INDEX TO THE PHARMACEUTICAL ERA

VOLUME XXXIII.

JANUARY 5 TO JUNE 7, 1905

EDITED BY

EZRA KENNEDY, 61906

21731
ONTARIO 124
COLLEGE OF PHARMACY
GERRARD ST. E.
TORONTO.

A

Acetyl Para-Oxy-Phenyl-Urethane, 706.
Acetylene, New Uses, 608.
Acid, Salicylic, Food Stuffs, 682.
Carbolic, 263.
Salc, 496.
Formic, 427.
Hydrophosphorous, 40.
Nitric, Absolute, 328.
Salicylic, Natural, 39.
Phosphoric, Free, 390.
Aconitine, Reaction, New, 682.
Adrenalin, Physical Properties, 296.
Synthetic, 547.
Adulteration, Drugs, New York, 239.
North Dakota, 92.
Advertising, 124.
Commentary, 152.
Convincing, 185.
Direct, 388.
Druggists, 24.
Drug Store, 337.
Enthusiasm, 248.
Ethical, 222.
Knapp's Announcement, 283.
Retail Druggists, 56.
Retailers, 94.
Agar-Agar, 156.
Alcohol, 42, in Fermentation, 474.
Consumption, Germany, 279.
Denaturing, 325, 635.
Use, 473.
Formaldehyde Detection, 552.
Free, 318.
Methyl, 262.
France, 352.
Relate, 42.
Tax Reduction, 279.
Wood, Effects, 168.
New York, 368.
Russia, 53.
Fats, 16, 475, 505.
Aldehyde, Ethylic, Concentrated, 285.
Almond, Defined, 231.
Almond Meal, 196.
Aloes, Cape, Assay, 706.
Valuation, 266.
Alpers' Soda Fountain, 280.
Amandine, 195.
Ammonia, Permeable, 233.
Plant, 205.
Test, 635.
Amyl Acetate, Dutiable, 541.
Anilin Colors, Toxic, 200.
Pat. Defined, 170.
Soluble, 231.
Angelus, Ginn, 325.
Anthrapurpurin Diacetate, 707.
Antidol, 192.
Antiseptics, Telegraph Poles, 8.
Antitoxins, Artificial, 495.
Antitoxin, New Jersey, 354.
A. Ph. A., Membership, 35.
Aqua Laurocrasi, 683.
Argols, No. 50, 155.
Aristol, Patent, 191, 174, 235.
Aristol, Medicinal, 285.
Arithmetic, Pharmaceutical, 34, 36, 227, 261.
Arnica, Pure, Scarce, 591.
Aspirin, 290.

ASSOCIATIONS, PHARMACEUTICAL.—
(Clubs, Societies, Drug Clerks, Alumni, Etc.)—
Alabama Pharmaceutical, 465.
Alton, Ill., Druggists, 664.
American Chemical Society, 529, 661, 710.
Austrian Chemical Society, N. Y. Section, 14, 173, 402, 501, 555.
American Conference of Pharmaceutical Faculties, 346.
American for Advancement of Science, 47.
American Medical, 583.
American Pharmaceutical Association, 35, 43, 143, 239, 350, 421, 475, 601, 710.

ASSOCIATION, D. R. C. Continued.
Anti-Adulteration Society, 683.
Antiseptic Club, 685.
Apothecaries' Bicycle Club, 402, 450, 529, 553, 552, 611, 622.
Arkansas Pharmacists, 618.
Baltimore Retail Druggists, 15, 145, 333, 429, 452, 532.
Boston Retail Druggists, 112, 144, 473, 586.
Camden Co. (N. J.) Retail Druggists, 312, 451, 478, 531.
Canadian Wholesale Druggists, 716.
Carroll Co. (Ind.) Druggists, 665.
Chicago Social Drug Club, 147, 357, 559, 614.
Chicago Retail Druggists, 83, 453, 491, 533.
Chicago Veteran Druggists, 275, 615, 712.
Cinchona Club, 50.
Colorado Pharmacal, 612.
Columbia Co. (N. Y.), Retail Druggists, 501, 585.
Connecticut Pharmaceutical, 715.
Cumberland Co. (Me.), Pharmaceutical, 177.
Delaware Co. (Pa.), Druggists, 557.
Delaware Pharmaceutical, 692.
Denver (Colo.), Pharmaceutical Society, 148.
Department of Agriculture Seminar, 486.
Drug Clerks' Circle, 12, 108, 355, 402, 445, 581, 691, 662.
Drug Merchants, 393.
Erie Co. (N. Y.), Pharmaceutical, 610.
Fall River (Mass.), Druggists, 271.
Florida Pharmaceutical, 477, 716.
Fort Wayne (Ind.) Drug Clerks, 330, 417.
Fulton Co. (Ill.), Druggists, 712.
French N. A. R. D., 44, 45, 175.
German Apothecaries, 44, 45, 175, 299, 403, 423, 475, 529, 609, 637, 662.
Grand Rapids Drug Clerks, 615.
Grand Forks Co. (N. D.), Druggists, 713.
Grant Co. (Ind.), Retail Druggists, 146.
Hulse Park Druggists' Club, 559.
Holyoke (Mass.), Druggists, 271.
Illinois Pharmaceutical, 22, 430, 614.
Illinois Pharmaceutical Travelers, 614.
Indian Territory Pharmaceutical, 617.
Indiana Pharmaceutical, 665.
Interborough Pharmaceutical, 638.
Italian Pharmaceutical, 300, 331, 451, 557, 574.
Iowa Pharmaceutical, 679.
Jersey City Druggists, 110.
Kansas City Retail Druggists, 16, 84, 306, 454.
Kansas Pharmaceutical, 385, 617.
Kings Co. Pharmaceutical Society, 43, 207, 354, 426, 554, 685.
Knox Co. (Me.), Retail Druggists, 12.
La Crosse (Wis.), Retail Druggists, 84.
Lebanon Co. (Pa.), Retail Druggists, 371.
Leitch Valley Retail Druggists, 478.
Louisiana Drug Clerks, 617.
Louisiana Pharmaceutical, 617.
Louisville (Ky.), Retail Druggists, 465.
Lomb Co. (Mich.), Druggists, 19.
McKesson & Robbins Mutual Benefit Association, 109.
Manhattan Pharmaceutical, 77, 239, 323, 425, 450, 556.
Maize Pharmaceutical, 643.
Manchester (N. H.), Druggists, 332.
Manufacturing Perfumers, 162, 173, 528.

ASSOCIATIONS, Etc.—Continued.
Marlboro (Mass.), Retail Druggists, 112.
Maryland Pharmaceutical, 242, 532, 615, 688, 716.
Mercer Co. (N. J.), Druggists, 479.
Metropolitan Retail Druggists, 11, 79, 108, 205, 225, 237, 267, 321, 329, 353, 369, 377, 393, 403, 417, 426, 427, 465, 475, 500, 528, 547, 555, 581.
Michigan Retail Drug Clerks, 82, 333, 357, 453, 669.
Milford (Mass.), Pharmaceutical, 177.
Milwaukee Pharmaceutical, 305.
Minneapolis Retail Druggists, 16, 454, 616.
Minnesota Drug Clerks, 84, 115, 210, 481, 560.
Minnesota Pharmaceutical, 407, 713.
Mississippi Pharmaceutical, 715.
Missouri Jobbers' Social Club, 211.
Missouri Pharmaceutical, 560, 692.
Montcalm (Mich.), Druggists, 688.
Montreal Drug Club, 276.
Montreal Druggists, 116.
Murray Hill (N. Y.), Retail Druggists, 269.
Nashville Retail Druggists, 115.
National Association of Manufacturers of Soda Fountain Supplies, 530.
National Boards of Pharmacy, 161, 166.
National Food Manufacturers, 701, 709.
National Pure Food & Drug League, 710.
National Retail Druggists, 11, 37, 49, 65, 75, 101, 107, 141, 273, 355, 532, 685.
National Wholesale Druggists, 401, 438.
Nebraska Pharmaceutical 689.
Newburgh (N. Y.), Druggists, 111, 176.
New Jersey Pharmaceutical, 528, 612, 690.
New Jersey Pharmaceutical Travelers, 476, 691.
New Haven (Conn.), Retail Druggists, 271.
New York Board of Trade & Transportation Drug Section, 110, 236, 241, 268, 300, 331, 379, 401, 478, 583, 663.
New York College of Pharmacy Alumni, 45, 206, 246, 449.
New York Drug Trade Club, 238, 640, 654.
New York Glensong Growers, 46.
New York State Pharmaceutical, 173, 268, 554, 638.
New York Retail Druggists, 141, 268, 301, 402, 611, 709.
North Carolina Pharmaceutical, 643.
Ohio, Kentucky, Indiana and Michigan Druggists, 146.
Ohio Pharmaceutical, 452, 588.
Ohio Physicians, Surgeons, Dentists and Pharmacists, 614.
Oklahoma Pharmaceutical, 406, 618.
Ohio Valley Druggists, 15, 49, 179, 242, 275, 406, 429, 480, 614, 666, 688.
Outagamie Co. (Wis.), Retail Druggists, 395.
Pennsylvania Pharmaceutical, 531, 603, 664, 715.
Pennsylvania Travelers' Protective, 478.
Pharmaceutical Club, 503.
Pharmaceutical Journal Club, 397.
Phi Chi, Gamma Chapter, 384.
Phi Gamma Fraternity, Alpha Chapter, 533.
Philadelphia College of Pharmacy Alumni, 531.

ASSOCIATIONS, Etc.—Concluded.
 Philadelphia Drug Athletic, 404, 532, 641, 687.
 Philadelphia Drug Clerks, 303, 429, 531, 664.
 Philadelphia Retail Druggists, 112, 113, 177, 178, 246, 302, 531, 640.
 Proprietary Association, 267, 380, 425, 465, 479, 492, 496, 517, 525.
 Rochester Ph. A., 13, 14, 47, 176, 427, 530, 663.
 Rhode Island Pharmaceutical, 111.
 San Francisco Drug Clerks, 454.
 St. Louis Drug Clerks, 116.
 St. Louis Retail Druggists, 383, 504, 560, 584, 714.
 St. Paul Retail Druggists, 84.
 Society Chemical Industry, New England, 380.
 Society of Chemical Industry, N. Y. Section, 80, 228, 355, 451, 555, 686.
 Southern Alabama Retail Druggists, 146.
 South Atlantic Drug Club, 308.
 South Bend Retail Druggists, 242.
 South Dakota Pharmaceutical, 689.
 Springfield (Mass.), Druggists, 332.
 Staten Island Branch N. A. R. D., 530.
 Syracuse Druggists, 143, 269, 270, 331, 427, 557.
 Tennessee Pharmaceutical, 558.
 Texas Pharmaceutical, 715.
 Torontonians (Conn.), Druggists, 13.
 Toronto Druggists, 44, 305.
 Trenton (N. J.), Druggists, 178.
 Troy Retail Druggists, 208.
 Wabasha Co. (Minn.), Druggists, 147.
 Wedgewood Club, 272, 307, 479, 503, 664.
 Westchester Co. (N. Y.), Pharmaceutical, 111, 449.
 Western Pennsylvania Retail Druggists, 75, 114, 178, 301, 381, 478, 641, 688.
 Wheeling (W. Va.), Druggists, 114, 204, 556, 588.
 Wisconsin Pharmaceutical, 147, 275, 590.
 Worcester Co. (Mass.), Pharmaceutical, 81, 240, 440.
Asthma Mixture, 7.
Atomizers, New, 459.

B

Bacteria, Staining, 3.
Baking Powder, 40, 399.
Balm of Gilead, 421.
Balsam, Cough, Lined, 137.
Pectoral, 137.
Peru, 445.
Baltimore Cutters Combine, 587.
Bandage Suprarenal Gland, 327.
Barometer, Weather, 73, 684.
Bataoactina, 131.
Batteries, Storage, Paste, 74.
Bay Leaf, 321.
Be a Pharmacist, 494.
Beatin, 138.
Benoluzer Capsules, 222.
Benzenolam, 551.
Betain, 73.
Botin, 73.
Bilz Seed, 156.
Bismuth Agaricinate, 168.
Bitters, Anguria, 608.
Black-No-More, 687.
Blacking, French, 400.
Shoe, 400.
Blackmalling Druggists, 25.
Blanc, Joel, Remorse, 196.
Blue, Bleachers', 155.
Bluing, Laundry, 474.
Blood, Human, Test, 138, 495.
Board of Pharmacy Questions Do Not Help, 228.

BOARDS OF PHARMACY—
 Arkansas, 227.
 California, 50, 478.
 Colorado, 18, 148, 454.
 Connecticut, 580.
 District of Columbia, 113, 356.
 Georgia, 146, 404, 482.
 Idaho, 245.
 Illinois, 17, 83, 146, 180, 303, 334, 335, 480, 481, 588.
 Iowa, 17, 19, 50, 499, 534.
 Kansas, 307, 617.
 Kentucky, 243, 404, 583.
 Maryland, 82, 273, 429, 470, 532, 613, 664.
 Massachusetts, 47, 177, 270.
 Michigan, 15, 82, 114, 430, 454, 481.
 Minnesota, 210, 276, 499, 560, 616, 713.
 Mississippi, 303.
 Montana, 294.
 Nebraska, 306.
 Nevada, 643.
 New Hampshire, 177.
 New Jersey, 242, 584.
 New York (State), 33, 46, 174, 230, 378, 491, 601.

BOARD OF PHARMACY—Concluded.
 New York (Eastern Branch), 78, 111, 143, 212, 267, 478, 583, 611, 638, 685.
 New York (Western Branch), 81, 530, 610.
 North Carolina, 1, 7, 612.
 North Dakota, 149, 668.
 Ohio, 210, 468, 588.
 Oklahoma, 149, 261.
 Oregon, 261, 430.
 Pennsylvania, 307, 442, 557, 618, 641.
 Rhode Island, 113, 177, 228, 586.
 South Dakota, 454.
 Utah, 506.
 Vermont, 112, 241, 662.
 Virginia, 407.
 Wisconsin, 16, 275, 453, 517, 520, 688.

"Bond Issue," Delibie's, 328.

BOOK REVIEWS—
 Ayer's Newspaper Annual, 1905, 157.
 Attenrieth, Detection of Poisons and Strong Drugs, 562.
 Balfour, Report Wellcome Research Laboratories at Gordon Memorial College, 292.
 Bell, Notes on Equation Writing, 42.
 Bolton, Follies of Science at the Court of Radolph II., 202.
 Chemist & Druggist, Winter Issue, 216.
 Conyngham, Manual of Corporate Organization, 202.
 Cutter, Vegetable Productions of America, 600.
 Eccles, Food Preservatives, Their Advantages and Proper Use, 468.
 Era Druggists' Directory, 99.
 Fish, Exercises for Students in Materia Medica and Pharmacy, 202.
 Green and Vanderkleed, Course in Qualitative Inorganic Chemistry, 42.
 Hatcher and Soliman, Text-Book of Materia Medica, 42.
 International Medical Annual, 1905, 502.
 Lewis, Credit Man and His Work, 120.
 Lilly & Co's Price List for 1905, 442.
 Lloyd Library Bulletin No. 4, Reproduction Series, 660.
 Lloyd, Mycological Series No. 3, 636.
 Mallinckrodt Chemical Works' Price List, 652.
 Memminger, Qualitative Analysis Brief, 42.
 Merck's 1905 Manual of Materia Medica, 636.
 Mineral Resources of the U. S., 1903, 286.
 Olsen, Quantitative Chemical Analysis, 408.
 Pharmaceutical Formulas, Vol. II., 42.
 Pharmaceutical Journal Formulary, 42.
 Proceedings of the A. Ph. A. General Index, 1832-1902, 408.
 Proceedings of the American Pharmaceutical Association, 1904, 562.
 Proceedings of the Manufacturing Perfumers' Association of the U. S., 1905, 580.
 Proceedings of the National Wholesale Druggists' Association, 1904, 580.
 Seville, Art of Compounding, 292.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, JANUARY 5, 1905.

Number 1.

Entered at the New York Post Office as
Second Class Matter.

Established 1887

THE PHARMACEUTICAL ERA
PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES:

U. S., Canada and Mexico, \$3 per annum
Foreign Countries in Postal Union, \$4 per annum

The Price List Editions of the Era are
issued in the Spring and Fall of each year and one
copy is sent free to each regular yearly subscriber.

Era Binders—Subscribers are advised to
save their Eras, together with the complete INDEX
which is supplied with each volume (6 months.)
We supply a substantial Binder at 75 cents
each, postpaid.

sions.—Market Changes.—Recent Pat-
ents.

EDITORIAL COMMENT

Eighteen Years Old.

The beginning of a new year and the
completion of another volume reminds us
that the Pharmaceutical Era is now
eighteen years old. Since our first issue
in January, 1887, the drug world has
witnessed many changes and those who
have followed our pages have, no doubt,
seen the gradual passing of the old order
reflected there. The years have left their
impression upon all of us. We have grown
older, and let us hope, also wiser and
better.

Eighteen years is not a remarkable age,
even for a publication. The Era is not
so old as some and not so young as others;
it is not so old that its stock of vitality
has run down and it is still old enough to
be worthy of confidence. Age is not to be
reckoned so much by years as by experi-
ence, and our journal is certainly rich in
experience. We have held our place in
the thick of the fight and it would be diffi-
cult to name a notable event in the
drug world during all these years which
has produced no responsive disturbance
in our columns.

A journal is extremely sensitive to the
impression of those whom it represents,
for if it is to hold the interests of its
readers it must think their thoughts and
record the histories which they are ex-
periencing. In the light of experience,
The Era is older than any of its readers.
It is also as young as it was the day
after birth, for it is quite as eager for
new impressions and is ready for new
enterprises.

Board of Pharmacy Inspectors.

According to Secretary Hancock, of the
North Carolina Pharmacy Board, that is
the only body of its kind in the South
which employs an inspector. It is only
a short time ago since no systematic in-
spection was carried on in any state, and
even at the present time these officials are
not many, only the boards of New York,

Illinois and a very few other states em-
ploying them regularly. Apparently inter-
est in this sort of work is growing, for
Mr Hancock speaks of numerous letters
of inquiry about methods and results.

Since pharmacy laws do not enforce
themselves, and since evidence of violation
does not obtrude itself upon the attention
of boards, some form of inspection seems
necessary, if the law is to have any effect
at all. The average pharmacy law is a
dead letter immediately after it has been
passed, unless it contains some provision
for bringing it home to the trouble which
it is intended to correct.

Whether the work of the inspector does
any good or not depends entirely upon
the inspector himself and upon the law
which gives him authority. If the inspec-
tor goes about his work in a judicious
manner, the result will be beneficial, but
if he is permitted to exercise his power
arbitrarily, he may cause great harm.
Obtaining evidence by unfair means, or
inducing violation merely for the sake
of securing a conviction, does not increase
the respect for law nor greatly reduce
the numbers of the violations which it is
the purpose of the law to prevent.

In other words, the board of pharmacy
inspector should possess the highest moral
and intellectual qualities. His work is
quite as important as that of the board it-
self, and his place is most difficult to fill.

Morals of the Chicago Episode.

Professor Rusby has discovered in the
Chicago pure synthetic crusade a moral
quite different from the one which we
abstracted from that disagreeable episode.
He sees in it only another proof of the
great necessity for the national bureau
proposed some time ago, for testing drugs
and eliminating the unfit before reaching
the retail store. We have been laboring
under the impression that a druggist buy-
ing only from reputable dealers need have
no fear of prosecution for the sale of bogus
goods, but Dr. Rusby says we are mis-
taken. He declares that there are whole-
salers who seemingly deserve the trust of
the pharmacist, but are in reality no better
than they should be.

If what our friend says is true—and he

is in a position to know whereof he speaks—the case is even worse than we had supposed. If the pharmacist can not do the necessary testing himself and is unable to trust his wholesaler, who bears all the marks of respectability, what is he going to do? The law holds him entirely responsible and there seems to be no means of escape. This situation is intolerable. The only hope of relief seems to lie in a national pure drug law, or a bureau such as Dr. Rusby advocates, but these measures offer only a faint glimmer of hope; the adoption of either is not even possible.

The Chicago scandal points to still another moral: Laws which induce violation of other laws are vicious. Our curious patent law lays a trap for the pharmacist and we all know how easily he is caught. The prime movers in the more recent campaign admit that they feel sorry for the poor druggist, because conditions are such that frequent violations of the law are inevitable. It is asking too much of human nature, they say, to place temptation in men's way and to expect everyone to resist constantly without taking at least an occasional advantage when the chance of being found out seems so small. They profess to deplore the unfortunate condition of affairs quite as much as anybody, but they say: "What would you have us do? Let our dishonest competitors take our business from us without a struggle?"

Since the prime cause of the temptation and the fall of so many druggists is our present patent law, the Chicago disgrace is about as good an argument for the Mann bill as anybody could desire.

Insurance and Federal Control.

In the agitation about corporation rights and government supervision, the life insurance companies are coming in for their portion—for more than their share, many of those directly concerned think. That people should be interested in the discussion is not at all surprising, for life insurance is a form of investment which absorbs the savings of a very large proportion of our population, including druggists. Each owner of a policy finds in the discussion a personal interest when all other talk about trusts and monopoly strikes him as the rain strikes the duck's back.

The part of the discussion most interesting to the policy holder is that concerning the stability of the insurance companies' immense holdings. People are accustomed to look upon life insurance investment as beyond suspicion; banks may fail, but no one thinks of any risk connected with his modest yearly deposit

for those dependent upon him. But there have been rude hints about speculation and extravagance in the management of life insurance companies, and demands for more rigid government control.

A few years ago the insurance companies were ready to welcome control by the national government. They were then in controversy with half a dozen western states, and the measures proposed by various legislatures caused a great amount of anxiety and trouble. The advantage of one body with which to deal instead of forty was apparent. Now, however, it seems that views are different; those high in the councils of the insurance companies see no benefit in federal pilogate. Why opinions have changed has not been explained. Perhaps it is the very natural reluctance to exchange the known for the unknown.

Where is the Remedy?

The wearisome agitation about adulteration and substitution continues, but some signs of real progress are beginning to appear. A year or two ago speakers and writers merely made a loud outcry and inveighed against the evil; now the same persons are looking for remedies. The public now knows quite enough about the prevalence and dangers of the practice. What the people are anxious to know now is: How can it be cured?

Some moral teachers of the old school shake their heads and declare dismally that the entire moral constitution of the people is going to smash. They look for nothing better until the world suffers a thorough moral awakening, and truth, justice and honor shall again guide the actions of men.

The Wisconsin Board of Pharmacy has petitioned its legislature to enact laws against adulteration, and the careless sale of poisons and narcotics. The members of the board believe that with more stringent measures they can do much to check the evil. Druggists of Kansas City are not only convinced that they can successfully deal with the evil in their own calling, but even claim that they have the matter well in hand.

A speaker at the meeting of the Chemists' Section of the American Association for the Advancement of Science, last week, suggested that the remedy lay in enforcement. "I am not in sympathy with those who continually demand more legislation," he said. "There are sufficient laws upon the statute book of every state in the Union, which, if enforced, will bring about the desired results. The trouble is those laws are not enforced."

We do not believe with the pessimist that falsification and sophistication are

more common now than formerly, and that the world is growing worse. Cheating of all kinds is no more prevalent than in any previous period of the history of man. We are simply hearing more about it because the people are inquiring and are demanding greater honesty. Whether the end will be attained by way of a refreshed moral tone, by means of more and better laws, or through more thorough enforcement remains to be seen. We are of the opinion that all three forces are already hard at work.

Protest Against Mann Bill.

Here is a bit of unwelcome news for friends of the Mann bill. At the meeting of the American Association for the Advancement of Science, in Philadelphia, last week, T. J. Parker, in the name of the General Chemical Company, presented a set of resolutions condemning the Mann bill. The resolution was referred to the council of the American Chemical Society, and that body instructed its secretary to send a protest against the passage of that measure to Senator Kittredge, on the ground that it would be inimical to the interest of American inventors and harmful to American chemical industries.

The list of members of the American Chemical Society's council contains such names as Professor Sadtler, Dr. H. W. Wiley, W. J. Schieffelin, Professor McMurtre, Professor Baskerville, and last, but not least, Professor Virgil Coblenz and that of Mr. Schweitzer himself.

The Patent Unhurt.

Last week we printed a story about the discovery of a supposed flaw in the phenacetin patent. It was an interesting story, although the discovery did look rather doubtful. Alas! Quite as the hopeful discoverers feared, they had been preceded by another Columbus, and the find turned out to be considerable less than a new continent. The identical flaw was explained in the courts by Professor Sadtler about six years ago, and the decision seems to have been unaffected by the discovery, for the patent was sustained in the highest court of the land.

The defenders of the patent explained away the flaw to the entire satisfaction of the court in an ingenious and simple manner. The patent specified that the color of the product was unaltered by acids and alkalis. Prof. Sadtler showed that nitric acid did produce a coloration and certainly nitric acid is an acid. But the chemists on the other side explained that nitric acid had in fact a property distinct from its acidity, and that the product was not supposed to be proof against nitric acid and that the specifications were sufficiently clear on this point. The explanation satisfied the court.

DR. FREDERICK HOFFMANN.

With the death of Frederick Hoffmann, an American pharmacist has passed away, whose position in the history of pharmacy during the second half of the nineteenth century will become more conspicuous as time passes on and a better perspective will be reached by those who look backward. Many names are better known to American druggists at the present time, but not a few of these will fade away with their own time and generation. After the popular and more spectacular characters will have been well nigh forgotten, true merit will have its deserts. It is then when American pharmacy will appreciate more fully the services rendered to our country and profession by the deceased.

Dr. Hoffmann came to this country in 1867, at a time when pharmacists and chemists of university education were rare even as teachers in our colleges of pharmacy. Almost at once he became prominent because of the role he played in the noted aniline case. While this did not identify him with pharmacy, it was through his position as a retail pharmacist in New York City that this prominence reflected credit upon the profession which he represented.

It was this prominence and later his position as public analyst that enabled him to assume the role of a leader in 1871, when the enforcement of the Irving drug law stirred up the profession in New York City in a way it had possibly never been roused before. Whatever may be said about the virtue or defects of that law, no matter how we may now look upon the attitude of the profession against the law and those who were entrusted with its enforcement, this much seems to be an undisputed fact, that Dr. Hoffmann was one of the few among the retail druggists of that city who had the courage of their convictions. While hosts of others protested yet submitted to what they regarded a degradation of their calling, he boldly refused to submit.

The opposition, of which he was one of the principal leaders, came out ahead, and pharmacy in New York was freed from the domination of the medical profession, and taken out of the clutches of the politician. Not only did New York reap the benefit of this victory, but that it exerted a wholesome influence upon legislation in all of the States that followed with the enactment of pharmacy laws can scarcely be questioned.

While Dr. Hoffmann was a born leader of men, he was not a brilliant public speaker, though whenever he spoke he was listened to with respect. His force lay primarily in his pen and this he wielded as possibly no pharmacist in this country has wielded it before him or since he laid it down as an editor. He wrote with a most fascinating style in German, and the "Pharmaceutische Rundschau" for thirteen years was read by practically all of the better educated German pharmacists who had come to this country in considerable numbers after 1848.

Not afraid to defend his beloved calling against attacks from without, with equal zeal he defended her against what he considered degradation from within. It was this that brought him many enemies. He was decried as a pessimist, while pos-

sibly none of his critics were as optimistic in their views as he. Not only because of his high ideals or because he hated sham and pretence, but because he dared work for his ideals without fear was he a true optimist. His activity did not consist in destructive, but in constructive criticism.

No other phase of his activity will possibly better demonstrate this assertion than the role he played in placing the United States Pharmacopoeia on its present footing, not only as a scientific treatise, but as a treatise that is being revised by pharmacists with the co-operation, but without the domination of the medical profession. There is possibly not a single country in which the pharmacist is permitted to play so independent and prominent a role in the revision of the national standard as in this country. Because of this we are the envy of our British brethren.

It was after the defeat of Dr. Squibb by his own colleagues in the American Medical Association that Dr. Hoffmann in 1877 brought about the realization of the present status quo of the American pharmacist in the revision of the United States Pharmacopoeia. Dr. Squibb's plan involved the subordination of the pharmacist to the physician and American pharmacy may be thankful that the indifference of the physician prevented the adoption of the plans of Dr. Squibb, many of which it should be added were a decided improvement over the previous method of procedure.

With the capacity for quiet leadership thus displayed, it can surprise no one that Dr. Hoffmann was induced to give up his routine duties as pharmaceutical practitioner and to assume the duties of pharmaceutical editor of a journal published by himself. For thirteen years he helped to mould the opinion of the better educated pharmacists from his editorial study. The power which he wielded is not only attested by those who respected his talents, but also by those who, while they did not love him, feared his pen.

It has become well nigh a commonplace in American public life to say that the man who has made no enemies has never accomplished anything. It is equally true, however that a man's accomplishments are by no means always in proportion to the number of enemies he has made.

EDWARD KREMER.

Madison, Wis., Dec. 21, 1904.

Pumpkin Seeds.

The use of pumpkin seed in the removal of tapeworm is as effective as it is simple (Journ. Am. Med. Assoc.). Full strength seed are to be employed, two ounces of which should be hulled, thoroughly crushed to a fine powder, mixed with a small amount of honey and spread on a thin piece of bread and eaten as an ordinary sandwich. In one or two hours follow with a cathartic. Infusion of pumpkin seed, recommended by some authors can be given to children in one or two ounce doses. Pumpkin seed is dependent on a resinous principle, pepsarin, as supposed by some, but this has not been definitely proved. It may be added that the flesh of the pumpkin has been used in the same disease. Deprived of their hulls and exhausted by ether, pumpkin seeds yield about thirty per cent. of fixed oil.

SENSATION OF INODOROUSNESS.

Absolutely inodorous surroundings are in Zwaardemaker's opinion, like an absolutely dark and noiseless space, of rare occurrence, as almost every substance possesses its specific odor. The fact that we do not usually perceive it, depends apart from our carelessness, upon the ventilation which enfeebls the odor, and, perhaps more correctly, produces transitions. If, therefore, we desire to become acquainted with the sensation of inodorosity we have generally to resort to an intentionally produced state of inodorosity. The most suitable arrangement for this purpose is a glass case of 40cc. capacity with an opening for the nose. If this case is carefully freed from adhering odors, the air contained in it will be found nearly odorless.

A different kind of inodorosity which is more often realized, consists of the composition of odors which supplant each other. A complete compensation, however, occurs only in the case of very faint odors, while powerful excitants enter into a contest with one another. A difference between the sensation of this apparent inodorosity and the actual one does not exist. Zwaardemaker also considers a third kind of inodorosity possible. Concentrated solutions of many odorous substances, as compared with dilute ones, have a remarkably faint odor. On repeated observation it becomes more and more faint, and finally disappears almost completely. It is not improbable that this kind of inodorosity also occurs in nature. In the summer, for instance, the terpene odor of a fir-wood is not so striking in the wood itself as when such a wood is passed on an open road and the wind wafts the odor toward one.

So far we have only discussed the question of inodorosity in spaces, or of the air in the open. There is, however, also a condition of inodorosity of bodies. A body is usually understood to be inodorous, if no molecules at all, or only an infinitesimal number, become detached from the body of evaporation. A glass or platinum vessel is for this reason practically odorless. H. Erdmann, however, had come to a different conclusion on the strength of his observations respecting the behavior of odorous substances toward liquid air. Many and Horgarths have demonstrated that the capability of dissolving, which liquids possess toward non-volatile bodies, or toward such which only volatilize with difficulty, is also found in gases. Starting from this idea, Erdmann examined liquid air as a solvent, and found that three well-known odorous substances, citral, rose oil, and ionone, show a remarkably strong solubility in liquid air, a characteristic property of odorous substances.

Up to the present it has been accepted that the molecules which volatilize or dissolve in the air, belong to the bodies which chiefly build up the respective substances. In many cases occurring in nature this is not so; for example, in the case of a resin or a wax, in which the odorous particles only represent a small portion. From Erdmann's point of view the separation of odorous molecules is there simply a transition from one solvent into another (Schimmel's Report).

A VISIT TO A COBRA DEN.*

BY NICHOLAS SENN, M.D.

My visit to the research laboratory (Laboratory of the government of India, Parel, Bombay) was made late in the day. It was during the short twilight and in the absence of electric or gas lighting. We had to find our way through the dark halls and rooms of the former palace of the governors of Bombay with the aid of the light of a lantern. Lieut.-Col. Bannerman led the way. We passed through halls and rooms on the first floor between rows of cages containing rabbits, guinea pigs, rats and mice, and the little creatures, scared by the appearance of the late visitors, were roused from their dormant condition and displayed an activity begotten by fear. We finally came to the door of a large room in which darkness was complete. The moment we entered a fearful hissing from every part of the room greeted us, mingled with short raps resembling the tapping sound made by striking a wire screen with a small hammer. I was in a cobra den, in the midst of 150 of these terrible reptiles, imprisoned in cages, it is true, but wide awake and roused to anger by our untimely intrusion. They were assisted in their hissing and striking against the wire screen which guarded the open end of their cages by fifty other snakes still more venomous, Russell's viper (*Daboia russellii*). Through the meshes of the wire screen shot the forked tongues of 200 of the most venomous reptiles known. Add to the hissing and striking noises the 200 forked red tongues, 400 staring, deceptive and treacherous eyes, the snaky odor that pervaded the atmosphere of their dungeon and you will have a good idea of what is meant by a cobra den. The cobra (*Naja tripidians*) is about four feet in length, and when angered the flat head and neck expand into wing-like projections on each side, increasing their width to the size of the palm of the hand. The color is almost black, the tail tapering into a sharp point. The viper is of about the same size, but has circular stripes. I know of no more ugly sight than a cobra in striking attitude. Every snake in the room was in a fighting mood, hissing and striking the wire screen with a thud-like noise; at short intervals red forked tongues shot out through the meshes of the wire screen on all sides, and the situation was made more horrible by the revolting snake smell issuing from so many cages.

The snake, the most despised animal in creation, is an object of fear and horror to all who are familiar with his damnable record in the Garden of Eden and with the curses imposed on him by the Almighty. I did not know but some of these terrible reptiles might be at liberty in that large, imperfectly lighted room, and only breathed easy again after we had left the room and the door was shut and securely locked.

It was prearranged that I should become more familiar with the dangerous part of the anatomy of cobra and viper. We ascended the broad staircase leading to the second floor and entered the office

of the superintendent of the laboratory, Lieut.-Col. Bannerman, who on this occasion extended so many courtesies to me. He sent for the "snakemen," and in a very short time three coolies made their appearance with so many snakes in their cages, one cobra and two vipers. I was to witness the "milking" of their poison sacs. I begged to be informed beforehand how this was to be done, in order that I might make my own plans of conduct for safety during the ordeal. The superintendent smiled and said: "You must see for yourself." The snakes were in an offensive attitude, as they had undergone this procedure repeatedly and had learned by experience to dread it. I could see no opening in the boxes through which the snakes could be made hors de combat.

The "snakeman" was a very slender coolie with very long, thin arms and legs, and fingers like the claws of a monkey.

The cobra, with its raised, expanded head in striking position, came first. The man held a smooth stick the size of an ordinary cane and about two feet in length in his left hand. Suddenly, standing behind the box with the wire screen directed toward him, he threw open the opposite side with a lightning jerk and out shot the angry monster, and in undulating rapid movements, advanced toward me. A quick retreat on my part behind the table increased the distance between us. Before the snake had advanced three feet the "snakeman" grasped the end of his tail with lightning movement of the right hand, lifted it high in the air, and with the stick passed from tail to neck, preventing a recoil, lowered it to the floor. With the stick, the neck was pressed against the floor, the right hand, quickly substituted for the stick, grasped the neck firmly and with the left hand made traction on the tail, thus straightening out the squirming body. A small goblet, covered drum-like with American adhesive plaster, with adhesive side directed outward, was placed near enough for the snake to strike it. The fangs penetrated the plaster and by pressure against the poison sacs about half a dram of viscid opaque fluid escaped into the sterilized goblet. The cobra was returned into the cage with the same expertness as characterized its liberation. The whole procedure did not occupy more than ten minutes. Snakes refuse all food during confinement, hence they are fed each time the poison is removed, which is done every ten days. The long tip of a small funnel is inserted into the throat and about two ounces of a mixture of egg and milk is poured into the funnel, which enters the alimentary canal without meeting any obstruction. The vipers were then handled in a similar manner, only that in their case the poison was received direct from the fangs into an open goblet by opening the mouth widely with a pair of forceps and steadying the fangs with a thread passed around them and on which traction was made by an assistant, who at the same time held the goblet. I could see distinctly the drops of poison escape through the tiny opening at the very tip of the enormous fangs, which looked like fish hooks without a barb.

The poison is desiccated in the laboratory, under aseptic precautions, and is later sent to another laboratory, where it

is used in the preparation of Calmette's antivenene. There is no lack of an adequate supply of cobras and vipers for this laboratory, as they are bought from the natives at from a few annas to one rupee each.

Toxicity of Some Quinine Derivatives.

Some interesting experiments on the toxicity of certain quinine derivatives are reported by Hunt (Arch. Inter. de Pharm. et Ther.). He first refers to the fact that certain compounds possess a double bond between two carbon atoms and at the same time are extremely toxic. Thus neurine is twenty times as toxic as chlorine and allyl alcohol is fifty times more poisonous than propyl alcohol. Quinine, $\text{C}_{20}\text{H}_{24}\text{O}_6$, $\text{H}_2\text{NC}_6\text{H}_4\text{N}(\text{OH}) + \text{C}_{11}\text{H} = \text{CH}_2$, also has such a combination between two carbon atoms. The present experiments were carried out with a view of determining whether it was possible by eliminating the vinyl radical to form compounds which would retain the specific action of quinine upon the malaria parasites, and at the same time be free from some of the detrimental effects associated with the quinine, or whether some of these derivatives might not have an action upon other diseases, caused by protozoa, similar to the action of quinine upon malaria. The compounds studied were hydroquinine, oxyhydroquinine and hydrochlorquinine. Cinchoquinine was also employed. This substance still contains the vinyl group, but the hydroxyl group has been changed to a ketone group. The experiments were carried out upon mice, guinea-pigs, rabbits, and certain infusoria. The substances were administered either subcutaneously or per os. From the results of the investigation it is seen that the vinyl group has only a slight influence upon the toxicity of the quinine molecule. In certain cases where the vinyl group was eliminated the toxicity of the compound toward mice, rabbits, and guinea-pigs was a little increased, while in one case (hydrochlorquinine) it was significantly reduced, this compound being hardly half as toxic as the quinine. For the infusoria (hay infusions) hydroquinine and oxyhydroquinine are less toxic than the quinine itself, but the hydrochlorquinine is much more toxic. Thus the addition of a chlorine atom decreases the toxicity for mammals and increases it for certain protozoa—an observation which may prove of therapeutic value. A mixture of glycerin, water and tragacanth, with 1 to 500 mercury oxycyanate, is recommended as an ideal lubricant for catheters and sounds.

Formaldehyde for Disinfecting.

An improved method of disinfecting is the subject of a recent English patent. One part of paraformaldehyde and six parts of carbon, both in finely powdered condition, are mixed with sufficient gum tragacanth or other suitable gum to form a stiff paste, which is pressed into blocks and dried. When required, the blocks are ignited, formaldehyde vapor being thereby gradually and uniformly disseminated.

Lermoyez' Solution of Coryza.—Carbolic acid, 5 grams; ammonia, 5 grams; alcohol, 90 per cent., 10 grams; distilled water, 15 grams. Every hour pour 10 drops of this solution on some blotting paper and breathe in the vapors produced.

*Portion of a letter from Bombay, India, to the Journal of the American Medical Association.

ADVANCES IN CHEMICAL INDUSTRY.*

BY J. FLETCHER MOUTON.

Let me analyze for a moment the forms in which advance may be made in the domain of chemical industry. Like every other department of industry, its province is to satisfy practically the wants of mankind, and the aim of those who direct it is to do this as cheaply and in as efficient a way as possible. Hence, advance may consist in its extending the scope of its manufactures by taking in new products to satisfy new wants, or more effectually to satisfy old ones. But chemical industry must seek somewhere the necessary materials for its manufactures, because chemistry does not create matter, it only rearranges it, and therefore advance may consist in the choice of new sources from which those materials are derived. These are, no doubt, two important types of advance, but at the present moment the main line of advance of chemical industry is not to be sought in the list of its products or the sources from which its materials are derived, but in the improved method by which it works. It is in these three divisions I shall consider the subject, viz., the trend of invention in (1) the product, (2) the source of material, and (3) the processes of chemical industry.

NO EPOCH-MAKING MANIFEST.

So far as new products are concerned, the present moment is specially characterized by the initiation of a crowd of small manufacturers. No epoch-making change is manifesting itself. This is natural. Some thirty years ago two gigantic chemical industries took their rise, viz., that of modern explosives and that of coal-tar dyes, and the world has ever since been working out in detail the almost revolutionary changes they brought about. I do not suggest that their fertility in new products is checked. New explosives are still being introduced, mainly such as are designed to meet the special difficulties of particular uses, such as the flameless explosives for coal mines, or the almost detonating explosives which can yet stand safely the shock of being fired in shells. New dyes are constantly being invented, and the names of fear which they bear become more terrible each year. But the triumphs of these great industries in the past have been so magnificent that no developments of to-day can overshadow or displace them, and the description of their growth in recent years, however sound and vigorous it may have been, would consist of a detailed list of products wholly beyond the scope, and foreign to the nature of this address.

DOMAINS INTER-DEPENDENT.

One victory, however, of the coal-tar dye industry cannot be passed over, and that is the commercial manufacture of synthetic indigo, which has taken such proportions, that it threatens to supplant the natural product, and produce far-reaching economic consequences in our Indian Empire. It is the greatest industrial triumph of synthetic chemistry, and

one hardly sees where it will find another like conquest to make. Its history illustrates well how independent, and yet how interdependent are the domains of chemistry and chemical industry. It is properly classed as an invention of to-day, although the synthesis of indigo has been possible to chemists for some years past, for it did not pass into the domain of chemical industry until a long series of improvements in the processes for its production, made under the stimulus of industrial development, enabled it to compete in cost with the natural dye.

INVENTION IN PHARMACOLOGY.

In my opinion, however, there are two departments in chemical industry, which are of great interest at this moment from the inventive development they manifest in their products. The first is that of pharmaceutical products. A field of research and its practical application is here opening out, the importance of which it is difficult to estimate, but which may be very great. I say this, because one can see, though perhaps as yet only dimly, and with little clearness of outline, the rise of great principles such as those which gave birth to the great chemical industries of which I have just spoken. Physiologists are beginning to associate specific effects on the human organism with specific chemical groups. These groups appear in countless combinations in organic chemistry, and their effect may be masked or hindered by the setting in which they are placed. This may arise in many ways. It may be that their effect is produced in the body by their being set free to form new combinations, so that too great stability in the original substances will paralyze them. It may be that their effect is produced by the selective absorption which is so characteristic of the organs and tissues of the human body, and in such cases the overloading of the molecule may render them inert. Again, it may be that the setting of the group, the combination of atoms with which it is associated to form the molecule, may itself be capable of producing conflicting or otherwise deleterious effects. In all such cases the group may be present without producing the characteristic result. But the belief is growing that the tendency of the group to produce its specific effect is real and inherent, and that with a right choice of its setting it will produce it without these extraneous effects. It may well be that we are still in the infancy of pure therapeutics. Few drugs are known which, side by side with the effects they are intended to produce, do not bring with them other consequences, unthought for and often undesirable. So far as these take their rise in the organism as a physiological consequence of the original effect, they must be accepted. But physiologists are raising the question whether it is certain that they are of physiological and not of pharmaceutical origin. It may well be that many of the forms in which the effective groups have up till now been administered have influenced and distorted the normal action of the group itself, and a line of genuine research and invention is being pressed forward, seeking practical solutions of the problem of the best way to use these operative groups. Taking at hazard a concrete example, let me instance the salicylic group, which is so potent, but the

effects of which on the heart are held in many cases to prohibit the use of it in its ordinary forms. It is claimed now that, if, instead of administering it in the shape of salicylic acid, or its salts, you take it in an acetylic setting as salicylic-acetylic, those ill effects are not produced. I am not concerned with the question whether this has or has not yet been demonstrated, but, assuming it to be so, it gives a clear instance of the nature and object of the research to which I am referring. It has already given rise to the discovery and manufacture of a large number of new pharmaceutical products, many of which have been looked for and found by applying the principles I have outlined. Unfortunately it is difficult, progress cannot be at once rapid and certain, and, indeed, the chief difficulty in forming a correct opinion on the subject is that in the case of pharmaceutical products, invention too often does not cease with their manufacture, but extends itself to the results of their administration.

WASTE OF NUTRITIOUS MATTER.

The other department of chemical industry to which I wish to refer in this connection is that of foodstuffs. In my opinion the present moment is characterized by a very serious attempt, in a variety of ways, to stop the vast waste of nutritious matter that is going on all around us. There are two forms of this waste. On the one hand, with the exception of cereals, foodstuffs are essentially perishable articles, the preservation of which by existing methods is often more costly than their production, and they are wasted because they cannot be used where and when they are produced. On the other hand, there are many substances treated as waste which would be capable of giving nutrition if they were in a form suitable for assimilation. I would cite milk as an example of the first of these classes, and yeast as an example of the second. Now, it is a very worthy aim of chemical industry to stop this waste. It may be an excellent advertisement for an extract of beef company to represent an ox as squeezed into a small earthenware pot, but to the industrial chemist, the very existence of such a caricature emphasizes the awful waste that is accepted as necessary in order to preserve even any portion of the food. How great would be the consequences of an advance in this department can be measured by the economic value of the system of cold storage at the present time. It would stagger those who have not made a study of the subject to figure out the monetary importance of this system in its present applications, although they are still crude and imperfect in many respects, and need, and will, I think, undergo great improvement.

The past history of this branch of chemical industry has not shown many successes of which we need be proud. Chemical preservatives are loved but little, and enjoy a social status not much above that of the criminal classes. The difficulties of the problems that present themselves are immense but personally I think we are at a moment of real advance. For instance, I believe that milk will soon cease to be a perishable article so far as its substantial use for human food is concerned. I should like to see a substantial part of the ability which is devoted to

*Portion of an address before the London Section, Society of Chemical Industry. Reprinted from the Journal.

the practical solution of difficult chemical questions in our existing industries, applied to the preservation of foodstuffs. With one or two exceptions the men who have best succeeded in this department have done so rather by their practical skill and good sense than by their technical knowledge, but I can myself see a change coming, and I hope that I am not wrong in considering it as one of the directions in which invention is about to be most vigorous. It is the great boast of the leaders of our chemical industries that waste has been banished from their factories, and I trust that they will not long be content to see going on around them this enormous waste of that which is necessarily in most universal demand.

FRINGE OF CHEMICAL INDUSTRY.

These new manufactures, though important in themselves and still more important in their aggregate, are, after all, in point of scale, only the fringe of chemical industry. The main chemical wants of mankind are almost as stereotyped and unchanging as its staple foodstuffs. The overwhelming importance of the alkali industry or of that of sulphuric acid will not materially alter, whatever be the developments in our industrial products. Hence it is that the list of the great chemical industries is so rarely added to. It is rare to find a new want which gives rise at once to a great manufacture. The only approach to this state of things, at the present time, is the cyanide manufacture, which has grown so suddenly to the proportions of a great industry that it almost merits a place in the list of new products. Before 1855 the annual production of cyanides in the world was below 500 tons. Now it amounts to about 8,000 tons. This is entirely due to the MacArthur-Forrest system of gold extraction, to which the world owes the recovery of some 9,000,000 ounces of gold from its ores, and it is a worthy example of the obligations of chemical industry toward inventors. The demand has been met by the invention and practical introduction of new and ingenious processes of manufacture which have wholly superseded the old methods, and though I do not propose to refer further to them in this connection, they illustrate the abundant resources of chemical industry to deal with newly arising demands.

Oil of Nikkei.

Oil of nikkel obtained from the leaves and young twigs of the Japanese cinnamon or cassia bark tree, Cinnamomum Loureirii Nees, found in the hottest parts of Japan, reminds one of the odor of citral and Ceylon cinnamon oil (Schimmel). The oil, obtained in a yield of 0.2 per cent., has a bright yellow color, and forms a clear solution with an equal volume of more of 80 per cent. alcohol. The oil contains 27 per cent. of aldehydes, chiefly citral. On fractionating the non-aldehydic portions cineol and linalool were found; of the latter at least 40 per cent. is present in the oil.

A French chemist has discovered that the slightest trace of uric acid in the presence of excess of alkali gives a fine blue color with tungstic hydrate, WO₃·H₂O and with phospho-tungstic solution.

HAIR COSMETICS.

BY L. H. TURNER, BROOKLYN, N. Y.

The number of preparations used for the care of the hair and beard is considerable. Many of them, advertised to strengthen the scalp and to stimulate the growth of the hair, are utterly inert. But many of the preparations used as dyes contain substances which would positively injure the hair or impart to it an unnatural color. A well made cosmetic, however, should never produce this effect, and nature must be faithfully imitated if the preparation is to deserve the name. Almost incredible swindles are perpetrated with many so-called hair and beard elixirs, but the practical perfumer cannot always advise against the use of preparations that are in daily demand. The only formulas of practical value are those for preparations which are intended for cleansing and making the hair soft and glossy, and for fixing it in certain positions.

Hair Stimulant.

A perfumed and highly valuable preparation for the hair and scalp. It strengthens the hair and renders it soft and glossy, removes dandruff and imparts to the scalp a refreshing and healthy sensation. The label should bear these directions: Apply to the roots of the hair night and morning, by means of a sponge. Brush the scalp well before using the tonic.

- Quinine sulphate 300 grains
- Fluid extract of jaborandi 3 fl. ounces
- Tincture of cantharides 3 fl. ounces
- Glycerin 12 fl. ounces
- Alcohol 14 pints
- Balsam of Peru 180 minims
- (2.)
- Oil of lavender 170 minims
- Oil of bergamot 120 minims
- Oil of rose geranium 180 minims
- Oil of orange 60 minims
- Oil of neroli 48 minims
- Tincture of vanilla (1 to 64) 12 ounces
- Tincture of butter of orris (1 to 20) 10 ounces
- Rose water 33 pints
- Water, enough to make .. 63 pints

Tanno-Quinine-Hair Restorer.

- Tincture of clochona ... 1 3/4 ounces
 - Tincture of nutgalls ... 1 3/4 ounces
 - Carmine 150 grains
 - Oil of neroli 75 grains
 - Oil of nutmeg 75 grains
 - Alcohol 3 1/2 ounces
 - Rose water 1 quart
 - Orange-flower water 1 quart
- The tincture of nutgalls and clochona are each made by macerating 3 1/2 ounces of the drug in one quart of alcohol.

Quinine and Jaborandi Hair Vigor.

- Quinine sulphate 1 ounce
- Cologne spirit, 94 per cent. . 48 ounces
- Fluid extract of jaborandi .. 6 ounces
- Glycerin 48 ounces
- Bay rum 24 ounces
- Water 24 ounces
- Rose water 24 ounces
- Vinegar of cantharides 6 ounces
- Triturate the quinine sulphate in a mortar with the vinegar of cantharides; add the water and enough acetic acid to entirely dissolve the quinine; add the glycerin, cologne spirit, bay rum, fluid ex-

tract of jaborandi and rose water; color red with carmine, and filter.

Hair Wash.

A hair cleansing preparation which presents a peculiar opalescence or iridescence when put up in cut glass bottles. Viewed by transmitted light it appears as an almost transparent, saffron yellow liquid.

- Rose water 5 quarts
- Saffron 75 grains
- Soap 1 ounce
- Alcohol 20 1/4 ounces
- Tincture of ambergris ... 3 drams
- Tincture of musk 3 drams
- Tincture of vanilla 3 drams
- Oil of bergamot 40 minims
- Oil of lavender 90 minims
- Oil of clove 50 minims
- Oil of rose 6 grains

Boll the finely divided soap and the saffron with some distilled water until the soap is completely dissolved; add the other ingredients; mix intimately and let stand for some days to allow the coarser particles of saffron to settle.

Hair Wash.

- Potassium carbonate 2 1/2 ounces
- Sassafras wood 8 ounces
- Rose water 4 quarts
- Orange-flower water 4 quarts
- Alcohol 1 quart

Macerate the ingredients for one month. The carbonate of potassium and the alcohol cleanse the hair and remove the fat. After using this wash and drying the hair, the gloss should be restored by the application of a suitable preparation.

Hair Cleanser.

- Ammonia water 3 1/2 ounces
- Tincture of cantharides .. 3 1/2 ounces
- Rosemary water 8 quarts
- Glycerin 10 1/2 ounces
- Oil of rose 3/4 ounce

The tincture of cantharides is made by macerating 1 1/4 ounces of powdered Spanish flies in one quart of strong alcohol. The caustic ammonia is similar to potassium carbonate in its cleansing effect and the glycerin makes the hair soft.

HAIR DYES.

The custom of dyeing the hair is universal in the Orient; in the Occident also, hair dyes are frequently used, mainly to hide the grayness of the hair, sometimes to give the hair a preferred color. Hair dyes may be divided into those which contain the dye already formed, and those in which the dye is produced in the hair by some chemical process. Some dyes contain substances which are decidedly injurious to the hair, and are liable to cause baldness.

In using hair dyes which consist of two separate portions, it is necessary to remove the fat from the hair before applying the dye. This may be done by washing the hair once or twice with soap and applying the dye when the hair is nearly dry. For this purpose the dye should first be diluted; if the color is not deep enough, the process is repeated. If the preparation is used at once in a concentrated form, a color may result which has no resemblance to any natural tint; hair meant to be black may assume a metallic bluish-black gloss.

Lead Hair Dye.

- Oxide of lead 4 pounds
 - Quicklime 1 pound
 - Calcined magnesiu 1 pound
- The ingredients are rubbed to a very

fine powder and for use are mixed with water, applied to the hair and left there from four to twelve hours until the desired tint (light brown to black) is obtained. The powder is then removed by washing. The lime, by its caustic effect, acts destructively on the horny substance of the hair; lead preparations, without exception, are very injurious.

Potassium Permanganate Dye.

Potassium permanganate . . . 5½ ounces
Distilled water 2 quarts
Crystalline potassium permanganate is soluble in water, forming a dark violet solution. When brought in contact with an organic substance like paper, linen, skin, horn or hair, the solution of permanganate is rapidly decolorized and imparts to the substances named a brown tint, due to the formation of hydrated oxide of manganese. For use as a dye the hair is washed to remove the fat, and the dilute permanganate solution applied with a soft brush; the color is produced at once. According to the degree of dilution this solution can be made to give any desired color from blond to very dark brown; it can also be used to dye the beard.

Most all hair dyes stain the skin, hence care should be taken to protect it during their application.

Silver Hair Dye.

Brown Dye.

(1.)

Potassium sulphide 7 ounces
Alcohol 32 ounces
Preserve in white bottle.

(2.)

Silver nitrate 4½ ounces
Distilled water 32 ounces
Preserve in dark bottle.

Black Dye.

(1.)

Potassium sulphide 8 ounces
Alcohol 32 ounces
Preserve in white bottle.

(2.)

Silver nitrate 5½ ounces
Distilled water 32 ounces
Preserve in dark bottle.

In the above formulas the silver solution should be kept in a dark amber-colored bottle, or one of black glass, as silver salts are decomposed by light. For use some of the potassium sulphide solution or No. 1 is poured into a cup and the hair is moistened with it by means of a soft brush. The silver solution, or No. 2, is poured into a second cup and applied with another brush.

The sulphide of potassium readily dissolves in water, and the solution must be filtered before it is filled into bottles for sale. The solution should be kept in well-closed bottles. When the two solutions are brought together black sulphide of silver, which darkens the hair, is produced. This preparation gives a disagreeable odor, which may easily be removed by washing the hair with water.

Golden Hair Water.

This is not a dye, but a bleaching agent which changes dark hair to a light blond or golden yellow. The preparation consists of peroxide of hydrogen, a substance possessing marked bleaching properties. It is made on a large scale by many manufacturers, and is readily obtainable. When applied to the hair as a bleaching agent, it must be used in a dilute solution. Those

who use it for the first time should always make preliminary trials upon samples of the hair like that which is to be bleached. The hair is first deprived of fat by washing with soap solution, the soap is washed out with water, and the peroxide of hydrogen then applied.

Whisker Dye.

(1.)

Lead acetate 1¼ ounces
Distilled water 1 pint

(2.)

Caustic potassa ¾ ounce
Distilled water 1 quart

Dissolve the acetate of lead in the warm water; filter the solution, and add ammonia water until a precipitate ceases to form. Collect the precipitate on a filter and wash it eight or ten times with distilled water.

DEPILATORIES.

Certain combinations of sulphur with the alkaline metals, calcium, barium and strontium, rapidly destroy the hair, and it is for this reason that tanners use the gas lime from gas works, which contains calcium sulphide, for removing the hair from hides. All the depilatories used for cosmetics, even rhusma, employed in the Orient for removing the beard, owe their activity to the presence of calcium sulphide. The latter substance is not by any means a harmless depilatory, for it has often done serious harm through careless application by persons unfamiliar with its caustic and corrosive properties. It is absolutely necessary to protect the skin against its action; otherwise superficial irritation or even destruction of the skin may result.

Calcium Sulphide Depilatory.

Calcium sulphide 4 ounces
Sugar 2 ounces
Water 2 ounces
Starch powder 2 ounces
Oil of lemon 30 minims
Oil of peppermint 10 minims

The resulting mass must be filled at once into an air tight jar, as the calcium sulphide is decomposed by the atmosphere.

For use some of the mass is moistened with water, painted on the skin and after thirty or forty minutes washed off with water. This and all other depilatories act only temporarily, that is, they destroy only the hair projecting above the surface, without killing the hair bulbs; after some time the hair grows again and the preparation must be reapplied. Barium sulphide is likewise used as a depilatory, but it decomposes more readily.

Pharmacists in North Carolina.

The North Carolina Board of Pharmacy has issued in printed form its twenty-third annual report, which was submitted to the governor June 1, last. From a personal inspection of drug stores in a large number of towns, Secretary Hancock found many irregularities and violations, but to a large extent, he says, these have now been corrected. North Carolina is the first and only southern state which has an inspector in the field and many letters had been received asking the results of this part of the board's work. During the last fiscal year fifty-two applicants were registered by examination and seventeen physicians living in towns of less than five hundred inhabitants were registered without examination.

INDIAN HOSPITAL FORMULAS.*

Alum and Zinc Eye-Drops.

Alum 2 grains
Zinc sulphate 12 grains
Glycerin 1 ounce
Distilled water 6 ounces

Alum and Zinc Eye-Drops.

(Lapis Divine.)

Divine stone 8 grains
Wine of opium 1 dram
Distilled water 1 ounce

(*"Divine stone" is made by fusing in a glazed crucible equal parts of copper sulphate, potassium nitrate and aluminum sulphate, adding 1/50th part of camphor at the end of the process. When cold, break in pieces.)

Carminative Mixture.

Tincture of ginger ½ dram
Tincture of gentian compound ½ dram
Tincture of chloroform, compound ½ dram
Aromatic spirit of ammonia 20 minims
Oil of cloves 1 minim
Distilled water 1 ounce

Compound Syrup of Camphor.

Camphor 30 grains
Benzoic acid 45 grains
Oil of anise 30 minims
Acetic acid 1½ ounces
Powdered ipecac 2 drams
Dilute alcohol ½ ounces
Tincture of opium 2½ ounces
Tincture of squills 5 ounces
Syrup, enough to make . . . 20 ounces

Mixture for Asthma.

Potassium iodide 1 dram
Potassium bromide 4 drams
Ammonium carbonate 1 dram
Tincture of belladonna 1 dram
Tincture of lobelia 3 drams
Ether 3 drams
Spirit of chloroform 2 drams
Camphor water to make . . . 12 ounces
Dose, 1 ounce.

D. T. Mixture.

(Mist. Capsul Comp.)

Solution of strychnine . . . 5 minims
Tincture of capsicum 10 minims
Dilute nitric acid 15 minims
Compound tincture of cinchona 20 minims
Water, enough to make . . . 1 ounce

Saline Mixture.

Magnesium sulphate 1 dram
Potassium citrate 10 grains
Solution of ammonium acetate 2 drams
Spirit of ether 15 minims
Camphor water to make . . . 1 ounce

Lotion for Eczema.

Prepared calamine 2 drams
Lead carbonate 1 dram
Zinc oxide 2 drams
Lime water 6 ounces
Water 20 ounces

Evaporating Lotion.

Ammonium chloride 3 drams
Vinegar 2 ounces
Alcohol 2 ounces
Water 6 ounces

*Selections from the prescriptions used in the Public Hospitals of British India. From Chemists and Druggists Diary 1905.

Startin's Lotion.

Calamine	2 drams
Zinc oxide	2 drams
Sodium bicarbonate	1 dram
Glycerin	2 drams
Lime water to make	8 ounces

Tannin Eye-Drops.

Tannic acid	$\frac{1}{2}$ to 1 dram
Glycerin	2 drams
Water	5 drams

Dissolve and filter.

Emulsion of Codliver Oil.

Codliver oil	10 ounces
Powdered tragacanth	50 grains
Tincture of benzoin	1 ounce
Spirit of chloroform	1 ounce
Glycerin	4 ounces
Oil of bitter almonds	10 minims
Oil of lemon	10 minims
Distilled water enough to make	20 ounces

Place the oil in a three-pound wide-mouthed bottle; pour into it the tragacanth and tincture and spirit mixed; agitate briskly for a minute; then add at all once, 5 ounces of water, and again agitate; lastly, add the oils, glycerin and the rest of the water.

Seidlitz Powder for Children.

Sodium bicarbonate

30 grains
Tartarated soda

10 grains
Dissolve in one ounce of water, adding a little syrup and essence of lemon. Then in another glass dissolve eight grains of tartaric acid in one tablespoonful of water. The contents of the glasses should be poured together, and the whole drunk while effervescing. An agreeable mild aperient in the warm weather for strong children, but it is not one which should be frequently used.

Staining Bacteria.

Buerger (Med. News, Jour. Am. Med. Assoc.) describes a new method for staining capsules of bacteria which depends on the rapid fixation of the living bacteria, and which, when spread in a medium, prevents the dissolution of their capsules. The required solutions are: (1) Mueller's fluid with mercury bichloride, about 5 per cent. (2) Beef, human or other blood serum, diluted with an equal amount of normal salt solution; or acetie or pleural fluid. (3) Alcohol, 80-95 per cent. (4) Tincture of iodine, U. S. P. (5) Freshly prepared stain, anilin water-gentian violet made as follows: Anilin oil, 10cc.; water, 100cc.; shake, filter and add 5cc. of a saturated solution of gentian violet; or 10 per cent. aqueous fuchsin. (6) Two per cent. aqueous salt solution. The culture is thinly and carefully spread over a perfectly clean slip by means of a drop of diluted serum. Just as the edges begin to dry, the fixing fluid, solution No. 1, is poured on, the cover gently warmed over the flame for about three seconds, rapidly washed with water, flushed once with alcohol and then treated with tincture of iodine for from one to two minutes. The iodine is in turn thoroughly washed off with alcohol and the specimen dried in air. Staining for two to five seconds, and washing with salt solution completes the procedure. The specimen is mounted in salt solution and rinsed with vaseline. Sputum and pus can be stained in a similar manner, the addition of serum being unnecessary, except in very mucoid, stringy, purulent exudates.

OUR
LETTER BOX

DR. RUSBY DRAWS A MORAL.

New York, Dec. 29, 1904.

Editor Pharmaceutical Era:

Your editorial in the December 22, 1904, Era, page 631, "Has Pharmacy Come to This?" with its conclusions that "108 out of 159 pharmacists in Chicago have purchased dithymol diiodide in good faith from irresponsible parties without any test whatever as to its purity," and that "The moral is to purchase only from reputable dealers who accept responsibility for the quality of their goods," is only "fair to medium." Some of the dithymol diiodide to which attention has been recently directed and which has been found more or less seriously impure, has been furnished by parties in whom, if in anyone, the American pharmacist might reasonably confide. Therefore, the moral is not as you state it, but is, "Buy nothing that has not been tested." There is no other rule of safety than this. If it is impossible (as it is) for a pharmacist to test everything, then the only recourse is to organize some sort of a testing bureau. The 139 Chicago pharmacists are but a fraction of those who bought this article. Imagine those thousands making tests when a few tests by a bureau, properly certified, would accomplish the purpose! What a wicked waste of time and material, even if the method were possible. Yet, as you say, "The law holds them entirely responsible."

H. H. RUSBY.

MR. FORBES ON PERCENTAGE SOLUTIONS.

Cincinnati, Dec. 22, 1904.

Editor The Pharmaceutical Era:

I am truly grieved to know that my editorial in the November issue of "Drugs and Sundries" has collided with Brother Hynson's corns (see Era of Dec. 8, 1904, page 576). That editorial dealt with the question of solutions in which the dissolved body has to bear a definite relation of some kind to the amount of solvent, and I had not the slightest idea that he claimed for himself originality for a method which is obvious to every chemist, and which has been practiced ever since the invention of percentage solutions and the subsequent attempts at sitting on two stools of unequal height, by allying weight and volume.

My whole contention in that editorial, was that a simple rational or proportional solution is more easily made and used, than one which requires the consideration of four factors: the volume occupied by a body when in solution; the relation of the weight of the solvent, to its volume; the temperature to which this relation is referred, and the decimal relation of the dose weight to the total weight; these factors, moreover, vary with every different salt and solvent, and I think that common sense votes my ticket.

Our tinctures, volumetric solutions and most of the official liquors, are based upon the principle which I contended for, hence, Mr. Hynson's personal abuse of

me bounces from my shoulders onto those of the revisers of the U. S. Pharmacopœia and the editors of the U. S. Dispensatory, one of whom, in the prefatory to the division of liquors, calls attention to the "risk of frequent serious errors, for the sake of an idea."

My position in favor of simplicity as against complexity, receives an unexpected support from the closing paragraph of Mr. Hynson's letter, as 240 grains of argyrol and 378 grains of water will make a rather full-bodied "fluid ounce" 518 minims; and also from his estimation in a previous paragraph, that one fluid ounce of a fifty per cent. solution will require 310 grains of argyrol, when it really requires but 309.

The inference is plain. No such errors would have crept into his mathematics had he followed the straight and narrow path of the proportional method and eschewed "intricate problems," as advised by Prof. A. B. Stevens in a late paper in Merck's Report, and he would have not fallen a victim to an "idea."

Waiving all consideration of Mr. Hynson's "psychic" vagaries, I will simply say that if he or his "ten-year-old child," can measure six fluid drams of water three times in succession in three separate average one-ounce graduates, and get 342 grains of the liquid each time, I will oblige him and "blush"; but until he can do this, I shall feel justified in wearing my everyday complexion.

J. WISCHELL FORBES.

Editor "Drugs and Sundries."

TELEPHONE SITUATION IN BROOKLYN.

Editor The Pharmaceutical Era:

I liked your "old clothes" much better. Regarding the telephone situation, we in Brooklyn are not at all well off; the corporation here is supposed to be free and independent of the N. Y. Telephone Co., hence we can get no cheap contract rates, and must be content with commissions.

I take great care to note all particulars of my telephone calls; in fact, my cash register throws out a separate slip for them, but never, since I have been here, has the record agreed with the number of calls reported in the bill rendered. When the shortage amounts to three dollars and the commission is only four dollars, one hardly feels repaid by making but one dollar for his month's effort and responsibility.

When are the new N. A. R. D. schedules to go into effect? We have not seen any Peruna contracts over here as yet.

Respectfully,

NELSON S. KIRK.

Antiseptics for Telegraph Poles.

The telephone and telegraph companies have appealed to chemistry for an embalming fluid that will paralyze the forces of decay in their poles. The United States Bureau of Forestry has undertaken the experimental work and has progressed so far as to report upon some results. The experts found that by the treatment of the wood with antiseptics they made it abhorrent to the fungi to which the cedar and chestnut poles have come as a treat. Where the period of usefulness had been fixed at from ten to fifteen years, it is now thought that the working age of any pole may be prolonged indefinitely.

QUESTION BOX

Kefir Grains: Fermented Milk.

(T. L. E.)—Kefir, sometimes spelled kaphyr, kefir or kephir, is a fermented milk, produced by a peculiar fungus, also called kefir, and found in the Asiatic regions, near the Caucasus. The origin of this ferment is unknown. It exists, however, and in the fermentation of the milk, new kefir granules are produced, and the ferment is thus presented in an "undying series of generations." According to Struve the alterations produced in the milk by the ferment, and the manner in which the new kefir is generated is not well understood, but a chemical analysis of the kefir grains has shown them to be composed of:

Water	11.21
Fat	3.99
Pepton-like substance, soluble in water	10.98
Protein substances, soluble in ammonia	10.32
Protein substance, soluble in potash	30.39
Insoluble residue	33.11
	100.00

The insoluble residue, after being soaked in dilute potash solution, is found to consist of the bacterium "Dispora Caucasia" originally described by Kern, mixed with some other, undoubtedly accidental bacterial forms. Hence, it may be concluded that the thirty-three per cent. of ferment bodies constitute the only active part of the granules. Milk which has been fermented in bottles, by means of this kefir, is found to contain but little alcohol after twenty-four hours, and likewise but a small amount of carbonic acid gas. After forty-eight hours these are present in larger quantities, and in still greater ones after seventy-two hours.

Fermented milk from kefir may be prepared by the following process: The dried fungi, or kefir granules, are soaked for three hours in lukewarm water, then washed repeatedly with pure water, placed into fresh milk at a temperature of 30° C. (86° F.), and the latter renewed every day. If occasionally (but gently) agitated, it requires about eight days for the fungi to become enlarged, of a whitish color, and specifically lighter so as to rise to the surface. In this condition they are fit for use. To prepare the "kefir" proper, as it is called among the mountain inhabitants, the fungi prepared as above are covered with six to eight times their volume of fresh, cool skim-milk, the vessel is closed with a cork, and set aside for twenty-four hours at a medium temperature, occasionally agitating. The liquid is then strained off, the fungi washed with cold water, and one or two further quantities of milk treated in the same manner. The resulting liquid is a beverage resembling fresh buttermilk in appearance and taste. Kedirkumys, or, as it is there called, kapyr, is prepared from the preceding by mixing one part of the kefir with two parts of fresh cool milk, pouring the mixture into champagne bottles, corking well, and setting aside, for 24, 48 or

72 hours, according as a "weak," or "midding strong," or "strong" kapyr is wanted.

Both "Modern Materia Medica" states that milk acted upon by kefir seed "is in a state of continuous fermentation, and therefore of constant change as regards both its composition and its medicinal action; so that fresh kefir of the first two days, which is used especially in cases of disease of the thoracic organs, is moderately laxative, while that three or four days old has a binding effect in diseases of the abdominal viscera. But it varies not only according to the duration of the vinous fermentative process, but also according to the kind, of cow's milk used, whether raw or boiled, creamy or skimmed, pure or diluted with water. It resembles kumys in its action, and is to be regarded purely as a dietetic article, like milk itself, only being more easily assimilated than the latter. In kefir the casein is peptonized and dissolved; in kumys, undissolved.

"Good kefir should foam like beer, should be more acid than thick, fresh milk, should not separate into a clear and a turbid layer, but should for the first few days have the consistence of good cream, and only later begin to grow more fluid."

Solution of Ferrous Iodide.

(Subscriber): "Please publish a formula for 'Liquor Ferri Iodidi' which may be used for the preparation of syrup of ferrous iodide, U. S. P., one part of liquor to seven parts of syrup. I have tried formula No. 220 of the National Formulary, but the preparation did not stay clear, even when kept in the dark, the solution soon assuming a brown color."

We know of no better formula for the extemporaneous preparation of syrup of iodide of iron than that suggested by the N. F. process, but a syrup so made cannot be called "U. S. P." In fact, the product is, as the N. F. states, almost practically identical with the official syrup. However, we give two formulas, the first being taken from the Australian Formulary and requiring for the preparation of the syrup one part of solution to seven parts of simple syrup.

(1.)

Iron wire, cut in small pieces	½ ounce
Iodine	726 grains
Hypophosphorous acid, 1 1/2 fl. drams.	
Water, a sufficiency.	

Digest the iron wire (free from oxide) and iodine in a glass flask, loosely stoppered with cotton wool, with two fluid ounces of distilled water; keep gently boiling with continual shaking, controlling the action by means of a cold-water bath until the liquid loses its yellow color. Heat to boiling; allow to cool, filter, add the hypophosphorous acid and pass sufficient recently boiled and cooled water through the filter to make two and a half fluid ounces, sp. gr. 1.033. Preserve in small full bottles, the corks of which have been soaked in melted hard paraffin. Dip cork and neck of bottle in melted paraffin and store away from direct light.

(2.)

The following formula is one proposed by F. E. Niece for the preparation of a solution of ferrous iodide as a stock preparation from which the syrup of fer-

rous iodide is readily made by mixing three parts (by volume) with fifteen parts (by volume) of syrup. The author states that the formula gives entire satisfaction if carefully carried out.

Glycerin and diluted hypophosphorous acids are recommended as valuable additions for preserving the solution for an indefinite length of time. The iron wire must be carefully cleaned from dust and grease by washing with a 2 per cent. aqueous solution of hydrochloric acid, then with distilled water, and rapidly drying, weighing out the desired quantity and introducing it into a clean, dry, pint flask, together with 3 fl. ounces of distilled water. The proportions of ingredients are as follows:

Iron (clean, dry, bright card teeth)	5 1/2 drams
Iodine (resublimed and dry)	2 1/2 ounces
Hypophosphorous acid (10 per cent.)	1 fl. dram
Glycerin (previously warmed, sp. gr. 1.25) ..	1 fl. dram
Water (distilled and ammonia-free) to make 4 ..	fl. ounces

The iodine is added in portions, one-fourth at a time. The flask is heated and the contents boiled for two or three minutes—the liquid having previously assumed a greenish hue; it is then filtered, using a long stemmed funnel, well-covered, and extending into the mixture of glycerin and hypophosphorous acid—the measure being brought to four fluid ounces with the distilled water rinsings of the flask, etc., passed through the same filter. The finished solution is preserved in one-ounce bottles of brown glass, completely filled, with the ground-glass stopper well paraffined, and stored in a cool, dark place. Well-cleaned implements, entirely of glass where they come in direct contact with the solution, must be used invariably throughout the entire process.

Condition Powder.

(H. C. 8.)—Try one of the following from The Era Formulary:

(1.) Common salt, 1 part; G. auber salt, 2 parts; sodium bicarbonate, 2 parts; juniper berries, 2 parts; gentian, 2 parts; ginger, 3 parts; linseed, 5 parts; fenugreek, 10 parts; asafoetida, 8 parts; fenugreek seed, enough to make, 150 parts. Powder separately and mix thoroughly. Dose, for horse or cow, large teaspoonful administered with the animal's food.

(2.) Alterative or Blood Purifying Powder: Cream of tartar, 5 pounds; sulphur, 5 pounds; white resin, 5 pounds; gum guaiac, 3 pounds; potassium nitrate, 2 pounds; powdered gentian root, 5 pounds; golden sulphuret of antimony, 6 ounces.

(3.) Ground linseed oil cake, 500 pounds; fenugreek, 50 pounds; anise seed, 10 pounds; African ginger, 5 pounds; common salt, 25 pounds; licorice root, 10 pounds. Reduce the ingredients to a coarse powder and mix. This powder, which has an excellent aroma and will not become "wormy," may be sold as a "stock food."

Linseed meal from the seed would be preferable in condition powder and stock food if for quick sale after mixing, but for a powder that is likely to remain in stock for a long time the presence of a large quantity of oil like that in linseed meal is objectionable, as it will cause a

ranced odor to be emitted from the packages.

Rheumatism Remedies.

(H. C. H.)—The salicylates for many years have been considered standard remedies for rheumatism, sodium salicylate and salol (phenyl salicylate) particularly being extensively employed. Salicin is also recommended, especially in acute rheumatism, to lower temperature, relieve pain, and reduce articular swelling. We give some general formulas:

(1.)

Sodium salicylate 2 drams
Potassium iodide 2 drams
Potassium acetate 2 drams
Fluid extract of cascara sagrada 4 fl. drams
Glycerin 4 fl. drams
Cinnamon water 4 fl. drams
Peppermint water, enough
to make 3 fl. ounces
Dose: Teaspoonful every four hours.

(2.)

Potassium iodide 256 grains
Tincture of quassia 4 ounces
Compound syrup of sarsaparilla enough to make 16 ounces

(3.)

Sodium salicylate 640 grains
Potassium iodide 320 grains
Fluid extract of buchu 2 ounces
Fluid extract of gelsemium 2 drams
Fluid extract of eimclifuga 4 drams
Fluid extract of pareira brava 2 drams
Alcohol 2 ounces
Glycerin 2 ounces
Syrup of orange, enough
to make 16 fl. ounces.

(4.)

Lithium benzoate 80 grains
Potassium iodide 30 grains
Tincture of serpentaria 2 fl. drams
Wine of colchicum 1 fl. dram
Fluid extract of manaca 1½ fl. drams
Chloroform water, enough
to make 8 fl. ounces

Shampoo Powders.

(E. J. C.)—"I have been trying to get a shampoo powder embracing the following points: (1) When dissolved in water there will be produced a generous, foamy shampoo liquid; (2) a powder that will not have to be put up in waxed paper, and can be sent through the mails in paper wrapper; (3) a powder of which ½ ounce or less when dissolved in water will make a quart of shampoo liquid. I have tried a powder composed of borax, 3 ounces; sodium carbonate, dried, 2 ounces, and powdered soap, 2 ounces. Dissolve ½ ounce in a quart of water. It did not work."

Without making a practical test, we should say that the incorporation of a suitable amount of powdered quillaya bark with the other ingredients you have named will probably enable you to secure a preparation which will remain tolerably dry in packages and at the same time one which, when used with water, will produce a satisfactory amount of lather. It is best, however, to be on the safe side and wrap the powders in paraffined or parchment paper to exclude moisture. The following is said to be a good formula, al-

though ammonium carbonate is easily decomposed on exposure to the air:

Ammonium carbonate 1 part
Borax 1 part
Quillaya bark 2 parts

Powder the ingredients, mix and add sufficient oil of bay to give a slight perfume, to which may be added any other desirable perfume. Divide into packages of about ¼ ounce in weight, each of which suffices for one shampoo. Directions to go with the powders: "Put the powder in a mug provided with a cover, pour on about a cupful of boiling water, cover, and let stand for a few moments. (A napkin or towel, wrapped around the vessel, to keep it hot a little longer, is said to improve the infusion of the quillaya.) When cool enough, use as ordinary shampoo liquor."

Hair Dye.

(W. H. P.)—See article by L. H. Turner elsewhere in this journal. Here are two other formulas:

Brown.

(1.)

Pyrogallic acid ½ ounce
Sodium sulphite ½ dram
Rectified spirit 1 ounce
Water 3 ounces
Dissolve the acid in the spirit, the sodium sulphite in the water, and mix.

(2.)

Silver nitrate, crystals 70 grains
Stronger water of ammonia, q. s.
Orange flower water ½ ounce
Glycerin ¼ ounce
Distilled water, to make 4 ounces
Dissolve the water in two ounces of the water and ammonia water, until the precipitate first formed is dissolved. Then add the other ingredients, making up to 4 ounces with distilled water. Put up in dark glass bottles.

Directions for use: After the hair has been well washed with a little oxoac and water, apply the dye evenly with a soft brush, night and morning, until the proper tint is obtained. The dye should not be allowed to come in contact with the skin. Oil must not be used on the hair while the dyeing process is being done.

Poultry Food.

(H. C. C.)—Almost every poultry fancier has his own ideas as to what constitutes a good food for fowls. We have seen it stated that sunflower seed constitutes one of the very best and most acceptable foods for poultry of every description; that it not only conduces to the production of eggs, but fowls fed on it are remarkable for the brightness and freshness of their plumage, and for which reason it has been especially commended to raisers of fowls for exhibition. The following are typical formulas for preparations "to make hens lay eggs:"

(1.)

Iron sulphate 1 part
Red pepper pods 1 part
Black pepper 2 parts
Lime phosphate 8 parts
Bread crust or crackers 8 parts
Fœnugreek 4 parts

Powder the ingredients, and add 4 parts of clean white sand. If preferred, well-bolled white beans may be used instead of the bread crust. The beans should be pressed through a colander to remove the

hulls, and then worked up with the powders. Label: For every dozen hens, add one level tablespoonful of the powder to the ordinary food, mixing it thoroughly, so that it may be as evenly distributed as possible.

(2.)

Capsicum 2 parts
Fœnugreek 1 part
Allspice 4 parts
Ginger 6 parts
Mix. Directions: One teaspoonful of the powder to every pound of food given to the hens. Use twice a week.

(3.)

Ground hoes 4 ounces
Ferrous sulphate ½ ounce
Capsicum ½ ounce
Fœnugreek 2 ounces
Black pepper 1 ounce
Sodium sulphate 1 ounce
Silver sand 2 ounces
Ground dog biscuits 8 ounces
A heaping teaspoonful is to be mixed with the food for twenty fowls.

Solution of Iron Peptonate With Manganese.

(O. W. P. G.)—The following formulas are given in the "Supplement" to the German Pharmacopœia:

Solution of Iron Peptonate.—Dissolve 8 grams of dry peptone in 100 grams of hot water, cool, and add 174 grains of "liquor ferri oxychlorati (G. P., containing about 3.5 per cent. of iron), neutralize exactly with a 10 per cent. solution of caustic soda, collect and wash the precipitate, mix it with 200 grams of simple syrup, warm and add sufficient solution of caustic soda to dissolve it. Cool and add 100 grams of alcohol, 3 grams of tincture of orange, 1½ of aromatic tincture, 1½ of tincture of vanilla, 5 drops of acetie ether, and water to make 1,000 grams.

Solution of Iron Peptonate with Manganese is made in a similar way, but before the addition of the alcohol to solution of iron peptonate, 50 grams of "liquor mangani glycosati" are mixed with it. The latter is made by dissolving 87 parts of potassium permanganate in 5,000 of hot water, cooling to 60° C., adding 50 parts of glucose, collecting the precipitate after an hour, washing, pressing and dissolving with gentle heat in a mixture of 600 parts of glucose, 325 of solution of soda, and sufficient water containing 5 per cent. of alcohol to produce 1,500 parts.

Solution of Saccharated Iron with Manganese is made by dissolving 200 grams of saccharated iron in 644 grams of water, and adding 50 grams of the solution of glucose-manganese (see above), 100 grams of alcohol, 3 grams of tincture of orange, 1½ grams of aromatic tincture, 1½ grams of tincture of vanilla, and 5 drops of acetie ether.

See also this journal for September 10, 1903, page 269.

Fighting a Horde of Rats.

In an attempt to halt the devastation by rats in the Charentes district of France, the Prefectures had posters displayed recommending the use of Danzey virus, supplied by the Pasteur Institute; sulphide of carbon and nux vomica. The virus failed completely, the nux vomica gave good results, but the sulphide of carbon is not yet reported upon.

SOLE AGENTS

Era Key to the U. S. P.

Every druggist and physician should have copies of this valuable little book in their vest pocket.

It contains a complete list of the drugs and preparations of the Pharmacopoeia and gives the official titles, common names and synonyms of the drugs, chemicals and preparations their strength and doses in Apothecaries weights and measures with equivalents in Metric Terms.

As a companion to the U. S. Pharmacopoeia the Era Key gives to the physician and pharmacist an epitome of the contents of the official guide, in convenient shape for every day use and quick reference and in a form that will assist them as prescribers and dispensers.

FEES TO PAY THE N. A. R. D.

Besides Annual Dues, One for Organization Is Required.

MR. DUBLE TELLS WHAT IT COSTS TO JOIN THE NATIONAL ASSOCIATION.—PREDICTIONS AS TO THE EFFECTS OF HIS STATEMENT.—MR. SWANN'S EXPLANATION.

An impression, until now uncorrected, prevails that the total expense of membership in the N. A. R. D. is the annual dues of four dollars. So those druggists who are being asked individually by the organizers to come into the fold are often surprised to learn that they must first of all pay an organization fee of \$2.50. This fee needs be paid but once, and with the first year's dues amounts to \$6.50. If subscription to "Notes" is desired, the same costs fifty cents, and makes the total an even \$7.00.

The statement of these expenses has never once been made by Mr. Duple, N. A. R. D. organizer, in any local association meeting, nor yet in the conference meeting, so that a large number were left in ignorance of the fact. As now stated by Mr. Duple, that the organization fee is obligatory everywhere and that it has been collected ever since the founding of the association. There are prominent and sincere friends of organization in Greater New York who fear the success of the movement may be jeopardized by the announcement of unexpected fees at so late an hour. But others, while admitting that withholding the announcement was a mistake, which might have been a fatal one, yet say that they do not believe that it will hinder the work of organization. They count on the fairness of the New York druggists in wishing to pay the expenses of their own organizing. S. V. B. Swann, secretary of the conference committee, is confident that there will be no set-back, and in a communication as this to say:

HEAVY EXPENSES OF ORGANIZATION.

"Our intimation that there is some misunderstanding in Greater New York in the work now in progress by the N. A. R. D., is based upon the supposition that the rank and file have not understood that in addition to the dues, \$4.00, the organization fee of \$2.50 is always collected from new organizations. To those who have kept in touch with the work of the N. A. R. D., this rule of that organization (N. A. R. D.) has been thoroughly understood. If it was not brought out at the meetings of the different associations and at the conference of the said associations, it was simply because it had been taken for granted that such a fee existed and was a part of organization of the city, and was known to all.

"Now, when we consider the character of their work undertaken in this city and the further fact that by the resolutions adopted at the conference and already approved by the Manhattan Pharmaceuti-

cal Association and the New York Retail Druggists' Association, that of recommending to their members that they join the N. A. R. D., which beyond much doubt will be accepted by all the other associations in Greater New York, and the action of the conference in requiring that the N. A. R. D. shall use their own men and money in undertaking this big proposition, and when you further consider that this work will involve the employment of at least six men for one year, you will readily see that the small amount required from each individual retail druggist will hardly be sufficient to defray the necessary expenses incident to the work of effecting a complete organization here in this large city of New York.

"I cannot, therefore, believe that the New York retail druggists would hesitate for one moment in the payment of the small dues and organization fee, considering the possibilities that are within our reach through a compact and solid organization, allied with a power of national significance that has demonstrated beyond a shadow of doubt what can be done by united action; and I do not believe, knowing as I do the great body of retail druggists in this city, that they would ask the retail trade of the balance of the country to furnish the "sinews of war" in this fight of ours for price protection and better conditions.

SMALL FEE NOT A BARRIER.

"I am willing to admit that there is some excuse for this on the part of the average retail druggist who has not kept in close touch with the ever changing conditions, but has been confined to his business so closely that he has not even taken the time to properly acquaint himself with the great forces now in motion to better his condition, and whose indifference has degenerated into a feeling, "the apathy of despair"; but to such of my friends, I want to say, remedy lies in organization and I do not believe even consider all the shortcomings of our trade, that after they have once been educated up to the proper standard, they will permit the small consideration of an organization fee to stand between them and assured prosperity.

"At the meeting of the New York Retail Druggists' Association, Mr. Peter Diamond, president, stated as follows: 'For years we have felt the need of organization in this city. For years we have been promised that the N. A. R. D. would come to New York; at last they are here. Will you now say, "Go back, we do not want to be organized?" I say, will any retail druggist of this city stand back and refuse to affiliate with the N. A. R. D. now, because of this small organization fee?'

"PHYSICIAN," NOT "DOCTOR."

The Society of Medical Jurisprudence at its last meeting, resolved unanimously against the vague title of "Doctor." Hereafter "Physician" only shall be good form.

OUT FOR N. A. R. D. DUES.

Association Collectors Begin This Work in New York.

G. V. Lincoln and J. D. Bellaire, N. A. R. D. organizers, started out last week to canvass individual druggists, to ask them to join the N. A. R. D., and to collect the initial N. A. R. D. dues from them. Mr. Lincoln said last Thursday that not one so far had declined to join.

"After the impression that New York would be hard to organize," he said, "I was much surprised to find how quickly the individual druggist fell in with the N. A. R. D. idea when once it was explained to him. Nowhere else have I found druggists in a more receptive attitude for it than right here in New York."

An important argument for the N. A. R. D. organization of New York, which seems to have been overlooked so far in the many speeches before local associations is suggested by Mr. Lincoln. It concerns the limited contract plan of the St. Louis Club, and how a local association can make this plan useful only if the said association is affiliated with the N. A. R. D.

"The proposition," he said, "is to the effect that the serially numbered goods be sold only to such jobbers as sign the contracts, they thereby becoming the selling agents. It is also to the effect that the minimum price at which these goods may be sold is to be fixed by the local associations, but provided such associations are affiliated with the N. A. R. D. Thus, it will be seen that if a jobber permits any of the goods to be sold by a retailer who refuses to maintain this schedule, he, the jobber, according to the contract, may be dragged into court, and publicly assessed the fine mentioned in the contract, which fine increases with each successive offense."

WOULD BE A CANCER DOCTOR.

Detroit, Dec. 31.—The following exhibits what is desired by at least one person under the medical practice law in Michigan. The letter is copied verbatim:

Sec Board of health

Dear Sir,

I am studying the 'Cure of Cancer (that alone) Can you direct me to an institution where I can take lessons by mail, or otherwise and obtain a Diploma Please answer and Oblige.

"Now, get a move on with those."

TRUST CUTS OWN CIGARS.

How the Tobacco Combine Seeks Control of All the Business.

REVIEW OF THE CONDITIONS HERE IN GREATER NEW YORK.—THE DRUGGIST HERE, THOUGH INSOLENTLY TREATED, IS NOT GREATLY INJURED.

Wherever the Tobacco Trust opens a retail store, the druggists of the same section may be gravely affected, as in Pittsburgh, or they may not be consciously so at all. The latter, on investigation, appears to be the case almost everywhere in Greater New York.

"With me," said one druggist, "the cigar trade is so small anyhow, Trust or no Trust, that it can hardly be considered as an asset of the business. And I suppose that I'm situated in this respect just as most of the others are. There's my little showcase, with a few choice brands, which are favorites of this or that customer, and I sell them casually, in a semi-social way. But as for cigars as an important feature, why, they pretty nearly drop out of the classification of trade altogether, and many of us would not be heavily grieved if we lost our cigars entirely. The business, however, amounts to two dollars a day with some, and on up to twenty dollars with others, according to location. This may now and then be a consideration for the druggist himself, but it's certainly too insignificant to inspire the Trust with the idea of buying up all the drug stores in order to make tight the retail cigar monopoly. It probably doesn't make the least perceptible difference to any of those Trust stores labeled: "Largest Retail Cigar Dealers in the World—One Profit, From Maker to Smoker."

THE MAKER A CUTTER ALSO.

It was learned that here, as in other cities, the Trust had appeared in the same stores where formerly independent cigar dealers had flourished, but it was also pointed out that the druggist, quite obviously, would never qualify as a subject for being similarly swallowed up. But evidences of his getting squeezed in another way were revealed.

"And the insolence of it!" exclaimed one man. "The Trust sells us cigars, oh, yes! But then the Trust's retail store cuts against us. There's the Cremo, a five-cent article, which the Trust sells at seven for a quarter. We get mad, of course, and many of us won't carry any of the Trust's goods. What then? Well! It prevents us from keeping certain brands, which are popular because well advertised, and when a customer demands one of these cigars, we have to offer something else or miss the trade. The thing to do would be to keep certain cigars, bought outside the Trust, and feature them as being of our own particular selection, and thus each man should build up a reputation for keeping unusually good stock at the different prices. Then, of course, he would have to protect his customer, from the fact that a certain brand of cigars 'runs down' after a while. He would make it his business to detect this even

before his customers, and on the instant switch off that brand for one that is up to grade."

UNFAIR COMPETITIVE METHODS.

Investigation would show that the druggist's returns on his cigar investment is yearly decreasing. There are, of course, notable exceptions, but these are the stores which do a regular cigar department business, employing as salesmen experienced tobaccoists. Many reasons are offered, but they point to the Trust's retail stores as an example of what may be accomplished by capital using unfair competitive methods. The coupon-giving campaign begun and continued by this concern, has made itself directly noticeable and many druggists are to-day conducting a cigar business more for the convenience of their patrons than with any idea of profit. Some, indeed, consider the cigar line a losing proposition.

While the Tobacco Trust has repeatedly deuced its connection with the "Largest Retail Cigar Dealers in the World," the independents have no hesitancy in saying that the firms are one and the same. The advertising in the newspapers is urged by these independent dealers as proof of Trust ownership. "Why," they ask, "should the retail concern so continuously boom trust made goods?"

HOW THE DRUGGIST IS INJURED.

"How can I compete with that corner Trust store?" demanded a druggist. "Even by buying at the very lowest price, my Cremo, Cubanole and other Trust brands, cost me \$31.50 a thousand. That's 3 2/20 cents each. Can I afford to sell them at seven or eight for a quarter? Yet the Trust keeps up the wholesale price and proceeds to cut the retail figure. They also give coupons, good for pianos and what not, in addition to redeeming the bands of some brands for other gifts. Is it fair to do this? We druggists, and other lines handling cigars, built up the trade for these brands in the days when there were no U. C. S. Company stores. We sold the \$33 cigars at five cents straight for a time, then we cut them to six for a quarter, but that was the limit. What's the result? The Trust now undersells us on goods which we have marketed for them."

The action of the Pittsburgh druggists in refusing to handle Trust goods while there were retail trust competitors, is generally commended here, especially since a victory was won there. But the small dealers ask despairingly, "How can we do it in New York, unless we organize? And then, could we do it?"

At the larger stores that feature cigar departments, Trust stores are cut below Trust prices, and they are not featured. Little Bengal cigars, a hot favorite of the U. C. S. Co. branches, where they sell at twelve cents for ten, are cut to eleven cents in these big drug stores.

The smaller drug stores cannot, of course, do this. "It is a serious proposition," say the druggists. "If the specialization continues, there may ultimately be branch stores of other Trust's, the rubber and other sundry lines, and these concerns could eat their pie and still have it, for the druggist would have to keep a stock of goods for the convenience of the man who forgot to buy at headquarters."

DANCED TILL DAWN.

Ball of Drug Clerks' Circle Was a Whirling Success.

It was a jolly crowd and a big one that attended the sixth annual ball of the Drug Clerks' Circle at Terrace Garden, last Wednesday night. Apparently all the apprentices of the pestle and mortar in the city were on hand, accompanied by their wives and other "crows' sisters," to the number of several hundred. When the festivities were at their height, President Philip Leroy and Treasurer Dr. Joseph Kahn compared notes, and with sighs of relief, agreed that it was the most successful jubilee in the history of the circle.

Dancing began at about 10 p. m., after the "Raymond" overture, by Thomas. Those who couldn't or wouldn't dance found plenty of comfort in the refreshment room. Among the kulgais of the little round tables were noticed Dr. George C. Diekman, Dr. William C. Anderson and Dr. Albert H. Brundage. Edward Kleine represented the younger generation of the teaching corps at the Brooklyn College of Pharmacy.

Nearly the entire assembly lined up for the "Tannhauser" grand march, shortly after midnight, led by President and Mrs. Leroy, after which there was more dancing and merry making until nearly dawn. By special permission, Dave McFadyen, baritone soloist, sang one of the latest popular hits, "Let's All Go Up To Maud's," by the author of "Meet Me In St. Louis, Louis."

The various committees, who together with the officers, were responsible for the good time, were as follows:

Arrangement Committee: M. Kuper-Smith, chairman; S. Norman, M. Mishkin, N. Klugman, H. Rudey, L. Wienter, H. Blumenthal, J. M. Gordon, Oscar Bean, S. Rodin, J. D. Robbins.

Reception Committee: Wm. Karlin, chairman; H. Luntz, H. Fertig, A. Ratnow, M. Levin, M. Silverman, H. Biltzer, S. Stein, I. Newstadter, M. Ossius, Ph. Shapiro, N. Gillman, B. Thorne, A.unner, A. Deutsch, D. Robinson, H. Lichtenstein, R. Jaffe, D. Ushkov.

Floor Committee: D. A. Lutz, chairman; B. Levine, floor manager; B. Koplowitz, I. Katz, J. Landes, B. Miller, Ch. Murray, J. Goodkin, M. Gollot, I. Khazen, A. Scheektman, H. Ziporces, Ch. Hochler, S. Fertman, M. Siegel, N. Klugman, L. Mishkin, Wm. Chomonsky.

Music by Prof. M. Schwartz; march director, M. Heicklen.

JOEL BLANC'S NEW JOB.

J. Leyden White ("Joel Blanc") has severed his connection with Dr. Garst, of the Pheno-Caffein Co., whose confidential man he has been for many years. He carries with him the good will and friendship of his former employer and becomes manager of the sales department of the Hentz Co., of Philadelphia, manufacturers of Hentz's Bitters, a full price article sold under the direct contract, serial numbering plan. Mr. White has been a persistent and enthusiastic worker in pharmaceutical organizations, and the trade will be pleased to learn that he will still work for price protection.

ATE WITH EPILEPTICS.**Why a State Pharmacist Did Not Like His Appointment.**

Rochester, Dec. 30.—R. T. Lakey, a graduate of the Buffalo College of Pharmacy, no longer desires to be state pharmacist of the Craig Colony for Epileptics, at Sonyea, N. Y. He was appointed to the position, having made an average of ninety-five per cent. in the state civil service list for pharmacist. But he declines to serve, and his reasons have aroused a great deal of comment.

"I paid a visit to the institution to look the ground over," he said, "and as far as I could see the place seemed to be an inviting one, inasmuch as the salary is \$40 a month and maintenance at the start, with a prospect of \$75 later on. Well, last Monday I went to accept the appointment. One of the assistant doctors told me I might as well go to work in the laboratory, which I did, although I was not yet officially in the institution's employ. At the first meal I was seated with two stenographers, while the doctors sat at a table by themselves. This was acceptable, but at the second meal I was told to eat in the ward with the patients, which I did, very much against my will. I can tell you it was not at all appetizing to sit at a table with thirty or more epileptics, some one of them throwing a fit every few minutes, and many of them half idiotic. Besides this there was a negro at the table. I did not regard the treatment as in keeping with my position and I assure you I resent being placed at a table with a negro. I am quite positive the physicians, who dined in luxury, would have declined to partake of their meal in the same way. A blacksmith gave up his room to me. This was a neat, clean room, and I have no objection to make on that score. I packed up and left the following morning, not having received my appointment and not caring for it either."

Mr. Lakey said that he was assisted in the pharmacy by a young patient, who has epilepsy in a mild form. The young man is not a pharmacist, he said, his acquaintance with drugs being what he had learned at the institution. He was informed that this young man had been "helping out" in the absence of a regular pharmacist.

BOOM FOR ROCHESTER PH. A.

Rochester, Dec. 29.—An active canvass is being made of the Rochester druggists to boom the membership of the Rochester Ph. A. A committee has the work well under way and it is expected that every druggist of standing will apply for membership. Besides holding instructive and entertaining meetings each month the Rochester association supports a bowling team and has an outing every summer. There is some talk of holding a banquet this winter, to stimulate interest. A number of new members have recently been added to the roll. The increase of the dues of the N. A. R. D. will not decrease the membership from Rochester. At the January meeting of the Rochester Ph. A. a proposition to raise the dues will be considered.

A TOBACCO INQUIRY.

From Washington comes the news that the Department of Justice has begun pro-

ceedings against the Tobacco Trust, through the appointment of A. E. Garner, a lawyer of Springfield, Tenn., as a special Assistant Attorney General to investigate the tobacco trade.

Several weeks ago F. G. Ewing, president of the Tobacco Growers' Association, after a number of communications with the department, was asked to come to Washington and discuss the features of the tobacco growers' side with Assistant Attorney General McReynolds. The names of several lawyers who would be acceptable agents to make an investigation, were suggested. Mr. McReynolds agreed with Mr. Ewing that his selection would be an acceptable one. His duties will be to inquire into conditions of the tobacco trade and to determine to what extent there is an unlawful conspiracy among tobacco buyers.

DODGE & OLCOTT CHARTERED.

The Dodge & Olcott Company, of New York City, has been incorporated with a capital of \$700,000. George M. Olcott, president, Francis E. Dodge and Francis H. Sloan, vice-presidents, are named as directors. They composed the former firm of Dodge & Olcott, and decided to incorporate in order to secure a better business organization.

The other officers of the company are Christian Beilstein, secretary; James H. Horn, manager of the New York warehouse; Emil Martens, treasurer, and Charles A. Hall, manager of the Bayonne factory. All of the foregoing have been long in the service of the firm and have become stockholders in the new company.

Robert Bach founded the business in 1798. It became Robert Bach & Co. in 1801, Bach & Bradish in 1821, and Dodge, Cumming & Co. in 1840. In 1850 the firm name was changed to Dodge & Olcott, and in 1859 to Dodge, Colvill & Olcott, and in 1861 to Dodge & Olcott.

IN NEW ENGLAND.

—Frank H. Wingate has been appointed by the Governor and Council, Police Commissioner of Nashua, N. H., to succeed Andros B. Jones, mayor-elect. Mr. Wingate owns a large drug store. He is a native of Somersworth and is well known in harness racing circles throughout New England.

—The executive committee of the Knox County, Me., Retail Druggists' Association, held a meeting recently, to discuss plans concerning the future of the newly-formed organization. The committee was entertained by C. H. Pendleton, the North End apothecary. There were present: C. H. Pendleton, C. H. Moor, W. F. Norcross, W. C. Pooler and L. M. Chandler.

—Druggists of Torrington, Conn., who have had more than their share of troubles of late, on account of the prevailing "cut prices," have formed an organization with the following officers: President, C. H. Dougal; vice-president, E. F. Nolan; secretary, H. E. Newport; treasurer, John Claxton; trustee, Charles Goodale.

—Dr. J. E. Cherry, of 101 Shawmut avenue, Boston, has been appointed a member of the new Board of Trustees of Panper Institutions.

DEATH OF JAMES OSCAR MAY.

Waterbury, Conn., Dec. 31.—James Oscar May, of Naugatuck, died at his residence, last week, after an illness of several months. He was a life-long resident of the borough and a descendant of the first settler of the east side of the river.

In addition to his retail drug business, he originated a number of proprietary medicines. Eighteen years ago Mr. May, in company with New York parties, established the Diamond Laboratory Company, with a factory in Union City. The deceased was also largely interested in the development of land in different parts of the country, notable near Yonkers, N. Y., and Brooklyn, and also in his native town. He was an official in the Brooklyn Co-operative Building Bank, and was a member of the trolley syndicate at Portland, Me., and president of a gold mining company operating in Alaska. He at one time was president of the Naugatuck Board of Trade and represented the First Ward of the borough as Burgess from May, 1903, until May, 1904.

He was a member of Shepherd Lodge, F. and A. M., and of Gavel Lodge, K. of P. He is survived by a wife and two daughters.

CODICIL TO FRENCH WILL.

Boston, Dec. 31.—A codicil to the will of the late Charles E. French, the wholesale drug merchant, who recently died, leaving a large fortune for various educational purposes, has just been found and filed. By this codicil the Massachusetts Homeopathic Hospital gets \$4,000, in addition to the \$1,000 already given. It is particularly stated that no money whatever shall be spent by committees or others "for junkets or dinners," and this terse sermon follows: "Industry prevents sin."

BURNED BY PERFUMERY.

Boston, Dec. 31.—In the Hanover street laboratory of the Jaynes Drug Company, Miss Georgia Ramsdell, employed in the chemical department, was trying to put a large bottle of freshly-made perfumery upon a high shelf, when the bottle slipped and fell, and its contents caught fire from a nearby gas jet. Both Miss Ramsdell and Timothy Raymond, who came to her aid, were severely burned.

A good criterion as to purity of the better grades of geranium oil is their solubility. Oils which do not dissolve in three parts of seventy per cent. alcohol should be rejected as inferior.

"Thirsty, Jack?"

HIERONIMUS A. HEROLD.

Mr. Herold is best known to the drug trade of New York City as the counsel for the Board of Pharmacy. This position, which he has held for the past four years, he owes to his pharmaceutical training, obtained at the New York College of Pharmacy, of whose Alumni Association he is a member. Although a New Yorker by birth, Mr. Herold spent the greater part of his life in Missouri. He attended college in the West, came East, and was graduated from the N. Y. C. P., and then studied law. He was admitted to the bar in 1897. Besides being an expert in pharmaceutical jurisprudence, Mr. Herold makes a specialty of negligence law and surrogate's practice. He is a member of the College of Pharmacy, State Ph. A., German Apothecaries' Society, Society of Medical Jurisprudence, New Rochelle Yacht Club, New Rochelle Rowing Club, and the Bar Association.

G. W. FULLER'S FATAL FALL.

Syracuse, Jan. 2.—George W. Fuller, the veteran druggist of Pulaski, passed away Wednesday afternoon, as the result of an accident. One week ago last Thursday, Mr. Fuller slipped on an icy sidewalk near his residence, while on the way to his place of business, and in falling, sustained a severe fracture of the hip bone.

Mr. Fuller was one of the most highly respected of Pulaski's business men. He was born in Cazenovia, March 11, 1818, and would have been eighty-six years old at his next birthday. He was educated at the Cazenovia Seminary. At the age of eighteen he entered the drug establishment of the late Dr. Hiram Baker as clerk, and remained there about three years. He then went to Newark, Wayne county, and later, just sixty-four years ago, he went to Pulaski as a dry goods clerk. Next he conducted a grist mill, and in the store and hardware business, and in 1857 purchased the business of D. Brunson Meacham. In the fire of 1881 the Fuller block was burned. A handsome

new block was erected the following summer, and since that time the business has been conducted by Mr. Fuller and his son, George H. Fuller. Mr. Fuller was a public spirited citizen, and he had a host of friends.

HIGHER DUES IN ROCHESTER.

Rochester, N. Y., Jan. 3.—At the meeting of the Rochester Ph. A., to be held Friday, of this week, the question of an increase in the membership dues will be discussed. Owing to the increase in the N. A. R. D. dues, it has become necessary to raise the assessment of the Rochester members, as the dues are paid out of the treasury of the association and the present dues are insufficient. It is the prevailing sentiment that the N. A. R. D. was justified in increasing the dues, and so no serious objection is expected locally. The association will also take up the matter of establishing a college of pharmacy in Rochester and of lending assistance to the drug clerks in the proposed organization of an association.

SEEK A CLERK'S PARDON.

Syracuse, Jan. 2.—The friends of Frederick E. Thompson, the former Syracuse drug clerk, who as sent to Auburn prison, after a sensational trial in this city, are making an effort to have him released. Former State Senator Henry J. Coggeshall, of Waterville, has been engaged and is using his best efforts in Thompson's behalf.

Thompson was tried and convicted of manslaughter in the first degree, and was sentenced by Judge Emerson to seven years and six months. He has nearly four years still to serve.

LAW ON COMBUSTIBLES.

Montreal, Dec. 31.—An ordinance regulating what druggists may handle in the way of explosives is causing its day of agitation here. A strong protest from Lyman, Sons & Co., wholesale druggists was read before the City Council on the subject. The letter declared if the by-law was adopted as drafted the firm cannot do business in Montreal. The letter explains, according to the published report of the by-law, it prohibits the storing of collodion, ether, phosphorus, and that benzine, kerosene, gasoline, alcohol, can only be stored in quantities not exceeding one hundred gallons, or about two barrels. But a wholesale business could not be conducted in that way. The firm buys a carload of alcohol at a time, and the talk of two barrels was absurd. The letter goes on to say that the insurance companies allow the storage of twenty barrels of spirits of turpentine, three barrels of petroleum oil, and a hundred barrels of phosphorus in water, with no restriction whatever on alcohol, collodion or ether. Should the by-law pass in its present form the firm would look to the city for heavy compensation of damages.

Diogenes trimmed his lamp carefully—"Quo Vadis," quoth the corner policeman.

"I go," said the sage, "in search of an honest druggist."

"And should you find him?"

"SB! Don't tell Hearst. I'm going to publish his name in the *Maffius Dailicus*, at a talent a head."

SUES PHARMACY INSTRUCTOR.

On a summons obtained by Hieronimus A. Herold, counsel for the Board of Pharmacy, Clemens M. Mueller, of 1606 Second avenue, New York City, will appear to-day in the 57th Street Police Court to answer to the charge of larceny. This is in addition to a civil suit already begun by Mr. Herold to recover \$85 paid by Frederick L. Burdett, of Brooklyn, to Mueller as the price of training him for the Board of Pharmacy examinations.

Mueller advertises as an instructor in pharmacy, and makes a specialty of coaching young men for the examinations. Last August, Burdett agreed to pay Mueller \$75 for this training. He studied all Summer. Just before the October examination Mueller asked for an additional \$10. This Burdett refused to pay, on the ground that the original price asked and paid was only \$75. Burdett took the examination and failed. When he complained to Mueller that he had failed to carry out his contract, Mueller, it is alleged, said that it was owing to Burdett's refusal to pay the \$10. Burdett finally paid Mueller \$10, and prepared to take the next examination. Before this examination took place Mueller, it is alleged, demanded another \$15, again for the purpose of "fixing" a member of the board, who was in a hurry to get the money. Burdett again refused, took the examination for the second time, and failed. The matter was placed in the hands of Mr. Herold, who began suit against Mueller last week to recover the \$75. He also had him summoned to appear in court last Saturday on the extortion charge, and Justice Barlow issued another summons, returnable to-day.

AMERICAN CHEMICAL SOCIETY.

The fourth regular meeting of the American Chemical Society, New York Section, will be held to-morrow evening, January 6, in the Assembly Hall of the Chemists' Club, 108 West Fifty-fifth street. The programme is as follows: F. v. D. Crusser, "The Application of Bismuth Ammonium Molybdate to Gravimetric Analysis"; F. W. Clarke, "Recent Progress in the Chemical Department of the Geological Survey"; W. A. Noyes, "The Work of the Bureau of Standards"; H. W. Wiley, "Last Year's Work and Future Plans of the Bureau of Chemistry."

RICHARDSON IN A NEW FIRM.

Montreal, Dec. 30.—The incorporation notices of the Johnson-Richardson Company have been published here. The capital stock is \$100,000; the object, to manufacture and sell drugs, patent medicines, chemicals, druggist supplies, surgical instruments, dyes and butter color. The incorporators are given as Albert Emore Richardson, manufacturer, of Vermont; Charles Moody Johnson, merchant; George Green Foster, advocate and King's counsel; Ceel Gordon Mackinnon, advocate; William Robert Staveley, advocate, and Thomas Jack Shallow, clerk, all of Montreal.

A. E. Richardson was for many years the general manager and vice-president of the Wells & Richardson Company.

STOPS THE BLACK LISTS.**Mr. Wooten Advises That No More
Need Be Expected.**

Baltimore, Dec. 31.—A circular letter was received by various members of the Baltimore Retail Druggists' Association, this week, from Thos. V. Wooten, of Chicago, informing them that no further black lists would be sent out by him in his private or official capacity. The letter offers no explanation, but is taken to mean that the decision of the Chicago courts relative to combinations among retailers or jobbers effected for the purpose of withholding goods from anyone has been adverse to the promoters of the movement to prevent cutting under the plan tried there, and that a readjustment, so as to bring restrictive action within the requirements of the decision, will be necessary before anything more is done in the question of cutters.

Nothing was accomplished here this week by the Retail Druggists' Association relative to the action of the insurgents who served notice that they would no longer be bound by the association schedule on tripartite or direct contract goods. As stated, the seceders promulgated their own price list, thus openly defying the association, and the organization will be obliged to take some action by way of reply. As far as can be learned, no time is being wasted, since the interval of quiet is being used to collect evidence.

CUTTERS ON THE WARPATH.**They Propose to Smash the Schedule
in Baltimore.**

Baltimore, Dec. 30.—The cutters who served notice on the Baltimore Association of Retail Druggists that they did not intend to abide any longer by the schedule of prices adopted by the association, have gone on the warpath. They issued their own price list several days ago, and have since conducted business contrary to the regulations of the association, to whose list they had at first subscribed. This action will compel the Retailers' Association either to strike back or to acknowledge itself defeated, and the outcome of the controversy is looked forward to with much interest by all persons affiliated with the drug trade.

A meeting will be called by the president of the association within the next few days to decide what action shall be taken in response to the aggressive attitude assumed by the cutters. It is declared that the organization with the aid of the proprietors can shut off supplies, and steps will probably be taken to do so.

SOUTHERN NOTES.

—The druggists of Moundville, W. Va., have formed an association for the purpose of regulating Sunday closing hours. Under the agreement the stores will be open on Sunday between the hours of 9 and 10 a. m. and 4 and 6 p. m.

—The Southern Manufacturing Company, Jacksonville, Fla., will move at an early date from the present quarters, corner of Bay and Madison streets, to a large building now occupied by the Covington Company, corner of Jef-

erson and Forsyth streets. It is understood that this company will increase its capital stock to \$100,000 at an early date to take care of the large increase of business.

—John L. Parker, druggist of Birmingham, Ala., has been elected niderman.

CIGAR TRUST IN LOUISVILLE.

Louisville, Dec. 30.—The United Cigar Stores Company, of Louisville, has made peace with the majority of leading druggists in Louisville, although several of them and the cigar trust are not on the "best of terms." This is due to the fact that these druggists will not handle the trust's goods, because of the absence of the union label.

PROSPERITY IN CINCINNATI.

Cincinnati, Dec. 30.—The year 1904 will go down in history as the most prosperous ever experienced by local retail druggists. During the year there have been less than a dozen druggists who have either gone into bankruptcy or given up their businesses, owing to dull trade. A well-known druggist said to The Era correspondent: "Throughout the entire year, and especially during the Christmas buying season, we have experienced an enormous call for sundries and our business for the year in these lines will run into the thousands." Other druggists expressed like opinions.

RAT BISCUITS NOT BARRED.

Columbus, Ohio, Dec. 30.—Secretary C. O. Probst, of the State Board of Health, in a communication to the local board, stated that he knew of no way by which the selling of rat biscuits could be stopped. The matter had been referred to the state board by the local body, whose members consider the rat biscuits to be extremely dangerous. Secretary Probst said that if the packages in which the poison is sold conform to the law, the local board is absolved from all responsibility.

WILL SUE HIS ACUSERS.

Wilmington, Ohio Dec. 30.—George R. Taylor, a druggist, arrested several weeks ago on an affidavit by a representative of the Ohio Anti-Saloon League, charged with selling liquor as a beverage, was discharged by the mayor of New Vienna, where the trial was held. A series of suits for damages against members of the Ohio Anti-Saloon League will be instituted by Taylor, who claims his business has been materially affected because of their unjust accusations.

TRADING STAMPS CONDEMNED.

Toledo, O., Dec. 30.—The Ohio Wholesale Grocers' Association and the Retail Grocers' Association have adopted resolutions condemning trading stamps. Both bodies in convention here last week, decided to wage a war of extinction against them.

FORMULAS AS PROPERTY.

Dayton, Ohio, Dec. 30.—The Circuit Court here has decided that formulas are private property and cannot be used by other persons. The decision was made in the case of the Interstate Food Co., manufacturers of stock and poultry foods,

against former employes, who sought to make use of knowledge gained while in the plaintiff's employ.

A GUESS WORTH \$17,500.

Cincinnati, Dec. 30.—A number of local druggists, headed by Herman Brunke, formed a combination last summer and purchased numerous estimates in a newspaper guessing contest on the recent national election. They captured the capital prize, \$17,500, besides about a dozen others.

OHIO HAPPENINGS.

—The next examination of applicants by the State Board will be held in Columbus, Jan. 10-11.

—L. P. Ohlinger and J. R. Zimmerman, who comprised the firm of Zimmerman & Co., at Wooster, have been adjudged bankrupts. Both were officials of the Wooster National Bank and their present whereabouts are unknown. The bank recently closed its doors.

—The O. V. D. A. has settled the ties between two candidates in the recent annual election of the association. Henry Eichler, running for third vice-president against Henry Spechtold has withdrawn. T. J. Weidrich and George Wilhelm, who polled the same number of votes for the Board of Control (Newport, Ky.) also withdrew, and Fredrick Zwick appointed L. P. Holzhauser to fill the position.

CAUSTIC SODA PLANT CLOSES.

Sault Ste. Marie, Mich., Dec. 30.—After battling with the manufacturing interests of the United States for several years, the manufacture of caustic soda and bleaching powder has been given up by the Canadian Electro-Chemical Co., which operated for some time a plant in the Canadian Soo. It is probable that no further attempt will be made to push an industry of that kind in that part of Canada, as the Dominion has refused to place a duty on such products. The plant represented an investment of about half a million dollars. The machinery has been removed, some of it being sold for scrap iron. The machinery alone cost \$200,000. The plant employed about fifty men.

MICHIGAN STATE BOARD.

Detroit, Dec. 31.—The new Republican State administration took the reins of office yesterday. L. E. Warner, of Marlette, is being pushed by many friends all over the State for a place on the State Board of Pharmacy. Mr. Warner is a graduate of the department of pharmacy of the University of Illinois, and a practitioner since his graduation. He has been elected six times as town clerk.

"What's all the noise 'bout, I wonder?"

ALARMED ABOUT DRUGS.

Chicago Crusade Arouses Wisconsin Board of Pharmacy.

Milwaukee, Dec. 30.—At its first meeting following the wholesale arrests in Chicago for the sale of impure and imitation drugs, the State Board of Pharmacy decided to ask the coming legislature for more stringent laws. First, it will ask the creation of the office of state drug commissioner, who would work under the state dairy and food commissioner and see that the laws pertaining to the sale of drugs are enforced.

It is proposed that a law be passed making it a misdemeanor, punishable by fine and imprisonment, to adulterate knowingly any drug or to import or manufacture adulterations or imitations. Simply to have these in stock will be punishable by fine. The board believes that thousands of dollars are paid annually by the people of the state for absolutely worthless material, in the supposition that they are buying aristol and other drugs, the importance of the purity of which is so great.

President Van Hise, of the State University, conferred with the board and it was agreed that the standard of pharmacists must be raised. Already the course in the university and the examination for licenses are pretty severe, but back of this, hereafter, there must be an education as good as a four-year high school course. This will apply also to applicants for "assistants' licenses. In the revision of the pharmacy laws provision will be made that no narcotics shall be sold except on prescription and that the prescription shall not be renewed except on order of the physician issuing it.

REPLY IN CONSPIRACY SUIT.

Milwaukee, Jan. 2.—In the Boston Store's suit against several wholesale druggists of this city, the issues have been fairly drawn. The defendants have demurred to the complaint and Judge Tarrant, of the Circuit Court, has taken it under advisement.

Answers are filed by the Yahr & Lange Drug Company, the F. Dohmen Company, Drake Brothers Company and the Jerman, Plueger & Kuehnstedt Company. It is asserted that the Boston Store is not a drug store, but that in a small section of its five acres of floor space there is a department that handles such drugs as it can get; that it cuts prices in some instances to cost and even lower; that in so doing it proves itself an enemy to the legitimate trade and unworthy of being recognized as well as undeserving of tradelands. It is further set forth that the defendants are powerless to supply the plaintiff, even should they desire, for the reason that the manufacturers would cut them off so soon as it was learned that they were supplying an "aggressive cutter."

CUT DEEP ON CIGARS.

Grand Rapids, Mich., Dec. 31.—The most significant move on the part of the United Cigar Stores Co., commonly called "The Trust," has been the throwing out of all the independent tobacco companies'

cigars and the handling of its own brands in its stores here. Another movement of recent date has been the closing of three of its stores, which leaves the Trust only four stores in Grand Rapids.

The downtown drug stores have successfully maintained a fight against the Trust and they are still standing pat in their positions. They held together in the cut-rate war and for eight months the Trust fumed and blustered, but did not meet the cuts. The Trust has doubtless lost through its course, for the druggists have gained the trade and have kept it.

TO RAISE REQUIREMENTS.

Wisconsin Board of Pharmacy Would Also Revise the Law.

Milwaukee, Dec. 30.—The state board of pharmacy has been conferring with President C. B. Van Hise and Prof. Edward Kremers, of the faculty of the University of Wisconsin, with reference to making more stringent the requirements for candidates for licenses as registered pharmacists. It is suggested that these be raised so that every applicant must prove that he has an education equivalent, at least, to the completion of the first year of high school.

The annual report of the board has just been issued, and one of the features is the recommendation that the present pharmacy law be given a complete revision. The board asks a discontinuance of the granting of "assistant" licenses, and a more stringent restriction upon the sale of narcotics.

The report shows that six examinations were held during the fiscal year ending June 30, 1904, and that 292 applicants were examined. Of these, 67 received registered pharmacists' certificates, 73 assistant certificates, and 153 failed to pass.

Although many of the men who now hold assistant certificates expect that in case of a revision of the law they will be given registered pharmacists' certificates, it is reported that the board proudly will refuse to issue such certificates and compel the assistants to pass an additional examination before they are given registered diplomas.

MINNESOTA NOTES.

—Daniel R. Noyes, of Noyes Bros. & Cutler, wholesale druggists, of St. Paul, has been appointed by Governor Van Sant a regent of the University of Minnesota, to succeed the late Judge Greenleaf Clark. The press of the state is consequently saying nice things of Mr. Noyes, by whose ability as a business man the university is expected to be a gainer.

—A device has been invented by Charles Musser, with Sever Westby, St. Paul, for opening the store door to let customers in and out. Women are astonished to find the door fly open at their approach.

—At its December meeting the Minneapolis Retail Druggists' Association, by resolution, authorized the president to appoint a committee to confer with the Retail Grocers' Association on the matter of joining that body in its credit system to "cut out" the "dead beat." The grocers' system has proved very effectual.

WOOD ALCOHOL TAX.

It Is Severely Criticized as Retaliatory Legislation.

Minneapolis, Dec. 30.—J. C. Eliel, of the Lyman-Eliel Drug Co., and former president of the N. W. D. A., frowns upon the bill recently introduced by Congressman Tawney, of Minnesota, to tax wood alcohol. Mr. Eliel thinks this is one step in the war waged by the trusts which use grain alcohol in their factories, to have the tax on that article reduced and to knock out their competitors who use wood alcohol in the manufacture of a cheaper grade of goods. "The tax on wood alcohol," says Mr. Eliel, "is retaliatory legislation on the part of manufacturers who use taxed grain alcohol. No article of commerce is taxed as grain alcohol is. Perhaps an average price for grain alcohol on the market, aside from the tax, is twenty cents a gallon. This article, then, costing fifteen to twenty cents a gallon to produce, bears a tax of \$2.08 a wine or running gallon.

"If \$75,000,000 to \$100,000,000 annually is taken off the tax in spirits, something else will be taxed to make up the deficiency in the federal treasury. If the tax should be reduced, are we sure the manufacturer using grain alcohol will reduce his prices accordingly? If so, where is his gain and why his intense desire for the change? Since the government must have the revenue, it is best to leave well enough alone, and I see no reason why the people should make a present to the trust. Should wood alcohol be taxed as is the grain article it would simply increase the revenue and add to the expense of those articles in which it enters as a solvent; but probably the reason for the bill is that taxed wood alcohol would be less of a competitor than now. Wood alcohol is used in a hundred ways, by the small consumer—such as cleansing in winter when water would freeze. To add the tax would put it beyond the reach of such consumers."

Mr. Eliel is not alone in outspoken criticism of the Tawney bill. H. F. Dains, of the internal revenue department, says:

"The argument that the taxing of wood alcohol would keep its manufacture under the eyes of the deputy inspectors seems to me a fallacy. All that would be necessary would be to issue an order to the inspectors. They are empowered to investigate the business of any manufacturers who they may think are violating the revenue laws."

KANSAS CITY R. D. A. AFFAIRS.

Kansas City, Dec. 21.—Fred C. Vincent, secretary of the Kansas City Retail Druggists' Association for several years, will be succeeded Jan. 1 by Romanta Wells, of Chicago, a national representative of the National Retail Druggists' Association. The annual banquet of the association, scheduled for January, has been postponed until February.

Napoleon was recuperating on the Isle of Elba. Downcast and in solitude he sat. Suddenly a sail hove in sight. Dr. Bunion stepped lightly off the ship, and pointing his finger at the fallen emperor said, "There is yet hope."

SIMON B. HARRIS RESIGNS.**After Twelve Years He Leaves the Massachusetts Board.**

Boston, Dec. 31.—This last day of the year is an important one with the Massachusetts Board of Registration in Pharmacy because the resignation of its State agent, Simon B. Harris, goes into effect at this time. The board had hoped for reconsideration on Mr. Harris's part, and not until yesterday was his resignation finally accepted, and then only with great reluctance. It has had the benefit of Mr. Harris's service for twelve years, during which time all conditions of pharmacy have undergone radical changes.

Mr. Harris has done much to elevate the standard of drug stores throughout the State. When he first undertook the work, there were more than two thousand listed drug stores in Massachusetts, but he felt that many of these were so in name only, and really saloons. He instituted a thorough weeding-out all through the State, and to-day there are about fifteen hundred actual pharmacies instead of two thousand posing as such. In the hundreds of cases of druggists brought to account for violation of the liquor law or the pharmacy laws, where stores have been found without a registered pharmacist on the premises, or where a certificate of a dead man served as a cloak, convictions have followed, with only one exception. And it has cost the board practically nothing for legal help, as convictions were obtained on evidence that Mr. Harris collected. He states that in turn he has received most courteous treatment and help almost everywhere from the druggists who are in business in an honorable and legitimate way.

The board has presented Mr. Harris with the following:

To Simon B. Harris,
Lowell, Mass.:

On Nov. 12 of this year, after serving the Massachusetts State Board of Registration in Pharmacy as its agent, for twelve years, for reasons which seemed good and sufficient to yourself, you tendered your resignation and asked that the same be accepted at once. This resolution was entirely voluntary on your part and unsolicited by any member of the board. After carefully considering the matter, our board accepts the resignation, to take effect Dec. 31 of this year. We desire at this time to express our deep regret in parting with your valuable services.

During this long term of years, your work has been zealous, faithful and effective, and nothing has been said against your character as a man or your honesty as an officer. For the long services you have rendered to our board, your record has been clean, and no charge could ever be preferred against you. It is impossible that an officer who has performed his duty as faithfully as you have could escape making enemies, and the fact that you have made them shows that you have not made any duty subservient to popularity. You leave the service of this board with the honor, respect and esteem of all its members, and with our best wishes for your future success and happiness.

This tribute is signed by the members of the board; George M. Hoyt, president; Fred A. Hubbard, secretary; Henry Adams, William F. Sawyer, and L. A. Lamson. The board further showed its appreciation by presenting Mr. Harris with a large water-color painting of Jacqueminot roses.

That the board may not be embarrassed, Mr. Harris has consented to remain tem-

porarily and continue the work until his successor is appointed. The appointment is made under Civil Service rules, the board having the privilege of selecting one from among all candidates suggested. The position pays \$1,500 a year.

ENJOINS THE N. A. R. D.**Isaac Platt Again Charges Interference With His Business.**

Chicago, Dec. 31.—Isaac Platt, the irrepresible, again hobs up. He has just filed a new bill for an injunction against six wholesale druggists and the N. A. R. D. And on Saturday Judge Healy granted him a temporary injunction, restraining the defendants from interfering with Platt's business or preventing him from getting goods.

Platt withdrew his first bill, he says, on the promise of the wholesalers and the N. A. R. D. to cease their alleged discrimination. He charges that the promise was not kept in good faith. Platt's store is at 809 Ashland avenue.

IOWA BOARD CHANGES.

Des Moines, Dec. 31.—Fletcher Howard, for twelve years the Democratic member of the Iowa Board of Pharmacy Commissioners, who for several months past has been recuperating from a serious attack of tuberculosis, will retire at the expiration of his term April 23. Governor Cummings has appointed J. S. Goss, of Atlantic, Iowa, to succeed him. Mr. Goss, also a Democrat, was a candidate for appointment on the board several years ago. He is well and favorably known among the druggists of the state. His associates on the board will be B. P. Keltz, of Webster City, and Fred Russell, of Rockwell City. Mr. Howard was not a candidate for reappointment. While he is improving and has been able to discharge his duties as commissioner from the Nordmeck ranch, Colorado Springs, where he now is, he and his friends did not believe it advisable for him to continue in the office. The physicians say that Mr. Howard will eventually recover.

CHAMBERLAIN DIVORCE SUIT.

Des Moines, Dec. 31.—D. S. Chamberlain, head of the Chamberlain Medicine Company, and formerly president of the National Proprietary Association of America, has signed an agreement whereby he is to make a divorce settlement on his wife. The divorce will be made public within a week. The agreement codes to Mrs. Chamberlain a magnificent hotel property, known as The Chamberlain, in Des Moines, at Seventh and Locust avenues. The annual rental from the hotel property is close to \$20,000.

Mr. Chamberlain, in the stipulations which have been signed, secures the home on West Grand avenue, in this city. The house is one of the finest in the Middle West. Mr. Chamberlain's business properties and personal estate are estimated at \$30,000.

CHICAGO NOTES.

—Albert E. Ebert celebrated his sixty-fourth birthday on December 23.

—The Reliance Drug Company has given up its idea of having a big store in the Reliance building.

FOR THE ILLINOIS BOARD.**Druggists of the State Urged to Vote on New Members.**

Springfield, Ill., Dec. 31.—The voting cards for the Advisory Board of Illinois University School of Pharmacy and the Board of Pharmacy member to succeed W. A. Dyche will go out more promptly than usual.

"The Illinois Pharmaceutical Association," says K. N. Dodds, secretary of the Board, "would urge the advisability of every registered pharmacist registering his choice. It is a duty they owe the profession. Our records show that about one in five votes. I do not know what becomes of the other four, unless they are consigned to the waste basket."

The appointments on the Board of Pharmacy by the governor are made according to the votes received. The five receiving the highest vote are recommended to the governor. From this number he selects one to fill the vacancy on the board which occurs with every outgoing year. In this manner the registered pharmacists of the State can say whom they want appointed. The trouble is, however, that so few vote.

The appointments on the Advisory Committee, Department of Pharmacy, University of Illinois, are regulated in the same manner, except that the appointments are made by the president of the university.

On one side of the voting card is the following:

CANDIDATES BOARD OF PHARMACY.

SPRINGFIELD, ILL., Jan. 2, 1905.
To the Registered Pharmacists of Illinois:

The following have been nominated by the Executive Committee of the Illinois Pharmaceutical Association, to be voted upon by the Registered Pharmacists of Illinois, for recommendation to the Governor for the appointment of a Member of the State Board of Pharmacy, to fill vacancy occurring December 30, 1905, by the expiration of the term of office of William A. Dyche, Evanston.

Please put a cross before the names of five of the persons named below, sign card and mail to me in addressed envelope enclosed herewith. You can vote for only five persons, one vote for each, and your vote is null and void if you vote for more than five, or if you cast more than one vote for one person. It is necessary that you send in your vote early. Please do so.

Congressional District, 1 to 10 inclusive: Wm. K. Forsyth, Chicago; Walter H. Gale, Chicago; H. J. Houghton, Chicago; Geo. P. Mills, Evanston; T. H. Patterson, Chicago; I. L. Quales, Chicago; Henry F. Schaper, Chicago; Andrew

"How's that, Ole Hoss?"

Scherer, Chicago; John D. Suydam, Oak Park; Charles A. Thayer, Chicago; Dist. 11, A. Tenneyson, Manhattan; Dist. 12, J. H. Keeling, Rockford; Dist. 13, F. G. Edwards, Mt. Carroll; Dist. 14, Gus Lindvall, Moline; Dist. 15, Geo. C. Lescher, Galesburg; Dist. 16, Ferd. C. Pauley, Pekin; Dist. 17, S. D. Van Deventer, LeRoy; Dist. 18, W. F. Baum, Danville; Dist. 19, E. W. Armstrong, Decatur; Dist. 20, J. A. Obermeyer, Jacksonville; Dist. 21, Melle Williams, Taylorville; Dist. 22, A. G. Schlweter, East St. Louis; Dist. 23, O. M. Waters, Mt. Vernon; Dist. 24, Chas. V. Parker, Harrisburg; Dist. 25, Thos. Rixleben, Jonesboro.

By order of the Executive Committee, Illinois Pharmaceutical Association.

R. N. Donbss, Secretary.

The candidates for the Advisory Committee of the Department of Pharmacy, to succeed Geo. M. Bennett, are:

Congressional District, 1 to 10 inclusive: W. T. Adams, Chicago; Geo. R. Baker, Chicago; Charles E. Cress, Chicago; Herman Fry, Chicago; J. E. Grubb, Chicago; H. M. Hibbs, Chicago; Leo L. Mrazek, Chicago; H. F. W. Spilver, Chicago; B. A. Tyler, Evanston; S. C. Yeamans, Chicago; Dist. 11, W. E. Holmes, Aurora; Dist. 12, W. D. Duncan, Ottawa; Dist. 13, Frank Barker, Rochelle; Dist. 14, C. Speidel, Rock Island; Dist. 15, C. A. Webster, Canton; Dist. 16, Albert Zimmerman, Peoria; Dist. 17, Ralph Bradford, Pontiac; Dist. 18, J. J. Schubert, Kankakee; Dist. 19, Geo. M. Bennett, Urbana; Dist. 20, W. H. Garrison, Pearl; Dist. 21, C. C. Webster, Staunton; Dist. 22, E. H. Smiley, O'Fallon; Dist. 23, James A. Martin, Palestine; Dist. 24, L. L. Smith, McLeansboro; Dist. 25, F. Thomas, Cairo.

WOULD RESTRAIN DRUGGIST.

Baltimore, Jan. 2.—Mary H. Hughes instituted suit, last Saturday, against Williamson & Watts, retail druggists, to restrain them from alleged violation of the conditions of a lease for the store and part of the cellar at the southeast corner of Franklin and Howard streets, where the defendants conduct a retail pharmacy. In violation of the terms of the lease, it is averred, the defendants are conducting on the premises a branch post-office, a branch express office, and a telephone pay station, and have erected awnings and placed on the outside of the building signs appertaining to the express and telephone business, besides occupying portions of the cellar in excess of the limitations set forth in the lease.

Williamson & Watts, who also conduct a drug store on the northeast corner of Eutaw and Baltimore streets are only one of a large number of drug firms which have postal stations in their stores, and if this is regarded as a violation of leases, an interesting question is raised.

"Why do grave yards 'yawn'?" asked the loungee, in the drug store.

"Must be the druggist's tired out by fool questions," snapped out the man of trouble.

"Hear there was something uncanny about that drug store fire. What was it?"
"Spirits. The boy dropped a match in the alcohol barrel."

CUSTOMS DRUG INSPECTION.

Imported Chemicals Undergo a Rigid Examination.

THE APPRAISERS' STORES BUILDING IN NEW YORK IS THE SCENE OF GREAT ACTIVITY.—SOME OF THE STATUTE REQUIREMENTS.

Uncle Sam is very particular about the medicines used by his innumerable nephews. He subjects to a rigid inspection all drugs and chemicals imported into this country by pharmaceutical houses, and any article which is not strictly up to standard is not permitted to be placed on the market.

As soon as a shipment of chemicals arrives at New York it is immediately taken in charge by the Custom House. The consignment is sent to the Seventh (Drug) Division of the Appraisers' Stores building, at 641 Washington street. Here it is tested by experts to see if it coincides with the invoice, which is usually sent ahead of the consignment. After the purity of the chemical in question has been determined, it is classified and its value determined by the assistant appraiser in charge of the division, who, in addition to his duties as appraiser, is also the special inspector of drugs.

The examination is conducted in half a dozen large rooms, each devoted to some special branch. For instance, one room is given up to medicinal and pharmaceutical preparations, another to essential oils, glues, etc. Coal tar products and bulky chemicals have a special room; so also do the heavy acids, etc. All these rooms are arranged in the form of an L about a large quadrangular space, where the boxes and cases are stored temporarily until they have been examined.

Taking Samples of Drugs.

Every afternoon all the rooms are filled up with the consignments to be examined the next morning. To open these cases, bales, etc., a large force of men is constantly employed. They take a sample from each package and place it in a small paper bag, which is marked to correspond with the number of the invoice. In the case of very bulky goods, the sampling is done in the basement and small portions sent up in the paper bags. When the cases have been sampled they are rolled up again and wheeled out in the quadrangle.

Great fairness is used in the taking of samples. The outer portions of the contents of a package are never taken, as they are more than likely to contain foreign substances acquired in transit. Instead, a handful is taken at random from the interior, insuring a just test of what the importer is really buying.

The examination of drugs is covered by section 2,933 of the Revised Statutes, which requires that all drugs, medicines and medicinal preparations, including medicinal essential oils and chemical preparations used wholly or in part as medicines, shall, upon importation, be subject to examination before passing the custom house, in respect to their quality, purity and fitness for medical purposes, as well as in respect to their value.

In accordance with this statute, all imported drugs, medicines and medicinal preparations are tested, in reference to their strength and purity, by the standard established by the United States Edinburgh, London, French and German pharmacopoeias and dispensaries. Crude drugs must yield by assay certain active principles. New pharmaceutical products are examined only on their first importation.

Must Conform to Statute.

In regard to purity, certain things are called for. Cinchona bark must yield 4.1 per cent. of quinine. Aops must yield 80 per cent. of aloetic extractions. Senna must give 28 per cent. of soluble matter. All drugs and chemicals which do not come up to the required standards are reported to the United States District Attorney, and forfeiture proceedings begun. Unlike the other divisions, the goods forfeited in the drug department are destroyed instead of being sold at public auction.

The vast extent of work done in the course of a month may be imagined when it is stated that the different varieties of coal-tar products alone run up well into the hundreds and thousands.

Classification is an important process, for on this depends the appraisement. Medicinal preparations containing alcohol, for instance, are dutiable at fifty-five per cent, while if they were non-alcoholic they would be assessed at twenty-five per cent. In all cases the appraisers ascertain as far as possible the prices at which a chemical could be bought in open market in the foreign country from which it is imported.

NEW COLORADO PHARMACISTS.

Denver, Dec. 30.—At the last meeting of the State Board of Pharmacy held in this city, the following passed the examinations and are registered pharmacists: W. C. Beck, Denver; Charles O. Brown, Colorado Springs; Roy K. Eldredge; Frank Gordon, John H. Green, C. T. Glydison, David E. Kent, Ernest F. Kronke, Clifton W. Miller, Denver; R. B. Nixon, Colorado Springs; G. H. Norton, Rocky Ford; Edgar C. Shaler, Denver; G. B. Sherman, Trinidad; L. D. Stove, C. E. Struntz, Elnathon Town, L. B. Weaks, Denver; George C. Whitmore, Canon City. The next examination will be held in Denver, March 10 and 11.

MANAGER BAIRD RETIRES.

William J. Baird, manager of the New York office of Powers & Weightman, has resigned, and will retire from active business. He has been in the service of the firm for thirty-seven years.

It is understood that the New York business of the Powers-Weightman-Rosengarten Co. will be conducted in the Powers & Weightman building, at 56 Maiden Lane.

HOLTON FOLLOWS A HOLTON.

M. L. Holton has retired from the firm of Holton & Adams, and is succeeded by his son, E. H. Holton. The new partners will continue to do a thriving business in druggists' sundries at the "old stand," 54 Beekman street.

AMONG THE COLLEGES

BROOKLYN COLLEGE OF PHARMACY.

Brooklyn, N. Y., Dec. 29.—Professor William C. Anderson, dean of the faculty, reports the total enrolment to be 280, and he is proud of the growth of the Brooklyn College of Pharmacy. The new building erected last year and owned by the college, affords first-class facilities for teaching pharmacy.

The college has recently adopted laws that enable it to comply with all of the provisions of the pre-qualitative law which has just become operative, and it also has complied with the requirements and standard of the American Conference of Teaching Faculties. The herbarium also has been largely increased during the past year. Among other things it contains a complete collection of the flora of this locality, about 2,000 specimens, presented by Dr. E. G. Rave, curator of the college botanical gardens at Hicksville, L. I. At the latter place medicinal plants are grown for teaching purposes and there the adaptability of foreign plants to this climate is under investigation.

The alumni association will hold its thirteenth annual dinner on Wednesday evening, January 18, in the college building. Arrangements have been made to entertain the ladies and dancing will follow the dinner. Tickets, \$2. Dr. Frederic P. Tutthill, 526 Putnam avenue, Brooklyn, is chairman of the committee of arrangements.

IOWA UNIVERSITY.

Iowa City, Dec. 24.—Holiday vacation began Thursday evening, December 22, and will continue until Wednesday, January 4.

Members of the senior and junior classes were entertained recently at the home of Dean W. J. Teeters, on the West Side. A guessing match, depending upon ability to recognize odorous drugs by the sense of smell, and numerous games contributed to the evening's pleasure.

Mr. and Mrs. R. E. Humphrey were hosts of the senior class, Friday evening, December 9th. Music and games and a dainty supper were on the programme.

At the last meeting of the Mortar and Pestle Society, three interesting papers were read, as follows: "Cod Liver Oil," Earl Allen; "Food Preservatives," F. J. Warnecke; "Pharmaceutical Products of the Bayberry Tree," Miss Zada M. Cooper. N. D. Whiting, '04, has passed the California board examination and is now employed in Armour's Pharmacy, at San Pedro.

UNIVERSITY OF ILLINOIS.

Chicago, Dec. 31.—The junior class of the University of Illinois School of Pharmacy organized and elected as officers: F. E. Bucklin, president; Russell Burger, vice-president; J. B. Ross, secretary-treasurer, and J. A. Pannansborg, sergeant-at-arms.

The senior class pins are out. They are

made of gold with the monogram U. I. at the center in raised letters, and around the border are the smaller characters, C. C. P., '05. The juniors will be asked to adopt the same style of pin.

The class invitations have been ordered of Elliott; the cover design shows an ancient pharmacist at work in his laboratory.

Souvenir postal cards, showing the students at work in four of the laboratories were distributed among students and their friends. The cards made quite a hit as reminders of the holiday season.

MICHIGAN UNIVERSITY.

Detroit, Jan. 2.—The regents of the University of Michigan have adopted a resolution making the requirements for graduation from the school of pharmacy correspond to the rules of the educational department of New York State, the most important stipulation being that graduates shall be twenty-one years of age, that in taking registrations it shall be ascertained if this requirement can be fulfilled.

WASHINGTON UNIVERSITY.

Seattle, Wash., Dec. 23.—The enrolment of the school of pharmacy, University of Washington, is as follows: First year students, 26; second year, 4; third year, 2. A year ago a four-year course leading to the degree of B. S., was introduced. This course includes the regular two-year course with an additional two years of language, rhetoric and advanced sciences. Three degrees are conferred, Ph. G., Ph. C., and B. S. Holders of the Ph. G. degree are entitled to receive a certificate from the board allowing them to practice pharmacy anywhere in the State. The entrance requirement is a diploma from a four-year accredited high school. Charles W. Johnson, a graduate of the University of Michigan, is professor of pharmacy and dean of the school.

UNIVERSITY OF CALIFORNIA.

San Francisco, December 30.—The faculty and members of the board of directors of the University of California have decided to abolish the Ph. G. degree, and will confer in its stead the degree of Ph. C. This departure will enable the university to follow the same plan that has been followed in other universities for years. The present senior class will probably be the last to receive the present degree. There are forty-three students in the senior class, and thirty-two juniors.

OMAHA COLLEGE OF PHARMACY

Omaha, Dec. 27.—Dean Edward Thorpe, of the Omaha C. P., reports a total enrolment of sixty-four, the senior class numbering twenty-four. There are five women students. No entrance examination is required.

The entire course consists of two terms of six months each, the whole covering one calendar year. The present class will finish its work February 24. A pharmaceutical association, which meets on Friday afternoons, is maintained by the students. Pertinent subjects are discussed. The president, Mr. Baum, and the secretary, Miss Mahan, are kept busy deciding and recording knotty scraps started by the more pugnacious students.

MINNESOTA UNIVERSITY.

Minneapolis, Dec. 29.—The University College of Pharmacy has seventy-six students on its roll this year, nearly all of whom are graduates of full four-year high school courses.

The officers of the senior class are: President, C. C. Adams; vice-president, G. H. Haines; secretary, H. B. Ostrander; treasurer, I. H. Robitschek; sergeant-at-arms, J. W. Crowe. The senior class is now completing its work in organic chemistry and urinalysis. It now begins laboratory organic chemistry, gravimetric and volumetric analysis, U. S. P. testing and clinical microscopy. The course in crystallography and mineralogy has been extended and will include two hours a week for the entire senior year.

The juniors have just finished their lecture course in physiology and anatomy, and will take their final examination early in January. The pharmacy quizzes conducted by Mr. Bachman will continue twice weekly until June. The work in operative pharmacy will be completed with the end of the first semester, January 16th.

The Phi Chi Fraternity is in a prosperous condition. It is composed of the majority of the members of the several classes, who meet in the pharmacognosy room every second Friday evening. A house in the neighborhood of the university has been rented and although it is a large one, it is proving inadequate. Beside sleeping rooms and several parlors, the house is provided with a reading room, a well appointed kite-en, and a dining room.

WINONA TECHNICAL INSTITUTE

Indianapolis, Dec. 24.—The Winona College of Pharmacy, the most recently established institution to offer instruction in pharmacy, was started as a part of the Winona Technical Institute, grounds for which were purchased at a cost of \$154,000, by popular subscription by the people of Indianapolis. The grounds cover eighty acres in the center of Indianapolis, and contain fifteen large buildings. Since its purchase in 1903, a large power house has been erected at a cost of \$30,000; besides a donation has been given of \$25,000 for the erection of an auditorium. The pharmacy school opened on September 6, '04, with an attendance of twenty-seven, and much interest is being shown by the students. Among the special donations received since its opening is that for the fitting up of an herbarium, by Eli Lilly & Co., manufacturing pharmacists, of this city. The main building of the pharmacy school is a three-story brick structure, having a floor space of 10,000 square feet, all of which is given to laboratories.

Faculty at the present time: S. C. Dickey, D.D., president; H. S. Lehr, Ph.D., A.B., dean; J. H. Gertler, Ph.C., Ph.G., principal; A. J. Mullan, M.D., Ph.G., organic chemistry; J. V. Reissbeck, Ph.G., laboratory demonstrator. On September 21st a library and reading room was started under the supervision of Miss Hoagland, State librarian. A students' pharmaceutical association has also been organized with Mr. Haller as president and Miss Elsie Stutsman as secretary and treasurer.

KANSAS CITY COLLEGE OF PHARMACY.

Kansas City, Mo., December 20.—The number of students enrolled this year is fifty-four, twenty seniors and thirty-four juniors. Both classes maintain organizations, the officers of the senior class being: President, C. E. Reed; vice-president, M. E. Harrah; secretary-treasurer, D. S. Long. Junior class: President, M. E. Bacon; vice-president, Glazier Williams; secretary-treasurer, G. C. Bowen.

The annual class party recently held was a very enjoyable affair, the members of the alumni association being present as guests of the classes. Refreshments and dancing were on the program. Plans are already under way for the annual reception to be held in March, when the alumni will entertain the graduating class.

The officers of the college are: President, James M. Love; vice-president, Fred L. Crampton; secretary, D. V. Whitney. The president of the alumni association is Mrs. D. V. Whitney, who also conducts the quiz classes. She is actively associated with her husband in the drug business, and for her personal effort in the meritorious work of the local committee of arrangements, will be recalled by many who were present at the annual meeting of the A. Ph. A., in Kansas City last summer.

N. D. AGRICULTURAL COLLEGE.

Fargo, N. D., Dec. 20.—Prof. E. H. Kimberly states that the department of pharmacy, created in 1902 as an integral part of the Agricultural College, is meeting with general approval throughout the State, and that it has already done good service. The department was opened in the Fall of 1902 with an enrollment of 11; in 1903 there were 19 students, and this year there will be 25 or more. A pharmaceutical association composed of students is maintained and holds its meetings weekly. The "Spectrum," a college paper, also published by the students, contains in a recent number an illustrated write-up of the association and its work. The officers of the association are: President, Dave Lofthouse; secretary, Erwin Thompson; treasurer, Benj. Lenhart; master of program, Roy Cook. New officers are chosen at the beginning of each term.

VANDERBILT UNIVERSITY.

Nashville, Tenn., Dec. 24.—The junior class in the Department of Pharmacy of Vanderbilt University this year is of a high order, both in mental equipment and ability to do work. There are 22 enrolled in the class, and 13 in the senior class. Entrance requirements keep out poorly prepared students. Professor Riddiman states that the department is closely connected with the university, and in consequence, the students have at command the facilities of the chemical and microscopical departments of the institution. He seems justly proud of the fact that not a graduate of the school, so far as he knows, has ever failed before a board of pharmacy. Class organizations are maintained, but outside of them the students have little to take them from their studies.

CINCINNATI C. P.

Cincinnati, Dec. 19.—The Alumni of the Cincinnati College of Pharmacy have or-

ganized a fraternity and will give an entertainment in the near future. President Gansz has appointed the following committee to make arrangements: Charles A. Apuener, George F. Stier, and Miss Clara Keller.

THE FERRIS INSTITUTE.

Irig Rapids, Mich., Dec. 24.—The Ferris Institute offers two courses in pharmacy, the regular course extending over a period of two years of thirty-six weeks each, and a short course designed for students, who have had the required store experience, and who wish to prepare for board examination in the shortest possible time. Students may enter at any time.

The pharmacy faculty consists of W. N. Ferris, president; Miss Mary J. McNeerney, Latin; W. D. Cramer, biology and botany; W. A. Pearson, chemistry, pharmacy, and materia medica. One hundred and thirty-nine students have been enrolled since January 1, 1904.

SOUTHERN COLLEGE OF PHARMACY.

Atlanta, Dec. 24.—The Southern College of Pharmacy, organized in 1903, graduated a class of eleven last year. A college pharmaceutical society is maintained by professors and students, and its object is to read and discuss current pharmaceutical literature. Two courses of study lead to the degrees of Ph.G. and Ph.C., and the courses comprise two and three sessions of six months each. The members of the faculty are: Edgar Everhart, chemistry; R. C. Hood, pharmacy; Archibald Smith, biology and pharmacognosy; Hansell Crenshaw, materia medica and therapeutics; Madison Bell, pharmaceutical jurisprudence; W. B. Freeman, commercial pharmacy.

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, Dec. 29.—The Seniors gave their reception and dance in the College Museum December 20. Owing to a careful distribution of invitations the usual extremely overcrowded condition of the floor was done away with. On the various committees were: Messrs. Dodds, Crawford, Hathaway, Palmer, Ottman, Reahard, Baer, Glenn, Oellig, Sibila, Gilliland, Kahnweiler, Remington, Honk, Woodland, Boesser, McNess, Sauerman, Shiffer, States, Whitney and Richards. William H. Dodds, the president of the class, delivered an address of welcome, and Clarence L. Bonta, '05, gave an interesting "Retrospection."

Prof. Remington gave the seniors a very interesting lecture on vaccine and antitoxin a week before the mid-year examinations. The worst of it all was that he threw in a few questions on the examination to see if it really was "taking."

Thesis work is keeping most of the class busy nowadays.

The second annual reception and hop is being contemplated by the boys at the College House. During Christmas week most of the boys went home or on a visit to friends. This year there are at the House fellows from California, Maine, Texas and Montana. That is scattering it some.

BROOKLYN POLYTECHNIC.

The Polytechnic Institute of Brooklyn begins on January 27 a series of evening courses in technical chemistry. Eminent specialists have been secured. The lecturers already announced are Prof. Geo. C. Whipple, "Sanitary and Industrial Water Supply"; Prof. A. C. Langmuir, "Shellac, Varnishes and Glycerin"; Prof. H. W. Wiley, "Foods and their Adulteration"; Prof. Wm. McMurrie, "General Technical Chemistry." The programme includes twenty lectures and the subscription price is \$15. The Polytechnic gives similar evening courses in electrical, civil and mechanical engineering. Prof. Irving W. Fay may be addressed for information concerning the courses in chemistry.

HOT FOR A COCAINE VENDOR.

Lynchburg, Va., Jan. 2.—There is more trouble in store for Dr. S. J. Simmons, the druggist, who was arrested here recently, on the charge of selling cocaine to boys. Last Saturday afternoon the police rearrested him, eleven more warrants containing similar charges having been issued against him. He was released on bail for his appearance in the police court this morning.

As stated at the time the first arrest was made, Dr. Simmons is accused of having sold cocaine to boys, some of them as young as ten years old. These alleged victims of an illicit traffic, it is said, have become addicted to the use of the drug and have suffered morally, mentally and physically as a consequence.

SUED FOR A CHILD'S DEATH.

Norfolk, Va., Dec. 31.—Suit was brought here to-day against Druggist William E. Snellings, for \$5,000 damages, it being alleged that he is responsible for the death of a child. The plaintiff is Mrs. Samuel Levitin, who alleges that she sent to Mr. Snellings' store for worm seed. The druggist, it is contended, said he had no worm seed, but could supply worm seed oil, which might be used for the same purpose. The oil was sent without caution or directions, it is contended, with the result that Mrs. Levitin administered too large a dose, from which her son Moses died.

MADE FAINT BY A DRUG.

From Paris comes a story of a mysterious drug. At a meeting of the Municipal Council, a letter was handed to one of the councilors. He had no sooner opened the envelope than he fainted. Others who examined the letter, which contained nothing but a whitish, odorless powder, experienced nausea, violent headache and faintness.

DOCTORS AND THE DRUG HABIT.

Chicago, Dec. 29.—Physicians who administer morphine and other narcotics to patients are blamed by Supt. Sloan, of the Bridewell, in his annual report, for an alarming increase in the number of drug fiends. Against 309 drug victims confined in the House of Protection in 1903, there were 370 this year.

"The many cocaine, morphine, opium, paregoric, codeine, phenacetin and other victims who thronged the cells everywhere," says the report, "were women, and they almost unanimously blame their physicians for getting them into the habit.

"They lose their friends and self-respect, and they drift along until they are taken up by the police and sent here. We have had fifteen college graduates here during the last year."

TRIBUTE TO DR. HOFFMANN.

Chicago, Dec. 31.—The executive committee of the Illinois Pharmaceutical Association has adopted the following resolutions on the death of Dr. Friedrich Hoffmann:

Whereas, Dr. Friedrich Hoffman departed this life recently, at Charlothenburg, in his native land, after a long, honorable and distinguished career as scholar, scientist and journalist, therefore be it

Resolved, By the Executive Committee of the Illinois Pharmaceutical Association that we record our high appreciation of the devotion to the cause of right which characterized the life of Doctor Hoffmann;

of the zeal with which he labored for the truths of science; of the courage which established and glorified his discoveries and convictions; of the positive qualities of mind and heart which warred against all that in his judgment was ignoble or wrong in men, measures, policies or creeds; of the fearlessness with which he challenged subversive influences in pharmacy at whatever sacrifice of his peace of mind or of his personal fortunes; of the ability, perseverance and conscientiousness which adorned his record with high achievement, which elevated him from obscurity to worthy distinction in the realm of science, and which gained for him the respect and love of all so fortunate as to know the depth and warmth of his rugged and kindly nature.

Resolved, That we express our sympathy to his beloved wife in her bereavement, and that we transmit a copy of these resolutions to her and to the press of the profession to which he gave the best years of his life.

Chicago, Ill., Dec. 22, 1904.

TO AMEND BLUE LAWS.

Pittsburg, Pa., Dec. 31.—Druggists in this vicinity are awaiting with much interest the bill to amend the Blue Laws which will be among the first bills to be introduced in the Pennsylvania legislature at the next session. There will be no attempt, so far as known now, to repeal the entire legislation affecting the observance of Sunday, as was hinted some time ago, but there will be a determined effort to have the law amended. There are two bills in preparation, one backed by the German-American Alliance, the other by druggists.

The bill which the druggists desire will be ready in time for the legislature, and introduced by Representative L. B. Cook. "I expect," said Mr. Cook, "that the bill will be presented soon after the recess, January 10. I am in favor of the amendments proposed, and believe they will pass. There is to be no attempt to repeal the law in its entirety, for that would be impossible in my opinion, but there will be some needed legislation regarding the observance of Sunday. The bill which I will introduce will be chiefly in the interests of the druggists and grocers who desire to have the right to sell certain goods, which might be considered articles of necessity, on Sunday."

EDICT AGAINST CUT RATES.

Milwaukee, Dec. 30.—From now on there will be little doing in the "cut rate" line among the legitimate druggists of this city and State. The word has come that it must stop. Jobbers have received it from the manufacturers, and in turn have passed the word along to the retailers.

It is stated that with the beginning of the new year all the old agreements against price cutting will be rigidly enforced and any new regulations that may be necessary to make the old ones stand will be forthcoming.

A retail dealer said on this subject: "We are satisfied to have this principle applied and applied to the letter. And I believe it will be so applied. The profits are what we are here for and if we cannot get them, the public has no assurance that it will get what it pays its money for. If for no other reason than as a guaranty of good faith to our customers we would welcome a strict 'no price cutting' policy. Hereafter the cheap drugs will be found only on the shelves of a few of

the unscrupulous stores and at some of the department stores."

WIFE OF POPULAR TRAVELER DEAD.

Friends of John Paul Jones, the popular traveler, known throughout New York and other States as the man who "pays the freight," will be surprised to learn of the death of his wife. She passed away on the 17th of last month. On January 1st Mr. Jones accepted a position with Hance Brothers & White, of Philadelphia. He was second vice-president of the Commercial Travelers' Auxiliary of the State Ph. A. in the first two years of its existence.

WM. S. GRAY & CO. INCORPORATE.

The business of William S. Gray, 76 William street, New York City, has been incorporated under the name of William S. Gray & Co. William S. Gray, the president of the company, retains substantially the same interest in the control and management as before. The other officers are E. J. Wright, treasurer, and J. J. Crawford, secretary.

NEW YORK NOTES.

—Samuel Felt, of the S. Felt Drug Co., Watenville, New York, was in town this week.

—Oscar H. Brickner has gone into business as a drug broker at 90 William street. Opium and quinine will be his specialties.

—The Manhattan Drug Co. has incorporated with a capital of \$30,000. The incorporators are Thomas Fahey and F. W. Widmayer.

—C. H. Landell and Mrs. Landell are taking a short vacation at Hot Springs, Va. Mr. Landell is on the executive committee of the N. J. State P. A.

—James Katerly, prescription manager for the Hegeman Corporation, at 200 Broadway, has left, to accept a similar position with Walter S. Aockey, Eighth avenue and Thirty-fourth street.

—J. H. Stallman, of the Stallman & Fulton Co., suffered the loss of his wife, Sophie M. Stallman, last Thursday. Funeral services were held Saturday, at the family residence, 250 West 104th street.

—Lester H. Carragan, son of S. H. Carragan, of Parke, Davis & Co., sailed for Havana, on Saturday, to attend a meeting of sanitarian commissioners from Canada, Mexico, etc. He will remain in Havana for several months.

—Robert A. Gledhill, one of the old time residents of Paterson, and for many years the proprietor of the drug store on Main street, in later years run by Benjamin Kent, and now conducted by the Vanderveck Drug Company, is dead in Arcola, Bergen county, from heart failure. While Mr. Gledhill was an old man, being in his seventy-fifth year, he was apparently hale and hearty.

—In a decision just handed down in a case which has been pending in New York State for some time, it is decreed that no debt created by fraud can be discharged by bankruptcy proceedings. The case is one in which a man was accused of securing money by making a pretense of mortgaging some timber land, which in fact was untimbered. He tried to evade this obligation by proceedings in bankruptcy.

To the Retail Druggists Of the United States

Notice is hereby given that on and after January 1st, 1905, all COUPONS presented to THE AMERICAN SELLING COMPANY (Manufacturers of MYSTICO LINIMENT) will be accepted by it in full or part payment for any and all of its preparations the same as cash.

Each COUPON carries a face cash value in trade of ten cents. Druggists will please honor all such COUPONS. Mail them at any time to THE AMERICAN SELLING COMPANY, stating the name of your Jobber through whom goods will be delivered. MYSTICO LINIMENT COUPONS should be accepted the same as cash at all drug stores in the United States.

The American Selling Company

62 Maiden Lane, NEW YORK

BANK REFERENCES; also Bradstreet's, Dun's

THE COUPON GIVEN BY THE AMERICAN SELLING COMPANY is enclosed in wrapper of each bottle. Every customer buying a bottle of MYSTICO LINIMENT will obtain a coupon, and that coupon should be received as 10 cents in trade at any drug store. The COUPONS are then accepted from the druggist by THE AMERICAN SELLING COMPANY as cash in part or full payment for any and all of its preparations. This plan affords the druggist a very handsome additional profit and at the same time pleases his customers greatly. It always brings them back to trade again. MYSTICO LINIMENT COUPON plan will give the druggist a profit far in excess to most goods on his shelves. If you have not as yet ordered, do so at once. Get the COUPONS and buy MYSTICO LINIMENT with them; they are as good as gold, MYSTICO LINIMENT is being extensively advertised throughout the United States.

THERE IS A WHOLE LOT IN PUSHING MYSTICO LINIMENT

Pepto-Mangan

AN ARBITRARILY COINED WORD.

It is the exclusive property of the M. J. BREITENBACH CO.

FOR twelve years we have been advertising to the drug trade, through the drug trade journals, the fact that **PEPTO-MANGAN** (irrespective of the name GUDE) is a trade-mark name, registered October 13, 1891, and is our exclusive property.

In order that there may be no misunderstanding, we call attention again to the fact that Pepto-Mangan is *NOT* a synonym for any other iron preparation, for

There is Only One **PEPTO-MANGAN**

which is our product, Gude's preparation, and the Courts have over and over again rendered decisions protecting us in our rights. To ask a customer "Which Pepto-Mangan do you desire?" when Pepto-Mangan is called for, is not only inaccurate and misleading, but renders the druggist liable to the law.

To protect the druggist from any possible loss of trade, or from becoming involved in a lawsuit, through ignorance, we wish to **EMPHATICALLY EMPHASIZE** the fact that

Pepto-Mangan is our **Trade Mark**

and the name does not apply to any other preparation.

M. J. BREITENBACH CO., 53 Warren Street NEW YORK.

TRADE SECTION

SCARCITY OF NATIVE DRUGS.

High Prices Caused by Decreasing Production.

SHORT-SIGHTED GREED OF GATHERERS, ABSORPTION OF WILD LANDS BY INDUSTRIES, AND LOW PRICES PAID COLLECTORS, REASONS.

The steadily rising prices for indigenous roots, barks, and herbs is perhaps the problem of greatest interest at present confronting the drug trade. Values are constantly advancing, and there is a general belief on the part of experts that the upward course of prices will continue for a long time to come. Golden seal, saffras, white pine bark, wild cherry bark, senega root, and many others are exceedingly scarce. On this market, it is said that the visible supply of golden seal at present throughout the country is certainly not more than five thousand pounds. This is really a famine. Large concerns which used to buy golden seal in ten-thousand-pound lots could not place such an order at present at any price. At the moment golden seal can be bought for \$1.50 a pound, but it is expected to reach a higher level shortly. It is said that medicine manufacturers have foreseen this situation at least in part for some time past, and have been protecting themselves not only against the advances of the moment, but also against future increases in the raw drug by raising their prices to the distributor, who, of course, collects from the consumer. The public will pay the piper.

INCREASED DEMAND.

The causes of the scarcity are numerous. Leading manufacturers and drug brokers concurred in stating that the situation was created by several influences. They are the enormous yearly increase in demand created by the constantly enlarging needs of a growing population, the low prices paid gatherers of the roots and barks for their labor compared to which their possible earnings in other lines are temptingly large, and the annual lessening of the actual crops by wasteful methods of gathering which are inspired by a short-sighted greed, making no provision for the full propagation of new crops.

At the office of Parke, Davis & Co., it was said, "All the above causes have certainly been instrumental in causing the present scarcity and rise in prices. Prices will undoubtedly climb higher, and it is unlikely that they will ever again reach the low level they took in past years. The plants are becoming scarcer each year in the South and West. The lands which produce the drugs are being more and more encroached upon by the requirements of a prosperous cotton manufacturing industry and other pursuits which follow the development of high civilization, and the gatherers are going into the mills and factories because the work pays them better, or, rather, has until recently paid them better than collecting drug plants.

"There is a remedy for this which differs from some already proposed in that it would have an immediate effect on prices. It is publicity in the right localities. Actually there are plenty of plants to be found if the collectors will take the trouble to hunt for them. But they don't do so because they fail to realize that they would be handsomely remunerated for the extra time it would take them. Let the newspapers in the South make known prominently that golden seal is selling for \$1.50 per pound, and the amount brought to market next year would immediately jump. Put it up to the collectors, and show them it will pay them to work. Then values will react to a reasonable level.

"Cultivation as a remedy? The time is not ripe, but probably it will be extensively done in time. But it would only pay in native American drugs. Anything which can be grown in Europe can be laid down here at a cheaper price than a cultivated drug could be brought from the South, because the cost of European labor is so low and because the ocean freight rates to this country are actually lower than the cost of shipping a commodity here from the South."

INADEQUATE GERMINATION.

Another gentleman familiar with the situation remarked on a more remote possibility. "There can be little apprehension," said he, "of a practical extinction of any of the leading native drug plants. But if it did occur commercially, no doubt some synthetics would be produced which would admirably replace the natural product. The work along such lines already done in Germany is truly wonderful."

An interesting feature of the scarcity was pointed out by Mr. A. C. Stallman. "The gatherers," he stated, "have themselves been largely responsible for the decreasing harvests. In the case of golden seal it has been told me by Southerners who live in the producing region that the collectors have failed to provide for an adequate germination and production of future crops. It is the same old story so familiar in other lines. In their greed to market the greatest possible number of pounds at the high prices prevailing during the last few years, they have dug up roots entirely, leaving not a slip or shoot or small branch root from which the plant might reproduce itself. It was extermination."

The Department of Agriculture has been alive to the gravity of the situation for some time, and it has not only constantly experimented, but has also attempted to foster cultivation of valuable drugs. While its efforts have been partially successful, they have not yet reached the point of commercial usefulness in many cases. An example of this was given by a prominent local house. They stated that a sample of stramonium seed raised under government supervision had been offered them at ten cents a pound. But the natural product can be had for six cents. In time, however, cultivation may solve the problem of scarcity, and it cer-

tainly must soon prove profitable if prices continue to climb. A Baltimore paper recently quoted a gentleman connected with the firm of Sharp & Dohme as saying: "The advance in prices this year has been very marked, and in January they will go even higher. I predict that it will be only a few years before farmers in the South will make a business of raising roots and herbs of various kinds to supply the demand. It will not be long before the prices will have advanced to such an extent that this business will be profitable."

In the annual report of the Department of Agriculture for 1903 the following appears: "In most instances this work (that of cultivating crude drugs) entered into by persons who were without adequate information in regard to the conditions required, has resulted in discouragement and loss. Experiments undertaken by the botanist to determine the actual cost of producing, curing, and preparing for market certain kinds of crude drugs, especially leaves of plants like stramonium, indicate that they cannot be produced profitably unless they may be grown where land and labor are cheap and where the growing season is long. An experiment in curing the leaves with artificial heat gave very promising results, and if this method proves to be entirely satisfactory a great saving in time and labor will be accomplished in this part of the work, with the assurance of greater uniformity in the product.

THE REMEDY.

"The cultivation of golden seal, senega snake root, and other similar native drug plants that are becoming exterminated in the wild state, has been begun on a small scale, to secure definite knowledge in regard to their life habits and to determine the conditions under which they may be cultivated. Owing to the increasing demand for them and their rapid disappearance from the forests, their successful domestication is extremely desirable."

Further on in the report, the Department comments on the projected cultivation not only of indigenous drugs, but of foreign also. We give the report verbatim:

"In the work on drug and medicinal plants it is planned during the coming fiscal year to follow up the work on the opium poppy and to prosecute actively the search for methods of utilizing either the dried herb or extracts from it as a possible source for morphine. In view of the large importation of opium into the country, it is also thought desirable to attempt the making of opium on a small scale in connection with the Texas experiment, labor there being abundant and cheap.

"The continuation of work in connection with the domestication of wild drug plants, chiefly at Washington, seems very desirable, especially the cultivation of golden seal and ginseng under artificial shade in quantities large enough to yield a considerable product. The further cultivation of established drug plants, such as digitalis, wormwood, aconite, belladonna, and many others on a much larger scale than is at present possible, seems

likewise desirable. In each case a sufficient area should be planted with each article to give a product ample to enable us to isolate active principles in considerable quantity. The Texas experiment is not limited by the amount of land available, and the plans for the coming year include the cultivation of several acres in the hope of obtaining a crop for harvesting and marketing. The primary object in this experiment is to demonstrate the possibility of growing the plants here concerned on a commercially profitable basis. In order to do this, of course, an area of considerable extent is necessary to arrive at any satisfactory conclusion. This is clear when one considers the cost of handling and marketing small quantities in comparison with the cost necessary to handle and market considerably increased quantities. The expense of these processes does not increase in proportion to the increase of the product. The plans, therefore, for the Texas experiment include essentially an increase in the area included in the experiment with a corresponding increase in the crop handled and marketed.

"In view of the fact that there is a considerable crop of crude drugs produced in hot, arid regions of the earth which are at present made use of in large quantities, and in view of the further fact that we have in the United States vast areas of dry, arid country which seem to be seeking some agricultural use, it would be very desirable to establish in the Southwest, and perhaps southern California, Arizona or New Mexico, a station for the study of this class of drug plant and products. Gum arabic, gum tragacanth, senna, colocynth, and others are at present imported from various arid parts of the world, and since the total market value for products from this type of country is a considerable sum, it would seem worth while to attempt the introduction and cultivation of these plants in parts of the Southwest.

"In connection with the laboratory at Washington, special emphasis is to be laid upon the fundamental process in making good drugs, namely, the curing of the fresh material. This involves processes of great complexity and of great technical importance, since the price of a drug is to a large degree determined by the correctness of the methods of curing employed.

"The formation of active principles making the products valuable will also be studied, with the hope that as the conditions of formation are better understood, it may be possible to so influence these conditions as to give an increased production of the active principles. This phase of the work must stand in close connection with the field work, and will be followed up in connection with the field experiments on the Arlington Farm and on the Potomac Flats."

This movement to study methods of increasing the cultivation and production of crude drugs has long ago interested the colleges of pharmacy. To be sure, they primarily are investigating the medicinal principles of plants, but they also, incidentally, are studying in a practical way the cultivation question. Some of these colleges have extensive botanical gardens and conservatories which are conducted in an exceedingly scientific way, and prac-

tical experiments and investigations regarding growing possibilities of various drug plants are undertaken. The botanical garden of the Brooklyn College of Pharmacy is located at Hicksville, Long Island, and there a practical study of the subject is being made. The gardens of the University of Michigan are at Ann Arbor. Purdue University, at Lafayette, Ind., operates a medicinal plant farm, and the Scio College of Pharmacy, Scio, O., includes a botanic garden and conservatory. These are but a few examples of the many pharmaceutical schools and colleges engaged in this useful work.

MYSTICO LINIMENT ANNOUNCEMENT.

The first of the year saw the inauguration of a new coupon plan by the American Selling Company, in connection with the distribution of its Mystico Liniment to the trade. In our issue of December 29th we mentioned this scheme, but inadvertently called the article "Mystic Liniment." All druggists will therefore please bear in mind that the following plan relates to Mystico Liniment, which is manufactured by the American Selling Company, of 62 Maiden Lane, New York. Each package of Mystico Liniment will contain in the wrapper a coupon which will be accepted by the American Selling Company as ten cents in cash on orders, and coupons may be used in full or part payment on all preparations made by that company. Druggists are requested to honor all such coupons presented to them by customers as carrying a face cash value in trade of ten cents. Druggists may mail them at any time to the American Selling Company, stating the name of their jobber, through whom goods will be delivered. The company desires that coupons should be accepted the same as cash at all drug stores in the United States.

TAKING HER OUT.

There were two of them—a little Italian cherub of seven or eight years, some three feet in height, and a little lady about a head shorter, and younger.

It was his treat. Both sat down at the soda fountain and the gentleman called for one ice cream soda. When it arrived the glass was tightly grasped in both male hands and tilted downward, so that Sbe could take the first sip. He took a corresponding sip from the other side of the glass. The first spoonful of ice cream was gravely thrust into Her mouth. He absorbed the second, gave Her the third, and so on. Regularly as clockwork, the glass went from mouth to mouth, until it held no more. Then the boy carefully wiped both mouths, using a gorgeous bandana handkerchief. He helped his sweetheart down from the stool and both went out with happy smiles, at peace with all the world.

SCIENCE FOR THE YOUNG.

Thoughtful little Willie Frazer
Carved his name with father's razor;
Father, unaware of trouble,
Used the blade to shave his stubble.
Father cut himself severely,
Which pleased little Willie dearly—
"I have fixed my father's razor
So it cuts!" said Willie Frazer.

—Saturday Evening Post.

ADVERTISING COMMENTARY.

There are always some topics of great general public interest. Any reference to one of these in an advertisement will at once attract attention. Advertising itself is but the seeking of publicity, and a simple way is to make use of the publicity incidental to current events. The well-known subject should be prominently featured in the advertisement in display type, and the text should gradually lead up to your own article. This idea has recently been used considerably, the favorite subject featured being a reference to Mr. Lawson or "frenzied finance." Such notices are usually read.

CONVENIENCE OF SIZE.

When designing an advertising booklet, small catalogue, or anything which is intended to have more than an ephemeral interest, remember that the average man, after deciding to keep it, will surely start to put it in his pocket. Now, if the booklet is not of handy size to fit his pocket he may become disgusted with it and throw it away. An advertisement constantly carried around is more likely to be referred to than one filed in an office desk. Make your booklet then, about 9x3½ inches, or the shape of a wallet pocket book. This style, moreover, has another advantage—it is the shape of the ordinary business envelope and can readily be mailed flat without folding.

WATCH SIZE AND WEIGHT.

In such advertising it is essential to be sure of the size and weight of the matter. A fraction of the very slightest measurement in paper stock, or its weight, may mean an additional cent in postage for every letter, and this will soon run up to quite a sum. A great deal of economy can be practiced in getting up printed matter. It is not only necessary that it should be attractive and readable, but it should also weigh no more than is absolutely necessary.

Where the object is to cause a preservation of the advertising medium for some time, it is well to use a fine grade of paper, good, clear-faced type, and well-executed illustrations. A clever sample of this type of advertising recently issued, was prepared by a manufacturing concern controlling a pharmaceutical preparation. The cover decoration or ornament is centered in the title line. The initial letter of the leading word is designed of a shears, a candle stick with burning candle, an ink horn, and a quill pen, cleverly woven together to form an "E," and all suggestive of the author's labor in preparing the treatise. Below the illustrated title line comes the table of contents. The whole arrangement is catching to the eye, and shows in a moment what the contents is and where any item can be found. It is essentially considerate of the time of a business man. It is always good to state your case clearly, concisely and tersely. You gain more attention for your advertising that way than by lengthily beating around the bush. Advertising should be telling people what you have in a simple and direct way, your statements to carry conviction to the reader that you tell the truth.

Coriander is scarce, owing to the unfavorable weather conditions in Europe last summer.

THE STORE OF WALTER S. ROCKEY, THIRTY FOURTH STREET AND EIGHTH AVENUE.

It has a large prescription and general trade, and is well known because of attractive window displays and sales features.

BLACKMAILING.

Schemes That Are Devised to Deplete the Druggist's Treasury.

CASES ARE "SETTLED" FOR FEAR OF HURTFUL PUBLICITY, THOUGH THE BITER IS OFTEN BITTEN.

Sporadic attempts at drug store blackmailing are still reported. While these cases are usually easily settled when cash is produced, occasionally an honest man will appear to be intent on moral blackmail, which is the more annoying, because it is continuous. A minor error is discovered by some "friend" of the druggist. He pats the druggist on the back and says: "It's all right, old man, I'm wise." And from then on he levies tribute in the shape of cigars, a handful of candy, free phones, etc., because "me and him know."

A LAWYER TALKS.

Commenting on types of blackmailers and their methods, a lawyer who has had experience with such cases said: "There is no denying that druggists, as well as other men, err, but the layman who is at all familiar with things medical is surprised that more serious blunders are not made by them. The doctor, when writing a prescription, enjoys blissful solitude, even when surrounded by excited women, compared with the conditions frequently present when the druggist compounds or

dispenses. Most of the cases of druggists attacked by blackmailers which I have defended, have never reached court and even where the druggist erred beyond all doubt, the settlement has been much smaller than the amount claimed as damages. The public is prone to exaggerate. The man who thinks he was injured by drugs sets up a howl that it would seem nothing could stop.

"There are two classes of blackmailers, the friendly and the howling. The first is the harder to handle. I understand, I am not speaking of cases where an injured party has just cause for complaint. But even he will make a mountain out of a molehill.

THE IODINE GAME.

"A sample of the howling tribe occurs to me. Incidentally, it was my initiation into a drug trade legal case. A druggist friend of mine called upon me and related the following story: 'A man called for tincture of iodine the other night, handing me a bottle bearing my own strip label, "Tincture Muriate of Iron." He was a stranger to me and we were alone, save for a man who was at the telephone directory. I inquired twice if it was iodine he wanted and he assured me that it was and that he wanted a camel's hair brush. He said nothing, however, I remembered afterward, about using the iodine externally. I poured an ounce of tincture of iodine into the bottle, and feeling pressed for time, was

about to paste my "Tr. Iodine" poison label over the old label. I grabbed a convenient spatula and gave the old label a perfunctory X scrape, pasted on the new label and handed out the iodine.

"An hour later, the iodine man rushed in. He was pretty white and appeared more scared than angry.

"I was waiting on a customer and after hastening her departure, I turned expectantly toward the man. His hand shook as he produced the iodine bottle. He made sure I didn't get my hands on it and then began loudly to demand what I was going to do about it. "I asked you for iron and you gave me tincture iodine," he said. "My wife took a teaspoonful of it and is in terrible pain; what shall I do?"

"The fellow appeared so genuinely scared that I was in doubt. "Get some milk," I ordered, "and give it to her. A teaspoonful of iodine won't hurt her much."

"The man glared at me as he showed the bottle. "Why didn't you label it iodine?" he demanded, and I then saw my iron label with its X spatula mark.

"Of course, it was pain to me then. He had removed the iodine label while still moistened with the paste, and I felt that I had placed myself at his mercy through carelessness. Before I could offer any explanation, he left the store."

"My druggist friend then stated that a lawyer had called upon him the following

day, prepared, he said, 'to settle or sue.' I grasped the situation from a legal standpoint, at once. Plainly a second's work would have saved all trouble for my friend. The moral is plain; don't paste over old labels.

"The outcome was a personal interview with the aggrieved party and his attorney. The man had left no address, but his attorney had. I had read up on iodine and iron, and a few valuable hints from the druggist gave me my cue.

"At this interview, the man's attorney did all the talking, and he was a glib one. My client is well-to-do and was apparently fair game, so they thought.

"I said never a word about that not being a mistake. The man said the brush he purchased was to paint his tonsils with iron. Plausible, eh?

"This was our argument: 'Admitting that you thought you got tincture of iron, why did your wife take a teaspoonful of it? The dose is plainly printed on the label, "five to twenty drops."

"That's my business," the man replied. "All right," I answered. "Go ahead and sue, and the day you serve papers, we'll jail you." Then I had a heart to heart talk with his attorney, whom I knew by reputation. I mentioned casually, that we'd like the address of the man at the telephone on the night of the sale, for, of course, that was a part of the game. Needless to say, that case has never been settled.

"That was one sample of the out and out 'howling' blackmailer. The old label trick is his stock in trade.

THE FRIENDLY DOCTOR.

"The 'friendly' blackmailer is represented by the inebriate type. This man or woman asked for paraldehyde, or says he did, and gets formaldehyde. Even though it is properly labeled formaldehyde, he drinks his usual sleeping potion, and the druggist is made aware of his pain-causing error by a physician (?) who calls in a friendly way to fix it up. A ten or less will fix it, and some druggists pay up rather than fight.

"It is the fear of publicity that makes the druggist such an easy target. The cases are sometimes humorous. Two years ago 'that henna case,' as we call it, elicited much amusement, though the plaintiff didn't laugh. Remember it? An actress who used henna to produce Leslie Carter hair? She claimed that her hair turned green, and it did, too. Sued for \$2,000, and got—some newspaper advertising and plenty of ridicule. The defense was that henna is unreliable at all times. That certain precautions had to be observed to get results. And an important precaution was to have the hair clean, thoroughly clean. Plaintiff 'bust out cryin'' after that, and she of the green hair garnered nary a simoleon.

COUNTER PRESCRIBING.

"The hardest cases to handle are those where the druggist is accused of counter prescribing certain domestic remedies. Too many druggists assent, without due deliberation, to a question: 'It's good for that, isn't it?' This scheme results later in making the druggist responsible through direct or indirect indorsement."

"With proprietary articles bearing a druggist's label as maker, and, therefore, his indorsement, too much care cannot be observed. Directions as to the use of

such re-mediés, whether for local or internal use, should not be obscure, and the druggist should avoid making extravagant claims for a preparation either by printed or spoken words."

"The pasting of new labels over old is carelessness, pure and simple, and shows at least contributory negligence. A good plan in use in many stores is to call off the name of the article while pouring or weighing it. If it is a case of a miscolored or misunderstood name, this method will help to detect it.

"Own make" tinctments containing blistering ingredients, are the source of many threatened damage suits. A case decided some years ago in this city brought out clearly the danger of handing out such preparations without a printed or spoken warning, 'Do not bind or bandage.—For rubbing only.'"

Carbolic acid for alcohol, ninety-five per cent. carbolic acid for its five per cent. solution, spirits of camphor for an eye wash of camphor water, and even blue ointment for blue mass, have been the most prevalent alleged mistakes.

Don't forget that in trial by jury you'll not have your professional peers—men who can understand the whys and wherefores. Druggists, you know, are not liable to jury duty, if in active practice, and it is perhaps as well to keep out of the courts, where the laity will impartially hit the druggist along with the railroad magnate and other millionaires.

TO EXAMINE MINERAL WATERS

To inspect the numerous mineral waters sold under domestic and foreign labels as "medicinal" is the latest form of activity of the Bureau of Chemistry of the Department of Agriculture. It is the belief of Dr. Wiley, based on the progress already made, that many waters have no medicinal value whatever. Some are positive frauds and an imposition on the public, he says, while the beneficial qualities of others exist only in the imagination of those who use them. The Geological Survey will cooperate in the work and will secure samples of waters from every genuine medicinal spring in the country. These samples will be used as standards in testing the many different waters sold. A complete report on their character and wholesomeness will be made by the Geological Survey. A small number of waters are labeled and sold simply as pure water from granite rock and not possessing any medicinal virtue.

Proctor Decorations.

One of the features of the Proctor houses next year will be elaborate floral decorations, a contract having been awarded, to one of New York's leading florists to furnish all of Mr. Proctor's theatres with the choicest and most fragrant flowers. This week, of course, the houses will be profusely decorated with holly, mistletoe and evergreens, on account of being New Year's week, and in the future the decorations will consist of the garden's most beautiful and expensive products. This feature should attract more than passing note, as it will materially enhance the beauty of these splendid playhouses.

She was young and pretty. She tackled the corner druggist for a Christmas contribution for the Home for Deceptit Cats. "No Chadwick business for me," said he.

NAVAL HOSPITAL CORPS.

Status of Bills That Are Now Before Congress.

PHARMACISTS ASKED TO WRITE TO THEIR REPRESENTATIVES TO SECURE FAVORABLE LEGISLATION.

The members of the hospital corps of the navy are very much interested in the bills now before Congress for increasing the efficiency of the hospital corps of the navy. Pharmacists are earnestly requested to give this measure their active support and to assist in bringing its merits to the attention of their representatives in Congress, not only for the good it will accomplish for the navy, but as well for the effect it will have in elevating the standing of pharmacists in government employ.

The present status of this measure is as follows: Identical bills were introduced in the last session of Congress—in the Senate as Senate Bill No. 3984, by Senator Gallinger, and in the House as H. R. Bill No. 12646, by Representative Roberts—entitled "A Bill to Reorganize and to Increase the Efficiency of the Hospital Corps of the Navy," which bills passed their second reading and were referred to the respective Committees on Naval Affairs. Both bills are still "in committee," no action having been taken during the last session of Congress, owing to its early adjournment last spring. Unless these bills are reported to the Senate and House by their Naval Committees, no vote can be taken on them, and if not reported this session, they will be killed by "limitation" on the adjournment of Congress, March 4, 1905. Most of the members of this present Congress have been informed as to the merits of these bills and a sentiment favorable to them exists, so that their passage seems likely if they can be reported from committee and brought up for a vote, but all this advantage will be lost if the bills have to be reintroduced in a new Congress.

The most effective aid that can be given these bills—which are the same in both Houses—is such as would secure their consideration and favorable report by the Senate and House Committees on Naval Affairs, so that the bills could be voted on. This can be done by enlisting the interest and active support of the members of these committees, and the more friends that can be secured among Congressmen for the measure, the better will be its chances for passage. Pharmacists are requested to write personally to their representatives in Congress, asking their support for the "Navy Hospital Corps Bill," both as to aiding its favorable reconsideration and report in committee, and by voting for it when before Senate and House.

The most formidable obstacle to be overcome is the opposition in Congress (at this session) to passing new legislation or legislation that involves an appropriation. The added increase to the estimated annual amount required for the "pay of the personnel of the navy" that this measure would cause will be about \$48,000 and because of this increased cost Congress may refuse to pass the bill. If the subject is considered, however, it will be plain that it is not true economy to cripple the efficiency of so important a branch of the navy for the seeming saving of so small

an amount, nor is it economy to spend money for training men for special duties, only to have them leave just when their services are most valuable. At present, few men re-enlist in the hospital corps, yet it costs the government a goodly sum to train each man to a point of high efficiency and the navy loses its men, its expensive training, and their skill and experience, because it does not pay them enough to keep them. A constant stream of new recruits has to be secured, and the expense of training these for their duties, the loss of their services while under instruction and the consequent inadequate force of hospital corps men for duty afloat and at hospitals are increasing losses to the navy. As a matter of fact, the actual money loss is more than the extra amount involved in this measure, and the money is simply lost, as far as keeping a force of experienced, educated hospital corps men is concerned.

SOME COMPARISONS.

The hospital corps asks nothing for itself or its members that is not already granted to the warrant officers and enlisted men in every other branch of the navy. No extra favors, no special privileges or benefits or rights are asked for, only that they be granted the simple justice of equal rights with the other men of the navy. These members of the profession in the navy ask your help only to secure for themselves the same legal rank and status, the same rates of pay, the same privileges, the same rewards of promotion and the same rights to the benefits of legislation as are now enjoyed by every warrant and petty officer of every other grade and rating. The men of the hospital corps are now debarred from equality with their shipmates in these respects, and it is to secure for them this equality that the bills in question have been drawn up and recommended by the surgeon general of the navy and have been approved by the navy department.

That such legislation for the hospital corps of the navy is both necessary and essential to its future efficiency, is shown by the facts stated by the surgeon general of the navy in his "annual report" to the Secretary of the Navy—that there is increasing difficulty in securing good men for the hospital corps, and that the refusal of trained and intelligent men to re-enlist after serving one term is greatly impairing the quality of the corps. Why is it hard to get good men and why do they leave the service as soon as possible? These are some reasons:

The men of the hospital corps are paid less and have a lower rank than the men of any other branch of the service, and they are also deprived of the rights of others to promotion and better pay.

A pharmacist has his "warrant" from the Secretary of the Navy, the boatswain, carpenter, et al, have their warrants from the President of the United States; the warrant of the carpenter gives him a fixed status, the warrant of the pharmacists exists only during the pleasure of the Secretary of the Navy, who could revoke every one if he saw fit. All other warrant officers have the right to promotion to commissioned rank and pay after six years' service! The pharmacist is not given this right, nor can he hope for any higher rank or pay under present laws no matter what his merits or service may be. The

actual rank and status of the pharmacist is only "relative," devoid of much of the substance of the status of other warrant officers.

The number of pharmacists is totally inadequate to allow them to be detailed for the responsible posts at hospitals and at sea where they are needed. To gain promotion to the rank of pharmacist a man must now expect to serve from ten to twelve years as hospital steward.

THE INJUSTICE OF IT.

A hospital steward is rated as a "chief petty officer," yet he receives only \$60 a month, while every other chief petty officer receives \$70, and he ranks below every C. P. O. When the pay of chief petty officers was increased \$10 a month, all but the hospital steward received this extra allowance, the law declared that the pay of hospital steward could be only \$60 a month, and he is consequently debarred from getting the benefit of any increase in pay, except by special legislation.

A "gunner's mate" or "carpenter's mate" can look forward to being promoted to the rank of warrant officer after five or six years' service; the hospital steward on his first enlistment cannot even hope to be promoted to pharmacist until he has served ten or twelve long years. Yet hospital stewards are required to be men of education and to possess a highly trained, special skill, not to mention administrative and clerical qualifications.

A hospital apprentice—who is trained to be a skilled nurse can get no higher rating than of "3d class petty officer," with a limit of \$30 per month, no matter how long his service or how great his ability or qualifications. The only promotion that he can look for is promotion to the rate of hospital steward, to secure which rate he will have to qualify as a skilled apothecary before a strict examining board. Even if thus promoted, the navy loses a nurse to gain an apothecary, which often works out an injustice to both nurse and apothecary, because of the loss of the distinction between the two callings and their different educational requirements.

RE-ENLISTING RARE.

The actual effect of these conditions and their results are significant of the harm they cause. Very few—almost no—men now re-enlist in the rating of "hospital apprentice" (nurse), this rating being too low and its pay too insignificant to attract and hold trained nurses. Hospital stewards, who are men of education and who hold their degree in pharmacy, find that there is no prospect for advancement in the navy and will not remain after serving one enlistment. The navy is almost daily losing the services, experience and training of these men just when they are most valuable, consequently, there must be a constant infusion of new recruits, who must be trained and educated to take their places. This is a heavy waste of time and money, it impairs the efficiency of the hospital corps, puts inexperienced men in places of responsibility, causes a crippling of the corps by lessening the number of men available for duty ashore and afloat below safe limits, and sadly impairs the morale of the corps as a whole.

There are but a few weeks left of this session of Congress, and prompt work is the best aid.

CAN STAPLES BE CUT?

If Miles' Plan Succeeds, Might Cutters Not Slash These?

OPINIONS OF MOST LEADING RETAILERS COINCIDE IN THINKING THAT THERE IS LITTLE DANGER.

Whether the raising of prices on patent medicines as the result of N. A. R. D. organization will have any beneficial effect on trade as a whole, is a question raised by a prominent New York pharmacist. He claims that any gain on patents will be more than counterbalanced by losses on the sale of drugs.

"Common household drugs," he says, "such as rochelle salts, epsom salts, cream of tartar and so on, constitute the backbone of our trade. It is the small but frequent sales of such things that fill the cash register, not the profits on patent medicines.

"Most druggists never keep a record of their sales. But I have done so for a long time, and I find that patent medicines make up only fifteen per cent. of my profits. The rest is all in drugs and sundries.

"Now, suppose that the N. A. R. D. does succeed in making cutters sign a schedule on patent medicines and stick to it. What is to prevent a man from advertising a big cut on rochelle salts? You can't stop his supplies of that, because there are not one, but twenty manufacturers from whom he can buy. At the worst he could send his order abroad and have it filled in a week. It makes no difference where he gets it, all he has to do is to put on his own label.

"So with all other drugs of that class. The cutter only needs one thing that he can advertise as a 'leader,' to get the people into his store. You know that a woman is attracted by bargains in two things more than any other lines—groceries and drugs. If she sees glycerin advertised in a down-town store at four ounces for seven cents when she knows that here she would have to pay ten cents for one ounce, all she has to do is to drop a postal card and the staff is brought right to the house.

THE MOST PROFIT IN STAPLES.

"I lose more profit that way than I could ever make up by higher prices on all the patent medicines put together. Suppose I do get ten cents more on a bottle of Peruna. In one day the extra profit would not amount to more than fifty or sixty cents—and I'm supposed to be in a neighborhood where patent medicines are used a great deal. I don't see the sense of making a dollar on one side of the store and losing four dollars on the other side.

"The big cutters and department stores will always have the advantage of us in the buying of drugs. Where the average retail druggist thinks he is doing well when he orders a hundred pounds, the big fellow will purchase a hoghead and get a bigger discount. Then he can sell a couple of cents below the druggist and still make a profit."

Another well-known druggist whose attention was called to these points thought that while the argument was a good one, it would not have very much weight in the price raising movement.

"For," he said, "the recross of the

wholesale houses show that sixty-five per cent of their sales are made up of patent medicines. Should not such a record be taken as the standard for estimating the sales of the retail druggist?"

Acting on this idea, a series of questions was asked a number of leading representative retailers, both cutters and non-cutters. It was suggested that such a cutting of staple drugs, if largely pursued, might do more harm to profits than cutting patents ever did and that the very foundation of the retail drug business would be attacked.

Supposing the new direct contract serial numbering plan to be in full and successful operation, and the cutter consequently shut off from slashing prices on leading patents, would he, in order to make a drawing feature, cut heavily on staple drugs? Is this idea practical and possible? Would there be satisfactory results to the cutter?

The answers were all of one tenor and usually the retailer did not require long to reach his conclusion. He usually thought such a development on the given hypothesis would be highly improbable and indeed, almost impossible.

ADVERTISING NECESSARY.

"There would not be enough popular demand for staple drugs," said one retailer, "because they would not be sufficiently advertised. The large demand for the leading patents is constantly stimulated by enormous advertising. The articles are well known. The public constantly asks for them. Such would not be the case with staples.

"Reduced staples," he continued, "would often be too great in bulk for a customer's needs. Suppose rochele salts were featured at five cents a pound; perhaps a few customers might be attracted, but when a pound of the stuff was handed out the customer would be appalled. How could he ever use it up! Besides, the package would be too large for comfortable postage. In all probability the patron would beg to be excused and ask for a cent's worth. Having once made the price a nickel a pound, the druggist would have to sell an entire pound to each purchaser alike. He could not in fairness sell a pound to one man for a nickel, half a pound to another, and a quarter to the third at the same figure. It would degenerate speedily into a penny trade.

EFFECT OF CUTTING.

"Of course, these low values would attract some attention. Some person who had purchased at the cut rate would expect to buy the same article at the same figure in another store. When denied this privilege, the individual would immediately exclaim, 'Oh, but I can buy it at Brown's for that price; then why can't you sell for that?' Upon which the wily druggist would unquessingly reply, 'Well, we could sell such drugs as Brown sells at those figures, but we prefer not to handle that quality of goods.' Constant repetition of this on all sides would soon give Brown the reputation of selling spurious or adulterated drugs. This could not happen when cutting patents, for they come in original sealed packages, put up by the manufacturers themselves, which acts as a guarantee of genuineness and purity to the purchaser, no matter at what reduction they are sold. In this respect, certainly cutting on staples would not work as well as cutting on patents."

Another druggist replied to the queries in this vein: "Of course, there are lines which could be featured by a cutter in the event of a complete success of the direct contract plan, which are not patent medicines. But they are not leading staple drugs. They are confined to the sundry class of articles, such as soaps, 'own makes,' etc. But featuring of these already goes on continually, and an expansion of such cutting would affect the general retail drug business not at all."

These conclusions, attained by men who surely know the situation, all combine to pay tribute to the power of large advertising. With such publicity, necessitating large organization and capital, an enormous demand can be created for anything with merit. The public can be educated into any line of thought by persistence. But without huge advertising there will be no great general demand, and consequently cutting unadvertised staples does not produce the same results for the commercial druggist as slashing well-known patents.

APPRAISERS' DECISIONS.

—Plasters were imported by the Eichler Publishing Company and were assessed as medicinal plasters. The importers protested on the ground that the merchandise was saline and so was dutiable under paragraph 68 of the tariff act as a medicinal preparation. The board found the merchandise to consist of healing or curative plaster in roll form, to be softened by heat, spread upon various fabrics, and then applied to the body. Webster's definition was cited that plaster is an external application of a harder consistence than an ointment, to be spread according to different circumstances, either on linen,

leather, or other material. The importers' protest was overruled.

—Agate scale bearings were imported by the Computing Scale Company, at Cincinnati. They were small pieces of agate, varying slightly in dimensions, which were cut, polished and grooved in order to fit them for specific use as bearings for scales of superior quality. The collector assessed them as precious stones, cut, but not set. The importers protested that the merchandise was dutiable as manufactures of agate. The Board of General Appraisers sustained the protest.

—Lanoline, or adeps lanae, was held by the Board of General Appraisers to be dutiable at 25 per cent, as a medicinal preparation. The importers, Victor Koehrl & Co., claimed it was dutiable at 1½ cents a pound, as wool grease. Testimony showed the merchandise was made from wool grease and is used as the base for many ointments, but the board ruled that the process of refining has made it an entirely different article and that its use brings it within the class of medicinal preparations.

Morpheus moved uneasily in his slumbers. "By the powers!" he ejaculated. "There's a rose in the garden, again." And it was no dream, as history proves. But wait! man.

Mamie often wondered why Acids trouble alkali—

Mamie in a manner placid,

Fed the cat boracic acid,

Whereupon the cat grew frantic,

Executing many an antic.

"Ah!" cried Mamie, overjoyed,

"Dussy is an alkaloid!"

—Saturday Evening Post.

Easter, 1905, Is April 23rd.

The "White Rabbit" reminds the progressive druggist that Easter will be here soon, and that he should prepare for the demand that is sure to come for the White Rabbit Easter dyes. The "White Rabbit" and the Easter egg are inseparable.

In choosing a satisfactory brand of Easter dye for the coming season, no mistake will be made in buying the well-known "White Rabbit" brand. These dyes have been on the market for many years, and always give satisfaction.

The old German myth familiar to all,

that the white rabbit is responsible for the colored Easter egg, is utilized in the name of the White Rabbit Easter Dyes. They have become exceedingly popular with the children, as well as with older people. The trade also appreciates them on account of their easy sale and the fact that the retailer's profit is large. The dyes are packed in handsome display boxes, which contain attractive advertising matter for the dealer. They are the best advertised dyes, as well as the best in quality. Get the best. Order from your jobber.

CARING FOR CIGARS.

An Expert Tobaccoist Criticizes Drug Store Cigars.

"The average druggist gives but little attention to his cigars," said an old-time cigar man, referring to the care of the weeds after they are once stocked. "The druggist with limited capital and facilities for handling cigars, is manifestly at a disadvantage when he competes with a cigar store, properly arranged and conducted.

"The average cigar case is fitted with either felt, tin or sponge moisteners, supposed to furnish sufficient moisture to keep the 'smokes' in good condition. The same cigar case frequently holds a great variety of cigars, some moist, some dry, all exposed to the same temperature and a like amount of water vapor.

"This is wrong. Cigars have their peculiarities, different types requiring dissimilar treatment to keep them in good condition, and the placing of tightly rolled, moist Havanna cigars beside the mongrel cascarilla-vanilla flavored weeds, that burn like sawdust, anyway, is responsible for many druggists' loss of cigar customers.

"Why? Because the Havanna cigar is already moist enough, is tightly rolled and holds the moisture in its filler, and too much dampness present will certainly affect the wrapper. In addition to this, the flavored cheap cigar, in summer at least, is bound to affect the better grade weeds by imparting a foreign flavor which is quite apparent to the expert.

"A little judgment on the part of the druggist would prevent the spoiling of \$90 goods with \$30, or lower priced doctored cigars. This could be accomplished by dividing the display case by an air tight partition, into wet and dry departments.

"That cigars in winter dry out because of the artificial heat, is well known. Summer heat causes sweating of cold surfaces, showing that it carries moisture. Therefore, in winter you should give your cigars a chance to absorb a little clean moisture.

"I personally don't put much faith in these exposed water surface moisteners or the other varieties. When I think my cigars are getting somewhat dry, I bathe the containing boxes with a sponge wet with tepid water. Wood is a good absorbent and water applied this way accomplishes results. I have taken cigars that were almost brittle, and by judicious box moistening, have rendered them salable. It's the cigar that 'breaks' or unrolls, the one that doesn't draw well, that loses the repeating trade. And it's the steady patron that counts in the cigar business.

"I have seen drug store cigars that would smoke themselves, they were so dry, and I have endeavored to smoke green cigars that should be in the custody of the Gerry Society, they were so young and fresh.

"Some rapidly selling brands never require attention. These I keep on open shelves and have no complaints about breaking. But the druggist would hardly be wise to expose absorbent weeds to the action of the combined odors present frequently in the pharmacy. Cigars, if exposed near a perfume case, absorb the volatile odors, which are by no means a pleasant addition, to my mind. How much worse

they would smell if valerian or asafoetida were in the air."

Many druggists admit that they cannot care for their cigars properly through lack of space. In order to secure discounts, quantity lots of cigars are frequently purchased and the absence of humidors makes the last of these quantities almost unsalable, because they are thoroughly dried out. Some stores have surplus cigars stocked on high shelves, where they are subjected to high temperature and absorb all sorts of volatile gases. Others have cigars hidden under counters, in musty or damp places, decidedly unsanitary, to say the least.

The druggist, if himself a smoker, can study his carried brands, making up his mind which should be classed as green or dry brands.

SPONGES BECOME SCARCER.

Their Cultivation Is Not Yet Considered Practicable.

The efforts of the United States Fish Commission to protect the sponge industry by the prohibition of the taking of small and immature sponges are meeting

ever acquire sufficient patience to become growers. The method of cultivation is not a difficult one and suggests that the dealers might undertake the cultivation, and thus save to the United States the purchase prices which may in no distant day go to the Mediterranean. Fresh sponges are cut into small cubes, injuring the outer skin as little as possible. The cuttings are skewered on bamboo rods, about three to each rod; these are attached to boards and sunk.

Modern methods have not appeared in the industry, so far as the curing of the product is concerned, or its dispatch to the market. The catch is thrown into small kraals on the beach, where between the washing tide and the hot, tropical sun, the decomposed animal matter is removed. The industry, too, confines itself to the few sections developed many years ago. To only a few ports come the fishers. In these the sponge merchants of New York and other cities maintain agents. At Key West and Tarpon Springs are marketed most of the Florida sponges. The Cuban Sheep's Wool is brought into Havana, and Nassau in the Bahamas is the market for a cheap and coarse variety.

Courtesy of American Inventor.

ASSORTED SPONGES ON THE KEY WEST SPONGE MARKET.

with little aid from the fishers, says Clifford M. Story, in a recent article in the American Inventor. As the fishers work independently, it is well-nigh impossible to make them amenable to the law in this respect. A profit in hand, they argue, is worth two in the future. The dealers at the ports say they are powerless to stop the lawlessness, being forced to buy thousands of small sponges which should never have been taken from the sea.

As a consequence, there is a startling diminution in the supply and an increase in prices which has brought forth public protest. There are those pessimists who predict the virtual elimination of sponge fishing as a prosperous industry.

That sponges may be cultivated has been demonstrated, but as it takes about seven years for one to attain a salable size, it is little likely that the fishers will

It is possible that a more alarming scarcity will awaken either enterprise sufficient to start sponge farms, or wide search for possible, new grounds in the Gulf of Mexico or among the West Indies.

Concerning Wild Licorice.

The bulk of the importations of licorice root are absorbed by tobacco manufacturers, who use it to flavor tobacco and snuff. Sometimes large enough quantities of this flavoring are used to warrant the term adulteration. Most of the licorice grows wild in the Tigris and Euphrates valleys. The plants are regularly cut; in fact, the harvesting of licorice is almost an industry. The imperfect or crooked sticks are used for fuel, but the good ones are exported in large quantities, usually to England and America.

SODA DISPENSERS' TALK.

What They Think About Fountains and Dispensing.

THE COMPOSITE VIEWS OF THE MEN BEHIND THE MARBLE COUNTERS.—"SANITARY SODA" NEEDS CLEAN, POLITE SERVICE.

It is sad, but true, that the average druggist knows little about his fountain, outside of paying its running expenses. Inquiry shows that not one proprietor in five can give the whys and wherefores of certain fountain attachments, or give lucid reasons why he is using a time-out-layed apparatus.

Who does know all about soda fountains?

Apparently the men who dispense soda. Yet each man is familiar only with the type of apparatus he is employed upon.

Manifestly it is impracticable to give the criticisms offered by a majority of the acknowledged leaders among the dispensers. Each has an argument for his favorite and positively no use for its contemporaries.

WHICH IS BEST?

There are at least two sides to the question, which is the best type of fountain. There is the dispenser's view, the proprietor's view and last and most important, the public's view.

The consensus of dispenser's views is that the apparatus must be easy to clean, and easy to operate. But, first of all, the arrangement of the apparatus must be such that pools of soda, drainage water, etc., cannot collect upon the floor. The dispensers, one and all, urge that there is something more important than looking clean. They want to be clean. What is the advantage of clean linen, white or black uniform coats, a well scrubbed counter, polished silver plate, and so on, if the dispenser is suffering personal and physical discomfort from wet feet and bedraggled trousers? Many dispensers urge existing conditions in extenuation of the soda man's tipping.

The plea is often made, "I took a little calisaya or coca wine to warm me up a bit," when disagreeable questions are asked about intemperance. And while this is little better than no excuse at all, still there may be some truth in it.

Whatever type of fountain you install, say they, give first thought to drainage. A concrete floor sloping to the center and fitted with at least a three-inch drainage tube to the sewer is accepted by many as the best. They add, however, that there should be no corners, the cement floor rising a couple of inches at the outer margin and being concaved to permit flushing with a hose.

SLOPPY FOUNTAINS.

This should be the foundation for any fountain. Then comes the question of "sloppy" fountains. Those with badly arranged sinks should be particularly avoided, as well as those with "leaky" soda taps. Renewing of washers will prevent in great measure this evil for which the dispensers are themselves frequently responsible. The practice of holding on to the draught arm lever or

faucet by the posing dispenser will in time do the trick.

The men say it is not the fountain as much as it is the dispenser who creates a "sloppy" atmosphere. In the haste to serve a crowd, the dispenser "slops" more or less. He interchanges glasses while the stream is on, doesn't shut off the soda properly, spills a drink or two, overturns glasses, or in his haste to wash them, splatters sink water about.

All of these trade slopping features can be and are more or less eliminated by the newer fountains. A projecting deep-fluted marble slab under the draught arms of the wall fountain, a projecting sink under the counter service apparatus, with plated drip drainage cups directly under the soda arms, help to reduce floor moisture to a minimum. The grating on the floor should be easy to remove, and should be thoroughly cleaned each day.

TIME IN SERVICE.

The turning about to the wall service to obtain syrup, the drawing of the soda and the serving of the customer is about equalized in serving three glasses of soda, by the care necessary in handling bottles, or the pushing of the pump on container.

This so much discussed question should not be considered important, say the majority of soda men. It should be how good, not how quick. They argue that the bartender in a saloon has to handle whiskey and cordial bottles, and has to wait for the froth to diminish on beer and ale, yet no great complaint is heard. Is it different with soda?

A post-theatre visit was paid seven of the larger soda dispensing drug stores. The same drink, orange phosphate, was ordered in each place, not, however, the same night. The bottle, pump, wall and combination wall and counter service fountains were represented. Each store was crowded and there were at least two men dispensing. And the observer had to admit, with the soda men quoted, that it was more the men and their methods than it was the fountain.

PRACTICAL DISPENSING.

In two stores the men had evidently suffered more from wet feet and the consequent alcoholic remedy, or else they were new and easily flustered. And some of the soda men talked. There were "asides"—some unfit for publication.

From many soda men's viewpoint the "new fangled" drinks are a nuisance, and those who drink and pay for them fools entitled to no consideration or good service. The man who, in a rush, asks for a malted milk, chocolate and egg, or an egg phosphate with three eggs (one man did) or some other combination that entails nicety in manipulation, should either be served willingly or not at all.

One of these "asides" heard by the observer was a whispered, "Say, Bill, look at that weak, little duffer. Three eggs; huh!" This directed apparently at his fellow dispenser, but intended for and heard by the patron who had evoked it.

Calling this to the attention of other soda men many admitted that the soda business was trying, especially during rushes, and these "asides" were pressure relievers, so to speak, and have nothing to do with the question at issue. It may be worthy of note that the sotto voice remarks were made at a wall fountain, while

the man was drawing syrup, his back to the customer.

ICE SUPPLY.

The question of ice supply from the dispenser's standpoint is important only from its labor-saving features. Dispensers unite in saying that a wall fountain should have a rear ice feed, that is, should be so built that icing may be done from the back, out of the dispenser's way and the customer's view. Syrup tanks in a wall apparatus should be arranged so that they may be removed without unnecessary climbing.

Syrup bottles, plunger pump tanks and all other types of syrup containers require careful attention. Soda glasses should, say all the dispensers, be washed in hot, soapy water, rinsed well each time and at least once a day a bicarbonate of soda solution should be used on them to give them a polish. This hot water washing is carried out in many stores where there is space behind a fountain, but in the majority it is impracticable.

Now that ice cream has acquired such a hold in soda dispensing, a thought should be given to the arrangement of containers of that delicacy. A convenient supply can in some of the new fountains, be placed at either end of the dispensing counter. These cans are contained in marble boxes having a lid top. The interior of the marble box is arranged to save ice. The removable cans fit within a sheet iron holder, allowing the side and bottom distribution of ice and salt. It is thus easy to replace an empty ice cream can with a full one without unpacking ice, because of the sheet iron wall, which prevents direct contact of can and salted ice.

Refrigeration of mineral waters, kunnys and the like should be accomplished, say most dispensers, without direct application of ice. Air tight chambers connecting with the ice supply are best for this purpose, because the waters are subjected to dry, cold air, which does not destroy identifying labels.

As to the carbonated water, it should be charged high enough to permit of rapid soda drawing, yet not high enough to break glasses. A hundred and twenty-five pound pressure, cold, will equal a much higher pressure of a warm stream. Some dispensers set their automatic carbonators at 150 pounds, but they are exceptions.

THE BEST DISPENSER.

In general then, the best soda fountain in the dispenser's eyes is the one that will be easy to clean, is conveniently arranged with an idea to the physical comfort of its operator, and one where unnecessary moisture is eliminated as far as possible by drainage or construction, preferably the latter. The measuring cups on syrup tanks are disregarded by dispensers generally, each preferring to guess quantities. Some say that the new apparatus is constructed entirely too much on the automatic plan, requiring but little skill from the dispenser.

Even on wall fountains so many special bottled preparations are in demand that it would seem that it would be as well to have a bottle system for all syrups, rather than a combination of systems.

All of the men behind the counter say that the desire of the druggist to hold on to an old time, worn out apparatus is responsible in a large degree for the slipshod, unsanitary methods of the men who serve.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued December 27, 1904.

- 778,243—Fritz Hofmann, Elberfeld, Germany, assignor to Farbenfabriken of Elberfeld Co. New York, a corporation of New York. Process of making dialkylcarbinols.
- 778,257—Louis L. Martin, Toronto, Canada. Apparatus for vending perfume.
- 778,260—James T. R. de Morley, London, England. Apparatus for the manufacture of mineral or aerated waters.
- 778,277—Carl F. Schaerger, Basel, Switzerland, assignor to the firm of F. Hoffmann-Laroche, Basel, Switzerland. Chloral-acetone-chloroform and process of making same.
- 778,311—Linley S. Grisell, Clyde, Kans. Fountain siphon-syringe.
- 778,477—Karl Ebel, Biebrich, Germany, assignor to the firm of Kalle & Company, Biebrich, Germany. Monochloro alpha-naphthol and process of making same.
- 778,556—Samuel L. Summers, Philadelphia, Pa. Process of making acetyl-salicyl-phenetidin.
- 778,566—Harvey Coale and Lewis S. Greensfelder, Baltimore, Md. Apparatus for using stoppers to bottles.
- 778,503—Alexander M. Macconnell, New York, N. Y. Closure for bottles or the like.
- 778,606—Ray D. Price, Detroit, Mich. Automatic guard for bottling machines.
- 778,656—Otto J. Graul, Ludwigshafen on the Rhine, Germany, assignor to Badische Anilin und Soda

- Fabrik. Ludwigshafen-on-the-Rhine, Germany, a corporation of Baden. Process of making acid nitrites.
- 778,677—Elijah M. Houghton, Detroit, Mich. Blackleg-vaccine and process of making same.
- 778,670—Michael Jijinsky, Krefeld, Germany. Ortho-dioxythraquinone-sulfo acid and process of making same.
- 778,687—John G. Marmion, San Antonio, Tex. Bottle.
- 778,736—David H. Bowlin and William L. Doudle, Columbus, Miss.: said Doudle assignor of one-half his right to said Bowlin. Shipping-case for bottles.
- 778,750—Frank P. Kirzinger, Louisville, Ky., assignor of one-half to Milton D. Bryant, Louisville, Ky. Pill or tablet machine.
- 778,770—Otto Ziemis, Leroy, Ill. Dispensing and measuring apparatus.

TRADE MARKS.

Registered December 27, 1904.

- 43,947—Antiseptic. Farbenfabriken of Elberfeld Co., New York, N. Y. The word "Metakalin."
- 43,948—Certain named toilet preparations. William Walter Westgate, Houston, Tex. The hyphenated word "Wesgateer."
- 43,949—Cough mixtures. Dominick A. Marino, Jersey City, N. J. The words "Rapid Transit," associated with the representation of an electric car, showing the trolley attached to the wire.
- 43,950—Liniment. Andrew W. Zeigler, Ellwood City, Pa. The word "Meud." with the representa-

tion of an awl arranged beneath the word.

Donnell Mfg. Co.'s Premiums.

The manufacturers of the famous White Rabbit Egg Dyes, the Donnell Mfg. Co., 612 S. Sixth street, St. Louis, are offering again this year a premium of a Wirt fountain pen or a pearl handled pocket knife to all salesmen who sell through their respective houses, thirty-five boxes of the dyes. Both premiums are of excellent quality and are well worth an effort to obtain them on the part of salesmen.

MARKET REPORT

MARKET EXCEEDINGLY FIRM.

Moderate Consumptive Demand as Year Closes.

LITTLE FEATURE, AS IS USUAL AT THIS TIME, BUT TOTAL SALES LARGER THAN MIGHT BE EXPECTED.

NEW YORK, Jan. 2. The general scarcity of certain leading drugs, especially indigenous drugs, causes decided firmness in most divisions of the market. This scarcity can be traced to a number of causes which have been operative for the last two years, and chief among them is the baneful influence of drought on the growing crops. The European drought of two years ago is now causing its full effect. The week has seen only a few changes in the market, as the end of the year naturally curtails operations. Declines of importance are non-existent and the general tendency continues upward. Lycodium, ladies' slipper and silver nitrate have again risen.

OPIMUM.—The market is quiet, steady and unchanged and the condition of foreign and domestic primary market fore-shadows no change for the immediate future. There is a moderate movement into consumption. Jobbers still quote \$2.85@3.00 for nine per cent., and \$2.95@3.10 for eleven per cent. Powdered, \$3.75@4.00 for thirteen per cent., and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—No new feature has developed. As is the case with opium, morphine holds steady at unchanged values under a moderate demand. Jobbing prices remain \$2.60@2.75 for eights, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—During the week a slightly easier tendency has appeared in the primary market, but without effect on jobbers. There was a sale of 10,000 ounces at terms not yet made public, but it is unlikely that any great variation in values was registered. Jobbing prices continue at 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

GLYCERIN.—A readjustment of values, owing to freer offerings, causes a decline, making jobbers' quotations 16@16½c. per pound for 30 degrees in 50-lb. tins; 20@25c. for less; 15@15½c. per pound for less than 28 degrees in 50-lb. tins, and 18@23c. for less.

LADIES' SLIPPER. The continued scarcity of supplies creates another advance. Jobbers quote the root 60@65c. per pound and the powdered 65@70c. per pound.

LYCOPodium.—The foreign scarcity has advanced local jobbing quotations to \$1.05@1.20 per pound.

SILVER NITRATE.—As the metal continues to increase in value because of short stocks, silver nitrate has also risen and

jobbers are asking 46@52c. for crystals per ounce \$7.10@7.50 for crystals per pound; 48@52c. for fused per ounce, and 60@62c. for cones per ounce.

OIL BERGAMOT.—This commodity is also scarce, owing to short production, and the Messina market is very firm. Local jobbing prices have been advanced to \$2.60@2.65 per pound in consequence.

CHAMOMILE FLOWERS, ROMAN.—The new crop is now on the market for distribution and values have been set by jobbers at 28@30c. per pound.

OIL PEPPERMINT, WESTERN.—The situation in this oil has been peculiar for some time past, as large holders have been speculatively withholding supplies from the market. The control of values still continues, but it is rumored that after the first of the year 30,000 pounds of the oil now in growers' hands will be unloaded at the best prices obtainable. In consequence, the market is slightly easier, and jobbers now quote Western \$3.75@3.85 per pound.

BARBERRY WAX.—In sympathy with the recent advance in barberry bark, the wax has risen to 28@33c. per pound.

MERCURY DISTILLED.—The market has risen owing to a lack of offerings. Jobbers now ask 85@90c. per pound.

STAR ANISE. The strength of foreign markets has finally caused an advance here in jobbing prices to 28@33c. per pound.

STRYCHNINE.—Owing to a slight falling off in demand and freer offerings, jobbing prices have been reduced to the following: Alkaloid, crystals, oz., \$1.90@1.10; ounces in ¼-oz. vials, \$1.20@1.30; powdered, oz., 95¢@81.05; ounces in ¼-oz. vials, \$1.15@1.25; sulphate, crystals and powdered, oz., 95¢@81.05; ounces in ¼-oz. vials, \$1.15@1.25. Other prices are unchanged.

FRENCH CHALK, POWDERED.—A slight decline has been made by jobbers, owing to larger offerings by first hands. Values are now, bags, 2½@2¾c. per pound, and less, 5@7c.

GUM SANDARAC.—The market has become firmer, because of but modest supplies. Jobbers are asking 30@35c. per pound.

OIL OF WINE, HEAVY.—Jobbers have held prices to 86.00@6.50 per pound.

ACID BENZOIC.—English has been lowered to 13@15c. per oz.

HYDROQUINONE. Jobbers have lowered values in sympathy with foreign markets to \$1.40@1.50 per pound and 14@15c. per ounce.

GUAIACOL.—A slight lowering of values makes jobbing prices \$2.25@2.35 per pound and 17@18c. per ounce.

SUGAR OF MILK.—Jobbers are now asking 18@20c. for the powdered per pound.

PODOPHYLLIN.—The market shows some slight easiness in cleaning up local supplies. Jobbers quote \$3.75@4.00 per pound and 35@40c. per ounce.

GENSENG ROOT.—A slight reactionary movement from the fairly recent declines causes jobbers to quote 88.75@9.00 per pound.

POTASH RABBIT'S.—An adjustment of values and conditions makes jobbing prices; cases of two dozen, case, \$2.05; four dozen, case, \$4.00, and less per dozen, \$1.05@1.15.

OREGON BALSAM.—The jobbing market value has declined to \$1.50@1.75 per gallon.

SPICEKARD ROOT.—A cleaning up of supplies created a slight decline in jobbing prices to 35@40c. per pound.

SENNA LEAF ALEXANDRIAN.—Jobbers are quoting an advance because of the scarcity of supplies. Their prices are, whole, per pound, 35@40c.

UNIQUE FORMULAS.

The desire of the daily papers to furnish useful information is responsible for many unique formulas for various toilet and household preparations, supposed to save the dear public's money. The following is verbatim from the New York Evening Telegram and speaks for itself:

"Nice perfumed sticks to burn can be made than can be bought. A preparation of one ounce of powdered benzoin, one-half ounce of cascarrilla, one ounce of sandal wood (not sandal wood), one-half ounce of cinnamon, one-half ounce of nitre, one-half ounce of cloves, three and a half ounces of charcoal and three-quarters of an ounce of oilburnum. All these should be powdered, then mixed with gum tragacanth. Roll into little sticks. One of the simplest pastilles is composed of four ounces of oilburnum, four ounces of gum benzoin, one dram each of oils of lavender, cloves, cinnamon, thyme, caraway, saotal, roduium and zeranum, one ounce of nitrate of potassium and two pounds of powdered charcoal. Dissolve the nitrate in gum tragacanth and then mix the whole as already directed."

It would appear that such formulas would boom certain hand soaps. Imagine the amateur mixing two pounds of charcoal, dissolving the nitrate in the gum, etc.

'Ware Owls.

That there is danger in exhibiting live animals in show windows is shown by the report from Louisville (not a druggist of that city, Dr. Scheffel Wright, was painfully injured by a horned owl which he had displayed in his window. Wishing to feed the sleeping bird, he poked it, whereupon it lacerated his left wrist. Moral: Don't poke the animals. You wouldn't like anyone to poke you.

"I want something for a headache and I want it bad," urged the man with the frown.

The Boston druggist retired to the rear and emerged with a glass, held at arm's length. The man held his nose and drank, "Gee," he said, "that was bad." The druggist nodded, "Still they say we are substitutes."

It is reliably reported that in Scotland recently, a jury in a criminal case returned the following verdict: "Guilty, but with some doubt whether the prisoner is the right man."—Law Notes.

Chalk for Medical, General and Toilet Use.

Thomas' English Prepared Chalk is produced in little, pure white cones for medical and general purposes, and in little delicately shaded pink cones of exceeding softness, which are especially intended for the complexion. They are packed in eight pound, beek-cornered, slide-hd boxes, with label bearing the name "The Thomas Manufacturing Co."

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, JANUARY 12, 1905.

Number 2.

Entered at the New York Post Office as

EDITORIAL — COMMENT

Organization in New York.

A case of unfounded suspicion as a result of too little frank statement is an unfortunate feature of the present N. A. R. D. organization campaign in this city. The rank and file of the retail trade have somehow acquired the impression that the forces of the national association have something sinister hidden behind the scheme of enrolling names under the direct contract banner. Who is to blame for this misapprehension is of minor importance; the fact remains to trouble and to delay. Certainly The Era has done what it could to clear the atmosphere, but no journal can speak with authority, and "straight talk" from those having authority to speak is what the druggists of New York want.

The misunderstanding about the dues and organization fees is not the worst of the difficulties which are withholding confidence from the N. A. R. D. movement. The difference between \$4.00 and \$6.50 is too small a matter to influence the pharmacist who really believes that organization would be a benefit to him. That alone is not enough to place the entire movement in peril. Far more serious is the suspicion that, in spite of the unequivocal endorsement of the contract principle at the annual meetings, the N. A. R. D. forces are stealthily seeking to commit the retail druggist to the tripartite policy. With that policy the pharmacists of this town have had an exceedingly unpleasant experience. Retailers and wholesalers who, some years ago, kept their promises scrupulously, only to see their trade captured by less conscientious rivals, are naturally wary of anything likely to involve them in similar situations.

It is needless, and we fear also useless, to say that all these suspicions have no basis in fact. The N. A. R. D. aims merely to bring the local druggists together for their own good; nothing more, nothing less. The national body does not

intend to inflict a schedule upon any locality; that is a matter which the druggists of every district must decide for themselves. Possibly a series of local schedules would do good in New York and possibly the druggists could arrange such a series without loss to any honest men, but those most concerned may rest assured that no power on earth could lead them into that sort of arrangement without their consent.

For the rest, we can assure the druggists of New York that the executive committee of the N. A. R. D. has no sinister designs upon the city. If they wish to benefit by affiliation with the most powerful druggists' organization in the country, they have the opportunity. If the local druggists find that none of the routine methods, which have been successful in other places, will do in New York, there are plenty of other plans which may be turned to profit.

Nobody endangers his liberty by joining the N. A. R. D.

Responsibility for Quality.

Discussions of the retail pharmacist's status in regard to the law which holds him responsible for the quality of all materials dispensed, almost invariably lead to the conclusion that actual tests are practically impossible in the ordinary drug store. Still, upon this basis rests the theory of all pharmacy laws, that licensed men are able to furnish the proper materials to the defenceless public. A law whose demands are impossible is obviously a bad law. The purpose of law is to prevent violations; not to induce them.

If, however, the impossible responsibility is taken away from the retail pharmacist, to whom shall it be entrusted? Shall the wholesale distributor be compelled to guarantee the quality of the material, or shall the responsibility be placed upon the manufacturer? These questions have been under consideration in the pharmaceutical societies of Great Britain, and the opinion that the pharmacist should take all the responsibility and importance which he can get seems to prevail.

If the duty or privilege of protecting the public from the evils of impure and

improperly labelled drugs is allowed to be shifted from the pharmacist to the wholesaler or manufacturer, what significance has the board of pharmacy license? Perhaps the better way would be that suggested by one of the parties to the discussion: to make the manufacturer responsible to the pharmacist and the pharmacist responsible to the public.

Criticize Contract Proprietors.

There is still a great deal of floating criticism directed toward the management of the direct contract movement. The adverse opinions are not the idle talk of habitual faultfinders, but the convictions of men who occupy a high place in the community and whose words have great weight in the councils of the N. A. R. D. The criticism is sufficiently severe; in effect that at least one of the big firms has bungled inexcusably and that it is only by good luck that the plan can be made to succeed at all.

Most of the fault finding concerns a lack of co-operation between the departments responsible for the contracts and those entrusted with the distribution of the goods. "Here, the plan was announced months ago," remarked one disappointed druggist, "and some of the retailers have not even had a chance to sign. Everybody has been allowed to stock up and the result is that no one will be obliged to sign for three months, unless he should happen to feel inclined that way."

It is, of course, unfair to judge the operations of a huge proprietary establishment according to the standards of the average drug store, but six months does seem a bit long for making a simple experiment for which the conditions have been carefully prepared by others. If the object of the campaign is actually the control of prices, it seems that a little more speed would save a lot of unnecessary trouble. Unfortunately, commercial reasons for the delay suggest themselves naturally and persistently.

The Board Meeting at Albany.

The most interesting part of the proceedings of the board of pharmacy meeting and conference last week, concerned the new pre-requisite law. That measure is something of a departure in pharmaceutical legislation, and the arrangement of the details incident to its enforcement, possesses an importance and interest not confined to the locality directly affected. The adjustment of the requirements so as not to bear too heavily upon candidates during the transition period and the grading of colleges with fairness and without favor were tasks which presented all the difficulties of an undertaking not experi-

enced before. That the work has been done so thoroughly and that results have been so satisfactory to all concerned, speaks volumes for the patience and ability of the board members.

The prerequisite clause of the New York pharmacy law seems likely to play an important part in the development of pharmacy during the next few years, and the names of Dr. Muir and the other gentlemen who have labored long and effectively for college training as a requirement for registration in pharmacy, will live in the history of the calling. If other states follow the path blazed by the pharmacists of New York—and inquiries from all parts of the country indicate a very lively interest in the matter—the pharmacist's license will hereafter mean something more than it has done in the past. Registration as a reward for time service may be fairly satisfactory in isolated cases, but it can create no great amount of professional self-respect and that is what pharmacy seems to need.

Dr. Muir, who has good reason to be proud of the first pre-requisite law to be enacted in this country, sees immense possibility in his protegee. He believes that nothing, not even the founding of superior schools and colleges, will accomplish so much for the real "elevation" of pharmacy as a compulsory course of study. He takes no stock in the scarcity of clerks bug-a-boo. In his opinion there will be quite as many pharmacists after the law has been in operation for some years, and they will be better equipped. The calling will attract better men, for the higher attainment will attract students who have superior qualifications. The present requirement is not to be taken as satisfying all hopes and ambition of the pharmacists. Requirements are to be raised gradually until the dispenser of drugs shall occupy the place which is his due. The regents declare that beginning with only twelve counts is a wise move; that it is a mistake to begin with demands which must later be reduced.

Pharmaceutical Arithmetic.

The failure to include pharmaceutical arithmetic among the requirements for board examinations under the new law in this State will occasion no little disappointment among practical pharmacists, for nothing in the matter of instruction is more important to the would-be dispenser than arithmetic. Even a knowledge of doses, properties and reactions is of less importance than an ability to add, subtract, multiply and divide. Arithmetic is the tool by means of which all other sorts of information are applied. Of what use is a brain stocked full of special in-

formation about drugs, if the possessor is unable to divide a fraction of a grain of strychnine into thirty doses with any security of results?

The loss of this point, upon which some of the board members were prepared to insist, must be ascribed to a species of red tape. The regents have a system of counts by which the learned of the State are measured. The system is a sort of standard and modifications create difficulties. Why prepare a new measuring rod for the pharmacist, when we have one which fits everybody else? seems to be the sentiment of the educational authorities.

The temporary abandonment of the arithmetic counts need not, however, be a serious loss. Why should not the subject of pharmaceutical arithmetic constitute a major subject in the examination proper? No subject is more important, more practical or more useful professionally, and Mr. Bodemann, who has every means of knowing, and whom we have every reason to believe, says that in no one subject are candidates apt to be so woefully weak. A pharmacist without the proper acquaintance with the science of numbers is like a carpenter who is unable to read the figures on his rule; his work is a matter of guess-work, and guess-work in the prescription department is fatal.

The Cut-Off List.

The correspondent who last week announced that Secretary Wooten would hereafter issue no more cut-off lists, did not relate quite all of the story. It is quite true that no more lists will be sent out by national "headquarters" or any officers of the N. A. R. D., but this does not imply that no cut-off lists will be prepared. We have learned from credible sources that this part of the machinery for enforcing schedules is now conducted in a very satisfactory manner by private enterprise.

This move on the part of headquarters is undoubtedly a wise one. It transfers a very disagreeable burden to other shoulders, and with it a responsibility bearing extremely unpleasant possibilities. The N. A. R. D. will hereafter have nothing to do with policing the trade. This service will be performed by others and the wholesale distributors, who are most interested in cut-off lists, will bear the expense.

How this arrangement will affect the legal status of tripartite operations remains to be seen. However, since the last N. A. R. D. convention declared almost unanimously against further faith in the three-party plan, it matters very

little. Which brings up another question, if coercion in the matter of schedules is to be abandoned, what will the cut-off list firm find to do?

More Publicity.

The council of the A. Ph. A. has granted us the privilege of letting our readers know what that important body is doing. In accordance with a resolution recently passed, the secretary sends out for publication such news of the work of the council as seems likely to be of interest to the public. Hitherto the members of the association have been compelled to wait until the annual report arrived for news of their council, no matter how much they may have been interested.

It is a very welcome change, which we owe very largely to the efforts of Prof. J. H. Deal and H. M. Whelpley, who led the movement which must have seemed almost revolutionary to some of the older members. We venture to predict that no one will ever have occasion to regret this step. The age demands publicity and it is impossible to keep up interest in the most worthy enterprise without it. In fact, in the opinion of many, the A. Ph. A., like some other worthy institutions, is suffering from a lack of publicity.

The work of pharmacopoeial revision is also an undertaking which might benefit by a little more publicity. The committee is criticised by the trade for the very simple reason that nobody in the outside world knows what that body is doing. The difficulties and the delays incident to the preparation of a new edition are not apparent to the practical man who has been waiting nearly five years for a new pharmacopoeia.

There is nothing that clears away suspicion and misapprehension like a good dose of frankness administered at the right time and place. People who are working in a good cause often make the mistake of attempting to hide what they consider unpleasant details from the masses. It is impossible, in the fierce light of the present day to suppress facts entirely, and things seen imperfectly always seem worse than when viewed from all sides in the full light of day.

Dr. Wiley and the Term "Drug."

We have already commented upon the importance of the exact definition of the term "drug" in considering the future of the pure food and drug bill now before the Senate. If the meaning of the term is restricted to pharmacopoeial materials, the measure will have the support of the entire drug trade—at least the retail and wholesale portions.

Dr. Wiley occupies a peculiar position

as regard the bill; by reason of his office and experience he has been a guide and counsellor to the sponsor of the measure in every stage of its development. In a recent letter to the Era he thus explains his attitude toward the all-important definition:

"In regard to the definition of the term 'drug,' I said I believed it was only keeping good faith with the druggists who helped frame the Hepburn bill to keep the definition of drugs as it is in that bill. Personally, I am in favor of extending the term 'drug' as used in the proposed regulation to 'all substances used internally and externally as remedies,' and which in themselves are neither foods nor condiments."

"Americanization" of the Trade.

A discouraged London pharmacist, in the *Pharmaceutical Journal*, deplore what he calls the "Americanization of pharmacy." The particular form of evil to which our British cousins have attached our names is not easily described. In our eyes it is not an evil at all, although some of us are not yet, by any means, reconciled to it. It includes everything which we for convenience sake sometimes call "business push," advertising, window displays, and the like.

But is this development of pharmacy distinctly American? It is generally understood that the reason why Dr. Frederick Hoffmann left this country was to escape commercialism in pharmacy, which was so distasteful to him. It was one of the disappointments of his life to find pretty much the same conditions in Germany. In France and in all the other countries of Europe specialties and pushful methods of marketing them are more and more in evidence. Side lines are perhaps not as conspicuous as in the United States, but it is well to bear in mind that the druggists of those countries are a great deal less prosperous than our own pharmacists.

It is a question whether America or England exhibits the most conspicuous examples of the application of commercial methods to a special calling. All of our druggists, big and little, seem to be more alert to their opportunities, but we have as yet no huge combinations like Boots, Ltd., which operates hundreds of shops and resorts to advertising of the department store variety.

Incidentally, the discouraged London pharmacist makes some very queer remarks about advertising: "Why," he inquires, "should thousands of pounds be spent to give the public this information? Is it because the public has not been able

to discover for itself the facts set forth in the advertisement?" Unfortunately, the public, at least that portion with which we are acquainted, is not particularly eager for facts about prices and goods. A dealer who sits down and waits patiently for the people to find him out will not be overrun with customers.

Frenzied Science.

The newspapers are fond of printing the strange celebrations of certain Chicago professors who seem to make a specialty of "frenzied science." The "Chicago professor" brand of science is highly entertaining, even though it is usually denied in toto within from two to ten days after publication.

The latest effusion of this type concerns the origin of life, Adam and Eve, and other questions of great interest and antiquity. The professor is alleged to have stated bravely, that life could be prepared artificially; that he considered it merely the result of certain physical and chemical combinations. "There is no doubt in my mind," he is reported to have said, "but that in a short time real life will be produced. Wonderful advances have been made in physiological chemistry in the last decade. It is now only a question of a short time before some scientist will discover the process of the final stage. We can now make everything but the nucleus in the laboratory."

All of which is considerably more daring than original. Others have preached of the magical power of chemistry and prophesied of wonders to come, but the fulfillment is rather long in coming. So long as physiological chemistry is still groping in dense ignorance of the composition of proteins and peptonoids, the raw materials in life's laboratory, talk about the manufacture of living beings seems a bit premature. There will be time enough to begin figuring on the artificial creation of the animal when science has learned to produce the food necessary to keep the poor beast alive.

Pharmacists in the Navy.

Although the present sessions of Congress will be very short, still an attempt will be made to get some recognition of the needs of the hospital corps of the navy. In the hospital corps are the representatives of pharmacy in that branch of the service, and pharmacists have been trying for several years to secure a reform. In the present session two identical bills will be presented: one in the upper and one in the lower house. The request of the pharmacists is extremely modest, nothing being asked which has not already been granted to officers and men of similar rank in other branches of the service.

OUR LETTER BOX

MR. BODEMANN EXPLAINS.

Chicago, January 3, 1905.

Editor The Pharmaceutical Era:

I read in a recent Era that Dr. Rusby has commended my stuff on arithmetic to the New York Board of Regents and I am glad to see him go on record, for his statement is in glaring contradiction to what I had to hear the other day on the identical subject. I was called down ruthlessly and accused of trying to be "professor" for holding the humble opinion that a dispenser behind a counter should be able to divide three-fourths of a grain by 24, 30, etc. I simply hold that no matter what a candidate knows about botany, chemistry, pharmacognosy, etc., he ought to be able to know what kind of a dose he gets when he divides three-fourths of a grain into twenty-four powders, and that is why I am so interested in this prerequisite clause. Little difference does it make from what common or high school or what school of pharmacy the candidate has graduated—it shows that these schools do not live up to their announcements when their prize graduates fail to give a correct answer to such simple problems as "How much morphine is required to make twenty ounces of three per cent. solution?" etc.

Our friend, Lillie, of Guthrie, Okla., objects to the stamping clause in the Wells & Richardson Co.'s contract and I am surprised. Brother Lillie should adhere to the stamp habit without a contract clause. Before we had a pharmacy law or a Miles contract I found it to my advantage to stamp every article that left my store. In the 1874 fire I burned out; part of my stock was saved and carted away by anybody who happened to have a horse and wheel. Six months after the fire an ice-man hunted me up with the information that he had several barrels of patent medicines in his barn, each package of which bore my label. It was through these that I was traced out and I was over \$100 "to the good."

I note Mr. Wilkinson's inquiry in your issue of December 29 (page 659) and I am sorry to say I cannot claim authorship of the "C. P." articles, and I regret that you dropped them. The author certainly is an expert at the art, as Von Thümmel says: "Des Leuens Unverstand mit Wehmuth zu geniessen."

W. BODEMANN.

MR. JONES ON THE OUTLOOK.

Louisville, Ky., December 30, 1904.

Editor The Pharmaceutical Era:

The year 1905 should bring to the retail drug trade a full measure of prosperity; the only thing to make this result at all doubtful will be the delay upon the part of proprietors to put their contract plans into effect. More than two months have elapsed since the St. Louis convention adjourned and the writer does not recall the name of a single proprietor who has issued a list of his agents, except Dr. Pierce, and this list embraces the names of those to whom his goods shall not be

sold. The only way to put the contract plan into force, is to put it into effect. Send out the list of those who have signed the contracts and refuse all supplies to others until they do sign. This may work a hardship for a short while, as those who have large stocks will continue to sell at less than contract price. This condition is inevitable, but when these stocks are exhausted, little difficulty will be experienced in securing signatures.

Regarding substitution: My opinion is that this habit is confined almost entire-

SIMON N. JONES.

ly to the larger cities, and the business is comparatively small in volume. The time was when such a thing as any pharmacist using or selling a counterfeit preparation of any kind was totally unknown. That substitution now obtains at all is only another evidence of the corrupting influence of the cut-rate business, where necessity in many instances has forced the retailer to offer and sell imitations of the well-known proprietaries, in order to make a living, and, like all bad habits, success in one line of fraud only encourages a step still further. The conditions as exposed by such representative retailers as Avery, Bodemann and Wooten will do more good to restrain this pernicious habit than all the lawsuits that might be instituted, could possibly accomplish. The N. A. R. D. stands for honesty, justice and integrity, and if the retailers will support the organization by prompt payment of the dues, I firmly believe that a measure of prosperity and profit can be returned to each one that will leave them no reason to handle anything that is tainted with fraud.

Wishing The Era a continuance of its deserved prosperity, I am, very respectfully yours,

SIMON N. JONES.

ORGANIZATION, FIRST STEP.

Lehanon, Pa., January 2, 1905.

Editor The Pharmaceutical Era:

The drug trade of to-day has lost its identity as compared with the trade when

the undersigned first ventured. It does, however, appear to me that of the numerous attempts at a reform, none seem quite as near the line, as the work inaugurated by the N. A. R. D.; there seems to be a gradual, and we may hope, a sure approach to better prices.

Now, when you discount the fact, this is what we are doing business for, and if the rank and file of the drug trade appreciates the opportunity, they will see a thorough home organization is absolutely the first step toward the end they are doing business for. Very courteously,

JOS. L. LEMBERGER.

NOT RELATED TO LYNCHBURG DRUGGIST.

Lynchburg, Va., January 2, 1905.

Editor The Pharmaceutical Era:

In your issue of December 29 (page 668) there appeared an item from Baltimore which stated that James Faulkner, a druggist of this city, had been arrested on a charge of selling cocaine to minors. This statement is true in every particular, except that the accused is not a druggist, nor is he in any way related to a druggist in this city. My father, the late John W. Faulkner, was for many years prior to his death, one of the leading druggists of Lynchburg, being a member of the firm of Faulkner & Craighill and afterward Faulkner & Hanvey. He died about ten years ago. He was well known throughout the drug trade, and the impression is probably apt to get abroad that James Faulkner, recently arrested in this city, is one of his sons. None of my family has followed the drug business and the young man now charged with the crime in question is absolutely no relation of our family. I would appreciate the favor if you will give proper publicity to this letter, as you will see at a glance how easy it would be for your readers, who knew my father and of his connection with the drug trade, to infer that the young man now in trouble was one of his sons and continued in the business after his death. Respectfully, etc.,

JOHN A. FAULKNER,

Secretary and Counsel Lynchburg Board of Trade.

PROPRIETARIES IN CUBA.

Havana, January 2, 1905.

Editor The Pharmaceutical Era:

We desire to advise you of the fact that the Cuban government has decided to put into force an old Spanish law which was suspended for many years, respecting pharmaceutical preparations (proprietary preparations) exacting that the sale of every preparation of this nature manufactured abroad must be authorized here before same can be offered for sale.

In order to obtain this permission an application must be made to the Secretary of the Interior, and a sample bottle or package submitted with the formula. If the Academy of Science passes favorably on the samples and formula a permit will be issued for the sale of the goods in Cuba. The date set for this order to take effect is May 5, 1905.

This order will work hardships with some well-known manufacturers of such preparations, for if they do not comply with this order they will have to withdraw their goods from Cuba. While at first slight

this new requirement seems hard, yet all manufacturers will come to realize that it has its merits, as in this way there is forced out of the market many spurious imitations of good preparations, and thus protects the conscientious manufacturer. Yours faithfully.

J. B. NEWMAN CO.

ORGANIZATION ON THE CONTRACT PLAN.

Philadelphia, January 7, 1905.

Editor The Pharmaceutical Era:

In reviewing the work of the national organization and its constituent locals for the year just closed, and looking forward to the work of the new year, one marked change, a change that shows progress, impresses me. This change, or rather advancement, lies in the fact that we hear less of schedules, still less of tripartite, and more of direct contract and serial numbering plan. In fact, it is no longer necessary to have a schedule to hold the strength of the local branch. It is not even necessary that a schedule be considered at the time of organizing in order to gain the attention and interest of the retailers. This is particularly true in forming new organizations in the larger cities, where varying conditions of different sections make a successful schedule such a difficult problem. While the question of price restoration must remain the chief incentive for organization, to organize upon the direct contract and serial numbering plan alone is a better and stronger foundation than we had to use before this plan became a reality. For the purpose of making effective the contract plan, New York can form its strongest organization, because this plan is the most definite and decisive; on this plan New York can give and receive the most help from other parts of the country.

With New York strongly organized upon the contract plan, other sections may think less of schedules and do more for contract, because they will feel that with harmony their demands will be so strengthened that many more proprietors will adopt the contract plan.

Not only organized hope, but organized effort adds to the strength of the contract plan. Each addition to the ranks of the proprietors acting under it makes it more real, and as we realize that the plan is no longer a theory but a present fact, we feel the happiness of success. The fact that the contract plan has brought to the trade greater enthusiasm and unity of action is evidence that it meets general conditions that have so long existed, and the change of sentiment and thought that it has brought is a change that proves it to be the plan most businesslike, fair and effective of any that has been tried. The foregoing being but a statement of conditions that exist, and these conditions being the best we have ever had, it seems only necessary to advise that the present line of thought and action be continued.

Satisfactory as the conditions seem, we must not forget that we are face to face with the most vital period in our organized existence. To succeed we must have more than the moral support of the majority; we must have their active, enthusiastic and practical support. The thought of organization at present is all that it should be. If the trade will act contract plan as

much as they think and speak it, our victory is assured. But now, as at no other time in our history, "It is up to the retailer."

A number of proprietors have put the plan in operation and are doing their part to enforce it. If we want others to follow them; if we want the plan to spread until it gives us protection on all proprietaries, we must make it an unqualified success for ourselves and those who have adopted it. If we act like children, who cry for a new toy and then tire of it so soon as they have gained possession, then the contract plan will surely fail and what its failure may mean to the retail trade I dare not contemplate.

The organization spirit is as it should be; we are inducing proprietors to protect their goods, and we are signing the contracts. If we do no more than this, failure will surely follow. To me the most important point for consideration during the coming year is that we must give to these contract goods the preference we have pledged, the co-operation we have promised, and live up to the mutually agreed upon "square deal." If we do this, success for the N. A. R. D. and all that makes it is absolutely assured. Yours very truly,

CHARLES REHPUSS.

CUTTER HAS BEEN SUCCESSFUL.

New York, Jan. 8, 1904.

Editor The Pharmaceutical Era:

Recently I listened to an able speaker for the N. A. R. D., but his arguments changed not my views, and when I stated them later on I failed to convince him of the error of his ways. It is very clear to me that the N. A. R. D. must fail of its object to restore prices, because the ways of cutters have been eminently successful. "Undersell and underbuy" is the first law of modern merchandising; it has built every large establishment of the day! "We undersell" is the tenor of every announcement in the press and the buying public responds nobly, and this response has paid and does pay. In proof whereof I may cite this druggist himself. He handles at least one article in quantity, in which he undersells. He buys it cheaper and makes a larger net profit than he used to do. The most radical cutter in the world does business on a profit of three per cent. on every item. Is the practice ruinous? Not at all, for the concern turns over its capital ten times, and hence realizes a gross profit of thirty per cent., and that's not bad.

The N. A. R. D. should revolute what has normally evolved. It shouts to the foremost runner in the race to slow up for the benefit of the hindmost! To me, it seems absurd; the more so because of its ponderous machinery contracts, numbering, stamping, law suits, penalties—things which appeal strongly to no one. If underselling is right, it may possibly be shifted in direction; it may not be stopped and the nineteenth cent prescription is the tiny speck on the horizon now! Not the least consideration is the public. Great as are the sums spent by the N. A. R. D. and the manufacturers, how insignificant is their power to compel eighty millions of people to toe the mark and pay a prescribed price! The cause is not in keep-

ing with the times; it punishes the energy, the enterprise of the best man. To beat him we must do as he does? Undersell and underbuy.

KARL SCHNACKENBERG.

N. A. R. D. DUES ARE DUE NOW.

Minneapolis, Minn., January 2, 1905
Editor The Pharmaceutical Era:

The change from the old to the new year always marks an era of more than ordinary interest to most of us. On this occasion we appear to take on a new lease of life. We look at things with a broader vision; we are more charitable in our opinions of others; we greet our fellow citizens with a "Happy New Year," and we regret many of the unkindly dispositions manifested by us against our neighbors and our competitors during the year just closed. The world looks larger and brighter to us and we seem full of generous impulses.

It is therefore especially fitting that I, as president of the N. A. R. D., should at this time, through the courtesy of The Era, extend to every druggist in the land the glad greetings of the new year, and express likewise the hope that to each one the New Year may open with bright prospects of profit, health and happiness.

While in this happy frame of mind it may not be amiss to remind you that the N. A. R. D. has a strenuous year ahead. To your executive officers you have committed heavy obligations, and it is incumbent upon each individual member to assume a share of those obligations. It is with much pride that I recall the wave of enthusiasm that rolled over that great convention at St. Louis when it was declared unanimously that the N. A. R. D. was an institution organized for the benefit of retailers, and that the time had come for retailers to assume independently the task of financing it. Fellow retailers, that time has now come. It is now up to you. The dues of 1905 are now due and that enthusiasm which at St. Louis declared us free and independent of support at the hands of the allied branches of the drug trade, should from this time on pervade every local association and every member of it. Let the battle slogan now on be: *The dues are due now*, and let every secretary and treasurer, and every member of every association make it his specific business to see that the money is sent now, at once. We need the money to carry on the work. Delay at the critical stage is fatal to any enterprise. Remember that we are soliciting no donations and the money for running the association must come from you, Mr. Retailer. If you can't send your entire contribution, send part now and the balance in a month or two.

I desire also to express the hope that associations not yet affiliated with the N. A. R. D. will join with us in the good work. We need you and you may rest assured that with your co-operation we can be of much service to you.

I might take up other questions of great interest to the druggists of the country, but as they are all subordinate to the great question of finance, I will touch upon them only incidentally.

Price control by serial number and individual contract is declared by the last two conventions the policy of the N. A. R. D., and this ought to be sufficient rea-

son why druggists should promptly send in their dues so as to enable the executive officers to carry out the instructions of the last two conventions.

The bogus drug question requires prompt and radical treatment. No punishment is too severe for anyone who manufactures and markets counterfeit drugs and chemicals. Recent Chicago experiences suggest the wisdom on the part of druggists to obtain their supplies only through reliable manufacturers or jobbers, rather than through unknown or unreliable agents or brokers, who may offer such goods at prices far below the regular market value. If your jobber sells you a spurious article, you can hold him accountable. Not so with an irresponsible broker, who is here to-day and somewhere else to-morrow. Messrs. Wooten, Avery and Hödenmann have rendered the druggists of the country valuable services by their clear statement of Chicago conditions.

On the question of substitution there can be but one opinion. In R work it is never justifiable unless by permission of the physician who wrote the R. I believe that this is a policy very generally carried out by druggists and that substitution is, as it ought to be, on the decline.

Bespeaking for the National Association and its officers your most cordial and enthusiastic co-operation in the great work before us, and assuring each and every one of you that your personal interest in the work of this year will have quite as much to do with the attainment of our hopes as any work of your officers, I am, fraternally yours,

THOMAS VOEGELI,
President.

ERA COURSE IN PHARMACY.

Graduates of December, 1904.

Matric. Number.	Graduate	Grade Per C.
4,000	Frank B. Porter, Geneva, Ind.	97
3,866	Fredrick Blendt Adler, 1409 Board Walk, Atlantic City, N. J.	96
4,155	Reginald M. Wildish, Aurora, Neb.	96
4,024	Frank P. Kirzinger, 1099 E. St., Catherine, Louisville, Ky.	97
4,076	Marie Atkinson, Lewisburg, Pa.	97
3,956	Harry K. Shutt, Hastings, Neb.	96
3,859	Walter C. Bateman, 1509 Opal St., Philadelphia, Pa.	97
4,054	Paul Wagner, 1111 Brown St., Davenport, Ia.	97

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engraved, especially suited for framing, will be furnished to all who request it, for the sum of \$2. Those who desire the latter should forward the necessary fee at once to The Pharmaceutical Era.

ETHICAL PHARMACY.*

BY A. L. BENEDICT, A.M., M.D.,
Buffalo, N. Y.

The typical city drug store represents a bizarre combination of businesses. It is usually a public telephone station, often a branch post office, express office, place to pay gas bills, sometimes a branch circulating library, and laundry. One can buy candy, hair brushes, tooth brushes, soap, valentines, knives, and various other articles of merchandise, tobacco, soda water and other soft drinks, and occasionally strong liquors as beverages. At some stores, one can even obtain a light lunch, at others, pet animals, gold fish, etc. In short, if you want anything and do not know exactly where to seek it, it is a good rule to ask at the drug store. There is no particular ethical objection to the drug store serving as a miscellaneous caterer to the wants of the public, although the physician, who is wont to take his medical equipment rather seriously and exclusively, never quite recovers from the incongruity of such signs as "prescription counter in the rear," "prescriptions a specialty," etc. It certainly would surprise the public, if, after our name on a sign, we displayed some such notice as this: "A specialty made of attending to patients."

Drug Store Advertising.

However, the public is not allowed to forget that the drug store exists for the purpose of selling remedial agents. More or less startling and often life-size display cards remind us of the virtues of plasters "which feel good on the back," and which serve partially to hide the charms of ladies and gentlemen in undress. Menstrual pads make an attractive window dressing, especially if flanked with an illustrated reminder of tablets which work while we sleep and break the monotony of a night's rest in a sleeping car. Gigantic green frogs amuse the children and remind adults of the frog in their throats, while vaginal syringes are instructive to the young and afford a subject for thought on the part of the statistician who is interested in our falling birthrate. A pasteboard trained nurse can be made to advertise pretty nearly anything, and, if she can do some automatic feats with an atomizer or a sprinkler, she is doubly charming.

Uselessness of Medical Profession.

On entering the store, we find that the front shelves, and, indeed, sometimes all that are visible, between the soda fountain and the prescription department, are devoted to an object lesson in the uselessness of our own profession. It even seems strange that there should be a prescription department at all, when all the ills to which humanity is heir can be relieved by the purchase of the appropriate remedy, neatly and not very expensively compounded, and with explicit directions for the guidance of patients, either on the label or included with valuable information as to the sun, moon and stars, or a complete joke book or collection of popular songs.

However, the patient who runs this gauntlet of proprietary medicines and who

escapes the druggist's own advice as to headaches, rheumatism, bronchitis, etc., is welcome to present his prescription at the desk, and, if we have been careful to avoid the metric system and have limited ourselves to cod liver oil, calomel, and tincture of opium and similar staples, he can get it filled with slight risk of error and with reasonable promptness. If, however, we have written for some such troublesome preparation as oil of phosphorus, or bromin, or for some new drug not yet in constant demand, the patient may have to wait till it is sent for, and, unless one practises in New York, Philadelphia, Chicago, and a very few other centers of trade, several days may elapse before the order is filled. Why, as a profession, do we endure all this from a profession which is avowedly, a specialization of our own, for the purpose of supplying medicines and medical appliances? Because, in the first place, we cannot help ourselves, and because, in the second place, in the majority of instances, the druggist is, at heart, not only a good fellow, out an intelligent and conciliations man, who cannot help himself either, but is hampered by all sorts of customs, who is under the screws of wholesale dealers of all shades of respectability, and who is subject to the same, if not greater, competition in an overcrowded profession, which we realize in our own experience.

Agencies Bring Popularity.

If the druggist did not sell stamps, soda water, hair brushes, and act as agent for the gas company, the express companies, the telephone company, the laundry, and even for Uncle Sam's post office, his store would fall in popularity. We can have no reasonable objection to the sale of soap and tooth powder. It is only a step to porous plasters and antiseptics, and only another step to headache powders, liniments, cough syrups and cathartics. The patients will not, under existing conditions, take our prescriptions to a man who will not sell him his own selection of drugs and aid him in that selection. Many druggists are courteous enough to look embarrassed when we happen to be in the store to see if he can fill a prescription for something a little out of the ordinary, and a man comes in and announces that he wants something for his liver or for his little ooy with croup. Some have become so accustomed to such occurrences that they overlook even this deference to our suppositious function and privilege.

Druggist Cannot Help Himself.

I am convinced that the druggist cannot help himself out of his present predicament, without the initiative of the medical profession. Some druggists want this assistance, some do not. Some openly declare that they do not care to bother with prescriptions. One man, of whom I know personally, issues curus of this form with every prescription: "This prescription is a valuable formula for . . . Yourself or any of your friends can get it on payment of . . . Thus, every physician whose prescription reaches this store, becomes the originator of a quack medicine, without any of the emoluments of quackery. On the other hand, there are pharmacists of good standing, who are not adapted to teaching positions, who cannot write textbooks or secure official

*Read before the American Academy of Medicine, Atlantic City, N. J., 1904.

appointments of one kind or another, who love their chosen profession and who are practically debarred from practice unless they submit not only to an irksome commercialism, but to methods that they recognize as unethical, and, potentially, at least, as dishonorable and murderous.

Solution of the Problem.

The solution of the whole problem is perfectly simple in theory, and it has been carried into practice with some degree of success in occasional instances. Find a pharmacist who is qualified in his profession, who wishes not only to make a specialty of prescription compounding, but who will limit himself to such work. Having found one such man in a city, apply exactly the same rule to him and his competitors that should be applied to the genuine and the fake specialist in any other line of medical subdivision. If the ophthalmologist, laryngologist, or neurologist is posing as a specialist, and, at the same time competing with the general practitioner in his own legitimate field, while some other specialist is doing honest work in his specialty, the responsibility rests with the general profession, for no specialist can succeed with a double-barreled gun if the general practitioners refuse to start the game for him. In the case of the druggist, the offence against the ordinary laws of specialism is even more flagrant, for the druggist is neither competent nor legally qualified to compete with the medical profession.

One Drug Store to Five Physicians.

A study of the directory of any city will show that there is one drug store to every five to ten physicians. Many of these stores have a force of five or more pharmacists, few have less than two, including advanced students. It is absurd to suppose that the legitimate profits on prescriptions, even including the earnings and profits on agencies, soda water, etc., can support any such ratio of pharmacists. The bulk of the support of the so-called pharmaceutical profession is the patent medicine business and the illegal practice of medicine. Curiously enough, my personal experience has been that the very men who are interested in pharmaceutical education, who are officially represented by our own profession in the codification of drugs, and who make the best speeches as to the dignity of the profession of pharmacy, have been the most flagrant violators of the principles of ethics, and having made the most glaring mistakes in the practice of their profession. Understand me, however, to refer merely to isolated examples and to make no general charge against either the profession of pharmacy in general or its most representative portion.

Solution of the Problem.

The solution of the problem proposed must, if successfully carried out, involve a marked diminution in the number of pharmacists in good standing and a practical separation of the pharmacists as a professional man from the soda water, agency-conducting, retail quack and counter-dispensing business man. Such separations are always wholesome. We can fight or ignore quackery and illegal practice. In the long run it makes more work for the regular profession than it removes by competition, and while it is our obvious duty to combat it in the interests of the

community, we are not called upon to place ourselves in a false light and reduce our influence for good, by unwise attempts at interfering with a too powerful influence.

Ethical Pharmacy.

While there is no particular objection to the various extra-medical side lines carried on in the average drug store, it is obvious that, unless some druggist already in business, were willing to eliminate from his store the entire middle portion and the show window, it would be practically impossible to continue them. The only ethical pharmacy on a practical working basis that I have ever actually seen, consisted of a comparatively small room in a medical office building. There was no pretense at catching custom by attractive displays, and the drug stock itself was not imposing, but I was assured that it contained almost everything prescribable by a man in a regular practice, including most of the newer chemicals and the really valuable ethical proprietary preparations. It was supported by about twenty physicians, and prescriptions were filled not only well, but comparatively cheaply, and to the satisfaction of the intelligent laity. Presumably, other druggists did not like it, but if not, they had every freedom of competing on the same basis.

No Business Relations.

Some question may be asked as to the business relations of physicians to such a pharmacy. My own idea is that there should be none, further than the informal understanding that the physicians should, so far as possible, send their prescriptions to the man who refrains from extra professional and unprofessional drug business, and also, so far as possible, keep them from passing into the hands of druggists competing on present methods. It may be objected that such a course will lead to the suspicion of interested motives. Undoubtedly, this suspicion will arise as it does under existing circumstances, and, I am informed, with ample basis of truth in some instances. Druggists, on whose word I can rely, have stated that they have been practically forced to pay commissions, although one cannot respect the stamina of a druggist who would yield to such a demand much more than the integrity of the physician who would make it. However, the charge of dishonorable motives is readily met in any particular case, and as the language appropriate in such an emergency would not be appropriate to this occasion, it is unnecessary to enter into details.

Salicylic Acid, "Natural."

The so-called "natural" salicylic acid can be satisfactorily made on the small scale (Merk's Report). Place oil of wintergreen in a porcelain evaporating dish with twice its bulk of water, and heat. Add to this a concentrated solution of sodium hydrate until the oil is completely taken up; dilute with water and heat. Then add to this mixture hydrochloric acid diluted with an equal volume of water and wash the precipitated acid on a filter with warm water until it shows no reaction with silver nitrate. By this method 350 grains of acid were obtained from 480 grains of oil. At \$2.50 a pound for the oil, salicylic acid can be produced for little more than twenty cents per ounce.

THEORY AND PRACTICE

Pharmaceutical Education in Holland.

In a recent address before the Metropolitan College of Pharmacy, London, Sir Josepa Wilson Swan contrasted the systems and conditions of pharmaceutical education in England and Holland. Pharmacy in the latter country holds an enviable position, he claimed. The student, before he can enter a university where pharmacy is taught, must have spent five or six years on a very thorough course of general education, and then, after that, he must enter a university and spend another five or six years in the acquirement of the special knowledge demanded of a Dutch chemist. The university course is a most comprehensive one, and it winds up, after a two years' practice in dispensing in a model chemist's shop, with an examination that lasts a fortnight, and an exhibition, during several days, of technical knowledge and skill in all the processes of practical pharmacy.

"The difference in the ultimate position of the English and Dutch chemist is equally great. Whereas the English chemist must be, or usually is, not a jack-of-all-trades, at least—to put it euphemistically—a versatile man of business, able to deal with many things extraneous to the pursuit of pure pharmacy; to be successful he must be a man of resource, a man such as I once had graphically described to me by the inventor of the steam-hammer—my friend James Nasmyth. He said he would not give a button for a man who could not bore a hole with a saw, and saw a plank with a gimlet. . . . In Holland the 'apotheker' does only one thing, and that is the making and dispensing of medicines from the Latin prescriptions of the medical man; and so strict is he—or was forty years ago, as I know by personal experience—that you cannot (or could not then) buy even the simplest drug or chemical except through the medium of the orthodox Latin prescription.

"I do not know how far the popular practice of photography and the chemical waxes created by the Kodak Company may have altered the old state of things, but from what I read in the article I have referred to, I should think that the Dutch apotheker still pursues his calling in the old rigorous spirit of ecclesiasticism that I have described, and this discloses a widely different state of things from that which obtains in our too free and easy country.

"I have no occasion to draw the other picture; you are all familiar—some will think too familiar—with it; but I will just give one other point of difference. It is this: In each of the four universities of Holland pharmacy and all the branches of learning bearing on it are taught in this thorough manner, and at the head of the chemical departments of the Amsterdam College there is one of the greatest of living chemists, Professor Van't Hoff, whose fame is world-wide. That is how pharmacy is dealt with in Holland."

Sir Swan thought it would be out of the

question to make the position of the British pharmacist exactly like that of his Dutch colleague. At the same time some degree of approach toward the latter's position in regard to a reasonable amount of legal security against the dangerous competition of the unqualified, such as would increase the public safety and at the same time give fair compensation for the cost—mental and monetary—ought not to be out of the question.

Calcium Fluoride.

Calcium fluoride, according to Defascez (Compt. Rend.), may be conveniently obtained in a crystalline form, either as cubes or octahedra, by fusing together a mixture of manganese fluoride, 1 part, and calcium chloride, 10 parts, at a temperature between 1,000-1,200° C., for two hours. On allowing the fused mass to cool slowly, and treating it first with water, then with very dilute hydrochloric acid, calcium fluoride is obtained in perfectly white crystals, which are octahedral if the fusion has taken place between 800-1,000° C., and perfect cubes if the temperature has been raised to 1,200-1,400° C. In employing mixtures of the same salts in other proportions, such as magnesium fluoride, 1 part, and calcium chloride, 3 or 5 parts, the product was not pure calcium fluoride, but a mixture of that salt with calcium fluorochloride, according to the equation:

A similar reaction takes place with the bromides, chlorides, and iodides of barium or strontium and manganese fluoride. In these instances the fused mass is washed with alcohol (95 per cent.) instead of with water. The crystalline form of the fluorochlorides has not yet been determined.

Hypophosphorous Acid in Dispensing.

Wyatt states that a few drops of hypophosphorous acid will work wonders in the prevention of iodine liberation in certain mixtures. The change which takes place when quinine, an acid and iodide of potassium are prescribed together, is shown in the following:

Quinine sulphate	36 grains
Hydrochloric acid, dilute	4 drams
Potassium iodide	1 dram
Tincture of orange	6 drams
Spirit of chloroform	3 drams
Water, enough to make	6 ounces

By adding 24 drops of hypophosphorous acid, B. P., coloration is prevented entirely. When syrup of iodide of iron has become colored, as it will do, particularly in winter when the actinic power of daylight is not sufficiently active to reduce the ferric oxyiodide gradually formed by the action of the air, warming gently, and dropping in sufficient hypophosphorous acid will soon bring it back to its sea-green color.

The Nobel Prizes.

The Nobel prize for physics has this year been awarded to Lord Rayleigh, professor of natural philosophy at the Royal Institute, London, and the chemistry prize is conferred upon Sir William Ramsay, professor of chemistry at University College.

QUESTION BOX

Phosphorus Paste.

(J. J. H.)—

We think that either of the following recipes from Pharmaceutical Formulas will answer your purpose. The points to note are that phosphorus may be readily dissolved in carbon bisulphide (1-2), chloroform (1-25), and hot fats (1-20 or more), and that if we make a super-saturated solution (as when the solvent is hot) the phosphorus, after separating, will not oxidize if kept submerged in the solvent.

(1.)	
Phosphorus	1 ounce
Beef dripping	2 ounces
Wheat-flour	2 ounces
Sugar	1 ounce
Powdered biscuit	1 ounce
Water, a sufficiency.	

Warm a large porcelain mortar and pour 6 ounces of boiling water into it; add the phosphorus. When melted add the dripping (previously liquefied in a water-bath) and stir assiduously, adding a little biscuit; then add the powders and water to a suitable consistency. Color with a little methyl blue dissolved in spirit.

(2.)	
Phosphorus	1 dram
Carbon bisulphide	$\frac{1}{2}$ ounce
Beef dripping	3 ounces
Biscuit powder	3 ounces
Comp. tragacanth powder	$\frac{1}{2}$ ounce
Oil of anise	10 drops
Oil of peppermint	5 drops
Boiling water	3 ounces

Heat the dripping until it is quite clear, and transfer to a hot mortar; pour into this the carbon bisulphide in which the phosphorus has been dissolved; stir, then add the two powders and the oils, and finally the boiling water all at once, kneading the mass thoroughly until a perfect mixture is obtained.

These are practically alike, but by dissolving the phosphorus in the carbon bisulphide the paste is made much more quickly, and it is one which the vermin eat more readily. The carbon bisulphide should be purified by keeping it in contact with a little mercury or copper, which combine with the free sulphur that gives the bisulphide its repugnant odor. Most of the bisulphide is dissipated by the hot water, and, as the solvent evaporates, access of air, therefore oxidation of phosphorus, is prevented. Another good way to make the paste is to melt lard in a wide-mouth bottle in a water-bath; introduce into it $\frac{1}{2}$ ounce of phosphorus for every pound of lard; then add a pint of proof spirit; cork the bottle firmly, keeping the contents heated to 150° F., and agitate smartly until the phosphorus becomes uniformly diffused, forming a milky-looking liquid. This liquid, on cooling, affords a white compound of phosphorus and lard, from which the spirit spontaneously separates, and may be poured off to be used again, as it only serves to diffuse the phosphorus in very fine particles through the lard. This phosphorized lard, on being warmed very gently, may be

poured into a mixture of its own weight of barley or wheat meal and sugar, incorporated therewith, and after flavoring with oil of rhodium, etc., the dough made into pellets for distribution to the mice. As a flavoring, the following may be used:

Oil of rhodium	20 minims
Oil of caraway	1 dram
Oil of lavender	5 minims
Oil of fennel	10 minims
Tincture of musk	5 minims

Use 10 drops to the ounce of fat.

Baking Powder.

(J. W. C.)—

(1.)	
Tartaric acid	1 pound
Bicarbonate of soda	1 pound
Starch (powdered)	$\frac{1}{2}$ pound
(2.)	
Cream of tartar	2 pounds
Bicarbonate of soda	1 pound
Starch (powdered)	$\frac{3}{4}$ pound
(3.)	
Acid phosphate of lime ..	$\frac{1}{2}$ pounds
Bicarbonate of soda	1 pound
Starch (powdered)	$\frac{1}{4}$ pounds
(4.)	
Acid phosphate of lime	2 pounds
Dried ammonia alum	2 pounds
Bicarbonate of soda	3 pounds
Starch (powdered)	5 pounds

Dried ammonia alum
 1 pound |

Bicarbonate of soda
 1 pound |

Starch (powdered)
 1 pound |

The ingredients, all finely powdered, should be first sifted separately, to get rid of all lumps, then the soda and starch should be well mixed together, and finally the acid ingredients should be added, and all thoroughly incorporated, either by rubbing together in a mortar or by sifting at least three times. Flour can be used in place of starch, and is considerably cheaper.

A recipe is given for each variety of baking powder, though there is considerable objection to alum powders. The amount of starch can be increased in any of the recipes, the other ingredients being left the same. The powder in this way can be made at almost any price desired. The starch is simply used to keep the chemicals in a powder form from acting upon each other.

World's Fair Data.

(J. H. W., Ind. T.)—The most recently revised data relating to the World's Fair at St. Louis in 1904, that we have seen are those published in the World Almanac (January 1); they are probably as accurate as any. The exposition was opened April 30, and closed December 1. The attendance was as follows: April, 1 day, 187,793; May, 26 days, 1,001,391; June, 26 days, 2,124,836; July, 27 days, 2,343,557; August, 27 days, 3,088,745; September, 26 days, 3,651,873; October, 27 days, 3,622,329; November, 26 days, 2,517,450; December, 1 day, 293,101. The total attendance for 187 days was 18,741,073; the greatest attendance on one day was on St. Louis Day, September 15, 404,540. There were about 5,000,000 free admissions during the exposition.

Cost.—Expended by the Exposition Company, \$22,000,000; by the States, \$8,000,000; by foreign governments, \$8,500,000; by concessionaires, \$5,000,000; total, \$44,500,000.

Receipts.—Approximate amount received by Exposition Company from gate receipts and concessions (estimated), \$10,000,000; from U. S. government, \$5,000,000; from city of St. Louis, \$5,000,000; subscribed by citizens of St. Louis, \$5,000,000; total, \$25,000,000. The United States government also loaned the exposition \$5,000,000, which was repaid out of the admission receipts. The exposition closed free of debt, but with little or no prospect of dividends to the citizen subscribers.

By way of comparison, it may be stated that the attendance upon the Chicago Exposition of 1893, was 27,539,521, and upon the Paris Exposition of 1900, 50,000,000.

The total popular vote for President of the United States in the last election was (all candidates) 13,508,567; the same, including scattering votes, 13,523,518. Of these President Roosevelt received 7,621,985.

White Liniment.

(H. K.)—There are any number of formulas for "white liniment." If no particular formula is specified, we should not hesitate to dispense "acetic turpentine liniment," which is semi-officially known as "linimentum album" (see formula No. 199, National Formulary). The designation "white" is very elastic, however, and we have often had customers call for "ammonia liniment" of the pharmacopoeia under the above title. To the lay mind this liniment is "white," for in its manufacture, as you are doubtless aware, the ammonia reacts with the oil to form a soap, which is partly dissolved and partly suspended in the water, producing a white, creamy emulsion. Here are some formulas:

(1.)	
Soft soap	4 ounces
Distilled water	4 fl. ounces
Oil of turpentine	16 fl. ounces

(2.)	
Camphor	2½ ounces
Soft soap	2½ ounces
Acetic acid	4 fl. ounces
Alcohol, 90 per cent. ..	5 fl. ounces
Oil of eucalyptus	1 fl. ounce
Oil of turpentine	6 fl. ounces
Strong solution of ammonia	3 fl. ounces
Six eggs.	
Distilled water	20 fl. ounces

(3.)	
(White Oils.)	
Acetic acid	2¼ fl. ounces
Liniment of soap	3 fl. ounces
Oil of turpentine	3 fl. ounces
Strong solution of ammonia	3 fl. ounces
Distilled water, a sufficient quantity to produce	20 fl. ounces

Compounding an Ointment.

(W. D.)—"In compounding an ointment where the last ingredient in the prescription—vaselin—is 'q. s. 3j' what is the correct way to arrive at the amount of the vaseline required? Should the ointment jar be delivered full, or should the ingredients all be weighed, regardless of whether the finished ointment fills the jar or not?"

The ingredients should all be weighed or measured, absolute accuracy requiring

that this rule be followed with ointments as well as mixtures of any kind. Of course, an ointment presents a much more satisfactory appearance if the jar or box containing it can be delivered to the customer nicely filled and rounded off, but this is only a minor detail which should never be attempted at the cost of accuracy. In your prescription the quantity of vaseline may be determined by simply subtracting the weight of the other ingredients from the specified weight of the finished ointment.

Sympathetic Ink.

(J. M.)—Here are several formulas from The Era Formulary:

(1.)
A weak solution of nitrate of copper gives an invisible writing, which becomes red through heat.

(2.)
A very dilute solution of perchloride of copper gives invisible characters that become yellow through heat.

(3.)
Onion juice will become yellow when exposed to heat.

(4.)
Oxide of cobalt ½ ounce
Hydrochloric acid, sufficient to dissolve it.

Water

Mucilage of gum acacia . . . 1 dram
Characters written on paper with this solution are invisible, but on the application of heat they instantly appear in blue. On cooling they become invisible again.

(5.)
Lead acetate

30 grains
Distilled water

1 ounce
Dissolve.
The writing is invisible, and becomes black when dampened with a sulphide solution.

(6.)
Oxalomylic acid 15 grains
Distilled water

1 ounce
Write with this in a dull light. The writing appears blue when exposed to the sunshine. When wetted the blue changes to black. Oxalomylic acid is made by dissolving mylic acid to saturation in a hot solution of oxalic acid and collecting the crystals on cooling.

We do not answer queries by mail.

Tincture of Celery Seed.

(W. D.)—We know of no standard formula under the above title. As a matter of fact, a fluid extract made according to the National Formulary process (No. 139) would probably answer all purposes where a tincture of celery seed might be demanded. However, for celery flavoring preparations the following have been recommended, the first formula being that given by Lloyd:

(1.)
Celery seed

2 ounces
Alcohol

q. s.
Powder the celery seed in an iron mortar, and pack the mixture in a percolator prepared for percolation. Cover with alcohol (using about twenty fluid ounces) and when the percolate appears close to the exit of the percolator, macerate for twenty-four hours. Then percolate slowly until one pint of percolate is obtained.

The strength may be increased or diminished to suit the operator, the quality desired governing in this direction.

(2.)
Celery seed (bruised or ground)

4½ ounces

Alcohol

1 pint

Digest a fortnight and strain.

Correction.

On page 661, third column, under "Manufacture of Acetic Acid," December 29, 1904 Era, the equation should read:
 $\text{Ca} (\text{C}_2 \text{H}_3 \text{O}_2)_2 + 2 \text{HCl} = 2 \text{H C}_2 \text{H}_3 \text{O}_2 + \text{CaCl}_2$

As previously printed the basic hydrogen was not represented in the formula for acetic acid.

Rebate on Alcohol.

(N. E.)—At the present time there is no rebate on alcohol used for manufacturing purposes. A section of the tariff law of 1894 did specifically exempt from the provisions of the regular internal revenue law all alcohol used in the arts and manufactures, but they were never carried out, because the then Secretary of the Treasury, Hon. J. G. Carlisle, refused to make the necessary regulations. The act was later repealed. At the present time there is a movement to secure changes in the revenue law, which shall give cheaper alcohol for manufacturing purposes. The bills now under consideration are those known as the Bouteille bill, reducing the tax from \$1.10 to seventy cents per proof gallon; another bill by Mr. Bouteille, providing for untaxed, denatured alcohol for use in the arts; and a third, known as the Lovering bill, which provides for a drawback or the refund of the internal revenue duty on alcohol used in exported articles made in whole or in part from domestic tax-paid alcohol.

Iodocleithin.

Iodocleithin, obtained by treating lecithin with monochloride of iodine, and forms a wax-like mass containing from 7 to 8 per cent. of iodine, is intended for use in the treatment of scrofulous and syphilitic affection (Ph. Ztz.). Various iodocleithins with higher percentages of iodine may be obtained by modifying the process of manufacture. Alkalies decompose them into choline, glycerol-phosphoric acid, and iodolized fatty acids.

Origin of Pharmacology.

The predecessors of the present-day pharmacologists were the first botanists in the true sense of the word, and until the year 1500 pharmacological botany was the only botany in existence. According to Dr. Marshall Ward, professor of botany in the University of Cambridge, England, John Ray was the first to arrive at the conclusion that true knowledge of plants was only to be gained by the study of the plants themselves. In the seventeenth century Ray practically invented the first natural system of plants and his investigations marked the time when botany began to part company with pharmacology. The investigation of drugs is now undertaken by men trained in the anatomy and physiology of plants.

BOOK REVIEWS

PHARMACEUTICAL FORMULAS.—Being a supplementary volume comprising a consolidation of the Medicine-Stamp Acts (with historical notes), Formulas for known, admitted, and approved remedies, an Australian hospital formula and many other recipes. 12mo, 648 pages. 10 shillings, net. London: The Chemist and Druggist.

P. J. F. THE PHARMACEUTICAL JOURNAL FORMULARY.—A register of formulae for medicinal preparations sold by chemists and druggists and regarded by the Board of Inland Revenue as "known, admitted and approved" remedies, together with collections of useful recipes, etc., etc., in every-day use. Edited by John Humphrey. Quarto, 812 pages. 21 shillings. London: The Pharmaceutical Journal Office.

These formularies are noticed collectively, because both grew out of the peculiar situation created by the changes in the administration of the Medicine-Stamp Acts of Great Britain, whereby medicines sold under names referring to ailments of the human body become dutiable. On the other hand, if such medicines are sold by registered chemists as "known, admitted and approved" remedies, they are exempt from the stamp duty. The effort to make the formulas public is in the two books before us.

Both are notable collections. Pharmaceutical Formulas is supplementary to the book of the same name which has found its way into the libraries of so many pharmacists on both sides of the Atlantic. To the British pharmacist the supplementary volume will be of great value, but it is doubtful whether it will ever attain in this country the popularity of its predecessor. There is a certain variety in the formulas presented, as might be expected, but probably many of those given would not have been incorporated in the book were it not for the legal formalities in regard to duty liability.

To a certain extent the same observation may be made with regard to the formulas in the Pharmaceutical Journal Formulary, but this collection as a whole, is an important one, and is not restricted entirely to formulas for "known, admitted, and approved" remedial preparations. There are recipes for galealsals, veterinary medicines, photographic solutions, dental preparations, perfumes, toilet requisites, and various other preparations in every-day use. Then, there are sections of the book dealing with the manufacture of compressed tablets, histologic stains and reagents, urine analysis, poisons and antidotes, standards for medicines, dietary tables, and useful commercial information.

Both books give in full the rules and regulations of the Board of Inland Revenue, under whose jurisdiction the Medicine-Stamp Acts are enforced. American pharmacists will find both formularies most valuable acquisitions to their libraries.

NOTES ON EQUATION WRITING AND CHEMICAL AND PHARMACEUTICAL ARITHMETIC.—Third edition, revised and enlarged. By J. H. Best, Sc. D., Ph.D., Professor of chemistry and pharmacy and principal of the department of pharmacy of Seale College. 12mo, 130 pages. Cloth, \$1. The Midland Publishing Co., Columbus, O.

QUALITATIVE ANALYSIS BRIEF.—By Alford Memming, M. D., professor of chemistry, hygiene, and clinical diagnosis in the Medical College of the State of South Carolina; of general and applied chemistry in the College of Pharmacy of South Carolina; and member of State, National, and International Medical, Pharmaceutical, and Scientific societies, etc., etc. Second edition, revised and rewritten. 12mo, 120 pages, interleaved. \$1. Philadelphia: T. Blankinson's Son & Co.

According to the author, this "Brief" has been written especially for his classes in qualitative analysis in the college of pharmacy, and his aim has been "to make more plain the methods of analysis." All very good, but the author does not go far enough. His "Brief" is too brief to be of much service to the pharmacy student who is expected to be able to perform the ordinary pharmacopoeial tests. To show the general meagerness of information relating to tests, the following quotation is sufficient (page 74): HCN is best determined when searching for the base, and will in most cases be driven from its combinations by other strong acids; when so disengaged, it gives off its characteristic odor of peach kernels. In applying this test, care should be exercised so as to get no too great whiff of the gas, which in its undiluted state is dangerous and harmful.

A TEXT-BOOK OF ALKALOID THERAPEUTICS.—Being a condensed resume of all available literature on the subject of active principles, added to the personal experience of the authors. By W. C. Waugh, M. D., and W. C. Abbott, M. D., with the collaboration of E. M. Epstein, M. D. 8vo, 405 pages, cloth, \$5. postpaid. Chicago: The Clinch Publishing Co.

Whatever the physician or pharmacist may believe about the supremacy of the "alkaloidal" idea they will find in this book a mine of information relating to the active principles of vegetable drugs, and also certain medicinal chemicals which may be well administered in "granule" form. One hundred and forty remedies are described and under each is given the quantity of alkaloid or other drug in each "standard granule," a description of the method of preparation and its physiologic and toxic action.

A TEXT-BOOK OF MATERIA MEDICA: Including Laboratory Exercises in the Histological and Chemic Examinations of Drugs. For Pharmaceutical and Medical Schools and for Home Study. By Robert A. Hatcher, Ph.G., M. D., Instructor in Pharmacology in Cornell University Medical School of New York City; and Torald Sollmann, M. D., Assistant Professor in Pharmacology and Materia Medica in the Medical Department of the Western Reserve University of Cleveland. 12mo, 411 pages. Illustrated. Flexible leather, \$2. net. Philadelphia, New York, London: W. B. Saunders & Co.

This text-book covers very completely the range of organic materia medica demanded by the practicing physician and pharmacist, and is especially well suited for students, owing to its convenient arrangement, concise statements, thorough indexing and abundance of illustrations. The authors are teachers of much experience, and in this book they aim to teach in an entirely new way—by actual experimental demonstration. Part I comprises a guide to the study of crude drugs, both

official and unofficial; while in parts II and III the histological and chemical examinations of drugs are considered in a satisfactory and clear manner. The histological descriptions are supplemented by laboratory exercises of important drugs, so that the student becomes thoroughly acquainted with their construction. Throughout the entire book general stress is laid on the recognition of adulterations.

COURSE IN PHARMACEUTICAL ARITHMETIC, Including Weights and Measures. By Julius G. Sturmer, Ph. G., Professor of Pharmacy, Purdue University. Second edition, with answers. 12mo, 140 pages. Cloth, \$1.50. Published by the author, Lafayette, Ind.

The issue of new editions of these well-known books is a sure sign that they are appreciated and used in practice, and we believe that in their new guise both will meet the demands of students and others who require a knowledge of the principles of arithmetic as applied to pharmacy and chemistry or the problems that may be given on an examination paper. Both books also may be depended upon to meet the every-day demands of the drug business. The inclusion of a "big multiplication table," showing results from the multiplication of all numbers up to twenty-five, would add to their value as reference works and tend to save much "brain-fag" on the part of the individual "extending" an inventory account or performing other similar work. Of course, it may be consistently argued that the figures of such a table should be thoroughly memorized by everyone, but how many of us in our school days ever got above the "twelves?"

A COURSE IN QUALITATIVE INORGANIC CHEMISTRY.—By Arthur L. Green, Ph. G., M. D., Ph.D., Dean and professor of chemistry, School of Pharmacy, Purdue University, and Charles E. Vanderkleed, Ph.G., B.S., A.C., analytical chemist with the H. K. Mulford Co., manufacturing chemists, Philadelphia; formerly assistant in chemistry in Purdue University. Fourth edition. Cloth, 158 pages. \$1.50. Published by Arthur L. Green, Lafayette, Ind.

Not the least interesting and most practical portion of this book are the pages devoted to the directions for teachers, for here are outlined the methods successfully followed by the authors in teaching qualitative inorganic chemistry to large classes. The authors insist, and rightly, too, that the student should not be excused from any portion of the course, whether he has had previous work in introductory general chemistry or not. Definitions, nomenclature and notation should be thoroughly learned, and he must be able to write the formulas for all normal salts, etc., and to read any formula with facility. With this practice he soon begins to know what is expected of him. The teacher who works along these lines is sure to help his student forward on the road to a mastery of the principles of qualitative analysis.

The following enumeration of the table of contents shows the scope of the "Course": Definitions, Nomenclature and Notation, Equations, Reagents, Rules Leading to the Analysis of Metals, The Detection of Metals, Table of Precipitation, Rules Leading to the Analysis of Acids, The Detection of Acids, Special Tests for Acids, Directions for Teachers.

The Era Publications for the Drug Trade.

THE PHARMACEUTICAL ERA.

(Issued Every Thursday).

\$3.00 Per Year, in Advance; Foreign, \$4.00 Per Year.

The only weekly pharmaceutical journal in America. The ERA is the newspaper of the drug trade, and its readers get: The news, thoroughly revised, and brought down to date twice a year. They are issued in the Spring and Fall. They combine in one publication, arranged for easy reference, the most complete lists of Drugs, Chemicals, Newer Remedies, Proprietary Preparations and Pharmaceuticals of a proprietary character ever offered to the drug buyer.

THE ERA PRICE LIST EDITIONS

Issued in the Spring and Fall of each year, FREE to Subscribers to the ERA

The Era Price List Editions contain complete Druggist Price Lists, thoroughly revised, and brought down to date twice a year. They are issued in the Spring and Fall. They combine in one publication, arranged for easy reference, the most complete lists of Drugs, Chemicals, Newer Remedies, Proprietary Preparations and Pharmaceuticals of a proprietary character ever offered to the drug buyer.

The list of Proprietary Preparations is the most comprehensive ever published. The present edition contains some 26,000 items, and in most cases the name and address of the manufacturer is supplied by means of a key number opposite the item, referring to the Manufacturers List. The preparations of nearly 3,000 manufacturers are thus listed.

These Price List Editions are published for the benefit of subscribers to the ERA, and every subscriber gets one copy free.

THE ERA COURSE IN PHARMACY.

Total Expenses for Full Course, \$10.00, Which Includes a Year's Subscription to the ERA.

This Course consists of printed lectures upon the theory and practice of pharmacy, chemistry, materia medica, prescription dispensing and other subjects essential to a sound and practical training in pharmacy. The lectures are prepared by the foremost pharmaceutical educators, are issued in monthly installments, and the entire work of the Course can be completed within twelve months. Recitations and examinations are conducted by correspondence directly with each regularly matriculated student. Especially valuable as a preparation for the examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

NEW CLASS FORMED EVERY MONTH.

Write for new descriptive PROSPECTUS.

THE ERA FORMULARY.

(5,000 Reliable Formulas).
Price, \$5.00 Per Copy, Postpaid.

Compiled specially for druggists. A collection of original and prize formulas, to which has been added a selection from standard authorities in English, French and German.

Contains formulas for Tincture Articles, Proprietary Medicines, Unofficial Pharmaceuticals, Family Medicines, Domestic and Household Articles, Veterinary Remedies, Technical and Industrial Processes, Flavoring Extracts, Soda Fountain Specialties, etc., etc.
462 pages, cloth. Sample pages on application.

THE ERA DRUGGISTS' DIRECTORY.

Subscription Price, \$5.00 Per Copy, Postpaid.

Carefully revised by personal canvass of nearly the entire trade. The most complete and accurate Trade Directory ever issued. It contains:

Part I.—Wholesale Druggists of the United States and Canada.
Part II.—Retail Druggists of the United States, Canada, Hawaiian Islands, Cuba, Porto Rico, Mexico and Costa Rica, together with a list of the principal druggists in Chile, Peru, Bolivia, Ecuador and Colombia.

Part III.—Manufacturers, Jobbers and others who supply the drug trade.

Part IV.—A Classified Business Directory.
Substantially bound in cloth, and thumb-indexed.

THE ERA DOSE BOOK.

(Third Edition, Revised and Enlarged).
Price, 50 Cents Per Copy, Postpaid.

It has a Dose List, (2,600 remedies); a Veterinary Dose List, the most complete ever compiled; Tables of Dose Equivalents; Poisons and Antidotes; Incompatibilities; Solubilities; Specific Gravities; Percentage Solutions; Drops in Fluidram, Metric System; Thermometric Equivalents; Lists of Latin, French and German terms used in prescriptions; and definitions of the Properties of Remedial Agents. 46 pages; board covers.

THE ERA KEY TO THE U. S. P., 1890.

Price, 25 Cents Per Copy, Postpaid.

A complete list of the Drugs, Chemicals and Preparations of the latest U. S. P.; gives official title, common name, synonyms, dose and strength of each; 75 pages, imitation leather binding only. Fits the Vest Pocket.

THE ERA POISON AND LIQUOR REGISTER.

Price, 60 Cents Per Copy, Postpaid.

Contains space for 800 entries, date, name of purchaser, name and quantity of poison sold; price, purpose, witness, remarks, etc., etc. It also contains a digest of poison laws of all the States. Where the law requires registration of liquor sales, this book answers the purpose admirably. Stiff board cover, leather back, 8x11 inches.

SAMPLE ADVERTISEMENTS FOR DRUGGISTS.

Price, 50 Cents Per Copy, Postpaid.

Last edition OUT OF PRINT. A new and revised Edition will be announced when ready.

SPECIAL NOTICE.—The prices here quoted include postage. All orders must be accompanied by remittance, in Cash, Express or P. O. Money Order or N. Y. draft payable to D. O. HAYNES & COMPANY. Send stamps (2c.) for amounts less than \$1.00.

A BIGGER MERGER.

SQUIBB, P. & W.-ROSENGARTEN.

Theodore Weicker Said to be Promoting the Consolidation.

FORMER MANAGER OF MERCK'S AMERICAN BRANCH, ACCORDING TO REPORT, IS TO BE MANAGER OF THE COMBINE, AFTER BRINGING ABOUT THE MERGER.—RUMORS GAIN PARTIAL SUPPORT FROM MR. WEICKER'S FRIENDS.

It is reported on good authority ordinarily considered beyond question, that another consolidation of two big manufacturing firms, the Powers-Weightman-Rosengarten Company and E. R. Squibb & Sons is about to take place.

This new merger, it is understood, will be brought about by Theodore Weicker, who last summer severed his connection with Merck & Co. Mr. Weicker has just secured an interest in the business of E. R. Squibb & Sons, and rumor had it that he was slated for the now vacant position of manager of the Powers-Weightman-Rosengarten Company's New York branch, with the purpose of consolidating the two houses.

While no absolute confirmation of this report is obtainable as The Era goes to press, still it was not denied by those of Mr. Weicker's friends who could be reached.

IN THE A. PH. A. COUNCIL.

More publicity will be given hereafter to the deliberations of the Council of the A. Ph. A., which has authorized the secretary to furnish to the pharmaceutical journals copies of the letters regularly presented, motions proposed for adoption, record of votes, etc.

George Neves, Ellis Island (Hospital), N. Y.; Joseph S. Claverie, Covington, La., and John H. Goodman, Fitzgerald, Ga., have been invited to complete their membership. Joseph L. Lemberger and H. M. Whelpley, both members of the council, believe that the matter of exhibits at the meeting in Atlantic City this year, should be left entirely to the judgment of the local committee, of which the local secretary is chairman; a resolution to this effect is now before the council. W. C. Wescott, of Atlantic City, is local secretary and chairman of the committee on arrangements, and he has been instructed to appoint his own associates.

William Mittelbach, chairman of the Committee on Membership, has asked for an appropriation of \$25 out of the general fund of the association to provide for the expenses of his committee. In presenting the resolution for the appropriation, Mr. Mittelbach said he desired to carry out the wishes of the association, and he thinks these disbursements will lead to a healthy increase in membership.

Applications for membership have been

received from Gustavus H. Brock, U. S. Marine Hospital, San Francisco, Cal.; John M. Gebrung, Cleveland, O.; William P. Moran, Fairmont, W. Va.; Levi M. Snow, Fairhaven, Mass., and William S. Bryson, Mingo Junction, O. Two hundred and thirty-one members were elected during the calendar year 1904, and twenty-three new members are to be credited to the present committee on membership.

MAKERS OF FAKE DRUGS.

Dr. Wiley Declares There Are Five Thousand of Them.

Dr. William H. Wiley, head of the United States Bureau of Chemistry, in speaking before the Society of Chemical Industry last week, said that there were in the United States no fewer than five thousand "fake" drug manufacturers, who should be put out of business. He emphatically declared that if his plans and those of the Post Office Department, which is co-operating with him, were realized, these manufacturers would be out of business in two years.

In the last year, he said, fifty firms had been put out of business for selling or advertising "fake" medicines. His own name, he said, had been used without his permission by one firm in an indorsement of its goods. When he wrote to the concern about this, he was told to mind his own business, but he forced the firm to refrain from using his name.

MUELLER CASE IN COURT.

Clemens M. Mueller, the "pharmacy instructor," who is being sued by Frederick L. Burdett, of Brooklyn, for the recovery of \$85, claimed to have been paid as tuition for a course in pharmacy, appeared in the Police Court, last Thursday, to answer to the charge of extortion. Magistrate Barlow, after hearing both sides, adjourned the case until to-day.

Substantially the same story as printed in last week's Era was told to the magistrate by Hieronimus A. Herold. He presented as evidence letters written by Mueller to Burdett, asking for money, in a most urgent manner and referring to a certain "party" as being impatient at the delay.

In reply Mueller stated that Burdett had only paid him \$50, although he got a receipt for \$75. His desire to get the remaining \$25, said Mueller, was only natural. Mueller is a chubby-faced, blond haired, sharp whiskered, thick-lipped Austrian, and he insisted excitedly that the whole charge was a conspiracy to ruin his good name.

It has been learned that some time ago Mueller got into trouble with the board of pharmacy over a similar matter and Mr. Herold expects to have some interesting witnesses to-day.

KINGS CO. JOINS N. A. R. D.

It Has Affiliated, But Will Control Local Policy.

SUCH IS THE BROOKLYN INTERPRETATION OF THE CONFERENCE PLAN.—A BUSY MEETING ATTENDED BY MR. DUBLE, WITNESSES THE STRIPPING OFF OF VERBIAGE AND THE COMING DOWN TO BRASS TACKS.—WARM DISCUSSION ON ORGANIZATION FEE.

The Kings County Ph. S., in its meeting at the Brooklyn College of Pharmacy, last Tuesday afternoon, decided once for all upon its attitude toward the N. A. R. D. After a most earnest and even warm discussion, wherein facts were threshed out from beneath obscuring words, the society voted unanimously to affiliate as an organization, with the National Association. This means affiliation according to the plan of organization approved by the joint conference committee, and in the spirit in which the framers of that plan intended. The old line association is to retain control of local affairs, and any ulterior plan of any national organizer, such as cutting the town up into districts and applying a schedule or rebate plan, will never be undertaken, except with the formal indorsement of the Kings County Society. Under these conditions, Brooklyn stands organized.

The question was presented with Mr. Kleine's report from the joint conference committee, which he made by reading the minutes of the conference's one meeting. Then Mr. Ray took the floor to inquire regarding the organization fee of \$2.50, which had not as yet been mentioned in any organization meeting. Mr. Duble, who was present as N. A. R. D. organizer, answered that both the fee and dues were absolutely required.

THE FEE DECLARED UNJUST.

"But why," Dr. Muir demanded, "should

The Boss—"Now, hurry up with that cleaning."

a district already organized pay an organization fee? Moreover, the budget of the N. A. R. D., at its last convention, was made up on the basis of \$4.00 annual dues." He was in favor, he said, of charging organization work to the section where it was done, but he had been led to believe that the \$4 dues covered all such expenses in Greater New York. In sparsely settled districts, with drug stores far apart, he readily understood the justice of an extra fee, but where organizers were to collect \$4 in almost every block, he thought that any greater charge was not fair. Moreover, in New York, all the machinery of organization was already found. New York had loyally stood by the N. A. R. D. in its early history, had contributed to the organizing of other cities, of Chicago, notably; and he was much disappointed to hear that the N. A. R. D. meant to saddle this extra fee on the druggists of New York. He thought it would hamper the movement. All in the trade were wanted in, but some would now keep out. Yet if he thought that it could be collected without delaying organization work, he would not talk for a minute on the subject.

Mr. Wischerth emphasized the same position in his own remarks. He thought that \$4 was just about the limit of what should be collected. To collect \$6.50 from many druggists would be absolutely impossible, and was, moreover, unjust.

Mr. Duple maintained that the organization fee had always been required, and that no one had ever been exempt. N. A. R. D. headquarters and members of the executive committee had telegraphed him that he must positively exact this fee from all who joined. He looked for difficulties because of it, but not nearly so serious one as those predicted by members present. From which point the speaker easily branched forth to picture the demoralized conditions in Greater New York where the N. A. R. D. had not as yet made its influence directly felt. Local manufacturers were unfair and so far as he knew, not a New York jobber, excepting perhaps one in Brooklyn, was on the N. A. R. D.'s honor roll.

However, Dr. Muir still thought it strange that mention of the \$2.50 had not been made before, at least at the conference committee meeting.

"But," he added, "if Mr. Duple, who knows all about organizing, where I know nothing—if he sees that he and his eloquent collectors can coax both fee and dues out of the druggist's till, why, all right, and I'll be glad of it."

Mr. Duple here arose to say that he had been working among proprietors and that the Peruna people had announced that no jobbers would henceforth sell Peruna any retailer who had not signed the serial numbering contract.

DR. ANDERSON'S STAND.

Dr. Anderson, at this point, took the floor, and brought the discussion back to the main question. "This fee," he said, "was not a fixed fee during the first years of the national association. (Mr. Duple conceded that the fee had not been assessed during the first year.) "But when contributions did not meet expenses," continued Dr. Anderson, "the fee came into existence. Now the vital mistake—rather, the one mistake, since it may not be vital

—is that the fee was not brought up before the Conference Committee. Here we had agreed on a plan of organization, and then comes an order that this fee must be collected. I want to see the N. A. R. D. get every dollar it can. But New York is different from other parts. New York associations have already been affiliated with the N. A. R. D. Are we, then, to be charged an organization fee all over again?"

"Not by any means," said Mr. Duple.

"Then," proceeded Dr. Anderson, "the position of the N. A. R. D. Executive Committee is not a just one. I believe that it will cost you more in the end to collect this than if you do not try to, for organization will take you longer, and, therefore, cost more. Still, we've either got to accept this position, or leave it. Now then, does the Kings County organization become a member of the N. A. R. D. by affiliation?"

For reply, Mr. Duple referred to the conference plan, which he interpreted as leaving the N. A. R. D. free to district the city afterward, if need be.

"Then," said Dr. Anderson forcefully, "the proposition is this, we let our members pay, we let them be districted, and we let the Kings County go!"

MIXED ON CONFERENCE PLAN.

"No, no!" Mr. Duple interrupted.

"But that is what you say, Mr. Duple," insisted Dr. Anderson. "But the conference plan means that you are to do your organizing under the old line associations, such as the Kings County. And afterward, if required, the Kings County can take up such questions as distributing, etc. But if you understand the plan to mean that the N. A. R. D. will independently inaugurate such things as schedules and rebates, which have long ago been discarded as failures, then I say to Kings County, don't touch the proposition!"

The society here broke into applause. Its sentiments on that point were unanimous.

"What is the need of local district organizations," asked Dr. Muir, "when 500 of the 600 Brooklyn druggists are organized into one efficient body, the Kings County?"

"None whatever," Mr. Duple replied.

FOR NAVAL HOSPITAL CORPS.

"You are not the first, Mr. Duple," said Dr. Muir, with a smile, "who has come over here to the Kings County and been set straight. Then he moved that the Kings County Ph. S. affiliate with the N. A. R. D., under the conditions of the conference plan, and that every member be notified of the same. "So that," he added parenthetically, "the organizers would not have so much talking to do."

Dr. Anderson being called upon, heartily favored the motion, and without further debate, it was passed unanimously.

This matter being settled, Dr. Muir referred to the bill now pending before both houses of Congress to raise the standard of the hospital corps of the navy, and he moved that the secretary of the society communicate with Senator Platt, a member of the committee of naval affairs, and at one time a pharmacist, and urge him to do all in his power to aid the bill. The motion was carried.

Mr. Wischerth next moved that the

society endorse the Mann bill now before the Senate, and this motion also was carried.

The alumni supper to be given at the college on the eighteenth was announced, and a most enjoyable affair was promised. Members were advised to procure ticket, \$2, and bring their ladies with them.

In the way of routine business, Treasurer Ray reported that the trustees of the college had transferred \$7,000 to the society, making a cash balance of \$7,332.81, and in a motion accredited to Mr. Ray, it was decided that the \$7,000 should be paid to reduce the college mortgage, and that President Jenkins, of the First National Bank, be thanked by the society for the aid he extended to the college, in its time of need.

Dr. Muir, reporting for the Supervision Committee and Educational Department, announced the action of the State Board of Pharmacy at its annual meeting, January 2, in approving the Brooklyn College on each and every point of the new prerequisite law.

CITRO LACKS A LICENSE.

Giuseppe Citro, the carpenter—"druggist," of 512 Adams street, Hoboken, and Giuseppe Oliviero, his unlicensed clerk, are held to await the action of the grand jury on complaint of the State Board of Medical Examiners, who charge them with selling drugs without a license. The men had previously been exonerated from the charge of homicide by the report of County Physician Converse, who stated that his autopsy in connection with the death of eight-year-old Vincenzo Shuliano showed no traces of poison, and that death could not have been caused by the medicine procured at Citro's drug store and compounded by Oliviero.

Dr. Giuseppe Di Geronimo, who made out the prescription, who was himself practicing in violation of the health code, having failed to register or to secure a State certificate, has disappeared, and agents of the State Board of Medical Examiners are looking for him.

Citro was well liked by the members of the Italian colony and made large sales of his patent medicines. Many who had been benefited by the latter have sympathized with him in his recent trouble, doubtless not understanding the difference between the selling of patent medicines and the compounding of drugs.

G. A. S. BALL TO-NIGHT.

The German Apothecaries Society will hold its fifty-fourth anniversary and annual ball to-night, at the Harlem Casino, Seventh avenue and One Hundred and Twenty-fourth street. The entertainment committee, of which S. V. B. Swann is chairman, has left nothing undone to make the affair the most brilliant ever given. A large orchestra, under Mr. Lederhaus, will render dance and promenade music. The banquet will be served at 1 o'clock. The floor managers will be S. V. B. Swann, B. R. Dauscha, R. S. Lehman, George Leinecker, August Diehl and Hugo Kantrowitz.

G. A. S. VOTES ON N. A. R. D.

German Apothecaries Recommend Members to Join Individually.

AFTER DISCUSSION AND MANY QUESTIONS THE SOCIETY DECIDES AGAINST AFFILIATION AS A BODY, BUT GIVES THE NATIONAL ASSOCIATION MORAL ENDORSEMENT.

What is considered a victory for the N. A. R. D. in New York was won last Thursday night, when the conservative German Apothecaries' Society voted to recommend its members to join the association as individuals, under the terms adopted at the recent conference. Some opposition was shown during the evening, but J. B. Doble, who was present by invitation, succeeded in answering satisfactorily most of the many bombarding questions.

On being given the floor Mr. Doble first cautiously inquired whether there were any reporters present. He was assured in the negative, and he then proceeded,

OTTO A. LEISTER.

somewhat in the same strain he had used at previous meetings, concerning the work and benefits of the N. A. R. D. He confined himself chiefly to facts and figures, but at the same time he referred to the good work of the German pharmacists and the splendid examples of German-American citizenship—what some of the sporty members afterward described as "taffy."

As soon as Mr. Doble had finished his speech the rain of questions began. Mr. Leister asked what the society was expected to do. To pass a resolution urging its members to join the N. A. R. D. was the reply. When enough men had joined, the cry would be distracted. S. V. B. Swann read the minutes of the conference in order to give some idea of the plans.

FOR AND AGAINST N. A. R. D.

Carl Schnackenberg read a letter in which he declared his opposition to the N. A. R. D. Under-buying and under-

selling, he said, were legitimate; that was the method by which the big cutters became rich. Mr. Schnackenberg referred to the annual cost of the N. A. R. D. as \$80,000, of which the secretary was paid \$15,000, and stated that he did not think the benefits derived were worth that much to the trade.

Mr. Roller argued against organization in New York. He believed in competition as the healthier condition, but he further argued as to department stores and cutters, and what these latter might do. If their sales of patent medicines are interfered with, said Mr. Roller, then they will cut on staples, or the very backbone of the trade. For Mr. Roller thought that undue emphasis was given patent medicines, his own sales in this line amounting to only sixteen per cent. of his entire business. But to cut on staples was a much more serious matter. It was especially goading to have a customer come in with an empty bottle from Macy's, and say that it had been filled there at half the price Mr. Roller would fill it for, or that there a quart of witch hazel was selling at the price of a pint in the drug stores.

THE DAILY PRESS.

"We would," Mr. Roller continued, "have the daily press against us, once it understood that we were organized to keep up prices. The papers would call it a tax on the sick and suffering, and raise cries of conspiracy, combination, etc., so that a cutter would need only to prove that he was not a N. A. R. D. member to entice all the neighborhood trade to his store.

Another member who considered it difficult to raise prices (although he was opposed to cutting) was E. C. Goetting. He criticized the Paris Medicine Company's contract because it prohibited him from offering for sale any of his own preparations. Mr. Doble assured him that this was not the case, and that the company's goods need not be offered unless they are specifically demanded.

Mr. Lauer made a strong speech in favor of the national organization.

After about an hour's discussion, President Imhof asked what members were in favor of affiliation. Not a man moved. Turning to Mr. Doble, the president remarked: "Your labor seems to have been in vain." Then Messrs. Swann and Schlessner both jumped up and the latter moved to recommend individual affiliation under the terms of the conference. He was seconded by Mr. Swann and the motion carried with only one dissenting voice.

A vote of thanks was given to Mr. Doble, after which the meeting adjourned without the customary lunch.

A BUNCH OF FUNNY MINUTES.

During the regular business of the session, Otto Leister, the new recording secretary, made a decided hit by writing up the minutes of the previous meeting in a humorous style. Felix Hirsman proposed that each chairman of a committee arrange a budget, with the idea of limiting expenditures. This was endorsed and instructions were issued to that effect. A letter from W. E. Faber was read, resigning as a trustee of the society. George Gregorius was chosen to fill the vacancy.

The Legal Aid Committee submitted the names of Messrs. Kalish and Herold as candidates for counsel for the society.

Later the committee held a conference and nominated Mr. Kalish, who was chosen.

S. V. B. Swann, as chairman of the Trade Interests Committee, reported on the action he had taken in regard to the proposition to urge that pharmacy be represented on the Board of Health. His decision not to press the matter was approved.

PHENACETINE AND THE MANN BILL.

The apparent failure of phenacetine to support, by practical tests, the claims made for it in the patent specifications, as published recently in *The Era*, was brought up for discussion by Felix Hirsman. Dr. Alpers explained that the patent office does not examine these products, but simply takes the affidavits of the manufacturers. He strongly urged all the members to write to their senators, asking them to support the Mann bill.

Mr. Swann reported that all arrangements for the ball on January 12 had been completed. One thousand invitations had been sent out. Carl Schur, custodian of the Mortuary Fund, reported a balance on hand of \$333.59, and a present membership of 124. He tendered his resignation as custodian, and recommended Paul F. Gebicke as his successor. Mr. Gebicke was chosen and a vote of thanks given to Mr. Schur.

Delegates to the American Pharmaceutical Association meeting at Atlantic City, were announced by President Imhof as follows: George Gregorius, chairman; Dr. Wm. C. Alpers, F. H. Plump, R. C. Werner and Carl Schur.

Emil Roller, of the Scientific Committee, promised a lecture on radium at the next meeting, by Dr. Weber, of Eimer & Amend.

ALUMNI BALL, N. Y. COL. OF PH.

The Alumni Association of the College of Pharmacy of the city of New York announces its tenth annual reception and ball, which is to be held Wednesday evening, February 8, at the Grand Central Palace, Lexington avenue, between Forty-third and Forty-fourth streets. The feature of the gathering will be the reception tendered President Butler, of the university, and the officers of the college. Crowley's Eighth Regiment Band and orchestra will furnish promenade music during the entire evening.

The regular meeting of the Alumni Association was held last night, at the college.

"Nice stuff they have in drug stores."

STATE BOARD'S MEETING.

New Prerequisite Law Was the Chief Business at Albany.

SEVEN DIFFERENT STATES WILL ADOPT SAME REQUIREMENTS AS IN NEW YORK—NINE OTHER STATES ARE CONDITIONALLY ACCEPTED.—IMPORTANT DECISIONS IN CONFERENCE WITH REGENTS.

The registration of schools of pharmacy, in accordance with the new prerequisite law, was the chief subject discussed at the annual meeting of the New York State Board of Pharmacy, held January 2, at Albany. Many details connected with the operation of the new law were adjusted. A large amount of routine business was also transacted.

The boards of pharmacy of seven States—Ohio, Tennessee, California, Oklahoma Territory, Louisiana, North Dakota, Arkansas—have requirements sufficiently similar to those of the New York State Board and hereafter a license from any of these boards will be accepted as a credential entitling the applicant to an examination in New York.

Nine other States have been recognized, conditionally. They are North Carolina, Kentucky, Connecticut, Oregon, South Dakota, Florida, Nebraska, Georgia and Mississippi. Either the age limit set by these boards is too low or else they do not require sufficient practical experience. As soon as these drawbacks have been remedied, the certificates will be recognized by the New York board.

Other States will likely be added to the list of those whose requirements are satisfactory, but they have not yet been heard from, or have not furnished evidence for some reason or other. Everything which comes up later will be referred to the three branches and decided by a majority vote of the members of the branches.

IMPORTANT EDUCATIONAL DECISIONS.

A conference was held with representatives of the Board of Regents on the subject of college registration, and several important decisions made. The educational requirements for entrance will be exacted of all schools applying for registration. Only schools having day sessions will be recognized. A pharmacy school using the same equipment as a medical school, when the latter is not registered, may be registered, irrespective of the medical school, so long as its pharmaceutical equipment is up to the required standard. The duty of notifying the schools when their requirements are complete devolves upon the regents.

COLLEGES REGISTERED.

Twenty applications for registration were received by schools of pharmacy of which the following were registered as fulfilling all the requirements: Albany C. P., University of Buffalo C. P., Brooklyn C. P., New York C. P. (Columbia University), Cleveland (O.) S. P., Philadelphia C. A., and Pittsburg C. P.

Colleges which do not come up to the requirements for registration may be accredited. A course taken in an accredited school may serve as part of the required

course if completed in a regular college. That is, a two years' course in some accredited school, for instance, would only count as one year.

The twelve regents' counts in the usual subjects will be accepted only during 1905. After this year they must include algebra. In regard to pharmaceutical arithmetic, the regents decided that they could not make a special case for pharmacy.

C. O. Bigelow, Dr. Willis G. Gregory, P. P. Tutthill and Warren L. Bradt, each representing a college, were appointed a committee of four, by the board of pharmacy, to have power in the interim of action by the board. They will act as representatives of the board in matters of registration, etc. A three quarters vote is to constitute a majority.

SCHEDULE OF EXAMINATIONS.

Examinations during this year will be held in the following months: Eastern branch, February, May, June, September, November, December. Middle and Western branches, February, April, June, September, November. Those who did not appear at the examination on December 28, on account of illness, or for some other good reason, are entitled to one examination within six months.

The board organized with the following officers: President, Charles B. Sears, Auburn; first vice-president, Clarence O. Bigelow, New York; second vice-president, Charles M. Palmer, Ocean; secretary, Warren L. Bradt, Albany.

On Tuesday, at 3 o'clock, the board as a body visited the new governor. Dr. Muir did the honors and introduced the members. They were given a very cordial reception in the governor's main room.

Warren L. Bradt was presented by the State Hospital pharmacists with a diamond stud, in appreciation of his services in improving their condition and raising their salaries.

The Howard University School of Pharmacy, Washington, D. C., and University of Washington School of Pharmacy, Seattle, Wash., were also registered in full. The following schools were accredited: National C. P., Washington, D. C.; Kansas City C. P., Kansas City.

The committees appointed by President Sears for 1905 are as follows: Finance, C. O. Bigelow, chairman; G. H. Merritt, S. A. Grove. Inspection, Complaints and Prosecutions, Warren L. Bradt, chairman; Geo. Reimann, Joseph Weinstein. Adulterations and Substitutions, Geo. C. Diekmann, chairman; W. G. Gregory, B. M. Hyde. Sales of Poisons, Wm. Muir, chairman; A. M. Palmer, J. B. Todd. Registrations, Judson B. Todd, chairman; F. P. Tutthill, H. M. Groves.

GINSENG GROWERS MEET.

Syracuse, Jan. 7.—The annual meeting of the New York State Ginseng Growers' Association was held in this city at the St. Clond Hotel last week, and the following officers were elected: President, Dr. I. C. Curtis, of Fulton; vice-president, C. E. Ingalls, of Cortland; secretary and treasurer, F. P. Hakes, of Cortland. The growers reported that the industry was in good condition. The association has 300 members. Action was taken urging that the laws that have been passed in this State relative to the growing of ginseng be ex-

teuded to other States. The New York law makes the stealing of ginseng a burglary, and makes it a crime to sell Japanese ginseng unless it is labeled showing exactly what it is.

ROCHESTER PRICES RAISED.

Local Association to Test Serial Numbering Plan.

Rochester, Jan. 9.—There was a lively discussion at the monthly meeting of the Rochester Ph. A. last Friday afternoon over patent medicine prices in accordance with serial numbering contracts. It was reported by Chairman Sibley, of the price committee, that a large druggist, not a member of the association, had stated that the large druggists of the country have entered into an agreement not to sign these contracts. But druggists who do not belong to the Rochester association have informed Chairman Sibley that they would abide by the prices established by the association.

To test the efficiency of the serial numbering plan, it was decided after considerable debate to increase the price of the Dr. Kilmer remedies as follows: For the \$1 article, from 69 cents to 79 cents, and for the 50-cent article from 35 to 40 cents.

Owing to the higher N. A. R. D. dues, the dues of the Rochester association, out of which the N. A. R. D. dues are paid, may be advanced from \$6 to \$12 a year, and of non-resident members from \$ to \$6 a year. An amendment to this effect was laid over for thirty days.

Ways and means to increase membership were discussed. Mr. Guilford said that the association is the means of getting at least 20 per cent. more for patent medicines. Hardly a store in Rochester sells less than \$1,000 worth of patent medicines a year, and this alone means \$200, while on a \$5,000 business the druggist is \$1,000 better off. No druggist, he maintained, should begrudge the small sum asked to carry on the good work.

A committee consisting of President Chilson, Treasurer Hall and Secretary McBay was appointed to endeavor to secure for membership the Duke Drug Co., Bryan Bros., and Sibley, Lindsay & Curr Co. President Chilson said that in Syracuse every druggist in the city belongs to the association.

NEXT N. W. D. A. MEETING.

The new Hotel Astor will be the headquarters of the National Wholesale Druggists' Association convention, to be held in this city the first week of October. Both time and hotel were selected by the Committee of Arrangements, at a meeting held last Friday, at the Lawyers' Club, when Samuel W. Fairchild acted as host. Clarence G. Stone was elected secretary. The chairman of the various sub-committees were empowered to select their own associates.

The committee is made up as follows: Thomas P. Cook, chairman; Clarence G. Stone, Brent Good, S. W. Fairchild, Albert Plant, Wm. Hull Wickham, Wm. Jay Scheffelin, Wm. P. Ritchey, Charles S. Littell, A. A. Stillwell, Thomas F. Main and John M. Peters.

STODDART TO ACT AS MAYOR.

Buffalo Councilman and Pharmacist is Called to High Honors.

Buffalo, Dec. 9.—Thos. Stoddart, for two years president of the New York State Ph. A., and now councilman in Buffalo, is to be elected president of the Board of Councilmen during Mayor Knight's absence from the city.

The mayor will leave shortly for a three weeks' trip to Cuba and the Isle of Pines.

THOMAS STODDART.

and Mr. Stoddart has been named as acting mayor by his colleagues on the board. In a complimentary way, the statement is made that Mr. Stoddart should familiarize himself with the duties of an office which he may be called upon to occupy for four years.

FOR A ROCHESTER COL. OF PH.

Rochester, Jan. 9.—At a recent meeting of the Rochester Ph. A. it was decided to ask the Mechanics' Institute, which has a well-equipped chemical laboratory, to consider the establishing of classes in pharmacy.

New officers elected were: President, Professor C. M. Woodward, St. Louis, Mo.; vice-president, Section A, Professor W. S. Eichelberger, Washington, D. C.; Section B, Professor Henry Crew, Evanson, Ill.; Section C, Professor Charles F. Mabery, Cleveland, Ohio; Section D, Professor F. W. McNair, Houghton, Mich.; Section E, Professor William North Rice, Middletown, Conn.; Section F, Professor H. B. Ward, Lincoln, Neb.; Section G, Dr. Erwin P. Smith, Washington, D. C.; Section H, Dr. George Grant McCurdy, New Haven, Conn.; Section I, Professor Irving Fischer, New Haven, Conn.; Section K, Professor William T. Sedgwick, Boston, Mass.; permanent secretary, Dr. L. O. Howard, for a period of five years beginning August, 1905; general secretary, Professor C. A. Waldo, Lafayette, Ind.; secretary of council, Professor John F. Hayford, Washington, D. C.; secretary Section K, Dr. William J. Gies, New York City, N. Y.

SCIENTISTS IN SESSION.

Over a Thousand Gather for the A. A. A. S. Annual Meeting.

Philadelphia, Jan. 9.—The fifty-fourth meeting of the American Association for the Advancement of Science, held here during the past week, was the third largest in the history of the organization. It is estimated that fully nine hundred members were in attendance. Three hundred other scientific men were probably present. But the sessions were also considered a success from the number and quality of the papers read, as well as from the interest taken in them. Thirty-one Affiliated Societies met in conjunction with the National Association, among them being the American Chemical Society, the American Mycological Society, the American Physiological Society, the American Society of Naturalists, the Botanical Club of the Association, the Botanical Society of America, the Society for Plant Morphology and Physiology, the Fern Chapter, Sullivant Moss Chapter, the Wild Flower Preservation Society of America, the Society of American Bacteriologists, and the Society for Horticultural Science. It is the policy of the association to encourage other great national societies to meet with it at the same time and place, and so makes all the general arrangements, thus saving the affiliated bodies considerable trouble and expense. (On the other hand, the response to the invitation show a hearty willingness to cooperate with the association in the annual gatherings.)

The first session was called to order Wednesday in College Hall Chapel of the University of Pennsylvania by the retiring president, Dr. Carroll D. Wright, who introduced the president-elect, Dr. William G. Farlow. Provost Harrison, of the University, made the address of welcome. Further, the University placed its halls and laboratories at the disposal of the association, and each day furnished a lunch to the members.

Besides the general program, as announced already, the various societies met independently. On Thursday evening the American Chemical Society held a comers at the University Club, and on Friday the Alpine Club held its annual dinner at the same place.

The council or the association elected as members of the council at large, J. McK Cartell, J. M. Coulter, and H. F. Osborn. Prof. C. R. Barnes and Dr. H. C. Cowles, of the University of Chicago, and C. L. Shear, of the Department of Agriculture, were appointed as representatives to the International Botanical Congress, which will be held during the year in Vienna.

Resolutions adopted were: "That the permanent secretary be authorized to offer sets of the back volumes of the 'Proceedings' to libraries which shall be approved by the committee of the association appointed by the president."

"That the committee recommends as members, and if they become members, nominates as fellows, members of the national scientific societies not now members of the association in cases in which the National Scientific Society has a qualification for membership equal to that of the

qualification of the association for fellowship."

At the meeting of the general committee it was decided to hold the next meeting in New Orleans, beginning Dec. 29, Boston was recommended for the meeting place of 1906. The committee on policy, after considering the desires of the out-of-doors sections for a summer meeting, reported that it would favor one at Ithaca in 1906, since there seemed to be no objection on the part of the association to holding two meetings yearly.

CONDENSED MILK LICENSE.

Pittsburg, Pa., Jan. 7.—Some of the city officials are out to enforce a State law that pertains to the sale of milk. Many druggists of this section handle condensed milk, though the profits are not very large. But now they are notified that they will have to secure a city license, costing \$1, to sell the liquid.

BLAMED FOR A SUICIDE.

Huntington, W. Va., Jan. 7.—Oscar Jones, father of Mrs. Pearl Jones Rysden, who committed suicide a few weeks ago by drinking carboic acid, has entered suit in the circuit court against B. T. Davis, a local druggist, for \$10,000 damages, alleging that he sold her the drug and is hence morally and legally responsible for her demise. The suit has created a sensation here.

BALTIMORE NOTES.

—Dr. Charles A. Caspari, professor of chemistry at the St. Louis College of Pharmacy, of Baltimore, has been on a visit to his father, Prof. Charles Caspari, Jr., of the Maryland College of Pharmacy. His wife and child accompany him. Dr. Caspari has been in St. Louis about two years.

—Baltimore is to have still another downtown pharmacy. This one is to be on the southwest corner of Hanover and Baltimore streets, and conducted by the Messrs. Klingel, who now manage a cut-rate establishment on West Lexington street. There is also some talk of a drug store being opened in the Hotel Caswell, which is to be erected on the northeast corner of Baltimore and Hanover streets. This structure is still to be built, while the one on the southwest corner is going up. Even without any further additions, the business part of Baltimore street will be well supplied with drug stores.

"That smells like there's smallpox in the neighborhood."

TO HELP HOSPITAL CORPS.

Text of the Bill For This Service in the Navy.

Washington, Jan. 9.—The bill referred to by Frederick J. Gordon, in the last issue of *The Era* to increase the efficiency of the hospital corps of the navy is here given in full, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Sec. 1. That the Hospital Corps of the United States Navy shall consist of chief pharmacists, pharmacists, hospital stewards, baymen (first-class), baymen, and hospital apprentices.

Sec. 2. That the number of chief pharmacists and pharmacists on the active list shall not exceed 50 in all, the pharmacists to be appointed by the President and have the status of warrant officers: *Provided*, That the provisions of law regulating the promotion, pay and allowances, and rights of warrant officers set forth in Section 12 of the Act entitled "An Act to reorganize and increase the efficiency of the personnel of the Navy and Marine Corps of the United States," approved March third, nineteen hundred and ninety-nine, shall extend to and include all pharmacists of the Hospital Corps; *And provided further*, That vacancies in the grade of pharmacists shall be filled from men holding the rating of hospital steward, subject to such examination as may be prescribed by the Secretary of the Navy; and that no pharmacist shall be promoted to the rank of chief pharmacist until he shall have passed an examination as to his mental, moral, physical, and professional qualifications before a board of officers, in accordance with regulations, prescribed by the Secretary of the Navy.

Sec. 3. That the Secretary of the Navy is hereby empowered to enlist, or cause to be enlisted, as many hospital stewards, baymen (first-class), baymen, and hospital apprentices as in his judgment may be necessary, and to limit or fix the number, and to make such regulations as may be required for their enlistment and government. Enlisted men of the Navy and Marine Corps shall be eligible for transfer to the Hospital Corps.

Sec. 4. That all necessary hospital and ambulance service at naval hospitals, naval stations, navy-yards, and marine barracks, and on vessels of the Navy and Fish Commission, shall be performed by the members of said corps, and the corps shall be permanently attached to the Medical Department of the Navy, and shall be included in the effective strength of the Navy, and be counted as a part of the enlisted force provided by law, and be subject to the laws and regulations for the government of the Navy.

Sec. 5. That the pay of hospital stewards shall be seventy dollars per month; of baymen (first-class), forty dollars per month during their first five years of service, and thirty dollars per month thereafter; of baymen thirty dollars per month, and of hospital apprentices, twenty dollars per month, with such increase on account of length of service as is now or may hereafter be allowed by or in pursuance of law to other enlisted men of the Navy. *Provided*, That all benefits given by the pursuit of existing laws, or that shall hereafter be allowed by or in pursuance of law to other warrant officers or enlisted men of the Navy, shall hereafter be allowed in the same manner to warrant officers and enlisted men in the Hospital Corps of the Navy.

Sec. 6. That all Acts or parts of Acts so far as they conflict with the provisions of this Act are hereby repealed.

EXAMS. IN MASSACHUSETTS.

Boston, Jan. 7.—During December only two examinations were held by the Massachusetts State Board of Pharmacy, on the 13th and 27th of the month, and at these there were in all nineteen candidates for registration. Six only out of this number were successful in passing, as announced by the secretary, F. A. Hub-

bard. They were as follows: John Minon, Charlestown, Boston; George J. Young, Somerville; James J. Keegan, Lawrence; William H. Burke, Fall River; Clinton H. Hart, Gardner, and Herbert S. Maxwell, Plymouth.

BAY STATE NOTES.

—The old-time botanic drug and herb house of B. O. & G. C. Wilson has removed its place of business from the corner of Canal and Market streets, Boston, to 32 Lewis wharf, at the extreme north end of the city.

—In the new Massachusetts legislature there are eight druggists.

—Frank A. Davidson, president of the Theo. Metcalf Company, and Mrs. Davidson have just announced the engagement

SIMON B. HARRIS.

of their daughter, Miss Helen Davidson, to Mr. G. G. Davis, of West Roxbury.

—Frank O. Randall & Co., druggists in Brockton, have been so annoyed by petty thieving in the past year or more that they recently laid a trap and succeeded in catching two boys with a box of candy which they had stolen. In court the boys were fined \$5 each. The candy boxes were displayed on a center table and to some were tied strings, fastened to the table.

—Senator William F. Craig, of Lynn, long a druggist, and more recently assistant chemist of the Lynn Board of Health, is to be the postmaster of that city, to succeed the late Howard K. Sanderson.

SOUTHERN NOTES.

—The Parker-Blake Co.'s wholesale drug store, of New Orleans, suffered a loss of \$250,000 in the recent fire there. The Druggists' Specialty Building, of the same city, has also been destroyed. The loss was \$75,000.

—The charter of the Jackson (Miss.) Drug Company, a wholesale drug concern, has been filed with the governor for approval. The capital stock is fixed at \$50,000, and the concern proposes to engage extensively

in the wholesale drug business throughout the territory tributary to Jackson.

—In a fire at Birmingham, Ala., two drug stores were among those burned out. Patton's Pharmacy, in stock and building, lost \$25,000; insurance, \$20,000; and Barber's Drug Store suffered to the extent of \$12,000; fully insured.

—B. T. Davis, a Huntington, W. Va., druggist, is being sued for \$10,000 damages for selling Mrs. Pearl Jones Rysden the carbolic acid with which she committed suicide. It is charged that he sold it in an unlabeled bottle.

BIG FINE FOR SIMMONS.

Lynchburg, Va., Jan. 7.—In the mayor's court, last week, S. J. Simmons, the druggist of the suburb of Rivermont, who pleaded guilty to the charge of illegally selling cocaine to Jim Faulkner and two others, was fined \$100 in each case. Eight other cases against him were held in abeyance on condition of good behavior.

Jim Faulkner, convicted of buying from Simmons and selling to a dozen boys, was fined \$25 and ordered to leave the State for one year or suffer imprisonment.

'PHONE TROUBLE IN OHIO.

Cincinnati, Jan. 9.—It is reported that the telephone company is working up cases against a number of business houses, who allow their telephones to be promiscuously used by the general public in violation of their signed contracts. According to the rule of the telephone company, when a telephone is placed in a business house without the addition of the slot arrangement, the phone is to be used by the concern only. It is claimed that a number of saloon and cigar men in the down town district have been throwing their telephones open to the general public, when they should have referred customers to a pay station.

Druggists, all of whom have the slot arrangement, have to pay five cents for every message they send, even those to their supply houses and to druggists. Their contract stipulates that they are to receive ten per cent. on receipts exceeding \$60 per year. Several druggists have entered vigorous complaint with the telephone people.

CINCINNATI VETERAN RETIRES.

Cincinnati, Jan. 10.—R. H. Weatherhead, for fifty years in business at Sixth and Vine streets, has retired in favor of his son, B. P. Weatherhead. The establishment has been incorporated at \$35,000. The directors are B. P. Weatherhead, Smith Hickenloper, J. C. Butler, A. E. Millard and George H. Ilerman. The elder Weatherhead was well known throughout the Central States. The younger is barely past twenty years of age.

FREAK GUESSING CONTEST.

Toledo, Jan. 9.—It is rather a curious coincidence that in a guessing contest thirteen people should tie for first prize, but that is what happened last week at Henry Neipp's drug store, Norwood and Lawrence avenues, when the number of pieces in a scuttful of coal were counted, and the result compared with nearly two thousand guesses. A big crowd attended the count and enjoyed a free lunch. The prize was a ton of coal.

BOTH THEFT AND MURDER.

How Illegal Cocaine Selling Is Rated in Cincinnati.

Cincinnati, Jan. 9.—Three drug clerks were in police court, last week, charged with selling cocaine illegally. The chief of police announced that this was but a prelude to sensational developments. The three arrested were Albert Carney, clerk at Fred Renner's, Sixth and Mound streets; George Serrins, clerk at Isaac Millers, Sixth and John streets, and M. Goodman, clerk at A. Strashun's, Sixth and Smith streets.

The startling statement was made that the sale of cocaine in one of the stores is known to aggregate \$60 a day, on which the profit was \$48.

At the trial Judge Lueders said: "This has been going on for years. One good feature about it is that the stuff sold for cocaine is one part cocaine and nine parts something else."

"In other words," interjected the chief of police, "it is one part murder and nine parts theft."

The cases of the three men on trial were continued until the latter part of the month.

OHIO HAPPENINGS.

—The Caldwell & Bloor Drug Co., of Mansfield, was recently incorporated with a capital of \$50,000, by E. B. Caldwell, F. W. Bloor, D. N. Buesser, Wm. Martin, Jr., J. L. Judson and J. L. Kappes. For years Caldwell & Bloor have conducted a retail store at Mansfield.

—George Bradford, of Portsmouth, has been elected treasurer of Meigs County.

—Owen Evans, a prominent Dayton drugist, is dead.

—The Retail Druggists' Association, of Dayton, held its regular quarterly meeting last week. The attendance was the best for several years past. Local trade topics were discussed, but no action regarding the cut-rate evil was taken.

—The annual euchre and dance of the O. V. D. A. will take place at Odd Fellows' Temple, Seventh and Elm streets, Cincinnati, Friday evening, January 27.

—Wm. Gilmore, widely acquainted in the drug trade of the Middle and Southern States, died at Dayton, Ky., on January 4.

NEW N. A. R. D. COMMITTEES.

Chicago, Jan. 7.—Standing committees of the N. A. R. D. for the year have just been announced by President Thomas Voegeli, of the association. Besides the consideration of efficiency, it is stated that appointments were made with a view to giving, so far as possible, representation to the different sections of the country.

The new committees are:

National Legislation:—S. L. Hilton, Washington, D. C.; J. C. Gallagher, Jersey City; W. J. Bullock, New Bedford, Mass.; E. L. Scholtz, Denver; L. E. Hoy, Woodstock, Ill.; J. M. Farnsworth, Beloit, Wis.; H. H. Barth, Lincoln, Neb.; J. D. Sutton, Mobile, Ala.; S. A. McDonnell, 4th and Market, San Francisco.
Commercial and Fraternal Relations:—Edward Williams, Madison, Wis.; C. H. Lumsden, Lynchburg, Va.; H. D. Cannon, Sioux City, Ia.; Geo. W. Robbie, Butte, Mont.; J. E. Alford, McComb City, Miss.

Pharmacy Laws:—Wm. K. Forsyth, Chicago; Paul L. Bess, Kansas City, Mo.; F. E. Little, Guthrie, Okla.; H. E. Glick, Lafayette, Ind.; C. B. Bradham, New Bern, N. C.

Forum of Organization:—H. C. Groves, Ocala, Fla.; A. P. Wells, Cincinnati; C. B. Ambrose, Fort Worth, Tex.; W. Porterfield, Fargo, N. D.; J. D. Kidd, Milledgeville, Ga.

Adding:—Victor Schmelzer, Meriden, Conn.; J. A. Todd, Watertown, Ia.; Chas. Peaslee, Redfield, S. Dak.; S. B. Higley, Bentonville, Ark.; R. G. Cunningham, Miami, Ind. Ter.

Transportation:—Wm. Dice, Allegheny, Pa.; G. T. Haahn, Grand Rapids, Mich.; M. S. Kahn, Baltimore; O. W. Jones, Auburn, Me.; W. C. Gordon, Wheeling, W. Va.; Henry Willis, Quebec; F. Jensen, Tacoma, Wash.; A. H. Knowlton, Concord, N. H.; D. P. Frierson, Charleston; O. C. Draper, Wilmington, Del.; J. L. Franken, Salt Lake City; J. A. Boyed, Piquette, Tenn.; Jas. L. Wright, Newport, R. I.; F. W. Schmalback, Albuquerque, N. Mex.; A. W. Allen, Portland, Ore.

ON DEATH OF MR. VAN SCHAACK.

Chicago, Jan. 7.—The following resolutions were unanimously passed at the meeting of the Board of Directors of the Chicago Drug Trade Club, January 5:

On December 5th, 1904, Peter Van Schaack was called by his Creator from the scenes of his earthly pilgrimage to his rest, and out of respect to his memory, and as a token of love and respect for his two sons, who are active members of this Club, it is met and proper that we pause a moment on our way to the goal he has reached, to utter a few words expressing our sympathy with those who were related to him by the closest earthly ties.

Mr. Van Schaack was not a member of this Club, on account of his retirement from active business life, but his life and energies had been devoted to the vocation that we embrace, and the influence he has had upon the drug business of Chicago has made him so well known over the entire nation that we feel that by his loss we have lost a friend and brother. Therefore, be it

Resolved, That in the death of Mr. Van Schaack we have lost an earnest and sincere worker for the advancement of our vocation and a genial friend and brother. Be it further

Resolved, That the members of this Club through the Board of Directors extend to the members of his family our sincere sympathy in their bereavement, and although we realize it is beyond our power to give any consolation, we feel that the sympathy we extend will not be ungrateful.

Resolved, That a copy of these resolutions be spread upon the records of the Board and a copy of the same be sent to the wife and each of the sons, who are members of this Club.

Adopted:—E. A. Vosburgh, H. Holland, J. V. Pierce.

HOFFMANN RESOLUTIONS.

Chicago, Jan. 7.—At the recent meeting of the executive committee of the Illinois Pharmaceutical Association, a special committee was appointed to draft suitable resolutions on the death of Dr. Friedrich Hoffmann. The resolutions have accordingly been drawn up, in which, after an earnest eulogy, sympathy is expressed for the widow of the deceased.

HOW TO INSURE PURE DRUGS.

Chicago, Jan. 7.—In reply to The Era editorial in the issue of January 5, "Morals of the Chicago Episode," Mr. Ehert says:

"A special bureau for the examination of drugs is not necessary. Every State has the machinery at hand for doing it through its board of pharmacy, who are,

or ought to be competent, either to perform the work themselves or engage some qualified person to do it for them. The solution of the whole matter, like many another problem, is very simple and near at hand if we will but take it up. Make it a part of the duty of the State boards to pass upon the purity of drugs, give them the money to do it, and the 'Chicago scandal,' so called, will not be repeated."

PLATT'S SUIT NOT DECIDED.

Chicago, Jan. 9.—The new injunction suit of Isaac Platt against the wholesale druggists and the National Association of Retail Druggists came up last Saturday, before Circuit Judge Dunne. The injunction was not granted, but the court intimated that if complainant would make certain amendments to his bill, he would grant the injunction. The matter will probably come up this week. The defendants may ask for a change of venue. The wholesale druggists are desirous of having the case come to trial in order to get a definite decision on the points of law involved, which may determine the legality of the contract plan.

CHICAGO NOTES.

—Abraham Mantrovitz has received a sentence of twenty years' imprisonment, under the habitual criminals act. His last exploit was the stealing of a quantity of goods from Morrissou, Plummer & Co.

—A. L. Parker has sold his drug store at Wood and Madison streets, to R. A. Sawyer, who will be remembered as of the old firm of Klein & Sawyer, on West Madison street.

—Geo. H. Mayr, a druggist at LaSalle and Washington streets, has been elected vice-president of the Chicago Cigar Dealers' Association.

—Clarence A. Davidson & Co. is the name of a new wholesale druggists' sundries house. Clarence Davidson is a brother of James A. Davidson, druggists' sundries wholesalers, on East Randolph street, and has been manager of the latter's store for several years.

—The drug store of James Adams, Forty-seventh street and Vincennes avenue, was recently burglarized. Stones were thrown through the two front windows. All of the cigars, some perfumes, candy and stationery were taken. Two show globes were broken. The loss was about \$500.

"They must have that for the undertakers."

DRUG RAID A FAILURE.

First Man Arrested in Milwaukee is Acquitted.

Milwaukee, Jan. 7.—The first battle for pure drugs has been fought in Milwaukee, with doubtful results. When the wholesale arrests were made in Chicago, of mail-order druggists, for selling adulterated and imitation drugs, chiefly aristol, then James G. Moore, State Dairy and Food Commissioner, determined to find out if such goods were sold in Wisconsin.

He began a systematic campaign, buying, or having bought for him, samples of drugs in stores all over Milwaukee. The first arrest was that of J. W. S. Tomkiewicz, 452 Mitchell street. Commissioner Moore secured a half dozen samples of tincture of digitalis, had them analyzed, thought he found wood alcohol, and had the druggist arrested. The warrant was served December 13.

The case came up for trial in the municipal court and Mr. Moore told his story. He also had the samples in court, and the chemist swore that they contained wood alcohol. Tomkiewicz, however, was acquitted. He told a remarkable story, and produced witnesses to substantiate it. He said he read in an evening paper, December 12, that a warrant had been issued for his arrest. Immediately he called in witnesses, sealed his bottle of digitalis in their presence, locked it in a drawer and gave them the key. Later they had a chemical analysis made and they and the chemist testified that the drug was pure.

ST. LOUIS CONTRACTS SIGNED.

St. Louis, Jan. 9.—At the Cinchona Club meeting, Tuesday, several members reported that they had signed the contracts with the Paris Medicine Company to sell Bromo Quinine and Groves Chill Tonic at twenty-five and fifty cents, on the serial numbering plan. The club, with the St. L. R. D. A., has adopted the Peruna and Paine's contracts, with a minimum price of ninety cents. The Cinchona Club elected Q. M. Good, president; Leland Miller, vice-president; C. N. Collins, secretary, and A. Q. Davenport, treasurer. President Good asked until next meeting to announce the appointment of committee chairmen.

IN MISSOURI.

—The J. S. Merrill Drug Co. of St. Louis, on Dec. 28, gave their traveling salesmen and heads of departments an annual banquet and love feast.

—George Conley, the J. S. Merrill Drug Co. salesman in Central Missouri, was married recently, and is now making his headquarters in St. Louis.

MANIA OF A POOR CLERK.

Des Moines, Jan. 7.—Charles Rothrock, a Des Moines drug clerk, has been sent to the Clarinda Hospital for the Insane. He had been employed chiefly to sell candies and specialties, and he commenced to believe that he was immensely wealthy and that he had made his fortune in candy. He placed large advertisements in local papers, asking people to visit him in the parlors of a big hotel and buy Gunther's candies. When not dwelling upon the confectionery idea, Rothrock spent his

time trying to convince people that he had bought out Cudahy's packing house.

IOWA'S NEW PHARMACISTS.

Des Moines, Jan. 7.—The following passed the last State pharmaceutical examination: George H. Brown, Clarion; William H. Mulix, Davis; Blaine R. Moore, Munsal; John G. Parks, Clarinda; John H. Collins, Clare; Peter Ludwig, Gray; H. R. Biddle, Thornburg; George W. Adams, Corning; Henry G. Rothgan, Ida Grove; C. R. Sheetz, Algona; C. A. Swazey, Fairfield; W. H. McCreery, Des Moines; F. L. Adams, Des Moines.

IOWA WANTS CHEAPER ALCOHOL.

Des Moines, Jan. 7.—Druggists here are leading a helping hand in the concerted effort being made throughout the country to get the tax on alcohol reduced. Mr. D. S. Chamberlain, head of the big proprietary medicine company, has secured the aid of the Commercial Exchange. All manufacturing druggists of the city and State will join with retailers in signing petitions.

IOWA NOTES.

—Brazleton & Co., of Center Point, one of the leading drug firms in eastern Iowa, were burned out this week; loss, \$10,000; insurance, \$8,000.

—Lieutenant Governor John Herriott, of Stuart, for forty years a druggist, is seriously ill. Mr. Herriott was busy behind the counter in his store during the holiday trade. He still enjoys selling toys and Christmas goods. He is a pioneer druggist of the State, and has attained more prominence than any druggist who has mixed in State politics.

—The stockholders of the Iowa Drug Company, of Des Moines, have authorized an increase in the capital stock of the firm from \$150,000 to \$200,000. The capital is fully paid up. The large increase in the business done by the company since it was launched last spring induced the increase of capital.

—B. F. Erb has transferred his drug stock at Des Moines, Ia., to Charles S. Ill by chattel mortgage. Mr. Ill will continue the stand at 125 West Fourth street. This is the stock which has been known as the Iowa Hotel drug store and which has been raided several times on the supposition that liquor was illegally kept and sold there.

FAVORITISM AT EXAMS.

Special Committee Investigates California Board of Pharmacy.

San Francisco, Jan. 2.—The special committee which investigated the methods of the California State Board of Pharmacy, as the result of charges of favoritism and discrimination, has at last presented its report to the governor. The report exonerates the members from any intentional favoritism, yet severely criticizes their action in allowing Professor Flint, whose pupils were taking the examination, to be present, with his young woman assistant, during the examination. On this subject the report says:

"One mistake was unquestionably made by the board in allowing Professor Flint to be present. There is considerable

rivalry and feeling between the graduates of the University of California and those of the College of Physicians and Surgeons, and when the former pupils noticed Professor Flint coaching his class, constantly asking questions of examining professors, etc., it was easy for them to imagine that some inside tip was given, no matter how unjust the assumption might be.

"What right had Professor Flint to encourage his pupils by chatting with them in this way? After the examinations were over, he made it a special practice to go into the room where the examiners were examining the papers, and as he knew the rating of his pupils before the announcements were made, he possessed the knowledge upon which to make a kick if he desired, before it was too late. The board was entirely too tolerant of Brother Flint and his persistence."

It is also stated in the report that while the State board did all it could to prevent cribbing in the examination room, the fact remains that considerable cribbing was done. The report adds: "They were not up to date in the methods of preventing cribbing, and at the investigation themselves learned at least one new method of cribbing that bore testimony to the resources of the modern female student."

This beyond doubt refers to the young woman who carried a book on toxicology into the examination room in her stocking.

The report contains about 3,500 words, reviews all the evidence taken by the investigating commission, and concludes that the board has been careless and lax in some particulars, but not guilty of any wrongful acts. The governor has made no comment on the report, and it is generally believed that there will be no removals. The effect will be to make the board more careful and exact.

TRUST INVADERS THE SLOPE.

Tobacco Combine Crowds Out a Pharmacy in San Francisco.

San Francisco, Jan. 2.—The Tobacco Trust has invaded the Pacific Coast, and the first person to suffer is a pharmacist. The Trust has hitherto kept aloof from California, but has this week completed preparations to open several stores.

It decided first of all that it desired the splendid store at the corner of Market and Stockton streets, which was occupied by the Lion Drug Company. This store is one of the most desirable in San Francisco, facing on the principal business thoroughfare and at a point where the crowds gather for the Owl cars. The Lion Drug Company had occupied the place for a number of years, and had been paying \$800 a month rent. The Trust was known to the owners of the place that it desired the store, and was willing to pay a much higher rental than the Lion people. The drug company was therefore given notice to leave, and the place is now being overhauled, and is to be fitted up as an immense cigar store.

In a few weeks the Trust will have half a dozen stores in operation here, and will then extend to the States of Oregon and Washington. Naturally, they will fight the present dealers, and those pharmacists who handle tobacco view its tactics with alarm.

BIG FIRMS IN NEW HOMES.**Baltimore Wholesale Houses Will Soon be Located Again.**

Baltimore, Jan. 10.—In a few weeks at the most two of the wholesale drug houses here, which were burnt out in the great fire last February, will be back in permanent locations, these being Messrs. Muth Bros. & Co., and James Baily & Son. The former firm will occupy the fine double warehouse at 23 and 25 South Charles street, which is now being finished on the interior, while the latter will have its home on the west side of Hanover street, between German and Lombard streets, in an attractive building, about as far advanced in construction. It is not unlikely that both firms will be able to celebrate the anniversary of the conflagration in the new quarters, which, in view of the magnitude of the task of securing an eligible site and arranging for the work of construction, is to be considered an achievement.

The Muth warehouse has six stories, while that of James Baily & Son includes five, being also of narrower frontage. Both structures, however, are of fine mottled brick with terra cotta trimmings, and are desirable additions to the business places in the reconstructed section of the city. Both will be equipped with all modern conveniences and include facilities that were not to be found in the old quarters. In point of airiness, light and accessibility of the various floors they will be far superior to the edifices formerly occupied. The electric lighting and heating appliances especially are admirable.

Baltimore continues to attract the attention of manufacturers in other cities. Mention has been made in these columns of the intention of William R. Warner & Co., of Philadelphia, to establish a branch depot of their products here in charge of Dr. Eugene F. Cordell, Jr. Arrangements to this effect will probably be concluded within the next few days, if they are not already agreed upon. Dr. Cordell, who has been representing the firm here for some time, was in Philadelphia, last week, with several friends, and the situation was gone over in all its bearings. An early realization of the plans is looked for.

The branch of Parke, Davis & Co., which was on German street, near Light, before the fire and has since been located at Frederick road and Monroe street, will shortly be housed once more in permanent quarters, these being on German street, between Charles and Hanover. A commodious warehouse will be occupied there, and a large stock of articles will be carried. Mr. J. Emory Bond, who has been looking after details during the absence of Mr. Oscar Smith, in Europe, has gained much praise for the efficiency with which he managed the branch.

It is reported on reliable authority that Hance Bros. & White, of Philadelphia, will also open a branch house here. No location has so far been decided upon and the details are yet to be worked out, but matters may be brought to a head this week. This firm would perhaps not take up a whole warehouse, but stock several floors. Its products appear to be in increasing demand here.

POISONED BY LAUDANUM.

Philadelphia, Jan. 9.—George Wilson, aged fifty-eight years, was picked up in an unconscious condition at Sixteenth and Federal streets, and was sent to St. Agnes' Hospital. His condition, according to the physicians at that institution was due to laudanum poisoning, but the police are unable to learn how the man obtained the same.

Wilson informed the doctors that he was out of work, but had been drinking heavily, and feeling sick, he entered a drug store at Sixteenth and Federal streets, and asked for something to relieve his condition. Despite the fact that the druggist denies positively that the potion given Wilson contained any laudanum, the man asserts that he became unconscious shortly after leaving the place.

Wilson's condition is not considered serious.

NEW CIGAR STORE'S CHAIN.

Announcement is made that the big cigar store at Twenty-sixth street and Broadway has been sold to a new corporation, known as the Royal Cigar Company. The company has been organized under the laws of this state, with a capital stock of \$250,000. It announces that it will run a "chain of cigar stores" in New York, to deal in high grade goods.

NEW YORK NOTES.

—Bernhard Berkitz, dealer in druggists' specialties at 429 East One Hundred and Twentieth street, has admitted Isaac Haas, his co-worker for a good many years, as a member of his firm, under the name of B. Berkitz & Co.

—George H. Merritt, member of the Middle branch of the Board of Pharmacy, was not present on the first day of the annual meeting of the State Board at Albany, owing to his attendance at the annual session of the Merritt family, at Newburg, on that day.

—Frank Caddy, one of Parke, Davis & Co.'s city men, will be confined to his home for several weeks as the result of a bad fall on the icy pavement, last Sunday. His leg was broken in two places.

—Alexander M. Levy, seventy years old, for twenty years a druggist at Congress and Lafayette streets, Newark, was found dead in his store one morning last week, probably of heart disease.

—The Syracuse Druggists' Association will hold its annual dinner and dance at Long Branch, January 26. The committee in charge consists of Roscoe K. Snow, chairman; F. B. Nye, N. P. Snow, Herbert W. Walker, Mrs. Susie Clary and A. H. Lawrence. An old fashioned dinner will be served at 7 o'clock, to be followed by bowling and dancing.

—The Seaver & Wright Pharmaceutical Company has recently been organized at Canton, N. Y., for the manufacture of proprietary medicines. The president is John R. Wright and the vice-president H. M. Seaver. Both are well-known traveling men.

—Incorporated: William S. Gray & Co., of West Nyack (general merchandise, wood alcohol, chemicals, oils and drugs). Capital \$250,000. Directors, William S. Gray, of New York; Ezra J. Wright and James J. Crawford, of Brooklyn.

ECONOMY IN DRUG BUSINESS.***Attention to Details is Made Almost a Science.**

BY OTTO J. C. BOBERG,
Eau Claire, Wis.

It can now well be said that economy in the drug business constitutes a science which it is imperative for the pharmacist to study, as on it depends largely the pecuniary profits of the business.

Attention to Details.

The details of all kinds of business demand the closest attention, but especially is this true of the drug business. Success is here won by attention to little things, and the cents must be saved as well as the dollars. There is no doubt that the prosperous pharmacist of to-day owes a considerable amount of the success to his ability to practice the right kind of economy. I say the right kind—for while it is well to be economical in the true sense of the word, it is on the other hand detrimental to business to be penurious or small in your dealings. Let us go a little deeper into this and try to find out what constitutes good and poor economy. There are the economical ways of the old-time druggist, with his saving of old bottles, old corks, pieces of used wrapping paper, bits of string and twine, the cleaning of old cans of all sizes, which, after having been painted, are used as containers for herbs, powders, labels, etc. While the monetary savings accrued by these economical habits, perhaps are not very large, I think, however, that these habits are as praiseworthy to-day as they were in our fathers' time. When you notice a drug clerk voluntarily folding up and putting away wrapping paper and strings from packages from the wholesale houses, then you may depend on it that this young man has at least some good qualifications. But good judgment must be used in practicing these little economical habits. It would be poor economy to use old newspapers for wrapping purposes, or even printed advertising counter wrappers for prescription packages. It is poor economy to buy old and dirty bottles from street children or junk dealers. There are usually enough

*Read at the twenty-fourth annual meeting of the Wisconsin Pharmaceutical Association.

"Ugh-ugh—Wbew-w-w!"

old bottles and boxes accumulated in any drug store to fill the current demand for cheap containers. It is good economy to use the proper sized boxes or bottles for given quantities. Do not put ten two-grain pills into a box which will hold a hundred pills of the same size, and do not put two ounces of Rochelle salt in a pound paper bag, even if it is an advertising bag which cost you nothing; the sending out of such slovably appearing packages is detrimental to the business. It is poor economy to use cheap boxes, cheap corks or cheap stationery; the best of such articles will generally prove to be the cheapest after all. The same rule applies to your help. A good clerk is worth good wages, because he saves you both money and worry.

Leaks and Losses.

An important economical factor in any retail drug business is the stoppage of all leaks and losses caused by ignorant or careless keeping of stock. Drugs, pharmaceuticals and sundries are often purchased and exposed to light, heat and air for a long time, which deteriorates their value greatly. Herbs, roots and powders, if kept in paper or wooden containers, are frequently injected with worms and insects, while if kept in well-closed tin cans they will retain their freshness and aroma for a great length of time.

Considerable value is lost from year to year by evaporation of volatile drugs and liquids; a loss which can very well be avoided. Camphor gum, menthol, powdered cardamom, cloves and other spices should be kept in glass stoppered jars or tight-fitting covered cans. Deliquescent salts should always be kept in glass or rubber stoppered bottles. Fluid extracts, exirits and other pharmaceuticals kept in cork stoppered bottles should have the corks replaced occasionally, thereby preventing loss by evaporation and precipitation. Ether, chloroform, bromoform, carbon bisulphide and ethereal oil should always be kept in glass stoppered bottles and in a cool, shady place. I once saw a manufacturer's packing bottle containing about two ounces of chloroform empty itself in a short time by simple evaporation through a loose fitting cork. Even tin cans containing bisulphide carbon or ether will lose in weight by being stored away for a length of time.

The writer some time ago had occasion to visit a drug store in a neighboring town, where, while chatting with the proprietor, he noticed, standing on a top shelf, three bottles of Anderson's Norwegian Hoffman's Drops, the wrappers of which appeared to have been exposed to the sun and flies for years. On my suggestion the wrappers of these bottles were removed and two of the bottles proved to be empty; while the third had about a fourth of an ounce of alcohol left in it, the ether having entirely disappeared.

Make it an iron rule to put on the want list every item as soon as the shortage occurs, thereby minimizing loss of sales. Make it another iron rule to charge articles which have been sold on account at the time the sale is made and not later, thereby minimizing loss of cash.

Buying Goods.

Most important is the economical buying of goods. Ordinarily many druggists

buy large quantities of new articles, which they know little or nothing about, simply because they get some advertising thrown in, while staple goods, which they know all about, often are ordered in comparatively small lots. Would it not be safer to reverse this order and be slow to buy new things; but instead to purchase staple goods, everyday sellers, in quantity lots and take advantage of the quantity discount and saving of freight?

If, in order to get the best price, the quantity of any certain patent medicine, toilet article or pharmaceutical, is too large for a single druggist to handle, then let three or four neighboring druggists join hands and together buy the quantity lot, which they could then divide. There is no doubt but that much money could be saved by buying goods in this economical way.

Another important economical feature of the drug business is the prompt paying and discounting of bills. As most bills will have to be paid within a time limit of thirty or sixty days anyway, then why not try and shorten this time a little and pay up in ten days and thereby save your cash discounts. The writer has for many years made it a rule to pay and discount all current bills every Monday morning. Such a rule, when once adopted, is bound to give good satisfaction to all concerned.

A goodly amount of money could furthermore be saved if the druggists would make all such easily made pharmaceuticals, non-secrets and toilet articles that they possibly could. By looking over the National Formulary or the Pharmacopoeia you will, no doubt, be surprised to see how many preparations you are now buying ready made, which you must admit you might as well make yourself and thereby save both manufacturer's and jobber's profit.

Cleanliness is good economy, and considerable value can be saved by keeping the store clean and attractive. Dusty, dirty showcases and shelves have their influence on leaks and losses by declined value of soiled stock and otherwise.

Advertising.

Economical advertising is also an important feature of the drug business which should at all times be carefully attended to. By economical advertising I understand the advertising which brings the best results with the least possible expenditure. Clean windows with attractive displays in them, and frequently changed, constitute a valuable, and at the same time economical, way of advertising. If newspaper advertising is done, a good position in the paper should be secured and the ad. changed at least once a week.

By careful watching of the market changes of current prices on drugs, the pharmacist will be in a position to buy many of his drugs in an economical way; but in order to do so he must be a subscriber to at least one of the leading pharmaceutical journals; and by reading such a journal he will be enabled also to keep himself posted on the general advancement of pharmacy.

—W. E. Reeves, manager of the New York City office of the Coca Cola Company, was presented with a gold fob and locket, a New Year's gift from the men of his office.

AMONG THE COLLEGES

BUFFALO COLLEGE OF PHARMACY.

Buffalo, Jan. 7.—Prof. W. G. Gregory, dean of the Buffalo College of Pharmacy, reports an enrollment of forty-two seniors and 120 juniors. This college was opened in September, 1886, as a department of the University of Buffalo. Arrangements have been recently made to comply with the prerequisite law, passed by the last legislature, regulating entrance requirements; that is, each student before entering the college must possess educational qualifications equivalent to twelve regents' counts. In addition to the regular college course leading to the degree of "bachelor in pharmacy," there are post-graduate courses for the "master's" and "doctor's" degree.

The alumni association is a potent factor in college affairs, and it has a membership of 395, thirty-six of whom are life members. It offers yearly a cash prize not to exceed \$15, for the best original paper presented at the annual meeting, which will be held this year on May 2, in an employment bureau, which aims to find situations for members, is in operation. The officers of the association are: President, Henry G. Fentz, M. D.; first vice-president, Willet H. Mosher; second vice-president, Frank I. Strozzi; third vice-president, Eva H. Webster; secretary, William E. Lemon; treasurer, Charles L. Gaugar; historian, Herbert D. Atwater.

PITTSBURG C. P.

Pittsburg, Pa., Jan. 3.—The mid-season examinations have ended and the students all seem happy; this would indicate that they have passed satisfactory exams.

J. S. Oller, son of Rev. W. E. Oller, of Butler, Pa., and a member of the junior class, died at the home of his parents on December 1, of heart disease. Nine members of his class attended the funeral. Mr. Oller was very popular among his fellow students and also with the people of his native city. All the drug stores closed during the funeral services.

Miss Agnes Rynd, '04, of Philadelphia, is spending her vacation with her parents at New Kensington. She was a welcome visitor at the college recently. Fred J. Blumenschein, '04, has accepted a position as quiz-master at the Pitspsurg Dental College.

Dr. J. H. Beal, professor of applied pharmacy, and son George, spent their Christmas vacation visiting the caves in Virginia.

Dr. J. A. Koch, dean, professor of organic chemistry and pharmacy, spent his vacation in Philadelphia, attending the meeting of the American Chemical Association.

WINONA SCHOOL OF PHARMACY.

Indianapolis, Jan. 3.—The Winona Technical Institute is the first school of its kind for this city and the department of pharmacy has begun its work under the

principalship of Prof. J. H. Gerbter. At the beginning of the first term there were twenty students, the number having already increased to nearly thirty, and quite a number more are expected at the next term, which opens about February 1. The students are from Indianapolis, Ohio, West Virginia, Arkansas and Illinois. The necessary preparation and equipments for the department are being made as rapidly as possible. Two courses are offered, one leading to the degree of Ph. G., and a more extended course leading to the degree of Ph. C. Students are admitted at any time. Two have already completed the course here, having been students under Prof. Gerbter, at Ada, Ohio. Four more, also former students, will be graduated at the close of the present term.

KANSAS CITY C. P.

Kansas City, Mo., Jan. 6.—The Alumni Association of the Kansas City C. P. is making arrangements for the annual reception to the graduates, to be held in March. The annual assessment (\$1) should be sent by the members to the secretary, Nick Hunter, Eighth avenue and Broadway, this city.

Special lectures will be given at the college on January 12 by Dr. C. L. Kerr on "Pharmaceutical Incompatibility," and on January 26 by Dr. F. J. Hall, on "Pathology."

A local artist photographed the students recently. The pictures show G. B. Fugitt and H. E. Harrah on the fire escape, the only available space.

T. R. Tanehill, '04, and Miss Anna Herbert were married on January 1.

Cecil E. Wiswell, '04, is located at Sabetha, Kansas.

J. F. Freisen, '03, is attending medical college in Chicago.

NEW ORLEANS C. P.

New Orleans, Jan. 3.—Dr. Philip Asher, dean of the New Orleans College of Pharmacy, reports an enrollment of thirty-six juniors, twenty-one seniors and three special students. The officers of the college are: President, George D. Feldner; vice-president, M. T. Breslin; secretary-treasurer, Walter T. Taylor. The college claims to be a school of pharmacy, conducted by pharmacists, who are in a large majority on its faculty and board of directors. The course of instruction is divided into a junior and senior year, of six months each, leading to the degree of Ph. G. The requirements for admission are that all applicants must be white, and of good moral character.

The holidays observed are Thanksgiving Day, Christmas week, Mardi Gras Eve and Mardi Gras.

RECENT MINNESOTA GRADUATES.

Minneapolis, Jan. 7.—Charles John O'Connell, Ph. M., '02, is in the experimental laboratory of Messrs. Parke, Davis & Co., Detroit, Mich., where he is filling a responsible position. Arthur Kuhn, '02, formerly with F. M. Parker, St. Paul, is now with R. F. Bryant, St. Cloud, Minn. Chas. F. Rutherford, '02, is the proprietor of the pharmacy on Fourth and St. Peter streets, St. Paul. Miss Helen Barnes, '04, is

with S. Gjesdahl, Cedar avenue, Minneapolis, Minn.

Charles F. Clough, '02, has taken into himself, Miss Helen Adams, a university young woman, as wife. They have returned from an extended wedding trip and Mr. Clough is back at his old stand with S. H. Reeves, Seven Corners, St. Paul.

O. S. Gifford, '03, is assistant manager of Goodrich & Jennings' pharmacy, at Lake and Nicollet streets, Minneapolis. John M. Bell, '00, took the civil service examination in June, at St. Paul, to enable him to enter the United States navy as pharmacist. He has received his appointment. W. S. Passer, '04, has resigned his position at Stillwater, to accept a position with M. Aune, at 1600 Hennepin avenue, Minneapolis. Thomas M. Gash, '04, is one of the chemists with the International Stock Food Co., Minneapolis. Paul H. Kelly, '04, is studying medicine at Hamline University. F. J. Noer, '04, is managing his father's pharmacy at Colfax, Wis.

N. D. AGRICULTURAL COLLEGE.

Fargo, N. D., January 2.—John Weaver, a student, recently nearly lost his sight by an explosion. He had just finished weighing out some concentrated sulphuric acid and potassium permanganate, when the explosion occurred. The scales were broken into pieces and his face and eyes were spattered with acid. The prompt action of the professors in neutralizing the acid saved the student's sight. He is progressing favorably, and will be soon able to resume his studies.

Wyman Page, formerly a student, visited the college recently. He has been in the employ of J. W. Boeig, Bartholdi, N. D.

Oscar Zuercher of the Broadway Pharmacy, Fargo, while handling a carboy of formaldehyde, accidentally broke the large glass container, spilling the contents. The vapor filled the store, drove the clerks out and completely stopped trade until the store could be ventilated.

The N. D. Agricultural College Pharmaceutical Association was organized in the winter of 1904, for the furtherance of pharmaceutical knowledge not obtainable in the class, and to promote general good fellowship among the students of the department. Any student in the pharmacy course is eligible to active membership.

WASHINGTON AGRICULTURAL COLLEGE.

Pullman, Wash., Jan. 3.—The school of pharmacy of the Washington Agricultural College and School of Science gives a two years' course of thirty-six weeks each. The degree of graduate in pharmacy is conferred. Two years' high school work for entrance and the completion of everything given with a grade not less than seventy-five per cent. In any subject, is required for graduation. The Washington State Board of Pharmacy registers as assistant pharmacists without examination all graduates who submit final examination papers upon the work done in the school.

The present enrollment is: Seniors, 11; juniors, 14. Nine students graduated as Ph. G.'s in 1904. Prof. George H. Watt, a graduate of Seio College, is professor of pharmacy and in charge of the work of the school.

WOOD ALCOHOL IN RUSSIA.

Wood alcohol in beverages has invaded Russia, and become a tributary curse of the war. When the troops were being mobilized at Dorpat, men and women partook freely of a beverage composed, according to the Journal of the American Medical Association, of alcohol, water, peppermint leaves, salvia, lavender, etc. But the stuff was made with wood alcohol instead of grain alcohol, the consequence being that sixteen men and one woman died. It is suggested that the alcohol used was probably of the deodorized kind.

More recently a report has come from Russia that twenty persons have died at Kief from drinking methylated brandy.

It is only within the last year that wood alcohol poisoning has occurred in Russia. Up to the year 1904 the wood alcohol used in Russia was so repugnant to the senses of smell and taste that even the ignorant peasant, who will drink the vilest and strongest forms of spirits, could not use it as a beverage.

In the early part of 1904 the deodorized wood alcohols were introduced into Russia, in consequence of which there have been already thirty-seven deaths reported.

As here, wood alcohol, owing to its comparative cheapness, seems to have been largely substituted in Russia for grain alcohol in the manufacture of remedial agents, flavoring extracts, perfumes, liniments, witch hazel, etc.

OBITUARY.

—Dr. Louis Victor Cabana, a native of Canada, long a druggist and physician in Taunton, and more recently in Fall River, Mass.; age, thirty-eight years. He was extremely popular with the French people in Fall River. He leaves a widow.

—Dr. John Kerr, formerly of Bucyrus, Ohio, at Cedar Rapids, Ia. He was born in Richland county, Ohio, eighty-five years ago.

—Harry W. Schmidt, of Cincinnati, O., died by his own hand at Denver, Colo., on November 3, where he was employed in the offices of the Davis-Brigham Drug Co.

—George A. Mitchell, a member of the Rochester, N. Y., Ph. A., and for fifteen years a pharmacist at 450 Main street, east.

—E. Knott Smith, of Cheltenham, one of Chicago's southern suburbs. Mr. Smith had been in business in Cheltenham for twenty years.

"Who sling that brick?"

AMONG THE BOWLERS

NEW YORKERS RESUME WORK.

The New York wholesalers' bowling league resumed their weekly tournaments on Monday night, after a two weeks' holiday. The results for the evening were as follows:

Merck & Co.	654
Whitall-Tatum Co.	837
Merck & Co.	618
Sharp & Dohme	721
Sharp & Dohme	728
Whitall-Tatum Co.	827
National Lead Co.	757
Dodge & Olcott	707
Dodge & Olcott	618
Lanman & Kemp	700
National Lead Co.	716
Lanman & Kemp	782
Korndorfer, of Sharp & Dohme, made the record score of 241. Another high score was 193, made by Thomas, of Lanman & Kemp.	

The team averages, computed up to the games rolled Monday night, are as follows:

	Won.	Lost.	Average.
Parke, Davis & Co.	10	1	.810
Whitall-Tatum Co.	9	2	.799
Colgate & Co.	8	2	.803
Seahy & Johnson	6	4	.777
Lanman & Kemp	6	5	.756
Dodge & Olcott	6	5	.738
Roessler & Hasslacher ..	5	6	.745
Sharp & Dohme	5	6	.734
National Lead Co.	4	7	.745
Bruen, Ritchey & Co.	3	6	.686
Lazell Dalley & Co.	2	9	.720
Merck & Co.	0	11	.660

High individual averages were by Reddy (Whitall-Tatum Co.), who made 2,000 pins in eleven games and pulled off the highest average, 181, and has thirty-seven strikes and fifty spares to his credit; Malsch (Roessler & Hasslacher) knocked down 1,833 pins in eleven games; Carr (Parke, Davis & Co.), 1,805 pins in eleven games; Colgate (Colgate & Co.), 1,792 pins in ten games; Burgess, 709 pins in four games.

NEW NAMES FOR OLD TEAMS.

St. Paul, Minn., Jan. 7.—The three teams of the bowling league of the Minnesota drug clerks have shed their old names of Spirits, Emulsions and Tinctures, and reorganized under new titles. The roster of the teams is now as follows, the first named in each instance being captain:

Capsules.—Hans Bodsgard, Ernest J. Otto, D. William Thompson, George Heller, Harry Frankensfeld.

Pills.—Lewis C. Landon, Howard E. Everett, Edward A. Merke, J. M. Princell, Martin Johnson.

Tablets.—Charles Muesel, David Colberg, Walter T. Lemon, Martin A. Lillis, Louis A. Sigo.

On the night of Jan. 5, the winning team of the first series, the Spirits, was banqueted by the losers. The prizes were awarded on this occasion. Aside from the team prize, E. A. Otto, who made the high score, 236, was given a special prize, and

Bodsgard, the high average man, 169, was honored for his consistent work during the thirty games. No games were bowled on the afternoon of reorganization, the boys saving themselves up for the gastronomic "stunt" of the evening. The second and last series will begin January 12.

The Retail Druggists' League played January 6, with the following results:

Spatulats	808	836	637
Everett			216
Mortars	701	772	862
Sundberg			192
Pesties	762	723	803
Prestou			203

TO PUBLISH FORMULAS.

Cuba Worries Over a Proposed Patent Medicine Law.

Havana, Jan. 9.—It is learned that a movement is on foot to invoke an old Spanish law which will require the manufacturers of all patent medicines which are sold on the island of Cuba to publish upon the wrapper or label of their preparations their complete formulas. The trade hopes that no such law will be passed. Druggists say that it would work a great injustice upon all patent preparations now being sold in Cuba, and what is more, that it would simply drive them out of the island entirely, because many of these preparations are the result of years of scientific study.

"With such a law in force," says the Havana Post, "all of these years of study will have been wasted by these inventors, because it would give anyone who knows anything about chemistry the opportunity to reap the benefit of the labors of others with comparatively no effort on his part."

"We cannot believe that such a law will be put into force, because of this rank injustice. If Cuba should invoke such a law, it would give her a most unenviable reputation abroad, and that is something which she does not want. But what is still more important, it would mean the taking away from the people many most excellent preparations upon which they have learned to depend, because of the beneficial results which they have obtained from them."

GRIEVANCES IN IRELAND.

LONDON, Jan. 3.—The trade's grievances in Ireland, as concerns legislation, were concisely stated by a member before the December meeting, in Belfast, of the Chemists' and Druggists' Society of Ireland. It is believed that almost anywhere else the druggist will consider himself lucky by comparison. Among the grievances, even where an amendment bill is demanded, are these two: First, druggists cannot be admitted to the examination for pharmaceutical chemist, except after a service of two years. In addition to the four years already served as apprentice; second, the widow of a druggist cannot carry on the business of her deceased husband. The latter proves especially galling, since the widow of a pharmaceutical chemist is permitted to continue the business for the benefit of the family.

It is hoped that the pharmacy law in Ireland may be made as liberal as that of Great Britain.

MEIRIC SYSTEM FAVORED.

British Apothecary Interests Urge Its Adoption by Legislation.

LONDON, Jan. 3.—The movement for the adoption of the metric system is gaining impetus, especially in the drug trade. The Executive Committee of the Federation of Local Pharmaceutical Associations, at its last meeting in the Holborn restaurant, recommended that all the associations should petition in favor of the Weights and Measures bill (which means the metric system). The committee held that this measure was of vital importance to the interests of the country. As all members of the committee were present, such action is regarded as especially significant.

The inconvenience caused by the lack of any officially recognized subdivision of the litre, smaller than its one-thousandth part, will likely cease to exist, since the three new designations—mil, decimil and centimil—are to be inserted in a reprint of the Board of Trade Regulations dealing with inspectors' metric standards.

The new apothecaries' measure will, presumably, be as follows:

1 centimil	= 0.1689 minims
($\frac{1}{1000}$ th millilitre)	
1 decimil	= 1.6894 minims
($\frac{1}{100}$ th millilitre)	
1 mil or millilitre	= 16.8944 minims or
($\frac{1}{1000}$ th litre)	= 0.2816 fl. drachm
1 centilitre	= 2.8157 fl. drms. or
($\frac{1}{100}$ th litre)	= 0.35119 fl. oz.
1 decilitre	= 3.5119 fl. ozs.
($\frac{1}{10}$ th litre)	
1 litre	= 17.598 pints.

The minim is equal to nearly 6 centimsils, the fluid drachm to rather more than 34 mils, and the fluid ounce to nearly 3 centilitres, thus:

1 minim	= 5.9192 centimsils
1 fl. drachm (60 minims) ..	= 3.5315 mils
1 fl. oz. (8 fl. drachms) ..	= 2.8412 centilitres
1 pint (20 fl. ozs.) ..	= 0.56232 litre
1 gallon	= 4.5459 litres
(8 pints, or 160 fl. ozs.)	

NEW CORPORATIONS.

H. C. Fuller Company, Massachusetts. Somerville. Capital, \$4,000. To manufacture and deal at wholesale and retail in drugs and medicines. President, Mrs. Anna A. Fuller; treasurer, Henry C. Fuller.

The Dr. Burleigh Company, Boston. Capital, \$300,000. To deal in drugs. President, William T. Smith; treasurer, Charles Burleigh.

W. F. Plummer Drug Company, Boston. Capital, \$10,000. Richard B. Stanley, president; William F. Plummer, treasurer.

E. & F. King & Co., Incorporated, Boston. Capital, \$150,000. President, Daniel G. Tyler; treasurer, Samuel G. King. To deal in oils, paints, varnishes, chemicals, etc.

N. Z. Graves Company, Boston. Capital, \$1,000. President, N. Z. Graves, Philadelphia; treasurer, V. Graves, Philadelphia. To deal in varnishes, paints, oils, etc.

Oldrich Paint and Chemical Company, Massachusetts, Brockton. Capital, \$5,000. President and treasurer, F. W. Oldrich.

J. C. Palmer Lozeng Machine Manufacturing Company, Boston. Capital, \$20,000. President, George F. Ramponi; treasurer, Joseph P. Allcott.

King Chemical Corporation, Boston. Capital, \$20,000. President, Vere Goldthwait; treasurer, Alfred J. Woolhard. To deal in drug merchandise, etc.

Does Your Trade Know YOU?

REIS' ADVERTISING TAPE

fastens your store's name in the minds of your customers, present and possible.

A narrow tape, woven in colors, attractively printed with the store's name and address; it wraps packages better than string, and makes your trade know you.

Neat and strong, with that "air" of security which does much to add to confidence in a good store.

One-sixteenth inch to one-quarter inch widths.

Reis' Advertising Tape is Advertising Without Cost

ALL YOUR ADVERTISING FOR \$2.00 PER MONTH!

Our New System of Advertising and progressive business methods is revolutionizing the Retail Drug Trade. Its users report increases varying from \$5.00, \$10.00, \$15.00 to \$20.00 and \$25.00 per day; some have increased trade 30 per cent. to 50 per cent.; others have more than doubled an already large business. This System is now used by nearly **One Thousand** druggists—the healthiest, most wide-awake, most successful and highest standing druggists throughout the United States—**Only One in a Locality.** It furnishes profitable copy for Newspaper Advertising, Booklets, Circulars, Pamphlets, Letters, Blotters, Announcements, Store Placards, Window Signs, Street-car Cards, Locals, and all other forms of advertising. Every month it offers successful new plans, gradually covering every department of every drug store. All users are at liberty to write to us for advice as often as desired. It is the only simple, complete, universally successful System of Advertising and business methods ever offered to druggists. Any one of its dozen different features is worth more than the price for the whole. Write for the large descriptive pamphlet.

Be Sure to Use the Attached Coupon, Worth \$2.00 to You

"Gould's system is the best thing I have ever seen or heard of."—A. H. Symonds, Coconaut, O. "Since we began the use of Gould's System, our receipts show 33 per cent. more than usual."—Sorensen Drug Co., Eagle Grove, Ia. "Gould's System has increased our business over \$10.00 per day."—Eames Drug Co., Manchester, R. H. "Gould's System is certainly a 'Hummer'."—Chas. A. Rapelye, Hartford, Conn. "All progressive druggists should have Gould's System."—C. L. Wright, Webb City, Mo. "My sales have nearly doubled since starting with Gould's System."—Wilber Sylvester, Port Huron, Mich. "Put me down for a long subscriber—I would not be without Gould's System."—R. Rowinski, Savannah, Ga. "Gould's System is easily worth five times the price."—Fricke-Hahn Drug Co., St. Louis, Mo.

 Nassau, Fulton & Ann Streets

First Month FREE

As a SPECIAL offer to druggists sending in this coupon from the "Pharmaceutical Era" we will mail our new pamphlet, explaining this New System, and if, after learning all about it, you contract for the System, we will credit you with \$2.00 to pay for the first month's service. Sending in this coupon does not obligate you to contract for our System.

JANUARY.

M.P. Gould Company NEW YORK

This is the Trade-Mark

Which is on the wrapper of every bottle of

SCOTT'S EMULSION

of COD LIVER OIL

All others claiming to be "just as good," "just the same" or "equal to Scott's Emulsion" are imitations. Scott's Emulsion has been the standard preparation of its kind for over thirty years.

This is the Formula of Scott's Emulsion

Pure Non-Freezing Cod Liver Oil	44%
Chemically Pure Glycerine	13%
Emulsifying Agent and Flavoring Extract	2%
Solution of Hypophosphites of Lime and Soda (being 6 grains of Hypos. of Lime and 3 grains of Hypos. of Soda to the fluid ounce)	40%
TOTAL	100%

We believe Scott's Emulsion contains a larger percentage of the pure oil than is contained in any other permanent emulsion of cod liver oil. The presence of chemically pure glycerine and the hypophosphites in the proportions above indicated will convince any practitioner of the value of Scott's Emulsion in the treatment of the diseases for which it is especially recommended. We would welcome a comparative or clinical test of our emulsion as against any other emulsion in the market. We know that the results will show all and more than we claim.

SCOTT & BOWNE

409 PEARL STREET
NEW YORK CITY

FOLEY'S HONEY AND TAR

The original and genuine
LAXATIVE cough remedy

Make No Mistake. See that you are buying
FOLEY'S HONEY AND TAR, the original,
the kind that you know will give satisfaction.

PREPARED ONLY BY

FOLEY & COMPANY :: Chicago, Ill.

TRADE SECTION

THE OWNER TALKS ON SODA.

The Man Who Pays the Bills Defines "Best Fountain."

SOLELY A MATTER OF INDIVIDUAL OPINION, HE SAYS.—RUNNING EXPENSES ARE MOST IMPORTANT.

"When I bought this fountain I bought it for style first, without figuring much on running expenses. I'm going to discard it now and be up-to-date. I haven't determined on any particular make of fountain as yet, but I know what I want and how much I want to pay. The rest is easy. I am drawing about two hundred glasses of soda a day during the season. That's about twelve dollars gross receipts daily.

"If I can sell that much soda from an antiquated apparatus, how much could I sell from the model fountains of to-day? That question bothered me in my figuring. I haven't entirely solved it yet. But I have made up my mind on one point. At first sight it's not common sense, I'll admit. While I'm determined to find a fountain adapted to my needs, I'm going to buy one a shade better than my present trade would appear to warrant. I'm going to bring trade to my fountain, not to my fountain to my trade.

"I've been handicapped by having a fountain that's really too small. Five years ago it was all right, because my soda trade was not all right. The trade has come, now I must hold it and push for more. Understand, it's not the syrup tanks which need enlarging. I simply need a handler, more compact, ice-saving fountain, one that can do twice the business of the old one at the same expense for running. I eliminate syrups and actual dispensing material entirely; they can be increased or cut at will.

A TRADE WINNING FOUNTAIN.

"The best fountain for me will be the one that is not frequently out of order, and is an ice saver. I want the very best constructed apparatus that my money can buy. If it happens to be built on artistic lines, permitting further decoration, so much the better, but I am for service first, style afterwards. I have had so much experience with a bad fountain that I know what I want to avoid. I want an apparatus that will first of all, sell soda to my present customers and bring more trade. And when added trade comes, I want my fountain to be able to handle it and hold it. I figure to make a hundred per cent. on my soda, including material, labor and ice bills. Therefore, I expect to make six dollars a day out of a twelve dollar business.

"I figure that it costs as much to serve one glass of soda as it does to serve five hundred, in point of ice and labor cost. If I didn't hope to increase my soda receipts I wouldn't install a new apparatus. With my new fountain, I ex-

pect to employ a good soda man. I expect him to stand behind the counter when he is not making syrups. I want him, not because we can't draw soda ourselves, but because I am featuring soda, expecting a profitable business; not running it as an accommodation annex to my regular lines.

"In this department I shall expect cleanliness and tidiness. I expect to help the man in charge along, by providing an outfit that is easy to clean and conducive of personal neatness. The display features must be easily accessible, so that they will always be clean. It is one thing appearing clean, another thing to be clean. The latter is my aim, whether I purchase a bottle system, a pump apparatus or a wall fountain.

MUST BE ICE SAVER.

All manufacturers appreciate the necessity of reducing ice consumption. Ice costs me 17½ cents a hundred pounds. Any system that will make a hundred pounds of ice go further has my endorsement. Some catalogues show a fountain with only one refrigerating chamber. This cools the soda, and the syrups. The trouble is that the ice supply must be chopped fine, and the ice man must have access behind the counter, to fill the chamber. I would prefer having my icing done from some hidden place. That's one point in favor of my present outfit. It ices from the back. It is, however, a big ice consumer, because it is not constructed according to correct refrigerating methods. There is too much space to fill to get results. The ice 'packs' too easily and lots of moisture accumulates on the outside of the fountain, showing the absence of an air chamber between the fountain lining and the exterior marble. I want a fountain that won't 'sweat'; and if it is a counter service apparatus, with ice beneath the fountain, I want to be sure that the ice has no direct contact with the marble bar. If it is otherwise some lady customer will soon call me to account because of a spoiled party dress.

"Draught arms? That's a matter I'm a crank on. I want the single action lever arm. One movement cuts off coarse stream and gives the fine. No more wheel faucets for me, with constant loosening of valves and washers caused by shutting off the soda too forcibly.

"Reservoir for ice on counter? I think not. I prefer having a huge silver bowl filled with cracked ice for frappés. Looks more hygienic than a metal lined counter ice box, and you can clean and polish to your heart's content.

"Sinks? I want an all-metal running board and at least two sinks. Our store is connected with a hot water supply and I expect to virtually sterilize glasses after a good rinsing.

"Ice cream boxes? Here again comes up the ice supply. Of course, now, I buy my ice cream, and that delicacy is cared for by its manufacturers. They supply ice and salt. Later on I expect to make my own ice cream, so I'll get a cream con-

tainer designed to prevent waste. All the ice cream boxes catalogued this year are greatly improved over old-time cabinets. They have metal holders which support the can proper, allowing its renewal and easy repacking of the layers of salted ice.

"Shakers, and other *ou de rois*? I'll wait till I get my fountain running before I waste time on them. Besides, I want to give the soda man a chance to eluciate on them.

DO OWN CARBONATING.

"I haven't said a word about the carbonating feature, but I will. If I had five thousand dollars to spend, I'd begin at that end of it, and buy outright the best carbonating machine, paying its cash price. The balance would go for a fountain, which is, after all, subordinate to the hidden supply tanks. These could do business without a fountain, but it wouldn't work the other way about. I'm going to buy a carbonator, anyway. I haven't electric power, but I believe a water power machine will do the work almost as well for me. Costly? Well, perhaps. But a good self-carbonator installed years ago would have saved me almost the price of a new fountain. The idea of paying ten cents a gallon for charged water. It really costs me more than that now, for I pay \$1 a tank for it, and the last gallon or two becomes 'flat' frequently and cannot be used. That's a considerable loss in the course of a year. I've been looking at some siphon and bottling attachments that would save me money, because I could bottle my own soda and vichy at a nominal cost if I carbonated the water myself. I'm not qualified to talk on the best carbonator, because I haven't examined them thoroughly. But the idea is all right and first cost isn't going to deter me from owning the property outright, rather than paying rental equivalent for the other fellow's machine.

"When I say well-made fountain, I mean its being built with an eye to lasting qualities. This is particularly important with reference to the joining of wood-work or of marble and onyx. Don't buy a fountain that has virtually to be 'built in' to your store. You may want to move some day. Another thing: If there is any choice of shades and colors in the marble or onyx, be sure and pick one that will jibe well with your fixtures. As it happens, I intend installing new fixtures, also; another opportunity for me to make things fit properly.

WHY NOT COLD AIR FOUNTAINS.

"I honestly believe that the new fountains embrace almost perfection in ideas. Only years of manipulation will tell the tale though, and I prefer to take some things on belief, rather than wait until they are proven entirely satisfactory or the contrary.

"What's the matter with our inventors? I know that cold storage—the ammonia process—works well in some lines; why not with soda pipes? It seems to me that with the perfection of the apparatus

there should come some plan of cooling that is less expensive than ice. Even were the cost slightly more, think what a saving of labor and dirt some such system would cause. I know that there have been many plans exploited, but they came to naught, or at least are not working successfully. I understand that for the small ice consumer a refrigerating plant which requires an engineer would be too costly. Solve this problem and I believe soda selling would pay us all better. But I'm not going to wait till that time comes. Maybe somebody has the thing figured out now and my competitor may soon have an iceless fountain, and laugh me to scorn."

AMERICAN SAFFRON.

Will the Shortage in Supplies Cause Further Advance?

In the annual report for 1904 of the committee on the drug market to the N. W. D. A., the following appeared: "Saffron (American) has had an abnormal advance. In October (1903) the market was steady at forty-five cents; in June (1904) eighty cents was the lowest price. When it appeared that the stock was concentrated in two holders the price jumped to \$1.25, and since then there has been nothing obtainable at less."

This statement was made in November last. What is the situation to-day? The market price is now \$1.30 per pound and there is an upward tendency. The situation derives its strength from the fact that the crop of 1905 was very small and the crop of 1904 even smaller. Stocks are now exceedingly light. Moreover, the N. W. D. A. report is correct in saying they are closely controlled.

Already the rise in price has been remarkable. Let us look back. In August, 1898, it sold for eleven cents a pound; in 1902 for twenty cents; in 1903 the highest price was thirty-five cents and the lowest eighteen. And now it is \$1.30 per pound.

At the office of one dealer it was said: "The present high price of American saffron is caused both by shortage of production and the artificial manipulative controlling of the output. It used to sell for twelve or nineteen cents, and now it costs \$1.30. Present supplies are light and closely held. As is, of course, well known, the drug comes from Mexico, but it is not as generally understood that it is also cultivated there, as well as being gathered wild. The new crop will probably relieve the present stringency, but that, of course, depends on its size, which cannot yet be estimated. As a usual thing, the demand absorbs most of the production each year, so that but small stocks accumulate by being carried over. There is always a fairly good steady consumptive demand for it. It is not very probable that any sharp advance will take place before the new crop comes on the market, although it is possible. The real reason for the present advance is that last year's crop was short and that the large number of scarlet fever cases stimulated the demand, for it is used extensively in the

treatment of all irruptive fevers, especially scarlet fever and measles."

Another authority stated the case somewhat more strongly: "The new crop, under favorable conditions, cannot be delivered before July or August, 1905. One house controls most of the present small stock. Others have but a few bales. If the demand increases to a very unusual degree there is every reason to look for decidedly higher prices. Years ago American saffron sold as high as \$3.00 a pound. It might go to \$2.00 now, and yet break no record. And, indeed, it would take sales of but comparatively few bales to put the prices on that level. A normal stock would be at least 200 bales, but it is doubtful if there is a fourth of that amount here now. Suppose each jobber wished but $\frac{1}{4}$ of a bale; would there be any left in thirty days?"

Some jobbers did not view the situation with any apparent uneasiness. At McKesson & Robbins' it was said: "The market is short of supplies and the price is high. It certainly may go higher. If there is an epidemic of scarlet fever or measles, it probably will stimulate the demand to such an extent that the price will jump." At another office no apprehension of a radical advance was entertained. "The demand for American saffron, while steadily fair, is not of great size. It is less than ever before. The drug is of no vital importance in medicine. It is a simple, harmless home remedy. Hot water, pure, or tea would aid the fever patient just about as much. What's the use of forcing the price of anything up to the point where no one will buy it?"

ADVERTISING COMMENTARY.

Some lines are unsuited to very extensive advertising. An example of this was the case of a Milwaukee physician, who controlled an excellent laxative and attempted to gain a more than local sale for it. Such an article is aided by local advertising, but not by operations in a wide field unless backed by a large company, strong in capital. There are too many such remedies in all sections to permit general results. Be sure that your article is being advertised in its own proper field and then push it hard.

EPIGRAMS USUALLY READ.

One useful system of advertising is to publish a little pamphlet of say fifteen or thirty pages, about 2 $\frac{3}{4}$ x inches. That size can very easily be slipped into a customer's pocket. Have some attractive design on the cover, illustrative of your business, and if it is in colors, all the better. Do not attempt to cram the pages too full with advertising of your wares. Pick a few leaders and play them up. In this way your reader will not so quickly tire. Indeed, it is often well to treat of but one subject, say the promptness and accuracy with which you fill prescriptions. But the surest way to interest is to be original. An epigram may not be very true or convincing, but if it is original, or at least the form conveying the thought is original a customer will read it. Why not simply run a short epigram on a phase of life on every page and make every third one, say, have some bearing on your business? It is a good scheme to leave the lower portion of the page entirely blank. The white vacant spaces attract a reader's eye

as much as a large typed statement would. As the pauses in music are often as important and impressive as the notes, so can a blank space attract attention to what you have to say.

SOME EXAMPLES.

Here are a few examples of epigrams. You can make others just as good or better, yourself, which are more suited to local conditions:

"No man can properly superintend others until he is capable of superintending himself—that's often a big contract."
"Confidence in one's self is the chief cornerstone of all success. We have great confidence in our store."

"The man who never rises in his thinking above the level of this world's materialism, is still in the kindergarten of his manhood."

"So-called great men are too often the result of temporary public opinion and circumstances, rather than through any merit of their own. We won't mention any names, but our store deserves a reputation for good work and unadulterated materials."

"All things are good or bad only by comparison with some better thing; our work will stand comparison with any and prove the best."

"These remarks are unlike postage stamps; they can be used more than once, therefore, save them."

"Honesty is the best policy, but the man who is honest only because it is the best policy, is still a dishonest man. Our goods are unadulterated and we don't substitute."

"Truth is stranger than fiction," and twice as interesting. Have you learned all about our store?"

"The devil always walks in the front door when he sees the proprietor staggering into the back door. We keep our back door locked and our front door guarded."

"One-half the world don't know how the other half lives. If they did there would be more trouble than there is now. We live by offering the public good service."

"Too many people see life through a knot-hole and only take an occasional look at it in that small way. Take a look at our establishment."

THE PLEASANT WORD.

The drug business offers an opportunity for the tactful salesman who has a pleasant word for patrons. The majority of drug buyers are also sympathy seekers, and some insist upon parading their woes for the benefit of the clerk or proprietor. While this feature is a constant tax upon the nervous system of the listener, if he is really sympathetic in make-up, he can reflect each time these stories are related, that he is gaining an insight into human nature, and be consoled. Some salesmen have cultivated their faculties to such an extent that they exude sympathy in manner and voice, without being apparently conscious of it. That is the best kind of sympathy and when accompanied by a pleasant word that will make the patron take an optimistic view of his troubles, does much to convince the sufferer, real or imaginary, that the listener is interested in other things than money-getting.

MAIL ORDER BUSINESS.

Its Appearance in the Pharmaceutical Field and Its Growth.

SMALL PROBABILITY THAT IT WILL EVER SERIOUSLY MENACE THE RETAIL DRUGGIST AND THE REASONS.

When the "mail order" method of selling certain lines of goods was confined to novelties—for example, safety pins and tool-boxes—it was within its legitimate confines. When it burst this limitation into settled lines of trade, it began to assume a character which threatened to disturb well-established rules of commercial activities. The last months of 1904 showed a determined effort to place pharmaceuticals in the "mail order" ranks, with some success. It cannot be thought, however, according to the opinion of leading pharmacists, that this movement will ever assume proportions readily menacing to the volume of trade handled by retail druggists.

Commenting on this view, Mr. Carssen, of the Riker Company, said: "There is an insurmountable barrier to the successful invasion of the retail drug business by mail order houses. It would not pay any 'mail order' concern to carry the tremendously variegated stock necessitated by the demands usually made on a retail druggist. To be sure, certain large drug stores do a large mail order business, but it is merely a feature of their regular retail trade. It would not pay them in itself alone; it is only profitable as a side issue. These concerns have to carry a large assorted stock anyway, and filling orders by mail is practically the same in their cases as selling the goods over the counter. In short they are not mail order houses. Another strong reason is that most drugs could hardly be put up in the proper sized packages to meet the demands of consumers. Each customer would require a fractionally different amount. Again, the margin of profit on drugs adapted to the requirements of mail order business would not be sufficiently great to pay for the necessary extensive advertising and postage charges."

THEIR ADVERTISEMENTS.

This gentleman's opinion is especially interesting in that Riker's was one of the first large drug houses to feature their mail order department, or rather, delivery system. They advertised extensively that a feature of their service would be free mail delivery in New Jersey and other districts adjacent to New York, of any article listed in their catalogue of such goods. They also inaugurated a scheme permitting a customer to order a "repeat" prescription by simply giving the original prescription number and the physician's name on a postal card, which insured a prompt delivery of the prescription by mail and did away with the necessity of the customer having to appear in person or having to mail back the original empty medicine bottle. Although this system bordered somewhat on mail order business, it was not the real thing, being after all but a variation of the free delivery system long ago adopted by all large metropolitan retail establishments. It was merely delivery by mail instead of by messenger. Expense of mailing tubes and special

shape bottles for liquids make such delivery too costly for general use.

The small novelty which allows a large profit with a low manufacturing cost, and which is of a size and weight requiring but a little cost in postage to secure mail transmission, is the natural subject of a mail-order business. The gist of the argument offered by the devotees of the system who advocate its introduction into the drug field, is that the margin expended for detailers, agents, advertising, etc., is saved to the purchaser in reduced prices. A review of the lists thus far presented to the public shows no material reduction from prices asked by the regular trade, leaving one to assume that the margin required to pay the detailer and postal mail-order firms in postage and overhead work. Some of these concerns have undertaken extensive campaigns with the medical profession, attempting to gain the physician's own personal trade and his influence upon his patients. While the dispensing physician may be attracted for a time by the apparently low values quoted by the mail-order houses, he will find that an abandonment of the local druggist on such lines will entail a decided loss to himself in several ways. Chief among these will develop is the fact that he will miss the "drug man," who has always given him every few months a most interesting half hour of gossip about pharmaceuticals and other kindred matters.

PERSONAL ADVERTISEMENT.

The chief trade bringer of a mail-order concern is, of course, direct personal advertising to the individual consumer. This may take the form of a personal letter, a circular, a booklet, or notices in certain publications which reach the homes of the great consuming public. There are certain periodicals which are little known in cities, but which depend on a rural circulation. There are others which are well known in certain localities, but which never gain widespread recognition. These are the vehicles of the communications of mail-order houses to their patrons. For various reasons it has always been held that this method of marketing goods was peculiarly pleasing and attractive to the residents of rural districts, the main idea being, of course, that such people were unable to come frequently to trade centers for their supplies, because of the time and money required to make the trip. An authority on such trade recently stated concerning the advertising requisite to secure results: "Mail-order advertising is telling people what you have in a simple and direct way, using words that inspire confidence in the reader that you are telling the truth." That strikes the keynote. Confidence is requisite.

Here is where the local druggist has the advantage over a firm attempting to cut into him by mail-order methods. He is always on the spot. He can be seen personally. He is living. He is tangible; while a firm, a representative of whom is never seen, is unsatisfactory to a buyer, and a letter is, after all, but a cold conversationalist. Letters convey no gestures, no expression of countenance, no modulations of voice, and if an error has been made, the time required to rectify it is exasperatingly long. Moreover, it is a real trouble to have to take the time to formally write. One can say in a minute what would take him half an hour

to put on paper. Again, it is sometimes hard to convey exactly what is wanted in definite, dry cut words in writing, while orally it would be simplicity itself. All these facts are especially applicable to pharmaceuticals, which above every other line, require a confidence in the consumer.

It is reasonable, therefore, to conclude that while the mail-order system may expand into the pharmaceutical field to a certain extent, nevertheless, it can never reach proportions which can alarm the local retailer. Its field of usefulness is limited by economic laws to a harmless area.

GROWTH OF APPRAISERS' WORK.

The annual report of the work of the Board of General Appraisers for 1904 shows a great expansion of its activities during the year. The number of protests received were 42,882, against 30,795 in 1903. The number decided was even greater, 43,229, because some of these had been carried over from 1903. In that year only 15,237 protests were decided. Written opinions in 1904 were 4,719. The number of suspended cases has been greatly reduced because the courts decided several very important points which governed the settlement of many such cases. The Board is accomplishing more work than ever before. The number of suspended cases is now only 37,000, while on June 30th it was 43,729. During the year a new plan of organization has been put in force. The board is now divided into three sub-boards and each General Appraiser has been allowed a secretary.

GOLD IN GOLDEN SEAL.

The scarcity of native drugs is being commented on by the daily press very freely. While most of the articles are fairly accurate, a great many are positively ridiculous. The Boston Globe recently said, ". . . common golden seal, one of the most valuable of medicinal plants to-day is bringing seventy-five cents a pound, but is being extenuated as a pest by farmers all over the country." A field full of "the pest" would be a very profitable matter for a farmer at \$1.55 per pound.

"I am Mr. Jones; can you tell me—" began the customer who had awaited his turn at the stamp counter.

The druggist growled. "Directory over there; telephone here. Boy's out. No more stamps. Take a Third avenue car. Go to —. I beg your pardon," he finished, lamely.

"That's all right," said Jones. "How much do I owe? I want to pay it."

Wee, experimental Nina
Dropped her mother's Dresden china
From a seventh-story casement.
Smashing, crashing to the basement.
Nina, somewhat apprehensive,
Said: "This china is expensive,
Yet it proves by demonstration
Newton's law of gravitation."

—Wallace Irwin, in *Saturday Evening Post*.

SEASONABLE SALES.

How to Get Rid of Left Over Holiday Goods—Prize Contests.

There is bound to be a stock of "left overs" after Christmas tide, and if your dead stock is large, there are many ways of turning it into cash. Perfumes, in regular assortments, are always salable, but the special holiday packages are usually dead and on the shelves till next Christmas time.

The druggist who has purchased novelties and sets of manicure and toilet articles, only to find that it was an "off" year, swears never to buy such goods again, except on consignment. When the following year comes, however, he feels that these goods are out of date and is compelled to purchase a few Christmas trade-bringers to make a worthy show. A Brooklyn druggist who did this for three years, decided to get rid of the odds and ends without undue loss on his investment. He arranged a series of sales which rid him of dead stock in short order, and this year he had a fresh supply of really up-to-date novelties, some of which, in spite of close buying, are again on his hands.

The mistake common with most druggists is the dismantling too soon of counters and cases which have been devoted to Yuletide goods. The two weeks subsequent to Christmas is the best time to expose "left overs" to the public view, for there are always the late or bargain hunting gift givers. Realizing this, many druggists cut on goods which are not the subject of a full price agreement with their makers. How to feature the protected price articles is the question which at least one druggist has answered.

HIS PLAN INEXPENSIVE.

The Brooklyn druggist's plan is simple and comparatively inexpensive. He numbers slips of paper in duplicate, using his prescription numbering machine. He makes a display of perfumes, and laid over toilet articles. Each post-Christmas buyer of perfumes and "left overs" is given a numbered ticket for each twenty-five cents worth purchased. Regular prices prevail; the scheme is advertised by hand-printed signs within the store and show windows. A thousand circulars are distributed throughout the neighborhood and the "something for nothing" people are bound to take notice. A window is given to a display of prizes which go to winning numbers. An elaborate toilet set, or a large bottle of perfume is made first prize; the others are of less value. Ten cent novelties, such as aluminum pin and ash trays, are consolation prizes to those holding nearest numbers to the first prize, say within ten, excluding other winners. In short, it is a lottery without unpleasant legal consequences, and the deviser has found it successful in his home neighborhood. The drawing takes place at a stated time, a show window being utilized because of its advertising value, and to prove the drawing is on the level. The winners of prizes become fast friends and frequently ask about the next free distribution.

Another plan used is the grab bag scheme. It differs only from the first in that the fun-loving patrons have full sway while their cash lasts. A common bag of burlap is filled with various "left overs" in perfumes and regular size goods, no

article retailing regularly at less than a quarter, else the anti-gambling society will take a hand. "You pay your quarter and grab. We'll exchange to acceptable odors on regular twenty-five cent goods," the signs read. The comedy element may be furthered by huge paper wrapping of small articles, or placing them in large cartons. Several slips marked "winner" are wrapped with small bottles of perfume. These entitle the grabber to a choice of manicure and like sets. Of course, the plan requires a certain amount of advertising. After a few successful "grabs" the news travels. A sign reading "Good goods come in small parcels," and the quotation "All that glitters is not gold" are additions designed as a saloace to the greedy, a hint to the wise.

CONTESTS FOR PRIZES.

Prize contests are arranged with a view of testing the skill and taste of patrons. An approximate inventory of stocked odors is made, each purchaser of perfume being entitled to one guess as to the popular selling odor and the number of bottles sold, percentage to three places being the method employed. Only one bottle of each odor is shown, the stock being under cover; incidentally the errand boys and other "leaky" persons are kept from the scene as much as possible. Sips are provided for recording the guess, with name and address of guesser. A large envelope, sealed, containing the inventory of odors at the start of the sale, is posted with an explanatory notice. To make the guessing interesting and add an element of chance, only voted coupons count as sales. The winners are given pound and half-pound bottles of the winning odors.

All these schemes entail work, yet the advertising results are worth considering. To the objection that such trade-making contests were not ethical, a druggist replied. "If cigar stores can give coupons and prizes to boom staples, guess I can afford to give the ladies a chance by booming perfumes occasionally."

Easter affords the last chance for "hold overs." In the absence of special contests or sales, keep April 23d in mind, and give a package of egg dyes with each bottle of perfume, large or small.

ARTIFICIAL MUSK DECISION.

The United States Circuit Court has recently rendered a decision in favor of George Luenders & Co., as defendants in a suit brought by the Societe Fabrique de Produits Chimiques de Thau et de Mulhouse, regarding an alleged infringement of a patent held by the plaintiff for artificial musk. The defendants set up the defence that there was an artificial musk obtained by other process and from other sources than those of the plaintiff before the granting of the patent. The court held that the patent in question was distinctly for the substance and not for the process of manufacture, and that so the patent was void. The plaintiffs have moved for a new hearing.

"Think," said the lecturer on the Arctic Zone, "of days six months long!"

The pale drug clerk was removed from the room before fatalities occurred.

"Papa," said Willie, as he tipped the ink bottle, "aint digitalis foxglove?"

"Yes, my son, and this is cy-pri-pe-dium," and he cypridied him where it would do the most good.

DOMESTIC TOBACCO CROP.

Yield and Quality Satisfactory, but Marketing Delayed by Drought.

The 1904 crop of domestic tobacco of all types was 660,460,739 pounds, of an average value of \$53,382,950. This yield was obtained from 806,409 acres planted, each acre yielding an average of 819 pounds. The average market price per pound was 8.1 cents.

The tobacco growing industry has become of very great importance to the United States, and each year sees an expansion of production. The Department of Agriculture shows that the sections of the country which raise the most tobacco are New England, New York, Pennsylvania, the Miami Valley of Ohio, Wisconsin, Georgia, Florida, parts of Kentucky and Tennessee, Virginia, Louisiana and Maryland. The first seven of these produce tobacco of cigar grade, while the output of the others is used for chewing, smoking and snuff.

The marketing of the past season's crop has been exceedingly slow. The large yields of Wisconsin, Ohio and New York, used for binder and filler in cigar manufacturing, were unstripped from the polea as late as the end of December. The cause has been drought, particularly severe in Ohio, and consequently the atmosphere has been too dry to permit preparing the crop for market properly. The counties of Georgia and Florida, however, which produce cigar tobacco, had progressed with the marketing of their crop further than usual by the middle of December, seventy per cent. of the output having been sold. The other classes of tobacco have been kept from speedy marketing also, by the dry weather.

The New England crop was the finest in several years and brought fifty per cent. more in selling prices than last year. The average price per pound was 21.6 cents. About three-fourths of the crop have been sold, but a very small portion has been stripped and delivered. The cured leaf is of good color and weight, and far superior to the crop of 1903. The New York product brought twenty-five to thirty per cent. more than in the preceding year. About half the crop has been sold on contract, but practically none of it has been delivered, dry weather having interfered with stripping. The same conditions and prices prevail in the case of the Pennsylvania crop. The Miami Valley crop, of Ohio, had not been moved at all by December 20th, but prices showed gains of fifteen to twenty per cent. over 1903. The quality is good. It is the same story with Wisconsin. In Georgia and Florida the production has practically all been sold at high prices, for drought early in the season caused a shortage of finer grades.

The chewing, smoking and snuff tobacco crops were all delayed by the drought, but the quality is better than in 1903 as a rule. The marketing was unusually slow, because of the drought. As a rule, prices paid growers were from twenty to thirty per cent. higher than in the previous year, but in the New Belt district of South Carolina they were as high as fifty to seventy-five per cent. over 1903. In the Upper Green River district there is a

marked tendency to plant Burley tobacco instead of the dark types heretofore grown. In the Clarksville and Hopkinsville district, the output of which is frequently exported, the average quality of the cured leaf is superior to that of 1903. "It is of a darker color and has more body, thus making it better for many purposes, though not so suitable for the French market," runs the report of the Department. A prominent dealer of Christian County, Ky., is quoted as saying: "Our handling seasons this year have been very unfavorable, much like those of last year, when a rain would be followed by a cold spell, thus causing tobacco to stiffen and become unsuitable for stripping. Prices this year are much better than last. In this immediate section the highest price reported was seven cents round, for a crop of about 75,000 pounds." The report states concerning the Virginia sun-cured district: "The cured leaf is said to be sweeter and of better flavor than the 1903 crop, but somewhat thinner and lacking in body and gum. It is, however, of good rich color and well suited to domestic manufacturing purposes. The average price up to December 1 was about 7½ cents per pound, but since that date a considerable decline is noted. In explanation of this fact, the following statement is made by a prominent dealer in this type: "The demand for sun-cured tobacco has increased so much that in many counties south of the James River growers have endeavored to sun-cure and air-cure their crops, with the result that a great quantity of so-called sun-cured tobacco is appearing on the "breaks." In consequence the price of real sun-cured tobacco has been unfavorably affected. The point is emphasized that this type of tobacco can be successfully produced only in the counties lying north of James River and near the tide water."

GEO. BORGFELDT & CO. IN 1905.

An artistically designed booklet has been issued by the jobbing house of Geo. Borgfeldt & Co., New York, extending the compliments of the season and announcing that the 1905 display of the company's lines will be complete and ready for inspection about February 1st. The house is well known to druggists throughout the country, particularly as it operates a drug sundry department, which handles tooth, nail and hair brushes, rubber goods, toilet articles, etc. The announcement is made that by acquiring several floors in buildings adjoining on Third street, all the departments have been enlarged. Moreover, several additional factories are now represented, expanding the already wide range of lines carried.

"Why don't you quit smoking?" he asked the druggist.
 "Can't," that worthy replied.
 "Just eat an apple when you feel like smoking, it's better than drugs."
 The druggist smiled. "Adam got the apple habit bad," he remarked, as he lighted a "two fer."

"Mist. Druggist: Them leaches you sold me may be al right, but my son John won't tak 'em. He thinks their pleson. Pleas advice at once."

WELFARE OF EMPLOYEES.

The National Cash Register Company Sets a Splendid Example.

A physician, two trained nurses, a class in first aid for the injured and beds for emergency cases, are some of the many precautions taken by the National Cash Register Company, of Dayton, Ohio, for the health and welfare of its employees. The company believes in good health for its employes, just as it believes in good materials out of which to make its products. It has followed out such a policy for a number of years, and it is safe

One of the Rest Rooms for Women Employees.

to assert that there is not another manufacturing concern in the United States which has healthier or happier employes. When a person makes application for employment at the factory, one of the first requirements is that he shall submit to a physical and medical examination. This is required for two reasons. First, it is the aim of the company to take into its employ only strong and healthy men and women. Second, its employes must be protected from all contagious diseases.

A special study of means to promote the health of its employes is made by the Welfare Department—one of the most important departments of the factory. A physician employed by the company is at the call of all employes while in the factory, without cost to them. He conducts classes in first aid to the injured, and many of the employes have become

A Physician and Trained Nurse are in Constant Attendance.

quite proficient in the work. The physician is aided by two trained nurses, who themselves are in close touch with the young women employed in the factory. The rest room, in which the girls may go when ill, is under their charge.

Ventilation and light receives special attention. The factory buildings are models of the builder's art in this respect. They are clean and light and are supplied with

High Back Chairs and Foot Rests for all Women Employees.

pure air. Everywhere are seen unusual sanitary provisions. For instance, in the polishing room the air is changed every fifteen minutes and the emery dust is drawn down by suction into a general exhaust pipe and conveyed out of the building. The young women are provided with high back chairs and foot rests. They are also supplied with immaculately clean aprons and sleevelets to protect their gowns while at work. Every building has its bath room, with tubs and shower appliances, and employes are given company's time for bathing.

All employes are given Saturday afternoon as a half holiday the year round. The young women in the factory are per-

A Class in First Aid to the Injured.

mitted to take a recess in the morning of ten minutes, and ten minutes in the afternoon and leave the factory ten minutes earlier than the men.

Dining rooms are provided where employes may secure warm lunches at a nominal charge. None but the purest of foods are served. Lectures on health and food are frequently given in the assembly hall for all the employes, by recognized authorities on these subjects. All the known hygienic laws are observed throughout the factory. In addition to all these precautions, the employes of the factory have a relief association, in which its members are entitled to sick benefits and the services of a physician when needed. There is a Men's Welfare League, which is the means of providing outdoor athletics of all kinds for the men employe in the factory. A constant effort is being maintained at all times by the company to do everything in its power for the health of its employes, and the good results of this work are becoming more apparent each year.

SHOW WINDOWS AND FEATURES.

Retailers Recover Slowly After the Holiday Trade.

CANDY AND CHRISTMAS NOVELTIES STILL DISPLAYED.—THE LARGEST BOTTLE.—DRUG IDENTIFICATION BY THE LAYMAN.

New York druggists are suffering from the usual post-holiday lethargy, and the larger stores are content with window features designed to move the remaining stock of Christmas goods.

Candy has become a standard side line and firms like W. B. Riker Sons & Co., the Hegeman Corporation, Jungman, and F. W. Kinsman, Jr., & Co. are giving up a great deal of window space to special packages of confectionery, known as "Saturday candy," for the business man to take home.

These sell variously at twenty-nine cents, thirty-five cents and fifty cents a pound, and the trade must be worth while, else valuable window space would not be given to it. This is in addition, in many cases, to regular lines of Huyler's candies. MacIntosh's toffee is also featured by drug store demonstrators in various parts of the city.

The Largest Bottle.

The Alpers Pharmacy, Broadway and Thirty-first street, has obtained from Whitall-Tatum Co., the largest bottle yet blown, which was described in The Era of December 1, and it is exhibited in the show window, together with the smallest bottle manufactured. The large bottle is sixty-four inches in height, thirty-one inches in diameter, and weighs, when empty, thirty-seven pounds. It has a capacity of one hundred and eight gallons, and the huge glass affair is as a mountain to an ant hill, compared with the exhibited minis, which are vial, which holds but four minims.

An electric light with a red globe is suspended within the giant bottle, and gives it the appearance of being filled with a radio active substance. Dr. Alpers contemplates converting the lower part of the huge vessel into an aquarium, with real fish. A folding wire bird cage is obtainable, which can be introduced through the huge bottle's neck, and if plans do not miscarry, Broadway crowds will enjoy a novelty; birds of the air and fish of the deep under the same glass shelter.

The store is a show-place for the laity and for druggists who are visiting New York. Not the least valuable hint given in the arrangement of the store's interior, is the noticeable absence of drug drawers. Dr. Alpers believes that dust-proof drawers are impossible, and only ground glass containers are employed for herbs and simples usually relegated to drawers. These containers are of uniform capacity, and are a pleasing decoration, adding to the professional atmosphere of the pharmacy. It is also worthy of note that the prescription specialties, ready-made pills, etc., are kept under cover in closets. An arrangement is in use which reduces space, yet makes every bottle label readable. This is done by placing the bottles on specially recessed shelves, directly against the rear of the cupboard. A self partition, mov-

ing on hinges, is inserted between the rear partition and the door of the closet, which is also fitted with shelves, so that each closet has four shelves, one set in, one on each side of the movable partition, and one on the door itself. Wooden guard rails hold the bottles in place, each with its label outward.

Pharmacognosy.

The laity is given the opportunity to study pharmacognosy in the window exhibit of W. Nonne & Co., 274 First avenue. One hundred and seventy-four selected specimens of pharmacopœial drugs are exposed in the numbered boxes gotten out by Eli Lilly & Company.

It is surprising, say the exhibitors, how many people are acquainted with the herbs and simples, and even with the poisonous drugs. One man knew nux vomica only as "dog's button," knew it was poisonous, but was surprised to find that it was the source of strychnine. Others recognize herbs grown in this and foreign countries, because their youth was spent in the places of the plant's habitat. Several people recognized simples that they thought unobtainable in America. The value in immediate returns of such a show is small, but it unquestionably impresses people with an idea of the extent of the druggist's necessary training, and that is the purpose of the pharmacists who make the display. "Want to let 'em know we carry drugs as well as proprietaries," is their slogan. One prize contest fiend suggested that the druggist offer a suitable prize, open only to laymen, to those who could identify a majority of the drugs shown.

More Presents.

The present-giving contagion has reached the neighborhood of the Waldorf-Astoria, where Daggett & Ramsdell are located. Tooth brushes in individual cartons are featured. Each carton is marked "hard," "medium" or "soft," corresponding to the quality of the contained brush's bristles, and obviates the unnecessary finger testing, and, alas, occasional surreptitious "sample" brushing of the purchaser's teeth. These necessities set at forty cents each, \$3.75 a dozen. With each purchase of three or more brushes, a full size patent can of the pharmacist's tooth powder is given free.

A special notice in use reads: "If you are in a hurry for anything in our line, phone us for it. That's the quickest way. We have four telephones. If one is busy, ask for another. Bandages, gauze and dressings, when wanted at all, are usually wanted in a hurry. Don't wait to send a messenger. Telephone and leave the rest to us; if you want a brush, sponge, or anything for the dressing table, telephone us; we will send an assortment for selection. We can meet every demand in a satisfactory manner."

Some Cut Prices.

Albert's Pharmacy, Lenox avenue and One Hundred and Sixteenth street shows some proprietaries in its cut-price window, including Peruna, 65c.; Coke, 54c.; Men-nen's Talc, two for a quarter; Liquezone, 39c. and 75c. Castoria is marked 21c. and hundred-bottles of 2 gr. quinine pills, 13c.

Gibian, Eighth avenue and Thirty-fourth street, has a sale and window display of Peruna, 63c., and Tontia, 40c.

"Stringy" Windows.

Schaaf Bros., 2157 Eighth avenue, call

attention to tooth brushes and fountain syringes in separate windows, by using strings of brushes, suspended from top to bottom of the window, criss-crossed with other strings. The fountain syringe tubing in the other window hangs vertically with the glass, and the eye seeks for its source, to find that each tube leads to a syringe, high in the window; low in price.

"Fresh" Codliver Oil.

W. B. Riker Sons & Co., opposite Wanamaker's, makes a bid for cod liver oil trade by showing tasteful cod liver oil in bottles, with a special sign reading: "Iressed from the liver of the cod as soon as taken from the water."

Something New.

Richard Hudnut's store at 925 Broadway, offers something new for the man or woman who has an eye to luxury and the eternal fitness of things. Specially labeled bottles, of convenient size for the dressing table, are supplied, and it is now possible for the individual to have a harmonious arrangement of bottles, each of the same size, provided with glass stoppers and properly labeled after the familiar drug store bottle, enamel style. Those shown include quarter and half pint bottles for brilliantine, Florida water, bay rum, eau de quinine, benzoin, shaving lotion, etc., although any label can be supplied. One advantage, at once apparent, is the absence of proprietary rights to odors, as the maker's name is omitted, and my lady can preserve the odors as well as in the retailer's bottles, without becoming an advertising medium. A dressing table can thus be made to hold only uniform vials, without danger of confusion because of the loss of paper labels.

MISSOURI.

A. W. Pauley's pharmacy at Fourteenth and Madison streets, St. Louis, presents a unique feature in signs. The score or more displayed are printed with a rubber stamp outfit, large and small letters, and are arranged with as much effect as a job printer could do with as limited a line of type. They are all unique and not at all formal. They also catch the eye, as many are suspended from the ceiling in most unexpected places. Here is the wording of a few: "Rubber gloves, just the thing for me! 95 cents." "Few combs are as desirable as our 35 cent ones, cut to 25 cents." "The new American product, Biecher's lung tea, has been used in Europe with wonderful success." The use of a punch in tracing the letters where there is a light or something light colored, helps the effect of signs.

Featured Patents.

L. C. Swinnen, Cherokee street and California avenue, St. Louis, put one bottle each of seventy-five kinds of proprietary remedies in his window, this week, with flanking signs calling attention to the unusual completeness of his stock.

Logomachy Advertising.

W. J. Blythe, of Centralia, Ill., advertises strongly on the name "Blythe's Drug Store," which he asserts in advertisements is equivalent to "getting the best." This season he offered a \$15 package of Lazell's perfume to the person making the most words out of the letters used in the

store name. Hundreds of persons entered the contest and the girl who carried off the prize reported 346 words. Mr. Blythe announced the result of the contest in half page ads.

MASSACHUSETTS.

At J. C. Roy's drug store, in Fitchburg, there has been on view a miscellaneous lot of things which have caused passers-by to wonder if this had become a sort of general country store. It really proved to be an exhibit of prizes which a French club in that city secured to distribute among lucky ticket holders to a social affair, a benefit. There were shown at the drug store a barrel of apples, a ham, a silk umbrella, oil paintings, boxes of cigars, and also of candy, a big bag of flour, gloves, a pool cue and some other things. To see these and also to get the prizes when they were awarded, a great many people visited the pharmacy, and not a little side business resulted, in return for the druggist's courtesy.

KENTUCKY.

Barbers.

The T. P. Taylor Drug Company, which conducts two Louisville stores, has a sale and window feature devoted to razors, hones, shaving cups and other requisites. Negro boys, wearing barber coats, are busily engaged in the display windows, honing and setting the cutlery, each razor being given a final inspection before being sold.

A Wise Old Owl.

The Albus-Wright Drug Company, at Shelby and Market street, Louisville, has on exhibition a live owl, together with humorous signs, such as "Get Wise." Holiday sundries are shown and crowds of Christmas shoppers are apparently getting wisdom.

A HEAVY DEMAND EXPECTED.

The trade hardly needs to be reminded of the fact that this is the season when Scott's Emulsion is in greatest demand, and from all indications it is evident that this excellent remedy will have a very large sale this winter. Advance orders bear out this impression and despite the many new preparations of cod liver oil, Scott's Emulsion continues to lead the market for such goods, the sales each year showing a great increase over the preceding year. The absolute purity and uniform quality of Scott's Emulsion, together with the satisfactory results that always follow its use, have made this preparation a household article all over the world. As Scott's Emulsion has been on the market thirty years, it is reasonable to suppose that something besides extensive advertising has secured for it the position it occupies. It's the quality and value of the preparation that has made it outlive so many imitations and competitors.

Arthur with a lighted taper

Touched the fire to grandpa's paper,

Grandpa leaped a foot or higher,

Dropped the sheet, and shouted "Fire!"

Arthur, wrapped in contemplation,

Viewed this scene of conflagration.

"This," he said, "confirms my notion—

Heat creates both light and motion."

—Saturday Evening Post.

MAKING THE FOUNTAIN PAY.*

How Can a Druggist Increase His Soda Water Trade?

The key: "Create in the minds of the people the thought that your soda and your fountain are the best to be found anywhere."

The manner in which a fountain plant is cared for indicates the process and the amount of thought applied by the owner. It is impossible to conceive that any soda fountain owner has any other aim than that his plant be good; the thought follows that his soda water must be good—the best.

It is necessary to do many things to bring about this result, and there are many ideas that cannot be carried on as well in one locality as in another. However, each and every druggist can put into practice the following: Cleanliness, politeness and attractiveness.

Cleanliness is the first requisite, an absolutely necessary quality, to even the running of a fountain, without considering the idea of increasing trade. The emphasis, therefore, to be placed on this feature of running a fountain should be very great.

USE FLOWERS.

Everyone, young and old, rich and poor, are lovers of flowers, and these natural, beautiful decorations can be used together with growing plants to greatly increase the beauty and attractiveness of the most elegant soda fountain.

The question of whether or not the evil of the five cent soda should exist has been discussed for years, far and wide. It is the opinion of the writer that there always will be a five cent soda, just the same as now, and as in the past. It depends entirely on the locality, as well as the attitude of the soda plant owner as to whether or not a glass of soda should be sold for five cents. In some localities it would be almost impossible to induce sufficient people to purchase enough soda at ten cents a glass to make it profitable to run a fountain. This applies especially to the small country towns. On the other hand, in another locality it would be folly not to take advantage of the congestion of business and secure the better price for every ice cream soda. Striking a medium between the two extremes, the proprietor of a soda fountain stands between the five and ten cent trade.

This is no doubt one of the best fields on which to build up a progressive business, as it can readily be seen that with the popular five cent soda, a very great number of people are ready to buy soda, and the ingenuity of proprietor and clerks can be brought into action and thereby induce the public to partake of the attractiveness and delicious fancy sundaes and sodas for the better price.

It pays to use the best of everything at the fountain. All people may not be able to decide whether or not a prescription is correctly compounded, but nearly

*Prize Paper No. 1. Read before the Wisconsin Pharmaceutical Association.

all, can tell when a soda is to their taste.

A majority of the public can be induced to purchase ten cent sodas if everything is clean, attractive and deliciously good.

Everything necessary to carry on the soda business should be kept handy. One should never be compelled to ask a customer to wait while he runs to the back room for a cellar for an egg, lemon or a batch of syrup. The soda clerks should be polite, neat and clean—never in too great a hurry to take a customer's order, but serve them quickly after the orders are taken.

Crushed fruits are the great favorites, and the numerous combinations to be made with these and the fancy chopped nuts, the whole given an appropriate name, appeals to the good taste of every elite patron of the soda fountain.

FOUNTAIN ADVERTISING.

The use of advertising matter in connection with the fountain is, of course, one of the best mediums of bringing the public to your fountain, together with neat cards, tastefully arranged, well worded, calling attention to the leaders of the fountain. One of the best plans to induce the people to partake of all times of the ten cent sodas is to have three or four leaders—exceptionally good—and then work the leaders, particularly one, which your opinion tells you is the best, in all the advertising, window displays and cards, bulletin boards and fountain cards. The oftener the names of these leaders appear, the nearer you are to the ten cent sales. The only method to successfully advertise the leaders is to push them daily, weekly, monthly, and at all times during the whole season, at every opportunity.

As stated before, the way to increasing the soda business is: To create in the minds of the people the thought that your soda and your fountain are the best. Accomplish the result by never ceasing watchfulness and constant application to all the details. Create in the minds of your customers the thought that you are active, enterprising and solicitous of their welfare and health, through the deliciousness of your soda fountain beverages, and you will have the support of the great majority of the public, who will talk for you, advertise your fountain at every opportunity, and your business will increase, not only in this particular department, but it will have a general effect on every department of your business. You are pleasing a vast number of people with the five cent sodas (therefore, not necessarily an evil) and at the same time delighting the most fastidious with the most appetizing and delicious beverages of the present time.

DRUGS LOST WITH DRUMELZIER

The cargo of the steamship Drumelzier, which was wrecked and abandoned off Fire Island recently, contained among other things, a number of consignments of drugs, oils, etc., which are a total loss. The manifest showed 1,400 bags of talc, 720 gallons of varnish, 154 barrels of ocher, twenty cases of chemical salts, twenty five bales and two bags of various drugs and roots, eighty barrels of paraffin, 100 barrels of wood alcohol, twenty five barrels of plumbago, and six cases of essential oils.

APPRAISERS' DECISIONS.

—Lanolin—Adeps Lanae Hydrous.—Adeps Lanae Anhydrous has been declared a non-alcoholic medicinal preparation by the Board of General Appraisers, as reported in the last issue of *The Era*. The invoice under protest contained two items covered by the protest of the importers, the first being specified as "refined wool fat" (lanolin), the second as "refined wool fat" (adeps lanae B. J. D. hydrous). Another protested invoice of the same importers contained "refined wool fat" (adeps lanae B. J. D. anhydrous). The president of the importing company, Victor Koelch & Co., testified that the letters B. J. D. signified the name of the manufacturer. Lanolin is Benno Jaffe & Darmstadter Lanolin Works; that the first two items, respectively, were the compound known as lanolin, which was patented, and had a trade mark, with the name of "lanolin," and the same thing under the technical name "adeps lanae," which is sold at a lower price. He also testified that this was the same lanolin that has been imported at this port for years, and held by the board and by the courts to be a medicinal preparation; and that the third lot was the same article, free from water. The board also was governed in its decision by the following, taken from Coblenz's "The Newer Remedies": "Adeps Lanae—Synonyms: Lanolin; Adeps lanae hydrous, U. S. P.; Anasalpin. The purified fat of the wool of the sheep mixed with not more than thirty per cent. of water, U. S. P. The wool of sheep contains a large per cent. of fats (about 45 per cent.), which it is necessary to remove before it can be used in manufacturing. These fats consist of a mixture of fatty esters of cholesterol and ischolesterin. The crude wool-fat, which is usually obtained by washing the wool with benzine, acetone, or some similar solvent, and evaporating, is emulsified with a weak alkaline solution, then separating the creamy mixture in centrifugal machines; the upper layer of fluid contains the cholesterol fats, while the lower layer consists of a soap solution of the impure fatty acids. The upper fluid is drawn off and the cholesterol fats set free by the addition of a solution of calcium chloride; the impure lanolin thus obtained is purified by repeated melting and washing, finally extracting with acetone. Anhydrous wool-fat is of a pale yellow color, somewhat translucent, melting at 36° C. (96.8° F.), readily soluble in benzine, ether, chloroform, acetone, but only partly soluble in alcohol. When mixed with thirty per cent. of water it constitutes the hydrous wool-fat of the pharmacopœia. Hydrous wool-fat occurs as a nearly white, unctuous mass, the surface of which, on standing, becomes of an orange color, due to loss of water. Its melting point is about 40° C. (104° F.); it is miscible with twice its weight of water without losing its ointment-like character. Wool-fat is employed as a base for the preparation of ointments, pomades, creams, etc." "It is thus," says the Board of General Appraisers, "made clear that the merchandise is extracted from wool grease, as stearin is from tallow. It seems clear that the wool grease provided for in paragraph 279 is not the highly finished product now in question. It does not happen that highly finished products are associated for tariff purposes with the

crudest articles of the general class at the same rates of duty. Paragraph 279 provides for tallow, three-fourths of 1 cent per pound; wool grease, including that known commercially as degrass or brown wool grease, one-half of 1 cent per pound, and from the description of wool grease as found by the court it is clear that the merchandise is not *ejusdem generis* with the substances covered by that paragraph. If we were seeking for information concerning the article commercially known as wool grease, we should apply to dealers in fanners' supplies, rather than to dealers in drugs and medicines, it being a grease used for stuffing upper leather."

—Scientific apparatus consisting of projection and condensing lenses which were imported by Henry Kolm & Co. were held free of duty, as being intended for the use of educational institutions.

—Drawback on syrup of figs manufactured by the California Fig Syrup Company, of Louisville, Ky., in part from imported alcohol, as allowed in addition to that already granted on the imported granulated sugar. The new drawback is to be equal in amount to the duty paid on the imported alcohol so used, less the legal deduction of one per cent. The Treasury Department issued the following instructions: "The preliminary entry must show the percentages of absolute alcohol appearing in the exported products, and the drawback entry must show the average percentages and the quantities of absolute alcohol contained in the shipments, and the percentages to be added thereto, respectively, to compensate for loss in manufacture. The said entry must further show, in addition to the usual averments, that the said preparation was manufactured of materials and in the manner set forth in the manufacturer's sworn statement. In liquidation, the quantities of absolute alcohol which may be taken as bases for the allowance of drawback may be those declared in the drawback entry after official verification of exported quantities and alcoholic tests, but in no case shall the percentage of absolute alcohol upon which drawback shall be allowed exceed 5 per cent., with an allowance for wastage not to exceed 1.5 per cent."

—Benzine soap was found by the Board of General Appraisers to be not an alizarin assistant, but a soap. The merchandise was invoiced as soap, but assessed as alizarin assistant. The importers protested on the grounds that the merchandise is soap "manufactured after a mixed formula and used in connection with gasoline or benzine, for the cleansing of white silks and similar light fabrics." The board agreed with the importers, finding it to be an article composed of soap mixed with benzole, which is not soluble in water, but is soluble in benzine or gasoline, and which is used in solution with them for cleansing silk and other delicate fabrics.

—Wafers imported by the North Pacific Trading Company were held to be free of duty as wafers, unlevained and not edible. It was shown they were used as envelopes for medicine.

—Certain wine of Spanish origin, but imported from France, was held not to be entitled to the benefits of the reciprocal commercial agreement with the latter country.

—Mica splittings coated with shellac were

claimed by the importers, Eugene Munsell & Co., to be dutiable as unenumerated manufactured articles, but the Board of General Appraisers classified them as rough trimmed mica.

Crossing the Tape.

Usually descriptive of race finishes, crossing the tape, the kind made by G. Reis & Brother, of 638 Broadway, N. Y., has a double significance. If followed out literally the ultimate result will have much to do with making you a winner across the success line, leaving twine-using competitors far in the rear.

Stop tying packages with flimsy twine. Use the woven package tie, bearing your business address. Up-to-date druggists and other merchants, too, are loud in their praises of the twentieth century method, as made possible by G. Reis & Brother. Wrapping packages is not an unimportant branch of the druggist's training. A well-wrapped package inspires confidence in a patron. If it is not properly wrapped it should not leave your counter. If it is as nearly perfect as you can make it, identify it with your store and your methods by using the G. Reis & Brother tape, which bears your advertisement.

All packages, heavy or light, large or small, can be tied with this woven package tie and each package will bear the store's name and address, because the "ads." are printed in succession on the tape. It's first class advertising is without cost, say G. Reis & Brother, and they offer to send "samples that talk" to those addressing them at 638 Broadway, New York.

Parke, Davis & Co.'s Insect Powder.

Some years ago Parke, Davis & Co., through its importing department, decided to market an insect powder. Their sales of this product have steadily increased until to-day they sell yearly enormous quantities, shipping it all over the world. Their brand has become exceedingly popular and well known. Each container is marked with their diamond shaped trade mark bearing the words "Pure, uncolored insect powder," one word on each face of the diamond. The powder comes in 100-lb. kegs, 50-lb. kegs, 25-lb. kegs, 10-lb. decorated cans, and 1-lb. decorated cans.

A Modest Hero.

The drug store was on fire! Suddenly there came an explosion and out shot the druggist, helpless in limb, but nimble of thought and speech as he lay on the pavement. "There's a thousand dollars in the till," he shouted. "Who, who will save it for me?"

"I will," cried an honest voice, and entering that furnace of fire, the hero emerged in a moment. "I have saved it for you!" he shouted, and then, modest hero that he was, he departed as silently as he had come, without a word as to his identity. The druggist has sought everywhere for him to reward him—and get the thousand back.

"References?" queried the druggist.

The applicant produced: "The bearer, Mr. Blank, has been in our employ, is a competent pharmacist, and has very taking ways."

"You won't do," said the druggist, as he slammed the door of his safe.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued January 3, 1905.

- 778,879—Anton Molinari, Woodbridge, N. J. Syringe.
- 778,931—Adolph R. Wiens, Milwaukee, Wis. Bottle-washing brush.
- 778,968—Benjamin Herman, Cincinnati, Ohio. Cork and cap removing device for bottles.
- 778,980—Oscar Liebreich, Berlin, Germany. Process of producing fatty acids.
- 779,049—Frank Lieske, Marquette, Mich. Non-refillable bottle.
- 779,107—Alfred L. Weissenhammer, New York, N. Y. Sheet-metal stopper for bottles, jars, etc.
- 779,108—Alfred L. Weissenhammer, New York, N. Y. Jar-closure.
- 779,164—Alecious B. Jamison, New York, N. Y. Syringe.
- 779,178—Louis Perotti, Newark, N. J. Liquid-dropper.
- 779,210—Georg Egly, Charlottenburg, Germany, assignor to the firm Gebrüder, Siemens & Co., Charlottenburg, Germany. Process of producing barium oxid from barium carbonate.
- 779,236—Rufus L. Odum, Nashville, Tenn., assignor of one-half to Hugh W. Pennel, Murfreesboro, Tenn. Insecticide.
- 779,266—William M. Davis, East Orange, N. J., assignor to Seabury & Johnson, a corporation of New Jersey. First-aid packet.
- 779,271—Robert Faries, Decatur, Ill., assignor to Walrus Manufacturing Company, Decatur, Ill., a corporation of Illinois. Jar and dipper for serving crushed fruit or the like.
- 779,277—Raoul A. Grimoin-Sansou, Paris, France. Treatment of cork

- for the manufacture of cork fabric.
- 779,290—Jens P. Lihme, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Ohio. Process of making sodium acetate.
- 779,338—Seward W. Williams, East Orange, N. J., assignor to Seabury & Johnson, a corporation of New Jersey. Tube for containing surgical articles.
- 779,347—William E. Brown, Los Angeles, Cal., assignor of one-half to Frederick Winstanley, Los Angeles, Cal. Bottle-corking machine.
- 779,377—Bruno R. Seifert, Radebeul, near Dresden, and Curt Philipp, Dresden, Germany, assignors to Chemische Fabrik von Heyden, Actiengesellschaft, Radebeul, near Dresden, Germany. Boryl esters and process of making camphor, etc.
- 779,380—Walter A. Startman, Toluca, Cal., assignor of two-fifths to Randolph C. Curry and Josephine S. Evans, Toluca, and Thomas E. Dilley, Los Angeles, Cal. Non-refillable bottle.

TRADE MARKS.

Registered January 3, 1905.

- 33,972—Remedy for certain named diseases. The Anti-Uric Company, Peoria, Ill. The hyphenated word "Uric-Antagon."
- 43,973—Tasteless castor oil. Nathan J. Gillespie Savannah, Ga. The word "Aromol" disposed on a background comprising an ornamental scroll.

- 43,974—Bottles. Obeare-Nester Glass Co., St. Louis, Mo. A monogram of the letters "O. N."
- 43,979—Wool-fat and products obtained therefrom. Norddeutsche Wollkammerei & Kamagarnspinnerei, Bremen and Delmenhorst, Germany. The letters and character "N W & K" inclosed within concentric circles.

MARKET REPORT

AN UNEVENTFUL WEEK.

Steady Market, With Few Price Changes.

DEMAND IS SATISFACTORY AND ON SOME LINES IMPROVEMENT APPROACHES ACTIVITY.

New York, Jan. 9.—The new year opens with fair prospects and some improvement in demand. Orders have so far been mostly for small lots, but they have been fairly numerous. Some large contracts are expected to be placed shortly, which will swell the volume of transactions considerably. But the market holds very well and the upward tendency continues marked in many lines. Few decided changes have occurred either way, however, with the exceptions that santaline and oil of wormseed, Baltimore, have both advanced sharply.

OPIMUM.—A hardening tendency is observable throughout the market, because of reports of cold weather in Smyrna and crop shortage. Consumers are ordering with satisfactory regularity, but there is no decided movement. Prices have not been changed by jobbers, who still quote \$2.85@3.00 for nine per cent., and \$2.95@3.10 for eleven per cent. Powdered, \$3.75@4.00 for thirteen per cent., and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—A fair demand continues, but no speculation is evident. The tone of the market is firm in sympathy with opium. Unchanged jobbing prices are \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The market is firmer and demand is improving, especially on the part of pill manufacturers. Bad weather has caused the strength shown and the fact that the December shipments of cinchona bark were lighter, 630,000 kilos against 640,000 kilos. Stocks in second hands are growing smaller. Jobbers, as before, quote 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

SANTONINE.—Owing to the shortage of the Russian wormseed crop, foreign markets have advanced sharply, and local prices in sympathy are 30 cents higher, making jobbing quotations, crystals, \$9.00@9.50 per pound, 68@70c. per ounce; powdered, \$9.20@9.70 per pound, and 70@73c. per ounce.

OIL WORMSEED, BALTIMORE.—The scarcity of supplies and the close holding of the visible supply has created another advance, this time of 25 cents. Local jobbers quote \$2.75@3.00 per pound.

ANNATTO SEEDS.—Certain large consuming interests covered their needs recently,

and as supplies are light the good demand raised jobbing prices to 20@25c. per pound.

CARNAUBA WAX.—Several causes of firmness prevail. The crop was small, light supplies are closely controlled at Hamburg, and supplies which were expected on the local market have not arrived. Jobbers now ask an advance at 35@38c. per pound for No. 1; 33@36c. for No. 2, and 32@35c. for No. 3.

OIL OF CLOVES.—Further easiness developing in the market for the spice, the quotations on oil have been dropped by jobbers to \$1.05@1.15 per pound.

IGNATIA BEANS.—Values have eased a little and present jobbing prices are 30 cents for whole per pound and 40@45c. for powdered per pound.

ASAFTIDA.—A readjustment of jobbing prices makes the extra select 30@35c. per pound.

CALAMUS, BLEACHED.—A slight decline in jobbing values makes current quotations 35@40c. per pound.

OIL CITRONELLA.—The market for the native oil has eased slightly under more liberal offerings to the basis of 43@47c. per pound.

OIL SASSAFRAS.—A falling off in demand and an increasing of offerings lowers the jobbing market to 72@77c. per pound.

OIL WINTERGREEN. (SWEET BIRCH).—Lack of demand causes a reduction by jobbers. Present value is \$2.15@2.25 per pound.

SPERMACETI.—The market continues to show strength, because of the shortage of supplies. Jobbers now quote 32@37c. for lump per pound and 33@38c. for cakes.

SALTPEETER.—The refined has risen a quarter cent on the wholesale market, in sympathy with the higher cost of raw material, but jobbing values are unchanged.

CELERY SEED.—Free offerings and an indifferent demand have caused a decline of half a cent in the primary market, but no change in jobbing figures.

COCAINE.—A good demand has developed for this commodity, but jobbing prices show no movement.

CANTHARIDES.—A falling off of demand has eased the jobbing market for Russian to \$1.55@1.70 for whole per pound, and \$1.65@1.80 for powdered.

GATHERING SPRUCE GUM.

A Tedious Process Requiring Patience.

The home of spruce gum is Maine, and Bangor is the headquarters for the supply. The gum is gathered in winter by expert woodsmen, many of whom are guides in the summer. The work is tedious and but poorly paid, considering the time and hardships necessarily required of the gatherer, and in spite of the high prices paid for the gum nowadays, the number of collectors is fast diminishing. The chief cause of the decline of the industry is that the supply of gum is growing less each year. The gum is no longer plentiful enough to make the business pay as it once did and fewer men are willing to spend their time gathering. This decrease in the supply of the gum is caused by lumbering

operations for the pulp mills, which annihilate many spruce trees each year, and another cause is the opening up of the remote parts of the woods by improved methods of travel, which bring in civilization with its death warrant for trees. The country is being more thickly populated yearly. This scarcity has advanced prices. To-day \$1.75 is paid for a pound of spruce gum in Bangor, while only a few years ago it cost less than a dollar. Yet the gatherers make less money to day than they used to. They have to look farther and longer to find the gum. It is going the way of juniper gum.

Formerly juniper gum was in good demand and plentiful supply; to-day it cannot be had in the Bangor district. It is so scarce that \$5.00 a pound is cheerfully paid for it. The flavor and medicinal properties of juniper gum rendered it very popular as a chewing gum. When it disappeared, spruce gum took its place in popularity. It also possesses medicinal properties to such an extent that it is said few habitual chewers of it ever are troubled with dyspepsia. But the high prices have lessened its use gradually, so that to-day the large majority of gum chewers use manufactured gum. This is because the supply is so small. Spruce gum is but one of the many indigenous American growths which have gradually been disappearing. It is the same with many barks and roots, as was told last week in *The Era*.

A hard working gatherer can collect 200 to 300 pounds of spruce gum between December and March, but the work is very arduous and requires much time each day to accomplish such results. The usual method pursued is to take what gum can be found on trees that have been trimmed or on which the bark has been bruised by the twisting of the tree in the wind or any accident. The gatherer carries a pole on which is fastened a knife or gouge. With this he isolates the gum and catches it in a receptacle fastened to the pole just below the gouge. When the small can is filled, the contents is placed in a sack. When work is over the gouge is removed and the stick discarded, which does away with the necessity of carrying it home. Another stick can easily be cut in the woods the following day.

In camp at night the gatherer roughly cleans the gum with a knife, removing all bits of bark, twigs, dirt, etc. The waste is usually just half the weight of what he has gathered and a day's work will net but three pounds, on an average.

Some professional collectors have a well-defined territory of operation in which they work each succeeding year. Every season they puncture the bark of the trees with an iron, which permits the sap to flow and gather on each wound. The next year they collect it.

"Who wrote that beautiful sentiment, 'The stars shall fade away, the sun grow dim with age; the earth shall sink in years, but thou shalt live an everlasting life unharmed—amid the war of elements, the wreck of matter and the crush of worlds'?" asked the student.

"One of them patent medicine fellers, I guess," said the scribe, who was reading the cure-all ads.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, JANUARY 19, 1905.

Number 3.

Entered at the New York Post Office as
Second Class Matter.

Established 1837

THE PHARMACEUTICAL ERA
PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES:

U. S., Canada and Mexico, - \$3 per annum
Foreign Countries in Postal Union, \$4 per annum

The Price List Editions of the Era are
issued in the Spring and Fall of each year and one
copy is sent free to each regular yearly subscriber.

Era Binders—Subscribers are advised to
save their Eras, together with the complete INDEX
which is supplied with each volume (6 months.)
We supply a substantial Binder at 75 cents
each, postpaid.

EDITORIAL COMMENT

The N. A. R. D. in Pittsburg.

Of the cities which have made good use
of the National Association of Retail Drug-
gists, and which The Era intends to ex-
hibit for the benefit of less fortunate local-
ities, Pittsburg deserves the place of
honor. In no other city in the United
States are the druggists so united and
in no other body of pharmacists is the
strength born of union used to better ad-
vantage.

An increase of profits equal to \$600 per
annum for a store of very moderate pre-
tension is an achievement of no mean pro-
portions, and the Pittsburg druggists do
not permit their association to fall into
disuse after the evils of competition among
themselves has been done away with. They
have shown that a well-knit organization
wisely led may be employed with profit
against any sort of common enemy. The
cigar combination, the telephone com-
panies and the blue law zealots have all
tried the strength of the association, and
in every case the druggists have been suc-
cessful.

The history of the Pittsburg organiza-
tion contains the secret of N. A. R. D.
success in every other place. The national
association is a means to an end, not an
end in itself. It helps druggists to get
together; they themselves must apply the
remedy to their own local evils.

Doctors and Prescriptions.

The art of prescription writing seems to
be in a much less serious state than we
had been led to suppose. If we try hard
enough, it is comparatively easy to find
evidences of very substantial progress.
Our friend, Dr. Clayton Thrush, recently
collected for the Philadelphia County Med-
ical Society a series of statistics which
show that while the modern prescription
may offer less trouble in the filling, it is
at the same time far more rational and
scientific than its prototype of fifty years
ago.

Dr. Thrush examined one thousand pre-
scriptions from the files of two Philadel-
phia drug stores conducted by college
trained pharmacists. Of these, 621 were
correctly written, 484 contained only offi-
cial preparations; only two contained pat-
ent medicines and 349 proprietary prepa-
rations, presumably specialties designed for
physicians' use.

The "shotgun" prescription has no
place in modern medicine; only 50 of the
collection contained each six or more in-
gredients, and 232 were limited to a
single preparation. Twenty-seven exhibited
incompatibilities of one sort or another,
which fact furnished the doctor with an
excellent text for a dissertation on the
lack of training in prescription writing
among young doctors.

Among the conclusions drawn from the
investigation, the following are of especial
interest to druggists: "That the trend of
modern prescription writing is in favor
of proprietary medicines;" "That the use
of polypharmaceutical preparations is dimi-
nishing to a great extent and their use is
confined chiefly to the older practitioners,"
and "That the more educated the phys-
ician the greater the use of pharmacopœial
preparations, and the greater the tendency
to simple instead of complex, non-scientific,
polypharmaceutical and proprietary
preparations."

A New Argument.

Elsewhere in this issue, Mr. Bancroft,
the owner of several drug stores in Brook-
lyn, gives us some entirely fresh views on
price protection. There are one or two
arguments showing why druggists should
support the work of the N. A. R. D., and
especially that concerned with the promo-
tion of the direct contract principle, which
are, as far as we know, entirely novel.
They deserve a careful reading from every-
body interested in price improvement, and
specially from N. A. R. D. organizers.

Mr. Bancroft's most attractive argument
is in effect, that, given a fair profit on
proprietary medicines, the sale of these
widely advertised preparations is far more
profitable than the exploitation of "own
make" goods. He furnished good, solid,

commercial reasons for his belief. His reasoning on the relative capital invested and the convenience and economy of handling a limited number of small lots are extremely convincing, and few are so well qualified to speak on these subjects as Mr. Bancroft. We know of no pharmacist who has reduced pharmacy so thoroughly to a science of reason and figures as he.

The assertion that anything can be more profitable than "own make" goods will sound like rank heresy to some of our ultra-professional friends. This particular heresy—if such it is—is subject to analysis by the lead pencil and bit of paper method. On another page are the facts, figures and reasons; disprove them if you can.

Herein lies also a hint to our proprietary friends. They complain of competition upon the retailer's counter. The cause of this competition is not far to seek; it is purely a matter of profit. Let them ensure a profit on their goods equal to or greater than that which the druggist can secure on his own product, and the incentive to compete will disappear. Think of the wear and tear, not to speak of the expense of frequent anti-substitution campaigns, which might be avoided by this simple means!

Schedule or Contract Plan.

In the past all N. A. R. D. organization work has been done on the schedule basis, and the bulwark of the price schedule has been the tripartite agreement. Although the association platform no longer contains the three-party plank, the organization department has not materially changed its method of attack. This is not so inconsistent as it seems, for schedules have been found not to rest heavily upon tripartite support; in fact, they persist even after that prop has been smashed beyond repair.

While the schedule, whether it happens to depend upon mutual agreement among druggists or upon arrangements with other branches of the trade, may still be the most useful force in improving prices, yet a too strict adherence to the one plan may defeat its own purpose. In some of the larger cities it is impossible to convince the retail trade that the schedule scheme is of any value, with or without the three-party prop. In such places the druggists, rather than risk the trouble and annoyance of price lists, prefer to leave the N. A. R. D. severely alone.

Mr. Rehfuess last week pointed out the danger of adhering too rigidly to one plan. The important question before the N. A. R. D. to-day is not the mere adjust-

ment of local difficulties. The vital question at present is how to make the contract plan successful. The association is committed to that plan and the manufacturers are hesitating on the border line. Will the retailers succeed in gaining their unqualified support or not?

In order that the contract and serial numbering plan shall be effective, it is not sufficient that the N. A. R. D. represents the most powerful body of druggists in existence. The organization must represent considerably more than that; it must represent a majority of the druggists in the United States.

Although apparently more prosperous than ever before, the N. A. R. D. is at present in a critical position. Its original foundation, the tripartite principle, has crumbled away, and it must have another. The mutual agreement scheme is not sufficiently tangible, and it may flourish quite independent of any but local societies. The national conventions have declared for the contract plan, and the association can not afford to turn back.

While vital issues are in danger, unimportant details should be kept in the background.

The Druggist and the Newspaper.

The newspapers of this town have apparently been proceeding on the principle, "when in doubt, hammer the druggist." The pharmacist has received so much pummeling of late that he should be fairly accustomed to it by this time. Doctors, lawyers, carpenters and tinsmiths are spoken of with respect by the daily press; only druggists, cabmen and barbers are treated as though they could never, by any possibility, say anything in their own defense.

Why has the pharmacist been at the mercy of every unlicked pencil-pusher in search of sensation? The answer is simple and convincing; because he has never raised a finger in his own defense. Doctors and lawyers have their representatives who are constantly on the alert for anything which might reflect upon their confères as a class. Any aspersions flung at random in the direction of one of the trades' unions would quickly bring a vigorous response. The druggists have been an exception to the rule.

All of this will now be changed, for the pharmacists of the city have taken the matter in hand. The visit of a committee representing the associations to the office of the New York Journal is a beginning from which we may expect to see some salutary results. One argument which is extremely effective in a newspaper office, seems to have been overlooked by the com-

mittee. A reference to the substitution howl as excellent free advertising for a wealthy manufacturing firm would make the average business manager exceedingly uncomfortable.

Must Guard Their Rights.

A point brought out in the drug counterfeiting case, last week, is interesting, if not instructive. It was conclusively shown that the sale of imitation goods had been extremely prevalent and that the sensational accusations had in a large measure stopped it. One of those legally interested in the case remarked that conditions would never have reached such a pass if the guardians of the trade-mark rights had properly looked after their interests. The makers of imitation goods were allowed to carry on operations unmolested for a long time, so that these adroit individuals had time, not only to stock the available markets, but even to go outside the usual lines and drum up trade. As a result, the bogus goods were bought and sold in good faith, and the arrests and accusations came as a bolt from a clear sky.

Trade-mark rights, like other forms of property, cannot be left lying around loose without loss. In this imperfect world, we are all expected to look after our own belongings. The farmer who permits the village boys to overrun his orchard gets no sympathy when his apples are stolen.

Our College News. alt

We have been blessed with not a little favorable comment upon our college news. For this we thank our friends. A college boy never grows so old that he ceases to be a college boy. When graduates pass out into the world the friends and instructors who are left behind often feel that college experience is remembered only as a passing incident crowded out of mind by the pressig affairs of the day. But the graduates themselves know better. It may be true that few alumni in active life go out of their way to keep the college fathers posted about their successes or failures, but where is the graduate who does not take some interest in what his alma mater and her children are doing?

Many of our readers will notice important changes in the schools where they learned the art of making a little knowledge go a great way. Methods of instruction have been modified and new subjects have been introduced. As the years go by the memory of our professors grows more and more tender; their fancied asper-

ities soften as their heads grow whiter and their steps less elastic. One feature of college life never changes; the spirit of the campus is ever youthful, ever buoyant and hopeful. We suspect that it is this tone which pervades our college news reports which more than anything else appeals to the old graduate.

Bloodlot's N-Rays.

It may be necessary to invoke the aid of The Hague Tribunal to adjust an international dispute of the scientific world. The savants of France are at present arrayed against the scientific men of the rest of the world in a manner which promises, if not war, at least some interesting dispatches.

About a year ago, Mr. Bloodlot, a physicist of Nancy, announced the discovery of a new form of radiation far more wonderful than that known as the X-Ray. The report was at once accepted by his compatriots, his results were confirmed right and left, marvelous developments followed, and the discovery was recognized by the French Academy. Charpentier pushed the investigation into the domain of physiology and claimed an ability to trace the course of the nerves and various organs of the body by means of the X-Rays, and even called attention to an interaction between organs and drugs placed at some distance. It was proposed to employ this method of studying the therapeutic behavior of medicine.

Thus far the story merely satisfies our craving for new scientific wonders, but men of science are not so easily content. Physicists in England, Germany and the United States repeated the experiments and were unable to obtain any but negative results. The evidence of the rays consisted of a slight increase in luminosity in a faintly illuminated screen, and the discoverer attributed the lack of success among foreign investigators, to defective eyesight; Frenchmen could see the X-Rays; foreigners could not.

The sceptical foreigners continued their investigation, invaded France, and, by means of sundry scientific tricks, tested the evidence with the eyes of the French enthusiasts themselves. A Harvard professor spent months in Bloodlot's laboratory, and proved to his complete satisfaction that the evidence upon which the wonderful X-Ray discoveries rest is purely imaginary; that French eyes are no better than others, and that all the keen gentlemen who have written volumes upon the subject, are entirely mistaken.

This is the situation at the present time. The controversy has reached international

proportions, and the end is not yet. It reminds one of the student who discovered an extremely delicate test for arsenic, one which would show an infinitesimal portion of a grain in a pound of material. Upon the suggestions of his professor, he tried the test upon material known to be free from arsenic, and the result was quite as positive as before.

Newspaper Mixers.

We have repeatedly had occasion to call attention to the danger of the formulas and advice printed in the "beauty" and "household" columns of the daily papers. The "jolly mixers" of the popular press gaily publish lotions and bleaches in total disregard of all laws of chemistry or pharmacy. Corrosive poisons in face lotions, incompatibilities of all kinds, and chemical crimes abound. One young lady cheerfully directs the "dear reader" to pulverize a substance already sold in liquid form; another gives a formula the chief ingredient of which is oil of bitter almonds.

An interesting question here presents itself. Suppose a reader were to take the penny advice and in consequence sustain injuries more or less severe. Who would be held liable for the damage, the paper, the girl beauty doctor, or the pharmacist who furnished the materials? Although the justice of the matter seems sufficiently plain, we are willing to predict on general principles that the pharmacist would get the worst of it.

The committee which last week called upon the management of the New York Journal should be a permanent organization.

For New Pharmacy Laws.

The season's pharmaceutical legislative campaign is already fairly under way. In New York nothing has yet occurred to stir the committees appointed to look after those matters into activity, but in other States the work has already been well begun. Michigan druggists are out for an amendment to their present law, which is said to lack in stringency and provisions for enforcement. In Tennessee the pharmacists were during the past week aroused to activity somewhat unexpectedly. Without warning to the trade at large, somebody introduced a measure permitting the registration of pharmacists without examination, the only requirement being five years' experience. The druggists immediately entered a vigorous protest, explaining that the measure could not possibly be of service to anyone but a candidate for

registration unable to pass the examination. That should convince all but those who demand material arguments.

The End of a Scandal.

Some months ago the people of this city were treated to a tremendous sensation. A prominent druggist had been arrested on the charge of selling cheap, inferior and poisonous drugs, and startling revelations were to be made later on, more arrests, confiscations and the like. The impression conveyed to the popular mind was that the drug trade is honeycombed with fraud and that no druggist is much better than a common cheap robber.

Last week the case against the prominent druggist was dismissed and the promised exposures, confiscations and wholesale arrests have unaccountably fallen through. The sensation, like its predecessors, has evaporated; not so the ugly impression upon the public mind. Who will now create a counter sensation to relieve the people of the notion that druggists are a disreputable class of poisoners?

Sentiment in the Business World.

Who says that the world of commerce knows no sentiment? The popularity of Joel Banc's drug trade sermons is beyond question; yet that amiable writer deals wholly in sentiment. Mr. White's sentimentality is of the ingenuous, sweet type, but it is sentimentality, as pure and unadulterated as that of Sterne and certain of the old English poets. Sentiment still moves the world, the world of commerce as truly as that of romance, religion and politics.

A curious circumstance about our drug trade sentimentalist is that this unworldly spirit flourishes in the midst of a proprietary medicine establishment. Mr. White is an unusually successful salesman. But, come to think of it, why should not that industry be governed by sentiment as well as the rest of this "oblate spheroid," as Prof. Beal scientifically dubs our planetary abode?

The Question of Salvage.

A body of pharmacists of St. Louis, some time ago, announced their intention to secure some of the goods exhibited at the World's Fair, after the close of the great exposition. It now appears that the success of the undertaking is both limited and doubtful. Representatives of Michigan University had anticipated them and secured the most valuable prizes.

Business enterprise now has a regularly established place on the campus.

C. P.
EMANATIONS

"I SAID IN MY HASTE —"

"Either druggists are the most disreputable scoundrels on the face of the earth, or somebody is doing some tall lying," said the man behind the counter.

"You deal in strong language, this morning," replied the C. P., quietly.

"The case calls for strong language," retorted the druggist. "That firm—you know which firm I mean—claims to have evidence against 7,000 pharmacists in this country. And they have the nerve to add that the list is not complete; that they haven't caught them all yet."

"Well?" inquired the sage.

The old gentleman's friend floundered for a moment in speechless astonishment. "Why don't you say something?" he demanded. "If ever there was a case to get excited about, this is it. Do you believe that yarn? Have fully a fifth of the druggists in the United States sold smuggled stuff?"

"Quite likely!" replied the C. P.

"Is that all?" inquired the druggist, in evident disgust and disappointment.

"The trouble with all you righteous people," began the sage, in his most judicial drawl, "is that you imagine a vast distance between you and the poor chap who is not quite so righteous. You seem to think that an honest man differs as much from a cheat, as black from white. The difference is more like that between the gray of dawn and the gray of twilight. Potentially, every man is a saint and also a sinner. Heredity, training and circumstances have some influence in swinging our inclination one way or the other, but not so very much."

"Do you mean to say," demanded the druggist, "that I, or any other respectable druggist, would stoop so low as to sell imitation products?"

The C. P. discreetly bustled himself with the cigar lighter. "It all depends," he said. "Suppose that you could buy goods precisely the same, as far as any customer was concerned, for a great deal less money; suppose it involved no cheating of the public, merely dodging the payment of a profit to a firm which doesn't need it. Suppose that you were practically certain that you could never be found out. Do you think that you would always have been proof against a combination like that?"

"The principle of the thing is enough," replied the druggist, his chin tilted at a lofty angle.

"Ah, principle!" said the old gentleman. "How many of us make our actions square with our principles? Let me ask you a question—it will not be necessary to reply—have you ever told a lie?"

The druggist showed some signs of discomfort.

"Yet," continued the sage, "you, and everybody else, knows that it is not only dishonest, but foolish to tell lies. It rarely pays, and to be found out is very unpleasant."

"A little misrepresentation is sometimes justified," ventured the man of drugs.

"Yes! That is an easy way out of it," said the old gentleman. "There are so many kinds of deception, some so pleasant and so harmless that we hate to consider ourselves dishonest for using them."

"Some kinds of cheating are worse than others," remarked the druggist.

"There you have it!" exclaimed the C. P. "The relative degree of guilt is adjustable, and that helps us out. If we mean to be very good, we practice only the mildest forms of cheating, such as telling our callers that we are glad to see them, when we are not pleased at all, or passing off a Canadian ten-cent piece for a coin of the realm. If we are bad, we don't try to fool ourselves with the belief that we are not cheating."

"Don't you consider this selling of smuggled drugs a very dishonest form of dishonesty?"

"To be sure!" replied the sage, with emphasis, "but it would not be so considered if there were no law and penalty against it, and if somebody did not periodically make an immense row about it. Did you ever smoke a smuggled cigar?"

The druggist admitted that he had.

"You no doubt enjoyed it more than usual," said the C. P., "and yet you knew that you were cheating your own government all the time you were doing it."

"But, I say," protested the druggist, "you are drawing the line too fine."

"Not at all!" replied the old gentleman. "I am merely trying to find out if there is a line at all between a big cheat and a little cheat."

"Do you mean to say that you see no difference between honest folks and those who deal in fake goods?"

"No, but the difference is not big enough to leave a great deal for those who call themselves honest to brag about. Human nature is human nature. Given the proper incentive, and none of us can be sure that he will resist the temptation."

"Every man has his price, you mean," sneered the druggist.

"I do not like to admit that," replied the C. P. "Some men who could not be bought with money would smoke a smuggled cigar."

Consumption of Sugar.

During the calendar year 1903 the average consumption of sugar in the United States was seventy-one pounds per capita and during the calendar year 1902 it was seventy-three pounds. In the United Kingdom, as estimated by Licht, the average consumption was still higher, reaching ninety pounds per capita during the best sugar year 1902-3. In Switzerland, with only one domestic sugar factory, the average consumption for 1902-3 was sixty-three pounds per capita. In Denmark, the per capita consumption was fifty-two pounds. The larger sugar-producing countries form a marked contrast to those given. In Russia the average consumption per capita was only eleven pounds during 1902-3, less than one-sixth that in the United States. In Austria the per capita consumption was eighteen pounds; in Belgium, twenty-two pounds; in France, twenty-four pounds; in Germany, twenty-eight pounds, and in Netherlands, thirty-one pounds. Spain consumed only eleven pounds and Italy seven pounds per capita, notwithstanding the rapid growth of sugar production in those countries.

FORMATION OF ACETONE.

Experiments to determine the influence of various fats on the formation and excretion of acetone were carried out upon man during periods of hunger lasting two days, and the fats fed were sodium palmitate, tristearin, triolein; the influence of stearic, oleic, palmitic and butyric acid, and of glycerol and sodium bicarbonate was observed (Jour. Med. Research). The acetone was determined in the urine and in the breath. That of the urine was determined by the Messenger-Hüppert method and that of the breath by the method of Muller, modified. Ammonia and nitrogen were also determined in the urine, and the feces were examined for fat, in order to get proof of their absorption. Control experiments showed that acetone increases in the first few days of starvation. Variations of 100 milligrams are within normal limits. With palmitic and stearic acid the most striking feature observed was the lack of absorption—practically eighty per cent. being recovered from the feces. The influence on the excretion of acetone was nil, or else tended to diminish the excretion. With triolein and tristearin, fifty per cent. of the former and seventy-five per cent. of the latter was recovered from the feces. They both retarded the excretion of acetone. Glycerol (10.8 grams) retarded the excretion of acetone to a greater degree than any other of the substances used. Sodium bicarbonate (31.4 grams) had practically no influence on the elimination of acetone. Oleic acid produced a marked acetouria, amounting to thirty-four per cent. and ninety-seven per cent. above the control experiments in the healthy starving subject, while the same quantity of butyric acid was without effect. Sodium palmitate produced a marked acetouria.

Corydalis Cave.

An interesting communication was presented by Gadamer (Chemiker Zeit., Notes on New Remedies) at the recent Congress of 'Naturforscher und Aerzte' on the alkaloids of the flowering herb, corydalis cave. Contrary to the observations of Battandier, the writer failed to find proto-pin in this herb. It was also demonstrated that bulbocarpin was the principal alkaloid in the plant. Among other alkaloids, the two following were more carefully studied; one which has the formula $C_{19}H_{19}NO_4$, crystallizes in greenish-yellow flakes, melts at 230° C., and polarizes to the left. The second has the formula $C_{21}H_{21}NO_5$, crystallizes in friable rectangular columns, melts at 137° C., and is probably closely related to hydrastin. These alkaloids are present in the dried herbs in quantity amounting to about 0.01 per cent.

Turicine.

Turicine, a powdery substance obtained by the condensation of tannin and glutencasein, has been recommended in the treatment of dysentery and diarrhea.

NOTICE.

To Graduates of the Era Course in Pharmacy.

Each graduate of The Era Course in Pharmacy is earnestly requested to send his present address to the director of the course, Prof. J. H. Beal, Scio, Oblo.

OUR
LETTER BOX

MR. FALKENBERG ON THE
REMEDY.

Chicago, Jan. 9, 1905.

Editor The Pharmaceutical Era:

Your editorial in the January 5 Era (page 2) asks the question, "where is the remedy?" Being a man of few words, I think I quote not a suggestion for—but the remedy. See the underscored contentions in Dr. Bertschinger's paper submitted herewith. Twenty years ago the theory therein expressed was my conviction; today I think I know of its truth. The remedy lies in the underscoring. Very truly yours,

FRANK E. FALKENBERG.

The "underscored contentions" to which Mr. Falkenberg refers, form part of a paper read before the Chicago Retail Druggists' Association, last summer, by Dr. Bertschinger, on "The Druggist's True Position." In this paper the author discussed the evils of substitution and argued that druggists and physicians should work together for reform. Mr. Falkenberg's answer to the question is the following extracts (the words underscored by Mr. F. are in *italics*.—Ed.):

CAMPAIGN OF EDUCATION THE REMEDY.

"But the remedy is easy and will put the druggist back to his standing of yore. And it does not consist in substituting a substitute, which is in fact no substitute, but the absolute equivalent. It consists in a campaign of education and publicity and could find its backbone in the *National Formulary*. If the manufacturers have made a success through the use of printers' ink you will only have to get a printer's press *going to show that you do not substitute, but that the manufacturers are the substitutes, substituting name, color and favoring in otherwise identical preparations. Through periodical journalistic advertising you will be able to teach the doctors that the majority of wholesale manufacturers in point of reliability do not differ and that therefore the druggist would be justified in using anybody's make; furthermore, you ought to publicly educate the doctor to the fact that you, with your college training, are more able to make those compounds in your store than an underpaid day-laborer without any responsibility in a wholesale exir factory. Through frequent additions to the National Formulary by a standard pharmaceutical commission of the highest rank (with power to act) the exact formula of any new compound and its *smilns* of other manufacturers ought to be given, and once and for all time the druggists ought to be given and to take the right to use his own raw material in manufacturing these articles—and if you are afraid to do so, a test case ought to be made in the courts to define your rights.*

PHARMACOLOGICAL EDUCATION FOR DOCTORS.

"The same campaign of education ought to go toward the general public regarding patent medicines. Finally, not the least stress should be laid toward enacting laws

to further the course of study of medicine in order to give the student a proper pharmacological training which will enable him to write prescriptions as of yore and become independent of the *pons assini*—the asses' bridge of the manufacturers' current literature.

"Then the druggists' shelves will get empty of dead weights; his capital will turn round quicker and the whole brotherhood will again become the well-to-do scientific people of former decades, held in high esteem above all commercial trades."

PROF. DIEHL ON EXISTING
CONDITIONS.

Louisville, Ky., January 12, 1905.

Editor The Pharmaceutical Era:

Your very cordial request that I shall address a few words of greeting to my fellow pharmacists through the columns of your valued journal, is doubtless

PROF. C. LEWIS DIEHL.

prompted by your recognition of the fact that, although I have severed my active participation in the drug business, I have by no means relinquished my interest in a profession with which I have been identified nearly half a century; an honorable profession, of which I felt proud to be a member, and toward the advancement of which I considered it a privilege, and found it a labor of love, to contribute a modest share in the degree of my ability.

That I have nevertheless been compelled to relinquish my active connection with the drug trade is due, partly to periods of illness, which at times incapacitated me from giving strict attention to business details, but more largely to the fact that, conducting my business on a professional basis, I have failed to recognize the drift of modern pharmacy into commercialism, and have been unable to reconcile existing conditions with professional demands.

You may therefore readily understand that I am not so closely in touch with the efforts of the retail drug trade to solve some of the perplexing problems, which has confronted it—increasingly—for a number of years, as to add anything to what has been so thoroughly discussed by others, who are in close touch with the situation.

Tendering to my fellow pharmacists, however, my sincere wishes, and the hope that this "New Year" may prove the turning point toward renewed prosperity, I venture to make the suggestion that the

permanent prosperity of pharmacy can only be secured if the order of existing conditions is reversed; if, rejecting the obsolete, pharmacists will return to the older, conservative, but professional methods of conducting their business; and if, accepting the best of modern commercial methods, they will purge the drug business of the quackery that has, as I see it, been a most fruitful cause of the present ruinous condition of the drug trade. That this may be accomplished, is the profound wish of, yours truly,

C. LEWIS DIEHL.

PHARMACY OF THE CIVIL WAR.

New York, Jan. 13, 1905.

Editor The Pharmaceutical Era:

The Committee on Historical Pharmacy of the A. Ph. A., has undertaken to collate data bearing on the military and naval pharmacy of the Civil War, and has issued an appeal for aid from all who have any knowledge of this subject. The men who participated in that struggle are fast passing away, and it is to be hoped that the committee will be successful in its effort. Even the most isolated facts may prove of value as supplementing information gathered from other sources. Will you please bring the matter to the attention of your readers, and request all who are in a position to furnish any information on the subject, or who can suggest possible sources of information, to communicate with either one of the officers of the section, as follows: Albert E. Ebert, chairman, 426 State street, Chicago, Ill.; Prof. Edward Kremers, historian, University of Wisconsin, Madison, Wis., or the undersigned.

CASWELL A. MAYO,
Secretary.

66 West Broadway, New York.

MR. EBERT ARGUES FOR MANN
BILL.

Chicago, January 12, 1905.

Editor The Pharmaceutical Era:

"Do you consider that substitution in the case of prescription drugs is increasing? In answer to this, I would say: Human nature is the same to-day that it was when Adam, in the garden of Eden, was tempted to bite into the apple. If he had not been tempted, he would not have fallen and there would not have been any need of pure or adulterated medicines to be furnished to mankind by druggists, as there would not have been any ills to cure.

Therefore, temptation is the existing evil, and we druggists of this country should make every effort to remove this evil by asking the United States Senate to pass at this session the Mann bill, which is at present before it. This is the greeting for the new year from, yours truly,

ALBERT E. EBERT.

ARGUMENT FOR SALESMAN'S
CARD.

Chicago, January 12, 1905.

Editor The Pharmaceutical Era:

It would be useless to deny that I am dead set against the present patent law, but I am frank to say that the Farbenfabriken of Elberfeld Co. have treated the violators in the aristol cases as liberally as could be expected and deserve credit

for giving the bulk of violators the benefit of the doubt by assuming that they were duped. I certainly do not love the patent law, but I hate substitution worse! and above all—leaving the questions of honesty and ethics at rest—if the druggist had paid only one per cent. attention to what has been drummed into him at meetings, this visitation would have been avoided; I refer to salesman's cards.

Every issue of "Notes" urges druggists to ask for these cards—at C. N. D. A. and district meetings the salesman's card is the topic. Had these druggists asked the peddlers of bogus aristol for this card, the violations would not have happened—for those peddlers have not got the card. It seems as if it was next to impossible to coax the bulk of druggists to the road they should travel for their welfare.

W. BODEMANN.

LIKES OUR NEW DRESS.

Lewistown, Ill., December 30.

Editor The Pharmaceutical Era:

I like the "new dress" of The Era better than I like the type, but I cannot get along without the paper, so will put up with the type and will not grumble.

I have been successful in winning two prizes for window displays during the past year. I won second place in the Pierce window contest (\$140 cash register) and the first prize (\$25) in the Spiro Powder contest, in a field of one thousand contestants. I look upon "Window Notes" as one of the very good things in The Era. Yours truly,

GEO. F. LOAR.

NOT FOR TWICE ITS COST.

Thomasville, N. C., December 27, 1904.

Messrs. D. O. Haynes & Co.,

New York.

Gentlemen: Enclosed find check for \$2.75, for which please renew my subscription to your most excellent journal, The Pharmaceutical Era, and send me one Era binder. I have been taking your journal for the past four years, and like it better now than ever before. I would not be without it for twice its cost. With best wishes for your continued success, I am, yours very truly,

CHAS. R. THOMAS.

Skimmanin.

Skimmanin is the name applied by Houda to an alkaloid, the toxic principle of the fruit of *Illicium religiosum* or *shikimi*, of India (Arch. d. Exper. Path. u. Pharm.). The alkaloid occurs in the form of crystals which are insoluble in water, difficultly soluble in ether and carbon disulphide, soluble in alcohol and chloroform, and melts at 175° C. Crystallizable salts of the alkaloid are readily obtained. A solution of the alkaloid in concentrated sulphuric acid produces a brownish-yellow coloration, which soon changes to a brownish-red on the addition of a few crystals of potassium chlorate.

Formane.

Formane, a combination of formaldehyde and menthol, is stated to be a useful remedy for cold in the head (Bull. Gen. de Ther.). The following inhalation is suggested: Menthol, 120 grains; formalin, 75 grains, geranium oil, 10 drops. Use frequently.

MODERN PRESCRIBING.*

BY M. CLAYTON THRUSH, PH.M., M.D.
Instructor in Pharmacology and Therapeutics, Medico-Chirurgical College, Philadelphia.

The object of this paper is to show the trend of the physician in his prescribing at the present time. Five hundred prescriptions were carefully examined as they were received and filed in each of two of Philadelphia's best prescription stores, both of which are managed by able and energetic pharmacists who have had collegiate training.

Five hundred prescriptions were examined in each store, in order to make proper comparisons, and also to give a more general report of the type of the modern prescription.

These stores were so located that they received prescriptions from all the leading physicians of the city, and a large number of the prescriptions were from the pens of the professors and instructors on our medical school and hospital staffs, as well as a number from physicians in general practice, so that these prescriptions represent the type of prescription as written by our best practitioners in the twentieth century.

The following table gives the results of my investigation, these prescriptions all being written since January 1, 1904.

1,000 PRESCRIPTIONS		Store Store Tot.	
		No. 1. No. 2. P. C.	
Number containing chemical incompatibilities	5	5	1.3
Number containing pharmaceutical incompatibilities	10	3	1.3
Number containing therapeutic incompatibilities	1	0	0.1
Number containing 6 or more ingredients	34	16	5
Number containing 2 to 5 ingredients	347	371	71.8
Number containing one drug or preparation	119	113	23.2
Number containing only official preparations	244	240	48.4
Number containing proprietary preparations in whole or part	195	164	35.9
Number containing patent medicines	1	1	0.2
Number in which the metric system was employed	3	2	0.5
Number containing non-official preparations in whole or part	60	95	15.5
Number written correctly	328	293	62.1
Total prescriptions examined	500	500	100.0

Now, let us consider these prescriptions under the various headings as classified above:

CHEMICAL INCOMPATIBILITIES.

Only those were considered where a dangerous or objectionable compound would result from dispensing the prescription as ordered (intentional incompatibilities not being considered), and we find eight in the one series and five in the other. This is a good showing, but it would have been far better if there had been none, as in some instances the prescriber had to be

notified and the prescription altered, in others a "shake well" label would suffice to obviate possible danger.

This shows two things; first, the importance of having our prescriptions compounded by competent pharmacists who have a thorough knowledge of chemistry and who can act as a "safety valve" when dangerous compounds are ordered, either through oversight or ignorance on the part of the prescriber. Second, the importance of every physician having a general knowledge, at least, of chemical combinations, and how to intelligently combine drugs in order to obtain the best results without forming dangerous compounds.

PHARMACEUTIC INCOMPATIBILITIES.

This heading is of particular importance to the pharmacist, as it is his duty to dispense as elegant and palatable preparation as possible.

As in the first group, only those prescriptions were classified which were particularly objectionable or unsightly in appearance, nauseating in taste or difficult to dispense as ordered. We obtained ten from the one store and three from the other. It has been frequently said that if a physician had to take some of the "potions" that he orders, there would be a radical change in modern prescription writing.

Every medical school should give a complete course in prescription dispensing in the pharmaceutical laboratory, as this knowledge would be of inestimable value, not only on framing elegant combinations, but would be of especial service to the country practitioner, who is compelled to compound his own medicine.

THERAPEUTIC INCOMPATIBILITIES.

Only one prescription was found that was particularly antagonistic from a therapeutic standpoint, and this shows that the average medical student is more thoroughly trained in therapeutics than he is in pharmacology.

SIX OR MORE INGREDIENTS.

Thirty-four in the one series and sixteen in the other contained six or more ingredients, and it was a noticeable fact that the majority of these prescriptions were written by a certain few physicians, who had drifted into poly-pharmacy. It is pleasing to note that this tendency is gradually dying out, and we hope that the day is not far distant when the old "shot-gun" prescriptions, of from twelve to fifty ingredients, will be framed as curiosities of by-gone days.

Another noteworthy fact is that these prescriptions are mostly written by the very old practitioners. If this improvement had only occurred years ago, homeopathy would not have gained its present foothold; then, again, the system of prescribing as used in our best hospitals is so designed as to use only single drugs or preparations, and to make these as elegant and palatable as possible—a good step in the right direction.

FROM TWO TO FIVE INGREDIENTS.

This constitutes the great majority, almost three-fourths, of the prescriptions, and shows a great improvement over the prescription of a century ago, when it was the popular belief that the greater the number of ingredients the greater the chance of cure. This rule would apply where ignorance in diagnosis exists, as by this theory the greater the number of ingredients present, the more likelihood

*Read before the Philadelphia County Medical Society, and reprinted from the Journal of the American Medical Association.

of administering something that will be of service. A good example of this is the old Warburg's tincture; the original formula as directed by Dr. Warburg contained the old "confectio democratiss." This was a complex astringent confection containing opium, and originally had sixty-four ingredients, many of the constituents being unobtainable at the present day.

ONE DRUG OR PREPARATION.

It is pleasing to state that the great number of these prescriptions were written by our most able practitioners, men who are prominent in medical teaching and while they do not represent quite one-fourth of the total number, this is not a bad showing.

ONLY OFFICIAL PREPARATIONS.

Approximately one-half belonged to this group, and it will be noted the very slight variation in this respect in the two series. This is likewise encouraging, and may the day be not far astant when the number will be increased still more. A point of interest observed here was the more educated the physician, the greater the use of the United States Pharmacopœia.

PROPRIETARY PREPARATIONS IN WHOLE OR PART.

One hundred and ninety-five of the one series and 164 of the other, about thirty-six per cent., contained proprietary preparations, or, in other words, more than one in three prescriptions.

This is a good showing, when we consider that the manufacturing chemists employ persuasive salesmen, who visit every physician's office at stated periods, and present him with a liberal supply of their "ideal" preparations, which are always "superior to any other made," and which are usually combined by a "peculiar" chemical process that enhances their therapeutic activity.

PATENT MEDICINES.

Only two of the prescriptions were for patent medicines, and one of these was written by an "osteopath," so that we are only responsible for one, and this was one too many. How any regularly qualified practitioner of medicine could so disgrace himself and his profession as to order patent medicines, is beyond any comprehension.

THE METRIC SYSTEM.

Only three of the one series and two of the other demonstrate the fact that the metric system is but little employed at the present time, and its use does not materially increase, as my own experience in the retail drug business for a number of years corroborates. One fact is observed, when a practitioner uses the metric system, he uses it exclusively. It is to be regretted that the profession does not adopt this system and use it exclusively, as it is simpler, more scientific and in every way preferable to our present system of weights and measures. The leading medical schools give their students a thorough training in this system, and teach them how to convert the various denominations into the English system, and vice-versa, but after leaving college halts this is all thrown aside.

PRESCRIPTIONS CONTAINING NON-OFFICIAL PREPARATIONS IN WHOLE OR PART.

In this group are classified prescriptions containing commonly used preparations which are not recognized by the United States Pharmacopœia, but which can be

prepared by any pharmacist, such as elixir of iron, quinin and strychnin. In this group we have sixty in the one series and ninety-five in the other, showing considerable variation, a noteworthy feature being that the series that yielded a large number, thirty-four, of the polypharmacy type of prescription, yielded the small number, sixty, of this type, while the other series that yielded sixteen of the former, yielded ninety-five of the latter. A proportionate comparison.

PRESCRIPTIONS WRITTEN CORRECTLY.

The criticisms in prescription writing applied to the endings used in designating the drugs or preparations and the use of the proper official names as embodied in the Inscription, and the proper phraseology as applicable to the subscription. As a rule, the prescriptions of the teaching class of practitioners were correctly written to a great extent, while those of some of the regular practitioners were carelessly written, and those of others showed a marked defect in the knowledge of prescription writing. This was especially noticeable among the prescriptions of the more recent graduates. Less than two-third were correctly written, and this is largely due to the deficient training in this important subject in the average medical school. Several of the prescriptions were written by a young practitioner who received the highest average among 400 men at a recent examination of the State Medical Board, yet every one of his prescriptions showed errors in writing and in combining drugs. This merely shows that his training was deficient in this important subject.

IMPORTANCE OF PROPER TRAINING.

Now, who is responsible for this deficiency? Is it the teacher, the means at his command and time allotted for teaching the subject, or the student, that is at fault? The teacher is often a physician, who has never received any practical pharmaceutical training other than the "smattering course" that he received as a medical student, and, as a rule, on account of limited training and lack of interest, he follows the same rut as his predecessor; as a consequence, the pharmaceutical laboratory is deficient in its equipment and very unattractive.

Because of these facts, officers and trustees consider this branch of medicine unimportant, and the student, not realizing the value of a pharmaceutical training, completes the course ignorant of its many valuable points, and usually not until he reaches the senior year and commences to prescribe, does he fully realize his deficiency in the knowledge of the mode of preparations, appearance, administration and effects of combining drugs, the very ammunition he is to use in firing his gun of knowledge to combat disease. It is not, however, until as a physician, authorized to use blank and pencil, and brought face to face with the patient, that he most seriously and keenly feels the sting of his pharmaceutical ignorance; tries to formulate a palatable mixture and fails, expects to find a nice, clear solution when he calls, only to find one with an unsightly and often dangerous precipitate. It is now, after repeated failures, that the horizon is filled with attractive-looking proprietary preparations, and these are substituted for the official drugs, because the label states that they are specific for the disease under

consideration. As a result, his habit once established is continual through life.

OSTEOPATH AS A PRESCRIBER.

Three of the above prescriptions were written by "osteopaths" and they all showed utter ignorance of the first principles of prescription writing. This should be a warning to us, because, if osteopaths should receive recognition in the various States, they will attempt to prescribe medicines and to treat all diseases, not limiting themselves to their own particular methods. The medical profession should be aroused to this matter and take action before it is too late. In the past few months several seathing editorials have appeared in the daily press relative to the large number of incompetent practitioners who are turned out by our medical schools, and the State Board suggests an investigation of the present methods of teaching, and the adoption of a more comprehensive curriculum.

However, in looking over the examination results of the various State Boards as compiled in the August 23, 1904, number of The Journal of the American Medical Association, we find that the percentages of failures from the Philadelphia medical schools vary from none to 8.6 per cent. for the year 1903, and this was the most satisfactory showing of any State in the series, when one considers the number of students examined.

The total number of candidates examined in the thirty-seven States was 5,027. They represented 151 American colleges, 8 Canadian institutions, and there were some representatives of foreign schools. Of the whole number examined, 4,312 passed and 715 failed. The percentage of failure was 14.2, but of the Philadelphia students but 5.48 per cent. was found wanting. This was a lower percentage than was shown by any other State, or by the outsiders. The percentage of failures from New York was 7.12; of Boston, 7.28; of Chicago, 8.18; of Washington, 18.84; of Baltimore, 22.70; of Louisville, 27.67, and of St. Louis, 32.67.

QUESTIONS OF MEDICAL BOARDS.

Again, at the recent examination of a State Medical Board, the following are two of the questions asked under materia medica:

1. Name the drug of which pilocarpin is the active principle, and give the dose of the tincture that would be equivalent to one-twentieth grain of pilocarpin.

In the first place, there is no official tincture of pilocarpus, and hence no recognized tincture of definite strength, and the majority of our standard medical works do not mention any strength for the tincture, and those that do show a variation in strength, so that this question is unanswerable. Books like those of Renington, Casper, Colenat and United States Dispensary on pharmacy, and of Shoemaker and Potter on materia medica, do not mention any strength for the tincture, and, granted that the strength was given, the yield of alkaloid varies from 0.25 to 2 per cent. in different lots of the drug, as all the books state; therefore, how in the world can a student answer such a question?

2. Give the dose of tincture of nuxvomica equivalent to one-thirtieth grain of its principal alkaloid, and name two official

preparations into which this active principle enters.

This is a more desirable question, but even here very few students can remember the strength of the tincture as indicated in the United States Pharmacopœia, and for the second portion of the question, a number of the students gave the salts of strychnin instead of the preparations asked for. After conversing with a number of the candidates, as they came from the examination room, I found that not one answered these questions correctly.

If the medical boards desire less failures, let them ask: First, questions that can be answered; and, second, questions that when answered are of some practical value, and not unanswerable and unusual questions that no one could answer intelligently, even if they had access to the text-books. The object of State examining boards is to determine the fitness of candidates to practice medicine and surgery, and this can only be done by asking practical and useful questions, that every well-educated physician should be able to answer intelligently, and not by asking unanswerable or unusual questions, the knowledge of which would be of no practical value, and questions which examiners could not answer themselves without consulting the proper books.

CONCLUSIONS.

The above investigation warrants the following conclusions:

1. That the trend of modern prescription writing is in favor of proprietary preparations.
2. That the use of polypharmaceutical preparations is diminishing to a great extent, and their use is chiefly confined to the older practitioners.
3. That the number of incompatibilities observed is greater than it should be.
4. That the metric system is but little employed at the present time in prescription writing, a condition to be deplored.
5. That over one-third of the prescriptions are incorrectly written, and this is especially noticeable among the younger practitioners.
6. That certain non-official preparations are quite popular, and that some of these deserve admission to the United States Pharmacopœia.
7. That the more educated the physician the greater the use of the pharmacopœial preparations, and the greater the tendency to simple instead of complex non-scientific, polypharmaceutical and proprietary preparations.

Hugenschmidt's Dentifrice.

Menthol	0.5 gram
Salol	4.0 grams
Soap	10.0 grams
Calcium carbonate	10.0 grams
Magnesium carbonate	30.0 grams
Oil of peppermint	1.0 gram

In cases where the teeth are covered with much tartar add to the formula 5 to 10 grams of powdered pumice stone.—(L'Union Pharm.).

Platinum in Oregon.

Platinum has been found as a coarse, black powder near bedrock, in certain places in Southern Oregon. The platinum sands, obtained by the washing-out process, contain both free and combined platinum, and rhodium, osmium, iridium and palladium.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 5 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Saturated Solutions and Prices.

(W. C. G.)—writes: "I would like a little information regarding a certain combination of drugs. I asked a local druggist if he could put up a saturated solution of about equal parts of Epsom and Glauber salts, containing about 5 minims of oil of wintergreen to the dram. He said it was impossible, but he could get 5 minims of the oil to the pint; however, it might be possible to make an emulsion. He quoted a price of about forty-five cents a gallon for the solution, contains extra.

"I then wrote to one of the largest chemical manufacturing houses in the country, whom I have always considered reliable; they have a reputation second to none. Their reply was: 'We are requested to estimate the cost of making an emulsion to contain oil of wintergreen, 5 minims to the dram, and equal portions of Glauber and Epsom salts to point of saturation. It is impossible to make an emulsion of this formula. We presume that what you want is a saturated solution with 5 minims of wintergreen oil to each fluid dram, and as this is pharmaceutically feasible, we have recorded the formula, etc. We beg to quote at \$1.75 net, per gallon, bulk, or at \$1.40 net, per gallon, in five gallon lots, bulk.'

"After getting this letter, local chemists said it was impossible. If that amount of oil was put into the solution, it was filtered out later as the solution could not be made to hold it. I submitted the proposition to other firms. One offered the following:

'Epsom salt, 4 oz.; Glauber salt, 4 oz.; calcium phosphate, precipitated, 1 oz.; oil of wintergreen, 1 oz., 160 minims. One gallon at \$3.75, five gallons at \$2.95 per gallon.

"Another wrote:

"In reference to a saturated solution of Glauber and Epsom Salts, equal parts, flavored with oil of wintergreen: We would not care to undertake to incorporate with the above more than 30 minims of oil of wintergreen to the gallon, and, in fact, we are quite sure that this is all the solution will carry. Supply same at \$1.50 per gallon."

"Personally, I did not think such a combination feasible, but did not have time to experiment with it. I asked other firms for information, as my time was more valuable at other work. Every reply aroused more interest on my part. I have not the time to figure out the why and

wherefore, but am satisfied that there is either ignorance or crookedness somewhere. I submit the matter to you and your readers. When it is fully threshed out, I shall be glad of my share of the wheat."

There is certainly a diversity in the character of the replies our correspondent reports in the above communication. On general principles, however, he will find that it is impracticable to attempt to combine any great quantity of oil of wintergreen in aqueous solution, whether the solution contains Epsom and Glauber salts, or not. In practice, the easiest way to make such a solution would be to prepare a wintergreen water after the general process of the pharmacopœia, and dissolve in it to saturation equal quantities of the salts. About one part of oil is sufficient to saturate 500 parts water. As a matter of fact, the official water of this type require 2 cc. of oil to 1,000 cc. of product.

An emulsion to contain these salts in any considerable quantity is impracticable, as neutral salts are incompatible with emulsions, though small amounts of salts may be combined if the emulsions are carefully manipulated. As to using another solvent or combination of solvents, we are not informed. A mixture of alcohol and water would allow the incorporation of more oil of wintergreen, but at the same time, it would materially lessen the quantity of salts which otherwise would be dissolved, as both of the latter are practically insoluble in strong alcohol.

The quantity of the two salts in equal amounts necessary to produce a gallon of saturated solution can only be determined by actual experiment. As given in the pharmacopœia, the co-efficient of solubility in water of Epsom salt (magnesium sulphate) is 0.8, and of Glauber salt (sodium sulphate), 2.8, at 15° C., but the solution of the salts in the presence of each other would modify these figures. The quantity of salt in any saturated solution varies with the temperature, and in calculating the amount necessary to produce saturation, account must be taken, also, of the water of crystallization, the percentage of which varies considerably in different samples.

At the price quoted above for the solution he intended to make, the retail druggist is nearest to the actual cost, but he apparently does not allow himself very much for his labor. We submit the query to our readers.

Silver Polish.

(F. C.)—A silver polish of the consistency of putty may be made as follows:

Oxalic acid	1 part
Oxide of iron	25 parts
Rottenstone	20 parts
Palm oil	60 parts
Vaseline	4 parts

The oxide of iron may be Venetian red. Both it and the rottenstone must be free from grit; oxalic acid is poisonous.

A polishing soap especially suitable for silver, is prepared as follows: Wash commercial colcothar in water six or eight times and then dry it. Next prepare a soap solution by dissolving at moderate heat 6½ pounds of cocoa soap, cut in pieces, in soft water. Mix intimately ½ pound of the prepared colcothar rubbed up with a little water and 5¼ ounces of

purified ammonium carbonate, finely pulverized, and add the cold soap solution, with constant stirring. Keep the polishing soap thus prepared in stone jars closed with oiled paper (Techno-Chemical Receipt Book).

Polishing Paste (Hard)—Rottenstone, 4½ pounds; oxalic acid, 4 pounds; turpentine, 1 ounce; sweet oil, 3 ounces; boiling water, 16 ounces. Dissolve the acid in water, add the rottenstone and incorporate the other ingredients to make a stiff paste. (Era Formulary).

Furniture Oil or Polish.

(F. C.)

Furniture Oil.

(1.)

Benzoin in fine powder	2 ounces
Hydrochloric acid	5 fl. ounces
Vinegar	15 fl. ounces
Linseed oil	15 fl. ounces

(2.)

Alkanet root	120 grains
Linseed oil	5 fl. ounces
Oil of turpentine	1½ fl. ounces
Vinegar	1½ fl. ounces

Furniture Polish.

(1.)

Hard soap 2 ounces
White beeswax 1 ounce
Yellow beeswax 1 ounce
Oil of turpentine 40 fl. ounces
Distilled water, boiling, 40 fl. ounces
Melt the beeswax and add the turpentine. Dissolve the soap in the distilled water and add to the beeswax solution with constant stirring.

(2.)

Ammonium oleate	1 ounce
Solution of ammonia	1 fl. ounce
Shellac varnish	3 ounces
Linseed oil	3 ounces

(3.)

Beeswax 1 ounce
Soft soap 1 ounce
Oil of turpentine 3 fl. ounces
Pearlash 60 grains
Extract of logwood 120 grains
Boiling water 3 fl. ounces
Melt the beeswax in the oil of turpentine. Dissolve the soap, pearlash and extract of logwood in the water. Add gradually to the warm mixture of oil of turpentine and wax, and rub in a mortar until cold.

Weather Barometer.

(F. H. P.)—"Can you inform me, through The Era, what the substance is sometimes used in advertising schemes, that will change color on changing of the air? It is used as a sort of a barometer."

Cobalt salts have the property of changing from blue to pink as they absorb moisture, so that in dry weather, paper or fabrics dyed with a solution of chloride or nitrate of cobalt will acquire a blue tint, but as the atmosphere becomes damp, the paper or fabric changes to a pink color. The same reaction is witnessed in writing done with the so-called "sympathetic ink," made from a solution of chloride of cobalt. A solution of this salt is almost colorless, and writing traced with it is invisible on white paper. But if the paper be warmed, the compound gives up the water which it has been holding in chemical combination, the deep anhydrous chloride of cobalt is produced, and the writing is very plainly seen. The writing dis-

appears again as the paper cools, because enough water is absorbed from the air to cause the re-formation of the colorless hydrated compound.

Here are some formulas for window pane barometers which may prove helpful:

(1)—Chloride of cobalt, 1; gelatine, 10; water, 100. (2)—Chloride of copper, 1; gelatine, 10; water, 100. (3)—Chloride of cobalt, 1; gelatine, 20; water, 200 parts; nickel oxide, ¼, chloride, ¼. The variations of color will indicate the probable weather. In damp states of the atmosphere the glass will be almost colorless, but in dry weather No. 1 will assume a blue, No. 2 a yellow, and No. 3 a green tint.

See also The Era of November 20, 1902, page 527.

Essence of Pepsin.

(R., Penna.)—Try one of the following formulas, the first being from the Hospital Formulary of the Department of Charities, this city:

Pepsin 2 drams
Anise water 1 fl. ounce
Dilute hydrochloric acid 2 fl. drams
Glycerin 4 fl. drams
Deodorized alcohol 1 fl. ounce
Sherry wine 1½ fl. ounces
Simple elixir, enough to make 1 pint
Mix and filter. Dose—1 to 2 fluid drams.

(2.)

Pepsin, in scales 1 ounce
Diluted hydrochloric acid 3 fl. ounces
Sherry wine 20 fl. ounces
Rennin 800 grains
Distilled water, a sufficient quantity to produce 80 fl. ounces

(3.)

Scale pepsin 128 grains
Dilute hydrochloric acid. 60 drops
Glycerin 4 ounces
Best sherry wine 4 ounces
Distilled water, enough to make 16 fl. ounces
Mix the glycerin, water, and acid; dissolve the pepsin in the mixture, and add the wine and some talcum (about ½ ounce). Let stand for two weeks, with frequent shaking, and filter. This pepsin solution, according to the author, "will not curdle milk (that property being imparted by rennet), but it is an elegant preparation"; contains 1 grain of pepsin in each fluid dram.

"Beatin."

(H. H.)—We are unable to find this name in any list of new remedies at our command. The spelling of the word, however, suggests that either "betain" or "betin" may be intended. The first, "betain," is a substance obtained by the oxidation of cholin. It is also found already formed in the sugar beet. According to Waller and Blummer (British Med. Jour.) betain extracted from raw beet sugar, possesses a well-marked, although not very powerful, poisonous action upon the animal organism. Syrup made with the sugar gave a cadaveric odor suggesting the presence of cholin and betain. These authors also state that about 44 grams of the hydrochloride salt were extracted from 1,000 grams of the material. Tested

upon animals in doses of .1 to .15 gram per kilogram of body weight and given intravenously, fatal doses were found to paralyze the heart, while smaller doses caused a rapid fall of blood pressure. "Betin," a so-called Eclectic resinoid, is prepared by precipitating tincture of the common beet. It has been proposed as a substitute for ergot, and is listed in The Era Price List at \$1.80 per ounce.

Hair Dye.

(G. T. D.)—We cannot give the formulas for the proprietary article. However, the following formulas from previous volumes of The Era may answer your purpose:

Blonde No. 1.

Sol. A—

Silver nitrate	1 gram
Bismuth subnitrate	2 grams
Water	10 grams

Sol. B—

Potassium disulphide 1 gram
Water 1 gram
Carefully remove all grease from the hair, dry and apply solution A. One hour later apply solution B.

Blonde No. 2.

Sol. A—

Tin chloride	2 grams
Calcium hydrate	3 grams
Water	10 grams

Sol. B—

Potassium disulphide 1 gram
Water 1 gram
Employ as above.

Blonde No. 3.

Sol. A—

Calcium sulphide	1 gram
Water	20 grams

Sol. B—

Solution of ammonium sulphide.
The color produced appears lighter or darker, in proportion, as more is applied to the hair of solution A or solution B. This dye is known as "Teinture Blonde Americaine." A "one-bottle" preparation, which may be made to produce the various shades of brown is this one:
Silver nitrate 70 grains
Stronger water of ammonia q. s.
Orange flower water ½ ounce
Glycerin ½ ounce
Distilled water, to make, 4 ounces
Dissolve the silver nitrate in two ounces of water and add stronger water of ammonia until the precipitate first formed is dissolved. Then add the other ingredients. Preparations of this character should be kept in dark glass bottles.

Another one-bottle preparation:
Nitrate of copper 360 grains
Nitrate of silver 7 ounces
Distilled water 60 ounces
Water of ammonia, a sufficiency.

Dissolve the salts in the water and add the water of ammonia carefully until the precipitate is redissolved. This solution, properly applied, is said to produce a very black color; a lighter color is secured by diluting the solution. Copper sulphate may be used instead of the nitrate.

Liquid Soap for Shampooing.

(S., S. & Co.)—Koller gives this formula, which he says makes a liquid soap that will lather freely: White soap, 20 parts; distilled water, 30 parts; alcohol

(60 per cent.), 60 parts; potasa, 1 part; perfume, q. s.

Or, 1 part of caustic potash is dissolved in an equal quantity of water and shaken well for ten minutes with 4 parts of oil—olive oil or sesame oil—and $\frac{1}{4}$ part of alcohol. After standing for an hour, with frequent shaking, the mixture is diluted with an equal volume of water, and left for several days before filtering. The soap has the consistency of thick glycerin, contains an excess of fat, and shows a content of water up to 70 per cent. of water.

Here are two formulas for liquid shampoo:

(1.) Fluid extract of quillaya, 2 parts; eau de cologne, 2 parts; glycerin, 1 part; alcohol, 4 parts; rose water, 7 parts.

(2.) Alcoholic ammonia, $\frac{1}{2}$ fluid ounce; tincture of quillaya, $\frac{1}{2}$ fluid ounce; essence of bouquet, 2 fluid drams; alcohol (90 per cent.), sufficient to make 8 fluid ounces.

Butter Color.

(E. R. N.)—Annatto is the basis of nearly all butter color, though turmeric is sometimes added to modify the shade. Dry colors used for the purpose are frequently found to contain annatto, bicarbonate of sodium, borax, etc. Here are two formulas:

(1.)

Annatto 1 ounce
Turmeric 1 ounce
Olive oil 3 ounces
Spanish saffron 1 dram
Alcohol 5 drams

Macerate the annatto and the turmeric in the oil for four days, and the saffron in the alcohol for the same time. Filter the expressed liquids and add enough oil to complete the same measure of the former; mix the two solutions and expel the alcohol by gentle heat.

(2.)

Annatto seed 15 pounds
Cottonseed oil 10 gallons
Heat the oil to a temperature of 212 degrees F., add the annatto seed, and allow to macerate for 12 hours. Let settle, and pour off the clear, dark-colored oil.

Huckleberry Phosphate.

(H. L. S.)—We are unable to find in any of the soda water formulas at hand, a formula for a "huckleberry drink." However, it is quite probable that such a drink might be easily concocted. We offer the following in the way of a suggestion:

Huckleberry Phosphate — Huckleberry juice, 1 quart; sugar, about 6 $\frac{1}{2}$ pounds, or enough to make a good heavy syrup. For the "drink," take of the syrup 1 ounce; soda water, large stream only, 7 ounces; one dash of acid phosphate. Stir with a spoon. Other modifications may be easily worked out by a little experimenting.

Manufacturers of Tooth Powder Cans

(H. C.)—Manufacturers of tin boxes for tooth powder are: The American Can Co., 11 Broadway, this city; Burdick & Son, Albany, N. Y.; John Dunlap & Son, Pittsburgh, Pa.; Rumlill & Co., Boston, Mass.

We are informed that the first named can supply the particular kind you name. A letter addressed to any of the manufacturers named would probably bring you just the information you seek.

Elixir of Lactated Pepsin.

(R. Penna.)—A typical formula for an elixir containing pepsin and lactic acid is No. 59, of the National Formulary. Another formula which has been published under the above title is:

Scale pepsin	128 grains
Pancreatin	64 grains
Diastase	9 grains
Hydrochloric acid	6 drops
Lactic acid	12 drops
Compound tincture of car-	
damom	2 ounces
Elixir of orange, enough to	
make	16 ounces

The glycerin, water and acid are mixed, the solids dissolved in the mixture, the wine added, and allowed to stand during two weeks before filtering, shaking the mixture frequently.

The National Formulary directs that the best commercial variety of diastase, capable of converting the largest amount of starch into dextrin and glucose, should be used for these preparations.

Paste for Storage Batteries.

(F. W.)—We cannot give the formula for the "paste" of peroxide of lead used in storage batteries. However, we are told that in practice, litharge is placed in a concentrated solution of caustic potash and boiled. A lead plate boiled in this solution will acquire a coating of spongy lead half an inch thick, which can be pressed to a very thin covering.

Formulas Wanted.

(H. J. L.)—"Formula and process for coating silk thread with a waterproof material which is not affected by wear or tear."

(H. L. S.)—"Formula for 'Dr. Pepper,' a soda drink."

FORMALDEHYDE TESTS.*

BY ALBERT F. JUDD.

The detection of formaldehyde appears to present to analysts many difficulties due to the unreliability of methods now in vogue.

While there are many methods used in practice, most of them are difficult to carry out and require too much time for a busy analyst; besides, at the best, there is always some doubt as to the correctness of the result. The one most generally used is sulphuric acid, containing a trace of ferric salt, which, in the presence of lactalbumin, gives a purplish coloration; this, therefore, can only be used for detecting formaldehyde in milk or in the presence of this peculiar albumin.

The same test wherein hydrochloric acid is used instead of sulphuric acid, does not seem to be reliable as milk which had not responded to the sulphuric acid test, and another test to be described later, gave as great a coloration as it did in milk, which, beyond doubt, contained the aliterant.

*Read before the Pennsylvania Pharmaceutical Association.

The older method consisted in distilling off a few cubic centimeters of the liquid to be tested and treating it with ammoniacal silver nitrate solution, which, if formaldehyde be present, gives the characteristic mirror. This method is used to some extent at the present time. The serious objection to the silver test is that any aldehyde will produce the same effect, and even sugar, chemically an aldehyde, will give like reactions if used in original solution.

Unfortunately, most text books which are used in our colleges, either fail to give any reactions for formaldehyde, or at best, give only general reactions for all aldehydes, leaving the special test to be given by the teacher in charge.

The method which I desire to submit, and which appears to have some merit, is the following, for which I do not claim any originality only as far as to the method of procedure.

The solutions required consist of a five per cent. aqueous solution of sodium hydroxide and a one per cent. alcoholic (aldehyde free solution) of phloroglucin.

This was first brought to my attention as a means of detection of formaldehyde in milk, with the following procedure:

Ten cubic centimeters of milk are introduced into a test tube, then a mixture of ten cubic centimeters of the solution of sodium hydroxide and one to two drops of the phloroglucin solution are added, and the whole well shaken. If the formaldehyde is present in a large amount, the mixture assumes a reddish color at once. In smaller amounts the color and time of appearance are relatively fainter and longer.

This method answers very well for milk analysis, but where there is likely to be found other aldehydes, the test fails, as other aldehydes will give nearly the same results.

In order to be sure that I had chemically pure aldehydes, I slowly oxidized ten cubic centimeters of methyl alcohol with a heated coil of fine copper wire. This I also did with ten cubic centimeters respectively of ethyl alcohol and amyl alcohol, thereby obtaining a solution of formaldehyde, ethylic and amylic aldehydes. Upon treating these three aldehydes by the above method, I obtained nearly similar results, but with the following characteristic differences:

1. The color produced by the amylic aldehyde faded completely in four minutes;
2. The color produced by the ethylic aldehyde gave the same result in from six to eight minutes;
3. While the rose color produced by the formic aldehyde was permanent for twelve minutes and then faded to a yellowish brown color which remained permanent.

This method takes from ten to fifteen minutes for its completion, but it has the advantage of not requiring the continual attention of the operator, and, as it appears to be a characteristic reaction for formaldehyde, it may be and has been used by me for the detection of wood alcohol used to adulterate grain alcohol and also whiskies.

This method, if carefully carried out, will prove the presence of formaldehyde in the dilution of one in one hundred thousand.

N. A. R. D. WINS. IT STOPPED A CHAOS OF PRICE CUTTING IN PITTSBURG.

Opinions of Some Druggists.

THOROUGH CANVASS MADE OF SITUATION IN WESTERN PENNSYLVANIA.—GOOD WORK OF THE LOCAL R. D. A.—ALMOST IDEAL TRADE CONDITIONS REALIZED THERE THROUGH SUPPORT OF THE NATIONAL ASSOCIATION.—AGREEMENT WITH DEPARTMENT STORES.

Pittsburg, Jan. 16.—"Peace, progress and prosperity dominate throughout Greater Pittsburg, thanks to the N. A. R. D.": this is the opinion that preponderates here. The Era representative has made an exhaustive canvass to ascertain the true conditions that have been produced since the formation of the N. A. R. D. at St. Louis in 1898, and there is presented the startling statement that some druggists in the Pittsburg district are benefitting to the extent of not less than \$900 a year as a result of the national association.

Many leading pharmacists were interviewed concerning the success of the N. A. R. D., and not one regretted that he was a member.

Pittsburg claims to be one of the best and most thoroughly organized cities in the country, and it is difficult to locate a retail druggist who is not affiliated with the Western Pennsylvania R. D. A., which is an ally of the N. A. R. D. But previous to the formation of the national association, this city was the storm-center of cutters. Competition grew so keen that the trade became virtually demoralized. It was on this account that about five score of druggists gathered in the rooms of the Chamber of Commerce early in 1898, and proposed that an association be founded. Then, from chaos, the drug trade in this territory was drawn into order. There is no cutting to disturb the business, nor controversies with manufacturers. All is calm and satisfactory. Local disturbances arise occasionally, but these do not come under the jurisdiction of the N. A. R. D. They are troubles which originate mostly as the result of too ardent work of "reformers." Through the efforts of the N. A. R. D. the raising of prices by jobbers and manufacturers has been averted.

In describing conditions in this vicinity it is hard to credit the remarkable achievement wholly to the N. A. R. D. The movement was instigated by the Western Pennsylvania R. D. A. In telling of the situation the directors of the W. P. R. D. A. are extremely modest. They declare emphatically that without the moral support and backing of the national, nothing could have been accomplished. As a matter of fact, the national did not organize this section, nor did it lend any financial assistance. The W. P. R. D. A. pays dues

to the national for each of its members in good standing. The dues of every member of the W. P. R. D. A. are \$12 a year, or \$1 a month. The W. P. pays a per capita tax of \$4 to the national. This is the status of the local and national associations in this locality.

NO WORRY ABOUT COMPETITORS.

"Is the N. A. R. D. a benefit to you?" a retailer was asked. "Why, it certainly is," came the quick retort, "we do not have to worry about what our competitors are doing. Price-cutting has been entirely abolished. We hear no more tales from customers, saying that they can purchase so-and-so's hair restorer for sixty two cents a bottle, while I ask seventy cents."

"What has the N. A. R. D. done for you?"—this to another druggist in the down town section. He answered, with a smile, "I am making \$900 a year more on a list of only one hundred articles, if I sell but one of each of the items a week. I certainly derive a benefit from the association, as do all other dealers."

Charles A. Spang, who conducts a store at 500 Allegheny avenue, Allegheny, said: "Through the N. A. R. D., we have gotten a new price list. The prices are higher, but the cost has not increased. We have made contracts with the principal manufacturers, preventing any further cuts in prices. The direct contract and serial numbering plan will avert much confusion and materially aid the retailers. We have got the Peruna and Miles people into line. These are but a few of the features that mark the success of the national."

Statistics concerning the success of the N. A. R. D. were found in the offices of the Western Pennsylvania R. D. A., in the Bessemer building.

B. E. Pritchard, secretary of the W. P. R. D. A., was seen and queried on the subject. During an hour's interview, he produced evidence to show that the N. A. R. D. is all that its admirers claim. He exhibited documents which indicated the marked progress made by the W. P. R. D. A., backed by the national. He said: "Some people have been criticizing the association, and I don't want you to take anything for granted."

He said that he was the first outsider who was given access to the agreements made by the large department stores and the association, abolishing price cutting and placing the trade on a sound, paying basis.

PRICE LISTS BEFORE AND AFTER.

"I was shown the price lists that prevailed previous to the agreement in 1901, and that which prevails now," he said. "Basing the facts of the matter on one hundred items, it can be readily seen what are the profits realized by the retailers."

An analysis of the present list and a comparison with prices prevailing before the formation of the association manifests a significant fact. With a very conservative estimate of the average sales of patent medicines—such as one each per week of the most saleable fifty cent and one dol-

lar ones, three per week each of the commonly sold twenty-five cent remedies, and one each per month of the slower selling ones—the difference in the profits, not gross sales, of each drug store in these two cities and the territory contiguous thereto reaches the snug sum of \$839.56. This figure is based on the minimum sales of any retailer. Scores of stores dispose of more goods than what was quoted. If five times as much are sold the profits are five times greater. These are declared to be the facts in the matter, leaving aside all prejudices and gossip, and any sceptic is advised to look up the ruinous prices that prevailed before the revised list became effective in March 15, 1901, and those that dominate now. There has been no serious controversy over prices since the agreement was signed. The agreement is between the department stores and the W. P. R. D. A.

The rumor has been going the rounds that the managers of the department stores in this city dictated the terms of a settlement, but the secretary of the association produced the agreement itself, and said: "We broached the subject of a new price list to the department stores for several months. Finally we got them interested in the matter. They then submitted to the association a price list. We did not favor it in its entirety, but during a meeting both factions made concessions, with the result that a contract was signed. It is in vogue to the present day. The contract was made February 21."

PHILOSOPHY OF MR. THOMPSON.

J. R. Thompson, one of the best-known druggists in this section, and manager of sixteen stores of the P. C. Schilling Co., said:

"Has the N. A. R. D. benefited the druggists of our city? Has it, do you ask? Well, I most prefer to rather guess in favor of the affirmative. The N. A. R. D. is the same to our most successful association here as the government of the United States is to the government of the State. The N. A. R. D. is the mother

The Boss—"Wake up now, Jimmy, and lend a hand with the inventory."

and father and the uncles and aunts of our locals and when old smoky Pittsburg bows to the sovereignty of a higher power I believe every association in the country will do the same. Do you know we have the strongest and coldest bunch in the realm. Well, that's right, we haven't a dissenting voice that you can hear without an ear trumpet. We're as strong as the Rock of Gibraltar and a half. If you want an idea of how strong we are, just think of that immovable body being shattered to smithereens by an irresistible Sunny Jim, and then multiply the I. S. J. by five, and yet with all our solidity, with all our unanimism, what could we do without the national? Not a substantial thing.

Yes, we might have boat excursions; we might have euches, we might even hold meetings and move, and second, and resolute till Hades became a mass of congealed H₂O, but without the backing of our fellows, the country over, we could avoid nothing.

"I believe I am a cutter at heart. I know if it wasn't for our associations, and if Thomas, Richard and Henry were selling goods for seven cents a wheelbarrow load and could buy everything they wanted, I would more than likely be one of them things myself. But so long as the N. A. R. P. is climbing toward the top of the pile, I and all others of the order of the quality of the dope will stay good, for the sake of peace, good will and the slippery coin.

"I am in a position to cut prices to as good advantage as anyone. With a large chain of stores, we buy in jobbing quantities, and buy right, but there's too much in life to waste all your time and energy watching your neighbor, to see if he is selling pills for two bits a million less than you are."

POISON LABEL VIOLATIONS.

The New York State Board of Pharmacy now has several cases pending against the proprietors of paint shops to recover penalties for failure to affix a proper label to poisons. H. A. Tierold, counsel for the board, said:

"Although the legislature, years ago, provided against people selling oxalic acid, carbolic acid and other poisons, without affixing a label containing the name of the article sold, the word 'poison' and the seller's name and address, all printed in red ink, still a great many people sell such articles without complying with the law. They thus lay themselves open either to a criminal prosecution for a misdemeanor, or a civil action for a penalty of \$25, for each violation.

EXAMS. FOR PANAMA SERVICE.

Dates have been announced for the examinations of those who wish to become pharmacists and trained nurses in the government's Panama service. The examinations in Greater New York were held yesterday, in the General Post Office of Brooklyn. The subjects and weights of the examination were as follows: Letter writing, 5; chemistry, 15; pharmacy, 40; materia medica, 15, and practical experience, 25. The salaries are \$900, \$1,000 and \$1,200.

SET THE PRESS RIGHT.

Representative Druggists Explain "Substitution Raids."

RECENT SENSATIONAL STORY IS DISCUSSED, THE PHARMACIST'S SIDE IS PRESENTED, THE ANIMUS BEHIND SUCH CRUSADES IS LAID BARE, AND THE YAKIN'S WOEFUL LACK OF TRUTH IS EMPHASIZED.

A joint committee, representing all the local associations, called on the business manager of the New York Journal, last Thursday afternoon, in regard to a recent article in that paper accusing the druggists of wholesale substitution and adulteration. After a conference lasting over an hour, Mr. Brown, who represented the Journal, admitted that he had learned something about the druggists' side of the case, and stated his intention of laying the matter before the editorial department.

The party of representative pharmacists comprised Peter Diamond, Dr. William Muir, Dr. George C. Diekmann, Joseph Weinstein, Dr. Wm. C. Alpers, Thomas Latham and A. Bakst.

Mr. Diamond began by reading a statement which set forth clearly the whole question of what is legitimate substitution and what is not. So called "patent medicines" or proprietary remedies, he told the Journal representative, are advertised to cure every imaginable ill "from an ingrowing nail to a tumor," and this without any examination of the patient whatever. The pharmacist, on the contrary, puts up his own preparations with the idea of guaranteeing each one for the cure of one specific thing only. He can be held responsible for what he sells under his own label.

DEFENSE OF DRUGGISTS' OWN.

It is therefore perfectly legitimate, and not harmful to the public, said Mr. Diamond, for a druggist to attempt to substitute his own preparation for the much advertised one that is called for; especially as he makes more money on articles of his own manufacture. It is merely a matter of business with him.

The question of patented chemicals was next discussed by the speaker. It was the height of injustice, he said, that foreign manufacturers should be able to patent a chemical process in this country and thus secure a monopoly, something which they could not do in any other country. Such a process is necessarily patented under a popular name. The identical chemical is manufactured by American houses under its chemical name. Hence, if a pharmacist, in filling a prescription calling, say, for phenacetine, uses something which is chemically identical with it, but sold under a different name, he is immediately pounced upon by the monopoly and branded as an adulterator, although, morally and actually, he may have been filling the prescription with accuracy and good faith.

FOREIGN PATENTEES ARE SCORED.

These foreign manufacturers, Mr. Diamond charged, are the instigators of all the "crusades" against so-called adulteration. It is to their interest to deceive the public, who are the ultimate victims

of the extortionate prices charged by the monopoly. To remedy these evils was the object of the Mann bill, which should receive the support of the daily press. Mr. Diamond then called on Dr. Diekmann, as chairman of the Adulteration Committee of the State Board of Pharmacy, to give some facts as to the real conditions.

"What the Board of Pharmacy considers a violation," said Dr. Diekmann, "is the failure to comply with the United States Pharmacopoeia. For instance, if a man's camphorated oil falls two per cent. below U. S. P., that is technically a violation. But, at the same time, it isn't a violation that would endanger the public health. Such violations constitute the majority of the cases in which we impose fines. As a matter of fact, our records show that ninety per cent. of the pharmacists in this city keep their drugs up to standard—common household drugs, I mean, for over patent medicines we have no jurisdiction.

"I wish to state unqualifiedly that it is my belief that the public in this city are getting better drugs to-day than in any other city in the country. Your reporter quoted me correctly in regard to what I said about running down adulterators. But he left out the explanation I gave him."

"In other words," said Mr. Brown, "he used just what he needed for his story, and so more." Dr. Diekmann agreed.

THE REPORTER'S INSTRUCTIONS.

Mr. Brown explained that the reporter was sent to work merely on the "news clue" that the Board of Pharmacy had flooded the city with inspectors. He was promptly assured by Dr. Diekmann that no "raid" of any kind had been started, and that no more than the usual number of inspectors were employed to collect samples.

Dr. Alpers denounced the article in question as a pack of lies. He said:

"This is a case of the tail wagging the dog. The reporter took one item out of the annual report of the State Board of Pharmacy, and on that hung his interview with Dr. Diekmann. Now, he quoted 'a prominent pharmacist' as saying that only two per cent. of the druggists are honest. Who is that prominent pharmacist? Give us his name. There is no reason why he should not be prosecuted for slander, for he has done incalculable harm to our profession."

"A prominent pharmacist whose name is withheld at his request," Mr. Brown read from the clipping.

From the question of disciplining the reporter who misrepresented the interview with Dr. Diekmann, the discussion branched off to the Mann bill and the injustice which it was intended to abolish. Mr. Brown suggested that some pharmacist bring suit against one of these manufacturers for the purpose of testing the patents and giving the matter a public airing. He was reminded, however, that suits often take years to decide.

To conclusion, Mr. Diamond asked that the Journal use the influence of its editorial page to set right the bad impressions caused by the publication of the article referred to. Mr. Brown agreed to send a reporter to the meeting of the Pharmaceutical Association, on Monday night, at which Dr. Alpers would read a paper, setting forth the situation.

W. S. ROCKEY EXONERATED.

Complaint of Beecham's Pill Company Dismissed.

PROCEEDINGS DROPPED ON REQUEST OF GEORGE GORDON BATTLE.—NO EVIDENCE OF VIOLATION.—MR. ROCKEY MAKES A STATEMENT.

Walter S. Rockey, the druggist with stores at Eighth avenue and Thirty fourth street, and Ninth avenue and Forty-second street, was dismissed from the custody of his counsel, by Magistrate Barlow, in the Yorkville police court, on Friday.

Mr. Rockey, who, as stated in The Era of October 13, was arraigned on October 6, before the same magistrate, on complaint of attorneys for Thomas Beecham, who charged him with selling spurious Beecham's Pills. He was subsequently paroled in the custody of his counsel, Frederick H. Kellogg, and now, at the instance of George Gordon Battle, attorney for Mr. Beecham, the proceedings are dropped.

Mr. Battle stated in his affidavit upon which the release was granted, that he is acquainted with all the facts in the case, among them that Mr. Rockey is the proprietor of two large stores, and was an innocent purchaser of the goods in dispute; also that there was no conclusive evidence of a violation of the statutory trade-mark law. He further deposed that his action was entirely voluntary, and that no consideration had been given or received to cause the dismissal of the original complaint.

Mr. Rockey's defense was that he was but an innocent party to the affair, and that he had been selected as a scapegoat, since it was admitted in court that the fake pills had flooded the American market, and that some were found among the lots sold by reputable wholesalers.

Mr. Rockey said: "Mr. Battle's action is not a surprise to me. Indeed, I expected it earlier. Perhaps the near approach of the trial of the case had something to do with it. The policy all along in my case has been 'postponement.' Indeed, I have been assured that it would never come to trial. Though I would have liked the public vindication that I would have assuredly received by an acquittal before a court of record, still the vindictive policy of the daily papers would doubtless result in much harmful publicity, the distinction between the guilty and the innocent not being clearly drawn. I have no sympathy with imitators, and was guilty only of misplaced confidence in the distributors of the goods, who offered them at a price not low enough to awaken my suspicions. The prosecution admitted that in outward appearance the 'fakes' were fac similes of the original, and even the manufacturer hesitated when identifying the questionable goods without comparison."

Simeon E. Minden, Manville Thomas, Charles Horn and Charles F. Riskey were held for trial in the court of special sessions. The first two are charged with manufacturing and selling the imitation pills; Horn is accused as an accessory, and Riskey as a distributor. Mr. Battle hopes to bring these cases to trial this week.

MERRY DANCE OF THE G. A. S.

More than the usual amount of hearty good nature and enjoyment marked the fifty-fourth anniversary and ball of the German Apothecaries' Society, which was attended by nearly three hundred people, last Thursday night. It was a strictly Deutscher Apotheker occasion.

At eleven o'clock the ball was opened with a grand march, led by President and Mrs. Inhof, after which dancing began in earnest. The costumes and the ladies were extremely pretty and captivating, so that the men joyfully waltzed themselves out of breath.

Among the spectators of the whirling throng was Gustav Kampsperger, the honored Honorary President of the society. He is the only surviving founder and his presence at the fifty-fourth anniversary was an eloquent tribute to the stability and excellence of the organization.

Supper was served at about 1.30, and the merriment went on. A temporary silence was secured for President Inhof, who made a few remarks. The traditional chorus of "Lang soll er leben" was swelled by every throat. Emil Roller was also seen to make a short speech.

Dancing was resumed shortly after three a. m., and continued until five. Although the ball was over at that time, many stayed another hour to chat and drink wine.

The entertainment committee was as follows: S. V. B. Swann, chairman; August Diehl, E. R. Dauscha, R. S. Lehman, George Leinecker. These, with the addition of Hugo Kantrowitz, were also the floor managers. Music was furnished by Lederhaus' orchestra.

MYSTERY OF M. H. LOVE CO.

If anybody has ever seen the man who pays the bills for the M. H. Love Drug Co., of Norfolk, Va., F. W. Babcock, an attorney of New Haven, Conn., would like to know it. He tried to collect a claim for \$9 against the Love Co., who were supposed to be wholesale druggists, of Norfolk. In reply to a letter from Mr. Babcock, a prominent wholesale firm of that city stated that they had several inquiries about the Love Drug Co., but they did not know of any such concern.

John A. Baecher, a Norfolk lawyer, who tried to collect the claim, writes that he "called at defendant's place of business, but could get no satisfaction." The person in charge, he says, absolutely refused to give any information, saying that he knew nothing about claims against the company, and that the proprietor was sick and could not be seen. He even refused to tell where the proprietor lived. This lawyer examined the public records, and did not find any such firm incorporated. He returned the claim to Mr. Babcock as being uncollectable.

ONE COMPANY BARS CUTTERS.

The Paris Medicine Co. is out with a statement to every retail dealer in the United States, that they will not be allowed to sell *Laxative Bromo Quinine* for less than twenty-five cents a box. The proprietors assert that they will not supply cutters with the goods, nor allow jobbers to.

MANHATTAN P.H.A. ON RECORD.

Dr. Alpers Reviews Substitution in All Its Phases.

HIS PAPER IS ACCEPTED AS THE SENTIMENTS OF THE ASSOCIATION.—GRIEVOUS FAULTS ARE LAID BARE.—A NEWSPAPER PROMISES TO SUPPORT MANN BILL.—QUESTION OF N. A. R. D. AFFILIATION DISCUSSED AND LAID ON THE TABLE.

Vindication in the sanctum of the daily press; such was the achievement in behalf of pharmacy which was reported last Monday night before the Manhattan Ph. A. This was the principal business, excepting N. A. R. D. organization, taken up in the association's regular monthly meeting at the College of Pharmacy.

Mr. Latham, of the press committee, told of the interview with the New York Journal editors, last Thursday, when that newspaper's accounts of substitution and other crimes were discussed. Dr. Alpers, who presided in the absence of the president, took the floor to read a paper, which he thought represented the views of the association, and if so, it might be adopted, so that the Manhattan could go on record once for all as to the question of substitution. The paper he read was a brief from the pharmacist's side, and its forceful presentation of the case was heartily indorsed by all the members present.

There were three classes of goods, Dr. Alpers said, in which substitution might be practised: (1) in drugs and chemicals named in the United States Pharmacopœia; (2) in proprietary articles; (3) in synthetic remedies, protected by patents or trade marks. Any druggist who practised substitution in the first class, he said, must be denounced as a scoundrel; and to buy and sell inferior chemicals, using them in prescriptions that called for something else, was a crime. And the general sentiment in the profession, he declared, was that these black sheep should be detected, punished, and driven out of business.

The practice, though, took another aspect as to proprietary articles, the speaker went on to say, and he described the patent medicine manufacturer as one who never diagnosed, who never even saw a patient, but advertised sure cures of many things, with the sole object of marketing

The Boss—"That's what you get for taking a lazy man's load."

his stuff. But patents were adverse in every respect to the interests of pharmacists, as well as of physicians, not to mention the public. "Are we then justified in offering our own preparations?" demanded Dr. Alpers, which question he dismissed as one of policy only, and not of morality. But, personally, he condemned the custom as bad business. The druggist should cheerfully sell what was asked for, and so build up a name for honesty and reliability.

DR. ALPERS SCORES PATENTS.

In the third class, of synthetic chemicals, Dr. Alpers described the unique position of foreign manufacturers who enrich themselves by their American trade, through our patent laws giving them a monopoly which they cannot enjoy elsewhere, even in their own country. Such laws, he said, checked enterprise, as when a chemist might find a better process of manufacture, besides drawing from this country vast sums of money without benefit to its citizens. A British jobber had offered him phenacetine at seventy cents a pound, but the law compelled him to buy it of the American distributor at \$16 a pound. But, supposing a druggist used phenacetine not bought from the American distributor, could he then be accused of substituting? Was he not employing the identical chemical called for in the prescription? This was the question submitted to the newspaper already mentioned. Yet the crusades, instigated by this manufacturer, he said, had confounded both newspapers and public with the idea that druggists were everywhere guilty of the crime of substitution. In conclusion, amid an outburst of applause, Dr. Alpers urged that all unite to bring about the passage of the Mann bill.

Mr. Weinstein stated that he came from the newspaper interview with the impression that they would see no more such stories about substitution.

On motion of Mr. Hitchcock, the paper was adopted for the records of the association, and Dr. Alpers was heartily thanked. Copies are to be sent to the daily press and to the pharmaceutical and medical press. Members who wish to distribute the same will be enabled to purchase them by the hundred.

MR. DIAMOND AND THE JOURNAL.

Peter Diamond, president of the N. Y. K. D. A., who attended the meeting as a guest, had had a number of interviews with New York Journal representatives, and he described how courteously he had been treated, and how, after understanding the question, the Journal editors had promised him the paper's support of the Mann bill, beginning with an editorial during the week. As an earnest of their intention, they had sent a reporter to the Manhattan meeting.

A communication from the legislative committee of the N. A. R. D. was read by Secretary Swann, in which was urged that resolutions be passed and sent to senators at once, pointing out to them the reasons why the Mann bill should become a law. The association decided that Dr. Alper's paper be sent to the New York senators, and on recommendation of Mr. Smith, it was moved that all members

be advised by postal card to write the two senators. Mr. Weinstein quoted Dr. Hugo Schweitzer, of the Farbenfabriken of Elberfeld Co., as asserting that the Mann bill will never be passed. Mr. Weinstein repeated this as a sample of the complacent insolence of this powerful foreign concern.

AS TO N. A. R. D. AFFILIATION.

The N. A. R. D. matter was taken up with Secretary Swann's reading of the conference committee's report, wherein the associations were recommended to affiliate with the national organization. Mr. Hitchcock, who was opposed to affiliation, moved that the report be "received"; at the same time he stipulated that this should not mean "adoption." His motion was carried.

The question later aroused considerable discussion, when Dr. William C. Anderson, of the Kings County Ph. S., was requested to address the meeting. The visitor, after being greeted with applause, said that the N. A. R. D. work was progressing nicely, but he was disappointed that all the associations had not carried out the conference recommendations as to affiliation. Though the Manhattan had recommended members to join individually, yet the N. A. R. D. did not have individual members. Individuals, then, had no standing in the national association in return for their dues, and would do the Manhattan no good either, unless the Manhattan were affiliated. He believed that the Manhattan ought to join with the other associations, and not leave its members to be distrusted by the N. A. R. D.

Mr. Bakst thereupon enthusiastically moved that the Manhattan affiliate with the N. A. R. D., and later he defended his motion with great earnestness. Mr. Hitchcock demanded to know if the association's recommendation to members to join individually would not have to be reconsidered first. Dr. Alpers decided in the negative, but the two motions not being contradictory, he thought it awkward that the recommendation had been made at the former meeting. This, though, had been done only at the solicitation of Mr. Doble.

Mr. Erb here observed that Dr. Anderson in a few minutes had thrown more light on the N. A. R. D. than Mr. Doble had as yet been able to do at all.

Mr. Doble not being present, Mr. Lincoln, an N. A. R. D. organizer, said that at first Mr. Doble had asked for moral support, with the idea of districting the city, but as there developed feeling against such districting, he later favored affiliation.

Mr. Fringie argued that the Manhattan had everything to gain and nothing to lose. But Mr. Hitchcock opposed affiliation, because the Manhattan had once before received a black eye in such a movement, and though he himself supported the N. A. R. D., yet he did not wish the Manhattan to again take the risk of failure. "What," he asked, "was to become of non-association druggists who joined the N. A. R. D.?" To this Dr. Anderson replied that such outsiders would pledge themselves to join one of the out-line organizations also, provided it was affiliated. Thus, instead of weakening the local bodies, the N. A. R. D. affiliation would only strengthen them. The matter ended with a motion by Mr. Hitchcock to lay the question on the table, which was carried.

STATE SHOULD GET FINES.

Medical Society's Prosecutions Against Druggists Said to be Unconstitutional.

The law which gives the County Medical Society the fines imposed upon persons prosecuted by its agents is unconstitutional, according to Charles L. Hoffman, a lawyer, of 320 Broadway. He has applied to have the case of his client, Louis Berdy, druggist at 1594 Madison avenue, taken to the Supreme Court for a decision on the constitutionality of the law.

Mr. Berdy was originally held in a police court on the charge of what is generally known as "counter prescribing." It appeared that two women agents of the County Medical Society had on different days called at Berdy's drug store, and said they were ill. In each case the druggist had recommended and sold some medicine. Mr. Berdy's case was sent to Special Sessions.

For such offenses the fine is \$500 for the first time and \$1,000 for the second time. All the money so collected goes to the society.

Mr. Hoffman has now moved that the case be transferred to the Court of General Sessions on the ground that a question of the constitutionality of a law should go before a higher court. He claims that the Court of Appeals has already decided that the law which gives such rights as those possessed by the County Medical Society is unconstitutional.

"As the law stands to-day," said Mr. Hoffman to an Era reporter, "any society at all can send out its agents and collect fines. These fines are the property of the State, and should go to the State. They constitute the punishments provided by law and are collected through the medium of the courts. To give these fines to a private corporation is absurd. Just imagine how profitable it is for a society to send out agents and get these fat fines.

"The County Medical Society," continued Mr. Hoffman, "has been going too far. A druggist has just as much right to recommend his goods as a grocer, or a hatter, or a hardware dealer. If he can't tell his customers that this medicine is good for a cold, and that for dyspepsia, then he may as well quit, and shut up shop.

"I believe this is a big question, in which every druggist in the city is interested, and I think they should all stand together; one man cannot carry on the whole fight."

The pharmacy law, which gives a part of the fines collected by the board to the New York and Brooklyn colleges, Mr. Hoffman also declares, is unconstitutional. The decision on the question, he says, will be of far-reaching importance.

REGISTER YOUR STORE.

Applications for the renewal of store licenses have been coming in so rapidly that Clerk DeLacey is kept busy piling up the "yellows" and sorting out the fifty-seven varieties of money that come in as license fees. Druggists have scarcely two weeks remaining in which to send in their applications to the Board of Pharmacy. Do it now, they are advised.

LIGHT ON CONFERENCE PLAN.**Its Interpretation by the Kings Co. Ph. S. Is Explained.**

Since the Kings County Ph. S. has voted to affiliate with the N. A. R. D. as a body, under the plan of the joint conference committee, there are many in Manhattan who ask if the Kings County means by such action to be responsible to the N. A. R. D. for its members. Others wish to know if the Kings County does not by such action bind itself to the N. A. R. D. beyond any further control over its own local policy. Some believe that the Society has done this, though the sense of its meeting last week was exactly the opposite. In the same connection there appears a startling latitude in the manner of interpreting the plan adopted by the joint conference. For while the New York Retail Druggists Association and the Kings County Ph. S. both have affiliated as a body with the N. A. R. D., the German Apothecaries' Society and the Manhattan Ph. A. so far have gone no further than to recommend their members individually to join.

"I don't see," said Dr. Anderson, when asked about these difficulties, "how the organization movement can be a success unless the old line associations do come in as affiliated bodies. The plan embodies the idea of subsequent questions being settled through the joint conference committee, but how can an association that is not affiliated have any representation on the conference committee? How can it do work through the N. A. R. D., not being a part of the N. A. R. D.? Recommending its members to join the national association, that seems to me to be only begging the question, and a way to evade actual affiliation."

INDORSEMENT OR AFFILIATION?

As to the interpretation of the conference plan of organization, whether it meant recommendation to individual members to join or local associations to affiliate, Dr. Anderson defended the view of the Kings County by merely quoting from the plan itself:

"That the delegates of this conference recommend to their associations that they affiliate with and endorse the N. A. R. D.," etc.

"If this is really the meaning," said more than one member of the Manhattan Association, "then we shall oppose the adoption of the report. At least, we do not wish to affiliate as an association. We do not want to tie ourselves in any such manner."

This objection being referred to Dr. Anderson, he mentioned the determination of Kings County to control its own local affairs, as expressed so forcibly at its last meeting, and stated that the plan of the conference in no way meant that an old line association by affiliation was surrendering itself bound and gagged. Greater New York questions would simply be settled by the old line associations, with the conference committee as a medium. The conference plan also answered the question as to whether the affiliated societies made themselves responsible to the N. A. R. D. for dues.

NOT RESPONSIBLE FOR DUES.

"As provided for by our resolution," said Dr. Anderson, "we are sending out circulars to each of our members, advising them that the Kings County has affiliated. Then they will expect the N. A. R. D. collectors, and pay \$6.50 each as dues to the N. A. R. D. But whether they do this or not, their standing in the Kings County is in no way affected. The Kings County's representation in the N. A. R. D. simply depends on the number of its members who are also members of the N. A. R. D. But the Kings County is not responsible for them to the N. A. R. D."

Dr. Anderson referred to an objection often made, that many do not wish to join the N. A. R. D., to sign contracts, or otherwise to bind themselves, for fear of a neighbor who does not sign or in no other way restricts his competition. "This consideration," said Dr. Anderson, "appears to be the one serious question over which many will hesitate. But I think I shall ask the conference at its next meeting to discuss a solution, such as an agreement that no contract will go into effect until the conference decides that enough have signed the contract to make it a success. In this way those who really want to support the plan would not be deterred from signing, and we would know who are opposed to the plan. Then, before putting the plan into effect, we could make a final effort through wholesalers to bring pressure on those retailers who still hold out."

BIG MERGER NOT A FACT.**Squibb and P. & W.-Rosengarten Combine Still a Rumor Only.**

As deep a mystery as ever surrounds the rumor of the merger between E. R. Squibb & Sons and the Powers-Weightman-Rosengarten Company. Positive denials were made by both H. B. Rosengarten and Dr. Charles F. Squibb, but the report is still the topic of conversation throughout the trade. Theodore Weicker, who is at present in Stamford, Conn., was asked to make a statement, but up to the time The Era went to press no reply had been received.

Dr. Charles F. Squibb, when seen on Monday, denied that Theodore Weicker had even secured any interest in the Squibb business.

"I can readily understand how the rumor of such a merger as you printed would get around," said Dr. Squibb. "The interests of the Powers & Weightman Co., Rosengarten & Sons and E. R. Squibb & Sons have always been very much alike. P. & W. and Rosengarten & Sons should have consolidated long ago; so that a rumor of our consolidating with P.-W. & R. would certainly be very plausible."

"What Mr. Weicker's plans are I have no means of knowing. He may have been contemplating a big deal of that kind, because Mr. Weicker is the kind of man to do big things; and he can't keep away from the chemical trade. But all these rumors are mere idle gossip and should be treated as such. They hurt nobody."

Dr. Squibb refused to say whether Mr. Weicker had made any overtures on the question of securing an interest in the Squibb business.

H. B. Rosengarten, president of the Powers-Weightman-Rosengarten Company, stated that there was "no foundation whatever" for the rumor.

MR. ROSENGARTEN DENIES.

Philadelphia, Jan. 16.—Another rumor, touching great things in the trade, is denied here. It was reported with some persistence that the recently-formed combination of the Weightman and Rosengarten interests would soon combine with the Squibb interests, and that negotiations with this end in view were under way. When told about this disposition of his vast business, to-day, Mr. Rosengarten said:

"This information is the first I have had that I was about to be absorbed. You can say emphatically that there is no truth in the report. There have been no negotiations looking to association with the Squibb interests, or with any other, and there is no reason for anyone to say that there ever will be any deal for a combination of the Weightman-Rosengarten concern with any others. The report is absolutely without any foundation, in fact, and I would be glad to have you deny it."

RAILROAD RATES TO BUYERS.

The Southern Pacific Railway has announced to The Merchants' Association, of New York that it will put in effect an individual special rate from Texas to New York, for the spring buying season. The special merchants' fare of one and one-third for the round trip over the Southern Pacific system, in Texas, will be in effect on February 11-15, inclusive, and March 4-7, inclusive, via the New Orleans gateway, on the certificate plan. The return limit on the certificates will be thirty days from date of issuance. The Southern Pacific Company has also agreed to make the same reduced rate from points reached by its system in Texas, in connection with water trip to New York from New Orleans, on the Southern Pacific passenger steamships. The special fare of one and one-third by rail and steamer also covers main and stateroom while on board the boat. On Friday, of this week, the association will send to Texas merchants the circular giving full particulars of the rates, routes, dates, etc.

Librarian of the German Apothecaries'
Society.

WOULD STOP OPIUM TRADE.

Reform Bureau Hopes to Save China From the Drug.

Representatives of the International Reform Bureau announce that they will renew agitation for the abrogation of the treaty between England and China, by which China gave formal consent to the importation of opium from East India. The reform association promises the co-operation of a large number of the missionary societies of America and other nations. The first move, it is understood, will be to place the matter before Secretary Hay, with the hope that he may intimate to Great Britain that the abrogation of the treaty would be a pleasing act to this nation.

More than sixty years ago, China made an effort, and has since repeated it, to induce England to prevent the importation of opium, on the theory that the use of the drug was a curse to the Chinese, threatening their moral and physical future well being. England promptly refused to make the desired change, insisting that the Chinese simply wanted to protect the opium made in China, and get from it a large revenue for the government. There was some fighting over the subject, and the English won, securing by treaty the right to send opium to China from India.

The opium trade in China is a large commercial proposition for India. The suppression of the traffic would rob India of a vast revenue that would otherwise have to be raised by taxation on a people already overburdened.

MEETINGS OF THE CHEMISTS.

At the next meeting of the New York Section of the Society of Chemical Industry, January 20, at the Chemists' Club, papers will be read by Alan A. Claffin, on "Quick Process of Tanning of Sole Leather"; Edward C. Worden and John Motion, on "The Preparation of Volumetric Solutions"; Martin L. Griffin, on "Standard Methods of Sampling."

Members of the section will hold the usual informal dinner before the meeting at the café of the Hotel Savoy, Fifth ave-

nue and Fifty-ninth street, at 6.30 p. m. Visitors are invited. The charge for the dinner is \$1.00.

Preliminary notice is already out for the next annual meeting of the Society, which is to be in London during the second week of July. The provisional program has been arranged, as follows:

First week in London: Annual meeting, address of the president, William H. Nichols, excursions and visits in and around London. Second week: Visits to places of industrial and historical interest in England. Guests in charge of Provincial Committee. These visits will be so timed that the whole party would finally meet in Glasgow, where the Scottish Section would take care of the visitors, and where the meeting would terminate.

NEW COURSES AT N. Y. C. P.

The New York College of Pharmacy (Columbia University) announces the establishment of three courses, to begin with the present session. They will be known as the College Course, University Course and Graduate Course.

The first will correspond with the two-year undergraduate course, heretofore given. The second will consist of two full academic years, leading to the degree of pharmaceutical chemist. Candidates for this course must have a credit of forty-eight Regents' counts, or twelve Columbia counts.

The Graduate Course will remain the same as the previous "Pos.-Graduate" until the close of the season 1906-7, after which it will be open only to Ph. C.'s of the University Course, or to graduates of equal rank from other colleges.

CLERK HELD UP BY FOOTPADS.

Christian Frank, head clerk at Cameron, Sawdon & Driver's, Sixth avenue and Thirty-seventh street, was held up at Seventh avenue and Thirty-fifth street, by two men early Monday morning. Mr. Frank had closed the store and was on his way home when he was approached by a negro, who asked for a match. Then a confederate appeared, and the clerk yelled "police!" The thugs got no money, but left a black eye in their hurry to escape.

NEW YORK NOTES.

—Professor John Uri Lloyd, accompanied by Mrs. Lloyd, was in town a few days ago, and was the guest of Col. E. W. Fitch at luncheon, at the Drug Trade Club.

—Otto Alexander, a former treasurer and popular member of the German Apothecaries' Society, died last Saturday of apoplexy, at the age of seventy years. The funeral took place from the home of his son-in-law, Lexington avenue and Eighty-second street.

—Colonel E. W. Fitch, manager of the New York branch of Parke, Davis & Co., gave his annual dinner to the fourteen executives of the house, on Friday, January 13, at the Hotel Astor. In spite of the day and date, and the fact that the Thirteen Club was dining in the ball room, a most enjoyable time was reported.

—The Hass Pharmacy, of New York City, has been incorporated, with a capital of \$50,000. The incorporators and directors are F. Rudd, J. N. Blair and L. F. Staar, all of New York City.

WHEN MUSIC IS A DRUG.

Fantastic Proposition in Therapeutics for the Trade to Consider.

There is an organization called the National Society of Musical Therapeutics, and it met one evening last week, at 180 W. Fifty-ninth street. The healing power of music was either the fad of the evening, or the weighty issue at stake, according as one has the fancy to regard this new phase of so-called freak ideas.

Miss Eva Augusta vescelius, the founder and president of the society, gave a brief address in which she described music as "a potent factor in the healing art," and then Dr. Francis S. Kennedy, of Brooklyn, lectured on "Music as a Medicine," illustrating his talk with charts showing the effect of various kinds of music on the pulse and temperature. He spoke of music as a sleep producer, and The Sun's account of the meeting mentions as an example two old ladies who slumbered peacefully throughout the entire lecture.

A PHYSICIAN'S STORY.

The doctor said that a fellow physician had recently told him of a wonderful musical cure.

"A commercial traveler came into my friend's office," said the doctor, "and complained that he was entirely used up, and feared he could not get home. He asked for some kind of a tonic. The doctor told him to rest for a moment before being examined, and then sat down to the piano and played several stirring marches. The result was that the bright, muscle moving pieces so revived the drummer that he jumped up and said that he felt all right and would go home without waiting for the drug."

The doctor went on to tell of experiments performed on trained nurses and school teachers. He said:

"The patient first listened to 'Solweig's Song' by Grieg, and the pulse went from 60 to 80. Then came 'Traumerer,' and the pulse dropped to 64. Next followed the 'Invitation to the Dance,' the pulse going to 80 and dropping at the close to 68. The 'Oberon' was played and the pulse jumped to 80. A Grieg nocturne followed and the pulse responded by dropping to 64."

RESPIRATION AFFECTED.

Similar phenomena were noted in the respiration of the subject, and the doctor drew the conclusion that music may be used as a stimulant or sedative. One subject whose pulse refused to respond to the dance music, and even suffered a drop when it was played, was found to belong to a church which forbids dancing. He had never learned the art.

At the close of the lecture Mrs. Mary Gregory Murray played various selections, grave and gay, to try the effect on the audience. The first stirring march awoke the two old ladies, but they promptly fell off again during the "Slumber Song," and the illustration was complete.

A line of such therapeutics, it is proposed, should be carried by all druggists. The remedies, presumably, would take the form of eight-ounce music boxes, or larger, either patent or non-secret, with either the names of selections and composers

published on the label as the formula, or else kept away back in the comfortable dark. To prevent price demoralization the source of supply—that is, the musicians who are tapped for a song or "piece"—would be put on the serial numbering plan, each particular song or piece, or other "crime" issuing from him having its own identification, like a subject for the Bertillon system. But so far the proprietors, with their customary shrewdness, have not made known any connection they may have with the National Society of Musical Therapeutics. This is regarded as only another striking proof of their consummate guile.

RAINES LAW AND DRUGGISTS.

Amendment Is Proposed for Stringent Regulation of Liquor Selling.

Albany, Jan. 16.—Comment here is largely concerned with the proposed amendments to the Raines law, particularly one that concerns the druggist. The amendment which Majority Leader Raines in the Senate has formulated was the subject of conferences among the members of the Excise Committees of both Senate and Assembly. Mr. Plank and Senator Raines went over the subject thoroughly, and Senator Raines also held a conference with Gov. Higgins and Lieut. Gov. Bruce.

The drug store amendment to the present law is, it is said, almost certain to be added to the statute books, whatever happens to the rest. That amendment will provide much more stringent regulations for the sale of liquor in drug stores. It is claimed that not only is the drug store holding a license permitted many more licenses under the present law than it is justly entitled to, but that, owing largely, it is believed to the laxity of the present law, many druggists have been selling alcohol without right.

FOR A COLLEGE AT SYRACUSE.

Syracuse, Jan. 17.—There is a strong probability that a college of pharmacy will be added to Syracuse University to meet a demand which has been steadily growing since the pre-requisite law went into effect. The requirement that every licensed pharmacist must be a college graduate was strongly opposed by many of the druggists in this part of the State on the ground that they could not afford to pay the salaries that would be made necessary by the new law. This opposition has not died out, and druggists from this part of the State may make a fight at the next meeting of the New York State Pharmaceutical Association to put the association on record as in favor of the repeal of the law.

If this is not successful the Syracuse and other drug associations in Central New York, it is declared, will endeavor to persuade the authorities of Syracuse University to establish a college of pharmacy. It is thought that it will be only necessary to prove that there will be students enough to pay expenses.

On the other hand many clerks favor the new law on the ground that it has already increased salaries and will probably continue to do so.

CIGAR STORES UP-STATE.

Signs Point to the Invasion of Syracuse by the United Company.

Syracuse, Jan. 17.—Thus far the United Cigar Stores Company, said to be a branch of the Tobacco Trust, has kept out of this city. But from recent developments it may be here soon, if it is not already, under a different name. Syracuse is the home of the Whelan brothers, who have been great factors in the tobacco business for the past few years. George J. Whelan is president of the United Cigar Stores Company, and his brother, C. A. Whelan, is vice-president. John F. Whelan and Michael J. Whelan up to this time have been owners of the most important stores here, and their influence with their brothers has kept the United Company from invading the city. The latest news, however, is that John F. Whelan has been chosen president of the Roral Company, said to be another branch of the Trust, and that Michael J. has been chosen to manage the mail order department of the United Cigar Stores Company. It is expected that the result of this will be that the United will now rear its many heads in Syracuse. The druggists expect to have this new problem to deal with in a short time.

Another phase of the cigar business is the running of card machines in all the tobacco stores. A druggist does not desire these machines in his store, as it would make the place objectionable to women, who are his chief customers. They have tried several times to make the city authorities enforce the law against gambling machines, but they have been unable to accomplish anything. There are spasmodic simulations of vigor on the part of the authorities, and the machines are ordered out. Only last week this was done, but within a few hours the machines were in again and running as hard as ever. The outlook for the cigar department of the Syracuse druggist is not reckoned as tremendously encouraging.

REGISTERED AT BUFFALO.

Buffalo, Jan. 16.—At the meeting of the Western Branch of the New York State Board of Pharmacy, held at Buffalo, Wednesday, Jan. 11, the following were granted licenses: Pharmacists—Wilber Ray Davis, Buffalo; George William Koerner, Racine, Wis.; John Lefler, Buffalo; Edgar Howard Lincoln, Charles Theodore Mann, Buffalo; John Hiram Rider, Lockport; William Andrew Robison, Frank Whitney Shaw, J. Lee Sherlock, Buffalo; Arthur Martin Wellman, Jamestown. Theodore Floyd Young, Buffalo. Druggists—Rosello Uberto Blackney, Angola; Thomas Duffy, Niagara Falls; Max Himelfarb, Joseph M. Podlewski, Alvah Humphrey Radder.

BAY STATE NOTES.

—Some fifty employees of Barnes & Co., the Boston retail druggists, died at the Hotel Essex one Sunday lately, and had a most enjoyable time of it.

—The Worcester County Pharmaceutical Association, at its January business meeting, has chosen March 2 as the date of the annual dinner. A committee made up of Walter S. Doane, T. A. Brennan and

Victor Berwell, was appointed on arrangements.

—In a large fire in Chelsea, the theatre, the Academy of Music, and the entire block was destroyed. The pharmacy of Justin S. Bartlett was in the thick of it. The stock was valued at \$10,000, insured for \$6,500, but there was time to remove a large part of the goods before the fire reached the store. The loss will be considerable, however. Mr. Bartlett is in alderman in his city.

—James O. Jordan, a graduate of the Massachusetts College of Pharmacy, has been appointed inspector of milk and vinegar in Boston. For seven years Mr. Jordan was instructor in the College of Pharmacy, and has been an instructor in chemistry in the Harvard College Medical School.

—Daniel Connor, of Palmer, has begun suit against John Wilson & Co., druggists of that city, for an alleged mistake in selling saltpetre when Rochelle salts were asked for. The druggist replies that Connor had saltpetre in his house before the purchase of the Rochelle salts, and that his error was due to carelessness.

WANTS A LAW FOR PATENTS.

New Hampshire Solon Would Have Formulas on Labels.

Concord, N. H., Jan. 16.—For each patent medicine label to tell what is in the bottle, is a matter to be demanded by legislation when next the lawmakers of New Hampshire assemble. It is the same project, by the way, as that agitated in Cuba, and described in the last issue of The Era. In Cuba, moreover, there is a precedent, namely, an old Spanish law, now a dead issue, over the island.

The father of the idea in this state is Joseph D. Malloney, who represents the town of Alstead in the lower branch of the Legislature. He appeared at the annual meeting of the Centre District Medical Society last week, and said he should introduce into the House a bill requiring that the printed formulas of all proprietary or patent medicines be put upon the labels of all bottles, boxes or packages in which they may be offered for sale in New Hampshire. Non-conformance will be attended by severe penalties.

"Gee, what's that?"

FOR SUNDAY SODA WATER.

Relief From Pennsylvania Blue Laws Is Sought by Petition.

Philadelphia, Jan. 16.—The opposition to stringent blue laws in this State, and their enforcement, such as those who sell cigars and soda water on Sunday, has crystallized in a petition, now being circulated among druggists and tobacco dealers. The petition will be submitted to the legislature, and relief by the passage of the attached bill is prayed for. The petition follows:

TO THE HONORABLE MEMBERS OF THE SENATE AND HOUSE OF REPRESENTATIVES FOR THE STATE OF PENNSYLVANIA:—

WHEREAS, Your petitioners having seen the evil and oppression created by the enforcement of the Sunday law in its present form by the Philadelphia Sabbath Association, who have periodically prosecuted, before a Magistrate, druggists, cigar and candy dealers only. These same dealers have, in a little over a year, paid thousands of dollars in fines, and

WHEREAS, The said Sabbath Association, by their discriminative actions, have brought about untold misery, degradation and suffering; fines and executions have been imposed on the small dealers, while all large violators have remained unmolested.

WHEREAS, We, the undersigned, therefore pray and petition the Legislature for the State of Pennsylvania to annul and repeal part of the Act of Assembly, approved the 22d day of April, 1794, and

WHEREAS, We here-by present an amendment of a reasonable character—the same is embodied in the petition, and

WHEREAS, By accepting and enacting said amendment into law, your honorable body will bring about a pacific settlement of this much vexed question.

And Your Petitioners will ever pray, etc.

AN ACT

Authorizing the Sale of Certain Articles and the Performance of Certain Labor on the First Day of the Week, commonly called Sunday:

SECTION 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania, in General Assembly met, and it is hereby enacted by the authority of the same, hereafter it shall be lawful to sell Drugs, Medicines, Soda and Mineral Waters and other harmless and non-intoxicating drinks, Bread, Oysters, Cakes, Pastry, Ice Cream, Candy, Milk, Fruit, Cigars and Tobacco, to prepare, print, and sell Newspapers on the first day of the week, commonly called Sunday:

Provided, That nothing herein contained shall be construed to allow the sale of any non-intoxicant, or other drinks, in any saloon, inn or tavern licensed by law for the sale of intoxicating beverages.

CUT-OFF LISTS IN BALTIMORE.

Baltimore, Jan. 16.—Copies of a new list of cutters, issued by the American Mercantile Agency, of Chicago, have been received here. They contain the names of the retail druggists who pursue cut-rate methods, and the agency announces on marginal notes, that it is prepared to furnish other business information to subscribers. Revised contracts have been sent out by the proprietors, and are being freely signed. Apparently the methods have been changed to meet the altered requirements of the situation, but otherwise the fight against trade demoralization goes on uninterruptedly.

MARYLAND BOARD VACANCY.

Baltimore, January 16.—There will be a vacancy on the State Board of Pharmacy to fill next summer, when the term of David R. Millard, the secretary, expires.

The board consists of five persons, two from Baltimore, one from the eastern shore, one from Central Maryland, and one from the western part of the State, and one member is to be elected each year. The first of the original members to go out was Dr. Henkel, of Annapolis, who was succeeded by Ephraim Bacon, of Roland Park, the place thus held by Anne Arundel County, going to Baltimore County. Next, Wm. E. Turner, of Cumberland, resigned, to move to Louisville, and H. Lionel Meredith, of Hagerstown, was named to succeed him. Mr. Millard will thus be the third of the board to go out. Who will be appointed to succeed him is not known. So far no name has been mentioned with sufficient distinctness to afford a clue. There is no salary attached to the positions, which are places of honor solely, that confer a certain amount of distinction on the incumbents.

LIQUOR FIGHT IN MICHIGAN.

Lansing, Mich., Jan. 16. The bitter fight between the druggists and saloon keepers of Marshall has finally reached the State Legislature. A bill has been introduced by Representative Beal of Ann Arbor at the request of the State Board of Pharmacy. Mr. Beal says the bill provides ways and means for the punishment of the violators of the pharmacy law, and particularly for the violation of that part of the law prohibiting the selling of liquor as a beverage by druggists not having a liquor license.

"There is a great deal of this sort of thing going on," said Mr. Beal, "not only in counties where there is a prohibition law, but in other places as well. The bill will permit country stores to do business in drugs by hiring pharmacists as clerks."

MICHIGAN NOTES.

—The druggists of Manistee have agreed that only one store shall be open after 6 p. m., except on Saturday nights. The covenant runs until April 1.

—Lee M. Hinchins, of the Hazeltine & Perkins Drug Co., has been made trustee of the chattel mortgage recently uttered by the Howard & Pearl Drug Co. of St. Joseph. The claims of creditors amount to \$8,000; and the inventory will run about \$12,000, and the book accounts \$2,000.

—Dr. John Jackola, of Hancock, has bought a site at South Range, and in the spring will erect a business block there, opening a drug store in connection with his medical practice. South Range people have depended on Houghton and Hancock for drugs and medicines for years.

—Charles Wright, chemist, of Detroit, has removed to Battle Creek, where he will manufacture toilet articles and extracts.

—Frank Kornejewski, of Seventh street, Grand Rapids, because of misplaced bottles, drank a quantity of ammonia for mineral water. Frantic with pain, he quickly seized a bottle of sweet oil and poured its contents down his throat and saved his life.

—Louis Hoffer, druggist of Grand Rapids, charged with illegal sale of liquor, was acquitted in the short space of ten minutes by a jury in the Superior Court.

—Arthur H. Webber, Cadillac, and secretary of the Michigan Board of Pharmacy, has gone to Los Angeles with his family to spend the winter.

NEW PHARMACY LAW WANTED.

Michigan Clerks' Association and the State Ph. A. Have Two Bills.

Detroit, Jan. 14.—The annual meeting of the Retail Drug Clerks' Association of Michigan was the liveliest in the history of the organization. The election of officers was decidedly spirited, although the contests were all of a friendly character. President George J. Robinson was re-elected by a handsome vote, and thanked by the association for his untiring efforts during the past year. In responding President Robinson laughingly remarked that his success was no doubt due to a reinforcement he received just before the election in the way of a ten-pound boy, which is No. 8 to come to the Robinson farm in Highland Park. B. W. Redick was chosen recording secretary and A. G. Reisterer as financial secretary.

The association has had a very prosperous year, and has added forty-one new members to its roll. The question of a model pharmacy law was discussed, and it was decided to submit a bill before the State Legislature. The committee having the matter in charge reported on what they considered would be satisfactory, and a special meeting will be held Jan. 18 to act on the same. The Michigan State Pharmaceutical Association also has a bill, and there promises to be something doing between them when it comes to the question of influence with the state solons.

The association discussed the appointment of W. E. Collins, of Owosso, as a member of the State Pharmacy Board, and voiced their dissatisfaction. They declare that Gov. Warner will probably hear from both proprietors and clerks at the next election. Detroit has no member on the board, and hasn't had for years. The clerks declare that the pharmacy laws continue to be violated in this city with impunity, and that no effort is being made to put a check on the lawlessness.

MICHIGAN EXAMINATIONS.

Cadillac, Mich., Jan. 10.—The Michigan Board of Pharmacy held a meeting at Ann Arbor, January 3, 4, 5 and 6. There were thirty-eight applicants present for examination for the full registered list, and sixteen for assistant. The following is a list of the successful ones:

Registered pharmacists: Chas. E. Bond, Detroit; Arthur E. Crippen, Brighton; Angus De Krulff, Zeeland; Rudolf E. Fisher, Ann Arbor; Wm. R. Gordon, Wyandotte; Frank M. Gute, Owosso; Murray P. Harner, Buchanan; Chas. F. W. Hanses, Ludington; Harvey A. Hall, Cleveland, Ohio; Geo. A. Matweys, Grand Rapids; W. C. Spring, Marietta; Fare A. West, Crosswell; Robert E. Weeks, Augusta; Frank N. Zinger, Detroit.

Assistants: Harry Bennett, Big Rapids; Fred D. Baruum, Cedar Springs; James F. Caio, Detroit; Samuel R. Crabh, Big Rapids; J. Harry Dunbar, Grand Rapids; M. Guillemeroy, Ann Arbor; Gordon F. Hill, Detroit; Floyd C. Letts, Traverse City; Herman A. Mayer, Ann Arbor; Florence M. Meek, Ann Arbor; Claud C. Owen, Maple Rapids; W. M. C. Scott, Detroit; Stanley Wilson, Yale; Frazer D. Wright, Tecumseh.

POISON BILL IN INDIANA.

Indianapolis, Jan. 14.—The fatal poisoning of Miss Crystal Krauss, daughter of a well-known and prosperous druggist of Hartford City, by her stepmother, Mrs. Rae Krauss, has resulted in the drafting by David Hecht, of Evansville, of the Indiana State Board of Pharmacy, of a bill to regulate the sale of poisons. This bill now before the Indiana Legislature will very likely pass, it is thought.

The bill makes it unlawful for any person knowingly to sell to any minor under 16 years of age, except upon the written order of an adult, any of a long list of poisons, including carbolic acid, chloroform, opium, arsenic and morphine.

Of the druggist the bill says: "And before delivery shall be made there shall be recorded in a book the name of the article, the quantity delivered, the purpose for which it is alleged to be used, the date of delivery and the name of the purchaser and of the dispenser."

DRUGGISTS SUED FOR DAMAGES

Jefferson, Ia., Jan. 14.—Mrs. E. R. Lindell has begun suit against the drug stores of the city for \$20,000 damages. Her husband was killed by a train some months ago, while in a drunken stupor, and she claims that druggists mentioned in the action were responsible for his death, by selling him the liquor that made him drunk.

DRUGGIST TRAPS ROBBERS.

Chicago, Jan. 14.—It is a good story, that of Frank Dieden, druggist, who trapped two footpads in his basement and stood on the trap door until the police came. At about 9.30, one evening last week, three men entered Mr. Dieden's store at 377 Cleveland avenue, when he happened to be alone. As he came from behind the prescription case, two of the robbers pointed revolvers at him and ordered him to hold up his hands.

At that moment a citizen passing the store saw what was taking place and discharged a revolver to attract the attention of the police. One of the hold-up men ran out of the store, and the other two commanded Dieden to pilot them out of the place through the basement. Once in the basement, the robbers debated as to whether they would kill the druggist.

Dieden groped through the darkness to a secret trap door, which he found, and sprang to the floor above. The door was quickly shut on the two robbers, and there was no escape for them. Two officers captured them there.

The other robber was fired upon by a saloon-keeper across the street from the drug store. He later was arrested at Wells and Division streets, suffering from a bullet wound in the leg.

PRaises ILLINOIS BOARD OF PH.

Chicago, Jan. 14.—The governor of Illinois, in his last message, pays tribute to the State Board of Pharmacy. The manner in which the affairs of the board are managed, he says, has gained for it the reputation of being the best conducted pharmacy board in the United States. During the year 1904, 5,659 registered pharmacists' certificates were issued, 936 to assistant pharmacists, and 399 to apprentices.

BUSY MEETING OF C. R. D. A.**Trust Cigars, Contract Plans and Other Matters Are Considered.**

Chicago, Jan. 14.—The regular quarterly meeting of the C. R. D. A., was held at the Northwestern University building, last Tuesday night. Attendance was large and important work was done. The report of the secretary showed that forty-seven new members had paid their dues and been taken into the association within the last month.

Representatives of the national and local cigar dealers' associations were present, and addressed the meeting, asking for support in their fight against the trust. They advised druggists to push independent goods, and pass out trust brands only when they are specifically asked for.

The report of the aristol committee, made by Chairman John I. Straw, coincided with the conclusions reached by Mr. Avery and Mr. Wooten.

President Avery stated that all but a few of the druggists charged with selling bogus aristol have signed the affidavits required by the Farbenfabriken of Elberfeld Company. The latter will prosecute those who have not signed.

A uniform insurance policy was discussed and held over for future action.

Mr. Schmidt introduced strong resolutions, endorsing the Mann bill. The resolutions were adopted; also resolutions endorsing House Bill 12,646 and Senate Bill 2,984, relative to better rank and pay for naval pharmacists.

On motion of Mr. Bodemann, resolutions were passed, expressing the appreciation of the C. R. D. A., for the Peruna Drug Manufacturing Company, in standing by the druggists, and not waiting for 30,000 signatures before putting its plan into force.

On motion of John I. Straw, the executive board was directed to prepare a financial statement of the association for the year ending April 1, and mail it to every member. On motion of Mr. Wooten, a committee of five was appointed to investigate trade and market conditions and notify the association of impending changes. This plan was cordially endorsed by Captain W. G. Morris and others. Resolutions were passed endorsing contract plan proprietors, thanking them for the measures they have adopted to protect their preparations from price cutters.

A change in the by-laws is proposed whereby the meetings will be held monthly, instead of quarterly. The matter will be decided at the regular meeting in April.

FOR THE SARGENT MEMORIAL.

Chicago, Jan. 14.—Memorial services for the late E. H. Sargent will be held on the afternoon of the 27th, in the Northwestern University assembly hall, under the auspices of the university. Dr. Patterson and W. Bodemann, as a committee, have announced the programme as follows: Music, prayer, remarks by Dr. Hugate, president of N. W. U.; oration by Dr. Mercer, of Cincinnati, for years pastor of Mr. Sargent's Church; remarks by A. E. Ebert, representing A. Ph. A.; remarks by H. Broth, president of the C. V. D. A.

TOOK ACETANILID FOR SODA.

Louisville, Jan. 14.—The case of Martha Adkins against Charles D. Knoefel, a druggist, both of New Albany, Ind., for \$15,000 damages, alleged to have been inflicted on her health by the alleged substitution of acetanilid for phosphate of soda, went to trial in the Clark Circuit Court, in Jeffersonville, last Wednesday, and promises to be continued until the latter part of this week. On March 2, 1903, Mrs. Adkins alleges that she went to the home of her mother, a short distance back of New Albany, and that the following day, while there, was taken ill. Her mother advised her to take a dose of phosphate of soda, indicating a package which had been prepared, she said, at Knoefel's drug store. Mrs. Adkins asserts that she took the drug and became violently ill. A physician was called and asserted that she had taken acetanilid instead of soda. Mrs. Adkins claims her health has been permanently impaired.

UNIFORM BILL OF LADING.

Louisville, Jan. 14.—Theodore Ahrens, president of the Board of Trade, has sent out to all members of that organization, a circular letter, in which all shippers are urged not to sign the proposed new uniform bill of lading, which, he says, deprives the consignee of freight of all claim of recompense for damage or loss. The adoption of the new bill was recently deferred by the railroads until April 1, and the matter is now before the Interstate Commerce Commission.

NOTES FROM LOUISVILLE.

—Charles F. Buschemeyer, of Buschemeyer Bros., has sold his interest in the firm to his brother, Julius E. Buschemeyer, and will retire from business. The firm will continue to be known as Buschemeyer Bros., Henry Buschemeyer retaining his interest.

—The Locke Drug Co., of Barren County, filed incorporation articles this week. It has \$10,000 capital stock; the incorporators are W. W. Locke, S. T. Botts and J. B. Honeycutt, of Glasgow, Ky.

—Miss Lillian Balsch has left for Chicago, where she will be married to Edward Dotson, formerly in the drug business in Louisville. He is now connected with the Fuller & Fuller Drug Co., of Chicago. They will reside in Chicago.

Jimmy: "I've want these in your inventory?"

BLAMED FOR SUICIDES.

Milwaukee Druggists Held to Account for Poison Sales.

Milwaukee, Jan. 14.—The city health department and the city council are hot after the druggists for laxity in the sale of poisons. But, while both branches of the city government are clamoring for more law, or the enforcement of such law as there is, they are fighting between themselves. The agitation began when a local newspaper commented on the fact that suicides in Milwaukee are averaging one a day, and over half of them are due to carbolic acid. At the last meeting of the city council, Alderman Sherburn Becker introduced an ordinance forbidding the sale of the well-known poisons, except on prescription. Now the city board of health has put in an objection to the ordinance, asserting that the State laws are sufficiently rigid if they are enforced.

Frank B. Schultz, secretary of the city board of health, said: "I am inclined to think that the druggists are lax in observing the provisions of the State law, especially as to the use of the poison register. I doubt if there is a druggist in the city that complies with the law."

District Attorney McGovern says he is too busy to look at books. "We have more important business, but this is the first time this has been brought to my attention, and I will try to see that a deputy shall find time to give some time to the subject."

Says Alderman Becker: "It is ridiculous to say that the giving of a name and address will prevent a suicide. I feel positive that no druggist, for the sake of five or ten cents, would sell a person poison if he knew, or even suspected, that the poison was to be used for self destruction, but the percentage of suicides to the number of poisons purchased is so small that the druggist cannot be blamed if he sells poison to suicides."

WISCONSIN NOTES.

—The annual banquet of the LaCrosse Retail Druggists' Association was held at the Hotel Stoddard, January 9. T. H. Spence, president of the association, was toastmaster. The speeches were devoted to the advancement of the city's interests.

—Edward C. Giese, Anna Giese and J. William P. Bell have incorporated the Crabb-Giese (drugs) Company, at Ashland, with a capital stock of \$5,000.

—D. D. Shea has been appointed receiver for S. A. MacCauley, of Arena, who disappeared November 30, leaving claims aggregating \$1,500.

—The drug store of J. E. Kopenick & Co., of North Fond du Lac, was destroyed by fire January 6. The loss on stock is about \$5,000, with \$3,500 insurance.

CLERKS CHANGE OFFICERS.

St. Paul, Jan. 14.—The affairs of the Minnesota Drug Clerks' Association were in new hands. The president, Ed V. Goltz, placed his resignation with the executive committee and the duties of the office devolved upon Vice-President David L. Goldberg. Lewis C. Landon, the secretary, likewise withdrew, and the committee named George T. Heller as his successor.

Mr. Goltz resigned because he could no longer devote time to the association's affairs, as he is taking a course in the medical department of Hamline University. As he continues head clerk for H. W. Rietzke & Co., St. Paul, there is no visible demand upon his inventive genius to create time-killing devices.

Mr. Landon's withdrawal as secretary was likewise due to the enlarged demands of his business. He finds the administration of a good-sized territory as representative of a Minneapolis wholesale drug house a much bigger proposition than clerking for Mr. Rutherford, of St. Paul.

The ambitious design formed by the association, on its reorganization a year ago, to organize the whole State into districts under officials subordinate to the St. Paul headquarters has not yet been realized. This work was to have been done chiefly by Walter T. Lemoa, of St. Paul, counsel of the association. But Mr. Lemoa is a member of the legislature, and his life for some years has been crowded with political activities. Hence, the district organizations of the Minnesota drug clerks are still on paper. But the association will not abandon what has been referred to as its "Tammany" scheme of organization. About a month hence its members will hold their annual meeting in the Twin Cities, and take a fresh "brace." President Colberg, Secretary Heller and Treasurer Gus. A. Dickman are evidently determined that 1905 shall be less barren of beneficial results than 1904.

MINNESOTA NOTES.

—The Lyman-Ellet Drug Co., it is announced, will erect a large four-story brick building in the spring, on Sixth street, between First and Second avenues, South. Details of the plan have not yet been made public, but a very fine and costly structure is promised.

—John J. Holzschub's drug store, at Fourth avenue, South, and Twenty-second street, was closed by a deputy sheriff the other day. This was because Noges Bros. & Cutler, St. Paul, had a judgment against Mr. Holzschub for \$177.50.

—The St. Paul Association of Retail Druggists devoted nearly the whole time at its December meeting to a discussion of the increase of N. A. R. D. dues. The attendance was light because of the holiday business, and the matter was postponed until the January meeting.

NEW MISSOURI PHARMACEUTISTS.

Kansas City, Jan. 12.—The State Board of Pharmacy met at Jefferson City this week and examined twenty applicants. Of that number seven received certificates to practice. They were: C. N. Spencer, Lee's Summit; William M. Guthrie, Neosho; Ernest J. Wilsie, St. Louis; Thomas Devancy, St. Louis; Louis O. Rudolph, St. Joseph; Elmer E. Luter, Oran; James T. Dolan, Joplin.

The tragedian was declaiming. "What," quoth he, "is that ethraling scent that e'en would o'erpover me? Are the roses poisoned? And yet 'tis a strange unbending odor!"

"James," urged a voice in the audience, "I smell it, too. It's that dreadful iodoforn. Let's go home."

NEW 'PHONE COMPLAINT.

Talking Is Now Made Too Comfortable in St. Louis.

St. Louis, Jan. 14.—There is a new telephone question in St. Louis. The old one, that of pay 'phones, is not settled, but is hanging fire pending some movement on the part of the company. The new question concerns desk or counter 'phones. At the solicitation of company solicitors, many druggists have placed movable or counter 'phones in their stores, "because they are handy." The druggist, it was argued, would find them so much more comfortable for his own use.

The latter proved true enough, but customers found the 'phones so very comfortable that in some cases they forget to stop talking at all. In nearly all cases these 'phones are "monthly" ones, for which the druggist pays all the cost, and he is likely to want to accommodate as many people as possible. But in one case reported the other day but one person was "accommodated" in an hour and a half, although a dozen were waiting during that time. The "one person" was a frail looking young person with an open lace work waist who was talking to "George."

"I have worn out my stock of profanity on the agent who put in that 'phone," said the druggist, "and I've almost worn out the wires trying to get it out. When I do get it out, I will put one in the most uncomfortable place I can find. I can endure the torture myself."

The old question of pay 'phones is awaiting action on the part of the Kinloch Company. All druggists have pay Bell 'phones. The Kinloch Company promised pay 'phones, then asked time and ordered the price raised from \$60 to \$72 a year. Most of the druggists on whom the demand was made threw out the 'phones, and the raise in price was dropped. Now developments are awaited.

RACE FOR FAIR EXHIBITS.

St. Louis, Jan. 14.—The St. Louis C. P. committee to secure salvage from World's Fair exhibits are not having smooth sailing, as the Philadelphia Municipal Museum and the University of Michigan Museum have already carried off most of the prizes. However, the local committee has secured from the government the North Carolina turpentine exhibit. There are several tree trunk sections which show the formation of the turpentine gum, and others cut during the gathering season exemplify the mode of work.

IN MISSOURI.

—Romanta Wells, who recently succeeded Maj. F. C. Vincent as secretary of the Kansas City Retail Druggists' Association, has taken charge of the office. Mr. Wells has been in the drug business forty-nine years, fifteen years of the time as a wholesaler. For some time past he has been a representative of the National Retail Druggists' Association.

—The annual banquet of the Kansas City Retail Druggists' Association will be held February 21. The details regarding place and programme have not been decided upon. A special meeting of the association will be held January 21 for making the arrangements.

AMONG THE COLLEGES

BUFFALO COLLEGE.

Buffalo, Jan. 14.—Students of Buffalo College of Pharmacy resumed work again January 6. The matriculates now number 161, which constitutes the largest class in the history of the college. The committee on festivities for University Day are at work, and it is expected that the exercises will be held on Lincoln's Birthday instead of Washington's Birthday, as formerly. This change will provide for the entertainments to be given by the students.

A new microscopical laboratory is being fitted up for the use of Dr. Ernest Weide, professor of botany and microscopy.

Buffalo University did not have a football team in 1904, but an effort will be made to have an organization in the field when the next season opens.

SCIO COLLEGE.

Scio, O., Jan. 12.—Prof. J. H. Beel, dean of the Scio College of Pharmacy, reports a total enrolment of thirty, as follows: One year course, 18; two year course, 10; four year course, 2. After the present year the one year's course leading to the degree of "Ph. G." will be no longer offered. This action is made possible by the new set of rules recently adopted by the Ohio Board of Pharmacy, which Prof. Beel believes will work a great deal of good for pharmacy in Ohio.

Three separate courses of instruction are offered, the "Ph. G." course, covering a period of 40 weeks; the Ph. C. course, covering a period of two years, and a "special review course," of from three to six months, but for which no degree is conferred. Students who have completed either of the first two courses may select sufficient work from the regular college course of Scio College to graduate with the degree of "bachelor of science" or "analytical chemist."

Prof. Beel, the dean of the college, is the president of the American Pharmaceutical Association, and a member of the Board of Trustees of the United States Pharmacopoeial Convention. He has also done much work along educational lines, and he emphasizes the fact that intending students are very likely to judge of an institution by the number in attendance, while the fact is, the best colleges of pharmacy have the smallest enrolments, and many of them have sacrificed most for the good of the profession.

UNIVERSITY OF MICHIGAN.

Ann Arbor, Jan. 16.—During the Christmas vacation Raymond J. Van Doren joined the ranks of the Benedicts, as he was married to Miss Cora Wallace. Both of the young people are residents of Ann Arbor, and the groom is a senior in the pharmacy department, taking a four year course.

The Michigan Board of Pharmacy held an examination during the first week of this month in the chemical laboratory of the university. Fifty-four applicants presented themselves for examination. A considerable portion of the three days allowed for the test was devoted to practical

prescription work. The prescription department of the laboratory was given over to the use of the board.

L. T. W. Högrieffe, Ph. C. '97, B. S. '98, chemist at one of the mines at San Luis Potosi, Mexico, has been obliged to resign his position, as he could no longer endure the climate. He is temporarily in New York City.

Governor Warner has appointed William E. Collins, Ph. C. '90, of Owosso, a member of the Board of Pharmacy to succeed C. B. Stoddard, of Monroe, whose term has expired.

Dr. A. B. Prescott, dean of the school, is confined to his bed with an attack of influenza.

MEHARRY PHARMACEUTICAL COLLEGE.

Nashville, Tenn., Jan. 12.—The Meharry medical department of Central Tennessee College was organized in 1876 for the purpose of furnishing to the colored people of the South an opportunity of obtaining a medical education. The name of Central Tennessee College was changed about four years ago to that of "Walden University." The Pharmaceutical College, now in its sixteenth year, began its present session in September last, with an enrolment of thirty, as follows: Freshmen, 12; juniors, 10; seniors, 8. Eight women are among the number.

As now constituted the course of instruction extends over three years, of six months each. Applicants for admission must be able to pass a satisfactory examination in the English branches and the elements of physics and of Latin. The degree of Ph. C. is conferred.

The Meharry College, of which the Pharmaceutical College is a part, is under the care of the Freedmen's Aid and Southern Education Society of the M. E. Church. Differing from most institutions offering courses in pharmacy, its rules for students forbid the "use of tobacco on the college grounds." Neither are students permitted to visit "the theater or other questionable places of amusement," and drinking intoxicating liquors is strictly prohibited. Students are also "required to attend morning prayers at the college chapel, religious services on the Sabbath, and monthly prayer meetings."

ATLANTA COLLEGE.

Atlanta, Jan. 10.—Dr. George F. Payne, dean of the Atlanta College of Pharmacy, reports an enrolment of 40 seniors and 70 juniors. This institution maintains a free dispensary, where, it is claimed, the students get actual drug store experience, prescriptions for several hundred patients being compounded daily. The college was organized in 1891, and claims to be the first of its kind in the United States to inaugurate a free dispensary for the benefit of its students. Two courses of study are offered, one of two years, leading to the degree of Ph. G., the other of three years, leading to the degree of Ph. C. (the college year is six months). Before he can receive the diploma, the student must have reached 21 years of age.

As an argument for attending college, the Atlanta C. P. presents some interesting data from a recent report of the United States Bureau of Education. The conclusions are: (1) The uneducated boy

failed to become notable in any department of usefulness, and only 24 self-taught succeeded; (2) the boy with only a common school education has in round numbers one chance of success in 9,000; (3) the boy with a high school training has 22 chances of success in 9,000; and (4) the boy with a college training has 220 chances of success in 9,000; in other words, the college boy has ten times the chances of the high school boy and 220 times the chances of the common school boy, and all of the chances over the uneducated boy.

CHICAGO SUMMER SCHOOL.

Chicago, Jan. 9.—The department of pharmacy of Illinois Medical College, this city, is the only institution your correspondent knows of which claims to be a summer school of pharmacy exclusively. The college buildings are located at Washington Boulevard and Halsted street. The term begins April 1 and continues until October 1. The degrees of Ph. C. and Ph. G. are conferred, the latter being the "higher" degree. Frank E. Fisk is dean and professor of pharmacy.

ST. LOUIS AND BARNES.

St. Louis, Jan. 13.—Both the St. Louis and the Barnes schools had good openings after the holidays, and the students have again settled down to work. The St. Louis C. P. students are looking forward with some interest to the A. A. ball, the first opportunity given the students for the year to meet the druggists of the city and other active friends of the college. The ball will be held at the Liederkranz Hall February 18. The A. A. and the students are drawn very closely together through the A. A. lecture course.

Dr. H. M. Whelpley, dean of the St. Louis C. P., will deliver his lecture, "The Mammoth Cave of Kentucky," before the Academy of Science next Monday night.

FERRIS INSTITUTE.

Big Rapids, Mich., Jan. 14.—The Ferris Institute has enrolled thirty-four new pharmacy students since January 1, 1905, and has a total of sixty-two in the pharmacy department at the present time. Seventeen students attended the Michigan Board examination at Ann Arbor, January 3.

The Boss—"Well, I know how much alcohol there's left in that barrel."

AMONG THE BOWLERS

CONTEST IN NEW YORK.

The scores at the bowling of the New York wholesalers on Monday night were as follows:

Seabury & Johnson	798
Bruen & Ritchey	726
Seabury & Johnson	810
Colgate & Co.	850
Colgate & Co.	836
Bruen & Ritchey	661
Parke, Davis & Co.	841
Roessler & Hasslacher	775
Parke, Davis & Co.	895
Lazell, Dalley & Co.	796
Lazell, Dalley & Co.	730
Roessler & Hasslacher	756

High scores were made by Norris (Bruen & Ritchey), 227; Judge (Seabury & Johnson), 230, and Burgess (Parke, Davis & Co.), 203.

The postponed game between Colgate & Co. and Bruen & Ritchey was rolled off and resulted in 818 for the former and 727 for the latter.

UNSTEADY PINS AFTER BALL.

High scores were made by the bowlers of the West Side or Friday club last week, due apparently to the effect of the S. A. S. hall the night before. The pins were scarcely able to stand up under the influence of Karty's gentle roll and Riefy's magnificent swing. Henry Hlefeld jumped three feet in the air (actual measurement) when August Drescher knocked down all the pins.

LEE CO. STILL AHEAD.

Philadelphia, Jan. 12.—The game played January 10, resulted as follows:	
J. E. Lee Co.	800 829 795
Herron & Wright, each	— 190
Philadelphia C. P.	687 829 691
Dawson	— 195

	Won.	Lost.	P. C.
J. Ellwood Lee Co.	20	4	833
S. Kline & French	11	4	733
P. D. A. Blue	19	6	714
Philadelphia C. P.	9	9	500
Wanderers	8	13	381
Hance Bros. & White	5	13	278
P. D. A. Red	1	20	047

High one game score, Maurice, 256; high three game score, Donnell, 610; high one game team score, J. Ellwood Lee Co., 910; high three game team score, J. Ellwood Lee Co., 2,568.

CONGRESS OF BOWLERS.

Baltimore, Jan. 14.—The Bowling Congress, in which the Baltimore Drug Trade Bowling Club is largely interested, will hold a meeting at Schneider's cafe, next Monday night, to discuss the question of organization. It is the intention to form a strong central body and have permanent quarters. The question of electing delegates to a national bowling match, to be held at Cleveland, will likewise come up.

The Drug Trade Bowlers are keeping up their enthusiasm, and their work shows

steady improvement. Without last night's games, the standing of the several teams was as follows:

	Won.	Lost.	P. C.
James Baily & Son	28	8	778
McOrmick & Co.	30	12	714
Lavis & Davis	21	15	583
Sharp & Pohme	22	17	564
Armstrong Cork Co.	9	24	273
Calvert Drug Co.	4	38	095

J. T. Jeffreys, who managed the affairs of the Welsh Grape Juice Company, in Philadelphia, in the absence of Mr. Walcott at the St. Louis Exposition, has been sent to Baltimore, as the local representative. As Mr. Jeffreys is one of the crack bowlers of the Quaker City, having been until now a member of the famous Wanderers, his removal to Baltimore is considered a great acquisition to the Baltimore Club.

BATTLE ROYAL IN DETROIT.

Detroit, Jan. 17.—There was a battle royal in the Drug League, last week, the two Parke-Davis teams being pitted against each other. No. 1 walked off with two of the three games, and No. 2 made a new high score for the season in the second game, knocking down 979 pins. Michigan Drug captured two games from the Stearns team, and are only two games behind P. D., No. 1, for the lead. Nelson-Baker cleaned up with the programs for three straight games. The highest individual score for the week was hauled by Ludwig, of the Nelson-Baker team, and he has the high average of the league to date, averaging 205 for the three games bowled. John Smith, of the Parke Davis team, No. 1, is close behind, with an average of 203. Each team had a great crowd of rooters present, and the games were the most exciting of the season. The scores:

P. D. & Co., No. 1	923	863	896
P. D. & Co., No. 2	739	979	784
Michigan Drug Co.	782	835	747
F. Stearns & Co.	759	814	872
Nelson, Baker & Co.	863	818	933
F. F. Ingram & Co.	769	784	812

The Parke, Davis & Co. teams are watching the scores of the New York firm's team with interest, and are figuring on games with them for the championship, at the close of the present season. A challenge will be forthcoming from the Detroit boys, if the New Yorkers don't send one in first.

REORGANIZED LEAGUE PLAYS.

St. Paul, Jan. 14.—At the first round of the reorganized League of Minnesota Drug Clerks, January 12, the Pills failed to operate successfully, the Capsules winning all three games. The score:

Capsules	751	756	796
Everett	—	—	198
Tablets	740	745	688
Colberg	—	—	197
Pills	726	696	737
Bonsgaard	—	—	201

The Mortars took two games in the Druggists' League play for January 13, the score being:

Mortars	753	878	797
Allen	—	—	213
Pesties	658	772	828
Preston	—	—	255
Spatulas	698	668	649
Smetana	—	—	194

Want a Challenge from Buffalo.

Rochester, Jan. 17.—The bowling club of the Rochester P. A., under command of Captain Moore, is getting into fine condition. The team meets every Thursday afternoon. For some time the Rochester boys have been looking for a challenge from the drug bowlers of the Bison City, and if it is not soon forthcoming one may be sent from this end.

MEXICO'S BIG DRUG TRADE.

An interesting opinion on drugs and drug stores in Mexico comes from a manufacturer's representative who was recently there.

"At the present time," he says, "the Mexican market for drugs is controlled by American manufacturers. While the large drug stores of the republic are owned by French firms they are supplied chiefly by the United States. Especially is this so in the case of proprietary medicines. No foreign manufacturers can compete with the Americans in the manufacture of patent medicines.

"I have found Mexico to be a far more profitable field for American drug manufacturers than I expected. I believed when I started on my trip to Mexico that I would find so little business being done in the drug line that I would have a great deal of time on my hands for purposes of recreation, but I have found that my beliefs were wrong. I was a very busy man during my entire stay in the republic. Recreation was out of the question. There is no doubt in my mind that Mexico is thoroughly up to date as far as drugs are concerned."

OBITUARY.

—James W. Dygert, of Canajoharie, N. Y., of heart failure. He was a member of the firm of Bellingr & Dygert, and the town's oldest pharmacist. He was prominent also in church and Sunday school work. Local accounts refer to his death as a heavy loss. He had been a member of the board of trade, had served in public office as a Democrat, and seemed a candidate impossible to defeat.

—F. R. Hanrath, pharmacist, in the United States Marine Hospital Corps, at the Marine Hospital of Cleveland, O. Mr. Hanrath was born and raised in Cleveland. He had a large acquaintance and was popular. The funeral services were conducted by the Knights Templar.

—Henry D. Weed, of Ashland, Wis., at the age of 75. Mr. Weed was one of the oldest residents of northern Wisconsin and proprietor of the oldest business house in Ashland, called the Pioneer Drug Store. In 1849, he crossed the continent in search of California gold, and returned via the Isthmus. He was born in Utica, N. Y.

DESTROYED BY FIRE.

—St. Louis: The store of Judge & Dolph, at 515 Olive street, suffered \$5,000 damage from fire, during a recent blizzard, when the firemen were all but helpless. The reserve stock kept in the cellar was thoroughly soaked by the overflow.

—Center Point, Ia.: The Brazleton & Co. Drug Store; loss, \$15,000.
—Fond Du Lac, Wis.: The Babcock block, with Kepeukic & Co.'s drug store; loss, \$20,000; insured.
—Devine, Texas: Leon Drug Co.; loss, \$9,500.

1842 NOT IN THE TRUST !! 1905

Upwards of SIXTY YEARS constant manufacture of SODA FOUNTAINS always taking FIRST GRAND PRIZE wherever exhibited, and with MILLIONS INVESTED, we never saw any construction of SODA FOUNTAIN that has so quickly met with favor as our "CONSTELLATION" COUNTER-DISPENSING APPARATUS. The patented SYRUP LIFT used in our CONSTELLATION is the acme of science, has no springs, measures accurately any desired quantity of syrup, quickest operating dispensing apparatus ever made. Dispenser always faces customer.

Order now, you cannot afford to delay, the demand is great.

SODA FOUNTAINS of every description, with slide, tilt or upright cans, FAITHFUL CARBONATORS all sizes.

MODERNIZED secondhand apparatus all makes at ridiculously low prices.

Catalogues now ready for distribution.

TRADE SECTION

SULPHUR FACTS.

HOME PRODUCT EXPORTED.

Its Entry Into Foreign Markets Due to Frasch Method.

MINING PROCESS USED BY UNION SULPHUR CO. AND THE EFFECT ON SUPPLY, DEMAND AND PRICE.—A SULPHUR 99.9 PURE OBTAINED BY ONE OPERATION.

For the first time, a large shipment of American raw sulphur was exported to Europe, last October. The cargo consisted of 3,000 tons and was shipped from Louisiana to Marseilles, France, by the Union Sulphur Company. The exportation was an important event in our commercial history, for there now seems to be a fair prospect that American shippers will share permanently in the important French trade in this article. Heretofore such a shipment was impossible, because our production of sulphur was far too small to even meet a portion of the domestic demand. Large quantities of sulphur were therefore imported by this country, and this movement still continues, but the expectation that eventually we shall produce enough for our own consumption, without importing, seems reasonable.

For many years it was known that large deposits of sulphur existed in this country, but it was impossible to mine it profitably until very recently. The discovery by Mr. Herman Frasch, of a process which solved the difficulty, occurred in 1891. An able summary of this situation has been given by United States Consul-General Skinner, who is stationed at Marseilles, which we quote:

"Our American sulphur deposits were discovered in Calcasieu Parish, La., thirty-five years ago, while petroleum boring was in progress. The sulphur found was practically useless, however, being buried under 400 feet of quicksand. The rock being porous and filled with water containing sulphureted hydrogen, the sinking of shafts was impossible by old methods. After millions of dollars had been spent in attempts to reach the sulphur, it was decided by Mr. Herman Frasch to extract it by the application of water, superheated under pressure to many degrees above boiling point. It is then forced by means of iron pipes into the sulphur rock. The sulphur, being insoluble in water, and of greater specific gravity, falls to the bottom of the well or deposit, from which point it is raised to the surface by means of an air pump. On the surface it is allowed to congeal, and is then ready for shipment."

THE FRASCH PROCESS.

The Frasch method of mining the sulphur consists of the above steps, but details are as follows: A well is drilled in the same way as for petroleum, to the bottom of the sulphur bed. Down this is run a system of pipes, one within another,

which reaches not quite to the bottom. The outside incasing pipe is ten inches in diameter; within this is a six-inch pipe, inside of which is a three-inch pipe, and inside of all is a one-inch pipe. Down these pipes heated water at 330° F. is forced under pressure, which melts the sulphur in the rock. The sulphur, melting, runs to the bottom of the well and this pure liquid sulphur is forced to the surface by compressed air, which is driven down the one-inch pipe. The compressed air mixes with the sulphur in the well, and lowers the specific gravity of the column inside the pipe to such an extent that it quickly rises to the surface. As previously stated, the rock is porous and naturally holds sulphur water, as well as sulphur,

MELTED SULPHUR FILLING A TANK.

and, indeed, the former is greater in volume than the latter. It was this fact that made earlier mining ventures impossible of success. When the cavity at the bottom of the well, made by the mining operation, becomes so large that the influx of the sulphur water exceeds the flow of the hot water forced down, cold water from the rocks flows into the cavity. The production of the well then lessens until enough water has entered to offset the hot water which has been used. The more hot water is introduced, the easier it is to work the wells, because the natural sulphur water itself grows heated, and the rock all through the bed becomes heated in consequence. Already the output has risen from 2,000 tons to 23,000 tons per well, on account of the cumulative effect of the constant inflow of hot water. At present, two wells are in operation, producing five hundred to seven hundred tons of pure sulphur a day, while the monthly output is 15,000 to 16,500 long tons.

STORING AND SHIPPING.

When the liquid sulphur is raised to the surface, it is pumped into reservoirs. One of our illustrations shows it actually running out of the pipe. In these reservoirs

it solidifies. The usual custom is to float one-inch layers of the liquid on to a previously solid sulphur foundation, after which another tank is treated in the same way. When shipments are to be made, men are put to work on the solid sulphur, who pick it out in lumps. A pile of these ready for shipment may be seen in the foreground of another of our illustrations. The flat surface in the foreground of our second photograph is solid sulphur, ready to be broken up at any time. The quality of the output of the Union Sulphur Company is 99.9 pure.

What has been the effect on the commercial market for sulphur of this utilization of those deposits in Louisiana, so long resisting all effort? To consider this we must bear in mind a few statistics. The annual consumption in the United States and Canada is about 185,000 long tons of elementary sulphur. The present market price is about \$21.75 per long ton, ex-vessel New York. Until the last few years the production of domestic sulphur averaged less than one per cent. of total consumption. In 1902 the domestic production of elementary sulphur was 7,443 long tons, and our importations 174,939 long tons, while the production of domestic pyrite was 104,129, and our imports 300,915 long tons. It is easily seen then, that the United States has until very recently depended on Europe for the bulk of its sulphur supply. Indeed, the United States is the largest consumer of sulphur in the world. The manufacturers of sulphuric acid, the refiners of petroleum, and the manufacturers of artificial fertilizers use great quantities of it. The paper pulp mills also consume a great deal. Of these latter, a recent United States Geological Survey report says: "By far the greater part of the sulphur consumed in the United States is used in manufacture of paper stock, by the sulphite process. The wood pulp is digested under pressure with sulphurous acid or the acid sulphite of calcium and magnesium, which, reacting upon the liquid and other incrusting materials of the fiber, transforms them into soluble products, which are subsequently removed in the liquor."

Our consumption of sulphur last year was a record breaker. It was 608,578 long tons, of which we mined 122,126 long tons, and most of this was in the form of iron pyrite. We were therefore forced to buy 386,452 tons abroad, of which 152,876 tons came from the Sicilian sulphur combination and the rest was Spanish pyrite. There are now worked but three sulphur deposits in the United States, in Louisiana, Nevada, and Utah, and their output is relatively in the same order as they are named. The Louisiana production is the important factor, and it is hoped that it will eventually reach a size suitable for all our domestic needs, doing away with the necessity of importations.

Before the inception of the Frasch method, four other companies had attempted to mine the Louisiana beds unsuccessfully.

fully. The natural difficulties of porous rock, gravel, quicksand and sulphur water in the deposit, which have already been mentioned, made the old method of sinking by shaft very costly, and finally forced the abandonment of the enterprise. Moreover, the high wage scale in this country and the steep railway freight rates to interior points, made it impossible to produce sulphur under old methods at a figure

THE SOLIDIFIED SULPHUR.

which could give a profit in competition with the Sicilian sulphur, produced as it is by low priced labor and shipped at small ocean freight rates.

THE SICILIAN INDUSTRY.

The Sicilian combination is primarily the Anglo Sicilian Sulphur Company (Limited), a concern organized chiefly by English capital. For many years it has had supreme control of the sulphur market of the world, and has regulated the price, seldom allowing it to drop below \$22 a long ton. The mines of the company are in Sicily. In competing with this new adversary, the Union Sulphur Company, which has suddenly risen to such importance in the United States, through the successful operation of the Frasch method of mining, the Anglo Sicilian Company has had the advantage of low labor cost. On the other hand the methods of extracting sulphur from its ore are of necessity slow and costly. Instead of a sulphur 99.9 pure, produced by one process, the Sicilian Company mines an ore which must be reduced. There are three methods of doing this in use, the Catania, the Gill and the Flocchi, all either primitive or costly. The first takes ten to twenty days and consists in merely burning the piled up sulphur ore and catching the liquid sulphur as it runs out. The Gill requires small iron ovens and is fairly speedy, but costly. The Flocchi consists of the use of double shelled iron receptacles for the ore, and the introduction of steam between these shells, which melts the sulphur. Very hard ore cannot be melted by this last process. The Sicilian sulphur exports in 1902 were 467,317 long tons.

The expense necessitated by this tedious refining process equalizes the price of the Sicilian and American product. But the American has the advantage of greater purity. The Sicilian Company is alive to the danger menacing its former comfortable control of the world's sulphur supply. Already the American product has been shipped to France, a market consuming much sulphur, using it to prevent the spread of diseases of the vines. On this subject Consul-General Skinner reported:

"The requirements of this country (France) are 90,000 tons a year, nearly all of which is used to prevent the spread of cryptogamic diseases of the vines.

"Heretofore the Anglo Sicilian Sulphur Company (Limited) has had a virtual monopoly of the market. Second fine Sicilian brought \$2.08.

"The last named grade is the one for which the important demand exists, and against this inferior quality the American producers offer a sulphur 99.9 pure. The lowest prices at which Sicilian sulphur has been sold in Marseilles of which I find any record, were thirty-nine cents less than the above quoted prices in 1897, and were offered under the stress of exceptional conditions in Sicily. At the general meeting of the Anglo Sicilian Company, on October 14, in London, the chairman reported gross profits amounting to \$914,450, against \$752,590 in the previous year. Exports had increased 20,000 tons. The chairman warned the shareholders that the company was a trading concern, and liable to the vicissitudes of trade. Sicily, he said, had been virtually the sulphur producer of the world, and there had been practically no serious competition from other sources; but it was this year threatened with competition by certain mines in Louisiana, where it was claimed that a considerable quantity of sulphur could be produced."

THE STRUGGLE OF RIVAL COMPANIES.

The Anglo Sicilian Company did not quietly acquiesce to an invasion of the French market by the Americans. It brought its extensive influence to bear on the French authorities, protesting that the American shipment should not be admitted as raw, crude sulphur, according to its classification on the manifest; that it was too pure to be elementary sulphur, and that it should pay the import duty on refined sulphur. Accordingly, the French authorities held up the importation for investigation. The difference in duty would have amounted to about \$20,000, and would have killed any profit for the

importers, the Union Sulphur Company. That concern, therefore, protested vigorously, through the State Department, and our Consul-General Skinner, at Marseilles. A French commission of three was appointed to take testimony. The Union Sulphur Company made a thorough exposition of its whole mining process before this board, using affidavits, photographs, and witnesses. The board, one member dissenting, decided in its favor, on the grounds that the American sulphur must be elementary (no matter if it was 99.9 pure), since it was not put through any refining process, but was mined direct in that condition.

FUTURE OF PRICES.

As to the future, a member of a most prominent firm dealing in sulphur said: "I do not look for any decided lowering of prices. It is not likely that the Union Sulphur Company will cut values. What would it gain by it? It has already proved its ability to dominate and control the home market. It is selling all it can comfortably produce with its present plant. True, by cutting, it might freeze out the foreign importations, but it would itself make less money. It is, you see, not suffering from over production, nor is it seeking hard for outlets. The shipment to France was perhaps more for strategic reasons than anything else. It wished to show its power to the Anglo-Sicilian crowd. It has successfully done so, and established a precedent, so it is plausible to suppose it will now rest on its laurels and come to some amicable arrangement with the Sicilian Company regarding the maintenance of prices. It is true that if the Union people cut prices to about half the present range, that the demand for sulphur to manufacture acid would increase stupendously. But how could it pay the company better than the present situation does? No, I do not expect any declines. The price will stay just about where it is, and be comfortably controlled within the confines of fifty cent fluctuations, as in the past."

LUMP SULPHUR READY FOR SHIPMENT.

MR. BANCROFT TALKS.

A Strong Argument for the Adoption of the Direct Contract Plan.

WILL THROW OUT "OWN MAKE" SPECIALTIES IF PRICES ARE CONTROLLED.—MONEY THUS SAVED CAN BE PUT TO BETTER USE.

Endorsement of the N. A. R. D. movement for weighty reasons comes from Olin F. Bancroft, the Brooklyn druggist, owner of four busy pharmacies in that borough's residential district. Several years ago, when the price control plan was tried in Brooklyn, Mr. Bancroft, together with other members of the Bedford Pharmacists' Association, found that the attempt to hold to a local schedule drove trade to the dry goods houses, where special prices on patents were featured. "This serial numbering plan," said Mr. Bancroft, "if put in force, will be the advance agent of prosperity for retail pharmacists everywhere. Aside from the added profit on proprietary goods, and the admitted value of a powerful organization which makes price control possible, think of the thousands of dollars that can be saved to the druggists, themselves.

"How? As trade conditions are to-day, rapidly selling proprietaries which are cut to almost cost, are bound to be imitated in idea at least, by 'own make' preparations that give a living profit. No matter what his intentions were when he stocked up on 'own make' preparations, the druggist feels that he has his money invested in these preparations of his own, and if there is little demand for them he endeavors to create it, not by direct substitution for goods desired, but by the exercise of so called salesmanship. It becomes second nature for the retailer to boom his own profit-making goods at every opportunity, until finally his patrons become tired of it and either buy at department stores or go to the larger stores where 'We give you what you ask for' is the motto. Those who continue to trade with the 'own make' boomer treat his really well meant advice as a huge joke, saying with a laugh, 'Oh, of course, it's your own stuff; I understand that.' A knowing wink accompanies this sally, and it's a mighty big man that doesn't feel small under those conditions.

LESS MONEY INVESTED.

"If prices were protected, as they are going to be, the handling of 'own make' preparations would entirely cease with me. That's where I could make a huge saving on money invested in my four stores. In order to compete with the 'cut' patents, I am compelled to carry an enormous stock of each variety of my own goods, and the famed '57' kinds of pickles are out-rivalled by the kinds of proprietary remedies. That money could be invested in other ways to a far better advantage and giving your patrons what they ask for without comment would do more than anything else to discourage the substitution cry which has been raised for years by the proprietary manufacturers and the daily newspapers. 'Something just as good' jokes would ultimately be retired and the druggist would cease to be the target for alleged witticisms of his 'wise' patrons.

"Another point. How can the 'own

make' man cater to the physician? If he merely acts as the agent for advertised remedies, no fault can be found with him by the doctor who writes prescriptions. When the physician is called in, all the medicines purchased and used by his patient is paraded before him. No self-respecting doctor is going on record as approving of my or any one else's specialties. The least that he can say is, 'Well, it won't hurt you.' If the preparation happens to bear your label, the patient will wisely decide that your drugs are 'no good,' and I hardly think the physician would take great pains to correct such an idea. He is bound to figure you a competitor. He doesn't stop to ask if his patient wanted that particular remedy, but remarks to himself on the evils of counter-prescribing. Maybe he talks out loud and that's still worse. Sick people treasure up these remarks, if they have confidence in the physician, and they swear by him on medicine, if they swear at his bills.

LESS RESPONSIBILITY.

"The Era, in an article on 'Blackmailing' last week, made a point that should not be overlooked by the druggist who assumes responsibility for internal and even external mixtures, by putting them up under his own label. If your cough mixture contains an opiate and a death results through the use of it by ignorant or careless patrons, what happens? If it's 'Blank's Cure' you can pass the suit on to the man who is able financially, liable legally, to defend himself and his wares.

"When will all this happen? When we druggists begin to look beyond our own noses. The argument is made that it will take time to get the plan working. That even though the plan is now put in force, it will take months to get direct results, because of the stocking up among the cutters, whether druggists or department stores. True enough, it will take time, but isn't it worth it? Think of it! You can't revolutionize things in a day, and the serial numbering plan will surely revolutionize conditions if it is enforced.

"The fact that the big jobbing houses have come into the fold, shows that the cut-off list is a menace to cutters and those who supply them. Sure enough, the department stores will fight. Can you blame them? The patent medicine cut-price business has brought thousands of customers to such stores, and these bargain hunters see something they need, or think they need, among the other displayed goods which are not cut. I venture to say that the success of the N. A. R. D. plan—that is, the serial numbering scheme to control other lines—would redound to the benefit of other lines independent of the drug trade. The individual who goes to the mammoth store to buy a bottle of somebody's emulsion, will buy a spool of thread, or perhaps wander into the grocery department or the butcher shop, and buy what they would ordinarily order from the neighborhood tradesman."

FRENCH WINE PRODUCTION.

The wine product of France for 1904 has been officially estimated at 66,016,567 hectoliters (1,743,959,650 gallons), which exceeds the vintage of 1903 by 30,614,231 hectoliters (808,736,140 gallons), and is 23,662,608 hectoliters (625,905,116 gallons) in excess of the average for the last ten years.

WHY PEOPLE DRINK SODA.

Not Always Because They Are Thirsty.

SODA FOUNTAINS THAT APPEAL TO THEM.—COMFORT VERSUS LUXURY.—THE SOCIAL SIDE OF SODA TIPPLING.

A woman's reason sums up in one word why people, winter and summer, drink soda. "Because" is the reason.

Mingling with the transient theatre rush that nightly crowds the neighborhood of Long Acre square, an investigator, listening attentively, noted several remarks bearing on soda. "Let's all go down to Blank's," said one of a party of five, who, apparently, were not in favor of after-theatre suppers. The Era man sauntered along with them. Three drug stores and several confectionery soda fountains were passed on the journey.

A THEATRICAL FOUNTAIN.

The leader of the party explained: "Lown's at Blank's you get a chance to mingle with the theatrical celebrities off stage." Developments proved he was right. Several theatrical personages rubbed shoulders with the party. An actress was chatting with her companion, surrounded by a circle of admirers. The other patrons were aware of her presence, seemingly by intuition, and there was no boating of drinks. "That is the reason for this store's popularity as a drinking place," thought the investigator, but he was quickly undeceived, when he ordered. "Kindly get a check at the desk," the soda man said, politely. Service was prompt, but not noticeably hurried; there was an absence of noise, the dispensers being thoughtful and attentive. The dissatisfaction of a drinker resulted in an exchange of a drink, without argument or testiness upon the part of the dispenser, who had only obeyed the "fussy" one's instructions. The store began to fill, new comers moved to a glass show case contiguous to the soda counter. The drug clerk on the floor quietly moved back displayed goods, of which there were only a few, and presto! there was an emergency counter. The soda men lengthened their service space, kept a watchful eye for signs of dissatisfaction, as the ranks of the drinkers were steadily replaced by new comers, among them lesser theatrical lights. Callisaya was asked for several times, but was not served, though coca wine was.

Though the fountain was an old-type wall apparatus, it was brought up-to-date by various improvements, but it is doubtful whether the soda patrons could state positively, after leaving, that it was a counter fountain or a plunger type. There was a plenty of beveled glass mirrors in the store. Women and men, too, eyed themselves and other people, in the fountain's mirrored top.

A SHOWY FOUNTAIN.

Further down the street is a fountain which is also crowded by the theatre-goers. It is a show place for the be-favored patrons. Mirrors, glassware in exposed profusion, make it a veritable fairy land, with the light effects produced by electric counter lamps. Two persons

stopped at the door of the drug store. "Don't go in there," said the woman. "I'm not fit to be seen under such strong light." So they went to a more retiring store, with less glare of illumination. Entering the brightly-lighted store, the observer found a really notable crowd of customers. There were two well-known physicians and a gentleman named Chauncey M. Depew, or someone who looked remarkably like him. These people evidently had some other reason than thirst alone for patronizing the soda fountain. At the end of the counter two men were standing, drinkers of Apollinaris. They were discussing the fountain. Said one: "Somehow Apollinaris tastes better here than in a cafe, where whiskey tipplers make you want to get off the water wagon." The other agreed. "Notice any difference between this and most fountains up town?" asked the other man. "I mean aside from the magnificent display, the people and all that," he hastened to add. The first man indicated the soda check lying on the counter. His companion nodded. "They trust their clerks," he said tersely, indicating a sign: "Get your soda first. No checks sold." A man in evening dress entered and nodded at the dispenser. A bottle of kumyss was served, without a word. That type of customer, apparently a regular, is common in the upper Thirties, and elsewhere, too.

DRINKS WITHOUT SODA.

A large part of the soda business has nothing to do with the soda draught arm. Kumyss and like fermented drinks, grape juice, egg and milk, milk shake, frappes, etc., have made the average drug store a gathering place for the men and women who think they require food in a liquid form. To these drinkers the type of fountain, the method of drawing soda, means little. But the refrigeration of these bottled and no-soda drinks is important in their eyes. In this store, such drinks were stocked in cold air coolers, without direct ice contact. Several "freak" orders were given, together with instructions for concocting them, and "very nice" and other commendatory remarks were passed by the drinkers. This was a counter service fountain; the men were constantly facing their customers. A man lingering over a phosphate attracted the attention of the dispenser. "Too sour?" he inquired.

Next, one of the oldest fountains in the city was visited, during a matinee crush. It is so old that it is new, being a counter style fountain, ice in huge molded balls being placed on top of the couer's silver draught arm standards, within which are placed the soda pipe coils. The bottle system is in use; monogrammed holders and the choicest of glasses are adjuncta. Here, also, people come to drink and see, or to be seen. "How are you, Mrs. X?" queries a dowager, as she catches sight of an acquaintance. "I usually stop in here after a shopping tour," replies the other woman, who has been caught in the matinee crush.

THE SHOPPER DRINKS.

Another store that caters to women of the shopping district was visited. It is also a bottle apparatus, counter draught arms, one of the old time silver reservoir types. One woman, who, with a compan-

ion, was drinking an ice cream soda, and evidently was a regular patron, turned to the soda man. "You've changed the fountain in some way, haven't you?" she asked.

The soda man indicated a narrow ledge of marble raised four inches above the counter, to which it was clamped by nickel-plated braces. "I knew it," said the questioner, as she manipulated the soda spoon. "I always thought the counter was too low for convenience." So no matter what the druggist believes, it is evident that patrons do notice the little points about a soda fountain.

A fountain near the Grand Central depot was the scene of a little comedy. A party of three with grips and other evidences of travel, entered, and after depositing the incumbrances, debated on the soda menu. "Three lemonades," finally announced the man. The soda clerk reacted for lemons, but was stopped by the customer. "Make mine a vanilla cream soda," said he. "I want to see those new-fangled things work." He indicated the plunger pump syrup tanks, and was an interested observer, while the soda man concocted. The visitor was a western druggist. "That's a fine machine," he said, "but my folks want to see what they're getting. I've got a fountain with a cut glass front, to the wall syrup jars at home, and electric lights behind them make the syrups gleam and prove my jars clean. You New York fellows don't know it all, by a jugful," was his parting.

CANDY VERSUS DRUG STORES.

A chain of high class candy stores was the next scene of operations. Women patrons were in the majority. Weighty questions of dress were discussed by soda drinkers. Ice cream soda was the usual order. These and frappes indicated that buyers were after ice cream with a soda chaser. The counter bottle service is in use in these stores, but they are of a type long since relegated to the manufacturer's store room. Mirrors were always in evidence.

The family, or home trade stores, when called on, were in sharp contrast to those described. Many druggists close their fountains in winter in these neighborhoods, driving their trade to the confectionery stores. This class of soda drinkers thinks first about getting its money's worth, and of comfort, rather than luxuries. Seats, or revolving stools, are provided, and a nickel goes far. In one of these stores, a woman asked for an orange phosphate, tasted it, and observed to her companion: "I was just thirsty for a nice orange phosphate, like you get in drug stores. These candy fountains are only an excuse for boozing their ice cream. They give you too much for your money." She left the two-ounce glass of soda untasted.

Other candy stores with five cent ice cream soda had the "fellow and his best girl" as customers. The ten cents was hardly missed, and the post-theatre supper was averted. There be many romances of the soda counter.

In the down town districts of two and three cent soda, it was observed that the pure fruit juice crusade had caused a radical change. There was less suggestion of anilin coloring in syrups, and though the investigator did not sample drinks, he observed a youthful Morgan, who swapped

three two cents stamps for a double dose of chocolate.

People drink soda then, because they are thirsty, or because they are not thirsty, but curious, or, as was the case with one man, because they are afraid they will get thirsty, and fall off the water wagon. And after due deliberation, it is asserted that many people drink soda, in some stores at least, simply as a chaser, or a diluent for coca wine, calisaya and coca wine or calisaya alone. Their opinions are of little value, as they are interested only in getting their money's worth of their favorite tonic. Fortunately, this business is less prevalent than the newspapers would have us believe.

IGNORANCE, OR ENTERPRISE?

Tale of a Druggist Who Scorned Drug Journals.

"Can you imagine the kind of a druggist who wouldn't take a drug journal?" inquired Col. Duble, once, when he was reminiscient. The question obviously exacted a negative, and the raconteur, on getting it, proceeded joyfully.

"Well, one time I had to stop in a small town between trains, and as there was an hour or so to spare, I just thought I'd stroll around to the local druggist and pay a visit, especially as I wanted to see the latest news about something of importance to the N. A. R. D.

"I found the corner store, and it was a typical one of the small town, and all that. During the first lag in conversation, I asked the druggist if I might see the last pharmaceutical journals he had. And I want to tell you, sir," exclaimed the colonel, in his most ponderous manner, "that man confessed to me that he did not take any pharmaceutical journal, nor ever had. And I want to tell you, he didn't seem to think there was anything strange about it, either.

"Can you imagine what kind of a druggist he was? Of course, you can't! Now wait. An old farmer came into the store while I was still there. The farmer said that he had a horse, but that the horse hadn't any hair on one leg, and what was good to make the hair come back on the horse. Now, sir, that druggist looked over his patents, and he brought down a bottle of Blank's Hair Vigor, and he sold it to the farmer for a dollar, to use on the horse. There, you see the kind of druggist who's above trade journals!"

FOR CLEANER CHICLE.

A Louisville Importer, Mr. John Colgan, president of the Colgan Gum Co., has made a complaint, according to the India Rubber World, to the customs authorities concerning the payment of duty on uncleaned gum chicle. He pointed out that he has to pay duty at ten cents a pound on chicle which contains bark, stones, and other rubbish in large quantities, and asked that the Treasury Department make provision to allow the chicle to be cleaned before duty is levied. It is said that other chewing gum companies, particularly the American Chicle Co., of Louisville, import the gum from Canada, where it is first received and thoroughly cleaned before entering the United States. The present customs regulations do not provide any method of overcoming the difficulty.

SHOW WINDOWS AND FEATURES.

Silent Salesmen Methods in Harlem.

"HELP YOURSELF" SALE.—POPULAR PRICES.—TRUST CIGARS, TEN FOR A QUARTER.—A MUSICAL AUTOMATON.—BABY CONTEST.

James Crammond, of Eighth avenue and One Hundred and Thirty-ninth street, has a store that is an exponent of the silent salesman idea, for he shows both the article and its price, in window displays, on counters, and in the glass show cases. Making one show window into a frame for a picture, by means of a border of purple crepe paper, the druggist made an attractive display of his Invincible Cough Balsam against a purple background. The bottles, cartoned in white, were arranged on crepe-covered wooden steps, and only a dozen or two were shown. Two-inch strips of yellow crepe paper led from the bottles to the bottom of the window. The color contrasts, white, purple and yellow, were logical, and the whole effect pleasing, giving one the impression that he was looking, not at the objects, but at an artist's reproduction of them.

Another window is given to ten cent novelties and preparations, and here again an individuality is lent the store by the method used in displaying such articles as sewing machine oil, corn cure, perfumes, bronchial lozenges, benzine in small bottles, etc. Two dozen wire net baskets are filled each with a special article. Brief signs are attached to the baskets and prices are always quoted. The baskets, says, Mr. Crammond, cost him seventy-seven cents a dozen, save their cost many times by preventing breakage when changing windows, and because they give an idea of special sales to the onlooker, and sell goods.

Within the store, the observer will find a general scheme in use, which the proprietor has found to be the best plan to push goods, especially those of his own manufacture. Small wooden boxes or platforms are placed on top and at the back of counter show cases. On these platforms various "own makes" are exhibited.

A sign attached to the platform tells its little story and the waiting customer can surely find something that he needs. A deep box has an attached card, reading, "From Japan and France; 10c." Pictures of a Jap maiden and a petite French lass are attached to the sign. In the box are tooth brushes. A bargain table is featured. This week Snowberry soap, eight ounce cakes for a nickel, are shown. They are the remnants from last week's two hundred cake window display of the same article.

In the show cases every article is priced. Signs are hung about the store, dealing with the substitution claims of the daily papers. These signs are neatly made by the druggist, who has a complete rubber stamp outfit made up of several different fonts, and he says returns show that the additional work is worth the time and pains he spends on them.

Witch Hazel Cure-Alls.

The American Witch Hazel Company, 240 Broadway, is showing a complete line of its specialties, with a sign, reading: "A remedy for every ill. Prominent physicians, hospitals and specialists use and recommend witch hazel preparations, because they are true scientific curative agents." These "own makes" include tubes of pie cure, tooth powder, talcum powder, healing ointment, with hazel Vaso Motor Nerve Tonic, shampoo, etc., all shown in profusion, together with quantities of witch hazel, bottled in half pints, pints and quarts, at 15c., 25c. and 45c.

Rubber Gloves.

W. B. Riker Sons & Company, opposite Wanamaker's, have a quantity display of rubber gloves, quoted at fifty-nine cents the pair. They are scattered about the floor of the window, shown in cartons, and are hung at the side and back, reaching from floor to ceiling of the display window, so that the quantity shown is impressive. "These are the fruit of the India rubber tree" is a needless announcement.

Help Yourself Sales.

Jesse McCreery's pharmacy, 2737 Eighth avenue, has a window show of insoles, left-over remnants. They are tumbled in the show window, which is protected from the store's interior by a low curtain, only. A sign reads: "Here they are. Pick 'em out yourself, 10c. a pair."

Popular Prices.

J. Milbau's Sons, 153 Broadway, have a sign which reads: "All goods at popular prices." No prices are quoted in the window, which shows Peruna, Pierce's preparations, Phillips' Milk of Magnesia, Gray's Glycerine Tonic, Wampole's Cod Liver Oil and Dr. Kennedy's preparations. Peruna sells at sixty-seven cents within the store. Hand Napolio sells at seven cents, and an offering of Turkish towels at twenty-five cents completes special features.

Some Resolutions.

Dr. Emile Brunor, of Eighth avenue and One Hundred and Thirty-sixth street, has gotten out fac-simile typewritten circulars, at the bottom of which appears a large red seal, with the words, "attested by everybody, and the resolutions are signed by E. Brunor, as proprietor of the Red Cross Pharmacy:

"Whereas, The press has recently called the public's attention to a band of rascals who were caught in the act of making and selling counterfeit medicinal preparations. The district attorney has brought to bear the influence of his powerful office and secured the indictment of these men. This disclosure prompts us to state that it is our rule to give you just what your physician has prescribed and under no circumstances do we deviate from this rule. While our motto of quick sales has created a revolution in the price of prescriptions and drugs, we have never used inferior drugs or chemicals; in fact, we are proud to say that we use the products of the largest and most reliable makers of medicinal chemicals in the world almost exclusively in our prescription department, and this fact, combined with the personal supervision of Dr. Brunor, makes our establishment worthy of your implicit con-

fidence. Therefore, it is a place where purity is paramount. Henceforth let it be your sole purveyor of drugs and chemicals, prescriptions and household remedies."

With these circulars are given sample bottles of Dr. Brunor's Constipation Cure, with directions for use. The two articles are enclosed in an envelope bearing the store's imprint and a Creolin-Pearson advertisement. One is given to each patron, and there is a window display of the pills advertised.

Sleepy Musicians.

J. N. Hegeman & Company's 21 Park Row store continued to show imported French novelty window features. This time it is a musical automaton, in which three lazy musicians are caricatured. The mechanism once started, the musicians appear to be rendering a very difficult musical composition, and a clearly toned music box, which is hidden at the base of the figures, completes the illusion. The leader of the trio, with a baton in hand, is directing. The violinist is becoming wearied, and his eyes are fast closing in sympathy with the tempo, until he is apparently asleep. The music stops. The director whacks one of the sleepers with his baton. A red lump appears where the violinist was struck, and for a few moments he sags away for dear life, only to fall asleep again. An electric light is placed within the head of the figure which is struck by the baton, and an alternating current makes the red light saw through the bump. This novelty, with others previously described in *The Era*, were specially imported, and are worth in the aggregate, over a thousand dollars.

Candy and Trust Cigars.

Saturday candy at twenty-nine cents a pound, continues to be a feature at F. W. Kinsman, Jr., & Co.'s One Hundred and Twenty-fifth street store. A cigar trust store nearby is featuring Creomo cigars and the drug company has gone it several better, quoting Creomo, Spaniola and Anna Hand brands at ten for a quarter. A large stock is shown in the window, and the smokers are taking notice.

Pick the Winning Baby.

T. H. MacDonald, of Third avenue and Fifty-ninth street, Brooklyn, is kept busy by patrons who are voting for the handsomest or some other "est" baby of some forty photographs entered by fond mammas and papas, in the prize contest. Ten dollars in gold will be given the youngster who receives the greatest number of votes, and the polls are being carefully watched by the child politicians of the neighborhood, who endeavor to steer drug purchasers toward MacDonald's.

MARYLAND.

For weeks a large glass jar, measuring nearly two feet in height and correspondingly big around, has been an object of much curiosity at the warehouse of the Calvert Drug Company, South Charles street, Baltimore. It was filled to the top with Bland's five-grain blood pills, and Messrs. Hance Bros. & White offered a prize of \$25 to the druggist who would come closest to guessing how many pills the jar contained. Various expedients were resorted to in order to arrive as nearly as possible at the total, and numer-

ous local druggists brought their mathematical knowledge into play. They measured the jar carefully and then proceeded to calculate how many pills could be put into the space the jar was found to contain. Whether Mr. Charles L. Meyer, Madison avenue and McMeichen street, tried this method or some other one, the fact remains that he came nearest to the actual number. His guess was 78,150, and the jar contained exactly 77,760 pills.

MASSACHUSETTS.

In the Bixby Block Drug Store, in Brockton, there has been going on for some time, a guessing contest regarding the time a watch, on exhibit there, would stop. One man, John H. Clifford, guessed within half a minute of the exact time the watch, sealed in a case, actually came to a stop. He does not get the timepiece, however, as the prize is a full course in photography, including necessary materials. It was a scheme of a school of photography, whose goods are sold at the pharmacy.

"THEM KIDS."

Four children, one push cart vender, two tramps and one policeman gathered to watch a druggist remove the copper ballast from a gum slot machine on the sidewalk.

The harvest was enormous. It took the druggist several minutes to transfer the contents of the machine to his coat pocket, and when he re-entered the store he was followed by the policeman and two of the bystanders. One of these remarked, to the world at large:

"You'd think by the crowd around that it's an unusual thing for a druggist to be pullin' money out of somethin'."

The druggist emptied his jingling pocket on to the counter.

"And that's the kind of money he gets," he replied.

The pile of copper pennies was liberally sophisticated with brass disks, punched exactly the size and thickness of a penny. By actual count there were sixty-two of these pieces of metal, with about an equal number of genuine currency. In addition, there was a curious copper coin which might have been an old Confederate piece; one of the spectators said it was, anyway.

The policeman made some remarks about "them kids," while the druggist proceeded to figure how much the brass disks were worth, if the vending company redeemed them at two for a penny.

E. ANTHONY CO. MOVES.

The E. S. Anthony Co., Inc. Fall River, Mass., has announced its removal to larger quarters, at No. 138 to 146 Second street. Its new quarters are in one of the modern fireproof buildings of that city, and are equipped with the latest labor-saving devices. The firm is one of the prominent New England wholesale drug houses, carrying a complete line of drugs, chemicals, specialties, and pharmaceuticals.

THE DRUGGIST'S EPITAPHS.

"He has got something just as good."

"I have got something better."—By himself.

"It couldn't be worse."—The truth.

FOOD ADULTERATION.

North Dakota Agricultural College Reports.

LARGE PERCENTAGES OF ALCOHOL FOUND IN PATENT MEDICINES, SODA FOUNTAIN BEVERAGES, ETC.

Bulletin No. 63 has recently been issued by the North Dakota Agricultural College, Government Agricultural Experiment Station. It deals with adulterated food products and food studies. The author, Mr. E. F. Ladd, chemist and food commissioner, introduces the data obtained by the researchers of the college staff, several of whom are pharmacists, with the following, which should prove of interest to all pharmaceutical houses doing business in North Dakota:

"The mass of data accumulated under the working of the state food law has reached such proportions that it is impossible to present the entire list of products examined during the year. In this bulletin we have decided to present just the list of products found to be adulterated and to discuss these more fully and reserve the legal products as a part of our forthcoming report now in course of preparation.

"The method laid down at the time the law went into effect, namely, to depend more largely upon personal work with the manufacturers and jobbers, to induce them to have their products in compliance with the requirements of our law, has been followed out with good success. Our method has been, therefore:

"1. To induce manufacturers and jobbers to have goods in compliance with the law.

"2. To give wide publicity to all food frauds.

"3. To induce retailers to leave illegal goods alone.

"4. To induce the public to demand pure food products and beverages.

THE LAW'S REQUIREMENTS.

"The first question to be answered then, is what are the requirements of the North Dakota Food Law? I believe the following answers the question:

"1. Harmful and unnecessary preservatives are prohibited from being used in food products.

"2. The use of coal tar dyes is prohibited in all food products and beverages offered for sale in North Dakota.

"3. That all food products must be labeled true to name and no deception practiced in the wording of the label, so as to mislead the purchaser or consumer."

Mr. Ladd next argues that the requirements of the law are not unnatural and "its enforcement should not work any great hardship on the honest manufacturer." He claims that indeed, "the manufacturers of high grade, pure goods have not complained, but only the man who produces inferior products made to appear as of high grade by the use of chemicals." An instance of the kind was unique in that the offending firm admitted that if saccharin was to be condemned in all classes of products, it meant an expense of \$10,000 per year for the house, as against \$500 at the present time."

In the course of the operation of the law, several offending firms urged retailers

to continue selling their goods, guaranteeing to stand back of the retailer in the event of legal proceedings by the State. Chemical preservatives in food are not within the law, benzoate of soda being one of those in frequent use.

North Dakota is a prohibition State. As a result, medicinal beverages containing a large percentage of alcohol are in great demand. The college investigators during the year examined a number of these, some of them well-known proprietaries. Six of these preparations were found to contain from 24.02 to 41.80 per cent. of alcohol by volume.

A large number of brands of chocolate and cocoa were analyzed. While many were found to be pure, eighteen makes showed the presence of starch.

In connection with the examination of beverages the report says: "But very little attention has been given as yet to the examination of beverages, soda fountain supplies, etc. From the examinations made, it is believed that there is need for some work in this direction." Of the various brands of blackberry brandy, port wine, apple cider, wild cherry, root beer, birch beer, champagne cider, and grape juice examined, seventeen were found to be adulterated, the usual illegal ingredients being coal tar dye, salicylic acid, saccharin, or benzoate acid.

Taking up the subjects of catsups, the report says: "A catsup, to be legal, should be made from ripe tomatoes, with the necessary sweetening and condiments, but should be free from coal tar dyes or vegetable colors, unless so labeled, and free from starch paste, saccharin, or other vegetable products other than that derived from the whole tomato." Of a large number of brands analyzed, sixteen were found to be illegal through the use of coal tar color or filler-starch. The report adds: "There has been a very marked improvement in the catsups and but few of the better known brands are found to be in violation of the law. Often these samples may have been from old stock, or products reshipped from other States where the laws are less stringent."

LEMON AND VANILLA EXTRACTS FAULTY.

Of lemon extracts, the report states: "A lemon extract, to be legal, must contain five per cent. of lemon oil, be free from coal tar colors, and of good and alcoholic strength." The results obtained from examining lemon extracts were rather startling. Fourteen brands were found illegal, all containing less than five per cent. of lemon oil, and three held no lemon oil at all. Foreign colors were prevalent. One brand held methyl alcohol.

Thirteen makes of vanilla were found to violate the provisions of the law. Many of these were synthetic products. Others contained foreign color.

Concerning cream of tartar, the report says: "A considerable portion of the bulk cream of tartar sold in this State has been found to be badly adulterated, to have as its basis alum, and in some instances to be a mixture of alum and phosphates, or of alum and sulphates and sulphites." In several instances jobbers have withdrawn the adulterated product from trade and replaced it with a pure product. It is evident that as yet we cannot de-

pend on securing a pure product in the bulk form. Retailers are warned against handling this class of goods and should buy only from houses willing to furnish a guarantee that the cream of tartar furnished by them will comply with the pure food law of this State."

APPRAISERS' DECISIONS.

The Treasury Department has ordered an appeal from the recent decision of the Board of General Appraisers which held that pieces of agate intended to be used as seal bearings were to be classed as precious stones, cut and not set. The Treasury Department considers them properly dutiable as manufactures of agate.

—Olive oil, which formed the importation of F. G. Favalaro, at New Orleans, was found by the Board of General Appraisers to be edible, although containing 2.9 per cent. of free, fatty acid, and held properly classified as dutiable. The importer claimed it was free of duty as olive oil for mechanical and manufacturing purposes only.

—French chalk imported by H. Lichtenstein & Son, at New Orleans, was assessed by the collector of customs. On the appeal of the importers, the Board of General Appraisers decided that the importers' contention was sustained by a former decision and that the chalk should have been classified as an unenumerated manufactured article.

—Distilled spirits. The Treasury Department has issued the following: "Spirits produced from fruit are subject to tax, and the producer is liable as a distiller. A person can make wine from fruits and sell the same at the place where made, or at one general business office without incurring liability." At inquiry had been addressed to the department as to whether the laws forbid the buying of alembic and the distilling of waste apples, pears and grapes for the makers' own use, when these fruits were grown on the distiller's own farm, and were formerly thrown away because they were not marketable. Going into particulars, the department stated: "As under the internal revenue laws of the United States, a tax of \$1.10 a gallon would attach to the spirits produced from these fruits, even though they were not produced for sale, but only for the personal use of the distiller, you could not engage in such distillation, except after having given bond as a distiller and having complied with all the other provisions of the internal revenue laws relating to the distillation of spirits from fruits, without involving yourself in heavy penalties under these laws. You can, however, express the juice from these fruits, and by fermentation, make it into wine; and under the provisions of section 3,246, Revised Statutes, sell this wine in any quantity, small as well as large, at the place where you made it, or at one general business office (but not at any other place), without involving yourself in any liability under the internal revenue laws of the United States. Any liability in which you might become involved on this account would be under the laws of the State of Michigan or under the local ordinances. For information on this point you should apply to the authorities at your county court house."

LABELING IMPORTED FOODS.

Proposed Regulations to Take Effect February 2d.

The Bureau of Chemistry of the Department of Agriculture has just issued a circular setting forth the regulations proposed by the bureau to govern the labeling of imported food products. The use of copper sulphate as a coloring matter, the use of glucose and the labeling of foods "prepared with oil" are treated. The circular is signed by H. W. Wiley, chief of the Bureau of Chemistry, and approved by Secretary Wilson. The proposed regulations and comments as published in the circular follow:

The use of sulphate of copper as a coloring matter in certain green vegetables has become quite prevalent. Sulphate of copper is a substance which in itself acts as a quick emetic and irritant, and therefore its presence in food products must be looked upon as undesirable.

PHYSIOLOGICAL EFFECT.

"Copper sulphate is irritant or mildly escharotic; and when in dilute solution, stimulant and astringent. At one time it was given in epilepsy and other nervous diseases; but at present it is never used internally, except for its influence upon the gastro-intestinal mucous membrane. In chronic diarrhoea with ulceration it is often a useful remedy. In doses of five grains it acts as a powerful, prompt emetic, without causing general depression or much nausea, but it is too irritant to be used freely. A dose of copper sulphate as an astringent is a quarter of a grain (16 milligrams), as an emetic 5 grains (320 milligrams)."—United States Dispensatory, 18th edition, p. 468.

It is claimed by some manufacturers, chemists, and hygienists that copper sulphate, when added to green vegetables, forms compounds which are harmless to health.

Pending investigations which are now making, all food products colored with sulphate of copper, or to which sulphate of copper has been added for any purpose, should contain upon the label a statement in English, in letters not smaller than long primer caps, as follows: "Colored with sulphate of copper," or if preferred, "Prepared with sulphate of copper." A statement of the quantity of copper, or any, which may be permitted in food products under the provisions of the law is reserved until further study of the question can be made.

SHOULD NAME DYES.

Food products artificially colored with other substances than sulphate of copper should bear upon the label, in letters of the size described above, the legend "Artificially colored," or if the manufacturer prefers, the statement "Colored with aniline dye," or whatever dyestuff may be used.

Manufactured food products in which glucose (sugar made by hydrolysis with an acid or otherwise from starch) has been used instead of sugar, or for other purposes, should bear upon the label in English, in letters of the size above mentioned, "Prepared with glucose" or some state-

ment of similar import. The glucose which is used must be free from arsenic or other injurious substances.

In countries where olive oil is the common edible oil the expression on food products "Prepared with oil" or "Packed in oil" will be construed to mean olive oil. Where a mixture of oils is used, or another oil than olive oil, a statement to that effect should be made upon the label.

This regulation in regard to labeling will go into effect on February 2, 1905. Importers are requested to immediately acquaint their agents in foreign countries with the ruling, in order that the proper preparation of the labels may be secured.

CINCHONA BARK STATISTICS.

An interesting and useful tabulation of the statistics of cinchona bark shipments from Java has been issued by Messrs. C. F. Boehringer & Soehne, of 7 Cedar St., New York. Each year they prepare this statement. The present issue shows the dates of cinchona bark sales at Amsterdam and London for the year 1905, the shipments of cinchona bark from Java for the past three years, the unit paid for quinine by the manufacturers at the Amsterdam bark sales and the corresponding selling prices for quinine sulphate. These statistics are very interesting to all large buyers of quinine who wish to be thoroughly posted on the movements of cinchona bark. The tabulation is printed in red and black, on a heavy pasteboard card about 11½ by 9 inches. The figures on Java bark shipments appear itemized for each month, beginning with 1896, and blank spaces are left for this year's. The unit paid for bark at the monthly Amsterdam sales and the dates of change in price are also given. On the reverse appears a calendar for 1905 with the dates of coming bark sales indicated, the Amsterdam in red, and the London in green.

THE DEADLY PROOF READER.

The editor wrote it: "A siphon of ammoniated seltzer water is an excellent deterrent for burglars, if properly used."

The proof reader, an ex-druggist, made "detergent" out of "deterrent," and sustains his action by referring to a definition of detergent: "Substances used for cleansing wounds, ulcers, etc." "You'll have to admit," said he, "that ammonia water will cleanse all right, and if the burglar isn't a wound or ulcer, morally, what is he?" Thus, again logic, pharmacy triumphs.

The man who was taking "Helpful Memory Lessons" entered the drug store. "I want," he began, "some tablets for a cough. I forget the name, but it's got something to do with a draught." The druggist was dazed for a moment. "Don't sell morphine," he suggested, figuring his patron for a Shakespearean.

The forgetful man, after some time spent in inductive reasoning, gave it up. "What's the dose?" asked the druggist. "One twelfth of a grain."

"Gee, but I'm dense to-day," muttered the druggist, as he reached for the heroin tablet bottle. But he didn't sell 'em, for he reflected that baby might get 'em through a similar course of reasoning.

RETAILER'S ADVERTISING.

Blunders That Might Be Avoided— Hints That Pay.

BY J. C. NATTRASS,
Bellingham, Wash.

Newspaper advertising has made such progress during the past four or five years that a person would naturally think no new light could be shed on the subject. Yet, if we pick up the average country daily or weekly and read the "ads." of the merchants, especially the advertisements of druggists, we will find that, while the larger firms in the large cities are doing business on sound principles, the smaller firms in the country towns have not advanced a step in the past fifty years. They are paying for space which is doing them more harm than good. They are using the old forms and styles and their "ads." are always the same—no change, no variety, no life in them. No wonder some merchants say that advertising does not pay. Advertising—the right kind—does pay, and it pays handsomely in most cases.

Merchants are too apt to look for direct and immediate results. Because a quarter, half page or full page "ad" does not crowd their store with customers on the following day, they get discouraged and conclude that they have wasted their money. They made no allowance for the future nor for the cumulative effects of good advertising.

"ADS" THAT TELL TOO MUCH.

Many advertisers in the drug trade in the larger cities make serious blunders. They frequently attempt too much. Their "ads" will often mention a dozen or more articles at one time.

If a sample of broadside advertising is before the writer. It occupies a full quarter page in a first class daily in a city of 150,000. It lists thirty-four separate and entirely different items, clinical thermometers, bedpans, hair tonic, trusses, prescriptions, hot soda water, camera supplies, curling irons, bath cabinets, etc., and about twenty cut-rate proprietaries. Picking up a New York daily we find an "ad" of one of the largest and best known merchants, occupying a full page, and how many items does he list in that large space? One only: a small lamp, or more properly speaking, a burner, "Jones lamp," we will call it, for convenience. From top to bottom of that large "ad" there is no mention of any other article, though the merchant has in stock almost everything in the way of furniture and house furnishing goods. "Jones" lamp" is so well described and illustrated in the "ad" that we venture the assertion that the one "ad" will pay for itself ten times over in the next six months.

CUTTERS' COMPETITION.

Many druggists complain that they find it difficult to advertise their business without offering goods at cut rates and competing with the department stores. The writer has found the reverse to be the case. He has so many articles that he wants to advertise that he feels tempted occasionally to try a broadside, but experience has taught him that advertising one article at a time pays best in the end.

Our contract calls for a five-inch space,

single column, a daily change, no duplicates, and we insist upon correct composition and punctuation. We try to put some ginger into that little space and make it more than pay for itself. Nor will we allow the half or full page advertiser to crowd us out of our pet corner.

The druggist's "ad" should be plain, simple, modest. No extravagance, no fancy language. It should be dignified and sincere. It must be backed up by the man behind the counter, who must make good under all circumstances. He must live up to his "ad." He cannot afford to advertise inferior or unknown goods. Only reliable goods that have stood the test of time should be advertised. Quality, rather than price, should be his watchword.

MARGARET MIXTER'S MIXTURES.

The New York Evening Telegram is no worse than the other daily papers which are publishing helpful hints for the toilet, but it is apparent that the person responsible for this paper's ludicrous and oft-time dangerous receipts, is well named Margaret Mixer. A sample of two of the fair Margaret's latest efforts are submitted by a druggist, who queries: "Has Margaret Mixer self on sweet almond oil and bitter almond oil?"

"C. O. B.—A massage emollient which is excellent for relaxed tissues and will soften and whiten the skin as well, is made of the following ingredients: Oil of sweet almonds, one and a half ounces; oil of bitter almonds, five grams; balsam of tolu, one gram; benzoin, one gram; essence of lemon, one drop; essence of cajuput, one drop. The resins are powdered and mixed with the oils. Keep at a gentle heat for twenty-four hours, then pour off from the sediment and add the essential oils."

Doubtless, fearing that she would be outdone by a rival beauty editor, who advised getting ten cents' worth of balsam of Peru, breaking it in small pieces and applying, Miss Mixer had published the following on Friday:

"An excellent skin food is composed of oil of bitter almonds, five grams; balsam of tolu, one gram; tincture of benzoin, one gram; essence of lemon, one drop; essence of cajuput, one drop. Apply night and morning, wiping off in the morning, but allowing it to remain on all night. I do not recommend one's trying to make one's own soap, for the quantities to be handled are so enormous that one could never use it all. Either buy a make that is recommended by a reliable druggist, or else use almond meal, that suits some skins far better than any soap, as it is more softening and whitening."

The druggist points out that in the first formula, aside from the mixing of ounces and grams, five grams of poisonous bitter almond oil are directed to be mixed with an ounce and a half of sweet almond oil, which weighs 37.68 grams (specific gravity, .915-.920), making better than a thirteen per cent. solution of bitter almond oil, to be used as a massage emollient.

The Era's informant stated that he had refused to dispense this mixture, fearful of consequences when left in the hands of irresponsible parties, and because the Dispensatory mentions the bitter oil as an external preparation for itching. In the

proportion of five drops to an ounce of water.

If the first formula is unambiguous, how about the second, which calls for pure bitter almond oil?

It is to be hoped that no druggist will dispense such mixtures (thoughtlessly, or without a poison label, and a proper poison book entry, if he feels that he is ever justified in dispensing such a mixture.

There is apparently a typographical error in the second formula, otherwise Margaret has discarded the sweet oil of almonds altogether.

Where, oh where would some of the daily papers be without the patent druggist, who one day finds himself arraigned as a substituter, and the next day standing between a paper and a possible damage suit to which he would undoubtedly also be a party, because "he shouldn't have gone and done it?"

PRIMARY RULES FOR RETAILERS.

An address consisting of "Practical Suggestions on the Business Side of Pharmacy" was delivered by Mr. Samuel C. Davis, before the Tennessee Pharmaceutical Association, at its nineteenth annual meeting, at Lockout Mountain, last July. While the ideas put forward by Mr. Davis are not remarkably new, they are so fundamental and full of common sense, that they should constantly be kept in mind by all druggists. Mr. Davis defined the business side of pharmacy as "the successful side, which, in my opinion, is the buying side, for an old mercantile adage states that 'Goods well bought are half sold.'"

A successful buyer should keep himself informed of general conditions and the course of the market for all commodities in which he is interested. The Far Eastern war, at its inception, should have warned an observant druggist that camphor, carbolic acid, and various oils and spices would advance. He should, therefore, have bought such goods.

Watch your business and ascertain from past sales where you can profitably buy in quantity in future, saving the discount always given on quantity. Be friends with your competitor and divide quantities between you, thereby each saving half the discount in cases where the whole quantity would be too large for your individual needs.

Get rid of "stickers" by cutting prices to cost, or even less, and use the ready money in your business.

Conduct your business as far as you possibly can on a cash basis. Refuse credit a second time to customers who fail to settle accounts. It is better to lose a small account and know it is lost, than to continually allow it to grow and be uncertain about its ultimate payment.

Never ask a clerk to do anything you would not have done when you were a clerk. Encourage your clerks to originate ideas regarding the business, and pay them a percentage on their sales of "own makes." Increase their salaries when you can, if they deserve it.

Twice in '64, The retired druggist was drafted. "I will go," he said, as he bid his loved ones good bye. "Never shall it be said that I would knowingly allow substitution."

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued January 10, 1905.

- 779,527—Herbert H. Church, Bellows Falls, Vt., assignor to Casein Company of America, a corporation of New Jersey. Wax emulsion and process of producing same.
- 779,582—Firmen C. Brooke, Chicago, Ill. Nipple-holder for nursing-bottle.
- 779,611—Lambertus Kuntz, Canute, Okla. Anti-refilling bottle.
- 779,705—William T. Gibbs, Buckingham, Canada, assignor, by mesne assignments, to The National Electrolytic Company, a corporation of New York. Method of treating alkaline solutions of chromate of soda.
- 779,728—John M. Morehead, Chicago, Ill., assignor to Union Carbide Company, Niagara Falls, N. Y., a corporation of Virginia. Process of making lampblack from acetylene.
- 779,749—Charles W. Tinning, Hamilton, Canada. Antiseptic feeding-bottle.
- 779,805—Otto J. Schinck, Newark, N. J. Non-refillable bottle.
- 779,832—Paul B. T. Berner, Brooklyn, N. Y. Non-refillable bottle.
- 779,833—Maylean Bjornstad and Joseph Stacey, Auckland, New Zealand. Medicated sweetmeat.
- 779,853—Samuel Hughes, Summerville, S. C., assignor of one-half to Edward F. Lowndes, Charleston, S. C. Means for elevating acids.
- 779,865—Peter McGrath, Hibbing, Minn. Siphon.
- 779,916—Harry L. Duncan, New York, assignor to New York Label-

- ing Machine Company, New York, N. Y., a corporation of New York. Labeling machine.
- 779,933—James G. Hendrickson, Bayonne, N. J., assignor to New York Labeling Machine Company, a corporation of New York. Double labeling machine.
- 779,934—James G. Hendrickson, Bayonne, N. J., assignor to New York Labeling Machine Company, a corporation of New York. Top-labeling machine.
- 779,991—Harvey Coale and Lewis S. Greensfelder, Baltimore, Md. Machine for applying closures to bottles.
- 779,998—William T. Gibbs, Buckingham, Canada, assignor to The Electric Reduction Company, Limited, Buckingham, Canada, a corporation of Great Britain. Process of making hydrochloric acid.
- 780,000—Harry P. Hall, Wattrace, Tenn. Non-refillable bottle.

TRADE MARKS.

Registered January 10, 1905.

- 43,992—Remedial agent for the treatment of lung and nasal diseases. The *Sonnola* Medicated Pillow Company, Louisville, Ky. The word "*Sonnola*."
- 43,993—Medical compounds for certain named diseases. Leonard L. Hill, New York, N. Y. The words "*Ascatco Gnu*," associated with the representation of the animal known as the "*gnu*," surrounded by an irregular and ornamental border.

LABELS.

Registered January 10, 1905.

- 11,787—Title: "Hoffman's Life Preserver." (For a hair tonic and dandruff cure.) R. H. Hoffman, Idaho Springs, Colo.
- 11,788—Title: "Locion Higienica De Eucalyptus." (For a medicinal preparation for the preservation of the hair.) Ruizy Roca, Buenos Ayres, Argentina.
- 11,789—Title: "Locion Higienica De Eucalyptus." (For a medicinal preparation for the preservation of the hair.) Ruizy Roca, Buenos Ayres, Argentina.
- 11,790—Title: "Locion Higienica De Eucalyptus." (For a medicinal preparation for the preservation of the hair.) Ruizy Roca, Buenos Ayres, Argentina.
- 11,791—Title: "Crasper's Easy Workers." (For a cathartic medicine.) The M. L. Crasper Company, Colorado Springs, Colo.
- 11,792—Title: "Taka Tonic." (For a proprietary medicine.) Taka Tonic Company, Allegheny, Pa.

A Chalk That Has No Equal.

Thomas' English Prepared Chalk is not only a strictly pure and thoroughly reliable article, but one which has no equal in the style and convenience of its conical form, the softness of its texture and its absolute freedom from waste. If you want the best and most popular brand, specify "Thomas' English Prepared Chalk."

MARKET REPORT

INCREASING ACTIVITY.

Firm Market Generally, But Several Price Changes.

IMPROVING DEMAND NOTICEABLE ON MANY DRUGS.—CHLOROFORM LOWER, BUT SPERMACEIT CARNAUBA WAX AND OIL WORMSEED ADVANCE.

New York, Jan. 16.—The indications last week of an increasing interest on the part of buyers have been multiplied this week. On several of the important lines a fairly good demand is developing. The week has produced a number of changes in prices, but most of them are of no great importance. In general the market is a firm one, and the outlook is promising to jobbers and manufacturers. The leading staples hold steady and show no evidence of decided price movements in the near future, which must be of advantage to the consummation of satisfactory business transactions. The most important variation in values for the week is the decline of five cents in chloroform.

OPUM.—The unfavorable foreign weather reports still operate toward strength. Both foreign and home markets are firm and if there is any tendency in values at all it is upward. The consumptive demand shows satisfactory proportions, with a moderate amplification. Jobbers have not altered prices, which still are \$2.85@3.00 for nine per cent., and \$2.95@2.10 for eleven per cent. Powdered, \$3.75@4.00 for thirteen per cent., and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—Buyers are ordering more liberally, but there is no speculation, a good movement into consumption being responsible for the demand. This holds the market firm in conjunction with the strength of opium. On this market jobbers quote unchanged prices as \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—There is a good demand for consumers, which gives indication of expanding. Values are firm, in sympathy with foreign strength, but moderate stocks, and good inquiry. At the London bark auction this week, all offerings were easily absorbed at former prices, which adds strength to the situation. Prices are unchanged, jobbers asking 23@23½c. for bulk in 100-oz tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

CHLOROFORM.—Manufacturers have announced a decline of five cents, which was caused by increasing competition for the trade in evidence. Accordingly, jobbing prices have been reduced to 40@45c. per pound and 50@55c. for purified per pound.

POTASSIUM CHLORATE.—No decided

movement or feature has influenced the market, but jobbers have readjusted values to 9@9½c. for kegs, and 12@15c. for less per pound; powdered, kegs, 9¼@9½c., and less, 12@15c. per pound.

GOLDENSEAL.—The scarcity of this drug grows more influential and as no relief is in sight and a fair demand keeps up, jobbers have raised prices to \$1.90@2.00 for the whole root, per pound, \$1.95@2.05 for ground, per pound, and \$2.00@2.10 for powdered, per pound.

HEMP SEED.—As supplies are but small and demand fair, prices quoted by jobbers have risen to 3¼@3½c. for bags per pound, and 4@6c. for less, per pound.

MASTIC.—The failure of the crop proves more influential with the passing of time and the gradual diminution of supplies on the market. Jobbing prices have again advanced, and are now, tears, 60@65c. per pound, and powdered, 65@70c. per pound.

MENTHOL.—The situation continues complicated, because of the Far Eastern war. The latest rumor is that the Japanese government may prohibit the exportation of anything except the refined. Jobbers have readjusted values to \$3.50@3.75 for crystals per pound and 30@35c. for ounces per pound.

COLCHICINE.—A decline of \$3.00 per ounce has occurred in the primary market, but local jobbers have made no changes, 10-grain vials being quoted 14c. per grain.

OIL CASSIA.—More liberal offerings have induced jobbers to lower prices to \$1.10@1.20 per pound.

OIL ANISE.—The primary market has eased 2½c., but jobbing quotations remain unaltered.

ACID GALLIC.—An improving demand with lighter offerings makes jobbing values 65@68c. per pound.

BALSAM PERU.—A slight easiness is evident in the market because of increased offerings. Jobbing prices are \$1.50@1.60 per pound.

CASSIA BUDS.—The market for these has eased a trifle and is now about 30c. per pound.

NETGALLS.—The continued scarcity, due to the practical failure of the crop, has again caused an advance in the primary market, this time by about 6c. Jobbers now quote 34@38c. per pound, bruised, 35@39c., and powdered, 39@44c.

OIL WORMSEED.—There seems to be no limit to the advances in this article. During the week Baltimore has climbed 25c. higher. Jobbers have raised their prices to \$3.25@3.50 per pound.

OIL CEDAR LEAF.—Values have declined somewhat, with larger offerings and jobbing prices have been revised to \$1.10 per pound.

Lambert Company Wins Medal.

Among the awards made at the St. Louis Exposition was that of a gold medal to the Lambert Pharmaceutical Company, for their Listerine and Listerine Dermatic Soap. This decision was made by the International Jury of Awards, after careful consideration of numerous competing exhibits in the same line. Merit wins.

The druggist was buying another man's store. "Figures don't lie," said the seller, as he showed his salesbooks. "True," said the canny druggist, who had been bit before, "but liars do figure."

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put the Era on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list editions.

We acknowledge receipt of the following price lists, recently received at this office:

C. F. Boehringer & Soenne, 7 Cedar street, New York City.—Chemicals.
Gleason Grape Juice Co., Fredonia, N. Y.—Grape and Apple Juice.

Whitall-Tatum Co., 46-48 Barclay street, New York City.—Glassware and Druggists' Sundries.

Whitall-Tatum List.

Its annual price list and catalogue has just been issued by the Whitall-Tatum Company, for 1905. It is a handsome production of 208 pages, gotten up in its customary attractive style, profusely illustrated. The paper used is of high grade, and the typographical work excellent. All the regular lines are listed, and in addition, some new features. Important among these is the "nonsol glass." The list defines this as "a new glass for laboratory purposes, which offers greater resistance to the action of chemical reagents than any other glass on the market." This was described in The Era of December 1, page 572. A useful reminder is the statement that "during July and August, owing to the heat, but little glass is made. It is, therefore, essential that our customers, in order to procure a stock of glassware to meet their wants during the summer, should, so far as practicable, send in their orders by the first of May in each year." Other novelties are a powder insufflator, the Emmet Smith nebulizer, and a soft rubber ear syringe.

They Continue to Grow.

The corporation of Hegeman & Co., 200 Broadway, this city, at the earnest request of a number of physicians residing in the upper West Side district, has opened a new branch pharmacy on the southwest corner of Broadway and 101st street. Their other branches are at 125th street and Seventh avenue, 153th street and Amsterdam avenue, and 149th street and Third avenue. Messrs. Hegeman & Co. are now sampling the trade with their specialties, santalol, a soluble extract of Sandalwood Comp., and Lubrikan, a sterilized lubricant for use on surgical instruments. Another specialty which they claim to be a perfect product, staple, safe and reliable, is Peroxide of Hydrogen. The attention of the profession is called to their analytical department, which is in charge of an experienced chemist and biologist.

"Where have I seen you before?" asked the bank paying-teller, as he glanced suspiciously at the presenter of a check.

"Before the bars, maybe," answered the man, quietly. "I was a keeper up at Sing Sing quite a while." The check was cashed. It is needless to say.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, JANUARY 26, 1905.

Number 4.

Entered at the New York Post Office as
Second Class Matter.

Established 1837

THE PHARMACEUTICAL ERA
PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES:

U. S., Canada and Mexico, \$3 per annum
Foreign Countries in Postal Union, \$4 per annum

The Price List Editions of the Era are
issued in the Spring and Fall of each year and one
copy is sent free to each regular yearly subscriber.

Era Binders—Subscribers are advised to
save their Eras, together with the complete INDEX
which is supplied with each volume (6 months.)
We supply a substantial Binder at 75 cents
each, postpaid.

EDITORIAL COMMENT

Sign the Contract.

All misapprehension about the delay
in enforcing the contract plan in this
city has been explained away. Each of
the half-dozen different parties necessary
to make the plan operative is
waiting for one or all of the others to
proceed. The "giant druggists" are
waiting for the pharmacist of usual
proportions to sign, the small retailers
are waiting to see what will happen to
their friends who have courageously
affixed their names, the friends are
waiting for numbered goods, the Peru-
na people are waiting for something
more than a bare eight per cent. of
2,000 possible signatures, the local
leaders are waiting for the N. A. R. D.
to do more proselyting, and the N. A.
R. D. seems to be waiting for the local
retailers to get together.

Of all the druggists of Greater New
York, less than 150 have signed the
Peruna contracts. The rest of the
country has already furnished 20,000
signatures! What is the matter with
the druggists of New York? No man-
ufacturer can be expected to go to the
vast amount of trouble involved in pre-
paring a remedy for the retailer's woes
and, after the preparation is complete,
to open jaws by main strength and to
pour the dose down unwilling throats.

The jobbers are the only players in
the game who are free from reproach.
They were the first to sign the con-
tract, and are now awaiting the signal
to do the rest. The New York whole-
salers fill their new role as leaders in
the price protection movement with
grace and dignity.

It is to be hoped that the letters of
the conference to the trade will hasten
the signing of the important papers.
The explanation that the terms of the
contracts will not be enforced until
the firm most concerned can be as-
sured of at least a reasonable number
of authorized distributors should re-
move some misgivings. The assurance
that no penalties will be inflicted upon
druggists who merely meet the prices

of competition should also reassure the
timid.

The future of the direct contract
and serial numbering plan is in the
hands of the retailers at whose request
the contracts have been issued. The
druggists of this city are at present
the block in the wheel.

Those excitable persons who feared
a scarcity of clerks as an immediate
result of the prerequisite law may
take comfort from the fact that some
two or three hundred candidates passed
the last examination in one branch
alone. A clerk famine is the least of
the druggist's troubles.

Fruit Syrups in Pennsylvania.

The druggists of Pennsylvania are
supporting a bill before the State legis-
lature, permitting the use of preserva-
tives and artificial coloring matter in
syrups used in soda water and soft
drinks. They ask the lawmakers to
grant an exception in their particular
case, and advance a series of exceed-
ingly ingenious arguments. The rea-
sons advanced are, in brief, that pre-
servatives are necessary to prevent
harmful decomposition, that customers
demand prettily colored liquids, and
that the quantity of the added mat-
erial in soda syrups is too small to do
any damage anyhow.

One argument excites our admira-
tion especially. It is, that the natural
product does not look natural to the
consumer, and that the real reason for
the addition of coloring matter is a
desire to prevent the customer from
deceiving himself into drinking some-
thing artificial and deleterious. That
is worthy of a Chinese diplomat.

The plea of the soda syrup man-
ufacturer—for such the author of the
Pennsylvania bill appears to be—is a
very good one as far as it goes, but it
reminds one curiously of similar pleas
advanced by the dairy men, the canned
goods manufacturers, the spice grind-
ers, the liquor men and scores of oth-
ers. Everybody is sure there is no
harm in his own little sophistications
and is extremely conscious of the
trouble which a law would impose
upon him; whereas the inconvenience
of his neighbor is entirely invisible to
him, and there is not the slightest

doubt in his mind about the wickedness and danger of food adulteration in detail and in principle.

It is quite possible that the present law in Pennsylvania is unduly troublesome to druggists, especially since it seems to have become the custom to employ preservatives and artificial colors in the preparation of syrups. We also believe that a little sodium benzoate and cochineal in a glass of soda does so much less harm than some other forms of adulteration, that it is scarcely worthy of consideration. If that is not reason enough for a revision of the law, it is difficult to see how the case can be strengthened by the addition of a lot of claptrap arguments which are as transparent as they are insincere.

It is possible to make a good fruit syrup without the aid of either preservatives or artificial coloring; to say that it is not, is to insult public intelligence.

That ancient jest about a popular talcum powder has at last found a resting place in the columns of one of our neighbors. Requiescat in pace!

Designing Tattlers.

Don't believe all that your customers tell you! The greatest source of trouble in towns in which schedules are maintained by mutual agreement are reports of cutting, carried about by customers. Patrons will come into a store and declare that goods can be obtained at a much more reasonable price elsewhere, all for the purpose of lowering the price to themselves by a few cents.

A druggist who has had experience advises his fellow pharmacists not to heed such stories. "Give your competitor the benefit of the doubt," he says. "Ten to one he is keeping his agreement as carefully as you are, while your customer's talk is only bluff." He tells of reports brought in by old customers in effect that his nearest neighbor had reduced the price agreed upon for a medicated liquor by some seven cents. Our friend promptly offered to buy any quantity of the preparation from the dissatisfied patron at the schedule price. It is needless to say that no supplies were ever received through that channel.

Problem.—If two druggists undercut each other at the rate of two cents a week, what per cent. will the creditors get at the end of six months?

Cannot or Will Not Understand.

A comparison of Dr. Alpers' very able article with the abstract which appeared in the New York Journal shows just how sincerely that publication tries

to be fair and honest. The scholarly article was, as our readers know, prepared for the very purpose of giving the daily papers a closer view of the substitution matter. It explains the difficult question fully, precisely and yet briefly, and it is difficult to understand how anyone could miss all the telling points unless eyes were deliberately turned the other way. Here is the Journal report of the last meeting of the Manhattan association:

The Mann bill, pending in Congress, which, it is claimed, will prevent or check adulteration in drugs, has been urged for passage by the Manhattan Pharmaceutical Association. At a large meeting Dr. William C. Alfers, president of the German Apothecaries' Association, declared that the druggist who willfully adulterated drugs and chemicals should be branded as a criminal and driven out of business.

"Phenactine," said Dr. Alfers, "is sold here to retailers at \$16 per pound. It can be bought in England at 70 cents a pound, but here it is patented. The public has to pay this swindling profit. The Mann bill will give relief and compel owners of patented articles to manufacture them in this country."

It would be difficult to compress more inaccuracy into two short paragraphs than have been injected into this report. Are the publishers of that paper merely stupid and careless, or is it a case of "None so blind as those who will not see?"

Does Not Refer to All Licenses.

Several readers have gathered an impression from our report of the conference between the Board of Pharmacy and the regents which is erroneous. The acceptance of license from other States as a qualification for examination does not refer to licenses granted upon examination passed later than January 1 of the present year. Candidates who have passed the board examinations in other States prior to that date, will be admitted to examination in this State, provided that the Board of the State in question complies with certain requirements of the New York board.

The details which must be taken into account in introducing a radical change like the prerequisite law, are many and complicated. We do not blame people for mixing the terms of the New York regulations more or less, for we are not by any means convinced that anybody has so far succeeded in fathoming them all.

Adulteration and Preservatives.

In another column we reprint a portion of a letter written by Mr. George Merck, of Merck & Co., this city, to U. S. Senator Dryden on the subject of food preservatives. Mr. Merck believes that in all legislation a distinction should be drawn between actual food adulteration and the addition of substances for food preservation. He argues that as the quantity of the standard preservatives usually employed is so small it is not reasonable to suppose

that any toxic effect will follow their use. Mr. Merck strongly condemns adulteration, but he believes that in many cases the addition of a suitable preservative is a necessity and should therefore be permitted by law.

Pharmaceutical Arithmetic.

Prof. Edward Kremers, of Wisconsin University, this week favors us with some very pointed remarks about the preparatory education of pharmacists. He disapproves of the manner in which we and some of our readers have been urging the necessity of pharmaceutical arithmetic as a part of the preliminary equipment and says in effect that if the general training has been properly attended to the division of fractional doses will take care of itself.

Our correspondent is undoubtedly right in his main contention that pharmaceutical arithmetic is no better than any other sort of arithmetic. We hope that he suffers less with the rest of us than he thinks. The main difference seems to be that he has more faith in our public educational system and in the utility of general culture than have some others. Practical knowledge of things is largely the result of familiarity and unfortunately some very well-informed people are not at all familiar with the art of numbers.

We venture to assert that a question involving, say the division of one-eighth into twenty-seven parts, would trouble sixty per cent. of the graduates of our city high schools. It is not that they have not been taught these things, but they have never been brought into intimate contact with fractions. General education is very necessary in the equipment of the pharmacist, but the ability to manipulate fractional doses is essential. Any sort of arithmetic is as good as pharmaceutical arithmetic, provided that there is enough of it, but unfortunately no diploma carries with it a guarantee that it covers the proper kind.

Should Have Been "Dined," Not "Died."

The press of this country has often been likened to a mighty engine, relentless, remorseless, slaying all that dare stand before it. Yet The Era, when it slew some fifty employes of Jaynes & Co., as narrated near the bottom of the second column, page 81, of the last issue, did so unconsciously, without malice, slew them as the unhappy man who occasionally mistakes his roommate for a housebreaker. The Era steaming, all unknowing that the starboard lights were out, speeding to make the harbor with the tide, crushed out the souls of those fifty employes of Jaynes & Co. in an enchanting hour of their lives.

NEARLY 42,300 DRUGGISTS IN U. S.

THE ERA DIRECTORY FOR 1905 SHOWS AN INCREASE OF 2,382 STORES SINCE 1903—IN ONLY A FEW STATES IS THERE ANY DECREASE.

An increase of six per cent. in the number of drug stores in the United States since October in 1903 seems to disprove the statement that the drug trade is less prosperous than other branches of commerce. The Era Druggists' Directory, 1905, which will appear this week, shows an increase in nearly every one of the States and Territories. In the very few instances in which a decrease occurred the loss is very small in comparison with the total number. The gain is distributed without favor to any one section of the country, the most conspicuous increases appearing in Alabama, Pennsylvania and Texas. Many other interesting facts may be gleaned from the rows of figures given below. The table is compiled from the Era Directory, 1903, and from the new edition.

RETAIL DRUGGISTS IN THE UNITED STATES.

States.	October, 1903.	January, 1905.	Increase.	States.	October, 1903.	January, 1905.	Increase.
Alabama	492	695	203	Montana	125	144	19
Alaska	16	18	2	Nebraska	818	828	10

Mississippi	485	522	37	Wisconsin	905	965	60
Missouri	2,385	2,466	81	Wyoming	65	65	..
				Totals	39,899	42,281	2,382

*Decrease.

There are at present 42,281 retail drug stores in the United States, 2,382 more than in 1903. Taking into account partners, clerks and employes, there are probably not far from 100,000 persons dependent upon the drug business for occupation and means of livelihood.

The increase in the number of drug stores since the publication of The Era Directory in 1903 is about six per cent. Pennsylvania leads with an expansion of 246. Increased activity and growth of mineral and manufacturing wealth is probably the cause for the opening of a great number of new stores in the South. Texas has to-day 244 more than it had in 1903. With the awakening of Indian Territory came 134 more stores. Alabama contains 203 more; Arkansas, 156; Georgia, 52. Not one of the southern commonwealths appears among those which have lost in numbers.

Deductions drawn from the figures betraying decreases can have little value. The losses are so small that they may safely be left out of consideration. Still, one might have expected an increase in New York City, where the population advances by leaps. It is probable that as the resident district moves northward, those drug stores which appear in the new lands are offset by the closing of drug stores in the

wards where the wholesale and purely business houses find fresh footing. There are three fewer in the city now than at the time of the publication of the last Era Directory. Of North Dakota we might have expected an increase natural to a growing western State. Instead, the figures show a contraction of two. In the District of Columbia the falling off is seven. Nevada, in spite of the revival of a great mining boom, has now thirty druggists, where in 1903 the State had thirty-three. New Hampshire and Vermont report a dwindling of eleven and five, respectively.

Though the changes have not been few, Oregon and Wyoming possess no greater number of pharmacists than they did two years ago.

As for the States wherein the druggists are most numerous, New York is the home of 3,774, distancing all other States, the closest to which—Pennsylvania—has 403 fewer. New York City has nearly as many druggists as all the rest of the State combined. Following Pennsylvania is Illinois, with 3,768. Its neighbor to the west, Missouri, has 2,466. So far, the size of the figures seems to follow that of the big cities, New York, Philadelphia, Chicago, St. Louis. But with Texas the immense territory must go toward explaining the numbers. With the exception of the States

mentioned in this paragraph and Ohio, it will be observed that New York City has more druggists than any other State in the Union.

The influence of legislation upon the numbers of druggists in a State is not apparent. States having new and stringent laws regulating registration show about the normal increase, while measures which seem likely to encourage the opening of new pharmacies have apparently had little or no effect.

The reason for the relative importance attached to New York City by the price control forces, is easily found in these figures. The entire commonwealth of Massachusetts, including the city of Boston, has fewer drug stores than this "center of disturbance." Only five States in the Union, with their great extent of territory and many hamlets, each prouder of at least one druggist, contain more stores than this city.

Some of the densely populated States have surprisingly few pharmacists. New Jersey, although the number of presidential electors which it furnishes compares favorably with that of some of the larger States, has less than a thousand stores. No doubt other anomalies of distribution can be found by those skilled in the meaning of figures and familiar with the conditions in the various localities.

⌘ ⌘ C. P. ⌘ ⌘
EMANATIONS

TWO AND TWO ARE FIVE.

"Why don't you adopt Mr. Falkenberg's plan and make some money?" inquired the C. P.

The druggist had been complaining about profits, the cost of rent, gas, clerk hire and about the very general difficulty of keeping a handful of the elusive.

"What sort of plan is that?" he said.

"Most simple possible—charge more!" the sage explained. "What you seem to need is more profits. As you must have noticed by this time, the profit is the difference between what you get and what it costs you to supply the stuff. You want more profit and cannot reduce the cost; then the only thing left is to get more for the goods. Nothing could be more simple."

"Humph!" snorted the druggist. "Everybody on the face of the earth knows that much. What we don't know is, how. Tell us how we can get more for the goods, and we will erect a monument to you at once."

The C. P. smiled. "That doesn't seem to have been provided for in the plan," he said. "Anyhow, that is not my affair, nor Mr. Falkenberg's; that is your part of the scheme."

"Oh!" said the man behind the counter, perceiving a twinkle in the old gentleman's eye. "It seems to me pretty much all there is of it. What do you suppose would happen if I set the boy to marking things up? Mrs. Moriarty from around the corner would come along with a market basket, looking for bargains. I can imagine her sniff. Charge her twenty cents for a cough syrup which she always bought for eighteen? Not much! I'd be a robber and a thafe." Within ten minutes Mrs. Flynn would know of it. "The childer all barkin', too!" No, no, it is not so simple as all that."

"No, of course not, if you go at it in that way. You must do it diplomatically, so that customers won't mind. Mr. F's customers are glad to pay more."

"My customers would not be glad," said the druggist, with emphasis. "I am no hypnotist. If it's only a matter of charging more, what is the use of all your big associations, schedules, plans, and the rest? The N. A. R. D. has been trying for six years to make it possible for us to charge more. It will take a lot of profit to pay that eighty thousand which they expect to spend this year."

"I forgot to tell you," interposed the C. P., "that the method applies only to prescriptions."

"There is some sense in that," the druggist admitted. "None of us get enough for our special qualifications. It costs more to fill a prescription than formerly and yet we get just about the same prices. I'll tell you what I'll do. You get Brown and Pillen and Billy Sharp and the Eagle to double prices, and I'll do it, too."

The sage smiled. "In my opinion, you'd better extend your list a little," he said. "Include a few of the big fellows down town."

"If you are looking for reasons why

prices, and especially prescription prices, should be raised," the druggist resumed, "I can give you all you could possibly want. The biggest and best of all is the effect upon the customer's mind. Faith in a medicine is largely a matter of price; the greater the cost, the better the medicine, is a popular belief and not a bad one, either."

"Still, you wouldn't charge for the belief, would you?" inquired the sage.

"And most doctors would be pleased to have us charge their patients more," continued the druggist, ignoring the reference to faith as a financial factor. "It is a bit ridiculous to charge for a prescription less than twenty-five per cent. of the consultation fee. I know a doctor who receives a fee of \$5. He invariably sends his prescriptions to a drug store where he knows the charge will be \$1."

"The doctors manage to keep up prices," the C. P. remarked by way of encouragement.

"Yes, their code of ethics and reputation does that. Now, if we druggists could get the people to attach more importance to the preparations of the medicines so that some of us could get a reputation, too."

"In the meantime, every druggist ought to raise prices," suggested the sage.

"Of course."

"When do you expect to begin?"

"When the others begin. Charging sixty-five cents for fifteen powders costing twenty cents may be all right for your Chicago friend, but I cannot do it, yet awhile."

"So, there you are!" said the C. P.

"That is precisely where the drug trade is at," assented the practical dispenser. "The beauty of the prescription business is that customers don't know what the other fellow would charge, but let one little pharmacist put up his prices, and the people would soon find out."

"Dry Cleaning" Fabrics.

Benzine is used in the process for "dry cleaning" fabrics. The specifications of a recent French patent provide for a closed chamber or vat in which the fabrics saturated with benzine are suspended. At the bottom of the vat a steam coil is placed. Air is introduced through a pipe at the bottom of one side of the vat and, being heated by the steam coil, removes the benzine from the fabrics. It is then pumped off up a tall column, down which a shower of cold water falls, thus condensing the benzine vapors. The mixture of water and benzine is separated in any convenient apparatus, and the benzine removed. The cooled air is pumped again into the vat containing the fabrics, thus completing a closed circuit and avoiding loss of benzine.

Potassium Permanganate Pencils.

Sodium phosphate is suggested by M. Lemaire for use in the preparation of permanganate pencils. The salt is melted in a porcelain dish and the desired quantity of potassium permanganate added; the melted liquid is poured into molds, greased with vaseline. The pencils are directed to be stored in glass tubes and hermetically sealed.

RESPONSIBILITY FOR FORMULAS

The Lyons courts recently acquitted a physician who had made an injection of 40 grams of a 5 per cent. solution of cocaine with the consequent death of his patient. The operation was for the relief of hydrocele, and the patient succumbed in twenty minutes after the preliminary injection of the cocaine. The physician stated that he had merely followed the directions in Tillaux' Manual of Clinical Surgery, second edition, page 411, which advised for cases an injection of "about 30 grams of a 5 per cent. solution of cocaine"; that is, a gram and a half of cocaine. In the third edition, which followed three years later, Tillaux warned against large doses and advised "about 10 grams of a 1 per cent. solution," that is, 10 cgm. The necropsy revealed pleural adhesions which made any injection of cocaine dangerous. The court acquitted the physician, stating that the citation from Tillaux's text book freed him from responsibility. Professor Tillaux was president of the Paris Academie de Medicine at the time of his death last fall, which occurred not long after this legal decision. The Journal de Med. de Paris, commenting on the affair, remarks that the decision evidently offers a precedent for holding the author of a book or formula responsible if the application of his formula entails any mishap. It doubts, however, if this precedent will be accepted in jurisprudence, as any physician making such an injection ought to know enough not to inject 2 grams of cocaine under any circumstances. "Our confidence in the works of the masters should not deprive us of our powers of judgment."

A similar case was recently decided in Georgia. The proprietor of a patent medicine was sued for injuries by a person who had taken the medicine. The court held that the proprietor was responsible and stated that after careful search not only in the authorities quoted by counsel, but in others, no record of a similar question having been determined by any court could be found. The court further held: "If the contents of a medicine are concealed from the public generally, and the medicine is prepared by one who knows its contents, and he sells the same, recommending it for certain diseases and prescribing the mode in which it shall be taken, and injury is thereby sustained by the person taking the same, proprietor would be liable for the damage thus sustained. . . . These proprietary or patent medicines are secret, or intended by the proprietors to be secret, as to their contents. They expect to derive a profit from such secrecy. They are, therefore, liable for all injuries sustained by anyone who takes their medicine in such quantities as may be prescribed by them. . . . He has a right to rely on the statement and recommendation of the proprietor, printed and published to the world; and if, thus relying, he takes the medicine and is injured on account of some concealed drug of which he is unaware, the proprietor is not free from fault and is liable for the injury thereby sustained. —Journ. Amer. Med. Asso.

OUR
LETTER BOX

MR. FRAILEY ON N. A. R. D.
WORK.

Lancaster, Pa., January 16, 1905.

Editor The Pharmaceutical Era:

The drug trade is in a transitory stage! True! It has been so for twenty-five years and more!

Years ago it required only the professionalism of a few who formed the various State and county associations to keep down ultra-commercialism in the trade. But with the advent of the large department stores and their so-called modern methods, the spirit of rivalry and competition invaded all ranks and the drug trade was not exempt.

As to price control contracts, we've had Campion plans, Detroit plans and tripartite agreements. These were failures, largely because the cut-rate evil was not general nor deep-seated nor the cutting so drastic as it has become in these latter days, so that it was impossible to enlist the influential power of numbers in the retail trade to combat the evil. Failures brought discouragement for a time and conditions became worse until, like all great crying evils, they began to work their own cure.

With the greater necessity to cure the grosser evils came a greater organization, which is being supported by a greater number of the retail trade than ever before, and of a personnel that never knows defeat. As the weakness of the tripartite agreement became apparent, the contract plan was evolved and at this time it is the accepted specific for the cure of the cut-rate evil. Whether the present plans in vogue or any one of them will ultimately prove to be the best we can adopt, no man knows. The step that led up to the present conditions have united in one organization the best brains, character, judgment and wisdom and the greatest monied interests in the drug world to-day.

By organization I refer to the N. A. R. D., and that in the broadest sense. Not merely embracing those retail druggists who pay a per capita tax for its support, but all who are working toward the success of its objects and aims. For what better and more loyal and valuable members has the N. A. R. D. than Kramer, Beardsley, Garst, Grove, Bessett, Pierce and his colleagues, Schumacher, Hentz, and others who are doing like work?

The cynic will impute selfish motives and we may so far agree with him as to say, "you may be right!" But when selfish motives impel men to do so much more than mere self-interest and hope of personal gain demands, when they give of their time and money and best effort to attack conditions for the purpose of bettering them, while so many others who are holding aloof are bound to share in the advantages gained by their labors and sacrifice, I maintain that selfishness is no longer a factor; the dominating influence is the broad spirit of humanity which leads to the noble deeds and elevating ideals and the voice of the cynic is drowned in the glad shouts of those who

appreciate the altruistic spirit in others.

It will be like pulling teeth for many proprietors to adopt the contract plan for, no matter how thoroughly it is explained that it is for their own best interests to do so, the feeling will remain that they are being coerced into doing so, which is naturally repugnant to them; also, when added to this they consider the expense of adopting the plan, it is reasonable to suppose that many of them will hesitate until they feel compelled to adopt it by falling off of business. Alas! It will then be too late for the weak ones. They will adopt the plan with the hope of reviving a dying business and expect that one act to restore them to the flood tide of prosperity. It will do nothing of the kind. The late

WILLIAM O. FRAILEY.

comers and the weak ones will pass out of existence. The retailer will be selling the goods of those proprietors who have early adopted the plan.

The reforms brought about by the N. A. R. D. are gradually looming up and rapidly growing. If the spirit of fraternity and mutual co-operation now existing and gradually spreading among former enemies and strangers and between proprietors, jobbers and retailers was the only reform brought about by the activities of the N. A. R. D., it would be worth all the time, labor and money spent to accomplish it. But with these reforms come education along both commercial and professional lines, a closer and wider reading of the trade journals, a frequent interchange of thought and opinion on trade methods and laboratory experiences, an elevation of the professional and commercial status of the pharmacist, protection from and defeat of vicious legislation, the enactment of just laws for the protection of the public from the capacity and greed of the ignorant and incompetent, the pending national legislation for amending the patent laws, reducing the tax on alcohol, etc.

Experience with the price controlling contracts emphasizes the first claim that the direct contract serial numbering plan is *The Plan*.

As to substitution in prescription drugs, I do not only think it is not increasing, but I do not think it is as bad as the inspirers of the yellow journal writers would have us believe. I am personally acquainted with nearly every pharmacist in my county

of Lancaster, and if I were asked to say conscientiously and sincerely who among them I would suspect of stooping to such despicable practices, I would say, "not one!"

Fraternity and co-operation are gaining rapidly in the drug world. But it requires courage and true friendship to criticize in a fraternal way the acts of others. Honesty of purpose is emphasized when one man criticizes another's acts in a fraternal way for the purpose of correcting an error. I believe that this is being done among the leaders and workers in the N. A. R. D. to a greater extent to-day than ever before. Such criticism is helpful. It helps us to see ourselves as others see us. It helps us to avoid making the same mistake twice. I am optimistic as to N. A. R. D. work, and feel that the organization will grow stronger each month. Every retail druggist, jobber and proprietor should consider it his own organization, and support its branches to the end that success once attained will be instantly reflected on proprietors and jobbers alike. The success of one will be the success of all.

To the retail druggist in particular I would say: Join your local association and help along with your influence and counsel. Attend the meetings, pay your dues promptly and you will not regret it. Don't fail to talk out your true opinions in meeting. If appointed on a committee, see that your committee does the work it was asked to perform and don't rest until you have done more than your share of the work. If grievances are reported, investigate them in a spirit of fraternity and candor, and lots of mountains will shrink to molehills which can readily be stamped to the level without difficulty.

WM. O. FRAILEY.

MR. AVERY ON THE CHICAGO
EPISODE.

Chicago, January 14, 1905.

Editor The Pharmaceutical Era:

The recent Chicago "aristol" experience teaches some practical lessons, and awakens many suggestions, pregnant with possibilities, for future consideration.

Out of the present "unpleasantness" good results will surely follow. Reputation for dispensing drugs of known purity will have a high value in the minds of pharmacists generally. Like the cashing of "bad checks," the demand will be that the "source of supply" of chemicals shall be able to "make good" in case the confiding druggist is "taken in." There will be a growing demand for some recognized agency which shall guarantee the purity of drugs on the market, and relieve the pharmacists of the outlay of time and money consumed in proving purity.

The temptation to evade the workings of unfair patent laws must be removed, and these laws so modified that the manufacture and sale of medicines cannot work undue hardship to consumer or compounding. The great majority of pharmacists are honorable men. Their resentment of protected monopolies in the drug trade exposed them to the cunning of robbers of another class, the "fake" drug brokers. Had the pharmacists who sold spurious aristol been of the criminal class they would not have paid eighty cents per ounce for stuff they could have made themselves at two cents per ounce. In

the examination by me of the Chicago victims of the aristol crusade, the fact was revealed that the average ale of aristol (of all sorts) did not exceed one ounce a year for each drug store. The extortionate price exacted by the patentees has rendered its use almost prohibitory. Substitution is the evil of the hour. It is induced not alone by the high price of protected chemicals, but by the policy of some pharmaceutical manufacturers as well. They market many facsimiles of various proprietary remedies, and promptly duplicate any specialty a rival house puts on the market and its similarity is called to the attention of the retailer as yielding a larger percentage of profit.

Ruinous "price cutting" on patents has led many pharmacists to force the sale of similar remedies affording better returns. Notwithstanding the sore trials besetting the pharmacist to-day, the future surely gives promise of a more hopeful nature. The day of organized effort and unity of action is here. Individually weak, collectively we shall be a power, not alone for the elimination of ruinous competition, but we shall progress along other lines as well, and we may assist in securing legislation, conducive to public welfare. One important gain will be a far closer alliance with our friends, the medical practitioners. The new issues of the Pharmacopœia and National Formulary should awaken activity on our part to secure general use of these high authorities and thereby supplant in many cases the secret nostrum of the day.

The recent adoption of the "direct contract" by the Parls Medicine Co., and the action of the Peruna Company in putting their contracts into effect at once will inspire confidence in the hearts of faint-hearted members of the trade. The ranks of the N. A. R. D. will be strengthened and a conviction brought home to the growers which should secure their active support and financial backing to an agency which aims to help the poor pharmacist in so many ways. May the Pharmaceutical Era continue its activities in promoting the welfare of the retailer, and its present appearance of well being be perpetuated by its record of well doing. Sincerely yours,

CHARLES H. AVERY.

DR. KREMERS DEFENDS REGENTS.

Madison, Wis., January 17, 1905.

Editor The Pharmaceutical Era:

Permit me to say a word in behalf of the position taken by the Regents of the State of New York with reference to the question of so-called "pharmaceutical arithmetic" which has received so much attention in your journal of late.

If you were to engage a reporter and soon found him to be deficient in general education and in mental training so that he could not write up an event of local interest, would you advise him to take a course in pharmaceutical English?

If a grammar school pupil has grasped the division of three-fourths by thirty, do you think it will make a difference to him whether the words grains, ounces or pounds happen to appear after the decimal? Do you for a moment suppose that if the teacher had taught him how to divide three-fourths grains that he would have been better prepared to divide three-

fourths scruple by thirty, later on in his course at a college of pharmacy?

Since when do the best engineering colleges of this country demand "engineering arithmetic" as an entrance requirement, or are you and your correspondents of the opinion that mathematics in any form are less important to the engineering student than to the pharmacy student?

What we need is not drill in "pharmaceutical arithmetic," but a better all round preparation for prospective pharmacy students. Capacity, not bits of technical information, should be the motto of those who are trying to direct young men who are about to enter our profession.

One year of high school training is certainly a great improvement upon no entrance requirement at all. However, it is far from being enough. To make one's self believe that a few scraps of "pharmaceutical arithmetic" can make up in any way for this deficiency is even worse than to make the pharmaceutical profession ridiculous in the eyes of the educators of this country by asking that the Regents of the State of New York devise "a new measuring rod" which shall seemingly add to the educational stature of an insufficiently prepared pharmaceutical student or candidate.

Call for more arithmetic; still better, call for algebra and geometry, but don't ask for a subject in which the prospective students will prepare by committing to memory a few tables and rules, and drill in quiz-compend like fashion.

No one can appreciate more than does the writer the need of a better preparation on the part of pharmacy students, not only in arithmetic, but in all those subjects that will develop in them the capacity to think. The pharmacy student who cannot divide three-fourths grain by thirty is so defective in the capacity to think, that any amount of training in pharmaceutical arithmetic will never make him a safe pharmacist. Respectfully yours,

EDWARD KREMERS.

THE ERA FULL OF NEW IDEAS.

Cosmopolis, Wash., Jan. 10, 1905.

Editor The Pharmaceutical Era:

I send you herewith a bit of a circular I got out last Christmas. I live in a small sawmill town of eight hundred inhabitants and am the only druggist here, but I believe in advertising just the same. I took in \$1,700 cash during the month of December and booked about \$200 in glittered accounts. I think that this is not so bad for a small town. The little circular was quite a help to Christmas shoppers, as well as myself. I enjoy reading your suggestions on advertising, window dressing, etc. That is what I take your paper for. It is always full of new ideas. Very truly yours,

D. F. SPIEGLE.

(An abstract of the circular to which Mr. Spigle refers and our comments thereon will be found in another column.—Ed.)

Antidol.

Antidol is stated to be a combination of caffeine, antipyrin, citric and salicylic acids. In doses of 1 gram it has been employed in the treatment of headache, coryza, etc.

ALPERS ON SUBSTITUTION.*

Aspects of the Question and Why Mann Bill Should Be Passed.

STATUS OF OFFICIAL REMEDIES AND PROPRIETARY PROPRIETARIES. — SALE OF THE LATTER A PURELY COMMERCIAL MATTER.—PECULIAR POSITION OF PATENT SYNTHETICS. — PARACET-PHENETIDIN AND PHENACETINE ALIKE BUT POSSESSION OF THE FORMER ILLEGAL.—UNFAIR PRIVILEGES OF FOREIGN MANUFACTURERS.

BY DR. WM. C. ALPERS.

There are three classes of goods in the pharmacist's stock in which substitution might be practiced, and for a clear understanding of this question it is necessary to consider them separately.

The first class comprises drugs, chemicals and pharmaceutical preparations as outlined in the United States Pharmacopœia. The second class comprises proprietary articles commonly called patent medicines, although as a rule they are not patented. The third class comprises synthetic remedies of definite chemical composition, generally protected by patents and often also by trade-marks under an arbitrary name.

OFFICIAL DRUGS.

The druggist who willfully or carelessly adulterates the first class of goods must under all conditions be stamped a scoundrel. As these goods are the ones that are generally prescribed on physicians' prescriptions, an adulteration becomes the more condemnable. There is absolutely no excuse for giving a customer an inferior article in his prescription than the one that the physician ordered. No plea can be advanced in excuse of such practice. To substitute wood alcohol for grain alcohol, to make a weak tincture of opium or iodine, to prepare tinctures or extracts from cheap and worm-eaten drugs, to buy and sell inferior chemicals for the sake of saving a few cents, is a crime against which every honest druggist will rise in protest. We druggists cannot claim that our craft as a class stands morally higher than any other profession or business. We are subject to the same human frailties and temptations that other people are, be they lawyers, ministers, bankers, merchants, mechanics, or laborers. Therefore, it may be presumed that among the two thousand druggists in New York City there will be some black sheep, and the records of the Board of Pharmacy show that some violators of the law have been found and punished. But it is equally true that in this large number of druggists, no matter how they may differ on many minor subjects, there is only one sentiment as to these violators, and that sentiment is to detect them, to expose them, to punish them, and to cast them out of the profession if possible. The records of our Board of Pharmacy show that the number of willful violators is comparatively small, and it can be stated without fear of contradiction, that the public in New York is better served in regard to purity of

*Read before the Manhattan Pharmaceutical Association, Monday evening, Jan. 16, 1905.

drugs than in any other city of the country.

PROPRIETARY GOODS.

While then, the substitution of official drugs, chemicals and preparations is always criminal, this practice takes another aspect when applied to the so-called proprietary goods. The composition of these compounds is kept secret; yet they are claimed to be remedies for certain ailments, sometimes for all ailments. Their preparation, therefore, is a commercial venture, and the unfortunate sufferer of some sickness is financially exploited for the sake of personal profit. The manufacturer of these goods never sees the patient, never diagnoses his disease, and, as a rule, cares very little about the result of his preparation. All he wants is to sell the goods, and the more skillfully the advertisements can be framed, and the more plausibly the virtues of the preparation can be extolled, the greater the success. The proper attitude for the professional pharmacist in reference to these goods would be that of positive hostility. Proprietary goods are adverse in every respect to the interests of the pharmacist, as well as physician, and it might also be stated that as a whole they rather injure than benefit the public. However, the conditions of trade, the custom of this country, and the expectation of the customers, compel us to keep a supply of these goods on hand and sell them. As neither knowledge, ability, nor experience is required for this work, their sale is a purely commercial matter into which the question of professionalism can never enter. The question here arises: Have we a right to persuade a customer to accept a different article from the one that he asked for, for instance, Brown's Cough Cure in place of John Smith's Cough Cure? This is a question rather of policy than of morality. The public is neither benefited nor injured by such substitution. The chances are that the one remedy will do no more good and no more harm than the other, and if injury is done at all, it is done to the man whose advertisement brought the customer into the store. The druggist is in that case in the same position as a shoe dealer who persuades his customer to take a different shoe than the one he originally asked for, for instance, a Regal shoe instead of a Douglas shoe; or the hatter who for some reason, prefers to sell and succeeds in selling a Young hat, when a Knox hat had been asked for.

ESSENTIAL PRINCIPLES OF SUCCESS.

I personally condemn such practice, not so much on moral grounds or out of sympathy with the advertiser, but because I consider it bad business. I believe that one of the essential principles of successful business consists in furnishing quickly, cheerfully and cheaply the article that the customer wishes. By this method the seller pleases the customer; but by persuading him to take another article, he takes great chances. Any little drawback, or defect of the article, any careless handling or wrong use by which the article becomes less valuable, will be charged against the seller, because, as the customer will argue, "he did not give what I asked for." The dealer who practices this kind of substitution has in view only the one individual sale, and he may never see the customer again. But the proper serving of the public with goods that they

ask for will not only build up a good business, but also a reputation for honesty and reliability. The question of price and profit has nothing to do with this argument. The druggist in this case, however, generally has a good opportunity to make the best of the situation. We all know that the majority of our customers are undecided as to what article they want, and often leave the selection to the judgment of the druggist. He is the successful druggist who has by his own actions built up a reputation of good judgment and reliability.

PATENT SYNTHETICS.

The third class of goods, the so-called synthetic patented articles, have during the past twenty years taken a peculiar position in medicine and pharmacy and in the eyes of the public. The majority of them are manufactured abroad, and their exploiting and sale in this country is in itself a perfectly legitimate and honest business. But owing to a defect or omission in our patent laws, the foreign manufacturer is given remarkable powers by which he holds the American public in his grasp. All patent laws are enacted for the purpose of promoting enterprise, investigating research and invention, and securing for the inventor a profit commensurate to the value of his invention for a number of years, and thereby benefiting the country and the whole people. These foreign manufacturers, however, pervert the intention of our patent laws and make them a means to stifle enterprise, to check original investigation, and to draw enormous sums of money out of this country without the least benefit to its citizens. They have done this by securing patents not only for the process of manufacturing these chemicals, but also for the articles themselves. This latter privilege is not given them in their own country as contrary to the public weal. Now, what is the result? No chemist in this country tries to invent new methods or improved machinery to prepare such a protected article, because, if he did, he would have to combat a gigantic monopoly with unlimited resources; nor is any capital invested here in its manufacture. As an illustration let us take Paracet-phenetidin, sold under the trade-marked name Phenacetine. The importation and sale of this article is restricted and confined to a foreigner, who takes advantage of the situation, sells it here at an enormous profit, more than ten times the actual value. We all know that Phenacetine is sold to retailers at \$16 per pound and is wholesaled at the best figure of about \$12. I have in my possession a letter from a large chemical house in England in which they offer me Phenacetine at seventy cents a pound; but I am told that I have no right to buy this, or to import it, or to use it after it is imported. Not one soul in the United States, not one branch of industry derives any benefit from this state of affairs. The fabulous profit is collected here and shipped to Germany; and the unfortunate patient, in addition to the misfortune of his sickness, is taxed this enormous profit to enrich a foreign manufacturer.

TWO KINDS OF PHENACETINE?

Now, let us suppose that there is some Paracet-phenetidin brought into this country, without passing through the ware-

house of this foreign monopolist. It is the same article in every instance as Phenacetine. It has perhaps been made by the same manufacturer, in the same laboratory. Are there at once two different kinds of Phenacetine? Is the one different from the other, because the one box bears the imprint "patented in the United States," and the other one "the resale in the United States is prohibited?" Can it be claimed by any sound mind that the contents of a prescription calling for either Paracet-phenetidin or Phenacetine will be different whether the article is taken out of one box or the other? Is it not an outrage to the intelligence of every pharmacist and physician to claim that this is a question of substitution?

AN ABSURD ARGUMENT.

A few days ago, one of the representatives of a large German chemical house was in my store, when a prescription was handed me calling for thirty grains of Paracet-phenetidin to be made into six capsules. I turned to the representative of the German firm and asked what he would dispense in such a case. He answered, "Of course, Phenacetine." "But," I replied, "the prescription calls for Paracet-phenetidin." "Well," he said, "don't you know that Phenacetine is Paracet-phenetidin?" "So it is," I said. Then according to your opinion, if Phenacetine should be ordered, I have a right to dispense Paracet-phenetidin." "No," he said, "because you have no right to possess that chemical, nor has a doctor a right to order it." The absurdity of this argument needs no further words. If, therefore, we have in our possession chemicals of definite chemical composition, and know positively by our own investigation that such chemicals are correct and answer all the requirements of another chemical of the same composition, which sells under a trade-marked name, the taking of the one for the other, and the other for the one, can by no process of logic be called substitution. It is in each and every case the same article, just as two pounds of sugar are alike, no matter if the one is wrapped in blue paper and the other in yellow.

POSSESSION NOT SUBSTITUTION.

Whether the possession of such an article is a violation of some trade-mark law, is a different question that has absolutely nothing to do with pharmacy or medicine, or the ethics of either profession, and its possession can in no case imply substitution. We might as well argue that the physician whose coat is made of a piece of smuggled cloth is therefore unfit to diagnose a case, or that a surgeon who applied a smuggled splint to a patient with a broken leg is a scientific substitutor and sure to ruin that patient's health. I do not advise the purchase of such goods in a round-about way. A druggist who chooses to buy these chemical compounds in avoidance of an unjust trade-mark law, may be liable for a certain fine, but to reflect on this account on his ability and integrity as a pharmacist is an absurdity. The manufacturers of these compounds, however, have tried, and in many instances successfully tried, to confound the minds of the medical profession, the press, and the public on this question. They have picked out one sentence from a report of the Board of Pharmacy in which a violat-

ing pharmacist was detected and punished, by skillful perversion of argument applied to their protected article, drawn inferences therefrom reflecting on all druggists, and charged as unseemly and rascally the representatives of an honorable profession.

WORK FOR THE MANN BILL.

It is therefore our duty to oppose the unfair privileges of these foreign manufacturers with all the powers in our possession. This is our duty as pharmacists, in order to protect our reputation that these men sometimes knowingly and viciously slay and besmear. It is our duty as citizens and patriots to help to free our country from this octopus that holds one branch of our chemical industry in its grasp. We should, therefore, all unite, no matter how we may differ on other points, to work for the final passage of the Mann Bill, which has passed the House, and is now referred to the Senate. In this bill the leading abuses, as delineated above, have been abolished, so that no grant will hereafter be given to a foreigner whose own country does not grant the same, and that the receiver of a patent must use this patent and manufacture the article patented in this country within a fixed time.

Let us work, therefore, in unison to see this bill become a law.

TASTE AND ODOR.

It is often desirable to determine, with some precision, the relative value of a sample, with regard to its flavor. In some cases it is all-important. The worth of oils and essences used for aerated waters and for culinary purposes is necessarily judged by the delicacy and richness of their flavor. It is in some respects the simplest and most easily applied of all tests, but it requires to be made under proper conditions. The careless way in which it is often done renders the indication altogether misleading. Frequently a sample is examined by applying the bottle to the mouth or the finger to the bottle, and then to the lips, without any care as to the condition of the parts with which the substance may come into contact.

PALATE MOST SENSITIVE.

Some years ago I made some observations on this subject, and found that to arrive at any trustworthy result it is necessary to work with almost as much care as in a quantitative analysis. The palate is a very sensitive organ, and it is easily overpowered, so that if a strongly tasting substance be applied, slight differences of flavor are quite obscured. Accordingly, full provisions should be made for taking advantage of the delicacy of the "apparatus" available. With few exceptions, the body under examination should be well diluted; a hundred, a thousand, or even ten thousand times, according to circumstances. Except in those cases where the chemist is quite familiar with lasting the particular substance, the observation should be made by comparison with another sample taken as a standard. In all cases every form of extraneous matter must be carefully avoided. Liquids are conveniently withdrawn by means of a clean, dry pipette, or by a glass rod; and the mouth of the bottle must be rendered perfectly clean before pouring any out; a little oxidized oil or extra t from the

mouth of a bottle may seriously modify one's impression of the quality of a sample. It is important to give attention to the state of one's mouth. It is not wise to criticise a flavor soon after a meal, especially after partaking of highly seasoned dishes, or after smoking. If the mouth and lips are not quite free from taste, they should be well rinsed with water before experimenting. It ought to be recognized that the principal flavor in two samples of the same substance is similar, so that it is the subsidiary factors which have to be compared; but it is the flavor as a whole which is first of all in evidence. It is, therefore, required to eliminate as far as possible the principal flavor, so that attention may be paid as exclusively as possible to the subsidiary. This may be achieved to some extent by first tasting both samples, so as to accustom the palate to the element which is common to them, and then, after a minute or so, repeating the tasting critically.

METHOD OF SAMPLING.

A procedure which is simpler and occasionally better, is to taste first sample A, then B, and after some time, taste first B and then A. The palate quickly tires, and if satisfaction is not readily obtained, the examination should be repeated some hours later. Generally, water alone should be used for dilution, but in the case of essence for aerated waters, it is often more to the point to dilute with water containing any, ten per cent. of syrup, which may, if desired, be slightly acidulated with citric acid; the conditions under which they will be used are thus more nearly approached. The proportion of essence employed should be such as will give a full, but not powerful effect. The quantities of sugar, acid, essence and water must be strictly the same in mixtures to be compared. For lemon oil the following works well:

Place 1 cc. of the oil in a separator, dissolve it in 1 cc. of absolute alcohol, add 10 cc. of syrup, shake well, then add sufficient water to make up to 100 cc., shake vigorously, and let stand five minutes; draw off the aqueous layer and taste it. The odor of the oily layer, also its taste, may throw further light on the quality of the oil.

Some other volatile oils may be treated similarly, but usually much less oil must be used—say, 0.1 cc. in 100 cc. For fixed oils—e. g., olive and cod-liver—the best and simplest method is to place about 1 cc. on a small watch-glass, from which it is sucked without letting it touch the lips more than can be avoided.

TESTS BY ODOR.

The general principles involved are the same as those for taste. When it is desired to compare two liquids or powders in their natural state, equal quantities should be put into two 50 cc. beakers placed side by side on the bench. If they are held in the hand for more than two or three seconds, they become warmed, and the odor is modified; and as it is unlikely they will become warmed equally, the comparison is entirely unfair. Care should be taken to avoid breathing into the containing vessel. Volatile oils may be dissolved in ten or more volumes of odorless alcohol, and a few drops of the solution spread over a small filter-paper, which is hung on a pin, stuck in a shelf

or the like, and examined as soon as the alcohol has dissipated. For comparisons the solutions must be prepared and used quantitatively. Generally it is best to use the substances pure, or merely diluted at the ordinary temperature; but sometimes an odor can be artificially developed with advantage. For example, an apparently good glycerin rarely has much odor when cold, but on warming, an unpleasant odor may become evident. If the glycerin be mixed with half its volume of dilute sulphuric acid (1 in 4), and heated to about 90° C., it will probably have a decidedly unpleasant fatty or sharp smell, if it has not been properly refined.—S. J. Lewis, in *Chemist and Druggist*.

THEORY AND PRACTICE

Mercury Bichloride as a Disinfectant.

In the class of "liquid disinfectants" may be mentioned mercury bichloride solution, carbolic acid preparations, coal tar preparations, mineral acids and metallic salts solutions, potassium and sodium permanganate solutions, eucalyptus oil, etc. (Aled. Brief.), but few are of any practical use. Undoubtedly, the best is mercury bichloride, the solution (one in one thousand) being a true disinfectant or germicide, but one requiring care in handling, owing to its poisonous character. A convenient formula follows:

Mercury bichloride	1 ounce
Common salt	5 ounces
Hydrochloric acid, commercial	1 ounce
Opal or cotton blue, commercial	1 grain
Water, to make	3 gallons
Strength	= 1 in 500.

The hydrochloric acid in the formula assists solution, and the common salt prevents the precipitation of monochloride of mercury and the coagulation of albuminous matters by the formation of albuminate of mercury when the fluid comes in contact with living tissues. The opal or cotton blue is used for coloring purposes, and thymol or some other odorant is added. The color and odor so characterize the solution that there is little danger from a harmless solution.

Iodotannic Syrup.

From a series of experiments with various flavorings, Wyatt, in a paper read before the Liverpool Chemists' Association, reports that he has found that coffee is the best to hide the taste of the hydroiodic acid and mask that of the tannin in iodotannic syrup. He suggests the following formula:

Iodine	320 grains
Tannin	320 grains
Sugar	12 ounces
Tincture of vanilla (1-40)	80 minims
Freshly roasted coffee	2 ounces
Water	20 fl. ounces

Make a strong infusion of the coffee by percolation with boiling water until 4 ounces of liquid have passed. Set this aside and continue the percolation until

four more ounces are obtained. Rub the iodine fine and put it and the tannin in a flask with percolate No. 2 and one ounce of the sugar and heat until the iodine is absorbed. Finally dissolve the rest of the sugar in this and percolate No. 1, adjust to one pint, and add the tincture of vanilla last. This makes a thin, dark syrup of pleasant odor and taste. The proportion of sugar may be increased if a denser and sweeter syrup be desired.

Determining Hardness of Water.

Charles R. Walker, in a recent issue of the Technical Quarterly, discusses the method of determining the hardness of water by a standard soap solution, which gives good results only when the water does not contain soap curdling substances over 100 parts per million. With harder waters two methods of procedure are possible—to use a stronger soap solution or to use a smaller volume of water than the usual 50 cc. The first method works fairly well, but with very hard waters there is still difficulty in determining the end-point, owing to the curd. Experiments, however, showed that the exact end-point could be determined within 0.05 cc. by sound, as the harsh sound as of solid and liquid is suddenly denuded, as if oiled, when the end-point is reached. It was also noticed that until the "earthy" salts were all precipitated by the soap, the larger bubbles broke almost instantly and without iridescence, but when the soap was in slight excess, or the end-point was reached, the larger bubbles lasted from one to two minutes and showed marked iridescence. The second method, using less volume than the customary 50 cc., gave, with sound method, uniform results.

Bleaching of Flour.

Three processes are in use for bleaching flour, viz., ozonized air, air charged with chemically prepared nitrogen peroxide and air charged with nitrogen oxides obtained by electrical discharge. According to Fleurent (Comp. rend.), if these processes merely changed the color of the flour, they would not be worth using, but it is claimed that experiment has shown that they do have an influence on the transformation of the fatty matters, acidity and diastatic power, and on harmful micro-organisms; further, an increased amount of superior flour is extracted and its keeping qualities are improved.

Gasoline Soap.

"Gasoline soap" is made, according to a process recently patented in France, by agitating 32 kilos of gasoline with 16 kilos of soda lye and stirring into the mixture 20 kilos of melted animal or vegetable fat; twenty-four kilos more of the lye are then stirred in; the resulting soap is run into suitable moulds, and transferred to a room heated to about 30° C., where it is allowed to remain for twenty-four hours, to complete the saponification.

Depilatory.

Barium sulphide, 25 parts; powdered soap, 5 parts; French chalk, 35 parts; starch powder, 35 parts; benzaldehyde to make, 120 parts. One part of the preparation is mixed with three parts of water, the mixture applied to the part and washed off after five minutes. (L'Union Pharm.)

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Benzoinated Almond Cream.

(Q. A.)—An "almond cream benzoïn hand lotion" may be prepared by adding a sufficient quantity of tincture of benzoïn to any one of the following formulas:

(1.)

Almonds, blanched	1 ounce
Rose water	8 ounces
White wax	1 dram
Almond oil	2 ounces
White castile soap	1 ounce
Honey	2 ounces
Cologne	1 fl. ounce
Oil of bitter almonds	4 drops
Oil of rose geranium	5 drops
Glycerin	½ fl. ounce

Blanch the almonds and beat to a paste, adding the rose water; heat this to about 212, and incorporate with the white wax, almond oil and soap, melted together; then add the other ingredients.

Directions: After washing the hands with warm water and castile or palm soap, apply the above, rubbing it thoroughly in, then wipe the hands with a dry towel.

(2.)

Ointment of rose water	5 parts
Oil of sweet almonds	5 parts
Glycerin	5 parts
Boric acid	5 parts
Solution of soda, U. S. P.	12 parts
Mucilage of quince seed (2 drams to 1 pint)	25 parts
Water, sufficient to make	200 parts
Oil of bitter almond,	
Oil rose, of each, sufficient to perfume.	

Heat the ointment, oil and solution of soda together, stirring constantly until an emulsion is formed; then warm together the glycerin, acid, mucilage and about 150 parts of water; mix with the emulsion, stir until cold, and make up to 200 parts by adding more water. Lastly add the perfume.

Askison gives this formula:

First prepare an almond cream as follows: Melt ten pounds of purified lard in an enameled iron pot or a porcelain vessel, and while increasing the temperature, add little by little, five pounds of potash lye of 25 per cent. strength, stirring all the time with a broad spatula. When fat and lye have become a uniform mass, 2% to 3% ounces of alcohol is gradually added, whereby the mixture acquires a translucent, crystalline appearance. Before the alcohol is added three-fourths to one ounce of oil of bitter almonds is dissolved in it. The soapy mass thus ob-

tained is called "almond cream" (creme d'amandes) and may be used alone for washing.

To prepare amandine or almond emulsion:

(3.)

Expressed oil of almonds	10 pounds
Almond cream	3½ ounces
Oil of bergamot	1 ounce
Oil of bitter almond	1½ ounce
Oil of lemon	150 grains
Oil of cloves	150 grains
Oil of mace	150 grains
Water	1½ ounces
Sugar	3½ ounces

In the manufacture the following rules should be observed:

Effect the mixture in a cool room, the cellar in summer, a fireless room in winter. Mix the ingredients in a shallow, smooth vessel, best a large porcelain dish, using a very broad, flat stirrer with several holes. The sugar is first dissolved in the water and intimately mixed with the almond cream. The essential oils are dissolved in the almond oil contained in a vessel provided with a stopcock. The oil is first allowed to run into the dish in a moderate stream under continual stirring. The mass soon grows viscid, and toward the end of the operation the flow of oil must be carefully restricted so that the quantity admitted can be at once completely mixed with the contents of the dish. Well-made amandine must be rather consistent and white, and should not be translucent. If translucency or an oily appearance is observed during the mixture, the flow of oil must be at once checked or enough almond cream must be added to restore the white appearance, under active stirring. As amandine is very liable to decompose, it must be immediately filled into vessels in which it is to be kept, and the latter, closed air-tight, should be preserved in a cool place. By adding three-quarters ounce of salicylic acid, amandine may be made quite permanent so that it can be kept unchanged even in a warm place.

Books on Fluid Extracts and Tablets.

(J. B. G.)—We know of no work on the manufacture of soluble fluid extracts, such as you outline. The best information on this subject as regards formulas, etc., outside of the Pharmacopœia, the National Formulary, Hemington's Pharmacy and other hand books on practical pharmacy, will be found in the files of the pharmaceutical journals and the various annual volumes of the Proceedings of the American Pharmaceutical Association. To put this information in the form you desire would take an individual considerable time.

About the same scarcity exists with reference to books on the manufacture of tablets. However, there are two small books on the subject; that of Coblenz, published by the Whitall-Tatum Co., this city, and Edel's "How to Make Tablets," published by the Spaulin Publishing Co., of Boston. If you read German, you will find Uzer's "Compressor of Medical Tablets" helpful, but by far the best information will be found in the articles like that by Rodwell and Turner, in recent issues of The Era. See September 1, 1904, Era, page 216 and the October 27 Era, page

421. There is also some information to be found in the recent editions of Scoville's "Art of Compounding," and Caspar's "Practice of Pharmacy."

Paste Stove Polish.

(C. W. S. Co.)—Mix 2 parts of black lead, 4 parts of coppers and 2 parts of bone black with water, so as to form a creamy paste. This is claimed to produce an excellent polish, as the coppers produce a jet black enamel, causing the black lead to adhere to the iron.

(2.)

Plumbago 2 pounds
Water 8 ounces
Turpentine 8 ounces
Sugar 2 ounces

Knead thoroughly and keep in tin boxes. Apply with a brush.

(3.) Plumbago made into a paste with sodium silicate or water glass. Must be brushed thoroughly after applying to the stove.

(4.)

Pulverized black lead 2 pounds
Oil of turpentine 2 gallons
Water 2 ounces
Sugar 2 ounces

(5.) Mix 5 parts black lead, 3 parts bone black and 10 parts of iron sulphate. Use enough water to form a paste.

(6.) Turpentine and black varnish put with any good stove polish is said to be the blacking used by hardware dealers for polishing heated stoves. If properly put on it will last throughout the season.

Paste for Labels on Tin.

(L. D. M.)—First roughen the tin with emery or sand paper, or brush over it some nitric acid or compound tincture of benzoin, and allow to dry. Then apply the labels with one of the following pastes:

(1.)

Tragacanth ½ ounce
Acacia 2 ounces
Water 8 fl. ounces

Boil together, strain and add:

Thymol 7 grains
Glycerin 2 fl. ounces
Water to make 1 pint

(2.)

Rye (or other) flour 4 ounces
Water 1 pint

Boil thoroughly and add

Alum ½ ounce
Or Nitric acid 1 fl. dram

(3.)

(a.)
Brown sugar 2 pounds
French gelatin ½ ounce
Hot water 20 fl. ounces

Make a solution.

(b.)

Corn starch 12 ounces
Water 12 fl. ounces
Boiling water 32 fl. ounces

Rub the starch with the cold water, pour into the boiling water and boil the mixture until translucent. Then mix the two solutions and add thymol, oil of cloves, or other preservative. The sugar is said to render the paste proof against cracking in a dry atmosphere.

Egg Shampoo.

(L. V. C.)—Many of the "egg shampoo" are so-called from their appearance. They usually contain no egg and are mere-

ly preparations of perfumed soft soap. Here are some formulas:

(1.) White castile soap, 4 ounces, powdered curd soap, 2 ounces; potassium carbonate, 1 ounce; honey, 1 ounce. Make a homogeneous paste by heating with water.

(2.) Melt 3½ pounds of lard over a salt water bath and run into a lye formed by dissolving 8 ounces of caustic potassa in 1½ pints of water. Stir well until saponification is effected, and perfume as desired.

(3.) Ammonia water, 3 fluid drams; cologne water, 3 fluid drams; alcohol, 5 fluid ounces; water, 5 fluid ounces; whites of egg, as many as desired. The whites of egg (about 2) are thoroughly beaten up previous to being mixed with the water of ammonia; the remaining ingredients are added in their order and the whole stirred briskly.

(4.) Incorporate 2 av. ounces of borax in fine powder with 1 fluid ounce of glycerin and add gradually with constant stirring, 10 fluid ounces each of hay rum and rum. Then add the previously well beaten whites of 2 eggs and then stir thoroughly until an even mixture results.

Almond Meal.

(L. D. M.)—

(1.)

Ground sweet almonds . . . 1 pound
Wheat flour 1 pound
Orris root, powdered . . . ½ pound
Oil of lemon ½ fl. ounce
Oil of bitter almonds . . . 16 minims

If a very light colored article is wanted, the almonds must be decolorated before being ground. This is usually accomplished by dipping them into hot water, and then removing the brown husk, which becomes loosened by the scalding.

(2.)

Ground decolorated almonds . . . 30 parts
Powdered soap 10 parts
Powdered cuttle-bone 10 parts
Powdered orris root 3 parts
Perfume q. s.

(3.)

Orris root, powdered 4 parts
Powdered soap 1 part
Powdered borax 1 part
Perfume q. s.

These two are used with water like soap.

(4.)

Ground bitter almonds 6 parts
Orris root, powdered . . . 4 parts
Ice flour 4 parts
Borax 1 part
Perfume q. s.

(5.)

Powdered oatmeal 10 parts
Sodium carbonate 1 part
Borax 1 part
Perfume q. s.

Any handkerchief extract may be used to perfume the powder.

Harness Dressing.

(Mixer.)—The following compound is said to be used for oiling the harness and artillery saddles in store at the National Armory, and appears to be very satisfactory in preventing mold, preserving pliability, and freedom from stickiness and rubbing off. Neat's foot oil, 1 gallon; bayberry tallow, 2 pounds; beeswax, 2 pounds; beef tallow, 2 pounds. These quantities are sufficient for two gallons of

the compound. Put the ingredients in a pan over a moderate fire and let them remain one hour until thoroughly liquefied; then add two quarts of castor oil and stir well until the mass comes to a boil, and the ingredients are well mixed. Then add an ounce of lampblack and stir well for ten minutes; strain the liquid while hot, through a cotton cloth, to remove sediment of beeswax, tallow, and lampblack, and put aside to cool. Apply to the harness and saddles with a woolen cloth and leave until the next day, when they should be wiped off with a woolen cloth, to remove the superfluous lampblack. For russet or "fair" leather, use the same mixture without the lampblack.

Liquid Shampoos.

(T. H. P.)—See last week's Era, page 73. Here are some other formulas:

(1.) Oil of lavender, 10 minims; rectified spirit, ½ ounce; soft soap, U. S. P., 2 ounces; distilled water, enough to make 6 ounces. The preparation may be perfumed as desired by dissolving the essential oil or other odoriferous substances in the alcohol.

(2.) Potassium carbonate 1 ounce; spirit of ammonia, 2 ounces; soft soap, U. S. P., 1 ounce; glycerin, 1 ounce; tincture of cantharides, 1 ounce; tincture of capsicum, ½ ounce; alcohol, 10 ounces; water, enough to make 1 quart. Dissolve, mix and perfume. After standing twenty-four hours the liquid may be filtered.

(3.) Tincture of quillaja, 10 fl. ounces; cologne water, 4 fl. ounces; glycerin, 3 fl. drams; fluid extract of jaborandi, 4 fl. drams; orange flower water, enough to make, 32 fl. ounces.

Fire Extinguishing Powder.

(A. C. E.)—We cannot give the formula for "fire dust," a powder for extinguishing fires. The character of some compounds which have been recommended for extinguishing fires is shown by the following formulas gleaned from various sources:

Bucher's Fire Extinguishing Powder—Powdered sulphur, 30 parts; purified salt-peter, 60 parts, and a small quantity of coke and bole.

Munich Fire Extinguishing Powder—Common salt, 43 parts; alum, 19.5 parts; Glauber's salt, 5.1 parts; soda, 3.5 parts; waterglass, 22.3 parts.

Fire Extinguishing Powder—(1)—Eight parts common salt, 6 parts sodium bicarbonate, 2 parts Glauber salt, 2 parts calcium chloride, 2 parts sodium silicate.

(2)—Sixty parts common salt, 60 parts sal ammoniac, 80 parts sodium bicarbonate.

(3)—One hundred parts sal ammoniac, 60 parts sodium sulphate, 40 parts sodium bicarbonate.

Resinol.

(G. D. S., Montreal.)—"Resinol" is a proprietary preparation in ointment form, and recommended by the manufacturers as "a harmless and true skin anesthetic." We cannot give the formula.

Massage Cream.

(W. F. A., Sr.)—See formulas in The Era, issues of November 17 and December 29, last year, pages 500 and 662, respectively.

NEWS SECTION

N. A. R. D. HELPS ST. LOUIS.

Almost Ideal Conditions Are Now Reported From There.

THE CITY AFFORDS A STRIKING INSTANCE OF THE VIRTUES IN ORGANIZATION. — THE NATIONAL BODY IS REPRESENTED BY TWO LOCAL ASSOCIATIONS, WITH A MEMBERSHIP OF NEARLY FOUR HUNDRED. — WHAT INDIVIDUAL DRUGGISTS SAY ABOUT IT.

St. Louis, Jan. 10.—Local men say that St. Louis is the best organized city in the United States, and that the field here gives the best possible results of organized work.

There are two associations, the Cinchona Club, which is the outgrowth of the Saturday Night Club, a combined business and dinner club comprising about forty of the progressive druggists of the city. The popular organization is the St. Louis Retail Druggists' Association, incorporated, which includes all but eight or ten of the Cinchona Club members and a total membership of about 350 druggists.

DUES PAID TO N. A. R. D.

Each member of these two organizations pays dues to the N. A. R. D., through one or the other of the local organizations. Both have been allied with the N. A. R. D. since its birth in this city. The associations took the field, getting whatever they could for proprietary remedies, without any general "understanding." They have accomplished three minimum price schedules, the last with a minimum price of twenty cents, forty-two cents and eighty-three cents. They have both adopted the Peruna and Wells-Richardson contracts. They have secured a withdrawal of the determination of the jobbers to reduce the cash discount from 1½ to 1 per cent. They have persuaded the jobbers to resume refilling containers without charge. They have secured abolition of the soda fountain water tax where there was no hydrant under the soda counter. They had the determination of the jobbers to cut deliveries to three deliveries a week rescinded.

These are perhaps the most important things accomplished through organization. With the situation as here outlined in mind, the Era man sought interviews on, "Is the N. A. R. D. an aid to local organizations, and why?"

THE N. A. R. D. A HELP.

Theo. Hagenow, of Fifteenth street and Chouteau avenue, and Jefferson and Shenandoah avenues, said: "The N. A. R. D. has most certainly been a help, in that while we were working on the St. Louis field alone, it brought us assistance from outside territory in which our jobbers do business and made demands from those sections similar. It also gives added dignity to our local associations to be so affiliated and gives us a better and more

confident membership." Mr. Hagenow is a member of both local associations and has been active in N. A. R. D. work.

Charles J. Koch, a South End druggist, an active member of the St. Louis R. D. A., of Eleventh and Rutger streets, said: "The N. A. R. D. has been of great value, especially in introducing the tri-partite plan, which puts us all on an equal footing. It also enables us to hold our membership in line. Our regulation of local affairs would not clear the field of cutters and we would be helpless in ourselves to keep objectionable features from coming in our way."

OTHER VIEWS.

A. W. Pauley, a North End druggist, with stores at Fourteenth and Madison streets, and Grand and Hebert avenues, spoke as follows: "I was a cutter and built up my business by cutting. Were the bars let down to-day, I would certainly be an aggressive cutter again. But I realize the conditions which at present are the best for the druggists, and we are making more money than before. I certainly think the N. A. R. D. has been of value in this work. It has served to gather a community of interests and center them for what we wanted. All druggists could not work as one organization without friction. All branches of the trade could not be represented in a popular organization. But through combination of interests, we are bringing the manufacturers to give us some attention, and in time, we may be able to dictate to them."

Mr. Pauley is a member of the Cinchona Club, and in stating his position as regards price schedules, he openly announced that he opposes placing the minimum price up to the printed price, as in his opinion city stores should not place themselves on a level with the country stores.

John Raboteau, of Raboteau & Co., down town druggists, at St. Charles street and Broadway, said: "I am not friendly to the N. A. R. D., and do not give it credit for work here. I think local associations can and ought to take care of their own field."

But it is estimated from those actually seen, that eighty per cent. of the druggists who had given the matter serious attention would credit the N. A. R. D. largely for the good accomplished here.

MR. SWANN'S NEW DUTIES.

S. V. B. Swann feels that he is a very busy man already, and now he threatens to be busier yet. Besides his secretary duties, and his duties on committees, he has just been named on the board of directors of the N. Y. Consolidated Drug Co., and on the legislative committee of the N. A. R. D. In the latter capacity he may have to go to Washington soon to do what can be done from the New York side for the Mann bill now before the Senate. Between times Mr. Swann remembers that he has a drug store.

CUT-OFF LISTS CONTINUE.

But They Are Issued Now by a Private Company.

Chicago, Jan. 21.—The cut-off list, so called, is no longer issued by the N. A. R. D. This announcement comes hardly as a surprise, in view of a recent publication of the fact in this journal. There is a cut-off list, however, which is being issued as a private enterprise, after the manner of a commercial report, by the North American Mercantile Agency, Chas. C. Bombaugh, manager, 145 La Salle street, Chicago. This service costs manufacturers and jobbers ten dollars a year, payable quarterly in advance. Information of what druggists are cutters comes from any accepted source of information, but principally, it is fair to presume, from the agents of the N. A. R. D. and from local affiliated associations. It is explained at the N. A. R. D. offices that the report is being issued, not by the N. A. R. D., but as a commercial, private enterprise, Mr. Bombaugh and his agency acting not as the agents of the N. A. R. D., but of the jobbers and manufacturers to whom the list is supplied.

The statement is made that, while Mr. Wooten did really act in a similar capacity in compiling and issuing the list of rate-cutters, it was impossible to convince a court that the list was not gotten out as a part of the machinery of the N. A. R. D. (!) and used as a club by the N. A. R. D. to coerce druggists and to punish those who would not "line up." Many thought best, therefore, to turn the list over to a private concern and run it in connection with a purely commercial business.

As a matter of fact, the information comes from the same source it always came from, with, perhaps, some added advantages which Mr. Bombaugh may have

The Boss:—"This kitten's for one of Mr. William's kids. Don't let it get away."

Jimmy:—"I've an idea."

or be at liberty to devise. Its issuance, however, is divorced from the national association.

This, it is expected, will fulfil legal requirements. The list as it stands is simply news of a certain, definite kind, bought and paid for by the persons requiring it, and carrying no intimation of any unfavorable action on the part of any person, firm or association.

DAVID ANTOINE GABAY.

David Antoine Gabay, head of the sponge department of McKesson & Robbins, and one of their oldest employees, died of apoplexy, last Saturday, after a

DAVID ANTOINE GABAY.

short illness. He was one of the best-liked and most respected men in the house and his loss is keenly felt.

The deceased was born in Hamburg, Germany, in 1826. At the age of sixteen he went in a sailing vessel to Havana, Cuba, where he obtained employment. After "roughing it" for a while, he came to New York and went into business for himself. He then became head of a department of the old house of A. W. Gabuden, then took a similar position with Henry Levy & Co., 49 Maiden Lane. His next venture was with McKesson & Robbins, whose employment he entered in July, 1877. He built up their sponge department to its present prominence, and was looked upon by the United States appraisers as an expert in sponges. He leaves a son, Arthur, who has been in the same department since 1883 and will probably succeed his father.

IN DRUG CLERKS' CIRCLE.

The Drug Clerks' Circle at its last meeting talked over the recent annual ball and came to the conclusion that it had been an unprecedented success. Plans were discussed for bringing all the drug clerks of Greater New York under one organization. A resolution was adopted which condemns druggists who employ unqualified men to fill positions of registered drug clerks. A copy of the resolution was sent to President Bigelow, of the Board of Pharmacy, with a request that he see to the enforcement of the law in this regard.

NEED NOT FEAR CONTRACT.

Druggists Are Urged to Sign by the Joint Conference.

THE CONTRACTS ARE NOT TO BE OPERATIVE UNTIL A DATE TO BE NAMED BY THE CONFERENCE.—JOBBER GIVE ASSURANCES THAT THEY WILL SUPPORT SERIAL NUMBERING.—G. A. S. DECLARES ITSELF AGAINST AFFILIATION WITH N. A. R. D.—THE DISTRICT PLAN.

The joint conference committee of the local associations of Greater New York, appointed to facilitate the N. A. R. D. organization of this section, met for the second time last week, in the Drug Trade Section of the New York Board of Trade and Transportation rooms. The presence of the jobbers and their assurances as to support of the serial numbering contract plans were among the features of a very earnest-minded session. A way to allay the fears of those retailers who had not signed the contracts, lest they suffer from a neighboring cutter, was the leading achievement of the meeting. In this the committee was aided by the counsel of Lee M. Evans, representing the Peruna manufacturers.

After Albert Plaut, of Lehn & Fink, director of the Board of Trade, had extended the privileges of the rooms, a roll-call showed the following present: From the Westchester Ph. Society, Schlessner & Foster; Kings County Ph. S., Anderson, Muir, Hegeman, Kleine and Gesell; the East New York, Rosenzweig; the Queens County, Boenke, Cannon and Lee; G. A. S., Gregorius, Hirseman, Lauer, Swann and Kunkel; Manhattan Ph. A., Searles, Emelin; N. Y. R. D. A., Diamond, Weinstein and Zagat; Brooklyn Consolidated Drug Co., Rehfuess and House; the Bushwick, Heimerzheim, Adler and Severn. Jobbers present were: For Lehn & Fink, Albert Plaut; C. N. Crittenton Co., Kennedy; McKesson & Robbins, Mallory; Towns & James, James; Britt, Loeffler & Well, Well; Kinsman & Co., Chauncey Ives. Mr. Messereau, on the part of Schleffelin & Co., could not attend, because of sickness. The Dry Goods Merchants' Association was represented by Mr. Graafe, but for information only, since this association had not as yet met to take action on the invitation from the conference.

ALL BUT TWO AFFILIATED.

Reports were heard on the action each local association had taken as to the recommendations of the conference about affiliation with the N. A. R. D. The Kings Co. Ph. S., the N. Y. R. D. A. and the Bushwick had affiliated as organizations. The G. A. S. and the Manhattan Ph. S. had gone no further than to advise their members to join. The Westchester delegates reported that their association had been affiliated for several years, already.

The first question Dr. Anderson, as chairman, submitted to the conference, was to find out if all the associations would affiliate, and if not, what action was to be taken. Dr. Muir believed that there would be unanimity on affiliation as soon as everyone understood that this action would not mean disorganization of the old-line societies. "While if they don't affiliate," he added, "then the N. A. R. D. must organize the individual members into dis-

tricts, which would weaken the local associations.

Mr. Hirseman replied that as for the G. A. S., they did not care to assume this kind of work. It being in their line, which was largely scientific and social. They never lost a member except by death, so that they were not jealous of the N. A. R. D., taking them into district organizations.

Though some delegates thought that a single plan of organization would carry more weight, there did not appear any objection to the G. A. S. indorsement of the district plan as regarded its own membership. Mr. Duble being called upon, urged the associations for their own interests to affiliate, since non-association members, on joining the N. A. R. D., would be induced to join an affiliated association, if possible. "Then," said Mr. Duble, "the whole city would be under the supervision of the local associations, and the effect would be to solidify and unify these associations."

DISCUSS THE DISTRICT PLAN.

Mr. Lauer here moved that the conference indorse the district plan, which motion brought Dr. Muir to his feet with a ponderous arraignment of the schedule plan, and a stout defence of aerial numbering as the beau ideal of organization. Mr. Diamond declared the motion out of place, since all but two of the associations had already affiliated, and Mr. Sheldon, representing the St. Louis Club, felt called upon to "arise to say a few remarks to clear the situation a little, but after he had talked and talked, and there was no more unanimity than before, it did not appear that he had cleared up anything in the least. Finally, Mr. Lauer arose and withdrew his motion. He had only wanted to hear a little discussion, and he had heard it.

But more was to follow. The jobbers being next called upon to speak, Albert Plaut, of Lehn & Fink, said that his house had signed all the serial numbering contracts and were living up to them without any great difficulty. However, should the plan be adopted by, say fifty proprietors, then methods of business would have to be changed. With fifty different lists of customers to supply, and lists of those not to supply, it would be impossible to make deliveries. Mr. Mallory reported for McKesson & Robbins that their force would have to be increased for checking, etc., but that they were willing to lend every assistance to make the plan a success. A. H. Kennedy, of the C. N. Crittenton Company, also mentioned the inconvenience incurred, but considering the hoped-for benefits, his firm was entirely willing to continue with the plan. Mr. James, of Towns & James, declared that his people would do all in their power to make the new venture as successful as they possibly could. He suggested that some expression of opinion be secured from the department and big drug stores.

WHAT THE GIANTS SAID.

Mr. Sheldon then reported a conference he had had with the giant druggists, "such as Hegeman, River, and others of that class." These men, he said, "had agreed on a material raise, to go into effect when some other branches agree to the same," which agreement he, Sheldon, would "bring about as soon as can be."

There were some who took this as quite definite, but Mr. Zagat, for instance, wanted the intentions of these big men stated in black and white before he could have any big faith in the contract plan.

Mr. Well, of Britt, Loeffler & Weil, said that while his firm had signed the contracts, he yet thought the N. A. R. D.'s system would prove a failure unless the Kramer plan were combined with it.

Mr. Evans, the Peruna man, assured the conference that the large retailers had said that they would agree to the plan after it had been put into effect. But he was ashamed to note that only 150 druggists in New York had signed the contract, out of the eighteen or twenty thousand signers over the country. "When it looks like a formidable proposition here in New York," he said, "then the giant druggista will come in, although they have large stocks on hand."

At this point Dr. Anderson led up to the one important resolution passed that day, by suggesting that the date when contracts go into effect be left with the conference. Then, he said, druggists would not be afraid to sign, for they would not be binding themselves before all was in readiness.

PROTECTION FOR SIGNERS.

"That's a good suggestion," said Mr. Evans. "It rests with the conference to relieve the situation. The big dealers would go in on the date that this conference names. The goods now coming to New York are serially numbered."

Thereupon, Dr. Muir moved that the secretary send notices to every druggist in Greater New York, advising them to sign the contract, with the understanding that it will not go into effect until a date to be later announced by the conference, the notices to be signed by all the conference members, and to be accompanied by copies of the contract.

Mr. Rehfuess and others raised the point that they had been notified that the contract went into effect January 12, but assurance promptly came from Mr. Evans that the penalty clause would not be enforced against any dealer who has to meet aggressive cutters.

The motion being put, was carried.

For greater convenience in carrying on the work, Mr. Duble suggested that a sub-committee be appointed, to deal with questions arising between meetings of the conference. The suggestion was promptly embodied in a motion, and the sub-committee was named as follows: For Kings County, Anderson; for Queens County, Cannon; for G. A. S., Lauer; for Manhattan, Searies; for N. Y. R. D. A., Diamond; for Bushwick, Fischer; for Westchester, Schleussner; added to whom Secretary Swann was made an ex-officio member.

After a vote of thanks to the Board of Trade for its courtesy, the conference adjourned to meet at the same place, February 24.

The Schneider & Macy Drug Company, of Troy, has elected the following directors: W. D. Bunny, H. Judd Ward and M. A. Burton. The directors elected Mr. Bunny president and treasurer; M. A. Burton, vice-president, and Mr. Ward, secretary. Mr. Runny, the new head of the company, has been connected with The Polk & Caidler Drug Company and is a prominent man of the city.

FEAST OF THE ALUMNI.

Brooklyn C. P. is the Scene of Pharmaceutical Good Times.

A most successful dinner was held by the Alumni Association of the Brooklyn College of Pharmacy, last Wednesday evening, at the college building. The presence of ladies, which the association has decided is to be a feature of all its entertainments, added much to the brilliancy and dignity of the occasion. All told, about sixty persons were present.

The guests were seated at two long tables in the pharmacognosy room on the top floor. At a cross-table at the head sat Dr. F. P. Tutthill, who presided, and other prominent members of the association.

Music was furnished by Charles Klein, who played the violin, with piano accompaniment. The menu was voted excellent. Some of the specially-named articles were: "Boiled Hairbut a la Alumni," "Punch Pharmacy" and "Ice Cream Medico." The latter was served in various anatomical shapes ranging from models of the cerebellum to reproductions of the heart.

Toasts were in order at 11:30 p. m., with Dr. Tutthill as toastmaster. In the absence of President Bruckman, Dr. Edward Klein, first vice-president, was called upon to respond to "Our Alumni Association," a duty which he performed gracefully.

Dr. George C. Diekmann, being called upon as the man who knew all about Brooklyn Rapid Transit, assured the alumni that they had plenty of which to be proud, despite their short existence as an association.

"You're young yet," he said, "but you'll soon get over it."

"The Brooklyn College" was toasted by Dr. A. P. Lohness. Dr. Walter Bryan followed with a semi-scientific eulogium of the work of the faculty and trustees. William Weygandt responded for "Our Alma Mater" in crisp, forceful style, after which Dr. Tutthill concluded with a few words of thanks to the executive committee for its efforts to make the affair a success. Dancing followed in the alumni room.

Among those present were Dr. and Mrs. F. P. Tutthill, Dr. and Miss Muir, Dr. and Mrs. George C. Diekmann, Dr. and Mrs. William C. Anderson, Professor Henry W. Schimpf, Dr. Walter Bryan, Hieronimus A. Herold, Mr. and Mrs. Gesell, Dr. A. P. Lohness, Oscar C. Klein, Edward Klein, Dr. Joseph Kahn and William Weygandt, secretary of the association.

EMPLOYES GET DIVIDEND.

For the first time in its history the McKesson & Robbins Mutual Benefit Association has declared a dividend. The association is composed of employes in the different departments of the house, each member paying weekly dues. This year the business of the organization has been so successful that there remained a surplus of \$514.20, which was divided among the members, according to the length of time each one had belonged to the society.

The twentieth semi-annual report of the treasurer showed total receipts of \$1,732.73. After deducting for all expenses, including the payment of the dividend, there remains

a balance on hand of \$697.78. According to the secretary's tenth annual report, there are at present 183 members. There was a net loss during the year of six members.

The officers of the association are as follows: President, George F. Moore; secretary, James J. Kane; treasurer, Alonzo Hageman; board of trustees, J. A. Cross, T. F. Farrell, H. Beiden, T. Quinn, J. Hutchings.

URGED TO AID MANN BILL.

Following the action taken at the last meeting of the Manhattan Ph. A., Secretary Swan has sent to each member a postal, on which is the following:

"By a resolution unanimously adopted at the regular meeting, January 16, you are earnestly requested to write a strong letter to U. S. Senators Hon. Thomas C. Platt and Hon. Chauncey M. Depew, Washington, D. C., urging upon them to support the 'Mann Bill' now before the U. S. Senate. The 'Mann Bill' is a measure introduced by Representative Mann, of Illinois (which bill has passed the House by a unanimous vote) to prevent foreign manufacturers from securing patents on medicines, chemicals, or chemical substances in this country, thus allowing them to secure a monopoly on an article in this country, which in their own country sells for a trifle. You know only too well what preparations this bill has reference to, and the firm or firms back of the same. Every letter counts. Don't leave it to the other fellow to write. Attend to this matter at once, as immediate action on the part of every individual druggist in this city is demanded to secure favorable action of this 'Mann Bill.'"

LOOK OUT FOR SCHULTZ.

A man who calls himself H. Schultz and claims to be an agent of the Brooklyn Consolidated Drug Co., has been securing considerable cash from druggists who imagined they were paying for membership in the company. So far, about a dozen druggists have been so victimized. The money, of course, never reached the company.

"H. Schultz" is of middle height and appears to be about thirty years old. He is well dressed, clean shaven and speaks broken German.

The Boss: "Hurry back, Jimmy."
Jimmy:—"Sure."

JERSEY CITY D. A. MEETS.

Mann Bill Indorsed, and Contracts Declared Operative.

A resolution heartily endorsing the Mann bill, now before the Senate, and asking the support of the two State senators in its behalf, was passed unanimously by the Jersey City Druggists' Association, at the regular meeting held January 17. Every member was urged to write a personal letter to each senator, asking him to vote for the measure. President Kimpel stated that he had already done so.

On the question of schedules and prices, there was considerable discussion. Most of the members present stated that they were getting twenty-five cents for Laxative Bromo-Quinine. Mr. Kimpel said:

"I keep on hand the postal card from the Paris Medicine Co., notifying me that the contract is now in force, and if a customer kicks I simply show him the card and tell him that I would be breaking a contract if I sold it for less. So far, I have had no trouble at all." John C. Gallagher said that not a single one of his customers had "kicked."

All those present were prepared to charge eighty-three cents for Peruna as soon as they received notice from the company, which they expected that day. Mr. Gallagher mentioned that he had seen the list of authorized retail agents for Peruna, which showed that only about 150 druggists in New York had signed the contract. In Jersey City fifty or more had signed. Mr. Hartnett asked:

"Suppose a man breaks his contract, is there anyone to call him to account for it?"

"There are enough of us here to watch out for any such thing," replied Mr. Gallagher. "We'll take care of that and we won't need a brass band, either."

On motion of James Fañue, it was unanimously decided to notify every druggist in the city that the contracts on Peruna and Laxative Bromo-Quinine were now in force.

A communication from the N. A. R. D. was read by Mr. Gallagher, thanking him for the check for \$28 received as dues from seven members of the Jersey City D. A. Another letter, from the Anti-Trust League, urging the association to petition the House in favor of the Hearst bill, was received without any action being taken. "We have enough troubles of our own," was the general sentiment.

Mr. Kimpel reported against having a banquet, as proposed at the last meeting. A stag was suggested instead.

DRUG SECTION, BOARD OF TRADE.

The annual meeting of the Drug Trade Section of the Board of Trade and Transportation was held at the Drug Trade Club, 100 William street, last Thursday afternoon. It was preceded, as usual, by an informal luncheon.

Owing to the absence of Chairman Thomas P. Cook, who was then in Chicago, I. F. Stone presided. A letter from Mr. Cook, in the nature of an annual report, was read. In a general way it commended the good work accomplished by the Section, and called attention to the

need of regular attendance on the part of the members. The outlook for a prosperous year, Mr. Cook thought, was excellent. A satisfactory financial condition was reported by the treasurer.

As chairman of the committee on membership Mr. Stone reported that sixteen new members had been added during the year, and that there had been five resignations. The Arbitration Committee was "pleased to report no report," meaning that there were no troubles on hand.

A letter was read from an out-of-town house, calling attention to a bill introduced in the Pennsylvania Legislature and advocated by the Retail Druggists' Association of that State. The act was designed to prevent the manufacture and sale of unwholesome fruit syrups, prepared fruits or fruit products used as flavoring syrups. The matter was referred to the Committee on Legislation.

The following officers were proposed by the nominating committee and unanimously elected for the ensuing year: Chairman, I. Frank Stone, of Schoellkopf, Hartford & Hanna Co.; vice-chairman, Charles S. Littell, of R. W. Robison & Son; treasurer, William P. Hamann, of Roessler & Hasslacher Chemical Co.; secretary, William F. McConnell; representative in Board of Trade, Thomas P. Cook.

UNUSUAL MORPHINE SUIT.

Suit has been brought against Howarth & Ballard, druggists of Utica, N. Y., by Truman E. Spencer, who seeks to recover \$50,000 for alleged alienation of his wife's affections. He claims that for the past six years the defendants have sold morphine to his wife without his knowledge and consent, and that the drug has unbalanced her mind.

Spencer is a traveling salesman and absent from home a great deal. He claims that before his wife began using the morphine she was perfectly healthy and sound of mind. Since then she has become ill and emaciated and "unable to perform her household duties." The complainant alleges that the druggists knew she was using the drug and that it was injuring her health.

A demurrer was filed by Howarth & Ballard, but Justice Keogh, in the Supreme Court, decided that the case should go to trial, a cause for action having been established.

DR. GILMORE'S DEATH

Dr. William Gilmore, one of the most popular and widely known men in the drug trade, died at Dayton, Ky., after an illness of more than a year. "Billy" Gilmore was best known in the middle and southern States, but he had friends all over the country. He was identified with the drug business for over forty-five years.

William Gilmore was born at Smithfield, O., in 1845. When he was twelve years old his parents moved to Pittsburg, where he was apprenticed to a local druggist. The boy showed such ability as a salesman that he was sent out on the road while still but a lad. His winning personality soon made him many friends, and his success was assured. He moved to Covington early in the '70s, where he married. A widow and one son, Dr. Park Gilmore, survive.

WITCH HAZEL CO. FAILS.

A petition in bankruptcy has been filed against the American Witch Hazel Company, which recently established a store at 240 Broadway. The creditors are: Schieffelin & Co., \$676; Orlando H. Jadin, \$241, and Eugene W. Dunstan, \$70, all for drugs. Ferdinand A. Hoyt, Jr., has been appointed receiver and authorized to continue the business for two weeks.

The American Witch Hazel Corporation was chartered in Jersey City, in August, 1902, with a capital of \$4,000,000. The incorporators named were Edward L. Conklin, Newark; Bernard Sheridan, Newark; Edward D. W. Langley, New York; Frank E. Fontaine and Frederick J. Weiss, Newark. This business was taken up in February, 1903, by the American Witch Hazel Company, with Charles C. Dickinson as president, and a capital of \$1,000,000.

After a long fight among the stockholders, President Dickinson was ousted last week, and a new man elected in his stead. E. E. Hand, the former treasurer, placed the liabilities at between \$40,000 and \$50,000 and the assets at from \$10,000 to \$15,000.

In February, 1904, Mr. Hand says, the company's plant at Chester Commona was damaged by fire, and \$20,000 collected as insurance. The stockholders, added Mr. Hand, wanted to know what had been done with this money. The company has four distilleries at Westchester, Hadam, Kellingsworth and Goodspeed, all in Middlesex county. The county sheriff has taken charge of these distilleries under labor claims of employes.

TO BE REGULAR JOBBERS.

The stockholders of the New York Consolidated Drug Company, at their annual meeting, last Thursday, voted to stand by the action of the Board of Directors in applying to the N. W. D. A., N. A. R. D. and P. A. of A. for recognition as a regular jobbing house.

It is understood that the N. W. D. A. objected to the method of dividing the profits among the shareholders in proportion to the amount of goods each had bought in the course of the year. The stockholders accordingly ordered a new application to be sent out, which in the matter of division of profits is to read like that on which the Calvert Drug Company, of Baltimore, secured recognition.

It was proposed to increase the amount of each share by \$100. This will be voted upon at a special meeting.

The following officers, constituting the Board of Directors, were elected: President, George Gregorius; vice-president, R. C. Werner; secretary, George Lenecker; manager, Felix Hirsemann; George Kleinau, Dr. William C. Alpers and S. V. B. Swann. All but the last two are re-elections.

N. Y. C. OF P. NOMINATIONS.

At the meeting of the New York College of Pharmacy on Tuesday last, the following nominating committee was appointed to select officers for the ensuing year: Ewen McIntyre, Sr., chairman; Frederick W. Carpenter, Gustav Balsler, Felix Hirsemann, Thomas P. Cook, William H. Ebbitt and Hugo Kantrowitz. The committee is to report at the next meeting.

FAKE RADIUM AS A CURE.

Dr. Henry H. Kane, a physician of 136 West Thirty fourth street, has been arrested on the charge of having swindled John McCullom, a carpenter, out of \$10,000, which the latter paid for alleged treatment with radium. The arrest was made through agents of the County Medical Society, who took up the case.

McCullom, it is alleged, was told by the physician that he had a disease which only radium could cure. A tube of this radium was procured by Champ S. Andrews, counsel for the County Medical Society, and was sent to the Lederle laboratory for analysis. It contained, said Mr. Andrews, ginseng, strychnine, a few other drugs usually found in tonics, but no radium.

"The arrest of Dr. Kane," said Mr. Andrews, at a meeting of the County Medical Society, "puts an end to one of the worst swindles we have ever met with. Nothing like it was ever attempted before. We are after another doctor who was in with him, and already have many cases against this man, showing that young men and old men by the score have been swindled out of sums ranging from \$100 to \$2,500. If there was nothing the matter with a patient, these men used nitrate of silver or some other agent, to produce something to convince a patient that he had a disease that was close to incurable and that only radium at \$10,000 an ounce in some cases could work the necessary cure. These men are practising under State licenses, and it is time the business was stopped."

WESTCHESTER CO. PH. A.

The Westchester County Ph. A. held its annual election in New Rochelle, and chose the following: Frederick Koch, Mamaroneck, president; George B. Wray, Yonkers, first vice-president; Frederick D. Lent, Peekskill, second vice-president; Howard R. Safford, Yonkers, secretary; J. D. Sackett, Tarrytown, treasurer; L. J. Schlesinger, of Yonkers; James A. Hart, of Ossining, and James Lawrie, of Tarrytown, members of the executive committee.

The County Association expects, in the future, to take steps to include in its membership rolls the name of every druggist in the county. The next meeting will be held in White Plains.

TALK ABOUT OPIUM TRAFFIC.

Local druggists are manifesting keen interest in the efforts to regulate opium traffic in China. The Pittsburg Chamber of Commerce is also taking an active part in the matter. At a monthly meeting of the board of directors on Tuesday the committee appointed with this express object filed a report in which it joined in petitioning President Roosevelt to use his good offices to have the treaty between England and China so amended that China can prohibit and restrict the traffic in the drug.

NEWBURGH D. A.'S ELECTION.

Newburgh, N. Y., Jan. 23.—The Druggists' Association of this place has elected its annual officers as follows: Isaac E. Lozier, president; Philip F. Hoffman, vice-president; Frederic Wallace, secretary;

W. Francis Nutt, treasurer; Elmer Tibbetts, Arthur Dubois and Isaac C. Chapman, executive committee.

It was decided to hold the annual banquet of the association at the Palatine, next Tuesday evening. The banquet committee consists of President Lozier, George H. Merritt, Philip F. Hoffman and Clarence Miller.

ONLY NEGRO PH. G. IN STATE.

Lockport, N. Y., Jan. 23.—Among the candidates who recently passed the State examination for licensed pharmacists, was Henry Leon Smith, of this city, and the notable fact in his case is that he is said to be the only member of the negro race who has ever successfully taken the examination and been given a license as a practising pharmacist in this State.

OLD FIRM WILL MOVE.

H. Patten & Son, the "pioneer capsule house," have secured a desirable site at 93 Henry street, corner of Pineapple street, Brooklyn, and have contracted for the erection of a large modern building. Their present quarters in New York, which they have occupied since 1847, are inadequate to handle their increasing business. The house was established in 1836.

NEW YORK NOTES.

—The next Board of Pharmacy examination takes place February 15, at the New York C. P.

—Dodge & Oleott expect to occupy their new six-story building at 87 Fulton street, by June 1.

—Charles Stuckert, of Trenton, N. J., is improving his store by the addition of \$1,000 worth of "silent salesman" showcases.

—Dr. V. Mott Pierce, of Buffalo, was elected president of the Association of American Advertisers at the annual meeting, last week.

—W. A. Dawson has taken possession of the Freeport Pharmacy, at Freeport, L. I., formerly owned by Dr. F. W. Fletcher. Mr. Dawson will carry the usual side lines.

—Schedules in bankruptcy of the Burrows-Taylor Pharmaceutical Company of 112 and 114 William street, show liabilities \$5,174 and assets \$145 in cash, in the hands of the receiver.

—The roof of the building occupied by Skillman & Van Pelt, druggists of New Brunswick, N. J., was partially destroyed during a fire in an adjoining building, and much damage by water resulted.

—Dr. F. P. Tutthill was initiated into Phi Chi Fraternity last Thursday night, with due and proper ceremony. Owing to the quality of the candidate, specially refined tortures were employed. Three juniors also went through the mill.

—The druggists of Trenton, N. J., held a banquet at the Stirling House, Monday night. Twenty-eight out of the thirty-five pharmacists in the town attended.

—A negro walked into Max Simons' drug store, at Seventh avenue and 136th street, and asked the proprietor, who was alone, for some pills. No sooner had the druggist turned his back than the negro sprang at him and beat him on the head with a hammer. Simons' skull is believed to be fractured. The negro escaped after taking \$65 from the druggist's pockets.

ANNUAL MEET R. I. PH. A.**Fifty Pharmacists Assemble at Providence.**

Providence, R. I., Jan. 21.—Business, pleasure, food for thought, and a dinner, these were the features of the annual meeting of the Rhode Island Pharmaceutical Association, held here last week, at the Wellington. Fifty members attended from over the State, and Alderman Gilbert R. Parker presided, with Secretary Charles H. Daggett on his right.

Reporting for the committee on the "Progress of Pharmacy," J. E. Groff briefly review three notable advances made during the last year through pharmaceutical study and discovery. Clarence Gowmer moved for the holding of four yearly meetings in place of two, as under present by-laws. The resolution called for the annual January meeting and quarterly meetings in April, July and October. The matter was placed on the table. Prof. Edward E. Calder, of the Rhode Island College of Pharmacy, was elected an honorary member of the association.

The secretary reported a membership of 156 and a loss by death in the past year of 4. The treasurer reported the year's receipts as \$614.48; expenses, \$372.93, balance, \$241.55.

A brief address on the present status of pharmacy was delivered by President Parker. Thereafter was appointed a nominating committee as follows: Alfred J. Johnson, Enoch W. Vars, Edward T. Cotton, James T. Wright and James M. Fenner.

The association organized for the new year as follows: President, John E. Groff; vice-presidents, Charles A. Gladding, of Providence; James T. Wright, of Newport; Samuel W. Hines, of East Greenwich; William Buffington, of Bristol, and Albert B. Collins, of Westerly; secretary, Charles H. Daggett; treasurer, Albert Fenner; executive committee, Howard Pierce, Enoch W. Vars and Alfred J. Johnson.

Following the election, papers were read by Professor Strickland, of the Rhode Island College of Pharmacy, and Secretary Daggett. The latter's address was on "How Can the Present Condition of Pharmacy be Improved." In it he deplored the practice of admitting inefficiently trained youngsters to the ranks of registered pharmacists. He advocated an ex-

Jimmy:—"Just wait till she reads the tag."

tion of the restricting provisions of the pharmacy law. Three years' experience at compounding physicians' prescriptions prior to first registration and five years' service as registered assistant pharmacist before full registration, were the changes suggested. He declared a change in appointive methods in connection with the State Board of Pharmacy necessary. The State association should have more say. Patent medicines were unkindly treated and the "bargain counter drug store" was scored.

Considerable discussion arose over the suggested change in the pharmacy law. Ultimately the legislative committee was instructed to draw up a bill to be presented to the present General Assembly, the bill to be passed upon by the association at a special meeting to be called at the option of the president and said legislative committee. At 6 o'clock the members with their wives sat down to dinner. The entertainment committee was composed of Messrs. George W. B. Fairbanks, Edward T. Colton and Clarence Bowmer.

BAY STATE NOTES.

—The Board of Overseers of the Poor, in Brockton, solicits bids for all drugs and medicines required by that department during the year.

—Dr. C. O. Weber, who has just died at his home in Newton, was a chemist who had identified himself with the manufacture of India rubber goods. Born in Germany, he was educated at Heidelberg University, where he received the degree of doctor of philosophy in 1880. He at one time occupied a chair as professor in Manchester College, England. He was considered an expert authority on India rubber.

—Four Brockton druggists, Eugene Linehan, Matthew Reilly, Thomas A. Duprey and Almon Willey, all pleaded "not guilty" to the two charges brought against them, that of selling intoxicating liquors and unlawfully selling drugs. Each had his case continued and furnished bonds.

—A verdict against the Rust & Richardson Drug Company, Boston, has been found by a jury in the second session of the Suffolk Superior Court, in Boston, in a suit brought by Thomas F. Edwards, et al., to whom were awarded the sum of \$2,057.

—Members of the Drysalter's Club, of New England, held their midwinter dinner meeting at the Trade Club. F. A. Goodhue presided and F. A. Atteaux acted as toastmaster.

—Leon T. Foster, a Wakefield druggist, has opened a free registry for nurses of that place and surrounding towns. The druggist's patrons and physicians have free access to the records and in this way trained nurses may be secured readily.

—Investigation is being made by the Boston police as to the death of George C. Webster, who has a drug store at Warren avenue and Clarendon street, Boston. He was found dead in a room above the drug store, his body in bed, and the room filled with gas escaping from a heater. The druggist was twenty-nine years of age and leaves a family.

—Following an operation for appendicitis, Charles F. Borden, of Fall River, died on Jan. 12. He was owner and manager of the Borden & Remington Drug Company.

BOSTON R. D. A. IN SESSION.

Growth and Prosperity Are Noted at the Annual Meeting.

Boston, Jan. 24.—The annual meeting of the Boston Retail Druggists' Association, held at the Massachusetts College of Pharmacy, showed that the organization is growing and is well established on a sound basis. The president, Henry Canning, whose pharmacy is an old-time one in Green street, in the West End, was re-elected to his office, as was also John J. Tobin, of South Boston, to the office of secretary. Other officers chosen were: First vice-president, John Tupper, Cambridge; second vice-president, C. P. Flynn, South Boston; treasurer, John G. Godding, Back Bay, Boston. An executive committee is made up of the presidents of the twelve auxiliary branches of the Boston organization, including the "Down Town" (or city) association; that in the Back Bay, and others in East Boston, South Boston, Charlestown, Chelsea, Cambridge, North Cambridge, Dorchester, Brookline, Jamaica Plain, and the Brighton and Allston (in one organization). The association now has 275 members.

It was voted to raise the annual dues to \$10. The "telephone committee" of the association reported on its conference with the officials of the local telephone company, which, it was stated, had promised to raise the percentage of profit to druggists for installing the public telephone service in pharmacies.

DRUGGISTS OF FIVE TOWNS.

Boston, Jan. 23.—Five towns, Marlboro, Hudson, Maynard, Concord and Northboro, are represented in the Marlboro Association of Retail Druggists, which has just had its annual meeting and election of officers. These are as follows: President, P. Charles Favreau, of Marlboro; vice-president, Dr. George B. Cochran, of Hudson; treasurer, J. Frank Carney, Marlboro, and secretary, Phillip J. Burke, Marlboro. An executive committee with members to represent each of the five places of the association will be appointed by the president. The association intends to have a banquet soon and social gathering.

ENERGY OF MR. MEGATHLIN.

Hyannis, Mass., Jan. 23.—Chas. W. Megathlin, who was burned out at midnight of December 3, in a fire that destroyed fourteen stores, has since then been constantly on the jump, with the result that he is now in temporary quarters and well restocked for business. His loss was about \$12,000, partly insured. He is rebuilding on the old site.

VERMONT BOARD OF PH.

St. Johnsbury, Vt., Jan. 23.—The State Board of Pharmacy, at its January meeting, organized as follows: President, C. C. Bingham, of St. Johnsbury; secretary, J. G. Bellrose, of Burlington; treasurer, W. F. Root, of Brattleboro. The other members of the board are Z. B. Hopkins, of Brandon and A. W. Higgins, of Rutland. Instead of holding meetings in various parts of the State, future examinations will be held at the State House. It is probable that the legislative cloak

room will be used for this purpose. Meetings will be held early in April, July and October of the present year.

RHODE ISLAND BOARD OF PH.

Woonsocket, R. I., Jan. 23.—The State Board of Pharmacy in its annual report to the Senate, expresses the belief that the time has come when the standard of proficiency required of candidates for registration should be increased. The board believes that the already increased requirements have been successfully met, this being due to the superior educational advantages now offered.

The report shows that on January 3, 1904, there were in the State 299 registered pharmacists in good standing, while at the beginning of this present year there were 311.

VERSATILITY OF A POLICEMAN.

Camden, N. J., Jan. 23.—Considerable interest has been aroused here in the case of Police Sergeant Dr. David Bentley, since Chief of Police Foster has declared that it is against the rules of the police department for policemen to engage in any other business. Sergeant Bentley is not only a practicing physician, but also conducts a drug store. As far as can be learned, there is no complaint as to neglect of duty. He has become a physician and druggist since his appointment to the police force. He was young and ambitious and at once devoted his spare time to the study of medicine. He graduated with first honors in medicine and pharmacy at the Medico-Chirurgical College, in Philadelphia, and since then has built up a large trade and a lucrative practice.

PREPARE A "KAFFEE KLATCH."

Philadelphia, Jan. 23.—Extensive preparations are being made by the entertainment committee of the Philadelphia Retail Druggists' Association for its "Kaffee Klatch," the first of a series of social events to be given this year. The Maennerchor Garden has been secured for this novel affair, which will be held on the evening of January 31. Many visitors are expected, for each member has the privilege of bringing one friend. The cost will be one dollar per capita. The program is an extensive and varied one. The entertainment committee follows: Chairman, S. W. Strunk; secretary, S. B. Davis; treasurer, H. A. Nolte; C. W. Smell, Otto Krause, H. L. Stiles, S. C. Henry, W. E. Supplee, J. P. Frey, James C. Perry, N. S. Steitzer and C. S. Cameron.

CONTRACTS IN PHILADELPHIA.

Philadelphia, Jan. 23.—Pharmacists located in the Twelfth District of the Philadelphia Retail Druggists' Association, on Tuesday evening decided to sign the contracts of the Paris Medicine Company, for the sale of Bromo-Quinine. The contracts will become operative February 1, next. Other districts of the fourteen into which the city is divided have already taken this action, but in some the pharmacists have been well supplied with Bromo-Quinine, and their delay in signing the contract held up the entire district. The signing of this contract raises the price of Bromo-Quinine from twenty cents to twenty-five cents.

WHAT THE P. A. R. D. IS DOING.**New Executive Board and Telephone Service to be Discussed.**

Philadelphia, Jan. 23.—At the next meeting of the Philadelphia Association of Retail Druggists, February 3, steps will be taken to change the formation of the Executive Board, the completion of which movement it is believed will result in much good to the organization. Heretofore the Executive Board has been composed of members elected by the association, but in the future it is proposed to have each district auxiliary represented by its chairman. One member will be elected by the association, making the membership of the Executive Board fifteen. This idea of having every section of the city represented on the board, it is argued, will do away with the possible formation of cliques, to say nothing of giving each auxiliary a voice in the doings of the parent body.

Among other matters to be discussed will be the effort to secure other arrangements with the telephone companies. The subject of charging for the delivery of telephone messages is also being largely discussed. A few auxiliaries have adopted a rule of charging five cents for each message delivered. Some druggists say they cannot do this without injuring their trade. They say it is such a small matter they cannot ask for the money. One enterprising proprietor overcomes this bothering of his patrons by having a slip printed on which it states that you are wanted on the telephone at his store. In addition, in large type, the person notified is informed that the cost of such notification is five cents. If he does not take this broad hint, he is not mentioned it. It is expected that the newly-appointed Telephone Committee of the P. A. R. D. will take up the question in detail at the next meeting.

DEATH OF TWO PARTNERS.

West Chester, Pa., Jan. 23.—Samuel K. Hammond and Charles M. Hammond, two of the best-known druggists in this town, died suddenly last week within an hour of each other.

Charles, nephew of Samuel K. Hammond, died of typhoid pneumonia, and soon after breathing his last the uncle, who was also ill, was told of his death. The news brought on a sinking spell and within an hour he too had expired.

Uncle and nephew were devoted to each other and they had been together in business here about thirty years. Charles, aged forty-one years, leaves a widow and two children. Samuel, aged seventy-three, leaves a widow.

COCAINE SCANDAL REVIVED.

Pittsburg, Jan. 23.—The police again threaten to inaugurate a crusade against the selling of cocaine by druggists without a prescription. The police in the East End part of the city rounded up a gang of youths last night who are said to be addicted to the cocaine habit. It is further charged that they sold the drug among boys younger than themselves, who are physical and moral wrecks from the excessive use of the drug. The question of where the cocaine was procured is be-

ing thoroughly investigated. The boys are said to have declared that the drug was as easily obtained as patent medicines.

P. A. R. D. ELECTS OFFICERS.

Philadelphia, Jan. 24.—Most encouraging were the prospects for a prosperous year as shown at the annual meeting of the Philadelphia Retail Druggists' Association. More than a score of new members were elected and a substantial balance was reported by the treasurer.

Officers were elected as follows: President, Thomas H. Potts; first vice-president, William L. Cliffe; second vice-president, William E. Lee; third vice-president, J. N. G. Long; recording secretary, N. A. Cozens; financial secretary, C. W. Shull; treasurer, G. W. Fehr; executive committee, Dr. A. D. Pollard, N. C. Blair, Charles Leedom, Richard Lackey, A. J. Frankeberger, John P. Frey and O. W. Osterlund.

CONTRACTS IN OPERATION.

Philadelphia, Jan. 24.—Retail druggists who signed the contracts with the Peruna Drug Manufacturing Company have just been notified that those contracts are now operative. Believing that there was no doubt that the new rate, eighty-three cents a bottle, would shortly be adopted, many of the local trade had already been selling Peruna at that price. The communication was welcome news to the signers of the contracts in this city.

MRS. EMERSON'S COSTLY WORDS.

Baltimore, Jan. 23.—Mrs. Isaac E. Emerson, wife of the millionaire manufacturer of bromo-seltzer, will have to pay \$4,000 for speaking her mind to a police captain here. It came about through her chauffeur getting himself arrested for speeding in Druid Hill Park, and, being indignant at such treatment, Mrs. Emerson told Captain Bernard J. Ward, of the police, that he was a liar, a thief and a puppy. These three words, according to the verdict of a slander suit just rendered in the Superior Court will cost the wealthy woman over a thousand dollars each. Throgs fought for admittance to the trial, because everybody wanted to see Mrs. Emerson's silks and diamonds.

DECISION ON PH. EXAMS.

Washington, Jan. 23.—Corporation Counsel Duvall has submitted an opinion to the commissioners which states that a graduate from a school of pharmacy requiring only three years' experience must be examined before he can be granted a license to practice pharmacy in the district. Mr. Duvall states that the district law requires that an applicant for a license to practice pharmacy without examination must hold a diploma from a school which requires four years of practical experience. This opinion was submitted by the corporation counsel at the request of the district pharmacy board, which also asked if an applicant can be licensed when he is a graduate of a school requiring no practical experience, but the dean of which furnishes a certificate to the effect that the said applicant has had four years' experience. Mr. Duvall gave a negative answer to this last question.

SOLD COCAINE AND FELL.**Confession of a Druggist Who Supplied Drug Fiends.**

Baltimore, Jan. 23.—The agitation here against the sale of cocaine to fiends has called forth a letter to the press by one who signs himself "A Druggist," and unburdens himself of a sensational confession. He reveals himself as the victim of his own nefarious traffic in the drug. His letter follows:

"I am from a distant State, and at present stopping in Baltimore. I have read a great deal about the cocaine law which was recently passed. I write these lines to give druggists advice to lead them away from that awful habit of selling cocaine to fiends.

"I am an experienced druggist, and was at one time proprietor of one of the largest retail drug stores in our city. But as time rolled on fiends became numerous, especially in our neighborhood; seven and eight would come to my place of business in an hour, expressing what they wished by 'Five cents worth "Coc," "Spezt, spezt," "A trip to Heaven," "Round trip to Coney Island," etc.

"So great was the demand, so many were the dealers, my neighbor druggists, that I thought I ought to share some of the profits. Profits? Loss was the consequence. True it was, cocaine brought some profit, but what little profit I received was lost, and more yet.

"My increase of 'coc' customers was outnumbered by my loss of respectable customers. My prescription trade diminished, and outside the cocaine I sold I would have starved.

"Then a law was passed as you now have in this city, prohibiting the sale of cocaine. My business was a total wreck.

"To save my reputation (for it was ruined enough then) I sold my store and an now clerking, but I am better off than when I sold 'coc'.

"Brother druggists, take my advice and put a stop to it at once. It will ruin yourself and your trade. I hope this will do you good."

The Brady Drug Co., Manhattan, has been incorporated, with a capital of \$2,000. The directors are: Joseph A. Brady, Eugene J. Reynolds, Thomas E. Brady, all of Brooklyn.

The Boss:—"Oh, oh; some of that derved kid's work."

HONORS FOR W. E. COLLINS.

Detroit, Jan. 17.—W. E. Collins, of Owosso, who has just been appointed by Governor Warner to the State Board of Pharmacy, is an exceedingly popular young man and is recognized as strongly equipped for his present duties. It is confidently asserted by his friends that the pharma-

whether articles of poison were mailable. An order was made that excluded morphine, cocaine, belladonna, strychnine, arsenic and remedies prepared for the cure of drunkenness.

Then the Memphis postmaster wrote to the Postmaster-General asking a modification of the terms. He explained that physicians living in a great number of cases away from the railroads and express offices constantly need poisons in their treatment of the sick, and that in many instances unless such articles were sent by mail great delay in their delivery would result, and that physicians living away from railroads and the offices of express companies would be materially interfered with in treating their patients, such articles being indispensable in many cases.

DOWN ON OPIUM TRAFFIC.

Washington, Jan. 23.—Secretary Taft has forwarded to Representative Payne, for introduction in the House, the draft of the bill fixing tariff rates on goods entering the Philippines. An interesting feature is a provision increasing the duty on crude opium from \$3 to \$4 per kilo, and on manufactured opium from \$3.50 to \$5. The commission or any succeeding Philippine legislature is empowered to suppress the opium traffic. Accompanying the bill is the report of the commission headed by Bishop Brent, which visited the opium using countries of the East. This report recommends the creation of a government monopoly in opium for three years, the drug being sold in that period only to confirmed Chinese opium users in the Philippines as a measure of humanity. After that period the traffic is to be suppressed.

WET STORE NOT WANTED.

Charlotte, N. C., Jan. 23.—The proposition to establish a city dispensary or drug store in this place will be no longer heard for the present. Since the publication of the text of the measure in the local newspapers the opposition developed fast and furiously, even threatening disruption in the ranks of the prohibitionists. Many of those who voted for a dry town refused to stand for the radical drug store dispensary measure. While nothing official has been given out, it is definitely understood that the measure will not be allowed to go to the legislature.

NEW COCAINE LEGISLATION.

Raleigh, N. C., Jan. 23.—The legislature has responded to the late sudden demand, and passed a bill for the regulation of cocaine and morphine sales. Neither drug can now be sold by a retailer except upon regular prescription of a practicing physician or dentist. The measure was passed after much debate and many amendments. All of the latter were defeated, except one, permitting sale in cases of emergency or when attended by a reputable physician. The State Pharmaceutical Association had urged the law.

TAYLOR & CO.'S NEW STORE.

Louisville, Jan. 21.—The building at 552 Fourth avenue has been purchased by T. P. Taylor & Co., the wholesale druggists and manufacturing chemists. As soon as the building is vacated, this company will open a store there.

DEATH OF FRANK WELLS.

Detroit, Jan. 24.—Frank Wells, the first president of the Michigan State Pharmaceutical Association, died of typhoid fever last Friday after a brief illness.

Mr. Wells was born in New York State 76 years ago, and moved with his parents

W. E. COLLINS.

lects throughout the State will have nothing to regret over his appointment. And yet, it is an appointment not altogether satisfactory to the druggists of this city, he not being their own candidate. But in a measure it was their own fault. They were divided among themselves, one faction representing the "regulars," and the other the "cut raters." Each faction had a candidate for the position, but they were not able to get together, each being afraid of the other, so apparently there was nothing for the governor to do but to choose an outside man.

NEW POISON MAIL ORDER.

Washington, Jan. 23.—The former ruling of the Postmaster-General, which made poisonous articles non-mailable, has been modified. Under certain conditions, such articles can now be sent through the mails. The order making the change is as follows:

"Proprietary articles of merchandise, not in themselves unmailable (see Sections 480 and 497), such as fancy soaps, tobacco, pills, tablets or other preparations such as are used by the medical and pharmaceutical professions, put in fixed quantities by the manufacturer, for sale by himself and others, which may be sealed in such manner as to properly protect the articles, but to allow examination of such package in its simplest mercantile form, will be accepted for mailing; provided, that poisonous articles, or articles containing poison, and not unmailable (see Sections 480 and 497), shall be accepted for mailing only when the package bears the label or superscription of the manufacturer or dealer in the article mailed.

"R. J. WYNN, Postmaster-General."

Last May the postmaster at Texarkana, Tex., reported to the Postmaster-General at Washington that the Memphis postmaster had permitted a local drug house to mail an ounce package of morphine. The Postmaster-General was asked to decide

FRANK WELLS.

to Ohio in early youth, where he attended Huron Institute at Milan, a college preparatory school. From there he came to Michigan, settling at Howell. He engaged in the mercantile business for ten years, and in 1861 moved to Lansing, where he lived up to the time of his death. For many years he was interested in the drug business in the latter city. He occupied his spare time largely in literary work, being a member of the U. I. Club, one of the most prominent literary organizations in southern Michigan, and had served the club for ten successive years as its presiding officer. He had been president of the Michigan Business Men's Association, and for the past twelve years was president of the Michigan State Board of Health. His studies have been largely along lines of scientific research and investigation, and he was the author of several papers in this field.

HAD A WEEK OF ROBBERIES.

Indianapolis, Jan. 21.—During the past week no less than half-a-dozen drug stores have been entered by burglars and robbed of cigars and bottled liquors. In most cases the goods taken did not run up into many dollars. Birk Brothers, in addition to losing \$50 worth of goods, had two cash registers broken to pieces. At Navin's drug store the burglars carried off 72 pocket-knives and 11 razors; total value, \$150.

R. D. A. OF WHEELING.

Wheeling, W. Va., Jan. 23.—The Wheeling Retail Druggists' Association held its regular election of officers at the last meeting here, as follows: John Coleman, president; W. C. Gordon, secretary, and John Klark, treasurer.

It was decided to incorporate the association and articles of incorporation will be applied for. The association indorsed J. H. Bean, of Moundsville, for commissioner of pharmacy for this district.

WOULD ABOLISH EXAMS.

Proposed Registration Bill in Tennessee Arouses the Druggists.

Nashville, Jan. 21.—Sudden activity prevails here in the field of pharmaceutical legislation. Local druggists are up in arms against the proposed pharmacy law introduced in the Senate Friday, by Mr. Woodlee, of Blount County. Mr. Woodlee introduced it upon request and so indorsed it. The measure as drafted provides for the registration as regular pharmacists of all persons who have continuously engaged for five successive years in the practice of pharmacy in Tennessee and have had daily practice in filling prescriptions.

The executive committee of the Nashville Association of Retail Druggists met immediately upon learning of the introduction of Mr. Woodlee's bill and steps were taken to acquaint the pharmacists of Tennessee with the purport and provisions of the measure with a view to securing their aid toward defeating its passage. A committee composed of Harvey Nell, J. B. Clark and Charles Kirkland waited on Senator A. G. Ewing, Jr., and requested that he use his influence toward the defeat or withdrawal of the measure.

The druggists assert that it is a backward step and one that will be dangerous to the public health. The present law provides that all applicants for registration as pharmacists shall pass an examination to determine their ability to compound prescriptions. It is asserted by local druggists that the only persons to be benefited by such a measure are those who are unable to pass such an examination, and they claim this alone demonstrates that they should not be authorized to fill prescriptions.

THIEF IN A SILK HAT.

Chicago, Jan. 23.—Robert Stevenson & Co.'s wholesale drug house, at Lake and Dearborn streets, was robbed of \$1,270 in cash by a daring thief Saturday while the store was filled with clerks and customers. Dr. Victor Pycana, cashier of the company, went to the bank shortly before noon and drew out \$1,270 to pay certain of the employees their wages. He returned to the store and entering the private office, placed the valise, filled with bank notes, on his desk.

A short time afterward the telephone bell rang, and while Dr. Pycana was at the phone, the valise full of money disappeared.

An investigation was started. Clerks remembered they had seen a well-dressed man, evidently in a hurry, walk into the store, hurry into the private office, removing his hat as he did so.

A moment later the stranger reappeared, bowing as if bidding some one farewell, and walked hastily out of the store.

NOTES FROM CHICAGO.

—Clarence Davidson & Co., the new druggists' sundries firm, are now out after business. Their offices are ready and stock is all in. Mr. Davidson is well known as a skilful buyer of drug store sundries, and has a host of friends in Chicago.

—Frank Layer, formerly a clerk in the drug store of B. S. Cooban, Sixty-third street and Normal avenue, has bought R. M. Frisbey's drug store at Olman, Ill. Mr. Frisbey will probably locate in another town.

—A Chicago druggist has been fined \$500 for refilling clear boxes.

—W. F. Blake is back home from the hospital, and recovering rapidly. G. A. Graves is not only through with the sick room, but out on the street again, and looking fine. He may go South to recuperate.

—The Sargent memorial services have been postponed, since Mrs. Sargent cannot attend until spring. She will spend the winter in the South.

JOBBERS MAKE ANSWER.

Their Reply to Charges of Conspiracy in Milwaukee.

Milwaukee, Jan. 21.—The so-called "conspiracy case," in which the proprietor of the drug department of a local department store is suing to compel leading jobbers to sell him goods, is still pending in the local courts, and will likely come up for final adjudication within a short time. It is charged that the wholesalers refuse to sell to this dealer because he cuts prices.

The jobbers have filed their answers and the issue is joined on the double question of the right of a dealer to refuse to sell for cash and the self preservation of the jobber as such. The jobbers will attempt to show at the trial that they have the right arbitrarily to refuse to deal with any prospective customer without giving him any reason. This, they think, is sufficient, but back of this they will set up the claim that they are not able to furnish this price cutter the goods he wants, including proprietary medicines. The answer further pleads that these goods are bought under contracts, that they are to be sold at a stipulated price to the retailers, and that the goods are to bring a stipulated price and a uniform price in the retail market. If a customer of the jobber sells below the uniform retail price, it will be shown that the jobber lays himself liable to forfeit his right to purchase more of the goods from the manufacturer. Therefore, while the jobber could furnish the goods once or twice to the price cutter, he could not continue to do so, and would ultimately be unable to procure them for his legitimate trade.

It will be shown that if this contract between jobber and contractor is illegal, or is against public policy, it is not a matter to be adjudicated between retailer and jobber, but between jobber and manufacturer, and that the initiative lies with the jobber. If he is satisfied with the arrangement, it is not for an outsider to interfere; but if it is in the sphere of the department store to attempt to upset the established order of things in the drug trade, then the case will have to go to the federal courts, as the parties to the suit do not all live in this State. The plaintiff is Fred B. Eycleshymer, of the Boston Store, and the defendants are Drake Bros., Yahr & Lange Drug Co., F. Dohmen Co., Jerman, Pfueger & Kuehnel.

MEET OF ST. PAUL CLERKS.

St. Paul, Jan. 21.—An exceptionally enthusiastic meeting was held by the Minnesota Drug Clerks' Association the other evening in the parlors of the Windsor Hotel, this city. It was a record attendance, and the meeting was a spirited proposition from start to finish. The chief business was the nomination of a ticket for the ensuing year. There is no contest except on the presidency. Following are the nominations: For president, David Colberg (incumbent) and Lewis Paulson; first vice-president, E. W. Chilstrom; second vice-president, August Morelius; third vice-president, Fred Klernert; secretary, George T. Heller; treasurer, Gustave A. Dickman; trustees, Charles Muessell, Edwin Pattee; employment bureau, H. Lang, Ernest Otto.

Most of these are renominations. The election will take place at the annual meeting, to be held February 1, at the National hotel parlors in Minneapolis. It will be followed by the annual banquet, for which the entertainment committee is preparing an elaborate spread.

BILL TO REGULATE SAMPLES.

St. Paul, Jan. 21.—A bill to guard children against illness from eating or drinking samples of medicine, it is expected, will be introduced in the legislature during the present session. The bill will make it a misdemeanor, with a \$25 to \$100 fine, for any person or firm to distribute such samples from house to house. Those who favor the bill say many children have been sickened seriously and some killed from eating samples thrown on the porch or inside the door by boys employed by medicine concerns. The Southern Minnesota member who intends to bring forward the measure says that several little ones in his town were made dangerously ill by drinking sample cough medicines and he sees no other way to stop the distribution.

PIERCE TO ENJOIN PLATT.

Chicago, Jan. 14.—Dr. R. V. Pierce has filed a bill in the United States Court here, seeking to enjoin Isaac Platt from interfering with his business by forcing wholesale druggists to sell him the goods of the World's Dispensary.

The Boss:—"It's a good joke, Jimmy, but I've got to tam you, to keep this old mind customer. Bawl louder."

MAY GOVERN IN IOWA.

John Herriott, Druggist and Town Santa Claus, Has Ambitions.

Des Moines, Jan. 22.—Iowa may soon have a druggist-governor, Hon. John Herriott, of Stuart, one of the pioneer druggists of the State, is in the race to succeed Governor Cummins, father of the famous "Iowa Idea." Mr. Herriott is now lieutenant-governor, and his chances of winning the plum next fall are considered very good.

John Herriott started in the drug business with J. R. Dosh at Stuart in 1872. The first store was a small frame affair built on the east side of Main street. Within a year the firm had so prospered that a new brick structure was needed. Starting with less than \$2,000 worth of stock Herriott & Dosh in 1880 had over \$6,000 worth of goods in their store. Now the stock will double that amount. Mr. Herriott bought out his partner in 1880.

It is said that John Herriott likes nothing so much as to jump out of the political whirl and get back behind the counter in the drug store where he has made most of his money. He is chief stockholder in a bank now, and the leading speak-

HON. JOHN HERRIOTT.

er in the State on railway reform. He presides over the Iowa Senate, and he has numerous political and social duties. But, notwithstanding these, he wandered back to Stuart three weeks before Christmas and got himself very busy handing out toys to the eager parents among his customers. In Stuart he is known as Santa Claus. Many of the children of the town grow up in the belief that Herriott's drug store is Santa Claus's place of business.

DRUG PEOPLE AS WITNESSES.

Minneapolis, Jan. 21.—Several employees of the Minneapolis branch of Parke, Davis & Co. were witnesses for the State in the Gebhard murder trial at New Ulm. Their depositions had to do with the attempt of the prosecution to show that Dr. Koch, the defendant, once sent Dr. Gebhard, the murdered dentist, a package of poison. Fred H. Tucker, who has charge of the Parke-Davis shipments, and Miss Elizabeth Mesken, bill clerk, were the witnesses. They were examined as to dates of ship-

ments to New Ulm, etc., and the identity of wrappers in which bromo-caffeine and a dental preparation were sent out over the State. Fred Kitzuld, superintendent of the box department of a Minneapolis manufacturing concern that makes boxes for Parke, Davis & Co., was also questioned on the stand.

W. G. Alwin, a New Ulm druggist, was among the scores of witnesses in the case. He was examined for the defense, and told of the effect of burns produced by carbolic acid and by alcohol. Injuries which were noticed on Dr. Koch's hands shortly after the tragedy cut a large figure in the chain of circumstantial evidence. Mr. Alwin also testified in the matter of the bottle of poison, pronouncing the particles left in the bottle to be effervescent salts.

A verdict of acquittal was the result of the murder trial of Dr. Germain, at Moorhead, in which Prof. H. C. Carel, chemist of the University of Minnesota, appeared as an expert witness.

IN MISSOURI.

—C. P. Walbridge, president of the J. S. Merrill Drug Co., St. Louis, has been elected president of the Business Men's League, a representative civic improvement association.

—G. W. Carmack, of Plattsburg, Mo., is the new secretary of the State Board of Pharmacy, vice Paul Hess, of Kansas City, who resigned the office.

—Katsky's Pharmacy at Delmar avenue and King's highway, St. Louis, has been sold to a brewery.

—The St. Louis police have asked the New York police department to arrest for them a woman doctor who sold to Mrs. Dora Williams, of 5337 Easton avenue, pills which caused her death January 19. Mrs. Williams was the wife of Dr. Leon Williams. Neighbor women testified that Mrs. Williams had answered an advertisement. The name of the advertiser has been withheld, pending developments in New York.

ST. LOUIS DRUG CLERKS.

St. Louis, Jan. 24.—The St. Louis Retail Drug Clerks' Association at their annual meeting January 16 elected Albert J. Bretscher, president; Carl Heinrich, first vice-president; Henry T. Suu, second vice-president; Chris G. Mueller, secretary; Henry A. Wolf, treasurer, and an executive committee of A. J. Bretscher, C. G. Mueller, H. A. Wolf, R. Boesewetter, J. M. Travis and George M. Shen. D. P. Wright is chairman of the entertainment committee; retiring president Richard Boesewetter is chairman of the by-laws committee, and Charles E. Miller will have charge of the employment bureau, making his headquarters at the Parke, Davis & Co. office at 108 South Fourth street. The annual banquet will be held at Priester's cafe, February 16.

PECULATIONS OF A CLERK.

St. Louis, Jan. 24.—Elmer R. Smith, recently clerk at Joseph Massarang's drug store at Washington and Leffingwell avenues, was bound over to the federal grand jury on a second charge growing out of the irregular money orders issued from the post-office station in Mr. Massarang's store. The post-office inspectors charge that Smith has made \$5,300 by his transactions.

MONTREAL TO ORGANIZE.

Druggists There Have Their Own Questions of Affiliation.

Montreal, Jan. 21.—Affiliation with other Canadian drug organizations was the subject of a special meeting of retail druggists, which was held here last week at the College of Pharmacy. The drug section of the Retail Merchants' Association of Canada has a large membership throughout the Dominion, and the advisability of uniting was obvious to many of the local trade. The Merchants' Association is composed of all classes of retail merchants, and is organized for the purpose of protecting the commercial interests of the retail trade. It is composed of branches and sections, and it is the intention of the officers to form an active branch in Montreal.

A. E. Walton, provincial chairman of the Drug Section of the province of Ontario, addressed the meeting and explained the work that has been carried out throughout the province of Ontario, and showed the advantages that had been gained by organization. C. S. Thling, of Hamilton, Ont., representing the Ontario branch of the Wholesale Druggists' Association, impressed upon the members the need for closer relationship between the manufacturers, wholesalers and retailers, and he urged the necessity of uniting with their fellow druggists throughout Ontario.

E. M. Trowen, Dominion secretary of the Retail Merchants' Association, explained the aims and objects of the association. He stated that their association had had legislation passed two years ago in the provincial Legislature of Ontario to abolish trading stamps, and they were also successful in winning an appeal in the High Court. He stated that the members from Ontario were willing to aid the retail merchants of Montreal if necessary in endeavoring to sustain the trading stamp legislation that they had secured here, and which was now attacked. He stated that he would shortly visit Montreal again and address a general meeting of all retail merchants and explain the Dominion legislation that the association desired to obtain at the present session of the Dominion Parliament. His address was listened to with great interest, and a special committee was appointed to arrange for a further meeting, so as to make arrangements to affiliate with the Dominion body.

LEGISLATION IN MISSOURI.

Jefferson City, Mo., Jan. 24.—There is no visible effort here on the part of the State druggists to secure special legislation from the State Assembly now in session. The elaborate plans of retiring President Wright of the Mo. Ph. A. do not seem to have carried over into the new administration. Senator McIndoe, of Jasper County, last week introduced a bill permitting the sale of cocaine on physicians' prescriptions only. This regulation is now in force in several of the cities of the State but otherwise the traffic is unrestricted. Mr. McIndoe says his bill is not prompted by request of any drug association.

AMONG THE COLLEGES

COLUMBIA UNIVERSITY.

New York, Jan. 21.—As noted in the Era last week, the New York C. P. (Columbia University) has just announced the establishment of three courses of instruction to be known respectively as the college course, the university course and the graduate course.

The College Course, leading to the degree of Graduate in Pharmacy, will correspond in every way with the two-year under-graduate course heretofore given, except the improvements that will be introduced from year to year and the entrance requirement of twelve regents' counts now imposed by law upon all schools of pharmacy of the State, and upon all those outside of the State whose graduates can hereafter be accepted for examination by the State Board of Pharmacy.

This entrance requirement can be met (1) by submitting to the Education Department, State of New York, evidence of having successfully pursued a course of one year's study at high school, or some other school of corresponding grade. Such credentials should be sent to the Examination Division, Albany, N. Y. (2) By passing examinations conducted by the State Department in any of a certain list of academic studies which may be selected by the candidate, the subjects so selected to give a total credit of at least twelve counts. These examinations are held simultaneously in January, June and September, in Albany, New York, Buffalo and Syracuse.

The University Course of two full academic years (October to June) leads to graduation with the other departments, and to the degree of Pharmaceutical Chemist conferred by the University. Arrangements are now being considered by which graduates from this course will be allowed a time-credit in the Medical Department should they subsequently matriculate there. Members of the present senior class are required to complete their present academic year only.

The conditions for admission to this course require that the candidate must have a credit of forty-eight regents' counts or twelve Columbia points. This condition is subject to the following modifications: Members of the present classes will be allowed to secure these credits at any time before the commencement date of their respective classes, provided that no entrance credit will be allowed them for work done as students of this college. Students matriculating in the fall of 1905 will be accepted conditioned in one-half of the required counts or points, the deficiency to be made good before the beginning of their second course. For entrance to the University Course, application should be made to the College of Pharmacy. If the applicant is entitled to credit for the full forty-eight counts, by virtue of graduation, he must secure a regents' certificate, which must accompany his application for matriculation. If entitled to partial credit, for one or more years' attendance, a certificate to that ef-

fect must be secured, and the additional required counts must be obtained by examination. The examination may be passed before the State Education Department or before the Board of College Entrance Examination, in June, or the Columbia University Committee on Entrance Examinations, in September.

All the conditions of the Graduate course will remain as heretofore until the close of the session of 1906-7, after which it will be open only to pharmaceutical chemists graduating from our University Course, or to graduates of equal rank from other colleges. Graduates of the class of 1907-8, and of succeeding classes, will receive the degree of doctor of pharmacy from Columbia University.

CHICAGO COLLEGE OF PHARMACY.

Chicago, Jan. 21.—Prof. F. M. Goodman, dean of the Chicago C. P., has sent the following letter to Messrs. Robt. and C. P. Van Schaack:

"Gentlemen: At a meeting of the faculty of the University of Illinois School of Pharmacy, held January 10, 1905, resolutions of sympathy and condolence relative to the loss of the president of your firm and an old-time friend and fraternal co-worker were adopted, and the dean was instructed to inform you and extend such words of sympathy as he might in regretting the loss of an old and time-tried friend. His loss will be sorely felt by his great circle of acquaintances, and I, personally, deeply regret his demise, and will in the years to come miss the cheery salutation, 'Good morning, comrade,' which I have so often heard during the past quarter of a century.

"Although I realize that his mantle falls upon the shoulders of strong, able and earnest workers, we will all miss him; men of his sterling qualities die regretted, for, alas, there are too few of them, and the world cannot afford to lose one; yet, an inexorable nature says: 'Come.' We bow in humble submission, express our sorrow and await our turn. Sincerely,
"F. M. GOODMAN, Dean."

TEMPLE COLLEGE.

Philadelphia, Jan. 19.—Numerous changes have been made this year in the faculty of the department of pharmacy, Temple College, under the direction of Deau I. M. Snively. New instructors have been added, and former ones promoted. The new members are: Chemistry, James C. Atix; materia medica, Miss Susan G. Haydock; pharmacy, Edward B. Finck; physics, Walter D. Spless; practical pharmacy, David Dalton; operative pharmacy and dispensing, Robert K. Pentland; instructor in chemistry, John H. Snoke. The course consists of two years of nine months each.

MEDICO-CHI. C. P.

Philadelphia, Jan. 21.—Extensive preparations are being made by the Alumni Association of the Pharmacy Department, Medico-Chirurgical College, for a smoker and reception to be given to the undergraduates on the evening of February 1 at the University Club. The committee of arrangements consists of Martin W.

Rodawig, chairman; D. S. Rhone and John R. Minehart.

Among the changes made in the faculty are the following: C. Stanley G. Mylrea, Ph.G., made demonstrator of pharmacy; Joseph F. Ulman, M.D., made assistant instructor of physiology; Harvey E. Knigge, Ph.G., adjunct professor of theory and practice of pharmacy, formerly docent; Charles H. Shaw, A.M., Ph.D., professor of botany, formerly adjunct.

The senior class is preparing to give a reception to the Freshman class early in February.

Members of the Meeker Analytical Society will give a theatre party to the Fisher Materia Medica Society in February.

The botanical excursions to Horticultural Hall in Fairmount Park are in charge of Professor C. H. Shaw.

In order that there may be increased opportunities for pharmaceutical laboratory work a forenoon has been added to the work of the senior class.

PHILADELPHIA C. P.

Philadelphia, Jan. 24.—Judging from indications the athletic association of the P. C. P. will realize a substantial sum from its theatrical benefit which was held last week at the Walnut Street Theatre. The attraction was Wilton Lackaye in "The Pit." Many theatre parties, composed of students and their friends, have been features of college life this week.

Arrangements have been completed for the annual ball of the Freshman class held in the college auditorium.

HOWARD PHARMACEUTICAL COLLEGE.

Washington, D. C., Jan. 20.—The Howard College of Pharmacy, a department of Howard University, gives a three years' course of thirty-two weeks each. The degree of "doctor of pharmacy" is conferred. Matriculants must hold diplomas from High or Normal schools or a teacher's certificate, and must make not less than 75 per cent. in each subject required for graduation. This college maintains a free dispensary where the students get practical drug-store experience. A new laboratory has recently been constructed and equipped with modern apparatus. Dr. J. Hervé Purdy, vice dean,

Jimmy:—"Don't be nervous, kitty, I'll soon be over."

is the director, assisted by Dr. R. B. Tyler.

A two-hours' quiz is held weekly, special attention being paid to questions taken from state board examinations. The members of the faculty are: John Gordon, D.D., president; Robert Reynolds, A.M., M.D., dean; J. Hervé Purdy, pharmacy; F. J. Shadd, materia medica and therapeutics; A. E. Burrows, theory and practice of pharmacy; W. H. Seaman, chemistry, toxicology and botany; W. W. Allger, microscopy and bacteriology.

PURDUE UNIVERSITY.

West Lafayette, Ind., Jan. 16.—The senior pharmacy students of Purdue University will this month receive several special lectures on the drug business and trade in general by Messrs. August J. Detzer, of the Indianapolis Drug Co.; Chas. Downing, of A. Kiefer Drug Co., Indianapolis; Louis H. Schulmayer, of Daniel Stewart & Co., Indianapolis, and J. S. Wright, botanist for Eli Lilly & Co., Indianapolis. Something very good is expected from these experienced men, and they will be given a hearty welcome.

The seniors are finishing their work under Prof. A. L. Green in the chemical laboratory with alkaloidal assaying and organic testing, and have begun under Prof. B. M. Hoak a series of quizzes on materia medica.

Ary Baldwin, '95, now a pharmacist of Noblesville, was married to Miss Gail White, of Westfield, Ind., during the holidays, and Phillip S. Hance, '01, Indianapolis, was married to Miss Pauline Aauk, of West Lafayette, December 27.

Martin Quinlan, an attorney of Lafayette, has begun a series of interesting lectures to the school on pharmaceutical jurisprudence.

William C. Elston, who has just entered the junior class, comes from Indiana University with plenty of credits in chemistry which enables him to join the '06 class so late in the year.

Dr. Stanley Coulter has begun giving a regular course of lectures on botany to the juniors. The course will last a couple of months.

RHODE ISLAND C. P.

Providence, Jan. 12.—Both senior and junior classes of the Rhode Island College of Pharmacy have organized, and a constitution and by-laws are forthcoming. The officers of the junior class are Harry Hanson, East Providence, president; Adelbert S. Goldthwaite, Evanston, vice-president; Frank E. Lockwood, Lakewood, secretary; William F. Hand, Woonsocket, treasurer. Seniors—Edward J. Gallagher, Providence, president; J. B. Drinkwater, East Greenwich, vice-president; T. E. Doherty, Providence, financial secretary; W. H. Atkinson, Providence, recording secretary; John Mullen, treasurer.

The college, which was opened in 1902, is located in the old Norman school building, not far from Brown University. The laboratory has accommodations for fifty students. The principal members of the faculty are E. E. Calder, dean and professor of chemistry; C. H. Daggett, registrar and professor of pharmacy; J. E. Groff, materia medica; A. H. Brundage, toxicology and physiology; F. N. Strickland, operative pharmacy; C. A. Schilling, languages.

AMONG THE BOWLERS

S. & D. TAIL-ENDERS.

In the bowling of the New York Wholesale League on Monday, the Parke, Davis & Co. team performed their usual feat of winning three straight games. Sharp & Dohme were the tail-enders. The scores:

Parke, Davis & Co.	813
Dodge & Olcott	706
Parke, Davis & Co.	783
Seabury & Johnson	771
Parke, Davis & Co.	896
Sharp & Dohme	691
Dodge & Olcott	733
Seabury & Johnson	802
Dodge & Olcott	730
Sharp & Dohme	667
Seabury & Johnson	782
Sharp & Dohme	724

Judge, of Seabury & Johnson, made three "200's"—204, 213 and 211. He has an average of 212 for the last five games. Other high scores were: Lovis, S. & J., 200; Braun, P., D. & Co., 221; Blake, P., D. & Co., 220.

PHILLIES MAKE HIGH SCORES.

Philadelphia, Jan. 19.—The bowling of the Wholesale Drug League, at Central Alleys, on January 17, resulted as follows:

J. E. Lee Co.	935	930	970
Wright			250
Sm., Kline & French ..	757	720	662
Sanner			201
Philadelphia C. P.	751	734	797
Worthington			227
P. D. A. Reds	612	673	716
Johnson			172

High one game, single, Maurice, 266; high three game single, Herron, 632; high one game, team, J. Ellwood Lee Co., 970; high three game team, J. Ellwood Lee Co., 2,855.

The standing to date:

	Won.	Lost.	Per C.
J. E. Lee Co.	23	4	.852
P. D. A. Blue	15	6	.714
Smith Kline & French ..	11	7	.611
Philadelphia C. P.	12	9	.571
Wanderers	8	13	.381
Hance Bros. & White ..	5	13	.278
P. D. A. Reds	1	23	.042

P., D.'S IN THE LIMELIGHT.

Detroit, Jan. 24.—The Parke, Davis & Co. teams of the Detroit Drug Bowling League, continue in the limelight. In the games of the past week team No. 1, the champions, got away with two of the three games with the strong Nelson-Bakers, and No. 2 cleaned up with Stearns & Co. in like manner. The games between Michigan Drug and Ingram were particularly exciting, Ingram winning the first by three pins, and Michigan the last by the same majority.

Those who obtained "200" scores during the series were McDonald, of P., D., No. 1, who rolled 222; Hedges, of Michigan Drug, 212; Barry, of P., D., No. 2,

208, and Snyder, of P., D., No. 1, 204.

The scores:

P. D., No. 1	805	868	953
Nelson-Bakers	866	846	826
Michigan Drug	747	815	870
Ingram Co.	750	773	867
P., D., No. 2	847	775	877
Stearns Co.	807	843	760

In the Parke, Davis & Co. Interdepartmental League, there is a hot race for the leadership, the first three teams being separated by but fifty-five pins in forty-two games. Scientific is but two pins in the lead of the Chemicals, while the latter made a decided gain in the last series with the Pharmaceuticals. The record for the week:

Mechanical	752	854	718
Scientific	745	700	735
Publication	691	688	780
General Business	706	691	789
Pharmaceutical	799	762	791
Chemical	762	879	724

The standing to date:

	Total pins.
Scientific	32,179
Chemicals	32,177
Mechanicals	32,124
General Business	31,844
Publication	31,822
Pharmaceutical	30,813

TABLETS TAKE THREE.

St. Paul, Minn., Jan. 21.—The scores of the games bowled January 19, by the Minnesota Drug Clerks' League, follows, the Tablets taking all three:

Tablets	802	744	777
Lillis			211
Pills	685	702	628
Bodsgaard			178
Capsules	673	660	769

The Mortars, of the Druggists' League, took two games January 20, the third going to the Pestles. Score:

Mortars	784	674	836
Walter			225
Pestles	738	727	701
Aberwald			186
Spatulas	660	722	673
Everett			191

TALL WORK BY COCKED HATS.

St. Louis, Jan. 24.—The Retail Druggists' Coked Hat Bowling League is becoming the stellar "sport" page feature in its line. Recently every bowling night has resulted in some exceptional records.

First Secretary Fritz Neu made a score of 311 out of a possible 450. Next Gus Wehrlein, the former Carondelet druggist, made a 90 score in one inning. The next session, W. F. Aszman, the Arsenal street druggist, ran a score for the evening of 322, and thereby incurred the enmity of Mr. Neu, who thought he had the one evening score "inched." At the last meeting H. Delkeskamp ran a 90 score in one inning, but his work for the rest of the evening did not put him in the high average class. The last scores were:

Retail Druggists: Nelson-Bakers, 3; Meyer Bros., 2; M. C. Paints, 3; Eli Lillys, 2; J. S. Merrells, 4; Moffitt-Wests, 1.

TRADE SECTION

PENNSYLVANIA AGITATION.

Druggists and Manufacturers Wish New Pure Food Regulations.

THEY SEEK PERMISSION TO USE CERTAIN PRESERVATIVES AND COLORING MATTERS IN THE PREPARATION OF SODA FOUNTAIN SUPPLIES.—SODIUM BENZOATE FAVORED.

The associations of retail druggists in Pennsylvania have set out to secure a revision of the present so-called pure food law of that State in those particulars which pertain to the manufacture and sale of fruit syrups, prepared fruits and other fruit products used in the preparation and dispensing of soda water, carbonated beverages, and other so-called soft drinks. The proposed new bill will be submitted to the next session of the Pennsylvania legislature, and it is expected that it will become a law, as it has been endorsed by all branches of the trade.

The new measure is entitled, "An act to prevent the manufacture or sale of unwholesome fruit syrups, prepared fruits and other fruit products, and providing for the enforcement thereof." Its text is as follows:

SECTION 1. Any person, firm or corporation, who shall by himself, herself, or themselves, or by his, her or their agents, or servants, manufacture, sell, ship, consign, offer for sale, or export, or have in possession with intent to sell, any fruit syrup, prepared fruit, or fruit product, or any syrup whose flavor is derived from any bark or root, such as Birch, Ginger, Sassafras, or Sarsaparilla, or any plant such as Peppermint or Wintergreen, or any vegetable product, nut or bean, such as Chocolate or Vanilla, or other kindred products, such as herein described, or any admixture of such fruit syrups, prepared fruit or fruit products, which are or may be manufactured particularly for use in the preparation and dispensing of soda water, carbonated beverages, or so-called soft drinks, leers or ice cream, and containing in the original package or concentrated form, more than one-fourth of one per cent. of Sodium Benzoate or more than one-fourth of one per cent. of added color obtained from Cochineal, Carmine, Turmeric, Gudanor, Iodine, Saffron, Spinach, or any vegetable substances which are equally harmless, according to the United States, National or other standard Diagnostics, shall be deemed guilty of a misdemeanor and upon conviction thereof in the court of quarter sessions of the proper county, shall be sentenced to pay a fine of not less than fifty dollars or more than one hundred dollars, or be imprisoned in the county jail for not exceeding sixty days, or both, at the discretion of the court; but the use of such added substances in said proportions or less shall be and is hereby permitted. Provided, however, that nothing in this section contained shall in any way alter or affect existing laws regulating the sale of wines, spirituous or malt liquors, vinegar, or natural fruit juices. And provided further, that no added or artificial color shall be used in any product mentioned in this section, so that putrefaction, decay or other inferiority of a similar nature is concealed, or so that any article or product herein referred to shall appear other than it really is, or so as to have any other effect than to restore or supply the natural color or appearance of the fruit or vegetable substance from which said article or product is made.

The advocates of the measure publish

a strong series of arguments in its favor. They first protest high and honorable motives in their attempt to remedy the present law and claim that their efforts, if successful, will have the effect of establishing higher standards of purity and wholesomeness of fruit syrups and fountain beverages. It is claimed that the present laws inflict unnecessary hardships on manufacturers, dispensers, and consumers, because they are too stringent and sweeping, stopping legitimate trade in healthful and harmless articles of food and drink. "Further than this, the rulings heretofore established by which the application of the present law is determined, are such as to pledge irrevocable allegiance to principles and standards which are constantly becoming obsolete, being modified or refuted by later investigations of science, thus precluding the benefits of later discoveries and more accurate knowledge which has been and will be developed by scientific progress."

ARE AFTER STANDARDS.

The purpose and tendency of all pure food laws is endorsed by the supporters of the new bill as being in the right direction, but the object of the present enterprise, according to the statement, is "to establish more definite standards for the more efficient and equitable execution of the law and to insure a higher degree of purity and wholesomeness in all products affected by it." Stress is laid on the fact that the purpose of revision is for fruit syrups and soda fountain beverages only. "It will readily be understood," continues the published pamphlet on the subject, "that such goods are in a class by themselves, first because of the extreme dilution to which they are subjected before they reach the consumer, and second, because they do not constitute part of the daily diet of every individual like most other foodstuffs." On the contrary they are used "sparingly and at infrequent intervals." A careful explanation follows of the dilution to which such supplies are subjected necessarily, and it is stated that "as a matter of fact all fruit syrups, prepared fruits or other fruit products manufactured expressly for use in the preparation of soda fountain drinks are used simply as flavors."

All this is introductory to the first real argument that preservatives must be used in such goods. "The use of harmless preservatives is not prohibited" because "all substances used as food or drink, particularly those of a vegetable nature or origin, are liable to decomposition, putrefaction, decay or other dangerous chemical transformation. Thus the absolute necessity of preserving such articles of food or drink from the natural effects of chemical change, decomposition or deterioration is recognized and admitted by the law."

The use of sodium benzoate is therefore defended. Some of the arguments used in its favor are now given.

Sodium benzoate "when taken internally is eliminated from the system in the urine and perspiration, without any noticeable

injurious effect, although in nearly all cases a beneficial effect is likely to result, owing to the tendency of benzoic acid to prevent the formation of phosphatic deposits in the urine, but this would be only in the case of moderate doses of benzoic acid administered several times a day. It has been for many years one of the ingredients of the well-known household preparation called pargoric, administered for the alleviation of stomach irritation, which preparation is officially recognized by the United States, British and other Pharmacopœias. Sodium benzoate has no cumulative effect on the human system when taken continuously. As a preservative the quantity used would be so exceedingly small as to have no appreciable effect upon the system. Sodium benzoate is simply a combination of benzoic acid with ordinary soda, and is preferable to the free benzoic acid only because of its greater solubility in water and because it is more tasteless."

"The average dose of sodium benzoate as a medicine varies from 120 grains per day for infants under three years of age, to 360 grains per day for adults. The maximum quantity which may be used in fruit syrups, prepared fruits or other fruit products under the proposed enactment, would be equal to one-fourth of a grain for each eight-ounce glass of soda water, by which it will be seen that it would be necessary for a person to drink at least seventy-five gallons of soda water in twenty-four hours in order to get the maximum dose of benzoate of soda."

The argument, after mentioning the fact that benzoic acid is found naturally in certain fruits, claims that if it were used in larger quantities than specified in the new bill, it would injuriously affect the fruit flavor.

THE USE OF COLORING.

Going a step further, the supporters of the measure undertake to show why sodium benzoate should be used. It is claimed that fruit syrups and crushed fruits must stand open to the air for a considerable time when being used on a fountain. Consequently, they are likely to decompose. Therefore, a preservative should be used. Again, such preparations must be put up in the hot summer season, which makes it possible some deleterious chemical change before the process of manufacture is finished, which strongly argues for the use of sodium benzoate. It is even stated that its use is necessary. To the suggestion that sterilization and the use of sugar would solve all difficulties, the statement replies that such packages would be too bulky and expensive and would not even entirely do away with the danger of decomposition. Since the use of boracic acid not exceeding one-half of one per cent. is permitted by present laws, the use of sodium benzoate should certainly be allowed.

The second main division of the pamphlet issued by the advocates of revision is devoted to the question of the use of coloring matter. Starting with the hypothesis that there are two classes of colors, harm-

less and detrimental, the argument is advanced that there can be no objection to the use of the former on reasonable grounds. An address delivered by Professor J. H. Shepard, State chemist of North Dakota, is cited as proving that many colorings are harmless. But to the objection as expressed by him that their use may have a tendency to hide inferiority or to deceive the purchaser, the answer is given that the coloring is not used to conceal inferiority but "to prevent the seeming appearance of inferiority which does not exist, or to make the article appear to be what it really is, instead of what it is not.

COLOR DETERIORATES.

"To explain this more clearly, let us mention strawberry syrup or prepared strawberry fruit as an illustration. Everyone knows that the fruit possesses a naturally high color and that when either the fruit or the syrup is first put up it retains in some degree the natural color of the fruit, although it is deteriorated somewhat by the processing the fruit receives. But, however strong the natural color of the product may be, it soon fades to a dirty brown, giving it an unattractive and damaged appearance which is misleading and deceptive, quite as much so as the use of any color could be, and with the double effect that the consumer is prevented from buying an article which would be otherwise beautiful and enjoyable, and the manufacturer or merchant suffers the loss of trade. The use of a harmless coloring matter in a limited, minimum quantity as provided in the proposed act entirely obviates both of these unnecessary, deceptive and harmful effects and prevents the appearance of inferiority which does not exist, and instead of being used for the purpose of deception, it is in such a case used to prevent deception."

Further on the statement says: "Why then should it be made a crime to imitate nature by harmless means, or to reproduce nature in restoring or supplying the natural colors of fruit products, the color of which is lost or impaired in the process of manufacture? It is useless to contend that the natural and pleasing appearance of such products does not render them more palatable."

The amount of vegetable color used, it is shown, because of dilution, would be only about one part in one hundred and twenty-five for all soda fountain supplies and by the time it was absorbed by the consumer further necessary dilution would reduce it to one part in four thousand.

FLAVOR TOO STRONG.

Again, "if a sufficient amount of the concentrated syrup were used to give the beverage the desired color, the flavor would be so strong and the product so much over-flavored that it could not be partaken of, much less enjoyed by any ordinary person. It will thus be seen that the natural amount of essential flavor in a given product is not commensurate with the amount of natural color which the product contains, so that when such a product is diluted to a given strength of flavor, it is invariably deficient in characteristic color."

It is emphasized that the proposed amendment does not seek to legalize the use of any so-called coal tar colors. But some hint seems to be conveyed that the future may see them advocated, for some of them are claimed to be harmless.

As a desirable adjunct to the proposed measure it is shown that any violation of its provisions are easy of detection. "It is believed, therefore, that the entire measure as proposed will not only confer benefit by the privileges which it seeks to obtain, but will assist in the proper observance of the present law and should therefore receive hearty support."

In closing, the document alludes to the magnitude of the interests affected. There are about ten thousand dispensers of soda water in Pennsylvania, with annual sales of perhaps more than \$5,000,000.

CREDIT MAN AND HIS WORK.

The importance of credit is appreciated by every business man. Therefore, a practical work on this subject is of widespread interest. Such a book, and a good one, has recently appeared from the press of the Book-Keeper Publishing Company, Ltd., Detroit, Mich. The author is E. St. Elmo Lewis, a gentleman well qualified by experience to speak with authority. The basis of his theme is this definition of credit: "Credit is a transfer of commodities involving the return of an equivalent at a future time." From this Mr. Lewis draws the conclusion that "it is the duty of the credit man to be thoroughly acquainted with his collateral." The major portion of the book is an exposition of practical methods of doing this, working on the idea that "the basis of normal commercial credit is the demand for marketable goods."

There are twenty-five chapters, commencing with a history of credit, next defining the term, treating of business methods, competition's effects on credit risks, practical methods of tabulating statistics and collecting accounts, the legal side of the subject, and credit information systems.

The book contains some 300 pages, is printed on good paper, and is usefully illustrated, with specimen pages of several filing schemes and of various systems of books used by credit men to record the condition of customers. It should prove a useful and instructive work to all business men. Price \$2.

PILLS, THE AGE'S SYMBOL.

When in doubt the American takes a pill. A statistical job attempted the other day to compute how many pellets and tablets went down the American throat in a twelve-month, but his supply of figures gave out. When a man has to use millions for fractions even the mathematical expression of Mr. Rockefeller's riches looks unequal to a sandwich.

In the olden times the flagged youth threw himself on the earth for the revivifying touch of mother nature. To-day he takes tonics. The ancient strong man with his lever sought for a fulcrum on which he might move the world. To-day he takes tablets and lets the old world wag on. If the gods dined on Olympus last night, they would be haunting the drug stores this morning for pepsin.

One of the familiar passages in "Romeo and Juliet" is this:

"I do remember an apothecary—
And hereabouts he dwelt—whom late I noted

In tatter'd weeds, with overwhelming brows,
Culling of simples; meager were his looks,

Sharp misery had worn him to the bones."

See the apothecary to-day! A man of goodly bearing, a philosopher, a leading citizen, and very likely a bank director.

For though pills cost little, the billions of little make millions of profits. Nowadays the culling of simples has a new meaning.—The Baltimore Herald.

AFRICAN CINCHONA.

The first attempt at transplanting cinchona outside of America was made in Algeria. The plants came from the Jesuits of Cluzco and from the French consul at Bogota (1849-1850). These attempts did not succeed, owing to unfavorable climatic influences. Similar trials, on the contrary, gave a satisfactory result in the Dutch Indies. Moreover, in 1866 and in 1868, plants from Java were imported into Algeria and did not give a single satisfactory result.

In 1814, upon the advice of Roxburgh, the importation of cinchona acuticarpa was tried at St. Helena, but without success. In 1868 Chalmers made some new trials. He planted 5,000 cuttings of cinchona succubra, officinalis, calisaya, pahudiana and condaminae. At an altitude of 800 to 900 meters they thrived so well that their number was soon increased to 20,000; but the plantation was not taken care of; it deteriorated little by little and in 1883 there were at St. Helena only 156 trees, in bad condition.

At Tenerife (Canaries) cinchona was also planted with success in 1868. At Reunion satisfactory results were obtained. The first trials were made in 1885, and in 1894 there were on this island 90,000 plants of cinchona acuticarpa, officinalis, ledgeriana and calisaya in full production.

A trial at Maurice gave good results for some time, but was subsequently abandoned. In 1871, at Madagascar, cinchona officinalis was planted and has fared well.

The plantations started at St. Thomas (Portuguese possession) at an altitude of 1,000 meters, are everywhere composed of cinchona succubra. They grew splendidly and in 1893 234,416 English pounds of bark were exported from St. Thomas. They contain 5.45 per cent of total alkaloids, 1.40 of quinine, 0.90 of cinchonidine, 1.46 of cinchonine and 1.54 of amorphous alkaloids. These are, together with the German plantations of Cameroon, those which have the most promising future.—Nouveaux Remedes, from Apotheker-Zeltung.

"I came in to look at your cornucopia," announced the visitor.

The druggist, unduly sensitive, because of his Cyrano de Bergerac beak, hesitated. Reflecting that a cornucopia meant a horn o' plenty, he was duly insulted, and threw the first article handily at his insulter. It happened to be the pharmacopœia. "Thank you," muttered the man. "You're prompt, if not gentle," and he fell to perusing.

"So this is hell," ejaculated the shade of the druggist. Satan acquiesced. "Why?" "Well," quoth the shade, after a sniff, "as I'm damned, you've got a lot of good SO₂ going to waste." And straightaway he formed a Hellish company, capital unlimited, to manufacture H₂SO₄, forgetting for the moment the absence of the H₂O.

BULK PERFUME TRADE.

Said to Be Retired in Favor of Original Packages.

"SUBSTITUTION" THE REASON, SAY PERFUMERS—THE DEPARTMENT STORES, SAY DRUGGISTS.—CUT GLASS A BACK NUMBER.

Whether the decadence of the bulk perfume trade, which was an important sideline for the old-time druggist, is due to the advertising of special odors by the manufacturing perfumers, or to the apathy of the druggist himself is a question. It is a fact, however, that bulk perfume trade is steadily decreasing. The era of cut glass bottles, also a profitable side-line formerly, as containers for these bulk perfumes, is virtually over.

Speaking of the noticeable absence of cut glass bottles in the shops of to-day, an old-time druggist said: "The perfume business of America has certainly become an art. We are close to the French as producers of excellent scents. Our packages, bottles and labels of to-day are in my opinion, in many case improvements on the Parisian goods after which they are patterned. But the money making bulk trade of my day seems to be fast disappearing. We got from fifty cents to a dollar an ounce for violet, rose, patchouli, frangi pang and other forgotten favorites. A handsome cut glass container for the best girl's gift added considerable profit during a business year. To-day, those who buy perfume in bulk, say an ounce or so at a time, are in the minority. The great majority have favorite odors, French or American, and they purchase original packages whether they buy a quarter's worth or four dollars' worth. Is this as it should be?"

ARTISTIC PACKAGES.

Unquestionably, the progress of American perfumers is directly responsible for the retirement of much of the bulk trade. Where the perfumer formerly used lithographed or embossed labels only upon expensive goods in pound or half pound packages, he now realizes the value of the labels suggestive of contained odors and places them indiscriminately on even trial size bottles, selling at a quarter.

Most every druggist has a supply of the old fashioned "Triple Extract" labels, bearing a blank space for the name of the odor, which was either written in ink carelessly, or left blank. The patron who regularly purchased rose perfume noticed after a while the bulk bottle used. He became acquainted with the manufacturer's name. He specified that manufacturer. All of which is as it should be. The maker of a good article, whether it be perfume or a locomotive, is entitled to specification, and it is due him to receive repeats on odors or orders.

A prominent American perfumer said: "The reason for the small packages holding from three and a half drams upward, which bear facsimiles of the labels of the pound or bulk bottles which we put up, is the old one, substitution. It was no unusual thing with us to find a half pound bottle with trade scarred label, that had done service for years as a bulk container for a special odor made only by our firm. Other goods had been placed in these bottles; they masqueraded under our labels.

It was oftentimes unintentional. A bottle of violet or other odor might be broken. The perfume was poured into the stock bottle and was sold as our violet. Candidly it was as good, perhaps cost more than ours, but that paved the way for substitution. Understand, we have no objection to a druggist making his own bulk goods. In fact, we supply many druggists with gallon lots of our extracts for this purpose. They are the same as our special goods, too. So the reason that we bottle small lots of these special odors under our trade-mark is because we wish to reap the fruits of our legitimate advertising. The druggists are themselves responsible for the loss of profit. We naturally have to cover cost of special labels, etc., on the smaller vials, all of which tends to reduce the profit on the aggregate trade."

THE DRUGGIST-PERFUMER.

While the statement of the quoted manufacturer is acknowledged to be partially true, druggists call attention to the fact that the apathy of the pharmacist where the manufacture of his standard odors was concerned, has made it possible for the specializing perfumer to succeed.

One druggist who features regular odors under his own "litho" labels, said: "There is no patent on the perfume business. I don't attempt to compete with the French perfumer. I don't push my goods when a special maker is mentioned. But a call for an ounce of violet or rose perfume, without specification, gives me my opportunity. The violet which I sell I compound in ten minutes. But I allow it to age for several months. That's where the regular perfumer has us beaten. Like champagne, the older the odor, if tightly sealed during the ageing period, the better it is. I have a large demand for my violet by bulk customers. And here is a point: Never let your stock container become only half full. Don't have it entirely full, either. The discerning public say when they see the 'last in the bottle': 'Oh! haven't you a fresh bottle?'"

"I carry all the regular brands, also. Have to in order to compete with department stores. I don't agree with the manufacturer who considered substitution the cause of the use of trial size bottles. Department stores sell more of these small vials than we do. Why? Because the average department store perfume girl couldn't distinguish between four drams and an ounce on a graduate, in bulk sales. In the old days of only bulk and ten-cent bottles, these stores didn't bother with perfume other than imported brands. Look at the situation to-day. Special sales on perfumes; but prices —"

Here the interviewer objected. "The big perfumers have a schedule, have they not? Cutters are cut off."

The druggist snorted. "Yes, there is a schedule with some houses." He pointed to his perfume department. "I carry their goods because there is a schedule. But there are other manufacturers who have 'caught on' and they don't care a hang for the druggists. Their goods are featured, too, by these department stores. These schedule perfumers are all right. Some of 'em don't want department stores as patrons."

"It's a common thing nowadays, when anything goes wrong in the drug trade, to blame the dry goods stores. And in this

case, they really are to blame. What business have they to handle perfumes, anyway?"

THE OTHER SIDE.

The heads of perfume departments have something to say about the reasons for their success, for they are admittedly successful. A buyer for one large department store stated: "Yes, we push the druggists hard on perfumes. Bulk goods? What are those?"

After an explanation, she said: "Well, I don't know about that part of it. But I do know that it's the way we display the goods that makes the sales. Take Roger & Gallet's goods. We have a complete line. There's the R. & G. case; it contains only their goods. People can see them. Then they ask the price. It would be impossible in the regular drug store to give the space to them, if they had the capital to invest. They haven't the patrons to draw from, for one thing. Notice the placing of our department. It isn't by accident that it's on a store thoroughfare. Our aisles are streets; passers-by who are simply looking about, have no hesitancy in asking prices. There are no doors to open, no long waits for attention while the chemist is selling stamps or telephoning."

"We have perfumes under our own label, too," she continued. "But somehow, even on special sales, they don't move very well." Which was certainly an edifying admission.

Some druggists welcomed the absence of bulk trade, regardless of lost profits. One man said: "I've a perfume graduate somewhere about that's a curiosity. We used only the one graduate, whether we measured a whiff from the sandal-wood Orient or the delicate flower odors of France. More frequently we guessed at measurement. My regular one-ounce prescription bottles hold nine drams. We couldn't appear stingy, so we filled 'em up. I'm glad I'm rid of it all. There isn't much doing, anyway."

Query: Had that "whiff-laden" graduate anything to do with it?

AGEING OF PERFUMES.

However, the druggist can make his own perfumes. Formulas for regular flower odors are virtually the same. Concentrated oils may be purchased. Dilution and ageing do the rest. Many druggists purchase in bulk, as previously stated, simply labeling the goods. One New York store this year featured "own perfume" made by a regular perfume house, and the returns make it worth their while.

The American public knows very little about perfumes. Some of our best selling brands are said, by the French, to be atrocious. One special odor, in particular, a great seller, owes its success to an accidental mixture of a pungent Oriental perfume with a delicate lily of France odor. It was marketed under a trade name, simply to save the loss of the expensive flower oils. It "caught on." It is said the chemists were puzzled for a time, in fact, are yet, as to the reason it pleased.

The secret of the success of perfumes, say the makers of flower odors, is the ageing, and the use of cologne spirits, not alcohol, in the preparation of extracts and toilet waters.

A NEW INDUSTRY

Growing Cigar-Leaf Tobacco in East Texas and Alabama.

THE DEPARTMENT OF AGRICULTURE REPORTS SUPERIOR QUALITY, DUE TO ORANGEBURG SOIL AND IS FOSTERING THE BUSINESS.

The growing of cigar-leaf tobacco in East Texas and Alabama is attracting attention through the fostering effort of the Department of Agriculture.

The Bureau of Soils of the department is of the opinion that the tobacco leaf grown on the type of soil called Orangeburg sandy loam (a reddish or grayish sandy loam with a red clay sub-soil) possesses an unusually fine aroma and quality. This soil is most frequent in East Texas, but is somewhat prevalent also in Alabama.

The Bureau has not only investigated and experimented, but has planned to give, during the present season, expert advice and general supervision to those growers who wish it. The counties most concerned are Nacogdoches, Anderson and Houston in Texas and Perry in Alabama, for in these is found most of the Orangeburg soil which the department believes to be the best for the growing of this southern tobacco.

The importance of the development of this industry and the success of the bureau's work to the tobacco trade at large, and even to cigar retailers, can be seen from the following statement issued by the Department of Agriculture: "The 1903 crop is now being sold and distributed among the principal cigar manufacturers of the country, who express satisfaction with the leaf. It is the general feeling of the trade that this tobacco will fill an important place in the market, if produced in sufficient quantities and at reasonable prices. The tobacco being an entirely new product, and having at the present time no fixed status in the market, it is to be expected that its introduction will be more or less slow and tedious, and the growers of this Texas leaf must not at first look for the highest prices. On the other hand, judging from the character of the leaf grown and cured under the supervision of the Bureau, the prices should increase considerably as the trade becomes acquainted with the tobacco, and channels for its distribution become established.

"The value of this tobacco, as far as the bureau has informed itself to the present time, varies considerably, the prices for the finished product ranging from twenty-five to forty cents a pound, according to the grade and quality of the leaf, but the grower cannot expect to obtain at the outset more than fifteen or twenty cents for the unfermented leaf. From computations based on the past work of the bureau, it is estimated that the cost of growing the tobacco, under normal conditions, should not exceed ten cents a pound. The average yield is estimated to be six hundred pounds or more per acre.

"The tobacco grown in Alabama, while not considered quite so good as the Texas product, meets with much approval from the trade, but the leaf so far produced in South Carolina is pronounced less satisfactory, and while the bureau will continue its experiments in that State on a small

scale, in the hope that methods for the improvement of the leaf produced there may be discovered, it does not for the present recommend that the farmers enter into its production.

"In Texas and Alabama, on the other hand, the indications are so favorable that the Department of Agriculture, through the Bureau of Soils, will encourage the farmers to undertake the growing of the crop to a limited extent. As a preliminary step an effort is to be made to have a limited number of farmers undertake the production of a relatively small area of tobacco, with the advice and supervision of the bureau experts."

Several years ago the attention of the department was first called to the subject, and it was found the industry had assumed considerable proportions around Willis, Montgomery County, in East Texas. "An examination of the tobacco, made by the Bureau expert showed that some of the leaf produced was of excellent quality, surpassing in aroma any domestic leaf examined up to that time, but that the crop as a whole, for reasons not determined, was not such as to warrant the prediction of any phenomenal development of the industry along the lines then being followed."

When the exhibit of domestic tobaccos for the Paris Exposition was being collected by the Bureau of Soils, in 1899, the high quality of the Texas tobaccos again attracted its attention. But it was still uncertain "whether this quality was the result of the particular soil upon which the leaf had been grown, of the kind of seed used, of any special system of fertilization, or of care and skill in handling and curing."

Two years later this question was thoroughly investigated and the bureau found the special soil was the cause of the superiority of the East Texas product. Meanwhile, the industry had fallen on evil days. "From a maximum acreage of 1,000 acres planted in 1898, the plantings had declined to 506 acres in 1899, and thence to less than 100 acres in 1901; and the growers, although needing some crop, like tobacco, in which to specialize, had become very much discouraged."

Lack of knowledge among the growers as to the methods necessary to profitably handle and market the crop were assigned as the reasons of this discouraging state of affairs. Other surveys of the bureau having established the fact that the Orangeburg soil was widely distributed in East Texas, and in other Gulf and South Atlantic States, it seemed that the possibilities of developing a large and profitable industry, with care and right methods, were good. So the bureau has ever since been conducting experiments and seeking to promote the practical working and expansion of the raising of cigar-leaf tobacco in that region.

"Have you any ideal?" queried the customer.

"Yes, if you insist upon knowing, I have. My ideal is a questionless drug store. I—"

The customer grinned. "I mean a perfume," he managed to say.

The druggist lamely apologized, without correcting the customer's French. "\$3.60," he said, with inward satisfaction, as he handed out a bottle of Ideal.

CHINESE CAMPHOR TRADE.

A recent British consular report contains this information: "It is only of recent years that any attempt has been made by the Chinese to utilize the resources which the province affords in the way of camphor. Camphor trees have been known to abound in the mountainous regions of the West, but no systematic efforts had ever been made, either by the Chinese government, or by the natives, to turn them to account until 1902, when camphor made its first appearance as an export in the customs returns, amounting to 222 piculs, valued at 11,228 Halkuan taels (£1,460). During the past year there has been a considerable increase, which would unquestionably have been largely augmented had it not been for an arrangement come to between the provincial authorities and a certain syndicate, whereby the latter acquired the exclusive right to traffic in this article, which had the effect of curtailing the supply, owing to the interference exercised by the syndicate, through the Chinese authorities, with the manufacture of camphor by the natives in the interior and its transport to the coast. British merchants who had already embarked in the trade maintained their right to carry on the business without obstruction, but their attempts were little more successful than those of the native dealers. Cargoes were confiscated and the trade generally disorganized, and the matter has only been satisfactorily settled during the present year. Prices ruled high in Hong Kong, which increased the bitterness of feeling on the part of the British merchants, as they saw the prospect of a lucrative business slipping from their grasp.

"Future returns should show a great increase, as it is said that camphor can be produced at a very reasonable rate within the province, and there is an ever-growing demand for it on the home markets. It is largely used in the manufacture of smokeless powder and celluloid articles."

SUBWAY CIGAR STANDS.

The company controlling the news stand privileges in the subway is now installing cigar stands. Many are already in place and within a few days the sale of subway cigars will have commenced. Whether the new movement is an underground branch of the United Cigar Stores Company or not is uncertain. The enterprise is, however, of sufficient importance to have aroused a storm of protest from small dealers throughout the city, who say the use of public utilities for private gain should be stopped at once, before subway barber shops and manicure parlors get a foothold. Were smoking permitted on subway trains, the cigar men would not object so much, but they claim that the stands are a convenient arrangement so that patrons can purchase the evening's supply of cigars upon leaving trains, especially in the home districts, where the cases are placed at exits.

"What does N. A. R. D. stand for?" asked the man with the wooden leg.

"Not a Ridiculous Demand," answered the pharmacist, with an eye to the future.

PRESCRIPTION PRICES.

The Big Downtown Drug Stores
Have a Low Price Scale.

ACTUAL PRICES IN NEW YORK CITY.
—BULK OF BUSINESS MAKES CLOSE
FIGURING POSSIBLE. — SMALL
DRUGGISTS KICK ON SHOPPING.

Comparison of price schedules on ordinary prescriptions as dispensed by the Hegeman Corporation, of 200 Broadway; J. Milbau Sons, 183 Broadway, and Reid, Yeomans and Cubit, of 140 Nassau street, prove that quick sales and small profits are the rule.

Frank E. Falkenberg, a Chicago druggist, is quoted as giving some data of original prescriptions filled at his store. In an interview with "Notes," he says concerning prices:

"Four-oz. mixture, 50c.; 3-oz. mixture, 50c.; 15 2-gr. quinine capsules, 50c.; 2-oz. mixture, 35c.; 3-oz. mixture, 50c.; 8-oz. sod. phos., 65c.; 15 powders, 80c.; 3-oz. mixture, 45c.; 3-oz. mixture, 45c.; 15 powders, 65c.; 22 powders, 65c.; 4-oz. powders, my own, 65c.; 3-oz. powders, 65c.; 3-oz. powders, 50c.; 6-oz. powders, 90c.; 4-oz. powders, 65c.; 3-oz. powders, 65c.; 20 capsules, 65c.; 2-oz. mixture, 40c.; 10 powders, 45c.; 8-oz. mixture, 85c.; 4-oz. mixture, 50c.; 4-oz. mixture, 65c.; 20 capsules, 65c.; 10 capsules, 50c.; 15 capsules, \$1.25. Total, \$16.10; two-thirds of same gives a profit of \$10.73, or 200 per cent. Goods cost \$5.36; under the usual system of charging only 100 per cent. over cost the druggist earns \$5.36, whereas I earn \$10.73. The difference is just the difference between a paying and a 'bum' business."

He also quoted a price of 65c. on a prescription for one dram of phenacetin in fifteen powders, and a fifteen capsule recipe brought \$1.25, its cost being 41c. "In none of these specific cases did the customer object to paying the price charged; all well pleased," he adds.

New York druggists, when shown this leaf from the Chicago druggist's prescription record said: "Well, he's a mighty lucky man. Admitting that we ought to get more for prescriptions, we haven't the courage to ask sixty-five cents for a dram of phenacetin in fifteen powders."

Inquiry shows that the usual rate on this latter prescription ranges in this city from twenty-five cents at the Hegeman Corporation Stores to sixty cents in an uptown ultra professional store.

DOWNTOWN PRICES.

The schedule quoted by General Manager Ramsey, of the Corporation, Mr. Ennis, of Milbau's, and Mr. Cubit, of Reid, Yeomans & Cubit, differs only slightly. On ordinary prescriptions the prevailing rates are: Two-oz. mixture, 25 and 30c.; 3-oz., 30c.-35c.; 4-oz., 40c.-45c.; 8-oz., 65c. One dozen 2-grain quinine sulphate capsules on prescription bring in the stores quoted, 25c.; ointments, 25c. one ounce; 35c. two ounces, and 50c. for four ounces. Prescriptions for \$1 articles, such as Ovaferin, Peptomangan (Gude), etc., original bottles, from 80c. to \$1, 85c. being the usual figure.

An uptown druggist had a shopper's prescription calling for two drams each of salophen and phenacetin, in twelve powders. He priced it at \$1.50, figuring the phenacetin and salophen to cost net sixty cents. The prescription was dispensed by another druggist for \$1. "This firm," said the one dollar and a half man, "buy a special quantity of drugs like salophen, bringing its cost down to 75c. an ounce. Therefore, they can beat me when they figure first cost on such articles."

PRICE EACH ON ITS COST.

S. Albert, the Lenox avenue druggist, said, speaking of schedules, that there ought to be none. Each prescription should be priced on its cost and labor. He showed prescription prices as quoted by druggists who follow a rule, to be a losing proposition in the end. "A man," says he, "becomes accustomed to quoting regular prices after a preliminary glance at the size of the mixture without a thought for the individual equation, and frequently finds the mixture priced below cost."

While the prices quoted in New York are those prevailing with the big stores, they by no means typify existing conditions.

"The druggists in the downtown district, counting financiers, brokers and wealthy Wall street men as their patrons, get these low prices. How much harder must it be for the East Side druggists to get prices relatively higher, from the poor?" asks an Eastsider.

The bulk of business done in the three big stores quoted consists of copies, or "t. i. d." prescriptions, showing that the corner druggists still supplies hurry calls. It is unquestionably the shopping instinct that is responsible for these quoted low prices. These stores are closed in the evening, therefore, business must be crowded into the shorter hours.

The commuter from Jersey or Bronx way pockets a prescription copy, leaves it at one of the stores which he passes on the way to his office and calls for it when homeward bound. Why does a busy man burden himself with these minor affairs? Because he considers his home neighborhood druggists incompetent? Unlikely. It's because he thinks he gets the medicine cheaper.

FIGURE THE PRESCRIBER'S FEE.

The writer recalls an experience that would tend to prove that schedule pricing without judgment loses customers, strange to say, because the druggist asks too little for prescriptions. A prominent physician, a specialist on gastric troubles, writes a prescription for a bulky powder containing ginger, subcarbonate of bismuth and sodium bicarbonate. The cost is merely nominal, yet some druggists get one dollar for the prescription. The writer, unaware of the physician's reputation and consequent consultation fee, asked the usual price, thirty-five cents, and was informed that it was too cheap. "Had it before," said the physician, "and I paid \$1.50 for it." So the patron must be counted in pricing prescriptions.

The doctor who charges five dollars for a consultation and writes for twelve quarter-grain calomel tablets, should at that rate write a prescription worth fifty cents at least; therefore, the discerning drug-

gist gets the fifty cents, which is as it should be.

"DRY GOODS" PRICES.

The retail pharmacists are frequently called "calamity howlers." "Why not?" asks one man who cites the following: "A prescription calling for twelve one-sixtieth grain strychnine tablets was left with me. I priced it at thirty-five cents. The party ordered some other goods which I did not then carry. I lost that prescription and a sale. The department store that put it up lost the good will of the prescriber, in fact, earned his enmity. Why? Well, the wise pharmacist there handed out an original package of one hundred tablets, price twenty-nine cents. The patient took the twelve as directed, and ultimately finished the bottle to save the tablets. Doctor wanted only systematic effect of strychnine, and obtained instead a characteristic 'strychnine heart.' He blamed me for letting the prescription go to the department store."

That little story perfectly illustrates the trouble with the prescription business. Commercialism is rampant. Not how good, but how much, is the query. Though the smaller druggists endorse Mr. Falkenberg's statement that the drug business to-day is a condition, not a theory, and that higher prices are necessary, they unfortunately cannot admit with him that they are sufficiently organized to combat existing conditions. These men point to the difficulty of organization with purely commercial interests at stake and urge that the professional side will remain the same while the minor bickerings over plans to organize the trade, continue.

SERIAL NUMBER PRESCRIPTIONS?

Several druggists who are familiar with the business of these big firms say that the success of the serial numbering plan in New York City will directly increase prescription prices, because: the "big fellows," if they join, will have to get fair prices on patents. A legitimate profit there will do much to discourage cuts on prescriptions.

"The excuse 'we have to cut on prescriptions in order to do a large bulk of business, thus overcoming the loss on patents,' won't go then," said an "organized" druggist.

"If they are in the fold on patents we'll soon win 'em over on prescriptions, too, and then druggists will be able to get the trade in which they are entitled, prices being regulated properly. It's the 'hogishness' of the druggists, myself included, that is responsible for existing price conditions. We hate to see the 'other fellow' do any business. I've reformed. All I want is my share."

The gentlemanly solicitor rang the bell, and to the responding housewife, began: "Madam, allow me to show you the greatest work of the age, a reference work that answers every conceivable question; tells the time of day without a clock, gives a complete history of the rise and fall of the Roman Empire, tells the house numbers nearest to all subway stations; in short—"

"Don't need it," briefly answered the lady, as she pointed to the door plate—"Blank, P.H.G." "Folled again," hissed the agent, as he read.

REOCCUPY BURNT DISTRICT.

Nearly All Baltimore Druggists Returning to Old Locality.

One of the retail drug firms which was burnt out in the great fire will move next week, back into its old location. This is the firm of Thomas & Thompson, which, since the conflagration, has conducted the pharmacy formerly owned by the late Adam Gosman, southwest corner of Charles and Mulberry streets. The firm will occupy its handsome six-story concrete and brick building at the southeast corner of Baltimore and Light streets, which is one of the most imposing structures in the burnt district, and will there take up the entire first floor.

The structure is in the style of the French Renaissance, with mansard roof and presents a handsome appearance. The upper floors will be occupied as offices and by the laboratory of the firm. The furniture of the pharmacy will be admirably adjusted to the proportions of the space, and the soda water fountain will constitute one of the show pieces of the city. All the equipment will be made to order and of a design in harmony with the entire establishment.

Another drug store to move back to its former location soon is that of the Hablston-Brickman Drug Company, formerly the Hablston Pharmacy, which was at the northeast corner of Gay and Baltimore streets up to the time of the fire and afterward secured a temporary location on Gay street, a few doors north of the corner. A substantial and commodious structure has been erected on the corner and the pharmacy will resume occupancy of its old quarters. Of course, everything will be spick and span and glistening with plate glass as well as polished furniture. A soda water fountain of handsome design will be one of the notable features.

In connection with this subject, a reference to the cost of fixtures possesses some pertinence. Unlike the furniture and shelving to be found in retail stores, that of wholesale establishments is plain and substantial rather than showy; yet it runs into money to a degree that will surprise persons not familiar with the subject. Thus, one wholesale firm which will occupy a new warehouse has contracted for shelving and fixtures apart from dumb waiters and similar appliances, at a cost of not less than \$17,000.

ADVERTISING COMMENTARY.

Generalities are dangerous, but it is almost safe to say that all retail druggists should advertise in local newspapers. In an article on this subject, read by Mr. W. H. Watson, before the Tennessee Pharmaceutical Association, the following points were strongly emphasized.

Change your advertising reading matter frequently and use as many new ideas (new to your locality) as you can.

Be persistent. You cannot expect immediate results. The day after the appearance of your first notice do not expect your store to be crowded with buyers. Look on advertising as an investment which will yield good returns, but only in time.

Feature one article at a time and do not attempt to jam too much in small space.

Where several articles are pushed in the same advertisement, the reader becomes confused and loses interest. Impress one idea indelibly on his mind, not a confused jumble of suggestions.

Truthfulness in advertised claims about offered goods is insisted on by Mr. Watson. He wisely advocates the constant use of other styles of advertising in conjunction with that in newspapers.

Get all you can in results out of your show window. It is a valuable asset. Study window display methods and change your features at least once a week.

Use a mailing list steadily to send circulars, pamphlets and booklets to your customers. Don't neglect to hold on to old friends. For country druggists in districts where there is the rural free delivery system of the post office, a great opportunity is offered for this. On this subject Mr. Watson says: "Let the mailing list embrace every family within trading distance of your store. A circular or a booklet is more personal than a newspaper ad. can be. Besides it reaches the people and they will be influenced by it. This may appear an expensive method, but there is no other way in which you can directly reach just the people you are after, and all of them. . . . The Rural Free Delivery offers a reliable and economical system for distributing circulars, etc. The carrier cannot distribute your ad. matter, but he is privileged to carry passengers. Employ a boy and send him with the carrier on his route, and have the boy distribute your ad. matter as the carrier distributes his mail."

Enclose printed matter in all packages sent out from your store.

Write each physician in your neighborhood a letter once a month, pointing out the completeness of your stock, that you carry the newer preparations, and guarantee high grade prescription work.

Make your store attractive, first being sure it is scrupulously clean.

Feature the fact that orders given over the telephone to your store will receive prompt attention and that the goods will be quickly delivered free of charge.

WESTERN ENTERPRISE.

In the Letter Box this week, appears a communication from a Washington druggist, which mentions a circular he issued at Christmas time, a copy of which was also sent The Era. The make-up of this circular is clever and shows decided enterprise in preparing such an announcement in a town of but eight hundred inhabitants. Judging from the figures of receipts quoted in the letter, it must have brought paying results. There are four pages. The type is of clear face and the display lines are well chosen. The announcement begins: "Early Hints for Christmas. A List of Suitable Presents You Can Buy at the 'Christmas' Drug Store." After a short generality, toys are mentioned. The paragraphs are short and clear cut. At the bottom of the first page appears: "The Inside Pages of This Circular Will Interest You." The inner pages carry two headings, the four sections playing up the lines appealing to men, boys, women and girls. On the last page candies, jewelry and watches are featured. The whole is free from extravagant statements and is exceedingly good taste.

GIRLS AS JUNIOR CLERKS.

Works Like a Charm, Says Mr. Faber—Much More Reliable.

If your boy is no good, send him away and hire a girl instead. That is what Sidney Faber has done and from his own account, it works like a charm.

"It's only an experiment," said Mr. Faber, "and all my friends are watching closely for the outcome. They have all had trouble with juniors and I dare say they will follow in my footsteps if my venture is successful.

"There never was a druggist yet who didn't have trouble with his boys. Boys are so apt to be slipshod and lazy; more often than not they smoke cigarettes. Give a boy an order to take out and he won't come back until he has finished his cigarette. Now, I grew tired of firing boys and I determined to strike out with something new. The girl is the result.

"She's about sixteen years old and she does everything that a boy can do—only one hundred per cent. better. Just look at the cases—and the soda fountain."

Metal and glassware sparkled in the light; cups and other utensils were neatly arranged and all bore the unmistakable signs of a feminine touch.

"Now, the cash register," said Mr. Faber.

"I see you've bought a new one," remarked the interviewer.

"That isn't new. It's the same old cash register, only it hasn't been scrubbed and polished that way for seven years; and I take pretty good care of it, too.

"Well, there isn't a thing that the boy used to do that this girl can't do better. She cleans the windows; she even carries orders, and that without wasting any time about it. Of course, heavy work, like attending to the furnace and such things I have always done myself, because that's the only way of making sure that it's done right.

"There's another thing about a girl; she is very much quicker to 'catch on' when it comes to helping out in an emergency. She looks neater and has cleaner habits.

"So there you are. Whether my experiment will turn out well I can't say as yet, but I think it will. Meanwhile, I appreciate the fact more than ever that 'cleanliness is next to godliness.'

THE GENIUS.

The affable stranger buttonholed David Belasco. He had just witnessed the new Leslie Carter production of *Adrea*. "Now, look here, Dave," he began, "that thunderbolt business can be done away with. The idea of a thunderbolt restoring eyesight to the blind! Only my tonic can do that. If you'll fix up that act a bit, and let the heroine cry 'At last I can see, thanks to Curen's Tonic, I'll give you a thousand dollars a performance.'"

Belasco smiled. "But," he objected, *Adrea* loses her sight again at the end."

"That's so," agreed Curen. "Well, let her say: 'If I had only followed Curen's directions. That'll let me down easy.'"

Only time will tell whether the deal was consummated.

MR. MERCK PROTESTS.

Distinguishes Between Food Preservation and Adulteration in Legislation.

We reprint below part of a letter addressed to United States Senator Dryden, of New Jersey, by George Merck, of Merck & Co., this city. Mr. Merck contends that a distinction should be made between food adulteration and food preservation. He writes: It is my purpose in this appeal to you to stimulate your personal interest in the question of legislation on the subject of food adulteration and to call your particular attention to the popular error and misapprehension thereon which confounds food adulteration with food preservation.

The United States Senate has now before it for enactment house bill No. 6295, popularly known as "the National pure food law." This bill, while it has a laudable underlying motive, is so sweeping in its terms and so uncertain in its scope that it should not be passed without calm deliberation as to its ultimate consequences, and certainly not without further important amendment.

I do not intend here to burden you with dry detail or elaborate statistical data, but simply point out the seriousness of the whole matter and to bespeak your serious consideration of the questions involved.

Such legislation, if hastily or inadvisedly enacted, may work great harm directly or indirectly upon the commercial interests involved and upon the well being of the State by affecting the food supply of the country.

The great point to be constantly borne in mind at every step in the consideration of pure food legislation is that there is a very important distinction to be drawn between the use of food adulterants and the use of food preservatives.

Food or drug adulteration is the substitution of spurious material for any of the normal ingredients of a food, a food preparation or a medicine.

Food or drug preservation is the addition of an ingredient to pure and honest foods and medicines for purposes of conservation.

In seeking to correct a serious abuse the reformer and the public have, through overzealousness and the lack of intimate knowledge, overshot the mark, and public opinion is hazy upon the important distinction to be made between food adulteration and food preservation, which I have pointed out above.

Food adulteration is a crime and must be stamped out.

Food preservation is a necessity and must be permitted.

Existing economic and social conditions, with our large population and its distribution, make the use of food preservatives indispensable.

Eliminate the legitimate and honest employment of food preservatives to-day and you will be confronted by a food problem that will represent so serious an aspect that mere food adulteration, reprehensible as it is, will sink into utter insignificance.

The standard food preservatives, when themselves pure and unadulterated, are harmless. For instance, a chemically pure

salicylic acid or sodium salicylate, free from deleterious adulterants, can work no harm, for they are used in such infinitesimal quantities for the purpose stated that the amount consumed with food ingested for a month would not equal a fair average dose when these substances are administered medicinally.

The danger of ptomaine poisoning following the consumption of decaying foods is real; the harm supposed to result from the use of preservatives is purely imaginary.

Apart from the broader question of the people's food supply, the proposed legislation has also an important industrial bearing that deserves your thoughtful consideration.

The chemical and food industries of the State of New Jersey are deeply interested in this problem and the legislation pertaining thereto.

A SELF-RECORDING THERMOMETER.

As the subject of temperature is a common topic of discussion, a self-recording thermometer is of great advertising value to a druggist. Such a thermometer placed outside a store, near the show window, will always attract a crowd of those eager not only to know the temperature at the time, but how cold or hot it has been at a certain hour. The use of the Draper Self-Recording Thermometer will soon repay its cost by drawing custom to the store and attracting observation to the show window.

The thermometer gives a correct and continuous record in ink of the temperature on a weekly chart. It is very simple in construction, and consists essentially of six parts—an iron frame, a clock movement, a metal disk, a pair of bimetallic thermometer bars, a lever with a pen attached to its upper end and a case. The temperature is traced automatically on a paper chart which is divided into 150 concentric circular divisions, representing a scale of degrees, Fahrenheit, from 20 below zero to 110 above, and 168 radiating lines to represent the days and hours for a full week. The twelve hours of every night, from 6 p. m. to 6 a. m., are shaded so that the distinction between night and day is very marked. The clock movement rotates the metal disk carrying the paper chart, and at all times the pen indicates the correct day of the week and hour of the day. The metallic thermometer bars are, perhaps, the most interesting part of the instrument. They consist of two thin sheets of different metals, brass and steel, fastened together, about ten inches long and one inch wide, having distinct expansive power, the same in principle as

the chronometer balance of a fine watch, and they are therefore absolutely positive in their action. The upper ends of these bars are fastened to the iron frame which is the base of the instrument, and the lower ends connect with an axis carrying the arcs and the lever with the ink pen attached to it. The pen is fed once a week with two or three drops of special ink. An increase of temperature causes one of the metals of the bi-metallic bars to expand more than the other, while with a decrease of temperature the same metal contracts more than the other, so that the bars are caused to bow in one direction or the other, as the temperature changes, and their motion actuates the axis carrying the lever with the ink pen. Thus, the variations are continually recorded on the chart, and it will be seen that the temperature is compelled to write its own record.

The working parts, which are lettered for convenience, are shown in the diagram: A, clock arbor; C, clock box; D, ink pen; F, F, arcs; L, L, recording lever; N, N, metallic thermometer bars; P, P, platinum wires; R, piece for holding thermometer bars to base; S, S, screws for adjusting recording lever; W, W, winding arbors of clock; X, X, screw holes for fastening instrument in place.

The thermometer is standardized and warranted, and requires little or no attention, save two or three minutes once a week to change the chart, wind the clock, and feed the pen within. It is attractively and substantially made, and considering the faithful manner in which it correctly and uninterruptedly records the temperature, it should commend itself to every live druggist as a valuable and continually interesting advertising medium. There are two sizes, 14x20 inches, and 9x14 inches. The former having a thermometric chart 1 1/4 inches in diameter, and the latter, one 8 inches in diameter. The prices are \$30 and \$20 each, respectively, and we understand there is a special discount to the drug trade. The Draper Manufacturing Company, 152 Front street, New York, are the manufacturers.

"Man's inhumanity to man makes countless thousands mourn," quoted the druggist.

"Meaning Mann and the Fabefabrikren Company?" queried his friend.

"No; why?"

"Well, countless thousands (of dollars) have shed a good many tears already, where they would do the most good. At that, I hear with the passing o. The bill an order was given for a 'we mourn our loss' wreath. Quit talking business."

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions.

TRANSVAAL TAXES ALMANACS.

Pharmaceutical manufacturing concerns should note that the Transvaal government has decided to collect duty on all almanacs imported into that country at the rate of ten per cent. ad valorem. This will, of course, bear most heavily on patent medicine houses. To balance this, however, comes the announcement that the government of India has decided to admit duty free all trade catalogues and circulars which come by parcel post, singly, or in packets.

"Hear you've resigned from the Board of Pharmacy?"

"Yes," wearily answered the druggist. "Lost all my friends in the drug trade, so now I'm going to get acquainted with my customers." And as a starter, he washed the glass in his windows, so he could see out.

A FRIEND INDEED.

The success acquired by the Fischer Self-Adjusting Bunlon Protector is said to be due to its general effectiveness and the instantaneous manner in which it alleviates the distressing pain to which people afflicted with bunions or enlarged toe-joints are subjected. The protector is a simple and durable leather shield, soft, pliable and so constructed as to readily adjust itself to any foot, building about the diseased and inflamed part, a wall of protection. Two sizes only, are manufactured, it having been thoroughly demonstrated to the manufacturers that these are sufficient to answer all requirements, no matter how

complex the case may be. The protector is not only simple, but inexpensive, selling singly or in pairs, and but a very limited stock is necessary to keep the dealer fully equipped for any emergency. It is made by the Fischer Manufacturing Co., of Milwaukee, to whom all interested parties should send for further particulars and samples.

He Will Control Larger Difficulties.

Fritz, the druggist's boy, was on his way up Broadway with a load of empty cartons, tied into two immense bundles. A truck, moving leisurely between the street car tracks in the same direction, was a challenge to youthful enterprise, and a scramble to lift the huge bundles upon the projecting tail followed. An insistent car clanging on behind, a jolt of the truck to one side, and an imperfect string left Fritz standing in the street, among sundry dozens of cartons scattered on the track, with the other half of his load on the tail of the truck disappearing in the distance.

Here was a situation demanding quick judgment and prompt action. Did Fritz hesitate? Not a fraction of a second! Stooping until his snub nose almost touched the trolley slot, he swept the track clear with a mighty sweep of his outstretched arms; then dodging among cabs and wheels, he recovered the bundle from the truck, and before the car had disappeared, he was back calmly tying up the scattered cartons, oblivious alike to the cheers of grown-up loungers and the jeers of newsboys.

If you care for a window display it will certainly pay you to read the advertisement of the C. I. Mond Co., in another part of this journal, and see what the expenditure of one cent will do. Better have one, as it makes business good.

MARKET REPORT

BUSINESS INCREASING.

A Number of Small Price Changes,
Mostly Upward.

FIRM MARKET WITH IMPROVING DEMAND AND ALL INDICATIONS POINT TO CONTINUANCE OF SATISFACTORY CONDITIONS.

New York, Jan. 23.—The feature of the situation is the improvement in the demand from consumers. Leading jobbers report a marked increase in the number of orders received since about the fourteenth of the month. The tone of the market holds firm and while a number of small price fluctuations have occurred during the week, they are not of vital importance, and are usually upward. Thus, the stability of conditions favors a further expansion of buying. The scarcity of native drugs causes further advances in golden seal and senega root.

OPIMUM.—Increasing firmness is manifested in all markets because of more cold weather in Smyrna and the report that the sowings are only 25 per cent. of the amount for this same date of last year. Large stocks abroad, however, operate as a drag on the natural buoyancy of prices. The consumptive demand holds good. Jobbing prices remain unchanged at \$2.85@3.00 for nine per cent., and \$2.95@3.10 for eleven per cent. Powdered, \$3.75@4.00 for thirteen per cent., and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—Except for an increase of demand from consumers, no feature has developed. The market is firm in sympathy with opium. Jobbers still quote \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½ oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The tone of the market is steady, but a short while ago it was firm. For although the demand has improved and Java cinchona shipments are smaller with lighter offerings at the Amsterdam auction on the 19th, still prices at that sale declined to 6.15 Dutch cents on the average. Values are, however, unaffected by such a slight decline, and jobbers are still quoting 23@23½¢. for bulk in 100-oz. tins, 23½@24¢. in 50-oz. tins, 24@24½¢. in 25-oz. tins, 25@25½¢. in 15 or 10-oz. tins, and 30@31½¢. in ounce vials, according to brand and amount.

MENTHOL.—A considerable augmentation of spot supplies has caused primary dealers to offer the commodity down 10@25¢, and jobbers have consequently lowered their prices to \$3.35@3.60 for crystals per pound and 30@35¢. per ounce.

CASTOR OIL.—Manufacturers have generally announced an advance of half a cent. in prices, because of the higher cost of castor beans, and the jobbing market has risen in sympathy to the following: A, A, barrels, 11@11½¢.; cases, 11½@12¢.; 5-gal. cans, 12@12½¢.; crystals, barrels, 12@12½¢.; cases, 12½@13¢.; 5-gal. cans, 13@13½¢., all per pound.

GOLDEN SEAL ROOT.—The cumulative effects of the scarcity of supplies has forced another advance and jobbing prices now are whole, \$1.95@2.05 per pound; ground, \$2.00@2.10 per pound, and powdered, \$2.05@2.15 per pound.

SENEGA ROOT.—The market is remarkably bare of supplies and as is the case with other indigenous drugs, the crop shortage can hardly be remedied for some time to come. Prices quoted by jobbers have risen to, whole, 95¢.@\$1.05 per pound, and powdered \$1.08@1.18 per pound.

PIROGALLIC ACID.—The firm attitude of producers, due to the frequent advances in nutgalls, has affected the secondary market, and jobbing values have been advanced to \$2.25@2.35 per pound and 21@26¢. per ounce.

BALM OF GILEAD BUDS.—These are in better supply and this causes an easing of jobbing prices to 50@55¢. per pound.

CANARY SEED.—A slightly easier market results from freer offerings. Jobbers have lowered quotations to the following: Sicily, bag, 6@6½¢.; less, 5@10¢.; Smyrna, bag, 5½@6¢.; less, 8@9¢., all per pound.

CARNAUBA WAX.—The crop shortage advances values once more. Prices quoted by jobbers are now up to 38@41¢. for No. 1, 36@39¢. for No. 2, and 35@38¢. for No. 3, all per pound.

STRAMONIUM SEED.—More liberal offerings are responsible for a lowering of jobbing figures to 22@27¢. for whole, and 28@33¢. for powdered.

ANGOSTURA BARK.—Spot supplies have been increased considerably recently and offerings by holders have consequently become free. In the adjustment jobbing quotations have sagged and now are, whole, 50@55¢.; powdered, 55@60¢. per pound.

BERGAMOT OIL.—The strength of foreign markets creates an advance here and jobbers are asking \$2.65@2.70 per pound.

CAJUPUT OIL.—An increase of offerings makes reduced jobbing prices 85¢.@\$1.00 per pound.

COTTON ROOT BARK.—The market has absorbed well the offerings of new crop and has firmed from the recent decline to the following, according to jobbers: Whole, 30@35¢.; ground, 33@38¢., and powdered, 35@40¢. per pound.

SODIUM BICARBONATE.—Jobbers have raised prices because of better demand and now quote Natrona, keg, 2½@3¢. per pound, and less, 4@6¢. per pound.

SPIRMECETI.—The strength manifested in other markets makes jobbers firm in the recently advanced prices of 30@33¢. for lump, per pound, and 31@34¢. for kags, per pound.

SASSAFRAS BARK.—Scarcity of supplies has forced jobbing prices up to 22@27¢. for whole, per pound, and 27@32¢. for powdered, per pound.

CACAO BUTTER.—Freer offerings produce a jobbing decline and present prices are, box, 36@37¢. per pound, and less, 40@45¢. per pound.

According to a Louisville, Ky., druggist, the people of that city consume more cough syrup yearly than is the case in most towns. It is computed that the 200,000 inhabitants consume 800 barrels of it yearly, or one pint each.

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put the Era on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list editions.

Buffalo Dental Mfg. Co., 587-89 Main street Buffalo, N. Y.—Catalogue gas, gasoline and kerosene burning appliances, chemical and assaying apparatus.

Ednur Pharmaceutical Co., St. Louis, Mo.—Proprietary medicines.

The Roessler & Hasslach Chemical Co., 100 William street, New York.—January price list, chemicals.

The Stein-Gray Drug Co., 230-32 E. Fourth street, Cincinnati, O.—"Drugs and Sundries" for January.

NO. ILL. COLLEGE OF OPHTHALMOLOGY.

The January attendance at the Northern Illinois College of Ophthalmology has been very satisfactory so far, the night class having begun its work on January 10, with forty-one students. Some of the matriculants are: A. G. Erlkaon, Chicago; C. A. Tiden, Chicago; M. R. Onelius, Chicago; C. W. Prickell, Elmer, Mo.; R. G. Merrill, Iowa; S. W. Weeks, S. C.; E. C. Brewer, Chicago; A. A. Thomas, Chicago; Geo. Rubenstein, Portland, Oregon; John Woollett, Chicago; John Levelt, Chicago; C. A. Melgs, Chicago; M. Cohen, Chicago; Fred Maier, Chicago; F. K. Malenstrom, Chicago; Wm. N. Link, Chicago; Elmer C. Kunz, Texas; Herbert Gardner. The faculty have invited those who are interested in optics to attend the week's exercises of the Alumni Association from February 20th to the 24th, inclusive. The programme will be ready in a few days.

THE GERMAN HOP CROP.

The 1904 hop crop of Germany amounted to 49,136,174 pounds, according to the estimate of the Imperial Statistical Office, which has been published by our Department of Agriculture. Of this total, Bavaria furnished very nearly half, 1,340 districts reported, with an acreage of 87,150. This area is the largest recorded for the past five years.

"What's this serial numbering plan you fellows are harping on?" asked the pure food fend, of the druggist.

"That's a plan in use by Peruna and the Wells Richardson Company," answered that worthy, as he attempted an explanation.

"Never mind," said his auditor. "I knew that Lactated Food was a cereal. How about Peruna?"

"I beg your pardon," he began simply, "but are you aware that on your window sign you intimate that you keep only leafings?"

The druggist looked interested. "Dreg store" was what he read, as he viewed some foker's work "Well," he muttered, "it's more than half true."

EDITORIAL COMMENT

The Platt Decision.

For the first time in the history of the disagreeable litigation with the notorious cutter in Chicago, the court has given a fair and square verdict for the N. A. R. D. forces. Last week Judge Tuley ordered the injunction granted to Platt a few weeks ago to be dissolved. The injunction enjoined certain wholesale druggists from refusing to sell proprietary medicine to the cutter.

The judge gave some unusual reasons for his decision in favor of the associations. He declared that an attempt on the part of the court to enforce an injunction of the kind asked would be too "big a job" for the court. It would mean a complete supervision of the drug business in Chicago, which would be impossible. Another reason was that, although the injunction might be of benefit to the solitary cutter, it would do great harm to the many other persons engaged in the sale of drugs in and about Chicago.

In all probability this litigation will soon reach its limit. It has been of considerable importance, not because the business involved is large or because the druggist most concerned was unusually influential, but because the basic principles of the N. A. R. D. were assailed. If the foundation of the structure could not be considered secure against the assaults of the lawyers, it would be useless to improve the appointments of the upper stories.

Now that the N. A. R. D. has scored a decisive, and, we hope, conclusive victory, there is no longer any good reason for further whisperings and mystery about the case. A great association like the N. A. R. D., which depends largely upon moral influence for support, cannot afford to travel by dark and devious ways.

The New York Liquor Law.

The very satisfactory liquor law which the druggists of this State have enjoyed for nearly a year is in danger. It seems that the attack will come from within as well as from the outside. Some druggists are not satisfied to sell

the liquor in one-half pint quantities under a State excise stamp, but wish the same stamp to carry twice the present quantity. They seem to have found that it is impossible to sell liquor in competition with regular dealers under the provisions of the law. The price of the stamp renders it impossible to sell as cheaply as in the saloon.

The assailants of the law outside the drug business find their strongest plea in the statement that the new arrangement does not yield revenue at all comparable with that of other revenue measures. The amount collected from the sale of stamps is very, very small, and there are those among the revenue advocates who hint that it should be larger.

This is the opposition which the friends of the law must expect to meet. The liquor dealers will condemn the law because it is not stringent enough, and a few druggists will wish it changed because it prevents profitable competition with licensed liquor stores.

These two reasons advanced by the opponents are, when taken together, about the strongest endorsement of the measure which it would be possible to devise. The dissatisfaction of the druggists who would like to sell liquor shows that the law does actually limit sales in drug stores; while the plea that it does not produce revenue shows that it is no great drain upon the drug trade. At the same time any druggist can supply any legitimate demand without trouble of any kind.

The greatest danger to the law lies in non-enforcement. If it is not enforced and if more than a very few druggists ignore its provisions, the liquor dealers will lose no time in making that fact known to the excise authorities, and agitation for revision will follow.

The present law is desirable for the following reasons: It permits the sale of liquor for medicinal purposes for which there is a legitimate demand; it prevents competition with the regular dealer who pays for a special privilege; it discourages liquor trade in the drug store; and it does not subject the customer to undue trouble or hardship. For the same reasons pharmacists should obey its provisions to the letter, and be prepared to defend the law whenever occasion arises. Pharmacists do not wish to trade in liquors, but they do wish the right to supply alcoholic mixtures of all kinds when required as medicines.

Useless Knowledge.

The president of a British engineering society recently made the following statement: "No knowledge is worth obtaining for its own or any other sake, unless it is or will be useful to men." The assertion is very attractive in appearance, and it has been hailed with much enthusiasm by a number of journals devoted to applied science. Apparently it is supposed to crush for all time the lovers of pure science as distinguished from the "bread-and-butter" variety.

But we have been unable to discover anything either new or remarkable in the statement. Everybody gifted with ordinary powers of thought is willing to admit that "knowledge for knowledge's sake" is about as ridiculous as "art for art's sake." Unless knowledge is, of course, useless. But who is to decide whether a particular bit of information is likely to be useful or not?

Speaking for mankind in general, there is no assertion which can be made with greater safety than that there is no such thing as useless knowledge. Nearly all great discoveries have been ridiculed as useless at some time during the world's history, and he must be a bold man who dares assert that even the refinements of mathematics and the humbleness of the innumerable synthetic organic compounds will never be of use to humanity. For all we know, the German professor who proposed to devote a lifetime to a study of the muscles in a beetle's leg may yet turn out to be a benefactor of humanity.

The individual should, however, examine the statement from another angle. Humanity can afford to wait for history to prove the value of a discovery; not so the indivisible fraction of mankind who has not time enough for that. Unless he is willing to labor unselfishly for the good of future generations he must select such knowledge as will prove useful to him. There are those who claim that no information can be useless even to the individual, but that assertion we may venture to question. For instance, of what use is a knowledge of esoteric philosophy to the business man who cannot find time to keep up a passing acquaintance with himself?

Mr. Eliel's Remedy.

The scarcity of good clerks seems to constitute a real problem in certain sections of the country. Why it is that life in a drug store is less attractive to the bright, ambitious boy than formerly has never been explained, but it seems to be conceded generally that recent recruits to the ranks of pharmacy are of a less desirable class than those of twenty or thirty years ago? Why is the young man of character slow to take up the routine work of the drug

store, and what can be done to make the life more attractive?

Elsewhere in this issue Mr. Leo Eliel suggests a remedy, which, in his opinion, will correct a number of difficulties. Whatever we may think of his conclusions, his diagnosis is worthy of consideration. His remedy is practically the same as that proposed some time ago by Mr. Ebert for an entirely different disease. It is the registration of proprietors and managers instead of clerks. This, besides giving the pharmacist greater freedom in the choice of assistant, would, Mr. Eliel believes, stimulate the clerks to greater care and studiousness, for registration as an entrance to proprietorship would be a goal worthy of his best efforts.

The main support for the proposed change is found in our common law. The owner or manager of an establishment is held responsible for the errors of his assistants in any case, so that the public would not suffer in any way by an arrangement which would place all the responsibility upon one pair of shoulders, where, in fact, it already rests. Although, by examining and licensing clerks, the State declares the candidate competent to carry this responsibility, the licensee does not assume his full duty until he becomes proprietor of a store.

We can discover at least one weak point in the proposal. The arrangement would make the druggist the sole judge of the fitness of his employes to serve customers safely. Would his high sense of duty be proof against the influence of the expense account? Would he, invariably, choose the most competent assistant regardless of the salary demanded? We fear that profits would obscure the interests and safety of customers in the eyes of many pharmacists.

Temptations are already sufficiently numerous; let us consider carefully before we multiply them.

Proprietary Remedies in New Zealand.

New Zealand has a curious law which empowers the ministers of public health to do a number of most remarkable things. Among other measures which he has taken from time to time in the interest of public health, is the recent publication of a long list of names belonging to widely advertised proprietary medicines, with an order that after June 30, 1905, all patent medicines "imported into or sold or offered for sale in the Colony shall be required to have the contents, with their exact proportions, legibly set out in English upon a label affixed to the box or container. In addition to such information, when such medicines contain one or more of the poisons scheduled under the Sale of Poisons Act, 1871, and

its amendments, the words "This contains poison" must be marked in clear medium-sized block type upon the label."

The order concerns British manufacturers more particularly than the proprietary interests of this country, although the list contains several names very widely known here. Although the journals profess to scoff at the danger of published formulas to the preparations most affected, still the proprietary interests are very much wrought up over the move. An organized protest has been forwarded to the Colonial Secretary, and each manufacturer has been requested to stop advertising in the New Zealand newspapers, and to write to the editors explaining what it all means. Aiding the manufacturers in their demand to be allowed to do business in New Zealand with all due secrecy, is the P. A. T. A., an organization analogous to our N. A. R. D.

This movement is probably the result of activity on the part of physicians. The doctors as a class have unbounded confidence in publicity as a means of putting proprietary medicines out of business. Why the publication of a formula should destroy popular faith in a remedy our medical brethren have neglected to explain. Granted that mystery has much to do with the efficiency of a medicine and that secrecy intensifies the mystery, still it would seem that a row of unintelligible names and figures could not let in a dangerous amount of light. In France, where formulas are visible on all labels, the proprietary remedy is as popular as elsewhere.

More Newspaper Prescribing.

The beauty page of the New York *Evening Telegram* maintains its reputation for remarkable therapeutics. If the ghastly possibilities of the advice there given were not so evident, the page would be more entertaining than seven newspaper columns devoted to conscious humor. We sometimes suspect that the writer of that fearful and wonderful mixture of tradition and extemporaneous science is merely amusing himself at the expense of a foolish lot of readers, but it seems incredible that any sane person would knowingly recommend to the public concoctions likely to cause grave injury and even death.

One of the more startling mixtures of the week was recommended for "killing parasites." It contained about five per cent. of corrosive sublimate dissolved in glycerin. The victim was directed to "rub in hair and scalp." That would undoubtedly kill parasites and also loosen some patches of scalp and hair in case the patient should happen to survive at all.

There are laws forbidding counter prescribing and the illegal practice of

medicine. Who has given this newspaper beauty doctor the right to prescribe the most dangerous drugs in this reckless and wholesale manner?

The Soda Syrup Bill in Pennsylvania.

Some of our friends have taken us to task for the views we expressed in last week's ERA regarding the proposed legislation in Pennsylvania to modify the law in that State for the use of preservatives in fruit syrups. We admit that their criticisms are, apparently, well grounded, but in some respects we have been misunderstood. What we intended to say was this: There are two excellent arguments for a modification of this law; first, the quantity of preservatives employed in soda syrups is so extremely small that it can do no harm; and, second, the preparation of fruit syrups without any preservatives is so expensive and difficult as to be impracticable. That, in our opinion, is putting the case as strongly as possible. In the argument attached to the bill, many of the pleas therein given, in our opinion, weaken the druggists' case, as these arguments have been repeatedly used by the manufacturers of canned goods and other products.

A law which leads to the arrest and fine of innocent druggists is a vicious law, and should be repealed. THE ERA wishes the Pennsylvania druggists success in their efforts. Surely, Mr. Pritchard does not consider it treasonable to suggest that some of those efforts might be directed with somewhat more telling effect in a different way.

Good Advice for Advertisers.

In an article in a journal for advertising men, we find some extremely pointed remarks by Arthur Brisbane, on the art and business which that publication represents. His advice in a nutshell is, tell the people what they would wish to know about your goods sincerely and simply.

In the opinion of this master of forceful writing, the greatest fault of advertisement writers is the same as that of other writers, insincerity, the result of a lack of faith in the goods described, a want of respect for the job in hand, or a desire to be brilliant and witty. The public is quick to resent trifling and, as Mr. Brisbane says: "All human minds have an extraordinary, intuitive capacity for recognizing insincerity."

All of this applies especially to the advertising of drugs and medicine. Illness and the treatment of disease are serious matters, and should be discussed in all possible seriousness. A frequent mistake of advertisers is an attempt to "be funny." There is nothing funny about being sick, and many an otherwise excellent advertisement

has lost all drawing power because this was not taken into account. The advertiser of medicines cannot afford to joke with his patrons or even suggest a joke.

The Medicine Locker.

From a quiet little investigation carried out by the Era, it appears that America shipping companies do not patronize the druggist as they should. The merchant ships which sail under the flag of our country are supposed to carry a well-stocked medicine locker, and the Nation's statute books even contain a law providing an inspector, but as a matter of fact, very little thought is given at the beginning of a voyage for sickness among the men.

It is the same old story about good laws with no provision for enforcement. A measure authorizing the appointment of an inspector was passed, but none has ever been appointed, for the very simple reason that the law provides neither salary nor duties for this official. The result is that while no British ship is permitted to leave even a foreign port unless its locker contains the prescribed number of remedies, American ships, unless engaged in the passenger service, carry only such remedies as the agent's fancy may dictate. One ship carried only a few pounds of Epsom salts and a half gallon of castor oil.

Here is an opportunity for some reformer. The sailors of our fleet are as likely to need medicine as those of any other nationality. The horrors of a long siege of fever or dysentery without quinine or any remedy may be imagined.

The Worst of the Season.

Of bills intended to rob the druggist of more or less of his meager prerogatives there are plenty in every State. But we have yet to hear of a measure which "does the thing up" so thoroughly and completely as one introduced in California. It aims to limit all of the pharmacists' sales to the prescription department and reads as follows:

"Section 404. Any person, druggist or pharmacist other than a licensed physician who prescribes or compounds for, or furnishes to any person any medicine or drug without a written prescription from a licensed physician is guilty of a misdemeanor."

That would give our medical brethren a monopoly of the drug business. Of course, the proposal is absurd—we quote it merely to show how extremely limited is the vision of some people.

"Revile Not Thy Neighbor."

Mr. Diamond, of the N. Y. R. D. A., the other night called attention to a

ALBERT E. EBERT,
of Chicago.

practice which no one can possibly defend. It is the posting of signs about the store with statements something like this: "Do not trade at our competitors; they substitute; we do not."

The public has only a very hazy notion of what substitution means. Such reproach as the term carries is distributed indiscriminately upon the entire trade. The old proverb about those who cast filth upon others, defiling their own persons, applies here with all its force. The druggist who hints at substitution by his neighbor arouses suspicion, as he intends to do, but the result is more harmful to himself than to any of his competitors.

A Cleveland newspaper man has discovered a new headache cure called batnacetina. In a report of a promised raid and exposure of drug trade frauds in which acetanilid and all the usual symptoms of official and public consternation figure prominently, local druggists are accused of selling adulterated batnacetina. It is a fairly suggestive name, but it does not appear in our semi-annual price-list.

During one week recently thirteen deaths due to poisoning were recorded in England. Of these, four were accidental and five were due to overdoses of laudanum. There was one case of suicide by carbolic acid and another by solution of oxalic acid. One death was due to hydrochloric acid and one to sulphuric acid.

During the trouble in St. Petersburg a Russian orator chose the steps of a drug store for his forum. A special cable despatch two days later announced that all the druggists' assistants of the city had struck at a given hour. This is not the first time that pharmacists have taken a hand in world politics.

☞ ☞ C. P. ☞ ☞
EMANATIONS

OUR TYRANT PLEASURES.

Everybody about the store was out of sorts. It was one of those dark, depressing mornings for which the climate is noted. Jimmy had been unable to begin cleaning at his usual hour because the clerk had been late opening the doors; so when the boss appeared, things were still topsy-turvy and an impatient string of customers waited at the counter.

When the C. P. entered an hour later the field of battle had been cleared somewhat, but the atmosphere of the place was still charged with gloom.

"What's up?" inquired the old gentleman, his "sibning morning face" full of courage and good cheer.

"Oh, nothing much," the druggist replied. "Too much fun last night, I presume."

"Ah, those pleasures of ours!" the C. P. observed.

"What makes it more annoying in my case is that I was late and did not feel altogether fit myself. Our howling club met last night and one of the boys has a brand new eleven pound bowler at his house. Of course, there was more or less howling of the other kind. When I left, Fritz was on a table singing a German song in honor of the occasion. Ah, it was great!" The face of the participant in the celebration lighted up for the first time that dismal morning.

"Did you make any progress in that scheme of yours to get the druggists squared in the papers? You spoke of pushing it among the pharmacists."

"Clean forgot it!" exclaimed the druggist.

The sage laughed: "I wonder what Charley means by carrying about that long face and those drawn puckers at the mouth," said he, as the clerk hurried by with unwilling, but obedient feet.

"That busy portion of the establishment stopped to collect his harried thoughts. "I—oh—nothing," he said. "The Clerks' Club had last night—the biggest time the club ever had. There were more than a hundred couples, and when I left—" a customer prevented a recital of the glories of the event and arrested the poor clerk's progress toward reinflated cheerfulness.

"And what has a healthy boy like you to be so glum about?" the C. P. asked of the errand boy, who had just planted a step-ladder and was preparing to mount, armed with a dust-cloth and a long face.

Jimmy was at least sincere about it. "Plenty," he said. "It don't make a feller feel mighty fine to be snowed under work, after standing out in de cold fer an hour."

"It wasn't over twenty minutes," corrected the clerk from the other end of the store, thankful for the opportunity to relieve his rebellious emotions.

"Plenty long for a feller wat's been sick all night," retorted Jimmy.

"And what right has a healthy boy like you to be sick?" inquired the sage, while the druggist smiled in spite of himself.

"Dunno," the boy replied, sullenly.

"My mother says it was the cake wot I had at my sister's party. I don't believe it—had only four pieces. I think it was the ice cream. It wasn't no good. They got it at Brown's."

"You ought to raise his pay for such loyal devotion to your store," remarked the C. P. to Jimmy's boss. The boy looked interested for a moment, but when he saw that his superior met the sally with a smile, he turned to the shelf-bottles with the original air of gloom.

"None of you are fit for duty," remarked the old gentleman, puffing at his cigar with conspicuous cheerfulness. "Don't you see that both the boys are worn out? You are a cruel, exacting employer, to expect service from such over-worked people."

The owner of the store made a wry face. "Those boys are not wearing themselves out working for me to any serious extent," he said. "If they work themselves to death having fun of their own after working hours, that's no affair of mine. I pay them for their time and it is their part of the bargain to keep themselves in good trim, so that they can work."

"You, of course, keep yourself in perfect working order," the sage said, pointedly.

"I am not on anybody's pay-roll," retorted the druggist.

"Indeed!" returned the C. P. "How about your customers?"

"Oh, well, yes, of course, but look here! I don't do that sort of thing more than once in a great while. There is Charley, now. He seems to make a business of having fun—balls, private minstrels, and that sort of thing all of the time. He has the making of a good man in him. He is naturally a hustler. But he can't get to bed after one o'clock three days a week and make much headway. This world is a hard proposition, at best."

"It can't be so dreadfully hard," said the sage, "while you are all spending more thought and energy having fun than you employ in doing the necessary things."

"On the whole I agree with the wise man of Coney Island," added the sage a moment later, with a hand on the door. "This world wouldn't be so hard if it weren't for our pleasures."

Digalen.

The name digalen has been given to a preparation lately placed on the market, which might have also been designated as "digitoxin soluble" and will undoubtedly be granted considerable attention. According to the well-known clinicians, Cloetta, (Munch. med. Wochenschrift New Rem.), it is possible to isolate from the digitals leaves, in small amounts, a white amorphous body which has the same chemical composition as the crystallized digitoxin and corresponds to the latter in its toxic action. This amorphous substance, however, is much more readily soluble and diffusible and does not produce any irritation when administered subcutaneously or by mouth. This new preparation is to be had in the form of a watery solution containing 0.3 mgm. of the amorphous digitoxin, being the usual dose for an adult.

THE "R. H. COMMITTEE."

We reprint the following from the Midland Druggist, not because we are partial to this kind of matter, but because Editor Ogier has had the courage to condemn a class of so called "entertainments" which, to say the least, is no credit to those who participate in them. It is unfortunate that some druggists feel called upon to "make fools of themselves" when they get away from home, and still more to be regretted that others are led into these "dings," against their wishes, for fear of not being considered "good fellows." But listen to Mr. Ogier:

"Upon the editor's table lies a copy of a drug journal for November, 1904, containing three columns explaining the functions of a self-constituted 'committee' of prominent members of the N. A. R. D., styled the 'R. H. (raise hell) Committee,' and giving a detailed account of some of the disgusting actions of the 'gang' during the recent meeting of the N. A. R. D. at St. Louis. * * *

"Will some of these gentlemen publicly give his honest opinion as to the impression such conduct as this correspondent describes of leading representative pharmacists of the United States will have upon those citizens who still cling to the antiquated notion that pharmacy is an honorable and responsible calling requiring sober, self-controlled, well-poised gentlemen in its ranks in order that the public may be safely served? How many of these same persons have at one time and another posed as advocatae for higher professional standards for pharmacists? Which of them would tolerate a clerk in his employ found with a crowd of bummers under the tables when the lights went out? Are the residents of large cities where national conventions of druggists are held to be given to understand that these are occasions wherein the national leaders are to give riotous demonstrations how to 'raise hell' in saloons, beer halls and dance houses? These are a few of the pointed questions which may be properly raised and to which we expect no answer other than a few sneers, but they are questions which will not be laughed down since all the responsible occupations which are engaging the toil of men in America this day, not one is carrying the awful burden which is being heaped upon pharmacy by its followers in the low standards of moral, professional and ethical conduct existing among many who pose as leaders in pharmacy but who never for a moment seem to comprehend the universal law of balance."

Rexotan.

Rexotan is a preparation recommended as an intestinal disinfectant and astringent. It is a condensation product of tanning and urea with formaldehyde and has the following formula: $C_{14}H_{14}N_2O_6$. It occurs in the form of a fine, non-hygroscopic powder, and is without odor or taste.

Tannochrome.

Tannochrome, a new disinfectant which has appeared on the market, is a combination of chromium oxide, 1 part; tannin, 4 parts, and resorcin, 8 parts. It is employed in the form of a powder (L'Union Pharm.).

OUR
LETTER BOX

MR. ELIEL'S REMEDY.

South Bend, Ind., Jan. 22, 1905.

Editor The Pharmaceutical Era:

I am not in a position to reply to queries respecting the N. A. R. D. and its workings excepting to say that I am in sympathy with the movement. Neither can I offer anything on the question of substitution that would be new or novel in any way. The passage of the Mann bill would do away with the chief inducements for substituting surreptitiously

make him a better and safer clerk. It would also enable a better qualified class of educated young people to engage as such, and do away with "bringing up" the chiefly undeducated errand boy, to the dignity of a full-fledged prescription clerk. If, in addition to this, the proprietor takes a proper interest in his young men, directs and aids them in their studies, he will have no trouble in getting good drug clerks whenever in need. In the larger towns and cities, evening classes could be organized and the proprietors could arrange for giving a regular lecture course to their apprentices. This course is pursued in my stores to my and my apprentices' eminent satisfaction. Probatum est.

LEO ELIEL.

MR. KING ON SUBSTITUTION.

Helena, Ark., Jan. 26, 1905.

Editor The Pharmaceutical Era:

In the year 1865, when the Yankees had overrun the South and your humble servant was living in a small town in the loyal State of Mississippi, he woke up one morning and saw in large letters painted on the water tank, "Helmhold's buchu." No one seemed to know what the sign meant until finally an old negro passed along and remarked: "Boss, there is shore going to be another war, for I seed those signs just afore the last war. Then came the greatest mystery, "St. 1860, X." Again we did not know what to think. Ask young druggists what "St. 1860, X," means, and if they ever heard of "Helmhold's buchu," and see how many will give you a correct answer. Then followed Ayer, Jayue, C. McLaue, John Bull, Wilder and Fahnestock in fast line with the others, and like shooting stars they passed through the drug stores; then either out through the back door or remained on the back shelves as assets of departed greatness. About this time I engaged in the drug business and when one of the makers of patents came along I generally bought nearly everything he made. I soon had a large stock on hand and what a pleasure, during dull times, it was for me to look at the pictures on Mustang Liniment and J. H. McLean's wrappers. I could enumerate many other preparations, but when Paskola hit the market and some fool enismat made the statement that it was nothing but glucose, the general public began to lose confidence in patent medicines. I then looked over my stock and found that there had been many changes in the different brands on my shelves and that the number was increasing. The idea gradually got fixed in my head, "Why work your fool self to death for these men when you might be selling your own preparations?" Like many other druggists, I have been partly forced into this line of business, and while admitting that perhaps my remedies are not as fine as those highly advertised, still, when I check my cash and figure up the profits I find out that I am a winner and my conscience feels better. (Beg your pardon, for I had forgotten that the substitution shouters have long since decided that the average druggist, like myself, had no conscience.)

As the years roll by and the non secret men kept whispering into my half deaf ear: "You old fool, why will you persist in working for these patents at a profit of fifteen per cent., when it costs you

more than that to conduct your business?" Little by little I listened to their advice and while taking in that part of it in regard to the profits, I about half way decided to cut out a few "mons," and to keep the cub and porter busy putting up preparations of my own. Now, after reviewing the thirty-seven years of my own experience, I have decided that the patent medicine makers are up against the hot end of a tough proposition. In all our rate towns the druggists are knifing them on account of the small profits and arbitrary rules; in other towns, druggists are fighting them with their own preparations, and while the contract men are making the fight of their lives to hold up prices, still it is hard for them. I am willing to give the N. A. R. D. a small credit for its efforts; still, I am fully convinced that

LEO ELIEL.

obtained synthetics for those obtained through regular channels. Hence we should use our best efforts to urge the passage of this important measure through the Senate. I do not think that substitution is practiced as much as might be inferred from the public press. I don't see how anyone who cares a rap for his reputation or who is possessed of the thing we define as conscience, can "substitute."

But there are a few things I could say something about, and possibly it might be taken up by others and some benefit might result. There is much complaint regarding scarcity of drug clerks (registered) and the difficulty of obtaining boys to work in the stores. For this there is good and sufficient reason. In the first place, a boy when old enough to go to work, can, as a rule, do better for himself with a lesser number of hours employed in other lines. After many years of hard work and study, he passes his examination and finds his hours of work possibly longer and his earnings not on a par with those in other lines. This accounts for the scarcity. The remedy is in our hands. In the first place, it is in my estimation a great mistake in all pharmacy legislation to require registration of clerks. The Boards of Pharmacy certify as to their qualifications, but the proprietor takes all the risk, despite the certificate issued by authority of the State. If one registration was required of the clerk until he was ready to become a proprietor or manager, he would have to keep up his knowledge so he could qualify. This would

R. B. KING.

if the local druggists will not unite to hold up prices, its efforts will amount to little benefit and the patents will suffer. How the contract men and the N. A. R. D. men are going to give us much advantage is hard for me to explain. The question is this: If I buy a horse for \$100 and am willing to sell him for \$90, whose business is it but my own? Shall the contract man or the N. A. R. D. tell me that if I buy a mule in Missouri for \$125 and bring him to Arkansas and sell him to a "colored gemmen" for \$100, that they will see that I buy no more mules in Missouri?

There was a time in this country when all people did not raise so much fuss about substitution and it was praised by some of the richest and best men in the country. It was from 1862 to 1865, when anyone was glad to hire a substitute to be shot at instead of himself. I had much rather sell a man a bottle of substitution medicine than to hire another man to take the medicine for me. If you could hire a man as a substitute during the war, what harm is there for a poor druggist to recommend and sell a bottle of his "rheumatic cure," instead of a preparation made by a celebrated chemist on the nineteenth floor of a sky scraper in Chicago, or one located on a sand pile in Michigan City, Ind.?

The only hope for the patent makers is to go way back into the interior and sell to those who do not care to put up preparations of their own. Yours respectfully,

R. B. KING.

CONDITIONS IN PHILADELPHIA.

Philadelphia, Jan. 28, 1905.

Editor The Pharmaceutical Era:

In your last issue I noticed the editorial "Sign the Contract" (page 97). The revelations of this article are painful and bring to my mind a remark that was made to me by one of your uptown druggists during a visit to your city last August. In search of information, I naturally dropped into a drug store and after politely furnishing the desired information, the druggist asked me where I was from. I told him that I was a druggist from Philadelphia. On hearing this, he stepped from behind the counter, and extending his hand, said in broken English: "I thank God I have the pleasure of shaking the hand of a Philadelphia druggist, because I am sure he is a member of the P. A. R. D., and they say it is the 'Banner of them all.'" I assured him that I was a member and he said:

"Oh! how I wish we had a P. A. R. D. in this city. I have read of the doings of that association and I think how badly we need such a one here, but," he said, "the druggists of New York are made of different material." I was informed by this man that the conditions were exceedingly bad; first, that the druggists had no faith in their neighbors, in fact, in anyone. He was in hopes that the N. A. R. D. would be able to do something for them, but I assured him that without their own co-operation the N. A. R. D. would be of little or no use to them. I was amazed to learn that only eight per cent. of your druggists have signed the Peruna contract.

I will give you a little account of how matters stand in Philadelphia. The druggists in this city number about eight hundred and fifty, seven hundred of whom had signed the Peruna contract a month ago; five hundred have signed the Laxative Bromo-Quinine contract and about the same number have signed the Wells & Richardson Co.'s and the Pierce contracts, and they are maintaining contract prices on unnumbered goods. It is true that some of our druggists, on account of being fully stocked, have not signed these contracts. One of these was discovered selling Peruna at sixty-seven cents, and one of our members wrote to the Peruna Co., asking if they would countenance such a practice after their contracts had become operative. They replied as follows: "We have marked Mr. _____'s name upon our list of cutters, and will not accept his contract if it should be tendered."

I consider it manifestly unfair for anyone to hold out on a proposition of this kind. The retailer has it within his reach to make or break the contract plan and if he should now let the matter go by default, he will never be given the opportunity to support another.

Our druggists seem to be well satisfied with the way the cut price evil is working itself out. We have troubles, but viewing the whole situation we notice a vast difference between now and a few years ago. Philadelphia is handicapped in a way. Our prominent cutters secure their goods from New York. This situation we have not been able to control, but with the N. A. R. D. starting operations in your city we hope the druggists there will be able to see their way clear to give the national organization their undivided sup-

port; with so much accomplished, the P. A. R. D. would be able to check every cutter in town. I believe it is the purpose of the proprietors to protect the prices on their goods, and I consider it unsafe, as well as unfair, to disregard these contracts now held out to us. Will we accept or refuse them? Fraternally,

N. A. COZENS.

FRUIT SYRUPS IN PENNSYLVANIA.

Rochester, N. Y., Jan. 27, 1905.

Editor The Pharmaceutical Era:

We are very much surprised by an editorial article on the first page of the current number of The Era, under the title of "Fruit Syrups in Pennsylvania." This undoubtedly applies to the copy of the proposed bill and argument in support of the same, which we mailed you a few days ago for your information. Evidently it has been read, but not carefully considered. In the first place we are astonished that The Era would ridicule and antagonize legislation introduced and supported by the rank and file of the retail druggists of the entire State of Pennsylvania, with whom The Era is supposed to be in sympathy and among whom it is supposed that it has some subscribers, in whose welfare it is presumed The Era is interested.

In sending you the copy of this bill we advised you that it had been endorsed by all branches of the trade, but it is quite possible that you do not realize that it also has the approval of all the leading manufacturers of soda fountain supplies in the United States. It may be that the worthy editor of The Era knows more about the manufacture of fruit syrups than the hundreds of retail druggists and the dozens of manufacturers who have given this bill their unqualified indorsement, for he states that "It is possible to make a good fruit syrup without the aid of either preservatives or artificial coloring matter and to say that it is not to insult public intelligence." No doubt he has put up strawberries, for instance, during the fruit season which, when opened at Christmas time, would be as plump and bright in color as when picked from the vines and as fresh in flavor, and which would moreover keep indefinitely when they were exposed on the counter of the dispenser. To dispute his ability to do this would certainly be an insult to him, if not to public intelligence. But it does seem to us that the editor has somewhat weakened his argument when he admits the belief that a little sodium benzoate and cochineal in a glass of soda does so much less harm than some other forms of adulteration, that it is scarcely worthy of consideration.

It is certainly to be inferred from his remarks that he is not familiar with the present pure food laws nor with the very arbitrary and unjust rulings which have been established in the enforcement of these statutes, under which many reputable and honest druggists have been arrested, haled into court and fined, guiltless of any real wrong and innocent of any intentional wrongdoing. Thus, many well meaning dispensers of soda water have been unjustly persecuted and it would certainly seem more appropriate if The Era claims to be published in the interests of the drug trade and to have any concern

for the interests of its members, that instead of attempting to ridicule and dispute the intelligence of several thousands of the best retail druggists in the United States, to say nothing of their friends, the manufacturers, and the Philadelphia and Pittsburg College of Pharmacy, the very clientele and support of this journal itself, that it should learn the real facts in the case and not make such positive declarations or give utterance to such extreme views on half knowledge.

It is evident that the editor of The Era does not understand that the proposed legislation is remedial rather than otherwise.

It is possible that the druggists in framing this bill should have been mindful of the brewery interests, canners, meat packers, etc., and made their bill broad enough in its scope to embrace all these industries, but because it is simple and straightforward in its construction, limited and plain in its application, offering no chance for unscrupulous evasion of the law, we are inclined to believe that it will receive more favorable consideration by the legislature and will be heartily approved and speedily adopted.

The editor makes one misstatement which should be corrected, viz.:

"One argument excites our admiration especially. It is, that the natural product does not look natural to the consumer, and that the real reason for the addition of coloring matter is a desire to prevent the customer from deceiving himself into drinking something artificial and deleterious."

We quote the argument referred herewith, verbatim, and commend it to his second reading:

"But the mistake which he (Prof. Shepard) makes and which may escape the notice of the casual observer, and thereby create a wrong impression is in assuming that the color is in all cases used to conceal inferiority which does not exist; or to make the article appear to be what it really is, instead of what it is not, although this is the real reason for the use of color by the manufacturer. To explain this more clearly, let us mention strawberry syrup or prepared strawberry fruit as an illustration. Every one knows that the fruit possesses a naturally high color and that when either the fruit or the syrup is first put up it retains in some degree the natural color of the fruit, although it is deteriorated somewhat by the processing the fruit receives. But, however strong the natural color of the product may be, it soon fades to a dirty brown, giving it an unattractive and damaged appearance which is misleading and deceptive, quite as much so as the use of any color could be, and with the double effect that the consumer is prevented from buying an article which would be otherwise healthful and enjoyable and the manufacturer or merchant suffers the loss of trade. The use of a harmless coloring matter, in a limited minimum quantity as provided in the proposed act entirely obviates both of these unnecessary, deceptive and harmful effects and prevents the appearance of inferiority which does not exist, and instead of being used for the purpose of deception, it is in such a case used to prevent deception."

It will be seen that the argument is not that the customer will be deceived into drinking something deleterious and

artificial, but that he would be deceived into refusing that which was wholesome and healthful and the manufacturer and merchant thereby suffer the loss of trade, to the injury of all three.

It is not supposed that the editor of The Era wishes to be understood as endorsing the present Pure Food law with the intolerable conditions which it imposed upon the retail druggists and which is universally conceded to be imperfect; in fact it is even rumored that the commissioner himself desires to have it amended, particularly as regards the disposition of moneys received from prosecutions, so that no taint of suspicion can rest upon the department as to money used for its legitimate expenses. It can only be that the editor lacks information regarding the present law and its practical operation, for he really seems to oppose all sides of the question.

We write this because of our acknowledged interest in the Pure Food law of Pennsylvania as it relates to the soda water business and the prosperity of the dispensers, and we confess that we shall be surprised if the druggists do not take issue with The Era in regard to the sentiments expressed in this editorial.

"Not in anger, not in wrath," do we indite this letter, but rather with a feeling of surprise and amusement. It would be useless to enter into a prolonged discussion on the subject, as we might also be misunderstood, but we do believe that a more careful and deliberate study of the question will lead the editor of The Era to different conclusions. Yours very truly,
J. HUNGERFORD SMITH Co.

McKeesport, Pa., Jan. 28, 1905.

Editor The Pharmaceutical Era:

I have just read with surprise, to put it mildly, your editorial entitled "Fruit Syrups in Pennsylvania." The proposed act of assembly referred to was drawn up by the attorney for the Western Pennsylvania Retail Druggists' Association, referred to the executive board of the P. A. R. D., by that body endorsed, submitted to and acted favorably upon by a number of other local and county organizations, and is cordially supported by the Legislative Committee of the Pennsylvania Pharmaceutical Association.

In view of these facts, we are certainly very much flattered by your several gratuitous statements, such as, for instance, "They ask the lawmakers to grant an exception in their particular case, and advance a series of exceedingly ingenious arguments," and again your kindly reference to their "own little sophistications" and we are especially mightily pleased by your respectful reference to our arguments as "A lot of claptrap, which are as transparent as they are insincere." I know from my own experience what an easy matter it is for an editor living in another State, with nothing at stake, to sit in his sanctum and write learnedly concerning matters of which he has no knowledge, gained by bitter experience, such experience, for example, as seeing, as the writer did, twenty honorable business men lined up at one time before an alderman, charged with selling adulterated fruit syrups, and compelled to submit to a fine of \$50 and costs, because, forsooth, the syrups contained an infinitesimal quantity of a simple, innocuous antiferment which could not

be, by any stretch of imagination, in the slightest degree harmful.

Now, Mr. Editor, to be explicit in my purpose for writing this, let me make a request of you. Will you quote from our argument one single statement which is not based upon actual fact? If you can, please do so. If you cannot, will you consent to apologize to the working contingent of the various local and county organizations of the best organized State, pharmaceutically speaking, in the United States, for the gratuitous, and entirely uncalculated for insulting flings and reflections upon their intelligence, as well as imputations upon their honesty of purpose? Respectfully, yet indignantly submitted,

B. E. PRITCHARD.

P. S. For your further information, let me state that the act was introduced in the House of Representatives by Hon. James M. Esler, an ex-druggist, by request of the writer.

(Is the statement that preservatives in fruit syrups are an "absolute necessity" founded on actual fact? We have known pharmacists who would permit the use of neither preservative chemical nor artificial coloring matter.—Ed.)

SALE OF WHISKEY THE CANCER.

Boonville, Mo., Jan. 17, 1905.

Editor The Pharmaceutical Era:

Price cutting, substitution and the other evils of our business affect us so little in the small cities, that we are really not posted on these subjects. That an unhealthy condition exists in the drug business, we must acknowledge; how to remedy it is another question. I believe, however, that if the sale of whiskey could be eliminated from the drug store, there would develop more satisfactory conditions. This branch of the business is the cancer to contend with out here. Very truly yours,

WM. MITTELBACH.

PROPRIETARIES IN CUBA.

Ernest Sarra, manager of the Drogueria y Farmacia "La Remonin," Havana, Cuba, sends us copies of two letters he has written to John W. Kennedy, of E. C. DeWitt & Co., Chicago, chairman of the Committee on Legislation of the Proprietary Association of America, on the status of proprietaries in Cuba. The letters follow:

(Enclosure No. 1.)

Havana, January 18, 1905.

Mr. John N. Kennedy,
Chicago, Ill.

Dear Sir: As you have read the editorial in The Havana Post (American Havana daily), you should be informed about the order of the Cuban Secretary of the Interior, issued on the 12th of last November.

This order intends to put into force a very old law, published in Spain, February 24, 1844, providing that proprietary medicine manufacturers need a special authorization to sell their medicines in Cuba.

To obtain this authorization it is necessary to write a letter to the affairs secretary and send to him a full description of the remedies, formulas and methods of preparing, preserving and using them. It is also required that enough of the proprietary medicine shall be sent to be

analyzed in the national chemical laboratory and the formulas and processes of preparation must be published in the scientific journals.

No Spanish governor, nor the American interventor governor has dared to put in force a law, which, if enforced, would drive out of the Cuban market almost all of the American proprietary medicines that now have a large sale in Cuba.

As this order simply comes from an officer of the secretary, and not from the secretary himself, we think it is very easy to prevent the enforcement of this old Spanish law. Enclosed find some practical advice from a very successful concern established in Havana. Surely your association will file its protest with the State Department in Washington or with the senators from different States. Yours very respectfully,

VIDEA DE JOSE SARRA Y HJO.

By Ernesto Sarra, Mgr.

(Enclosure No. 2.)

Sres. Viuda Jose Sarra y Hijo,
Ciudad.

Dear Sir: We herewith return you letter of January 4th from J. E. Tom, secretary of the National Wholesale Druggists' Association, Indianapolis, U. S. After investigating this matter, we find that the best way and possibly the only way in which to secure immediate results will be to have the association file a formal protest with the State Department in Washington, which will then instruct Minister Squiers, of Havana, how to proceed. We believe that if you will so instruct the association, the result desired will be obtained. Yours truly,

Signed,

HAVANA ADVERTISING CO.,

A. W. Albright.

THE CINCHONA ALKALOIDS.*

BY A. B. LYONS,
Detroit, Mich.

The text books on pharmaceutical chemistry give very meagre information regarding the behavior of the salts of the several cinchona alkaloids toward the more common organic acid radicals. The statement that was recently published in a pharmaceutical journal that there exists an incompatibility between quinine sulphate and ammonium acetate has induced me to make a series of experiments, the results of which should interest every pharmacist.

The plan of experimentation was a very simple one. One gram of quinine sulphate was dissolved in fifty cc. of water with addition of 2.5cc. of five per cent. sulphuric acid. Similar solutions were made of the sulphates of quinidine, cinchonidine and cinchonine. The ordinary commercial sulphates of the alkaloids were used, and no attempt was made to make the solutions correspond accurately in alkaloid content. In each the same quantity of sulphuric acid was used, sufficient in each case to give a strong acid reaction with litmus paper.

AMMONIUM ACETATE.

A solution of ammonium acetate was prepared by mixing equal volumes of official acetic acid and water of ammonia, the former being chemically in excess. When 1 cc. of this strong solution was mixed with 1 cc. of the quinine solution, crystals

*Pharmaceutical Review.

formed almost immediately so that the mixture became semi-solid. When 1 cc. of the ammonium acetate solution was diluted with an equal volume of water, and 1 cc. of the quinine solution was added, crystallization began very soon and proceeded rapidly. The addition of a little more sulphuric acid did not dissolve the crystals, although they disappeared when a larger quantity was added. Addition of 1 cc. of alcohol in place of the acid caused immediate solution of the crystals. When 2 cc. of water was added instead of one, the formation of crystals did not begin until after the mixture had been shaken vigorously for a minute or more. The crystalline deposit (slender acicular crystals like those of quinine sulphate) was moreover not very abundant. If 2 cc. of the ammonium acetate solution and 1 cc. of acetate was used, crystals formed more rapidly and were fairly abundant.

When 1 cc. of the solution was mixed with 1 cc. of solution of cinchonidine sulphate, crystals appeared only after prolonged vigorous shaking, and then not numerous. If 2 cc. of the saline solution was used, crystallization occurred more quickly. Solutions of quinidine and cinchonine sulphate gave no reaction.

These observations are of interest, especially in connection with the suggestion to use ammonium acetate in preference to sodium citrate in making elixirs containing ferric phosphate or pyrophosphate. The alcohol present in such elixirs would remove all danger of any precipitation of quinine, even if the elixir contained as much as a grain of the sulphate to each fluid dram.

AMMONIUM CITRATE.

A solution of ammonium citrate containing about ten per cent. of the salt, with a distinct excess of acid, was used in the next series of experiments. Four experiments were made, in which 1 cc. of the quinine solution was added to 1 cc. of the ammonium citrate solution to which had been previously added 1, 3, 5 and 8 cc. respectively, of water. In the first case a heavy precipitate was thrown down almost immediately. Addition of 1 cc. of alcohol only partially cleared the solution; 2 cc. rendered it quite transparent. In the second case the precipitate was more tardy in forming, but was sufficient in amount to render the fluid quite thick. In the third, crystals appeared only after shaking the mixture, but soon filled the whole fluid. The addition of 2 cc. of alcohol rendered the solution nearly clear. In the last, the crystals appeared only after rather prolonged shaking, although ultimately abundant in amount.

In all cases, addition of a few drops of five per cent. sulphuric acid had no apparent effect, but the crystals dissolved when any considerable quantity of the acid was added.

It was noticeable that when this or almost any other of the saline solutions experimented with was added to the highly fluorescent solution of quinine bisulphate, the fluorescence was immediately quenched. It is plain that even in preparations containing a considerable proportion of alcohol, a decided incompatibility exists between alkaline citrates and salts of quinine. It is this incompatibility that forms one of the chief difficulties in making permanent elixirs of the phosphates

of iron and quinine, where the quantity of the latter exceeds half a grain to the dram.

The other alkaloids of the cinchona bark, with the single exception of cinchonidine, do not exhibit this incompatibility. There was no precipitation or sign of crystallization when equal volumes of the ammonium citrate solution and the solutions of quinidine or cinchona were mixed, even after prolonged violent agitation. Cinchonidine shows the incompatibility, but in a much smaller degree than quinine. When equal volumes of the solutions of cinchonidine sulphate and of ammonium citrate were mixed, a crystalline precipitate began to appear after some time, becoming at length fairly abundant. Addition of 1 cc. of alcohol rendered the solution nearly clear. When 2 cc. of water was added until the end of an hour, although the mixture was frequently shaken vigorously in the meanwhile.

ROCHELLE SALT.

That quinine and cinchonidine are precipitated from neutral solutions by tartrates of the alkaloids is a fact commonly known, as is the antiferretic fact that solutions of quinidine and of cinchonine are not so precipitated.

The following experiments with acid solutions of the cinchona alkaloids are nevertheless not without interest. The same plan was adopted as in the experiments with ammonium citrate. 1 cc. of a 10 per cent. solution of Rochelle salt was diluted with varying proportions of water and then 1 cc. of the quinine or cinchonidine solution added.

In the experiments with quinine, precipitation of apparently amorphous tartrate took place in solutions to which had been added only 2 or 3 cc. of water, but when 8 cc. of water was added, precipitation did not take place at once, and was evidently quite incomplete. The crystals which formed were very small and were not in the form of slender needles as in the case of the citrate. With 12 cc. of water no crystals formed within twenty minutes, the solution being meanwhile repeatedly shaken. The precipitate was much less soluble in alcohol than that of the citrate. It was also somewhat less soluble in acids. Eight or ten drops of a 5 per cent. sulphuric acid solution generally sufficed, however, to dissolve the precipitate formed from 1 cc. of the alkaloidal solution, whatever its concentration.

Cinchonidine tartrate proved to be distinctly less soluble in water or in alcohol than the quinine salt. Solutions containing 12 cc. of water showed crystals very soon; even with 15 cc. of water the crystals appeared within fifteen minutes.

While quinine, therefore, is scarcely precipitated as tartrate from a somewhat acid solution containing 0.17 per cent. of alkaloid, cinchonidine shows some precipitation when the strength is only 0.12 per cent.

AMMONIUM OXALATE.

Quinine is sharply contrasted with the other cinchona alkaloids in its behavior toward oxalates. The acid solutions of quinine, cinchonidine and cinchonine are not precipitated by ammonium oxalate. Proceeding as in the foregoing experiments, I found that when 8 cc. of water was added to the oxalate solution, the separation of quinine oxalate on adding the quinine solution was slow, but the deposit

was abundant. Even when 20 cc. of water had been added, crystals began to form after a short time, the solution having been shaken to promote crystallization. The practical limit seemed to be reached thus when the solution contained about 0.07 per cent. of quinine. In several experiments, the residual quinine in 10 cc. of the mother-liquor from which the quinine oxalate had been removed amounted to between 2 and 3 milligrams. In similar experiments with solutions from which the quinine had been precipitated with Rochelle salts, the residual alkaloid was 6 or 7 milligrams. From strictly neutral solutions, no doubt, the alkaloid is much more completely removed.

SODIUM SALICYLATE.

The salicylates of the several cinchona alkaloids are only sparingly soluble in water, but dissolve readily in weak alcohol. When a solution of one of the alkaloids is mixed with a solution of sodium salicylate, a precipitate is thrown down which is not distinctly crystalline, and which assumes a curdled appearance, the particles aggregating into sticky masses.

In experiments, similar to those previously described, abundant precipitation occurred in the case of quinine and quinidine when 6 cc. of water had been added to the 1 cc. solution of sodium salicylate (10 per cent.), the mixture becoming clear on adding 1 cc. of alcohol. About an equal amount of precipitate was thrown down by solutions of cinchonine and of cinchonidine sulphate when 4 cc. of water had been added to the salicylate solution, a somewhat larger quantity of alcohol being required to redissolve the precipitate. Precipitation takes place in considerably more dilute solutions of an excess of the reagent is used.

SODIUM BORATE.

There is no marked incompatibility between salts of the cinchona alkaloids and borax, except such as is due to the alkalinity of the latter. When the acid solutions of the alkaloids were mixed with an equal volume of five per cent. borax solution, no change took place except in the case of the quinine salt, which yielded presently a fairly abundant crop of crystals. These may have been nothing more than quinine neutral sulphate, and were not formed in solutions to which an equal volume of water had been added.

SODIUM BENZOATE.

When 1 cc. of either of the alkaloidal solutions used in the foregoing experiments is added to 2 cc. of a five per cent. aqueous solution of sodium benzoate a heavy precipitate is immediately thrown down. Except in the case of quinine, addition of a little water dissolves the precipitate completely. For the quinine precipitate about 4 cc. of water suffices, but a portion of the precipitate, which has aggregated into sticky masses, fails to dissolve. For quinidine 3 cc. of water is required. For cinchonidine or cinchonine two is sufficient, but in the case of cinchonidine the solution almost immediately begins to crystallize, becoming shortly filled with acicular crystals. The addition then of 6 cc. of water fails to redissolve the crystals. The solutions containing quinidine and cinchonidine remain permanently clear; the quinine solution after a time—it may be an hour or more—throws out small warty groups of minute crystals.

If 1 cc. of the quinine acid solution is

QUESTION BOX

diluted with 4 cc. of water and 1 cc. of a ten per cent. solution benzoate is added, the mixture becomes milky, but very soon there separates a precipitate which adheres to the sides of the container, leaving the fluid clear. After a time warty groups of crystals form, adhering to the sides of the container. At a dilution of 1.8, very little precipitation takes place.

The limit of dilution for a quinidine solution is about the same as for quinine. Cinchonine is not precipitated in solutions diluted much more than 1.2.

The cinchonidine solution at a dilution of 1.8 yields, after shaking, an abundant crystalline precipitate. At 1.10 crystals appear only after prolonged shaking; at 1.12 crystals form within half an hour, but not in abundance. The precipitates are all very readily soluble in alcohol. It is not easy to see just how soluble they are in acids, since these cause separation of benzoic acid.

SODIUM PHOSPHATE.

When 1 cc. of the acid quinine solution was mixed with 1 cc. of a five per cent. solution of disodium orthophosphate, the mixture first gellatinized, then crystallized. The addition of 10 cc. of water did not immediately dissolve the crystals. When the quinine solution was diluted with water 1.5 before adding the sodium phosphate, abundant crystallization took place after shaking the mixture. When the dilution was 1.7, crystals appeared only after some time. The crystalline precipitate dissolves on addition of 2 or 3 cc. of alcohol.

Solution of quinidine sulphate of the strength used in these experiments shows no reaction with sodium phosphate solution.

When 1 cc. of cinchonidine solution is added to 1 cc. of the sodium phosphate solution diluted with 2 cc. of water, crystals separate shortly in abundance. Addition of 1 cc. of alcohol does not dissolve the crystals; 2 cc. gives a clear solution. In a dilution of 1.5 there is after half an hour only a faint suggestion of crystallization. The behavior of solutions of cinchonine toward this reagent is characteristic and surprising. On mixing 1 cc. of the reagent with 1 cc. of the cinchonine solution, at first a clear solution results. From this there is slowly deposited a small crop of minute rosettes of crystals which are remarkable for their very sparing solubility in alcohol.

When the phosphate solution is rendered as nearly as possible neutral with acetic acid, it is noticeable that its effect in causing crystallization in these acid solutions is distinctly diminished, as might be expected.

POTASSIUM IODIDE.

No precipitate is produced in acid solutions of the cinchona alkaloids by a neutral solution of potassium iodide. In strictly neutral solutions of quinidine sulphate containing 0.25 per cent. of the alkaloid, precipitation of the crystalline iodide takes place slowly and incompletely. The other alkaloids, as is well known, are not precipitated.

POTASSIUM BIROMATE.

Acid solutions of quinine are not precipitated by this reagent. In strictly neutral solutions containing 0.2 per cent. of the alkaloid abundant crystals form slowly. The reaction is distinctive for quinine.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Pectoral Paste.

(English).—The following formula for "pectoral paste" has been published:
 Mallow flowers 1 ounce
 Cudweed 1 ounce
 Coltsfoot 1 ounce
 Red poppy 1 ounce
 Water 2 pints
 Gum arabic 30 ounces
 Sugar 20 ounces
 Tincture of tolu 2 fl. drams
 Boil the flowers in the water, strain and add the other ingredients, then evaporate over a waterbath to the proper consistency.

PECTORAL BALSAM.

(1.)

Wine of ipecac 4 ounces
 Dilute sulphuric acid 4 drams
 Spirit of vitriol ether 6 ounces
 Oxyml of squill 6 ounces
 Syrup of red poppy 10 ounces
 Glycerin 20 ounces

(2.)

Camphorated tincture of opium 3 ounces
 Spirit of nitrous ether 3 ounces
 Aromatic spirit of ammonia 2 ounces
 Wine of antimony 2 ounces
 Spirit of chloroform 1½ ounces
 Spirit of camphor 1½ ounces
 Oxyml of squill 10 ounces
 Glycerin 26 ounces

LINSEED COUGH BALSAM.

Vinegar of ipecac 2 drams
 Compound tincture of camphor (without opium) .. 4 drams
 Vinegar of squill 2 drams
 Burnt sugar q. s.
 Infusion of linseed, enough to make 3 ounces

Nitric Acid Incompatibles.

(J. W. C.).—"Enclosed find a prescription which proves to be incompatible. Can you suggest any way to make a mixture of it? The owner claims that the prescription has been frequently filled."

Here is the prescription:
 Gum camphor ½ ounce
 Corrosive sublimate ½ ounce
 Carbolic acid 1 ounce
 Nitric acid 1 ounce
 Spirits turpentine 2 ounces
 Mix, and make a solution. Used for fistula on horse.

A homogeneous mixture cannot be made. There are several incompatibilities, the nitric acid being the principal cause of the trouble. The reactions depend on the

order in which the acid is brought into contact with the other ingredients. Thus, if the nitric acid be added to the turpentine, a violent reaction ensues, the products formed depending on the strength of the acid. Both camphor and carbolic acid are oxidized by nitric acid, producing with the first named camphoric and camphoronic acids, and with the second, mono-, di-, and tri-nitrophenol, the latter being picric acid. Corrosive sublimate is soluble in nitric acid, but not in the liquids of this mixture. Compounding this prescription is attended by considerable danger and but few druggists would care to undertake it.

Mange Cure.

(F. H. P.).—"We cannot give the formula for the proprietary article. However, according to "Veterinary Counter Practice," no better preparation for horses or cattle will be found than the following, which may be applied twice a day for a short time and afterwards once a day:
 Sulphur vivum 4 ounces
 Powdered white hellebore 1 ounce
 Turpentine 1 to 4 ounces
 Linseed oil, enough to make 24 ounces

When a milder treatment is required, particularly for dogs, mercurial ointment, or sulphur ointment, or a mixture of sulphur, tar and linseed oil may be tried.

The Era Formulary gives the following formulas under "Mange Lotion":

(1.)

White hellebore 2 ounces
 Tobacco 2 ounces
 Water 3 pints
 Boil, strain, and add, when cold, a pint of fresh lime water.

(2.)

Acid nitrate of mercury ... 2 drams
 Distilled water 16 ounces
 Apply.

OINTMENT AGAINST MANGE.

(For Dogs.)

Aloes, in powder 2 drams
 Mercurial ointment 2 drams
 Oil of turpentine 12 drams
 Sulphur 2 ounces
 Prepared hard 4 ounces
 Mix thoroughly. To be applied twice daily.

Masking Odor of Illuminating Oil.

(R. W.).—"Various processes have been recommended for masking the odor of kerosene or "lamp" oil, such as the addition of various essential oils, artificial oil of myrrane, etc., but none of them seems to have proved entirely satisfactory. The addition of amyl acetate in the proportion of 10 grams to the liter (1 per cent.) has also been suggested, several experimenters reporting very successful results therefrom.

Some years ago Keringer proposed a process for removing sulphur compounds from benzine, which presumably would be equally applicable to kerosene. It is as follows:

Potassium permanganate .. 1 ounce
 Sulphuric acid ½ pint
 Water 3½ pints
 Mix the acid and water, and when the mixture has become cold, pour it into a two-gallon bottle. Add the permanganate and agitate until it is dissolved. Then add benzine, one gallon, and thoroughly

agitate. Allow the liquids to remain in contact for twenty-four hours, frequently agitating the mixture. Separate the benzine and wash in a similar bottle with a mixture of

Potassium permanganate. . . 1 $\frac{1}{2}$ ounce
Caustic soda 1 $\frac{1}{2}$ ounce
Water 2 pints

Agitate the mixture frequently during several hours, then separate the benzine and wash it thoroughly with water. On agitating the benzine with the acid permanganate solution an emulsion-like mixture is produced which separates in a few seconds, the permanganate slowly subsiding and showing considerable reduction.

In the above process it is quite probable that the time specified (24 hours) is greatly in excess of what is necessary, as the reduction takes place almost entirely in a very short time. It has also been suggested that if the process were adopted on a manufacturing scale, with mechanical agitation, the time could be reduced to an hour or two.

Almond Cream.

(C. F. S.)—See last week's Era, page 105. Here are two other formulas:

(1.)

Almonds, blanched 1 ounce
Rose water 4 ounces
Beat the almonds to a paste and add the rose water; strain, heat to boiling point, and add
White wax 1 ounce
Almond oil 2 ounces
White Castile soap 1 ounce
Mix thoroughly and add
Saturated boric acid solution 2 drams
Eau de cologne 1 ounce
Oil of bitter almonds 4 minims
Oil of rose geranium 5 minims
Glycerin 1 ounce

(2.)

Oil of sweet almond 100 parts
White vegetable wax 125 parts
Spermaceti 160 parts
Glycerin 280 parts
Boric acid 12 parts
Water 500 parts
Dissolve the boric acid in the glycerin, and mix the solution with the oil, wax and spermaceti. Melt together with a very gentle heat, stirring constantly; when homogeneous, pour into a warm mortar, add the water and beat energetically until it forms a smooth mass. In case the mass becomes "lumpy" remelt, and again heat up.

Fluid Extract of Hydrastis in a Prescription.

(T. L. M.)—asks if there is any way to prevent precipitation in the following prescription:

Cocaine 15 grains
Menthol 10 grains
Fluid extract of hydrastis. . . 4 drams
Liq. antisept. 1 ounce
Water, enough to make. . . 3 ounces
Mix. Directions—Mop throat every 3 hours.

Precipitation cannot be avoided if the official fluid extract be employed, as it is not miscible with water.

Some difficulty may also be experienced with the menthol which is but slightly soluble in water. The amount which may be dissolved will depend, not only on the

alcohol in the fluid extract, but also on the alcohol in the "antiseptic solution," the composition of which is not stated. If the antiseptic solution be alkaline (borax) some of the cocaine may be precipitated, although the presence of glycerin in the fluid extract may prevent the reaction. By using glycerite of hydrastis instead of the fluid extract the difficulty can be avoided, but no change of this character should be made without the consent of the prescriber. It is assumed, of course, that cocaine hydrochloride is wanted instead of the alkaloid cocaine.

Solution of Subacetate of Lead, Aust. Ph.

(Subscriber.)—The Austrian Pharmacopoeia gives the following formula for the preparation of solution of subacetate of lead:

Lead acetate 300
Rub together with
Powdered lead oxide 100
Place the mixture in a flask
which contains

Distilled water 1000
Let stand in a closed flask, frequently shaking vigorously, until the color of the sediment has changed to white, a small quantity of which remains undissolved. The solution, having been filtered, is preserved in a well-closed vessel. It should be a clear, colorless liquid, of an alkaline reaction; having a specific gravity of 1.23-1.24. The solution should remain clear on the addition of ammonia.

Hoff's Consumption Cure.

(A. B. Z.)—The following prescription was given wide circulation in the daily papers several years ago as a wonderful cure for consumption discovered by Prof. Hoff, of Vienna:

Acid. arsen. 0.1
Acid. cinnam. 0.3
Kali, carb. dep. 0.2
Aqua distill. 0.5
Make a perfect solution.
Add
Cognac 2.5
Mix.

Sig.—Take after meals, according to instructions of physician.

Comment on the Latin of the prescription is unnecessary, but pharmaceutically, a clear solution cannot be produced with the amount of water present, and there is not sufficient potassium carbonate to effect solution with the acids. Medicinally, the mixture is decidedly dangerous. In 1900 The Era printed the comments of a leading specialist on this prescription and among other things he said that "this 'latest discovery' would fit a man for the graveyard; no respectable druggist would think of filling it."

Elixir of Terpin Hydrate.

(A. W. R.)—F. A. Sleser several years ago called attention to the fact that an elixir of terpin hydrate containing one grain in each fl. dram, cannot be prepared so as to hold this amount in solution when the usual formulas that have appeared in print are followed. His formula, claimed to be satisfactory, follows: Dissolve 17.5 grams of terpin hydrate in 400 cc. of alcohol, by the aid of a gentle heat if desirable, add 400 cc. of glycerin, and then enough distilled water to make 1,000 cc. At the

ordinary temperature this elixir will hold the terpin hydrate indefinitely in solution. At low temperature some will crystallize out, but is quickly redissolved by warming.

Other formulas have been published in previous volumes of The Era. Consult the indexes.

Beatin.

(H. H.)—In further reply to your query, this journal, January 19, 1905, page 73, Mr. Harry B. Mason, of Detroit, Mich., kindly informs us that "Beatin" is mentioned in Dorland's Medical Dictionary (W. B. Saunders & Co., Philadelphia, 1903) as a "substance, $C_5H_9NO_2$, used in urinary diseases." The source of the article is not indicated.

Solution of Iron Peptonate.

(F. W. D.)—See January 5, 1905, Era, page 10. We cannot give the formula for the proprietary article.

Test for Human Blood.

Tallquist (Ber. Klin. Woch., New Rem.) suggests a simple physical method of testing the composition of human blood, as follows: If a drop of fresh blood is caught on a piece of filter paper, there may appear around it, as it dries, a ring of moisture which is better seen when the paper is held up to the light. The appearance of this ring always denotes a marked change in the number of red blood cells present and apparently the ring does not appear until this number has sunk down to about half the normal. The degree of the change is marked by the difference in the width of the transparent ring and its presence indicates the presence of a severe anemia. It is also noteworthy that a drop of normal blood dries up quite rapidly on the filter paper, whereas blood containing a diminished number of red cells is absorbed with difficulty, so that more time elapses before the ring appears.

Djamboe Leaves.

An analysis of djamboe leaves made by Altan (L'Union Pharm.) gave the following results: Resin, 3.15; fat, 5.99; volatile oil, 0.36; chlorophyll, 0.39; tannin, 9.15; ash, 3.95; cellulose, 77. The resin melts at 189° C., has an iodine value of 115, acid value 89, and saponification value 131. The fat, a solid, melts at 135° has an iodine value 199, acid value 95 and saponification value 137. The volatile oil has the empirical formula $C_{10}H_{16}O$, boils at 237°, and has a specific gravity of 1.069. The composition of the tannin is expressed by the formula $C_6H_6O_4$. The leaves have been employed in the treatment of cholera and come from the *Phydium soyaya*, which grows in South America and the Indies.

Pakoin.

Pakoin, a toxic glucoside, has been isolated from the fruit of *Lycas circinalis*, indigenous to the Iurch Indies, where it is known as "Bidji Pakoe Hadji." Pakoin is described as an amorphous light yellow powder, soluble in dilute alcohol, but insoluble in most organic solvents. Phytosterin has also been isolated from the fruit of the cecay (Pharm. Zeit.).

Don't Disappoint

your Physician when he writes for a drug from which he *must have* definite results.

Call his attention to the positive physiological action of

BURROUGH'S Fluid Extract Digitalis

Fresh leaves, perfect exhaustion by low temperature process, and *drop doses*, make our product a favorite with the skilled practitioner.

NEWS SECTION

NEW SQUIBBS CO.

REORGANIZES AFTER ALL.

Theodore Weicker Becomes President of Brooklyn House.

IN SPITE OF RECENT DENIAL THAT CHANGES WERE CONTEMPLATED, THE COMPANY NOW ANNOUNCES THAT STEPS ARE TAKEN FOR BROADER WORK AND WIDER SERVICE.—DR. SQUIBB, CHAIRMAN.

E. R. Squibb & Sons, manufacturing chemists of Brooklyn, announce that their firm has been reorganized with Theodore Weicker as president and Dr. Edward H. Squibb as chairman of the Board of Directors.

This announcement comes only two weeks after a flat denial on the part of the Squibb interests that any such step was contemplated. Nearly a month ago The Era announced that Theodore Weicker had secured an interest in the Squibb business and also printed a rumor that Mr. Weicker intended to consolidate E. R. Squibb & Sons with the Powers-Weightman-Rosengarten Company. This latter report was vigorously denied by H. B. Rosengarten and Charles F. Squibb. Mr. Squibb said there was absolutely no truth in the statement that Mr. Weicker was to form a connection with the Squibb house. Communication was had with Mr. Weicker over the telephone, from his home in Stamford, Conn., but he would neither confirm nor deny the rumors.

The text of the announcement issued to the trade is as follows:
To the Medical and Pharmaceutical Professions and the Drug and Chemical Trade:

Dear Sirs: We hereby announce that our house has been reorganized for broader work and wider service.

Mr. Theodore Weicker has been elected its president.

Dr. Edward H. Squibb is chairman of the Board of Directors, and Messrs. Charles F. Squibb, Lowell M. Palmer, Herman G. Weicker, William M. Spackman and Edward M. Shepard are directors.

We shall be able to meet hereafter the constantly growing demand for Squibb quality in a considerably larger line of products than we have been able to supply hitherto.

Thanking the professions and the trade for their generous support in the past, we promise to spare neither effort nor expense to deserve their continued preference for our label. Very truly yours,

E. R. SQUIBB & SONS.

Dear Sirs: Referring to the foregoing announcement, I wish to state that under the new management the affairs of E. R. Squibb & Sons will be conducted in such manner that the time-honored traditions of this establishment shall be preserved; that the business principles which have

guided this American chemical house through almost half a century of effort and achievement shall also govern its course in the future.

We shall remain true to the inspiring example of its founder, that great and noble man, Dr. E. R. Squibb, to whose memory this house shall ever be a worthy monument. Faithfully yours,

THEODORE WEICKER.

ATTACKS ON MANN BILL.

Opposition Gets Energetic With the Senate Stage of Passage.

Washington, Jan. 30.—After passing the House without trouble, the Mann bill now confronts enemies who seemingly have just awakened to the fact that it may as easily go through the Senate. A keen legislative struggle may therefore be expected. Foreign concerns who own patents in this country are naturally most interested in the defeat of the measure, but the Patent Law Association, of Washington, D. C., has also been developing opposition. From this source letters have been issued to different leading drug manufacturers, whose attention is thus called to their vital concern in the threatened legislation. They are recommended to "at once communicate with your senators and urge them to oppose it, stating such reasons as you can for the opposition."

But meantime local associations of retail druggists are answering the plea sent them by the N. A. R. D., and as organizations, and the members as individuals are doing all in their power to win their senators over to the bill's support. County newspapers, newspapers from small towns, as well as from cities, from every part of the country, have in them accounts of druggists in session and passing resolutions favoring the Mann bill.

Meantime, S. L. Hilton, chairman of the N. A. R. D.'s Committee on Legislation, and recently J. C. Gallagher, of Jersey City, and member of the same committee, are in Washington and defending the bill before the different members of the Senate Committee on Patents. The committee is to give both gentlemen a hearing, but at the same time the opposition must also show its hand. However, opposition was looked for sooner, and its appearance now occasions neither surprise nor dismay.

NEW WHOLESALE FIRM.

A certificate of Incorporation has been filed by the Bergen Drug Company, which proposes to do a wholesale drug and chemical business at 573 Newark avenue, Jersey City. The incorporators named are Henry I. Darling, Robert V. Smith, who formerly owned a drug store in Jersey City, and H. C. Goode. This will be the only wholesale drug house in Jersey City; hitherto local druggists have been compelled to get their supplies elsewhere.

PLATT WRIT THROWN OUT.

Injunction Aimed at Price Protection Fails in Chicago.

CUT-RATE DRUGGIST WHO ASKED COURT'S AID IN BUYING CONTRACT GOODS IS MET WITH DENIAL.—JUDGE TULEY SUSTAINS VALIDITY OF SERIAL NUMBERING IN AN ABLE DECISION.

Chicago, Jan. 29.—What is known as the Platt writ has been dissolved. The position of the N. A. R. D. and wholesale druggists and the validity of the serial numbering and contract plan have been sustained in a lengthy decision rendered this week, by Judge Murray F. Tuley, the Nestor of the Chicago bar, recognized by general consent as the ablest jurist on the Illinois bench.

The decision of the court is not final in the sense of being an expression of the Supreme or Appellate Court, but it presents very fully the whole legal aspect of the case. The salient points of the decision are as follows:

After stating the case made out in the bill of Isaac Platt, the complainant, the court said:

"The facts appear to be that the National Association of Retail Druggists recommended—and it may be said the evidence tends to show they are acting in understanding, if not in collusion with the proprietors of these medicines—to put in force in the trade what has come to be known as the direct contract and serial number plan of operations.

"The direct contract plan appears to have had its origin in England, and a case is reported as far back as 2d Chancery Reports, Elliman vs. Carrington, which I believe arose in regard to a certain secret preparation, medicine both for horse and man.

"It was afterwards adopted in Canada by what is known as the Liquid Ozona Company, manufacturing liquid ozone by a secret process, and was subsequently adopted in this country by the National Association of Retail Druggists and certain manufacturers.

OPINION ON THE CONTRACT.

The plan is simply a contract plan and consists in this: The manufacturer of the medicine gives notice to the world that he will sell only to wholesale merchants and jobbers upon condition that they enter into a contract with him or with his company, by which the wholesale merchant is appointed a distributing agent of the proprietor of the medicine, or of the medicine. He is termed an agent, but it is in reality a sale and must be so treated and considered."

Here the court quoted the substance of the actual contract which had been placed in evidence by the wholesale druggists, and continuing said:

"The proprietor, or I think probably the National Association of Retail Druggists, aids in the expense of sending a notice to the wholesale druggists monthly, containing the names of all persons who have cut rates upon the medicines supplied them. The proprietor has upon his medicine a fixed price—say of \$1 per bottle—and any one found selling at a less price is placed upon what might be termed the "black-list" or "list of unfair purchasers." The wholesale merchant is notified not to sell to such parties; if he does then the contract between him and the proprietor is annulled, all medicines are withdrawn from him, and he cannot procure them upon any terms whatever."

AS TO RESTRAINT OF COMPETITION.

Here the court reverted to certain features of the case, involving a recent temporary injunction, and continued:

"The wholesale merchants set up this contract, and they say in substance, 'we need these medicines in carrying on our business; they are necessary to the successful supplying of our customers with what they desire. We can get them upon the condition that we shall sell only to such persons as the proprietor designates, or at least that we shall not sell to those to whom he says no sale shall be made, and also on condition that all retail druggists that we sell to shall obligate themselves to maintain the prices marked upon the goods.'

"It is contended on behalf of the complainant that this arrangement * * * is in restraint of trade and * * * prevents competition between retail druggists.

"It would appear to be undisputed that * * * if A. (the proprietor) sells to B and C (retail druggists) at one and the same price on condition that B and C shall resell at a fixed price, there can be no competition in the sale of the medicines between B and C. It is in restraint of competition to that extent.

"If this contract that is forced upon the wholesale merchants by the proprietor is a legal contract * * * then it can not be held to be illegal competition or unlawful competition, or to produce unlawful competition, and * * * in my opinion * * * this case depends upon the validity of that contract in question."

RIGHTS IN A SECRET.

Here the court proceeds to state that patentees and persons possessing trade secrets hold lawful monopolies upon them; the latter remaining in force so long as its subject matter remains a trade secret. In support of his view that persons holding such trade secrets may make such terms as they please, or refuse entirely to sell their goods, the court quotes the English case above cited; also the case of Park & Sons vs. The National Wholesale Druggists' Association, 67 Northeastern Reporter, 136.

"It is well known that in patented articles and in manufactures under trade secrets, they both stand upon the same footing—that the patentee has a right to fix the price at which his article shall be sold to the consumer."

Judge Tuley also quoted 186 U. S., p. 70, in support of his view. Several other cases were also mentioned, and the court stated his conviction that the case under his decision was one involving trade

secrets on which manufacturers had a right to fix the retail price.

The closing remarks of the court are interesting:

Mr. Gammage, counsel for complainant, said: "That restraining order was restraining the defendants from combining and conspiring together to issue a blacklist, in which this complainant's name appears, and it seems to me it is an entirely different state of facts."

The Court: "As I understand, that is a mere notice that if this party will continue to sell at cut rates, no goods must be sold to him."

Mr. Sidley, of counsel for the wholesalers: "Yes."

The Court: "The decisions appear to be that they have a right to make that condition, and I do not understand it to be a blacklist. Let the order be: Restraining order set aside and temporary injunction be denied."

CHRONIC VICTIM OF THEFT.

As a victim of burglars, A. Richter, druggist at Third avenue and Sixtieth street, claims to hold the record. Eight times during the past two years attempts, some of them successful, have been made to enter the store. This is the record so far:

In 1903 there were two attempts at robbery, and another in January, 1904. Just about a year ago the safe was opened and \$1,000 in money, stamps, drugs and instruments taken. Last August the store was again ransacked, though little was taken. A week ago the door was pried open with a jimmy and the burglar secured a watch, some small change and a few trifles.

Now Mr. Richter has taken out a permit to carry a revolver, and with this and a Winchester, he proposes to give the robber a warm reception. He thinks the same man has been concerned in all the attempts.

Another victim of the local epidemic of hold-ups is Max Mariamson, whose drug store at Union avenue and 165th street, Bronx, was entered by burglars last Thursday night. A desk in the rear of the store was broken up and cash amounting to \$200 together with jewels valued at \$800 were taken.

TWO DEATHS IN BROOKLYN.

Adolph Frederick William Nietsch, who for thirty-five years conducted a drug store at 150 Harrison avenue, Brooklyn, died at his residence, 1219 Hancock street, after a brief attack of erysipelas. He was born in Germany, eighty years ago, and came to this country when only ten years of age. He retired from the drug business about a year ago. The deceased leaves a widow, a son and two daughters.

George S. Phillips, a colored pharmacist of Brooklyn, died suddenly on January 25, at his home, 200 Johnson street. Born in New York City in 1830, he went to Brooklyn in 1854 and established a drug store at the corner of Fleet place and Johnson street. He was choirmaster of the Siloam Presbyterian Church for the past twenty years. A widow, three children and several grandchildren survive.

"Dear Mr. Druggist: Your directions say 'if one bottle does not cure the cough, get another.' Please send me another cough, at once."

COCAINE LAW COMES AGAIN.

One Like That of Last Year is Introduced at Albany

A bill to regulate the sale of cocaine practically the same as that which failed at Albany last year, has been introduced in the Assembly, and referred to the Committee on Public Health. The measure was submitted by Mr. McKewon, member of the Assembly, but further than this the interests and supporters back of the bill are not known locally. The New York State Ph. A., at its last meeting voted not to take any action as to cocaine legislation this year, and though it fathered last year's bill, its legislative committee will take no part in the present attempt.

The proposed law would prevent the sale of cocaine except on prescription, and would bar the repeating of such a prescription without the physician's order, nor can a copy of the prescription be given. A prescription would accordingly be required for the sale of a proprietary medicine, though there is an exception as to certain coca preparations.

The bill is called "an act to amend the public health law, and the acts amendatory thereof, in relation to pharmacy." The new portions are stated as follows:

"It shall be unlawful for any person to sell or retail or to furnish or dispose of the alkaloid cocaine, its salts or any admixture thereof, or any proprietary preparations or articles containing the same except upon the written prescription of a duly registered practicing physician or dentist, which prescription shall be retained by the seller and, unless the prescribing physician or dentist shall otherwise direct in writing, shall be filed but once, and no copy or which shall be taken by any person; and excepting that proprietary preparations or articles containing said alkaloid cocaine or its salts may lawfully be sold at wholesale when not for the use or consumption of the purchaser, provided that the quantity of said alkaloid, cocaine or salts thereof contained in said preparations or articles is conspicuously printed upon a label affixed to the boxes, bottles, or other receptacles containing said preparations or articles, and upon the outer wrapper of original packages thereof."

The exception made for coca proprietaries is as follows:

"But nothing in this section or in section one hundred and ninety-eight hereof shall apply to or cover coca preparations or preparations made from coca leaves, where not over two ounces of such leaves are used to make each fluid pint of such preparation and where no alkaloid cocaine as such has been added thereto."

MR. GLATZ DIES OF INJURIES.

Joseph Glatz, formerly of the firm of Schering & Glatz, died last Friday, from injuries caused by an explosion in his laboratory at Long Island City, the day before, while engaged in experimenting with ammonia. Together with Hugo Schering, Mr. Glatz in 1867 founded the firm of Schering & Glatz. He retired in 1892, Mr. Schering having died two years previously. He is survived by a widow, two sons and one daughter.

ST. PAUL PRAISES N. A. R. D.

Opinions There Bear Out Those of Other Cities.

EVEN A DOUBTING THOMAS CITES "ONE GREAT PIECE OF WORK" ACHIEVED BY THE NATIONAL ASSOCIATION.—OTHERS FIND IT INDISPENSABLE AND A SALVATION.

St. Paul, Jan. 30.—With one exception, all the druggists here who were questioned on the subject were enthusiastic in their expressions about the N. A. R. D.'s work in St. Paul. The one exception is by no means an opponent of the organization, but rather a "doubting Thomas" as to a few points. Here are some of the representative opinions:

Henry McColl, member of the legislature—"No doubt exists in my mind that the majority of druggists here are better off by reason of the efforts of the N. A. R. D. I have always been rather radical in my views. I do not believe outsiders (meaning chiefly department stores) should be granted advantages over the legitimate distributors of drugs."

R. A. Becker—"Prices in this city were cut outrageously two years ago. Now they are, as a rule, up to the proper level, and this result is due in large measure to the N. A. R. D. That association has certainly done a vast amount of good to the trade."

H. W. Reitzke—"Fraternally the N. A. R. D. is an excellent institution. I hope that in a business way it will prove the panacea for the evils that prevail. But thus far not much can be said for it. The association has as yet given us only promises. However, an organization which has the interests of retail druggists close to heart is bound to be beneficial, even if it does not achieve quite all it sets out to. The N. A. R. D. is entitled to credit for one great piece of work which I do not think the public generally understands. It secured the repeal of the Spanish war tax a full year, and perhaps two, sooner than would have been the case otherwise. Thus the N. A. R. D. saved the retail druggists of the country many thousands of dollars."

EFFECT ON DEPARTMENT STORES.

W. A. Frost, former president of the State Board of Pharmacy—"I cannot speak too highly of the amount of good the N. A. R. D. has accomplished in the Twin Cities. I would not return to the old order of things if it could be avoided. Pleasant relations have, as a result of the national organization's efforts, been established not only among druggists, but between them and the department stores."

C. F. Rutherford—"We positively could not do without the N. A. R. D. I think it very strange that the druggists of Greater New York hold out as they do. Should the present association fail, not for many years could the retailers secure so effective an organization throughout the country."

C. T. Heller, member State Board of Pharmacy—"It would be a great blow to the druggists of United States if the N. A. R. D. should fail. I do not believe it would ever again be in our power to secure so effective an organization. I consider

the Miles plan the salvation of druggists. We must all give something in order to get something. The one stumbling block in the way is the attitude of the Greater New York retailers."

John Neff, of Neff & Rosenquist—"The N. A. R. D. has accomplished much good in this city, and could not be dispensed with safely."

FORMED A NEW SCHEDULE.

J. P. Jelinek, president St. Paul Retail Druggists' Association—"The N. A. R. D. has done a great deal of good here, but much more in other cities where the trade was more demoralized than in St. Paul. We are only just beginning to feel the effects of its work here. The principal thing it has done thus far was to aid us in forming the new price schedule which is now in operation, to the satisfaction of all members. The only thing I can see to interfere with the success of the organization is the raising of the dues to \$4. Of course, such a work cannot be carried on without funds, but some druggists appear to think the raise a hardship."

Albert J. Schumacher, secretary St. Paul Retail Druggists' Association—"I can hardly say just how much the N. A. R. D. has done for druggists here thus far, but I doubt if the local association could have accomplished so much as it has without the backing of the national body. Its influence is the backbone of the movement for uniformity of prices, and I do not see how there can be any question of the benefit of the organization. It would be many years before its equal could be created."

WHAT IS SAID OF MR. CLUFF.

Numerous inquiries have been received by wholesale houses and credit agencies here as to the financial responsibility of Burgess Cluff, importer and jobber at 71-73 West Broadway. To all callers at his office Mr. Cluff told substantially the same story, to this effect:

It was his first venture in business, he said, although he had been a salesman in the line of drugs, sundries, etc., for the past fifteen years. He named one or two well-known houses as references. He was now engaged in settling up his father's estate. Mr. Cluff expressed no surprise at the many inquiries. "Nobody knows me yet," he said, "so it's only natural."

A member of one of the firms given as a reference stated that Mr. Cluff had been in the employ of the house some eight years ago, and that nothing was known of his doings since that time. This reference did not speak very highly of Mr. Cluff.

On Tuesday Mr. Cluff was again visited by an *Enter* reporter, to whom he made this statement of his financial condition:

Stock on hand and in transit, \$2,240; fixtures, etc., \$400; cash on hand and in bank, \$550; good accounts, \$650; equity in real estate, \$2,000; total, \$5,840. Liabilities, accounts due February 1, \$165; due March 1, \$150; due April 1, \$250; total, \$565; making total assets of \$5,275.

Mr. Cluff has two rooms, each about ten by twelve feet, one stored with a miscellaneous assortment of standard goods, the other used as an office. He claims to supply only dealers in the vicinity, and no further away than Buffalo.

N. Y. R. D. A. TAKES A PLUNGE.

Association Sidesteps a Little to Favor Municipal Gas.

COUPLED WITH THE SAME RESOLUTION IS A DEMAND FOR THE PASSAGE OF THE MANN BILL.—GROCERS SEND TO THE MEETING A PROPOSITION THAT RETAIL MERCHANTS ORGANIZE.

For the first time in three months the New York Retail Druggists' Association, at its meeting last Friday night found time to discuss local affairs without the distraction of a hot debate over the N. A. R. D. A resolution demanding the passage of the Mann bill was passed jointly with one supporting the present efforts to obtain municipal ownership of gas and electric light plants. Many and loud were the denunciations of "gas trust" methods.

One of the matters taken up was the reading of a communication from the Retail Grocers' Association of New York and Brooklyn, submitting a proposition to form an association of retail merchants throughout the city. The association decided to send a representative to a conference on January 31, when the subject would be discussed.

A. Bakst, chairman of the entertainment committee, reported that the annual entertainment and ball would be held at the Grand Central Palace, Lexington avenue and Forty-third street, on Friday evening, March 3. The entertainment, for which elaborate preparations are being made, will be strictly professional.

President Diamond rendered a full report of the last joint committee conference on organization. The situation, he said, was very encouraging. All the jobbers had agreed to the direct contract plan and so also had the "giant druggists" at a conference held on the previous day. These "giants," however, wished it distinctly understood that when they raised their prices the small druggists were not to take advantage and undercut, as had been done on previous occasions. Another decision made was that while no goods were to be furnished to any dealer who had not signed the contract, prices were not to be raised as yet.

"The signing of the contracts," Mr. Diamond proceeded to impress upon his hearers, "does not bind you to anything at present. You may sign it today and receive notice that it is in force; but if your neighbor cuts because he happens to have a supply of Peruna for the present, you are not to feel that you are compelled to keep up prices. Meet his competition, and be assured that you will be able to beat him without any loss to you."

As an instance of the good faith of the jobber, Mr. Diamond stated that he had seen one order returned to a druggist by a prominent house, bearing in red ink the words, "We cannot supply you with Peruna unless you sign the contract." This druggist, said the president, suddenly became very anxious to sign the contract and enrol in the N. A. R. D.

J. D. Bellare, N. A. R. D. representative, said that Horlick's Malted Milk would soon be placed under direct contract.

A report on the conference between the joint press committee and the New York Journal was then given by Mr. Diamond.

He said that in connection with the Journal he had become greatly interested in the municipal ownership question, and had attended a hearing on that subject at Albany. Tales of oppression by the gas monopoly were told by Mr. Diamond and warmly corroborated by the members.

Accordingly, two resolutions, one on the gas situation and the other on the Mann bill, were read by the president and offered for discussion, with the understanding that both were to be printed in the New York Journal as part of a report of the meeting and that the Journal was to hammer in favor of the Mann bill through its editorial columns.

Most of the discussion was confined to the first resolution, favoring a legislative inquiry into the gas situation, endorsing the municipal ownership proposition and commending the work of Wm. R. Hearst in that direction. It was generally admitted that this question was really outside the pale of a professional association like the R. D. A., but Mr. Weinstein pointed out that gas was not a side-line, but one of the biggest items in the drug store, and just as important to local pharmacists as the Mann bill. His motion that the resolutions be adopted with thanks to Mr. Diamond was carried unanimously.

To help the Mann bill through the Senate, it was also decided to send canvassers through all districts, with the intention of getting every druggist to send personal letters to Chauncey M. Depew and Thomas C. Platt, asking for their aid in behalf of the bill.

M. Zagat protested against the practise of some druggists in displaying signs stating that they do not substitute, and that their neighbors do. He cited one instance where the offender was a member of the association. A committee will visit this druggist and use moral suasion.

At Mr. Diamond's suggestion, the association endorsed the bill now pending in the legislature which requires the manufacture of any patent medicine to paste on the bottle a label containing the formula for the preparation.

The following committees were announced: Legislative, Messrs. Diamond, Bernstein and Kahn; Membership, Ehrenfreund, Robbins & Fleishman; Finance, M. Zagat, Gollubin, Hergenberg; Grievance, Rosahn, Mahler, Bergman, A. Bakst, Goetzboff; Trade Interests, Weinstein, I. Friedman, Brodkin; Entertainment, A. Bakst, J. Beck, Kassell, Goldberg, Mrs. Broder, Epstein, Segal; Scientific, Kruskal, Marmor, H. Beck.

At 2.40 a. m. the meeting adjourned to the sandwich emporium downstairs, where refreshments were imbibed.

TO AMEND PENAL CODE.

The amendments to the Penal Code, to make the latter conform with the pharmacy law, have been drafted, and will be introduced at Albany this week, if the codes committee agrees on them. These amendments were those decided upon in the conference of last November at Albany, which had been called by the legislative committee of the State Ph. A. Some seventeen local associations were represented. It is hoped that these amendments will do away with any future conflicts between the code and the pharmacy law.

REDUCED R. R. FARES.

Buyers Coming to New York Secure Special Privileges.

Reduced railroad fares for the coming spring have been secured by the Merchants' Association of New York to benefit buyers contemplating a trip to this city. All druggists who are interested should note the dates and rates given below. Investigation will reveal to many the economy of direct personal buying in New York, and in some cases the chance offered by these reduced fares will allow a saving to a buyer when a trip under ordinary terms would not. It pays to buy in New York.

Reduced fares have been arranged from the territories of the Central Passenger Association and the Trunk Line Association (except from points less than one hundred miles from New York). The terms will be, to New York, full fare; returning, one-third fare. No reduction will be made to anyone who does not have a return trip certificate, or who buys a ticket on dates not authorized. No reduction will be allowed on half-fare tickets.

When buying ticket to New York obtain from the agent a return trip certificate, which must be signed by the buyer in the presence of the ticket agent, and countersigned by the latter. This is a voucher which must be deposited at the office of the Merchants Association, 346 Broadway, on arrival in New York.

POINTS AFFECTED.

The territory of the Central Passenger Association includes points west of, but not including Suspension Bridge, Niagara Falls, Tonawanda, Black Rock, Buffalo, East Buffalo, Buffalo Junction, Dunkirk and Salamanca, N. Y.; Erie, Pittsburg and Allegheny, Pa.; Bellaire, O.; Wheeling, Parkersburg, Huntington and Gauley Bridge, W. Va., north of the Ohio River and east of the Mississippi River, and south of a line from Keokuk, Iowa, to Chicago, Ill. Chicago, St. Louis, Louisville, all points in Kentucky on the Chesapeake & Ohio Railway, and Canadian towns west of Toronto and Hamilton are included in Central Passenger Territory.

Reduced rate tickets for this territory will be sold on February 11 to 15, inclusive, and on March 4 to 7, inclusive. Tickets bought in this territory on other dates are worthless for return reductions. The return limit is fixed as 30 days from date of ticket.

The Trunk Line Association Territory includes Suspension Bridge, Niagara Falls, Tonawanda, Black Rock, Buffalo, East Buffalo, Buffalo Junction, Dunkirk, and Salamanca, N. Y.; Erie, Pittsburg and Allegheny, Pa.; Bellaire, O.; Wheeling, Parkersburg, Huntington and Gauley Bridge, W. Va., and points east thereof to New England Line (N. Y. and Harlem R. R. not included.) Montreal, Canada, is also in this territory. The dates of sales of tickets goods from these points are March 4 to 7, inclusive, and 25 to 28, inclusive.

If you are not within the territories specified, come forward to the nearest point in the Central Passenger or Trunk Line territories and there, on one of the specified dates, buy your ticket.

The Merchants' Association also announces that it has arranged for reduced fares for merchants in Texas only, coming to New York on February 11 to 15, inclusive, and 4 to 7, inclusive. The railroad routes offering the reduction are the Southern Pacific System, the Houston & Texas Central Railroad, and the San Antonio and Aransas Pass Railway via both the New Orleans and St. Louis gateways.

The Southern Pacific Co. offers the same reduced rates from points reached by its system in Texas in connection with the water trip to New York from New Orleans on the Southern Pacific passenger steamships. The special fare by rail and steamer also covers meals and staterooms while on board the boat.

OTHER CHEAP RATES.

The following railroads have also agreed to put in the special rate via the St. Louis gateway: International and Gt. Northern R. R., Missouri, Kansas & Texas Ry., St. Louis, Iron Mt. & Southern Ry., St. Louis & San Francisco R. R., Texas & Pacific Ry.

The Chicago, Rock Island & Gulf Ry., Chicago, Rock Island & El Paso Ry., and the El Paso-Northeastern System will make the rate effective via the Chicago gateway.

No rates apply via the Memphis gateway.

The special fares are for non-resident members of The Merchants' Association of New York, their buyers and the immediate members of their families. Merchants and their representatives can join the association when in New York. There is no fee attached to such membership.

The reduction consists of a two-thirds reduction in price of the return trip.

The methods of securing a return trip certificate for Texas merchants is the same as described above for other sections.

CONTRACT PRICES IN JERSEY.

Over in Jersey City the druggists are getting eighty-three cents for Peruna and no kicks from customers. So far as reported, trade has lost nothing on account of the increased prices. J. C. Gallagher criticized sharply the manner in which the contracts are being handled in New York.

"What do they mean by this decision not to charge the contract price until they're good and ready?" demanded Mr. Gallagher. "Somebody over there is giving them a wrong idea of what the contract is. It's in force now and they must charge eighty-three cents or violate the contract. How do they ever expect to get the thing going at this rate?"

"I know there is a lot of talk about a druggist losing trade to the profit of the neighboring cutters. But how long would that last? Not above a few days, until their supply is exhausted. These people who tell you that they are stocked up for two or three months are only bluffing and lying. And nobody can get Peruna any more that hasn't signed the contract."

SUBSTITUTION.

"Have you a two-cent stamp?" asked the lady in the drug store.

"No, ma'am," replied the clerk; "but we have something just as good. Here are two one-cent stamps."—The Yonkers Statesman.

TO AID THE CONTRACTS.

But the Conference Plan Waits on the Proprietors.

Letters from the Greater New York joint conference committee on N. A. R. D. organization have been sent to the three firms who have adopted the direct serial numbering contract plans. These firms, the Peruna, Wells-Richardson, and Paris Medicine Co., were made a party to the policy of the conference committee, when this committee, at its last meeting, desired that the contract prices should not go into effect until a date to be named by the conference. In the letters the three firms are asked if they will agree to this arrangement, and if they do, then a notice will be sent to the druggists of the city, signed by the members of the conference. Such an assurance, it is hoped, will dispel all fear of getting bound up in a contract when cutting prevails on all sides, and will result in a rush to sign the contracts. But meantime the sparse 150 who have signed so far have not grown appreciably. Druggists generally prefer to drift along under the present conditions, selling what Peruna they have, and borrowing here and there from neighbors where possible, rather than sign any contract and take what they regard as a risky step into a dark place. The dark place might be hot. They want light, they say, and a thermometer, and then they'll march right in, oh, beautifully!

So far two of the serial numbering contracts are operative in New York, but only to this extent, that no jobber will sell the goods, either Peruna or Bromo-Laxative, to any retailer who has not signed the contracts. But it is not known that any signer of the contract who meets the price of a neighbor, thereby violating his agreement, has as yet been called to account. But this is in line with the statement of Lee M. Evans, representing Peruna, at the last conference meeting, when he assured the trade that his company would prosecute no contract violators who had to meet aggressive cutters. The Wells-Richardson contracts are not yet operative, but the list of signers is now in the printers' hands, which will in due course be sent out to the jobbers.

PASSED BOARD EXAMINATION.

As a result of the examinations held here December 28, the following have received licenses as pharmacists:

Joseph Abramson, James E. Alguter, Allison Androvette, Jacob K. Appelbaum, Euclid Ashley, Frederick Baden, Jr., Henry E. Balcum, Menache Barouch, Walter J. Brandenber, David G. Burton, Theodore Caldera (druggist), Clemente Carnevale, Frederick W. Carpenter, Maurice H. Cohen, James P. Colonel, James E. Daly, Jacob Daniels, Edmond A. Devaele, Daniel S. W. Dwyer, Gustave H. Fabian, Jr., John F. Garbarino, Edward G. Geist, Berthold Gerson, Paul Goldberg, Harry Gordon, Clement Grassi, Louis Hamann, William Heldemard, Morris Hessel, Morris Horn, Willard J. Hull, Benjamin Jacobs, Walter O. Jebe, Bella Junger, Joseph Katz, Wolf M. Krimerman, Thomas M. Lepard, Richard M. Magen, James F. McGowan, James J. McMahon, James E. McNamara, Morris Meyers, Germaine Millite, Philip S. Naumoff,

Paul E. Nielsen, Grandin Norcross, Frank C. Oser, Harry Person, Antonio Petraglia, Francesco D. Pittaro, James H. Platt, Gustave A. Pretti, Kurt Heiter, E. L. Reigeluth, Gustaf Rennerfelt, Michael U. Robbins, Samuel Rosen, Isidor Rosenblum, David Rudy, Giuseppe Scatturo, John H. Schell, Robert C. Schmadel, William F. Silver, Sister Chrysoptom, Sr. Editha, Sr. Mary Leo, Sr. Mary Perpetua, Sr. Mary Vincent, Carroll D. Tryon, Harry W. Tucker, Wolff Wallach, Edgar E. Warner, Abraham Wiesenthal, Max Wohlge-muth, Israel Grief, J. J. Jabrondi, Luigi Capobianco, Solomon Gutman, Harry Jacobson, C. J. Auchterlonie (druggist), David Bernstein, Thomas F. Brokaw, Gaetano M. Coccozza, Edward H. Fuller, Conrad G. Gmelch, Ben. A. Lilienthal, Maurice J. Schutzman, A. Z. Wolodarsky.

A. P. H. A. COUNCIL NOTES.

Some of the members of the A. P. H. A. Council believe that a popular exhibition of drugs, pharmaceutical and pharmacists' supplies should be held during the next meeting of the association at Atlantic City. The exhibitors, they claim, not only make the public better acquainted with the achievements and progress of pharmacy and associated industries, but they incidentally provide additional funds. A resolution before the Council authorizes the president of the association to appoint a special committee to manage such an exhibition and provides the sum of \$100 to defray the preliminary expenses of the committee. President Beal states that the work required to make a successful exhibition is greater than should be placed upon the local secretary.

An appropriation of \$230 has been made for the use of the committee on membership.

The programme for the next meeting is now under consideration by the Council and J. L. Lemberger and Harry E. Mason want the consumer sub-committee authorized not to make provision to have all entertainments given in the evening. According to Mr. Lemberger, the main "attractions of Atlantic City—sea bathing, sailing, fishing, etc.—are not engaged in after 6 p. m.," and members should be given a chance to enjoy these pleasures. Thirty-three members are credited to the present committee on membership; of the number President J. H. Beal has secured fourteen.

NO NEW SCHOOL NEEDED.

Rochester, Jan. 30.—B. M. Hyde, member of the State Board of Pharmacy, is of the opinion that a school of pharmacy is not needed in Rochester.

"There is not a scarcity of drug clerks, as some druggists seem to think," he said. "Plenty of good men may be had. But few of them want to work for nothing—that is the trouble, I think."

Mr. Hyde said he did not believe the Rochester Mechanica Institute, which has under consideration the forming of a class in pharmacy, comes up to the standard in the matter of equipment as prescribed by the State Board of Pharmacy. Each college must have an equipment of at least \$5,000. A committee has been appointed by the Mechanica Institute to confer with the officers of the Rochester Ph. A. in the matter.

TOOTHACHE GUM DECISION.

A suit was recently brought by C. S. Dent & Co., of Detroit, against the Manhattan Drug Company, of New York, and John Bell McLeod, of Buffalo, alleging that those concerns were infringing the Dent trade-mark. It was claimed that the defendants were marketing toothache gum put up in packages similar to the Dent packages in size, shape and style, and with wrappers of the same color, printed in a similar style of type. Dent & Co. sought an injunction from the court against the use of the words "toothache gum" by the defendants. The court, Judge Hazel presiding, on December 17, refused to thus enjoin them, holding that the words "toothache gum" are descriptive, denoting "the character of the article sold and its efficiency as a curative medicinal preparation, rather than origin of ownership, and hence not entitled to protection as a technical trade-mark. A decree may be entered enjoining defendants from the use of the words 'toothache gum' in connection with the style of type similar to that used by complainant on a label to the same or similar color of that used by complainant, so order."

At the office of the Manhattan Drug Company emphasis was laid on the fact that the use of the words "toothache gum" had not been enjoined. In fact, the firm considered their position vindicated. On the question of types, however, they contemplate an appeal.

NEW YORK NOTES.

—The Syracuse Druggists' Association announces an old fashioned country supper, at Long Branch, N. Y., held on Jan. 26th.

—The Kuehn Manufacturing Co., of Brooklyn, drugs, has been incorporated with a capital of \$3,000. The directors are R. C. Werner, H. Maier and Bertha M. E. Kuehn, Brooklyn.

—Articles of Incorporation have been filed by the Roberts Chemical Co., Niagara Falls, capital, \$750,000. Directors, Dr. L. L. Lewis, F. W. Williamson and J. B. Smith, Jr., New York.

—A. G. Rosengarten, treasurer of the Powers-Weightman-Rosengarten Company, was in town last week, the first visit of a member of the firm since its consolidation.

—William B. Young, manager of the Lee & Osgood Company, of Norwich, Conn., is a visitor to the city.

—H. J. Huder, of Indianapolis, Ind., was among the buyers in the local drug market.

—Eleven druggists and one grocer of Brooklyn were charged in the Myrtle Avenue Court with selling poison in beer bottles. Eight of the men were fined \$50 each. The complaints were made by an inspector of the Long Island Bottlers' Union.

—Charles M. Topliff, aged sixty-eight years, for over thirty years a druggist at Medina, died January 25, of heart failure. Death came while he sat talking with his sister. He retired two years ago on account of ill health.

"Have you any dog crackers?"
"Tommy, fetch the ice plex," shouted the fresh clerk.

MALT WHISKEY NOT A PATENT.

An important decision has been rendered in the case of the Excise Department of New York State, against a New York City druggist charged with violation of the liquor laws. The question involved was whether the pharmacist had a right to sell a certain well-known malt whiskey as a patent or proprietary medicine. It was claimed by the Excise Department that it was a liquor within the meaning of the law and it has been so decided. In the course of the trial three chemists testified for the State that they had analyzed a sample of the product in question, and that it was a whiskey containing about 45 per cent. of alcohol. No appreciable quantity of any drug or medicine was present, they testified. As the whiskey had been sold without the prescription of a duly licensed physician, prescribed by law, the full penalty of \$500 was imposed.

ALBERT W. HIGGINS.

Albert W. Higgins, a well-known Vermont pharmacist, died at his home in Rutland, January 15. The funeral was attended by many out-of-town druggists and friends who had been associated with him on the State Board of Pharmacy. There were numerous floral tributes, among them an emblematic design from the Vermont State Ph. A., one from the Board of Pharmacy and others from associations and lodges of which the deceased was a member.

OLD FASHIONS IN SYRACUSE.

Syracuse, Jan. 28.—The members of the Syracuse Druggists' Association and their wives had their annual social event at Long Branch, Thursday night, January 26. It took the form of an "old fashioned country supper," consisting of pickles, roast beef, mashed potatoes, cold ham, peas, jelly, cabbage salad, beets, cheese, pickled pears, cake, coffee, chocolate, apples and ice cream. There was a dance programme of fifteen numbers. Those who did not care to dance enjoyed cards and bowling. The committee in charge consisted of Roscoe K. Snow, George E. Thorpe, N. P. Snow, Mrs. J. Clary, Herbert W. Walker and F. B. Nye.

SYRACUSE NOTES.

—The schedule of John Binning, who has filed a petition in bankruptcy, shows \$1,534.60 liabilities and \$1,097.50 assets.

—C. W. Snow & Co., wholesalers, have elected C. W. Snow, president; I. S. Merrell, vice-president, and N. P. Snow, secretary and treasurer. The H. W. Weed Company has elected H. W. Weed, president; C. W. Snow, vice-president; I. S. Merrell, secretary, and G. L. Merrell, treasurer.

—David Stolz, of this city, and Louis Stolz, of New York, have leased the drug store of John H. Googan, No. 205 East Genesee street.

MEET OF THE BOSTON R. D. A.

Boston, Jan. 30.—The monthly meeting of the Boston Retail Druggists' Association, which was also the annual business meeting, took place at Young's Hotel, last week, and was largely attended. The election of officers for the ensuing year resulted as follows: President, Cornelius P.

Flynn, South Boston; treasurer, George H. Ingraham; secretary, James O. Jordan; executive committee, Reuben Richardson, Fred A. Hubbard, William D. Wheeler, George W. Cobb, Elliot W. Keyes, Joel S. Orme and George L. Roswell. After dinner there was a general good time. John F. Fitzgerald was the chief speaker of the occasion, and Frank H. Pope contributed several humorous selections. Both were guests of the association.

BAY STATE NOTES.

—Drug Clerk Jonas Chalmerson, of Lowell, was a bit of a hero recently. He was warmly congratulated for having compounded a few drops of ink for a young woman bent upon self-destruction.

—While there seems little doubt that eventually some of the druggists in Fitchburg will be granted sixth-class licenses, the committee on licenses of that city has derided all action for the present and applicants hardly know just where they stand. The committee is composed of Mayor Sawyer and Aldermen Cogswell and Davidson. The mayor personally favors issuing licenses to at least some druggists.

—Eugene Levitan, of Springfield, charged with violation of the liquor laws, has been found not guilty. It appeared that the charge had no real basis.

—The New England Sabbath Protection League, which has just held its tenth annual meeting in Boston, discussed the hoped-for closing of drug stores on Sundays.

—The annual report of the Lawrence city pharmacist, Edward L. Barrett, shows that this department cost the city \$3,844, of which \$900 was for the salary of the pharmacist.

—Several druggists and physicians of Boston recently have become members, by invitation, of the Ambulance Corps. Effort was made to induce them to enlist, as they will prove valuable members.

—After a long illness, Lewis H. Baker, a Provincetown druggist, is dead at his home. He was in his sixty-fourth year, widely known, and well liked. He was prominent in Masonic circles. A widow and two daughters survive.

—C. D. Harlow, who has stores in Weymouth and South Quincy, lost his home at East Braintree by fire, during the recent blizzard.

—Thieves who entered the pharmacy of John J. Forest, in Lawrence, one night recently, secured \$80 in cash and some articles of stock.

—The Potter Drug and Chemical Corporation has taken out papers of organization at Portland, under the laws of the State of Maine. It is capitalized at \$200,000 and Edmund H. Talbot, of Sharon, Mass., is president and treasurer. The company has long been doing business as a Massachusetts corporation, with its plant and laboratory in Boston.

ROUND-UP OF TRAVELERS.

Boston, Jan. 31.—This year's annual "Round-up" of the Mellin's Food Company's travelers began with a reception at the home of President Thomas Dolber and Mrs. Dolber, in Brookline. Other evenings were filled with theatre-going and the like, and the series ended with a dinner party which the company gave at the New Algonquin Club.

BIG MERGER OF PHONES.**Leading Companies of the Country Said to Have Combined.**

Pittsburg, Jan. 30.—A telephone combination of the forty-three leading companies of the country is announced here by The Press. The statement is made that the merger will be made public next month, when the annual meeting of the American Telephone and Telegraph Company, of New York, is held in Boston.

The combined capital of the companies mentioned is placed at \$250,000,000, and it is purposed to join California with New York State, and Canada with the Gulf by phone. The New York concern is said to have been working on this for a long time, and that plans have but lately been completed.

Among the companies in the supposed deal are the Bell Telephone Company, Buffalo; Bell Telephone Company, Canada; Bell Telephone Company, Missouri; Bell Telephone Company, Philadelphia; Central District and Printing Telegraph Company, Pittsburg; Central New York Telephone and Telegraph Company; Utica; Central Union Telephone Company, Indianapolis; Chesapeake and Potomac Telegraph Company, Washington; Chicago Telephone Company, Chicago; Cincinnati and Suburban Bell Telephone Association, Cincinnati; Cleveland Telephone Company, Cleveland; Colorado Telephone Company, Denver; Colorado Telephone and Telegraph Company, Denver; Cumberland Telephone and Telegraph Company, Nashville; Delaware and Atlantic Telephone Company, Philadelphia; Duluth Telephone Company, Duluth; East Tennessee Telephone Company, Nashville; Empire State Telephone and Telegraph Company, Syracuse; Freeport Telephone Exchange Company, Freeport, Ill.; New York Telephone Company, New York; New York and New Jersey Telephone Company, Brooklyn; New York and Pennsylvania Telephone Company, New York; North Western Telephone Exchange Company, Minneapolis; Pacific State Telephone and Telegraph Company, San Francisco.

ALEXANDER KENNEDY DIES.

Philadelphia, Jan. 30.—Death last week claimed Alexander Kennedy, one of the pioneers in pharmacy in this city. He was seventy-four years of age, and his long experience, as well as the fact that he had been in the retail drug business in New York and Baltimore, as well as this city, made his list of friends and acquaintances particularly large.

On account of health, he was taken out of school and a position was secured for him in a drug store. Left to support his mother and sister, he went to New York, and after a few years as clerk, purchased a store at Twelfth street and Broadway, which he conducted for a year. Then in Philadelphia he engaged with A. J. Shick, at Tenth and Ogden streets. Two years later he bought the store. In 1860 he removed to 1107 Girard avenue, where he remained until 1870, when he located at the northeast corner of Eberentz street and Girard avenue, his last location.

In 1859, Mr. Kennedy admitted to partnership his son-in-law, William T. Burke, and three years ago, owing to failing health, he retired.

ARGUE FOR SYRUP BILL.**Pittsburg Druggists Tell Their Reasons to the Legislature.**

Pittsburg, Jan. 30.—Officials of the Western Pennsylvania R. D. A. are exercising their influence to have an act to prevent the manufacture or sale of wholesome fruit syrups pass the Senate and House of Pennsylvania. Philadelphia druggists are also interested in the bill. The local dealers have mailed a copy of the bill to every member of the House and Senate, enclosed with an argument favoring the act. A copy of the letter follows: Dear Sir:

We enclose you herewith copy of proposed addition to the Pure Food Laws of Pennsylvania, together with argument in support of the same. Under the present law, every dispenser of soda water in the State is liable to prosecution, and this amendment is designed to relieve them from such hardships.

There are over ten thousand soda-water dispensers in the State, and at least two-thirds of the number are retail druggists, so you can readily see that we have a good reason for taking up the matter of endeavoring to interest the Legislature in any proper measure that will provide for the free sale of fruit favorings that will retain all the deliciousness of the fresh fruit. As the law now stands, we are in constant fear of being adjudged malfeasors, when, as a matter of fact, we are only desirous of protecting the public.

The article which we have proposed to add to the fruits and syrups we have submitted to Prof. Jos. P. Remington, of Philadelphia, and he has written thus: "I believe that the presence of one-fourth of one per cent. of sodium benzoate in concentrated fruit syrups and crushed fruits would not be detrimental to health when used for making syrups for soda water." A number of eminent chemists, as well as medical men, have voluntarily given like opinions.

Whatever you may be able to do to help us along with this legislation, we assure you, will be very greatly appreciated by the thousands of druggists, as well as other soda-water dispensers in the State. We append some of the reasons why we think our measure should appeal to thoughtful men who have the interest of the public at heart.

Trusting you will pardon us for thus imposing upon your good nature, and that you will co-operate with us, we are most sincerely yours,

E. E. RINTCHAUD, Secretary.

A FEW REASONS WHY THE BILL SHOULD RECEIVE FAVORABLE ACTION.

First: Because it will benefit the public by the selling of safe sodas.

Second: Crushed fruits and fruit syrups cannot be kept sweet and in perfect condition after opening without the use of a preserving agent.

Third: Benzoate sodium is an ideal, safe, healthful preserving agent.

Fourth: To obtain a maximum dose of the preservative mentioned would necessitate the drinking of 75 gallons, or one and a half barrels of soda water inside of 24 hours.

Fifth: Each of the coloring agents mentioned in this Act, it will be noted, are well known, harmless, vegetable substances, which could not possibly produce any deleterious effect in any reasonable quantity.

THEIR CHILD REUNITED THEM.

Baltimore, Jan. 27.—Harvey Meredith, of Church Hill, Va., who has conducted a retail drug store in Richmond Va., did not live happily with his wife, and they separated seven years ago. Mrs. Meredith obtained a divorce in Cincinnati, while the husband obtained a legal separation in Richmond. It is said that neither knew where

the other was. The action of both was based upon alleged incompatibility of temper. Just how the couple again met is not stated, but it is said that their child was seen on the street one day by the father, who was so impressed with its beauty that he felt his old love for the mother rekindled. Ascertaining where she was, he persuaded her to be married again. The ceremony took place in Baltimore, though neither the name of the minister nor the church of marriage are given.

BALTIMORE COCAINE RAID.

Baltimore, Jan. 28.—The authorities here as well as in Virginia seem determined to break up the promiscuous sale of cocaine and other narcotics. Druggist Charles E. Sonnenburg, Baltimore and Greene streets, arrested some time ago, has pleaded guilty in the Criminal Court, and was fined \$25 and costs.

James Faulkner, a white man who was charged in Richmond, Va., with selling cocaine to a number of boys there, some of them only ten years old and who was fined \$25 several weeks ago, at which time he promised to leave the State, was fined \$100 on the 18th inst., and sent to jail for thirty days on the new charges of selling the drug. There are a number of other accusations pending against him.

DAMAGED BY FIRE.

Baltimore, Jan. 30.—Fire broke out on the night of January 19, on the second floor of 118 and 120 North Paca street, occupied by the Columbia Skirt Company, and extended to the laboratory of the Lorimer Medical Institute, manufacturing chemists, in the same building, which concern sustained a damage of some thousands of dollars. Mr. Lorimer, of the Medical Institute, stated that the stock of his concern was valued at \$15,000, while the insurance amounted to not more than \$2,500.

NERVE IN A DAMAGE SUIT.

Sharon, Pa., Jan. 30.—A suit for \$5,000 damages has been instituted in the Mercer County court by David Hamilton, a Greenville grocer, against T. P. Garber, a druggist of that city. Hamilton alleges that Garber sold him a pint of whiskey, contrary to law, and that he became intoxicated to such an extent that he could not manage his horse, which ran away and injured him so that he cannot work. Garber denies selling the whiskey and will fight the case, alleging blackmail.

STOP COCAINE PRESCRIBING.

Charlottesville, Va., Jan. 30.—The grand jury of the Corporation Court has recommended that two physicians of the city, Drs. B. H. Sparks and H. B. Montz, who it is alleged, have been granting prescriptions indiscriminately for cocaine, be notified that such practice should be discontinued. The strict letter of the law regarding the sale of cocaine by druggists on prescription was urged.

SUICIDE OF A CLERK.

Philadelphia, Jan. 6.—George L. Wagner, a drug clerk, formerly proprietor of a pharmacy at Allentown, Pa., was found dead, Saturday night, in his room in an Atlantic City hotel. He had long been despondent.

ENCOURAGED IN BALTIMORE.**But the R. D. A. There Gets Yet More Vigorous as to Cutters.**

Baltimore, Jan. 30.—The last meeting of the Baltimore Retail Druggists' Association at Sonnenburg's Hall, Baltimore and Greene streets, proved to be of exceptional importance, much enthusiasm being manifested and confidence displayed in the aims and objects of the organization. The trade situation in the city was extensively discussed, and the reports submitted showed that while some little price-cutting was going on, the prevailing conditions were encouraging. It was decided to adopt a more vigorous policy as to the enforcement of the serial numbering plan if the situation made such a course expedient. A resolution was unanimously adopted to assist in every possible way the manufacturers who are earnestly and in good faith striving to restrict the cutter, and all present were requested to sign the direct contracts without delay, the statement being made in this connection that it would be necessary to do so when the druggists desired to restock, as they would be unable to obtain goods otherwise.

Letters and telegrams received from manufacturers were read at the meeting. The manufacturers assured the association that they were with them heart and soul, and would co-operate in anything the organization might undertake. They extended both moral and financial aid. It was demonstrated at the meeting that those present desired a schedule, and a motion was put and passed to increase the yearly dues from \$5 to \$10, to be collected in quarterly payments. To start the ball rolling all of those present, with but one exception, paid the first quarter then and there, some even tendering the whole year's dues. This, however, was not accepted. Dr. A. J. Corning, president of the association, has since sent out a circular letter, giving information of what was accomplished at the meeting, and calling on all the retailers to assist in the work, in order that there may be no breaks in the line.

In this connection it is also to be stated that the manufacturers of proprietaries who are in the direct contract plan and members of the so-called St. Louis committee are making arrangements to draw the lines more closely. A circular was received here this week, from the Pierce Company, announcing that the goods of the concern would be sold through certain jobbers, and from this list several houses were omitted. The circular caused much surprise and was extensively commented upon in interested circles. Other manufacturers, it is said, are preparing to follow the lead thus taken. Members of the Retail Druggists' Association take the view that it is almost useless to go after the retailers who cut prices so long as no attempt is made to force the jobbers into line. With the jobbers absolutely committed to the plan of selling goods only to druggists in good standing, it is said, no difficulty would be experienced in controlling the trade and in preventing cutting of prices. The co-operation of the jobber, therefore, is regarded as the key to the situation. Hence, pressure is now being brought to bear on him. Meanwhile

the local cutters are going ahead and putting out goods at the prices on their own schedule. For the present no attempt is made to interfere with them, the fight having taken another direction.

Among the latest of the accessions to the ranks of the St. Louis Club is A. C. Meyer, manufacturer of Dr. Bull's Cough Syrup. He has been added to Class C of the serial numbering plan, and will put out all of his goods in accordance with the existing arrangement.

BALTIMORE NOTES.

—The Maryland College of Pharmacy held its regular meeting last Thursday evening, when Dr. John F. Hancock continued his series of papers on prominent druggists of former days. His latest paper was devoted to Mr. Andrews, a member of the firm of Thomson & Andrews, in its day one of the best-known firms here, and ranking among the pioneers of modern pharmacy.

—Among the visiting druggists in Baltimore last week, were C. H. Mentzer, Waynesboro, Pa.; Dr. E. E. Wolfe, Cambridge, Md.; Dr. C. E. Michaels, Reisters-town, Md.; R. R. Smith, Annapolis, Md.; Dr. C. Perry Kemp, Stevensville, Md., and William Aughinbaugh, Md.

—Mr. J. Gilbert Leber is very ill at his home in York, Pa., of what appears to be blood poisoning, and his condition is regarded as precarious. He was for many years a representative of the old firm of Thomsen & Muth, but for the past ten years he has looked after the business of Muth Bros. & Co., in his home territory. He is one of the best known members of the trade.

—Druggist D. L. Miller, of Waynesboro, Pa., was in Baltimore, last week.

—The Equus Medical Company was incorporated in this city on the 9th inst., by John Johnston, Philip Crist, Jr., William A. Carlow, Philip Crist, Sr., and Theodore O. Smith. The authorized capital is \$5,000, divided into 510 shares. The company will manufacture medicines and salves.

ANTI-EXAM-BILL DROPPED.

Nashville, Jan. 30.—The proposed legislation, which would allow clerks with five years' experience to register as regular pharmacists without an examination, will go no further. A storm of disapproval, largely from druggists, rose over the State, and now the author of the bill states that he will ask unanimous consent of the Senate to withdraw it. He says that he had introduced the measure simply on request, and so indorsed the bill, not caring to shoulder it as coming from him personally.

GEORGIA BOARD OF PHARMACY.

Atlanta, Ga., Jan. 30.—The next meeting of the Georgia State Board of Pharmacy will take place in the State Capitol, Atlanta, on Monday, April 10, beginning at 9 o'clock. The following are the members of the board: C. D. Jordan, chairman, Monticello; J. G. Dodson, Americus; R. H. Land, Jr., Augusta; S. E. Bayne, Macon; George F. Payne, secretary, Atlanta.

COCAINE FINES ASSESSED.

Cincinnati, Jan. 30.—Fines of \$100 each were paid in the Police Court last Tues-

day by three druggists whose clerks had been charged with selling cocaine unlawfully. The fines were paid under protest, as the defendants said that the cocaine confiscated had not been analyzed, the police in their zeal to make examples having overlooked that important essential. The cases will be carried to higher courts. The appeal of the cases will be watched with great interest by police officials, and it is said the crusade will be continued, but in the future the city health officer will make an analysis of all the cocaine secured by the police. Two negroes caught peddling cocaine from house to house in the tenderloin district were sent to the workhouse for three months.

GRANT COUNTY, IND., R. D. A.

Marion, Ind., Jan. 27.—The Grant County Retail Druggists' Association has organized and elected officers. Charles Rothengrove, of Jonesboro, is president; Frank Rigdon, of Marion, vice-president; Merle Agness, of the Indiana Pharmacy, secretary, and the members of the executive committee are: A. W. Leedy, Marion; John L. Freel, Marion, and George Kleiter, Marion. Following are the members of the committee on legislature: Marion Evans, Marion; J. C. Stoebe, Marion; L. D. Conwell, Van Buren; R. C. Livingston, Upland; P. J. O'Hara, Fairmount.

OHIO HAPPENINGS.

—The Ohio, Kentucky, Indiana and Michigan Drug Association, composed of wholesalers, held its annual convention in Cincinnati last week. About thirty-five members were present. W. J. Mooney, of Indianapolis, acting president since the death of A. E. Neat, of Louisville, was elected to that office for the ensuing year. K. H. Bradley, of Toledo, was re-elected secretary and treasurer.

—Philip Streich, the popular Portsmouth druggist, has been appointed a delegate from southern Ohio to the coming general conference of the United Brethren Church, which will be held at Topeka, Kan.

KRUMBS FROM KENTUCKY.

—The drug store of Noek & Snyder, Second and Market streets, Louisville, was broken into by thieves several nights ago, and a quantity of bottled-in-bond whisky stolen. Entrance was effected through a side window.

—Col. Millard F. Wood has entered suit in the Greenup Circuit Court for \$10,000 damages against Dr. W. M. Fenner, a manufacturer of patent medicines of Fredonia, N. Y. Wood alleges that he lost his hearing and barely escaped with his life in consequence of taking medicines said to have been made by the defendant.

—The plant of the California Syrup of Figs Company at Thirteenth and Maple streets, Louisville, was damaged by fire on the night of January 26 to the extent of \$8,000, and narrowly escaped total destruction. The fire originated in a grain warehouse across the street from the Syrup of Figs plant.

NOTES FROM THE SOUTH.

—Cantrell & Young's drug store, of Huntsville, Ala., was robbed recently and \$25 taken.

—The Tennessee Board of Pharmacy held

its regular quarterly meeting in Nashville Jan. 11, 12 and 13.

—The entertainment committee of the Tennessee Pharmaceutical Association is preparing the best programme yet presented at any meeting for the annual meeting to be held July 19, 20 and 21, 1905, at Bon Aqua Springs.

—The Southern Alabama Retail Druggists' Association met in Dothan last week, and elected the following officers: N. H. McCallum, president; E. M. Beach, vice-president; J. F. Collins, treasurer; P. M. Carlisle, secretary. The next meeting will be held in April.

MANILA C. P. EXHIBIT A GIFT.

St. Louis, Jan. 30.—Probably the most valuable specimens that will be added to the St. L. C. P. museum by the "salvage committee" on World's Fair exhibits came unexpectedly through Secretary A. Guerra, secretary of the Philippine commission, and president of the Insular Board of Pharmacy, and Dean H. M. Whelpley, of the college.

This contribution is the entire exhibit of the Manila College of Pharmacy, consisting largely of charts, school records and papers, and finally the herbarium specimens. The latter present a comprehensive study of the medicinal plants of the islands, many being secured by students at their homes. The charts and plant records are exceptional work, done in water color with much artistic taste.

Dr. Guerra presented the collection to Dr. Whelpley, and with the donor's permission the latter turned it over to the college with the exception of a few samples of the work that he wished to keep in his private collection.

FATE OF TWO BOLD ROBBERS.

St. Louis, Jan. 31.—Druggist Sieving, of 2616 South Jefferson avenue, has the satisfaction of knowing that one of the two men who came into his store last October and made him stand attention while they toyed with big revolvers and incidentally collected \$25 and a box of cigars, is dead. His testimony was largely instrumental in sending the other one to the penitentiary for thirty-five years.

ILLINOIS EXAMINATIONS.

Springfield, Ill., Jan. 30.—At the meeting of the Illinois State Board of Pharmacy, held in Springfield, January 24, 1905, the following candidates passed: For registered pharmacists: O. R. Colby, Litchfield; H. Hamilton, Bethany; John Lemp, Chicago; Floyd Mercer, Liberty; E. A. Oulvey, Edwin R. Snider, E. St. Louis; E. B. Webster, Shawneetown. For asslant pharmacists: Alfred Bickes, Springfield; C. A. Demes, Chicago; Margaret M. Ludwicz, East St. Louis.

NO LIQUOR SALES IN ALBION.

Albion, Ill., Jan. 28.—Voters have withdrawn from druggists here the right to sell liquors. The town is local option, and special licenses have been granted to the druggists. Recently, however, a number of disturbances were traced to liquor and the druggists were blamed. But they assert that the liquor did not come from their stores, but was shipped in. For the most part they do not care that the privilege has been revoked.

TO STOP LIQUOR SALE.

Ann Arbor, Mich., Jan. 30.—Representative Beal has introduced a bill in the legislature to make effectual the enforcement of the law against the retailing of liquor as a beverage behind the prescription counter of drug stores, and the sale of dangerous drugs by unqualified clerks and shop boys.

Mr. Beal is acting as the representative of the State Board of Pharmacy in the matter, having drafted the bill along lines which they suggested.

"The idea is," said Representative Beal, "to provide for the enforcement of the present laws. There is no money to prosecute offending druggists who violate the State laws. The board have turned over to the state about \$6,000, and the plan of the pharmacy board is to have this money, which comes from the registration law, kept to prosecute druggists who violate the law in regard to selling liquor behind the prescription counter.

"Another thing, the bill provides for the prosecution of druggists in cases of accident caused by careless mistakes made by their unregistered clerks and shop boys."

THANKS FOR A GOOD LAWYER.

Chicago, Jan. 30.—At the last meeting of the Illinois State Board of Pharmacy, upon motion of Mr. Bodemann, the following vote of thanks was tendered to Hon. J. S. Dudley, attorney at law:

"Although Hon. J. S. Dudley, attorney at law, is only retained by this Board in cases where it feels it needs legal assistance, it has had the benefit of his advice at all times when asked for. His interest in our work in the cocaine cases is of the greatest value to us and the Board, and the pharmacists of the State are under great obligations to him for his almost superhuman efforts to make the best out of a weak law, and his constant endeavor to recommend a better and more effective law to cope with this new phase of pharmacy legislation, therefore

"Resolved, That we express to this gentleman our thanks by sending him a copy of this resolution."

BRENDECKE NOT FINED.

Chicago, Jan. 30.—With expressions of regret that necessities of the law made their action imperative, the judges of the Appellate Court to-day reversed the judgment of the Criminal Court holding Adolph C. Brendecke guilty of selling cocaine.

The druggist need not pay the \$50 fine inflicted in Judge Tuthill's court several months ago. Trouble arose over the reading of one of the instructions given the jury.

In the instruction no limit of time was put upon the jurors' belief that Brendecke had sold cocaine without a prescription.

SPENCE-McCORD COMBINE ?

Millwaukee, Jan. 28.—Negotiations are now being carried on for the consolidation of the T. H. Spence Drug Co. and the Jas. McCord Drug Co., the two oldest houses in La Crosse. The deal has not been closed, but is in the process of consummation. The new company will be organized and probably managed by T. H. Spence, of the T. H. Spence Drug Co. Being ill at his

home, Mr. Spence could not be seen. The trustees of the McCord estate would not deny the story. Details are expected the early part of the week.

"GREEN GOODS" IN DRUGS.

Sheboygan, Wis., Jan. 30.—M. R. Zaegel, druggist of this city, gave the most damaging evidence yet produced in the investigation of the drug cases in Chicago. The United States government is prosecuting the cases on the ground that the mails were used to dispense spurious goods. In the hearing before Court Commissioner Mason of the charges against Edward A. Kuehnmsted, Mr. Zaegel produced the following letter:

"Chicago, Ill., My Dear Mr. Zaegel: Although I have been selling bogus phenacetine and a lot of other bogus goods for over three years, I have never had the pleasure of selling you any of them. I should very much like to do so and feel that I can give you satisfaction both in goods and prices. The prices I have made you are, I think, exceptionally low, and I trust they will induce you to give me a trial. Express charges I prepay. Very respectfully,

"EDWARD A. KUEHNMSTED."

Mr. Zaegel took the first opportunity to expose the man.

BRANDY OF THE NORTHWEST.

St. Paul, Jan. 30.—A number of druggists in North Dakota are having a long series of evil quarters of an hour with Pure Food Commissioner Ladd. These druggists have been selling a class of blackberry brandy that has re-established Mr. Ladd's cholera in business. Samples received by him for analysis indicate that the alleged brandy contains not the slightest trace of the real article. It is a hodge-podge of saccharine, coal tar, dyes, alcohol, water and chemical flavors. The worst part of the business, according to reports received here, is that the stuff is sold on physicians' prescription to sick people who need genuine blackberry brandy. The druggists, happily, are not the ones primarily at fault. They are trying to get back at the manufacturers who sold them the mixture.

IN JAIL FOR SELLING LIQUOR.

Crookston, Minn., Jan. 28.—Dr. B. F. Budworth, of Shelley, has been brought here to serve a thirty day sentence for selling liquor without a license. There were two indictments against him, according to his story, and he paid a fine of \$50 on December 2, which he says was to settle everything and he holds a receipt to that effect. When the new county attorney came into office, however, he moved that Budworth be sentenced under another indictment and sentence was pronounced—thirty days in the county jail.

CHICAGO CLUB SMOKER.

Chicago, Jan. 30.—Cards are out for the first annual smoker of the Chicago Social Drug Club. "Business cards" are to be "forgotten" and raffle tickets, cigars, and sandwiches are mentioned. On the committee are: Alex. Harris, chairman; Geo. W. Mathison, John F. Mattheis, Geo. Wright and Frank L. Gauss.

ANNOYED BY NEW BILLS.**Wisconsin Druggists Begin a Campaign Against Freak Legislation.**

Millwaukee, Jan. 30.—The Wisconsin Pharmaceutical Association will not only send a lobby to Madison before the session of the legislature is very old, but it is taking other measures to prevent what is described as unjust legislation. There are this year more than the usual number of bills "regulating" druggists in course of preparation or already introduced in the legislature. Most of them, say the druggists, have no merit and are absolutely ridiculous. While the State Association is anxious for a reasonable pure drug bill to be passed, and is willing that the laws regarding the sale of poisons and liquors shall be made more rigid, it is nevertheless determined that these bills shall be passed upon by competent authorities. There are also some freak bills in prospect that it is deemed wise to check in their incipency.

John F. Hughes, chairman of the legislative committee, has addressed the following letter to the druggists of Wisconsin:

"The State legislature is now in session and important measures concerning the retail drug business are sure to come before that body. There is in the minds of many legislators and the people at large an idea that the drug business is a monopoly that holds people up; that the druggist is a man who in the hour of sickness will exact a pound of flesh from his victim. One of the most difficult things to overcome is prejudice, and it behooves every druggist to start at once a campaign of education. Show that nearly all articles sold in a drug store sell for a similar profit that the shoe or hardware merchant charges. Write to your assemblyman and senator and dispel this prejudice."

MINNESOTA MENTION.

—O. S. Ross, of Minneapolis, has been sued in the United States district court by L. Paulle, a show-case manufacturer, who charges infringement of patent on corner clamps for show-cases.

—Ed. V. Goltz, of St. Paul, ex-president of the Minnesota Drug Clerks' Association, who clerks for H. W. Reitzke & Co., has been made captain of next year's football team of Hamline University, in which institution Mr. Goltz is taking a medical course.

—Some unknown person has ruined a costly thermometer for the A. D. Thompson Drug Company, of Minneapolis, by applying a lighted cigar to the bulb, bursting it. The thermometer was valued at \$50 and a liberal reward awaits the person who brings about the arrest and conviction of the perpetrator.

—R. Hoagland has been appointed assistant chemist in the office of the State Dairy and Food Commission, in place of Fred Bedford, who becomes chemist for a large wholesale grocery house in Chicago. Mr. Hoagland has been with the State Agricultural College, at St. Anthony Park. —The new officers of the Wabasha County Druggists' Association are: Charles Carrella, Wabasha, president; F. W. Kingsley, Mazepa, vice-president; M. L. Collins, Lake City, secretary; R. C. Steele, Lake City, treasurer.

NEW PH. BOARD DEMANDED.**Colorado Clerks Charge Violations of Registered Pharmacist Law.**

Denver, Jan. 27.—There is much opposition to the reappointment of the present Board of Pharmacy. The officers and executive board of the Colorado Drug Clerks' Association are directing their best efforts to secure the removal of A. W. Scott, of Fort Collins, C. H. Wells, of Pueblo and John A. Martin, of Denver. The latter is a member of the association which seeks to compass his removal, and is liked by members of the association, who say they are willing to sacrifice Martin in order to have a new board appointed. Members of the association make a great many charges against Mr. Scott and Mr. Wells, and some of these are included in a circular letter to the governor. Both of the members have been on the board for several terms. Politics has been practically eliminated from the choosing of the board in the past, and they have been allowed to hold their places. Martin is a new member.

The letter prepared by the association will be mailed to all members of the legislature and persons of influence throughout the State. The following is quoted from the letter:

"At this time, when the governor will soon name a new State Board of Pharmacy, we deem it proper to protest against any member of the present State Board of Pharmacy being reappointed. To justify our protest we wish to state that the present members have not fulfilled their duties, having not enforced the law, been too lenient in the marking of examination papers, and in other ways incurred the displeasure of the registered clerks and proprietors whom they are paid to serve.

"We hear of many violations of the pharmacy law, most of which are very rank. One case we have in mind at the present time is a store in Denver which is owned by a man who is not registered in this State nor does he employ a registered clerk."

MR. KUHN TO THE MINES.

Omaha, Jan. 27.—Norman A. Kuhn, after twenty-six years in the drug business, is a proprietor no longer. He has sold his store here at Fifteenth and Douglas streets to Dr. J. B. Whittaker, late of Central City.

Mr. Kuhn leaves in a few weeks for Nevada, where he has had large mining interests for several years, and where he will engage in the mercantile business. His family remains here for the present. In a few years, when he becomes a multimillionaire, Mr. Kuhn intends to return to Omaha and live like one.

Several friends tendered him a farewell dinner at the Calumet, among them being C. R. Sherman, A. B. McConnell, P. B. Myers, L. E. Peyton, C. D. Beaton, J. H. Schmidt, A. C. Adams, Max Becht, H. B. Graham and J. C. Kennard. A number of these druggists had graduated from Mr. Kuhn's.

NORTH DAKOTA EXAMS.

Fargo, N. D., Jan. 26.—The State Board of Pharmacy has concluded its winter course of examinations. There were nine-

teen candidates in the class, six of whom passed as registered pharmacists, and four candidates as assistants, one of the latter a bright young woman in Pembina County.

The next meeting of the board will be held in Fargo, May 23 and 24. Secretary Parker, of Lisbon, announces the list as follows: W. C. Budge, Grand Forks; Alfred J. Young, Oakes; J. L. Chard, Webster, S. D.; S. Leroy Smith, Kenmare; Anton Mickelson, Moorhead, Minn.; R. J. Woods, Minto.

As assistants: O. O. Slind, Sherwood; May E. Camden, Wallhalla; J. O. Smith, Omamee; O. H. Johnson, Barton.

REGISTERED IN OKLAHOMA.

Guthrie, Okla., Jan. 26.—At the regular meeting of the Oklahoma Board of Pharmacy, held Jan. 10, the following were registered, upon examination: William A. Albrecht, Foss; G. B. Baker, Perkins; James W. Bissell, Carmen; W. W. Daniels, Selling; F. H. Ludelson, Thomas; R. H. Hardenbrook, Arapahoe; Paul P. Oliver, McComb; A. J. Varvel, Apache.

Under a recent ruling of the board that graduates of colleges of pharmacy, recognized by the board, should receive certificates of registration, fifteen applications were received and the following were registered: Sam W. Agee, Silver City, N. M.; William M. Andrew, Shawnee, O. T.; Orval J. Cloughly, St. Louis; Jno. Foster, Oklahoma City; D. F. Howell, Philadelphia; W. A. Lamborn, Shawnee; Jno. N. Neeb, Glenwood Springs, Col.; Samuel LeRoy, Baltimore; Robert A. Spahr, Monessen; A. G. Sortore, Walter, O. T.; Charles C. Sacco, Long Branch, N. J.; R. E. Wolgamot, Richwood, Ohio; George O. Weirich, Wellsburg, W. Va.

The next regular meeting was set for April 11, 1905, at Enid. The board adopted the constitution of the National Boards of Pharmacy and made application for membership.

NEW OKLAHOMA ENTERPRISE.

Oklahoma City has a new enterprise and one needed to keep up the reputation of the city as a commercial center. O. C. Bowers & Co. have established a wholesale drug and physicians' supply house on Grand avenue. The nearest physicians supply houses are located at Wichita, Kans., Springfield, Mo., Dallas, Tex., and Denver, Col. Mr. Bower was connected with the Oklahoma Drug Co. for a long time.

BURNED WITH HIS STORE.

Caney, I. T., Jan. 27.—John G. Horner, for two years in the drug business at this place, was burned to death recently in a fire which destroyed his store. He was about sixty-five years of age. His remains were found charred in the building later. He was a native of Virginia and had been in the drug business in Dallas, Waco, Marlin and Merkel. He was express messenger on the Texas and Pacific road from Marshall to El Paso in the '80s.

ALCOHOL FROM SAWDUST.

Orange, Texas, Jan. 27.—A Chicago company proposes to spend \$30,000 to \$40,000 for a plant to make alcohol, turpentine, etc., from the refuse of the sawmills here and has begun negotiations for a site and supply of material.

CRISIS IN SAN FRANCISCO.

San Francisco, Jan. 26.—Another crisis is at hand in the drug trade in California. The price agreement entered into a year ago by the San Francisco pharmacists, including the Owl Company, expires this month. The question of its renewal hangs in the balance. The agreement drafted last year applied to certain proprietaries which rate slashing had forced some to sell below cost. The agreement was considered the greatest step forward in drug circles here for years. The renewal at present will wait on the action of the Owl Company. If this company is willing to sign, there will be no trouble; if not, the old war will be on again.

TO LIMIT CLERKS' HOURS.

San Francisco, Jan. 26.—A bill has been introduced in the State legislature to regulate the hours of drug clerks. It provides as a measure for the protection of public health, that no person employed in selling drugs or medicines or compounding prescriptions of physicians in any store or establishment where drugs or medicines are sold at retail, shall be so employed for more than ten hours a day.

CALIFORNIA NOTES.

—J. W. Smith, of San Luis Obispo, Cal., is a man of grit. A year ago his drug establishment was burned out. This week he opened a new store on the same site, much larger and more handsomely fitted up.

—A bulky individual entered the Perle Drug Company's store on Seventh street one day this week. He said he felt ill. Julian Waller, the manager, diagnosed his case and prescribed. Then the bulky individual opened his coat, revealing a policeman's star. The next day Waller paid a fine of \$100 for practicing medicine without a license.

Mrs. Julia Redington, widow of the founder of the Redington Drug Co., of San Francisco, passed away at her home in Santa Barbara, Cal., this week.

—E. Scioria, a clerk in the Popular Pharmacy, on Dupont street, San Francisco, by mistake sent carbolic acid for a prescription. The acid was given to a Chinese baby, which died instantly. Scioria has been arrested.

TACOMA STORES COMBINE.

Tacoma, Wash., Jan. 26.—The French Drug Company has been incorporated in Tacoma, with a capital stock of \$40,000. The officers and incorporators are Lester U. Saterlee, president; Clyde J. Chamberlain, vice-president and general manager; Thomas V. Tyler, secretary and treasurer; George M. Hellar, of Hellar, Lyon & Co., and H. G. Bartow.

Under this new organization two well-known drug concerns are consolidated, the French Drug Company, and the drug store of Loomas V. Tyler & Co.

DENVER PH. S. ELECTION.

Denver, Jan. 28.—At a meeting of the Denver Pharmaceutical Society, these officers and trustees for the succeeding term were elected: President, F. M. Hall; vice-president, A. G. Clarke; secretary-treasurer, Charles J. Clayton; trustees, G. S. Trowitt, F. J. Lord and F. M. Hall.

OLD SPANISH PATENT LAW.

Havana, Jan. 26.—The old Spanish law regarding the formulas of patent medicines to be given on the label, the renewal of which is now being agitated in Cuba, has been copied from the records for The Era. Following is the translation or the order giving the requirements of the law: Office of Secretary of Government, Havana, November 12, 1904.

The provisions of regulation dated Feb. 24, 1844, related to proprietary medicines and preparations, and was afterwards modified by Royal Order dated April 3, 1855. This regulation exacted that all preparations of a medicinal nature which were not then on sale or being used for the cure of diseases for which they were recommended, or if in use there was proposed a change in the manner of preparing same which differed from that already known, should be presented to the government in a sufficient quantity to permit of analysis and qualification, the medicines to be accompanied by a sealed document bearing the names of the substances of which the medicine might be composed together with the method of preparing and administering same.

In conformity with the above regulation which is hereby put into force, the secretary of this department has fixed a period of six months from the date hereof in which to allow the owners of such preparations as may be on sale in the drug stores of the island, to comply with the requirements hereof and obtain the necessary authorization. At the expiration of the said period of six months there shall be prohibited the sale of all medicines which shall not have complied with this order to the above effect.

Signed,

BALBINO GONZALES,

Chef of Dept.

DRUGGIST WANTED IN CUBA.

Havana, Jan. 27.—There is a town in Cuba that has no druggist, and this town, Cotorro by name, insists that it shall have one. A number of the residents have addressed a memorial to Provincial Governor Nuñez, calling his attention to the fact that the drug store at that place has no qualified pharmacist.

The townspeople are in daily dread of being poisoned in consequence of some mistake on the part of those managing the drug store, not one of whom is a licensed pharmacist.

From San José comes a similar complaint, with the announcement that a resident of that town was a few days since seriously poisoned as the result of a mistake made by one of the clerks of the drug store there, which, like the one in Cotorro, has no licensed pharmacist at its head.

BLAZES HERE AND THERE.

—At Altamont, Ill., Reis' drug store was destroyed in a general blaze, with a loss of \$3,000.

—At Whitney, Tex., the Harris Drug Co. went up in smoke with a large part of the town's business district. The fire was finally checked at the drug store, it being the last to burn. Loss, \$9,000; insurance, \$5,000.

AMONG THE COLLEGES**UNIVERSITY OF MAINE.**

Orono, Me., Jan. 27.—The college of pharmacy of the University of Maine offers two courses of instruction, the "pharmacy course" and the "short course in pharmacy." The former extends over four years and leads to the degree of B.S. Thirty credits are required for graduation and the course covers instruction in modern languages, civics, etc. The "short course" corresponds to the usual full course of pharmacy colleges, and extends over two years of nine months each. No opportunity is given for the student to do outside drug store work. Students who satisfactorily complete this course receive the degree of "pharmaceutical chemist." There are now eleven students in this department. Last year the degree was conferred upon six. A prize is offered to the student who attains the highest standing in chemistry in the last year of his course.

Prof. W. F. Jackman, a graduate of the University of Michigan and a pharmacist of much practical experience, is head of the department.

PITTSBURG COLLEGE OF PHARMACY.

Pittsburg, Pa., Jan. 24.—Dr. J. A. Koch, dean of the Pittsburg College of Pharmacy, reports an enrolment of two in the three year course, one hundred and twenty-five in the two year course, and one special student in chemistry.

The senior class has decided to hold its annual reception and dance on the evening of February 8th. The following gentlemen constitute the committee on arrangements, appointed by the president: J. H. Smith, C. E. Shaw and P. W. Hietzel. The officers of the class are: W. R. Smythe, president; P. W. Hietzel, vice-president; J. A. Griffin, treasurer; Miss Grace I. Harper, secretary; C. E. Smith, marshal; C. E. Fawcett, press representative, and C. E. Ertzman, athletic representative.

James W. McAteer, member of the senior class, is ill at his home, with measles.

A. W. Cruikshank has enrolled as a special student in chemistry.

Dr. J. A. Koch, who is president of the Pennsylvania Pharmaceutical Association, spent part of last week at Washington, D. C., in the interest of the proposed amendment to the pharmacy law of Pennsylvania.

Students of the senior section in pharmaceutical laboratory are now doing work on the assay of crude drugs and volumetric analysis.

OMAHA COLLEGE OF PHARMACY.

Omaha, Jan. 26.—The Pharmaceutical Association conducted by the students of the Omaha C. P., held its regular meeting January 13, and discussed "First Aid to the Injured." Much benefit is derived from these discussions.

The Nebraska Board of Examiners in Pharmacy will meet at Lincoln, February 8. A special railroad fare will be given

to the students who wish to take advantage of the examination.

The college has purchased a new piano. We have several vocal soloists and a quartette and orchestra have been organized. John Motl is the leading violinist.

The seniors have recently been photographed and now seem to realize that disbandment is not far off. The juniors also tend to be out into the world with them, forgetting that college days are the happiest days in our lives.

C. E. Hopping, ex-president of the Nebraska Pharmaceutical Association, called at the college January 16, and gave the students a short talk. He pointed out how advancement in pharmacy might be made.

The junior class has completed inorganic chemistry, and is now making good headway in materia medica. The boys will finish the work in qualitative analytical chemistry in a few days. They will then take up quantitative analysis.

Professor Thorp has just recovered from a severe cold.

For the first time since coming back to work after holiday vacation, the students have just begun to dispense with their long faces. Leaving a sweetheart along with the thought of starting in for eight months, "including the summer, too," is enough to give a fellow that hungry look.

Mr. Pohl has been absent for about ten days. Presumably he has been suffering from indigestion contracted during the holidays.

The spring term opens February 28. The prospect is good for a large class to enter at that time.

SOUTHERN COLLEGE OF PHARMACY.

Atlanta, Jan. 25.—An interesting feature of the meeting of the Association of the Southern College of Pharmacy, held January 19, was the reading of the papers, "The Future of Women in Pharmacy," by Miss Olive Lang, and "The Relation of the Druggist to the General Public," by H. V. Leavright. The discussion of the latter subject hinged mainly on the question of counter-prescribing and cold cures. The attitude of the association is decidedly against both.

The Southern C. P., though in its second year, has all of the energy natural to a young institution. The college has two departments new to pharmaceutical schools—a department of commercial pharmacy, and one of pharmaceutical jurisprudence.

VANDERBILT UNIVERSITY.

Nashville, Tenn., Jan. 16.—Members of the senior and junior classes of the department of pharmacy, Vanderbilt University, were entertained at the home of Dr. and Mrs. Riddiman, Thursday evening, December 29. Numerous games and guessing contests contributed to the evening's pleasure.

Thirteen seniors and twenty three juniors are enrolled in the department, nine States being represented. Both classes maintain organizations, the officers of the senior class being P. D. Whetstone, president; H. A. Buchl, vice-president; J. E. McSwain, secretary, and J. C. Ware, treasurer. Juniors—S. F. Latimer, president; H. P. Mathis, vice-president; R. M. Oglesby, secretary, and H. H. Bradford.

treasurer. The juniors have completed their work on anatomy, having taken their final examinations on the subject January 7. On February 1 they will begin microscopical work which will continue during the second term.

NORTH DAKOTA AGRICULTURAL COLLEGE.

The increase of students in the department of pharmacy of the North Dakota Agricultural College has been very large this term. This is partly due to the short course in pharmacy, materia medica and chemistry offered to those intending to take the board of pharmacy examination and also to the practical work which cannot be learned in a drug store.

There are several cases of sickness in this department, the mumps being responsible for most of them.

The N. D. A. C. Pharmaceutical Association has changed its time of meeting to once in two weeks, on account of the inability of some of the members to attend the meetings formerly held each week. Some of the leading druggists of Fargo have promised to speak before the association in the near future. The present officers are: Roy Cook, president; V. Aiken, secretary; F. Sears, master of programme.

The members of the advanced class in laboratory work are busy compounding difficult prescriptions taken from actual drug store files. The juniors are at work on the preparations of the U. S. P.

The department is endeavoring to establish a bureau of employment for druggists. Numerous requests are received for men to fill positions and also from men asking for positions. Those in charge of the proposed bureau will do all in their power to help applicants.

UNIVERSITY OF WASHINGTON.

Seattle, Wash., Jan. 19.—The pharmacy class of the University of Washington has this year revived the class "Pharmaceutical Society." It is an important factor in class work.

The young men of the class recently gave a very unique spread and dance in one of the laboratories which, for the occasion, had been decorated in class colors and everything symbolical of a drug store. The lunch was served in various kinds of laboratory apparatus and was very much enjoyed. The latter part of the evening was given over to dancing and games.

As an incentive to good work, T. W. Lough, of the Washington Board of Pharmacy, has offered a gold medal to the member of the junior class who shall attain the highest all-round scholarship. The judges are to be the professors in charge of the class.

Roy Nelson, of the four-year class, has left school and taken charge of a store he purchased at Prosser, Washington.

Mr. Newton, of the U. S. Assay Office, and Mr. Bogardus, manufacturing chemist, gave interesting talks on their special lines of work before the chemical club.

It was 2 a. m. A solitary pedestrian approached a sleepy policeman.

"Since when did those two drug stores keep open all night?"

"Ain't. One is waitin' for t'other to close first," summed up the cop.

AMONG THE BOWLERS

MAKE SEASON RECORD.

A new record for the season was made by Koessler & Hasslacher, at the bowling of the Wholesale Drug League, on Monday. By doing some consistent bowling the team managed to roll up a total of 948 pins. The lowest individual score was 172 and only one '200' score, Bode, 225, was made. Other high rollers during the evening were Hamann, R. & H., 200, and Merrill, L. & K., 212. The results: Koessler & Hasslacher 948 Merck & Co. 792 Koessler & Hasslacher 702 Bruen & Ritchey 753 Bruen & Ritchey 688 Lanman & Kemp 745 Lanman & Kemp 846 Merck & Co. 648 Koessler & Hasslacher 846 Lanman & Kemp 816 Bruen & Ritchey 681 Merck & Co. 655

DR. DOHME DROPS OUT.

Baltimore, Jan. 28.—This has been an active week for the bowlers. Sharp & Dohme set a stiff pace, making scores of 818, 905 and 880 last Tuesday night, at the Diamond, while the individual showing was hardly less impressive. Armour, of McCormick & Co., rolled up a high score of 225 pins, while Brauer, of James Baily & Son, went him one better, his total being 226. Byer, of the Baily team, is credited with a high score of 208. The games this week resulted as follows:

Davis & Davis	751	753	799
Armstrong Cork Co.	661	561	693
Sharp & Dohme	818	905	880
Calvert Co.	547	544	499
James Baily & Son.	746	809	860
McCormick & Co.	837	837	763

The standing of the teams:

	Won.	Lost.	P. C.
James Baily & Son	35	10	.778
McCormick & Co.	34	14	.708
Davis & Davis	25	17	.595
Sharp & Dohme	25	20	.556
Armstrong Cork Co. ...	9	33	.214
Calvert Drug Co.	7	41	.142

Nearly all the teams have from five to seven or eight postponed games to bowl, which may alter their positions somewhat. Several of the teams also underwent a partial reorganization during the week. Dr. A. R. L. Dohme dropped out of the Sharp & Dohme quintet, and Kornmann assumed charge as captain. Dr. Dohme's withdrawal is also responsible indirectly for Andrew Baumgartner returning to the club. He becomes captain of the Armstrong Cork Co.

NEW RECORD IN DETROIT.

Detroit, Jan. 31.—At the last meeting of the Drug League, Almindinger, of the Michigan Drug Co., established a new high score for the season of 242 in one game. The record previous to this was held by J. Smith, of Parke, Davis, No. 1, 236. Weiber, of the Ingram team, averaged 198

for three games. Others who bowled over 200 were Stewart, of P., D., No. 2, 210; Hedges, of Michigan Drug, 221; and Heck, of the same team, 201. The scores:

Parke, Davis, No. 1 . . .	344	830	807
Stearns & Co.	706	889	792
Parke, Davis, No. 2 . . .	814	820	779
Ingram & Co.	773	748	855
Michigan Drug Co.	846	862	976
Nelson-Baker Co.	829	812	751

In the Parke, Davis & Co. Interdepartmental League, the Scientifacs have slightly increased their lead over the Chemifacs. The best work of the series was done by the Pharmacificals, who knocked down 2,389 pins in the three games. Snyder, 202; Wright, 203; Stewart, 208, and Phelps, 201, were the high bowlers. The results:

Scientificals	779	784	809
Pharmacificals	741	836	812
Chemificals	831	729	762
General Business	786	710	704
Mechanicals	821	712	680
Publication	792	820	745

CAPSULES MAY QUIT.

St. Paul, Minn., Jan. 28.—In the game of the Minnesota Drug Clerk's League, January 26, the Tablets won the first and second games easily, but the Pills played strong in the third, and owing to the high scores of Bodsgaard and P.incelli, 200 and 178, respectively, were able to pull out first. Score:

Tablets	816	758	746
Lillas	—	—	188
Pills	686	721	793
Bodsgaard	—	—	200

The Capsules did not take part. They are badly disorganized and probably will bowl no more.

At the meet of the Retail Druggists' League, January 27, the Mortars took all three of the three games. Score

Mortars	792	757	776
Allen	—	—	216
Pestles	646	708	700
Jelinek	—	—	175
Spatulas	667	666	682
Everett	—	—	180

HIGH HONORS IN SPAIN.

When a pharmacist lives in Spain he may rise to high Castilian titles. There is one, the Doctor Don Gabriel A. Romero Lauda, professor in Madrid, who has just been named knight of the civil order of Alfonso XII. Another, an eminent botanist and pharmacist of Aragon, Don Jose Pando Saatron, has been distinguished with the "decoration in ordinary" of the same civil order. He may be made a knight later, but until then the doctor above mentioned can precede him into dinner. However, such honors are valued over there. For instance, the Restaurador Farmaceutico says: "It is a distinction for which we send him our sincere compliments, hoping that such may not be the only rewards, since there are already many individuals in honoring their profession enable their country."

"Conjugate the verb substitute," ordered the teacher. Willie was strong on past tense, but would not deal with present or future. His lexicon of youth had no such words as "I will substitute," for papa had taught him differently.

SHIPS DRUGS.

OUR LAWS DISREGARDED.

Medicine Chests Notoriously Inadequate to Needs.

AMERICAN SAILOR THE MOST MISUSED SEAMAN AFLOAT AS REGARDS MEDICAL CARE. — THE MARINE HOSPITAL CORPS RECEIVES BURDEN THAT MIGHT FALL UPON MASTERS AND OWNERS.—BRITISH REGULATIONS PUT OUR OWN TO SHAME.

The federal law requires all passenger-carrying vessels flying the American flag to provide medical attendants, even though any one voyage may never exceed ten days. No such provision is made with regard to shipping classified as purely freight-carrying. There are laws intended to see to the succor of the seaman of freighters in time of sickness or injury, but even these—few and inadequate and primitive as they are—are yet obeyed not even in the letter.

Conditions as revealed by investigations, show that Uncle Sam's freighters, tramp steamers and coasting schooners are illly provided with even the necessary medical stores. It is, of course, not practicable to have a medical officer aboard each freighter, but it is possible to have a sufficient store of supplies, so that the navigating head can deal intelligently with disease among his men.

In foreign trade, according to the report of the Commissioner of Navigation, 1,134 vessels are engaged with an aggregate tonnage of 579,264. Of these 348 are steamers, the balance sailing vessels. The coastwise trade numbers 21,746 vessels with a tonnage of 5,141,037, with 7,697 steam vessels. These figures are for vessels regularly engaged in foreign and domestic trade, but there were 24,425 vessels, aggregating a tonnage of 6,087,347 documented under United States papers, inclusive of the 1,134 given above. It is estimated that \$215,069,296 represents the total value of floating property under our flag. Examination of the gross tonnage of the merchant navies of the world shows that in 1850 the British had 4,222,062 as against the American tonnage 3,485,266. In 1903 America has 6,087,347 while Great Britain has 16,006,374. Germany was third in that year with 3,283,247 tons, which is about half that of the American merchant marine of to-day. In 1870 American tonnage was 4,194,740, the German 982,355, or about one-quarter of that amount.

These facts are necessary to a thorough understanding of the situation. It is not claimed that the disregard of the health of our seamen is responsible for our loss of maritime supremacy, but it is worthy of note that Great Britain with her magnificent showing of gross tonnage has made

laws, and caused them rigidly to be enforced, looking to the care of her sailors.

THE BRITISH LAW.

The "Merchant Shipping Act, 1894," in sanctioning the official "Ship Captain's Medical Guide," says "the Board of Trade shall issue scales of medicine and medical stores suitable for different classes of ships and voyages and shall also prepare or sanction books containing instructions for dispensing the same. The owner of every ship navigating between the United Kingdom and any place out of the same shall provide and cause to be kept on board a supply of medicine and medical stores according to the scale appropriate to the ship, and also one of the said books."

Besides bandages, a clinical thermometer and minor surgical appliances, the act goes on to state that certain quantities of various listed drugs shall be carried. The scale given below is for a crew of ten or under. Increases over that number are met by doubling the first quantity for each ten men or boys, and is intended for a year's voyage.

"Alum, 2 ounces; aromatic spirit of ammonia, 4 ounces; balsam of copaiba, 4 ounces; potassium bicarbonate, 4 ounces; black draught, 2 pints; black wash, 1 pint; blistering fluid, 1 ounce; ammonium bromide, 2 ounces; calomel, 1 ounce; camphor, 2 ounces; carbolic acid, 95 per cent., 4 ounces; carbolic or other approved disinfectant, 1 gallon; carron oil, 1 pint; castor oil, 2 pounds; caustic, half ounce; compound tincture of chloroform and morphine (instead of chloroform), 1 ounce; creosote, half ounce; crimson fluid (fig. pot. permang.), $\frac{1}{2}$ pint; elixir vitriol, 2 ounces; Epsom salts, 3 pounds; essences of ginger and peppermint, each an ounce; Friar's balsam, 4 ounces; Goulard's extract, 1 ounce; potassium iodide, 2 ounces; iodine solution, 1 ounce; iodoform, 6 drams; laudanum, 4 ounces; linseed meal, 7 pounds; mustard leaves, 10 tins, 12; saltpeter, 4 ounces; olive oil, 4 ounces; linimentum opii, 6 ounces; pargoric, 4 ounces; blue pills, 4 dozen; cough pills, 4 dozen; opium pills, 2 dozen; purgling pills (colocynch compound), 2 dozen; Dover's powder and ipecac, each an ounce; quinine (trebled on tropical voyage), 1 ounce; soda salicylate, 4 ounces; spirit of chloroform, 4 ounces; zinc sulphate, 1 ounce; sulphur, 1 pound; sweet spirits of nitre, 6 ounces; tartaric acid, 4 ounces; tincture of steel (tinct. ferri. perchlor.), 4 ounces; turpentine liniment, 8 ounces; witch hazel, 1 ounce, and ointments of oric acid, galls and opium, mercury, sulphur, white precipitate and vaseline, from four ounces to a pound of each."

There is a separate schedule for voyages of less than five days from port to port. A pair of scales, the weights marked in grains, is also required.

CHESTS INSPECTED.

Medical inspectors from the Board of Trade have the authority to inspect these

stores and are held responsible for the quality as well as the quantity of the drugs aboard. The inspectors can prevent a vessel from clearing port until she is properly stocked and the burden of proof rests with the owner or captain. Fines are provided and imposed for violations and ships are required to replenish their stock of drugs wherever they may happen to be after a long trip. Thus, New York gets some of the trade. Altogether it is a worthy exposition of what governmental supervision can do.

In America it is different. Were it not for the United States Marine Hospital service, acknowledged to be the most perfect organization of its kind, American seamen would be, indeed, in a bad way.

The treatment afforded seamen by this service is, at the most, temporary, though established hospitals, one at Stapleton, S. I., others on the Great Lakes, receive serious cases. This treatment is free only to seamen enrolled under the American flag, though foreigners are accepted under certain restrictions. The service was established by act of Congress approved July 16, 1798. A tax of twenty cents a month was imposed on every seaman engaged on vessels of the United States engaged in foreign or coasting trade. On June 29, 1870, this tax was increased to forty cents a month, which rate prevailed until 1884, when the tax was abolished and the tonnage tax made available for the ordinary expenses of the service. The tonnage tax virtually makes "the foreigner pay the freight," as it is levied on vessels which trade with us. The service is under the direct control of the Supervising Surgeon General, Dr. Walter Wyma, who is responsible to the Treasury Department of the United States.

THE SERVICE LIMITED.

All American seamen are entitled to and receive treatment when in port, but unfortunately that is as far as the service can go. Seamen are supposedly healthy when shipped. They should be passed by a surgeon. But once afloat, where is the Marine Hospital Service? It is vested temporarily in the captain, and for weeks, yes, months, perhaps, the seaman who is ill or injured looks to his commanding officer for relief. True, the Marine Hospital Service issues the "Handbook for the Ship's Medicine Chest." It contains a list of drugs which should be carried by each vessel, and gives easily understood directions for bandaging, dieting and the proper administration of medicines. But what good is the book without the stores?

The regulations say "a sufficient quantity of medical stores shall be carried," but no stated list is made obligatory. And if it were obligatory, who would enforce it?

The list advised is as follows: Carbolic acid, nitric acid, argonin, beef extract, bismuth subcarbonate, black wash, borax, blotting paper, calomel, carbolic soap, castor oil, collodion, Epsom salts, ipecac, ground flaxseed, glycerol, linseed

oil, iodoform, mustard, olive oil, zinc oxide, and its ointment, potassium citrate, Rochelle salts, Sedlitz powders, sulphur and its ointment, vaseline, vichy salts, zinc sulphate and acetate.

Seventeen kinds of pills are recommended, including blue mass, calomel, cathartic, mercurous iodide, $\frac{1}{4}$ grain, copaiba mass, 3-grain, morphia sulphate, one-sixth-grain, iron quinine and strychnine, and quinine sulphate in 2 and 5-grain pills.

Seventeen different compressed tablets, including phenacetine, Brown mixture, potassium bromide, chlorate and iodide, calomel and soda, and Dover's powder are listed.

Tinctures of arnica, benzoin, capsicum, iron, ginger, iodine, kino, myrrh, opium and pargoric are also given, and hard filled copaiba capsules, etc., are urged as substitutes for nauseous mixtures of the same.

NO PAY FOR INSPECTOR.

Questioned on the regulations, a prominent druggist said: "The position of drug inspector was, I believe, created, but no appropriation was made for him. The inspector has never materialized." This druggist further said that he has known (in fact, it is a common thing) a ship to leave port with uninspected, worthless stores, which are worse than the proverbial "pound of salts and quart of castor oil" carried by others. One ship with a crew of forty-one, he stated, had aboard three pounds of Epsom salts and two pounds of castor oil. This was for a three months' journey. Of course, the regulations provide lime-juice and other anti-scorbutics. This is a part of the mess. Yet most deep-sea American vessels do not carry lime-juice at all. Their contempt for it is such that they have dubbed British sailing vessels, "lime-juicers."

New York, reached by most merchantmen carrying our flag, is a big clearing port. The supplying of drugs to ships, although so important a trade, is little understood except by men who make it almost exclusively a business. And these men know only too well that the quantity and quality of drugs carried by American vessels are a disgrace to our flag. Such conditions would hardly be tolerated in the merchant marine of any other foreign power, however small. The shipping druggists' trade comes from English, German, Dutch and other foreign vessels. The druggists must understand the various languages, familiarize themselves with various official drug standards, and ever push for business along with the chronometer man, the ship chandler, the clothing sharks, and the scores of other commercial people, all eager for the captain's favor, as he steps from the gig or leaves his ship at his pier. The druggist is a minor consideration. Many of the New York druggists' supply houses are members of the maritime exchange and receive due notice of the approach of the vessels with which they may do business. A representative, along with the health officer of the port and other landsmen-merchants, climbs aboard a tug and hustles for orders. A fare of \$1 is charged on these tugs and there is an intense business rivalry, where etics have no part, subdued as they are by fierce gales and grasping captains.

"SALTS, OIL AND STEEL."

Doctors who make a business of caring for the crews of vessels at a scheduled

rate per ship state that aboard ship they couldn't find even the simplest kinds of medicine. Tincture of steel, Epsom salt and castor oil frequently appeared to be all that was carried. Permanganate of potash, the basis of the British crimson fluid, is usually found, because it is used to purify drinking water. The sailorman himself has often his private medicine chest and some patent pill which he swears by. He is protecting himself as best he knows. Surely something can be done to remedy this state of affairs. American seamen must have drugs at hand. There is no excuse for the owners or the captains. The Marine Hospital Service stands ready to help the ill when ashore and to remedy conditions arising afloat. The simple remedies advised by the book previously quoted, if stocked and administered with any degree of intelligence, would do much to make the seaman sober and self-respecting. "Booze" is his remedy frequently, because other medicines are not provided, and the fact that the service is as healthy as it is, is due, not because of treatment received, but in spite of it.

ADVERTISING COMMENTARY.

Premium and souvenir ideas are frequently very useful in attracting trade. They lose their effect, however, if overdone, if not properly advertised, or if the premiums themselves possess little intrinsic value. Here are some suggestions for premiums which have already been successfully used by various concerns:

Give a panoramic view picture of your city or town with every dollar's worth of goods sold. Souvenir postal cards with local scenes are of similar value.

If interest in the local high school runs high, offer a prize for the best essay on a certain article which is in your stock, say, the virtues of an "own make" cold cream.

A fortune teller was engaged by one store, and all purchasers of at least a dollar's worth of goods could have their palms read free.

OTHER SCHEMES.

Offer a handsome premium for the customer bringing in the largest number of coupons cut from your advertisements in the local papers. Mark all your advertising plainly with such a coupon which can easily be clipped out. Or make 100 coupons equal a sum of money in extra trade to all customers buying more than a specified amount in a month.

A firm recently obtained good results by offering a prize for the customer who guessed nearest to the number of replies from a certain advertisement. This method centers attention and interest on your advertising.

If your store has a general name, such as "The Peoples' Drug Company," or if your own personal name is the title and it is long enough, a good scheme is to give with each purchase made a slip containing one of the letters of the alphabet. When any purchaser has enough of the right letters on alphabet slips to spell your store name, redeem the slips with a present.

SOME MORE APHORISMS.

In connection with advertising on lines similar to those suggested in The Era of January 12, a few aphorisms recently published may serve to suggest others, therefore they are given:

"No success is secure; no failure final. "If you want to know how to do anything, ask him who cannot do it himself.

"For every sucker who is born every minute there are two sharks waiting.

"To avoid making enemies, don't get the better of anyone."

MONTHLY CALENDARS.

Many large firms issue calendars each month instead of simply one for the whole year. The idea is growing in favor because it insures the firm's representation by a perfectly clean, attractive advertising medium. Of course, the expense is greater, but the design could be very simple or well chosen styles of type simply would serve satisfactorily. Yearly calendars are apt to become soiled, torn, or dingy before the twelve months are up and in that condition they are hardly attractive representatives. A simple monotone style of printing is very effective for a monthly calendar.

THE POWER OF SUGGESTION.

An accommodating druggist in Hartford, Mich., has something coming from a well-known farmer living in that neck o' woods. The farmer stepped into the store recently and asked the use of the druggist's desk to write a letter. Of course, the privilege was granted and the tiller of the soil started in laboriously. He soon glanced up from his tablet, however, and remarked:

"I can't see a thing back here; ain't you got a pair of glasses that'll fit me?"

"Guess so," the genial proprietor replied, and he took a pair from the case, and walking to the desk, placed them over the farmer's eyes.

The visitor finished his letter and arose.

"Got through?" inquired the druggist.

"Yep," he replied.

"See any better?"

"Yes; them spectacles are tip top."

Then the druggist stepped up and stuck his fingers through the supposed glasses. He had given him an empty pair of bows.

CHEMICAL PRODUCTS CO. STARTS.

Announcement has just been made that the Chemical Products Co., of Detroit, has been organized for the purpose of introducing Sulfidine and its derived products. Mr. A. M. Campau is general manager of the company. Sulfidine is a loose chemical compound, derived from thymol, by converting the thymol into a mercaptan, condensing two molecules of this mercaptan and substituting part of the hydrogen present in the SII group, with iodine. It is a very fine buff-colored powder, and contains 13 per cent. sulphur and 27 per cent. iodine.

A SYLLOGISM.

Various New York daily papers publish alleged cuttings from the columns of contemporary rural papers. Here is a sample from a Missouri paper:

"At last a drug store has been started in our town. 'Sid' Herring is the genial proprietor, and everybody remembers 'Sid' as a boy. Success to you, 'Sid'."

"Judge Hain, one of the oldest inhabitants of —, died yesterday, after a short illness. We mourn our loss,—" etc.

GOLDEN SEAL'S SCARCITY.**Systematic Cultivation of the Plant
Becomes Necessary.****SUCCESSFUL PROPAGATION POSSIBLE
ACCORDING TO DEPARTMENT OF
AGRICULTURE. — BEST METHODS.
— MONETARY RETURNS. — SOME
FACTS ABOUT THE PLANT.**

The scarcity of golden seal root is growing acute. The jobbing price has already risen to about \$2 per pound and will probably rise further. The causes of the gradual extermination of this useful indigenous drug were fully discussed in The Era for January 5. They may be summed as the results of the march of civiliza-

GOLDEN SEAL, FLOWERING PLANT.

tion, the enormous yearly increase in demand, and the destruction of the sources of future supply by wasteful methods of gathering.

The Department of Agriculture recognized this threatened extermination of a useful medicinal plant as early as 1899. It has just issued, through the Bureau of Plant Industry, a bulletin devoted to golden seal and its cultivation. In this is the following: "The demand for the root appears to be increasing, and the time seems to be not far distant when this plant will have become practically exterminated so far as the drug supply is concerned. The cultivation of golden seal seems now to have become a necessity in order to meet the demand and save the plant from extinction." There are now several commercial growers of the root.

THE HISTORY OF THE PLANT.

The Indians understood the virtues of golden seal and imparted the information to the white settlers that its juice was good as a dye or as a medicinal remedy for sore eyes. In Ohio and Kentucky the pioneers used the root extensively for the latter complaint, and Lewis and Clark secured it as a specimen for their herbarium collection on their famous expedition in 1804. Captain Lewis described it as "a sovereign remedy for sore eyes." But no great demand for the drug existed until it was extensively prescribed by physicians of the eclectic school which arose

about 1847. In 1860 the root was made official in the United States Pharmacopœia. Ohio, Indiana, Kentucky and West Virginia produce the most golden seal, but it is native from southern New York to Minnesota and western Ontario, and as far south as Georgia. It is now becoming scarce throughout its range. Golden seal occurs in patches in high open woods where there is plenty of leaf mold, and usually on hillsides or bluffs affording natural drainage, but it is not found in very moist or swampy situations, in prairie land or in sterile soil.

DESCRIPTION OF THE PLANT.

The Department of Agriculture gives the following information concerning the plant itself:

Golden seal (*Hydrastis canadensis* L.) belongs to the same family as the buttercup, namely, the crowfoot family (Ranunculaceæ). It is a perennial plant, and the thick yellow rootstock sends up an erect, hairy stem about a foot in height, around the base of which are two or three yellowish scales. The stems as they emerge from the ground are bent over, the tops still remaining under ground, and sometimes the stems show some distance above the surface before the tops are brought out from the soil. The yellow color of the roots and scales extends partly up the stem so far as it is covered by soil, while the portion of the stem above ground has a purplish color. Golden seal has only two leaves (rarely three), the stem bearing these seeming to fork at the top, one branch supporting a large leaf and the other a smaller one and a flower. Occasionally there is a third leaf, much smaller than the other two and stemless. The leaves are prominently veined on the lower surface, and are palmately 5 to 9 lobed, the lobes broad, acute, sharply and unequally toothed. The leaves are only partially developed at flowering time and are very much wrinkled, but they continue to expand until they are from six to eight inches in diameter, becoming thinner in texture and smoother. The upper leaf subtends or incloses the flower bud.

Early in spring, about April or May, the flower appears, but few ever see it, as it lasts only five or six days. It is greenish-white, less than half an inch in diameter, and has no petals, but instead three small petal-like sepals, which fall away as soon as the flower expands, leaving only the stamens as many as forty or fifty—in the center of which are about a dozen pistils, which finally develop into a round, fleshy, berry-like head. The fruit ripens in July or August, turning a bright red and resembling a large raspberry, whence the common name *ground raspberry* is derived. Each fruit contains from ten to twenty small, black, shining, hard seeds.

If the season has been moist, the plant sometimes persists to the beginning of winter, but if it has been a dry season it dies down soon after the fruit is ripe, so that by the end of September no trace of the plant remains above ground. In a patch of golden seal there are always many stemless stems, simple and erect, bearing a solitary leaf at the apex, but no flower."

COLLECTION AND PREPARATION.

The root or rhizome is the part of the plant employed in medicine. It contains an ill smelling yellow liquid, and measures,

when dry, one or two inches in length and from one-eighth to one-third of an inch in diameter. It possesses "an exceedingly bitter taste and a persistent acidity, which causes an abundant flow of saliva when the rhizome is chewed. The most important constituents of the rhizome are the three alkaloids—hydrastin, berberin, and canadine," of which the first is of most medicinal use, especially in treatment of the mucous membranes and glandular system.

"The root should be collected in autumn after the plants have matured seed," says the report of the Department of Agriculture. "Spring-dug root shrinks far more in drying and always commands a lower price than the fall-dug root. After the roots are removed from the earth they should be carefully freed from soil and

THE FRUITING PLANT.

all foreign particles. They should then be sorted, and small, undeveloped roots and broken pieces may be laid aside for replanting. After the roots have been cleaned and sorted they are ready to be dried or cured. Great care and judgment are necessary in drying the roots. It is absolutely necessary that they should be perfectly dry before packing and storing, as the presence of moisture induces the development of molds and mildews, and, of course, renders them worthless. The roots are dried by exposure to the air, being spread out in thin layers on drying frames or upon a large, clean, dry floor. They should be turned several times during the day, repeating this day after day until the roots are thoroughly dried. If dried out of doors they should be placed under cover upon indication of rain and at night, so that they may not be injured by dew. After the roots are thoroughly dried they may be packed as tightly as possible in dry sacks or barrels, and they are then ready for shipment."

CULTIVATION METHOD.

For cultivation obtain a soil as nearly as possible like the soil of a deciduous forest. It should contain much humus, the best form of which seems to be leaf mold. After planting, it is well to add a mulch in the fall. Thorough drainage is absolutely necessary. The soil should be prepared to a depth of six or eight inches. Artificial shade is essential for the growing

plant. The method used by the department to secure this is thus described: "That used in connection with the experiments of the department was made of ordinary pine plastering lath nailed to a suitable frame elevated on posts. The posts were of cedar 8½ feet long, set 2½ feet in the ground in rows 11 feet apart, and 16 feet distant from each other in the rows. Supports 2 by 4 inches were set on cedar blocks 2 feet long sunk below the soil surface in the middle of the 16-foot spaces. Nine pieces 2 by 4 inches were nailed edgewise to the tops of the posts and supports. The posts were notched to receive the 2 by 4 inch sticks. Pieces 2 by 4 inches were nailed across these at intervals of 4 feet. The laths were nailed to these, leaving spaces about an inch wide." The lumber will cost about \$500 to \$700 per acre.

The care of the plants is not arduous. The chief need is the removal of weeds. The general treatment is similar to that used for ginseng. Beds are not absolutely necessary. If they are not used, plant in rows one foot apart and six inches apart in the rows. If beds are preferred, make them four to eight feet wide with two-foot walks between.

PROPAGATION.

There are three methods of propagation of golden seal, by seed, by division of rhizomes, and by means of small plants formed on the stronger fibrous roots. The second method is the best and so far the department has been largely unsuccessful with the other two. The course of the experiment with the divided rhizomes is thus described by the department:

"In the spring of 1902, forty plants were secured and planted under a shade of a temporary character, but the season was too far advanced to permit of much growth during that year. In 1903, proper shade was supplied, all other conditions were better, and the plants made a good growth. The crop was dug about the middle of November, 1903; the roots were weighed and divided. They were again planted, and in May, 1904, there were found to be 150 strong plants and a few smaller ones as a result of this division, an increase of 275 per cent. This method of propagation seems to be the most important and the other two of secondary importance. The processes are simple and no skill is needed. The plant dies down in late summer and the stem decays, leaving a scar in its place on the rhizome. Two or more buds are formed on the sides of the rhizome and these accumulate energy for growth the following spring. If the root is cut into as many pieces as there are buds, giving each plant a portion of the rhizome, some fibrous roots, and one or more buds, the number of the plants can be doubled. The roots are planted and mulched and the process is complete. The rains pack the soil around the roots and they are ready to grow when spring comes. The process may be repeated every year and the number of roots increased indefinitely."

YIELD OBTAINED.

The yield obtained by the department was four pounds of green roots to an eighth of a square rod of soil, or 5,120 pounds per acre. After drying the roots, an acre on this basis should return about 1,500 pounds. Considering that the conditions surrounding the department's ex-

periment were not very good, the result was highly encouraging.

Concerning the number of years necessary to produce the largest crop, the department finds that the roots begin to decay after the fourth year and the central and largest part of the root decays at the oldest scar, leaving two or more plants in place of the old one. Do not grow a plant more than three years. For propagation alone, one year gives good results, while for maintaining a constant area and producing a crop, two or three years will give best results.

The grower of golden seal for the commercial market should study the market conditions thoroughly and remember that in the past prices have fluctuated widely because of waves of oversupply, manipulation or scarcity. Recently, however, values have steadily held on a very high level, because of the general scarcity of the plant and the future promises a continuance of these conditions, so that a moderate cultivation of golden seal should bring a handsome profit.

GADUOL A CHEMICAL COMPOUND.

Merck & Co. some time ago imported at New York, an invoice of gaduol, which was assessed for duty as a medicinal preparation, alcoholic at the rate of fifty-five cents per pound. The importers protested, claiming the merchandise to be a chemical compound, not specially provided for, dutiable at the rate of 25 per cent. ad valorem. The Board of General Appraisers overruled the protest. Thereupon Merck & Co. appealed to the United States Circuit Court, southern district of New York, which reversed the decision of the Board of General Appraisers. The government appealed, and now the United States Circuit Court of Appeals, Second Circuit, has handed down a decision in favor of Merck & Co., finding gaduol a chemical compound. The government has announced that no further legal proceedings will be instituted and acquiesces in the decision of the court. Judge Townsend, in delivering the court's decision, stated that gaduol is an extract of cod-liver oil, in the preparation of which alcohol is used. The question was whether it was a medicinal preparation or a chemical compound, under the law. He then cited a former decision of the Supreme Court of the United States as follows:

"The commercial meaning of the term 'medicinal preparation' is the same as its ordinary meaning, viz, a substance used solely in medicine and prepared for the use of the apothecary or physician to be administered as a remedy in disease. Muriate of cocaine is dispensed in the form in which it is imported, or more often reduced therefrom to a powder, or by means of a mortar and pestle, or diluted in water or admixed with inert or neutral matter."

Judge Townsend therefore decided that gaduol in the form in which it was imported is not prepared for the use of the apothecary or physician, and is not dispensed in said form, and therefore, is not dutiable as a medicinal preparation, but as a chemical compound.

A Norwegian chemist predicts that the time will come when more alcohol will be made from sawdust than from potatoes.

EXAMINING IMPORTATIONS.

Treasury Department to Assist Department of Agriculture.

Instructions have recently been issued by the Treasury Department to all officials in the customs service regarding their actions in assisting the Department of Agriculture to enforce and operate the provisions of the new pure food law. The instructions are signed by Secretary Shaw. Since the new law, runs the instruction, "provides that whenever the Secretary of Agriculture has reason to believe that articles are being imported from foreign countries which by reason of adulteration are dangerous to the health of the people of the United States, or which are forbidden to be sold or restricted in sale in the countries in which they are made or from which they are exported, or which shall be falsely labeled in any respect in regard to the place of manufacture or the contents of the package, he shall make a request upon the Secretary of the Treasury for samples from original packages of such articles for inspection and analysis to determine whether such goods come within the provision forbidding their delivery to the consignee. In all cases where invoices are received in time by the Secretary of Agriculture the requisite request may be made before the goods pass from customs custody. But in cases where invoices are not sent or are not received in time, the purpose of the law may be defeated by the delivery of goods coming within the law to the consignees, unless measures be adopted whereby analyses may be secured in such cases. With this purpose in view, collectors at ports where representatives of the Department of Agriculture are stationed are hereby authorized and directed to advise such representatives of any such importations which apparently come within the pure-food law, and officers at other ports are hereby authorized and directed to telegraph this department in all cases where they have reason to believe that there has been a violation of said law. In no cases, however, shall any importation be withheld from delivery after compliance with the customs requirements to await the receipt of authority to take samples for analysis under that law, nor shall any goods be examined for the express purpose of determining whether they come within the law. "Your attention is especially directed to importations entered on pro forma invoices, of which the Secretary of Agriculture will, in most cases, have no previous advice. "You will be advised by the department from time to time when the Secretary of Agriculture desires to inspect all importations of any particular kind of food products, and in such cases you will immediately give proper notice of the arrival of any shipment of such food products in order that the Secretary of Agriculture may have opportunity to request that they be detained and sampled."

If you care for a window display it will certainly pay you to read the advertisement of the C. I. Hood Co. in another part of this Journal, and see what the expenditure of one cent will do. Better have one as it makes business good.

SHOW WINDOWS & FEATURES.**Things Are Quiet in New York.**

A DRUG STORE BOYDOR.—ACCIDENTAL DISPLAY.—"FRENZIED FINANCE" A GAME.—NO ICE ON THE KALISH SHOW WINDOWS.

There is a sameness about window and sal features these days, that reminds one of the old-time drug stores which indicated the seasons by showing chest protectors or moth balls, inevitably one or the other. Linonine, Vinol, Wampole's Oil, Scott's Emulsion and similar preparations are shown in profusion, usually backed by strings of chest protectors. In the Harlem district, F. W. Kinsman, Jr., Co. show several dozen bottles of Vinol, not in arches, as heretofore, but laid flat on the window floor, so that the mirrored backing of the window gives an idea of quantity. In the centre of the window a house with sloping roof, built of the same cartons, attracts attention.

At Reed's Pharmacy, 1960 Seventh avenue, Linonine is featured by showing large posterboard cartons which bear the words lettered in red. Narrow strip signs booming the preparation are pasted upon the glass and a novel effect is given by placing paper facsimile bottles so that they appear to be resting on these narrow strip signs.

The tooth brush and dentifrice free offer is continued here. A free brush accompanies each bottle of twenty-five cent dentifrice. The brushes are half hitched on lines of black thread extending from the ceiling and the window's floor shows several geometrical figures made with the same bristling articles.

Cream of Magnesia.

Schaff Brothers, 2157 Eighth avenue, have on exhibition a large quantity of their Cream of Magnesia bottled in six-ounce quantities and quoted at a quarter each bottle. The preparation is recommended as an antacid, etc., and resembles a proprietary preparation in point of viscosity and color.

Another window given to bath accessories is well arranged. The window floor is covered with rubber sponges in strips and odd pieces, while several steps are used to feature bath towels, hands scrubs, bath mats, etc., all at cut prices.

Frenzied Finance.

The Hegeman Corporation, 200 Broadway, has given a window to "Trust and Bust, or Frenzied Finance," an up-to-date card game selling at fifty cents. Not content with the daily scramble for wealth the Wall Street contingent are buying this novelty game, which thoroughly illustrates the uncertainty of the stock market. Signs testify to the value of the game as an attention holder and cards displayed read "puts, call," etc., suggestive of the downtown atmosphere. A shot is taken at Lawson, and he is treated, apparently, with some seriousness in the card game.

"That" Window.

Reld, Yeomans & Cubit, 140 Nassau street, have in their one window this week articles for man's every need, as is their usual custom. In addition, various

novelties are shown, including mustache brushes, with mirrored back, in a case, for twenty-five cents; fancy papier mache flower pots with flowers, at five cents, and cigar moisteners at \$1.49. These latter are boxes finished in mahogany and well polished, and they are designed to hold a box of cigars. The moistening is done by a sponge tray after the cigar counter method.

Seal of West Virginia stogies are cut to eight cents, wax matches in 500 and 1,000 boxes are nine cents and eighteen cents, alarm clock, ninety-eight cents; dates, the kind you eat, twenty-five cents, and hair insoles, five cents a pair.

Preventing Ice on Windows.

The big stores have seemingly solved the problem of how to prevent the icing of show windows. The Kalish Pharmacy, at Fourth avenue and Twenty-third street, has windows not protected by full length partitions and the steaming of the windows has been a great annoyance. The trouble has been altogether remedied by placing an electric fan within the window. This is run at short intervals and dries out the window so that there is no moisture to freeze.

MASSACHUSETTS.

A clever scheme to catch trade is in operation at the Adams House Pharmacy, Boston. The store is exceptionally well situated, being located near four theatres. A toilet stand is laden with brushes, whisk brooms, cosmetics, various toilet powders, lotions, cold cream, combs, hand mirrors, simple manicure articles, colognes, etc., suggestive of the twentieth century dressing tables. These articles are there to be used gratis, a large placard states, and theatergoers avail themselves, men and women, too, of the opportunity to fix up a bit, straighten hats, subdue a wandering wisp of hair, touch up the face with powder, to remove the "shine," of course, and so on. Mirrors are always magnetic in attracting women and Boston women have been quick to recognize the value of the convenience so thoughtfully provided. The store has an elaborate soda fountain, at which various sandwiches, pie, cake, etc., are served and patrons are able to obtain a light lunch at small expense.

AN ACCIDENTAL DISPLAY.

A novelty in window displays was seen last Friday, at the Rex Pharmacy, at Nineteenth and Castro streets, San Francisco. It was nothing less than a horse and wago—alive and moving—but it was unintentional and caused a panic. The animal was a runaway, and after flying along the streets for a dozen blocks, made straight for the pharmacy. The doorway is narrow, so it made for the window. Gathering itself together, the horse made a leap into the glass. There was a wild mix-up, a hurried exodus of customers, and a shower of glass. Two policemen restored order.

A public meeting was in session. Grave discussion followed the introduction of a motion. The amendment then arose: "I move, Mr. Chairman, that we strike out the words 'so that' and substitute —" But he got no further. It was a pure drug meeting. He was not a druggist.

APPRAISERS' DECISIONS.

—Borate of soda, which was imported by the Charles E. Scholes Company, was held by the Board of General Appraisers to have been correctly assessed for duty by the collector of customs at New York, as borax at five cents per pound. The importers claimed that it was dutiable at three cents per pound as borate of soda containing not more than 36 per cent. of anhydrous boracic acid. Testimony showed the merchandise to be a mechanical mixture of borax, which is much the more valuable per pound, with about ten per cent. of carbonate of soda, of much less value per pound than borax; that by such mixture the percentage of anhydrous boracic acid in the pure borax was reduced from over 36 per cent to 23.56 per cent.; and that the article contained 91.65 per cent. of crystallized borax and really, in the opinion of the board, was adulterated borax.

—Artificial fruits made of fancy soaps in the forms of apples, pears, peaches, and oranges made of soap, coated and colored with substances that render the forms impervious to water and impracticable for use as soap were found by the Board of General Appraisers to be not fancy soap, but to be dutiable as artificial fruits at 50 per cent. ad valorem. The importers had claimed the importation dutiable at fifteen cents per pound as fancy soap. The official samples were the only evidences produced by the importers to substantiate their claims. According to the record of the board examination, showed that, regardless of what material the merchandise was made, the forms were coated and beautifully colored with some substance to make them impervious to water. A former decision of the board on a similar importation was judged to be erroneous and was overruled.

—Oil of rose or so-called Rhodinol, more generally known as synthetic oil of rose, which was imported at New York by Fries Brothers, was held by the Board of General Appraisers to be free of duty.

—Bleachers' blue, which was imported at New York by A. Deltonde & Co., was held to be dutiable as a coal-tar preparation, not a color or dye and not medicinal, as claimed by the importers.

—White oxide of manganese, which was imported at New York by Gabriel & Schall, was held to be dutiable as a chemical compound, as claimed by the importers.

—Argols invoiced as "white double sifted argols, No. 50" were held by the Board of General Appraisers to have been properly classified under the provision in paragraph 6, tariff act of 1897, for argols containing more than 40 per cent. of bitartrate of potash. O. S. Janney & Co. imported them at Boston.

—Gloy was imported by Arthur A. Brigham, at Boston, and was assessed by the collector of customs as a chemical compound under paragraph 3, tariff act of 1897. The importer claimed it was dutiable as an unenumerated manufactured article under section 6. The Board of General Appraisers overruled the protest and found that the merchandise was invoiced as gloy, and was described by the local appraiser as consisting of two varieties of size or finish, one white and solid, the other light brown and semi-liquid. The chemical analysis showed them to be compounds or preparations consisting of

chemical starch, zinc and magnesium chlorides.

—Quebracho fragments were imported by N. W. Rice & Co., at Boston, and were classified for duty by the collector of customs as a drug advanced in value under paragraph 20, tariff act of 1897. The importers protested that the merchandise was free of duty as an article in a crude state used in dyeing or tanning. The Board of General Appraisers overruled the protest, stating that the merchandise had the appearance of fragments or small chips of quebracho wood, apparently produced by grinding or crushing the wood in order to make it ready for use in the extracting process to which it was to be submitted. The board further stated that the trunk or logs of the quebracho tree of considerable size is the usual and crude form in which quebracho is imported and that the condition of the importation in question was one very considerably advanced over the crude state.

—Japanese grass roots were held to be free of duty as crude drugs. They were imported at San Francisco by Choy Lung & Co. Investigation showed that they were only washed clean and dried.

—Quinoid wine was classified as a medicinal preparation and the classification was affirmed by the Board of General Appraisers. It was imported at San Juan, by Sers. De F. Juncos & Co. and was claimed by them to be dutiable as a still wine.

—Oenotannin was classified as tannic acid, or tannin, under paragraph 1, tariff act of 1897, by the collector of customs at Chicago, where it was imported by the United States Bottlers' Supply Company, who claimed it was dutiable either as gallic acid under the same paragraph, or as a chemical compound under paragraph 3. The Board of General Appraisers affirmed the classification and assessment of duty. Investigation showed that the article consisted of a dry powder, of which tannin was the component of chief value and which was invoiced as oenotannin. In the opinion of the board it is used for the clarification or sophistication of wine.

—Borax imported by F. W. Braun & Co. at San Francisco, was assessed as borax, under paragraph 11, tariff act of 1897, and this was affirmed by the Board of General Appraisers. The importers had protested that it was dutiable as borate of soda.

—Pyridin coal-tar preparation was imported by Laidlaw, Mackill & Co., at Richmond. The collector of customs assessed it for duty as a chemical compound. The Board of General Appraisers reversed the assessment and sustained the protest of the importers that it was dutiable as a coal-tar product or preparation, not a color or dye, and not medicine. The board further stated: "According to Watt's Dictionary of Chemistry, 'Pyridin occurs in bone oil, in coal tar, and in tar got by distilling bituminous shales and peat.' Formerly, and perhaps at present, the chief source of pyridin was bone oil, the product of which would be a chemical compound. The evidence in these cases shows that the pyridin covered by these protests was produced from coal tar and that it is a coal-tar product or preparation, not a color or dye, and not medicinal, and we so find."

Chemical glassware, which was imported by Queen & Co., at Philadelphia, was classified under paragraph 100, relating to ground glass, blow glass, etc., by the collector of customs. The Board of General Appraisers decided that certain jars, bottles, flasks, lamps, funnels, tubing, etc., were really dutiable as manufactures of glass, under paragraph 112, as claimed by the importers, but that certain chloride calcium jars and desiccators were properly classified under paragraph 100 as originally assessed.

—Agar-agar was held by the Board of General Appraisers to be properly classified for duty as isinglass. The merchandise was imported at Honolulu by U. Kobayashi who filed a protest.

—Candy seed was held by the Board of General Appraisers not to be free of duty as grass seed. The importers, McClure & Kidpath, had protested against the assessment of duty on this basis by the collector of customs at New Orleans.

—Borate of manganese was held by the Board to be dutiable as a chemical compound as claimed by the importers, the Strohmeier & Arpe Company, of New York, and O. G. Hempstead & Son, of Philadelphia.

—Bilz seel, which was imported by C. Brinkman, at Chicago, was assessed for duty as an alcoholic compound. The importers protested it was dutiable as chemical compound or as an unenumerated article under section 6, under paragraph 3 of the law. Their protest was overruled by the Board of General Appraisers on the evidence of the local appraiser, who showed that the merchandise was an alcoholic liquid used in the manufacture of summer drinks.

—Medicated wines are held by the Board to be dutiable as medicinal preparations. In the most recent case Groome & Co. imported at Philadelphia quinine sherry wine and tonic port wine which was so assessed. They protested, but the Board of General Appraisers decided against them, finding on investigation that the so called quinine sherry wine was a medicated wine and that the tonic port from which tannin and astringent substances had been extracted had been combined with extract of malt and meat. The board found the port to be almost identical with bovril wine, which was in United States v. Shoemaker to be a proprietary medicinal preparation. There was also another decision holding quinine sherry as a medicinal preparation.

—Filtering paper in circular sheets was held by the Board to be dutiable as filtering paper, under paragraph 397 of the law, as claimed by the importers, the F. W. Braun Company, of Los Angeles. The collector of the port had assessed it as a manufacture of paper, under paragraph 407.

"Yes," began the druggist, who had political aspirations, "expansion's the thing. I'll show you how we can pay the national debt in five years, as a result of expansion. I—" A customer entered. "Very sorry, ma'am, I haven't got a pound of rochelle salts. Just sold a pound—no less do!" Exit customer, minus salt. "As I was saying gentlemen, expansion —" but the auditors quickly stole away.

MIXING MIXTURES.

The latest news from the New York Evening Telegram's beauty doctor, Margaret Mixer says:

"Several times lately I have received letter from correspondents saying that they were unable to find at any druggist's certain ingredients of various recipes. One could not get oil of benne, another could not find chevril, and still a third cannot buy extract of Portugal. These three things and all that I have given are to be found in New York drug stores, but frequently not in small shops. The large manufacturing chemists, most, if not all, of whom have retail shops, carry all such things in stock. I bought some oil of benne within a couple of days and chevril to-day. Do not, however, expect a small shop with a limited trade to have them."

"S. H. F.—The tired look that you complain of in your eyes may come from a weak condition and a simple tonic would aid. Here is one that certainly will not harm and may strengthen: Distilled water, one and three-quarter pints; sulphate of zinc, thirty centigrams; orris root powder, one gram 55 centigrams. Mix in a bottle, shake and set in a cool place for twenty-four hours. Then strain through porous plaster. To use, either put a couple of drops into the eye with a dropper three times a day, or fill an eye cup and open and close the eye in it. If your bed faces the light, turn it so that you will face the other way. In reading be sure to have the light on your paper and not in your eyes."

"Failure—Cure for parasites: One hundred grams glycerine, five grams bichloride of mercury. Apply to the scalp, shampoo in half an hour and always use tar soap for a shampoo as long as there is danger of reappearance."

It seems a shame that Miss Mixer is handicapped by the owners of drug shops with a limited trade, which are without drugs and chemicals prominent in the Mixer pharmacopoeia.

In the formula given above for Eye Tonic, the remarkable directions state that the sulphate of zinc solution is to be strained through porous plaster. Whether the kind with belladonna or just the plain strengthening plaster was the query propounded to an unsuspecting druggist. Since Margaret recommended the lotion as a strengthening tonic, the customer inferred that the latter would do. This would not mean, however, that belladonna is not safe for the eyes, for the beauty doctor said a few days ago that "Atropine and belladonna are said to be harmless for the eyes."

"Failure," who wants a cure for parasites and is advised to use a mixture of bichloride of mercury and glycerin, five per cent., to be applied to the scalp for a half hour, then washed out, is not even warned that the solution is dangerous. Fortunately, druggists have been able to show their patrons the positive danger of such a compound.

Whether Miss Mixer's hit at the druggists is due to their refusal to allow the perpetration of some of her mixtures on an unsuspecting public, is not known, but it may be imagined that the laity takes the explanation of the druggist as a lame apology for not having certain drugs.

MERIT OF WELCH GRAPE JUICE

A druggist, in writing the Welch Grape Juice Co., said: "You have more competitors every year and less competition." That sums up the situation. The growth of this company is remarkable from 1869, when Dr. Welch put up a few bottles for sacramental use in his own church to the more than 250,000 gallons sold in 1904, and the more than 300,000 gallons pressed last fall for 1905. The business has made great strides within the past ten or twelve years, and during this time innumerable competitors entered the field, only to expire in a short time. The reason for the success of Welch's Grape Juice Company is merit—advertising. The company has just ordered 2,000,000 lithographed labels for immediate delivery; this shows the business being handled. The World's Fair at St. Louis, last year, proved of great advertising value to Welch's Grape Juice. The two corners of the Pike and five other prominent locations on the grounds were secured. 20,000 gallons were dispensed in three ounce glasses. The juice was served pure and in a manner fitted to advertise Welch's Grape Juice for the dealer at home. There is surely no better way to advertise Welch's Grape Juice than to have it tasted and tested. No grape juice was awarded a gold medal by the Final Jury; a number of grape juices, including Welch's, were given silver medals, yet the display and prominence given Welch's Grape Juice on the grounds rightly gives it advertising compared with which a medal is of little value. An aggressive campaign has been started in the January magazines. Mediums with a total circulation of over 5,000,000 are being used to enlarge the demand for Welch's Grape Juice, mediums which are high class. As only a good class of people buy grape juice, it will be seen that the field is well covered. There are many other ways in which Welch's Grape Juice is successfully advertised to the public; one of them is a store at Atlantic City. The company has had a store for two years

in a good location, but this year a still better location has been secured. Co-operation with the merit of Welch's Grape Juice and the advertising given it cannot help but bring the druggist a good trade. Very attractive advertising matter is supplied to dealers who will use it.

AYER'S NEWSPAPER ANNUAL.

"The American Newspaper Annual" for 1905, published by N. W. Ayer & Son, Philadelphia, records 23,480 newspapers and periodicals in the United States, Canada, Hawaii, the Philippines, Porto Rico, Cuba and the West Indian Islands. In the number listed there is a net gain of ninety-five over 1904. The printing center of the United States remains unchanged, for 2,007 publications are issued in the State of New York, the greater part of them in this city. This is nearly 700 more than New England's production and within 125 of as many as all those in Delaware, Maryland, New Jersey, Pennsylvania and the District of Columbia. The publications of all of the British American provinces are but 1,168, or 839 fewer than in New York. The rival of New York in the matter of printing is Illinois, where 1,724 newspapers and periodicals have their home. About twenty new periodicals were launched in New York City in 1904, of which five come within the classification of technical. Only one new one of this class appeared in Chicago last year, but three ventured forth in St. Louis. A publication devoted to sanitary science and one to automobiles are the only new journals in Philadelphia. Boston has another monthly devoted to the textile industries. A glance over the Annual shows that the sport of motoring is responsible for most of the periodicals started in the last year or so. They are apparently the successors of the bicycling papers and one may wonder if they will be as short-lived. The publishers have appended a description of every place in the United States and Canada in which a newspaper is published, including a statement of rail-

road, telegraph, express and banking facilities.

The Annual, with its 1905 edition, betrays something of those qualities that attach themselves to the worthy and prosperous burgher, an increasing waist-line, a more subdued taste in color, a less credulous acceptance of mere say-so about circulation figures. The book, it would seem, is sensitive about its years, for it makes no mention of them on the title-page. Yet there are those who do not by any means count themselves old who recall the Annual as a thin, narrow-chested work, with bright-red outer garments and with contents of such enthusiasm they would have been called yellow, had this term yet entered journalism. The Annual is invaluable to all interested in newspapers, periodicals, or in advertising. It is sold at \$5.

WORTH SEEING.

A courageous woman is appearing and will appear for several weeks longer at Proctor's Twenty-third Street Theatre. She is Carlotta, "The Marvel" who loops the loop on a bicycle. Starting at the top fly-gallery of the stage, she rides down an incline of forty-five degrees at the rate of sixty miles an hour, and is stopped in the wings by a rope attached to ten sand-bags, weighing in all 200 pounds. The bicycle is made of iron and weighs 100 pounds. Mlle. Carlotta is the only woman in the world to-day successfully doing this, and it is well worth a visit to New York to see her make the plunge.

CRUSHED FRUIT BOWLS.

Bolner's Patent Crushed Fruit Bowls are not sold directly to the retail trade, but can be obtained from leading jobbers of fountain supplies. The bowls are recognized as a necessity by dispensers of soda. Two kinds, with glass cover and with silver-plated cover, respectively, \$1.00 and \$1.50 each. They are made by the Bolner Manufacturing Co., Chicago.

PLANT OF THE WELCH GRAPE JUICE COMPANY, WESTFIELD, N. Y.

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions. Address The Pharmaceutical Era, 90 William street, New York.

KINSALE.—Add Kinsale Drug Co.

booklet, the inquirer must send the name of her dealer. Mrs. Graham intends to turn every one of these inquiries into a purchase made over a retailer's counter. She is prepared to send by letters, samples and consultation offers from five to ten times the sum which is represented by

the big advertisements in the big magazines. Kosmeo is to take the place of Jasmine Kosmeo, which will be discontinued. The preparation and pot remain the same. The label has been changed to a five-colored lithograph; the price from seventy-five cents, to fifty cents.

Mrs. Graham makes an "early order bonus offer" and sends new advertising

WHERE TRUE QUALITY IS SHOWN.

The excellence of Scott's Emulsion is recognized by the highest authority. The London Lancet said of it: "The value of the hypophosphites combined with cod liver oil, especially in wasting diseases and debilitated conditions is well known. In addition to these constituents, Scott's Emulsion also contains glycerine, which is well recognized as assisting very materially in the absorption of oils and fats. We have examined the preparation with care, and find that it fulfills all the requirements and presents all the conditions of a very satisfactory emulsion. In appearance and consistence it is not unlike cream, and under the microscope the fat globules are seen to be of perfectly regular size and uniformly distributed. In fact, the preparation, microscopically examined, presents the appearance of cream. So well has the oil been emulsified that even when shaken with water the fat is slow to separate, the liquid then looking like milk. The taste is decidedly unobjectionable and is pleasantly aromatic and saline. We had no difficulty in recognizing the presence of the hypophosphites in an unimpaired state. The Emulsion keeps well, even when exposed to wide changes of temperature. Under the circumstances just described the Emulsion should prove an excellent food, as well as a tonic."

ONE WHO "CREATES THE DEMAND."

Mrs. Gervaise Graham is one of the manufacturers who does not ask a druggist to stock her preparations until she has created the demand. To-day she is one of the best-known manufacturers of cosmetic toilet articles, which is due to fair—even liberal—dealings with the trade and to the high standard of the articles she manufactures. Mrs. Graham, in the year 1905, will more than double her last year's appropriation for magazine advertising. In addition to her regular magazine work she is pushing Kosmeo, an article not heretofore advertised, but which she has manufactured for many years and on which she has a remarkable sale. She has contracted for two-thirds of a page space in the Delimitator, Designer and New Ideas, for March, April and May, with large space to follow throughout the year. On page 7 of this issue appears a facsimile of the March advertisement appearing in the three above-mentioned magazines. In April and May she will take the same space to advertise Kosmeo, but in different form. Mrs. Graham is not working for a mail-order business, but with the sole object of leading the consumer to the retail counter. In sending to her for her free sample of kosmeo and

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued January 24, 1905.

- 780,551—Benjamin J. Craggy, Manchester, N. H. Hot-water bottle.
- 780,563—Frank E. Girard, Toledo, Ohio. Eye-irrigator.
- 780,607—Charles R. Harris, Los Angeles, Cal., assignor to The American Percolator Company, Los Angeles, Cal. Filter.
- 780,619—Robert Schorr, Berlin Germany, assignor to the firm of J. D. Riedel, Berlin, Germany. Morphine compound and process of making same.
- 780,650—William Gardner, Carberry, Canada. Bottle.
- 780,710—Henry Dickinson, Flushing, N. Y. Nozzle for syringes.
- 780,714—Harvey S. Ferry, Mount Vernon, N. Y. Apparatus for carbonating liquids.
- 780,732—Edward D. Schmitt, Baltimore, Md., assignor to Halleck A. Penrose, Baltimore, Md. Bottle-seal.
- 780,739—Hamling Tatum, Elba, Ala. Non-refillable bottle.
- 780,780—Carl R. Cully, Norwalk, Ohio. Nozzle.
- 780,791—John H. Gerrer, Elreño, Okla. Hygrometer attachment.
- 780,851—Joseph D. Wilson, East Haven, Conn. Combined distiller and cooker.
- 780,886—Eudolf Butzler, Ludwigshafen-on-the-Rhine, Germany, assignor to Radsche Anilin and Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany, a corporation. Process of purifying indigo.
- 780,905—Charles S. Orr, Providence, R. I. Non-refillable bottle.

TRADE MARKS.

Registered January 24, 1905.

- 44,031—Malarial remedies. Laurence E. Cash, St. Louis, Mo. The letter "H," the cross-bar of which is pierced by an arrow.
- 44,032—Liver remedies. Laurence E. Cash, St. Louis, Mo. The letter "H," the cross-bar of which is pierced by an arrow.
- 44,033—Dyspepsia remedies. Laurence E. Cash, St. Louis, Mo. The letter "H," the cross-bar of which is pierced by an arrow, associated with the hyphenated word "Dys-pep-en."
- 44,034—Medicines for the treatment of certain named diseases. Ehrlicher Brothers, Pekin, Ill. The facsimile signature of Alexander Boyd, M.D., and the portrait of the said Dr. Boyd.
- 44,035—Medicated preparations for the treatment of the hair, scalp and skin. John J. Krom, Atlanta, Ga. The word "Kromopathic."
- 44,036—Linctum. W. A. Byrd & Son, Glade Hill, Va. The representation of a circle inclosing a picture of two birds perched on the limb of a tree.
- 44,051—Compound for removing stains from fabrics. The Olympia Drug and Chemical Company, Seattle, Wash. The word "Luceo."
- 44,052—Dandruff-destroyer. Otto Ritzert, Los Angeles, Cal. A portrait of the registrant.

- 44,009—Nervine. Farbenfabriken of Elberfeld Co., New York, N. Y. The word "Gynoval."

LABELS.

Registered January 24, 1905.

- 11,824—Title: "Bite-No More." (For a preparation for preventing mosquito bites.) Franklin Hawley & Co., Austin, Ill.

What an Inch Cube of Chalk Contains.

Ehrenberg says that an inch cube of chalk would be identical with a corresponding cube of mud taken from the bottom of the Atlantic Ocean and mixed with mud from the bottom of the Thames River. This statement proves that chalk contains many impurities and druggists should be careful in purchasing to get the kind that is thoroughly purified, namely, Thomas' English Prepared Chalk.

MARKET REPORT

PRICES RISING.

Decided Strength Manifested in Many Lines.

DEMAND KEEPS UP WELL DESPITE THE BLIZZARD.—OPIMUM, COCAINE, AND CAMPHOR ADVANCE.

New York, Jan. 30.—Several important advances in prices have been registered this week. There are a few declines, but they are of small significance. Generally the market is very firm and further upward movements in certain drugs would occasion no surprise. The consumptive demand is rather above the average for the time of year, and this despite the heavy storm of last week, which cut down the mails and prevented the shipping of goods by distributors.

OPIMUM.—The cold weather in Smyrna and the report of but small sowings there have caused an advance in foreign markets. Our market has risen in sympathy also, but jobbers are not agreed as to values for powdered. This irregularity appears to be caused by a desire on the part of certain firms to move stock. Jobbing values now are \$2.90@3.10 for nine per cent., and \$3.05@3.20 for eleven per cent. Powdered ranges \$3.50@4.00 for thirteen per cent. and \$4.25@4.75 for sixteen per cent. Granulated, \$4.75@5.00.

MORPHINE SULPHATE.—The lighter movement in opium has accentuated the upward tendency of morphine, but no actual advance in prices has resulted as yet. Jobbers still quote \$2.60@2.70 for eights, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The strong statistics on cinchona bark strengthen the situation. For the first half of January the shipments were only 387,000 pounds. Those for the latter half will very shortly be announced, and if they prove equally bullish prices may advance. At the recent Batavia auction, 16½ florins was realized on the average, or about the same unit as before. Local jobbers report a satisfactory demand at the unchanged scale of 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

COCAINE.—For some time foreign markets have been gaining strength, and the domestic consumptive demand has been increasing. This situation has now resulted in an advance here. Jobbers have raised their prices to \$3.80@3.90 per ounce for the hydrochloride.

CAMPHOR.—The steady upward course of this drug since the opening of the Far Eastern war registers another advance. It has been rumored that the Japanese government has been considering the prohibiting of exports of all save the refined. Meanwhile stocks have lessened and the demand continues good. Accordingly, refiners have advanced their figures and

jobbing prices have risen to 80@80½c. for bulk in bbls., and 84@91c. for less; 80½@81c. for 4-oz. blocks in cases, and 84@91c. for less; 82@82½c. for ounce cakes in cases and 86@91c. for less; 84@84½c. for 24s in cases and 88@93c. for less, all per pound. Ounce cakes and 24s in 1-lb. boxes, 1c. per lb. additional on above prices.

GAMBAGE.—Higher foreign markets cause an advance here and local jobbers now quote \$1.05@1.20 per pound, and powdered \$1.20@1.30 per pound.

OIL SPERMINE.—Freer offerings have produced a decline. Jobbers now ask \$4.75@5.00 per pound.

OIL OLIVE.—Malaga has advanced somewhat, owing to improving demand and moderate supplies. Prices of jobbers are, yellow, in barrels, 65@70c. per gallon, and 55c.@\$1.00 for less, per gallon; green, in barrels, 67@72c. per gallon, and 57c.@\$1.05 for less per gallon.

OIL ORANGE SWEET.—Holders have decided to ask higher prices because of a satisfactory demand and the absence of pressing offerings. Jobbers now quote \$2.30@2.55 per pound.

PECAC.—Foreign markets are strong. Light supplies of the Carthagena root cause higher selling prices and jobbing values have risen to \$1.65@1.80 for the whole per pound, and \$1.75@1.90 for powdered, per pound.

OIL CITRONELLA.—Lighter stocks of the native and a good demand have enabled holders to push up values. Jobbing prices are 50@55c. per pound.

SANTONINE.—The shortage of the Russian wormseed crop is being more decidedly felt and both home and foreign markets have again risen. Local jobbers are asking \$9.00@9.25 per pound, and 65@75c. per ounce; powdered, \$9.50@9.75 per pound and 70@75c. per ounce.

SALTPETER.—In sympathy with the higher cost of raw material the wholesale primary market has again risen. Consequently jobbers have advanced their prices to the following: Granulated, keg, lb., 6@6¼c.; small crystals, keg, lb., 6¼@6½c.; less, lb., 8@10c. large crystals, keg, lb., 6¾@7c.; double salt nitre, keg, lb., 7¼@7½c.; triple salt nitre, keg, lb., 7¾@8c.; powdered, keg, lb., 6½@7c., and less 9@12c.; barrels, ¼c. per lb. less.

SACCHARIN.—A decline has occurred because of increasing competition among manufacturers. Prices quoted by jobbers now are, in barrels, pound, \$1.75@2.00, and per ounce, 15@18c.

SPIRITS OF TURPENTINE.—Slight fluctuations are frequent, as usual. Latest jobbing prices are, in barrels, 59@60c. per gallon, and less, 65@70c. per gallon.

LYCOPDIUM.—The demand increases and causes an advance in the wholesale market, but jobbing quotations remain about the same at \$1.05@1.15 per pound.

OIL COTTONSEED.—Readjustments of values due to the availability of new crop oil makes jobbing quotations, white, in barrels, gal, 35@36c., and less, 45@53c.; yellow, in barrels, 34@35c.

WHITE PINE BARK.—Sharing in the general scarcity of native drugs, this commodity has been enhanced in value. Jobbers have raised prices to, whole, 15@20c., per pound, and ground, 20@25c.

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put the Era on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list editions.

Chemicals, Electrical Heating Apparatus, Laboratory Utensils, Filter Papers.—Elmer & Amend, 205-11 Third avenue, New York.

January list Essential Oils, Essences, Essences, Colors, etc.—Fritzsche Bros., 37 Barclay street, New York.

1905 Catalogue Pharmaceutical and Biological Products.—H. K. Mulford Co., Philadelphia.

Biological Products.—Pasteur Vaccine Co., Ltd., 219 E. Randolph street, Chicago.

Balances of Precision.—Alb. Rueprecht, Vienna, Austria.

STAR ANISE.—Continued strength in foreign markets creates another advance. Jobbing prices now are 30@35c. per pound.

UNICORN ROOT.—Another indigenous drug sharing of general scarcity of all those native. Prices have been advanced by jobbers to the following: Whole, 60@65c.; ground, 63@67c.; and powdered, 65@70c.

FALSE UNICORN ROOT.—Like true unicorn root, this commodity is scarce and higher. Jobbing prices are, whole, 65@70c.; ground, 68@75c.; and powdered, 70@75c.

OIL OF CLOVES.—In sympathy with the reactionary tendency in spices, this oil has been advanced by jobbers to \$1.15@1.25 per pound.

MANNA.—Values have been cut by jobbers to the following: Large flake, 50@55c. per pound; small flake, 40@45c. per pound; and sorts, 35@40c. per pound.

OIL SASSAPARA.—The scarcity of the root has created an advance in the oil to 80@90c. per pound.

BISMUTH METALLIC.—This has recently been advanced by jobbers to \$2.85@3.00 per pound.

SILVER NITRATE.—A readjustment of jobbing prices leaves crystals at 45@50c. per ounce.

NITRIC ACID.—Present jobbing prices are, carbonyl, 36½@6c. per pound, and 38½ carbonyl, 5¾@6c. per pound.

A FREE DOZEN.

Visitors to the plant of the Ironouquet Wine Co., at Rochester N. Y., are struck by the thorough methods displayed by that company in its processes of manufacture of medicinal wines. These are supplied to the drug trade and medical profession only, being strictly medicinal. Since January 15 the company has offered to include one extra dozen free with every first order for not less than three dozen of Beef, Iron and Wine of Pomelo. A detailed announcement of this liberal offer will be found on page 1 of the advertising section.

EDITORIAL — COMMENT

Judge Tuley's Decision.

It is difficult to overestimate the
importance of Judge Tuley's decision
rendered in favor of the N. A. R. D.
last week. All the old points which
had been decided by former courts
and later again brought into question
were settled, and a great many new
ones also definitely placed in order.
It reviews previous litigation of a
similar nature and constructs for the
associations a legal bulwark such as
they have never had before. One de-
cision may establish a precedent, but
it rarely grounds a principle; but a
long series of decrees, each determi-
ing some point, and all supporting
a whole, forms a foundation which
future assaults seem likely to strengthen
rather than weaken.

No previous decision has been so
far-reaching and yet so definite. It
covers the right of the manufacturer
to fix prices, the right of the whole-
saler to choose his customers, and the
right of retailers to ask and suggest
protection from manufacturers. It
recognizes the right of monopoly in
goods protected by trade mark as ex-
actly analogous to those covered by
patents. This latter point will be of
importance in the Park case against
the wholesale association now pend-
ing, for the complainants in that case
hope to show that a trade mark be-
stows no right of monopoly.

All the dread of publicity which has
marked the proceedings of the price
protective forces seems to have gone
for naught. Judge Tuley admitted
that the retail druggists "recommend-
ed—and it may be said that the evi-
dence tends to show that they are
acting upon an understanding, if not
in collusion with the proprietors of
these remedies," etc., but since the
proprietors had a legal right to pro-
tect prices, there would be nothing
illegal in the understanding. The cut-
off list is also firmly established upon
a legal basis. The court said: "The
decisions appear to be that they (the
proprietors) have a right to make
that condition, and I do not under-
stand it to be a black-list."

N. A. B. Ph.

The National Association of Boards
of Pharmacy—to use its very unwieldy
title in full—has already put itself in
trim for actual work, thus disappoint-
ing the critics who feared that several
years would necessarily lapse before
anything definite could be accom-
plished.

The objects of the association are
the promotion of greater uniformity
in boards of pharmacy examinations
and to provide for an interchange of
certificates between different States.
The first is purely an advisory func-
tion, but the latter involves both
initiative and action.

The first meeting of the association
was held at Kansas City last Septem-
ber during the convention of the A.
Ph. A. A constitution and by-laws
were adopted, among others the fol-
lowing article:

"The interchange of certificates,
provided for in this constitution, shall
go into effect whenever ten States or
Territories shall have made applica-
tion for membership."

Secretary M. G. Motter announces
this week that the association now has
a membership of thirteen boards. This
marks the beginning of a better order
of things, and a long step in the direc-
tion of more rational and more thor-
ough education in pharmacy.

Trade Marks and Patents.

From some statistics which will be
found upon another page in the pre-
sent issue it appears that the United
States Patent Office is the only pay-
ing institution that our Government
maintains. The immense establish-
ment at Washington which attends to
the registration and granting of pat-
ent rights pays a very fair profit, and
the business is growing rapidly.

The purpose of the patent, the en-
couragement of enterprise and origi-
nality by granting a monopoly in the
thing originated, has been accom-
plished with marked success. The
number of articles offered for protec-
tion has increased enormously during
recent years. A patent is easily se-
cured, and unfortunately our system
does not ensure entire freedom from
abuses; but in general the monopoly
in inventions has done much for all
of us.

The demand for trade marks is also
increasing rapidly. Now that the
Bonygne bill has passed the House

and seems likely to become a law, we may expect unusual activity in acquiring protection of trade rights. This bill reduces the cost of registering trade marks very materially, and the authorities have already applied for increased facilities for handling the expected rush of business.

Association Dues.

The Manufacturing Perfumers' Association, which met in this city last week, besides attending to many other matters interesting to its members, voted to increase its annual dues to forty dollars. The explanation, that the increased activity of the association created a drain upon the treasury which could be met only by an additional fifteen dollars collected from each member, brings to mind the fact that all associations appear to be very much in the same state, a state of growing duties and increasing expenses.

This is an age of association. We are rapidly reaching a state in which we shall be dependent upon organization for both guidance and initiation in all great questions. We see in this not the least cause for alarm. No individual mind, however great, is superior to many minds.

If we are to leave our destinies in the hands of associations, we must provide the means; if we expect our organizations to fight our battles, we must provide the sinews of war.

The Situation in New York.

The drug trade of the whole country is still interested in the price control situation in this city, which is not to be wondered at, for the future of the entire movement depends in a measure upon the success or failure of the several plans now on trial or about to be tried in New York. Taking all things into consideration, even the most skeptical must admit that the outlook is becoming more and more hopeful. All obstacles have been removed, and only patient, continuous uninterrupted hammering along the lines already laid down is now needed to bring final success.

The prices of contract goods are gradually approaching the required level. Naturally, in a great town where interests are so many and so varied as in New York, progress is slow and unsteady. The attitude of the retail trade toward the direct contract movement is still that of mild incredulity. But the refusal of the jobbers to furnish goods to those who have not signed is gradually driving in the signatures, and some day the druggists may be surprised into an appreciation of greater prosperity.

After the doubting brethren begin to realize that their profits are actu-

ally increased by the movement, they will hasten to give the N. A. R. D. some of the credit which is its due. Then it will be time to attack the many other evils which are waiting for a vigorous organized effort.

The Right to Fix Prices.

Upon the question of right in the matter of fixing the price of proprietary goods, the Chicago decision is admirably clear. It says:

"There is no question under the authorities but that the possessor of trade secrets, parties manufacturing under trade secrets, and patentees, stand upon the same footing. They are both recognized by law as lawful monopolies.

"It is well known that in patented articles and manufactures under trade secrets the patentee has a right to fix the price at which his article that he manufactures shall be sold to the consumer. It is done all over the country and it has been repeatedly recognized by the courts, who have said that the manufacturer under trade secrets stands exactly upon the same footing as the owner of a patented article."

Judge Tuley added a few remarks which may be turned into advice for proprietary manufacturers with very little trouble. "It is to the interest of the manufacturer that his medicines should be widely distributed; should be sold at every drug store if possible, and in order to help his own business he is obliged to make a fixed rate and demand that all these parties should come up and sell at those rates."

The Right to Refuse Goods.

An interesting part of Judge Tuley's decision concerns the right of dealers to sell to whom they choose, and the uselessness of court orders to sell to any particular buyer. He said: "I know of no way in which a court of equity can make one man trade with another. If a party puts himself in a position where he holds himself out to the public as ready to sell to everybody, it may be that an action at law will lie against the merchant for any damages that a party may sustain to whom he refuses to sell, but I see no method of proceeding in equity by which I can make that merchant sell to that individual unless he wants to."

There are so many good, legal reasons for refusing to sell to some people, that the attempt to hold the reluctant dealer upon one of doubtful legality must always be well-nigh impossible. Credit in business is an exceedingly delicate quality; a reputation for unfair methods may damage it beyond repair. Nobody questions the right of every merchant to decide for himself concerning matters of credit.

Swapping Professors.

A project, said to be the fruit of the German Kaiser's enormous intellectual activity, possesses no end of possibilities. It is the interchange of professors between different universities, presumably for the purpose of preventing educational stagnation by giving both teachers and pupils a frequent change in point of view. The experiment is, say the reports, to begin with a shifting of instructors of applied science in Berlin and one of the foremost American universities.

No doubt the idea might be applied to pharmaceutical education both in an interstate and international way with very interesting results. For instance, New York students could listen with great profit to a course of lectures by a professor from Chicago, the home of the N. A. R. D. An instructor from peaceful Philadelphia should find the pharmacy students of St. Petersburg, Russia, very stimulating.

To Test Christian Science.

The followers of the Christian Science delusion have the courage of their convictions. If we may believe reports which we must confess, do not furnish internal evidence of great veracity, they have consented to risk their all by experimental trial, and that in the midst of scoffers and unbelievers.

It seems that the Nebraska Legislature—again, if reports are to be trusted—is considering a bill to prohibit the practice of Christian Science, but final action has been postponed until the adherents of the cult have had an opportunity to demonstrate their curative power. A janitor or door-keeper of the Senate chamber is—or, to be entirely safe, was—exceedingly deaf, and he has been agreed upon as fair material for experiment. Presumably the success or failure of the test will determine the fate of the bill.

From the druggists' point of view the plan is an attractive one and might be applied to a long list of other remedies seeking special favors.

Wood Alcohol Legislation.

It is not unlikely that the danger of poisoning, which is the direct result of improvement in the manufacture and refining of wood alcohol, will be used as a means of securing a modification of the restrictions on the use of grain spirit. Statistics of mortality and injury due to the use of wood alcohol are being circulated widely and discussions of the question appear in the papers in all parts of the country.

The first reason for the tax on grain alcohol is the evil effects of the substance upon the human body. It is because the too free use of alcohol is

condemned that the tax has been imposed, and it is for the same reason that it is so difficult to secure a reduction of the amount. Such being the case, the advocates of cheaper grain alcohol for use in the arts seem to be entirely justified in demanding either that a heavy tax be imposed upon the product of wood distillation or that the burden upon the producers of ethyl alcohol be reduced. Purified wood alcohol is so similar in taste and odor to the ordinary spirit that it offers a constant temptation to the abnormally bibulous, and its physiological action is unquestionably far more treacherous and disastrous. If, therefore, it is expedient to tax the former, a restriction on the latter is even more desirable.

Very little, if any, doubt about the poisonous quality of wood alcohol remains. According to a recent estimate, the victims of the compound number more than 100 a year, and the number is growing. While the wood alcohol of commerce was the evil-smelling, greenish liquid known as wood spirit, or wood naphtha, the dangers of drinking it, either inadvertently or deliberately, were small; but the more recent product is free from offensive properties and it resembles grain alcohol so closely that it can be employed as a substitute in cheap whiskey and other alcoholic beverages.

Many plans for reducing the risk from this source have been proposed. One suggests a law to label wood alcohol as a poison and to place upon the container a warning that the liquid, when taken internally, is likely to cause blindness. Another proposes to prohibit absolutely the manufacture and sale of "deodorized" or "purified" wood alcohol; and still another that, as in Germany and Great Britain, an untaxed ethyl alcohol be allowed for use in the arts or that ethyl alcohol be rendered undrinkable by the addition of offensive substances.

A bill to tax wood alcohol was introduced into the New York Assembly at Albany last week. This is apparently not an attempt to place this product in the same category as grain spirit, for the tax is *ad valorem* and the collections are placed in the hands of the commissioner of health. It is apparently purely a health measure.

Radium at Work.

Radium, from being the bad boy in the family of elements, bids fair to develop into the most laborious and useful member of the group. It has now become a regular article of commerce and it is therefore necessary to curb one's freedom when speaking of its merits and idiosyncrasies, but we may safely say that, contrary to early predictions, radium has not wrecked or even seriously damaged any of

those hypotheses which men of science had built up with so much care and so much labor. It has rather aided in the construction of other useful working theories and as a stimulant for the speculative faculties it has never been equaled.

Radium has probably occupied its proper place in medicines, and it, therefore, comes within the province of the pharmacist; but the druggist may have even a nearer interest in the mysterious substance than that of daily business. Professor Rutherford of McGill University suggests that we may be indebted to the energetic element for light, heat and life itself. He asks if it may be possible that the mysterious source of heat which keeps the sun warm and this earth endurable is an

CHARLES H. AVERY
President Chicago R. D. A.

immense although widely distributed supply of radium?

Apart from the gratitude which we should feel for sunshine and bodily comfort, we shall all feel better if the controversy about the age of the earth which has raged for years between the physicists and the geologists may be settled by this chemical means.

Mind and Medicine.

One of the differences which distinguish the pharmacist's calling from that of the physician is that the former deals with concrete things in definite quantities while the latter is confronted with the problem of adjusting a definite treatment to a very indefinite set of symptoms modified by an extremely uncertain psychic element. So long as the human mind unaided by drugs is capable of creating and obliterating symptoms, so long will medicine fail to be an exact science.

Dr. Wiley has been forced to take this influence of mind over bodily functions into account in his work with the famous "poison squad" at Washington. In past experiments the young men have known the name and properties of the drug under experiment, and in several cases imagination proved to be more powerful than the medicine. They actually suffered from symptoms of poisoning long before they had taken enough of any drug to bring about such a condition. Now the subject of the experiment knows nothing of the nature of the substance mixed with his food until the test is concluded, and in consequence he is uncertain as to which set of symptoms he ought to feel, with the supposition that as a result he will feel none but the correct one.

Perhaps this quality of the human mind and body has something to do with the doctor's secrecy as to his remedies. Patients are encouraged to feel only such symptoms as show that they are getting better. Unfortunately this does not cure them all.

Are the Mighty Vanished?

We are all tired of this talk about evil days and degenerate times, or at least we ought to be. This year of 1905 is as fine a period as the world has ever seen. The pursuit of happiness was never more successful, and never have the honest, industrious and earnest enjoyed better opportunities for attaining their hearts' desire.

But, say the croakers, where are the great men? The giants have all departed. There was a time when every walk of life had its leaders, observed and respected of all men. Where is the Procter, the Maisch, or Rice of the present time?

The answer is simple. There are fewer conspicuous figures, because the general level is higher than formerly. Men are as able and laborious and self-sacrificing as of old; but it is more difficult to surpass because competition for greatness is keener than it used to be.

The drug business is no exception to the general rule. We defy any one to name a period in the world's history when the level of honor and intelligence was higher or when the public obtained better or purer drugs than to-day. Our great men have not all departed. It remains for us to find them and to honor them.

Now, if somebody would only choke off those wicked persons who make unreliable clinical thermometers, how happy some people would be.

The "old theory that any criticism which is not of the approved pattern is a sign of malevolence" still seems to be in force in some quarters.

☞ ☞ C. P. ☞ ☞
EMANATIONS

A LIGHT HEART AND A MERRY
EYE.

The day was bitterly cold and the outlook for trade was bad. The druggist scowled at the dark sky and the scurrying snow.

"A brisk day," observed the C. P.

"H—m! So brisk that sales won't amount to two dollars."

"But you'll get it all back when the weather moderates."

"That's not my experience," said the man behind the counter. "Trade lost is trade lost. Making it up the next day is all nonsense."

The sage smoked several minutes in silence. His friend knew that a sermon of some kind was brewing, but he felt too listless to ward it off.

"If I were a customer and were to see your face through the window I would go on to the next place," the old gentleman observed.

"What do you mean?"

"I mean that it pays to be cheerful. People do not like to trade with a thunder cloud."

"I'd rather do business with a thunderbolt than with a blithering idiot," the druggist snorted.

The sage perceived that his audience was not in a receptive mood. "Do you remember old man Brown and young Sharp?" he inquired.

The druggist nodded. "The old man was too mean to live, and Sharp was a hustler," he said. "A hustler will get along no matter what his disposition happens to be. I saw Sharp the other day; he isn't so all-fired cheerful now."

"No, I dare say," the old gentleman replied. "He is going in over his depth, and no man can do that without rubbing some of the sunshine off. But, look here! You know what I mean."

"Of course I know what you mean. You've got to be civil, but you've got to use sense about it. You can't say, 'Ho, ho, let me be cheerful' and make a fool of yourself. I once had a clerk who was loaded up with that idea of yours. He would waltz up to a customer with a smirk on him like a ribbon counter dude. Bah! I wouldn't have him around."

The sage felt that he was not making much headway. "It is largely a matter of tact," he mused. "Nevertheless, if I were a little girl and you growled at me like that I wouldn't be apt to ask you to show me your prettiest note paper. I would quietly walk away and keep my pennies in my glove."

"You aren't a little girl," retorted the proprietor of the establishment, "and if I've ever frightened away a customer, I'd like to know it. I know how to run my business, and every man has a right to feel gloomy once in a while. The drug business is enough to drive anybody out of sorts—mean, pesky, little annoyances, small profits, not enough trade to keep one decently at it."

The C. P. saw an opening and lost no time taking the advantage offered. "That's

what I mean," he said. "You've got to believe in things. There are plenty of men who find pharmacy worth while. All the successful druggists believe in it."

The druggist did not reply.

"And as for finding something to do," resumed the old gentleman. "That depends upon how you look at it. There's McDonald, of Brooklyn, if he had your fine location—"

"Well, what then?"

The sage thought best under the circumstances not to expatiate upon the wonderful things Mr. McDonald would do in a fine location. "Optimism is a paying asset in business," he said. "A man who doesn't believe thoroughly in what he is doing had better not do it. And to believe in himself he must believe life is worth while and in what his associates are doing."

"Be a promoter," suggested the druggist. "There's millions in it to him, no matter what it is. Your true optimist is the promoter; he believes in all of his thousands of schemes, in spite of what everybody else thinks and in spite of his thousand and one failures."

"I see no need of going to that extreme," objected the sage. "Why can't you strike an average? All the men who do things in this world believe in things, their fellowmen, the country and its institutions, that truth will prevail, that honesty and ability will find a just reward, and all that."

"Which means," said the druggist smiling at last, "that they walk around with their eyes closed and that they think very little and never to the bottom of things."

"It isn't true!" cried the sage. "Take it back!"

The druggist's face showed that he had already denied his heresy in his heart. "Take back what?" he said.

"That the world is not good to live in, isn't growing better."

"Including the drug business?"

"Including the drug business."

"All right! I'll take it back."

"The average of intelligence is higher, the average of honesty and morals is higher and men are better than they were before, and are growing better all the time," the C. P. said, with hand uplifted.

"The sun is coming out," the druggist remarked, his face to the window. "The wind has gone down, and there is old Dr. Fitzgerald. I may have some trade after all."

Poisoning by Phenacetine.

A case of poisoning, apparently the result of the habitual use of phenacetine, is reported from Germany (Dr. Max Hirschfeld, Deutsch. Med. Wochschr.). A young woman who had taken frequent doses of the synthetic as a remedy for headache, complained of an eruption of the skin on the lower limbs between the ankle and knee. The eruption appeared in the form of dark spots and blotches, extravasation of blood appearing on the more severely affected areas. In the course of a few weeks the blotches were followed by superficial ulcers. All eruptions and ulcers disappeared when the doses of phenacetine were discontinued, but returned when the patient surreptitiously took 1.50 grams of the compound.

FORMULAS FOR CORYZA.

As to local remedies to cut short an attack of coryza, the following is recommended in the form of an inhalation:

(1.)

Stronger ammonia water . . . 1 dram
Rectified spirit 2 drams
Carbolic acid 1 dram
Water 2 drams
A few drops of the mixture to be dropped on absorbent cotton and the vapor inhaled.

(2.)

Oil of pine 2 drams
Camphor 40 grains
Stronger ammonia water . . . 1 dram
Rectified spirit 1 ounce
To be used in the form of an inhalation.
Anodyne Spray (Shurley).

Menthol 1 grain
Alcohol 5 minims
Precipitated calcium phosphate 5 grains
Water, enough to make . . . 2 ounces
Sedative and Astringent Spray.
Cocaine 5 grains
Alum 10 grains
Menthol water 1 ounce
To be used locally as a spray.

Oil Spray.

Camphor 1 grain
Menthol 3 grains
Carbolic acid 2 minims
Liquid alboline 1 ounce

As an inhalant the ordinary compound tincture of benzoin is very efficient; one teaspoonful is floated on a pint of hot water and the vapors inhaled. Creosote may be used in the same manner, using from ten to fifteen drops to a pint of hot water.

Spray Solution.

Menthol 8 grains
Camphor 5 grains
Liquid petrolatum 1 ounce

Mix. To be used in the atomizer as a spray, after thoroughly washing the affected areas. As a vapor to be inhaled, the following is recommended:

Menthol 1½ drams
Eucalyptol 1 dram
Liquid alboline 1 ounce

A few drops to be boaced on a small amount of water, placed over a spirit lamp and inhaled.—Jour. Am. Med. Assoc.

A WORD ON OUR NEW MAKE-UP.

Seit Anfang Dezember präsentirt sich unsere Kollegin, The Pharmaceutical Era, in einem neuen gefälligen Gewande, Durchwegs mit neuer Schrift versehen und durch ein geschicktes, völlig verändertes Arrangement in der Einteilung des Lesestoffes, wird die beliebte Fachzeitschrift gewiss nicht verfehlen, auf ihre vielen Leser den günstigsten Eindruck hervorzurufen.—Deutsch Amer. Apoth. Zeitung, N. Y.

Translation.

[Since the beginning of December, our colleague, The Pharmaceutical Era, has appeared in a becoming new dress. Provided throughout with new type and with a complete change in the arrangement of the reading matter, this esteemed trade journal cannot fail to produce the most favorable impression upon its many readers.]

OUR LETTER BOX

BULK PERFUME TRADE.

Worcester, Mass., Feb. 2, 1905.

Editor The Pharmaceutical Era:

Regarding the article "Bulk Perfume Trade" which appeared in your issue of January 26, (page 121) we would like to take a few exceptions, as no doubt the most of the matter was gleaned from the American perfumers, for we know that more bulk perfume is sold to-day than ever and not by American perfumers, but by the French, for in our year the increase of duty on perfumery amounted to upwards of \$119,000. This decidedly shows a marked preference for French perfumes, and that without one cent of advertising. Why is this? The reasons are many, among them being that French perfumes are allowed to age from one to two years before being bottled, which naturally makes the products superior, a fact the public appreciates. Another reason is that many druggists now make their own bulk perfumes by a simple process of "concentrated flower oils," which require but the addition of cologne spirit and water and ageing; the concern of whom we buy our oils told us that in 1904 they sold about 15,000 ounces of these oils, each ounce making one pint of extract. This represents a total of about 15,000 pints of bulk extract that the perfumer did not sell. These two facts alone taken together, show where the bulk perfume trade has gone to.

As to our American perfumer, he has not advanced in making perfumes; first, he allows his goods for the most part to age but from four to six weeks up to four months before shipping; result, product no good. Next, he pays most of his attention to "specials" at very high prices, because some of the perfumers think that the success of the French goods is because of the high prices asked, and also that the perfumer wants to have something bearing his own special name; it is a fact, however, that these specials are mostly old odors, dished up under names and new prices ranging from \$9 up to \$14 a pint and higher. The druggist has often in this way been duped, but he finally stops to think, and says, "If I must pay such prices, I'll buy the French goods, and then I will know that I have the best."

We admit that department stores now control the perfume business, and only because of their display and push. What the druggist *must* do is to meet their cut prices on the goods that perfumers sell both to himself and department stores, but his profits can be realized on the perfumes he makes himself under his own coined names. Druggists will remember that for years they sold *all* of the bulk perfumes for the perfumer without any advertising except the druggist's own recommendation, and for which he simply realized his legitimate profit. Why can he not to-day sell more of his own make than ever with a little attention and push? He shows, tries to sell, and *does* sell his own proprietary preparations, which proves what he *can* do if he tries. We feel that

the perfume business belongs to the druggist, and that every honest effort must be made to retain it or regain it, as the case may be. Your very truly,

HENRY L. GREEN.

MR. TODD'S OPINION.

Ithaca, N. Y., Jan. 28, 1905.

Editor The Pharmaceutical Era:

I am of the opinion that the drug trade is in a transitory state, or a state of metamorphosis, so to speak. It is to be hoped, however, that when the business moth enters the butterfly state, our excitement will not only be far more pleasant,

JUDSON B. TODD,
Member of N. Y. Board of Pharmacy.

but of greater longevity than the latter. Of the N. A. R. D. proposition, price agreements and legislation, I am not sufficiently posted to talk. Regarding the substitution question, I may say that, in my opinion, based upon the findings of our up-State Pharmacy Board inspectors, the rank and file of our pharmacists are honest, upright men who do not practice substitution. I have always questioned the advisability of any manufacturer or concern, through the press, whipping the many for the faults of the few. It is a great temptation for any man to think that so long as he is sure to get the name, he might as well have the game.

There always has been, and I fear will be unscrupulous pharmacists, but I have good evidence that they are not the only ones not free from guilt. I cannot, however, endorse the idea that it is best to frighten an already suspicious public by big scare heads in the daily press into thinking that our business is in the hands of crooks.

Prosecution of guilty men and dignified appeals to the honor of all, it seems to me, is along "safe and sane" lines.

The reason for one line of substitution lies in Uncle Sam's error in protecting, to such an unreasonable extent, goods that are sold in adjoining countries for a much lower figure. The way to make some folks

honest is to remove temptation and that suggests continuous work at Washington. Perhaps if the N. A. R. D. could accomplish this it might get the good will of more pharmacists than any other means it could employ. As to the general trend of our business, I cannot but believe that it is both encouraging and upward.

JUNSON B. TODD.

PRESCRIPTION PRICES.

(Chicago, Jan. 30, 1905.)

Editor The Pharmaceutical Era:

Your very excellent journal, issue January 26, 1905, lies before me. Page 100, "Two and Two are Five," is good, and is a favorite expression with me. Your druggist asks how he can charge more for his prescriptions than formerly, and you reply that "that is his part of the scheme," correctly. My answer to him is not to question how, but to "Do it now!" I have been doing it for several years and have not yet been caught at it by the public. I did it from necessity, not from choice. I had two alternatives to choose from: much greater profits and the daring to ask them, or certain bankruptcy. I chose the former and won; I fill more prescriptions now than ever in my career, and, at a minimum average of 200 per cent. profit. My gross receipts for the year 1904-5 were the greatest I have ever had.

Your druggist says "he is no hypnotist." To succeed he must be. Success is only a question of nerve.

We now come to "Prescription Prices" (page 123). The symposium, beginning, "Four ounce mixture," and ending "a bum business," was taken from my file of original prescriptions on December 29, 1904. Retailers were not included. A memorandum was made after closing the store on the same day. Now, taking the list as printed in The Era, and beginning with the 4 ounce powders (my own), down to 20 capsules (77,366), etc., the quantities should read "mixtures" and not ounce powders; 8 ounce—\$.85 should read 8 ounce mixture; 4 ounce—.50 and 4 ounce—.65 should also read "mixtures." I wish you would kindly call your readers' attention to this correction in the next issue. Twenty-two years ago, when I had been instructed to charge 100 per cent. profit on drug items (I think it was the year antipyrin came out) I filled a prescription calling for one dram of antipyrin to be made into six powders. At that time antipyrin cost \$1.40 per ounce. I figured a dram at 20 cents, plus 5 cents for the box, or 25 cents in all, and charged the customer 50 cents, thus making a profit of 25 cents, or 100 per cent. The gentleman in whose employ I was, upbraided me severely for such careless pricing, threatening to discharge me for using such abominable judgment. He said: "Maybe you can make money by such pricing, but I who am old enough to be your grandfather have not yet learned that; you must at least get 75 cents for a prescription that costs you 25 cents." Of course, I got 65 cents for one dram of phenacetine whether there are three powders or fifteen powders. I figure that one dram of phenacetine costs 15 cents, and the box, label and powder papers cost 5 cents, or 20 cents in all. My profit is therefore 45 cents, which, at least, I think I am entitled to. Now, did I make 45 cents?

Let us see. It certainly in no instance costs less than 25 per cent. of the total day's sales to conduct a retail drug business. A \$20 per day store will surely have \$5 expenses; what is true of the whole is also true of any part of the same. Five dollars is 25 per cent. of \$25. Twenty-five per cent. of 65 cents is 16½ cents; cost of phenacetin, 15 cents; box, label, etc., 5 cents; cost of doing business, clerk hire, rent, light, heat, etc., 16½ cents; or 36½, which subtracted from the selling price (65—36½= 28¾) leaves a net profit of 28 cents. Does your Mr. Druggist think this extravagant? If he fills twenty such prescriptions per day, he earns on them \$5.60. Is it too much? And, yet, there is not a druggist in Chicago or New York employing one registered clerk whose daily expenses are not as great. Hegeman Corporation stores operate under an expense of 25 per cent., and I don't believe it lets loose a trifle over one cent when selling one dram of phenacetin, box inclusive, for 25 cents.

In your interview with New York druggists, you say that they lack the courage to get what they are entitled to. Let them but try, and they will very soon learn that the much feared public is very submissive, weak and truly ignorant of drug prices. By all means let them get together, organize, affiliate with the greatest of all price boosters the power that can—the one that makes good—the National Association of Retail Druggists.

Very truly yours,

FRANK E. FALKENBERG.

FRUIT SYRUPS IN PENNSYLVANIA.

New York, Feb. 2, 1905.

Editor The Pharmaceutical Era:

I have just concluded reading the letters to you from the J. Hufferford Smith Co., and from Mr. Pritchard, on the proposed Pennsylvania law on preservatives in soda water syrups (last week's Era, page 134—Ed.). My sympathies are with your correspondents in their anxiety to get relief from the oppressive rulings of Commissioner Warren, but I fear they are trying to escape one evil by jumping into another. They make a mistake when they try to legislate into existence a monopoly. It is unjust to other interests and it enables the manufacturers of sodium benzoate to raise the price upon them as soon as the bill becomes a law. They should mention no preservative whatever. Where their bill reads, "and containing in the original package or concentrated form, more than one-fourth of one per cent. of sodium benzoate." It would be immeasurably safer and better to have it read, "and containing in the original package or concentrated form, more than one-fourth of one per cent. of any substance, the medicinal dose of which is given by standard works on therapeutics as from 5 to 20 grains, or any per cent. of any substance the maximum named dose, in such works, of which is less than 10 grains."

With a law reading in this way room is left for new discoveries to be utilized by the pharmacists of Pennsylvania. Such a law would be absolutely impartial and absolutely safe. The pushers of such a law could not lay themselves liable to be accused of being in the employ of some one firm. I sincerely hope that Mr.

Pritchard will get the lawyer of the Western Pennsylvania Retail Druggists' Association, and the Hon. James M. Ester to consider the amendment I here offer to their bill. I believe that, after due consideration, they will agree with me that a change of this kind would be an improvement to the bill. Why should the great State of Pennsylvania make itself an advertising medium for any particular firm? Why should the pharmacists of Pennsylvania be prevented from using better preservatives that future discoveries in science may bring to their doors?

In reply to your editorial note, permit me to call your attention to the fact that the cases you mention of pharmacists who use neither preservatives nor artificial coloring matter are exceptional. If all druggists can be compelled, and all dealers in soda water that are not druggists can be compelled, without failure, to permit of no deterioration or decomposition in the goods they serve the public, then there is no necessity for the use of preservatives. If the conditions of the State are such that dealers will not or cannot serve un-preserved goods, then there is a necessity for preservatives. One has not to study the subject long before learning that without preservatives great financial loss and great injury to public health is certain. Pasteurizing of fruit juices gives an almost wholly artificial product. It is a delusion to think that a cooked fruit juice has any such chemical composition as a pure fruit juice. Some of the products of the cooking may be as dangerous as preservatives. No one knows, for the products of the decomposition are unknown.

R. G. EGLES.

MR. SNOW ON SUBSTITUTION.

Topeka, Kans., Jan. 29, 1905.

Editor The Pharmaceutical Era:

The condition of the drug trade in this part of the country is very flattering, and while we may not have done as much business during the summer months of 1904 as we have done in previous years, yet since the first of November and during the Holidays we have gone far ahead of what we expected. Concerning the price control contracts and serial numbering plans, we are heartily in favor of anything tending that way. It strikes the writer that the plan of legislation as mapped out, if it can be carried out, will accomplish the end looked for. I would most earnestly urge upon my fellow retail druggists to exert themselves in getting their senators to support the Mann patent bill and to do it at once. In recent cases to which my attention has been called, especially in cut rate towns, I have formed the opinion that the wrong of substitution is on the increase. Very truly yours,

F. A. SNOW.

NATIONAL BOARDS OF PHARMACY.

Washington, Jan. 31, 1905.

Editor The Pharmaceutical Era:

I am authorized by the executive committee of the National Association of Boards of Pharmacy to extend to you its unanimous vote of thanks for the great assistance you rendered this association by furnishing us with extra copies of our constitution and by-laws.

This association now has a working membership of thirteen, comprising the following States and Territories: Ohio, South Dakota, District of Columbia, Maryland, Louisiana, Alabama, Florida, Massachusetts, Indiana, Arizona, Oregon, Michigan and Oklahoma. The next step is indicated in article 11 of the by-laws: Upon receipt of an application for registration in another State, the secretary of the board shall request the secretary of such examining board to furnish a certified copy of the applicant's examination questions and ratings; provided, that in all cases the applicant shall have received a rating of five per cent. higher than the minimum rate required by the board before which he was examined; and such questions must be satisfactory to the board from which he seeks registration. Faithfully yours,

MURRAY GALT MOTTER,
Chairman.

The Remedy for Quackery.

We must reform our ways. We must cultivate the highest ethical, and that means moral, standard, so that we shall be looked upon as the firm refuge in the hurricane of greedy selfishness that is overwhelming society since the era of the Captain of Industry began. Be pure and clean; think, feel, act and speak only from the most disinterested motives; and the time will not be long when the world will recognize your worth and trust you as you deserve. Nothing is so urgently needed to-day as men who are worthy of confidence.

We must improve our methods of treatment. We must use better remedies, and apply them more intelligently. We must study our cases better, must learn to recognize the pathologic conditions, rather than to name the diseases. We must learn to know our remedies, and to see the precise indications for the use of precise remedial agents; and to recognize the effect of these so that we use neither too little nor too much, but just enough to accomplish our definite, well-considered purposes. Guesswork and chance must be eliminated from our practice. We must be prepared to use that most impressive branch of our art, prognosis, so as to teach our patients our mastery of the case in a way no quack can possibly do.

These are the things that make for better doctors, and we cannot afford to be turned aside from anything that tends in that direction, by the sneers of self-interest or arguments addressed to prejudices, that do not touch the merits of the question. And if there be any other or better methods of opposing quackery the writer knows them not.—Dr. W. F. Waugh, Alkaloidal Clinic.

Pumice for Ash Determination.

Pumice stone is recommended by Dyck as a valuable aid in ash determinations of organic substances which become carbonized with difficulty (Jour de Pharm. et Chim.). The material to be tested is mixed with an equal quantity of finely powdered pumice stone and heated over a moderately strong flame. Incineration follows rapidly. If further analysis of the ash is required, extraction may be accomplished with the usual solvent and the pumice stone remains behind.

PATENT OFFICE PAYS.

Annual Report Shows Progress in Many Directions.

The chief impressions gained from a perusal of the annual report for 1904 of the Patent Office, which has recently been issued, are that the work of the Office is constantly increasing in size and importance, and that it is one of the few national institutions paying financially.

The gross receipts of the Patent Office in 1904 were \$1,657,326.53 and the expenditures \$1,476,009.38, leaving a surplus for the year of \$181,326.15. The treasury of the United States is carrying the large balance of \$5,863,866.76 to the credit of the Patent Office.

Details of the work completed in 1904 show 52,143 applications received for new patents and reissues, 2,524 for the registration of trade-marks, 1,335 for the registration of labels, and 397 for prints. Investigation and action on these resulted in the issuing of 30,824 patents and the reissuing of 110. Trade-marks registered numbered 2,158, labels, 1,114, and prints, 297. During the year 20,429 patents expired.

Apparently the citizens of Connecticut are the most inventive, nor one patent was granted in every 1,097 persons of that State. New York was eighth, according to this method of comparison, one patent being granted in every 1,614 inhabitants. But in another way New York stood first among the States, for to her citizens in the aggregate the most patents were awarded, numbering 4,502. Many subjects of foreign countries successfully applied for patents, the Germans being most numerous. To them were granted 919 patents, while the English came next with 830.

Since 1836, when the present system of letters patent was inaugurated, there have been but eight years when the Patent Office did not show a surplus. The largest surplus was rolled up in 1883 and amounted to \$473,005.14. The lowest profit made by the Office in recent years was in 1898, when only \$1,538.28 was laid by. This was probably because of the Spanish war and the general centering of all interests in that event.

A glance at some of the figures for the early years is interesting. In 1837, the number of patents issued was 435, bringing in \$29,289.08 to the Patent Office. In the same year \$33,506.98 were expended. Needless to say, there was a deficit. But it was made up the next year, which brought a surplus of \$4,784.62, receipts being \$42,123.54 and expenditures \$37,338.92. In 1838 patents issued numbered 520. Compare these figures with those for 1904. The growth is wonderful.

One of the best achievements of the Patent Office during the past year, from a managerial standpoint, was the elimination of all loss or claims of loss of funds transmitted by applicants to the Office by mail. At one time this item was a regular annual feature. Better details of systems used have been gradually lessening this loss since 1901, and 1904 saw its extinction.

Loss by what were termed "office errors" has also been done away with. An interesting statement is: "Careful exploration work among the printed patents in this

Office and development of hitherto lost resources of printed patents have resulted in a saving from the amounts which would otherwise have been required for the purpose of reproducing exhausted copies, estimated by the chief clerk at \$39,030.40.

"During the summer of 1904 eighty-three iron model-cases and about twenty-five thousand models were removed from the galleries of the Patent Office to the second floor of the Union building. This leaves less than one hundred models in the Patent Office building, and they will be removed to the Union building very shortly. The space formerly occupied by these cases is being used for the storage of printed copies of patents, patented files, and other official records."

Commissioner of Patents Allen concludes his report with an appeal for the provision of more space for the work of the Office. "The trade-mark measure now before Congress will, if it becomes a law, undoubtedly result in an increase in registration of trade-marks in this Office, and will require an increase of facilities both in the force employed and in space and equipment required for its transaction, due to the considerable reduction of trade-mark fees provided by this measure."

10 per cent solution of potassium iodide, and 4 c.c. of dilute sulphuric acid (8 per cent), and the resulting coloration matched by means of a standard solution of iodine. J. Pharm. Chim.-Jour. Soc. Chem. Ind.

Chemical Industry in America.

The most recent statistics on the growth of chemical industry in the United States are those embodied in a paper read by Prof. C. E. Murore before the International Congress of Arts and Sciences, which met in St. Louis during the World's Fair. For purposes of comparison, the following figures are taken: In 1890 the number of establishments was 58,195 and of employes 710,485. The total wages aggregated \$311,369,495. In 1900 the number of establishments had increased to 84,172 and of employes to 1,033,543, the total wages being \$469,848,022. The cost of materials used in 1890 was \$2,177,433,777, and the value of the products, \$3,165,768,188; in 1900 the materials used were valued at \$3,392,974,000 and the products at \$4,962,715,785.

Zirconium Tetraiodide.

Zirconium tetraiodide, ZrI₄, has been obtained by Staebler and Denk (Berichte) by heating metallic zirconium to about 340° C. in a stream of hydriodic acid and removing free iodine from the salt by treatment with benzol. Zirconium iodide is a reddish brown powder which shows a yellow crystalline structure under the microscope. It dissolves in water and acids with violent reaction and appears to be soluble in absolute ether. By the action of water on the salt zirconium oxyiodide, ZrO₂·8H₂O, is formed, a compound which may also be obtained by dissolving hydrated zirconium oxide in strong hydriodic acid.

Matrin.

Matrin, a crystalline principle, C₁₅H₂₅N₃O, has been isolated from the root of *Sophora angustifolia* by Nagai and Ishizaka (Deutsch. Med. Woch.). This root is used in China in the treatment of typhoid. Matrin is toxic in its action, the lethal dose for rabbits being 0.3 gram for 1 kilo of body weight. Some years ago Wood claimed to have obtained from the poisonous seeds of the Texas tree *Sophora secundiflora*, a liquid alkaloid (sophorine), which was also thought to exist in other species of the genus. Plüggel later stated that this alkaloid was identical with cytisine.

Enusol.

Enusol, a salicyl-arsenate of mercury, is obtained by the action of one molecule of methylarsenic acid on one molecule of basic salicylate of mercury. It does not give the reactions for the arsenates, nor those of mercury, and is not precipitated by ammonium sulphhydrate nor by potassium iodide. One centigram of the salt, a white, amorphous body, corresponds to one centigram of tri-iodide of mercury. It is slightly soluble in water, 4 p. in 100 (Nouv. Rem.).

Acid-Proof Finish.

An acid-proof solution for laboratory table tops may be made as follows (Jour.

THEORY AND PRACTICE

Paste for Eczema.

Various "pastes" are prescribed in the treatment of eczema, and the pharmacist is frequently called upon to prepare them, the names of the authors of the formulas only being given. Here are three, recommended by a specialist in a recent issue of one of our medical exchanges:

Lassar's Paste.

Salicylic acid10	grains
Zinc oxide	2 drams
Starch	2 drams
Vaseline	½ ounce

Ihle's Paste.

Resorcin	10 grains
Zinc oxide	2 drams
Starch	2 drams
Vaseline	2 drams
Lanolin	2 drams

Morris's Paste.

Zinc oxide	1 dram
Kaolin	3 drams
Vaseline	1 ounce

Valuation of Hydrogen Peroxide.

Potassium iodide reacts with hydrogen peroxide, forming potassium hydroxide and iodine, which in turn react upon each other with the formation of iodate and other iodine derivatives. This secondary reaction can be entirely prevented by the addition of sulphuric acid, so that the original reaction can be represented by the equation:

2KI + H₂O₂ + H₂SO₄ = K₂SO₄ + 2I₂O + I₂, according to which 1 gram of iodine corresponds to 43.75 c.c. of oxygen, or 1 c.c. of oxygen to 0.022857 gram of iodine. In the colorimetric method, based on this reaction, 20 c.c. of the hydrogen peroxide solution previously diluted to a tenth of its strength are treated with 12 c.c. of a

Applied Micros.) : Solution I.—Iron sulphate, 4 parts; copper sulphate, 4 parts; potassium permanganate, 8 parts; water to 100 parts. Solution II.—Aniline, 12 parts; hydrochloric acid, 18 parts, water to 100 parts. Apply solution I first, when hot. When it has dried, remove the excess by thorough rubbing, and then apply solution II. When the wood is dry, apply a thin coat of linseed oil thinned with turpentine.

Lupeol.

Lupeol in a crystalline condition has been obtained from the bark of *Touckeria Griffithiana* by Sack and Tollens (Berichte, through Ch. and Dr.). Lupeol melts at 210° (213° corrected) and has the formula $C_{26}H_{42}O$. A crystalline benzoate of lupeol melting at 262° was prepared and a bromide, an acetate and a phenylmethane were found to agree with the characters of lupeol derivatives. Glucose was also obtained from the bark and in the mother liquors of the crystallization of the lupeol.

Fetron.

Under this name Liebreich designates a new ointment base composed of 97 parts of yellow vaseline and 3 parts of stearic acid anilide. The product is yellowish and odorless, does not become rancid, and at a temperature of 68° is capable of absorbing large quantities of water. This property is further enhanced by the addition of anhydrous lanoline. Fetron does not provoke irritation of the skin, but is not so readily absorbed as lanoline. It may be employed with various medicaments used in dermo-therapy (Nouv. Rem.).

Vioform.

Vioform or iodochlor-oxyquinoline is obtained by treating an alkaline solution of chloroxyquinoline with an equal quantity of a solution of iodopotassium iodide, or by adding to a mixture of an alkaline solution of chloroxyquinoline and potassium iodide some body which will liberate iodine. It is recommended as an effective antiseptic more powerful than iodoform, and to be quite free from irritating action on the skin (Nouv. Rem.).

Bismuth Agaricinate

Bismuth agaricinate, employed in the night sweats of phthisis, intestinal catarrh, etc., is a white, tasteless powder, insoluble in water, and has the formula $Bi_2(C_{16}H_{18}O_5)_3$. The dose is 5 to 15 grains.

Duran.

Duran, found in the market as a white powder and in the form of tablets, is a remedy intended for use in rickets (Pharm. Ztg.). It is stated to be a preparation containing calcium carbonate and magnesium phosphate with albumin.

Spike lavender oil is very scarce. Only a very small quantity distilled and in southern France Adulteration is flourishing. Soap manufacturers will find it to their interest to experiment by substituting something else.

Although new crop orange oil has arrived, prices are advancing and are higher than it was expected at the opening of the season.

EFFECTS OF WOOD ALCOHOL.*

BY HAYDN M. SIMMONS, PH.G., M.D.

The toxic effects of wood alcohol have been brought recently to our notice by several able articles on this subject, especially those of Dr. Buller and Dr. Wood. Many individual cases have been brought to light by the medical and daily press.

Wood alcohol (or more properly speaking, methyl alcohol) is known by a great variety of names, which has often led to confusion and even mistakes, many of the latter being followed by serious results. The following are some of the synonyms by which wood alcohol is known and under which the same product may oftentimes be found in commerce : Under the head of "spirits," as Columbian, colonial, cologne, wood or green wood, eagle, lion, methylated, pyroxylic, and pyroigneous; under "alcohol," as wood, methyl, burning, or "for external use;" also, as wood naphtha.

Wood alcohol, as it was formerly manufactured (with but few exceptions) was a dark yellow or brownish liquid, having an unpleasant or rank odor and a nauseous and bitter taste. This product was, by virtue of its odor and taste, excluded from use in any preparations intended for internal use, and thus few cases of poisoning resulted. But this is no longer the case, as vast improvements in its manufacture, with the resulting elegant product, nearly odorless, tasteless and colorless, has given a product not very different in appearance, etc., from ethyl alcohol, for which it has been much substituted. As a result many unsuspecting persons have been duped and many injured.

Wood alcohol is used in the arts to a great extent, and has displaced ethyl alcohol as a solvent for resins, varnishes and oils, and in the manufacture of paints, metal polish, and cleaning fluids. It has a large use as a fuel in alcohol lamps, cigarlighters, etc.

Adulterations with wood alcohol have been practiced on a large scale, both in those preparations which are used internally as well as those used externally. It has been found in many samples of witch-hazel, bay rum, liniments, tincture of iodine, rub-downs, and the like. All manufacturers of wood alcohol claim that it is harmless when used externally, but Brundage and Wood both report cases of eye trouble resulting from its external application.

The real danger comes from using wood alcohol internally. It has been frequently found in essences of ginger and lemon, extract of vanilla, paregoric, spirits of camphor, whiskey, brandy, all wines, high-balls, punches, bitters, and several popular patent medicines. The New Jersey Board of Health found wood alcohol in four out of eight samples of paregoric. Dr. Warren, of the Pennsylvania Food Commission, found that in one thousand samples of cheap whiskey ninety-five per cent. of them contained wood alcohol, and some as high as seventy-five per cent. The New York Health Board examined two hundred and fifteen samples of essence of ginger from various parts of the State and of these many contained varying amounts

*Read before the Alumni Association of the College of Pharmacy, University of California.

of wood alcohol. Mr. Patch examined two hundred and twenty-five samples of spirits of camphor and found that forty of these contained varying amounts of wood alcohol. The same was true of essence of lemon.

The appetite for alcohol among persons cut off from civilization and amusements has often been noted. This has led to much trouble in army posts, reservations, etc., where the regulations limit the supply of alcoholic liquor. These conditions often lead to many complications hard to deal with. One army surgeon reports three cases of men who, after being on a spree in a near-by town, sobered up at their quarters next morning on wood alcohol, nothing else being obtainable. Cases are also reported of Indians drinking red ink, believing it contained alcohol.

SYMPTOMS OF POISONING.

These may be best described under mild cases, exhibiting symptoms of intoxication, with nausea, vertigo, vomiting, and disturbed vision, and severe cases, having not only the above symptoms, but in addition muscular weakness, severe gastro-intestinal disturbance, partial or complete blindness and delirium. Fatal cases result in coma and death, the latter being due to cardiac and respiratory failure. When collapse or coma occur in any case, recovery is unusual. The blindness may come on within three hours, or be delayed as long as, in one case, seventeen days. In most cases it occurs in the first twenty-four or forty-eight hours. In the hopeful cases the eyesight returns in two or three days. The toxic symptoms in nearly all cases are developed in two or four hours, but a few have been as long as twenty-four hours in developing. Dr. Hunt states that he has proved by experiment and demonstrated that wood alcohol is not only more slowly absorbed, but also that it is more slowly eliminated.

Dogs have been given daily small doses of wood alcohol for two or three weeks, which produced in them a comatose state. When, on the other hand, ethyl alcohol was given under the same conditions for several months, no coma was produced and nothing in particular was noted. It is also stated that wood alcohol is only partly oxidized in the economy, and forms first, formaldehyde, and finally formic acid, the latter being highly poisonous and very slowly eliminated in the urine. The loss of vision has been attributed to this fact. The non-elimination of any nerve poison like formic acid must be dangerous.

The Birch-Hirschfeld experiments show that monkeys were rendered blind in three days by daily doses of wood alcohol. Only a few fatal cases in man are reported from a small dose—say under 60 c.c. Burnett reports a case of blindness and death from 5 c.c. Raub reports one from 7.5 c.c., and another from 1.5 c.c. It would appear that in this poison, as in all others, the system can eliminate a certain amount, but beyond this limit it is powerless. While it is a general belief that wood alcohol is not poisonous when used externally, several cases of mild poisoning and eye trouble have been reported.

Many persons may drink wood alcohol in small quantities for some time and the only bad effects noticeable will be progressive blindness. Professor Puckner believes that the poisonous effects are due

to the acetone present, but this could hardly be so, as the better samples of wood alcohol contain no acetone whatever. Dr. Hunt demonstrated this last fact clearly when he experimented with and without acetone in the wood alcohol used, and puts his results in this brief statement: "No matter how pure wood alcohol may be, it is an active poison; the presence of impurities only increase its toxicity."

The blindness which is a prominent symptom of this poison is the result of optic neuritis and atrophy, with degenerative changes in the retina. The poison seems to have a selective action on this particular nerve. The conditions that govern the action of all poisons are also true of wood alcohol—that is, that the condition of the patient's constitution, age, sex, contents of stomach at time of ingestion of poison, time elapsed before medical aid is called, etc., are factors in the effect produced.

The fatal dose can be placed at 90 c.c. Much less has destroyed life, and some have escaped from larger doses. This, however, is true of all poisons. Buller says that fifty per cent. of all cases of poisoning escape permanent injury. When death or blindness results suddenly during an alcoholic debauch, wood alcohol poisoning should be suspected. Large quantities of ethyl alcohol may be taken, and even cause death, but such cases are extremely rare.

TREATMENT.

No specific antidote has yet been brought forward. The treatment is similar to that of ethyl alcohol poisoning. Stimulating emetics, such as mustard and zinc sulphate, are of great value. The stomach-pump is most important, as washing the stomach out with warm water has proved very beneficial. Hot baths and quick-acting purges promote elimination and rid the system of the poison. Cardiac and respiratory stimulants should be freely used; digitalis, strychnine, atropine, and coffee being most useful. Ethyl alcohol is highly recommended and should be used in all cases.

RECORD OF CASES.

Buller reports forty fatal cases and fifty-four resulting in eye trouble. Wood states eighty-two fatal and 153 cases which developed some eye trouble. About 390 cases of all kinds have been reported, 152 deaths and 207 recoveries with eye trouble resulting. Two recent instances have been reported in the daily papers—one in New York where twenty-five persons died of wood alcohol poisoning by drinking liquor which had been diluted with that poison; another case occurred in Kentucky, where twelve were poisoned in the same way by whisky, and ten of them died. Of all the cases reported, only seven have escaped without some injury.

In conclusion, it is clear to see that wood alcohol in all forms and degrees of purity is an active poison; that it is dangerous to life in any size dose, 5 c.c. having been fatal; and that it should not under any circumstances be used internally, and even in its external use should be used with great caution.

Synthetic ylang ylang oil is now used largely in place of the natural oil, which choice quantities are very scarce.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Mucilage of Irish Moss.

(T. R. E.)—We can suggest no better formula than the alternative process given in the National Formulary. As stated in the note appended to the formula, the mucilage may be made clear by diluting it when freshly made and still hot, with about three volumes of boiling water, filtering and then evaporating the filtrate to a volume corresponding to the proportions used. In 1887 Emien Painter, in a paper read before the American Pharmaceutical Association, described some experiments made by him with a view of producing Irish moss gelatin suitable for any purpose for which the gelatin is useful. The apparatus consisted of a cylindrical metallic percolator, eighteen inches high, tapering slightly, from four to six inches in diameter, and surrounded by a water-jacket. The lower extremity of the percolator terminates in a tube $\frac{3}{8}$ inch in diameter, which is bent at right angles and passes through the side of the water-jacket, the tube terminating in a $\frac{5}{8}$ inch bibb. A conical shaped bag made of cheese cloth, of about one-half the capacity of the percolator, is filled with selected Irish moss, previously washed in cold water. The bag is then suspended in the percolator, the water-jacket and percolator both filled with water, and the apparatus placed over the fire. After being kept at the boiling temperature for about two hours, the bibb is opened and the clear, mucilaginous liquid drawn off, which, upon evaporation and spreading upon plates of glass, yields a beautiful, transparent gelatin. This gelatin, when dissolved in water, makes a perfectly clear mucilage and one claimed by the author to be in every way satisfactory.

To Color Meerschaum.

(R. P. F.)—We have had no practical experience in coloring meerschaum pipes, but some years ago we published in The Era the instructions of a smoker who took considerable pride in producing the fine colors of the "pipe artist." "In the first place," he said, "one must smoke the pipe very slowly and only just fast enough to keep the tobacco burning, without overheating the bowl. As soon as you have smoked one pipeful of tobacco, let the pipe get cool again. In this way you will eventually give to the whole a delicately shaded tint. Only a careless smoker will permit the bowl of his pipe to get scorched around the edge. Furthermore, a new pipe

should never be smoked out of doors in cold weather, nor laid on cold marble or glass, the chill is apt to crack the meerschaum. Meerschaum would not color at all but for the fact that it is boiled in wax. If used in its natural state it would quickly become soiled, the material being so porous that it absorbs the slightest moisture from the hand or anything it comes in contact with. The wax, however, fills up the pores and gives the meerschaum a sort of an enamel. A pipe that has been spoiled by overheating so that it will not color can be rebalbed in wax and restored to some extent."

Another authority informs us that dealers in meerschaum, in cases of pipes burnt by careless or ignorant handling, usually boil the substance in a mixture of wax and sweet oil, the relative proportions of the materials varying, according to the quality of the meerschaum. This, it is stated, is but a partial restorative, and there is really no process which will fully restore a pipe which has been badly burnt.

Comp. Syrup of Tar.

(C. G.)—We cannot give the formula for the proprietary article. However, the following formulas for combinations with tar in syrup form have been published; one of them may answer your purpose.

Fluid extract of licorice	2 ounces
Camphorated tincture of opium	2 ounces
Syrup of ipecac	2 ounces
Glycerite of tar	$\frac{1}{2}$ ounce
Syrup of tolu, enough to make	1 pint

By using one-half the quantity of fluid extract of licorice a much nicer preparation can be obtained.

Glycerite of tar	60 parts
Syrup of tolu	60 parts
Syrup of wild cherry	90 parts
Syrup of squills	30 parts
Tincture of opium	12 parts
Fluid extract of ipecac	1 part
Fluid extract of sanguinaria	1 part

Tar	6 parts
Wild cherry in No. 20 pow.	12 parts
Sugar	60 parts
Glycerin	10 parts
Boiling water	60 parts
Cold water, a sufficient quantity.	

Upon the tar contained in a suitable vessel, pour 12 parts of cold water and stir the mixture frequently during twenty-four hours; then pour off the water and throw it away. Pour the boiling water upon the residue and stir briskly for fifteen minutes, then set aside for thirty-six hours, stirring occasionally. Decant the clear solution and with it thoroughly moisten the wild cherry. Macerate for twenty-four hours in a closed vessel, then pack it firmly in a cylindrical glass percolator, and gradually pour upon it the solution of tar and then water until 30 parts of percolate are obtained. Dissolve the sugar in the percolate by agitation without heat, add the glycerin and strain.

Hair Oil.

(J. G. R. & Co.)—Hair oil may be prepared from any of the bland, fixed, non-drying oils such as olive, mustard, rape-

seed, peanut, or benne oil, also from liquid petrolatum, and from a mixture of castor oil and alcohol. These mixtures must be rendered pleasantly odorous by the addition of suitable perfume. Frequently hair oil is colored red by the use of alkanet root or of its coloring constituent, alkanin.

Hair oil in its usual yellow condition, is frequently dispensed under the name "bear's oil"; if colored red, it is often known as "rose oil."

(1.)

Castor oil	4 fl. ounces
Alcohol	26 fl. ounces
Tincture of cautharides	2 fl. ounces
Oil of lavender	1 fl. dram
Oil of rosemary	1 fl. dram
Oil of cloves	2 fl. drams
Oil of bergamot	4 fl. drams
Alkanet root, powder	20 grains

Mix the oils in a bottle; put the alkanet root on a filter or pack in a funnel, and percolate the alcohol through it; mix this percolate with the oily mixture, and add the tincture of cautharides.

(2.)

Castor oil	8 fl. ounces
Alcohol	24 fl. ounces
Oil of bergamot	3 fl. drams
Mix well.	

(3.)

Olive or benne oil	32 fl. ounces
Burdock root, fresh	4 av. ounces
Castor oil	24 fl. ounces
Oil of bergamot	2 fl. drams
Oil of rose geranium	1 fl. dram
Alkanin or alkanet root	sufficient.

Digest the olive or benne oil with the burdock root for about one-half hour at a moderate heat, then decant the clear liquid, add the other oils, and color, if desired, with alkanin. Alkanet may be employed instead of the latter and may then be added to the burdock root during digestion.

Rouge Pomade.

(T. A. R.)—Try one of the following:

(1.)

Rosanilin	10 grains
White wax	95 grains
Spermaceti	95 grains
White petrolatum	760 grains
Alcohol	1 dram
Perfume to suit.	

(2.)

Eosine, pink	10 grains
Orange flower pomade	120 grains
Hydrated woolfat	13½ ounces

(3.)

Eosine, pink	5 grains
Rosanilin	5 grains
White wax	95 grains
Spermaceti	95 grains
Petrolatum	760 grains
Oil of bergamot	2 drops
Oil of lavender	4 drops
Alcohol	1 dram

These formulas are taken from the New Idea, and the method of preparing them is the same for all. Dissolve the dye in the alcohol, add the melted fats (previously well mixed) in small amounts at a time, with constant trituration. When the pomade begins to solidify, incorporate the perfume and continue the trituration until all danger of the settling of the dye and of tendency to lumpiness in the pomade are past.

Some formulas for grease paints appear in The Era for February 18, 1904, page 161.

Oil and Ammonia.

(O. W. P. G.)—We are unable to give you a practicable formula of the character you name. Fatty oils and ammonia react to form soaps, but ammonia soaps are very unstable and decompose spontaneously, ammonia being constantly given off at the ordinary temperature. At a higher temperature the decomposition takes place much more rapidly; and an ammonia soap, on heating to 100° C. for a period of two to three hours, becomes entirely decomposed into ammonia, which volatilizes, and fatty acids, which remain as a residue.

The common aniline bases in general use for coloring fats, etc., are auramine, chrysoiline, safranin, fast blue, victoria blue, induline, methyl violet brand 6 B, malachite green, brilliant green, bismarck brown and nigrosine. All kinds of shades can be obtained by suitable mixtures made from among these. The bases are either sold as such in powder or in highly concentrated solution, or made up into small dice-shaped pieces by fusion with the proper quantity of stearine. They are also sold dissolved in oleine. They are much used especially in the manufacture of stearine candles.

COMMERCIAL FUSEL OIL.*

BY SAMUEL F. BALL.

The constantly increasing demand for fusel oil, the annual consumption of which in the United States may now be estimated at 450,000 gallons, has caused attention to be drawn to its composition; 80 per cent. of the entire quantity is consumed in the manufacture of amyl acetate, and more than 10 per cent. is refined and placed upon the market as amyl alcohol, or "Refined fusel oil."

From a commercial standpoint the essential ingredient is necessarily the amyl alcohol; but recently a problem has been presented which involves the question of the amount of ethyl alcohol which the oil may contain, and what percentage of the latter would be necessary in order to make a separation and recovery of the ethyl alcohol upon a paying basis.

In addition to the expense of manipulation, an element of primary importance, which it is necessary to take into consideration, is the United States tariff. The import duty on "alcohol" (ethyl) is \$2.25 per proof gallon, while that levied on "fusel oil" is ¼ of one cent per pound.

It can thus be readily perceived that if merchandise containing excessive quantities of "alcohol" could be "entered" and "passed" as fusel oil, it would prove to be an important factor in the case. In view of the possibility that "fusel oil" of this character might be imported, the customs authorities caused analyses to be made of numerous samples, with the result that the average amount of alcohol in fifty importations was found to be 5.04 per cent. In four instances the amount exceeded 15 per cent.; the results being 16.38 per cent., 18.91 per cent., 27.60 per cent. and 77.35 per cent., respectively.

There appears to be very little litera-

ture relating to fusel oil, particularly as regards this phase of the subject, and such methods as have been proposed for the determination of ethyl alcohol in this compound have, upon practical application, failed to yield satisfactory results. The following method is based upon the results of experimental work; and is submitted for the consideration of those who may have occasion to make quantitative determinations of ethyl alcohol in fusel oil.

Mix 20 c.c. of the sample under consideration 20 c.c. of benzol and 70 c.c. of a saturated sodium chloride solution in a cylindrical graduated separator of about 1 in. diameter (an ordinary burette will answer the purpose) and after separation, carefully read the volume of the sodium chloride solution (the precipitation of a small amount of sodium chloride which occasionally occurs, has been found to cause no appreciable error in the estimation of the volume). Place 50 c.c. of the sodium chloride solution after separation in a distillation flask with 60 c.c. of water, distill 50 c.c., and estimate the alcohol contained therein by specific gravity and temperature.

The percentage of alcohol thus found, multiplied by the number of c.c. of salts solution after separation, will represent the c.c. of alcohol contained in the brine, and consequently the number of c.c. which were contained in 20 c.c. of the sample; the product of this result multiplied by five will equal the per cent. of ethyl alcohol contained in the sample of fusel oil.

On behalf of this method, it may be stated that it requires no special apparatus, and possesses the additional advantages of simplicity, rapidity and commercial accuracy.

Oil of Baobab Seeds.

The baobab tree (Adansonia) is a native of tropical Africa, but has been transplanted to Asia and America. The pulp of the fruit ("monkey bread") is eaten by the negroes, whilst the fat is extracted by the natives of Madagascar by boiling the crushed seeds with water. The seeds examined by the author weighed about 1 gram each, and had a maximum diameter of 16 to 16 minims. 100 grams of the seeds yielded 63.3 per cent. of kernels, which had the following composition: Water, 5.4; nitrogenous matters, 17.0; fat, 63.20; extractive substances, 9.72; cellulose, 1.05; and ash, 3.55 per cent. The phosphoric acid amounted to 1.34 per cent. Starch was not found. A specimen of the fat obtained from Madagascar was a whitish solid which began to melt at about 25° C., becoming perfectly fluid at 34° C. It had an odor recalling that of Tunisian olive oil, and was quite free from any trace of rancidity, although it had been prepared some eight or nine months. The author points out that this fat could be advantageously used in place of coconut oil in the manufacture of vegetable lards, and also for high-priced toilet soaps and unguents.—J. Pharm. Chim.-Jour. Soc. Chem. Ind.

Oxylupanine.

Oxylupanine, C₁₂H₂₄N₂O₂ + 2H₂O, is a new alkaloid isolated by G. F. Bergh from the seeds of Lupinus polyphyllus. It crystallizes in large rhombic crystals.—Arch. d. Pharm.

The Chemist Of The Workshop.

The druggist is not living up to his opportunities if it is not known in all the small workshops and industries of his neighborhood that he is a chemist and able to give pointers on many technical and industrial processes. He already has a good foundation for such knowledge, and there is a wealth of working formulas at his command in

THE

ERA FORMULARY

WITH THIS BOOK AS HIS GUIDE, HE CAN FURNISH:

- The Machinist with Metal Polishes, Processes, etc.
- The Laundryman with Special Starches, Glosses, Blues, etc.
- The Undertaker with Embalming Fluids.
- The Dyer with Dyes and Processes.
- The Photographer with Chemicals and Processes.
- The Leather Worker with Dressings, Polishes and Processes.
- The Tailor and Hatter with Cleaning Preparations, Special Soaps, etc.
- The Painter with Special Colors, Varnishes, Stains, etc.
- The Cabinet Maker with Polishes, Glues, Varnishes, etc.
- The Cigar Maker with Flavors and Colors.
- Every Industry with Cements, Glues, etc., for every purpose.

There are over 1,500 formulas in the book for technical and industrial processes, domestic and household preparations, miscellaneous articles, etc., and any druggist with this collection can easily work up a profitable trade in a line of articles which his training as a chemist makes him proficient to engage in.

Era Key to the U. S. P.

Every druggist and physician should have copies of this valuable little book in their vest pocket.

It contains a complete list of the drugs and preparations of the Pharmacopoeia and gives the official titles, common names and synonyms of the drugs, chemicals and preparations their strength and doses in Apothecaries weights and measures with equivalents in Metric Terms.

As a companion to the U. S. Pharmacopoeia the Era Key gives to the physician and pharmacist an epitome of the contents of the official guide, in convenient shape for every day use and quick reference and in a form that will assist them as prescribers and dispensers.

NEWS SECTION

MAY SIGN WITHOUT FEAR.

Retailers Are Reassured As To Serial Numbering Contract.

ACCORDING TO AN INSPIRED SOURCE, PROSECUTIONS FOR VIOLATIONS OF PERUNA AGREEMENT WILL POSITIVELY NOT BEGIN UNTIL CONDITIONS ARE RIPE.—ASSURANCES THAT GIANT DRUGGISTS ALSO MEAN TO JOIN THE MOVEMENT.—ARE WAITING ONLY ON THE RANK AND FILE.

There have been important developments during the past week in the plan adopted by the joint conference committee on organizing New York. The plan provided that prosecutions for contract violations were not to begin until conditions are ripe; that is, until the signers are no longer in danger of neighboring cutters. The conference itself was to decide on the date, the contract proprietors concurring therein. Now it may be stated, from an unofficial but inspired source, that so far as Peruna is concerned, the ideas of the conference committee in this respect will be carried out in spirit, though not in the formal way provided.

In the first place, the Peruna people answered by letter that they had announced that the contracts had already gone into effect, and therefore they could see no reason in what was seemingly a backward step, and postpone the entire movement. According to their letter, then, they could not agree to what the conference committee proposed.

THE COMMITTEE'S INTENTION.

But it was not the intention of this committee that the part of the jobbers in the contract should cease, nor that they should be absolved from refusing goods to all retailers who had not signed. The committee only meant to protect a retailer in the vicinity of a cutter, and to assure this retailer that he would not injure himself by signing. Fortunately, F. W. Schumacher, vice-president of the Peruna Drug Manufacturing Co., was in the city Monday, on his way to Europe, and Lee M. Evans, the Peruna representative, being already in town, Dr. Wm. C. Anderson, chairman of the committee, was enabled to explain the real intentions of the committee. Accordingly, after consultation with the Peruna people, Dr. Anderson is enabled to state the following:

(1.) That the jobbers will be held to strict account to their part of the contract. Retailers who have not signed will not be able to obtain the goods.

(2.) Retailers who have signed, or who sign, will not be injured thereby. They can meet the prices of any cutter, and they will not be prosecuted. Prosecutions will begin only when conditions are ripe.

(3.) But retailers who have signed and who use their privilege for supplying with

goods, others who have not signed, will be prosecuted to the utmost.

"Now then," said Dr. Anderson, "contracts can now be signed without any possibility of injury to retailers. The makers intend to make this a success. I have certain assurances from the giants and dry goods men, from even those who are reputed to have 'stocked up,' that they will sign also as soon as they see that the retailers will come in too. So it depends on the retailers themselves. They should be in a great hurry to sign, and thereby they will hurry up the success of the movement. There are hardly any Peruna goods in the market now, except those which are serially numbered, so that everything waits on the retailer himself."

The reply of the Miles people was similar to that of Peruna. The Paris Medicine Co. and Wells-Richardson have not been heard from as yet.

SALES OF CONTRACT GOODS.

So far those retailers who have not signed the contracts, are being refused the goods by the jobbers. That those who have signed are now selling at the contract price, does not follow.

Various neighborhoods of Greater New York have been canvassed, and there appears a considerable variety of effects produced. Along Sixth avenue, toward Central Park, the price of Peruna is eighty-five cents, but this is the price that has generally existed anyhow. Obviously the contract has not made any difference there. Paine's Celery Compound though, has been advanced by some of the contract signers from eighty-five cents, its former price, to ninety cents, the contract price. Likewise Laxative Bromo-Quinine, that used to sell for twenty cents is now held at twenty-five cents. Those who have raised these prices announce that there has been no complaint whatever. Their customers pay the difference as a matter of course. But what makes the situation more interesting, is the presence of a cutter in the neighborhood, who, moreover, has become a little bit aggressive during the past few months, or along about the time the contract movement grew business-like. He is cutting, all right, but the orthodox druggists declare that there has not been the slightest falling off in their own trade. So the cutter, they say, may keep on selling until his stock is exhausted, and then he will either have to sign the contract or do without. Such a crisis might be hastened, observed one of this cutter's nearest neighbors, if the proprietors would send around and buy him out at the cut price.

WHERE CUT PRICES PREVAIL.

Now, on Ninth avenue, only a few blocks west, the aspect is totally changed. Dollar proprietary articles are still selling there at seventy-nine cents, and fifty cent articles at thirty-nine cents. Signers of the contracts are rarities, too. One druggist said that he had not signed, but that he was well stocked with Peruna,

enough to last him a long while. He professes no alarm at the prospect of getting no more when his stock runs out. He believes the situation will be changed by that time, and that there will be an avenue of relief. Yet this druggist, while opposed to patent medicines, while offering his own makes instead, while he has not signed any of the contracts, yet he would sign immediately if he thought the plan could succeed. Like the majority of others, he hesitates for fear of binding himself and letting a neighbor win from him all his trade.

In one Brooklyn neighborhood the price of Peruna has been seventy-five cents, but since the contract went into effect, only one man has advanced the price, making it eighty-five cents. The others still sell Peruna at seventy-five cents, Celery Compound at eighty cents, and Bromo Quinine at twenty cents. Yet among these are several who have signed the contracts. They do not see why they should change the prices when their nearest neighbor still holds to the lower rate. They therefore continue to meet the rate, and they expect to be able to get more goods, while their competitors who have not signed cannot do so. They will charge contract prices when they can do so without injury to themselves.

HOBOKEN UNIQUE.

In Hoboken the situation is unique. There all have signed the contracts except one big cutter, and this cutter has recently put up a great placard in his window, informing the world that he sells Peruna at seventy cents. It is understood, too, that he has a large stock on hand. The others, except one, are meeting the price, and they do not look to be prosecuted for violation of the contract. But the exception is a druggist who does not care to risk such prosecution. He will not, therefore, sell Peruna at less than eighty-three cents. But on the other hand he does not wish to charge his customers more than they are charged elsewhere. It would be very bad business, he says. So he cuts the knot. He does not sell Peruna at all. "We don't keep it," is a better thing to say, he maintains, than to sell it thirteen cents higher than

"That dog soap of yours did no good at all."

the next man. Of course, he has some other preparation to recommend.

Many druggists on the East Side are having no difficulty in getting eighty-five cents for Peruna. Those in the neighborhood of big cutters, however, have not signed the contract, and do not attempt to get more than seventy or seventy-five cents. Strange to say, most of these druggists have not sold a bottle of Peruna in the last two weeks.

Several instances are known where druggists have been compelled to sign the contract in order to get more goods after their supply had run out. In these cases, where an aggressive cutter is in the neighborhood, people refuse to pay the higher price of eighty-three cents and go to the cutter for the medicine.

WANT 'PHONE SECRETS.

Business Men to Decide if Rates Are Too High.

Telephones threaten to be again an issue in Greater New York. High rates are the complaint. And this time the Merchants' Association furnishes the agitators. A committee of business men, mostly from this association, has been formed to investigate. It holds meetings at 15 Dey street, in the New York Telephone Co.'s offices. Vice-President and General Manager Bethel, of the Telephone Company, submitted facts to show that the rates charged were justified. But none present talked for publication, and the conclusions, if any, so far made by the committee are as yet kept secret. There will have to be many more meetings, for the committee means to go through the entire subject before deciding on what action should be taken. Appeal might be taken to the Legislature for relief.

HIS SILVER JUBILEE.

A huge silver loving cup will help to remind Charles Gibson, the well-known wholesale druggist of Albany, that he was fifty years old on January 26. The cup was a gift from his employees, who chose this method of showing their affection for their chief.

The affair was intended as a birthday surprise for Mr. Gibson. When he walked in at 8 o'clock in the morning the entire establishment was waiting to greet him with congratulations on his silver jubilee. A graceful presentation speech was made by Mr. Appin, the buyer for the house. Mr. Gibson responded with a few words of thanks and good wishes, after which he received individual congratulations from his employees.

Mr. Gibson was born in Delaware county on January 26, 1855. He came to Albany in 1869 and has been a resident ever since. He is a member of several financial and eleemosynary institutions, a trustee of Wesleyan University, a member of the Board of Missions of the M. E. Church, a trustee of Trinity M. E. Church, and treasurer of the endowment fund of the Troy conference. On November 21, Mr. Gibson was appointed a member of the Board of Education, immediately afterward he was elected its president to succeed Calvin W. Edwards. Mr. Gibson was associated in business with William J. Walker, under the name of Walker & Gibson, until last May, when Mr. Walker died.

FIX UP A SCHEDULE.

East Side Druggists Combine For Better Prices.

MOVEMENT INDEPENDENT OF THE N. A. R. D., THOUGH MANY HAVE ALREADY PINNED THEIR FAITH TO IT—A SCHEDULE ON "PATENTS" ADOPTED—NO PENALTIES.

The first actual attempt at district organization that New York City has seen for twenty-five years was made last Friday night, when all the druggists in one section of Yorkville got together and agreed to a schedule on proprietary goods. With this as a starter, the regulation of the closing hour and other improvements are to follow rapidly.

The initiative in this movement was taken by two men who became tired of undercutting each other. A canvass of all the drug stores in the district bounded by Forty-second street, Third avenue, Fifty-ninth street and the East River showed that every pharmacist, without exception, was willing to join in a movement for better prices. Accordingly, a meeting was called for 11 P. M. on Friday night in A. S. Katzman's drug store, Second avenue and Fifty-first street. Twenty druggists attended, comprising all those in the district, with two or three exceptions. These latter signified their intention of abiding by the decision of the meeting. M. Brodwin, of Second avenue and Forty-eighth street, presided.

A little discussion soon brought out the fact that all were in favor of bringing proprietary articles into line first. This was decided upon, with a schedule of 20, 45 and 85 cents for 25, 50-cent and dollar preparations. It was realized, however, that it is impossible to obtain such prices on a few of the most popular articles. A committee was therefore appointed to draw up a second schedule on these preparations. This is to be ratified at another meeting.

It had been the idea at first to establish a penalty for violation of the schedule, but the meeting proved to be so harmonious that it was deemed unnecessary. This movement is declared to be entirely independent of the N. A. R. D., although many of the members present Friday night have enrolled and paid their dues in the national organization.

Optimistic sentiments were expressed by those who are in the movement. "It is only an experiment," said one, "but the fact that it has not been tried before is no reason why it should not succeed."

Sidney Faber, whose store is at Second Avenue and Fifty-eighth street, said it was a "good sign." He saw no reason why, if all stood together, they should not be successful.

"No movement of this kind," said Mr. Faber, "can succeed if the public is not considered. This seems to have been done in the present case." He referred to the proposition of one druggist to charge twenty cents instead of fifteen cents for magnesia, and to make it of full strength. In this way it would be possible to assure the public that they were getting better value for the increased price. Mr. Faber recalled the last time a price-raising crusade was begun, in 1881.

TO AID DRUG INVESTIGATION.

Washington, Feb. 6.—To carry on the work of the Bureau of Chemistry during the coming year, relative to the investigation of foods, drugs, beverages, etc., the sum of \$125,920 is set aside in the annual agricultural appropriation bill just passed by the House of Representatives. This money is to be devoted to the continued collaboration with other bureaus of the Department of Agriculture desiring chemical investigations.

Not the least important branch of the work will be the investigation of adulterated, falsely labelled or falsely branded foods, drugs, beverages, condiments, etc., whenever the Secretary of Agriculture has reason to believe that such articles, dangerous to the public health, are being imported from foreign countries. He is authorized to obtain from the Secretary of the Treasury samples from original packages of such articles for inspection and analysis. The owner or consignee of such articles is given the privilege of being present at such examination and has the right to introduce testimony. Delivery to the consignee of goods found to be prejudicial to the public health may be refused.

A clause equivalent to a Federal pure food and drug law has been drawn up by Senator Stewart, of Nevada, and an attempt will be made to incorporate it in the agricultural bill when the latter reaches the Senate. The amendment is very doubtful of success, owing to the desire for more comprehensive legislation. Senator Stewart's provision would make it the duty of the Secretary of Agriculture to analyze foods and drugs transported into any State, and publish the result of such analysis in three daily newspapers. The big sum of \$300,000 would be appropriated for expenses.

E. B. M'DUFFIE WITH GUNTER.

E. B. McDuffie, of New York, is now traveling representative for C. F. Gunther, of Chicago. His territory is Pennsylvania, Ohio and West Virginia.

Last year Mr. McDuffie was with Huyler's, for whom he traveled throughout the United States, and previous to that he had been with Schieffelin and other well-known houses in the drug line.

Mr. McDuffie's many friends in the trade will be pleased to hear of his new and desirable connection. The sale of Gunther's candies with druggists is rapidly increasing, and many druggists are putting in this line to their advantage. Fine confections is one of the side lines that druggists can handle appropriately and with profit, and the druggist who secures an agency for Gunther's goods is to be congratulated.

BONYNGE TRADE MARK BILL.

The House of Representatives on Jan. 14 unanimously passed the Trade-Mark bill, which was introduced by Representative Bonyng, of Colorado. The provisions of this bill were outlined in The Era for December 22, 1904. Prospects for the early passage of the bill by the Senate are bright.

Only small quantities of geraniol reseda oil were produced this season.

PERFUMERS IN SESSION.

Their Eleventh Annual Convention is Held in New York City.

MANY QUESTIONS CONSIDERED, AMONG THEM PARCELS POST REGULATIONS, EVILS IN THE BUSINESS AND POSSIBLE ELIMINATION OF HALF OUNCE STOPPERED GOODS.—DUES INCREASED.

The Manufacturing Perfumers' Association of the United States met for its eleventh annual convention in this city on Wednesday and Thursday of last week, at the Down Town Club, 60 Pine street. Business sessions were held during the day, while the evenings were given over to entertainment. "Family matters," such as nuisances in the perfume business and how to get rid of them, were the main subjects discussed. Several important questions were acted upon.

Wednesday was devoted to the president's address and the annual reports of committees. In his review of the work of the various committees, President Woodworth dwelt particularly on the need of a sound financial basis for the association. He also touched upon some of the business evils calling for attention, among them the following: Consignment of goods, prepayment of freight in less than \$25 lots, dating of bills ahead, tendency to increase discounts beyond reasonable limits, extra discounts for cash, goods listed too low, and premiums.

The report of Secretary James E. Davis showed the present strength of the association to be 70 associate and 55 active members. The treasurer's report showed receipts for the year, \$1,828.44; expenses, \$1,607.20; leaving a balance of \$221.44. All these reports were referred to the Committee on Resolutions. In the afternoon the meeting went into executive session. A theatre party was the feature of the evening, the attraction being Fritz Scheff, at the Broadway Theatre.

MEMBERS' DUES INCREASED

The chief business on Thursday, when President Woodworth opened the meeting shortly after 11 A. M., was consideration of the report of the Committee on Resolutions by D. H. McConnell, chairman. After commendation of the work of the various committees, the first subject taken up was that portion of the president's address which recommended placing the association on a better financial basis. With this end in view, Mr. McConnell proposed that the dues of active and associate members be increased to \$35 and \$20 respectively, which, he said, would give an increased revenue of twelve or thirteen hundred dollars a year.

A proposal that in addition to the higher dues an initiation fee of \$50 be charged provoked considerable discussion. Many thought that this would make it difficult, if not impossible, to secure any more members. In fact, it was pointed out that the last time the dues were raised several members resigned.

Mr. McConnell withdrew his motion in favor of one by Secretary Davis, amending Article VII. of the Constitution so as to raise the dues to \$40 and \$20 for active and associate members respectively, without the payment of any initiation fee.

Many of those present expressed their willingness to pay this tax. A proposal for a further increase to \$50 and \$25 was voted down, and Mr. Davis' motion was carried unanimously.

PARCELS POST REGULATION.

On the question of the proposed new parcels post regulations, Mr. Davis read a very able paper, a report submitted to the Detroit Board of Trade by a committee appointed by that body to investigate the subject thoroughly. It was shown that the United States was the only country which still maintained a high rate for a low maximum weight. In this respect European countries are far ahead of us. The express companies, the report showed, compete successfully with the mails for the carriage of small parcels. On motion of Mr. Davis it was resolved to endorse the bill now before Congress. A copy of the resolution is to be sent to the Department of Commerce and Labor for investigation as to the particular feature of rate discrimination.

The question of legislation was next taken up. The committee's report showed, said Mr. McConnell, that there are at present no laws under consideration which are adverse to the interests of the perfumers. House bill 9303, intended to reduce the tax on alcohol, he thought of sufficient importance to receive the endorsement of the association. This was given, in the same unqualified terms as the resolution adopted last year on the same subject. Endorsement was also given to the drawback bill and the bill on the denaturization of alcohol.

TRADE MARK TROUBLES.

Disputes over trade marks next came in for attention. Although the Executive Board has power to arbitrate differences between members on the subject, this function had not been exercised. It was pointed out that both sides must ask for arbitration, which would account in some degree for the difficulty in getting the disputants together. A suggestion was made that perhaps the powers of the Executive Board in settling trade-mark disputes were not sufficiently well known or understood. The secretary was accordingly instructed to prepare a circular on this subject for distribution to all the members.

The nominating committee presented the following nominations for the year 1905: President, Harry S. Woodworth, of Woodworth Sons Co., Rochester, N. Y.; first vice-president, Adolph Spiehlner, Rochester, N. Y.; second vice-president, D. H. McConnell, of Goetting & Co., New York; secretary, Frank B. Marsh, of Theodore Ricksecker Co., New York; treasurer, Richard Hudnut, New York; new members Executive Board, James E. Davis, of Michigan Drug Co., Detroit, and Herman Tappan, New York.

ELIMINATE HALF-OUNCES.

At the afternoon session there was discussion on the advisability of eliminating half-ounce stoppered goods from the trade, and a committee was appointed, consisting of Henry Dalley, James E. Davis and J. C. Buck, to ascertain the sentiment of the trade on that point.

Owing to the fact that many members in the West found it inconvenient to get away from business so early in the year, it was voted to change the time of the annual meeting from February to April.

Officers were then elected, and after a brief speech by President Woodworth, the meeting adjourned.

A banquet in the ballroom of Hotel Astor in the evening, followed by a special vaudeville performance, wound up the work of the convention.

The entertainment committee consisted of William G. Ungerer, chairman; H. O. Brawner, J. J. Haigney and Monroe P. Lind.

Among the firms represented were Colgate & Co., Theodore Ricksecker Co., Ladd & Coffin, Alfred Wright, Adolph Spiehlner, Lazell, Dalley & Co., The Hess Co., C. L. Cotton, Richard Hudnut, Lehn & Fink, Michigan Drug Co., Woodworth Sons Co., D. R. Bradley & Son, Crescent Perfume Co., French, Cave & Co., Goetting & Co., Hilbert & Co., Jennings Perfumery Co., Andrew Jergens Co., The Abner Royce Co., Shaudin & Lind, Vail Bros., Herman Tappan, and a good number of associate members.

A. C. S., N. Y. SECTION, MEETING

The New York Section of the American Chemical Society will hold its fifth regular meeting to-morrow evening, Friday, at the Chemists' Club, 105 W. Fifty-fifth street. Previously, at 6.30, there will be an informal dinner at the Savoy Hotel. The programme for the evening has been announced as follows:

Presentation of the Nichols Medal to Charles Lathrop Parsons, by the president of the American Chemical Society Francis P. Venable. Otto Zwingenberger, "The German Chemical Exhibits at St. Louis," E. B. Voorhes and J. G. Lipman, "The Accumulation and Utilization of Atmospheric Nitrogen in the Soil," Heyward Scudder, "The Detection of Methyl Alcohol," Bertram B. Boltwood, "The Origin of Radium." 20 minutes.

DATE OF STATE PH. A. MEETING

The last week in June has been chosen for the twenty-seventh annual meeting of the New York State Pharmaceutical Association at Saratoga. The work of arranging for the convention devolves this year upon the executive committee, as there is no local association at Saratoga. Peter Diamond, chairman of the committee, is writing to hear from the druggists there, as to hotel rates, plans for entertainment and other details.

"Pleg take these bottles. I wish that pup'd come in here."

ARISTOL, MYSTERIOUS.

Is Still a Patent, But no Longer Claims to Be One.

Of late it has been remarked that recent Aristol packages no longer contain mention of the fact that the article is a patented one. Promptly the obvious question arose: Had the Aristol patent run its course? And if so, would not the trade-mark name of Aristol become public property, and would not anybody be enabled to manufacture and sell it under that name, as well as under its chemical designation of dilymoltol-iodide?

The first question was a mere matter of looking up dates. Aristol being patented in February, of 1891, its rights do not lapse until the same month of 1908. The second question, as to the trade mark lapsing with the patent, was answered in the New York offices of the manufacturers. Trade mark rights do expire with the patent, it was admitted, but only when the article is patented under the trade-mark name. However, when the name is registered as a trade mark after the patent has been obtained, then the trade mark is valid, independently of the patent. Its protection continues to exist, no matter what happens to the patent. This is the outline of the case for Aristol in the New York home of Aristol.

But in the same quarters no answer could be conjured to yet another question. And this question is: Why should the Farbenfabriken of Elberfeld Co. drop all mention of the patent from the wrapper, when as a matter of fact the patent itself has three years to run yet? Do these people, by some sudden stroke of generosity, desire to forego their privileges and desist from gathering their profits during the three years that remain? This is the question, and being unanswered, it is a mystery of mysteries. For the Farbenfabriken people know the patent law of the United States, and this law, on the question of "marking," requires that every patented article must bear upon it the word "Patented," with the day and year of the issuing of the patent, unless the thing from its nature will not permit of this, when the like mark must be placed upon the package wherein one or more of the articles are enclosed. And should an article not be so marked, the person manufacturing a similar article or using it will not be liable for infringement, unless it can be shown that he was informed of and knew that it was an infringement and still continued to manufacture or use it. Every person who shall mark as patented any article which has not been patented, or who shall place upon such an article any imitation of the name or label of the patentee, or who shall imitate or counterfeit the marks of the patentee without his permission, and with the intention of misleading the public or of deceiving those who may purchase such article, is liable to a fine of not less than one hundred dollars for each offense.

As to this question, and even as to the simple question of the date when the Aristol patent expires, The Era reporter was referred to Dr. H. Schweitzer, as the only one in offices and laboratory who might answer them. But Dr. Schweitzer

was not in at the time. A second time he was too busy. A third time he was closeted in the laboratory, and could not emerge. A fourth time he was out. A fifth time he was not in, and the sixth time he was in, but again very busy. Consequently, The Era goes to press with the mystery unexplained. But the fact remains, that upon its face—face of the package—Aristol is not a patented article. The package, in other words, does not say so. The claim is no longer made. Here is the inscription: "The word Aristol is protected by registered trade mark No. 17,393." Hitherto the label had these words: "Aristol—Registered in all countries. Registered and patented in the U. S. A., Feb. 24th, 1891—No. 446,875"

BOARD EXAM. SCHEDULE.

The schedule of Board of Pharmacy examinations for the year 1905 has been announced as follows:

Eastern Branch, February, May, June, September, November, December. Middle and Western Branches, February, April, June, September, November.

The examination in each case is held on the third Wednesday of the month at 9 a. m. Candidates should apply direct to the secretary of the branch having jurisdiction in the part of the State where they wish to practice. The blanks must be filled out, properly attested and sent to the secretary at least ten days before the day of examination, accompanied by a fee of \$10.

Applications should be addressed to George Belman, secretary of the Western Branch, 405 Genesee street, Buffalo; Warren L. Bradt, secretary of the Middle Branch, Eagle and Howard streets, Albany; or Joseph Weinstein, secretary of the Eastern Branch, 115 West Sixty-eighth street, New York City. The dates of examination are February 15, April 19, May 17, June 21, September 20, November 15, December 20.

WM. A. VAN DUZER DIES.

William A. Van Duzer of Brooklyn, died at his home, 520 Washington avenue, last week. Mr. Van Duzer had been a pharmacist in Brooklyn for thirty-five years. Five years ago he moved from the corner of Atlantic and Washington avenues to the corner of Fulton street and Washington avenue, where his store has been ever since. He was regarded in the trade and by all who knew him as a quiet, unassuming and very estimable man. He was born in Staten Island about fifty-eight years ago, and had lived in the Ninth Ward since his marriage to Miss Brew, a well-known resident of the old town of Flatbush. She survives him. He was a member of St. Joseph's Council, C. B. L., and belonged to St. Joseph's R. C. Church. He was very popular in the parish of St. Joseph.

New Name for Love Co.

It is reported that the M. H. Love Co., of Norfolk, Va., has changed its name to the Cut Rate Drug Co. This is the firm against which F. W. Babcock, of New Haven, Conn., holds a claim of \$9, which has been declared uncollectable by a lawyer of Norfolk.

INVADES OUR MARKET.

German Bromide Syndicate Begins Campaign and Cuts Prices.

German manufacturers have entered into direct competition for the American bromine market. They have had to defend their home markets against the American goods, and now they themselves have turned invaders. For the first time a German syndicate offers its products in the United States. The challenge is a ringing one. The offer of goods is made at a big cut price, which when announced this week, was a sensation.

The invader in question is the German Bromide Syndicate, of Leopoldshall-Strassfurt. Their first advance is this: They have just appointed the Roessler & Hasslacher Chemical Co. as their agents. This firm will be sole distributors in this country and Canada for the syndicate's products of bromine and bromine salts.

The circular which announced this step is signed by H. Jacobson, managing director of the syndicate, but the distributors at the same time quote sensationally low prices for bromide of potassium, bromide of sodium, and bromide of ammonium, the same not to be re-exported. This announcement of Roessler & Hasslacher follows:

Referring to the attached circular, we beg to offer you for your legitimate wants and none to be re-exported, subject to immediate acceptance:

	Per lb.
Bromide of potassium, U. S. P.	15c.
Bromide of sodium, U. S. P.	17c.
Bromide of ammonium, U. S. P.	22c.
Packed in 100-lb. cases.	

Terms, f. o. b. New York, net thirty days, or less 1 per cent for cash in ten days.

The first delivery to be made from prompt shipments from the other side, further deliveries can be made from stock, which will be carried in New York.

The cut is a big one. Prices are slashed in halves. The motive for it is not certain, unless it be to carry the invasion into the enemy's country; in other words, to undersell American firms in America, because the Germans have been undersold in Germany by Americans.

Asked if the low prices would be maintained, or what was likely to happen to them next, representatives of Messrs. Roessler & Hasslacher were non-committal in the extreme. As to the future and future prices, they were as babes. "We wish you could tell us," they said, bewildered and innocent.

COCAINE FIENDS DIMINISH.

Syracuse, Jan. 7.—The sale of cocaine which a couple of years ago reached such proportions that the Syracuse Druggists' Association prepared a bill prohibiting its sale, except upon a proper prescription, has almost entirely stopped, so far as its use by "fiends" is concerned. Dr. A. W. Beach, whose store is located in East Washington street, in the locality where most of the drug victims lived, said: "The most extensive users of the drug were formerly negroes. I am glad to say that they have almost entirely stopped its use, owing to the agitation the matter received and the publicity that was given as to its effects."

G. A. S. STANDS PAT.

Apothecaries Come No Nearer N. A. R. D. Affiliation.

The N. A. R. D. again furnished a subject for discussion at the meeting of the German Apothecaries' Society, last Thursday night, S. V. B. Swann brought up the subject by reading the minutes of the last joint conference committee meeting. Speaking of the action taken at the society's last meeting, in regard to individual affiliation, he then expressed the hope that the society itself would remain free from any alliances with the N. A. R. D., although as individuals they could join the association.

In the discussion which followed, Dr. Alpers remarked that there was on each occasion a different sentiment regarding the N. A. R. D. Be consistent, he urged, for only in that direction lies success. He approved of the plan to stick together and organize.

"But why," he demanded, "do not the manufacturers inform the department stores that they cannot have another bottle of contract goods?"

Mr. Sheldon denied that all manufacturers sell direct to department stores; certainly the proprietors he represented did not. He had seen letters directed to "giant druggists," in which their orders had been refused, or in which the druggist had been referred to the jobbers.

VERSIFIED MINUTES.

At the opening of the meeting the recording secretary, O. A. Leister, read another batch of humorous minutes, which at times even lapsed into verse. The meaning of N. A. R. D. was ingeniously explained as "Now Attempt to Reap the Dough." The secretary's efforts were vigorously applauded. Dr. Weber, of Elmer & Amend, was then introduced and given a cordial welcome. He delivered an interesting lecture on radium, and specimens of the precious substance were circulated among the audience. In particular the lecturer showed one vial which exhibited apparently undiminished activity, although it had been filled several years ago. Photographs taken with radium were also exhibited.

Dr. Weber received the thanks of the society, after which the routine business was continued.

Felix Hirseman announced the death of an old and respected member, Otto Alexander. All rose in honor of his memory. Librarian Trau said he had made favorable arrangements with the International News Co. in connection with the library system, from which he expected many improvements. A detailed report of the ball, showing a deficit of \$71.80, was given by R. S. Lehman, chairman of the entertainment committee. He also submitted a schedule of expenses for the coming year, asking \$400. This was reduced to \$350, and the report accepted. An entertainment, to which the ladies are to be invited, will be given in April.

Dr. Alpers read two letters which he had received from Senators Dewey and Platt, acknowledging the receipt of his request for their support of the Mann bill. He regretted that so few members had written to their senators, and strongly urged all to do so. President Imhof re-

marked that Mr. Doble had promised to supply each member with a printed letter, but had not done so, and that it was the expectation of receiving these letters which had caused the inactivity of the members.

A resolution endorsing the Mann bill was adopted by the society.

PRISON FOR A SWINDLER.

William Brown's Little Flyer in Forged Orders Stops Abruptly.

The latest swindler to appear in New York has now two months to serve in the State penitentiary. His fall succeeded his operations in the following way:

On Tuesday, January 24, an order, purporting to come from Ranney's Pharmacy, 27 Pearl street, was presented at the order desk of Lohr & Fink, wholesale druggists, of 120 William street, calling for various patent medicines which amounted to \$10.65. The order was filled without question, and the goods were handed to the messenger. Next day the same person presented a similar order calling for merchandise to the value of \$18. But this time the order clerk's suspicions were aroused, and he telephoned Mr. Ranney for confirmation of the order. Mr. Ranney replied that he knew nothing of either order, and that undoubtedly they were forgeries.

Then a policeman was called in and the messenger arrested. At the police station he gave his name as William Brown, and said that he was formerly a salesman in the employ of the Sterling Pharmaceutical Co., of Brooklyn. He was forty-two years of age and married. Next day he was arraigned before a magistrate and pleaded guilty and was held for the Court of Special Sessions. On being brought up for sentence, he was sent to the penitentiary for two months. The court was lenient in view of the fact that it was his first offence, and that he has a family dependent on him.

WILLIAM H. McCURE.

Albany, Feb. 7.—William H. McClure, well remembered in the wholesale drug trade since his active connection with it fifteen years ago, and one of the most prominent citizens of Albany, died here last week, of heart disease, after an illness of several months. He was sixty-three years of age.

With his brother, Mr. McClure many years ago succeeded his father, the late Archibald McClure, in the wholesale drug business in this city. After the death of Archibald, the firm was changed to McClure, Walker & Gibson, and about fifteen years ago Mr. McClure retired.

He had been a lifetime resident of Albany and a prominent member of the State Street Presbyterian Church, and was instrumental in building the present church building. He was one of the elders of the church and also a trustee.

Mr. McClure had always been a staunch Republican and much interested in the welfare of his party, though never aspiring to or holding any office. He is survived by his widow and one son, Archibald J. McClure.

TO TAX WOOD ALCOHOL.

Bill at Albany Would Give One-Third to the State.

Albany, Feb. 6.—Wood alcohol is to be taxed in the State of New York, that is, if the bill of Assemblyman Yale, of Putnam, becomes a law. Revenue is said to be the motive behind the bill. At any rate, the State government would receive one-third the amount of the selling price. The measure has been introduced and referred to the committee on Public Health.

The text of the bill follows:

Section 1. Article thirteen of chapter six hundred and sixty-one of the laws of eighteen hundred and ninety-three, entitled "An act in relation to the public health, constituting chapter twenty-five of the general laws," as renumbered by chapter two hundred and ninety-three of the laws of nineteen hundred and three, is hereby amended by adding thereto two new sections, to be sections two hundred and eighteen-b and two hundred and eighteen-c thereof, and to read as follows:

§ 218-b. Reports of sales in State of wood alcohol.—Every manufacturer, jobber, wholesale dealer, or other person selling wood alcohol within the State, other than at retail to consumers, shall on the first day of each month report to the State Commissioner of Health, on blanks furnished by him, if requested, the name and address of each person, firm or corporation within the State to whom wood alcohol was sold by such manufacturer, jobber or wholesale dealer during the preceding month, and the quantity sold to such person, firm or corporation. Every such manufacturer, jobber or wholesale dealer who shall sell wood alcohol within the State without making the report required by this section shall be liable to a penalty of fifty dollars for each sale not so reported; and any contract for payment for wood alcohol sold within the State, the sale of which is not so reported, shall be absolutely void and unenforceable.

§ 218-c. State tax on sales of wood alcohol to consumers.—Every person, firm or corporation selling wood alcohol within the State at retail to consumers shall on the first day of each month report to the State Commissioner of Health, on blanks furnished by him, if requested, the quantity of wood alcohol sold by such person, firm or corporation during the preceding

"Hold still now. This stuff'll make you feel good."

month, and the price paid to such person, firm or corporation therefor; and shall pay to the State Commissioner of Health a tax equal to thirty-three and one-third per centum of the selling price of all wood alcohol sold during the preceding month. Every person, firm or corporation failing to make the report required by this section on or before the tenth day of any month, or failing, within such time, to pay any tax due as provided therein, shall be liable to a penalty of fifty dollars for every such failure, and the additional sum of five dollars for every day that such failure continues. Such tax shall be a lien upon and bind all the real and personal property of the person, firm or corporation from the time when it is payable until the same is paid in full; and may be recovered by the State Commissioner of Health in any court of competent jurisdiction; and it shall be lawful to join a cause of action for accrued penalties or failure to make a report required by this section, with a cause of action to recover a tax due.

§ 2. This act shall take effect July first, nineteen hundred and five.

BONDED SIGNS IN BUFFALO.

Buffalo, Feb. 7.—Signs hanging over the sidewalk are just now worrying the aldermen. If any sign projects from a building more than three feet, it is contrary to the ordinances of the city. The committee on lamps of the Board of Aldermen has had this sign matter before it and Attorney William H. Love, representing the Cahoon-Lyon Drug Company, told the committee that his company was willing to put up a bond securing the city against a damage suit, in the event that anyone was hurt by the falling of the sign. It was recommended that a bond of \$5,000 be required. Mr. Love left the committee to understand that that would be satisfactory to his company, provided everyone else having a sign projecting over the street line is compelled to put up a similar bond. The committee decided to report in favor of exacting a bond from each person, firm or company having signs hanging over the sidewalk.

ROCHESTER PH. A. MEETING.

Rochester, Feb. 6.—At the monthly meeting of the Rochester Ph. A., held last week, the only business of importance transacted was the adoption of a constitutional amendment increasing the annual dues of city members from \$6 to \$12 a year. The out-of-town members will hereafter pay \$8 a year dues. The increase was necessitated by the increased dues of the national association.

It was expected that a communication would be received from the Rochester Mechanics' Institute on the subject of the proposed formation of a school of pharmacy in connection with that institution. Although a committee of the Institute, headed by Prof. Littmore, has had the matter under consideration for some time, no communication was received by the pharmacists and the matter, of necessity, will go over for another month.

Druggist—"Mr. Gazzam, you owe \$1 for a bottle of tonic."

Mr. Gazzam—"I'm not the one that bought it. You know it made another man of me."—Chicago News.

ANOTHER ANTI-SECRET BILL.

In New York Also a Law for Formulas is Demanded.

Albany, Feb. 6.—State Senator Platt has introduced a bill in the legislature to compel all proprietors of so-called "patent medicines" to print on their labels the formulas from which they are compounded. This is the third proposed measure of the kind within the past month, the first being the threatened revival of an old Spanish law in Cuba. The second is prepared for the next meeting of the legislature in New Hampshire. Regarding this agitation, one man observes: "At all events, the higher class of proprietary medicines need no such regulation and should be exempt; certain ones, on the other hand, should not be sold, formula or no formula."

"No drug, medicine or mixture of drugs, herbs or medicines, commonly known as patent or proprietary medicine, shall be sold, offered or exposed for sale in this State, unless an analysis or formula specifying the ingredients is plainly printed upon the label of the bottle or package containing such medicine, and also upon the outside wrapper of the packages containing the same.

"Every person who shall print upon the label of any bottle or package, or upon the outside wrapper thereof a false analysis or formula, showing the ingredients or quantity of ingredients of any patent or proprietary medicine, as required by this act, or who shall sell, offer or expose for sale any such patent or proprietary medicine, without such analysis or formula, showing the ingredients and the quantity thereof in any patent or proprietary medicine, as required by this act, shall be guilty of a misdemeanor, punishable by imprisonment for not less than one month nor more than six months, or by a fine of not less than fifty nor more than five hundred dollars, or by both such fine and imprisonment.

"This act shall take effect September first, nineteen hundred and five."

NEW YORK NOTES.

—Some of those in the local drug market this week are Dr. J. E. Suter, of Piedmont, West Virginia; W. F. Church, Kingston, Pa.

—George W. Fuller, representative of Lehn & Fink, in Massachusetts and Rhode Island, has been spending a few days in town.

—F. G. Meyer, of Meyer Bros. Drug Co., has moved his office from 95 William street to 96 William street, in the Mallinckrodt building.

—Mrs. Marietta Harmon Greenland has tendered her resignation as secretary of the Syracuse D. A., but the druggists have refused to accept it.

—John A. Hamann, father of Mr. Hamann, secretary of the Roessler & Hasslacher Chemical Co., died last week, at his home in Mt. Vernon. He was seventy-five years old.

—At the annual election of officers of the Merchants' Association of New York, which took place last Thursday afternoon, Mr. Clarence Whitman, of Messrs. Clarence Whitman & Co., was re-elected president, while Messrs. Gustav H. Schwab, of Oelrichs & Co., John C. Eames, second

vice-president of the H. B. Claflin Co., and W. A. Marble, vice-president R. & G. Corset Co., were re-elected first, second and third vice-presidents, respectively. Mr. Geo. L. Duval, of Beeche, Duval & Co., and Mr. S. C. Mead were re-elected treasurer and secretary. Mr. Daniel P. Morse, president Morse & Rogers, was elected to the directorate of the association to fill out a term expiring January, 1907.

DAMAGE SUIT SETTLED.

Syracuse, Jan. 7.—The widely discussed case of Frederick H. Barton and Lillian L. Barton against H. D. Dwight & Co., druggists, was announced in Supreme Court as having been settled. The suit was brought on the charge that a prescription was put up in which a mistake had nearly caused the death of the plaintiffs. The druggists claimed that by their double checking system a mistake was impossible, and if any poison appeared in the mixture the fault was that of the manufacturer of the drugs. It is said that the sum settled for was not large.

DEATH OF WILLIAM H. KRUG.

William H. Krug, who was connected with the Bureau of Chemistry of the Department of Agriculture until two years ago, died recently in this city of pneumonia. The body was taken to Washington for burial.

Mr. Krug was an inventor in the arts of tanning and distillation. He had much talent as a musician, and had a large circle of friends in Washington. Two years ago he accepted a position with the firm of A. Klipstein & Co., of New York, where he was employed at the time of his death. He was a graduate of the School of Pharmacy of the University of Michigan, belonging to the class of '89. He was formerly of Cleveland, O.

BANQUET AT NEWBURGH.

The Newburgh Druggists' Association and guests feasted at the associations' fifth annual banquet, which was held at the Palatine, in Newburgh, last week. The druggists doing business outside the city who were present, have joined the Newburgh organization, and will adopt the scale of prices now prevailing. Speeches were made by President Isaac B. Lozier and Vice-President Hoffman, George Merritt, Isaac C. Chapman and Fred V. Carpenter, of the local association, Mr. Holteran, of Cornwall; Mr. Loughran, of Fishkill Landing, and President Thorpe, of the Syracuse Retail Druggists' Association. In response to an invitation the next annual meeting of the Newburgh Association will be held at the Holland Hotel, Fishkill landing.

BOGERT & HOPPER BLAZE.

A disastrous fire occurred last Wednesday in the building occupied by Bogert & Hopper, manufacturers of twined wood boxes, at 162 William street. The loss on the stock, although heavy, has not been estimated. Mr. Bogert stated, however, that the damage would be fully covered by insurance, which amounts to \$9,900. The temporary office of the firm is at 133 William street, the former quarters of the Eli Lilly Co. Bogert & Hopper have occupied the building at 162 William street for about ten years, and are well-known to the drug trade.

FIGHT MRS. POTTER'S WILL.

Boston, Feb. 7.—The will of Mrs. Sarah E. Potter, widow of the old-time druggist of the former Boston firm of Weeks & Potter, may be contested. Mrs. Potter, who died only a few weeks ago, left generous sums to charities and educational projects, and with other bequests figured into the millions. But now "a cousin once removed," as the allegation states, declares that she was overlooked. Some of the relatives would like to compromise; others are for the courts and a battle, while trustees of institutions endowed by Mrs. Potter state that legally they may not accept a bequest less a reduction.

MASSACHUSETTS EXAMS.

Boston, Feb. 7.—Five examinations were held by the Massachusetts State Board of Registration in Pharmacy during January, and in all thirty-nine candidates were examined. Of these fourteen succeeded in passing, as follows: David L. Burdo, Boston; William J. Costello, Boston; James P. Williams, Brookline; Charles W. Lowe, Malden; Max G. Hirshon, Chelsea; George W. Norwood, Spencer; Robert A. Newton, Southboro; Charles K. Breena, Lowell; Alvin F. Brown, Concord; Robert B. Allen, Great Barrington; Adelbert C. Ashley, Arthur C. Boardman and Charles E. Higham, all of New Bedford; James E. Lynch, Bethlehem, N. H.

BILL TO AID STORE CHANGES.

Boston, Feb. 7.—A bill has been introduced in the legislature to make it possible for pharmacies to conduct business temporarily by a person who is a qualified registered pharmacist, even though not the owner or part owner of the store. Under present laws regarding ownership and registration, a good-paying place of business often has to be closed up for a time while some prospective buyer is looking into its condition and prospects. If the store could be kept open in charge of a salaried clerk, its favorable chances of success would be far better emphasized.

RHODE ISLAND BOARD REPORT.

Woonsocket, R. I., Feb. 6.—In the report of the committee on public institutions, in the House, there was an abstract of the thirty-fifth annual report of the State Board of Pharmacy, in which it was shown that fifty-three candidates had been examined during the year, one passing the examination as registered pharmacist, and twenty-two as registered assistants. The total number of registered pharmacists in good standing Jan. 1, 1905, is 311 and of registered assistants, 182. The College of Pharmacy is in successful operation and doing excellent work. The Board has increased the standard of proficiency required of students for registration. The report was referred to the joint committee on public health.

IN CUMBERLAND CO., MAINE.

Portland, Me., Feb. 4.—The Cumberland County Pharmaceutical Association held its annual meeting and banquet last week at Riverton. The banquet was the crowning feature. The following were present: James T. State, James A. Broc, John Williamson, E. W. Murphy, E. W. Stevens, J. B. Higgins, G. W. Merrill, Walter I. Drew, Theatra Hilton, Fred A. Turner, Gray E.

Hill, John M. Shaw, Edw. E. Ulrick, D. C. Adams, F. H. Gallison, C. A. Simmons, Frank W. Jewett, A. P. Clark, A. P. Cook, L. K. Paine, Fred B. Thompson, G. H. Wymau, Frank L. Winship, G. R. Ballard, Geo. O. Tuttle, Asa F. Abbott, F. H. Power, John S. Quinn, Thomas F. Devine, J. F. Sheehan, H. K. Wasbourne, J. H. Turner, F. M. Allen, William E. Hurlburt, D. M. Rand. Officers elected were: President, Edward W. Murphy; vice-presidents, Chas. A. Simmons, Frank L. Winship, Edward W. Brown, Edward A. Hay; secretary, John Williamson; treasurer, James A. Broc.

BAY STATE NOTES.

—A fire in the Peabody building, in Washington street, Salem, destroyed the store of Joseph I. Moulton. Loss, about \$6,000, covered by insurance.

—Two charges of violation of the liquor laws were brought against Frank S. Preble, a Haverhill druggist. He pleaded guilty to selling liquor to a minor.

—Francis A. Goodhue, dealer in aniline dyestuffs, in India street, Boston, died suddenly, in his office, from a stroke of apoplexy. He was a native of Brooklyn.

—Nathan E. Mayhew, a veteran of the Civil War, is dead in New Bedford, of apoplexy. As a young man, before the war he went into the drug business, and continued in it after the war.

—Boston employees of the Moxie Nerve Food Company have formed a social society. The officers are: President, H. C. H. Parker; vice-president, James Mitchell; treasurer, Samuel E. Richards; secretary, Louis E. Greene.

—Herbert Eyles, of Marlboro, an apothecary in the United States Navy, has applied for discharge, in order that he may take up special studies in pharmacy and chemistry, probably at the Massachusetts College of Pharmacy, in Boston.

—Since before last May the druggists of Woburn have waited patiently to hear from their application for licenses of the sixth class. At last the City Council has granted those of Samuel Highley, George L. Robbins, Daniel W. Kelley, Chester F. Jones and William E. Doyle.

—The Milford Pharmaceutical Association, at the annual business meeting, elected these officers: President, L. A. Lamson; vice-president, A. H. Sweet; treasurer, J. Allen Rice; secretary, A. B. Morse; executive committee, C. H. Collins, Vice-President Sweet and A. C. Nason.

—Out of respect to David Dewar, long the head clerk and cashier of the J. C. Ayer Company, the entire plant at Lowell was closed one day from noon until three in the afternoon, during the funeral of Mrs. Dewar, wife of the cashier. She was well known to most of the employes.

NEW HAMPSHIRE EXAMS.

Concord, Feb. 6.—Secretary Geo. F. Underhill announces that the third quarterly meeting of the New Hampshire Commission of Pharmacy will be held at the State House here, on April 26. At the second quarterly meeting held in Manchester, January 25, the following candidates were successful: Seniors: Paul V. Rockwood, Dover, N. H. (now Boston); James C. Lynch, Bethlehem, N. H.; Harry A. Whitton, Manchester, N. H. Junior: Fred L. Howe, Concord.

P. A. R. D. IN SESSION.**Encouragement From Organization Was the Keynote of the Meeting.**

RECORDS IN NEW MEMBERSHIP ARE EXPECTED DURING THE YEAR.—INCREASED DUES CAUSE NO COMPLAINT.—CAMPAIGN AGAINST THE SUNDAY BLUE LAWS RECEIVES THE ASSOCIATION'S SUPPORT.

Philadelphia, Feb. 7.—There was an unusually large attendance of pharmacists at the February meeting of the Philadelphia Association of Retail Druggists, held last Friday afternoon at the College of Pharmacy. President Thomas H. Potts opened the meeting, and before taking up the regular order of business, Recording Secretary N. A. Cozens called the attention of the members to an infraction of a rule of the National Association, that is, the failure of druggists in making up prescriptions to put on them the national cost mark. Mr. Cozens urged the necessity of instructing clerks as to the importance of the cost mark on each prescription.

Chairman A. J. Frankenberger, of the committee on membership, stated that there were about 250 druggists in the city who were still outside of the association and that he proposed by the end of the year to have enrolled at least fifty per cent. of that number. This increase would be greater than that of last year, which was the best in point of growth that the organization had known.

ASSOCIATION'S MANY FRIENDS.

An encouraging report was made by Organizer E. C. Bottume. He declared that among druggists in and out of the association there had never been the friendly feeling toward the organization that was shown at present. Although the annual dues had just been increased from four to eight dollars, he had found no objection to paying the advance. Where trouble had been expected there was absolutely none.

The financial secretary reported collections for the month, which with the balance from January, amounted to \$1,070.35, the best showing for any month.

TO REPEAL BLUE LAWS.

Charles P. Fields, representing the Northwest Business Men's Association, addressed the members, and urged them to join the movement in favor of repealing the old Blue Laws of Pennsylvania, which

"Wow!"

prohibit Sunday selling. A committee will go to Harrisburg in the course of a few days to interview members of the legislature, and recommend a bill repealing such old-fashioned laws. President Potts named W. H. Bell as the representative of the P. A. R. D., on this committee.

Chairman Charles Rehfsuss, of the schedule committee, reported that work on the new schedule was progressing, but the list was still incomplete. The telephone and press committee reported its hopes to secure from the telephone companies a universal commission of twenty-five per cent. on automatic phones and a similar rate on all newspaper advertisements received.

AS TO CONTRACT VIOLATIONS.

Secretary Cozens read a letter from the Peruna Drug Manufacturing Co., in answer to one he had sent them complaining of the actions of certain pharmacists who still sold Peruna below the price, eighty-three cents, stipulated in the new contracts. This letter stated that if efforts to have the parties in question sign the contracts were in vain, they should be reported to the company. Further the letter stated:

"All dealers who have signed our contract are expected to maintain the eighty-three cent price in large cities and by so doing, while they may suffer at the outset, the reaction will be in their favor when the cutters have exhausted their stocks and they are unable to secure further supplies."

The following resolution was adopted:

"As it is well known that the Munyon Homeopathic Remedy Co. has in the past conducted its business in such a way as to compel druggists to sell their goods at a loss, and

"Whereas, They now ask us to assist in distributing their goods by a plan which will be detrimental to the interests of our members, therefore, be it

"Resolved, That this association is opposed to their present plans and we recommend the M. H. R. Co. to adopt the full price, serial numbering, penalty clause contract plan in marketing their products."

Another resolution recommended the proposed amendment to Section 5, act of 1887, now before the legislature, making it necessary that every applicant for a certificate as a registered pharmacist be a graduate of a reputable college of pharmacy. The proposition to change the composition of the executive committee so that in the future it shall consist of the chairmen of the fourteen auxiliaries of the city, and one member elected by the association itself, was also adopted. A corresponding change in the by-laws was ordered made.

SYRUP BILL PROGRESSES.

Pittsburg, Feb. 4.—Every indication points to a successful issue for the bill now pending before the House of Representatives at Harrisburg, entitled, "An Act to Prevent the Manufacture or Sale of Unwholesome Fruit Syrups, Prepared Fruits and other Fruit Products, and Providing for the enforcement thereof." The bill has been reported favorably by the committee on public health and sanitation.

WHAT AILS NEW YORK?

Mr. Pritchard Tells of Difficulties of N. A. R. D. Organization.

Pittsburg, Feb. 4.—E. E. Pritchard, former president of the N. A. R. D., has made a pungent reply to the question, "Why is it so much more difficult for the N. A. R. D. to gain a foothold in Greater New York than in other cities?"

He says: "That the city of New York needs organization among its many hundreds of retail druggists as badly as any city in the country no one will deny. We refer to organization for protective purposes, under the N. A. R. D. banner. So far as organization is concerned, New York City has a plenty. It is the most numerously organized municipality in the world. We have never been able to find any one who could correctly state just how many different societies it really does have. But there have never been any of them, so far as we have been able to ascertain, that had any object in view other than the simple fact of being organized. In protection and other trade matters they have always seemed to have been at sea, and, up to the present movement, every effort to get the drug trade swung into the great National Association has proven futile.

"One of the greatest reasons for this, to our mind, has been the seeming inability of the members of the trade to grasp the breadth of the situation."

TRIED A KAFFEE-KLATSCH.

Philadelphia, Feb. 7.—The "kaffee-klatsch" of the P. A. R. D. came off according to schedule, last Tuesday evening, and those members who contributed to the success of the affair were congratulated on all sides. There were nearly 200 druggists with a few representatives of the wholesale trade present. S. W. Strunk presided at the feast and called for speeches in clever little original four-line verses.

Among those who responded were President T. H. Potts, ex-President W. H. Foley, ex-President Charles Leedom, James C. Perry, Recording Secretary N. A. Cozens, Financial Secretary C. W. Shull, Treasurer George W. Fehr, W. E. Lee, J. N. G. Long, Dr. A. T. Pollard, J. P. Frey, A. J. Frankenberger, R. H. Lackey, D. E. Bransome, and Messrs. Duffy, Huhn, J. Leyden White and others.

This kaffee-klatsch is the first of a series of social entertainments to be held by the association this year. On March 7, there will be a musicale and dance in Mercantile Hall.

NEW SCHEDULE IN PITTSBURG.

Pittsburg, Feb. 4.—Announcement is made that the Western Pennsylvania R. D. A. has succeeded in forming a very satisfactory schedule on toilet articles, perfumes and soaps, which has been adopted by all the leading department stores in Pittsburg and Allegheny, with the exception of one, that of K. Solomon & Co. The manager of this store, it is averred, requested that the schedule be held open until after the holidays. He promised to consider the matter then. But now he refuses to concur, and blocks an agreement between the druggists and depart-

ment stores, because it was the understanding that everyone directly affected must sign the contract before it becomes operative.

BANQUET AT TRENTON.

Trenton, N. J., Feb. 6.—The fourth annual banquet of the Trenton Druggists' association was held last Monday evening. The members present were George Pierson, of Hopewell; Dr. Walter Madden, Dr. Samuel Freeman, Dr. Charles H. Holcombe, Dr. Ireneus M. Shepherd, Dr. Arthur M. Barrows, Albert Holcombe, D. E. Stretch, C. Brophy, George T. Fitzgeorge, S. G. Scarborough, Charles Young, Howard Richards, C. H. Thatcher, T. Keopie, Charles Scott, W. Scott Taylor, John J. Strasser, Howard Goodenough, Andrew Farley, Albert West, A. L. Updyke, Frank Birt, Lewis Samuel Vincent, Oscar Davison and Gilbert D. Laird. George Fitzgeorge was master of toasts. Messrs. Stretch & Davison were the committee.

F. H. LALOR ASSIGNS.

Trenton, N. J., Feb. 7.—Frank H. Lalor, the North Warren street druggist and former postmaster of this city, has made an assignment in favor of his creditors—Gilbert D. Laird, druggist of 1,000 South Broad street, was named as assignee. Mr. Lalor's liabilities are fixed at \$15,000 and his assets consist of the stock in his drug store, valued at \$2,000. The greater part of the liabilities is made up of endorsements on notes as follows: First National, \$13,000; Broad Street National, \$2,000; Trenton Trust Company, \$2,000, and Trenton Banking Company, \$500.

Mr. Lalor entered the drug store of G. A. Mangold, in 1872, an in 1874 he engaged in the drug business for himself, purchasing a half interest in the wholesale drug establishment of George F. Wilson. He conducted two stores at one time, one on the corner of Broad and Market streets and the other at 12 North Warren street. In later years he confined his energies to the store at 12 North Warren street. His lease on this store expires on April 1, and Mr. Lalor secured the store at 7 West State street in which to conduct his business.

PLIGHT OF INSECTICIDE CO.

Baltimore, Feb. 4.—Upon complaint of Leamon W. Leach, an order was signed January 31, by Judge Dennis in the Circuit Court, No. 2, requiring cause to be shown by February 10 why a receiver should not be appointed for the Leach Insecticide Company. The bill of complaint states that the company was incorporated September 8, 1903, with an authorized capital of \$15,000, divided into shares of the par value of 85 each, and that the business was successfully conducted until last June, when it was practically discontinued. Mr. Leach, it is alleged, owns 1,910 shares of the capital stock, besides which the company owes him \$685.82 back salary. The company has no funds with which to pay its debts, it is alleged, and is hopelessly insolvent. It is stated in the bill that the company has a large stock of merchandise on hand and other property, which is being damaged because of failure to look after it, and that no effort is being made to protect the creditors.

CHASES BURGLAR BAREFOOT.

Baltimore, Feb. 6. Druggist Frederick Lambdin, North and Druid Hill avenues, had an exciting chase on the night of January 22 after a supposed burglar who had been robbing the slot-machines in front of his store. Mr. Lambdin did not stop to put on his socks and shoes, but darted out of his side door barefoot, armed with a revolver. He blazed away, and caused great excitement. The robber finally disappeared in one of the side streets, but about ten minutes or so later a young man named William S. Shockney rang the bell of Dr. E. A. Smith, 1605 West North avenue, not far away from Mr. Lambdin's store, and asked that a wound in his temple be dressed. He said that he had been hit with a cane in a fight, but to the doctor the injury looked like one produced by a bullet. Shockney was arrested and charged with the attempt to break open the slot-machines. Mr. Lambdin says that in twenty-seven months the machines have been raided not less than twenty-one times. He had rigged up a burglar alarm, which would be set ringing whenever anyone tampered with the machines, and this is what aroused him on the night in question.

MAKE A DRUG STORE MAP.

Baltimore, Feb. 4.—A labor of great convenience to the representatives of drug houses who are sent here to look after the wants of retail pharmacists is being performed by Dr. John G. Beck, of the Calvert Drug Company. This is the laying out of the city into routes, so arranged that Baltimore can be covered by a salesman without undue loss of time and energy. To facilitate the work a large map was obtained and the location of every drug store was indicated by black-headed pins. In this way all removals and changes of location can be noted immediately. The routes are mapped out with reference to the most convenient car lines and other considerations, so that a salesman can cover his territory in the smallest possible time. There are over three hundred pharmacies in Baltimore.

GREET NEW POSTMASTER.

Baltimore, Feb. 4.—There was a big gathering of druggists at the post-office yesterday, those who made up the crowd having charge of branch post-offices. The occasion of the assemblage was the induction into office of the new postmaster, W. Hall Harris, a lawyer, recently named by President Roosevelt to succeed S. Davies Warfield, and the call was made necessary by the formality of transferring all the branch offices to the new official. Every druggist who has a post-office had to sign papers making the transfer of the postal property in his possession to the new postmaster. Incidentally, Mr. Harris also extended greeting to all the pharmacists.

IN THE OHIO VALLEY.

—Dr. A. J. Hocking, aged forty-seven, for twenty years in business in Cincinnati, died last week, after a week's illness. His death resulted from paralysis.

—The drug store of Emil Zorn, at Twelfth and Elm streets, Cincinnati, was robbed of twenty-three boxes of cigars and forty-nine chamolis skins. The thief was detected leaving the place, and dropped most of the plunder.

NEW CHECK ON SUICIDES.**Ordinance That Demands Two Customers for Each Acid Sale.**

Cincinnati, Feb. 6.—Legislation to restrict the sale of carbolic acid on account of its frequent misuse by those having suicidal intent, is requested in resolutions adopted by the Board of Control of the O. V. D. A., and submitted to the City Council, last week. The druggists desire to co-operate with Council in restricting its sale to legitimate purposes only. They suggest:

1. That Council allow the sale of a 5 per cent. solution without restriction.
2. That they allow the sale of the concentrated acid only on a physician's prescription, and also at the request of two adult persons in the presence of each other, both of whom are to be required to answer proper questions as to its intended use. The matter was referred to the committee on health.

"The suggestion of the O. V. D. A., regarding the sale of carbolic acid, is a good one, I think, and it will probably be embodied in an ordinance," said Councilman Urban, one of the leaders in the city's legislative body. He favors placing restrictions on the sales of other poisons, also.

BALTIMORE NOTES.

—Among the visiting druggists in Baltimore last week were J. J. Heinrich, Alexandria, Va.; Robert S. McKinney, of Taneytown, Md., and J. R. Pope, Cleveland, O.

—Hugo Kantowitz, of the Deutsche Apotheker Zeitung, of New York, was in Baltimore last week and called on a number of druggists, putting in some time also on the wholesale and manufacturing houses.

—The colored porter employed by Druggist Owen C. Smith, Pennsylvania avenue and Hoffman street, who stole \$10 put on the counter for a postal money order, was sentenced last week to one year in the penitentiary.

—The Wedgewood Club varied its program somewhat last time, and instead of the usual monthly dinner, gave a theatre party. Some twenty-six of the members occupied the first rows in the Maryland Theatre and were especially singled out by Comedian Frank Bush and others of the company for jibes. After the performance the Wedgewoodites went to a cafe on North Eutaw street for lunch. The next meeting will take place at the St. James Hotel.

O. VAL. D. A. PLAYS EUCHRE.

Cincinnati, Feb. 6.—The euchre and dance given by the O. Val. D. A. at Odd Fellows' Temple, was a success in every way. Several valuable prizes donated by wholesale firms, were distributed. Over five hundred couples were present and a handsome sum was realized for the association's treasury.

E. J. Roth, of Charleston, W. Va., has sold his interest in E. J. Roth & Co. to Jas. Carr, but the business will be continued under the name of the Roth Drug Co. Mr. Roth has gone to New Mexico because of his falling health.

SUED FOR MISCHIEF MAKING.

Cincinnati, Feb. 6.—George E. Meyers, a druggist at Loveland, O., filed suit in the Common Pleas Court, last week, against G. H. Lounsberry, a prominent merchant in this city, who lives at Loveland, for \$25,000 damages. It is alleged that the defendant at different times during the past few months endeavored, by his encouragement and otherwise, to stir up quarrels and a suit and other controversies between Meyers and other residents of the village, and also sought the arrest and prosecution of the druggist, with intent to injure him in his business. It is said that the defendant had endeavored to get persons to go to the drug store and buy liquor, or try to do so, expecting to get a chance to prosecute him for the illegal sale of liquor in a "dry" town. It will be remembered that Meyers was arrested last fall on a charge of selling liquor in violation of the local option law, but at the trial the prosecution fell flat.

MICHIGAN NOTES.

—Cabnet and Laurium druggists have agreed to close their establishments at 9 p. m. until April 1.

—A midnight thief dusted out the tills in the cash register of the Walter K. Schmidt Co., Grand Rapids; loss, \$40.

—Levi Thomas, the Cedar Springs druggist, has married. His bride is Miss Rosamond Bauman, of Traverse City.

—Druggists of the village of Lowell have joined with the furniture and hardware stores in an early closing movement.

—The City Drug Store, of Clare, Chas. L. Pickel, proprietor, is now located in the new brick McKinnon block, which has arisen out of the fire ruins of last summer.

—Dr. Arthur Toal, owner of the drug store and bank at Peck, and a physician with a large practice, is dead from pneumonia, aged 48 years. He was for many years a resident of the place, and had a wide acquaintance throughout the State.

—Some thief in Petoskey has stolen from the Fallas Drug Store, in that city, the collection box of pennies for the support of the Children's Home at St. Joseph. It was only a small cradlerful of coins, left on the cigar case, yet the depth of meanness in the theft has prompted the Fallas Store to offer \$25 for information leading to the arrest and conviction of the culprit.

"Head 'in of"

—Five hundred copies of the new pharmacy bill for Michigan have been ordered printed by the legislative committee, to be sent out to the druggists who are inquiring by every mail as to its provisions.

—Daniel W. Elferdink, former druggist of East Bridge street, Grand Rapids, and now at Alpena, is a bankrupt. Kirk E. Wicks, of Grand Rapids, is referee. Liabilities are about \$3,000, with no visible assets.

—The store of J. B. Collins & Son, at South Frankfort, has been burned to the ground.

—Robert Baker, druggist of Vicksburg, is eighty-one years old and is more active now than are the majority of men at forty years. He was born in the State of New York, taught school and served with a Wisconsin regiment during the Civil War. He has been in business at Vicksburg for twenty-seven years, and is known throughout Kalamazoo county as the oldest and strongest business man of that section.

—Chas. H. Frantz, of Center avenue, Bay City, was quietly married recently to Miss Edith F. Trahan, of Saginaw.

INSANE AND A SUICIDE.

Merrill, Mich., Feb. 4.—John Murray, at one time a prosperous pharmacist of this place, hanged himself in a cell in the Saginaw county jail, with a rope made out of blankets. He had been sick and insane for the past three months, and his family had been trying to care for him at home. He became violent, however, and it became necessary to put him under guard. He was awaiting a hearing as to his mental condition when he killed himself.

BIG WOOD ALCOHOL PLANT.

Manistique, Mich., Feb. 3.—The Superior Chemical Company's plant at Newberry is now in commission. It is operated in connection with the Newberry iron furnace, which it supplies with charcoal, the product of fifty two ninety-cord kilns. The chemical works is one of the largest and most modern in the State, and when operated to its capacity will produce 30,000 gallons of wood alcohol per month, in addition to other by-products secured from the smoke in the kilns.

DRUG BILL IN ILLINOIS.

Chicago, Feb. 4.—A movement is said to be on foot to bring before the legislature of Illinois a bill to regulate the sale and distribution of cocaine, morphine and other narcotic drugs. The suggestion is that the powers of the Board of Pharmacy should be amplified to include a fuller supervision of the sale of such drugs, such regulation to include measures of control by the Board of Pharmacy not now given to that body. It is said that the Board and its representatives are conferring with regard to the terms of such a proposed enactment, and that results will be forthcoming soon.

A Fort Worth druggist is in receipt of a curt and haughty note, in an angular feminine hand: "I do not want vasoline but glycerine. Is that plain enough? I person you can spell."—Texas Med. Gazette.

SOCIABILITY IN CHICAGO.

Chicago, Feb. 6.—Several good entertainment features, including a six-round boxing bout, were among the amusements provided at the Chicago Drug Social Club's meeting last week. The boxing was between John Krone, the 280-pound druggist, and Harry Gilmore, Jr., a 135-pound boxer. The mill was declared a draw by the referee, each man winning merited applause. Krone was a veritable Gibraltar, resisting the most strenuous onslaughts of his lighter opponent.

Sandwiches, beer, coffee and cigars were served. Guests came from all sections of the drug trade. H. E. Eddy sang several songs, and H. A. Antram entertained those present with some of his readings from the poetical works of James Whitcomb Riley. Eight numbers were presented by professional vaudeville artists.

The Chicago Telephone Co. gave a \$50 donation, while one of \$25 was given by the American Soda Fountain Co.

Speeches were made by John J. Straw, Henry P. Schayser and George Mathison.

The affair was held in the Sherman House and was a great success.

SPENCE-M'CORD MERGER.

La Crosse, Wis., Feb. 4.—The Spence-McCord Drug Company has been organized with a capital stock of \$100,000. It is a consolidation of the James McCord Drug Company and the T. H. Spence Drug Company. It began business February 1, in the quarters of the McCord Company. The officers of the consolidated concern are: T. H. Spence, president and treasurer, and A. H. Spence, secretary.

In 1864 James McCord associated himself with J. H. McCulloch, of Milwaukee, and John Rice, of Milwaukee, and the firm of McCulloch, McCord & Co. was formed, the firm purchasing the wholesale drug business of Uriah Parry, Jr. A few years later Mr. Rice withdrew from the firm and in 1882 Mr. McCulloch retired, leaving Mr. McCord in sole ownership of one of the largest houses in the northwest. Last spring a stock company was formed, known as the James McCord Drug Company. Mr. McCord died December 8, last.

T. H. Spence came to La Crosse in 1874 and entered the wholesale drug business. He incorporated in 1892 as the T. H. Spence Drug Company.

CHICAGO NOTES.

—F. H. Peck, until recently with the United States Marine Hospital service at St. Louis, and still more recently stationed at Evansville, Ind., has resigned from the service and accepted a position with Parke, Davis & Co., making his headquarters at the Chicago office and traveling thence to the principal cities of the West and Northwest.

WISCONSIN NOTES.

—The Septicide Company, manufacturers of an antiseptic and preserving fluid, has incorporated at Milwaukee, with a capital stock of \$25,000. Orange Williams, W. A. Walker, Jr., and S. G. Chase are the incorporators.

—Arthur G. Neumeister, Otto C. Neumeister and John H. Look, of Appleton, have organized the Union Drug Company.

—John H. Fiebing, president of the

Fiebing Chemical Company, announces that the company has increased its capital stock from \$20,000 to \$30,000, with the intention of enlarging the business.

—Horace Stone, a pioneer druggist of Racine, is in a critical condition as the result of a fall. He sustained internal injuries and his friends have been given to understand that there is small chance for his recovery.

MINNEAPOLIS R. D. A. ELECTION

Minneapolis, Feb. 6.—Virgil Dillin is the new president of the Minneapolis R. D. A. E. M. LaFenotiere is vice-president, Matt Wittich, secretary, and J. W. Thompson, treasurer. The executive committee is continued. Mr. Dillin was chosen by acclamation and the most beneficial results are expected from his administration. The association will appoint a special committee to watch cocaine legislation.

Incidentally, it may be noted that the Dillin Drug Co. and A. R. Crowell have consolidated, and bought the Sanderson stock at 828 Nicollet avenue, and will form a stock company. The Dillin store at Washington and First streets, and the Crowell store at 1012 Hennepin avenue will continue.

ATE A MEDICINE SAMPLE.

Minneapolis, Feb. 4.—This city has just had an object lesson in connection with the indiscriminate distribution of patent medicine samples. A two-year child of William H. Cowles, recent Republican candidate for the mayoralty nomination, narrowly escaped death from eating a sample. This case comes under the proposed law introduced in the legislature by Representative W. C. Fraser, of Rochester, which makes such distribution of drugs a misdemeanor.

INDICTED IN NEW LONDON.

St. Paul, Feb. 6.—Harold Swenson, a leading druggist and prominent citizen of New London, has been indicted on the charge of illegal liquor selling. The finding of the grand jury astonished most of the community, as Mr. Swenson had not been generally known as a man of the type commonly called "blind piggers." New London is a prohibition town.

CARBOLIC ACID IN MISSOURI.

Jefferson City, Mo., Feb. 4.—To make it difficult for prospective suicides to get carbolic acid, Representative Silver, of Cole, has introduced a bill requiring druggists to register the names of all persons asking for the poison.

"We think," said Mr. Silver, "if druggists insist on learning the name of the applicant, and for what purpose the acid is to be used, that occasionally we can save a life. That is the sole purpose of this measure."

IOWA DRUGGIST IN JAIL.

Cedar Rapids, Ia., Feb. 6.—The drug store situation in Benton county is occupying the attention of the local court for at least a week. It is reported that the owners of nearly every drug store in the county have been arrested, charged with unlawful sales of liquor. The outcome is watched with much interest by the people of Benton county and in various other localities.

FOR NEW PHARMACY LAW.

California to Require Four Years' Experience.

Sacramento, Feb. 1.—Dr. J. J. Crowley, secretary of the State Board of Pharmacy, is here to help two bills affecting the pharmacy law of the State. One is the outgrowth of the recent investigation of the State Board of Pharmacy by the commission appointed by the governor. It provides that henceforth no person shall be examined or registered as an assistant pharmacist, and that all persons now registered as assistant pharmacists shall be registered as licentiate when they establish to the satisfaction of the State Board of Pharmacy that they have had four consecutive years' experience in a pharmacy in this State after the passage of the act under the supervision of a registered pharmacist.

It is also provided that no member of the Board shall teach pharmacy in any of its branches unless it be as a teacher in a public capacity in a college of pharmacy.

The other bill adds carbolic acid to the list of poisons the sale of which is prohibited except upon a physician's prescription. It is provided, however, that carbolic acid may be sold in a solution containing not more than five per cent. of crystallized carbolic acid and not less than ten per cent. of alcohol, the antidote to carbolic acid. It is thought this restriction will greatly reduce the number of accidental cases of poisoning from carbolic acid, not to mention deliberate attempts at suicide.

DEATH OF JAMES TOPLEY.

San Francisco, Jan. 30.—James Topley, pioneer Californian, druggist, and one of the most honorably known men of the State, died at his home in Vallejo, on the 20th.

He was born in Dublin, Ireland, seventy-nine years ago, and while still a boy went to Canada to stay with relatives. Later he lived in New York, and when the Mexican War broke out enlisted in the First Regiment of New York Volunteers. Mr. Topley served with distinction throughout the war, and was mustered out at Fort Hamilton in 1848. He went to Mare Island the following year. He was a member of Naval Lodge, No. 87, F. & A. M., also of the California Association of Mexican Veterans. For many years he had been trustee of the Vallejo Presbyterian Church.

TO LIMIT CLERKS' HOURS.

Sacramento, Cal., Feb. 1.—The bill fixing ten hours as a day's work for a drug clerk, introduced by Senator Wolfe, has been recommended for passage. Congressman-elect Julius Kahn spoke for it. He said that San Francisco has an ordinance, adopted in 1904, giving the hours of the drug clerks at 130 in every two weeks, which is two hours less than provided for in the pending bill. While the ordinance takes care of the San Francisco drug clerks the latter want all the drug clerks in the State to be also benefited by a general law, as in New York.

Ultral oil was first discovered and named in 1888.

AMONG THE COLLEGES

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, Feb. 3.—About \$100 was realized by the theatrical benefit given at the Walnut Street Theatre. The Athletic Association is the beneficiary and it is likely that another similar affair will be held shortly.

The prospect for athletics at the college this spring is particularly bright, owing to the large amount of good material to choose from. As a result of a shake-up in the bowling team, the college team jumped from fourth to third place among the teams in the Wholesale Drug League.

Manager O. G. Hancock has issued a call to candidates for the basketball team, as the annual game is being arranged with the team from the Philadelphia Dental College. Of last year's crack team which won the medical championship of Pennsylvania, there are at college this spring Captain McCambridge, French, Hawes, Bradshaw and Dawson. Practice will commence this week.

For the first time in its history the college will be represented this year by a baseball team. There are half a dozen experienced players as a nucleus for a nine, and Manager Joseph Houck will call out the candidates as soon as weather permits out-door work.

UNIVERSITY OF MICHIGAN.

Ann Arbor, Feb. 4.—With the beginning of the new semester, an opportunity will be given all pharmacy students to attend a series of lectures by prominent pharmacists, pharmaceutical manufacturers and others. Among those who are promised to address us are: Mr. J. Hungerford Smith, manufacturer of fruit juices, Rochester, N. Y.; his subject will be "True Fruit Flavors," and will be illustrated with lantern slides. Prof. Fillibert Roth, "Turpentine Orcharding in the Southern States." Prof. Roth was formerly connected with the Bureau of Forestry, and is now professor of forestry in the university. Charles F. Mann, retail pharmacist, of Detroit, "Organization."

Raphael del Valle, Ph.C., '01, is chemist for the Board of Health of San Juan, Puerto Rico.

Dr. Prescott's condition continues to improve very satisfactorily.

Several samples of an adulterant of pepper, used by the skilful adulterators of that article, have been received by Dr. J. O. Schlotterbeck, professor of pharmacognosy. He also received several whole, fresh cacao fruits from L. M. R. Guillermet, of San Juan, Puerto Rico. Mr. Guillermet was a member of the class of '04, and is at present employed in his father's large wholesale and retail pharmacy. The cacao fruits were grown upon his father's property.

UNIVERSITY OF WISCONSIN.

Madison, Wis., Jan. 21.—The Board of Regents of the University of Wisconsin will ask the legislature now in session for

a large sum of money for improvements directly in line with the work of the college of pharmacy. President Van Hise has consistently, during the short time he has been at the head of the State University, insisted upon broadening the scope of the science departments, and in all this the pharmacy school has been the chief beneficiary. Now the plan is to spend about \$150,000 in building a new wing to the biological laboratory. The chemical laboratory has recently been put in fine shape by additions of new apparatus and appliances.

BAYLOR UNIVERSITY.

Dallas, Tex., Jan. 31.—Under an agreement effected last June, Baylor University at Waco established a medical department in Dallas by acquiring the medical and pharmacy departments of the University of Dallas, the last named having been established in 1900. The course extends over two years, leading to the degree of Ph.G. To receive the degree, however, the student must not only have satisfactorily completed the course, but he must have attained the age of twenty-one and have had not less than two years' practical experience in a drug store. Those who have not had the necessary drug store experience may receive the degree of "bachelor in pharmacy." Women are admitted under the same conditions as men.

Professor E. G. Eberle, a well-known member of the A. Ph. A., is dean of the faculty, and associated with him are Julius Reverchon, botany; Ernest Dunlap, materia medica; J. T. Wells, physiology; Pierre Wilson, histology and bacteriology.

Prof. Reverchon has a noted botanical collection, which includes herbarium specimens of every plant known to grow in Texas, and also an extensive variety of foreign plants.

The commencement is scheduled for April 4, and the final examination will begin March 21.

UNIVERSITY OF KANSAS.

Lawrence, Kan., Feb. 4.—The final examinations for the first half year's work were held during the week ending January 27. Over eighty per cent. of the pharmacy students passed in all their work.

The work given in the pharmacy department during the last few years has placed the school among the best of those in the country. Prof. L. E. Sayre, deo., and a member of the Committee of Re-

"Didn't do nuttin' to 'm—just hed a fit."

vision of the U. S. Pharmacopæia, and other members of the faculty have worked hard to accomplish this end, and they have the thanks of the students and alumni association.

Prof. Sayre delivered a lecture before the students of the University Medical College at Kansas City, Saturday, Jan. 28.

The second of the several parties to be given by the pharmaceutical society of the University of Kansas was given in Pythian Hall, Friday evening, Jan. 22. Forty couples danced to the music of Sommer's orchestra. The entertainment marked the close of the mid-winter examinations, and all came pledged to spend the evening in merriment. These parties are exclusively for pharmacy students and are provided by a committee appointed by the president of the pharmaceutical society. They have been a great success and have added much to the social standing of the pharmacy department among other departments of the University. The last entertainment will be given in the F. A. A. Hall. A few of the friends of the pharmacy students will be invited.

MEDICO CHIRURGICAL COLLEGE

Philadelphia, Feb. 6.—Most successful was the reception and smoker given by the Alumni Association of the Department of Pharmacy, Medico Chirurgical College, last Wednesday evening, at the University Club. The guests were members of the faculty and the graduating class. Covers were laid for one hundred. S. J. Rhove, Ph.G., presided at the supper and among those who responded to toasts were W. W. Rodawig, John R. Minehart, H. H. Mentzer, dean of the department of pharmacy; Prof. C. H. Shaw, Prof. John V. Shoemaker, Harvey E. Kendig, Dr. S. Egbert, dean of the medical department, and Dr. M. C. Thrush.

Dr. Henry Fisher, professor of materia medica, in the department of pharmacy, is seriously ill at his home, 345 East Dauphin street.

REIMPORTED CIGARS AND CIGARETTES.

Hereafter all reimported cigars and cigarettes will have customs stamps affixed reading, "American goods reimported," in accordance with an order from the Treasury Department. Prior to 1901 this was the custom; since then such reimportations have been stamped as manufactured tobacco. The department has now ordered a return to the former method on the ground that the law distinguishes between manufactured tobacco and cigars and cigarettes. Under the first class the law includes by-products of cigar factories, but not cigars themselves.

SOME BUSINESS TROUBLES.

—James A. Rogers' store in Charleston, W. Va., is closed because he is both sick and without a clerk.

—Petition for bankruptcy has been filed at Cleveland by creditors of the wholesale drug and grocery firm of Zimmerman & Co., of Wooster, O. Liabilities, \$66,000; assets, \$65,000.

—Hayward Hooper, a druggist at Fifth and G streets, northwest, Washington, has filed a voluntary petition in bankruptcy. His debts are stated at \$6,339.31 and his assets, \$65,350.

AMONG THE BOWLERS

SCORES TAKE A SLUMP.

A decided slump was noticed in the play of the New York Wholesale League, Monday night. Poor scores were the rule. Only one 200 was made, by Barnes, of Colgate & Co. The results:

Whitall-Tatum Co.	802
Colgate & Co.	878
Whitall-Tatum Co.	837
Lazell, Dalley & Co.	778
Colgate & Co.	739
Lazell, Dalley & Co.	690
Lazell, Dalley & Co.	791
National Lead Co.	802
National Lead Co.	759
Colgate & Co.	795
National Lead Co.	697
Whitall-Tatum Co.	868

BOWLERS TO BE HONORED.

Rochester, Feb. 7.—The Rochester Ph. A. will hold its annual banquet February 9, and the guests of the occasion will be the members of the bowling team of the Buffalo Ph. A. A committee composed of Messrs. Flannery, Hahn and Gifford is arranging for the dinner. The bowlers of the Rochester and Buffalo teams will meet in a match game before dinner.

GOOD TEAM SCORES.

Baltimore, Feb. 4.—Not less than seven scores of 800 and over were made by the Baltimore Drug Trade Bowlers, this week, a number of other totals being close to this mark. There were also various individual scores of 200 and over. The Calvert quintette, however, showed up far from strong; Armor, of McCormick & Co., exhibiting a remarkable let-down with scores of 117 and 106 in two games bowled last Monday. The totals of the week were as follows:

Sharp & Dohme	705	798	747
McCormick & Co.	765	788	703
Davis & Davis	682	824	766
Calvert Co.	650	720	642
James Bally & Son ...	772	806	804
Armstrong Co.	803	785	768

The team standing:

	Won.	Lost.	P. C.
James Bally & Son	37	11	.902
McCormick & Co.	36	15	.706
Davis & Davis	28	17	.622

COULDN'T BEAT CHAMPIONS

Detroit, Feb. 7.—Before the Michigan Drug team and Parke, Davis & Co., No. 1, clashed last week, the P.-D. team had a lead of just one game. The Michigans told their friends to be on hand to witness the humiliation of the champions. The crowd was there, the biggest this winter, but the humiliation was on the wrong foot, for the champions cleared up with their adversaries in three exciting straight games. Now the P.-D.'s have a lead of four games on the would-be champions. To make matters worse, the triple defeat put the second Parke-Davis team

ahead of the Michigans, throwing them into third place. Those who obtained scores of 200 or over during the series were: Willits, of Stearns, 219; Lawrence, 202, and J. Smith, 202, 204, both of P. D., No. 1; Helme, P. D., No. 2, 202; Feeeny, of Nelson, Baker & Co., 207. The scores:

P. D. & Co., No. 1 ..	866	959	873
Michigan Drug Co. ..	804	824	828
P. D. & Co., No. 2 ..	826	864	887
Nelson, Baker & Co. .	774	809	766
F. Stearns & Co.	807	901	814
F. F. Ingram & Co. ...	789	686	855

In the Parke, Davis & Co. Interdepartmental League, the Chemicals have dropped to second place in the point of number of pins, although leading in the number of games won. Comparatively few pins separate the first five teams in the race, the leaders having 36,785, and the fifth team 36,344. The high bowlers of each team for the week were: Held, of Mechanical, 200; Helme, Pharmaceutical, 192; Faigle, General Business, 185; Smith, Chemical, 190; Watson, Publication, 191; Russell, Scientific, 179. The scores:

Pharmaceuticals	722	706	772
General Business	768	773	759
Chemical	747	764	754
Mechanical	781	744	755
Publication	729	791	803
Scientific	748	714	772

SPATULAS SHUT OUT.

St. Paul, Minn., Feb. 4.—The Pills, of the Minnesota Drug Clerks' League, took two games from the Tablets, February 2. Score:

Pills	665	688	769
Bodsgard	—	—	199
Tablets	739	655	729
Muessel	—	—	192

The games of the retail druggists, on February 3, netted a victory for the Pestles, the Mortars getting one game and the Spatulas none. Score:

Pestles	794	853	775
Jelinek	—	—	199
Mortars	733	752	797
Allen	—	—	181
Spatulas	685	729	707
Everett	—	—	184

BRIGHT LIGHTS; BRIGHT TRADE

It is generally recognized that a brightly lighted store attracts customers. Illumination is good advertising. City stores are in a position to use electricity for this purpose, but country establishments are, of course, not usually in a position to do so. They can, however, use some good system of lighting. One favorably spoken of is the Hydro-Carbon Air Light system of the White Manufacturing Company, factory at Chicago Ridge, Illinois. Requests for catalogues and estimates will be promptly attended to by them.

"Why get only five cents a glass for soda?" asked Mr. Butt-in.

"Can't get more."

"But, if you had the fountain in sight of the street you could sell more," insisted the man.

"If I had it in hell, I could sell more," responded the druggist, as he viewed the thermometer.

TRADE SECTION

SALESMANSHIP.

Conjunction of Ideas Made to Pay by Wise Salesmen.

HOW IT WORKS.—VARIETY OF GOODS SHOULD BE SHOWN.—SPONGE SELLING SAID TO BE A GOOD TEST OF A CLERK'S ABILITY.—INFORMATION SHOULD BE GIVEN IF POSSIBLE.

What is salesmanship?

It is often defined as the art of selling a person an article which he does not want. A druggist imbued with the sixth or commercial sense, says of salesmen: "I can hire a man at a dollar a day to hand out asked-for articles. He would be an automaton, of course, but then he would be a dollar a day man. A salesman must be able to sell goods, sell my goods, preferably, but he must show results."

It is this spirit that has stunted the growth of the natural salesman. There is a wider field for the excessively commercial druggist. He need not confine himself to own preparations. The sundry lines carried afford ample opportunities for the exercise of skill in parting the customer from his money. In the rush to boom "own makes," the other lines are neglected. How not to handle trade can best be learned by observation. A man intent on selling goods must be in earnest. No slipshod treatment of the patron should be permitted. A case in point. The proprietor of an Eighth avenue pharmacy sharply reprimanded a salesman in the presence of the writer. It was perhaps a minor thing, yet the corrective influence of a word in time may make a fair salesman of a thoughtless clerk. A fine-tooth comb was asked for by a person at the rear dispensing counter. As it happens combs, etc., are stocked in drawers at the front of the store. The clerk, thoughtlessly walked the full length of the store, picked out a comb perfunctorily and returned to the customer. This article did not suit, whereupon the salesman repeated his initial performance, to the evident disgust of the proprietor, who took a hand. "Either take the combs to customer, or customer to combs," he remarked. That thing is repeated daily, not only in drug stores, but elsewhere. When a man asks for a particular brand of tooth brushes or a certain type of fountain syringe, it is perhaps permissible to show him only that article. But when a broad statement, "I want a comb," is made, why not lead the customer to the combs, or better still, have the combs arranged on trays, so that they may be brought to the customer.

NEVER JUDGE BY APPEARANCES.

Asked what he considered the test of true salesmanship, a Broadway druggist said: "The ability to show and sell bath sponges." He went on to explain that salesmen too often figure a man by the clothes he wears. The request for a bath sponge frequently results in the salesman

showing an article which he thinks the patron able to pay for, without producing the goods the man really wants. In selling sponges the plan that works best is to make it evident that it is no trouble to show goods. Even here the thing can be overdone. Salesmen frequently act on the theory that the hocus-pocus piling of goods in front of the customer may force him to buy. "A forced sale is a lost sale" might well be added to the trade code.

Orientalers are acknowledged to be excellent salesmen. A large antique store in New York that employed oriental salesmen found them the "best ever," except that they were great liars. The secret of their success was that they had, or appeared to have, intimate knowledge of their stock. They had an appreciation of their goods and showed it by the petting of a particular piece of tapestry or a rug. They could and did discuss the merits, yes, even the demerits of a particular article. The writer recollects the statement of one of these Oriental salesmen. After calling attention to the beautiful colors, the texture, etc., of a rug, he exclaimed, "Alas! it will wear so long. That is it; too long."

A TELLING PHRASE.

The same argument applies to some sundries. A fifty cent tooth brush guaranteed not to shed bristles could be said to wear too long. While the tooth brush patron would not be pleased to have a salesman speak of a certain brush as an old acquaintance, he would not be displeased to have the clerk say a word about the care of brushes in general. A caution to get a brush slightly harder than the one in use is not amiss. An injunction to give the brush a good wetting before adding it to the toilet case is apropos. Some salesmen instruct patrons to place the bristles in salt solution before using, to set the bristles and insure a prophylactic brush, they explain. One man, a particularly good salesman, sells three brushes to the one customer. That is not salesmanship. It's hypnotism. His argument is plausible. Says he, "A brush should be given an opportunity to dry. If you're a stickler for cleanliness, you clean your teeth several times a day. Therefore, the bristles of the brush will become soggy through continuous wetting. Get two brushes at least, use them alternately. Have a third brush, of hard bristles and use this occasionally with pumice stone, say once a week."

Wise salesman. He lifts his eyebrows enquiringly after the brush sale has been consummated. "Powder, paste, liquid dentifrice?" he enquires. The fact that the patron has powder doesn't deter. He cites the reasonable statement that a change is good and sells either the paste or a liquid, perhaps both. The interest taken in what was intended originally to be a thirty-five cent sale is well repaid ultimately. Perhaps a bottle of antiseptic eucalyptus wash will accompany the other articles. Incidentally, the salesman's teeth are perfect. He's an "after using" advertisement.

The secret of salesmanship is frequently the application of a conjunction of ideas. As tooth brushes suggest washes and the like, hair brushes suggest combs, hair tonics, bay rum, etc. Sponges permit a casual reference to bath accessories. A few words about sponges, an effort to make the customer understand how to judge a good sponge are appreciated. I dwell upon the fact that the roots of the sponge are more important than the "holes." If the roots are solid, do not appear to be easily torn, the rest is unimportant. The mistake of the average American sponge user is the plunging of a sponge immediately into boiling water. A caution against that and instructions to dry the sponge thoroughly is sensible and is so recognized. Instructions to give the sponge a salt water bath occasionally, to strengthen its texture and disinfect it, would not be resented.

MUST KNOW STOCK.

In large stores where each man is delegated to a department salesmanship, except in the lines in his department, is a hard proposition. With the average druggist it is different. The only disadvantage is the great variety of goods stocked. And no one should set up as a salesman until he knows where things are. One of this city's most successful stores has a national reputation. There the training of salesmen, the selling of goods, are more important than the drug and prescription trade. This store handles the eclat. And it is at once noticeable that there is an air of refinement made possible only by the strictest discipline. False statements are not allowed and asked-for goods are cheerfully sold. Perfumes, toilet articles, etc., are exhibited. Silent salesmanship by showing goods, later supplemented by the tactful work of the human machine, do the rest. People who go there expect to get something nice. And they do. The service is excellent. Speedy, but not too much so. One may have a whiff of various perfumes from a real French Piston Atomizer, may handle goods as much as he or she likes. Customers are not pressed to buy. But once started, a woman is likely to go deeper than she intends. The buyer of a perfume notices the novel atomizer. A query as to price of the atomizer, and presto! she will perhaps purchase one. The tone of the store is distinctively respectful. The class of trade is known. The salesmen, the soda men, all are clean cut and gentlemanly. The peculiar foibles of peculiar women, and men too, are respected. There is no jangle, no noise, no lounging.

SALESMEN BEST PAID.

While it is impracticable for the ordinary druggist to create such an atmosphere, there is still much that can be done to help the salesman. The proprietor may or may not be a good salesman. The clerk should be. The best paid men are not, as is erroneously supposed by the laity, the prescription men. A store in this city pays the head prescriptionist \$20 a week. The salesmen receive the same, and have

less responsibility. These salesmen receive 5 per cent. commission on various "own makes" and toilet articles. Some men average three dollars a week in this way. Speaking of this profit-sharing scheme, a big employer said: "I hire men to sell goods. If I give percentage on 'own goods' they are bound to give them undue prominence. Therefore, I give no commissions. If a man 'makes good' I raise his pay. If he doesn't, I 'fire' him."

A school of salesmanship would be worth while. An interesting curriculum could be devised. It would be mainly instructive on what not to say. "Don'ts" are back numbers. They are read, but not heeded. In a prominent store not long ago, a salesman was holding forth on an "own make" internal preparation. As a clincher he said: "I made this myself, I know what's in it." A glance at the unclean linen, stubby beard, and the consciousness of the unmistakable odor of nicotine, which the cigarette-stained fingers of the salesman confirmed, did not induce the customer to purchase. To the observer that was worth a column of "don'ts." The idea of a bald headed man recommending a "put on hair" preparation is as ludicrous as possible. A salesman limping about with rheumatism, hors de combat because of sore eyes, or with throat wrapped in flannel, is a frequent peculiarity seen in a great city. "Physician heal thyself," is as true as it's true. Before trying to sell goods designed for beauty makers or d'sense cures, convert yourself into a silent salesman, so that you can if necessary, say, "Behold! I have tried these goods, this treatment, and it is good."

SUNBRIGHTS FOOD COMPANY.

We take pleasure in introducing to our readers one of our new advertisers, the Sunbrights California Food Company, of Los Angeles. It is now entering upon its third year, with increasing advertising, increasing detail men and a largely increased business. While its principal offices and factory are located in Los Angeles, it has permanent representatives in other cities. Its principal stockholder is Mr. Ibrahim C. Smith, a multi-millionaire of San Francisco, while amongst its other leading stockholders are Mr. Lucius L. Long, of San Francisco, Mr. H. E. Huntington, the well-known railroad man of New York, San Francisco, and Los Angeles, Mr. J. A. Graves, a millionaire banker of Los Angeles, Mr. W. G. Kerckhoff, a multi-millionaire lumberman of Los Angeles, Dr. Walter Lindley, editor and publisher of the Southern California Practitioner, of Los Angeles, and L. J. Christopher, a very wealthy Los Angeles business man. The president of the company is Mr. L. C. Gates, who is at the head of the legal department of the Los Angeles Title Insurance and Trust Company.

Sunbrights California Food is made of select California grains, the dominant principle being choice barley. It is not a predigested food, and contains no sugar or drugs. The manufacturers simply claim that it is an ideal modifier of cow's milk.

Stocks of lavender flowers in first hands are said to be depleted. Still higher prices are expected, according to Fritzsche Brothers' list, and the entire quantity produced this year will probably be insufficient to cover the demand.

TIRED OF THEIR BARGAIN.

Druggists Discover They Have More Jewelry Than They Want.

"NO ONE TO BLAME BUT THEMSELVES," SAYS COMPANY'S REPRESENTATIVE.—READY TO DO EVERYTHING PROMISED, HE SAYS, BUT DRUGGISTS MUST STICK TO CONTRACTS.—COMPLAIN T WIDE.

Many druggists in this city and vicinity have acquired stocks of jewelry under what seemed to them advantageous terms at the time they signed the contracts. Finding that the jewelry did not sell, however, they refused to pay their notes. The western houses that sold them the goods threatened to sue and on consulting lawyers, the druggists were advised that the contracts are binding and that they have no redress except from the jewelry firm.

Some of the contracts are made out to the Puritan Manufacturing Co., of Iowa City, Iowa, and others to the Lyon-Taylor Co., of the same place. The New York City representative of the former was seen, and declared that there was no connection between the two, except that both obtained their goods from the same factory, and some of the officers of one were also officers of the other. He characterized the hue and cry raised by the druggists as simply a kick over a bad investment.

"They can blame no one but themselves," he said. "They went into this thing with their eyes open. Everything was open and above board. A man doesn't have to sign any paper without first reading it. This is simply a case where a man showed poor judgment in buying something that he can't sell; that is something for which he himself is responsible."

"The company stands ready at any time to do everything it promises so long as the other people stick to their part of the contract."

According to the story told by several men in Manhattan, Bronx, Brooklyn and Jersey City, they were approached by an agent of the company, of such polite and gentlemanly demeanor that he was given more than the consideration usually accorded to a solicitor. This agent carried a few handsome samples of jewelry, such as fobs, belt buckles, etc., and said that most of the well-known druggists had already placed orders.

It transpired later that this statement was exaggerated, but it had considerable influence with the pharmacists to whom it was made. Nearly all felt that in order to keep up with their neighbors they ought to take up the proposition; and they did. They signed contracts for the delivery of from \$250 to \$350 worth of jewelry, the company on its part, promising certain things, and giving a bond for their fulfillment.

Under the terms of this contract, the druggist was to pay in four regular installments of six months, eight months, ten months and twelve months each. He was to display the jewelry for sale in a case furnished by the company or that purpose. On its part the company guaranteed its goods and agreed to exchange any which did not wear satisfactorily. It

also promised to send a gold ring to every new-born baby in the druggists' neighborhood, upon proper application.

But the most attractive offer of all was this, that if at the end of twelve months any portion of the stock of jewelry remained unsold, the company agreed to buy back sufficient to make up the amount of the original invoice. By this plan the druggist was to be safeguarded against any loss whatever.

This offer, coupled with the fact that the company was well rated by the mercantile agencies, induced many druggists to sign contracts and accept the company's bond. When the goods arrived, the druggist signed a promissory note to pay the four installments as per the terms of the contract, although each now claims that he was told that it was merely a receipt for the goods.

Some regretted the investment as soon as they had signed the note. Others discovered that they had made a very poor stroke of business. The jewelry did not seem to find a market. One man sold six dollars' worth in six months; another, more fortunate, sold sixteen dollars' worth. One druggist declared that the only article disposed of during the first six months was a gold fob at \$2.50. It was returned about four days after its purchase.

Many efforts were made by the druggists to fight the contract. Their difficulties were increased by the fact that the company turned the notes over to third parties for collection. One druggist had a short legal battle at the end of which, it is reported, he paid a lump sum to be rid of the whole matter. Others who were threatened with suits because they refused to pay the first instalment at the end of six months, consulted lawyers and were advised that they had no option but to pay the notes; that the contracts were perfectly legal and fraud could not be charged.

Now those who engaged in the venture are waiting for the expiration of the twelve months to see whether the company is going to redeem the jewelry.

"Most irritating of all," says one druggist, "is the high-handed way in which communications by mail are disregarded."

Druggists of this city are deriving poor comfort from the knowledge that their brethren all over the country are having similar troubles. The Philadelphia Association of Retail Druggists, it is reported here, proposes to hold a meeting of interested druggists, also discussing the question of surplus jewelry.

HEMP AND MANILA.

The distinction between the hemp of commerce and the fiber known as manila was thus stated in a recent case before the Board of General Appraisers: In the literature of the fiber-producing plants of the world, the word "hemp" appears frequently applied to fibers that are widely distinct from each other. The "hemp" of commerce is a soft fiber, this product of an annual plant known botanically as *Cannabis sativa* and is susceptible of being split into finer fibers by a process of heckling or carding, while the hard fiber, known as manila, which is obtained from a plant known as *Musa textilis*, is a coarse fiber, consequently different from the usual hemp of commerce.

MAKE ADS CONVINCING.*

This Only, Arthur Brisbane Says,
Brings Big Returns.

HE ADVISES COMMERCIAL WRITERS
TO BE ALWAYS SIMPLE, ALWAYS
EARNEST—FRIVOLITY DOES NOT
ENTICE BUYERS.—CHEERFULNESS
AND OPTIMISM DO.

BY ARTHUR BRISBANE,
Of the Hearst Newspapers.

Advertising is the art of telling the people what they want to know in language very much like the expression of their own thoughts.

The Sphinx Club of New York City, an organization composed of intelligent advertisers, organized for the purpose of dining and exchanging noble thoughts once a month, is about to publish a magazine called "The Voice of the Sphinx." The editor of this magazine requests the editor of the Evening Journal to write an article to be published in the first number of "The Voice of the Sphinx." We write the article with pleasure—here it is. The subject suggested by the Sphinx Club is "How to Write Advertisements Intelligently."

Advertising is important not only to men who live by writing advertisements or publishing advertisements, but to all business men and all inhabitants of the country.

As nations grow bigger, and it becomes more and more impossible to tell important news by word of mouth, the work of the advertiser grows in importance. He must tell the people what they want to know, and he must be able, with as little friction and interference as possible, to bring the man who wants to buy in direct contact with the propositions of the man who wants to sell.

The advertisement, if it be a good one, is more important to the man who buys than to the man who sells. The man who buys is really in need of something. It is essential that he should have the best advice and the best guidance in selecting what he wants.

The art of writing advertisements may be put briefly as follows:

Make up your mind what the reader of the advertisement wants to buy and what he wants to know about the article. Then tell him, as simply and convincingly as you can, what you have to say and why you think the things you have for sale are the things that he wants.

If we accept the statement that the writer of advertisements should talk simply and convincingly, the next thing is to find out how to be simple, and how to be convincing.

To achieve simplicity, say in the shortest words that answer that purpose, and in the shortest sentences that are complete, what you have to say.

To write in a convincing manner involves various requirements.

In the first place the tone of the writer must be sincere. He must seem in earnest, and he must be in earnest. Flippancy, and even wit are dangerous in the writing of advertisements. When a man wants to buy a coat, he wants a coat and not a good joke. When he is spending his money, his mood is serious, and his money is apt to

go to the man who is serious also. You have only to look at the earnest, even worried faces of the ordinary men and women engaged in shopping, to realize that their mood is not one for jokes or laughter. They are in deadly earnest—the clerk who waits on them when they get to the store, or the advertiser who would bring them there from their homes, will do well to be as earnest as they are.

Style in the writing of an advertisement is very important, and the best style is the absence of any style in particular. That is to say, a simple, straightforward, unaffected manner of telling facts.

To convince a human being, and to attract his attention easily you must use methods of talking that he is accustomed to. Once in a while a man who uses long words and grand phrases is successful as a writer of advertisements, but his usefulness is limited to a circus, or some other kind of business where the proprietor wants to arouse the wonder and curiosity of the public. It is well enough for him to arouse wonder and curiosity by his use of wonderful words, if wonder is what he aims at.

The ordinary writer in the commercial line ought to remember this:

It is easy to get into a man's mind the kind of thought and the kind of words that come out of the man's mind. All success in writing depends upon expressing thought in such a way that the reader says to himself, "That is just what I should have said had I written it," or "That is just what I should have liked to say had I written it."

Advertisement writers must be careful not to give the reader too many facts that he does not care about particularly. It is an excellent thing for the man who writes an advertisement for soap, to tell the public how many pores there are in the human skin. It is well, also, to tell how important it is to keep the pores of the skin open, letting them breathe and purify the body by taking in fresh air, etc. But it does not do for the ad writer to get so enthusiastic over *physiology* as to forget his *soap*.

The very best thing you can say about soap, perhaps, is that it is best for the complexion, that it floats—some people do not want it to sink—that it is good for chapped hands, etc.

You must bear in mind that women are the ones that buy soap and use it—you must remember that women's thoughts are on their complexion, on their hands, you must realize what they are thinking about when their thoughts concern soap, and you must talk what they are thinking about when you are trying to get your soap into their homes. The great books that have lasted for centuries are all written in the style of the successful advertisement writers. They interpret the thoughts of the mass.

Advertisements are now and have been for some time recognized as an extremely important part of the industrial and business system of the United States.

No matter how great a business may be it must have a voice to tell what it is doing, and what it has to offer. *The advertising man is the voice.*

No definite limited rules may be laid down for the successful writer of advertisements. Any rule that can apply to writing in general can apply to advertising

writing. No rule applies to the writing of advertisements that does not apply to the whole range of literature.

The advertisement writer, we have said, must be simple and must be convincing. The greatest men in the literary history of the world are simple and convincing. The commonest difficulty with the writer of advertisements, he shares with all writers in the world. We refer to the great tendency of the beginner—or of the man who never learns—to exploit his own personality, to inject himself and his individual pretentiousness into what he writes. The trouble with many who are writing about trousers or socks lies in the fact that they think the word hardly good enough for them and while they are writing about socks they write in a tone that would lead one to think that they mistake themselves for Iants, describing his emotions when he came up through the hole in the ground on the other side of the earth, after having climbed down over Satan's shoulders in the bottom of the frozen pit.

They step too high.

They use words and use what they think are thoughts altogether foreign to their subject. To the young man who writes about a dog fight for a newspaper, we should say: "Keep your mind on dogs and on fighting. Do not try to make the brindle bull pup seem like Alexander the Great. He is a dog, tell about him as a dog."

Similarly, when a reporter writes of any other event we tell him to fix his mind on that event. He may make it vivid by a happy comparison and such a comparison may be borrowed whenever he likes. But his success depends mainly upon keeping his thoughts and his words fixed on the thing that he tells about and suited to that thing.

The same instructions would apply to the young advertising writer. If he be writing about shoes his mind should be on shoes. He should remember that the man who wants to buy a pair of shoes thinks at that moment of shoes and nothing else. He thinks of comfort, he thinks of keeping out the wet, he thinks especially of how long they will wear, he thinks of what price he will pay, he thinks of the comparison in value between one kind of shoe and another. He thinks, perhaps, a little about the quality of leather.

The writer of a shoe advertisement should have thoroughly in his mind those things which the buyer of shoes thinks about and he should write about them. If in addition he can suggest to the buyer some sensible, really important shoe thought, let him do that. But do not let him try to combine with the shoe writing any other fanciful occupation. Let him make up his mind to write that one advertisement, write it well, and for the time being have nothing in his mind but shoes.

There is another very important consideration for the advertisement writer. He should try to connect himself with good merchandise.

The ablest man is weaker than his inferior if his inferior is telling the truth, and if he the able man—be not telling the truth.

A newspaper loses its influence, its power to convince, the minute it begins to

*From the Voice of The Sphinx.

advocate an unjust cause or to attack a righteous one.

All human minds have an extraordinary, intuitive capacity for recognizing sincerity.

Many a failure, in the advertising line, would have been successful if he had had truth and honest goods behind him instead of trash. The man who wants to succeed as a writer of advertisements ought first of all to get with a concern worthy of praise. You cannot fool the people very long and the man who starts out with a contract to fool the public all the year round will fail.

What are the best qualities in an advertisement writer?

Optimism, cheerfulness, animal spirits, that give rainbow hues to commerce and poetic attributes to pills.

Good health is as important to the advertisement writer as to the race horse. And general education is important also. The advertisement should be simple.

But the simple things come from the most complex sources.

The machine that makes a simple nail or needle is not a simple machine by any means.

And the advertisement writer who needs the ability to say the simplest things in the simplest way, will be all the better and abler for complicated thinking, wide education, and a big knowledge of things outside of his particular field.

THE COMBINATION'S PRICE-LIST.

A price list has just been issued by the Powers-Weightman-Rosegarten Co., the first since the combination. Declines are noted in tartaric acid, chloroform, cream tartar, menthol, Rochelle salt and Seidlitz mixture; advances in cocaine and santolin. These changes have previously been reported in *The Era's* market report, except that the movement in Rochelle salt and Seidlitz mixture was too small to affect the jobbing market.

The make-up of the pamphlet is pleasing. The cover and pages are blue gray. The change in size from previous issues is marked, the present dimensions being 4½ x 8¾ inches, allowing the easy carrying of the pamphlet in the coat pocket. The width is therefore only about half that of previous issues of the Powers & Weightman price lists. In fact, the general make-up suggests a combining of the best characteristics of the independent publications of the two houses, now consolidated. The title reads, "Prices Current, February, 1905, Powers-Weightman-Rosegarten Co., Manufacturing Chemists. Founded 1818. Philadelphia, New York, Chicago. Issued Monthly."

The following interesting notice appears on the first inside page: "While it is contemplated eventually to furnish all products of our several laboratories under the label of the Powers-Weightman-Rosegarten Co., yet, when definitely ordered, we will supply either the Powers & Weightman or Rosegarten & Sons, Inc. label, as may be wanted. We would therefore request our friends to kindly specify where necessary, the particular label desired."

At the end of the list is given a view of the laboratories of the company at East Falls of Schuylkill, Philadelphia.

SPENT GINGER FREE.

Court of Appeals Finds for the Importers.

"So-called spent ginger, which is a by-product resulting from the cracking and distillation of ginger root, and is in the form of caked particles, due in part to the cracking and in part to disintegration, is held to be free of duty under paragraph 667, tariff act of 1897, covering 'ginger root, unground.'" This decision was handed down on January 13, by the United States Circuit Court of Appeals, Second Circuit.

The merchandise was originally imported at New York, and was assessed for duty as ground ginger under paragraph 287. The Board of General Appraisers overruled the protest of the importer, who thereupon appealed, only to again lose his case in the United States Circuit Court, Southern District of New York. An appeal was taken and now the Circuit Court of Appeals has decided against the government.

Circuit Judge Lacombe cited the relevant paragraphs of the tariff act of 1897, which are:

Par. 287. Spices: Mustard, ground or prepared, in bottles or otherwise, ten cents per pound; capsicum or red pepper, or cayenne pepper, two and one-half cents per pound; sage, one cent per pound; spices not specially provided for in this act, three cents per pound.

[Free list.] Par. 667. Spices: Cassia, cassia vera, and cassia buds; cinamon and chips of; cloves and clove stems; mace; nutmegs; pepper, black or white, and pimento; all the foregoing when unground: ginger root, unground and not preserved or candied.

THE ARGUMENT.

Judge Lacombe then continued: "The article in question is known as *spent* ginger. The appropriateness of the term will appear later. It is not disputed that it is a spice, and that the collector's classification under paragraph 287 would be correct unless it is within the term 'ginger root, unground and not preserved or candied.' The Board of General Appraisers found that 'it is known to trade and commerce only as ginger, and it is also admitted that it has been ground.' The testimony returned does not warrant such finding. The single witness who was examined before the Board testified that the merchandise is a by-product in the manufacture of ginger extract or ginger ale. The crude root is run through cylinders which crack it into pieces about an inch around. It is then distilled, and after that process is completed is removed from the still and pressed so as to remove the moisture. The result is a dried cake of small particles of ginger, resulting in part from the cracking, in part from the disintegration of the vegetable matter in the stuff. It is in lumps, cakes and strings. There was no admission before the Board that the ginger had been ground.

"Some additional testimony was taken in the circuit court, which did not modify the foregoing description of the process. The article is sold 'as a cheapening product for a cheap quality, used for the same purposes as ginger absolutely.' It has still a gingery taste and is used to dilute ginger from which the essential element

has not been distilled. Examination of the cake shows that it can be reduced by the hand to a quite finely divided substance, the particles of which, however, are irregular in size.

"The circuit court reached the conclusion that the process was substantially the equivalent of grinding, and that the root had been reduced to small particles and was within the dictionary meaning of 'ground,' whereof it could not be considered as wholly unground.

A TRADE DISTINCTION.

"The tariff schedules in many instances impose a different rate on articles which they call 'ground' from that imposed on them when unground, thus following a distinction which had already been made in trade and commerce. In determining to which class any particular sample belongs the statute should be construed in conformity to the commercial understanding. One of the witnesses called by the government testified that 'all ginger is unground until it has been ground,' and the proof to the case is convincingly to that effect. The government's witnesses all testified that ginger root in the condition of this importation would not be accepted by the trade as a good delivery of ground ginger, and it further appears that the distinction made is not merely a nominal or unsubstantial one based on the circumstances that the root has been treated by a different process from that used in producing ground ginger. Witnesses called by both sides testified that it contained 'shreds,' the fibrous material of the unground root, which would have to be eliminated before it could be known in trade as ground ginger, and that such elimination could be secured apparently only by putting it in a mill and grinding it. We are therefore of the opinion that the importation is still unground within the meaning of the tariff act.

"The decisions of the Circuit Court and of the Board of General Appraisers are reversed."

BOTTLE NOT NEEDED.

This happened in an East Side drug store: A woman wanted ten cents' worth of glycerine—glycerine only.

"I don't want to pay part of that for a bottle," she said. "I want my money's worth."

"Did you bring a bottle with you?" inquired the druggist.

No, she did not.

"Then how do you expect me to give you glycerine without a bottle?"

"Well, just put it in a bag," answered the customer. "That will do just as well."

The druggist stared. "A bag? You surely don't expect to carry it in a paper bag?"

"Yes. Why not? I have done it before."

Unconvinced, but willing to experiment, the druggist poured the viscous fluid into a paper bag and handed it to the woman. She took it carefully in one hand, tucked her bundles under her arm and marched out, all unconscious that she had done anything out of the ordinary. The druggist began to estimate on the cost of paper versus glass.

Fritzche Brothers report that owing to the severe drought last year, only an insufficient quantity of *reseda geraniol* oil could be manufactured.

PROPRIETARIES IN SOUTH SEA.**New Zealand's Regulations Meet With Opposition.**

GOVERNMENT IMPRESSED WITH THE AGITATION—PROPOSES REGISTERING FORMULAS WITH AUTHORITIES ONLY—WILL PROBABLY ABANDON ENTIRE LAW.

The New Zealand government through the Hon. J. G. Ward, Minister of Public Health, has prohibited the sale of patent medicines after June 30, 1905, unless the labels on such medicines give the ingredients of which the preparations are composed.

The section (101) of the Public Health Act of that country which gives the Minister of Public Health authority for such action runs as follows:

"The governor may from time to time make regulations for any purpose for which in his opinion they are contemplated or required by this part of this act, including, amongst other things, the purposes following:

"1. The inspection and analysis of drugs, chemicals, and patent medicines.

"2. Prohibiting the sale and providing for the destruction of such drugs, chemicals, and patent medicines as are adulterated.

"3. Requiring the ingredients of patent medicines to be disclosed at or prior to the sale thereof.

"4. Imposing penalties not exceeding fifty pounds for any breach of the regulations."

THE REGULATIONS.

On November 3, 1904, the Hon. J. G. Ward signed the following regulations:

"All patent medicines imported into or sold or offered for sale in the Colony shall be required to have the contents, with their exact proportions, legibly set out in English upon a label affixed on the bottle, box or container. In addition to such information, where such medicines contain one or more of the poisons scheduled under the Sale of Poisons Act, 1871, and its amendments, the words 'This contains poison' must be marked in clear medium-sized block type upon the label."

Section 2 gives a list of 154 remedies which for the purposes of the act are to be considered patent medicines. Section 3 provides a penalty of not exceeding fifty pounds.

The Chemist and Druggist at once commented unfavorably on the New Zealand experiment, pointing out errors in spelling the names of several remedies which might defeat legally the purpose of the act in regard to them and objecting to the sweeping use of the term patent medicines as applied by the act to proprietaries.

Agitation against the measure at once arose in the Council of the Proprietary Articles Trade Association, the Manufacturers' Association, and the London Chamber of Commerce. Letters of protest poured into the general and pharmaceutical press. In most of these the manufacturers took the ground that publicity of formulas in New Zealand meant publicity to the whole world. They also announced their intention of ceasing advertising and the sale of their remedies in New Zealand after May, if the law was not repealed.

For obvious reasons the advertising men and newspapers sided strongly with the manufacturers.

POWERFUL OPPOSITION.

The representatives of the Proprietary Articles Trade Association and the Manufacturers' Association met and agreed on the following campaign of active protest and opposition:

1. Each manufacturer of articles specified in the list to instruct his advertising agent to stop all advertising in New Zealand (including newspapers and journals there) as from March 31, 1905.

2. Each manufacturer to write to the editors of New Zealand newspapers explaining how the order by the Minister of Public Health has compelled this action.

3. Each manufacturer to write to the Colonial Secretary protesting against the order.

4. To seek an interview with Mr. Reeves, Agent-General for New Zealand, in regard to the matter.

On January 13, the Hon. W. P. Reeves, Agent-General for New Zealand, received protesting delegations of manufacturers and retail druggists. These latter brought forward the new argument against the enforcement of the act that the time allowed by it was too short to clear the large stocks of secret proprietaries carried by New Zealand retailers.

A deputation from the Manufacturers' Association waited upon Hon. J. G. Ward. The spokesman is reported as follows, by the Chemist and Druggist:

"The reason for such disclosure was not at all apparent. The usual purchaser of such an article was not interested in the formula, and the people who would read it with care were probably only those who would do so with a view to putting up an inferior counterfeit, and depriving the rightful owner of a reputation built up by expenditure of labor and money. He further argued that in crushing this large industry a considerable branch of trade between the Mother Country and her Colonies would die out, involving sudden and serious loss, not only here, but to various concerns in the Colony, and this at a time when the knitting together of business ties was in everyone's mouth."

GOVERNMENT REPLIES.

Sir Joseph Ward replied. Evidently he was quite uncertain of his exact personal position in the matter, was impressed by the widespread, powerful opposition to the act, and was inclined to vacillate. In fact, he ended in suggesting a compromise. He said that the regulations were put in operation upon the recommendation of the professional advisers in the Health Department, because of many complaints received from the consuming public that poison was sometimes contained in proprietary remedies without being marked on the labels. He felt sure that it was far from the desire of the government to compel manufacturers to disclose their secret formulas and methods of business. He recognized that time in any event, would be necessary to clear large stocks, and suggested a postponement of the date of operation of the act. But the most important concession was this: "The manufacturers of medicines in New Zealand might send the formula to the Minister of Public Health, and examinations could be made by the medical

men employed, and if the public were protected the manufacturers need not give away their formula on the labels. I think there should be an examination of the formula by some officer of the Public Health Department, instead of having it printed on the labels. On my return to Wellington I will look into the matter with the officers of the Health Department, with a view to seeing in what direction, while protecting the public, we can assist the manufacturers, so as not to interfere with the legitimate progress of the business generally, which I am anxious to see carried out in every possible way."

It seems to be the general impression that the New Zealand government will not attempt to enforce the act. Perhaps the proposal for registering formulas with the Health Department will be seriously considered as a substitute method, but it is at best doubtful. Indications point to a purposely slow yielding of the government on the whole matter and the passing of the whole experiment into the bounds of innocuous desuetude. Meanwhile the agitation against even a modification of the act continues.

WEST INDIAN SPONGE TRADE.

At the recent sponge sale at Nassau, Bahama Islands, about \$100,000 worth of sponges were sold. Supplies of the most valuable variety of sponge, the sheep-wool, have not shown the highest quality. A good demand appeared from both America and Europe. The growing importance of Nassau as the sponge market of the world adds interest to the statement that about six hundred vessels of various kinds are engaged in sponge gathering, giving employment to about 55,000 men. Many others are engaged in preparing the sponges for market. Efforts are being made to prevent the gathering of sponges which have not reached maturity.

CEYLON TAXES CARDAMOMS.

The governor of Ceylon has imposed a tax of one per cent. per pound on all cardamoms exported for two years. This was done at the request of leading planters of the island, representing about three-quarters of the acreage devoted to cardamom growing, as a remedy for the steadily declining value of this commodity, the prices realized now being hardly sufficient to assure a profit. The money thus collected will be devoted to developing new markets for cardamoms.

OFFICIAL CONTROL OF OPIUM.

The use of opium in Formosa is successfully controlled by the Japanese government, which fixes the price and allows selling agents a profit of only one and one-half per cent. In 1902 the imports amounted to \$769,110 and in 1903 to \$594,055, a decrease of \$175,000. Since 1900 the number of opium smokers on the island has also decreased by about a thousand a month. Each opium smoker must be registered. Public opinion as well is opposed to the use of the drug.

"Charles the Second was fleeing from Cromwell. 'How shall I escape to France?' he cried. A henchman knelt before him. 'A thousand pardons, sire, but a chemist is never noticed in a crowd. Wouldst disguise thyself as such?' 'Aye, varlet.' History tells the rest."

APPRAISERS' DECISIONS.

Joss Sticks—Punk—Dutiable.

The Board of General Appraisers has decided that so-called joss sticks are dutiable as a non-enumerated manufactured article at 20 per cent. ad valorem, under section 6 of the act of 1897. In the case in point the Nordlinger-Charlton Fire works Company imported the merchandise at New York, which was assessed for duty as above. The importers protested that the merchandise was free of duty under paragraph 587 of the same act as "joss sticks, or joss lights, the contention being that the first two words of this paragraph enumerate the articles in question in this case."

The Standard Dictionary describes joss sticks as:

"A thin cylinder or stick made of perfumed wood-powder and paste, and burned by the Chinese as incense or in measuring time at night."

In the Century Dictionary it is described as follows:

"A small stick or perfumed pastil consisting of a hardened paste made from the dust of various kinds of scented wood mixed with clay, used in Chinese temples and houses as incense before the idols, as a slow-match in measuring time at night, for lighting pipes, etc."

Testimony showed the article was used to ignite fireworks and firecrackers; that it was known as joss stick and was bought and sold under this name prior to the passage of the law. The local appraiser says in his report that it is really known in commerce as "punk," that it differs from joss sticks in that the joss sticks are much thinner, are perfumed, and are used as an incense in religious exercises by the Chinese.

In its decision the Board was governed by the following ruling of the United States Supreme Court: In weighing the testimony of witnesses as to trade designation it is proper to consider the extent to which the witnesses may be interested in the result of the litigation. To establish such trade designation the usage must be shown to be definite, uniform, and general, and not partial, local, or personal."

In overruling the protest the Board summed up as follows:

"We do not feel that it has been satisfactorily proven that the merchandise in question was so generally well known in commerce as joss sticks prior to the passage of the tariff act of July 24, 1897, as to overcome the conclusion which we would feel bound to reach were there no testimony of this kind before us. The purpose of this testimony was, of course, to show that the merchandise in question was contemplated by Congress in adopting paragraph 587. The interest of the witnesses in the result of this case is such as to lead us to feel that there would be danger of their testimony being colored upon a question which is, to some extent, a matter of opinion, and, at best, appeals to the memory over the lapse of a number of years; and the statements which they make fall far short, we think, of establishing the fact that the designation of

joss sticks for the merchandise in question was general or uniform in character, or prevailed over the entire or any large part of the country, so as to lead us to believe that Congress had such merchandise in mind in placing joss sticks upon the free list. The very use of the word "joss" carries with it the idea that the articles are to be used in some form of religious rites, and the well-defined policy of the law in exempting articles used in religious worship was doubtless responsible for this paragraph. The merchandise before us does not satisfy the description given in the dictionary for joss sticks, and, in our judgment, the testimony has failed to overcome the ordinary meaning of the word as found in this description."

Apparatus for Brewing School Free.

G. W. Sheldon & Co. imported at Chicago, certain apparatus for counting grain and for cutting grain, for the use of the Wahl and Henius institution of that city. The merchandise was assessed for duty. The importers protested that it was free of duty under the law, as scientific apparatus for the use of schools. Investigation showed that this institution was incorporated under the laws of Illinois, under the name of Wahl and Henius, to conduct a brewer's school, for the purpose of instructing in practical and theoretical brewing, as well as to carry on a business as analytical and manufacturing chemists. The Board therefore held that the merchandise was free of duty and held that, "an institution incorporated to teach practical and theoretical brewing and carry on the business of analytical and manufacturing chemists, the primary object of which is the educational one; that maintains a corps of professors, receives, teaches and graduates pupils, giving them diplomas, and has within its curriculum various branches of the sciences, is a school within the meaning of paragraph 638, act of 1897, and entitled to the right of free importation accorded thereby."

Commercial White Dextrin Dutiable

Charles Morningstar & Co. imported at New York, merchandise invoiced as soluble starch, or as soluble potato starch. It was assessed by the collector at two cents per pound as dextrin. The importers protested it was not dextrin, but starch. The provisions of the law involved are:

285. Starch, including all preparations, from whatever substance produced, fit for use as starch, one and one-half cents per pound.

286. Dextrine, burnt starch, gum substitute, or British gum, two cents per pound.

The Board stated the situation as follows:

"Soluble starch and dextrin are produced by the action of heat or acids, or both, upon starch, which process modifies or breaks down the starch cells and results in a product which becomes increasingly soluble, depending upon the length of time the process is continued. Soluble starch represents a stage in the modification of the starch granule intermediate between starch and dextrin. Important uses of soluble starch and dextrin are in connection with filling and finishing textile fabrics and the manufacture of adhesives.

"The importers contend that their

products are 'physiologically, chemically, and microscopically starches, slightly modified.' The government chemist reported the article to be soluble starch and testified to the same effect before the Board. A quantitative analysis of the official exhibits gives the following constituents:

	Exhibit 1.	Exhibit 2.
	Per cent.	Per cent.
Moisture	9.70	9.87
Soluble starch	52.22	51.84
Dextrin	29.27	28.83
Dextrose	5.56	5.56
Ash	0.45	0.40
Undetermined	2.80	3.59
	100.00	100.00

"Whatever may be the identity of the articles from a scientific standpoint, however, the evidence in the case shows without contradiction, that substances such as those contained in these importations were generally known in the trade prior to and at the time of the passage of the present tariff act as 'white dextrin'—in fact, have been continued to be so designated up to the present time. The testimony of a member of the protesting firm shows that he has imported the articles for the last twenty years as white dextrin and sold them as white dextrin, at a white dextrin price. In the presence of this testimony and the fundamental rule of tariff construction that the classification of imported merchandise is to be determined according to its designation in trade and commerce, the fact that the products in question are not pure dextrin, chemically, ceases to be of importance in the consideration of the case.

"There is a close analogy between the present case and *Gabriel v. United States*, where the Circuit Court of Appeals for the second circuit held that so-called lithofone, composed of 70 per cent. of sulphate of barytes and 30 per cent. of sulphide of zinc, and found to be commercially known as sulphide of zinc, white, was classifiable for duty under a provision for 'sulphide of zinc, white,' rather than as a white paint or pigment containing zinc."

The Board therefore overruled the protest and held the merchandise dutiable as dextrin.

Scientific Apparatus Free.

Certain glass rods, wire triangles, pinch-cocks, and cork borers, imported by the Kny-Scheerer Company, at New York, were held by the Board to be free of duty as scientific apparatus imported for the use of educational institutions. The importers also contended that certain skeletons in alcohol should have been classed under the same paragraph, but the Board held that paragraph 663 applied to the case and that inasmuch as the importers failed to state this claim, their protest was insufficient.

Thermophors Metal Articles.

So-called thermophors, imported by H. R. Bernard, at San Francisco, were held by the Board of General Appraisers to be properly classified as articles in part of metal, under paragraph 193, act of 1897. The articles consisted of metal receptacles filed with a chemical compound possessing the quality of retaining heat for long periods.

SHOW WINDOWS AND FEATURES.

Druggists Are Beginning to Wake Up.

THE BABY CONTEST ENDED.—
CREPE PAPER WINDOW DISPLAY.—
A WOMAN'S HEAD IN A WINDOW.—
SANITARY CRACKED ICE CONTAINERS.—
DOUBLE PERCOLATION.

The Brooklyn baby contest conducted by T. H. MacDonald, Third avenue and Fifty-fourth street, came to a close on last Tuesday night. The contest was started with twenty-five photographs of babies under three years of age and the Bay Ridge residence district was disrupted for a time, fearing that the judging of the most popular baby was to be done by the druggist. When the discovery was made that the residents themselves were to act as judges, things began to hum. Each purchaser of five cents' worth and upward was given a ballot, on which he noted the number conforming to the one on the photograph which attracted him. The vote getters were much in evidence. It was a lucky man who managed to get away from the youthful partisans of the baby on his block. At the close of the contest, the window in which the photographs had been exhibited, was converted into a tally room, and the neighborhood was out in force to see that there was a fair count. Two reporters acted as poll clerks, or tellers. The youngsters outside, with noses pressed against the glass, "kept tabs," and called off final decisions on doubtful votes. The ballots were first divided into piles, from one to five, etc.; then each number was counted separately. The shouters without the window were no less interested than the ballot clerks when they found that a total of 1,208 votes had been cast. For a time the vote of 137 for a baby, by name Aloise S. Simonson, looked the winner, but when the last number, twenty-five, was reached, George Mitchell, with 287 ballots, was declared to be "just the prettiest baby ever." The result was posted and the radiant messengers departed in search of said George, who, with his parents, received a new ten dollar gold piece from the druggist. The second prize, a hospital size of Horlick's Malted Milk, was awarded the other youngster, and MacDonald bowed to a chorus of "What's the matter with Mac? He's all right." The local paper will publish the two pictures. Mr. MacDonald said that the contest had brought in over \$150, so the prizes and advertising are well covered, leaving a neat profit. Whether contests do good or not, they certainly awaken enthusiasm. Even the policeman on post could see that.

Crepe Paper and Electric Lights.

Just what can be done with crepe paper reinforced by electric lights properly shaded, is shown by the window of the Knickerbocker Drug Company, 648 Broadway. The window dresser, Mr. Bucher, became interested in the possibilities of ordinary crepe paper, and procuring a quantity of green and red, divided the display into two parts, one featuring a high class toilet soap, the other chocolate candies in quantity. The side walls were covered with paper through which pro-

truded electric globes of the color used, green or red. The globes were festooned with white paper. The window was backed with paper hung like portieres. The floor of the window was decorated with the paper, mounds being used to give the whole a wavy appearance. At the back of the candy window a large metal statue of a woman in classic garb was made to hold an electric globe, from which a red light glowed. Behind was a background of deep red paper and at night, when the lights are lighted, the whole display shows the artist's touch. The relief to the subdued glare of the red color scheme is afforded naturally enough by the green window. The chocolates, with the red background and window furnishings, look what they are claimed to be, "the most toothsome made." The cost of the window, for material, was not great, though the labor expended was considerable. With gas light, of course, such a window would not be possible.

Is She Alive?

That is the question innumerable people ask, as they view the display at W. B. Riker's Sons, Broadway and Ninth street. The old illusion trick is being played upon them by a woman whose head appears on a standard. She is apparently alive, her eyelashes wink occasionally, yet the onlooker is not certain. Just how it is done is the store's, or rather the exhibitor's secret, for she makes a business of it. At first sight it would appear that there is no place for her body. That's the puzzling thing. The mirror trick, which gives the idea of vacancy, is apparent only after long observation. Altogether this feature has the result desired. It first attracts attention to the Riker Violet Cerate, shown in profusion about the window, and then coaxes people in to satisfy themselves as to the reality of the woman. Broadway was crowded to the curb by women shoppers from a nearby department store. They commented more on the arrangement of the exhibiting woman's headgear than upon the question of her life or death.

Kalish Novelties.

Kalish Pharmacy Fourth avenue and Twenty-third street, has a window display of the much advertised Oxyzn Balm, which shows a quantity of the various preparations made by the Oxyzn Chemical Company, together with testimonials from Lillian Russell, Mrs. Langtry, Blanche Walsh and others. Large portraits of the above named actresses are featured. Within the store are some novelties, old, yet new. One show case top is devoted to hollow wooden rollers for massage purposes. This device consists of a wooden cup or socket and a hollow wooden ball, fitting tightly within the cup. The ball revolves in the socket and can be made to carry weight by filing it with shot. The wood is highly polished and the ball resembles a miniature bowling ball. It is said the device gives satisfactory results in reducing adipose tissue, especially about the abdomen. These outfits sell according to size, from \$1 to \$3.60. There is also exhibited an ivory "bust developer," selling at \$7. This is nothing more than a cylinder of ivory attached to a handle. A novelty that sells at ten cents and attracts plenty of attention, is a loop of horse hair attached to a match-like handle. It

is said to be useful in removing other things than notes from your neighbor's eyes. An innovation at the soda fountain which is appreciated, is the sanitary method of keeping ice for egg drinks and the like. Mr. Kalish, unable to find suitable articles here, has specially imported two hollow silver-plated globes. These have dust-proof sliding covers. A supply of shaved ice is kept in them. It is easily accessible and the cleanly appearance of the shiny silver globes is attractive, aiding the sale of soda. The globes, when imported, had no standards. The plumber and silversmith have fitted each with a base through which a drain pipe runs and a hole in the marble counter allows the ice containers to drip into the sinks. The globes are not attached to the counter, and with due care of the projecting pipe, may be scoured out daily. The ice reservoirs on the counter, usually banked with ice, are now used only for cooling soda glasses, and customers no longer see egg drinks made with drainage ice.

Name Out of Herbs.

Frank's Pharmacy, St. Nicholas avenue and One Hundred and Nineteenth street, exploits herbs such as pennyroyal, tansy, peppermint, etc., in ounce packages, by a window display of them, using the varicolored packages to form the letters of Mr. Frank's name. A display of "own make" headache powders is made by pasting several hundred of the empty envelopes in geometrical figures on the plate glass. The light at night reflects on the snow, the curves and angles through which it shines, and it is possible to square a circle actually, with a snow shovel.

Keg of Malt.

Koehler & Woell, Eighth avenue and One Hundred and Twentieth street, are booming a malt extract by showing a quantity of the bottled product surrounding a vine-clad keg—symbolic of age. The keg (a witch hazel keg) is labeled "malt extract," and the onlooker can easily imagine that K. & W. are the bottlers of the aged malt.

Double Percolation.

S. Albert's Pharmacy, Lenox avenue and One Hundred and Sixteenth street, makes a professional bow by conducting the percolation of "own make" white pine syrup in the show windows. Two three gallon percolators are hung from the ceiling and an elaborate arrangement of rubber and glass tubing, shut offs, etc., lead the eye to the receiving jar, while under a sanitary cover, the finished product is collecting. A large quantity of the preparation in twenty five and fifty cent packages is shown in the same window.

Snowshoes.

A somewhat unusual thing for a druggist to carry as a part of his stock is snowshoes, but J. Wells Thompson, a North Adams pharmacist, has found it a finely paying experiment. Students at Williams College, in the adjoining town of Williamstown, have caught the craze and Mr. Thompson has sold fifty or more pairs of snowshoes recently, and has orders for many more pairs.

MISSOURI.

About one-fourth of the windows of St. Louis drug stores became bowers of beauty Monday, valentines being the merchandise shown. The stock this year is similar

to that of previous years, but evidently another step toward discarding celluloid is taken, as fewer of these novelties are shown. Paper lace is still used freely, but the newest and daintiest designs are figures made of a tissue paper net or lattice work. One of the most striking of these, shown in several sizes, is a cupid seated under a crimson stool playing a guitar. The druggists of St. Louis leave the more expensive designs to the newstands and the "comics" to the grocery stores. The "pretty" ones handled range from one cent to \$1 in price, very few exceeding the latter figure.

Judge & Dolph, 515 Locust street, St. Louis, are making a "flyer" out of Manhattan Soap Company products at twelve cents the box. Red Cross Antiseptic, Glycerine, Witch Hazel and other brands are shown.

La Preferencia cigars at five cents straight was a two days' feature at the Wolff Wilson store, Sixth street and Washington avenue. The cigars appeared to be the ten cent size, and were the sort put up in tin cans, twenty-five to the can. Rexall Hair Tonic at forty-five cents, was another offer at the store and in the next window was a wax woman removing hairs from her face every fifteen seconds.

MICHIGAN.

E. N. Orr & Co., the enterprising Manistique, Mich., druggists, hit upon a novel advertising scheme. They offered a handsome prize to the person writing the words "Orr's drug store for holiday goods" the greatest number of times on a postal card. A small boy, the son of Dr. J. M. Sattler, was adjudged the winner. His card contained the words 1,390 times, or a total of 8,240 words. More than 150 persons competed, and the one standing the lowest wrote the words less than fifty times.

CARE OF THE NAILS.

To maintain that refinement and well-groomed appearance which is justly so highly esteemed universally, the nails must receive careful attention. It pays in the business world to be scrupulously neat. The days when a refined and well-dressed business man was considered effeminate are gone. To-day the personal appearance exerts more influence than ever before. First impressions are important and well-kept nails always reflect credit on the individual. If the busy man cannot spare time for extensive manuring, he can at least carry a Klenall in his pocket and a moment's use of it daily, will produce well-kept finger nails. Klenall is a combination nail trimmer, cleaner and file, made of solid German silver, which cannot rust or tarnish. It trims round the corners and prevents hang nails, producing the beautiful oval shape of the nail. It can be used with either hand. Made by the Standard Mfg. Co., Rochester; price 25 cents. If your trade demands a cheaper article, the same firm offers another grade, which is not designed to take the place of the other, but to replace the many worthless imitations of Klenall; made of finest steel, heavily nickel-plated. Price fifteen cents. There is a large demand for both articles.

Very little new spearmint oil has been offered so far and at high prices only.

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions. Address: The Pharmaceutical Era, 90 William street, New York.

ALABAMA.

GOSHEN.—Stallings Drug Co., succeeded by Law & Park Drug Co.

ARKANSAS.

HAVANA.—E. L. Ferguson & Co., succeeded by Dr. H. A. Britt.

CALIFORNIA.

LOS ANGELES.—Add J. E. Hughes.

DIST. OF COLUMBIA.

WASHINGTON.—Add Florence E. Stafford, Twentieth and K Sts.

ILLINOIS.

CHICAGO.—Liquid Ozone Co., Prop. Meds., now Liquezone Co.

GIBSON CITY.—C. A. Foster, succeeded by W. C. Bryant.

INDIANA.

BREMEN.—Thos. W. Lytle, out of business.

INDIANAPOLIS.—Dr. N. C. Davis, Prop. Meds., inc. as Dr. N. C. Davis Medicine Co.

KINGMAN.—Williamson & Son, succeeded by John Redenbaugh.

IOWA.

DAVENPORT.—F. L. Stoughton, succeeded by Will Lage.

IOWA CITY.—Novack & Nicking, now J. H. Novack.

LYONS.—H. J. Roff, burned out.

WAFLELO.—Add Frost & Kirby.

KANSAS.

COLUMBUS.—Bartlett & Coolbaugh, now C. E. Bartlett.

ELLSWORTH.—Hoffman & Ackers, now G. R. Hoffman.

LAWRENCE.—Barber Bros., now O. P. Barber & Son.

KENTUCKY.

OWENSBORO.—Mrs. E. N. Courtney, succeeded by Wathen Bros. Co.

SOMERSET.—S. Denham & Co., succeeded by M. C. Williams & Son.

LOUISIANA.

FARMERVILLE.—C. H. Jameson, succeeded by Farmerville Drug Co.

MARYLAND.

BALTIMORE.—Chas M. Benson, out of business.

John B. Hurtt & Co., now John B. Hurtt & Sons.

MICHIGAN.

DETROIT.—Louis T. Schurrer, out of business.

GRAND RAPIDS.—Scheppers & Jongejan, now C. H. Jongejan.

MISSOURI.

CENTRALIA.—O. B. Wilson, succeeded by Wm. O. Baker.

EXCELSIOR SPRINGS.—Cushing & Co., succeeded by P. Donighan.

MONTANA.

GREAT FALLS.—Chamberlain & Co., now Chamberlain-Porter Co.

NEBRASKA.

HASTINGS. A. H. Farrens, now Farrens & Neimeyer.

NEW HAMPSHIRE.

WEST STEWARTSTOWN. Mackinnon Bros., burned out.

NEW JERSEY.

VERONA.—Add Verona Pharmacy.

NEW YORK.

AMAGANSETT.—E. W. Babcock, out of business.

MT. VERNON.—G. H. Ankerson succeeded by Ang. Stof.

NEW YORK CITY.—J. Marsching & Co., colors and bronze powd., succeeded by E. F. Drakenfeld & Co.

STRACUSE. J. H. Coogan, succeeded by Stolz Bros.

OHIO.

WEST CARROLLTON.—Mrs. J. P. Billett, succeeded by Ray Patton.

PENNSYLVANIA.

PHILADELPHIA.—F. W. Klinger, Mfrs. Pocket Books, succeeded by F. W. Klinger & Langbein Co.

RHODE ISLAND.

BRISTOL.—A. J. Jasin, petition in bankruptcy.

Texas.

BIRMINGHAM.—T. J. Birdwell, deceased.

BROWNSWOOD.—D. S. Camp, now Camp-Bell Drug Co.

Jno. R. Robinson, petition in bankruptcy.

FORT WORTH.—Childress & Coulson, now Jno. H. Coulson.

MEXIA.—Clark Drug Co., assigned.

VIRGINIA.

BUFFALO LITHIA SPRINGS.—Thos F. Goode, min'l water, deceased.

NORFOLK.—Williams, Martin & Gray, wh. drugs, inc. as Williams, Martin & Gray Co.

SAVED FROM PNEUMONIA.

How Antiplogistine saved a pneumonia patient is told in the following account from Florida:

J. B. White, male, age thirty years, was recovering from a severe case of typhoid. On the thirty-sixth day his temperature was normal. On the thirty-ninth day it again began to rise and in a few days had reached 104.5, the pulse 140. A severe cough and consolidation of the right lung told the story of a complicating pneumonia. After the long and severe drain upon his resources incident to the typhoid, his condition presented a very alarming, not to say, desperate situation.

Counsel was called and it was decided that his only hope lay in the generous use of Antiplogistine. A "Large" package was secured and heated by placing the sealed can in hot water. The temperature of the room was brought up to about 80°. A cotton-lined cheese-cloth jacket, open upon the shoulders and in front, was prepared and warmed. Then Antiplogistine as hot as could be borne was spread upon the skin about one-eight inch thick over the thoracic walls (back, front, side and over the shoulder). This was covered with the jacket. Turning the patient over, the other side was dressed in the same way. The jacket was then drawn together with stout thread. The entire contents of a 34½ ounce package (large) was used for the one dressing. In a few hours, the temperature had declined to a point of safety and the pulse to 120. A similar dressing was applied fresh every twenty-four hours. The improvement was steady and marked, and in six days the patient was again convalescent.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued January 31, 1905.

- 780,970—Gino Clapetti, Strada, Italy. Process of making cream of tartar.
- 780,980—Alfred D. Cressler, Fort Wayne, Ind. Non-refillable bottle.
- 780,984—Hans Foersterling, Perth Amboy, N. J., assignor to the Roessler & Hasslacher Chemical Company, New York, N. Y., a corporation of New York. Process of making tin oxid.
- 781,018—Frank D. Palmer, Jacksonville, Fla. Filter.
- 781,041—Robert S. Wiesenfeld, Baltimore, Md. Non-refillable bottle.
- 781,045—Benjamin F. Brooke-Sewell, Skien, Norway. Apparatus for evaporating and distilling liquids.
- 781,132—William K. Conley, Cincinnati, Ohio, assignor of forty-nine one-hundredths to Joseph A. Turner, individually and as trustee, Cincinnati, Ohio. Stopper for vessels for containing liquids.

MARKET REPORT

FURTHER ADVANCES.

Improving Demand and Scarcity of Supplies.

FIRM MARKET DEVELOPS GREATER UPWARD TENDENCY. — OUTLOOK FOR GOOD JOBBING BUSINESS.— OPIUM, COCAINE AND TANNIC ACID RISE.

New York, Feb. 6.—As the season advances the volume of business transacted continues to hold proportions satisfactory to jobbers and indications point to further activity. The general tone of the market is remarkably firm, most lines suffering from scarcity of supplies. The few declines are insignificant. Several drugs which have not actually advanced during the week are likely to do so soon, notably camphor. The distribution of goods and the filling of mail orders have been hindered somewhat by the severe weather, which makes the considerable amount of business actually handled all the more noteworthy.

OPICUM.—Decided strength is shown, culminating in another advance by jobbers. What irregularity there was in the market is fast disappearing. Confirmations of the unfavorable weather in Turkey have been cabled from Smyrna and predictions are made that unless climatic conditions there improve shortly, the crop will not total more than 5,000 cases. This situation has occasioned a decided improvement in the demand from retailers, resulting in another advance of prices. Jobbing quotations now are \$3.00@3.15 for nine per cent., and \$3.10@3.25 for eleven per cent.; powdered, \$3.75@4.00 for thirteen per cent. and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—In sympathy with the advances in opium, morphine shows decided strength, but jobbers have not raised prices as yet, still quoting \$2.60 @ 2.70 for eighths, in ounce boxes, \$2.55 @ 2.65 in 2½-oz. boxes, \$2.35 @ 2.45 in ounce vials and \$2.30 @ 2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The statistical situation of cinchona bark is strong. The shipments for the last half of January were even smaller than for the first and the total for the month was only 773,000 pounds. On this basis Java and German quinine were immediately pushed up half a cent. The recent Amsterdam bark auction produced results not altogether unsatisfactory. In sympathy with this foreign strength, the local situation shows an upward tendency, but no actual changes have been announced. The jobbing demand continues good. Prices remain 23 @ 23½ c. for bulk in 100-oz. tins, 23½ @ 24 c. in 50-oz. tins, 24 @ 24½ c. in 25-oz. tins, 25 @ 25½ c. in 15 or 10-oz. tins, and 30 @ 31½ c. in ounce vials, according to brand and amount.

COCAINE.—The upward movement in the primary market last week, caused by the advancing of values to \$3.75 by several

manufacturers, was not universally followed. The demand, however, improved considerably and some other wholesalers have raised their quotations to that basis. The movement has only this week exerted its full influence on the jobbing market, values on which have now been marked up to \$4.00@4.25 per ounce for the hydrochloride.

ROCHELLE SALT.—Owing to an advance announced by manufacturers, because of the increased cost of raw material, jobbers have advanced prices to 21½ @ 22 c. per pound in barrels, 22 @ 23 c. in 50-lb. boxes, and 25 @ 30 c. for less.

OIL WORMSEED.—Long continued scarcity of supplies and exceedingly good demand has forced jobbing values up to \$3.25 @ 3.50 per pound for Baltimore and \$3.00 @ 3.25 for western.

TANNIC ACID.—Sympathy with the advance in nutgalls, which are the basis of the acid, has advanced jobbing quotations to 75 @ 80 c. per pound for bulk, and 85 @ 95 c. per pound in 1-lb. packages.

GUM MASTIC.—Scarcity of available supplies induces a jobbing advance to 63 @ 68 c. per pound for whole, and 73 @ 78 c. per pound for powdered.

ALKANET ROOT.—Lack of spot holdings has created another advance and jobbers are now asking 19 @ 24 c. for whole, 22 @ 27 c. for ground, and 25 @ 30 c. for powdered, all per pound.

PYROGALLIC ACID.—Manufacturers have again advanced prices, because of the scarcity and high price of nut galls. Accordingly, jobbing prices have been revised to \$2.25 @ 2.35 per pound and 22 @ 27 c. per ounce.

COCA LEAVES.—Supplies are controlled by a few hands and the market has therefore advanced. Jobbing quotations are now 47 @ 57 c. for Ihuauco per pound, and 52 @ 62 c. for powdered; Truxillo, 35 @ 45 c. per pound, and 40 @ 50 c. for powdered.

COD LIVER OIL.—The situation is rather unsettled. Early in the week wholesalers reduced prices on Norwegian because the season was waning and it seemed advisable to move stocks, but this stimulated a better demand and the market is now firmer. Samples of new Norwegian oil of good quality have been received. Jobbers have lowered their prices somewhat and quote \$53.00 @ 54.00 per barrel for Norwegian. Newfoundland remains unchanged.

MANACA ROOT.—One of the few declines of the week occurred in this commodity, owing to poor demand. Jobbing prices are 40 @ 50 c. per pound.

CARBOLIC ACID.—The cost abroad is higher and our market has risen in sympathy with the foreign strength. Quotations of jobbers have risen to 31 @ 35 c. for crystals in one pound bottles.

CITRONELLA OIL.—There has been a scarcity of spot oil for some time. Foreign markets are strong. Local jobbers are asking an advance at 52 @ 57 c. per pound.

LONDON TRIPLE.—Manufacturers have just announced their schedule for the season as follows: Casks, lb. 10 @ 11 c.; kegs 80, 90, 100 lbs., lb. 10½ @ 11½ c.; iron drums of 25 and 50 lbs., lb. 11½ @ 12½ c.; cases, 100 lbs., of assorted packages of 1, 2 and 5 lbs., lb. 12½ @ 13½ c.; cases, 100 lbs., all 1-lb. packages, lb. 12½ @ 13½ c.; cases, 50 lbs., holding only ½-lb. packages, lb. 14 @ 15 c.; cases, 50 lbs., holding ¼-lb. packages, lb. 16 @ 17 c.; less than case lots

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put the Era on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list editions.

Columbus Drug Co., Columbus, Ohio.—Soda Fountain Supplies.

Ozonol Chemical Co., Odessa, Mo.—Proprietary Medicines.

Powers-Weightman-Rosengarten Co., Philadelphia, Pa.—February price list.

carry an advance of 2 to 3c. over these prices.

BURDOCK ROOT.—There is a decided scarcity of supplies. It is reported that orders sent to Hamburg at top prices have been left unfilled. Local jobbers have not, however, altered prices.

VANILLA BEANS.—Bourbon beans are reported as exceedingly firm abroad, owing to considerable damage to the crop by a severe storm on the Reunion islands. Receipts also are light. The local jobbing market remains unaltered, however.

SUNFLOWER SEED.—The supply is steadily diminishing and scarcity appears pronounced. The wholesale market has risen ¼ c., which is not sufficient to affect jobbing quotations.

CAMPHOR.—A very strong market. No further rise this week, but some expectation of one shortly, because of light receipts and the proximity of the season of greatest demand. The Far Eastern war, of course, is the primary cause of strength.

FORMALDEHYDE.—Keen competition is evident in the wholesale market, which has so far resulted in a decline of ¼ c. Jobbing prices remain unaltered.

MENTHOL.—Heavy arrivals and at best a very moderate demand, have unsettled the market, which is now decidedly irregular, but no effect has resulted on jobbers.

NEW WHITE LIGHT SYSTEM.

Illumination is about the cheapest form of advertising and a form that does not require the services of an expert. The New White Light Gas Company, 312 West Madison street, Chicago, are the originators and manufacturers of a vapor gas system which is said to closely approach perfection. This light burns a combination of air and gas, nine parts of the former to one part of the latter. The system is economical, safe and practical, and can be operated by a seven-year-old boy. The lamps are lighted the same as city gas. No alcohol or gasoline is used.

A FULL-FLAVORED MIXTURE.

A drug clerk, Heracleum Gummiferum, Met his fate, sweet Lily Bulbiferum; Valerian his odor, patchouli her scent, Who can mask this druggy couple from Kent?

For our sisters won't sit beside 'em, And our brothers all the while condemn The full-flavored mixture of scent Wafted from this couple of Kent.

EDITORIAL — COMMENT

The Mann Bill.

Even though the Mann bill does not pass the Senate during the present session of Congress, the druggists will have achieved a great victory in their efforts to secure an amendment of the patent law. Never has the trade been so unanimous in its views as to what should be done, and never has the united power of the pharmacy of the country been wielded with more telling effect.

Not that the contest has been abandoned. On the contrary, there is still hope that the bill, already passed favorably upon by the House, may be coaxed out of committee, and John C. Gallagher is confident that once out of committee the measure will surely pass.

Letters have been pouring in upon the senators from all parts of the country in a manner highly gratifying to the association leaders and in the same degree disquieting to those who took it for granted that "retail druggists could never agree about anything." Not only druggists, but physicians, have aided in bombarding senators with letters, and the force that is able to withstand the combined assault which is being directed against the present obnoxious law must be a powerful one indeed.

The movement of which the Mann bill is the expression will not end with the present session of Congress. There will be other questions which will come up for the consideration of our Nation's legislators, and other trials of strength between the druggists' united forces and the powers that prey.

Anti-Proprietary Bills.

Every year we are entertained by a procession of bills, each loudly proclaimed as the only one capable of putting the proprietary medicine people out of business. The procession moves through the legislative halls of the various States and usually disappears from view completely in the early spring. The measures bear a striking resemblance to one another, all being apparently aimed at the proprietary manufacturer's most cherished posses-

sion, the secret formula, and all propose a money penalty in case of violation.

The crop of these bills is uncommonly large this year, and one or two have shown unusual features indicating a change of development, the nature of which remains to be determined. Several have cocaine and morphine clauses "to protect the uninformed public against the use of dangerous drugs," and others have peculiarities all their own.

The Noble bill introduced in Wisconsin contains a provision for the analysis of the secret remedy by the State Dairy and Food Commissioner and for the collection of a fee for this service.

It is useless to speculate upon the possible effects of these "formula-on-the-bottle" bills, because none of the long procession has ever been known to pass. Perhaps some day, in the dim future, a stray member of the legion may be brought up when no one happens to be on guard. Then our curiosity may be satisfied.

The Question of Arithmetic.

Some time ago we sent out a number of inquiries to the secretaries of boards of pharmacy with the object of obtaining every possible view of the subject of arithmetic as applied in the education of the pharmacist. The answers received are especially satisfactory for they represent the thoughts of many minds and the results of experience gained in every part of the country and under every possible variety of circumstances.

There is no difference of opinion as to the most important object of the inquiry, namely, the necessity of skill in the use of numbers. This most practical of all studies is recognized as being of the utmost importance to the pharmacist. The questions asked of candidates at board examinations testify to the esteem in which this subject is held by examiners. Many admit that candidates are more apt to fail in questions involving simple but unusual calculations than in any other branch, the proportion of failures due to deficiency in this subject being very large.

Several of our readers have submitted reasons for this prevalent weakness in a most important part of the pharmacist's equipment. Some blame

the schools, Mr. Bodemann being particularly outspoken in this respect, while others ascribe the defect to the general lack of training.

It is not difficult to find the moral of all these pertinent remarks from a body of observers who are especially qualified to represent the pharmacy of the entire country. The candidates must have special training in the application of arithmetic to weights and measures. The average mind demands concrete data, and is incapable of carrying on speculation in the abstract. The candidate for honors in the drug store must be familiar with arithmetical calculations applied to drug store quantities. It makes no difference how he acquires the training, but the training he must have.

A Physician's Advertisement.

The accepted code of ethics of the medical men forbids advertising in the ordinary sense of the term, but there are ways of keeping one's self before the public which avoid the bill-boards. We all know of little tricks which the doctors fondly imagine will never be discovered, all to gain the good opinion of the public. Most of these little ruses are, however, entirely harmless and no more to be condemned than the publicity-seeking of the society woman and the professional reformer. But the method employed by a Wisconsin doctor and described by one of our correspondents is open to objection of a serious sort. The doctor strives to gain patronage, not by extolling his own virtue, but by discrediting druggists. In the local papers of the town appear letters bearing his signature and warning the people not to believe pharmacists' advertisements. His denunciation is directed especially against advertised cough mixture, the announcements of which he calls "one of the greatest bluffs on earth," and ends with the advice to consult a qualified physician.

Perhaps some of the advertisements of cough medicines do overstate the case, but not more seriously than the doctor's production. No sensible druggist attempts to "cure consumption," and the pharmacist's cough mixture—taking it for granted that it is a good one—fills a want which could be supplied in no other way.

Pharmacy in Russia.

From an article which appears elsewhere in the present issue, Russia seems to be a veritable paradise for pharmacists, at least for those who have been fortunate enough to obtain a foothold in the restricted field. None of the more serious troubles which worry the American druggist are known to the Muscovite pharmacist. The government protects him in a most remarkable manner from all

forms of competition—no new pharmacy is allowed to open in a district until all surrounding apothecaries are convinced that the establishment would not materially injure their business. Doctors are not permitted to dispense at all, and the sale of proprietary medicines and specialties is carefully regulated.

Once established, the pharmacist has enough business guaranteed by the authorities to keep him reasonably and comfortably occupied. There is no occasion for undue hustle, no scheming, no advertising, and no cut prices. No wonder that, as the author of the article remarks, "the public in Russia grumble, but the pharmacist, never."

Yet, although the pharmacy law regards the public as existing for the pharmacist and not the pharmacist as a servant of the people, we feel certain that the calling as it is administered in Russia does less for either the people or those engaged in the pursuit than the business tempered with professionalism which we know in this country. On the basis of the greatest good to the greatest number. American pharmacy is vastly superior. In our country the ratio of drug stores to population is one in less than 2,000, while in Russia each concession includes from 7,000 to 10,000 possible patrons. The mere ownership of a drug store does not insure ease and fortune on this side of the Atlantic, neither is it impossible for a poor boy to rise to the dignity of an establishment of his own.

Another Success Formula.

Recipes for the manufacture of success have always borne a striking family resemblance, but lately these smug formulas have been more nearly alike than ever. Speakers and writers on this old, old subject about which there is only one thing to be said, are gradually coming to realize the uselessness of all side excursions into the pleasant field of advice, when all paths lead to the same point.

Here are a few examples from the latest sermon on how to be successful: "Success means doing something new. Do to-day something that you have not done before. Don't be afraid you'll do too much. Every successful man has done too much in the eyes of the lazy. You can't say there is nothing for you to do."

In the formula for success there are a number of items, but all are beyond our control except one, and that is the one which well-fed advice-givers are always prescribing for their less fortunate brethren, namely, "work." Most of us, whether we are rollicking in sunshine or toiling in hopeless impotence, know that; and everybody who has a spark of ambition left ad-

ministrators that same advice to himself every morning. Still there are a few who will never achieve any remarkable success.

Not a Half Pint.

In discussing the New York liquor law in these columns last week, we referred to the advantages of the measure to druggists and the necessity of living strictly up to its requirements; inadvertently we referred to the quantity of liquor a pharmacist is allowed to sell under one State excise stamp as one-half pint. The druggists' original request to the excise department included permission to sell one-half pint quantities, but when the request had been granted they found that they had received more than they had asked for, the quantity having been increased to a full pint. The law as it stands permits the sale of pint quantities under the stamp provided. Mr. Edward V. F. Kelly, of Brooklyn, directs our attention to this inaccuracy in our former reference, and suggests that a correction might save some law-abiding pharmacist from injustice.

Doctors and Anti-Trust Law.

A newspaper in Iowa has unearthed a sensation in the form of a conspiracy among physicians to compel a certain county to pay for drugs and for attendance upon its patients a price agreed upon by the doctors. A report announced that fifteen or more medical men had signed an agreement not to undertake the service for less than \$5,000 a year, and the journal makes all sorts of dire threats as to what will happen if the doctors do not abandon such methods and break the monopoly.

The physicians may be asked to answer for their misdeeds as interpreted by an anti-trust law, thus adding another chapter to anti-conspiracy litigation. The druggists are accustomed to the "combination in restraint of trade" bogey, but doctors have thus far escaped its terrors.

The Alumni Ball.

The Alumni ball, which occurred last week, is of more than social significance in the life of the New York College of Pharmacy. The presence of President Nicholas Murray Butler shows that the authorities of Columbia University do not look upon the union with the college of pharmacy as a mere perfunctory alliance. The college is in fact, as well as in name, a part of the university, and the life of the school of specialized pharmaceutical training is merged into that of the broader, larger institution of learning. The beneficial effect of the union is already apparent.

OUR LETTER BOX

QUESTIONS IN ARITHMETIC.

Harrisburg, Pa., February 6, 1905.

Editor The Pharmaceutical Era:

It gives me pleasure to note that you are taking hold of a very essential matter in pharmaceutical instruction, namely, pharmaceutical arithmetic. We have always found that many of the applicants for examination disclose a lamentable lack of knowledge in this respect, chiefly, however, among the younger men who have not enjoyed a complete public school education or who have but recently entered a college of pharmacy (all of the colleges of pharmacy in our State now give instruction in this fundamental). It is also surprising to find that older men and even college graduates are unable to do the simplest calculations in arithmetic, as note the questions in reference to the price per pint of compound syrup of white pine, in the accompanying question-sheet, and the prices of syrups of strawberries and pineapple, per gallon, on another sheet, simple sums of addition and division.

We have questions of this kind at every examination and we find more applicants fail in these than in any other questions in pharmacy. I enclose herewith a number of question-sheets disclosing our method in this direction. Respectfully yours,

CHAS. T. GEORGE.

Dr. George is the secretary of the Pennsylvania Examining Board and accompanying his letter are the sample question sheets referred to as showing the methods followed by the board. The particular questions he cites as examples are the following:

COMPOUND SYRUP OF WHITE PINE.

White pine bark	1050 grains
Wild cherry bark	1050 grains
Balm Gilead buds	140 grains
Spikenard root	140 grains
Blood root	70 grains
Morphine sulphate	6 grains
Chloroform	128 minims
Alcohol	6 ounces
Water	18 ounces
White granulated sugar ..	20 ounces

Proceed by making 20 fluid ounces of percolate with the menstruum of alcohol and water and the vegetable drugs; dissolve in this the morphine sulphate, then add the chloroform, previously mixed with one fluid ounce of alcohol; then add the sugar and stir until dissolved, the whole to measure 32 fluid ounces. The vegetable drugs average forty-five cents per pound; morphine sulphate, \$2.40 per ounce, av.; chloroform, sixty-five cents per pound; alcohol, \$2.50 per gallon, and sugar, six cents per pound. Calculate the cost per pint of the finished product.

PINEAPPLE SYRUP.

(1.) Fifteen small ripe pineapples are purchased at the rate of eight cents a piece; they are washed, peeled and cut into thin slices (total weight in slices, eighteen pounds); thirty-four pounds of white granulated sugar is purchased at 5½ cents per

day work and poor pay prevent many a bright boy from engaging in the apothecary business. A good bright young man can command a larger salary in almost any other branch of business, with shorter hours and no Sunday work. This is about the sum and substance of the situation, as I understand it. Yours sincerely,

GEO. F. UNDERHILL.

MR. MILLARD'S OPINION.

Baltimore, Feb. 6, 1905.

Editor The Pharmaceutical Era:

Our law requires no examination in arithmetic or other academic knowledge, but we see from the answers turned in at each examination the necessity for such an examination, and the deplorable lack of such knowledge. I would not like to say that more than fifty per cent. of the candidates examined could correctly answer how much calomel would be in each powder, were one-fourth grain divided into twenty-four doses. I am sure that some candidates, just from school (I do not mean a college of pharmacy, nor do I say that the college weeds all such out), would be unable to answer the questions correctly, for the greater number are boys who grow up in the business, and who began the process of "growing" before they had been long enough in a primary school, to say nothing of the higher grades; such boys generally fall in the other branches as well. As I said in the beginning, we ask no direct questions in arithmetic, but we do ask questions that require a knowledge of fractions, and such questions are answered more satisfactorily by candidates who have enjoyed a higher education.

I wish to say, without having my opinion asked, that we can only expect that such men will continue to enter the business until the returns for a drug clerk's services shall at least approach, to say nothing of passing, the wages received by clerks of other lines. Why should a young man, fairly educated, spend two or three years, nights, Sundays and holidays thrown in, serving an apprenticeship, and a similar length of time, or longer at a college of pharmacy, to prepare himself to earn \$15 a week, while his chum, clerking in a shoe store, ridicules and laughs at him, and asks him: "Why can't you get off at five each evening, every Sunday and holiday, and get \$20 a week, like I do?" It is not the fault of the employer that this condition exists; it is that the drug business does not justify it. We will have to quit chasing pennies, look to something higher, and learn to be business men. Then we can employ clerks for what they are really worth and those worth while will turn our way. Yours very truly,

DAVID R. MILLARD,
Secy. Md. Board of Pharmacy.

PIERCE VS. BOK.

Buffalo, February 8, 1905.

Editor The Pharmaceutical Era:

It may be of interest to your readers to hear about our mix-up with the Curtis Publishing Co., for publishing statements in the Ladies' Home Journal, in which we claim \$200,000 damages, as follows:

In the first place, the Curtis Publishing Co., the defendants in the case, alleged in answer a number of matters which we considered wholly irrelevant. We made a motion to have these matters stricken

and set aside for twenty-four hours; as soon as sugar is fairly dissolved, stir from time to time to assist in the solution of sugar; strain and press off the syrup, then add one quart of water to the remaining mark and press again, adding to the first product and boil to syrup and strain into one or two gallon jugs. Result, seven gallons strawberry syrup. If strawberries cost you eight cents per box and sugar 5½ cents per pound, what will one gallon of syrup cost you? And if the market price for such syrup be \$2 per gallon, what is your total profit on the above amount?

STRAWBERRY SYRUP.

[There are many other questions on the sheets which are designed to show the applicant's knowledge of mathematics.—Ed.]

HIGH SCHOOL STUDENTS WILL SUCCEED.

Concord, Feb. 4, 1905.

Editor The Pharmaceutical Era:

In respect to candidates being proficient in arithmetic, I will say that many of them show their ignorance in their answers not only in that branch, but in other branches. As a rule poor, dull scholars find their way into drug stores in the first instance by being hired when young, to sweep out the store, wash bottles, etc., and none but cheap boys will do this work. I have made it a point to secure clerks from high school boys, by going to the superintendent of public instruction and learning from him who would be suitable to learn the business. I wish all apothecaries would do this, for I think that if they did so, there would be a marked improvement. I put this question to a class of fifteen or twenty: What is natural philosophy? and none could give a definite answer. This experience satisfied me that not one of the class had a common school education. Another simple question: What is the scientific name for heat? All failed to answer.

You cannot make a silk purse out of a sow's ear. A good high school education is the all important possession. If the applicants have that, they will in my opinion, succeed, provided they have a taste for their adopted profession. The identification of drugs, fluid extracts, tinctures, elixirs, and other preparations they fall down on badly. One reason is that a great many of them never saw any crude drugs as the old apothecaries did, who used to be obliged to grind all of their material and thus become familiar with drug specimens. Long hours, Sun-

out, and the court granted it. From this order they appealed to the Appellate Division, and about two months ago the Appellate Division affirmed the order we obtained. They have now made a special application to the Appellate Division to appeal to the Court of Appeals upon the question. The defendants also made six weeks or more ago, a motion to require us to state the particulars of our damages, our formula, the cost of the various ingredients going into it, the amount of the loss on our sales, etc. This motion was denied upon our opposition to it. No appeal has been taken to this order by the defendants; but the appeal which they have taken to the Court of Appeals will necessarily prevent the trial of the case until this point is decided. These various motions and appeals have, of course, prevented the trial of the case thus far upon its merits. The Curtis Publishing Co. has admitted the entire falsity of the formula they published, and in the suit do not claim that it was true.

There seems to be a general impression among the druggists that we have settled the suit. Such is not the case. Yours very truly,

V. MOTT PIERCE.

JOEL BLANC'S REMORSE.

Philadelphia, February 9, 1905.

Editor The Pharmaceutical Era:

In your issue of February 2 (page 132), I read an editorial reprint from another trade publication upon the R. H. Committee. It has pricked my conscience so deeply that I feel compelled to make bitter confession of my part in the "orgies" of that awful "gang."

As usual, it has taken a long-durance reformer to expose the utter corruption of this "gang" of moral degenerates, and how elevating and ennobling it is to perceive the child-like confidence with which he accepts the information imparted by an editorial rival. Is it possible that his sweeping condemnation of many men was just for the purpose of taking a whack at an editorial competitor? No! No! I can not harbor such a base suspicion. Rather would I believe that some of the "gang" have been playing upon his child-like innocence, just to make a "guy" of him.

But like all other hair-trigger reformers, he is always right. Little does he really appreciate the horrors of the meetings of the R. H. Committee. If he did he would throw the letters "R. H." out of all his type cases and thus keep his pages pure as the driven snow. I have been one of the unwilling victims to whom he refers. At the Buffalo, Washington and St. Louis conventions I was one of the doves who had his plumage soiled. I was enticed, cajoled and deceived into participating in the devilish antics of this committee.

I—even I—was one of those who were "under the table." At least my feet were under it. I actually did drink a glass of beer! One big glass of real beer, and it was awfully nasty and bitter. I saw "a prominent official of the N. A. R. D." drink two glasses. Horrible! Horrible! At St. Louis we even went to the brewery and ladies went with us. It is true that we saw the brewing and bottling processes, but, of course, we only went to get beer. What is professional pharmacy coming to? Ye gods and little fishes! Gee! Gosh! Ouch!

But most degrading of all (dare I write it?) we went to the Pike. Now I have laid bare the depths of our depravity. Yes; we went to the Pike, and each man carried a champagne bottle (made out of wood with a tin whistle in it). And horror of all horrors! We smoked! Yes, we did! We smoked real cigars. We went to the "Streets of Cairo" and "Ireland." They were public shows and millions of others saw them. That, however, makes our degradation all the deeper. Because they were so common, doncherknow? What can I do to atone for my crimes and self-debasement? Ah! I have it! I do most solemnly swear that never again will I enter any place of amusement located upon the Pike at the St. Louis Exposition.

Remorsefully yours,

JOEL BLANC.

WORDS FROM TENNESSEE.

Greenfield, Tenn., February 9, 1905.

Editor The Pharmaceutical Era:

There are to-day few questions of greater importance than those which surround the retail druggist. Here is one. Shall prescription work be a thing of the past, or shall the druggists offer inducements to doctors to draw them away from their personal laboratories? An affirmative answer to the second question as a whole, would remedy this evil, for those dragons who sap the life out of the drug trade by furnishing formulas and crude ingredients to the ignorant public at a reduced price must be destroyed. This is probably the greatest question we have before us, and the difficulty can be overcome by awakening the individual to this responsibility placed upon him as a cog in this great commercial wheel. If the cog weakens, the wheel stops. Wake up to the conditions which surround you, and the wheel will continue to revolve with gained momentum until the direct product of these advanced ideals shall have become practical facts. The world is learning, so wake up! wake up! for in union is strength.

PAUL N. McCULLOUGH.

BODEMANN ON TEACHING METHODS.

Chicago, February 4, 1905.

Editor The Pharmaceutical Era:

Replying to Dr. Kremers' defence of the action of the Regents of the State of New York (Jan. 26, 1905, Era, page 102), I will state that he is right and wrong; there is no difference between pharmaceutical arithmetic and any other kind of arithmetic, but our schools, praised as they are by spread eagle orators, don't teach it half decent and, therefore, Illinois disregards even high school certificates. It is an every day occurrence that a high school graduate cannot figure out a percentage pharmaceutical problem. You ask him if he can figure out percentage in money problems and he will answer "Yes," of course. What is the difference? He doesn't grasp the meaning of percentage. The schools teach too many branches and too little of roots.

Here is an illustration of an arithmetic problem:

Question— $1\frac{1}{2}$ gr. strychnine is divided into thirty capsules. How much strychnine in each capsule?

Answer— $\frac{1}{40}$ grain.

Question—"Please show method of working out this remarkable result?"

Answer—1 grain divided by $30 = \frac{1}{30}$; $\frac{1}{2}$ grain divided by $30 = \frac{1}{60}$; added ($\frac{1}{30} + \frac{1}{60} = \frac{1}{20}$).

Now then, Dr. Kremers may object to calling this pharmaceutical arithmetic, but it is arithmetic that comes up behind the counter daily. Several candidates answered the same way, which prompted me to inquire into their method. I asked them if they had attended school. Many replied, "I took the prize at the School of Pharmacy." I ask, what good does a course in a college do such a "stiff"? What good does this "stiff" do any college? Instead of giving this "Stoughton bottle" the grand prize, the college should give him the grand bounce. There lies the rub; the schools take any old crop. We should have fewer and better schools, in order to have fewer and better pharmacists.

W. BODEMANN.

Nomenclature of Synthetics.

Pharmacists are frequently directed to dispense preparations about which they know absolutely nothing more than the fanciful name ending in al, en, ic, in or ol, says Golaz-Veyre (Schweiz. Woch. f. Chem. u. Pharm. Journal A. M. A.). The names usually consist of (1) some arbitrary abbreviation of the descriptive chemical title; (2) some real or imaginary reference to the possible therapeutic uses of the remedy; or (3) some fanciful and usually far-fetched discovery of the manufacturer. Pharmaceutical and medical societies should demand that manufacturers furnish information on (a) the commercial as well as the exact chemical constitution of the preparation; (b) reliable tests for identity; (c) melting and boiling points; (d) solubility; (e) special incompatibility; (f) dose and therapeutic action; (g) necessary precautions that are to be observed in keeping the preparation. If this really necessary information were forthcoming in all cases, new preparations might be dispensed and used with some prospect of a more rational advance in therapeutics.

ERA COURSE IN PHARMACY.

Matric Number.	Name.	Grade Per Cent.
3754.	Herman J. Weinke, North Manchester, Ind.	97
4079.	P. L. Rice, Woodlawn, Alabama	95
4187.	Jacob A. Shulman, 1407 E. Pratt St., Baltimore, Md.	97
4006	D. A. Waterhouse, Charter Oak, Iowa	97
3944	Joseph C. Keck, 525 E. 150th St., New York City	97
4004	Edward L. Ferrin, 122 Fall St., Seneca Falls, N. Y.	96
3960	D. S. Grinnell, Clarkson, Ky.	96
3992	Claude G. Carr, 217 Utica St., Ithaca, N. Y.	96

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engraved, especially suited for framing, will be furnished to all who request it, for the sum of \$2. Those who desire the latter should forward the necessary fee at once to The Pharmaceutical Era.

PHARMACY IN RUSSIA.*

Druggists There Not Recruited
From Native-Born.

DAILY ROUTINE OF PRACTICE REGULATED BY GOVERNMENT.—CODE EVEN SPECIFIES THE LOCATION OF DEPARTMENTS.—WOMEN ON EQUAL TERMS WITH THE MEN.

BY PROSPER H. MARADEN.

Lecturer on Pharmacy in the University of Liverpool.

The first thing that strikes you on entering Russia is that you have at length discovered the habitat of the official. The longer you reside in the country, I understand, the more certain do you become aware that Russia principally consists of uniformed officials and persons of no consequence, without uniforms, who exist for the convenience of the former class. The pharmacist, strange to say, does not wear any uniform, and is, therefore, altogether an anomaly in Russian life. He is invariably of non-Russian extraction, either German, Jew, or Pole, for the most part. Thanks, however, to the importance of his profession, he enjoys from the Russian government an amount of considera-

THE FERREIN APTEKA.

tion and protection afforded to no other class of skilled traders in the empire, and unequalled anywhere else in the world. Probably this anomalous position is largely due to the manner in which pharmacy was introduced into the Empire of the Czars.

About the end of the sixteenth century there was established in the capital of the empire, Moscow, then the residence of the Czars, an institution called the Aptekarski Prikaz—that is, a Ministry, the duties of which were to attend to matters pharmaceutical. It is not quite clear as to who was actually responsible for the foundation of this body; but there can be little doubt that the first pharmacy in Russia was one founded by an Englishman, James Frencham, at the Court of Ivan the Terrible. This monarch, whose habits and customs are perhaps the best remembered of any Russian ruler, at least had one redeeming virtue—he treated his visitors very hospitably, particularly those who professed the art of healing. Amongst these were such men as Robert Jacob and Ralph Standish, the physicians, the apothecaries Thomas Carter and James Frencham. The position in the Russian Court of that time was rather of the nature of wizard or astrologer, and perhaps it was fear of superior occult knowledge which, as much as anything, led to

these men being well treated by the barbarians who ruled the land in those days.

FOUNDER'S HISTORY OBSCURE.

Of Frencham little is known beyond his name and the fact that he was the founder of the first Apteka in Russia. We do not know why Frencham left Russia, nor have I been able to learn much of this original foundation; but it is certain that some twenty years later he was invited to return to Moscow by the Czar Boris Godunov. He left England and went to the Russian capital, taking with him his wife and family. He also took many drugs and preparations, a list of which, to the number of one hundred and sixty four, is still to be seen. The date of the foundation of this first Court pharmacy—1581—is interesting as being the same as that at which the first old Slavonic Bible was printed. These were stirring times for Russia, and in a previous paper I have given elsewhere some account of the way in which the natives look to their English visitors for medical and pharmaceutical skill.

One is rather inclined to linger here and give some details of the early English physicians who visited Moscow about this time, but I am afraid that I must keep to the subject of my paper—this is, to give to English readers some idea of the excellent regulations affecting the opening and conduct of a pharmacy in Russia.

Fortunately, these are to be had in the form of a code, which can be bought by all and sundry. Upon the title page of this is the inscription in Latin, which is, perhaps, a statement of the first law in all countries, "Juris ignorantia culpe non erit." This is, indeed, true of the laws of pharmacy, as penalties are mentioned in the code which make any reader very careful ere he offend.

The Department of Medicine exercises a control over all new remedies, and finds out if these can be replaced by Russian-made articles. Russia being a protective country, foreign preparations of drugs are prevented competing with native-made articles as far as possible, without interfering with the higher interests of science. Would that this were so in our own country, where the medical man so often allows himself to be exploited by the German or Transatlantic nostrum monger, and makes but little use of the services of the properly trained and educated pharmacist.

In the first place, we have in Russia a system of local government, each province having its own council. St. Petersburg, Moscow and Odessa having police administration which differs from that of the rest of Russia, are under special regulations, whilst Poland is specialized most likely because it is Poland.

REGULATIONS OF PHARMACY.

The regulations relating to pharmacy deal with its very inception and enter into every detail of its daily routine. Before a new pharmacy can be opened in Russia, whether in town or country, a number of conditions have to be observed, and they all make for the success of the new venture and the maintenance of the welfare of the already established pharmacies. Like many other Russian regulations, they regard the public as existing for the benefit of the pharmacy, and thus the public in Russia grumble, but the pharmacist, never. There are not wanting

signs that these good times may soon come to an abrupt end, but at present every pharmacy in Russia does well, and most bring a fortune to their owners. Once established, there is guaranteed a clientele large enough to amply supply it with business; but until evidence of such a clientele is satisfactorily proved to the medical authorities, no one is allowed to dream of opening another pharmacy. Even when this first condition is fulfilled it is necessary to obtain in writing from the neighboring owners of pharmacies, a statement that they do not believe another pharmacy within such and such a distance of their own would materially injure their business.

The first step to obtain permission to establish a pharmacy is for the postulant to obtain permission to present a petition to the local Medical Administration, together with a certificate that the applicant has passed the examination for the legal qualification of provisor, which cannot be taken until the age of twenty-five. The authority mentioned then takes into consideration the need or otherwise of a new pharmacy, owing to an increase in population in a certain neighborhood. The normal increase is defined by law as so many new people for St. Petersburg, so many for Moscow, and so on. In each

THE KELLER APTEKA.

of the towns mentioned the allowance of permanent residents to each pharmacy is 12,000, and the number of new prescriptions and repeats per annum is 30,000. In the capital towns of the provinces the numbers are 10,000 inhabitants and 15,000 prescriptions; in the district towns, 7,000 people and 6,000 prescriptions; whilst in the military ports the numbers are 7,000 inhabitants and 12,000 prescriptions.

YEARS OF RED TAPE.

If the already established pharmacies do a business in prescriptions and repeats so much in excess of their legitimate allowance, defined as above by law, as to allow of the new place being opened without detriment to their own trade, and the increase of population has been shown to be sufficient, the petition goes through various hands until it reaches the governor of the province. The most surely based petition may be delayed at any one of its stages for years by perfectly legitimate means, and so one can understand that a qualified man may waste a deal of his life in getting into his own piece of business.

No branch of the same owner is allowed in the same district. In the country, pharmacies must not be less than fifteen versts (ten miles) apart, although special arrangements are made in cases of large fairs and similar gatherings.

In Russia a hard and fast law is drawn

*Read before the Pharmaceutical Society of Great Britain. Reprinted from the Journal.

between the Apteka or place in which medicaments are dispensed on prescription, and the Aptekarski Magazin, or shop in which goods are sold by retail. The two must be kept entirely separate. In the large business of Ferrein, photographs of which are shown, these are under different roofs. Upon presenting credentials from the University of Liverpool and the Pharmaceutical Society, I was privileged to inspect this palatial Apteka, and its many departments, in company with the head of the firm. To Mr. Vladimir Karlovitch Ferrein, I am indebted for an excellent insight into every branch of this immense business and an extremely pleasant hospitality and companionship during a visit all too short. I have already given some account of this elsewhere.

In every pharmacy, not only in large towns, but even in the country, the dispensing is kept entirely separate from the retail, or "sale in hand," as the Russian expression has it. As a rule, a different set of men attend to each counter, and in every case the fittings of the Apteka proper are distinct from the retail. This is all set forth in the code, and even the rooms which constitute the Apteka are specified. A prescription room or dispensary, another room for storage of materials, so situated that neither damp nor over-heating will cause the preparations to deteriorate, a coctaria or decoctorium, and a laboratory (these last two may be together), a dry cellar, an ice cellar, a drying-room for medicinal herbs, and finally, a suitable dry place for the storage of crude drugs.

The Apteka must also stock a sufficient quantity of fresh drugs of the best quality and the owner must do his best to provide also preparations which, although not in the tariff, are in usual demand.

He must keep, for sale to the public, or on prescription of a medical man, homeopathic medicines.

CODE SPECIFICS BOOKS.

He is required to keep the various vessels for the manufacture and supply of the various medicines, and these are specified by the code, from works of reference, which must include a list of all the medical men licensed to practice, a Russian and a German pharmacopoeia, a Russian military pharmacopoeia, and works on chemistry, pharmacy, and allied subjects, and so on down to the smallest funnel and evaporating dish required.

The books in which prescriptions are copied, and retail sales entered, must be kept upon a sealed cord, that is to say, a cord is run through the book, and the seal of the inspector appointed by the government set upon it.

A sealed book for the issue of poisons must also be kept. Finally, a herbarium of medicinal plants indigenous to Russia.

POISON REGULATIONS.

The greatest care is observed with regard to poisons. The code sets forth that poisonous articles, both in the dispensary and the store-room, cellar, or other place, must be kept apart from all other materials, locked up and under the seal of the magistrate or provisor in charge. Special balances are to be used for the weighing of poisons, and for this purpose alone. I may say that into whatever pharmacy I went in Russia I observe, the greatest care exercised in this particular part of the business. One would see the dispenser take a key from the provisor's desk, go

into the rooms set apart for poisons and "medicamenta heroica," and return with the drug weighed in his scales. These usually have horn pans, and are deeper than the kind we use. The dispenser takes them to the bottle of powder to be weighed, and not the bottle to the scales, as is our custom.

It is interesting to note the immediate result of the poison regulations in Russia as compared with that of the crass ignorance exhibited by certain sections of the community in this country, and particularly of some coroners, who might be expected to know the law. In Russia poisons are so rigidly guarded that the lovelick servant girl and the despairing unfortunate invariably poison themselves with ammonia. In 99 per cent. of the poisoning cases, where the deed is not a constructive crime by qualified persons, but a suicide by women or the uneducated classes, ammonia is the agent employed.

A COUNTRY APTEKA.

We find, as might be expected, that the number of deaths from poison is not large. For any disregard of the necessary precautions in the keeping, issue, or use of poisons and the stronger remedies (medicamenta heroica), the responsible person in the Apteka is liable to loss of his right to control for all time, if, in addition to his being the responsible person, he be the owner, he likewise loses his right to own an Apteka.

STANDING OF WOMEN.

Women have equal rights with men in matters pharmaceutical, and in the large business to which I have referred some half a dozen were engaged in dispensing, and about an equal number were employed in turn typewriting the curious fan-stick labels called "signatura." I have always been an advocate for the employment of capable women in dispensing practice, and was therefore well pleased to hear that in Moscow, as elsewhere, women were able to hold their own as careful and reliable dispensers. The article of the code referring to the admission of women into pharmacy, says that "Persons of the female sex are also permitted to take occupation in an Apteka, due regard being had to existing rules." That is to say, that they must have the necessary educational qualifications, and in particular a qualifying knowledge of Latin.

There is a system of registering the engagement and dismissal of each one employed in an Apteka. Not only does this apply to the heads of departments, but also to any assistant or apprentice who may be engaged or dismissed, and it is the duty of each owner or responsible manager to report to the local medical authority any change which may take place in his staff, and at the same time to remark upon

the conduct, abilities, and pharmaceutical knowledge of each person named in his report.

PRESCRIBING AND DISPENSING.

The Russian law lays down very definitely the question of prescribing, keeping it very rightly in the hands of the medical men, whilst such a thing as a doctor doing any dispensing is unknown. Dentists are not allowed to prescribe, although they may order for their own use certain poisons such as arsenic, cocaine, perchloride of mercury, and such drugs as they may require for the practice of their art.

For all the medicaments marked in the tariff with a cross a doctor's prescription is required; the others may be supplied to the public in a simple form in the way of ordinary retail trade. Should these drugs be required compounded together, it is necessary to obtain the sanction of the Medical Council before such sale can take place. The issue of some of the more powerful remedies, which can in our own country be obtained without any difficulty by the general public, is prohibited in Russia without a physician's prescription, and one sees none of the loose handing about of a doctor's prescription which with us is all too common. In Russia it is recognized that one goes to the medical man for advice, and to the pharmacist for medicine. The law appears to be wisely administered by the Medical Council for the benefit of both classes, and the public are the richer for such regulations as this body may make.

Owing to the severity of the examinations, neither of the professions is overcrowded, with the natural result that each may make a very good living as a rule. Some of you may have read a book by a Russian writer—a self-conscious, morbid kind of person who describes his struggles and want of success as a medical man. The book has been translated into our language, and had a vogue some two years ago. This man, who calls himself Vera-saef, who is a pessimist of the most pronounced kind, states that the normal average fee for a general practitioner in the country is three roubles. The cost to the public of the average prescription may be put down at a rouble, so that payment for medical and pharmaceutical skill is rather above than below our average. Again, there is the tariff to control the prices charged. These prices are marked upon every single article purchased in plain figures, and no over-charge is allowed. It will be seen from these figures that by a judicious appreciation by the government and the general public of the respective functions of the medical man and the pharmacist, and a harmonious working of these two together, one arrives at as near perfection as it is possible to do.

DRUGS FOR THE POOR.

In the country districts the Aptekas are under the care of the Zemstvos. These bodies, which of late have been very much before the public eye, are either county councils similar to our own, save that in Russia a county is sometimes half as large as England, or else district councils, a district being perhaps the size of an English county. The county Aptekas are subject to the usual regulations as to the inspection, fitting out, storage of poisons, as those of the towns. The Zemstvos pay for the medical treatment of their poor,

to the extent in some provinces of as much as 30 per cent. of their own total budget.

There are special regulations for Aptekas attached to mills, hospitals, etc., but in every case the same care is exercised as in the large metropolitan houses.

The manner of dealing with the prescriptions in Russia is an excellent one. This document is rightly understood by all to be an order from the medical men to the pharmacist to dispense or supply certain medicaments. The original is retained by the Aptekar, the keeper of an Apteka, which must be kept for three years, and the patient is supplied with a "signatura," the prescription being copied upon the back of this, and the directions for the patient upon the front. In addition to this the prescription is copied into the sealed book previously mentioned; should a repeat of the prescription be required the signatura is brought, and a second, third, or further supply obtained. In cases of prescriptions containing any of the medicamenta heroica a repeat may only be obtained upon the doctor giving a fresh signatura each time, and this fact is put before the public at the time of the first filling of the prescription by means of a rubber stamp upon the reverse of the signatura.

A regulation of this kind is hadly required in our own country, and it would prevent the repetition of medicines containing such drugs as morphine, cocaine, and chloral hydrate. *Eveo antipyrin*, *antifebrin*, and *phenacetin* are classed as medicamenta heroica, and animal preparations as spermia, special mention being made in the code to the preparations of *Poeha*, and *Parke-Davis*. These are absolutely forbidden to be sold by retail.

RESPONSIBILITY.

In every Russian pharmacy the provisor, or qualified man, must sign his name upon the reverse of the signatura each time that it goes out. This in practice is done by means of a rubber stamp of the name of the person taking the responsibility.

In all the pharmacies which I visited I noticed that the bottle which had been dispensed was placed upon the original prescription; upon the patient calling for the medicine the provisor would take it up and compare it with the original prescription; he himself signs the signatura, or rather stamps it; he satisfies himself that the medicine is correctly dispensed, caps the bottle, and wraps it up, the original prescription being retained. In the large Apteka or Ferrein, special places are kept for each class of medicine, lotions, liniments, pills, etc., and although there does not appear to be any bottle of the type of our hexagonal "not to be taken," special care is shown in the labelling, the external use orange yellow label being general. Here also, for hypodermic injections, a large aseptic instrument case is used to keep the medicines in as perfect a condition as possible.

In order that trades requiring to use poisons for manufacturing purposes may not be unduly hampered by rigid restrictions, there are special regulations for chemists, artists, mill-owners and craftsmen. The most important of these is that the persons mentioned must have a certificate either from the police, or from their immediate chief, ere they can be supplied with poison. There is none of the loose

way of supplying mineral acid in beer bottles, which is not unknown here, nor can one buy cyanide and perchloride at the photographer's, in Russia. A curious order forbids the sale of "sympathetic" inks.

Sherry and other wines are supplied upon a doctor's prescription, and I can vouch from personal knowledge that one famous Aptekar has a particularly fine taste in port, which, together with Malaga and sherry, he imports direct.

AS TO FOREIGN GOODS.

The list of articles of foreign manufacture occupies many pages of the code, most of the foreign proprietaries being forbidden, and all plant extracts manufactured abroad.

Another instructive list is that of the medicaments which may not be sold in the Aptekarski Magaziu, that is to say, which one must go to an Apteka for. It contains nearly all the galenic preparations which appear in their Russian and Latin names—e. g., *Aguae medicinales omnes exceptis aqua tripliae flor.* *Aurantii* et *agua rosarum*, *Trochisci omnes exceptis trochiscis menthae, zingiberis et natri bicarbonica*, *Folia coacis et pulverata omnia*, *Linimenta omnia*. *Eveo* such simple drugs as *gummi resinae pulveratae omnes* are forbidden, excepto *gummi arabico pulverato*. *Mel depraturum* et *rosarum* are also forbidden. It will be seen from this that the Russian pharmacist guards very rightly his own particular branch of the calling, and keeps to himself all the manufacture, as also the dispensing of galenics.

CLASSIFICATION OF REMEDIES.

There are four classes of poisons and heroica recognized. Class A contains eighty-two of the most poisonous drugs. In this list are many of the vegetable alkaloids, arsenic, nitric acid, nitroglycerin, amyl nitrite, chloroform, chloral hydrate, and all the known anaesthetics. Class B includes the mineral acids, oxalic acid, iodine, bichromate of potassium, oxalate and cyanide of potassium, resorcin, and a number of others—forty-seven in all.

List C has the commoner hypnotics, colocyth, and many poisonous crude drugs, as calabar bean, belladonna root and herb, ipecacuanba, savin oil, cantharides—the total number in this list being one hundred and forty-four.

The fourth list contains chiefly poisons or very active herbs and roots.

The wholesale trade in drugs is conducted entirely by selected merchants, who are guaranteed by their guild, as being men best suited to conduct the business. The provincial *Zemstvos* have of late busied themselves with the wholesale importation, from Germany almost exclusively, of certain drugs, mostly disinfectants. The latter have been required for the hospitals chiefly to cope with epidemics of typhus, typhoid and other famine diseases.

As will have been seen from recent issues of *The Pharmaceutical Journal*, the *Zemstvos* are not in favor of the protective system for the pharmacist, rightly believing that the public do not get the best of it.

PENALTIES SEVERE.

These regulations, which I have tried to put before you briefly, seem formidable enough in themselves, but they are enforced by a list of penalties appalling in

their severity. For instance, for the illegal opening of an Apteka the punishment is confiscation of all property to the use of local government institutions, and for preparing any medicament until the necessary full permission has been obtained there is a fine of not exceeding a hundred roubles (more than ten pounds).

But in Russia, as elsewhere, there is something to correspond to our own precept of tempering justice with mercy, and the Russian reading of that honored precept is one which, although it is not accepted by the government, has its application none the less. It is the saying, "It's a long way to Peter." In other words, that laws are made in St. Petersburg, but are not necessarily observed very far away from that center of enlightenment. Practically a friend at court is, in Russia, much more powerful than the severest of the Russian laws; and the pharmacist who takes care to make friends with the powers that be in his own department, is not often troubled with the laws about breach of regulations.

My thanks are especially due to Mr. Vladimir Karlovitch Ferrein for the interesting visit he made with me to every part of his enormous business, in the dispensary of which more than half a million prescriptions were dispensed last year, and to my brother, Mr. Victor E. Marsden, whose intimate knowledge of the language and customs of the Russians has enabled me to put before you a paper which I trust may be considered an authoritative account of the laws regulating the practice of our art in Russia.

THEORY AND PRACTICE

Detection of Lichen Colors.

Archil, orsellin or orchil and cudbear, coloring materials produced from lichens, are being used to a considerable extent for coloring medicines and foods where colors of coal-tar origin are prohibited. To distinguish lichen colors from those of coal-tar origin, Tolman (*Jour. Am. Chem. Soc.*) extracts the colors from ammoniacal solution by amyl alcohol, which separates them from the natural colors of the fruits and wines. This amyl alcohol extract, of a purplish red color, is evaporated on a steam bath to drive off the amyl alcohol, and the purified color tested. A water solution of this color is readily reduced by tin and hydrochloric acid, and reoxidized by ferric chloride. This at once eliminates all the azo dyes and magenta, which are by far the most common dyes used, and leaves only dyes of Class II, of the scheme proposed by Rota. All the coal-tar dyes used as archil substitutes and which resemble it in color are azo dyes, and can be readily distinguished from the archil color. If it is desired still farther to identify the color, it can be treated as described by Allen. If it is found by the wool dyeing tests that some added color is present and that amyl alcohol extracts a reddish purple color from an ammoniacal solution, which is readily reduced by tin and hydrochloric acid and reoxidized by ferric chloride, we may be certain that

the color is one of the lichen colors, archil, cudbear or litmus, all of which act in a similar way. These colors are on the market in a number of different forms as extracts or pastes, as ground up lichens, or as sulfonated orcein. This latter form might be readily mistaken for a coal-tar dye on account of its appearance and solubility, but it gives all the reactions of the non-sulfonated colors, and can be identified as described above.

Poisonous Aniline Colors.

C. W. Chlopin, in an extended examination of aniline colors, finds that the most toxic dyes are among the yellows (Pharm. Centr.). These are followed by the blues, browns and the blacks, but very slight toxicity is found among green and violet colors. Not a single poisonous red was met with, and only one of doubtful toxicity. He classifies the following as poisonous when taken internally: Aurantia, mandarin orange. It., metanil orange (methyl orange), butter yellow, auramine O, brilliant green, sodium aurine, pure blue for cotton, ursol D, thioacetechin, autogenic black and Vidal's black. The following dyes have more or less effect on the digestive or excretory organs: Metanil yellow, aniline orange T, pyroin RR, Ponceau RR, benzo-purpurin, erika B, Iodo-green, acid green, Bavarion blue DEF and DSF, cerise DN, Iodolavin, rhodemin B and G, chrysaniline, benzohavin II, methylene green, primulin and quinoline yellow. Toxicity on the skin was determined by applying wool dyed with the colors to the hands and feet for ten to eighteen days. Only two of the colors, auramine O and ursol D, were found to have harmful properties.

Effects of Radium on Tissues.

When the skin is exposed to radium there first appears an erythema; if the process goes beyond erythema, there develops a livid dermatitis; if it progresses further, vesicles develop upon the surface, the cells that are most affected undergo necrosis, and indolent ulcers are produced (Pusey, Jour. A. M. A.). The process may not go beyond an erythema or congestion. If so, the erythema or congestion, at first diffuse and later sharply circumscribed, becomes less marked and finally fades out. Scaling of the epidermis occurs, and at last a pigmented area is left to mark the site of the reaction. If the process goes on to the formation of ulcers, the lesions that occur are very indolent. In the burns which M. Becquerel and M. Curie produced on their own persons the ulcers did not heal for about two months, and the duration was longer in the case reported by Hallopean. All this is, of course, very strikingly like X-ray burns.

Pearl Coating Pills.

A method described by S. Hardwick before the Bournemouth Ph. A. (Eogland), recently has been employed with very good results. A small enameled plate is made hot and rubbed over with a piece of cacao butter until there is a melted film covering the plate. The pills are then rotated on this, and, when covered with oil, are thrown into a tin containing French chalk, and then rapidly revolved. The pills acquire a good surface and very fair polish.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Aspirin.

(C. A. B.)—Aspirin is the trade marked name applied to "acetyl salicylic acid," the product obtained by the action of acetic anhydride on salicylic acid. It forms white crystalline needles, having the composition $C_9H_8O_4$, soluble in alcohol or ether, and to the amount of 1 per cent. in water at 37° C. It has also been stated that it is an extremely unstable compound, being readily decomposed by solvents like water or alcohol (Am. Journ. Pharm. 1902, 442, from Wiener Med. Presse). It is incompatible with sodium bicarbonate, ammonium carbonate and the alkalies generally, and is decomposed by moisture, heat, etc. For this reason it is advisable to keep it in well-closed receptacles, in a cool dry place. It cakes when mixed with antipirin, and attention has been called to the liquefaction of a mixture of aspirin, exalgin and sodium bicarbonate, this condition being due to the saponification of the aspirin by the alkaline bicarbonate, the acetyl radical of the aspirin (acetyl-salicylic acid) being easily removed by alkalies.

Goldmann has proposed the following test for the identification of aspirin (Pharm. Zig.): If 0.5 gram is boiled from two to three minutes with 10 c.c. of 10 per cent. sodium hydrate solution, it is completely saponified and a clear solution results on cooling. If diluted sulphuric acid is then added to the solution, salicylic acid is precipitated with brief violet coloration. The salicylic acid is collected by filtration and identified by solution in ether, melting point, reaction with ferric chloride, etc., while the filtrate is characterized by an acetic acid odor, and by developing the odor of acetic ether when boiled with alcohol and sulphuric acid. To determine the purity of aspirin—absence of free salicylic acid—0.1 gram is dissolved in 5 c.c. of alcohol, and the solution diluted with 20 c.c. of water. The addition of one drop of diluted ferric chloride solution should not produce a violet color.

Coblentz (this journal April 2, 1903, page 348) states that aspirin is insoluble in acid fluids, but is decomposed into its components in alkaline media. For this reason, he says, "It passes unaltered through the stomach, and splits off its salicylic acid in the intestinal canal, thus avoiding gastric irritation. The liberation and absorption of the salicylic acid takes place in a gradual manner, and this prob-

ably explains why the drug has not been found to produce the nervous disorders often noticed under the use of salicylates." It has been recommended in the treatment of acute articular and muscular rheumatism, gout and diabetes, and is best given in dry form. Upon the other hand, Wieleh (Amer. Journ. Pharm., Wiener Med. Presse) warns against the indiscriminate use of aspirin, particularly in cases of enteric fever of phthisis, in both of which conditions sudden collapse and other untoward complications have been observed.

Ginger Ale for Bottling.

(R. I. F.)—Ginger ale for bottling may be prepared by using a ginger ale extract with sugar and water and charging the bottles with carbonic acid gas in the usual manner, or it may be prepared by the fermentation method. Here are some formulas:

(1.)

Tincture of ginger, U. S. P.	7 fl. ounces
Tincture of capsicum	3 fl. ounces
Oil of lemon, fresh	1 fl. dram
Solution of citric acid	4 fl. ounces
Sugar	10 av. pounds
Water, enough to make	19 gallons

Mix in the usual manner, and charge not to exceed 150 pounds pressure.

(2.)

Gingerine	1 ounce
Good Jamaica ginger	2 pounds
Alcohol	2 pints
Distilled water	3 pints
Soluble oil of lemon	2 ounces
Soluble oil of orange	2 ounces
Carbonate magnesia	1 ounce

Dissolve the gingerine in the alcohol and add to it gradually the water heated near the boiling point; with this as a menstruum, percolate through the ginger. In the percolate dissolve the soluble oils and suspend in this tue carbonate of magnesia, then filter, returning the filtrate until it comes through clear. One dram of tincture of capsicum may be added to the finished preparation if a sharper product is desired. One ounce of above is used to one gallon of syrup.

(3.)

Sugar (white or brown)	2 av. pounds
Lemon juice	2 fl. ounces
Ginger, bruised	2½ av. ounces
Yeast	2 gallons
Water	8 fl. ounces
Honey	2 av. ounces
Essence of lemon	1 fl. dram

Boil the ginger one hour in one gallon of water, then add the rest of the water and the other ingredients, and strain it when cold. Add the white of one egg and the essence of lemon. Let stand four days in a warm place, and bottle.

(4.)

Ginger, Jamaica or Africana	1 av. ounce
Parley root	1½ av. ounces
Cream of tartar	¾ av. ounce
Lemons, sliced	2
Sugar	16 av. ounces
Water, boiling	1 gallon

Mix the above, stir frequently until the mixture has a temperature of about 100° F., then add a cake of compressed yeast, and keep the whole in a moderately warm place. After twenty-four hours, strain,

ferment another day or two, strain again, and bottle securely.

(5.)

The following extemporaneous method may be employed:

Into a suitable bottle, having the capacity of about 12 fluid ounces, put
Syrup of ginger 1 fl. ounce
Syrup of lemon 2 fl. drams
Carbonated water, sufficient
to fill the bottle.
Cork the latter instantly, and secure the cork with twine or wire.

Ink for Show Cards.

(M. A. C.)—An ink that may be applied to enameled calling or playing cards and one that will show perfectly plain and not destroy the gloss, is printer's ink diluted with oil of lavender.—Scientific American Cyclopedia of Receipts.

For window display cards you can purchase paints similar to distemper colors which only require the addition of water to make them ready for use.

A good black ink for shading pens and one which flows well on ordinary paper is the following:

Powdered nutgalls 18 parts
Iron sulphate 8 parts
Gum arabic 7 parts
Water 145 parts

The galls are first boiled in 120 parts of water, the iron sulphate and gum arabic dissolved in 15 parts of water, and this solution then slowly added to the former. The ink is said to be very glossy and black.

A red ink may be made by dissolving 15 grains of carmine in 4 ounces of water, thickening with mucilage of gum arabic. Colored inks may also be made from the various aniline dyes. The following formulas we take from our files:

EOSIN RED.

Eosin B 1 dram
Solution of mercuric chloride 2 drams
Mucilage of acacia 2 drams
Rectified spirit 4 ounces
Oil of lavender 1 drop
Distilled water to 4 ounces

Dissolve the eosin in the solution and 2 ounces of water, add the mucilage, and mix, then the oil dissolved in the spirit, and finally make up.

BLUE.

Resorcin blue 1 dram
Distilled water 6 drams
Mix and acetate occasionally for two hours, then add:

Hot distilled water 24 ounces
Oxalic acid 10 grains
Sugar ¼ ounce
Shake well. This and other aniline inks can be perfumed by rubbing up a drop of attar of rose with the sugar before dissolving it in the hot water.

ORANGE.

Aniline orange 1 dram
Sugar 2 drams
Distilled water 8 ounces

Coloring Electric Lamp Globes.

(A. P. F.)—The process generally recommended for coloring incandescent lamp globes is to coat them with a solution of colodion in which has been dissolved anilin of the desired shade. For frosting electric light globes a solution of alum or a transparent solution of white shellac dissolved in wood alcohol may be

used. To apply the former, make a saturated solution of alum in water and dip the globe into this, holding it in a horizontal position while the crystals are forming and the excess of liquid is draining. The drying and cooling process should be very slow, in order to impart a perfect crystallization to the glass. Repeated dipplings and dryings will make a heavier coating of crystals. To make red glass globes, color the alum solution with cochineal or logwood. Yellow globes are made by coloring the solution with turmeric; blue by using indigo, and other colors by using diamond dyes.

See also this journal, March 29, 1900, page 344.

Polish for Brass.

(G.)—Here are three formulas:

(1.)

Oxalic acid 1 ounce
Peroxide of iron 2 ounces
Whiting 4 ounces
Water 1 pint

Mix and shake before using. Besides brass, this makes a good polishing liquid for copper and other metals. It may be used dry (omitting the water), or applied with a little oil and rubbed dry with whiting.

(2.)

Precipitated chalk 2 ounces
Solution of ammonia 2 ounces
Methylated spirit 3 ounces
Water to 20 ounces

POLISHING PASTE.

Oxalic acid 1 part
Peroxide of iron 15 parts
Powdered rotten stone 20 parts
Palm oil 60 parts
Petrolatum 4 parts

Powder the acid and add the rouge and rotten stone, mixing thoroughly. Sift to remove all grit, then gradually add the palm oil and petrolatum and incorporate. Add oil of mirbane or oil of lavender to suit. Apply with a piece of flannel, rubbing off with soft paper, and polish with chamois.

Cod Liver Oil and Iron.

(Gul.)—Various formulas have been suggested for combinations of cod liver oil and iron. As you do not give us particulars of the kind of preparation you wish to make, we can only assume that you wish a formula of the "ferrated cod liver oil type." Here are two, the first being that given by Dietrich:

(1.)

Solid dialyzed iron, 37.5 grams, is dissolved in distilled water, 200 c.c. White, hard soap, 3.5 grams, is also dissolved, by the aid of heat, separately in a similar quantity of water. The solutions are cooled and mixed; the precipitated ferric oleate is collected, washed and drained until the weight is 20 grams. It is then placed in a capsule with sodium chloride, 5 grams, and cod liver oil, 100 grams, and heated on a water bath, with constant stirring, until the iron oleate is dissolved. The product is then filtered. It contains about 2 per cent. of iron, and is diluted with cod liver oil before use.

(2.)

Solution of ferric chloride is precipitated with an excess of solution of sodium benzoate. The precipitate is collected, washed, drained, and twenty parts of this

is mixed with sufficient sodium benzoate to form a dry powder. This is rubbed down with 100 parts by weight of cod liver oil, and heated on the water bath at a temperature not exceeding 32 C. The ferric benzoate is thus dissolved, while the sodium salt remains insoluble and is filtered out. The oily solution, containing about 2 per cent. of iron, is diluted with 4 to 9 parts of oil for medicinal use.

IODIZED COD LIVER OIL AND IRON.

(1.)—Iron filings, 2 parts; iodine, 4 parts; cod liver oil, 40 parts; mix in a mortar, adding a little ether, and triturate together until a blackish mixture results. This is then made up to 1,000 parts with more oil, and filtered. (2.)—Iodine, 1.7 parts; iron filings, 1 part; cod liver oil, 1,000 parts. Introduce into a flask and leave in contact for eight days, with occasional agitation. Filter and add cod liver oil, 30 parts. The product contains about 0.2 per cent. of ferrous iodide.

Waterproof Marking Ink.

(M. A. C.)—The following ink is not easily washed off and may be employed for marking packages, bottles in the laboratory, etc., and it is said to resist the destructive action of vapors: Dissolve by boiling in 400 parts by weight of water, 50 of borax, add to the solution 20 of shellac, boil again until the shellac is dissolved and add to the clear fluid 10 parts by weight of nigrosine and 15 to 30 of ammonia. Various formulas for laundry marking inks have been published in recent volumes of The Era. Consult the indexes. We cannot give the formula for the proprietary specialty.

Fireproofing Curtains.

(J. H. M.)—The following solutions have been successfully applied for rendering tissues incombustible: (1) A mixture of sodium tungstate solution of 25% Truabell and 3 per cent. sodium phosphate; (2) 6 pounds alum, 2 pounds borax, 1 pound sodium tungstate, 1 pound dextrine dissolved in soap water; (3) 5 pounds alum, 5 pounds ammonium phosphate, 100 pounds water; (4) 3 pounds borax, 2½ pounds Epsom salts, 20 pounds water; (5) 8 pounds ammonium sulphate, 2½ pounds ammonium carbonate, 3 pounds boric acid, 2 pounds borax, 2 pounds starch, 100 pounds water.

Hager ("Handbuch der Pharmaceutischen Praxis.") gives this formula for a fireproof solution for light fabrics:

Ammonium sulphate 8.0 kg.
Ammonium carbonate 2.5 kg.
Borax 2.0 kg.
Boric acid 3.0 kg.
Starch 2.0 kg.
(or dextrin or gelatin, 4 kg.)
Water 100 kg.

The fabric is impregnated with the solution warmed to 30° C., and then smoothed and dried.

Citronal Pills.

(Citronal Pills have been recommended in the treatment of gout and rheumatism. One hundred of the pills are stated to contain quinine hydrochloride 0.5 gram; chloride acid, 10 grams; extract of fragaria, 6 grams; extract of huckleberry (Myrtillus) leaves, 4 grams; powdered licorice root, q. s.—Pharm. Centr.

BOOK REVIEWS

THE ART OF COMPOUNDING.—A text-book for students and a reference book for pharmacists at the prescription counter. By Wilbur F. Scoville, Ph.D., formerly professor of theory and practice of pharmacy in the Massachusetts College of Pharmacy; Member of the Committee of Revision of the United States Pharmacopoeia. Third Edition, revised and enlarged. Svo, 337 pages, cloth, \$2.50; sheep, \$3.50. Philadelphia: P. Blakiston's Son Co.

A large number of Era readers and most American dispensers are already familiar with this book, previous editions of which have been noticed in these columns. The present edition bears the marks of careful revision, considerable new matter having been introduced both in the text and in the prescriptions which are used to illustrate the principles discussed. Among the additions noted are those made to the chapters on "incompatibilities" and "ointments," included in the latter being St. Onge's table showing the relative absorptivity of the different bases when manipulated in the usual manner. The table of "drops in a fluidram" from the Era Posse Book is given a prominent place.

Professor Scoville's "Art" has found a place as a text-book in many colleges of pharmacy and deservedly so, for it supplies just such information as the student most needs, and in practical drug store work it can be depended upon to supply the answers to all of the vexatious problems which are likely to arise and confuse the man behind the prescription counter.

FIRST REPORT OF THE WELLCOME RESEARCH LABORATORIES at the Gordon Memorial College, Khartoum. By the Director, Andrew Haffour, M.D., B.Sc., M. R. C. P., Edin., D. P. H. Camb., Fellow of the Royal Institute of Public Health, etc. Quarto, 83 pages. Department of Education, Sudan Government, Khartoum.

As explained above, this book is the first annual report of the research laboratories of the Gordon College, the equipment for which formed the gift of Henry S. Wellcome, of Burroughs, Wellcome & Co., the well known manufacturing pharmacists of London. The report contains the story of "mosquito work" in Khartoum and the Anglo Egyptian Sudan, a record of the investigations of biting and noxious insects other than mosquitoes; a report of the studies of insects and vegetable parasites injurious to crops and cyanocephalis in Sorghum vulgare; and describes the general routine work performed by the staff under two main headings, pathological and chemical. There is also an interesting paper on the mosquitoes of Egypt, the Sudan and Abyssinia, by Alfred Theobald, M.A., vice-president of the S. E. Agricultural College and president of the association of the Economic Biologists of Britain.

The regions traversed by the Nile and its tributaries are very prolific in regard to the mosquito, the chief of which, according to Professor Theobald, seem to be in the genera *Culex* and *Mansonia*, and

among the *Anopheles* is found an abundance of *Celia*, *C. pharansis*, Theobald, and a *Myzomyia*, *M. funesta*, Giles. Mr. Wellcome is specially honored by having a new *Anopheles*, *A. wellcomei*, named after him. This mosquito is said to be closely related to *Anopheles gigas*, Giles, from India, and bears a scientific description as long as the moral law. Notwithstanding this, it is probably just as voracious in its thirst for human gore as the *Probingianian* of New Jersey. The report is embellished with a number of full page plates, reproductions of photographs of the laboratories and college, and a skeleton map of the Sudan.

THE FOLLIES OF SCIENCE AT THE COURT OF RUDOLPH II. 1576-1612. By Henry Carrington Bolton. Svo, 212 pages; cloth, \$2. Milwaukee: Pharmaceutical Review Publishing Co.

This interesting book carries the reader back to the days of Rudolph II., King of Bohemia and Hungary and Emperor of Germany, who preferred the study of astrology and alchemy to the responsibilities of government. He was a contemporary of Queen Elizabeth from whose court there came to him the famous astrologer and mathematician, Dr. John Dee, who, history tells us, was once accused of using enchantments against Queen Mary's life. In 1551 Dee became acquainted with Edward Kelley, "the Golden Knight," an apothecary who professed to have discovered the philosopher's stone, and by whose assistance he performed various incantations and maintained frequent imaginary communications with spirits.

But Dee and Kelley were not the only tricksters at Rudolph's court. The eccentric monarch surrounded himself with charlatans and mountebanks of all degrees. In his anxious desire to discover the philosopher's stone he extended his patronage to Kepler and Tycho Brahe, whose study of astronomy was thought specially to qualify them for the great work of discovery. Brahe was a Dane, and the patronage which Rudolph extended to him is one of the few claims the monarch has to the grateful remembrance of posterity, for Rudolph undertook, but subsequently failed for want of means, to defray the expenses incidental to the completion of the astronomical calculations of Brahe and Kepler, now known as the "Rudolphine tables."

One must read this book to breathe the atmosphere of a strange court in a most credulous age. The descriptions of persons, localities and events are true to history, but the word pictures of the author are those of an artist. The stories of the physicians attached to Rudolph's court, the formulas they employed, their wonderful elixirs, the secret symbols of Pontanus' letter, the pharmacy of Christian Horecky, noted for the "purity of his medicines as well as for the accuracy with which the complex prescriptions were compounded," will interest the pharmacist of to-day who has a taste for the symbolism of the "masters" in an age when there was a deluge of searchers for the philosopher's stone. There is portrayed no better picture of the contrast between the baseless speculations of the alchemistic age and the scientific hypotheses of to-day than will be found in the "Follies of Science at the Court of Rudolph II."

ELEMENTARY EXERCISES FOR STUDENTS IN MATERIA MEDICA AND PHARMACY. By Pierre A. Fish, D. Sc., D. V. M., Professor of Veterinary Physiology and Pharmacology in the New York State Veterinary College, Cornell University. Second edition, revised and enlarged. Svo, interleaved, cloth, \$1.50. Published by the author, Ithaca, N. Y.

This book is intended as a laboratory compendium for students of veterinary medicine. In this, the second edition, the author states that he has "cut out the taking of notes on a number of drugs which were of more or less limited use in medicine" and in their stead he has introduced more practical work in the way of experiments. To this end blank pages have been inserted upon which the student may make notes of his observations and there are charts to show the specific action of the more important medicines at frequent intervals throughout the book.

For the purpose intended this book is probably comprehensive enough to give veterinary students a working knowledge of many of the remedies they will later employ as active practitioners. It does not cover so wide a scope as corresponding text-books for pharmacy students.

A MANUAL OF CORPORATE ORGANIZATION, containing information, directions and suggestions relating to the incorporation of enterprises. By Thomas Conyngham, of the New York Bar, author of "A Manual of Corporate Management." Svo, 350 pages; sheep, \$3.20. New York: The Ronald Press.

The author of this book is a corporation lawyer of extended experience and he is peculiarly qualified to deal with the various problems of incorporation. These he discusses in the book before us in a practical manner, stating fully and clearly the possibilities of incorporation, the advantages and how they may be best attained, and also, the disadvantages and dangers which may be encountered and how and to what extent they may be avoided or overcome. To one intending to incorporate or who may be interested in incorporation, this work will be found of direct and valuable assistance, for it contains much important information not easily accessible elsewhere. Wherever necessary, the author has fortified important points by citations and quotations. Part VII contains legal forms for incorporation in the various States, by-law forms, underwriting agreements, voting trust agreements, etc. We can heartily commend the book.

Improved Tincture of Opium.

One hundred grams of powdered opium and 50 grams of calcium phosphate are mixed to a paste with the aid of hot water. After adding the same amount of fine white sand, the mass is evaporated to dryness. With hot water the mass is moistened well, allowed to stand for 12 hours, then percolated with hot water until 700 cc. have been obtained. The percolate, after cooling, is filtered, evaporated to 500 cc., mixed gradually with 500 cc. of alcohol, the whole filtered again, enough of 45.5 per cent. alcohol being added to bring the measure up to 1,000 cc. The resulting tincture is said to be almost odorless, does not cause nausea and is pleasant to the taste.—Apoth. Zeit.

NEWS SECTION

THEO. WEICKER CO. FORMED TO REPRESENT MFGRS

Mr. Weicker Announces Its Organization to the Chemical and Drug Trade.

PURSUANT TO HIS PROMISE OF LAST JULY.—THEODORE WEICKER AND HERMAN G. WEICKER THE PARTNERS.—PLANNED FOR WORK AND OPERATIONS ENTIRELY SEPARATE AND DISTINCT FROM THOSE OF E. R. SQUIBB & SONS, OF WHICH COMPANY MR. WEICKER RECENTLY BECAME THE PRESIDENT.

The announcement has just been made of the organization of the Theodore Weicker Company. Coming as it does on the heels of Mr. Weicker's election as the president of E. R. Squibb & Sons, it confirms the universal opinion that Mr. Weicker would not long remain away from the important activities of the chemical industry. The scope of the new company's plans will not conflict with the interests of E. R. Squibb & Sons in any way, for its purpose is to serve as manufacturers' agents.

Associated with Mr. Weicker in the partnership of the new company, will be Mr. Herman G. Weicker, his brother. The standing of these gentlemen in the trade assures that the Theodore Weicker Company will prove a leading concern in its line.

THE OFFICIAL ANNOUNCEMENT.

The text of the announcement issued to the trade is:

The Theodore Weicker Company, New York, Chemicals and Drugs, Manufacturers' Agents, to the Drug and Chemical Trade:

In pursuance of my promise of July last, I hereby announce the establishment of the Theodore Weicker Company, a partnership consisting of Theodore Weicker and Herman G. Weicker, with temporary offices at 38 Doughty street, Brooklyn.

As my entrance into the house of E. R. Squibb & Sons has recently been published, and in order to prevent any misunderstanding, I desire to say that the Theodore Weicker Company has been planned for work and operations entirely separate and distinct from those of E. R. Squibb & Sons.

THEODORE WEICKER.

When seen at his home in Stamford, Conn., Monday evening, Mr. Weicker explained that the text of the announcement was to be taken literally. The company has been planned to represent manufacturers' interests. Future developments, said Mr. Weicker, might occur, but the time was hardly ripe for an elaboration of details. Mr. Weicker pointed out that the organization of the company was the culmination of the plans he had announced last summer, when, as will be remembered, the establishment of a company by him was intimated, and since when such an announcement has steadily been expected.

Mr. Weicker's entrance into the house of

E. R. Squibb & Sons recently, somewhat confused the other issue in the public mind, but it is now evident that he never abandoned his original purpose.

MR. WEICKER EXPLAINS.

While not disclosing any new facts concerning the plans of the company, Mr. Weicker rather intimated that he might at no very distant date, have other matters to lay before the trade and the public generally. Future developments will therefore be watched closely.

Although Mr. Weicker's responsibilities have more than doubled, and the cares of such great undertakings as these he has successfully accomplished, have undoubtedly placed a heavy strain on him, it is plain that his energies for new achievements

THEODORE WEICKER.

are but strengthened, and that nothing but success can attend these recent undertakings.

When asked to throw some further light on the situation by recalling past events, the idea of reminiscences brought forth the reply that he preferred to allow his actions and the work of the companies with which he is associated, to speak for him. It would seem as if there already had been some convincing conversation of the character preferred by Mr. Weicker.

Asked why he did not confirm or deny various rumors which had been circulated before the two recent announcements, Mr. Weicker explained that he was then not ready to make any definite statement to the trade.

PREVIOUS CONNECTIONS.

The selection of Mr. Weicker as the president of E. R. Squibb & Sons appears to be especially congenial for all interests, as Mr. Weicker has always been noted for his high ethical stand, and the same principle has always characterized the policy of E. R. Squibb & Sons, as is testified by

the standing of their products. Now that Mr. Weicker finds himself backed by such a line of standard products, all the workings of the business are sure to be harmonious.

Theodore Weicker first came to the United States in 1887, as the sole representative for this country of E. Merck, of Darmstadt, Germany. Later he became a partner in the business and established the American house of Merck & Co., in conjunction with Mr. George Merck. For over thirteen years this connection continued, terminating last June. During that time the reputation and position of Merck & Co. had been firmly established. By his new associations, Mr. Weicker has actively resumed those intimate and cordial relations with the trade which he can hardly be said to have ever severed.

CRUDE IODINE ADVANCES SHARPLY.

Cable advices from London received Tuesday morning, reported an advance of two shillings on crude iodine, per pound, and the immediate practical withdrawal of the makers of iodides from the market. Authorities in the trade here predict a sharp advance in iodides shortly, when the full effects of this development are felt. This upward movement, in their opinion, will be accentuated by the fact that when crude iodine last advanced the iodides did not rise commensurately. This time their upward movement is therefore likely to be much stronger, because of this stored momentum.

Local jobbers have not as yet altered their prices and may not for some time, in the natural sequence of such movements, but it is stated by some authorities that the readjustment will probably result in an advance of about forty cents per pound on iodide of potassium and a proportionate rise in other iodides. Iodine and iodoform should therefore advance about eighty cents per pound.

PLASMON CO. IN TROUBLE.

A petition in bankruptcy has been filed against the Plasmon Company of America, at 116 Broad street, manufacturers of a food product, a powder made from milk. The following creditors are on the petition: John Hays Hammond, of Lakewood, \$9,000; Henry A. Suters, of San Francisco, \$1,000; Joseph M. Malament, \$10, and Frank P. Mercereau, \$384. The petition charged that on February 2 the company admitted in writing its inability to meet obligations.

The company was incorporated in New York in April, 1902, with a capital stock of \$750,000, taking over the business of the American Plasmon Syndicate, of London, which was started here in 1900. The company some time ago gave up its offices in London and San Francisco. A large factory was erected at Briar Cliff Manor, Westchester county. The company is said to have spent \$150,000 in advertising its products.

CHANGES IN PENAL CODE.

Text of Amendments to Be Introduced at Albany.

The proposed amendments to the Penal Code, to make the same conform with the pharmacy law, are now in Albany, where they were taken last week, by Dr. Wm. Muir, member of the N. Y. State Ph. A. Legislative Committee. They would have been introduced at once, but Senator Hill, of Buffalo, who is chosen for the part, was ill at the time, so that their fate at the hands of the Codes Committee must be deferred.

These amendments, as already stated, were drafted after being agreed upon by the conference of associations called by the State Association, at Albany, last November. The text of the proposed legislation follows:

Section 1. Section four hundred and one of the Penal Code is hereby amended to read as follows:

Section 401. Apothecary, *druggist* or *pharmacist*, omitting to label drugs, or labeling them wrongly.—An apothecary, or licensed *druggist*, or licensed *pharmacist*, or a person employed as clerk or salesman by an apothecary or licensed *druggist* or licensed *pharmacist*, or otherwise carrying on business as a dealer in drugs or medicines, who, in putting up any drugs or medicines, or making up any prescription, or filling any order for drugs or medicines, wilfully, negligently or ignorantly omits to label the same, or puts any untrue label, stamp or other designation of contents upon any box, bottle or other package containing a drug or medicine, or substitutes a different article for any article prescribed or ordered, or puts up a greater or less quantity of any article than that prescribed or ordered, or otherwise deviates from the terms of the prescription or order which he undertakes to follow, in consequence of which human life or health is in danger, is guilty of a misdemeanor.

Section 2. Section four hundred and two of the Penal Code is hereby amended to read as follows:

Section 402. Apothecary selling poison without recording the sale.—An apothecary or *druggist* or a person employed as clerk or salesman by an apothecary or *druggist*, or otherwise carrying on business as a dealer in drugs or medicines, who sells or gives any poison or poisonous substance without first recording in a book to be kept for that purpose, the name and residence of the person receiving such poison, together with the kind and quantity of such poison received and the name and residence of some person known to such dealer, as a witness to the transaction, except upon the written order or prescription of some practicing physician whose name is attached to the order, is guilty of a misdemeanor.

Selling poison without labeling and recording the sale.—It shall be unlawful for any person to sell at retail or furnish any of the poisons named in the schedules hereinafter set forth, without affixing or causing to be affixed, to the bottle, box, vessel or package, a label containing the name of the article and the word "poison" distinctly shown, with the name and place of business of the seller, all printed in red ink, together with the name of such poi-

sons printed or written thereupon in plain, legible characters, which schedules are as follows, to wit:

SCHEDULE A.

Arsenic, cyanide of potassium, hydrocyanic acid, cocaine, morphine, strychnia and all other poisonous vegetable alkaloids and their salts, oil of bitter almonds, containing hydrocyanic acid, opium and its preparations, except paroprice and such others as contain less than two grains of opium to the ounce.

SCHEDULE B.

Aconite, belladonna, cantharides, colchicum, contum, cattan root, digitalis, ergot, hellebore, herbene, phytolacca, strophanthus, oil of tansy, veratrum viride and their pharmaceutical preparations, arsenical solutions, carbolic acid, chloral hydrate, chloroform, corrosive sublimate, croscote, croton oil, mineral acids, azaleic acid, Paris green, salts of lead, salts of zinc, white hellebore or any drug, chemical or preparation which, according to standard works on medicine or materia medica, is liable to be destructive to adult human life in quantities of sixty grains or less, and such other poisons as the State Board of Pharmacy, under the authority given to it by the Public Health Law, may from time to time add to either of said schedules. Every person who shall dispose of or sell at retail or furnish any poisons included under schedule A shall, before delivering the same, make, or cause to be made, an entry in a book kept for that purpose, stating the date of sale, the name and address of the purchaser, the name and the quantity of the poison, the purpose for which it is represented by the purchaser to be required, and the name of the dispenser, such book to be always open for inspection by the proper authorities, and to be preserved for at least five years after the last entry. He shall not deliver any of said poisons without satisfying himself that the purchaser is aware of its poisonous character and that the said poison is to be used for a legitimate purpose. The foregoing portions of this section shall not apply to the dispensing of medicines or poisons on physicians' prescriptions. Wholesale dealers in drugs, medicines, pharmaceutical preparations or chemicals shall affix or cause to be affixed to every bottle, box, parcel or outer enclosure of an original package containing any of the articles enumerated under said schedule A, a suitable label or brand in red ink with the word "poison" upon it. Any person who violates any of the provisions of this section shall be guilty of a misdemeanor.

Section 3. Sections four hundred and three, four hundred and four and four hundred and five of the Penal Code are hereby repealed.

Section 4. The Penal Code is hereby amended by inserting in Title XII, the following new sections, numbered respectively four hundred and three and four hundred and four:

Section 403. The provisions of section four hundred and one shall not apply to the practice of a practitioner of medicines who is not the proprietor of a store for the dispensing or retailing of drugs, medicines and poisons, or who is not in the employ of such a proprietor, and shall not prevent practitioners of medicine from supplying their patients with such articles as they may deem proper, and except as

to the labeling of poisons shall not apply to the sale of medicines or poisons at wholesale when not for the use or consumption of the purchaser; provided, however, that the sale of medicines or poisons at wholesale shall continue to be subject to such regulations as from time to time may be lawfully made by the Board of Pharmacy or by any competent Board of Health.

Section 404. Any person who violates any rule or regulation lawfully made by the State Board of Pharmacy for the protection of the public health or who violates any provision of Article XI, of the Public Health Law for which no other penalty is imposed, is guilty of a misdemeanor; and in case of death ensuing from the unlawful compounding or preparation of a medical prescription, the person offending is guilty of a felony punishable by a fine of not less than one thousand dollars nor more than five thousand dollars, or by imprisonment for not less than two years nor more than four years, or by both such fine and imprisonment.

Section 5. Section four hundred and five-a of the Penal Code is hereby renumbered four hundred and five.

THEIR OWN SECRET SOCIETY.

If present plans do not fall, there will soon be a Council of the Royal Arcanum in New York almost exclusively devoted to druggists and physicians. A little group in one of the big Councils of the city has been working toward this end for some time past. They will first withdraw from the old Council, which numbers over a thousand members, and they will carry with them others whom they wish in the new Council. In this way there will be fifty or seventy-five old members, but according to the by-laws, forty new members must be secured in order to form a new Council. Twenty of these forty are already found, and the Council will be inaugurated when as many more are chosen. This will hardly take long, and members are now out in search of a hall for the Council's home. It must also have a name, and some have suggested that it be called The Pharmacists' and Physicians' Council.

Among those interested are G. H. Hitchcock, G. E. Schweinfurth, A. J. Reeder, Bruno R. Dauscha, Dr. E. F. Haddad and Dr. Sprague, of the Board of Health. In the wholesale trade also there are those that are interested in the movement, and it is expected that this branch will furnish a good share of membership in what is to be the druggists' own fraternal organization. But for that matter applications are looked for from all quarters, now that the possibility of a druggists' Council has come to light.

FROST INJURES TURKISH OPIUM.

It is stated that the cold in the growing districts of Turkey is reported from Smyrna to have produced the worst conditions known in twenty-five years. The opium market is very firm, on top of the recent advances, and further upward movements would occasion no surprise. First hands are asking \$3 as an inside price for cases.

GREATER N. Y. R. D. A.**DISTRICT PLAN NOW URGED.**

Sudden Change in Developments of Organization Work.

SUB-COMMITTEE OF THE JOINT CONFERENCE FINDS THAT AFFILIATION DOES NOT ANSWER ALL OBJECTIONS.—MEMBERS OF LOCAL ASSOCIATIONS WHO WILL NOT AFFILIATE MUST BE CARED FOR.

The Greater New York Retail Druggists' Association, or an association with a name of similar import; this is the prospect for the near future which the trade now confronts.

A development so marked, and seemingly so sudden in the local situation, had its beginning last Saturday afternoon, between three and five o'clock, in the New York office of the N. A. R. D., at 100 William street. There the sub-committee of the Joint Conference Committee held its first meeting since being named at the last session of the conference. The sub-committee's meeting was executive, and no report of its proceedings will be given out, except to the Conference Committee direct. It was learned, however, that one resolution of considerable importance had been adopted. This resolution, in substance, means that the sub-committee will recommend to the Conference Committee that Greater New York have a central organization as a branch of the National Association, and that the district plan be adopted.

For quicker action in the matter, the sub-committee at the same time called a special meeting of the conference for Friday, the seventeenth, at the Board of Trade and Transportation rooms.

From this point, the chain of developments is traced into the future as follows:

WHAT THE FUTURE MAY HOLD.

The conference accepts the sub-committee's recommendations.

It then calls a mass meeting of all druggists, irrespective of membership in local associations. Those who are not members are especially urged to be present. The conference's reason for being would then come to an end, and the conference would then adjourn sine die.

Then, at this mass meeting, the R. D. A. of Greater New York will be formed under constitution and by-laws, and officers will be elected.

These are the results logically deduced from the action of the sub-committee—that is, if everything proves harmonious.

In the meeting, questions were raised, as by Dr. Wm. C. Anderson, of the Kings County Ph. S., and Peter Diamond, of the N. Y. R. D. A., since their associations had already voted to affiliate with the N. A. R. D. But to them it was pointed out that the G. A. S. had refused to affiliate, yet had the most members who had joined the N. A. R. D. That the Manhattan Ph. A., which had not affiliated so far, yet had the second largest N. A. R. D. representation; that the N. Y. R. D. A. came only third; and that Kings County came last of all.

But more important yet, the fact was

revealed that more druggists belonging to no local association had joined the N. A. R. D. than those who did belong to any single one of the local associations. A great many, having no time for the social and other phases of local association work, were yet anxious to join the N. A. R. D. for the strictly business side, and to have district organizations for closer working purposes than the old line associations could afford. Naturally, the question arose, what was to be done with them? The sub-committee answered the question in its resolution of Saturday. To this there were in the end no objecting votes.

As to Kings County and the N. Y. R. D. A., it was contended that they could still be affiliated, as many other associations, notably the wholesalers, are already affiliated with the N. A. R. D. As to district schedules, the time is not considered ripe in New York for their remotest consideration. The only schedule wanted so far is the universal one of the manufacturers themselves, in the expectation, furthermore, that other proprietors will decide to come into the same plan.

All the local associations, as well as the N. A. R. D., except Queens County and the Bushwick, were represented in the meeting.

PREPARING FOR THE GRAND CLIMAX.

If the mass meeting is called, it will be the climax of the present campaign to organize New York, and leaders in the movement hope to make it the triumph, as well. A large hall would probably be rented and refreshments served, and some of the very biggest men in the N. A. R. D. would be brought here, if possible, to address the large assemblage expected.

Then there would be the election of officers. Who for president? Who for secretary? Etc., etc.? A very interesting little political campaign is looked for among the new things in local drug affairs.

WELLS-RICHARDSON CHANGES.

The announcement has been made in Burlington, Vermont, by the Wells & Richardson Company, that A. E. Richardson is no longer a stockholder or connected in any capacity with this famous old proprietary house. The name of the company will remain the same as it has since its formation twenty-three years ago.

A. E. Richardson was replaced as general manager two years ago by George M. Besett, the present general manager. Many changes in this company's relations to the wholesale and retail trade have been made under Mr. Besett's regime, the latest and most important one being the direct contract price protection plan for the retailer. Upon February 6th this plan went into effect.

NEW AMMONIA PLANT.

A large plant for the manufacture of ammonia has been started at Wheeling, W. Va., by Mr. J. C. McKinley, who is both owner and manager. It is the only plant of the kind in that region, so that not only is the outlook for success good, but the enterprise should prove of use to the business interests of that locality. The daily output is five or six thousand gallons of crude ammonia. The raw material is the liquor obtained from a neighboring gas plant.

MANN BILL STANDS STILL.

Supporters Fail to Get Hearing Before Senate Committee.

Washington, Feb. 16.—What developments there are in the Mann bill during the past week may be described as negative. That is, opposition to the measure can now be more tangibly felt. Friends of the bill do not seem to be able to get even a hearing before the Senate committee, and consequently a certain feeling of alarm has sprung up.

"After all, are the interests behind the opposition strong enough to dictate legislation and defeat the bill? Such is the question being asked during the past few days. And an appeal has gone forth for influence to favor the bill, if only to secure it a hearing in committee. Yet once before the Senate itself, there is every hope for the bill's success. The following is a letter sent out last week from the N. A. R. D. office in Washington, to members of the association's Legislative Committee in different cities:

Gentlemen:

It seems to be necessary, at this time, to request each of you to write your senators that it is imperative to have them use their influence with Senator Kittredge, and have him, as chairman of the Committee on Patents, of the Senate, take up and grant a hearing on the Mann bill.

The present outlook is not very encouraging, and I most urgently request that you communicate with your senators at once, and see if we cannot bring enough influence to bear whereby the Patent Committee will at least consider the bill at this time.

I am unable to learn anything definite, or even have a talk with Senator Kittredge, and if we cannot bring around the desired results by this means, we will not be able to accomplish anything at this session, and all of our work will be for naught.

We have with us a large number of senators who will support the bill after the committee makes its report. I have no fear for its passage if we can procure a favorable report.

Kindly give this matter your immediate attention and let's see if even in the last days remaining of this session of Congress we cannot get this bill passed and bring relief, not only to ourselves, but to the people of this country as well. Fraternally yours,

S. L. HILTON.

HOPES OF MR. GALLAGHER.

John C. Gallagher, who was in Washington recently, in the interest of the Mann bill, summed up the situation by saying that if only it could be got out of committee, there would be enough votes to secure its passage.

"I have never before known the drug trade of this country to work for a bill as it is doing for this one, said Mr. Gallagher. "Letters are pouring in on the senators from all over the country. Every day petitions are presented by senators from their constituents in every State in the Union, praying for the passage of the Mann bill. There is no question that a tremendous influence in its favor has been secured. We have the votes, if we can get it out of committee.

"When I was in Washington last, I was

assured that we would certainly get a hearing before the committee—when a hearing was given. But then, Washington is full of all those patent lawyers and they see the members of the committee more often than we do; so that whatever opposition there is, is not open, but underhanded. Somebody is holding up the bill, and the next time I go to Washington I propose to find out who's doing it."

MANY RUSH TO SIGN.

Druggists Are Now Showing More Confidence in Contract Plan.

During the week it has been learned that the signing of serial numbering contracts is in the enjoyment of a boom throughout Greater New York. But at the last meeting of the Joint Conference Committee, Lee M. Evans, representing Peruna, stated that those in New York who had signed his company's contracts were but a scanty 150. By now, the number is more than trebled. This change in local sentiment, or confidence in the plan, is explained by the assurances made at the conference that those who signed would not be prosecuted for violations until such time as the conference should decide that conditions are ripe for prosecutions to begin.

Meantime, the Wells & Richards contracts are now in effect, dating from the sixth of this month. The jobbers, having been furnished with lists of signers, cannot sell W. R. goods to retailers who have not signed. These goods are Palne's Celery Compound, Kidney Wort and Diamond Dyes. It is announced that fifteen thousand druggists have already signed.

One leader in the retail trade points out that those druggists who delay signing until they need to replenish their stocks, may learn to their embarrassment that they have been shortsighted. In other words, if they think they can secure goods as soon as they sign, they should understand that lists of signers are not furnished to jobbers every day, but only at intervals. During such an interval, then, they would have to do without the goods.

\$25,000 FOR A FORMULA.

A prize of \$25,000 for the best and most practical formula and process for making tartaric acid from grapes was offered a year and a half ago by A. Sharrow, chairman of the promotion committee of the American Grape Acid Association of California. The contest has now closed, 375 formulas from all over the world having been submitted. It is expected that the winner will be announced in five or six weeks.

The jury which is now going over the formulas submitted consists of Percy T. Morgan, Charles Bundschu, Prof. E. W. Hilgard, A. Scheffing, C. de Guigne and A. Sharrow.

PATERSON R. D. A. BANQUET.

Paterson, N. J., Feb. 15.—The Retail Druggists' Association of Paterson will hold its annual banquet here, this evening. A number of guests are expected, including some from New York, representing the N. A. R. D.

GALA NIGHT FOR ALUMNI.

Reception to President Butler a Feature of N. Y. C. P. Ball.

As the most brilliant social function of the local pharmaceutical world, the tenth annual ball of the New York College of Pharmacy Alumni Association, last Wednesday night, not only maintained its past reputation, but exceeded the most sanguine expectations of the Ball Committee and the officers of the association. The ample floor of the Grand Central Palace was crowded with several hundred alumni, their friends and guests, while added dignity was given to the occasion by two simple words printed at the head of the programme—"Columbia University."

The most important event of the evening was the reception to President Nicholas Murray Butler and the officers of the college. At 10 p. m. the president was escorted to a position facing the central doorway, where, with the assistance of Dean H. H. Rusby, Prof. Virgil Coblenz, Charles H. White, Charles S. Erb and other prominent members of the college, he received the guests. These were many, and H. A. Herold, who made the presentation, was kept busy for a full fifteen minutes.

At the conclusion of this ceremony, the grand march was led by President Butler and Mrs. Charles S. Erb, followed by Fred Borggreve, president of the A. A., with Miss McCauley. As many as three hundred couples joined in the march, after which dancing began. A programme of good selections, including promenade music, was rendered by Crowley's Eighth Regiment Band.

In the balcony boxes were posted detachments of the Phi Chi and Kappa Psi fraternities and members of both classes of '05 and '06. Their banners and insignia combined with the lavish decorations of the ball room to form one of the most brilliant spectacles ever seen at an alumni function of this character. At intervals, above the singing of the music, rose the sharp "rahs" of the class yell, adding to the liveliness, if not to the general harmony.

Charles S. Erb was the chairman of the Ball Committee; Nelson S. Kirk, chairman of the Reception Committee, assisted by Thos. M. Davies; Geo. H. Hitchcock was chairman of the sub-committee. The floor manager was Rudolf Gies, assisted by William A. Hoburg, Jr., and Frank N. Pond.

Besides those already mentioned there were noticed Ewen McIntyre, Sr., the "oldest alumnus"; Mr. and Mrs. S. V. B. Swann, Dr. and Mrs. Charles F. Klippert, George E. Schweinfurth, Andrew E. Hegeman, secretary of the Kings County Ph. S., Edward T. N. Stein, secretary of the Jersey City R. D. A.; Mr. and Mrs. J. L. Lascoff, Lee M. Evans, Mr. and Mrs. Peter Diamond, Dr. Edward M. Klein, Bruno R. Dauscha, Richard Timmerman, Hugo Kantrowitz, A. Bakst and others well known in the local profession, besides a host of younger graduates and undergraduates.

EDWARD L. KALBFLEISCH.

Edward L. Kalbfleisch, long connected with the chemical manufacturing business, died February 5, at his home, 842 Park

place, Brooklyn, in his sixty-eighth year. When the firm of James L. Morgan & Co., with which he had been connected, was consolidated with the General Chemical Co., in 1895, Mr. Kalbfleisch went into business on his own account. Together with his son, Edward L. Kalbfleisch, Jr., he established the firm of Edward L. Kalbfleisch & Son, commission merchants in chemicals, at 76 William street. He retired two years ago, leaving the business entirely to his son.

FOR MORE FIRE PROTECTION.

Merchants Push Plans for High-Pressure Water Service.

Better fire protection is now an issue with The Merchants' Association of New York. A committee of the association, headed by Frank R. Chambers, and President E. W. Bloomfield, of the Retail Dry Goods Association, last week conferred with Mayor McClellan on plans for an auxiliary high pressure water service. Both associations have employed an expert civil engineer to study the Water Department situation, and certain plans which the department has under way. The engineer has already reported, and based on his reports, the two associations prepared a letter for the mayor recommending an enlargement of the work planned. The plans and development of the Brooklyn high-pressure system, begun at the same time as the corresponding work in Manhattan, appear to be much further advanced than those for Manhattan, and the Merchants' Association committee insists that those interests are entitled to equally speedy prosecution of the work in hand, and that the boroughs of Manhattan and Brooklyn both be provided with necessary hydrants for street cleaning purposes, separate from hydrants for fire-fighting purposes.

THOMAS ADAMS.

Thomas Adams, inventor of the chewing gum which bears his name, died of pneumonia, last week, at his home, 314 Washington avenue, Brooklyn, at the age of eighty-six. He served as photographer with the Army of the Potomac during the Civil War. After the war, he began to experiment in chicle, and in 1869 engaged in the manufacture of chewing gum. In a few years he had almost a monopoly of the business. He established a big factory in Brooklyn in 1888, retiring from active business ten years later. He retained his place, however, as director in the American Chicle Company, which included his own and several other chewing gum concerns. A few years ago the factory was moved from Brooklyn to Newark, N. J. Mr. Adams is survived by his wife, seven children, nine grandchildren and one great grandchild.

A PERAMBULATING DRUGGIST.

Syracuse, Feb. 14.—A new feature has developed in the drug business in this city. He is a former druggist, and he goes from house to house taking orders for patent medicines, drugs and all supplies found in a drug store. He has promised not to cut prices. He has a regular route and makes a good living.

THE RETAILER MUST DECIDE.**Dr. Anderson Declares Success of Contract Plan is in Their Hands.**

"SIGN THE CONTRACTS, KEEP FAITH WITH THE PROPRIETORS."—A HARMONIOUS MEETING, MOSTLY ROUTINE.—DR. MUIR RAIS CRITICS OF NEW YORK ASSOCIATIONS.

A stirring appeal by Dr. William C. Anderson for quicker work in signing the direct contracts, was the feature of a harmonious meeting of the Kings County Pharmaceutical Society Tuesday afternoon. After Oscar C. Kiefe had given a report of the last joint conference, Dr. Anderson was asked to make some remarks about the situation. He said:

"While I can't state that the retailers are signing as rapidly as they ought to, still, as a general proposition, everything is working nicely. There has been a lot of talk, though, about druggists being afraid to sign because they have to compete with their neighbors. Now if druggists would only look at this thing in a reasonable way, they would realize that no manufacturer cares to injure his own friends. Their object at present is to get as many signatures as possible and they are devoting all their energies to that end, rather than to the strict enforcement of the contracts.

"The proprietors who are trying the contract plan have now notified the wholesalers that under no circumstances must goods be sold to retailers who have not signed the contract. Hitherto the jobber has been allowed some leeway in filling orders, but that has now been stopped. Therefore, with the proprietors doing everything in their power to improve the existing demoralized conditions, the retail trade should come forward as one man and sign these contracts—and do it immediately. The large dealers, the 'giant druggists,' are only waiting for the retailers to show their hand. I am positive, from information I have, that they are willing to fall into line as soon as they know the sentiment of the retail trade.

A TIP FOR THE RETAILER.

"The retailer who refuses to sign because he is well 'stocked up,' is taking big risks, for the jobber can sell only to those whose names are on his list and it necessarily takes some time before additions can be made to a printed list.

"With all these assurances, I cannot see why the druggists should hold back. The N. A. R. D. has tried many plans, and there is no chance that the direct contract plan will fail. It is what you have always asked for; it has been shown to be absolutely trustworthy.

"That plan is now on trial and the retailers themselves have got to decide whether it is to be a success or not. Do you suppose for a moment, if failure meets the efforts of the proprietors after they have gone to so much expense, that other proprietors will care to take up the same plan with the certainty of failure?

"Sign the contracts. And when the N. A. R. D. organizers come around to get your dues, remember that the N. A. R. D. is responsible for the contract plan and the relief which it promises from the demoralization of cut prices. We should be willing to bear our share of the ex-

penses. Let the whole retail trade stand behind the contracts, and before the year is out other proprietors will have become encouraged to join in the movement for the common welfare and better fraternal relations."

Hearty applause followed Dr. Anderson's appeal.

OTHER BUSINESS TRANSACTIONS.

About thirty members were present. An address on Organo-Therapy was read by Thomas J. Keenan, who received a vote of thanks for his efforts. Treasurer Ray reported a balance of \$382.81 in the society's treasury, and announced that \$7,000 had been paid off on the college mortgage. He also announced the death of George S. Phillips, a member of the society.

A letter of condolence was ordered sent to his family. Dr. Muir, as chairman of the Legislative Committee, stated that there had been a hearing on the bill for exempting the college building from taxation and that its prospects for passage were good.

The Raines law, said Dr. Muir, will certainly be amended, and an effort made to get more revenue from the sale of liquor than is now collected under the stamp tax law.

DEFENDS NEW YORK LOCAL SOCIETIES.

Dr. Muir then fired some hot shot at "the man from Pennsylvania" who criticized New York associations. Organization men here, he said, leave their business to work for pharmacy, without receiving a cent in compensation.

"Organizations here," he said, "have a record of fifty years' hard work. They have done their share and a little more, in legislation as well as in other things. Why, at one N. A. R. D. meeting, it was admitted that the best talent present came from New York, and a New York man was offered the presidency without his ever asking for it. And everything we do is of our own free will, not because we get paid for it. Such criticisms are in very bad taste, to say the least."

Another matter brought up by Dr. Muir was that of telephone charges. There were so many complaints about the size of bills, he said, that the company should be visited by a committee to see if some better arrangement could be made by which the druggist would know just for how many calls to charge his patron. The matter was referred to the Trade Interests Committee for further investigation. Mr. Duble took the opportunity to tell what had been done in Chicago through national influences. He came to New York, he said, armed with credentials to induce the company here to introduce the same system as in vogue in other cities.

COMPLAINS OF JEWELRY FIRM.

A communication from the Washington R. D. A. was read, telling that fifteen druggists of that city had been "victimized" by a jewelry firm and warning the society against having anything to do with the proposition.

Just before the meeting adjourned somebody started a discussion about citrate of magnesia. Dr. Muir said that the Board of Pharmacy was very liberal in this respect; that if the strength of the solution did not fall below a certain standard, say fifteen or twenty per cent, the druggist would merely be notified that his magnesia was not strong enough, without

any fine being required. "Don't let the boys make the magnesia," said Dr. Muir; "do it yourself." Mr. Duble extolled magnesia as one of the most important things sold by the druggist, who, he said, should get not less than twenty-five cents for it.

SCHIEFFELIN & CO. GET INJUNCTION.

A permanent injunction has been secured by Schieffelin & Co., against Anton Heuseler, of Milwaukee, Wis., restraining him from violating their rights as agents for Johann Maria Cologne. The claim was made that Heuseler had been counterfeiting the labels for use on an imitation of the preparation.

L. H. Hobby, Jr., of Schieffelin & Co., says he discovered that the counterfeiting was going on as far back as 1900. After vigorous efforts, Heuseler was traced, witnesses were secured, and a temporary injunction was obtained in the United States Circuit Court, Eastern District of Wisconsin. This has just been made permanent.

The injunction directs that "the said defendant, Anton Heuseler (sometimes calling himself A. Kassel) * * * be perpetually enjoined and restrained from, directly or indirectly, violating the complainant's rights, by the further use of the labels, bottles, etc., in said bill of complaint described," * * * or from doing anything calculated to mislead the public in the belief that the goods offered for sale by defendant are the goods of complainant. Defendants are also ordered to pay costs.

DRUGGIST WINS JEWELRY CASE

H. B. Kantner, a druggist of Altoona, Pa., has won a suit against the Puritan Manufacturing Co., of Iowa City, Ia. The company sued to recover \$324 on a written order for jewelry sold and delivered by them to the defendant, at his store. The defense made was that the traveling salesman of plaintiffs had obtained the order from defendant by misrepresentations; that the defendant upon an examination of the jewelry discovered that it was cheap and comparatively worthless, and had thereupon re-shipped the goods to plaintiffs. To push the sale of the jewelry, it was set out in the order, that the plaintiffs were to furnish advertising materials and printed applications to defendant, wherein plaintiffs offer to mail to the mother of every one-year child in Altoona a gold ring. Mr. Kantner testified that he did not receive from plaintiffs the printed applications that the mothers and guardians of the babies were to sign.

JOBING SITUATION ON BROMIDES.

While the bromide situation remains unchanged from that described in the market report of this issue, first hands are less willing to accept business at the figures established by the cut of the German syndicate. The movement is slowly passing down to jobbers, some of whom have reduced package prices from forty cents to the basis of thirty. But this is not general, for jobbers justly demand assurance that the cut will be both permanent and general before they slash their own figures for the benefit of retailers.

BAD BARGAIN IN MEDICINE.**Huckster Leaves a Sickened Neighborhood in His Wake.**

Many people in the neighborhood of Tenth avenue and Twenty-second street are twenty-five cents poorer and a good deal wiser as the result of an experience with a fake patent medicine peddler. Those who were not too sick, made complaint to the West Twentieth street police station, but so far the gully one has not been caught.

The ingenious person who perpetrated the fraud loaded up a one-horse wagon with several dozen bottles of a preparation which was an imitation of a well-known patent medicine. The price of this, said the owner of the rubbish, had been reduced from one dollar to twenty-five cents, and was being sold at Eberhardt's Pharmacy, at Tenth avenue and Twenty-second street, simply as an advertisement.

"If Eberhardt's Drug Store is selling it, it must be all right," thought the women. Besides, a reduction of seventy-five cents! It would be sinful to miss such a bargain. So they bought, swallowed, felt sick, and then did what they should have done first—went to Eberhardt and asked whether he was responsible for the wagon load of "medicine." The druggist had no hesitation in pronouncing the vendor a fraud and calling in the police.

Dozens of persons dosed themselves with the medicinal bargain, and while the stuff was in the main thought to be harmless, many were made ill. The police sergeant had strong opinions about people who bought medicine simply because it was cheap.

In Brooklyn, a man who advertised that on payment of one dollar, a love pill would be given which would bring a husband, was arrested, charged with having awindled many women. He was discharged with a reprimand.

NEW YORK NOTES.

—At the annual meeting of the Drug Trade Club, on February 9, the following were unanimously elected to the Board of Governors for the term ending 1908: J. L. Hopkins, W. S. Gray, Wm. McCarroll, Louis S. Reed.

—Frank P. Crobrough, of Waterloo, died February 5, of typhoid fever, at the age of fifty-one. He was a prominent Mason, belonging to Seneca Lodge of Waterloo, and the Knights Templar and Damascus Temple of the Mystic Shrine, of Rochester.

—The Students' Club, at the New York College of Pharmacy, observed February 12 with special exercises at the West Side Auditorium. "Abraham Lincoln, the Man," was the subject of a patriotic address by Dr. Charles S. Morris, the noted colored orator. Songs were rendered by the Lotus Glee Club.

—The Elmira Drug and Chemical Co., of Elmira, has been incorporated, with a capital of \$15,000, to manufacture drugs. Incorporators: A. Mask, Sayre, Jr.; C. P. Mapes, Elmira; Emily W. Mapes, Pine City.

—Much difficulty is being experienced by local jobbers in shipping goods, owing to the heavy snow and sleet storms. Freight

and express delivery is badly delayed, affecting all out-of-town orders.

—It is reported here that John H. Clampt, of Bridgeport, Conn., will open a branch store in the western section of that town.

—Mrs. Smith, daughter of T. J. Barnaby, tue Eighth avenue druggist, left with her husband, C. Moore Smith, on the Baltic, for a trip to the Old World, last week. Mrs. Smith will take a course in vocal training on the other side.

—Reid, Yeomans & Cubit bought in the stock of the American Witch Hazel Co., at the receiver's sale of that concern.

FOR LIQUOR IN MAINE.**Druggists May Be Granted Licenses Under Certain Restrictions.**

Bangor, Me., Feb. 13.—What is likely to prove to be the most important matter to be considered by the legislature this session affecting as it will the important question of the enforcement of the prohibitory law, is a bill now in process of drafting, to permit of the sale of liquor by the reputable druggists of the State, for medicinal purposes. In general the measure aims to do away with the city and town agencies and place the handling of spirit and malt liquors in the hands of those best able to handle it under proper restriction—the druggists.

The bill is yet in embryo. Only its general features have leaked out, but it is known that it meets with the approval of men high in the official affairs of the State, as well as the officers of the Civic League and other temperance organizations. It is intimated that with the endorsement of people of well-known temperance proclivities, it is likely to be adopted.

Without going into the details of the bill, it may be said that it will permit of the sale of liquor by the druggists operating under a United States license, without that fact being accepted as prima facie evidence of illegal sale, as at present. It will provide for certain restraining features, as to whom liquor may be sold and limiting the amount to each person or family, it will provide that a record be made of each sale, and that this record shall be open to inspection as under the operations of the poison law. But above all, druggists will be hedged about by such laws that the violation of any or all of them will lead to drastic measures being taken against them. The measure, in fact, will be what many of the most conservative and fair minded citizens have been contending for years.

FOR A DRUG STORE EXCHANGE.

Under the name of "The Druggists' Exchange," Peter Diamond and Joseph Weinstein, both widely known in the trade, have established at 99 Nassau street, an agency for the buying and selling of drug stores, as well as for the transaction of all business pertaining to pharmacy. Mr. Diamond has had considerable legal experience, but at the same time he is a practical pharmacist, with a drug store at 83 Lenox avenue. Mr. Weinstein is well known as the secretary of the Board of Pharmacy in the Eastern Section.

HARM IN SLOT MACHINES.**Syracuse Druggists Opposed to This Kind of Competition.**

Syracuse, Feb. 14.—One of the most important matters which is being considered by the Syracuse Druggists' Association, is the running of card machines in cigar stores. E. L. Weston has been appointed to investigate and see if the law against these machines cannot be enforced. The matter will be considered at a later meeting, when definite action will be taken.

The Druggists' Association has succeeded hitherto in having them removed, but after a short time they would bob up serenely again.

The cigar business of the druggists is said to have fallen off 60 per cent. in the past five years. This was due to the progressiveness of the cigar store proprietors and the failure of the druggists to push this branch of the business. The cigar dealers, by attractive window trimming, began to draw the trade away from the druggists. But the greatest blow of all to the druggists was the introduction of slot machines. While strictly against the law, the city administration has always been lenient and the machines have been allowed to flourish. Of course the druggists might also put in card machines if they wanted to, but they don't want to, and cannot without lowering the tone of their stores. Not a druggist in the city has card machines.

President George E. Thorpe, of the S. D. A., said: "We believe the running of gambling machines in the cigar stores is strictly illegal and has a bad effect on the young men, leading them to worse forms of gambling. Of course, a druggist cannot have the machines, and the result is a loss of trade which would come to us if the machines were not allowed in the other stores. What can be done I cannot tell. The expense of forcing the cigar dealers to take out their gambling machines would be large. It is hard to do anything unless public sentiment is with you, and I do not think there is a very strong public sentiment against the card machines. Perhaps there will be when the people wake up to the harm there is in them."

BURGLARS KEEP SHOP.

Boston, Feb. 14.—One of the vilest burglaries on record was the recent one at the pharmacy of Dr. Cornelius P. Flynn, in Andrew square, South Boston. It took place in the early morning hours and the burglars, who got in through a cellar bulkhead, coolly lighted up the store and went about as if they owned the store. There were many passers-by who saw them and supposed them to be employees. They went off with about \$125 worth of stock and all the cash that was left in the cash drawer. They helped themselves to some liquors, kept for prescription purposes, and sat in the back room to enjoy this, and also some cigars. When they got well ready, they took themselves off with their plunder.

Matthew F. Kelly, a Brockton druggist, up in court there on a charge of unlawfully selling drugs, pleaded guilty and paid the fine imposed, \$25.

NEW PREREQUISITE LAW.

Hopeful Outlook for the P. A. R. D.'s Proposed Legislation.

Philadelphia, Feb. 13.—With the assurance that the bill drawn up and fostered by the P. A. R. D. will become a law, pharmacists throughout the State are commending their brethren in this city for their efforts in bringing about what is claimed will be a boon to the profession, as well as to the public at large.

Thanks to Representative Edward H. Fabey, of this city, himself a leading pharmacist and an active member of the P. A. R. D., and of Senator Elmer I. Phillips, of Lawrence County, who introduced the bill, the Health and Sanitary Committee have passed favorably upon it. Briefly, it provides for the amendment of the act of May 24, 1887, so that it shall be necessary for all applicants for certificates as pharmacists to be graduates of a reputable college of pharmacy. The section as amended provides that all applicants for certificates must produce satisfactory evidence of having had four years of practical experience in the business of retailing, compounding or dispensing of drugs.

It is promised that if the amendment becomes operative Pennsylvania will follow New York's lead in this direction. A well-known pharmacist said:

"There is no question about the necessity of such a law. Clerks and managers are sadly deficient. If I should advertise to-morrow for one, I would get a hundred replies, and I am pretty safe in saying that I would not want one of them to even wait on my soda fountain. They may all have passed the State Board.

"The bill will pass because it is legitimate and because it is an absolute necessity. It is an indication of the power and judgment of the P. A. R. D."

Professor J. P. Remington, of the Philadelphia College of Pharmacy, and representatives of the local association have visited the State Capitol recently and did what they could for the bill. During the coming week it is believed it will go through both ranches of the legislature without opposition.

BLUE LAWS, PRO AND CON.

Philadelphia, Feb. 13.—Although pharmacists and merchants generally throughout the city have expressed themselves as being in favor of the McNichol Bill, which is virtually a repeat of the famous old "Blue Laws," prohibiting Sunday selling, the Presbyterian ministers have adopted a resolution, protesting against the bill. The protest is framed as follows:

Whereas, An effort is being put forth to modify, if not virtually to repeal the law which prohibits unnecessary labor or business on Sunday, and as this law, namely, the act of April 22, 1794, commonly called the "Sunday Law," has received the highest commendation from the courts of our commonwealth, and has been such a blessing; therefore, be it

Resolved, That we earnestly protest against the passage of the McNichol bill, now in the hands of the Judiciary-General Committee of the Senate, or any other change in the law.

Resolved, That a copy of this action, signed by the president and secretary of

this meeting, be sent to the Hon. Cyrus E. Woods, chairman.

A committee was appointed to attend the hearing before the Judiciary-General Committee of the Senate, and represent the opposition to any change in this law. But a delegation of business men, including a representative of the P. A. R. D., will also go to Harrisburg in a few days to urge upon legislators the other side of the question.

CONVERTED TO N. A. R. D.

Pittsburg, Feb. 13.—Further evidence presented itself this week to show the benefit druggists are deriving from the N. A. R. D. That the smaller retailers and large firms are placed on an equal plane is manifest from a letter received by Secretary B. E. Pritchard from the May Drug Co., one of the largest retailers in Pittsburg. The May Co. was perhaps the deepest cutter in this city at one time.

The communication follows:

My Dear Sir:

We have just realized that we were deriving certain benefits from your association in common with the members thereof, and for which we have contributed no support, while your members were called upon for certain dues. We have particular reference to national legislation, dealing with parent laws and excessive taxation of various sorts, and State legislation concerned with pure food laws as affecting the retail drug business. Inasmuch as we are deriving the same benefits from efforts in this direction as are your own members, we feel that it is but just what we should contribute in support of this work on the same basis that they do; and therefore take pleasure in enclosing herewith our check for \$60, representing an assessment of \$12 per year (we believe this is the amount of the annual dues) from March, 1901 to 1906. Our attitude on certain other aims of the local and National Association remain unchanged.

THE MAY DRUG CO.

The May Drug Co. is a party to the agreement on the schedule of prices.

HE PEDDLED COCAINE.

Washington, Feb. 13.—An early morning caller at police headquarters, recently, was the proprietor of a drug store, who complained that his cocaine trade had been ruined by a man who was selling the drug from door to door. Detective Proctor, who has charge of cases involving alleged violations of the pharmacy law, heard the druggist's complaint and frankly told him that he was not in sympathy with his complaint of loss of business. He said, however, that the man might be reported for doing business without a license.

TIED FOR FIRST PLACE.

Indianapolis, Jan. 23.—In the Druggists' Bowling League, 102 games have now been played. The Kleferettes and Ell Lillys are tied for first place, each having won sixty-one games and lost forty-one. The White Elephants have won fifty-four and lost forty-eight; Standards, won fifty-two, lost fifty; Schuull & Co., won fifty-two, lost fifty; Y. B.'s, won twenty-six, lost seventy-six. The highest score was made by Maurer, of Kleferettes, 225.

NEW PITTSBURGH SCHEDULE.

Pittsburg, Feb. 13.—At the coming meeting of the Western Pennsylvania R. D. A., a schedule will likely be adopted, which will involve several important changes. The following is to be voted on: "Resolved, That the present schedule be continued in force, with the exception of contract articles and list of exceptions to be submitted for approval."

Under the present agreement there are sixteen exceptions; in the future there will be but nine. These exceptions are: Allcock's Plasters, 15c., two for 25c.; Carter's Pills, 17c.; Castoria, 28c.; Listerine, 20c., 40c., 75c.; Wampole's Cod Liver Oil, 79c.; Pinkham's Compound, 79c.; Coke Dandruff Cure, 79c.; Scott's Emulsion, 79c.; Hood's Sarsaparilla, 79c.

The following articles, formerly sold at 79c., have been advanced to 83c.: Pierce's Discovery and Favorite Prescription, Kilmear's Swamp Root, large; Fellows' Syrup, from \$1.19 to \$1.25; Beecham's Pills, 19c. to 21c.

The following articles have been placed under direct contract: Falne's Celery Compound, 90c.; Kidney Wort, dry, 90c.; Kidney Wort, tablets, 45c.; Peruna, 83c.; Diamond Dyes, 10c.; Will's English Pills, 25c.; Lactated Food, 25c., 45c. and 90c.; Laxative Bromo Quinine Tablets, 25c.

Under agreement with the various proprietors, the druggists will not be compelled, in this district, to adopt the contract prices, nor will the provisions of the schedule take effect until the expiration of the legal compact with the different department stores, which will be March 15.

PENNSYLVANIA NOTES.

—Philadelphia pharmacists are discussing the approaching famous Loder suit against the P. A. R. D. and N. A. R. D., charging discrimination. Important testimony has been taken before the commissioner in Chicago recently, which will be presented at the trial here.

—The extensive drug business of H. N. Snyder, of Lancaster, will be sold within the next few days. A prominent Philadelphia drug firm will probably be the purchaser, and will establish a branch house there.

The Lancaster Drug Company has been elected a member of the National Wholesale Druggists' Association.

NEW INDIANA DRUGGISTS.

Ft. Wayne, Ind., Feb. 11.—Secretary C. B. Woodworth, of the Indiana Board of Pharmacy, is now issuing certificates of registration to applicants who were successful in passing the January examination for pharmacists. The class of successful applicants is an unusually small one, consisting of but seven members: Joseph F. Schafer, of Poseyville; Walter E. Jolly, Scipio; W. H. Schulte, Evansville; Daise Emschwiler, Montpelier; Brady V. Wilsow, Louisville, Ky.; A. E. Smith, Logansport, and R. F. Heaton, Circleville.

"Hello, this Dr. Cranky? This is the druggist. You left a prescription with me for Mrs. Blank. Do you want—? You want exactly what you wrote for? Thank you," and the druggist smiled as he viewed a prescription for one-half dozen collars, three shirts and a case of tomatoes, evidently a personal memorandum.

N. A. R. D. IN MICHIGAN.

Some Opinions on the Improved Conditions in Detroit.

Detroit, Feb. 11.—While the majority of the druggists in this city are members of the Detroit and Wayne County Retail Druggists' Association, comparatively few of them are individually members of the N. A. R. D. This would seem to be a good field for the association to do excellent work. Some of those who do belong express themselves very favorably. Here is what they have to say:

W. H. Burke, president of the Central Drug Co.: "The Detroit and Wayne County Retail Druggists' Association was formed about six years ago. They affiliated with the N. A. R. D. soon after formation. As a result of this action the dealers in Detroit have been the gainers by a great many thousand dollars. Prices prevailing up to a period of five years ago were in a great many instances lower than the jobbers' prices, and in some cases even lower than the manufacturers' prices. At the present time prices are very satisfactory. While the N. A. R. D. is not entirely responsible for present conditions, it may be well doubted whether present conditions could have been established and maintained without it."

George B. Simons, Simons & Cooper, 371 Woodward avenue: "The N. A. R. D. has had a tendency to make druggists more friendly towards one another and prevent them from cutting one another's throats. This is the whole benefit, expressed in a nutshell, for if they are friendly, other things regulate themselves, and better prices prevail."

Doty Bros., proprietors of three stores in Detroit: "The N. A. R. D. is a good thing for the druggists, and an association from which much benefit is derived. It has enabled us to fix prices right and many other things can be accomplished after that step has been taken."

A. L. Walker: "The N. A. R. D. is a benefit to the retail trade. It has helped considerably in establishing uniform prices in different localities."

F. W. Mann: "Without any doubt, the N. A. R. D. has been, and is, a great benefit to the retail druggists of this city."

REGISTERED IN OHIO.

Columbus, Ohio, Feb. 11.—Out of eighty-two applicants for certificates to practice as pharmacists, only seventeen passed the recent examination before the State Board of Pharmacy. The successful candidates were:

Pharmacists—Aurel H. Klein, Toledo; Armond F. DeMersits, Cleveland; J. Maxwell Hanawalt, Chillicothe; James G. Reed, Cleveland; George S. Austin, Fairport Harbor; Frank C. Jessup, Lyon; R. M. Clark, Parkersburg, W. Va.; Simon F. M. Hirsch, Cleveland; Leo Reuscher, Newport, Ky.; Ada E. Davis, Cincinnati; J. W. Hoon, East Palestine; Clifton Lower, Marion; Earl Marston, Belle Center; John K. Haley, Napoleon; W. E. Bamber, Mason; Charles G. Baier, Cincinnati.

Assistant pharmacists, if they desire to accept the rating—David C. Kunkle, Dayton; J. C. Stewart, Tippecanoe; James G.

McClintock, Cleveland; Jesse Parcher, Nevada; W. S. Bartlett, Columbus; A. J. Koelbe, Morrow; Charles F. Kuppinger, Newark; Gaddis Henry, Greenfield; Frank L. Dickson, Toledo; Edgar B. Rawlings, Bellefontaine; Philip P. Koehl, St. Mary's.

Regular assistant pharmacists—F. Gehrling, Cincinnati; Herman U. Bolles, Gallipolis; F. C. Assenheimer, Bucyrus; Harry R. Burbacher, Summerfield; W. P. Rotsinger, Sandusky; Paul R. Barnes, Granville; Ellsworth Loesch, Cleveland; Wilbur H. Stalder, St. Mary's; Raymond E. Potter, Cleveland; Emmanuel M. Mandel, Cleveland.

AGED DRUGGIST HELD UP.

Chicago, Feb. 11.—An aged man's heroism failed to shame two robbers who held up the drug store of T. P. Flannery, 1352 North Halsted street. Henry Reinhardt, sixty-six years old, said to be one of the oldest druggists in the city, was behind the prescription counter. He readily consented to give the men his money, but when they demanded his watch, he refused.

He said the watch was valued as a keepsake, that his wife had given it to him and that she was dead. The robber reached for his watch and the feeble old man fought with him until the former struck him a blow on the head with a revolver and felled him. The bandit then turned to Oliver Winner, the clerk, and with his revolver against his head, commanded him to open the safe door. In their hurry, the bandits overlooked more than \$50 that was placed in the safe with the stamps.

CHANGES ON MINN. BOARD.

St. Paul, Feb. 6.—Things have been stirring in the State Board of Pharmacy. Charles T. Heller, of St. Paul, has been reappointed for another term by Governor Johnson, and J. A. Poetz, of St. Peter, has been chosen for the unexpired term of Mr. Trautman. Mr. Heller, who was the first treasurer of the reorganized N. A. R. D., was originally appointed on the board six years ago, by Governor Lind, and has served continuously since, being recognized as one of its strongest members. The work requires men of sterling qualities, who can be wheedled into no compromise with what they consider wrongs and abuses, and this describes Mr. Heller. The appointment of Mr. Poetz is also commended by the druggists. He served his apprenticeship under F. J. Lord, of Shakopee, and Clark & Frost (now W. A. Frost & Co.), St. Paul. Then he worked for James Bennett, of St. Peter for several years and embarked in business for himself in Winthrop, in 1891. Five years later he returned to St. Peter, having bought out his former employer there.

PHYSICIANS VS. PATENTS.

Delavan, Wis., Feb. 12.—Physicians of this village are taking part in the campaign against the unrestricted sale of patent medicines. Dr. William Hanover presented the views of the local physicians to a committee of the legislature at Madison, and was assured that a bill prepared by him, or a modification of it, would be given consideration.

DRUG STORES HARD HIT.

Liquor Scandals in Battle Creek Laid at Their Door.

Battle Creek, Mich., Feb. 10.—Drug stores, though which particular ones are not specified, have been bitterly arraigned for selling liquor to children. The accuser is The Weekly Herald, the official organ of the Trades and Labor Council. It asserts that one night recently a young girl, not more than sixteen, was picked up stupidly intoxicated. The same thing occurred a few nights later with another girl. The paper states that the whisky in both these cases was bought at a certain drug store in this city. It says that one morning five empty whisky bottles were found on the high school grounds, and that a few evenings ago two prominent citizens engaged in a drunken brawl in a drug store. While the saloons are not upheld, it claims that the drug stores are doing a great liquor business without paying any license. The Herald condemns the churches, W. C. T. U., the Y. M. C. A. and the prohibitionists for keeping quiet on this matter, blames the city government for not enforcing laws, and points out the fact that liquor is also sold and gambling permitted in several prominent places in the city where the persons have no legal right to engage in the business. The whole blame is laid upon local politicians.

MINNESOTA DRUG CLERKS.

Minneapolis, Feb. 11.—The Minnesota Drug Clerks' Association, at its annual meeting in the parlors of the National Hotel, Minneapolis, elected the following officers: President, Fred Klenert, Minneapolis; first vice-president, Walter Chilstrom, Minneapolis; second vice-president, August Marielus, St. Paul; third vice-president, Frank Klenert, Minneapolis; treasurer, Gustav A. Dickman, St. Paul (re-elected); secretary, George T. Heller, St. Paul; trustee, three years, Irwin Pattee, Minneapolis; two years, Ernest Otto, St. Paul; on information bureau, H. Lang, Minneapolis; Ernest Otto, St. Paul.

The constitution was so revised as to fix the annual dues at \$1, they having been \$1.50. The usual social session and banquet followed. Mr. Klenert, the new president, is known as a great "hustler" and was one of the five founders of the association. Mr. Heller, the secretary, is the brother of Charles T. Heller, member of the State Board of Pharmacy, and former treasurer of the N. A. R. D.

WILLIAM HUDNALL DEAD.

St. Paul, Feb. 6.—William Hudnall, a pioneer druggist of Helena, and State examiner of Montana, is dead. He entered the drug business at Helena, January 1, 1868, as an employe of R. S. Hale. Six years later he became junior partner in R. S. Hale & Co., and in 1889 was identified with J. B. Lockwood & Co., remaining there until 1901, when Governor Toole made him State examiner. His widow and one daughter survive.

FROM MINNESOTA.

—Frank Fisher, a colored man, has been arrested at Minneapolis, charged with stealing \$45 worth of fountain pens from the store of Voegell Bros.

CONSPIRACY SUIT FAILS.

Injunction Asked for by Louisville Cutter Is Refused.

Louisville, Ky., Feb. 11.—One of the most important cases in local drug history was decided this morning, by Judge Shackelford Miller, when he denied an injunction to three local druggists against the Robinson-Pettit Drug Company, wholesalers. The plaintiffs were W. F. Klusmeyer, C. B. Rademaker & Co. and Olga, Renz & Co., three out of thirty-nine local druggists who refused to sign the schedule of prices fixed in 1902.

The National Association of Proprietors allows the schedule of prices on their patent and proprietary medicines to be fixed by a majority of three-fourths of all the druggists in the city. The druggists who refused to sign the schedule and continued selling goods at cut rate prices were refused goods by the local wholesale house. After various meetings, including a meeting of the Louisville Board of Trade, at which the matter of cut rates was discussed, the three plaintiffs filed a suit for an injunction.

A great deal of testimony was introduced, showing that the wholesalers were forced to refuse orders from the cutters by the majority rule among other druggists who signed the schedule, and the basis of the complaint was of conspiracy in restriction of trade.

In his opinion, Judge Miller holds that in the present case an injunction will not lie, but admits that there are many cases where injunctions being out of place, indictments and judgments for damages will lie. In the present case he is of opinion that an injunction is out of place, as the evidence showed merely that the defendant exercised a natural right in refusing to sell.

The victory is a doubtful one, in view of the nature of the decision, and while both sides claim complete victory, the course of the plaintiffs to get the spoils of their alleged victory is not evident. The decision having only been rendered, none of the plaintiffs would say just what would be done. However, the opinion was expressed that this action would be followed by a suit for damages, in the event the court of appeals upholds the lower court.

The case will be appealed immediately, but owing to the crowded conditions of the Court of Appeals dockets, a decision will be delayed some time.

KNOXVILLE COCAINE LAW.

Knoxville, Tenn., Feb. 6.—A city ordinance has been passed regulating the sale of cocaine and other narcotics and provides for keeping a record of the same so that it can be examined by the city physician, health officer and secretary of the Board of Health. This ordinance is to stop the "sniffing joints" and the physicians who have been in the habit of writing prescriptions to the habitual users of the drug.

KENTUCKY NOTE.

—All of the whisky cases in the Glasgow police court against the Locke Drug Company, E. B. & W. N. Locke, recently worked up by a private detective, have been dismissed. The attorneys for the prosecution say the dismissal of these cases does not mean that the prosecu-

tion of alleged violators of the local option law is to stop, but, on the contrary, they say the prosecution has only begun.

SOUTHERN NOTE.

—W. L. Smith, the United States revenue agent, has begun an investigation of all the drinks now being sold in East Tennessee as soft drinks, but which are said to contain alcohol. He will investigate the drinks in drug stores, grocery stores, and all sold in towns where there are no saloons. The charge has been made that many of these mixtures contain the pure juice of the fruit and corn.

ON A VERBAL PRESCRIPTION.

Kansas City, Mo., Feb. 11.—W. H. Harrison, city license inspector, is trying to find out if the law gives a druggist permission to sell liquor to a stranger on a "verbal" prescription. The other day in the course of his duties, he went into a drug store with a friend, where he was not known, and asked the druggist for fifteen cents' worth of whiskey. The man behind the counter said:

"Certainly."

He started to get the liquor. Seeing something in Harrison's face that excited his suspicions he came back and said:

"Your friend gave you a verbal prescription, didn't he? He is a doctor, isn't he?"

Being assured that the friend was not a doctor, the druggist thereupon refused to sell the liquor.

COCAINE SELLER FINED.

Kansas City, Mo., Feb. 10.—William M. Edmonds, a druggist at Fifth and Broadway, was fined \$50 in police court this morning, on a charge of selling cocaine without a prescription. Edmonds entered a plea of guilty, and was given a stay of execution for \$25.

BIG OMAHA HOUSE BURNS.

Omaha, Feb. 11.—In the big fire here, when more than half a million dollars was lost in the wholesale district, one of the losers was the Porter-Ryerson-Hoobler Co., manufacturing chemists. The amount of loss placed after the name of this firm is \$40,000.

At the most critical moment of the progress of the flames, it was thought the heavy wall between the eastern half of the Mercer building and that occupied by the Vogele & Dinning Company, manufacturing confectioners, would be sufficient to check the spread of the fire. It was not, nor was the similar wall between Vogele & Dinning and the Porter-Ryerson-Hoobler Company sufficiently strong. These establishments went in succession, but the heavy west wall of the main building proved strong enough and stopped the fire before it entered the Great Western Type Foundry plant.

The building occupied by the Porter-Ryerson-Hoobler Company was the scene of a fire six years ago, in which four firemen lost their lives by being electrocuted. This fire occurred during the afternoon.

Charles Beaser has sold his interest in the new Odeon Pharmacy, in St. Louis, and gone to Denver, because of Mrs. Beaser's health.

WOULD PUBLISH FORMULAS.

West Virginia Druggists Take Arms Against Legislation.

Charleston, W. Va., Feb. 11.—The druggists of the State are greatly aroused over threatened legislation, and they are canvassing among themselves for the purpose of fighting an especially obnoxious bill, which bears the number "50." They regard with indignation the provision whereby they would have to buy a license of \$50 and pay a fee of \$25 in order to have patent medicines analyzed by the State.

The bill is stigmatized as one gotten up to benefit physicians, at the expense of the proprietary trade.

"If this bill goes through," said Percy D. Leap, of New Martinsville, "the drug business in West Virginia will be a dead one. However, we will do all we can to knock it out."

Manager Gordon, of the Logan Drug Company, said: "We manufacture as many as a dozen different medicines of our own here, and the passage of bill No. 80 will compel us to quit in this respect. The \$50 license and the fee of \$25 for the analysis of the medicine by the State would cost us in the neighborhood of \$1,000 a year. It would put all of the druggists out of the business of making their own medicines and it would cut a great portion of their income off."

"Another great injustice is the placing of the formula on each bottle. With such a law as this, what would be the motive in getting up a proprietary medicine? Any person in the country could have the same thing made at any drug store by merely taking our bottle there."

"I understand too, continued Mr. Gordon, "that it is a part of that bill or another one that prohibits druggists from recommending any medicine. The man that instigated it was certainly never in a drug store. Think of not being allowed to tell a customer which is the better to take for a cold—quinine or carbolic acid. This would compel every person with the least ailment to go to a physician and pay for a prescription before coming to the drug store to buy a dime's worth of medicine. It would certainly make it a soft snap for the doctors."

MO. VALLEY JOBBERS MEET.

Omaha, Feb. 9.—The Missouri Valley Jobbers' Social Club, an organization of wholesale drug houses in this part of the country, met for lunch in the Commercial Club, and discussed insurance and other matters of interest to the trade. C. F. Weller, of the Richardson Drug Company, presided. Fourteen drug handlers attended the meeting, representing eleven houses. The firms interested in this association are: Davis, Brite & Co., Denver; W. A. Hover & Co., Denver; Lincoln Drug Company, Lincoln; Faxon, Horton & Gallagher, Kansas City; Evans, Smith & Co., Kansas City; C. D. Smith Drug Company, St. Joseph; Harnish, Hess & More, Sioux City; Van Natta-Lynds Drug Company, St. Joseph; Harle-Haas Drug Company, Council Bluffs; E. E. Bruce Drug Company, Omaha, and Richardson Drug Company, Omaha. The association meets quarterly at one or another of the five points to consider things of interest to the wholesale drug business.

A SENTIMENTAL SERMON.

Being a Confidential Little Letter to You.

BY JOEL BLANC.

My Dear Brother:—You say that I have amused and entertained you by some of the things that I have written, but that some of my articles are all tommy-rot. You cannot see why you should continue to work for the N. A. R. D. It has done nothing for you and you cannot understand why some of the boys keep on hustling for the cause. You want to know where they come in? What there is in it for them?

My reply can only be that while direct benefits have come in many cases through business improvement, most of the boys are working for something besides the material part:—Just the feel-goodness of it. For nothing to eat, drink, wear nor spend. Not even for praise, but:—Just the feel-goodness of it.

One morning, a good many years ago, a boy was on his way to work in a wholesale drug house. The boy walked to work, ate a fifteen-cent lunch and rode home at night. To make his small salary go as far as possible, he put just twenty cents in his pocket each morning. So that he could spend no more. On the morning in question, at a certain corner, he found a ragged little urchin in tears. At the little one's feet was a broken paper sack with its former contents of sugar scattered over the pavement. The old story, you know. Poverty, dime as big as a dollar, fear of a whipping and so on. The drug store boy gave the little chap ten cents, ate a ten-cent lunch and walked home. That's all. All but the feel-goodness of it.

That was twenty-seven years ago. But that ten cents worth of sugar has added sweetness to each of the years. The drug store boy used to wonder why that little act came back to memory so often and always when it brought a little needed sunshine. He knows now that it was an act of sacrifice. "Only a dime!" Yes, only a dime. The dimes were big, then. But what a lot of feel-goodness it bought.

So it is in this organization work with the little acts of sacrifice, the little bits of help. Acts seem to pass from memory as they are done, but they come back again and again and grow and grow, and each return brings more of the feel-goodness of it.

Don't you remember the time that one of the boys was awfully blue? He had such a poor little bit of a store and there was a cutter nearby.

Don't you remember how you took an hour that you could hardly spare to go and cheer him up? Don't you remember how you strengthened and encouraged him by painting a brighter future for him to think about? Don't you remember the smile of hope that you brought to his lips, and that his eyes had lost that feverish dryness and were just a bit moist as you bade him good-by? Don't you remember? No! Never had an experience like that? Well, have an experience like that and see how your dues will come back with interest in:—Just the feel-goodness of it.

Don't you remember when we were trying to put the schedule into effect that we stuck on two of the boys who had

been enemies for years and neither would sign until the other had signed? Don't you remember how you labored with them and at last got them to meet in your own home? Don't you remember how you stood in your door when they had left and watched them walking down the street together and talking to each other, for the first time in years? Don't you remember the happy lump in your throat as you thought of having made enemies into friends? Don't you remember that it made the store seem brighter, wife prettier and baby sweeter? No! you are not the man? You can be. You will, won't you, old man?

Are you saying that Joel has gone ballooning again? Another one of his flights of fancy? No, no! It's the really, truly Joel who is writing this. He wants you to know that right through the drill and care of the business day runs the vein of golden conscience and that there are times in even the busiest day when you may uncover it and by looking at it make it turn into sunshine. When wife has a new gown and children have new clothing don't you forget that your own best coat is a bit out of date? Don't you sort of square up your shoulders in it and feel that you are "All right" and every inch a man? Ah, yes. You can understand that. I knew you could.

Now, old man, you would not want any one to mention the coat even to praise you, would you? You are so jealous of the feel-goodness that you don't want any one to even know you have it. It's a sort of selfishness that might have been made the eleventh commandment.

We will not argue about this. It's something that I don't want to talk about any more than you do. Even writing about it seems sort of sacrilegious, doesn't it?

You never had a real good time all by yourself, did you? When mother praised you, when father said he was proud of some act of yours, when sweetheart thanked you for some sacrifice made for her, when she as wife and sweetheart, too, had eyes that shone with pride in you, when the children climbed into your lap and thanked you, those were the really happy times. Were they not? But that happiness was just the feel-goodness reflected from the happiness brought to others.

Despite the cynics and the fools, despite the sages and the schools, business men are human. Real manliness is not very different from real womanliness, because both are tenderness. We men keep ours pretty well covered up, but we cannot pluck it out and put it in a bureau drawer when we go into the store. It goes where we go and is the real self. We may blush when we think of it, we may orally deny it, we will not talk of it, but it is always there. It is our holy of holies, and God help the man who never worships in that temple of the conscience to find it filled from wall to wall, from floor to dome with:—Feel-goodness.

I know that these lines are cold and enigmatical. But I somehow feel that they establish a telepathic circuit between you and me, old man. I feel that they will take to you what I think but cannot write. Just think about this carefully, deeply, won't you? I have written this only for you, you know.

Now, don't you understand how it is that so many of the boys go ahead sacri-

ficing time and money, month after month, year after year, in the cause of the N. A. R. D.?

Just for the feel-goodness of it?—W. Pa. Retail Druggist.

A MODERN BABEL.

Documents in All Languages as Evidence of Pharmacy Training.

Nearly every language in the world is represented in the mass of documents filed with the Board of Pharmacy of the great metropolis as evidence of an applicant's former experience in the pharmaceutical profession. Hitherto a large proportion of those taking the board examinations have been foreigners, who first had to qualify by bringing proof from their native land that they were college graduates or had had a certain number of years' experience.

These documents accordingly range from modest references from former employers written on plain paper, to pretentious diplomas engrossed on parchment with seals of varying kinds and colors. So far the following languages figure in these papers: Russian, Italian, French, Spanish, Austro-Hungarian, German, Swedish, Danish, Hebrew, Roumanian, Turkish, Greek and Egyptian, besides the Spanish speaking Central and South American countries, such as Brazil, Argentina, Santo Domingo, etc. A strange fact is the omission from this modern Babel of the Japanese and Chinese languages. Although many Japanese are now studying pharmacy here, none has as yet evinced a desire to go into the retail drug business. The largest representation comes from Russia and Italy.

Some of the most remarkable papers are those which come from the Russian provinces. Many of the applicants from those regions have official descriptions of themselves and their careers, with an excellent official photograph of themselves securely attached to the written paper. Others again have documents which show in detail the exact time when they were licensed and the date of taking service with each employer and the time of leaving, signed by the employer himself.

In this way the Board of Pharmacy secures itself to a large extent against the frauds of ignorant foreigners who would practice pharmacy here without the necessary preliminary qualifications. To make assurance doubly sure, no paper is received unless it is accompanied by a statement of its authenticity from the United States Consul of the city from which the applicant comes.

In spite of all these precautions, and of ingenious methods employed to prevent cheating on the part of the foreigners and their friends, many come to the Board with "references" made in this country for the special benefit of the Board of Pharmacy. These frauds are invariably detected by a little sharp scrutiny of the paper and a cross-examination of the person presenting it. More than one case is on record in which a "certificate" torn up in the presence of the holder, led to a hasty and abject confession.

AMONG THE COLLEGES

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, Feb. 13.—One of the most interesting pharmaceutical meetings held this term at the Philadelphia College of Pharmacy, was that on Tuesday afternoon. There was a large attendance. The speakers were: Dr. H. W. Wiley, chief of the Bureau of Chemistry, Washington, "Methyl Alcohol, What It Is and What It Is Good For"; Prof. S. P. Sadler, on "The Detection of Methyl Alcohol in Ethyl Alcohol"; M. N. Kline, on "Some Reasons Why the Internal Revenue Tax on Alcohol Should be Reduced, and Why Our Government Should Provide Free Denatured Alcohol For Use in the Arts"; M. I. Wilbert, Ph.M., on "Camphor Snow and Cream of Camphor; Two Unctuous Non-Greasy Tolel Preparations For Chapped Hands and Lips." Communications were read from Dr. A. R. L. Dobme, of Baltimore, and others.

The Athletic Association has decided to hold another benefit at the Garrick Theatre, the latter part of the present month. As the result of the recent shake-up in the bowling team of the college, it has won eight of the last nine games played, and has advanced from fifth to second place in the Drug League.

Lack of practice is the reason assigned for the defeat last week of the basketball team, by the representatives of the Philadelphia Dental College. The next game is with the Atlantic City High School team, at Atlantic City.

More than one hundred members of the senior class journeyed to Meadville, Pa., last Thursday, where they were the guests of the Whitall-Tatum Co., bottle manufacturers. The trip was made in special cars, draped with the college colors. On arriving at Meadville, the visitors were shown through the works of the company and were enlightened as to the manufacture of bottles. Other points of interest were also visited and the day ended with an elaborate banquet.

MEDICO-CHIRURGICAL COLLEGE

Philadelphia, Feb. 11.—The faculty of the Department of Pharmacy of the Medico-Chirurgical College will be the guests of the George H. Meeker Analytical Society, at a theatre party, early in March.

At a recent meeting of the faculty, it was decided that prospective students in the future must be able to prove that they have spent at least one year in a first class high school. This step is taken with the view of still further increasing the standard of excellence of students.

Prof. Charles H. Shaw, who occupies the chair of botany, is preparing to conduct another expedition during the coming summer, into the Selkirk Mountains, British Columbia, in search of botanical specimens. He will leave about June 1, to be gone about three months, and will probably be accompanied by some of the students. In a similar expedition last summer, Professor Shaw collected 40,000 specimens and supplied colleges and institutions all over the country with botanical

collections. He also lectured on his travels, which extended in some cases through country rarely if ever traversed by white men.

WASHINGTON AGRICULTURAL COLLEGE.

Pullman, Wash., Feb. 8.—The School of Pharmacy of Washington State College was established in 1896, and though young in years, has a good reputation for thorough work and competent graduates. Two years of high school work are required for entrance and preparatory work in chemistry and botany. The school has all of the advantages of laboratory equipment, herbarium and library of the State College, and, in addition, a well-stocked pharmaceutical library of its own. The

PROF. GEORGE H. WATT.

Students' Pharmaceutical Association of about thirty members, meets regularly and discusses everything of interest, from laboratory work to the campaign of the N. A. R. D. Of late the college news in The Era has opened up a new field of interest. Our pharmacy students have representations on the various athletic teams and in the college band, orchestra and glee club.

Students who complete the regular course with an average above 75 per cent. receive the degree of Ph.G., and are registered by the State Board as assistant pharmacists, without examinations, the licenses being issued after two years of practice. Prof. George H. Watt is unable to supply the demand for graduates, and salaries range from \$60 to \$100 per month, according to the practical experience possessed by the student.

Final examinations for the semester are now in order, and are being finished up in true western style. These "exams." are connecting links which make students of the East and West one great brotherhood.

WINONA TECHNICAL INSTITUTE

Indianapolis, Feb. 8.—Extensive improvements are being made in the department of pharmacy in this institute. A new laboratory has already been equipped for the senior class, and other additions will be made as the department grows. At the beginning of the new term, January 30, nine reported for enrolment in the junior class, one has entered the senior class to do review work, and Joe Riesebeck, a graduate of last term, is doing work in the

special course in chemistry. This makes a total of about thirty in the department at the present time.

Of the four students who graduated from the college at the close of last term, Mr. Riesebeck has been appointed as laboratory demonstrator; Elmer Weakley has gone to his home in West Virginia, and Pearl Wenkey and Mr. Turner have accepted positions here in the city.

Mr. Long and Mr. Turner recently took the State Board examination.

Dr. Mullen has been added to the faculty as instructor in organic chemistry.

The senior class has taken up the work in organic pharmacy and chemistry, and the juniors are at work on the pharmaceutical preparations.

SCIO (O.) COLLEGE OF PHAR- MACY.

The class of '05 recently procured a beautiful class pin of unique design.

W. E. Flooding, Ph.G., '04, a successful pharmacist at Delphos, O., for the past eleven years, sold his drug store a few weeks since to F. H. King, vice-president of the Ohio Board of Pharmacy. Mr. Flooding has not yet decided upon a new location, but expects to continue in pharmacy.

L. A. Noble, Ph.G., M.D., class of 1900, has been enjoying an extensive medical practice in Cleveland, O., and lately was elected to the chair of chemistry and physics in the Homeopathic Medical College, of that city. Dr. Noble has for several years conducted a very successful analytical laboratory at 526 Prospect street, Cleveland.

"The People's Natural History," in five volumes, published by the University Society, New York, was added to the library of the College of Pharmacy this term.

Roy B. Thomas, Ph.G., '02, holds the position at Wellsville, O., made vacant by the death of F. L. McCaslin, class of '04.

UNIVERSITY OF MINNESOTA.

Minneapolis, Feb. 9.—The mid-year examinations in the first semester's work were held during the week ending January 21. Much complaint is heard among the students at the high percentage (85 per cent.) required to pass in metrology and mathematics, but the dean gives the assurance that it should be 100 per cent., and that he has in mind to make it that soon.

The seniors have begun work in volumetric and gravimetric analysis, organic chemistry, dispensing and operative work in the pharmaceutical laboratory. In the operative work is included the manufacture of National Formulary preparations, and U. S. P. salts, assaying and homeopathic pharmacy. The juniors are continuing the subjects begun in the first semester, excepting physiology and pharmaceutical laboratory, but in their place are devoting five afternoons a week to the chemistry laboratory and five hours a week to materia medica.

Linn Bradley, '04, is now manager of the Red Star Drug Company, Great Falls, Mont.

Alex. S. Kellam, '02, is hospital steward on the U. S. S. Supply, now at Guam, having recently left Cavite, P. I. Mr.

Kellam is the third graduate of this college to join the navy, the others being George W. Iltis, '95, and J. M. Bell, '00.

The faculty is again discussing the advisability of extending the regular course to three years. Matriculants now have the option of doing the work of the regular course in three years instead of in two (without additional expense for tuition). About one-fifth avail themselves of this privilege. The work of the junior year covers 1,233 hours. If students do not bring credits for Latin and physics, they are also required to take in addition, seventy-two hours in Latin and seventy-two hours in physics. The work of the senior year covers 1,318 hours, and special lectures from six to twelve during the year. Bacteriology is optional.

The student's time is very fully occupied for, in addition to the regular day-work, he is required to do considerable home-work, having to prepare papers on the work in hand every day. These are counted in the final ratings. Because of this strenuous work, only the better class of students is attracted to the college, and even a number find it necessary each year to drop out altogether, or to take an additional year or two for the completion of the work.

THE UNIVERSITY OF KANSAS.

Lawrence, Feb. 8.—The semi-annual reorganization of the Pharmaceutical Society, which is composed of students in pharmacy in the various courses, was held February 23. The following officers were elected: President, Roy L. Sanford, Independence; vice-president, F. K. Smith, Abilene; secretary, Miss Mamie Swann, Lawrence; treasurer, Robert Eyth, Abilene; librarian, Miss Clara Garver, Humboldt, Neb. The object of the organization is to encourage original research work, look after the social interests of the students, secure employment for its members during vacation and after graduation, and to promote the general interest of the department.

Prof. H. W. Emerson, instructor in physiological chemistry and dispensing, has started the course of dispensing by having the students take a thorough invoice in the drug store. By working in sections, the class will be able to complete the invoice in four days of two-hour periods each.

W. H. Labr, a candidate for the degree of pharmaceutical chemist and chief dispensing clerk of the pharmacy laboratories, was married to Miss Phoebe Hillman, of Lyndon, Kansas, December 28.

TWO AND TWO ARE THREE.

"It's this way," explained the cigar man. "All the expense in a box of cigars lies in the box, the bands, lithographs, and so on. The tobacco costs almost nothing. So that part of the selling price pays for the box, while the rest is for the cigars, and is all velvet."

The listener meditated. "Suppose," he propounded, "you don't sell the whole box at once, but a few cigars at a time, and you keep the box—what then?"

"It's all profit, of course," solemnly replied the cigar man. "It is only when I sell the box without the cigars that I lose the profit. See?"

AMONG THE BOWLERS

NEW BOWLING CLUB.

The "Jolly Bowling Club" has been organized by some of the employees of A. Klipstein & Co., of this city. They will bowl every Tuesday night, at 1150 Third avenue. The officers of the club are: E. R. Moranetz, captain and president; J. A. Lange, secretary; T. Rautenkranz, treasurer.

BANQUET TO THE VANQUISHED.

Rochester, N. Y., Feb. 13.—The bowling team of the Buffalo Ph. A. went down to defeat, last Thursday evening, at the hands of the team of the Rochester Ph. A. The teams are great rivals and as each had previously won a game, the game Thursday was a keen one. Rochester, captained by D. H. Moore, won by a score of two to one, and an advantage of sixty pins. Following the contest, the vanquished team was given a banquet at the Hotel Eggleston, attended by thirty-eight members of the Rochester Ph. A. Fred Fickett officiated as toastmaster, and informal toasts were given by many of those present.

WILL ENTER NATIONAL CONTEST.

Baltimore, Feb. 11.—This city will be represented at the national bowling contests in Milwaukee, by two teams, selected by the Baltimore Association, in which the Drug Trade Bowling Club holds membership.

The drug men this week rolled up some excellent scores, which are to be counted among the highest made. Totals of over 200 were rather plentiful, and individual averages were sent up sharply. On last Monday night, at Schneider's Cafe, Jahries, of James Baily & Son, made one score of an even 200 and another of 224. Tuesday, Blumber, for Sharp & Dohme, rolled up a total of 222, while Coulson did better, with 234. Last night the mighty men of McCormick & Co. made a killing of the Armstrong Cork Company, Armour having 220 and W. Smuck 207. The results of the week's games were as follows:

Jas. Baily & Son	901	801	885
Calvert Drug Co.	621	633	638
Sharp & Dohme	917	835	784
Davis & Davis	800	802	803
McCormick & Co.	833	824	792
Armstrong Cork Co.	698	769	693

These scores leave the standing of the teams as follows

	Won.	Lost.	P. C.
James Baily & Son	40	11	.782
McCormick & Co.	39	15	.722
Davis & Davis	29	19	.604
Sharp & Dohme	29	22	.569
Armstrong Cork Co.	10	39	.204
Calvert Drug Co.	7	47	.130

P. D.'s HAVE STRONG LEAD.

Detroit, Feb. 14.—The feature of the past week's games was the series between Parke-Davis, No. 1, and the Ingrams. The second was especially exciting. A count of the pins showed that each team had 916.

The tie was bowled off, the champions winning, and making it three straight. The Parke-Davis "infants" trampled all over the Michigan Drug team, defeating them three games. The scores:

P. D. & Co., No. 1	893	916	861
Snyder	—	—	203
F. F. Ingram	807	916	821
Laughna	—	—	223
P. D. & Co., No. 1	883	838	830
Barry	—	—	197
Michigan Drug Co.	766	830	780
Carlisle	—	—	185
F. Stearns & Co.	831	740	807
N. O'Donnell	—	—	199
Nelson, Baker & Co.	790	859	801
Feehey	—	—	187

Only three more games to play and the Parke, Davis & Co. Interdepartmental League season will be closed. Within the past week, the season's leader, the Scientific team, dropped the position to the Chemicals by a few pins. The next three games will decide the ownership of the championship trophy. Additional interest is given through the addition of a "down and out" tourney, the six low bowlers dropping out each night. A handsome pipe is offered for the ultimate survivor. A silk umbrella is also up for the man who most improves his average for three games. The last week scores:

Mechanical	775	802	778
Lawrence	—	—	172
Pharmaceutical	777	777	714
Helme	—	—	193
Chemical	757	82	802
Maunder	—	—	202
Publication	833	760	796
Watson	—	—	210
Scientific	769	750	783
Soyder	—	—	180
General Business	817	794	754

TWO GAMES FOR TABLETS.

St. Paul, Minn., Feb. 11.—At the play of the Minnesota Drug Clerks' League, February 9, the Tablets won two games, the score standing:

Tablets	734	749	715
Colberg	—	—	174
Pitts	733	674	846
Heller	—	—	190
Thompson	—	—	190

The bowling of the Retail Drugists' League, February 10, was unusually satisfactory, for each team won a game. The score:

Mortars	756	705	828
Walter	—	—	179
Pestles	697	727	732
Preston	—	—	184
Spatulas	808	675	658
Everett	—	—	189

NEW INCORPORATIONS.

Lakeview Drug Company, Massachusetts, Lowell. Capital, \$2,500. Treasurer, Harrison Lake. To conduct the drug business.

Port Tampa Phosphate Company, Boston. Capital, \$300,000. President, Charles R. Tapley; treasurer, Benjamin L. Emerson.

Layman's Remedy Company, Boston. Capital, \$50,000. President, Miles Hanver; treasurer, Charles E. Estey. To sell vegetable remedies.

NOT IN THE TRUST.

For sixty-three continuous years the PUFFERS have made
SODA WATER APPARATUS
 and all appliances connected therewith.

A PUFFER APPARATUS

has always been synonymous with cold and pure beverages,
 superior construction and unequalled convenience. There
 are other makes of soda fountains, but only one make of

PUFFERS.

We make Soda Apparatus of every description for wall or
 counter. Also, our celebrated counter Dispensing Apparatus

The "CONSTELLATION"

(PATENTED)

which has the only responsive and reliable

PATENT SYRUP LIFT

An immense stock of new and secondhand soda apparatus
 to select from, at prices lower than ever.

SPEED
AND
ACCURACY

are both demanded as qualifications of the dispenser. There should be as little as possible of time lost in looking through reference works for things that can't be remembered, and which would endanger accuracy should the dispenser trust them to memory.

THE ERA DOSE BOOK,

THIRD EDITION—REVISED—ENLARGED,

Gives these things in convenient form—answers nearly all the questions which arise in dispensing—all those about doses, dose equivalents, incompatibles, solubility, Latin, French and German terms, etc. It does this accurately and quickly.

PRICE, 50 CENTS PER COPY, POSTPAID.

TRADE SECTION

WHY AM I A DRUGGIST?

Reasons Advanced by Men Who Are Employed or Employing.

"WANTED TO LOOK NICE," SAYS ONE. —"DAD" WANTED ME TO," SAYS ANOTHER.—DESIRE FOR AN EDUCATION A GOOD REASON.—A DRUGGIST-BANK PRESIDENT TALKS.

"Why did I go into the drug business?" That's the question hundreds of young and old men occasionally ask themselves. The query may come after a weary day. When the querist is querulous it means little. It is when he is optimistic that he best answers the question.

A Brooklyn druggist, owner of several stores, said: "The desire for a restful life, the opportunity to wear my best clothes and hang on to the pulley line of an awning on bright Sunday mornings, so that the pretty misses and their jealous brothers could see me and admire, was the combination that drew me into the drug field. It was up in Connecticut; I was the son of a truck farmer. It was a welcome relief to get away from the farm for our daily visits to the neighboring town. How I did envy the young fellows with their 'store clothes,' who were clerks! But the drug clerk—was my beau ideal. I watched my particular hero as we passed the drug store every morning. With the ease born of experience he would deftly twine an arm around the awning ropes, and behold! his yellow hair and freckled face would invite caresses from the sun. Why he pulled up the awning when the sun shone I never knew. I held him in too great awe to ask, even when I later became an apprentice there.

"Am I sorry? No. You see just how restful I found the life." He indicated a huge pile of bills representing a week's purchases for his stores. "Did I ever swing on the awning ropes? Alas! no. Like the defined yearnings of great minds (ahem!) that was denied me. But I am not sorry," he added, "because I can now swing on awning ropes attached to four stores which belong to me."

Surely not originally a great ambition. But a man who can forego lesser ambitions and become an employer in a comparatively few years must pay the price.

IT WAS COMPULSORY.

"I'll answer your question by saying it was compulsory," said a drug clerk now manager for a large concern. "Failure in business made my parents unable to give me an education. I was naturally independent and determined to shift for myself. I wanted an education. I had to work. I wanted, of course, but how? A card in a druggist's window gave the hint. I was the boy they wanted. I was thirteen, then. The partners, there were two, were said to be cranks. I never found them so. I got three dollars and a half a week the first year and went to grammar school. I cleaned up, made myself generally useful and received instruction enough in the

business to make me wish to understand it. I learned first how to do things. It was years after when I could reason for myself that I found out the why of the wherefores. That came at college.

"Am I sorry? Sorry for what? Does the wise man curse the bridge that carries him o'er a dangerous stream? With me, ignorance was the stream, the drug business the means which I utilized to bridge it. Why am I not an employer? Because I don't wish to be. Every man, every true man has his work to do. If there were no employers there would be no employers. I'm happy. I'm free. Long hours? Perhaps. But I'd rather put in twelve hours a day at this business, than be the butterfly of fashion or the man with nerves in Wall Street."

Oh, for more such men! The manager admitted being a student of Confucius. He reads Virgil for pleasure; is a self-taught French scholar and linguist; has a laboratory at home. And strange to say, has health; never a sick day in his life. The drug business with him, in the beginning, simply a means to an end, has become his life work, his study. Since he knows thoroughly the scientific side, he is studying the commercial end of the business. He can tell you who makes nearly any proprietary, with its retail and wholesale price. This information he obtains by studying price lists. He is not superficial; perhaps that's why he's content.

SOUGHT A PROFESSIONAL LIFE.

Another type, a too frequent type, is that of the seeker after professional standing. Said one of these: "Sure, I'm sick of the business. There ain't nothing in it. I thought when I got a job to learn the business that I was the whole thing. I've been in it ten years. It's too late to get out now. What could I do anyway? I'm a registered pharmacist. Pooh! What's that amount to? Work twelve, yes, fourteen hours a day for fifteen a week. Study? What'll I study? Latin and Greek, eh? Well, I ain't strong on study. Oh, I s'pose I could if I wanted to. I passed the Board exams, dead easy. Hadn't really been two years in the business when I was enjoying all the privileges that 'Willy-guys' going to college had. What in thunder is the use of knowing more than you have to? It's the 'guy' that keeps mum that gets along best.

"Sorry? You bet your life I'm sorry I ever went into this game. See that man that just went out? Notice that rip-roaring diamond pin? Well, he's got all kinds of money. And say, he was an ornery bootblack before he 'backed' the races. Now see what he's got. Look at 'Pittsburg Phil.' He was a gambler, sure, but he left a cool million, they say."

"But," objected a listener, "'Pittsburg Phil' is dead." "Well," answered the clerk, "ain't I a 'dead one,' too?"

Is he? It's rather a "safe bet," as he would put it, that his dissatisfaction comes from an overwhelming desire to get the better of Dame Fortune, without work. It's a fact that he can name the winners

of the Brooklyn Handicap for years back. And rumor has it that on Monday, following Saturday pay-day, he makes "a touch." "I pass," "That beats me," and "That's good" are words frequently heard about the store. As the Curb Philosopher said awhile back, "If it were not for our pleasures, life would be easy," or words to that effect. Is it true?

The son of his father said: "Well, you see, 'dad' wanted me to step into his shoes, and I did. Well, of course, I'm not actively engaged in the business. I'm president of the X Bank, and have other business interests. Since when did I make pills? Oh, five or eight years, I guess. Oh, the business is all right. Made a stock company of it, you see. You can hire men who will safeguard it better than yourself. Why? Well, they have your system down pat. They don't depart from laid-down rules. They have neither the desire nor the authority to take initiative action that might lose money for me. When the druggist becomes a capitalist, in my opinion, he should retire from the active management of his business. The drug field is too limited, the details too minor for a mind capable of financing."

NOT "DAD'S" POSITION.

If that be true, then the drug business was embarked in merely as a means to an end, the financing end. "Dad" would probably rise from the grave if he knew the son's sentiments. The old man loved the business for other reasons than dividends in cash. The prestige that success gave him was accompanied by respect for his strict professional views.

A Brooklyn physician, once chief of a neighboring town's fire department, was formerly a druggist. The reasons why he became a druggist were because he wanted to know drugs as well as the practice of medicine. He was, they say, a good fire chief, a mighty good druggist, and even his enemies admit, an excellent physician. He takes as much pride in his druggist's license as he does in the sheepskin of the doctor. He knows what he knows.

If corporations had souls and voices, they could tell why they invaded the drug field. "To make money" would be the expressed sentiment. There would be no rant about professionalism, if they were truthful. One such concern has recently found that such an intent brought failure.

DOES IT SUCCEED?

Summed up, it seems that men, and women too, take up the drug business either because it pays at the start out of all proportion to the later compensation, or because "Dad" was in it, or because the novice wanted to look nice and have a snap.

It is worth noting that none of the latter class has had an unqualified success of the business.

While all admit that the realization in cash or experience and study necessary to become good druggists is relatively less than the returns in many other lines, not, however, those approaching professions, it is safe to say that the successful druggist

can reflect, whether employed or employer, that he knows more, has a better training and is capable of untiring drudgery to accomplish his ends. In short, 'tis a life well spent.

GROWTH OF PROCTOR'S CIRCUIT.

It is almost five years since F. F. Proctor extended his amusement enterprises in New York City, and added the 125th Street Theatre to his circuit. To be quite exact, Proctor's 125th Street Theatre has been running 232 consecutive weeks without having the doors closed once, even during midsummer. The Proctor Stock Company in Harlem has given 2,784 consecutive performances, and has utilized about 212 different plays. So far as modern theatrical history goes, this appears to be the record for stock company achievements, in the popular price class. With the approaching elaborate productions of "The Silver King," on February 27, and "The Only Way" a week later, it is difficult to find any reason to cavil at what they offer for your delectation in the Proctor playhouses. "The Money Makers," a really fine comedy, which passed an all too brief fortnight at Klaw & Erlanger's Liberty Theatre, was revived week of February 13, at Proctor's Fifth Avenue Theatre, and it attracted really enormous houses. During the early week of March it will be produced with the complete original scenic production, identical with that at the Liberty Theatre, at Proctor's 125th Street Theatre. Just so fast as the Broadway successes (so-called) are to be obtained for stock company uses, Mr. Proctor is in a position to secure them first for his formidable circuit of stock company theatres, and his patrons naturally are the quickest gainers.

CHEMIST & DRUGGIST'S WINTER ISSUE.

Our English contemporary, the Chemist & Druggist, has sent forth its semi-annual special supplement or Winter Issue. It might be termed a library in itself, for it carries, bound in and inserted between its leaves, circulars and entire price lists of some twenty-five firms. Under the English postal laws, this is permissible without detracting from the usual mailing privileges. Among these, two American houses appear, McKesson & Robbins and William R. Warner & Co. All the price lists are well gotten up and some of the pictorial work in colors is really beautifully executed. There is also an enormous amount of smaller advertising announcements, and the whole issue appears comprehensively representative of British pharmaceutical manufacturing interests. The regular portion of the issue, the publication proper, is interesting, as usual, including an article on the cultivation of golden seal based on the recent publication of the Department of Agriculture, which has already been fully treated in The Era of February 2. The whole issue of the Chemist and Druggist is interesting and instructive. The next semi-annual to contain inserted price lists will be the Summer Issue, to be published on July 29.

TELEPHONING DOCTORS FREE.

Plan of Brooklyn Druggist to Increase Prescription Trade.

An enterprising Brooklyn druggist, Mr. T. H. A. MacDonald, has inaugurated a trade winning plan which promises to work well and should interest the druggist in any section. Free telephone calls from the drug store for physicians are allowed to anyone.

In order to make his plan generally known, Mr. MacDonald first issued announcements to all the physicians in his vicinity and then published details in the local papers. If any other druggist decides to use the same plan he should carefully recollect this sequence and observe professional etiquette scrupulously by first notifying his clients.

Mr. MacDonald's announcement sent to physicians was in good taste in all mechanical details. A mauve note paper was used with a mauve envelope of strictly fashionable style. The type was plain and clear faced, although small. We reproduce the wording:

MacDonald's Pharmacy.

(Always on Top.)

54th St. and 3d Ave., Brooklyn, N. Y.
Telephone, 42 Bay Ridge.

Night Calls Promptly Answered.

Dear Doctor:

We wish to inform you that on and after February 1, 1905, we commence the "Free Telephone Calls for Physicians" at our store. Anyone needing his physician can save time by letting us telephone for him. If you care to you might tell your patients in this vicinity to call you from here.

We are constantly adding to our already large list of chemicals and proprietary articles, always keeping in touch with the physician's needs.

We are now entering on our fourth year in your midst, and are working as hard as ever to add to our reputation.

We established our reputation on Squibb's Standard U. S. P. Chemicals, and shall continue to use the same, unless otherwise specified. Accuracy, purity and quality in our prescriptions, in combination with competency and experience, is a guarantee of excellency unsurpassed in the city.

Every prescription that leaves our store is sealed before it leaves the prescription department, thus insuring the physician that it contains just what was prescribed.

Thanking you for your patronage in the past and assuring you that every attention will be given your prescriptions in the future, as heretofore, we remain,

Respectfully yours,

T. H. A. MACDONALD, PH.G.

The originator of the scheme was questioned on some details. It was suggested that people might use the 'phone for other purposes than that intended and yet claim exemption from payment on the ground that they had been talking to a physician.

"That could not happen," Mr. MacDonald replied. "We never allow a customer to go directly to the 'phone for a physician's call without first notifying us. If it is done, the customer must pay us regular rates; we make this distinctly understood. When a customer wishes a free call for a physician, all he has to do is

to tell one of our store force. Then we call up the physician, and having established the connection by saying, 'Hello, is this Dr. Blank?' Yes? Well, this is T. H. A. MacDonald's Pharmacy, Fifty-fourth street and Third avenue; one of your patients wishes to speak to you, doctor,' we turn the transmitter over to the customer himself. Catch the point?"

When asked what results were expected, he said: "Could you get any better advertising? Everyone will soon know about our free call for physicians. All those needing medical advice will flock to our store to save telephone charges, and it will be strange if our prescription trade does not grow. And we keep our name before the physicians constantly. Consequently, when a patient asks where to have a prescription filled, the physician will be disposed to suggest our establishment. The plan will make the whole medical profession of the locality friendly to us and will really be a public convenience. It is a safe rule in trade to be sure that if you really serve the public your reward will certainly come."

Another feature of MacDonald prescriptions is, as was stated in the above announcement, that all packages are sealed with string and wax before leaving the store. This insures no tampering and is one of those little artistic, up-to-date touches which stamps character, good taste and progressiveness on any business. Such small matters create in the aggregate an atmosphere for an establishment which, while intangible and impossible of careful analysis, is generally recognized as real and exerts a powerful influence in holding and attracting trade.

But a short time ago the writer overheard a lady say, "Oh, don't go to that drug store. Go 'round the corner, if it is a block further. That nearest is so unclean and has such cluttery windows. The other has an air of refinement."

And as Dr. Chillip says in David Copperfield, "The ladies are great observers."

LABEL LAUGHTERS.

It is rather amusing at times to read the different drug labels that come here to be printed; that is, the manner in which the copy is prepared. Here are just a few samples from memory. In part of the directions for Corn Cure it reads: "Apply each night for four nights and remove the corn." How simple. Another for toothache: "Saturate cotton and insert in cavity." For the guma: "Rub a little on the finger." For rheumatism: "Take a tablet three times a day until cured." Another reads: "Sure cure for Big Head, guaranteed to cure in ten minutes; take one tablet every twenty minutes." Another, a hair tonic: "Removes and prevents dandruff, making it fine and glossy." And one reads: "Repeat in twenty minutes if not relieved in half an hour."—Burt's Box Bulletin.

"You'll excuse me, doctor," began the angry druggist, "but are all your patients poor?"

"Why?"

"Well, all those tonic mixtures of yours are written, 'As directed, P. P.'—poor patient. I'm getting tired."

The doctor smiled. "P. P.—post prandium," he managed to say.

C. P.
EMANATIONS

**THE UNSOLVABLE PROBLEM;
SOLVED EVERY DAY.**

The clerk moved about the store with a quick, alert step, while the druggist looked on with an air of amused encouragement, mingled with irritation.

"Charley has taken the fatal step," the latter remarked to the C. P., inclining his head in the direction of the clerk.

"Not bought a store?" the sage inquired.

The druggist laughed at the utter absurdity of the question, for he knew the state of his employer's impetuosity to the last cent of overdrawn pay.

"No," he said, "not that. He's going to get married."

"Oho!" cried the sage. "So you are going to give hostages to fortune, are you?" But the hearer for whom the remark was intended had disappeared behind the prescription case.

"It's ridiculous," said the druggist, lowering his voice. "Here he is getting fifteen a week, and he says he can't live on that. What will he do when he has a family to support?"

"Make more than fifteen a week, most likely," replied the sage promptly.

But that is fair wages for a drug clerk. How can he get more than the market price? I've figured it all out for him, but he either can't or won't see it."

"It's no use," said the old gentleman, oracularly. "All young fellows are that way under those circumstances."

"But must a young fellow, when he gets like that, lose all sense?"

"It is not a matter of sense," replied the sage. "Sense has nothing to do with it. If people went at it in a purely sensible way, there wouldn't be many marriages, I take it. Nature is too wise to leave such matters to the intellect."

"But what is to become of him?" demanded the druggist. "I can't afford to pay him much more, and I hate to see him rushing into difficulties. He is a nice fellow, and the girl is mighty nice, too."

"Don't worry," advised the sage. "If he is what you say he is, and the girl is the proper article, there will be no trouble—that is, not any more than is good for them. Some trouble is good for people."

The druggist was far from satisfied. He knew his clerk's expensive habits. To him there was something radically wrong with a man who spent two-thirds of his week's salary for two opera tickets.

"Shucks!" remarked one C. P. "Think how it was with yourself. Did you figure on ways and means to any serious extent?"

The proprietor of the comfortable business on —th street smiled. "I was getting ten dollars," he admitted, "and nothing better in sight."

"You might as well confess that it was the making of you," urged the old gentleman.

The druggist pondered a moment and said slowly, "Yes, I rather think it was. You see, ten wasn't enough; it did not take long to find that out. I simply had to get more."

"And you did," said the sage. "You don't happen to remember how you did it?"

"I am not likely to forget that," replied the man of experience, stern determination appearing in his face at the recollection. "It's this way. Have you ever in your younger days seen a strange cat cornered in a cellar? He will fight like seven demons. That is the way a man feels when he is confronted with the little problem of making five dollars cover eighteen dollars worth of bills."

"And if he is the proper sort, he will ask neither odds nor sympathy," added the C. P. "That is where this state of unforeseen difficulties gets in its fine work on a man. It stiffens his back. The average young fellow doesn't half try until he is obliged to."

"But how is Charley going to do it on a drug clerk's salary?" objected the employer. "He is an expensive sort of a boy, and the girl is of the silk-lined variety, too."

"It can be done," said the sage stoutly. "It must be done. If a clerk's wages are not enough to support a family, why the— the race will become extinct. If they can't live, there won't be any drug clerks. You can't upset the laws of nature by cutting prices and figuring down margins to that extent."

"Still, that is the situation," replied the druggist with a sigh. "Whatever you and I managed to do in our day, I am sure Charley can't do it."

"In that case," said the sage, "he may have to do something else—start a store of his own, for instance. I wonder, now, if that is the reason why there are so many drug stores."

The druggist saw much probability in the suggestion. "Or," he reflected, "he may leave it entirely."

"In that case, you lose a good clerk, and pharmacy an able exponent," observed the sage.

The two friends were on the point of giving the problem up as impossible, when the object of their solicitude entered. No misgivings troubled him; the world and the future had no terrors for him; courage and even gaiety radiated from every feature.

The sage smiled, and when he again heard the vigorous sounds of the clerk's pestle in the rear of the store, he said: "We are a pair of old fools to worry about him. Let him figure it out; I haven't the slightest doubt that he will do it to the satisfaction of the one most concerned. You say she is of the right sort; they are both young. That is enough!"

A HAIR RAISING FABLE.

Once upon a time a Man with a Bald Head walked into a Drug Store to seek a Tonic for his affliction. Down the line of Counters he traveled, past Coffee sales, Razor sales and Candy sales until he came to the Patent Medicine Department, where they make new Men.

Pointing his Finger at the Luxuriant, accurately-bisected Hair of the Drug Clerk, the Bald Headed Man said:

"Is there any more in stock like that?" "We have something here that will grow Hair on a Sunday school story," answered the Clerk; "ten drops per square inch will grow ten square feet of Hair. Im-

mediate and positive results guaranteed, and only one dollar a Bottle."

"I'll try some of it right now," said the afflicted one. And before the Clerk could interfere the Man had slapped about four ounces of the Rejuvenator on to his Dome.

The result was immediate, wonderful and worth the price of admission. A regular Forest of Hair sprang up in ten seconds. It bit the Electroliner a whack in the Slat that put the Lights out of business. The woolly growth shot up from the Man's Head until it reached the Ceiling, where it spread out and hung down gracefully like a swell Conservatory. It twined around the Bottles on the Shelves, encircled lovingly the Necks and Legs of the clerks and Customers, and soon was growing rapidly out through the Door.

Just as the Bureau of Forestry was about to be summoned, a Youth, who was lighting a Cigarette, dropped a Match into the Underbrush, which blazed up and vanished in a puff of Smoke.

Strange to say, nothing and nobody was hurt. The only one who was singed was the Drug Clerk. He went out and had another drink.

Moral: That Clerk missed his calling. He ought to swear off drink, the Drug Store, and other bad habits, and take to writing Advertisements.

TRUST DRUGGISTS' INTEGRITY.

The supervisors of Genesee County, Michigan, in a recent session, considered the bills presented by various druggists for formaldehyde furnished the county authorities for the treatment of contagious diseases. The druggists had charged four dollars per gallon. At the October session, the supervisors had set a uniform price as payment of but \$3.50 per gallon, but so many protests have since been registered that the supervisors, on reconsideration, have granted the full four dollars. One of the supervisors said that he did not believe the druggists were in the business of making exorbitant charges for supplies furnished the county, and suggested that they were better quadded than were the supervisors to say what formaldehyde was worth.

PHOEBE SNOW APPROVES MR. SNOW.

Mr. Judson B. Todd, of Ithaca, N. Y., makes use of the Phoebe Snow style of advertising to feature his business. Associating local store news with matters of general public interest or methods of advertising already well known is a sure method of attracting attention.

Says Phoebe Snow:

"It is not odd

That people buy

Their drugs of Todd,

He sells things cheap;

He treats you white;

His store is always clean and bright

Although he uses anthracite."

—From Junior Week Cornell Widow.

A REASONABLE REQUEST.

Poor Feeble (about to be operated on for appendicitis)—"Doctor, before you begin I wish you would send and have our pastor, the Rev. Harps, come over."

Dr. Cutter—"Certainly, if you wish it, but—ah—"

"I'd like to be opened with prayer."—Life.

SHOW WINDOWS AND FEATURES.

Epidemic of Inhaler Demonstration All Over the Country.

SWEET CIDER IN DRUG STORES.— THAT "GROUND-HOG STORY" FROM KENTUCKY.—PERUNA. SIXTY-ONE CENTS.—VALENTINES AND PERFUMES.—MORE GUESSING.—STAMP MACHINE—SOME ODDITIES.

The Rocky Store, Eighth avenue and Thirty-fourth street, has Munyon's Paw-Paw and inhalers on sale this week. A special offer is made by the proprietary house of a dollar bottle of Paw-Paw and a dollar inhaler, all for eighty-five cents. The inhaler is provided with a sufficient supply of tablets and liquid, for a lengthy trial. A man, with whitened face and made up to caricature a scarecrow, imitates the automatic motions made famous by Montgomery and Stone, in the Wizard of Oz. A crowd watches his antics as he operates the inhaler or waves his enormous hands, white gloved, at an imaginary acquaintance. A sale of fountain syringes from forty-nine cents upward is on. These syringes are hung in double rows, and by connecting the tubing with two bags, an endless chain is formed. A pyramid of invalid cushions is a centre-piece, beneath which appears a sign, "Don't be afraid to use one of our syringes. Let them take care of themselves and patient. They won't leak." The window is backed with hair sole remnants on strings, quoted at five cents a pair, and a quantity of Stain-off is featured at seven cents a cake, three for twenty cents.

Peruna, 61c.

James, Eighth avenue and Forty-fourth street, has a window display of Peruna, quoted at sixty-one cents. A special offer made by Mr. James is a five pound box of Belle Mead Sweets, to be given free each week, to the party holding a lucky number. Each purchaser of ten cents' worth or upward is given a numbered coupon. A large envelope is posted within the window. This envelope is duly sealed with red wax and contains a number, "Unknown to anyone," says the circular. Some of the James "specials" are Booth's Talcum, ten cents; Bland's Pills, ten cents per hundred, 300 for twenty-five cents; Seidatz powders, twelve for twenty cents; Twenty Mule Team Borax, twelve cents a pound; Williams' Turkish bath soap, twelve cakes for thirty-nine cents, and Williams' shaving soap, cakes, five cents.

Mr. James stated that he was selling Peruna at sixty-one cents because he has satisfied himself that Macy & Co. are disposing of serial numbered goods at fifty-four cents. He had purchased there a bottle of Peruna at that price, bearing the number 107,374 m, and has the Macy check for the article, signed by clerk 225.

Sweet Cider.

Gibian, Eighth avenue and Forty-second street, S. J. Barnaby, Eighth avenue and Twentieth street, and others are selling sweet cider from a glass tank, or a barrel, in connection with the soda business. Both of the above report good demand for drug store cider.

Candy and Catarrh Cure.

F. W. Kinsman, Jr., & Company, Eighth avenue and One Hundred and Twenty-fifth street, continue to show "Saturday Candy" at twenty-nine cents a box. A demonstrator for the Jensen Inhaler is in the candy window, and the catarrh remedy is featured along with sweets. The inhaler is simple in arrangement, and sells at ten cents.

Show Bulk Goods.

The Miner Drug Company's One Hundred and Twenty-fifth street store devotes a whole window to cough drops and throat lozenges. Seven large wicker baskets are arranged in a row. These baskets contain a bulk quantity of licorice gum drops, wild cherry drops, slippery elm drops, licorice pellets, borehound candy, etc. In front of each basket compartment is placed a quantity of the articles featured, packaged neatly in pasteboard cartons. The store is handy to a theatre and the large variety of throat easing pastilles thus shown brings many nickels to the firm.

Valentines.

John Coghlan's Pharmacy, Third avenue and Forty-third street, makes a bid for the valentine trade by showing attractive bottles of perfumes with small cards attached, reading, "To My Valentine." The man who desires to send his divinity a valentine can procure one in glass, that will be appreciated. No attempt is made to handle paper novelties separately, and no charge is made for the cards.

Chandeliers.

Many people have noticed a sign "Chandeliers For Sale," in the window of the Hegeman Corporation's new store, Broad way and One Hundred and First street. The corporation has not, however, as it would appear, gone into the gas fixture business. The old furnishings are offered for sale and will be replaced by up-to-date fixtures. Things are topsy-turvy in the new store, and taking advantage of the extreme cold weather, the management is having installed a new Innovation soda fountain.

Guess Again.

MacDonald, Third avenue and Fifty-fourth street, Brooklyn, has them guessing again, this time on headache cachets which are his own make. A display of the envelopes in which his remedy is dispensed, is made interesting by showing a large glass jar filled with the cachets. Each purchaser of five cents' worth and upward is entitled to guess how many cachets are in the show container, and the one guessing nearest will receive a fifteen dollar bottle of perfume. The prize is worth while and the druggist figures to educate his patrons up on cachets, especially those for headache. In the past he has had a contest on guessing how many pieces of coal were in a scuttle, etc., all being foreign to the drug trade, and he hopes by the new contest to remedy this.

Kentucky Ground Hog.

At the store of Harting & Browning, Lexington, a novel window display is attracting considerable attention. A ground hog, which was captured last fall, has been lying in a stupor during the winter. A few weeks ago six hen's eggs were placed under him and four chicks were hatched out. Whether he will look for his shadow successfully is worrying the

warmth-loving Kentuckians. The daily press throughout the country have used an article sent out by a press bureau about the Drug Store Ground Hog, and the advertising has been national.

Makes Stamps Pay.

The Fry-Hodge Drug Company, Marshall, Texas, has turned the postage stamp business into a profitable side line, by means of a silent salesman slot machine, which delivers two two-cent stamps and a blank envelope when a nickel is deposited in the slot. Aside from the convenience to customers, it is a time-saver for the firm.

Dummy Operates Vaporizer.

The window of W. S. Johnson & Sons' store, Henderson, Kentucky, attracts plenty of attention. A large variety of vaporizers and atomizers is shown and the working of the apparatus is illustrated by means of a mechanical dummy. The automaton is operated by electricity and the motions incidental to using an atomizer are faithfully reproduced. Within the store a young woman demonstrates the articles and administers free treatments to all comers.

MAINE.

Three scholarships in the Rockland Commercial College will be given away by Mr. W. J. Conkley, of Rockland, Me., to advertise his drug store. One scholarship will go to a young lady, another to a young man, and the third to the person getting the third highest number of votes polled by customers. Votes are allowed with each ten cent sale. The contest has begun and will run until May 10. Anyone who wishes a free business education would do well to move to Rockland and stuff the ballot box.

SOUTH CAROLINA.

The Ladies' Working Society of the First Baptist Church of Greenville, S. C., has planned a novel way of raising money for charity. It will hold a special sale of extracts and medicines at Reynolds & Earle's drug store, lasting three days. The goods will be put up by the Westmoreland Drug Company, which wholesale concern has recently been established in Greenville. Dr. Westmoreland himself, the president, will superintend the putting up of the articles. Reynolds & Earle, besides obliging leading residents, will undoubtedly reap larger sales on their regular lines.

GASOLINE VAPOR LIGHTING.

Where electricity is not available, the problem of maintaining an attractively lighted store may be solved, it is said, by the use of the gasoline vapor system. As an exponent of this plan, the Hydro-Carbon Air Light System of the White Manufacturing Company, factory at Chicago Ridge, Illinois, is highly recommended by many merchants. This company is said to be the oldest and among the most reliable of the concerns in this line of business. Its product has stood the test of time and is sold under a binding guarantee. Those considering the subject can obtain information and estimates by writing the company. It is suggested that the dimensions of the premises to be lighted should also be sent.

RANDALL'S GRAPE JUICE.

Exhibit of the Company at the
St. Louis Exposition.

BY THEIR MODERN METHODS THE
SKINS AND SEEDS ARE ELIMIN-
ATED IN PROCESS OF MAKING.

The Chautauqua Belt produces the bulk of the grapes used in the manufacture of grape juice, and in that section most of the leading factories are located. The vineyards stretch a length of about fifty miles on the south shore of Lake Erie. Although other grapes are raised, it is the Concord which furnishes 95 per cent. of the fruit used by these factories. The Concord long ago achieved lasting popularity as a table grape. The crop grown on 25,000 acres last year produced about 500,000 gallons of grape juice, and yet allowed shipments of 6,700 carloads of the fruit for table use. It is estimated that the re-

skin from further connection with the process. According to older methods the skin was heated with the pulp and juice. By discarding it the Randall Company prevents the presence of tannic acid in the final product, not only rendering it more healthful, but more palatable. The opaque purplish hue sometimes observed in other grape juices is thus avoided.

This company has only been in the business with this process about four years, but it has already achieved great results. The members of the firm are F. N. Randall and F. M. Randall, father and son, whose portraits are published on this page.

Their exhibit at the St. Louis Exposit-

will come in time and already the increase of grape juice drinkers over the number in past years is noticeable. Let a person once drink grape juice which is properly cooled and served, and it is a practical certainty that he will wish to drink again.

The Randall people have always been in the lead in the way of modern advancement and up-to-date ideas as regards marketing their products.

To-day they announce another innovation—a higher step to satisfy the growing demand of the American public and will this year offer Randall's Grape Juice to the trade in neatly lithographed cartons, which will materially assist the druggist

in his growing trade to these high grade goods, as well as bring the consumer a fuller knowledge of the various uses and benefits of Randall's Grape Juice.

The members of the company have striven to make their product the most perfect of its kind in the world. They have studied processes

BOOTH OF RANDALL'S GRAPE JUICE CO. AT WORLD'S FAIR.

F. N. RANDALL.

turn to the growers was more than \$2,000,000, and this in spite of the fact that the crop was greater than the demand, making the price of Concord's only \$25 per ton.

Prominent among the firms manufacturing unfermented grape juice, stands forth the Chautauqua Fruit Company, sole manufacturers of the Randall Grape Juice; its factory is located at Ripley, N. Y., in the heart of the Chautauqua Belt, the home of the Concord grape. The success of its product is due to its merit, arising from the care displayed in the methods of manufacture. To this concern a gold medal was awarded by the International Jury in group 92, at the St. Louis Exposition. The Randall Company states that they have received the only gold medal ever awarded grape juice at any exposition.

The process used by them is a new one, an improvement over old methods. It has already been fully described in The Era for December 5, 1904. The principal features, however, are the care in the selection of thoroughly ripe and undamaged grapes, and the elimination of the

tion was impressive and attractive. Our large illustration reproduces its appearance and arrangement. The decorations were especially appropriate, being artificial grape vines, while in the background was a view of the factories of the company and the surrounding vineyard country of Chautauqua county. This was the main booth, but ten other stands were also maintained from which Randall Grape Juice was dispensed to the public.

The virtues of Randall Grape Juice are well known to physicians and druggists, and a greater demand for it is developing each year. The public, while consuming large quantities of the juice at soda fountains, is not fully educated as yet to the full knowledge of how refreshing a glass of unfermented grape juice is. But this

Grape juice is a so-called temperance drink; that is, it is not intoxicating. The fact that wine is made from fermented grape juice has perhaps led some to believe unfermented grape juice of a somewhat similar nature. This idea is rapidly disappearing, and, indeed, it never existed to any great extent. The surest way of eradicating it from the mind of a doubter is to persuade him to drink a glass of Randall's Unfermented Grape Juice. At any time it is gratefully refreshing, but on a hot summer day it meets the needs of the thirsty thoroughly, as is proved by the frequent calls for it at all soda fountains.

The quickness and thoroughness with which it brings refreshment has commended it particularly to those suffering most from midsummer heat.

F. M. RANDALL.

thoroughly, constantly seeking improvement and accepting it wherever it might be suggested. They now are confident that little can be done to produce a better flavor, that will make the soda fountain patron, once he has tasted the Randall unfermented grape juice, call for this as his favorite beverage.

APPRAISERS' DECISIONS.

Sesame Pulp Dutiable; Not Oil.

"So-called sesame oil, consisting of ground sesame seed or pulp from which the oil has not been extracted, being consumed and dealt in exclusively by Assyrians in the United States, and differing from the sesame oil known generally in trade, which is a refined product free of the seed or pulp, is not exempt from duty as sesame oil, under paragraph 626, tariff act of 1897. Assessment as an unenumerated manufactured article under section 6 of the act affirmed."

This decision was reached by the Board of General Appraisers, in the case of an importation at New York of sesame pulp, claimed to be sesame oil by the importer, F. Zaloom & Sons. Testimony developed that the merchandise was ground sesame seed, together with the oil, which is a natural extract therefrom. Witnesses for the importers clearly showed it was imported by them as sesame oil for the Assyrian trade in this country. Testimony in behalf of the government, however, showed that there is a refined sesame oil which is the same as this, with the exception that the ground seed or pulp has been removed. The opinion of the Board continued "It is clear from the evidence that the commodity involved in this case was known among Assyrians at the time of the passage of the act as sesame oil, but its consumption and dealings in it were apparently confined to that class of people. It is used principally as a food product, and while it might be termed sesame oil were it the only form in which sesame oil was imported, still we are of the opinion that in view of the fact, as established by the evidence, that the refined product is of more general use, is the only sesame oil known to the trade generally in this country, and unquestionably is a sesame oil as the term "oil" may be applied in its broadest significance, it is the product intended to be covered by the statute.

"The commercial designation which will control in the classification of the imported merchandise must be the result of established usage in commerce and trade, and such usage * * * must be definite, uniform, and general, and not partial, local, or personal." Proof that the article imported is known and dealt in as sesame oil among a comparatively small class of foreigners living in this country does not satisfy the requirements of this rule."

Two similar decisions on sesame pulp have previously been rendered by the Board.

Hexamethylentetramin Contains Alcohol.

Lehn & Fink imported at New York hexamethylentetramin which was assessed for duty as a medicinal preparation, in the preparation of which alcohol was used. The importers claimed it was a medicinal preparation in the preparation of which alcohol was not used. The decision of the Board continued:

"In Abstract 864, Abstract 1091 and Ab-

stract 1986 the Board held this article to be a medicinal preparation, in the preparation of which alcohol was used. In this case the importers have produced an affidavit in which the method of making the article is given, but it is not stated whether it is crystallized out of alcohol, but it is stated that no alcohol remains in the article, or words to that effect. As the case is presented we do not change our former finding, but hold that the article in question is a medicinal preparation in which alcohol is used in the crystallization thereof. See United States Dispensatory (p. 1823)."

Classifying Fireworks.

Moses Norris imported at Baltimore, merchandise invoiced as "brilliant star matches," "bengalen rot" matches, and "bengalen green" matches. They were classified as unenumerated manufactured articles under section 6, and were claimed by the importer to be dutiable as matches under paragraph 423. Certain "pelitots" were classified as firecrackers, but were claimed by the importer to be dutiable as unenumerated manufactured articles. The Board of General Appraisers found that "the articles described as matches are the size of the ordinary match of commerce, but when ignited differ from the match of commerce in that their sole function is to produce brilliant display of stars and other pyrotechnical effects. The samples show them to be identical with those which were the subject of Board's decision in Norris' case, there held to be dutiable under section 6, at 20 per cent. ad valorem, and the testimony presented in this case is not such as to make us doubt the correctness of that decision. The merchandise called pelitots is composed of a paper cylinder about four inches long, inclosing an explosive substance, and in circumference is the size of an ordinary lead pencil. It has a fuse at one end, and is to be held by the hand when in operation. The article does not meet the locographic definition for firecrackers, nor does it resemble the commercial article of that name, but it is similar to the merchandise which was the subject of Board's decision in Richard's case, and held to be dutiable as unenumerated manufactured articles at 20 per cent. ad valorem." The Board therefore overruled the protests on the matches, but sustained the importer in regard to the pelitots.

Scientific Apparatus Free.

The following articles, imported by Elmer & Amend, at New York, were held to be free of duty as scientific apparatus for educational institutions: Korke (corks), Drahtnetze (wire gauzes), magnets, Drahtdreiecke (wire triangles), Umdersätze (underplates), Gummertempel (rubber stamp), Schutzbrille (goggles), Schreibdiamant (writing diamond), mortars, test tubes, glass tubing, porcelain funnels, horn spatulas, porcelain measures, porcelain mortars, flasks, cylinders, funnels, separators, Stehkolben, Rundkolben.

Cotton Catheters.

Certain catheters, composed of cotton and gum, which were imported by Wagner Brothers & Co., at New York, were held to be dutiable as manufactures of cotton.

Surgical Needles.

O. G. Hempstead & Son applied for a review of a decision of the Board of General Appraisers, which had held that some surgical needles imported by them were not free of duty as hand sewing needles. When the case came up before the United States Circuit Court, eastern district of Pennsylvania, the proceeding was discontinued, on motion of the United States attorney in charge.

PROTESTS AND REAPPRAISEMENTS.

The Treasury Department has issued instructions concerning the forms to be observed by importers to obtain reappraisements. Heretofore protests and reappraisal applications have frequently been confused by importers, leaving the authorities uncertain as to what was really desired. All protests should point out the precise objection of the protestant and his reasons, citing the paragraph of the tariff law under which relief is claimed. Blanks for protests are not furnished by the department; importers should have their own forms printed. Blanks are furnished, however, for requests for reappraisements. The papers must be forwarded to the Board of General Appraisers.

J. ELLWOOD LEE CO.'S PRICE LIST.

A new catalogue and price list is being issued to the drug trade by the J. Ellwood Lee Co., manufacturing chemists, Conshohocken, Pa. Some of the lines manufactured by the concern are absorbent cotton dressings, medicinal and surgical plasters, ligatures, catheters, splints, suspensories, and other druggists' sundries. The make-up of the volume is attractive, one of the most noticeable and useful features being the indented marginal index. The pages are profusely illustrated with half tones and are decorated with an ornamental marginal red line. One of the new lines featured is the picric acid gauze, of which an explanatory note says: "This is a new product made by impregnating plain gauze with a special picric acid solution. Its preparation was suggested to us by Dr. A. F. Jonas, chief surgeon of the Union Pacific R. R. Co., for use as a dressing for burns. The gauze has simply to be laid on the wound and moistened with water." In November, 1903, the J. Ellwood Lee Company acquired the entire business of the E. C. Penfield Co., manufacturers of trusses, supporters, braces, etc., and now includes all the Penfield lines in its own catalogue. Very recently it has also bought out the Philadelphia Truss Company. The wholesale discount sheet for January lists the following discounts: Part 1, 20 per cent.; part 2, 25 per cent.; and part 3, 25 per cent.

AMER. PEROXIDE & CHEM. CO.

We desire to call the attention of our readers to the announcement of the American Peroxide & Chemical Co., of New York, which they will find in this issue of The Era. The superior line of goods now issued by this company and the liberality of their various propositions are sure to claim the careful attention and consideration of progressive pharmacists.

LICENSED DRUGGISTS IN PORTO RICO.

For the benefit of those firms who are interested in the trade of Porto Rico we print this official list of the licensed pharmacists in that island. The list supersedes the list in our Directory, as it is more recent and more complete.

WEST VIRGINIA

CHARLESTON.—E. J. Roth, now Roth Drug Co.
 WHEELING.—R. S. Waterman, now Waterman Drug Co.

WISCONSIN

CYLON.—John T. Elliott, out of business.
 LA CROSSE.—Jas. McCord Drug Co., and T. H. Spence Drug Co., Wb. Drugs, consolidated as The Spence-McCord Drug Co.
 MILWAUKEE.—M. E. Billings, bankrupt.
 MONDOVI.—Geo. A. Leutscher, out of business.
 RACINE.—Kradwell-Thiesen Drug Co., now Kradwell Drug Co.

BENOLGUR CAPSULES.

Oil of gurjun is an East India product and has been known to natives of that country for centuries as a specific in bladder and urethral inflammation. It has lately been recognized in America, and it is claimed thorough tests have been made which prove that gurjun oil, when properly extracted and combined, is the most efficient of all known medicaments in the treatment of genito-urinary disease.

Benolgur capsules, written sometimes "capsl. Benolgur Comp." or "Benz. C. C.," are made by the Benzol Capsule Co., 317 Delaware street, Kansas City, Mo. These capsules contain properly extracted oil of gurjun combined in a scientific manner with the active principles of gum benzoin, and the compound is encapsulated after a special process. Each Benolgur capsule contains ten minims of the medicine. The capsules are packaged in glass, each vial holding fifty. Physicians usually write for an original bottle, though many druggists have created a demand for the Benzol preparation because of the plainly written circular which accompanies each vial. Directions as to diet, etc., help along the curative work. These capsules can be purchased through any jobber or through the Benzol Capsule Co., 317 Delaware street, Kansas City, Mo.

ETHICAL ADVERTISING.

A Galesville, Wis., physician, barred by the ethics of his profession from advertising in the ordinary way, has inserted the following signed card in a local paper: "Look out for misleading advertisements from druggists in curing coughs and colds and, one of the greatest bluffs on earth, curing consumption. Don't lose your precious time; be examined by a qualified physician. Consumption is an infectious disease which shouldn't be treated by druggists and bottles! Those advertisements make more harm to the human race than if a patient with the plague had liberty to walk around the streets of Galesville."

Saffrol oil is 20 per cent. stronger than natural saffras oil. It is much in demand on account of the high prices now prevailing for the latter.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued February 7, 1905.

- 781,684—Adele R. Sherwood, St. Louis, Mo. Holder for bottles or the like.
- 781,689—George A. Stebbins, Watertown, N. Y. Apparatus for making bisulfite.
- 781,702—Jesse C. Waugh, Denver, Colo., assignor of one-half to Edwin T. Jones, Denver, Colo. Bottle.
- 781,733—John C. Mallonee, Charlotte, N. C. Process of obtaining spirits of turpentine from wood.
- 781,770—Annie J. Flaherty, South Boston, Mass., administratrix of John J. Flaherty, deceased, assignor to Louis A. Curtis, Roslindale, Mass. Device for washing bottles.
- 781,773—Thomas E. Goff, Monterey, Tenn. Bottle-neck cleaner.
- 781,785—Henry Robinson, Newark, N. J., assignor of one-half to Oscar Heyman, New York, N. Y. Corking-machine.
- 781,826—Henry W. Hemingway, Walthamstow, England. Process of making nitric acid.
- 781,839—Henry G. Miller, Cleveland, Ohio, assignor to The Loew Supply and Manufacturing Company, Cleveland, Ohio, a corporation of New Jersey. Bottle-receptacle for bottle washing machines.
- 782,016—Simon Fabaron, Paris, France, assignor to Pierre Leon Plof, Paris, France. Allyl-formaldehyde-sulfo-cyanate, and process of making same.
- 782,019—Charles Fay, Philadelphia, Pa. Bottle stopper.

MARKET REPORT

STEADY TONE.

Demand Continues Satisfactory Throughout.

NO EFFECTS YET ON JOBBING PRICES FOR BROMINE COMPOUNDS FROM THE ATTACK OF GERMAN SYNDICATE; FUTURE DEVELOPMENTS UNCERTAIN.—OPIUM HIGHER.—SOME UNIMPORTANT DECLINES.

New York, Feb. 13.—A real sensation has developed during the week in the sudden and unexpected attack of the German Bromine Syndicate on the price schedule of domestic manufacturers. A report of this movement was given in the news section of The Era, last week. Last Monday the Leopoldshall-Stassfurt Syndicate announced the appointment of the Roessler & Hasslacher Chemical Co. as their sole distributing agents for the United States and Canada for the syndicate's production of bromine and its salts. They also cut existing prices in half. At first domestic manufacturers refused to meet the German cut, claiming that the syndicate was unable to make prompt deliveries and probably could lay down nothing in this country for two or three weeks. Then it was rumored that the domestic interests were quietly meeting the cut, but this was publicly denied. Most recently it has been reported that bromide of potash has been sold by a domestic concern at the German figures. A great deal of business for future delivery has already been placed with the Roessler & Hasslacher Chemical Co. This concern is now, however, refusing to book any more orders, having handled all they wish for just now. Several of the large domestic manufacturers have met the cut and are openly selling legitimate quantities to regular customers at the reduction, not selling for speculation, however, but some of the largest interests are at the present writing still maintaining former prices. The movement has not as yet extended to jobbers. They are waiting to see what will happen and if prices will remain at the German schedule. Jobbing quotations have not therefore been changed a particle. Future developments will be watched with interest.

The general jobbing market is in good shape, under a satisfactory demand at steady prices. Some minor declines have been registered, but most drugs are firm on the basis of a real scarcity of supplies and the strength of foreign markets. Opium has again advanced.

OPIUM.—The market is very firm and higher. Advices of continued severe weather in the growing districts of Turkey continue, and it is reported that foreign interests have been buying heavily in Smyrna. In sympathy, the local jobbing prices have risen to \$3.15@3.25 for nine per cent., and \$3.25@3.35 for eleven per cent.; no change has been made in powdered prices of \$3.75@4.00 for thirteen per cent. and \$4.50@4.75 for sixteen per cent.

MORPHINE SULPHATE.—Strength is

everywhere manifested and the demand is fair, but no actual advance has yet been announced by jobbers, in spite of the strength of opium. A rise is expected, however, before long. Prices hold firm at \$2.60@2.70 for eighth, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The situation remains unchanged and may be characterized as quiet. Demand is not very active. The next Amsterdam bark auction will occur on February 23, and it is said that about 8,900 packages will then be offered for sale. Jobbing values are maintained unchanged as 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 25 oz. tins, 24@24½c. in 25 oz. tins, 25@25½c. in 15 or 10-oz. tins and 30@31½c. in ounce vials, according to brand and amount.

BROMIDE SALTS.—As stated above, the German syndicate has cut prices in half, and is now quoting bromide of potassium, 15c., a decline of 15c.; bromide of sodium, 17c., a decline of 18c.; bromide of ammonium, 22c., a decline of 18c. Domestic manufacturers officially maintain old values and control almost all supplies available here at present. Jobbers have made no changes at all.

COFAIBA.—Less demand and larger offerings cause a decline and jobbers are quoting Central American at 31@32c. per pound.

CAMP BARK.—Free offerings have been made and values have dropped all along the line, making jobbing prices 27@32c. per pound.

OIL CITRONELLA.—Foreign strength continues and local supplies are not plentiful. Jobbers have raised quotations to 54@55c. per pound.

MENTHOL.—The increased supplies, augmented as they have been recently by sizeable arrivals, cause a drop to \$3.40@3.65 per pound in jobbing figures.

CASCARA SAGRADA.—Demand has been slow for some time and consequently jobbing values have eased to 25@30c. for whole, 28@33c. for ground, and 50@55c. for powdered, all per pound.

GUARANA.—This commodity is now in better supply and jobbers are asking the lower figure of 70@80c. for whole per pound, and 80@90c. for powdered per pound.

SARSAPARILLA, MEXICAN.—Prices have firmed a trifle because of less selling pressure and more moderate stocks, and jobbers now quote, whole, 21@26c.; cut and crushed, 23@28c., and powdered, 26@31c., all per pound.

OIL ANISE.—Supplies are good, but demand is moderate. Jobbers have reduced prices to \$1.47@1.72 per pound.

SIMARUBA BARK.—Stocks have accumulated too much, and to move them jobbing values are down at 42@52c. for whole per pound, and 52@62c. for powdered per pound.

BAYBERRY WAX.—The scarcity which has prevailed for several months has created another upward movement, making jobbing prices 30@35c. per pound.

GALANGAL ROOT.—First hands have reduced values and jobbers have followed. Their present figures are, whole, 12@14c. and powdered, 16@18c. per pound.

SPIKENARD ROOT.—Poor demand makes lower prices. Jobbers quote crushed, 30@35c. per pound.

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put The Era on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list directory.

Carpate Salve Chemical Co., 195 Pearl St., New York City—Carpate Salve.

Larned & Barker, Syracuse, N. Y.—Hexamine Preps. & Pharmaceutical Specialties.

J. Elwood Lee Co., Coughsicken, Pa.—Surgical Dressings, Hospital Supplies, Trusses, etc.

SENNA ALEXANDRIA.—An increased demand has developed. Foreign markets are higher, so that it is likely that our market too, will advance, but no change has yet occurred.

YERBA SANTA.—Recent arrivals have increased the supply considerably, and the wholesale market has declined two cents, but jobbing prices remain unaltered.

CARNAUBA WAX.—The scarcity continues unabated and demand has been steadily growing. Foreign markets are strong. A number of slight advances have recently been registered in the wholesale market, and to balance these, jobbers have raised quotations to the following: No. 1, 42@46c.; No. 2, 39@43c.; No. 3, 35@39c. per pound.

MILLET SEED.—An advance of ¼c. has occurred in the wholesale market, but the movement has not been sufficient to change jobbing prices.

CHLOROFORM.—The market is unsettled, for manufacturers are competing and price shading is going on, but as no decided change has taken place, jobbers' quotations remain unaltered.

"KLENALI" OFFER.

To create a demand for an article that a few years ago seemed a luxury, the Standard Manufacturing Co., of Rochester, N. Y., makers of the nail clipper called "Klenali," are offering to the drug trade a guaranteed German silver pocket manicure set, consisting of a combination clipper, file and cleaner, to retail at twenty-five cents for the complete set.

Each dozen is mounted on a handsome stand, nickel-plated base, black enameled holder, and a very neat circular card holding the dozen Klenalis. This silent salesman, together with the merits of the device, make the article a ready seller.

The trade is requested to write for full particulars and prices.

STANDARD MANUFACTURING CO.,
Rochester, N. Y.

"This is for Tommy," said the mother of the irrepresible small boy, who had annoyed the doctor, as she passed over a prescription.

The druggist read: "Aluta, q. s.; apply P. r. h."

"I have razor strops," he finally announced.

EDITORIAL COMMENT

The Bromine War.

A sudden cut from thirty to fifteen cents on bromide of potassium, a product which has for years been subject to a powerful price regulating and steadying force, calls for an explanation other than that of the ordinary fluctuations of trade. The prices of bromine and its compounds would be very unlikely to decline to practically one-half the normal figures, as the result of the usual vicissitudes of supply and demand.

When the sensational reduction was announced the local trade lost no time in formulating a plausible explanation. The cut had all the appearance of a hostile act of commercial warfare. The makers of bromine in the two countries have had a sort of agreement as to the division of trade and the German manufacturers seem to have resorted to retaliation because of an invasion of their territory by the American product. The fact that the salts found their way to the German market indirectly does not seem to have mollified the makers of that country.

What the outcome will be remains to be seen. That the abnormally low prices can be maintained indefinitely seems highly improbable, for those who are familiar with the industry declare that the present quotations are below the cost of manufacture, marketing and transportation. Taking into consideration the fact that the salt beds of Michigan contain a larger proportion of bromine than any similar deposits yet discovered, and that the German product is subject to a duty of twenty-five per cent., it seems reasonable that the manufacturers of this country will have no difficulty in holding their own.

Individual Responsibility.

The question of adulteration and substitution has been discussed from many points of view in our columns of late; it remained for Professor Eberle to analyze the evil and discover the causes. He finds that the most potent influence to foster this obliquity in morals, which, by the way, does not

exhibit its most virulent form in the drug business, may be traced to our industrial development with its vast aggregations of capital and the resulting loss of individual responsibility.

Industrial progress, says our correspondent, has produced "a peculiar condition, the absorption of individuality." He refers to exemplary members of local society, loving husbands and fathers, kind and obliging friends, who in business, when entrusted with the property of others, become grasping tyrants, robbing the poor and oppressing the helpless. When laws are imperfect and almost universally disregarded, personal integrity is subjected to a pressure which it is too often unable to resist. It is so easy to accept that what many consider right cannot be wrong for another.

It appears to us that this picture is drawn in too sombre colors. Granted that the tendency which Mr. Eberle describes pervades the business world. Is it any worse than individual rapacity and blunted conscience? The public perception of right and wrong was never so keen as to-day, and although the ideal is still far away, is it any less likely to be attained in semi-public operations which are open to the scrutiny of thousands than in the dark corners of the small dealer's shop? The consensus of opinion gathered from many letters upon this subject seems to be that adulteration is not more prevalent than in years gone by. The public demands purer goods and better morals. The people are more enlightened and are more ready to detect a wrong than in other days. A wrong detected is half righted; a disease correctly diagnosed is in a fair way to be cured.

A Greater New York R. D. A.

The Greater New York Retail Druggists' Association was fairly launched under favorable auspices at the final meeting of the conference committee representing the pharmaceutical societies of the city last Friday. The new association, which in point of numbers will surpass most of the country's State organizations, will represent all the varied retail pharmaceutical interests in a commercial way, and will be a means of bringing together the scattered forces which have in the past exerted a very beneficial influence, but which have lost much efficiency by reason of incoherent action.

Probably few of those present at the conference realized the full meaning of the movement they were helping to start on its way. As a means of making effective the plans of the proprietors already committed to the price control doctrine, the newly-found body will, by adding a few cents to the price of a dozen articles, increase the income of the retail druggists by many thousand dollars. Merely as an aggregation of auxiliary associations, it will exert an overwhelming influence upon the future of the N. A. R. D. Once firmly established, it will by sheer force of numbers overbalance the voting power of several of the Western States combined, and because of the concentrated position of its members, interest in the work will never wane, as it is apt to do in sparsely settled districts.

Not the least important of the results of a firmly-united commercial organization in Greater New York will be the influence which local activity may be expected to exert upon the proprietors and jobbers who have hitherto regarded the efforts of the retailers to improve conditions as so much wasted energy. A united and persistent demand, when backed by definite action, will not be likely to fall upon deaf ears.

The N. A. R. D. has gained a firm foothold in New York. The complete occupation and setting in order may now be confidently expected.

New Reason for Joining N. A. R. D.

A druggist recently called our attention to an unappreciated force which is aiding in the organization of New York. At first we were inclined to be incredulous, but the logic was plain and conclusive. The newly discovered assistant of Mr. Doble and his lieutenants is no less a factor than the scarcity and high wages of good prescription clerks.

The circumstances as explained to us by our friend are as follows: The hire of competent clerks has increased the expenses of the professional side of pharmacy to such a degree that druggists feel that they must make some profit on proprietary medicines. Many have hitherto been inclined to ignore this part of the business which can be carried on with less costly service, but competition, with the resulting low margins, the greater outlay for rent and fittings, have led them to consider this despised portion of their armamentarium for relief. They are ready to welcome any plan which promises to increase their revenue without adding a corresponding outlay for expensive clerks.

It would be a curious and unforeseen development if the elevation of the educational standard of pharmacy were to drive the exponents of pro-

fessionalism already in the business into ultra-commercialism, and who shall say that there is not an element of probability in the suggestion? The scarcity of trained prescriptionists is a real condition, and it is likely to become more severe as the effects of the prerequisite law begin to be felt. At the last examination held by the eastern branch of the board, only seven-teen candidates presented themselves. Add to this the exorbitant rent which pharmacists are asked to pay for desirable stores, and it becomes more and more difficult for the scientific gentleman with the microscope and "made-in-Germany" apparatus to hold his own. Some time ago we referred to the rental of a store at the rate of \$1,000 a month. Now rumor has it that the owners of an exceptionally desirable building have had the temerity to demand something approaching the same sum per week!

Proprietors, Managers and Men.

From the conversation of two worried druggists—it will be found upon another page of this issue—it appears that the position of manager in a large store or chain of stores is an exceedingly difficult one to fill, both in a subjective and an objective sense. The manager must, in the nature of things, serve as a substitute for his employer, and must, therefore, be something more than a duplicate of his superior. Men possessing the requisite knowledge of detail, the judgment and the force, who are willing to surrender their freedom and their opportunities for the salary of a subordinate, are extremely rare.

The trouble with most proprietors is that they expect too much and trust too little. Being more or less doubtful of their own judgment, they are unwilling to place confidence in that of a subordinate whose experience has necessarily been somewhat different. The manager's judgment is warped by another factor, the idiosyncrasies of his employer, and a perfect working basis implies a knowledge of the employer's character and ideals, a bit of knowledge which the latter rarely possesses himself.

The ideal manager has never been found. He is probably hiding in the dim nowhere, comparing notes with the ideal employer and the ideal man.

Social Conscience.

President Pritchett, of the Massachusetts Institute of Technology, in an address in Boston recently, touched upon the same question which Professor Eberle in his letter this week brings to bear upon the impurity of drugs. He urges the necessity of "ethical education," the development of a social conscience to counteract

the loss of individual responsibility in large undertakings.

In our opinion the public is now receiving an "ethical education" such as no past generation has ever had. The newspapers and journals, imperfect and apparently devoid of moral tone as they are, are whetting the public conscience to such a keen edge that even the professional reformers are outdone. When in the country's history have our public men been held to such a strict accounting as to-day, and when before has the mere driving of a sharp bargain—the chief offense of the great corporations—been considered reprehensible?

The public conscience is aroused, and the world of business, finance and politics is hard pressed to live up to it.

Pharmacists in Great Britain.

We find in one of our British exchanges some interesting figures about pharmacy and pharmacists in the land across the sea which approaches most nearly our own in ideals and conditions of life. Registered pharmacists in 1904 numbered 15,743, four less than the year immediately preceding; of this number 13,619 were chemists and druggists, and 2,124 pharmaceutical chemists. Registration as pharmaceutical chemist, which requires a somewhat higher scientific training, seems to be less highly esteemed than formerly, for the figures show a steady although slight decline during the past five years.

The number of candidates presenting themselves for examination and registration during the year was smaller than any of recent years, 933 in England and Wales, as compared with 1,144 for the same territory in 1903. The percentage of rejections in England was 59.61, and in Scotland, 64.51.

It is said that one of the obstacles to the growth of American trade in China is the opium monopoly which has been held by Englishmen for many years. It has been estimated that one hundred and twenty millions of Chinese families have been pauperized by the opium curse, and the monopoly and its results are the greatest source of the widespread "anti-foreign feeling."

There are contracts and contracts. Some of the New York druggists who are still hesitating about the Peruna and Wells-Richardson contracts were the first to sign a gilt-gold brick scheme agreement a few weeks ago.

Deaths from disease in the Japanese army are said to be in proportion of one to sixty or seventy as compared with those lost from the same cause in wars of this and other nations supposed to enjoy the best of all that civilization offers.

OUR
LETTER BOX

THE ARKANSAS STANDARD.

Little Rock, Ark., February 8, 1905.

Editor The Pharmaceutical Era:

The Arkansas Board of Pharmacy has been keenly alive to the deficiencies in an ordinary English education, as shown by many presenting themselves for examination. At the November meeting the Board adopted the following rules to govern; the certificate named in the resolutions in all cases being required to accompany the application for registration and forms a part of it:

(1.) That hereafter no application for examination for registration by this Board, as registered pharmacist, will be entertained unless accompanied by a certificate from the county examiner of the county where the applicant resides, or by the principal of a graded high school in such county, that the said applicant has passed an examination before such examiner or principal, on spelling, grammar and arithmetic, such as would be equal to the examination on said branches for admission to a graded high school of this State.

(2.) Said examination, to be acceptable to this Board, shall consist of not less than twenty questions on each branch, and the ratings on the same shall not be less than 70 per cent. average.

(3.) Persons residing in other States, desiring registration in this State, must furnish satisfactory evidence of their proficiency in the English branches named, before some accredited examiner or Board where they reside.

(4.) This rule applies equally to applications for temporary certificates.

We hope to raise the standard by enforcing these rules. Truly yours,

J. W. BEIDELMAN.

PROFICIENT IN ARITHMETIC.

Atlanta, Ga., February 9, 1905.

Editor The Pharmaceutical Era:

The examinations of the Georgia State Board of Pharmacy usually contain several questions which require a knowledge of arithmetic. These are frequently based upon the conversion of ordinary weights and measures into the metric system and vice-versa, and we have questions involving the cost of compounding various formulas. Some of these require a pretty general knowledge of arithmetic.

We do not find candidates more likely to fail in answering these questions than in answering some others. However, we do find, in the subject of pharmaceutical chemistry, a peculiar deficiency among young men who have never attended a college of pharmacy, but who have simply stayed in a drug store for three years and are, therefore, entitled to appear before the State Board for examination. These young men are able to answer such theoretical questions as "What is an atom?" "What's a molecule?" etc., given in the average quiz compend, but they know little of the practical side of actual chemical reactions, like those involved in making various pharmaceutical preparations.

You ask what proportion of the average

candidates in Georgia would, in my opinion, have no difficulty in dividing a quarter of a grain into twenty-four doses and giving the amount of each dose. I think the average would be very near 100 per cent. It would certainly be ninety odd per cent. Of course, those who have had good school facilities answer such questions with much more certainty than those who have no such training.

I do not believe that there are many of the young men who go before the Boards anywhere in the country but who can intelligently divide one-fourth grain into twenty-four doses and give the answer correctly. The average education in mathematics of our American citizen is not so deficient as to cause many incorrect answers to such a question. The average American citizen is essentially a business man, and in my experience most of them understand mathematics fairly well, but as remarked above, the great lack of knowledge in practical chemistry among pharmacists who have grown up in a drug store is surprising. What I mean by practical chemistry is a knowledge of those things that are important for intelligent manufacturing or for doing the best dispensing.

I have received letters from pharmacists in many States and also from many public teachers, and am impressed with the fact that in much of the teaching of chemistry in the public schools there is not enough practical work combined with the theoretical teaching. Colleges of pharmacy, however, seem to realize the importance of teaching practical, as well as theoretical chemistry, and their students show the results of this training in their examinations. Very respectfully,

GEORGE F. PAYNE.

FRUIT SYRUPS.

McKeesport, Feb. 11, 1905.

Editor, The Pharmaceutical Era:

I am, in the main, much pleased with the interesting letter from Dr. Eccles, in the current issue of The Era, concerning "Fruit Syrups in Pennsylvania." The doctor shows, however, a lack of familiarity with the food laws of our State. Such a bill as he proposes would not survive five minutes after being born into the legislature, and the midwife, so to speak to carry out the metaphor, would be discredited in the profession. The use of preservatives of any kind, under the present laws, is sternly forbidden. Within the short life of the present session of the legislature, a new act has been submitted by Senator Brown, of Philadelphia, one of the attorneys for the Dairy and Food Department, that specifically mentions each and every substance by name that could be used as a preservative, and forbidding the same, saving and excepting benzoic acid and the benzoates, and then, as if to clinch the matter, there follows, "or any other substance deleterious to health."

It has been customary to make it incumbent upon the accused to prove that the substance found by the chemist in the sample procured by the department's agent was not deleterious to health. To do this necessitates expert testimony, the cost of which is so great that to pay the fine and costs (thus practically pleading guilty) is much cheaper and less annoying. Under these conditions the drug-

gists concluded that it would be wise to draft the bill we have submitted, and thus, if successful in getting it passed, have a standard fixed by law that will permit us to dispense soda water in peace, and not under constant fear of being suddenly summoned to "Walk up to the captain's office and settle."

Sodium benzoate is a perfect preservative of fruits and fruit syrups, in trifling quantities and its absolute safety is abundantly vouched for in opinions given our committee by such a physiological chemical expert as Dr. Victor C. Vaughan, and such well known professors of analytical chemistry and materia medica as Samuel P. Sadtler, Joseph P. Remington, H. V. Army and Julius A. Koch. I confess that I do not understand Dr. Eccles' charge that we "make a mistake when we try to legislate into existence a monopoly" and "it enables the manufacturers of sodium benzoate to raise the price as soon as the bill becomes a law." Reference to the U. S. Dispensary will show the good doctor that it is needless for him to worry, for we are therein told that "Sodium benzoate is easily made by adding benzoic acid to a concentrated hot solution of sodium carbonate."

We are happy to announce that our bill, unamended, passed the lower House, Wednesday, February 8th, by the remarkable vote of 178 ayes, 1 nay. I like this agitation because of the educational features. Faithfully yours,

B. E. PRITCHARD.

NAVAL HOSPITAL CORPS BILL.

Atlanta, Ga., February 9, 1905.

Editor The Pharmaceutical Era:

I will appreciate it very much if you will kindly publish the enclosed request to the pharmacists of the United States. I wish also to thank you for ever ready help in aiding our committee in its work.

To Each Individual Pharmacist of Our Country:

Dear Sir: I wish to urge you most strongly to immediately write a letter to your congressman and senators at Washington, and ask them to support the Naval Hospital Corps Bill, which is now before Congress (House bill No. 12646 and Senate bill 3984). A brief letter simply asking them to support the bill is all that is needed. It will only cost you six cents in stamps and a few minutes of time, as the wording of each letter can be the same. We trust that each pharmacist in the United States will consider this as a personal letter to himself, for the recognition of pharmacy in the proper manner by our government, not only means much for the general standing of our profession, but means much for the standing of every individual pharmacist throughout the country. Recognition by our government is the strongest public recognition we can get, as it is founded upon actual recognition of merit, and causes the public to realize in every community that the modern pharmacist is a man of attainment and ability. Your interest in this work is a duty to yourself and to your profession. The Bill simply gives to pharmacists all the rights of other warrant officers. We have already obtained the position of warrant officers for the pharmacists in the navy, but, since this was secured, certain recognition has been given to other war-

rant officers, such as boatswains, sail-makers and carpenters, in which pharmacists have not been included. This bill will accord to the pharmacists all the privileges of other warrant officers, both new and in the future. Your immediate action in this matter will be heartily appreciated. By prompt action on the part of us all, we will secure this fair and just legislation. Very respectfully,

GEORGE F. PAYNE,
Chairman Special Committee of the A.
Ph. A.

AN ERA OF PROGRESS.

Carroll, Ia., February 15, 1905.

Editor The Pharmaceutical Era:

We are of the opinion that the last five years has brought about more changes and as much progress in the drug business as the previous fifteen years, and the bill is not clashed. We are seemingly not many rounds up the ladder toward the height of our ambition—a successful professional and financial termination of our work as a retail druggist.

With the most of us the end is not in sight. We predict for the next half a decade many and rapid changes in events connected with the drug business. Why so? Why should things not run along in the same old way, in the same old rut? Not so! We are living in an age of shifting events—an era of progress—an N. A. R. D. era of organization and progress. Without organization we can never hope to successfully cope with the cut rate evil or the substitution and general sale of bogus chemicals. It seems to be true that some druggists in large cut rate cities have been found with unclean hands, but this does not demonstrate to our satisfaction that all druggists are substitutes, nor that they handle counterfeit trademarked and patented articles in the coal tar products.

If substitution is practised by druggists to the extent claimed by the sensational press, it is true of cut rate centres only. When a druggist is compelled to dispense drugs and medicines at less than living profits, it is but human nature for him to look around for some way to cheapen or reduce the cost of that article which he is compelled to sell at cut prices. This fact, however, does not excuse him in the least and the moral crime remains the same. We are positive that in towns of less than 5,000 inhabitants, where full prices or nearly full prices are obtained, this condition does not exist. Out of fifty stores visited, not more than two contained anything of a suspicious character, and in these two there were not more than two articles, and these the original purchase was not made by the owner of the store. Why is this difference in favor of the smaller town as against the cut rate centres? Because the druggist in the small town buys from reliable sources only, and his business being on a profitable basis, the moral is greater than the financial responsibility. Put the business of the city druggist on a living basis and you have removed 90 per cent. of the causes which lead the druggist to substitute and buy spurious drugs. We do not believe that very many of the counterfeit drugs captured in Chicago, even had they not been destroyed, would have ever found their way onto the shelves of legitimate druggists.

A visit to the drug rooms of dispensing physicians disclosed the fact that they, in many cases, were the easy victims of the peddlers of spurious drugs. Many dispensing physicians will not patronize a local druggist, but will buy their supplies at wholesale from catalogue and mail order houses. Many of them, therefore, have no reliable source of supply for their articles, and when a salesman for a pharmaceutical physician's supply house happens along with a grip full of coal tar products at reduced prices, they may relieve him of a few ounces without being too inquisitive as to the original source of supply. If the opportunity does not present itself in this manner, the physician may avail himself of some of the mail order houses which send out their price lists broadcast. Prices are quoted which allow you to make your own comparisons and you are also asked to note that all goods are genuine and on which the duty has been paid.

Some physicians tell us they cannot see any difference between these coal tar products and those bought from their local druggists, and they are much cheaper (cheapness seems to be the object sought after). Others pronounce the goods so obtained rank frauds when their attention is called to the matter. We deem it the moral duty of every retail druggist to see that none of this kind of stuff is marketed in his locality. Very truly yours,

E. B. TAINTER.

DIRECTORIES AND DRUG STORES.

Titusville, Pa., February 13, 1905.

Editor The Pharmaceutical Era:

I enclose a clipping from the "kickers column" of the Pittsburg Leader. It is to be hoped that the "kick" may come to the notice of the offending druggist and be the means of making him more obliging to the dear public.

J. E. PHILLIPS.

(Enclosure.)

Editor Kicker: There are a lot of small-caliber druggists in this town and Allegheny who ought to be kicked good and hard for keeping old directories on their counters. Last Friday I was over in Allegheny and dropped in a drug store to take a look at a directory. The proprietor smilingly told me it was on the showcase, and when I looked at it, saw it was of 1895 vintage. Now, Mr. Kicker, I am a peaceable man, and not given to cussing except on election day, when it may have good effect, but when I saw those figures 1-8-9-5 I boiled over. If druggists do not want people to look at their directories why in the name of common sense do they not say so, or stop insulting the public by placing old out-of-date books to look at? Some druggists keep their 1904 directory in a place where people can look at it, so why can't others do it? If they can't, there's no excuse for rubbing it in by putting out useless old trash.

ALLEGHENIAN.

SIMPLE QUESTIONS DO NOT HELP.

Columbus, February 16, 1905.

Editor The Pharmaceutical Era:

The examinations of this Board (Ohio) include questions involving percentage

solutions and the division of doses. An examiner is really surprised to note how many candidates fail to correctly answer simple questions involving only such calculations as may be readily made by mental process. This is the case with many candidates who surely know better, but who fail to apply their reasoning faculties to simple problems. Take for example a question asking how an alcohol of 30 per cent. of volume may be made from the alcohol of 94 per cent. by volume, and the majority of applicants will fail to answer the question correctly. We endeavor to make our questions involving arithmetic very simple indeed, and it is a question sometimes if the very simplicity of the question does not preclude the applicant from giving a correct answer, for the reason that I have found that nearly all applicants for examination are looking for trouble with great care. The majority of these men do not consider that a simple question is possible in an examination, and no matter how you may try to disabuse their minds of this prejudice, they persist in looking for complications in the most simple proposition.

It has been the purpose of the Ohio Board for several years to reduce its questions used in examinations to their simplest form, but this does not appear to help the applicants in any marked degree. Very truly yours,

W. R. OGDEN.

RHODE ISLAND EXPERIENCE.

Providence, R. I., February 13, 1905.

Editor The Pharmaceutical Era:

In relation to the subject of pharmaceutical mathematics, many of our questions do require a knowledge of arithmetic, including division of fractions, but the particular class of questions on which candidates fail has never been tabulated. We do not examine inexperienced boys directly from school, our law requiring that candidates for examination for registered assistant pharmacists shall have had three years' experience in a shop where physicians' prescriptions are compounded, or shall be graduates in pharmacy, and most of the colleges of pharmacy of which we have knowledge require practical experience preliminary to graduation. We do not know, either, whether our candidates are high school graduates or not.

Regretting that my information is of such a negative character, I remain, yours very truly,

HOWARD A. PEARCE,
Secretary and Registrar, Rhode Island
Board of Pharmacy.

MR. KUHN'S RETIREMENT.

Omaha, Neb., February 14, 1905.

Editor The Pharmaceutical Era:

Allow me to thank you for the good report of the dinner which was given to me upon my retirement from the drug business, by a number of former employes, now successfully running stores of their own. This shows that, while competition for business is unusually strenuous in Omaha, good fellowship is not lost, and I felt very much touched by this expression.

With thanks not only for the amount and character of the diet The Era has served, but also for the dessert, in shape of various personal notices, it has given to me, I am, yours very truly,

NORMAN A. KUHN.

SOME CAUSES AND EFFECTS.

BY E. G. EBERLE,
Dallas, Tex.

Every business is in a transitory stage; perhaps with ours it has been more in evidence for the last twenty-five years than in any other like period of time. The thoughts and labor of our antecedents find their culmination not always in the era of their abiding, but are transmitted to the generation following to be completed, modified or discarded, and they in turn leave some evidence of their efforts for those who succeed. Thus not only habits and customs become part and parcel of a people, but principles of business are engrained.

Every existing condition can be traced backward; our life is what we make it. Our government and our trades are the result of the combined efforts of those who are active to-day and of those who have lived. In our vocation we are actuated by our own views and dispositions, the influences of our patrons, and very considerably by the ideas and convictions of the medical profession and the forces of those who compel us to cry out their wares. Through a succession of years, little by little, at times, and more recently by leaps and bounds, the idea of the combination of enterprises has become deeply engrained. The results were predicted fifty years or more ago, but the trend was not diverted; the trusts we have with us. Quoting in part the Century Dictionary, a trust is an organization of several business enterprises under one direction—the object being to enable the trustees to elect directors in all of them, to control and suspend at pleasure the work of any, and thus to economize expenses, regulate production, and defeat competition—in brief, to hold the interests of each establishment subservient to a common authority, for the common interests of all.

It is not my purpose to dwell upon this subject more than to discuss a few points, viewing their harmful side, which may also be present with us, not perhaps identical, but partaking of a like nature. We are all acquainted directly or indirectly with members of such bodies, and among them are those whose good names as citizens, parents, brothers or sons, are above reproach, gentle, kind, charitable and sympathetic, yet the corporations of which they are members, may oppress the laborer, extort from the citizen, and impose upon the public by adulteration, misrepresentation, etc. A peculiar condition, due to the absorption of individuality, instilling individual disregard, is a lack of individual responsibility. The inventive mind has been stimulated by the remuneration a useful contrivance will bring, a discovery perhaps that after its perfection necessitates thousands of bread-winners to seek other employment. The times demand it; all are contributing to the progression, willingly or unwillingly, consciously or unconsciously.

Within the memory of our confederates drugs were bought by the retailer in a crude state, comminuted by the industrious apprentice, preparatory to being made up into the various preparations. Many druggists still living have labored long and diligently to extinguish the last globule of mercury visible in mercurial ointment;

the days came frequently for making the mass and rolling out compound cathartic pills, for making powders, suppositories, etc. True, the work seemed onerous, but encouragement was not long in coming. The miller can grind drugs with a great saving of time; the more popular formulas for pills can be put up much more quickly and the pills finished with an elegant coating, and those who manufacture for many can install machinery, which will make mercurial ointment more quickly and save much trouble. It is expensive and requires attention and interest to sell one's own preparation; there are those, too, who sell all the drug stores similar preparations to the kind you make, and to do so, advertise and reach the public everywhere; all you have to do is to buy, and when the customer comes in and asks for their goods, you swell up with dignity of your profession and simply hand out the medicine over the counter. The physician is imperturbed to try a special formula,

E. G. EBERLE.

the result of extensive study and investigation and to prevent anyone else from manufacturing the same preparation a copyrighted name is given to it. This method of nomenclature has another advantage. It requires only one line to write a prescription for the preparation, and still another advantage, the diseases for which the remedy is recommended are not so closely akin that the physician need fear his diagnosis or surmise, for if he makes a mistake he will find the ailment is noted in the accompanying literature. What a blessing such preparations are! "A Procter" would not have held the secret, but then, perhaps, no one else has the proper skill or knowledge to compound such a valuable prescription, and then too, it saves the pharmacist labor, for all he has to do is to remove the label, write the directions on his own label and wrap up the medicine; sometimes the manufacturer is still more accommodating and furnishes a direction label securely pasted on the bottle.

Competition is the life of trade. A druggist uses considerable quantities of a powdered drug; by investigation he will obtain a lower quotation than the price he paid before, and when he wants another lot, a salesman comes in with a bargain price. Now, the jobber must buy the

drug so he can sell it to the druggist at a profit, and sometimes powdered drugs sell for less than the whole; sometimes, too, pharmaceutical preparations, chemicals, etc., must be bought very low. Manufacturers other than the sole owner of the secret referred to, contrive to make similar preparations. The first price grasps with the quantity, and after competition comes into play, quantity cuts no figure, and the price goes down. The label being stereotyped, however, does not change. What a pity price-lists cannot always displace the pharmacopœia; it would save the feeling of responsibility and cause less trouble.

By the influences of our patrons is meant the necessity of complying with their wants, which include items of necessity, habit, luxury and those which satisfy the frailties of human nature. In considering the ideas and convictions of the medical profession, ideas are placed first because they lead to overstocking with a variety of specialties, for you must not substitute, even if the formulas are identical, and you double meaning is here expressed, for the writer believes that if the physician prescribes an acetanilid compound tablet, blue, a white one should not be dispensed. Nevertheless, it remains a fact that a temptation to substitute is offered by imposing on the druggist a necessity for keeping in stock an unwarranted variety of preparations, the variety being in the names, color and flavor of these preparations. I call these ideas of the medical profession because to-morrow some manufacturer's representative will come in and cause the physician to write for a sky-blue tablet instead of a blue one, and woe unto the druggist who is color blind. Regarding the convictions of the medical profession, I can only repeat that they aid in shaping our profession.

Anyone has the privilege, I suppose, to place on the market a boon for suffering humanity, to report that it is the formula of a missionary who abstracted his drugs from the materia medica of heathen lands or that he makes his preparation from a modest flower growing sparsely in secluded spots of the swamps of Florida, but if the charity of heart of these individuals is so unbounded, should these valuable drugs not be added to our official list and the best method of making a reliable preparation from them be included in the pharmacopœia? If perchance the discovery is made that, after all, these drugs can be obtained in the open market, the manufacturer simply having been mistaken in their habitat and identity, how our hearts should swell with pride to see that no one is imposed upon with a substitute.

The origin of prices not in conformity with material varies; the miller may want the patronage of a large consumer or jobber, the jobber that of the retailer, and the latter may want prices so that he may make a greater margin of profit. Prices thus frequently become established on an arbitrary basis, or on the fact that colored cracker dust is cheaper than cayenne pepper, or that inert drugs are a loss if they are not sold. I will not refer to pills and tablets, and enough has been said of specialties. You have perhaps been quoted prices on morphine tablets, and were surprised to learn that morphine in bulk costs as much or more, and a like surprise came to you when prices were offered on

elixirs that otherwise you would have made.

Is not personal responsibility shaded down to imperceptibility at times? The conditions I have named are true, although they are not general. From the window of some of the schools where the science and art of pharmacy are taught and studied with an unquestionable sincerity, smoke can be seen arising that speaks of propelled machinery grinding coccoanut shells, etc. The miller cannot run his plant without remuneration, and still all down the line to the consumer comes the call for a shading of prices. The same is true with manufactured goods, in making resins, for instance, the more aqueous the menstruum the larger the yield of the product, or if an elixir is desired at a lower price, it still is such if the amount of active ingredient has been reduced to conform to the desired price.

I really believe the extent of substitution is largely overstated; in many instances the claim is an advertising dodge of the manufacturer. Of course, the manufacturer who happens to make a preparation bearing the same name as that made by another manufacturer or of one the druggist makes himself, will find that the druggist prefers to dispense his own instead of their preparation, but that is not substitution, notwithstanding that some manufacturers may advertise or insist that "when the physician prescribes so and so, he wants ours, because we advertise in the medical journals, because we are the originators."

With regard to the sophistication of imported chemicals and the like that sell at home for one-tenth of what they make us pay here for them, I have no direct knowledge, and cannot speak authoritatively. I do not believe in substitution; adulteration is substitution or worse.

Commercialism is at the bottom of most of the substitution practiced. Many individuals are attracted to the ranks of pharmacy by seeming large profits; their interest is therefore only pecuniary, and until the profession is made more exclusive, those who are forced out of other lines, due to machinery displacing the laborer, etc., will have to seek other fields of employment, and it is unreasonable to assume that none will enter our ranks. I believe the day is coming, although distant, when the professional pharmacist will not be classed with the ordinary dealer in drugs. Of the former, the law will exact not only educational, but also moral qualifications, and boards of pharmacy will be charged with investigating just such conditions as those which surround the druggist to-day. Laws regulating the sale of pure foods and drugs should not become acts creating a system of legal blackmail against the merchant and providing lucrative positions for a few.

In this day of combination of forces, every retail druggist should recognize that it is his duty to be not only a member of the N. A. R. D., but to take an active interest in its work; if he as an individual does not need such aid, then he should join anyway as payment of a debt he owes to those who will follow his vocation, and to the profession he is a member of. The success accomplished thus far by the association, through the management of its affairs, is worthy of the highest commendation. Seldom have a body of

business men been charged with more difficult problems, and obtained more telling results. The conditions which would have existed ere now without such an organization can only be surmised, but no one, after due reflection, will say that they would be so satisfactory as they are to-day.

I hope I may not be considered presuming in making a few remarks touching upon two points that may be relevant. In order to be most effective in the work, should the N. A. R. D. not seek to become entirely independent of outside financial assistance? The association has it in its power to bring to itself the manufacturer, a power the members are beginning to realize. It is to the interest of the manufacturer from financial considerations, if none other, to act in harmonious conjunction with the N. A. R. D., for he obtains at once a valuable advertisement. The reformation of the drug trade is in the hands of the retailer, let him insist on the purity and quality of the goods he purchases rather than on attempting to get an unreasonably low price; let him regain his individuality, let his calls be for more and more of the preparations of the pharmacopœia, and with the motto "We give you the best" inscribed on his insignia, let him become an observing, energetic enthusiast in his honorable profession.

Some British Sheep-Dips.

In England the Board of Agriculture and Fisheries are required to pass upon the formulas employed by manufacturers of sheep-dips. From a recent issue of the *Chemist and Druggist* we take the following three formulas which have been approved by the Board after experimental trials:

Lime and Sulphur.

Mix 25 pounds of flowers of sulphur with 12½ pounds of good quicklime. Triturate the mixture with water until a smooth cream without lumps is obtained. Transfer this to a boiler capable of boiling 20 gallons, bring the volume of the cream to 20 gallons by addition of water, boil and stir during half an hour. The liquid should now be of a dark red color; if yellowish, continue the boiling until the dark red color is obtained, keeping the volume at 20 gallons. After the liquid has cooled, decant it from any small quantity of insoluble residue, and make up the volume to 100 gallons with water.

Carbolic Acid and Soft Soap.

Dissolve 5 pounds of good soft soap, with gentle warming, in 3 quarts of liquid carbolic acid (containing not less than 5 per cent. of real tar acid). Mix the liquid with enough water to make 100 gallons.

Tobacco and Sulphur.

Steep 35 pounds of finely ground tobacco (offal tobacco) in 21 gallons of water for four days. Strain off the liquid, and remove the last portions of the extract by pressing the residual tobacco. Mix the whole extract, and to it add 10 pounds of flowers of sulphur. Stir the mixture well to secure an even admixture, and make up the total bulk to 100 gallons with water.

Note.—The period of immersion in these dips should not be less than half a minute.

About 6,000 kilos of oil of rose have been distilled this season.

PRESENT DAY QUESTIONS.*

BY PROF. C. H. DAGGETT, P.H.C.,
Providence, R. I.

The foundation of any profession is education. A man cannot get along without it. He may have much or he may have little of it, but he has at least some. He is educated to do certain things, and no matter how long he lives he can never complete his education. Young men entering the profession of pharmacy as a rule do not realize the amount of education required to make them proficient. They seem to think that by washing bottles and running errands for a year or two they have during their spare moments but to learn the names on shelf bottles and drawers, and watch the clerk compound prescriptions for a time, and they will then be ready for any kind of work. In many cases the proprietor is more at fault than the clerk in offering him too much encouragement.

A young man should be assisted over ground which he finds very difficult. He should be induced to study during his spare moments and to be made to feel that he is at liberty to ask questions about things which he does not understand. His course of study in the store should be selected and arranged by his employer, and unless he commences with the fundamental principles, his study is useless. Theory and practice go hand in hand.

A young man should be allowed, when not otherwise occupied, to watch the compounding of prescriptions, but he should not assist in the work until he has obtained a general knowledge of doses, incompatibilities, etc., of organic and inorganic substances. The average pharmacist expects too much of a young man with a limited experience, and it is a great mistake.

After spending at least two years' time under a registered pharmacist, the young man should be advised to attend a college of pharmacy. Many pharmacists discourage their clerks in an effort to obtain a college education, saying that it is unnecessary to spend the time and money required. This is a great mistake, and the same pharmacists desiring a competent clerk would give the college graduate the preference. They want someone to educate the young man, so that they may get the benefit of his education.

Many pharmacists make the mistake of not having in their employ clerks who can compound physicians' prescriptions satisfactorily, and this is one of the reasons why so many physicians are dispensing. It is also the reason why many physicians recommend their patients to take prescriptions to a particular pharmacy to be compounded. A pharmacist cannot be too careful in the selection of his clerks, for he should realize that oftentimes human life is at stake. The proprietor may not be legally liable for error, yet he is morally so.

In order to obtain the services of competent clerks, one must be willing to pay for what such services are worth. Few firstclass clerks are obtainable because there is so little incentive to spend time and money to obtain an education for a profession in which there is a greater responsibility for a smaller remuneration.

*Portion of a paper read before the Rhode Island Pharmaceutical Association.

than is to be found in other calling. It is as necessary to have first-quality clerks as it is to have first-quality drugs and chemicals. The services of the best clerks may be the means of assisting one in building up a large and profitable business. Of course, if you want a clerk simply to sell soda water and cigars, as many do, you can get anyone to do that, but I do not consider such men pharmacists. They may have passed the board examination and have certificates, but they cannot be considered pharmacists in any sense of the word.

The law requires that a person before applying for registration, shall have had at least three years' practical experience in a store where physicians' prescriptions are compounded, but the law does not state what the practical experience shall consist of. Washing bottles, running errands, and selling soda water and cigars is practical experience in a particular line of work, but it is not of the kind necessary to pass a board of pharmacy examination. The law is weak in this requirement, and this weakness is one of the principal reasons for so many poor clerks.

It is not within the power of the board of pharmacy, under the law, to state what practical experience shall consist of. I believe that the law should require a person to serve at least five years as a registered assistant pharmacist before he may be allowed to become a registered pharmacist and consequently a proprietor. If the condition of the pharmacist is to be bettered and the profession elevated, the restrictions for entering it must be severe. If a law requiring five years' experience were to be passed, as I have suggested, you would have a very different class of men than you now have in the profession, and fewer of them.

In order to keep in touch with the physician, you should call upon him frequently, invite him to inspect your place of business, and note your methods and facilities for dispensing his prescriptions. You can obtain suggestions from him and in return he will be pleased to accept suggestions from you if you make them in the proper spirit. Physicians as a rule have a limited knowledge of pharmacy and are always willing to obtain a pharmacist's ideas.

Without casting any reflection upon the present members of the board of pharmacy, I desire to say that the present method of appointing such a board is entirely wrong. When you allow politics to enter into the appointment of examining boards, you lay yourselves liable to the possibility of obtaining incompetent men on those boards. The governor can appoint whom he pleases, so long as those he appoints are registered pharmacists. In years past some governors have made very poor selections. If you have an incompetent board you must expect incompetent pharmacists. A law should be passed compelling the governor to make these appointments from a list of registered pharmacists of at least ten years' experience, submitted by the State Association, which is in a better position to select suitable persons for the position than any governor. The confirmation of appointments by the Senate should also be abolished, or else you will get back again into politics. A governor may appoint suitable members and if they happen to have any enemy in the Senate, the con-

firmation may be refused and the Senate will then appoint its political adherents.

Commercially, your business may be improved by the regulation of prices and the better serving of the public by the establishing of a system of agencies of manufactured products, the number of distributors being limited with restrictions as to purchase and sales, a fixed relationship between manufacturer, jobber and retailer, a greater degree of activity on the part of the retailer, and the application of modern business methods.

Syrup of Calcium Lactophosphate.*

BY FRANCIS HEMM,
St. Louis.

It is a well-known fact that the United State Pharmacopoeia syrup of calcium lactophosphate darkens by age and is likewise liable to precipitate or ferment (especially in warm climate or summer weather), and therefore if a method can be proposed to prepare this syrup quickly if the demand is limited, it strikes the author as being a welcome and profitable suggestion. Welcome because the dispenser can enjoy the satisfaction of sending out a perfectly fresh and pleasant preparation and profitable because he loses no stock by the change caused by age. Proposed method:

Precipitated calcium carbonate	2.5 grams
Lactic acid	6 cc.
Phosphoric acid	3.6 cc.
Orange flower water	2.5 cc.
Syrup, extra heavy, sufficient quantity.	
Distilled water	20 cc.

Mix the acids with the distilled water and orange flower water in a porcelain mortar (or glass mortar), add the calcium carbonate and triturate until completely dissolved and effervescence ceases, filter or strain through cotton about 67 cc.; add sufficient syrup to make 100 cc. Strain or filter as time allows.

Testing Commercial Iodine.

Tatlock and Thompson, in a paper read before the Scottish Section of the Society of Chemical Industry, suggest a method for the determination of bromine and chlorine in commercial iodine (Ch. & Dr.). The method suggested depends on the application of known reactions, the great advantage of operating on large quantities (from 5 to 10 grams of the sample) being claimed for the method. The iodine bromine and chlorine are first converted into the zinc compounds by agitation with zinc and water, the iodine is then liberated by addition of sulphuric acid and potassium nitrite, filtered to remove the great bulk of the iodine thus precipitated, and the solution treated with benzene or other solvent to remove the rest of the iodine. The bromine is next precipitated in the solution by silver nitrate in an ammoniacal solution, and finally the chlorine, by acidifying the filtrate with nitric acid.

*Read before the Missouri Pharmaceutical Association.

STANDARDS OF PURITY.*

The following food standards form a part of the supplemental proclamation just issued by the Secretary of Agriculture in accordance with the act of Congress, approved June 3, 1902. The standards are expressed in the form of definitions, with or without accompanying specifications in composition.

HONEY.

1. Honey is the nectar and saccharine exudations of plants gathered, modified and stored in the comb by honey bees (*Apis mellifica*). It is laevo-rotatory, contains not more than twenty-five per cent. of water, not more than twenty-five hundredths per cent. of ash, and not more than eight per cent. of sucrose.

2. Comb honey is honey contained in the cells of comb.

3. Extracted honey is honey which has been separated from the uncrushed comb by centrifugal force or gravity.

4. Strained honey is honey removed from the crushed comb by straining or other means.

SPICES.

1. Spices are aromatic vegetable substances used for the seasoning of food and from which no portion of any volatile oil or other flavoring principle has been removed and which are sound and true to name.

2. Allspice or pimento is the dried fruit of *Pimenta pimenta* (L.) Karst. and contains not less than eight per cent. of quercittanic acid; not more than six per cent. of total ash; not more than five-tenths per cent. of ash insoluble in hydrochloric acid, and not more than twenty-five per cent. of crude fiber.

3. Anise is the fruit *Pimpinella anisum* L.

4. Bay leaf is the dried leaf of *Laurus nobilis* L.

5. Capers are the flower buds of *Capparis spinosa* L.

6. Caraway is the fruit of *Carum carvi* L.

CAYENNE AND RED PEPPERS.

7. Red pepper is the red, dried ripe fruit of any species of capsicum.

8. Cayenne pepper of cayenne, is the dried ripe fruit of capsicum frutescens L., capsicum baccatum L., or some other small-fruited species of capsicum, and contains not less than fifteen per cent. of nonvolatile ether extract; not more than six and five-tenths per cent. of total ash; not more than five-tenths per cent. of ash insoluble in hydrochloric acid, not more than one and five-tenths per cent. of starch, and not more than twenty-eight per cent. of crude fiber.

9. Celery seed is the dried fruit of *Apium graveolens* L.

10. Cinnamon is the dried bark of any species of the genus *Cinnamomum* from which the outer layers may or may not have been removed.

11. True cinnamon is the dried inner bark of *Cinnamomum zeylanicum* Breyne.

12. Cassia is the dried bark of various species of *Cinnamomum*, other than *Cinnamomum zeylanicum*, from which the outer layers may or may not have been removed.

13. Cassia buds are the dried immature fruit of species of *Cinnamomum*.

14. Ground cinnamon or ground cassia

*Circular No. 13, U. S. Department of Agriculture.

is a powder consisting of cinnamon, cassia, or cassia buds, or a mixture of these spices, and contains not more than eight per cent. of total ash and not more than two per cent. of sand.

15. Cloves are the dried flower buds of *caryophyllus aromaticus* L. which contain not more than five per cent. of clove stems; not less than ten per cent. of volatile ether extract; not less than twelve per cent. of quercitanic acid; not more than eight per cent. of total ash; not more than five-tenths per cent. of ash insoluble in hydrochloric acid, and not more than ten per cent. of crude fiber.

16. Coriander is the dried fruit of *coriandrum sativum* L.

17. Cumin seed is the fruit of *cuminum cyminum* L.

18. Dill seed is the fruit of *anethum graveolens* L.

19. Fennel is the fruit of *faeniculum faeniculum* (L.) Karst.

20. Ginger is the washed and dried or decorticated and dried rhizome of *Zinziber zingiber* (L.) Karst., and contains not less than forty-two per cent. of starch, not more than eight per cent. of crude fiber, not more than eight per cent. of total ash, not more than one per cent. of lime, and not more than three per cent. of ash insoluble in hydrochloric acid.

21. Lined or bleached ginger is whole ginger coated with carbonate of lime and contains not more than ten per cent. of ash, not more than four per cent. of carbonate of lime, and conforms in other respects to the standard for ginger.

22. Horse-radish is the root of *roripa armoracia* (L.) Hitchcock, either by itself or ground and mixed with vinegar.

23. Mace is the dried arillus of *myristica fragrans* Houttuy and contains not less than twenty nor more than thirty per cent. of nonvolatile ether extract, not more than three per cent. of total ash, not more than five-tenths per cent. of ash insoluble in hydrochloric acid, and not more than ten per cent. of crude fiber.

24. Macassar or Papua mace is the dried arillus of *myristica argentea* Warb.

25. Bombay mace is the dried arillus of *myristica malabarica* Lamarck.

26. Marjoram is the leaf, flower and branch of *majorana majorana* (L.) Karst.

27. Mustard seed is the seed of *Sinapis alba* L. (white mustard), *brassica nigra* (L.) Koch (black mustard), or *brassica juncea* (L.) Cosson (black or brown mustard).

28. Ground mustard is a powder made from mustard seed, with or without the removal of the hulls and a portion of the fixed oil, and contains not more than two and five-tenths per cent. of starch and not more than eight per cent. of total ash.

29. Nutmeg is the dried seed of *myristica fragrans* Houttuy deprived of its testa, with or without a thin coating of lime, and contains not less than twenty-five per cent. of nonvolatile ether extract, not more than five per cent. of total ash, not more than five-tenths per cent. of ash insoluble in hydrochloric acid, and not more than ten per cent. of crude fiber.

30. Macassar, Papua, male, or long nutmeg, is the dried seed of *myristica argentea* Warb, deprived of its testa.

31. Paprika is the dried ripe fruit of *capsicum annum* L., or some other large-fruited species of *capsicum*.

PEPPER.

32. Black pepper is the dried immature berry of *piper nigrum* L. and contains not less than six per cent. of nonvolatile ether extract, not less than twenty-five per cent. of starch, not more than seven per cent. of total ash, not more than two per cent. of ash insoluble in hydrochloric acid, and not more than fifteen per cent. of crude fiber. One hundred parts of the nonvolatile ether extract contain not less than three and one-quarter parts of nitrogen. Ground black pepper is the product made by grinding the entire berry and contains the several parts of the berry in their normal proportions.

33. Long pepper is the dried fruit of *piper longum* L.

34. White pepper is the dried mature berry of *piper nigrum* L. from which the outer coating or the outer and inner coatings have been removed and contains not less than six per cent. of nonvolatile ether extract, not less than fifty per cent. of starch, not more than four per cent. of total ash, not more than five-tenths per cent. of ash, insoluble in hydrochloric acid, and not more than five per cent. of crude fiber. One hundred parts of the nonvolatile ether extract contain not less than four parts of nitrogen.

35. Saffron is the dried stigma of *crocus sativus* L.

36. Sage is the leaf of *Salvia officinalis* L.

37. Savory, or summer savory, is the leaf, blossom and branch of *satureja hortensis* L.

COCOA AND COCOA PRODUCTS.

1. Cocoa beans are the seeds of the cacao tree, *Theobroma cacao* L.

2. Cocoa nibs, or cracked cocoa, is the roasted, broken cocoa bean freed from its shell or husk.

3. Chocolate, plain or bitter, or chocolate liquor, is the solid or plastic mass obtained by grinding cocoa nibs without the removal of fat or other constituents except in the germ, and contains not more than three per cent. of ash insoluble in water, three and fifty-hundredths per cent. of crude fiber, and nine per cent. of starch, and not less than forty-five per cent. of cocoa fat.

4. Sweet chocolate and chocolate coatings are plain chocolate mixed with sugar (glucose), with or without the addition of cocoa butter, spices, or other flavoring materials, and contain in the sugar-and-fat-free residue no higher percentage of either ash, fiber or starch than is found in the sugar-and-fat-free residue of plain chocolate.

5. Cocoa or powdered cocoa is cocoa nibs, with or without the germ, deprived of a portion of its fat and finely pulverized, and contains percentages of ash, crude fiber and starch corresponding to those in chocolate after correction for fat removed.

6. Sweet, or sweetened cocoa, is cocoa mixed with sugar (sucrose), and contains not more than sixty per cent. of sugar (sucrose), and in the sugar-and-fat-free residue no higher percentage of either ash, crude fiber or starch than is found in the sugar-and-fat-free residue of plain chocolate.

1. Wine is the product made by the normal alcoholic fermentation of the juice of sound, ripe grapes, and the usual cellar treatment, and contains not less than

seven nor more than sixteen per cent. of alcohol, by volume, and in one hundred cubic centimeters, not more than one-tenth gram of sodium chlorid nor more than two-tenths gram of potassium sulphate, and for red wine not more than twelve-hundredths gram of volatile acid derived from fermentation and calculated as acetic acid. Red wine is wine containing the red coloring matter of the skins of grapes. White wine is wine made from white grapes or the expressed fresh juice of other grapes.

2. Dry wine is wine in which the fermentation of the sugars is practically complete and which contains, in one hundred cubic centimeters, less than one gram of sugars, and for dry red wine not less than sixteen-hundredths gram of grape solids, and for dry white wine not less than thirteen-hundredths gram of grape ash and not less than one and four-tenths grams of grape solids.

3. Fortified dry wine is dry wine to which brandy has been added, but which conforms in all other particulars to the standard of dry wine.

4. Sweet wine is wine in which the alcoholic fermentation has been arrested, and which contains, in one hundred cubic centimeters, not less than one gram of grape ash, and for sweet white wine not less than thirteen-hundredths gram of grape ash.

5. Fortified sweet wine is sweet wine to which wine spirits have been added. By act of Congress, "sweet wine" used for making fortified sweet wine, and "wine spirits" used for such fortification are defined as follows (Sec. 43, act of October 1, 1890, 26 Stat., 567, as amended by section 68, act of August 28, 1894, 28 Stat. 509): That the wine spirits mentioned in section forty-two of this act is the product resulting from the distillation of fermented grape juice, and shall be held to include the product commonly known as grape brandy; and the pure sweet wine, which may be fortified free of tax, as provided in said section, is fermented grape juice only, and shall contain no other substance of any kind whatever introduced before, at the time of, or after fermentation, and such sweet wine shall contain not less than four per centum of saccharine matter, which saccharine strength may be determined by testing with Balling's saccharometer or must scale, such sweet wine, after the evaporation of the spirit contained therein and restoring the sample tested to original volume by addition of water: provided, that the addition of pure boiled or condensed grape must, or pure crystallized cane or beet sugar to the pure grape juice aforesaid, or the fermented produce of such grape juice prior to the fortification provided for by this act, for the sole purpose of perfecting sweet wines according to commercial standard, shall not be excluded by the definition of pure, sweet wine aforesaid. Provided further, that the cane or beet sugar so used shall be in excess of ten per cent. of the weight of wines to be fortified under this act.

6. Sparkling wine is wine in which the after part of the fermentation is completed in the bottle, the sediment being disgorged and its place supplied by wine or sugar liquor and which contains, in one hundred cubic centimeters, not less than twelve-hundredths gram of grape ash.

7. Sugar wine is the product made by the addition of sugar to the juice of sound,

ripe grapes and subsequent alcoholic fermentation with the usual cellar treatment.

8. Raisin wine is the product made by the alcoholic fermentation of an infusion of dried or evaporated grapes, or of a mixture of such infusion or raisins with grape juice.

VINEGAR.

1. Vinegar, cider vinegar, or apple vinegar, is the product made by the alcoholic and subsequent acetous fermentations of the juice of the apple, is laevo-rotatory, and contains not less than four grams of acetic acid, not less than one and six-tenths grams of apple solids, and not less than twenty-five-hundredths gram of apple ash in one hundred cubic centimeters. The water-soluble ash from one hundred cubic centimeters of the vinegar requires not less than thirty cubic centimeters of decinormal acid to neutralize the acidity and contains not less than ten milligrams of phosphoric acid. (P_2O_5)

2. Wine vinegar, or grape vinegar, is the product made by the alcoholic and subsequent acetous fermentation of the juice of grapes, and contains, in one hundred cubic centimeters, not less than four grams of acetic acid, not less than one and four-tenths grams of grape solids, and not less than thirteen-hundredths gram of grape ash.

3. Malt vinegar is the product made by the alcoholic and subsequent acetous fermentations, without distillation, of an infusion of barley malt or cereals whose starch has been converted by malt, and is dextro-rotatory and contains, in one hundred cubic centimeters, not less than four grams of acetic acid, not less than two grams of solids, and not less than two-tenths gram of ash. The water-soluble ash from one hundred cubic centimeters of the vinegar requires not less than four cubic centimeters of decinormal acid to neutralize its alkalinity and contains not less than nine milligrams of phosphoric acid (P_2O_5).

4. Sugar vinegar is the product made by the alcoholic and subsequent acetous fermentations of solutions of starch sugar, molasses, or refiners' syrup, and contains, in one hundred cubic centimeters, not less than four grams of acetic acid.

5. Glucose vinegar is the product made by the alcoholic and subsequent acetous fermentations of solutions of starch sugar, glucose, or glucose syrup, is dextro-rotatory, and contains, in one hundred cubic centimeters, not less than four grams of acetic acid.

6. Spirit vinegar, distilled vinegar, grain vinegar is the product made by the acetous fermentation of dilute distilled alcohol and contains, in one hundred cubic centimeters, not less than four grams of acetic acid.

Reaction for Formic Acid.

A new reaction for formic acid is suggested by Comanducci, who makes use of the characteristic yellow color the acid affords with sodium bisulphite. The reaction consists in diluting 2.5 cc. of the liquid to be tested (formaldehyde, glycerin, methyl alcohol, acetic acid, etc.) with an equal volume of water, adding 15 drops of a concentrated solution of sodium bisulphite solution (5 grams in 5 cc. water), shaking, and warming slightly. If formic acid is present, a yellowish red color develops.—Pharm. Zeit.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Rose Tooth Paste.

(F. R. T.)—Your request for a formula for a toothpaste which contains no glycerin is somewhat different than the requests usually made; most operators prefer glycerin as an excipient, for it does not ferment like honey or syrup. However, here are the formulas:

(1.)

Fine powdered pumice stone, 2 ounces; powdered orris root, 2 ounces; powdered myrrh, $\frac{1}{2}$ ounce; honey, 4 ounces; sufficient liquid cochineal to color; oil of cloves, $\frac{1}{2}$ dram; spirit of lemon, $\frac{1}{2}$ drams; oil of rose, 8 drops.

(2.)

Red Rose Tooth Paste.—Prepared chalk, 4 ounces; heavy carbonate of magnesium, 4 ounces; powdered orris root, 4 ounces; powdered pumice stone, 4 ounces; powdered cuttlefish bone, 4 ounces; honey, 8 ounces; simple syrup, 2 ounces; rose water, 8 ounces; carmine, 2 drams; ammonia water, $\frac{1}{2}$ ounce. Rub the carmine and ammonia water together in a mortar, then add the liquids in the order given and finally the powders; perfume with attar of rose, 1 dram, and oil of rose geranium, $\frac{1}{2}$ dram. The pumice stone may be omitted and replaced by precipitated chalk.

In the following formula glycerin is employed, but the paste is said by a writer in the Western Druggist to be adapted for filling collapsible tubes:

Water 4 ounces
Gelatin 120 grains
Glycerin 7 ounces

Dissolve the gelatin in the water by the aid of heat, then add the glycerin. Label: Massing Fluid.

Then prepare the following powder:
Precipitated chalk . . . 15½ av. ounces
Castile soap powder . . . ½ av. ounce
Oil gaultheria 1 dram
Solution of carmine,

N. F., enough, or . . . 1 dram

Mix and pass through a No. 80 sieve. Put the powder into a good sized mortar and pour on 4 ounces of the massing fluid. With the pestle rub into a paste. Keep your patience and keep your pestle a-going, and by and by the powder will show a moist place, which will grow larger until you have the whole thing to a paste. The rubbing should be kept up until a soft, uniform mass is obtained. It is now just right for jars. For tubes, add 1 fluid ounce more of massing fluid, rubbing this addition into the mass well and good. Do

not fill the tubes more than three-fourths full; if you do it will squeeze out all over the tube and your pliers.

Perfumed Ammonia.

(Dr. A. H. S.)—We suppose tincture of orris root or spirit of ionone might be used to perfume an ordinary weak aqueous solution of ammonia, but just whether either of these would be the most suitable for your purpose we do not know; you fall to inform us whether the solution is to be employed as a toilet requisite or not. If a "volatile essence" is what you want, we suggest you try one of these formulas:

(1.)

Camphor ½ dram
Essence of musk ½ ounce
Oil of lemon 30 minims
Oil of lavender, English, . . . 1 dram
Oil of bergamot 3 drams
Oil of cloves 20 minims
Strong ammonia water . . . 8 ounces

(2.)

Oil of lavender, English . . . 1 dram
Oil of bergamot 40 minims
Oil of rosemary 15 minims
Strong ammonia water . . . 3 ounces

(3.)

Oil of rose 2 drams
Oil of lavender, English . . . 1½ ounces
Oil of bergamot 1½ ounces
Oil of cinnamon, true . . . ½ ounce
Oil of cloves ½ ounce
Essence of musk 1 ounce
Rectified spirit 4 ounces
Alcoholic solution of ammonia 10 ounces

TOILET AMMONIA.

Ammonia water, 10 per cent. 250 cc.
Green soap 120 grains
Oleic acid 10 cc.
Oil of bay 1 cc.
Oil of rosemary 1 cc.
Oil of verbena 5 cc.
Water, sufficient to make 1000 cc.
Dissolve the soap in warm water, 500 cc., and when cool add the water of ammonia and the oils; mix by agitation and add lastly the oleic acid and water to make 1,000 cc.

Flavoring Extracts.

(W. S. C. & Co.)—

STRAWBERRY.

(1.) A flavoring extract from the fruit may be made as follows: Bruise 4½ pounds of strawberries; pour 3 quarts of alcohol over the mass, let stand for some time and filter. The product will make about a gallon of the extract.

(2.) Butyric ether, 1 fl. ounce; acetic ether, 1 fl. ounce; amyl acetate, 4½ fl. drams; amyl butyrate, 3 fl. drams; glycerin, 4 fl. drams; oil of wintergreen, 4 fl. drams; alcohol, deodorized, enough to make 16 fl. ounces. Color red with carmine or other suitable red coloring. Replacing a portion of the alcohol with a weak tincture of orris is said by some to improve the flavor.

RASPBERRY.

(1.) Upon 50 pounds of the fresh and cleaned berries, pour 14 gallons of 85 per cent. alcohol. Let the mixture stand for 24 hours, then add about 6 gallons of water, and distill off 13 gallons.

(2.) Fluid extract of orris root, 2 fl. ounces; acetic ether, ½ fl. ounce; oil of

cognac, 10 drops; butyric ether, 5 drops; diluted alcohol, 16 fl. ounces. Mix the ingredients, color to a dark red with tincture of cochineal, and after a few days filter, if necessary.

BANANA.

(1.) Banana fruit (peeled), 1 pound; alcohol, 1 pint; water, 1 pint. Macerate for 14 days; express and strain.

(2.) Butyric ether, $1\frac{1}{4}$ fl. ounces; essence of lemon, 1 fl. dram; essence of orange, 1 fl. dram; alcohol, deodorized, enough to make 16 fl. ounces. The essence in this formula should be prepared by macerating 1 part of finely cut fresh lemon or orange peel with 5 parts of alcohol for 3 days, then expressing and filtering.

PEACH.

(1.) Bruised peach pits, 4 drams; oil of bitter almonds, 2 drams; diluted alcohol, 16 ounces. Macerate 48 hours and filter.

(2.) Acetic ether, 5 fl. drams; butyric ether, 5 fl. drams; amylic acetate, 5 fl. drams; oil of wintergreen, 30 minims (or less); oil of bitter almonds (deprived of hydrocyanic acid), 2 or 3 fl. drams; alcohol, deodorized, enough to make 16 fl. ounces.

PINEAPPLE.

(1.) Grated pineapple, 16 fl. ounces; alcohol, 6 ounces. Macerate 48 hours in a covered vessel, and strain, adding enough water through the strainer to make the liquid measure 1 pint.

(2.) Chloroform, 1 fl. dram; acetic aldehyde, 1 fl. dram; amylic butyrate, 10 fl. drams; glycerin, 4 fl. drams; alcohol, deodorized, enough to make 16 fl. ounces. Color yellow, if desired.

It should be stated that the pure food laws of some of the States require that in cases where flavoring extracts cannot well be prepared from the natural fruits, such as banana, pineapple, strawberry, etc., the synthetic product must bear the name "artificial" on the label. All extracts so made are also required to be free from harmful ingredients, etc.

Magnesia Magma.

(F. X. C.)—Under the above title the following formula appears in the Proceedings of the A. P. A., for 1903:

Magnesium sulphate, two hundred and fifty grams 250 grams
Sodium hydroxide, eighty-one grams S1 grams
Water, a sufficient quantity
to make 1000 grams

Dissolve the magnesium sulphate in 4,000 cc. of water and the sodium hydroxide in another portion of 4,000 cc. of water and filter the solutions. Pour the soda solution slowly, in a thin stream, into the magnesium sulphate solution with constant stirring. Allow the precipitate to subside and decant the clear fluid. Wash the magma several times with water by decantation until the washings are free from saline taste. Transfer the magma to a muslin strainer and allow it to drain without pressing. Then re-transfer it to suitable vessels and add sufficient water to make one thousand cc. of fluid and mix thoroughly by stirring. One teaspoonful of this preparation contains about three grains of magnesium hydroxide.

The water used in preparing this must be free from organic matter or the magma will become discolored. Ordinary tap

water contains an excess of organic matter as a rule, but may be rendered suitable for the above by treatment with alum. To a gallon, mix thoroughly and allow to stand over night. Then decant the clear water. If the water is decidedly yellowish from organic matter, more alum may be needed, but an excess of alum should be avoided, as not clearing the water so well. Long standing with a trace of alum is most effective. The quantity of soda directed is slightly less than is required for complete precipitation of the magnesium sulphate, because caustic alkali is difficult to wash out, and its presence in the finished preparation would be decidedly objectionable.

Yohimbine.

(E. M. F., M.D.)—Yohimbine is an alkaloid obtained from Yohimiba bark, a species of *Tabernaia* (Montana), a tree found in the southwestern part of Africa. According to Spiegel, the alkaloid is extracted from the powdered bark by means of dilute acetic acid, and precipitated from the solution thus obtained with sodium carbonate. By recrystallization from alcohol the pure substance may be obtained in the form of white needles. The alkaloid has the formula $C_{25}H_{32}N_2O_4$, is soluble in water and melts at $234^\circ C$. Yohimbine hydrochloride, a salt of the alkaloid, may also be obtained in the crystalline condition. It melts at $295-300^\circ C$. By the formation of the iodmethyle of the alkaloid, yohimbine is shown to be a tertiary base. The iodmethyle is soluble in hot water with tolerable facility, but sparingly in cold water, separating from the hot solution as a syrupy mass, which afterwards becomes crystalline. By oxidation with permanganate yohimbine yields two acids, yohimbic acid, $C_{20}H_{24}N_2O_6$, and nor-yohimbic acid, $C_{16}H_{20}N_2O_4$. The alkaloid is said to possess powerful aphrodisiac properties and is claimed to be an effective remedy in impotence of nervous origin. According to Waugh and Abbott's "Alkaloidal Therapeutics," yohimbine "may be given by the stomach or hypodermically. For hypodermic use the hydrochloride must be dissolved in boiling water. This solution will keep for a few weeks, and longer if a drop of chloroform is added. It is advised to give the tablets containing .005 each, three times a day, for six weeks or more, rather than to give larger doses."

Cleaning Wall Paper.

(E. S. B.)—The following has been recommended: Mix together 1 pound each of rye flour and white flour into a dough, which is partially cooked and the crust removed. To this 1 ounce of common salt and $\frac{1}{2}$ ounce of powdered naphthalin are added, and finally 1 ounce of corn meal and $\frac{1}{4}$ ounce of burnt umber. The composition is formed into a mass of the proper size to be grasped in the hand. In use it should be drawn in one direction over the surface to be cleaned. Other formulas have been published in previous volumes of *The Era*. Consult the indexes.

Application for Pimples.

(I. L. S.)—We cannot give the formula for the proprietary specialty and we do not answer queries by mail. However, if you will consult the indexes to previous

volumes of *The Era*, you would find many references to formulas for preparations of this character. Here are several that have been recommended:

(1.)

Carbolic acid, 15 drops; borax, 1 dram; tannin, $\frac{1}{2}$ dram; glycerin, $\frac{1}{2}$ fluid ounce; alcohol, 1 fluid ounce; rose water, $2\frac{1}{2}$ fluid ounces. Make a solution and apply night and morning.

(2.)

Thymol, 10 grains; boric acid, 2 drams; distilled extract of witch hazel, 1 fluid ounce; rose water, 4 fluid ounces.

(3.)

Crystallized alum, 1 ounce; salt, 1 ounce; sublimed sulphur, 1 ounce; sugar candy, 2 drams; elder flower water, 3 ounces; distilled water, 3 ounces; brandy, 10 ounces. A "snake" mixture.

Assay of Iodoform Gauze.

The following method is proposed by Francois for inclusion in the forthcoming "Codex" (*Pharm. Journ.*): Weigh off 20 grams of the material, cut into small pieces, and extract with ether into a graduated 100 cc. flask. Adjust the volume of the ether extract to 100 cc., transfer 10 cc. of this to a conical flask, drive off the ether with a current of air; add to the residue 10 cc. of 20 per cent. silver-nitrate solution, and place on a cold water-bath. Then apply heat to the bath, so that the temperature of the mixture is slowly raised, and keep it on the boiling water-bath for an hour. Then fill the flask with distilled water, set it aside for twenty-four hours, and collect the silver iodide on a tared filter. Dry at $100^\circ C$., wash with ether, again dry at $100^\circ C$., and weigh. The weight obtained + 0.559 gives the weight of iodoform in 2 grams of gauze.

Solubility of Lime.

Why is lime less soluble in hot water than in cold? In a paper read last month, before the Edinburgh Assistants' Association, William Duncan answered this question by saying that solution is either an exothermic or an endothermic reaction. Solution of $Ca(OH)_2$ belongs to the first. There is an evolution of heat and the salt in consequence decreases with a rise in temperature. The reverse happens when potassium nitrate is dissolved in water, a rise in temperature increasing the solubility. Sodium chloride, on the other hand, dissolves in water with practically no change in temperature, and consequently it is equally soluble in hot and cold water.

Platol.

"Platol" is a name applied by the *Apoteker Zeitung* to a liquid starch polish, which is prepared as follows: Reduce 5 parts of powdered tragacanth to a homogeneous condition by soaking it in 250 parts of water. When the gum becomes fully swollen, add $7\frac{1}{2}$ parts of boiling water and dissolve in the mixture 50 parts of borax; then stir in 50 parts of talcum and 50 parts of stearin. A half pint of this mixture added to a quart of cooked starch will make a suitable liquid polish, or the mixture may be applied directly to the starched surface by means of a sponge just previous to applying the smoothing iron.

THE PURE-FOOD LAW

makes it prohibitory to sell any but

STRICTLY PURE

Extract of Vanilla

Wyeth's Extract Vanilla is prepared from the choicest variety of carefully selected and properly cured Vanilla Beans, and contains no coloring matter nor any of the artificial or synthetic principles so frequently employed.

THE DELICATE AROMA a distinguishing feature of our preparation, is imparted by the natural flavor of the bean

333 East 26th Street,

NEW YORK.

ADNEPHRIN

In addition to our well-known Adnephrin Solution (1 to 1000) which is sold at 60 cents an ounce net we now offer:

ADNEPHRIN OIL SPRAY—A 1 to 1000 solution of the adrenal (suprarenal) active principle in a neutral oil, aromatized. Price 60 cents an ounce.

ADNEPHRIN EMOLLIENT—An ointment having a neutral base and containing in each 1000 parts 1 part of the adrenal (suprarenal) active principle. In collapsible tubes, price 30 cents a package.

These two new products are of the same high quality as Adnephrin Solution and are unexcelled for activity and permanence.

The Era Publications for the Drug Trade.

THE PHARMACEUTICAL ERA.

(Issued Every Thursday).

\$3.00 Per Year, in Advance; Foreign, \$4.00 Per Year.

The only weekly pharmaceutical journal in America. The ERA is the newspaper of the drug trade, and its readers get: The news when it is news; market reports which follow the market closely; prompt replies to "Question Box" inquiries; prompt reports of association meetings, etc.; and the latest developments in pharmacy, scientific, professional and commercial.

THE ERA PRICE LIST EDITIONS

Issued in the Spring and Fall of each year. FREE to Subscribers to the Era

The Era Price List Editions contain complete Druggist Price Lists, thoroughly revised, and brought down to date twice a year. They are issued in the Spring and Fall. They combine in one publication arranged for easy reference, the most complete Lists of Drugs, Chemicals, Newer Remedies, Proprietary Preparations and Pharmaceuticals of a proprietary character ever offered to the drug buyer.

The list of Proprietary Preparations is the most comprehensive ever published. The present edition contains some 20,000 items, and in most cases the name and address of the manufacturer is supplied by means of a key number opposite the item, referring to the Manufacturers List. The preparations of nearly 3,000 manufacturers are thus listed.

These Price List Editions are published for the benefit of subscribers to the ERA, and every subscriber gets one copy free.

THE ERA COURSE IN PHARMACY.

Total Expenses for Full Course, \$10.00, Which Includes a Year's Subscription to the ERA.

This Course consists of printed lectures upon the theory and practice of pharmacy, chemistry, materia medica, prescription dispensing and other subjects essential to a sound and practical training in pharmacy. The lectures are prepared by the foremost pharmaceutical educators, are issued in monthly installments, and the entire work of the Course can be completed within twelve months. Recitations and examinations are conducted by correspondence directly with each regularly matriculated student. Especially valuable as a preparation for the examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

NEW CLASS FORMED EVERY MONTH.
Write for new descriptive PROSPECTUS.

THE ERA FORMULARY.

(5,000 Reliable Formulas).
Price, \$5.00 Per Copy, Postpaid.

Compiled specially for druggists. A collection of original and prize formulas, to which has been added a selection from standard authorities in English, French and German.
Contains formulas for Toilet Articles, Proprietary Medicines, Unofficial Pharmaceuticals, Family Medicines, Domestic and Household Articles, Veterinary Remedies, Technical and Industrial Processes, Flavoring Extracts, Soda Fountain Specialties, etc., etc.
462 pages, cloth. Sample pages on application.

THE ERA DRUGGISTS' DIRECTORY.

Subscription Price, \$5.00 Per Copy, Postpaid.

Carefully revised by personal canvass of nearly the entire trade. The most complete and accurate Trade Directory ever issued. It contains:
Part I.—Wholesale Druggists of the United States and Canada.
Part II.—Retail Druggists of the United States, Canada, Hawaiian Islands, Cuba, Porto Rico, Mexico and Costa Rica, together with a list of the principal druggists in Chile, Peru, Bolivia, Ecuador and Colombia. In the United States and Canada lists the side lines carried are indicated.
Part III.—Manufacturers, Jobbers and others who supply the drug trade.

THE ERA DOSE BOOK.

(Third Edition, Revised and Enlarged).
Price, 50 Cents Per Copy, Postpaid.

It has a Dose List, (2,800 remedies); a Veterinary Dose List, the most complete ever compiled; Tables of Dose Equivalents; Poisons and Antidotes; Incompatibilities; Solubilities, Specific Gravities, Percentage Solutions, Drops in Fluidram, Metric System, Thermometric Equivalents; Lists of Latin, French and German terms used in prescriptions and definitions of the Properties of Remedial Agents. 46 pages; board covers.

THE ERA KEY TO THE U. S. P., 1890.

Price, 25 Cents Per Copy, Postpaid.

A complete list of the Drugs, Chemicals and Preparations of the latest U. S. P.; gives official title, common name, synonyms, dose and strength of each; 75 pages, imitation leather binding only. Fits the Vest Pocket.

THE ERA POISON AND LIQUOR REGISTER.

Price, 60 Cents Per Copy, Postpaid.

Contains space for 500 entries, date, name of purchaser, name and quantity of poison sold; price, purpose, witness, remarks, etc., etc. It also contains a digest of poison laws of all the States. Where the law requires registration of liquor sales, this book answers the purpose admirably. Stiff board cover, leather back, 8x11 inches.

SAMPLE ADVERTISEMENTS FOR DRUGGISTS.

Price, 50 Cents Per Copy, Postpaid.

Last edition OUT OF PRINT. A new and revised Edition will be announced when ready.

SPECIAL NOTICE.—The prices here quoted include postage. All orders must be accompanied by remittance, in Cash, Express or P. O. Money Order or N. Y. draft payable to D. O. HAYNES & COMPANY. Send stamps (2c.) for amounts less than \$1.00.

NEWS SECTION

STATUS OF ARISTOL

NEW FACTS ARE REVEALED.

Has the Patent Expired? Has the Trade Mark Expired

ACCORDING TO UNITED STATES PATENT OFFICE, PROTECTION FOR THIS ARTICLE IS LIMITED BY THE LIFE OF ANY OF ITS PATENTS ABROAD.—THE GERMAN PATENT, BEING FOR FIFTEEN YEARS, MUST HAVE EXPIRED ONE YEAR AGO.—OFFICIAL RECORDS SHOW THAT THE TRADE MARK WAS GRANTED PRIOR TO THE PATENT.—DOES NOT THEN THE TRADE MARK EXPIRE WITH THE PATENT?

Is the patent on Aristol alive or dead? Is the trade mark alive or dead?

The actual status of the patent must be determined by the courts, but facts have been laid bare which, in the opinion of many, prove two things:

(1.) That the patent, Aristol, is now dead in the United States, and has been since March of last year.

(2.) That the word, Aristol, is now common property, and no longer a trade-mark.

These involve questions that have not as yet been answered. The proprietors of the rights in Aristol have dropped all mention of the patent on the article. Instead, they have substituted the mention that: "The word Aristol is protected by registered trade-mark No. 17,393." Therefore, if the patent is *not* dead, there's a mystery about leaving off all mention of patent protection.

ANOTHER PROBLEM.

But if the patent is *dead*, and the trade-mark expires with the patent, then there's a pretty little problem in how there can still be any protection in trade-mark No. 17,393. To take up the question of the patent first, the facts so far obtainable are these:

(1st.) From the United States Patent Office comes the following: "This patent (No. 446,875, or Aristol), issued February 24, 1891, to Messinger & Vortmann, assignors to Edward N. Dickerson, of New York, N. Y., for Compound of Iodine with Thymol, for the term of seventeen years, limited to expire with the foreign patent having the shortest term, the same having been patented in Germany, March 9, 1889, and in England, March 23, 1889." The above is signed by C. M. Irehan, chief clerk. It is *not* an opinion. The Patent Office is expressly forbidden to give any opinion whatsoever. The above statement is no more nor less than a simple statement of fact, and it is official.

(2d.) From a private legal source it is learned that the life of a patent in Germany is fifteen years. Then the patent on Aristol must, provided the statement of

Chief Clerk Irehan is correct, have expired in Germany in March, of 1904.

MR. HILTON'S STATEMENT.

This, moreover, would seem to explain why mention is no longer made of a patent on the wrapper of Aristol. But apropos of this same point, there is the statement of Chairman S. L. Hilton, of the N. A. R. D. Committee on National Legislation, that "the number of the patent appears on the last package of Aristol purchased by him two or three months ago." Yet, if such mention has been used since the expiration of the patent, the same might turn out to be a violation of the law which provides that: "Every person who shall mark as patented any article which has not been patented, or who shall place upon such an article any imitation of the name or label of the patentee without his permission, and with the intention of misleading the public, or by deceiving those who may purchase such article, is liable to a fine of not less than one hundred dollars for each offense."

In the N. A. R. D. Notes, of recent date, reference is made to the letters patent of Aristol, which Mr. Hilton forwarded from Washington. "It was issued February 24, 1891, and will expire February 24, 1908," says Notes. The article further has it that, "The contention that the life of the American patent has been curtailed by the fact of the existence of foreign patents, is untenable, because all such patents are process patents, not product patents. The American patent is therefore alive, and did not expire in 1903, as claimed. Members of the N. A. R. D. should govern themselves accordingly, and take good care that they are not deceived."

AS TO THE PROCESS PATENT.
