Opposed to the N. A. R. D. opinion, is the unqualified statement from the Patent Office. The latter statement, here quoted, has it that the Aristol Patent is "limited to expire with the foreign patent having the shortest term." There is, moreover, another contradiction, seemingly at least. Whether being a process patent makes any difference or not, here is this quotation from the letters patent: "We do not here-in claim the process by which the article is made, as that is the subject-matter of our application, Serial No. 342,642." From the above it appears that a patent has been applied for on the process, but if the patent on the process has been granted, why is not mention of the same recorded on the article itself? There is no mention of a process patent on the wrapper.

Furthermore, certain chemists maintain that Aristol cannot be made by following the process described in the letters patent. The specifications direct that:

"We proceed as follows: 1.5 kilos, by weight, of thymol are dissolved in ten liters of water, under addition of 0.5 kilos, by weight, of soda-lye, and to the clear liquor a solution of 5.08 kilos, by weight, of iodine in 6.5 kilos, by weight, of an alkaline iodide is added, under continuous

stirring at a temperature of about 15° Centigrade. A dark-red voluminous amorphous precipitate is immediately formed, which represents the new iodine substitution product of thymol."

But a chemist of considerable prominence says that the dark-red precipitate is not formed at all. To obtain such a precipitate a solution of chlorinated soda must first be added. The question arises: If the product cannot be produced according to directions in the specifications, then are said specifications faulty, and was the said patent ever really a valid patent?

QUESTION OF TRADE-MARK.

Next comes the question of the trade-mark. It has been contended that if the name is trade-marked subsequently to the patent, then the trade-mark lives on, independently of the patent. But experts in this subject hold—and they point to court decisions for backing—that where the article is known only by its trade-mark name, then the trade-mark name comes to be the common name for the article. This view of the case is applied to Aristol. The article has always been called Aristol. On the boxes only this name appears, and not the chemical name, and the word has therefore become associated in the public mind with the article.

But there is another contradiction, and this contradiction appears in the trade-mark records of the United States. It makes clear that the trade-mark Aristol was taken out in the United States *before* the patent. Here is the record: Official Gazette, Vol. 50, page 170:

"17,393.—Antiseptic Powder.—Farbenfabriken, vorm. Friedr. Bayer & Co., Elberfeld, Germany. Application filed December 9, 1889. Used since November 23, 1889. The word 'Aristol.'"

And here is one line from the patent sheet:

"Specification forming part of Letters Patent No. 446,875, dated February 24, 1891."

NEW PARCELS POST TREATY.

A parcels post treaty between the United States and Great Britain has been signed and will take effect April 1. It allows a maximum weight of four pounds and six ounces. The rate fixed is twelve cents a pound or fraction of a pound in this country and 2s. a parcel in England. All packages sent under this arrangement are limited in value to \$50. The treaty follows the general provisions of existing parcels post treaties with other governments. A parcels post treaty with France is expected to be concluded shortly.

\$1,000,000 IN FIRE LOSS.

Indianapolis, Feb. 20.—Fire in the wholesale district yesterday, caused a loss of over \$1,000,000. Several explosions occurred in the warehouses of the A. Kiefer Drug Co., who are among the heaviest losers. Helmetach & Co., druggists' sundries, also suffered severely.

ASK 'PHONE-RATE RELIEF.

Business Men Demand Action by the Legislature.

At the meeting of the New York Board of Trade and Transportation, last Thursday, the question of telephone rates came up for discussion, and a resolution was passed, favoring a legislative inquiry into the matter. Reference was made to the investigation in 1887 and the revelations brought to light at that time, and consensus of opinion showed that the time had come to show up what further might prove startling. The legislature is accordingly petitioned to put a committee at work on the subject, which is to recommend or frame a bill whereby the State and city may obtain a fairer telephone service. Here are a few pertinent excerpts from the resolution as adopted:

"That excessive charges are due to the existence of an absolute and undisputed monopoly in the rendering of the service. That monopoly exists, because competition has been thus far impossible. That competition has been defeated because the monopoly has owned the subways and controlled access to them by intending competitors. * * * That a monopoly in control of a public necessity should be subjected to a regulation of its charges in the public interest. That legislative control of charges should be governed by cost of service.

"That the legislature of this State be and is hereby earnestly, but respectfully petitioned to appoint a special committee to investigate the charges for telephone services, the cost of such service to the companies * * * and such other information as may be useful in determining if rates charged are excessive and what rates would be just and equitable. That such committee have power to subpoena witnesses and to compel their attendance and testimony under oath and to compel the production of all books and papers relating to the business, property and transactions of telephone companies in this State. * * *

The committee of business men, also occupied in a study of the situation, held another of its meetings last week, at the offices of the New York Telephone Co. Union N. Bethel, first vice president and general manager of the telephone company, was present. Details of the sessions were withheld, but it is said that the committee will endeavor to have experts go over the books and official statistics of the telephone company in order to demonstrate that the charges for service are higher in this city than is reasonable. That the company will consent to such a plan is not considered probable.

Mr. Bethel submitted data to prove that, in view of the greater outlay and heavier cost of installation in New York, the rates in vogue here are as low as any operating company could furnish on a profitable basis.

At Albany, Senator Keenan, of New York, has introduced in the Senate, a joint resolution, calling for the appointment of a committee of three senators and five assemblymen to investigate the charges that the telephone service in New York

City is controlled by a monopoly and that the cost of the service is exorbitant.

The commission is to be vested with power to take evidence and employ counsel to the end that the report may be thorough and its recommendations such that the conditions of telephone service in New York City be remedied.

ASSAULTED BY A NEGRO.

A murderous attack on Dr. Louis Keyser, a druggist of Oyster Bay, L. I., was made early Saturday morning, by a negro known as "Diamond Dick," who narrowly escaped lynching, and is now lodged in the county jail at Mineola.

Three years ago Dr. Keyser sold his drug store at Sixth avenue and Twenty-eighth street, Manhattan, and went to Oyster Bay, where he established a pharmacy on East Main street. About half past four on Saturday morning, he was aroused by the ringing of the night bell. The negro was there, asking for pills. After reproving him for calling at such an unearthy hour, Dr. Keyser went behind the counter and reached up to get the pills. As soon as the druggist had turned his back, the negro struck him on the head several times with a hatchet. Dr. Keyser shouted for help, and his assailant fled. Later the fellow was found crouching under a stairway back of the store, and taken to jail. The motive is supposed to have been robbery.

GAS MAGNATES AT ALBANY.

Albany, Feb. 18.—Agitation for cheaper gas in Greater New York, to which the N. Y. R. D. A. added largely in its last meeting, has taken a change of scene, to the legislature. Neither are the agitators the same, for the boot is on the other foot. The gas companies, in other words, don't seem to want legislation under which they would have the privilege of charging less. Through their attorneys they have even protested, and last Thursday these gentlemen appeared before the Senate Committee on Miscellaneous Corporations and the Assembly Committee on Electricity, Gas and Water Supply, and stated quite earnestly that they did not like the bills which provide for seventy cent gas in New York. All the representatives of the companies claimed that a reduction of the rate would mean the confiscation of their properties, as they could not even produce gas at the rate fixed by the bill. The detailed cost of the manufacture of gas was asked for from one of the representatives, but he said that he could not give it.

W. A. DeFort, representing the Municipal League of New York City, favored the bill, claiming that the recent investigation of the gas situation in Boston showed that the companies could produce gas there and sell it at a 7 per cent. profit, for eighty cents per 1,000 feet. He criticized the representatives of the companies for coming before the committee and refusing to go into details as to the cost of the manufacture of gas.

The Merchants' Association of New York filed a letter in which it was argued that the cost of gas under favorable conditions does not exceed forty-two cents per 1,000 cubic feet. The letter was signed by J. Hampden Dougherty, chairman of the committee on gas and electricity of the association.

LODER WANTS BIG DAMAGES.

Sues Druggists and Associations Under Sherman Trust Law.

Chicago, Feb. 20.—A suit of great importance to druggists in the United States, and one of the largest ever started under the Sherman Anti-Trust law, is being pushed in the Federal court, by C. G. A. Loder, a druggist of Philadelphia.

Loder is represented in Chicago by Attorney William Carlisle, of Philadelphia, who began proceedings against many individual druggists and several unincorporated drug associations for \$100,000 damages.

Loder charges that he refused to become party to the agreement among the retail druggists to charge prices quoted by the wholesalers, and as a result was listed as "an aggressive cutter" and thereby placed at a great disadvantage and expense in securing drugs to furnish to his customers.

Thos. V. Wooten, secretary of the National Association of Retail Druggists, admitted that lists were compiled containing the names of "aggressive cutters" and sent to wholesale druggists throughout the United States. This system, Loder asserts, resulted in refusal of the wholesale druggists in the combine to furnish him with drugs, his name being on the "aggressive cutters" list.

Examinations of this character will be held in a large number of cities throughout the United States. The sworn testimony of the witnesses is to be used in the trial of the case in Philadelphia.

United States Circuit Clerk Marshall E. Sampson, as a special commissioner, is hearing testimony at the Monadnock block, from Chicago members of the various druggist associations. The hearing will probably occupy several weeks.

Mr. Loder says he has been unable to keep books showing his transactions, because, if he does, the association will learn the names of those who are selling him drugs and boycott them, and thus make it impossible for him to do business at all.

He maintains that the drug trust is the greatest trust in the country.

ANDRUS PARTNERSHIP ENDS.

A. V. Andrus, of the firm of A. V. Andrus & Co., drug importers at 7 Gold street, will retire on March 1, when the partnership expires. The business will be conducted by the remaining partners under the name of P. E. Anderson & Co. The firm was established fourteen years ago. Mr. Andrus was formerly connected with Lazell, Dalley & Co.

ALL IN THE FAMILY.

"Hello, this Smith?" "Yes," answered the druggist. "Well, Henry Watkins just died. Will you send and—" "You want my brother John, 'steem hundred, Thirty-eighth," said the druggist, hastily. "He's an undertaker." "This is John, you fool. Tell Harry to look after the insurance, send up some formaldehyde, and say, tell father to be prepared to read the funeral service Wednesday, three sharp."

DISTRICT PLAN.

HARMONY AT THE LAST.

Joint Conference Finds a Way to Organize New York.

OBJECTIONS EXPLAINED AWAY, AND THE RESOLUTION OF THE SUB-COMMITTEE IS ADOPTED UNANIMOUSLY.—MASS MEETING OF ALL DRUGGISTS TO BE CALLED, AND A GREATER NEW YORK ASSOCIATION FORMED.—OLD LINE SOCIETIES MAY COME IN AS AUXILIARIES.

By a unanimous vote, the Joint Conference decided last Friday, that New York, to be organized at all, must be organized under the district plan with a strong central body through which every druggist in the greater city can be reached. This does not mean that the old line associations will be ignored. They will probably be admitted as auxiliaries, on some plan of representation. Meanwhile, the next two weeks will see a big mass meeting of New York druggists, at which a central body, in effect a local branch of the N. A. R. D., will be formed and officers elected to carry on the work of organization.

President Anderson called the special meeting to order at 3.15, with the following representatives present: Kings County Ph. Soc., Anderson, Muir, Hegeman, Gesell, Rosenzweig; Manhattan Ph. A., Searles, Diner, Emelin; N. Y. R. D. A., Diamond, Weinstein; G. A. S., Lauer, Swann; Bushwick, Mittenzweig, Fischer, Helmerzhelm; Westchester, Forster; East New York, Maas, Mr. Weil, of Britt, Loeffler & Weil, and Messrs. Evans, Duble, Sheldon, Belaire and Clarke.

Mr. Swann read two communications, one from the Peruna Company and the other from the Miles Company, in reply to the proposition that the conference decide when the contracts were to be enforced. The Peruna people refused to extend the time, saying that the contracts were now in force. The Miles firm thought the request was reasonable for those who had only recently adopted their plan. Dr. Anderson, commenting on the reply of the Peruna Company, said it was evident that they had misunderstood the object of the conference. He gave it as his opinion that no attempt would be made to enforce the retail price of eighty-three cents, wherever it could not be done without great injury. The principal efforts at present were being devoted to getting signatures.

BIG SIGNING OF CONTRACTS.

Further correspondence with the company was thought unnecessary. Dr. Muir then proposed that Mr. Evans, by way of encouragement, state whether it was true that the number of signatures had increased to about six hundred. Mr. Evans said it was true and promised big developments within a week.

Reports were then heard from the various representatives. The Bushwick Association, it seemed, had affiliated, while in East New York the situation was discouraging and the association very weak. Dr. Muir suggested that if the matter were explained by N. A. R. D. men, the druggists might join. Mr. Duble promised to send a dozen, if necessary—"and all serially numbered," added the chairman.

In Westchester, all was peace except for a single cutter in Yonkers, but by vigorous efforts it was expected that he would soon have to come into the fold.

After the associations had been heard from, Chairman Anderson thought the moment ripe for a report of the sub-committee. Although the majority knew what was coming, Mr. Swann's report was awaited with interest. At the meeting of the sub-committee, said Mr. Swann, the announcement was made that of the members in the existing organizations, the largest number of signatures came from the G. A. S. The Manhattan was second and Kings County last. The largest number of signatures came from those not in any organization. In view of these facts, Messrs. Searles, Lauer and Diamond had been asked to draw up a set of resolutions, to be presented to a special meeting of the conference. The resolution recommended that as a great number of pharmacists were not in any association, the only practicable method was to form a local district organization, independent of the old line associations. A differential schedule was not contemplated.

OBJECTIONS EXPLAINED AWAY.

Mr. Lauer moved "that the report of the sub-committee be adopted in its full intent, and that organization on those lines be proceeded with."

"Will this district organization extend to Brooklyn, where the Kings County has already affiliated?" inquired Dr. Muir.

Mr. Diamond replied that it had seemed to him unfair to exclude Kings County and have different plans for each borough. There should be one system for the greater city.

Dr. Muir immediately waxed wroth. "After the Kings County Society, with a membership of 90 per cent. of the druggists of Brooklyn, has affiliated and done everything in its power, why," he demanded, "do you want to change the whole scheme now and form a new organization in that same district? I hardly think it's fair to turn us down that way." In short, he opposed organization on the district plan in Kings County.

Mr. Searles protested that Dr. Muir misunderstood the question. The idea was to let the Kings County, if it wished, organize as one whole district. This was emphasized by Mr. Lauer. There was no intention, he said, of slighting Kings County. If the society wanted to organize as one district, all well and good; they were strong enough to do it, but they would be held responsible for their borough.

"It's a case of loving Rome no less, but Caesar more," remarked Mr. Diner. "The issue is not Kings County, but N. A. R. D. and it has been shown that the only way to succeed is by the district plan."

Dr. Muir protested still further that Brooklyn had not been given a fair chance. Mr. Weinstein wanted to know whether the raising of prices was the only object of the district plan. This brought forth a characteristic reply from Dr. Anderson, outlining the situation in vigorous terms and cleared away all obscurities. He said:

FOR CONTRACT PLAN ONLY.

"We are absolutely opposed to sliding scales on proprietary medicines, because in them we see failure. Nothing of that kind is intended. The only idea is the

contract plan, and the St. Louis Club plan, if they present a satisfactory schedule. But no general or sliding schedule is contemplated.

"The old line associations were offered the privilege of affiliating. If all had accepted it, the question would have been settled. But they have not affiliated. Now, if in Manhattan we can't get the old line associations to join, then we must have a central body through which all can come in. Again, the idea is to form auxiliary associations; why can't we adopt the plan, recognizing as auxiliaries those who have already affiliated, then get a central body? What we want now is something through which we can work and complete the New York organization."

This seemed to satisfy everybody. But Mr. Weinstein said he failed to see the necessity for a district plan. He believed in concentrating on one thing—to get the retailers to sign the Peruna and other contracts. He thought most of the difficulty arose from the fact that the signing of the contracts and the payment of N. A. R. D. dues were not differentiated. Mr. Sheldon said he proposed to state Dr. Anderson's point of view in different words; which he did. He promised that the giant druggists and department stores would come in regardless of district work.

VOTE WAS UNANIMOUS.

A few more remarks followed, by Messrs. Diner, Duble and Muir, the latter withdrawing his opposition and defending the loyalty of Kings County, after which the resolution was put and carried unanimously. Mr. Searles then moved that the sub-committee be empowered to call a meeting of the druggists of Greater New York, at which a central branch of the N. A. R. D. be formed. This also was adopted unanimously. A further effort will be made to have the contracts signed.

The surprise of the day was then sprung by Mr. Diner. Having first received from Mr. Evans the positive assurance that jobbers are now absolutely forbidden to sell to retailers who had not signed, he said he had personal knowledge "that during the past week serially numbered Peruna has been supplied to a retailer who did not sign the contract; and," he added, "I am the man! I have not signed, and to try the jobber I ordered three dozen last Tuesday. I have the goods now."

"The jobber who sold you that, violated his contract," replied Mr. Evans, "and he will be punished." He then read a strong letter from the Peruna Company, saying that they were in earnest and meant to enforce the contract, if they had to establish distributing depots of their own. This announcement was applauded. Dr. Anderson said: "Here is a splendid chance to show the working of the contract plan. Follow up those bottles!"

Mr. Lauer gave warning that unscrupulous druggists were trying to evade the contract by giving a rebate on the return of the bottle. Mr. Evans promised to look out for all such cases.

On motion of Dr. Muir, it was decided to send out a letter calling the attention of retailers to the situation, and urging them to sign the contract. The secretary was authorized to incur the necessary expenses.

In regard to terminating the existence of the Joint Conference, the general opinion was that as soon as the central body was formed, each local association would

discharge its committee as having accomplished its purpose.

After adjournment the sub-committee met and decided to call the big mass meeting early in March, after the first of the month. Exact time and place will be selected shortly.

MORE CUTS IN BROMINE.

American Makers and German Syndicate Mystify the Trade.

War in bromine is now on. The cutting began on the part of the German syndicate, when it appointed the Koessler & Hasslacher Chemical Co. as their agents in this country. To inaugurate the invasion, prices were chopped into halves. But during the past week the American manufacturers took up the gage. The Powers-Weightman-Rosengarten Co. notified the wholesale drug and chemical trade that it had met the cut made by the German syndicate. But this company does not guarantee to sell at the prices named. Meantime, jobbers have trouble in getting bromine, especially at the lower prices.

Enough rumors are current, however. One was that the domestic and foreign manufacturers had settled their differences, which was as quickly denied by the representative of the German syndicate. At the same time he denied a second rumor, namely, that his people had acquired control of the Dow Chemical Works.

H. Jacobson, manager of the German Bromine Syndicate, has come to this country to personally conduct the invasion. During the week he was in St. Louis, as was also Mr. Rosengarten. The largest American bromine manufacturers, the Mallinckrodt Chemical Works, are situated in St. Louis. These coincidences are regarded in the trade as significant, but if there has been a conference, the same is not known as yet, much less any definite results as to the migrations of these bromine gentlemen.

DRUG CLUB ELECTION.

Jesse L. Hopkins, president of the Drug Trade Club, was re-elected for his fifth term at the meeting of the governors, last Wednesday. Although Mr. Hopkins had positively declined a re-election, the governors felt that the proposed extension of the club's activities should properly be carried out under his direction, as it was he who had suggested all the projected changes.

During Mr. Hopkins' administration, a surplus fund of \$5,000 has been accumulated, through the policy of setting aside initiation fees and defraying current expenses by means of dues. This surplus, the governors believe, will, with the dues from the increased membership, be sufficient to pay for the projected improvement of the club rooms. These contemplate the occupancy of the fourteenth and fifteenth stories of the new addition to the Woodbridge building, to be erected soon. The new rooms will be elaborately fitted up with a special eye to the comfort of the club members. It is expected that the furnishings will cost from \$10,000 to \$15,000.

MANN BILL HEARING.

Senate Committee Listens to Arguments From Both Sides.

Washington, Feb. 20.—The Mann bill is now having its hearing before the Senate Committee on Patents. The first was held last Friday. Senator Kittredge, chairman; Senators McComas, Latimer and Smoot being present. Congressman Mann and Messrs. Gallagher and Hilton represented the interests of the bill, but the opposition was also out in force. Among the latter was A. Von Briesen, representing the General Chemical Co., the Thomsen Chemical Co., of Baltimore; Baker & Adamson, of Easton, Pa., and the Frazier Tablet Co., of New York. Other opponents present were: William Dodge, A. P. Greeley, late Deputy Commissioner of Patents, Dr. Freeman, Arthur Brown and George P. Whittlesey, of the Washington Patent Law Association; and E. P. Wetmore, of the New York Bar Association.

Mr. Mann stoutly defended the measure in an extended address, in which he took phenacetin as an example of the workings of the present patent law. The forcible arguments he used are those already well known throughout the trade, as for instance this one paragraph, which gives a clue to the rest:

"I have here two little boxes of equal size for phenacetin. One is a package to sell in the United States that cost about \$1 an ounce; the other is a package to sell anywhere else in the world, that costs about \$1 a pound."

Mr. Von Briesen said that personally he was strongly in favor of a reciprocity arrangement as to patents and hoped to see it adopted some day, but without such an arrangement many important American interests in the chemical trade found it necessary to oppose the Mann bill, which, in their opinion, would simply stifle the chemical industry so far as inventive genius was concerned.

Senator Smoot said that he thought that if the laws were designed to stimulate inventive genius, it would be far better to limit drug patents to process; otherwise the inventor of a product would be able to bottle it up, so to speak, and no one else would be permitted to produce it, even though he used an entirely different process. Mr. Von Briesen was not disposed to coincide with this view of Senator Smoot's, but Senator McComas reinforced his colleague's argument, insisting that if the purpose of the patent laws was to stimulate invention, the widest possible field should be opened up. In his opinion, more inventors would enter any given field if the patents therein were limited to process rather than products, and he cited the case of Germany, which does not grant patents on products, but which has made marvelous progress in the field of chemistry.

SOCIETY OF CHEMICAL INDUSTRY.

The Society of Chemical Industry, New York Section, will meet Friday, of this week, at the Chemists' Club. Papers are to be read by: C. Richardson and C. N. Forest: Tetrachloride of Carbon and Its Use as a Solvent in the Differentiation of

Bitumen. H. Schweltzer; History of Artificial Musk. Wilton G. Berry: Tannin and Tanning Materials in Relation to Tariff Classification. An African Bark, with Exhibition.

BLOW AT PURE FOOD.

Hope for Legislation by Present Congress Abandoned.

Washington, Feb. 19.—All expectation that the Senate will pass the Pure Food bill at this session has been practically abandoned. In a final effort to secure action, a delegation called on President Roosevelt last week, and suggested that he send a special message to Congress on this subject. The President is reported to have assured the members of the delegation that he sympathized with the movement to secure pure food legislation, but there the matter ended. It does not appear probable that any effort will be made by the Administration toward securing this legislation at this time.

"It is my opinion," said Secretary of Agriculture Wilson, "that there will be no legislation on the subject of pure food by the present Congress. There is no time now to take up this important matter. That there is need of pure food legislation no one conversant with the subject can deny. I hope and expect to see such a law enacted by the Fifty-ninth Congress."

NO NEW TIMES SQUARE STORE.

A rumor for some time current that the Hegeman Corporation, 200 Broadway, had arranged to open another drug store, this time in the Times Building, Broadway and Forty-second street, has been denied by General Manager Ramsey. He admitted, however, that the store had been offered the Corporation.

It is said that the rental of the large store is \$50,000 a year, a figure prohibitive even for the largest firms. In the published advertisements of the Times Building agents, the statement is made that several applications have been entered for space by druggists. Since the Corporation considers the rental as beyond all reason, other druggists will doubtless also "view with alarm" any similar venture.

MENACED WITH LIBEL SUIT.

Syracuse, Feb. 19.—Dr. Elmer E. Keeler, of this city, has received a letter from a manufacturer of proprietary medicines, threatening to sue him for libel unless he makes a retraction of an article which he published in The Clinic, a medical journal published in this city. Dr. Keeler claimed that the medicine was composed mostly of whiskey and opium and published an analysis of it. Dr. Keeler says the company will not carry out its threat and wants some free advertising. He says he will stand by the analysis as published.

The saloon man had advertised for a bartender. "Salary?" queried the boss. The applicant gazed at the cash register. "Twenty-five dollars a week flat, or fifteen dollars and the run of the register," he answered.

N. Y. DRUGGISTS ARE HONEST.

Board of Ph. Report as Basis for Newspaper Article.

Another "substitution and adulteration" story, it is probable, will shortly appear in the daily newspapers, but this time the druggists' side of the question will be given. It will be founded on the annual report of the State Board of Pharmacy Adulteration Committee, of which Dr. George C. Diekmann is chairman.

The report shows that only about twelve per cent. of the samples collected during the year were found to be below standard. Realizing that this offered a splendid opportunity to vindicate the pharmacists of this city, Dr. Diekmann called the report to the attention of the Journal representative who wrote the previous story, and he saw no objection to giving the druggists a chance to state their case. The report follows:

"The collection of samples of drugs and medicines in the territory constituting the Eastern Branch has been continued as heretofore, with the following results:

"Twenty-one hundred and seventy-seven samples were collected; of these twenty-one hundred were analyzed and fifty-six are still in the hands of the chemist. In every instance a portion of the material purchased, placed in a sealed container, was left with the seller. Every violation was referred to the secretary of the Eastern Branch for further action."

SUMMARY:

	Exam-ined.	Stand-ard.	Not Stand-ard.
Tincture of Iodine	491	437	54
Spirit of camphor	400	369	31
Soap Liniment	346	295	46
Camphor Liniment	376	313	63
Camphor Liniment	376	313	63
Tincture of arnica	92	83	9
Tincture of benzoin	53	52	1
Cream of tartar	49	41	8
Carbolic acid	24	23	1
Mercurial ointment	29	26	3
Cod liver oil	2	2	0
Tincture of opium	47	34	13
Tincture of nux vomica	26	22	4
Solution of magnesium citrate	13	1	12
Pepsin	2	1	1
Bay rum	17	14	3
Zinc ointment	12	12	0
Creosote	18	15	0
Solution of hydrogen dioxide	2	2	0
Extract of vanilla	4	4	0
Extract of lemon	4	4	0
Essence of peppermint	7	7	0
Sodium bicarbonate	1	1	0
Totals	2121	1853	268

"Per cent. of deficient samples, 12.63. Total number of samples containing wood alcohol, 117, or 5.51 per cent. of total number collected."

Several important facts in regard to this record were pointed out by Dr. Diekmann. Crude carbolic acid, for instance, it was believed, was being substituted for creosote; but not a single one of the eighteen samples analyzed was found to be of that character. The collection of samples of carbolic acid was stopped soon after the

enactment of the Board of Health ordinance.

"Because," said Dr. Diekmann, "if a pharmacist sold us a five per cent. solution he would be violating the Pharmacy Law, while if he sold it of full strength he would be fracturing the city ordinance. It was a ticklish position for the druggist and to take advantage of it was manifestly unfair."

It is also noteworthy that most of the samples of adulterated cream of tartar were collected from grocers.

In order to set the pharmacists right with the medical profession, Dr. Diekmann will prepare an article for one of the medical journals, based on the above record. And in regard to other than U. S. P. preparations, Dr. Diekmann has this statement to make:

"I personally do not believe that pharmacists violate the law in reference to preparations and compounds or chemicals not official in the U. S. P., over which the Board of Pharmacy has no control, nearly so often as the distributors of such articles would lead the physicians and the general public to believe."

A. PH. A. COUNCIL NOTES.

The council by vote has provided for the following special committee on the drug exhibition, which is to be held during the next meeting of the association, at Atlantic City: Henry P. Hynson, Baltimore, Md.; John G. Godding, Boston, Mass.; W. C. Anderson, New York City; W. L. Cliffe, Philadelphia, Pa.; Louis Emanuel, Pittsburg, Pa.; Alfred DeLang, Cincinnati, O.; H. F. A. Spilker, St. Louis, Mo.; Eugene R. Selzer, Cleveland, O.; F. S. Hereth, Chicago; Joseph Helfman, Detroit, Mich.; F. C. Godbold, New Orleans, La.; George F. Payne, Atlanta, Ga.; T. A. Miller, Richmond, Va.; F. C. Henry, Washington, D. C.; John A. Davis, Baltimore, Md.

The entertainment programme has been referred to the sub-committee, consisting of the general and local secretaries, and the secretary of the council. Geo. F. Payne, of Atlanta, in discussing the programme for the meeting, said he thought that "a half-day trip out to sea far enough to reach any accessible deep sea fishing would be very attractive and entertaining."

Chairman Beal, of the council, has appointed the following committee to prepare suitable resolutions upon the death of the late Dr. F. Hoffmann: Edward Kremers, H. M. Whelpley and C. Lewis Diehl.

Fourteen journals have requested the secretary to furnish them regularly with council correspondence.

The supply of blank parchment certificates for members is exhausted and a resolution has been introduced for a special appropriation of \$225 to defray the cost of 200 new certificates and the expense of changing the plate to conform with the changed method of electing new members, and, also, for engraving certificates for the ensuing year. In accordance with the recommendation of President Hopp, the chairman of the council has moved that the president of the association be authorized to appoint a special committee on publicly to act until the Atlantic City meeting, and to report upon a plan for organization work.

Seven new applicants have been invited to complete their membership.

WILL NOT AFFILIATE.

Manhattan Ph. A. Finally Decides Its Attitude Toward N. A. R. D.

HEARTY INDOORSEMENT WITH RECOMMENDATION TO MEMBERS TO JOIN, EXPRESSES THE SENTIMENTS OF THE SOCIETY.—REPORT OF CONFERENCE COMMITTEE ON THE DISTRICT PLAN OF ORGANIZATION.

The Manhattan Ph. A. has finally and definitely decided not to affiliate as a body with the N. A. R. D. This action was taken at a poorly attended meeting on Monday night, and after a short, but vigorous discussion, J. B. Doble approved the course the association had taken.

Mr. Searles set the ball rolling by giving a detailed report of the N. A. R. D. joint conference committee, with the decision to organize a central branch of the N. A. R. D. under the district plan. He believed the association should affiliate.

"If the Manhattan Association joins the N. A. R. D.," said Mr. Searles, "we give it our moral support without incurring any financial obligations."

Mr. Swann did not believe the association should affiliate. In support of his argument he cited the statistics as to the percentage of association members who had joined. "Affiliation as a body is a farce," declared Mr. Diner, who thought that the special committee had now done its work and should be discharged. Mr. Swann, however, pointed out that this would leave the association without any representation in the sub-committee.

Then the resolution laid over from the previous meeting, that the association affiliate as a body under the terms of the conference, was taken up. It was promptly and vigorously opposed by Mr. Hitchcock.

"I believe that we have gone as far as is necessary in recommending our members to join as individuals, and I think that is sufficient," he declared.

"There is absolutely nothing to be gained by joining as a body," said Mr. Diner. "Let the matter stay where it was, individual recommendation."

Mr. Emeling said that under the district plan it was unnecessary to affiliate.

DEBATE ON AFFILIATION.

The cudgels in favor of affiliation were taken up by Mr. Searles, who believed it was a positive benefit to the association to be represented in the councils of the N. A. R. D., in addition to the representation under the district plan.

"What does the Manhattan Association want with the N. A. R. D., a purely business organization?" demanded Mr. Swann. The motion was then put and almost unanimously lost. Mr. Searles cast the only affirmative vote.

Mr. Swann gave the information that a department store was about to establish a prescription department, but this was judged outside the province of the association.

Mr. Hitchcock spoke strongly on the N. A. R. D. question. He believed that the affiliation of bodies should be done away with entirely, although he reiterated his loyalty to the national organization.

J. B. Doble expressed himself as pleased

at the association's action in refusing to affiliate. He pointed out that internal contentions might arise in affiliated associations.

In spite of the unusual difficulties here, he said, the work in New York City had met with unexpected success.

"We have the jobber keeping his eyes open to-day that he doesn't make any mistakes. The big druggists all have signed the Peruna contracts, and I was informed to-day that some had already advanced prices. All they are waiting for is the mass of the retailers." He deplored the ignorance of the retailers, as a body, wherever N. A. R. D. work was concerned.

THE ROUTINE BUSINESS.

A quorum was not obtained until 10.15, when Messrs. Bigelow, Dickman and Weinstein were recruited from the Board of Pharmacy meeting. Treasurer Hitchcock reported a balance on hand of \$277.10. Secretary Swann stated that between forty and fifty members of the association who had written to Senators Platt and Depew in regard to the Mann bill, had received replies. A letter from Dr. Alpers was read, advising the association that the Board of Pharmacy had dropped its case against Gray B. Sullivan.

President Collins stated that Mr. Fringle had contracted with a firm for some jewelry, but had declined to sign any notes, because the company had not supplied him with a case to display the goods, as promised. The company thereupon claimed \$100 damages and threatened to sue Mr. Fringle, who inquired whether his case could be taken up by the Legal Defense Committee. Mr. Pond confessed that he had entered into a similar contract, but had returned the jewelry because it looked too cheap. He had placed the matter in the hands of his lawyer.

In this connection Mr. Swann read a letter from the Washington R. D. A., complaining of similar troubles. After some discussion, the matter was referred to the Legal Defense Committee.

For the Legislative Committee, Mr. Scaries reported on several bills which had been introduced at Albany. Assembly bill No. 20 is intended to restrict the sale of cocaine and was commended. Other bills are, one requiring the labelling of proprietary medicines, and the wood alcohol measures. That which requires the retailer to make monthly reports of his sales and to pay on these a tax of thirty-three and one-third per cent., was condemned in strong terms. The customary check for \$50 was drawn for the use of the committee.

Resignations were read from L. A. Hassel and Frederick Kleinschmidt. A communication from L. Spingarn was read, complaining of injustice on the part of the Board of Pharmacy in imposing a fine of \$25 for alleged non-standard citrate of magnesia. The case was referred to the Legal Defense Committee.

Dr. H. H. Rusby sent an interesting letter on the subject of the Manhattan Scholarship. He stated that the entrance fee had been raised to \$325, and that the new system of courses might give rise to complications, by which the association would have to pay more money to maintain its scholarship. Mr. Scaries thought it advisable not to cite the beneficiary of the option of taking the post-graduate course.

The whole system of courses was explained by Mr. Erh. On motion of Mr. Hitchcock, the matter was laid over and Mr. Erh was requested to get from Mr. Rusby in the meantime any further information, that might be necessary.

Another communication was read from Frank E. Campbell, undertaker, offering to issue benefit burial certificates to every member of the association. This offer was placed before the members for acceptance.

NEW YORK NOTES.

—Fire in the acid factory of Thomas Keery, at Hazel, Sullivan County, resulted in the total destruction of the building and a loss of \$10,000.

—A petition in bankruptcy has been filed against the Laxakola Company, manufacturers of patent medicines at 182 William street. William Lesser, of 220 Broadway, has been appointed receiver. The company was incorporated in 1900, under the laws of West Virginia, with a capital of \$3,000,000. The assets, it is said, will not exceed \$2,000.

—Miss Katherine C. Mahegin, a graduate of the New York C. P., has resigned from the Vincent Pharmacy, in Brooklyn, and will shortly open a store in the Amphion Theatre building. The Vincent Pharmacy, at 139 Broadway, has been sold to Tripp & Braswell.

—General Manager Swift, of Parke, Davis & Co., is in town for a short stay. C. E. Dodd, South American representative, arrived here on Monday, after a long trip.

—Lewis H. Hoogland has become the sole owner of the Van Deursen Pharmacy, at George and Paterson streets, New Brunswick, N. J. He began as a clerk for the late John Van Deursen, eighteen years ago, and has been manager since Mr. Van Deursen's death, five years ago.

—Seen down town: Clarence C. Leadbeater, of J. E. Leadbeater's Sons, Alexandria, Va.; E. K. Hoge, of Martin's Ferry, O.; Mr. and Mrs. A. Z. Wright, of Auburn, N. Y.

—By an explosion in the Brooklyn Sulphur Works, at 624 Kent avenue, Williamsburg, eight men were badly injured and \$15,000 damage was done. The fumes of the burning sulphur made the work very difficult for the firemen, eleven of whom were overcome.

—The Knickerbocker Drug Co., of 648 Broadway, this city, it is said, contemplates a removal to the southeast corner of Broadway and Bleecker street. This would bring the store opposite to the new Scherick branch store, on the northwest corner. Dr. Stein, of the Knickerbocker Drug Co., would not affirm the rumor.

—Miss Veronica L. Jenkins was married on Tuesday evening, February 14, to Mr. William Morlath, a well-known druggist of this city. Miss Jenkins was for several years cashier for J. N. Hegeman & Co., and upon the removal of that firm's Thirtieth street store, she accepted a similar position with Dr. Alpers.

—W. A. Vogel died on the 11th of this month, in the New York Hospital. Mr. Vogel was formerly in business in New Orleans and New York, and later in South Norwalk, Conn., where he was succeeded by W. C. Bauer. Since retiring from business, he resided in South Norwalk during the summer, and in New York in winter.

ARGUES FOR PAY 'PHONES

Example of Detroit Cited to the Syracuse Trade.

Syracuse, Feb. 20.—A renewed effort will be made to have the druggists introduce pay telephones in their drug stores. The project was started some time ago, but owing to lack of interest, the matter was dropped. Of late, however, a sentiment has been gaining ground that they should be installed and Dr. A. W. Beach intends to canvass the druggists and see if enough can be found in favor of it to go ahead. Dr. Beach has received the following letter from Detroit:

"A recent issue of The Era informs me concerning the proposed introduction of pay 'phones into the pharmacies of your city. In this connection our experience may interest you. For many years Detroit pharmacists suffered the intolerable nuisance of free 'phones. Finally the company proposed to install pay instruments and invited the association to send a committee to Cleveland to investigate the system in use there. The report of the committee was unanimously favorable to its adoption in Detroit. The report was accepted and pay 'phones were installed in every store, with two or three exceptions. Under this plan the price is five cents, the druggists receiving 40 per cent. commission. By way of concession people are permitted to call a doctor free of charge, also fire, police and messenger.

A great many of the pharmacists have their own private 'phones, which are practically paid for out of the receipts from the pay 'phones. There was just a little acrimonious talk at first, but now no one would for a minute consider going back to the old regime. In fact, we would feel that our business interests demanded a private 'phone. If the pharmacists in your city should decide to install pay 'phones they should never regret it."

Dr. Beach has installed a pay 'phone in his own store, and says he takes in more than enough to pay the rental without any trouble whatever. He says if the druggists once put them in they will never take them out.

FRANKLIN P. CROBAUGH.

Syracuse, Feb. 20.—Franklin P. Crobaugh, who recently died at Seneca Falls, was well known to all the druggists of Central New York. In 1886 he became a partner in the drug business of J. J. Marsden, at Seneca Falls, and since 1902 he had conducted the business alone. He was fifty-one years old and was born at Penn Yan. He was a member of the Wheelmen's Club, Seneca Lodge Masons, Geneva Commandery and Damascus Temple. He was buried in Maple Grove Cemetery with Masonic honors.

BEWARE OF THE SALVE MAN.

Syracuse, Feb. 20.—Here is a swindling scheme that has recently been worked. A man leaves a box of salve at a house with the understanding that if it is used he will collect fifty cents. After a few days another man calls and if the box has not been used he will take it away. A little later the original salve man will call and will demand the goods or the money. When told that another man has the goods he

will simulate anger and to get rid of him the price will be handed over. The pair are confederates and the police are after them.

DR. CHARLES DENNIN.

Dr. Charles Dennin, one of the veteran druggists of Brooklyn, died last Sunday, at his home, Court street and First place, in his sixty-first year. During the Civil War Dr. Dennin was apothecary on a government boat, the Ocean Queen. He established his drug store in South Brooklyn in 1865. He was one of the founders of the Brooklyn College of Pharmacy and the Kings County Ph. S.

DRUG SECTION, BOARD OF TRADE.

The Drug Trade Section of the New York Board of Trade and Transportation held its regular monthly meeting last Thursday. There was considerable discussion of bills which had been introduced in the legislature, affecting the drug and chemical trade. Some of these measures were described as of a most drastic character. They were referred to the Committee on Legislation.

The following committees were appointed for the ensuing year:

Standing (Executive) Committee.—Thos. P. Cook of N. Y. Quinine and Chemical Works; Jesse L. Hopkins, of J. L. Hopkins & Co.; Albert Plaut of Lehn & Fink; Wm. S. Gray, of Wm. S. Gray & Co.; John Anderson of Chas. Pfizer & Co.

Committee on Membership.—John L. Snowber, of Elmer & Amend; Edward J. Young, Jr., of Thurston & Braidich; Emil Leo, of F. F. Roehlinger & Soehne; H. S. Chatfield, of Rogers & Pyatt, inc.; E. S. Woodward, of E. Fougere & Co.

Committee on Legislation.—John M. Pathe, of Pathe, Watson & Co.; Thos. P. Maté, of the Tarrant Co.; Dr. Hugo Schweitzer, of Farbenfabriken of Elberfeld Co.; F. M. Harrison, of James A. Webb & Sons; T. J. Parker, of General Chemical Co.

Committee on Arbitration.—Herbert B. Harding, of Humphrey's Homeopathic Medicine Co.; H. Sheraton, of Coffin, Redington & Co.; Jas. B. Horner; Geo. M. Olcott, of Dodge & Olcott; E. W. Fitch, of Parke, Davis & Co.

Committee of Jobbing Druggists.—Wm. P. Richey, of Bruen, Richey & Co., Chairman, and one representative from each jobbing house in the drug trade section.

Committee of Importers of Drugs and Chemicals.—John H. Stallman, of Stallman & Fulton Co.; Jos. A. Velsor, of Peck & Velsor; George Merck, of Merck & Co.; Herman A. Metz, of H. A. Metz & Co.; H. J. Braker, of H. J. Braker & Bro.

Committee of Manufacturing Chemists.—Philip S. Tilden, of Franklin H. Kallberg & Co.; H. T. Jarrett, of Jarrett Chemical Works; Dr. Martin Waldstein of Maas & Waldstein; Robt. McClain, of Grassell Chemical Co.; John T. Barry, of D. C. Williams & Co.

Committee of Manufacturing Pharmacists.—Ernest Stauffen of Sharp & Dohme; S. W. Fairchild, of Fairchild Bros. & Foster; Jas. H. Hutchins, of Fraser Tablet Co.; Irving McKesson, of McKesson & Robbins; Clarence G. Stone, of Lambert Pharmaceutical Co.

Committee of Importers of Essential Oils.—Arthur A. Stillwell; Wm. B. Robeson of Antoine Chrlis, Carl Brucker of Frische Bros.

Committee of Manufacturing Perfumers.—Gilbert Colgate, of Colgate & Co.; Henry Dalley, of Lazell, Dalley & Co.; Edward P. Montague, of Ladd & Coffin.

ENGLISH FIRM WINS AWARD.

A Grand Prix (Highest Award) has been conferred upon Burroughs, Wellcome & Co., for the pharmaceutical and other fine products exhibited by them at the Cape Town International Industrial Exhibition.

PHARMACY BILL KILLED.

Certificate of Fitness Not Needed for License in Massachusetts.

Boston, Feb. 20.—The Massachusetts House last week reversed its action on the bill to abolish the provision of law which requires druggists to obtain a certificate of fitness from the State Board of Pharmacy, in addition to a sixth class license from local authorities in order to set in quor. Tuesday the House ordered the bill to a third reading, with two votes to spare. Then it was killed in the engrossment stage.

Mr. Luce, of Somerville, took the position that its passage meant placing in competition with men who pay \$1,000 for a license, men who will pay but \$1. He contended that the certificate now required was a wise safeguard.

Mr. Howe, of Boston, said that only two men, formerly druggists, appeared in favor of the bill before the Committee on Public Health, while two pharmacists' associations appeared in opposition.

Mr. Moore, of Boston, wanted to know if the gentleman from Boston (Mr. Howe) had not been refused a certificate of fitness by the Board last year. Mr. Howe admitted the fact, but stated that when the matter had been explained to the Board, the certificate had been granted.

On a rising vote of 76 to 91, the House refused to pass the bill to be engrossed. A roll call was ordered, which resulted in the defeat of the bill by a vote of 81 yeas to 97 nays.

Not in a long while has any bill so engaged the attention of druggists, and there was a large attendance and lively discussion. Those favoring the bill felt that the issuing of licenses should be vested in local authorities everywhere, without any jurisdiction on the part of the Pharmacy Board. The druggists present and having a voice in the hearing, said that they, as a trade, were not in fear of the Board, but felt that body's supervision of pharmacies to be in the line of law and order and decency. Almost to a man the druggists opposed the bill.

Several druggists who are members of the House spoke strongly against the passage of the proposed bill, saying that present conditions are wisest and work to the best interests of any community; that reputable druggists intend to abide by the law and not violate it; that should they do so the Board of Pharmacy, far better than any local authorities, can determine regarding such violation and the penalty therefor. Some druggists may perhaps violate the rules of their licenses after securing these, but the Board soon gets after them, and in the first instance the Board makes it practically impossible for men who pretend to be druggists and who are not, to open alleged pharmacies and then conduct the places as bar rooms in reality. Herein comes the benefit of "certificate of fitness" showing the druggist to be registered as a pharmacist and at least able and fitted to conduct a legitimate drug business.

FORMULA CAMPAIGN IN BOSTON

Boston, Feb. 21.—The Committee on Health has held a hearing regarding a bill which requires the publication of formulas

on labels of proprietary medicines. The petition is brought by Mrs. Julia Ward Howe. The Woman's Christian Temperance Union and other organizations appeared to urge the need of the bill and many physicians spoke in its favor.

W. W. Bartlett, counsel for the Massachusetts State Pharmaceutical Association, and Amos K. Tilden, long the secretary of the State Board of Pharmacy, were against its passage.

BAY STATE NOTES.

—Frank S. Ireble, the Haverhill druggist who pleaded guilty to a charge of violation of the liquor law in selling liquor to a girl only twelve years of age, has paid a fine of \$50.

—There is some chance that the office of city pharmacist in Lawrence may be abolished. It remains for the overseers of the poor of that city to determine this, yet experience has shown that the department, under Pharmacist Edward L. Parrett, has been conducted at a great saving to the city, and as he is much liked and there is no opposition to him personally, he will be reappointed for three years if the office is not abolished. He has already served for a term of three years.

—George L. Roskell, of Boston, is out with the announcement that he has disposed of his interest in the E. L. Patch Co. This includes his resignation as a director and vice-president. Mr. Roskell has been in bad health of late, and this is the reason for his withdrawal.

—The Worcester South Division of the Worcester Association of Retail Druggists, taking in Southbridge, Webster, Leicester, etc., has had its annual business meeting, at which these officers were elected; President, B. W. Patton, of Southbridge; vice-president, C. S. Campbell, of Webster; secretary and treasurer, George Shepard, of Southbridge.

—Justin Bartlett, owner of a drug store in Chelsea, is now member-at-large of the Board of Aldermen of that city. Formerly he was connected with Dodge's Drug Store in the Maplewood section of Malden.

—In the fight in Boston to obtain eighty cent gas, through legislative help, several of the druggists have come out strongly in favor of the project, among them Silas R. McVey, whose pharmacy is in the East Boston district; C. W. Crocker, also a druggist of that same section, and John J. Fraser, another of the island ward pharmacists.

—Justin Whitney, for many years a well-known Boston druggist, has died at his home in the Roxbury district of the city, at the age of almost seventy-four years. He had his pharmacy at the South End, an old-fashioned apothecary shop.

CONNECTICUT ITEMS.

—The store of the late C. B. Brooks, of Derby, is to be sold at auction.

—The unsold stock of S. F. Stevens & Co. has been bought at public auction by John H. Clappett.

NAMED TO VERMONT BOARD.

Rutland, Vt., Feb. 18.—Gov. C. J. Bell has appointed H. R. Warner, of Vergennes, a member of the State Board of Pharmacy to fill the vacancy caused by the death of A. W. Higglus, of this city.

CONTRACT PLAN THE ISSUE.**Suit Brought by Miles People Means Much in Pittsburg.**

Pittsburg, Feb. 18.—An action brought by the Miles Co., against the May Drug Co., to restrain the defendant company from selling Miles Remedies at bargain prices, and from preventing the corrupting of its agents, has aroused great interest among the local druggists.

The action was brought before Judge McFarlane, who issued a temporary injunction after the preliminary testimony was heard. A final decision will be rendered by the court some time next week, it is expected. The decision is awaited with keen interest, as on it depends much of the success of the direct contract system. In the petition submitted to the court, the Miles interests set forth that the May Drug Co. were cutting the prices on drugs known as "Miles Remedies." It further averred that the defendant company secured the medicines through its agent, the Sebring Drug Co., of Ohio. The latter had been instructed not to sell to any firm that failed to maintain prices.

Testimony was heard by the court regarding what effect the cutting of a medicine would have on it. The Miles representatives declared that the reputation of the medicine was injured, and that the sales were lessened, because the dealer was inclined to recommend a substitute on which the profits were greater.

Louis Emanuel and John Thompson, recognized in local drug circles as authorities, testified that the allegation of the plaintiff was correct. The tendency was to recommend articles upon which the profits were greater.

Joseph Fleming & Sons sold the same remedies at cut prices, but they were not mentioned in the petition. It is said that the Flemings are willing to abide by the direct contract prices, if the May people agree to it. It is hoped that through the decision of the court the cutting will be abolished.

NEXT P. A. R. D. MUSICALE.

Philadelphia, Feb. 20.—The attendance at the musicale and dance to be given by the P. A. R. D., on the evening of March 7, will probably number between 600 and 800 persons. Mercantile Hall has been taken for the occasion, and judging by the musical talent already engaged, there will be little room for late comers. Without intending to do so, the committee in charge of the "Kaffeeklatsch" two weeks ago, found itself with a nice balance in hand, which was turned over to the association; and next month, as the result of the committee's efforts in behalf of the musicale, it is hoped that a much larger sum will be turned over. The souvenir program which is now in the hands of the printer will be no small feature of the occasion.

WORKING FOR PURE FOOD LAW

Pittsburg, Feb. 20.—B. E. Pritchard, secretary of the Western Pennsylvania A. R. D., and W. G. Richardson, of New Castle, appeared before the Senate committee and argued in behalf of the Pure Food law. It is anticipated that this bill will become

a law. James M. Esler, a former druggist of Tarentum, Pa., is the author of the bill, and has done some energetic work for its passage.

COCAINE EVIL AND SERVANTS.

Baltimore, Feb. 11.—The cocaine evil continues to occupy the attention of persons interested in the promotion of public morality and in the diminution of crime and pauperism. Judge Motter, in opening the February term of court in Frederick, Md., made a forceful charge to the jury on the illegal sale of cocaine. The drug, it is said, is not being dispensed by pharmacists, but is brought to the town and sold by other persons, who have numerous calls. A young negro was found unconscious in the street recently, and died the next morning. He was a confirmed user of the drug, and his death was caused by it. The habit is having a startling effect upon the servant girl question, it being almost impossible to get domestics because of the prevalence of the habit.

MARYLAND PH. A. RECORDS.

Baltimore, Feb. 13.—In the records of proceedings of the Maryland Pharmaceutical Association there are several breaks. The minutes of the annual meetings of 1887, 1888, 1889, 1891, 1893 and 1894 are wanting. Until last year those of the meeting of 1886 were also missing, but in that year they were found among some old papers, and it was decided at the Ocean City gathering to publish them. They have now made their appearance in attractive pamphlet form and constitute a valuable addition to the available data on pharmaceutical matters in this State. The work of publication was under the direction of a special historical committee, consisting of John F. Hancock, Louis Schulze and Henry P. Hynson.

BALTIMORE NOTES.

—One of the first of the druggists burnt out in the great fire to get back into his old location, is A. O. Brickman, manager of the Habliston-Brickman Pharmacy, on the northeast corner of Baltimore and Gay streets. The building there is rapidly nearing completion.

—The warehouse built for Muth Bros. & Co., South Charles street, is practically ready for occupancy. It is thought that the firm will be installed by March 1.

CARBOLIC ACID IN OHIO.

Cincinnati, Feb. 20.—The O. Val. D. A. will be given another opportunity to draft a carbolic acid ordinance. The one drawn on their previous suggestions has been returned by the City Council. According to an opinion given by the City Solicitor, Council has no specific authority to regulate the sale of drugs, nor is the selling of any drug of itself a misdemeanor or crime. He advises that if possible another ordinance, and one more likely to stand the test of the courts, be passed.

"I hear Smith, the successful druggist, has failed." "Yes, it's sad, but true. Spent so much time telling how he became successful, that his business got away from him."

REGISTERED IN NEW JERSEY.

Bridgeton, N. J., Feb. 18.—Secretary Henry A. Jordan, of the State Board of Pharmacy, announces the following as having passed in the January examination:

Registered Pharmacists.—Axel William Anderson, Perth Amboy; Filippo Castrataro, New York; John X. Douglass, Philadelphia; John Simmonds Davis, Atlantic City; Wallace Ross Fessler, Long Branch; Frank Joseph Freda, Newark; Horace Ware Given, Camden; Edward Gorodetzky, New York; William A. Gammell, Phillipsburg; Harry H. Hammel, Newark; Christian Bauer Kyle, Middletown, Pa.; Elias A. Kamenetzky, New York; Thomas Milton Lepard, Passaic; William A. McDonald, New York; Talmagh C. Post, Paterson; Moses Strauss, Newark; Edward Sweeting, Manasquan; Hannah Willson Siffer, Philadelphia; William J. Steigler, Paterson; Archie L. Tufts, New York; Henry Lewis Wagnener, Brooklyn; Harry D. Wilkinson, Moorestown; Abraham Zingher, New York.

Registered Assistants.—Morris E. Berkowitz, Brooklyn; Alfred W. Dunaven, Plainfield; Eli S. Keyser, Philadelphia; Alfred E. Onkes, Elizabeth; John C. Plemenik, Elizabeth; Charles Anton Reibel, Elizabeth; Edwin Quinn Thayer, Philadelphia; Dann L. Wood, Summit; Edward H. Hartnett, Jersey City.

The next examination will be held in Trenton, April 20 and 21.

MAD DOG SCARE IN CAMDEN.

Camden, N. J., Feb. 13.—The drug store of Dr. F. J. Vickers, at 1701 Fillmore avenue, looked like the accident ward of a hospital, on Thursday last, when six little boys and girls, all the victims of a supposed mad dog, were lined up for treatment. Among the number was the druggist's six-year-old son Carl. The children were on their way home from school when the dog, a small fox-terrier, ran among them, snapping right and left. Two men who ran to the rescue, were also bitten before the animal could be driven off and killed. Dr. Vickers hurried all the children into his store and there cauterized the wounds, which, thanks to heavy clothing, were only slight.

INDIANA NOTES.

—The Retail Druggists' Association, of South Bend, met at the Commercial-Athletic Club, and elected the following officers for the ensuing year: President, F. W. Warren, of New Carlisle; vice-president, E. A. Schliefe; secretary, Henry Spohn; treasurer, Paul Walters.

—The illegal sale of whiskey will prove costly to three druggists of Vandalia if all of the counts in information filed in this city this week by prosecuting Attorney H. L. Buckley are proven. Arthur Roberts will face two charges, V. L. Brashears nineteen and Joe Sisk fifty-three. All have given bond for their appearance in court in January.

"The technical authorities indicate that the dextrin of commerce is not necessarily chemical dextrin," citing Thorpe's Dictionary of Applied Chemistry and Watts' Dictionary of Chemistry.

EXAMINED IN KENTUCKY.

Louisville, Feb. 20.—At the meeting of the State Board of Pharmacy, held in Covington, January 10, a class of thirty-one was examined. The following passed: Milton D. Allen, Ashland; E. L. Barton, Norwood, O.; A. Benjamin, Newport; John W. Boswell, Lexington; N. H. Davis, Hardin; W. C. Fraile, Ashland; R. A. Gordon, Covington; J. S. Greenwood, Dayton; John H. Hugg, Louisville; A. S. Hulskamp, Louisville; Geo. G. Russ, Shelbyville; C. T. Meiburn, Harrodsburg; Thos. W. Mills, Lebanon; R. A. Nelson, Benton; W. H. Foyner, London; L. W. Sauer, Cincinnati; Geo. F. Stockton, Albany; A. H. Vossmeier, Newport; R. M. Willis, Louisville; E. F. Willson, Greensburg; Geo. F. Feid, Cincinnati.

The next meeting will be held April 11, in Louisville. Those intending to appear for examination should file application at least ten days before that time with the Secretary of the Board, J. W. Gayle, Frankfurt.

KENTUCKY NOTES.

—Harting & Browning, of Lexington, will build a three-story modern drug store at the southwest corner of Mill and Short streets directly opposite their present site. The new brick and stone building will be modeled especially for a drug store.

—Dr. J. W. Robb, sixty-four years old, died in Woodburn, Ky., February 6. He had been in the drug business in that city for the past forty years.

—Oliver H. Stratton, druggist, lawyer and politician, 78 years old, died at his home in Louisville, after an illness of a month. He was born in Jennings County, Ind., in 1827 and came to Louisville in 1849, engaging in the drug business. He later studied law and entered politics, yet retaining his interest in the drug business.

—Dr. M. G. Milan, one of the best known druggists in Western Kentucky, died at his home in Paducah, February 9, of paralysis. He was a native of South Carolina.

FROM THE SOUTH.

—The Retail Drug Clerks' Association of Louisiana has elected the following officers for this year: President, E. H. Dast; first vice-president, E. D. Heineman; second vice-president, F. T. Mouton; secretary, Arnold Troxler; treasurer, E. Koecker; grand marshal, G. Paquette; sergeant-at-arms, William Wendt.

—The Hutchinson-Cotter Drug Company, of Tampa, Fla., has purchased the business of the Morton Drug Company, the largest retail drug store in Florida.

ALL THE WAY FROM TEXAS.

—The Dunlap Drug Company held its first annual meeting and elected W. B. Dunlap, president; Chas. Stroock, vice-president; W. C. Wiley, secretary and treasurer. These three constitute the directory. In addition to their retail trade they will do a jobbing business later on.

SUES FOR A GRAND PRIZE.

St. Louis, Feb. 21.—The Borden Condensed Milk Co., of New Jersey, has secured a temporary injunction through the United States Circuit Court, sitting in

St. Louis, to restrain the Louisiana Purchase Co. from delivering to the Horlick Malted Milk Co., of Racine, Wis., a grand prize, which the Borden Company alleges was first awarded to the complaining company. The company will try to have the injunction made permanent and the methods of award reviewed and the original awards adhered to.

According to the pleadings, the Borden Company allege that a grand prize was awarded that company by the jury for group S5, to which their exhibit of malted milk had been assigned. Notice of the award was given the company through the Exposition president, with a request that the news be withheld from the public until October 15. Later the exhibit was ordered moved to group S7, though over protest, and here it was examined and awarded a silver medal, while the Horlick product, examined by a different jury, was awarded the grand prize.

The Borden Company carried their appeal to the national commission and to the grand jury, but assert in their pleadings that they did not secure a satisfactory hearing.

JAMES RICHARDSON A SUICIDE.

St. Louis, Feb. 16.—James Richardson, a son of James Richardson, founder of the once successful Richardson Drug Co., shot himself here yesterday. At the time of his death he was vice-president of the J. H. McLean Medicine Co. Financial difficulties through a wheat speculation are believed to have caused his act.

Mr. Richardson was formerly connected with the drug business of his father and has always been closely associated with the drug trade of St. Louis. His son, James Richardson, known as James Richardson III, is connected with the only remaining branch of the Richardson Drug Co., which is at Omaha.

ARE DROPPING "TRUST" CIGARS.

St. Louis, Feb. 18.—Druggists of St. Louis and vicinity are letting their lines of "trust" cigars run out. Recently there has been a less strenuous advertising campaign for "trust" goods in this vicinity, and the druggists have welcomed the opportunity to step from under. Some of the druggists are pushing other advertised cigars.

ENTERTAINING A BRIGAND.

Milwaukee, Feb. 18.—James J. Hasenmiller, a druggist at 680 Seventh street, took desperate chances against a hold-up man a few days ago, and came out with a whole skin and a full purse. He was back of his prescription case at work and alone in the store, when a young man entered. The stranger walked back to the window in front of the prescription case and thrust a pistol in the face of the astonished druggist.

"Make a move and you're a dead man," said the bandit in a cool voice. "Hand over your money and do it in a hurry." Mr. Hasenmiller dropped to the floor, and at the same time grabbed his own revolver that he always keeps lying in reach on the counter of the case. He was up in a moment at another place and plugging away at the bandit through the glass case. The bandit fled.

NO DRUGS IN GENERAL STORES.

Lincoln, Neb., Feb. 18.—The druggists of the State have defeated a measure to permit the sale of drugs in department and rural stores. The bill had been reported for indefinite postponement. This report was adopted. Senator Haller opposed the bill. He declared that it would lower the standard of pharmacy in the State and allow every dealer to dabble in drugs.

Senator Dimery maintained that the rural districts needed the bill. He said that in his district people had to travel ten miles in some cases to get to a drug store. Harmless drugs were to be handled and the State Board of Pharmacy, according to the provisions of the bill, could outline the list.

Senator Laverty, of Holt, declared that he lived in a district where settlers traveled forty miles to buy supplies. There was no demand for the bill in his section of the State.

Senator Dimery declared that the committee had not been exactly fair in the consideration of the bill. He said he merely wanted the State Board to give permission to grocers and others to sell such harmless drugs as sulphur, coppers, charcoal and niter.

"That's just where you fellows make a mistake," declared Senator Haller. "You don't know what is harmless and what is not. Do you call niter a harmless drug?"

SUED FOR A BIG SUM.

Council Bluffs, Iowa, Feb. 18.—The alleged mistake of a prescription clerk is responsible for an \$8,000 damage suit which is now pending in the district court of the county, in which Morgan & Dickey and Frank J. Ainsworth, their clerk, are made defendants. George L. Dewitt, said to be an employee of a motor company, alleges that he took a bottle to the drug store to be filled with a mixture the formula of which he had not obtained from a doctor, but which was pasted on the outside of the bottle, that the formula was not followed and that he was made sick as a result of taking the medicine.

RECENT STATE COMPETITION.

Oshkosh, Wis., Feb. 27.—The druggists of the State are being called to arms by the manufacturing druggists to oppose the proposed laws providing for the manufacture of anti-toxin at the experimental station of the State university.

"This new doctor certainly is busy," thought the man who had waited his turn in the neat little reception room.

"Now, my man, what can I do for you?" asked the physician a few moments later, as he glanced searchingly at the prospective patient.

"Well, I dunno, doctor, what you can do. Guess it's more mental than physical. Things are going to smash. Worried. Can't sleep and all that."

The doctor nodded sympathetically. "We'll fix that, my man. What you want is a change of scene. Half your ills are imaginary. I write very few prescriptions. Too much medicine isn't good. Don't think about your troubles. Keep away from medicines. Here is a simple powder, Mr. —"

"I'm Jones, the druggist. I came to see if we couldn't fix things up; you were saying—?"

LAWS FOR BAD HABITS.

Cocaine Sniffing and Alcoholic Under Treatment in Minnesota.

STATE PH. A. STRIVES THROUGH RIGOROUS LEGISLATION TO DIMINISH HARM WORKED BY THE DRUG.—LIQUOR IN PATENT MEDICINES IS THE TARGET FOR A NEW LICENSE BILL.—PENALTIES HEAVY.

St. Paul, Feb. 16.—Minnesota seems to be setting the pace for the Union in the matter of restricting the sale of cocaine. Some months ago one of the St. Paul daily papers began a crusade against the popular abuses in connection with this drug, and the result is embodied in a bill introduced in the legislature this week, by Representative W. B. Anderson, of Winona. It has practically the unanimous support of the Minnesota Ph. A. The bill is designed to prevent the sale, not only of cocaine, but of other drugs into which cocaine enters, to cocaine "fiends" and other victims of the drug habit. It is absolute in its prohibitory provisions. The fines collected for violations of the proposed law are to be turned over to the State Board of Pharmacy.

The Anderson bill prohibits the sale or gift of cocaine, hydrochlorate or any salts or composition of cocaine or preparations containing it, except on the written prescription of a physician or dentist. No prescription shall be used more than once and each shall bear the name and address of the patient to whom issued, and shall be preserved by the pharmacist, who is forbidden to give the patient a copy of the prescription. The act is declared not to apply to the wholesale sale of the drugs or their sale in original packages, but packages thus sold are required to be labeled in English, with a formula showing the proportion of cocaine contained in the preparation.

Doctors or dentists prescribing for habitual users of the drug are punishable by a fine of not less than \$50 nor more than \$100, or imprisonment for ninety days. If the offender is a druggist or a druggist's assistant, in addition to the penalty, his license shall be revoked. County attorneys are given authority to examine the books of wholesalers and manufacturers to determine all details of sales of the drug. The bill was referred to the committee on public health. Its enactment is regarded as certain, for agents of the State Ph. A. will be on hand to watch and expedite the bill through its various stages. Besides, it is of a nature to appeal to reformers and philanthropists generally.

Representative Gustav Erickson, of Canby, has introduced a bill in the legislature requiring druggists who sell compounds containing more than 20 per cent. of alcohol to secure a retail liquor dealer's license. The bill mentions stomach bitters, tonics, cordials and all patent medicines and provides that when containing more than 20 per cent. alcohol they shall be labeled with the exact percentage, whether or not the druggist offering them for sale has a liquor dealer's license. Violations are to be punished the same as are illegal sales of liquor. The chemist of the State Dairy and Food Commission is to analyze samples of such medicinal compounds and determine the alcoholic

percentage. The vendor can obtain from the commission the percentage shown by the analysis, which shall be printed plainly on a label attached to the package. The bill does not apply to medicines compounded from doctor's prescriptions.

Alcohol is very dear to the hearts of many of the large Scandinavian population of Minnesota, which includes the author of this bill. In sections remote from railroads, diluted alcohol is used habitually as a tipple by Swedes and Norwegians, and where ordinary intoxicating liquors are scarce and costly, cheap alcohol, with its multifarious possibilities, is esteemed a godsend.

FINED FOR BEER SALES.

Minneapolis, Feb. 18.—Harry Preston, clerk in the West Hotel Drug Store, owned by Fred Weinhold, was arrested on the 7th, by License Inspector Longfellow, charged with selling liquor without a license. A policeman said he caught Preston passing a bottle of beer over the counter to a young man. The accused pleaded not guilty. The next day, however, on his appearance in court, he changed his plea to guilty. Sentence was deferred one day, to enable the proprietor to explain to Judge Smith. Mr. Weinhold was on hand with his elucidation on the 9th. He testified that he had beer in the basement, but it was for his private use, and not for sale. A night clerk said he had sold beer on several occasions, but without the proprietor's knowledge. Preston deposed that he sold it to a messenger boy, at the request of the night clerk. The next day, it being shown that Preston had sold more bottles of beer than one to the messenger, he was fined \$75. His defense was that other clerks in the store informed him that he would be permitted to make such sales. Mr. Weinhold declared he had expressly forbidden the sale of his beer.

DRUGGIST SUES FOR LABEL.

St. Paul, Feb. 17.—G. W. Frostenson, the Volin, S. D., druggist, is out gunning for a newspaper, and threatens to start something in the line of libel suits. The Volin Times not long ago printed a story in which it charged the G. W. Frostenson Pharmacy with selling liquor to four young men attending the city schools, the boys all being drunk at school one day. Mr. Frostenson quietly got his testimony together, and by means of the manufacturers of the cider which was sold the boys, and also by the State pure food inspector, he proved there was nothing of an intoxicating nature in what he furnished the boys. A demand for a complete retraction is to be made. A Wakonda paper, through a Volin correspondent, is also in the tangle. The affair grew out of a strong W. C. T. U. movement. The great majority of Volinites, however, contend that Mr. Frostenson is a good citizen, and if anybody has aught to fear in this squabble, it is evidently not the drug man.

If you were a drug clerk and you had a divinity, an ideal, so to speak, and she asked you for a remedy for corns, some nitric acid for warts and some H₂O₂ for her Leslie Carter hair, would you still be idealistic or idealist?

CONSPIRACY SUIT OUT WEST.

California Druggist Seeks Damages Under the Sherman Law.

Los Angeles, Feb. 15.—Conspiracy, boycott, monopoly—such high crimes are charged here against the drug trade, in a damage suit for \$10,000 brought by the Sun Drug Co. The suit is brought under the Sherman Anti-Trust Law, and the defendants are: The F. W. Braun Company and the Western Wholesale Drug Company, of Los Angeles, and all druggists in Riverside other than the Sun Drug Company. The Riverside defendants named are: Hardman Drug Company, Heath & Morrison, F. A. Gardner & Co., Charles E. Week, Boyd Keith and James D. Sehrell.

The complaint charges that all of the other druggists in Riverside complained in unison to the National Association of Retail Druggists that the Sun Drug Company was cutting trust prices, and thereupon the Sun Drug Company was boycotted, and since has been unable to buy any goods at wholesale.

The Sun Drug Company claims, and offers to prove, that the defendants named, together with the National Association of Retail Druggists, the National Wholesale Druggists' Association and the Proprietary Association of America "control absolutely and in conjunction the output of drugs and druggists' supplies in the United States, and that they are co-conspirators in a plot to arbitrarily fix and maintain the prices of all drugs and druggists' supplies at figures in excess of market values, and to boycott all retail druggists who dare to sell below 'trust' prices."

The Sun Drug Company, according to the complaint, conducts five retail stores in Los Angeles, one in Riverside, one in Redlands and one in Pasadena; also maintains a supply house in Los Angeles from which its eight stores are supplied.

All of the Riverside druggists except the Sun Company are members of the National Association of Retail Druggists. The F. W. Braun Company and the Western Wholesale Drug Company are members of the National Wholesale Druggists' Association.

Responsive to the complaint of the Riverside druggists, the Sun Drug Company's name was placed on the cut-off list, October 1, 1904. Since then the Sun people have been unable to buy a pound of drugs or supplies, having been firmly and decisively "turned down" by the F. W. Braun Company, the Western Wholesale Drug Company and every other wholesale drug house on the Pacific coast from which attempts to buy were made. The refusal to sell was frankly based on the cut-off list. The latest refusal was on January 30, 1905.

The Sun Company, it is declared, was saved from ruin by the fact that its own supply house was well stored.

Damages in the sum of \$10,000 and costs are now claimed. Should a jury award this amount, the plaintiff will be entitled to recover \$30,000 from the defendants, according to the Sherman Law, allowing three times the amount of damages.

FIGHT PRESCRIPTION BILL.

Druggists of California Are Also Busy With Legislative Troubles.

Sacramento, Feb. 16.—Druggists throughout the State are organizing a determined campaign against Assembly bill 369, which prohibits them from compounding any medicine without a physician's prescription. The measure proposes to add the following new clause to the Penal Code:

"Any person, druggist, or pharmacist, other than a licensed physician, who prescribes, or compounds for, or furnishes to any person a medicine or drug, without a written prescription from a licensed physician, is guilty of a misdemeanor."

Members are being deluged with letters from druggists, asking them to vote against the bill. The argument is made that the effect of the bill would be to prevent a druggist prescribing for even a toothache, and it is asserted that the measure has been introduced in the interest of physicians.

"It will be necessary," writes one druggist, "for a person to call in a physician and pay him \$2 or \$2.50 before he can get a medicine for the most trifling indisposition."

PEDDLER OF THE SPURIOUS.

Leadville, Colo., Feb. 16.—A peddler of spurious synthetics which were really dangerous, made the rounds here recently, but the local druggists proved too sharp for him.

The drummer first came to notice when he approached J. C. Arthur St. James, clerk for the George E. Taylor Drug Company. He gave a name thought to be fictitious and mentioned that incidentally he was handling a certain patented drug, and such a price as the man offered if the stuff was pure would have meant a big profit. St. James promptly asked the man to let him taste the stuff and the latter agreed and broke the seal of a small package. St. James applied a test which proved the article greatly adulterated.

Next the stranger approached several other druggists, but St. James had sent out a warning and the stuff was not purchased. When he found that his game was discovered the man hurriedly left town and it is thought went to either Salt Lake City or Denver.

PHARMACY BOARD IN IDAHO.

Boise City, Idaho, Feb. 12.—A State Board of Pharmacy is to be established, according to a bill now before the Senate, which is certain to pass. The measure will provide not only for a State Board, but for the licensing of pharmacists and pharmacists' assistants and regulating the sale of drugs and poisons.

FAR WESTERN NOTES.

—B. C. Duffie, Los Angeles, is suing for \$10,000 damages, in Judge Conroy's court, the defendant being George B. Wilson, pharmacist at Sixth and Figueroa streets. The plaintiff declares the druggist sold him carbonate of potash for Epsom salts, and that the drug brought on a serious and protracted illness and almost caused his death.

AMONG THE COLLEGES

UNIVERSITY OF NOTRE DAME.

Notre Dame, Ind., Feb. 16.—The pharmacy department of this university is a comparatively new one, having been established about five years ago. The growth, however, has been very satisfactory, there now being fourteen students in the first year class, six in the second, and one in the third year class. Among the students are a few from our Spanish possessions. The degree of "graduate" was conferred on a class of five at the last commencement.

The school offers two courses in pharmacy, one of two years leading to the degree of "graduate in pharmacy," and one of three years leading to the degree of "pharmaceutical chemist." Applicants for admission to the short course must be eighteen years of age, and must pass an examination in the common English branches. For admission to the long course, the requirements are the same, except that an examination in Latin and algebra as far as logarithms must be passed.

The university maintains in the department a fully equipped drug store, the object being to give the student experience similar to that he would get in actual business. For instance, a second year student is placed in charge of the store. He is required to furnish supplies, order material, write business letters, invoice stock, etc., and at the end of a specified time he delivers the store in good order to his successor. Robert L. Green, Ph.G., professor of pharmacy and materia medica, is in charge of the school.

Notre Dame University, located about two miles from South Bend, Ind., was founded in 1842, by the Very Reverend Edward Sorin, superior-general of the Congregation of the Holy Cross. Two years later it was incorporated by the State. Besides the school of pharmacy, there are the departments of arts and letters, science, engineering and the school of law. Students of all religious denominations are received, but the university is, nevertheless, a strictly Catholic institution, and according to the rules of discipline, all students are required to attend divine service in the college church at stated times.

UNIVERSITY OF IOWA.

Iowa City, Ia., Feb. 17.—J. L. Magennis, '06, of Fort Dodge, who has been a member of the Fifty-sixth Regimental Band, will be a candidate for the directorship of the university band next year.

Carl Narum, '06, has been awarded the varsity letter by the Board of Control.

Acting Dean Wilber J. Taeters has been elected dean of the pharmacy college by the Board of Regents.

L. R. Henderson, '04, who has been employed in the Graff Pharmacy, at Muscatine, called on college friends recently. He was the guest of his class-mate, R. R. Wheatstone.

W. M. Coykendall, ex. '05, of Strawberry Point, is now with the Percy Pharmacy, Olinville.

C. E. Duncan, '03, in business at Nichols,

and Miss Charlotte Heide, '04, who has been conducting the late Dr. Bowman's Pharmacy, at Hills, were visitors in the city recently.

The university has secured as commencement speaker, the vice-president elect, Hon. Charles W. Fairbanks, of Indiana.

UNIVERSITY OF ILLINOIS.

Chicago, Feb. 15.—Willard Jones is making the senior class picture this year. Gowns but not caps will appear in the photographs.

Emilio Alfaro, our Porto Rican student, said the other morning, when the thermometer stood at 22° F.: "O, for the balmy breezes and green fields and trees of February at home."

T. L. Larson, of the senior class, has been elected treasurer in place of John G. Mick, who left school at the holidays.

The work in botany of the junior class closes this week. The two ladies have certainly given the boys a race for the honors in this study, and the announcement of the average is looked forward to with much interest.

The annual senior class debate to select the valedictorian and salutatorian, will be held on the morning of February 22, a holiday at the school. The members of the faculty have been invited to be present and a number of the class have signified their intention of appearing as candidates for the honors.

P. A. Nystrom, '92, has bought the drug store of F. H. Brown, at 58 E. Forty-third street, this city. Mr. Nystrom is well acquainted with the trade at that location, as he was employed for twelve years with O. F. Schmidt, formerly at the same corner.

MARYLAND COLLEGE OF PHARMACY.

Baltimore, Feb. 16.—The first semester of the Maryland College of Pharmacy, now a department of the Maryland University, has ended, and the students have begun the second. The faculty is about ready to report on the result of the examinations, which were held recently, and under this stimulus studies are being prosecuted with zeal. The men of the senior class are beginning to look forward to commencement day and are applying themselves closely to the books. They find time, however, to participate in the university athletics and have done some excellent work of this sort. It is now generally admitted that the removal of the college to the university has had a beneficial effect upon the institution, which has gained in prestige and in the value of its courses of instruction.

FERRIS INSTITUTE.

Big Rapids, Feb. 16.—The pharmacy department of Ferris Institute held a very successful meeting February 4, and elected the following officers: President, W. B. Arms; vice-president, H. A. Bennett; secretary, Mabel C. Richmond; treasurer, W. B. Covey. The programme included several helpful papers and music by the Pharmacy Mandolin Club.

At the mid-winter meeting of the Ferris Co-operative Association on February 3, W. A. Pearson, professor of chemistry and pharmacy, delivered an address on "Antitoxin and Vaccine."

The pharmacy class held its annual

dancing party, Wednesday evening, February 15, at the Light Guard Armory. A part of the evening was spent in almost total darkness, for the gas lights suddenly gave out and it was necessary to resort to lanterns. Punch was served in the parlor by lantern light, and lanterns furnished light for the musicians. The gas light was later restored, however, and aside from this unpleasantness, the party was a success. The decorations were yellow and blue; the class colors, and a human skeleton, looking down upon a mortar and pestle, adorned the front hall.

PLANS FOR "ALUMNI DAY."

The Alumni Association of the New York C. P. met last Wednesday night and began preparations for the closing exercises of the collegiate year. "Alumni Day" will be April 26. Henry K. Binder is chairman of the committee that has charge of the affair, which, it is promised, will put all previous efforts in the shade. There will be a vaudeville entertainment, followed by dancing. The other members of the committee appointed by President Borggreve are Thomas M. Davies, Wm. A. Hoburg, H. Ward, George W. Morse.

Much difficulty was experienced in securing a chairman for the Outing Committee, as nobody seemed to care for the honor—or the work. Finally Henry K. Binder volunteered, and the following additional members were appointed: Nelson S. Kirk, Thos. M. Davies, Dr. Gundlard and E. P. Wender. Although Charles S. Erb was not present to make a report of the Ball Committee, it was announced that the hall had been a financial as well as a social success.

DRUGGISTS MEET IN TORONTO.

Toronto, Feb. 18.—At the annual meeting of the Drug Section of the Retail Merchants' Association of Canada, the following resolution as to free samples was adopted:

"We recommend that the retail druggists throughout Canada be requested to refuse to give away any free samples of medicines unless they are marketed on the contract plan.

The following officers for the year were elected: Chairman, W. J. A. Carnahan; first vice-chairman, D. E. Munro; second vice-chairman, C. H. Cowen; treasurer, W. G. Becker, secretary, G. M. Petrie; chairman of the Contract Plan Committee, John Hargreaves; chairman of the Pharmacy Committee, F. W. Flett; chairman of the Trade Improvement Committee, A. E. Walton; chairman of the Membership Committee, J. W. Struthers; general secretary, E. M. Trowers.

WOMEN WANT TO DISPENSE.

Ontario, Feb. 18.—The Ontario College of Pharmacy has received a number of inquiries from the Ladies' Licentiate Apothecaries' Society of England, asking if they could practice under their English certificates in Ontario. It appears that it is a common custom for English physicians to employ women to do their dispensing for them, and those inquiring believed the custom was the same in Canada, which it is not, although a few such cases have been known. The Registrar-Treasurer was instructed to inform them that their English certificates would not entitle them to practice here.

AMONG THE BOWLERS

RETAILERS WILL MEET S. & J.

The Retail Druggists' Bowling Association has challenged the Seabury & Johnson team to a match game, consisting of three series. Each series will be composed of three games, total number of pins to count. The first series will be rolled tomorrow evening, February 24, on the Retail Druggists' alleys, Starr's, at Eighth avenue and Fifty-ninth street. The second series will be played on the S. & J. alleys, and the third on neutral territory.

SCORES FROM PHILADELPHIA.

Philadelphia, Feb. 18.—The games rolled at Central Alleys, February 18, resulted as follows:

J. E. Lee Co.	933	826	777
Berk	—	—	214
Hance Bros. & White. 671	744	712	
Hog	—	—	190
P., D. A., Blues.	785	776	714
Neely	—	—	176

Smith, Kline & French, forfeited three games.

Team standing:

	Won.	Lost.	P. C.
J. Ellwood Lee Co.	29	4	.878
P., D. A., Blues	21	9	.700
P., C. P.	17	10	.629
Smith, Kline & French. 12	12	.500	
Wanderers	8	16	.333
Hance Bros. & White ...	5	22	.185
P., D. A., Reds	4	23	.148

STAR BOWLING BY S. & D.

Baltimore, Feb. 17.—Members of the Baltimore Drug Trade Club this week gave an exhibition in knocking down the pins which has not often been equalled. The Sharp & Dohme quintette developed a remarkable streak and seemed unable to miss anything, yet it won only one of the three games. In the second contest with James Baily & Son, three of the Sharp & Dohme bowlers made over 200, the total for the game being 991, which stands as the record for the druggists, and has been beaten very seldom by other teams. Goldsborough led off with 210 and Rlummer hit up a terrific clip, making a score of 249, while Coulson made the remarkable high average for the three games of 205%. James Baily & Son's men also did well, Byers, Brauer and Jabries making 200 and over. Brauer took the lead with 222 in the second game and rolled up 213 in the third. The results for the week are as follows:

Armstrong Cork Co.	681	827	701
Calvert Co.	583	646	657
James Baily & Son	846	856	897
Sharp & Dohme	809	991	812
Davis & Davis	758	857	818
McCormick & Co.	716	778	852

The employees of Muth Bros. & Co., though not in the Drug Trade Club, have formed two teams among themselves, which gave battle last night at St. Alphonsus Hall. The teams are made up as follows:

First.—Edward S. Muth, captain; Joseph Brandmiller, Charles P. Muth, George I. Cook and Addie Huber.

Second.—Frank A. Muth, captain; George A. Muth, James Coyne, Andrew Will and Milton Mott.

GOOD AVERAGES IN ST. PAUL.

St. Paul, Minn., Feb. 18.—The Pills took two games when the Drug Clerks' League rolled its weekly games, February 16. The score stood:

Pills	793	685	766
Bodsguard	—	—	176
Tblets	791	769	715
Colberg	—	—	195

In the play of the Retail Druggists' League, February 17, the Spatulas won two games, the Pestles taking the third.

Score:			
Spatulas	818	836	783
Rietzke	—	—	217
Pestles	827	808	761
Preston	—	—	199
Mortars	819	674	728
Friedman	—	—	174
Romans	—	—	174

LOSERS BY FIRE.

—Champaign, Ill., Read & Cassingham, in a general blaze that destroyed the Southern Hotel and other buildings. The drug store's loss was \$7,500; insurance, \$4,000.

—Stafford, Kans., O. H. Baugh Drug Co., in a \$262,000 fire that destroyed fifteen buildings.

—Gillespie, Ill., Behren's Drug Store; loss, \$10,000.

—Rockwell City, Ia., George Riez; loss, \$6,000; insurance, \$1,000.

—Atlanta, Ga., Dr. Stuckney; total loss.

—Des Moines, W. V. Goodrich; loss, \$2,500; insurance, \$1,400.

—Springfield, Tenn., McFerris & Gill; loss, \$9,000.

—Lancaster, Ill., C. J. Selbert; loss, \$2,500; no insurance. This fire started at midnight of February 2, and destroyed the entire block.

OBITUARY.

—Joseph Mueter, 2209 Griffiths avenue, Louisville, Ky.; of typhoid fever.

—William Pond, Warren Ohio. He started in the drug business at Warren forty years ago, with E. A. Smith. Later he became a member of the firm of Pond & Kistler. After leaving there he conducted stores at Orwell, Burg Hill, Bristolville and Newton Falls, Pa. For the past two years he had been living quietly at Hiram. A widow and three children survive.

—Phillip Kaut, of St. Louis, at 1806 Lafayette avenue. He was born in Frankfurt, Germany, and came to St. Louis while quite a young man. His store at Eighteenth street and Lafayette avenue he kept for more than twenty years and sold six months ago because of falling health. A widow and two children survive. He was prominent in German societies.

CENSURED BY A DIVINE.

Los Angeles, Feb. 17.—At a meeting of the Prohibition Alliance, the Rev. F. H. Ashleigh, of the Methodist Church, scored druggists of Riverside county for selling liquor in violation of the law for the profit they derive from the sales. He advocated a stricter enforcement of the law.

The Chemist Of The Workshop.

The druggist is not living up to his opportunities if it is not known in all the small workshops and industries of his neighborhood that he is a chemist and able to give pointers on many technical and industrial processes. He already has a good foundation for such knowledge, and there is a wealth of working formulas at his command in

THE ERA FORMULARY

WITH THIS BOOK AS HIS GUIDE, HE CAN FURNISH:

- The Machinist with Metal Polishes, Processes, etc.
- The Laundryman with Special Starches, Glosses, Blues, etc.
- The Undertaker with Embalming Fluids.
- The Dyer with Dyes and Processes.
- The Photographer with Chemicals and Processes.
- The Leather Worker with Dressings, Polishes and Processes.
- The Tailor and Hatter with Cleaning Preparations, Special Soaps, etc.
- The Painter with Special Colors, Varnishes, Stains, etc.
- The Cabinet Maker with Polishes, Glues, Varnishes, etc.
- The Cigar Maker with Flavors and Colors.
- Every Industry with Cements, Glues, etc., for every purpose.

There are over 1,500 formulas in the book for technical and industrial processes, domestic and household preparations, miscellaneous articles, etc., and any druggist with this collection can easily work up a profitable trade in a line of articles which his training as a chemist makes him proficient to engage in.

"MANAGER WANTED."

A Druggist Tells What He Wants a Manager for and Why.

HE WILL NOT PROMOTE HEAD CLERKS.—SOME HEAD CLERKS DECLINE TO BECOME MANAGERS.—MANAGERS SHOULD HAVE FACT—ORDERING GOODS THE HARDEST TEST OF THE MEN.

"I should like to hire a good managing clerk," said a successful druggist. "I have not yet found one. Salary? I would pay twenty-five a week."

The interviewer was interested. "What do you want of a manager?"

"Well," said the druggist, "I'm running two stores now. I have a head clerk in each of the stores, but I want a supervising head. I want a man to represent me when I'm away. And I want to go away. I need a rest."

A PERFECT MAN.

"That ought to be easy," mused the interviewer, "there are lots of good men who would welcome such a position."

The "boss" smiled. "I know it," he said, "but they won't do. I want a man who can order goods, same as I do, one who can keep his hand on the throttle, so to speak. I want one who is able to give correct decisions on weighty matters of policy, such as giving licorice sticks to youthful messengers, etc. He must be able to bank for me. Must understand something more than the rudiments of business, and must know the details of the drug business, prescription, sundries, soda and side lines, thoroughly. I'd give such a man a percentage on ready sales, if he kept my business up. But I won't find such a man, so what's the use?"

This is by no means a new complaint. The druggist sounded a wish that is bound to come to the successful man sooner or later, judging from what is said by them. Manifestly, a man can't be in two places at once. According to this druggist, the managing head must represent the "boss." Asked what he considered his own services worth, the proprietor modestly replied: "Well, you see, to myself I'm invaluable. I allow myself \$50 a week, but I'm worth more."

"Yet you want to pay only twenty-five dollars a week to a responsible facsimile edition of yourself," was hinted.

The proprietor frowned. "Well, you see, I've got money invested here."

"The man you want perhaps has money invested, too. Probably he's a 'boss,' likely a competitor. 'Perhaps that's why you can't get him,' was suggested.

"Now," resumed the druggist, "I suppose you wonder why I don't make one of my head clerks my representative. I couldn't, because both head clerks have been with me a long while. Both are good men."

HE DOESN'T PROMOTE MEN.

"But they're in a rut. Each knows the trade of his own store only. I could not trust them to buy for me for both stores,

because they are inexperienced buyers and don't understand combining orders, thereby saving much expense.

"When away one spring I left a senior clerk in full charge. He bought my summer camphor at so high a figure that my competitors were able to sell it at less than what I had paid. He bought at the top of a bull market, and the slump came directly. After that experience, he became overcautious, buying only quarter dozen lots of staple proprietaries when I should have saved by buying dozens.

"My fault? How?"

"I can't run a school for managers. Besides, if I initiate clerks into my methods, first thing I know I'll have competition from them. I know both men want to go into business for themselves. No, sir; I wouldn't be so foolish."

Another type of druggist criticized the first's remarks. Said he: "Instead of rewarding a faithful employe, one who could understand him and his wishes, the man you have described seeks the unattainable, a person who can represent him, without having the faintest conception of what manner of man his employer is. After the new man has grasped the situation he may be all right, but it takes time to study human nature."

A MANAGER TALKS.

"There is another side to the managing question. The manager should be heard from. I once heard one say, 'Yes, I'm the manager, all right, in name. I administer reproaches to the lady that scrubs, and to the boy. Policy prevents me going further. You see I'm the fifth manager here in four years. The head clerk has been here seven years. He wouldn't take my job for a gift. It's been offered him again and again. Of course, that makes it pleasant for me in my relations with him. My duty is mainly to look pretty and put up a front. I don't buy any goods. The 'boss' does that. I don't hire or discharge clerks. The 'boss' does that. We have just refurbished the store. We have elegant fixtures, all right. Of course, I wasn't even consulted. The 'boss' did it. I gave one of the black kittens away last week. Shouldn't have done it. That's the 'boss' duty. What do I do? Draw my money each Saturday night, and hope I'll last another week."

A MANAGER NOT A MANAGER.

"That's one type of manager. It happens that this particular man is better educated, has a better business head than his pro tempore 'boss.' But he is also gifted with wisdom. Things are not as bad as he would make them appear. He is really the manager, the 'boss' the puppet, but it would never do to let the 'boss' know that. A little story about the fixtures and the renovating of that store would illustrate this best. When it came to selecting wall paper, the manager 'buted in.' Knowing that a certain color scheme was to be followed, the manager approved of several samples shown, being careful to deride the shade he considered best. Result, the 'boss' selected that one shade.

Both take pleasure in their own way over the outcome.

"With success often comes the bullying instinct. No matter what line of business we are in, we daily see examples of this to 'the man that has arrived.'

SHOULD OVERSEE MINOR THINGS.

"The trouble with the drug business is that it is a conglomeration of minor things," continued the pharmacist.

"A manager hired to handle the little affairs that make trouble, has troubles of his own in differentiating between important and unimportant things.

"Unquestionably the man whose money is at stake should do the buying or oversee it, and he should for his own protection hire and discharge clerks. With the problems of the day, methods of increasing business, how to make a dollar go farthest, etc., it would seem that the proprietor had his working time fully employed. Why not turn over minor affairs entirely to his manager, if he has one? If a manager cannot be trusted to see that the store's products are up to standard, he should not be retained. If the witchhazel barrel leaks when it is delivered by the manufacturers, the manager should take cognizance of the matter and relieve the 'boss' of the worry over it. If a prescription is off color, there is a reason for it. It is up to the manager to find the why. If he cannot find out what was the matter with Mrs. Brown's prescription, which was a different color each time it was repeated, he should report the matter to the 'boss.' If So and So's substitute of bismuth appears too heavy to the prescription clerk and he reports it to the 'boss,' the 'boss' should put it up to the manager 'for attention and report.'

SHOULD BE WORRY SAVER.

"A division of supervision is necessary in a well regulated drug store. If things are fitted properly together there will be few 'kicks.' One proprietor calls his manager his 'trouble man.' A large business is done, 'kicks' are unfortunately common. It's the manager's business to straighten out difficulties and take worry from the proprietor's shoulders.

"A good manager should have tact. He should instinctively know what to call to the attention of the 'boss,' or more important still, know what to keep to himself. Whether the proprietor appreciates it or not, the manager is conscious that he is doing his duty as he sees it. If his perspective is wrong, he won't last, be sure of that. The constant running to the 'boss' with minor complaints is largely responsible for the proprietor's feelings toward his manager. He feels that if minor questions cannot be properly decided by the employe in charge, important affairs will be similarly treated, if he is away."

"A school of managers?" was suggested, jokingly.

"Not a bad idea," replied the druggist. "A purely commercial course in conjunction with the science of pharmacy. A curriculum that would teach 'tact' would be a winner."

BROMINE STATISTICS.

The American Production Steadily Increasing.

MOST RECOVERED IN MICHIGAN WHERE THE SUPPLY OF BRINE APPEARS INEXHAUSTIBLE. — EXTENT OF THE AMERICAN INDUSTRY.—ITS TERRITORY RECENTLY INVADED BY THE GERMAN SYNDICATE.—ALL TREATIES OFF.

The recently declared bromine war, commencing with an unexpected attack by the Leopoldshall-Stassfurt Syndicate on the control of the United States market by the American combination, makes the details of the production of bromine in this country of especial interest just now.

The assault of the German Syndicate on prices resembled in its suddenness and the complete surprise of their opponents the attack of the Japanese torpedo flotilla on the Russian fleet in Port Arthur, early in the Far Eastern war. The peaceful, commercial conflict is still raging. Local interests have met the charge by lowering their own prices commensurately, as has just been officially announced by the Powers-Weightman-Rosengarten Company. The outcome is still apparently afar off.

Years ago the foreign product supplied the bulk of the world's needs for bromine. But later the American inventive mind solved the problem of a process which would make possible the commercial utilization of the Michigan deposits at prices as low as those asked for foreign products. Since then the American production has almost steadily grown, becoming ample for domestic needs.

AMERICAN AND GERMAN SYNDICATES.

To prevent ruinous competition, it is understood that the American and German interests entered into some sort of territorial agreement, neither to invade the other's field with its output. That arrangement has now gone by the board. If for the reason is a desire for retaliation, it means that American bromine was first marketed in the German territory, probably indirectly.

The comment of the United States Geological Survey report for 1902 on the bromine situation at that time is now, in the light of these events, rather interesting. It says:

"The production of bromine in the world continues to be controlled by the associated American producers, and by the Leopoldshall-Stassfurt Convention, the latter being operative for several years to come."

Michigan furnishes the largest output of bromine in this country. Next come Ohio, Pennsylvania and West Virginia. A large portion of the bromine obtained in Michigan is recovered as potassium bromide. In 1902 the production of the above mentioned States, in order of importance, was 226,452, 100,491, 93,575 and 93,375 pounds.

PRODUCTION IN UNITED STATES.

The total bromine production of the United States in 1903 was 598,500 pounds, of a value of \$167,550, as against 513,890 pounds, worth \$128,472, in 1902. In 1901 the corresponding figures were 552,043

pounds, valued at \$154,572. The average price per pound for 1903 was twenty-eight cents, against twenty-five cents in 1902, and twenty-eight cents in 1901.

Michigan, the most important producing State, gives forth about one-half of the total supply of this country. Much of its output is in the form of potassium bromide, amounting in 1902 to 61,452 pounds, while the balance of its production, 165,000 pounds, was in the form of liquid bromine. In 1901 the total recovered of both forms was 217,995 pounds.

From these figures it will be seen that the production of bromine is steadily increasing.

THE MICHIGAN INDUSTRY.

The Geological Survey report says of the Michigan industry: "So far as is known, the entire central basin of the lower peninsula of Michigan contains one vast brine deposit, which carries a large percentage of bromine than any brine yet discovered. The deposit extends from the Indiana boundary line on the south to Grayling on the north, and from the Saginaw Valley on the east to Lake Michigan on the west. The highest percentages of bromine are reported from the wells in Midland and Gratiot counties. The supply of brine seems to be unlimited, and wells in Midland county which have been pumped for more than twenty years, show no signs of exhaustion. Since 1883 thirteen companies have been engaged in the bromine industry in Midland, and eight companies at different times have manufactured bromine at other localities in this basin." At present there are three large producing companies.

The foreign product is controlled as before said, by the German syndicate, which includes some sixteen firms. Among these are the Royal Prussian government, which operates mines in Stassfurt, under the bureau of the Koenigliche Berginspektion. Other leading syndicate firms are the United Chemical Works, of Leopoldshall, the German Solvay Works, the Potash Works and the Consolidated Alkali Works, of Westergeln; the Salzberg Works, of Neustassfurt and several more.

ENTHUSIASM IN ADVERTISING.

This With Sincerity and True Worth of Goods Brings Success.

Curiosity, self-interest and pride are chords present in every human mind. One, or all of them should be struck by advertising to bring results. This cannot be done without enthusiasm on the part of the advertiser.

Sincere belief in the value of the commodity offered must be present. Confidence cannot be counterfeited. As has been said by Mr. Brisbane, in the article published in *The Era*, February 9, the public is extremely quick to detect insincerity.

The great leaders throughout history have been enthusiasts; they have implicitly believed in their abilities and missions. They therefore possessed personal magnetism. Consequently, they moved people to do their wills.

Move the people to buy goods by sincere enthusiasm for the qualities of the goods. Do not misstate facts. Misstatements

will be discovered and react like boom-crashes.

How is the advertiser to create enthusiasm for all his lines when he carries a large stock? The goods are prosaic merchandise. They amount to nothing in themselves. It is their use that signifies. Everything has good points. Let the advertiser study the goods and learn every virtue they possess by personal experience.

Then he can speak authoritatively. He can announce the good points of comfort, convenience, appearance, style, utility or quality.

The cost of goods has often nothing to do with their value to the consumer. The people want the effect, the result which their use brings, not the goods themselves. They pay upon the human interest.

If the advertiser cannot know all these qualities and facts concerning his goods by personal experience, he must use the experience of others. Above all in such a case, he must possess imagination. He must know men. He must study character. He must take a broad view of life. He must be able to look at the goods as the buyer will.

Anticipate the buyer's needs. Anticipate his queries. Put yourself in his place by the power of imagination, based on observation.

Imagination should not bring involved or flowery thoughts and phrases. Simple language, direct statements tell best.

TALK TO THE PUBLIC.

Men who do not believe in themselves do not force others to believe them. Never doubt the merit of what you are pushing. If it is worth pushing at all, it is worth believing.

There have been cases when a cause advocated by a man was poor, was worthless, or unjust. At first he knew this himself; but he was compelled to sound its praises, to work for it. The more he did this, the less he disbelieved what he said. In time he came to implicitly believe and then he produced results.

Why? Because his enthusiasm was genuine. Enthusiasm is always evidently either true or false. And the true is contagious. It spreads to those nearby and creates a like belief and like effect.

How have the great missionaries, the great teachers of any cause conquered; persuaded at last even their active enemies. By enthusiasm. And if enthusiasm could do this for them, how much more can it do for an advertiser who has not to face violent opposition, merely passive inattention and indifference.

Have your goods worth while, if possible, but above all, have enthusiasm in your advertising. First believe yourself; others will then also believe and buy.

MODEST.

"Let me have ten cents' worth of toothache drops," she said, handing over a soda-water bottle.

"Why didn't you bring a bigger bottle?" demanded the druggist.

"Sure, the full 'o' that will be enough," she answered, modestly. "It's only for a baby."

Prices realized for sandalwood at the auctions in India are about 10 to 15 per cent. higher than last year.

INTERIOR OF ST. LOUIS DRUG STORE OWNED BY HARRIS & MOSBY.

ST. LOUIS NEGRO PHARMACISTS

New Store Makes Total of Five in That City.

MR. HARRIS SAYS DRUGGISTS OF HIS RACE ENCOUNTER LITTLE PREJUDICE AND HAVE NO PECULIAR GRIEVANCES. — BUSINESS CONDITIONS SAME FOR BOTH RACES. — THESE PHARMACISTS TRUSTED ADVISERS TO THE MAJORITY OF THEIR RACE ON HYGIENIC QUESTIONS. — SCARCITY OF DRUG CLERKS FOR THESE STORES.

Dr. C. F. Crews, a reputable negro physician of this city, will open a drug store in the Douglas Hotel, at Leffingwell and Lawton avenues, as soon as the business quarters are ready for the store. This will be the fifth pharmacy to be opened by negroes in St. Louis. None of the four already running have apparently suffered because of race prejudice.

The pioneer store of this kind, the Peoples' Drug Store, at Jefferson avenue and Morgan street, was opened by a lawyer, purely as a financial venture. It is said to have proved a success from that standpoint, although it has been entrusted to hired help at all times. It was opened in the spring of 1899.

The next store, that owned by Harris & Mosby, at Twenty-third and Market

streets, was opened in May, 1900. Market street is one of the prominent thoroughfares of St. Louis and the store is but four blocks from Union station. It

ERNEST HARRIS.

enjoys a fine trade and in the summer its soda business is enormous. This firm later opened a place at 809 North Jefferson avenue. This store is less advan-

tageously situated, but enjoys a good business.

The Wright & Boinn store at 2333 Market street, a competitor with the oldest Harris & Mosby store, and in charge of a former clerk in that store, is but a few months old, and is still something of an experiment.

The store to be opened by Dr. Crews is farther west than the others, but is still within the district where negroes are welcome renters.

MR. HARRIS DENIES ANY PECULIAR GRIEVANCE.

Of the persons concerned in the management of these stores, Ernest Harris, one of the proprietors and manager of the store at Twenty-third and Market streets, has had a longer career in St. Louis and perhaps a wider experience than any man of his race concerned in the drug business in St. Louis, a city where the extreme sentiments of the north and south clash in both races; where the confederate and union veterans and their descendants and sympathizers brush elbows with the indifferent immigrant from other lands; where are men who would not think of eating at a hotel where a negro had ever been entertained, and others who indifferently patronize negro restaurants.

Mr. Harris was born in Alabama, but came to St. Louis in 1883, and was first employed in a drug store in 1890, and became an apprentice under George A. Lucking, at California and LaFayette avenues

SOME ST. LOUIS NEGRO PHARMACISTS.

in 1892. His appearance raises no race question. He was graduated in pharmacy in St. Louis, and immediately secured employment as a full clerk. Later he enlisted in the Hospital Corps and saw service in Cuba. After being discharged from the army, Mr. Harris returned to St. Louis and later worked in Omaha and Landers, Wyo., in both of which cities he had charge of stores in the first instance as chief clerk, in the second as manager. He returned from Wyoming to St. Louis to go into business.

It was to Mr. Harris that the Pharmaceutical Era put the question: "Have the negro druggists a grievance, and what are the conditions under which they do business, and what is the great question before the negro in pharmacy?"

To the first part, Mr. Harris answered a most decided no, and then proceeded to prove that he was in position to give expert testimony, by telling of the men of his race who owned stores in other cities and in St. Louis. His answer was also based largely on his own experience.

During the last summer Mr. Harris enjoyed exceptional advantages for meeting negro and other pharmacists who were visiting the World's Fair, as his store is the most notable of the negro stores, is in the center of the negro hotel and boarding house district, and is on a prominent thoroughfare leading from Union station. In naming the men he met, Mr. Harris ran down a long list from many cities, one of them a young man who owned two stores. These men, he said, had only the small talk of grievances common to all pharmacists. None of them spoke of the race question or prejudice in business.

BUSINESS CONDITIONS SAME FOR BOTH RACES.

As to the conditions under which the negro does business, Mr. Harris says they are the same that confront other men. During the last summer, he saw a few persons turn from the door of his store when they saw a negro clerk at work and a negro dispensing soda water. A few others objected, evidently, to negro customers sitting at the small soda water tables. This loss of trade was looked for, because of the number of strangers in the city and each case was noted. It

was so small that it could not be figured as a percentage, according to Mr. Harris. In most cases, the people so departing were, to judge from appearances, from the rural district. Mr. Harris and other men of his race, including physicians who have met with similar experiences, blame this repugnance more to ignorance or disbelief that negroes have risen to proficiency in a profession, than to prejudice.

Mr. Harris' experience with physicians is the same as when he was working in stores owned by white men—that most physicians who do not live in the immediate neighborhood, do not attempt to throw the trade. Physicians from out of his trade district, mostly advise negroes whom they treat in that neighborhood to come to his store. In one or two cases, he has heard of physicians advising negroes to go to the nearest white store. In one of these cases he knows that advice was given because the physician had especially asked that one remedy prescribed be carried at that store. The negro physicians urge people of their own race to patronize the store, and sometimes ask their white patients to do the same.

The neighborhood trade is similar to that of other neighborhoods. Some people pass the store to patronize nearby stores, and some people come to the store past the neighboring stores. An hour spent in the store will convince an observer that scores of white people in the neighborhood have confidence in the establishment.

Mr. Harris says that the blacker the clerk, the more hesitancy can be observed, but that neatness counts more than complexion, and terse intelligent answers to questions will disarm prejudice in ninety-nine cases out of a hundred.

LACK OF CLERKS MAIN QUESTION.

As to the question before the pharmacists, Mr. Harris says just now it is clerks. Two schools, the Meharry Medical College at Nashville, and Howard University at Washington, regularly graduate pharmacy classes, but their classes do not fill the demand. The two schools turn out about twenty men with diplomas each year.

The work of the negro in pharmacy, Mr. Harris believes, is just beginning. He sums up the situation in this way:

"This beginning has not come too soon. There has been and is, a demand for negro pharmacists, and sad, but true, the supply falls far short. In this, as in all things, the greatest good will come to the race when the supply coincides with the demand.

"A few years ago we had no pharmacists, but to-day the negro is being born into a new profession, bringing with him opportunities and possibilities of not alone helping his people, but in contributing to his profession as a pharmacist.

"Among his own people, the negro pharmacist has a larger field of labor than devolves upon his white professional brother. The masses of his people are ordinary laborers and among them he finds few who know the first principles of elementary hygiene and their readiness to use all kinds of medicines for all kinds of diseases places them in a peculiarly unsafe position. In many cases medicines bought from peddlers and fakirs are carried to the negro druggist to ask whether they should be taken or not. In this field, the negro pharmacist must not act with a motive of pecuniary gain alone, but must instruct his people for their own good and for the good of the profession."

In connection with the last point mentioned, Mr. Harris says that with the exception of the few negroes who still cling to the idea of slavery days that all knowledge comes from white people, he finds his people more ready to confide their weaknesses of purchase to a man of their race than to a white man.

"Do you think," The Era man asked Mr. Harris, "that the men who have made a national issue out of the luncheon President Roosevelt partook of with Booker Washington, would interfere with your business or draw the line at patronizing your store?"

"Individually, no; collectively, yes," was the answer. "If those men were to come along here one at a time, and my sign read, 'Harris & Mosby, negro druggists,' and each of those men wanted to smoke, nine-tenths of them would come in and buy their cigars. If those men all came along together or in crowds of three or more, they would not patronize this store, if they knew it belonged to negroes."

A CASE OF COWARDICE.

"Did you advertise for a boy?"

"Yes. Have you answered the advertisement?"

"I have. But I'd like to know first what you mean by saying that you want a boy who ain't afraid of work."

"It's plain enough, isn't it?"

"Maybe it is, but I should think you'd rather have a boy that was a little afraid of work. Just enough afraid of it to catch hold of it quick and rattle with it, and down it and jump on it, and get the best of it, and show it that it won't get a chance to prove too much for him. That's the kind o' boy I should think you'd like—instead of the kind that ain't afraid of work. Why, I knew a boy once who wasn't the least mite afraid of it, and he'd rub up against it, and walk right into the cage where they kept it, and let it eat off his hand, and at the same time never meddle with it enough to soil his finger tips."

"That's enough, young fellow. The job is yours."—Cleveland Leader.

SHOW WINDOWS AND FEATURES.

A Few Features From Many Different Stores.

JAPANESE DISPATCH BRINGS TRADE.—COTTON ON THREADS.—BURNT WOOD AND "FIRE PENS."—PIGION FEEDING.—CUTS ON PRESCRIPTIONS.—FULL PRICES IN TEXAS.—MODEL DRUG STORE.

O. P. M. Canis, of the Canis Transfer Pharmacy, 760 Flushing avenue, Brooklyn, has evolved a good window feature, which is herewith reproduced. Mr. Canis, who is much interested in window features and advertising, says that the dispatch shown has attracted much attention in his window and has increased the sale of his cough drops wonderfully. He features cough drops the entire season and together with the reproduced Japanese sign he has another "fake" sign, supposed to be in Chinese characters. "Stop that cough," a catch line, is written in five languages. The above dispatch reads:

"Tokio, January 26, 1905.

"Dr. Acins' Chemical Laboratory:
Dear Sirs: Please send us at once 10,000 boxes of Dr. Acins' Red Cross Cough Drops for our soldiers in the field. They are all coughing to beat the band. Send them as quick as you can, and oblige, yours truly,

"THE MIKADO,

"Omaya, Commander-in-Chief."

The errors in the sign are intentional. People spend many minutes trying to decipher the posted message, until it dawns upon them that the words are English. They then appreciate the cleverness of the idea. In reading the sign, the opposite to the English method should be used, reading from bottom to top and from right to left.

Cotton on Threads.

Schaaf Brothers, 2157 Eighth avenue, are this week featuring absorbent cotton in pounds. A very pretty effect is given the window, especially at night, by the arrangement of tufts of cotton tied to white thread. Some fifty separate lines of thread extend from floor to ceiling against the window glass and on each thread at an interval of a few inches is a tuft of the down. The electric lights at night make the show appear a snow storm, and the pure white of the cotton makes the Harlequin fall of the "Beautiful" look very dirty. This thread arrangement is cheap and can be used for most any light article, either loose or cartoned. The cotton is not lost as it is when glued to the windows, and the arrangement can be removed in quick time.

Drug Store Pyrography.

The J. N. Hegeman & Co. Store, Broadway and Eleventh street, is showing burnt wood outfits. Two artists alternate in making copies in wood of nature studies, etc., occasionally varying their programme to get a burnt wood likeness of someone in the crowd of spectators. It seems that the interest in burnt wood work has not materially decreased, for there is a large demand for the outfits which the artists are demonstrating. This novelty is called "The Fire Pen." It consists of a small rubber tube, five feet long, a sixteenth inch

DEPARTMENT OF WAR, TOKIO-JAPAN

(COPY)

THE CANIS TRANSFER PHARMACY WAR DISPATCH.

in diameter, which has at one end a cap of rubber which fits over any ordinary gas fixture. At the burner's end of the pen is a cork handle, which holds a metallic pen. There are small holes near the pen point, and the gas once ignited, burns like a Bunsen flame and heats the metal point to a red heat. This outfit sells for fifty cents. One with three points, or pens, brings \$1, and a complete outfit, six pens, with handles for each, sells for \$2. The artists who exhibit also give lessons in pyrography.

MASSACHUSETTS.

The Union Square Drug Store, in Somerville, Mass., has become quite famous from the fact that one of the clerks, William E. Young, habitually feeds a large flock of pigeons every day, sometimes from fifty to a hundred of the feathered pets. They gather regularly in front of the pharmacy and on its steps, and wait for their noon-day meal, which always is forthcoming, no matter what the weather. It all began by Mr. Young throwing out a few peanuts one day. Two pigeons ate them. Next day they returned with others and the flock steadily has grown, keeping up the daily visits. They are even bold enough to walk into the store when the door is open.

Tickling the Authorities.

The annual complimentary distribution of Brown's Bronchial Troches, which for many years has been followed by an old-time drug firm, John I. Brown & Son, has just been made at the State House in Boston, to members of the General Court and others. Fully four hundred boxes were required for this distribution, as there are 240 members of the House of Representatives; forty members of the Senate and the messengers, clerks in various departments, and heads of the departments, elevator men, etc., all came in for the compliment.

Cutting a Prescription.

A Boston cut-rate store takes advantage of the fact that a certain prescription which it offers to put up "with pure drugs" will be sold for sixty-five cents, whereas at several other places the price for identically the same prescription was much higher. A trip around town by a clerk who wished to find out, showed that at one store, not a cut rate place, the charge was \$2.20; at another store, \$1.75; a third place, \$1.50; at another \$1; two

places would put it up for eighty-five cents and the first named cut-rate store, as stated, would do it for sixty-five cents. The prescription was for rheumatism and was as follows:

Six oz. fluid extract of sarsaparilla, two ox. tincture of conium, two oz. fluid extract of senna, and six drams of potassium iodide.

The dose was to be a teaspoonful three times a day.

MICHIGAN.

Under the head "A Model Drug Store," there appears in the Saginaw, Mich., Herald, a column article devoted to Schirmer's Pharmacy, corner Hoyt and Sheridan avenues. The following is a part of the article:

"All prescription drugs are bought in original packages. Then all packages of the same nature are placed in boxes and indexed in a book. Thus when a certain drug is wanted, the book must first be consulted to find the right box, and the box being found, it becomes necessary that the druggist read every label on the packages until he finds the drug wanted. That is the reason that every prescription sent out from Schirmer's Pharmacy is thoroughly reliable and guaranteed for absolute purity. The Schirmers take great pride in their stock of goods, as they use exclusively the products of E. R. Squibb & Sons which are renowned the world over as the very highest type of drugs, and also the products of Parke, Davis & Co., Merck, J. Weych, and other leading manufacturing chemists. In fact, a poor article never finds a place on their shelves."

The druggists apparently believe in taking the public into their confidence, and though unmistakably a "write up," it is well done.

TEXAS.

Henton Brothers, of Victoria, Texas, send The Era a copy of a "Notice to Our Customers." It shows that the druggists are doing to keep up established prices. No eighty-three cent business there! The notice reads:

We the undersigned druggists of Victoria, Texas, hereby notify our customers that on and after February 1st, 1905, we will charge full price for any and all patent and proprietary medicines. We take this action on account of the fact that many manufacturers are compelling us by rigid contracts to do so. Very respectfully,

E. W. Parker, Heaton Brothers, Louis P. Leibold, Diesbach's Pharmacy and H. M. Elchholz."

KENTUCKY.

A shipment of pills, said to be the largest ever made to Kentucky, was received recently by Millheiser & Co., druggists of Bardstovv, Ky., from a leading pharmaceutical firm of Indianapolis. To advertise them, Millheiser & Co. will mail ten of these pills to any family in the United States. The company controlling the manufacture of the medicine is composed of Bardstovv people, and will in a short time be incorporated with a capital of \$8,500. It expects to employ from eighteen to twenty-five hands selected from the community.

A Blue Grass Calendar.

The Dawson Pharmaceutical Co., of Earlington, Ky., has issued a handsome calendar in colors. The illustrations are, according to title, the "Froducts That Have Made Kentucky Famous." There are the beautiful woman, the fast horse, the red liquor, and added, a bottle of the principal medicine manufactured by the company.

DELAWARE.

On exhibition in the window of Z. James Belt's Drug Store, at Sixth and Market streets, Wilmington, Del., is a bottle containing a small quantity of the South American drug known as curare which is deadly poison, one-sixtieth of a grain being fatal. It was claimed that this drug was used by Johann Hoch, the Chicago man, who is suspected of having caused the death of many of his wives. The interest in the morbid always attracts attention, and the druggists have many questioners.

CALIFORNIA.

Dr. A. L. Ramage is to make a new departure in business circles by establishing a veterinary drug store, to be located on Eighth street, in the Evans block, San Francisco. Dr. Ramage will keep stock feed, bird seed and other contemporary items. He expects to be established there by the middle of the month.

MYSTERIOUS WINDOWS.

It is a fact that people, even those most interested in their own thoughts, will stop and gaze for many moments at even the most ordinary mechanical feats. A building in the course of erection, a safe being lowered from a window, the replacing of broken window glass, are all things that hold New Yorkers enchanted. But when the every-day doings of men and women are reproduced in metal or wood with clockwork, or other operating device, the attention claimed and held is really wonderful.

Various large concerns take advantage of this weakness of the pedestrian and arrange mechanical exhibits in their windows. One such seen was that of the National Cash Register Company, on upper Broadway. The country mill was reproduced faithfully and the scene painter had made a typical stage setting. The real water ran, the wheel turned, and a fisherman on the bank near the mill, was casting for trout. The cork bob on the line would strike the water, and behold! a bite. But no fish. The bite is reproduced by an electro-magnet, which attracts the metallic hook, then other mechanism forcibly withdraws the hook and line, only

to release it, ad infinitum. The naturalness of the scene awakens comment.

Another "mystery show" is on exhibition in a corner window on upper Broadway. An arrangement similar to a bagatelle table, having sloping sides and covered with green, is the scene of a contest between hill climbing balls. There are four small balls, similar to the golf article, and they seem to be climbing the baize covered boards by their unaided will. They quiver as they go upwards. Every moment one or another will lose its grip and tumble back, only to begin all over again. When the balls finally reach the apex, they roll on a curved ridge into a groove, which toooogans them back to the bottom. The balls doubtless have steel cores and magnets are at work under the table. It is a question that causes considerable discussion anyway, and the trades people only smile when asked to elucidate.

DRUGGISTS' RUBBER SUNDRIES.

Several rubber novelties have recently appeared, which may be of interest to the drug trade. One line of these is toy druggists' sundries, atomizers, hot water bags, and nursing bottles primarily intended as a part of the household equipment of dolls. The toys are about two or three inches in height, and about one and one-half in width. Another article, but of practical use, is an adjustable window cleaner with a rubber blade, the new feature of which is the adjustability of the hinge and spring, by which the rubber will adjust itself to all conditions of work, regardless of the angle of the pane. The user can therefore make continuous strokes from top to bottom of the window. Then there is a toilet appliance for automobilists, a combination water tank and wash basin, both waterproof and airtight, collapsible when not in use. Pockets are provided for towels and soap. A new razor cleaner, made of soft rubber, is really a shallow cup with scalloped low edges, which vary to fit the curves of any razor blade. The refuse lather is to be scraped off the razor on the edges. It is easily cleaned and strictly sanitary, preventing the daubing of lather all over the bureau and the clothes of the shaver. A rubber toothbrush ends the list. This device is to be fitted on the end of a finger, needing no other handle. It is supposed to treat the inner side of the teeth better than a bristle brush, and appeals to invalids and those having tender gums. All these articles are described in the issue of the "India Rubber World" of February 1.

A VARIATION OF THE PLASTER JOKE.

The woman who was told to get a mustard plaster and put it on her chest, went back, bought the plaster and slapped it onto an old trunk. Two days later she complained to the doctor that it wasn't doing her a bit of good.

If you draw soda, you've met her. She's the sweetest, meanest thing ever. "Make it sweet; lots of ice cream," she says with an engaging smile. You "fall"; who wouldn't? After she disposes of the frozen delicacy, she smiles again. "Please, a little more soda; it's too sweet." And did you fill the glass again?

PRICE LISTS RECEIVED

Manufacturers are requested to send in their price lists as issued, and to put **The Era** on their mailing list for price-list changes. It is important that we have this information to enable us to list your goods properly in our price-list editions.

Roessler & Hasslacher Chemical Co., 100 Willam street, New York. February list.
Americau Peroxide and Chemical Co., 88 Maiden Lane, New York. Prices quoted on case lots.

John F. Hancock & Son, Baltimore, Md. Special pharmaceutical preparations.

Larkin & Scheffer Chemical Co., 109 St. George street, St. Louis, Mo. Quotations on products, list bearing date of Feb. 6, 1905.

Pasteur Vaccine Co., Ltd., 266 W. 11th St., New York; 219 E. Randolph St., Chicago; 409 Market St., San Francisco. Serums and vaccine instruments. List for January, 1905.

The Stein Gray Drug Co. February issue of "Drugs and Sundries."

MYSTERY OF A POISON.

The story which comes from Paris of the poisoning of a member of the municipal council by the simple opening of a packet of "white odorless powder" sent to him by mail, while of very doubtful probability, recalls the reputed almost magical properties of the Borgia poisons. As a matter of fact, these mysterious drugs, of which we are said to have lost the secret, are probably largely mythical. There are but few substances competent to produce any such violent and immediate poisonous effect by mere inspiration as that attributed to the Paris letter. Of these prussic acid and nitrite of amyl are the best known. Scheele, the discoverer of the former, was killed by inhaling its poisonous exhalation, following the breaking of a flask. Nitrite of amyl is an extremely volatile and powerful poison, sometimes used for inhalation in cases of angina pectoris. Both have a strong and pungent smell, are liquids, and could by no possibility be described as odorless. Nitrobenzol, which seems to act somewhat like prussic acid, is much slower in effect. A man subjected to its fumes may at first experience slight inconvenience; several hours afterward (eight hours in one case) he suddenly becomes unconscious and dies in a state of coma. No one could breathe the fumes of these drugs without knowing it, so that they are in no sense secret poisons.—New York Globe.

DRAWBACK ON SYRUP OF FIGS.

The Treasury Department has issued an order amending the rate for the allowance of drawback on imported alcohol used in the manufacture of syrup of figs manufactured by the California Fig Syrup Company. It appears that the imported alcohol used does not test 200 degrees, but is of uniform strength and is sold as alcohol 191 degrees proof. Former regulations are therefore amended to read five and three-tenths per cent., instead of five per cent.

IPECACUANHA.*

How Gathered in Brazil and Exported.

A source of ipecacuanha is the province of Matto Grosso, in Brazil, but few have more than a vague notion as to how it reaches this country. The root, which grows in the shade of trees, is pulled up, not dug, by natives known locally as "pauyos," the root being called by them "pouayo." An energetic collector, on a wet day, when the ground is soft, has been known to gather as much as thirty pounds, but the average worker cannot pull more than ten pounds in the same time. The root is then made into smallish bales, called "serons," and brought down to the coast on the heads of carriers. Here it is collected and sorted into different grades, and sold or bartered by the native merchants to shippers, who, in return, pack it into bales and ship a consignment from one of the various ports, of thirty, forty, fifty or possibly more bales at a time to London. On the vessel reaching London, these bales are unloaded from the vessel and carted by the dock company to their up-town warehouse at Crutched Friars. The goods are immediately weighed, examined, and a slip sent to the merchant owning the goods or to the person who has the handling of them. This slip, called a "landing account," besides giving the gross weight on landing, also indicates the tare, or estimated tare, of the packages. Should the goods arrive damaged, such a fact is also noted on the landing account, and the account discriminates the degree of damage, and also states whether the damage has been caused by sea or by soft water—water being, in nineteen cases out of twenty, the cause of mischief when damage exists. A bale damaged by sea water may be returned as fourth-class sea damaged, whereas another bale may have been only slightly damaged, and this by rain water; this would be described as first-class "country damaged." In practice, first-class damaged goods may be considered sound, as the dock company is very particular, and should a package show only external traces of having been wet at some time or other, they will yet return the goods as first-class "country damaged," although the contents may be sound. The landing account also states quality, and this is denoted in an old fashioned manner, the word quality giving way to "pile." Thus the finest quality of goods are described as Pile 1, Pile 2, and so on. The describing of goods in this manner is a relic of by-gone days, when merchants received their goods in great quantities, which they sold according to quality; the various qualities were stacked and stored at the docks in bulk in a heap, the merchant then issuing delivery orders to his buyers for so many tons or hundredweights of an article of such-and-such a "pile."

The merchant, having received a landing account of his goods, will next instruct his broker to sell them by public auction, and at the same time he will instruct the dock company to place these goods on view, for which purpose packages are opened and the contents exposed. All this is presmning that the goods are sound.

*Reprinted from the Pharmaceutical Journal.

When, as sometimes happens, a consignment arrives damaged, or the quality does not run even, the merchant may, prior to the sale, instruct the dock company to make the goods "merchantable." This operation may consist in removing the damaged parts, or, in the case of ipecacuanha, removing the woody parts (which contain practically no emetine) not covered by the cortex, thus enhancing the value of the merchandise, the loss in weight being more than compensated by the increasing value of the remainder of the bale. The broker has catalogues printed, and therein he gives the particulars already given in the landing account. In the case of some merchandise, several packages (five or ten) go to make a "lot." In the case of ipecacuanha, the rule in recent years has been to offer it on sale in one-hale lots, varying in weight of from, say, fifty pounds to 150 pounds. On the day before the public sale, called "levelling day," merchants, brokers, shippers, wholesale druggists, etc., visit Crutched Friars, catalogues in hand, and view the goods, making such notes in their catalogues as they think fit. The following day the goods are sold in the ordinary manner. The bales are then restitched and got ready for delivery. Presuming that the wholesale druggist has procured a "lot," he will send his cart to obtain delivery, and on this being done the goods will be reweighed, fresh slips (called re-weight slips) being sent both to the merchant and the buyer.

A REFLECTION ON THE PAST.

William Pinkerton, the detective, was praising the various cash-registering devices that have come of late years into world-wide use.

"These machines," he said, "have undoubtedly diminished crime. They have saved many weak persons from a daily, an hourly temptation hard to withstand. They have also saved employers a great deal of money, for they have driven the dishonest out of a field of work wherein they loved to labor in the past."

"I heard of a clerk in a grocery the other day who was getting \$8 a week. He had to be on duty at seven in the morning, and he was not through till seven, and sometimes eight, at night. The poor fellow had no time for anything but work and sleep."

"He found time, though, to get married, and the week after the ceremony he asked his employer for a raise."

"Why, Horace," the employer said, "you are getting \$8 a week. What ails you? When I was your age I kept a wife and two children on \$8 a week and saved money besides."

"They didn't have cash registers in those days," said Horace bitterly.—*Cincinnati Enquirer.*

MR. SCANNELL'S ALMANAC.

The Saratoga County Almanac for 1905 has recently been issued by T. J. Scannell, retail druggist of Waterford, N. Y. Mr. Scannell has long shown advertising enterprise, this being the eighth issue of the almanac.

The book contains forty-six pages, 10x7 inches, of a fair quality of paper and easily readable type. The cover is of a light green tint and is adorned with an allegorical design, portraying a maiden

inhaling the fragrance of a rose, the design being set in a medallion with flanking supporters, male and female figures. Below is the title and Mr. Scannell's name and address.

The contents prove interesting. Leading, is a history of Saratoga County. Following, all the even pages carry monthly calendars in true almanac style. Then there are hints to farmers, interesting naval expenditure figures, salaries of United States officials, hints to housekeepers, facts about animals, a study of the bare canal projected for New York State, and tables of weights and measures. Many other topics are treated.

DARK TALES, AWFUL DRUGS.

Here is the latest of sensational newspaper stories, which are always important, if true. Pharmacists will be interested to learn of the marvelous drugs here described, that is, if they find any entertainment in taking as gospel whatever the "chemist" quoted has to say. But here is the story itself:

"The more dreadful poisons," said a chemist to a Sunday (Newark, N. J.) News reporter yesterday, "are known only to a few men. Mercury methide, for instance, the inhalation of whose fumes produces incurable idiocy, can be manufactured by two Italians, and by no one else in the world."

"Dhatoora is a poison used in India. It, too, produces incurable idiocy. A British army officer told me of a sad case—a case of two rival tailors, one of whom gave the other a small dose of dhatoora. The victim of the drug remained an idiot all the rest of his life. He sat and moved his empty hands as though he were sewing. He was a formidable rival no longer."

"Mercaptan produces a melancholy so great as to terminate nearly always in suicide. No government would permit the manufacture and sale of this poison."

"Dhatoora, mercury methide, mercaptan and some twenty other poisons are neither made nor sold in any public way. They are only experimented with. Such poisons would be formidable weapons in unscrupulous hands. Driving their victims to suicide or to insanity, they leave behind them nothing suspicious or untoward. The giver of these poisons is secure from any fear of punishment. It is no wonder that the learned men who know such poisons keep their knowledge to themselves."

LIGHTING THE STORE.

People like light. It has been said that cities were created because men wished companionship and light, disliking the loneliness and darkness of the country. Light, companionship; darkness, loneliness. It is the same nowadays with a store. Where there are bright lights, there will be patronage, other things being equal. But to-day a country store can be well lighted. If it is not, the proprietor is not alive to his best interests. Reports of those who have used it, state that the Hydro-Carbon Air Light System of the White Manufacturing Company, factory at Chicago Ridge, Illinois, is very satisfactory. It is a system of gasoline vapor-gating and can serve all purposes far better than kerosene. By application to the firm an interested person can promptly receive catalogue and estimates.

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions. Address The Pharmaceutical Era, 90 William street, New York.

ALABAMA.

Midway.—J. W. Thomason, new town and new name.

Opelika.—Hightower & Farver, succeeds C. L. Hightower.

CALIFORNIA.

Pomona.—L. W. Pierce, succeeds Pierce & Robbins.

Porterville.—C. L. Robbins, succeeds Pierce & Robbins.

COLORADO.

Pueblo.—Triangle Pharmacy, 201 N. Union Ave., succeeds John J. Pearson.

DISTRICT OF COLUMBIA.

Washington.—S. Sacks, 9th and P Sts., sold out to Lloyd & Taylor.

GEORGIA.

Leslie.—Reeves & Tinsley, new name.
Pavo.—Hicks & Watson, succeeds Frank J. Harris.

ILLINOIS.

Danville.—Lin Carter, succeeds H. A. Hall.

East St. Louis.—M. Sondag, 243 Collinsville Ave., burned out.

Springfield.—John Conant, 404 S. 6th St., succeeds R. N. Dadds.

O. G. Hudson (People's Drug Store), First and Jefferson Sts., succeeds Noble R. Hudson.

Spring Valley.—Thomson Bros. Drug Co., succeeds E. G. Thomson & Son.

Taylorville.—Seaman Drug Co., burned out.

INDIANA.

Clinton.—Bonner-Bence Drug Co., new name.

DeMotte.—J. L. Tyler, succeeds J. L. Tyler & Co.

Linden.—E. B. Scott, succeeds Bradley & Co.

IOWA.

Cedar Rapids.—W. C. Snyder, new name.

Iowa City.—Shrader Drug Co., Clinton St., succeeds W. E. Shrader.

Rockford.—W. G. Thomas, succeeds W. C. Oelke & Co.

Sibley.—C. L. Wilbern, new name.

Vanhorne.—E. G. Bevelhymher & Co., succeeds P. H. Bell.

F. M. Gardner, succeeds Wirth & Co.

Milwaukee.—Rudolph Best, 602 Walnut., succeeds Louis Schmitt.

BRITISH COLUMBIA.

Vancouver.—W. M. Harrison & Co., new name.

PRINCE EDWARD ISLAND.
Summerside.—Wm. Kennedy, new name.

A PROSPEROUS JANUARY.

The month of January has been one of increased commercial prosperity, as compared with the corresponding month one year ago, according to Dun's Review. The total involved in failures in January, 1904, was \$18,483,573, while for January, 1905, there was a reduction to \$10,417,205. An analysis of the returns for the past month, by Dun's Review, shows the following conditions:

"In all manufacturing occupations only 256 suspensions occurred, with liabilities of \$4,078,602, against 271 failures last year, when the amount involved was \$6,687,936; trading defaults numbered 93, with liabilities of \$5,275,640, compared with 1,079 a year ago involving \$8,224,937; other commercial failures were 27 for \$462,873, against 56 last year, for \$2,571,000, an aggregate of 1,222 failures and \$10,417,205 liabilities, as compared with 1,406 in the corresponding month of 1904, when defaulted indebtedness rose to \$18,483,573. While it is extremely gratifying to find that 1905 has started with a decrease of \$8,000,000 in amount of liabilities as compared with the previous year, it is still more cheering to carry the comparison much further back. Only one other January in the past decade made a decidedly better showing, 1899, while 1900 was slightly better, but every other year back to 1893 recorded a much heavier mortality. January is the most significant month in respect to the value of failure returns, and such a phenomenally good showing augurs well for the year."

THAT NIGHT BELL.

A boy with no respect for propriety got a Columbus avenue druggist out of bed at midnight, a few nights ago.

"I want a bottle of magnesia," announced the youngster, "and, say, do you give anything for the empty bottle?"

"Yes, five cents," growled the drug man, grudgingly serving the article. Then he went back to bed. About half an hour later the bell rang again. When the druggist got to the door there stood the lad.

"Here's that bottle, mister," said he. "Give us fi'pence."—New York Sun.

GALVESTON DRUGGISTS BUSY.

Owing to epidemics of grippe, mumps, chills and fever and diphtheria, all of a mild and seldom fatal character, Galveston druggists are being kept very busy compounding prescriptions. The doctors and hospitals have also been overtaxed. It is estimated that the prescription business has increased anywhere from 10 to 40 per cent. in different drug stores.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued February 14, 1905.

- 782,268—Jackson L. Prior, Fayetteville, N. C. Non-refillable bottle.

MARKET REPORT

IODINE UP.

Bromine War Still on Between Manufacturers.

JOBGING MARKET GENERALLY STEADY AND DEMAND SATISFACTORY.—JOBBERS ADVANCE IODINE PREPARATIONS BUT OPENLY HOLD ON BROMIDE SALTS.—OPIMUM FIRM.—OTHER PRICE CHANGES.

New York, Feb. 20.—The advance in crude iodine which was reported in last week's Era, passed its momentum on to jobbing prices very quickly and all the iodine preparations are commensurately higher. The bromine war is still on, although there have been rumors of a conference between leaders of the German syndicate and the American combination looking to a settlement and the arrangement for some mutual agreement to protect prices. The Roessler & Hasslacher Chemical Co., the agents for the German syndicate, is refusing to book future orders and declines in any event to accommodate new customers at the cut prices. It is stated that the firm has taken so many orders already that it is unwilling to receive any further bromine business at all just now. The Powers-Weightman-Rosengarten Co. has officially announced its prices on bromine and its salts on the same basis as the low German figures. It is reported that other American houses are also meeting the cut, but at this writing one or two domestic interests are still holding at old figures nominally. Jobbers find themselves in a peculiar position, for while manufacturers have openly cut quotations, jobbers are unable to secure supplies of the bromine preparations at such prices as the foreign makers are not yet in position to deliver, and the domestic manufacturers, while quoting the same low range established by the German syndicate, do so "without engagement" and apparently are unwilling to fill any but contract orders. Some jobbers are quietly selling at the reduced figures, but others are not, so the jobbing market cannot yet be said to have altered.

The volume of trade in progress continues satisfactory. The jobbing market is generally of a steady tone, the advances outnumbering the declines.

OPIMUM.—The weather in the growing districts in Turkey continues very severe. It has been characterized as the worst in twenty-five years. Further frost and snow is reported to have ended sowing operations. Foreign markets are strong and prices have hardened universally since last week. Local jobbers, in sympathy, have advanced their quotations to \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered has also risen

and prices now are \$4.00@4.25 for thirteen per cent. and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—In spite of the strength of opium, no changes have been made by jobbers. The market is, however, strong, and shows an upward tendency. Prices hold firm at \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—The market is steady, but rather featureless. Demand is of average proportions. Bark shipments from Java have been very light, only 128,000 pounds. The average unit of sales made at the London auction February 14 was 1½¢, which is fractionally higher than for the previous month. Foreign markets, therefore, are firm and tending upward. Local jobbing prices remain unchanged at 23¢@23½¢, for bulk in 100-oz. tins, 21½¢@21¢, in 50-oz. tins, 24¢@21½¢, in 25-oz. tins, 25¢@25½¢, in 15 or 10-oz. tins and 20¢@31½¢, in ounce vials, according to brand and amount.

BROMINE PREPARATIONS.—While manufacturers have generally reduced prices, supplies at the new figures are hard to obtain. Some jobbers are said to be quietly lowering quotations, but others are holding at old prices still. The jobbing market cannot therefore be generally quoted lower.

IODINE PREPARATIONS.—A sharp advance has occurred, owing to a rise of 1½¢, per ounce in the London syndicate's prices. Two reasons for this have been suggested; either that the Far Eastern war has absorbed the Japanese supply of crude iodine, so leaving the South American supply, which is closely controlled by the English combination, the only iodine on the market, or that the English syndicate has secured a control over the Japanese output. Local jobbers have advanced quotations all along the line. New prices are: Iodine, re-sublimed, \$4.50@4.75 per pound, and 35¢@40¢ per ounce; iodoform, \$4.75@5.00 per pound and 37¢@42¢ per ounce; ammonium iodide, \$7.25@5.50 per pound and 40¢@45¢ per ounce; arsenic iodide, \$5.80@5.55 per pound and 45¢@50¢ per ounce; bismuth subiodide, \$3.25@5.50 per pound and 40¢@45¢ per ounce; calcium iodide \$4.75@5.00 per pound and 36¢@40¢ per ounce; iron iodide, \$4.25@4.50 per pound and 35¢@40¢ per ounce; syrup iodide of iron, 45¢@50¢ per pound; lead iodide, \$3.15@3.40 per pound and 25¢@30¢ per ounce; mercury iodide, green and yellow, \$3.00@3.25 per pound and 25¢@30¢ per ounce; red, \$3.25@3.50 per pound and 28¢@32¢ per ounce; potassium iodide, \$3.50@3.75 per pound and 28¢@32¢ per ounce; sodium iodide, \$4.40@4.60 per pound and 34¢@40¢ per ounce; sulphur iodide, \$5.00@5.25 per pound, and 38¢@45¢ per ounce.

GLYCERIN. An easier tendency in the market abroad, because of a lack of demand, co-operates with a demand of but moderate proportions here towards a decline. Jobbers have reduced prices to the following: 30", in 50-lb. tins, 15@15½¢, and less, 18¢@20¢ per pound; 28", in 50-lb. tins, 14@14½¢, and less, 17¢@20¢ per pound.

OIL WORMWOOD.—A slackening of demand causes a moderate reduction in jobbing quotations which now are, pure, \$4.65@4.90, and ordinary, \$3.90@4.15 per pound.

OIL OF CLOVES.—The continued weakness of the spice results in another jobbing decline in the oil, this time to \$1.10@1.20 per pound.

UNION SALAD OIL.—Manufacturers have cut prices because of the smaller cost of raw material. Jobbing prices, in sympathy, have been reduced to 38¢@39¢ per pound in barrels, and 50¢@55¢ per pound for less.

BALSAM TOLU.—Some pressure of supplies on the market produces a slight decline in jobbing prices to 29¢@30¢ per pound in 10-lb. tins, and 35¢@41¢ per pound for less.

CITRONELLA OIL.—As stocks have been moving slowly, jobbers have been more inclined to sell and have accordingly reduced their prices to 52¢@57¢ per pound.

MERCURY.—Competition from outside sellers is affecting the wholesale market, but declines are too small to materially change jobbing values. In less than flask quantities, however, quotations have eased to 62¢@66¢ per pound.

BALSAM PERU.—A light demand and keen competition makes jobbing values lower in sympathy. Present figures are \$1.37@1.57 per pound.

BAVEBERRY WAX.—The scarcity continues and its effect increases. Jobbing prices have risen to 33¢@38¢ per pound.

SEIDLITZ MIXTURE.—A decline has occurred because of competition among manufacturers. Revised jobbing prices are, barrels, 18@18½¢; 50-lb. boxes, 18½¢@19¢; and less, 22¢@25¢, all per pound. Kidder's, in barrels, is 20¢@21¢ per pound.

CREAM OF TARTAR.—Affected by the same movement mentioned above, this commodity has been reduced by jobbers to the following: Barrels, 25¢@25½¢; 50-lb. boxes, 25½¢@26¢; and less, 28¢@32¢, all per pound.

TARTARIC ACID, POWDERED.—In sympathy with the two above reductions, jobbers now quote a reduction to the following: 31@31½¢ in barrels; 31½¢@32¢, in 50-lb. boxes; and 35¢@38¢ for less, all per pound.

BENZOIC ACID, GERMAN.—Jobbing values have dropped to 45¢@55¢ per pound.

MENTHOL.—The last fluctuation wave in this, caused by larger arrivals, has reached jobbing prices and caused a reduction to \$3.25@3.50 per pound.

NUTGALLS.—The frequent recent advances in the primary market, due to scarcity and a good demand, have caused a jobbing rise to 38¢@42¢ per pound, and powdered, 43¢@47¢ per pound for Blue Aleppo.

GALLIC ACID.—Owing to the rise in nutgalls, jobbers have advanced prices for acid to 65¢@70¢ per pound.

OIL HENBANE.—Most recent jobbing prices are 40¢@50¢ per pound.

ROCK CANDY SYRUP.—Because of the increased cost of raw materials, manufacturers have raised prices and jobbing quotations have also risen, now being 60¢@61¢ per pound in barrels; 62¢@63¢, in ½-bbls.; 66¢@67¢, in 10-gal. packages; and 71¢@72¢, in 5-gal. packages; second grade, 3¢ less on above list.

ROCK CANDY.—Manufacturers have boosted values and jobbers follow. Present prices are: White, strings, boxes, 12@15¢ per pound; palls, 11@14¢ per pound; red and yellow, 5-lb. boxes, 13¢@15¢ per pound, and palls, 12@14¢ per pound.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, MARCH 2, 1905.

Number 9.

Entered at the New York Post Office as
Second Class Matter.

Established 1887

THE PHARMACEUTICAL ERA
PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES:

U. S., Canada and Mexico, - \$3 per annum
Foreign Countries in Postal Union, \$4 per annum

The Price List Editions of the Era are
issued in the Spring and Fall of each year and one
copy is sent free to each regular yearly subscriber.

Era Binders—Subscribers are advised to
save their Eras, together with the complete INDEX
which is supplied with each volume (6 months.)
We supply a substantial Binder at 75 cents
each, postpaid.

EDITORIAL —COMMENT

The Soda Fountain in 1905.

The article on the soda fountain in
the Alpers pharmacy is the first of a
series which The Era has in prepara-
tion as an introduction to the soda
trade of 1905. We expect to discuss
all sides of this subject, which is of al-
most supreme importance to the drug
trade of the country. There will be de-
scriptions of representative equipments
in the principal cities of the country,
and the trade bringing details of dis-
pensing will be discussed by recognized
experts of the art.

The fountain expert who kindly con-
sented to talk for the edification of our
readers this week brings out a number
of points which cannot fail to interest
dispensers everywhere, but especially
those who are familiar only with the
modest equipment of the smaller drug
stores where soda is only a minor side-
line. Here are the views of one who
has made the business a profession, and
has studied every phase of the trade as
a pharmacist studies the pharmacopœia.

An interesting development of the
fountain trade is disclosed in the state-
ment that fully one-half of the income
is derived from the sale of fancy drinks
in which no carbonated water enters at
all. Another point which contains a
hint for the fountain man everywhere
is the storing of ready remedies for
minor ailments at the soda dispenser's
elbow. Does a customer need a reme-
dy for a disturbed stomach or a tablet
for a headache? He finds it at the
fountain within easy reach of some-
thing with which to wash it down.

The necessity of absolute cleanliness
and the advantage of attractive glass-
ware and fittings, are, of course, well
understood. Yet it will do us all good
to hear about those things at least once
a week.

Newspapers to the Rescue.

The "formula on the bottle" bills,
which have been introduced into the
legislature of apparently every State in
the Union, have by this time nearly all
been disposed of. These bills all bear
a strong family resemblance, the simi-
larity being in many cases so close
that entire paragraphs are identical in

word and punctuation. In view of this
remarkable similarity, the first source
of these many measures becomes an in-
teresting subject of inquiry.

The bills all bear the marks of the
reformer's shop. They are all frankly
denunciatory of proprietary medicines,
which are calmly assumed to be all
thoroughly bad. No attempt is made
to protect the really meritorious remedy
for which there is a real demand, and
that constitutes a convenient point of
attack from which these specimens of
spectacular legislation may be easily
subdued. The newspapers have been
quick to see this advantage in favor of
their very good friends, the proprietary
manufacturers, and have all responded
bravely in defense of threatened rights.

It is difficult to understand what the
reformers expect to accomplish with
their compulsory publication of formu-
las. A measure of that kind would
seriously embarrass the proprietors,
for it would subject their remedies to
wholesale imitation; but that it would
reduce the consumption of secret mix-
tures by the public is highly improb-
able. Formulas mean nothing to the
people whom the measure aims to pro-
tect, but they mean a great deal to the
horde of imitators who need no pro-
tection, and much less encouragement.

Pure Drug Bill in New York.

The pure food and drug bill, which
was introduced in the assembly at Al-
bany, last week, was evidently like
many another similar measure now be-
fore the people's representatives, mod-
eled upon the lines of the bill which
has died from lack of attention at
Washington. But it is even more dras-
tic than that much belated measure,
and, it is safe to say, also less likely
to become a law.

Features which at once place the bill
in the class inimical to drug interests,
are the definition of the term "drug"
and the clause providing for the print-
ing of formulas. The definition of drug
is identical with that of the national
pure food and drug bill. It reads:
"The term drug, when used in this act,
shall include all medicines and pre-
parations recognized in the United
States Pharmacopœia for internal and
external use; also any article or sub-
stance intended to be used for the cure,
mitigation or prevention of disease."

Clause 7 contains the following:
"Every compound, combination or mix-
ture of drugs, manufactured or drugs

with substances which are not drugs, manufactured, sold or offered for sale in this State, as a remedy, medicines or cure, for internal use, shall have printed in plain type, not smaller than the sort known as brevier, on or on a label securely attached to, every package, case, box, bottle or wrapper containing such compound, mixture, remedy, medicine or cure, a list of the substances or ingredients contained therein, giving the common or English names thereof, and the percentage of each of such substances or ingredients so contained."

The penalties are severe, one thousand dollars fine or imprisonment not exceeding two years, the members of a firm or corporation to be prosecuted individually. All in all the terms of the bill are so drastic that one is led to doubt whether it was ever intended to become a law. It is not surprising that the bill has only a very meager chance in the assembly, so meager that local druggists do not seem to consider active opposition worth while. Other interests will have no difficulty in throttling it before it becomes at all dangerous.

A college president has asked for donations of dress suits, so that the impecunious students of his college may enjoy the benefits of full dress functions. The request has aroused a great deal of discussion and no little resentment. But why should we smile? A claw-hammer coat is quite as becoming to a poor student as to the average bank president, and probably quite as necessary to his happiness. Just the same, most students will continue to get along without dress suits and spend their money for hash and sweaters.

The Old Anti-Secret Order in Cuba.

La Lucke, a newspaper of Havana, gives as its opinion that the ancient royal order providing for the printing of formulas will never be enforced. As our readers will doubtless remember, this old measure was dug out of a deserved oblivion last November, and for a time threatened the proprietary trade in the island.

The manufacturers of the United States, Germany, France and other countries united in a protest. It now appears that the order is a dead letter, and was, in fact, never put into effect in either Cuba or Spain. Moreover, the law is absurd in several ways and could never be enforced. A circumstance which should go far to reassure manufacturers who contemplate the invasion of the island with proprietary medicines is the fact that the importation of secret remedies supplies a large revenue, and that the enforcement of the order would curtail customs receipts without adding to the income of the State in any way.

Useless at Forty and in the Way at Sixty.

The views of Dr. Osler on the comparative uselessness of aged men have reached Chicago and have stirred our friend Bodemann to a characteristic proof of his youthful vigor. He says: "Who is Dr. W. Osler, who wants to chloroform everybody at the age of sixty? Gee whiz! If that's a go, I shall have to hustle to make my mark in this cold, heartless world. Where do Gladstone, Humboldt, Bismarck, Moltke, R. E. Lee, Mentzel, Mommsen and Helmholtz come in? And where is Ebert and Biroh? They have passed the chloroform dead line! Is this Osler hunting for notoriety, fame or infamy?"

As our friend has no doubt learned by this time, Dr. Osler is one of the foremost exponents of medical science in this country. He has been professor in the medical department of Johns Hopkins University since his fortieth year, and it was in his farewell address to his students preparatory to assuming an important chair in the University of Oxford, England, that he made the famous remark. He has since explained away the most startling portion of his reported proposal, but he sticks to his view that men under forty do the world's work. In a late interview he said:

"I have been so misquoted in the papers that I should like to make the following statement:

"First—I did not say that men at sixty should be chloroformed; that was the point in the novel to which I referred, and on which the plot hinged.

"Secondly—Nothing in the criticisms have shaken my conviction that the telling work of the world has been done and is done by men under forty years of age. The exceptions which have been given only illustrate the rule.

"Thirdly—it would be for the general good if men at sixty were relieved from active work. We should miss the energies of some young-old men, but on the whole it would be of the greatest service to the sexagenarii themselves."

The learned doctor, of course, refers to man as a human machine, the efficiency of which has its rise and its fall. That he speaks only in the most general terms is proved by the fact that he made the announcement upon the eve of his departure for fresh fields of labor. No doubt most men do begin to stagnate physically and mentally at about the age when it is natural to put on flesh and grow set in one's ways, but the exceptions are so many that our friend need not be in the least alarmed about the youthful veterans of Chicago. All the names mentioned are exceptions to the rule, and he himself is the most notable exception of them

all. Decay comes with stagnation, and old age kept green by a keen interest in things is youth glorified and fortified by the experience which comes only with the years.

Mr. Ebert and Mr. Biroh are safe for the present, and Mr. Bodemann still has plenty of time in which to straighten out several kinks in this world and prepare for himself a lasting memorial.

A Drug Clerks' Hours Bill.

A shorter hours bill has passed the Lower House and the Senate of California, and is now awaiting the signature of Governor Pardee. The measure aims "to regulate the work and hours of employes engaged in selling at retail all drugs and medicines." It provides that drug clerks shall be required to work not longer than an average of ten hours a day and six days a week "outside of any emergency calls which might be made." Any person violating this will be adjudged guilty of a misdemeanor and subject to a fine.

Many attempts have been made to regulate the working hours of drug clerks by legislative means, but the results have not been very encouraging. The average period of duty is entirely too long, but the actual needs of the case depend upon so many factors beyond general control that the matter must always resolve itself into a question of personal expediency. It would be obviously impossible to compel a druggist to employ two clerks when he can support only one, and to reduce the clerk's hours only to load the proprietor with extra hours would make present evils only worse. No doubt the exception in cases of emergency possesses sufficient elasticity to cover all requirements. The term "emergency" admits of many interpretations. Illness of the proprietor would be emergency enough to justify several hours' extra service on the part of the clerk, and some judges might even consider an occasional picnic a sufficient excuse for a moderate stretching of the law's provisions.

Our College News.

It has been the complaint of practical druggists against colleges of pharmacy that they do not bring students into close touch with the actual affairs of the trade. This complaint, such as it is, is rapidly losing all the flimsy foundation which it may at one time have possessed, and in bringing about this very desirable change THE ERA is taking its part.

The news printed under the heading "Our Colleges," has opened up a new field of interest for students. They have been attracted to the topics in our pages which are not severely professional and educational. Thus, we see

the members of the Washington Agricultural College Pharmaceutical Association discussing along with the work of the laboratory the progress of the N. A. R. D. campaign and other topics of the work-a-day world.

Even the most incredulous of practical men must now admit the injustice of accusing the colleges of mixing too little practice with too much theory. In Kansas University the students begin their commercial course by taking an inventory of the college drug store. Even the ancient preceptor could not nauch his apprentice upon a pharmaceutical career in a more direct or practical manner than that.

Death of E. Abbe.

Every student who has handled a microscope is familiar with the name "Abbe." It may not be so generally known that the owner of the name was the inventor of numerous improvements in optical instruments, and that his additions to the practical efficiency of the microscope were so important that without them the marvelous strides of bacteriology which have marked the past few years would have been impossible.

E. Abbe died recently at Jena at the age of sixty-four. He had been connected with the Zeiss optical instrument factory since 1860, and at the same time he held the position of honorary professor of astronomy and meteorology at Jena University. Besides his achievements in the realm of science, he was interested in the social problems of the day. One of his most valued achievements was the reorganization of the Zeiss establishment on a basis which tends to solve some of the questions concerning the relations of labor to capital.

Albert Benjamin Prescott.

The chief events in the life of Dr. Prescott, his work and his achievements will be set forth elsewhere; on this page we wish to offer merely a slight appreciation of the good and true friend whom we have lost. He was a friend not only of those who knew him personally, but a friend of all humanity. American pharmacy owes to him, more than to any other man, its position of respect in the community, and when we seek an example of pure, unselfish devotion to the welfare of others, we instinctively think of Doctor Prescott.

His was as sweet and noble a life as it falls to man's lot to contemplate, uncompromising devotion to duty, gentleness and forgiving in his dealings with those less perfectly constituted than he, to all who knew him he was the ideal of a perfect, scholarly, almost saintly character.

The fruits of Albert B. Prescott's

life work are visible in every institution of pharmaceutical education in the land. Years ago he looked forward to a time when the pharmacist would rank with the men of other learned professions, and he laid the foundation of a system of instruction which has been a model of its kind and will so remain for many years to come. He elevated the courses for the training of the manufacturer and the dispenser of medicines to the university standard. In the opinion of many the thoroughness of his courses in chemistry and the allied sciences was far beyond the needs of

THE LATE ALBERT B. PRESCOTT.

the druggist of the times; but if his ideals did occasionally outstrip the present need, all pharmacy has reaped the benefit.

As an instructor and in his dealings with the young, Dr. Prescott was a living refutation of the theory that without a certain amount of harshness it is impossible to spur men to their best efforts. Scolding and fault-finding were as foreign to his nature as is darkness to sunlight, yet few of his more brusque colleagues could stimulate their students to equally earnest work. His criticisms were never destructive or caustic, but always helpful and encouraging.

An incident of the class-room many years ago will serve to illustrate the gentleness and effectiveness of his methods. It was when he still delivered a course of lectures on organic chemistry to junior students of the medical department—the young men of that department of the University of Michigan possessed a reputation for rawness not envied by the pharmacy students. It was near the beginning of the term, not far from the noon hour, and the occupants of the benches in the old amphitheatre were restless. Students are but larger editions of small boys, and a more or less subdued battle

was on, the missiles of offence being tooth-picks. One or two of the bits of wood fell upon the floor before the speaker's desk, much to the dismay of the more decorous hearers, but apparently unnoticed by the patient lecturer. Presently the courteous gentle Doctor stepped down from his platform, never pausing in his discourse or altering the even tone of his voice, slowly stooped, picked up the offending tooth-picks and placed them upon the desk by the side of his manuscript. There was no interruption, and not a word of reproof; but it was effective. The youth who would be bold enough and shameless enough to create a disturbance after that would have been hissed from the campus by his class-mates.

Yet, although he was uniformly kind and gentle, Professor Prescott could, when occasion brought in the question of right and wrong, be as firm and unyielding as a stone wall. The overworked assertion that a man who has no enemies lacks virility, is disproved for all times by his life. An enemy of the beloved "Doctor" is almost inconceivable, yet he was a man, among men, every inch vibrant with force and expression of calm dignity. Another doctrine of the cynics to be disproved by his life is that of the incompatibility of sincere religious belief with high scientific attainment and enlightened intellectual activity. He was a devout Christian and for two generations he rarely missed a service in the old Presbyterian Church.

The death of Albert B. Prescott creates another gap in the U. S. Pharmacopoeial Convention, a gap which in seriousness is second only to that caused by the loss of Dr. Charles Rice. Of the time and painstaking attention which he devoted to the scrutiny of pharmacopoeial terms and specifications few pharmacists know.

There is one adjective seldom applied to men which is naturally associated with the friend whom we have lost. He was lovable in the loftiest sense of the word. No one who has looked upon his beautiful white head and gazed into his kindly eyes will feel any sense of incongruity or experience any sensation of outraged sincerity in connecting the word "love" with the name of Dr. Prescott. Not one of our readers who has ever felt the uplifting influence of his presence can read his death notice without a profound sense of personal loss.

FROM THE FAR WEST.

—At the annual meeting of the stockholders and directors of the Columbus Pharmaceutical Co., Seattle, Wash., the following officers were elected: W. T. Wells, president; W. H. Grigsby, vice-president; W. B. Beebe, treasurer; A. W. Conner, secretary and general manager; A. M. Cutler, assistant secretary.

✂ ✂ C. P. ✂ ✂
EMANATIONS

The Old Dog Has Lost His Teeth;
Knock Him on the Head.

"You may consider yourself down and out," remarked the druggist, laying aside his paper.

"What do you mean?" demanded the C. P.

"What? You haven't read those pleasant remarks of Dr. Osler's? That proves it; you don't keep up with the times."

"That bosh about a man's being useless at forty and fit only to be chloroformed out of the way at sixty?" inquired the sage, with a weak attempt at a smile.

"There is a good deal in it," said the druggist, whose age still lacked a year or two of the disqualifying number.

"It all depends upon what you expect a man to do," said the sage. "Of course, in a football game, even you might be a little too slow and heavy, but life is not a football match."

"It's a race for success," observed the man of drugs, "and in any kind of race the young fellows have a big advantage."

"Nonsense!" replied the C. P. "The main business of life is not to scramble to get ahead of everybody else. That may be the way the world makes its big leaps ahead, but the work of keeping the thing going is not so exciting. That's where the steady, level-headed old chaps come in."

"At any rate, if a man doesn't do anything before he is forty, he is not likely to do it later in life," the druggist said.

"That has nothing to do with the case," replied the sage. "If a race horse becomes so stiff in the joints that he can't keep up with the bunch, he is, of course, useless for racing purposes—knock him in the head? But a plough horse can still move a plough when the suppleness of youth has worn off. The average man belongs in the plough horse class."

"Just the same, I would rather have a clerk of twenty than one of forty-five—other things being equal," observed the man behind the counter.

"Ah, other things being equal," repeated the old gentleman. "Does experience and knowledge of the past count for nothing?"

"Shucks, experience and a stale acquaintance with what has been done doesn't count," insisted the druggist maliciously. "Knowledge of the past doesn't accomplish anything. It's the enthusiasm, the vim of the small boy that does things. The world takes account only of the work done. It doesn't care anything about the individual who does it; his fears and his difficulties don't matter."

"Still, gray hairs have been the symbol of wisdom in all ages," said the C. P.

The druggist smiled. "Wisdom is a drug on the market. It doesn't sell the goods or build houses. Wisdom is a waste of time."

"But—but," stammered the sage, "how about avoiding mistakes?"

"Don't mind mistakes, but go ahead! Is the motto of the age," observed the

druggist. "A lot of fellows are so afraid of making mistakes that they fail to do any work."

The old gentleman gazed gloomily out of the window for some minutes. He was at a loss for a reply; he agreed too well with his friend on the subject of philosophy in general and its absolute non-productiveness to raise any serious objections.

"It makes the time mighty short," he said. "You could scarcely expect a boy to get thoroughly started before twenty-five. That would give him five years in which to save enough out of his salary to set up for himself, and only ten years to make his pile. Then just about the time when his children would be in school, he would be out of it. How about the children?"

The druggist spread out his hands in token of helplessness. "They will have to look out for themselves, I suppose."

"And the good wife who has shared his joys and sorrows, and toiled to the limit of her strength; what is to become of her when it comes time to chloroform the old man at sixty?"

"Better chloroform her, too, I suppose," replied the druggist, promptly, thoroughly enjoying the sight of his old friend's rueful face.

"And there are the young fellows who are always coming to the old gentleman for advice," resumed the C. P., "they seem to value advice."

"They would be better off without it," returned the druggist, heartlessly. "Advice never sawed wood for anybody."

The old gentleman's eyes sought a distant cloud. After some moments of silence, he returned to the druggist. "All right," he said. "If it is best, I am ready to go. But is it quite fair? Here I have toiled to do the world's work; is there nothing but work, nothing but grinding the wheels around and around in this life? Is there to be no quiet evening when the old couple can sit on the porch and talk about the trials and joys of times past? That to me is the most pleasant part of life, when the whip of ambition has ceased to sting and the spur of necessity is no longer urgent. Would you deprive the old man of that?"

"Oh—well—of course," said the druggist. "If you are not in the way, there is no objection to your staying a bit; but remember that it is only on sufferance. Besides," he added, with a twinkle in his eye, "my stock of chloroform has run down."

But our old friend found it difficult to smile at the sally. To be of no use in the world—that is the tragedy of old age. The C. P. lacked his usual air of cheerfulness as he passed down the street that morning, and the cashier at Brown's, who happened to meet him, remarked later to her employe that the old gentleman was aging very rapidly of late.

Preserving Chloroform.

Chloroform, according to Temoin (Pharm. Centrbl.), may be preserved by adding to each kilo sulphur, 4 grams. This treatment is said to keep the chloroform unchanged.

"Money, they say, is the root of all evil." "Well," said the thoughtful drug clerk, "I'd like to have some fluid extract of that root."

LETTER BOX

FRUIT SYRUP PRESERVATIVES

New York City, Feb. 23, 1905.

Editor The Pharmaceutical Era:

Mr. Pritchard's interesting letter in The Era of to-day (page 227) has just been read with great pleasure. I would like to have him make clear to me, and to the pharmacists of Pennsylvania, wherein the Brown bill can be of the slightest service to these pharmacists. The existing law forbids the use of substances deleterious to health. Mr. Brown's bill does the same. The existing law does not mention sodium benzoate as a forbidden article. Neither does Mr. Brown's bill. Commissioner Warren has been ruling that sodium benzoate is deleterious to health and the courts of Pennsylvania have sustained him in this ruling. Will the commissioner and the courts reverse their own rulings under the magic of a bill that leaves the law in this particular, exactly where it was when they made these rulings? If the pharmacists of Pennsylvania think so, pity their credulity, unless they have a prior understanding with Commissioner Warren. Mr. Brown's bill condemns other preservatives which the present law leaves unmentioned, as injurious.

If Mr. Pritchard will kindly read the Pennsylvania law on adulterants, he will discover that preservatives are not forbidden by it, as he seems to think. I fear it is Mr. Pritchard's lack of familiarity, with the law of Pennsylvania that is a fault instead of mine. The Pennsylvania law forbids adulteration. It defines adulterants as substances added to foods that are put there to defraud or that are injurious to health. Commissioner Warren states his own sweet will as to which substances he shall rule as deleterious or injurious to health. In the foggy phrase of the law he gains his autocratic power which the courts, through lack of personal knowledge, have been led to support. As this feature of the Brown bill is identical with the existing law, he must still remain the autocrat. If Mr. Warren has promised to change his rulings he may find it a little more difficult than he imagines. I believe him to be too little of a gentleman to think of placing himself in so suspicious a light, however unfounded it might be, as this would place him. Perhaps neither he nor Mr. Brown have observed that Senate bill 48 fixes a standard for the courts to use that might prove awkward should someone list upon that bill salicylic acid is listed as injurious to health. The United States Dispensary, Potter's Materia Medica and Casby's Pharmacology show that it is only half as injurious as benzoic acid. As the antiseptics, and as these acid radicals are freed by the fruit acids, sodium benzoate is changed to benzoic acid in fruit syrups. The sodium salt is used because it is soluble. These facts considered and we seem to have a case of jumping out of the frying-pan into the fire.

Has it occurred to druggists that their

are some unpleasant features that they might have to face if it was known that only sodium benzoate was being used as a preservative by them? Take, for instance, the fact stated by the United States Dispensary that benzoic acid made from urine is largely imported into the United States. Who knows where this goes? Is it not most likely used in making sodium benzoate? Think what the sentiment of the public might be should they discover that an article made from urine is being put into their soda syrups. Will this not be a pretty story to rebut in court? Then, too, there is the old prejudice against "embalmed" things. When they learn that the genuine old-fashioned acid that embalmed the ancient dead is the identical acid that can be used in Pennsylvania to embalm soda syrups they may not relish it. I do not refer to this with any ill-will toward benzoic acid or its sodium salt. If Mr. Pritchard will turn to page 688, Vol. I, of Thorpe's Dictionary of Chemistry, he will discover why I should have no prejudices against it. That was written before benzoates were used as preservatives.

I am sorry to learn that Mr. Pritchard cannot foresee the inevitable outcome of a policy that would compel a whole State to use only one kind of preservative. It would certainly form a monopoly with all that that implies. Already the benzoates are nearly one-third dearer than the salicylates. When now so much more dear, what could possibly hinder the soaring of the price to figures still higher? It takes more benzoate to preserve, it costs more, weight for weight, and it is only about half as safe to use, if the authorities cited can be believed. What is the gain? Who, except the makers of benzoic acid, are benefited?

It was not necessary for Mr. Pritchard to refer me to Vaughan, Sadler, Remington and Koch regarding the harmlessness of benzoate of sodium, in the amount used, as a preservative. I agree fully with those gentlemen. The superstition that any substance is injurious or deleterious to health in minute amounts, because it can injure in large amounts, does small credit to the intelligence of our age. It is on this superstition that the present law of Pennsylvania is founded and it is on it that the Brown bill has been written. The only inherently injurious substances are those that are laden with toxin-producing germs. They are self-multiplying, so that minute doses can injure. Mr. P's ingenious escape from monopoly by making his own sodium benzoate will hardly work. The present makers of sodium benzoate hold the market on benzoic acid. The corner will be on the acid part. The sodium carbonate is a product of Pennsylvania, but the benzoic acid is a product chiefly of France. If he attempts to escape the clutches of the holders of the French patent, he will have to confine himself entirely to the product from urine. The product from the gum is too expensive. Very truly yours,

R. G. ECCLES.

IN OKLAHOMA.

Guthrie, Okla., Feb. 13, 1905.

Editor The Pharmaceutical Era:

All of the examinations of the Oklahoma Board of Pharmacy cover to some extent pharmaceutical arithmetic, but do not pay

special attention to the division of fractions. At the last examination this question was asked: "The following formula makes 32 fluid ounces of Syrup of White Pine Co. Calculate the cost per pint of that based upon the following: The vegetable drugs average 45 cents per pound; morphine sulphate \$2.40 per ounce; chloroform, 65 cents per pound; alcohol, \$2.50 per gallon, and sugar, 6 cents per pound."

[The formula is identical with that submitted by Dr. Charles T. George, secretary of the Pennsylvania Board, this Journal, February 16, 1905, page 195.—Ed.]

About 50 per cent. of the class answered the question correctly and at least 80 per cent. of the class were approximately correct. I believe that 75 per cent. of our candidates could divide $\frac{1}{3}$ gr. into 24 doses, and give the correct amount of each dose.

A large proportion of the candidates for examination with us are those who have grown up in drug stores and the greater number of them come here from other States. I believe that those candidates who have graduated from high schools would be more proficient in this respect than those who have not had this advantage.

As our law does not require this qualification for examination, we have no record as to what percentage of the candidates are graduates of high schools. The average educational qualifications of our candidates are exceptionally good. Very truly yours,

F. B. LILLIE.

FRACTIONS IN OREGON.

Salem, Ore., Feb. 14, 1905.

Editor The Pharmaceutical Era:

In a general way questions of fractions and percentage are taken up in our questions in pharmacy and chemistry and I find there are many failures in answering them correctly. These failures seem to be due more to a lack of care than anything else.

Regarding the question, "Do you find candidates more apt to fail in answering these questions than in others?" it would seem that there should be no difficulty in a student answering this. However, to satisfy myself, later on I will endeavor to demonstrate whether or not students can answer such problems properly. The deficiency in this respect, of course, comes from the boys who have grown up in the store, rather than those who have had a good common school education. Candidates who are graduates seldom have any trouble with questions of this nature. Very truly yours,

C. G. HENTLEY.

Secretary Oregon Board of Phar

NO FREE TELEPHONE CALLS.

Brooklyn, N. Y., February 18, 1905.

Editor The Pharmaceutical Era:

Under the heading, "Telephoning Doctors Free," February 16, 1905, Era, page 216, you attribute the plan to a Mr. MacDonald, of this borough. Permit me to correct an error, as the practice is an old one that has since been discarded by most pharmacists. In the beginning, like trading stamps, it was a good advertising scheme, but soon the fellow on the corner "got wise," and followed suit, which meant that each had to part with many

dollars each year without reaping any benefit, except in cases where they reimbursed themselves when the prescription came in. The scheme was in vogue when I first came here, but I soon tired of paying freight on bulletins announcing to the physician that the patients had felt the effects of the medicine, etc. In these days of small profits, we can ill afford to give away eight cent telephone calls; it's hard enough to see the eighty-five a dozen articles driving the good old counter trade goods into oblivion.

In connection with the telephone subject, I would like to ask if there is a pharmacist in Brooklyn who has received a telephone bill that has tallied with his record? Respectfully,

NELSON S. KIRK.

WELL ARRANGED LECTURES.

Editor The Pharmaceutical Era:

I beg to acknowledge the receipt of my diploma as a graduate of The Era Course in Pharmacy, for which please accept my thanks. I certainly think the lectures of the course are well arranged and by thorough and conscientious study, one will surely derive much benefit from them. Again thanking you, I remain, very respectfully yours,

JACOB A. SHULMAN.

Essential Oils in Annuals.

Observations have been made on the amount and distribution of essential oils in annuals at four stages: the first, before flowering, when the leaves were in preponderance; the second, at the commencement of blooming; the third, when the plants were in full bloom; and the fourth, after flowering, when the seeds were ripening. It is found that as the process of inflorescence proceeds, the amount of essential oil increases in the flowering parts and decreases in the leaves, reaching a maximum, in the first, when the plants are in full flower, with a corresponding minimum in the second. After flowering, however, the reverse takes place: the amount of essential oil found in the leaves again shows an increase, while that in the flowering organs diminishes. In other words, the movement of the essential oil follows that of the reserve material in the fecundated flower; and after fertilization is accomplished, the odoriferous principles are transferred back to the chlorophyll-containing organs of the plants. The root of annuals is found to contain no essential oil and the stem but little. The leaves and inflorescences contain the greater part.—Compies rend. through Pharm. Journal.

STERILIZING DRINKING WATER.

In a paper read before the American Public Health Association at its recent meeting in Havana, V. B. Nesfield recommended as a chemical method for sterilizing drinking water, the use of tablets made from $1\frac{1}{2}$ grain of bleaching powder and $\frac{1}{2}$ grain sodium bicarbonate. He claims that these will each sterilize a pint of water in five minutes, or, better, ten. He removes the taste of chlorine by adding a tablet of sodium sulphate. He claims that by such use foul river water can be made free from disease germs and palatable.

METHYL ALCOHOL.*

By H. W. WILEY, M.D.,
Washington, D. C.

When wood is heated in retorts, the moisture is driven out, but no decomposition occurs until the temperature approaches 160° C. Between 160° and 275° C., a thin, water distillate, known as pyroigneous acid is chiefly formed; above 295° C. the yield of gaseous products becomes marked, and between 350° and 450° C. liquid and solid hydrocarbons are most extensively formed. Above this temperature little change occurs, and charcoal remains in the retort.

The distillate is condensed and run into large tanks, where the tar settles to the bottom, and the pyroigneous acid, containing acetic acid, methyl alcohol, acetone, allyl alcohol, phenols, and a great many other compounds in small amounts, remains on top and may be drawn off. As the boiling point of methyl alcohol is 66° C., while that of acetic acid varies from 100° to 120° C., according to the amount of water present, if the crude pyroigneous acid is again distilled, that portion distilling below 100° C., will contain most of the acetic acid.

The crude methyl alcohol from the above described distillation is purified by diluting with water until it becomes milky, owing to the separation of oily impurities which collect in a separate layer on standing and are removed. The liquid is redistilled over lime in a rectifying still and the spirit filtered through a charcoal tower to remove coloring matter. By again distilling over lime 99 per cent. methyl alcohol is obtained. Acetone, which boils at 56.3° C., is not removed from methyl alcohol by distilling over lime, hence, to remove this the alcohol is treated with calcium chloride, when chloroform is formed from the acetone, and the methyl alcohol distilled; or with iodine and caustic soda and the alcohol redistilled after the iodoform has been removed. Or the alcohol may be treated with calcium chloride, and the recrystallized solid, which is stable below 100° C., gently treated until the acetone is driven off. The calcium chloride compound is then treated with hot water under pressure, during which it is broken up and the methyl alcohol afterward distilled off. The products of the destructive distillation of wood are given in the following table.

	Gray Acetate.	Turpen- tine.	Tar. Gallons.
Southern pine ..	50-200	—	3-5
Mixed hard wood	50-120	10	5-10
	Char- coal.	Wood Alcohol.	
	Bush's.	Gallons.	
Southern pine	43-52	1-2	
Mixed hard wood	43-52	2-12	

These are the chief products of distillation. In addition there is a large volume of gases evolved, consisting mainly of hydrogen, methane, ethane, ethylene, carbon monoxide, and carbon dioxide, which, having no value for illuminating purposes, are burned under the retorts. An average of 0.1 per cent. of acetone passes over during the distillation, and, as has been said, is very

difficult to separate from the methyl alcohol.

Methyl alcohol is also said to occur in traces in the juices of some plants, and a compound thereof is well known as methyl salicylate in the oil of wintergreen. When pure its specific gravity at 0° C. is 0.810 and at 16° C., 0.7956. It differs but little in this property from ethyl alcohol, which has, at the temperatures mentioned, gravities of 0.806 and 0.794, respectively. It is, therefore, useless to try to distinguish between these two alcohols by determining their volume weight. The boiling point of pure methyl alcohol at ordinary pressure is 66° C., while that of pure ethyl alcohol is 78° C. Although these boiling points are widely separated, it is difficult to so fractionate a mixture of the two alcohols as to secure each in an unmixed state.

The exact determination of the quantity of methyl alcohol which may be mixed with ethyl alcohol or other alcohols is somewhat difficult. One or the other of the following methods is usually employed. The first method depends upon the conversion of methyl alcohol into aldehydes, the removal of any acetaldehyde which may be formed, and the subsequent detection of formaldehyde.

The other method, which is particularly suited to the detection of methyl alcohol in commercial spirits, is found described on page 212 of the Analyst, volume XXIV, 1899.

A simple color reaction for methyl alcohol is described in the American Chemical Journal, volume XXI, 1899, page 296. This test also depends upon the oxidation of methyl alcohol to formaldehyde and the detection of the presence of the latter compound by the reaction with resorcin or phloroglucin and sulphuric acid. This is a test which can be easily applied, and, therefore, I will give it in sufficient detail for ordinary purposes.

It is best that the solution to be examined should be previously distilled, but this is not always necessary. A spiral copper wire is heated to a bright red heat and plunged into a small quantity of the mixed alcohols to be examined. It is well, if the solution is dilute, to repeat this process several times. If the alcohol is concentrated it should be diluted before the application of the test. One drop of a half-per cent. aqueous solution of resorcin or phloroglucin is added, and the mixture carefully poured into a test-tube containing a few cubic centimeters of concentrated sulphuric acid. The presence of methyl alcohol is indicated by the production of a rose-red zone at the conjunction of the two liquids. Above this zone a scanty white or pinkish coagulum appears which finally separates and rises in purplish red flecks.

The only compounds which give any reactions similar to the above described are the tertiary butyl alcohols, dimethyl-ethyl-carbinol, and formic acid. The succession of colors and the department of the flaky coloring matter finally produced are quite different, however, with these bodies as compared with those given by methyl alcohol.

Practically pure methyl alcohol is on sale in the United States under various names. Among these, Columbian, or Manhattan, spirit may be mentioned. The toxic character of this alcohol is so pronounced as to render it advisable that

every package containing it—no matter what the trade may be—should be plainly marked as is required for poisons. Unpurified wood alcohol is known also as wood spirit and wood naphtha.

The uses of methyl alcohol are very many. The crude methyl alcohol, or wood spirits, is used in many countries, especially in England and its colonies, for denaturing ethyl alcohol for use in the arts, for instance, for burning in lamps, and other purposes. Ethyl alcohol, thus denatured, may be used in England without tax when mixed with a certain portion of wood spirit. The properties of methyl alcohol are such as commend it for use in the arts as a solvent or for other purposes, and also for burning in lamps. One of the common methods for producing formaldehyde is by burning methyl alcohol in a lamp of special construction. This general use of denatured methyl alcohol in the arts is advisable because of the tax which is laid upon ethyl alcohol. This tax for alcohol is not remitted in this country for any except the public service and for institutions of learning and research.

The general toxic properties of methyl alcohol, when taken into the system as a beverage or otherwise, have been well set forth in recent articles in the Journal of the American Medical Association, written by Buller, of Montreal, and Wood, of Chicago. These papers being at the disposal of all members of the profession, it is not necessary even to summarize them here. The general effects which are produced by the use of methyl spirit in any form internally are such as to justify its classification among the poisons. When intended for external use also, it seems to me that a similar prohibition should be exercised. This would lead to the prohibition of its use in the manufacture of such a mixture as hay rum or of similar decoctions which are to be applied externally. Its introduction into any substance which is to be used internally as medicine or beverage should be absolutely prohibited. The penalties for its introduction, it seems to me, should be as stringent as those which attend the use of other poisonous matter.

Stringent precautions should be employed in the marking of all vessels containing methyl alcohol and compounds or mixtures thereof, so that even the unwary might be advised of danger. The thirst for alcohol, which is developed in some men to such an extent as to be an actual disease, leads them to consume almost anything which has the appearance of the stimulant which they crave. As a purified methyl alcohol has something of the odor and taste of ethyl spirit, it is not strange that the victim of such a taste might be misled. It is astonishing to observe the character of the decoctions which persons suffering from such a disease will drink. The crime of wilfully placing poison of this kind in beverages which of themselves are quite destructive enough, is one which should meet with swift and appropriate punishment. It is well known that alcoholic beverages can only be used in moderation, even when containing only pure ethyl alcohol and the oxidized residue of some of the other pure alcohols known by the common name of fusel oil.

The use of fermented and distilled ber-

*New York and Philadelphia Medical Journal.

crages in small quantities, it appears to me, can hardly be objected to on hygienic grounds, since nature is able to oxidize and convert into heat and energy a limited amount of ethyl alcohol. The gentle stimulation and agreeable effects produced by small quantities of beer, wine and distilled spirits are well known. The great value of these preparations in certain disordered states of the body is also acknowledged, and they thus become a valuable part of the pharmacopoeial armament.

PHARMACY IN RUSSIA.

The Public Guarded Against Self-Medication and Over-Charging.

BY JOSEPH WEINSTEIN.

Secretary of the Eastern Branch New York State Board of Pharmacy.

As a native of Russia and as one who practised pharmacy there for fifteen years, I am surprised at some of the misstatements contained in the article entitled, "Pharmacy in Russia," by Prosper H. Maraden, which was reprinted in the February 16 issue of *The Era*. The author evidently was not sufficiently familiar with the language to secure his information at first hand. The very first thing that struck me was the juxtaposition of the two pictures of the Ferrein and Keller Apteikas, respectively. Only the former is a retail store, the other being wholesale. This is a strange oversight on the part of the author, as the two stores are directly opposite each other, on the same street; which would be forbidden were they both retail pharmacies.

The Ferrein Apteika is easily the largest in the world. It employs something like ninety registered pharmacists and puts up more than 1,000 prescriptions a day. It is situated on the Nikolska street, a short distance from the Kremlin, about half a block from the spot where Grand Duke Sergius was assassinated. It has its own wholesale department.

In the very first paragraph of the article referred to the statement is made that the Russian pharmacist "is invariably of non-Russian extraction, either German, Jew, or Pole, for the most part." This is absolutely untrue. In all Russian cities, with the single exception of Moscow, the majority of the pharmacists are orthodox Russians. Moscow, where Mr. Maraden got his information, happens to be the only city in which the conditions he describes are found.

In regard to the "control over all remedies" exercised by the Department of Medicine, there are no "remedies" or patent nostrums in Russia. The law provides that in order to secure a patent, chemical merit of the product must first be proved. After this is done, a patent is granted, but on the process, not the product. Thus, other processes may be devised and patented by other people, cheapening the price of the chemical. Should chemical merit not be proved, the product cannot be patented or sold, even when the formula is given on the label.

To my knowledge there has never yet been granted a patent on a remedy for internal use, all patents being for tooth-

ache, hair dyes, corn cures, cosmetics, and such articles which are only used externally. In all, the number of patent medicines allowed in Russia does not exceed 100, including these external preparations and various herbs. Headache cures, blood purifiers, all-cures and other nostrums are strictly forbidden. Thus does the Department of Medicine look out for the public and prevent the evil of self-medication; which is my first argument against Mr. Maraden's statement that the public in Russia grumble, but not the pharmacist.

Now, as to prices, so frequently a cause of complaint by the public. All prices are regulated according to a fixed government schedule. When a pharmacist gets a prescription he must carefully calculate the price of each ingredient according to his schedule, and add so much for the cost of the bottle, and "taxa laborum." That fixes the price of the prescription. Should it be thirty-nine cents, he is absolutely forbidden to raise it even one cent. He may, if he chooses, charge less than that, provided he doesn't advertise the fact; but under no circumstances may he charge more. Why, then, should the public grumble? They are protected both from over-charging and self-medication.

The system of attaching a "signature" to each prescription is really another way of safeguarding the public. As the prescription is duplicated on the back of each signature, it is possible to obtain any number of refills. Substitution is impossible; it is altogether unheard of.

There are positive restrictions as to the opening of new pharmacies. In capital cities, such as Moscow or St. Petersburg, the proportion of pharmacies to inhabitants is fixed at 1 to 15,000; in government cities it is 1 to 10,000, and in provincial towns 1 to 7,000. Beyond this limit it is absolutely impossible to establish a new pharmacy. Should an increase in population take place, the privilege of starting the new store goes to the man with the greatest government pull.

Under these restrictions, one might imagine that pharmacists would have a sort of monopoly. But this is where the Apteкарski Magazin comes in, and I don't think Mr. Maraden has differentiated it sufficiently from the pharmacy. The Apteкарski Magazines correspond closely to the American drug store, with the difference that they have no right to compound prescriptions nor sell galenicals, unless they come in sealed bottles, put up by a regular pharmacy. The sales of the Apteкарski Magazin are made up chiefly of the "sale in hand" preparations. There are separate stores for toilet articles and cosmetics, and others for rubber goods. Cigars are restricted to cigar stores and soda water to confectionery stores and kiosks, and whiskeys and brandies to liquor stores only. In no Russian drug store will you find such variety as we do over here; there are no hair-soles, or canides, or razor strops; not because the druggists do not care for it, but because it is strictly forbidden by law. Take the largest American drug store, strip it of everything but prescription and dispensing trade, and it would be smaller than the littlest pharmacy in Russia.

In Moscow, a city of over a million population, I think there are about eighty pharmacies and some 400 Apteкарski Magazines. The latter, by the way, are

generally presided over by competent men employed in the pharmacies.

In order to practice pharmacy in Russia a man must first have a preliminary education equivalent to that of a high school here. He then serves an apprenticeship of three years, after which he may take an examination as assistant pharmacist at the medical faculties of one of the universities. Another term of three years' experience in pharmacy follows, after which he is admitted to a two years' course in any university. He graduates with the degree of provisor, a full-fledged pharmacist. There is also a scientific or post-graduate degree, of magister or master of pharmacy. To obtain this it is necessary publicly to defend a dissertation against a corps of professors.

No provisor is ambitious to own a pharmacy. This is not remarkable, because as a result of the restrictions I have already named, the good-will of an established pharmacy in a capital city may reach the price of a quarter of a million rubles. In a government city the price is \$25,000 to \$50,000, while in the smaller towns it is seldom less than \$10,000. Any pharmacist is welcome to establish an Apteкарski Magazin.

With all these restrictions, the profession is not overcrowded and consequently the position of an employed pharmacist there is much better than that of the average proprietor here. There he is on an equal footing, socially and otherwise, with his employer. There is not so much competition in salaries, hence short hours and good pay.

A board of pharmacy or the pharmaceutical branch of the Medical Department in each government has charge of the inspection of stores and takes care that all preparations are kept up to standard. I remember, when I had a store in a small town for a time, in the government of Wilna, I was notified that on a certain day the inspector would be in to examine my preparations. The inspector, with his staff, came; he was an expert chemist, and brought all his apparatus and reagents with him. He examined and tested samples right on the spot. From such an examination, there cannot be, and there never is, any appeal. The registration of records and reports of prescription and poison sales is also among the duties of the Board of Pharmacy.

The pharmacy laws of Russia, as pertaining to the business and educational part, are nearly identical with those of Germany. While in many ways the development of Russia is far behind that of other countries, owing to the form of government, still, in pharmacy it is far superior to the United States. Such legislation as the Mann bill, and bills for raising the educational standard in the various states—these have existed for a long time in Russia.

NOTE ON CARBOLIC ACID.*

BY L. REUTER.

Almost fifteen years have passed since the writer made his first experiments for the purpose of finding means to prevent crystallized carbolic acid from becoming red.

Inasmuch as these experiments proved successful, at least with reference to cer-

*Pharmaceutical Review.

tain brands of carbolic acid, especially those of German manufacture, the following account may be of interest, not only to the manufacturers who ship thousands of drums of their acid to all parts of the world, but also to such wholesale houses, who transfer large quantities into smaller containers.

The method for preserving crystallized carbolic acid coming from the factory in white condition, is based on the addition to the melted acid of a certain quantity of sulphurous acid: An amount large enough to counteract the oxidizing influence of the air or of other oxidizing agents which might produce the red coloration, but at the same time so small that nobody could reasonably raise any objection to its use.

The best way of carrying the method into effect is to saturate liquefied carbolic acid containing 10 per cent. of water with sulphurous acid gas until it contains about 10 per cent. of the latter.

The carbolic acid to be saturated is preferably cooled with cold water, and the sulphurous acid prepared either from charcoal and sulphuric acid or from some sulphite and acid. If thus prepared, the gas should be purified by careful washing, but it is not necessary to dry it. Liquefied sulphurous dioxide can also be used to advantage.

The 10 per cent. solution is a yellow liquid and has a very strong odor of sulphurous acid. If 50 cc. of this solution, containing 5 grams of sulphur dioxide be added to the contents of a drum holding about 200 kg. of melted carbolic acid, and the contents thoroughly mixed, then the phenol thus treated will contain about 0.0025 per cent. A 5 per cent. carbolic water made from such an acid will contain 0.000125 per cent. of sulphurous acid, a quantity which is certainly not objectionable.

While certain brands of carbolic acid of English manufacture behave differently and sometimes assume a peculiar yellowish tinge, when sulphurous liquor is added even in so small quantities that German acid would give no coloration whatever, it has been found that the best brands of German carbolic acid, melting point 30°-35° C., give very good results. The writer has even succeeded at times to decolorize German acid which arrived from the manufacturer with a slightly red coloration by macerating the well covered, melted acid, preferably in a chamber heated by steam coil, with 25 to 50 to 75 cc. of the sulphurous liquor for each 200 kg. of the melted acid.

If German carbolic acid—for instance, the excellent quality manufactured at Ludwigshafen-on-the-Rhine—was treated as described above, it very seldom happened that it became red after it had been subdivided and kept in well stoppered smaller containers. As a matter of fact, after crystallization it was perfectly white and remained so for an almost unlimited length of time when kept in well closed bottles. Even in white bottles it did not become red for many years, provided there was just enough sulphurous acid present to counteract the oxidizing effect of the small amount of air which filled the space between the acid and the stopper.

The same carbolic acid not treated with sulphurous acid, very soon became slightly reddish, even when kept in a dark place

and in tightly closed bottles. After somewhat longer time, it became dark red and in some instances, after a few months or years, even blackish red.

Samples are still at hand which are over ten years old. They prove almost without exception the value of the method. Those samples containing traces of sulphurous acid are to-day perfectly white, while samples of the same acid not treated with sulphur dioxide transferred to the same kind of white bottles, provided with the same quality of stoppers and stored under the same conditions, are all more or less colored, even to red and black.

If more care were to be taken in carbolic acid factories to avoid access of air during the distillation process and during crystallization in the galvanized iron drums, much trouble would be saved to the manufacturer as well as to the purchaser. The acid should be allowed to cool in an atmosphere of carbon dioxide, and before crystallization a small amount of sulphur dioxide should be added. With the exercise of these precautions the percentage of acid in drums arriving at the point of destination, in a more or less colored condition, would be lowered considerably.

While, as stated above, no objection can be raised against the use of such small quantities of sulphurous acid, the use of tin or of tin salts, or of phosphoric acid (the latter being used in this country) is strongly objectionable. Of course, nobody would object to the presence of traces of tin, such as are necessarily taken up by the carbolic acid from tinned drums during the solidification or remelting process in the drums. For this reason a yellowish coloration should be permissible if equal parts of melted carbolic acid and hydrogen sulphide water are mixed; but a dark brown reaction, indicating the presence of an objectionable quantity of tin, should not be tolerated.

The fact that sometimes, even in carbolic acid which has been shipped from the factory in drums made from galvanized iron and free from tin, the latter has been found in objectionable quantities, seems to prove that either tin salts are used in such factories to preserve the acid, or the acid has been digested with metallic tin for the same purpose.

The adoption of tests for tin and phosphoric acid by the pharmacopœias and by the committee compiling standards in accordance with the new "pure food and drug law," would only be justified, and eventually the entry into the United States of carbolic acid producing a brown color with hydrogen sulphide water should be forbidden.

In regard to the melting point of carbolic acid, it may be added that it does not seem necessary to adopt as an index of purity a higher one than that which the principal brands of the market now have, namely, a melting point of 30° to 35° C.

The 42° acid is almost exclusively used for the synthetic manufacture of such articles as salicylic acid, cumarin, etc. The principal article of commerce, namely, that used for disinfecting purposes and sold by druggists, is the 30° to 35° carbolic acid. The latter, even if strongly colored, is a good and pure acid, if free from tin and phosphoric acid. The principal difference between the 35° and 42° acid is that the former, in addition to a

little water, contains a small percentage of cresylic acid and cannot, therefore, be used for making salicylic acid, but in regard to its disinfecting efficiency, it is equal if not superior to the 42° acid, just because the cresylic acid it contains is supposed to possess a stronger disinfectant power than the pure phenol.

The situation will be changed, of course, when synthetic carbolic acid (m. p. 41°-42° C.) is put on the market as cheap or cheaper than the 35° acid.

In conclusion I would say that a slight discoloration of the carbolic acid does not interfere at all with any of its medical uses, but, unfortunately, manufacturers and wholesalers are expected to furnish colorless acid, and for that reason something has to be done to suit the retail trade. Instead of using a preserving or decolorizing agent, it would perhaps be recommendable to have all carbolic acid sold by druggists colored uniformly by some red organic dye stuff. A large number of mistakes and accidents could probably be avoided if that were done.

In several states of the German Empire, the coloring of corrosive sublimate tablets is prescribed by law for the purpose of avoiding accidents; a similar law was passed in France a few years ago, and there appears to be no sufficient reason why the same principle of safety could not be applied to carbolic acid. The coloring of carbolic acid would certainly save much trouble to manufacturers, wholesalers and retailers, while at the same time the public would be protected and less inclined to make mistakes.

Keratin Coating For Pills.

Pills intended to be coated with keratin must be made with some fatty excipient and contain no appreciable moisture; the mass is best made with cacao butter and oil of sweet almond, or a mixture of purified mutton tallow or cacao butter, 10 parts, and white or yellow wax, 1 part (Bull. Pharm.). After the pills have been rounded they should be dipped in melted cacao butter, which is allowed to harden; they are then dipped in a porcelain dish, the keratin solution added (about 30 or 40 drops for 100 pills of medium size) and rotated until the pills have become thoroughly moistened, after which they are dried on parchment paper, to which they will not adhere. The application of keratin solution must be repeated three or four times and allowed to dry each time.

To avoid the tediousness of coating with keratin, salol coating has been recommended, which is best applied by melting salol in a dish and dipping the pills, fixed on needles, into it, afterward closing the small needle holes separately. Salol, like keratin, is insoluble in the gastric juice, but the coating has not been found so satisfactory.

It was during the revolution in Paris. The drug store was besieged. The worthy druggist, exhausting his bullets, rammed home a charge of blue mass pills and the old musket spoke once more. "Someone is getting his medicine hypodermically," said the apothecary, musingly. Ever ethical, he sent out seidlitz powders by the boy.

IN BREADTH OF BOND.

BY JOEL BLANC.

The week had held a peculiar and puzzling experience. Among the places to which my contracts had been sent, were two small cities in neighboring counties. The number of retailers in each was about the same, and I felt well acquainted with the trade in both places. In addition to the circular letter that accompanied the contract, I had sent a few personal lines to each of the druggists in these cities; I had written as friend to friend, for I was the friend of each, and felt that each was mine.

From one of the cities fifty per cent. of the contracts were returned signed, within forty-eight hours; and with nearly all of them came a few kind words of encouraging approval. One man had asked that I let him know who had not signed, that he might use his phone to hurry them up; others offered show-window space; there was hardly one that did not evince some real sentiment of fraternity; and not one had failed to clearly understand the proposition—every retailer had signed by the end of the week. From the other city only twelve per cent. of the contracts had been signed by the week-end, and the only lines of writing with them, were in the nature of expressed doubt and suspicion.

Both of these cities are organized. Why were the results so different? Even in the peace-and-love atmosphere of my own home, this problem was with me as I sat in my easy chair and tried to read the solution in meerschaum-born castles of smoke.

"Papa, rock boy to sleep!" The imperious command came from the lips of a little white-robed figure that stood at my knee. I lifted my darling, and he cuddled snugly in my arms.

"Papa, has my hobby horse got real skin and a really, truly tail?"

"Yes, honey-boy; horsey has real skin and real hair."

"That little boy who came to play with me said my hobby-horse had real skin. I love my horsey better now, and wasn't he a nice little boy to tell me? I love to play with other little boys, and when I am a great big boy I am going to play awful lots and—when I am—a big—big—man I am going to play with other maas—and—I don't want to be—like Robinson Crusoe—and—have only a bow-wow—to play with—and—!" My baby had gone to dreamland's playground, but not until with baby words, from baby thought, he had solved the problem that I alone could not solve. He had shown me that the spirit of progress, with or without organization, is fraternity.

Of the two organizations that puzzled me, one was lit by the glowing bonds of true fraternity; the other was merely a loose collection of selfish units. The members of one of these associations have learned that community of commercial interests can only be beneficial where all the character, all the individuality of each man is used for the general good through real fraternal unity, while the members of the other organization know each other as druggists only, and have not learned that commercial bonds alone are but shattering shackles of clay.

If you, my brothers of the trade, had lived and wandered for a few weeks as I

lived and wandered for years; if you had but known the awful solitude of the crowd; if you had sat as I have in the crowded lobby of a hotel and looked upon the hundreds of faces without seeing one you knew; if you had day after day, week after week, spoken to scores of men and not been able to call one your friend, your brother; then you would know what fraternity really means, and would cherish this bright gem in the jeweled chain of life.

Look around you and see who they are that live in the sunshine of others' smiles. See what sort of men they are who cower in the shadow of solitude; see how the miser hermit trembles in fear of other men and then leaves the only gold he knew for other men to spend, knowing nothing but a self-made hell on earth; expecting nothing but a deserved hell beyond.

We seem to think that other men are unfit for our fraternal confidence because in the hours of business care they think and do as we do. Suppose that our forefathers had reasoned so; they were all limited in occupation to the axe, the gun, the plow or hoe; suppose that they had not learned to know each other as men, within the home and church; the hand of each would have been against all the others, and each would have faced the red savage alone—and died.

We face the common trade-demoralizing foe together, for a few moments or at most a few hours at a time, and then we glare at each other in suspicion, break ranks and scatter. Why not bivouac together? Why not sit around the same camp fires and find greater strength for the battle of to-morrow by forgetting our trade war in talk of other things that will make us know each other as sons, fathers, men and brothers?

The hard commercial conditions of the day have put upon nearly every business man a coin-hard mask, that hides his true character during the business hours at least. Remember, that it matters not how many things a man may seem, he has but one true self, one soul. The God within him is that self. We call it mind. Let us know each other truly and not superficially, let us learn to know each other as men first, and druggists last; then, as brothers, we can accomplish more for our drug interests.

Away back in the dark days, the days of wandering, I used to say that happiness was a meaningless word. That it was like to-morrow, a something that never comes. I know, now, that happiness is real, beautifully real. Why, boys? I am one of the happiest and richest men in all the world, and in my storehouse of happiness one of the rarest gems is friendship. All the men friends I have are in the trade, and yet their friendship is not trade bound. I know my friends in their homes, and they know me in mine; we know each other's wives and children; we are friends first—druggists incidentally. Do you not envy me? I hope you do, because what we envy in another, we strive to gain for ourselves.

"Bear ye one another's burdens"—how hard it is to do it when we think of financial burdens alone. See your friend in his home, see him take in his hand the picture of some loved one who has gone into the Great Beyond; see the tears gather in his eyes and feel the moisture springing to your own; know the impulse that draws

your arm about his neck in depth of fraternal feeling that no words can express; know, feel, that love in fraternity, is as truly, purely love as in parental, filial or conjugal bonds.

Learn the beauty of fraternity, and the world grows bright; practice it, and you in the world grow strong. To an army going out to battle for a great cause, no general, no ruler, not even the Ruler of the Universe could give any more encouraging, strengthening, manly advice than this: "Love ye one another."

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Tanning Sheep Skins.

(F. B. P.)—The following method for tanning "sheep skins with the fur on" is taken from Workshop Receipts:

(1) All fragments of flesh must be scrupulously removed with a knife, taking care not to cut or bruise the inner skin; then dry with towels, and lay the skin on a flat board or slab. With hot water, soft-soap, and a hard brush, thoroughly scrub the inside of the skin. Crush and mix together 2 ounces of salts of tartar and one ounce of ammonia, which sprinkle on the skin while you scrub it. This will free it from grease. After well scrubbing the skin, rub it well with dry saw-dust, and in a few hours it will be ready for the tanning pickle. This preparation consists of one pound of fine oatmeal, eight ounces of corrosive sublimate, four ounces of saltpetre, and one gallon of vinegar. Boil the vinegar and pour it over the solid ingredients, stirring the whole briskly while in the act of pouring. Let the solution get quite cold, and then immerse the skin, which may be allowed to remain and soak for at least two days. Then take it out, and strain it tightly over a stretcher till it is quite dry. During the process of drying, comb and smooth the wool or hair. In the course of a week the skin will be ready for use.

(2) After cutting off the useless parts and softening the skin in warm water, take away the fatty part from the inside, and again soak the skin in tepid water for two hours. Mix equal parts of borax, saltpetre and Glauber salt in the proportion of about one-third ounce of each. Spread with a brush over the inside of the skin, applying more on the thicker parts than on the thinner. Double the skin together, flesh side inward, and place in a cool place. After standing twenty-four hours, wash the skin clean and apply the following mixture in the same manner

as before: Sal soda, 1 ounce; borax, $\frac{1}{2}$ ounce; hard white soap, 2 ounces; melt slowly together without allowing to boil; fold together again and put in a warm place twenty-four hours. Now dissolve 3 ounces alum, 7 ounces common salt and $1\frac{1}{2}$ ounces sodium bicarbonate in sufficient hot water to saturate the skin; when cool enough not to scald the hands, soak the skin in the solution for twelve hours and then wring out and dry. Repeat the operation two or three times till the skin is sufficiently soft. The inside of the skin may be smoothed with fine sandpaper or pumice stone.

(3.) The following from Davies' "Methods in the Art of Taxidermy" is recommended for small skins: When taken from the animal, let the skins be nailed in the shape of an oblong square to dry, fur side down. Before taking them from the board, clean off all of the fat or oily matter with a dull knife. Be careful not to cut the skins. To tan them, soak them thoroughly in cold water until soft; then squeeze out the water and place the skins in a solution made by dissolving $\frac{1}{2}$ pound common salt and one ounce best sulphuric acid in $\frac{3}{4}$ gallon of soft water. Allow the skins to remain in the solution thirty minutes, then remove and squeeze (not wring) them out and hang in the shade, fur side down, to dry. It is said that if the quantity of the acid solution be proportioned to the skins they will need no rubbing to make them soft, and tanned in this way the moths will never disturb them.

Corn Cure.

(L. A. H.)—Most of the so-called "corn cures" contain salicylic acid. Here are three formulas for "salves," which have given general satisfaction:

(1.)	Salicylic acid	10 parts
	Lactic acid	10 parts
	Simple cerate	80 parts

(2.)	Salicylic acid	10 parts
	Balsam fir	5 parts
	Resin	6 parts

Melt the resin, add the balsam of fir and stir in the salicylic acid as it cools. Spread on a suitable medium, this preparation may be used as a plaster.

(3.)	Salicylic acid	10 grams
	Balsam Peru	10 grams
	Resin	10 grams
	Venice turpentine	15 grams
	Petrolatum (or lard)	20 grams
	Beeswax	120 grams

(4.)	The following is a liquid preparation:	
	Extract Indian canabals	1 part
	Salicylic acid	10 parts
	Turpentine	5 parts
	Collodion	82 parts
	Dissolve and add:	
	Acetic acid	2 parts

Books on Soap.

(L. A. H.)—The following are standard works on soap manufacture: Gathmann, "American Soaps," \$15; Watt, "The Art of Soap Making," \$3; Brantt, "A Practical Treatise on the Manufacture of Soap and Candles," \$7.50; Christlan; "Technical Treatise on Soap and Candles," \$15.

THEORY AND PRACTICE

Lutes and Cements.

(1.) Water Proof.—Of use to engineers are fluid asphalt coatings for reservoir walls, concrete foundations, etc. Benzine (crude) is recommended as a diluent. Tar ana pitch are not regarded as so suitable on account of water, light oils, free carbon, etc.

(2.) Oil Proof.—A stiff paste of slightly diluted glycerol and litharge, mixed, only when ready for use. A solution of silicate of soda (35° B_e) made into a stiff paste with precipitated carbonate of lime, magnesium carbonate or white lead, which increase the quickness of setting in the order named.

(3.) Acid Proof.—Two formulas under this heading are: Boiled linseed oil and fire-clay, and "black putty" made by mixing equal portions of gas tar, linseed oil, and dry china clay.

(4.) Resisting Hydrocarbon Gases.—Silicate of soda of about 42° B_e, mixed with inert material, as clay, sand or asbestos.

(5.) Chlorine-Resistant.—The following is much used for electrolytic chlorine work, etc.: Powdered glass, Portland cement and silicate of soda, each, one part, and a small amount of powdered slate.

(6.) Elastic Cements.—Hart's India rubber cement. Equal parts of pure linseed oil and clean, unvulcanized rubber are mixed, the rubber being previously dissolved in the least amount of carbon disulphide possible.

(7.) General Purposes.—Plaster of Paris, mixed with asbestos, straw, plush trimmings, hair, broken stone, etc., used according to temperature, strain and other conditions. A patty of flour and molasses is very useful.

(8.) Marine Glue.—Crude rubber, 1 part; shellac, 2 parts; and pitch, 3 parts.

(9.) Gasket Composition.—Hard pitch for high temperatures. Silicate of soda mixed with silica, clay, asbestos, carbonate of lime, caustic lime, magnesia and oxides of heavy metals.

(10.) Machinists' Cement.—Linseed oil, 6 parts; rubber, 1 part; linseed oil and red lead (sets hard); linseed oil and oxide of iron (does not set so hard); fish oil and red lead (does not set so hard).

(11.) Leather Belting Cements.—Equal parts of good hide glue and Americanising glass softened in water for ten hours and then boiled with tannin until the whole mass is sticky. Cement applied hot to roughened joint.

(12.) Iron and Stone Cements.—Stone cement: Zinc or magnesium oxide, 2 parts; zinc or magnesium chloride, 1 part; powdered stone as diluent; water to make paste. Iron cement: Iron filings, 40 parts; manganese dioxide, 10 parts; sal-ammoniac, 1 part; Portland cement, 20 to 40 parts; water to form paste.

(13) and (14.) Core Compounds and Briquette Binders.—Dextrin, starch and starch products, molasses, clay, loams, bituminous coal, pitch, asphalt, tar, oxychloride and Portland cement.—Journ. Franklin Institute.

Permanence of Writing.

The "treasury standard" ink, which is now used exclusively in all branches of the United States Treasury service, is made according to a formula approved by the Department after mature consideration, the adoption of which was found necessary in the interest of the permanency of the public records. In order to secure permanence in writing, an ink with a heavier body than that of the ordinary commercial writing fluids is necessary. A heavy body in ink is essential to permanence, but such an ink should not be expected to flow from the pen as freely as would a lighter and more ephemeral fluid. Corrosion of the pen is also to be expected, and ought to be guarded against, in the use of a heavy permanent ink. In order to obtain satisfactory results in the use of the ink, the following rules should be observed:

Pens should be kept clean, to prevent undue corrosion and filling up.

Inkstands with open wells should be kept closed, when not in use, to prevent evaporation and the consequent excessive thickening of the ink. Such inkstands ought also to be cleaned and refilled at intervals of about a week; but the ink in automatic stands, where the wells are entirely inclosed and protected from dust and atmospheric influences, need not be changed so frequently.

Water or other diluting substance must not be added to the ink for the purpose of increasing its fluidity, because ink so thinned loses in permanency.

Valuation of Aloes.

The following method for the valuation of aloes is proposed by Tschirch (Pharm. Jour.): 5 grams of the sample are macerated in a 50 cc. flask with 5 cc. of methyl alcohol for twelve hours. The mixture is then warmed to 50-60° C., and treated with 30 cc. of chloroform. After thorough agitation it is set aside, and the yellow chloroform solution separated from the insoluble resinoid matter by filtration into a tared Erlenmeyer flask. The solvent is then distilled off, and the recovered chloroform again used to extract the resin; this is repeated four times in all. Finally, the chloroform is distilled off, and the residue dried to constant weight and weighed. This residue should be yellow in color, and give distinct crystals of aloin when recrystallized from methyl alcohol. Cape aloes give 86.8 and 81.2 per cent. of chloroform residue. Uganda aloes, 81.2 per cent.; fresh Barbadoes aloes, 72.4 per cent.; old Barbadoes aloes, 62.8 per cent.; Curacao aloes, 66.6 per cent., and Socotrine aloes, 36.6 per cent. These results indicate that the selection of Cape aloes as the official drug in the German Pharmacopœia is justified, since it contains less inert resin than the other kinds. It is suggested that in those pharmacopœias in which Cape aloes is official it should be required to give not less than 80 per cent. of chloroform-soluble matter.

Typewriter Ink.

Transparent soap, 1 part; glycerin, 4 parts; water, 12 parts; alcohol, methylated, 94 per cent., 24 parts; spirit-soluble anilin (any desired color) q. s. Dissolve the soap in the mixed glycerin and water, and the anilin dye (nigrosin for black) in the alcohol.—Apoth. Zeit.

OUR MARCH PROPOSITION.

Until March 25th, we offer:

	Selling Price		Selling Price	
1 Doz. H. O. (Am.) 2 oz. \$1.25	\$1.80	Gratis 5 Bots. Parola Cream	\$1.25	
1 " " 4 " 2.00	3.00	" 8 " "	2.00	
1 " " 8 " 3.50	6.00	" 14 " "	3.50	
1 " " 16 " 6.00	9.00	" 24 " "	6.00	
1 " " 5 pt. 18.00	24.00	72 " "	18.00	
Cost, \$30.75	\$43.80		\$30.75	

PROFIT \$43.80 or 142%

No purchase to be more than \$30.75, or less than \$4.00; any sum between.

The American Peroxide of Hydrogen represents your physicians' anticipations at all times.

Parola Cream is a perfect emollient for all irritations due to March winds and weather.

Send for proposition card.

NEWS SECTION

ORGANIZATION DRAWS NEAR.

Time and Place For Mass Meeting Selected.

THE NEW BODY WILL BE A PURELY BUSINESS ORGANIZATION.—SPECULATION AS TO WHO THE OFFICERS WILL BE.—SOME NAMES PROPOSED. APPEAL TO SIGN CONTRACTS.

A mass meeting of New York druggists will be held on Friday evening, March 10, at the New York College of Pharmacy, when the question of organizing a local branch of the N. A. R. D. will be taken up. The new association, it is distinctly understood, will be absolutely independent of existing organizations. It is expected, of course, that "association men" will be on hand in large numbers, but the one thing that will be impressed upon the trade at large, when the notices of the meeting are sent out, is that this is the opportunity for non-association men to go in and share in the benefits of a purely business organization, such as the new body will be.

Who are to be the officers of the new organization? is a question that is gradually taking the center of the stage. The general belief is growing that the president should be a man of large business experience, able to handle such a huge commercial enterprise as that about to be established. A candidate who is coming into favor is C. O. Bigelow, who, it is urged, is probably better known to the Greater New York retail trade than any other druggist. His adherents point out that he is not, strictly speaking, an "association man," hence, he would be more likely to find favor in the trade at large. As for the office of secretary, there is evident unanimity that S. V. B. Swann, secretary of the Joint Conference, of the State Association and of the Manhattan Association is the man for the place.

The ideal ticket, it is urged, should include "giant druggists" and association men in nearly equal proportions. Hence, a slate has been proposed, consisting of such names as Bigelow, Anderson, Diamond, Swann and O. Kalish, with E. D. Cahoon, J. Jungman, A. C. Searles and B. J. Lauer as possible trustees.

An appeal to the retailers to sign the contracts has already been sent out, in a notice signed by Wm. C. Anderson and S. V. B. Swann. It follows:

"You are earnestly requested to sign the contracts for the proprietary patents now marketed on the direct contract and serial numbering plan, as follows: Peruna, Wells, Richardson & Co., Paris Medicine Co., Miles Medical Co., The Piso Co. You need not have any fear at present that you will be held to strict accountability for the selling contract retail price of the preparations of the above mentioned firms, such action depending upon the conditions in your locality.

"Our best efforts are now being used in obtaining signatures to the contracts, thus

enabling the proprietors to discover who will support them in this work, and as soon as those who will support them can be separated from those who will not, their friends will reap the benefits of this plan, and those to the contrary will have to suffer the consequences of their acts. Your prompt signature will aid the work materially, and we hope your name may soon appear on the friendly list.

"Due notice will be given you of the calling of a mass meeting of all druggists in Greater New York in the very near future on the question of organizing a branch of the N. A. R. D. in said territory on this plan.

"If you do not have a contract or have not signed one, see your jobber, or address N. A. R. D. headquarters, 100 William street, New York."

BOYCOTT CASES SETTLED.

Petition For Injunction Against Louisville Druggists Dismissed.

Louisville, Ky., Feb. 25.—In a joint opinion Judges Kirby and Miller, of the two Chancery Divisions, on the 11th instant, settled the so-called "drug boycott" cases by dismissing the petition of W. F. Klusmeier, Olga-rienz & Co., and C. B. Rademaker & Co. for an injunction to compel the four wholesale drug houses here and the twenty-three other retailers to sell them goods. The opinion says that the defendants exercised a right in refusing to sell, and that no injunction can issue to prevent them from doing so. If they are guilty of conspiracy in so refusing, the opinion continues, the plaintiffs have a remedy by suits for damages or indictment.

The drug cases have been bitterly fought. The retailers of Louisville on September 15, 1902, adopted a scale of prices. The Proprietary Association of America refused to allow the wholesalers whom its members supply to sell to price cutters under penalty of being themselves put on the cut off list and prevented from getting goods. The three plaintiffs would not sign the scale of prices agreed upon by the other twenty-three retailers, but came out in advertisements stating that they were engaged in fighting the combination. Thereupon the wholesalers, influenced by the Proprietary Association, declined to fill their orders, and suit was brought.

The opinion cites the case of Owen Brewster against the Millers Sons' Company, where the Court of Appeals upheld the right of the defendant to refuse to sell the plaintiff a coffin for any reason, good or bad.

The concluding paragraph of the opinion is as follows:

"Suppose, for illustration, that we should direct the prayer of the petitioner to be granted, what would be the terms of the injunction? We could not require the defendants to sell goods to the plaintiffs, for the contention was expressly dis-

posed of in the Brewster case. We could not restrain the defendants from sending out circulars or black lists, for the evidence wholly fails to show that any one of the defendants ever had anything to do with Wooteu's 'cut-off lists,' or with furnishing him with any of the information therein. We cannot enjoin the defendants from making threats or from interfering with the business of the plaintiffs, for they have done none of these things. In fact, the complaint is that they will not do something—that they will not sell goods to the plaintiffs. The only material act that plaintiffs complain of is that the defendants have conspired to fix the prices of certain drugs; and if that be true, it is plain that plaintiffs' remedy is not by an injunction to compel them to fix other prices, but it is by indictment, or by a suit at law for damages for the injury sustained."

BROMONIA CO. IN TROUBLE.

An attachment for \$4,141 against the Bromonia Company, manufacturers of a headache remedy, with an office in the "Flatiron" building, has been obtained by Albert F. Hagar, for Edward Penock, on an assigned claim for goods sold to the company by W. R. Warner & Co., between November 15 and January 15. The company has a storeroom at 256 West Twenty-third street, but it was closed up when the sheriff went there. The business was started four years ago, by William F. Boothie, and the present company was incorporated in May last, under South Dakota laws.

PASSED NEW YORK BOARD.

The following have been licensed as a result of the examination held at the New York C. P., on February 15:

Arnold A. Eekstein, Harry A. Nuse, Abraham Brodsky, Frederick T. W. Brown, Frederick W. Higby, Malcolm W. Kennedy, Solomon Miller, Alexander M. Shafer, Thomas A. Tall, Marshall A. Tiller, Theodore A. C'roly (druggist), Manuel D. Galvan (druggist).

PURE DRUG BILL IN SENATE.

A New Measure, With Penalties For Misbranding or Non-Labeling.

Another pure food and drug bill has been introduced at Albany, by Senator Grady, and after two readings, has been referred to the Committee on Public Health. It provides that "any person who shall manufacture or deliver for pay or otherwise * * * or who shall sell or offer for sale, etc. * * * any adulterated or misbranded food or drugs, shall be guilty of a misdemeanor, and upon conviction, shall be fined \$500 for the first offense, and for a subsequent offense, shall be so fined and also imprisoned, not exceeding one year, in the discretion of the court." Should the article of food or drugs contain "any drug, substance or ingredient which is, or may be, injurious to health, or dangerous to life," a felony is committed, carrying a fine of \$1,000 and imprisonment for not more than two years.

When the law is violated by a corporation or company, the president or highest officer is to be prosecuted; and if by a firm, the individual members are to be prosecuted.

The term drug is defined as including "all medicines and preparations recognized in the United States Pharmacopoeia for internal and external use; also any article or substance intended to be used for the cure, mitigation or prevention of disease." Any food or drug which is adulterated within the meaning of the public health law or penal code, is deemed adulterated within the meaning of the new law.

A drug is to be deemed misbranded if it is offered for sale under the name of another article, or if it bears a false statement as to ingredients, etc., on its label, or if, in the case of a compound, it does not bear a label giving a list of the ingredients contained in the compound or mixture, when used as a medicine. Inspectors of any board of health are authorized to obtain samples. Any adulterated or misbranded article of food or drugs found in the possession of any manufacturer, dealer, etc., is to be seized and destroyed or sold at the discretion of the court.

The State and local boards of health are to be held responsible for the inspections and examinations necessary for the enforcement of the act. The State or local chemists are to collect and test samples from time to time and in cases of violation, proceedings are to be instituted by the various district attorneys.

N. Y. STATE MEETING.

The United States Hotel has been selected by the Saratoga druggists as headquarters for the annual convention of the New York State Ph. A., in June. Charles H. Fish, the local secretary, has notified Peter Diamond, chairman of the Executive Committee, that a rate of \$4 per day for the best rooms will be charged. These are on the second and third floors. The proprietors of the hotel will allot fifty rooms on the upper floors at \$3.50, which are said to be just as good as those at the higher rate, the chief difference being in the altitude. These prices, of course, include board, and the association is to have

all necessary rooms for meetings, receptions and committees.

Entertainment features are to be arranged later. Some of the suggestions given are recitations and music, carriage rides, a visit to the House of Pansa (a reproduction of the one at Pompeii), a trolley ride to the lake and a steamboat trip to White Sulphur Spring, a trip to Schuylerville and a visit to the monument. Mr. Diamond, however, has already signified his intention to curtail the entertainment programme. He thinks that too much entertainment will result, as it did last year, in the transaction of very little business.

PLAN TO FIGHT 'PHONE CO.

Vigorous Campaign Now Being inaugurated at Albany.

Albany, Feb. 27.—Indications point to a vigorous campaign in the legislature against the New York Telephone Company within a short time. Favorable action on the resolution for an investigation of the telephone monopoly is expected. Assemblyman Sullivan, of Queens, has introduced a similar resolution in the Assembly and the Board of Trade and Transportation is also prepared to carry its resolution to the legislature.

It is probable that representatives of the Board will have a resolution of their own formally presented, as soon as printed copies of the resolutions passed by the Board are in the hands of the law-makers.

"After all," said Frank S. Gardner, secretary of the Board of Trade, "the important thing is to see to it that such resolutions get prompt and favorable consideration in committee and then that the committee so reports as to insure the appointment of a special investigating committee by the legislature.

"After the way this subject has been threshed out, a legislative committee, in my opinion, ought to be ready to vote for an investigation right away, without wasting any time over preliminary hearings. The telephone company contends that its rates in New York are no more than equitable and that it can demonstrate that fact to any fair minded body of men. If it be sincere in that assertion, then it should have no cause to shirk or oppose such an investigation as our resolution requests. It should welcome the opportunity of making a public demonstration of its righteousness before the accredited representatives of the people of the entire State. Should it succeed, after a full and fair inquiry by a committee vested with judicial powers of investigation, in establishing the equity of its position, surely such a verdict would be for it a certificate of character not to be lightly ignored."

In the opinion of well informed members of the Merchants' Association, so general and so vehement is the present demand, that substantial concessions are likely to be won from the telephone monopoly without the intervention of legislative authority.

—Racine, Wis., Harbridge & Co.; loss on stock, \$25,000; on building, \$10,000.

—Canton, Mass., W. J. Moseby & Sons; loss, \$6,000; insurance, \$2,000.

THEIR BANQUET IN TROY.

Druggists Hold an Association Feast and Talk Shop.

Troy, N. Y., Feb. 25.—The annual banquet of the Pharmaceutical Association of Troy and vicinity, was held at Harmony Hall, last week. Among the guests were S. S. Smith and Frank Applin, of Albany. Dr. John E. Grady presided as toastmaster.

Lorenzo Strecker, secretary of the association, was the first speaker. His subject was "Our Association," and in part, he said:

"Has any one of you ever stopped to realize what a world of meaning these two little words, our association, convey to the retail pharmacists of this city? Probably not; you have been too busy reaping the benefits which you have derived from them to give it more than a passing thought.

"Some five years ago these same two little words meant no more to us than some unintelligible jargon, but to-day they signify to us good fellowship, a friendly feeling towards your brother pharmacist. They have served to make us magnanimous, to forget our little petty jealousies and we can now grasp the hand of our neighbor with an assurance of confidence fraught with the knowledge that he is just as anxious for the success of our organization as we are and always ready to uphold any agreement for the betterment of our condition, for he knows that united action is the only salvation for the retail druggist of to-day.

"We have all experienced what it is to be at swords' points with one another. None of us have forgotten the chaotic state in which the retail pharmacies were conducted prior to the beginning of our organization. What was the upshot of such conditions? You had a feeling of animosity against your competitor, when in fact he may not have been guilty of the act. The public was not slow to realize that such conditions existed among us, and that they could purchase their drugs and medicines at almost their own price. Do we have that trouble now? No. Our association has dispelled that nightmare."

W. Leland Thompson was called upon to speak for the jobbers. He said: "The thought, 'The Jobbers,' is a serious subject, and to-day the jobber must be serious. It looked some time ago as if the jobber was going out of business, but an improvement has been brought about and the credit for such achievement is due to such associations as this."

George E. Stillman was called upon to recite his famous declaration made at a meeting of the Troy, Albany and Schenectady druggists, which, the toastmaster said, startled the druggists of the three cities. Mr. Stillman said he was unable to recite the fiery speech and substituted a few pleasant remarks.

The committee in charge of the function was composed of John E. Grady, John J. Healy, Robert F. Moncrief, S. C. Hull and William E. Gray.

—Gadsden, Ala., the Adams-Nowlin Drug Co.; loss, \$5,000; insurance, \$2,500.

READY FOR R. D. A. BALL.

Big Affair Planned For To-morrow Night at Grand Central Palace.

"All preparations for the annual ball of this association, on March 3, at the Grand Central Palace, have been completed. Now step up, gentlemen, and pay for your tickets."

So said A. Bakst, chairman of the Entertainment Committee, when he reported at the meeting of the New York R. D. A., last Friday night. It will be the biggest reunion in the history of the association, he promised. There will be a vaudeville entertainment, two bands of music and plenty of decorations.

It was a quiet, routine meeting of the association, with nothing of importance to claim attention. For the Trade Interests Committee, Joseph Weinstein reported laconically, that "trade is dull." A detailed report of the last meeting of the Joint Conference, at which it was decided to try the district plan, was rendered by President Diamond. He told of the great increase in the number of those who had signed the contracts.

"And if any one of you," he added, "still receives Peruna without having signed the contract, report that fact at once. You must co-operate by reporting every violation; that is the only way to succeed."

Mr. Weinstein commented on the report of the Adulteration Committee of the State Board of Pharmacy, bringing out the fact that last year the daily press had taken it up and raised a hue-and-bury over it, while this year it was being left severely alone.

The proposal was made that the report be brought to the attention of the newspapers, but was voted down. It was thought better to let sleeping dogs lie.

On the question of souvenir-giving, Mr. Diamond announced that all but two men were now in line, and on these two every effort was being concentrated.

STATE B. OF P. ANNUAL REPORT.

The fourth annual report of the New York State Board of Pharmacy has just been issued and transmitted to Governor Higgins, by Secretary Warren L. Bradt. It contains the usual schedule of examinations, list of committees and president's report, besides several pages of statistics showing in detail the Board's work for the year.

During 1904 the number of store certificates (pharmacies) issued was as follows: Eastern branch, 2,305; Middle, 1,405; Western, 402. Only eighteen drug stores were licensed throughout the State. A total of 347 apprentices were registered throughout the State. As a result of the examinations in the Eastern branch, 607 pharmacists have been licensed (including twelve druggists); 725 applicants were rejected. In the Middle branch, 232 were licensed, 177 rejected. In the Western Branch, 104 passed, 149 were rejected. Of the total number passed, 59 were women.

The number of pharmacies inspected in the Eastern branch was 2,400; Middle branch, 1,002, and Western branch, 109. A total of 2,603 samples were assayed, of which 2,194 were found standard or near-

ly so. Two criminal convictions were secured in the Eastern branch, and fifty-seven civil. There were no convictions in the other branches. Only three cases were tried in the Middle branch. The financial report shows that the largest receipts in the Eastern branch were from examination fees, \$9,385, and fines collected, \$9,144. Total receipts were, Eastern branch, \$28,736.98; Middle, \$11,504.82; Western, \$3,411.50. The Eastern branch shows a surplus of \$8,594.36, while the Middle and Western branches show deficits of \$5.01 and \$70.55, respectively. The general board shows a balance on hand of \$894.94.

MURRAY HILL R. D. A. ORGANIZED.

"Murray Hill Retail Druggists' Association" is the name under which the druggists in that district have decided to organize, as a result of the movement for better prices recently started there by two former cutters. Officers have been elected, money subscribed and a schedule adopted. The druggists point with pride to the good effects already apparent.

Under the schedule adopted, all articles of which the selling price is below twenty-five cents are to be sold at full price. Dollar, fifty cent and twenty-five cent preparations are to be sold at eighty-five, forty-five and twenty cents. This general schedule is supplemented by another, containing articles which are either to be sold at full price, or at special cut rates, owing to their popularity. Some of the articles listed are: Mennen's Talcum Powder, 15c.; all kidney plasters, 25c.; Antikamnia Tablets, dozen, 25c.; Cascarets, full price; Castoria, 25c.; Liebig's Extract of Beef, Nestle's Food, each, 40c.; Haemaboldids, 85c.; Allcock's Plasters, 15c.; Vin Mariani, \$1.00; Bromo-Seltzer, 10c., 20c., 45c.; seidlitz powders, 1 for 5c.; dozen, 25c.

The following officers have been elected: President, A. S. Katzman; vice-president, T. Kahn; treasurer, A. A. Edlich; secretary, M. Brodtkii. Every member has already paid in \$1.25 to defray expenses and there is at present a balance on hand of about \$14. Even those who were at first lukewarm over the movement, are now enthusiastic. Annual dues of \$6 have been proposed, as well as a penalty for every instance of violation of the schedule, which all have now signed and are enforcing. Meetings thus far have been held weekly. Last Friday a committee was appointed to investigate the question of prescription prices.

The one peculiar feature about the whole movement is that the public is also being considered. Prices on foods and articles used daily in the household have not been advanced and will not be except by slow degrees.

SYRACUSE DRUGGISTS OBJECT.

Syracuse, Feb. 27.—The Syracuse druggists object strongly to the Yale wood alcohol bill which provides that one-third of the receipts from its sale must be paid as a tax. The Onondaga members of Assembly have received letters from several Syracuse drug houses, asking them to vote against the Grady bill which requires the manufacturers of patent medicines to print the formula of patent medicines on the outside of the bottle.

BROMIDE WAR GOES ON.

The bromide war continues without the faintest sign of any disposition to come to an understanding on the part of either side. H. Jacobson, managing director of the German Bromine Syndicate, who sailed for Bremen last week, states in the Oil, Paint and Drug Reporter, that his syndicate is prepared to go to any length to hold its trade against Americans in Europe as well as in this country. He says:

"The territorial agreement between the Germans and the Americans expired three years ago, and since that time a large American maker has been exporting sufficient quantities to disturb the market for our goods in Europe. It was not so much in Germany as in England and Italy that our interests were assailed, and we decided that radical measures would have to be adopted in retaliation. Our resources are practically unlimited, millions of gallons of brine now going to waste in the production of muriate of potash, and we could increase our manufacture of bromides twenty times without extending our present works. The only items of extra expense would be in labor, which is cheap, package and freight. The Prussian government is a member of our convention and the owners of the Anhalt mines are indirectly interested. The principal American manufacturer, I believe, does not control absolutely the source of his own supplies. We are, therefore, in a much stronger position to produce bromides at lower prices than the Americans. While potassium bromide may not be a commercial success at fifteen cents, if future conditions warranted it, we could still make some concessions from this price."

He declared that his firm could compete successfully with American manufacturers even in the face of the 25 per cent. duty on bromide importations. Besides, he thought that the German government would soon place bromides on the dutiable list.

A RECOMMEND.

"Gentlemen: Before taking your celebrated Elixir, my friends had their doubts as to my sanity. Thanks to your valuable remedy, all doubting has ceased. Yours, etc., P. Schycological."

"A burglar," he said.

GAS BILL AT ALBANY.

Albany, Feb. 27.—The seventy-cent gas bill for New York City was given a hearing, last week, before the Senate Committee on Miscellaneous Corporations. Assistant Corporation Counsel Guy appeared on behalf of Mayor McClellan, in favor of the Fitzgerald bill.

"The mayor says the people want seventy-five cent gas," said Mr. Guy. "They want good gas, want it at once, and want proper measurement and quality. State inspection of gas meters has been a failure, so the city should have a chance to inspect them. The city would be very thankful if the legislature would pass the mayor's municipal light plant bill."

C. F. Matthewson, representing the Consolidated Gas Co., said the mayor could come and ask for fifteen-cent gas if he liked, but that the legislature had simply to see that justice was done. He declared that there are only three cities in the country which get gas at less than one dollar per 1,000, Cincinnati at eighty-five cents; Cleveland at seventy-five cents, and Indianapolis at ninety cents. There, he said, the companies can get coal much cheaper.

CONSOLIDATED'S BIGGER CAPITAL.

The stockholders of the New York Consolidated Drug Company held a meeting last Thursday, and ratified the increase of the capital stock. It is now \$60,000, an increase of fifty per cent. Another thing approved was the action of the Board of Directors in amending the by-laws so as to place some of the president's powers in the hands of the manager. This, it is explained, is merely for the purpose of simplifying the routine business.

While no official announcement has yet been made that the company's application to be listed as a regular jobber has been granted, it is now receiving contract goods and is carrying on a regular jobbing business. The question of seeking larger quarters for the rapidly increasing business came up, but the lease on the present building is apparently an obstacle.

At the last meeting of the Board of Directors, George Leuecker resigned as secretary, and George Kleinau was elected in his place.

SUPERABUNDANCE OF CLERKS.

Syracuse, Feb. 27.—Last summer it was impossible to get clerks, while now there is a superabundance. None of the druggists are able to say what has caused this change, but all are aware of the facts. Most of them have several applications, but there are no jobs. The fears that when the law was passed requiring all who tried the pharmacy examinations to be college graduates, there would be a falling off in the number who went into the business, were not realized and there seem to be more entering than ever.

The question of establishing a college of pharmacy in connection with Syracuse University is still under consideration. Much will depend upon the laws that are passed at Albany this spring. If no amendment is made to the present provision, it is probable that a college of pharmacy will be established.

WILLIAM HARRISON.

Syracuse, N. Y., Feb. 27.—The death of William Harrison, the only druggist at Liverpool, N. Y., occurred Thursday afternoon, from an attack of apoplexy, from which he never recovered. The deceased came to this country from Liverpool, Eng., where his father was a salt magnate. He had lived in this country thirty years. He was a Mason, and belonged to the Scottish rite body. Mr. Harrison was known as a hard student and in addition to being an excellent pharmacist, was an expert chemist. The funeral was held from the family residence and the following members of the Syracuse Druggists' Association acted as bearers: E. S. Dawson, Jr., T. W. Dalton, Albert Coling, George E. Thorpe. The S. D. A. sent a handsome wreath as a token of regard.

SUCCESSOR TO THORPE?

Syracuse, Feb. 27.—With the annual meeting of the Syracuse Druggists' Association near at hand, talk has already begun as to the officers. President George E. Thorpe, who will have served five years at the completion of his present term, has stated that he wishes to be relieved from the office. In fact, last year he refused to take the honor another year, but was forced into it by the unanimous demand of the members. If he adheres to his determination to retire, there is a strong possibility that Wayne B. Bissell will be his successor. Mr. Bissell is now vice-president, and has long been actively identified with the work of the association, which has come to be an important body and its affairs have been extended over Onondaga county, with the result that it is well organized, the prices being maintained even in the remote country districts.

The friends of Mr. Bissell are urging him for a member of the State Board of Pharmacy, and it is probable that some active work in this direction will be done before the State meeting.

NEW YORK NOTES.

—Miss Jessie Thomas Perkins, daughter of Mrs. Lithgow T. Perkins, was married, yesterday, at the Emanuel Baptist Church, Brooklyn, to Hugh Clay Pierce, brother of Dr. V. Mott Pierce. Mrs. Perkins is the widow of the late Lithgow T. Perkins, who many years ago was one of the most prominent Brooklyn pharmacists. He was the father of Lawyer Perkins, present counsel for the Kings County P. S.

—Some local visitors this week are Samuel Davis, Boonton, N. J.; T. S. Armstrong, Plainfield, N. J.; L. J. Schlesinger, of Yonkers, N. Y.; F. A. Seaman, Perth Amboy, N. J.; G. W. Jacques, South Amboy; W. L. Mix, New Haven, Conn.

—Schedules in bankruptcy of N. Lopard & Co., manufacturers of cosmetics at 725 Broadway, show liabilities of \$46,644 and assets of \$6,151, consisting of bottles, labels, etc., \$4,000; stock, \$125; office furniture and fixtures, \$650; notes, \$1,200; accounts, \$172, and cash, \$4. There are over 200 creditors.

—A petition in bankruptcy has been filed against the Trinidad Bitters Co., manufacturers of aromatic bitters, at 76 Pine street, by the following creditors: Carl G. Weidinger, \$22,640; Tison, Goddard &

Brewster, \$630 and W. H. Tallmadge, \$50. The business was started in 1897, by W. E. Tyrer. In March, 1903, it was incorporated under New Jersey laws, with a capital stock of \$250,000. Mr. Tyrer, who was the president, died on January 9 last, and the company decided to wind up the business. Carl G. Weidinger was vice-president and treasurer.

—Oscar Davison, of Trenton, N. J., has bought Lang's Drug Store, in Atlantic City, and has taken his clerk as partner. The firm will be known as Davison & Watson.

—E. R. Squibb & Sons have leased the building 78-80 Beekman street, where, it is understood, Mr. Theodore Weicker will have his office.

—Dr. H. W. Wiley is scheduled to deliver a course of six lectures on "Foods and Their Alterations," at the Brooklyn Polytechnic Institute, on Tuesdays, at 7.30 p. m.

—E. Fougere & Co. it is reported, have leased No. 90-92 Beekman street or occupancy in the near future.

TWO KINDS OF LICENSES.

More Regulation of Liquor Traffic Wanted in New Hampshire.

Concord, N. H., Feb. 27.—There is a rumor in legislative circles that a majority of the Judiciary Committee is in favor of establishing two classes of licenses for druggists, one for the druggist who desires to do a drug business and the other for the druggist who wishes to carry on a liquor business in connection with his drug business.

In view of the big difference under the law as it stands today, between the fees charged for a license of any class, except that pertaining to druggists and the fifth class of drug store license fee, led to several bills being introduced in the present session relating to an increase of the fee for a fifth class license. The liquor fraternity of the State almost to a man was in favor of the increase, and now it would appear that some of the more substantial druggists in the State would favor the idea of a separate class of licenses.

It is not unlikely that the Judiciary Committee will report a bill in favor of amending the present law so that a druggist fee would be from \$75 to \$500 in the discretion of the commission. But the substantial druggists of the State, as an organized body, have anticipated any such action, and would probably oppose the higher fee. It is suggested that a second class of druggists' licenses be authorized, the fee of which shall be the same as under the law at present, but the privileges of the license would only permit sales on a regular physician's prescription.

The new law as proposed by the druggists will not apply to any class of cities or towns, but to the State generally. It is claimed that no druggist in the State who lives within his license can afford to pay a big fee, and the new idea will restrict the business in a way that will meet the desires of both the prohibition element and the holders of other classes of licenses.

MR. HOYT QUILTS THE BOARD.

He Resigns as Chairman of the Massachusetts Registration Board.

Boston, Feb. 28.—George M. Hoyt, chairman of the Board of Registration in Pharmacy, has tendered his resignation, and considerable surprise throughout the trade locally, is the result.

Recently the Board has been in the public eye because of the effort to take from it the granting of "certificates of fitness," which all druggists first must have before they can receive liquor licenses. The public hearing before the legislative committee brought out much opposition, and charges were made that Chairman Hoyt, in a no license town, has sold liquor in his drug store. Technically, he may have transgressed the law, it is declared, but not willfully or wrongfully. In all towns, so the law says, there shall be one place at least where liquors may be had on physicians' prescriptions, and it is maintained that only under such conditions has Mr. Hoyt ever sold the stuff.

Effort was made to have it appear that the Board, with such a chairman, should not be empowered to issue certificates. The effort failed, for the legislative committee voted against repealing the present power of the Board.

Chairman Hoyt, in his letter of resignation to the governor, reviews all this matter, and calls attention to the fact that the Board was sustained in its position and attitude against those who, because they could not themselves secure certificates, have become enemies of the Board.

There is a feeling that the governor may not, after all, accept the resignation, which would further emphasize the full vindication of Chairman Hoyt. The Board always has had one feature of criticism to battle against. Whenever a druggist anywhere is caught selling liquors illegally, the Board is blamed for oversight in not preventing such sales.

NEED OF A CITY PHARMACY.

Lawrence, Mass., Feb. 27.—Is a city pharmacist worth while, or is he not worth while? There are two answers to this question in Lawrence.

Dr. M. F. Sullivan declared at the last meeting of the overseers of the poor that the city pharmacy is not a success and that it ought to be abolished.

He said that the average annual bill for medical supplies has increased more than \$500 a year. He contended that it was a hardship on many poor people to be forced to walk from various parts of the city to the city hall for medicine. Another deplorable feature was the fact that the pharmacy is open only eight hours a day. No medicine can be obtained after a certain hour at night until the next morning.

However, Edward L. Barrett was re-elected city pharmacist for three years on the first ballot.

Mr. Barrett claims that the city pharmacy has been a considerable saving to the city and he presents figures in support of his contention. He said:

"The last year under the old system

the expenses of supplying medicine to the city's poor was \$4,200. This is the total after the State Board of Charity had deducted \$800 from the city's bill for State patients. The past year the net expenses of the department was \$3,765.70, including my salary."

NEW HAVEN ORGANIZED.

New Haven, Conn., Feb. 25.—A New Haven branch of the National Association of Retail Druggists has been organized. Dr. Hoffman, representing the national body, was prominent in the movement. New Haven branch is now said to be on a firm foundation, and the members are sanguine in their expectations of more prosperous times.

First of the provisions by which the local body will now be governed is the order that "all contract goods shall be sold at not less than the price stipulated by the manufacturers," while "all five, ten and fifteen cent preparations shall be sold for full price." To this rule, however, there are about two hundred exceptions, no less than five having been added on February 7 alone.

And, in order to prevent the evasion of this rule by any subterfuge, still another rule is added, reading: "No trading stamps, checks or other discounts or bonuses are to be given on or after February 15."

The president of the New Haven branch is Ernest F. Hesse, of 35 Lawrence street, the other members of the executive committee including Charles I. Crosby, manager of the City Hall Pharmacy; M. F. Hope, 359 Grand avenue, and Joseph I. Deegan, 609 Grand avenue.

BAY STATE NOTES.

—Hon. Charles L. Dean, of the Boston firm of Dean, Foster & Co., druggists' sundries, is making a record for himself as a member of the Massachusetts Senate. For many years he was mayor of Malden, where he lives and where he established a great reputation for shaking hands.

—Many Boston druggists knew Dr. James T. Renouff, one of the drug firm of Baird & Renouff, who died in Atlanta, Ga., recently. He was a native of Connecticut.

—There are several candidates in the field for appointment by Governor Douglas, of Massachusetts, to the position of medical examiner for Newton, Watertown, Waltham, Weston and other towns. Among the possibilities is Dr. Michael J. Kelley, a physician of Waltham, and formerly a druggist in Lexington. He is a registered pharmacist and graduate of the College of Pharmacy.

—The Fall River Druggists' Association, at its recent annual business meeting, elected a board of officers for the ensuing year and arranged a scale of prices to which the members pledge themselves to adhere strictly.

—The members of the Holyoke Druggists' Association, at their annual business meeting, elected a board of officers as follows: President, Charles E. Bardwell; vice-president, Clarence M. Porter; treasurer, W. E. Martin, who serves also as secretary; James J. Currau, Mark Carpenter and Herman Heintz, executive committee.

DEBATE ON BLUE LAWS.

Both Sides Are Heard by Pennsylvania Senate Committee.

Harrisburg, Pa., Feb. 27.—The hearing given by the Judiciary Committee on changing the Blue Laws, proved one of the most notable legislative committee meetings held at the capitol in recent years. The entire lower floor of the Senate, the aisles and the galleries, were crowded during the session of the committee. Many men on one or the other side of the question, were present to defend their views. They represented numerous religious bodies of the State and also business men's organizations and labor unions. The sponsor for the bill, Senator James I. McNichol, of Philadelphia, made a speech which was listened to with close attention.

The bill before the committee makes it "lawful to sell drugs, medicines, soda and mineral waters and other harmless non-intoxicating drinks, bread, oysters, cakes, pastry, ice, ice cream, candy, milk, fruit, cigars and tobacco; to prepare, print and sell newspapers on Sunday."

The first speakers to address the committee for the bill were C. J. Field, of Philadelphia, secretary of the Business Men's Protective League; Attorneys Charles A. O'Brien, of Pittsburg; Lincoln L. Eyre, of Philadelphia, and Richard B. Scandrett, Pittsburg. They argued that the present law works a hardship on the poor, in that the small dealer must pay fines, while the great corporations work their men without being held legally responsible; that four-fifths of the people demand its repeal; that it is an instrument of persecution and oppression and therefore intolerable, and that the stand taken by the religious bodies is driving people from the churches.

Rev. Charles L. Fry, of Philadelphia; Rev. D. C. Martin, of the National Reform Association; Judge William M. Ashman, of the Orphan's Court, Philadelphia; Bishop Dubbs, of Harrisburg, and B. Frank Carson, of Philadelphia, opened the argument against the bill. They argued against the repeal of the Sunday law because the law rests on divine decree, because it protects the workingman and prevents the employers from working him seven days a week.

Judge Ashman said he realizes that the

His Fears Confirmed.

law is inconvenient to some and added that a law has never yet been devised that did not cause a certain amount of inconvenience. Bishop Jubbs asserted that the question was not one of merely legalizing the sale of certain articles on Sunday, but whether the continental Sunday shall be introduced in this country.

The committee took no action on the bill, nor has a meeting been called to consider it. A member of the committee said that a majority of the members are against the bill.

HEARING ON MANN BILL.

Washington, Feb. 25.—A hearing on the Mann bill was given by the Senate Committee on Patents, last week, for the purpose of listening to arguments for and against. Livingston Gifford, of Jersey City, N. J., and E. P. Wetmore, of the New York Bar Association, appeared against the bill, and J. C. Gallagher, of the N. A. R. D. Legislative Committee, appeared in its favor.

Mr. Gifford claimed that the Mann bill would do great injury to American, and none to foreign manufacturers. It was not advocated, he said, by anyone engaged in research work in laboratories. The only supporters of the bill were the retail druggists, because every new product increased the number of articles they were compelled to carry in stock, and because they thought the inventor's royalty must come out of their profits. Mr. Gifford took up the differences between the patent laws of this and other countries, claiming that the Mann bill would increase, rather than diminish the inequality between them.

PRESERVATIVES IN SYRUPS.

Philadelphia, Feb. 27.—After working for months to secure the passage of a bill in the State legislature which will permit druggists to put a small amount of preservative into their fruit-syrups, members of the trade are now awaiting the announcement of the fate of that bill, which, it is believed, will be known this week. The bill has come up before the House, and was referred to the Committee on Public Health and Sanitation, and this week it will come before the Senate.

Opposed to the druggists of the State in the fight to secure this concession, is Pure Food Commissioner Dr. Warren. Already there have been numerous prosecutions in the western section of the State, and druggists have been fined \$57 when it was found that they were using a preservative to keep their fruit-syrups from fermenting. No arrests have been made in this city on that account, but pharmacists felt that if they did not take action it would soon be their turns.

Members of the P. A. R. D. and others who have been working for the bill feel confident that it will become a law. The bill legalizes the putting of a minimum amount of benzoate of sodium in the syrups as a preservative. This, it is argued, would be better than giving out soda containing a fermented syrup. The bill also provides that harmless vegetable coloring matters be used. Petitions forwarded by the P. A. R. D. have contained the endorsement of well-known authorities, who have stated that these preservatives, used in minimum quantities, are absolutely harmless. It had been the intention of the local association to send a delegation to Harrisburg this week, but later it was decided that this was unnecessary.

DAMAGES FOR ACID BURNS.

Covington, Ky., Feb. 25.—A settlement effected in the Kenton County Court, last Saturday, recalls the serious injuries received by a prominent business man's daughter, in a peculiar manner, about a year ago. She was passing down Walnut street, in Cincinnati, and had just reached the front entrance of the Hale, Justis & Co.'s wholesale drug house, when a delivery boy came out, carrying a carboy of sulphuric acid. This he dropped, and the contents were spattered on the young woman, inflicting injuries from which it is said she has not yet recovered. Damage suits for \$5,000 each were filed against Hale, Justis & Co. and the delivery company in whose employ the boy was. The drug firm settled the case for \$500. The suit against the delivery company is still pending.

the purpose of illustration, as the patent will soon expire. Phenacetine is protected by a product and process patent in the United States; in Germany and Canada it is protected by a process patent only. In Germany there have been seven different process patents granted on this article and there it is sold under its chemical name para-acet-phenetidin.

Another illustration of the injurious effects of our existing laws which patents the product instead of the process only, may be instanced in the case of antipyrine. This drug, while protected by a product patent under our law, sold for \$1.50 an ounce; when, however, the product patent expired, the price dropped to sixteen cents an ounce. This is another case where the American people have paid tribute to a German corporation.

"The product patent stops all research along the line of the discovery until the expiration of the patent. With a process patent only, there will be an incentive for further investigation and new processes will be discovered, thereby producing pure remedies, and a cheapening of the cost of production."

There will be further hearings on the bill before adjournment.

WEDGEWOOD CLUB DINES.

Baltimore, Feb. 24.—The Wedgewood Club, which is devoted to social purposes, held its monthly dinner at the Eutaw House, last Thursday evening. Dr. J. F. Hancock presided and a most enjoyable time was passed. The intention of the club is to introduce some variety in the entertainments given by the organization, and a special committee has been appointed to devise a programme. It is considered altogether probable that at the next session provision will be made for the ladies of the members. The event will likely take the form of a trolley ride to Ellicott City, some eight miles out, and a dinner at the hotel there, followed by a dance.

BALTIMORE DRUGGISTS DEAD.

Baltimore, Feb. 25.—The druggists of this city mourn the death of not less than three of the fraternity, who passed away this week. The best known of them was Charles Ridgely Pue, who had conducted a pharmacy in Southwest Baltimore, at Baltimore and Stricker streets, for many years and had attained great popularity among the residents of that part of the city. He died on February 20 of a complication of diseases. Mr. Pue came to Baltimore when a young man. He established himself in the drug business on the corner mentioned as far back as 1866 and had remained there ever since. His wife and two sons, as well as a daughter, survive him. He had been failing in health for two years or more, and his death was not unexpected.

Another druggist to pass away was Oscar C. Parr, who expired in Santa Fe, New Mexico on February 21, whither he had gone for his health. The deceased was a member of the retail drug firm of Parr Bros., owners of several drug stores in various parts of the city. He came to Baltimore in February, 1896, and formed a partnership with his brother, J. S. Parr. They purchased a pharmacy at Wilkes avenue and Payson street and another at

"So long as it is possible to patent things in some countries and not in others, just so long will it be inevitable that the prices will be low in those countries where the inventor omits to secure a patent, and this will be true, whether the form of the patents be process or product."

Another claim made by the speaker was that the bill was equivocal in that it did not distinguish between chemicals that are medicinal and those that are not. Mr. Wetmore spoke briefly in opposition to the bill.

Mr. Gallagher argued in favor of the bill, that it would not interfere with existing treaties with foreign countries, and that it would bring relief to science and the medical and pharmaceutical professions. He said:

"The result of the product patenting of medicinal remedies by foreigners in this country, is that they have created a monopoly in the article protected. The result is that to-day the American public are compelled to pay from 300 to 400 per cent. more for this class of medicines than is paid in Canada or in other countries. As an illustration of the prices charged for product patented goods, we will take phenacetine; it is only used for

Govanstown, a suburb, besides which they conducted stores at Frederick and Garrison avenues and at Edmondson avenue and Fulton avenue. Mr. Parr was a Mason, and will be buried with the rites of the order next Monday, at Columbus, N. J. His wife and a daughter survive.

From Winchester, Va., comes information about the death at Denison, Texas, of Capt. A. R. Manning, formerly a well-known druggist at Winchester. At the time of his death he was bridge and bridging superintendent of the Missouri, Kansas and Texas Railroad. He was a native of Jefferson county, West Virginia, and fifty-five years old. His wife and four children survive. Interment was made at Parsons, Kansas.

FOR BOARD OF PHARMACY VACANCY.

Baltimore, Feb. 24.—A petition is being circulated among the druggists of this city and State, asking Governor Warfield to reappoint as a member of the Maryland Board of Pharmacy, David R. Millard, the present secretary. Mr. Millard is one of the original members of the board, having been appointed as soon as the law went into effect, nearly two years ago. Under the provision of the law, which provides that one of the five members shall retire every year, Mr. Millard will retire next May, his term having expired. He has given much satisfaction, and his friends think that he should be reappointed. The petition is being numerously signed by members of the Maryland Pharmaceutical Association and others. That there will be a number of other aspirants in the field anxious to get the honor is more than likely, but so far no names have been mentioned with sufficient distinctness to indicate who will be in the field.

JOURNAL CLUB MEETS.

Baltimore, February 24.—The Pharmaceutical Journal Club on last Thursday evening, listened to Dr. Joel Barnett read a paper entitled "Mild Criticisms of Pharmaceutical Journals." He took the ground that much of the matter in drug papers was of a character unsuited for the profession. It dealt with subjects of an essentially commonplace order that did not interest the reading man, who looked for something higher than admonitions that bottles should be washed before refilling, and that clean labels should be pasted on them. The druggist, on the other hand, for whom such instruction was necessary, was not a reading man, and would not peruse the articles, so that the space devoted to them was wasted in any event.

DRUGGIST COMMITS SUICIDE.

Salt Lake City, Utah, Feb. 23.—William A. Neldon, one of the best known drug men in the West, committed suicide at his home here to-day. Despondency, due to loss in his business, caused the act.

It was in a department store. Peruna was fifty-four cents. Suddenly a woman fainted. "Is there a doctor about?" queried the aisle man. Seven men, each bearing a bottle of Peruna moved silently toward the doors. They were druggists.

BALTIMORE NOTES.

—Druggist J. Edwin Hengst, Gay street and Central avenue, has gone to New Orleans to attend the Mardi Gras festivities. Presumably he will bring back some pointers to be utilized in his capacity as member of entertainment committees.

—Mr. Brubacker, formerly with the Stanley & Brown Drug Company, has accepted a position with Muth Bros. & Co.

—Druggists Charles Morgan and A. J. Corning were on the sick list last week, but they are reported to be improved.

—John Gleichman, who looks after the Baltimore interests of the Weightman-Powers-Rosengarten Company, is said to contemplate the erection of bowling alleys in Towson, about eight miles from Baltimore, where many Baltimoreans spend the summer and where there is a large colony of Baltimore business men.

—Ronald McKesson, of McKesson & Robbins, New York, spent five days in Baltimore, last week. Other recent visitors were Fred A. Fenno, of Wallace & Co.; Frank Meals, of the People's Drug Store at Gettysburg, Pa.; Dr. T. C. Fineley, Fawn Grove, Pa.; S. S. Van Trump, Trump, Md.; Joseph B. Boyle, Westminster, Md., and M. J. Zimmerman, Waltersville, Md.

—William E. Turner, formerly of Cumberland, Md., but who has been in Louisville, Ky., for about one year, was in Baltimore, last week, and there is said to be some prospect that he will locate here, the western city having been not altogether satisfactory. Mr. Turner was a member of the State Board of Pharmacy, and H. Lionel Meredith succeeded him on his resignation.

INDIANAPOLIS FIRE LOSS.

Indianpolis, Feb. 25.—In the fire of February 19, the Indianapolis wholesale district had the largest loss it has ever known. Seven big buildings with their entire contents were destroyed. This loss amounted to \$1,070,000. The heaviest was that of the A. Kiefer Drug Co., \$75,000 on building and \$304,000 on stock. The salvage will be practically nothing. The insurance will cover 80 per cent. of the loss. This is the third fire that this drug house has had in fifteen years, none of them by reason of any fault of the company. The flames always came from neighboring stores.

Augustus Kiefer, now seventy-five years old, is as game as ever, and long before the fire had been extinguished in his building, he had secured temporary quarters in a neighboring street. Here he gave notice that his house would be rebuilt, the work to begin as soon as the debris of the fire fire could be moved off. Mr. Kiefer is the oldest wholesale druggist in Indiana, and has been in the wholesale trade in Indianapolis forty-four years. He said that just as he was getting ready to take things easy this fire came along, and that now he feels that he will have to rebuild and set things going again before he can have the easy time to which he had been looking forward.

A MARRIAGE TREAT.

L. E. Treat, of Syracuse, N. Y., the New York State representative of Johnson & Johnson, was married February 16, at Syracuse, to Miss Mariette Ferren.

N. A. R. D. IN MIDDLE WEST.

What it Has Accomplished in Two Large Cities.

Indianapolis, Feb. 25.—The local drug situation so far as Indianapolis is concerned, has been improved by organization. I. N. Heims, secretary of the Marion County (Indianapolis) Druggists' Association, says:

"The work of the National Retail Druggists' Association has not, perhaps, been as effective in Indianapolis as in other places. But we have felt its influence here for the betterment of the drug trade. The work of the association has practically unified the majority of our druggists, who now get better prices than they did before the association began its work, and the feeling of demoralization that pervaded the trade has passed away. For a year or more we have heard little about cutters. Owing to the stand taken by the N. A. R. D. and the protective plans adopted by some of the leading manufacturers, contracts have been signed with practical unanimity to conform to the prices as insisted upon by manufacturers and embraced in the contract.

"Of the two hundred retail drug stores in Indianapolis, only five are looked upon as aggressive cutters, and there is a disposition on the part of at least four of these to sign the contracts sent out by proprietors.

The only active cutter in this city is now considered to be in a business tangle, and will probably soon be compelled to remove from the prominent place he has occupied in the principal retail business street of the city, to some less prominent location. Taken altogether, the work of the N. A. R. D., while it has been quietly done, has been effective, and its influence will, as time goes on, still further improve the conditions under which the retailer does business."

IN CINCINNATI.

Cincinnati, Feb. 25.—Frank Freerichs, advisor of the Ohio Valley D. A., said: "The efforts of the N. A. R. D. through the O. V. D. A., its local representative, have made it possible, for the last five years, to maintain conditions which are not nearly so bad as they previously were,

Like Bob Acres, His "Courage Oozed."

or are now in some other large cities. The O. V. D. A., for the past four years, however, has realized that a betterment in price conditions on proprietary medicines could be brought about only by bringing pressure to bear upon the manufacturers. Since realizing this, the entire efforts of the O. V. D. A. have been centered upon convincing the affiliated bodies of the correctness of its views. The O. V. D. A. officers believe that by reason of the co-operation of all local associations, through the N. A. R. D., the proprietors have been made to appreciate their responsibility, and that it is entirely due to this that the manufacturers have now taken matters in hand themselves. Summed up, the N. A. R. D. has accomplished two important things: It has been the cause of conditions becoming no worse in the past five years, and has been the cause of making the manufacturers see the benefits to be derived from the Contract and Serial Numbering Plan."

Henry Gansz, president of the Alumni of the Cincinnati College of Pharmacy, said: "The local association, through its admirable organization, is fully able to combat all evil, but conditions in other big cities are different, and better organization by the N. A. R. D. people would prove a good thing."

Henry Willenbrink, member of the Board of Control (Covington, Ky.) district: "The good accomplished here and in Cincinnati is directly due to the efforts of the N. A. R. D. Individual association cannot accomplish much. Cutters in this territory have been forced to raise the price of Peruna eight cents, and that is an example of the good done retailers by the N. A. R. D."

John C. Otis, for many years in business at Sixth and Vine streets, was among the infrequent ones who could see no good accomplished. He said: "Everything depends on the manufacturers, and unless they see fit to better conditions, they will remain as they have for the past twenty years."

Al. De Lang said: "The N. A. R. D. is a wonderful thing. They have done all that could be expected of them here, through the O. V. D. A."

Miss Cora Dow, who operates seven stores here, and is recognized as a big cutter, laughed and said: "The N. A. R. D. has done nothing here. My business has not been affected in the least. Recently the price of Peruna was raised, but likewise prices on other medicines were reduced. To my notion, one person has as much right as another to make his own prices. We live under the great American flag."

NEW POISON LAW IN INDIANA.

Indianapolis, Feb. 25.—The anti-poison bill by Representative Darby, has been passed by the House. It provides that poisons shall be sold only on prescription and purchasers must be registered by the druggist. Prescriptions for such poisons can only be filled once, and the names of two or more antidotes must be printed on the label.

One of the purposes of the measure is to restrict the rapidly growing use of drugs by persons addicted to them. The police have frequently complained of the increasing number of "dope" fiends who are arrested.

DR. PRESCOTT DEAD.

Venerable Dean of U. of M. School of Pharmacy Expired at Ann Arbor.

END OF A LONG AND USEFUL LIFE.—DEATH THE RESULT OF PNEUMONIA AND OLD AGE.—HIS MANY SERVICES TO PHARMACY.—OCCUPIED POSITION OF DEAN DURING FORTY YEARS.—EX-PRESIDENT OF THE AMERICAN PHARMACEUTICAL ASSOCIATION, THE AMERICAN CHEMICAL SOCIETY, THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE AND MEMBER OF MANY PHARMACEUTICAL AND SCIENTIFIC SOCIETIES AT HOME AND ABROAD.

Prof. Albert Benjamin Prescott, dean of the School of Pharmacy of the University of Michigan, ex-president of the American Pharmaceutical Association and the American Association for the Advancement of Science, member of the United States Pharmacopoeial Convention, honored and revered by the graduates of forty years, died at his home in Ann Arbor, Mich., on Saturday, February 24. He was seventy-four years old, and death was due to a number of complications arising from pneumonia and old age. He had been ill for about a month and appeared to be on the way to recovery, when a sudden relapse ended his long and useful life.

Albert B. Prescott was born in Hastings, New York, December 12, 1830. He pursued scientific studies under private instructors for some years, and at the mature age of thirty, entered upon the study of medicine, obtaining the degree of M.D. in 1864. Receiving a commission as army surgeon, he served in this capacity until late in 1865, when he returned to his alma mater to assume the duties of assistant professor of chemistry. Five years later he was made full professor of organic and applied chemistry and pharmacy. The department of pharmacy had been organized a year before, and the position of dean which he occupied in 1865 he held continuously for nearly forty years. In 1880, he assumed the directorship of the chemical laboratories of the university, his guiding hand being apparent throughout the history and the development of the courses of instruction in the institution.

There is little need to enumerate what has been accomplished in the domain of chemistry and pharmacy by Dr. Prescott. In his capacity as an instructor, the influence of his lofty ideals has been spread throughout the world by his students. As a chemist he was recognized abroad, and in this country he was considered an authority, particularly in sanitary matters and in the chemistry of the alkaloids. His experience as a forensic chemist was extensive.

Several works, considered standard, and innumerable contributions to scientific and technical journals remain—a monument to his useful life. Probably none of his later works have exerted a greater influence upon the world of chemistry than his "First Lessons in Qualitative Chemistry," which still remains as a model book of laboratory reference. His other more im-

portant productions are: "Chemical Examination of Alcoholic Liquors," "Qualitative Chemical Analysis" (jointly with S. U. Douglas, and later editions with Otis C. Johnson), and "Prescott's Organic Analysis." His contributions to current pharmaceutical and chemical literature were voluminous and were invariably marked by painstaking thought and careful statement.

In pharmacy, his influence in association matters will continue to be felt for many years to come, and his services were recognized by the many positions of trust and honor which he was asked to fill. His work upon the U. S. Pharmacopoeia and his aid of the various revision committees was second in importance only to that of Dr. Charles Rice.

In appreciation of his mental equipment and scientific accomplishments, many positions of honor have come to him. He was selected president of the A. Ph. A., at the meeting in Richmond in 1900, and was an honorary member of the British Pharmaceutical Conference. He was president of the American Association for the Advancement of Science in 1891, and also occupied the chair in the American Chemical Society. He was a fellow of the London Chemical Society, and a member of numerous pharmaceutical and scientific bodies.

Dr. Prescott leaves a widow and an adopted son. He was the oldest professor in point of service in the University of Michigan, and his death will be mourned wherever an alumnus who has known him in the classroom is to be found.

One of the last, if not the last, contributions to current literature to leave his pen was a letter of appreciation of his friend, Dr. Frederick Hoffman, which appeared in The Era of December 22, 1904.

MICHIGAN PHARMACY BILL.

Detroit, Feb. 28.—W. H. Burke, president of the Michigan Ph. A., and ex-President A. L. Walker, of the same body, went to the State capitol, last week, and appeared before the Legislative Committee on Public Health, in behalf of the new pharmacy law. The bill which the association is pushing would greatly increase the powers of the State Board of Pharmacy. Under it they could hire inspectors, retain an attorney and prosecute violators of the law. Pharmacists must be high school graduates, sign the bill, and the fees received by the Board are to be deposited with the State treasurer for the Board's use. Another clause in the bill requires that the Board be composed of only members of the Michigan Pharmaceutical Association, and that the Board report its finances yearly "to the Board of State Auditors and the Michigan Pharmaceutical Association."

In some respects the bill is the most assertive measure ever urged by a private organization.

Rumor has it that "Sandrock Smith," the boy "hold-up" man, was a drug clerk. Gee! Didn't know any druggist had that much nerve. If it's true, what a thundering good advertisement for the nerve tonic which twenty-five years hence he will be able to market.

WANT NO FORMULA BILL.

Editors and Druggists of Wisconsin Are Moved to Protest.

Milwaukee, Feb. 25.—Never has any proposed legislation aroused so much antagonism among the dealers in drugs in Wisconsin as the so-called Noble bill, now getting a full share of consideration by the State legislature. The bill provides that all bottles or packages containing the so-called patent or proprietary medicines shall be labeled plainly on the outside with a statement containing the ingredients and the proportion of each. It also provides penalties of from \$5 to \$1,000 in fines.

The State Druggists' Association has already issued a warning and druggists and manufacturers from all parts of the State, as well as the agents of several of the large manufacturers outside the State, have gone to Madison to enter protest against the measure. It is argued that the measure is opposed to the American spirit of freedom; that it would result in driving out of the State many commodities that have an established place in the commerce of the State; that it would work a hardship on local dealers and upon manufacturers as well as upon the consuming public, who, deprived of articles they have been accustomed to use, would be forced to pay unnecessary doctors' fees. A last argument is that it is a bill in the interest of the physicians, and is class legislation. There is no provision in the bill requiring the ingredients of a physician's prescription to be written on the package.

Not only have those in the trade taken up the fight against the bill, but the newspapers of the State have become the champions of the druggists. At a meeting of the State Press Association, held at Madison, the following resolution was unanimously adopted:

"WHEREAS, This and similar legislation is an unjust exercise of the police powers of the State, unduly paternalistic in its objects, and in favor of a special professional class and in restraint of lawful trade; therefore, be it

Resolved, That the association appoint a committee of five publishers to oppose the passage of the measure and that all members of this association, while at Madison, and at all other times, present the character of the proposed law to their assemblymen and senators to the end that they may be thoroughly conversant with its real nature."

REGISTERED IN WISCONSIN.

Milwaukee, Feb. 25.—Twenty of the sixty-five applicants for pharmacists, and assistant pharmacists' certificates in the recent Milwaukee examination of the State Pharmacy Board, were successful in obtaining certificates, according to the list of successful candidates made public by Secretary A. F. Menges, February 17.

The following obtained registered pharmacist certificates: J. August Anderson, Milwaukee; Elmer J. Falk, Stoughton; Richard H. Juers, Wausau; Sylvester W. Macho, Spooner; Robert J. Roberts, Racine; Ferd A. Spieker, Manitowoc; Henry C. Thene, Milwaukee.

Assistant registered pharmacist certificates were granted to Arthur M. Abbott,

Duluth; Milo E. Becker, Winneconne; A. W. Dietz, Milwaukee; Henry E. Davis, Ripon; William Garot, Green Bay, Arthur T. Hallahan, Milwaukee; Joseph Huebinger, Ludvig A. Kravick, Cambridge; Frank F. Koch, Theodore T. Marlewski, Milwaukee; Arthur F. Schmidt, Juneau; Joseph N. Steinmetz, Frank Stratton, Milwaukee.

Members of the Board who were present were D. A. Taylor, president, Stevens Point; H. G. Ruenzel, Milwaukee; H. A. Peters, Oconomowoc; H. C. Schranck, Milwaukee; A. F. Menges, secretary, Madison.

The next meeting of the Board will be held in Madison, Wis., on April 12 and 13.

LOCAL OPTION IN WISCONSIN.

Madison, Wis., Feb. 25.—A local option bill is receiving much favorable comment by members of the State legislature. It provides that on petition of 10 per cent. of the qualified voters of any county a special election shall be called. A majority vote shall then make the sale of spirituous, vinous or malt liquors illegal, except on the prescription of a physician.

IOWA HOUSES COMBINED.

Waterloo, Iowa, Feb. 25.—One of the largest transfers of business ever made in Waterloo has been completed. The Wangler Wholesale Drug Company have sold their house in this city to the Churchill Drug Company, of Burlington. The transaction involves \$200,000. The Churchills will add this to their string of houses over Iowa, and will continue business here. The Wangler Company was established years ago and has done a large business.

PROPOSE CONSOLIDATION.

Chicago, Feb. 25.—At a meeting held February 21, President Broth proposed that the Chicago Veteran Druggists' Association should take initiative steps to have the two schools of pharmacy in this city consolidated. T. N. Jamison spoke on the desirability of a "pharmacy headquarters" afforded by such a consolidation, and W. Bodenmann gave voice to his ideas upon the necessity of consolidation. He said that one school instead of two could create a standard and live up to it—something that few schools do. They have announcements that read all right, but are honored in the breach. A committee of consolidation consisting of A. E. Ebert, W. H. Forsyth, W. Lyche, W. Bodenmann and President Broth, was appointed. The committee represents both schools and the Chicago Veteran Druggists' Association.

A. E. Ebert made a report on his trip, as a member of the American Pharmaceutical Association Legislative Committee, to the Dakota legislature.

CHICAGO NOTES.

—Peter A. Nyström, for the past ten years associated with Oscar F. Schmidt as prescription clerk, has bought the drug store of Frank H. Brown, at Lake avenue and Forty-third street.

—The C. R. D. A. Executive Committee met Tuesday of last week, and took up the discussion of cocaine legislation.

FOR PURITY IN MEDICINES.

People of North Dakota Demand Laws For Rigorous Regulation.

St. Paul, Feb. 25.—The North Dakota legislature has passed a bill providing for an analysis of drugs and medicines at the State Agricultural College. While the bill was under discussion in the House, Representative Casey said that druggists and patent medicine manufacturers had protested against the measure and he asked Mr. Sweet, the author, to explain it. Mr. Sweet said the portion to which objection had been made was the requirement of the printing of the formula on all packages. This clause had been amended so as to meet the approval of the North Dakota P. h. A.

This is not the only thing that has been doing in North Dakota. Patent medicine men poured into Fargo to see Pure Food Commissioner Ladd, who had the bill in question introduced in the House, whose real object was to drive injurious medicines out of the State. It is along the same lines for medicines as the other measure for pure foods, and it has received general public support. The representatives of the big concerns tried to persuade Mr. Ladd that some amendments were necessary. He refused to accept any changes and urged the passage of a law that he can enforce or none at all. The proprietors sought to throw upon the State the burden of proof as to injurious effects, and it was against this that the commissioner put up the hardest fight. The agents of the proprietors admitted their lack of success in efforts to influence Mr. Ladd to accept changes in the bill. The commissioner has acquired a national reputation in his warfare against food and drug adulterations.

Chicago, Feb. 25.—Albert E. Ebert returned yesterday from North Dakota, where he went a week ago to try to prevent the passage of the Ladd pure drug bill.

The gist of the proposed law, so far as it refers to pharmacy, is found in section 4, which reads:

"Every proprietary product, drug, medicine or beverage containing more than 5 per cent. of ethyl alcohol, or which contains chloral hydrate, ergot, morphine, opium, or any of their compounds or derivatives, cocaine or any of its salts, bro-

Out to the Rescue.

mine, iodine or any of their salts, shall be clearly labeled in block, open gothic letters, printed on a white background, showing the true name and per cent. of each of the foregoing constituents, and said label shall be affixed to each and every package, carton, box and bottle in such way as to be clearly seen."

The bill provides for a fine of not less than \$5 nor more than \$100 for the first offense, plus costs of action and cost of analyzing, and provides for confiscation of the goods.

During the course of a conversation, Mr. Ladd said that the bill is but the part of a concerted plan to be carried out in the several States, placing the drugs in the hands of the State experimental stations, Virginia and other States, it is understood, are working along similar lines. Mr. Ebert suggests that a committee from each of the four branches of the trade, N. A. R. D., P. A. of A. A. Ph. A. and N. W. D. A., be formed to combat the passage of inimical legislation wherever it may be brought up; this committee to be clothed with full power, and appointing an executive committee from its members.

MINNESOTA EXAMINATIONS.

Minneapolis, Feb. 18.—The State Board of Pharmacy, after its regular examination of candidates at the College of Pharmacy, State University, awarded certificates as follows: Pharmacists: Harry W. Lang, Henry J. Mollitor, Harry T. Olin, Herbert I. Scheel, Ladislav J. Valik, Frank P. Taylor. Assistant pharmacists: H. W. Cutler, D. B. Dooley, E. L. Kailher, G. O. Kroegstad, Charles W. Lang, C. E. Mattix, H. O. Maxwell, D. F. Widing, Albert H. Mueller, Oscar Tensvad.

EARLY CLOSING IN MONTREAL.

Montreal, Feb. 25.—It is likely that Montreal will soon have a by-law that will require tobacco, drug and news stores and cafés to close at seven o'clock every night in the week, excepting Monday, Tuesday, Friday and Saturday. The by-law was drafted some time ago to provide for the enactment of such legislation but its legality was questioned, and it was submitted to the city attorney.

They have decided to have the by-law printed and submitted without prejudice to the city council. The by-law was based on provincial legislation, and it is tolerably certain that the city council will pass it, despite the protests that are being made by the merchants affected.

MONTREAL DRUG CLUB.

Montreal, Feb. 25.—At the annual meeting of the Montreal Drug Club the following officers were elected for the ensuing year: Hon. president, H. H. Lyman; hon. vice-president, T. Wardsworth; president, J. E. Tremble; vice-president, H. Barré; secretary, A. T. Christie; treasurer, J. H. Goulden. Committee, O. Dowling, J. Dearden, L. G. Ryan, G. Porter, O. Tansy, W. S. Stone, L. Teller, J. Weinfeld. After transaction of business, an informal concert followed, during which songs and speeches were contributed by Messrs. Cameron, Strong, Rogers, Porter, Wight, Barré, Mitchell and Professor Bemrose.

MISSOURI LEGISLATION.

Some Opinions on Proposed Amendment to Pharmacy Act.

St. Louis, Feb. 28.—It has finally leaked out there that there is an effort being made at Jefferson City for legislation for druggists. The bill is now resting peacefully in the House, with no signs of emigrating or anyone intending to give it a push. It is in the form of an amendment to the pharmacy act.

The principal provisions are for a \$5 fee for registration and for re-registration once each year for a fee of \$1. The present system is one registration for a lifetime for \$3.

The bill plans in detail the method of notification and marking off of the list pharmacists who have failed to register and requires that the licensed man shall mark his number on each prescription filled. It also provides a salary of \$600 yearly for the president and vice-president of the board, and \$1,000 for the secretary.

Opinion among druggists on the bill is somewhat divided, except as to the placing of the number of the pharmacist's certificate on prescription labels and that is condemned almost without exception.

William Mittelbach, of Booneville, condemns the bill and the effort for legislation this year, saying the druggists are not ready to decide upon their needs.

Eugene Soper, a former president of the Missouri Ph. A., thinks the present law good enough, but especially condemns the re-registration as a waste of time and money.

Prof. James M. Love, of Kansas City, thinks the amendment would show decided improvement over the present law, but suggests allowance for the man who has retired from active practice, so that he may be re-registered within six years without examination. More stringent laws are also needed regarding the employment of registered men.

Prof. James M. Good, of St. Louis, is of the opinion that the State should make a liberal appropriation for the support of the board, and that re-registration should be free. "The law is for the benefit of the people of the State, not the druggists," says Mr. Good.

C. J. Koch, secretary of the St. L. R. D. A., thinks pharmacists should be required to register each year and that they should pay a good fee for it, to keep the profession clean as possible.

SALOON MEN MAKE CHARGES.

St. Louis, Feb. 28.—Excise Commissioner Selbert, who controls the saloons of St. Louis, through State licenses, has requested the prosecuting attorney to issue warrants for forty-three druggists who, he says, have been selling whiskey in violation of the State law. The controversy arises over the dispute as to original package. Medicated whiskeys are not under consideration.

Mr. Selbert is said to have received complaints from saloonmen when the licenses were renewed the first of the year, and he started a detective out, who sought to buy whiskey at virtually every store in the city not holding a retail liquor dealer's license.

The wholesale issuance of warrants was

denied, but several were issued to serve as test cases and warrants were also issued for those from whom bulk whiskey was purchased. The warrants issued up to date are for Earl L. Woods, 540 North Vandeventer avenue; Thomas S. Glenn and N. Emery Williams, 2338 Manchester avenue; Nathan Leity, 1225 Franklin avenue; Edward M. Perner and Archie Godfrey, 4459 Delmar avenue.

THEN HE WRECKED THE SHOP.

St. Louis, Feb. 25.—Neither James Coven, the clerk, the police who investigated, nor James W. Harlow, can explain the cause for the sudden wrecking of the City Hall Drug Store, at Twelfth and Chestnut streets, unless it can be attributed to the intense cold.

Harlow is from Texarkana, Ark. He entered the drug store and purchased a cigar. Coven waited on him. After lighting the cigar, Harlow suddenly grabbed up a chair and smashed the cigar case to bits. Then he buried the chair at another case, threw iron cuspidors through windows, and when Coven sought to prevent further destruction, fought desperately. He was overpowered when two policemen arrived.

He could not tell what actuated him. The police suppose that he was affected by the intense cold and lost his mind for a spell. Harlow was locked up.

DRUGGIST FIRE HERO.

St. Louis, Feb. 28.—Druggist Beaumeister, of East St. Louis, is quite the hero of that section since February 19, when he rushed into the burning residence of Mr. and Mrs. C. O. Gorton, and assisted in saving them from the flames. Mr. Beaumeister and another business man discovered the flames and tried arousing the household by kicking at the doors, but failed, and then smashed in the windows and climbed in to drag the half-suffocated couple to safety.

ST. LOUIS NOTES.

—Henry J. Stolle, treasurer of the J. S. Merrell Drug Co., was married January 25, to Miss Lillian Zwarts, daughter of the late Dr. Zwarts, proprietor of the downtown pharmacy of that name, in the city. The wedding was carefully planned as a secret and was supposed to be such by the principals until Theo. Hagenow, W. H. Lamont, L. A. Seitz and a few others reached their home after the ceremony and gave them a "serenade."

—St. Louis friends of J. B. Cuykendall, formerly agent for Eli Lilly & Co., have received copies of the Dawn Magazine, a new publication issued at Denver, which shows that Mr. Cuykendall is secretary and treasurer of the company. Mr. Cuykendall left St. Louis because of his health.

CARL NETSCHERT'S LIST.

Carl Netschert, of 187 South Clark St., Chicago, the well-known manufacturer of artificial flowers, has just issued a new price list containing a complete assortment of flowers in various forms for spring and Easter decorations.

All druggists who are interested in making their stores attractive during the Easter and soda fountain days, should have one of these price lists, which will be sent free on application. You should ask for New Spring List No. 25.

AMONG THE COLLEGES

MEDICO-CHIRURGICAL COLLEGE.

Philadelphia, Feb. 27.—Great interest is being taken in the student meetings being held on Sundays in the Garrick Theatre. On Sunday last the speakers were Dr. Wilbur White, of New York, and Dr. J. M. Anders, of the Medico-Chi. Among the musical features were selections by the College Quartette and a mandolin solo by H. Wilson Levensgood.

C. S. Steele, W. E. Smith and Claude Culver have been appointed a committee to arrange for the taking of the freshman class pictures.

Prof. C. S. Shaw lectured last week to the inmates of the House of Refuge, on the trip taken by him to British Columbia, last summer, for the purpose of conducting botanical research and collecting specimens.

Dr. John R. Minehart has been appointed registrar of the college. He was a member of the class of '00.

Members of the freshmen class will be the guests of the senior class at a reception and euchre, to be held early in March.

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, Feb. 25.—The junior class gave its annual reception to the class of '05, in College Hall, on Tuesday evening. Addresses were made by C. W. Evans, president of the class, John D. Dawson and Prof. C. B. Lowe. The affair was arranged by Chairman J. D. Dawson, G. O. Hancock, C. W. Schwenzler and W. B. Goodyear, members of the committee.

A series of botanical excursions are to be conducted by Prof. Henry Kraemer into the surrounding country, once every two weeks.

A lecture will be given this week, at the college, preparatory to the new course in commercial advertising that is to be added to the curriculum next year.

The Graduate, published by the class of 1905, is well under way and will be completed May 1. The committee in charge has for members: R. D. Gilliland, editor-in-chief; S. A. Shiffer, L. E. Boesser, H. T. Richards, J. P. Rippeoté, E. J. Shelly, J. Sauermann and J. E. Bonner.

The decision of the faculty regarding that those who hereafter become students of the P. C. P., shall be graduates of a first-class high school, is meeting with the approval of all. This step was made necessary by the action of a similar nature taken by the examining boards of other States.

Nearly all the fraternities this week held their annual banquets and receptions. On Tuesday evening the members of Pi Theta Sigma, to the number of forty, gathered at the Bellevue-Stratford. Prof. Samuel P. Sadler was toastmaster, and the following responded: J. R. Rippeoté, Prof. J. P. Remington, Howard B. French, president of the college; H. T. Richards, Prof. C. B. Lowe, Prof. Henry Kraemer, Prof. Raymond Hendrickson, Prof. F. X. Moerk and C. E. Bragdon. Members of the faculty were guests of the fraternity.

The banquet committee consisted of S. A. Shiffer, H. T. Richards, F. P. States, Jr., and C. E. Bragdon.

The Zeta Delta Chi held its banquet at "The Colonnade." Prof. J. P. Remington was toastmaster and members of the faculty were among the guests. The speakers were E. C. Hathaway, C. W. Evans, H. L. McEntire, S. Y. Althoff, J. B. Oellig, J. D. Dawson and W. C. O'Brien.

The Phi Chi, the oldest pharmaceutical fraternity in existence, held its banquet at the Flanders. Mahlon N. Kline was toastmaster and those who responded were: R. N. Renbard, L. P. Palmer, W. T. Bean, Eli Lily, J. A. Portugal and members of the faculty. A flashlight picture of the assembly was taken. The reception committee consisted of L. W. McNess, H. A. Bradshaw, E. E. Woodland, Eli Lily and G. C. Hancock.

The Kappi Spi banqueted at the Hotel Walton. Prof. J. P. Remington presided and those who responded were: J. P. Lehman, R. D. Gilliland, P. A. Coles, G. D. Burgoon and some of the guests. The entertainment committee consisted of D. E. Crawford, A. G. Spaulding and P. A. Coles. More than forty members and guests attended.

ST. LOUIS COLLEGE OF PHAR- MACY.

St. Louis, Feb. 28.—The St. Louis C. P. Alumni Association has elected Charles Hahn president; Joseph Scherzinger, first vice president; W. S. Angermueller, second vice president; Henry O. Hugel, corresponding secretary; Price Mansfield, corresponding secretary; Charles Geitner, treasurer; F. A. Moeller, register; R. E. Schleger, Charles Renner, O. F. Claus, W. H. Lamont, E. H. Voepel and O. H. Ellbrecht, board of directors. W. H. Lamont will be in charge of the employment office.

The Alumni hall was given at Liederkrantz Hall, February 15, and two days later the postgraduate class at the college, Messrs. Musick, Shaffner and Woodruff, entertained their fellow students.

The senior class has adopted business suits for the commencement exercises and accompanying social functions. W. C. Kern has been selected valedictorian and will speak at the banquet tendered the class by the college.

NORTHWESTERN UNIVERSITY.

Chicago, Feb. 17.—Judson W. Hoover, secretary of the Alumni Association of the School of Pharmacy of the Northwestern University, reports that the year 1904 was most successful. The library has been completely overhauled and its volumes are now easily accessible to students and alumni. A librarian, Mrs. Pearson, is in charge, and her entire time is devoted to matters pertaining to the association and its work.

At the December meeting of the association, a banquet was given to the graduating class, and a resolution was adopted, directing the Executive Board to thereafter give one scholarship to the student passing the highest entrance examination at the beginning of the following term. The bestowing of additional scholarships will be arranged for later, if the finances of the association and the liberality of the

school management will admit of it. Mr. Hoover states that the executive officers of the association are trying to do their full duty by endeavoring to keep alive the fraternal spirit which characterizes all graduates of Northwestern University. He admits that the association needs help and invites all graduates of the school to identify themselves with this movement.

The officers of the Alumni Association are: President, Thos. V. Wooten; vice-presidents, G. H. Adamick, J. E. Elliott, W. L. Barnum, Jr.; secretary, Judson W. Hoover; treasurer, M. A. Miner; trustees, Dr. H. Kahn, J. J. Gill and J. H. Montgomery.

WASHINGTON AGRICULTURAL COLLEGE.

Pullman, Wash., Feb. 20.—The pharmacy students have successfully weathered final examinations with few casualties, and none of them serious. The work of the new semester has begun and for the seniors the end draws near. Their work now includes prescription incompatibilities, pharmaceutical testing and drug assays, therapeutics, qualitative organic analysis and toxicology, quantitative analysis and orinalysis.

The weather is now pleasant enough for baseball and the "pharmies" have organized a bunch of ball tossers who look for the college class championship, seven of them being "varsity" men. An effort will be made to arrange outside games and, if possible, a contest with the university pill mixers at Seattle will be pulled off. In fraternal spirit and progressiveness the students of this department hold first place among the various classes which embrace the eight hundred students in attendance at the college.

The Pharmaceutical Association is considering the advisability of a series of debates on subjects of interest in the field of drugs, and Prof. Thatcher, of the Department of Chemistry, will give some interesting lectures on his recent biological researches.

Several new students, preparing for the State Board, are enrolled this semester.

A communication was recently received by Prof. George H. Watt, stating that this school had been placed on the accredited list by the State Board of Pharmacy

Victory Not Always to the Brave.

of New York, as fulfilling all conditions of the pre-requisite law. Many believe the time is coming when we shall have a national system of pharmacy schools, whose graduates will be licensed without examination to practice anywhere in the United States.

UNIVERSITY OF MICHIGAN.

Ann Arbor, Mich., Feb. 25. The catalogue of the university is being translated into Spanish. When completed, copies are to be sent to the various neighboring countries in which Spanish is commonly spoken. M. M. Guillermet, Ph. C., '04, is translating that portion of the catalogue relating to the School of Pharmacy.

William H. Krug, '89, for a long time chemist in the Department of Agriculture, and recently in charge of the chemical laboratory of Kilstein & Co., chemical importers, in New York, died February 1, of pneumonia, after a short illness. He was a very able chemist and was at one time secretary of the Washington section of the American Chemical Society.

At the meeting of February 16, the Board of Regents of the university decided to establish a summer school in pharmacy. The session will last six weeks, and instruction will be given in the theory and practice of pharmacy, laboratory work in pharmaceutical preparations, pharmacognosy, materia medica and prescription work. It is designed to meet the needs of such students who desire to obtain sound training in their chosen profession, but who cannot afford to take a full college course.

John E. Ferris, Ph.C., '00, is in the advertising department of Parke, Davis & Co., and Frank Hamilton, a recent graduate, has accepted a position with the same house.

H. H. Eatough, Ph.C., '01, is head pharmacist for the Santa Fe hospital, at Albuquerque, N. M.

Dr. Volney M. Spalding, for many years professor of botany in this school, is pursuing research work in Tuscon, Ariz., in the Desert Laboratory maintained by the Carnegie Institution.

Rudolph E. Knapp, B.S., '04, chemist with Parke, Davis & Co. for six years, is taking the medical course in this university.

James Seymour, Ph.C., '04, B.S., '04, formerly assistant here in chemistry, and later in pharmacy, and for several years instructor in pharmacy in the University of Oklahoma, has returned to take up some advanced courses in chemistry.

Cnsried Fishman, '02, for some time chemist with Smith, Kline & French Co., Philadelphia, and more recently with Meyer Brothers Drug Co., of St. Louis, has returned to the university, and is completing the requirements for a bachelor's degree in pharmacy, and is also pursuing medical studies.

A course of ten special lectures on "business organization and accounting" was begun on February 21, by C. C. Parsons, of the Shaw-Walker Co., Chicago. The lectures will be given weekly. Some of the subjects to be considered are bookkeeping, advertising and selling, credits, collections, purchasing, receiving, stock accounting, etc.

AMONG THE BOWLERS

S. & J. BEATEN BY RETAILERS.

When the first series in the tournament between the Retail Druggists' Bowling Club and the Seabury & Johnson team closed last Friday night, at Starr's alleys, three cheers were given for S. & J. This was by way of consolation, for they were taken in by the retailers to the tune of two games to one, although they put up a stiff fight. All three games were closely contested. The scores:

Retail Druggists	771	754	820
Timmerman			219
Seabury & Johnson	752	797	721
Judge			190

About two dozen druggists were in attendance to "sick on" the combatants, and after the third round the whole jolly crowd sat down to a fine collation. The next series will be rolled on the S. & J. alleys.

THREE STRAIGHT FOR CHAMPIONS.

Philadelphia, Feb. 25.—In the games rolled February 21, at Central Alleys, both the Lee Co. and Smith, Kline & French teams took three straight victories from their opponents. The scores:

J. E. Lee Co.	834	830	818
Wright			212
P. D. A. Reds	679	672	734
Hahn			164
Wanderers	610	713	646
Kuhl			194
Smith, Kline & French	801	793	772
Donnel			202

J. E. Lee Co. are still champions, with P. D. A. Blue eighteen points behind. High one game single, Maurice, 256; three game single, Herron and Hollowell, 632.

N.-B. BEATS CHAMPIONS.

Detroit, Feb. 28.—Nelson, Baker & Co. showed the way to the champions of the Detroit Drug League at last week's meeting, and took them into camp to the tune of two out of three games. The success of the N.-B. team was due to the remarkable work of Ludwig, whose scores for the three games were 207, 207 and 223, an average of 212½. The last game between the teams was exciting, the champions losing it by one pin. Parke, Davis & Co., No. 2, keep a-coming, in the last series having trimmed the Stearns team for three games. The scores and highest individual work:

P. D. & Co., No. 1	779	860	863
McDonald			191
Nelson, Baker & Co.	817	794	864
Ludwig			223
Michigan Drug	802	830	875
Carlisle			226
F. F. Ingram & Co.	780	805	753
Weiber			200
P. D. & Co., No. 2	933	784	841
Helme			206
F. Stearns & Co.	840	800	729
N. O'Donnell			198

STANDING IN ST. LOUIS.

St. Louis, Feb. 28.—After bidding for public attention for several weeks, the Druggists' and Meyer Bros.' Coked Hat Bowling Leagues have dropped back to their accustomed gaits. The standings of the clubs are:

DRUGGISTS' LEAGUE.	Won.	Lost.
Team.		
Eli Lillys	21	14
J. S. Merrells	18	17
Nelson Bakers	18	17
M. C. Paints	17	18
Meyer Bros.	17	18
Moditt-Wests	14	21

MEYER BROS. LEAGUE.	Won.	Lost.
Team.		
Lidas	22	13
Mikados	18	17
Imp. Crowns	17	18
Pearls	17	18
La Toscan	16	19
T. F. Ms.	15	20

SENSATIONAL PLAY BY CALVERTS.

Baltimore, Feb. 24.—The sensation of this week in drug trade bowling circles, is another victory for the Calvert Drug Company, which brings their string up to eight games won this season. What is more, one of the Calvert men made a score of over 200, Becker having 214 to his credit, and the other members of the Bowling Club are now inquiring what special brand of nerve food the Calverts take. Sharp & Dohme bowled one game of over 900 and a number of high individual scores were made. Winkelmann, of Davis & Davis, on the other hand, distinguished himself with a score of 97. The totals this week were as follows:

Baily & Son	815	855	764
Davis & Davis	767	729	755
Sharp & Dohme	792	912	823
Armstrong Cork Co.	751	811	851
McCormick & Co.	756	694	845
Calvert Drug Co.	680	706	588

The standing:

	Won.	Lost.	P. C.
James Baily & Son	45	12	789
McCormick & Co.	41	18	695
Davis & Davis	31	23	574
Sharp & Dohme	32	25	561
Armstrong Cork Co.	14	41	259
Calvert Drug Co.	8	52	133

BODSGAARD HITS UP SCORES.

St. Paul, Minn., Feb. 25.—The Pills, of the Drug Clerks' League, took two games from the Tablets, in the play of February 23. Bodsgaard maintained his reputation by rolling up the whopping score of 226. The scores:

Pills	804	756	845
Bodsgaard			226
Tablets	682	686	866
Muessel			214

When the retail druggists bowled February 24, the Pestles came out on top with two games. Score:

Pestles	786	722	750
Neff			190
Spatulas	713	787	728
Everett			192
Mortars	749	741	718
Allen			171

If we could take you through our factory showing you its splendid equipment of special machinery and all modern facilities and the absolute cleanliness that is observed in all Departments, explaining to you the special COLD processes by which our goods are handled, you would realize

***Why "True Fruit" Fountain
Requisites are Worth More
Than Any Other Line.***

Why they are richer in flavor,
Finer in quality, more highly concentrated.

Why they not only give the best results
but actually cost the dispenser less.

Why the sales of these goods have doubled
within two years, and

Why there were more of these goods sold
during the past year than any other four
brands put together.

TRADE SECTION

REDUCE TAX ON ALCOHOL.

Good Features of the Two Boutell Bills and the Lovering Bill.

MR. M. N. KLINE ADVOCATES THEIR PASSAGE IN A PAPER READ BEFORE THE PHILADELPHIA COLLEGE OF PHARMACY.—EXAMPLE OF PROSPERITY OBTAINED BY GERMANY THROUGH FREE ALCOHOL.

Mr. Mahlon N. Kline, chairman of the Committee on Legislation of the N. W. D. A., read a paper before the Philadelphia College of Pharmacy on February 14, advocating the passage of three bills now before Congress. The first, introduced by Hon. H. S. Boutell, provides for the use free of tax, of alcohol which has been rendered unfit for drinking purposes by the admixture of some noxious substance; the second, also introduced by Mr. Boutell, reduces the internal revenue tax on distilled spirits; the third, introduced by the Hon. Wm. C. Lovering, provides for the refund of the tax paid on domestic alcohol used in the manufacture of exported articles. Mr. Kline's paper was entitled, "Some Reasons Why the Internal Revenue Tax on Alcohol Should be Reduced, and Why Our Government Should Provide Free Denaturated Alcohol For Use in the Arts."

Mr. Kline said in part:

"The necessity for the legislation proposed in the first of these bills is found in the fact that our internal revenue laws, under which a tax of \$1.10 per proof gallon is levied on all distilled spirit, make no distinction between the distilled spirits used as beverage and that used for industrial purposes. In the latter form distilled spirits, generally called alcohol, are a necessary material in thousands of important industries.

"As commercial alcohol is usually of 188° or 190° proof (that is, 94 or 95 per cent. pure alcohol) the tax of \$1.10 per proof gallon is equivalent to a tax of about \$2.07 per gallon of industrial alcohol, or nearly 1,000 per cent. of the original cost of the alcohol as distilled. The effect of a tax of this kind is so evidently oppressive on productive industry that practically every commercial and manufacturing country in the world, except the United States, makes a distinction between alcohol used for industrial purposes and that used as a beverage."

GERMANY FOSTERS EXPORTS BY FREE ALCOHOL.

Mr. Kline then showed that this policy had successfully been pursued for more than twenty years by some of these countries and that none of them had gone back to the old system of taxing alike beverage and industrial alcohol. Of Germany, as the one most benefited by this policy, Mr. Kline said:

"The German farmer has been benefited by cheap untaxed alcohol in two ways: (1) Through a great additional market for his potatoes, of which enormous crops are

annually grown for making alcohol; and (2) through the use of alcohol for light, heating purposes and as a fuel for motor engines running all kinds of farm machinery. The farmers have also benefited by this policy making possible the development of new industries employing many thousands of workmen, who consume large quantities of German farm products.

"Germany's manufacturing industries in the many lines in which alcohol is used have been enormously stimulated by the very low price (the present cost, according to Counsel-General Mason's report, being from 15 to 18 cents per gallon) at which it can be procured.

"Among the articles, the export trade in which has thus been greatly fostered by Germany, are the products of the great chemical industries, the coal-tar colors, lacquers, dyes, varnishes, perfumery, etc., etc. Not only does Germany practically control the trade of neutral markets in all the various chemical products, but she also sells large quantities of these articles in this country, the advantage resulting from cheap alcohol being sufficient to enable them to be sold here in spite of our protective tariff.

"The effect of the law of 1887 in stimulating the consumption of untaxed alcohol in Germany is shown by the following table:

1888.	20,476,768;	1890.	28,074,667;
1894.	35,102,593;	1898.	46,979,841;
1900.	55,098,285;	1902.	58,632,840

proof gallons.

GERMAN CONSUMPTION OF ETHYL ALCOHOL.

"In addition to this enormous amount of untaxed alcohol, Germany consumes for industrial purposes an almost equally large amount of tax-paid alcohol. Owing to the low tax rate in force in that country (about forty cents per proof gallon) the industries requiring pure ethyl alcohol have been so extensively developed that the estimated annual consumption of tax-paid alcohol is about 55,000,000 proof gallons annually.

"In the United States there is, of course, no consumption of untaxed denaturated alcohol, owing to the failure of our laws to make provision for such use. Of tax-paid alcohol it is estimated that less than 5,000,000 gallons are annually used in the arts, the excessive tax of \$2.07 making its use prohibitive, except in the manufacture of articles such as flavoring extracts, perfumery, pharmaceuticals, medicines, etc. Even in these industries the consumption is very much smaller than in Germany, as the high cost of the alcohol greatly increases the selling price of the goods into which it enters.

"Another reason for the small consumption of tax-paid alcohol is found in the general use of inferior untaxed substitutes, chiefly refined wood alcohol, which, notwithstanding its injurious qualities that render it dangerous to health, is being largely substituted for pure grain alcohol.

"With a per capita consumption in this country equal to that of Germany, we

should be using 150,000,000 gallons of alcohol per year, instead of 5,000,000 gallons as at present.

OTHER POSSIBLE USES OF ALCOHOL.

"It is, however, in the use of alcohol as a motor fuel, and for lighting, heating, cleansing and similar purposes that the greatest consumption of alcohol would take place. It is clean, odorless and free from danger of accidental explosion.

"For heating and cooking, alcohol is unquestionably safer, cleaner and more agreeable to use than gasoline, and would preferably be used in millions of households for these purposes if it were furnished at the same price as that material. It is estimated that the alcohol used for heating in Germany is as economical as anthracite coal at \$6 per ton.

"It is in the manufacture of the organic chemicals that the greatest field for new industries would be created by legislation giving cheap alcohol. We import annually about \$10,000,000 worth of fine chemicals, drugs, coal-tar colors, dyes, etc., chiefly from Germany, almost all of which could be, and would be, manufactured here under alcohol laws as liberal as those of the countries from which these articles are imported.

ADVOCATES REDUCTION OF TAX ON DISTILLED SPIRITS.

"To meet the requirements of industries for cheaper pure ethyl alcohol, it is proposed to reduce the tax on distilled spirits to seventy cents per proof gallon, which would effect a reduction of about seventy-five cents per gallon in the cost of commercial alcohol. This would give the manufacturers pure grain alcohol at a reasonable price.

"To compensate for any loss of revenue that might result from the reduction in the tax rate it is proposed to levy an additional tax of forty cents per proof gallon on all rectified, compounded or blended spirits. This would yield an annual revenue of \$3,000,000 or \$35,000,000, which would all be paid by the users of distilled spirits as a beverage.

"A precedent for the imposition of this additional tax is found in our revenue laws for the Philippines, which provide for a special tax on all rectified or blended distilled liquors. It is also instructive to note that provision has been made by these laws for a very low tax rate on denaturated alcohol for industrial purposes.

"H. R. 9051, the third measure to which I have referred, is one of particular interest to our export trade. While alcohol in the original tax-paid packages may be exported free of tax, no provision is made for refunding the internal revenue tax on alcohol exported as a component part of manufactured articles. Since all other commercial countries give their manufacturers tax-free alcohol for the export trade, the failure of our laws to make a similar provision has effectually prevented our manufacturers from competing in these lines with their foreign rivals or the world's trade."

ALPERS' FOUNTAIN METHODS.

W. E. Beall, Manager of the Soda Department, Explains Them.

SANTARY SODA, COURTEOUS SERVICE, SCRUPULOUS CLEANLINESS, UP-TO-DATE IDEAS, SCIENTIFIC STUDY AND PRACTICE, AND HARD WORK BRING SUCCESS.— SOME HINTS AND FORMULAS.

"Sanitary soda" is not simply a catch line. It is true of the Alpers' soda. We have an up-to-date fountain of the Becker counter service style; a Twentieth Century fountain. It is twenty-six feet in length and is of onyx, marble and wood. Given such a fountain and a first class neighborhood such as we are in, a man can make soda pay and pay well. Cleanliness and politeness are necessary to dispensers. And cleanliness applies to the dispenser as well as to the fountain. Even the syrup room should be clean, and mine is as neat as a pin.

The great point about this Twentieth Century fountain is that the bottle system features plainly to the public that our syrups are maintained in their integrity. It is perfectly plain that there is no contact between syrup and metal. Besides, the syrups are exposed to view and are constantly being agitated in use. Our bottles must be kept clean, for they are conspicuously in sight of the customers.

I believe that the head of the fountain should know how to make the syrups. It's only a matter of opinion, but I prefer making all syrups, plain or fancy. I make my own clam juice. And it's good, too. After thoroughly washing three dozen claims, I boil them with a quart of water till they open. Strain and there you are.

Just now, when "hot chocolate" is the rage, I should be compelled to work overtime if I hadn't hit on a good scheme. Every dispenser knows that hot chocolate, to be worthy of the name, must be strong with chocolate. Instead of using a heavy hot process chocolate syrup for this purpose, I am using a mixture of bitter chocolate and condensed milk: one pound of chocolate to five pounds of milk. This I thin out to the proper consistency with water and serve from a silver pitcher. The hot water brings out the fine chocolate flavor and it tastes like homemade. Trouble with chocolate, it's usually too sweet. This plan gives an article acceptable to most tastes. Cream, of course, is added and topped off with whipped cream, served in a cup, you have the best drink ever.

The practice of serving hot drinks in glasses I heartily condemn. Take it with myself; hot chocolate never tastes right to me unless I drink it from a cup. The same thing applies to most hot drinks. I am using a western product for beef tea. It's a rich, only I feature it under the name "beef tea" rather than its special name. The latter term sounds like a patent tonic. Tomato bouillon seems to be a back number.

"NO SODA" DRINKS POPULAR.

The number of drinks ordered nowadays into which little or no soda enters is surprising. I figure that 50 per cent. of our business is on "new fangled" drinks. Of course they pay. They ought to pay, for it takes time to serve them. Take malted

milk drinks. Every dispenser gets weary of trying to dissolve it properly, especially in a rush. No matter how you mix it, a cold malted milk, egg, chocolate and milk is a bad combination from the dispenser's view. Still people will have it, and as it pays well, it's not for me to "kick." Zoolak is another trouble maker. Take a call for Zoolak. If you get ten cents for it (and you can hardly get more) it's the least paying of the lot. You have to wait until the thick liquid runs into the glass after opening the bottle and the rising of the bottle with carbonic or vichy takes time. A final stir with a spoon is often necessary. I don't blame the boys for hating to clean glasses, spoons and even a counter that smells of sour buttermilk. Care is necessary to prevent the contamination of sink water. We, of course, have running hot water, so cleaning is comparatively easy.

First on the list of special drinks, of course, comes coca cola. There is coca

WILLIAM E. BEALL,
Manager Soda Department Alpers' Pharmacy, New York, Leading Soda Specialist.

cola and coca cola. That is, some serving of it is poor. We put it out in good shape. We have a patent draught arm for all still drinks. It's made by the Carbonating Apparatus Co., and is designed to give a heavily charged stream without gas bubbles. I use it for all phosphates, ginger and still drinks generally. There's a peculiar arrangement within the draught faucet that allows excess of gas to escape and the stream when drawn represents CO₂ and water perfectly mixed.

OLD STAND-BYS STILL SELL.

Of the regular drinks, same as father made, I sell the most of chocolate; next comes orange, then vanilla and strawberry. I am running about thirty to forty gallons of orange syrup a week. I don't claim any credit for my orange, although it's fine. I grate the peel, being careful to avoid the white skin, which is bitter, and I beat the orange peel gratings with sugar until the orange cells are broken up. You really can't triturate the sugar and peel enough. You get the color, the odor, and best of all, the taste of the fresh orange, by making it this way. I have converted a meat chopping machine into

a fruit mangle. And by running the oranges through it I get the juice without the white skin. This machine, which works on a cog handle, is fine for making crushed fruits and the like.

Chocolate is my special pride. I am using a fine product. I boil my chocolate for twenty minutes, and I have a fine article for cold drinks. That's where the Becker bottle system apparatus comes in handy. Chocolate should be well mixed whenever served. If it were tanked, agitation would be impossible. No soda man ever saw a chocolate syrup that wouldn't separate in a few days. Same with orange, because of the floating oils. Must be "shaken before being taken."

All my syrups run the same; ten pounds of sugar to a gallon of water, and I use the hot process to make my syrup. Percolation is all right, if you are demonstrating a crystal syrup, but we're not, so what's the use. The public wants syrup to show color. Vanilla and sarsaparilla, the only naturally nearly white syrups, are colored with caramel. It's boss, of course, but we have to suit the public, not ourselves. I don't mean by that that I color fruit syrups, for I don't. I make my own fresh fruit preparations. I see that the fruit is ripe and right. I make them at the proper time and in the proper quantities and they keep. No preservatives are necessary. Fruit juices that you buy are all right, but I like to know just what I'm using and I like to make my own preparations. You must use judgment in making syrups. For the store with a limited business and no regular soda men the home product is impossible. Then concentrated juices are a godsend. But where a syrup man is in charge, he should be able to be independent and if he knows his business, he will turn out the better goods.

FANCY DRINKS.

Coffee syrup is a good seller. I make mine after the hot percolation process. I use a half pound of coffee to a quart of boiling water and percolate three times. Mocha, $\frac{3}{4}$, and Java, $\frac{1}{4}$, makes the best flavored syrup.

Cream, that is plain cream, I make one in five, using the Orange County condensed cream and water. We are using Horton's ice cream just now, but later, when the season opens, we will make our own.

The soda business is looked upon by many druggists as a minor thing, a side line. That's why it doesn't pay them. A good soda man takes an interest in his work. If he has the materials and utensils at hand, he can make lots of fancy syrups and specialties that will sell and pay well. Take chop suey, for instance, or nut sundae syrup. By chopping up figs, pineapples, strawberries, cherries, English walnuts and adding a little chert syrup you have an elegant syrup for sundae. There is no limit to the tickling of the public's palate, if the soda man is ingenious.

One lot of drinks I hate to sell, yet we have to. The public wants them and orders them frequently. They are, for instance, coca wine, calisaya, coca wine and calisaya, Vin Mariana and a host of others, including some internal proprietary catarrh remedies. One woman gets a beautiful mixture of coca wine, calisaya and Jamaica ginger. Worse than whiskey!

Soda fountain of Alpers' Pharmacy, Thirty-first street and Broadway, in the Imperial Hotel, New York. A Becker Twentieth Century. Length, 26 feet; height of base, 38 inches; extreme height, 13 feet; depth, 26 inches; onyx columns and mahogany finish. One of the best known fountains in New York, doing an enormous business all the year 'round.

There can be no "hit or miss policy" in running a soda fountain. From my syrup room to my flooring under the fountain you will find things neat as can be. The fountain is largely responsible for the sanitary atmosphere, but it takes elbow grease to keep any fountain in shape. You will find nothing but porcelain ware in the manufacturing department. I have all sizes of kettles from one gallon to five. I have a "ringed" gas stove which can, by lifting out the rings, be made to accommodate the largest or smallest kettle. My syrups never come in contact with metal. Everything is bottled as soon as made. Syrups are not exposed to the air. There is no running behind the fountain with syrups. A dumb waiter carries my syrups to the fountain and brings empties to the cellar. Hot water is a necessity and is freely used in cleaning everything.

WHY SANITARY SODA SELLS.

We use an automatic electric self-carbonator. I do not have to watch it except to put on a cylinder of gas when it is out. So there is time which I can use to advantage in syrup making or thinking up schemes to make soda pay.

All these things are, of course, preliminary to soda selling. Once on the store floor, you will see why sanitary soda sells. The finest glassware is shown in profusion. I superimpose fruits, oranges, bananas, lemons, etc., on the glasses at the back of the fountain. The mirrors, the clusters of electric lights, all combine to give a pleasing effect. There are forty-eight incandescent lights about the fountain. Each drink has its special serving glass. There are phosphate glasses, twelve ounce glasses, two ounce medicine glasses, cocktail glasses (for creme de minte and frappes); sherbet cups, bouillon cups and saucers, etc. All are of the finest material and are thin and delicate. They please the most fastidious, and fastidious sums up our class of trade. On the standards which hold our glassware are decanters containing creme de rose, violette and mint, which we serve frapped at fifteen cents. We carry champagne clder and also serve champagne cocktails made after the approved style, a square of augustura flavored sugar and sparkling clder, q. s. Then again, there is a soda cocktail, etc.

THE "MEDICINE" DRINKS.

But it is not a bar. For bars do not stock in neat bottles such things as rochelle salts, epsom salts, rhubarb and soda, elixir pepsin and bismuth, aromatic ammonia, paregoric, sun cholera mixture, castor oil, elixir lactopeptin, headache cachets and like things. We do, and we use them. We give people what they ask. When they want Bromo-Seltzer, they get the real thing. We have open packages of most of the patent headache remedies, including powders, Stearns' wafers, etc.

Many people ask about our fruit displays. You will notice that the oranges which are shown are selected and are made to appear like freshly plucked fruit. I stick laurel leaves into the twig ends of the fruit. That's why. A little green, sets off orange and other fruit colors amazingly. I believe in counter decorations aside from glassware and electric lights. A pile of fruit is a good thing. I take a stick, say three feet high, and use it as a center. By stringing a base of oranges like you would pop corn, I have a stable

foundation upon which I can build. Pineapples, layers of bananas, apples, lemons, grape fruit, all can be utilized. The string doesn't show, and soda drinkers wonder how it is done.

How to make an egg stand on end, as shown by the gentlemanly discoverer, Christopher Columbus, I utilize, too. I have three or four dozen eggs placed about, contrary to all laws of gravity, some leaning like the tower of Pisa, others directly on end. It goes without saying that our supplies of eggs are strictly fresh. All of these little tricks of decoration attract attention and pay in the end. The public is observing.

I attracted considerable attention by sinking a glass aquarium into a hollowed out cake of ice. The swimming gold fish were apparently in a frozen pond. They lived for twenty-four hours. Around bananas and other fruits artificial ice can be frozen, and they will show up well.

SECRETS OF SUCCESS.

After all, the soda business is, as you will see, a separate business from that of dispensing drugs. Yet a soda man must know a little about drugs and proprieties, at least diabetes cures and the like. We carry open bottles of piperazine water, Buffalo lithia, Hunyadi, manaca, veronica, and many others. Apollinaris, celestine vichy, kumyss, matzoon, citrate of magnesia and just plain water are always in demand.

It is simply repeating old statements to say that polite, courteous, cleanly service will do much to help increase the soda receipts; nothing, however, is more certain. A cheap soda man is dear at any price. A five thousand dollar fountain with a five dollar dispenser is an expensive investment.

A LITTLE PERSONAL HISTORY.

Have I been in the business long? Oh, well, about eight years. Some occasions I shall never forget. One of these is my first attempt at drawing soda. I was a boy on a boy's small pay, at a fountain in Washington. Cleaning up was my work and dispensing was not in my province. Early that day, however, before the regular dispensers were on duty, a customer came in to ask for a lime-ade. It was up to me. No one else was around. Of course, I was nervous, but I tried it on a bluff. Lime-ade—I didn't know what it was. Instead of lemon syrup, I struck the peach. You see I had seen enough dispensing to have some idea where things were to be found. Well, that customer kicked all right, but I had drawn my first glass of soda, and I guess it was pretty poor "slops" at that.

The trouble with most soda men is that they have too narrow views. Take the case of work. If one of them is paid to do certain work he'll be hanged if he does a bit more. If his duty is to clean half the counter and the other man has failed to properly clean his share, the first will mulishly refuse to do it for the general good. If he wished to rise, a soda man should work hard, not only on his own special job, but for the general good when he sees a chance outside his own duties. The boss always notices good, painstaking work, no matter how hard and mean that boss may be. Do all that comes your way and you'll pass over the heads of those who won't.

NORTHERN ILL. COLLEGE OF O. & O.

Charles R. Parker, of Toledo, Ohio, who recently completed his course at the Northern Ill. College of Ophthalmology and Otology, has returned home to assume a position with an optical establishment. J. A. Kauffman, of Luray, Va., another recent graduate, will establish himself in Luray. C. W. Carruth, of Denver, an old time graduate, has accepted a position with the C. D. Peacock, as optician.

The Alumni Reunion held by the college February 20 to 24, inclusive, excelled all past gatherings in brilliancy. There were many interesting topics taken up for discourse, and select papers on different subjects were read.

J. J. Lewis, of Cedar Rapids, Iowa, optician for Ludy & Taylor Company, last week paid a flying visit to the college.

Dr. Chalmers Prentice, on January 9, delivered his initial lecture on the anatomy and physiology of the extrinsic and intrinsic muscles of the eye and the location of the eye centers in the brain. The lecture was illustrated by the college artist, S. S. Graves, who has prepared a number of large drawings of the eye and brain. He has also made a number of fine drawings to illustrate the lectures of Dr. J. B. McFatrach, who has spent considerable time in aiming to make his course useful to the optometrist. He believes that the optometrist should not practice medicine and surgery, but he would so familiarize himself with the structure of the eye that he will be able to know what cases belong to him and what cases belong to the oculist.

WATCHING SULPHUR SITUATION.

As a side light on the sulphur situation and the impression produced abroad by the exportation of Louisiana sulphur, which was fully described in The Era of January 19, it is interesting to notice the following item from the British and Colonial Druggist:

"On January 2, at Rome, Baron del Balzo, Italian Under-Secretary of Agriculture, replying in the Chamber to questions on the subject of the production of Louisiana sulphur and on the measures that the government intended to adopt for the protection of the Italian sulphur industry, declared that up to the present, Italian sulphur could profitably be sold in Marseilles, Rotterdam and Stockholm, where the American Sulphur Company had made its first shipments. For the present, Baron del Bazo remarked, the danger was not very imminent, and did not appear to him to be very serious."

MANSUR DRUG CO.'S NEW STORE.

About April 1st the Mansur Drug Co. will open a new store in St. Paul, Minn., at the southwest corner of Seventh and Robert streets. The store room will have a steel ceiling and a tiled floor. There will be an open prescription case with plate glass partition. A large soda fountain will occupy the center of the store.

"Have you any Arcopaglitca Tetrolo-dide?" asked a customer. "No," said the druggist, "but maybe the Farbenfabriken Company has."

A GOOD ADVERTISING PAMPHLET.

This booklet is the latest advertising announcement of Knapp's Drug Store to increase prescription trade. The dimensions of the pages are 4 3/4 x 3 1/2 inches. The quality of the paper is good, it being a medium weight cream. A feature of much utility is the street map on the fifteenth page. If it is desired to draw new customers they must be informed plainly where the store is, and in this instance the plan of the streets in the neighborhood is particularly confusing to strangers.

Knapp's Drug Store

Founded by Peter W. Knapp in 1839

Five Members in 1905

Estate of Peter W. Knapp and Gilbert W. Knapp (Managing Partner)

It was the fruit of an experience that had not shirked full and careful consideration of the responsibilities involved. It told something.

The little Leaflets that have gone out, since then, have told something,—in each instance—of actual methods adopted to insure a uniform standard of good work.

We had tried these methods in the handling of a large prescription

business and were in a position in which we had nothing to lose and everything to gain by frankness.

It was the opening of a new field in retail drug-store advertising.

It is not difficult to realize how, even with only a slight knowledge of the subject, and naturally barred from a full comprehension of it, the public should feel deeply interested.

A prescription, in itself, is merely an order. Although it represents more than most orders—the physician's skill and the patient's hope of

depends upon these matters: and, therefore, drug stores differ in point of efficacy, as men differ; and the public is hardly ever able to judge of these variations in the merit of drug store service.

It is not strange, in view of the lack of information that has prevailed, that people should have been content to have their prescriptions compounded at the "nearest" drug store, while articles of mere household utility are purchased at distant shopping centers with great care. The day of shopping intel-

the code is silent, the lack of System means chaos, and, at times, a difference in results.

Some people are, by nature, unsystematic, and pharmacists are no exemption from the rule. The Pharmacopoeia does not teach System, as applied to the general management of drug stores; the law does not even require the "checking" of prescriptions; and yet, as we have seen, the efficacy of prescription work

ing of prescriptions, leads us to hope for some of your patronage in these cases.

The booklets describe our service. Write for them.

Prescriptions received by mail will have faithful and prompt attention. We cannot, however, undertake the immediate, special delivery of each individual prescription, although this is done, when practicable; and a sufficient allowance of time should therefore be made to protect the needs of the patient.

Convenience and economy will be served,—in ordering medicine that is to be continued for some time,—by requesting *the quantity*, or *in naming the length of time for which medicine is required*, which will enable us to compute the required quantity.

It does not seem necessary to make more than a passing reference, here, to our scale of prices, in which a fair charge only is made for high class work.

Respectfully,
P. B. KNAPP & SONS,
302 & 304 HUDSON ST., Cor. King St., New York
Telephone 4954 Spring

More than half a million new prescriptions dispensed since 1919.

We took the public into our confidence a year ago and described, minutely, the inner workings of our Prescription Department.

It was the first time that a serious effort had been made in this direction, and, as a result of our bold step, we were rewarded by an immediate and continued increase in prescription patronage.

WILL THESE THINGS INTEREST THE PUBLIC? we were asked. The question has now been answered. We have increased our business by telling the people how we work.

re, very—its value may depend entirely upon the manner in which it is compounded.

DRUG stores are not all alike. It would be sufficient for our purpose to say that the matter of the control of help, alone, would make one drug-store differ from another. Without right methods, the working habit of a store becomes merely the working habits of the individual employees. But this is not all.

The public has heard of the Pharmacopoeia, which is the official authority and text-book, in Phar-

lignance as applied to the purchase of drugs has been slow to arrive; but the importance of the subject is now generally recognized and our booklets supply a new gauge of prescription values.

We are aiming at an "outside" prescription business; it is our ambition to extend the service which we have to offer beyond neighborhood lines; and the method by which we seek to accomplish this result is to enable the public to judge of the value of that service by telling the people how we work.

THE people were interested in these matters. Public curiosity had been piqued by the reticence surrounding drug-store work. It was but one step further to regard so much "mystery" with suspicion.

But a chief factor in the success of our Prescription Booklet was the fact that we had something of vital interest to tell.

OUR Booklet told of the dangers incident to work of this kind and of the plans we had made to avoid them.

may, on such matters as may properly be controlled by law. Assuming that all druggists are equally honest as to the matter of substituting or omitting in prescription work (and as a matter of fact, they are not), there are a hundred other considerations that vitally affect the question of "best value," which the Pharmacopoeia absolutely ignores—and must do so from the very nature of the case.

WHERE there is a code to follow, System is still necessary, to enforce it; but in matters on which

To those who live "too far away"

It is reasonable to assume, that in a large number of cases, the prescription wants of a family are not of an emergent nature and can easily be calculated in advance.

The increasing and more intelligent interest on the part of the public, in what constitutes "best value" in the dispens-

SHOW WINDOWS & FEATURES.

Miniature Scenes Prove Effective Trade Bringers.

A YACHT MID ICE CAKES IN A BROOKLYN WINDOW.—A RUSSIAN SKATING SCENE.—AN OLD BUT USEFUL LOTTERY SCHEME REVIVED.—USEFULNESS OF CLEARLY PRINTED SHOW CARDS.

E. J. Huels, Broadway and Gates avenue, Brooklyn, featured some tablets by a yachting scene window display. A photograph of this is herewith reproduced. Mr. Huels says that the display was eminently satisfactory. Sales amounted to four dozen boxes of the tablets in ten days. At a dollar a box the profit was worth while. The display consisted of a model yacht, rigged as the cup defender was rigged and displayed in a winter scene, having alum to represent the ice. An electric fan was attached in one corner of the window, causing a strong breeze to strike the sails, producing a very nice effect and attracting a great deal of attention.

A Russian Scene.

W. S. Rockey's Eighth avenue and Thirty-fourth street store is forcing the sale of chest protectors, etc., by showing a typical Russian winter scene. The miniature representation is modeled in cardboard, and is the work of a prominent art studio. It shows the city of Moscow, the Kremlin in the distance, and hundreds of skaters true to life. The coldest day in New York finds people viewing this reminder of winter. The chest protectors are placed in line with the vision, so that they who shiver can, by investing variously, 78c., 98c. or \$1.50, secure "shiver preventers." The only bad feature of the display is that the passersby look vainly for the "after taking" picture, evidently figuring that Mr. Rockey is showing Moscow before the Japanese war. Above this scene is one of similar dimensions, which shows an old fashioned log hut. The old fire place, the crude utensils are cleverly reproduced, but the only tenant of the cabin is a large dummy figure, upon which are placed chest protectors. Mr. Rockey believes in suggestion in window dressing, and he says that such scenes call attention to special goods that can be attracted in no other way. People, he says, get tired of looking at regular lines, no matter how well they are featured, and something foreign to the drug trade is a sort of "eye easer" to bargain hunters.

A Lottery?

J. N. Hegeman & Company's 21 Park Row store has resurrected an old scheme designed to help sell a throat lozenge, Throatlets. Each ten cent box of Throatlets contains a numbered slip which calls for some article. For example, you may win a fifteen cent bottle of Creme Simon, a fifty cent bottle of Williams' Shaving Lotion or Violet Water, or if you are very lucky, you may win a silk umbrella, worth, it is said, \$3. Of course, the Throatlets are worth the money, whether you get a prize or not. The American people are born gamblers, to judge by the rush for chances and whether the proposition is paying or not, there is plenty of excitement

YACHTING WINDOW OF HUELS' PHARMACY.

when the expectant umbrella winner departs with a bottle of complexion creme. The fishing scene, which was previously described in *The Era*, is still a feature that continues to draw crowds.

Signs That Can Be Read.

F. K. James, Eighth avenue and Forty-fourth street, features a variety of goods, sick room necessities and so on. Mr. James believes in making signs that can be read, and one is now in use calling attention to a special sale of rubber goods, hot water bottles and cotton. This sign, which is readable from across the street, is in black lettering, with red border. Within the window are shown all the special priced articles possible. Feeding cups and bath thermometers are quoted at thirty-five cents. Douche pans, the one dollar kind, are forty-nine cents, and hot water bottles, fifty cents. Another window is filled with Sheffield Dentifrice, priced at twelve cents a tube. The arrangement of sick room requisites is neatly done, and instead of showing a few of each kind of goods, a large variety is on exhibition, and prices are freely quoted. Within the store special boxes are placed upon the floor. These hold five and ten cent specials, such as pumice stone, laundry soap, sponges, etc. The silent salesman idea is cultivated in most Eighth avenue stores.

TENNESSEE.

Open all night for business is the new programme of the Fortune-Ward Drug Co., of Memphis. The policy was inaugurated by them on January 14. The notice of this fact sent to the public by the company was well devised. It was printed in blue type on white paper 11x8½

inches, a size convenient for folding to allow enclosure in an envelope. The heading and signature were in full faced block type, but the body of the notice was almost in Italics, Whitney type. The notice read: "A new feature. A modern drug store that is open all night. The attention of physicians and the public is invited to the fact that on Saturday, January 14, 1905, we inaugurated the policy of a drug store that will be open at all hours of the day and night, and every day in the year. Some one of our eight registered pharmacists will always be on duty. It is worthy of note that we are but a few yards from the A. D. T. and other messenger offices. Physicians' prescriptions can be taken over the telephone, filled at once and delivered to their destination in the shortest possible time. This store continues under the same management and its force was never more efficient than at present. Fortune-Ward Drug Co."

GLYCERIN PLANT SHUTS DOWN

The Indiana Glycerin Company, whose plant is just north of Hartford City, Ind., has been shut down for the past three weeks because of the poor demand for nitro-glycerin, field work being prevented by the severe weather, and heavy snow has stopped blasting operations. The plant will resume shortly.

HARTNAGEL-HARRISON BIRTH-DAY.

Recently the Hartnagel-Harrison Drug Company, of Belleville, Ill., celebrated its twenty-fifth anniversary of establishment in business.

APPRAISERS' DECISIONS.

Equinine a Medical Preparation.

Equinine was imported at New York by Merck & Co., and was assessed for duty at 25 per cent. ad valorem, under paragraph 67 of the tariff act of 1897. Merck & Co. claimed it was free of duty, under paragraph 647, or, if dutiable, it was dutiable at \$1 per pound as an ether not specially provided for under paragraph 21.

In taking testimony the Board of General Appraisers stated: "In the last-mentioned paragraph there is a proviso that no article in the paragraph shall pay a less rate of duty than 25 per cent. ad valorem. The article in question is patented in the United States by letters patent 585068, dated June 22, 1897. It is stated in the specifications:

"That it may be produced by dissolving 5 kilograms of quinine in 10 kilograms of strong alcohol, and to this solution .62 kilograms of pure caustic soda dissolved in their own weight of water are added. Then while the mixture is being energetically stirred and cooled 1.8 kilograms of the chloroformic ethyl ether are added. When the reaction is completed, the sodium chlorid which has separated is filtered off, and the alcoholic solution is either distilled off or mixed with water, whereby quinin-carbonic ether is precipitated and finally crystallized out of diluted alcohol. The ethyl ether of quinin-carbonic acid forms delicate white needles having their point of fusion at 95° C., and dissolving with difficulty in water, but being readily soluble in alcohol, ether and chloroform. Its reaction is not bitter to the taste, its substance upon litmus-paper being decidedly basic, while it has the property of forming salts by combining with acids.

"It is apparent that the article is not a salt of cinchona bark, but it is an ester and a medicinal preparation in the preparation of which alcohol is used; and it is a chemical compound.

"We hold that quinine is dutiable at 25 per cent. ad valorem as assessed."

The Board therefore overruled Merck & Co.'s protest and assessed duty under paragraph 67 as a medicinal preparation.

Cobalt Oxide Not Cobalt Ore.

Hanmill & Gillespie imported at New York merchandise which was assessed for duty under the provision in paragraph 16 as cobalt oxide. The importers protested, contending that it was free of duty under the provision in paragraph 525 for cobalt and cobalt ore. The Board overruled the protest.

Failure to Comply With Regulations.

The protest of Wakem & McLaughlin against the assessment of duty on certain scientific apparatus imported by them at Chicago, was overruled by the Board of General Appraisers. It appearing that there had been no compliance with the regulations of the Treasury Department for the free entry of such merchandise.

Aldehyde Concentrated Ethylic.

Merck & Co. imported at New York aldehyde concentrated ethylic, which was classified as an alcoholic compound. The importers claimed it was a chemical compound. The Board found that it is produced either from original mash or from alcohol, but contains no free alcohol, and that it is not a medicinal preparation. The protest of the importers was overruled, the Board holding the merchandise was an alcoholic compound.

Quinine Salts Free.

Salts of cinchona bark, quinine salts, were imported by Merck & Co., at New York. The Board found that "the merchandise consists of quinine glycerino-phosphate, quinine borate, quinine carbamid-hydrochlorate, quinine dihydrochlorate, salicylate of quinine, quinine dihydrochlorate carbamid, quinine carbolate, quinine tannate, arsenate of quinine, and hydroferrocyanide of quinine. It was classified as medicinal preparations under paragraphs 67 and 68, tariff act of 1897, and was claimed to be free of duty under paragraph 647, as salts of cinchona bark. The various quinine salts above mentioned have been recognized and classified by the customs authorities for many years, under former tariffs as well as the present one, as salts of cinchona bark. They are chemical salts and medicinal preparations in which the dominating characteristic elements are derived from cinchona bark, and we are not inclined to disturb the contemporaneous and continuous classification of said articles as free under paragraph 647 of the tariff act of 1897. The protests are sustained."

Equinine and Aristochin Medicinal.

Certain equinine imported by Merck & Co. was held to have been properly classified as a medicinal preparation in the preparation of which alcohol was used, under paragraph 67, tariff act of 1897. The Board also reached the same conclusion as to certain aristochin, which was found to be a neutral carbonic ester of quinine, a medicinal preparation in the preparation of which alcohol is used.

Morphine Meconate A Salt of Opium.

Morphine meconate, imported by Merck & Co., at New York, was held by the Board to have been properly classified under paragraph 43, tariff act of 1897, as a salt of opium.

Cocconut Oil Free.

Cocconut oil, imported by the Oriental American Company, at Portland, Ore., was held by the Board to be free of duty as claimed by the importers.

RE-REGISTER TRADE MARKS.

All trade mark owners who use the trade marks in interstate commerce, will do well to re-register them under the new trade mark statute, the Boynege bill, which will take effect the first of April. At present the bill has passed both houses of Congress, but has not yet been signed by the President. It will probably be signed shortly; perhaps it has been already.

The Deputy Commissioner of Patents and the Chief of the Trade Mark Division of the Patent Office stated that re-registration would be advisable because the

statute of 1881, which the new Boynege trade mark measure will displace, provided only for trade marks used in transactions with other countries or Indian tribes. This was decided by the United States Supreme Court in a famous suit, Warner vs. The Searle & Hereth Co. The court showed that trade marks of interstate commerce were not entitled to registration in the Patent Office. Registering under the new law will do away with all this, for the Boynege bill reads "that the owner of a trade mark used in commerce with foreign nations, or among the several States, or with Indian tribes, provided such owner shall be domiciled within the territory of the United States or resides in or is located in any foreign country which, by treaty, convention, or law, affords similar privileges to the citizens of the United States may obtain registration for such trade mark."

Those who contemplate registration will do well to hurry preparations, as a great rush of business is expected by the Patent Office immediately that the new law takes effect. It is said that Washington lawyers already have several hundred of such cases on hand.

Anticipating such a situation, Commissioner of Patents Allen asked Congress for an additional appropriation of \$20,000 for the use of the Trade Mark Division of the Patent Office, as was stated in The Era for February 9. This will enable the Office to employ eighteen additional clerks and nine additional assistant examiners of various grades.

MEDICINES AND CASES.

Burrongs, Wellcome & Co. have issued an attractive little book setting forth the character of their exhibit at the St. Louis Exposition. As noted in last week's Era, the firm took three grand prizes and three gold medals. The frontispiece of the booklet is a picture of the exhibit booth, which occupied a floor space of 163 square feet. A feature is an illustrated description of historical medical equipments. Here is a specimen medicine case supplied to the troops from the various British Colonies for use in the South African campaign, a medicine chest carried by Sir H. M. Stanley through "Darkest Africa," another used by the ill-starred Emin Pasha in the Sudan, and other outfits belonging to Thomas Stevens, Nansen, Commander R. E. Peary, Walter Wellman, the Duke of the Abruzzi, Julius Price and others. An interesting illustration depicts the medicine chest of Queen Mentu-hotep, who lived B. C., 2200, in Egypt. This also vividly shows the contrast of the cumbersome medicine outfits of the ancients with modern condensed equipment such as is made by Burrongs, Wellcome & Co., for their Tabloid brand of supplies. Conveying the same lesson is a representation of a military medicine chest of 1588, designed according to the recommendations of Fabricus, a noted Swiss physician. The other extreme is shown by a photograph of the smallest medicine chest in the world, made of gold, fitted with twelve square medicine chest bottles containing 300 doses of Tabloid brand medicaments, equivalent to fifteen pints of fluid medicine. The case is shown balanced on the end of a man's finger. The volume also carries a catalogue of the lines carried by Burrongs, Wellcome & Co.

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions. Address The Pharmaceutical Era, 90 William street, New York.

ARIZONA.

Bisbee.—Lowell Drug Co., new firm.

ARKANSAS.

Forrest City.—J. H. Dunavant & Co., succeeds J. H. Dunavant.

Little Rock.—Orrin J. Zeisler, out of business.

Magazine.—Alfred M. Leftwich, succeeds R. P. Chitwood.

Huntington.—Roetting Drug Co., succeeds F. C. H. Roetting.

Wheeling.—The Elite Pharmacy, succeeds Chas. H. Geiger & Co.

OUR MINERAL RESOURCES.

The annual report of the United States Geological Survey for 1903 has recently appeared. As in previous issues, the value of the products is the only practical way of comparison for the outputs of minerals, because of the varied character of the units of measurement employed by the several branches of the mineral industry.

The whole industry continues to expand. For the fourth time the total value of the mineral outputs of this country exceeded the enormous sum of \$1,000,000,000. To be exact, it amounted to \$1,419,721,569, as against \$1,269,599,738 in 1902. The gain was \$159,211,831, or 12.63 per cent.

In the recent past the largest actual gain in any one year was in 1899, of \$273,601,810 over 1898. In 1884 production decreased nearly 9 per cent, or \$40,451,968. It was a bad year.

Iron and coal continue our most important mineral products. In 1903, the value of iron produced was \$344,350,000, and of coal, \$503,724,381. The value of all fuels climbed in every way during 1903. The average price of anthracite coal per long ton at the mine was \$2.50, as against \$2.35 in 1902. Bituminous coal cost \$1.24 at the mine on the average, as against \$1.12 in the previous year.

A new feature first developed in 1901, is the manufacture of arsenious oxide. Production of this has decreased, however.

In South Carolina, tin is being mined, for it has been found in commercial quantities there.

The report continues: "The gain of \$159,211,831 in the total value of our mineral production is due to the large increase in nonmetallic products, the metallic products showing a decrease from \$642,258,584 in 1902, to \$624,318,008 in 1903, a loss of \$17,940,576, and the non-metallic products showing an increase from \$617,251,154 in 1902, to \$794,403,561 in 1903, a gain of \$177,152,407. To these products should be added estimated unspecified products, including building, molding and other sands reported to this office, the rare mineral molybdenum, and other mineral products, valued at \$1,000,000, making the total mineral production for 1903, \$1,419,721,569."

The usual wide range of information contained in the report is shown by the number of pages, 1,178.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued February 21, 1905.

- 782,815—Charles H. Bangs, Everett, Mass. Soda fountain.
- 782,821—Jacob E. Bloom, New York. N. Y. Process of preparing oils for edible or other purposes.
- 782,989—Hugh Rodman, Philadelphia, Pa. assignor to The Electric Storage Battery Company, Philadelphia, a corporation of New Jersey. Electrolytic production of superoxide in alkaline solutions.
- 783,038—James M. Hicks, Summit, N. J., assignor, by direct and mesne assignments, to The Auto Stopper Company, New York, N. Y. Means for securing sealing-caps on vessels.
- 783,045—Joseph E. Johnson, Jr., Longdale, Va. Oxygen-separating process.
- 783,120 Alexander G. Lederer and Harry B. DeFord, Louisville, Ky. Non-refillable bottle.
- 783,128 Romuald A. Oleshak, Philadelphia, Pa. Powder-atomizer.
- 783,173 Berry A. Brown, Franklin, Ohio. Combined chest and throat protector.
- 783,191—Charles F. Goddard, Wataga, Ill., assignor of two-thirds to George D. Adamson, Merriam Park, Minn., and Frank D. Curtis, San Francisco, Cal. Bottle.
- 783,211 Joshua O. Maddux, Bakersfield, Cal., assignor of forty-nine one-hundredths to Francis G. Munzer and Franklin T. Whorff, Kern county, Cal. Fly-paper holder.
- 783,265—George A. Hargreaves, Evanston, Ill. Non-refillable bottle.
- 783,271—Henry W. Herbst, London, England, assignor to Betts &

- Company, Limited, London, England. Machine for closing the bottoms of collapsible tubes.
- 783,272 Don J. Higginbotham, Rialto, Fla. Bottle.
- 783,367—George F. Craighill, Lynchburg, Va., assignor of two-thirds to Chas. E. Heald and Ernest Williams, Lynchburg, Va. Producing rosin.
- 783,380—William K. Rice, Chicago, Ill. Apparatus for charging liquids with gases.
- 783,405—Alexander Darvas, Budapest, Austria-Hungary. Dividing apparatus for powders or the like.

TRADE MARKS.

Registered February 14, 1905.

PEROXIDE & CHEMICAL CO.

We wish to call the attention of our readers to the very liberal proposition of the American Peroxide & Chemical Co., on page 9, this issue. The profits accruing from this gratis proposition on products of marked superiority should be of great interest to progressive pharmacists.

MARKET REPORT

COMMONPLACE MARKET.

Few New Features. Advances and Declines Balance.

BROMINE WAR STILL ON BUT JOBBING PRICES UNAFFECTED.—GENERAL TONE STEADY AND DEMAND FAIR.—OPIMUM FIRM, SPIRITS OF TURPENTINE, COTTONSEED OIL AND GOLDEN SEAL ADVANCE; COLLIVER OIL AND SOME ESSENTIAL OILS DECLINE.

New York, Feb. 27.—No new developments of great interest have occurred during the week. The bromine war is still on, and on now to the finish, according to the statement, published in another column, of Mr. H. Jacobson, the head of the German bromine syndicate. It appears from this that all attempts at a conference to arrange the differences between the American and German interests have failed. Supplies of bromine preparations are exceedingly difficult to obtain at the new prices from both German and American sources, although leading domestic interests have officially met the cut, as reported in last week's Era. Everyone appears to be waiting developments. If arrivals of the actual commodities materialize soon from Germany in sufficiently large quantities, the situation will be simplified and jobbing prices may be expected to decline. But at present, since no one can obtain goods, jobbers naturally refuse to drop their quotations. In this connection it is of interest to note that the Roessler & Hasslacher Chemical Co. expects to make deliveries by the first of March.

The general jobbing market is steady, with a fairly good consumptive demand, but with little feature. The movement of supplies to consumers keeps up with regularity and price show few marked fluctuations. Advances and declines are about evenly balanced.

OPICUM.—The market continues firm, but some competition has developed among wholesalers. It is of no great importance, however. Reports from Smyrna confirm previous statements concerning the damage worked to Turkish opium by frost. They agree that severe frost has destroyed all unprotected plants and further field work is prevented, resulting certainly in a very small crop. There is a somewhat better demand on jobbers, but quotations remain unchanged at \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered, \$4.00@4.25 for thirteen per cent. and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—Strength predominates, but no change in prices has developed. The demand is fair and prices firm. Jobbers still quote \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quantity.

QUININE SULPHATE.—The upward tendency imparted by light Java bark shipments, has been increased by the results

of the Amsterdam bark auction on February 23, when the average price realized was 6.55 Dutch cents against 6.15 at the January sale. About 93 per cent. of the offerings were sold. The demand, however has not been very good, so the tone of the market is no more than steady. Jobbing prices remain unaltered as 23½¢ 23½¢ for bulk in 100-oz. tins, 23½¢@24¢ in 50-oz. tins, 24¢@24½¢ in 25-oz. tins, 25¢@25½¢ in 15 or 10-oz. tins and 30¢@31½¢ in ounce vials, according to brand and amount.

BROMINE PREPARATIONS.—As stated above, jobbers have not lowered their prices to the new basis indicated by the cut instituted by the German syndicate. A very few sales may have been made in sizable quantities to old and important customers at a decline, but this is not the case generally. The jobbing market is therefore still unchanged.

OIL CITRONELLA.—To move stocks and because of some competition, jobbers have lowered prices slightly to 50¢@55¢ per pound.

CANARY SEED.—Following the easiness developed in the primary market some weeks ago, jobbers have reduced quotations to the following basis: Canary, bag, 5½¢@6¢, less 7¢@8¢; Sicily, bag, 6¢@6½¢, less, 7¢@8¢, all per pound.

SPIRITS TURPENTINE.—The latest jobbing change is an advance due to the recent rise in the speculative wholesale market. Present prices are, barrels, 60¢@61¢, per gallon and 70¢@75¢ for less per gallon.

MERCURY.—A further reduction has occurred because of outside competition of producers, and jobbers quote 60¢@65¢ per pound.

COTTONSEED OIL.—Owing to the reaction in cotton and its recent advances, the value of cotton by-products has increased and cottonseed oil has risen. Jobbing prices have been raised to the following: White, in barrels, 38¢@40¢ per gallon, less, 45¢@60¢; yellow, barrels, 37¢@39¢ per gallon, and less, 45¢@60¢ per gallon.

COLLIVER OIL.—The Norwegian fishing industry is producing good results. Late cables from Lofoten report the yield to date there as 325 barrels, against seventy-five barrels for the same time last year. Consumptive demand has been of only moderate proportions and jobbers have lowered their figures for Norwegian to the following: Barrel, \$45.00@46.00; 5-gal. cans, \$1.90@1.95 per gallon, including 4¢; less, \$1.85@2.15 per gallon, exclusive of can.

BALSAM TOLU.—The market continues easy because of light demand and good-sized stocks. Latest jobbing prices are, 10-lb. cans, 29¢@30¢ per pound, and less, 25¢@41¢ per pound.

BAYBERRY WAX.—Scarcity of supplies. Higher jobbing quotations are 25¢@40¢ per pound.

GOLDEN SEAL ROOT.—The market is really bare of supplies and the general scarcity cannot be relieved for some time. Prices have again risen, jobbers quoting, whole, \$2.00@2.10; ground, \$2.05@2.15, and powdered, \$2.10@2.20, all per pound.

OIL CALAPUT.—Because of lack of demand, jobbing values for native have declined to 80¢@95¢ per pound.

OIL EUCALYPTUS.—The Australian has been reduced to 75¢@90¢, per pound by jobbers, as demand has not been good.

OIL LEMONGRASS.—Readjustments of values and conditions make jobbers quote \$4.00@4.25 per pound.

CANTHARIDES.—The Russian remain unchanged, but the Chinese have declined, owing to liberal arrivals, and jobbers now are asking 75¢@85¢ per pound for the whole, and 85¢@95¢ per pound for the powdered.

SENEGA ROOT.—The market is firmer because of an improved demand. Prices have been advanced by jobbers to the basis of 98¢@1.08 per pound, for the whole, and \$1.08@1.18 for the powdered, per pound.

OIL CASSIA.—Jobbers have revised quotations to 97¢@1.12 per pound, because of poor demand.

VANILLIN.—Increased supplies warrant a reduction to 75¢@80¢ per ounce by jobbers.

OIL CEDAR LEAF.—To move stock, holders have lowered prices somewhat and jobbers now quote 90¢@1.05 per pound.

OIL WORMWOOD.—The easiness developed last week has disappeared, and a better demand consequent on that reduction has influenced jobbers to restore values for pure to \$4.80@5.00 per pound.

SAFFRON.—Valencia is higher, as primary markets report an advance of \$1 per pound. Prices in this market have risen, but not so sharply. Jobbers are asking \$8.50@9.00 per pound. American continues scarce and closely controlled. Higher prices are predicted before the new crop is available, which will not happen before the last of July or the first of August. Jobbing prices are firmly unchanged at \$1.65@1.75 per pound.

PINK ROOT.—Supplies are scarce and jobbers have advanced terms to 40¢@45¢ per pound.

OIL NEROLI.—As a result of the severe damage by frost to the crop of orange flowers, the market is stronger. Jobbers now quote the higher values of \$2.65@2.90 per ounce for Bigarade and \$2.90@3.15 per ounce for Petale.

YERBA SANTA.—Supplies continue scarce, therefore jobbers have advanced quotations to 25¢@30¢ per pound.

GRINDELIA ROBUSTA.—Primary markets are stronger, causing a rise to 25¢@30¢ per pound in jobbing prices; powdered is also 25¢@30¢.

OIL OF CLOVES.—While there is no change this week in either the primary or jobbing market, it is thought that the oil may rise soon, for the spice is firming, according to cables from Zanzibar.

BEESWAX.—Producing markets are higher and the local primary wholesale market has advanced ½¢, but jobbing prices are unaltered, the advance being too small.

JAPAN WAX.—Stocks are liberal, demand is dull, and the wholesale market is down ½¢, but jobbers make no changes.

GLYCERIN.—It is reported that the agreement between English and Continental refiners has been broken. If the combination no longer exists, values may decline, but so far no change has occurred.

It is worthy of note that no king, czar or potentate has ever been assassinated by means of medicine obtained on prescription from the court, or official pharmacist. Either druggists are not anarchistic in tendencies or the medicine is tried on the dog first.

EDITORIAL — COMMENT

Publish the Formula.

An Associated Press dispatch announces that a well-known firm of proprietary medicine manufacturers of New England have decided to publish the formulas of their preparations upon the bottle. To the average proprietary man who clings to secrecy as a priceless possession, this innovation must seem revolutionary, but it is not difficult to find logical reasons for the change of tactics.

Although it has been the fashion in drug circles to pooch-pooch the idea that the attacks upon secret remedies which have grown ominously common in the pulpit and upon the platform, as well as in the columns of influential publications, can have any serious effect, yet there is no denying that proprietary remedies have been placed sharply on the defensive. The people have been told that the ready-filled bottles which they buy in the drug stores may contain poisons of all descriptions, and it is only reasonable to believe that some suspicions have been aroused.

If the belief that proprietary remedies contain all sorts of dangerous substances should become common, the manufacturers may be compelled in self-defence to give up secrecy. In the opinion of many, the mere publication of the formula would not seriously affect the sales of any meritorious preparation. Formulas mean very little to the layman, and the absence of the substances which the public has been taught to fear would restore confidence.

Publicity in the matter of composition would, however, bring up a number of other conditions which would have to be met. The manufacturer's formula would set a standard for the preparation, and eventually the law would compel strict compliance with its specifications. But this also would be no hardship to the reputable manufacturer.

The U. S. Pharmacopoeia.

A reader inquires anxiously, "When can I get a new edition of the U. S. P. or some dispensatory?"

We are all waiting for an answer to that question. We have several times

passed along a prediction that the pharmacopoeia would surely appear before a certain future date, but thus far all predictions have failed. Last Summer everybody expected the new volume in October, 1904, but the months went by and brought no pharmacopoeia. The latest guess—we can scarcely consider it more—about the appearance of the new edition names April, 1905, as the propitious month; but few will be surprised if the presses do not complete their task before June.

The revision of the pharmacopoeia, always a formidable task, has developed some extraordinary difficulties and delays. We may rest assured that the gentlemen responsible for the completion of the task are quite as anxious as any of us to see the volume in type and binding.

Mr. Bok's Latest.

In the March number of the journal of which he is pilot, Mr. Bok renews his attack upon "patent medicines." He has evidently learned several things since he began his "campaign of education," for his latest production gives evidence of considerable knowledge, and care, and is calculated to give several proprietary manufacturers a disagreeable quarter of an hour.

But he makes the fatal mistake of all wholesale reformers. He condemns all without the least discrimination. Now no one knows better than the druggist that there are patent medicines and patent medicines. Some are all that Mr. Bok makes them out to be, dangerous poisons, absolutely worthless as remedies for the diseases which they are supposed to cure. But there are others which are a positive blessing to humanity. An attack upon all without distinction injures the meritorious product and fails to have the desired effect upon the real object of disparoval.

One point in the diatribe in question is decidedly ridiculous. It is stated that the physician who discovers a valuable remedy and fails to make it public for the benefit of suffering humanity "violates the highest point of honor of the physician, and by his very act he declares himself outside the ranks of the honorable practitioner." Respect for so-called "medical ethics" seldom stands between a man and possible wealth and fortune. Even in Germany, many famous physicians are willing to

advertise their special achievements, and to reap a financial reward.

In the discussion of a second point, Mr. Bok is decidedly unfair. He insinuates that the secrecy of the formula is only a cloak under which all sorts of sneaking substitutions are carried on. He hints at the use of wood alcohol because it is cheaper, and the addition of inexpensive poisons for the same reasons. Certainly no reputable proprietary manufacturer would resort to a practice which he has condemned so vehemently, and it is the reputable proprietary men who will suffer from these attacks.

Between Two Fires.

Dr. Joel Barnett last week told the Pharmaceutical Journal Club of Baltimore why he could muster only a very poor opinion of current drug journals. He said in effect that the matter in the technical papers was pretty poor stuff for professional men, and that the few poor hints which appeared therein were useless, anyhow, because those for whom such advice was suitable could not be induced to read anything at all.

We do not know which journals the doctor means—he disqualifies himself as a critic by the sweeping assertion that they are not fit for a professional man, and since he doubtless considers himself a member of that class, it may reasonably be assumed that he does not read any. However, there is more than a grain of truth in his remarks. Platitudes about order and cleanliness and the ordinary business virtues are all too common, but what are the poor editors to do? The pharmacists of the country will not support a purely professional journal, and among the forty or fifty drug publications only The Era and one or two others have facilities for gathering the news of the trade.

If the doctor will, however, take another look at the best examples of the class, he will find that among the association news and trade discussion which he appears to consider of no interest, quite as much purely professional matter as is to be found in the exclusively scientific journals published abroad. If he is discouraged in his search for the matter which he appreciates by the items and articles which others enjoy, that is his misfortune.

Drug journals are prepared for druggists, and not for a class of men who devote their lives to scientific pursuits. The chase of ideals is an expensive luxury; besides, we are not ready to admit that the doctor's ideals are worth while. If he has in mind an American edition of the most highly scientific German publication, we beg to differ with him. Long discussions of the graphic formulas of the acids which occur in different varieties of colophonium may be interesting to a few experts, but the most elastic imagination

could not bring them into touch with matters pharmaceutical, to say nothing of the drug business. If he cannot find interest in matters which interest druggists, it would seem advisable for the doctor to look elsewhere.

Roosevelt on Success.

Our President, upon the eve of what most men would consider a personal triumph of the most definite kind, found time to make an admission for which all toiling, struggling mankind should arise and call him blessed. He said, in effect, that great success is not purely a matter of personal merit and effort. Moderate success is within the reach of all, but the great prizes come by accident. In an address during his recent visit to this city he said:

"It is a great mistake to measure success only by what glitters without. There must be for success a certain material basis. I can only think ill of anybody who would not wish to leave his children a little better off than he has been himself, and not a little worse. He would not be doing his duty if he did not have that wish. And if he does not do his duty by his children, he will certainly not do it by anybody else.

"But that much once gained, what counts for most is not the things of the body, but of the soul. I am sure that each of you, if he stops to think of what makes him happy, of what makes him respected by his neighbors, will agree with me. I am sure that if you look back upon your own lives, what make you feel proudest on almost every occasion are memories of pride associated not with days of ease, but with days of effort—of days when you were doing all that was in you for some worthy end. And the worthiest end of all is to care for those that are closest to us, for wife and children, and to live so that they are happy and not sorry that you are alive.

"After this has been done the best thing is to be able to so handle yourself that you can feel when the end comes that, on the whole, the community and all your fellow-men are a little better off for your having lived. This much is open to all. The great prizes come by accident. And no human being knows this better than one who has won one of them."

Had he been a less great man, he might have said without fear of contradiction: "There is no such thing as accident. I did it all."

A Title for Druggists.

We cannot quite make up our mind as to whether Prof. Hynson wishes us to take his proposal that all druggists assume the title of "doctor" seriously or not. He makes out a pretty fair argument in its favor, but he does not make the expediency of the step very plain.

No one will deny that pharmacists have as much right to the title as many of those who now wear it; but the effort to introduce the innovation would in our opinion scarcely pay. In the first place, many druggists already wear the title very gracefully, people naturally associating learning and a dignified bearing with the word. Honor must come spontaneously if it is to be worth having, and recognition of merit by the public in this way is equal to that conferred by any institution of learning or introduced by any set of resolutions.

In the second place, no title is better than that which it represents. "Doctor" as applied to medical men does not convey the sense of dignity or learning to any remarkable degree, because the title is exploited by a dozen or more classes of men who possess neither the one nor the other. In our opinion, the word "pharmacist" has a far more distinguished sound than "doctor," which may mean so many different things that it has almost lost its serious meaning.

It would not be more difficult to teach the public to say "pharmacist" than "doctor," it being doubtful whether people could be led in the matter at all. On the other hand, why not encourage them to continue to use the title "druggist"? Everybody knows precisely what it means, and it is quite as honorable and respectable as "doctor" or "professor." To find fault with our distinctive name is to find fault with our calling.

Caution in Handling Poison.

At the present writing the mystery surrounding the death of Mrs. Stanford is as impenetrable as ever. If it should be found that the bottle from which the supposed dose of sodium bicarbonate was taken turns out to have contained strychnine, the question whether the poison was placed therein purposely or by mistake will remain to be determined. In any case some druggist will be obliged to answer unpleasant questions.

The pharmacist who sold the original bottle of sodium bicarbonate has already taken precautions to protect himself, and presumably will, with some difficulty, escape all suspicion. But if the mystery remains a mystery, suspicion will find a resting place, and some member of the trade will have a share.

The case once more brings plainly to view the risk involved in handling the powerful poisons which the pharmacist is licensed to sell. And still many people, including not a few druggists, think that a profit which would be considered only fair for ordinary merchandise is sufficient recompense for handling these dangerous materials.

The Michigan Pharmacy Bill.

The bill to regulate the practice of pharmacy in Michigan, introduced by the pharmaceutical association of that State, is the most ambitious measure of its kind that has appeared for many a year. Its provisions will receive the endorsement of progressive pharmacists everywhere, but they are so radical that they are not unlikely seriously to affect the bill's chances of becoming a law.

Besides containing a prerequisite clause requiring candidates for examinations to possess high school diplomas or an equivalent, it provides funds for enforcing the law, and stipulates that no person can serve on the board of pharmacy unless he is a member of the State pharmaceutical association. To secure either one of these provisions would be worth a season's work, and if the Michigan brethren succeed in their efforts to secure the passage of the bill, they will establish a record never equaled by previous pharmaceutical reformers.

The bill excites admiration in every way. It contains the embodiment of all the most progressive ideas concerning pharmaceutical legislation, and we hope it will receive the attention which it deserves from the lawmakers. The measure has strong backing, and if it is possible to convince the cautious legislators that it is not an example of class legislation, it will no doubt be done.

If the powers that he should see fit to enact the measure into a law, the druggists of Michigan will have the envy of the pharmacists of every other State in the Union.

News and Honest News.

Our friend, Mr. McElhenie, in a letter which appears elsewhere in this issue, takes us to task for printing announcements of cut-prices in our trade feature columns. He says that such items will retard N. A. R. D. work in New York, and will merely harden the heart of the unbeliever.

Our friend makes the same plea that we have heard so often in this office, namely, that we print only such news as would seem to be favorable to the price control movement. To this we have invariably answered that it is our duty to print the news, and that half news is no news at all. If we were to publish only selected facts showing only one side of any question, we should not be doing our duty to the multitude of druggists who want to know the real facts, nor to our friends of the N. A. R. D.

The whole truth, although it may at times be unpleasant news, is as necessary to the success of the price control movement as to that of a publication. No public enterprise, however worthy it may be, can endure if its foundations are laid in darkness and mystification.

For a New Law in Texas.

The regulation of pharmacy in Texas is in a somewhat chaotic state at present, the existing law being very unsatisfactory, providing as it does for separate boards for numerous districts with no penalty and no means of enforcement. A reform bill is now before the State Legislature at Austin, and members of the pharmaceutical association are doing their best to secure its passage.

The bill is very liberal in its provisions, so liberal that pharmacists in some other States will consider them little better than none at all. It provides for the registration without examination of all persons now engaged in the drug business, and also for the sale, by anyone, of proprietary remedies and other preparations bearing sufficient evidence of having been compounded by a qualified druggist.

Mr. J. J. Thames, of Taylor, president of the Texas State Pharmaceutical Association, explains that: "The bill is intended to replace the present law regulating the practice of pharmacy which is void, as it carries no penalty, and has been declared unconstitutional and class legislation, inasmuch as it does not apply to all towns alike."

The Louisville Decision.

The case of the Louisville cutters against the price-control forces brought a decision almost identical with that of Judge Tuley, rendered in Chicago a few weeks ago. Judges Kirby and Miller, in a joint opinion, dismissed the petition for an injunction, and upheld the right of a dealer to refuse to sell to anyone for any reason, good or bad.

The legal status of the schedule, backed by the authority of the proprietary manufacturers, should be pretty definitely settled by this time. One decision has followed another, and a cutter who hereafter undertakes to contest the principle must be either ill-informed or unusually venturesome.

The only points which still remain undetermined are the question of liability for damages and that of conspiracy. But as these are both more or less dependent upon the principle of rights in withholding goods, they are not likely to be brought to a test very soon. The difficulty of establishing proof of either would be great in any case, and an attempt to do so could not be a very attractive undertaking under any circumstances.

Mr. Platt on the Pure Food Bill.

The Hepburn Pure Food and Drug Bill came up for a brief hearing in the Senate recently, and during the discussion Mr. Platt of Connecticut made a few remarks which many druggists will appreciate. He objected to the bill, and offered amendments inserting

the word "knowingly" in a number of places, so that no person who receives or sells adulterated or misbranded foods or drugs can be punished unless it can be proved that he does so knowingly.

Mr. Platt said that the bill would not amount to much if his amendments were inserted; but he argued that the theory of the thing was all wrong, anyhow. He asked why the committee after thirteen months' work had not succeeded in providing a penalty against the real culprit, the manufacturer or adulterator.

"The theory of this bill is to let the big fellow escape," he said, "and to catch the little fellows, the retail grocer and druggist."

It is well to bear in mind that Mr. Platt represents the State famous for nutmegs of great durability and doubtful strength.

Antitoxin in New Jersey.

A bill for the free distribution of antitoxin has passed the House in New Jersey and is now before the Senate. Last year a similar bill failed to pass, but the promoters have renewed the attack with unimpaired confidence. The measure is aimed at the "trusts," which, it is asserted, maintain the price of this indispensable remedy at an exorbitant figure.

It is needless to point out that the bill is contrary to the interests of druggists. If it should become a law, a slice of the pharmacist's trade would be removed. What right has the State to deprive any class of its citizens of legitimate trade? In St. Louis and Massachusetts we have had sufficient examples of municipal antitoxin plants. The danger of political favor and jobbery in a matter so delicate is apparent to all. The great private laboratories where our supply of serum is now produced are under government inspection, and the product is satisfactory in every way.

Two Methods.

There is in this city a movement on foot to secure a reduction in telephone rates. The companies, of course, assert that the present charges are not excessive, and to secure a working basis, the assembly at Albany has been asked to pass a bill authorizing an investigation. In all this the druggists, although deeply interested, have taken no considerable active part.

How differently the telephone question was handled in Chicago a few years ago! The druggists got together, made up their minds as to what they wanted, and presented their demands, and the thing was done. To be sure, the two cases are not even remotely parallel, but they are similar enough to show the relative efficiency of direct as compared with indirect methods.

Practical Chemistry.

Prof. Payne, secretary of the Georgia Board of Pharmacy, finds candidates who present themselves for registration deficient in pharmaceutical chemistry more than in any other branch of study. He states that the education of boys trained in the common schools is very satisfactory as far as it goes, with the single exception of chemistry. High school chemistry, in his opinion, is too much given to theory. For practice the boy must be sent to the college of pharmacy.

Perhaps the fault which Dr. Payne finds in common school chemistry is the same as that discovered in common school arithmetic by Mr. Bodemann. Both sciences are so broad that the common school pupil can grasp only a few basic principles. The application of these principles to concrete examples requires special training. Common schools cannot specialize; colleges of pharmacy can and do.

Drug Store Sanitation in Mexico.

In Mexico, punishment for disobedience of orders is apt to be summary and severe, for although that country has a republican form of government, affairs are not regulated entirely by popular favor. Thirty drug stores in the capital city were recently closed because the proprietors had failed to obey an order of the health board.

The pharmacy being the source of sanitary supplies, the drug stores themselves were quite logically required to observe strict sanitation. Accordingly, an order went forth directing that all drug stores be provided with cement or mosaic floors, that the walls and ceilings be covered with oil paint and that certain indispensable modern apparatus be provided. About thirty druggists waited too long before complying with the requirements, with the result that a visit of an inspector ended in closed doors.

There are a few difficulties which the druggists of this country have not as yet experienced.

Consolidation of Schools.

The proposal of the Chicago veterans to consolidate the two colleges of pharmacy in that city into one institution deserves careful consideration. Mr. Bodemann's remarks on the question are also likely to set people to thinking. He said "that one school instead of two would create a standard and live up to something that few schools do. They have announcements which read all right, but which are honored chiefly in the breach."

This charge against our colleges is a serious one. The rivalry between the different schools has usually been considered a healthy one. Can it be that the rivalry concerns only the number of students? Why does not competi-

tion create a rivalry of standard and efficiency as well?

Chance in Securing a Drug Store.

A highly original druggist in Ohio recently decided to quit the business and to get rid of his stock and fixtures hit upon a novel scheme. The contents of the store amounted in value to approximately \$3,500 or \$4,000. The plan involved the sale of a souvenir publication descriptive of the town, together with a chance to win the store for one dollar. According to last accounts, sales were brisk.

Let us hope for the sake of the general peace of mind that the lucky number may not be drawn by some Christian scientist.

The Simplon Tunnel.

The joining of the two ends of the Simplon tunnel, which pierces the Alps between Italy and Switzerland, last Friday morning, marked the completion of one of the greatest engineering feats of all time. The tunnel is twelve and one-quarter miles long; at one point the borings are one and one-half miles below the surface. When in a few months trains will be run through this immense gallery through the mountain, a most important link in the line of communication between Italy and Central Europe will have been completed.

The boring was carried on from both sides of Mont Leone, the working requiring only seven years. The wonderful accuracy of modern scientific measurements is exemplified in the fact that the two ends of the tunnel, begun miles apart, met exactly. When we consider that the only means of adjusting the two lines of work lay in measurements and observation over twelve miles of jagged and irregular mountain masses, the feat appears truly marvelous. Imagine the difficulty of driving a nail on the inside the rear wall of one of two adjoining buildings so as to exactly strike another nail in the other building, when the only way of finding the precise spot consists in carrying a line sights through several rooms, out of the front door, and over the roofs and chimneys of an intervening block of buildings and faint conception of the delicacy of the operation will become apparent.

The greatest difficulty encountered by the engineer was, curiously enough, due to the internal heat of the earth. Springs of hot water and the heat of the surrounding rock rendered work impossible without some artificial means of cooling. The temperature was reduced by streams of cold water carried through pipes, upon the same principle as an inventor now proposes to employ in the construction of an iccess soda fountain; only in the case of the tunnel, the cooling liquid had to be carried six or seven miles before it could accomplish its work.

Dr. Jacques Loeb, of the University of California, who some time ago startled Chicago and the rest of the world by declaring that it would soon be possible to create life by artificial means, announces that "We are now able to imitate the process of sexual fertilization in the egg of the sea urchin completely and in all essential features by purely artificial means." A sea urchin factory is, therefore, suggested. Unfortunately we do not need an unlimited supply of sea urchins half as much as a store of vitality which will enable men to do their work without wearing out before forty and being fit only for the chloroformatory at sixty.

PERSONAL MENTION.

"Dr. Alpers, may we take a photograph of the piles of fruit at your fountain?" "Certainly. Take anything you like, only don't interrupt my business," replied the busy doctor. "Don't interrupt my business," is a fair to good working motto for everybody. But, then, business opportunities such as those offered on Broadway and Thirty-first street are not plentiful; nor does every druggist pay a thousand dollars a month rent.

A personal encounter between the ever youthful Mr. Bodemann and Dr. Osler would be highly interesting. Says our friend in Chicago about the 60-year chloroform limit: "I move that we try it on him first; then he can find out how it feels." The suddenly famous doctor is now ashamed of that particular utterance, and has written to the papers requesting its denial. Still the impression conveyed by his incendiary speech was unmistakable. All of which goes to show that men of prominence must be extremely careful about what they say, and that some people's jokes ought to be carefully labeled with complete formula and directions for use on the bottle.

When Mr. Charles A. Jerman retired recently from the Jerman, Pfleger & Kuehnsted Company, the employees of the firm presented him with a loving cup bearing the following inscription: "From the employees of Jerman, Pfleger & Kuehnsted Company to Charles A. Jerman on his retirement as president and manager of the company. February 18, 1905." One wonders whether Mr. Jerman's contemplated trip to the Pacific Coast, and possibly Honolulu, can give him as much satisfaction as this tribute to his character as an employer.

"Why is it that almost everybody who holds any kind of position is busy blowing his own horn?" inquired Dr. Muir. Then he added, reflectively, "Well, we might as well get used to it. It seems to be a necessary part of the game."

☞ ☞ C. P. ☞ ☞
EMANATIONS

He Began Discouraged and Was Not Disappointed.

Although our old friend the C. P. has left the sixty year mark far behind, he is still pretty busy in his way. His natural sympathy for the under dog frequently leads him to champion the cause of the unfortunate. To his own serious inconvenience. Clerks out of a job and boys in trouble always find a willing ear into which to pour their tales of trial and woe. Many a discharge has been averted by his gentle pleading, and many a clerk owes present position and salary to the old gentleman's influence.

Some of the sage's proteges do not turn out well, which is a source of great personal grief to him. He carries with him a sense of responsibility for the acts of everyone whom he has befriended, and he feels it his duty to advise, lecture and cajole every ne'er-do-well into better ways.

The other morning he met one of his unlucky young friends on a crowded street and turned aside to inquire how he was getting along in the place he had recently secured.

"I like the place very well," said his young friend. "If it would only last!"

"If it would only last?" repeated the sage with rising infection. "What's the trouble now? You haven't got yourself into difficulties already, I hope. You have been there only three days."

"Four," corrected the new clerk at Smith's. "No, only I'm sure I shall be fired soon. I always am."

"Do you always begin a new job with that feeling?" inquired the sage.

"I don't know," replied the clerk, not having anything more definite to say.

"Look here!" said the C. P., sharply. "Drop it! If you begin discouraged, there is no hope for you. If you start out with the expectation of being fired, you certainly will be. Nothing can save you."

"But how can I help being discouraged when everything is against me?" protested the young fellow, feebly. "I never have any luck. Before I get a chance to show what I can do, it is all over."

"Why can't you show that you are the right stuff at once?" demanded the sage.

"Because I can't chuck a bluf like other fellows, and I can't slash into things before I know what I am up against. I tried to do more than I was told to do once, and I'll never do it again. The bosses are all like that. They won't give a chap credit for trying and meaning to do the right thing. So what's the use. Go slow and avoid kicks, is my motto."

The C. P. shook his head. "No, no; that won't do," he said. "Go ahead, anyway, kicks or no kicks. Why do you think you will not stay long at Smith's?"

"Because Mr. Smith seems to hate to see me around. He always looks as though he would like to wade into me about something. It makes me nervous. I am not so swift yet as the other fellows, because I don't know exactly how Mr. Smith wants things done. I wish I could get a show."

The sage was disgusted, and his face probably disclosed the state of his feelings, for the poor clerk's appearance took on several additional shades of gloom. But the old gentleman's pity overcame his impatience and he resolved to try once more.

"You remind me of a colt we had on the farm years ago," he said. "The poor brute was horn discouraged, lived discouraged, and finally died discouraged. When he was three days old it made you sorry for him just to look at him. His head wore a dismal droop and his ears sagged like those of an old mule. Instead of skipping about in the sun, as a colt should, he would lean up against the fence in the shade. I knew him, colt and horse, for fifteen years, and I never saw him when he didn't seem tired out. He was almost too discouraged to eat, and always was a ratty-looking runt."

"At least he couldn't get fired," said the clerk, enviously.

"No," replied the C. P., "but it never paid to keep him. The old man wanted to fire him out of this world with a club or an ax, but the girls felt sorry for him, and saved him. Women are always soft that way. A-out a miserable runt that hasn't got glower enough to look out for himself. Men or colts; it's all the same."

"What became of him?" asked the clerk, becoming half interested.

"When he got to be old enough to drive," continued the C. P., "he was so slow and ambitious that my father thought he would be a safe horse for the girls to drive." The sage smiled. "But it wouldn't work. Even girls want to get there some time. They wore out more whips on him than the brute was worth. It was impossible to get him out of the slowest kind of a trot. It was positively painful to see him go; every step seemed to hurt him, and he always seemed to be looking for a place in a fence corner to lie down."

"Did it kill him?"

"What, discouragement? No! That never kills anything but a weak ambition. He was knocked endwise by a freight train. Father tried him at the plough, but it was less trouble to push the thing by the handles than to make him pull. A tin-peddler finally bought him along with some junk hardware and he pulled the tin-wagon for several years, always discouraged. One day the cart got stuck on the railroad track. It wasn't heavy; a slight heave would have cleared it, but the old nag hadn't ambition enough to save his own skin. He watched the engine coming with a sorrowful air that was heartrending to see. But he failed to get out of the way and was knocked into kingdom come."

"Well?" said the clerk.

"Well," repeated the sage. "I hope you have more sense than a horse. Get out of the dumps; stir yourself, or—or go to the river and jump off a pier."

Ten Thousand Photographs a Second.

Photographs taken in one ten-thousandth part of a second are an achievement of the Institute for Technico-scientific Investigations in Neuhabesburg, near Berlin. The destruction of bone by a modern small-bore rifle bullet is shown by a series of photographs taken during the progress of the bullet.—*Journ. A. M. A.*

☞ ☞ OUR ☞ ☞
LETTER BOX

"DOCTOR SHOULD BE THE TITLE.

Baltimore, March 6, 1905.

Editor The Pharmaceutical Era:

I begin the new year owing the same peculiar devotion to pharmacy and its loyal votaries that has consistently possessed me during all the years that have passed since I first entered its "portals," and it is in this old-time, respectful, devoted and hopeful mood that I come with a plea to the pharmaceutical press, fully acknowledging its benign interest, splendid influence and unequalled power in all things pharmaceutical.

I come begging that this interest, this influence, this power, may be actively directed towards the correction of a mistake, the removal of a hindrance, and, thereby, the advancement of a cause—no less a cause than pharmacy itself. I come earnestly begging the concentrated direction of all these potencies because I am sadly convinced that all will be needed; needed in their breadth, their strength and their fullness. Modesty and timidity made the mistake; over-ambition and unsympathetic assertiveness will try to perpetuate it.

For years and years, even from the very beginning, pharmacy as a whole and pharmacists as individuals, have craved and sought recognition; not as scholars, from men of letters and their guides; not as scientists, from men of science and their societies; not as philosophers, from men of philosophy and their associations; but simply as *professional* pharmacists, first from the laity and then from those professions of medicine and dentistry with which they have most to do. Strange as it may seem, the single thing that would have done most to have won recognition for pharmacy as a profession—a professional *title*—"doctor"—has been withheld; not the title of "doctor of science," nor "doctor of philosophy," nor yet "doctor of medicine," nor "doctor of dental surgery," but simply "doctor of pharmacy," a science, profession, or what not, that has not risen and never can rise above the great mass of its votaries or beyond the demands made upon its practitioners, no matter how much *individuals* among these may have honored the calling by the unusual advancement they may have made. Such a title or degree—"doctor of pharmacy"—as heretofore given, however much it may have cost in time, study or practical experience, has never meant more and never will mean more to anyone, excepting those who conferred it, than that the bearer has been adjudged worthy, by some legally authorized school to practice pharmacy, plain, everyday pharmacy. If it means more than this, it will never get its true value from the overwhelming majority who are uninitiated; *to them*, "pharmaceutical chemist," "bachelor of pharmacy," "master of pharmacy" and, perhaps, even "graduate in pharmacy," have a higher sound, a more exalted meaning.

The *higher* title or degree should mean

more than does that which is so generally conferred upon us by the general public; conferred upon graduate and nongraduate, the ethical practitioner and the proprietor of nostrum alike. The public believes all should be qualified, believes all are qualified, and, thus believing, gives the title such qualification deserves, calling each—"doctor." When none really own the title, who should defend it? When but a few, a very few, may honestly claim it, how will it be protected? Give it to all honest young men and young women who seek fitness to practice pharmacy through accepted channels and who meet the standards of the times, and they will valiantly defend it against usurpers and against its misapplication by the more careless and less intelligent public.

It is absolute folly to contend that the higher degrees from different schools have been, or ever will be, of equal value; in some, it is dependent upon so variable a measure as drug store experience, the length of which is known, but the quality uncertain; in another, the study and practice of advanced botany, volumetric estimations and assay; in still another, upon preliminary university counts. And thus will it ever be; always will be asked, "Whose prescription does it bear?" It is the lower degree that will become uniform. It will be standardized by the requirements of safety, through the examining boards which, after all, offer the great stimulus and, as time goes on and they become more closely associated, the standards of both entrance and exit to colleges will be raised by them, while enthusiastic and erratic pioneers will continue to suffer.

If the ultra-scientific, ambitious scholar desires a higher degree, one beyond the regular requirements of his vocation, let him seek it as so many have done, with great credit to themselves, in the better established sciences and in philosophy. Let him secure something really distinctive, something that is standardized elsewhere, but let pharmacy's degree or title be a thing to itself, meaning no more nor less than it should and let it *gradually* grow in worthiness as the science of pharmacy has gradually grown, higher and higher, in spite of the hindrance; yet more slowly on account of it.

Gentlemen of the pharmaceutical press, lend all your influence and excite the influence of your readers that the noble army of coming pharmacists may be saved the embarrassment their elders have always suffered. Being properly addressed as "doctors," they will be stimulated to worthily wear the title and thereby honor the profession to which they belong.

In the interest of pharmacy and pharmacists of the future, I am, with great respect for all concerned,

HY. P. HYNSON.

MONTANA APPLICANTS QUALIFIED.

Butte, Mont., February 21, 1905.

Editor The Pharmaceutical Era:

The questions of the Montana Board of Pharmacy do not, as a rule, include many in pharmaceutical arithmetic, but I usually include something of this kind in my paper on chemistry. I do not believe we have ever had an applicant who could not have answered the question of dividing 1 grain into twenty-four doses. For my part, I

should consider anyone unable to answer so simple a question entirely unfit to become a registered pharmacist, notwithstanding his ability in other directions. I think that all of our applicants have at least enjoyed a public school education, and as our schools in the West are very good as a rule, we have very little trouble in this respect. Yours respectfully,

HOWARD ROCKEFELLA.

READY TO SIGN.

Brooklyn, N. Y., March 4, 1905.

Editor The Pharmaceutical Era:

I beg leave to say in all good fellowship that the items you print as store features, similar to that about F. K. James, on Sheffield Dentifrice, will retard the N. A. R. D. work in New York. It will simply harden many whom it is sought to bring in line, and make them close their minds, hearts and pocketbooks.

Joel Blanc's essay is fine, and tastes for more. He ought to attend the New York mass meeting and have the right of way. I am ready to sign all contracts when I hear that my neighbor does. You know who that is? Very truly,

THOS. D. McLEHENE.

DR. A. B. PRESCOTT.

His Services to Pharmacy as Viewed by Leading Men.

A SCIENTIST AND EDUCATOR, HE NEVER SACRIFICED WHAT HE BELIEVED TO BE RIGHT FOR THE SAKE OF EXPEDIENCY.—HIS TEACHING ABILITY OF THE HIGHEST ORDER.—HIS CHARACTER AND WORK AS A CHEMIST.

HIS WORK IN THE A. P. A.

Professor J. H. Beal, Secy. O. president of the American Pharmaceutical Association:

The recent death of Dr. Albert B. Prescott comes as sad news to the host of friends who knew and appreciated his real worth as a man and his services to pharmacy, especially in scientific and educational lines.

The key-note to Dr. Prescott's character was his simplicity and transparent honesty, and these features were reflected in and formed a part of everything he did. Dr. Prescott apparently did not know the meaning of flunse, but relied upon establishing his beliefs by going straight forward to the point which he sought to attain. This was the nature of all his work in the American Pharmaceutical Association, as chairman of the council, as its president, and in other capacities. He saw his points clearly, stated his position plainly and then sought to accomplish his purpose by the most direct methods, never sacrificing what he believed to be right for the sake of expediency, and preferring to wait for the natural and correct growth of sentiment rather than to win victory by circuitous methods.

In one important particular, however, Dr. Prescott differed from most men who are noted for direct methods, in that he seemed to totally lack anything in the nature of abruptness and the disposition to force his views upon others. In fact, he was one of the most considerate of men,

and always anxious to give full weight and credit to the arguments of others, even to those with whom he differed most.

Dr. Prescott's life and character afford a fresh illustration of the fact that the greatest of men and the greatest of characters are always the simplest in manner and the easiest to approach.

His was a kindly spirit as well as a great one. His approachableness and his disposition to help the beginner along the stony pathway of pharmaceutical knowledge are treasured in the hearts of hundreds of former students to whom, as to the writer, his life was an inspiration and his friendly counsel a benediction.

HIS WORK AS A TEACHER.

Prof. Julian W. Baird, dean of the Massachusetts College of Pharmacy, and a former pupil of Dr. Prescott:

The death of Professor Albert B. Prescott will be regretted by all who were acquainted with him, and especially by those who came under his care as pupils. By those who were intimately associated with him, he will be remembered as a dear friend.

From the very first, his modest manner created and held the profoundest respect of all his students, which later deepened into love for the man, as the breadth of his learning and his capacity for teaching became more and more realized by his classes. At the very first, perhaps, his ability as a teacher was not appreciated by the average student, but as he led the classes in his painstaking way through the subjects, arranged in logical sequence, the fact soon dawned, and became more and more a fixed idea, that his teaching ability was of the highest.

He impressed his students as extremely conscientious in his work. In the class room he was accurate in description, comprehensive as to the subjects presented, minute in details, sincere and earnest. He searched current literature, and gave to his classes the freshest results of reported work. His broad view of the profession enabled him to select the material that would be of the most advantage to the needs of the student and the profession.

He did much original work, and contributed by his personal efforts many valuable facts. He contributed to literature and gave to his classes many ideas for the advancement of the profession. He himself placed a high estimate upon research, and was ever ready in his lectures and writings to give proper credit to those who did such work.

He was always willing to counsel and advise, and very many of the students, and later as graduates, have profited thereby. His interest in his pupils did not cease with their graduation, and he had a father's pride in those of his graduates who made a marked success in business and a good name in the profession.

His estimate of the personality and ability of students was remarkably correct and his judgment was sought by many schools, laboratories and business houses, in the selection of competent men. When his advice was asked, he gave the matter conscientious consideration, and his recommendations were regarded as final. He was loyal to his school, always advancing the men who were trained therein.

Up to the very last his thought was to

Increase his usefulness to the profession of the teacher, and only three years ago, he discussed with the writer the advisability of issuing another book on organic chemistry, covering some new ideas he had introduced in the teaching of that subject.

In the death of Professor Prescott, the School of Pharmacy of the University of Michigan has lost its most noted and beloved teacher, the graduates a sincere friend and the profession of pharmacy a valued contributor.

INSPIRED NOBLER IDEALS.

Dr. A. B. Lyons, Detroit, Mich.:

"In the death of Dr. A. B. Prescott, American pharmacy has sustained an irreparable loss. It is not that there are not others who will prosecute research work in the field which he cultivated so industriously and with such distinguished success. Active minds and willing hands the world has in abundance, when there is work to do that promises to the worker pecuniary reward. It is the exceptional man who chooses for himself the privilege of toiling, that others may reap by and by rich harvests. Such a one was Dr. Prescott. His was a life of noble self-effacement such as the world seldom sees. For him the Kingdom of Heaven was a present reality. Life meant opportunity to lend a hand, whether as member of a scientific society, as university professor, or as simple fellowman, brought casually into relation with one to whom he could be of help. Early in life he accepted the limitations that came to his life, asking no special favor because of these limitations, and in spite of them left a record of achievement that the stroughest may well envy. His lasting reward is the affectionate regard in which his memory will always be held, and the contagion of his example which has inspired many another to a nobler ideal of living."

A TEACHER OF CHEMISTRY.

Prof. Arthur L. Green, dean of the School of Pharmacy, Purdue University, La Fayette, Ind.:

"In Dr. Prescott's death there has left us an eminent scholar, a good teacher, and an agreeable gentleman. His departure is especially sad to me, as I was his assistant in the chemical laboratory for four years (1882-1886), and was a student in the School of Pharmacy of the University of Michigan from 1880 to 1883.

"I was always delighted to attend Dr. Prescott's lectures. They were very practical; yet there was enough of the theoretical about his instructions to show that he had a broad view of the subject of chemistry. When he lectured, he went slow enough for us "to take it all in." This always pleased the class. He never lost patience with us for asking our numerous questions.

"After knowing Dr. Prescott for a quarter of a century, I would say that he was a man whose sayings will increase in value as the years go by. Thus, his life lives after he has passed away.

Arthur H. Webber, secretary of the Michigan Board of Pharmacy, has been elected to succeed himself as president of the Cadillac Board of Trade.

DRUG STANDARDS.

The Local Government Board of Ireland have issued a revised schedule of the standards for pharmaceutical preparations which drugs supplied to the Irish work houses are required to pass. A good many alterations have been made in the list printed in 1902, and we give the revised standards in full, as they embody alterations which extended experience has dictated as necessary. In the preliminary directions the analyst is now instructed to use only 10 cc. of the galenic when ganging the total solids; formerly 100 cc. was directed to be taken for this purpose. If the total solids usually exceed 10 grams in 100 cc., only 5 cc. of the preparation need be employed. The sp. gr. of drugs is to be taken by means of the sp. gr. bottle, which is also to be used in estimating alcohol-values. Many of the galenicals formerly included in the list are omitted. The solids are grams in 100 cc., the alcohol being per cent. by volume.

Ac. Sulph. Arom., sp. gr. 0.922—0.926; 81 per cent. Alcohol (vol.), H₂SO₄, 13.0 per cent. (wt.).

Dec. Aloes Co., sp. gr. 1.00—1.02; solids, 4.5; alcohol, 16.

LIQUID EXTRACTS:

Cascar. sag., sp. gr. 1.054—1.065; solids, 21; alcohol, 17.

Ergote, sp. gr. 1.014—1.123; solids, 12; alcohol, 50; total solids not to exceed 22 grams in 100 cc. cooled over sulphuric acid.

Glycyrrhizae, sp. gr. 1.114—1.128; solids, 38.5; alcohol, 17.

Opil, sp. gr. 0.985—0.995; alcohol, 17; alkaloid, 0.7—0.8 gram in 100 cc.

LINIMENTS:

Aconitl (meth.), sp. gr. 0.860—0.873; solids, 3.5; alcohol, 80; camphor, 3.2 grams in 100 cc.

Ammonia, sp. gr. 0.914—0.919; NH₃, 2.4 grams in 100 cc.

Bellad. (meth.), sp. gr. 0.880—0.890; solids, 3; alcohol, 74; total solids not to exceed 8 grams in 100 cc., camphor, 5 grams; alkaloids, 0.36 gram minimum.

Camphora, sp. gr. 0.925—0.927; camphor, 20 per cent. by wt. minimum.

Camp. Ammon. (meth.), sp. gr. 0.866—0.873; alcohol, 60; camphor, 12 grams, NH₃, 5.5 grams in 100cc. minima.

Chlorof., sp. gr. 1.195—1.22; camphor, 10 grams in 100 cc.

Ssponil (meth.), sp. gr. 0.805—0.905; solids, 5; alcohol, 58; camphor, 4.2 grams in 100 cc., minimum.

Prepared as in B. P., using methylated alcohol, 90 per cent.

Terebinth, sp. gr. 0.915—0.920; camphor, 5 grams in 10 cc.

LIQUORS:

Calumb. Conc., sp. gr. 0.993—1.00; solids, 3.3; alcohol, 18.

Epispast., sp. gr. 0.905—0.914; solids, 4.5.

Hamamel. sp. gr. 0.983—0.986; solids, 0.03; alcohol, 16.

Iod. fort., sp. gr. 1.017—1.023; alcohol, 70; iodine, 11.5 grams in 100 cc. minimum.

Pic. Carb., sp. gr. 0.858—0.866; solids, 2.75; alcohol, 80.

Quass. Conc., sp. gr. 0.976—0.980; solids, 0.25; alcohol, 18.5.

Rhei Conc., sp. gr. 1.017—1.027; solids, 10; alcohol, 17.

Sarse Co. Conc. sp. gr. 1.02—1.04; solids, 9; alcohol, 19.

Senega Conc., sp. gr. 1.00—1.04; solids, 10; alcohol, 21.

Senna Conc., sp. gr. 1.01—1.07; solids, 11; alcohol, 18.

Mist. Senna Co., sp. gr. 1.11 1.12; solids, 22; alcohol, 9; MgSO₄·7H₂O, 25 per cent.; ash, 9.5 per cent.

Oxymel. Scill., sp. gr. 1.32.

POWDEES:

Catechu Co., ash, 3.3 per cent.

Cret. Arom., ash, 22 per cent.

Cret. Arom. c. Opio, ash, 22 per cent.; morph., 0.25 per cent.

Glycyrrh. Co., ash, 4.5 per cent.

Ipecac. Co., ash, 81.1 per cent.; morph., 1 per cent.

Jalap. Co., ash, 20 per cent.

Rhei Co., ash, 68 per cent.

Scammon Co., ash, 2 per cent.

SPIRITS:

Camphor., sp. gr. 0.843—0.847; alcohol, 86.

Chloroform., sp. gr. 0.864—0.870; alcohol, 86; chloroform, 8.25 per cent. by weight, minimum.

Juniper., sp. gr. 0.834—0.838; alcohol, 84.

Menth., Pip., sp. gr. 0.838—0.842; alcohol, 81.

SYRUPS:

Calc. Lactophosph., sp. gr. 1.320—1.330; H₂PO₄, 3.5 grams in 100 cc.

Chloral., sp. gr. 1.315—1.325; chloral hyd., 18.2 grams in 100 cc.

Ferri Iod., sp. gr. 1.380—1.385; Fe, 8.3 grams in 100 cc. Preservatives not permissible.

Ferri Phosph., sp. gr. 1.28—1.32; ferrous phosphate, 1.8 gram in 100 cc., free H₂PO₄, 4.5 to 6 grams (maximum) in 100 cc.

Ferri Phosph. c. Quin. et Strych., sp. gr. 1.28—1.32, ferrous phosphate, 1.8 gram in 100 cc.; quin. sulph., 1.41 gram in 100 cc. minimum; strychnine, 0.045 gram in 100 cc. minimum; free H₂PO₄, 4.5—6 grams (maximum) in 100 cc.

Fran. Virg., sp. gr. 1.28—1.32.

Rhel. sp. gr. 1.28—1.32.

Scill., sp. gr. 1.33—1.335.

Senna, sp. gr. 1.28—1.30.

Tolu, sp. gr. 1.30—1.35.

TINCTURES:

Aconitl, sp. gr. 0.890—0.895; solids, 1.2; alcohol, 65.

Asafoetid., sp. gr. 0.910—0.915; solids, 10; alcohol, 65.

Aurantil, sp. gr. 0.877—0.886; solids, 1.8; alcohol, 72.

Bellad., sp. gr. 0.910—0.916; solids, 0.5; alcohol, 57; alkaloids, 0.048—0.052 gram in 100 cc.

Benz. Co., sp. gr. 0.890—0.901; solids, 16.5; alcohol, 73.

Buchu, sp. gr. 0.930—0.935; solids, 3.5; alcohol, 55.

Calumb., 0.915—0.922; solids, 0.9; alcohol, 53.

Camph. Co., 0.915—0.920; solids, 0.33; alcohol, 157; morphine, 0.05 grams in 100 cc.

Cannabis Ind., sp. gr. 0.845—0.850; solids, 3.5; alcohol, 87.

Cantharidil, sp. gr. 0.835—0.840; solids, 0.15; alcohol, 85.5.

Capnel, sp. gr. 0.890—0.895; solids, 1.0; alcohol, 66.

Cardamom. Co., sp. gr. 0.945—0.950; solids, 6; alcohol, 54.

Catechu, sp. gr. 0.975—0.980; solids, 15; alcohol, 50.

Chlorof. et Morph. Co., sp. gr. 1.010—1.015; solids, 30.5; alcohol, 44; morph. hydrochlor., 1 gram in 100 cc.; chlorof., 7.5 per cent. by volume; extract cooled over sulphuric acid.

Cinchona, sp. gr. 0.915—0.922; alcohol, 63; total solids not to exceed 7.5 grams in 100 cc.; alkaloids, 0.95—1.05 grams in 100 cc.

Cinchona Co., sp. gr. 0.915—0.922; solids, 4.3; alcohol, 63; alkaloids, 0.45—0.55 gram in 100 cc.

Colch. em., sp. gr. 0.950—0.955; solids, 2.25; alcohol, 41.

Digitalis, sp. gr. 0.930—0.935; solids, 3; alcohol, 53.

Ergot, Ammon., sp. gr. 0.930—0.937; solids, 3.5; alcohol, 51; NH_3 , 0.9 gram in 100 cc., minimum.

Ferri Perchlor., sp. gr. 1.00—1.11; alcohol, 22; Fe, 5.625 grams in 100 cc.

Geisem., sp. gr. 0.920—0.925; solids, 2; alcohol, 53.

Gentian. Co., sp. gr. 0.965—0.970; solids, 4.7; alcohol, 41.

Guaiael Ammon., sp. gr. 0.895—0.902; solids, 13; alcohol, 70; NH_3 , 2.35 grams in 100 cc., minimum.

Hydrastis, sp. gr. 0.920—0.926; solids, 2; alcohol, 55.

Hyoscyami, sp. gr. 0.950—0.958; solids, 2.7; alcohol, 42.

Iodi, sp. gr. 0.875—0.880; alcohol, 85; iodine, 2.5 grams in 100 cc.

Jaborandi, sp. gr. 0.950—0.958; solids, 3; alcohol, 41.

Jalap., sp. gr. 0.905—0.910; solids, 3.5; alcohol, 66; resin, 1.45—1.55 gram in 100 cc.

Kino, sp. gr. 0.995—1.00; solids, 19; alcohol, 45; extract cooled over sulphuric acid.

Lavandul. Co., sp. gr. 0.835—0.840; solids, 0.4; alcohol, 87.

Lobel. Aether. (Spt. Aether.), sp. gr. 0.815—0.820; solids, 1.0; alcohol, 62.

Myrrh., sp. gr. 0.845—0.855; solids, 4.5; alcohol, 83.

Nucis Vom., sp. gr. 0.906—0.915; solids, 2; alcohol, 62; strychnine, 0.24—0.26 gram in 100 cc.

Opil, sp. gr. 0.950—0.960; solids, 3; alcohol, 42; morphine, 0.7—0.8 gram in 100 cc.

Podophylli, sp. gr. 0.845—0.850; solids, 3.9; alcohol, 86.

Quinin., sp. gr. 0.885—0.895; solids, 3.5; alcohol, 72; quin. hydrochlor., 2 grams in 100 cc.

Quin. Ammon., sp. gr. 0.925—0.930; alcohol, 52; NH_3 , 0.86 gram; quin. sulph., 2 grams in 100 cc., minimum.

Rhei Co., sp. gr. 0.967—0.975; solids, 14.8; alcohol, 48; extract cooled over sulphuric acid.

Scllæ, sp. gr. 0.960—0.975; solids, 10; alcohol, 51.

Senegæ, sp. gr. 0.935—0.940; solids, 6; alcohol, 54.

Senne Co., sp. gr. 0.995; solids, 9; alcohol, 38.

Stramonii, sp. gr. 0.955—0.965; solids, 3.8; alcohol, 41.

Strophanthi, sp. gr. 0.810—0.893; solids, 0.45; alcohol, 66; extractive yields green coloration with H_2SO_4 .

Valerian. Ammon., sp. gr. 0.935—0.942; solids, 3.5; alcohol, 52.

Zingib., sp. gr. 0.837—0.843; solids, 0.4; alcohol, 87.

WINES:

Antim., sp. gr. 0.995—1.00; solids, 2.5; alcohol, 16; tartarated antimony, 0.45 gram in 100 cc.

Ipecac., sp. gr. 0.990—1.00; solids, 3; alcohol, 16; alkaloids, 0.1—0.1125 gram in 100 cc.—Chemist & Druggist.

THEORY AND PRACTICE

Drug Addiction a Disease?

A discussion before the Section of Nervous and Mental Diseases at the last meeting of the American Medical Association, concerned the question whether or not drug addictions have a pathological basis. Dr. Albert E. Sterns dwelt at some length upon the predisposing causes and the probable effect of heredity upon the attitude of the individual towards narcotics. He divides the occasional causes for the acquirement of drug habits into two classes; first, the use of drugs purely as a stimulant; and, second, their use to efface some physical or mental distress, whether this be in the nature of pain, worry, grief or shock. Ultimately, the main factor in the causation of all drug habits, whether they be based on hereditary influence, on physical or mental pain, is always the same, namely, the weakness of the nerve cell and the lack of vital force, which make the individual powerless to combat the strenuousness of existence. In the one or the other direction, the victim seeks to fortify his failing mental or physical power through the aid of a stimulant." In conclusion, he said that the pathological basis may be expressed as follows: Hyperacidity of the system, and by minute structural changes within the cerebral cells in particular, and probably also alterations in the vascular tissue.

Dr. A. J. Pressy stated that what is probably really inherited from parents addicted to alcohol or morphine is a feeble constitution, a neurosthenic condition and a lowered vitality. But it is perhaps doubtful if such a person is much more likely to acquire a habit than a child born of parents who have given to their offspring the same conditions from some other cause. Persons only get alcoholism from alcoholics and morphinism from morphine.

Physical Properties of Adrenalin.

Pure adrenalin has, according to Van G. Bertrand (Bul. d. Sci. pharm.), the following physical properties. It forms a crystalline, white, extremely fine powder, which in moist air, especially in the presence of alkalis oxidises, very easily turning brown. Under the microscope it appears in the form of spherocrystals resembling in appearance and structure small rosettes. They appear to be composed of minute tabular crystals grouped about a common centre. Attempts to prepare larger crystals have hitherto failed. The author has never found adrenalin in the isolated prisms which other observers had reported. The prismatic crystals found in the commercial product were found to consist of ammonium magnesium phosphate.

Adrenalin is only slightly soluble in water; the author gives the solubility as .027 per cent. at 20 degrees C. In boiling water it is slightly more soluble, the excess separating out in fine needles upon cooling. The solubility in alcohol is still less than in water, and in carbon bisulphide, chloroform, petroleum ether, benzol and ether adrenalin is insoluble. Acids dissolve it readily as also potassium and sodium hydrate, and less readily ammonia solutions. Adrenalin is optically active, and seems to possess no distinct melting point.

Fibrolysin.

The usefulness of thiosinamin is somewhat impaired by its difficult solubility in water. To overcome this disadvantage E. Merck-Barmstadt has prepared a soluble combination composed of one molecule of thiosinamin combined with one-half molecule of sodium salicylate. The product called fibrolysin forms a white, crystalline powder easily soluble in cold and warm water. Solutions are, however, not permanent when exposed to the air and light, the compound being readily decomposed into a number of oxidation products. For this reason the preparation appears in the market in hermetically sealed vials containing 2.3 grams of a solution of 1.5 grams fibrolysin in 8.5 grams of water. The solutions are heated for one hour in a steam bath at 115 degrees. The contents of each vial represent 5 gram thiosinamin. Fibrolysin has the same pharmacodynamic properties as thiosinamin with the following advantages: it may be employed as either a subcutaneous, an intramuscular, or intravenous injection without discomfort or harm to the patient. It is by reason of its ready solubility absorbed more rapidly than thiosinamin and is, therefore, also more active.

Test for Saccharin.

Mahler (Chem. Zeit.) describes a test for saccharin which is superior to Schmidt's reaction in that it is simple to carry out and does not presuppose the absence of salicylic acid. It is based upon the fact that when metallic sodium is fused with organic bodies containing sulphur, sodium sulphide is produced. The substance to be analyzed is extracted with ether, and the ethereal solution evaporated to dryness. The residue is then placed in a tube with a small piece of metallic sodium and heated until it burns and is carbonized. The hot tube is then plunged into a freshly prepared solution of sodium nitro-prusside. A violet-red coloration may be considered certain evidence of the presence of saccharin in the original substance, since the ethereal solution can contain no other sulphur compound.

Essential Oil of Sandarach Wood.

Sandarach saw dust, from the wood of *Thuja articulata*, yields, according to E. Grimal (Comptes rend.) upon distillation with steam, 2 per cent. of a dark reddish-brown laboratory essential oil with an odor of phenol; specific gravity, .991; soluble in all proportions of 10 per cent. alcohol. It contains about 5 per cent. of phenols which may be removed with alkali consisting of carvacrol and thymohydroquinone. Thymohydroquinone is also present in the non-phenol portion which is not soluble in alkali.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each except a few issues which are out of print for which we charge 25 cents each.

Saponification Test.

(R. D. P.)—The method of determining the saponification number of fats and oils is given in many works on chemical technical analysis. The saponification test is based upon the fact that fats represent mixtures of many triglycerides and that the quantity of the same in every kind of fat is a fairly constant one. In consequence of those so called constants, slightly varying values can be determined for each fat. The saponification number indicates how many milligrams of potassium hydrate are necessary to saponify one gram of fat, and is, therefore, a representation of the capacity of saturation of the fatty acid contained in the fat.

For determining the saponification number (Kottstorfer's number) there are necessary (Ulzer and Frankel):

(a) An about $\frac{1}{2}$ normal hydrochloric acid, exactly standardized by titration with potassium hydrate.

(b) An alcoholic potash solution, prepared by dissolving in a little water 30 grams caustic potash, purified by alcohol, and then diluting to 1 liter with alcohol free from fusel oil. After standing one day it is filtered into a flask. A 25 cc. pipette, provided above with a piece of rubber tubing and a clip, is inserted into the single perforation of a tightly fitting rubber stopper. When pure alcohol is used the solution will never become brown, but can at the utmost assume a pale yellow tint on standing for months.

To conduct the operation 1-2 grams are placed in a wide-necked flask of 150-200 cc. capacity. For the purpose of weighing, a small bottle with a lip is preferable. Introduce 50-60 drops oil from the weighing-bottle into the flask and reweigh the bottle. 25 cc. alcoholic potash are now allowed to flow from the pipette into the flask. The drops which issue finally are counted, in order to observe equal conditions. A reflux condenser is then inserted through a suitable cork in the flask and the contents are heated to boiling in a water-bath and agitated from time to time. Saponification is complete in fifteen minutes as a rule, but with difficult saponifiable fats $\frac{1}{2}$ hour is required. A few drops of phenol phtalein are added, and the excess of alkali is titrated with $\frac{1}{2}$ normal hydrochloric acid.

Since the standard of the alcoholic potash alters somewhat, 25 cc. are titrated anew with hydrochloric acid prior to each experiment. The same conditions as heretofore are to be observed, namely, the

same period of heating on the water-bath, etc. The difference between the number of cc. hydrochloric acid used for this and the previous titration is expressed in milligrams KOH and calculated on 1 gram fat to obtain the saponification number.

In the examination of olive oil the "iodine number" (Hubl's test) is also taken. Should both iodine and saponification numbers correspond to the mean values for this oil (iodine number, 79 minimum, 88 maximum; saponification number, 185 minimum, 196 maximum), the oil may be considered pure. Should the saponification number correspond, but the iodine number lie above 85, adulteration with sesame oil, peanut oil, or cotton-seed oil has been attempted. Special methods may be used for detecting their presence. Should the saponification number be low and the iodine number high, the adulterant is presumably rapeseed oil. In this case a test for mineral oil must also be made. When used for machine oil the acid number should not exceed 16.

An Immiscible Liniment.

(A. A.) submits the following formula:
Spirits of turpentine 1 ounce
Spirit of ammonia 1 ounce
No. six 1 ounce
Laudanum 1 ounce
Camphor 1 ounce
Alcohol, enough to make ... 8 ounces
Make a liniment.

He writes: "The formula for the liniment calls for aqua ammonia, but the aqua ammonia not being miscible with the other substances, I substituted for it spirit of ammonia and made a nice 'pharmaceutical mixture.' Lately, however, I have tried the same formula and after the liniment has stood for a while it separates, the chloroform and turpentine settling to the bottom. Please give me the reason for this separation. I had such a nice mixture before."

The reason for the separation is that oil of turpentine (spirits) and chloroform are not miscible with laudanum (tincture of opium) and "No. six" (tincture of capsicum and myrrh). The menstruum of each of these tinctures is composed in part of water, and water will not mix with oil. The oil also is but slightly soluble in the alcohol and the chloroform does unite with the other liquids, hence, on standing, the mixture separates into two layers, the lower one being chloroform and oil. We do not understand how you secured a "pharmaceutical mixture" in your previous trials. As written, the formula will not produce a non-separable mixture.

Mixture of Aloes and Potassium Nitrate.

(N. Y. Z.)—"Would an aqueous solution of aloes, saltpeter and 2-100 of bicloride of mercury to the ounce be incompatible and cause a precipitate? Can you name a water soluble mineral salt that could be used as a laxative in a spring medicine?"

To the first question we answer, yes. The quantity of aloes which may be dissolved depends somewhat on the variety employed and the temperature of the solvent. As a matter of fact, the British Pharmacopoeia states that the official varieties of aloes (Barbadoes, Socotrine and Zanzibar) are almost entirely soluble in alcohol (90 per cent.) diluted with half

its volume of water. But of the first named variety "not more than 30 per cent. should be insoluble in cold water." Of the other varieties "about 50 per cent. should be soluble in water." The quantity of saltpeter employed is not named, but the presence of the salt does not materially increase the precipitation. The bicloride of mercury is decomposed by the aloes. The mixture, if put up, should be sent out bearing a "shake label."

Magnesium sulphate, sodium and potassium tartrate and sodium phosphate are salts which possess laxative properties; so does calomel.

Liquid Depilatory.

(W. G.)—The following formula for a "liquid depilatory" was communicated to us about a year and a half ago, by Dr. W. E. Dreyfus, then chemist to the Department of Public Charities, this city:

Sodium sulphide 25 to 35 parts
Glycerin 25 parts
Water, enough to make 100 parts
Oil of nutmeg, q. s. to perfume.

Dr. Dreyfus stated that aromatic vinegar is one of the best applications for the skin following the use of a depilatory. It neutralizes the caustic action of the base and possesses valuable antiseptic properties.

The following, from the Pharm. Post, and which we give for what it is worth, is also a formula for a liquid depilatory:

Tincture of iodine 6 parts
Oil of turpentine 8 parts
Castor oil 8 parts
Alcohol 48 parts
Collodion 100 parts

To be used once or twice daily for three or four days. The film formed is then pulled off rapidly, so as to take the hair with it.

Some general information on the use of liquid depilatories is given in The Era of December 10, 1903, page 604.

Wine of Cod Liver Oil.

(H. H.)—As we explained recently in these columns, the name "wine of cod liver oil" is applied to a preparation containing gadual, an alcoholic extract of cod liver oil, wine, etc. Some formulas were published in the August 25, 1904, Era, page 194. Here is another formula:

Fluid extract of wild cherry 2 fl. ounces
Fluid extract of leorice 3 fl. ounces
Glycerin 1 fl. ounce
Syrup 1 fl. ounce
Liquid extract of malt 6 fl. ounces
Syrup of hypophosphites 3 fl. ounces
Gadual 64 grams
Fuller's earth 4 drams
Caramel, as desired.

Mix the gadual with the glycerin, and triturate with the Fuller's earth; add the fluid extracts, syrup and malt, shake well and let stand one day, occasionally shaking, filter, and to the filtrate add the syrup hypophosphites, and mix well.

Spray Solution For Atomizer.

(H. W. V.)—Some formulas for spray solutions are given in the February 9, 1905, Era, page 164. Here are some others:

(1.)

Iodine 1 grain
Menthol 1 dram
Liquid petrolatum to 1 ounce

Dissolve the iodine in the oil by heat and add the menthol while warm.

(2.)

Gualacol	10 minims
Menthol	10 minims
Liquid albolene	1 ounce
Oil of eucalyptus	20 minims
Thymol	3 grains
Menthol	25 grains
Oil of wintergreen	7 minims
Boric acid	7 grains
Glycerite of tannic acid	3 drams
Alcohol, 90 per cent.	2 ounces

Ellixir of Lactated Pepsin.

(S. F. S.)—For an ellixir of lactated pepsin you can employ the formula in the National Formulary under the title "Compound digestive ellixir" (No. 59). An ellixir of lactated pepsin, iron, quinine and strychnine may be made by slightly modifying the N. F. formula for ellixir of iron, quinine and atrychnine, as follows:

Tincture of citro-chlor-

Quine of iron	2 fl. ounces
Quinine hydrochlorate. 64 grains	
Strychnine sulphate ..	1 1/4 grains
Alcohol	4 fl. drams
Compound digestive ellixir, enough to make 16 fl. ounces	

Dissolve the alkaloidal salts in 12 fl. ounces of ellixir, then add the tincture and the alcohol, and finally, enough ellixir to make 16 fl. ounces. Filter, if necessary. Each fl. dram represents about 1 grain of ferric chloride, 1/2 grain quinine hydrochlorate and 1-100 grain of strychnine sulphate.

Razor Paste.

(U. S. K.)—

(1.)

Finest levigated emery powder	2 ounces
Jeweler's rouge	3 ounces
Palm oil, sufficient to mass.	

(2.)

BLACK.

Black lead	2 ounces
Mutton-suet	3 ounces
Oil of bitter almonds	2 minims
Mix.	

May also be made with equal parts of levigated emery and black lead.

(3.)

RED.

Levigated rouge of ferric oxide	2 ounces
Putty-powder	1/2 ounce
Mutton-suet	3 ounces
Oil of peppermint	2 minims
Mix.	

Spirit of Nitrous Ether and Potassium Iodide.

(E. P. D.)—"What chemical compound is formed or what reaction takes place when iodide of potassium and spirit of nitrous ether are mixed, say in the proportion of 4 drams of the former to 4 ounces of the latter?"

Spirit of nitrous ether is generally acid in reaction, and when an acid solution of nitrous ether is brought in contact with potassium iodide, iodine is liberated and nitric oxide is formed and evolved as a gas. On this reaction (with sulphuric acid) is based the pharmacopoeial assay process for spirit of nitrous ether. Mixtures of the above character should not be dispensed on account of the free iodine formed.

Massage Cosmetic.

(H. K. & Co.)—Formulas for massage cream were recently published in this journal. See issues for November 17 and December 29, 1904, pages 500 and 662, respectively. In addition to the formulas referred to, Koller ("Cosmetics") says that a new specialty which is largely used in America "before, during and after massage," is made as follows: Alum, 4 parts; oak bark, 4 parts; noiseed, 8 parts; thyme, 8 parts; sage, 8 parts; rosemary, 8 parts; hyssop, 8 parts; lavender flowers, 8 parts; wormwood, 8 parts; camphor, 8 parts; peppermint, 8 parts; alcohol, 45 per cent., 1,000 parts. The ingredients are macerated for fifteen days and then filtered. It would be advisable perhaps to strain the mixture, then add the alum, and filter after settling. This cosmetic is claimed to be an excellent softener for the hands.

Soothing Ointment.

(F. D.)—"We cannot give the formula for the proprietary article. However, under the title of "soothing ointment," Prof. Wilbur L. Scoville, Chairman of the Subcommittee on Formulas of the National Formulary, submitted the following formula to the American Pharmaceutical Association in 1903:

Resorcin	60 grams
Zinc oxide	60 grams
Bismuth subnitrate	60 grams
Oil of cade	120 grams
Petrolatum	350 grams
Hydrous wool fat	350 grams

Powder the resorcin and mix with the other ingredients. This ointment will darken on exposure to air and light, and it should be kept in well closed containers. We do not answer queries by mail.

Color For Solution of Ammonia.

(Dr. A. H. S.)—It is not advisable to put up a mixture of ammonia water and a solution of hydrogen peroxide, for these substances are incompatible, ammonium nitrate being formed. For coloring aqueous ammoniacal solutions, as "toilet ammonia," there is nothing better than the green dyes sold for the purpose by various specialty houses. The Evergreen Chemical Co., whose advertisement appears elsewhere in *The Era*, makes such a color, only a small quantity of the dye being needed for the purpose, and the addition not increasing the bulk of the preparation to an appreciable extent. There is no odor that will completely disguise the smell of the ammonia, although it may be partially masked by ionone or some of the volatile oils, lavender, bergamot, cinnamon, clove, etc.

Coloring Colloidon.

(W. L.)—You can easily color colloidon a bright red or brown, but we know of no substance which may be used for the purpose that will permit of the addition of water to the mixture without decomposing the colloidon. Pyroxylin is insoluble in water and the addition of water to colloidon will cause immediate precipitation. Some of the anilin dyes used for coloring fats and oils are soluble in alcohol and ether, and we presume might be used to color colloidon. Sudan (brown) and Sudan III. (red) are dyes of this character. Alkanin from alkanet root is also soluble

in alcohol and ether. Why not do a little experimenting yourself?

Eucalyptus Tooth-Paste.

(H. K. & Co.)—A eucalyptus tooth paste suitable for filling collapsible tubes may be prepared from precipitated chalk, 160 grams; powdered soap, 45 grams; wheat starch, 45 grams; carmine 1 gram; oil of peppermint, 30 drops; oil of geranium, 30 drops; oil of eucalyptus, 60 drops; oil of clove, 12 drops; oil of nutmeg, 12 drops; mix together and make into a paste with equal parts of glycerin and alcohol.

Glyco-Heroin.

(S. F. S.)—"Glyco-heroin" is a proprietary specialty manufactured by the M. H. Smith Co., of this city, and claimed by them to be useful in the treatment of coughs, phthisis, bronchitis, etc. In their literature to physicians the manufacturers state that "each teaspoonful represents 1-16 grain heroin, with hyoscyamus (herb) 1 grain, ammonium hypophosphite, white pine bark, balsam tolu, glycerin and aromatics." We cannot give the formula.

Liquid Court Plaster.

(L. A. II.)—A formula in use in some of the hospitals in this city is—

Compound tincture of benzoin ..	60 cc.
Glycerin	5 cc.
Collodion	120 cc.

Tropical Fruit Flavoring Extract.

(C. W. S. Co.)—We cannot give the formula for the proprietary specialty. See this journal August 18, 1904, page 168.

Incompatibility in Theory and Practice.

At a recent meeting of the North British branch of the pharmaceutical society of that country, J. P. Gilmour stated that it is the duty of the dispenser to compound the prescription as written, unless the products of the interaction between incompatibles are dangerously toxic or contrary in action to what is apparently required by the prescriber. He further stated that "the insolubility of a substance does not necessarily contraindicate its exhibition as a remedial agent." Insolubility in itself is of no importance, since many valuable agents like camolom, bismuth salts, and some of the synthetic compounds are highly insoluble. Theoretical chemical incompatibility does not necessarily destroy the medicinal value of a mixture. Many of the so-called incompatible mixtures are therapeutically active. The resultant of a mixture of incompatibles may have therapeutic properties similar to those of the original interacting components. A prescription containing mercuric chloride and syrup of ferrous iodide should be dispensed, because the therapeutic action of mercuric biniodide is so nearly identical with that of mercuric chlorid that the effect is likely to be practically the same. Mixtures of incompatibles which may have medicinal properties dissimilar to those required by the prescriber are the real cases requiring skill and judgment on the part of the dispenser.

"Every owner of a Soda Fountain should subscribe for it."—National Druggist

The Soda Fountain..

a LIVE, MONTHLY JOURNAL devoted to the interests of Soda Fountain operators. The Latest and Most Popular Formulas are published in it exclusively. To

Make the Fountain Pay

is its purpose.

Reaches 10,000 Druggists, Confectioners, Etc., each month and is an unsurpassed medium for advertising anything and everything handled by these two classes of retailers.

We Do The Advertising

YOU can't wish customers into your store—they don't come that way. Somebody has got to do something to get them in; something must bring them there. We will do that by doing the advertising. They know what they want, and we tell them to go to you for it. All we ask is that you give them what they ask for. And when you stand behind your counter selling a bottle of Scott's Emulsion you can safely stand behind the Emulsion, too. For thirty years we have guaranteed our Emulsion—its purity, uniform quality, permanency, palatableness and effectiveness. We further guarantee it to be the purest and best emulsion of cod liver oil made. With this guarantee back of you, and thirty years' successful use all over the world to substantiate our claims, you will make no mistake in putting Scott's Emulsion to the front on every occasion when an emulsion is needed. That's one way of holding the customers we bring to you. ∴ ∴ ∴ ∴

The Era Publications for the Drug Trade.

THE PHARMACEUTICAL ERA.

(Issued Every Thursday).

\$3.00 Per Year, in Advance; Foreign, \$4.00 Per Year.

The only weekly pharmaceutical journal in America. The ERA is the newspaper of the drug trade, and its readers get: The news when it is news; market reports which follow the market closely; prompt replies to "Question Box" inquiries; prompt reports of association meetings; etc., and the latest developments in pharmacy, scientific, professional and commercial.

THE ERA PRICE LIST EDITIONS

Issued in the Spring and Fall of each year. FREE to Subscribers to the ERA

The Era Price List Editions contain complete Druggist Price Lists, thoroughly revised, and brought down to date twice a year. They are issued in the Spring and Fall. They combine in one publication, arranged for easy reference, the most complete lists of Drugs, Chemicals, Newer Remedies, Proprietary Preparations, and Pharmaceuticals of a proprietary character ever offered to the drug buyer.

The list of Proprietary Preparations is the most comprehensive ever published. The present edition contains some 25,000 items, and in most cases the name and address of the manufacturer is supplied by means of a key number opposite the item, referring to the Manufacturers List. The preparations of nearly 3,000 manufacturers are thus listed.

These Price List Editions are published for the benefit of subscribers to the ERA, and every subscriber gets one copy free.

THE ERA COURSE IN PHARMACY.

Total Expenses for Full Course, \$10.00, Which Includes a Year's Subscription to the ERA.

This Course consists of printed lectures upon the theory and practice of pharmacy, chemistry, materia medica, prescription dispensing and other subjects essential to a sound and practical training in pharmacy. The lectures are prepared by the foremost pharmaceutical educators, are issued in monthly installments, and the entire work of the Course can be completed within twelve months. Recitations and examinations are conducted by correspondence directly with each regularly matriculated student. Especially valuable as a preparation for the examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

NEW CLASS FORMED EVERY MONTH.
Write for new descriptive PROSPECTUS.

THE ERA FORMULARY.

(5,000 Reliable Formulas).
Price, \$5.00 Per Copy, Postpaid.

Compiled specially for druggists. A collection of original and prize formulas, to which has been added a selection from standard authorities in English, French and German.

Contains formulas for Toilet Articles, Proprietary Medicines, Unofficial Pharmaceuticals, Family Medicines, Domestic and Household Articles, Veterinary Remedies, Technical and Industrial Processes, Flavoring Extracts, Soda Fountain Specialties, etc., etc.
42 pages, cloth. Sample pages on application.

THE ERA DRUGGISTS' DIRECTORY.

Subscription Price, \$5.00 Per Copy, Postpaid.

Carefully revised by personal canvass of nearly the entire trade. The most complete and accurate Trade Directory ever issued. It contains:

Part I.—Wholesale Druggists of the United States and Canada.

Part II.—Retail Druggists of the United States, Canada, Hawaiian Islands, Cuba, Porto Rico, Mexico and Costa Rica, together with a list of the principal druggists in Chile, Peru, Bolivia, Ecuador and Colombia. In the United States and Canada lists the side lines carried are indicated.

Part III.—Manufacturers, Jobbers and others who supply the drug trade.

THE ERA DOSE BOOK.

(Third Edition, Revised and Enlarged).
Price, 50 Cents Per Copy, Postpaid.

It has a Dose List, (2,000 remedies); a Veterinary Dose List, the most complete ever compiled; Tables of Dose Equivalents; Poisons and Antidotes; Incompatibilities; Solubilities, Specific Gravities, Percentage Solutions, Drops in Fluidram, Metric System, Thermometric Equivalents; Lists of Latin, French and German terms used in prescriptions and definitions of the Properties of Remedial Agents. 46 pages; board covers.

THE ERA KEY TO THE U. S. P., 1890.

Price, 25 Cents Per Copy, Postpaid.

A complete list of the Drugs, Chemicals and Preparations of the latest U. S. P.; gives official title, common name, synonyms, dose and strength of each; 75 pages, imitation leather binding only. Fits the Vest Pocket.

THE ERA POISON AND LIQUOR REGISTER.

Price, 60 Cents Per Copy, Postpaid.

Contains space for 800 entries, date, name of purchaser, name and quantity of poison sold; price, purpose, witness, remarks, etc., etc. It also contains a digest of poison laws of all the States, where the law requires registration of liquor sales. This book answers the purpose admirably. Stiff board cover, leather back, 8x11 inches.

SAMPLE ADVERTISEMENTS FOR DRUGGISTS.

Price, 50 Cents Per Copy, Postpaid.

Last edition OUT OF PRINT. A new and revised Edition will be announced when ready.

SPECIAL NOTICE.—The prices here quoted include postage. All orders must be accompanied by remittance, in Cash, Express or P. O. Money Order or N. Y. draft payable to D. O. HAYNES & COMPANY. Send stamps (2c.) for amounts less than \$1.00.

D. O. HAYNES & CO., Publishers,

NEWS SECTION

URGED TO SIGN CONTRACTS.

G. A. S. Hears Penalty Clause Is Not Yet in Force.

"A SOLID FOUNDATION NOW," SAYS MR. HIRSEMAN — PLANS FOR SPRING OUTING TO BE HELD AT GLENWOOD, L. I., THE LATTER PART OF JUNE.

"Sign the contracts and go to the mass meeting on March 19," was the advice given by B. J. Lauer, reporting for the Trade Interests Committee to the meeting of the German Apothecaries' Society, last Thursday. He explained that the penalty clause would not be enforced until the N. A. R. D. branch so decides. Mr. Lauer told in detail what had been done at the last conference, after which Felix Hirseman declared that there was now some solid foundation to the plan of organization and he believed in it. He had been in New York for the past two years.

Plans for entertainment during the coming season were discussed and acted upon. R. S. Lehman, chairman of the Entertainment Committee, announced that the next annual ball had been arranged to take place January 11, 1906, at the Harlem Casino; this was endorsed by the society. For the spring outing, the committee chose a water excursion to Karatsonyi & Klemiz's ideal resort on Long Island Sound, at Glenwood, where three years ago the members had a most enjoyable time. The outing will be held in the latter part of June. Lunch will be served on arrival and the banquet will take place in the evening. The entertainment which was proposed for the month of April has been postponed until the fall.

Emil Koller reported progress in the matter of co-operative fire insurance. As chairman of the Scientific Committee he announced that Dr. Frederick Grosse would lecture at the next meeting.

Troubles of druggists in signing contracts with a jewelry firm were touched upon by S. V. B. Swann, who warned the members to steer clear of any enterprise of this nature. Three new members were elected, among them E. P. Wendler, son of Emil Wendler, one of the oldest members of the society.

On the recommendation of President Imhof, the following resolutions were unanimously and enthusiastically adopted:

WHEREAS, S. V. B. SWANN, our associate member and colleague, has rendered excellent service for the benefit of the society, both as a member and as chairman of several committees, and has shown a lively interest in all matters pertaining to the society, be it hereby

Resolved, That our colleague, S. V. B. Swann, be entered from this date as a regular member of our society, and have all the rights of such membership.

The second resolution reads as follows: WHEREAS, Our official reporter, Hugo Kantrowitz, has published for sixteen

years, exhaustive and truthful reports of our meetings and entertainments in the Deutsch-Amerikanische Apotheker-Zeitung, and in consequence has done much to further the publicity of our society and to popularize it in this and other countries, be it

Resolved, That Hugo Kantrowitz be elected a corresponding member and his name entered in the membership list of this society.

A communication from the Morrisania German Literary Society was read, requesting the co-operation of the G. A. S. in the erection of a monument to the poet Schiller, and asking the society to send delegates to a meeting on this subject, to be held at Terrace Garden, in the near future. President Imhof heartily favored this undertaking and appointed Messrs. Emil Koller, Frederick Trau and Bruno R. Dauscha to act as delegates. At 11.30 the meeting adjourned to discuss a fine collation.

MANN BILL IS DEAD.

Washington, March 3.—The Mann bill has received its quietus through the familiar process of being "talked to death" in committee. "Senatorial courtesy" has made it possible for the enemies of the measure to prolong the hearings until the adjournment of Congress. This task was made easier from the fact that owing to press of business the hearings were only one hour in length.

Among those who opposed the bill at the final session of the Committee on Patents, was Prof. Charles F. Chandler, who said in part:

"I know these men (the retail druggists who favor the bill) thoroughly, and I am ashamed to find them here endeavoring to rob their brother chemists of their hard-earned rewards. I worked for these retail druggists for nothing and I feel that I can speak freely with regard to them. They come here with a plea that they speak for the sick and suffering, but this is not an honest plea. The passage of this bill would make no difference in the price of any drug product to the consumer. Phenacetin, which, by the way, was never patented in Germany by its inventor, is one of the greatest blessings of the century. Much money was spent in testing it and putting it on the market. Its owner ought to have a good profit. There are nearly 100 doses in an ounce of phenacetin, so that if the price to the druggist is \$1 per ounce, a five-grain dose costs about 1 cent, yet the druggist charges fifty or sixty cents for a prescription whether he uses phenacetin or some heavy chemical worth ten cents a pound."

Nothing further will be done with the bill by the committee. It will probably be re-introduced at the next session of Congress.

—The retail druggists of the Choctaw Nation have organized an association. Officers were elected at a meeting held at Hugo.

NEWARK'S COCAINE CRUSADE.

Grand Jury Investigating Alleged Violation of the Bradley Law.

Newark, N. J., March 6.—The investigation which the grand jury began last week into the alleged violation of the Bradley cocaine law was continued when that body convened again to-day. The particular cocaine case which the present grand jury is investigating has attracted an unusual amount of attention, as it is said that the offense is a most aggravated one, the druggist who is charged with the selling having been warned several times by the relatives of a boy who was a victim of the drug habit. The sale, it is said, was made without a physician's prescription, and in violation of the Bradley law, which is very strict, and was passed especially to meet the conditions which are said to have existed in this and other large cities of the State, where the illegal sale of drugs had grown to such an extent as to become a public scandal. This law is designed to prevent not only the indiscriminate sale of cocaine, but of all other drugs into which cocaine enters, and which victims of the cocaine habit are accustomed to use when they cannot get the straight article. The law prohibits the sale or gift of cocaine or of any of the medicines into which it enters, and heavy penalties are provided for its violation.

The illegal selling of cocaine in this city is said to have been as bad one year ago, as it is in the Mississippi river towns, whence the cocaine habit among the poorer classes is believed to have had its origin. A crusade was begun by a local newspaper, which resulted in many arrests, including a number of druggists in the city. Heavy fines were administered. It is only fair to say that in the cases of the better known druggists it was clearly shown that in almost every instance the sales had been made by clerks and without the knowledge or consent of the proprietor, but they were, nevertheless, held responsible for the acts of their agents. It was supposed the vice had been nearly stamped out, but the newspaper which began the fight has been repeating the charge every Sunday that the drug was still purchasable in many places, in violation of the law, and in some instances has supplied evidence in support of the charges, with the result that arrests and convictions have followed.

The crusade, the police say, has not led to any marked diminution in the use of the drug. In this they are borne out by the statements of druggists, who declare that the illegal sale of cocaine in this city has been reduced to a minimum, but that the consumption by the "fiends" is nearly, if not quite, as large as it was when the crusade in support of the Bradley law began. The only difference is that now the cocaine is bought in New York, instead of being purchased in this city. In some cases a member of the "cocaine

gang" is sent to New York for the drug, and in other cases there is always a member of the gang who is employed in New York, who purchases the drug and divides with the other victims of the habit.

Both police and druggists say that the sales in violation of the law in this city have been nearly stamped out. Since the arrest referred to above, the general sale of the drug has been discontinued. Some druggists, more reckless than wise, continued the sale though, until the present grand jury met and it became known that that body would take up the matter, and the punishment would be more than a fine where convictions were obtained. Many witnesses have been summoned and examined in the particular case which the grand jury is investigating.

POWELL OWNS LOVE DRUG CO.

One more case of an uncollectable claim against the M. H. Love Drug Co., of Norfolk, Va., has just been reported. This time the Norfolk lawyer who investigated discovered that the proprietor of the M. H. Love Co. is J. B. Powell, who, the lawyer says, has recently been in the custody of the United States authorities. The attorney declared that it would be useless to bring suit against him, as he has no assets other than what would be held subject to a prior lien.

It could not be determined whether J. B. Powell is in any way connected with the B. F. Powell whose name appears on the door of Henry P. Croslier's office, at 168 Greenwich street, New York. Henry Croslier protested complete ignorance of either J. B. Powell or the Love Co. Where was B. F.? He didn't know; it was one of his or The Era's business; it wasn't furnishing information to The Era, and if the reporter was anxious to know, he was welcome to go and find out.

Reminded of the \$65,000 worth of groceries which had been delivered last summer to B. F., at No. 168, from where they had utterly disappeared, Mr. Croslier was the picture of surprise. "First I ever heard of it," he said.

Colonel Haire, who was present, joined in to the extent of giving his personal opinion of the reporter; and as to B. F.—"D'you remember what Hamlet said to his uncle when he asked where Polonius was?" he inquired. "Seek him in heaven and hell, and if he be not in the one place"—

He left it to be inferred where B. F. was to be found.

ITALIAN PH. A. AGAIN.

A meeting of the Italian Pharmaceutical Association, which has been practically extinct for the past three years, will be held to-morrow evening, March 10, at Hotel Matese, 198 Grand street. Recently several members decided to reorganize and under the leadership of Frank Avignone, of 59 Macdougal street, a meeting was called and was attended by over two dozen druggists. Temporary officers were elected as follows: President, D. Cafferata, 405 West Broadway, who was the former president; treasurer, J. Aquaro, 202 Spring street; secretary, G. Scaro.

To-morrow evening permanent officers for the year will be chosen. The objects of the association will be, as formerly, the promotion of social intercourse among the Italian pharmacists of this city and the mutual protection of the members.

ACT ON 'PHONE QUESTION.

Delegation of Business Men Will Present Petition.

Nearly fifty organizations of merchants and business men in Greater New York were represented at a conference on the telephone question in the rooms of the Board of Trade and Transportation, last Friday afternoon, when the Board of Trade resolutions asking for a legislative inquiry, were endorsed and preparations made to send a strong delegation to Albany to urge Senator Keenan's resolution calling for such an inquiry.

There seemed to be no doubt in the minds of those present that telephone rates were excessive, especially between the different boroughs. As Chairman Frank B. Green put it, "There has in the past few years been increased economy in the cost of operation and an increased number of subscribers, without a corresponding decrease in charges to the consumer."

It was proposed to make the investigation one to include the entire State, but the majority thought that if too much were asked, nothing at all would be granted. The resolutions, therefore, are general, and do not state whether the inquiry is to be confined to New York City or extended to other cities; this is left to the discretion of the legislature. After some discussion, the resolutions were unanimously endorsed. They are as follows:

WHEREAS, The legislative investigation of telephone service in this State in 1887 revealed many important facts with reference to the transactions, charges and enormous profits of the companies prior to that time, which facts were disclosed by the officials of the telephone companies upon compulsory examination of them as witnesses, and by an examination of their books by expert accountants in the employ of the Legislative Committee, most of which facts had been previously withheld from the public and the true conditions denied, and

WHEREAS, No investigation of these telephone companies has been made in the public interest since 1887, while the volume of the business has grown many fold and the charges have been greatly increased; therefore, be it

Resolved, That the legislature of this state be and is hereby earnestly but respectfully petitioned to appoint a special committee to investigate the charges for telephone service the cost of such service to the companies, the amount of capital stock issued or held, the actual cash capital invested, the dividends paid, the percentage of dividends to capital stock, the percentage of dividends to actual cash invested, the surplus earnings invested, or on hand, or expended for the uses and purposes of the company and for what uses and purposes expended, and such other information as may be useful in determining if rates charged are excessive and what rates would be just and equitable. That such committee have power to compel the production of all books and attendance and testimony under oath and to compel the production of all books and papers relating to the business, property and transactions of telephone companies in this State and that such committee be required to report by bill or otherwise to the next legislature.

The question of having a competing telephone company came up, but met with strong opposition. Two companies, it was declared, would necessitate two systems in every business office, and would cause endless confusion.

Dr. William Muir and John G. Wischerth represented the Kings County Pharmaceutical Society.

W. H. ROGERS TALKS ON ADAM.

At the annual dinner of the Business Men's Association of Middletown, N. Y., on Washington's Birthday, one of the most enjoyable toasts of the evening was delivered by William H. Rogers, whose dignified figure is familiar seen at every State Ph. A. convention, and who has done good work towards bettering the condition of the State service apothecaries.

Mr. Rogers was scheduled to speak on "Old-Time Business Men." His remarks, given in his usual sly manner and supplemented by an expressive twinkle of the eye, ran on in part as follows:

"The earliest business man of whom I find record was a man named Adam. I don't know his other name. Adam was living the simple life, of which we hear so much and see so little nowadays. He was a sort of truck farmer, with a life interest in as pretty a piece of land as lay out of doors—not a weed nor a potato bug in it.

"Adam ought to have been happy—no taxes to pay, eggs forty cents a dozen, and few clothes to buy—fashion in fig leaves didn't change often.

"Along comes a slick promoter with a gold brick. He offers to make Adam wise—promises him tips on the market and all that. You all know the rest of the painful story. The promoter was a fakir, the tip was no good, the market went the other way, Adam was sold out under the rules, margin all gone, loses his farm, gets evicted, has to buy a suit of store clothes all around and go out West and take up government land full of cactus and Canada thistles. Poor old Adam—his children are yet buying gold bricks—the promoter is still selling them."

At the conclusion of Mr. Rogers' address, three cheers were proposed by D. C. McMonagle. They were given with a will.

NOMINATED FOR N. Y. C. P.

The Nominating Committee of the New York College of Pharmacy will, at the annual meeting of the college on March 21, at 8 p. m., submit the following list of candidates for office for the ensuing year:

President, Nicholas Murray Butler; first vice-president, Charles F. Chandler; second vice-president, Wm. Jay Schieffelin; third vice-president, Herbert D. Robbins; treasurer, Clarence O. Bigelow; secretary, Thomas F. Mann; assistant secretary, O. J. Griffin; trustees to serve three years, William C. Alpers, Max J. Breitenbach, Charles S. Erb, Leo W. Geisler, Jr., Henry Imhof.

PARTNERSHIP DISSOLVED.

Wheeling, W. Va., March 4.—S. Rosenberg and Harry Hirsch have retired from partnership in the Waterman Drug Co. Rolla Waterman will continue the business.

READY FOR BIG MEETING.

**Call Sent Out For To-morrow Even-
At N. Y. C. P.**

Every retail druggist in Greater New York has received a call to the general meeting to be held to-morrow evening, at the New York College of Pharmacy. "Perfect organization is the keynote to the situation," says the circular, which goes into the benefits to be derived from the N. A. R. D. and the great strides which it has made in the past few years.

The situation in regard to the officers of the new organization has changed very little in the past week, except for the entrance into the field of the head of a large drug corporation. Those whose names have already been mentioned, it is understood, have signified their willingness to be candidates.

While C. O. Bigelow's candidacy seems to be finding general favor, there is a feeling in some quarters that the so-called "giant druggists" should not be in the majority among the officers. What the final nominations to-morrow evening will be, however, it is impossible to foretell. That there will be a contest by the association men to secure a good representation is not improbable.

Colonel J. B. Doble was highly pleased with the attitude of the members of the Drug Merchants' Association in being willing to head the N. A. R. D. organization here. "It shows," he said, "that they are seeing this thing in a broad minded way. They have all signed the contracts, and when the edict goes forth, they will, as officers of the organization, be the first ones to put the contracts into effect."

ANALYSES OF IMPORTED FOOD.

The Department of Agriculture has issued through the Treasury Department the following rules regulating the communication of results of analyses of imported food products made under the pure-food law:

"First. When the results of the analyses are such as to warrant the release of the invoice from further detention they are not communicated to the importer.

"Second. When the results of the analyses warrant the further detention of the invoice, in order to give the importer opportunity to present evidence respecting the fitness of the goods covered by the invoice for entry, the results of the analyses will be communicated to the importer at his request. This will give the importer a statement of the causes which led to the further detention of the invoice and enable him to prepare a suitable statement respecting it.

"Third. In no case hereafter will the results of the analyses be communicated from the New York laboratory or any laboratory at other ports, but they will be sent directly by this Department [of Agriculture] from Washington."

"C. H. KEEP,

"Assistant Secretary."

NEW YORK NOTES.

Harry Good, son of Brent Good, part proprietor and advertising manager of the Carter Medicine Co., has been ill for several days. He is expected to be convalescent shortly.

— John H. Matthews, of John Matthews, Inc., sailed on Saturday for Europe, to be gone three months.

Emil Levi, representative here of C. F. Boehringer & Soehne, is back at his desk, after having been absent nearly two weeks, on account of illness.

— Frederick Vollmar, who did relief work in New York City for about forty years, died last Thursday. Cremation services were held at Fresh Pond on Sunday.

STORES MUST CLOSE EARLY.

**New Restrictions on Overtime
Work in New Zealand.**

The early closing of stores and the payment of employes for overtime work is the subject of a new "Shops and Offices Act" just passed in New Zealand, according to United States Consul-General Dillingham, at Auckland. It provides that all shops in the combined districts of Auckland, Wellington, Christchurch and Dunedin in which two or more persons, including the occupier, are employed, shall be closed for business at 6 p. m. on five days in the week, and at 9 p. m. on one day. Should the late evening fall on Christmas or New Year's Eve, shops may remain open till 11 p. m., and on Christmas Day or New Year's Day falls on a Sunday or a Monday, then shops may remain open till 11 p. m. on the preceding Saturday. Refreshment rooms are exempt from these provisions, but all other shops in which one or more assistants are employed come under their operation.

HOURS OF WORK LIMITED.

Several important changes are made in regard to hours of employment. Hitherto it has been forbidden to employ women and young persons more than fifty-two hours in any one week. This is now extended to include all employes. The hours of work are also limited to nine in each day (exclusive of meal times), except in the late evening, when employment may be for eleven hours. But employes may not be on duty for more than five hours continuously without an interval of at least one hour for meals.

Several alterations are made in the conditions controlling employment in offices. It is provided that an office assistant shall not be employed in or about a business place for more than half an hour after the closing hour fixed by the act, but several exemptions are provided, a cashier being permitted to remain for a daily balance, a ledger keeper for the periodical balance of his ledger, ordinary assistants for the usual half-yearly balances, or for the purpose of writing up the books for the day's transactions, or clearing arrears due to special circumstances.

A new provision imposes on the employer the duty of keeping an extra time book for the recording of all overtime, together with its purpose. This book is open to the inspector of factories. Overtime must be paid at one and one-half times the ordinary rate, with a minimum of twelve cents an hour for employes receiving \$2.50 a week or less, and eighteen cents an hour for all other employes. Heads of departments receiving \$1,000 a year, however, do not receive overtime pay.

CROWDS AT ANNUAL BALL.

**N. Y. R. D. A. In Big Reunion at
Grand Central Palace.**

That the officers of the New York Retail Druggists' Association are able to stir up a wonderful enthusiasm among the members was amply demonstrated at the annual reunion and ball last Friday night, when the big hall room of the Grand Central Palace was thronged almost to suffocation. Two thousand persons would be a fair estimate of the attendance. The only circumstance that tended to detract from the gaiety of those who were aware of it, was the fact that President Diamond's brother-in-law had died in the course of the day, which necessitated the president's absence. As a sign of respect the customary grand march was omitted.

Prior to the dancing an excellent vaudeville programme was given, with the following numbers:

1. Overture.....Prof. Edward Dicey, Pianist
2. Sisters Chaffin.....Songs and Dances
3. Musical Comedy.....Russell & Buckley
4. Mysteries of the Orient.....Youna & Youna
5. Frank & Mattie Walsh

Housekeeping in Cointown
6. The Goddess of Grace—The Electrical Novelty

Madeline Burdette, vocalist; N. Power, electrician.

Montgomery H. Throop was stage director.

As chairman of the Ball Committee and floor manager, A. Bakst, distinguished himself by moving everything along without a single hitch. He was assisted by Joseph Herzenberg, I. Plicker, Wm. S. Sindy and J. Beck. Robert Goldberg was chairman of the Floor Committee and Joseph Weinstein chairman of the Reception Committee.

Among the familiar faces seen on the floor, were Dr. George C. Dickman, H. A. Herold, William J. Carr, of Parke, Davis & Co., Francis E. Sheldon, of the St. Louis Club, Messrs. Bellaire and Clarke, of the N. A. R. D. staff, and many prominent members of the trade. Several pharmacists left about midnight to attend the inauguration at Washington, but the great majority stayed on and footed it right merrily until the cold, gray dawn of the morning after.

FIRE AT EIMER & AMEND'S.

What might have been a serious fire in the Eimer & Amend building, at Third avenue and Eighteenth street, was fortunately checked through the early sounding of a pneumatic alarm, last Thursday. As it was, \$10,000 damage was done, mostly to costly glassware on the fifth floor. Twice the firemen were driven back by explosions of chemicals.

WHEELING DRUGGISTS UNITE.

Wheeling, W. Va., March 4. A charter has been granted to the Wheeling Druggists' Association. The object of the association is the mutual protection and the common benefit of all the stockholders. The capital stock is \$10,000. Incorporators, John Klari, John Coleman, Frank L. Schmidt, W. S. McElroy, John Ehrle and nineteen others, all of Wheeling

FOR SUNDAY CLOSING.

Proposition Considered by the P. A. R. D.—Legislative Bills.

Philadelphia, March 6.—President T. H. Potts, at the monthly meeting of the P. A. R. D., on Friday, caused some little comment by strongly advocating the proposal submitted by the drug clerks, that the stores should be closed Sunday afternoons from 1 to 6 o'clock. Mr. Potts declared his willingness to accede to the request, and expressed the hope that the association would do likewise.

"We keep open," he said, "when all the business we do in the majority of cases is to sell a stamp, or a cigar, or answer the telephone. Nearly all of us live at the store or close to it, and in urgent cases we could always be reached. But if all of us don't close, there is no use of one or two doing it. If your neighbor won't close, some of your customers, when they want a trifle on Sunday, will go around to him when they find that you are closed. It is a matter of importance, and careful consideration should be given it."

The following committee was named by President Potts to confer with a similar committee from the Drug Clerks' Association, and some conclusion, it is believed, will be reached, so that a report can be submitted at the April meeting: Charles Leedom, Harry L. Stiles and D. J. Reese.

Another matter discussed was a recent move made by the Bell Telephone Co., which, it is hoped, will result in more satisfactory arrangements between the druggists of the city and the telephone company. The latter asked for and received a list of the druggists in the city who had Bell phones. The idea was to find what part of the company's receipts came from the drug stores. The P. A. R. D. has been trying to secure a uniform rate of 25 per cent. on all automatic telephones and the outcome of this new move on the part of the telephone company is awaited with interest. The matter of having each district in the local organization represented in the main body by a chairman, the executive body to consist of fourteen such chairmen and one member chosen by the association at large, making fifteen in all, was allowed to go over until the next meeting, although there is no question as to the final adoption of the plan.

Two new members were elected to the association. The Entertainment Committee reported that all indications pointed to a most successful musicale and dance at Merchantile Hall, on next Tuesday evening. Reports were also received as to the success in the attempts being made to secure the enactment of the bills, making it necessary that all applicants for pharmacists' certificates must be able to show that they are graduates of a reputable college of pharmacy, and also the one allowing pharmacists to use a harmless quantity of preservative in their fruit syrups used at the soda fountain. These reports were most gratifying.

CAMDEN DRUGGISTS AND N. A. R. D.

Camden, N. J., March 6.—Pharmacists in this city are considering the advisability of organizing and enrolling themselves with the N. A. R. D. The previous attempt did

not turn out as desired, but every day the necessity of organization is brought before some pharmacist. A meeting will be held shortly, that the feeling of the retail trade toward organization can be ascertained. On that occasion it is expected that members of Philadelphia's well-organized association will be asked to explain their methods and some of the benefits they have received as the result of that organization.

BRADDOCK PHARMACIST SUED.

Pittsburg, March 4.—Not in many years has so much interest been displayed by druggists in this community over a lawsuit, as has been stirred up by the action against a Braddock pharmacist for the recovery of damages. The plaintiff is Johanna Stern, who seeks to recover \$25,000 from Joseph M. Hollander, a well-known druggist of Braddock, one of the suburbs of Pittsburg. In a statement the woman has filed, she avers that December 27, 1904, while her husband, David Stern, was in a drunken condition, Hollander or one of his clerks sold him carbolic acid, which he drank, and from the effects of which he died. The widow alleges that Hollander or his clerk knew, or should have known, Stern's condition, and was grossly careless in selling him the drug.

Naturally the outcome of the suit is awaited with great interest. More than one question can be legally raised by the attorneys on both sides, and the court will also hand down an opinion. According to B. E. Pritchard, secretary of the Western Pennsylvania R. D. A., druggists should remember the lesson taught by the unfortunate occurrence. In Pennsylvania a druggist is not required to register the sale of carbolic acid, like the sales of other poisonous liquids. The Braddock druggist, however, was exact in his business, for the sale of the carbolic acid was registered on the books, and it was an easy matter for the widow to find out who sold the acid. No prescription is necessary and it is hard to see wherein the druggist erred, unless he is guilty of criminal negligence, and that is for a jury to decide.

MR. WELLCOME'S RECEPTION.

Philadelphia, March 6.—Extensive preparations are being made to entertain Henry S. Wellcome, of London, England, upon his arrival here this week. Accompanied by his wife, he has been touring in this country since last fall, and recently had a narrow escape from being killed by the Indians, during an uprising in Mexico. He is now in Washington, where he and Mrs. Wellcome witnessed the inauguration.

Mr. Wellcome is a member of the firm of Burroughs, Wellcome & Co., of London, and is well known here, for both he and his partner, Silas M. Burroughs, now deceased, are graduates of the Philadelphia College of Pharmacy. They went to England twenty years ago, and there laid the foundations for the house that since has become famous.

On Thursday evening Mr. and Mrs. Wellcome will be entertained at the residence of Howard B. French, president of the college, and on Saturday evening, Mr. W. will be the guest of honor at a dinner to be held at the Union League. Mr. and Mrs. Wellcome will remain in this city about five days.

BENZOATE BILL

In Pennsylvania Awaits Governor's Signature.

Philadelphia, March 6.—Having successfully passed both branches of the legislature, the bill which will permit pharmacists to use a minimum quantity of benzoate of sodium as a preservative of fruit syrups, only awaits the signature of the governor to make it a law. He has until ten days after the closing of the legislature, April 31, to do this, and while he may veto it, those who have been working for the bill believe that he will follow the example of the House and the Senate and approve it. Last week the bill was returned by the Joint Committee on Public Health and Sanitation with a favorable recommendation, and no apprehension is felt now as to its fate. Petitions bearing the signatures of the members of the P. A. R. D., as well as of many well-known experts, have been forwarded to Harrisburg and many personal visits have been made.

While the "Phillips-Fahey" bill is not quite so far advanced as the other, those who have been working for it claim to have good reason to believe that it too will go through. On Wednesday last a committee, of which Prof. J. P. Remington was chairman, appeared before the Committee on Public Health and Sanitation and explained in detail the provisions of the proposed law. Briefly, this "Prerequisite" law makes it necessary that after January 1, 1906, all applicants for certificates as pharmacists must be able to prove that they are graduates of a reputable college of pharmacy, and that all such applicants must show evidence of having had four years of practical experience in the business of retailing, compounding or dispensing drugs. It was found that while there was no organized opposition, some physicians were of the opinion that this bill would prevent a physician from putting up certain of his own prescriptions, and in that way was detrimental to them. Another erroneous idea that was unearthed was that it would affect clerks and proprietors already in business.

Edward H. Fahey, who represents the Tenth Legislative District, and is a leading pharmacist of Thirteenth and Race streets, this city, with the assistance of the members of the visiting committee, explained away these wrong ideas, and as far as is known there is no serious opposition to the bill.

"Of course," said a member of the legislature, yesterday, "you cannot tell what opposition will develop when it reaches the floor." It will be given first reading next week.

PHILADELPHIA NOTES.

—Charles Leedom is the new vice-chairman of the Executive Committee of the P. A. R. D., vice H. C. Blair, resigned. The latter remains a member of the committee.

—Fire which broke out in the drug store of H. C. Blair, at the corner of Eighth and Walnut streets, one evening last week, caused considerable consternation in that closely-built section, but it was quickly extinguished with little loss to Druggist Blair.

DRUG CLERKS ELECT.

Association Members Working For Sunday Closing.

Philadelphia, March 6.—The Philadelphia Drug Clerks' Association has elected the following officers for the ensuing year: President, G. W. Geasey; vice-presidents, Edward J. Kelly, Charles S. Lebo; treasurer, George H. Grubb; secretary, Robert J. Hunt; guard, William Gibbs. The executive committee consists of G. H. Grubb, chairman; C. J. Chalfant, L. G. B. Botfield, E. J. Kelly, Oscar W. Sellers, Lewis Green and S. C. Shannon, and the committee on legislation is as follows: William B. Murphy, E. C. Leshner, G. H. Grubb, E. J. Kelly, O. W. Sellers, R. J. Hunt and Dr. J. A. Rosenheim, chairman.

There are unusually bright prospects for a successful year. There is a comfortable balance in the treasury and the membership at the meeting next week, it is believed, will be increased to 500. At present the members of the association are working to secure the co-operation of their employers in the P. A. R. D. for regular Sunday closing from 1 to 6 p. m. Their efforts in that direction are meeting with considerable encouragement and in some parts of West Philadelphia proprietors have voluntarily agreed to close every evening at 10 o'clock, except Saturday. The matter has been presented to the proprietors, but as yet nothing definite has been announced. President Geasey and Secretary Hunt are the representatives of the association who will confer with a similar committee from the P. A. R. D.

The Philadelphia Drug Clerk is the name of an eight-page publication that is being issued monthly by the organization, and next month four pages will be added.

During the week of April 3, a benefit will be given at the Park Theatre. The attraction will be "Quincy Adams Sawyer."

LONG USED AS A DRUG STORE.

Baltimore, March 4.—There was sold this week a building in which is located one of the oldest drug stores in the city. This is the house on the southwest corner of Charles and Mulberry streets, in which Messrs. Thomas & Thompson are now doing business. The firm moved there temporarily, after the great fire, having bought the pharmacy from the successors to the late Adam Gosman, who conducted the place for many years. Prior to his incumbency, the store was managed by McDonald & Leaming. The location has dropped behind modern requirements, however, and Thomas & Thompson will occupy their handsome new six-story edifice at Light and Baltimore streets, soon. The show cases and other furniture are now being put in. These will be of the colonial pattern, all being of mahogany, with brass trimmings, and making a very rich effect.

WOMAN PHARMACIST DEAD.

Baltimore, March 4.—This city has few women engaged in the practice of pharmacy, although not a few druggists in the city are materially and efficiently aided by their wives. One woman who successfully conducted a drug store for years, recently passed away. She was

Mrs. Kathinka Pauline Grauel, of 212 East Cross street, whose death occurred February 18. She was fifty-eight years old and had been for some time engaged in the business with entire satisfaction to her customers. She left considerable property.

FORMULA BILL IN TEXAS.

Austin, Tex., March 4.—Texas also is threatened with a formula law. The following bill has been introduced in the legislature:

"Be it enacted by the legislature of the State of Texas, that any person or persons who shall sell or offer for sale any compound as a medicine, except upon the prescription of a regular practicing physician without having the formula thereof plainly printed upon the label attached to the bottle, box or cover containing such medicines, shall be guilty of a misdemeanor, and upon conviction thereof, shall be fined in any sum not to exceed \$100. This act shall take effect and be in force from and after Oct. 1, A. D. 1907."

The measure is meeting with a storm of opposition throughout the State.

There is a bill pending in the Senate which would also have the effect of prohibiting the sale in this State of a number of largely used proprietary medicines.

The proposed measure provides that no medicine containing more than 2 per cent. of opium to the fluid ounce or an eighth of a grain of morphine to the fluid ounce, and other narcotics in proportion, shall be sold without prescription.

The bill has been reported favorably by the Senate Committee on Public Health. This bill, like the other, looks so innocent in the incidental provisions that the committees reported them favorably without much consideration.

UNJUSTLY HALED TO COURT.

Newport, Ky., March 4.—Druggist T. J. Widrig was before Squire K. A. Hutchison, last week, to answer to a charge of operating a drug store without a State certificate. He had been arrested on a warrant sworn to by agent of the State Board of Pharmacy. When Widrig appeared in court, it took him but a few minutes to prove that he had complied with the requirements of the law by sending to the State \$1 annually for a certificate, but that since 1898 he had not received the paper. For the past year he exhibited a check that had been cashed and returned to him. A dismissal of the case was immediately ordered. Mr. Widrig says that he will not allow the matter to drop and hints at interesting developments.

NEW GEORGIA DRUG COMPANY.

Macon, Ga., March 3.—Mallory H. Taylor, E. Stewart Payne and Holt Chapman have applied for a charter for the College Hill Pharmacy. The amount of the capital stock of the proposed incorporation is placed at \$3,000, but is to be increased from time to time, until it reaches \$25,000. The principal place of business is to be in Macon, with branch offices and stores in other cities.

—The State Board of Examiners of Mississippi will meet at Jackson, April 4, when applicants for registration as pharmacists will be examined.

SUIT FOR HEAVY PENALTIES.

Alleged Illegal Sales of Cocaine May Cost Druggist \$5,000.

Chicago, March 6.—The suit against Louis Re. to recover penalties amounting to \$5,000, for alleged unlawful sales of cocaine, has created an unusual amount of interest in drug and other circles. This is an action in debt in the name of the people of the State of Illinois, for the use of the State Board of Pharmacy. He is the proprietor of the National Pharmacy, in this city. The State Board of Pharmacy has previously complained of him for alleged violation of the law in connection with the conduct of his business. This is only one of sixteen actions which the Board of Pharmacy is prepared to bring, but in other cases the suits will be for first offense.

In a former case, final judgment was obtained against the defendant. Since that judgment, it is charged that further offenses against the same law have been committed, and the prosecution now claims to have obtained legal evidence sufficient to result in a conviction. The Penalty for conviction in each such offense is a fine of not less than \$200 nor more than \$1000.

The contention of the Board is that experience has shown the limitations of the present law, which was largely experimental. The Board has issued a statement which is in part as follows: "A better understanding of conditions has resulted in a clearer conception of what those conditions really demand in the preparation of an act dealing with the sales, not only of cocaine, but other dangerous habit-producing narcotics. Conditions demand legislation suited to check and correct this growing evil, and the public is able to its necessity.

"The reputable druggists and dealers themselves now thoroughly understand that if such legislation as is calculated to safeguard the community is not promoted by them and their organizations, it will be by others, with perhaps no better public success, but with more embarrassment to the legitimate dealers, who are now lending their aid in this connection. It is confidently expected that the urgency of such legislation will be recognized and that no serious opposition will hamper the passage of the bill."

The Board is to adopt the plan of proceeding directly against clerks who make the sales and against managers of stores, as well as their proprietors.

CHICAGO'S DRUG TRADE HISTORY.

Chicago, March 7.—The Illinois State Historical Society has issued the first part of the history of the Chicago Drug Trade. The data for this interesting and valuable work was collected through the efforts of A. E. Phert, historian of the Chicago Veteran Druggists' Association. The association is urging every druggist in the State to take an interest in the work of the Illinois State Historical Society. Several bills have been introduced in the legislature, looking to the preservation of the records of the history of Illinois pharmacy, and druggists are requested to aid in securing the passage of these measures.

WISCONSIN FORMULA BILL.**Druggists and Editors of the State Face and Confuse the Author.**

Madison, Wis., March 4.—The so-called Noble bill, which has for its object the requirement that all patent and proprietary medicines sold in Wisconsin shall have their formulas printed on the outside wrapper, is as good as defeated. The druggists of the State put up such a strong fight on the measure that they have convinced a majority of the Senate Committee on State Affairs, to which the legislature referred the bill, that the bill is not only harmful to the commercial interests of the State, but that it is an infringement on the rights of the individual, of doubtful constitutionality, and foolish.

The druggists in their fight were ably assisted by the newspapers. The two interests were in Madison this week, when a public hearing was held. They were accompanied by lawyers who stated the case as it appeared to the druggists and newspapers. The author of the bill, a physician, was put to rout by a fusillade of questions tending to show that the bill was framed solely in the interests of the physicians of the State and that it was the result practically of a conspiracy of physicians to destroy the business of other professions. Dr. Nootie was greatly embarrassed and confused and made but a poor defense of the measure he has fathered.

The doctor argued that there are many injurious and poisonous medicines sold without restriction and that there are many false and misleading advertisements inserted in the newspapers. He was answered that, while his statement might be true, there are laws covering the subjects, and others of a specified nature could be enacted without destroying the legitimate business of a large part of the population of the State.

After the hearing a canvass of the committee showed that the bill will never be reported.

YOUNG DRUGGIST DEAD.

St. Paul, Minn., March 2.—R. F. Rogers, a young druggist, met death last week, under singularly pathetic circumstances. He was struck by a street car in Minneapolis, and died the following day. The first version of the affair was that Rogers had been put off one car for refusing to pay his fair and that he was intoxicated. This account was evidently erroneous. His friends declare he was not a drinking man. He was engaged to Miss Helen Suessey, of this city, and the wedding was to have taken place shortly. Mr. Rogers visited his fiancée the evening of the fatal accident. She declares he was subject to fainting spells, due to an affection of the lungs, and had not taken a drop of liquor the day in question. The young man's father, Rev. Thomas Rogers, of Farmington, Minn., believes his son was ejected from the car with such force as to fracture his skull, and that he was wandering about dazed when hit by the car that killed him.

Mr. Rogers was twenty-six years old. After graduation he worked two years as clerk in various St. Paul drug stores, and then became pharmacist in a Minneapolis sanitarium, where he was employed at the time of his death. He suffered from tuber-

culosis and spent last summer with an uncle at Hankinson, S. D., where his health was considerably benefited. Another theory is that he had a hemorrhage on the car, and when he alighted was too weak to dodge the car on the other track. An inquest will be held.

BANDITS RAID DRUG STORE.

Chicago, March 6.—For the second time in three months highwaymen entered the store of Andrew Scherer, Division and North State streets, a few nights ago, and at the point of revolvers, held up the clerks. They secured \$90 and a watch.

The men entered the store about nine o'clock. One of the clerks was forced to stand against the wall, while the robber took \$15 and his gold watch. The second robber ordered another clerk to open a cash register and hand to him the money it contained. The clerk refused and the robber fired two shots at him, one of which broke the register. The robbers escaped.

TO FIGHT POISON BILL.

Logansport, Ind., March 4.—Druggists to the new poison law which is before the legislature. John Coulson has been sent to Indianapolis as a representative of the local druggists to protest against the passage of the bill. Coulson was instructed to talk to Senator Powell and Representatives Berndt and Baker, requesting them to oppose the bill.

The new bill provides that no person shall purchase poison in drug stores without a prescription from the physician and the purchaser must also register his name when the poison is bought. On the label of each bottle must also be inscribed the names of two antidotes.

All over the State the druggists are meeting and organizing to fight the measure. The bill has already passed the House, but the druggists hope to beat it in the Senate.

INTERESTING TAX FIGHT.

Chicago, March 4.—The fight over taxing the drug stock of Morrisson, Plummer & Co., at Richmond, Ind., has been brought to public attention again. Fremont Clifford, who was at one time employed as a tax collector in Richmond, is looking for a percentage on the taxes already paid and on those which he claims are still due to that city, and which he wants to collect. The city compromised its claim on this stock, which was part of the estate of the late James L. Morrisson, for \$2,000. The county secured about \$13,000 in taxes on the same stock.

The city attorney of Richmond holds that the compromise does not bind the city and that the city's mistake was in not collecting the full amount at that time. He thinks the city should make the effort to collect now without the assistance of Clifford. There is about \$10,000 to be collected.

DRUG CO.'S ANNUAL MEETING

Fort Wayne, Ind., March 4.—At the annual meeting of the Fort Wayne Drug Company, the board of directors was re-elected and a substantial dividend was declared. The directors are: H. C. Paul, John Jacobs, Jacob Colter, Charles Paul, Fred Landenberger, A. E. C. Becker and H. J. Bowerfing.

CHARLES A. JERMAN RETIRES.

Milwaukee, March 2.—Charles A. Jerman, president and general manager of the Jerman, Plueger & Kuehnmstedt Co., has severed his connection with the company. He has been in ill health for several months, and will go to California for a short rest. Then, if his health permits, he will enter business in some other field. Mr. Jerman's resignation was accepted at the annual meeting of stockholders February 18, and at the same time it was announced that the other stockholders had purchased Mr. Jerman's interest, no new member being admitted.

The company elected these officers: President, Howard Greene; general manager and secretary, William Strong; treasurer, Otto Kuehnmstedt.

Mr. Jerman issued a statement to the house's trade, urging all to continue giving the J. P. K. Co. their patronage.

MAYOR SCOTT CANNOT REFUSE.

Milwaukee, Wis., Feb. 29.—A. J. Scott, pioneer druggist of Hancock, Mich., has been spending a few days in Milwaukee. He is no longer in the drug business, but always makes it a point to visit the wholesale houses when he comes to the city. He has been mayor of his city several times, but had informed the citizens positively that he would not accept another term.

"But I will, though," he said while here. "I wanted to get out of the turmoil of public life and had hoped to be allowed to retire, but they insisted that I be a candidate again, and I suppose I cannot refuse."

Mr. Scott is well known throughout the upper Michigan peninsula for his many philanthropies.

ATHLETICS AS A LUXURY.

Grand Rapids, Mich., March 2.—An Eaton County Circuit Court jury recently gave J. H. Chamberlain, of Bellevue, a verdict of \$325 damages against T. E. Robinson, druggist of Bellevue, and manager of the pure food plant in that town. Chamberlain was an employe at the food plant and was discharged. A street mix-up followed and the athletic druggist did the obvious. Chamberlain went down and a gap in his scalp needed six stitches. Chamberlain sued and was awarded about \$50 per stitch. Mr. Robinson was a prominent figure in University of Michigan athletics a few years ago. He pitched the game Michigan played Yale, at New Haven, and his right arm still retains some muscle knots.

NEW CHEWING GUM CONCERN.

Rochester, March 2.—The George H. Pembroke Co. has been formed in this city, with a capital of \$1,000,000, for the purpose of manufacturing chewing gum. The principal offices of the company, which has been incorporated, will be in this city. The officers of the company are: President, Charles A. Drake; vice-president, Edward C. Gutland; secretary and treasurer, George H. Pembroke; John W. Smith, manager; Edward B. Lynn, assistant secretary and counsel.

The directors are Charles A. Drake, Edward C. Gutland, George H. Pembroke, Edward B. Lynn and Hampden Hyde.

MINNESOTA LEGISLATION.

Measures Relate to Wood Alcohol, College Experience and Opiates.

St. Paul, Minn., March 4.—Matters of importance to druggists continue thick in the Minnesota legislature. The Senate has passed and the House will follow suit, a bill requiring wood alcohol to be labeled "wood naphtha," the label to contain also the word "poison." The object of the bill is to do away with the present confusion of wood alcohol with alcohol, which often leads to the drinking of the poisonous article with fatal results.

An important change in the requirements for a pharmacist's license is contemplated by a bill introduced by Representative W. J. Stock. It requires the candidate to have had two years' training in a school, college or university having a course in pharmacy, and to have had two years' practical experience in a pharmacy. Authority is given the examining board to accept certificates of other States having similar laws. New York is the only State having this law and the object is to secure uniformity in the pharmaceutical laws of the different States. The present Minnesota statute requires no college course, but demands four years' working experience. Mr. Stock's bill has the indorsement of the Minnesota Ph. A.

A registered druggists' trust is contemplated in a bill brought in by Representative Ward Stone. It specifies that after 1906 diplomas issued by other State Boards of Pharmacy shall not be recognized in Minnesota. The applicant must have a certificate from the State Board to be a qualified pharmacist.

H. B. Chamberlain has introduced a bill in the House requiring the labeling of bottles and packages of patent medicines containing opiates, so as to indicate the quantity thereof. It is directed chiefly at medicines containing opium, morphia, codeine and laudanum. Violation of the act is made punishable by a fine of \$50 to \$500, or imprisonment of from thirty days to six months.

The Anderson bill to require a physician's prescription for the sale of cocaine or cocaine preparations, whose provisions have been set forth fully in The Era, has passed the House unanimously, and is on the eve of going also through the Senate unopposed. This result is due primarily to an agitation started by the St. Paul Daily News, and secondarily to the undivided support of the Minnesota Ph. A.

VANISHED FROM THE STORE.

Montclair, N. J., March 2.—Charles Jaeger, secretary and treasurer of the Verona Pharmacy, is missing. As treasurer of the drug company, Jaeger had the handling of the funds. Former Judge John L. Johnson, of Verona, recently sold out the business to Shuddy and Jaeger. Jaeger was a justice of the peace and real estate agent, with an office over the drug store. He was secretary of the Verona Building and Loan Association and chairman of the Democratic county committee. He left a wife and child behind him, who are said to be in straitened circumstances.

MINNESOTA MENTION.

William C. Kregel, employed in A. D. Thompson's drug store, Minneapolis, has asked the help of the police in finding his brother, F. H. Kregel, who has been missing for some time. W. C. has received a note from a man signing himself "Dr. Hopper," informing him that "William Kregel" was injured in a street car accident the night the brothers saw each other for the last time. As there was no accident of the sort on the night in question, the letter is regarded a hoax, and efforts are being made to find the sender.—Franklin J. Benneson, of Los Angeles, Cal., who is reported to have found radium in large quantities in a clay bank in that State, was formerly employed as a chemist by the Lyman-Elliott Drug Co., of Minneapolis.

—The lower house of the legislature has adopted a memorial to Congress, favoring legislation to prohibit interstate commerce in adulterated misbranded and deleterious drugs, medicines and foods. Gov. Johnson inspired the memorial.

—At a recent meeting of the Minnesota Historical Society in St. Paul, Daniel R. Noyes, of Noyes Bros. & Cutler, read an exhaustive paper on "Minnesota Charities." Mr. Noyes has spent many years in charitable work in the Capital City, and has a mastery of the subject enjoyed by few Minnesotans.

BANQUETTED IN TORONTO.

Toronto, March 2.—About one hundred members sat down to the annual banquet of the Toronto Drug Section of the Retail Merchants' Association. Besides these, the members of the council and faculty of the Ontario College of Pharmacy were present as guests of the association, and also members of the wholesale and drug manufacturers.

W. J. A. Carahan, president of the association, occupied the chair. The following responded to toasts: H. Waters, of Ottawa; President Graham, of the C. P.; Vice-President Case, ex-President Kinn, C. MacD. Hay, E. M. Trovorn, G. E. Gibbard, W. J. Pyas, John Hargraves and A. E. Walton.

SOUTHERN NOTES.

—A meeting of the stockholders of the Jonesville (S. C.), Drug Company was held, at which the following directors were elected: J. L. McWhorter, J. J. Littlejohn, Dr. H. T. Hames, R. W. Scott, Dr. M. W. Chambers, D. L. McLaughlin and D. C. Perrin, Jr.

—A new drug firm in Macon, Ga., is that about to be incorporated under the firm name of the Taylor-Bayne Drug Company. It is composed of Mallory H. Taylor, Samuel G. Bayne and Arthur E. Chapman. Mr. Taylor is a graduate of the New York College of Pharmacy, and Mr. Bayne of the National Institute of Pharmacy, in Chicago.

—A. P. Shaw, a pharmacist of Windsor, N. C., has committed suicide by shooting himself.

—Mrs. Abe Caruthers died suddenly at her home in Nashville. She was preparing to retire, when she dropped dead. She was the wife of Abe Caruthers, who travels for Spurlock-Neal Drug Co., of Nashville.

VOEGELI DENIES STORY.

N. A. R. D. Not a Combination to Rob the Public, Says He.

Minneapolis, Minn., March 6.—Thomas Voegeli, of this city, president of the N. A. R. D., denies the Chicago story that the druggists of the country have organized a gigantic trust. He says:

"It is true we have an organization, but it is absolutely untrue that we have entered a combination to raise prices and rob the public. The basis of the complaint is the arrangement manufacturers of patent medicines exact from those who sell their goods. These firms do so of their own volition and not at the request of druggists. All we desire is to get prices for our goods that will enable us to handle them at a fair profit. Formerly some stores were selling \$1 medicines for as low as forty-seven cents. We buy it at sixty-seven cents. Our selling price, by arrangement, is eighty-five cents, giving us about twenty-seven cents profit. The cost of running our business demands a minimum profit of 22 per cent., which leaves us a net profit of 5 per cent. upon an investment of sixty-seven cents. I am sure no one would call that robbery. The same things are true of other patent medicines. The proprietors have demanded that anyone selling their products shall sign a contract to dispose of them at a price that will insure a small profit. The courts have held they have a right to do this.

"C. G. A. Loder, of Philadelphia, cannot get medicines under this arrangement, and it is he who is raising this cry of 'trust.' Talk of bringing criminal proceedings against the N. A. R. D. is all bosh."

WISCONSIN NOTES.

—Henry C. Schrank, of Milwaukee, is contemplating a trip to Europe for his health. —Horace Stone, veteran Racine druggist, recently injured, has just celebrated his ninety-first birthday.

—Cala Valerio Jahrling, a Filipino from Manila, has entered the pharmacy school of the University of Wisconsin, at Madison.

—Ferey Atkinson, who has managed Gerlach & Haase's pharmacy at West Bend for two years, has entered a Milwaukee medical college.

—Retail druggists of Neenah, Menasha and Oshkosh probably will buy the drug stock of a large Oshkosh department store, on condition that the store quits selling drugs.

—H. G. Falk, of the firm of Falk & Schmalz, Wilton, has taken up the duties of the sheriff, having been elected last fall. He is making his home at Sparta, the county seat.

—The Outagamie county (Appleton) Retail Druggists' Association has elected William Downer president; George Woelz, vice-president; Rufus Lowell, secretary, and C. S. Little, treasurer.

—The new officers of the Milwaukee Pharmaceutical Association are: L. G. J. Mack, president; J. E. M. Krembs, vice-president; L. H. Kressin, treasurer; W. F. Kaiser, secretary; W. H. Barr, H. L. Schultz, R. M. Dadd, Max Goetz, E. M. Krembs, L. W. Kressin and W. F. Kaiser, executive committee.

ILLEGAL LIQUOR SELLING.**Druggists in Several States Charged With the Offense.**

In some of the States in which the laws are very stringent regarding the sale of intoxicants, there seems to be an unusual degree of activity just at this time among the officers who are charged with the enforcement of the laws. As is usual, whether right or wrong, druggists come in for a full share of any blame in connection with violations of the laws. Numerous arrests have been made, and in several instances fines have been imposed. The activity of the officials does not seem to be confined to any special geographical area, as the arrests have been made all over the country.

The drug store of T. A. Clifford, in Rutland, Vt., was raided and a large quantity of liquor was found. Before it could be carried away a writ of replevin was served and a bond of \$1,000 was furnished.

Of this raid the Montpelier Argus says: "As we understand the law, licensed druggists have a right to keep liquor on hand. If the raiders found more than they reported in their monthly returns there may be trouble. Otherwise, we fail to see what business it is of the officers how much stock the druggist carried. There is law enough now to punish druggists who violate the conditions of their licenses without resorting to raids."

A. B. Kingman, a druggist of St. Albans, Vt., was arrested on the charge of selling intoxicating liquors without a license. He pleaded not guilty, but after trial was found guilty and fined \$500 and costs, from which sentence he appealed and furnished bail.

In the United States Court at Ada, I. T., two well-known druggists were fined \$500 each, sentenced to jail for twelve months and placed under a bond of \$2,000 each for violating the liquor law. The jail sentence was suspended. Both will forfeit their bond if they violate the law again within three years.

Threats of arrests and raids are made in several of the Southern States, where the laws are very stringent. Newspapers in North Carolina are agitating the question in that State and openly charge that liquor is being sold on prescription in Charlotte and other cities.

KANSAS DRUGGISTS' BANQUET.

Kansas City, March 3.—The second annual banquet of the Kansas City Retail Druggists' Association was attended by 350 retail druggists. Henry W. Evans acted as toastmaster. He was introduced by H. Y. Riddle, president of the association. The following toast programme was given: Frank A. Faxon, "Mergers"; Dr. W. S. Kuhn, "Alkaloids"; A. T. Fleishman, "Random Remarks"; Judge W. T. Bland, "Kansas City and the Cutter."

RIGORS OF LAW TONED DOWN.

St. Paul, Minn., March 2.—The North Dakota Senate has passed an amended drug permit law, raising the quantity of liquor allowed to be sold to a pint, and reducing the number of signers necessary to obtain a druggist's permit. Thus are the rigors of the prohibition law in North Dakota toned down now and then.

W. A. NELDEN.

W. A. Nelden, president of the Nelden Drug Co. of Salt Lake City, Utah, who recently committed suicide, owing to financial reverses, was born at Milford, N. J., in 1852. He went to Salt Lake at the age of twenty-six and was identified with the drug business ever since. With Bolivar Roberts, he organized the firm of Roberts & Nelden, in 1884. In 1892 he bought out the interest of Mr. Roberts and a year later incorporated as the Nelden-Judson Drug Co. This business increased from

THE LATE W. A. NELDEN.

\$60,000 to \$500,000, until a year ago, when Mr. Nelden sold out to Edward C. Smith, L. M. Smith and others, of St. Joseph, Mo. Two months later he had opened a wholesale house under the name of the Nelden Drug Co., his share in which he recently sold out.

Mr. Nelden was a prominent and public-spirited citizen of Salt Lake. He leaves a wife, a daughter and two sons.

OBITUARY.

E. H. Griffith, a well-known druggist of Tyler, Texas, of paralysis.

—John L. Krummell, the oldest druggist of Circleville, O., of heart disease. He was a prominent Knight Templar and a member of the Elks.

—Frederick J. Kellenberger, Pittsburg, Pa. Twenty years ago he opened a drug store at 108 Fulton street. He was married in 1863 to Miss E. M. Tipton, of Gettysburg, Pa. He is survived by his widow and one son.

—Frances Beach Gregory, of Buffalo. She was the widow of the late Willis L. Gregory and mother of Dr. Willis G. Gregory, of the State Board of Pharmacy and dean of the Buffalo College of Pharmacy. Mrs. Gregory was born at Barrington, Mass., September 8, 1824, and died at No. 1268 Main street, Buffalo, February 17, 1905.

—Louis B. Gehlbach, at New Orleans, aged forty-five. Mr. Gehlbach was born in New Orleans, and for many years was a prominent druggist. He was a member of the legislature in 1892, and his work in that session has not been forgotten. He was a member of the Lusitanian Portuguese Benevolent Association, the Chalmette Tickwick Association and the Royal Benevolent Association.

EXAMINED IN NEBRASKA.

Superior, Neb., Feb. 26.—The examiners to the Nebraska State Board of Pharmacy met at Lincoln, February 7, 8 and 9. A class of forty took the examination, twenty-six of whom were successful, as follows: Geo. E. Anderson, Omaha; Fred M. Attebery, Ashland; John D. Beck, Omaha; A. R. Chapman, Lincoln; Bertha D. Crawford, Belvidere; Jas. K. Davison, New Castle; Geo. L. Endres, Omaha; Ralph W. Green, Elmwood; Geo. J. Haller, Blair; Francis C. Hedges, Fairbury; Wilbur W. Lupton, Omaha; Miss E. O. Martin, Bellwood; W. E. McClung, Nebraska City; Wm. T. Miltonberger, Broken Bow; John Ross Neal, Jr., Springfield, Ill.; Harvey E. Poole, Emerson; Lester S. Pope, St. Paul; P. E. Ryerson, Broken Bow; David Simus, Alma; Louis F. Sobeslavsky, So. Omaha; W. F. Solt, Humphrey; Frank A. Stava, So. Omaha; Wm. B. Warrington, Bender; Edward E. Whitten, Abilene; Reginald M. Wildish, Aurora; Ben G. Worthing, Overton.

John Ross Neal, Jr., Springfield, had the highest average, his rating being 87.2, and Miss Bertha Crawford was second with an average of 86.6. The class as a whole was one of the best ever examined by the State Board.

The next meeting of the Board of Examiners will be at Beatrice, May 9, 10 and 11, the examination being on the 10th.

LE MAIRE CO.'S NEW BRANCH.

Wichita, Kans., March 4.—The Le Maire Perfume Co., of Paris and Chicago, has opened a branch in this city, which is in charge of S. E. Mayse. It is the intention of the company to supply the Kansas and Oklahoma trade from Wichita.

SPRING.

A LITTLE BUD
A WELCOME SHOWER

A STURDY PLANT
A FRAGRANT FLOWER

A LITTLE SHOP
A WELL WRITTEN AD

AN INCREASED TRADE
A HEART MADE GLAD

PENNSYLVANIA EXAMS.

Harrisburg, Pa., Feb. 27.—Of those who took the examination at the Philadelphia College of Pharmacy, in Philadelphia, January 15, the following passed:

Registered Pharmacists: Jos. J. Williams, Conshohocken; John J. Brallier, Berks; Geo. W. Wilson, Frank E. Goulden, both of Wilkesbarre; Wm. T. Moore, Crafton; Joseph A. Ames, Maderia; Harry F. Plum, Bellefontaine, O.; John S. Davis, Oscar J. Reynolds, both of Scranton; Jos. M. Cosgrove, Shenandoah; Carl E. Schmidt, Canton, O.; Harry H. Searl, Clifton Heights; Frank Hohmeyer, Jersey City, N. J.; H. T. Richards, Coatesville; Eugene M. Schieb, Bethlehem; George Ralph Schrader, Johnstown; Jos. Alex. Shroen, C. M. Miller, both of Carlisle; James D. Condra, Titusville; Wesley C. Mast, W. Howard Swartz, both of Reading; Jos. L. Wade, Powell Hampton, both of Bridgeport; C. E. Householder, Windler; Carl C. Schomo, Hamburg; Lewis J. F. Welch, Eldred; Gustave Aicher, Erie; Lloyd E. Goss, Lewisstown; Frank W. Carl, Lehighville; L. E. Hyres, Northumberland; John B. Oellig, Altoona; Geo. H. Summers, Etrick; Ray D. Gilliland, Snow-Shoe; John C. Lehman, Williamsport; Andrew E. Spalding, Troy; Benjamin F. Bowersox, State College; Jos. Howard Honk, Purchase Line; Winfield H. Miller, William Henry Gross, both of York; Monroe E. Zephyr, Lancaster; Horace W. Givens, Camden, N. J.; Abraham Zingher, New York, N. Y.; Franklin A. Butten, San Jose, California; Richard H. Ottman, Lead, South Dakota; W. H. Webber, Pittsburg; Elizabeth Davis, Mary J. Lauter, Esther J. Berman, J. Fiske Smith, A. F. McNeerney, John B. Spencer, Tilden B. Borden, Lewis E. Boesser, Minnie E. Assala, Harry W. Dundore, Benj. Ulaniski, William McCouch, Jr., Edwin Thayer, Chas. H. Hargreaves, Gilbert March, Frank H. Holzschuh, John R. Rippetol, Benj. M. Lum, Ralph Wimentz, Wm. S. Lank, Will E. Lucas, Theodore Rosenorn, William A. Lum, Chas. K. Todd, all of Philadelphia.

Registered Qualified Assistant Pharmacists: C. Victor Miller, James C. McAllister, Charles L. Lyter, all of Harrisburg; Charles H. Fry, Pottstown; Frank W. Schaefer, Allentown; Wilmer C. Dreibelbis, Lehigh; W. Raymond Klapp, Womelsdorf; William L. Bender, Ashland; Guy L. Fritch, Shamokin; J. Shear, Howard L. Irvin, Phillipsburg; Lewis M. Shaul, Howard J. Baer, both of Lancaster; Albert H. Owens, Lost Creek, George Henry Troxell, Swathmore; Roy E. Martin, Newburgh; Karl L. Bosch, Erie, Harry J. Weightman, Greensburg; C. Covel Day, Coatesville; Walter L. West, McKeesport; Edward S. Thomas, DuBois; Alex. C. Cameron, Edward Harris, both of Allegheny; Charles H. Leniger, Danville; James E. Stouffer, Dawson; Jesse George Cable, Pottsville; Percy A. Coles, Mansfield; Erma D. Eadie, Berwyn; Edward T. Shaefer, York; Wilbur B. Good-year, Carlisle; James D. Eisenhower, Carlisle; Samuel S. Butler, Swedesboro; Seth S. Sawtelle, Elmira, N. Y.; John T. Kinney, Phillipsburg, N. J.; William C. Haines, Mullica Hill, N. J.; William C. Hoffman, Trenton, N. J.; Fred B. Kelly, Salem, N. J.; John F. Sweeney, Atlantic City, N. J.; John F. Mackay, Vineland, N. J.; G. O. Hancock, Asbury Park, N. J.;

G. O. Hancock, Asbury Park, N. J.; Charles W. Hanson, Norwich, N. Y.; John A. Whare, Jr.; Syracuse, N. Y.; Garfield March, Bellefontaine, Ohio; Fred Plum, Bellefontaine, Ohio; John C. Emerson, Carthage, Miss.; J. A. Worthington, Billingsham, Washington, D. C.; Benjamin L. Fuser, Booneville, Miss.; Ancy L. Baskin, Florence, S. C.; P. A. Miller, Fullerton, Neb.; C. W. Schweitzer, Indianapolis; Roy Hastings Brown, Amherst, Nova Scotia, Canada; John J. Mullen, Elmer H. Bohst, Ralph A. Forrest, Reed L. White, A. Benjamin, Morris Herson, J. Elwood E'we, John P. Lousdorf, Walter T. Butler, Paul G. Weston, Leonard Hughes, Walter H. Orrick, Charles A. Monaghan, George E. Hitzelberger, Harry E. Klingman, Philip A. Cohen, M. M. Becker, William E. Sanders, Henry S. Fitch, Max M. Keyser, Gabriel R. Cardt, Frank C. Taylor, Celia J. Lubin, all of Philadelphia, Pa.

The next meeting of the board for the examination of applicants for registration will be held in the High School, Harrisburg, Pa., and the Pittsburg College of Pharmacy, Pittsburg, Pa., on Saturday, April 15, 1905. All applicants for registered pharmacist's certificates must make application to the secretary, Chas. T. George, for blanks and instructions, not later than ten days before the examination.

REGISTERED IN KANSAS.

Ellsworth, Kans., March 2.—The fourth quarterly meeting of the State Board of Pharmacy was held at Wichita, February 15. All members of the Board present. There were fifty-six applicants present to take the examination, of which there were thirty-eight passed and registered. Following are the names of those who were successful: C. E. Annabell, McPherson; J. E. Atwood, Utica; Ross H. Beem, Herington; Galen Burriss, Burdette; Florence B. Craik, Oketo; L. E. Chase, Neodesha; George Cole, Wichita, W. B. Campbell, Galeana; R. G. F. Eyth, Abilene, Walter S. Foster, Concordia; L. P. Galbraith, Neodesha, Oliver C. Holmes, Parsons; Clydes G. Hoshaw, Chanute; Ed Hardenbrook, Oketo; Maurice S. Ingalis, Halstead; Joe J. Kowalski, Emporia; Iris J. Kinyon, Bern; Robt. J. Long, Beloit; I. W. Morgan, Augusta; Chas. F. McNair, Eskridge; J. L. Mathis, Greensburg; G. Ivan Pohok, Pittsburg; E. L. Porter, Wichita; Bessie Powers, Topeka; Roy M. Riley, Wichita; J. W. Rutherford, Pittsburg; Delton Sparr, Conway Springs; Percy Stevens, St. Johns; Edna K. Somers, Latham; F. K. Smith, Abilene; Wm. K. Smith, Newton; Jos. C. Sanders, Wichita; Clay Thom, Altoona; C. W. Thompson, Wichita; Geo. W. Wilson, Caney; N. G. Witchey, Winfield; Harry E. White, Oketo.

Assistant Pharmacist: O. J. French, Wellington.

The following were registered during the quarter by virtue of being graduates of recognized schools of pharmacy: J. Floyd Tilford, Olathe; W. P. Brown, Alma; Alphonso T. Kridler, Arkansas City; John I. McGeorge, Argentine; Cecil F. Wiswail, Sabetha. Following are those whose names were restored to the register during the last quarter: E. W. Ething, Moline; A. L. Ross, Chanute; Harry L. Hauley, Rock Creek; O. L. Cooke, Wraydette; Aug. A. Meyer, Alma.

The next regular meeting of the Board of Pharmacy will be held at Junction City, May 25. These examinations are held four times a year, in different sections of the State. The members of the Board are: R. L. Atery, president, Hutchison; W. E. Sheriff, secretary, Ellsworth; W. W. Taylor, treasurer, Holton; C. L. Becker, Ottawa; Fred A. Snow, Topeka.

DRUG BUSINESS SOLD.

Wilton, N. Dak., March 4.—P. C. Remington & Co. have sold their drug store to A. P. Lenhart, of Washburn. The purchase price was \$14,000. Mr. Remington purchased the business in 1890, and has established a store the citizens have been proud to refer to as one of the best in the Northwest. Mr. Lenhart has been in the drug business in Washburn for the past four years. He was for several years in the employ of Mr. Remington.

GUN COTTON EXPLODES.

Pittsburg, March 4.—An explosion of gun cotton, caused by James McCann, proprietor of a drug store at 804 Penn avenue, Wilkinsburg, trying to remove it from a bottle, blew off two fingers of his left hand, cut his face and head with glass splinters and did \$400 damages to the store. The concussion knocked down scores of bottles from the shelves and broke flasks in all parts of the store.

A MARRIAGE NOTICE.

謹啟者今回與田家三
長女千代子之結婚生儀
右仰通知申上候何事將
來此為同様の仰交下
一給上夜奉願上候
敬具
一月十日 塩原又策

A translation of the above is appended: Colonel E. W. Fitch and Madame Fitch: I take pleasure in informing you that I have married with Miss Chikio, the eldest daughter of Mr. Shozu Okuda, and I beg you to give her equal courtesies and friendship that you have bestowed upon me.

January 11, 1905.
(Signed)

MATASAKU SHIOHARA.
Mr. Shiohara is manager of the Tokyo branch of Parke, Davis & Co. His letter to Colonel Fitch is one of several received by the New York house. The translation is by Dr. Takamuni.

PHILADELPHIA C. OF P. FOOTBALL TEAM.

The Philadelphia College of Pharmacy last season was represented by the strongest football team in its history. The players reading from left to right on the upper

row are as follows: Bossler, Manager Gilliland, Shiffer, French, Eckhardt, Sweeney, Assistant Manager Whitney, Bradshaw; middle row, from left to right,

Yoerg, Captain Wagner, O'Brien; lower row, left to right, Myers, Lehman, Dawson, Kurtman, Spalding, Schwenzer, McIntyre.

ONTARIO COLLEGE OF PHARMACY.

Toronto, March 6. The council of the Ontario College of Pharmacy closed its semi-annual meeting in this city, last week. The registrar-treasurer reported a most prosperous year, with a cash balance of \$16,000. The balance of assets over liabilities amounted to more than \$76,000, which is an increase of \$7,000 over the last term. The report also showed more students present than there were in 1901, more men having surmounted the higher standard now required for admission. The college building is valued at \$35,710.48, and the apparatus \$9,196.75.

The report of the John Roberts scholarship showed a balance on hand of \$3,339.60. The question of extending the course was discussed, the present course of one year being regarded by many educators as too short to properly train pharmacy students for the duties expected of them. The matter was placed in the hands of a committee, which was instructed to secure the necessary amendments to the pharmacy law, particularly the insertion of a clause which adjusts the apprenticeship term to meet the requirements of the change which reduces the term to be served in practical experience with a preceptor to three years and adding one year to the college course, making in all five years.

Another subject which came up for discussion was the question of seeking to have the senate of Toronto University recognize college of pharmacy degrees as part of the qualification required on the medical course. R. A. Harrison, of Dunnville, stated he believed that formerly Trinity Medical College allowed one year on its course to graduates of pharmacy, who were thus enabled to read for their degree in medicine in about three instead of four years. It was claimed that some

time should be allowed, as under the present Act graduates in medicine are allowed to conduct drug stores. The druggist, to become qualified, must serve an apprenticeship of four years with a competent druggist, and attend the college of pharmacy for a session, and he has a far superior training in chemistry, materia medica and allied subjects than the graduate of the medical college. It is likely the corporation of Toronto University will be asked to recognize the degrees of pharmacy in the subjects covered by it in the medical course.

KANSAS CITY COLLEGE OF PHARMACY NEWS.

Kansas City, March 2.—The Alumni Association of the Kansas City College of Pharmacy has decided to hold its annual ball for the graduates on March 30, at the New Casino. Many out of town alumni have signified their intention of being present. Walter A. DeGraw, '04, West Moreland, Kan., is the first member of the association to take advantage of the life membership clause. A check for \$10 last week made the secretary happy.

Mac Allaman, of Topeka, Kan., is with the Juniors again, after a month's illness.

Mr. and Mrs. D. V. Whitney entertained the seniors on the eve of January 24. In a guessing contest Nick Hunter won first prize and B. E. Eoff, second.

Alkaloidal assays are keeping the seniors busy.

SOUTHERN DRUGGISTS MEET.

Savannah, Ga., March 1.—A meeting of the South Atlantic Drug Club was held here last week, and rates were adopted for the sale of staple goods. Dr W. J. Merry, of Charleston, presided over the meeting, at which were representatives of wholesale firms of Georgia, North Carolina and South Carolina.

AMERICAN CHEMICAL SOCIETY.

The New York Section of the American Chemical Society will hold its sixth regular meeting to-morrow evening, March 10, in the American Museum of Natural History, at Seventy-eighth street and Central Park West. The programme for the evening is as follows: Morris Loeb and F. S. M. Pederson, "The Vapor Friction of Isomeric Ethers"; A. C. Langmuir, "The Iodine Absorption of Rosin and Shellac"; William Melville and Alfred H. White, "Decomposition of Ammonia at High Temperatures"; A. A. Breman, "Mineral Waters at the St. Louis Exposition"; George F. Kunz, "The Radium Exhibits at the St. Louis Exposition."

Owing to the distance between the place of meeting and the Savoy Hotel, the usual informal dinner will be omitted.

VALUABLE PUBLICITY GRATIS.

Scott & Bowne, the manufacturers of Scott's Emulsion, are pursuing a very active, and what has proved to be an effective campaign of advertising in the interests of the druggists throughout the United States. The plan adopted is one that is certain to bring good results to the retailers who have enjoyed this publicity. The work is done without a cent of cost to the druggist and the placing of the work is done entirely by Scott & Bowne. This relieves the retailer of both labor and expense. The many druggists who have taken advantage of Scott & Bowne's offer are delighted with the way it has helped their business. It is the intention of the manufacturers of Scott's Emulsion to follow out this campaign until early summer and probably again in the fall. Druggists who have not yet had any correspondence with Scott & Bowne in reference to this publicity should not delay in writing them and getting in line.

AMONG THE BOWLERS

MERCK TEAM FORFEITS TWO.

The bowling in the Wholesale Drug League, on Monday night, resulted as follows:

Dodge & Olcott	725
Merck & Co.	Forfeited
Parke, Davis & Co.	834
National Lead Co.	811
National Lead Co.	818
Bruen, Ritchey & Co.	820
Parke, Davis & Co.	826
Bruen, Ritchey & Co.	666
Lazell, Dalley & Co.	800
Merck & Co.	Forfeited
Lazell, Dalley & Co.	725
Dodge & Olcott	781

The Merck team had only two men bowling. The standing to date:

	High	Won.	Lost.	Score.
Parke, Davis & Co.	17	1		895
Colgate & Co.	16	4		912
Whitall, Tatam Co.	14	4		868
Landman & Kemp	12	6		886
Seabury & Johnson	10	8		896
Roessler & Hasslacher ..	11	9		948
Dodge & Olcott	10	10		849
National Lead Co.	7	11		828
Sharp & Dohme	8	12		809
Bruen, Ritchey & Co.	5	15		813
Lazell, Dalley & Co.	4	16		848
Merck & Co.	0	18		772

BRAUER LEADS WITH 223.

Baltimore, March 4.—The Bailly and Sharp & Dohme teams, of the Drug Trade Club bowlers, showed up strong this week. Various scores of 200 and over were made. Brauer, of James Bailly & Son, heading the list with 223. This team with that of Sharp & Dohme, ran a close race, last Tuesday night, getting an average of 852½, against one of 840½ for Sharp & Dohme. The results of the week were as follows:

James Bailly & Son ..	872	853	832
Sharp & Dohme	854	882	785
Davis & Davis	788	794	842
Armstrong Cork Co. ..	651	723	748
McCormick & Co.	826	738	824
Calvert Drug Co.	635	622	646

TWO MORE FOR TABLETS.

St. Paul, Minn., March 4.—The Tablets, of the Drug Clerks' League, took two games in the play of March 2, the score standing:

Tablets	744	852	745
Lillis			199
Pills	726	729	794
Bodsgaard			200

When the Druggists' League bowled March 3, the Mortars were the tallenders. Two games went to the Spatulas and the other to the Pestles. The score:

Spatulas	761	826	759
Everett			200
Pestles	726	681	797
Jelinek			189
Mortars	699	737	763
Lundborg			191

MAKES A SCORE OF 299.

The biggest score ever rolled at Terrace Garden and one that has seldom been equalled and very rarely beaten, was made last Friday afternoon, by Karl Schnackenberg, of the West Side Bowling Club. In the course of a ten-pin game, he made eleven strikes in succession. At the twelfth ball, nine pins fell, making a total of 299. In honor of the occasion "Schnucky" set 'em up for the crowd, who sang, "Hooh soll er leben" in no uncertain measure.

P. D. LEAGUE CLOSES SEASON.

Detroit, March 6.—The Parke, Davis & Co. Interdepartmental League has closed its most successful season since the league was organized. Some excellent bowlers have been developed, and when the Parke, Davis team of New York meets the Detroiters they will know they have been up against the real thing. The league had a long list of magnificent prizes which were awarded Saturday night. Parke, Davis team No. 1, in the Drug League, had the three highest bowlers in the Interdepartmental League, Smith, Snyder and Lawrence, whose average for the sixty games played was 178, 173 and 172 respectively. Here are the season's results, with the prize winners and some of the individual averages: Smith, 178; Snyder, 173; Lawrence, 172; Helme, 166; Paige, 161; Stewart, 161; Phelps, 160; Ames, 160; McFadden, 160; Popkins, 159.

Total pins and games won and lost:		
Chemical	46,162	33 27
Scientific	46,000	34 26
Patent	45,824	33 27
General Business	45,770	35 25
Mechanical	45,707	25 35
Pharmaceutical	44,586	20 40

The prize winners are as follows: Total pins (team), Chemicals, G. W. Mutter, captain; James Wilkie, A. R. Mendenhall, A. Maunder, J. E. Smith. Consistency (team), Mechanical, H. J. Lawrence, captain; H. M. Ferry, D. Reid, W. G. Nowell, T. W. Perkins. High average (individual), W. G. Snyder. Consistency (individual), E. Popkins. Improvement (individual), N. Worthy. High average strikes (individual), A. W. Helme. High average spares (individual), H. B. Phelps. Special contest No. 1, C. C. Milburn, silver-mounted pipe. Special contest No. 2, W. G. Snyder, silk umbrella.

The regular prizes are silver cups, inscribed, and are donated by executives of the Detroit and Walkerville offices.

In the Drug League tournament last week, no less than seven of the players rolled in the 200 class. As the season closes, it is seen that the champions of last year will again carry off first prize. Interest is now centered on the fight for second place, the contest being a close one between Michigan Drug and Parke, Davis No. 2. The scores:

Michigan Drug Co. ..	904	848	888
Carlisle			215
Nelson, Baker & Co. ..	839	870	742
Schroeder			209
Parke, Davis, No. J. ..	825	801	869
Smith & McDonald ..			202
F. Stearns & Co.	757	843	791
Haggerty			185
F. F. Ingram & Co. ..	719	837	782
Cosgrove			225
Parke, Davis, No. 2. ..	759	843	737
Harry			225

A CARD INDEX SYSTEM.

Designed and Successfully Used by
Mr. A. W. Dows, of Lowell.

TWO CO-OPERATING SYSTEMS.—LOCATION OF GOODS IN THE STORE, COST AND SELLING PRICE ON FIRST.—THE SECOND RECORDS THE PURCHASE AND DETAILS OF EVERY PROPRIETARY AND PACKAGE ARTICLE BOUGHT.—TIME AND MONEY SAVED TO THE RETAILER BY SUCH A SYSTEM.

That a card index system is of great value to a druggist is a certainty. To be sure, there are systems and systems, some of them too cumbersome to be really useful. It was of one of these latter that a manufacturer recently said: "No more card system for me. I put one into my factory a year ago—a cost system. Every job going through is entered on seven separate cards. Not one of my workmen can blow his nose without recording it on a card. I've taken on two extra clerks to keep the thing running; and it's just as hard to-day to get the facts I want as it was a year ago."

That manufacturer's system needed systematizing. An expert showed him eventually how to combine his seven records into one and get all the facts he wanted in most concise and intelligible shape.

A GOOD CARD SYSTEM.

But The Era proposes to outline a good, simple system—a system which is of great use to a druggist. It is not a patented system, as the following letter from its inventor, Mr. A. W. Dows, will explain. It has stood the test of actual usage splendidly for years. It was presented to the attention of The Era in this letter from Mr. Dows.

Lowell, Mass., Jan. 30, 1905.

Editor The Pharmaceutical Era:

I have read with much interest your article in the 22d December issue of The Era, entitled, "The Druggist's Inventory." In addition to the fact stated that "a card index system saves time" you might have as truthfully stated that it saves much money. In the year 1900 the writer was attempting to run three stores practically single handed. The possible use of a card system presented itself, and a temporary system was quickly installed, in so far as it related to the cost of goods, their selling prices and location in the store. Its value was soon demonstrated and a second system was installed January 1, 1903, covering the purchase and recording of every proprietary and package article bought, which was entered upon cards like the enclosed blue ones. At the same time goods bought in bulk were entered upon white cards like those enclosed.

SAVED TIME AND MONEY.

It is just two years since this last system was introduced, and to say that it is valuable is putting it mildly. One might think it would be hard work to enter every item upon cards. It is not. In my own case they are all entered, even to the daily paid outs for articles borrowed from other druggists, and are entered by me alone. It is true that the lady bookkeeper has access to the cards for the purpose of making out bills, etc., but it is actually necessary for the buyer to keep tabs upon

goods purchased. I claim that more is saved, and hence more earned, by keeping track of how fast goods are moving than by looking after the cash register. I employ a trusted person to look after all the cash accounts, registers and general bookkeeping, and pay very little attention to that end of the business.

Should any of your readers have made inquiry for sample cards, I would be pleased to furnish them upon receipt of stamp. Some cards, as you may note from the enclosed which have passed their usefulness, are filed so rapidly that another card is started containing the former account condensed. Other cards may last ten years. A card system is expansive anyway, and that makes its worth. Can the average druggist tell what chemicals are decreasing in sale or use? Can he tell what are increasing enough to warrant their purchase in larger lots? A card system is sure to tell. The enclosed style of cards are entirely my own design, and not in use anywhere else that I know of, but I should not patent them. The use of the same or similar will be prohibited. Very truly,
Azw. M. Dows.

THE FIRST CARDS.

Each style of card enclosed by Mr. Dows is reproduced herewith in this article. Reference to his letter will show that Mr. Dows speaks of two systems. The first of these inaugurated is to keep track of the cost of goods, their selling prices and location in the store. These cards are made of serviceable white cardboard. Their dimensions are five by three inches. They are notched on each side about half an inch from the bottom, in order to fit into the guides in the draws of a filing cabinet.

Wood, C. I. & Co.	QTY	UNIT	PRICE	TOTAL
Sarsaparilla	5	4	2.75	13.75
Tooth powder small	11	3	1.75	19.25
" " large	5	5	2.00	10.00
Pills	22	2	2.00	44.00
Total	8	3	4.50	36.00

NO. 1.

Our first illustration shows one of these which has actually been in use. The horizontal lines on the original are in blue and the second from the top rule line is in red. It will be seen that the card is to indicate first of all, location of the goods in the store; next, cost per dozen; and lastly, the retail selling price. This particular card has been devoted to the goods manufactured by C. I. Hood & Co. The sarsaparilla, it appears is located in section 6 of the store, on shelf 4; its cost per dozen is \$8.75; and it retails for eighty-three cents. Mr. Dow states, "This card is for the clerk's use in marking and putting away goods." The reverse of all the cards is ruled in the same manner, but it is explained that the reverse "cannot be used unless the other side is spoiled."

QUANTITIES AND COSTS.

The second section of this first system requires white cards somewhat larger than the first. In the present case they are 5 1/2 x 3 1/4 inches. Our second illustration shows their plan. They are to record the purchase of goods, quantity and cost. First comes the date of purchase, then the name of the firm from whom they were bought, then the quantity, and finally the price paid. Columns are left for the rate of discount, cash discount, the f. o. b. terms, and the wholesale figures, if any.

In this sample card the purchases of morphia sulphate are recorded. The first item shows, "bought June 16, 1904, from the Hongland Co., five ounces of morphia sulphate at \$2.40 per ounce." The reverse of the card is exactly the same. When one side is filled the other can be used. Mr. Dows informs us that this card was actually in use five years and the entries on the other side, not shown in the cut, proves it so. When one year has expired, the average quantity and price on purchases for the year is computed and the result entered on the card. A glance shows the epitome of transactions for years past.

Morphia Sulphate	DATE	QTY	UNIT	PRICE	TOTAL
				AVERAGE	
6	16	5	0.24	1.20	6.00
7	1	2	1/2	1.25	2.50
8	15	4	Eastern Drug Co.	3.00	12.00
9	12	1	Blakely	1.25	1.25
10	7	1	Gilman Bros	2 1/2	2.50
11	6	1	"	2 1/2	2.50

NO. 2.

Of the same size, but without the ruled columns, is another style of white card, which completes the units for a variety of purposes, such as addresses, in which case one card is allotted to each letter. It is also of use in recording discount terms of various firms.

BULK PURCHASES.

We now come to the second system, inaugurated by Mr. Dows in 1903. This covers the purchase and recording of every proprietary and package article bought. Our last two illustrations reproduce these cards. They are of blue cardboard, 5 1/2 x 3 1/4 inches.

The first records the quantity of goods bought and the date. It will be seen from the illustration that 1/2 gross of sarsaparilla was purchased from C. I. Hood & Co. on January 10, 1904; 1/4 gross on March 5, and 1 gross on June 1. The advantage of this record is obvious. It enables the druggist to accurately know which goods are increasing in sale enough to make larger quantity buying profitable, and which are falling off in sale, so suggesting smaller purchases.

Wood, C. I. & Co.	DATE	QTY	UNIT	PRICE	TOTAL
Sarsaparilla	10	1	1/2	12.00	12.00
Tooth Powder					
" " large					
Pills					
Tooth powder small					
" " large					
Lotion					
Flavor					
" Bleach					
Polish					

NO. 3.

The last card is ruled for two uses. It simultaneously records the quantity, size, price, discount and date of bulk purchases of proprietaries and package goods. Here we find entered the fact that on January 10, 1904, four dozen of Swamproot, large size, were bought, costing \$8.00 per dozen, at 10 per cent. discount and also that 3 dozen of the small size of the same article were secured at \$4.00 per dozen, with 10 per cent. off.

SEVERAL SIZES AT ONCE.

Plainly this card is a great convenience, for it permits the separate entry of several sizes or grades of the same goods which are bought on the same date.

The reverse of these cards is also usable after the front face has been filled. As Mr. Dows so truly says, the whole system is expansive. Expansion is one of the chief merits of a card index system. And yet any one entry concerning any article can be found with surprising quickness. Again the economy of space is remarkable. The same information entered in books would take up much more room.

Elmer's Co.	DATE	QTY	UNIT	PRICE	TOTAL
Swamproot	10	4	doz	8.00	32.00
U. S. G. Oint					
Parilla					
Ocean Stead					

NO. 4.

Any druggist may require some special variations of the system to meet the peculiar requirements of his business, but the very necessity for these suggests the proper way of caring for them. New ideas can easily be incorporated in the system without disturbing the general scheme or expanding the amount of space required or the expense to any considerable extent.

Mr. Dows explains in his letter that he will permit the use of this plan by others.

The system will save time and money and will show in a moment accurate statements of facts. Besides, the use of the card index always has a comfortable feeling of confidence, knowing that he has the salient points of his business literally at his fingers' ends.

EMPYROFORM.

Dr. F. Kornfeld, assistant at Prof. von Fritsch's Polyclinic, Vienna, has just made public some interesting clinical results he has obtained from the use of empyroform in his own dermatological practice. The treatment with the drug embraced a whole series of the most varied chronic eczemas with good results and no relapses. Empyroform is said to be a condensation product of birch tar and formalin, but in contradistinction to tar, it causes neither local irritation nor systematic intoxication. In Dr. Kornfeld's tests, noted above, the most satisfactory results were obtained from a 5 to 20 per cent. empyroform-vaseline ointment, a 5 to 20 per cent. empyroform-Lassar's paste, a 50 per cent. empyroform-vaseline paste, and a 5 to 15 per cent. liniment. Another combination found to be of much value was a "paint" of empyroform, 1/2 ounce; French chalk, 2 1/2 drams; glycerin, 2 1/2 drams; distilled water, 5 drams. Literature on empyroform will be supplied to the trade on request, by Schering & Glatz, 58 Malden Lane, New York, and the druggist should get posted.

BARON IAOTO AT PROCTOR'S.

Baron Iaoto, one of the richest Japanese in the world, who is now touring America, occupied a box at Mr. Proctor's Fifth Avenue Theatre a few weeks ago, and was much pleased with the performance of "The Silver King" that was given that week. He particularly applauded Mr. Edwin Arden, Miss Isabelle Evesson and Mr. James E. Wilson, who played the leading roles. The "Little Brown Men of Japan" are a really wonderful people, and are trying steadily to become familiar with American customs and manners.

SPRING IS HERE !

The signs are all apparent; boys are playing marbles on the sidewalks; baseball is a subject of conversation; Spring poets have begun to effervesce;

Soda Fountains Are Beginning To Fizz !

Time to clean up the Fountain and get everything in order for a new season, especially if you serve Soda Water the year round.

A special opening day announced in advance is a splendid idea! It is a good advertisement, attracts attention and draws new trade. The opening of the Soda Water season comes with a sense of fresh novelty to many people who watch for it with interest. The first fountains to open are sure to do a large business and will hold a large portion of the new trade thus attracted.

Are You Ready For The Rush ? How is Your Stock ?

YOU CAN HAVE NO BETTER GUARANTEE OF SUCCESS THAN TO USE

“True Fruit” Fountain Requisites

Made on honor, sold on merit, and guaranteed to give the highest satisfaction.

There are other lines, it is true, *BUT*

• If you have used the rest,

Now try the *best*.

While we lay the greatest emphasis upon the superior quality of our goods, we can prove to you that they will *cost you less* money than other lines!

Send in your order immediately so as to secure prompt shipment, as our factory is taxed to the utmost to keep up with our orders.

J. HUNGERFORD SMITH CO., Rochester, N. Y.

This is the card of FLEXIBLE NAIL FILES we want to sell you for \$1.75, postage prepaid.

There are one dozen files on this card—no two exactly alike. One-half of them are finished in blued steel handles, the other half are finished in polished nickel plate.

Part of them are made with cleaner—the others have file all the way to the end.

All of them are made of an exceptionally fine steel, carefully tempered and cross cut. They will bend like a fencing sword and come back to perfect shape. The sizes are also assorted.

In fact, if you will order this card of files, you will have an assortment from which *any* customer wanting a *good* file, can make a satisfactory selection.

Remember, we *mail* this card to you promptly upon receipt of order.

TRADE SECTION

GROWING MEDICINAL PLANTS.

Work of the San Francisco Garden Explained by Dr. Schneider.

The Alumni Association of the College of Pharmacy of the University of California held its semi-annual meeting on December 9, 1904. On this occasion a number of exceedingly interesting papers were read, among them one by Albert Schneider, M.D., Ph.D., on "Vacation Work of 1904."

The third topic treated in this paper was the San Francisco Garden of Medicinal Plants. In The Era of January 5, the marked scarcity of indigenous medicinal plants was shown and the progress of experiment work in cultivating such plants. The garden of medicinal plants of San Francisco is a field of such effort, and Dr. Schneider's paper dealing with its work, is of decided interest. We therefore give this portion of his treatise:

WORK BEGUN YEAR AGO.

"The field work of the garden was begun in March, 1904. Seeds were supplied, and about three hundred and fifty species of medicinal plants are now in the grounds set aside by the Park Commissioners. The garden-culture work was in charge of Charles Mitchell, who has prepared a report for the season of 1904, a copy of which is in the college library.

"The writer, as chairman of a committee on botanic gardens, representing the College of Pharmacy, has prepared a fairly complete report embodying tentative suggestions with regard to organizations, management, etc., of the proposed garden. This report is in manuscript only, and is in the hands of the committee for further consideration. In this report the significance and importance of gardens of medicinal plants is fully set forth. The following are a few of the more important features with regard to the growing of medicinal plants in the State of California.

"Persistent and scientifically conducted efforts should be made to cultivate cinchona in California. These trees are of great value, yielding the quinine which is the great malaria cure, besides having other remedial powers. The United States each year spends millions of dollars for the bark of the tree for quinine which is imported. The successful cultivation would not only mean a saving of these millions, but would be the means of opening up the necessary industries to grow the plants, collect and prepare the bark, manufacture the quinine and other derivatives, thus giving employment to thousands.

"Cinchonas require a moist, uniform atmosphere, not too warm nor too cold. A dry atmosphere is fatal. A single plant of cinchona grown in the Berkeley Botanic Garden survived seven seasons in the open when it was killed by a single unusually dry "norther." The State should

set aside a special appropriation of from five thousand to twenty-five thousand dollars in this attempt. Seeds as well as plants of the more hardy species should be imported from South America, Japan, India and other countries where cinchonas are now successfully cultivated, and planted and transplanted in the most suitable localities in the State, as certain hillsides along the coast, especially in the northern portions of the State, where the necessary conditions of atmospheric moisture are favorable.

THE COMMERCIAL SIDE.

"About ninety per cent. of all medicinal plants may be grown in the State, which, however, does not imply that they may all be grown profitably. To make such cultivation profitable, the plants must first have a ready market, and must be grown, collected, garbled, dried, and otherwise prepared on a large scale. The small grower cannot compete with the European grower. To illustrate: Digitalis, aconite, marribium, hemlock, and many other introduced medicinal plants are common in California, yet the San Francisco wholesale drug houses import these vegetable drugs largely from England, simply because the English workman can do the work so much cheaper than his American brother. This condition can be met successfully only by growing the drug yielding plants on a large scale. In fact, it is only by this method that the American farmer can compete with the European farmer. There is absolutely no obstacle in the way of attempting this cultivation of medicinal plants on a large scale. All that is necessary is for some one with the required energy and determination to make the beginning. American wholesale drug houses will purchase vegetable drugs from American growers just as soon as the article placed on the market by these growers is proven to be of good quality and the price is no higher than that of the European article."

STAND AGAINST JEWELRY CO.

Several druggists of Jersey City, N. J., have so far held their own against the jewelry firm which seeks to enforce contracts which the druggists have found unprofitable and unsatisfactory. A mutual agreement to stand together and employ legal aid, was gone into by half a dozen of the pharmacists. So far the jewelry company's end has been taken up by three successive lawyers, who each dropped the case after a short experience.

DRUGGIST FOR COUNCILMAN.

Anniston, Ala., March 4. Dr. J. L. Wike, the pioneer druggist of this city, has been nominated for councilman. Dr. Wike came here twenty-five years ago, when the site of the present city was farm land.

Most of the drug stores in Lansing, Mich., are displaying cards notifying customers that on account of the high price of glassware, it will be necessary after March 1 to charge for bottles.

END OF GLYCERIN COMBINE.

English Firms Terminate Agreement Owing to Dissensions.

The Chemist & Druggist says of the termination of the English glycerin combine:

"The annual meeting of the glycerin convention was held last week, and such was the discussion among its adherents that it was resolved to terminate it. The break-up of the convention is said to be due to the opposition of a well-known firm of soap manufacturers, who signified their withdrawal, and as their competition was of a character that could not be ignored, there was no help but to dissolve. The result is that the market is quite unsettled, and several firms have issued circulars showing a reduction of about £4 per ton on the double distilled s. g. 1,260 quality, but in the present state of the market it is doubtful whether these prices can be adhered to, as agents are soliciting bids.

"The fact that the convention has come to an end is a surprise to many, as there were no outward signs of disturbance in the market. No definite prices can be quoted, but £53 per ton is about nearest value for double-distilled in 10 cwt. drums. In the present circumstances buyers prefer to look on, waiting more settled conditions."

STABILITY OF H₂O₂.

In speaking of the keeping qualities of a 3 per cent. solution of Hydrogen Peroxide, this can only be done in a comparative sense, because the value of the article as an antiseptic, depends entirely upon the easily available atom of oxygen.

It is desirable, of course, that a preparation of Hydrogen Peroxide should suffer as little decomposition as possible, before it is wanted for use, and it may safely be said that the Mallinckrodt brand represents the maximum degree of stability obtainable in this article. The old fashioned belief that Hydrogen Peroxide should "pop" when the cork was removed from the bottle, in order to be a good preparation, is, of course, erroneous, as this merely shows that the article has decomposed and the liberated oxygen is what causes the pressure. The active oxygen, however, i. e., the oxygen which destroys the organic matter, must be obtained in the nascent form, and it stands to reason that a peroxide which will longest retain this available oxygen is the best, most reliable and most economical preparation.

There is another great advantage in the Mallinckrodt brand, which physicians should not overlook, and that is its freedom from acidity, and for many purposes, at least, this lack of acidity is a very desirable feature.

The Mallinckrodt Chemical Works have issued a very attractive booklet, giving interesting information regarding the properties and uses of Hydrogen Peroxide, and a copy of this will be mailed to any physician or pharmacist, upon request.

METHODS OF OPERATING SEVEN RIKER FOUNTAINS

Albert P. Corcoran, Manager of the Soda Department, Tells His
Ideas and Experiences

GOOD SODA IS THE MAIN REQUISITE

It is not the fountain, although that is important; it is the soda that makes or ruins a soda water trade. If your soda is good you'll do a good business, no matter if your fountain is not quite down-to-date; if your fountain is the very latest and best and the drinks you serve over the counter are not as good as they should be, your trade will never be as large as you ought to make it.

Next in importance to the soda itself, I rank the fountain, of course. The style of fountain best suited to a business depends upon the location and class of trade, upon the question whether your business is done all in a few rush hours or is evenly distributed over the day, upon the size of the city and the size of your business.

The Riker Company operates seven stores and our fountains are not all of the same type. Special stands have special needs. This Broadway and Ninth street store was started last June, and from the first we determined to make a feature and a success of the soda trade. We had to have as fine a fountain as could be obtained and celerity of service was of prime importance. Therefore, we installed this fountain and it has given complete satisfaction.

THE NEW RIKER FOUNTAIN.

It is an "Innovation," manufactured by the American Soda Fountain Company. It is generally known, of course, that the "Innovation" is a new idea in fountains and has only been on the market a couple of seasons. The essential points distinguishing it from old styles are the counter service system and the pump appliances for drawing syrup from the syrup jars. By the first the dispenser is always facing the customer, and by the second the quantity of syrup drawn for each glass of soda is always uniform. Besides, the pumps are much quicker than old syrup-drawing contrivances. The "Innovation" is the only fountain with the plunger pump system of syrup service.

Our particular fountain is twenty-four feet long, twelve feet seven inches extreme height in the back, the height of base is forty inches, and height of counter forty inches. The extreme width of the whole outfit is five feet from the outside of the counter to the store wall. That shows the economy of space. The base is onyx and white Italian marble. The counter is of Pavanaozza and Alps green marble. Onyx forms the back with the mirrors, and the decorations at the top are of Tiffany leaded glass. It is as handsome a display as you can find, and yet it is all in good taste, not too gaudy,

not overcrowded, or overdone with decoration.

INGENIOUS APPLIANCES.

In the counter are twenty-four syrup tanks of porcelain with their service pumps or taps. On the counter are three draught arm standards, each with five draught arms, two for soda, two for mineral waters, and one for ice water, or a grand total of six soda, six mineral water and three ice water draught arms. These

ALBERT P. CORCORAN.

Manager Soda Department in the Riker Pharmacies.

are all leed directly under the counter by the usual coil system.

The fountain is designed to allow four men to dispense simultaneously, but we usually have but three on duty at a time. That is why we have so many draught arms. Our large business requires rapid service. Each dispenser can easily reach every appliance he needs without interfering with his companions. It is as if there were three separate fountains in operation.

And yet you will see there is a wonderful economy of space. Only eighteen inches behind the counter. But it is enough.

The workboard is the latest pattern German silver, silver plated. No rust, no decaying wood, no odors. But, of course, any modern fountain is the same in those respects.

INSET FRUIT BOWLS.

A feature entirely our own and one we take great pride in, is our style of crushed fruit bowls. We have six of

them, all made of porcelain. The point is that they are built into the counter, inset in the same way as the syrup tanks. Each has a snugly fitting, German silver, hinger cover. No slopping of crushed fruits, no more collisions between the dispenser's elbow and the fruit bowl. Our bowls are thus out of the way and yet quickly accessible. And the scheme is all our own. These fruit tanks are leed directly, another advantage.

As to the main leg question, we find our fountain very economical. Of course, we use care and system in keeping down the ice bills. In the counter portion is direct icing and in the back box is cold air refrigeration from a central ice container. There we keep the bottled mineral waters and fancy bottled drinks and the cold air system keeps them perfectly dry, so that the labels are never washed off or injured.

Our list of driks comprises over 100 different things. Fully one-half our trade is on fancy driks, into many of which no soda at all enters. I see Mr. Beall, in an article published in *The Era*, last week, finds it the same. I imagine every New York fountain man would agree to my statement. Novelty appeals tremendously to New Yorkers.

SANITATION AXIOMATIC.

Good soda first, good fountain next, and cleanliness are the secrets of success. Sanitation is a prime requisite, but that fact is fast becoming an axiom with soda men. We all know that courtesy in any business pays, but in soda dispensing it is absolutely necessary. See that your dispensers are personally clean, and see that you allow them plenty of clean white serving uniforms. A dirty jacket has lost many a repeat customer.

Don't be mean and stingy. Penny wise and pound foolish applies more than ever to-day. We allow a customer to use as many crackers with hot driks as he likes. We place a number of them before him in a handsome cut glass tray. Many fountain owners allow just two crackers to each drink. No customer likes that. It makes him think he is at a boarding-house table instead of a fountain. If the saloons are liberal, it is because it pays and the same principle applies to the soda business.

Another thing. Suppose a patron sees a strange name on the menu of driks which excites his curiosity. He has never tried it before. So he orders. But its flavor does not tickle his particular palate. If you make him pay for that unused drink, you will not lose his trade.

FOUNTAIN OF THE RIKER STORE AT BROADWAY AND NINTH STREET, NEW YORK.

An American "Innovation." Length, 24 feet; height of base, 40 inches; height of counter 40 inches. Onyx and Italian marble.

We never hesitate a moment, but ask him to order something he knows he likes instead. These minute wastes really cost the store little and the goodwill earned is beyond calculation, producing solid dollars of profit.

Decorations and high grade accessories count strongly. All our glassware is handsome and we are believers in flowers (fresh flowers) on the counter, or piles of fruit. But don't overdo it. A few choice decorations at a time and change them frequently.

LINEN NAPKINS.

One feature we have that is, I think, very unusual. We serve real linen napkins with our hot drinks. These cost much, but they were, and are, worth it, for the touch of refinement imparted to our service goes straight to the heart of a woman. They are so much better than paper napkins, and they are not strewn all over the store floor before the day is over. They are durable, lasting through years of washing. Outside of this, people often ask for them as souvenirs, and we always are glad to let them have them, for woven into the center of each napkin is "Riker's Perfect Soda Water." You couldn't buy from these people space in their homes for one of your advertisements

under ordinary circumstances, but as a souvenir the customer will take a lasting advertisement of your business into his home. These napkins are about 6x5½ inches, with a heavy fringe, a little over an inch deep. And the best quality of linen.

Fruit syrups? We use the American and the J. Hungerford Smith kinds. But in the fruit season we buy our own fruits and make both fresh syrups and other fruit preparations. I am a great believer in the "own make" idea, especially around the fountain.

AS TO PATENT DRINKS.

It is the same with ice cream. All we use in all the Riker stores is our own make. We have an extensive ice cream freezing plant, so to speak, at our Twenty-third street headquarters, and I have all our cream made there and shipped to the other stores as required. Here at Ninth street we have three ten-gallon cans of ice cream always stored on ice, and a telephone call brings a fresh supply. It pays us to make our own cream. To buy it costs ninety cents a gallon, and to make it ourselves requires an outlay of but forty cents.

Some patent drinks we dislike selling. We will not handle certain of these be-

cause the profit allowed is too small. We have calls for them all the time, but nothing doing. Others we sell freely, among them, Horlick's Malted Milk and Kumyss. There should be no trouble in serving malted milk. Just put in the glass three teaspoonfuls of really hot water and you will dissolve it quickly.

WINDOW POSTERS.

On the ends of the show counter back of the dispensing counter proper, are kept a number of simple remedies, which customers often call for in connection with a drink of some kind. By having them at the fountain within reach we save time. Of old it would have been a case of walk to the other end of the store to get the headache powder or whatever the customer wanted. Many of these remedies are liquids such as aromatic ammonia, pepsi and whey of pepsi. We keep them in uniform glass bottles with the uniform store labels on the glass, as if they were regular stock bottles for prescription trade. When we have a call for one of these specialties we serve a drink of carbonated or iced water with it. The dose can be prepared in a moment, and the customer's time is saved by combining two operations in the same place.

The most useful form of advertising in

[By courtesy of the American Soda Fountain Co.]
CINEMATOGRAPHIC PICTURE OF DISPENSER.

Preparing a mixed drink at a counter service fountain, showing how he always faces the customer.

my experience for increasing soda sales, is the use of strip signs featuring some one drink. These we paste up on the window facing outward, of course. One of ours runs: "Riker's Perfect Soda. Moist Joy, a Big Drink With Joy in Every Drop Of It. 10c." These strips are 18x6 inches. We keep a supply of them already cut. On the left end we have them all printed in red with a plain border line of the same color, within which is our watchword: "Riker's Perfect Soda." The special part of the notice, occupying about two-thirds of the entire length, is written on in the usual show card style. I know these signs catch the eye of passers, and turn them into consumers of our soda.

As a rule I am reticent about my syrup formulas, but I will say that my method for preparing chocolate is this: I use Groot's Dutch Cocoa, putting more sugar in if it is to be used for hot chocolate than I do when it is to be served in soda proper. I make the syrup double strength of chocolate for serving cold. In either case our syrup is prepared in twenty gallon lots and eight pounds of sugar is the usual proportion.

THOROUGH CARBONATING.

As I said before, the main secret of success is good soda. In the preparation of ours we go right to the root of the matter and secure perfectly pure water first of all. Let us follow a drop of water from the moment it enters this Ninth street store in the pipe.

First it goes through a patent charcoal filter, which takes any color and smell from it. Next it enters a stone filter, which pasteurizes the water thoroughly. Then it reaches a fifty-gallon block tin storage tank, which is thoroughly iced. When needed, the water is pumped into a carbonator through iced coils.

Our carbonator here is an automatic electric machine, the "Coldstream," made by the American Company. I keep the gauge at 140 to 120 pounds pressure for 70° water, usually the former.

The sixth process for the drop of water is its arrival in ice storage tanks. Of course, it is now thoroughly carbonated. There are two of these tanks, each holding fourteen gallons. They are made of steel.

You see our soda is all made before leaving the basement. On its arrival upstairs, it passes through a "mat" coil cooler, which is block-tin lined, and then it is further chilled by a "Wonder" cooler, which consists of two cylinders. Last of

all, it passes through iced coils to the draught arms of the fountain.

MAKING MINERAL WATERS.

We use the same process for mineral waters, for the carbonator can be connected up with the mineral water tanks instead. We serve five waters, vichy, seltzer, congress, geyser and kissingen. Of course, we make all except the geyser ourselves. Down stairs are five steel tanks in which we store these mineral waters. When needed, they are pumped, all ready prepared, into the "wonder" coolers up stairs and so into the fountain.

Let us turn from cold to hot drinks. These pay us very handsomely and we do a heavy business. One of our best sellers is hot coffee. For preparing this I secured an electric coffee heater or stove, which is really a French drip coffee pot with an electric burner beneath it. It is nickel-plated and a handsome ornament back of the fountain. On the front end of the counter, in winter, we keep a brilliant nickel apparatus for chicken and clam broths. Really, it is a combination of two porcelain urns under the nickel cover. Each container holds one gallon. The soups are kept at the right heat by a hot-water bath, warmed by a gas flame.

The food drinks, I find, sell best; that is, rich soup preparations. People like to take nourishment as well as heat internally, on a cold day. They can resist the cold better.

TRADE BRINGING SCHEMES.

Now, as to business gaining by special schemes. At this store I have inaugurated a plan that works well. In this section of the city are many large department stores. It is a section filled with out-of-town buyers. To get this trade, I co-operate with neighborhood merchants in other lines of work. I go, for instance, to a cloak house and arrange that they give each of their customers one of our complimentary soda checks. The cloak house is glad to do it, for it brings them the goodwill of their customers. One check only, of course, of each person. So we get them to try our soda, and you bet they come back and pay for it afterwards.

In our Brooklyn store we give a ten-cent soda check with each dollar purchase in any department.

For the Riker Flatbush store, which has just been opened, we gave out 5,000 soda checks to leading residents of the town. All these schemes paid well in trade-bringing. But circumstances alter cases,

and a plan that is good in one locality may not be in another.

WORTHY OF HIS HIRE.

Proprietors of soda fountains are very prone to forget an important phase of the situation. They ignore the fact that to have good service at the fountain good salaries must be paid the dispensers. A good soda man is worth good pay. His hours are very long at the best, and many proprietors insist that they be far too long. After a certain number of hours of standing to the work, no man is much good. He must have rest. Better far to employ more men. It will pay in the end. We try to remember these truths and we pay well for good work, so our dispensers stay with us and take interest and pride in the business. You can't keep a good man very long on poor pay, in New York; there are too many opportunities and openings.

It may seem that I am very didactic on these questions. Not so. I am always learning something and always on the lookout for new ideas, but I have been in the business long enough to know it. Eleven years with the Riker Company for one thing. I am a licensed pharmacist in several States, and have owned a number of drug stores, which is, perhaps, unusual for a soda specialist, and I have done business south and west, in fact, all over.

HE GOT IT TOO.

Once I ran a pharmacy in New Haven; several years later fate led me to the State of Washington. I gradually drifted north. One day, in a mountainous defile on a very narrow path, with sharp, sudden turns, I ran plump into a young man who was descending. We recognized each other simultaneously; he had been a Yale undergraduate when I ran the Osborn Hall Pharmacy. He threw up his arms and exclaimed: "Great Scott, you haven't come all the way out here to collect that eight dollars I owe you?" And I got the money, too.

Among other experiences in the soda business, I had charge of the large fountain of Stevens & Todd, in Detroit, when it was first opened for business, a number of years ago.

If any proprietor is determined to make his fountain pay, let him always remember to make the fountain a specialty, not a side line. Specialization is truly the order of the age.

25 CENTS OR 26 DOLLARS?

Every intelligent man with pride in his personal appearance appreciates that the finger nails require systematic care. There are two methods open to secure well-kept nails. One is a weekly visit to a professional manicure. The cost of this will be fifty cents weekly, or twenty-six dollars yearly. The other is the personal use of a pocket manicure, such as Klip-Klip; original and total cost twenty-five cents for several years. Which is the better business proposition?

Klip-Klip is sold to last twenty-five years, for it is made of solid German silver, which cannot rust or tarnish. It is a combination of a nail trimmer, cleaner and file which by trimming 'round the corners will prevent hang nails. It is convenient, as can be seen by the accompanying cut, which shows its exact size when closed. It can be used with either hand, in the method illustrated in the first cut. It is simple in construction. It is self-sharpening. It is fully guaranteed.

Klip-Klip enjoys a large demand, and every druggist needs a stock of it. Made by the Klip-Klip Co., Rochester, N. Y. This concern says to the druggist: "If you have Klip-Klip in stock, we want your future orders; and if you haven't, we solicit an immediate trial order."

The same company offers Klip-Klip Junior for fifteen cents, which, they say, is not designed to take the place of Klip-Klip, but to replace cheaper, worthless imitations. It is made of the finest steel, heavily nicked.

WHAT THE NAME MEANS.

The word which is shown in the script cut accompanying this article is not strange to the druggists of this country. Probably to the energetic druggists, those who are interested in promoting their business in every legitimate way, especially in advertising, there is no one word, or no one cut, that is more familiar to them than this cut of the word "System."

It is a word which has been adopted by M. P. Gould Company, New York City—a well-known drug store advertising firm—to an advertising service, which has been used by practically every substantial and progressive English speaking retail drug firm in America, and by hundreds of progressive retail drug concerns in foreign countries.

On another page of this edition will be found M. P. Gould Company's half page advertisement, which will make you thoroughly acquainted with their System of Advertising for retail druggists. You will note that this firm makes a special offer to retail druggists, which allows them one month of advertising absolutely free,

providing, after carefully investigating the System, a year's service is ordered. It will be well worth every progressive druggist's while, who has not already used the System, to read the advertisement, clip out the coupon attached and communicate with M. P. Gould Company.

The M. P. Gould Company's methods of doing business can be recommended to the retail druggists of this country.

CHOCOLATE SODA, HOT AND COLD.

It is a known fact that the sale of chocolate soda has phenomenally increased. Every seller of soda water knows this to be true in his own case. This increased sale is general throughout the United States.

If your chocolate soda trade is not increased, it is possible that the syrup with which you make your soda is not pleasing to your trade, and it is suggested that you try Runkel Brothers' Essence of Powdered Chocolate. This article has a stupendous sale. Runkel Brothers will promptly furnish a sample upon request. The firm's office and mills are 445-451 W. Thirtieth street, New York City. It is reported that Runkel Brothers' Essence is equally as good as the imported, costing much less money and having a superb flavor, fine aroma, as well as being absolutely soluble.

It is the opinion of a great many that the sale of hot chocolate is not increasing in proportion to chocolate soda, and we are led to believe that in most cases there is not sufficient milk or cream used in the hot chocolate to bring out that chocolate flavor, which is most pleasing. In other words, the beverage tastes flat.

Runkel Brothers have a very good formula for hot soda made with their Essence of Chocolate, and a request will secure a sample, as well as the formula.

NO. ILLINOIS COLLEGE OF O. & O.

Chicago, March 1.—The annual reunion of the Alumni Association of the Northern Illinois College of O. and O., held during the past week, resulted in the election of the following officers: President, J. A. L. Walman; vice-presidents, Mrs. A. M. Heurich and I. J. Friedman; corresponding secretary, Mrs. E. Veliquette; censor on optical publications, Orris Booth; censor on legislation, Hon. L. Y. Sherman; censor on membership, C. S. Friedman; marshal, H. P. McDonald.

A banquet at the Sherman House closed the exercises Friday afternoon. Addresses were made by members of the faculty and others present.

SPIRIT OF NITROUS ETHER.

Official spirit of nitrous ether has always been troublesome to the conscientious pharmacist. As usually made, it quickly undergoes chemical decomposition when freely exposed to air and light, as in a stock bottle, until scarcely a trace of the active ingredient is left. The addition of potassium bicarbonate to neutralize the acid set free is a temporary remedy, but a poor one, because the nitrous radical is thereby changed into an alkaline nitrite, instead of being, as it should be, in the form of ethyl nitrite.

Those engaged in crusades against drug adulteration, especially in England, have

frequently caused druggists annoyance and pecuniary loss because of the decomposition of spirit of nitrous ether. This difficulty has been overcome by Smith, Kline & French Co., of Philadelphia, who have originated hermetically sealed amber glass tubes of concentrated nitrous ether, which keep indefinitely. By their use, spirit of nitrous ether of full strength can be made in a moment. Only a pint need be made at a time. Current demands can be met and the retail druggist is secure, complying with every legal standard regarding the strength of this very commonly used preparation.

Sample mailed free to druggists upon application to Smith, Kline & French Co., Philadelphia.

A GOOD HYPODERMATIC TABLET.

Designed as they are to be introduced directly into the circulation, the use of hypodermatic tablets involves peculiar responsibilities and no practitioner can afford to use any but the best obtainable. A line of hypodermatic tablets which seems to meet all the requirements which modern medicine imposes, is that made by Eli Lilly & Co., Indianapolis, Ind. The Lilly hypodermatic tablet is made under safeguards against septic contamination, its base is neutral, non-irritating and extremely soluble. Hypodermatic medication is essentially for emergencies, when the physician demands accuracy of dosage and quick solubility. In these respects the Lilly tablets are excellent; not only are they quickly soluble, but completely so, and in injecting the solution the patient gets the full dose intended, no insoluble particles remain behind to clog the syringe and reduce the amount supposed to be given.

The druggist can commend these tablets to any physician who wishes to practice hypodermatic medication in conformity with strictly modern medical and surgical procedures.

NO MORE POUITICING.

In a recent notification by the surgeon general of the United States army, it is asserted that all the good results from poultices can be obtained in a more cleanly way, by the use of wet, hot compresses. Hence the order to the army surgeons to drop linseed and linseed meal from army medical requisitions.—Virginia Medical Semi-Monthly.

This order, as far as discarding poultices made of putrescible and bacteria-breeding materials is concerned, is highly approved of, for that is what has been done by all up-to-date physicians in private practice. At the same time one would hardly recommend the substitute offered, after practically testing Antiphlogistine, which possesses so many advantages over hot compresses and everything else employed as an external application for inflammation and congestion. Antiphlogistine need be renewed but once a day, and it is said to be most efficient and cleanly.

A beautiful little brochure with illustrations in color, tells all about the therapeutic application and uses of Antiphlogistine. Issued by the manufacturers, the Denver Chemical Mfg. Co., 57 Light street, New York.

SHOW WINDOWS & FEATURES.

Pushing Own Makes All Over Town.

THE RIKER WEDGE.—A TRUSSED VENUS.—A GRECIAN ARCHITECTURAL DESIGN OF CARTONED SKIN OINTMENT.—TO PLEASE AND SUPPLY THE "PROFESSION" (THEATRICAL).—CONTRASTED WITH ABOVE ONE-IDEA WINDOWS IS THE CROWDED DISPLAY OF A NASSAU STREET PHARMACY.

The Wm. B. Riker & Son Company, at the Sixth Ave. and Twenty-third street store, devotes the corner window facing on the avenue to a display of Antiseptics. This preparation they make themselves. The background of the window is purple drapery superimposed on white hangings, the white projecting and showing below the purple. The corners are looped up gracefully and the center concentrates the folds into a rosette formation at the top. In the central foreground is a large stump, genuine wood, with the natural bark still on it. In the crevices of the bark are placed ribbons and bits of real moss. Prominently projecting from the top is a large iron wedge, such as woodmen use, deeply driven into the flat surface of the stump. Printed large and clear in white on the flat side of the black wedge is the word "Antiseptics." A large show card lying below the stump, reads, "Antiseptis; a Perfect Mouth Wash. A Pure Antiseptic Solution For Either Internal or External use. 25c., 50c., 90c."

THE RIKER WEDGE.

Dominating the whole window from the upper background is a large sign worded, "The Riker Wedge." The whole picture thus conjured is realistic of a woodman's work and clearly features to the observer's mind that the trial of Antiseptis is a wedge sure to rend the prejudice or indifference of anyone, resulting in the permanent use of Riker preparations. Ranged on either side of the stump are companies of the bottles of Antiseptis, some prim and regular, some prone, tumbled in artistic confusion. Two show glass standards flank the main feature and bear aloft other bottles. It is a one-idea window. No other goods are shown.

Inside the store the inquirer obtains a folder on Antiseptis, bearing a cut showing the stump and wedge. "We call Antiseptis our wedge," it declares, "because it makes friends for us in every home it enters. The first sentence in our business creed has always been: 'Make friends by deserving them.'"

SICK ROOM SUPPLIES.

The other avenue window holds a display of hot-water bottles and bags, all rubber. A card announces Riker's velvet water bottle, \$1.09, special price for one week. The special price is the sole feature, inducement and argument.

One of the Twenty-third street windows is filled with elastic stockings of which a card says, "They Give You Comfort and Help. We Have Them Silk, Linen, or Cotton, in Stock or Made to Order; \$2.00 to \$9.00."

In the center of the other window

stands a plaster Venus de Milo, decorated with well-fitting trusses and elastic bandages. The goods here shown are, of course, all of that character and the sign reads, "Our Entire Second Floor is Devoted to Surgical Dressings, Sick-Room and Hospital Appliances and Furniture, Rubber Goods, Etc. For the Doctor, Nurse and Family." Other cards run, "Trusses—Many Sacrifice Comfort and Safety by Wearing Ill-Fitting Trusses. We Fit Trusses Right and Our Experience is Backed by an Assortment That Includes Every New Idea in Truss Making. The Price Will be Just as Comfortable as the Truss." Azain, "Belts, Silk, Linen and Cotton. (Elastic and Non-Elastic.) \$2.50 to \$15.00."

A PERISTYLE OF CARTONS.

The Twenty-third street and Fourth avenue Kalish Pharmacy reveals a decorative window featuring Kalish witch hazel jelly. The central device is built of paste-board cartons of this "own make," the units being clamped together with small wire staples. Double columns of these rise on each side of the window with connecting strain braces of cartons between. On these rest two lines of cartons rising toward the center and meeting like the peristyle of a Greek temple. Filling the space between the columns and roof lines is a circular disk, deeply edged with green tissue paper. The bull's eye of this is tinted a flesh rose and on it in black lettering runs the inscription, "Kalish Witch Hazel Jelly, for Chapped Hands and Face. Softens and Heals the Skin. 15c." Another show card proclaims that it "is not greasy and dries at once." Again, "A General Soothing Application." The background of the whole window is a green curtain on a brass rod, reaching considerably above the line of level vision of the passersby. An electric fan in one corner of the window is busily revolving, preventing lead windows, according to the scheme previously reported in The Era.

Another Kalish window holds rubber gloves at 75c. each. They are displayed in the open boxes. Listerseptic tooth paste fills a third window and honey cough syrup in heavy masses of containers, the last show space.

The Knickerbocker Pharmacy, Thirty-eighth street and Broadway, plays up theatrical make-up outfits, especially theatrical cold cream. Tin make-up cases of various sizes are shown with raised covers. Inside the convenient compartments are seen grease paints, soft brushes for the face, powder puffs, eyebrow brushes, tubes and boxes of cold cream. The lower front of the window is filled with serried ranks of pound and half-pound containers of Crovat's Theatrical Cold Cream, but an "own make." Knickerbocker cold cream is the leading feature, in prominently shown cans, at 50c. a pound. This display is particularly appropriate for the stand, which is in the very heart of the theatrical district.

The corner window of the same store puts forward another "own make"—Knickerbocker Floral Tooth Powder. Price asked is 25c. "Leaves that pleasant taste in the mouth." The thought of tooth powder suggests kindred toilet accessories and the observer is pleased to find this idea anticipated in the display, for on every side lie tooth brushes in boxes, perfumes, powders, etc. In the foot of

the window appears imported perfumes, especially Roger & Gallet preparations, such as Poudre de Riz, Violette de Parme and Vera-Violetta.

NAME IT AND YOU CAN HAVE IT.

First impression, chaos! Second, what is the crowd looking at? Third, something attractive somewhere, for there is a stream of buyers going in the door. It is the show window of the store of Reid, Yeomans and Cubit, at Nassau street, near Beekman. It certainly is not a one-idea window, for it is jammed full of everything conceivable. And yet it impresses one idea on the mind—low prices. Small heaps of one article jostle something entirely opposed. The glass of the windows is covered with rows of fancy postal cards and photographs. The largest one-idea inside is a revolving wheel covered with silk and rimmed with artificial violets. The edge is studded with intermittent electric lights. The center advocates Quentin's Breath of Violets, 5 and 10c. packages, a breath perfume.

Let us enumerate a few articles and values. What a range; what contrasts! A show card with price for each:

Razors, 87c.; shaving mirrors, dollar kind, 59c.; R. Y. C. Emulsion of Cod Liver Oil, 50c.; Hoffman House Magnums, cut to 11c.; pocket books and card cases of leather; traveler's or pocket tooth brushes, 10c.; shaving sponges, 35c.; tooth brushes, cut to 19c.; candy, steel nail files, cut to 15c.; pocket knives, liquors, chamois skins, strip rubber sponges, fresh stuffed dates, Ingersoll watches, pop corn crisp, hair brushes.

JUST PRICES.

Second spasm: Salted peanuts, rubber bands, "Natural" cigarettes, 10c.; 25c. scissors for 15c.; pure Castile soap, 15c.; alarm clocks, worth \$1.50, cut to 95c.; rock candy, 10c. per pound; 100 two-grain quinine pills, 19c.; manicure scissors, 7c. each; whisk brooms, 10c.; Floritina Cabinet cigars, box of 25 for 98c.; Adelia Patti cigars, 25 for \$2.50; Geo L. Storms & Co.'s 50 Havana Resagos for \$1.52; box of 50 Cubanola cigars, \$1.78; box of 50 El Belmont Puritanos, \$3.74. Then look out that the man entering the store behind you does not tread on your heels.

THE WINNER APPEARS.

The first issue of a new house organ has just appeared. It is published by Hance Brothers & White "now and then." It consists of sixteen pages of well handled matter, mostly advertising the lines of the firm. A clever suggestion is for a window display of dyspepsia remedies. Two pies are shown flanking a lobster. The background is formed by dyspepsia tablets neatly cartoned with the box lids opened. Around the pies are marshalled other tablets. The whole display is labeled in letters formed of separate tablets, "10 Cent Cures For Dyspepsia." Some accessory signs are, "Pies An' Things With Cures For The Pizen," and "You Get The Dyspepsia; We Do The Rest For 10 Cents."

NORWICH COMPANY REMOVES.

The Norwich Pharmaceutical Company has announced its removal from 64 to 70-72 Fulton street, because of its need for larger office quarters.

APPRAISERS' DECISIONS.

Gadulou a Chemical Compound.

The Board of General Appraisers has decided that gadulou or morrohol, an alcoholic extract of cod-liver oil, is dutiable as a chemical compound. Merck & Co., who imported it at New York, had protested that it was dutiable at fifty-five cents per pound, under paragraph 3. The Board summed up the facts in the case as follows:

"We find the protestants imported into the port of New York under the tariff act of 1897, certain merchandise invoiced as gadulou and as morrohol, the several names being used for the alcoholic extract of cod-liver oil, which was the subject of decision by the United States Circuit Court of Appeals, second circuit, in United States v. Merck; that the said gadulou, otherwise called morrohol, was found by the court to be a chemical compound and not a medicinal preparation, and held to be dutiable at 25 per cent. ad valorem under paragraph 13 of said tariff act, instead of at fifty-five cents per pound under paragraph 67. Duty was assessed by the collector under the latter paragraph, and it is claimed to be dutiable at 25 per cent. ad valorem under paragraph 3. In some of the protests the glass demijohns or carboys are claimed to be dutiable at the same rate as their contents, but this claim is waived by the importers, and we hold that duty was lawfully assessed upon the containers; but as to the merchandise, in accordance with the decision of the court in the case as above cited, we find it to be a chemical compound, and hold it to be dutiable at 25 per cent. ad valorem under paragraph 3, and this claim in all the protests is sustained."

Surgeons' Silk, Twisted.

The Board has decided that silk thread wound upon spools or cards, and known commercially as "surgeons' silk," is dutiable at the rate of 30 per cent. ad valorem under the provision in paragraph 385, tariff act of 1897, for "silk threads * * * of every description."

In the case in point, the importers, the Kny-Scheerer Company, invoiced the silk as "surgeons' silk." The Board summed up as follows:

"The importation was returned by the appraiser as a 'mf. silk,' and was assessed with duty by the collector at the rate of 50 per cent. ad valorem under the provisions of paragraph 391 of the act of 1897. It is claimed to be dutiable under paragraph 385 of said act, the pertinent provision of which is as follows: "385. * * * And silk thread or yarns of every description, except spun silk, thirty per centum ad valorem."

"The appraiser makes the following special report to the case:

"The merchandise under protest consists of braided silk of varying degrees of fineness, and is used by surgeons for ligating blood vessels and the coaptation of wounds."

"It appears, however, from the testimony that the only goods which are in fact

braided are those represented by the last item (14 gross) on page 11 of Invoice 22985, and as to these goods the importers make no contention.

"We find from the testimony and samples admitted in evidence that the merchandise consists of silk thread of different sizes, wound upon spools or cards, and that it is commercially known as 'surgeons' silk.' It differs from the merchandise passed upon by the Board in a former case in that it is twisted and not braided.

"The article is a silk thread, and in our opinion is dutiable at 30 per cent. ad valorem under the provision in paragraph 385 for 'silk threads * * * of every description.'

"The protest is sustained to this extent, and the decision of the collector is reversed, with instructions to reliquidate the entry accordingly."

Surgeons' Silk, Braided.

In the case of the protest of Davies, Turner & Co. against the assessment of duty on braided surgeons' silk, imported by them at Boston, the Board held that "an article consisting of several strands of silk, braided, and which is known commercially as 'patented ligature silk' or 'braided ligature silk,' is dutiable at 50 per cent. ad valorem under the provision for 'cords * * * composed wholly or in part of silk,' in paragraph 389, tariff act of 1897."

The Board summed the facts as follows:

"The merchandise in question was returned by the appraiser as 'silk braids,' and was assessed with duty by the collector at the rate of 60 per cent. ad valorem under the provision for silk braids in paragraph 390. It is claimed to be dutiable at the rate of 30 per cent. ad valorem under paragraph 385 of said act.

"We find from the testimony and samples admitted in evidence that the merchandise consists of several strands of silk, braided, wound upon cords or in skeins, and known in trade as 'patented ligature silk,' or 'braided ligature silk.'

"Although the article has been braided, it does not fall within the class of articles commercially known as 'braids,' and the fact that it has been braided rather than twisted distinguishes it from the sewing silk of commerce and from silk thread.

"The article is chiefly used by surgeons in sewing up wounds and in the ligation of blood vessels, and it appears from the testimony that the object in braiding the silk instead of twisting it is to give it greater strength and to prevent it from kinking.

"As the article is braided rather than twisted, it is not a thread, and in our opinion it is properly dutiable at the rate of 50 per cent. ad valorem under the provision in paragraph 389 for 'cords * * * composed wholly or in part of silk.' As the importers have failed to make that claim in their protest, the decision of the collector, though erroneous, must stand."

Scientific Apparatus Dutiable.

Certain scientific apparatus imported by Hensel, Bruckmann & Lorbacher was held by the Board to be correctly assessed for duty, it appearing that there had been no compliance with the regulations of the

Treasury Department in the invoice statement. A similar decision was rendered in the matter of two protests by Eimer & Amend.

Amendment of Protest.

Under the law, a protest against assessment of custom duties may not be amended, says the Board of General Appraisers. This decision was rendered in the case of G. W. Sheldon & Co., who protested against the assessment of duty at New York. The protest related to certain quinine phosphate which it appeared was admitted free of duty under paragraph 647, tariff act of 1897. The importers stated that they intended to protest against an imposition of duty upon certain salicylate of quinine, instead of quinine phosphate. The Board held that under the law a protest may not be amended.

Pellets and Matches.

Fireworks imported at Baltimore, consisting of certain pellets, classified as firecrackers, under paragraph 420, were held to be dutiable as unenumerated manufactured articles under section 6, as claimed by the importer, Moses Morris. Certain so-called brilliant star matches were held to have been properly classified as unenumerated manufactured articles, and not to be dutiable as matches under paragraph 423.

Japanese Wax Free.

Japanese vegetable wax was imported by C. D. Bunker & Co., at San Francisco, and the M. Finruya Company, at Port Townsend. In both cases it was assessed for duty as tallow, although invoiced as wax. The Board of Appraisers sustained the protests of the importers, holding the wax free of duty under paragraph 695, as vegetable wax.

Fire After Arrival.

An interesting decision has been handed down by the Board of General Appraisers concerning the question of damage to merchandise by fire after it had arrived at the port of destination and while it was in customs' custody. The importers, Wood & Selick, had applied for relief to the Secretary of the Treasury, who had authorized an allowance of the damage, which allowance had been made in the liquidation of the entry. The importers also protested to the Board of Appraisers. The Board, however, dismissed the protest on the ground that it had no authority, summing up as follows: "The tribunal in which all claims for relief, or disputes, growing out of the importation of merchandise must be heard and decided is fixed by express provisions of statute. In certain cases the Board of United States General Appraisers is given exclusive jurisdiction and in other cases exclusive jurisdiction is given to the Secretary of the Treasury. In cases similar to the one here under consideration exclusive jurisdiction is given to the Secretary of the Treasury by section 2981 of the Revised Statutes. This Board has no more authority or jurisdiction to decide this case than the Secretary would have to decide a case wherein the law gives exclusive jurisdiction to the Board. The protest is therefore dismissed for want of jurisdiction."

SURGICAL NEEDLES DUTIABLE.

Surgical needles are dutiable under the provision in paragraph 165, tariff act of 1898, for "all other needles, not specially provided for," and are not free of duty under paragraph 620 as "needles, hand sewing," which would seem to be such needles as are employed by persons generally who use needles, and not such as are used only by professional persons in surgical operations to which they are specially adapted.

This decision was handed down by the United States Circuit Court, Southern District of New York, on February 15.

These proceedings were brought by A. J. Woodruff & Co., and relate to merchandise imported at the port of New York. The articles in controversy consisted of surgical needles. They were classified under the provision in paragraph 165, tariff act of 1897, and were eluded by the importers to be free of duty under paragraph 620 as "needles, hand sewing." This contention was overruled by the Board of General Appraisers, whereupon the importers applied to the court for a review of the decision.

Judge Wheeler supported the decision of the board, no testimony having been taken and there being nothing by which to change the classification.

FREE ALCOHOL INVESTIGATION.

The House of Representatives is considering a resolution, which will probably be adopted, that the Secretary of Agriculture be authorized to investigate the benefits which would accrue to agriculture by the free use of denaturated or methylated alcohol in the mechanical arts and sciences, in industries, and for the purpose of light and fuel. The Department's report is also to contain information as to the production, treatment, cost and use of methylated alcohol in foreign countries.

This is a new move in the campaign for free alcohol, of which question Mr. Kline's paper, published in last week's Era, set forth the salient points. It is claimed that the increased use of methylated spirits would extend the market for grain for the production of alcohol, and would also supply cheap fuel and power to the farmer. The Department of Agriculture has confessed the same belief, and as the report will probably be authorized, much interesting information should be forthcoming shortly.

ELDERBERRY WINE UNTAXED.

The Commissioner of Internal Revenue, replying to an inquiry, stated that there is no tax on elderberry wine, and manufacturers thereof are not required to pay a special tax, provided they sell only at the place where it is made or at one general business office.

On the other hand, the addition of Catawba wine to cider, even for the purpose of preventing it from souring, is rectification. Therefore, every manufacturer of such a beverage for sale involves himself in special tax liability as a rectifier. This ruling was given in reply to a person who contemplated manufacturing cider according to a formula which called for eighty per cent. pure apple cider and twenty per cent. sweet Catawba, the Catawba being added to prevent the cider from souring.

BUSINESS RECORD.

It is our desire to make this a complete record of new firms, changes in firms or addresses, deaths, fires, assignments, etc., which occur in houses connected with the drug trade. Our readers will confer a favor by reporting such items or calling attention to any errors or omissions.

Address The Pharmaceutical Era, 90 William street, New York.

MARKET REPORT

ROUTINE MARKET.

Leading Commodities In Moderate Demand At Steady Prices.

JOBGING DECLINES IN CODLIVER OIL AND FURTHER BREAK IN WHOLESALE MARKET FOR NORWEGIAN.—BROMINE SYNTHICATES NOT SELLING MITCH; MAKING DELIVERIES ON OLD ORDERS.—IODINE PREPARATIONS MAY AGAIN ADVANCE.

New York, March 6.—Business is generally moderate and orders mostly routine. It was supposed that the commencement of March would show an increase in trade, as it is the general practice to restrict operations near the close of a month and to increase them at the beginning of the new month. Such has not been the case, however, this time. The bromine situation remains the same, the price war between the German and domestic interests continuing, but goods are hard to obtain at the reduced figures from any source. During the week the codliver oil market has been demoralized by the sudden and exceedingly low offers of Norwegian oil for April shipment. Another advance in iodine abroad has occurred and it is expected that the various preparations will again rise.

OPIMUM.—The market is quiet but firm. Conditions in primary markets warrant further advances, the damage to the Turkish crop being heavy, but local competition between leading dealers prevents any improvement here. Demand continues moderately satisfactory and jobbers still quote \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered, \$4.00@4.25 for thirteen per cent. and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—The situation presents no new feature. Business is of moderate proportions and the market undertone is firm, in sympathy with opium. Jobbing prices still are \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—Second hands report a moderate improved inquiry, but jobbing business is of but ordinary proportions. Strength is imparted to the situation by the small Java bark shipments which are only 727,000 lbs. for February against 1,062,000 lbs. for the same time last year. At the Batavia bark auction March 1, 93 kilos were sold at 16½ florins, bringing the same price as at the previous sale. The failure of the market for quinine sulphate to respond to the influences of various auctions gives rise to the theory that manufacturers are trying to make the market more steady and less susceptible to speculative influences. The Amsterdam auctions do not exert as much effect as formerly. The results of the last four have not changed prices a particle. Local jobbers still quote 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c.

in 15 or 10-oz. tins and 30@31½c. in ounce vials, according to brand and amount.

CODLIVER OIL.—On account of poor demand, quotations have been weak for some time. Prospects of a good catch of cods in Norway have also eased values. Jobbers have therefore reduced quotations for Newfoundland oil in sympathy with the decline in Norwegian reported in The Era last week. The new prices are Newfoundland, barrel, gallon, \$1.35@1.40, and less than a barrel, \$1.00@1.75 per gallon. During the week the primary market has become demoralized, but this decline has not yet affected jobbing prices. A circular letter was received by wholesalers from a local agent of a well-known manufacturer in Norway, offering April shipments \$22.00 f. o. b. Aalsund. At first the trade refused to believe this radical cut, trusting that a mistake had been made somewhere, but this price has been confirmed, and orders amounting to 500 barrels have been looked on at this basis. Spot oil has now dropped to about \$26.00. Other producers quote higher prices and look on the break as but temporary, even claiming that conditions favor an advance. This decline has not yet reached jobbers.

IODINE. Iodine is called firmer abroad and the indications are considered favorable to a further advance in quotations for the various preparations, but no change has yet occurred here.

POTASSIUM BROMIDE.—Both German and American makers are delivering on former purchases made at 15c. The market is nominally unchanged. There are many eager to buy at the new figures, but there seem to be no sellers at all. Jobbing prices have not been changed.

PEACOCK ROOT.—The market is easy for all descriptions, because of a falling off in demand and freer offerings. Jobbing quotations have been dropped to the following: Cartagena, whole, \$1.55@1.65 per pound, and powdered, \$1.65@1.75; Rio, whole, \$1.50@1.60 per pound and powdered, \$1.60@1.70.

OL PEPPERMENT.—Values have declined as demand continues poor. In an interview, a local dealer said: "The continued apathy among dealers here and abroad, combined with the depressing influence of the Japanese oil, have made it necessary this year to have an earlier destruction of the peppermint crop than usual. For the first time in my experience of forty years the speculators, through the trade journals, have made their annual announcement of the failure of the crop fully sixty days in advance of the average date of planting. The fact, however, is that there is no more foundation for the published report than in the case of those referring to the proverbial failure of the Delaware peach crop." Jobbers have reduced quotations as follows: Wayne County, \$4.00@4.25; western, \$3.90@4.15, and redistilled and H. G. H., \$4.25@4.50, all per pound.

AMMONIA WATER.—Following recent changes in the primary market, jobbers are quoting an advance as follows: 4 F. carbonyl, 5¼@6c.; less, 8@10c.; 26° carbonyl, 7¼@8c., and less, 12@14c., all per pound.

CLOVES.—As the spice market is over-supplied, jobbers have lowered prices to 16@20c. for the whole, per pound, and 21@22c. for powdered.

PARIS GREEN.—The spring schedule of prices announced by manufacturers is as follows: Barrels of 200 to 400 lbs., 500 lb. lots, lb., 13@14c.; less, 15@17c.; kegs of 100 lbs. in 500-lb. lots, lb., 15½@11½c.; less than 5 kegs, lb., 16½@20c.; 5 and 2-b. papers, 56, 28 and 14-lb. tubs in 500-lb. lots, lb., 14½@15½c.; less, 17½@20c.; 1-lb. papers, in 500-lb. lots, lb., 15@16c.; less, 18@20c.; ½-lb. papers, 500-lb. lots, lb., 16@17c.; less, 19@21c.; ¼-lb. papers in 500-lb. lots, lb., 17@18c.; less, 20@22c.

MEXICAN SASSAPARILLA.—Some scarcity has resulted from recent buying which has materially reduced spot supplies. Jobbers have therefore raised prices to 21@26c. for the whole, 23@25c. for crushed, and 26@31c. for powdered, all per pound.

OIL LEMONGRASS.—A decline has resulted from an increase of supplies. Jobbing prices now are \$3.85@4.10 per pound.

SAFFRON.—The American has been advanced by the principal holder. Supplies are very scarce and no relief is in sight for a long time to come. Still higher prices are likely. Jobbing quotations have risen to \$1.65@1.75 per pound for the whole, and \$1.75@1.85 per pound for the powdered.

ALERTIS ROOT.—A falling off in demand induces jobbers to lower prices to 55@60c. per pound for the whole, and 60@65c. for the powdered.

LADIES' SLIPPER.—Slow sales cause a decline. New jobbing quotations are 55@60c. per pound.

CANADA BALSAM.—Demand is so moderate that jobbing prices have eased to \$4.15@4.40 per gallon and Oregon balsam for the same reason has declined to \$1.40@1.65, according to jobbers.

COTTON ROOT BARK. It is reported that ungathered supplies in the producing districts are very large. Jobbing prices remain unchanged at 30@35c. for the whole, 33@38c. for crushed, and 35@40c. for powdered, all per pound.

CITRIC ACID.—Foreign markets are stronger. It is reported that the crop of raw material is very small and closely controlled. Jobbers quote the unchanged values of 32½@33c., kegs, 33@33½c., and less 28@45c., all per pound.

OIL CAMPHOR.—The market is hardening. Demand has been active, with sales of 50,000 lbs. Stocks are reduced. Prices unchanged so far.

MENTHOL.—No change. Some experts think that a change will come in the situation and that when it comes it will come suddenly. Present extreme depression is set down to manipulation by short sellers acting under the necessity of protecting their speculative sales.

ACID ACETIC.—The primary market is higher, owing to the increased cost of raw material. Manufacturers' prices of U. S. 1. 36 per cent. have been advanced to \$4.60@5.60 by the drum. Commercial, 28 per cent., has risen to \$2.60@3.05 by the drum. As yet, however, the jobbing market is unaffected.

POTASSIUM SALTS.—The Gerbuo syndicate has advanced prices three cents per hundred pounds for concentrated potash salts. No effect on jobbers.

CUMARIN.—Leading manufacturers have reduced their prices to \$2.95 for 25-lb. lots, \$2.90 for 100 lbs. and \$2.85 for 200 lbs. For less than 25 lbs. the price is \$3.00. Jobbing quotations unaltered.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

EDITORIAL COMMENT

New Hopes, New Responsibilities.

The inauguration of a Greater New York retail druggists' association, which will represent the commercial interests of the trade in this city, opens up attractive prospects for the future. The widely varying classes now have a place where they can come together and examine conditions from a common plane. Since everybody is eager for better prices, better profits and less destructive competition, all that is necessary to bring about improvement is correct understanding and harmony. The latter now seems to be assured, and we may take for granted that the diagnosis of evils will be entrusted to competent hands.

The selection of representatives is a matter of supreme importance in the price control movement in this city. The new association will represent about two thousand druggists; of these five hundred have been enrolled; yet at the enthusiastic meeting the other night, only about one hundred were present. The great distances and difficulties of getting about in the metropolis will always tend to keep the attendance at central gatherings down to a low figure. The association will be a representative body, and nearly all the business will be looked after by committeemen and employes, which makes it extremely important that officers, committeemen and representatives be chosen with greatest care.

End of Pennsylvania Syrup Bill.

The bill to permit the use of sodium benzoate in soda syrups, which the druggists of Pennsylvania have been backing, and which was passed by both branches of the legislature, was brought to an unexpected end by Governor Pennypacker last week. After all these weeks of earnest effort, it seems particularly hard that the measure should die by a miserable veto.

No doubt the Essler bill was planned and constructed in all sincerity, with

an honest endeavor to render conditions less difficult for the legitimate druggist, and at the same time give the public more adequate protection, yet the measure bore within itself the seeds of its own destruction. As pointed out before in these columns, it seemed to lack the ring of sincerity. Apparently a too great eagerness to make out an especially strong case led to the piling on of secondary arguments which obscured the single point at issue. It is not at all surprising that the Governor failed to discover the real merits of the measure, and it is very much to the credit of the legislators that they succeeded in finding its value at all.

Governor Pennypacker's veto message will touch many a raw spot, especially since the real purpose and need of the bill are honorable in every way. He declared the measure unconstitutional, because it was so framed as to be "calculated to mislead the legislator, and is an unusually striking example of the evil which the Constitution with respect to the title was intended to prevent."

The subject of the bill purports to be the prohibition of the sale of fruit syrups and products containing more than a certain proportion of preservatives and coloring substance. This, according to the Governor, is misleading, for he says: "The subject of the bill is not the prohibition of the adulteration of food since the subject has been much more fully covered by the prior legislation. The real purpose is found in the words, 'but the use of such added substances in such proportions or less shall be and is hereby permitted.' To this subject, which constitutes the really important part of the bill, there is no reference whatever in the title, and, therefore, is plainly unconstitutional."

The reason for the rejection of the bill is purely a technical one, and it is only reasonable to suppose that had the measure been framed with a little more outspoken frankness and a little less tortuous subtlety, its chances would have been good.

Formula Bill in Maine.

In the State of Maine the bill against secrecy in proprietary medicines has reached an interesting stage of development. The anti-secrecy measures which have been introduced in the

legislatures of most of the States this year have mostly been very simple in form, and have been disposed of with as little fuss as possible. But in the State of Maine the matter has apparently been taken seriously with the result that efforts to make the idea fit a particular case have brought about some interesting modifications.

The original bill contained merely a provision prohibiting the sale of alcohol and poisons unless the nature and quantities of the contents are plainly printed on the package. Its prohibition applied to all preparations of the physician and the druggist and was plainly impossible. But the most easterly of our States is a temperance community, and the bill developed strong backing. It was, therefore, worked over with the aid of the pharmacy board and officers of the State association, and in its amended form presents some features entirely new to legislation of this class.

The new draft of the bill provides that no person shall sell proprietary medicines containing alcohol, opium, chloral or cocaine, unless the quantity of each of the poisonous substances contained therein is printed on the label. This provision does not include remedies for external use nor the ordinary preparations of the pharmacist, but applies only to preparations sold under a seal or trade-mark. Manufacturers are to be held responsible for false statements made on the label.

An important clause in the new bill is the following: "Any person, who through failure of a manufacturer to comply with the provisions of this act, shall have cause of action against the manufacturer and may recover both actual and exemplary damages."

It is doubtful whether the bill will ever become a law, but as it stands it is interesting because it shows the result of an honest effort to harmonize the ideas of the reformers with the practical objections of the druggists.

A New Drug Clerks' Journal.

Volume I, No. 1 of the Philadelphia Drug Clerk, official organ of the Philadelphia Drug Clerks' Association, has found its way to our desk. It is only a modest little pamphlet to be issued monthly, but its aims are wholesome and lofty. It stands for union—not of the labor variety—mutual improvement, better conditions, better service in the drug store, Sunday rest, and the betterment of things generally.

The motto of the association is a good one, although the sentiment is not unknown to members of other associations: "Our strength lies in numbers, all pulling together in the same direction; the greater the number, the

greater the benefit for each individual member." That is the all important question in all associations from the N. A. R. D. to the society in a western town which has only three members, numbers to lend authority, numbers to help pay expenses, and numbers to do the work. One trouble with clerks' associations always has been, and we hope always will be, that they grow only at the wrong end. Prosperity, age and experience, in short, the qualities which render a man valuable to an association, drives a clerk out of the ranks, and his place must be filled with a fresh recruit who must in turn pass through a period of preparation only to pass on like his predecessor.

Yet drug clerks' societies are capable of doing much good. If their aims are honorable and in harmony with the ideals of pharmacy, they cannot go wrong, for even when their members graduate from their ranks their experience will go with them. If their object is merely to enforce hard conditions upon employers, the future is no better than doubtful, for resolutions passed by the clerk might arise and smite its author transformed into a proprietor.

Notes on the "Shrimp."

N. A. R. D. Notes has, of late, taken to hurling profanity and abuse at the non-dues-paying druggist whom it chooses to designate as "shrimp," though why that inoffensive and succulent crustacean should be chosen as an emblem of narrow-minded men is not at all clear. Everybody despises the shirk who is always on hand to help gather the fruits of victory won by somebody else, and there are, no doubt, many such in the drug trade; but, to assume that everybody who fails to pay his \$4 dues belongs to this class, is as unwise as it is unfair.

The N. A. R. D. professes to be a business organization which returns to its members many times the value of the amount paid in dues. Is it good business policy to shout profanity at those who may honestly differ with us concerning the value of the service rendered.

Another thing, "Notes" should not forget that it represents the retail druggist of the entire country. In a recent issue it expressed its impatience and its contempt for the non-association druggist in this way: "To h-l with the shrimp!" That sounds more like the polished remark of a hoodlum shrieking defiance at an enemy across the street than like the expression of a great body of professional men who are striving for their rights by an appeal to the public sense of justice and honor.

Commercial Course in the Colleges of Pharmacy.

That the commercial side of pharmacy is coming to be esteemed in our colleges of pharmacy as highly as the sciences which have to do with manufacturing is shown in many ways. Recently Mr. M. P. Gould, the advertising expert, delivered an address before the Philadelphia students and the same authority is shortly to speak on a similar subject to the students of the Buffalo College of Pharmacy. There was a time when only chemists and botanists were invited to expound their several special branches before the embryo druggist, but in those days the selling of goods had not as yet been reduced to a fine art and manufacturing had not entirely forsaken the drug store laboratory.

Mr. Gould told the students all about the secrets of advertising, that is, they are supposed to have been secrets at one time. The three essentials in advertising, he said, are honesty, fair dealing and persistence. The advertiser must have a good article to sell, he must offer and give the customer a square deal and he must keep everlastingly at it. Enterprising persons are constantly trying to dodge one of these three rather hard conditions, but never with any lasting success.

Another remark of the speaker which should interest our readers and also our advertisers, concerns the use of trade publications. He said that manufacturers of drug specialties are constantly wasting money in advertising only to consumers, and argued correctly that since the druggist is the medium for these goods and is expected to display them upon his counter and shelves, some appeal should be made to him.

Property Rights in a Formula.

A case involving an interesting question is now before the courts in Canada. An employe of a manufacturing firm gained possession of the formulas employed in preparing the company's products and upon leaving for another place took them with him for use elsewhere. The company brought suit, claiming that the ex-employe had no right to keep and use the formulas of which there were some 1,500 in all. The defence stated that the recipes were neither original nor copyrighted, but admitted that they might be worth thousands of dollars to a competing firm.

The progress of the case will be watched with considerable interest by proprietary manufacturers, for while the rights of the exclusive owners of a formula are pretty well established other questions relating to priority and actual value remains to be determined. A number of decisions during the past

few years have placed the working formula on precisely the same basis as any other piece of property. In Germany two employes who had filched secrets about the manufacture of colors and dyes are even serving sentences of imprisonment. Business secrets are valuable possessions, and the drug clerk will do well to think twice before imparting his employer's pet formula to a neighbor.

Another Prerequisite Bill.

Since the druggists of New York last year proved the possibility of securing legislation requiring graduation from a school of pharmacy before registration, the pharmacists of a number of other States have also taken steps in the direction of compulsory education. The bills under discussion in Pennsylvania and Michigan have already been considered in these columns. It now appears that of all the prerequisite bills of the year that of Minnesota is the most likely to become a law.

Minnesota has made ample provision for thorough pharmaceutical education in its State university and the enforcement of a prerequisite law would not cause any undue hardship of any kind. The pharmacists have the courage of their convictions and nowhere in the Union are the ideals as to the future of pharmacy higher or more fearlessly and vigorously fought for than at the annual meetings of the pharmaceutical association of that State.

The measure is modeled after the New York law, requiring a diploma from a recognized school and providing for the recognition of registered pharmacists only from States imposing similar requirements before registration. The bill reduces the period of practical experience required from four years to two, making the course at the college of pharmacy count as experience. In case the legislators see fit to give the measure legal authority, it will go into effect in 1908.

"You're Another."

The manner in which the word "trust" has been flung back and forth by the contending parties in the suit of the Philadelphia cutter against the N. A. R. D. is highly entertaining. That word seems to be a peculiarly effective epithet nowadays, and appears to carry a sting quite as vicious as "scab" and "boycott."

Last week a press association scattered among the newspapers of the country long accounts of a gigantic drug trust controlling a business of nearly half a million dollars. This trust, it was stated, was under the direction of one Thos. V. Wooten, of Chicago, and by unfair means had robbed the people of an immense number of millions.

Upon the heels of this startling an-

nouncement came an interview with a representative of the alleged trust, hurling accusations back upon the accuser, hinting darkly at a huge cutter's trust with headquarters in Cincinnati and chief outlet in New York and backed by Standard Oil millions. This, the real trust, was robbing the honest druggists of a fair livelihood only to rob the public later.

Now, will some one please give us an accurate definition of the word "trust" and a clear description of trust methods?

Why Clerks Do Not Remain Clerks.

It is not at all surprising that drug clerks do not wish to remain on a salary basis a week longer than necessary. The discussion of drug store profits, expenses, etc., aroused by Mr. Falkenberg's calculations, one reason why clerks hasten to become proprietors is made very clear. Of the druggists who have submitted figures, nearly all began by deducting a yearly salary for the proprietor at least twice as large as that allowed for individual clerks.

Thus, one druggist evidently doing business on a very modest capital, allowed himself a profit of \$1,899.05, besides a salary of \$1,200, while his three clerks received during the year only \$1,664. Bearing in mind the fact that the registered clerk and his employer are on a plane of professional equality, is it any wonder that hireling grasps the first opportunity to secure the necessary stock to begin for himself?

The relation of a competent drug clerk with his employer is necessarily a confidential one. The registered clerk must represent the druggist in many ways, and he enjoys opportunities of becoming acquainted with the intricacies of the business such as the employes in no other line of trade have. He learns to buy as well as to sell goods, has access to the books and in the frequent absence of the proprietor has charge of the cash. If he is at all enterprising, he will do a little figuring on his own account, and recognizing several mistakes, in his superior's methods, quickly acquires confidence in his own ability to do as well or better.

Window Cards are Effective.

"Price cards in the windows sell goods," remarked the Window-trimmer to a bystander, as he surveyed the result of his work from the sidewalk. He pointed to a pile of tooth brushes with a card bearing simply the price, 25 and 35 cents. "I put that card out yesterday," he said, "and forgot to add the main exhibit. Before I got around to that, in came a man inquiring about those brushes. He did not know what sort of brushes they were, but he wanted one, anyway."

Signs of Improvement.

The dismal brethren, who are still talking about the decay of pharmacy and the loss of a golden past, are respectfully referred to the article by Prof. Kremers on the life of Dr. A. B. Prescott. There are unmistakable evidences of improvement in the domain of pharmaceutical education as well as an appreciation of a noble life.

The writer calls attention to the changes which developed during the lifetime of the dean of pharmaceutical education. The thirty-five years of activity witnessed the departure of the old apprentice system of education and the elevation of the pharmaceutical curriculum to the university standard. From a plan analagous to that of the skilled artisan, the calling has been advanced to one on a level with the learned professions. The degree granted to students in the University of Michigan after four years of study following entrance on a high school diploma, places the recipient on a par with graduates from the literary and engineering departments.

An interesting report comes from the seat of war in the Far East. The Russians have discovered the secret of Japanese success at arms. The despatch, which, by the way, comes by way of St. Petersburg, states that each knapsack of the Mikado's soldiers contains a quantity of pills prepared from some mysterious drug which at the proper time are consumed so that at the nick of time the patient may be stimulated to deeds of prodigious valor. It is probably of no use to look for those pills in The Era's semi-annual price-list.

Our friend, Thomas Stoddart, is stirring the political pot with commendable vigor in his home town of Buffalo these days. Only a few months ago he served as acting mayor of that important city, and last week unearthed a plot to enrich a few at the expense of the town. He is said to have made the most sensational speech heard in the Council Chamber for many years. He accused the Mayor of employing Czar-methods, and of insulting elected officers in the municipal legislation. He has the support of the Council and the people, and no one need be surprised to hear that Mr. Stoddart has been elected to the office of Mayor.

The University of Halle, Germany, has conferred upon Dr. Willy Merck, member of the old house of E. Merck, Darmstadt, established in 1668, a very high distinction, namely, the honorary degree of Doctor of Medicine "in recognition of numerous meritorious contributions looking to the advancement of the therapeutic side of medicine."

✂ ✂ C. P. ✂ ✂
EMANATIONS

Oh, Who Will Blow My Horn?

"Dr. Muir is right" the C. P., said. "If you don't blow your horn, nobody will look at you, and that is necessary if you want to exert any influence."

"You mean prominence in association work?" suggested the druggist.

"It is not necessary to cite particular cases. It is that way in everything," said the C. P., with decision. "From advertising your business to keeping your children in order in your own house, it is all the same. You can't afford to be inconspicuous."

"Isn't modesty a virtue any longer?" inquired the druggist.

"It never was any of the practical virtues," returned the sage. "Nobody ever took any stock in it as applied to himself. Modesty is admired only in others."

"Still you hear men boasting about it every day," said the druggist.

"Pure bluff!" said the old gentleman. "Accuse one of cultivating the gentle virtue, and he will straightway begin to blow about his exploits till you feel like an arrant hypocrite. And ten to one he will mentally resolve to mend his ways, and get a little more notice in the future."

"Nonsense!" said the druggist. "I know lots of people who are really modest. Many of them cultivate that sort of thing. They will not blow their own horn. You couldn't make them do it."

"Yes, there are a few very amiable persons," admitted the sage. "Mostly youngsters who still have a notion that the world is on the hunt for merit all the time, and is simply aching to discover it and make much of it. They soon find out that it doesn't pay. Inconspicuous merit never amounted to anything. If they don't discover the need of a horn, and hasten to supply themselves with good, big megaphones, they suffer disappointment, and live lives of vague regret."

"Mighty pleasant sort of people, though," the druggist observed.

"That's true," assented the C. P. "Do you know why?" It is because they are always ready to listen and to admire. The fellow with a big horn wouldn't have any fun if it were not for them."

"Look here!" remonstrated the man behind the counter, who rarely did more than applaud and vote with the majority at meetings. "That isn't quite fair, you know."

"No, perhaps not," admitted the sage. "There is a sort of admiration, even among horn blowers. But don't forget this: It is invariably the man who makes the most noise who creates the biggest disturbance."

"Wrong again," said the druggist. "Quiet chaps, who never make any spurge at all, are the ones who do the real work."

"There is a quiet way of blowing a horn, which carries farther than any other," remarked the C. P., easily. "And then there are some who are shrewd enough or fortunate enough to get somebody else to do the blowing for them. That is the most effective of all."

The druggist made sundry gestures, in-

dicative of disgust. "Bah!" he said.

"Can't you take anything at face value?" "It is always a good plan to count your change twice," remarked the C. P.

"That sort of thing is all right in advertising," observed the druggist. "All that you say applies there, but in association work and every day life—that is different."

"You talk as though advertising were something that has to do only with the store," replied the sage. "You are mistaken. Business is only a small part of life, a part of a whole. Our friend Smith never has much to say, yet he will be elected president. Very well! That cough mixture in your window is made by a proprietary firm. They spend very little in advertising, they are fortunate in having you and other druggists do it for them."

"It's a good remedy," said the druggist, quickly. "Besides, they offer some inducements."

"Ah! they offer inducements," repeated the old gentleman.

Potassium Hydrate in Alcohol.

Thiel and Mase (Journ. Chem. Soc.) have sought the reason for the yellow and brown color which develops in solutions of alcoholic potash. The reason generally assigned to this change of color is the oxidation of alcohol by the alkali and the subsequent formation of what is commonly known as aldehyde resin. The same discoloration occurs when solution of potassium hydrate is mixed with aqueous solution of phenol. To prevent the discoloration of alcoholic potash, the following process is proposed: For one litre of semi-normal solution, 43.5 grams of potassium sulphate is mixed with 110 to 120 grams of barium hydroxide in a platinum or china basin and 100 cc. of distilled water poured over the mixture. The basin and its contents are weighed, heated for fifteen minutes with constant stirring and again weighed. Water is then added until the original weight is obtained. The contents of the dish are rinsed with a flask with 800 cc. of water. After shaking and allowing the precipitate to settle, 3 or 4 cc. of a concentrated potassium sulphate solution are added to remove any excess of barium hydroxide. After the precipitate settles, the clear liquid may be drawn off. The latter will keep for months without turning brown.

ERA COURSE IN PHARMACY.

Graduates for Feb., 1905, Whose
Average Grades are Above 90
Per Cent.

Number.	Name.	Per Cent.
4134	Philip W. Small, Stonington, Maine	96
4048	John L. Tewksbury, Chelmsford, Mass.	95

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all who request it, for the sum of \$2. Those who desire the latter should forward the necessary fee at once to The Pharmaceutical Era.

✂ ✂ OUR ✂ ✂
LETTER BOX

DRUGGISTS' FIRE INSURANCE.

Cincinnati, March 1, 1905.

Editor The Pharmaceutical Era:

Enclosed you will find a copy of my answer to the article in the Apothecary, of February, on the subject of the druggists' fire insurance company. Very truly yours,

FRANK H. FREDERICKS.

The communication follows:

The Apothecary, in its February number, undertakes to assail the writer and his suggestion for a national druggists' fire insurance company, by charging him with either misrepresentation or gross ignorance. The truth of truth would, however, have given a more penetrating light had my editorial friend learned to distinguish a "capital stock" from a "mutual" fire insurance company.

It is asserted that my statement "That a druggists' fire insurance company with a capital stock of \$200,000 can do business in every State," is untrue, and that it would require approximately a capitalization of \$400,000. These assertions are based upon the following particular items of irrelevant information:

1st. That Virginia and Georgia require each a deposit in securities of \$10,000.

2d. That New York does not license a "mutual company" of another State to do business within the State of New York.

3d. That the respective officials of Vermont and Minnesota in their reply, speak of deposits, and not of deposits of securities obtained by investing the capital of the company.

THE SUGGESTED COMPANY.

It was asserted by me at St. Louis and in an article written for another drug journal, "that a druggists' fire insurance company having a capital stock, fully paid, of \$200,000, can do business in every State." My purpose was to speak of an insurance company as a business proposition, without entering into unnecessary detail.

In the pamphlet presented by me on the subject, the suggestion was made that the stock be sold at \$5 per share above par, in order to secure the initiatory expense money necessary as license and registration fees in the various States.

The company which I had suggested was to be one in the control of conservative business men (hundreds of whom are to be found in the drug field), who would undertake to conduct its affairs for the benefit of the greatest possible number of druggists. As business men, its members will first go over the field carefully, ascertaining where business may first be inaugurated with a view of reaching the greatest number under the most favorable conditions, and also with a view of securing the quickest and best returns.

When the directors of the suggested company come to formulate its business policy they will find that on payment of registration and license fees, varying some in the different States (which is fully provided for by selling the stock at \$5 per share above par), they are privileged

to commence business in forty-two of the States and the District of Columbia, Arkansas requires a \$20,000 bond in addition, which can be secured at small expense.

It is not likely that as careful business men they will desire to avail themselves of the privilege to immediately enter every one of the aforementioned States. They will select such States as offer the best field for immediate operation. The company established, they may be expected to carefully reach out, and to enter into all States where business can be conducted on a safe basis.

How it happens that the suggestion made by me for a capital stock company, should in his mind be confused with a mutual company, I am unable to fathom. It is due to this confused state of mind, however, that he feels called upon to recall my statement in answer to a question by Prof. W. C. Anderson, on the convention floor, as to the right of such a company to do business in New York. That my answer was correct is proven by a letter addressed to the Superintendent of Insurance for New York, and his reply thereto.

I wrote to him that my understanding was that under the law a fire insurance company organized under the laws of Ohio, as a stock company having a capital of \$200,000, invested in securities and deposited with the proper authorities in Ohio, can upon production of a certificate to that effect from the department in Ohio, do business in the State of New York, after complying with such rules and regulations and paying such charges as are provided by law.

The superintendent's reply was that an Ohio fire insurance company with a paid up capital of \$200,000, properly invested and making a financial statement to his department, verified by the Ohio department satisfactory in its character, can be licensed to transact business in New York.

There seems to be only one other item to prevent a return to the Apothecary's first and original impression of my suggestion for a druggists' fire insurance company, that in the reply from Vermont and Minnesota, a deposit is referred to, and not an investment. Reference to the statutes of all the States, including Vermont and Minnesota, will prove that whenever "deposit" is spoken of in this connection, there is meant a deposit of the securities in which the capital of the company has been invested. It may also be said that but few States require the deposit of investments to be made with officials of the company's home State, but since it can make no difference whether these securities are kept in the safe of the State or in the safe of the company, it hardly needs further comment.

Having, as I believe, fully sustained my original position in answer to the charges of the Apothecary, it is my earnest and sincere hope that it will give me such aid as it may see fit, in order to carry the undertaking through to a successful end. It is, in my opinion, a duty owing to the drug fraternity of this country, which is being made to pay exorbitant insurance rates in order to pay losses occurring in other lines of business, and in order to defray the great expense in salaries, commissions, etc., which companies doing a general insurance business are subjected to.

A national druggists' fire insurance company would be for its stockholders and policy holders alike, the best possible business proposition. Since the stockholders are intended to be druggists, it will afford to many a double source of profit. If the aid of the N. A. R. D. can be enlisted for the project, it would in addition, offer to that body a most liberal source of revenue.

The company having a capital of \$200,000 can do business in every State and can net its stockholders a dividend of 20 per cent. annually; its policy holders a saving of at least \$2.50 on each \$1,000 of insurance carried, and the N. A. R. D., through the use of its organizers, at least \$20,000 annually. Respectfully submitted,

FRANK H. FREDRICKS.

Camphorated Oil.

In a paper read before the Pharmaceutical Association of West Scotland, A. Boyd (Br. & Col. Dr.) proposed a method for preparing camphorated oil which, he stated, would avoid all loss of camphor. Instead of heating in the open air, the oil is heated by placing in a wide mouth bottle and immersing in hot water. The camphor is introduced in the form of No. 20 powder after the oil has become warm. The bottle is closely stoppered and shaken from time to time and returned to the hot water. Solution is fairly rapid, and no loss of camphor by volatilization can occur. The stock of camphorated oil should be kept well stoppered in a cool part of the store, preferably in the cellar. To test the proportion of oil present, merely heating a weighed portion until all camphor has evaporated and repeating the weighing is sufficient.

Denaturing of Alcohol.

The report of the Sectional Commission to the French Finance Minister contains some interesting information regarding denaturing of alcohol. This report states (Jour. Soc. Chem. Ind.) that the denaturing agent at present employed in France consists of 10 litres of wood spirit and 0.5 litre of heavy petroleum benzine (naphtha) per hectolitre, costing nearly nine francs. The commission has examined a large number of proposed denaturing agents, but the only substances which could be entertained are: (1) Petroleum benzine (b. pt. 100°-160° C.) mixed with toluene—this benzine has the advantage that it can be detected by Halphen's reaction in all fractions when alcohol containing it is submitted to distillation, a guarantee which the heavy Excise benzine (b. pt. 150°-250° C.) does not possess. (2) Pyridine, 0.5 per cent., as employed in Germany. (3) Acetone-oils from wool-scouring. (4) Formalin.

Behavior of Various Denaturants Towards Fraudulent Treatment.—The commonest fraud consists in blending a certain proportion of denatured alcohol with pure alcohol and disguising the flavor by aromatic bodies. The addition of formalin in denaturing, to the extent of 0.5 per cent., will still be detected with certainty when the denatured spirit is blended with fifteen times its volume of pure alcohol. If the denatured spirit contains 2.5 per cent. of wood-spirit, the presence of methyl alcohol can only be detected so long as the blending does not exceed the propor-

tion of 1:8. In order to obtain a higher guarantee against blending, it is desirable that benzine and pyridine or acetone oils should be present. A rarer form of fraud consists in agitating the spirit with benzine or carbon tetrachloride and brine and redistilling the aqueous portion in a rectifying apparatus. This process yields 60 per cent. of potable alcohol, but requires considerable plant. By this means the whole of the benzine, pyridine and acetone oils are eliminated, but traces of formalin can always be detected in the redistilled alcohol, while the whole of the methyl alcohol remains. If the redistilled spirit be used for blending purposes, the sole guarantee would rest with the methyl alcohol, which would escape detection at dilutions greater than 1 to 8.

Proposed New Formula for a Denaturing Agent.—The commission recommends the following mixture: 2.5 per cent. of wood spirit, the methyl alcohol of which serves as an indicator in cases of redistillation and to a certain limit in those of blending; 0.5 per cent. of formalin (33 per cent. of formaldehyde), mainly as a very delicate indicator in cases of blending and (in form of traces) in those of redistillation without subsequent blending; 0.5 per cent. of heavy Excise benzine together with 0.25 per cent. of pyridine, the flavor of which is very nauseous, even at extremely high dilutions, the object of these being to compel the blender (without redistillation) to employ smaller proportions of denatured spirit in his mixtures. It is calculated that the above mixture would lower the cost of denaturing by five francs per hectolitre, and would extend the use of denatured spirits by reducing the price to the small consumer by five centimes per litre.

A New Gum.

Goris and Lefrose (Bull. Sc. Pharm.) describe a new Indian gum which promises to be useful in various ways. There are two varieties, both obtained from species of Anogeissus. That from *A. latifolia* appears in rounded venular pieces and in long tears of a white or pale yellow color. The fracture is vitreous and transparent, and the taste insipid. It is precipitated by corrosive sublimate and is slightly colored by ferric chloride due to the presence of a small amount of tannin. The gum from *A. pendula* has not been studied extensively. Both gums dissolve much more easily than gum arabic. The solutions obtained are not quite so white as those of acacia, but with a little care the same limpidity may be obtained. Solutions should be made in the cold, heat rendering the gum partly insoluble. A mixture of 5 to 100 requires from eight to nine hours, while of 10 to 100 requires about 20 hours for solution.

Toxic Action of Ethylen Chloride.

Dubois (Nouveaux remèdes) discusses the poisonous properties and inquires whether the presence of this substance in chloroform may not be the cause of numerous accidents attending the use of this anesthetic. One or two respirations of an atmosphere containing 10 per cent. of ethylen chloride were sufficient to produce a very definite toxic action.

DR. A. B. PRESCOTT.

His Services to Pharmacy as
Viewed by Leading Men.

A PIONEER EDUCATOR.

Dr. Edward Kremers, University of Wisconsin:

Professor Prescott was not only the senior of the pharmaceutical deans of this country; he was also the pioneer of pharmaceutical educators at a university, more particularly at a State university. To grasp the importance of this remark, one must compare the conditions of pharmaceutical education some thirty-five years ago with those of to-day.

Then the colleges of pharmacy were evening schools for the training of apprentices and clerks; to-day Michigan is one of the few institutions at which the pharmacy student may secure a bachelor's degree, which makes him the intellectual and social peer of the American college graduate.

Then the majority of pharmaceutical instructors were men—honorable men, it is true—who had worked their way somewhat above the average of their fellows, and who, because of personal characteristics, were accorded intellectual leadership by the profession as represented by the local druggists. To-day the pharmaceutical professor must be something more if he would be truly successful as a teacher.

Then the pharmacy student took several courses of evening lectures during the winter months, working for his preceptor during the day and spending in the latter's service his best energies. To-day a "reputable" college of pharmacy shuns evening work as a sign of inferiority.

In those days pharmaceutical instruction at college consisted principally of lectures; to-day the laboratory plays an increasingly important rôle in the curriculum.

To intimate that Professor Prescott and the University of Michigan are responsible for all these changes for the better, no one would dream of doing; yet no one will deny that the University of Michigan was the most important single factor in bringing about these improvements, nor that at the University of Michigan Professor Prescott was more responsible than any one individual for the inauguration of university methods into the course of pharmaceutical instruction.

"The stone which the builders rejected, the same is become the head of the corner" of our new edifice of pharmaceutical education. The old conference of pharmaceutical faculties went to pieces because it refused to accord a place to the "new" method of pharmaceutical education which was not based on the traditional apprenticeship and which refused to regard the university as a mere "Fortbildungsanstalt." The new conference elected the veteran dean its first president. Some of the oldest colleges have since affiliated with universities and their college courses are being remodeled in accordance with the university ideas and ideals.

The exact rôle which the future historian may accord Professor Prescott in this evolution of pharmaceutical education, we need not attempt to prophesy. The rôle which he has played is possibly sec-

ondary to the influence his memory will continue to exert through hundreds of loyal alumni, not only in Michigan, but in almost every State and territory of this Union.

HIS WORK AS A CHEMIST.

Joseph F. Geisler, official chemist to the New York Mercantile Exchange, and chemist to the New York State Department of Agriculture, New York City:

The death of Prof. Albert B. Prescott, at Ann Arbor, Mich., on February 25, 1905, removed not only one of the foremost chemists and scientists of America, but will be felt as a distinct loss to mankind in general. His forty years of activity at the University of Michigan are in part reflected in his works as an author, in his books—"First Book in Qualitative Chemistry," "Critical Examination of Alcoholic Liquors," "Outlines of Proximate Organic Analysis," "Qualitative Chemical Analysis" (jointly with Dr. Douglas, and a later edition with Prof. Otis C. Johnson), and the "Manual of Organic Analysis"—all of which have proven their excellence in shaping the chemical training of students in this country. His numerous articles on scientific subjects published in pharmaceutical and scientific journals, notably his articles on the alkaloids of opium, cinchona, belladonna and the per iodides of the alkaloids, are valuable contributions to science.

These, however, reveal but a small part of his activities aside from his arduous duties as dean of the department of pharmacy and director of the chemical laboratories at the university. His loss will be felt particularly in pharmaceutical circles, for he took an active and leading part in the uplifting of pharmacy as a profession, and in the deliberations of the American Pharmaceutical Association during the past twenty-five years. He was a zealous and indefatigable worker in the committees for the revision of the United States Pharmacopœia of 1880-1890, and the forthcoming edition, and much of the descriptions of chemicals, tests and assay processes bear the imprint of his valuable suggestions. His writings were always lucid, logical and convincing, and show his mastery of the subject.

Of striking and pleasing personality, Dr. Prescott was a conspicuous figure in any assemblage, and always ready to take part in its deliberations, a matter for which his learning and broadness of mind admirably fitted him. The proceedings of the American Pharmaceutical Association give evidence of this. His advice was sought in the drafting of food and drug laws, and many of the present statutes owe their existence to him. His views as to a food and drug law won him honorable mention in New York, in 1880. As a chemist he was a close observer of details, a precise, conscientious and syst-matic worker, and above all governed by the true principle—the search for the truth. He won distinction as a forensic chemist. Always serious, broad minded and quick to grasp the germ of a proposition, his testimony was more than ordinarily effective. His ready and learned answers often discomfited aggressive attorneys. His abilities won him many honors among fellow scientists. He was elected president of the American Chemical Society in 1886; president of the American Association for the Advance-

ment of Science in 1891; president of the American Pharmaceutical Association in 1899, and was chairman of the World's Congress of Chemists, at Chicago, in 1893. Pharmacy and chemistry are much indebted to him. Many pharmacists and professional chemists owe their chemical training and learning to Prof. Albert B. Prescott. As one of his former assistants, I consider it an honor to, at least in a small measure, be able to pay a debt of gratitude to the memory of one who has won such distinction, been so highly honored, and had the good fortune to leave his mark for good in the world.

FOUNTAIN FORMULAS.

Orange Snow.

Three eggs.
Concentrated orange
syrup 1½ pints
Milk 1½ pints
Water 1 pint
Acid phosphate 2 ounces
Gelatin 1 teaspoonful
Mix and freeze.

Pineapple Snow.

Whites of twelve eggs.
Juice of twelve lemons.
Cream.
Syrup.
Water of each 14 pints
Gelatin 1 ounce

Dissolve the gelatin in a pint of water, beat the eggs, mix the syrup, cream and water, add the eggs, stir thoroughly, add the lemon juice and freeze. After opening, add a jar of crushed pineapple and turn the freezer until thoroughly mixed. Serve in sherbet cups.

Frozen Phosphates.

Simple syrup ¼ gallon
Water 6 pints
Fruit acid solution 1 pint
Solution acid phosphate . . . ½ pint
Grate and squeeze four lemons.
Grate and squeeze three oranges.
White of one egg thoroughly beaten.
Mix and freeze.

Bowlers' Favorite.

Wild grape juice 3 ounces
Strawberry syrup 16 ounces
Fluid extract of kola . . . ¼ ounce
Solution acid phosphate . . ½ ounce
Soda foam ¼ ounce
Syrup, to make ½ gallon

Chocolate Syrup.

(1.)

In making chocolate syrups, it must be remembered that the brand used is of much importance, and, hence, comparative tests must be instituted. It must also be borne in mind that there is a difference, commercially, between "chocolate" and "cocoa," the former always containing the full natural proportion of oil, it being preferable to buy it in the form of "confectioner's chocolate" in bulk.

Cocoa, soluble 2 ounces
Water 32 ounces
Sugar 52 ounces
Vanilla extract ½ ounce

Triturate the cocoa in a mortar with a portion of the water, to a smooth paste, add the remainder of the water, then the sugar, heat the whole in a suitable vessel with constant stirring, until it nearly reaches the boiling point, then strain through a fine sieve, and when cold, add the vanilla extract.

(2.)
 Chocolate 1 pound
 Sugar 6 ounces
 Boiling water, enough to
 make 1 gallon
 Grate or scrape the chocolate fine, and triturate it with 2 ounces of the sugar (this may be done preliminarily, and in larger quantities, if necessary), then, in a large, warmed mortar, form a paste under the pestle by gradual addition of boiling water up to 40 fluid ounces; transfer to a porcelain dish, slowly heat, and, stirring well, gradually add the remaining 4 ounces of sugar and 20 ounces of boiling water, and bring the whole to the boiling point for five or six minutes; then remove and stir until ebullition ceases, and again heat and boil for one minute. By this means the cacao butter will not separate, and the product will not need straining, only skimming. The attention here is mainly devoted to obtaining a smooth paste at the first step, and in not overheating at the last.

Coffee Syrup.

Mocha coffee 8 ounces
 Java coffee 8 ounces
 Boiling water 1 gallon
 Granulated sugar 10 pounds
 Boil together, or pass through a suitable filter coffee pot, until 1 gallon of infusion is obtained; allow it to settle and add the sugar.

Crushed Cherries.

Extract of vanilla 2 ounces
 Oil of bitter almonds 2 drops
 Solution of citric acid 4 ounces
 (Caramel, sufficient.)
 Syrup, to make 1 gallon

Idlewild Syrup.

Strawberry syrup 10 ounces
 Orange syrup 10 ounces
 Pineapple syrup 10 ounces
 Lemon juice 2 ounces
 Use one and a half ounces of this to a large glass one-third full of shaved ice, then fill glass with soda, add a few strawberries, slice of pineapple, slice of orange, and serve with straws.

Mountain Mist.

Orange syrup,
 Strawberry syrup, of each. 1 pint
 Orange flower water,
 Fruit acid, of each 1 ounce
 Soda foam ½ ounce

Fruit Nectar.

Vanilla syrup,
 Orangeade syrup,
 Strawberry syrup, of each. 1 quart
 Port wine 3 ounces
 Serve in soda glass with cream.

Sarsaparilla Syrup.

Fluid extract of sarsa-
 parilla 1 ounce
 Fluid extract of licorice. ½ ounce
 Oil of wintergreen 10 drops
 Oil of sassafras 6 drops
 Syrup, enough to make .. ½ gallon

Grape Punch.

Grape juice 2 ounces
 Juice of ½ orange.
 Juice of ½ lemon.
 Sweeten to suit taste.
 Cracked ice ¼ glass
 Shake thoroughly, serve in 10 ounce
 straight lemonade glass.

Malted Milk Frappe.

Strawberry syrup .. 1 ounce
 Vanilla ½ ounce
 Malted milk 2 teaspoonfuls
 Whipped cream 4 ounces
 Egg 1
 Cracked ice ¼ glass
 Shake, strain, toss and serve.

Cantaloupe Sundae.

Take a small sized cantaloupe, cut in two, remove the seeds, slice off a small portion from the bottom so that it may stand squarely. Place in the half of the cantaloupe the usual amount of ice cream. Top with crushed pineapple and whole cherries. Insert spoon upright in meat of cantaloupe. Place upon napkin and serve on fancy plate.

Grape Cobbler.

Juice of 4 oranges.
 Grape juice 1 quart
 Claret wine 1 pint
 Sugar and water to suit taste.
 Serve from punch bowl in 8-ounce glass, with ice.

Cherry Cream Puffs.

Put a ladle of ice cream in 12-ounce glass; then add one ladle of cherries over ice cream. Mix.
 Strawberry syrup 1 ounce
 Sweet cream 1 ounce
 One egg.
 Cracked ice ¼ glass
 Shake, strain, toss and pour on top of ice cream and cherries.

Grape Juice Sherbet.

Sweeten 1 quart grape juice to taste, add ½ pound sugar to the juice of six oranges, stir till sugar dissolves, mix together and freeze slowly. Beat the white of an egg, adding a tablespoonful powdered sugar and stir into sherbet, repack and set aside for two hours. Serve in sherbet cups.

American Lemonade.

Orange syrup 1 ounce
 Lemon syrup 1 ounce
 Powdered sugar ... 1 teaspoonful
 Solution of acid phosphate 1 dash
 Shaved ice ½ glass
 Fill with coarse stream. Add slice of orange and run two straws through it.

Peanut Dope.

Peanut butter 4 ounces
 (Finely ground peanuts
 can be used also.)
 Salt, a pinch.
 Powdered gum acacia.... ¼ ounce
 Water 1 ounce
 Syrup ½ gallon
 Rub peanut butter, salt and acacia together in a mortar, add all of the water, then beat up and add syrup gradually. Small lump of ice cream with this syrup poured over.

Tally Ho Sundae.

Put large measure full of ice cream in a tall sundae glass, cover with fresh crushed banana fruit and fill the glass with whipped cream. Cover one side with maraschino cherries. Other fruit may be used if desired.

Chocolate Sundaes.

Make a thick, smooth paste with powdered cocoa and hot water and add simple syrup until the proper consistency is obtained. Pour over vanilla ice cream.

Chocolate Fruit Sundae.

Strawberry syrup 10 ounces
 Vanilla syrup 10 ounces
 Raspberry syrup 8 ounces
 Chocolate syrup 4 ounces
 Pour a ladle of this sauce over plain ice cream.

Midnight on the Midway.

Claret syrup 1 ounce
 Kola syrup ½ ounce
 Lemon juice 1 dash
 Angostura 1 dash
 Ice ½ glass
 Fill with ginger ale, etc.

Pineapple Cardinal.

Pineapple syrup 1 ounce
 Catawba wine 4 drams
 Catawba wine 4 drams
 Ice ½ glass
 Carbonated water, enough.

A Standard Eye-Dropper.

At a pharmaceutical meeting held in Philadelphia, Dr. P. N. K. Schveik (Am. Journ. Pharm.) proposed the adoption of a standard dropper so that there might be some control of the doses of powerful alkaloids administered to the eye. He found that the straight dropper, having a point or tip 2.00 to 2.50 millimetres in diameter, will most nearly drop sixty drops of aqueous solution to the dram. This allows an inclination of the dropper of 45 degrees to the horizon. A drop always bears a direct ratio in size to the surface from which it drops, so that in a curved dropper the solution follows the curve to the point of rest and gives rise to a larger drop than if dropped from the point. The same is true of beaded droppers. Curved or beaded droppers should be given with drop solutions containing poisonous alkaloids, as they always give a surface more than 2.50 millimetres in diameter, and, therefore, drop more than one minim per drop. He prefers droppers having dark rubber nipples, because the bulb is less sensitive to the touch. The rubber nipples should always be cleansed to rid them of rubber dust and sulphur.

Oil of Almonds and Substitutes.

Lewkowitzch (Pharm. Journ.) states that commercial oil of almonds, called oil of sweet almonds, is prepared from the seeds of apricots. He gives a table showing the specific gravity, the iodine index, the saponification number and the acid number of various commercial products. Bieber's reagent—equal weights of sulphuric and fuming nitric acids—furnishes a satisfactory means of distinction. One part of the reagent mixed with eight parts of oil gives no coloration when the oil is the pure, sweet almond variety. With nut oil a peach blossom color is produced. With apricot oil, the reaction may be doubtful when in mixtures containing only a small proportion of this oil, one in four giving only doubtful results, but proportions above one in these the reaction is unmistakable. Chloroglucline, in ethereal solution of 1 in 100, also serves to distinguish mixtures.

A firm in Germany is introducing surgical bandage impregnated with the active principle of the suprarenal gland, the whole being sterilized. Bloodless surgical operations by the aid of adrenalin seem to be a possibility.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Foam For Soda Water.

(S. C. V.)—The following formulas are of the character you outline:

Solution of Alumen.—This may be made by adding the white of 1 egg to 1 pint of water, stirring well, and after standing for a short time straining; or, better, if it is not all to be used at once, adding to 8 ounces of water, straining and adding an equal quantity of syrup—the latter tending to preserve it. This can be used in the proportion of the white of 1 egg to the gallon of syrup, being one-half greater quantity than is usually recommended.

Solution of Irish Moss.—Take of Irish moss, 1 ounce, and water enough to make 1 pint. Wash the Irish moss in water, to free from impurities; add one pint of water and boil for five minutes, or heat in a water bath for fifteen minutes, or macerate in cold water for twenty-four hours, with occasional stirring; filter through purified cotton on a muslin strainer, in a hot-water funnel. This mucilage, it is claimed, has no more taste than mucilage of gum arabic, and is said to keep better. It can be used with soda syrup, in the proportion of from 2 to 4 ounces to 1 gallon of the syrup.

Solution of Gum Arabic.—Take of gum arabic, 8 ounces, and water, 1 pint. Wash the gum arabic with water, to free it from impurities, and add the water, stirring occasionally until dissolved. Used in the proportion of 3 or 4 ounces to 1 gallon of the syrup.

If gelatin be used as a foam producer, it must be dissolved by the aid of heat in the water used in making plain syrup. About half an ounce is sufficient for 1 gallon of syrup. Formula for solutions containing quillaya have been published in previous volumes of The Era. Consult the indexes.

Witch Hazel Jelly.

(H. K. & C.)—

(1.) Dissolve 30 grains of borax in 4 fluid ounces of distilled extract of witch hazel, mix with 3 fluid ounces of glycerin and 2 fluid ounces of cologne water, add slowly to 4 ounces mucilage of Irish moss, previously mixed with 2 fluid ounces of glycerin. After standing a few hours, strain the mixture.

(2.) Mix in a large mortar 32 parts of glycerin and 20 parts of soft soap and stir

until incorporated. Add 10 parts of distilled extract of witch hazel, stir in well, then add in a very thin small stream, under constant agitation, 256 parts of oil of sweet almond and 1 part of extract of white rose, keeping up the agitation until complete incorporation is attained. Lastly add a sufficient quantity of tincture of musk to perfume the jelly.

(3.) Dissolve 108 grains of Russian Isinglass in 6 fluid ounces of distilled water by the aid of a gentle heat, add ½ ounce of glycerin, 4 fluid ounces of distilled extract of witch hazel and strain. Then add 1 ounce of clarified honey and ½ fluid dram of oil of neroli.

(4.)

Tragacanth, in flakes	4 ounces
Alcohol (90 per cent.)	20 fl. ounces
Glycerin	15 fl. ounces
Liquid extract of hamamelis	20 fl. ounces
Mix.	

Photographic Paste.

(H. K. & C.)—Try one of the following:

Gelatin	150 grains
Arrowroot	308 grains
Water	8 fl. ounces
Methylated spirit	2½ fl. drams
Solution of formaldehyde (40 per cent.)	20 minims

Soak the gelatin for a few hours in 2 ounces of the water, then make a paste with the arrowroot and remaining 6 ounces of boiling water; mix, heat gently till dissolved, and as the mixture cools, add the methylated spirit and solution of formaldehyde.

(2.)

Arrowroot, 4 ounces; mixed with 4 ounces of water, and pour in 20 ounces of boiling water with constant stirring. When cold, add 1 ounce of gelatin, and as soon as this is swelled, set the vessel in hot water and boil the water in the outer vessel until a uniform mixture is obtained. Finally add:

Alcohol	4 ounces
Carbolic acid	1 dram
Ammonia water	1 dram

(3.)

Rice starch	2 ounces
Gelatin	6 grams
Water	16 fl. ounces
Oil of cloves	16 drops

Incorporate the starch powder with the water, add the gelatin and heat gently over a water bath until a jelly-like compound results.

"Delibie's Bond Issue."

(M. & P.)—"We have a call for a teething preparation, a liquid for rubbing and soothing the gums of teething children, called 'Delibie's bond issue for teething.' We are unable to find any remedy by this name in any price list at our command, and have, therefore, thought that possibly it might be the same as 'Delabarre's sirup dentition.'"

We do not find "Delibie's bond issue" listed in the Price List Edition of The Era, and inquiry at wholesale houses here fails to elicit the desired information. Can some reader supply it?

Chondrus Crispus.

The sea-weed known as chondrus crispus is, in France, gathered in the district of Treguier, in Brittany, between Plougenast and Perros Guirec, upon the reefs and little islands that border the coast, as well as in the little streams subject to tidal fluctuation (Pharm. Journ.). It is collected from May to August, the gatherers following the retreating tide and wading often up to the waist. As soon as gathered, it is heaped upon the shore to drain. It is then sorted to remove other algae and adhering shells, washed in fresh water and spread out near the sea. When dry it is of a greenish-yellow tint and is packed in sacks and taken to the nearest port, whence it is sent to Hamburg. Then it is bleached, apparently by the use of sulphurous acid, and after a final washing and drying, it is ready for pharmaceutical use.

Green Color of Cajuput Oil.

The characteristic green color of cajuput oil is stated by Prinsen Geerligs (Chem. Centr.) to be due to the presence of copper, kept in solution by the butyric and valeric acids and esters of the same contained in the oil. If specimens of cajuput oil freed from acids and esters be mixed with water and with ethyl formate, acetate, propionate, butyrate, valerate, lactate, citrate, cinnamate and oxalate, respectively, together with a few drops of the corresponding acid, and the whole allowed to act on copper turnings, only those samples of oil containing butyrate and valerate are colored; in all other cases the dissolved copper is found in the aqueous layer. Valerian oil, when left in contact with copper turnings, also acquires a green color, and is not decolorized by agitation with water.

New Centrifugal Machine.

Koesner (Chem. Zeit.) describes a new laboratory centrifugal machine which eliminates a number of the difficulties encountered in the ordinary machine. One of the difficulties in the use of these machines has been the impossibility of employing high speeds because no practical means for balancing the rotating parts and avoiding excessive vibration was available. The new machine makes a perfect balance possible by providing only one vessel, which is placed directly in the axis, thus rendering it possible to increase the revolutions up to 90,000 per minute. Another feature is a tube which may be lowered into the revolving vessel and permits of drawing off the clear liquid and washing the deposit without stopping the machine.

Absolute Nitric Acid.

The pure substance HNO_3 can only exist at -41°C . Kuser and Munch (Zeit. Anorgan. Chem.), by crystallization of the strong acid near the freezing point, succeeding it in the form of white crystals. As soon as the crystals melt, the liquid becomes yellow from the separation of N_2O_5 and water. The fluid can again be rendered colorless by subjecting it to a current of dry air, but when treated in this way it contains only 98.67 per cent. of the acid, the limit of strength for temperatures above the freezing point.

A SAVING THAT PAYS.

It pays to keep the current formulas, processes, valuable papers and history of the drug trade bound in volumes for future and ready reference. Each number of The Pharmaceutical Era contains material of this kind which should go into the pharmacist's library in "book" shape.

The Era Binder

Will hold copies of the Era, without advertisements, for an entire year (two volumes with indexes) or copies for six months (1 volume) with advertisements.

Price, 75 Cents Each, Postpaid.

The Puzzler

STORE PAPER

Newest Kind of Drug Store Advertising

The "PUZZLER" isn't like anything else published. It's a Monthly Illustrated Store Paper, to be sure, but examine it, and you at once recognize its unique, trade-bringing, entirely new features. It is only 11 months old, but **230,000** copies per month tell the story of its tremendous success with the shrewdest advertising druggists in America—one only in a locality. You never before could buy such effective drug store advertising at so small a price. It pays for itself over and over every month. Its effectiveness is doubled by a novel plan which carries the interest of all ages and classes of readers over from one month to another. Get exclusive control of the "Puzzler" for your locality and the profits on your increased trade will more than pay the costs—and besides, it will be the best general advertising that you can get for your drug store. Write at Once for Free Sample Copy.

Drug Store Advertisers

M.P. Gould Company

Bennett Bldg.

NEWS SECTION

ORGANIZED!

NEW YORK BRANCH OF N. A. R. D.

Mass Meeting of Druggists Votes to Carry Out District Plan.

PERMANENT OFFICERS TO BE ELECTED AT A FUTURE MEETING, WHEN BY-LAWS WILL BE ADOPTED.—ALL CLASSES OF DRUGGISTS REPRESENTED, FROM THE LITTLE FELLOW TO THE GIANT DRUGGIST.—ALL STAND UP AND PLEDGE FAITH TO EACH OTHER.—BEGINNS WITH 500 MEMBERS.

Amid scenes of unparalleled enthusiasm and the thunder of repeated rounds of applause, the druggists of Greater New York—big fellows and little fellows, wholesalers and retailers, "giant druggists" and simple pharmacists—inaugurated the New York branch of the National Association of Retail Druggists. The last link was joined. Within two weeks a constitution will have been adopted, permanent officers elected, and organization will at last be an accomplished fact.

This, in brief, is the result of the mass meeting, held last Friday evening, in the New York College of Pharmacy, attended by over one hundred members of the trade. Big "cutters" sat side by side with "little" men, each pledging fair play and good faith to the other. The temper of the Drug Merchants' Association, who held a caucus just prior to the meeting, was indicated by one remark which was reported to have been made by F. W. Kinsman, Jr.—"What's good enough for Bigelow is good enough for me." Those present at this caucus were C. O. Bigelow, Manager George Ramsey of Hegeman & Co.; Gilbert P. Knapp, F. W. Kinsman, Jr.; E. D. Caboon, Walter S. Rockey, O. Kalish, J. Jungman, G. Wiley Holmes, William Bolton, E. Rosenzweig.

DR. ANDERSON PRESIDES.

The New York branch of the N. A. R. D. sprang into being when Chairman Anderson's gavel fell at precisely 9.30 o'clock. Secretary Swann immediately moved to go into executive session, which was done. In calling the meeting to order, as chairman of the Conference Committee, Dr. Anderson said in part:

"Looking back over the years of work and anticipation, we see now that our expectations are about to be realized. The object for which we are met here to-night is to form a local branch of the N. A. R. D. You are all familiar with its work and with the conditions of the drug trade that led to its formation. You all realize the gigantic task and the many difficulties to be overcome. Through all these years of experience we have finally mapped out a plan which has been found to stand every test. That is the direct contract and

serial numbering plan, which is the only remedy for price demoralization. First launched by the Miles Company, it is now in use by the Perrina Company, the Wells & Richardson Company, Paris Medicine Company, Piso Company, etc. This is a contract binding the signer to all its provisions and is recognizable in law.

NEW YORK THE LAST LINK.

"The N. A. R. D. has left New York as one of the last places to be appealed to. It has recognized that, in the chain extending over the country, there was one important link that had not been joined—Greater New York. When this gavel fell to-night it marked the joining of this link and the establishment of an organization.

"There are only two things which can prevent success; first, lack of sincerity on the part of the proprietor. I believe that we can positively say to-night that their faith has been proved. The only other thing which can possibly cause failure is the attitude of the retail trade of the country, of the retail trade in New York; your attitude and my attitude. (Applause.)

"Are the members of the retail trade," continued Dr. Anderson, "to see the proprietor go to the expense of making these changes, and then stand still and ask them to do it all? The retailer must stand back of the proprietor, to aid in making this a success, and I believe he will.

"What have we to look forward to? We might predict that in one year every proprietary medicine man in this country will market his goods under the contract plan, if the retailers give their support. Hence the one great reason for our meeting to-night is to prove to the proprietor that the plan is a paying one and that the retailer will stand back of it.

"The N. A. R. D. has done such work that it is entitled to your moral and financial support, which you can give by joining this association or the auxiliaries that will be attached to it. It seems to me that the proper plan would be to appoint temporary officers, appoint committees to draw up by-laws to report at a future meeting, and then elect permanent officers. The rest of the country will be glad to know that the link is now so strong that it cannot be broken."

ORGANIZATION ESTABLISHED.

Deafening applause followed Dr. Anderson's address and Jacob Diner at once moved that a permanent, organized branch of the N. A. R. D. be formed and that the present officers be continued until permanent ones can be chosen. This was carried unanimously. A. C. Searles asked that a committee of five be appointed to formulate by-laws, which was done. Other committees decided upon were, a committee on membership, consisting of three, and a committee of ten to district the city in the interim, for the purpose of establishing auxiliaries.

In the open discussion which followed, the chairman called on J. B. Duble, who took the floor, radiantly happy. He en-

larged on the time, trouble, patience and work which had been necessary before the present conditions were attained. Jobbers who elsewhere acted in perfect good faith, he said, owing to the attitude of the retailers, had played an entirely different game here. He reiterated that the raising of prices was the least one of the objects of the National Association and that the greatest difficulty to-day was in the apathetic attitude of the very class which the association had been organized to benefit—the retailers.

Mr. Duble brought up the Mann bill, which, he said, had been the subject of a part of the President's message to Congress. It had passed the House and reached the Senate.

"We knew that if it once came out of committee," he declared, "the bill would pass. But, among the men who testified against the Mann bill at the committee hearings were two of your most prominent pharmacists. You know their names, Professors Chandler and Virgil Coblenz."

The druggists were on their feet, all shouting at once. Out of the hubbub came the remark, "Are those gentlemen pharmacists?" followed by the answer, "No, but they are supposed to educate pharmacists."

"Men have been offered exorbitant sums," continued Mr. Duble, "to go down and testify against the Mann bill. I confess that makes me a little bit suspicious!" (Laughter and applause.)

A diversion was caused by L. Marmor, who stood up, he said, as a member of the N. A. R. D. and proceeded to say that one who is sick needs a doctor, "but the doctors are trying to give us asafetida pills and non-coated at that." What good will it do, he demanded, to raise prices on ten or twenty or any number of patent medicines? Will that lead to improvement? Will not cutters reduce the prices on drugs? He believed this could be taken care of if the districting were properly done, so that the jobber would immediately stop sending supplies to any such cutter.

TO STOP DEMORALIZATION.

This argument was promptly answered by Mr. Diner, who said:

"We are not organizing to stop cutting, but to stop demoralization. It will not be stopped in a day or by a simple resolution. In order to accomplish anything at all we must first have a strong organization behind us. We cannot succeed unless the droppers, the leaners, are willing to put in their little share. We alone cannot pull them out of the mire.

"We need money to carry on the work of organization. This money must come from us. It is up to us and to our brethren who are not here to-night to get on the wagon together. There is no need of getting little profits by stealth. Let us come out like men and be men." (Tremendous applause.)

"There have been doubting Thomases before," said B. J. Lauer, "and there are today. People who have no confidence in

themselves have none in others. There is only one thing to do—organize. Now, there are druggists here who run stores one hundred times larger than do some of the little fellows. These men are willing to help, but they don't want the little fellow to snipe. Shall I tell you what 'sniping' means? ("We all know," said a voice.)

"We have got to play fair, as we have not done before. Let us come to the big men in all sincerity and be true to ourselves and to them."

JOBERS KEEPING CONTRACT.

Lee M. Evans, representative of the Peruna Company, told the audience that all jobbers are now strictly living up to the plan. In reply to questions, he said that his firm had never solicited orders from department stores and big men. And as for the rumors of "stocking up," he declared that one firm which was said to have two carloads of Peruna was now begging for goods. A large department store in Brooklyn, he said, has twenty gross of unnumbered Peruna, but the manager has declared that the price will go up to eighty-three cents on the day that the contract goes into effect. Mr. Evans explained the injustice which would result from attempting to enforce the retail price at present. Close on to one thousand druggists, however, had signed.

Other druggists told of rumors that the Peruna company had been selling direct to department stores. This prompted Mr. Evans to make the following positive statement:

"Not a retailer nor a department store in five years has bought a single bottle of Peruna direct from us."

"Now I hope that will settle down and kill all these idiotic rumors that come up every little while that a department store has a carload of Peruna in the cellar," said Mr. Swann, so savagely that everybody laughed.

Dr. Muir urged the druggists not to expect the proprietor to run around and do all the work. The proprietor has only made it possible for the retailers to do the rest. "Get together," he cried; "don't find fault until you do your part."

Mr. Dubie stated that five hundred men had already enrolled as members. Organization is an assured fact, the only question is one of size.

RAPS PROF. CHANDLER.

One of the sensations of the evening was caused by Dr. William C. Alpers, who, referring to Professor Chandler's remarks before the Senate hearing on the Mann bill, characterized them as entirely offending and insulting to pharmacists. Every sentence, he declared, was a misstatement, and, while he was a sincere friend and admirer of Professor Chandler, he felt compelled to enter a decided protest. Mr. Bodemann, of Chicago, had declared in a letter that he was amazed at the insulting language used by Professor Chandler. Dr. Alpers advocated the appointment of a committee of three to call on Professor Chandler and get at the truth of the matter, and give him a chance to defend himself. This was decided upon and later Messrs. Alpers, McElhenie and Swann were appointed.

A congratulatory letter was received from the N. A. R. D., signed by Thomas V. Wooten; other letters were read from the

Wells & Richardson Co. and T. H. A. MacDonald. Dr. Ebbitt, of Schieffelin & Co., said the jobbers were ready to help the retail druggists.

"Now, I propose," said John H. Morey, "that every man here who has faith in this organization and in its members stand up and show his sand." Everybody stood.

Thanks were voted the trustees of the college for the use of the lecture room, after which the meeting adjourned, subject to call from the chair. An excellent collation was provided.

Before the meeting began, and while the caucus of the drug merchants was going on, the old N. A. R. D. committee of three years ago met to finish up its business and vote itself out of existence. This is the committee of which Dr. William Muir was chairman and George E. Schweinfurth, secretary.

The following committees have been appointed: Membership, Jacob Diner, Albert B. Baltzly, Wm. Porr; constitution and by-laws, A. C. Searles, Peter Diamoud, A. E. Marsland, Joseph Weinstein and John G. Wischerth; districting Greater New York, B. J. Lauer, George H. Hitchcock, Oscar C. Kleibe, Jr., E. J. Emell, H. E. Steinhilber, Chas. Heimerzeich, S. A. Levin, M. Zagat and B. R. Dauscha.

DRUG CLERKS ORGANIZE.

Fort Wayne, Ind., March 13.—The drug clerks of this city have organized a union. The object of the organization is to secure the employment of registered clerks exclusively, to enforce the pharmacy laws, to secure shorter hours, and the closing of the stores at 9 o'clock in winter and to settle upon a definite scale of wages.

The retail druggists here, who have had a very active and efficient organization, have decided to change the name of the association and to enlarge its field of usefulness. The organization will hereafter be known as the Allen County Pharmaceutical Association, and every retail druggist in the county will be eligible to membership.

DRUG STORE BLOWN UP.

Lexington, Ky., March 10.—A terrific explosion wrecked the drug store of O. S. Kinney, last evening. A quantity of gasoline leaked onto the floor and by evaporation filled the store with its vapor. A lighted match caused an explosion that blew out the glass front and the clerk, named McFarland, into the street, setting his clothing as well as the store on fire. He was terribly burned and is in a critical condition. Kinney was also seriously burned.

The store was destroyed, involving a loss of about \$25,000.

WANTS THEIR ANNUAL REPORTS.

St. Louis, March 8.—The circuit attorney of St. Louis has filed suit in the city courts against the incorporated concerns which have failed to comply with the requirement for an annual report. Those of interest to the drug trade are: Bremer Chemical Co., Bonita Water Co., Crown Linsed Oil Co., Charles L. Allen Chemical Co., Dr. J. H. McLean Chemical Co., Dios Chemical Co., Fallopa-Lynn Chemical Co., St. Louis Pharmaceutical Co., and the J. Guenther Chemical Co.

OPIMUM IN THE PHILIPPINES.

Progress Association and Government Would Restrict the Sales.

Philadelphia, March 13.—The Filipino Progress Association has sent a petition to Congress asking that power be conferred on the Philippine Commission or on the Philippine Legislature, soon to be organized, to enact a law for the restriction or prohibition of the sale of opium in the islands.

The Philippine government has had a committee, consisting of an American officer, an American bishop, and a Filipino physician, investigate the methods of regulating the opium trade in other Asiatic countries. This committee recommends as a model the Japanese law regulating the use of opium in Formosa, and the bill proposed by the committee provides a government monopoly in the Philippines for three years and prohibition of importation thereafter except for medicinal purposes. This recommendation, with some possible modification, is indorsed by the Philippine Commission and the Secretary of War.

As a means of abolishing the opium trade it is suggested that the regulations adopted in Formosa by the Japanese government shall be substantially followed in the Philippines. It is also claimed that our tariff laws, as applied in the Philippines, have proved no adequate barrier.

ALLEGED SMUGGLING OF DRUGS.

Syracuse, March 13.—The statement has frequently been made that many Syracuse druggists were buying drugs smuggled from Canada and manufactured in Germany at a low rate. It was said that agents were selling these goods at a figure which meant a saving of 60 per cent. on the price of the drugs.

President George E. Thorpe, of the Syracuse Druggists' Association, denies that such drugs are being bought by Syracuse druggists. One of the Syracuse druggists recently received a letter from the United States Postal authorities, stating they had a man under arrest on the charge of smuggling drugs and among his correspondence the name of the Syracuse druggist was found. The Syracuse druggist wrote back he never heard of the man before and could not imagine how he had got his name.

SYRACUSE CIGAR STORES.

Syracuse, March 13.—The recent announcement that C. A. Whelan & Co., Inc., were contemplating opening a large number of additional cigar stores in central New York and Northern Pennsylvania, has set the druggists to asking whether the United Cigar Stores Company is not in this city already and does not own the Whelan stores here. All of the Whelans who run stores have offices in the United Cigar Stores Company.

The W. C. T. U. is making a war against the sale of cigarettes to minors and threatens to prosecute any person violating the law. The druggists claim they have observed the law, but cigar dealers have not.

PLASTER HOUSES COMBINE

Johnson & Johnson Secure Control of the J. Ellwood Lee Co.

R. W. Johnson, of Johnson & Johnson, in an authorized statement, admits that his company has acquired a controlling interest in the J. Ellwood Lee Co., of Conshohocken. He further states that it is not the intention to merge the two concerns, but that each house will maintain its own identity.

Several years ago, when R. W. Johnson withdrew from the firm of Seabury & Johnson, and started the rival concern of Johnson & Johnson, competition was then very acute, but for some years past it has been generally acknowledged in the trade that all of the plaster houses were working together to avoid unnecessary competition. Johnson & Johnson are now recognized as the largest house in their line, and with their control of the J. Ellwood Lee Co., they are in a position to practically dictate what other houses shall do.

So long as George J. Seabury lives it is not probable that there will be an actual merging of all the plaster manufacturers, although some people in the trade are of the opinion that such combination is not far distant. Besides the three houses named, there are Bauer & Black, of Chicago, and the Dean Plaster Co., of Yonkers.

If Seabury & Johnson can be persuaded to join such a combination, it seems to be the general opinion that it will not be difficult to influence the others to come in. In any event, R. W., or "Bob" Johnson, as he is familiarly called by his friends, is the moving spirit and might be the "Plaster King" of America, or for that matter, of the entire world, for there are no houses abroad that produce these surgical supplies in such quantities as do the concerns in this country.

ITALIAN PHARMACISTS MEET.

With a membership of over fifty and nearly all in attendance, the Italian Pharmaceutical Association, last Friday night, held its first regular meeting since re-organization. Officers were elected and a constitution and by-laws adopted. The latter are in Italian, and all business will be transacted in that language. This fact, the leaders think, will do much toward cementing a close, brotherly organization. Formerly the business was carried on in English, to which is attributed, in part, the failure of the association.

The following are the officers elected: President, Frank Avignone; vice-president, Frank Perilli; secretary, Giovanni Scavo, 23 Monroe street; treasurer, Joseph Aquaro; financial secretary, L. V. Ferraro; trustees, G. Zito, N. Caliva and D. Caffarata. Practically all the officers were elected by acclamation. Fifteen new members were present at the meeting and the membership list is growing rapidly. Meetings will be held on the second Friday of each month.

"COCAINE CRUSADE" ON.

In a "cocaine crusade" in the Tenderloin district, summonses were issued for Cornelius V. Losee and W. W. Wassor, two drug clerks employed respectively by Walter S. Rockey and Francis S. Warner, in whose stores, the police allege, they were

able to purchase cocaine without any trouble. Joseph Weinstein is quoted in an interview in the World, on the subject, as saying that "there is enough poison sold in small quantities on 'Poison Row' in one day to kill 10,000 persons." He is also quoted as saying among other things, that "dope fiends and the druggists have a secret code of signals, and with the signals it is easy to secure any drug. Hydrate of chloral is the only poison that requires a physician's prescription for each purchase." To The Era Mr. Weinstein denied having made the statements attributed to him.

BUNCO MAN FROM THE WEST.

A man calling himself James Upton Medlock has been arrested in New York on the charge of swindling drug firms in the West. The arrest was made at the instance of the Police Department of St. Joseph, Mo. It is alleged that his system was to visit wholesale drug houses and order a bill of goods sent to some place, where he pretended to have a retail drug store. He would then intercept the goods and sell them to retail stores, deriving considerable money from the sales. The scheme is alleged to have been worked in Baltimore, St. Louis, Chicago and several other western cities. The prisoner acknowledged having been a resident of the West.

Recently a young man giving his name as H. R. Foster, and falsely representing himself as one of Parke, Davis & Co.'s western representatives, secured an advance from one of their eastern customers. It is thought that this individual may have been operating under an alias.

OSWEGO DRUG STORE BURNED.

Syracuse, March 13.—Fire destroyed the drug store of Coroner Vowinkle, in Oswego, a few days ago. The stock of drugs was practically made valueless by the smoke and water. The loss is fully covered by insurance.

The drug store of J. P. Mericle, at Brocton, N. Y., was recently burned, and it is said Mr. Mericle will not continue in business.

NEW YORK NOTES.

- Fire in the store of the Lake Drug Co., of Rochester, caused about \$25 damage.
- The J. Wilson Star Theatre Pharmacy, of New York, to manufacture drugs, was incorporated, with a capital of \$4,000. The directors are Bertha Wilson, Israel Diamond and others.
- The State Commissioner of Agriculture is preparing to introduce a sweeping pure food and drug bill, the result of recent investigations carried on by the Agricultural Department.
- Articles of incorporation have been filed by the Fowne Drug Co., with an office at 77 River street, Hoboken. The capital is \$125,000 and the incorporators are E. A. Schultz, Harold T. Jannison and Erich Zeiltschmann.

A. G. Rosegarten, treasurer of the Powers-Weichtman Rosegarten Co., is in town, looking after the negotiations for the purchase of the building at 145-47 Front street, to be occupied by the New York branch. The building will have an "L" to Maiden Lane.

FRICITION AT 'PHONE HEARING.

Company's Representative Charges Board of Trade With Ulterior Motives.

At a hearing on the resolution to investigate telephone conditions in New York, held at Albany last week, sensational charges were made by John G. Milburn, representing the New York Telephone Company. He declared that the officers of the New York Board of Trade and Transportation and the principal officers of the People's Telephone Company were one and the same, and intimated that the main purpose of the New York Board of Trade and Transportation in leading the agitation for lower telephone rates was to obtain all the aid it could from the books of the New York Telephone Company for the furtherance of the interests of its officers as stockholders or directors of the People's Telephone Company.

That he was also secretary of the People's Telephone Company was admitted by Frank S. Gardner, secretary of the New York Board of Trade and Transportation. He declared that he had not had any financial interest in the company.

A communication from the Merchants' Association was read, declaring that it was investigating the situation on its own responsibility and was receiving all assistance from the telephone company. The association asked that there should not be a legislative inquiry until its own investigation had been completed. Mr. Gardner said that he did not believe the books of the telephone company were thrown open to the investigators and that the work was not being done in good faith. F. B. Bernard, chairman of the Telephone Committee of the Merchants' Association, said the books were open to the committee. Mr. Milburn denied that telephone rates had been constantly increased. He failed to find a greater increase than 21 per cent. in New York than in any other given city.

ALUMINUM COMPANY REORGANIZES.

The New York Aluminum Co., located at 338 Broadway, has reorganized, under the name of the Aluminum & White Metal Mfg. Co., with an office and salesroom on the ground floor at 336 Broadway, New York. The company's factory is located at Newark, N. J., where they make a specialty of spinning, stamping and casting in pure aluminum all kinds of white metal goods, and manufacture advertising novelties to order. Druggists in need of goods in this line are requested to correspond with the New York office.

DR. MINDEN PAYS FINES.

Dr. Simeon B. Minden, the druggist at Eighth avenue and Twenty-seventh street, who was arrested last fall, on the charge of counterfeiting Beecham's pills, was fined \$500, by Justice Zeller, in the Court of Special Sessions, last Thursday. His two clerks, Manville Thomas and Charles Horn, who were also arrested coincidentally with Minden, were fined \$50 each. Minden paid all the fines.

VETOES BENZOATE BILL.

Governor Declares That it is Unconstitutional and House Sustains His Action.

Philadelphia, March 13.—Greatly to the surprise of those who were interested in the bill before the State Legislature, which was intended to allow the using of a minimum quantity of sodium benzoate as a preservative in fruit syrups, Governor Pennypacker last week vetoed the bill, which had gone through both branches of the legislature with favorable recommendations. He suspected the existence of a "snake" and declares there is no prohibition in the bill which is not contained in the act of 1895.

He explains his unexpected action as follows: "The subject of the bill purports to be the prohibition of the sale of fruit syrups, prepared fruits and fruit products containing 'more than one-fourth of 1 per cent. of sodium benzoate or more than one-fourth of 1 per cent of added color' obtained from harmless vegetable substances. As the act of 1895 prevents the use of these substances, this bill, if it became a law, would repeal to that extent the former act. It would also be such a repeal without any reference whatever to the preceding act as the constitution requires.

"The subject of the bill, however, is not the prohibition of the adulteration of food, since this subject has been much more fully covered by the prior legislation. The real purpose is found in the words 'but the use of such added substances, in such proportions or less, shall be and is hereby permitted.' To this subject, which constitutes the really important part of the bill, there is no reference whatever in the title, and, therefore, the bill is plainly unconstitutional.

"Since these important words are contained in the midst of a long section, the bill is calculated to mislead the legislator, and is an unusually striking example of the evil which the provision of the constitution with respect to the title was intended to prevent. For these reasons the bill is not approved."

The House sustained the veto.

Final reading of the bill regarding the additional qualifications for applicants for pharmacists' certificates was postponed in the House on the day before adjournment, the necessary number of representatives to pass the bill not being present. The bill will probably be called up for final reading the coming week.

Briefly, this "prerequisite" law makes it necessary that after January 1, 1906, all applicants for certificates as pharmacists must be able to prove that they are graduates of reputable colleges of pharmacy, and have had four years of practical experience in retailing, compounding and dispensing drugs.

GOLD LOVING CUP TO P. C. P.

Philadelphia, March 13.—Henry S. Wellcome, the London pharmaceutical manufacturer, and founder of the Wellcome Research Laboratory of the Gordon Memorial College, at Khartoum, was a guest at the Philadelphia College of Pharmacy on Saturday. He was tendered a

reception and in return he presented to the institution a handsome loving cup of gold in memory of his student days. Mr. Wellcome was graduated from the college in 1874. Mr. and Mrs. Wellcome were guests at a dinner given in their honor on Thursday evening, at the home of the president of the college, Howard B. French.

DANCE AND MAKE MERRY.

Philadelphia, March 13.—The ladies—the wives, sisters, mothers and friends of the members of the P. A. R. D., were most pleasantly entertained by the musical and dance given in their honor last Tuesday evening. More than 600 druggists and their guests were in attendance. The weather conditions were anything but favorable, but the evening's enjoyment had all been planned beforehand, and few were kept away by the elements. There was not the slightest hitch in the arrangements. Mrs. H. A. Nolte, wife of the treasurer of the committee, was easily the favorite, and of particularly pleasing excellence was her rendition of the "Jewel Song," from Faust. The entertainment was the most successful affair of the kind that the P. A. R. D. has ever held, and its success is due to the efforts of the following members, who comprise the Entertainment Committee for 1905: Chairman, S. W. Strunk; Secretary, S. B. Davis; treasurer, H. A. Nolte; J. C. Perry, Otto Kraus, C. W. Shull, H. L. Stiles, S. C. Henry, W. E. Supplee, J. P. Frey, C. S. Cameron and N. S. Steltzer.

MORE PENNSYLVANIA LEGISLATION.

Pittsburg, March 13.—Pennsylvania druggists are bitterly disappointed over the action of the governor in vetoing the House bill to supplement the pure food laws by prohibiting the sale of fruit syrups, etc., on grounds of unconstitutionality. The druggists worked energetically for the passage of the bill. B. E. Pritchard, secretary of the Western Pennsylvania R. D. A., is in favor of formulating a new bill and presenting it to the House before an adjournment is taken at the end of the month. It is the general opinion that this will occur.

A bill has been introduced in the House to provide inspectors of weights and measures. It specifies that county commissioners must appoint as many inspectors as may be necessary likewise to fix the pay of the inspectors. Each inspector is to be furnished with a standard weight, measure, etc., for purpose of inspection, and he is to visit every place within his jurisdiction at least as frequently as four times a year, and may enter any place into which his official duties require him to go. Weights and measures found to be short shall be forfeited and destroyed by the inspector, except where it is necessary to preserve them to introduce evidence in court. Scales, weights or measures inspected are to be stamped, and any merchant providing his establishment with new weights must notify the inspector and have them stamped. Any not stamped shall be subject to forfeit. Violations are punishable by a fine of from \$10 to \$25, or ten days in jail, or both.

TRAGEDY ENDS IN SUICIDE.

Chester, Pa., March 13.—Friends in this city have not entirely recovered from the shock caused by the tragedy of Monday last, when Druggist John E. Chatham murderously attacked his wife and mother-in-law, and then ended his own life. The former, Mrs. Isaac Abrams, has since died and Mrs. Chatham is still in a critical condition.

The crime is supposed to have been committed during a fit of temporary insanity. Chatham was thirty-six years of age and was well-known and popular here. Although he was known to have his peculiarities, there was no previous evidence of insanity.

DRUGGISTS' ANNUAL BANQUET.

Springfield, Mass., March 11.—The Springfield Druggists' Association held its first annual banquet, in the Massasoit House, Monday evening. This was the first social gathering ever held by the proprietors of local drug stores as a body, and it is planned to make it an annual affair. An excellent ten-course dinner was served at 8 o'clock to the twenty-five members present. President P. L. Vaughn, who was toastmaster, called for toasts from D. F. Keefe, F. A. Eldred, J. T. Monnie, of Chicopee; F. C. Coolbroth, A. E. Lerebe and Henry Adams, president of the State Board of Pharmacy. An entertainment in legerdemain was furnished by F. A. Eldred.

BAY STATE NOTES.

—Joseph E. Chenette, a Springfield druggist, of 172 Main street, Indian Orchard, was fined \$100 on the charge of liquor selling.

—The store of Edmund Chapdelaine, in Main street, Springfield, was damaged by fire to the extent of \$1,000, fully insured. The cause of the fire is unknown.

—Charles H. Webster, of Northfield, announces the sale of his drug business in the Webster block to Alvin George, a Boston druggist of twenty years' experience.

—Walter A. Kneeland, the new proprietor of the West End Drug Store, in Worcester, has restocked and refitted the store and has once more thrown it open to the public.

PROTEST FROM DRUGGISTS.

Manchester, N. H., March 13.—The Retail Druggists' Association of this city has sent a circular letter to all the members of the legislature, protesting against the proposed amendment to the license law, the effect of which would be to put at the discretion of the license commission the fee which each druggist shall pay, the minimum being \$50 and the maximum \$500. This proposed law was described at length in a recent issue of The Era.

SODA FOUNTAIN APPLIANCES.

Erie Specialty Co., Erie, Pa., have issued their catalogue for 1905, which illustrates their full line of appliances used at the soda fountain and it will be sent on application. Every up-to-date fountain should be in possession of this, as it contains many useful and up-to-date articles that will make your fountains a better money maker by using them.

DEATH CAUSES BREACH IN RANKS.

Drug Trade Loses Two Well-Known Manufacturers.

Baltimore, March 11.—The death of Dr. Peter Fahrney, a wealthy manufacturer of proprietary remedies, of Chicago, on the 6th inst., is deeply deplored in Ligerstown and Washington county, Md., where the deceased practiced medicine and made his home for a number of years. His attachment for the place was very strong, and for a long time he maintained a summer residence at the old family homestead. Lately he had made a gift of it to the Dunkard or German Baptist Church, for philanthropic purposes. Dr. Fahrney was sixty-five years old and had accumulated a fortune estimated at \$1,000,000. He was a grandson of Dr. Peter Fahrney, for whom he was named, and who practiced medicine in Washington county a century ago. The medical shop of the noted physician is still standing at Benevola. In 1896 it was purchased by his grandson, and has since been cared for by the Fahrney Memorial Association.

Dr. Peter Fahrney was the son of Dr. Jacob Fahrney, bishop of the Antietam Dunkard Church, and was born in 1840, in Franklin county, Pa. In 1860 he engaged in the manufacture of proprietary remedies, and after the Civil War, went to Chicago, where he built up a large business. His four sons, E. C., W. H., J. H. and E. H. Fahrney, were associated with him under the name of the Dr. Peter Fahrney & Sons Medical Company.

By a remarkable coincidence, a cousin of Dr. Peter Fahrney, Dr. Daniel P. Fahrney, died of paralysis, the day before the former's demise, at Hagerstown. He was sixty-four years of age. Dr. Daniel Fahrney was also engaged in the manufacture of household remedies. The funeral took place on March 8, at Hagerstown.

Another death which creates a breach in the ranks of the drug trade, is that of James Armstrong, treasurer and manager of the Keimel Chemical Company, which occurred on March 7. Mr. Armstrong's death was unexpected. The day before he went to the office of the company, returning home as usual at 6 o'clock in the evening. He complained of a chill and a choking sensation in the course of the evening, but the symptoms were not considered alarming. The fatal stroke came about midnight. Mr. Armstrong was born in County Fermanagh, Ireland, sixty-six years ago. He completed his education at Trinity College, England, and held several public positions in his native country. Fifteen years ago he came to Baltimore. He was connected with the James Armstrong Soap Company, and three years ago organized the Keimel Chemical Company. His wife and five children survive him.

RETAILERS TO MEET.

Baltimore, March 13.—A meeting of the Baltimore Retail Druggists' Association has been called for next Thursday morning, at Sonnenburg's Hall, Baltimore and Greene streets, and the manufacturers of pharmaceuticals have also been invited. It is intimated that the manufacturers have not been observing the rules relative to

selling to cutters and others as closely as the retailers might have desired and the former will be called on to give their views on the subject of regulating the trade. In particular they will be requested to define their attitude toward the department stores that sell pharmaceutical preparations at cut prices, the purpose being to strengthen the fences against demoralization in this direction. The session promises to be an interesting one, and a large attendance is expected.

BALTIMORE NOTES.

—Charles A. Bersick, who has been shipping clerk for Muth Bros. & Co. for a number of years, died last Saturday, of a complication of maladies.

—Druggist William H. Loefler, of Monument and Bond streets, is very ill and talks of selling his store and taking up his residence at Asheville, N. C.

—James Bally & Son and Muth Bros. & Co. are getting ready to move into their new warehouses, the former on Hanover street and the latter firm on Charles street.

—Among the druggists from out of town in Baltimore, last week, were R. L. Vandeventer, Hagerstown, Md.; Joseph B. Boyle, of Westminster, Md., and Dr. L. H. Dielman, of New Windsor, Md.

—The drug trade was well represented at the annual meeting and banquet of the Old Town Merchants and Manufacturers' Association, this week. Among those present were: Dr. A. J. Corning, J. H. Blass, J. Fuller Fraumes, J. Edwin Hengst, John G. Beck, Charles Morgan and Mr. Houchens.

DRUG COMPANY ELECTION.

Brookhaven, Miss., March 13.—The stockholders of the C. E. Grafton Drug Co., at their annual meeting elected officers and directors for the ensuing year as follows: President, W. H. Seavey; vice-president, Henry Greenwood; secretary-treasurer and general manager, R. F. Aylward; legal adviser, H. Cassidy; directors, W. H. Seaver, Robert Stamps, Dr. R. E. Higdon, Dr. J. H. Johnson, L. Abrams, Charles Henck, Henry Greenwood, F. V. Becker, R. F. Aylward.

FROM THE SOUTH.

—The Temple Pharmacy, in Danville, Va., has been sold to P. R. Jones' Sons, who already own two drug stores in that city.

—The drug store formerly owned by S. B. Leonardi, in Tampa, Fla., has been purchased by L. J. Moseley and Whitney Curry.

—The E. K. D. Davis Drug Company has been incorporated in Greenville, Miss. The capital stock is \$10,000. The incorporators are E. D. Davis, F. D. Smythe and others.

—C. T. Allen, of Paducah, Ky., has been fined \$25 for operating a drug store without the care of a registered pharmacist. W. L. Moyers, of Bardwell, who was charged with violating a State ordinance, has also been fined \$25.

—One of the strongest opponents of the Miller pharmacy bill, which is designed to regulate the practice of pharmacy in Texas, is F. P. Hamill, the mayor of Temple, who is a druggist. He objects to the measure because it would work an injury to druggists in every town and village in the State.

DRUGGISTS AND DOCTORS

Join in Campaign Against Advertising Physicians.

Madison, Wis., March 13.—The druggists of the State and the physicians have joined in one of the most aggressive campaigns now on before the legislature. It is another bill by Dr. Noble that interests them, and they are out to secure its passage, though in this instance they have not the support of the newspapers, as the druggists have had in their successful fight against that other Noble bill, which required that the formula of every patent or proprietary medicine be printed on the outside wrapper.

The present bill aims a death blow at the worst forms of the advertising doctor, especially as that class who advertise to cure ailments that the best scientific and medical knowledge of the world has decided cannot be cured. It also would prevent the advertisement of practices that have a criminal element, such as those appealing to unfortunate girls.

FORM KALAMAZOO R. D. A.

Kalamazoo, Mich., March 11.—Under the name of the Kalamazoo County Retail Druggists' Association, the retail druggists of this city have organized and will be affiliated with the N. A. R. D. At a meeting held in the rooms of the Board of Trade, organization was perfected and the following officers were elected for the ensuing year: President, F. N. Maus, Kalamazoo; vice-president, O. B. Inunning, Vicksburg; secretary, J. L. Wallace, and treasurer, C. P. Bidlack, both of Kalamazoo.

It is expected that before long every druggist in the county will be included in the association.

SAMUEL F. HENRY PARALYZED.

Menasha, Wis., March 13.—Samuel F. Henry, a well-known druggist of this State, is dangerously ill of paralysis. In 1863 Mr. Henry became clerk for the late D. L. Kimberly, in the drug store established by the latter in 1861. In 1866 he became a partner and in 1874 proprietor. He sold his business in Neenah and went to Menasha and Waupaca at the Soldiers' Home, where he engaged in the drug business.

MICHIGAN DRUG CLERKS.

Detroit, March 8.—The popularity of the Retail Drug Clerks' Association of Michigan was amply testified to at their annual ball given in Strasburg hall, March 1. Several days before the event the lists were closed and the members forced to stop selling tickets. The association cleared a snug sum. Committees are already preparing for the annual moonlight excursion to be given early in the summer, and they promise something novel for the occasion.

SUDDEN DEATH OF DRUGGIST.

Cleveland, O., March 13.—John L. Krimmell, the oldest druggist in this city, is dead of heart disease. He was stricken in the street while on his way home. Mr. Krimmell was prominent in Masonic and Elk circles.

CONSOLIDATION OF SCHOOLS.

Chicago, March 13.—The reporter recently heard a rumor to the effect that the Chicago College of Pharmacy and the Northwestern University School of Pharmacy were to arrange some plan whereby the two may be consolidated into one institution, under the sheltering wings of the University of Illinois. The matter was referred to Mr. Ebert. He said:

"At the last meeting of the Veteran Druggists' Association, a committee representing each of the schools was appointed by President Broth to discuss the matter and see what can be done. Thus far, as nearly as I can judge, there is not much chance of a consolidation. The State will not give up its school, nor can it make any sort of a partnership arrangement with a private corporation, such as the Northwestern University. But if the latter will turn over its pharmacy school in fee simple, as it were, as the Chicago College of Pharmacy was turned over to the State, there should be nothing in the way of the consummation of the plan.

DISCUSS ANTI-NARCOTIC LAW.

Chicago, March 8.—The proposed amendments to the Illinois cocaine law came up for discussion at the meeting of the Executive Committee of the Chicago R. D. A., held yesterday. W. Bodemann presented a draft of a measure along the line of the Beal "Model law," which he considered might be suitable. At the same time he said he was far from wishing to add additional weight to the "white man's burden." Legislators were anxious for a broader anti-narcotic bill. Mr. Bodemann also stated that it was easier to head off than to defeat bills, and that in the future legislators will introduce far more stringent and obnoxious anti-narcotic measures than those which might be presented by the druggists themselves.

The committee decided that it was desirable to make the cocaine section of the law stronger and not to include therein regulations for the promiscuous sale of morphine, opium, chloral, etc. It is likely that a general anti-narcotic law will be discussed at the next meeting of the State Association.

MICHIGAN NOTES.

—The Walter K. Schmidt Co., Ltd., of Grand Rapids, has declared a dividend of 8 per cent. An increase of capital stock was voted.

—Walter Jones, formerly of Grand Rapids, leaves the Frank Heath store, at Middleville, to manage the new store of Weaver Bros., at Charlotte.

—Elmer A. Anderson has resigned as manager of the Cadillac Pharmacy, at Cadillac, and goes to Newberry to take charge of the Perry & Bohn store.

—The Hannab & Lay Mercantile Co. has opened its new drug store department at Traverse City and J. E. McEvoy, assisted by A. W. Hamel, is in charge.

—Lee M. Hutchins, of the Hazeltine & Perkins Drug Co., has been elected a director of the Grand Rapids Board of Trade for the ensuing two years.

—Mayor Fred L. Heath, of Hastings, has admitted to partnership in his drug business, City Treasurer Albert H. Carverth, and the new firm name is Heath & Carverth.

—T. J. Milliken's drug store in St. Clair, was destroyed by fire, together with the entire stock; loss, \$6,000. The fire started in the basement of the drug store and spread rapidly to adjoining buildings, which were also destroyed. Exploding chemicals are supposed to have been the cause of the fire.

—Chas. Frantz, druggist of Bay City, has outgrown the quarters in which he started business five years ago, and has leased the adjoining store, which will be thrown into his present establishment, and when alterations are completed, will make it one of the finest pharmacies in Michigan. He will be ready to receive his patrons in the new establishment April 1.

CHICAGO ITEMS.

—The Illinois Board of Pharmacy will meet in Chicago on April 11, and at Springfield on May 16.

—The A. E. Rutherford store, at Twenty-second street and Wabash avenue—the old Bliss & Sharp stand—has been sold to Robert Mellinger, manager of the Harrison Street Pharmacy.

—The Owl Drug Store, at Clark and Monroe streets, will be compelled to vacate that location by May 1. It is proposed to erect a nineteen-story building upon the site of the present structure. The stock of the drug store will be sold and the fixtures stored, provided no better arrangement presents itself.

—The Buck & Rayner store, on Wabash avenue for a year or so, is about to move back to the old location, but into a new building. The southwest corner of State and Madison streets is thought by many people to be the best business corner in Chicago. It is reported that the Buck & Rayner store will pay \$40,000 a year rental.

OBITUARY.

—Trigg T. Allen, Liberty, Mo. He was eighty years old. He conducted a drug store up to his death.

—A. Frank Jordan, druggist, Denver. He was married about ten months ago. Mr. Jordan was one of the most prominent Masons in Denver.

—William Harrison, of Liverpool, N. Y., at the age of sixty. He formerly resided in Liverpool, Eng., but had lived here for thirty years. He was a prominent Mason.

—C. A. Withers, druggist, Brazil, Ind. He was a member of the Knights of Pythias and Knights and Ladies of Honor. He was married in 1872 to Miss Anna Morgan.

MILES CO. SUES CUTTER.

Cleveland, O., March 13.—The Dr. Miles Medicine Co. has brought suit against the May Co., of this city, for violation of its contract, entered into in November, 1904, not to sell the Miles remedies at cut rates. The May Co. holds that the contract is illegal and that, having purchased the property, it may sell at any price it pleases, even at a loss.

MARSHAL KILLS DRUGGIST.

Dallas, March 10.—Deputy United States Marshal Tilley shot and killed Dr. Nicholas Nash, a druggist, at Gardner, I. T. When Tilley went to search his store for liquor, Nash resisted and was shot four times.

DEATH OF WELL KNOWN SALESMAN.

St. Louis, March 8.—E. G. Armsby, in charge of the out-of-town sales and advertising department for the Moffitt-West Drug Co., was found dead in his bed, March 2. The coroner decided death was due to apoplexy. Mr. Armsby was fifty-six years old, and unmarried. He came to St. Louis several years ago from Kansas City.

ST. LOUIS NOTES.

—L. A. Seltz, of St. Louis, was a Mardi gras visitor at New Orleans.

—W. G. Grani, Nebraska avenue and Cherokee street, was a patient in the Lutheran Hospital, last week, after a serious operation.

—O. B. Frazier and James Smith, who have been flooding the country around Belleville, Ill., with nostrums of doubtful antecedents, were fined \$100 and costs in that city recently, under provisions of the pharmacy law.

—William E. Krueger, a druggist at 2900 Chouteau avenue, attempted to detain a young man recently, who sought to pass a counterfeit half dollar by purchasing a package of chewing gum. The young man, however, got nervous while waiting for change, and ran away.

—J. G. Broeckelman, who recently purchased the old store at 809 Market street, soon became disgusted with a down town trade on a popular, but not big-class thoroughfare, and sold the store to F. M. Delne. Within a week, Mr. Boeckelman bought Popp Bros.' store at Ninth street and Allen avenue, on the south side.

—James Stark, aged thirty-seven, of prosperous appearance, was recently arrested on a charge of having "short changed" Chris. Luther, clerk at the Fricke-Hahn store, at 1827 Cass avenue, last October. Stark, it is said, was assisted by a fashionably dressed woman, who interfered at the proper time to fix a \$2 and a \$20 bill with the result of leaving the clerk \$10 short.

KENTUCKY NOTES.

—Kenneth Balsley, son of C. S. Balsley, and a well known young druggist of Bullitsville, died February 17, after a brief illness. He was a grandson of the famous June Balsley.

—State Auditor's Agent A. M. Harrison has filed suit in the Franklin Circuit Court against a number of rectifiers for taxes of fifty cents a barrel on rectified whisky, due for the six months ending December 31, 1904.

—The drug store of Line Bros., at Crab Orchard, was destroyed by fire recently, both store and stock proving a total loss. The insurance was only \$1,200. Several neighboring stores were involved, entailing a loss of about \$20,000.

—The Inceda Coppo Co., recently organized in Louisville, will manufacture and place on the market a rheumatic remedy and other specialties. The officers of the company are Harry B. DeFord, president; Dr. J. W. Kremer, vice-president; James Mitchell and W. C. Hoeflin, secretary.

—R. M. Bell, formerly secretary of the LaCrosse, Wis., Retail Druggists' Association is now traveling for Kennedy, Saffet & Andrews, of Minneapolis.

ILLINOIS EXAMINATIONS.

Springfield, Ill., March 2.—At the recent examination conducted by the Illinois State Board of Pharmacy, at Chicago, the following passed:

Registered Pharmacists: E. R. Abrams, L. N. Alt, R. W. Anderson, C. G. Anderson, C. M. Anseth, T. A. Beaud, S. Benensohn, V. Bologna, C. D. Boring, C. F. Buschick, A. Chittick, H. Cobb, P. F. Coffey, A. E. Curtis, T. C. Dedman, J. W. Drewitz, F. B. Flisk, C. Hallett, H. O. Hartley, P. L. Hawkins, J. T. Holway, J. C. Higgins, M. Indovina, E. Jerlebo, E. Johnson, H. A. Johnson, C. J. Kollar, Jr.; A. E. Lee, W. C. Leonard, W. F. Locke, A. Lofstrom, C. E. Menzies, J. G. Mick, G. H. Mitchell, E. Monaco, E. L. Naviaux, J. J. Reinhofer, C. R. Roth, R. Rugg, P. F. Rice, A. R. Schenck, M. F. Schomer, G. F. Staack, L. G. Stahlfeld, A. Vrettos, C. A. Walz, J. P. N. Waterloo, A. C. Weissenburger, V. D. Weisenburger, all of Chicago, and F. H. Bess, Peoria; O. Burton, Newton; C. R. Clothier, Polo; L. A. Dickhut, Quincy; G. G. Dillow, Dongola; J. C. Freeman, Argenta; E. E. Granger, Kasheer; W. B. Keusink, Champaign; M. Lundberg, Blue Island; E. R. F. Maag, Pana; W. R. Moffitt, Chillicothe; V. C. Murphey, Cuba; F. A. Nester, Jr., E. St. Louis; R. O. Ostrowski, Hammond, Ind.; C. A. Voigt, Cairo; O. S. Wertz, Prophetstown.

Time Service: E. R. Clause, Leo Gans, H. F. Krohn, E. R. Newman, C. M. Olson, E. Schmidt, of Chicago, and A. M. Resh, Freeport.

Assistant Pharmacists: W. L. Bartholomew, H. C. Brown, M. E. Felteustein, C. D. Gauthier, A. H. Goette, E. E. Grebel, L. M. Haesler, J. R. Hall, S. L. Harnit, H. Hansen, F. J. Kimmel, J. Mauilela, W. S. Mayhew, G. B. Meredith, M. J. Meyerowitz, J. E. Miller, C. W. Moors, T. J. Peters, J. A. Razor, J. G. Roensing, A. J. Sachse, G. A. Schnadt, M. G. Stahlfeld, G. J. Toussig, W. P. von Zelinski, of Chicago, and A. G. Ackermann, Quincy; O. E. Behrensmeyer, Quincy; G. Eirele, Quincy; G. J. Foxford, Morris; F. H. Foster, Maywood; W. Grimes, Clinton; R. P. Kile, Rockford; M. J. Kurt, Aurora; J. P. Lester, Berwyn; T. J. Murphy, Cardiff; W. A. Neill, Harvey; J. W. Robinson, Aurora; C. E. Schultz, Joliet; J. T. Sexton, Peoria; A. Suidine, Moline.

The next meeting of the Board of Pharmacy for the examination of candidates will be held at Chicago, on Tuesday, April 11. All applications for this examination must be on file in the Springfield office of the Board, by Thursday, April 6.

NO LONGER SUB-POSTMASTERS.

St. Louis, March 7.—Local druggists who find the revenue from post office substitutions a considerable help in maintaining a store in the outskirts of the city, are much perturbed over the announcement of Postmaster Wyman that druggists as sub-postmasters are soon to be a thing of the past. The change came about over the defalcation of Elmer Smith, a clerk for Druggist Massareng, recently. Smith got \$5,500, and showed how easy it was for an unbounded man to defraud the government. Hence the order. Four stations have already been replaced by one central post office station for the territory they served.

FOR FIRST SOCIAL MEETING.

St. Louis, March 14.—The first "social" meeting of the St. Louis R. D. A., will be held at the Southern Hotel, March 21, and the occasion, if the present plans are carried out, will be a notable one. Secretary Wooten, of the N. A. R. D., has been invited and will, so he has promised, make an address. C. P. Walbridge, president of the J. S. Merrill Drug Co., is down for an address.

The social plan is for those who go in for the dinner which will be served at the conclusion of each monthly meeting, to pay \$1 a month whether present or not, and for other members of the association who do not care for the dinner to pay the regular dues of \$5 a year. The February meeting, at which the social plan was finally decided upon, was attended by more than fifty druggists and more than 100 are expected at the dinner.

J. S. MINNICK,
Manager City Department of the J. S. Merrill Drug Company, St. Louis.

MISSOURI MEASURES.

St. Louis, March 14.—The Missouri General Assembly passed a bill, last week, requiring the druggists to keep an open record, similar to poison registers, of all prescriptions containing more than 20 per cent. of alcohol. In some way the metropolitan papers got the impression that this was a very radical move toward the heading off of the tipping trade and the headlines that appeared over the articles were amusing. The authorship and reason for the bill have not been satisfactorily explained to St. Louis druggists.

Senator McInobe's bill prohibiting the sale of cocaine except by prescription has been passed by both Houses and signed by the governor. As it does not carry an emergency clause, the bill will become effective with the other laws. It does not affect the sales by wholesale houses and manufacturers.

Beaver, Col., March 10.—There is much mystery in a fire which did \$70,000 damages to the stock and drug store of the Forbes Drug Company.

AMONG
THE COLLEGES

NEW JERSEY C. OF P. TO BUILD.

Newark, N. J., March 13.—Unless present plans fail to mature, before the opening of another term the New Jersey College of Pharmacy will be installed in a home of its own, and one which will be in every way commensurate with its needs, which have increased greatly within the last two terms.

Some time ago a committee on site was appointed by President Keubler. For various reasons, principal of which was the absence of some of the members and their many business engagements, the committee accomplished little. As the time passed the necessity for hurried action became more apparent. There has been a steady increase in the number of students, and the present quarters, at No. 234 Market street, have long been inadequate to the needs of the college. It is necessary that the new home should be in the center of the city, and property in that section has been rapidly increasing in value during the past two years. It was evident that action could not longer be delayed, and President Keubler impressed upon the members of the committee on site, Messrs. Frank Crissey, chairman; George Linnett, Dr. Meeker, Dr. Ost and L. L. Staehle, the importance of the work. As a result, many sites have been inspected and there will be a meeting late in the week, at which the members will make their reports. One of two sites, both of which are centrally located, seems to be the choice of a majority of the committee. One of these sites is on High street, near Springfield avenue, and the other is at the corner of Bank street and Wallace place.

This has been one of the most prosperous seasons the college has had since it was opened. There are thirty-four junior students this term, and these, with the students from last year, make an enrollment of fifty-four. The graduating exercises will be held next month.

Charles Wuensch, secretary of the Essex County Retail Druggists' Association, who has been in Florida for a month for his health, has returned home. He is greatly improved. Mrs. Wuensch accompanied her husband.

CLEVELAND SCHOOL OF PHARMACY.

Cleveland, O., March 9.—With the present school year drawing to a close, the trustees of the Cleveland School of Pharmacy have already started on next year's campaign with the determination to make the incoming class next fall larger than was the one of this year. If this is accomplished it will mean a 25 per cent. increase over the attendance this year. The trustees hope that the druggists of Cleveland will continue to extend their cooperation, for in no way can they do the institution greater service than in persuading the young men in their employ to attend school.

The Northern Ohio Druggists' Association holds its monthly meetings in the

lecture room of the college, 356 Superior street.

Governor Herrick has announced that he will appoint M. G. Tielke a member of the State Board of Pharmacy to succeed Geo. W. Voss, a pharmacist of this city, and long a member of the college. Mr. Voss has won much publicity by his success in conducting parties of tourists to Europe.

SCIO COLLEGE OF PHARMACY.

Scio, O., March 9.—The senior orations given in the college hall on the evening of February 28, included two by Ph. C. students who are completing the regular Bachelor of Science course. The exercises were attended by the members of the college of pharmacy as a body.

Charles E. Ringer, Ph.G., '94, at Pittsburg, Pa., addresses a monthly letter to his patrons, and to the physicians of his neighborhood, calling attention to new items. He has built up one of the best paying pharmacies in the city.

The Ph. C. class is now engaged in the preparation of standard volumetric solutions, and will shortly begin work in water analysis and the analysis of milk and its products.

E. T. Terrick, Ph.G., '03, has purchased a drug store at Salem, W. Va.

D. W. Palmer, Ph.G., '04, is now employed at the Eagle Drug Store, Salineville, O.

I. C. Gibson, Ph.G., '03, is located at Kingwood, W. Va.

John R. Elson, Ph.G., '01, was married February 16, to Miss Myrtle E. Morford, of Wellsburg, W. Va., at which place Mr. Elson is proprietor of a fine drug store.

Clyde E. Albright, Ph.G., '01, is prescription clerk at the Hamilton Pharmacy, Wellsville, O.

C. R. McGuffie, Ph.G., '04, is clerking at Sherrodsville, O.

CHICAGO COLLEGES OF PHARMACY.

Chicago, March 9.—The annual debate of the senior class of the University of Illinois School of Pharmacy, between candidates for the honors of the class commencement, April 26th, was held on February 22.

Dean Goodman presided, and with Professors Day and Gathercoal, acted as judges of the candidates. The first speaker was Thomas L. Larson, who discussed the question, "Disrespect of the Public for the Pharmacist." Mr. Larson took the position that the public is disrespectful to the pharmacist, unecessarily and wrongfully so, yet the pharmacist, to a great extent, is to blame for this condition. He should be educated not only in his profession, so us to meet the physician on equal footing and command his respect, but also should have a thorough general education, so as to produce a good impression on the public.

Guy G. Dillow followed with remarks on the same subject. He maintained that the druggist must command the respect of the people by his position as proprietor, or representative of the owner, of a drug store. He must not be a petty shop-keeper nor a blind saloon-keeper, nor agent for this, that and the other thing. But as a man of business he will command respect.

T. I. Schelps said: "Oust the 'pat-

ents.' They are more or less dangerous to use, not particularly profitable to sell, and when the druggist recommends as a cure for disease something that he knows nothing about, he brings himself into disrespect. If necessary, he may prepare and recommend a line of his own medicines. However, there can be no objection to supplying such proprietaries as are not of a dangerous nature and such as are demanded by the public, but not with the druggist's recommendation."

Mr. Mayfield claimed that feeing the physician, i. e., paying the physician a commission on the amount of business he sends the druggists, was wrong and certain to bring about the disrespect of both physician and laity.

T. F. Brown and Professors Day and Goodman discussed the value of special lectures before the class. It is expected that a series of special lectures on "First Aid to the Injured" or on "Commercial and Business Features of Pharmacy" may be instituted.

The decision of the judges awarded the honors of the class to Thomas Lewis Larson, as valedictorian, and Guy Garland Dillow, as salutarian.

OMAHA COLLEGE OF PHARMACY.

Omaha, March 9.—Twenty-two graduates received diplomas at the mid-year commencement exercises of the Omaha College of Pharmacy, last week.

The address was delivered by Rev. T. V. Moore, of the Westminster Presbyterian Church. He spoke of the tendencies toward commercialism at the present time, depicting the future of the nation as being of such a character as to fire one's imagination. He said that so many ambitious young men are drawn into commercial and industrial pursuits as to call forth a cry of apprehension from every denomination in the land that the ministry is being neglected. He maintained that the ideal of success is coming too much to be measured by materialistic standards and worldly achievements. He urged the graduates not to lose themselves in their work and pointed out that in commercial lines of activity there was danger of absorption in business and a forgetting of higher things.

The diplomas were presented and the degrees conferred by Prof. Edmund Thorpe, dean of the college. A prize, consisting of a pair of prescription balances, was awarded to G. E. Gustine, of White-wood, S. D., for proficiency in manufacturing pharmaceutical preparations. Sixteen of the graduates recently passed the State examination. After the exercises a banquet was held at the Calumet.

Following is a list of the graduates: T. V. Ryerson, L. A. Adams, B. W. Watson, E. S. Andrews, A. L. Pope, C. Anderson, D. G. Worthing, Z. Lilleahl, R. L. Beck, B. K. Bullis, F. M. Murphy, M. S. Sobavlesky, N. S. Seanson, F. R. Sius, R. T. Lupton, F. T. Maurers, R. F. Solt, T. Green, G. Whiton and R. S. Griffith.

After the exercises at the college building, the members of the faculty and the students and their friends partook of a banquet at the Calumet Restaurant.

On August 10, next, the second semi-annual commencement will occur. There are twenty-eight members in the senior

class, who will probably finish the course at that time, making a record for the year of fifty graduates. This we consider a very good showing for a college of pharmacy only four years in existence.

Dr. Sherraden, president of the Omaha Dental College, recently gave the students two lectures on "Anaesthesia." The lecturer has had a great deal of practical experience in the use of anaesthetics.

The spring term opened on February 28. There is a good attendance in the junior class. At the last meeting of the Board, at Lincoln, eighteen students took the examination, all successfully passing with good averages.

Norman A. Kuhn, a member of the Board of Pharmacy, and Professor Kelley, formerly an instructor in the college, made addresses at the recent meetings of the College Pharmaceutical Association.

PHILADELPHIA COLLEGE OF PHARMACY.

Philadelphia, March 9.—The Beta Phi Fraternity has passed resolutions endorsing the Phillips-Fahey bill, and recommending its passage by the State legislature.

The junior class has appointed the following as members of the general committee for the getting out of the college book for 1905: Chairman, John D. Dawson; Wilfred Thompson, Charles Grammar, H. B. Peters, A. L. Baskin, W. B. Goodyear, F. C. Taylor.

A new method of conducting the final examinations is about to be inaugurated at the college. Formerly it had been the custom to crowd all the finals into the last week, which was early in May. It was a severe test and frequently students would break down under the strain. By the new system the final examinations are now starting and will continue at intervals until the close of the term. For the first year classes the finals will begin early in the coming week. The seniors take the chemistry examinations on Monday and the pharmacy finals on Friday. The following week the second year classes come in, and so on until March 5.

Many pharmacists are expected to be present at the pharmaceutical meeting on March 21, when papers will be read by Prof. Henry P. Hynson, of the Maryland College of Pharmacy, Baltimore, and Dr. William C. Alpers, of New York. George M. Beringer, of this city, will read a paper on "The Evolution of Nostrum Vending and its Relation to the Practice of Medicine and Pharmacy."

A class for special work in the laboratory on thesis and manufacturing subjects, has just been organized.

Preliminary arrangements are being made for the annual banquet of the Alumni Association, in May, just before commencement.

ALKALOIDAL LABORATORY PRODUCTS.

The Abbott Alkaloidal Co., of Chicago, have favored us with a copy of their latest price list for 1905, which gives a complete list of their alkaloidal products and illustrations, with prices of their line of medicine cases. Copies of this list will be forwarded to any druggist so desiring, if he will kindly mention The Era.

The Chemist Of The Workshop.

The druggist is not living up to his opportunities if it is not known in all the small workshops and industries of his neighborhood that he is a chemist and able to give pointers on many technical and industrial processes. He already has a good foundation for such knowledge, and there is a wealth of working formulas at his command in

THE ERA FORMULARY

WITH THIS BOOK AS HIS GUIDE, HE CAN FURNISH:

- The Machinist with Metal Polishes, Processes, etc.
- The Laundryman with Special Starches, Glosses, Blues, etc.
- The Undertaker with Embalming Fluids.
- The Dyer with Dyes and Processes.
- The Photographer with Chemicals and Processes.
- The Leather Worker with Dressings, Polishes and Processes.
- The Tailor and Hatter with Cleaning Preparations, Special Soaps, etc.
- The Painter with Special Colors, Varnishes, Stains, etc.
- The Cabinet Maker with Polishes, Glues, Varnishes, etc.
- The Cigar Maker with Flavors and Colors.
- Every Industry with Cements, Glues, etc., for every purpose.

There are over 1,500 formulas in the book for technical and industrial processes, domestic and household preparatious, miscellaneous articles, etc., and any druggist with this collection can easily work up a profitable trade in a line of articles which his training as a chemist makes him proficient to engage in.

Price, \$5.00 per copy, delivered.

D. O. HAYNES & Co., PUBLISHERS,

MAKE YOUR CHOCOLATE SYRUP RIGHT

NO PRECIPITATE—NO SCORCHING—NO BOILING OVER

LARGE SALES

will be the result if you write for our free advertising matter about

MAJOR'S CEMENT

ESTABLISHED 1876

If you have never handled it also send us your jobber's name and we will send you 1 doz. free cement through him.

15c. PER BOTTLE.

\$1.20 PER DOZEN. \$14.40 PER GROSS.
RUBBER AND LEATHER CEMENT THE SAME PRICE.

THE ALPHONSE MAJOR CEMENT CO.,
461 Pearl St., New York City.

D. WATSON & CO., Montreal, Agents for Canada.

IF YOU PREPARE YOUR CHOCOLATE SYRUP IN MAJOR'S STEAM BATH KETTLE

This method makes a rich syrup with a delicious flavor, entirely free from scorching. It is impossible for the syrup to boil over or scorch in MAJOR'S STEAM BATH KETTLE. All of the aroma is retained, and with the same amount of chocolate ordinarily used, you will get a much stronger syrup.

It will increase your trade at the fountain.

It is unsurpassed for preparing ingredients for cold cream.

It is now used by leading druggists in New York and other cities.

Write for booklet of testimonials, prices, etc.

Major's Kettles are used and endorsed by Hegeman & Co., Wm. Willson and J. Jungman in their several New York stores; by Albert Chalmers at Coney Island, and many others.

W. H. ROGERS, Summit, N. J.

Having used your kettle to make chocolate syrup for the past summer, would say, that it is entirely satisfactory in every way. It makes better syrup, and, in the impossibility of its boiling over is of great advantage over old style kettle, being both a saving of expense and annoyance.

A. MAJOR

461 Pearl Street

NEW YORK CITY

A Tweezer That will Tweeze

THIS card of tweezers is the work of a man who has spent nearly a well-rounded-out lifetime making surgical goods. You know the quality that is put into the finish of surgical goods—the steel itself is the very best, and the workmanship is simply fine.

This tweezer is built likewise—made especially to qualify where every other tweezer fails—on the gripping edge. They come together perfectly—will pick up the finest hair. They are file-cut inside the clutch, which gives a firm hold, and are sharpened right down to an edge.

They retail for 25 cents and, of course, have to compete with cheaper goods, but just the same when a man really wants a tweezer that will tweeze, he's looking for something with a grip and a point to it. You can sell two of these tweezers to one of the ordinary kind.

We finish them in bright polished steel, heavy nickel plated, without design. In appearance they are just like a surgeon's tweezers. In fact, we call them by the surgical names. One with the fine point is the "Splinter." The other with flat pincer-like end is the "Cilia."

There are six of each kind on this card. Price of card is \$1.75, postage paid.

DRUG STORE ADVERTISING.

M. P. Gould Delivers an Interesting Address Before the P. C. P.

Many students and pharmacists attended the lecture on "Drug Store Advertising" delivered by Mr. M. P. Gould, of M. P. Gould Company, New York City, in Philadelphia, on February 28, before the Philadelphia College of Pharmacy. The lecturer was invited by the Board of Trustees of the college, through its Committee of Instruction, with the object of acquainting the undergraduates of the college and the retail druggists of Philadelphia with modern methods of advertising. It is expected that a regular course in advertising will be added to the college curriculum next year, under the charge of the dean, Prof. Joseph P. Remington.

The speaker, Mr. Gould, has a pleasing personality, and is filled with enthusiasm for his work. He was introduced by Prof. Jos. P. Remington, who stated that Mr. Gould was born in Kansas, and that he was a graduate of Yale University. He also stated that the lecturer earned the money to take him through the university by writing advertising, and studying the whole subject in an experimental way.

Mr. Gould then delivered his lecture. When a telling point was made the audience responded with a good will, and it was evident that it takes Mr. Gould a very short time to be on good terms with his hearers. He treated the subject in a most novel way, opening with a series of contradictions, telling what is not advertising, and then proceeding to vigorously tear down the fabric which he had created, and before he finished, the subject had been dealt with from all sides.

He dwelt especially upon the fact that all advertising, to be successful, must be based upon the solid foundation of honesty and fair dealing. Persistence is a *sine qua non*. He advocated setting aside at the beginning of the year a fixed sum to be spent in advertising. This need not necessarily be a large amount of money, and results must not be expected at once. He spoke of his own business and stated that he had spent \$375 the first year in advertising his business, and \$9.75 was the figure which represented all that he could fairly reckon as results. The next year he had a much larger return, and the next still larger, and now, of course, he could not think of attempting to do business without advertising.

He stated that he believed that many manufacturers of druggists' specialties were wasting their money by advertising solely to consumers, and illustrated it by telling the story of a manufacturer who was taken ill away from home in a hotel in a large city, and believing in his own remedy, he sent to eight neighboring drug stores, only to find that his largely advertised specialty was not to be had. The department stores, who mostly handled it, were closed. Mr. Gould strongly empha-

sized the fact that the retail druggist should be depended upon to handle remedies and medicines, and the success of the sales largely depended upon advice given to customers by the pharmacist. He gave as his reasons for this that every pharmacist was interested in making his own business a success, and that they could tell better than the boy or girl who hands down the article in a department store, whether it would be likely to be beneficial to the patient.

He paid a glowing tribute to the city of Philadelphia because of its reputation throughout the country for honesty, conservatism and solidity in methods of managing business.

The lecturer touched upon the other side of the subject, and spoke of one of his customers who spends \$50 a month in advertising and is an enthusiastic believer in it, but is unable to get satisfac-

M. P. GOULD.

tory results from his efforts, because he had the dirtiest store in the city and was not careful about his personal appearance, so that people once visiting the place would not be attracted to return.

The lecture was filled with good advice, and showed clearly that Mr. Gould was a master of the first principles of shrewd advertising, and that is to thoroughly understand human nature and then tell the truth, but tell it persistently about goods that you can guarantee.

A point brought out by Mr. Gould in an informal conversation, after the address, is perhaps unique. It is that all advertising is honest. It may not be honest in intention, but in final effect it must be, for deceptive advertising is soon recognized by the public and its statements discounted accordingly. For example, if a merchant makes exaggerated public statements concerning his goods, the public will soon discover how false they are and future advertising of the same character will be taken at its true worth, that is, the true worth of the merchandise.

Mr. Gould has been invited to deliver three addresses on "Drug Store Advertising," before the Buffalo College of Pharmacy of the University of Buffalo. On March

14, he will speak on direct advertising, and this The Era intends to present to its readers in full, through the courtesy of Mr. Gould. This lecture will treat of advertising by means of windows, counters, walls, letters, circulars and booklets, subjects all of the greatest importance to druggists.

PROF. ERDMAN ON P., D. & CO.

During the past year, for the first time in history, the Society of Chemical Industry, which was organized at London twenty-three years ago, held a meeting outside of Great Britain. The European members were the guests of the New York branch society, during the second week of September, and subsequently, at the invitation of their American colleagues, participated in a round-trip through part of the United States. At the close of his interesting report, in the "Zeitschrift fuer Angewandte Chemie," Vol. 17, No. 51. Prof. Hugo Erdmann, the eminent Berlin chemist, makes the following complimentary reference to one of his American experiences as the representative of the "Society of German Chemists":

"Near the close of the very instructive round-trip, I had occasion to address a large meeting at Detroit, where we passed a full day as the guests of the world-renowned firm, Messrs. Parke, Davis & Co.

"Our present host, Parke, Davis & Co. was the first firm in the world—thanks to the material placed at its disposal by the gigantic Chicago stockyards—to produce and market the active principle of Suprarenal glands in a pure crystalline form, under the name of Adrenalin. Not less than 40,000 oxen must be killed to obtain a single kilogram of this valuable substance. This new remedy, which was also recently employed in the case of our German emperor, has a powerful effect on the circulation, increases the blood pressure and quickens the heart-beats. As our memorable trip through America draws to a close, and when we return to the Old World and our usual sphere of activity, our hearts will beat as though we had received a maximum dose of Adrenalin whenever we think of Detroit, the beautiful 'City of the Straits.'"

MAJOR'S CEMENT FREE.

Retail druggists in Brooklyn, N. Y., and Eastern Pennsylvania and New York will do well to be prepared for a visit from a representative of The Alphonse Major Cement Company in the near future.

The wide-awake druggist who places his order for Major's Cement with the salesman will receive a quantity of free cement with his order. These gratis goods can be secured in no way except by ordering through the salesman when he is making his regular trip through a territory. Orders sent directly to the house or through jobbers will in no case entitle the druggist to the gratis goods. The druggist whose stock of Major's Cement is getting a little low will do well to fill up when he can get a quantity of cement free.

THE EVANS SYSTEM OF FOUNTAIN MANAGEMENT

Mr. W. S. Stinson, Manager of Evans' Soda Department, on
Business in Philadelphia

REFRIGERATION BY AMMONIA REPLACES ICE

The largest soda fountain in Philadelphia is that of the drug store of George B. Evans, at 1104-06 Chestnut street. This business has been established twenty-two years and "Evans' soda" is well known. There are four other Evans stores, but this one does the largest soda business.

Here the fountain is forty feet long, the largest in the city. It was manufactured by Robert M. Green & Sons, Philadelphia.

While perhaps not as showy as some smaller fountains, careful attention has been given to its construction, and the materials used—marble, onyx, silver and mahogany—are so arranged as to impress at a glance, one of artistic tastes. While the appearance of the fountain appeals to the novice, the feature of the system is really concealed beneath it. Briefly, it is a refrigerating process, located in the basement, that equals in cooling capacity a ton of ice. It does its work with no slop and annoyance, now that it is installed and running smoothly every day, and creates less expense than that necessitated by many fountains of smaller capacity.

This process, as does the whole management of the fountain, comes directly under the supervision of W. S. Stinson, a druggist and a manager whose particular ability as an originator of new concoctions, pleasing in name, appearance and flavor, is well known to Philadelphians. He has been with George B. Evans for ten years, and in that time has made many friends for the house.

AMMONIA PLANT COOLS.

Mr. Stinson explained in detail the refrigerating process. Ammonia does the work of the ice. This ammonia is contained in a steel tank, directly under the fountain. From this tank the ammonia passes through a small iron pipe, to an expansion valve where the liquid becomes a gas which passes on into a set of iron coils. These coils are laid in a steel tank, thoroughly insulated, twenty feet long and five feet square. This tank is almost full of filtered water, and when, by starting a motor, the ammonia commences to flow, the process of forming ice on the iron coils begins. Of course, the forming of the ice gradually cools the water surrounding the coils and when by means of a thermometer, the engineer finds that the temperature of the water in the tank is 33 degrees, he shuts off the ammonia and until the ice, melting, allows the temperature of the water surrounding it, to go up

several degrees, no more ice is formed. The filtered water thus cooled, is pumped by means of a one-horse power driving pump, up into the tanks of the fountain. There are the coils containing the soda water, while directly beneath are the porcelain drawers, containing the flavors. In the ordinary fountains, the tanks into which the water is pumped is filled with ice. This water, cooled to 33 degrees, is allowed to pass very slowly through these tanks and by a "perpetual motion" arrangement, passes back again to the metal-lined tank in the basement, where it had been cooled before. There is practically no loss of water.

The ammonia-gas, after passing through the ice-cooled coils, enters a compressor just outside the far end of the box. There the fumes are compressed and passed into a condenser, from where, transformed into a liquid, it returns to the ammonia tank. Practically no ammonia is lost.

COOLS RESERVE SYRUPS.

But this cooled water performs a double function. On its way from the fountain tanks it passes through many feet of iron pipe, arranged in coil form, along the sides of a compactly built refrigerator room. In this room is kept an extra supply of syrup-flavors made from the crushed fruits. They are contained in square porcelain-lined iron boxes, systematically arranged in an iron framework. In the bottom of each box is a spigot which permits the flavors to be run off very quickly. The refrigerating room also contains extra ice cream cans, all filled and ready to be put on an elevator and run up to the fountain.

Another feature in the basement is the washing of the glasses, chinaware and spoons used upstairs. They are sent down on a small elevator and are washed in hot and cold water and then thoroughly polished. The spoons are treated antiseptically. Two men are kept busy all day at this work.

All of the Evans flavors and ice cream are made fresh every other day at the laboratory at Tenth and Spring streets.

Mr. Stinson does not go behind the counter, but from the outside keeps a watchful eye on all that is going on. In speaking of the methods that have helped to give the Evans soda its reputation, he said in part:

"In our efforts to please the customers at our soda fountain, we are daily making changes; improvements, the result of careful attention to the likes and dislikes of all and a study of the wants of an ever-changing public. Winter and summer, we

are always on the alert to get up some new drink, some new name that will catch the eye of the ear, and in turn suit the taste. In doing so we are just as careful in our attention to the first principles that insure the success in the operation of a fountain. I mean cleanliness, politeness, the use of only the best materials in our drinks, variety, decorations.

DISPENSERS AND THEIR WORK.

"We employ seven young men behind the counter, in addition to a boy who collects glasses that have been used and sends them down to be washed. No empty glasses are allowed to stand on the counter under any circumstances and we would rather have customers go out unserved than to have them see a wet, soiled counter. The attendants wear white jackets and aprons, and when they are soiled they are changed at once. Each man wears a flower in his lapel and the man who is not naturally neat in his appearance is not long with us.

"We never have an argument with a customer. If, when ordering a drink that is new to him, a patron finds that it is not to his or her liking, we are always only too glad to give him another, of course without additional charge.

"In making our flavors from fruits we use only the best that are in season at the time, and then only enough to last us a day or two.

"There is much to be said on the subject of variety. We are now dispensing about 100 kinds of drinks, hot and cold. This idea of not being able to make the fountain pay in winter is all bosh, if it is run right. We have an enormous trade in hot drinks, and even in cold weather the demand for drinks that are partly composed of ice cream, would surprise you. Just now "sundaes" are great favorites—ice cream with fruit or fruit syrup, topped with whipped cream and on that a cherry or a white grape. To one who does not know it, the sight of a sundae is enough to sell it. Throughout the year there is a steady demand for drinks that have eggs in them. Egg-coffee, egg and milk, egg and beef tea are all delicious and wonderfully nourishing. Grape juice, too, is a popular beverage, and these cold, damp days there is a lot of coffee sold. We don't sell any drink for more than twenty cents and for most the price is five and ten. We sell a lot of lithia water, imported and domestic, but use only the imported ginger ale. Crackers and napkins are supplied.

"Very few fancy drinks last more than one season, and we are always on the lookout for new ones. There is almost as

A PHILADELPHIA FOUNTAIN.

The Fountain shown above is in the store of George B. Evans, 1104-06 Chestnut street, Philadelphia. A "Polar," manufactured by Robert M. Green & Sons. Length, 40 feet. Marble, onyx, mahogany and silver trimmings.

much in the names and the appearance as there is in the taste. Novelties catch the eye of the regular soda drinker, as well as the occasional one. For instance, our 'Piff-Paff-Pouf' was very popular. We always have plenty of shaved ice, for although our drinks are served at a temperature of 33 degrees, lots of people would not realize that they were so cold if they did not see the ice.

DECORATIONS AND ACCESSORIES.

"The decoration of the fountain plays no small part in the receipts and money expended on tasteful and attractive ideas is well spent. We have a yearly contract with a florist, who supplies us daily with bouquets of the finest flowers that can be had. Then too, we use oranges, bananas, apples, pineapples and other fresh fruits for decorative purposes. On our counters we have small syrup tanks, made of marble and lined. Each holds three jars for the fresh fruits. They are about six inches high and each jar has a silver cover. Nothing is exposed to dust or flies. Our signs are small strips of cardboard, fourteen by two inches, which are displayed above the fountain, on the windows and the glass doors. Our attendants receive the money for the sales and deposit it and make change with cash registers. We don't believe in the check system. Only thin glasses are used. The

breakage is heavy, but it pays in the added enjoyment of drinking from a thin glass.

"We are careful not to overwork our men, and they are well paid. We serve no malt preparations, for if we did it would open up a line of trade that we do not care to cater to. Headaches and slight indispositions can be treated at the soda fountain, but we don't prescribe and the complaints of children are always referred to the prescription department."

The fountain is of the Green polar system. The syrup tanks slide in and out in front like a drawer and are made of porcelain. To remove a tank for cleansing, a small door is opened, the tank withdrawn and the door closed and latched, the fountain presenting the same appearance as though the syrup tanks were still in tact. Believing that to have a good beverage it is necessary to have the soda well carbonated, Mr. Evans has his soda carbonated in tanks by the rocker process. He has about one hundred tanks in use to supply his various stores.

BOUGHT A DRAPER.

The Orear-Henry Drug Store, Maryville, Mo., has purchased a Draper's Recording Thermometer, says the Forum, of that town, and is finding it very satisfactory. The dials are filed away for future reference.

MEYS' POULTICE.

The attention of our readers is invited to the advertisement of the Meys Chemical Mfg. Co., of Chicago, which will be found elsewhere in this issue of *The Era*. Meys' Poulitice and Antiseptic Surgical Dressing is a paste-like product for the external treatment of localized inflammations and congestions. The manufacturers state that it is being used with happiest results in infected wounds, upon abraded surfaces and the mucous membrane, as in vaginal, rectal, nasal and other inflammations. It is soluble, bland, anodyne and prophylactic.

It is put up in hermetically sealed jars in four sizes. It is being largely advertised to physicians and sold by all the leading wholesale druggists. Druggists in seeking further information, are invited to address the Meys Chemical Mfg. Co., 69-71 W. Jackson Boulevard, Chicago, Ill.

STRAWBERRY SOAP.

On another page we call attention to Strawberry Juice complexion soap, made by the Frazer Soap Co., New York and Chicago, which is one of the best transparent glycerin soaps offered to the trade. It is sold at \$9.00 per gross, packed one-quarter dozen in box, and will be found to be a quick seller whenever displayed.

MANICURE AND MASSAGE.

Riker's Drug Store Devotes One Entire Floor to This Service.

OPENED TO ADVERTISE TOILET PREPARATIONS.—NOW A DISTINCT DEPARTMENT.—CHIROPODY, HAIR-DRESSING, MANICURING, MASSAGE, ELECTRIC SCALP TREATMENT AND HUMAN HAIR GOODS.—DEPARTMENT SUPPORTS FOURTEEN EMPLOYEES AND SERVES 200 PATRONS A DAY.

How many druggists would be able to fill a doctor's prescription calling for massage? Riker's Drug Store, Sixth avenue and Twenty-third street, of the Wm. B. Riker & Son Company, possesses facilities not only for administering massage, but also for supplying the needs of its patrons in manicuring, hair dressing and other operations pertaining particularly to the toilet. The entire third floor of the building is devoted to chiropody, hair dressing, manicuring, massage, electric scalp treatment and human hair goods.

Originally opened for the purpose of promoting the sale of the firm's own toilet preparations, the department has grown far beyond the limits of the ordinary drug store side line. It is a considerable establishment in itself, having an efficient manager and some thirteen employes serving fully 200 patrons a day.

Stepping from the elevator, one finds himself or herself—for feminine customers naturally predominate—ushered into a comfortable, well-lighted room, which resembles more the reception room in a hotel than a department of a pharmacy. Abundant light and comfortable chairs and settees render the place especially attractive to the tired shopper.

Along one side of the room, from which broad windows command Twenty-third street and the bustle of the elevated sta-

tion, are the manicure tables, at which the ladies can sit at ease while operators trim and polish their finger-nails and attend to the hygienic needs of the hand.

Here are four manicure operators, each serving about ten patrons a day. The demand for this service often exceeds the supply; on some days no transient customers are served at all, the entire force devoting their time to regular patrons.

In the corners and across one end of the room are arranged booths, in which the other operations are carried on. There are in these rooms, or compartments, three hair dressers, three masseurs and two who apply special treatment of the scalp; all well supplied with patrons.

"A large proportion of our massage patients come with cards from physicians," said Miss Catherine Tingley, the manager of the department. "We try to disabuse people of the impression that facial massage is merely a beautifying process. It is the hygienic effects that should be sought, although, of course, a healthy skin with

FACIAL MASSAGE.

not if we were obliged to buy our various preparations. The massage cream, the nail polishes, the hair tonic, shampoo mixtures, the lotion and bleaches make up a large item. The fact that the firm prepares these products in its own laboratory is a great advantage. We do considerable prescription work in the treatment of scalp disorders; these are from scalp specialties and can be obtained at no other place."

The corner of Sixth avenue and Twenty-third street is an exceptionally favorable location for a department of manicure and hair-dressing. It is at the crossing of two important lines of travel and the streets are thronged from morning until night with well-dressed crowds. It may be doubted whether another drug store in the world has an opportunity comparable to that of Riker's Drug Store. Besides being located in a region where people who have money to spend go to spend it, the store is in a "manicure and hair-dressing" neighborhood. Twenty-third street west of Sixth avenue is lined with parlors devoted to this class of service, some large and luxurious and others more modest, both in prices and service.

The prices in the Riker parlors are lower than those of the more pretentious establishments, but there is no attempt to meet the rates of the cheaper plants, where the service is necessarily of a lower standard. Following are some of the prices: Manicuring, 50 cents; massage, \$2 per treatment, twelve treatments for \$15—the manager explained that it had been found desirable to encourage a series of treatments in order that the results, which might not be attained in one treatment, might be more satisfactory; hair-dressing, the Marcel wave, 50 cents; shampooing, 50 and 75 cents; singeing and clipping, 50 cents; scalp treatment, \$2; chiropody, 25 cents up; pedicure, 50 cents.

The expenses of the establishment are considerable. Besides the rent and supplies, there are fourteen employes who de-

TABLES AND MANICURE OPERATIVES.

perfect circulation does add to one's attractiveness."

"Riker's being a cut-rate drug store, this department is also carried on upon the same principle. Our prices are lower than those of any other similar establishments, and we are prepared to compete with the best of them.

"Where do our customers come from? This is the heart of the shopping district, and many of our customers are shoppers. But they are also from out of town, from the many small cities lying hereabout. Some of our regular patrons come in over one or the other river. This would seem to be an ideal spot for transient customers, but occasionally we are obliged to turn them all away.

"Does it pay? Certainly. But it would

MANICURE PARLORS—GENERAL VIEW.

vote their entire time to its patrons. The salary of manicure, massage operators and hair-dressers vary from \$9 to \$25 per week, and the number of customers which a person is able to serve in a day is some what limited. Hair-dressing requires from one-half to three-quarters of an hour; and manicure operators treat from eight to twelve patrons per day.

The average daily number of customers in the various departments are approximately: Massage and scalp treatment, 20; manicure, 40; chiropody, 20; hair-dress ing, 100, which is a low estimate.

The trade-bringing factor has in a measure been lost sight of in the magnitude of the department, but it must be considerable. All patrons of the parlors pass through the crowded drug store on their way to and from the elevator. The effect upon the trade in toilet goods must be great, and the soda fountain which extends along the entire length of the room, is an incentive to the passerby in every one of his sixty or seventy feet of counter.

TRUE COMFORT IN STROPS.

How many people enjoy shaving like the man in this picture?

"How Easy."

He whistles because he is happy, having a strop which keeps his razor in good shape with small effort. A sharp razor is a joy forever.

He is using a Red-E-For-Use razor strop, made by the Gifbord Manufacturing Co., Adrian, Mich.

A prominent New York house, marketing strops, said of the Gifbord lines: "We sell them on their merit. We think them the best on the market."

The Gifbord Company says: "We use the horse hide strop for the coarse or sharpening strop, because the animal is older, therefore, the grain of the leather is much coarser and will cut faster. On the other hand, the calf skin is from a younger animal, the grain is much finer and after going through our process it possesses the nice, even draw or pull, and soft, kind surface that puts the smooth, keen, shaving edge on the blade, so much desired by the shaver."

It is worth while to write to the Gifbord

Mfg. Co., Adrian, Mich., for a catalogue of their lines, saying that The Era suggested your doing so.

A TYPEWRITER FOR DRUGGISTS

A typewriter is a necessity in every drug store. In this age of hurry, business men have neither time nor patience for handling scribbled correspondence. Many

a sale has been lost; many an idea miscarried; many a profitable deal gone wrong, because presented in a pen-written letter. There are numerous records that the progressive druggist should preserve in typewritten form. Typewritten labels will bring a reputation for business-like methods and will act as a trade mark. The business uses to which a typewriter can be put are multitudinous, such as circularizing customers, etc.

By the saving in construction effected by the American Typewriter Company's new patent—the one-piece key and type

bar—they are offering \$100 in typewriter value for \$50. No wobbly bearings between key and type—a simple rigid construction which saves hundred parts and saves \$50 cash. Their new No. 7 model at \$50 is remarkable value. It is handsomely finished and has every improvement found on the higher priced machines. This cut in price, which makes possible more universal usage of writing machines, is worthy of support, as the price could have been fixed at \$100 and yet constituted excellent value for the money.

Era readers who are interested should write to the American Typewriter Co., at 271 Broadway, N. Y., for their illustrated pamphlet. Don't forget to mention The Era.

THE SODA FOUNTAIN OUTLOOK.

The J. Hungerford Smith Co., of Rochester, report that their shipments of soda fountain requisites this season are the largest in the history of the firm, and other manufacturers seem to be enjoying similar prosperity. Prospects are particularly bright for a splendid soda water season. For the past four or five years the summers have been unusually mild and unfavorable, but this year we judge from the volume of business, everybody expects a longer season and warmer weather. Already many soda fountains are being polished up for "opening day" and a display of mineral waters and other beverages will no doubt soon supplant the chest protectors in many drug store windows.

Those druggists who have not yet laid in their supply of soda fountain requisites, will do well to communicate with this firm, whose full page announcement is elsewhere in this issue.

A NEW CIGAR CASE.

A new departure in cigar cases now being offered by A. C. Mickelson & Co., of Racine, Wis., will no doubt be received with great favor by the drug trade and their customers. The "Superior Cigar Cases" are made in the most approved manner, of a good quality of stock, and many customers accustomed to using cases or pouches, will carry them for continuous use. It has long since been demonstrated that cigars are carried in such cases with greater safety and less annoyance than when carried loosely in the vest pocket. The dealer who offers these cases for the convenience of his customers will increase his trade and get the benefit of the valuable advertising printed thereon. Considering the number of cigars the Superior case will hold and its adaptability, it is said to be the best and most economical case on the market, and with each order is furnished a neat counter stand finished in leatherette.

This firm also makes another style of case, which, to all appearances, is a plain business card. They also handle Nissen's Cover Support, a device for holding the cover of a cigar box in a rigid open position so that the box can be handled by the cover. Other useful articles are being added to their line constantly and they will be glad to hear from druggists who are interested in pushing their cigar trade.

FRENCH CASTLE SOAP.

A. Henriotin Co., 133 Kinzie street, Chicago, are making a specialty of pure French Castle soap of their own importation; also choice line of Virgin olive oil. By the steamer Cirassina from Marseilles, they recently received 725 boxes of their "La Lune" brand of French Castle soap, being the fourth importation received this year. They also report a recent arrival of their Virgin olive oil from Portugal, in gallon cans and in cases of quarts, pints, half-pint bottles. They state that this oil comes from Nice, France, and is refined four times through cotton, making it the most desirable pure olive oil obtainable.

They will be pleased to hear from druggists who are interested in a fine grade of imported castle soap and olive oil. Please mention The Era.

BOHNER'S CRUSHED FRUIT BOWLS.

The Bohner Mfg. Co., 42 State street, Chicago, are putting on the market a very fine line of crushed fruit bowls. The handle is inside the bowl with the handle resting on a rod above the fruit, thereby always keeping it clean and ready for use. The cover is tight fitting, without notches or openings, thus preventing dust and flies from getting in on the fruit. These fruit bowls are standard and thousands of them are in use all over the country. They are sold by all wholesale druggists. If you want the best thing of this kind, be sure to ask for the "Bohner" bowl.

L. & F.'S NEW CATALOGUE.

Lehn & Fink, of New York, the well-known wholesale druggists and manufacturing chemists, have just issued their new catalogue for 1905. It not only contains a very complete general drug list, but also a complete list of pharmaceutical products, sundries and specialties, together with a new and revised list of new remedies and many imported specialties for which they are exclusive American agents.

This catalogue is in particularly convenient size and copies will be sent to any druggist on application, if he mentions The Era. It is not intended for distribution to physicians or to the public.

SMALL GLASS GOODS.

The little necessities for every day service are sometimes overlooked when the required article is not to be found. Especially is this the case in regard to breakables, such as medicine droppers, eye pipettes, test tubes and homeopathic vials.

A good quality of glassware is indispensable in all accessories of the prescription department, and in this respect the products of the Chesapeake Glass Co., 412 and 424 W. Conway street, Baltimore, Md., have a reputation for excellence. Write them for prices and discounts, mentioning The Era, and they will send you full details concerning their specialties.

ARTISTIC PICTURES.

The Crandall Art Co., of Jersey City, N. J., are offering an artistic line of pictures, consisting of reproductions from famous pictures, by leading French artists. They are making a special offer on their "Gems of Art," a dainty little book containing twenty handsome plates, advertised elsewhere in this issue of The Era. The offer is made for getting druggists better acquainted with their line of pictures.

They also have a new line of pictures on Western life and will be pleased to send, free of charge, illustrations in miniature to any of our readers who are interested

Pensantville.—H. C. Zanner, new store.

RHODE ISLAND.

Central Falls.—Bernard & Thibaudau, succeeds Bernard & Co.

Providence.—Joseph A. Bernard, succeeds J. A. Bernard & Co.

SOUTH CAROLINA.

Gaffney.—Gaffney Drug Co., listed under Eutawville, should be under Gaffney.

SOUTH DAKOTA.

DeSmet.—G. E. Mallery & Co., succeeds G. E. Bradley.

TEXAS.

Eagle Lake.—Davidson & Stewart, consolidated with M. G. Calvert, under name of Calvert's Drug Store.

UTAH.

Murray.—G. H. Larson Drug Co., new firm.

VIRGINIA.

Christiansburg.—Dr. J. L. Morgan, succeeds A. F. Barker.

WISCONSIN.

Colfax.—D. Hoepner, burned out.
Seattle.—J. E. Yerkes, succeeds Jessie M. Giny.

WEST VIRGINIA.

Fairmount.—J. B. Martin, out of business.
Salem.—E. T. Tetrick, succeeds Union Drug Co.

Williamstown.—E. J. Skidmore, succeeds Skidmore & Stout.

WISCONSIN.

Prairie du Chien.—Prairie City Drug Co., new firm.

PROCTOR ENTERPRISE.

On the evening of March 4, Inauguration Day, there were presented at all the New York Proctor houses views of President Roosevelt and the inauguration, taken in Washington earlier in the day and rushed to New York by special train. A special corps of trained men was assigned to handle the photographs, their development into lantern slides, and their delivery at the respective theatres. When the wonderfully characteristic snap shots of the President's "smiling face" were displayed, the audiences went wild with enthusiasm.

The Roosevelt views were shown at all houses during the week following the inauguration and became tremendously popular.

It is intended to present from time to time actual "news" views, reproduced from photographs especially taken for the Proctor houses and illustrative of the more important news happenings of the day.

LICORICE ROOT CARGO.

The Austria steamship Java, from Smyrna and other ports in Asia Minor, recently arrived at Camden, N. J., with 23-176 lbs of Licorice root, consigned to the Consolidated Tobacco Co. The freight above root \$25.00.

MARKET REPORT

CITRATES ADVANCE.

Steady Tone and Fair Demand In Average Market.

CODLIVER OIL UNSETTLED AND STILL EASIER.—DELIVERIES OF BROMINE PREPARATIONS CAUSE OPEN JOBBING DECLINE IN IMPORTANT BROMIDES.—WOOD ALCOHOL HIGHER; MENTHOL LOWER.—OTHER MINOR CHANGES IN A ROUTINE MARKET.

New York, March 13.—Trade keeps up in fairly satisfactory volume and the market holds generally steady. Since the break in codliver oil, noted last week, no feature of great importance has developed. The decline in codliver oil has now passed on to jobbing values, which are all lower, but not as decidedly so as the weakness of the primary market would have indicated. The agents of the German bromine syndicate have received supplies of those preparations and have made deliveries on old contracts, but it is still difficult to obtain acceptances on new orders. The market, however, is clearly established on the new low basis and both foreign and domestic sources of supply are so quoting. In recognition of these facts, jobbers have at last openly lowered their quotations on the leading bromide salts. During the week manufacturers have advanced the price of citric acid and all the citrates because of the increased cost of raw material, and jobbers have been quick to follow.

OPIMUM.—In spite of the really heavy damage by cold weather in Turkey to the new crop, local competition among holders and the pressure of considerable stocks at leading European markets have exerted a counter influence strong enough to check a further upward movement. The tone of the market is steady and a moderate demand continues, but all quotations remain unchanged, jobbers still asking \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered, \$4.00@4.25 for thirteen per cent. and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—This staple continues in the same condition which has prevailed for a long period. It has not advanced commensurately with the rise in opium because of some pressure from competing sellers, but the undertone is very steady. The demand on jobbers holds satisfactory and their quotations are unaltered at \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—Manufacturers have made no move to change the situation and their prices are the same, but second hands are shading prices a trifle to secure business. This influence is far too small to affect the jobbing market, however. Statistics continue bullish and the fact that only about 7,000 packages of bark are to be offered at the next Amsterdam auction is a strengthening

factor. The consumptive demand is of good routine proportions at full prices and jobbers still quote 23@23½c. for bulk in 100-oz. tins, 23¼@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins and 30@31½c. in ounce vials, according to brand and amount.

CITRIC ACID. Because of the increased cost of raw material, manufacturers have announced an advance of three cents in their figures, or rather there have been two upward movements of two and one cent, respectively. Jobbers have consequently raised their quotations and now ask 36@37c. per pound in kegs, 40@45c. for less, and powdered, 42@46c. per pound.

THE CITRATES.—Coincident with the rise in the acid, manufacturers advanced the prices of the citrates, but only two cents. Jobbers, however, have pushed their quotations up three cents, in the same proportion as the increase on the acid. New jobbing prices are as follows: Potassium citrate, 47@52c.; sodium citrate, 47@52c.; iron citrate, U. S. P., 57@62c.; iron citrate, soluble, 53@58c.; iron phosphate, scales, 55@60c., and iron pyrophosphate, 55@60c., all per pound.

POTASSIUM BROMIDE.—As stated above, jobbers have at last lowered their general quotations, as the German sources of supply have made actual deliveries at the new cut prices. The fact that supplies are still hard to obtain, operates to sustain the market, however. Jobbers now quote 20@25c. per pound.

SODIUM BROMIDE.—With the other two more important bromine preparations, this is now quoted lower by jobbers, and is 23@25c. per pound.

AMMONIUM BROMIDE.—As just stated, jobbers have also lowered values on this, the third important bromine preparation, because of the general cut by manufacturers, and are now asking 29@34c. per pound.

CODLIVER OIL.—The radical cut created by the unexpected offer, last week, of a Norwegian manufacturer to accept April contracts at \$22.00, still paralyzes the market. The demand in neither primary nor secondary market has increased as much in consequence as might have been expected. During the week, because of these influences and a demand of but moderate proportions, jobbers have shaded their prices to \$38.00@45.00 per barrel for Norwegian oil, and \$1.75@2.00 for less, per gallon; Newfoundland, \$3.00@3.75 per barrel and \$1.50@1.75 for less, per gallon.

RED GRU.—Latest jobbing prices for true are \$1.75@2.00 per pound.

MENTHOL.—For some time past the market has gradually weakened under the pressure of increased supplies and the relaxing of the efforts of holders for a rise. Jobbing prices vary considerably, but all show a decline. Two representative quotations by different firms are \$2.75@3.25 per pound and \$3.20@3.45 per pound.

AXISEED, STAR.—Higher foreign markets induce jobbing advances here, but the range of jobbing quotations is wide, 25@37c. per pound.

VALERIAN ROOT.—The market is firmer in sympathy with stronger markets abroad, and former cheap sellers of Belgian have either withdrawn or advanced their quotations. Jobbers have therefore

raised their prices to Belgian, German and Vermont, to prices included in the range of 16@33c., with powdered costing three cents additional. English is quoted 46@51c.

WOOD ALCOHOL.—The consumption is steadily increasing and with a good demand and reduction in available supplies, the market has risen all along the line, so that present jobbing prices are, barrels, per gallon, 72¼@73c., and less, gallon, 50@90c.

CHAMOMILE FLOWERS, ROMAN.—Supplies of the old crop are reduced both here and abroad, causing an advance in jobbing prices to 30@40c. per pound.

HEMLOCK OIL.—A readjustment in jobbing prices leaves them at the decline on a basis of 55@75c.

FORMALDEHYDE.—Following a reduction of some time ago by wholesalers, jobbers now are asking 19¼@11c. per pound for 40 per cent., in barrels and carboys, and 20@25c. per pound for less.

SAMARBA BARK.—To move stocks more freely, jobbers have reduced quotations to 40@45c. per pound for the whole, and 50@55c. per pound for the powdered.

GINSENG ROOT.—This commodity is subject to frequent fluctuations, as there is not only speculation, but also speculative production. The most recent wave is an advance due to a certain scarcity of supplies and a good demand. New jobbing values are \$9.25@10.00 per pound.

CRAMP BARK.—A slight decline in the wholesale market is duplicated by jobbers, who have lowered quotations to 28@33c. per pound for the whole and 25@30c. per pound for powdered.

JALAP ROOT.—Heavy arrivals are depressing to values and jobbers have cut prices to 19@24c. for the whole and 22@29c. for powdered, per pound.

CITRIFLIS BONE.—The market is higher abroad, but the upward movement in the wholesale market here is too insignificant to affect jobbers.

TRUXILO COCA LEAVES.—These show a firmness and a slight advance in the primary market, because of light spot supplies and a good demand, but jobbers make no changes.

BISMUTH PREPARATIONS.—The English market is lower, but local wholesalers are opposed to any change here and no price alteration is looked for.

LEMONGRASS OIL.—Prices are up in Eastern European markets and an advance here soon is probable, but nothing has happened yet.

CARNAUBA WAX.—Scarcer than ever; good demand, higher in all quarters. New jobbing prices are the following: No. 1, 44@48c.; No. 2, 41@45c.; No. 3, 37@41c. per pound.

SODA FOUNTAIN REQUISITES.

Smith & Painter, of Wilmington, Del., send us their price list of Soda Fountain Requisites for 1905. It is a thirty-two page list devoted to complete information, with prices, regarding their natural fruit juices, concentrated syrups, unfermented grape juice, crushed fruits and numerous specialties. It also contains some interesting information on the essential points for the management of the soda fountain, with a number of good fountain recipes.

Every druggist who has a fountain will appreciate one of these lists and copies will be sent on application.

EDITORIAL — COMMENT

The Grady Bill.

The pure food and drug bill, known as the Grady bill, and now before the legislature at Albany, is, after all, likely to have considerable attention from druggists. A few weeks ago we expressed the opinion in these columns that the retail pharmacists were so certain that the obnoxious measure would receive its quietus from those more directly interested that no attention from the committee would be necessary. It has later developed that the bill has certain half-concealed possibilities which demand prompt action, and last week Dr. Muir took considerable time and trouble to explain its vicious nature to the legislators.

The purposes of the bill are superficially worthy ones, the prevention of fraud and adulteration, but a careful examination of its provisions discloses the fact that it confers no powers of inspection and prosecution not already possessed by the Health Department and the Board of Pharmacy. Its definitions are sweeping, but there is nowhere a clause likely to give the public protection not already provided for.

On the other hand, the bill contains provisions which are admirably adapted to protect the proprietary manufacturer who ships his goods into this State from foreign countries or from other States. The clause defining misbranded places in the category of misbranded drugs all goods sold in imitation of other goods, containing any misleading statement upon the label and not properly provided with a printed formula upon the package. But the most suspicious portion of all is Section 13, which reads as follows:—

"The person who shall make the complaint or give the information which results in the conviction of any manufacturer, producer or dealer of any violation of this act, shall be paid one-half of the amount of whatever fine is imposed as a penalty for such violation, and a Board of Health or a District Attorney to whom such complaint is made, or to whom such information is given, shall certify to the clerk of the court the name of the person to whom such payment is to be made."

In other words, it gives a foreign firm a beautiful opportunity to protect its trade rights at the expense of the State. All that would be necessary if this ingenious scheme were to become operative, would be to turn an inspector loose, allow him to make complaint and collect half the fine imposed by the machinery of the Government. The slipshod manner in which some manufacturers look after their trade fences would even render it possible to realize a profit on the transaction. A few months of neglect would flood the market with imitations; then an enterprising inspector would have no difficulty in lodging sufficient complaints against various branches of the drug trade to keep the courts busy for some time and the fines collected would constitute a veritable harvest.

The Soda Fountain Attracts Trade.

What is the value of a soda fountain as means of stimulating trade in other lines of goods? While opinions may differ as to the profit to be derived from the sale of ice cream soda at five cents a glass, there can be only one answer to this question. The fountain is an ornament and in most drug stores occupies a conspicuous place. It adds to the general attractiveness of the place and brings people inside. That is the first object of all trade-bringing schemes: get the people into the store.

The effect of the fountain upon the regular trade of the drug store, prescriptions and drugs, may not always be apparent, but it must be considerable in a direct way. Its influence upon the side lines which fill up the greater part of the store room is direct and most important. Fountain customers find a surprising number of wants, of the existence of which they are unaware until the article needed appears before their eyes. Confectionery and cigars are perhaps most directly benefited by the close proximity of a fountain, but perfumes and specialties for minor ailments are also within the radius of its influence.

Doctors and N. F. Preparations.

Dr. Anderson, in an address, recently, made a statement which is somewhat more significant than appears upon the surface. He said that the use of National Formulary preparations was steadily declining. The Formulary was compiled for the purpose of fur-

nishing physicians a reliable class of attractive ready-made remedies in the hope of discouraging the prescribing of mixtures about which the druggist can know very little and the doctor much less.

Many campaigns have been inaugurated to increase the physician's respect and regard for these semi-official preparations. Yet their use is steadily declining.

Does this mean that the doctor's confidence in the manufacturers of specialties is growing at the expense of the druggist's reputation for skill in making agreeable preparations, or that medical men are returning to the Pharmacopœia for their armamentaria?

Soda Syrup Investigation.

The soda fountains of this State are to be subjected to a rigid inspection, and it will be well for druggists to do a little investigating on their own account before the inspector arrives. The object of the quest is unsanitary syrups and samples are to be submitted to the State chemist who will be asked to look especially for artificial flavoring ethers.

Commissioner Wieting of the State Department of Agriculture has the matter in charge. He said in a recent interview: "The soda season will open in a few weeks, and I concluded that this time would be a proper one for making an inquiry into soda syrups. Many children are made sick every year by impure syrups, and I am convinced that an examination will show that they contain injurious substances."

This statement reveals a curious attitude for an investigating man of science. The temper of the remarks should put all druggists upon their guard. He who starts out with the object of discovering some great wrong is pretty likely to find it.

Druggist Who Does Not Sell Liquor, the Exception.

The description of the soda fountain trade in Kansas City, which appears elsewhere in the present issue, reveals a startling state of affairs in the drug business of that thriving western town. The druggist interviewed considers it worth while to feature the fact that he does not dispense liquors at his soda fountain, which seems to indicate that serving strong drinks at the soda dispensing stand is the rule rather than the exception.

It is scarcely necessary to point out that herein lies a danger to the fountain trade everywhere. Even if the laws of the State permit such practice, a prejudice against the fountain on the part of the temperance people is something which those interested in the sale of innocent beverages will not wish to encourage.

The Permanent Job.

The editor of one of the popular journals has got himself into a curious predicament by serving up general rules of life without the seasoning necessary to render them suitable for exceptional cases. Some time ago he enlarged upon the evils of too steady employment. The deadening effect upon the average man of the routine job, which can be held with a minimum of exertion and with no dread of discharge, was dwelt upon at length. A good salary and a permanent place were shown to be important factors in preventing good men from making the most of themselves. For, he argued, the only road to success lies through unreaxed effort, ambition to do better, and initiation in devising plans of one's own.

Taken in a general way, these remarks are no doubt wholesome, for a reasonable amount of worry about the future is good for at least ninety-nine men out of a hundred. It hardens them and renders them fit to grapple with the new difficulties which are the only certainties in this uncertain world. But the proposition must be taken *cum grano salis*. A reader, an elderly gentleman, neglected to add the necessary seasoning, and hastened to write to the editor inquiring what to do. He had held a steady job for years, and feeling himself stagnating, wondered whether he had not better break out of the routine and begin anew.

The editor in question rose to the occasion; he explained that even a comfortable berth with plenty of income need not drive anybody into premature decay. It is possible to retain a broad interest in things and to keep in touch with living affairs without the constant spur of necessity. Drug clerks need have no fear of remaining too long in one place.

Advertising the A. Ph. A.

The proposal made some time ago to advertise the American Pharmaceutical Association may not have been taken seriously by the members of that dignified body, but something very like systematic publicity is now being carried on and no doubt with very good effect.

The advantages of membership in the great association which represents the professional and scientific side of pharmacy are pretty well known to all of us, but amid the hurly-burly of life and the distractions of the advantages of a thousand other things which are daily thrust under our noses we are apt to lose sight of them. A. Ph. A. publicity is no more nor less than a reminder to every pharmacist that he has a duty to his profession in a broader sense and that he misses much of the spirit which alone makes things seem

worth while if he continually ignores the distinctive part of his daily work.

The letter of Mr. Eckstein to the druggists of Minnesota is an example of what may be done to bring more pharmacists to a realizing sense of the importance of the A. Ph. A., both as a source of profit and a fountain of professional stimulus.

The 'Phone Question in New York.

It seems that, after all, the druggists of this city are to take a hand in the fight with the telephone companies. If the organization of the new N. A. R. D. association were a little more nearly complete, this would be an excellent opportunity to test its newly-created powers. Perhaps, as it is, it may not be too late to show the authorities that the druggists of the city have very definite ideas as to what is just and proper in the matter of votes.

Dr. Muir at the meeting of the Kings County society last week gave some very pertinent information about the objections of the telephone people to the slot-phones. He said the company preferred to let the druggist waste his time to install automatic booths. The pharmacist's time is too valuable to be placed at the disposal of a mere public convenience, and that alone should be sufficient incentive for a vigorous organized campaign all along the line.

The Conference of Faculties.

An interesting publication recently issued is the Proceedings of the Fourth and Fifth Annual Meetings of the American Conference of Pharmaceutical Faculties. The little pamphlet of some forty pages represents a great deal more than the work actually recorded. It marks a growth and tendency in educational thought which promises more for the future than for the immediate present.

The Proceedings includes two presidential addresses, one by Prof. Edward Kremers and the other by Prof. H. H. Rusby. Both furnish much food for mental digestion. Here is a suggestive sample from Prof. Kremers's paper: "The graduate who ten years ago knew his Pharmacopœia to the very dot on the letter 'i,' and who could turn out a perfect batch of pills, may be totally out of date to-day when the Pharmacopœia of 1880 has become an historic treatise, and when he may have little or no opportunity to make pills. The man who, with a solid scientific foundation, combines a proper economic sense and business instinct, so that he can adapt himself readily to changing economic and commercial conditions, is the one to succeed in the long run. 'The science of to-day is the practice of tomorrow.'"

Novel Advertising for a College.

We are indebted to a friend for the receipt of a folder setting forth the advantages of a certain college in a unique way. Besides the name of the institution, the requirements for admission and the degrees conferred, all stated in tabular fashion, it contains nothing but a letter from an imaginary teacher to his former pupil who is about to go somewhere to college. Not once during the course of the letter is the name of the college mentioned, the advantages of the ideal school being merely expounded in the abstract.

The epistolary form is well sustained throughout the discourse, and on the whole is interesting reading. The advice given is fairly useful, although largely of the obvious sort. Thus, the admonition begins in this way: "I advise you to seek a college that will make you work hard, and that has such a teaching force and such an equipment as will make hard work bring the largest returns. You do not want a cheap or empty degree, and, therefore, you should not go to a college where the standards of scholarship are low, or where the teaching is weak, or where the faculty is too small, or where the library or laboratory facilities are inadequate."

This is a fair sample of the style of this latest disciple of the "Self-made Merchant." Whether it answers its purpose as an advertisement, we shall have to leave the expert to determine. The accepted rules of advertising are broken rather freely, but then, advertising is a very uncertain game, and, "You never can tell."

Stearns & Co. Semi-Centennial.

The first quarterly issue of the New Idea for 1905 commemorates the fiftieth anniversary of the founding of the house of Frederick Stearns & Co. The number is dedicated to the founder of the firm, Mr. Frederick Stearns, whose active participation in the business affairs of the company bearing his name ceased eighteen years ago. It contains a brief sketch of his life and devotes considerable space to the history of the development of Mr. Stearns' "new idea" in pharmacy, popular non-secret family medicines.

The dedication gives evidence of the esteem and affection in which Mr. Stearns is held by his business associates. The following appreciation, which appears in tabular form, is a sufficient monument to any life of activity and usefulness:

"To Frederick Stearns, whose contributions to pharmacy have enriched its science; whose pioneer work in manufacturing gave to the West its first great pharmaceutical manufacturing establishment; whose original methods have increased the prosperity of phar-

macists; who has encouraged pharmaceutical education; who has liberally patronized the fine arts; who has labored to develop general culture; whose success was wrought by patient and unceasing toil; whose genius has been constructive. May peace and happiness be his; may the remaining years of his life be happy; may pharmacy ever honor his name."

Why Friday?

Why is Friday morning the time of the week almost universally devoted to the overhauling and refurnishing of drug store windows? That is a question for which Mr. Field, who makes a profession of show window advertising, would like to have an intelligent answer. There are many reasons why at least an occasional exception to the rule would be advisable, if not actually profitable, yet the last day, but one, of the week, finds nearly every drug store in the country in a state of dislocation.

Mr. Field, to whom this issue is indebted for a comprehensive discussion of window decoration, can find no reason whatever for this strange Friday custom. To him one day is as good as another for introducing the public to a new line of goods, as far as this is consistent with freedom from smudges on the glass and absence of dust from the wood work. A division of the dreaded task between two or more days would seem to be advantageous in several ways. It would give the public fresh bursts of splendor more frequently.

Perhaps some of our readers will be sufficiently interested in the subject to let us know what they think about the subject. Is the Friday habit a survival of Puritan days when every one began betimes to prepare for the Sabbath; or, is it merely one of those queer freaks of unconscious imitation—like fashions in dress and the use of new words in conversation?

An Epidemic of Cerebro-Spinal Meningitis.

We are at present passing through what appears to be almost an epidemic of cerebro-spinal meningitis. During a single week the health authorities of this city reported sixty-nine deaths from this dread malady. In one family four of five children were stricken, and full returns from all parts of the eastern section of the country will undoubtedly show an unusually heavy mortality from this obscure disease. It will be well for druggists to remember that there is considerable danger from infection if not contagion in these cases, and to post themselves as to the precaution to be taken so that they can warn their patrons. A physician in Philadelphia, last week, contracted the disease from a patient and died within four days.

That medical science is at present practically helpless in dealing with cerebro-spinal meningitis only shows that there are in the physician's domain still many citadels yet to be assaulted and taken.

Consolidation of Chicago Schools.

Mr. Bodemann writes that earnest efforts will be made to consolidate the two schools of pharmacy in Chicago. "Either the State University School will be merged with that of Northern University or both institutions will abandon the courses in pharmacy in favor of one large, independent college supported by a Carnegie endowment of a million dollars."

We do not know whether the reference to the Laird of Skibo Castle is meant to be taken in any but a Pickwickian sense. If Mr. Carnegie has become interested in pharmaceutical education, that is good news, indeed, and if he has not, why should he not? Until recently philanthropic givers have passed pharmacy schools by, but recently a capitalist of Boston has set an excellent example. If not the builder of libraries, it is time that some other person blessed with superabundant means, founded a college of pharmacy, which could afford to pursue the ideal independent of student fees.

The New Jersey druggist who owns a flesh-eating and rat-killing carriage horse should employ a press agent and use the wonderful animal in advertising his business. It is related of this strange horse that it catches and kills rats, over twenty of the marauding rodents having been disposed of in this way in one month. The story about equine flesh-eating is less surprising, for travelers tell us that on the arid coast of Southern Arabia there is a breed of ponies which, in the absence of plant life, feed exclusively on fish.

"What is the matter with pharmacy as a calling? It demands as much brains as any so-called learned profession. It requires commercial wisdom in no less degree than other lines of trade—and probably rewards it as well." We quote this remark from one of our exchanges. Pharmacy is a good career, and is becoming more desirable every year. And it seems that many people are finding it out. An unusually large number of new drug stores are reported this week.

"The soda business?" inquired the druggist. "It may be a matter of opinion. My neighbor, two doors from here, considers it a nuisance, and will have nothing to do with it. Last year I made a good profit on ice cream soda at five cents. This year I mean to charge ten. My store is not large enough to accommodate all of my patrons."

EMANATIONS

Gift Silence, Sometimes Mistaken for Golden.

"What do you think of this as a motto: 'The Secret of Success is 'Keep Mum'?"

"It is all right as far as it goes," replied the C. P. "but like all those smart sayings, it says both too much and too little."

"It is a pretty good rule," observed the druggist.

"Excellent for some men."

"For instance?"

"Thieves and detectives."

"And who are the exceptions, please?"

"Now, don't go too fast. I don't want to be forced into a short, snappy remark that is quite as idiotic as the one you quoted just now," said the C. P., holding up the palms of his hands as if to ward off a sudden attack. "Silence, like everything else—it all depends. Keeping mum is golden only when it is tempered with discretion. Some men have a faculty of speaking up at the wrong time and acting the clam when they ought to be saying something."

"Successful men have always been men of few words," suggested the druggist.

"Not always," replied the sage. "Barnum was always talking. He was constantly shouting all over the sides of barns, fences and in the newspapers."

"Oh, that! I call that advertising," objected the druggist.

"Call it what you will. If he had not told people what he had done, was doing and expected to do, he would never have been a great showman."

"You don't catch what I am driving at," said the druggist. "Keep your own council in business affairs; I mean private affairs."

The old gentleman nodded. "I understand," he said, "I merely wanted to show that there are distinctions in this clam business. I will go a bit further, and say that the average business man, and especially the druggist, doesn't talk half enough. I don't mean to the public in an advertising way, but about his intimate business affairs to his clerks."

"The head of an establishment must give orders," said the druggist, his face very stern. "It is the clerk's business to obey. What the order means is none of their affair."

"Ah! there you are mistake," replied the C. P. "How is a clerk going to carry out an order intelligently unless he knows something about what the boss is driving at?"

"Orders should be accompanied by sufficient instructions," said the druggist.

"If instead of instructions, you will say explanations," remarked the C. P. "That is precisely what I mean. The first druggist I worked for was one of the clamming kind. He believed in keeping everything to himself. 'Trust nobody,' was his motto. One day he ordered me to unpack a case of bottles in the back room. I went at it with a vim—was so absorbed in obeying orders that I never noticed that the store was full of people. You see the

boss went out to get a hair-cut, and I knew nothing about it."

"That's not to the point."

"The same principle applies to bigger things. Another day he said to the head clerk, in his domineering way, 'Here, Jim, clean out that mess,' pointing to several shelves full of odds and ends, 'most of it is only fit to throw away.' Jim hated to ask questions. He assumed that he was expected to judge of what was worth saving and what was worthless. He made a mistake, of course, and left a row of practically empty shelves."

"I don't see how that applies either," said the druggist.

"I know another druggist who kept things to himself," resumed the C. P. "He lost a faithful clerk, because he curtly refused to consider an increase of salary. If he had explained in a few words that the rent had been increased, that he was obliged to meet an unusually large number of bills just at that time, and that sickness in the family put him under an extra heavy expense, that clerk would have been more than willing to wait another year."

"One summer, the same druggist left the store short handed, during the vacation season. He neglected to tell his help that he had tried in vain to get extra men, and that a trip was necessary for the health of his wife. When he came back, he found things in a pretty mess, and the force so disgruntled that he was obliged to break in an entirely new set of men. He alone knows what he lost by that golden silence."

"Still, business secrets—" began the druggist.

"Yes, yes; I dare say there are important business secrets," broke in the old gentleman, impatiently, "but their importance is vastly overestimated. As a rule, when they become public, which they always do in the end, it generally turns out that they never amounted to a great deal. A man who can't do everything himself has got to trust somebody. If his employees are not worthy of his confidence, he ought to fire them."

Making Artificial Camphor.

Another process for the artificial production of camphor has been patented in England. A solution of pinene hydrochloride, alkali hydroxide and an alkali formate or oxalate in alcohol and water is treated in an autoclave for ten hours at about 120 degrees C. As much of the alcohol as possible is then distilled off on the water-bath and the residue acidified and distilled with steam. The borneol or isoborneol which distils over is dissolved in benzene and oxidized camphor with potassium permanganate.

Adulterated Eucalyptus Oil.

C. T. Bennett (Chem. & Drug.) reports the discovery of large consignments of eucalyptus oil adulterated with castor oil. The mixture answered the accepted tests fairly well, but is more viscous and contains less cineol than its specific gravity seems to require. The castor oil is easily separated by distillation. One sample of the adulterated oil contained 20 per cent. castor oil, and others from 12 to 15 per cent.

☞ ☞ OUR ☞ ☞
LETTER BOX

THE LATE DR. A. B. PRESCOTT.

March 11, 1905.

Editor The Pharmaceutical Era:

On the 25th day of February, Dr. A. B. Prescott, dean of the department of pharmacy of the University of Michigan, passed away, and memorial services were held in Sarah Casswell Angell Hall, on the 28th of February. Fitting tributes were paid him memory by President Angell, Dr. Victor C. Vaughan, Dr. W. J. Herdman and Prof. Dooge; after which resolutions were read by Prof. Schlatterbeck and Dr. Novy for the pharmacy and medical departments, respectively; and also resolutions by the presidents of the various classes of the two departments.

I enclose herewith resolutions from the faculty and senior and junior classes of the pharmacy department, for publication. Yours very respectfully,

J. O. SCHLOTTERBECK.

WHEREAS, The faculty of the school of pharmacy of the University of Michigan has sustained an irreparable loss in the death of its dean, Albert Benjamin Prescott, and

WHEREAS, The faculty of the school of pharmacy wishes to record its deep sense of sorrow caused by the removal from its midst of a wise leader and a beloved colleague who for more than a quarter of a century has labored earnestly and unceasingly for the advancement of pharmaceutical education, and for the welfare of the school of pharmacy, be it therefore

Resolved, That by the death of Albert Benjamin Prescott, to whose efforts and labors the school of pharmacy owes its high standing in the educational world, it has lost a most valuable and extensive one whose sterling and unselfish qualities have gained the lasting respect, admiration and love of everyone with whom he came in contact, and

Resolved, That his colleagues and students will ever carry the recollection of that kindly face, that cordial and considerate manner, that forgetfulness of self in thoughtfulness for others, as a cherished and tender memory, and inspiration to better work and a better life, and be it further

Resolved, That a copy of these resolutions be spread upon the minutes of the faculty and also that copies with the assurance of our profound sympathy, be conveyed to the bereaved family.

Signed,
J. O. SCHLOTTERBECK,
E. D. CAMPBELL,
L. S. BIGELOW.

Inasmuch as it has seemed best to Divine Providence to take from our midst, our revered and beloved professor and dean, Doctor Albert Benjamin Prescott, be it

Resolved, That in the death of Doctor Albert Benjamin Prescott, the members of the senior class of the school of pharmacy of the University of Michigan have lost a kind and loving friend, teacher and guide whose life and successes may well be a model for all.

Resolved, That we tender to his family our heartfelt sympathy in this, their hour of grief; and be it further

Resolved, That a copy of these resolutions be sent to the family, and preserved in the archives of the school of pharmacy and published in the college and pharmaceutical journals.

BORNELIUS J. PUTMERS,
FLORENCY M. MEER,
JAMES T. AOWLES.

WHEREAS, It has pleased the Almighty God to fulfill and perfect the illustrious

life of Doctor Albert Benjamin Prescott, WHEREAS, His distinguished services to the profession of pharmacy, to the University of Michigan, and to the individual members of the school of pharmacy, have become a lasting and priceless treasure, and

WHEREAS, His pure and noble character, lofty ideals and kindly nature will ever be an inspiration to us for greater and nobler efforts, therefore, be it

Resolved, That in the death of Doctor Albert Benjamin Prescott, the University, and especially the students of the school of pharmacy have lost a most kind and loving friend and teacher, and be it

Resolved, That we the students of the junior pharmacy class, herewith express our keen sense of the loss we have sustained and wish to convey our deepest sympathy to the bereaved family, in this, their greatest sorrow, and be it

Resolved, That a copy of these resolutions be sent to the family, to the university, and to the pharmaceutical and city publications.

Committee on resolutions.

GEORGE B. MORRIS,
FRANK S. STUMMEL,
ROBERT A. HOLBROOK.

Professor Joseph P. Remington, dean of the Philadelphia College of Pharmacy and chairman of the Committee of Revision of the United States Pharmacopœia, writes as follows:

Although Professor Albert B. Prescott has been failing in health for some time, his death came as a great shock to his scientific friends. Gifted with a rare personality, to know him was to love him. His services to chemistry and pharmacy in America have placed him in the front rank of those whose names will be inscribed upon the roll of eminent educators in this country.

For more than twenty years he has been intimately associated with the work of revising the United States Pharmacopœia. He was frequently called upon by Dr. Charles Rice in former revisions for special research work, and although he declined to serve as a member of the Committee of Revision, he was always willing to respond to any inquiry made by the chairman. He has contributed to the new pharmacopœia a valuable test for the detection of methyl alcohol, and in many other ways has aided in the work of the committee. At the time of his death he was first vice-president of the United States Pharmacopœial Convention.

Dr. Prescott was a man of high purpose and possessed of great nobility of character. His voice was always heard in favor of what was right, just and pure. The University of Michigan will sadly feel the loss of this great man, and the army of students who were privileged to listen to his lectures will never cease to profit by his clear expositions of difficult chemical questions. American pharmacy is called upon to mourn the loss of one of its brightest ornaments and best men.

THE N. A. R. D. PRICE MARK.

Chicago, March 13, 1905.

Editor The Pharmaceutical Era:

Just got a retail prescription from way down in "old Virginia," and it had this mark: "R T/N. A. R. D." Surely "de world be movin'." It did my heart good. Very truly yours,

W. BODEMANN.

PROFANITY JUSTIFIED.

Chicago, March 18, 1905.

Editor The Pharmaceutical Era:

As a matter of justice to the editor of N. A. R. D. Notes, as well as to the rest of us who are working at the headquarters of the National Association, and in order that there may be no chance to misunderstand what constitutes the class of druggists which Notes has designated as "shrimps," I want to say a few words regarding your editorial entitled "Notes on the Shrimp," which appeared in the March 16 issue of The Era.

The expression "to h—l with the shrimp," quoted in Notes was uttered on the floor of the Chicago Retail Druggists' Association, at one of its recent meetings, during an impassioned address by a loyal N. A. R. D. druggist on the subject of cowardliness and despicability of anyone's accepting all the benefits which the national and the various local associations, respectively, have been able to secure as the result of years of the hardest sort of hard work and then throwing into the faces of the workers in these associations (in reply to their request for financial aid with which to continue the work) the statement: "We know the N. A. R. D. is benefiting us; we've got the money in our tills to show for it, but you can't make us pay and we don't propose to give up anything we don't have to." There are times when polite language doesn't do justice to the subject under consideration and I will leave it to any druggist whose arteries are full of rich, red blood, whether this is not an instance, despite the fact that The Era deprecates the abuse and "profanity" which it is claimed characterize what Notes has said on this live topic.

Whoever wrote the editorial in The Era, to which I have referred, has a wholly wrong idea as to the class of individuals Notes designates as the shrimps. Apparently the editor has a notion we are referring to the man who is too poor to pay \$4.00 a year for the benefits he is receiving as the result of N. A. R. D. activity on his behalf. This misconception does us the greatest injustice. The number of druggists who cannot afford to pay one and a tenth cents a day, for the protection and the advancement of his interests which the N. A. R. D. bestows, is very small; but it would be quite as unjust to berate a citizen who had lost a leg or an arm in active military service for his country because he did not rejoin the army, as to abuse such a druggist as I have mentioned because he did not contribute to the maintenance of the National Association.

Neither has Notes in mind the druggist who, honestly, is not yet convinced the N. A. R. D. is a good thing for the retail druggists of the country. We are inclined to regard with wonder, not unmixed with pity, a druggist who is so lacking in appreciation of a good business proposition when he sees it, but we certainly have no intention of saying harsh things about such a man. On the contrary, \$45,000 was fixed upon by the National Association at its last convention as the amount to be used during the present year for evangelizing among druggists of this class. Some of the most active men now in the ranks of the N. A. R. D. did not, a few months ago, fully comprehend the aims and

methods of the National Association, and because of this lack of comprehension, these men underestimated the value of the movement into which many of us have, for nearly seven years, put the very best work of which we are capable. Those who are still unconverted, we have no intention of designating as shrimps; we do not even call them (to use the kindhearted Era editor's term) "narrow-minded." We look upon them as unenlightened; we think they are extremely slow to grasp the import of what we have been trying to do and we regard it strange they fail to place the proper estimate upon the splendid results of our years of earnest labor; but we are entirely willing to show them wherein they are standing in their own light as not co-operating with us. Such a thing as "abusing" such druggists never entered our minds and The Era editor must place a very low estimate upon our right-heartedness to bring against us, directly or indirectly, a charge so utterly groundless.

The individual we are after is the man who is fully able to do his part of the work and to pay his share of the expense of improving the common lot of our fellow-craftsmen, but who is too despicably mean to do either. The man we have in mind acknowledges the enormous value of what has been accomplished for him through organized effort, and yet he refuses to give the work either his moral or financial support because of innate or acquired, or both kinds of swinishness. The man we are talking about takes refuge behind the well-known fact that he cannot be made to cooperate and who shamelessly bases his attitude upon that ground. Such a man deserves to be executed, he deserves to have every druggist in his community know he possesses the despicable qualities I have mentioned, he richly deserves social and professional ostracism. It is hard for us to believe that the editor of The Era is the sort of man to defend, publicly or privately, an individual so utterly devoid of the qualities that constitute manhood.

With the end in view of determining what the shrimp in the drug business really is, we would suggest that The Era editor confer with some of the self-sacrificing men prominently identified with the efforts that are being made (thank God there are such druggists in every State) by the various pharmaceutical bodies throughout the United States, from the American Pharmaceutical Association down to the neighborhood group, who would like to get together on Sunday-closing. Let him ask these workers to describe the type of man who, as far as he is able, blocks the game at every turn, who will pay nothing, who will do nothing but obstruct, who isn't amenable to reason, who can't be coaxed, wheeled or driven, who simply will not co-operate—not because he has any excuse for refusing to do so, but because—because he is a shrimp. If The Era editor will get the ideas of these workers regarding the shrimp, we shall be entirely content to leave it with himself to decide whether the individual we have in mind deserves anything better than to have the truth told, even though the language employed be more lurid than diplomatic. It is inexcusable that The Era or any other pharmaceutical publication that has its heart set upon bettering

the calling in which we are engaged, should come to the defense of a class so totally unworthy of respect. In designating such creatures as shrimps an apology is due our crustacean friends, an apology that is hereby tendered. Very truly yours,

THOS. V. WOOTEN.

[A careful perusal of the paragraph in question should convince anyone that The Era's remarks contain nothing in the nature of a defense of the "shrimp." That shrimking individual probably deserves all the abuse that has been heaped upon him. It was the use of cheap profanity by Notes that inspired those remarks in our editorial columns. The explanation that the language of the street was uttered in the heat of an exasperating moment does not excuse Notes. The words were used editorially, and surely the editor does not allow a momentary passion to color his remarks. The Era understands the meaning of the word "shrimp," as used in Chicago, but there are many honest, conscientious druggists who do not. Is it wise to scatter profanity broadcast when a decent, convincing argument might turn apparent rebels into staunch supporters?—Ed.]

MEMBERSHIP IN A. P. H. A.

Andrew J. Eckstein, New Ulm, Minn., sends us the following communication he is mailing to pharmacists in his State, asking them to become members of the American Pharmaceutical Association. The printed matter referred to by Mr. Eckstein consists of a paper read before the Ohio Ph. A., by Prof. J. H. Beal, on "What the A. Ph. A. Has Accomplished in Fifty Years," and a prize paper by Mr. Bruno Batt, of St. Louis, on "Ten Reasons Why a Druggist Should be a Member of the A. Ph. A."

Mr. Eckstein's letter follows:

New Ulm, Minn., March 1, 1905.

Dear Sir: I am enclosing herewith some printed matter pertaining to the American Pharmaceutical Association.

Whether you will it or not, you are part of the pharmaceutical strength of this country. But energy you know is useful only when it is active. What affects all of the pharmacists in this country, affects you. One druggist bears the same relation to the drug trade as a nerve to the entire system. You cannot get along without the assistance of the system. Nor can you get along so well apart from this half-century-old organization, as you can by becoming identified with it.

Not knowing your views with regard to societies or associations, I cannot argue with you for the sake of making you believe as I do in these matters. It is not my wish to do so. I am taking this up wholly as a matter of business. It is the time to time, concerted action is necessary. Neither you nor I could do much before Congress in defending a measure for the betterment of the trade. Nor could either of us interest Europeans who have perfected themselves in pharmacy—in giving to the pharmacists in this country an idea of what they have done. It is the old, old cry of the strength in unity, but it is logical. The American Pharmaceutical Association has shown in many ways its great value to the druggists of the United States. It will continue to be of value to us pharmacists.

In the enclosed matter, you will find the reasons for your joining this association. But aside from all other reasons, important of itself, is the one fact that this association is of value to pharmacists, and it is helping them in their progress. The cost is minimal—and the results are important, large and numerous.

I should be very much pleased to hear from you. If you have arguments, should consider it a privilege to hear them, and, in my estimate, purely a subject of cooperation. It is not something to throw

aside. It concerns us vitally, and for that reason, I ask that you give it your consideration. In anticipation of your early reply and an application for membership in the grand and honored "American Pharmaceutical Association," I am, fraternally yours,

ANDREW J. ECKSTEIN,

Member of the Committee on Membership for Minnesota.

PHARMACIST AND PHYSICIAN*

BY J. H. DROGE, M. D.,

Brooklyn, N. Y.

Originally the pharmacist and physician were one, but gradually a separation was brought about, and now we have two distinct and recognized professions. By legislation and through our colleges and the various State boards of pharmacy, we are gradually raising the standing and efficiency of both professions, as the requirements each year are becoming more rigid.

But I regret to say that a great deal is to be desired to elevate the standard and to increase the confidence between the physician and the pharmacist. The physician to-day must be alert for patients. Hospitals, dispensaries, drug stores, department stores and patent medicine firms, by all sorts of methods and schemes, are competing for patients.

The pharmacist must compete with the physician who dispenses his own drugs, or with the department stores and others who advertise extensively at cut-rate prices, with or without trading-stamps.

A large number of physicians write their prescriptions, depending upon the skill of the pharmacist to properly compound them. This should be so, for the doctor's time can be well occupied by the study and cure of disease, and not by compounding and dispensing his own remedies.

What has become of our old-time reliable, competent manufacturing retail pharmacists and dispensers, and what are the causes that have driven them away from their noble professions? How many retail pharmacists to-day prepare their tinctures, pills, ointments, elixirs, extracts, etc.? All these preparations are sold by the manufacturers and bought by the pharmacist, thereby saving time and money.

The manufacturers control the supply of drugs which they buy at the lowest prices, but the drugs are not always of the highest grade. By the use of machinery they can turn out better appearing products, such as tablets, pills, tinctures and ointments. No hand-made pill can compare in shape, uniformity and appearance with those made by the leading pillmakers.

Few retail pharmacists can make their own preparations so cheaply as they can buy them, but do they receive the best grades of chemicals and drugs in these preparations, and does the physician obtain the desired result from his prescriptions?

At present the market is flooded with ready-made preparations suitable for all ills and diseases. All that is required is to read the printed matter on such a package, follow the directions, take from one to twenty bottles and you are cured. It requires no skill or knowledge to sell these preparations, either by a graduate pharmacist or by a department store clerk who does not know arsenic from indigo.

*Paper read before Kings County Pharmaceutical Society.

The department store, by buying large quantities, can sell for less than cost, thereby underselling the small retail dealer and gaining the bulk of trade. Apparently all protesting and combining does not remedy the evil of selling patent medicines and drugs by department stores, nor eradicate the cut-rate evil. With the energetic efforts of the manufacturing pharmacist, the patent medicine advertiser, the department stores and the dispensing physician, the old-time pharmacist who adheres strictly to pharmacy is doomed.

What is the retail pharmacist doing to meet this pressure, to fill in idle time and to be able to meet his expenses? He has added to his regular stock of medicines, countless patent and proprietary articles, cigars, soda water, candies, oils, paints, stationery, toilet articles, etc., and in some cases liquor and wines. On all these goods there is a certain amount of profit, but the quantity of goods sold is not so large, because of the competition of the department stores.

Naturally the pharmacist is forced into giving a certain amount of medical advice and counter prescribing, whether he wishes to or not. He is constantly called upon to treat emergency cases, such as accidents, to dress wounds and sores, treat coughs, colds, rheumatism, headaches or other ailments and the customer is willing to pay double the price for the drugs, that he may save the doctor's fees. There is no question that in many cases counter prescribing is overdue. The pharmacist has no legal right to make a diagnosis and to treat diseases. His domain is to compound prescriptions and to sell drugs; not to treat illness.

I do not think it is morally wrong to allow a person to suffer, or, perhaps, die from the temporary aid that might be given by a pharmacist in the absence of a physician, and any court will uphold him for treating an accident or poison case in an emergency until the arrival of a physician. But the pharmacist not only does give temporary relief for emergency treatment, but he continues the treatment from day to day and from week to week. In many cases, his practice obtained in this way is much more lucrative than that of his neighbor, the physician, and the pharmacist makes more money than he could make by adhering strictly to compounding and selling drugs. It is not likely that he will give up this part of his income for sentimental reasons only. Consequently the physician will endeavor to prevent his prescriptions from going to that particular drug store, or he will dispense his own drugs. He must also earn his living and get it in spite of all drawbacks, such as the counter prescribing druggist, the advertiser, the quack and the manufacturer of ready-made remedies. The physician naturally opposes those individuals in his endeavor to hold that which he thinks is rightfully his own. Medicine is a profession, and the advice of the physician is given for the welfare of his patient, not for the sole benefit or financial gain on the part of himself.

The constant aim of the medical profession is to alleviate suffering, to reduce the amount of sickness, and to prevent by sanitary methods the causes and spread of disease. What other profession or class of men constantly endeavor to take away from themselves the source of livelihood?

Does not their effort to prevent disease tend to deprive them of making a living? And still the physician must contend with a great many unscrupulous people, who, regardless of whom their so-called treatment may injure, are constantly aiming to make the almighty dollar. Whether the patient needs his remedies or not, the quack or the charlatan, in a convincing manner, misleads suffering humanity into buying his goods, with a result in the majority of cases, that is injurious to the health of the patient.

New remedies every day are put before the public by well worded advertisements, not alone by means of posters, circulars and the public press, but, I am sorry to say, through the medical, religious and pharmaceutical press. Innumerable sample packages of powders, pills, tablets, etc., are mailed to clergymen, school teachers and prominent persons, along with literature exploiting the wonderful effects of these remedies, which in many cases are endorsed by physicians.

One gross injustice to the doctor, and a dangerous procedure by some unscrupulous druggists, is the substitution of other articles for those that have been ordered. High priced drugs of certain known strength may be replaced by cheaper ones of variable quality, thus upsetting the calculation of physiological action; the doctor not obtaining the desired effect from the drug he has prescribed, loses confidence in the druggist or druggist, and resorts to self-dispensing or depends upon suggestion and hygiene. How many physicians know that paregoric is often made from benzoic acid obtained from urine? Two samples can rarely be found to resemble each other in medicinal properties and therapeutic strength. Three-fourths of the salicylic acid is made from coal tar, not from true oil of wintergreen, and it often produces serious gastro-intestinal inflammation. Cheap preparations of ipecac are inert. Sweet spirits of niter, syrup of iodide of iron, tincture of nux vomica, belladonna, digitalis, ammonium carbonate, etc., are all injured by age, yet those drugs continue to be dispensed until the supply gives out.

Any number of preparations could be mentioned which require the careful watching of the conscientious druggist. From the want of a reliable pharmaceutical preparator, many a poor man has gone to that land from which no traveler ever returns. The doctor who blindly practices medicine and pays no attention to the important factor of pure drugs, is simply gambling on the case. With the physician, quality should be considered of primary importance; price, secondary.

It is very annoying for the physician or the relative who has the prescription filled for the patient to have the druggist say, "Who is sick?" "What is the trouble?" or "If you had Dr. Brown or Dr. Smith, the patient would recover more quickly." Then again, the druggist may state his opinion of what the prescription is good for when the doctor intended it for an entirely different ailment.

Do not show your surprise at the dose or the kind of medicine prescribed and say: "Well, it is a strong dose for a child," as your statement will at once create distrust in the physician. Should the dose in your estimation be a large

one, quietly and without the knowledge of the customer, communicate with the prescriber and learn from him if it is the quantity desired. The doctor will, in the majority of cases, thank you for this work and consider that you are a careful and conscientious dispenser; any other procedure would injure the patient's confidence in the doctor and create the latter's animosity. Should there be any grievance between you and the doctor, do not make it public, but seek an interview; ask for an explanation and the chances are that each will understand the other and be good friends in the future.

Another very unprofessional and injurious practice of a few druggists and doctors is the prescribing and dispensing of secret preparations by number or name known only to the pharmacist and the physician. The patient is thereby compelled to have the prescription compounded at that particular drug store for no other pharmacist can dispense it, and the chances are that the patient pays a good price for his drugs. Who knows but what the doctor is also a financial gainer by this system?

I think it is not out of place for me to mention one subject which to my mind would be of great benefit to both professions, and that is that each medical student should be compelled to take a practical course in pharmacy. He should know how to write prescriptions intelligently, giving proper dosage, avoiding incompatibilities and should be familiar with the appearance of drugs and mixtures prescribed. During my brief experience as a pharmacist I had the opportunity of learning the merits of properly prepared prescriptions. The scheme introduced by your society some time ago to present to physicians samples of National Formulary and Pharmacopoeial preparations, I think is a very good one. Show your doctor that you can prepare as fine and as reliable preparations as any manufacturer in the country. A more liberal distribution of the Epitome of the National Formulary I think would be advisable.

A great mistake some physicians make is to tell the patient to buy ten grains of antipyrin or five grains of quinia or some other drug, or some proprietary preparation, whereas if he would write a prescription for the substances he would help both himself and the pharmacist from a financial point of view, and would tend to prevent subsequent serious results by the patient taking the drug without consulting the doctor and whether it be indicated or not. By not writing a prescription the physician loses his fee for a new consultation and the pharmacist cannot charge as much as he could for the medicine were it called for in prescription form, for the customer simply asks for ten cents' worth.

Now, what can we do to elevate both professions and bring them closer together so that we may best work for the mutual benefit of the patient, pharmacist and physician. You can cater to the physician and obtain his confidence, by showing him your skill in compounding his prescriptions, dispense the best and purest drugs, and above all, be an honest and a conscientious pharmacist, remembering that the physician can be in great help to you in building up your profession and business.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

"Cream" Liniment.

(P. J. L.)—Some formulas for liniments of a creamy consistency appear in The Era of January 12, 1905, page 41, under the title "White Liniment." Here are some others:

(1.)		
Ammonium chloride	½ ounce
Soft soap	2½ ounces
Oil of turpentine	10 fl. ounces
Boiling distilled water	25 fl. ounces

(2.)		
Alcohol, 90 per cent.	6 fl. drams
Olive oil	12 fl. ounces
Oil of thyme	2 fl. drams
Oil of turpentine	6 fl. ounces
Ammonia water	6 fl. ounces

(3.)		
Acetic acid	5 fl. ounces
Oil of turpentine	9 fl. ounces
Two eggs	
Distilled water	7 fl. ounces

Gray's Glycerin Tonic.

("Last Week.")—Trade marked rights, we understand, are claimed in the above title, and we cannot give the formula for the preparation as now manufactured. However, some years ago William L. Cliffe, of Philadelphia, communicated a formula with the statement that under the above title it had for years been known to Boston pharmacists and was very commonly prescribed by physicians. The formula, as furnished to Mr. Cliffe by Kelley and Durkee, is as follows: Gentian root, No. 40, 3½ ounces troy; sherry wine, sufficient to percolate, 26 fl. ounces. To percolate add: Extract of dandelion, 4½ ounces troy; glycerin, 26 fl. ounces; dilute phosphoric acid, 478 fl. ounces; compound tincture of cardamom, syrup of lemon, syrup of orange peel, of each, 6½ fl. ounces.

Roach Exterminator.

(J. S. J.)—Various formulas for "roach exterminators" in powder form have been published in The Era. Here are some formulas from The Era Formulary:

(1.) A mixture in naphthalin, 2 parts; powdered angelica root, 200 parts; meliod, 50 parts; oil of eucalyptus, 5 parts; strewn around the places infested will drive the pests away.

(2.) Mix borax, 10 ounces; sugar, 3 ounces, and cocoa powder, ½ ounce, and sprinkle where the insects are.

(3.) Borax, 6 ounces; red lead, 2 ounces; sugar, 3 ounces; cocoa powder, 1 ounce.

(4.) Barium carbonate, precipitated, 1 ounce; borax, 2 ounces; oatmeal, 3 ounces. Mix.

SODA WATER FORMULAS.

Menthe Phosphate.

Creme de menthe, syrup . . . ½ ounce
Lemon syrup 1½ ounces
Cracked ice ¼ glass
Mint leaves 2
Soda water, coarse stream, to fill 8-ounce glass.

Atlanta Bracer.

Chocolate syrup 2 ounces
Coca cola 1 ounce
Sweet cream 3 ounces
Egg 1
Cracked ice ¼ glass
Shake, strain, toss and serve.

Frisco Favorite.

Vanilla ice cream, 1 inch in glass; cover with crushed strawberry, ½ inch; add 2 ounces raspberry sherbet, orange fruit, 2 ounces; fill glass with whipped cream. Serve in 14-ounce straight mineral glass, dress with whole cherries. Insert long spoon down on side of glass to bottom.

Moorish Sherbet.

Strawberry syrup 1½ ounces
Pineapple syrup ½ ounce
Vanilla syrup ½ ounce
Shaved ice ¼ glass
Milk to fill glass.
Shake, strain, toss and serve. Top with nutmeg.

Loop the Loop.

Pineapple syrup ½ ounce
Orange syrup ½ ounce
Vanilla syrup ½ ounce
Egg 1
Ice cream 1 ounce
Brandy 2 dashes
Cracked ice ¼ glass
Shake, strain, toss and serve.

Crushed Strawberry.

Select ripe strawberries, stemmed and washed, 1 quart; powdered sugar, 1½ pounds. Put in a glass bowl and stir well together. If the fruit is fully ripe, a heavy syrup will soon form on which the berries will float. In lading out, dip the ladle into this syrup and draw up through the fruit. Half an ounce to an ounce of syrup as a "topping" to ice cream soda is sufficient.

Wild Cherry Phosphate Syrup.

Solution of acid phosphate 8 fl. ounces
Cherry juice, German
black 8 fl. ounces
Syrup of wild cherry,
U. S. P. 10 fl. ounces
Oil of bitter almond . . . 10 drops
Syrup, sufficient to make. 1 gallon

Fruit Ice.

Crushed cherries ½ gallon
Crushed pineapple 1 pint
Crushed strawberries . . . 1 pint
Sliced pineapple (chopped) 1 can
Sliced bananas ½ dozen
Chopped nuts 1 pound
Maraschino cherries, cut in
two ½ bottle
Syrup 1 gallon
Add an ounce of solution of citric acid,
and water enough to make 3 gallons.

Freeze, pack and let stand. Then serve with a little whipped cream and a cherry on top.

Egg Phosphate.

Break one egg in mixing glass, add 1½ ounces of orange syrup, 1½ ounces lemon syrup phosphate to your customer's taste, shaved ice, shake well; use fine stream and serve in bell glass.

Pepsin Phosphate.

Shaven ice ½ tumblerful
Lime syrup 1 ounce
Liquid pepsin 3 dashes
Curacao cordial 2 dashes
Plain soda 6 ounces
Stir, strain and serve in a mineral tumbler.

Flinch Frappe.

Strawberry syrup ¾ ounce
Pineapple syrup ¾ ounce
Sweet cream 1 ounce
Angostura bitters 1 dash
Small quantity of ice cream, shake well, put in 12-ounce glass, add a little soda, small stream, and ice cream to fill up glass. Garnish with pineapple and cherry.

Orange Frappe.

Pine ice ½ glass
Powdered sugar . . . 1 tablespoonful
Orange syrup ½ ounce
Lemon syrup 2 dashes
Prepared raspberry 1 dash
Solution of acid
phosphates ¼ ounce
Fill with soda and stir well, strain into a mineral glass and serve.

Grenadine Syrup.

Extract of grenadine 2 ounces
Liquid foam 1 ounce
Red fruit coloring 1 dram
Syrup 1 gallon
Mix, then add:
Fruit acid 2 ounces

Chocolate Frappe.

Frozen whipped cream, sufficient.
Shaved ice, sufficient.
Chocolate syrup 2 ounces
Put in a glass half full with frozen whipped cream, fill with shaved ice, nearly to the top, and pour in the chocolate syrup.

Cherry Cocktail.

Cherry juice 1 ounce
Orange cider 2 ounces
Powdered sugar 1 teaspoonful
Bitters 1 dash
Shake with a little shaved ice, strain into a cocktail glass and fill with soda, add a couple of cherries.

Egg Lemonade.

Break one egg in soda glass.
Lemon syrup 1¼ ounces
Lemon juice 6 or 7 dashes
Shaved ice 1 dash
Shake well; add soda, pass from one glass to another and serve.

Calisaya Phosphate.

Elixir of calisaya, N. F. . . 4 ounces
Cinnamon water 4 ounces
Rose water 13 ounces
Solution of acid phosphate. 2 ounces
Sugar 18 ounces
Dissolve the sugar by percolation.

Chocolate (Imperial) Syrup.

A chocolate syrup containing egg may be dispensed under this name or the following may be employed:

Cocoa, powder 18 ounces
Sugar 4 pounds
Gelatin, gold brand ½ ounce
Water 5 pints
Vanilla extract . . . 1½ to 2 fl. ounces
Eggs 8

Dissolve the gelatin in 8 fl. ounces of water, and the cocoa, sugar and the remainder of the water, bring the whole to boil, stirring constantly meanwhile, strain when quite cool, add the vanilla extract, and finally the eggs, previously well beaten.

Serve like chocolate syrup.

Yum Yum Syrup.

Vanilla syrup 3 fl. ounces
Orgeat syrup 2 fl. ounces
Pineapple syrup 2 fl. ounces
Orange wine 1 fl. ounce
Syrup enough to make . . 16 fl. ounces

Egg Phosphate.

Lemon or orange
syrup 2 fl. ounces
Solution of acid phos-
phate 1 or 2 fl. drams
Egg 1
Shaved or cracked ice,
about 2 ounces
Shake as described, add the coarse
and fine stream of charged water, and top
the foam with a small amount of nutmeg.

Instead of making the beverage with one syrup, a mixture of syrups may be employed, such as raspberry, pineapple and lemon, or orange and lemon, etc. If lemon syrup is used, the lemon flavor is accentuated by adding several drops of lemon essence.

Royal Flip.

Vanilla syrup ¾ fl. ounce
Pineapple syrup ¾ fl. ounce
Raspberry syrup ¾ fl. ounce
Egg 1
Ice cream 1 spoonful
Shaved or cracked ice,
about 2 ounces

Mix by agitation, strain into a 12-ounce glass, nearly fill the latter with the coarse stream of carbonated water, and then fill entirely with the fine stream.

Crushed Cherries.

Almond essence (8 drops
oil to 1 ounce alcohol) 30 drops
Vanilla extract 6 fl. drams
Solution of citric acid . . 12 fl. drams
Caramel 12 fl. drams
Simple syrup, enough to
make 32 fl. ounces

Methyl Alcohol in France.

The French law considers methyl alcohol, from a fiscal point of view, as assimilated to ethyl alcohol and susceptible of being consumed as a beverage either mixed or unmixed. Dr. H. W. Wiley (Am. Jour. Pharm.) gives the nature and proportion of substances which must be added to render the liquid undrinkable before the law. The Consulting Committee of Arts and Manufacturers, on the 14th of March, 1900, decided that, in order to be considered as unfit for consumption by the mouth, and free from the expense of excise and denaturing, methyl alcohol should contain at least 5 per cent. of acetone and 3 per cent. of pyrogenic impurities, which give to them a disagreeable empyreumatic odor. The decision was put into effect by the Minister of Finance on January 4 of the present year.

THE PURE-FOOD LAW

makes it prohibitory to sell any but
STRICTLY PURE

Extract of Vanilla

Wyeth's Extract Vanilla is prepared from the choicest variety of carefully selected and properly cured Vanilla Beans, and contains no coloring matter nor any of the artificial or synthetic principles so frequently employed.

THE DELICATE AROMA a distinguishing feature of our preparation, is imparted by the natural flavor of the bean

STORE
PAPER

Newest Kind of Drug Store Advertising

The "PUZZLER" isn't like anything else published. It's a Monthly Illustrated Store Paper, to be sure, but examine it, and you at once recognize its unique, trade-bringing, entirely new features. It is only 11 months old, but **230,000** copies per month tell the story of its tremendous success with the shrewdest advertising druggists in America—one only in a locality. You never before could buy such effective drug store advertising at so small a price. It pays for itself over and over every month. Its effectiveness is doubled by a novel plan which carries the interest of all ages and classes of readers over from one month to another. Get exclusive control of the "Puzzler" for your locality and the profits on your increased trade will more than pay the costs—and besides, it will be the best general advertising that you can get for your drug store. **Write at Once for Free Sample Copy.**

BE ON THE SAFE SIDE

when you make chocolate syrup. It can not be made directly over the fire without scorching. Try

When your customers wish to mend any broken article, advise them to get

MAJOR'S CEMENT

If you have never handled Major's Cement, write us stating the fact, and we will send you prepaid some free cement and attractive advertising matter.

MAJOR'S CEMENT

15 cts. per bottle; \$1.20 per dozen; \$14.50 per gross. Major's Rubber and Major's Leather Cement the same price.

THE ALPHONSE MAJOR CEMENT CO.,
461 Pearl Street, New York.

MAJOR'S STEAM BATH KETTLE.

The proper way to make chocolate syrup is in a water bath. Absolutely prevents scorching—cannot boil over—needs no attention while cooking.

The pressure of the steam on the surface of the syrup prevents the loss of any of the aroma—positively no evaporation. This insures a rich, deliciously flavored syrup—much stronger in flavor than can be secured from the same amount of cocoa by any other method.

Major's Steam Bath Kettle is also a valuable utensil in which to prepare cold cream. The following testimonial is but one of many.

Clarence O. Bigelow, 106-108 Sixth Ave., New York City:

"We find your Steam Bath Kettle a most excellent device for making chocolate syrup for fountain purposes. By its use the full aroma of the chocolate is preserved, and a product of much finer flavor obtained than by any other process known to us. We give you full credit for the unprecedented demand this season for chocolate syrup."

Higgins' Eternal Ink.

In a Drug Store

There should be only one quality of goods—the BEST.

There is a "best" in everything; one product or make that stands out from all others by reason of its superiorities.

Those druggists who carry only the best of everything make reputation (good capital) and get the trade that pays.

Higgins' Taurine Mucilage.

Inks and Adhesives are a very appropriate and profitable line for Druggists to handle in connection with fine stationery. There is a **best** in these goods and it is made by Chas. M. Higgins Co.

A GOOD ASSORTMENT for the average drug store—

12 doz. 2-oz. Eternal Ink,	\$14.40
12 " 2-oz. Taurine Mucilage,	14.40
3 " 4-oz. " " "	7.20
6 " 4-oz. Office Paste,	10.80
3 " 8-oz. " " "	9.00
6 " 3-oz. Photo Moulder,	10.80
3 " 6-oz. " " "	9.00

\$75.60

Retails for	\$75.60
Costs	41.77

NEWS SECTION

WILL ELECT OFFICERS.

New N. A. R. D. Branch to Meet and Adopt By-Laws.

CONSTITUTION WILL BE A MODEL.—WORK OF DISTRICTING THE CITY COMPLETED, WITH TWENTY-NINE DISTRICTS FOR MANHATTAN AND THE BRONX.—BROOKLYN WILL ARRANGE ITSELF TO SUIT ITSELF.

On Tuesday evening, March 28, the second meeting of the New York branch of the N. A. R. D. will be held at the New York College of Pharmacy building, for the purpose of adopting a constitution and by-laws and electing permanent officers. Reports from the various committees will be heard. The constitution committee, of which A. C. Searles is chairman, has been meeting with great frequency in the endeavor to frame a set of by-laws which will be the future model of all other associations.

All three committees appointed at the last meeting—on districting, membership and by-laws—have been working hard on the problem of organization. The districting committee has practically completed its labors, but will not give out its report until the meeting next Tuesday. It has decided, however, to divide Manhattan into twenty-three districts and the Bronx into six. The boundaries of the various districts are as follows:

Manhattan.—1st district, from south side of Chambers street to Battery, from North River to East River; 2d, from north side of Chambers street to south side (Canal street, East Broadway and Grand street), from Bowery to East River; 3d, from north side Chambers street to south side Canal street, from Bowery to North River; 4th, all west of Bowery, north of Canal and south of Houston street; 5th, all east of Bowery, north of Canal street, East Broadway, Grand street, and its continuation to East River, up to Houston street; 6th, all north of Houston street, west of Bowery and Fourth avenue, and south of Fourteenth street; 7th, all north of Houston street, east of Bowery and Fourth avenue, and south of Fourteenth street; 8th, Fourteenth street to Thirty-fourth street, Fifth avenue to North River; 9th, Thirty-fourth street to Thirty-fourth street, Fifth avenue to East River; 10th, Thirty-fourth street to Forty-second street, Fifth avenue to North River; 11th, Thirty-fourth street to Forty-second street, Fifth avenue to East River; 12th, Forty-second street to Fifty-ninth street, Fifth avenue to North River; 13th, Forty-second street to Fifty-ninth street, Fifth avenue to East River; 14th, Fifty-ninth street to Eighty-sixth street, Fifth avenue to North River; 15th, Fifty-ninth street to Seventy-fifth street, Fifth avenue to East River; 16th, Eighty-sixth street to

One Hundred and Tenth street, Fifth avenue to North River; 17th, Seventy-fifth street to Ninetieth street, Fifth avenue to East River; 18th, One Hundred and Tenth street to One Hundred and Twenty-fifth street, Fifth avenue to North River; 19th, Ninetieth street to One Hundred and Fifth street, Fifth avenue to East River; 20th, One Hundred and Fifth street to One Hundred and Sixteenth street, Fifth avenue to East River; 21st, One Hundred and Sixteenth street north to Harlem River, Fifth avenue east to Harlem River; 22d, One Hundred and Twenty-fifth street north to south side of One Hundred and Forty-fifth street, west of Fifth avenue to North River; 23d, all north of One Hundred and Forty-fifth street to Harlem River at Two Hundred and Twentieth street, from Harlem River west to North River.

Bronx.—24th district, Harlem River north to One Hundred and Sixty-first street, Longwood avenue and all east of Third avenue; 25th, territory between Harlem River west of Third avenue, south of One Hundred and Sixty-first street; 26th, all north of One Hundred and Sixty-first street and Longwood avenue, south of One Hundred and Seventy-sixth street, and east of Third avenue; 27th, all west of Third avenue, north of One Hundred and Sixty-first street, south of One Hundred and Seventy-sixth street to Harlem River; 28th, all east of Third avenue and north of One Hundred and Seventy-sixth street to city limits; 29th, all north of One Hundred and Seventy-sixth street, west of Third avenue, east of Harlem River to city limits.

Brooklyn, it is understood, has been left to the Brooklyn people. Messrs. Klein and Heimerzheim, who represented Kings County in the conference committee, are in charge of the work. Their report, which will be in the nature of a sub-committee report, will be accepted as final by the committee. Queens County will probably be taken in as one district.

In laying out the districts the aim has been to have an average of fifty members to each district. A larger number, it was thought, would be unwieldy and would not leave so much opportunity for close relations as the smaller number.

Many druggists have been asking why the election of officers was not made at the first meeting, when the moment was ripe. In reply to this it is stated that the decision was reached not to allow any office to be held by any but a member of the association. This made it necessary for several representatives of corporations to consult with their boards of directors before they could join.

DRUG CO. INCREASES STOCK.

Helena, Mont., March 18.—The Parthen Drug Company has filed a certificate showing the increase of its capital stock from \$75,000 to \$150,000.

JEWELRY IN DRUG STORES.

Not a Legitimate Side Line, Pharmacists Think.

MANHATTAN PH. A. DISCUSSES THE QUESTION WHETHER TO AID A DRUGGIST IN TROUBLE OVER JEWELRY.—MEMBERS THINK IT IS MERELY A PRIVATE BUSINESS MATTER WHICH HE HIMSELF MUST DECIDE.

Is jewelry a legitimate branch of the drug business? And is the druggist who gets into trouble over it entitled to receive the support of his association? This question was thoroughly discussed at a well-attended meeting of the Manhattan Pharmaceutical Association, on Monday night, when Dr. Alpers, of the Legal Defense Committee, made his report in the case of Mr. Pringle, who was threatened with suit by a jewelry firm. Dr. Alpers had a letter from Mr. Kalish, counsel to the association, stating that he had no doubt of the justice of Mr. Pringle's position in the event of suit being brought. Mr. Kalish had communicated with the Washington R. D. A., and had discovered that the same company was responsible for the trouble there and in this city. The Washington people asked for a contribution of \$5 for each victim, to fight the matter, but Mr. Kalish advised against this.

Charles S. Erb said he had no doubt that the notes held against him had been obtained by fraud and that the bank which held the notes was a party to the fraud, inasmuch as in the notice of collection the name of the jewelry firm was printed instead of written, as is customary. He had carried out his part of the contract, but the company had not. This was especially true as regards the baby ring feature. The blanks on which application for these rings was to be made had not been received at all, neither had the blanks been furnished for the monthly report which the druggist was supposed to make.

The question was here raised by Dr. Alpers whether the handling of jewelry belonged to the drug business, or whether it was a side line for which the druggists themselves must be responsible. This brought up the point whether Mr. Pringle was entitled to the aid of the association through its Legal Defense Committee. After some discussion, Mr. Diner voiced the general sentiment by declaring that jewelry, like liquor, properly did not belong in the hands of the druggist, and that the druggist who took up this line did so as a business man, and not as a druggist. Therefore, he should not be entitled to legal aid. The whole question was finally left open until such time as suit is actually brought against Mr. Pringle.

Treasurer Hitchcock reported a balance on hand of \$220.50. Among the receipts

for the month was a check for \$31, the association's share of the funds left over in the hands of the old N. A. R. D. committee. Secretary Swann pointed out that the annual meeting of the Association takes place next month and the Entertainment Committee was accordingly instructed to prepare the necessary refreshments. Mr. Swann also announced with much pleasure that the Bromonia Company, which had vexed druggists considerably in the past few months, was dead, the sheriff having secured an attachment against it.

A. C. Searies reported for the Legislative Committee that he had attended the hearing at Albany on the amendments to the Penal Code and that these would be favorably reported. Resignations were received from George Kleinau and L. F. W. Seifert, and were accepted.

The carbohic acid ordinance came in for a kick from W. J. Koch, who complained that he had lost considerable trade, owing to the fact that it was not enforced. He obeyed it, but most of his neighbors did not. The matter was referred to the Committee on Grievances.

In the matter of the Manhattan Scholarship, Mr. Erb reported that the student who held the scholarship at present would go through the course for \$100, but that the post graduate fee would be \$150. Dr. Alpers said:

"It may take ten or twenty years before we have a post-graduate man, on account of the high requirements, which make it necessary for the candidate to have forty eight counts. When we do get one why should we not pay \$25 extra for a good man." Mr. Erb pointed out that the association would not have to pay more until 1908. "We are responsible for that scholarship," said Mr. Hitchcock, "no matter what it costs." On motion of Mr. Searies, the secretary was instructed to inform Dr. Rusby that the association stands for the expense of the scholarship, as heretofore, until further notice.

Mr. Swann read an editorial concerning the alleged drug trust, which appeared in the Evening Mail, but no action was taken. It being deemed unnecessary. Adjournment was taken at 10.35, only one hour after the meeting had been called to order. It was the shortest and quietest meeting the association has had for months.

FREE ANTI-TOXIN HEARING.

Trenton, N. J., March 20.—Arguments for and against the free diphtheria anti-toxin bill were heard in the Senate chamber.

Assemblyman Fordyce, of Middlesex made a plea for the bill. Among those who favored the measure were Henry J. Gottlob, Newark, chairman of the Legislative Committee of the State Federation of Labor, and Messrs. Quinn and J. Peeney, of Perth Amboy. They claimed the present price of the anti-toxin was prohibitive and it was as much the duty of the State to provide a preventive for diphtheria as to provide free vaccination against smallpox.

A representative of a firm of anti-toxin manufacturers in Philadelphia opposed the bill. He said it would cost the State over \$100,000 to secure a plant well enough equipped to produce good anti-toxin. He claimed the State would save money by purchasing the preventive from present makers. George M. Beringer, a chemist, of Camden, also opposed the measure.

MAY FIGHT 'PHONE CO.

Committee of Brooklyn Druggists to Lodge Protest.

THE SUBJECT OF SLOT 'PHONES THOROUGHLY THRESHED OUT BY THE KINGS COUNTY PH. SOC.—TO SPREAD A KNOWLEDGE OF NATIONAL FORMULARY PREPARATIONS AMONG PHYSICIANS.

Telephone matters furnished a topic for a lively discussion last Tuesday, at one of the best attended and most interesting meetings that the Kings County Pharmaceutical Society has had for a long time. Personal experiences with the telephone company in regard to overcharging were freely given, in some cases the druggist coming out on top, but more often not. As a result of the discussion, the Trade Matters Committee was instructed to call on the company and try to adjust some of the difficulties.

John G. Wischerth, chairman of the committee, set the ball rolling with the announcement that a representative of the telephone people had called on him and told him that if the members of the society would present their complaints in a proper manner, the company would be pleased to receive the committee to discuss improvement.

This statement, Dr. Muir thought, was a good sign that the company was impressed by the united stand taken by the druggists. No concessions were ever secured from the telephone people, he declared, except after a hard fight. He was strongly in favor of a twenty per cent. commission on slot 'phones, instead of ten per cent., pointing out that the Chicago druggists had demanded twenty-five per cent., and got it. Slot 'phones should replace all other kinds, as by no other means could the druggist safeguard himself against overcharging and the loss of time and money.

NO MORE SLOT 'PHONES.

Mr. Rosenzweig said he had been informed by a representative of the company that no more slot 'phones would be installed, "because they didn't make enough money." Another pretext which the company had advanced for discontinuing the slot 'phones was that there was litigation pending with the manufacturers of the machine and until this was settled there could be no more delivered. Mr. Rosenzweig, however, believed that the phone people were willing to make concessions, as they did a yearly business of \$150,000 with the druggists, and were afraid of the latter uniting against them.

The fact that the telephone company did not make so much money out of slot 'phones, said Dr. Muir, was proof of what an enormous amount of the druggist's time was wasted by the other kind. The company, of course, preferred to use the druggist's time rather than their own. He delivered a fierce broadside against the methods of the company and said that anyone who chose to stand firmly on his rights could force the company to put in slot machines, as discrimination by a public service corporation was illegal.

USELESS TO DEFY COMPANY.

Other members, however, related that they had defied the company, but without

success. Mr. France said the company was a common carrier and therefore could not discriminate by granting slot machines to some and refusing them to others. President Paradis and Dr. Muir are to accompany the committee.

Another fruitful subject for discussion was Dr. J. H. Droge's paper on the relations between the physician and the druggist. This paper, for which the author received a vote of thanks, will be found elsewhere in this issue of The Era. Dr. Droge, in the course of his remarks, dwelt particularly on the importance of the National Formulary preparations, and commended the efforts made by the society two years ago to introduce these preparations among physicians.

N. F. PREPARATIONS.

Dr. Muir moved that the Trades Committee be empowered to take up the matter. Dr. Anderson brought out the fact that the use of N. F. preparations by the druggist was decreasing and of manufactured products increasing. This, he said, was because the retailer did not give sufficient attention to his own preparations. In order to bridge the widening gap between physician and druggist, the latter, he declared, "should show less knowledge of diagnosing and the physician more knowledge of writing prescriptions."

President Paradis told of one druggist who presented six copies of the Pharmacopoeia to as many of his physicians. Five of them came back and thanked the donor; they said it was the first time they had ever seen the book.

After considerable discussion the motion was adopted, with the additional proviso by Dr. Muir that \$100 be set aside for the use of the committee in introducing the N. F. preparations among physicians.

ROUTINE BUSINESS.

Under routine business, Treasurer Ray reported a balance of \$288.21. For the Legislative Committee, Dr. Muir reported that owing to a technicality, the bill for exempting the college from taxation had met with some difficulty. In regard to telephone matters, he read the resolution which had been adopted by the Board of Trade, asking for a legislative inquiry. This resolution was endorsed by the society.

A report of the N. A. R. D. organization meeting, held on the previous Friday, was rendered by Dr. Anderson. He also announced the self-termination of the old N. A. R. D. committee on that night, with the distribution of the balance of \$92 among the societies which had contributed. The Kings County Society's share was \$31.

Dr. Anderson told of the progress made in securing signatures to the various contracts, which progress he considered very satisfactory. In order to help the N. A. R. D. work, he advised the members not to wait for the organizer to come around after the dues, but to send in the \$4 at once to headquarters.

DUES AND ORGANIZATION.

This prompted Dr. Muir to ask whether, since the Kings County Society was an affiliated body, the payment of the dues by a member would not relieve him from the payment of the organization fee. A warm discussion ensued. It was pointed out that the organization fee is charged

all over the country, and that the work of organization is an extra expense not intended to be covered by the annual dues. Anyway, said Dr. Anderson, the members who wish to pay their dues should do so at once, because as soon as organization here is completed he felt sure that the amount would be raised to \$8 at least.

The perennial rumor, "coming from a reliable source," about another carload of fernua delivered to another department store was once more launched, but did not receive much attention. Dr. Anderson soon expressed the general sentiment when he said:

"We've had these rumors now for four months. What we want is facts. It is wrong to hurt the movement by spreading these rumors unless you have the facts to back them."

"GAS AS A SOURCE OF POWER."

The next meeting of the Society of Chemical Industry, New York Section, will be held at the Chemists' Club, 108 West Fifty-fifth street, to-morrow evening, March 24. The program for the evening will be a "Symposium on Gas as a Source of Power." Under the head of "Generation," W. F. Case will treat "Producer, Mond, and Blast Furnace Gases," and C. G. Atwater "Coke Oven Gas" (illustrated by lantern slides); "Utilization" will be discussed by W. A. Giles, Alex. C. Humphreys, Franz Meyer, Oscar Nagel, F. Schiewiele and Edward A. Uehling. The usual informal dinner will be held before the meeting at the cafe of Hotel Savoy, Fifth avenue and Fifty-ninth street, at 6.30 p. m.

TO HONOR MR. WELLCOME.

The Drug Trade Section of the Board of Trade and Transportation will entertain Henry S. Wellcome, of Burroughs, Wellcome & Co., of London, during his stay in this city. At the meeting of the section last Thursday, Thomas F. Main suggested that a committee be appointed to consider the advisability of extending some form of recognition to Mr. Wellcome. This was put in the form of a motion and passed, and Albert Plant was appointed chairman. Mr. Main and Samuel W. Fairchild are the other members of the committee.

MORE BROMONIA TROUBLE.

A petition in bankruptcy has been filed against the Bromonia Company, manufacturer of a headache cure, with offices in the Fuller Building, Twenty-third street and Broadway, by the following creditors: Walter F. Emison, \$650; Frank R. Abbey, \$200, and Harry A. Rosenberg, \$100. It was alleged that the company is insolvent, and on March 15 admitted in writing its inability to pay its debts. Judge Adams, of the United States District Court, has appointed Edward C. Benedict receiver in bankruptcy for the assets of the company. It was said that the liabilities were \$8,000 and assets \$2,000.

Judson Montague Wolever, connected with the financial department of Parke, Davis & Co.'s Detroit establishment, died after an operation. He was fifty years old.

OPPOSE GRADY BILL.

Aimed Against Patent Violations, It Is Claimed.

A hearing on the Grady bill "for preventing the adulteration or misbranding of food or drugs," was held at Albany, last Wednesday, and was attended by Dr. William Muir, Dr. William C. Anderson and A. C. Searles, all of whom appeared in vigorous opposition. The only person who was on hand to favor the bill was Senator Grady.

Dr. Muir made the principal argument against the measure, bringing out the fact that the Board of Pharmacy and the Board of Health already have ample power to enforce purity of food and drugs; and that the Board of Health has practically unlimited power to do anything except protect the patents on foreign drugs. The one section which Dr. Muir particularly objected to was that relating to the misbranding of drugs, which he claimed would virtually enlist the services of the Boards of Pharmacy and Health as agents to detect infringements of patents, in the interest of foreign proprietors and at the expense of the State.

This section provides that:

"Any drug or drugs shall be deemed to be misbranded:

"First. If it be an imitation of or offered for sale under the name of another article.

"Second. If the package containing it or its label shall bear any statement regarding the ingredients of the substances contained therein, which statement shall be false or misleading in any particular, or if the same is falsely branded as to the country, State, territory or place in which it is manufactured or produced."

Another point brought out by Dr. Muir was that, under the section giving half the fine imposed to the informer, it would pay any manufacturer to send out agents for the detection of violations. The proportion of fines so collected would be more than sufficient to pay the expense.

Following the hearing on this bill, Drs. Muir and Anderson and George Kleinau attended another hearing before the Codes Committee on the proposed amendments to the Penal Code. To these no opposition has developed, and they will be favorably reported.

NEW YORK PHARMACIST DEAD.

Charles Miehling, Jr., thirty-seven years old, died suddenly Monday night, at his place of business, the Washington Bridge Pharmacy, of nephritis. His father, Charles Miehling, is secretary of the Dry Dock Savings Bank. Young Mr. Miehling was a graduate of the New York College of Pharmacy. His place on Washington Heights was called "The Little Drug Store Around the Corner."

SCHNEIDER & MACY FIRE.

Troy, N. Y., March 18.—Fire in the Schneider & Macy Drug Company's building on Congress street, caused damage estimated at \$6,000, covered by insurance, besides threatening several other buildings. The blaze started in the oil storehouse and required an hour's work before it could be brought under control.

LESS COCAINE CONSUMED.

Syracuse, March 20.—A peculiar development of the cocaine question is the statement of a local druggist that the recent decrease in its use has been among the lower classes, while the higher classes use it about as much as formerly. "It is a mistake," said he, "to suppose that all the cocaine is used by the depraved and ignorant people. The fact is that some of the best people of the town get to using it through doctors' prescriptions or through certain catarrh remedies. Some times dentists use it and their patients get into a bad way. The consumption of cocaine in Syracuse has fallen off fifty per cent. in the last year among the negroes and the common people. I believe this is due to the newspaper agitation and to the work of missionaries who have been explaining the horrors of the drug."

CATSKILL DRUGGIST DEAD.

Binghamton, N. Y., March 20.—The recent death of Clifford L. Bailey in this city was a great shock to his friends. At the time of his death he was in the drug business at Catskill, N. Y. He was formerly in the drug business here and a member of the firm of Bailey & Dixon. He had been in Catskill three years. He was thirty years old.

SUES DRUGGIST FOR \$5,000.

Newark, N. J., March 20.—Mrs. Thomas Naughton, of 530 Market street, has brought suit against Louis D. Greenleaf, a druggist, of Broad street and Central avenue, charging that he improperly filled a prescription. Instead of getting the medicine she wanted, Mrs. Naughton says, she got something else which made a sore on her leg, to which she applied it, much worse.

NEW YORK NOTES.

—F. B. Campbell, 534 Court street, Brooklyn, has sold out to S. Chess.

—F. J. Haynes succeeds A. M. Jones, formerly Dyua & Jones, at 336 Quincy street, Brooklyn.

—Henry Glassman succeeds Charles Koehler at Fifty-third street and Third avenue, Manhattan.

—Mrs. S. V. B. Swann has gone into mourning for one year, having lost her sister, Mrs. Stock, of Brooklyn.

—The stock of Frank H. Lalor, of Trenton, who recently went into bankruptcy, was sold yesterday, at an assignee's sale.

—The Drug Clerks' Circle will hold an open meeting March 29, at 9.30 p. m., at 206 East Broadway.

—Suffering from a deranged mind, Frederick Kronsberg, a druggist at 138 Franklin street, Greenpoint, was taken to the Kings County Hospital, after showing violently destructive tendencies. He had been acting queerly, following a severe attack of the grip.

—Friends of Joseph Leeming, of Thomas Leeming & Co., will be glad to learn that his health has so far improved that he is able to take up horseback riding. The loving cup presented to him by the P. A. of A., was recently sent to him at Colorado Springs.

W. C. T. U. WAGES WAR.**To Restrict Sale of "Patent" Medicines Containing Alcohol.**

Philadelphia, March 18.—After losing in their efforts to secure the passage of a bill which would allow them to use a minimum quantity of sodium benzoate as a preservative in fruit syrups, the druggists of this State are again facing the prospect of having another blow dealt at their interests. Senator Charles L. Brown, of this city, last week introduced into the Senate, a bill which prohibits the sale of any patent or proprietary medicine for internal use, which contains alcohol, except on the prescription of a physician. In this prescription the particular medicine must be specifically named.

The bill was drawn up by E. J. Buckley, counsel for the Women's Christian Temperance Union, and, it is said, is the initial step in a similar movement which will be taken up eventually in every State in the union.

In case the bill becomes a law, the unfortunate who attempts to sell any patent medicine containing alcohol, without having a physician's prescription to show for it, will, upon conviction, be fined for the first offence not less than \$50 nor more than \$100, or imprisoned not exceeding thirty days, or both, at the discretion of the court; and for the second offence a fine of not less than \$100 nor more than \$500, and imprisonment of not more than ninety days are provided. Section 3 of the bill repeals all acts or parts of acts not consistent with this act.

Members of the P. A. R. D. are not alarmed over this new stumbling block in their paths of progress. They predict an untimely fate for it. A well-known member said last evening, in discussing the bill:

"The idea is ridiculous and you can depend upon its never becoming a law. The governor would veto it in short order if it even got that far. They have gone so far as to prohibit the use of any other preservative but alcohol in various preparations and now the idea is to stop the use of that. Without the use of alcohol many of the best patent medicines would become worthless in a few weeks. Not a druggist in the State but is interested in defeating such ridiculous legislation, to say nothing of the big manufacturers who are not likely to sit idly by and see their interests threatened in such a manner. For my part, I don't think that it will require any organized effort to defeat the bill."

Other pharmacists expressed themselves in much the same manner. On the other hand, the members of the W. C. T. U. declare that they have prepared their plan carefully and are prepared for a bitter fight. The Central Committee of the State body met in this city, last Thursday, but did nothing beyond recommending the steps already taken, the matter being left in the hands of the State President, Mrs. Rebecca F. Chambers, of West Grove.

In the efficient hands of Edward H. Fahey, pharmacist and member of the legislature from this city, the "pre-requisite bill" promises to be brought to a successful issue. It passed the House by a vote of 147 to 10, only 103 being necessary, and was immediately transcribed to the Senate, where it is expected to come

up for final reading about Tuesday or Wednesday, of this week.

PHILADELPHIA NOTES.

—C. O. Bonta, proprietor of the pharmacy at Oak Lane, is seriously ill with typhoid fever.

—W. M. Morrison, of Roxborough, will spend the remainder of the stormy months in Florida.

—J. F. Maurice, with Johnson & Johnson, who was injured in an accident a month ago, has resumed his duties.

—F. W. E. Stedem, of Broad street and Fairmount avenue, and D. J. Thomas, of Scranton, both widely known pharmacists, have started on a pleasure trip to Jamaica.

—The Travelers' Protective Association, composed of traveling salesmen from all branches of trade, on Saturday evening, April 1, will give an entertainment and dance at Lu La Temple.

—The overturning of an oil stove in the rear of the drug store of G. E. Jelliff, at Seventeenth street and Susquehanna avenue, on Friday, resulted in a fire which caused a loss of \$3,000. The proprietor was not at home at the time and his wife attempted in vain to extinguish the flames. When the firemen arrived they were driven back again and again by the stifling fumes of burning chemicals, and several of them were temporarily overcome.

Fire supposed to have been caused by defective insulation, on Wednesday night damaged the stables of James M. Munyon, of the Munyon Remedy company, at Fifty-fourth street and Montgomery avenue, to the extent of \$2,500. Mr. Munyon is in Florida and the fire broke out while his son was entertaining several New York friends at the house. Three collie dogs, valued at \$450 and 250 carrier pigeons, valued at \$1,000 were burned.

LICENSED IN CONNECTICUT.

Danbury, Conn., March 18.—The Connecticut Board of Pharmacy Commissioners has granted certificates of registration to the following applicants who passed a successful examination at a meeting held February 14: Harry W. Tucker, Danbury, Conn.; Martin J. Coughlan, Danbury, Conn.; A. Paul Alderman, Hartford, Conn.; John G. Wheeler, Mystic, Hartford, Conn.; Honorius J. Sorel, Waterbury, Conn. At a meeting held March 7th the following passed: Henry E. Gilcom, Norwalk, Conn.; Thomas J. Gillespie, Jr., New Haven, Conn.; Oscar J. Kahn, Brooklyn, N. Y., and John F. McCann, Bridgeport, Conn.

The next meeting of the Board will be held April 4.

INDIANA PHARMACISTS.

Terre Haute, Ind., March 18.—The local association of druggists is preparing for the State convention of the Indiana Pharmaceutical Association, which will be held in this city early in June.

WOOD ALCOHOL BILL REPORT-ED OUT.

The Matthews bill, requiring the labeling of wood alcohol as a poison, has been favorably reported to the New York State Senate, by the Committee on Public Health. The bill has already passed the Assembly.

FWLER GETS DECISION.**Can Retain Possession or Must be Given \$5,000 to Move.**

Louisville, March 18.—Dr. J. W. Fowler, the aspiring mayoralty candidate and proprietor of the J. W. Fowler Drug Company, has been awarded a decision in his case against the Messrs. Sanders and Lawrence Jones, involving the lease of one of the most prominent corners in Louisville's retail business section. The case is of unusual interest, a novel point being involved. In 1903, Dr. Fowler leased a small corner of the Masonic Temple building, owned by the Messrs. Jones. The store cost him about \$45,000, including good-will and furnishing, which were unusually handsome. He leased the corner from the Messrs. Jones for five years, making a provision in the lease that in the event he was compelled to move in one year he was to receive \$5,000; in two years, \$4,000; three years, \$3,000; four years, \$2,000, and any part of the fifth year, \$1,000. A few months after he took possession of the corner a fire destroyed all of the massive structure, except that little corner. The building was four stories high, built of massive stone and 210 feet long and 75 feet wide. The building was torn down over Dr. Jones' head, but he patched up the ceiling and made a tarpaulin roof, which remains intact.

By the decision he can retain possession of the building or must be given \$5,000 to move.

MANUFACTURERS HEARD.

Baltimore, March 18.—A number of retailers assembled yesterday, at Sonnenburg's Hall, Baltimore and Greene streets, to hear what the manufacturers of pharmaceuticals had to say about the efforts of the local association to prevent the cutting of prices. Invitations had been sent out to the pharmaceutical houses here, and Dr. A. K. L. Dohme, of Sharp & Dohme, and Oscar Smith, manager of the Baltimore branch of Parke, Davis & Co., responded. Both made brief addresses, stating that their respective houses were in thorough sympathy with the aims of the retailers. They declare that the association of retailers could count on the hearty co-operation of the manufacturers, and made a most favorable impression upon the meeting.

So satisfactory were the expositions of the two gentlemen that the retailers adopted a vote of thanks for their courtesy in responding and for the manufacturers in thus placing themselves closely in touch with the retailers, and thus attaining eligibility to go on the honor roll of the N. A. R. D. Dr. A. J. Corning presided and Owen C. Smith acted as secretary.

The annual meeting of the retailers will be held on the second Wednesday in April.

—Adam Wirth, formerly demonstrator of pharmacy in the Tulane University, New Orleans is mentioned as a probable candidate for appointment to the Louisiana State Board of Pharmacy. Mr. Wirth is now conducting the Tourist Pharmacy, at St. Charles avenue and Girod.

DRUGGISTS AS CANDIDATES.

Baltimore, March 18.—Druggists of this city are taking a most active interest in the fight for the city council this spring. A number of them are nursing political ambitions, and there is no reason why they should not realize their desires, as all are men of ability and trained intelligence. Among these candidates are Edwin R. Downes, a member of Downes Bros., who conduct several pharmacies in North Baltimore. Mr. Downes has announced himself as a candidate for the second branch from what is called the second councilmanic district. He is a Democrat and declares that he will abide by the outcome of the primaries of that party. W. E. Brown, a former president of the Maryland Ph. A., and who conducts a drug store at Bloomington and Rayner avenues, Calverton, has come out as one of the Republican aspirants in the sixteenth for the first branch. He has a number of friends, who wish him well in his present campaign. J. Wesley White, who for some years conducted the pharmacy at the northwest corner of Lafayette avenue and Gilmore street, but sold out some time ago, is a third candidate. He also has a large following and hopes to land the prize in his ward.

JAMES BAILY & SON MOVE.

Baltimore, March 18.—After repeated delays, due to circumstances beyond its control, the firm of James Baily & Son is now located on Hanover street, near German, in a new building having all the conveniences and facilities for the expeditious handling of business. The edifice is five stories high and of pleasing design.

Muth Bros. & Co. were to have taken possession of their warehouse on South Charles street, this week, but unforeseen delays occurred, but the removal will almost certainly be accomplished between now and April 1.

BALTIMORE NOTES.

—George G. Muth, of Muth Bros. & Co., has been in Atlantic City with Mrs. Muth for a week, recuperating after an attack of illness.

—W. J. Taylor, the local representative of Armour & Co., of Chicago, lost his wife by death, last week. The body of Mrs. Taylor was taken to Chillicothe, O., for interment.

—The firm of Gilbert & Musterman, retail druggists at Annapolis, Md., has been dissolved by the retirement of Mr. Musterman, who has other interests which claim his attention.

—The march of improvement is pervading every corner. It is stated that J. S. Hopkins & Co., who held out against the telephone longer than any other drug concern in the city, have installed an instrument.

—Messrs. Muth Bros. & Co., the Baltimore wholesale druggists, have opened a sample room for the display of fancy goods, in the Harper building, 467 C street, N. W., Washington, D. C., with M. J. Brandmiller in charge.

—The monthly meeting of the Wedgewood Club will be held at the Hotel Raleigh, on Thursday evening, March 30. The Raleigh is a new hotel which was recently opened, and something special in the way of a dinner is expected.

AIM TO DEFEAT BILL.**Michigan Drug Clerks Criticize Board Members.****STATE ASSOCIATION FOR PROPRIETORS ONLY, THEY SAY.**

Detroit, March 14.—The Drug Clerks' Association of Michigan held a meeting in this city, last week, which for results has not been equaled in sensations in some time.

Charges were made that half of the drug business in Detroit is done in violation of the law and that the pharmacists of the city continually break the statutes of the State. A summary of the charges made follows:

That 50 per cent of the business done by pharmacists in Detroit is in absolute violation of the law. Unregistered clerks are employed in filling physicians' prescriptions in a majority of the drug stores, whereas the law requires that all men thus employed shall be registered.

That it is the general custom in Detroit to ignore the law which requires a pharmacist, on selling poisons at retail to record the name and address of the purchaser.

That liquors are sold in drug stores in defiance of the law.

The drug clerks aim to defeat the Beals bill now before the State legislature, and to throw out of office members of the present State Board of Pharmacy, who, it is alleged, are in league with the proprietors to prevent the adoption of any act which will decrease the sale of morphine, cocaine and chloral.

"The situation in Detroit is appalling," said Geo. J. Robinson, president of the Clerks' Association. "Illinois, Ohio and Indiana have laws restricting the sale of cocaine, morphine, etc., but Michigan has none. Persons addicted to the terrible habit of using these drugs come to Detroit from Canada to obtain them, because they meet with no questions or prohibition here. Asylums are overflowing with poor wretches who have become slaves to the dope habit.

"The Beals bill now under consideration by the Michigan legislature ostensibly provides for a remedy for these conditions, but in effect it does nothing of the kind. It is intended to shield the interests of the proprietors of drug establishments, who belong, most of them, to the Michigan Pharmaceutical Association. This latter association practically controls the board of pharmacy appointments by the governor, and members of the Board of Pharmacy act solely in the interests of the Michigan Pharmaceutical Association—the association of the proprietors. We hope to correct the evils of the pharmacy business in Michigan and to redeem that business from the degrading features. A bill looking to the enactment and enforcement of wiser laws will be presented to the legislature by Representative Jerome, in opposition to the Beals bill."

In discussing the charges made by the Drug Clerks' Association, N. A. Tabor, treasurer of the Central Drug Co., proprietors of four of the largest pharmacies in Detroit, said that there were between 7,000 and 10,000 people in Detroit addic-

ed to the drug-using habit, and he declared that all efforts to stop the strings of dope fiends who come into their stores at night had failed. Orders had been issued to clerks to refuse to sell morphine, cocaine and other such drugs to persons who come late at night, and so far as possible stop the trade in it during the day, as well.

G. W. Stevens, proprietor of the pharmacy at 273 Woodward avenue, virtually substantiated all the charges made by the Drug Clerks' Association. The people of the city in general are aroused at the extent of the evil and vigorous methods for its suppression are looked for from the proper authorities.

CHICAGO SOCIAL DRUG CLUB.

Chicago, March 20.—The Social Drug Club has 359 members, 342 of whom have paid their dues. This fact was brought out by Secretary Schaper, at a recent meeting of the club. Messrs. Wooten, Bodemann, Straw, President Fry, of the Illinois Pharmaceutical Association; Hattinger, MacDonald, of the Chicago Telephone Co., and others, were among the speakers.

A bouquet of flowers was sent to Mr. Ebert, who was reported to be indisposed, and greetings to Geo. R. Baker, who is at Miami, Fla., for his health.

The club has two members from among the fair sex—Mrs. L. K. Waldron and Miss Jane Gordon.

CHICAGO NOTES.

—Stolz & Grady's Drug Store at 104 North Clark street, was damaged recently by an explosion of chemicals in the rear of the store. The loss was reported to be about \$500.

—Adolph C. Brendeke has bobbed up again. Brendeke owns a drug store at 260 West Randolph street, and sells cocaine. His latest venture in this line was appraised at \$100 and costs, by the police magistrate.

—The United States Agricultural Department will soon establish a station in Chicago for the analysis and examination of imported foods and drugs. The department will employ a chemist to give his exclusive time to the work of the station.

—It is reported that the L. K. Waldron store, in the Briggs House, corner Randolph and Fifth avenue, will seek a new location. Mrs. Waldron became sole owner on the death of her husband. It is said that a saloon keeper has bid more for the corner than Mrs. Waldron feels she can afford to pay.

COCAINE BILL PASSED.

St. Paul, Minn., March 16.—The State Senate, with but one dissenting vote, has passed the Anderson bill, regulating cocaine sales. There is no doubt that Governor Johnson, in whose hands the measure now is, will approve it. Speaking in support of the bill before the vote was taken, Senator Calhoun, of Minneapolis, said:

"Cocaine fiends are becoming more numerous than persons addicted to intoxicating liquor. It is time the State of Minnesota put a stop to the use of this drug. If the people do not know enough to stop using so deadly a drug, the State should compel them to stop. The bill is a good measure and should pass."

LEGISLATIVE MEASURES.

Move to Register Apprentices.— Tonic Bill Saved From Death.

St. Paul, Minn., March 18.—The drug men's interests continue to demand a fair share of the attention of the legislature.

By the terms of a bill introduced in the lower house, by Representative Henry McColl, himself one of the foremost druggists of the capital city, pharmacists' apprentices intending to become registered pharmacists must be examined as to their educational qualifications. The measure requires registered pharmacists employing apprentices to register with the State Board of Pharmacy. The Board is to examine the apprentices as to their educational merits before permitting them to register and the period of practical experience required of applicants for registration is to begin with the date of the apprentice's registration. The State Board may charge a fee of \$2 for the examination. Registered pharmacists failing to comply with the act are subject to a \$10 fine. The bill does not apply to apprentices regularly employed as such for at least one year prior to the passage of the act.

Before the House Public Health Committee, Mr. McColl opposed the bill requiring preparations containing opium to be so labeled. He pointed out that with such labels the opium fiends could ascertain what proprietary medicines would satisfy their cravings and the opportunities to get the drug would be increased.

Gustav Erickson's bill, commonly known as the "tonic" bill, was saved from death by its author in the House. The Committee on Public Health reported the bill for indefinite postponement, but Mr. Erickson rallied his friends and succeeded in reversing the committee and sending his bill to the Temperance Committee, which is supposed to be more friendly. The measure prohibits the sale of medicines containing more than 20 per cent. of alcohol, unless upon a physician's prescription. A similar bill was introduced in the House two years ago by S. D. Peterson. Druggists and dealers in proprietary medicines are opposed to the Erickson measure, and there are but few aside from the author willing to gamble on the prospects of the enactment of such a law.

CHARGED WITH MURDER.

St. Paul, Minn., March 15.—Edward Gottschalk, who is in jail in this city, charged with the murder of Christian H. Schindldecker, a butcher, is the son of Albert Gottschalk, a well-to-do druggist of Waverly, Ill. The murder was the most atrocious one recorded in the annals of the Northwest. The father, who is confined to his house by illness, has written to his son's attorney, expressing all the confidence of a loving parent in the innocence of the accused and promises to attend the trial and lend to his son whatever financial assistance he needs. The letter shows that Edward is the black sheep of a most respectable and respected family.

Albert Gottschalk, foreman of the Ninety-ninth street shops of the Interborough Traction Co., New York, a brother of the accused man, has arrived here, and strongly asserts his belief in Edward's innocence.

THE LATE FLETCHER HOWARD.

Des Moines, Iowa, March 18.—State Pharmacy Commissioner Fletcher Howard died in Colorado Springs, Colo., March 10, of tubercular meningitis, after an illness of several months. Mr. Howard was first appointed commissioner from O'Brien County, April 6, 1893, as the Democratic member of the board of three. He was president of the commission for a number of years. Before moving to Des Moines he owned a drug store at Sheldon, Iowa. He was a thirty-third degree Mason and very prominent in that order.

Mr. Howard was born in Leeds, Maine, October 5, 1853. In 1879, he graduated from Bates College, in Lewiston, his native State. In the winter of 1880 he came to

FLETCHER HOWARD.

Iowa and entered the school room as a teacher. After teaching one year he entered the drug business at Onona, Iowa, where he remained several years. He removed to Sheldon, where he continued in the business for eleven years. During this time he became thoroughly identified with the public interests of his State. He was a born leader and his ability was at once recognized by the Democratic party. In all of his actions he was liberal almost to a fault to those who appealed to his generosity and no man ever heard a whisper of suspicion against his integrity. Mr. Howard was a cousin of Gen. O. O. Howard, of Civil War fame.

DRUG HOUSES CONSOLIDATE.

Dubuque, Ia., March 17.—W. H. Torbert and G. A. Grimm have consolidated under the name of the Torbert Drug Co., and have filed articles of incorporation. The capital stock is \$75,000 and the Board of Directors consists of W. H. Torbert, G. A. Grimm, G. A. Schenkowitz, W. O. Bensch and Glenn Brown. A wholesale and retail business will be carried on. Mr. Torbert has been in the drug business in Dubuque for the past thirty years. Mr. Grimm was connected with Mr. Torbert for a number of years and went into business five years ago.

DELAY IN LODER SUIT.

Indianapolis, March 16.—There was another delay, yesterday, in the hearing of evidence before Noble C. Butler, as a special commissioner in the suit of C. G. A. Loder, of Philadelphia, against the National Wholesale Druggists' Association. Although witnesses and attorneys for both sides were present, W. Wilson Carllie, who is conducting the hearing, asked that further examination be postponed, in order that he might secure a written order from Judge Anderson.

Mr. Carllie said that the officers had given him to understand that they would not produce these documents unless a written order was secured from Judge Anderson.

The examination of Frank E. Holliday, vice-chairman of the committee on proprietary goods of the association, has been completed.

Joseph E. Toms, secretary of the association, gave his testimony yesterday. John N. Carey, chairman of the Committee on Proprietary Goods, will be the next witness examined.

PROCEEDINGS IN BANKRUPTCY.

Indianapolis, Ind., March 18.—The Mooney-Mueller Drug Company, the A. Burdall Company and the Columbia National Bank filed proceedings of involuntary bankruptcy against the Faulkner-Webb Company. The claims of the companies amount to \$550.

DRUGGIST MAKES ASSIGNMENT

Ogden, Utah, March 18.—B. G. Knoch, who has operated a drug store in this city for several years, has been forced to the wall financially and has made an assignment. The liabilities will be about \$10,000. One of the heaviest creditors is the Nelden-Judson Drug Company, of Salt Lake. The Commercial National Bank, of Ogden, also has considerable claims, but it is understood that these are secured by mortgages of fixtures.

DRUG BILL IN UTAH.

Salt Lake City, March 12.—A bill which has been introduced in the legislature makes it unlawful to sell patent medicines containing opium, cocaine, chloral or alcohol, without labeling the bottle to that effect and showing the quantity of said drug.

DRUGGISTS LOSE LICENSES.

Topeka, Kan., March 10.—The judge of the Probate Court to-day revoked the licenses to sell liquor, which had been granted to C. F. Young, Charles W. Kohl and W. T. Lake. C. M. Hines voluntarily surrendered his permit. The revocation of the licenses followed a long legal fight by the State Temperance Union against the druggists.

BROOKLYN ALUMNI DANCE.

The Alumni Association of the Brooklyn College of Pharmacy held its regular monthly dance last Wednesday evening at the college building. About one hundred people of both sexes attended, including several members of the faculty and teaching corps. The usual tasteful decorations were in evidence.

AMONG THE COLLEGES

MICHIGAN UNIVERSITY.

Ann Arbor, Mich., March 18.—On Tuesday morning, February 28, memorial services were held in Sarah Caswell Angell Hall, in honor of the memory of the late Dr. Albert B. Prescott. Short addresses were made by President Angell, Doctors Vaughan, D'Osge and Herdman. The resolutions drawn up by the pharmaceutical and medical faculties and by the several classes of these departments were read. After the services all of the students walked to the doctor's late residence in a body to view the remains. Many Detroit pharmacists and alumni attended the services, as did representatives of the Michigan Ph. A., the State Board of Pharmacy, the A. Ph. A., and the American Conference of Pharmaceutical Faculties.

James R. Huber, '03, who has been pursuing post-graduate studies during the past two years, has accepted a position as chemist with the Detroit Copper and Brass Rolling Mills.

Dr. J. O. Schlotterbeck, professor of pharmacognosy, gave an address before the Journal Club upon phyto-chemical relations, in which he reviewed some of his own research work recently accomplished with some of his students.

Frank Hamilton has resigned his position with Parke, Davis & Co., and has accepted another in a retail pharmacy in Circleville, O.

Walter K. Schmidt, '91, of Grand Rapids, will address the students of the School of Pharmacy, on April 26. The subject of his lecture will be in the nature of a general outline of the duties of a public analyst. Because of his wide experience in this field of work, he is well qualified to speak upon the subject.

Ernst Grather, Ph.D., has returned after an illness of several weeks, and has resumed his researches upon the synthetic production of the active principle of the suprarenal gland.

Wm. E. Sanford, '92, at one time professor of pharmacy in the University of Illinois, and more recently chemist with the Western Tube Co. of Kewanee, Ill., is now assistant superintendent of the Mark Manufacturing Company, at Zanesville, Ohio.

Wm. C. Kirchgessner, '89, for many years in charge of the prescription and manufacturing department of Peck Bros., Grand Rapids, is now the owner of a prescription pharmacy on Third avenue, Detroit.

UNIVERSITY OF WASHINGTON.

Seattle, March 13.—The chemical club of the university recently gave a program and produced a series of experiments for the public in honor of the chemist, Priestley. The experiments were chiefly those which Priestley had in his day performed. The soda water and laughing gas experiments were the chief attractions of the evening. Dr. H. G. Byers gave a lecture on "Priestley and His Life Work."

Dr. Johnson, dean of the pharmacy school, on March 6 entertained at his home the members of the State Board of

Pharmacy and the pharmacy classes. The evening was spent in many and original contests.

P. Jenseo, of the State Board of Pharmacy, addressed the students on March 9 on the practical side of the drug question.

Several members of the class went up for the State examination this week, and reported that it was quite difficult.

MARYLAND COLLEGE OF PHARMACY.

Baltimore, March 18.—The bi-monthly meeting of the Maryland College of Pharmacy Association was held last Thursday evening, at the Hotel Belvedere, and proved very interesting from the standpoint of the druggist. Prof. Charles Caspari, Jr., read a paper on the "New United States Pharmacopoeia." The changes, he stated, were numerous, and the volume would constitute a notable contribution to the progress of pharmacy. It would be issued in a short time. Prof. Henry P. Hynson gave "A Prescription Clinic," in which he presented many examples in dispensing that would come within the ordinary experience of the druggist, and explained how difficulties could be easily overcome. A discussion followed the reading of the paper and the clinic. The meeting concluded with a "Dutch Feast."

The committee of arrangements included Dr. John F. Hancock, Prof. Caspari and J. Edwin Hengst.

VETERINARY SERUM THERAPY.

Serum therapy properly means the prophylactic and curative treatment of certain acute infectious diseases by the subcutaneous injection of a blood serum containing an antitoxin specific to the particular disease. As applied to the treatment of veterinary diseases the Vaccines and Antitoxins of the Pasteur Vaccine Co., Ltd., Paris, London, New York, Chicago and San Francisco, have attained an enviable reputation. Among the various scientific products listed by this house are Tuberculin, Mallein, Veterinary Streptococcus Antitoxin, both "Liquid" and "Dry," Pasteur Anthrax or Charbon Vaccine, and Blackleg Vaccine. Pasteur Anthrax has been successfully employed upon over 23,000,000 animals. Under the registered name "Blacklegine," the Pasteur Vaccine Co. supply a Blackleg Vaccine ready for use, being in the form of a cord impregnated by a process that is patented in the United States, Canada and other countries. It has been used upon over 20,000,000 calves with success. They also supply Antivenomous Serum (Calmette) for the treatment of snake bite, and Pasteur Virat (rat virus) for destroying rats and mice. The latter is claimed to be more or less pathogenic to all species of rodents, and is harmless to all other animals and man. It is endorsed by Dr. J. J. Kinyoun, surgeon of the United States Marine Hospital Service, and others. Druggists should send, mentioning The Era, to the Pasteur Vaccine Co., Ltd., for literature descriptive of these interesting serums and antitoxins. See their advertisement in The Era.

NEW BALTIMORE FOUNTAIN.

Williamson & Watts have just installed a handsome new soda fountain in their store at Baltimore and Lutaw streets.

UP-TO-DATE SHOW WINDOWS.

Next only to strength and safety, light is the great end aimed at in our modern

construction, and the proper setting of plate glass presents quite a problem to the architect and builder. In accomplishing this end the "Petz" corner post and transom bar, shown in the order mentioned in accompanying cuts, has made a fine record and won distinct recognition. This does away with big, unsightly and obscuring pillars and posts. It possesses great strength, holds the largest and heaviest lights of glass securely and firmly in position, takes up small space, does not obstruct the light and leaves the entire window for purposes of display. These posts and bars are made from 1 3/8 to 2 1/2 inches in diameter, in many styles and finishes, to cover every possible need of the contractor and builder.

The "Petz" corner post and transom bar is made only by the Detroit Show Case Co.,

Detroit, Mich., but can also be obtained from the Pittsburgh Plate Glass Co., at their warehouses in New York, Boston, Chicago, Cincinnati, St.

Louis, Minneapolis, Detroit, Pittsburg, Havenport, Cleveland, Omaha, St. Paul, Atlanta, Ga.; Savannah, Ga.; Kansas City, Birmingham, Ala.; Milwaukee, Wis.; Rochester, N. Y.; Baltimore, Buffalo, N. Y.; Brooklyn, Philadelphia, etc.

VESTPOCKET ELECTRIC LIGHT.

To the enterprising druggist or retail dealer in any line, who will hazard seventy-five cents on a new quick seller, we know of hardly anything that will please him more than to invest that sum in a simple Vestpocket Electric Searchlight which the Montgomery Gibbs Company, of 400-402 West Twenty-third street, New York, offer.

Their offer to refund the amount paid for the sample, which retails at \$1.00, if purchase is not entirely satisfactory, means just what it says. These electric Vestpocket Searchlights are ready

sellers, take up very little room and pay a good profit. The company supplies a neat hanger to all who stock their goods. There is no end to the uses to which these handy lights can be put. They are finished in polished nickel trimmings and the batteries are the strongest made. Liberal discounts are given on quantities, and a free electrical catalogue may be had of the firm, on application. Please mention The Era.

STEARNS' SEMI-CENTENNIAL.

Fifty Years Since Frederick Stearns Entered the Drug Business.

FREDERICK STEARNS & CO. CELEBRATE THE FIFTIETH ANNIVERSARY OF THEIR FOUNDER'S CONNECTION WITH PHARMACY.—FIRST 1905 ISSUE OF NEW IDEA DEDICATED TO HIM BY BUSINESS ASSOCIATES.—APPRENTICED IN BUFFALO IN 1846.

The first quarterly issue of the New Idea for 1905 is the fiftieth anniversary number of that publication and is affectionately inscribed to Frederick Stearns, founder of the house of Frederick Stearns &

FREDERICK STEARNS,
Founder of Frederick Stearns & Co.

Co. by his business associates. The title page contains a sincere appreciation of his character and achievements and wishes of happiness and honor through the remaining years of his life. Frederick Stearns gave up active participation in the affairs of the firm some eighteen years ago. The principal facts of his life, his achievement as a manufacturing pharmacist and his activity during the period of his retirement, are set forth in an article which forms the principal feature of the issue.

Frederick Stearns entered the domain of pharmacy in 1846, as a boy of fourteen, apprenticed to a drug store in Buffalo. The work was not light, yet he managed to attend a course of lectures on chemistry and pharmacy in Buffalo. He later entered the employ of A. I. Matthews, one of the leading retail druggists in Buffalo at that time, and it was here that he became acquainted with the details and management of a large, well-ordered pharmacy. Two years later he was taken into partnership and continued thus until 1854, when he sold his interest and came to Detroit. On New Year's Day, 1855, he opened a store in that city, which was to be the scene of the greatest achievements of his long and active life.

He soon acquired a share of the drug business of the town and although, as he says, his condition was one of "little money, fair credit, high hope," he achieved enough success to enable him to carry out

his plan of manufacturing for the trade. His first laboratory was a 12x12 back room, equipped with a cook stove. He made up samples of a few pharmaceuticals, and from time to time took trips through the State, showing his samples and taking orders from retailers. On his return he manufactured the goods and filled the orders which he had taken. His life was one of constant activity. Besides attending to his store, looking after the increase of his business, he edited the Peninsular and Independent, a 64-page medical journal, having as editorial associates A. B. Palmer, A.M., M.D., and Moses Gunn, A.M., M.D., professors in the University of Michigan. He contributed scientific articles to the American Pharmaceutical Association and prepared one of the first reports on the progress of pharmacy, which for years has been a feature of the proceedings of that organization.

At the beginning of the Civil War, Mr. Stearns was appointed purveyor of the medical supplies for the State of Michigan. The manufacturing business increased and the end of hostilities found his laboratory equipped with apparatus for carrying on business on a large scale. In 1871 his store was twice destroyed by fire, and he then determined to separate the manufacturing business from the retail pharmacy.

In 1881 his drug store was sold to Henry J. Milburn and Mr. Stearns then devoted his entire attention to manufacturing. The new laboratory on Twenty-first street, between Baker and Porter streets was erected and the business incorporated, with \$200,000 capital stock. Mr. Stearns himself assumed the presidency and then, as now, all stockholders were actively engaged in the business and no stock has ever been bought by outsiders. A Canadian branch laboratory was established in Windsor, Ontario, in 1884, under the management of I. H. Taylor. In 1887 Mr. Stearns retired from active business life, feeling that after devoting forty years to pharmacy, he was entitled to a period of rest. His son, Mr. Frederick K. Stearns, was unanimously named to succeed him as president.

Since his retirement, Mr. Stearns has not been idle. His travels in foreign countries, begun for the purpose of recuperating his health, have led to the formation of a number of valuable collections in the domain of art, science and especially educational work. Among his earlier achievements in this line is a magnificent collection of Japanese and Korean art objects, some 16,000 of which he donated to the Detroit Museum of Art. Various collections, such as coins, precious stones, etc., claimed his attention for a time, and he took up conchology and devoted his time and money for several years to what was to him an absorbing diversion, but which was to science a work of the greatest value. His book, "Marine Mollusks of Japan," is one of the standard works of reformation in its class. His collection of musical instruments was presented to the University of Michigan five years ago. It comprises some 2,000 different kinds of instruments and is considered the most complete collection of its kind in America and possibly in the world.

Mr. Stearns spends about one-half his time at his home in Detroit, remaining in milder climate during the severe winter

months. Three years ago the University of Michigan conferred upon him the honorary degree of Master of Arts, for distinguished service to science and fine arts. The Detroit Free Press said of him in an editorial tribute: "The university has indeed conferred a degree, but to those whose privilege it has been to know him well, Frederick Stearns has been for many years a true Master of Arts."

The fiftieth anniversary number contains, beside a tribute to the founder of the firm, sketches of Frederick K. Stearns, now the active executive head, and other members of the firm, besides a description of the immense manufacturing plant and facilities of carrying on the work. Since the retirement of the founder, the progress of the house has been in a straight line; the growth of the business to its

FREDERICK KIMBALL STEARNS,
President Frederick Stearns & Co.

present dimensions is a matter of common knowledge to the drug trade of the country.

THE PUZZLER MONTHLY.

Last May M. P. Gould Company, drug store advertisers, New York, got out a most unique little drug store paper. May, the first month, 67,000 copies were printed; June, 85,000; July, 95,000; August, 110,000; September, 140,000; October, 165,000; November, 176,000; December, 201,000; January, 200,000; February, 212,000, and March will undoubtedly run over 225,000. That has all been accomplished within eleven months. M. P. Gould Company say they expect to be printing 250,000 per month when the Puzzler is one year old. In their advertisement on page 15 of this issue of The Pharmaceutical Era, they make a special offer to our subscribers, which certainly ought to be quickly acted on. If you clip the little coupon from that advertisement and send it to M. P. Gould Company, 99 Nassau street, New York, and ask for their proposition, and a sample copy of the Puzzler, they agree to print, without cost to you, from the first month as many Puzzlers as you order for the other months. If you sign a contract for 2,000 Puzzlers per month for one year, they will print 2,000 Puzzlers free for you. Write at once if you want to control the Puzzler exclusively for your locality.

No. 51030. Lily Vine. 3 lilies, 3 buds in white, pink or purple colors and 18 leaves to the yard, per dozen yards, \$3.00, per gross \$36.00.

No. 51034. Morning Glory Vine. 3 flowers, 3 buds, in either white, pink or purple color and 15 leaves to yard, per doz. yards, \$2.40. Per gross yards, \$24.00.
No. 51035. Morning Glory Vine. 3 flowers, in either white, pink or purple color and 12 leaves to yard, per dozen yards, \$1.50. Per gross yards, \$15.00.

No. 52144. Lily Bouquet and Vase. Composed of one dozen lily sprays in either white, pink, purple or assorted, and a paper mache vase. Esch. \$1.25.

No. 51144. Single lily sprays, per doz., \$1.00; per gross, \$10.00.

No. 52148. Easter Lily Bouquet and Vase. Composed of 12 fine large individual Easter lilies and a paper mache vase. Complete, \$1.50.

No. 51148. Single lily sprays, per doz., \$1.25; per gross, \$12.50.

No. 51062. An Easter novelty, representing the messenger of Peace, Happiness and Purity. The very thing for a neat, appropriate and thoughtful Easter decoration. Is composed of my first quality, life-size dove, which has a yard of my beautiful Lily Vine No. 51030 trailing from each side. The dove may be suspended in windows, arches, doorways, and from ceilings, and with additional vines made into any desired length. Price as above illustration, \$2.00.

For additional Vines, see my Lily Vine No. 51030.

No. 51618. Lily Plant, No. 51615. 18 inch high 1 lily and 1 bud to plant, each 25c.; per dozen \$2.50.

No. 51042. Sml. lax. Per doz. yds., 90c.; per grs. yds., \$9.00.

SOUVENIR POST CARDS.

Not How Cheap But How Good

The druggist who does not sell Souvenir Post Cards is neglecting an attractive feature of his stock that interests customers and affords a good profit.

The American News Company, of New York has one of the finest lines of these cards it has been our pleasure to examine. Their specialty is views of New York City and vicinity executed in plain black and white; also in colors. It includes all of the big buildings in the metropolis; also, all the important scenic and historical views, such as Grant's Tomb, the leading statues, Central Park, the Hudson River scenery, the cemeteries and other places of interest. The entire collection numbers some 300 distinct views.

Everybody is interested in New York. It is so cosmopolitan, so big and contains so many things of interest for the visitor, and what better way of learning about the city than by examining a set of these photographs, which are ideal productions of the photographic and lithographic arts?

These cards of the American Co. are not the ordinary cheap half-tone productions, but are beautifully executed in plain black and white and in twelve colors. The trade price of the plain variety is \$1.20 per 100; the colored ones at \$2.00 per 100. On an order for 100 of each (200 cards) they offer to send them prepaid to any point in the United States for \$3.50 net. The cards retail at from three

to five cents each, and afford a liberal profit.

A descriptive list of the 300 subjects with the title of each will be sent on application. Ask, also, if interested, for their assortment of post-card albums, display racks, etc. They have, too, a complete line of baseball and sporting goods in separate catalogue. Their new catalogue of commercial stationery specially for the drug trade, is now in preparation; every druggist should file his application for a copy.

ADDRESS

THE AMERICAN NEWS COMPANY - - NEW YORK

Please mention the Era..

Pepto-Mangan

AN ARBITRARILY COINED WORD.

It is the exclusive property of the M. J. BREITENBACH CO.

FOR twelve years we have been advertising to the drug trade, through the drug trade journals, the fact that **PEPTO-MANGAN** (irrespective of the name **GUDE**) is a trade-mark name, registered October 13, 1891, and is our exclusive property.

In order that there may be no misunderstanding, we call attention again to the fact that Pepto-Mangan is *NOT* a synonym for any other iron preparation, for

There is Only One **PEPTO-MANGAN**

which is our product, Gude's preparation, and the Courts have over and over again rendered decisions protecting us in our rights. To ask a customer "Which Pepto-Mangan do you desire?" when Pepto-Mangan is called for, is not only inaccurate and misleading, but renders the druggist liable to the law.

To protect the druggist from any possible loss of trade, or from becoming involved in a lawsuit, through ignorance, we wish to **EMPHATICALLY EMPHASIZE** the fact that

Pepto-Mangan is our **Trade Mark**

and the name does not apply to any other preparation.

M. J. BREITENBACH CO., 53 Warren Street, NEW YORK.

TRADE SECTION

CIGAR MEN WARNED.

Empty Marked, Branded Cigar Boxes Unlawful.

THE INTERNAL REVENUE OFFICE HAS HITHERTO HESITATED TO INVOKE THE HEAVY PENALTIES OF THE LAW, BUT WILL SEIZE ALL SUCH BOXES AFTER MAY 1 AND WILL ALSO INSTITUTE PERSONAL PROSECUTIONS.

The manufacture and use by dealers of empty marked and branded cigar boxes for advertising purposes has grown so prevalent that the Commissioner of Internal Revenue has issued a solemn warning against the practice. All druggists who handle cigars will be interested in the circumstances.

A revenue officer, Mr. E. D. Crocker, collector at Tacoma, Wash., brought the matter to the attention of the Treasury Department. The Commissioner of Internal Revenue replied in the following:

"Yours of the 23d ultimo is received, in regard to an empty cigar box, a sample of which you forward, manufactured by the _____ Cigar Company, factory No. _____, district of _____, which has upon it the indented brand and printed caution notice of said factory, but no stamp. You state that such empty marked and branded cigar boxes are distributed among dealers in your district for use as advertisements and for display purposes. You refer to Treasury decision 814 of August 2, 1904, concerning pasteboard cartons representing cigar boxes, and ask whether action is necessary in the matter.

"In reply, you are advised that an empty cigar box bearing the indented brand and caution notice of a cigar factory comes within the provisions of section 3455, Revised Statutes.

"Eliminating the words of the statute not applicable to the case, it reads:

THE LAW.

"Whenever any person sells, gives, purchases, or receives any box * * * branded or marked in any way so as to show that the contents or intended contents thereof have been duly inspected, or that the tax thereon has been paid, or that any provision of the internal-revenue laws has been complied with, whether such * * * branding or marking may have been a duly authorized act or may be false and counterfeit, or otherwise without authority of law, said box * * * being empty, * * * he shall be liable to a penalty of not less than fifty nor more than five hundred dollars. And every person who makes, manufactures, or produces any box * * * branded or marked, as aforesaid, described, or may be brands or marks the same, as hereinbefore recited, shall be liable to penalty as before provided in this section. And every person who violates the foregoing provisions of this section, with intent to defraud the revenue, or to defraud any persons, shall be liable to a fine of not less than one thousand nor more than five thousand dollars, or to imprisonment for not less than six months nor more than five years, or to both, at the discretion of the court. And all articles sold, given, purchased, re-

ceived, made, manufactured, produced, branded, stamped, or marked in violation of the provisions of this section, and all their contents, shall be forfeited to the United States.

"It will be observed that the foregoing provisions of law clearly denounce penalties for making or using of an empty cigar box, branded or marked in any way purporting to show that any provisions of the internal revenue laws have been complied with in respect to such box. These penalties, both corporal and pecuniary, are so severe that this office has hesitated to invoke them for the prevention of the practice in the trade of making and using "dummy" cigar boxes for advertising purposes, a practice innocent enough in itself, and not ordinarily resulting in any fraud on the revenue. When, however, the empty boxes or receptacles are marked or branded with factory numbers and caution notices, there can be no doubt as to the applicability of the statute to them, and it becomes necessary that all parties interested, both manufacturers and dealers, should be informed that the practice of making and using such marked and branded boxes must be discontinued or the consequences be suffered.

"In view of the fact that the statute in question has not heretofore been applied in such cases, and to the prevalence of the practice of making and using marked and branded empty cigar boxes, it is deemed proper to give public notice that the practice must be stopped and that after a reasonable time violations of the statute will be prosecuted.

"Any such empty marked and branded cigar boxes found in the hands of dealers on and after May 1, proximo, will be seized for forfeiture and personal proceedings will also be taken under section 3455, Revised Statutes.

"JOHN W. YERKEN,
Commissioner."

FACTS ABOUT WALL COATINGS.

Dealers should remember that a wall coating bought cheap must be sold cheap. That a wall coating offered at a cheap price must be either an inferior article or one for which no demand exists. That profit and not price is what should be considered and that no matter how cheap an article may be bought, if it cannot be sold at a profit it will not help pay expenses.

The Alabastine Company, of Grand Rapids, Michigan, has a well established and increasing demand for Alabastine, and is said to be the only manufacturer of wall coating in the world that does all the advertising and pushing, creates, maintains and adds to the demand alike for jobber and retailer.

The Alabastine Company this year is advertising in an extensive manner in the leading magazines, getting articles on Alabastine purely on its merits, and is also advertising in thousands of local country papers, the result of which must be a demand greater than ever before.

CLINICAL LABORATORY WORK.

The Small Druggist Should Feature It, Says Prof. Mecker.

"It is time for the pharmacist to realize that to keep abreast of the times he also must branch out. We are teaching our students clinical laboratory work in all its details, believing that this branch is today offering exceptional opportunities to the pharmacist."

So declared George H. Mecker, M.S., Ph.D., professor of physics and chemistry and director of the chemical laboratory at the Medico-Chirurgical College. Professor Mecker, in discussing the matter, further said:

"Physicians to-day are dealing more and more with the big firms that are putting up the prescriptions he uses. One cannot blame him. These firms put up prescriptions by the thousand while the druggist on the corner will put up one, consequently, he would often rather trust the firm that has, and proposes to keep, a reputation than some corner druggist. As a result, this druggist must work with the physician in another way and that is by doing his laboratory work.

"The old days when the family doctor examined the tongue and the pulse, are gone. Now-a-days the physician depends largely upon his chemical analysis for his diagnosis of disease. But the busy practitioner has not the time, in many cases the apparatus, for this sort of work. This is where the pharmacist could make himself invaluable. He need not depend on the physician for the work either.

"Then again, many physicians who now do this work, would be only too glad to transfer it to another. I have had physicians come to me with samples of urine, asking me to test it. They have admitted that they have made these tests for their patients, but wanted to be entirely satisfied in their own cases. Many diseases are determined by tests such as the competent pharmacist would be called upon to make.

"This idea does not apply alone to the student now in college. All pharmacists should fit themselves for this sort of work. They will have to be educated to it and we are doing our part here in college by impressing its importance upon our students."

SANTA FE SELLS GUM.

The annual report of the Santa Fe Railroad System for the year brings out the fact that the company is a large dealer in chewing gum.

In the 400 stations between Chicago and the Pacific coast are slot machines containing gum. Into these machines last year were dropped 1,150,000 pennies for gum, the sum aggregating \$11,500.

SODA IN KANSAS CITY STORE

W. M. Federmann Explains His Fountain Methods

Opposed to Alcoholic Drinks—Proprietor's Name Best Title
—Soda Should Be Better Than That of Competitors—
Pleased Customers Best Advertisers—New Ideas
Adopted—Wide Range of Beverages—Fancy Drinks

At one soda water fountain in Kansas City, Mo., between 2,000 and 3,000 mixed and plato sodas are served every warm day during the season. The dispensing is under the direct supervision of W. M. Federmann and the place is his Diamond Drug Store, at 904 Main street, in Kansas City's noted junction. Mr. Federmann has advanced ideas on the conduct of a soda fountain. He believes it should be separate and distinct from every other department in a drug store; that only the most skillful dispensers should serve the public; that only the best materials should be used in the concoction of the beverages and that absolute cleanliness should be observed in every nook and cranny. His motto is: Please the Public.

Of course, Mr. Federmann has achieved success as a dispenser of soda water. He has been in Kansas City eighteen years. He began his business career in Cincinnati, where he graduated from the Cincinnati College of Pharmacy. For several years after his arrival in Kansas City, he clerked in a pharmacy at Independence and Forest avenues. He bought his employer out, and twelve years ago, with a partner, he acquired the Diamond Drug Store, which is in the heart of the city's retail district. One year ago he purchased his partner's interest and shortly after secured the Palace Drug Store, at Twelfth and Main streets. At that store his soda water plant is a duplicate of that in the Diamond Drug Store.

LIKES OWNER'S NAME AS TITLE.

Mr. Federmann doesn't like the titles "Diamond" and "Palace," however. He says a title for a drug store, other than that which the owner's name gives it, is too provincial. The stores, the Diamond and the Palace, have been known as such for a good many years, but now the name Federmann is better known. "If a man sells the right class of goods his name is good enough for his store," he said the other day. "I don't believe in a druggist hiding his identity behind a catchy title or an elaborate electric sign. I'm behind every article sold in either of the stores, and I am not ashamed to let the buying public know it. I want my name to be the guarantee of quality, the symbol of fair dealing. The words 'Diamond' and 'Palace' stand for nothing. The name 'Federmann' does."

The soda water plant in Mr. Federmann's Junction store represents an investment of \$5,000. The fountain is a Low Art Title, made in Boston. It has a 20-foot tile counter. In the basement directly under the fountain there is a con-

W. M. FEDERMANN.

tinuous electric carbouator, with an automatic attachment, which provides a continuous supply of charged water. Attractive signs, mirrors properly placed, a profusion of flowers, when in season, large cut glass bowls filled with crushed fruits and an array of fine glasses and silverware, make the fountain a sight worth going blocks to see.

SODA BETTER THAN OTHERS.

"Our aim," said Mr. Federmann in his talk with The Era man, "is to dispense soda water just a little better than anybody else. We use the best fruits, the best flavors, the best ice cream; our glassware is always clean, our dispensers immaculate and our prices reasonable. The way to achieve success is to earn it. That is what we are doing. We study our public and we cater to its wants. We make an especial effort to make the fountain attractive for women. The seats are comfortable and inviting, the service is prompt and electric fans keep the air cool. In fact, the fountain is an excellent retreat when the sun is shining brightly and we cultivate the habit some women have of making it a rendezvous after a vigorous shopping campaign."

"During the season we adopt every new soda idea and often invite suggestions from our customers. I remember that five years ago the dispensing of soda water in Kansas City was a most prosaic calling. Only the common flavors of commerce were

used. Crushed fruits were almost unknown. The use of ice cream was very limited. A sundae was really considered a remarkable refreshment. Since that time the business, from a monetary standpoint of view, has increased more than 50 per cent. I believe that improved service and up-to-date ideas are as much responsible for the improvement in a profit way as the increase in population. Kansas City is getting to be a soda water-drinking town and it is a source of gratification to me to hear, as I often do, that Federmann keeps the best soda water in town." I try to maintain that reputation by giving the soda drinkers the very best for the money.

NO LIQUORS AT FOUNTAIN.

"Here is another idea that I have demonstrated to be a success. I do not permit a drop of spirituous liquor behind the counters of my soda water fountains. A soda water fountain, I believe, should be the home of temperance drinks exclusively. As a result, no tired trippers ever bother the dispensers and every customer leaves the better for the visit."

"What is the range of drinks? From a plain soda phosphate to an egg Arctic flip. An egg Arctic flip has a different name in every city where there is an expert dispenser. Its ingredients? Oh, the usual materials—soda, ice cream, crushed fruit, nutmeg or cinnamon, with an egg shake for a top dressing or for a base, just as the fancy of the dispenser dictates. Malted milk is also popular, the phosphates are always in demand, and customers never tire of calling for crushed fruits. The most popular syrup, of course, is chocolate. It is syrup that stands far ahead of anything else. It simply has the call. The manner of making the syrup is an important factor. We have a process of our own. No, I'll not describe the process. We believe we make the best chocolate syrup in the town. That is one soda water secret that we will not impart to the trade. Of course, we use the best materials money can buy. It is our best advertiser. Those addicted to drinking chocolate sodas tell their friends and thus the advertisement goes on in an endless chain sort of way."

FANCY DRINKS.

"Coca Cola is often called for. Some of the soda water drinkers of the city have the Coca Cola habit. It is stimulating and I've known of persons who have called for the beverage as often as eight or ten times in a day."

"To revert to the absence of spirituous liquors from my soda water fountains," continued Mr. Federmann, "I not only ban alcohol in every form but also malts. Neither belongs in the soda water business. The sooner soda water dispensers adopt the idea, the more they will be thought of by the people, and the better their business will be. As I have said, I believe a soda fountain is strictly a temperance proposition. It is no place for liquors."

"Of course," said Mr. Federmann, resuming his discussion of refreshing drinks, "the nickel plays a prominent part in our soda trade. We charge five cents for ordinary ice cream and phosphate drinks, ten cents for an egg phosphate, a crushed fruit or a mixed drink. Our season opens

A LEADING FOUNTAIN IN KANSAS CITY, MO.

Proprietor, W. M. Federmann. Fountain, a Low Art Tile, manufactured by the Low Tile Co., Boston. Length of counter, 20 feet. Sells 2,000 to 3,000 drinks daily.

April 1 and ends about November 1. By season I mean the busy period. Then is the time we run our dispensers in shifts, five or four to a squad. During the cool months we dispense but chocolate, clam and tomato bouillon, beef tea and similar "warming" drinks."

EXCHANGING OLD FOR NEW.

Every druggist or other dispenser of soda water knows that there is big profit in soda water if the thing is handled properly. Many will glance at their old-time fountains and sigh that any attempt to corner the local trade means a new soda fountain and a lot of fuss and bother. Doubtless it does mean a new fountain. An authority in the soda trade recently stated that at least two-thirds of the dispensers of the country could with great profit trade their old fountains for modern apparatus, and that the past few years have demonstrated beyond question that the trade goes where there is purity of beverage, conspicuous cleanliness and progressive appearance.

Commenting upon this, the L. A. Becker Company, manufacturers of the Twentieth Century Sanitary Fountain, say: "The conclusion is correct and the advice is good, but a warning is needed. Look out that in the exchange you do not simply swap your old-time concealed syrup, drippy

spigot fountain for the same ancient system disguised in a new dress of polished marble and onyx."

Sanitary precaution is a safe investment and this explains the wonderful successes made by operators of the Twentieth Century Sanitary Fountain. Entire departure from old style construction and the application of advertising to the soda trade have revolutionized the business.

It is universal experience that the Twentieth Century Sanitary Fountain not only increases soda trade, but general business also. The Becker Company have many remarkable proofs of this and when you look into the Twentieth Century Sanitary system of refrigeration, the saving effected by single or double icing, etc., you begin to see wherein the claims for the Twentieth Century Sanitary are made good.

There is no opportunity like the present. Now is the time to discard the fountain of the past while it still has value for exchange purposes, and install in its place the fountain of the future—the Twentieth Century Sanitary. For full particulars, see advertisement on another page.

WHY HE BENEFITED.

Gyer—"My brother has been greatly benefited by patent medicines."

Myer—"What kind did he take?"

Gyer—"Oh, he didn't take any. He's a druggist." Ex.

DRUGGISTS AS OPTICIANS.

For many years past the physician was expected to look after the eyes of the public. Inattention on his part caused the fitting of glasses gradually to slip from his hands. It was taken up by the jeweler, who in many cases found it so profitable as to abandon his jewelry business altogether. It is now being taken up by the druggist, who seems to be a very proper person for handling this class of work. It is an extremely profitable adjunct, and in many instances, druggists have abandoned the drug business for optics, finding the latter more profitable, requiring less time and less financial risk. The Northern Illinois College of Ophthalmology and Otology for many years has been successfully engaged in teaching optics, and it has graduated many druggists. It is still energetically continuing its efforts to induce the druggist to put in an optical department as a side line. Even though it should not be desirable on the part of the druggist to launch into optics exclusively, it will always enable him to pick up a great many dollars which would otherwise go somewhere else.

The secretary of the school, G. W. McFatrieh, M.D., Masonic Temple, Chicago, would be pleased to correspond with anyone desiring to study this profession.

WINDOW ADVERTISING

Views of an Expert on Arrangement of Displays

Good Windows Pay Anywhere—Expense Trifling and Time Required Inconsiderable—Chief Requisite Thought and Attention—Silk Drapings more Economical than Crepe Paper—Price Cards Essential—Why are Most Windows Changed on Friday?

The difference between six dozen and twenty-two dozen of a fifty cent preparation represents the advertising value of one window during one week. A simple calculation shows that this one display increased the daily receipts of the store by about \$15 and the money and time invested were too trifling to deserve consideration. This is an example chosen at random by Mr. A. C. Field, the window decorator. In reply to the question: "Does window dressing pay?"

"There is no question about that," said Mr. Field, smiling. "It makes no difference what the location may be or how unfavorable the neighborhood, a druggist's windows will always increase trade, and the expense is so trifling that almost any increase means a profit. Of course, the value of a window depends largely upon a great many conditions, but some attention to the arrangement of the goods which the public can see from the street will pay in even the most obscure little drug shop in the back country.

GOODS SUITABLE FOR DISPLAY.

"The kind of goods which is suitable for display depends upon many conditions. Timeliness must be taken into account as a matter of course but aside from that there are a multitude of things which must be taken into consideration. A druggist's 'own make' goods naturally take the first place, but it is impossible to adhere rigidly even to that rule. Few druggists have a large enough line to keep their windows supplied with a sufficient number of changes. In that case sundries of proprietary remedies may become entirely proper. But there need be no difficulty in finding material for a window display. Every druggist, no matter how small may be his stock, has enough to keep weekly changes going indefinitely.

"In pushing preparations of their own make, cold-creams, lotions, tooth powder, etc., many druggists make the mistake of putting up a cheap article. They do not use the best material and their packages are not attractive. If they would not try to get quite so large a profit, they would do much better. Above all, other considerations are the quality of goods which you put into your window.

"It is not necessary to stick to articles put up in bottles or jars. There are the great mass of side-lines to choose from. Toilet goods are always a good feature. A window that appeals to women, showing toilet sets, requisites and accessories, is an excellent drawing card, and also one aimed at the men—hair brushes, razors and shaving requisites. But, as I said before, the druggist who cannot find something in

his stock with which to fill his windows is rather lacking in ingenuity.

PRICE CARDS.

"Price cards are of the greatest importance. Without tickets giving prices, you might as well make no display at all. The price is the very point about the goods in which the public is most interested. That is a personal affair that touches everyone who is attracted by the appearance of the goods.

"And the expense is trifling. A plain card, 5 by 7 inches, bearing a simple statement about the goods and the price is the best salesman, and with care will

last a long time. After the week's display is taken down, the cards can be laid away for future use when the time and season are again propitious.

"Any man can learn to write cards if he will devote an hour or two per day to practice. With this, as with everything else, you can't make a success of it if you go at it in a half-hearted way. Go in to win or not at all. A great help in writing cards is a book containing model letters which is supplied by a firm who make a specialty of inks and supplies for this purpose. An outfit of this kind, a supply of card-board which can be obtained from any stationer and a little perseverance will do the trick.

"The choice of subject matter is neither so difficult nor so important as it seems. Say very little—just enough. The price is all important. That with the name of the article and a simple catch line, is enough. For catch lines, use your taste and judgment. Keep on the lookout for ideas. Advertisements in magazines and elsewhere are suggestive. As an example of what I consider a good catch line here is the card of one of our toilet preparations: "There is beauty in every jar."

SINGLE ARTICLES OR MISCELLANEOUS DISPLAY.

Mr. Field does not believe in miscel-

A VIOLET CERATE WINDOW.

Size of window, six foot front, seven foot back, four foot six deep, and ten foot high. The back and sides covered with smilax and violets. In the center of the back was a large natural palm. Running around the top of the window was violet ribbon. The floor was covered with white cashmere. Two half round stands stood in each corner of the window; on each was placed Violet Cerate. In the center of the window was a large wooden box representing Violet Cerate, a reproduction of the small package. Coming out of the top of the box was a wax form. On the side of the box there was a small card which said: "There is beauty in every jar of Riker's Violet Cerate."

PLAYING CARD WINDOW, AWARDED SECOND PRIZE IN 1892 BY UNITED STATES PLAYING CARD COMPANY.

Front of this window, six foot wide, the back seven foot six. Eight foot high in the back and five foot six deep. The back of the window was covered with a figured deum. In the center of the back was a large diamond four foot six. Next was three foot six, and the other two foot six. They each stood six inches out from the other. On the back of the wall was a clown riding on a bicycle. The effect when standing in front of the window was like looking into a camera. On the right and left hand corner, as the picture shows, there were two hearts. Either way you read them you will find the cards placed, Ace, King, Queen, Jack and Ten. The floor of the window was made up of the usual playing cards, poker chips and poker chip boxes.

laneous displays, that is, a heterogeneous collection of all sorts of goods in one window. When reminded of the success of certain windows of this kind in the city, he said:

"The plans mentioned are in perfectly abnormal locations. In those crowded business districts people crowd the streets at lunch time and idly flock about the windows. That makes it possible to dispose of stuff, of which the ordinary druggist would not make one sale in a life-time.

"Of course, I do not mean to condemn assorted windows. For instance, on one showing everything for the teeth, brushes, powder, pastes, washes, etc. These are most effective, but as a general rule, one article at a time catches the public. During an experience of seven years with druggists' windows, in New York, Philadelphia and other large cities, I have never known it to fail.

SHAPE AND SETTING OF WINDOWS.

"Much depends upon the shape and setting of a window, the distance between the glass and back wall, the depth from the observer's eye to the floor, etc. The floor of the window should be on a level with the bottom of the glass if possible. This saves waste of goods. If the floor is below the line of sight, it will be necessary to pile in dozens of packages before

you get to the point where people can see them.

"The depth of the window, the distance from glass to back wall, should be no less than two feet six inches. That is, I should say, a minimum. As a general rule, depth counteracts or rather equalizes the height of the window. Most windows extend far above the heads of the people looking at them. If the space is too shallow, and the goods are arranged in the usual pyramidal form, a tall front glass will make your display look as though a derick had fallen upon it.

COLOR SCHEMES.

"The choice of color is a matter of taste of course, but also one of convenience. As nobody buys a complete new outfit every time the window is changed, it resolves itself into a question of the best material available. By taking thought a few days in advance this may be adjusted very satisfactorily.

"If the preparation displayed happens to be a light package like cold cream, use green or pink drapery, and if a red dentifrice, use pure white. The trick is to get the tints to harmonize. Boisterous colors will not get along peacefully with subdued tints. Green with pink makes a very effective combination if the shades are the right ones.

"Unattractive packages need not be hopelessly discouraging. The more attractive the package, the less of additional decoration it requires to secure the desired effect, of course, but if the carton is not decorative, that quality can be added. Take, for instance, extract of callisaya, everybody knows what the ordinary package of that is; merely a plain carton with lettering. Here is a scheme which I am using now: Apple blossoms on branches (the back of the window; the floor is covered with grass; in the centre is a log of wood and a stump, out of the top of which green blades are sprouting; the packages of callisaya are hung upon the boughs among the apple blossoms; the tickets read: 'Now is the time to take — callisaya; it tones the system, prevents malaria and banishes that tired feeling!'

MECHANICAL AND LIVING DISPLAYS.

"Among outside attractions there are, in my opinion, four unusually effective means of attracting attention—flowers, live animals, mechanical figures and devices, and the living human figure. These are all more expensive and troublesome than the stock display. Paintings and water colors are not suitable for druggists' windows. Will not animals and moving figures draw attention away from the goods offered? Not if the decorator

A. C. FIELD.

knows his business. The attraction will draw the crowd; it is up to him to make it count. Cards, if properly used, will attend to that. Of course, the greater the attraction, the greater the care that must be taken to prevent the effect from going to waste.

THE FRIDAY QUESTION.

"A display should be run long enough to show what it can do. The weekly change has so much to recommend it that it seems to be the rule everywhere. That suggests an interesting question, one which I should very much like to have answered. Why do almost all druggists change their windows on Friday? If you go into almost any store on a Friday morning you will find everything topsyturvy, and everybody out of joint, from the proprietor down to the boy who holds the box of tacks. In the average store everybody dreads those windows; why, I can't understand, for that is a simple matter when approached in the right way.

"Instead of 'ripping things up the back' generally, every Friday morning, it would, in my opinion, be much better to divide the unpleasantness between two days. If you have two windows, change one on, say, Tuesday and the other on another day, devoting a half morning to each. Give an impression that there is always something doing in your store."

Then, with a smile, Mr. Field added epigrammatically, "It is a good thing to make people think you are alive, even if you are not."

A WINDOW DECORATOR BY HEREDITARY.

Mr. Field says window decoration is a second nature to him, for his father followed the business for thirty-five years. The son is fond of his work, a fact which is easily apparent in every detail of his windows. He has been a decorator for ten years, beginning with the arrangement of the interior of dwellings, hall furniture, cosy corners, etc. For the past seven years his attention has been devoted to druggists' windows exclusively. For three and a half years the windows in the stores of George B. Evans, of Philadelphia were his especial charge, and later he was employed by the corporation of Hegeman. At present he devotes his time to the windows of the Riker Drug Stores.

BUSINESS RECORD.

ALABAMA.

Brundage.—M. W. Britt, succeeds A. G. Seay.
Camden.—Foster & Jones, succeeds R. D. Jones.
Scottsboro.—Hackworth Bros., new firm.
ARIZONA.
Phoenix.—A. L. Cornwall, succeeds James W. Doud.
Phoenix.—N. N. Miller, succeeds T. H. Hudson.

ARKANSAS.

Phayetteville.—Hight & Hulse, new firm.
Hope.—O. M. Battle, succeeds Battle & Waddle.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued March 14, 1905.

- 784,596—Simon Schlagen, Chicago, Ill. Filling apparatus for liquids.
- 784,622—August S. Lindemann, Milwaukee, and Henry F. Stock, Waukesha, Wis., assignors to Milwaukee-Waukesha Brewing Company, Milwaukee, Wis., a corporation of Wisconsin. Bottle soaking machine.
- 784,632—William M. Ricketts, Columbus, Ohio, assignor of one-half to Colonel E. Bright, Columbus, Ohio. Inhaler.
- 784,640 Robert Suchy, Griesheim-on-the-Main, Germany, assignor to Chemische Fabrik Griesheim Electron, Frankfurt-on-the-Main, Germany. Process of making chromates.
- 784,645—Hubert L. White, Utica, N. Y. Inhaler.
- 784,656 Henry W. Brent, Jr., New York, N. Y., assignor of one-fourth to Charles S. Wilson, Washington, D. C. Non-refillable bottle.
- 784,688 Gustav L. Kleiser, Christiania, Norway. Corkscrew.
- 784,729 Edwin G. Bates, New York, N. Y., assignor to The Bates Machine Company, New York, N. Y., a corporation of New Jersey. Numbering machine.
- 784,830—Martin L. Beistie, Ingram, Pa. Medicine spoon.
- 784,851—Frederick M. Gissel, Chicago, Ill. Device for removing internal bottle-caps.
- 784,868—Jean A. Leu, Montreal, Canada, assignor of one-half to Numa Huguenin, Montreal, Canada. Bottle support and protector.
- 784,914—William J. Boyle, Lewiston, Me., assignor of one-half to William J. O'Brien, Bath, Me. Nursing-bottle holder.

- 784,941—Francis S. Hefferman, Springfield, Mo. Non-refillable bottle.
- 784,975—Louis N. Bishop, Dayton, Ky. Non-refillable bottle.
- 785,001—John A. Hicks, Summit, N. J., assignor, by mesne assignments, to The Auto Stopper Company, New York, N. Y. Machine for bottling liquids.
- 785,003—Paul Julius, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany, a corporation of Baden. Dichloro-dimethyl-fluorane and process of making same.
- 785,011—Abbot A. Low, Horseshoe, N. Y., assignor to The Auto Stopper Company, New York, N. Y. Secret-sealing means for vessels.
- 785,012—Abbot A. Low, Horseshoe, N. Y., assignor to The Auto Stopper Company, New York, N. Y. Bottle.
- 785,013—Abbot A. Low, Horseshoe, N. Y., assignor to The Auto Stopper Company, New York, N. Y. Bottle mouth and neck.
- 785,062—Earl Clemens, Chicago, Ill., assignor of one-half to Henry E. Lazarus, Chicago, Ill. Bottle-stopper.

TRADE MARKS.

Registered March 14, 1905.

- 44309—Tooth and mouth cleansing preparations. Albert M. Pearson, Cleveland, Ohio. The word "Smokers" associated with quotation marks.
- 44310—Remedies for certain named diseases. William J. Zelner, San Francisco, Cal. The representation of a man leaping or dancing with joy etc., the

representations of a crutch on one side and a walking-stick on the other ailing to the ground.

- 44,311—Preparation for the treatment of certain named diseases. Carder & Gates, Jerico Springs, Mo. The word "Cassenna."
- 44,312—Liquid preparation for the treatment of certain named diseases. John W. Cotterel, Harrisburg, Pa. The compound word "Oil-Thunder."
- 44,313—Preparation for rheumatism cure. George Anton Georgiad, New York, N. Y. A rectangular border of Greek design inclosing a heart surmounted by a cross springing from the upper central hollow. Superposed upon the heart is a double-headed crowned eagle, upon each wing of which are four squares bearing respectively, the letters "H," "M," "K," "S," "E," "O," "C" and "M," etc. On one side of the eagle and on the heart are the words "The Empire" and on the other side "of Byzantium." In one upper corner is a bull's head with the words "The Great Heads," and in the opposite upper corner a star and crescent.

MARKET REPORT

RESTORE BROMIDES.

Jobbers Cannot Obtain Supplies, So Old Prices Maintained.

CANNOT SELL AT NEW CUT FIGURES GOODS BOUGHT AT OLD PRICE LEVEL UNLESS NEW SUPPLIES CAN BE OBTAINED FROM MANUFACTURERS AT THE GERMAN SYNDICATE'S QUOTATION AND THIS IS IMPOSSIBLE.—GENERALLY STEADY BUT DULL MARKET.—CODLIVER OIL FIRING.—SAMBURBA BARK LOWER.

New York, March 20. Conditions have altered very little during the past week. The general tone continues steady despite some irregularity in a few lines. But there has been a gradual falling off in the volume of transactions. In fact, the market is rather dull and uninteresting, with little feature. Jobbers report a steady movement of goods to consumers, but are willing to see an improvement in the demand. The position of bromides is paradoxical. While all the leading manufacturers are quoting on the low basis established by the German syndicate, they are persistently refusing to fill orders at such prices, except to old customers for actual requirements. The agents of the foreign syndicate are pursuing the same policy, compelled by their inability to produce sufficient supplies to meet the demand. It is therefore exceedingly hard for jobbers to replenish their stocks at the new price level, and in consequence, they are refusing to supply retailers at a reduction from old figures. Those jobbing houses which openly lowered their quotations on bromides last week have this week restored them to the former level. Cod liver oil is unchanged by jobbers, but the wholesale market is firmer and some manufacturers of the Norwegian have advanced their figures from recent low levels because of bullish developments regarding the quality of new oil and the comparatively short period left for this year's catch.

OPUM.—While local conditions and the size of stocks in foreign markets tend towards a decline, the undoubtedly great injury caused by frost in Turkey to the crop, operates to hold values at the present level. The demand has dwindled materially and only a very moderate business is reported by jobbers. It is now stated that the general opinion in Smyrna is that this crop will not yield more than 4,000 cases. Jobbing prices remain unchanged at \$2.15@3.20 for nine per cent., and \$2.25@3.40 for eleven per cent.; powdered, \$4.00@4.25 for thirteen per cent., and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—A moderate consuming demand continues, but nothing of interest has developed. Conditions are quiet and steady. Jobbing prices are unaltered, being \$2.60@2.70 for eighths, in

ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.30@2.40 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—A routine, quiet, steady market. Statistical influences continue bullish, Java bark shipments for the first half of March aggregating only 217,000 lbs. There is little activity anywhere, however, and demand from consumers on jobbers is of moderate extent. Unchanged jobbing prices are 23¢@23½¢ for bulk in 100-oz. tins, 23½¢@24¢ in 50-oz. tins, 24¢@24½¢ in 25-oz. tins, 25¢@25½¢ in 15 or 10-oz. tins, and 30¢@31½¢ in ounce vials, according to brand and amount.

BAYBERRY WAX.—Diminishing spot stocks produce a steadily hardening market. Moreover, there is a lack of offerings from producing markets. The principal local holder controls most of the stock in this market and refuses to sell, save in single barrel lots. Prices have naturally jumped and a proportionate rise makes jobbing quotations 40¢@45¢ per pound.

BROMIDES.—As stated above, it is practically impossible to obtain supplies from either American or German manufacturing sources at the low figures recently inaugurated and now generally officially quoted. In recognition of this situation and to protect themselves, jobbers have returned their quotations to the old level. The present prices are: Potassium bromide, 35¢@45¢; sodium bromide, 38¢@48¢, and ammonium bromide, 44¢@54¢, all per pound.

CODLIVER OIL. No change in jobbing prices, but the wholesale market is firmer and the recent radical cut by a Norwegian manufacturer is losing its effect. Some makers have pushed values up again, and a general advance is probable, for the quality of the new oil is excellent and only a few weeks remain of the regular fishing season.

OIL CITRONELLA.—A reactionary movement has developed, and prices have advanced. This is largely due to speculative manipulation, local supplies being quietly bought up and controlled. No new offerings are expected from Ceylon before July and present arrivals are small. Naturally, jobbing prices have risen to the level of 55¢@65¢ per pound.

SILVER NITRATE. Because of the weakness of the metal, manufacturers have reduced prices two cents. Jobbers also have lowered their figures to 43¢@48¢ per pound.

BERBERIS AQUIFOLIUM.—As reported some weeks ago, supplies are very scarce and jobbing prices have advanced to 30¢@35¢ per pound.

OREGON BALSAM.—Lack of demand and some desire to move stocks cause a lowering of jobbing prices, which now are \$1.00@1.65. These quotations are representative, but the price range might be made wider, according to brand, quantity and seller.

SAMBURBA BARK.—Following last week's decline, comes another drop. The weakness is due to keen local competition. Jobbers are quoting 30¢@35¢ per pound.

GRINDNELIA ROUSTA.—The lack of supplies is more imperative, causing a rise in jobbers' terms to 28¢@35¢ per pound.

MATICO LEAVES.—Although a wide range of prices is offered in the market, the average is firmer and higher, so that jobbing

quotations may be given as 40¢@45¢ per pound.

LYCOPODIUM.—This commodity is expected to advance as spot stocks are very light and the next crop is hardly available before September or October. Present jobbing prices are \$1.05@1.20 per pound.

OIL LEMON.—The wholesale market is firming and one brand has risen three cents. Other sellers are said to be waiting the development of a good demand before advancing values. Jobbing prices unchanged at 90¢@\$1.15 per pound.

OIL ORANGE, SWEET.—Like other Mission essences, this is firm, and one brand has risen ten cents. Local jobbers have made no change in their prices of \$2.70@2.50.

PINK ROOT.—In the wholesale market, another advance of two cents has occurred because of scarcity, but jobbers do not follow. Still 40¢@45¢ per pound.

LIQIDIT STORAX.—More interest has developed and a two cent rise has been registered in the wholesale market, but jobbing quotations hold unchanged at 25¢@35¢.

STEARIC ACID.—A decline of half a cent is the feature of the primary market, but without effect on jobbers, who still quote 18¢ per pound and 30¢@35¢ per pound for the C. P.

GREASE-PROOF OINTMENT JAR.

Bogart & Hopper have added to their line of turned-wood boxes a new ointment jar that should prove very interesting to druggists. This jar is of turned wood and finished plain or highly polished. Inside is a heavy coating of white enamel

which is impervious to grease. A screw cap seals the package. Its advantages over glass are many: it costs less and is unbreakable. Six sizes are offered, 1/4, 1/2, 1, 2, 4 and 6 ounces, full measure.

Write Bogart & Hopper for samples, which will be sent free. Their address is now 133 William Street, New York. When writing, mention The Era.

NEW BIRCH OIL MILL.

A birch oil distilling mill will soon be in operation at East Hampton, Conn., near Lake Pocotopaug. A New York concern will run the enterprise, distilling the oil, which is sold as oil of wintergreen.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, MARCH 30, 1905.

Number 13.

EDITORIAL COMMENT

A Great Gain in New York.

The announcement that the number of members enrolled upon the records of the new N. A. R. D. Association in this city has been increased by upward of four hundred since the general organizing mass-meeting, shows what may be done after a movement has been given a good start. The largest local in the country now has as members more than half the druggists in Greater New York, and the greatest number have been enrolled within the past few weeks. This does not, however, mean that the bulk of the work was done during that time, but rather that all the hard work which has gone before is beginning to bear fruit.

The preliminary labor has been tedious, and at times almost disheartening, but the end will justify all the effort expended. The end has never been in doubt, although the difficulties were many. Support of this body which had brought about the adoption of the serial numbering plan by a goodly number of the big proprietary manufacturers was plainly and admittedly the duty of New York druggists. Not a little of the influence which finally shattered the wall of cynical and suspicious indifference which separated the drug trade of New York from the National Association has been supplied by the manufacturers. Their conduct during the trying campaign now drawing to a close was straightforward and admirable in every respect.

The New Trade-Mark Law.

The trade-mark bill, to which reference has been made in these columns, received the approval of President Roosevelt on the twentieth of last month. Some misapprehension as to its effect upon rights granted under the old law has been caused by the many circulars sent out by attorneys anxious to aid in securing registration. To those who are in doubt we can state that re-registration is desirable, but in no sense is it necessary for the protection of trade-marks granted under the old law. The new provision offers

greater protection, but it preserves all rights already granted.

Some of the advantages of the new law as pointed out in the Bulletin of the U. S. Trade-Mark Association are as follows:

"It gives jurisdiction to the Federal courts of actions against infringers engaged in interstate commerce. Under the old act, these courts have jurisdiction only when the infringing mark is used in foreign commerce.

In any action for the infringement of a registered trade-mark where the plaintiff prevails, he may in the discretion of the court recover damages in three times the amount of damages actually found to have been sustained.

"An injunction obtained in a suit before the Federal courts may be served or enforced anywhere in the United States, instead of only within the circuit where it was issued as formerly.

"Infringing labels or wrappers bearing marks found to infringe may be ordered delivered up and destroyed.

"Registration under the new law may be made in the exact form in which the mark is actually used. Formerly registration has been so restricted by the requirement that the 'essential feature be specified, that registration has seldom been obtainable in other than a mutilated form from which the mark actually used was often unrecognizable."

Professionalism vs. Commercialism

Those who were fortunate enough to attend the last pharmaceutical meeting of the Philadelphia College of Pharmacy enjoyed a discussion, to hear which was easily worth a trip of many miles. The subject under consideration was that of "Ethical Pharmaceutical Practice," and among the speakers were such masters in both theory and practice of the calling as Prof. Hynson, Dr. Alpers and Mr. Beringer.

During the course of the remarks it became quite evident that the ethical side of pharmacy is not a thing of the past. Prof. Hynson even going so far as to declare that its pursuit could be made to pay in dollars and cents, and the recompense was both more generous and less uncertain than that connected with pure merchandising. Dr. Alpers held that the pharmacist should elevate the commercial part of the vocation and make it subservient to the professional portion.

Creditable to the Profession.

Somebody ought to see to it that some of the statements made last week by Dr. Diekman about Board of Pharmacy work are given wide publicity in the daily papers. He said that the results of the investigation into the quality of the preparations sold in our drug stores were entirely creditable to the pharmaceutical profession. Since certain dailies have in the past distorted a report of the same gentleman to the discredit of the pharmacist, it is only fair that they give these remarks equal prominence and undo some of the wrong which they have committed.

Dr. Diekman said at the meeting of the College of Pharmacy that "In every instance where impure cream of tartar was obtained, a grocer was the offender, and not in a single instance, the pharmacist. Statements appearing from time to time in the columns of the daily press, alleging that many pharmacists (90 per cent. in one instance) are deliberate and intentional violators of the public health laws, are certainly not substantiated by facts or conditions as we found them. On the contrary, the results of the investigations of the Board of Pharmacy are entirely creditable to the pharmaceutical profession."

Inspections by representatives of the Board are undoubtedly a wholesome influence, and it is a pity that the work done is not more extensive. During the year 1904, 2121 samples were collected, and since many of these were obtained from grocers, it seems reasonable to suppose that the stock in trade of some pharmacists was not sampled at all. The report would be more valuable and convincing if it covered the entire field, and were not restricted to certain predetermined articles from selected stores. We feel certain that the results of an inspection of all the articles in all the drug stores of the city would be still more creditable to the profession.

Advertising Essentially Honest.

A statement made by Mr. Gould to a body of pharmacy students is a bit surprising—until one considers the explanation. He said in effect that there is no such thing as cheating in advertising, and this, for the very simple reason that the business is so open and public that no sort of misstatement in a display announcement can succeed in deceiving anybody.

That is a very curious view upon a very curious subject, but the gentleman who has discovered it has every means of knowing whereof he speaks. Moralists have found fault with American advertisements, insisting that the printed claims for the virtues of the goods advertised invariably overstated the case. If, however, the extravagant statements are always discounted

in the proper amount, the advertising does no harm, whatever may have been the intention. Another thing, if the excessive claims have no effect whatever, why indulge in extravagant statements at all?

Dr. Wiley's Prescription.

All those who gave up hope when Dr. Osler sentenced men of above forty to comparative uselessness may take a fresh grip. Dr. Wiley has provided an antidote. Just as we are becoming reconciled to the thought that modern life wears out good men before they have fairly begun to live, he declares that science has already done much to prolong man's usefulness, and that with care we may be worth the space we occupy at ninety.

His recipe is simple, although the ingredients are not to be had in every drug store. A man to be useful at ninety must attend to the following matters somewhat earlier in life: As a baby, he must not be too fat. He must have a good pedigree and his youth must be one of temperance and self-restraint. He must not work too long and hard and must devote an equal amount of time to play. He must not eat or drink too much, and, above all, he must not worry about anything.

Most of us will decline the proffered help with thanks. The prescription is too hard to fill, especially the items calling for plenty of play and no worry.

Multum Better Than Multa.

One of the more thoughtful of the newspaperers, in discussing the prevailing cry of poverty in our schools and colleges, gave the following sage advice: "Multum is better than multa." While this may not be directly applicable to our colleges of pharmacy, yet it may very profitably be borne in mind. It is better to give much instruction in a reasonable number of courses than to divide the same effort among many courses.

Nearly all the large universities and colleges are pleading for increased endowments and donations, and cutting down expenses. The explanation is that they have been too ambitious, that courses and equipment have been multiplied and magnified beyond the power of maintenance. The result has been an increase of expense with no adequate return. It seems that unrestrained competition is not an unmixed blessing even in the domains of education.

Is this the proper attitude for the pharmacist in approaching questions which concern the morals of the people? "I am running a drug store, and it is my business to supply people what they ask for. It is not my fault if they misuse what they get. Anything can be misused."

Local Physicians' Associations.

Druggists have shown how a local association may make good its demands, and the doctors are, it seems, beginning to learn the lesson. Elizabeth, N. J., has a Physician's Protective Association, and the activities of that body are not altogether pleasing to the pharmacists. A recent proposal contemplates a ban upon all drug store advice as to the treatment of disease, the doctors to determine what is counter prescribing and what is not.

A similar association in Bayonne has occasioned considerable friction between druggists and doctors. The pharmacists received letters warning them against dispensing medicines without a doctor's prescription, and even hinting at rigid inspection and punishment in case the warnings were disregarded.

A story which is going the rounds shows how acute is the case. A druggist sold a simple preparation in response to a request for a "colic medicine." A doctor found the bottle in a patient's house. He called upon the druggist and said: "Look here, you did me out of a dollar. You'll have to quit that." Now it is said the druggists are planning a counter move to compel the physicians to give up carrying tablets.

Organization must be met with organization. The individual is helpless.

Bills Pending in Pennsylvania.

Prof. Remington last week announced to an assembly in Philadelphia that the prerequisite measure in which the pharmacists of Pennsylvania are most deeply interested had been approved by both branches of the Legislature, and would in all probability receive the Governor's approval. It seems likely, therefore, that of the States now considering college education as a requirement for registration the Keystone State will be the first to sanction this reform.

Mr. Pritchard writes that the Fruit Syrup bill, which was vetoed by the Governor a week or two ago, has been reintroduced with certain modifications to meet the objections raised by the Chief Executive. In his opinion, the chances of its becoming a law are good.

A third bill, and one which would be of surpassing interest to druggists if it were taken more seriously, is the measure backed by the W. C. T. U. That remarkable example of regulation building aims to do away with all sales of proprietary medicines, except the very few which fall under the supervision of physicians. It requires a doctor's prescription for every package of medicine containing a considerable proportion of alcohol. It is looked upon as too absurd to cause serious alarm.

System and Economy.

Quite the most striking contrast to the casual observer of the operations of the giant drug stores of the city and those of the more modest pharmacies in the back streets is the evidence of system in the former and the lack of system in the latter. Without doubt much of the success of the large establishments is due to this observance of order and sequence in doing things, for system is merely a forced habit of attending to the right thing in the right time and the right place. In that lies economy, profit.

The druggist who has only enough work for himself and a boy is apt to think that the refinements of system are not meant for his small enterprise. He is inclined to consider rules and plans as too much trouble, and since he looks after things himself, superfluous. No mistake could be greater, for the larger the number of affairs entrusted to one person, the more the need of method which will avoid waste of time, energy and material.

The chief function of system is the elimination of waste, the stopping of leaks and not that of a mere lubricant to keep the machine in smooth working order; and the small druggist needs to look after the leaks more closely than his more prosperous neighbor. Yet it is in the large, flourishing stores that care in this respect is most apparent.

The small pharmacist may admit the value of card indexes, checking systems and other well known waste reducing schemes, and at the same time convinces himself that in his case these things are impossible. A card index would require his entire attention and leave no time for the actual operations of the store. This may be a serious objection to that most highly developed instrument of system, but no one has so little shelf-room that he cannot arrange his goods in classified order so that his entire establishment will constitute its own index. A common fault in small drug stores, and one which is wasteful in a dozen different ways, is the placing of goods in a helter-skelter way, so that the exact location of an article depends upon the very fallible memory of the person who last set eyes upon it.

Order is the first law of the universe, and also of the business world. The very best stopper for leaks is everything in its proper time and its own place.

Anti-Narcotic Bill in Rhode Island.

In Rhode Island the druggists seem to be at odds with the physicians about a proposed anti-narcotic law. The bill which is before the State Legislature aims to restrict the sale of narcotics and the refilling of prescriptions. Violations are to be punished with a heavy

fine, and in case of a second offense with a loss of license.

From reports received, this measure does not seem to differ greatly from similar legislation endorsed by druggists in other States, but there must be some concealed twist to the bill, otherwise representative pharmacists of Rhode Island would not oppose it. Anti-narcotic legislation of some kind is necessary to save pharmacy from disgrace, and druggists will better serve the interests of their calling by co-operating in securing and modifying legislation than by opposing all regulation in toto.

Mark Twain and an Advertisement.

A characteristic story about Mark Twain shows that the goods do not always talk more effectively than the advertisement. It seems that on a recent trip across the ocean, the gentle humorist and a party of friends were greatly annoyed by the constant grinding of a patent piano-playing machine. He and the friends resolved to lose no chance to speak ill of the offending mechanism. But upon his arrival in this country he came across numerous excellent advertisements of the same machine and was convinced that there must have been some mistake. He called upon the manufacturer's office and ended by buying one of the instruments of torture for installation in his own house.

Of course, this may be only another example of the remarkably persuasive advertising which beguiled the immortal Mark, for it sounds uncommonly like one of that worthy's own stories. If that is the case, it deserves to live on its own account.

Not the Effect Intended.

It was a window-display of the non-descript variety. The central object, a large doll, rested with apparent discomfort upon the upright stoppers of rows of perfume bottles. About the doll were suspended various nursing-bottles and other infantile paraphernalia. The connection between the perfume, the nursing-bottles and the doll, which was of the ordinary kind suggesting mature proportions, was not striking to the eye.

"Hi, Billy," cried an urchin to a friend in the street. "Look at the loidy doll sittin' on the flower juice. Wot's them kid things buttin' 'er in the face fer?"

A California druggist does not believe in the necessity of restoring prices to those on the package gradually so that there will be no shock. "That," he says, "is like cutting off the dog's tail, a little at a time, so that it won't hurt him so much. To my way of thinking, one chop is all that's necessary."

Monopoly Abolished by Pope.

A drug store in the Vatican, Rome, has been closed by order of Pope Pius X. The pharmacy was opened some twenty-five years ago to supply the residents of the Papal palace with drugs. As goods shipped to the Vatican are exempt from duty and the doors were open to the public, the pharmacy drew much trade from the city drug stores. The brothers who had charge of the place even put up a line of elixirs and proprietaries under the Vatican trade mark. In closing this curiously situated pharmacy, the Pope seems to have been influenced less by the unfair competition with regular dealers than by reports that the sale of liquor was a source of revenue.

Decent and Indecent Languages.

Brother Ogier, of the Midland Drug-gist, has himself fallen into the muck pile in which he accuses the R. H. gentlemen of wallowing. In his denunciation of the highly flavored doings which good taste forbids us to chronicle in print, he slashes about in slime with an abandon quite beyond the famous committee's pale of indecency.

Indecency in the use of language lies not so much in the meaning of words as in the application thereof. Words intrinsically beautiful may be made to suggest filth quite as revolting as those which are not usually spelled out in print. Hurling such epithets as "swine," "vulture," not to mention others still more objectionable, does not suggest a love of sweetness and purity in word, thought or deed.

In view of the discussion still raging about the necessity of spike-tail coats and low-cut waistcoats to the peace of mind of college students, the members of a class in a Chicago pharmacy school have done a very sensible thing. They passed a resolution making the ordinary business suit the official costume to be worn at their commencement. How this particular plan would work in these parts is a question. Pomp and pageantry still command great respect on the Atlantic seaboard.

Members of the A. Ph. A. will begin work upon the programme to be followed at the meeting of the association at Atlantic City in good season. The local secretary and committee have been requested to report as early as May 1. It must be that the proposal to eliminate all entertainment features has not been accepted as a working basis.

N. A. R. D. Notes now also discovers that the Aristol patent and trademark have been dead since 1903. How does this affect the legal status of the fines collected in Chicago a few months ago?

EMANATIONS

Virtues of the Pachyderm.

The druggist had recently been made a member of the board of pharmacy, and being new to the office, he had somehow assumed a large share of the burdens, and he felt keenly the responsibilities of his duties. He had very definite ideas as to what an officer occupying a position of trust before the body pharmacutic, the public and the law should be and do, and he had performed his duty with conscientious care. It was therefore, not surprising that reports of dissatisfaction with his work and apparently vindictive criticism of his method should arouse in his heart a spirit of bitterness and a sense of outraged justice.

He did not realize until later that his most serious wounds, those that rankled the most bitterly, were those which affected his pride, his amour propre. In the first flush of his pain and disappointment he confided his trouble to the C. P. The old gentleman appeared to be more amused than sympathetic.

"You will have to get used to that," remarked the sage with a careless wave of the hand. "You now occupy a public position and must expect that sort of thing."

"But it is so unjust," protested the druggist. "There is absolutely no ground for it at all. I have done the very best I knew; I don't see why I should be open to these vicious attacks when there is absolutely no reason for them."

"No, you don't see it now," replied the C. P., "but you will some day when some of your present critics are on the rack. It is a wholesome and necessary part of our general scheme of government."

"Necessary and wholesome!" cried the victim. "Is it wholesome or necessary that a public officer should serve as a target for public abuse?"

The sage nodded. "It depends somewhat on the point of view," he said, "but as a general proposition, that's about it. Wholesome for the official, because it saves him from absolutism and necessary for the people because it gives them some hold upon their servant between elections."

"I did not bargain for that," said the druggist. "I thought and still think that when a man tries to do the square thing they ought to be satisfied."

"It takes more than that to make the world go 'round," replied the sage. "You forget that every change is supposed to be for the better. When a man becomes prominent for one reason or another, it does not necessarily follow that the spectators regard him as a superior and infallible being. Oh no. They accept his doings and says only so long as he voices their sentiments or carries out their wishes. You can disagree and argue with an individual; not with a crowd."

"That does not explain why every person of prominence should be riddled with criticism," objected the member of the board.

"It does for this reason," replied the old

gentleman. "It is impossible to please everybody all of the time. There will always be someone who will be disgruntled. The experienced politician does not mind the pounding. He keeps his ear to the ground and carefully compares the signs of content and discontent, so that he can keep on pleasing the majority all of the time."

"It's a hard place to occupy," sighed the druggist.

"No place for a mau with a tender, silken skin," corrected the sage. "I always feel sorry for the individual who has risen to a position in the public eye and cannot stand criticism. It makes life miserable and warps his judgment so that he cannot do himself justice."

"So the indifferent, cock-sure, thick-skinned person is, according to your light, the ideal officer," suggested the druggist with the suspicion of a sneer.

"Indifferent and cock-sure he need not be," replied the C. P., "but pachyderm, yes. Have you ever thought how appropriately the animals which represent our two great political parties have been chosen—an elephant and a donkey—both remarkably well provided with protective hide, both indifferent to the attack of mosquitoes, and capable of enduring an unlimited amount of clubbing. There is your model. Cultivate an impervious hide and you will be happy, although a prominent and useful citizen."

"But suppose a person's epidermis is naturally thin?"

"Then use skin food, wear a suit of armor or resign," replied the sage.

Food Preservatives.

The following are, in the opinion of Dr. Victor C. Vaughan, the essential requirements of a substance before its employment as a food preservative, should receive legal sanction: First, it must be a real preservative, keeping the food in a wholesome condition and not merely retaining the appearance of freshness, while bacterial changes continue. Second, in the largest quantities used, it must not materially impair any of the digestive processes. Third, it must not be a cell poison, or, if a cell poison in any amount, it must be added to foods only by persons qualified by special training and officially authorized; and foods containing these substances must be plainly labeled and the kind and amount of the preservatives used must be made known, not only to the buyer, but to the consumer.

Calomelol.

Calomelol is described (Apot. Zeit.) as a colloidal form of calomel. It is a grayish-white, odorless and tasteless powder, insoluble in alcohol, but in water it dissolves to an extent of about 2 per cent. It is also soluble in weak sodium chloride solution, in albumin solution and in blood serum. It is precipitated by acids, but dissolved again when the acid is neutralized. It is free from corrosive sublimate and contains 75 per cent. of mercurous chloride and 25 per cent. of albumin. "Calomelol ointment" is a soft, grayish-white preparation containing 45 per cent. of calomelol.

LETTER BOX

PRITCHARD ON BENZOATE BILL.

McKeesport, Pa., March 18, 1905.
Editor The Pharmaceutical Era:

There was not one member of the Pennsylvania legislature in either branch that could plead ignorance of the contents or purpose of House bill 63. Nor did the governor fail to "discover the real merits of the measure." Before our bill was introduced a printed copy of it, accompanied by a full and frank discussion of the articles which it was thought desirable to use in the fruits and syrups was mailed to the home address of every member of House and Senate. I, in company with several others interested, made a personal call upon Governor Penuypacker and presented a copy of the act, and enjoyed an exhaustive discussion concerning the action of sodium benzoate on the fruit and syrups, the source from which the chemical is derived, its dosage and physiological action.

His Excellency informed us that we need not make any apology for the proposed coloring agents, as he was willing to concede that they were harmless and that he "recognized the fact that an article of diet that looked handsome to the eye was always more pleasing to the palate." He further said, "about the preservative mentioned, of course, I know nothing, but I would naturally infer that anything that will stop fermentation in fruits will likewise stop the formation of the ferments necessary to carry on digestion." We were assured that if we could produce evidence from qualified physiological chemists that such an effect would not result, he might be led to look more favorably upon our contention. We were at all times and upon all occasions that presented, busy explaining to assemblymen and senators the nature of sodium benzoate. Indeed, so persistently was this carried out that the writer was frequently saluted by jocular members as "Benzoate Bill." The Dairy and Food department was also kept fully aware of every movement our committee made. Three weeks before introducing our bill, we submitted it to Dr. Warren, the chief of that department and requested that he suggest any improvement he might desire, or if he did not approve of the measure, to kindly so state. To this we never received any reply, except a formal acknowledgment from the assistant, Mr. Schock. We then made a personal call upon the commissioner, insisting that he give us his opinion on the measure. His only reply was to refer us to the governor.

Now, as to the misleading character of the title: On folio 324, Pennsylvania laws of 1903, will be found an act, the sole and only purpose of which is to permit of the addition of $\frac{1}{2}$ to 1 per cent. boric acid and the 1.50 of one per cent. of copper to articles of food. This act was approved by Governor Penuypacker. The title to the act, as well as the text, was the same nearly as possible as that

which appeared in House bill 63, and was the source from which it was taken. Now, Mr. Editor, in view of all this history of our bill, which you truly say in your editorial of March 16 "was planned and constructed in all sincerity, with an honest endeavor to render conditions less difficult for the legitimate druggist, and at the same time give the public more adequate protection," why should we be branded as intentional deceivers? Why should it be deemed necessary for even you, Mr. Editor of the Pharmaceutical Era, to remark "that had the measure been framed with a little more outspoken frankness and a little less tortuous subtlety, its chances would have been good?"

Our bill is again in the hands of the Senate, has passed first reading and bids fair to make the same favorable progress as before. Its present title was submitted by Representative Esler and the writer to His Excellency on Monday evening, the 13th inst., at the executive mansion. The governor pronounced it now invulnerable as regards constitutionality and said: "Gentlemen, in its present form it will stand before any court." But—the end is not yet. Let us hope it will be more pleasing when it is reached than was that of its predecessor.

B. E. PRITCHARD.

BENEFITS OF ORGANIZATION.

Fort Worth, Tex., March 25.

The condition of the drug business is improving rapidly, and it is easy to see that the N. A. R. D. is the reason. In this day of organization, when everything is organized, from the teamster to the capitalist, the druggist would be stepped on by all if he did not organize. When the retail drug men of the country become so well organized that they can act as one man, they will be able to get anything they ask for, as no commercial enterprise is strong enough to antagonize the entire outlet for its goods. Two or three cutters may sell more of an article than all the retail druggists in one town or county, but they cannot sell more than all the retailers in the whole country.

One of the most important things for us to do now is to form strong local associations, have a regular meeting night, have a programme and other committees to see that there is something of interest to be done at each meeting. Let us do this and get together, talk over our hard points, get a uniform scale of prices on bulk drugs, capsules, tablets, etc.

All druggists ought to have a fraternal feeling for each other. Their interests and troubles are the same. Next to a brother druggist, the druggist should esteem the public, his customers. Surely they are more to him than the man he buys from. They deserve the best he can give them, at as low a price as is consistent with honesty and quality. Give them cheaper medicines, but do it by making the manufacturer cut his fat dividends and the patent medicine man his printing bill. Don't cut the small per cent. we are now making on these goods. If the doctor will prescribe these high priced proprietaries, let us get together and charge a reasonable profit for them. Theo, if they kick, let him know that the proprietor and manufacturers are the ones to get after.

A great many retailers have been using alleged smuggled or imitation drugs, because they really believed them to be equal in medicinal value to those obtained through the regular channels. I have had drummer after drummer beg me to take their article and test it beside the known genuine. That was a strong argument, and they well knew that I didn't have the time or apparatus, or in some cases any known series of tests to apply for these goods. I think now, since the adulteration of these drugs is known, very few druggists will buy them. It isn't good business to give your customer a worthless drug, to say nothing of common honesty.

C. B. AMBROSE.

which druggists possess as well as others. In closing, let me urge every retailer to boost the N. A. R. D. It is our organization, working hard for us, and since it is fighting concerns of large capital, who will spend money in defense, it is necessary for us to supply it with money; so pay the dues and help it along, and the reward will come ere long in the receipt of larger profits.

C. B. AMBROSE.

OPPOSITION TO MR. EBERT.

Editor The Pharmaceutical Era:

As an alumnus of one of the schools of the Agricultural Station at Champaign, I wish to protest again Professor Ebert's unwarranted attack, and hope that the A. Ph. A. and N. A. R. D. will not stoop so low as to pull the chestnuts out of the fire for the patent medicine factories, the greatest mistake these societies could make.

I would rather be in the grip of the agriculturists who work for pure food laws, than in the grip of patent medicine factories. The people of this country want to know what they are buying. The Agricultural Department wants everything labeled according to contents, and the patent medicine crowd want to sell their dope without giving the label.

G. DAWES.

[We do not locate Mr. Dawes, as he fails to give his address, but we print his letter in accordance with our rule to give every man a hearing. Albert E. Ebert, of Chicago, has been actively connected with the drug trade for many years, and we

do not believe that he would undertake to influence any legislation which, in his opinion, was detrimental to the public welfare. He is altogether too conscientious and too level-headed a man to be identified with any other side of any movement, and everyone who knows him is cognizant of the fact that he is never the tool of any faction.—Editor.]

FOUNTAIN OR PHARMACY?

Bellingham, Wash.

Editor The Pharmaceutical Era:

When an outsider drifts into a modern drug store and beholds the immense space devoted to the soda fountain, is he to be blamed for supposing that the Epsom salt barrel may be empty, or that the stock of trusses is very small and that dust and cobwebs have been allowed to accumulate on the pharmacopoeia? Would his guess that the stock of drugs and sundries were being purchased on a very small scale and that the drug end of the business was being conducted on an extremely economical basis, so that the soda fountain bills could be met, be very far wrong? Could you blame him for thinking that a modern clerk could get along nicely with a slim knowledge of pharmacy, chemistry, etc., providing his ability to compound ice cream soda was of a high order? The outsider might be making a mistake, but it seems very natural for him to suspect that the druggist would do well if he would dump a few yards of his soda fountain on the junk pile.

A return to the compact, moderate-sized fountain of former times would not reduce the druggists' bank account. Those old fountains took up little room, seldom cost over \$200, and had a way of supplying most excellent soda. They served their purpose admirably. They were used as an attraction to bring people into the store. They were of secondary importance. The drug end of the business, the trusses, sundries, brushes, supporters, etc., were the thing. The fountain was simply a lure to bring people inside—an advertisement, as it were. At present the fountain is too often the "whole show." The drugs and chemicals, etc., are secondary. The immense capital tied up in the modern double-deck fountain, which only pays its way a few months in each year, could be used to much better advantage.

Competition by department stores, cut-rate prices on patents, increased expenses and other causes have combined to drive the druggist into side-lines, and often to neglect his legitimate business.

A pharmacy, if well-equipped, located and handled, should be more profitable than ever before, if we would keep pace with our neighbor, the dry goods and shoe man. Business methods in nearly all other lines have undergone a change in the past decade. The cloth and shoe man has outstripped us hundreds of years in the advertising department.

The remedy for decreasing business for a druggist is not additional lines of goods or a larger soda fountain, but improved methods of handling and pushing the sale of the lines he already carries. If the department store and dry goods emporium is selling the toilet soap, the perfumery and toilet preparations, whose fault is it? DO DRUGGISTS ADVERTISE ENOUGH?

Merchants in other lines are amassing princely fortunes by the aid of judicious

advertising. The percentage of druggists who advertise is small and many of these are cut-rate patent medicine advertisers.

Our worthy friend of the pestle and mortar is apt to say: "Oh, the drug business is a hard one to advertise. What can we do? Ours is a profession; we have to be conservative. Our soda water and elaborate fountain is our best advertisement. Besides, if we do not quote cut prices, we might as well keep out of the newspapers."

Another worthy man with streaks of silver in his hair will tell us: "Oh, I don't need to advertise. My acquaintance and reputation is so extensive and so well established that it would be a waste of money."

His arguments seem sound. But is he absolutely sure of the future? We will say that his stock is paid for, that he has some money in the bank, and possibly owns his own home. Suddenly, a younger man, equal in ability, industry and every other respect, equipped with newer ideas, opens a store a few doors away. He is progressive, a hustler and a skilful advertiser. He is not afraid to invest liberally in printer's ink of the right kind. In a year this young man is as well known and has a better business than his older competitor. Other competition, first class in every respect, creeps in. Our old friend is not so sure of his position now. But he is stubborn. He does not like to change his methods. He will not copy from his competitors. The result can be imagined.

The old saying—"Push your business, or it will push you"—is as true to-day as it ever was. It applies to all, the pharmacist as well as the other fellows. He cannot remedy matters by adding ten or twenty feet to his soda fountain nor by putting in a line of cameras, cutlery, batteries, jewelry or musical instruments and merchandise. The druggist had not the experience nor space to handle successfully these costly, slow-selling side lines. "Every man to his trade" is an excellent motto. If he will push and advertise his most profitable, legitimate lines—chemicals, prescriptions, trusses, crutches, suspensories, supporters, hot water bottles, syringes and specialties, etc., as hard as he does his soda water and bath cabinets, he will increase his deposits at the bank, besides having more time to devote to his laboratory. His time spent in working off a slow-selling bath cabinet would be better employed in getting up neat ads. for the local paper, describing the merits of his tooth powder and vermifuge.

It, no doubt, is gratifying to some to have a score or more of happy young people crowding their store from morning to night. Their merry laughter and careless chatter is very cheerful. The nickel or even dime that they leave behind helps to increase the day's sales. But the gruff old farmer, waiting patiently for a clerk to jar loose from the fountain long enough to sell him a three or four dollar truss, or the anxious mother, waiting to have her prescriptions filled for the sick child at home, look out of place amid so much glitter of marble, mirror and nickel plate, and so much mirth. They feel out of place, too, and no doubt wish the fountain and merry revellers were at the bottom of the sea, or at least less conspicuous. But they don't count.

"The fountain is my best advertisement," the druggist will tell you, gleefully. "Why, just look at the crowd. Did you

ever see anything like it? Talk about newspaper advertising? Why, I've got the newspapers beat. I've got all the advertising I want. It came high, but by George, it's worth every cent it cost. None of your slow, old foggy newspaper advertising for me. The drug business is too slow anyway. Give me a rattling good fountain and a crowd like that and the other fellows can sell the salts and castor oil."

Such men as the above are largely to blame for the increasing number of so-called prescription stores. The drifting apart of the professional and mercantile is to be deplored. The ancient and honorable calling of the apothecary is not one to be ashamed of. His place in the affairs of men is an important one. His work in life, if well and ably done, should win him the respect and esteem of his fellow man. If his compensation is not what it ought to be, considering the hours he has labored and the drudgery he has gone through, he yet has his reward in a clear conscience and no taint of remorse to sadden him, which is better than any riches the world could bestow.

We might add, however, while at it, that in the West, the calling of the druggist is often disgraced by men without conscience, who will do anything for gain. Sometimes the sign over the door, "Pharmacy," is a mere blind; it should read, "Saloon." Then, even worse than this type, is the man who cultivates the sale of morphine, cocaine, chloral, opium, codeine, etc., living off the nickels and dimes of the most unfortunate people on earth. That druggists stoop so low is surprising, but it is a fact, nevertheless, but happily, such monsters are not plentiful and their number is constantly decreasing.

The modern pharmacist is certainly up against brisk competition. The question is, does he keep pace with the aggressive merchant in other lines of business? Can he win back his trade in his own legitimate lines, especially toilet soaps, perfumery, face powders, face creams, toilet creams, etc.? Patent medicines are not so important; if he can't sell them at regular price, it won't pay him to sell them at all. Can he not build up a better trade on his own specialties—the best-paying line in the store? He can do it by the right kind of advertising. It will pay handsomely.

J. C. NATTRASS.

THE PATHETIC SIDE.

Brooklyn, N. Y., March 25, 1905.
Editor The Pharmaceutical Era:

I think you know my fancy for "snooping" round" on my day off. Usually I manage to shake business for the day and keep clear of drug stores, but last trip I saw a very tangible evidence of the superfluity of drug stores in the city of New York. At the corner of Broadway and One Hundred and Twenty-fifth street is an empty drug store. Glancing in through the windows, I could see the counters, cases, shelving, etc., in modern style and hard wood, probably the property of the landlord, as they were not removed by the departing apothecary. Just in front the subway trains go whizzing by in the open. The vicinity is mostly open lots.

As I walked on up Riverside Drive and thence home by the subway, I fell to musing on the pathetic story indicated by

that empty store, the plucky young fellow who opened there, with courage and bounding hope, fresh from the college, with all pharmacy at his fingers' ends and with, perhaps, a bonny young wife and a prattling babe. But the business did not come and the landlord at last turned him adrift, plus experience and minus money. I wonder where he is now? Very truly yours.

THOS. D. McELBENIE.

SOME TESTED FORMULAS.*

BY J. T. DAVIDSON, PH.G.,
Pueblo, Colo.

The object of the present article is to discuss somewhat, three formulas for preparations in common use at the prescription counter. All are workable, and none are original with the writer other than slight modifications or adaptations to make them more in accord with current needs. The merit of the three being as stated, that they may be prepared in the confidence that satisfactory articles from a pharmaceutical standpoint will result.

ESSENCE OF PEPSIN.

Pure scale pepsin	2 drams
Glycerin	2 fl. ounces
Dilute hydrochloric acid.	3 fl. drams
Alcohol	2 fl. ounces
Syrup	2 fl. ounces
Spirit of orange (fresh)	sufficient.
Caramel, sufficient.	
Water, enough to make . . .	1 pint

Reduce the pepsin to powder; mix with the glycerin; add the dilute hydrochloric acid; then the syrup and water sufficient to make 14 fluid ounces. Add the alcohol and a few drops of spirit of orange and enough caramel to color the liquid a light amber or sherry wine color.

The merit of this formula is, that it may be prepared in a few minutes, proceeding as directed above. Each fluid dram contains about one grain pure pepsin. In theory, one teaspoonful should digest or convert an indefinitely large quantity of proteid material. In practice, the amount of pepsin is too small to be of much value in the treatment of more than the most trivial dyspepsias, or to make junket, to which it is well adapted, or to be used as a vehicle for such remedies as iodide of potassium. There is also the disadvantage resulting from the formula containing alcohol; well known to inhibit or retard, or even nullify totally in time, peptic action; resulting in an inert although possibly still slightly-looking preparation. A better method would be to make an acid glycerole of pepsin according to the following formula, and which is to be diluted with simple elixir at the time of dispensing:

ACID GLYCEROLE OF PEPSIN.

Pure pepsin in scales	2 drams
Glycerin	3 fl. drams
Dilute hydrochloric acid.	36 minims
Water, enough to make . . .	1 fl. ounce

Reduce the pepsin to powder and mix with the glycerin and acid in the order named. Add water sufficient to make one fluid ounce. At first, the glycerole is turbid with admixture with bubbles of air. Later it forms a clear, yellowish, viscid liquid. This formula enables the prescriber to increase the quantity of pepsin

*Rocky Mountain Druggist.

to the maximum for good, quick effect without unduly increasing the amount of hydrochloric acid. A dose of pure pepsin, to be of particular avail, should, in the opinion of the writer, be not less than 5 to 10 grains. Hence, to secure the latter amount, if essence of pepsin was used, would necessitate a dose of 10 fluid drams and thereby give not only a bulky draught, but a considerable amount of alcohol, not always necessary for the patient if not positively injurious to the properties of the pepsin. There is less objection, therefore, to combining shortly before the time of giving, an acid glycerole of pepsin with a moderately alcoholic liquid, such as simple elixir, as an adjuvant, and which contains in each dose of one fluid dram 5 grains of pepsin, as in the following suggestive formula:

Acid glycerole pepsin 1 fl. ounce
Simple elixir 2 fl. ounces

The cost of one pint of essence of pepsin prepared according to the first formula, would be about twenty cents. The glycerole cost about eleven cents per ounce. Elixir of pepsin, bismuth and strychnine, N. F., leaves nothing to be desired as a formula, with the possible exception that it would be better to omit the strychnine, leaving that to the discretion of the prescriber. The quantity of strychnine ordered, however, may be dissolved in a little alcohol, adding the requisite amount of the basic elixir. There would be, following this course, greater latitude of dosage of an important and potent drug and corresponding satisfaction in giving what was required in the individual case.

Elixir of terpin hydrate and combinations are in frequent use. The following formula taken from Merck's Report is a useful one in so far as resulting in the preparation of a handsome pharmaceutical product. The objection to ready-made compound elixirs, such as elixir of terpin hydrate with heroin or codein, or elixir of iron, quinine and strychnine, is that it leaves the prescriber no option in the matter of regulating the dose of more potent remedies to the needs of the individual, and, also, that it conduces to mechanical prescribing, of which there is already a sufficiency. Therefore, if physicians can be educated to the fact that such remedies as codein, heroin, etc., may be prescribed in any amount desired by using the basic elixir as an adjuvant, much will be done towards smoothing the road to prescribing for the individual, and, incidentally, calling out the special skill of the pharmacist.

BASIC ELIXIR OF TERPIN HYDRATE.

Terpin hydrate 128 grains
Saccharin 2 grains
Alcohol 6 fl. ounces
Glycerin 2 fl. ounces
Simple elixir, sufficient to
make 1 pint

Reduce the terpin hydrate and saccharin to fine powder and dissolve them in the alcohol; add the glycerin and then sufficient simple elixir to make one pint. Filter. In this and other formulas for elixirs where haste is not necessary, it is good practice to allow the mixture to stand twenty-four hours or so before filtration.

The conventional formulas of the manufacturers call for one twenty-fourth grain of heroin in each fluid dram, or, if the combination be with codein, one-eighth

grain of the latter. All that is necessary to quickly prepare an elixir containing either of the above combinations, is to dissolve the heroin or codein, as the case may be, in a portion of the basic elixir, filtering if necessary and adding sufficient elixir to make the required volume. In the case of elixir of terpin hydrate with heroin, a few drops of dilute hydrochloric acid should be added to the heroin, in order to convert it into the more readily soluble hydrochlorate. The relative insolubility of terpin hydrate in the menstruum results in the production of an elixir having a considerable percentage of alcohol, which may be a disadvantage, especially where it is desired to give any considerable quantity of the remedy.

In elixir of iron, quinine and strychnine we have a subject of occasional discussion. The writer's experience leads him to follow Diehl's method in preparing this elixir. The same objection holds in this as in other formulas where a potent medicine is compounded with others of indifference as to the amount which may be given. It would be better from the prescriber's standpoint to omit strychnine, codein, morphine, heroin, etc., and other potent remedies from the elixir combination, since they may at the time of dispensing be added in amounts to suit individual requirements. From the pharmacist's viewpoint the preparation of the basic elixir is all that is necessary. Diehl's formula is:

Quinine sulphate 60 grains
Strychnine sulphate 1 grain
Citric acid 5 grains
Alcohol 3 fl. ounces
Syrup 6 fl. ounces
Pyrophosphate of iron . . . 240 grains
Spirit of orange 80 minims
Water 7 fl. ounces
Ammonia water, sufficient.

Rub the quinine, strychnine and citric acid with the alcohol and spirit of orange; add the syrup previously heated; then the pyrophosphate of iron previously dissolved in the water. Finally, add carefully, enough ammonia water (a few drops) to neutralize any free acid in the mixture. Let stand twenty-four hours and filter. This makes an elixir of good keeping qualities, apple green in color when first prepared, later turning somewhat darker, according to age. If kept in a cold place the elixir will become turbid, clearing as the temperature rises. It costs to make from eighteen to twenty cents per pint. This formula may be modified to make the elixir agree in dosage with the usual commercial preparations by increasing the quantities of quinine, strychnine and iron pyrophosphate. In this case, the amount of alcohol should be increased to four fluid ounces and the citric acid to ten grains, reducing the amount of water in the formula one fluid ounce.

Royal Flip.

Queen nectar syrup ½ ounce
Clairade syrup 1 ounce
White and yolk of 1 egg
Fresh cream 1 ounce
Cracked ice ¼ glass
Shake well together, strain
and add:
Curcua cordal 1 dash
Plain soda, sufficient to fill tumbler.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Estimating Tannin in Canaigre.

(P. Co.)—The best information on the standard methods of estimating the tannin of canaigre is to be found in the Proceedings of the Association of Official Agricultural Chemists, published by the Department of Agriculture, Washington, D.C., copies of which you can probably obtain through the good offices of your representatives in Congress. Canaigre contains about 30 per cent. of tannin, together with a bright yellow coloring matter much resembling gambier. Canaigre tannin is sold as an extract, which is prepared by treating the plant with water and evaporating the solution to either a thick syrup or to dryness, the operation being conducted in a vacuum. The extract is, of course, much more economical to transport and more convenient to use.

Of the two methods employed for technical analysis one depends upon causing the tannin, contained in a known weight of the watery extract of the tannin material, to combine with purified hide powder. The loss of weight which the dissolved material suffers gives the weight of the tannin. The other method, proposed by Lowenthal, estimates the tannin by its oxidizing effect upon standard potassium permanganate solution under suitable conditions.

Shampoo Cream or Paste.

(M. & P. Co.)—

(1.)
White castile soap 4 ounces
Potassium carbonate 1 ounce
Water 6 ounces
Glycerin 2 ounces
Oil of lavender flowers 5 drops
Oil of bergamot 10 drops

To the water add the soap, in shavings, and the potassium carbonate, and heat on a water bath until thoroughly softened; add the glycerin and oils. If necessary to reduce to proper consistency, more water may be added.

(2.)

Borax 2 ounces
Glycerin 1 ounce
Rum 10 ounces
Bay rum 10 ounces
Whites of egg 2

Incorporate the borax in fine powder with the glycerin and add the bay rum and rum gradually and without constant stirring to the mixture. The previously well-beaten white of egg is added and the whole

thoroughly stirred until an even mixture results.

According to Koller ("Cosmetics") a good shampoo powder is a mixture of ammonium carbonate, 1 part; borax, 1 part, and quillaya bark, 2 parts, with bay-leaf oil or some other perfume. The powder is made up in packets, with the following directions for use: Put the powder into a covered jug along with a cupful of boiling water, close the lid, and leave the liquid to stand awhile until cool enough to use.

Some Chemical Reactions.

(H. L. S.)—"I make a gargle of (1) copper sulphate, (2) tincture of iodine, colorless, (3) solution of hydrogen peroxide, (4) concentrated solution of boric acid, (5) distilled extract of witch hazel, variable quantities. When 1 add No. 1 to No. 2 the copper sulphate is coated white; then adding No. 3, q. s., the liquid is colored brown, probably CuO being formed. Adding No. 4 there is more discoloration, and when No. 5 is added the color is more or less restored. What chemical changes really take place?"

It is presumed that in preparing the above mixture there was used the decolorized tincture of iodine of the National Formulary, which contains sodium iodide, sodium tetrathionate and ammonium iodide, as these compounds are formed in making the tincture by the reaction between the iodine, sodium thiosulphate and ammonia water. In adding copper sulphate to the tincture the reaction is likely to be somewhat complex, but in a general way soluble iodides (sodium and ammonium) precipitate copper salts as white cuprous iodide Cu_2I_2 , which is colored dark brown by the iodine separated in the reaction. The reaction in question is thus represented:

It is also possible that the cuprous iodide may be partially dissolved in the sodium tetrathionate with the formation of other combinations. On adding to the mixture the solution of hydrogen peroxide, the latter is decomposed, more iodine being liberated, which probably accounts for the brown coloration noted. The copper may also be oxidized and some iodine acid be formed, the final reaction depending upon the amount of hydrogen peroxide employed, etc. The latter can also react with the alcohol of the tincture. On adding No. 4, some of the boric acid is probably thrown out of solution, the quantity, of course, depending on the amount of the liquids in the mixture. The addition of the distilled extract of witch hazel further dilutes the mixture and with the precipitation of organic matter, some basic copper compounds and iodine. The absence of exact data, however, makes it impossible to state definitely and accurately all of the reactions involved.

Grass (Green) Coloring.

(Moss).—Green colors are produced by the aid of chlorophyll, which can be easily prepared by treating triturated leaves with alcohol, and evaporating the solvent. In preparing green powders, use is often made of dried and pulverized leaves of a brilliant green color, among those most suitable being spinach, laurel, celery and parsley leaves. The combination of a yellow and a blue coloring substance produces

a green, and this knowledge can be utilized by the druggist in combining a solution of indigo-caruline with tincture of saffron to make a harmless green color. The following formula has been suggested:

Tincture of American saffron 8 ounces
Glycerin 8 ounces
Solution of Indigo-caruline, q. s.

Mix the glycerin and tincture together; then add the solution of indigo-caruline until the proper tint is obtained. The solution of indigo-caruline is made by dissolving one ounce of indigo-caruline in sixteen ounces of water.

There are also various anilin greens which may be employed for either aqueous or alcoholic solutions.

Books on Extracts, Etc.

(Moss).—For formulas for extracts, toilet waters, etc., the following books will prove helpful: The Era Formulary, \$5; Askinson, "Perfumes and Their Preparation," \$3; Cooley, "Handbook of Perfumes, Cosmetics and Other Toilet Articles," \$1.50; Deltz, "Manufacture of Perfumery," \$3; Koller, "Cosmetics," \$2.50; Snively, "Treatise on the Manufacture of Perfumes and Kindred Toilet Articles," \$2. On the chemistry of essential oils, etc., the following are recommended: Farry, "The Chemistry of Essential Oils and Artificial Perfumes," \$5; Jdris, "Notes on Essential Oils with Special Reference to Their Use, Composition, Chemistry and Analysis," \$2; Sawyer, "Odorography, a Natural History of Raw Materials and Drugs Used in the Perfume Industry, Including the Aromatics Used in Flavoring," first series, \$5; second series, \$6.

Red Ink.

(J. H. R.)—The usual formulas for red ink do not contain oxalic acid, though we suppose such an ink might be made. Here are some typical formulas which do not contain it:

(1.)
Brazil wood 4 ounces
Alum 2 ounces
Distilled water 2 pints
Boil for fifteen minutes, and strain; then add:
Gum arabic, powdered 1 ounce
Mix and bottle for use.

(2.)
Durable Red Ink (Winckler's).—Rub fine 6 parts of red carmine with 75 parts of liquid water glass. Dilute this mixture with 675 parts of rain water, allow to stand for a few days, and pour off the fluid.

(3.)
Dissolve 25 parts, by weight, of saffranin in 500 parts of warm glycerin, then stir in carefully 500 parts of alcohol and an equal quantity of acetic acid; then dilute with 9,000 parts of water, in which is dissolved a little gum arabic.

(4.)
Boil 4 ounces of Pernambuco wood with 16 ounces of dilute acetic acid, and an equal quantity of water, until 24 ounces remain. Add 1 ounce of alum and evaporate again until the liquid measures 16 ounces; add gum arabic, 1 ounce, and strain; lastly, add to the cold liquid, 1 dram of protochloride of tin.

(5.)
Eosin ink, also known as "scarlet" or "coral" ink, is made as follows: Dissolve

120 grains of eosin (water soluble) in about 12 ounces of water (hot); then add 2 ounces of alcohol and shake; finally add 1 ounce of mucilage of acacia and enough water to make 16 ounces.

Tobacco Cures.

(O. B. G.)—We do not answer queries by mail. It has been stated that most of the so-called "tobacco cures" consist mainly of combinations of gentian and licorice root, though we have never examined the proprietary specialty you name. A formula that has been suggested for the treatment of the "tobacco habit" is the following:

Silver oxide 1 grain
Caffeine 40 grains
Hop tree 10 grains
Pulsatilla 80 grains
Valerian 90 grains
Wintera 60 grains
Dyer's broom 60 grains

Mix and make into forty lozenges. The mixture is said to possess "tonic, alternative and sedative properties, besides the sustaining and substitutive virtues of caffeine."

Carbon Tetrachloride.

(F. X. C.)—Carbon tetrachloride is manufactured by the Acker Process Co., of Niagara Falls, N. Y.

SODA WATER FORMULAS.

Mint Sangaree.

Strawberry syrup 1 ounce
Pineapple syrup 1 ounce
Mint leaves 4
(Crush with ice against side of glass.)

Cracked ice ½ glass
Soda water, coarse stream.
Serve in 14-ounce mineral glass. Decorate with slice of orange and creme de mint cherries.

Ping-Pong Sundae.

Sliced bananas 8
Sliced oranges 8
Whole cherries 8 ounces
Sliced pear 8 ounces
Strawberry syrup, diluted, 2 gallons
Mix in punch bowl; use 2 ounces of the above to one ladle of ice cream. Dress with whipped cream, and 1 whole cherry.

Arctic Glace.

Strawberry syrup ½ ounce
Pineapple syrup ¼ ounce
Vanilla syrup ¼ ounce
Orange syrup ¼ ounce
Acid phosphate 3 dashes
Cracked ice ½ glass
Carbonated water to fill 12-ounce glass.
Stir thoroughly with spoon. Rim glass in powdered sugar; garnish with fruit; serve with spoon and straws.

Grape Sherbet.

Grape juice 1 quart
Simple syrup ½ gallon
Water 3 pints
Milk 3 pints
Whites of three eggs thoroughly beaten.
Mix and freeze.

Pistache Water Ice.

Simple syrup 3¼ pints
Water 3¼ pints
Cherry juice 2 ounces
Lemon juice 2 ounces
Orange flower water ¼ ounce
Essence of bitter almonds ¼ dram
Color green. Mix and freeze.

NEWS SECTION

M. A. R. D. IS LAUNCHED.

Metropolitan Association of Retail Druggists Now a Fact.

CONSTITUTION AND BY-LAWS ADOPTED—DR. WILLIAM C. ANDERSON, OF BROOKLYN, ELECTED PRESIDENT—GIANT DRUGGISTS HOLD OFF, BUT CHARGED FOR PHENACETINE.

The Metropolitan Association of Retail Druggists, the New York branch of the N. A. R. D., was formally organized on Tuesday night, with the adoption of a constitution and by-laws and the election of officers. Dr. Wm. C. Anderson was elected president. The members of the Drug Merchants' Association did not come in, preferring, for business reasons, to form a separate organization, but giving their hearty support to the movement. Over one hundred druggists and representatives of wholesale houses attended the meeting at the College of Pharmacy.

A. C. Searles began by reading the constitution and by-laws proposed by the committee of which he was chairman. The constitution restricted membership to owners, or partners of drug stores, or managers of corporations. The dues were fixed at \$8 per annum, with meetings on the second Thursday of each month. Each local branch is to have a membership of 50 to 60, with one delegate for every 50 or less. In reply to a question, Mr. Searles stated that nothing in the constitution would conflict with the Sherman Anti-Trust law. On motion of Mr. Lauer, the constitution and by-laws, after being slightly amended, were unanimously adopted.

Chairman Anderson appointed Messrs. Diner, Kleine, Weinstein, Maass and Swann a committee to nominate officers. They retired and presented the following nominations: For President, Wm. C. Anderson; 1st Vice-President, B. J. Lauer; 2d Vice-President, Peter Diamond; 3d Vice-President, A. C. Searles; Treasurer, B. Rosenzweig; Secretary, S. V. B. Swann; Trustees, Messrs. Diner, Kleine, Wischerth, Morey, Huether and Axt.

DR. ANDERSON CHOSEN.

A demand was made that only those be eligible to office who are actively engaged in the drug business. Mr. Diner declared that all the nominees fulfilled this condition. Dr. Anderson was then nominated for president by Mr. Lauer. Felix Hirseman took the chair, and Dr. Anderson was unanimously elected. Said Mr. Hirseman.

"Dr. Anderson, I have the pleasure to greet you as the first president of this grand association."

When the tumultuous applause had sub-

sided the newly-elected president made a strong speech in favor of sticking to one thing first and making a success of it—the direct contract and serial numbering plan. All the other nominees were unanimously elected, excepting for two contests over the second vice-presidency and treasurer-ship, for which offices Geo. Schweinfurth nominated B. R. Dauscha, and Geo. H. Hitchcock respectively.

By unanimous and enthusiastic vote Dr. William Muir and Felix Hirseman were elected honorary members. President Anderson then called on Mr. Fernauld, representing the Dr. Miles' Medical Co., who extended hearty congratulations to the M. A. R. D., and declared that work could not be carried on in any other way than under the direct contract plan. Plans which depend on schedules, he said, are shown to be unsatisfactory.

PROPRIETORS AND DRUGGISTS.

"It costs three times as much to advertise under cut-rate conditions," said Mr. Fernauld, "as to give the retail druggist a satisfactory profit. The policy of the company was to place itself in the hands of the druggists with the assurance of getting fair treatment. All that was necessary to success was for the retailer to give the proprietor a chance. In spite of the great expense involved in launching the contract plan," Mr. Fernauld said "the company's business has increased 25 per cent. the first year."

Reports were heard from the Committees on Membership and Districting. The substance of the latter has already been given in a previous issue of The Era. The special committee on Professor Chandler reported progress. Letters of regret were read from several wholesale houses, as well as a communication from the Drug Merchants' Association, regretting their inability to join the N. A. R. D., owing to a failure to come to an understanding with the dry-goods stores. Thomas Vogeli, president of the N. A. R. D., sent congratulations.

On motion of Mr. Swann, the Executive Board was empowered to set a date when the contracts are to go into effect. It was also decided to investigate the advisability of incorporating.

Colonel Dable, being called on, declared that the "giant druggists" were absolutely in earnest, but with their immense capital they must be exceedingly cautious not to jeopardize their businesses. "They are to-day," he said, "working on the big establishments to better trade conditions."

The meeting adjourned shortly after midnight.

—The Retail Druggists' Bowling Association held its annual theatre party and dinner on Monday night. "It Happened in Nordland" was the play and Little Hungary was chosen for the dinner.

DENOUNCES MANN BILL.

Prof. Chandler Calls It An Attempt To Rob the Chemist.

"IT IS TO ENABLE THE RETAIL DRUGGIST TO SELL INVENTIONS WITHOUT PAYING THE INVENTOR HIS ROYALTY."—WHY HIGH PRICE IS CHARGED FOR PHENACETINE.—IN-

Prof. Charles F. Chandler threw some more hot shot at the Mann bill, at the annual meeting of the New York College of Pharmacy, on March 21. His attack was unexpected to most of the members, as he turned suddenly from his talk on the progress of the college to assail the bill, and at the same time justify his previous remarks made at Washington. Prof. Chandler said:

I had occasion to go to Washington and go before the Committee on Patents of the United States Senate, to oppose a bill which has been taken to Washington by representatives of the Retail Druggists' Association. I did not go there in the interest of any individual or any manufactory profession, the chemists, of the rights they now enjoy under the patent laws of the United States; to take from them rights which are conferred by the patent law upon every inventor, a certain proprietorship in what he invents; and I cannot see what excuse there was for undertaking to break down our patent system, to begin by robbing the chemist in order to please the retail druggist. If this were allowed, the patent dealer might come along and say anybody who invents anything that can be used as a paint shall be deprived of his rights under the patent law. Then the dyer would say, "I want to buy dyes, and I don't want to pay the man who invents them his royalties." Take dyes out of the patent law, and the farmer would come along and say, "No more royalties to the man who invents patent agricultural machines; the farm must be freed from the thralldom of the patent law."

This bill is nothing but an attempt to rob the chemist. I am a chemist, and I stand for the chemists. You have taken me as a pharmacist, and I will stand for the pharmacists whenever I find their rights infringed upon. I make this statement because I do not know what has been rumored in the pharmaceutical journals; perhaps nothing; maybe they didn't think it of enough importance to mention it. But I want you to understand why I went there. I went there as a chemist because the rest of my profession were assailed by this bill.

Prof. Chandler went on to explain the old theory of the patent law, that the inventor was to be allowed to reap a reward for his services for seventeen years, after which the invention becomes the property of the public.

The advantage of making his invention public is something that cannot be over-estimated, particularly for the chemist. A chemist starts out on a new line, invents a sulphonal, for instance, and the moment

he tells the public how to make a sulphonal, other chemists turn their attention that way, and then we have trional, but we would have made that if the sulphonal man had not made public what he invented. Then another man introduces another ethyl root and makes tetronal. It is the greatest damage in the world to have the chemist publish what he does, because it points a new line in which a hundred chemists can follow and you may get a hundred more this year.

Otherwise, if the chemist is not rewarded, he will make a secret of what he does and the public will not get the advantage. It is a matter of justice that the chemist should be paid, just as well as anybody else.

Now, people complain that the inventor charges too much, that the article can be made cheaper. So it can, of course, by somebody who didn't have to invent it. After a man has spent several years in his investigations, has invented 100 things, of which 30 are good for nothing, and has found the 100th article which is valuable, he must be paid not only for that article, but for the time spent in arriving at it. And he has no right to let anybody else anybody might come along and say, "Yes, I can make that, this man told me how to make it. I don't have to go through all the laborious process a man has had to go through." Of course it can be made cheaper, but it couldn't if the inventor had not told how to make it.

Now, the substance of this bill are very simple. It provides that if the article, a new composition of matter, which is invented, can be used in medicine, then there shall be no patent issued for the composition of matter, only a patent for the process by which the inventor made it. You might just as well say no patent at all, because chemists are not serving the public that if a chemist following a process arrives at a new composition of matter and makes that public, other intelligent chemists can immediately take up the same ways of making the same thing; and the inventor can only have a patent for the precise process which he employed; so he is not practical, no, not in the public interest. If everybody else can have a patent for a new composition of matter, why should not the chemist have a patent? Isn't it meritorious to invent something that can be used in medicine? If it is a paint, he can have a product patent. If it is a dye stuff he can have a product patent. But, if it is anything that can be used in medicine, anything useful to relieve suffering, to save life, that is of so little consequence that he is not entitled to a patent for it. That is the theme of this bill.

When are you going to find out whether the thing can be used in medicine? A man invents a new composition of matter, and takes out a patent. Perhaps it is methyl green or methyl yellow, and he thinks it very suitable as a dye; and 10 years afterwards it is discovered to be useful in medicine. Are you going to take away the patent given him 10 years before, because some one discovered that it was useful in medicine? It is impracticable. You cannot tell if it is useful in medicine unless you try it on a patient, or in the hospitals, and if you find it useless there, you say this patent is no good, this thing can be used in medicine. The impracticability of enforcing such a law is apparent.

The bill is to enable the retail druggists to sell new inventions in medicine without allowing the inventor to have a monopoly for them. The bill has no other object. In other words, it is to enable any private citizen to employ and use a new remedy which may be invented by a physician.

I have been acting as an expert in patent suits for 40 years, and know all about the effect of such a bill. The bill strikes distinctly that if the new composition of matter is used in medicine there shall be no product, patent issued for it, but only for the process by which it is made, and that would be no protection at all to the chemist. And then the bill provides that the article cannot be sold by the patentee or his agents unless it has been manufactured in his country. Now, it doesn't say it cannot be sold by anybody. Any other fellow can sell it, as much as he likes, can import it from Germany or Holland or Belgium and sell it. The only penalty for selling it when made in any other country is to render the patent null and void. Consequently the only

person who can be punished for selling the article in this country when it is manufactured in another is the man who happens to be so unfortunate as to be the inventor or own the patent. So the process patent is valueless unless the article is manufactured in this country. That is ridiculous; because many of these articles are used in such small quantities that it does not pay to have a factory in every country where it is sold. It would simply raise the price of the article. Then, how could the man compete if the import can bring it from somewhere else at half the price and without any penalty?

There is no merit in the bill. It is class legislation. It is the entering wedge to destroy our patent system, which is of such benefit to the whole community; and the only object, the only reason the retail druggists have any interest in it is because they think they will buy the new article cheaper than now.

Of course, the bill purports to be for the benefit of the sick and suffering, and the impression that the sick and the suffering are paying enormous prices for the medicines the physicians prescribe, and that this bill is going to give the force of prescriptions. The phenacetine case as worked up by the retail druggist represents a very iniquitous sound, but if you look at it from the point of view of the chemist you will see that it has no such appearance at all. The reason phenacetine is so cheaper in other countries is because the man who invented it is a man so fortunate as to publish an account of it in a scientific journal in Germany; by doing so he forfeited his right to get a patent on the compound in that country. The consequence is he has no patent on the continent or in Canada. But the United States law is more liberal, and he did not lose his right to a patent here. So we are not paying any more than we ought; but this meritorious inventor, who is entitled to the thanks of the whole world, is made rich by his invention. The consequence is he is able to make anything out of it except in the United States. And as for the iniquitous price of an ounce, 437 1/2 grains—57 1/2 doses for an ounce, 437 1/2 is a little over a cent a dose. Do you suppose if the druggist bought it for one-third of a cent a dose, that the sick and the suffering would pay any less for their prescriptions? (Applause and laughter.)

Now, that is the Mann Bill. I told the representatives of the Retail Druggists' Association that I was a friend of the pharmacist, and was proud to consider myself a pharmacist and the druggist, wholesale and retail, my friends. (Applause.) But when I met them at Washington, trying to rob my brother chemists of their rewards to which they are entitled for their industry and perseverance and skill, I must cross swords with them, and do what I could to defeat that object. (Applause.)

About fifty members of the college were present, Prof. Chandler presiding. The first thing on the programme was balloting for officers, which resulted in the election of the following: President, Nicholas Murray Butler; first vice-president, Charles F. Chandler; second vice-president, Wm. Jay Schieffelin; third vice-president, Herbert D. Robbins; treasurer, Clarence O. Bigelow; secretary, Thomas F. Main; assistant secretary, O. J. Griffin; trustees to serve three years, William C. Alpers, Max J. Breitenbach, Charles S. Erb, Leo W. Gesler, Jr., Henry Imhof.

Prof. Virgil Coblenz gave a rapid outline of the plan and scope of the new pharmacopoeia. An interesting talk on the work of the Board of Pharmacy was given by Dr. George C. Diekmann. Speaking of carbolic acid, he said that in spite of the Board of Health ordinance, no difficulty had been found in buying that article in paint stores, without even a label attached. Notwithstanding what the daily press has said, the results of the investigations of the Board are entirely creditable to pharmacists.

A letter from Dr. Alpers was read, in which he regretted his inability to be pres-

ent at the meeting. By unanimous vote, the honorary president, Ewen McIntyre, Sr., was continued as such.

Mr. McIntyre then outlined the efforts which had been made to lift the college debt. The work was begun two years ago and in that time there had been collected from the retail trade and allied branches of the trade, a total of \$17,157.50. The public spirited men of New York would be appealed to for the remainder, said Mr. McIntyre, in the belief that the appeal would not be vain. In conclusion he said:

"It will give me great pleasure, before I leave"—the voice of the white-haired oldest alumnus faltered—"before I leave this sphere, to announce that the college debt has been paid."

In taking up the subject of "A Year's Connection With Columbia University," Prof. Chandler observed that while the past year had been one of great prosperity, still, it was a question how much of this was due to the union with Columbia and how much to other influences, such as the pre-requisite law. But the association with Columbia has already improved the courses of instruction and has led to the institution of a new degree. The most noticeable advantage, has been the improvement in the college library. Prof. Coblenz was placed in charge of this and a simple system of classification adopted. The library now contains 1,682 bound volumes and 140 unnumbered volumes, as well as 164 bound volumes of pharmaceutical journals of this and other countries and 949 unbound volumes. Prof. Chandler commented on the fact that little use has been made of the library by outsiders. It is used chiefly and extensively by the students, especially the juniors.

The relations with Columbia University thus far have been most harmonious. Numerous meetings of joint committees have been held, showing that the authorities at Columbia take a lively interest in the College of Pharmacy.

It was about 10 p. m. when Prof. Chandler finished his remarks on the Mann bill, after which the meeting adjourned to the library, where a collation was served.

VICTORY FOR STATE BOARD.

By a decision handed down last week by the Appellate Term of the Supreme Court, the New York State Board of Pharmacy wins a final victory in three cases which had been appealed. Several months ago the Board, through its counsel, Hieronimus A. Herold, obtained judgments against two paint dealers, Abram Wagner and Robert Jacob, for \$75 each, for selling poison without the proper label. The Board also obtained judgment against Max Goldblatt, a druggist, for \$100, for selling pharmaceutical preparations not up to the U. S. P. standard. All three of the defendants appealed, but the Appellate Term has now affirmed the judgments.

In the Goldblatt case the defendant sought to escape liability by labeling his preparations "Golden Leaf T. of Iodine," "Golden Leaf Spts. of Camphor," etc., alleging that more than one penny could not be recovered in a single action, and that the law was unconstitutional. He was defeated on all grounds, the Appellate Term affirming the judgment unanimously without opinion.

MR. WELLCOME HONORED.

Reception and Luncheon at Drug Trade Club.

Mr. Henry S. Wellcome, the American head of the famous London firm of Burroughs, Wellcome & Co., whose notable services abroad in the interests of American pharmacy have won him respect and admiration throughout the trade, will be the guest of honor at an informal luncheon and reception tendered by the members of the Drug Trade Section of the New York Board of Trade and Transportation, at the Drug Trade Club, 100 William street, at 1 o'clock this afternoon.

The arrangements made by the committee in charge of the affair, the chairman of which is Mr. Albert Plaut, and the number of acceptances received, indicate that to-day's event will be a most enjoyable and memorable one.

While the reception, in compliance with the wishes of Mr. Wellcome, will be of a purely informal character, there is no doubt that the guest will make an impromptu speech, to which several of the gentlemen present will add a few remarks. Preparations have been made for the accommodation of about fifty of the most representative men in the drug trade, and among those who will attend are Messrs. Samuel W. Fairchild, Albert Plaut, Thomas F. Main, Edward W. Fitch, John M. Peters, Joseph Plaut, Thomas P. Cook, William S. Gray, Joseph A. Velsor, Brent Good, Emille Levi, Sidney H. Carragan, I. Frank Stone, Walter Rowley, Samuel H. Moneyenny Clarence G. Stone, H. Koffl Planten, E. S. Woodward, Robert McClain, John B. Ladd, Sturgis Coffin, Hugo Duroso, Philip S. Tilton, J. L. Hopkins, Henry C. Lovis, Frank Black, Carl Brucker and a number of others.

Following is the menu for the luncheon:
Coutut Oysters.

Fimolas.

Green Turtle Soup.

Baked Guilford Clams.

Fried Squab, Maryland Style.

Grape Fruit Salad.

Strawberry Shortcake.

Coffee.

Haute Sauterues. Scotch Whiskey.

Apoiluaris.

Mr. Wellcome is just bringing to a close an extensive trip across the continent which began last September, when he arrived in this city from London for the first time in five years, and it was deemed fitting that the local members of the trade should make this occasion serve the double purpose of adding to the honors conferred on Mr. Wellcome during his visit to the United States and to wish him godspeed on his return.

TO AMEND LIQUOR LAW.

Albany, March 27.—Senator John Raines to-day introduced amendments to the liquor law doing away with the druggists' stamp tax and providing that if a druggist wishes to sell liquor without a physician's certificate, to be drunk off the premises, he must take out a storekeeper's certificate. Another amendment declares to be liquor any beverage or patent medicine upon which an internal revenue stamp must be placed.

SCHEDULES IN BANKRUPTCY.

A meeting of creditors of N. Lopard & Co. (corporation), manufacturers of cosmetics, at 725 Broadway, was held before Morris S. Wise, referee in bankruptcy, at 40 Exchange Place. The schedules showed liabilities of \$46,664 and nominal assets of \$6,101, but so far only \$500 cash has been realized from the assets.

Schedules of the Trinidad Bitters Company show debts of \$27,401 and assets of \$2,053. The principal creditors are Carl W. Weidinger, 56 Pine street, \$22,640; Heller, Hirsch & Co., 52 William street, \$2,200. The assets consist of cash, \$17; stock in trade, \$300; fixtures, \$750; personal property, \$300; accounts due, \$332; deposited in bank, \$654.

Deputy Sheriff Forges has received an execution for \$1,270 against the American Pyranzine Co., manufacturers of a cleansing compound, of No. 49 South street, in favor of George W. Stiles. The company was incorporated on April 8, 1902, with a capital stock of \$100,000, which was increased to \$250,000 on June 16, 1902.

WITCH HAZEL CO.'S ASSETS.

Schedules in bankruptcy of the American Witch Hazel Company, of 220 and 240 Broadway, show liabilities of \$24,298 and assets unknown, consisting of real estate, distilleries, accounts and office furniture, the latter being \$75. There are distilleries at Westchester, Conn., and ten acres of land at Killingsworth, Conn., and one-half acre of land at Haddam, and at Goodspeed, Conn.; also three acres of land at Chester, Conn., all of which is covered by a mortgage of \$10,000 to Norman MacLeod & Co., of Philadelphia. The American Soda Water Company, of Philadelphia, is a creditor for \$3,719, secured, and the Sackett-Wilhelm Lithographing and Printing Company, \$1,850.

JAIL FOR RADIUM DOCTORS.

Four months in the penitentiary was the sentence imposed by Judge McMahon, in the Court of General Sessions, upon Dr. Henry H. Kane, who pleaded guilty to having swindled John McCullum, a carpenter, out of \$10,000 by means of an alleged radium cure for kidney disease. Dr. William H. Hale, Dr. Kane's associate as a radium curist, was given eight months. This leniency was a result of recommendations by District Attorney Jerome and by Champe Andrews, counsel for the Medical Society, after the two prisoners had returned to McCullum all they extorted from him. As a result of the sentences Kane and Hale will be unable to practice medicine in this State.

WILL FIGHT FLAG BILL.

Albany, March 25.—Governor Higgins has signed the Walnwright bill, which was designed to put an end to the practice of using the United States flag for advertising purposes.

The new law imposes a fine of \$50 for each offense of desecration, mutilation or improper use of the national emblem.

It is reported that cigar and cigarette manufacturers, who will be the heaviest sufferers because of the passage of the bill, are preparing to attack it in the courts.

'PHONE RATES REDUCED.

Company Announces a New Schedule in Effect June 1.

A reduction in rates between Manhattan and the Bronx and points in the immediate vicinity, to go into effect on June 1, is announced by the New York Telephone Company. The reductions vary from five to ten cents and are shown in the following table:

	Rates		
	Former Rates. after June 1.		
	From Man.	Bronx.	Man. Bronx.
Astoria	20	25	15 20
Barren Island ...	25	30	25 25
Bath Beach	25	30	20 25
The Bronx	15	..	15 ..
Brooklyn	15	25	15 20
Coney Island	25	30	20 25
Sheepshead Bay ..	25	30	20 25
Far Rockaway ...	30	30	25 25
Lawrence	30	30	25 25
Hammels	30	30	25 25
Flushing	25	30	20 20
Jamaica	25	30	20 20
Manhattan	15	.. 15
New Dorp	25	30	20 25
Newtown	25	30	20 25
Queens	25	30	20 20
Richmond Hill ...	25	30	20 20
Tompkinsville ...	25	30	20 25
West New Brighton	25	30	20 25
Toitenville	30	30	25 25

Subscribers' rates are five cents less than the pay station rates given in the above table.

In Brooklyn a new schedule of rates provides for a reduction from \$66 for 700 calls over a direct line, to \$54 for 600 calls, in the business districts; and from \$54 for 600 local messages over a party line, to \$42. Residence rates for unlimited local service for a direct line are reduced from \$75 to \$60, and for a party line from \$60 to \$48.

The directors of the company also announced the following reductions in message rates, to take effect May 1:

Number of Messages	Old Schedule.	New Schedule.
600	\$ 75	\$ 60
1,200	111	87
1,800	141	111
2,400	165	135
3,000	183	159
3,600	201	177
4,500	228	204

In a letter to the Merchants' Association, U. N. Bethell, general manager of the company, says:

"All direct line business subscribers will be billed at the new rates from May 1, regardless of the rates named in their contracts.

"The schedule of toll rates between the several telephone districts in New York City has also been revised along the lines discussed at our recent conference. This revision will take effect at the first of the month following the next issue of the telephone directory."

As a result of these reductions, a temporary halt has been called at Albany in the legislative campaign to compel such reductions, until their extent is determined.

AGAINST 'PHONE INQUIRY.

Boston, March 25.—The House yesterday refused to substitute for an adverse report the bill of Mr. Deitrick, of Cambridge, to provide for the appointment by the governor of a committee of three persons to consider the service given by telephone companies, to what extent it can be improved and its cost lessened, and to consider also the matter of public ownership and State supervision. Mr. Deitrick claimed that the rates charged in this State were exorbitant and believed the appointment of an investigating committee the most feasible way of gaining the desired information. He instanced the recent action of the telephone company reducing rates in New York, due, as he said, to the threat of an investigation by the Merchants' Association. He felt that a similar result would follow investigation here.

NEW SECTION FORMED.

Boston, March 27.—The New England section of the Society of Chemical Industry has been organized here, with Henry Howard as chairman and W. H. Walker as secretary. The objects of the society are the advancement of the study and practice of applied chemistry, for the discussion of all matters connected with the chemical industries and for the diffusion of information on applied chemistry and chemical engineering among its members. Monthly meetings will be held.

DOCTORS TO SELL DRUGS?

Providence, R. I., March 25.—Under the leadership of President James O'Hare, of the Rhode Island College of Pharmacy and Allied Sciences, a majority of the druggists in this State are striving to defeat the passage in the legislature of a bill to restrict the sale of narcotics, which they claim is arbitrary.

The terms of this act allow a physician to sell narcotics to a patient in such quantity as he prescribes and forbids their sale by druggists to any person not bearing a prescription with the name of the person presenting it, written upon by the physician issuing it.

Violation of the act is a misdemeanor punishable by a fine of not less than \$20 nor more than \$100, and a second offense constitutes a forfeiture of the right to be registered by the State Board of Pharmacy.

Physicians are urging the passage of the bill.

DR. MIRANDA TO RETIRE.

Woonsocket, R. I., March 27.—Dr. J. C. Miranda, who has conducted a drug store in this city for many years, is to retire. He has sold his store to L. Philip Collet, of Moosup, Conn., and J. A. Garne, of Putnam, Conn. Dr. Miranda will devote his time to the practice of medicine.

BAY STATE NOTES.

—A. E. Martel, a Greenfield druggist, who has been located in Rist's block, Fourth street, for the past twenty years, has decided to move on the avenue. In the corner store of the Hibernal block. He will move about May 1, as soon as extensive alterations are completed.

—Atherton Thayer Brown, a member of the drug firm of J. D. Brown & Son, at 144 Oliver street, Boston, died Tuesday,

March 21. Services were held at St. James Church, Roxbury, on Friday.

HALL & LYON'S NEW STORE.

Providence, R. I., March 24.—The Hall & Lyon Company has leased the corner store on the ground floor of the new Journal building, on Westminster and Eddy streets, for a term of years, and as soon as the new quarters are ready for occupancy, will remove the present store at 225 Westminster street to the Journal corner. The new store will occupy a floor space on the ground floor of nearly 10,000 square feet, which is practically as much as it now has on the six floors it occupies at its present quarters. The latter will be abandoned as soon as the new store is completed, furnished, stocked and ready for occupancy, which is expected to be by March 1, 1906. The furniture and fixtures will be new throughout.

SUIT OVER DRUG STORE.

New Haven, Conn., March 20.—As a result of a suit brought by Otto P. Zeitfuss, of Norwalk, against Maxwell Slade, property of the latter valued at \$2,000 has been attached. Zeitfuss owned a drug store in Greenwich. Frederick and Walter Lewisohn, of New York, claimed he owed them \$310. The claim was transferred to Slade, and the plaintiff in the present action alleges Slade forced him out of a business in which he was making \$100 a month. Zeitfuss asks for \$2,000 damages, alleging that Slade's claim was not an equitable one.

PIONEER DRUGGIST DEAD.

Syracuse, N. Y., March 27.—John Cromwell Sprague, for fifty years a prominent resident of Ogdensburg, died last week, at the ripe age of seventy-seven years. Mr. Sprague was one of the pioneers in the drug business, having learned it in Syracuse with Charles Snow, long since dead. He went to Ogdensburg in 1848 and engaged in the drug business with A. B. Jenner, under the firm name of Sprague & Company. This business was conducted in the Eagle block, until it was destroyed by fire. Among the men who went to Ogdensburg in the fifties, was H. S. Humphrey, who under the name of H. S. Humphrey & Co., carried on a drug business for many years. This concern finally failed and Mr. Sprague bought the stock and re-opened the business. He remained there until September 1, 1870, when he moved into the store now occupied by Frederick S. Ives, who was in his employ over thirty years, and who bought him out when he retired from business six years ago. Mr. Sprague built the store himself. Besides the drug business, Mr. Sprague had engaged in many other enterprises. He was born at Canandaigua in 1828.

PROPRIETORS WILL MEET.

From the office of the secretary, Clarence G. Stone, 192 Front street, New York City, the call will be sent out early next week for the twenty-third annual meeting of the Proprietary Association of America, which will take place at the new Hotel Astor, in this city, on May 2, 3 and 4.

Because of the important matters to be taken up, the indications are that the forthcoming annual gathering will be one

of the most notable and largely attended in the history of the proprietary organization.

WESTERN PA. R. D. A.

Elects Officers and Advises Members on Munyon Co.'s Goods.

Pittsburg, March 27.—At the annual meeting of the Western Pennsylvania R. D. A., the following officers and board of directors were chosen: President, H. J. Siegfried; vice-president, J. R. Thompson; secretary, B. E. Pritchard; treasurer, Louis Emanuel; directors, Wm. G. Shirmer, B. P. Welsch, B. E. Pritchard, Louis Emanuel, J. B. Porter, H. J. Siegfried, H. G. Duff, Chas. Spang, L. B. Hughes, P. P. Knapp, F. J. Brehm, E. E. Heck, Wm. Dice, F. D. Troth, S. A. Straight, Chas. E. Ringer, A. E. Fischer, F. Karl Deffin, E. J. Kretz, W. J. Forest, J. R. Thompson.

The following action was taken with reference to the Munyon firm:

"Resolved, That the members of the association shall not deal with any representative of the Munyon firm. If it is deemed necessary to handle the goods to protect trade, order from the jobber in such quantities as may be required. Window display and encouragement of the sale should not be indulged in. The Munyon firm is not now, nor never was a friend of the retail druggist."

The above action was taken after the secretary had explained that the "Paw Paw tree atomizer" deal meant a duplication of stock to all who already had "Paw Paw" on hand, as the atomizers are only included with new orders. The explanation being made that any old stock could be used for second calls. The firm agreed to hold the price at eighty-five cents, also, which it has failed to do.

The most interesting discussion of the meeting followed the resolution reported from the meeting of the Board of Directors:

"Resolved, That we endorse the bill now before the legislature, making graduation from a reputable college of pharmacy a pre-requisite to the issuance of a registered pharmacist's certificate by the State Pharmaceutical Examining Board."

The resolution was supported warmly by H. J. Siegfried, C. E. Ringer, Dr. J. M. Linn, Wm. C. Schweitzer, Edw. Rode-moyer, B. E. Pritchard. The negative side was well presented by R. J. Hardy, J. R. Thompson, W. H. Forst.

The minutes of the directors' meeting, of which the resolution formed a part, were finally adopted, on motion of A. E. Fischer, supported by R. W. Henderson, and thus the bill was endorsed.

Mr. Siegfried called attention to the financial problem, which was greater this year than ever before, on account of the increased dues to the N. A. R. D. He suggested that members should pay dues in accordance with the volume of business done by each, to be equitable.

SUNDAY CLOSING IN CANADA.

St. Catharines, Can., March 20.—The druggists of St. Catharines have entered into an agreement whereby only one of the eight drug stores in the city shall keep open on Sunday, each store to have its turn. The store for Sunday work will be open from 8 in the morning to 9 at night.

PHARMACEUTICAL LEGISLATION.

Pre-Requisite Bill Now a Law.— Other Bills of Vital Interest.

Philadelphia, March 27.—Representatives of pharmaceutical colleges and associations, as well as legislators and private citizens who have all been working to secure the passage of the "pre-requisite bill" and incidentally to elevate the educational standard in this State, this week saw their efforts crowned with success.

Governor Pennypacker on Friday affixed his signature to the bill and the law becomes operative on and after January 1, 1906. In the future, all applicants for registration as pharmacists must be able to prove that they are graduates of a reputable college of pharmacy.

Although endorsed by all the colleges and associations in the State, there was not a little opposition encountered, chiefly on the part of a few country physicians who conduct drug stores, and, it is said, employ boys to do the work that should be done by qualified assistants or by graduates in pharmacy. Governor Pennypacker, to whom the advantages of the proposed law had been explained by Representative Fahey, Prof. J. P. Remington and others, declared that in his opinion it was one of the best pieces of legislation that had been brought before him in years, and that it would put the calling of the pharmacist upon a higher level, as well as raise the standard of education.

Other bills that are of vital interest to the drug trade, and which are now before the legislature, are the one making it a misdemeanor to sell patent medicine for internal use, that contains alcohol, without a physician's certificate, and the one creating the offices of inspectors for the purpose of looking after weights, measures and scales used by merchants in all lines of trade. The first bill was prepared at the instance of the Women's Christian Temperance Union, and is said to be the first step in a general crusade that is about to be instituted in every State. The other bill was defeated in the House on Thursday afternoon. One reason for this was that there was not a constitutional quorum present. The privilege of having the bill reconsidered within five days of legislative session still exists. This may be done.

THE KNICKERBOCKER'S NEW QUARTERS.

The Knickerbocker Drug Co. have taken a long lease of the store basement and sub-basement, 640 Broadway. This is a modern fireproof building, fronting on Broadway, southeast corner of Bleeker street, and extending east 200 feet of Bleeker street, with a Crosby street entrance. The subway entrance "south" is within twenty feet of the Crosby street entrance; the basement, 215 feet long by 36 feet wide, is supplied with ventilators and private electric elevators on the Bleeker street side. The Knickerbocker Drug Co. are the proprietors of Cran-tonic goods, and on page 4 of this issue their announcement of a special offer of this popular line should be of interest to our readers.

JEWELRY AS A SIDE-LINE.

Baltimore, March 27.—The experience of a number of Baltimore druggists with jewelry as a side-line has not been such as to encourage continuance of this business. In fact, twenty-two of them assert that they have been taken in by a jewelry firm in Iowa, and they held a meeting last Wednesday night, on North avenue, near Pennsylvania avenue, and formed an organization for mutual protection in the legal proceedings which they fear will be instituted against them, if they do not pay \$380 each to the company. Druggist F. W. Schanze was chosen chairman of the meeting, and it was resolved to cooperate with the N. A. R. D., which has engaged William Henry White, of Washington, to defend the suits apprehended.

Some of the druggists caught feel so humiliated that they do not care for their names to become known in connection with the matter; others, like Mr. Schanze, think that the matter ought to receive wide publicity, in order to protect others against a similar experience.

The wares were placed in the Baltimore drug stores last November, but few of them have been sold. The things that went out brought in complaints. Matters were brought to a crisis a few weeks ago when the discovery was made that the paper signed as a receipt for the goods when delivered was in reality an agreement to pay for them in quarterly instalments.

According to a circular sent out by the N. A. R. D., the same arrangements were made with seventy-five druggists in Philadelphia, nineteen in Baltimore and nearly twenty in Chicago. The Baltimore pharmacists are now distinctly of the opinion that jewelry as a side-line does not pay, each of the nineteen facing prospects of a suit to recover \$380.

COCAINE CONSUMPTION FALLS OFF.

Baltimore, March 25.—The experience of druggists in other cities that the consumption of cocaine has fallen off very much of late, is also being observed here. The decrease is estimated at as much as 50 per cent. and even more. This development is attributed to the popular outcry against the promiscuous sale of the drug and the warnings against its debauching influence that have been sounded during the past few months. Everywhere the authorities have been active in endeavors to stop such sales, and this agitation is having an unmistakable effect. Perhaps not the most sanguine advocates of restrictive measures had looked for such pronounced results, and much gratification is accordingly expressed. The decline is accepted as signal proof that the evil can be controlled or even suppressed if the police and other officials are earnestly responsive to the moral sentiment of the community.

MORE DRUG FIRMS MOVE.

Baltimore, March 27.—Two other drug firms are moving into handsome new quarters this week. One of them is Muth Bros. & Co., and the other Parke, Davis & Co. The former has a large double warehouse at 23 and 25 South Charles street, where it will have almost twice as much room as in the establishment at 15 East Fayette street, occupied before the great fire. The building has six floors. It is equipped with

all modern facilities and has been fitted up in fine style. About two weeks will be required to move the whole stocks.

Parke, Davis & Co. this week occupy the commodious five-story warehouse on German street, near Charles, almost adjoining Muth Bros. & Co. in the rear. This firm, too, will be handsomely housed and Oscar Smith, the local manager, will take great pleasure in showing patrons over the establishment.

BALTIMORE WHOLESALE HOUSES SUEED.

Baltimore, March 25.—It seems as though there had been some misunderstanding about the settlement between certain druggists and the Klingel Pharmacy, on West Lexington street, near Park avenue. The Messrs. Klingel brought an action last summer against certain wholesale and manufacturing drug houses on the ground that there existed a combination to deprive them of their supply of goods. This case was settled, and the matter was believed to be entirely adjusted, when yesterday the Klingel Pharmacy entered suit by titling against the Calvert Drug Company, the Baltimore Retail Druggists' Association, Sharp & Dohme, A. J. Corning, Owen C. Smith and John G. Beck, claiming \$50,000 damages. It is alleged in the bill of complaint drawn up by the lawyer of the Messrs. Klingel, that the defendants are parties to a combination to prevent the Klingel Pharmacy from obtaining goods, and thereby to deprive that establishment of the opportunity to do business, because it has put into operation a scale of prices below that maintained by the defendants. The Klingel Pharmacy was one of those which the retail druggists affiliated with the N. A. R. D. and the wholesale houses that sought to protect the retailers, sought to urge into an acceptance of the agreement not to sell below certain prices, and the effort was thought to have been successful.

BALTIMORE NOTES.

—The handsome \$6,000 residence of G. Milton Sydnor, a druggist of Warsaw, Va., narrowly escaped destruction by fire on the night of March 22. An empty nail keg was found smoldering in one of the rooms. The fire is thought to have been due to spontaneous combustion.

—The Imperial Drug Company, for dealing in drugs, chemicals, medicinal preparations and toilet articles, has been incorporated here by Joseph G. Kannecke, Frederick Kannecke, George G. White, Lawrence F. Kannecke and Francis I. Mooney. The capital stock is \$1,000, divided into shares of \$1 each.

—Mentzer & Clugston, of Waynesboro, Pa., have sold out their drug store to Clarence Croft. J. H. Mentzer has taken charge of the Summit Pharmacy, at Blue Ridge, Md., and Mr. Clugston has gone into the wholesale liquor business.

—Druggist Gay L. Wisotzki, of Smithburg, Md., was married last week and is now on his wedding tour.

—George G. Muth, of Muth Bros. & Co., has returned from Atlantic City, entirely restored in health, and George L. Muth, senior member of the firm, has gone off on a short trip.

DETROIT BOWLERS DINE.

Detroit, March 28.—Rivalry forgotten and only the best of good feeling prevailing, members of the Detroit Drug Bowling League enjoyed, with their friends, Saturday night, a most sumptuous banquet at Lume's Hotel. Toasts and good natured roasts added materially to the pleasures of the event.

The evening's programme was opened with a witty speech by Harry E. Perry, president of the league, who officiated as toastmaster to the satisfaction of everyone present. An elaborate programme had been prepared, and it was well into the wee sma' hours when the happy gathering broke up. The speakers of the evening were Mr. F. F. Ingram, Hon. Alfred Murphy, judge of the recorder's court; Hon. Flavius L. Brooke, Hon. Geo. Beck, Hon. P. J. M. Hally, Mr. James Wilkie, Hon. James Phelan, judge of recorder's court. Musical selections were rendered by Mr. James Fitzgibbon and Mr. Norman Worthy.

One of the features was the presentation of prizes to the winning team in the league and the individual prizes to players who made the highest averages. The league has been in existence three years, but no prizes were distributed last year, but in recognition of this fact, President Perry, in a happy speech presented the Parke, Davis & Co. team with a handsome silk banner for their victory of 1904, and for their carrying off the championship again this season, they were awarded gold medals and a check each for a snug sum. This team finished the season with forty-seven games won and thirteen lost, making their percentage .783.

Individual prizes were distributed as follows: J. E. Smith, Parke, Davis & Co. team, No. 1, highest individual average, 182 for the season of sixty games; A. H. Ludwig, of Nelson, Baker & Co., second highest average, 178; E. J. Barry, Parke, Davis & Co., No. 2, third highest average, 174; and Walter Snyder, Parke, Davis & Co., No. 1, highest individual score, 258. Team No. 1, of Parke, Davis & Co., also carried off the honors for the highest team score, 1,002.

President Perry, of the league, was presented with a handsome floral piece by its other officers, who are: Howard J. Lawrence, vice-president; secretary, A. H. Ludwig; treasurer, Chas. H. Willits. The teams in the league represented at the banquet were the Parke, Davis & Co., No. 1 and No. 2; F. F. Ingram, Nelson, Baker & Co., Michigan Drug Co. and F. Stearns & Co.

Arrangements have been completed for the big games between the Parke, Davis & Co. teams of New York, Detroit and New Orleans, and the game will be bowled next Saturday night, by telegraph. There is an intense interest in the outcome of these games, and it is figured that not less than 1,000 interested friends of the Detroiters will assemble at this end of the line to watch the contests. As fast as the games are bowled the results will be posted on a big blackboard. The three teams will bowl simultaneously in their home cities.

DATES OF STATE MEETINGS.

The twenty-first annual meeting of the Minnesota State Ph. A. will be held in Duluth, July 18, 19 and 20.

The Texas State Ph. A. will hold its convention at Fort Worth, May 18.

JAMES A. SMITH IS DEAD.

President of Altaire, Woodward & Co. Had a Brilliant Career.

Peoria, Ill., March 27.—James A. Smith, president and general manager of Altaire, Woodward & Co., pharmaceutical chemists, of this city, and well known in the drug trade throughout the country, died at his home last Wednesday.

Born in Cincinnati fifty-seven years ago. Mr. Smith entered the drug business soon after leaving school and through tireless energy and rare business judgment, soon came to be one of the most prominent men in the trade in the Central West. Leaving Cincinnati while still a young man, Mr. Smith removed to Terre Haute, where he established one of the most progressive retail drug stores in that city. His abil-

THE LATE JAMES A. SMITH.

ity attracted the notice of the officials of the Richardson Drug Company, in St. Louis, with the result that Mr. Smith entered the service of that firm, remaining there until 1883, when he became assistant manager for Altaire, Woodward & Co. His success in that berth was followed by his promotion to be general manager upon Mr. Altaire's retiring from the firm several years later. In 1894, less than a dozen years after he first came to Peoria, Mr. Smith succeeded to the presidency of the company, upon the death of Mr. Woodward. He remained as the active director of the company's affairs almost up to the day of his death. Mr. Smith was married in Terre Haute, to Miss Susan R. Potter, and is survived by a widow and two sisters. The following resolutions have been adopted by the directors of Altaire, Woodward & Co.:

In the death of James A. Smith, President and General Manager of this Company, we are called upon to face a loss almost beyond our ability to express. His exceptional abilities in the line of his profession, united with his many years of study and experience, left him few peers in the ranks of manufacturing druggists in this country.

We can but recognize in the reputation and success of Altaire, Woodward & Co. the professional ability, untiring industry, and conscientious and painstaking discharge of his responsibilities by our departed President.

To his superior attainments as a business man, he added those traits and graces that go to make that noblest work of God—a Christian gentleman.

And while his loss to this Company is almost irreparable, it is altogether so to his widow—to whom we tender all that we can give, our heartfelt sympathy. She is a partner with us in this bereavement, but no one can share with her, the removal of such a husband as God has taken away from her side.

Resolved, That these resolutions be spread upon the records of the Company, and a copy tendered to the widow.

H. J. WOODWARD,
ELIOT CALLENDER,
J. N. WARD,
W. T. SLOAN, M. D.

NOW BEFORE THE LEGISLATURE.

Chicago, March 27.—Druggists are closely following the progress of two bills recently introduced in both branches of the Illinois legislature, which, if passed, would cause a revolution in the retail business.

A bill before the Senate, which the C. R. D. A. refused to sanction, makes it compulsory on the part of the retail pharmacist to personally inform himself as to what purpose any narcotic he sells is used by the purchaser, who can obtain narcotics only by a prescription in which the physician vouches for his patient.

The Assembly bill provides that every druggist must analyze the contents of each package or bottle of patent or proprietary medicine before offering it for sale, and must furnish each purchaser with a minute analysis of the ingredients he purchases.

MUST BE TRIED ON ITS MERITS.

Milwaukee, Wis., March 28.—The so-called druggists' conspiracy case must go to trial on its merits, according to a decision rendered by Judge Tarrant, in the Circuit Court. This is the case of Fred H. Eycleshymer, manager of the drug department of the Boston Store. He sued the Jerman, Pfleger & Kuehnst Company, Drake Bros., The P. Dolmen Company and the Yahr & Lange Drug Company, alleging that they had entered into a conspiracy with manufacturers of patent and proprietary medicine to refuse to supply him with goods. He asked an injunction and damages.

Judge Tarrant has refused to grant a temporary injunction during the pendency of the case, and has also overruled a demurrer of the defendants. The defendants admit they refuse to sell goods to Eycleshymer, because he is a price cutter, but assert that they are compelled to do so, by reason of contracts with manufacturers.

TO PROTECT BOTTLE OWNERS.

St. Paul, Minn., March 16.—State Senator McNamee introduced a bill this week, designed to protect the owners of receptacles used in the sale of soda water, etc. Under the bill, any person engaged in the manufacturing and bottling of soda, mineral waters and the like contained in a receptacle having a name or device stamped thereon may file with the Secretary of State a description of such name or marks. The fee is \$1. A certificate shall be issued and it is made unlawful for any person to make use of the trade mark without the written consent of the person named in the certificate. The penalty is a fine of from \$10 to \$100.

ST. L. D. A. STRIKES OUT.

Social Side a Feature of Reorganization Plans.

St. Louis, March 28.—The St. Louis I. D. A. took the full plunge in promoting the social feature of the organization, and now that the chill of the first dip is over, they feel much encouraged. Fortunately they had the assistance of Thomas V. Wooten, who came down from Chicago to attend the reorganization and approve the changes made in the constitution and by-laws. The dues were made \$12 a year, and after each meeting a dinner will be served. For the present, the meetings will be held at the Southern Hotel.

There was a feeling of confidence after the meeting. It was feared that many of the members would feel crowded out of the organization by the increased dues, and a special effort was made to get a full attendance. Nearly one hundred druggists gathered at the dinner and the feeling of confidence in the national organization was displayed in the voting without dissent, the changes after they were given the approval of Mr. Wooten.

The national secretary entered into the discussions on sections of the constitution as they were read by J. M. Good, chairman of the Revision Committee, as readily as did the directors who had fathered the movement. Nearly every member present voiced his approval of the change, by remaining for the dinner. Those who excused themselves, insisted that they did so because of business pressure, not because of objections to the changes in the form of government. A salary of \$200 a year for the secretary, \$100 for the treasurer and \$5 each for the Executive Committee is a part of the new constitution.

A seven-course luncheon was served on adjournment of the meeting at 1.30, and after cigars were passed, President F. V. Johnson called for order. President Johnson, who was compelled to drop the active work of the association several months last summer, because of ill health, is entirely himself again and has entered into the reorganization work with a will. Theodore Meyer, of Meyer Bros.' Drug Co., was the first speaker. He congratulated the association on its recent progressive action and referred to the first meeting held in St. Louis for the purpose of organization, but modestly failed to assume the credit for engineering that meeting—an honor that was freely conferred upon him later in the toasting, by retail men.

C. P. Walbridge, president of the J. S. Merrell Drug Co., spoke of the encouragement given organizations of retailers by jobbers and gave as the reason, that the best condition of trade for the jobbers, was to have a healthy constituency to whom to sell their goods, and this healthiness depended upon organization and singleness of purpose. He suggested as a toast, "Co-operation Between Organizations of the Drug Trade," explaining that the power of the N. A. R. D. was becoming too great for reckless use.

Mr. Papin, of the Moffitt-West Drug Co., congratulated the druggists on the showing of confidence in their organization. He told of overhearing a conversation between the toastmaster and his neighbor as to the special reason for inviting the jobbers to be present, but said that for his part, he hoped the friendliness between the

branches of trade was sufficient excuse.

Thomas V. Wooten made the chief address, opening with a reference to Mr. Walbridge's talk on co-operation, giving it his hearty approval and referring to the absence of suspicion at present between jobbers and retailers, due to the effects of organization. As another result of organized co-operation, he mentioned the good feeling now existing between retailers and proprietors and the almost practical elimination of the broker.

Taking up the recent experience with aristol prescriptions in Chicago, when twenty-one out of 130 decoy prescriptions were returned honestly filled, he turned that into a lesson for much needed co-operation. It was caused, he said, by two things: First, the criminal carelessness of the druggist in buying drugs of a peddler; and second, the need for profit.

He spoke of the desire of clerks to enter business for themselves, and of the willingness of jobbers to assist them. The result was, he said, too many stores, too much striving for trade. The need was for jobbers not to encourage the opening of stores, merely because some clerk had saved a few hundred dollars, thus cutting down the opportunity of a fair living for all druggists and making the position of less fortunate clerks worse than before.

J. M. Good spoke of the organization of the N. A. R. D. in St. Louis and other changes that had been wrought, as illustrated at that meeting.

President Johnson closed the speaking with the expression of the hope that the average attendance at the dinners would soon be three hundred, as it should be from the four hundred proprietors of stores in St. Louis.

Theo. Hagenow, not to be repressed, asked all druggists to support Sol. Boehm for city councilman and was greeted with cheers.

DR. WHELPLEY ON MEDICINES.

St. Louis, March 28.—Dr. H. M. Whelpley, dean of the St. L. C. P., lectured before the St. Louis Academy of Science, March 20, on the development in the study of medicines as remedies and their idiosyncrasies. He illustrated his point in one way by the combination of chlorine and quinine, which, while adding to the power of the quinine in malarial treatment, lessened the ill effects. The lecture was illustrated with prescriptions of years ago, showing the growth of the remedial mixtures up to the present.

"A WONDER-WORKER OF SCIENCE."

Luther Burbank, the California magician, has developed a verbea with a strong arbutus fragrance. He has made possible a new fruit, the plumcot, a combination of the common wild American plum, the Japanese plum and the apricot. He has accomplished what Darwin hinted at, but accepted with reservations—the grafting of one tree upon another and at the same time the transformation of the tree without fertilization, the accomplishment of a complete cross by the graft. The details of these and other experiments, Mr. Burbank's aims, beliefs and hopes in his work, will be the substance of William S. Harwood's article in the April Century, the second of two papers on "A Wonder worker of Science."

AMONG THE COLLEGES

PITTSBURG COLLEGE OF PHARMACY.

Pittsburg, March 26.—The inauguration of our new chancellor, Dr. S. B. McCormick, D.D., was held at the Carnegie Music Hall, Wednesday, February 22. The exercises began at ten o'clock and were continued all day. Addresses were made by presidents of different universities. The pharmacy department attended in a body, chartering two street cars to take them from the college to the hall. Dr. J. H. Koch was chief marshal of the different faculties and P. G. Walter performed the same duty for the pharmacy students. The attendance was very large, there being many visitors from other colleges.

The annual class election for valedictorian awarded the honor to J. Homer Smith, who made an appropriate speech, accepting the same.

One of the requirements for graduation in the Ph. G. course provides that each student must prepare a thesis upon some pharmaceutical subject. These are now being placed before the dean for acceptance.

The university glee, banjo and mandolin clubs gave a concert at the Carnegie Music Hall, on Wednesday evening, March 8.

The members of the senior class in the applied pharmacy laboratory, are earnestly striving to win the J. H. Beall prize of a year's membership in the A. Ph. A. This prize is awarded to the student who compounds the best set of prescriptions in the laboratory during his senior year. The examining committee is selected by Dr. Beal from the board of trustees of the college.

The senior class recently gave its annual reception and dance at Brau's Auditorium, South Highland avenue. The affair proved to be the social event of the year and the committee is to be congratulated for its untiring efforts to make it a success. There were about two hundred and fifty present, including members of the faculty.

The members of the chemical section of the senior class are at present working on the analysis of water, milk and urine. This will complete their year's work.

The junior class in chemical arithmetic will finish the term's work in this subject next week; the following week they will be examined.

PHILADELPHIA C. P.

Philadelphia, March 27.—The regular pharmaceutical meeting of the Philadelphia College of Pharmacy, held on the evening of March 21, will probably go on record as one of the most important meetings in recent years tending to the uplifting and betterment of pharmacy. The subject chosen for discussion, "Ethical Pharmaceutical Practice," was considered by men who are actively engaged in the practice of retail pharmacy. It will be recalled that at the January meeting the subject of the ethical relations of pharma-

GRADUATING CLASS, PHILADELPHIA COLLEGE OF PHARMACY.

The Senior Class of 1905 is one of the largest ever graduated at the Philadelphia College of Pharmacy. It has 137 members. The officers are as follows: President, Howard Dodd; Vice-President, John B. Oleig; Treasurer, Percy Remington; Secretary, Harry N. Whitney; Class Reporters, Miss Nellie J. Stevenson and Miss Mary M. Hodge. The picture was taken in front of the College, Tenth Street, above Race.

elists and physicians was considered by Dr. Henry Beates, Jr., Prof. John H. Musser and M. I. Wilbert, so that the papers presented at the March meeting furnished a sequence to the former.

Professor Henry P. Hynson, of the department of pharmacy, University of Maryland, began with a paper on "Ethical Pharmaceutical Practice and Its Recompense," in which he showed that this practice could be made to pay in dollars and cents, and that it has paid in larger proportion to the amount invested than has conventional pharmacy, and furthermore, the percentage of failures has been much smaller than with the latter.

Dr. William C. Alpers, of New York City, read a paper on "Professionalism versus Commercialism in Pharmacy," in which he said that our aim must be to elevate the commercial part of our vocation and make it subservient to professionalism.

George M. Beringer, Ph.M., read a paper on "The Evolution of Nostrum Vending and its Relation to the Practice of Pharmacy and Medicine," in which he stated that if physicians would quit prescribing nostrums, it would be a great boon to pharmacists.

Prof. Joseph P. Remington presided and announced that the prerequisite law had passed both Houses of the Pennsylvania legislature, and that there was a probability of the governor signing it.

PHI CHI'S ANNUAL BANQUET.

New York, March 25.—The annual banquet of the Phi Chi Fraternity, Gamma

Chapter (N. Y. C. P.), held at the Arena, March 23, will long be remembered by the fratres in urbe. The hall was handsomely decorated for the occasion with colors and flags from all of the leading universities and each member wore a colored carnation, the Phi Chi flower.

The exercises began at 10 o'clock, when sixty members marched in and took their respective places at the table, Professors George C. Diekman and Virgil Coblenz, of the N. Y. C. P., both members, leading the procession. After the dinner, Prof. George C. Diekman, as toastmaster, made the first speech on his favorite topic, "The Foundation of a Fraternity House." The following also responded to their respective toasts: Daniel B. Dwyer, "Welcome"; Prof. Geo. Ferguson, "Retort"; H. D. Swain, "Recollections"; Dr. H. B. Ferguson, "Reunion"; Prof. Virgil Coblenz, "Pharmaceutical Chemists"; W. L. Sabine, "Prospects of 1906"; Willard J. Hull, "The Mysterious Diamond"; H. T. Blake, of Eta Chapter, Boston, "Prospects of Eta Chapter"; Frank W. Pond, "Prospects of Phi Chi." Some fine talent was also furnished for the evening, which could be heard when the yells of the boys had ceased.

PURDUE UNIVERSITY.

Indianapolis, March 29.—The graduating class of the school of pharmacy, Purdue University, Lafayette, is the largest in the history of the school. The graduates are E. H. Bailey, Sharpsville; J. F. Bruner, Kokomo; C. G. Carpenter, Terre Haute; J. K. Crandall, Paris, Ill.; Miss

Daisy M. Emshwiller, Montpelier; H. B. Fox, Bicknell; D. P. Griffon, Corydon; Clifford Hammersly, Clinton; W. P. Hanna, Lafayette; P. E. Hood, Shelbyville; J. P. Jay, Kokomo; W. E. Jolly, Scioto; G. C. Kohl, Burlington; F. V. McCullough, Scottsburg; J. P. McMillan, Medora; A. R. McGee, Greensburg; Frederic Marrs, Dudley, Ill.; C. H. Miller, Ft. Wayne; A. O. Osborn, Sullivan; R. T. Raymond, Henryville; R. E. Reeder, Rockville; S. P. Roush, Bluffton; W. H. Schulte, Evansville; W. W. Schertzer, Bloomfield; A. J. Schurte, Wanatah; R. M. Skinner, Albion; A. E. Smith, Logansport; J. H. Weaver, Marion. One thing is particularly noticeable in this list: that many of the graduates come from the small towns in the State, showing that Indiana pharmacy laws are making it necessary that even in out of the way communities those who prepare medicines shall be educated and equipped for their work.

A PROCTOR FEATURE.

The "news" views still hold forth on the Proctor circuits during the last week in the form of pictures of the "L" and subway strike. If you want to see correct pictures of a "news" happening of any consequence, go to Proctor's, as arrangements have been made to secure such pictures on the day of the happening and exhibit them at the different Proctor houses. Next week will be shown pictures of the New York baseball players at practice in the southern clime, and which will no doubt be of interest to all.

The Chemist Of The Workshop.

The druggist is not living up to his opportunities if it is not known in all the small workshops and industries of his neighborhood that he is a chemist and able to give pointers on many technical and industrial processes. He already has a good foundation for such knowledge, and there is a wealth of working formulas at his command in

THE ERA FORMULARY

WITH THIS BOOK AS HIS GUIDE, HE CAN FURNISH:

- The Machinist with Metal Polishes, Processes, etc.
- The Laundryman with Special Starches, Glosses, Blues, etc.
- The Undertaker with Embalming Fluids.
- The Dyer with Dyes and Processes.
- The Photographer with Chemicals and Processes.
- The Leather Worker with Dressings, Polishes and Processes.
- The Tailor and Hatter with Cleaning Preparations, Special Soaps, etc.
- The Painter with Special Colors, Varnishes, Stains, etc.
- The Cabinet Maker with Polishes, Glues, Varnishes, etc.
- The Cigar Maker with Flavors and Colors.
- Every Industry with Cements, Glues, etc., for every purpose.

There are over 1,500 formulas in the book for technical and industrial processes, domestic and household preparations, miscellaneous articles, etc., and any druggist with this collection can easily work up a profitable trade in a line of articles which his training as a chemist makes him proficient to engage in.

Price, \$5.00 per copy, delivered.

D. O. HAYNES & Co., PUBLISHERS,

HOW ONE DRUGGIST REGARDS "PRINTERS' INK."

EST 1888

MR. HARRY F. RUHL, DRUGGIST, MANHEIM, PA.

MANHEIM, PA., March 21, 1905.

MR. CHAS. J. ZINGG,

Editor *Printers' Ink*, New York.

DEAR SIR: I wish to tell you how valuable *Printers' Ink* has been to me. The first copy I saw led me to ask myself, "How can a busy druggist wade through so much matter every week?" The difficulty was soon overcome when I learned to discriminate, and the fact that *Printers' Ink* is of such a convenient size, so it can be carried in the pocket and be read at odd moments. Even if *Printers' Ink* were of no direct value to a druggist, the wealth of general information it contains makes it worth the present subscription price of only \$2.00. But there is much help that is of direct value to a druggist. Some of the sample ads and ideas have been very valuable to me. Many ideas, taken from other lines, I have adapted to my business with profit.

Strange, as it may seem, one of the first things I read is *Printers' Ink* Jonson's ad. Any student of advertising can find how it is possible to treat one subject with only a few talking points—"selling cheaper, selling only for cash and transportation charges and money back if goods are not satisfactory." Mr. Jonson tells his story in a new way each week. Any druggist who thinks a drug store hard to advertise can get inspiration for his ads, by reading Mr. Jonson's ads.

Even by reading articles, that at first thought would seem of no use to a druggist, like Mr. Rowell's "Forty Years an Advertising Agent," I have learned some things of real value to me. Take, for instance, the eleventh paper where, in the history of the advertising of different proprietary remedies, is described. Here any druggist, who has ambitions to advertise his own remedies on a large scale, be they ever so meritorious, finds what he is up against.

I have been reading *Printers' Ink* for about four years and it has always been worth the former price (\$5.00) to me. At the present price no up-to-date druggist should be without it. I am a reader of a number of advertising journals, but shall stick to *Printers' Ink* last of all.

Very truly yours,

H. F. RUHL.

The above letter is written by an intelligent, up-to-date druggist—one who thoroughly believes in advertising. Mr. Ruhl has been a reader of *Printers' Ink* for four years, and twice has he been the winner of cash prizes awarded for excellently written advertisements.

There must be many thousands of druggists like Mr. Ruhl in this country. Men who believe in modern methods, who believe that advertising will pay if it is made to promote an honest business, an honest service, and if it is done properly and judiciously. There's the point where *Printers' Ink* comes in.

I should like to bring the message of *Printers' Ink* to every druggist in the land—many receive it already, but I want to see many more on its subscription list.

Printers' Ink is a weekly journal for advertisers, the oldest and best of them all. The druggist who believes in advertising must have *Printers' Ink* and once a reader—always a reader.

And why? Because its weekly pages tell in plain, logical English everything about advertising that is really worth knowing. It does not relieve you of your thinking cap—but it awakens enthusiasm and faith in your business. Its department for retailers, appearing every week, contains advertisements and suggestions applicable to any business and ready for immediate use. The whole paper is permeated with push, pluck, perseverance and power. Each weekly copy is a volume of concentrated usefulness. Its timely hints, helpful suggestions, bright thoughts, all pointing to one great object—how to advertise judiciously—have proved to be *indispensable* to retailers, wholesalers and professional men alike. The student of human nature finds in its pages conclusions of surprisingly correct judgment.

Quantity and quality—especially quality—of the contents are the best criterion of the merits of a publication. *Printers' Ink* is the representative journal of the American industry of advertising, and its qualities of excellence have won it the position as the standard publication of its kind in the world. Valuable essays and hints by practical advertisers and specialists of business publicity are some of the leading features every week. They inspire you with their importance and keep you abreast with the growing art of advertising.

Printers' Ink is an exponent of advertising principles, discusses advertising topics in an intelligent, impartial and instructive manner. It is independent, well informed and truthful. It teaches you HOW TO DO IT.

If you want better and more results from your money invested in advertising, subscribe for and read *Printers' Ink*.

If you want to acquire a thorough knowledge of advertising and wish to become more proficient in the writing of advertisements, and want to be well posted what others are doing in this field, subscribe for and read *Printers' Ink*—it costs you less than 5 cents a week.

The yearly subscription price is \$2.00, payable in advance. If you send me a dollar, I will send the paper on trial for six months. DO IT NOW.

Address, CHAS. J. ZINGG, Manager, *Printers' Ink* Publishing Co., 10 Spruce St. (up-stairs), NEW YORK.

TRADE SECTION

SHOW WINDOWS & FEATURES.

One-Idea Windows Predominate Everywhere.

"OWN MAKES" DISPLAYED.—SOME BEAUTIFUL COLOR HARMONIES, UNUSUAL IN THEIR SIMPLICITY AND GOOD TASTE.—BROOKLYN WINDOWS BEST THIS WEEK.—A POKER TERM SIGN.

The J. W. Ferrier Pharmacy, Forty-third street and Seventh avenue, devotes its avenue window to a rheumatism remedy which is featured in an ingenious manner. Occupying the center is a life-sized wax figure of a man offering a package of the remedy in his outstretched hand. He is dressed tastefully in a gray checked cutaway suit. Were his expression less laudable, the impression left on the observer would be more convincing, but such is always the case with a lay figure. The general effect of the window is good, however. Four large display boards flank the gray gentleman, two each side, and they are covered with sample envelopes of the rheumatism cure. Reaching to the figure's knees is another large sign, and on each side lower down are display boxes supporting samples of the remedy.

The central, lower sign runs as follows, real playing cards being inserted where the words in capital letters in this reproduction indicate:

APPEALS TO CARD PLAYERS.

"If you suffer with rheumatism like the DEUCE (deuce of diamonds) and it has been troubling you for FOUR (four of diamonds) or FIVE days, we want to give you a STRAIGHT (ace, king, queen, jack, ten) tip that will cure you, and you do not have to be FLUSH (five clubs) to get it; it only costs a ONE (ace) spot, or we will sell you SIX for FIVE. This would please a KING or QUEEN and you would not suffer with rheumatism for THREE or FOUR times the price it costs; especially if you had a FULL HOUSE (three nines and two fives) and wanted to enjoy yourself."

The Bolton Drug Co.'s Fulton and Clinton streets store, Brooklyn, devotes a window to the Riker Antiseptics. The harmony of colors in the display is striking. On the floor of the window, and as a background, is textile fabric of delicate pink, against which the yellow fluid of the Antiseptics contrasts, or rather harmonizes beautifully. On the bottles, the white labels add a high light to the other color tones, producing a cumulative effect of a blending of tints and tones. Save an unobtrusive sign explaining Antiseptics, the deflacy of conception of the whole display is unmarred.

COLOR HARMONIES.

In the next window, Riker Violet Toilet Water is exhibited with the same artistic motive. Here the background is white and

the green tint of the liquid is thereby set off pleasingly. A modest sign declares, "Will please you if you like the odor of violets. 25c, 50c, \$1.00."

The third window of this store is given up to Riker Toilet Benzoin. Here the eye enjoys a harmony of a white cloth background, the dark brown of the liquid in the glass bottles and the green of the labels. The accompanying showcard is of the usual moderate tone: "Makes the skin firm, clear and smooth. No oil or grease. A luxury for your toilet. Not injurious and thoroughly reliable."

A more complicated display appears in the next window. Two columns rise on either side, composed of tooth paste cartons and springing from one to the other is an arch bearing the legend, "Riker's Tooth Preparations." It is the key to the whole idea. Under the arch stands a cylinder show bottle filled with an "own make" tooth wash and round its base curve upward sloping piles of the regular bottles holding it. In the foreground are tooth brushes by the hundred, and tooth powder in cans. Some signs exclaim, "Our tooth powder should be used every morning. The teeth are priceless pearls; too much care cannot be lavished on them." Again, "Our tooth wash is such an ideal preparation for the teeth, so pleasant and effective, that a trial makes a permanent user."

GREEN AND WHITE.

At the Bolton Drug Co.'s store at 456 Fulton street, Brooklyn, the same artistic sense dominates the windows. The keynote is green and white. A cloth background of the former sets off the white liquid in the glass containers and white lace covers glass standards and hanging shelves. The labels on the bottles are also white. The merchandise shown is a Riker glycerin lotion, 25c. "For chapped hands, lips and face." A card announces "Just the thing for curing coarse, red skin." The back of the whole window is a large mirror. Mirrors are always good backgrounds in show windows. They give the impression of large space and gazers are always pleased to see themselves reflected. In the middle center, rear, of this display rises a large show bottle of the cylinder type filled with the crystal white glycerin lotion. Bright red ribbons decorate both this and the hanging glass shelves.

ATOMIZERS.

Another window plays up the atomizer. Against the mirror background are fastened parallel wooden strips vertically at regular intervals of about six inches. On the strips hang the pasteboard boxes for the atomizers, with an atomizer itself standing calmly on top of the lid. On the floor of the window is a shiny white cloth of satiny texture. In the center of which rises a pyramid draped with the same fabric. Surmounting this is a glass show standard holding numerous atomizers. The color scheme is white (cloth), silver (the mirror), blue (boxes), and light

blue (tops of boxes). They all harmonize finely.

The last window of the same store features a foot balm for 25c. A sign explains, "Will make the feet happy." The colors here are green cloth background, the gray powder and white bottle labels.

The designer of all these displays has a soul attuned to color harmony, and indeed, in Mr. A. C. Field, the concern possesses a window feature man of unusual discrimination.

J. Maxwell Pringle, Jr., at 977 Eighth avenue, gives one window to the "Turkish Hair Promoter" made by a company of the same name. No address of said company appears on bottle labels. Inquiry reveals it is really an "own make." Why Turkish? But never mind. This disguising of an "own make" may be useful, but its expediency is problematical. The display itself consists of rising tiers of the containing bottles with the yellow labels. More labels are pasted to the window glass in a row. Show cards state, "Special introductory sale, at 50c."

MECHANICAL DEVICE.

The other Pringle window contains a mechanical feature, ever dear to American crowds. Here appears an electric brush. Front center is a clock-work device holding one of the brushes, bristles downward. Right under the brush is held a wooden case containing twenty-four small compasses in rows. The machinery moves the brush over the compasses and back in an arch and the needles move more or less with the brush. Certainly they move. A sign on the end of the brush handle shows a female figure, supposedly Electricity herself, and a notice reading, "The electricity in the brush moves the compasses." Regular prices of goods, \$1.00, \$1.50, \$2.00, \$2.50 and \$3.00. Special sale prices, 97c., \$1.44, \$1.93, \$2.41 and \$2.89.

ANALYTICAL POINTS.

The Hegeman Corporation, 200 Broadway, follows its usual window idea of one thing at a time. The window is filled, but not to overflowing, with a codliver oil preparation. Cartons, bottles and cartons. A large sign holds the center of the stage with this incendiary proclamation: "Does it pay to deceive the public? Decidedly not. There is no easier way of deceiving the public than in the manufacture of codliver oil preparations. In the interest of the public we have carefully examined several makes of so-called codliver oil mixtures. The results are as follows: One contained no codliver oil, the second linseed oil, the third 30 per cent. pure codliver oil, the fourth 20 per cent. codliver oil, and ours 50 per cent. pure Norwegian codliver oil. We therefore confidently recommend this as the best on the market."

The Kansas State Ph. A. will hold its annual meeting at Junction City, May 23, 24 and 25.

THE HEGEMAN CORPORATION FOUNTAIN

Enormous Business and Titanic Apparatus

System Absolutely Necessary—The Soda Department Manager, Frank A. Murray, Gives Facts and Figures—Extent of the Soda Habit in the Heart of New York's Downtown Business District

In my opinion, system is the first necessity in a soda business. My experience as manager of the soda department of the Hegeman fountain makes me certain of this. All our duties in running this fountain are scheduled and systematized, and it results in our ability to handle the large trade we enjoy. Even the smallest details are placed on a definite basis. For instance, have installed a time card which shows at a glance which dispensers are on duty and for how long, or, if they are absent, the reason and the length of their leave.

REGULATING THE SHIFTS.

On this card are two sections for our two reliefs of dispensers. A brief explanation is necessary. Our business here is strictly a day trade, situated as we are on lower Broadway, in the heart of the wholesale business district. The store closes at 7.15 p. m. Each of our soda men is on duty for ten and a half hours. Now, as the establishment opens at 7 a. m., it is plain that all our men are not at work at the same time. We employ six dispensers, one syrup man, two boys, and a department manager. The dispensers are divided into two shifts. The first of these goes on duty at 7 a. m., and works until 6.15 p. m.; the second begins at 8 a. m., and leaves at 7.15 p. m. Thus those who come earliest go first, and the later starters leave work last. Each man is allowed forty-five minutes for lunch, but, of course, no two go out at the same time. With these points in mind, the necessity of our time card is clear. Each shift is scored separately. In the first column, labelled "On," is entered the time of beginning work for each dispenser. The next column reads, "Lunch Out," the following "Lunch In," and the last "Night Off." Every man must certainly handle this card several times each day, so it is hung just at the back of the fountain, where the door opens on the narrow passage leading to the ice tanks. On the side of the card I have written some simple rules which our dispensers bear in mind. By placing them in this most conspicuous place, I ensure a recollection of them daily by each man.

RULES FOR DISPENSERS.

Here are the rules, short, easily remembered, and of vital importance in a soda business:

1. Use nothing but a clean, dry glass for drawing soda.
2. Give checks with each drink.
3. Each dispenser must be careful to keep hands and nails clean.
4. Dispensers must not handle glasses at the rim; take hold at middle.

5. Dispensers must not serve employes; they will refer them to the head soda man.

6. Laughing and talking by dispensers on duty at the fountain are not allowed.

7. Dispensers are not to entertain friends at the counter.

8. Dispensers are not to leave the counter without permission.

These rules may seem trivial, and at some fountains they certainly would be unnecessary, but at the Hegeman Corporation's fountain they are required. For here is handled probably the largest soda business in Greater New York.

AN ENORMOUS TRADE.

All day long the crowds pile in, and space at the counter is often at a premium. In the homeward rush hour of the late afternoon, customers are often lined up two and three deep before the counter—consequently we reserve a large open floor space there. Even in the early morning it is surprising how many people apparently begin the day with a soda or tonic drink. As for the noon lunch hour, the crowd must be seen to be understood. It is a fact that many take no other lunch than an egg drink of some kind. Economy prompts some to this, but most who do so have the saving of a few minutes of precious time as an object. Of course, our hot weather trade is far larger.

Some idea of the size of the soda business at this fountain may be obtained from a few statistics. We buy our sugar in 100,000-pound lots, and a lot lasts but two months. In summer we use seventy-five dozen eggs per day and four hundred quarts of ice cream. Our daily consumption of chocolate syrup alone is thirty gallons.

THE FOUNTAIN ITSELF.

Suiting the size of the business, is the size of the fountain. The counter is 32 feet 6 inches long, and its height is 42½ inches. The back portion of the fountain rises about fourteen feet. No wood is used in any part of the construction. The base is brown marble and the rear superstructure onyx. To add to the imposing beauty of its effect, four large bronze panels are set in the wall portion, high up, above the line of the syrup containers. The designs are by the noted Italian artist Tossetti, and represent the four seasons. In each, small cherubs are depicted, grouped in a manner characteristic of some season of the year. Each of these bronze panels weighs 850 pounds. Besides these, there are three smaller panels of the same material, ornamented with a conventionalized flower pattern. The weight of these is 250 pounds.

It is evident from these details, that the whole fountain must weigh a good deal. It does. The total weight, including the brick foundations, is about forty tons.

The manufacturers of this apparatus were the Liquid Carbonic Company. Its cost was \$25,000.

LIGHTS AND DECORATIONS.

Of course, one of the prime requisites of any fountain is bright illumination. This we have to a marked degree here. In the back portion of the fountain proper are twenty-three electric lights, and in the ceiling above you will observe three groups of six lights each, enclosed in a glass case. These might be called sunbursts. They throw down upon the counter proper, the dispensers and the customers, mellow light, which does not disturb and yet clearly displays everything. At the ends of the counter are two large onyx columns, which rise to something over ten feet above the counter and carry at the top six lights each. These are exceedingly handsome ornaments and serve the double purpose of decoration and utility. Their cost was considerable, being \$1,000, or \$500 apiece, but the outlay was justified in the handsome effect produced. Turning from decoration to practical details, you will notice that the fountain proper possesses eight soda and eight mineral draught arms. Five men can easily dispense at one time, and sometimes we employ six when there is a rush of custom.

Our fountain differs very widely from others of the wall type in that it is leed from the back. This feature was, of course, planned for at the time the fountain was erected, and room was left in a rear compartment, running from one end of the fountain to the other. It is not very wide, but it is sufficiently so to allow a man to enter easily and insert in the fountain the largest cake of ice necessary. Opening on this alley to the rear of the fountain are three single and four double metal doors of large size. Below these is another row of the metal doors, which lead to the compartment of the cold air refrigerator. The total of all these metal doors is twenty.

ICING FROM THE BACK BEST.

We find this feature of icing from the rear is not only convenient, but desirable in many other ways. There is no interference with the dispenser in the front and the usual drip from the ice is confined to a special compartment, where it cannot mar the general appearance of the business. In short, the fountain can be completely leed and a customer who is standing in the front will know nothing whatever about it. Another advantage arises from the fact that the iceman is of necessity not of a pleasing appearance, dressed, as he must be, in his working clothes, so that his concealment from the customer adds not a little to the general appearance of things.

Returning to the front of the fountain, it will be seen that there are really four sections to it. In each section are fourteen syrup tanks six two-gallon tanks and eight one-gallon tanks. Those syrups which are not frequently called for are, of course, held in the two-gallon tanks. Besides these, there are three compartments for tonics, and below you will see a row of four double shallow recesses for the purpose of containing mineral water in

THE HEGEMAN CORPORATION'S FOUNTAIN.

Located in Heart of New York's Business District, Doing an Enormous Business. A Liquid Carbonic Apparatus. Length of Counter, Thirty-two Feet Six Inches. Noted Also For Its Artistic Beauty, Particularly the Bronze Panels Representing the Four Seasons.

original bottles. In the dispensing counter proper are four two-gallon ice cream holders, placed at regular intervals along its length. This enables every dispenser to secure the necessary cream without interfering with his neighboring co-worker.

Our variety of syrups is very large. We probably dispense every sort of syrup which any customer would ever ask for. On a list, which we have framed at the side of the fountain, hanging on the wall, are thirty-two such syrups, but we carry many more. Besides these, you will observe listed nine special health drinks, five kinds of egg drinks, eleven kinds of hot soda, seven special sodas and seven varieties of phosphate. This sign in itself cost \$125, and, as can be seen, is a really handsome piece of work, composed of enamels and colored glass.

ACCESSORIES AND PRICES.

On the dispensing counter itself are our hot water draught arms for serving hot soda; there are four of these. All the smaller accessories, such as a garbage chute, and a dumb waiter, which runs to the floor below, will be found in their usual places.

The use of crushed fruits, while a development of the last few years in regard to its present great popularity, is an old

story with us. We have four crushed fruit bowls on the counter and in the season we prepare our own crushed fruit preparations from the best fresh fruit we can buy on the open market.

A word about prices would seem to be in place. Our schedule is this: We charge five cents for plain soda drinks, eight cents for tonics, ten cents for ice cream soda, fifteen cents for egg drinks, saying that we ask but eight cents for egg phosphate. While these prices may seem peculiarly graded to some dispensers who do not understand the local conditions, they are really justified by the class of our trade. The saving of three cents or two cents to a customer on a certain class of drinks is perhaps infinitesimal, and many might say that we would do just as well to charge ten cents for such and make the extra two cents profit, but our customers buy in such large numbers that it pays us to make this special inducement, in order to attract trade. Besides, we do not believe in making an exorbitant profit on anything. To make large sales and small profit is a rather trite saying, but nevertheless, we find it true and useful as a motto in our own business.

MAKING ICE CREAM AND SYRUPS.

On the floor below, directly beneath the

fountain, will be found all our extensive plant for manufacturing the soda proper, the ice cream and our syrups. Our ice cream we make ourselves, and to supply the exceedingly heavy demand for it, we are compelled to make it in very considerable quantities at a time. It takes us but twelve minutes to make ten gallons of ice cream. We make the American style of ice cream, for this is the kind preferred by our trade. Our ice cream machine is made by the Roger Williams Company, and is run by electricity. We always keep 130 quarts of cream stored on ice, in order to make it of the best quality and to be able to meet any unusual demand which might suddenly develop.

A great many of our syrups we make ourselves, especially when the ripe fruit can be had in season, but during the winter we find that the preparations of the J. Hungerford Smith Company prove entirely satisfactory. We also use their crushed fruit preparations, except when it is possible to obtain fresh fruit in the open market. Our special syrup making tank is so large that it will hold fifty gallons, and we make these syrups of our own in such large quantities that we carry on a profitable side-line business in marketing them, put up in quart bottles. Of course, we use the most of chocolate syrup

and we have our own formula for preparing this staple preparation. The material that we use is Phillips' chocolate and Phillips' cocoa. Next to chocolate we sell the most of orange syrup, and the third in order is coffee, while vanilla possibly holds the fourth place. We make our orange syrup in large quantities and always keep twenty-gallons stored on ice as a reserve supply.

Our way for making coffee is the percolation process and we make it in twenty pound lots at a time. We have a special machine for the preparation of this beverage, but it is really no more than an enlargement of the usual well-known French drip process. Steam does the work, and there is very little waste in the manufacturing, for, by the mechanism in use, the steam recondenses underneath, performing this process over and over again.

THE CARBONATING.

Our carbonator was supplied by the Liquid Carbonic Manufacturing Co., and is called a Perfection Electric No. 1. We usually keep the pressure at 150 to 160 pounds, claiming that the more thoroughly soda is charged with gas, the better it is, and that to produce such a result, it is necessary to keep the pressure at a high gauge. Our water first passes through a Brunoings filter, where it is thoroughly clarified and made completely sanitary; next it enters a reservoir, where it is cooled, and finally goes through the carbonator. We use the Crescent gas, which comes in the ordinary steel tanks. The fourth step is the entrance of the non-carbonated water or soda into the large storage tank, which is made of copper, and is capable of holding three hundred gallons. This may seem a large quantity, but it is not any too large for our needs, for we use from 400 to 500 gallons of plain soda daily, and it may be interesting to add in the same connection that our consumption of vichy is daily, eighty gallons; of seltzer, 20, and of coffee, 60. Our process for making mineral water is practically the same in use in many fountains, except that we make it in very much larger quantities. As an example, I may say that we manufacture thirty gallons of vichy at one time.

Of course, we sell a prodigious amount of special drinks, and Coca Cola easily leads the list. Next comes Kumyss and Malted Milk. We sell five pounds of Horlick's Malted Milk daily, and the consumption of the others is somewhat larger.

AN INGENUOUS BEATER.

In our experience of many years, we have devised a number of small contrivances which are of great assistance in the dispensing of soda. Perhaps the most useful of these is an egg beater, with which the dispenser can thoroughly stir up an egg drink before serving. It is exceedingly thorough and expeditious in its work, and simple in construction. Its construction is that of an ordinary style of beater, but it works on a spring, with a worm inside a long metal handle; the whole device having some resemblance to a patent spring ice pick. Inserting this in the glass, the dispenser presses down a number of times sharply on the handle and the blades of the beater revolve very rapidly inside the glass, performing their work in an incredibly short time, without causing the loss of a drop of the liquid.

There is profit in soda, but only by systematic, hard work.

DIRECT ADVERTISING*

Best Ways of Promoting Publicity in Drug Stores

Interesting Address on Use of Window Displays, Wall Signs, Counter Placards and Slips, Envelopes, Handbills, Circulars and Booklets—Mr. M. P. Gould's Talk Before the College of Pharmacy, University of Buffalo

How much do you suppose was spent last year in America for the purpose of advertising? I ask this question, not to show any of you how little you know, or to give myself or anybody else an opportunity to laugh at you, providing you do not know. I ask it for the purpose of shaping my remarks so that they will be of more practical value to all of you. Do not be afraid to make a guess for no harm will be done if you do shoot wide of the mark.

You guess \$100,000,000, and you guess \$50,000,000, and you guess \$25,000,000. Are you afraid to go the other way and guess over \$100,000,000?

Well, it is estimated that during the year 1904, there was expended in America alone \$1,000,000,000. I bring this fact out at the very start, in order that, if possible.

Only a few moments ago, one of your citizens told me with great admiration that one of the Buffalo stores spent \$80,000 per year in advertising. I nearly took him off his feet when I replied that to my knowledge there were at least two other concerns in Buffalo spending upwards of \$200,000 per year in advertising.

The very fact that the members of this audience have been such poor guessers as to the extent of the advertising business, only goes to emphasize the lack of general knowledge regarding the scope and importance of advertising.

A SAFE INVESTMENT.

Many people look upon advertising as a gamble, as a joke, as a game of "perhaps," as something to be taken up by a man who has more money than he knows what to do with, and who can therefore afford to lose some of it. They do not look upon advertising as a vital factor in the building up and maintenance of business. Of course, there are fewer and fewer of such people each year. There is a much lesser number of people who look upon advertising as a luxury, as the first expense to be cut off in hard times, as something not necessary to their business.

No one can know accurately about advertising, its possibilities and its power, without believing in it. It can stand the truth being known about it. It is not afraid of being stripped of all the mystery gathered around it. It can step right out into the open sunlight and let anybody of even moderate discernment study it from tip to toe without fear of being discarded. It does not need anybody to advocate its merit. It has established, and is more and more firmly establishing the proof of its power to increase trade for anything worthy of patronage.

EVERY DRUGGIST ADVERTISES.

But, many druggists say that they cannot afford to advertise. They are mistaken. I have yet to know of the first druggist who did not advertise in one way or another. It might be in a small way, but it was advertising. My constant aim is to assist druggists in knowing more about advertising, and in using to better advantage whatever money they do spend in advertising. I do not necessarily ask them to spend any more money than they are now spending. I simply ask them to use it more carefully and effectively. If they

will do that, they will not only have more money to spend, but they will spend it gladly, knowing that it will build up their trade to an ever-increasing degree, for advertising is accumulative in its effects. The most fraudulent kind of advertising usually brings the quickest immediate returns, but in the end is the most costly kind of advertising, since it wears itself out. The most economical kind of advertising is that which is honest and advertises worthy goods. Such advertising must not necessarily be conservative, but it must be clear, direct, straightforward, honest, reliable, trustworthy—and in addition to that, it must be clever, new and persistent. Let us begin at the very beginning of direct advertising for druggists.

WALL SIGN ADVERTISING.

Go into any drug store and study the signs on the wall. Under the same head come the little counter signs and other notices posted about the store. A proper use of these signs greatly increases trade. A druggist in Manchester, N. H., had put a sign for a corn cure, simply giving the name and guaranteeing it to cure corns permanently. He had a small demand for this article. Then, at our suggestion, he took the sign down and up this one: "Corns 'Cured' Forever by —'s Corn Salve. They Won't Come Back. Price 1c." This sign was well displayed so that it could be seen all over the store. It was a bigger than the old sign. He said that that sign alone more than doubled the sale of his corn cure. Most wall and store signs are too old, dry and threadbare. You always see, "Pure Drugs Skillfully Compounded." You expect to see that sign in every drug store, hence its advertising value for any one particular drug store is very small.

WINDOW DISPLAY ADVERTISING.

Window displays are a most important feature of drug store advertising. Motion displays are the best. Any American ought to have enough Yankee ingenuity about him to invent or copy some motion display. The trade journals are full of them, if you will only make use of those that you hear of. All Americans like funny things. Anything new and different will amuse a crowd so well as good advertising, hence little puppies, chickens, rabbits and all such things are usually good advertising. A beautiful little bird, who rounds a glass globe with a hollow center. It is really two globes in one. Air is supplied to the center globe from beneath. In it is placed a beautiful little bird, who sings and enjoys life like any other happy bird. The outer globe is filled with water and goldfish are swimming around in it. Wherever all kinds of things are put in a window, hundreds of people have been puzzled as to how that bird could live in the water, because the interior globe could not be seen, and the water was so deep. This illustrates the value of novelties in the window. Some druggists make their window novel by merely putting in a great array of all kinds of drug store goods, with a tag on each one. The whole purpose of window displays should be gone into thoroughly by every druggist. It is the least expensive and the most effective way of advertising, especially in localities where a great many people are passing the store constantly.

COUNTER SLIP ADVERTISING.

Counter slips to wrap in packages are a very inexpensive and effective mode of advertising. I am disgusted with the silly

*Address by Mr. M. P. Gould before the College of Pharmacy, University of Buffalo.

talk that some druggists make about their not being able to get their clerks to enclose such advertising slips in packages. I have observed that druggists who put them in themselves without fail, and do not excuse a clerk if he forgets or neglects to put them in has no trouble at all in this respect. I know one druggist who has the same clerk for about ten days, and he puts out a certain number of slips each day, and gathers them up at night. If the number given out does not correspond with the number of slips he has, he reports to the proprietor, and if he can locate the trouble, he comes down on the offending clerk like a ton of brick. Clerks who do not neglect this method of advertising if they see their employer always enclose them in the packages of the customers he waits on, and if they see that he insists on their enclosing them, for you know a great many druggists who will discharge the best clerk in their store if he continues to neglect this method of building up trade. Lots of clerks are stupid, but the great majority of them are open to reason and want to make their services more valuable to their employer. If the employer is a pretty good man, one of them and have a good talk with him about the value of this kind of advertising, the clerks will help to increase trade in that way. The druggist who pretends to neglect a druggist who lets his employes run over him, and do as they please. Jawing and blowing up does very little good. Work with the clerks, and get them on your side if you are antagonistic to them, they will work against you. As to what to advertise on these little enclosures—it is best not to do too much on one slip, but to simply have them clever sayings, particularly interesting about one thing, or one department. They are so inexpensive, anywhere from seventy-five cents to \$1.50 per 1,000, and they do so much to develop trade, that any druggist who neglects them, does not care much whether his business grows or not.

CIRCULAR ADVERTISING.

Circulars are merely large counter slips. The all phases of the store. Each one can be devoted entirely to a department, or entirely to one article, or can attempt to cover five or six different articles, in clever phrases or in stories. They can be large or small. They can advertise special events, or they can be filled with straight talk for the building up of the reputation of the store. They can be price lists, or they can be catchy. As far as possible, each circular should contain something out of the usual run, some new view, some unusual presentation of a subject, some of these circulars can be left on the counter, where some will be picked up by waiting customers. Most of them can be distributed from house to house throughout the community. Some can be wrapped in packages like counter slips. Others can be enclosed in daily or Sunday newspapers. Still others can be tacked up about the store, pasted on card board, or on the windowpane in front, while others can be sent to the regular mailing list.

ENVELOPE ADVERTISING.

Speaking of mailing lists, the form of advertising which really costs almost nothing, and is exceedingly effective, is to have envelopes with some special wording on the outside, and you have this printed on when the envelopes are made. It costs really no extra expense. Even if you take a regular envelope, and have something else printed on it, it costs only a trifle per thousand, and sometimes a little more with a very catchy expression on the outside, will double the interest in its contents and increase the effect of the advertising. Do not overdo the matter and make your envelope look like some cheap liver pill sample.

LETTER ADVERTISING.

As to what shall go in these envelopes—there are four kinds of letters. We will hold up the four and ask you gentlemen on the front seat to tell me what kind of letters they are. Of course, this has been often asked me, and you know what are the other three? You think that one is typewritten and this is a mimeographed letter, and this one a printed script letter. You think so. You are wrong. Very well, this one which you think is typewritten is mimeographed, and the name and address filled in on the type-

writer. The ribbon being carefully selected to exactly match the ink of the mimeograph. With a little practice and great care you can make a mimeographed letter look almost exactly like a typewritten letter. The main fault with most mimeographed letters is that they are so poorly done that they look better than the letter which you thought was mimeographed is a printed letter, and photographing it on a zinc plate, and then printing from the zinc plate. It is a very cheap way of getting out a letter, but it always looks cheap. It is the way that most letters are reproduced. You are right about this third letter being printed script. A zinc plate is made in the same way as for the letter mentioned above and the letter is printed in two ink—the script in black and the druggist's name and address, etc., in green. A regular typewritten letter is better than any other kind of a letter, since you can make it personal for each person to whom it is written. You can put in something which appeals specially to each person, or you can make it so general that it will not be good advertising for that person. The main fault with the personal typewritten letter is that it costs much more than a mimeographed way of running up into money, and the work being slower. Whatever kind of a letter you send out, make it neat and attractive. No matter how plain the paper may be, and the recipient who appreciates attention and nice things.

BOOKLET ADVERTISING.

Booklets are only an enlarged form of circulars. They are very effective for advertising specialties such as toilet articles of all kinds and remedies. A booklet costs more than a circular and is worth more. It can be made more beautiful, it can be illustrated better. It is more effective on a nice thing, or an important thing. It carries more weight. It costs more to make, but it brings more return. It is distributed in the same way as a circular. It should never be made to look cheap or dirty. If possible, it should have something in it that has been requested up to whom it is addressed want to keep it.

ONE-TIME ADVERTISING UNPROFITABLE.

A very common error among druggists is to use direct advertising spasmodically. They use newspapers a little better because they have been educated up to that and besides they get a very much lower rate if they will sign a year's contract to use the weekly paper every week, or the paper at stated periods, such as twice a week, or three times a week, or every day. But, when it comes to booklets and circulars, some druggists will simply get out one booklet or circular, and then wait six months before they get out another. The best returns cannot be gotten that way. The druggists throughout the country, who are making the most money out of their direct advertising, are those who get out a circular every month, or every two weeks, or issue a series of booklets. In every way you can get out that form of advertising until it makes an impression. Never forget that advertising returns increase the longer you advertise. I know of one druggist who has done so well in ten years old which has dealt honorably and satisfactorily with its customers will get ten times as many replies from its advertising, paid for, as has done so well in one year. In every way you can get out that form of advertising, knowing that we had something to sell druggists which was useful to them, and which in time they would appreciate the value of. We have been spending more and more in advertising every year, until last year we spent in advertising our own business, upwards of \$1,000, and all brought us back a return enough business directly and almost immediately to more than pay for its entire cost, but indirectly it brought back many times its cost. That illustrates the cumulative effect of advertising. If you do a little advertising now, and then stop and wait a long time and then do a con-

little more, and stop again, you never will accomplish anything very large through advertising, and more than you could build up a large business by opening your store one day and closing it the next, and then when you felt like it, opening it up again for a week, and then closing it for a week. You realize the folly of that when you apply it to opening and closing a store. To an experienced advertiser the folly is more than great when you apply the same tactics to advertising.

ADVERTISING IS REGULAR STOCK.

If time ever comes, and I hope it will speedily come when you men of this university own your own drug stores, I hope that you will then know enough about advertising, and appreciate its value enough so that as you plan your new store, you will not spend all of your money in the fixtures and stocks, but will set aside a liberal sum for the advertising of your store. I have seen many a young man start out in business for himself, fully equipped to do splendid work, but few people knew about his business, and anything soon after he would sit down and pace back and forth in his store, every day getting more discouraged and further behind on his investment, until finally he would give up. I have seen other young druggists start in for themselves and spend enough money right at the start to make an ordinary druggist think that means they made an impression upon their locality and started off with a good business at once. I recall one clerk in a town in Illinois, who had been working for an old-established drug store. The store was not in the best of condition, nor did the druggist believe in advertising. This clerk studied advertising for about two years. Then he opened up a store for himself and spent between \$150 and \$200 on the initial advertising for his store, with the result that within three weeks after his store was opened, he was doing a bigger business than the old store. He made such an impression at the very start that he had the people with him. He realized that he had to get out and take the bull by the horns, and look upon that advertising as stock in trade, as an investing pure and simple, as a means of getting trade at once, which by less radical results would take him probably two years to obtain. So he made the investment and at once became the leading drug store in his locality. He did not accomplish this altogether by newspaper advertising, or altogether by circular advertising. He did it largely by the very appealing method which he employed to get people into his store, win their good-will and secure them as regular customers.

I do not come before you students and druggists to plead the cause of advertising. It does not need my plea, or your plea. I come primarily to point out to you the need everyone of you will have for advertising. I hope that I have pointed it out in a way that will make you appreciate the power that advertising has for building up a retail drug store trade, as apothecaries, clerks, as proprietors, the more you study advertising and put what you learn into practice, the more successful you will be as retail druggists.

SPONGE EXHIBIT.

Smith, Kilne & French's annual sponge exhibit, which is in New York at present, will open at the United States Hotel, in Boston, Monday, April 3d.

This exhibit is worthy of the attention of every druggist. It shows many rare specimens in sponges that are seldom seen, and one cannot fail to get many good points on how to make money on his sponge trade.

Mr. E. Bensinger will be in charge of the Boston exhibit and will be glad to have the druggists call upon him.

Mary had a little dog,

Its feet were white as snow,
And everywhere that Mary went
The dog did H.O.

THE TIE THAT BINDS.

Packages must be tied up. Why not use something that not only holds secure, but also has a meaning?

Give Reis' Advertising Tape a trial. Your store's name and address are printed successively its entire length. It both advertises your business and adds a distinctive touch to the packages leaving your establishment.

The accompanying cut shows what a neat appearance such a package makes.

The tape can be had one-sixteenth or one-fourth inch wide, in any tint or color you wish. It won't break easily or stretch, being superior to string in both particulars.

G. Reis & Bro., Dept. P, 640 Broadway, New York City, will send you free samples of the tape upon request, if you mention The Era. It is well worth a trial. Better write for a sample.

OUR PRAGUE CONSUL ACTIVE.

Urban J. Sedons, American Consul at Prague, Bohemia, Austria, has put in operation a system to promote the sale of American goods in that market. He requests exporters and importers to supply that consulate with the following commercial data about their business: Name of firm, street, city and cable address, codes used, export discounts and terms, languages of correspondence, references or commercial rating, nature of exports and imports, list of their foreign branches and agents.

Catalogues, price-current, discount sheets, circulars, photographs, small samples, etc., are also desired. All this information is entered on cards of an index system and the catalogues are filed in folders, numerically indexed.

Mr. Sedons tersely describes the working of the system thus: "Mr. Buyer addresses himself to this consulate; we have complete commercial data. He wants information immediately; we can furnish it immediately. We simply direct him to our merchandise file which indicates to him the dealers, introduces the record cards, which in turn bring in their respective folders, and drive in immediate sales. The information is most complete; he can make an order immediately."

All firms interested in business to Bohemia and Austria should file such information with Mr. Sedons.

TO MOVE WITCH HAZEL MILL.

The Dickinson witch hazel plant at East Hampton, Conn., will receive no more brush. It has on hand about 175 tons and when all the brush is cut up, the mill here will be dismantled and moved elsewhere, three different places being considered.

BUSINESS RECORD.

ALABAMA.

Opp.—Opp Drug Co., damaged by fire.
Tuscaloosa.—Oak City Pharmacy, new store.

ARKANSAS.

"Pine Bluff.—Sawyer & Austin, new store.
CAJAL PUEBLO.
Etna Mills.—Balfrey & Johnson, succeeds Edgar Bridgewater and J. A. Diggles.
San Francisco.—International Phcy., 1232 Stockton St., new store.
Lion Phcy., 852 Market St., sold out, no successor.
Santa Barbara.—Crane & Fairbanks, new firm.
Santa Rosa.—C. F. Keller, succeeds J. W. Warboys.

COLORADO.

Pueblo.—H. C. Mehrlich, 402 Northern Ave., succeeds Allard & Mehrlich, 325 Northern Ave.

GEORGIA.

Atlanta.—H. S. Simpson, succeeds S. S. Brunson, Jr.

IDAHO.

St. Anthony.—Chas. S. Watson, damaged by fire.

ILLINOIS.

Aledo.—Craig Drug Store, new store.
Chicago.—Chas. Golden, succeeds Schiller Phcy. Co., 562 N. Clark St.

INDIANA.

Bryant.—E. L. Shull, succeeds W. H. Eberson.
Et. Wayne.—Weihe & Kaiser, 133 E. Berry, damaged by fire.
Gas City.—Rothinghouse Bros., burned out.
Hudson.—A. B. Davis, succeeds J. H. Wagner.

Linton.—B. M. Moss, succeeds E. M. Sherwood.

Osgood.—E. D. Bower, new store.

Royal Centre.—Tonsley & Hazely, succeeds J. L. Thomas.

INDIAN TERRITORY.

Pauls Valley.—Gaulf & Johnson, succeeds W. G. Kimberlin & Co.
Tishonung.—L. D. Moss, burned out.

IOWA.

Des Moines.—E. E. Draper, succeeds P. E. Stroud.
Dubuque.—Torbert Drug Co., succeeds W. H. Torbert.

Gilman.—Gould Drug Co., succeeds Dunkle & Son.

Newton.—Iowa Merc. Co., new store.
Rock Valley.—H. H. Pember, succeeds Koening & Son.

Victor.—N. R. Ross, succeeds J. F. Schulte.

KANSAS.

Assaria.—Scanlon & Co., succeeds Ekstrand Drug, Book & Stationery Co.
Attica.—M. F. House, succeeds Cristler & House.

Norcutt.—Norecutt Phcy., new firm.
Seneca.—E. J. Clark, succeeds A. Snyder.

KENTUCKY.

Bloomfield.—Ernest May, succeeds M. Lynch.
Midway.—Starke & Co., damaged by fire.
Owensboro.—T. W. Mills & Co., succeeds W. M. Terry.

MARYLAND.

Cumberland.—C. W. Stark, succeeds A. M. Lichtenstein, 179 N. Centre.

MASSACHUSETTS.

Holyoke.—Menard Pharmacy Co., succeeds A. S. Menard.
Medway.—W. W. Clough, damaged by fire.
New Bedford.—J. M. Kelleher, County and Kempton Sts., new store.

MICHIGAN.

Coloma.—Fred Scott, succeeds Lewis Muth.
Newberry.—Bohn & Perry, succeeds F. W. Neal.

MINNESOTA.

Duluth.—St. Louis Pharmacy, new store.
Granite Falls.—Johnson & Lennon, sold out.

Mankato.—Edw. L. Lamm, succeeds H. I. Parry, 307 S. Front St.
Osakis.—G. H. Hayward, succeeds Maries Drug Co.

MISSISSIPPI.

Isola.—W. P. Turnipseed, succeeds Turnipseed & Gunter.

MISSOURI.

Braymer.—Braymer Drug Co., new firm.
Liberty.—J. H. Barnes, succeeds T. T. Allen.

Memphis.—G. D. Dawson, succeeds Dawson & Williams.

Newtown.—G. W. Bowers, succeeds M. Williamson & Co.

Vienna.—B. F. Pinnel, sold out.
Warrensburg.—J. C. Veruay, succeeds Melter & Veruay.

MONTANA.

Boulder.—E. W. Burdick, succeeds Reidell & Burdick.
Bridger.—Gates Drug Co., succeeds Bridger Drug Co.

NEBRASKA.

Ashland.—C. M. Hendrick, sold out.
Central City.—T. J. Locke & Son, new firm.

Holbrook.—Gully Butler, succeeds J. S. Bollbaugh.
Seward.—Fallen & Murphy, succeeds A. H. Totten.

NEW HAMPSHIRE.

Manchester.—Walsh & Cummings, 955 Elm St., new firm.

NEW JERSEY.

Milville.—Ion E. Terry, sold out, no successor.

NEW YORK.

Cortland.—Perkins & Quick, burned out.
Newburgh.—Clinton E. Turner, succeeds Fredk Wallace, 226 Grand St.

NORTH CAROLINA.

Binford.—Geo. W. Lockett, new store.
Dickinson.—David M. Benzie, succeeds White & Co.

OHIO.

Defiance.—Jennings & McCaulley, succeeds H. Jennings.
Delta.—N. E. Garum, destroyed by fire.

Lorain.—Floding & Jameson, succeeds Frank Floding & Co.
Massillon.—Fribley & Gordin, succeeds T. E. Seaman.

PENNSYLVANIA.

Blue Ridge Summit.—H. J. Mentzer, new firm.
Elizabethtown.—Chas. B. Dierolf, succeeds F. H. Balmer.

Hamburg.—Wm. Harris, M.D., dead.
Philadelphia.—Glenn E. Jeffell, Seventeenth St. and Susquehanna Ave., burned out.

Pittsburg.—W. Sawhill & Son, to 645 Fifth Ave., from 801 Fifth Ave.
Waynesburg.—Clarence Croft, succeeds Mentzer & Clugston.

RHODE ISLAND.

Woonsocket.—Desrochers Bros., Sayles and River St., new store.

SOUTH DAKOTA.

Fort Pierre.—Watson-Fletcher Medicine Co., succeeds M. Dunning.

TEXAS.

Mexia.—Parlor Drug Store, new store.
Park City.—Rosevair Phcy. Co., succeeds E. J. Rosevair.

Salt Lake City.—Red Cross Drug Co., succeeds First, South and State St., new store.

VIRGINIA.

Portsmouth.—Jerome P. Carr, damaged by fire.

WASHINGTON.

Quincy.—H. D. Vail, new store.
WEST VIRGINIA.

McMechen.—S. B. West, dead.
Wheeling.—Dankworth Bros. Co., succeeds M. H. Hagne, 117 Sixteenth St.

WISCONSIN.

Melrose.—Ward Gilbert, succeeds M. B. Olson.

PHOSPHORIC ACID FREE.

The Treasury Department has notified its officials that the government will take no further proceedings in the case of the recent decision of the United States Circuit Court for the eastern district of Louisiana, which was adverse to the government. It was the case of the Mississippi Valley Transportation Company vs. the United States.

The merchandise in suit consisted of phosphoric acid, which was assessed for duty as syrup of phosphoric acid. The importers protested, claiming the merchandise to be phosphoric acid, and not a medicinal preparation or syrup, and properly entitled to free entry under paragraph 464 of the free list of the act of July 24, 1897, which claim has been sustained by the United States Circuit Court.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued March 21, 1905.

- 785,106—William H. W. Jones, Waverly, N. Y. Jar or bottle closure.
- 785,161—Adolph Frank, Charlottenburg, and Nikodem Caro, Berlin, Germany. Process of making nitrogen compounds.
- 785,322—Harry W. McMillan, Stafford, Kans. Automatic label affixer.
- 785,357—Meredith R. Green, Kensington Park, South Australia, Australia. Bottle for preventing the fraudulent refilling of same.
- 785,364—Frank G. Kammerer, Chicago, Ill. Valved bottle-stopper.
- 785,467—Carel Bell, Hoboken, N. J. Non-refillable attachment for bottles.
- 785,469—Joseph Bendor, Macon, Ga. Turpentine still.
- 785,524—John J. Shea, Beverly, Mass. Surgical saline-infusion apparatus.
- 785,551—Edward Hoerichs, Baltimore, Md., assignor of two-thirds to Thomas A. Bryan and Charles H. Boone, Baltimore, Md. Stopper for bottle.
- 785,592—Ruth E. Core, Boulder, Colo.
- 785,638—Amos J. Scritchfield, Janesville, Wis. Hot-water bottle.
- 785,656—Nathaniel E. Booth, Southold, N. Y. Bottle.
- 785,660—William E. Brown, Los Angeles, Cal., assignor of one-half to James H. Brennan, Los Angeles, Cal. Handle for demijohns, etc.

TRADE MARKS.

Registered March 21, 1905.

- 44,331—Remedy for indigestion, dyspepsia and similar complaints. The Grove Co., Salem, Ohio. The word "Jumbo," associated with the illustration of an elephant.
- 44,332—Rheumatic tonic. John F. Finke, St. Louis, Mo. The representation of a serrated seal in red having a central circular background in black and crossed by a panel bearing a fac-simile of the signature of the registrant in the possessive form.
- 44,333—Tonic. Carl Reinschild, New York, N. Y. The compound word "Bromo-Mangan."

LABELS.

Registered March 21, 1905.

- 11,958—Title: "Sbivine's Rheumatic Remedy." (For medicine.) George W. Schlive, Scranton, Pa.
- 11,965—Title: "Ka-Be." (For stomach-bitters.) Crysoo Drug Company, Harrisburg, Pa.
- 11,966—Title: "Paramel." (For medicine.) Anton V. Kouba, Boulder, Colo.
- 11,967—Title: "Fitzpatrick's Rheumatic Cure." (For medicine.) Lawrence L. Fitz Patrick, Milwaukee, Wis.
- 11,968—Title: "Heat-Quick." (For an external remedy.) Fidelity Co., Philadelphia, Pa.

PURGEN—A NEW PURGATIVE.

Lehn & Fink are putting on the market a new synthetic purgative, "Purgen," which will be extensively advertised to the medical profession, and for which a big demand may be looked. Purgen is supplied in tablet form in boxes of 20 and bottles of one hundred. This new purgative

The advertisement features a central illustration of a box of Purgen tablets. The box is labeled "PURGEN" at the top and "D. D. BAYER, BUDAPEST" at the bottom. The illustration shows a hand holding a tablet, and the box is surrounded by decorative elements.

has aroused the greatest interest among the profession wherever it has been introduced. Purgen is entirely harmless, as it is not absorbed by the system and leaves the body with the faeces. It is useful in graduated doses for children as well as adults, and no general depression follows its use. Purgen tablets are pleasant to take, being sweetened with saccharine and flavored with vanilla. Druggists desiring information should address Lehn & Fink, 129 William street, New York.

SUICIDE OF A DRUGGIST.

Denver, March 27.—Thomas Craig Reeds, a druggist, committed suicide, recently, because of his physical condition and inability to get employment at his profession.

Reeds came to Denver six years ago from the East, with his wife. He had only one leg. His physical disability caused him continual annoyance and worry.

MARKET REPORT

STEADY AND QUIET.

Several Unimportant Declines, But Little Feature.

NO SPECULATION AND CONSUMPTIVE DEMAND SMALLER—CONDITIONS, HOWEVER, FAIRLY SATISFACTORY.—BROMIDES CONTINUE PRACTICALLY UNOBTAINABLE AT NEW PRICES FROM MANUFACTURERS AND JOBBERS SELLING AT FORMER LEVEL.—UNION SALAD OIL AND MENTHOL EASIER.—CARNAUBA WAX AGAIN ADVANCES.

New York, March 27.—A lack of new features characterizes the market. During the week prices have held very steady on most lines and few fluctuations in either direction have occurred. The bromides remain in the same paradoxical position of low wholesale prices of a merely nominal significance to most buyers and of a jobbing level of practically the old higher figures. The leading commodities are unchanged, but show little life. A few changes in more unimportant articles have taken place and these are mostly of a downward course, but their significance is not great.

The demand on jobbers cannot be termed more than moderate. But although quiet conditions generally prevail, it is thought that the total sales for the month will reach average proportions. As a result of the lack of speculative operations, all actual transactions may be considered as direct movement into consumption and in such light, business appears healthy. In bromides there would be much speculative buying if manufacturers were able and willing to fill such orders at the reduced figures recently established.

During the week the most important changes are declines in menthol and union salad oil and another advance in carnauba wax.

OPIMUM.—Interest has lessened considerably and less anxiety regarding the damage to the crop seems to be experienced by consumers. This is largely because of the size of stocks carried by first hands, both domestic and foreign. The stock in Smyrna on March 1 was reported to be 4,114 cases. Nevertheless the market continues steady, because of the severe damage inflicted by frost on the new crop. Local demand is moderate and jobbers quote the unchanged prices of \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered, \$4.00@4.25 for thirteen per cent., and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—A moderate routine demand continues, but little interest is shown. Prices are unaltered and steady, jobbers still asking \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials and \$2.50@2.40 in 5-oz. cans, according to brand and quality.

QUININE SULPHATE.—The movement of supplies from first hands to jobbers and from them to retailers continues routine. There seems to be an absolute lack of spec-

ulative interest. The result of the London bark sale on March 21 was a slightly lower unit, 1½d. being the average figure. The offerings at the next Amsterdam auction, which is to be held March 30, will be only 7,022 packages and many dealers expect an advance in prices as a result. Local jobbers still quote 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

MENTHOL.—The spot stocks here are very large and in excess of consumers' needs, resulting in some selling pressure. Prices have consequently declined in some quarters. Other holders, however, profess to see firmer conditions. Jobbing prices can be fairly quoted at a range of \$2.75@3.35 per pound, according to quantity and seller.

CARNAUBA WAX.—The scarcity is more pronounced and offerings from Brazil are hard to secure at a reasonable figure. All primary markets are strong. Consequently, jobbing prices are now on the higher basis of 46@50c. for No. 1, 43@48c. for No. 2, and 39@43c. for No. 3, all per pound.

CAMPHOR, MONOBROMATED.—Owing to competition, the market has eased somewhat. New jobbing prices are \$1.40@1.50 per pound and 16@20c. per ounce, while powdered is \$1.50@1.60 per pound and 17@20c. per ounce.

SABADILLA SEED.—Free offerings by holders create an easy market on the lower jobbing basis of 24@29c. for the whole, per pound, and 29@34c. for powdered, per pound.

UNION SALAD OIL.—Manufacturers have announced a two cent decline during the week, owing to the lower cost of raw material. New, proportionately lower, jobbing prices are 35@37c. per gallon, in barrels, and 45@53c. per gallon for less.

SANDARAC.—In sympathy with the London market, which is overstocked and easy, local values are lower, jobbers now quoting 29@34c. per pound.

CANTHARIDES.—There is keen local competition in the marketing of Chinese flies, although prices here are lower than those in foreign markets, and it is hard to obtain supplies in China. As a result, jobbers in this market have reduced prices to 73@83c. for whole and 83@93c. for the powdered, per pound. The Russian flies are unchanged at \$1.55@1.70 per pound, for sifted.

ALERTIS ROOT.—Because of the expected receipt of consignments of the new crop, the true has declined, and jobbers have lowered prices to 52@57c. for the whole and 57@62c. for powdered.

JALAP ROOT.—The market is weak. The new crop is arriving freely. New jobbing quotations are 17@22c. for whole, and 22@28c. per pound, for powdered.

SAFFRON.—Further strength is shown by the American. The light stocks have been closely controlled for months and the jobbing demand is quite good. Higher prices are asked by jobbers on the basis of \$1.62@1.72 per pound, for whole, and 29@34c. per pound, for powdered. The Spanish varieties are unchanged.

JABORANDI LEAVES.—Very scarce. The spot is practically unobtainable in the spot market. New and higher jobbing prices are as follows: Whole, 29@34c.; ground,

32@37c., and powdered, 34@39c., all per pound.

STRAMONIUM LEAVES.—Foreign markets are strong, as supplies are very light and no relief can be seen until the arrival of the new crop in September or October. Prices in the wholesale market here have risen, but are not yet on a parity with foreign quotations. However, local jobbing prices remain unchanged at 15@20c. per pound, for the whole.

NEX VOMICA.—Is in better supply, and wholesale prices are a trifle lower, but not sufficiently so to change jobbing figures, which hold at 11@16c. per pound.

BAVBERRY BARK.—The near approach of the date when the new crop will be received depresses values at first hands, but as yet, jobbers have made no change from 17@22c. per pound.

ELM BARK.—All varieties have eased at wholesale, owing to the lateness of the season. The new crop will soon arrive. Jobbing prices unchanged at, say, 27@32c. per pound.

PRICKLY ASH BARK.—New crop due soon. Prices lower at wholesale, but jobbers still quote 26@31c.

CORIANDR SEED.—Some scarcity is felt and the market is firm, but no real change. Jobbing values remain 11@14c. per pound.

CHAMOMILE FLOWERS, ROMAN.—Another advance has occurred in the wholesale market, because of the diminishing stocks of old crop. Moreover, these are concentrated in a few hands. The advance is too small to affect jobbers, who still quote 30@40c. per pound.

HALL & LYON IN PAWTUCKET.

With the first of the month Hall & Lyon, the well-known druggists of Providence, opened a large, well-equipped store in Pawtucket. The new establishment is in the Edith block, Main street.

The opening was marked by a reception to the public to allow inspection, and music, both afternoon and evening, rendered the occasion the more auspicious. The firm gave every visitor a small box of chocolates and a study of a girl's head, on cardboard, suitable for passe-partout. 5,000 boxes and 5,000 pictures were thus distributed.

The furnishings of the new store are white and mahogany. The ceiling is white and dotted with incandescent lamps. To the left of the entrance is the large soda fountain. Just beyond the fountain is the cigar counter. The rear of the store is devoted principally to the regular drug goods and the prescription department. On the right of the entrance is the candy and perfumery counter, and also the patent medicine department.

E. E. Earnshaw, the manager, says the store will be conducted exactly on the same lines as the Providence stores.

Drug dispensaries are the scenes of many humorous dialogues. Hypochondriacs are too numerous. An Irish woman confides to the druggist: "Sure, that new doctor is on the bum. It's the pink and white mixture that does me good. I don't want this brown stuff," and she stalks out to come on a clinic day, when the other doctor is on duty.

EDITORIAL COMMENT

Sanitation and Red Tape.

The report upon the sanitary condition of the Panama Canal Zone by Dr. Charles A. S. Reed, chairman of the legislative committee of the American Medical Association, has caused something approaching a sensation in some of the Government departments at Washington. It was recognized in the beginning that the sanitary conditions surrounding those who were to dig the canal would be of paramount importance in carrying that big undertaking to a successful issue, and arrangements for this preliminary work were early made. Now Dr. Reed announces that sanitation on the Isthmus is in a bad way when it should have been well on the way toward perfection.

No one is accused of incompetence or neglect. The trouble is traced to the paralyzing influence of circumlocution and red tape. As an illustration of the ridiculous methods employed, the rigmarole which a surgeon must go through in order to obtain supplies which could be secured in an ordinary drug store is described. The surgeon in charge of the hospital makes a requisition for the supplies needed; this document goes to the Chief Sanitary Officer for approval, then to the Governor of the Zone, then to the Chief Disbursing Officer, and thence to the commission at Washington. There it must wait for bids, and when the award is made, the requisition is filled under the direction of a purchasing agent who is not in every case qualified to select medical supplies. The drugs, or whatever the material happens to be, are then shipped to the Isthmus, the disbursing officer is notified, he notifies the Governor, and he in turn must notify the surgeon who has been waiting all this time for the supplies, he applies to a quartermaster for transportation, and finally as much of the material as in the judgment of several superior officers ought to be allowed, the hospital receives its supplies.

How much of the routine is unnecessary we are not prepared to say,

but we may trust the President to reduce it to its lowest terms.

President Wm. C. Anderson.

The choice of Prof. Wm. C. Anderson to fill the office of president of the newly formed branch of the N. A. R. D. in this city calls for congratulations to everybody concerned. Dr. Anderson is not only pre-eminently fitted for the duties of a presiding officer, but he understands better than any other living man the principles of the national association and their application to the peculiar conditions in the city, and—most important of all—he has the confidence of every member of the trade. No one will even think of accusing him of ulterior motives, of being influenced by thoughts of personal aggrandizement or salaried office. Nothing could be said in praise of the new president more convincing than "everybody trusts him."

It is also appropriate that this honor should be conferred upon him. He may be said to have been the pioneer in the direct contract movement for the control of prices. He fought for the recognition of the contract principle through several conventions, and now that the perfected plan promises to lead the retail druggist to a complete victory, it is only fitting that he should be chosen to head the most important division of the forces.

The N. A. R. D. owes Dr. Anderson all the honors which it is able to bestow for another reason. But for him the alienation of New York from the national body would have been complete, and without his aid the campaign just brought to a successful close would have been much more prolonged and difficult, to say the least.

President Anderson is the man for the place. His magnetic personality and his cool judgment render him a natural leader of men, and his wide experience and his integrity will save him from the fate of degenerating into a subservient tool of any faction.

Why the "Giants" Hold Aloof.

The failure of the members of the Drug Merchants' Association to join the N. A. R. D. movement as a body may not be so serious as it at first sight appears. The promised individual cooperation is probably all that will be necessary to ensure a measure of success in the protection of prices. The

"giants" said in effect to the leaders of the local association, "We are with you as long as you behave properly, but we will not make ourselves responsible for your good behavior."

Apparently the drug merchants have been frightened away. Heavy investments of capital and large business interests are apt to develop a dread of entangling alliances. We suspect that sundry remarks, for which the N. A. R. D. leaders are responsible, and which, in the light of later events, seem to have been a bit injudicious, may have had something to do with the reluctance of the "giants."

As long as the avowed object of the movement was the maintenance of fair prices, the big druggists were interested and willing to promise hearty support. But when statements began to circulate in effect that price protection was only a minor purpose of the N. A. R. D., their sympathy began to cool a little. What are those other purposes, and can a member of the trade whose interests are not all parallel to those of the small druggist safely endorse them? That is a question which may have caused doubts. A remark from Chicago brought out by the Sherman anti-trust law suit was, under the circumstances, also highly suggestive. As our readers will remember, a representative of the N. A. R. D. declared that New York was the chief retail outlet for a gigantic drug trust backed by Standard Oil millions. Now, that was a direct challenge to certain retail interests in this city, and may well have caused additional doubts. "Notes" has also asserted from time to time that the small dealers are the chief beneficiaries of the N. A. R. D. movement. A large dealer cannot be blamed for hesitating to join a propaganda which is expected to flourish at his expense.

Not that any of these queer statements is even partially true—better prices are certain to benefit all branches of the trade alike—but everybody is not in a position to scrutinize all sides of all questions and propositions.

The Friday Question Answered.

Mr. Field's wonder about the habit of changing window displays on Friday has had the desired effect. Mr. J. Albert Kiedaisch, in a letter which appears elsewhere in this issue, gives a very acceptable reason for the furnishing up of drug store windows on that particular day. He says it is because Saturday is the great show day, and that no self-respecting window-dresser wants to be outdone in the matter of freshness and interest.

That seems very reasonable, yet it is not very flattering to the enterprise and ingenuity of the average trimmer. It implies that the prime impulse which prompts the choice of that day is a

dread of being outdone, or a willingness to follow. In choosing Monday, instead of Friday, Mr. Kiedaisch shows not only originality, but also confidence in his own judgment, both of which qualities make for success in any line of work.

Does He Figure Correctly?

A friend of ours was criticized severely for the extravagance of giving away a fifty-cent box of candy with all purchases amounting to a dollar and over on a certain day during the holidays. "Oh, I don't know," he said, "it was not so foolish. On that one day I did more business than during an entire week ordinarily. Now, figure the running expense of one day in comparison with that of a week, rent, fuel, heat, light and all extras. The difference would pay for a good many boxes of candy. You can't figure on any individual sale, but must take all things into consideration. I have no definite data, but believe that the venture was far from foolish."

Not All Disapproval.

A few weeks ago we referred in these columns to sundry remarks made by Dr. Barnett before the pharmaceutical journal club of Baltimore about current drug journals. The remarks were not at all complimentary, and although we admitted the justice of the criticism, we suggested that there might be another side which the doctor had overlooked. In a letter which appears elsewhere in the present issue, Dr. Barnett explains that he did actually consider the other side, but that only the disagreeable portion of his remarks had found its way to our attention.

That is an unpleasant way that criticism has of traveling at different speeds. The striking remarks outstrip the less remarkable portions, and disagreeable things are somehow always the most striking. Say something nice and something less pleasing about a person, and the unpleasant portions invariably go straight to the mark, while those likely to have an opposite effect, linger by the wayside and often get lost entirely. It seems that Dr. Barnett approves heartily of drug journals except in the particulars which happened to attract so much attention. He agrees heartily with a friend who lately remarked that if druggists would spend more time reading drug journals and less in scanning the pages of newspapers, they would be better off.

There we are again unable to follow him. Some drug journals are not half as interesting and instructive even to druggists, as a good daily newspaper. Several of our contemporaries are still traveling the old grass-grown road, deserted by sensible people twenty years ago. Besides in touch with the world

is quite as necessary for the pharmacist as extending his knowledge of incompatibilities.

Demand for Libraries Falling Off.

The suggestion printed in these columns a few weeks ago to the effect that Mr. Carnegie might find an independent college of pharmacy is not so impossibly visionary after all. It seems that the library market is dull, and that the benevolent builder who is working heroically not to die rich, can no longer find suitable locations in which to place collections of books and is looking elsewhere for an outlet for surplus capital. He has now turned his attention to the small colleges, apparently reasoning that the larger institutions provided with persuasive presidents are able to look after themselves. It is not at all improbable that this practical giver would be interested if the needs of pharmacy schools were plainly and attractively set before him.

The latest reports of Mr. Carnegie's plans are more stimulating to the imagination than the story of Monte Cristo. The library business, which is considered practically played out, still represents a daily disbursement of \$20,000, but the mere humdrum of founding one library a day has ceased to be amusing, hence the search for needy but worthy small colleges. Arrangements have already been completed to give away some 17 millions to institutions of learning, but the demand has not yet been properly worked up. No doubt, with a little additional advertising and a few more detail men, trade in the new line will be brisk.

Boundaries of the Drug Business.

Mr. Diner, in declaring at the meeting of the Manhattan association the other night that jewelry is not a legitimate side line for the drug store, and that members who had reason to regret little ventures in that branch of commerce should not be entitled to legal aid from a body of druggists, established a precedent which possesses many interesting possibilities. Are we to accept this as one of the boundary stones which will eventually set the limits about the drug business?

If jewelry is not a legitimate side line, what is? There are many pharmacists who believe that even the soda fountain has no proper place in a drug store.

A retail druggist, writing to N. A. R. D. Notes, reports that on a basis of \$11,437.79 he makes an annual profit of \$3,587.16, and he devotes only part of his time to the business at that. Thirty per cent, besides a good salary for a fraction of one's time is not half bad. And yet they say that there is nothing but hard work in the drug business.

The Drug Trade Press

For the purpose of bringing the subject to the attention of our regular readers, we reprint in another part of this issue a circular on our drug and pharmaceutical journals, which is now being distributed by our business office to druggists who are not subscribers to this publication.

Our trade journals are filled with reports of retail druggists who are organizing for their mutual advantage; the wholesalers have had their strong national association for many years, together with their local organizations; the proprietors protect their interests through a parent body which is strongly supported; the chemical houses work more or less closely together; the pharmaceutical houses have had a better understanding among themselves ever since the Spanish war; even the perfumers have their national organization for correcting trade abuses; while the drug trade journals continue to plod along single-handed, facing competition which is as severe as that in any other branch of the drug trade, and in many respects more unfair and unjust.

But now, after all the other branches have their fences repaired, perhaps, we are not too presumptive in suggesting that the journalistic branch of the drug trade may receive a small share of attention from those whose interests it endeavors to serve.

Before proceeding further, we will explain that this is no scheme to consolidate all the drug journals into a gigantic trust. Such a combination would not be advisable, but would be prejudicial to the best interests of the drug trade. We simply propose to call attention to some conditions which exist, and to point out some changes that must be made if this branch of the drug business is to be placed on a basis where it can render the grade of service that the other branches of the trade and profession demand, and have a right to expect.

Many other trades are better served with their trade publications. Some of our esteemed contemporaries may not like this statement, but they can stand it if we can. In the drug trade we have no such recognized authorities as the "Iron Age," the "Electrical World," the "Dry Goods Economist," the "Engineering and Mining Journal," "Machinery," and others which we could mention.

After spending twenty years in the business of making drug journals, we confess that it is not a pleasant duty to write such a confession; but it is true, nevertheless, as everyone knows who is at all informed regarding the merits of the various trade publications.

Naturally, the reader will ask, Why is it?

Is it because the drug trade does not offer equal opportunities for the enterprising trade publisher?

Yes and no. The opportunities are there in abundance if conditions can be changed, and if the trade can be awakened to its responsibilities.

To analyze the present situation, there are too many drug journals. The patronage in subscription and advertising is so scattered that no one publisher can afford to employ the number and the grade of men necessary to produce a thoroughly first class authoritative publication.

There are more than forty so-called drug and pharmaceutical journals in this country; practically one journal for every one thousand druggists.

The curse of the business is the great number of "house organs" put out by the manufacturers and jobbers, and the druggists receive so much of this free copy stuff that many of them have "no time for any more journals."

It's no great trick for such houses as Parke, Davis & Co., the Meyer Brothers' Drug Co. and Merck & Co. to put out a so-called "journal" and through their commercial machinery to give it a comparatively large circulation; neither is there any law against their doing so, if they so elect.

Their audacity can be excused on the ground that it is "business," and everything goes under that heading with some people. One might think that their sense of propriety would suggest that they stick to their legitimate lines and pay their own postage bills instead of asking other manufacturers to contribute, and one could almost imagine that such representative concerns would have enough business of their own to attend to without trying to usurp all the lines. With some thirty such "blood suckers" in the drug journal field, do you wonder that there is not enough "blood" left to enable the independent publishers to give the trade first class journals?

These firms mentioned are the leading offenders and their principals are all personal friends of ours. There is nothing personal in these remarks and we hope they will be so accepted. It is possible that the present managers having inherited them from their predecessors. Nevertheless, they are responsible for their continuance, and if they insist on flying over the fence into our garden and scratching up our flower beds, they must expect us to throw stones.

It is to the advantage of every trade to have its strong independent trade organs. The more independent, the greater their influence. It is absolutely impossible for a "house organ" to occupy such a position, but it can spoil the business for the independent journal. We do not accuse the house organ

publishers of any wilful intention to injure the trade from which they receive their profit. They have, no doubt, been influenced by minor reasons, such as saving postage, having an organ, and getting their advertising at the other fellow's expense.

It is time now that the evil be stopped, for evil it is. The drug trade, most of all, surrounded as it is with legal restrictions, excessive competition and technicalities, should have the ablest of protectors in its trade publications. The retailer, upon whom we all depend, is small in himself, but large in the aggregate, and the first duty of a pharmaceutical journal is to protect his interests. He must have an independent and reliable source for securing his information, aside from that through interested parties. He cannot afford to encourage the house organ even by reading it, and we shall see that his eyes are opened to the dangers and to his responsibilities in the matter.

The publishers of the independent journals are not entirely without blame for the existing conditions. They have paid too much attention to pushing their advertising and not enough to their editorial departments. The field is an unlimited one for original research and special articles, but it requires men of brains and education to do such work and the profits from the business have not justified the expense. This can be remedied if the monies expended for subscriptions and advertisements be concentrated among a half dozen good journals instead of being scattered over forty weaker ones.

This is a matter of importance to every branch of the drug trade, and we are not prompted by selfish motives alone in this discussion. Our appeal is in behalf of no one publication, but for the independent drug press as a whole. It is not right that influential manufacturers and jobbers should demoralize this branch of the business. On the contrary, they should lend their influence for helping to establish a line of influential independent publications. If they insist upon putting themselves in the position of competitors they must expect that these journals will take such action as is necessary to meet their competition.

Give the independent papers a fair chance. Put them all on their merits and insist upon their giving you the grade of service the drug trade should have, and a "square deal" to every individual or firm and to all branches of the trade. There is plenty of competition to prevent these journals from taking advantage of their opportunities. With proper support the independent press can be a wonderful power for good, and the results correspondingly beneficial to all who are connected with this trade.

OUR LETTER BOX

WHY CHANGED ON FRIDAY.

Keokuk, Iowa, March 28, 1905.

Editor The Pharmaceutical Era:

It is with much interest that I noticed in the current Era the statement that most druggists change their window on Friday, and asking for the reasons why this is. In our stores the windows are changed on Monday and from the results of the past few years, we find this the most satisfactory time. On Monday we find the clerks and everyone concerned to be in a much more willing mood, and since every employe is called upon for a little extra work while the window trimming is being done, we find this time the best. After having been away from the store the previous day, it is only natural that each one lends a more willing hand than at the end of the week, especially since few clerks take to this work with the willingness that they should. There are many reasons for making window changes on Friday, and the most probable one is that each trimmer wishes his window to be seen by the greatest number of people while it is new. Saturday being the big day, especially in cities of 100,000 population or under, it is only natural that the windows be changed on Friday. Yours truly,

J. ALBERT KIEDAISCH,

Adv. Mgr.

AMERICAN SELLING CO. EXPLAINS.

New York, March 29, 1905.

Editor The Pharmaceutical Era:

Dear Sir—Knowing that the Pharmaceutical Era is always glad to right a wrong, we wish to explain away a false impression that some druggists have regarding our coupon plan. The N. A. R. D. notes of March 4 contained an account of the resolutions passed by the Middletown (N. Y.) D. A. not to handle "Mystico Liniment" or our coupons, and compared our coupon plan to a trading stamp scheme. We wrote Mr. H. C. Ogden, secretary of the association the following letter:

We note in the March 4 N. A. R. D. Notes the resolutions passed by your association regarding "Mystico Liniment" and our coupon plan. It is very evident from the comments made by yourself that you do not understand the object of the coupon given with our preparation, and we therefore, enclose herewith a brief explanation of our plan. Let us emphasize to you that our coupon is by us accepted the same as cash for all goods we sell. We should be very glad to hear from you on any other points which you may wish to know. We are sorry you knew so little of our plan as to compare it to a trading stamp scheme, for the plan was purposely originated to counteract that unbusinesslike method and it in no way shows partiality to any one class of druggists. We solicit the investigation of all fair and impartial druggists.

We also wrote Mr. Thomas V. Wooten as below:

Dear Sir—We have read your article in the March 4 N. A. R. D. Notes, and we are a little surprised at your conclusions regarding our coupon plan in connection with the sale of "Mystico Liniment."

Feeling that you have not been properly informed of our desire to co-operate with druggists we herewith enclose an outline of our system. It is very evident from

the resolutions passed by the Middletown (N. Y.) D. A. not to handle "Mystico Liniment" or to redeem our coupons that the members were not properly informed. We feel sure that after due investigation you will inform the readers of "Notes" as to our explanation. Our coupon plan should certainly not be connected with any trading stamp scheme for its object is directly the opposite.

Trusting that you will give this matter your very careful consideration, etc.

It certainly would seem as though both of these gentlemen have not been properly informed regarding our plan, for it will stop, rather than encourage, the cutting of prices, and it does not appeal to any one class of druggists. The plan can in no way be compared to a trading stamp scheme, for we redeem our coupons at their face value with our preparation. Yours very truly,

AMERICAN SELLING COMPANY,
W. B. Wisenfeld, Sec'y.

DRUGGISTS SHOULD ADVERTISE.

Brooklyn, N. Y., March 31, 1905.

Editor The Pharmaceutical Era:

A copy of your long-named journal came into my hands last week. It seems to me to be a good way to reach the retail druggist.

The spring is here, and amateur artists and camera fiends, like myself, who are employed during the week and have to themselves only a half-holiday Saturday and Sunday, are often put to great inconvenience to secure artists' materials and camera supplies. It seems to me these goods come under the heading of "drugs," as their bases are largely chemical.

Will you not call the attention of the druggists of the City of New York and elsewhere to our wants. I am sure, as soon as we learn where we can find these articles without a trip to the special stores, we should give them a good trade.

Very truly yours,
ANITA M'OSZ,
(Amateur artist.)

[In many parts of the country druggists do carry in stock artists' materials, such as tube paints, brushes, oils, canvases, drawing boards, colors, etc. The request of our correspondent, however, seems to emphasize the necessity of the druggist letting people know that he has these goods; in other words, he should advertise the fact.—Editor.]

THE TITLE OF DOCTOR.

Atlanta, Ga., March 21, 1905.

Editor The Pharmaceutical Era:

There has appeared recently in several of the drug journals a plea from one of our most progressive and able pharmacists in behalf of the title of "Doctor" being given to pharmacists and also some good-natured editorials upon the article. It would give us pleasure to see this title accorded all worthy pharmacists. In the discussion of titles at the meeting of the American Ph. A. in Philadelphia in 1902, we opposed the use of the title of "professor" upon the floor and stated that outside of such assemblies it was our custom to address all pharmacists as "doctor." We further stated that whenever we were uncertain as to a man's title in Georgia, we called him "Colonel." At the present writing the Governor of our State has over one hundred real Georgia colonels on his staff. Where a man

is a graduate in pharmacy, we usually attach his degree if we know he possesses one. In other words, it has been our earnest desire to secure better professional recognition for pharmacy and we are much pleased to see the matter taken up. The pharmacist is the chemist of the physician and the public; he is also an expert on disinfectants and general sanitary matters. The veterinary surgeon is given the title of "Doctor," the dentist is given a similar title and the man who is much nearer the physician than either is certainly entitled to the same designation.

We do not feel sure whether it would be best to change any of the present degrees in pharmacy, but the action recently taken by the State of New York in regard to allowing only graduates in pharmacy to go into the drug business in the future and to give all men who are already licensed the same standing as graduates in pharmacy. If followed by other States will do much towards accomplishing very practical results in the general recognition of pharmacy as a profession. If such legislation were adopted very generally throughout the country, it will make the designation of "Doctor" quite general in a short while. The use of the title, as applied to pharmacists in Georgia, is on the increase, and is due to those who are awake to the benefits of better professional recognition by the public.

The United States probably accords less to pharmacists professionally than any other civilized country. Great Britain does not give commissions to pharmacists in her public service, but she does give the legal title of "chemist" to pharmacists and with it the privilege to practice medicine under certain restrictions.

Our own Government, at an early date, will probably accord commissions to pharmacists in one or more branches of the public service. In the army, however, veterinary surgeons and dentists are accorded better recognition than pharmacists. In the Japanese army the pharmacist is a second lieutenant and the medical service fully recognizes his ability as a pharmacist and as a chemist. Unfortunately in the army of the United States, the medical department instead of depending upon its own pharmacists, employs ready made prescriptions prepared by enterprising manufacturers. The success of the medical service in the Japanese army should cause our medical service to bestir itself and put the handling of medical supplies, dispensing, testing, chemical examinations, etc., into the hands of competent pharmacists. The practice of enlisting men who know absolutely nothing of pharmacy and training them under men who have never had any systematic instruction in pharmacy is narrow, behind the times and is not permitted in business life by any State, nor by any other civilized country. The awful death lists from sickness during the Spanish-American war could have been materially lessened by better medical and pharmaceutical service. The so-called half-civilized Japan is now illustrating the marvellous value of modern methods in medicine and pharmacy. There is not a State nor a territory that will tolerate the present requirements of pharmacists in our army.

Our army medical service does not seem

to realize what constitutes modern pharmacy. It clings to the idea of the country doctor, compelled by circumstances to do his own pharmaceutical and chemical work, and in feeling that it can teach anyone to become a competent pharmacist, it loses sight of the fact that modern pharmacy involves a far better knowledge of chemistry and materia medica than does the practice of medicine. The up-to-date medical officer has had his hands too full with therapeutics and surgery to devote himself to pharmacy or chemistry. It would be wise and true economy for our army to have only the very best medical men who require and demand competent pharmacists. Yours sincerely,

GEORGE F. PAYNE.

PHARMACEUTICAL JOURNAL CLUB.

Baltimore, Md., March 19, 1905.

Editor The Pharmaceutical Era:

I was much surprised to notice in a recent issue of the Era a criticism of an unimportant article read at the last meeting of the Pharmaceutical Journal Club of this city. I enclose you the aforesaid, with the regret that I have been misunderstood.

In explanation let me say that these remarks were intended only for members of the Journal Club, and not for publication. But in justice to you and myself, I think it only fair to send you the article. If you see fit to put it in print, I will ask that this letter accompany it. Respectfully,

J. J. BARNETT.

Following is Mr. Barnett's paper:

SOME CRITICISM OF THE JOURNALS.

As I understand the object and purpose of this club to be the discussion of current pharmaceutical literature, I feel that I am keeping within bounds in presenting some impressions gained in reading the different journals.

In offering these criticisms of the journals, I do not wish to be understood as depreciating their value as educational mediums for the pharmacist, for I am fully aware of the fact that in this day and time they are a necessity, and the regret is that they are not read and studied more.

But it is in reference to what may be termed inert matter that I wish to bring before you, and in doing this I hope I will not tread on the toes of any present, but if I do, remember the adage—"If the cap fits, just wear it a bit."

In so many of our journals, presented under so many different titles and by so many different writers, do we see the same old "Cautions in Dispensing," "Notes from the Prescription Counter," or "Some Don'ts in Pharmacy," as termed by some. Now not for one moment do I claim that caution, care and cleanliness are not necessary, but is it necessary to give them every week, or having given them, are they heeded, and the cautions given, are they not those with which every pharmacist is familiar and practices, and might not this space be devoted to matter more interesting? As an illustration, one writer says "never allow a bottle to go out of the store with sugar crystallized around the cork. Lip and sides of the bottle;" furthermore, the writer advises,

that the bottle be thoroughly cleaned before it is used. In another article we are cautioned against soiling the prescription counter with such substances as fixed oils, copaiba balsam, and the like. This we are told can be prevented by placing on your counter pieces of paper large enough to cover it, also all vessels used for oils should be washed inside and outside with soap and hot water. Of course, we are always warned against pasting one label over another, especially if they describe different preparations; likewise never send out a soiled box, jar or bottle.

These are only a few of the "Don'ts" so often seen in print. Certainly they are worth knowing and practicing, and I hope you understand me, that I do not in any way underestimate their value, but as stated above, do they furnish us with new information? For, which of you pharmacists here would send out a dirty box or bottle, or would willfully soil your prescription counter? I daresay you all know how to wash a graduate or mortar, and not one of you would be guilty of pasting one label over another.

In defense of these articles, the argument advanced is that as all classes and conditions of men go to make up the rank and file of the profession, it is necessary to reach and preach to those who hold these facts in ignorance. This, it is claimed, can be done through the medium of the journals. Well and good if the result be accomplished—but is it? In my humble opinion the pharmacist who is so ignorant as to commit the errors mentioned, is not the kind who will read the journals, or who, having read them, will practice what is preached. So, instead of devoting this space to those whom it will not benefit, might it not be given over to information more useful?

Having indulged in these criticisms of the journals, you naturally ask—in what do I approve them? This I answer briefly and broadly by saying—in all things, save those faults just named. As evidence of my friendship for the journals, I would like to emphasize a recent article of Mr. _____, in which he tells us if we would give the same time and thought to the reading of the journals as we do to the daily paper, we would be wiser and better pharmacists.

In conclusion I want to say that these are my humble opinions expressed to the members of the club, and as a club, I do not think that we could better help ourselves or each other than to carry out literally that section of our constitution, that calls for "the report and discussion of current pharmaceutical literature and topics," and thus be enabled to more effectively "separate the wheat from the chaff."

Dr. Osler's Welcome.

Dr. Osler has received a welcome from a publication of the university in which he will serve as professor, which he should appreciate. According to the Chemist and Druggist, the Oxford Magazine prints the following pathetic epigram, which was found inscribed in blood on the walls of the old Clarendon building:

"Brothers, I am sixty-one.

So my work on earth is done:

Calm should follow after storm,

Reach me down the chloroform."

TESTING IMPORTED DRUGS.

Work in Laboratory of U. S. Customs Appraisers' Office, N. Y.

ANALYSIS OF IMPORTS REQUIRES LARGE FORCE OF CHEMISTS.—MANY MATERIALS BESIDES DRUGS EXAMINED.—OPIUM SUBJECT OF MOST IMPORTANT EXAMINATION.

On the top floor of the United States Appraisers' Stores building, at Christopher and Greenwich streets, our government maintains a laboratory in which materials imported into this country are examined as to purity and chemical properties. Here the fitness of a foreign drug to enter our markets is determined, and here the customs officials obtain the chemical data upon which to base their decisions as to the amount and kind of duty to be levied. The examination of drugs forms only a small, although important part, of the work of the laboratory force, polariscopic tests of sugar, an article which yields the government an immense revenue and the analysis of dye-stuffs, tanning materials, heavy chemicals and a great number of other substances occupying a large share of the attention of the force of chemists.

The laboratory has been fully described by Mr. Russell W. Moore, the chemist in charge, in papers read before the New York Section of the Society of Chemical Industry. It is divided into an office and six working rooms, which are arranged to accommodate different classes of work. Assays and metals, alcohol determinations, general analysis, sugar and glucose, organic work, and polariscopic testing are divisions of the work assigned to the different rooms. Besides Mr. Moore there are eight chemists and four polariscopists, who with clerks and assistants make a force of twenty-three, representing a salary list of \$22,980 a year.

DIVERSITY OF THE TESTS.

The great variety of samples to be examined necessitates a division of the analyses among a number of chemists and a specialist in some particular branch. The work upon one sample cannot be divided among several men, because in matters of this kind one individual must be held responsible for the report. The report may at times be used as evidence in a suit in the courts when the chemist may be called as a witness. There are two chemists who test ores of metals, and metallurgical products, one who devotes his attention exclusively to materials containing alcohol; another who examines miscellaneous articles, including chemicals, fats, oils, paints and drugs; and another who determines the quantity of sugar in confectionery, preserved fruit, etc.; and two who examine organic articles.

DRUGS AND MEDICINES.

With the exception of opium, which is subject to a duty of one dollar a pound, crude drugs which have not been increased in value by manipulation, are admitted free, provided that they are of the proper quality and strength. No adulterated or misbranded goods are admitted, and the more important barks, roots, gums, resins, etc., must conform to a standard established by law. Thus, if opium contains less than the standard per cent. of mor-

UNITED STATES LABORATORY.

phine, a prohibitive duty is levied, which amounts to exclusion.

The customs chemist has not the power to condemn or exclude goods. He occupies only an advisory capacity to the appraisers' department, which also acts only in an advisory capacity to the collector of customs. His function is to supply the necessary information to enable customs officials to act correctly in cases of doubt or incomplete evidence. Yet, since the laboratory is the only means of determining facts which are of the greatest importance, his position is one of great responsibility. Often judicial decisions are based directly upon the chemist's report.

IMPORTER'S INTEREST PROTECTED.

If the importer is not satisfied with the treatment received by his goods at the hands of the customs officials, he can obtain a reconsideration of his case by the Board of General Appraisers. Samples are again analyzed if necessary and all chemical data are again carefully considered. The previous report is examined, and any error found is taken into consideration. From the general Board an appeal may be taken to the United States courts. At every step the importer has ample opportunity to present his side of the case.

SOME OF THE TESTS APPLIED.

The following list of classes of articles and the determinations made will give some idea of the great variety of work performed at the United States Customs Laboratory: Drugs, assays and tests for purity, medicinal alcoholic preparations, determination of alcohol by volume, chemicals, determination of potassium bitartrate in argols and baking powder and of boric acid in borax and borate mixtures, estimation of cyanide of sodium in commercial cyanide, identification of unmarked chemicals and comparison of various grades of the same salt, coal tar preparations, if medicinal or not; coal tar colors, identification and methods of manufacture with occasional quantitative estimation in diluted dyes, albumen and gelatin, identification and nature of material from which

albumen is made, fruit juices, determination of alcohol, spirits, determination of alcohol, oils, fats and waxes, identification and quantitative results in oils of known composition, metals and alloys, estimation of compound parts.

THEORY AND PRACTICE

Definition of "Poison."

Victor C. Vaughan, in an address before the Pathological Society of Philadelphia, defined the word "poison" as follows: "A poison may be defined as a substance that destroys or impairs cell function by virtue of its chemical constitution." The explanation is given that the bodies of animals, including man, are made up of cells which are alive and perform duties, the proper performance of which is necessary to the well-being of the whole of the individual. These cells are essentially chemical compounds and those substances which combine with these cells chemically in such a way as to cause their destruction or to render the performance of their normal functions impossible are poisons. The cells of the different organs vary more or less in chemical composition, and, consequently, a compound may react with a liver cell more readily than it does with a muscle, bone or nerve cell. In this way, poisons are to a certain extent selective in their effects, their selective action being dependent on the readiness with which they react with the chemical constituent of different cells. A substance which combines with, and, consequently, interrupts the function of the respiratory center in the brain causes the speedy death of the individual, while those substances that destroy blood, liver or kidney cells are slow poisons, inasmuch as the life of the individual may survive the destruction of a large number of these cells, but those of one class are just as truly poisons as those of the other.

Oxygen as a Food Preservative.

Von Foregger (American Inventor) recommends the use of magnesium dioxide which, upon decomposition, furnishes nascent oxygen, which in turn prevents the development of bacteria. Magnesium dioxide, or peroxide, is a white powder, odorless and tasteless, insoluble in water, but readily soluble in dilute acids. With carbonic acid it reacts to form magnesium carbonate and oxygen. The oxygen is in its nascent state and in this form is said to be especially effective in arresting fermentation. A number of experiments with this substance have been conducted in the New York Board of Health laboratory, first upon water contaminated with typhoid bacilli, and second, upon fruit juices to which the same disease germs had been added. To orange juice containing 2,160 bacteria to the cubic centimeter, was added enough typhoid culture to make 4,380 micro-organisms in an equal volume. Magnesium dioxide was then added in the proportion of 2 grams, 1 gram and .50 gram per liter. One cubic centimeter of each of these mixtures was placed in agar plate. Broth and agar plate cultures made from the orange juice treated with 1 gram magnesium dioxide per liter were, after twenty-four hours, both sterile.

Mercuric Chloride, Volatile.

A. Minozzi (Boll. (aim. Farm.) finds that on distilling 300 cc. of a 1 per cent. solution of mercuric chloride in steam, under conditions which yield $\frac{1}{2}$ of the total amount of a liquid in forty to forty-five minutes, the distillate contains up to .022 gram of mercuric chloride. The quantity of mercuric salt carried over increases with the concentration of the solution, and the error introduced in the analysis under these conditions may amount to .2 per cent. Similar results were obtained with mercuric chloride solutions in the presence of phosphoric acid, hydrochloric acid and certain chlorides, but in the presence of phosphoric acid alone the volatility would not seem to increase with the concentration of the solution.

Another Alkaloid in Calibar Beans.

Ogü (Apoth. Zeit.) has examined isophysostigmine, which was found with physostigmine and Calibar beans some time ago. The two bases have the same chemical composition. Physostigmine is soluble in ether and gives no precipitation when a 1 per cent. aqueous solution of sulphate was treated with platinum chloride. The iso-compound, on the other hand, is insoluble in ether and forms a crystalline chloro-platinate, when $\frac{1}{2}$ to 1 per cent. solution of its sulphate is treated with platinum chloride. The sulphate of the iso-compound melts at 202° C., while that of physostigmine fuses at 140 to 142° C. The physiological action of the two bases is the same in character, only the iso variety is slightly more powerful.

Fluorescent Antiseptic.

Fluorescein resorcinol-phthalein is said to have been patented in France as a fluorescent antiseptic. It may be mixed with perfumes, dentifrice and other products to render them antiseptic, and, if desired, they may be rendered alkaline to increase the fluorescent properties.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS INQUIRIES RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Detection of Fibers.

(Clerk.)—Tests for cotton and wool were published in *The Era* for March 31, 1904, page 305. For most practical purposes, however, material which is to be examined for different fibers, is simply boiled with a solution of caustic soda (sodium hydrate), the remainder is washed, dried and weighed. This weight is then compared with the original weight of the sample. The difference is all estimated as animal fiber, whether silk, wool or hair; the sample remaining is estimated as vegetable fiber whether cotton, linen or jute. If it is desired to know the silk present, the silk is first destroyed by subjecting the sample to a concentrated solution of zinc chloride. The sample is then well washed, dried and weighed, and the loss in weight from the original, estimated as silk. Before testing a sample for the different fibers, it must be thoroughly cleansed, which is accomplished by immersing it for about twenty minutes, in a weak scouring solution at 140° F. The sample is then dried and weighed carefully, this weight being taken as the original weight before testing. Of course, in colored fabrics the dyestuff has some influence on the weight of the material, but it is very slight.

Other tests can be used for the detection of fibers, besides those based on chemistry. For instance, the microscope frequently reveals the different fibers and they can often be distinguished by burning. Silk and wool burn with a peculiarly disagreeable odor, leaving a gray ash, while cotton and linen burn actively, being entirely consumed.

To separate wool from cotton, and estimate the percentage of each present, take a mixed sample of cotton and woolen goods, entirely free from grease and weighing 10 grams. Boil it for thirty minutes in a solution of caustic soda containing 100 grams of sodium hydrate in 1,000 c.c. water, a proportion of about 4 ounces to the quart. After boiling, the sample is thoroughly washed, dried and again weighed. If now weights 4.8 grams; figuring from the original weight it is found to be 48 per cent. As the wool is now entirely destroyed this must be the amount of cotton, the difference (52 per cent.) is the wool; with so large an amount of cotton present this test is simple. It still leaves a perfect fabric and there is no danger of losing any of the cotton fiber.

With samples containing small amounts

of cotton, and especially in some kinds of yarns, testing is more difficult. In such cases, after boiling the sample of yarn with caustic soda, the whole solution is filtered through a clean, closely woven cotton cloth, and the fibers being afterwards thoroughly washed, without taking from the filter; it is then dried on the piece of cotton cloth and after drying, carefully picked off and weighed, or the cloth can be weighed before the solution is passed through it, and then weighed again with the fibers on it. The difference in weight is then estimated, and the percentage of cotton and wool determined. Of course, colored fabrics in this treatment very frequently lose their tints, which causes the solution to become so colored that the fibers cannot be seen. In such instances great care must be exercised in filtering and washing.

Cleaning Microscopic Slides.

(J. F. R.)—New slides for the microscope may be cleaned by a thorough rinsing in water and afterward wiping with a soft towel, followed by a wiping with an old soft handkerchief. If the slides are not satisfactorily cleaned in this way, soak them a short time in dilute alcohol, drain for a few minutes on a clean towel or on blotting paper, and then wipe with a soft cloth.

For used slides, if only water, glycerin or glycerin jelly has been used on them, they may be cleaned with water, or preferably, warm water and then with alcohol, if necessary. Balsams may be removed from the slides by soaking the latter for a week or more in a small quantity of the "battery fluid" of the National Formulary. A mixture of nitric and sulphuric acids is also employed in a similar manner, the proportions being two of the former to three of the latter. This solution acts more rapidly than the dichromate mixture, but on account of the fumes it is not so well adapted for general laboratories. To shorten the cleansing operation it is sometimes desirable to soak the slides in solvents like xylene, benzene or turpentine to dissolve the balsam, which softens the resins or balsams and allows the cover glasses to be removed without breaking them.

Baking Powder.

(F. M. L.) Here are formulas for three kinds of baking powder:

(1.)
Tartaric acid 1 pound
Bicarbonate of soda 1 pound
Starch (powdered) ½ pound

(2.)
Cream of tartar 2 pounds
Bicarbonate of soda 1 pound
Starch (powdered) ¾ pound

(3.)
Acid phosphate of lime 1½ pounds
Bicarbonate of soda 1 pound
Starch (powdered) 1¼ pounds

The ingredients, all finely powdered, should be first sifted separately, to get rid of all lumps, then the bicarbonate of soda and starch mixed together, and finally the acid ingredients sifted, either by rubbing together in a mortar or by sifting at least three times. Flour can be used in place of starch, and is considerably cheaper. In order to insure their keeping well, each ingredient should be first thor-

oughly dried by a gentle heat, and the resulting powders should be kept securely closed in dry fruit jars, corked bottles, or sealed cans.

The amount of starch can be increased in any of the formulas, the other ingredients being left the same, and in this way be made at almost any price desired. The starch is simply used to keep the chemicals in a powder form and from acting upon each other as much as possible, and, being cheap, is used very liberally in the low priced baking powders.

Flour and Dextrin Pastes.

(W. H. H. R.)—Here are three formulas presented by Leo Ebel to the A. Ph. A. some years ago:

(1.)
Rye flour 4 ounces
Powdered acacia ½ ounce

Rub to a smooth paste with 8 ounces of cold water, strain through a cheese cloth, and pour into one pint of boiling water. Continue the heat until thickened to suit. When nearly cold add:

Glycerin 1 ounce
Oil of cloves 20 drops

This is suitable for tin or wooden boxes or bottles, and keeps sweet for a long time.

(2.)
Rye flour 4 ounces
Water 1 pint
Nitric acid 1 dram
Carbolic acid 10 minims
Oil of cloves 10 minims
Glycerin 1 ounce

Mix the flour with the water, strain through a cheese cloth, and add nitric acid. Apply heat until thickened to suit, and add the other ingredients when cooling. This paste is suitable for bottles, tin or wooden boxes, and will not spoil.

(3.)
Dextrin 8 parts
Acetic acid 2 parts
Alcohol 2 parts
Water 10 parts

Mix the dextrin, water and acetic acid to a smooth paste, then add the alcohol. This makes a thin paste, and is well suited for labeling bottles and wooden boxes, but is not suitable for tin boxes.

The following is a good paper-hangers' paste: Take ½ quartern flour, put it into a pail with a small portion of alum broken up small. Mix it up into a stiff batter with warm water. Have ready a large saucpan of boiling water and pour it over the paste, stirring well all the time or it will be lumpy. If properly done it will thicken as the boiling water is poured over it; if it does not thicken set it over the fire a few minutes, but be sure to stir it or it will burn. When well thickened throw a dash of cold water over it to prevent it from "skinning." Use rather thin.

Irish Slate.

(W. A. S.)—"What is 'Irish slate or slate,' not 'Irish stew'? It is said to be used for kidney trouble."

Irish slate or *Hibernicus lapis*, according to Dumbarton ("Medical Dictionary"), is a "Kind of slate or very hard stone, found in different parts of Ireland, in masses of a bluish-black color, which stains the hands. It has been taken, powdered, in spruce-beer, against inward contusions."

50 Per Cent. Emulsion.

(Gum).—“Can you inform me what will prevent separation in a 50 per cent. emulsion of cod liver oil, using acacia in the formation of the nucleus? I have been following the Continental method and get a beautiful emulsion, using Hunter’s emulsifier, but separation has taken place as soon as two days after making the emulsion. Any information will be appreciated.”

The permanence of an emulsion depends upon two things: first, to get both the oil and the water into very minute globules, and second, to prevent these globules from coalescing on standing. Of course, we do not know just how much acacia you employed, but if you used the proper proportions and thoroughly emulsified the nucleus you should have experienced no difficulty in obtaining a permanent emulsion.

Either dry acacia or mucilage of acacia can be used for emulsion. Both have their advocates, but according to Prof. W. L. Scoville, from whose “Art of Compounding” we take the following rules for emulsion making, who has had a wide experience with young men learning to make emulsions, dry acacia has proved itself a quicker and more certain agent to use, at least in the hands of novices. This is probably due to the fact that dry acacia must always be used in definite proportions, as must also the water added.

Two rules are in common use for making emulsions with dry acacia:

(1.) For one part of gum, use three or four parts of fixed oil (two or three parts of volatile oil) and ounce and a half as much water as gum.

(2.) This rule varies only in using twice as much water as gum. The proportions of oil to gum vary with different oils; most fixed oils being emulsified well in proportion of four of oil to one of gum, while most volatile oils require one of gum to two of oil.

Suppose we wish to make a pint of 50 per cent. (by volume) emulsion of cod liver oil.

This will require 8 fluid ounces of oil, and by the rules, every four parts of oil will require one part of gum; then the 8 fluid ounces of oil require 2 ounces of gum. Carefully weigh, then, the 2 ounces of powdered acacia, place it in a *dry* mortar having a capacity of three or four pints, pour upon it the 8 fluid ounces of cod liver oil. Triturate lightly until the acacia is diffused even through the oil, which will be accomplished in about a minute if both acacia and mortar were dry.

Now lift the pestle, and having carefully measured 3 fluid ounces of water (rule 1), pour it all upon the oil in the center of the mortar, then triturate rapidly until a perfectly white, creamy mixture results, showing no globules or color of oil. This is called a primary emulsion. Then add it to this slowly, with constant trituration, water enough to make a pint of emulsion. This emulsion is of the color and consistency of thick cream, and is permanent.

In using mucilage of acacia, the mucilage is placed in a dry mortar, and the oil added in small portions, each portion being thoroughly triturated before adding the next. One ounce of mucilage will easily emulsify two ounces of cod liver oil, with the addition of a little water near the end of the emulsification.

Often a failure is made in this through the breaking of the emulsion while adding the last portions of oil. A little calculation will show the cause. One ounce of mucilage having a specific gravity of 1.25 will weigh an ounce and a quarter, and contain 34 per cent. of gum, or about 200 grains. This amount of gum will emulsify, according to the rule, about 13 drams of the oil, then after adding thirteen drams of oil to the mucilage, the remainder of the oil should be alternated with portions of water, as in making the 50 per cent. emulsion.

Blacking for Shoes.

(G. W. R.)—Here are several formulas; you can take your choice:

Bone black	10 ounces
Fish oil	1 ounce
Simple syrup	4 ounces
Water	25 ounces
Sulphuric acid, commercial	1 ounce
Hydrochloric acid, commercial	7 drams
Ferrous sulphate	150 grains

Mix the bone black, oil, syrup and 20 fluid ounces of water, gradually, and with constant stirring; add the sulphuric and hydrochloric acids and the ferrous sulphate previously dissolved, in the remainder of the water.—Hager.

French Blacking.

Ivory black	12 ounces
Porto Rico molasses	6 ounces
Olive oil	½ ounce
Balsam of copaiba	¼ ounce
Sulphuric acid	1 ounce

Vinegar, Q. S. to make the proper consistence.

Mix the oil and balsam of copaiba with the ivory black; add the acid to the molasses and mix with the oil, etc. Allow the mixture to stand for three days, then add enough vinegar to make the proper consistence.

Liquid Dressing For Shoes.

Gum arabic, 4 ounces; molasses, 1½ ounces; good black ink, ½ pint; strong vinegar, 2 ounces; alcohol, 1 ounce; sweet oil, 1 ounce; dissolve the gum in the ink, add the oil and rub all in a mortar until thoroughly mixed; then add the vinegar and lastly, the alcohol.

Elixir of Salol, Acetanilid, Etc.

(D. C. A.)—“Kindly inform me how an acceptable preparation may be made from the following formula:”

Salol	2 drams
Acetanilid	2 drams
Phenacetin	2 drams
Caffein citrate	1 dram
Tartaric acid	1 dram
Sodium bicarbonate	6 drams
Aromatic elixir, to	1 pint

owing to the comparative insolubility of some of the substances in a weak alcoholic liquid like aromatic elixir, a satisfactory preparation cannot be made from this formula. Tartaric acid with sodium bicarbonate forms sodium tartrate, but in the quantities here present there is a large excess of sodium bicarbonate, one dram of the acid only requiring about 1½ drams of the bicarbonate for neutralization. This excess is readily soluble in water (1:11.3) but insoluble in alcohol. Sodium tartrate, the salt formed, is also

insoluble in alcohol. The addition of acacia to hold the synthetics in suspension is not recommended. A better plan would be to get the physician to prescribe the remedies in dry form.

Ink for Rubber Stamps.

(T. M.)—Khuber is easily destroyed by oil, and hence only anilin colors, rubbed to a smooth mass with glycerin, can be used. A German technical exchange gives the following as a model formula, with the statement that anilin colors, whether for ink or stamps, are all the better for a little acid:

Anilin blue	3 parts
Water	10 parts
Pyroigneous acid	10 parts
Pyroigneous acid	10 parts
Alcohol	10 parts
Glycerin	70 parts

Other formulas have been published in The Era. Consult the indexes.

SODA WATER FORMULAS.**Curacao Syrup.**

Curacao essence	½ ounce
Lime juice	½ ounce
Syrup of orange to make	1 quart

Color to suit.

Kola Fizz.

Fluid extract of kola	2 drams
Grape juice	8 ounces
Pineapple syrup	6 ounces
Fruit acid	1½ ounces
Syrup, sufficient to make	1 quart

Orangeade Syrup.

Orange syrup	1 pint
Pineapple syrup	1 pint
Peach syrup	1 pint
Fruit acid	2 ounces

This syrup may also be used as a punch by adding water and serving from a punch bowl. Keep thoroughly cold with ice.

Pistachio Syrup.

Essence of almond	1 ounce
Orange flower water, distilled	2 ounces
Maple syrup	1 ounce
Syrup, to make	½ gallon

Color green.

Dewey Flip.

Fresh eggs	5
Lemon juice	2 fl. ounces
Peppermint cordial	1 fl. dram
Lemon syrup	10 fl. ounces

Trim with fresh mint and berry.

Pepto Malt Phosphate.

Extract of malt	8 ounces
Essence of pepsin	2 ounces
Essence of cinnamon	1 dram
Orange flower water	1 ounce
Syrup of raspberry	8 ounces
Acid phosphate	2 ounces

Syrup, to make 2 pints

Orange Frappe.

Fine ice	½ glass
Powdered sugar	1 tablespoonful
Juice of one orange	
Lemon juice	2 dashes
Raspberry syrup	1 dash

Fill with soda and stir well, strain into a mineral glass, and serve.

Peaches and Cream.

Shaven ice	½ tumblerful
Ice cream	1 tablespoonful
Fresh cream	1 ounce
Extract of peach	1 dash

REMOVAL NOTICE

Our constantly increasing business compels us to secure larger quarters. We shall therefore remove on May 1st, to

42-44 LAKE STREET

where, with more space and improved facilities, we shall be able to serve the trade even better than in the past.

We take this opportunity to thank our numerous friends for the cordial support which has so materially contributed to our success.

ROBERT STEVENSON & CO.

A certain indication of solid progress and keen business foresight is to send us an order to equip your store with our celebrated

ILLUMINATED "Quick Sales" SHOW CASES.

(JOHN PETZ, PATENTEE.)

We manufacture the best cases on the market of the world. We do not make a single claim for them that cannot be fully substantiated by many pleased customers in every section of the country. When we say that the use of our Illuminated "Quick Sales" Show Cases will result in "More Sales and Quicker Sales," we mean exactly what we say.

Don't be satisfied with old style antiquated fixtures. They actually harm your business and keep people out of your store. Be progressive. Write us to-day for more information about "Store Improvements."

Steady Profits *vs.* Frequent Losses

Any retailer who is in business purely for his health will not be interested in our contracts. But every retailer in the United States who is in business for all he can honestly make will be interested.

Our contracts which are now in effect simply mean the difference between big, steady, certain profits on our goods and the frequent losses owing to the demoralized conditions that did exist.

Two-thirds of the legitimate retailers have voted for the big, certain profits by signing our contracts.

If you have not signed, how do you want to vote?

30 Cents Net Profit Per Bottle

That is what our contracts mean on Paine's Celery Compound to the retailer who is trying to do business in the cut-price demoralized districts.

40 Cents Net Profit Per Bottle

That is what our contracts mean on Paine's Celery Compound to the retailers in the full-price territories who must be protected from any invasion to maintain full prices.

THE WELLS & RICHARDSON COMPANY, Burlington, Vermont

ST. LOUIS :: :: :: :: NEW YORK

NEWS SECTION

BILL HITS DRUGGISTS.

Pratt Amendment Would Force Out "Own Make" Preparations.

The Pratt bill, introduced into the New York Legislature, requiring the formula for every patent medicine to be printed on the label, has been amended so as to require the registration of the formula with the State Board of Health and the payment of \$50 for every such registration. The ingenuity of this amendment, Dr. William Muir points out, lies in the fact that pharmacists will practically be forced to stop the manufacture and sale of "own make" preparations, as no druggist could stand the expense of paying \$50 for the registration of each one of his mixtures.

The big patent medicine manufacturers, who have heretofore opposed the bill, are now in favor of it. The Yale wood alcohol bill has been referred back to committee.

MORE 'PHONE REDUCTIONS.

Still further reductions in tolls have been made by the New York Telephone Company, to take effect May 1. These reductions affect residences and business party lines. Regarding the latter the company makes this announcement:

"Party line business subscribers in Manhattan will be billed from May 1, 1905, at the new schedule of rates for direct line business telephones, announced March 21, and as soon as practicable after May 1 each of such subscribers will be provided with direct line service. This will improve the working of the system as a whole, provide a higher grade of service to the subscribers directly affected, and reduce rates to those in this class who send more than the minimum allowance of messages, as follows:

No. of Messages.	Old Rate.	New Rate.
800	\$ 75	\$ 63
1000	87	78
1200	99	87
1500	117	99
1800	135	111
2100	153	123

"These subscribers will also be relieved of charges for certain extras heretofore made, and in all respects will be put on the same basis as direct line subscribers."

MORE INSURANCE DELAY.

Inter-insurance for druggists is likely to be delayed indefinitely, according to information received by Emil Roller, chairman of the G. A. S. committee on the subject. Mr. Roller is waiting for a test case to be decided at Albany, and through his counsel, Edward Hassett, has just received word from the attorney-general that the case will not be tried until some time during the summer.

Mr. Roller's committee received a communication from Frank H. Freericks, of

Cincinnati, on the question of co-operating to form a national druggists' fire insurance company, but decided not to accept the offer and to play a lone hand instead. Having begun the work, the committee felt that they should carry it through without any assistance.

N. W. D. A. COMMITTEES.

President M. Carey Peter, of the N. W. D. A., has announced the various committees to serve during the current year. The following are the chairmen of these committees: Adulations, Carl Brucker, New York; Arrangements and Entertainment, Thomas P. Cook, New York; Commercial Travelers, C. F. Michaels, San Francisco; Credits and Collections, W. A. Hover, Denver, Col.; Drug Market, E. W. Fitch, New York; Fire Insurance, Thos. F. Van Natta, St. Joseph, Mo.; Fraternal Relations, J. B. Riley, Macon, Ga.; Legislation, M. N. Klue, Philadelphia; Membership, Chas. F. Cutler, Boston; Memorials of Deceased Members, Charles H. Pettet, Louisville, Ky.; Paints, Oils and Glass, Walter V. Smith, Philadelphia; Passenger Rates and Routes, Romaine Pierson, Chicago; Proprietary Drugs, John N. Carey, Indianapolis, Ind.; Relations With Local Associations, City and Interstate, Charles A. Jerman, Milwaukee, Wis.; Trade Marks, A. J. Horlick, Racine, Wis.; Transportation, Courtney H. West, St. Louis, Mo. Special committees, chairmen: Box and Cartage, J. C. Eitel, Minneapolis, Minn.; Commercial Travelers, B. F. Van Allen, Chicago; Paris Green, Alanson S. Brooks, Detroit, Mich.; Pharmaceuticals and Plasters, William J. Walding, Toledo, O.; Suits Against Members, M. N. Klue, Philadelphia.

FORM THEIR OWN COUNCIL.

After only a few weeks' work, a number of druggists and physicians of this city have succeeded in forming a new Council of the Royal Arcanum. Those who started the idea were George H. Hitchcock, George E. Schweinfurth, A. J. Reeder, B. R. Dauscha and others. Last Thursday they saw the reward of their labors when a Council of fully a hundred members was instituted at a big jollification meeting. For the present the Council has been named "Chevron," but many members are not satisfied with this, and will probably change it.

W. S. BOYDEN QUILTS.

W. S. Boyden, who was the manager of the New York branch of Rosengarten & Sons, before the consolidation with Powers & Weightman, severed his connection with the firm on April 1. He will continue to make his headquarters at 133 William street, the old office of the Rosengarten Co., for a short time.

TRIBUTE TO RETAILERS.

T. P. Cook Praises Their Work at Wellcome Luncheon.

Good fellowship was the all-pervading spirit which made the complimentary luncheon to Mr. Henry S. Wellcome, of Burroughs, Wellcome & Co., of London, at the Drug Trade Club, on March 30, as enjoyable and interesting event as has taken place in some time in trade circles.

Forty of the most representative members of the Drug Trade Section of the Board of Trade and Transportation gathered about a long U-shaped table to greet the distinguished American who has achieved such an admirable success in the European pharmaceutical field and who has done much to uplift the American trade abroad.

After the well-selected menu had been disposed of, Mr. I. Frank Stone, who acted as chairman, delivered a speech of welcome, in which he assured the guest of the day that his rise from the ranks to be commander-in-chief of practically the whole field of his trade, would ever be an inspiration to American pharmacy.

After expressing his appreciation of the compliments showered upon him, Mr. Wellcome, in replying, paid a high tribute to the great good accomplished for the trade through the efforts of the Drug Section of the Board of Trade and Transportation and declared that there was great need for a similar organization in London. Mr. Wellcome's concluding remark that the best of heritages was the necessity of one's setting hands to the plow at an early age, was cordially applauded.

President McCarroll told of the aims and efforts of the Board of Trade and Transportation and Mr. Albert Plaut lauded Mr. Wellcome for his scientific support and financial backing of his constituent research in Europe.

Mr. Thomas P. Cook's characterization of the retail pharmacists as "a body of patient, studious, conscientious, hard-working men, whose co-operation we should be deeply grateful for," came in for much applause.

Messrs. Thomas F. Main, John M. Peters and C. A. Mayo also spoke.

Present, in addition to the above, were Messrs. S. W. Fairchild, B. T. Fairchild, Schieffelin, Hopkins, Good, Fraser, Joseph Plaut, Velsor, Ladd, Stillwell, Ritchey, Brucker, Coffin, Gray, Metz, Du Bois, Woodward, McClain, Rowley, Black, Levi, Planten, Thiden, C. G. Stone, Carrigan, Page, Moneypenny, Lovis, Gardner, Haynes and Earle.

Mr. Wellcome sails for London on the Celtic, to-morrow.

A. D. Carpenter, Williamsburg, Mich., is dead. He was a veteran of the Civil War and a prominent Mason. Mr. Carpenter was sixty-three years old.

AMERICANS IN ENGLAND.

British Conservatism is Against Their Chances of Success.

"Where one American succeeds in London, many fail, the majority of them chiefly because of their failure to appreciate the fact that the Englishman does not and will not do business along certain American lines."

This is one of the interesting points made by Mr. Henry S. Wellcome, ex-president of the American Society in London, to an Era interviewer, in what, because of the subjects discussed and the press of engagements of the interviewed, might be termed a "tabloid talk."

"Novelty and change from older methods—which are so characteristic of success here in America—count for absolutely nothing in presenting a proposition to the average Englishman," continued Mr. Wellcome. "Here in New York a project entailing an enormous amount of money may be—many have been—finally determined within an hour. Not so on the other side of the ocean. Conservatism reigns to-day in English methods as it has for centuries. The wonderful success of such men as Morse with the cable, the McCormicks with their harvesters, Howe and Singer with their sewing machines, Yerkes with his underground railways in London, Edison and his inventions, and the others whose results brought about the so-called American invasion of commercial Europe, have effected no change in the temperament. This is especially so in Great Britain, where studious conservatism is one of the nation's great elements of strength. 'Don't hurry, we have all the time there is,' seems to be the business motto over there. That is why the American, bubbling over with an excess of electric energy, often fails. Your average Englishman takes weeks to thoroughly master a project, where the Yankee takes but a day. But once you have convinced our English friend, you will find it easy to continue your business relations as long as you care to. When you do win him you have his confidence for life. Integrity and the spirit of fair play characterize English business men."

"The influence of Americans and their methods over there has been very beneficial, and the direct and indirect influence of American women abroad is a thing to reckon with. There are comparatively few self-made men in England. "There is a great contrast between the English and the American drug trade methods, both wholesale and retail. Over there it is not always the hustling youngster, out to make a record as a salesman, who gets the best results. On the contrary, often the older a traveling salesman is and the longer his dealings with a house, the larger his business. That is another instance of conservatism. In both the wholesale and retail trade, long credits prevail. "I believe that the American has a better opportunity for quick, successful results here in his own country to-day than he or anyone has abroad."

The Prince Medicine Co., of Cambridge, Mass., has been incorporated with a capital of \$15,000. Albert E. Lynch is president and the other officers are J. Edwin Kimball, Warren W. Akers, and Thos. H. Shea.

CLERKS IN WORDY WAR.

Starting with speeches on the elevation of pharmacy, the condition of the drug clerk and things in general, the members of the Drug Clerks' Circle, at their "open meeting" last Wednesday evening, drifted into a wordy war that almost assumed serious proportions. At times several members were on their feet at once, in spite of the fact that the hall was crowded with visitors and friends, mostly of the other sex.

It all began because Vice-President Karlin, in speaking of the object for which the D. C. C. is organized—the enforcement of the pharmacy laws and the reform of the Board of Pharmacy—saw fit to refer to the election last June and the action of three members in going over to the N. Y. R. D. A. This desertion, Mr. Karlin spoke of as cowardly. Louis Epstein resented this and wanted the floor, but was suppressed.

Then Dr. Joseph Kahn, as editor of the Circle's journal, read an article on the advancement of pharmacy. In education and organization, he said, lies the future salvation of the drug clerk. He was vigorously applauded. President J. Gollobin then took up the thread of Mr. Karlin's discourse, stating that the reason he did not support Dr. Kahn last year was because the latter had one point against him—he was an instructor in the Brooklyn College of Pharmacy. Hence, Dr. Kahn could not carry out the main object of the organization, the reform of the Board of Pharmacy, owing to this affiliation.

Dr. Kahn rose, pale but calm. "I positively object to such statements," he said. Several other members jumped up and also objected, all demanding the floor at the same time. Mr. Gollobin refused to yield it, claiming that all he wanted to do was to clear Dr. Kahn.

"We want a drug clerk to represent us," he said, "not an instructor in a college."

This precipitated the uproar afresh, the audience took sides, and for a time it looked as though things were going to happen. But at the height of the excitement some cool-headed clerk moved to adjourn, and so saved the situation. The floor was cleared, dancing was begun, and all proceeded to drown their differences.

A letter from Mayor McClellan was read, regretting that he was unable to accept the Circle's invitation to be present. In the course of the evening musical selections were rendered by Miss Ida Weinstein, daughter of Joseph Weinstein, and the Misses Rosenthal.

A. B. C. ON WHEELS

When the Apothecaries' Bicycle Club resumes its weekly runs, it's a sure sign of spring. Last Thursday, several members of the club, under the leadership of President George Lünecker, set out to wheel to Yonkers, but turned back when they struck the semi-liquid roads at the end of Boulevard Lafayette. The other members who participated in the run were Mr. and Mrs. George Stoltzenberg, Sidney Faber and Herman Ramzenberg. To-day's trip will be to Werthmüller's hotel, at Grand City, S. I. Runs will be held every Thursday.

AGAINST SOUVENIR GIVING.

R. D. A. Will Wrestle With Problem Through the Local Press.

After a prolonged discussion on the question of souvenir-giving, on March 24, the New York Retail Druggists' Association decided to impress upon the public, by means of the local press, the fact that as a rule the druggist who gives a two-cent present with a five-cent purchase is the one who is found to be a substitute. The matter was left in the hands of the Grievance Committee. Only fourteen members were present at the meeting.

Mr. Weinstein gave a full report of the N. A. R. D. work, urging the members to be loyal and not to be pessimistic, as the outlook is bright. That the annual ball was financially successful was reported by A. Bakst.

Legislative matters then came up. On the subject of the cocaine bill, Mr. Marmor moved to send a letter to the legislature, urging it to pass the measure, and stating that the organization, of six hundred members, goes on record as favoring the bill in the interest of the public health, although in some respects it will hurt the druggist. This was carried.

Mr. Marmor also announced that a new trading-stamp scheme had appeared on the scene, by which the customer was to receive life insurance instead of the customary merchandise. This proposition, Mr. Marmor thought, would be very attractive to the public and dangerous to the druggist, and at his suggestion he was instructed to embody a warning against the scheme in the notice of the next meeting.

WILSON CASE DECIDED.

Referee Wilbur Larremore has just rendered a decision to the Supreme Court of New York, giving judgment for \$8,504.38 against William Wilson in favor of Harry S. Boisnot, who was the manager of the Wilson drug store from December, 1880, to November, 1903. Boisnot took charge of the store with the understanding that he was to receive one-third of the profits in addition to a salary of \$30 per week. The profits during the period amounted to \$76,878.96. The judgment just granted is Boisnot's share, after the deduction of the sums already paid.

During the period of Boisnot's employment the stock in trade was increased by the sum of \$17,187.20. The referee rules that the plaintiff is not entitled to any part of, or any interest in the said increase of stock.

AMERICAN CHEMICAL SOCIETY.

The seventh regular meeting of the New York Section of the American Chemical Society will be held to-morrow evening, April 7, at 8.15 o'clock, in the assembly hall of the Chemists' Club, 108 West Fifty-fifth street. The programme for the evening is as follows:

F. D. Dodge, "Polarimetric Analysis"; Victor J. Chambers and M. T. Bogert, "Quinazolines from 2 Nitro 6 Aminobenzoic Acid; A. Hoffmann and M. T. Bogert, "Homo-anthranilic-nitril and some of its Derivatives: 7 Methylquinazolines"; Graham Lusk, "Theories of Metalolism."

DAGGETT & RAMSDELL IN WALDORF.**Druggists to Open Prescription and Toilet Departments in Hotel.**

Daggett & Ramsdell will open two branch departments in the Waldorf-Astoria Hotel, Fifth avenue, between Thirty-fourth and Thirty-fifth streets, New York, on May 1.

This is a radical and important innovation in the retail drug business of this city. No other hotel in this city literally houses a drug store, although there are several which boast pharmacies in the corner stores rented out by them.

The firm intends erecting a booth for the handling of perfumes, toilet goods and sundries at the Astor Court end of the northern corridor in the Astoria proper, in the space now occupied by the package room.

A Parisian effect is contemplated in the architecture of this department.

On the floor below will be a dispensing prescription department in a room eighteen feet square. This is adjoining the Waldorf Importation Company. No expense will be spared in fitting this up in a style suited to the situation. A glass front extending the length of the department and reaching fifteen or sixteen feet in height will provide an adequate show window space.

Other features of the plan are a corps of uniformed messengers employed by the firm to call for and deliver prescriptions, etc., particularly to guests of the hotel, and a pneumatic tube service, as well as telephone between the two hotel departments and the main store of the firm on Thirty-fourth street.

The location in the Waldorf will open up a wide field to Daggett & Ramsdell, for the class and number of the hotel's guests make this assured. Moreover, it should eventually bring the firm a national reputation.

The only other business houses having branches actually in the hotel proper are three stock brokerage houses, one banking firm, a florist, the Waldorf Importation Co., the American Audit Co., and Huyler's.

The new department will be named The Waldorf-Astoria Pharmacy, Daggett & Ramsdell.

TATUM COMPANY ABSORBS MEINECKE.

The Whitall-Tatum Company have made the following announcement to the trade, under date of April 1:

"We have this day purchased from Meinecke & Co., of New York City, all of their merchandise, stock, fixtures, trade marks, patents and the good will of their business.

"We shall add to our line, and continue to manufacture all of Meinecke & Company's patented specialties for the sick room and hospital, and many of their leading articles of high grade druggists' sundries.

"Mr. C. Wm. Meinecke is now connected with our company, and will superintend the manufacture of our druggists' sundry and hospital supply goods. Respectfully,
"WHITALL-TATUM COMPANY."

OLD DRUGGIST RETIRES.

Rochester, March 28.—The Gustav Mannel Pharmacy, of Clinton avenue, N., established in this city in 1864, and one of the oldest drug stores in Rochester, will be moved to Buffalo within a short time. Gustav Mannel, who established the business is one of the oldest practicing druggists in Rochester. He first opened a store at 51 Front street, where he remained for twenty-one years. In 1885 he removed to Clinton avenue, N., where he has been located since. On account of advanced age, Mr. Mannel wishes to retire, and has placed the store in the hands of his son, Henry Mannel, who has been in the drug business for twenty-seven years. Henry Mannel was until recently with George Schaefer, 895 Genesee street, Buffalo, but decided to purchase his father's business and open a store at 958 Genesee street, Buffalo.

DRUGGISTS' THEATRE PARTY.

A number of the members of the German Apothecaries' Society organized a theatre party, last week, and spent a very enjoyable evening at Weber's Music Hall, listening to "Higgledy-Piggledy," the "College Widower" and "Dudu." After the performance, the party adjourned to Mouquin's, for supper. Those who took part were: President and Mrs. Henry Imhof, Vice-President and Mrs. Charles F. Klippert, Miss Klippert, Mr. and Mrs. R. Eschmann, Mr. and Mrs. Geo. Leinecker, Mrs. P. Gauss, Mr. and Mrs. C. F. Hatterman, Mr. and Mrs. Paul F. Gebicke, Robt. S. Lehman and mother, Mr. and Mrs. Geo. T. Riefflin, Miss Riefflin, Herman Reaske, Mr. and Mrs. Henry F. Albert, Mr. and Mrs. Hugo Kantowitz.

FIRE VISITS CORTLAND DRUGGIST.

Syracuse, March 27.—Fire which broke out in the cellar of Perkins & Quick's drug store, at Cortland, destroyed at least 95 per cent. of the stock and fixtures. The fire was started in a pile of rubbish, the cause being unknown. Mr. Quick had locked up the store at 11 o'clock, and the fire broke out about 3 o'clock. An insurance of \$8,500 was carried on the stock and \$1,500 on the fixtures. The stock is practically worthless, on account of the heat and smoke.

NEW YORK NOTES.

—L. F. Weissmann, formerly of 114 Nassau street, has opened at One Hundred and Fifteenth street and Third avenue.

—Fire which started in the acetic acid department of the General Chemical Co., Shadyside (N. J.), did \$2,000 damage.

—John Oehler and William Moakley, both old employes in the city department of McKesson & Robbins, have severed their connection with that firm.

—The marriage is announced of Howard McK. Kirkland, superintendent of McKesson & Robbins, to Miss Elizabeth B. Swift, on April 25, at the Madison Avenue Reformed Church.

—Oscar Goldmann has at last found a drug store. He has purchased Fred E. Tower's store, at Richmond Hill, L. I. The Record, the local paper, gave Mr. Goldmann a great send-off.

NO SCHEDULE WANTED.**M. A. R. D. Members Will Support the Contract Plan and Nothing Else.**

A strong feeling has already developed in New York City against the adoption of a schedule. While there is at present no definite indication that a schedule is contemplated, members of the newly organized Metropolitan Association of Retail Druggists intend to be on the safe side and to protest vigorously at the slightest indication of any such attempt. "The contract plan only," is the cry. On this question, Dr. William C. Anderson, president of the M. A. R. D., said:

"I believe it would be disastrous to establish a schedule now. At any time a Schedule is dangerous, but while our organization is still weak, it would be folly to adopt one. So much of our strength would be spent in maintaining it that we would have none left for anything else.

"In the contract plan we have something solid in back of us, something that has already stood the test of the courts. So long as we stick to that we are absolutely safe. I believe that we should devote more attention to getting more signatures to the contracts than to getting new members in our association. It would help us considerably.

"Possibly, when we have a strong organization perfected, we may be able to think of a schedule. But even at the best a schedule is not satisfactory."

Dr. Anderson did not believe that the Executive Board would even be able to fix a date when the contracts are to go into effect. His opinion is that the time should be deferred until so many signatures have been secured that there will be an absolute certainty of being able to hold everybody to strict account. The Executive Board meets to-morrow afternoon.

Already several branch associations have adopted schedules similar to that of the Murray Hill K. D. A., which was actually organized before its official designation as a district. These schedules, however, are purely local and the association at large does not stand back of them.

DR. PIERCE'S REMEDIES.

Dr. Pierce has sent to us for publication the following information concerning the composition of his two specialties—"Favorite Prescription" and "Golden Medical Discovery." For the sake of comparison, Dr. Pierce's statements regarding each remedy are followed by the names of the drugs reported by Dr. Hager, whose analyses were published some years ago:

Favorite Prescription, according to Dr. Pierce, contains golden seal, ladies' slipper, black cohosh, false unicorn root, blue cohosh; according to Dr. Hager, savin, cinchona, agaric, opium, digitalis.

Golden Medical Discovery.—Dr. Pierce says golden seal, queen's root, cherry bark, mandrake root, stone root, blood root. According to Hager, lutealucarium, tincture of opium, water, honey.

Dr. Pierce says the above is the first authoritative statement relating to the composition of his remedies ever given out.

TABARD INN CORPORATION.

Receivers Named for Its Eight Companies—Book Stations in Drug Stores.

Philadelphia, March 31.—Considerable surprise was expressed among the many who had known and had carried on business with the Tabard Inn Corporation, when it was announced that five of the subsidiary companies of the corporation had been placed in the hands of receivers. The Tabard Inn Corporation controls eight companies in all and those for which receivers have been appointed and their liabilities are as follows: Tabard Inn shops and studios, the furniture business, liabilities, \$14,000; assets, \$15,000; Tabard Inn Press, liabilities, \$85,000; assets, stock and machinery, \$40,000 cash, and credits, \$56,000; Tabard Inn Druggists' Specialty Company, liabilities, \$20,000; assets, stock and fixtures, \$10,000; cash and credits, \$11,000; Tabard Inn Food Company, liabilities, \$10,705; assets, stock and fixtures, \$12,000; Tabard Inn Bookstore Company, liabilities, \$43,000; assets, merchandise, \$30,000, cash and credit, \$37,625.

The appointing of receivers does not mean, in the words of the officers of the corporation, that anyone is going to lose any money. The step was deemed advisable so that any unfriendly creditor could not step in and sell the property out at sheriff's sale, thereby causing a heavy loss. The business of the library will not be affected by the receivership.

At the food store on Chestnut street above Eleventh, teas, coffees and cereals were the principal lines of goods. Only jobbers are dealt with at the drug store. No stock is carried and the retailers and consumers can buy nothing. Whether the proprietary articles with the right to manufacture and sell them, will be sold in a lump or disposed of separately, is a matter that rests with the receivers. Many of the 1,500 stations for the distribution of literature, in the country, are located in drug stores.

POISONED AT AUTOPSY.

Philadelphia, April 3.—Harvey E. Kendig, assistant professor of theory and practice in the department of pharmacy at the Medico-Chirurgical College, is recovering from an attack of blood poisoning, incurred at an autopsy. Although Mr. Kendig's hands were free of cuts or abrasion, he became infected from handling the body.

DRUG ATHLETIC ASS'N SMOKER

Philadelphia, April 1.—In order "that they could meet their friends away from business," the members of the Philadelphia Drug Athletic Association and their friends to the number of 500, on Tuesday evening attended a "smoker" at Tagg's Maennerchor Hall. The programme included instrumental music, topical songs, vaudeville sketches, boxing bouts and minstrel work by a team of clever "black-face" comedians. Refreshments were served.

The association's officers are as follows: President, W. F. Steinmetz; vice-presidents, F. E. Miller and Charles Willis; secretary, E. T. Hahn; treasurer, A. A. T. Pollard; board of directors, J. F. Hauck; J. Duffy, Dr. E. K. Boltz, J. J. Kelly, Wil-

liam Dewees, Dr. H. P. Leuf and W. D. Mann.

The association was organized on May 13, 1902, for the purpose of promoting a feeling of sociability and comradeship among druggists, physicians and those allied in any way with the drug trade.

BENZOATE BILL TO BECOME LAW?

Philadelphia, April 1.—The House on Friday last passed the Senate bill regulating the manufacture and sale of fruit syrups, prepared fruits and fruit products for use in beverages and ice cream, and permitting the use of certain maximum proportions of sodium benzoate and of harmless vegetable coloring matter therein. As this bill has already passed the Senate, it is now awaiting the signature of Governor Pennypacker. This bill was vetoed by the Governor, because it was said it was misleading in its title and in the governor's opinion admitted the possibility of a "snake." All misunderstandings, it is said, have been now explained away, and those who are working for the bill have received the assurance that it will become a law.

PHILADELPHIA NOTES.

—C. L. Bonta, proprietor of the Oak Lane Pharmacy, who had been seriously ill at his home, is able to be about again.

—The annual meeting of the Philadelphia Drug Athletic Association will be held at Tagg's Maennerchor Hall, on the evening of April 7.

—Fire in the basement of the drug store of George B. Evans, at the corner of Eighth and Arch streets, on Thursday, caused a trifling loss.

—Charles Z. Ball, proprietor of the pharmacy at Nineteenth and York streets, died on Monday, after a short illness. He had been a member of the P. A. R. D. since its organization.

—As the result of the crusade against the practice of distributing samples of medicines among school children and along the street, the police of Camden in one day seized and destroyed 20,000 samples.

—William Monteith, aged twenty-three years, assistant pharmacist at the Jefferson Hospital, died on Saturday, after a short illness of pneumonia. He had been in the employ of the hospital for ten years.

—William L. Cliffe, who has been seriously ill in the Episcopal Hospital, suffering from appendicitis, is convalescent, although still unable to leave the hospital.

—Friends of William J. Helm, proprietor of the pharmacy at Tenth and Jefferson streets, wondered at his absence from the smoker of the Drug Athletic Association on Tuesday evening. The mystery was explained when it was learned that he had been quietly married on that evening.

NEXT KENTUCKY EXAM.

Louisville, March 24.—The Kentucky State Board of Pharmacy will hold its annual examinations here on Tuesday, April 11, in the council chambers. Applications should be sent to J. W. Gayle, Frankfort,

DRUGGISTS' ORGANIZATIONS MEET.

Baltimore, April 1.—The Wedgewood Club held its monthly dinner and business session at the Hotel Italeigh, the newest of the hostelrys here, on last Thursday evening, and spent several hours in the most enjoyable manner. Ephraim Bacon, the new State Pharmacy Commissioner, presided, and the fun proved infectious, everybody contributing to the enjoyments of the evening. The attendance was fairly large.

On the same night the Pharmaceutical Journal Club held a session at the Hotel Belvedere, where Dr. H. A. Brown Dunning read a paper on the combination of peptones and albuminates with metals, while Dr. E. Frank Kelly, Dr. H. P. Hynson and Dr. Frank L. McCartney reported on journals. Others present were Dr. Joel J. Barnett and Dr. W. J. Lowrey. The meeting proved to be highly instructive and much interest was shown in the proceedings.

WOULD DECLARE COMPANY BANKRUPT.

Baltimore, April 1.—The Crown Chemical Company, which manufactured medicinal and chemical preparations at an establishment on South Sharp street, is in difficulties. Recently receivers were appointed by consent of the corporation in the City Circuit Court, and last Thursday Edward M. Hammond and William H. Lawrence were named in a similar capacity by Judge Morris, in the United States District Court, pending the appointment of a trustee in bankruptcy. The receivers who bonded in the sum of \$4,000 each, were named on the petition of certain creditors, who also applied to have the company adjudicated a bankrupt.

BALTIMORE NOTES.

—The Habliston Pharmacy, A. O. Brickman, manager, is now settled in its old location, Baltimore and Gay streets.

—The northwestern section of the city has an all-night drug store, this stroke of enterprise being attributable to F. W. Schanze. The experiment is said to be successful and may encourage emulation.

—Owing to delay in the completion of the warehouse and the torn-up condition of the adjoining streets, the local branch of Parke, Davis & Co. did not move this last week, but will endeavor to get through with the task this week.

—The firm of Muth Bros. & Co. is now installed in its new building, 23 and 25 South Charles street, and during the past few days hundreds of persons have called to go over the place. Among the visitors were Mayor Timanus and a number of out-of-town manufacturers of pharmaceuticals and chemicals, some of whom came from as far as Boston.

—Someone recently secured a lot of Dr. J. F. Hempel's prescription blanks, and for a time afterward these blanks, calling for quantities of cocaine, turned up in various drug stores. Dr. Hempel, who has an office at 1106 Valley street, thinks that the thief, who evidently has some knowledge of medicine, was prompted by a craving for the drug to adopt this means of getting it, when the stringent police regulations forced druggists to stop promiscuous sales.

NEW ASSOCIATION.

Louisville Druggists Agree on Schedule of Prices and Elect Officers.

Louisville, Ky., March 31.—One hundred and thirty druggists met March 23 and formed the Louisville Retail Druggists' Association, which includes all but two druggists in the city. The organization was formed by W. J. Hatfield, agent of the N. A. R. D. He presented a schedule of prices for proprietary medicines, which is on a basis of nineteen cents for twenty-five cent articles and which was reached by means of an average of all of the prices set by the 130 druggists who are members of the association. According to the rules, nineteen cents is the minimum, but any druggist can charge as much more as desired. The scale will be sent to the various manufacturers and if agreed upon will be adopted by the local druggists. There is also a provision that any druggist violating the prices shall be subject to the refusal of goods by the manufacturer. Dr. J. W. Fowler was elected president and W. P. Overstreet, secretary. The president was empowered to appoint a committee on rules and by-laws and also a committee on grievances. The objects of the association are to protect the public against incompetency and adulteration, and will be a means of putting into use a better class of medicines.

GEORGIA BOARD OF PHARMACY.

Atlanta, Ga., March 30.—The next meeting of the Georgia Board of Pharmacy for the examination of applicants for licenses will take place in Atlanta, Monday, April 10. Applicants for examination are requested to note the following:

1. Under a recent Act of the Legislature all applicants must pay \$15 upon applying for examination unless they have previously paid their examination fee. This gives a permanent license.
2. Anyone who has failed in a previous examination is not eligible for another examination until six months have elapsed.
3. Anyone applying for examination on account of three years' experience in a drug store, shall present a certificate or certificates from his employer or employers, countersigned by the ordinary of the county in which he resided during the three years. The said certificates shall state that the applicant has had three years' practical experience in the manufacturing, compounding and vending of drugs and poisons. The law requires that such experience must have been under a licensed apothecary.
4. The Board recognizes the diplomas of such schools as require a course of two years or more, of not less than six months each, and not more than one course to be given within one year. Diplomas of institutions other than colleges of pharmacy are not recognized by the Board.

KENTUCKY NOTES.

—The drug store of R. S. Starks & Co., at Midway, was destroyed by fire last week, causing a loss of \$11,000; insurance, \$8,000.

—The drug store of J. O. Jones & Co., in Paducah, was robbed of several thousand dollars' worth of goods and a small amount of money. The burglars forced the safe.

—Mrs. Lena Donahue was denied damages in her suit against Dr. Henry Heuser, a local druggist, for \$5,000 for alleged injury suffered at the hands of Dr. Heuser, who owns a house in which Mrs. Donahue lived. Dr. Heuser called to collect rent

which was in arrears \$23, and being unable to collect, seized a quantity of household furniture and is alleged to have removed twelve plants from a flower bed and to have captured several chickens after a rather exciting chase. The jury considered Dr. Heuser entitled to all he got.

—Frank J. Kaye, a pioneer druggist of Louisville, who died in St. Louis last week, was buried in Cave Hill Cemetery, in Louisville, Tuesday. Mr. Kaye was seventy-five years old and until a short time ago lived here. He was connected with the drug business here from early youth and was a member of the old Botanical Club, now the Retail Druggists' Association.

LONG CAREER OF A. T. BROWN.

Boston, March 31.—Atherton Thayer Brown, whose death was briefly referred to in last week's Pharmaceutical Era, not only had a long career in the drug trade, but his family has been closely associated with the business for more than a century. Mr. Brown had been identified with the line since his boyhood days. His father was the originator of Brown's "bronchial troches."

Mr. Brown was born in Boston. He was the son of John I. Brown, and his mother was Rebecca Thayer, whose father, Stephen Thayer, founded the drug business about 1792, with which subsequent generations of the family became connected. Mr. Brown was educated in the Chauncey Hall School, and upon graduating began his business career with his father. He was made a partner in 1850. Up to that time the firm of John I. Brown & Son had engaged in the wholesale and retail business, but then the former line was given up.

It is interesting, as illustrating what a wide association the family had with the drug trade, that Mr. Brown had three uncles in the business.

TO ENTERTAIN DRUGGISTS.

Gloucester, Mass., April 1.—Preparations have been begun for the annual convention of the Massachusetts State Pharmaceutical Association, which takes place here June 22, 23 and 24. Headquarters will be at the Hawthorne Inn, at East Gloucester, and an attendance of not less than 1,200 is expected. A big programme has been laid out by the committee in charge. Sight seeing will comprise one of the pleasures enjoyed and the beauty of Cape Ann will be seen in its grandest. A full list of sports will occupy one of the days. A banquet will end the affair, which promises to eclipse any held by the association for years.

HOAGLAND TRIES AGAIN.

Boston, Mass., April 1.—Ralph P. Hoagland has formed a co-partnership with Henry K. Mansfield, of Salem, to carry on a wholesale drug business there, under the name of Hoagland & Mansfield. Mr. Hoagland was formerly president and treasurer of the Ralph P. Hoagland Drug Co., which assigned last November.

Adolph W. Johnson, with Halsey Bros. Co., St. Paul, Minn., has been made instructor of homeopathic pharmacology at the University of Minnesota.

DRUGGISTS CAUGHT NAPPING.

Give Money for Periodical Agencies to Mythical News Company.

MANY VICTIMS OF THE SWINDLE IN SOUTHERN STATES.—TEN THOUSAND DOLLAR SURETY BOND IS FLOURISHED AT THE HESITATING DRUGGIST.—AN ATTRACTIVE OFFER.

An outrageous swindle of huge proportions and wonderful ingenuity is reported from Virginia, North and South Carolina and other Southern States, of which a large and increasing number of druggists are the victims. The scheme is one by which the druggist is to be supplied with periodicals at such a low figure that he can make an excellent profit out of them. The affable stranger who makes the offer and collects the money claims to represent the "Federal News Co., Union Square, New York." There is no such company.

According to information thus far obtainable, it appears that the so-called agent makes a very attractive offer to the druggist to establish a depot for the sale of a long list of periodicals. A still further attraction lies in the fact that should any periodicals remain unsold they may be returned at their cost price. The careful druggist who even then is doubtful about engaging in this venture, is reassured by a ten thousand dollar surety bond, which the "agent" produces as proof of his responsibility.

The list of periodicals is said to contain about 180 names. The druggist makes his selection and pays his subscription in advance for such periodicals as he may select. By this method the swindler has been deriving a considerable revenue and his task grows easier as he goes along, because of the list of names he can show of druggists who have already placed orders with him. All that the victim has to show for the transaction, besides an empty pocket book, is a periodical stand, which the stranger promises and has the decency to deliver.

ALABAMA PH. ASSOCIATION.

Tuscaloosa, Ala., April 3.—The twenty-fourth annual meeting of the Alabama Pharmaceutical Association will be held at Blount's Springs, beginning June 7.

THE ORIGINAL SUBSTITUTER.

On the front cover of a little booklet issued by the Denver Chemical Co., and over the legend "the original substituter," appears a picture of him with the cloven hoof—his Satanic Majesty—who without doubt personifies all of the attributes of his modern successor—the present day substituter. This illustration, however, is not all that one may find in this booklet. On the left hand pages are quotations from the classics and on the right hand pages are little sermons on "Vocations," "Reputation and Character," "Imitations Unreliable," "A Home Thrust," etc., etc., all leading up, of course, to the central theme, "Prescribe Antiplogistine." As a specimen of trade literature, the Denver Chemical Co., in the publication of this booklet has marked a distinct advance in specialty advertising.

CARBOLIC ACID TROUBLES.

Cincinnati, O., March 31.—The members of the Ohio Valley D. A. will at the next quarterly meeting prepare a resolution, again asking the City Council to pass an ordinance restricting the sale of carbolic acid. Several weeks ago a resolution was presented requesting that the pure acid be sold only on a physician's prescription, and when the purchaser had two adult witnesses with him. The Council turned the resolution over to the Board of Health Committee for investigation. The city solicitor decided that the city could not restrict the sale of carbolic acid or any other poison unless the health officer thought it necessary, and he stated that there was a State law which covered the case, but was seldom enforced. The Council then turned the resolution back to the druggists, and recommended that it be prepared in milder form. In the first resolution there was a clause asking that the alleged wholesaling of the acid be restricted. This has aroused some ill-feeling in certain quarters.

SLOT MACHINES BANISHED.

Cincinnati, March 31.—Penny slot machines have been removed from all places of business in this city and in the suburbs of Madisonville, Norwood, Bellevue and Newport, Ky., upon the orders of the authorities. For some time a quiet crusade had been going on. It is estimated that in drug stores there were more than 400 of the devices, but no complaint was uttered when the edict to banish the machines was received. On the contrary there was general rejoicing. It is reported that the cigarists and saloonists intend to fight to secure reinstatement of the machines. Druggists have not been asked to support the proposed movement, inasmuch as they have been trying for a long time to have them put out of business.

CINCINNATI NOTES.

—Several cases of patent medicines said to have contained ninety per cent. of alcohol, were stolen from a supply house last week by a gang of thieves. Later the police found the men, all intoxicated from the effects. The authorities are investigating.

—Harry Stanley, a well-known young druggist, was murderously attacked by two unknown men, last Saturday night, while going home from his place of business on Broadway. An attempt was made to cut his throat. He was taken to the hospital with two bad cuts in the neck. His condition is precarious.

—Joseph Hovercamp, a veteran druggist, has succumbed after a lengthy illness. For more than thirty years he conducted a business at Laurel and Baymiller streets.

—The Ohio Confectioners' Association will in all probability erect a co-operative chewing gum factory, in this city. The members claim that the so-called trust is charging exorbitant prices.

—The Oklahoma Pharmaceutical Association will meet at Shawnee, Okla., May 10 and 11, 1905. Headquarters, Hotel Burt; local secretary, Wallace Mann.

ANOTHER FORMULA BILL.

Grand Rapids, Mich., April 1.—Representative Adam W. Walker, of Bay County, has introduced a bill to regulate the sale of patent and proprietary medicines in the State. Its chief provision is that all such medicines shall have the formulas plainly printed in English upon the labels. Little attention has been given the measure as yet and it is still in committee. Three members of the House Committee on Public Health, however, are physicians, and they may insist on reporting the bill out. It is essentially a measure in the interests of the physicians, though not fathered by the State Medical Association.

MICHIGAN NOTES.

—The New Troy drug store of J. A. Sibley, of Benton Harbor, was destroyed by fire; loss, \$2,000.

—John Strachan, druggist of Muir, fractured his leg below the knee recently, in a runaway accident.

—Lee M. Hutchins, secretary of the Hazeltine & Perkins Drug Co., Grand Rapids, is ill with typhoid fever.

—O. A. Fanckboner, of The Hill Drug Store, Grand Rapids, is with a party on a business and pleasure trip to Texas.

—Lee M. Knill, druggist of Port Huron, was very ill for a few hours, of ptomaine poisoning. He ate potted ham for supper.

—C. H. Frantz, the well-known Bay City druggist, has taken possession of his new store, one of the finest pharmacies in Michigan.

—The establishment of the International Drug Co., at 68-70 Miami avenue, Detroit, was damaged \$4,000 by fire caused by defective electric wiring.

—F. J. Poole has sold his drug business on Oakland avenue, Pontiac, to Seymour E. and Cassius B. Voorheis, who will continue the business under the name of Voorheis Bros.

M. E. Butts, proprietor of the Elk Rapids Pharmacy, has bought the stock of the Corner Drug Store, until recently conducted by H. A. Mix & Co.

—Manager Whitehead, in charge of Haggart's store, at Ososso for the past two years, has added another registered pharmacist to the force, the new man being A. A. Mack, graduate of the Ontario College of Pharmacy.

—W. W. Munger, of Three Rivers, has sold his drug store in that city, to W. R. Gibbs, of Howard City. Mr. Munger will remove to Seattle, Wash., where he will embark in the drug business.

—An aquarium of glass an inch thick, in the window of G. W. Milner's drug store, Big Rapids, burst with the pressure of 900 pounds of water and the flying pieces crashed through a plate glass window. The damage reached \$100.

—C. E. White, for the past year pharmacist at E. D. Hawley Co.'s store, Stanton, has purchased J. L. Congdon's drug store at Pentwater, and has engaged in business there. Mr. Congdon had been in the drug business at Pentwater for thirteen years.

—Burglars entered the Crescent Drug Store, at Pentwater, taking about \$20 in cash, several dollars' worth of stamps, about \$15 worth of cigars and two \$5 pieces of French china. Two plate glass windows were ruined in an attempt to cut them.

REMOVAL OF SLOT MACHINES.

Milwaukee, Wis., April 1.—Druggists of this city are to be made the innocent victims of a quarrel among the saloonkeepers and gamblers. The city is notoriously wide open, gambling flourishing as publicly as a drug store and saloons never closing unless the proprietors see fit. From the penny-in-the-slot chewing gum vender the slot machine craze grew until it became a worse gambling device than the faro table. Every saloon and some groceries and drug stores installed machines for purely gambling purposes. From a nickel in the slot with a possibility of winning a dollar, they increased to quarters and halves, with stakes as high as \$10. Parents complained that children lost money, wives complained that husbands' weekly wages went into the "devil machines." Then the sheriff acted. He confiscated all the gambling machines. Then the owners of the machines threatened to close the gambling houses. The gamblers threatened to close the saloons at midnight. It was a merry row and fast and furiously waged. The only visible result, however, has been the removal of all slot machines, down to the innocent little dispensers of perfumery.

TUBERCULOSIS CONTAGIOUS.

Madison, Wis., April 1.—A bill that is of some interest to the druggists of Wisconsin has just passed both houses of the legislature. It places pulmonary tuberculosis in the same category of diseases as smallpox, scarlet fever, diphtheria and other infectious or contagious diseases. In fact, consumption is made infectious and contagious by law, whether or not doctors agree on this proposition. Hereafter physicians must report all cases of tuberculosis and all houses containing patients suffering with the "great white plague" must be cordoned. The State legislature is considering a bill that proposes to establish a State tuberculosis sanitarium.

ARTISTIC POST CARDS.

Souvenir Post Cards have become a fad all over the country, and many enterprising druggists have found them a paying specialty.

The Rotograph Company, 754 East 164th St., New York City, employs a new photographic process, with much success. This company carries stock subjects, and makes plain and colored post cards to order from photographs of local views, and it invites enterprising druggists to write for special wholesale offer and samples.

PERKINS' OIL SOAP.

Perkins' Oil Soap is one of the biggest trade winners on the market. One sale means a dozen more every time. Put up in neat collapsible tubes—retail price, only ten cents—it is the favorite with travelers, tourists, actors and for general toilet and bath purposes.

The first druggist to handle this line will find it a big trade winner. Used by the United States government and leading hospitals, its purity is unquestioned. Its cleansing power is unequalled. Send today for full particulars for this big money maker, to Perkins' Soap Co., 136 Liberty street, New York, N. Y., U. S. A.

OFFICERS DETROIT DRUG BOWLING LEAGUE.

Reading from left to right they are: H. E. Perry, president; H. J. Lawrence, vice-president; A. H. Ludwig, Secretary; C. G. Willits, treasurer, and J. N. MacDonald, chairman of Arrangement Committee.

P. D. INTER-CITY MATCH.

Detroit, April 4.—The inter-city games between the Parke, Davis & Co. team of Detroit and those of the firms' branches in New York, Chicago, Kansas City and New Orleans, last Saturday night, for the bowling championship, drew a throng estimated at nearly 1,000. The Detroit team was composed wholly of heads of departments, and was the same as played on the regular No. 1 team in the Drug League all season, with the exception of Dr. Aldrich.

In the first game the boys found it hard work to down the new pins, the result being only an ordinary score. At its conclusion a telegram was received from Prof. Ryan, of the firm, who had gone to New York to see the games there and place a barrel of money on the Detroit boys, saying that the New Yorkers were "leary" and no money in sight. The home team then got busy and rolled up a score of 924 in the second game. They followed this with 903 in the third, 836 in the fourth, and 919 in the last, making a total of 4,414 for the five games.

Lawrence bowled in hard luck most of the evening. Although most of his balls were perfectly bowled, the pins wouldn't tumble, and he only succeeded in making an average of 170% for the series. Smith was in great form, his average for the five games being 197. Snyder and MacDonald also bowled in splendid form.

Great enthusiasm was displayed throughout the entire evening, but some disappointment was manifested at the slowness with which the results were received from the other cities. The only returns posted on the board to midnight were those of the first two games in New York, which showed that that team had made a total of 1,600 in the first two games. As the Detroit boys had 156 more than that for the same number of games, they felt confident that they would retain the championship. Here are the results at the Detroit end of the contest:

Games.	1	2	3	4	5	Tot's
Snyder	167	160	192	191	183	893
Macdonald	170	203	185	131	222	911
Aldrich	177	144	156	131	165	773
Lawrence	160	208	157	179	148	852
Smith	158	209	213	204	201	985

A. G. THOMPSON'S RETURN.

A. G. Thompson has announced his return to active manufacturing. Some years ago Mr. Thompson retired from business,

having sold out his interest in Thompson's Wild Cherry Phosphate. That article had a wide sale in those days. Mr. Thompson's object in again taking up manufacturing is to put on the market his "Phosferine," a preparation of the highest grade and quality. It will be put up in three sizes, 10c., 25c. and 50c. bottles, making four quarts, sixteen quarts and forty quarts respectively. Old friends of the former success will undoubtedly be inter-

A. G. THOMPSON.

ested in this new venture and those druggists who intend stocking it can obtain literature, price list and a description of a \$5 combination case by mentioning The Era, and writing to the Thompson Mfg. Co., 22-24 River street, Chicago. A notice of this firm will be found on another page of this issue. It is worth reading. We publish Mr. Thompson's portrait, so his old friends may recognize him

PASSED IN VIRGINIA.

Richmond, March 30.—The Virginia Board of Pharmacy to-night gave out the list of those passing a successful examination. Among the applicants were five negroes and one negress—all of whom failed. Those who passed were:

Registered Pharmacists—L. B. Whitehouse, C. E. Walton, C. M. Showalter, L. R. Swimley, H. M. Harper, A. C. Swinley, C. A. Johnston, W. D. Crockett, J. M. Jones, Eugene R. Wight, S. F. Fletcher, J. D. Fruit, Sidney E. Bray, Russell Stiff, C. M. Flsher, Arthur Richards.

Registered Assistants—Loring Hammer, E. W. Addison, W. T. Hammer, W. R. Helnestine, Thos. W. Hauback, J. T. Wallace, Charles G. Parker, George J. Hatcher, J. B. Nicholson, Frank C. Larrabee, Howard Whitehead.

QUININE AND OPIUM LOWER.

A Two Cent Decline in Quinine Unexpectedly Announced.—Salts Proportionately Reduced.

Manufacturers of quinine sulphate announced a two cent decline in that staple rather unexpectedly on Tuesday morning, just too late to allow its inclusion in our regular market report. Following this cut, jobbers have reduced their quotations to 21@21½c. for bulk in 100-oz. tins, 21½@22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

This reduction is undoubtedly the result of the quiet demand, the lower unit at the recent Amsterdam auction, and the increased bark shipments from Java. It is now announced that the total shipments for March were 1,450,000 pounds, and not 1,000,000 pounds, as previously reported. All the quinine salts are correspondingly lower.

Opium is also lower. As noted in our market report, the demand has been but moderate for some time. Stocks in primary centers are fairly heavy and there has been considerable competition in powdered. Jobbers have therefore shaded prices and the new figures may be given as \$3.05@3.20 for nine per cent., and \$3.15@3.30 for eleven per cent.; powdered, \$3.85@4.10 for thirteen per cent., and \$4.60@4.85 for sixteen per cent.

MINNESOTA PH. A.

St. Paul, Minn., April 3.—The Minnesota Ph. A. will hold its annual meeting at Duluth, July 18-20. It has been decided to eliminate the usual athletic sports and give some other form of entertainment, such as a tally-ho, boat ride, etc. The committee in charge of arrangements resolved to ask for financial aid in lieu of prizes from manufacturers and jobbers. The committee will publish the names of donors in the annual report of the association, without giving the amounts. For the entertainment of the women of the convention special provision will be made. A carriage drive over Duluth's famous boulevard will be one item. This boulevard, which is circular in form and rises about a thousand feet above the waters of Lake Superior, is said to have but one rival in the world, and that is at Monaco, on the Mediterranean.

AMONG THE COLLEGES

UNIVERSITY OF IOWA.

Iowa City, Ia., March 31.—At the last meeting of the Mortar and Pestle Society, the following new officers were elected: B. E. Manley, president; F. C. Schadt, vice-president; George E. Weaver, treasurer, and B. C. Cochrane, secretary. After the election the following programme was rendered: Paper, "Pepsin," F. C. Schadt; recitation, R. E. Humphrey; music, Henry Siebka; paper, "Opium," R. C. Cochrane; local news, M. R. Dickson; discussion, Prof. W. J. Teeters; reading, J. F. Machacek.

Track work has begun in the new gymnasium with several pharmacy students as candidates for honors. The boys have recently organized a base ball team, with A. Johnson as captain and B. E. Manley as manager.

The junior class held its second regular meeting and re-elected all of the old officers for the remainder of the school year. The members of the class are progressing rapidly in analytical chemistry.

W. T. Coffman, '04, now employed in Salt Lake City, recently passed the examination of the Utah Board of Pharmacy.

HOWARD COLLEGE OF PHARMACY.

Washington, D. C., March 25.—The senior class of the Howard College of Pharmacy has reorganized, and the following have been made class officers: President, J. B. Darden, N. C.; vice-president, C. Green, N. C.; recording secretary, H. H. Kingslow, N. J.; corresponding secretary, L. D. Erans, Ga.; assistant corresponding secretary, A. W. Edwards, Va.; treasurer, P. D. Lee, Wash.; chaplain, J. V. Stovel, N. Y.; sergeant-at-arms, A. T. Moore, Va.; chairman executive committee, W. B. Gray, Penn.

Dr. J. Herve Purdy, vice-dean, has been instrumental in securing the services of several competent pharmacists, who have given the senior class special lectures on commercial pharmacy, drug store book-keeping, etc.

The seniors had their final examination in botany on Friday last; the rest of the finals will begin in about a month.

We regret to note the illness of Miss A. L. Jackson, the only woman in the senior class.

KANSAS CITY COLLEGE OF PHARMACY.

Kansas City, Mo., March 30.—At the twenty-first annual commencement exercises of Kansas City College of Pharmacy, held at the Academy of Music, last night, Prof. J. M. Love presided and Dr. W. F. Kuhf. conferred the degrees on the following graduates: Wilfred Bottomley, Claude L. Cowdery, Frank C. Duigenan, B. Eugene Eoff, George B. Fugitt, John E. Hershner, Milo E. Harrah, David S. Long, Joseph B. Massman, Win. Deming Laney, Milton C. Moore, Bertha M. Norman, Ray T. Prettyman, Robert Ragsdale, Charles E. Reed, G. C. Turner, John J. Schmid, James P. Withrow.

The gold medal for highest general aver-

age by a member of the senior class was awarded to Ray Thomas Prettyman, and honorable mention to Milo E. Harrah. The junior class medal was awarded to Glaxier Williams and honorable mention to Paul S. Lane, W. H. Stone and C. S. Ryan. The gold medal offered by the Alumni Association for best general work in microscopy was also won by Mr. Prettyman, and life membership in the Alumni Association for the next best grade was won by Miss Bertha Norman.

The annual reception to the graduating class by the Alumni Association was a very successful affair, more than a hundred couples were in attendance. Dancing and cards were enjoyed and refreshments were served informally all evening. Charles Hassing, Amoret, Mo.; Earl E. Brown, Logan, Kan.; C. C. Prather, Lonsere, Mo., and Lottie Kelly, Topeka, Kans., were among out-of-town graduates there.

At the annual meeting for election of officers of the Association on March 27, the members of the graduating class were admitted to membership. The officers elected are: President, R. D. Irland; first vice-president, Nick Hunter; second vice-president, Earl E. Brown, Logan, Kans.; secretary and treasurer, Mrs. D. V. Whitney.

FERRIS INSTITUTE.

Big Rapids, Mich., March 31.—Thirty-six students from the Ferris Institute went to Grand Rapids to attend the State Board of Pharmacy examinations. They left in good spirits, each wearing a carnation, and repeatedly gave appropriate yells for their class and instructors. Before leaving, they presented the school with an elegant class picture, beautifully framed, and also honored their instructor in pharmacy with an elegant present. The entire pharmacy department accompanied them to the railway station, showing their colors and wishing them success.

BOOK REVIEWS

GENERAL INDEX to Volumes One to Fifty of the Proceedings of the American Pharmaceutical Association from 1882 to 1902, inclusive. 8vo, 592 pages; cloth, \$5. Baltimore, Md. Published by the American Pharmaceutical Association.

The Index Society of England has defined the meaning of the word "index" to be "an indicator of required information," and the very first rule of that society insists that every work should have one index to the whole set, and not an index to each volume. That the A. Ph. A. has gone further than this is obvious when it is recalled that not only has it published this collective index, but it has indexed each volume of its Proceedings for many years. As a time-saving medium, this volume furnishes the key to the best of the pharmaceutical literature for fifty years, and makes the Proceedings not only more accessible, but more valuable to the pharmacist.

As a matter of history the publication of the Index was determined upon at the fiftieth anniversary of the organization of the association, and was made possible by the assistance of the publishers of five

leading pharmaceutical journals. The Era being one of them, the idea being that such a work was thought to be desirable for the use of all interested in the progress of pharmacy and cognate sciences. The result of that effort is now apparent. The Index contains over 55,000 titles and nearly 70,000 references, and so far as we have been able to test the book, we believe the compilers have included most of the title-words that are likely to occur to the searcher after information. At any rate, we believe it can be safely said that this book covers more pharmaceutical literature of direct interest to the American pharmacist than any other work ever published, and as such, it is a fitting milestone to mark the completion of the first fifty years of the association's existence.

A TEXT-BOOK OF QUANTITATIVE CHEMICAL ANALYSIS by gravimetric, electrolytic, volumetric and Gasometric methods. With seventy-two laboratory exercises giving the analysis of pure salts, alloys, minerals and technical products. By J. C. Olsen, A. M., Ph. D., professor of analytical chemistry in the Polytechnic Institute of Brooklyn, formerly Fellow of Johns Hopkins University. 8vo, 513 pages; cloth, \$4 net. New York: D. Van Nostrand Company.

This is a book primarily adapted to the wants of the American student, though experienced analysts will find it most valuable as a reference work. According to the author, the order in which the various general methods are taken up is that used by him in instructing his classes. The instruction on the manipulation of the balance and general operations is first given; then the determination of metals and acids in pure salts is taken up, each student making one determination under each of the general methods given. This is followed by instruction in the separation of the elements in connection with the analysis of alloys and minerals, chapters on electrolytic and volumetric methods, oxidation and reduction and precipitation methods, and chapters on technical analysis, covering iron, steel and coal, water analysis, oils and fats, gas analysis, and a chapter on stoichiometry. In an appendix of twenty-two pages is presented much valuable reference matter relating to reagents, tables of international atomic weights, chemical factors and their logarithms, logarithms, antilogarithms, specific gravities of ammonia solutions and acids, vapor tension and density of water, etc. The pharmacist in need of a book which shall contain a clear exposition of useful and well-accredited quantitative methods will find "Olsen" to answer his every requirement.

DIAMOND DYES.

How is your stock of Diamond Dyes? Do you know that Diamond Dyes are the only dyes sold on the price protective basis, which absolutely protects you in your profit and assures you that no other dealer can sell the goods at a better price?

Diamond Dyes have been on the market for twenty years and are the recognized standard of the world. Every retail druggist should have a well-stocked Diamond Dye cabinet. If you are not fully posted as to assortment and prices, write to the Wells-Richardson Co., Burlington, Vt., and they will promptly send you fully descriptive circulars.

LANOLIN

Our Price **30** Cents Lb.

We prefer that you order from your jobber, but if he will not supply you, write to us and we will see that you get our goods. On an order for 10 pounds or more we will deliver freight paid.

The Puzzler

Your Own Store Paper.

Newest Kind of Drug Store Advertising

The "PUZZLER" isn't like anything else published. It's a Monthly Illustrated Store Paper, to be sure, but examine it, and you at once recognize its unique, trade-bringing, entirely new features. It is only 12 months old, but **225,000** copies per month tell the story of its tremendous success with the shrewdest advertising druggists in America—one only in a locality. You never before could buy such effective drug store advertising at so small a price. It pays for itself over and over every month. Its effectiveness is doubled by a novel plan which carries the interest of all ages and classes of readers over from one month to another. Get exclusive control of the "Puzzler" for your locality and the profits on your increased trade will more than pay the costs—and besides, it will be the best general advertising that you can get for your drug store. Write at Once for Free Sample Copy.

THIS TOOTH BRUSH

was shown in a recent copy of the Pharmaceutical Era in connection with a special introductory offer, and it brought us a great many orders for gross lots.

We had several highly complimentary letters from those who ordered the brushes on the strength of this illustration without seeing the goods. In fact, the brush was more than they had anticipated it should be. One druggist said, "The brushes are fully equal to the illustration."

This brush is one we have made with especial care to sell as an extra high-grade 25 cent brush. You will find this is a much better brush than we describe it.

We believe many druggists would order if they were positive the brush would equal the cut here shown.

We want to say that we not only stamp our trade-mark upon it, but guarantee the brush, and you may return the shipment if it doesn't meet your expectation.

WE REPEAT THIS OFFER

For \$21.00—ship you an assorted gross of these guaranteed Tooth Brushes, H. & A. trade-mark, and include with the shipment a handsome polished wood rack in which to display 24 brushes.

For \$42.00—ship you two gross of these same brushes, stamp your name on front of brushes, and send the display rack. We will furnish the die for stamping.

Express prepaid east of the Mississippi River—beyond that we will pay one-half expressage on all mail orders.

Failing to interest you in either of these very good offers, we will send samples for your inspection.

These brushes are the very best 25 cent retail values in all our line. Get acquainted with us through one of the above orders, and we will put you in touch with our constantly changing and ever new line of Brushes and Toilet Specialties.

TRADE SECTION

THE NEW TRADE MARK LAW

Operative April 1. So Owners Should Re-Register Trade Marks.

RE-REGISTRATION NOT ABSOLUTELY NECESSARY, BUT ONLY BY THAT MEANS CAN ALL PRIVILEGES ALLOWED BY NEW LAW BE OBTAINED.—FEE TEN DOLLARS.

The new trade mark law which became operative April 1, renders it advisable that all owners of trade marks re-register them under the new act. But re-registration is not compulsory and trade marks registered under previous acts retain all their effectiveness and rights. The point is that registration under the new act obtains additional privileges.

Mr. Arthur P. Greeley, who was a member of the Commission to revise the Patent and Trade Mark Laws, created by Congress in 1898, has had more to do with the creation of the new act than any other one man. His opinions on its meaning and workings are therefore of great value.

Mr. Greeley has recently written a pamphlet dealing with registration of trade marks under the new act, which is exhaustive and very valuable to everyone contemplating registration, or indeed, to every trade mark owner. Some of the salient facts featured in this booklet, which is published by John Byrne & Co., Washington, D. C., are here given.

PURPOSES OF NEW LAW.

The new act supercedes all previous legislation relating to the registration and protection of trade marks, without, however, in any way affecting existing rights acquired under common law or acquired by registration under the act of 1881.

One purpose of the act is to so far facilitate and encourage registration that the register of trade marks may be made as complete as possible, so that the public may know what marks are in use and who claims the exclusive right to them.

The registration fee is reduced to ten dollars from twenty-five.

Registration of all marks which under the common law can be considered trade marks, and marks used in interstate commerce, may be secured, as well as those used in foreign commerce or commerce with the Indian tribes. The new law gives registrants advantages over those given by the common law in respect to the delivery of damages; in respect to the destruction of copies, of infringing marks; in respect to the enforcement of an injunction granted in any one of the circuit courts; in respect to the jurisdiction of the United States courts in controversies respecting the use of registered trade marks in interstate commerce; and in respect to the exclusion from entry at custom houses of merchandise falsely bearing a registered trade mark.

COMMON LAW RIGHTS HOLD.

The new act does not make any change in the common law of trade marks or in the doctrine of unfair competition, section 23 of the act expressly providing, "That nothing in this act shall prevent, lessen, impeach or avoid any remedy at law or in equity which any party aggrieved by any wrongful use of any trade mark might have had if the provisions of this act had not been passed."

The new act permits the registration of trade marks used in domestic commerce, provided that their use is not wholly within a single State.

The final decision as to the registration of a mark offered for registration rests, not with the Commissioner of Patents, but with the Court of Appeals of the District of Columbia, a court composed of three judges.

IN FORM OF COMMERCIAL USE.

The new act permits trade marks to be registered in the form in which they are actually used, and the Patent Office will not only require specimens of the mark as actually used to be filed, but will require the drawing of the mark to correspond with the specimens.

Under the act of 1881, applicants for registration have been required by the Patent Office to eliminate from the drawing of the mark, all but the features which were considered the essential features of the mark, with the result that in many cases the trade mark as registered would not readily be recognized as the trade mark actually used.

The new act provides that where, in a suit either at law or in equity, for infringement of a trade mark registered under the act, a verdict has been rendered in favor of the plaintiff or an injunction issued, the court may, according to the circumstances of the case, enter judgment for increased damages to the extent of not more than three times the actual damages found, thus making it possible to compel the infringer to pay a penalty for his infringement, as well as to pay such damages as can be proved.

ADVANTAGES OF RE-REGISTRATION.

Those having rights to a trade mark should register before someone anticipates them and registers the very same mark. This often happens and many more cases will appear with the operation of the new law. While there are remedies in such cases for the rightful owners, they are slow and expensive. Obviously, it will be less expensive for owners to register their marks than to be compelled to oppose the registration of their marks by others, or to otherwise defend their rights against those who, by reason of having secured registration, have a *prima facie* right to use marks.

The new act requires the registrant of a trade mark to give notice to the public of the fact of registration by affixing the words, "Registered in U. S. Patent Office," or "Reg. U. S. Pat. Off." on the trade mark or where that cannot be done, by

affixing a label containing a like notice on the package. Failure to give this notice does not affect the right of ownership or the right to bring suit, but does prevent the recovery of damages, unless it is proved that the defendant was duly notified of infringement and continued to infringe after notice.

FORM OF NOTICE ON ARTICLE.

The form of notice described should be followed strictly, as it is possible that no notice of registration given in any form other than that prescribed would be held by the courts to be sufficient to permit of the recovery of damages.

Trade marks owned by residents of Porto Rico and the Philippines are entitled to the full privileges of registration.

Foreign trade marks may be registered if first registered in their own countries.

Applications for registration of a trade mark pending at the date of the passage of the new act may be amended to bring it within the provisions of the act and may be proceeded with and registration secured without the payment of a further fee. This applies also to applications which have been refused under the old law. They are, so to speak, permitted a second trial without additional expense.

ENGLISH EYES ON OUR SULPHUR.

At the annual meeting of the Anglo-Sicilian Sulphur Company, which controls the Sicilian sulphur output, signs of decided anxiety over the growth of the American sulphur mining industry in Louisiana were manifested. The speech of the chairman, Mr. William T. Brand, is of interest as a commentary on the sulphur situation which was fully described in The Era of January 19. Mr. Brand said:

"Sicily has been until now virtually the sulphur producer of the world and there has been practically no serious competition from other sources, but we are threatened this year with some further competition from certain mines in Louisiana, where it is claimed that a considerable quantity of sulphur can be produced. Whether these mines will produce all that is claimed for them remains to be seen and we are, of course, meanwhile carefully watching their position.

"The Board has made inquiries as to what the Louisiana mines were doing, but it was difficult to obtain information, as the owners had taken every precaution to prevent inquirers from finding it out. They had ascertained, however, that in 1902-3 the mines produced about 8,000 tons of sulphur, and there were no figures published as to what they produced in 1903-4. The directors were naturally anxious to ascertain all they could on the subject."

BOSTON SODA METHODS

The Gilchrist Fountain's Good Results

William F. Dey, the Manager, Believes in Liberality to Customers, in Floral Decorations and in Quality of Supplies—Unusual Features of Fountain—Fifty Feet of Counter

Although the handsome "Constellation" soda fountain recently installed in the store of Gilchrist Company, Washington and Winter streets, Boston, occupies comparatively little space, it has become one of the busiest and most profitable of the many in the city. It well demonstrates that much can be done under even limited conditions as regards room, if this can be done properly by people understanding their work. This handsome fountain, designed and built by The Puffer Manufacturing Company, Boston, is in itself so attractive that it compels admiration, and few patrons of the store go anywhere near it without pausing to admire it. From that to tasting its delicious things is an easy step.

William F. Dey is the manager in charge of this fountain department, and he has as assistants just the right sort of young men required to invite patronage, in the first instance, and to retain it and make permanent friends of these customers as a result. Mr. Dey, in speaking of the success which has been attained, recalled that only about four years ago the introduction of a fountain and of serving soda had a modest beginning. "It was an experiment," said Mr. Dey, "and, of course, its popularity and success were problems which we had to study. This we have done steadily from the very start, learning something new right along which we could apply profitably to ourselves, noting carefully seemingly unimportant details, which, however, proved of material benefit. We began to study customers and their ways and requirements, learning little by little their tastes and preferences, likes and dislikes, and much else which served to guide us.

DIPLOMATIC ATTENTIONS.

"I first determined to give all our customers the very best value possible for their money and to make them realize it, moreover, and also, when our new 'Constellation' was installed, to occasionally give them something without charge, of course, using careful judgment in this matter. Take two or three women shopping together, for instance. I would size them up, now and then, as people fully able to appreciate a good thing and also as susceptible to a little more than the expected attention. After they had been served and finished their drink, ice or whatever they enjoyed, I would quickly suggest something from our own specialties, usually quite new among the things I have introduced from time to time, and invite them to try it. It is human nature to be eager to get something for nothing, and women are never slow to avail themselves of an opportunity. By giving them a fairly good sample, less of course than

would be served for payment, and asking their opinion of its merits, I appeal to their taste and criticism, and they invariably feel a bit flattered that their opinion has been asked regarding this or that. The actual cost of what is given them free, after they have previously

WILLIAM F. DEY.

bought a drink or ice cream, is very small, comparatively, and it makes them friends and steady patrons. They tell their friends, moreover, how delicious things are and by this means send their friends to the store. It is a good investment every time.

"I have been in this business long enough to see the changes which time has brought about. You cannot fool the public now, as you could years ago, by serving syrups, flavors, creams and the like which are not strictly first class. Taste is generally far better cultivated in these matters than it used to be and people are wise.

SYRUPS AND ICE CREAM.

"I searched a long time to get syrups and fruits which satisfied us in all ways. This was no easy matter, but having succeeded in solving this problem, I have kept the strictest watch over it to prevent any falling off in quality of what we use. We selected after several experiments, an ice cream which satisfied us and which has since given like satisfaction to our patrons when adopted. In serving this, we gave just as liberal portions as we possibly could; that is a great point which many dispensers do not realize is bound

to work for their benefit. Customers are greatly impressed, favorably or otherwise, by the large or small amount of ice cream served them. To seem to be stingy on this point is most unwise and you certainly drive customers away if you give them small portions of cream; you as certainly win them permanently by liberal allowances of the frozen delicacy. I am sure this plan has done much toward building up our trade, for remarks along this line frequently are overheard by my assistants.

"We found that we must have a fountain which not only was of greater capacity, but which would make possible greater expedition in the work of dispensing, and it seemed to the company that the Puffer 'Constellation' exactly met and filled our requirements. One essential point about it which appealed to us was its saultry plumbing, and the fact that in its construction only marble, slate and onyx were used, combined with nickel and white metal, heavily plated. Besides there are glass and block tin syrup receptacles and like hygienic features to recommend it. Wood is entirely eliminated, for with a material of that absorbent character, absolute cleanliness is impossible in my opinion. A fountain simply cannot smell sweet where there is wood to be kept clean. That is a fact that many who think they know all about a fountain have never yet learned.

COUNTER SERVICE; SYRUP PUMPS.

"Just look under here," said Mr. Dey, to The Era's representative, "and see if anything could be finer, cleaner or more satisfactory generally than our fountain. See these receptacles for my syrups and how appropriate they are for such purposes. No germs, of which we hear so much, can possibly come in contact with these syrups. See how easy it is to serve them, too, by these patented dispensing lifts. Isn't that ingenious? You see it supplies exactly the right quantity of syrup which ought to be served, without any resort to mere guessing on the part of the clerk serving the drink. And it does the trick so quickly, you notice, that no time is lost, which is a point to be considered when there is a crowd around, all eager to be served as soon as possible.

"These syrup containers can be taken out easily, to be cleaned or for other purposes, but it is not at all necessary to remove them if you want to refill them. All I have to do to draw the syrup is to pull down this ball and forth it comes, and when I release the ball it moves back automatically to its usual position. It's a great idea and it makes me wonder how we all stood for the old fashioned style of fountain all the years we did without somebody inventing something to replace it earlier than was done.

"You see we have fifty of these syrup lifts, and see how cleverly planned the cooling idea is, with economy of ice and yet insuring the required chill of the drinks. Our ice creams are kept cold in the same way, and there is entire freedom from the old-time sloppiness and untidiness which used to be found under and behind all soda fountain counters. Our dispensers always face customers, and since this is a counter style apparatus, and this I consider a great advantage. The customers can see plainly what you are doing and they like to watch what is done in

A WELL-KNOWN BOSTON FOUNTAIN.

In the Store of Gilchrist & Co., Washington and Winter Streets. A Puffer "Constellation." Marble and Onyx. Fifty Feet of Counter. This is Notable Also For Its Unique Shape, Taking a Minimum of Floor Space For a Maximum of Counter.

their behalf. It adds a certain zest to the enjoyment of a drink.

HAVE NEAT DISPENSERS.

"I think one great thing which has helped us to build up our present big soda trade is the fact that everyone connected with the fountain seems to invite confidence in what is served there. All our clerks were chosen from a large number of applicants and the selection was made by giving preference to those of good personal appearance. A man who was neat and well dressed and clean shaven, and whose hands were in good trim, and whose hair showed careful attention, so it seemed to me, would be pretty likely to keep us neat in all ways at the fountain and see that his portion of the work was done in a cleanly, neat manner. I don't mean that my assistants had to be finely dressed or beautifully manicured, but if they had self respect enough to be thoughtful as to their personal appearance, doesn't it follow naturally that they will have some pride regarding the fountain? My men are always clean-shaven, for I insist on this point. Their hair is always in order, too, and they would not dare go too long without having it cut, or I should get after them. It does not mean much expense to them, anyway, any more than it does to have on clean linen. Little of this, as to clothing, shows, except their collars, which must be clean and fresh always. Their white coats and aprons have to be as immaculate as possible and frequent changes of these do much to keep things up to the proper

standard. They have to be agreeable in manners, attentive to customers, naturally, without any familiarity at all and in every way where politeness tells, they must be right there.

DISPENSERS' DEPARTMENT.

"I will allow no quarrelling or bickering among the assistants. A first offence means a reprimand which is effective, usually, and they are given to understand that a like offense will mean discharge. My men, however, get along very well together. If I can engage men who are what might be termed fine looking, I, of course, like to do so; tall, athletic-looking and straight, for a stooping, slouchy man does little credit to your fountain staff. I don't mean by this that I require them to be like Adonis, but merely not cross or repelling in appearance, nor do we want those who have a 'weary' look. All these things tell far more than you would believe possible. Of course, they must understand fully their duties and the proper drawing of drinks and correct way of serving ices, etc. I have certain simple rules which must be remembered and followed, and I will not tolerate carelessness. A glass of soda properly drawn and neatly served, or an ice cream rightly offered does much to make a good impression upon customers and the reverse rule also holds good, for indifference on the part of the clerk as to the appearance of what he is serving will go far toward creating an unfavorable impression. Too great care cannot be used in these matters. I believe thoroughly that a good

impression is a lasting one with customers, causing them not only to return, but also to bring friends with them or send them into a place where they have been well treated and have found things satisfactory.

"Another point by which business may be increased is to offer a variety. We have a list of nearly two hundred different refreshments to offer the tired and thirsty, including our drinks of various kinds, college ices and sundaes, ice creams, etc. It affords a wide range for a choice of something delicious. If a person, by chance, inquires for something I never have heard of and I chance to be near, I become interested, and manage to get them to tell about it and what it is like. This flatters them and they become pleased. I suggest that it would be a good thing for me to add it, and if it really is worth while, I try to do this; but usually it is practically just the same as something we already have under some other name.

A SPECIALTY OF FLOWERS.

"We have fifty feet or so in length of fountain space and to relieve this great length I try to keep fresh flowers prettily arranged, and also potted plants on the fountain, as decorations. The bright bits of coloring and the freshness of the flowers, as well as the greenery do much to liven up and make attractive any fountain, large or small. Women constantly speak of the flowers they see here and this shows they notice the decorations and are favorably impressed. In the right seasons I think it is an excellent idea to keep fresh

fruits about, for oranges, lemons, pine-apples, bananas, bunches of grapes, especially with some of the foliage attached, possible of course in the grape season, and sometimes a pretty hamper filled with strawberries or raspberries, or a basket of peaches well placed all offer suggestions of the good things we serve. A bowl of eggs also is not new, by any means, but if you have a handsome bowl, say of the rich Chinese medallion ware, the eggs take on an inviting look far above the usual. All these details, small perhaps in themselves, really tell in the long run, in my opinion. I have eight soda clerks to keep the fountain clean and attractive in appearance, to decorate it and to attend to all customers expeditiously without interfering with one another behind the fountain counter."

THIS CONSTELLATION.

Briefly described this great fountain at the Gilchrist store has its body-work of Paronaxia white marble, from Italy, which is wonderfully beautiful in its veining and it contrasts finely with the base of Genesee marble, in its coloring known usually as "Alps green." Just above the base, Mexican onyx has been used effectively, as it also is under the frieze, giving a distinctive look of richness to the structure. Highly polished dark Tennessee marble forms the top of the serving counter, from which rise pilasters of Mexican onyx to form the draught stands. These bear electric lights on the top. The trimmings of white metal are finished like old silver, dull and substantial looking. It occupies a square directly in the center of the big store, opposite the Washington street entrance. One side faces several elevators, a point of vantage, as it is seen by people entering and leaving the cars or waiting to take them. Not infrequently such waiting begets thirst which only a drink at the fountain will satisfy, and undoubtedly some trade is promoted from this fact alone.

JAVA CINCHONA.

A correspondent in the "Straits Times" writes that the cinchona estates in the Preanger Regencies are going on very well, says the Chemist & Druggist. The soil in West Java, especially in the Preanger, seems to be much better for cinchona than in the other parts of Java. Many of these estates have paid big dividends. The cinchona-estate Lodaya has just paid a dividend of 5 per cent., and the Passir Malang, Passir Nangka, and Therbantance estates more than 30 per cent. These estates are all working with a large capital, and they market cinchona of a high class. The estates which have only cinchona of low quality are doing well at present, owing to the high market prices. The government cinchona-estate has made a big profit every year. Last year it was about 350,000 guilders, and this year probably it will be even more. The managers of the tea-estates have nothing to complain of, too, as most of the tea companies have paid dividends of over 7 per cent. The news from the coffee estates is bad, as only few coffee estates in Java have been able to pay a dividend. There are many estates in Java which are working with English capital.

SPONGE TRADE CONDITIONS.

Mr. Albert Hart, of the Smith, Kline & French Co. on Scarcity and Prices

"General business conditions are only moderately satisfactory," said Mr. Albert Hart, when seen at the Broadway Central Hotel. "Business in the drug trade is far from active. But in sponges it has been good. Last spring was rather dull for transactions in sponges, but last fall brought activity. This spring so far has not seen results above the average, but I expect such will develop. I have great faith, too, in the outlook for generally prosperous conditions."

Mr. Hart has been at the Broadway Central Hotel the past week, having come over to New York from Philadelphia to present to the trade the large lines of sponges carried by the Smith, Kline & French Company. This week the same exhibit will be in Boston.

The lines shown by the firm were very comprehensive, including sheepwool, grass, Turkish bath, silk cups, mandruka, West Indian and Florida sponges in bales, and many other varieties. There was also a line of chamois, domestic and imported.

Speaking of sponge conditions, Mr. Hart said: "The supply of good sponges is steadily diminishing and the consumptive demand rapidly increasing. The sponge fishers in Grecian and Turkish waters have for years cut the beds too exhaustively. Beds should be harvested but once in three years to allow full maturity of size and quality in the product, but often they are cut every six months. The recent regulation of the Turkish government prohibiting the use of diving bells in the fishing will aid a correction of these evils materially, and it is hoped that in time the quality of sponges will improve. At present it is hard to get good sponges, and many of those offered by gatherers are heavily sophisticated with sand or other substances. Prices have really advanced more than appears on the surface. To-day when we buy from gatherers we may pay apparently old prices, but in reality we are getting part of our weight in sand, so net cost is decidedly higher. If retailers would realize these conditions, they would not be so apt to complain of any advances asked by reputable wholesalers."

ATTRACTIVE SUNDRIES.

Many druggists claim that the sale of sundries is the most profitable part of a druggist's business. Certainly all druggists carry them. Therefore, it is well worth everyone's while to read the special notices appearing weekly in The Era of attractive offerings of sundries by the well-known firm of Holton & Adams, 54 Beekman street, New York. Last week they quoted special prices on bath mitts; this week they offer tooth brushes. Their offer is good and a consideration of their notice in another part of this issue is useful. Retailers' sales of tooth brushes are increasing, for the general standard of care of the person is constantly rising and the population of our country is growing by leaps and bounds. Especially attractive, aside from price and quality, is the offer to stamp a purchasing druggist's name on the handle of the brushes.

APPRAISERS' DECISIONS.

Rubber Sponges.

The Board of General Appraisers has decided that rubber sponges are dutiable as manufactures of rubber at the rate of 30 per cent. ad valorem and not at 20 per cent. as sponges. The Alfred H. Smith Company imported the merchandise at New York, where it was assessed at 30 per cent. as a manufacture of rubber. The importers protested, claiming 20 per cent. only was the duty on the merchandise as sponges.

The Board stated its position as follows:

"An examination of the exhibit in the case shows it to be a porous substance, oval in form, about 4 inches in length and 1 1/2 inches thick, composed of india rubber colored a reddish brown. The cellular formations resembling those of a sponge, and render the articles excellent substitutes for bath sponges.

"At the hearing in the case, the only witness examined was the importer, who testified that the merchandise had been introduced into the United States subsequent to the passage of the tariff act of 1897, and that it was dealt in exclusively under the name of sponges, more specifically as 'kleanwell sponges.'

"Counsel for the importers, in support of the protests, directed the Board's attention to the dictionary meaning of the word 'sponges,' and contends that, inasmuch as the merchandise is dealt in as sponges and is used only in the bath, it is included in the provisions of paragraph 82. In this conclusion we do not concur. Turning to the lexicographers, we find the following definitions of sponge:

"Century:

"1. A fixed aquatic organism of a low order. * * * 3. Any spongelike substance: (a) In baking, dough before it is kneaded. * * * (b) A metal when obtained in a finely divided condition. * * * 4. A tool for cleaning a cannon. * * *

"Webster:

"1. Any one of numerous species of *spongiæ*, or *porifera*. 2. The elastic, fibrous skeletons of many species of horny *spongiæ*. The most valuable sponges are found in the Mediterranean and the Red Sea, and on the coasts of Florida and the West Indies. 4. Any spongelike substance." "Under the caption of 'bath sponge,' glove sponge is described as a variety of *commercial sponge*.

"From these numerous definitions it becomes reasonably manifest that Congress was dealing with merchandise usually imported, and not with mere figures of speech, and intended to include in paragraph 82 only *commercial sponges*, the clause providing for manufactures of sponges being indicative of this intent. Manufactures of dough (bread) would hardly fall under paragraph 82, nor would manufactures of metal in any shape. Within the trade understanding the word 'sponge' does not differ from the recog-

nized authentic definition of commercial sponge, which includes only a fixed aquatic organism of a low order.

"In G. A. 2923 (T. D. 158-23), the Board held that 'chamois sponges' made from clippings, or waste of chamois skins, sewed together on a string or twine, and having the same uses as sponges, were dutiable as a manufacture of leather. *Loofah*—a spongelike vegetable substance, also used in the bath—has been decided by the Board to be free of duty as a crude vegetable substance, G. A. 5559 (T. D. 24962), and not as sponges. These and scores of other articles, as well as the merchandise in dispute, would be included in the provisions of paragraph 82 unless its application is limited to the substance referred to in Webster as commercial sponges.

"The merchandise in question had not been imported up to the date of passage of the act of 1897; hence commercial designation has not been invoked by the importers in support of their contention, nor would such commercial designation render a manufacture of rubber dutiable as sponges, a product of nature. Gold-berg v. United States (61 Fed. Rep., 91).

"We find the merchandise to be a manufacture of India rubber, not sponges. The protest is overruled and the collector's decision affirmed.

Soluble Potato Starch.

The Board has decided in the case of the protest of the importers, Stein, Hirsch & Co., that "so-called soluble or thin boiling starch, consisting of potato starch somewhat modified by the action of acids or alkalis to increase its solubility, the starch granules not having been essentially altered by the treatment, and which is bought and sold as soluble starch, is dutiable as 'starch' under paragraph 285, tariff act of 1897, and not by similitude at the rate applicable to 'dextrine' under paragraph 286."

Testimony showed the following proximate composition as shown by analysis:

	Per cent.
Moisture	10.45
Dextrin, dextrose and starch, soluble in cold water	9.50
Starch forming an opalescent liquid with water at 70° C.	62.45
Ditto at 98° C.	11.05
Starch nonsoluble in water at 98° C.	6.15
Mineral residue40

This upheld the protest of the importers, who had claimed the merchandise dutiable as starch at 1½ cents per pound, rather than as dextrine at 2 cents per pound. The collector had held it dutiable as dextrine by similitude.

Some interesting facts were developed. It appears that potato starch is one of the best known starches, a decision of the Supreme Court stating that "wheat and corn and potato starches are the starches commonly used in the United States." The uses of soluble potato starch are not clearly brought out. One of the importers stated it was used in laundries. The appraiser reported that it is like dextrin in the commercial application. It is used largely in the filling and finishing of textiles and the manufacture of adhesives.

Alexander W. Martin, one of the pioneer druggists of Chelsea, Mass., is dead, after a long illness, at the age of sixty-four. He went to Chelsea as a young man.

SHOW WINDOWS AND FEATURES.

The Souvenir Idea A Good One With Candy.

HOW ONE DRUGGIST OVERCAME SMALL WINDOW SPACE.—CREPE PAPER AS A BACKGROUND—MORE POPULAR THAN EVER.—PERMANENT, PATENT DISPLAY—RODS UNDESIRABLE.—WESTERN AND SOUTHERN DISPLAYS.

The Japanese duck seems to be the best seller among the Easter novelties displayed by druggists all over Greater New York.

Arthur W. Porter, 1691 Broadway, Brooklyn, has an attractive window of a line of proprietary goods. The background is a dull red drapery. The base or ground is light green crepe paper. The goods are in white boxes with black lettering and are in broken piles in the form of a semi-circle. The concave space is filled in with the crude drugs that enter into these remedies. The meaning conveyed to the observer is that the goods are purely vegetable.

OVERCOMING SMALL SPACE.

Wilson's Pharmacy, Broadway and Wall street, not discouraged by the smallness of the show windows in that historic building, which are only 6x7x10 feet, has prepared an effective display. A sign, "12 for 25c.," attracts the eye of the pedestrian. This dominates a window featuring a brand of cigars. The floor of the window and the sides are covered with white crepe paper, upon which the U. S. shield and gilt stars appear frequently. In order to admit sufficient light into the store, the background remains undraped, but to offset this, cardboard boxes of cigars, of a buff color, are arranged obliquely at the sides and back in a way which gives the appearance of depth to the window. This is done by having three tiers each standing about six inches back from the one in front and also arranged obliquely with open spaces between the boxes. In the center of this boxed frame appears the large oval card sign, "Golden Eagle Cigars." Around the picture sign is a green mat draped with apple blossoms. On the top appears our national bird in gilt with outspread wings. A crepe tissue United States flag is attached to the sides of this picture sign in such a manner that the folds form a drapery. Beneath the sign is the large price card reading "12 for 25c."

A GEOMETRICAL DESIGN.

The Broadway window tells the story of a well known headache powder. The labels only are used, being pasted on the pane in geometrical designs. In the center the brown labels and glass form a checkerboard. Beneath this are checkered half pyramids. The attitude is formed by the sides of the window; the hypothesis starting from the center of the base of the window and leading up to the dome.

ONE IDEA.

F. K. James, Eighth avenue and Forty-fourth street, New York, features Oxygn preparations, particularly the balm. The usual and well-known sign with the beau-

tiful lady predominates, occupying the back center. On either side are smaller signs. The body of the window is filled with hundreds of the various preparations in original containers. Three circular paper signs on the glass of the window announce, "Balm, 50c. size, cut to 31c.; 25c. size cut to 16c.," and, lastly, "\$1.00 size cut to 60c." Two of the "beauty books" published by the remedy company mark the corners of the window. This one idea display, the various lines of which naturally lead the eye to the central sign with the lady, is marred by the introduction of a huge sign rising nearly the whole height of the window, proclaiming an expectorant, an "own make" of the store. Better far, one thing at a time.

F. W. Kinsman & Co., at the Eighth avenue and Thirty-ninth street store, have two bulk displays, one a malt extract and the other Mellin's Food and Horlick's Malted Milk. The only special feature is a series of flying buttresses in the first window, composed of the bottle wrappers or protectors used to prevent breakage in original shipment.

GOOD AND BAD POINTS.

Kneuper's City Hall Pharmacy, 264 Broadway, displays tooth brushes held in metal clips on parallel horizontal metal rods at regular intervals. There are five of the rods. The top three support brushes, the next one rubber sponges, and the last brushes again. On the floor in foreground are boxes of the brushes, rubber gloves and rubber sponges. This rod idea is good in that it utilizes the entire height of the window, but it destroys unity of display, especially when without a background and the heavy metal frame work which permanently fills the window to support these rods grieves the eye.

In the second Kneuper window is a line of "own make" perfumes in five rows corresponding to the same five metal bars. But here we see shelves and the effect is much better.

SOUVENIR PICTURES.

The Knickerbocker Drug Co., 648 Broadway, recently presented two effective windows featuring candy. The first stood out on a background of white cheese cloth which was carried up the side walls of the window in puffing, while two portieres of the same material were draped from the top. The floor was covered with champagne colored crepe de chine. Holding the center of the display was a woolen arch, rising about twelve feet, which was covered with white crepe paper. On this were fastened peanut brittle boxes in a continuous line. Six side wall glass shelves supported various kinds of candy in boxes, three shelves to a side. In the rear floor of the window, behind the arch was a row of paper roses of six different colors, and others were distributed throughout the foreground. These really were candy boxes of the familiar cotton type. The goods featured were chocolates and bonbons in pound and half-pound boxes.

The other window carried the same white cheese cloth background, portieres and side wall puffing. On the floor were sixteen round trays, holding chocolate chips and puffs, while two large cut glass punch bowls as flankers at the front, were heaped to overflowing with the same confectionery. The feature of the whole dis-

play was a card announcing a price of nineteen cents on half a pound of the chips and carrying a bonus of a handsome study of a Fisher or Christie girl's head, on a heavy cardboard sheet, with each half pound purchased. There were five types of beauty in the assortment of pictures to choose from. As might be expected, sales were heavy.

ST. LOUIS FEATURES.

Rabateau & Co., St. Charles street and North Broadway, St. Loui., are making a run on tooth paste. A window display offers Euthymol, Sheffield, Sanitol, Sozodont and others at fifteen cents the twenty-five cent tube, or two for a quarter. Tubler gloves were offered for sixty nine cents.

Johnson & Bro., Franklin avenue and North Broadway, St. Louis, offered last week, William Walke & Co.'s Witch Hazel Soap, the ten cents a bar kind, at forty cents the dozen. The three cakes to the box sort of Walke soaps were offered at fifteen cents or two boxes for twenty-five cents.

The Enderle stores, Chestnut and Sixth streets, and Market street and Broadway, made a week's leader of Propyl-lactic tooth brushes at nineteen cents, and pushed the sale of razor straps at bargain prices, by offering Colgate's bar soap at four cents and the tube soap at four teen cents.

"MYSTICO" LINIMENT.

The coupon given by the American Selling Company is enclosed in wrapper of each bottle. Every customer buying a bottle of Mystico Liniment will obtain a coupon, and that coupon should be received as 10 cents in trade at any drug store. The coupons are then accepted from the druggist by the American Selling Company as cash in part or full payment for any and all of its preparations. This plan should afford the druggist a very handsome additional profit, and at the same time please his customers greatly, bringing them back to trade again. Mystico Liniment coupon plan should give the druggist a profit far in excess to that on many goods on his shelves. When you get the coupons you can buy Mystico Liniment with them. Mystico Liniment is being extensively advertised throughout the United States.

Mystico Liniment is a 50c article, and sells for \$3.00 per doz. to the druggist; with the extra profit derived from the coupon it nets a profit of over 100 per cent.

A Bathing Luxury.

The pleasure of the morning bath may become a delightful luxury by the addition to the bowl or bath-tub, of a small quantity of Bathasweet, a preparation which softens and imparts a delicate and refreshing fragrance to the water. Bathasweet is a rapid seller and the manufacturers, Batcheller Importing Co., 343 Broadway, New York, are making to the retail druggists a special offer for April only, that should meet with a ready response, the purchaser of three dozen Bathasweet at \$2 a dozen, receiving a bonus of one dozen Bathasweet Rice Powder and one hundred samples of each, affording a net profit of 100 per cent.

This offer will be accepted through your jobber, the goods to be shipped April 29.

BUSINESS RECORD.

ALABAMA.
Birmingham.—Jas. Brown, 125th St. and Syvan Ave., new store.

ARIZONA.
Clifton.—Barrett & Beauchamp, succeed C. P. Dunn.

ARKANSAS.
Argenta Sta.—Robbins & Co., succeed Robbins-Moseley Drug Co.
Black Rock.—William & Smith, new firm.
Clifton.—John K. Hatchett, succeeds Pate & Hatchett.

Fort Smith.—J. P. Stuart, 400 Garrison Ave., new store.

Mulberry.—Cambell & Wigley, succeed Qusenbery & Conots.

CALIFORNIA.
Colton.—Mission Drug Store, Eighth St., new store.
Oroville.—J. E. Sangster, succeeds Mrs. L. McG. Bennett.

San Francisco.—Mrs. L. McG. Bennett, Devisadero and Page Sts., new store.

COLORADO.
Trinidad.—R. A. Greenfield, dead.

FLORIDA.
Puota Gorda.—W. A. Roberts, damaged by fire.

IDAHO.
Genesee.—J. H. Greaves & Son, new store.

ILLINOIS.
De Pue.—Thompson Bros., new store.

Hettick.—Oren Brandon, new store.

Kewanee.—N. S. Parsons, damaged by fire.

Williamsville.—H. Braun, succeeds Lloyd & Perce.

INDIANA.
Brazil.—West End Pharmacy, succeeds Burns & Shaffer.

Converse.—L. A. Schreck, new store.

English.—Harry Roberts, new store.

Fairland.—Hugh T. Graham, succeeds Ira B. Totten.

Farmland.—R. E. Innis, succeeds Fred. C. West.

Greensburg.—A. A. Magee, succeeds T. H. Alexander.

Munroe.—Shelby Ray, burned out.

Muncie.—D. P. Campbell & Bros., 420 S. Walnut St., damaged by fire.

INDIAN TERRITORY.
Whitefield.—J. D. Morgan, succeeds Hess & Morgan.

Wilburton.—Brown & Williams, succeed J. R. Williams of Harleyville, Ind. Ter'y.

IOWA.
Audubon.—J. L. Rippey & Co., succeeds J. E. Griffith & Co.

Boxholm.—Lundvall & Steen, new firm.

Fremont.—F. L. Stolte, succeeds John R. Dale & Co.

Marshalltown.—Mr. W. S. McBride of McBride & Will Drug Co., dead.

Missouri Valley.—Alex. Lutes, succeeds B. A. McKay.

Ottumwa.—A. L. Orr, dead.

Pacific Junction.—Kelly & Co., new firm.

Perry.—Fred. Jacobs, succeeds Wood & Co.

Princeton.—D. W. Hill, succeeds E. A. Clarke.

Shannon City.—W. D. Christy, damaged by fire.

Shannon City.—Ger. W. Logan, burned out.

Shellsburg.—Penrose & Bergen, succeed J. L. Welch.

KANSAS.
Leonardville.—Chas. Johnston, succeeds S. N. Thompson.

Washington.—Meyent & Smith, succeeds E. B. Fox Drug Co.

MARYLAND.
Brookville.—Henry Howard, new store.

MASSACHUSETTS.
(West) Quincy.—Geo. A. Berry & Co., new store.

Thorndike.—A. P. Adams, dead.

MICHIGAN.
Eik Rapids.—H. A. Mils, sold out, no successor.

MINNESOTA.
Duluth.—F. W. Palmer, succeeds D. C. & L. Carson.

MISSOURI.
Belle.—Belle Drug Co., succeeds C. S. Branson.

Backnet.—H. G. Roehkin, succeeds J. S. Wilson.

Eagleville.—E. Ping & Sons, succeed J. R. Whitsitt.

Everton.—L. A. Mason Drug Co., succeeds J. M. Cole.

Laredo.—W. S. Nichols, succeeds C. S. Thomas.

Princeton.—J. T. Snelling, succeeds W. H. Laws.

St. Louis.—Swift Drug Co., succeeds Fred. H. Swift, 2842 Olive St.

Vienna.—W. F. Pinnell, sold out to Vienna Drug Store.

Vienna Drug Store, succeeds Vienna Pharmacy.

MONTANA.

Joliet.—Dr. L. A. Gates, succeeds Dr. A. C. Wolf.

Kendall.—Kendall Drug Co., succeeds L. C. Wilson.

NEBRASKA.

Beaver City.—Horton & Axtell, succeed W. E. Horton.

Graf.—B. Somberg, succeeds Lintz Bros.

Memphis.—Memphis Drug Store, new store.

Nehalem.—J. T. Hill, burned out.

New Castle.—M. A. Davison, succeeds W. A. Chingan.

Omaha.—J. E. Busch, succeeds M. A. Dillon.

Seward.—Fallen & Murphy, damaged by fire.

Tilden.—Dr. Hugo Nelson, succeeds W. H. Stocker.

NEW YORK.

Black River.—W. A. Wright, succeeds P. V. Poor.

Frankfort.—Mrs. E. Steele, dead.

Brooklyn.—Chas. Goerrig, succeeds Frank J. Haynes, 1432 Broadway.

Brooklyn.—Frank J. Haynes, succeeds Chas. Hays, 334 Quincey St.

Troy.—Jas. T. O'Sullivan, 606 Fifth Ave., from 777 Burden Ave.

Whitesboro.—H. R. Petrie, succeeds Jas. H. Ewer.

NORTH CAROLINA.

Duke.—E. R. Thomas Drug Co., succeeds E. R. Thomas.

Wilmington.—Percy Hall, Fourth and Harnett, new store.

OHIO.

Elyria.—H. J. Eady Drug Store, succeeds H. J. Eady.

Haviland.—Felix Smith, new store.

New Philadelphia.—Edw. Sehl, succeeds J. L. Wallace.

OKLAHOMA.

Earlsboro.—G. F. Day, dead.

OREGON.

Roseburg.—Red Cross Pharmacy, new firm.

PENNSYLVANIA.

Girardville.—C. T. Trout, of Trout Bros., dead.

Lancaster.—Snyder Drug Co., succeed H. N. Snyder, 146 N. Queen St.

Norwood.—Manning & Edgeworth, damaged by fire.

Philadelphia.—W. H. Sauer, succeeds P. C. McLaughlin & Co., 1724 Poplar St.

Tioga.—Wells' Modern Drug Store, succeeds Phil Tutler.

Watsonstown.—J. J. Oram Mille, succeeds W. A. Bright.

RHODE ISLAND.

Thornton.—Almond G. Smith, damaged by fire.

SOUTH DAKOTA.

Alexandria.—John Momsen, succeeds J. L. Layton.

Castlewood.—W. H. Bennett, succeeds Richards & Bennett.

VALLEY SPRINGS.

Barghardt & Texas, succeed P. L. Skillman & Son.

TEXAS.

Leonard.—Umberger & Edwards, succeed C. R. Umberger.

Saltwater.—Meyton Swift & Co., succeed Merton Swift.

Savoy.—P. M. Inzer & Son, succeed P. M. Inzer.

UTAH.

American Fork.—American Fork Drug Co., succeeds Thos. E. Steel.

VERMONT.

Paxlet.—Thos. Weeks, succeeds Nelson M. Jones.

VIRGINIA.

Richmond.—Blanks Prescription Co., succeeds Eaton Pharmacy, Twenty-eighth and N. Sts.

WASHINGTON.

Gorau.—Fred. M. Jenks, new store.

Summer.—Geo. Michael, succeeds Hodge & Michael.

PATENTS, TRADE MARKS, ETC

PATENTS.

Issued March 28, 1905.

- 785,722—Herbert H. Dunn, Dayton, Ohio. Cork extractor.
- 785,742—Louis P. Lipps, Cleveland, Ohio. Graduated measure.
- 785,791—Anson G. Betts, Troy, N. Y. Process of making lead dithionate.
- 785,946—Peter P. Gorski, Chicago, Ill., assignor of one-half to John Cedarstrom, Chicago, Ill. Device for filling valved receptacles with charged liquids.
- 785,951—Nellie R. Ihull, Asheville, N. C. Powder-puff.
- 785,964—Florian J. Martin, Milwaukee, Wis. Numbering machine.
- 786,004—Max Cohn, Berlin, Germany. Method of preparing dressings for bandages.
- 786,112—Milton D. Good, Kansas City, Mo. Inhaler.
- 786,113—Charles Grohman, Careret, N. J. Apparatus for cooling liquids.
- 786,134—Robert J. Modespacher, Hoboken, N. J. Bottle.

TRADE MARKS.

Registered March 28, 1905.

- 44,346—Certain named preparations for the teeth. Dr. J. A. Deane Company, Kingston, N. Y. The word-symbol "Kremo."
- 44,347—Remedies for certain named diseases. Dr. T. W. Wood Medicine Company, Des Moines, Iowa. The name "Wood's" associated with the portrait of T. W. Wood, deceased.
- 44,348—Certain named internal remedies. Fritz Jacobson, Brooklyn, N. Y. The word "Salusol."
- 44,349—Soluble sulphur and sulphur in liquid form for certain named purposes. Sol Sul Chemical Co., New York, N. Y. A diamond-shaped figure bearing the compound word "Sol-Sul,"

which is surrounded by double border lines of diamond form. 44,351—Certain named extracts for tanning and dyeing. Clinton A. Spencer, Boston, Mass. The word "Quermos."

LABELS.

Registered March 28, 1905.

- 11,990—Title: "Genii Oil." (For medicinal oil.) Harry W. Heimer, Chicago, Ill.
- 11,991—Title: "American Hair Grower." (For hair grower.) J. H. Magee, Chicago, Ill.
- 11,992—Title: "Sealpine, Nature's Own Cure." (For medicine.) Burton H. Warren, Chicago, Ill.

- 11,994—Title: "Japanese Rheumatism Cure, Kapsang." (For medicinal preparations.) Edward F. Pangburn, Battle Creek, Mich.
- 11,995—Title: "German Hog Remedy." (For hog remedies.) Edwin H. Allison and Hugh L. Marshall, Stronghurst, Ill.

R. S. & CO.'S REMOVAL.

Robert Stevenson & Co., the well-known wholesale druggists of Chicago, will move on May 1 to more commodious quarters at 42-44 Lake street, near State, that city, in the building formerly occupied by Burley & Tyrrell. Constantly increasing business and need of larger warehouse facilities have made this change imperative. The excellent reputation and straightforward business methods of this house are well known to all druggists.

CHANGE IN DRUG FIRM.

Terre Haute, Ind., March 18.—The partnership existing in the Buntin Drug Company, between W. C. Buntin and S. S. Anderson has been dissolved. The interest in the company heretofore held by Anderson will be assumed by John L. Butsch.

A SIGNIFICANT CHOICE.

On page 9 of this issue of The Era is a picture of Paragon Park, the great amusement enterprise of New England, located on Nantucket Beach near Boston.

The 20th Century Sanitary Soda Fountain again takes the honors and is the choice against all competitors for exclusive use in the park. Five 20th Century Sanitary Fountains will dispense absolutely pure soda water at convenient points in the park.

The exclusive choice of the 20th Century Sanitary for the World's Fair at St. Louis is still fresh in mind. In summing up the possibilities of a soda fountain enterprise, large or small, the vital and all important question is, "Will it make money?"

The L. A. Becker Company, the manufacturers of the 20th Century Sanitary point to such evidence as this order for Paragon Park, as the most convincing testimony that could be desired. They say that if this is not sufficient they will take pleasure in showing actual results as high as 300 per cent. increase of business, in proof of the claim that "the 20th Century is the fountain that makes the money."

Their immense new factory at Chicago gives the L. A. Becker Company unequalled facilities for filling orders at short notice. Write to the general office and factory, Halsted St., Chicago, or to nearest branch office, as follows: New York, 27 E. Twenty-second street; Philadelphia, 504 Arch street; Denver, Thirtieth and Lawrence streets; Boston, 34 Portland street; Seattle, 207 Third avenue; South Los Angeles, 372 South Los Angeles street; Atlanta, 82 Marietta street; Baltimore, 19 North Liberty street.

In a recent case the Board of General Appraisers decided that the shamrock is a species of clover and that shamrock seed should be classed as clover seed rather than wood sorrel.

MARKET REPORT

ROUTINE BUSINESS.

A Steady and Featureless Situation.

SANTONINE, ACETANILID AND BAYBERRY WAX ADVANCE; THE FIRST AND LAST SHARPLY.—DISAPPOINTING CONDITIONS IN QUININE AND OPIUM.—FEW DECLINES THIS WEEK.—WOOD ALCOHOL AGAIN HIGHER.

New York, April 3.—Although the volume of business transacted is not large and this disappointing lack of demand naturally works toward the lowering of prices, the general market tone remains steady. Indeed, a glance at the week's price fluctuations shows more advances than declines. Conditions are routine. No feature of interest has developed since last week and no indications of any radical changes in the near future can be discovered. The two most important movements for the week are advances in santonine, acetanilid and bayberry wax.

OPIUM.—The market remains unaltered in any particular. Very little attention is given to it by speculators and large operators among first hands. The demand on jobbers holds to about the same proportions, but is strictly routine and for immediate requirements. New crop statistics are bullish, but stocks are large. Further competition in powdered has developed. Jobbers quote the unchanged prices of \$3.15@3.30 for nine per cent., and \$3.25@3.40 for eleven per cent.; powdered, \$1.00@1.25 for thirteen per cent., and \$4.75@5.00 for sixteen per cent.

MORPHINE SULPHATE.—This week finds the same conditions as last. A moderate demand keeps up, but nothing new of interest has occurred. Jobbing quotations remain \$2.60@2.70 for eighths, in ounce boxes, \$2.55@2.65 in 2½-oz. boxes, \$2.35@2.45 in ounce vials, and \$2.30@2.40 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—Hopes of any advance have been dampened by the unfavorable results of the Amsterdam bark sale where the lower unit of 6.30 Dutch cents was averaged in prices. This compared with 6.55 at the February sale and 6.15 in January. However, nearly all the bark offered was purchased. The next Amsterdam sale will occur on May 4, but there will be an auction in London on April 18. Shipments of bark from Java for March were 1,000,000 against 500,000 lbs. last year and for the first three months of this year they amounted to 2,497,000 lbs. against 2,423,000 in the same period of 1904. The jobbing market remains steady, quiet and unchanged at 23@23½c. for bulk in 100-oz. tins, 23½@24c. in 50-oz. tins, 24@24½c. in 25-oz. tins, 25@25½c. in 15 or 10-oz. tins, and 30@31½c. in ounce vials, according to brand and amount.

ACETANILID.—Manufacturers have advanced prices one cent, because of the increased cost of raw material. Jobbers

have accordingly raised their figures to 29@36c. per pound.

SANTONINE.—An advance of 20 cents per pound has been announced by manufacturers. It is justified as caused by the continued scarcity of raw material, but as the article is controlled by a Russian monopoly, the actual cause may be of a wholly different character, and there is no certainty that prices may not be forced much higher. Local jobbers have raised prices to the following: Whole, \$9.50@9.75 per pound, and 70@75c. per ounce; powdered, \$10.00@10.25 per pound, and 75@80c. per ounce.

ACETIC ACID.—Stocks are very moderate and prices have again risen. Jobbers now quote the following: No. 8, 30", carboys, 6½@7c. per pound and 10@11c. for less; 36", U. S. P., carboys, 7@8c. per pound and 12@16c. for less.

WOOD ALCOHOL.—As is usual at this season, the demand is good and in sympathy with the advance recently inaugurated by manufacturers, jobbers, have raised quotations to 76@77c. per gallon in barrels and 88c.@\$1.00 per gallon in smaller quantities.

BAYBERRY WAX.—The scarcity of spot stocks is acute. One holder controls the bulk of supplies tenaciously. Moreover, there is a lack of offerings from producing markets. Prices have been forced to a fictitious level, and to this the urgent needs of a large manufacturing house contributed, as supplies had to be secured. Production was curtailed in the growing regions by an early winter. In view of all this, jobbers have advanced prices to 65@75c. per pound.

JAPAN WAX.—A slight decline has occurred in this commodity and new jobbing prices are 17@19c. per pound.

BERBERIS AQUILIFORMIS.—As previously noted in these reports, prices have been rising for some time, because of a scarcity of supplies. New jobbing quotations are 31@36c. per pound.

CUMIN SEED.—As a result of the unsettled political conditions in Morocco, prices here have risen, jobbers now asking 15@20c. for the whole, and 18@22c. for powdered, per pound.

FLAXSEED.—Owing to the smallness of supplies as compared with normal, and a fair consuming demand, jobbing prices have been raised to the following: Clean, barrels, \$7.25@7.50 each, and less 5@6c. per pound; ground, barrels, 3@4c. per pound, and less, 5@6c.

GOLDEN SEAL ROOT.—As predicted, prices continue to advance, because of the shortage of the production and a good demand. New, higher jobbing quotations are \$2.00@2.25 per pound for the whole, and \$2.10@2.25 for the powdered.

IRON PREPARATIONS.—In sympathy with the recent rise established by manufacturers, because of higher cost of raw materials, jobbers have readjusted some prices to a higher level. Iron citrate soluble is now 55@60c., iron phosphate scales, 55@60c., and iron pyrophosphate also 55@60c., all per pound.

LINSEED OIL.—In sympathy with recent advances in the wholesale market for flaxseed, linseed oil has been raised by jobbers to the following level: Raw, in barrels, 47@48c. per gallon and 55@60c. for less; boiled, in barrels, 49@50c. per gallon and 60@65c. for less, per gallon.

PINK ROOT.—The advance to the wholesale market reported last week has caused a similar movement in jobbing prices, which now are 45@50c. per pound for the whole, and 50@55c. for the powdered, per pound.

POTASSIUM CITRATE.—The strength in all the citrates induces another increase in the price of this article and jobbers are now asking 48@55c. per pound.

SAFRON AMERICAN.—The close control of the small visible supply continues unabated. Besides, the prevalence of measles increases the demand. Higher jobbing quotations are \$1.65@1.75 for the whole and \$1.75@1.80 for powdered, per pound.

SILVER NITRATE.—The recent declines in the metal now cause a lowering of jobbing values to 43@46c. per ounce for the crystals and 45@48c. for fused, per ounce.

SODIUM CITRATE.—Another citrate up because of recent advances by manufacturers. Jobbers are now asking 49@54c. per pound.

SPRITS TURPENTINE.—The unchecked upward movement in wholesale prices has forced up jobbing prices. Unusually heavy shipments from producing centers have reduced stocks to the lowest point during the present season. Moreover, there is a speculative bull clique in control of the Savannah market. New jobbing quotations are 61¼@62c. per gallon, in barrels, and 70@75c. for less, per gallon.

SUNFLOWER SEED.—Some scarcity has prevailed at first hands for some time. Jobbers have now advanced prices to 8@10c. per pound.

OREGON BALSAM.—A further weakening of values accompanies a falling off in demand. Lower jobbing prices are \$1.35@1.60 per pound. Canada is unchanged.

JALAP ROOT.—The new crop is now available at wholesale, but as jobbers have none yet, their prices remain unchanged at 17@22c. per pound.

SASSAPARA BARK.—Select bark is exceedingly scarce, but plenty of very ordinary grades are obtainable.

COCA LEAVES, TRUXILLO.—Primary markets are quite bare of supplies, but no change has occurred in jobbing prices.

CITRIC ACID.—An upward tendency is evident and an active demand continues. Jobbing quotations, however, remain unchanged at 38@45c. per pound, for crystals.

OIL WINTERGREEN.—Some slight easiness has developed at wholesale for the natural, but jobbing prices still are \$2.35@2.45 per pound.

MERCURY.—Supplies are larger and a decline of one cent at wholesale has occurred. Jobbers still quote 60@65c. per pound.

OIL PETIT GRAIN.—Prices at wholesale have eased, but the jobbing market is unaltered.

MENTHOL.—At the London drug auction, March 16, thirty-five cases sold at a decline of 10d. per pound, compared with similar prices a month before. No further change here. Jobbers quote \$2.75@3.35 per pound.

NITRALS.—Blue Aleppo are somewhat easier at first hands. Jobbing price still 38@42c. per pound.

William Lowrie, Pacific Coast Manager Dearborn Drug and Chemical Works, was killed in a railroad wreck at Santa Barbara, Cal.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, APRIL 13, 1905.

Number 15.

Entered at the New York Post Office as
Second Class Matter.

Established 1887

THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

SUBSCRIPTION RATES:

U. S., Canada and Mexico, \$3 per annum
Foreign Countries in Postal Union, \$4 per annum

The Price List Editions of the Era are
issued in the Spring and Fall of each year and one
copy is sent free to each regular yearly subscriber.

Era Binders—Subscribers are advised to
save their Eras, together with the complete INDEX
which is supplied with each volume (6 months).
We supply a substantial Binder at 75 cents
each, postpaid.

EDITORIAL — COMMENT

Less Cocaine Consumed.

Reports which come from different parts of the country that the consumption of cocaine has fallen off to a marked extent during the past year show that much may be done to control the misuse of this alkaloid. There are druggists who still try to excuse their own sales of the drug with the argument that if the victim does not secure a supply in one store he is bound to get it elsewhere. The statement that in the city of Baltimore the quantity sold has fallen off fully 50 per cent. proves that this is not by any means invariably the case.

An intelligent co-operation on the part of the community which stands for morals and the police authorities can accomplish much to control the very great evil. And pharmacists should be the first to propose restrictive measures, because alkaloidal debauchery carries with it an odium which will inevitably descend upon the drug stores if the knowledge that they pander to a vice vastly more degrading than drunkenness is allowed to go abroad. Members of the trade who oppose all anti-narcotic legislation do so at the peril of the good name, not only of themselves, but also of their calling.

Lower Telephone Tolls.

The reduction of the telephone rates after only a mild campaign of agitation should encourage the druggists who act as agents for the company to begin a movement to obtain better terms for themselves.

It is remarkable how sensitive these corporations are to a little public prodding. At the beginning of the campaign just closed the telephone people declared dolefully that expenses were so high and dividends so low that a reduction in rates would be ruinous. Yet in response to a bill merely proposing to investigate all these things, the tolls come tumbling down of their own accord. Whether this prompt action will result in call-

ing off the investigation remains to be seen. The apparent eagerness to dodge the inquiry raises a suspicion that there is something worth investigating.

Delay is Dangerous.

The action of the Executive Board of the Metropolitan Association of Retail Druggists in deciding not to fix a date for putting the proprietary medicine contracts into effect was not unexpected, in view of the prevailing sentiment of the trade in this city. President Anderson, we believe, expressed this sentiment very accurately when he declared that for some time, at least, greater effort should be devoted toward getting signatures to the various contracts than to securing more members in the association.

There is no doubt that the Executive Board has acted wisely in not being in too great haste. At the same time, the men who are at the head of the new organization should remember that prolonged delay is dangerous. It will be up to the proprietors to enforce the contracts just as soon as the signal is given; and the quicker this is done the better.

Druggists within a radius of fifty miles around New York are waiting for contract prices to be inaugurated in this city. Let us not have too much delay. Place the matter as soon as possible squarely before the proprietors and give them a chance to show their mettle.

The Pennsylvania Prerequisite Law.

Pennsylvania is, after all, the second State in the Union to enact a law requiring candidates for registration in pharmacy to produce evidence of graduation from recognized pharmaceutical colleges. For some time it seemed likely that the State, which contains within its borders the Philadelphia C. P., would be outstripped by Minnesota in the race for prerequisite legislation, but the signature of Governor Pennypacker, affixed more than a week ago, secures to Pennsylvania that honor.

Before affixing his signature, Governor Pennypacker expressed an opinion which may be used with advantage to influence other persons occupying

high places. He said that he considered the prerequisite bill as one of the best pieces of legislation brought before him in years.

Blazing a Trail.

An event of decided novelty was the announcement last week that a firm of New York retail druggists will open two branch departments in the Waldorf-Astoria Hotel. It is a new departure, for, although several hotels rent out corner street stores to pharmacies, no other druggists are actually incorporated in any local hostelry. If this experiment proves profitable both to the druggists and the hotel management, it would be but natural to see other pharmacies in others of our large inns.

There seems but little possibility of lack of success to the enterprising pioneers, for it is believed that there is a real need of a prescription department in an establishment which entertains as many guests daily as the Waldorf. Many of these are strangers to the city, who dislike personally seeking a pharmacy when in need, and the use of messengers of the hotel to secure the filling of a doctor's prescription entails not only a scheduled fee to the hotel management, but a tip to the messenger himself, often doubling the original price of a prescription.

On the other hand, the hotel is benefited by this augmentation of its complexity and completeness of service to its patrons.

Undoubtedly it was the consideration of these facts which favored the entrance of pharmacy into the Waldorf. As for the druggists, the move means a monopoly of a large trade, not only in prescriptions, but also in profitable toilet sundries, a department for the sale of which will be inaugurated. It is an opportunity for a national reputation.

The Decline in Quinine.

It has been generally conceded that for some time past the demand on manufacturers of quinine was small. It was also known that the margin of profit under such conditions was not large. It was, therefore, something of a surprise when, on April 3, all the leading domestic producers announced a decline of two cents on quinine sulphate, with a corresponding cut in the salts. Foreign markets are similarly lower.

The reduction was not generally expected, for while demand was slack, the market tone was steady, and five foreign bark auctions with varying units, which, on the whole, averaged lower, had passed without a slump. The cumulative effect of these was,

however, enhanced recently by the announcement that the March bark shipments from Java were unusually heavy, being 1,450,000 pounds. It is very probable that this was the last straw which induced manufacturers to declare a price reduction in quinine sulphate.

While consumers will undoubtedly be stimulated to buy more freely for a time, small hopes can be entertained for a healthy absorption of present sizable stocks until competition grows less keen and primary statistics more bullish. But the recognition of conditions as indicated by the cut is a proof of wisdom on the part of manufacturers. A dogged holding to an arbitrary price level by artificial means frequently results eventually in a break more severe than circumstances really require.

Why Not Examine Legislators?

An Ohio man once told us that one hundred and fifty legislators at \$1,600 a year would do better work than three hundred at \$800; in other words, one could not get good things at cut rates. Judging by some of the legislation that *The Era* has been recording this year, either the legislators' salaries should be raised, or candidates for seats in the various legislatures should be subjected to a competitive examination. An examination for pharmacists who are required to know the laws and none for those who make the laws looks like an anomaly. If prospective "Honorable" were compelled to answer such questions as are asked of those who wish to become registered pharmacists, there might be something like a reform in legislation.

A Curious Measure.

A bill which is manifestly absurd and still shows the direction in which the wind blows upon proprietary remedies, is claiming the attention of Illinois druggists. It provides that every druggist must analyze the contents of each package or bottle of patent or proprietary medicine before offering it for sale, and must furnish each purchaser with a minute analysis of the ingredients sold.

Needless to say, the bill will never become a law. The interests most concerned will see to that. Besides, the law cannot demand impossibilities. Few druggists are sufficiently expert in chemical analysis to test all their pharmacopoeial drugs; how, then, can every salesman of proprietary remedies make an exhaustive investigation of mixtures which in many cases would defeat the most refined efforts of analytical science. American proprietary remedies are largely made up

of little-known field plants which contain neither alkaloids nor glucosides for identification, and a host of gums, resins and extractive matters which would tax the ingenuity of an expert for months.

Cosmopolitanism of Science.

News dispatches of the last few days convey the intelligence that Professor Wilhelm Ostwald, the eminent physical chemist of Leipzig, will again this year take part in the work of the summer school of the University of California. It is also stated that Harvard University has invited the distinguished chemist to serve as lecturer during the first half of the coming academic year under the arrangement for an exchange of professors agreed upon by Harvard University and the German Government.

The performance of these duties by Professor Ostwald is certainly a triumph of cosmopolitanism, and in these days the cosmopolitan spirit in regard to science has become a feature of every thoughtful mind. There are those who would look upon this tendency as a cause for lamentation, but have we as Americans any reason to tremble for the integrity and intellectual entity of our country? We believe not. As they have done in the past, American scientists will continue to assimilate and turn to account the best knowledge of other lands, and will amplify without destroying that individuality which has characterized the development of our national existence. It has been said that science knows no barriers of race or language, but all the same, men for long years to come will remain citizens of a country in the first place, and be cosmopolites in the second. American pharmacy, as a branch of applied science, will never lose its individuality by contact with foreign teachers, nor will its followers blindly seek to imitate them; on the other hand, they will continue to make use of the best teachings of the masters of whatever nationality or language they may speak.

Here is a job for those who are abnormally fond of reading. The night telephone operator at Bellevue Hospital is said to have read 5,085 books of fiction, to say nothing of magazines and papers during the thirty-five years that he has spent at his post. He says, moreover, that he might have read more if he had not run out of material. Telephone calls after midnight are rare, which leaves him seven hours of practically uninterrupted reading.

It doesn't cost anything to say "Good morning" to your clerks, even if the weather is likely to keep trade away from your store.

Proprietary Medicines.

If Edward Bok were experienced in the prescribing or dispensing of medicines he never would have written that article on "Why Patent Medicines Are Dangerous."

He builds his story on an ethical platform which does not exist in practice; he attributes abuses to the use of these products which are largely imaginary; he accuses the manufacturers of motives which are ridiculously far from the truth, and, taken as a whole, the article shows that his knowledge of the subject is based upon theory and imagination, and not upon any real knowledge as to the conditions or practices which prevail in the proprietary medicine business.

The name "patent medicine" had its origin when it was the custom to patent these compounds. To-day, patented articles are mostly confined to such chemical compounds as phenacetine and the more correct term "proprietary medicines" is coming into more general use in the trade. Probably four-fifths, if not more, of the medicine business of to-day is proprietary. Competition is largely responsible for this, as the manufacturer is compelled to adopt this form for marketing his preparation in order to protect his investment and trade. The competition on standard, open market drugs and medicines is fully as sharp as in any other line of business. Another reason why medicines seek protection in the trade mark instead of the patent is because of the physician's prejudice against any preparation which is patented.

A recent examination of the prescription files in two drug stores showed, in one case, some sixty per cent, and the other case that nearly eighty per cent. of the prescriptions called for proprietary preparations. In fact, so universal has the custom become of putting new preparations into the proprietary form, that the physician finds it impossible to take advantage of the latest developments in remedial agents without prescribing these proprietary goods. This custom, however, is not without its advantages. The physician knows who is responsible for the quality of the goods, and, like merchandise in other lines, one has more confidence in their quality when the manufacturer is willing to print his name on the package.

But it is not with these "ethical proprietaries," intended for physicians, that Mr. Bok deals. He refers more particularly to those remedies advertised direct to the laity and popularly known as "patent" medicines. He badly mixes the quack doctor with the medicine manufacturer, and ethics

with business, but his evident desire is to condemn all patent medicines as dangerous to health.

It is a fact, easily demonstrated, that the patent medicine business, as a whole, is in a healthier and better condition to-day than ever before, so far as the protection to the consumers is concerned. By far the greatest number of these preparations are put out by the retail druggists over their own labels, and made from formulas which they supply or which are known to them. Out of the 43,000 druggists in the United States, surely three-fourths of them, if not more, have from one to a dozen or more of their so-called "own preparations."

As to the big selling patents, or those which are largely advertised to the public and have a general sale, they are, with few exceptions, put out by large corporations that for strictly business reasons dare not make any but meritorious goods.

Now and then a purely fake remedy or compound comes to the front with its spread-eagle advertisements, but they are soon found out and their careers are short lived. Then, too, there is the quack doctor with his wise ways and big charges, always humbugging the people, but the legitimate, long-lived, standard patent medicines should not be confounded with either of these. It's the rule with these latter to use the best of materials and the latest improved machinery and processes for making their preparations. They cannot afford to do otherwise. They know that their goods must have merit and that they must be uniform in quality and appearance. They have too much at stake to even risk a change in color, or taste, or smell.

With these large houses the making of patent medicines is strictly a business and not a profession. They supply ready-made medicines as your shoe manufacturer does shoes or your clothing man clothes. The people are not running to the doctor for every little ache and pain. Self-medication always was and always will be a matter of personal privilege, and these business men are supplying the goods. They work on the imagination of their customers in their advertisements the same as does the department store manager, the shoe manufacturer or any other tradesman. The physician may not like it any more than the custom tailor wants the people to buy ready-made clothing, but, nevertheless, it will continue, and with the increasing knowledge of the laity about medicines and medical topics, self-medication will probably increase proportionately.

All this talk and nonsense about the

dangers of patent medicines is amusing to those who know. Not one patent medicine in a thousand is dangerous to health. Here and there we find some potent drug in dangerous proportions, but the sensible manufacturer starts out with a rule that his remedy shall not be capable of doing harm, even if it does no good. He realizes the danger to his business and he takes no such chances. A novice may occasionally be found who takes such risks, but his race is soon run.

Those unfortunate creatures, too well known to druggists, who are addicted to the morphine, opium, cocaine or chloral habits, do not acquire these habits from the use of patent medicines. Ninety-nine out of every hundred get their start through the advice of a physician, who, no doubt, feels at the time that he is doing his duty, but often realizes when too late that the curse is upon them. Few people know how many physicians themselves succumb to the influence of these drugs. If statistics could be published some of our law-makers would see the necessity for a law to protect the doctors against their own prescriptions.

The patent medicine man is not without his faults, but he is not the black-hearted villain that some people try to picture him. When he is successful you will generally find him a level-headed business man, a good reader of human nature, and willing to take a chance. He believes in the merit of his goods, and has untold testimonials from those who have benefited from their use. He takes conditions and human nature as he finds them. He knows that of all the ills of humanity, real and imaginary, that the doctor is asked to prescribe but for a few. That every adult person feels more or less competent to prescribe for his minor ailments, and that every mother insists on dosing her children to scare away disease.

He has a good formula or employs a competent chemist to prepare one, and then starts out in a small way to see how it works. If successful he pushes the business according to the limits of his means and his ability. If he had any doubts as to the efficacy of his remedy, that is soon removed by the testimonials he receives, and he soon begins to realize that he is more or less of a public benefactor. To accuse him of wilfully trying to injure people or of getting them into debased habits from which they cannot escape, is as untrue as it is unjust.

Any reputable publication which tries to make capital out of such erroneous accusations is either woefully ignorant of the real conditions, or is trying to create a sensation by work-

In front of the stump place some plaster of paris on a paper, with an Easter chick on it. Above have a sign reading: "Never scratched yet. This tooth powder doesn't scratch." Toilet articles should be spread around on the bottom of window. This will prove to be an attractive window display. Yours respectfully,

GEORGE H. WILSON.

THE AIM OF THE A. PH. A.

Andrew J. Eckstein, New Ulm, Minn., of the General Committee on Membership, sends to the Letter Box the following communication, a copy of which he is sending to those he thinks should be interested in the American Pharmaceutical Association:

The Ethical Reason.

"If you can interest a pharmacist to join the American Pharmaceutical Association on ethical grounds, he is much more likely to stick to the association than though he were won by an appeal to his commercial interests."

A fellow pharmacist in an eastern city wrote these words to me and they have suggested a new line of thought and action; a new set of arguments to present to the druggist in behalf of the A. Ph. A.

I am going to lay aside the dollar-part entirely, for the time being. I am not going to let the coin of the realm enter into our discussion. This, perhaps, is a difficult matter to do, because we have fallen into a rut that permits of no reason, no logic, that does not begin with the graceful curves of the dollar sign.

Pharmacy is just as much a "calling" as is the ministry. We have as our basic principle the good of man. We aim toward parity, toward honesty, toward progress. We seek to correct evils regarding drugs and the manner in which they are dispensed. We work sometimes into the night over a problem involving not our selfish interests, but something broader and better—something that concerns the entire human race.

So far as I am concerned I could shut myself off from every other pharmacist on earth and still make money. I could crawl so far back into my shell that no one could find me except the man who came to settle a bill. I might refuse to contribute one solitary penny toward the "cause." I could exist. I could have a larger bank account than I might otherwise have. But—and right at that knotty "but"—I find the stumbling block.

To whom am I indebted for the drugs I sell? Who found out for what they were good? Who told me how to read the queer little signs which signify or indicate that some dying man has a hope in the drugs I dispense? Who taught me how to use care and judgment in the preparation of some remedy that may keep a mother's infant from the grave?

Do I owe nothing to society? Do I owe nothing to that branch of human progress that we call "pharmacy"? "Am I my brother's keeper?" cried Cain, and through the silence of the night a still, small voice answered, "Yes."

That voice speaks to everyone of us. Pharmacists have a mission. But do they always heed that voice? Do they always pay attention to that "ethical" calling.

I am indebted to someone, some Supreme Cause for life. I am indebted to society

for the condition of my life. Had my forebears seen nothing ethical to live for I might to-day be a cave-man with low brow; with no knowledge of civilization, with only a lurking desire to kill and devastate.

But my ancestors, our ancestors, recognized this obligation that bound them to each other, and out of chaos came order; out of darkness came light; out of confusion came method.

As I compound the drugs which, if combined in right proportions, make medicines for the cure of human ills, there comes before me a picture, and it stays with me until my work is accomplished. It is the picture of a patient old man bending over his tubes and bottles in his laboratory. The light of his night lamp flickers and I can see that the hours are far advanced. I watch this old man with his high brow, his purposeful eye, struggling on—for an ethical purpose. He is solving a problem that will assist suffering humanity for ages to come—that will aid in the solution of problems by far too complex to forecast at present.

That picture tells me that I am living not for myself alone; but for a cause.

Had the soldiers of the colonies seen nothing ethical to fight for, we would still be a colony. But they saw; they understood; they acted. It is not enough that we admit a principle; we must investigate and act—we must live it.

In pharmacy, nothing represents the ethical principle more fully than the American Pharmaceutical Association.

There is a reason for every pharmacist in this country to belong to it. That reason does not have the metallic jingle of money. It is simple, beyond dispute, convincing, complete. It is the ethical reason that binds us together for a purpose.

We owe a debt, an ethical debt, and the one way in which we can pay it is to join forces with our brother pharmacists in the ceaseless cause; the eternal progress that admits of no perfection, but continued endeavor. Respectfully submitted,

ANDREW J. ECKSTEIN.

To Prevent Poisoning by Mercury Vapor.

N. Jarugi (Gazetta) has devised an inhaler which will prevent the vapor and particles of mercury from passing into the lungs. The device is to be worn over the nose and mouth of those employed in working with mercury. The air which is inhaled is made to pass through a mass of finely divided aluminum. The power of aluminum to absorb mercury, even when highly diluted with air, is so great that in its passage every trace of the metal is absorbed, the action being so complete that the heavy vapor evolved by heating mercuric chloride may be breathed with impunity.

Linim.

Linim is not the active principle of linum catharticum, according to the investigations of J. Stuart Hills and Prof. Wynne (Pharm. Journ.). The authors have isolated that body and found that it is not the active principle of the plant, but a decomposition product of a glucoside, which is the real active principle.

THEORY AND PRACTICE

Hydrogen Peroxide in Ordinary Combustion.

In an address before the London Chemical Society, A. G. Solomon stated incidentally that H_2O_2 is an intermediate product of combustion. The author gave a brief historical sketch of the revolution which the conception of combustion has undergone during the last few decades, more particularly since the research of Dixou, who in 1884 proved the incom-bustibility of carbon monoxide and of Brereton Baker, who showed that hydrogen, even when wet, will not burn in oxygen, if every trace of electrolyte is excluded. Water is only formed as a result of an electrolytic change. An electrolyte must be present and in all ordinary experiments this is supplied in the form of traces of acid impurity from the reagents or of alkaline salt of the vessel used.

Toxicity of Adrenalin.

Lesage (Soc. Biol.) gives the results of a series of experiments with different doses of adrenalin in intravenous injections. In the dog the fatal dose when administered in this way lies between .0001 and .0002 gram per kilogram. The cat is more resistant to the action of the drug than the dog, the rabbit or the guinea pig. The fatal dose varies from .005 to .00087 gram per kilogram. In the dog anesthesia has no influence upon the progress of the poisoning, while in the cat anesthesia aids in rendering the body accustomed to the action of adrenalin. Death does not occur in the same way in the two animals; the dog apparently suffers a cessation of the heart beat, while the cat succumbs by reason of failure of respiration.

Validol.

Validol or valerianate and menthol is the menthol ether of valerianic acid with the addition of 30 per cent. of free menthol. It is a chemical combination, having neither the odor nor the disagreeable taste of its constituents; while possessing in a high degree the therapeutic properties of its two components. If a drop of the substance is placed in the hollow of the hand and rubbed briskly, it develops an odor of valerian, which gradually passes into the refreshing odor of menthol. Validol is an oily, colorless liquid. It is used as an antiseptic and in hysteria and hypochondria.

Formic Acid and Formate of Soda.

This preparation, according to Huchard (L'Union Pharm.), increases muscular force and resistance to fatigue, as experiments with the ergograph have shown. Instead of prescribing formic acid with bicarbonate of soda, which does not form an agreeable combination, the author recommends the use of a formate of sodium in doses of 2 to 3 grams per day. The formula suggested is as follows: Formate of sodium, 15 grams; syrup of orange, 300 grams; a tablespoonful three times a day in a little water.

PROFESSIONALISM VS. COMMERCIALISM*

Difficult to End Old Conflict in Pharmacy

Dr. William C. Alpers Says Conditions Have Reached a Crisis—Commercialism Must Give Way to Professionalism, Which Means Progress and Reform—Education is the Keystone to Success

The conflict between commercialism and professionalism in pharmacy is an old one—as old as pharmacy itself. While in many European countries it has long been settled in favor of professionalism, it is far from being solved in our country. During the last ten years pharmaceutical conditions in the United States have reached what may justly be called a crisis. A revolution almost is taking place, and nobody can foresee the outcome. Of late years the tendency has been to push commercialism to the front, direct all efforts to reform on strictly commercial lines and let professionalism take care of itself. There are even many voices heard condemning professionalism as the source of our difficulties, and advocating its total abolishment from pharmacy. Luckily, in all extreme measures a reaction is bound to set in, and the signs are numerous that professionalism will soon get the upper hand in pharmacy.

PHARMACY DEFINED.

In order to compare the two sides of pharmacy, and try to find a harmonious and satisfactory link between them, let us first clearly understand what we mean by the two terms, professionalism and commercialism. Professionalism, according to our dictionaries, is a vocation that involves a special education and mental, rather than manual labor. Commercialism, however, is the spirit of commerce, an exchange of goods. If, therefore, we speak of the profession of pharmacy, we thereby imply a special training of the mind, an education beginning at the lowest step and gradually leading up to what is collectively called pharmacy. For it must not be forgotten that pharmacy as a profession is not a science in itself, but rather the combination or chaining together of certain branches of different sciences. A scientific pharmacist, in the widest sense of the word, would have to possess a much broader education than a chemist, a botanist, a physician, or a microscopist. But even if we restrict the word to our daily vocation, a wide range of knowledge is necessary, which by its very nature must at once raise its possessor above the ordinary commercial man.

THE COMMERCIAL MAN.

The commercial man has little to do with education. It is practical experience and a keen perception and exact knowledge of goods that make him successful. He may be able to determine at a glance whether a bale of drugs, like sarsaparilla

or ipecac, is of good or poor quality. He does not bother his mind with the question whether the drugs under consideration contain an alkaloid, an oil, or a resin; whether they are poisonous or salubrious. His experience tells him that they are good objects for commercial enterprise, and in this sense alone he is interested in them. The pharmacist looks upon his goods from a different standpoint. The questions that are uppermost in his mind in handling the same articles cannot be solved by practical experience. Their answers are based on knowledge, on education.

VALUE OF EDUCATION.

To say, therefore, that education in pharmacy is an unnecessary thing, means retrogression. The advancement of the human race is based on education, on enlightenment, and the repudiation of any established science by its disciples, is indirectly a step toward barbarism. To wipe out the educational part of pharmacy would be to wipe out pharmacy itself. It would mean to divest a growing and beautiful plant of its leaves and flowers, leaving the bare stem as a monument of folly and destructiveness.

We arrive at the same result if we commence our argument from the opposite end. What is a pharmacist? The answer is: A person skilled in the art and science of compounding and preparing medicines. He is not simply a thoughtless mixer of different materials, and the compounding of medicines can in no way be compared to the mixing of mortar, or the mixing of oils and paints. The very definition of the word implies education. But to the public and in law it implies more. It is the established principle in all civilized communities, that the pharmacist is responsible for the quality of his goods, and that he is, and must be, a judge of what is good or injurious to the health of his clients. Nobody expects any responsibility from the purely commercial man. If the bale of ipecac that he sells turns out to be of inferior quality, the buyer claims a proportional credit, which is generally granted—and the transaction ends. But if the pharmacist dispenses a preparation of ipecac that by inferiority or faulty compounding causes injurious results, he is held responsible in every direction, and he may not only be sued for damages, but also held criminally. In our own ranks, the men who for the last five years have worked very faithfully for the elevation of the commercial side of pharmacy, almost to the exclusion of all professionalism, have yet unconsciously acknowledged that professionalism is, and must be, the foundation of pharmacy; for

the profit that they claim and try to obtain on certain goods far exceeds the just rewards of commercial enterprise and can only be explained and maintained from a professional standpoint.

STRENGTH OF PROFESSIONALISM.

The public finally give proof every day that they look upon pharmacists as men of higher education, and apply to them for information in many instances where knowledge of chemistry, hygiene, botany or materia medica is presupposed. That these demands of the public are sometimes carried too far and may become sources of annoyance is probably true—but we should not forget that this confidence put in our knowledge and judgment, if properly answered and encouraged, will, by the very nature of our dual position, give us more than mere mental gratification, and lead to increased activity in prescriptions and other professional work.

Thus, whichever way we look, professionalism is the very backbone of pharmacy, and should therefore have the first consideration in all our doings and enterprises.

In carrying out this principle, we must not forget, however, that a drug store is a poor place for mere hypothetical speculation; nor can a strict carrying out of a theory, however beautiful, be a successful vocation. The claim that we study pharmacy and conduct pharmacies, for the sole purpose of advancing science or gratifying our desire for higher education may justly be called an absurdity. We are in business for the sake of profit. We must make a living and feed our families. But this merging of the prosaic demands of stern reality with the higher ideal of a professional calling is not restricted to pharmacy alone. Every professional man has to face the same dispute, and must find a way to harmonize the ideal with the real. Nor must we forget that this is not an age of abstract speculation, and that the tendency of the times points toward an immediate and quick application of all scientific discoveries.

LEGITIMATE SIDE LINES.

Whatever new is invented or discovered in any science, and particularly so in medicine and chemistry, does not long remain the property of some scientists, who keep it like a jewel in a forbidden shrine. No, it becomes at once the common property of the whole world; every man of intelligence reads about it, and commercial enterprise at once takes possession of it. Thus science, or professionalism and commercialism, or practical application, run together, and it is almost impossible to draw or find the line of demarcation.

Let us apply this general observation to medicine and pharmacy. The principal aim of medicine of to-day is not directed to combat disease by ordering remedies; the tendency is rather to prevent disease, and hygiene and sanitation have become such important branches that they form almost a science by themselves. And here arises at once the demand for an innumerable number of articles and apparatus tending to promote hygiene and sanitation, and it is natural that the pharmacist should supply them. It is, for instance, quite natural that where antiseptics and prophylactics that are used and ordered for the purpose of sanitation, as mouth washes and other dental preparations, are

*Read before the pharmaceutical meeting of the Philadelphia College of Pharmacy, and reprinted from the "American Journal of Pharmacy."

sold, also the articles for their application, as tooth-brushes, etc., are kept, or to step from dermatological preparations to brushes, combs and similar implements. Aromatic liniments may, without strain of argument, lead to perfumery, and new methods in practical medicine to a large number of sundries, as electro-batteries and various glassware. All these appear like natural and legitimate side-lines, and even the strongest advocate of professionalism cannot exclude them entirely from his pharmacy. But they should remain what they are—side-lines, not principal lines—and their handling, as well as the whole arrangement of the store, should be managed accordingly.

ONWARD AND UPWARDS.

The history of civilization shows us that wherever it became necessary that people of different degrees of civilization lived together, the inferior race must yield to the more enlightened one. Superior education will enforce its demands in every instance, if necessary, even by brute force, in order to elevate the lower race. When the opposite takes place and higher civilization succumbs, we have a retrogression to barbarism. Applying this general observation to our little sphere of pharmacy, we must let professionalism take the lead. We can never consent to arrange our professional calling as a mere commercial practice. Our aim must rather be to elevate the commercial part of our vocation and make it subservient to professionalism. And it can be done and has been done. It is a fact that since the time of the present pharmaceutical crisis the complaints about unbearable conditions have come mostly from the so-called commercial pharmacists, while the professional man has complained little, if at all. He is not blind to existing conditions—as is so often claimed—but rather by prudent foresight and keen perception he recognized the fact that pharmacy based on commercialism cannot prosper, and his aim has been to elevate the desirable sideline and strengthen his position with the medical profession as well as the laity.

A METAPHORICAL CASE.

Let me use a metaphor. A strong and vigorous man enjoys the freshness of the water of the Niagara River above the Falls. He is a good swimmer, he knows his surroundings, no idea of danger ever enters his mind. He has done the same for years. Then, one morning, venturing out further toward the Falls, he discovers that he is gently carried off by the current. "I must turn around," he says to himself, and he does. But has he become weaker than in former years, or is the current stronger? For he is slowly, but surely, being dragged toward the Falls. His feeling of safety leaves him. For the first time in his life he feels that he has made a mistake, that he cannot depend on his own resources. He looks around for assistance, but there is none. The banks of the river are far from him on both sides. The rushing of water drowns his voice, and there he is, in the midst of the irresistible, constant current. His apprehension turns to fear. How can he save himself? Already his strength is leaving him. In a few minutes he will be beyond the hope of rescue. In this state of mind he sees not far from him a raft. With the last remaining strength he swims

toward it, he climbs on it. "I am saved," he shouts, and lays on it exhausted, but in the ecstasy of joy. And more than this, on the raft he discovers many treasures, precious stones and bags of gold. "What a find," he cries, "how lucky I did not reach the shore in time!"

After the first fullness of his joy, he again looks around. Is he really safe? He discovers, to his dismay, that his rescuer is only seeming, for the raft and treasures and rider are still in the current, and slowly moving toward the Falls. But there is help from another quarter. On the bank he discovers some friends. They motion to him; they show him a rope. At a favorable point they throw it to him. "Now I am safe," he cries. Eagerly he grasps the rope. He pulls at it in his excitement; but, alas, it is too thin and weak to stop the momentum of the raft; it breaks and leaves him helpless again. His fright approaches despair. What shall he do? Again his friends motion to him. Now he understands. The rope is thrown again, but this time, instead of trying to carry the heavy raft with him, he ties the rope around his waist, takes a few of the treasures that are not too heavy, then bravely plunges into the water, and with his own great exertions and the help of his friends, he reaches the bank in safety.

PROFESSIONALISM TO THE RESCUE.

Here we have the pharmacist who some day discovers that the quiet enjoyment of his business has been interrupted and that he is carried to financial ruin. His own efforts of former days fail. He climbs on the raft of commercialism that seems to give him safety and promises golden treasures; but he discovers that still he is in the deadly current. Then his friends throw him the line of professionalism. It is not strong enough to pull the clumsy raft, but it is strong enough with proper guidance to save him alone, if he will add his own efforts; yea, he may even carry some of the treasures along. Shall we stubbornly stick to the heavy raft of commercialism and be carried down the falls? or shall we bravely plunge again in the river of pharmacy, use our own efforts strenuously and with the gentle guidance of professionalism be saved?

The advocate of professional pharmacy is often called an idealist, a visionary who shoots far beyond the mark and fails to recognize the cold facts of the world around him. In reality it is the idealist who sees clearly beyond the narrow circle to which he is confined. It is the very keenness of his vision that makes him attack and reject conditions around him which others deem unalterable, and while he may sometimes underrate the difficulties of reform, he yet points a way in the right direction. There never was a great man without an ideal! It is necessary to have higher inspiration in order to rise above the ordinary, and this inspiration is generally transposed from the leader to his followers and is able to carry a whole nation to nobler aims. Without an ideal there would be no progress, no reform. Without an ideal there would be no art, no music, no greatness. Let me put before you the often-cited instance of the artist who looks in ecstasy at a block of snow-white marble. "How wonderful," he exclaimed. "See the grandeur of perception, the beauty of the face, the harmonious lines of the whole figure." "What

are you talking about?" asked his neighbor, "I see nothing but a mass of stone." "Yes," replied the artist, "there is some stone about the statue, but give me hammer and chisel, so I can cut it away, that the whole world may see the statue in all its beauty."

Let us in the same way look at pharmacy as an accomplished piece of art. Do not cut up the block of marble for commercial paving stone. Let us take hammer and chisel and work faithfully from morning till night until professional pharmacy stands before us perfected in all its glory.

Straw Charcoal Dressings.

The Journal of the American Medical Association describes an ingenious method of making inexpensive absorbent surgical dressing employed by the Japanese. The aseptic absorbent material is the charcoal of recently burnt straw. Any straw will answer, either fresh or old, soiled or clean, but rice straw is generally used there, because it is most common. The straw is placed in an iron vessel or on the stone or dirt floor of a room, and set on fire, the vessel being covered or the doors and windows of the room being closed to diminish the supply of oxygen. The straw charcoal thus made is aseptic and very absorbent, and may be obtained without expense anywhere. It is applied to wounds, in a linen bag of the proper size and the bags are the only part of the bandage which it is necessary to provide or transport, as the straw can be obtained anywhere. The dressing is the invention of Surgeon-General Kikuzi, it is said, and has been used for several years.

SODA WATER FORMULAS.

Alaska Snowball.

White and yolk of . . .	1 egg
Lemon syrup, No. 2 . . .	½ ounce
Orange syrup, No. 2 . . .	½ ounce
Raspberry syrup, No. 2 . . .	½ ounce
Fresh cream	½ ounce
Shaven ice	1 tumblerful
Shake well in milk shaker, then add:	
Plain soda	1 tumblerful
Stir and serve with straws.	

Sorcerers' Delight.

Shaven ice	½ tumblerful
Liquid phosphate	5 dashes
Compound tincture of cardamom	3 dashes
Vanilla syrup, No. 2	½ ounces
Plain soda	8 ounces
Stir, strain and serve with straws.	

Imperial Cream.

Cream soda syrup	1 ounce
Extract of vanilla	1 dash
Pure cream	1 ounce
Shaven ice	½ tumblerful
White of	1 egg
Shake well, strain, then add:	
Plain soda	1 tumblerful
Serve with nutmeg.	

SHORTER HOURS FOR CLERKS.

Marysville, Cal., April 10. —The governor has signed the bill making the day's work of drug clerks not more than ten hours. Any proprietor of a drug store who makes his employees work over ten hours is guilty of a misdemeanor.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Cement for Mending Pestles.

(C. G.)—

(1) Plaster of Paris is ordinarily used for fastening loose handles. It is made into a moderately thick paste with water, run into the hole in the head of the pestle, the handle inserted and held in place till the cement hardens. Some add sand to the paste, and claim to get better results.

(2) Boil together 1 part caustic soda, 3 parts resin and 5 parts water till homogeneous and add 4 parts plaster of Paris. The paste sets in half an hour and is but little affected by water.

(3) *The Era* Formulary gives this: one: Equal quantities of gutta percha and shellac are melted together and well stirred. This is best done in an iron capsule placed on a sand-bath and heated either over a gas furnace or on the top of a stove. It is a combination possessing both hardness and toughness, qualities that make it particularly desirable in mending mortars and pestles. In using, the articles to be cemented should be warmed to about the melting point of the mixture and retained in proper position until cool, when they are ready for use.

(4) Some years ago, Paul L. McCoomy, of Philadelphia, contributed the following formula for a cement for pestle handles, which he says he has used for many years, with satisfaction: Make a smooth, moderately soft paste with litharge and glycerin; fill the hole in the pestle with the cement and firmly press the handle in place. The pestle should then be wedged under a shelf or other convenient place for three or four days until dry.

Ink Erasers.

(J. A. K.)—We do not know the composition of the particular ink eraser in stick or paste form that you have in mind. However, the following are typical formulas for preparations for removing ink from paper and it should not be very difficult to put some one of them into the particular form you desire:

(1.)

Immerse blotting-paper or a similar material in a hot concentrated solution of citric acid, roll it into a pencil, and coat the larger portion of it with paper or lacquer. Moisten the eraser with water, and rub over the ink to be removed. Drop upon the ink spot a drop of water con-

taining chloride of lime. The ink immediately disappears.

(2.)

Mix equal parts of oxalic and tartaric acids in powder. When to be used, dissolve a little in water. The solution is poisonous.

(3.)

Use equal parts of cream of tartar and citric acid in solution with water.

(4.)

Thick blotting-paper is soaked in a concentrated solution of oxalic acid and dried. Laid immediately on a blot, it takes it out without leaving a trace behind.

(5.)

Tin chloride, 2 parts; water, 4 parts. To be applied with a soft brush, after which the paper must be passed through cold water.

(6.)

A weak solution of chloride of zinc.

Manufacture of Formaldehyde.

(W. D. Co.)—Formaldehyde gas for purposes of disinfection may be derived from the following sources:

(1.)

From a commercial product known as formalin, said to be a 40 per cent. solution of formaldehyde gas in water. It is said to be manufactured technically from methyl alcohol by a method not well known.

(2.)

From the combination of the above solution and chloride of calcium placed in a closed receptacle. By the application of heat the gas contained in the receptacle is given off in a dry state and conducted through a fine tube to the room to be disinfected.

(3.)

The generation of formaldehyde gas by the oxidation of methyl or wood alcohol in a specially constructed lamp, of which there are several forms on the market.

(4.)

By the heating of paraformaldehyde in the form of tablets.

Oil for Floors.

(C. J. H. & Co.)—

(1.)

Neatsfoot oil 1 part
Cottonseed oil 1 part
Petroleum oil 1 part

(2.)

Beeswax 8 parts
Oil 56 parts
Potassium carbonate 4 parts

Dissolve the potash in 12 parts of water, heat together the wax and the remaining water till the wax is liquefied; then mix the two and boil together until a perfect emulsion is effected. Color, if desired, with solution of annatto.

(3.)

Some time ago a writer in a contemporary proposed a formula for an emulsion containing paraffin oil, 8 parts; kerosene, 1 part; lime water, 1 part. A coat of the mixture is applied to the floor with a mop.

"Spirit of Swallows."

(J. J. H.)—We must confess our ignorance of the identity of "spirit of swallows." However, we think your customer probably had in mind the medieval preparation known as "oil of swallows,"

which was made by pounding and boiling sixteen young swallows with a handful each of plantain and bay leaves, chamomile, rue, dill, sage, hyssop, rosemary, hypericum and costmary in 4 pounds of oil and 1 pound of Spanish wine, and straining. There are other old-time formulas. In a paper read before the A. Ph. A. some years ago, by L. F. Kolber and G. R. Hancock, on "Curious Oils," the statement was made "that some bird oil is usually supplied" on calls for "swallow oil."

Elixir of Glycerophosphates.

(J. Mel.)—The following formula for elixir of glycerophosphate of lime and soda was contributed to the American Pharmaceutical Association, at the meeting last year, by Wm. C. Kirchgessner, of Grand Rapids, Mich.:

Sodium glycerophosphate 128 grains
Calcium glycerophosphate 64 grains
Hydrochloric acid 1 fl. dram
Simple syrup 4 fl. ounces.
Compound syrup of orange 1 fl. dram
Prune juice, q. s. for fluid pint.

Dissolve the sodium and calcium glycerophosphate in the prune juice with the hydrochloric acid previously added. Mix the syrup and spirit of orange. Filter if necessary.

Chlorophyll may be employed for coloring elixirs green.

Registered Trade Marks.

(L. S.)—We suppose you can register a trade mark without the assistance of a patent lawyer. First write to the Commissioner of Patents, Washington, D. C., for a blank form which must be filled out by you, requesting such registration. The commissioner will also send you certain rules to be observed by applicants. Under the new trade mark law which became operative on April 1 of the present year, the fee for registration is \$10; under the old law the fee was \$25. Some information regarding the provisions of the new law were published in *The Era* of last week, page 409.

To Clean a White Plume.

(S. T. D.)—The following process, recommended for cleaning white ostrich feathers, will presumably answer your purpose for cleaning a white plume: Four ounces of white curd soap, cut small, dissolved in four pints of water, rather hot, in a basin. Make the solution into a lather by beating it with birch rods or wires. Introduce the feathers and rub well with the hands for five or six minutes. After the soaping, wash in clean water, as hot as the hand can bear. Shake until dry.

Hyoscyamus Muticus from India.

The bulletin of the Imperial Institute contains a description of *hyoscyamus muticus* from India. One obtained from the Punjab was found to contain .36 per cent. of hyoscyamine in the dry stems and .38 per cent. in the dry leaves. The second from Larkana contained .28 per cent. of hyoscyamine. No other alkaloids were found in either of the plants. These results seem to show that the Indian plant is much less rich in alkaloids than the Egyptian variety.

The Puzzler

Your Own Store Paper.

Newest Kind of Drug Store Advertising

The "PUZZLER" isn't like anything else published. It's a Monthly Illustrated Store Paper, to be sure, but examine it, and you at once recognize its unique, trade-bringing, entirely new features. It is only 12 months old, but **225,000** copies per month tell the story of its tremendous success with the shrewdest advertising druggists in America—one only in a locality. You never before could buy such effective drug store advertising at so small a price. It pays for itself over and over every month. Its effectiveness is doubled by a novel plan which carries the interest of all ages and classes of readers over from one month to another. Get exclusive control of the "Puzzler" for your locality and the profits on your increased trade will more than pay the costs—and besides, it will be the best general advertising that you can get for your drug store. Write at Once for Free Sample Copy.

G. A. S. STARTS CAMPAIGN.

Committee to Recommend Candidate for Board of Pharmacy.

THERE MAY BE THREE CANDIDATES AT JUNE ELECTION, NOMINATED BY ASSOCIATIONS — STEAMER CHARTERED FOR JUNE EXCURSION. — SPLENDID LECTURE BY DR. GROSSE.

Credit for taking the first step in the annual campaign for the election of a member to the Board of Pharmacy belongs to the German Apothecaries' Society, which launched the subject at a largely-attended and interesting meeting last Thursday night. It was Felix Hirseman who suggested that the G. A. S. recommend some member of the society who would be acceptable to all his fellow members, as a candidate for election in June. While there was no reason to complain of anyone on the present Board, Mr. Hirseman said, he thought the best plan was to have a committee of three appointed to select a candidate from the G. A. S. In seconding this idea, S. V. B. Swann mentioned that there may be three candidates nominated by different associations, which latter he did not think it advisable to name. Mr. Hirseman's resolution was adopted and the following were appointed: Messrs. Felix Hirseman, C. F. Schlessner and George Leinecker.

A short report on the M. A. R. D. elections was given by Mr. Swann, who congratulated the society on being well represented among the officers of the new organization. As chairman of the Trades Committee, Mr. Swann also announced that the telephone question was being agitated throughout the city, with a demand for slot phones. His committee also commended the present movement in favor of pushing National Formulary preparations as one which would result in an increase in prescription business. Dr. Diekmann stated that instruction in National Formulary preparations would soon be given at the College of Physicians and Surgeons.

George Kleinau reported on the various bills before the Legislature. Speaking of the bill requiring the payment of a fee for the registration of every patent medicine, Mr. Hirseman suggested that it would be a good plan for the members to write to their representatives asking them to oppose the measure.

In regard to the outing on June 8 to Karatonyi and Kmetz's resort on Long Island Sound, R. S. Lehman, for the Entertainment Committee, reported that the steamer "Isabel," having a capacity of eight hundred, had been chartered. This will cost the society \$153. Two landings will be made, one at Thirty-first street and the other at Ninety-first street, East River.

Emil Roller announced that Dr. Fredrick Grosse was present and ready to give

his promised lecture and that at the next meeting Dr. Abraham Jacob, the celebrated specialist, would lecture on tuberculosis. On the question of the Schiller memorial, Mr. Roller said that there had been some difference of opinion among the committee, to which he was a delegate, in regard to what shape the memorial should take. The idea of a monument prevailed and definite action is to be taken at the next session of the committee.

At the request of President Imhof, Mr. Swann gave some information about the State Ph. A. convention at Saratoga, June 27, 28, 29 and 30. Headquarters will be at United States Hotel, rates \$3.50 and \$4. The one and one-third rate for railroad fare will probably be in force as usual. Mr. Swann promised to give some idea of the entertainment features at the next meeting.

Dr. Grosse's lecture on "Bacteria in the Service of Humanity" was heard with profound interest and attention. The lecture lasted about an hour and at its conclusion President Imhof conveyed the thanks of the society to Dr. Grosse, with a suggestion that he be rewarded by election to honorary membership in the society. This was unanimously agreed to by a rising vote.

President Imhof greeted E. P. Wendler, a new member, with the remark that by his membership the average weight of the society was considerably increased. An extra fine luncheon was served.

CALL FOR P. A. A. MEETING.

The Committee on Arrangements of the Proprietary Association of America has issued formal notice of the arrangements made for the meeting of the association on May 2, 3 and 4, at Hotel Astor, Times Square, this city. The first session will be held Tuesday, May 2, at 10 a. m. Comfortable quarters have been reserved for the meetings without charge to the association, in return for which the committee urge that as many members as possible stop at that hotel. The rates are as follows:

Rooms without bath, \$2.50 up for one person, \$3.50 up for two persons; rooms with bath, \$3 up for one person, \$4.50 up for two persons. Outside rooms cost more than court rooms.

In order that nothing may interfere with the important business to be considered, the committee have decided to make it a strictly business meeting, leaving the entertainment to the individual inclinations of the members. The members of the Committee on Arrangements are Clarence G. Stone, H. H. Good and J. B. Patton.

—The Cuban Medicine Co., of Minneapolis, has been incorporated by Charles A. Proctor, J. DeWitt Spencer and Fred E. Wheaton, of that city, and C. S. Bartram, of St. Paul. The capital stock is \$20,000.

FILES SWEEPING SUIT.

M. C. Dow Seeks to Enjoin Manufacturers, Wholesalers and N. A. R. D.

CHARGES ILLEGAL COMBINATION TO MAINTAIN PRICES WHICH SHE SAYS ARE ARBITRARY. — WANTS \$50,000.—MEMBERS OF OHIO VALLEY D. A. INVOLVED.

Cincinnati, April 11.—Cora Dow Goode, who does business in this city as a retail druggist at seven stores, under the name of M. C. Dow, filed a sweeping suit in the Common Pleas Court, last Friday, against a number of wholesale druggists and manufacturers and associations of such persons, to enjoin the maintaining by them of an alleged combination which she declares is unlawful because in restraint of trade. As defendants, she named the N. A. R. D., the N. W. D. A., the Proprietary Association of America, Peruna Company, Alfred Vogeler Co., Stein Gray Co., Freeman Perfume Co., Samuel J. Hale, John J. Justis, John Uri Lloyd, N. Ashley Lloyd, W. D. Freeman, Alfred DeLang, Frank J. Cheney and the O. Val. R. D. A., as follows: President A. O. Zwick, Vice-Presidents Herman Spechtold, F. W. Kiser and A. D. Wells, Board of Control, L. F. Holzhauser, H. B. Walterman, Emil Zorn, J. H. Linowman, J. F. Kutchbach, Otto Groenland, E. H. Theising, Chaas. Willenbrak, Carl Plath, William Howe and Edward Voss, Jr.

It is asserted in the petition that the plaintiff has been in business for years and has refused to join with the defendants in maintaining prices which she says are arbitrary and the result of a combination to maintain such prices and prevent competition in the manufacture and sale of drugs. It is charged that the combination is unlawful. She declares that because of her attitude toward them they have put her on what is called a cut-off list and class her as a person with whom ordinary trade relations cannot be carried on; that they have threatened certain newspapers with a withdrawal of advertisements if they accept hers, although she has contracts with such newspapers. She asks that the defendants be enjoined from maintaining such illegal combination and from refusing to sell drugs to her and from doing all the things she charges against them. She also asks for \$50,000 damages as a result of their acts.

None of the members of the O. V. D. A. would talk on the suit or as to what action the association would pursue. "It was a surprise," said Frank Freerichs, the legal advisor.

Miss Dow said she believed she had a perfect case, and was anxious for the trial to begin.

SCORE ONE IN 'PHONE FIGHT.

KINGS COUNTY GETS SLOT MACHINES, BUT IS NOT SATISFIED.

WANTS TWENTY PER CENT. COMMISSION, COMPANY SAYS IT CAN NOT AFFORD TO PAY MORE THAN TEN—SOCIETY TO MEET EXPENSE OF GETTING CONTRACT SIGNATURES.

Not satisfied with obtaining from the telephone company the concession to install slot machines wherever demanded, the Kings County Pharmaceutical Society decided, at its meeting on Tuesday, to demand a higher percentage than the company has offered. When John S. Wischerth reported for the Trade Interests Committee that the telephone company had promised to install slot 'phones for any druggist who applied, on a basis of 10 per cent., Dr. Muir remarked,

"That's no concession at all. They're giving us slot machines because they know they can't help themselves. Now this committee was instructed to get 20 per cent. Instead of 10, and they haven't done it. If the company is so poor that it can't give us an extra 10 per cent., let's split the difference, and make it 15." A move that the matter be referred back to the committee with instructions to demand 15 per cent." This motion prevailed.

The first business transacted was the discharge of the N. A. R. D. committee, with thanks. Treasurer Ray reported a balance in the treasury of the Society of \$383.71, and in the College of \$3,392.35. In his report for the Committee on Supervision, Dr. Muir stated that the end of the present session would show a surplus of about \$3,000. Counting in the \$7,000 paid on the mortgage, there will be a clear gain of \$10,000—the most successful year the College has ever had.

Dr. Muir presented a full report of the legislative work at Albany. Regarding the excise amendments, he said it had been found that when the stamp tax went into effect the State only received \$17,000 revenue from this source, while \$80,000 was lost on those druggists who ceased taking out store licenses; making a loss to the State of \$63,000, which went into the pockets of the druggists, and is a good indication, said Dr. Muir, of the work being done by the State Association.

The deaths of three old members were reported: Chas. Dennin, R. J. Owens and L. A. Conklin.

Encouraging results on the National Formulary work were reported by Mr. Wischerth. The canvassing already done showed that physicians think very favorably of the movement. Suitable bottles and labels were already secured. The chief expense was in furnishing epitomes, at 10 cents each, to be distributed to all the physicians. Dr. Muir promptly moved to appropriate an additional \$30 to meet this expense, which was done.

A lengthy discussion followed on the advisability of having the committee investigate new formulas and processes. This was finally left in the hands of the committee. After which Thomas J. Keenan gave a talk on the discovery and the na-

ture of radium, exhibiting specimen tubes containing the substance.

On the N. A. R. D. situation, Mr. Klein reported that the Executive Board of the M. A. R. D. had decided that to get signatures to the contracts was now the most urgent necessity. Already 1,200 had signed, said Mr. Klein, but 600 more were needed. In order better to prosecute this work he and Mr. Helmerzhelm, who were in charge of the distributing in Kings County, had decided to divide Brooklyn into 31 districts. Mr. Klein wanted volunteers to get signatures in each district, but on motion of Dr. Muir, Messrs. Klein and Helmerzhelm were instructed to engage men to do the work, at the expense of the Kings County Society.

RICHARD JACKSON OWENS.

Richard Jackson Owens, the oldest druggist in East Brooklyn, and a charter member of the Kings County Pharmaceutical Society, died April 1, at his home, 389 Greene avenue, at the age of seventy-five. He was a native of Anglesey, North Wales, and his first important work in this country was under Dr. Squibb, at the Brooklyn

THE LATE RICHARD JACKSON OWENS

Navy Yard. In 1858 he purchased a drug store on Clason avenue and four years later bought the store at 637 Myrtle avenue, which he conducted up to the time of his death. Mr. Owens was the first treasurer of the Kings County Society, a trustee of the East Brooklyn Savings Bank and an old-style life member of the American Pharmaceutical Association.

MANHATTAN PH. ASS'N.

The annual meeting of the Manhattan Pharmaceutical Association will be held Monday evening, April 17, at 9 p. m., at the New York College of Pharmacy. Officers will be elected and annual reports of committees will be heard.

The Manhattan Association was organized to fight a movement for shorter hours for drug clerks. Reports are spreading through the trade of a revival of this movement.

FORMULA BILL ADVANCED.

Registration Fee Reduced to Five Dollars.—Other Measures.

The Platt bill, which originally required the formula for every patent medicine to be printed on the label, but which was amended by a substitute measure requiring the registration of formulas with the State Board of Health, has been placed on the order of second reading and was scheduled for another hearing at Albany, April 12 (yesterday). Five dollars is the fee proposed for registration, but it is likely that a further reduction will be made before the bill becomes a law.

Owing to the efforts of the Legislative Committee, the Yale wood alcohol bill has again been sent back to committee with the indication that it is permanently shelved. This bill required the retail dealer to turn over to the State one-third of his profits from the sale of wood alcohol. The law forbidding the sale of cocaine except on the written prescription of a physician or dentist, while not pressed by the State Association this year, is reported in good shape and likely to pass.

The amendments to the liquor tax law, it is reported, are certain of being passed. Among other things, the special druggists' license permitting the sale of liquor in quantities not greater than one pint, without a physician's prescription, will be done away with. Strong objection, however, was made to the section providing that where a druggist or pharmacist had violated the liquor law so that his certificate was cancelled, he was allowed to forfeit his pharmacist's license and surrender it with the cancelled liquor certificates. As this would take away a man's means of livelihood, the committee recommended that the pharmacist's license be simply suspended for one year. This provision, Dr. Muir thinks, will be substituted for the drastic penalty first proposed.

George E. Thorpe, of Syracuse; George S. Ballard, of Utica, and other druggists from Central New York were present at the hearing on the liquor bill, last week.

LENOX LOCAL ORGANIZED.

Lenox Branch, Local No. 18, of the M. A. R. D., was organized last Thursday afternoon at a meeting of the druggists in the district, which embraces the territory from One Hundred and Tenth street to One Hundred and Twenty-fifth street, and from Fifth avenue to the North River. Only a handful of men was present, but J. B. Doble was on hand with Mr. DeShetley, and a great store of enthusiasm, so that the druggists got to work with a feeling of confidence, and elected the following permanent officers:

Chairman, S. Reinhardt; vice-chairman, M. Zazat; secretary, J. J. Bockar; treasurer, George Rosenzon.

Peter Diamond opened the meeting as temporary chairman, with a brief description of the nature of the work to be done. Mr. Doble followed with a heart-to-heart talk as to the intimate relations which should exist between competing druggists. "Don't expect too much at the start," he urged, while telling of the crooked things which had already been made straight since organization secured a foothold in New York.

MR. WEICKER'S NEW VENTURE.

Not Connected With E. R. Squibb & Sons or Theodore Weicker Co.

Theodore Weicker has leased the five-story brick building at No. 12 Gold street, for a period of five years. "Another one of my enterprises," was Mr. Weicker's only comment. This new venture, Mr. Weicker said, had no connection with either the Squibb Co. or the Theodore Weicker Co., but he was not yet ready to tell more about it.

The building, No. 12 Gold street, is at present occupied by Charles H. Rutherford, commission merchant in drugs, who will retire from business.

P. D. INTER-CITY SCORES.

In the Parke, Davis & Co. inter-city match, the Detroit scores of which were published in last week's Era, the New York branch made the following scores for the five games:

	Games.				
	1	2	3	4	5
Braun	145	139	198	154	177
Burgess	169	167	186	169	176
Blake	174	158	146	179	153
Tuthill	179	191	178	188	163
Carr	153	123	136	171	207
Totals	820	778	844	861	876

FREE SOAP MOVE CHECKED.

Free soap for the "Great Unwashed" was to have been distributed last Sunday through the medium of a newspaper which published in its Sunday edition a coupon "good for one cake of Babeskin soap." By some oversight, however, the druggists were not supplied with an extra quantity of soap, nor were they even notified of what was going to happen. The result was that when the rush began many druggists, seeing that they were in danger of being swamped, refused to honor the coupons and sent away the army of little boys and girls, soapless but happy.

NEW YORK NOTES.

—Fred Trau, librarian of the German Apothecaries' Society, has followed the lead of Pres. Imhof, and has had his facial appendages amputated.

—Edgar Poe Reese, the faithful and energetic manager of the sales department of the American Stopper Co., of Brooklyn, N. Y., died last Friday, after a brief illness.

—C. F. Meyer, president of the Meyer Bros. Drug Co., sailed with his wife last week, for Mediterranean ports. Mr. and Mrs. Meyer expect to travel extensively in Europe, returning in about five months.

—William Wilson, it is reported, will soon vacate his old store at Broadway and Wall street, to make room for another branch of the United Cigar Stores Co. Mr. Wilson will take up new quarters at Broadway and Liberty streets.

—Thomas Stoddard, vice-mayor of Buffalo, and one of the best known druggists in the State, spent a few days in New York City, last week, visiting his many friends in the trade. He recalled to some of Schieffelin & Co.'s old employes the fact that he had bought his first bill of goods from that house in 1878.

—A petition in bankruptcy has been filed against David W. Keith, manufacturing

chemist at 45 Cliff street, by the following creditors: David L. Glnck, \$113; George S. Relyea, \$265, and Sadie Margoles, \$500. It was alleged that he is insolvent and on April 6 admitted in writing his inability to pay his debts. The assets are estimated at \$1,000. He did business as B. Keith & Co., and has been connected with it since 1889. The business has been established more than fifty years. He manufactures at Stamford, Conn.

—Schedules in bankruptcy of the Laxakola Company, manufacturer of patent medicines at 182 William street, show liabilities of \$6,439, nominal assets of \$4,181, and actual assets of \$2,031, consisting of cash, \$231; stock, \$200; office furniture, \$150; accounts and consignments, \$950, and trade marks, \$500. The Bates Advertising company is the largest creditor, for \$2,500.

ROCHESTER PH. A. MEETING.

Rochester, April 8.—The Rochester Ph. A. monthly meeting, held yesterday afternoon, was well attended and an enthusiastic one. Five applications for membership were received, four of which were from country towns. Morris Greishelmer was elected to membership.

Relative to the matter of establishing a course in pharmacy at the Mechanics' Institute, it was learned that the committee appointed by the directors of the institute had reported unfavorably on the proposition. This action was principally due to the fact that the institute does not possess the teachers, the necessary room, nor sufficient finances to devote to such a course. The committee regretted to make the report, but considered it best to do so, in view of present conditions. However, it is thought that a course in pharmacy may be established at the institute at some later time.

A committee, consisting of H. B. Guilford, A. C. Dempsey and W. F. Esterheld, was appointed by the pharmacists to confer with a similar committee representing the Retail Butchers' Association, relative to the recent increase in the wholesale price of ice in Rochester. A raise of five cents a hundred pounds has been levied by the local ice companies, which the pharmacists look upon as unwarranted and altogether unfair. It has been reported that Buffalo ice dealers are willing to sell to the Rochester trade at a lower cost than the local companies and it is for the purpose of investigating these reports and to decide upon some action that the committee from the pharmacists will meet and confer with that of the Retail Butchers' Association.

At the next regular meeting, which will be held the first Friday in May, nominations will be made for officers for the ensuing year. The election of officers will take place at the June meeting of the association.

—Dr. Amos Harrison Brundage, of Brooklyn, died at his home, 1073 Bushwick avenue, at the age of seventy-seven. He was one of the founders of the New York State Medical Society. Graduated in 1855 from the medical college of New York University, he served as surgeon under Gen. Sheridan, in the Civil War. He is survived by two sons, Dr. Albert H. Brundage, of Brooklyn, and the Rev. Henry E. Brundage, of Denver, Col.

DOPE FIEND DRAWS REVOLVER.

Syracuse, N. Y., April 10.—Alderman Bolton, of Watertown, who is a druggist, had an exciting experience last Wednesday. A tall stranger entered his store and asked for some laudanum. Mr. Bolton waited on him and before he had received his pay another customer entered and asked for goods. While the alderman was waiting on the second person the first man drew the cork and drank his laudanum. The man then refused to pay for the laudanum and the proprietor stepped from behind the counter and locked the front door. Then he went behind the screen to fasten the rear door and upon coming again to the main part of the store, he looked into the barrel of a revolver in the hands of the stranger who asked him if he was going to unlock the door. Mr. Bolton thought he would unlock it, and did. Thereupon the stranger left the store. Mr. Bolton followed him at a safe distance and when the man saw he was being followed, he took to his heels and disappeared.

FRENZIED FINANCE PARTY.

Syracuse, N. Y., April 10.—The members of the Syracuse Druggists' Association and their friends were entertained by President Thorpe and Secretary Marietta Harmon Greenland, at a "frenzied finance" party, in the Snow building, Friday night. The new game of "frenzied finance" was played and the druggists tried their hands at stock speculation. F. C. Joslyn won the first prize, a box of cigars, proving himself to be the most accomplished speculator. Of the women Mrs. W. H. Bissell proved herself to be the most accomplished trader and received a Haviland china dish. After the game, refreshments were served.

WANT THEIR MONEY BACK.

Syracuse, N. Y., April 10.—Some of the druggists are annoyed by the habit a few persons have of bringing back medicines and claiming the guarantees. As is well known, many manufacturers guarantee a cure and promise to return the money if a cure is not effected. There are a few people in the city who make a practice of using most of the article and then asking for their money back. They try everything offered and come back regularly. The druggists have yet to find some remedy to apply to this class of people.

NO DATE SET FOR CONTRACTS.

The Executive Committee of the M. A. R. D. met last Friday afternoon at N. A. R. D. headquarters, 100 William Street, and decided not to set a date when the contracts are to go into effect. Instead, the committee selected one man in each local district whose sole duty shall be to obtain signatures to the contracts. After this work has been done the committee will be able to set the date.

—Communications for the secretary of the Tennessee Pharmaceutical Association should be addressed to E. P. Trolinger, at 837 Second avenue, Nashville. Mr. Trolinger removed from Bell Buckle a short time ago, having purchased the Red Cross Pharmacy in Nashville.

DISCUSS TRADE CONDITIONS.

Telephones and Commissions on Advertisements Questions Before P. A. R. D.

Philadelphia, April 8.—While the holding of another meeting of those interested in the welfare of the drug trade, interfered somewhat with the attendance last evening at the quarterly meeting of the P. A. R. D., interest in the work of the organization was apparent.

Interest centered in the efforts that are being made by the association, through its Telephone and Press Committee, to secure better terms from the newspapers and from the telephone companies. The service has for a long time been far from satisfactory to all of those who receive a commission for allowing their stores to be used as branch offices for the papers and who have one or both 'phones.

Chairman F. W. Fluck stated that he had been unable to see the advertising managers of all the papers, but one to whom he had stated the desires of the druggists, viz., that they should be allowed a uniform commission on all advertisements taken in by them, of 25 per cent., had flatly refused to change from the commission now allowed, which is 10 per cent. While the chairman did not wish this to be taken as an indication of the feeling of all the papers, he gave it as a specimen of what might be expected in the way of opposition. No satisfactory arrangement, Mr. Fluck said, had been made with the telephone companies. The original idea had been to ask a commission on all telephone receipts, amounting to more than \$9 a month. Then it was found that there was a large percentage of stores that did not do that much business in any one month in the year. The result would be that these proprietors would get nothing from their 'phones. The attempt to get a uniform 25 per cent. commission on all automatic 'phones, has not been received favorably by the companies, and as a result the committee has been obliged to get up a schedule covering the conditions in different parts of the city. The time intervening before the next meeting of the association promises to be a busy one for this committee, for they expect to have both questions settled by that time.

The Legislative Committee announced that the "pre-requisite bill" had passed both branches of the Legislature, had been signed by the governor and as a law would become operative on the first of January next. The new bill, permitting the use of sodium benzoate as a preservative in fruit syrups, it was announced, had also passed and awaited the signature of the governor. The bill regarding the sale of patent medicines, back of which are the members of the Woman's Christian Temperance Union, it was said, was not expected to appear at the present session of the legislature. Following this report, a resolution was unanimously adopted urging Governor Pennypacker to sign the sodium benzoate bill.

The matter of acceding to the request of the Drug Clerks' Association, that all the drug stores of the city close on Sunday afternoon, from one to six o'clock, then came up for discussion, with the result that it was decided to leave the ques-

tion entirely in the hands of the individual proprietor. The question of changing the by-laws to allow a membership of fifteen in the Executive Committee was decided in the affirmative, by unanimous vote.

PHILADELPHIA DRUG CLERKS.

Philadelphia, April 7.—Members of the Drug Clerks' Association felt greatly encouraged when at the monthly meeting on Monday, it was announced that after a joint conference with a committee from the P. A. R. D., the latter announced that it would recommend favorably the request for the closing of the stores on Sunday afternoons from one to six o'clock. It was proposed that the plan be taken up in districts, starting with Southwestern Philadelphia and then extending through West Philadelphia, where it is said the feeling is very favorable for this innovation. Ten new members were elected and the members who had been working for the success of the theater benefit this week, felt amply repaid for their efforts when it was announced that the treasury had been enriched \$153 as the result.

Robert J. Hunt, who has been secretary since the organization was formed, announced that in May he would return to his home in O'Neill, Neb., and for that reason he would have to retire from active membership. A committee was appointed to draw up a resolution, expressing the regret felt by all at the loss of Mr. Hunt and thanking him for his services in the past. Carl Schmit, Jr., was elected to succeed him. On account of the numerous and growing duties of George H. Grubb, it was decided to relieve him of some of his duties, and consequently Harry B. Lupin was made manager of the employment bureau and C. J. Chalfant was made collector. Mr. Grubb still retains the office of treasurer. He reported a balance of \$81.47. The reports of other officers and committees indicated the growing strength and prosperity of the association.

PLANS SHOULD BE REFUSED.

Pittsburg, April 8.—At a meeting of the association held in Greensburg, Pa., recently, the "Munyon \$5c." and similar propositions were discussed, and it was the unanimous opinion that all such plans which had a tendency to reduce the sellers' profits, were detrimental to the retailers' interests and should be refused. It was the sentiment of all present that the sale of 25c., 50c. and \$1 goods costing more than \$2, \$4 and \$8, should be discouraged, and no new goods costing more than these prices should be taken.

The custom of some agents of soliciting trade from others than druggists was discussed, and the advisability of issuing "Salesmen's Cards" to such agents as would agree not to call on any but druggists in sympathy with the organization was favored. Final action on this matter, however, has been deferred until the annual meeting in May, when this and many other subjects of vital interest will be discussed. Affairs in the county are apparently in a satisfactory condition.

Further notices of the annual meeting to be held in May will be sent out later by President S. C. Daugherty and Secretary Miss M. E. Tassel, and every member will be requested to make a special effort to be present.

ALCOHOL IN PROPRIETARIES.

Act Sweeping and Arouses Ire of Western Pennsylvania A. R. D.

Pittsburg, April 8.—Seldom in the history of the trade have the retail druggists in this section displayed so much interest in a State bill as is being manifested in the bill to regulate the sale of proprietary and patent medicines containing alcohol, and providing penalties for the violation of the provisions of said act.

Secretary B. E. Pritchard, accompanied by a committee, has spent the past week in Harrisburg, lobbying for the killing of the bill. It follows:

SECTION 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same, that no person, firm, or corporation shall by himself, herself, or themselves, or by his, her or their agents, sell or offer for sale any patent, proprietary medicine or remedy which contains alcohol and which is intended for internal use or medication by any human being, except upon personal prescription of a regularly registered physician, naming specifically the particular medicine prescribed.

SEC. 2. Every person, firm or corporation, and every officer, agent, servant or employee of such person, firm or corporation who violates any of the provisions of this act shall, upon conviction thereof, be fined for the first offense not less than \$50 nor more than \$100, or imprisoned not exceeding 30 days, either or both at the discretion of the Court; and for the second offense shall be fined not less than \$100 nor more than \$500, and imprisoned not exceeding 90 days.

SEC. 3. All acts and parts of acts inconsistent with this act be and the same are hereby repealed.

The act was introduced by Senator Charles L. Brown, of Philadelphia, in the interest of the Dairy and Food Department, and was referred to the Committee on Public Health and Sanitation, was reported out of the committee favorably and is now making its way through the usual channels to the governor.

John C. Wallace, chairman of the legislative committee of the Pennsylvania I. h. A., has sent out a circular letter to the members of the trade, asking them to immediately write to the members of the legislature from their respective districts, protesting against this act.

There appears to be a difference of opinion concerning what class of articles this act will cover. It is highly probable, according to one well versed in these matters, that it is the intention of the department to restrict the output of every medicine containing alcohol, in whatever proportion, prepared and bottled, ready for sale, with accompanying directions. The act is said to be a sweeping one and has aroused the ire of the Western Pennsylvania A. R. D.

DRUG CO. ELECTS OFFICERS.

Dubuque, Ia., March 25.—The directors of the Torbert Drug Co. have elected the following officers: President, W. H. Torbert; vice-president, G. A. Griffin; secretary, Glenn Brown; treasurer, G. A. Shenkowitz; assistant treasurer, W. O. Buesch. The directors voted to lease the Bradley building on Iowa street, between Seventh and Eighth streets, to be used as a wholesale house.

ELECTS NEW OFFICERS.

Philadelphia, April 8.—The coming year promises to be an important one for the Philadelphia Drug Athletic Association, which held its annual meeting at Tagg's Maennerchor Hall. The reports of the various committees were most flattering and it was apparent to all that the coming summer is destined to be the busiest in the organization's history. The same athletic field at Twenty-fourth and Tioga streets has been secured and the out-door work will start on April 15, when a baseball game will be played between teams composed of members.

The following officers were elected: President, W. F. Steinmetz; first vice-president, W. A. Johnson; second vice-president, Charles Willis; treasurer, A. T. Pollard; secretary, E. T. Hahn. The members of the Board of Directors are J. F. Hauck, John Reynolds, John Duffy, Ralph Haus, Harvey Wertley, Frank Apple and William Dewees. Entertainment Committee, W. A. Johnson, J. H. Masholder, E. T. Hahn, Charles Willis and John Duffy. Purchasing Committee, C. G. Neely, A. B. Robinson and Charles Willis. Ground Committee, F. C. Miller, Dr. E. K. Boltz, H. J. Hackett, W. D. Mann and M. H. Dickson.

P. A. R. D. NOTES.

Philadelphia, April 10.—Members of the P. A. R. D. are being urged to look well to their fire insurance policies. An example of the advisability of such action was shown a few weeks ago, when the store of G. E. Jelliff, at Seventeenth street and Susquehanna avenue was burned out and there was no insurance to help make up for the loss of \$3,000.

An organization has been effected for the purpose of fighting the fake jewelry concerns that have been victimizing druggists. A. J. Frankeberger is chairman, T. W. Fluck, secretary and Christopher Koch, treasurer. Counsel has been employed and nearly all of the forty members who have been victimized have contributed to the fund and enrolled their names.

George H. Johnson, in business at Seventh and Brown streets, for some years, died at his home in West Philadelphia, after a short illness.

BAY STATE NOTES.

—John H. Cronin, of Lawrence, was surprised one evening by a party of friends, who presented him with a pair of Elks' cuff buttons, each of which has diamond eyes. A collation was served.

—Mistaking a graduate full of carbolic acid for one containing medicine that he was about to take, Amasa P. Adams, a Thorndike druggist, swallowed a fatal dose of the poison and died in an hour. He was sixty-three years old and had lived in Thorndyke for twenty years.

—Plans are being made for the incorporation of the Woodman-Davis Co., in Worcester, to deal in drugs, toilet articles, specialties, etc. The incorporators will be Dr. F. P. Barnard and Dr. W. E. Taft, of Worcester; Dr. H. C. Woodman, of Boston, and Attorney Morrell.

—Alexander C. Martin, one of the pioneer druggists of Chelsea, is dead, after a long illness, at the age of sixty-four. He went to Chelsea as a young man and later bought the store of his employer.

DRUG FIRMS MOVING BACK.

Baltimore, April 8.—An event of interest this week in drug circles was the opening of the Hablston-Breckman Drug Company's new store on the northeast corner of Baltimore and Gay streets, where it was located before the great fire. This building was among those laid in ruins by the flames, and the company has since then occupied quarters a few doors north on Gay street. Now it is once more on the old stand, where a handsome four-story structure has been reared. The interior is finished in light stucco, handsomely frescoed. All the cases are of mahogany, with beveled glass fronts, while the smaller cases are wholly of glass. The soda water fountain is particularly handsome, taking up a large part of one side and having all the latest appliances of such apparatus. The corner has been occupied as a drug store since 1823.

Parke, Davis & Company are slowly getting into their new warehouse, on German street, just east of Charles, where they will occupy every floor of a fine five-story structure. This week the signs were put up and some of the fixtures and goods were installed.

RETAIL DRUGGISTS TO MEET.

Baltimore, April 8.—The Baltimore R. D. A. will on next Wednesday hold its annual meeting in Sonnenburg's Hall, Baltimore and Greene streets, when the yearly reports will be read, officers elected and other business of an important character transacted. The meeting is expected to result in an interchange of views on various matters of vital moment to the trade, and it is not unlikely that some action or expression of opinion on the pending suit of the Klmgel Pharmacy against various wholesale and manufacturing druggists and against the association members will be taken. Both sides profess to be ready to try the issue on its merits. The retail pharmacists affiliated with the N. A. R. D. say that they are not willing to stand in the attitude of maintaining an unlawful organization, and that if their methods of enforcing price lists are illegal they are ready to discontinue them. But if, on the other hand, the means employed are within the provisions of the statutes, this fact they also desire to be made patent and incontestable.

FOWLER CO. AGAIN SUES.

Louisville, April 8.—The J. W. Fowler Drug Company has entered suit against Lawrence and Saunders Jones, owners of the property occupied by the drug company, for damages in the sum of \$100,000, alleging its business has been damaged to that extent by reason of the failure of defendants to construct a new building or to pay plaintiff \$5,000 forfeit. It is alleged the Jones brothers also annoyed plaintiff greatly, tearing away part of the roof and in other ways attempting to make the drug company move.

The suit is the outcome of the case recently decided by the Court of Appeals, which gave the drug company the right to occupy the corner unless given a forfeit of \$5,000.

DRUGGIST AGAIN MISSING.

Baltimore, April 8.—W. A. Pryor, a druggist who has figured several times in the public prints by reason of a disposition to vanish every now and then, is missing again. He has been conducting a pharmacy at Canton, on the eastern outskirts of the city, and disappeared last Sunday afternoon. When last seen he seemed to be in the best of spirits. After waiting on several customers, he went out, and nothing has been heard of him since.

Mrs. Pryor has no apprehension for her husband's safety. He is about forty-five years old, of medium height and build, and has an extensive acquaintance.

NORFOLK DRUGGIST ARRESTED.

Norfolk, Va., April 8.—Dr. Charles R. McKimmie, a druggist of this city, was arraigned in the police court on April 5, on the charge of selling morphine without the prescription of a physician. The law requires a prescription for every sale of the drug, and the prescription can be used only once. The charge was preferred because of the suicide of Edith Turner, a young girl, in Savannah, Ga., by taking the poison. The druggist and a clerk declared that they did not sell the drug.

BALTIMORE NOTES.

—The Ellbert Courtney Chemical Company has been incorporated, with a capital stock of \$10,000, by Robert A. Courtney, Jr., Peter J. Campbell, Ralph Nolley, Henry B. Mentis and Richard Harry Peoly, for the manufacture of chemicals. —Jacob L. Mayer, a druggist at 1643 Pennsylvania avenue, applied on the 3d inst. for the benefit of the bankruptcy law. His liabilities are placed at \$2,985.30 and his assets at \$1,666.67, of which \$750 is stock in trade and \$750 fixtures, etc.

—Dr. R. Millard, of the new firm of Morgan & Millard, has gone to Boston to get ideas about drug store fixtures and other appointments, to be utilized in the equipment of the pharmacy to be opened by the firm on the old site of the Sun, southeast corner of Baltimore and South streets.

—The State Board of Pharmacy held a meeting last Thursday, to consider the applications for admission to registration as pharmacists or assistants.

O. V. R. D. A. MEMBERSHIP.

Cincinnati, April 11.—The membership of the O. Val. R. D. A. is rapidly increasing, under vigorous campaigning. Last week several local druggists joined the association, while the druggists of Harrison, three in number, also became members. "This is gratifying," said President A. O. Zwick, "and will increase our influence. There are only a handful of druggists here still outside the fold, and these are mostly of a class who could not be induced to join the association because of the business methods they pursue."

—C. M. Rawlins, the well-known druggist of 1253 Euclid avenue, Cleveland, O., has been granted a patent on a dental floss holder.

SCHEDULES IN EFFECT.

St. Louis Club Proprietors Announce
New Prices on "Big Six" Goods.

New schedules on St. Louis Club goods were announced last week and were arranged to take effect April 5. Full prices are to be in force at New Orleans, Duluth and several smaller towns in Michigan, Pennsylvania and Virginia.

The so-called St. Louis Club has now reached the sixth month of its existence. Under the guidance of Dr. V. Mott Pierce, its representatives have succeeded in bettering trade conditions in many large cities, notably Washington, with a schedule of 85 cents; Detroit, 83 cents; Cleveland, 91 cents, and Boston, 73 cents. The complete schedules are as follows:

Cleveland, O.	25	47	91
Detroit, Mich.	25	45	83
Saginaw, Mich.	23	45	85
Day City, Mich.* ..	25	45 & 50	90
Grand Rapids, Mich.*	25	45	90
Kilmer and Pierce goods 40 to 50c.*			
Perrysburg, Mich.	Full prices.		
Manistee, Mich.	Full prices.		
Manchester, N. H.	25	50	85
Washington, D. C.	25	50	85
Nashville, Tenn.	25	50	85
New Orleans, La.	Full prices.		
Atlanta, Ga.	19	39	73
Birmingham, Ala.	19	39	73
Boston, Mass.	19	39	73
Lynn, Mass.	19	39	73
Salem, Mass.	19	39	73
Malden, Mass.	19	39	73
Chelsea, Mass.	19	39	73
Cambridge, Mass.	19	39	73
Dorchester, Mass.	19	39	73
Jamaica Plains, Mass.	19	39	73
Chicago, Ill.*	19	37	69
Duluth, Minn.	Full prices.		
San Francisco, Cal.	20	40	80
Los Angeles, Cal.	20	40	80
Warren, Pa.	Full prices.		
Lancaster, Pa.	Full prices.		
Easton, Pa.	Full prices.		
Petersburg, Va.	Full prices.		
Lynchburg, Va.	Full prices.		
St. Paul, Minn.	25	45	85
Minneapolis, Minn.	25	45	85
St. Louis, Mo.	25	42	83
Kansas City, Mo.	19	39	79
Kansas City, Kan.	19	39	79
Grand Rapids, Mich.* ..	Dr. Shoop, full prices		
Day City, Mich.*	Dr. Shoop, full prices		
Chicago, Ill.*	Dr. Shoop, 83 cents.		

All schedules have been arranged in the past so that the prices on \$8.50 goods range from 10 to 15 per cent higher in all instances.

These schedules have been obtained by Class "C" agents in all cases except St. Louis and Kansas City.

The proprietors in the St. Louis Club, otherwise known as the "Big Six," are: World's Dispensary Medical Association (Pierce goods), Buffalo, N. Y.; California Fig Syrup Co., San Francisco; Dr. Kilmer & Co., Binghamton, N. Y.; The Piso Co., Warren, Pa.; Dr. Shoop Family Medicine Co., Racine, Wis.; Paris Medicine Co., St. Louis, Mo.

ILLINOIS PH. A. MEETING.

The twenty-sixth annual convention of the Illinois Pharmaceutical Association will be held at Chicago, August 22, 23 and 24. As was the case last year, the entertainment features have been placed entirely in the hands of the Illinois Pharmaceutical Travelers' Association, who are soliciting contributions of cash or merchandise to help defray expenses. C. C. Lake, 195 Randolph street, Chicago, is the secretary and treasurer.

DRUGGIST NOW PUBLIC OFFICIAL.

Detroit, April 8.—Jacob J. Haarer, pharmacist at the corner of Myrtle and Fifteenth streets, this city, just named by the mayor for commissioner of public works, is a shining example of what a young man can do when he makes up his mind to it. He was born October 4, 1864, in Washtenaw county, Michigan, of German parentage. In 1883 he started out for himself, and has been paying bold ever since, being a bachelor. After leaving college in Elmhurst, Ill., he went into a drug store, thence to the University of Michigan pharmacy department, and in 1886 came to Detroit. In 1893 he purchased the drug store which he now runs.

In 1897 he was elected alderman for the tenth ward. He served five years in

JACOB J. HAARER.

this position, for one term being president of the council, with signal ability, and when the administration of city affairs was changed from the Democratic to Republican last fall, his friends predicted that he would be found among the leading advisers of the new administration. Their prediction has come true, and he now has an appointment for four years at a salary of \$5,000 a year.

Pointing to his little pharmacy with visible pride, he remarked: "I got my friends right here, which, after all is over and done, must continue to be my source of livelihood."

MORE LIQUOR PROSECUTIONS.

Kansas City, April 6.—A campaign is being waged here against druggists who sell liquor without conforming to the license laws. By order of the police commissioners, all saloons are now closed on Sunday, and the belief exists among the city authorities that entirely too much liquor is being sold on the sly by druggists. Only one arrest has been made thus far, but the promise is held out that there will be many prosecutions. The victim under arrest is H. E. Olney, a clerk employed in Huckle's Drug Store, at Eleventh and Walnut streets. The complainant is W. H. Harrison, city license inspector. Olney is charged with selling liquor without a license.

REGISTERED IN MICHIGAN.

Cadillac, Mich., March 26.—The Michigan Board of Pharmacy held a meeting at Grand Rapids, March 21-23, and examined twenty-nine applicants for registration as registered pharmacists, and thirty-eight as assistant registered pharmacists. Of this number twenty-seven received registered pharmacist papers and twenty-six received assistant pharmacist papers, as follows:

Registered Pharmacists—Wilford O. Bourbonnells, Detroit; Charles E. Brown, Lowell; Charles Brandenburg, Benton Harbor; Wesley B. Covey, Bonor; Vern L. Correy, Allen; James C. Campbell, St. Ignace; Milford J. Daper, Saginaw; Melvin R. Doo, North Branch; Alexander Duroolman, Big Rapids; Frank Fredericks, Niles; John F. Harris, Bay City; Joseph M. Huffman, Jackson; Frank D. Johnson, Muskegon; Chas. J. Kimling, Jackson; Frank M. Metcalf, Charlevoix; Herman G. Meyer, Ann Arbor; Richard J. Morley, Tuo Sock; Alex. A. Mercer, Detroit; Geo. L. Olsson, Marquette; Frank Perrault, Detroit; Geo. Paquin, Grand Mareis; Celestia Pershall, Bowell; Clon. F. Reynolds, Owosso; Mabel C. Acommond, Bear Lake; Francis Schroeder, Detroit; Edna F. Stekler, Cowe; Fred R. Stamer, Cedar Springs.

Assistant Pharmacists—Lawrence H. Acker, Charlevoix; Harry J. Allen, Bad Ax; Grover H. Burke, Marlette; Otto L. Beyer, Detroit; Jay L. Bullock, Hadley; Gordon B. Clark, Marlette; Ernest W. Clark, Mayville; Earnest L. Chadwick, Ludington; Ned Clark, Cadillac; Jas. F. Cain, River Rouge; C. A. Drake, Yale; Peter Forkenson, Ludington; John S. Cranfin, Escanaba; H. D. Hudson, Grand Rapids; A. E. Jay, Grand Rapids; Albert McGeorge, Bit Rapids; Otto R. Nouman, Detroit; Arthur V. Nellist, Cadillac; Day-ton N. Surplice, Ludington; Frank B. Snell, Vermontville; Clyde F. Shirliff, Bear Lake; Addison Souder, Brown City; Burt W. Tuttle, Metamora; Nina Vanhorn, Marlette; H. A. Wagar, Gladwin; W. J. Walker, Midland.

The next examination will be held at Star Island, June 26-28.

LICENSED IN OREGON.

Salem, Ore., March 21.—The following passed a successful examination before the State Board of Pharmacy:

Licentiate—C. W. Grover, Woodburn; E. L. Ross, Portland; C. A. Beauchamp, Stayton; Willis W. McKenzie, Lostine; Frank W. Murphy, Portland; David Grigg, Cottage Grove; John H. Greves, Portland; Conrad Staffin, Dallas; Ross A. Farr, Oregon City; Samuel L. Dillard, Roseburg; J. W. Buster, Eugene; William Menefee, Gaston.

Assistants—W. D. Forsythe, Corvallis; A. G. Newsome, Silverton; G. A. Henderson, Portland; W. J. Miles, Salem; C. Cal Boswell, Vale, and Carl Thompson, Portland.

Election of officers of the board resulted as follows: Clyde G. Huntley, president, Oregon City; Zadoc J. Riggs, secretary, Salem; Kittle W. Harbord, treasurer, Salem; John M. A. Lane, Geo. C. Blakely, members of board.

—W. H. Wood, druggist, Jackson, Miss., died in Chicago.

WISCONSIN FORMULA BILL.

Dead Forever so far as This Session is Concerned.

Milwaukee, Wis., April 8.—Wisconsin druggists have won their principal fight before the State Legislature. In this contest they were loyally and ably seconded by the newspapers of the State and succeeded in overcoming great obstacles. They have killed the so-called Noble bill, a measure introduced by a physician, in the interests of the practicing physicians of the State, at the expense of the druggists. It provided that every patent or proprietary medicine should have the formula printed on the outside wrapper. The Senate Committee on State Affairs has finally voted to recommend the bill for indefinite postponement, which means the bill is dead forever, so far as this session of the Legislature is concerned.

A QUESTION OF EXPENSE.

Milwaukee, April 8.—The A. Spiegel Drug Company, of this city, is up against a tough proposition on the expense question. It occupies the principal retail corner in the city, West Water street and Grand avenue, and does the largest retail drug business and also a considerable amount of wholesaling in specialties. It occupies a room about 30 by 100 feet with an "L" half as large. This, with basement, constitutes all that it gets for \$7,500 a year. Now its lease is about to expire and along comes the Pennsylvania Railroad with an offer of \$12,000 a year for the place. Hackett & Hoff, the owners of the building have agreed to give the Spiegel Company the refusal of the place and the company is now trying to figure out how it can increase its profits \$4,500 a year to justify the increased expense.

OBJECT TO LABEL LAW.

Milwaukee, April 10.—Manufacturers of proprietary medicines in Wisconsin have cut out all business in Massachusetts and Maine. They have instructed their agents in those States to cancel all orders made with dealers for goods to be delivered after the new label laws go into effect. The objectionable feature in the new law is the same as that which caused the death of the Noble bill, in the Wisconsin Legislature—requiring the formula to be printed on the outside of packages. The Shoop Family Medicine Company, of Racine, was the first to cancel orders, instructing agents by wire. The company will call for a conference of manufacturers, at which some plan of campaign will be formed to combat such legislation in other States.

DAHL LIQUOR BILL PASSED.

Madison, Wis., April 2.—The legislature has passed the so-called Dahl liquor bill, which is aimed at unscrupulous druggists. The bill is intended to prevent druggists running liquor houses on government license. It provides that each purchaser of liquor must make affidavit that it is for medicinal purposes. He must give his name and address and the druggist must file the affidavits, together with record of sales, with the clerk of village or city. Revocation of the pharmacist's license is one penalty.

IN WISCONSIN.

—E. W. Sackett, of Appleton, is sojourning at Asheville, N. C.

—Harry Demock, formerly in charge of Dr. Hungen's pharmacy at Pittsville, has purchased the drug store of J. C. Webster, at Ladysmith.

—Louis F. Fischer, a traveling salesman for the Yahr & Lange Drug Company, has quit the firm, and has been succeeded by J. B. Segall.

—Oscar Ehardt for ten years with the F. Dohmen Company, of Milwaukee, has gone to Minneapolis to engage in the floral wire design business.

—Henry C. Schrank, of Milwaukee, who recently retired as a member of the State Board of Pharmacy, probably will make a trip to Europe for his health.

—M. B. Olsen, of Melrose, has sold his drug store to Ward O. Gilbert, of Janesville, and has gone to North Dakota to engage in the same business.

—A front will be built to the residence at 198 Wisconsin street, Milwaukee, and the remodeled building will be occupied by W. D. Van Dyke, as a drug store.

—Ilerman Discher, of Manitowoc, registered pharmacist in the Meyers Drug Store, at Kaukauna, will be married shortly to Miss Anna Spinks, a Chicago school teacher.

—The Stearns Drug Store, of Shullsburg, is occupying temporary quarters while its place of business is being remodeled. Edgar Gundry has taken the management of the store.

—Edmond C. Neumann has bought the Gerlach & Haase Pharmacy, at West Bend. Mr. Gerlach is traveling for the Phoenix Surgical Dressing Company, and Mr. Haase is with Kremers & Urban, manufacturers of pharmaceutical preparations.

—O. B. Roberg, druggist of Eau Claire, has been appointed a member of the State Board of Pharmacy, to serve until 1909. Mr. Roberg will shortly move his drug store into a building he has recently purchased and which he is fitting out in a modern way.

—The building at Clintonville occupied by the drug store of John Kalmes, was partly destroyed by fire and the drug stock was practically ruined. Mr. Kalmes came immediately to Milwaukee, purchased a new stock and is dispensing temporarily in an adjoining building.

—J. E. Kopenick & Co., of North Fond du Lac, recently burned out, will have a larger and better store before the summer is over. Work has already started on a new brick block, of which the drug store will occupy the first floor. New stock and fixtures are to be purchased.

—Howard Greene, president of the German, Pfueger & Kuehnsted Company, of Milwaukee, has resigned his commission as major in the Wisconsin National Guard, owing to the pressure of business. Mr. Greene was adjutant in the Fourth Regiment during the Spanish-American war, and was promoted to be a major.

—William B. Strong has taken the active management of the German, Pfueger & Kuehnsted Company, Milwaukee, succeeding Charles A. Jerman, and Henry Cook, formerly with the Yahr & Lange Drug Company, of Milwaukee, and later with the Meyer Bros. Drug Company, of St. Louis, has taken charge of the sundries department for the same house.

DRUGGIST LEGISLATORS DIS-AGREE.

St. Paul, Minn., April 8.—In the lower house of the Legislature the other day the druggists disagreed in considering the Stock bill, which requires druggists, beginning with 1909, to be graduates of a school of pharmacy. Henry McColl, of this city, who speaks for the profession on the floor, protested that the requirement was in force in only one State and that it involved a hardship on the poor boy who got his education behind the prescription counter. W. J. Stock, the author of the bill, declared it had the indorsement of the State Ph. A., and was extremely desirable from the professional standpoint. A motion to postpone the measure indefinitely was defeated and H. B. Chamberlain's motion for the progress of the bill was accepted.

MINNESOTA MENTION.

—B. H. Larrabee, a Minneapolis druggist, has been held before the courts on a charge of selling liquor without a license. Before this happened one of his clerks was arraigned on a similar charge and pleaded not guilty.

—D. R. Noyes, of Noyes Bros. & Cutler, the St. Paul wholesale druggists, has been appointed representative for Minnesota of the American National Red Cross Society and will undertake the formation of a branch of the organization in the Gopher State. Such a branch would provide supplies and enlist nurses and others for emergencies at home or abroad.

—C. L. Adams, president of the Adams Drug Co., St. Paul, is enlisted in the cause of the humble newsboy. The St. Paul Daily News, the paper to whose initiative the recent passage by the Legislature of the anti-cocaine bill was due, put up a plan for the free medical treatment of its newsboys. Mr. Adams announces that his company will fill the necessary prescriptions free of charge.

—Allan C. McCord, of La Crosse, Wis., has become interested with the Minneapolis wholesale drug firm of Kennedy, Snuffel & Andrews. For five years Mr. McCord has been in charge of the wholesale business of the McCord Drug Co., of La Crosse. Recently, on the death of James McCord, head of the firm, it was merged with the T. H. Spence Drug Co., and A. C. McCord withdrew.

—A young colored man connected with the drug trade is in serious difficulty in Minneapolis. Henry Roberts, who had charge of the drug department of the T. M. Roberts supply house, an extensive concern, was one of a half dozen employees of the house to be arrested on the charge of having robbed their employer by the wholesale. The accused were held in \$1,000 bail each.

—C. J. Haugen, a druggist doing business in the Eighth ward of Minneapolis, has been fined \$100 or thirty days in the workhouse on the charge of selling liquor without a physician's prescription. O. B. Gifford, Haugen's clerk, was assessed a fine of \$25 or ten days, for a like offense. The booze was sold to a policeman, who alleges he had no trouble in securing what he was after, though he had no prescription.

AMONG THE COLLEGES

CHICAGO COLLEGE OF PHAR- MACY.

Chicago, April 1.—The annual meeting of the Alumni Association of the Chicago College of Pharmacy, held in the Sherman House parlors on the evening of March 29, was preceded by a dinner to the members by Dr. A. W. Baer, '85. The secretary reported the loss of seven members by death during the past year and the reception of thirty-three new members. The report of the treasurer showed receipts during the year amounting to \$451.83 and expenditures of \$476.61, and a balance on hand of \$250.60.

The election of officers resulted as follows: President, E. N. Gathercoal, '95; vice-president, V. J. Chvala, '04; secretary, Max Sobel, '98; treasurer, Paul F. A. Rudnick, '93; historian, Charlotte E. Stinson, '00. Following the installation of the new officers was a discussion of the arrangements for the annual banquet to be tendered the graduating class on the evening of Commencement Day, Thursday, April 27. The president appointed a committee on arrangements for the banquet as follows: Dr. A. W. Baer, '85; A. D. Thorburn, '94; E. D. Irvine, '93; Max Sobel, '98; Margaret M. Gray, '99; E. A. Neversman, '98. P. X. Senger, '04, and Professor W. B. Day, '92.

A course of four special lectures has been given to the senior class during March. On the 15th, Mr. A. E. Ebert spoke on "Pharmacy in Early Chicago." He urged the members of the graduating class to join the association at the earliest opportunity. On March 17, the class visited Dr. A. W. Baer's office and were shown numerous appliances for use in electro-therapeutics, among these being static and X-ray machines. On March 22 Mr. E. D. Irvine gave a talk on "Advertising a Drug Store," and on March 29 Dr. Hugh Wisdom lectured on "First Aid in Emergencies."

NORTH DAKOTA AGRICULTURAL COLLEGE.

Fargo, N. D., March 24.—Work in the department of pharmacy has ceased for this term and many of the students have gone home for a few days of rest. The seniors have finished their work in prescriptions and will take up alkaloidal drug assay next term. The juniors expect to finish their galenical preparations next term.

A number of students will try the State Board examination this spring.

Some of the short course men were recently taken on a tour of inspection through local drug stores and an opportunity was given to note and discuss the general arrangement and conveniences of each store, especial attention being paid to the facilities for prescription work and laboratory equipment. Fargo has a number of excellent stores, each managed by a competent man, and the boys obtained, during their visit much information and many useful points.

Much interest is taken by the students of this department in the proposed new

chemical laboratory which we are assured will be built. One wing of this building will be entirely devoted to pharmaceutical purposes and will be fully equipped with the best of apparatus. With this equipment, this college for teaching pharmacy will offer advantages equal to any school in the Northwest.

Many of the short course men have gone home, but we expect to see them again before the examination, which takes place in May.

WASHINGTON STATE COLLEGE.

Pullman, Wash., April 2.—Governor Mead was the guest of this college for two days during his recent tour of the educational institutions of the State. He was much pleased with our high grade of work and was especially interested in the departments of pharmacy, veterinary medicine and the work of the Experiment Station.

On Monday evening the seniors were pleasantly entertained at the home of their classmate, Mrs. Ray G. Morse. "Five hundred" was the diversion.

On Thursday of last week, Prof. Watt decided that the seniors needed a taste of the "real thing" and accordingly gave them a State Board examination, on two days' notice. It was creditably passed by all, one student making 95 per cent.

Prof. S. B. Nelson, head of the department of veterinary medicine, has challenged Prof. G. H. Watt, head of the department of pharmacy, to a game of baseball, each to be represented by his respective classes. The proceeds of the game are to go to the Y. W. C. A., and the losing professor will banquet the whole aggregation of ball tossers. Prof. Nelson was not aware on issuing the challenge that the "Pharmics" have seven men on the first team. He is game, however, and the contest will be pulled off.

By act of the Legislature, the name of this institution has been changed from the Washington Agricultural College and School of Science to Washington State College.

ATLANTA COLLEGE OF PHAR- MACY.

Atlanta, April 3.—The commencement exercises of the Atlanta College of Pharmacy took place this evening, in the Grand Opera House. The following are members of the graduating class: Carrall E. Black, William J. Bolt, Dawson B. Burns, Archibald S. Coody, William C. Cowart, Jesse G. Coleman, Frank Campbell, Jesse Davis, William O. Deans, James N. Drake, Thomas A. Dry, Francis M. Ellerbe, Reuben T. Franklin, James L. Hooper, Walter S. Humphries, Belton E. Jennings, Alexander S. Knight, Guy G. Lunford, William M. McDonald, Bernard McLaurne, Benjamin A. McManus, Samuel L. Moyer, George L. Miller, James A. Olivell, Champ H. Parkins, Holley H. Parr, Elmos C. Poole, Davis S. Porter, Walter R. Reed, Brummit K. Reeves, William B. Spain, Arthur C. Traylor, Rufus M. Werts, Preston Y. Whitman, Clarence D. Williams, Miss Nell Gwin Wright.

The class officers are: President, Francis M. Ellerbe; vice-president, A. Stinson Coody; secretary and treasurer, James N. Drake; quizmaster, Carroll E. Black, chaplain, William J. Bolt.

ST. LOUIS COLLEGE OF PHAR- MACY.

St. Louis, April 8.—The faculty of the St. Louis C. P. have selected Father W. Bank Rodgers, president of St. Louis University, as valedictorian for the faculty at the commencement exercises, April 28. The graduating class of sixty is now assured.

At the last meeting of the board of directors of the college, W. K. Eckhardt, Dr. J. O. Fouch and Dr. R. H. Whelpley were appointed a committee to write a history of pharmacy in St. Louis and of the college. Much of this history will be secured from the old druggists, among whom are Charles Bang, who has been in business in this city since the forties, and Enno Sander.

NEW QUARTERS FOR STU- DENTS.

Students of the New York College of Pharmacy (Columbia University) are advised that in September, 1905, the trustees of the university will throw open two new dormitories on South Field, namely, Hartley Hall and Livingston Hall. Each has accommodations for 300 students, and is thoroughly modern in every way. Their proximity to the One Hundred and Sixteenth street station of the subway brings them to within eight or ten minutes of the college. The average rate for single rooms, completely furnished, will not exceed \$125 for the academic year. Assignment of rooms will be made as soon as practicable after May 1.

NO GOWNS FOR GRADS.

Once more the cap and gown question has appeared to vex the graduating class of the Brooklyn College of Pharmacy, with the result that these classic regalia will not be seen at this year's commencement and the occasion will be as unconstrained and entertaining as ever. The commencement exercises will be held Thursday evening, May 11, at the Baptist Temple, Third avenue and Schermerhorn street. On the same night the Alumni Association will give a dinner to the graduating class.

AN ICE CREAM DISHER.

Erle Specialty Co., Erie, Pa., are placing on the market a new ice cream disher which will appeal to those who want some thing better than heretofore used. They claim for it durability, it being made of copper and bronze, nickel plated, so that it will not rust or wear out; ease of operation, being easily operated with one hand; sanitary, as it is instantly cleaned without taking it apart, by placing in water. It also leaves the cream in the dish in pramoid shape which the customers so much desire. It is guaranteed and money refunded after two weeks' trial if not perfectly satisfactory.

—At Jeffersonville, Ind., Martha Atkins, in a suit brought against Charles D. Knoefel, druggist, has been awarded by a jury \$2,000 damages. The plaintiff had suit for \$15,000, alleging that the defendant had sold her acetanilid for phosphate of soda, and that the error had resulted in inducing a dilated heart, with which, she alleged, she had suffered greatly for two years.

We don't care how complete or how limited a line of manicure goods you carry, you will find sale for this set, which retails for 50 cents. We say this knowingly, for no other manufacturer in the United States compares with us in the volume of our manicure business.

Our development of this line pointed out to us the call for an inexpensive set of this kind, and when we put it out over a year ago, the call was immediate, and grew at a rate out of proportion to any of our other manicure specialties. This shows the practical need of such a set.

This set contains a 6 1/8 inch polisher, pad of English felting, chamois covered; double pointed manicure stick; Grecian emery board and our Princess Nail Powder.

Price is \$4.00 per dozen.

There is so much real value in this set that we like to send sample to anyone interested, post-paid, upon receipt of price.

Ask for sample set and look it over carefully.

THIS HANDSOME OUTFIT FREE.

Made of the finest imported German stoneware and decorated in colors. Faucet connections for drawing the Rootbeer. Nothing so practical, ornamental and complete ever graced a fountain. Write for particulars and Free ticket offers, or ask your jobber.

Hires Rootbeer Pays the Largest Profit and Enjoys the Greatest Popularity of Any Fountain Drink When Served the Right Way.

The right way: Use 1 gallon Hires Fountain Rootbeer and 8 gallons of water in a 10 gallon tank, charge to 135 and attach to draft tube. Draw off some in the Rootbeer container of bowl. When serving fill the stein two thirds full from container and finish from tank. Profit \$7 to \$8 to the gallon of syrup.

THE CHARLES E. HIRES COMPANY, Philadelphia, U. S. A.

 We won the highest award over all other fountain drinks at the World's Fair.

TRADE SECTION

"JUST OUT."

A Too Familiar Phrase in Drug Stores of To-day.

THE LAITY THINKS LACK OF CAPITAL.—THE DRUGGIST KNOWS LACK OF CARE.—"WRITE IT DOWN NOW" THE SAFE RULE.—WANT BOOK ALWAYS NEARBY.—HOW ONE DRUGGIST COMBATED THE EVIL.

If you haven't the goods, you can't sell them.

Which sums up the necessity for keeping up stock properly. How to do it is a question that is puzzling every store-keeper more or less.

The drug store, with its heterogeneous collection of goods, is bound to be continually running out of things, and it is the ambition of every proprietor, and should be the study of every employe, to keep it well stocked up on salable articles. Salable is perhaps too elastic a term. An elephant, kept long enough, could ultimately find a purchaser. "Demandable" would perhaps fit the case better.

A person enters a drug store to purchase So and So's liver tablets. A query. The druggist hunts for the seldom-called-for liver tablets and finds that he is "just out" of them—also a customer. The customer goes elsewhere. Perhaps he continues to go elsewhere for other things.

Proprietary articles are so numerous, advertising so extensive, that it is practically impossible for the small druggist to keep a complete line. It is not however, the small drug store having but one or two clerks, that suffers most from bad stock keeping; it is the medium-sized store, too large for the dominating force of the proprietor and too small for specialized stock keeping.

HIDDEN ARTICLES OFTEN OUT.

In the medium sized store, say with three or more clerks, things are often bound to be "just out." This may be best explained by saying that what is everybody's business is nobody's business. True, there is usually a personage dubbed a stock clerk. But he only superficially "sizes up" things. A space vacant here or there tells its own tale and he is not slow to replace sold articles. But when it comes to the hidden knick-knacks, such as pills and tablets and little-called-for articles, stocked in drawers and out of the way places, he is at a loss.

The laity are quick to infer; generally too quick. The fact that Jones, the druggist was out of Blank's tablets may influence him to believe that the last prescription was, maybe, shy an ounce or two of good medicine.

Whether the explanations made for being without asked-for articles are offered perfunctorily or not, the bearer is bound to assume that the druggist, employer or employe, is in fault either through carelessness or because of lack of capital. The

layman does not stop to think of the many times he has procured needed articles at Jones'; he has only seen the present inconvenience.

WHAT THE LAYMAN THINKS.

Many people swear by some little-heard-of article. It is perhaps a heritage in the family, and they are narrow minded enough to judge the drug store that is "just out" of their favorite panacea as a "dead one."

In these days of up-to-date wholesaling, the small dealer is on a virtually the same footing with his wealthier competitor. In large cities, where daily ordering by phone is practiced, there should be no excuse for being long out of anything, if the article short is properly noted. There, of course, is the rub.

"I sold the last one and didn't put it down" may explain the absence of a looked-for "cure-all," but it never satisfies the man who does things. The plea, "I was too busy, or I meant to do it" is also unsatisfactory. In a busy store, where each man writes a hundred and fifty to three hundred checks a day, there is sure to be at least one man who is a poor stock keeper and who needs considerable watching in this particular.

A SAFE RULE.

There is no time like the present to note short quantities. One man, acknowledging to be a good stock keeper, has a safe rule. "If you don't see one more, put it down," says he, and coupled with this axiom is the familiar catch-word "Do-it-now." And he does it at the time. Indeed, before the article in question is passed over to the customer, it is on record in the want book, which is kept conveniently near the do-up counter, and is never allowed to stray away from its accustomed place, except when orders are being given. Even then a sub want-book is at hand.

No great matter if there is a quantity of a needed article in the cellar. Be on the safe side. The man who buys should know about what he has. The card index system in general use, is a check on overbuying, if the buyer be not too lazy or too busy to use it.

This, then, would appear to be the best way: "When in doubt, put it down."—but do it while it is in your mind.

PRESCRIPTION SPECIALTIES.

And "just outs" in the prescription department are just as frequent, and cause more annoyance than the same trouble at the proprietary counter. A man may have a prescription for four ounces of X's codain cough compound. He buys a pint bottle and is surprised to find suddenly that he is unable to fill a repeat prescription. The party who presents the renewal wonders at the delay incidental to borrowing sufficient of the mixture from a neighboring pharmacist, or perhaps, fumes loudly at the druggist's explanations which do not explain.

"Humph" mutters the disgruntled man.

"Doctor's giving me some patent medicine stuff," and later the doctor hears of it and resolves to make sure of his druggist for the future.

"But," says a practical druggist-proprietor, "these things should not occur," and he is right. Nevertheless, they do occur, and too frequently.

Take it to yourselves. If you wanted a fourteen and a half collar, and your haberdasher was "sorry, but—" what would you think? "Ab!" say you, "but that's different." Not a whit different from the layman's standpoint. Unfortunately, to his mind, commercialism has placed the drug business on a plane with the haberdashery and the delicatessen store.

A DRUGGIST'S REMEDY.

What is the remedy when "just outs" become too prominent a feature?

"Well," said a druggist who has several stores, "this was my alternative remedy: In one of my stores I had continual complaints about being without demanded goods.

"I went on a Monday morning (contrary to my usual practice) to this store and talked with the men when they were all on duty. This was my ultimatum: 'Each man must take turns, in point of seniority, at the sales counter. I shall camp out in this store beginning to-morrow morning, and I shall watch things closely. The first sale that is lost because of being 'just out' of anything that we ought to carry, will be charged up to the man who loses the customer.'

HOW IT WORKED.

"Tuesday morning I had an order from that store that made me smile grimly. It was triple the size of the record breaker when I started the branch. I said nothing, however, about it, but took my own medicine and camped out all day Tuesday and Wednesday. Had my meals brought in to me, at the store. And only two sales were lost during that time; the supplies for one had already been ordered, the other overlooked. My edict, backed up with my presence, had done the work. I have had little trouble there since.

"How did they beat me? Why, the whole force combined for the common good and their personal pocketbooks. They stayed the greater part of Monday night and with The Era blue book, wholesalers' lists and the like, whipped things into shape in shorter order than I could have done, personally, in several days."

"That is the point—combination for common good; unselfishness. And the poor stock keeper should remember that, while he is not apparently a loser financially by his laxity, the time may come some day when this great fault will place him without the pall of managing positions.

An Eastern salesman who was in Chicago in February, was thoroughly chilled by seeing two young ladies drinking ice cream soda when the mercury stood at eighteen degrees below zero.

SODA ON CENTRAL BROADWAY

In New York's Upper Dry Goods Region

The Fountain of the Knickerbocker Drug Co.—A Talk by W. C. Bucher, Manager of Soda Department—Wide Work Board Saves Breakage—Study of Local Trade Conditions Factor in Success

To what particular feature do we attribute the success of our, and, indeed, any soda business? First, as a matter of course, I give due credit to the fountain. Ours is an elegant structure, as can be seen, and just as easily manipulated as any to be found. The next requisite is a study of the local trade conditions. We keep careful watch on our patrons' wants, and try to serve them accordingly. A constantly observant eye for all improvements, modern features and novelties is of prime importance. I believe that these principles will sum up the major points of the source of our success. I am firm in the contention for, first of all, a beautiful fountain, one that will attract attention and draw the crowd to the counter, giving them the best soda to hold them. There will then be no trouble in keeping busy, providing, of course, you draw good soda and give good service and constant attention. One thing should always be kept in mind: soda water is a luxury, not a necessity; therefore, one must cater to his trade to keep it and to build up even better results.

We agree with Mr. Murray, of Hegeman & Co., in his rules for dispensers, and such essentials as relate to systematic work. I think with him that the soda manufacturer's labor is in the selection of material and the enforcing of courtesy in the treatment of patrons; the quality most of all needed in service and an attribute which can easily be cultivated in dispensers. Much can be condoned in a rush of business, in a misunderstanding of wants, accidents in the delivery of drinks, etc., providing that politeness is in evidence at all times. The inflexible rule here is, consideration for the customer in front of the counter.

A BOTTLE SYSTEM FOUNTAIN.

Let us begin at the beginning, or what we consider the beginning of good soda water—a first-class fountain. We are using a special design of the L. A. Becker Twentieth Century fountain, which is constructed along the latest modern lines, thereby satisfying the demands of the present day for sanitation. Sanitation prevails where everything is open and above-board to the sight of the customer. The mirrors in the back reflect a full view of the entire drain board, which is thirty-five feet long and a foot and one-half wide, made of marble, and covered with solid German silver throughout. Connected with the drain board are six ice cream packers. The work board, as well as the fountain proper, is laid out in sections, each complete in itself, yet complementing the others, which permits the men to draw with ease and rapidity and does away

with the old fault of one man having to cross another. For that matter, there is ample space between the counter and the fountain in our apparatus for two men to stand abreast, with perfect comfort.

No racks are used on the floor, and it is surprising how very little care is needed to keep the pavement dry and in perfect

W. C. BUCHER.

condition. This is a strong point in favor of our particular make of fountain.

Too much cannot be said in favor of a wide work board, if for no other reason than the economy in glasses. My experience with small, narrow drain boards is that they cause more breakage by two-thirds than the wider and more roomy ones. Our breakage here is extremely small, considering the amount of business we do.

PLAN OF REFRIGERATION.

As for the icing, our system is unsurpassed for economy of ice and general results, for the refrigerating compartment runs the full length of the fountain, and, indeed, constitutes its base. There are three ice boxes; one under each section of the fountain. Besides, there is a box for holding chopped ice, which performs the two distinct functions of giving the soda and mineral waters their first cooling and of circulating a constant flow of intensely cold air throughout the entire base. This refrigerator compartment, running throughout the bottom of the fountain, is itself divided into ten sections. A glass door is provided for each section, permitting a full view of the stock of syrups, cream, eggs, fruits, mineral water, etc., contained therein.

This system of double cooling from the fountain's base, renders our soda extremely cold at all times and does away with the extra expense of having an elaborate arrangement of cooling tanks, etc., in the cellar. The soda itself goes through a triple filtration before entering an automatic carbonator, which keeps the fountain supplied without any other care than an occasional replacing of an empty gas tank by a full one. We keep two gas tanks, connected up all the time, insuring against a complete running out of gas, even for a moment.

We have a B. & B. carbonator of a capacity of 200 gallons of soda per hour. This is supplied with water from a Buh-ring filter.

SUBTERRANEAN APPLIANCES.

In the same section of our cellar is installed our apparatus for the manufacture of ice cream, which is, of course, run by electric power. Indeed, electric power is applied by us to everything where it is feasible. This machine's capacity for turning out ice cream is 120 quarts per hour. Here, also, we make our own syrups, fruit juices and crushed fruits whenever we can obtain the supply of fresh fruits at reasonable prices in the general market; in other words, when they are in season. During the other months of the year we use the preparations of the J. Hungerford Smith Co.

Returning to the upstairs apparatus, a few more details regarding our fountain seem in order. As said before, it is a Becker Twentieth Century. The length of the fountain is thirty-five feet; the length of the counter is forty feet; the fountain is mahogany and onyx, and the whole apparatus is divided architecturally into three sections. There are four large plate-glass mirrors, and in front of these will be seen the syrup bottles, standing in semi-circular groups. These rest on ice, but their tops project into plain view, following the key idea of the Becker fountain. This use of mirrors we consider very effective, for most customers like to see themselves reflected, and, indeed, the decorative quality of a mirror may be almost instantly recognized by anyone. Besides the serving capacity of our fountain, we have forty small tables for the use of those customers who prefer being seated, and these are distributed further back in the store.

Our working force consists of six dispensers, in the summer season, exclusive of the manufacturing department, in which two men are constantly employed.

We handle all the specialties and patent drinks that are in demand, believing it poor judgment not to keep everything within reason that is frequently called for. First of them all is Coca-Cola, and the demand for this popular drink seems to be greatly on the increase. Among the food drinks some of the leaders are kumys and malted milk. Very little care is needed to put them out in proper shape. If a dispenser will but take pains. To some, the serving of malted milk has for a long while been a worry, but we have solved the problem. I find that it can be proved absolutely soluble with a little attention. The call of our trade for fancy drinks is enormous. We have a list comprising about one hundred cold drinks and forty-three hot ones. Many of them are special and original with ourselves.

FOUNTAIN IN DRY GOODS DISTRICT, NEW YORK.

The Apparatus of the Knickerbocker Drug Co., 648 Broadway. A Becker Twentieth Century. Note the Style of Bottles on Back counter, length, 35 feet; counter, 40 feet. Finish, Mahogany, Onyx and Large Mirrors.

A FINE EGG SHERBET.

Our leader just now is egg sherbet. The syrup for this I now mix myself, as I do all of our specialties. The basis of the flavor of the sherbet is from an extract that I make, and to that I add fruit syrups. This, when shaken up with pure cream and egg and mixed with soda, makes a most delicious beverage.

We use only pure cream in all our drinks. I find that the cost is, indeed, far in excess of the common mixture of the ordinary milk and water, but the satisfaction derived from the superior quality balances the extra expense and we know it is the best in the long run.

We endeavor to carry out this method of using the very best material obtainable for all of the drinks we serve; there is no question but that it is the best policy.

A special feature of this fountain during the winter, is our hot chocolate. We serve a finished chocolate, made entirely of milk, cocoa and sugar. This is made down stairs, brought up stairs and put in an urn made especially for this purpose. The chocolate is served in small, dainty Japanese cups, and it is a common thing to have our customers exclaim how thoroughly delicious it is. Coffee also served in the same way, made after the same style, enjoyed a similar success.

Our check system for sales at the fountain is the giving of a pasteboard check to the customer by the dispenser, which the former pays for at the cashier's desk,

as he goes out. This, I believe, is the best way and finds favor with the majority of soda patrons, because many men have a strong dislike to pay for their check before the service of the desired drink.

LOCAL SITUATION.

Any business has its peculiarities, due to local environments, and ours is no exception. These conditions we noted before choosing the situation for our enterprise, and, indeed, selected our situation at No. 648 Broadway, at the corner of Bleecker street, because of the vast manufacturing enterprises centered about this vicinity and because of the absence of any drug store for several blocks on either side of us at that time.

The soda fountain as an important feature in our modern drug store, suggested alluring prospects, on account of the many thousands of women and girls employed in the nearby business houses of the millinery, wearing apparel and notion trade; and patronage from these has justified our expectations. This is our third year of the soda department, and our results are continually expanding. On May 1 we move to No. 640 Broadway, southeast corner of Bleecker street. In our new quarters we shall have one hundred feet of plate glass windows on that street, besides those on Broadway, and a nine-foot window on Crosby street. One entrance will open on Broadway, one sixty feet back from Broadway on Bleecker street, and still another

at Bleecker and Crosby streets, within twenty feet of the entrance to the subway.

COLORS AND PERFUME BASES.

Among the many lines legitimately open to a druggist stands out "own make" perfume. All pharmacists feature their own creations in cough mixtures, toilet preparations, etc., but many buy all their perfumery direct from manufacturers. The Evergreen Chemical Co. points out that this field is worth trying. It can easily be successfully done by the use of the Evergreen Chemical Co.'s concentrated flower oils and colors. They state the cost will be but \$1.00 to \$2.25 a pint for the completed perfume, and can be sold from \$4 to \$8 per pint. This concern also offers a formula for a profitable violet talcum and a cold cream. Another of their lines is colors, used extensively by manufacturers of pharmaceutical preparations, soda syrups and cordials. When writing to the Evergreen Chemical Co., 130 Fulton street, New York, for a price list, please mention The Era. The firm's advertisement appears on another page.

—The Minnesota Pharmaceutical Manufacturing Co., St. Paul, will put up a building on University avenue, near Fairview, in the Midway district, easily accessible from either of the Twin Cities. The building will probably be ready for occupancy before the summer is over.

APPRAISERS' DECISIONS.

Cumarin Synthetic.

Cumarin synthetic, imported by George Lueders & Co., was held to be dutiable as a coal-tar preparation, not a color or dye, and not medicinal, under paragraph 20, tariff act of 1897. A similar decision was rendered in the case of an importation by Emil Levi.

Shan Dong Free.

Chinese medicinal roots known as shan dong were held free of duty as crude drugs, as claimed by the importers, See Wo & Co., of San Francisco.

Resorcine.

Resorcine imported by Sykes & Street, at New York, invoiced as resorcine pharmaceutical, was held to have been properly classified as a medicinal preparation.

Neglect of Regulations.

Radium imported by Eimer & Amend was assessed for duty. The importers protested it was free, being imported for the use of an educational institution. The regulations of the Secretary of the Treasury not having been complied with, the protest was overruled.

Manufactures of Charcoal.

Manufactures of charcoal imported by McKesson & Robbins, at New York, were held to have been improperly classified as an article of carbon, not decorated, under paragraph 97, act of 1897, but to be dutiable as an unmenstrated manufactured article, under section 6, as claimed by the importers.

Verdigris Free.

The United States Circuit Court has reversed the Board of General Appraisers in the cases of C. Bischoff & Co. and A. Klipstein & Co., who imported verdigris on which duty was assessed. The importers claimed it free as a subacetate of copper under paragraph 694 of the free list. The appraisers held it dutiable as a chemical salt. The court held that "From testimony which has not been contradicted, it appears to be subacetate of copper, and to have been admitted free of duty as such for some years past. Thus it now appears to have been entitled to free entry."

Pumpkin Seeds Dutiable.

J. L. Hopkins & Co. imported at New York, pumpkin seeds, which were assessed for duty at 30 per cent. ad valorem as seeds of all kinds not specially provided for. The importers protested that the seeds should be admitted to free entry, under paragraph 548, which exempts among other things, "drugs, such as * * * seeds aromatic and seeds of morbid growth, * * * which are drugs and not edible and are in a crude state, * * * not specially provided for."

The Board of General Appraisers overruled the protest and held the seeds dutiable on the following grounds:

"It is true that pumpkin seed is referred to in the United States Dispensatory as having medicinal properties and contain-

ing a fixed oil with an aromatic principle (U. S. Dispensatory, 8 ed., p. 1011), but it is thought the following extract from the appraiser's report, which is not controverted by anything in the evidence, correctly describes the character and uses of pumpkin seed in general:

"The use of pumpkin seed medicinally is small in quantity and infrequent. Its consumption as a garden seed vastly preponderates. It is definitely recognized as one of the most important and most extensively cultivated vegetable seeds, and the pumpkin itself is among the commonest of our vegetables, and the slight medicinal qualities of the seed are known only in professional circles."

"In *Clay v. Magone* (40 Fed. Rep., 230) a verdict was rendered in favor of the appellant's claim that certain celery seed, which had been assessed as 'garden seed,' under paragraph 465 of the tariff act of 1883, were free under the provisions of paragraph 636, which exempted 'drugs * * * seeds aromatic * * * which are not edible and are in a crude state,' etc. It appeared upon the trial of that case that celery seed sold to be sown or planted to raise celery to be consumed by man was sold with marks, etc., to indicate and guarantee the kind of celery it would produce, while the celery seed in controversy in the case was a very cheap article, which was always purchased without statement from the seller, or marks on the bales or the packages containing the same, to indicate what kind of celery it would produce if sold or planted, or that it would even germinate; that it could not be sold for planting purposes, but was used to a slight extent medicinally and chiefly for making celery salt and other condiments. "No attempt has been made in this case, however, to show that the pumpkin seed in question is of any different variety from that sown to raise pumpkins, and in the absence of affirmative proof on this point we should not feel justified in finding that it fell within the category of medicinal seeds rather than that of garden or agricultural seeds."

Salts of Cinchona Bark.

The Board of General Appraisers has sustained the protest of G. W. Sheldon & Co., holding quinine bromide, quinine phosphate and cinchonidine salicylate free of duty as salts of cinchona bark, under paragraph 447, act of 1897. Quinine hydro-ferrocyanate, imported by Merck & Co., was also held free for the same reason.

Stearin Pitch.

Stearin pitch, imported by F. B. Vandegrift & Co., at Chicago, was classified and assessed as an unmenstrated manufactured article, under section 6, act of 1897. The importers claimed it free of duty as soap grease, or as encaustic grease, or if dutiable at all, at 10 per cent. ad valorem, under said section 6, as an unmenstrated manufactured article. The chemical analysis showed the article to have the following composition: Hydro-carbons, 27 per cent.; calcium soap, 12.5 per cent.; saponifiable fatty acid compounds, 60.5 per cent.; the fatty acid compounds being present in about the proportion of one part free acids (stearic) to two parts glycerides (stearin). The Board held the evidence insufficient to justify a disturbance of the assessment of duty.

SHOW WINDOWS AND FEAT- TURES.

Much Variety in the Displays in This City.

NOVEL METHODS OF ADVERTISING SARSAPARILLA.—SOME NOTABLE SHOWINGS IN BROOKLYN WIN- DOWS.—FEATURING CORN FILE AND SALVE.

If it be true that "variety is the spice of life," the drug store window dressers are doing their share toward driving away dull care in New York. From modest and unassuming showings to windows dressed in the most elaborate style, is a wide enough range to meet all fancies. A day's wanderings in the city will show an unlimited variety of displays, appealing to the artistic eye.

J. N. Hegeman & Co., Park Row, are attracting attention by a double demonstration. One-half of their window is given up to velvet molasses candy and a young lady demonstrator in the store gives out samples. The other half of the window is filled with Krato. At the entrance to the store stands another demonstrator, who tells customers that the goods are now reduced from fifty cents to twenty-five cents.

A LESSON IN PHARMACY.

The Hegeman Corporation, 200 Broadway, New York, gave a lesson in pharmacy by featuring a well-known make of sarsaparilla in their show windows. A large receptacle supported a correspondingly large percolator in operation. Parallel with this, one on each side, stood two walnut pedestals supporting a linear glass counter, upon which were displayed the goods in dark red cases. Standing next, on the same line, were columns built of the bottles in cases. The rear corners of the window were filled with semi-circular steps holding the red-covered goods. The hanging at the back was also of dull red.

T's made by one cased bottle placed horizontally across an upright one, covered the floor of the window. The arrangement of these T's was linear, but by standing them obliquely, a very pretty bias effect was given. In the third row they supported large unglazed plates, in which were displayed the crude herbs and roots. The bark of the sarsaparilla, as it comes to market, packed and tied in long sticks, resembling a limb of a tree, was laid crosswise over the T's between the columns and counters and the receptacle and plates.

A large card attached to the percolator read:

"Three principles are involved in the production of this sarsaparilla:

"First—Attention must be paid to the careful cultivation and curing of medicinal plants.

"Second—The scientific selection and combination of the different plants, so that each plant shall either increase the healing powers or correct some objectionable properties of the others.

"Third—The pharmaceutical skill required in the various preparations must be of the highest character.

"All these conditions have been employed in this sarsaparilla."

SOME BROOKLYN WINDOWS.

Sarsaparilla and candy seem to be the run in the show windows this second week in April. Riker's, Fulton street, Brooklyn, are featuring "own make" sarsaparilla in a unique way. The floor of the window is covered with grass (crepe), the background and side being filled in with branches of apple blossoms. In the center, lying upon an imitation rock, is an old game, smoking peacefully. He is attired in a green coat, with large buttons, dun-colored trousers and on his head is a tassel cap of red. In his hand he holds, as if resting between drinks, a bottle of a Riker preparation. The face of the rock is defaced by the usual patent medicine talk. It states: "Pure blood means more than we think; Riker's Sarsaparilla will make your blood pure, we guarantee. Price 75 cents."

In the corner next to the wall is the face of another rock, which says: "Get it at Riker's." The balance of the window is filled with the goods, artistically arranged, among which many miniature figures of the gentleman on the rock appear.

Riker's second window features "own make" face powder. The floor of the window is covered with grass (crepe), from which the ox-eyed daisy lifts its head. Although untrue to nature, the value of the decoration is just as good. One side has peach tree branches loaded with pink flowers, while the other side and rear are filled with branches of the apple tree in blossom. The center is occupied by a latticed arbor in green. In the arbor is the wax figure of a woman draped in black chiffon. On the floor of the window, attached to the branches and frame work of the arbor, are the neat, pale violet boxes of powder. A card tells the story: "Riker's Dresden Face Powder, 25 cents."

Rosenzweig's, 644 Fulton street, Brooklyn, is pushing the sale of a brand of slippery elm lozenges by a window display. The neat, yellow, square boxes are arranged in blocks, while a willow automobile filled with the lozenges and in charge of a Japanese, is rounding in from the side. A large white card states: "Four cents each; seven for 25 cents."

Joseph Dahlbender, Broadway and Kosciusko street, Brooklyn, is devoting his corner window to featuring a new corn file and salve. Naturally, the straight line effect is the only one that can be used in true perspective to give a good effect to a display of these goods. One dozen files with pale blue tinted handles are attached in upright position, to a white card. These cards can be folded and locked into triangles, thus making the goods visible from any viewpoint.

Three rows of the flat cards are arranged in step form in each window, having box supports, which the cards disguise. The floor of the window is also carpeted with the flat cards. The open vacant spaces are filled in with the triangular counter stands.

—Robert Williams, a pioneer pharmacist of Minneapolis, is dead, after an operation for appendicitis. At the time of death Mr. Williams was connected with the Minneapolis Pharmacy Co. He was born in Wales fifty-eight years ago, and lived in Minneapolis twenty-three years.

THE PROGRESS OF SODA.

Mr. L. A. Becker Describes Trade Conditions in all Sections.

INCREASE OF SODA SALES OVER COUNTERS IN FIVE YEARS ESTIMATED AT 500 PER CENT.—PUBLIC DRINKING MORE SODA EACH YEAR.—CONSUMPTION IN WINTER.

General trade conditions pertaining to soda water fountain apparatus, I believe, are better than formerly. Western business shows an increase of nearly 25 per cent., while in the East, transactions show a remarkable increase. The effect of this is, no doubt, cumulative.

In the South the price of cotton apparently governs, in a measure, the sale of soda water apparatus. This, of course, should not be the case, but purchasers in that section are more timid this year than last. No doubt the timidity of many merchants still interferes with their own prosperity in the purchase of fountains.

Cold seasons for the past three years have also interfered with the purchase of apparatus by timid merchants. The progressive merchant, however, realizing that the consumption of soda water no longer depends upon geographical or climatic conditions, makes his necessary changes from the old plant to the new and entices the nickels and dimes from the public's pocket into his till, of course, to his advantage in every way.

PROFITS IN SODA.

That climatic conditions do not control the consumption of soda water is perhaps best attested by numerous cases, one of which is especially noteworthy in the northern territory. Mr. C. H. Cirkler, of Minneapolis—one of the leading druggists there—installed a new modern Twentieth Century plant about eight months ago, and is doing a business at the rate of \$35,000 per year. He has had virtually no actual summer to depend upon for the results.

Another instance might be cited in Boston, where Mr. Frank Norris, proprietor of the Adams House Pharmacy, installed a large fountain about six months ago, and whose winter sales since the installation of the fountain show an increase of a small percentage over his best sales during the hottest months of last season, namely, July and August. Mr. Norris further attributes an increase of over 30 per cent. in his general drug and sundry business to the publicity which the installation of this new apparatus gave his store.

A very well-known drug store in New York City, in fact, one of the most prominent in that city, has, since the installation of its fountain about six months ago, earned one-half of its large rent by the profits of this fountain. Such results, of course, are very encouraging to the proprietor, who never previously had a soda water fountain, and arouses a natural interest in the soda water business on his part. Hundreds of instances of a similar character could readily be cited. It proves conclusively statements made, and in addition proves that merchants who run soda fountains as an adjunct to their business in about the same manner as by-products were permitted to go to waste in years gone by, cannot and must not expect to be successful. It is the utilization of energy that counts, and its proper utilization

brings with it the returns that make life worth living.

CONSTANT IMPROVEMENT.

The consumption of soda water is constantly on the increase; this increase, during the past five years, is said to be fully 500 per cent. Taken altogether, modern fountain plants with good fruits, syrups and carbonated waters and proper dispensing have brought the natural results such a combination would indicate. Good soda water dispensers are always in demand, and I am very glad to see the wonderful increase in their efficiency. In order to hold the best positions and earn the good salaries paid them, however, dispensers should carefully study the possibilities of the business, and, by constantly adding to their own knowledge and efficiency, they will aid materially in increasing the general consumption of soda water.

Sanitation, at the present time, is a vital consideration in soda water matters. I believe that there is nothing of such an importance as this, and as a manufacturer, I believe in constructing soda water apparatus in a manner which shall do away with the opportunity for the accumulation of dirt and filth, which naturally develop and breed bacteria and germs. My endeavor is to uphold the integrity of the syrup container, and I have found nothing better than the sterilized glass container, placed in plain plain view, yet surrounded by ice.

VALUE OF A TRADE MARK.

There are a few manufacturers who do not realize the value of a trade mark, but their number is steadily decreasing. Today trade marks are more valuable than ever, under the provisions of the new law which went into effect April 1. But what of the manufacturer who registers a mark and then fails to make the fact known to the trade and the consuming public; who fails to teach the man in the street to instantly recognize that mark as standing for some particular thing? He is throwing away the fruit of his labors. He is literally hiding his light under a bushel.

Such a man, however, is often open to conviction and such conviction should come through a reading of a little pamphlet, attractively illustrated, published by Ben B. Hampton, New York. It is interesting, containing a description of the rise of Royal shoes, Victor phonographs, Royal baking powder and other well-known specialties. The article is not a dry dissertation on advertising. It is a very readable little talk, reprinted from Printers' Ink. If you write to the Ben B. Hampton Co., 7 West Twenty-second street, New York, and state that The Era suggested your doing so, that firm will send you a copy.

SPECIAL TERMS ON CASTORIA.

Castoria—"the kind you have always handled"—is made by The Centaur Co., 77 Murray street, New York, of which Charles H. Fletcher is president. Mr. Fletcher thinks that almost any druggist ought to be able to sell a dozen bottles of his specialty a month, or one gross a year, and to induce effort in that direction he authorizes jobbers to allow a discount of 5 and 2½ per cent. on gross lots.

Druggists are invited to send for counter wrappers, cartons and other advertising matter.

A REMARKABLE SHOWING.

The M. P. Gould Company, drug store advertisers, 99 Nassau street, New York City, say that their Puzzler, a monthly drug store paper which they get out and publish under the name of the retail druggist using it, has proven one of the most remarkable pieces of advertising they have ever produced, and that although their Puzzler is not yet one year old, they are now printing nearly 250,000 copies each month.

This publication, advertised elsewhere in this issue of The Era, is a unique monthly paper of puzzles so arranged with drug store advertising that they produce a great deal of interest among old and young. Anyone interested in advertising his drug store should read the advertisement carefully and correspond with M. P. Gould Company.

A special offer is attached to the advertisement, which will be worth from \$7.50 up, to any druggist connecting himself with M. P. Gould Company for their Puzzler.

OPENING FOR AMERICAN TRADE.

Elsewhere in this issue of The Era appears an advertisement of Messrs. H. B. Sleeman & Co., of London, a firm established so far back as 1866 and who have devoted themselves to supplying the requirements of wholesale chemists and druggists. This firm has a very large connection in the East, South Africa and Australian Colonies and is prepared to undertake the representation of American houses having products suitable for the drug trade in those countries and to energetically bring them to the notice of Eastern and Colonial buyers. Messrs. Sleeman represent some of the best-known houses in the East, and enjoy an extensive acquaintance and an honorable reputation among the wholesale houses in this country. They will satisfy firms disposed to open correspondence with them as to their financial standing and their ability to honorably fulfill any engagements they may undertake.

PROCTOR SANITATION.

Mr. Proctor has begun lately to equip his theaters with a pneumatic method of dustless cleaning, which would almost seem to be superfluous, in view of the fact that the Proctor theaters are generally known to be clean theaters, and demonstrations of this process of cleaning can be seen at the Fifth Avenue Theater every morning, to which the public is cordially welcome. Every portion of the immense theater, every corner, the tile lobbies, the silk and plush portiers, the plush seats, the carpets, the scenery, the rugs and any part therein cleansible, is gone over with this almost Alladin-like apparatus, so that any woman, no matter how delicate the fabric of her dress, can feel assured that in sitting at a Proctor theater she runs no risk of soil.

OLIVES IN DRUG STORES.

Is there any reason why the retail druggist should not handle high grade olives? Riker's find it profitable, as well as an aid in featuring their olive oil. The druggist, by keeping to a high quality, could secure and retain a good trade.

BUSINESS RECORD.

ARKANSAS.

Milwaukee.—Waters & Buck, succeed F. P. Roemheld, 2105 North avenue.

Clintonville.—John Kalmes, burned out.

Madison.—Geo. Faine, succeeds Maria P. Clark, E. Main st.

Shullsburg.—Dr. C. C. Gratio, succeeds H. C. Stearns.

BRITISH COLUMBIA.

Vancouver.—McJowell, Atkins & Watson, succeed C. E. Netherby, 2444 Westminster.

WEST VIRGINIA.

Davis.—J. T. Darkey Drug Co., new firm.

Huntington.—R. A. Sample, burned out.

Parkersburg.—Lee L. Hudson, damaged by fire.

NEW BRUNSWICK.

Shediac.—W. B. Deacon, dead.

QUEBEC.

Knowlton.—Dr. H. W. MacGowan, succeeds MacGowan & Balfour.

A SIGNIFICANT CHOICE.

On page 11 of this issue of The Era is a picture of Paragon Park, the great amusement enterprise of New England, located on Nantucket Beach, near Boston. The Twentieth Century Sanitary Soda Fountain again takes the honors, and, against all competitors, five Twentieth Century Sanitary Fountains have been chosen for exclusive use in the park.

The L. A. Becker Company, the manufacturers, point to such evidence as this order for Paragon Park, as the most convincing testimony that the Twentieth Century fountain will pay.

Write to the general office and factory of the L. A. Becker Company, Halsted street, Chicago, or to nearest branch office, as follows: New York, 27 E. Twenty-second street; Philadelphia, 504 Arch street; Denver, Thirteenth and Lawrence streets; Boston, 36 Portland street; Seattle, 207 Third avenue; South Los Angeles, 372 South Los Angeles street; Atlanta, 82 Marietta street; Baltimore, 19 North Liberty street.

PATENTS, TRADE MARKS, ETC

PATENTS.

Issued April 4, 1905.

- 786,255—Joseph Angeletti, Milwaukee, Wis. Bottle-washing machine.
- 786,295—Ramon G. Julien, Jerez de la Frontera, Spain, assignor to Pedro de Demecq, Jerez de la Frontera, Spain. Bottle.
- 786,495—Herman Haulick, William A. Walling and George J. Winkle, New York, N. Y., assignors to New York Labeling Machine Company, New York, N. Y., a corporation of New York. Labeling-machine.
- 786,496—August P. Horn, Hamburg, Germany. Process for making neutral soap.
- 786,521—Conrad Schroeder, Milwaukee, Wis. Receptacle-closure.
- 786,529—Heinrich Spatz, Schoneberg, Germany. Manufacture of a substitute for caoutchouc.
- 786,595—Edward C. Paramore, Philadelphia, Pa. Art of treating and utilizing chlorine.
- 786,717—Oscar G. Bell and Richard C. Stoffer, Norwich, N. Y. Clinical-thermometer case.
- 786,722—Andrew Breslin and Joseph Lees, Summithill, Pa. Surgical appliance.
- 786,735—Christian Dorn, Philadelphia, Pa., assignor to Charles Rath, Philadelphia, Pa. Bottle-stopper.
- 786,747—Andrew Forbes, Philadelphia, Pa. Bottle-washing machine.

LABELS.

Registered April 4, 1905.

- 12,006—Title: "Y Kof." (For medicine.) Alexander K. V. Reamer, Philadelphia, Pa.

- 12,007—Title: "Korexills." (For medicinal compound.) Josiah C. Peacock, Philadelphia, Pa.
- 12,003—Title: "Phospho-Ferrum." (For a medicinal preparation.) W. H. Hostelley & Co., Collingdale, Pa.
- 12,009—Title: "Madden Eye Medicin." (For eye medicine.) Dr. Madden Eye Medicin Co., Fargo, N. D.
- 12,010—Title: "Sa-Ix-Ia." (For hair-tonic.) Schmelzel and Gallop, Boise, Idaho.
- 12,011—Title: "Er-Bo Tooth Powder." (For tooth powder.) Ludwig G. R. Erb, New York, N. Y.
- 12,012—Title: "Lemon Skin Lotion." (For skin lotion.) William Barrett Shaw, Cleveland, Ohio.
- 12,013—Title: "Pimplexion Skin Food." (For an ointment.) F. H. Robinson, Philadelphia, Pa.
- 12,020—Title: "Townsend's Latter Day Saints or Temple Brand Olive Oil." (For olive oil.) Bert-rum H. Townsend, Salt Lake City, Utah.
- 12,025—Title: "Egyptian Spray." (For chemical compound.) Egyptian Spray Manufacturing Co., Boston, Mass.

PRINTS.

Registered March 7, 1905.

- 1,235—Title: "Heartsense." (For medicine.) The Heartsease Remedy Co., Ashland, Ohio.
- 1,237—Title: "Allen's Royal Remedy, a Foot Powder." (For powder for the feet.) Joseph C. Allen, Plainfield, N. J.

A ST. PATRICK WINDOW.

One of the most striking displays made in Philadelphia on account of St. Patrick's Day was that of George B. Evans. The center window of his drug store on Chestnut street above Eleventh was a mass of color which rarely failed to catch the eye.

Green, of course, was the prevailing color, but not to color alone did the display owe its attractive features. The floor of the window was covered with dark green silk. The background was a large shamrock of wood, covered with tufted silk and outlined with green electric lights. The same designs were carried out in smaller shamrocks on all sides of the large one. The whole as seen against a ground composed of many yards of green baby ribbon made a very pleasing effect. Fastened to this ribbon were "Faddy's pipes," common white clay pipes of all sizes and filled with colored shredded cocoa in imitation of tobacco. In either of the rear corners of the window were high marble pedestals on which stood bases in keeping with the general color scheme. They each contained half a dozen small Irish flags. Small green baskets filled with candy of the same hue were scattered about the floor of the window, while from a jardiniere in the center there was growing the famous Irish shamrock. Colled about the marble pedestals were artificial snakes. The whole was seen through candy bars that reached from top to bottom of the window, about four inches apart. These candy bars were "straws," colored a bright, shimmering green and strung on threads which were invisible. It was the most pleasing and varied window display to be seen along the streets this year. It reflected credit upon the store and upon the designer, H. Hartman, the Evans decorator.

MARKET REPORT

IMPORTANT REDUCTIONS.

Quinine, Opium, Morphine and Camphor Lower.

MENTHOL ALSO EASIER.—SOME ADVANCES IN OTHER DRUGS.—TONE OF THE MARKET IS GENERALLY STEADY, HOWEVER.—DEMAND ON JOBBERS MODERATE, BUT CONTINUOUS AND FAIRLY SATISFACTORY. STATISTICAL INFLUENCES EFFECTIVE.

New York, April 10.—The leading staples eased last week, but the declines were not radical and the market tone continues steady. Owing to large Java bark shipments and an unsatisfactory demand, manufacturers announced a cut of two cents in quinine and all the salts on Tuesday, just too late to allow its mention in this report last week, although it was fully reported in our news columns. Because of competition, opium has also weakened, and while it actually defined decline has influenced morphine sulphate, jobbers generally are asking a smaller price. Refiners of camphor declared a reduction of four cents to-day, and while jobbers have not yet openly reduced their quotations, the market is practically down in proportion. Owing to speculation, menthol is also lower. Nevertheless, the situation is steady and since some of the reductions were somewhat expected and discounted, the atmosphere is now healthier and clearer. Trading continues routine and moderate, but is perhaps of somewhat heavier proportions than last week. Jobbers profess to be satisfied with the demand. No further important changes are anticipated. In some instances prices are higher.

OPIMUM.—Prices are lower, in order to stimulate demand. Stocks in primary markets had accumulated to a considerable extent and local competition had increased in keenness, while consumers evinced little interest and speculative buying was absent. Nevertheless, foreign statistics are bullish. Recently, cables reported an advance of 3d. per pound in Smyrna, with some good American buying in that market. New jobbing prices as noted in another section of The Era, last week, are \$3.05@3.20 for nine per cent., and \$3.15@3.30 for eleven per cent.; powdered, \$3.55@4.10 for thirteen per cent., and \$4.60@4.85 for sixteen per cent.

MORPHINE SULPHATE.—While no radical change has occurred, the weakness in opium and local competition have been gradually affecting prices for some time past, so that jobbing quotations can fairly be given as \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25@2.35 in 5-oz. cans, according to brand or quality.

QUININE SULPHATE.—Manufacturers announced a two cent decline on Tuesday, April 4. This move was rather unexpected, for while recent bark auctions had averaged lower and demand had not been brisk, the market tone held steady. Un-

doubtedly the heavy Java bark shipments for March, 1,450,000 pounds, helped to break the market. Moreover, competition had been growing from second hands and manufacturers were not getting the business. Since the break quinine has been inactive, but steadier. At the Batavia bark sale, April 3, prices were unchanged, and 112,800 oz. sold at 16½ florins. The new jobbing prices are 21@21½c. for bulk in 100-oz. tins, 21½@22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

OTHER QUININE SALTS.—The other salts are all proportionately lower and jobbing prices may be given as follows: Alkaloid, 53@58c.; acetate, 56@61c.; arsenate, 53@58c.; arsenite, 58@63c.; benzoate, 58@63c.; bimuriate, 52@57c.; benzoate with urea, 62@67c.; borate, 50@55c.; citrate, 50@55c.; ferrocyanide, 50@55c.; hydrobromate, 48@53c.; hypophosphite, 53@58c.; hydrochlorosulphate, 52@57c.; iodide, 63@68c.; lactate, 53@58c.; muriate, 41@46c.; phosphite, 49@54c.; salicylate, 48@53c.; sulphocarbonate, 43@46c.; tannate, 29@34c.; tartrate, 43@46c.; valerianate, 51@54c., and powdered, 53@56c., all per ounce.

CAMPHOR.—As this report is in preparation, it is reported that refiners have cut prices four cents. As yet the movement has not passed on to jobbers, some of whom are decidedly opposed to any reduction in quotations, claiming that circumstances do not justify it. In some quarters, however, new prices may be declared on the following, or even lower, basis: Barrels, 78@78½c. per pound, and less, 82@89c.; 4 oz. blocks in cases, 78½@79c., and less 82@89c. per pound; ounce cakes in cases, 80@80½c., and less, 84@89c. per pound; 24s. in cases, 82@82½c. per pound, and less, 86@91c. per pound. Ounce cakes and 24s in 1-lb. boxes, 1c. per lb. additional. In general, however, prices nominally remain on the old higher level.

MENTHOL.—Governed wholly by speculative reasons, prices have been forced lower, under liberal offerings. New jobbing quotations are \$2.75@3.00 per pound. The market is weak, demand is poor, and prices may go lower still.

PYROGALLIC ACID.—The strength of nutgalls caused another advance and new jobbing prices are \$2.20@2.30.

CARDAMOM.—For a long time the tendency of prices has been lower, due to the overproduction of recent years in Ceylon. Jobbers have just announced a decline, because of lower wholesale prices and indifference to demand to the following basis: Aleppo, 75@85c.; Malabar, 80@90c.; bleached, \$.90@1.00; extra bleached, \$1.00@1.10, and powdered, \$.90@1.00, all per pound.

GUM TRHS.—The bull campaign in turpentine in the South, engineered by the clique controlling the Savannah market, operates also on gum tins. Jobbers have raised values to the following: 280-lb. barrels, each, \$7.75@8.00; per pound and less, 12@15c. per pound.

OIL ORANGE, BITTER.—This is no exception to the strength prevailing in other Messina essences, and is now higher, owing to scarcity and good consumption. Jobbers quote \$2.25@2.50 per pound.

OIL WORMSEED, BALTIMORE.—The scarcity so often noted grows more acute and

prices have again bounded up, jobbers asking \$3.50@3.75 per pound.

SANTONINE.—As the rise in jobbing prices reported last week was not as great proportionately as the advance recently inaugurated by manufacturers, jobbers have advanced quotations to the following: Whole, \$9.75@10.00 per pound and 75@85c. per ounce; powdered, \$10.15@10.40 per pound, and 80@90c. per ounce.

BALSAM PERU.—Because of poor demand and competition between sellers, jobbers have lowered prices to \$1.35@1.55 per pound.

CARNAUBA WAX.—The scarcity continues extreme. Supplies cannot be obtained from Brazil and stocks are closely controlled. Prices have risen further under a good demand and jobbers now quote 55@65c. for No. 1, 45@55c. for No. 2, and 39@43c. for No. 3. Supplies for No. 1 are particularly short.

COOLIVER OIL.—No changes in prices. Market steady. The total catch of cod for the whole of Norway amounted on March 22 to 11,452,000, yielding 8,955 barrels of oil against 4,873 barrels last year.

ANISE SEED, GERMAN.—The statistical position is improved. Spot stocks are small and closely controlled. A slight advance at wholesale, but no jobbing change.

LYCOPodium.—The approach of the summer and opening of pleasure resorts arouses expectation of an increased demand. Supplies but moderate. No price changes.

SILVER NITRATE.—As the metal has declined, manufacturers have reduced the price of the nitrate ½c. per oz. Jobbers have made no change.

GLYCERIN.—The crude is weak abroad and the refined is easy in sympathy. At wholesale there is a slight decline here, but no jobbing change.

SPERMACETI.—A poor demand causes some easiness at first hands. Too small to affect jobbers.

CHIPPED ICE FOR THE FOUNTAIN.

We have just had a peep at a real money-saver for the soda fountain user. The successful operation of a fountain depends largely upon its economical administration. Ice is wasted in many cases where it could be saved. Heretofore the making of ice chips has been laborious and attended with much loss of time. A new patented device called the Cyclone Ice Chipper has just come out. By a rotary motion, exactly like the use of a carpenter's augur, this very handy and easily worked chopper makes flake ice chips at the rate of a quart a minute. It has six steel cutters that bore a hole in the ice cake placed in any position, and can be operated by a child. You simply hold the teeth against the ice and turn the crank. The chips are carried into a covered bowl, a part of the device, and are emptied from it into any desired vessel. No more stabling of ice boxes, no loss of ice and as cheap as it is handy. It is supplied drugists by the Montgomery Gibbs Company, 400 West Twenty-second street, New York, and the price is only 75 cents. It weighs but thirty-two ounces and is so thoroughly made that its destruction is practically impossible.

THE PHARMACEUTICAL ERA

EVERY THURSDAY

VOL. XXXIII.

NEW YORK, APRIL 20, 1905.

Number 16.

Entered at the New York Post Office as
Second Class Matter.

EDITORIAL COMMENT

More Anti-Proprietary Agitation.

The propaganda against "patent medicines" has not yet run its course. In fact, it is not improbable that next legislative season will witness a campaign even more virulent than that which is now drawing to a close. The agitation for pure food and drug legislation seems as yet to have reached only an incipient stage, and nearly all pure food bills contain a clause aimed at "patents." The temperance people declared that they have not yet fairly begun their onslaught upon secret remedies containing alcohol, and no class of reformers is more persistent. Added to this, or perhaps more correctly, behind this, is a growing determination among medical men as exemplified in the more influential journals of the profession to oppose the proprietary interests in every way.

Proprietary men may scoff at all this outcry and assert that it will not affect them in the least; but the movement is bound to have some effect. Already advertisements of proprietary remedies are beginning to appear in the papers, bearing in large letters the statement, "This is not a patent medicine." If this means nothing else, it signifies that secret proprietary remedies are on the defensive. The bad ones will have to go, and in the meantime the good ones will need the friendship of the retail drug trade and that of the pharmaceutical press.

Keeping an Ear to the Ground.

It may be assumed that the real reason for the existence of any store is the convenience of the public. Of course, the storekeeper's profit is the most essential point as far as he is concerned; but, after all, it is but a result of his enterprise in furnishing what his neighborhood desires. If he does not perform a really useful duty to his customers, his profits will soon dwindle to the failure point.

These truths being so generally appreciated, indeed, so self-evident on a moment of reflection, it seems strange

that many storekeepers, druggists among them, continually persist in refusing to supply the wants of buyers. It is no uncommon thing in a certain class of small pharmacy to see the proprietor losing sales because he does not carry the desired commodity in stock. It can be readily understood that some customer may occasionally ask for an article never before demanded, and, of course, in that case he cannot be accommodated; nor the second, third, or perhaps the fourth time; but when the same people repeatedly call for something not handled, it is time to put it in stock. If there is any fear that it will not be generally marketable, let the druggist secure but a very moderate quantity; experience on this will guide him for the future.

Many fail to do this, however, and persistently turn away customers who after vainly inquiring for something a few times, soon learn to go elsewhere for it, saving energy and breath. Last week a druggist talked in The Era of the "just out" evil and its serious results. The "never in" evil is almost as serious and just as annoying to patrons. With remarkable density a druggist of the type just described will bemoan his fate over a declining trade and a poor stand. If he kept everything often called for there would be a marked improvement.

Liquor Legislation.

In the Legislatures of the various States the liquor question is a source of perennial disturbance, and particularly so when it must be considered in its relations to the pharmacist and his business. In many quarters there is a tendency on the part of the temperance people, and some so-called law and order organizations, to look upon druggists as natural horn lawbreakers, and, therefore, they would have our lawmakers impose such regulations that the legitimate sale of liquor for medicinal purposes is made almost impossible. In many instances there are, no doubt, regulations framed which actually tempt infractions and thereby put a premium upon wrongdoing.

Liquor legislation is a matter requiring the most careful consideration, but on general principles we hold, and have often asserted, that the legitimate use of liquors in the drug business should not be hampered by burdensome re-

restrictions, while on the other hand violations of the law by druggists should be punished with the same penalties as are meted out to other violators. Certainly the druggist's responsibility is greater and his duty clearer, and why should he not observe the law? We have no sympathy for the dram selling druggist, and he is no friend of legitimate pharmacy.

In this State amendments to the present excise law have already been proposed, and it is altogether likely that some of them will pass the Legislature. It is up to the druggists of the State to consider this legislation. Those in authority are working hard for the abrogation of the stamp tax act passed two years ago on the basis that the present stamp arrangement does not yield enough income, for it has been found that the State only received \$17,000 revenue from this source, while \$80,000 was lost on those druggists who ceased taking out store licenses. This \$63,000 loss to the State, it may be assumed, was saved to the druggists, a convincing argument, according to Dr. Muir, of the work done by the State Association, for it was through the effort of this organization that the stamp provision was secured. It is to be hoped that the druggists of New York will secure an act which will be just and satisfactory to all concerned.

An Attractive Package.

"I may be a crank on the subject," remarked the druggist, "but I can't bring myself to allow a carelessly-wrapped article to go out of my store. It is surprising how weak clerks are on this point. Every new clerk I get has to be put through a course of sprouts before he can fill my idea as to what a package ought to be.

"What is necessary to make a neat package? Good material, care and practice. Unless the paper has sufficient body, it is impossible to fold it evenly. Next in importance is the size of the sheet. It takes a practical eye to tear off just the right size. There is some knack in that, but care and practice will give it. If the paper does not meet properly, the package is ugly, and if the sheet is too large, a double fold makes the flap too bulky. And then so many clerks merely tuck the ends under. I insist that they fold them up evenly and smoothly.

Pharmacy in Rhode Island.

The annual report of the Rhode Island Board of Pharmacy has just come to hand, and from it we learn that there were in good standing within the State on January 1 last 311 registered pharmacists and 182 registered assistants. There were also 242 registered stores. What is more interesting, the

Board reported that the increased requirements of the standard in proficiency have been successfully met, "thanks to the superior educational advantages now afforded." This speaks well for pharmacy and trade conditions in "Little Rhody," and at the same time is an unsolicited testimonial for colleges of pharmacy.

The Position of the Fountain.

The Cincinnati druggist, whose soda fountain is described this week in another column, has not only an originality of thought, but the courage of his convictions. He located his fountain in the rear of the store. To his mind, its business could be transacted just as successfully there, drawing with it the more boisterous class of store patronage, and leaving the light from the windows for the illumination and featuring of sundries, toilet articles and patent medicines.

Results appear to have been satisfactory, so the old theory that a fountain had to be near the front door is not maintained. Further it might be argued that the patrons of the fountain are more apt to buy other things than soda if they walk through the length of the store to reach the fountain. The fact that soda is dispensed can be featured by window signs, and, indeed, it is doubtful if the sight of a fountain through a window usually draws a considerable portion of the soda drinkers. They go to a certain fountain because they have found good soda there on past occasions.

Those pharmacists who have expressed an antipathy for the soda fountain as being an inappropriate side line for a drug store might find their objections considerably modified by the relegation of this business to the rear end of the store; while those who regard the fountain as a staunch helper towards success might find, as did the Cincinnati druggist, that the trade does not depend upon the position of the fountain. At any rate, such an arrangement surely possesses one good quality as a trade bringer, the charm of novelty.

Professor Scott, of the Chicago University, has punctured the early rising bubbles, which ought to please almost everybody and especially pharmacy students. He says that owing to improved lights and other conveniences of civilization, the quiet hours of the night are now the best for study. All modern great men, he says, achieve wonders by means of the midnight oil, or to be more strictly up-to-date, electricity. Talleyrand's famous saying about early-risers, that they brag about it all morning and yawn all afternoon, may therefore be laid aside.

Contract Plan Wins Again.

What is virtually another victory for the direct contract and serial numbering plan has just been gained in Milwaukee. Last Fall suit was brought by a department store against the N. A. R. D., N. W. D. A., P. A. of A., and the various wholesalers in the city. They were charged with conspiracy, restraint of trade, and so forth—the usual formula, which is becoming monotonous by repetition.

After all these months of battle a compromise has finally been effected, whereby all the department stores become recognized druggists and entitled to purchase goods as such. But they have agreed not to cut prices in future and will sell on a schedule of 23, 45 and 89 cents instead of 19, 39 and 75 cents, as formerly.

The department stores do not consider that they have won a victory, which we dare say no one will dispute. An agreement between the proprietor and his retail agent not to cut the prices on his goods is the essence of the direct contract plan. That one point being gained, it matters not how many "concessions" are made as matters of expediency.

The World's Trade.

The London Board of Trade last week issued a bulletin giving a summary of the world's trade for the year 1904. It shows that the import trade of the United States for that period was \$1,079,070,000, while that of the United Kingdom was \$2,205,200,000 and that of Germany \$1,572,745,000. The value of the exports from the United States was \$1,425,155,000, from the United Kingdom \$1,504,080,000, and from Germany \$1,293,275,000, from which it appears that while the imports of the United States were only one-half as great in value as those of the United Kingdom, the exports were nearly as valuable.

The cinematograph is now to be used in the study of botany. By exposing a plant every quarter hour for days or weeks as the case may require, it is possible to show the manner of growth, the opening of buds, the closing of blossoms at night, the increase in size of leaves and all the changes of plant life. The resulting photographs may be reproduced at any desired speed so that changes involving weeks and possibly months may be depicted as occurring in the space of a minute or two.

The latest recruit to the ranks of the proprietary manufacturers is a police captain of New York's East Side. He has just contracted with a wholesale drug firm to market a cure for skin disease, the formula of which he claims to have brought from Ireland many years ago.

Wholesale Druggists

The man who received his first impressions of the wholesale drug trade some twenty years ago is to be congratulated. Such men as James Richardson, Arthur Peter, Wm. A. Gellatly, C. F. G. Meyers, Daniel Stewart, Daniel R. Noyes, Samuel Strong, Geo. A. Kelly, Frank A. Faxon, M. N. Kline, Wm. A. Robinson, and numerous others who attended their annual meetings, were an inspiration to the young man who listened to their discussions and observed the many evidences of solidity and respectability surrounding those who participated therein.

This was before the days of rebates, cut prices and contracts, when this jobbing trade was in the hands of a comparatively few houses, and when the old-time merchant had an opportunity to show his shrewdness and use his credit to his advantage. Competition was keen; in fact, it became so excessive that the National or Western Association was started by a few leading houses for the purpose of checking the tendency toward too low prices.

With organization, all the paternal regulations have followed and individuality has to a great degree been relegated to the past. The profits on "Patents" were saved, but it is a big question if the new evils are not more injurious to the business. In fact, many of the larger houses are frank to say that the remedy is worse than the original disease. One direct result of the rebate plan has been the great increase in the number of so-called jobbers. Every crossroads town has one or more, and if the N. W. D. A. continues to recognize these small firms as it has for the past few years, then the separation of the wholesalers from the retailers will be found unnecessary.

But it is a mistake to attribute all of the trouble to the association and the rebate plan. This is so pronounced that other causes are overlooked by those who are most bitter in their declarations. Trade conditions have changed in all lines. The manufacturer has been getting closer and closer to the consumer. The department stores and mail order houses have had their influence. The general trend in merchandising has been toward the elimination of the middleman, and the drug trade could not escape from its share of these evolutions.

But this growing tendency to ignore and belittle the jobber, particularly in the drug trade, is a very

grave mistake. It does not augur well for the future prosperity of this trade. The jobber is not only a great convenience for the manufacturer and the retailer, but through his frequent connections with the retailers he is able to check their extravagances in buying and keep them up in their payments; in other words, he makes them better business men and proportionately more successful.

If the entire drug business of this country were handled through the wholesale druggists there would be more successful retailers and many less bad accounts on the manufacturers' books. Again, when you find the jobbing trade prosperous, so will you find the retailer and the manufacturer; and the reverse of this statement is equally true. It behooves some of our ambitious manufacturers who are filling up their books with the names of retailers and physicians to stop and reflect what it means in the future. Competition is the life of trade; over-competition is its sure death.

Every jobber ought to say to himself: my business is like the railroad, and it is my duty to handle everything that comes, so long as it pays the freight—then he should see that every employe acts accordingly.

There are too many so-called wholesale druggists. The official list contains some 450 firms and corporations, while 250, or at most 300, are entitled to be so classified. Several of the houses in the N. W. D. A. list are rated as low as H-3 or H-3½—\$3,000 to \$5,000 capital! The list also contains the names of several specialty houses and manufacturers. Why not put in the barber shops and saloons—they all buy more or less drugs and patent medicines! One would think that the jobbers themselves, through their own organization, would take the initiative and be careful as to who they recognize as entitled to wholesalers' prices and discounts.

The next thing to be remedied is the growing tendency on the part of manufacturers to not protect the jobber in his legitimate profit. We wish we could have a fifteen-minutes' talk with every manufacturer on this subject. We know what he would say, and we sympathize with him in a way, but any other policy than that of protecting the jobber is suicidal to the future welfare of the trade. The jobber is a necessity, and it is your duty as a manufacturer to protect him. He may want the earth and will do nothing for you, but none the less, after you get established he will handle your goods and you must put up with some of his shortcomings until he sees the

errors of the treatment he extends to you.

The jobber is a distributing agent, pure and simple. It's his business to supply what is wanted. He ought to pride himself on keeping everything, or at least he should know where to secure it. The manufacturer should protect him in his profits and against loss on his stocks, but the jobber must undertake to supply the goods, or he does not fulfill his mission.

If the larger jobbers would inaugurate a separate department for the introduction of new goods, it would add materially to their prestige and profits. We know of one jobber who does this most successfully by making each manufacturer pay something toward the expense of his salesmen, or detail men, and for advertising. It is a great convenience to the manufacturer and prevents him from working the jobber's territory for direct orders. It frequently, too, leads to exclusive agencies which are very profitable to the jobber.

Many of our large mail order houses and department stores make it a rule to supply everything a customer may want—anything from a package of pins to a house and lot. It is a convenience to the buyer and in keeping with the modern merchandising methods which make these institutions so successful. No order is too small, no trouble to please. If our wholesale druggists would adopt such up-to-date rules for conducting their businesses, it would be greatly to their profit and go a long way toward making their positions more secure.

We hope that our jobbing friends will not misinterpret our remarks. We believe in the jobber and always have. We have some appreciation of the difficulties under which he labors, but we are sure that his condition and profits can be improved if he will do his part and insist on his rights.

Each jobber should be jealous of his territory and his trade. Give the manufacturers to understand that you will work your territory for them and they must pay you for doing it. Let the retailers know that you can and will supply everything they want and at the right prices. Throw petty jealousies to the wind and work with your neighboring competitors—"Hang together or you will hang separately." Confine your organizations to houses of your own class and do not include every would-be jobber. Give the proprietors to understand that if they want your trade they must protect you and then give them a square deal.

✂ ✂ C. P. ✂ ✂
EMANATIONS

Play Ball!!!

The druggist gave certain unmistakable signs of impatience, and the C. P. smiled in anticipation. "To one with a sense of humor a man is never so funny as when he allows his irritability to show.

"Well?" inquired the old gentleman, "Spring fever?"

The druggist let off some of the pressure in a vicious kick at the cat, but that watchful animal escaped easily. "Spring fever," growled the man of drugs. "Yes, I dare say it is something like that. I can't get the boys to pay attention to a blessed thing. All I hear is, 'died on third,' 'two bagger,' 'drops,' 'ins,' 'pop-ups,' and things like that. Jimmy walks around in a half dazed sort of way—instead of washing the glass he will look through the window at the sky and make passes at imaginary halls in the air. The clerk is calling up some other daffy idiot like himself every few minutes trying to get up a drug clerks' team, and my paper which I used to find turned to the war news is now always open at the sporting page."

"And you find yourself out of sympathy with that sort of thing?" asked the sage.

"Out of sympathy? Rather!" replied his friend, making no effort to conceal his disgust. "I have more important matters to think about."

"I feel sorry for you," said the C. P. "Better consult a specialist."

"What are you talking about?"

"You're in a bad way," replied the sage. "I suppose if you were to pass a vacant lot containing about forty small boys, four bricks, a pump-handle and a ball, the heavy affairs of this world would intrude themselves between your eye and that ball."

The druggist did not reply.

"You wouldn't go to the circus, even if your youngsters were to talk about it every day and show you all the ads in the paper for a month?" continued the sage.

"And you wouldn't go out of your way a block to see a parade?"

"I can't see what you're driving at," replied the proprietor of the store. "But on general principles, of course not. I have outgrown childish things, I hope."

The old gentleman nodded. "Those are the symptoms," he said. "I have observed them again and again. Had a touch of the same thing once myself, but I got over it."

"Over what?"

"That tired feeling about everything that interests the young. My boy, fight it! It is a sure sign that you are approaching the chloroform age. If you allow that disease to go on unchecked, your interest in the things of this world will gradually disappear until you have nothing left but an old arm chair and a pipe."

"I'm interested in making a living."

"And nothing else? In that case, you might as well quit at once. It isn't worth while."

"Look here! This life isn't made for fun," observed the druggist.

"The pursuit of happiness, according to the constitution of the United States,"

corrected the old gentleman, "and happiness is mighty scarce at that. Fun is only one variety, and being so few you can't afford to waste many. Better enjoy the kind that comes your way. Besides, some enjoyment is necessary to keep you in trim for the scramble."

"Oh, well!" said the druggist, "I have enjoyment of my own kind. Bowling, for instance—"

"All right! Then don't despise the kind that the youngsters pursue. Do you want a prescription for that ancient, blasé, tired feeling of yours?"

The drug man offered no defense.

"Borrow two small boys and take them to the circus," said the sage.

A French N. A. R. D.

In France the price protective plan was recently adopted by certain manufacturers, and seems to be working satisfactorily. It is now proposed to form a sort of an N. A. R. D. in France (Union de pharmaciens pour la réglementation de la spécialité). According to the Chemist and Druggist, a committee will be formed of an equal number of representatives from the manufacturers of proprietary medicines, retail pharmacists of Paris, and retail pharmacists of the provinces. It is proposed to place a stamp on the protected articles; blue stamps for packages sold at full price, and red stamps for those on which a reduction of 10 per cent. would be allowed. These stamps it is proposed to sell at a centime apiece, so as to produce the revenue for the association. Each member will be required to sign an agreement not to substitute, to compete with protecting articles, or to sell at cut prices. Local associations, called "syndicates" in France, will perform police duty. Hitherto, it is said, every one of the many price protective schemes tried in France have failed. Many pharmacists object to the protection of proprietary prices, as they believe such action will encourage the growth of the proprietary business, which they look upon as the bane of the pharmacists.

Galalith.

A new substance which has been put upon the market under the name galalith, by a Vienna firm, is intended to be used like celluloid to replace horn, ivory, tortoise shell, etc. (Schweiz. Woch.). It is made of casein, subjected to a strong pressure and treated with formaldehyde. The casein is precipitated by acids or by the salts of heavy metals, and subjected to a pressure while warm, until it becomes transparent. The mass is then hardened by formaldehyde. It can be colored by all ordinary pigments. It has a specific gravity of 1.30, and is scarcely affected by alkalis. It softens in water, but recovers natural liquids, but is affected by acid and its hardness, elasticity and brightness on drying.

Fucol.

Fucol is a name given to substitute for cod liver oil. It is prepared in the following manner: Algae, rich in iodine like *Fucus vesiculosus* are raised under special conditions, pulverized and treated with a fine oil. The preparation appears in the form of a limpid oil, having an agreeable taste, suggesting roasted coffee.

✂ ✂ OUR ✂ ✂
LETTER BOX

DR. OSLER'S BOOK.

Chicago, April 15, 1905.

Editor The Pharmaceutical Era:

The following extracts I copied just to give you a taste of Dr. Osler's book. The book is full of interest for pharmacists as well as the medical man and layman—a literary gem, and perhaps a little too rich in quotations. Dr. Osler must be a book worm

WILHELM BODEMANN.

Page 6. Deal gently then with this deliciously credulous old human nature in which we work and refrain your indignation when you find your pet parson has triturates of the one thousandth potentiality in his vest pocket, or you discover accidentally a case of Warner's Safe Cure in the bedroom of your best patient. It must needs be that offenses of this kind come. Expect them and do not be vexed.

Page 129. It cannot be denied that we have learned more rapidly how to prevent than how to cure diseases, but with a definite outline of our ignorance we no longer live in a fool's paradise and fondly imagine that in all cases we control the issues of life and death with our pills and potions. It took the profession many centuries to learn that fevers ran their course influenced very little, if at all, by drugs, and the sixty pounds which old Dover complained were spent in drugs, in a case of ordinary fever, about the middle of the last century, is now better expended on a trained nurse, with infinitely less risk and with infinitely greater comfort to the patient. Of the difficulties inherent in the art, none is so serious as this which relates to the cure of disease by drugs. There is so much uncertainty and discord even among the best authorities (upon non-essentials, it is true) that I always feel the force of Rabbi Ben Ezra's stanza:

"Now, who shall arbitrate? Ten men love what I hate, shun what I follow, slight what I believe.

"Ten, who in ears and eyes watch me; we all surmise—they this thing; I that. Whom shall my soul believe?"

DEMAND FOR FREE SOAP.

New York, April 17.

Editor The Pharmaceutical Era:

All of the pharmacists in this city should extend their thanks to the Babeskin Soap Company for distributing soap free of charge through the medium of a Sunday newspaper. It was a pleasant surprise for the pharmacists, as they knew nothing of the free distribution until customers came in and called for the soap, which was in many instances not in stock in sufficient quantity to supply the large demand which can always be anticipated when something is to be had for nothing. Then, too, imagine the pleasure of these same pharmacists when the next morning the little ones came marching in with bright and smiling faces, bringing the wherewithal to purchase a two-cent stamp, with which to start the weekly correspondence, or with another coupon from the enterprising newspaper which was engi-

neering the scheme. It was, indeed, a happy day for the compounder of drugs. It was the happiness and contentment which comes with the consciousness of duty well performed.

The druggists are entitled, I think, to the thanks of the Board of Health for saving that holy the time and trouble required to send notices to some of our customers, who apparently belong to the great unwashed. Our only wish should be that all of the soap factories would go and do likewise.

I was really surprised to see what a beneficial effect the soap had on some of my customers.

F. W. DULBERGER.

PLEA FOR DRUG CLERKS' CLUB.

Editor The Pharmaceutical Era:

We have the Drug Clerks' Club in the city of New York. From its name one could imagine that it has a long list of membership—but it has not—and that it is the only club of its kind which takes the clerk under its flag and makes him feel at home. And many of those who do belong, seldom, if ever, attend the meetings for the following reasons:

Because the club has no rooms of its own (meetings are held in socialist literary societies' quarters).

The club has no fixed principle (its object being neither political nor social, is a little of everything and nothing of anything).

At present its meetings are held at midnight in the lower part of the city (East Broadway), thus making it inconvenient for the up-town clerk to attend.

The members individually and the organization as a whole should cultivate relationship with the proprietors and their organizations, or declare themselves to be a fighting organization and become affiliated with the Central Federated Union.

Let me suggest a few points which the members may find worthy of consideration: Let the club have its own quarters, which should be located somewhere near the center of the city, so that the clerk who is out of work and the clerk who has his day off, may have a place of refuge, and, above all, let the club be a social organization for the benefit of all the members rather than a source of self-gratification for a few office seekers.

Many more improvements could be suggested for the benefit of the members of the present club, but the foregoing must be adopted before it can succeed or have the support of the drug clerks of Greater New York.

Yours for reorganization on social lines,

HARRY H. KLOPLOWITZ,
439 Brook avenue.

HOW DRUGGISTS MAY BE BENEFITED.

Redbad, Ill., April 10, 1905.

Editor The Pharmaceutical Era:

On page 393 of The Era of April 6, last sentence, first column, is what has attracted my attention. I think this sentence should have added at the end the clause "without injustice to anyone." The expressed opinion of the majority, even if enacted into law, can only produce trouble and more or less crushing monopoly as soon as we depart from the line of using laws only as guides of conduct, but without

punishment to persons who disobey these laws, excepting, perhaps, the making good of the damages that may have been done and the natural punishment which always comes to violation of natural law. The enclosed card and leaflet will explain my views a little better. I told the Randolph County Retail Druggists' Association that just as we approach the so-called "single tax," druggists will be benefited as well as everybody else by doing away with useless groundroids and government officials, and opening up the best idle land for use; the general resulting improvement of society is of the utmost importance to all classes. How can you keep silent on this important question which you undoubtedly are acquainted with? Let your light shine. Don't be afraid to tell the whole truth.

Yours truly,

LOUIS LESAUNIER.

JOHN R. THOMPSON.

Newly elected Vice-President Western Pennsylvania A. R. D.

GOOD WORDS FOR THE ERA.

The Pharmaceutical Era is undoubtedly improving. It is publishing more live, interesting stuff than it formerly did. It is better-humored than it used to be. In fact, it is showing much of the life and sprightliness of the old Pharmaceutical Era that used to be published in Detroit. We can't say so much for its new type—for that is too small—but type is a trifling matter after all. It's what goes into a journal that makes it valuable—and what does not go in.—The New Idea.

Antiseptic Properties of Balsam of Peru.

In a communication to La Societe Therapeutique, Dr. Paul Gallois speaks highly of the antiseptic properties of balsam of Peru. He uses it freely for minor abrasions and superficial suppuration. Its healing properties are well known by perfume makers, as it is used frequently as an application to the skin. When the workman suffers a contusion or bruise, he will at once seek a supply of the balsam. The application is said to produce a rapid cure without suppuration.

THE GOLDEN SPIKE.

BY JOEL BLANC.

When a great railroad is finished, it is not unusual to drive in the last tie, at the farthest end of the last rail, a golden spike.

A few years ago there was started from the country's center, Chicago, a great system of communication, a great improvement and blessing for the drug trade. Through pain and toil, in spite of discouragement and opposition, lacking both funds and workers, tunneling through obstacles mountain high, bridging rivers of indifference and chasms of abuse, the brave workers saw their system of the Road of Right spread in all directions. From the Golden Gate to the Delaware, from the Penobscot to the Everglades, this great system was built, and we call it the N. A. R. D.

But the most desirable, the most necessary point, the country's metropolis, it could not reach. It was not because the druggists of New York did not want it, it was not from lack of effort both within and without; it was merely from differences of engineering opinion. Let us say that the engineers could not agree upon a plan to bridge the Hudson. But finally we found the right plan, the Direct Contract Plan. Then speedily the bridge was built; a bridge of hands, clasped in fraternity.

On Tuesday, March 28, 1905, the N. A. R. D. road was completed to its terminal in New York City. Then, in the tie that binds, holding the rail of right, was driven the golden spike of co-operation. The brightness of it was reflected from Fire Island to the Hudson, from Richmond to the Bronx; yes, more than that, it shed its light from coast to coast—from Canada to the gulf.

It was fitting that this golden spike should be held by one who has the courage to change his mind, and better still, to speak it—S. V. B. Swann. It could not have been otherwise than that this golden spike should be driven by one who helped, through years of toil, to dig the gold to make it; gold as strong as his own character, bright as his own mind, pure as his own life—William C. Anderson.

The Imperial City of the Empire State is reached! The N. A. R. D. is in New York at last!

Do we comprehend in this time of exultation what this accomplishment means? Do we fully appreciate its bearing upon the future of our commercial existence? Do we realize that while it lessens not the burden of duty, that it gives us two thousand more burden bearers, two thousand more whose burdens all the rest of us must help to bear?

Perhaps I, the wanderer, the cosmopolitan, the man of many homes; yet one who has known his most perfect home happiness in New York, can see more in the organization of New York than some others may.

My brothers of New York, you can as yet but appreciate in small measure the great and good thing you have done; you have given an impetus to the cause such as it has never had before; you have put a new "Empire State Express" upon the "Road of Right." Remember! It is not a subway train to shun daylight, nor is it an elevated to be run above the heads

of the majority; it must be run on the level, where every man can help to remove obstructions and take a hand at the brakes. Above all, bear in mind that its run does not stop at Harlem, nor even at Buffalo. The crews may change; but the national spirit of each must go through with the train to "Frisco," and with the sleepers for Seattle and New Orleans. It is merely one more truly trans-continental train that you have added to the rolling stock of the N. A. R. D. system. It comes from the shops new and bright; the strongest, best and swiftest train of all—keep it going as it has been started and the drug world will honor and praise you. Run it on Direct Contract more than schedule; look out for hot boxes of useless scheming; see that the brakes are not operated by hot air, but by the compressed air of caution; let the trainmen put as much intelligence and sincerity in their work as do the engineer and conductor, and keep the peanut peddlers and bunco steers from ever getting a foothold on the train.

Organizing peculiarly as you did, upon the Direct Contract Plan, you can, by your numbers, intelligence, and concentration of effort upon that plan, marvellously increase the effectiveness of the entire organization of the trade. In this one particular your power may equal, if it does not exceed, all the combined efforts of the rest of the country. So may you benefit us all, and only by helping others can you receive from others that help that you *must* have to succeed.

There is work ahead for you, boys; lots of it. Hard work or not, as you choose to make it. If there are many who preach and few who practice, if meeting theory is not made store fact, if there are district jealousies and sectional narrowness, the work will be hard—bitterly hard.

But if every man who talks will work, if each will work for all and all for each, if you are great in action as your city in size, and broad in thought as the nation, the work will be easy—and successful.

The peculiar location and commercial pre-eminence of New York have made it the gate through which some demoralizing trade influences have spread over the entire country. It is in your power to make it the door through which blessings for the drug trade of the nation may enter. It is in your power to double the speed and effectiveness of N. A. R. D. trains, to make its every effort a success. Do it, and all will honor you; none will rob you of your laurels, but each will vie with all the others in bestowing honest praise upon you.

The golden spike is driven, the road is finished and the train is ready. The safe and skilled engineer, Anderson, is in the cab. Buy your tickets, for there are no dead heads on this road, and those who work hardest are those who pay most. All aboard!

Tachisan.

A preparation employed superficially for local pains is called tachisan. It is a product obtained by distilling an equal part of camphor weed and the entire plant of *Artemisia cina* and peppermint. It contains camphor, associated with the essential oils of *artemisia* and peppermint.

DISPENSING MEMORANDA.*

BY J. P. GILMOUR.

If the chemists who complain so woefully of the tedium and drudgery of shop life would only cultivate at their daily tasks the habit of scientific observation, which they ought to have formed when serving their apprenticeship and preparing for the qualifying examination, they would quickly realize that even the most familiar objects and processes of the laboratory and dispensing counter are capable of affording inexhaustible interest and instruction. Observation of an apparently trifling phenomenon and simple experiment to elucidate its meaning have often led to remarkable scientific discoveries, with far-reaching sociological consequences, the discovery of saccharin and the Röntgen rays being cases in point. And even if the supposed original observation or theory turns out to have been long since anticipated, there is always the inalienable satisfaction of having at the same time independently verified the fact, and confirmed anew the range and precision of one's powers of scientific scrutiny. The science and art of dispensing opens up a field infinitely rich in possibilities of physico-chemical development. And every day, in the compounding of the countless collocations of chemically active substances there must emerge many unobserved and more unrecorded and uninterpreted instances of hitherto unknown and unsuspected reactions.

If dispensers, as a class, would only open their eyes and sharpen their wits a trifle more than is absolutely necessary for the intelligent performance of their duties it is certain that the stock of knowledge in general science, and particularly in practical pharmacy, would speedily be augmented and enriched to an unprecedented degree. The plan which I have found most useful for systematizing one's dispensing practice is to keep a diary, in which is entered notes and comments on apparently new or peculiar incidents and observations in laboratory and dispensing operations. This has a practical as well as speculative value, inasmuch as reference to its records frequently solves difficulties which might otherwise prove formidable. The under-noted examples selected somewhat arbitrarily from my journal illustrate the utility of a methodical minuting of data, and also how scientific theory and the element of the unexpected figure in the simplest facts of routine work:

Hydrag-perchlor gr. 1-24
Potass. iodid gr. lxxii.
Ft. pil, mass et div, in pil. xxiv.

Referring to "Excipients" in the Journal index it was ascertained that on a former occasion syrup glucose had been used as an excipient for potassium iodide. Accordingly 1 G grain of puv. tragacanth and liquid glucose q. s. were used for each pil, and a most satisfactory mass was formed.

B

Potass. acetat ʒiv.
Sol. potass. chlorat. saturat. ad. ʒvi.
The potassium acetate had barely been taken up by the solution when a copious

*Read before the Glasgow and West of Scotland Pharmaceutical Association, and reprinted from the *Pharmaceutical Journal*.

precipitate of minute iridescent crystals developed. At first sight this looks like a case of chemical reaction. The real explanation is that the solution of the acetate "salts" out the chlorate. According to the ionisation theory, which, while open to some serious objections, yet serves as a good working hypothesis, there being as many potassians in the potassium chlorate solution as can possibly be produced under the given conditions, the addition to it of a more soluble salt of potassium towards which the solvent has what may be called a higher potential, determines the recombination of the surplus potassians with chlorions and the consequent displacement from solution of the potassium chlorate.

B

Cocainæ hydrochlor gr. ii.
B. Eucainæ hydrochlor gr. ii.
Ac. salicylic gr. 1-6
Sol. adrenalin m.x.
Aque ad. ʒii.

Half a grain of salicylic acid was dissolved in 6 drams of boiling water, and when this had cooled 10 minims were measured, the B. Eucainæ added, and the mixture raised to boiling point. The eucaine seemed unusually difficult to dissolve, and whenever the liquid cooled an abundant crop of minute crystals formed. These were found to be eucaine salicylate. In preparing the official solution of cocaine hydrochloride, which contains salicylic acid in the above percentage as a preservative, a small quantity of the unstable cocaine salicylate is formed, but as, although sparingly soluble, it is present in infinitesimal quantity, it remains in solution. Eucaine salicylate resembles the eucaine hydrochloride from which it is formed in being much less soluble than the cocaine salts, and hence the precipitation in the above combination. The prescription was for a solution to be used as a dental anaesthetic, but on account of the incompatibility the prescriber had no alternative but to cancel it.

B

Syr. ferri iodid. ʒiv.
Aq. chlorof. ad. ʒiv.

This seems a perfectly innocent and legitimate mixture, and yet it was returned two days after being dispensed because it had become deeply discolored. An application of the starch test showed that the coloring agent was free iodine. Samples from the stock bottles used in compounding the mixture were then taken, mixed in the same proportions, and placed under observation, when it was found that traces of free iodine could be diluted after twelve hours, and that in twenty-four hours the liquid had become sherry tinted, and contained an appreciable quantity of free iodine. For control purposes, the syrup was tested to determine the absence of uncombined halogen and a mixture of the syrup and distilled water in the proportion of the prescription was set on with the test mixture. The control test mixture showed no color change for nearly a fortnight, and even after standing for a month did not acquire more than a straw color. Experiments made subsequently with samples from a fresh batch of syrup and from outside sources all gave practically the same results, although with one sample of a syrup prepared from a liquor the change

seemed somewhat slower. Temperature also influenced the rate of decomposition, a higher temperature accelerating and a lower retarding the reduction. The precise cause of the reaction is obscure. One naturally suspects the presence of free chlorine, derived from decomposition of the chloroform, but while an admixture of water with chloroform seems to induce the formation of carbonyl and finally of chlorine, as solution of chloroform in water is remarkably stable, although, owing to the energetic evaporation of the chloroform, it is constantly becoming weaker as a solution. The starch test which is so embarrassingly delicate does not reveal the faintest trace of free chlorine even in samples of Aq. Chloroformi, which have been exposed to sunlight for some time. This is, therefore, a case in which it is not possible at present to do more than state the facts as far as they have been ascertained. The explanation must wait on fuller knowledge.

In a recent issue of a trade journal, a correspondent states that he dispensed the following prescription:

R
Syr. ferri iodid ʒiv.
Syr. Eastoni.....aa ʒiv.

The customer brought back the bottle half filled with crystals, and said that the mixture must be different from what had been dispensed in Edinburgh, as that remained in perfect solution. I have tried this mixture with several samples of both syrups, and in every case there has been a slow formation of crystals after the lapse of a day or so. The deposit seems to consist principally of strychnine iodide, probably mixed with some quinine iodide. It is difficult to conceive how such a reaction could be averted, save by the omission of the strychnine or the aqueous dilution of the mixture, when, as the strychnine only amounts to 1/2 grain, the iodide formed, albeit its higher molecular weight, would remain in solution. The statement that the mixture dispensed as ordered did not deposit crystals on some occasions on which it was compounded is quite inexplicable.

While the foregoing illustrative instances are simple almost to the point of being primitive, they may, nevertheless, serve to enforce the thesis upon which this apology for a paper is pivoted.

Ferric Sulphate as an Antiseptic.

The ferric salt of sulphuric acid possesses, according to Vincent (La Press Medicale), many advantages as an antiseptic. In a classification of disinfectants arranged according to their antiseptic power, the deodorizing value and the price, the author places ferric sulphate after sulphate of copper, cresol, chloride of lime, lysol and the alkaline basis like sodium and potassium hydrate. He states that the antiseptic power of ferric sulphate is almost equivalent to that of carbolic acid under the same conditions. The ferric salt is to be preferred to ferrous sulphate, which has only an extremely feeble disinfecting value, and also to heavy oil of coal and chloride of zinc. The use of these substances should be discouraged, because it gives a false and dangerous sense of security.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Vegetable Hair Dye.

(J. T. W.)—We do not know of any specific formula for a hair dye which may "be made from herbs, etc., but not to contain walnut shells or leaves." However, several preparations of which the tinctorial basis is purely mineral, and particularly those containing silver nitrate, are often thus labeled and advertised by unscrupulous manufacturers or vendors. Of purely vegetable dyes there may be mentioned the casbew or anaacardium, pyrogall acid, henna, etc. The latter dye is furnished by the leaves of Lawsonia inermis, which, being first powdered, are stirred up to a pulp with water, which is applied to the hair with a brush, and afterwards washed off again. The longer the henna acts on the hair, the darker is the dye; the color varies from light brown to orange red. After an exposure to the dye for forty-five minutes, the hair becomes a pale brown; after four hours, it is red brown to golden blonde, and after twenty-four hours the hair becomes orange red and unnatural looking. These data, taken from Koller's work on "Cosmetics," are supplemented by the statement that "this possibility of regulating the color by the time of exposure, renders henna especially adapted for use as a hair dye."

Drunkenness Cures.

(O. R.)—We cannot give the formulas for the "tasteless powders used to stop the drinking of whiskey." Many of the nostrums recommended for the purpose no doubt owe their activity to alcohol or aromatics, or both; and it rarely happens that these preparations are successful unless they are well backed up by moral influence. However, there are preparations which owe their virtues entirely to solid ingredients, sample formulas for which are the following, taken from Pharmaceutical Formulas:

- (1.)
Golden seal 1/2 grain
Cinchona 1/2 grain
Capsicum 1/2 grain
Ginger 3 grains
Licorice 4 grains
Powder each ingredient and mix thoroughly. For one powder.
- (2.)
Ginger 1/2 ounce
Cannella 1/2 ounce
Fennel 1 dram
Cassia 2 drams
Licorice 2 ounces

Mix thoroughly and divide into 8 powders.

On the treatment of chronic alcoholism, Potter ("Materia Medica and Therapeutics") says:

"The continued ingestion of alcohol in excessive quantities is not a disease, as sentimentalists would have us believe, but is simply a vicious drug-habit, and may be overcome, like any other drug habit, by the exercise of the subject's will-power alone in abstaining therefrom. The effort to gradually reduce the amount consumed simply prolongs the agony and is much less efficient than the total and immediate withdrawal thereof, entirely. This should be carried out in an inebriate asylum in most cases. Strychnine is a specific remedy for alcoholism, and the basis of all the so-called "cures" which are extensively advertised, under the gold-extracting title of "Gold Cure." Ten to twelve minims of a solution of strychnine nitrate, three grains in ten drams of distilled water, should be injected hypodermically three or four times a day for two weeks, and less often for two weeks more, gradually reducing the dose and frequency of administration."

Face Powder.

(F. E. M.)—The Era Formulary gives these formulas:

- (1.)
Venetian chalk 20 pounds
Subnitrate bismuth 42 ounces
Zinc white 42 ounces
Oil of lemon 1 1/2 ounces
- (2.)
Tale 10 drams
Orris root 1 dram
Oil of bergamot 1 drop
- (3.)
Bismuth subnitrate 1/2 dram
Purified talcum 1 1/2 ounces
White starch 2 ounces
Gypsum 3 ounces
Triple extract fleur de lis. 1 fl. dram
Mix intimately and pass through fine bolting cloth.
- (4.)
Tale (of the finest white grade) 38 pounds av.
English precipitated chalk 25 pounds av.
Powdered carbonate of magnesia 10 pounds av.
Oxy-chloride bismuth. . . 7 pounds av.
Corn starch 20 pounds av.
Acid salicylic (true). . . 43 grains
Oil of rose (pure) . . . 5 fl. drams
Heliotropine 1/2 ounce av.
Oil of bitter almonds 10 drops
Triturate oils, heliotrope, salicylic acid, with bismuth thoroughly, mix with balance and sift through bolting cloth.
- PINK OR FLESH.**
- (5.)
Take of the above . . . 3 3/4 pounds av.
Carmine, No. 40 1 dram
Triturate carmine with a small amount of the powder, gradually adding the balance, and sift thoroughly through bolting cloth.
- BLONDE.**
- (6.)
Take of the "white" powder (No. 4 above) . . . 1 1/2 pounds
Carmine, No. 40 5 grains
Burnt umber (in fine powder) . . . 2 drams
Raw sienna 2 drams
Proceed as with the "plok."

Extemporaneous Rose Water.

(Ohio).—By "extemporaneous" rose water, we presume you mean a preparation made without the aid of distillation. Here is a process known as the "hot water method," which is said to produce a satisfactory rose water for most purposes: Put 4 pints of hot water (180° F.) in a bottle; to this add 30 minims of rose, previously dropped upon a folded filter paper. Cork loosely, to prevent bursting the bottle, and shake well. Upon agitation the filter paper will be reduced to a pulp and the oil rapidly disseminated and dissolved in the water. After having cooled, filter, adding enough water, through the filter, to make the whole measure 4 pints.

(2.)

Another process taken from the Dublin Pharmacopœia is as follows:

Oil of rose 20 minims
 Distilled water (Imp.) .. ½ gallon
 Agitate together and filter.

There are various other processes in which filtration through an absorbent powder is made use of; the object of using the powder is to divide thoroughly the oil and expose a greater surface, so that the water in filtering through it may become thoroughly saturated. In the processes given in the Pharmacopœia of 1870, magnesium carbonate was the powder used. This is objectionable on account of its slight solubility in water. Upon this ground its use was discarded by the Pharmacopœia of 1880 and the method of percolation through cotton adopted. Other powders, such as calcium phosphate, kaolin, talcum, etc., have been suggested as substitutes, but there are quite as forcible objections to their use as against the magnesium carbonate. Medicated and perfumed waters should always be prepared by distillation whenever practicable. The above formula, known as the "hot water method," is founded upon the fact that most of the volatile oils are much more soluble in hot water than in water at ordinary temperature; hence, if the oil is thoroughly agitated with hot water in a suitable vessel, such as a tin can or a bottle, and allowed to stand until the excess has separated, the water will be found to be saturated, when it may be decanted and filtered.

Crushed Fruits.

(Soda).—Put up by the following process, the fruit is said to retain its natural color and taste, and may be exposed to the air for a long time without fermenting:

CRUSHED STRAWBERRY.

Take fresh, ripe berries, stem them, and rub through a No. 8 sieve, rejecting all soft and green fruit. Add to each gallon of pulp thus obtained 8 pounds of granulated sugar. Put on the fire and bring just to a boil, stirring constantly. Just before removing from the fire, add to each gallon 1 ounce of a saturated alcoholic solution of salicylic acid, stirring well. Remove the scum, and, while still hot, put into jars and hermetically seal. Put the jars in cold water, and raise them to the boiling point, to prevent them from bursting by sudden expansion on pouring hot fruit into them. Fill the jars entirely full, so as to leave no air space when fruit cools and contracts.

CRUSHED RASPBERRY.

Prepare in the same manner as for crushed strawberry, using one-half red raspberries and one-half black, to give a nice color, and using 7 pounds of sugar to each gallon of pulp.

Crushed fruits are served as follows: Mix equal quantities of pulp and simple syrup in the counter bowl; use 1½ to 2 ounces to each glass, adding the usual quantity of cream or ice cream. Draw soda, using a fine stream freely.

PRESERVING FRUITS.

Select the finest fruit, but not too ripe, and pare such as peaches, quinces and pears; then with an ordinary fork, prick them to the seed in several places, so that the air in the fruit may escape, and also the sugar may enter the fruit more easily; as they are pricked throw them in cold water; this prevents them from becoming black in the places pricked; now, put them into a basin of hot water, letting them simmer until parboiled, then, with a skimming ladle, dip them from the hot water and drop them into a basin of cold water, allowing them to remain a few moments; remove from the water and put on a hair sieve to drain; when drained, put them in a wide-mouthed crock and bring to a boil a quantity of simple syrup; pour this over the fruit; then place a plate over the top to hold the fruit under the syrup; set away till next day, then empty this crock of fruit and put the syrup again into the basin, and bring just to the boil; return again to the crock and cover with the plate; do this each following day, for six days, by this time the fruit will take up no more sugar; put them into a cool place.

Good books for the soda fountain dispenser are Eberle's "Soda Water Formulary" (\$1) and Hiss' "Standard Manual of Soda and Other Beverages" (\$4). Copies of either may be obtained through this office.

Cold Cream.

(Salome).—The best formula one shall use for the preparation of a "cold cream" is almost entirely a question of individual preference. Some operators have been so successful with formulas that have been condemned by others that nothing could induce them to make a change. The "best" formula is the one which produces the best results. Because you have failed to attain the highest standard in your trials of published formulas you should not hesitate to make other trials or to use other formulas.

In a paper read before the Maryland Pharmaceutical Association, two years ago, H. A. B. Dunning stated that it is not so much a question of formula as the method of preparing cold cream that will give the most satisfactory results. There are several essential requisites to a perfect cold cream. It should be creamy white, also firm, yet soft in cold and hot weather, readily absorbed when rubbed upon the skin, leaving but a slightly oily surface. A cold cream having these characteristics may be obtained by exercising proper care in the preparation. The wax and almond oil are fused together on a water-bath, and allowed to heat a short time after fusion has taken place; the borax (previously dissolved in the rose-water and heated to about the same temperature) is then added to the fat mixture all at once. After stir-

ring until thoroughly mixed and of homogeneous cream appearance, it is removed from water-bath and whipped, ceasing while still warm, and running from dish to stock container. If the fat solution is not sufficiently hot, the borax is not allowed ample time to saponify, thereby producing an oily cream. For the same reason, the borax solution in the rose-water should be sufficiently hot, because, if cold, it would cause the precipitation of fat in lumps. Finally, it should be removed from the dish while still warm, because if allowed to cool in the open without stirring, the wax will collect at the top when it is colder; if stirred until cold, the cream will become granular, due to the separation of the water.

We give below a formula recommended by W. C. Alpers, of this city, some years ago. In the formula, almond oil is replaced by the so-called paraffin oil, which is also sold under the name of "mineral" or "white oil."

Care must be taken to select the best quality, entirely free from odor or color. The resultant cold cream is uniform in all climates and available under all conditions. White wax, 150 parts, is dissolved in paraffin oil, 600 parts, with the aid of a gentle heat; borax, 9 parts, is dissolved in water, 240 parts, the two fluids are brought to a uniform temperature, not exceeding 60° C., and the aqueous solution is poured into the oily one in a continuous stream, stirring gently for a minute or two; then oil of geranium, 1 part, and oil of rose, 10 to 20 drops, are added while stirring, and the product is poured into jars before cold. The cold cream so obtained is more white, soft and smooth, pleasantly odorous, keeps well in the heat of summer and the cold of winter, and becomes only slightly thinner in summer.

Neuronal or Bromo Diethylacetamide.

Bromoethylacetamide, or neuronal, is obtained by treating diethylacetamide with perchloride or phosphorus. The product treated with bromine forms a chlorine product of diethylacetamide bromoethylacetic acid. This is treated with ammonia, which forms the product desired. It appears in a white crystalline powder, having a bitter taste and a faint odor of camphor. It melts at 60° C., is easily soluble in the ordinary solvents, but very slightly in water. It is said to possess hypnotic qualities and is given in doses varying from ½ gram to 2 grams, for insomnia.

Vasenol.

In order to render liquid and solid paraffin capable of forming an emulsion in water, various fat bodies have been added. In a recent preparation called vasenol is a mixture of vaseline, or oil of vaseline, with fat alcohol, obtained from spermaceti, Chinese wax and beeswax. It is offered as a new excipient, forming with water a stable non-irritating emulsion, which is easily absorbed by the skin. Its forms on the market are, vasenol emulsion, containing 25 per cent. of water, and liquid vasenol, a stable emulsion, of white liquid paraffin, containing 33 per cent. by weight of water. The latter is recommended as a remedy in the treatment of diseases of the skin.

THE PURE-FOOD LAW

makes it prohibitory to sell any but

STRICTLY PURE

Extract of Vanilla

Wyeth's Extract Vanilla is prepared from the choicest variety of carefully selected and properly cured Vanilla Beans, and contains no coloring matter nor any of the artificial or synthetic principles so frequently employed.

Paper.

Newest Kind of Drug Store Advertising

The "PUZZLER" isn't like anything else published. It's a Monthly Illustrated Store Paper, to be sure, but examine it, and you at once recognize its unique, trade-bringing, entirely new features. It is only 12 months old, but **225,000** copies per month tell the story of its tremendous success with the shrewdest advertising druggists in America—one only in a locality. You never before could buy such effective drug store advertising at so small a price. It pays for itself over and over every month. Its effectiveness is doubled by a novel plan which carries the interest of all ages and classes of readers over from one month to another. Get exclusive control of the "Puzzler" for your locality and the profits on your increased trade will more than pay the costs—and besides, it will be the best general advertising that you can get for your drug store. Write at Once for Free Sample Copy.

Pepto-Mangan

AN ARBITRARILY COINED WORD.

It is the exclusive property of the M. J. BREITENBACH CO.

FOR twelve years we have been advertising to the drug trade, through the drug trade journals, the fact that **PEPTO-MANGAN** (irrespective of the name GUDE) is a trade-mark name, registered October 13, 1891, and is our exclusive property.

In order that there may be no misunderstanding, we call attention again to the fact that Pepto-Mangan is *NOT* a *synonym* for any other iron preparation, for

There is Only One **PEPTO-MANGAN**

which is our product, Gude's preparation, and the Courts have over and over again rendered decisions protecting us in our rights. To ask a customer "Which Pepto-Mangan do you desire?" when Pepto-Mangan is called for, is not only inaccurate and misleading, but renders the druggist liable to the law.

To protect the druggist from any possible loss of trade, or from becoming involved in a lawsuit, through ignorance, we wish to **EMPHATICALLY EMPHASIZE** the fact that

Pepto-Mangan is our Trade Mark

and the name does not apply to any other preparation.

M. J. BREITENBACH CO., 53 Warren Street, NEW YORK.

\$5,000 PER DAY Is Spent in Advertising **PE-RU-NA**

Besides being the largest proprietary medicine concern in the world, The Peruna Drug Manufacturing Company is the most extensive advertiser of modern commercial history. Every day of the year during the Spring and Winter it spends fully \$5,000 to bring its remedies prominently before the public. The most valuable space in thousands of daily and weekly newspapers is taken up by its "catchy" announcements, and upwards to 36,000,000 booklets, almanacs and pamphlets are annually distributed broadcast over the North American Continent, introducing Pe-ru-na into millions of homes.

Schedule of Prices:			
}	1 Dozen Peruna,	- -	\$8.00
	2 Dozen Peruna,	- - -	7.75
	12 Dozen Peruna,	. -	7.50

Reasons Why You Should Push Pe-ru-na.

FIRST, because hundreds of people, hitherto prejudiced strongly against patent medicines, are daily adopting its use and recommending it to others, thereby increasing the demand for it.

SECOND, because the retail dealer is protected against the so-called "cut-rate" slaughterer of prices by the Direct Contract Serial Numbering Plan, a process costing the manufacturers of Peruna more than \$100,000 to put into operation.

THIRD, because Peruna is the world's standard remedy for catarrh, a disease which in some form or other infests every locality; and

FOURTH, because the profit resulting from the immense sale of Peruna stamps it as the most desirable article, from the dealer's standpoint, on the market.

NEWS SECTION

ONE MORE VICTORY.

Contract Plan Wins and Department Stores to Sell at Regular Rates.

SUIT STRENGTHENS THE MILWAUKEE TRADE IN ITS EFFORT TO PROTECT ITS BUSINESS.—DEPARTMENT STORE DRUGGISTS CONSIDER THE OUTCOME A COMPROMISE RATHER THAN A VICTORY.

Milwaukee, Wis., April 15.—The serial number people and the wholesale druggists of Milwaukee have won the greatest victory possible in their campaign against price-cutting. Every drug store in the city and every department store that maintains a drug department is now a party to an agreement to sell at regular rates.

This millennium was reached through a suit brought by Fred B. Eycleshymer, proprietor of the drug department of the Eoston Store. He was a price-cutter and naturally the serial number people declined to have their goods go into his house. The local jobbers refused to sell to him and he brought suit. The defendants were the Yahr & Lange Drug Company, the Jerman, Pflueger & Kuehnstedt Company, F. Dohmen & Co. and Drake Bros., of Milwaukee, and it was alleged that a conspiracy existed among these defendants and the National Wholesale Druggists' Association, the National Association of Retail Druggists and the Proprietary Association of America.

It was alleged that the wholesale manufacturers kept a black-list of persons selling goods at a price lower than the manufacturers indicated the goods should bring at wholesale and that by intimidation compelled jobbers to refuse to sell to persons on the black-list. It was called a trust and a combination in restraint of trade, and the plaintiff asked for an injunction and for damages in the sum of \$5,000. In their answer the defendants denied the charge of conspiracy and of maintaining a trust, declaring that they were simply acting in self defense to prevent department stores using goods that were their stock in trade for advertising purposes, selling at or below cost merely to induce customers to come to their stores.

The case was begun early last fall, but was postponed from time to time, and in the meantime a representative of the serial number people came here, and, after numerous conferences and much labor, effected a happy compromise.

By the terms of the compromise and agreement entered into, all the department stores become recognized as druggists, and may buy goods directly from the manufacturer or wholesaler. One small concession was made to them. Whereas they heretofore sold such goods as they could get through secret agents alleged to be legitimate druggists, at 19, 39 and 75 cents, respectively, for the 25 cent, 50 cent and \$1 goods, they may now sell them at 25,

45 and 80 cents. The suit and the strife resulting therefrom has simply strengthened the trade in its effort to protect its business.

F. B. Eycleshymer made the following statement regarding the agreement: "We department store druggists consider it a compromise, scarcely a victory, because we had to agree not to cut prices in future. Each side will pay its own costs, and request will be made in the Circuit Court for the suit to be dismissed. Agreement papers were signed by Kanneberg & Cochems for me, and by Hunter & Goff and Robert McMynn for the defendants: Yahr Bros. Company, Jerman, Pflueger & Kuehnstedt Co., Yahr & Lange Co., and the F. Dohmen Company, wholesale druggists.

"All down-town stores will hereafter be sold drugs, including those named in the exhibit 'A' of the alleged October black list, who were: Gimbel Bros., the Boston Store, T. A. Chapman Company, F. B. Eycleshymer, Fred Hesse, William Steilmeyer & Co., G. M. Barrett Co., Strohmeyer & Co., and J. W. Wilson.

"Instead of buying through friends secretly, we wanted to buy directly and sell at whatever price we chose, but the agreement would not permit us to do this."

WESTCHESTER PH. A. MEETS.

The spring meeting of the Westchester County Pharmaceutical Association was held April 12, with a largely attended dinner at the Carpenter House, White Plains. An excellent menu was served and after that had been discussed the remainder of the afternoon was given over to a comfortable "talky-talk" on trade conditions, which seemed to show considerable improvement. With few exceptions, all the druggists of Westchester County are now in line for better prices. Following are the officers of the association: Frederick Koch, president; Geo. B. Wray, first vice-president; F. Lent, second vice-president; J. B. Sackett, treasurer; Howard Safford, secretary. J. B. Duble and J. D. Bellaire represented the N. A. R. D.

DRUG STORE 60 YEARS OLD.

In commemoration of the sixtieth anniversary of the first drug store opened in Derby, Conn., George H. Harding, the present proprietor, displayed in the windows the old prescription files, mortars and show bottles used in the business, as well as pictures of former proprietors. These told graphically the history of the store during its existence of over half a century.

The store was opened on March 31, 1845, by S. P. and J. B. Tomlinson, and since then has changed hands many times. Charles H. Coe became the proprietor in 1876 and continued in sole ownership until his death a few years ago, when George H. Harding bought the store from the estate. Over 178,000 prescriptions have been compounded in the store since its establishment.

OFFICERS ELECTED TWICE.

Illegal the First Time, so Alumni Had to do so Again.

To be elected twice to the same office on the same night, is a distinction that belongs to Fred Borggreve and Wm. A. Ho-hurg, Jr., president and first vice-president, respectively, of the Alumni Association of the New York College of Pharmacy. At the annual meeting, last Wednesday, two successive motions were made and carried, that these officers be re-elected unanimously. Complications soon arose, and it was discovered that an election, to be legal, must be made by ballot. Hence the job had to be done over.

Henry K. Binder defeated F. N. Pond for second vice-president. H. J. Goeckel was unanimously elected second vice-president, while Secretary Rudolf Gies was compelled to cast one ballot for himself for re-election. Treasurer Charles S. Erb was re-elected, defeating Phillip Flitz by a vote of thirteen to twelve, Mr. Erb not voting. In view of the work that he had done in straightening out the affairs of the association, Mr. Erb expressed in plain terms his resentment at what he considered an exhibition of ingratitude on the part of the association.

Dr. George C. Diekman was unanimously re-elected registrar. Messrs. Wendler, Ward and Davies were elected to fill vacancies on the Executive Board, Mr. Wendler succeeding himself. Treasurer Erb reported a balance of \$1,021.78.

Preparations for the Alumni Day exercises, said H. K. Binder, were practically completed. The exercises take place Wednesday evening, April 26, at the college. Vaudeville begins at eight o'clock and dancing at ten o'clock. The roll of honor will be read, as usual, by Dr. Diekman, and prizes will be awarded by the president. With regard to the June outing, Mr. Binder reported that his committee had selected Bussner's Park, Bachmann's, S. I., which has a conveniently located refreshment factory. The report was promptly accepted. Twenty dollars was appropriated for the use of the committee.

Dr. Diekman presented to the association, as the gift of Dr. William Muir, a valuable photograph, taken in 1870, of the graduating class of the college. The picture contains the portraits of the late Dr. E. R. Squibb, Prof. C. F. Chandler, W. De F. Day and other prominent men.

President Borggreve spoke briefly on the year's work in placing the association on a sound financial basis. He expressed the hope that during the year social features would be introduced to a large extent, at the meetings. Pres. Borggreve appointed the following committees: Entertainment, Messrs. Flitz (chairman), Bloder, Wendler, Morse and Bremer; auditing, Dr. Diekman and Dr. Harry B. Ferguson.

FORMULA BILL OPPOSED.

Legislative Committee Points Out Its Legal Defects.

There was a hearing on the Platt bill at Albany, last Wednesday, attended by Dr. Wm. C. Anderson, Dr. Wm. Muir, A. C. Searles, George Kleinau, Warren L. Bradt, George E. Thorpe and George S. Ballard. Messrs. Anderson, Muir and Bradt were the principal speakers.

Considerable objection was raised by Dr. Muir to the proposal of the chairman that the registration fee be reduced from \$5 to \$1. Dr. Muir was opposed to the bill in its entirety, on legal grounds. He showed, first, that the powers already visited in the Board of Health were sufficient to protect the public health. Second, that the Commissioner of Health would be compelled to grant a certificate of registration on every preparation, whether or not it contained poison, inasmuch as no medicine is deleterious to health when used for its intended purpose and in the quantity prescribed. Hence the bill practically lacks a controlling clause.

A third point raised by Dr. Muir was that under the intercommerce law the products of manufacturers in other States could not be excluded. New York manufacturers could transfer their business to New Jersey, and so evade the law. Hence the sale of medicines would be regulated, but not the manufacture.

Lastly, said Dr. Muir, the law does not make provision as to what shall be done with the stocks on hand. And as soon as this is made, he said, druggists will be able to sell so-called "old stock" indefinitely.

Mr. Bradt stated that under the present health laws it is possible to publish the results of analyses of patent medicines in the newspapers and so warn the public.

The Hill bill (penal code amendments) passed the Senate Wednesday. It was expected that the McKeown cocaine measure would be reported out of committee.

THE FACTS ABOUT MR. SCHULTZ.

In our issue of January 26, we printed some statements about a certain "H. Schultz," who had been taking subscriptions to the Brooklyn Consolidated Drug Co., but who, it is claimed, did not turn the money over to the company. The article which we published was the English translation of one which appeared on January 15, in the *Deutsch-Amerikanische Apotheker Zeitung*, and which was written for that paper by Mr. P. G. Breitschneider, a Brooklyn druggist, and one of those who paid the \$5 to Mr. Schultz, without becoming a member of the company and without ever hearing anything further about his money. The receipt for this money is in our possession.

Two weeks ago Mr. Hugo C. Schultz, of Brooklyn, called at this office and claimed that an injustice had been done him and that he was a bona fide agent of the company. On investigation, we find that Mr. Schulz has a private arrangement with John G. Wischerth, treasurer of the Brooklyn Consolidated, whereby Mr. Schulz is to bring in applications for membership in

the company, accompanied by a fee of \$5. For every application so brought in he is to receive \$5, paid by Mr. Wischerth out of his own pocket. We are informed by Mr. Wischerth, however, that Mr. Schultz has not adhered to this arrangement; that he has taken payments of only \$5, which Mr. Wischerth refused to accept, and that Mr. Schultz has kept these \$5 payments, instead of returning them to the various druggists from whom he received them. Not having paid the full \$25, these druggists, of course, could not become members of the company, and were out the \$5 which they had paid to Mr. Schultz.

Mr. Schultz is not officially member of the company, according to the statements to us by President Anderson and Treasurer Wischerth.

A. B. C. TAKES A LONG RIDE.

The Apothecaries' Bicycle Club, after four short runs, inaugurated the season of 1905, on April 13, with a trip from Cornwall-on-the-Hudson to Suffern. *Sanguinaria Canadensis* and *Hepatica Triloba* were found in full bloom. The route was along Meadna Creek, through Central Valley, Ors Mills, Mountainville, Woodbury, Highland Mills to Turners, where the Ramapo Valley commences, then through Arden, Southfields, Tuxedo, Ramapo, Hillburn to Suffern. Dinner was served at Mountainville and supper at Doughty's Terrace Hall, Ramapo, an old friend of the club. The cuisine at both places was excellent. At an informal meeting, the officers of the previous year were re-elected, excepting the secretary, who had resigned and quit riding. The officers are: Geo. Leinecker, president; Mrs. G. C. P. Stolzenburg, vice-president; Leon Wernert, treasurer; Sidney Faber, secretary.

Those who participated in the run were Mr. and Mrs. Stolzenburg, the genial Geo. Leinecker, muscular S. Faber, volatile Leon Wernert and jolly Herman G. Ransperger. A schedule of the entire season's run is being drawn up and the club extends a hearty invitation to all cyclists to join in their cross country rides. Thursday, as heretofore, are held selected for the club's outing day and all information can be obtained from the secretary, Mr. Faber, 1102 Second avenue, who will cheerfully give time and destination of runs.

SQUIBB CO.'S NEW OFFICES.

E. R. Sniffib & Sons have taken a long lease of the building at 78-80 Beekman street, Manhattan. This is a substantial building, 50 feet wide by over 100 feet deep, some six stories high, with basement and sub-basement. Messrs. Squibb & Sons will occupy both basements and two of the floors above, and later, as their wants demand, they will occupy the entire building.

The general offices of the company will be located at this address, under the personal charge of Mr. Theodore Welcker, the president of the company. By removing the offices and various departments from their Brooklyn laboratories, it will give them about 30,000 square feet additional space at the Brooklyn plant, which is badly needed to take care of their increasing business.

WORK OF THE YEAR.

Annual Meeting of Manhattan Ph. A. One of Routine Only.

MOST IMPORTANT WORK, ESTABLISHMENT OF MANHATTAN SCHOLARSHIP, SAYS PRESIDENT COLLINS.—OFFICERS ELECTED.—DR. ALPERS ON PHARMACEUTICAL ASSOCIATIONS.

The annual meeting of the Manhattan Pharmaceutical Association came off Monday night in routine style and with an entire absence of discussion on any important topic. Officers for the ensuing year were elected. Annual reports were read by the various officers, giving briefly the work of the year. Most important, in President Collins' opinion, as expressed in his annual report, was the establishment of the Manhattan Scholarship as a mark of gratitude to the college. Otherwise nothing striking had been accomplished.

In giving its approval to the N. A. R. D., continued Pres. Collins, the Manhattan Association had done much to increase the membership in the new M. A. R. D. Membership in the Manhattan Association, however, had fallen off considerably.

Secretary Swann presented an able report of the year's work, month by month. The membership during the year decreased from 210 to 179. Treasurer Hitchcock reported unusual heavy expenses during the year. Receipts were \$111.66, expenditures, \$794.77, leaving a balance of \$116.89. The reserve fund is now \$1,713.58.

As chairman of the Legislative Committee, A. C. Searles reported on the progress of affairs at Albany. The Platt formula bill, requiring the payment of \$5 for the registration of every patent medicine, would, he said, require the employment of prominent counsel in order to defeat it.

At this point Fred Borggreve, chairman of the Entertainment Committee, announced that he was ready to begin the serving of liquid refreshments out of an innocent wooden keg. Hailed with acclamation.

The resignation of Walter E. Faber was received and accepted. A communication from Dr. H. H. Rusby was read, stating that for the present there would be no increase in the cost of the Manhattan Scholarship, and that the remainder of the course would be at the present rate.

Election of officers was then taken up. President Collins was renominated by Dr. Alpers, but declined. Mr. Hitchcock then nominated Dr. Alpers, who was unanimously elected president, amid great applause. The following elections were made in rapid succession, and were all unanimous: First vice-president, Jacob Dine; second vice-president, G. P. Knapp; third vice-president, Michael Rafter; secretary, S. V. B. Swann; treasurer, George H. Hitchcock.

President-elect Alpers spoke briefly on the subject of pharmaceutical associations. Through these only, he said, could the advancement of pharmacy be brought about. Dr. Alpers declared that the man

who never leaves his store to associate with his fellows is bound to make a failure of his profession, and that most of the successful men to-day are members of organizations.

Dr. Alpers' remarks were heartily applauded. At the suggestion of Secretary Swann, the Legal Defense Committee was instructed to recommend, at the next meeting, the selection of C. A. Kalish as counsel to the association for another year. The meeting then adjourned and proceeded to discuss the good things provided by the Entertainment Committee.

DRUGGIST CAUGHT SUBSTITUTING.

Recently Fairchild Bros. & Foster, of this city, received a complaint from a physician in St. Louis that a prescription calling for Fairchild's Phenolated Essence of Pepsine had been filled by the use of some substitute, evidently containing a large amount of carbolic acid, one dose of the liquid having been sufficient to cause the patient to complain to the physician. Messrs. Fairchild Bros. & Foster undertook an examination and found the fluid to be a substitute, containing an excessive amount of phenol.

Prescriptions were then prepared calling for Fairchild's Phenolated Essence of Pepsine, and sent to Jacob's Pharmacy, northeast corner Seventh and Spruce streets, St. Louis, where the first prescription was filled. The mixtures dispensed upon these prescriptions were sealed and delivered to the manufacturers, who inform us that they found the fluid in each bottle to be substitutes of their products.

Fairchild Bros. & Foster have sent to every physician in St. Louis a letter containing a statement of these facts, and also a declaration of their intention to take every legal means to protect themselves and all proper interests against the substitution of other products for those manufactured by them. They say they are able to positively identify their Essence of Pepsine in the various combinations in which it may be used.

DRUGGIST IN DRY GOODS STORE.

It has become known in the trade that Ehrlich Bros., the big dry goods house on Sixth avenue, at Twenty-second street, are trying to rent space at the Twenty-third street end of their store, including a large double show window, as a drug store. The proposition has been made to several big druggists, but up to the present it is not known whether it will be taken up. The space offered by Ehrlich Bros. adjoins the Riker Drug Store, at Twenty-third street.

SOC. OF CHEMICAL INDUSTRY.

Owing to the fact that to-morrow, April 21, is Good Friday, the New York Section of the Society of Chemical Industry, instead of holding its meeting to-morrow evening, met last night at the Chemists' Club, 108 West Fifty-fifth street. The following papers were read: Maximilian Toch, "New Paint Conditions as Indicated in the Subway of New York"; G. W. Thompson, "The Determination of Acetic Acid in White Lead"; Russell W. Moore, "Analysis of Senna."

TO CHECK TRADE EVILS.

Italian Ph. A. Will Give Information to Board of Pharmacy.

DRUG STORES CONDUCTED BY PERSONS USING FALSE CERTIFICATES. — PHYSICIANS DISPENSE PRESCRIPTIONS NOT COMPOUNDED BY REGULAR PHARMACISTS. — CONTRACT PLAN WANTED.

As the first important step in its new field of activity, the reorganized Italian Pharmaceutical Association decided at its meeting, last Friday night, to offer to furnish the Board of Pharmacy with information regarding drug stores which are owned or conducted by persons who are not registered or who are using the certificates of others. This evil, the association thinks, has already existed too long, and should be suppressed.

Another matter about which the association will proffer the Board concerns the practice of some physicians who carry a stock of drugs and have prescriptions compounded by non-registered pharmacists. About such cases also the association has full information and will furnish it to the Board of Pharmacy, on request. The action taken on these two evils was embodied in a letter sent to the secretary of the Eastern Branch.

The work and purpose of the N. A. R. D. was explained to the members, most of whom seemed to be in favor of the movement. All promised to give their support. The association also decided to try to induce J. Personnel, the principal importer of Italian proprietary preparations in this city, to establish a direct contract system of selling his goods. Cut prices now prevail on these specialties, and the association is anxious to change this condition of affairs. There are now over sixty members in the organization.

WITCH HAZEL TROUBLES.

The creditors of the American Witch Hazel Company held a lively meeting, last Friday, before Seaman Miller, referee in bankruptcy, at 346 Broadway. There were three candidates for trustee: Ferdinand A. Hoyt, Lawrence A. Norton and G. Thornton Warren. None of the candidates received a majority vote and after considerable wrangling, all agreed to have an independent man appointed by the referee, who selected Augustus H. Skillin. His bond was fixed at \$10,000. One reason for the selection of an independent trustee was that suits would probably have to be brought against some of the stockholders for unpaid subscriptions. Charles C. Dickinson, formerly president of the company, was present and declared that the creditors would not get five cents on the dollar if the suits for unpaid subscriptions to stock were not pressed.

NEW YORK NOTES.

—Auditor Hall, of Parke, Davis & Co., has been paying his regular quarterly visit to this city.

—Seen about town: F. J. Shevick, Bridgeport, Conn.; Mr. Burdick, of Burdick & White, Ithaca, N. Y.

—Irving Kelly, of the Kelly and Williams

Co., Kansas City, was in town last week, calling on friends in the trade.

—The Oxyzn Manufacturing Co. have removed from 678 Broadway, to the Bigelow building, where they will occupy the fourth floor.

—George H. Childs, for the past twenty-five years manager of the C. O. Bigelow Pharmacy, is on a two weeks' vacation, after a hard winter's work.

CAMDEN DRUGGISTS REORGANIZED.

Philadelphia, April 15.—After practically disbanding the Camden Co. (N. J.) Association of Retail Druggists has again reorganized, with nearly 80 per cent. of the pharmacists in the county enrolled. The inability of the members to agree on a price schedule caused trouble before, but the members do not fear now that this stumbling block will again present itself. The price schedule is the only matter of importance that has presented itself for adjustment, but it is likely that in the near future the telephone question will receive some attention, although it is admitted that many of the members are satisfied with the existing rates, which are, however, irregular.

The officers of the reorganized association are as follows: President, William P. Weiser; first vice-president, Rowland Willard; second vice-president, Howard D. Taylor; secretary, Charles L. Barrett. The office of treasurer has yet to be filled. The executive committee is as follows: Chairman, George D. Borton; George M. Berlinger, Charles L. Barrett, W. W. Filcraft and Dr. William A. Sprenger. The following other committees have been named: Legislation: Chairman, G. M. Berlinger; Dr. W. E. Miller, George J. Pechin, Dr. G. E. Kirk and C. L. Barrett. Membership and Social Regulations: H. D. Taylor, C. M. Butcher, C. B. McLaughlin, O. C. Welsh and Henry Curtis. Auditing: Chairman, Dr. L. P. Hirst, L. H. Witson and Dr. M. Osman. Meetings will be held on the second Friday of each month.

DRUGGISTS IN HARMONY.

Lebanon, Pa., April 14.—The Lebanon County Retail Drug Association held its annual meeting, yesterday. Joseph L. Lemberger was re-elected president, Charles E. Boger, secretary-treasurer and Messrs. John F. Loehle and Samuel F. McGowan, trustees. The report of the secretary showed encouraging progress made by the association. Prices have been advanced slightly over previous years, and the association presents a very prosperous showing. In the evening, at nine o'clock, all the drug stores closed and a banquet was given at the Colonial Hotel. All the druggists of the county, with a few exceptions, were present and participated in the good things that followed. Addresses were made by Messrs. Lemberger, Boger, McGowan, J. H. Redsecker, together with Albert G. Reizenstein, Dr. E. H. Glingrich, Dr. W. R. Roedel and Luther G. R. Harpel, ex-druggists, who were formerly in business in the city here, but who are now engaged in other occupations. Great credit is due to Frank E. Gleim, of Lemberger & Co., who was the acting chairman of the Committee of Arrangements, for the success of the banquet. An era of good feeling prevails among the druggists of the county.

ORDINANCE TO REGULATE

Manufacture, Sale and Storage of Explosives Worries Pittsburg Druggists.

Pittsburg, April 15.—Retail and wholesale druggists in this city are up in arms against an ordinance that has been introduced in Councils, creating the Municipal Explosive Board. It regulates the manufacture, sale, storage and transportation of explosive materials and puts a hardship on the dealers. Although the druggists opposed the ordinance in a determined manner, it was favorably reported and the chances are that it will become a law. In other words, the druggists received scant recognition and they promise to make things interesting. James McNally, a local druggist, is a member of Councils, and has been adding the opponents to defeat the ordinance, but all efforts seem to be futile. The druggists say they will fight the matter to a finish, but their endeavors appear to be in vain, as the majority of the councilmen favor the passage of the bill. The mayor, director of the Department of Public Works and the Board of Fire Underwriters are working for its passage. A hue and cry has been raised about Pittsburgers living in the midst of a volcano that may explode at any time. It is argued, of course, by those who favor the passage of the ordinance, that some of the druggists carry sufficient explosives in stock to blow up the town. This the druggists refute. When the ordinance was first introduced the committee returned it with an unfavorable mark, but the Director of Public Safety warmly protested and it was again considered and acted upon favorably. Several manufacturers are also opposing the ordinance.

TABARD INN CONCERNS SOLD.

Philadelphia, April 15.—The receivers of the Tabard Inn concerns have sold to Lit Brothers the entire stocks of the Tabard Inn Food Company, the Tabard Inn Drug Specialty Company, the Tabard Inn Shops and Studios, as well as many thousands and books from the Philadelphia Book Store Company, The Booklovers' Library, the Tabard Inn Library and the Booklovers' Magazine, are in no way affected by the financial difficulties that involved the other concerns or by the sales of their stocks. The stock of the Drug Company included a large assortment of soaps, powders, perfumes and dentifrices.

F. W. DEAN IS DEAD.

Ringhamton, N. Y., April 15.—Frank W. Dean, druggist, leading business man and one of the most popular citizens of this town, died last Monday morning, after a brief illness. He was taken ill with pleurisy, about ten days ago, and his sudden death was a severe shock to his relatives and a large circle of friends.

Mr. Dean was born here fifty-two years ago, and most of the time had been engaged in the drug business in his native town. He began as manager of the R. W. Mosher Drug Store, a position which he held for seventeen years. He was uniformly successful in business. Mr. Dean was a prominent Mason and an Odd Fellow.

DRUGGISTS ELECT OFFICERS.

Baltimore, April 15.—The Retail Druggists' Association held its annual meeting last Thursday, receiving reports and transacting other business. An unsuccessful effort was made to inaugurate a kind of war on the cutters by fighting them with their own weapon, a price list lower than that now maintained by the seceders. The resolution to this effect, however, was snuffed under, the consensus of opinion among the members being that such a step would be inadvisable. The officers elected for the ensuing year are as follows: President, A. J. Corning; vice president, Lee Williamson; secretary, Owen C. Smith; treasurer, David R. Millard; board of trustees, A. Wellepp, E. E. Quandt, F. M. Blaney, J. Edwin Hengst, A. O. Werckshagen, J. D. Hall, George Weller, M. Strasburger, John Hudson and S. N. Appleby. The reports presented show that the association is in a good condition, and is doing effective work in the way of promoting the interests of the retailers.

Francis E. Sheldon, the representative of the Washington Promise Committee, got here to day, after an absence of some weeks. It is intimated that he came at the invitation of several price cutters, who find they are having trouble to get goods and evince a disposition to come in line with the retailers once more. He is expected to call on several retailers and as a result of his visit it is expected that the local N. A. R. D. work will be appreciably strengthened.

GOING TO SAVANNAH.

Baltimore, April 15.—A number of Baltimore druggists are going to the annual convention of the Travelers' Protective Association, which will be held at Savannah, Ga., in May. They will probably make the journey as a party, leaving here together and enjoying all the pleasures which this mode of touring gives. W. Edgar Jenkins, representing Schieffelin & Co., of New York, in this territory, is president of the national organization, and will be one of the party. John G. Beck, manager of the Calvert Drug Company, and H. F. Meikle are among the others expected to go.

NORFOLK DRUGGIST FINED.

Norfolk, Va., April 15.—W. R. Matthews, called "doctor" because he formerly conducted a drug store, was fined \$100 in the police court, this morning, on the charge of selling cocaine to a young woman in the Tenderloin. The girl's life was saved with great difficulty after she had inhaled the drug. Matthews was accused of systematically selling various dangerous drugs to women in the slums. He appealed from the decision, but was unable to give bail.

The police declare that there are other walking offenders whom they will run down and prosecute.

BALTIMORE NOTES.

—John S. Muth, of Muth Bros. & Co., went on a short trip to Boston, last week, for relaxation. He returned greatly benefited. —The stock and fixtures of the drug store at Pennsylvania avenue and Wilson street are to be sold at public auction on the 25th inst.

—Among the visiting druggists in Baltimore, last week, were: Joseph A. Jeffries, Warrenton, Va.; Dr. D. M. Ragan, Conowingo, Md.; Joseph B. Boyle, Westminster, Md.; Dr. E. A. Wareham, Hagerstown, Md.; H. W. Disher, Berkeley Springs, W. Va.; H. Helvetic, Millwood, Va.; William E. Turner, Louisville, Ky.; Edward Turner, Cumberland, Md.; J. C. Keating, Centerville, Md.; Dr. R. B. Reall, Barnestown, Md.; J. Hartley Johnson, Ellcott City, Md.; J. N. Gilbert, Annapolis, Md.

—David R. Millard, who went to Boston to study the interior arrangement of drug stores there and get ideas for the equipment of the pharmacy to be opened by the firm of Morgan & Millard on the site of the old Sun building, Baltimore and South streets, has returned with a strong impression of the aggressiveness of the Boston cutters. He says Baltimore druggists don't know what price-cutting is. At one place in the Hub he visited, one man was employed doing nothing but putting up and taking down signs that called attention to this or that speciality the store was pushing. Some articles were sold away below cost as leaders, and in other ways did the fiercest competition find expression.

OHIO PH. ASSOCIATION.

Cincinnati, April 17.—The twenty-seventh annual convention of the Ohio Ph. A. will be held in Cedar Point, on June 20, 21, 22 and 23. Alfred DeLang is chairman of the Entertainment Committee, to whom all inquiries can be directed.

The headquarters for the association will be at the Breakers Hotel and arrangements have been made for committee and conference rooms there. Arrangements are pending for a special rate on railroads from Cincinnati, Columbus and Cleveland. Boats leave the Cedar Point dock, Sandusky, every twenty minutes, for the resort.

All hotels on Cedar Point are conducted on the European plan. A one dollar rate has been made for this occasion, with the understanding that guests will double up if necessary. This rate is for the new Breakers Hotel. A few exceptionally fine rooms can be had for \$1.50 per day, but the entire association can be accommodated at \$1 a day if desired. A rate of thirty-five cents for meals has been secured.

DEATH FROM OVERWORK.

Indianapolis, April 15.—Robert Lostutter, thirty-six years old, a druggist at 5554 East Washington street, Irvinton, a suburb of this city, was found dead in the basement of his store, on the morning of April 10. The coroner made the return that he had come to his death by a stroke of apoplexy brought about by overwork.

Lostutter, who came to this city from Rising Sun, Indiana, lived with his family over his place of business. His trade was constantly growing and he endeavored to get along without an assistant, giving his entire time to his trade, opening his store at an early hour in the morning and keeping his place open until late in the night. For nearly a year, it is said, he had scarcely been a block from his place of business and had literally worked himself to death.

C. R. D. A.'S ANNUAL.

New Officers Chosen.—Has 220 Members and is Out of Debt.—Prospective Legislation.

Chicago, April 15.—On Tuesday last, occurred the annual meeting of the Chicago Retail Druggists' Association, when the following officers were elected: President, Chas. H. Avery; vice-presidents, I. M. Light, Geo. P. Mills and H. F. V. Spilver; secretary, S. C. Yeomans; treasurer, Walter H. Gale; trustees, Andrew Scherer, J. S. Hottinger, Thos. A. Wooten, J. J. Boehm, J. P. Crowley and Geo. Bollinger. The principal contest on the election of the ticket presented by the nominating committee was that on the nominee for the presidency, John I. Straw being an opposition candidate. Mr. Avery was elected by a good majority, however.

President Avery reported that the association now numbered 220 members, its receipts were more than \$5,000 per annum and it is out of debt, a good showing, he thought.

The Clark Anti-Narcotic bill, now before the Judiciary Committee of the Senate, at Springfield, came up for discussion. The members of the committee called on the introducer of the bill, who after hearing their statements, promised to do nothing with his measure this session, provided the druggists would agree to submit an adequate measure for adoption early in the next session. The senator's proposal was unanimously adopted.

The Telephone Committee made its report and favored the endorsement of the Yale "slug" for telephone purposes. It was stated that the use of this particular slug would mean a saving to the drug trade of from \$6,000 to \$8,000 a year. The committee recommended that members of the association should throw out of their stores the yellow directory, on account of the large number of errors it contains. Amendments to the by-laws were adopted. These related principally to the boundary lines of the auxiliary districts and also to the expenditure of money for the use of the districts. The latter was finally referred to the Executive Committee.

BANDITS ROB DRUG STORE.

Chicago, April 17.—While crowds were in the streets, bandits entered a drug store at the corner of Leavitt and Van Buren streets, compelled the proprietor to turn over the contents of the cash register and held up two customers who came into the place. There was a running revolver fight with the robbers, but they made good their escape. The owner of the store, who was robbed, is Samuel N. Jackson. He was alone in the place when a couple of handsomely dressed fellows entered and ordered him to turn over all the money and valuables he had. Two formidable looking revolvers were used as persuaders, and Jackson lost no time in handing over the contents of the register.

J. H. Willson and Harry Lindon, prospective customers, came into the place. They were each relieved of all the money they had with them, which happened to be a small amount. The total proceeds of the robbery did not net the thieves more than \$20.

CHICAGO NOTES.

—The Board of Pharmacy has again won its case against Adolph Brendecke; verdict, \$100.

—The father of Bernard Schwartz, Jr., a member of the State Board of Pharmacy, died on the morning of April 13. Mr. B. Schwartz, Jr., is a resident of Salem.

—President R. L. Morland and Chas. T. Heller, of the Michigan Board of Pharmacy, spent two days with the members of the Board of this State during the recent examination.

The members of Chicago R. D. A. were the recipients of a liberal supply of cigars on the occasion of their annual meeting, held last week. The donors were the Fuller & Fuller Co., wholesale druggists, and three prominent cigar manufacturers.

—Wilhelm Bodemann presented a gazette to the Social Drug Club, on the evening of April 14. Mr. Bodemann referred to the fact that the day was the fortieth anniversary of Lincoln's assassination, a historical event our dailies were too busy to remember.

WISCONSIN PHARMACISTS.

Madison, Wis., April 15.—The State Board of Pharmacy has re-elected D. A. Taylor, of Stevens Point, president, and H. G. Ruenzel, of Milwaukee, secretary. Mr. Ruenzel is in business at 753 Third street, Milwaukee, and succeeds A. F. Menges, of Madison, who retires, owing to the pressure of his private business. Mr. Menges had been a member of the Board ten years and secretary for two years. His term as member of the Board did not expire until next year, but he retires at once and the governor will name his successor. It is expected that Edward Williams, of Madison, will succeed to the Board membership.

The Board concluded its examination of applicants for registered and assistants' certificates. The successful candidates for registered pharmacist certificates were: Charles G. Ford, Janesville; Charles F. Schultz, Neenah; Oscar B. Liechtenberg, Princeton; Fred. G. Welchmann, Wausau; Peter O. Fox, Oshkosh; Eyoel Overgaard, Milwaukee; Frederick J. Noer, Colfax; Percy R. Drowler, Racine; George F. Oates, Darlington; Ernest R. Lueders, Columbus; Lewis E. Griswold, Turtle Lake; Frank J. Kowalsky, Milwaukee; George J. Schoenleben, Racine; James E. Young, Milwaukee.

Those receiving certificates as assistant pharmacists were: Arno F. Fink, Milwaukee; Joseph E. Kalgreen, New Richmond; Gustave H. Gensch, Cudahy; Andrew Anderson, Phillips; Steward Lindsay, Plymouth; Arthur W. Quatt, Madison; William L. Stowe, Barron; G. A. Ingersoll, Milwaukee; George W. Liebel, Sheboygan; Charles Ivy, Mineral Point; J. C. Rowland, Cambria; Charles A. Dechsel, Milwaukee; Eugene Semmling, Merrill.

—The Prince Medicine Co., of Cambridge, has been incorporated, with a capital of \$15,000. Albert E. Lynch is president and the other officers are J. Edwin Kimball, Warren W. Akers and Thos H. Shea.

MICHIGAN DRUG CLERKS

Want Legislature to Give Their Bill Favorable Action.—Opposition.

Detroit, April 18.—There was a lively time at a meeting of the Public Health Committee of the State Legislature, last week, when President George J. Robinson, of the Retail Drug Clerks' Association of Michigan, with headquarters in Detroit, appeared before that body and put up a strong fight to have the drug clerks' bill providing for the regulation of the sale of poisons and the practice of pharmacy given favorable action. The State Board of Pharmacy and the Michigan Pharmaceutical Association, composed of employing pharmacists, was also strongly represented in opposition to the move of the clerks.

Mr. Robinson, in the course of his remarks, threw hot shot into the present State Pharmacy Board by saying that the best results cannot be obtained from a body of men influenced by politics. He pointed out many of the evils in the present law and the flagrant violations being practiced all over the State, especially in the larger cities.

The members of the State Board of Pharmacy have submitted to the Legislature a substitute for the Beals and Drug Clerks' bill, which is drawn along the lines of the former measure. The substitute contains a provision which would make it compulsory for the governor to reappoint the present Board. The members of the Pharmaceutical Association are satisfied with the substitute, and it looks as though the committee would accept it.

PREREQUISITE BILL KNOCKED OUT.

St. Paul, Minn., April 11.—Several leading Minneapolis druggists were at the capital a few days ago to oppose Representative Stock's bill requiring registered pharmacists to have college diplomas. The party included Thomas Voegel, president of the N. A. R. D.; W. K. Hicks, A. D. Thompson and A. B. Herrmann. For all the Minnesota Ph. A. proposed this measure (which caused Mr. Stock to introduce it), the druggists of the State are sharply divided as to its merits and its passage by the Legislature is rather problematical.

St. Paul, Minn., April 12.—The climax came April 11, when the House, by the close vote of 42 to 44, killed the bill. The contest over the measure was led by Representatives Stock and McCall, both druggists. The opposition, headed by McCall, maintained that the proposed law would make it almost impossible for poor young men to become competent to fill a position as prescription clerk.

IN WISCONSIN.

—E. H. Parmelee, of Burlington, has been compelled to leave his business temporarily, on account of ill health, and is spending a vacation at Kilbourn.

—Private letters received by friends in Milwaukee, from Charles Jerman, who went to California for his health, indicate that Mr. Jerman is rapidly recovering. He will engage in the wholesale business somewhere in the middle northwest in a short time.

A TEST CASE.

South Dakota Physician Contends That He Can Practice as Pharmacist.

St. Paul, Minn., April 14.—I. A. Keith, of Lake Preston, and E. C. Bent, of Dell Rapids, president and secretary, respectively, of the South Dakota State Board of Pharmacy, are greatly interested in a test case which will be tried in McCook County, shortly, the matter at issue being the question of the right of a registered physician to practice pharmacy without being a registered pharmacist. The defendant is Dr. J. C. Lawyer, of Spencer. He was arrested on complaint of President Keith and was required to furnish bonds for his appearance at a term of State Circuit Court in McCook County. Dr. Lawyer is a regularly licensed physician, but is not a registered pharmacist. The law permits a registered physician to dispense drugs to his own patients from a private stock, but not to conduct a general drug store. It is claimed by the officers of the State Board that Dr. Lawyer has been conducting a general drug business, and therefore has violated the State law. The defense of Dr. Lawyer will be based on the ground that he is not conducting what might be termed a general drug business, or on the ground that being a licensed physician, he has the legal right to engage in such business. President Keith and Secretary Bent both declare that the law is very clear on both these points, and they express the opinion that their views will be sustained when the case comes to trial.

APPLICANTS NOT SUCCESSFUL.

St. Paul, Minn., April 15.—The result of the latest examination by the Minnesota State Board of Pharmacy would seem to justify those druggists who are insisting upon more rigorous exactions for candidates as registered pharmacists. Of the entire seventy-four aspirants who appeared before the Board, not one was able to pass as a full-fledged pharmacist. Only thirteen came up to the requirements entitling them to become assistant pharmacists. Those of this class who were granted certificates were: A. M. Borden, Oscar Bergquist, Anton E. Essen, William N. Lungberg, Joseph L. Guetten, Arthur F. Magnusen, Claude C. Middents, Odo C. Reder, Arthur L. Welle, E. W. W. Huetti, William Winter (not the renowned dramatic critic and poet), Stenef I. Lee and William M. Pones.

DRUGGISTS' BASEBALL LEAGUE.

Minneapolis, Minn., April 17.—The pharmacists and engineers of the State University have formed what they call an Interdepartment Baseball League. The first game was played April 13, and was won by the Pharmacists, 12 to 11, in a sensational finish. At the end of the sixth innings, the Pharmacists stood 6 to 2 against them. Then they landed on Pitcher McRae for four singles and scored six in the seventh inning. The Engineers scored four runs in the ninth, but a high fly to left field sent home the winning run.

MINNESOTA MENTION.

—Stephen B. Conger, of Conger Bros., St. Paul, has for some time been laid up with abscess of the tongue, but is better.

—The Minneapolis Retail Druggists' Association will hold its meetings hereafter in Dillin hall, at First avenue S. and Washington. President Dillin, of the association, has tendered the free use of the hall.

—Mrs. C. R. Marelius, of St. Paul, has purchased the store of J. S. Herbert & Co., at Case and Clark streets. The business will be managed by Mrs. Marelius' brother-in-law, August Marelius, formerly with Conger Bros., in their store at Selby avenue and St. Albans street.

—E. N. Freach, who has acquired A. Gilmore's interest in the City Drug Store, at Bemidji, will install new fixtures.

—Adolph W. Johnson, with Halsey Bros. Co., St. Paul, has been made instructor of homeopathic pharmacology at the University of Minnesota.

—The Voegel Bros. Drug Co., of Minneapolis, a member of which is president of the N. A. R. D., will overhaul and rejuvenate both of its stores. The one at Nicollet and Seventh is to have a new outfit of shelving, fixtures and windows and a new \$12,000 soda fountain. The Washington avenue store will also be supplied with a new fountain, which will be the leader in the city, and extensive remodeling will be done.

LIQUOR PROSECUTIONS AND FINES.

Kansas City, April 12.—Prosecutions of druggists accused of selling liquor without a license continue in police courts. L. M. Woodward, Twenty-sixth street and Prospect avenue, was to-day fined \$25, the minimum fine. He promised to have the stock of beer and bottled whisky removed from his store.

T. Friedburg, 908 East Eighteenth street, is another druggist drawn into the license inspector's dragnet. When his case was called in police court this morning, he was not present, and an alias warrant for his arrest was issued and his case continued.

W. B. Sloan, Ninth street and Brighton avenue, who was fined \$100 last year, has appealed to the criminal court. He was accused of selling liquor to boys. He denied that he had sold liquor to the boys. Some time ago Sloan was fined \$250 on a similar charge.

PASSED COLORADO BOARD.

Denver, March 24.—The following passed the State Board examination as registered pharmacists: John B. Aitch, Fort Collins; Henry Branch, Denver; R. E. Dinsmore, Fort Collins; Willard Donaldson, Colorado Springs; Thomas H. Dunbar, Canon City; Lloyd Egbers, Canon City; E. L. Foster, Denver; Louis H. Hearn, Denver; G. Lavelle, Julesburg; Frank Leigh, Denver; W. H. McCreery, Cripple Creek; F. H. Moehlan, Pueblo; Philip Munisher, E. L. Muzzy, William Neissel, John R. Nicholls, W. H. Parsons, Merriam C. Roe, Edward Salter, S. F. Sanderson, Frank E. Stomper and M. R. Tillotson, of Denver.

SHORTER HOURS FOR CLERKS.

San Francisco Association Spreads News of New Law.

San Francisco, April 14.—In order to spread broadcast the news of the success of the shorter hours' movement, the San Francisco Drug Clerks' Association is sending out circulars together with copies of the new law, which was signed by Gov. Geo. C. Pardee, on February 28. The circular says:

"This bill is the result of a conference held between a committee representing the San Francisco and Bay County Association of Retail Druggists and a like committee from the San Francisco Drug Clerks' Association, and after extended consideration, it was agreed that its provisions were just, equitable and mutually satisfactory.

"Briefly, it provides for an average work-day of ten hours, and not more than sixty hours in six consecutive days (practically from Monday to Saturday inclusive). Sunday was not deemed a regular workday, as in certain localities pharmacies are open only two or three hours on that day, while in others, by arrangement, each one opens in regular order, while the others remain closed, and in larger cities half days and alternate Sundays have been the established custom from time immemorial and the conditions governing this day will undoubtedly remain unchanged. We feel that the justice of this measure will appeal to employer and employe alike, and that the benefits of the same will be entirely mutual."

The new law is described as "a measure for the protection of public health." Violation of any of its provisions is a misdemeanor, punishable by a fine not less than \$20 nor more than \$50, or by imprisonment for not exceeding sixty days, or by both such fine and imprisonment, at the discretion of the court.

CLERKS TO GET DAY OFF.

San Francisco, April 6.—"A day off every week" is announced by the Owl Drug Co. for the employes of all their stores. In putting this rule into effect the company declare their belief that sufficient time for rest and recreation is necessary to their salesmen in order that they may reach the high standard of efficiency demanded. The company is confident that public opinion will soon force other stores to inaugurate the same system.

K. C. R. D. ELECT OFFICERS.

Kansas City, April 12.—The Kansas City Retail Druggists' Association has elected the following officers for 1905: President, H. Y. Riddle (re-elected); first vice-president, C. E. Abraham; second vice-president, J. W. Hunter; secretary, Ramanta Wells; treasurer, J. F. Mills; sergeant-at-arms, J. P. Laird. The following were elected members of the board of trustees: R. S. Stevens, W. M. Federmann, J. W. Giesberg, J. C. Wirthman, R. E. Thornton, S. E. Hinsoe, O. E. Zinn, F. L. Crampton.

—J. T. McLean has sold his drug business at Belzoni, Miss., to Miss R. C. Piel, who will conduct it under the present name, The Delta Drug Co. Mr. McLean will devote his entire time to his pharmacy in Indianola, Miss.

WISCONSIN FORMULA BILL.

Thought to be Dead, But Now Appears in New Form in the Senate.

Madison, Wis., April 15.—Dr. J. H. Noble, of Eau Claire, who is a member of the State Senate, and the leader in the campaign to add to the statute books as much legislation as possible to boom the business of physicians at the expense of druggists, had not given up his fight for a formula bill.

A short time ago a bill of that kind was reported for indefinite postponement, and it was thought this was an end of the whole matter. But not so. Dr. Noble is chairman of the Senate Committee of Public Health and Sanitation. During the time since the other Noble bill was killed, the doctor has been working with his committee, with the result that the committee consented to the introduction of a new bill. It was introduced in the Senate this week, and created a sensation, for it is more drastic than the one killed. It provides for fine and imprisonment for offering for sale or selling any patent or proprietary medicine unless the true formula shall be printed on the label. Not only must the pharmaceutical terms be used, but their equivalent or common English names must be given.

It will require a harder effort on the part of those interested in the defeat of this measure to accomplish their purpose than it did before, for the reason that this bill has the support of a Senate committee, and a committee bill is always given more respectful consideration than another.

WHOLESALEERS COMPLAIN.

Milwaukee, April 15.—Wholesaleers complain that dealers just signing contracts with manufacturers using the serial number system, do not always grasp the situation, and sometimes are without the goods longer than is necessary. Sometimes an order is not filled and the query will come in from the retailer: "Why did you not send so and so, that I ordered?" I made a contract with that house two weeks ago." The jobbers want the dealers generally to know that they (the jobbers) do not always know at once when such a contract is signed. They must wait for the regular list to come to them from the manufacturer. This is supposed to come promptly every month, but sometimes it is delayed. It is suggested that, when a druggist signs a contract with a manufacturer, he send the contract to the jobber with whom he expects to trade. The jobber can then enter him as entitled to the goods and can forward the contract to the manufacturer.

DRUG DEAL IN TOLEDO.

Toledo, April 17.—An interest in the Brown, Eager & Hull Co. has been purchased by members of the drug firm of Walding, Kinman & Marvin. The latter are not interested as a firm, only three members being in the deal. The interest was bought by W. J. Walding, H. E. Marvin and Robert H. Bradley. The Brown, Eager & Hull Co. has a large retail and wholesale wall paper, book and stationery business.

AMONG THE COLLEGES

PITTSBURG COLLEGE OF PHARMACY.

Pittsburg, April 17.—The Pittsburg College of Pharmacy held its commencement exercises in Carnegie Music Hall, Allegheny, last Wednesday evening. Following is a list of the members of the graduating class: Alfred Armstrong, Frank Aron, Clyde Roy Barkley, John S. Benjenkowski, Emil L. Brinkhoff, Alexander C. Cameron, Robert J. Campbell, Otto H. Dahlin, Lorne A. Dodds, Francis M. Dent, George W. DeFrance, Paul Engelsburg, Charles E. Ertzmann, Elizabeth P. Fulton, Charles E. Fawcett, James A. Griffith, William A. Gray, James B. Green, Joseph A. Geiger, Phillip W. Hetzel, Grace I. Harper, Chauncey K. Hetzel, Frank R. Hill, Frank J. Hanna, C. Frank Hunkler, Carl C. Kennedy, John E. Ketter, Theodore D. Kyatsak, Walter S. Mundshower, William E. Malloy, James W. McAteer, Adolph M. Muchnic, Fred G. McMorris, Charles M. Patterson, Charles W. Robbins, John M. Risbeck, Joseph H. Smith, Charles E. Shaw, Alvah C. Swartz, Charles E. Smith, William R. Snythe, William C. Schweitzer, George Tempest, Edward Trust, Ennis Thompson, Jr., George J. Thomas, Ernest H. Voelger, Walter L. West, Andrew C. Wesloski, Apostol Yanitchevitch, Harry G. Young, J. Arthur Young, Post Graduates: Peter G. Walter and J. Bert Holsopple.

Of the graduates, Miss Fulton, Miss Harper and Messrs. Kvatsak and Thompson received certificates, as they had not had the required amount of store experience. Mr. C. E. Fawcett received first honors, C. M. Patterson, second, and L. A. Dodds, third.

The class officers were: President, William R. Snythe; vice-president, Phillip W. Hetzel; secretary, Grace I. Harper; treasurer, James A. Griffith; marshal, Charles E. Smith; editor, rep., Charles E. Fawcett.

Dr. Samuel B. McCormick, chancellor of the university, delivered the address of welcome and conferred the degrees. Rev. J. Leonard Levy, D.D., delivered the address to the graduates. He spoke of the great responsibility of life and health of the people, that will rest upon the faithfulness to duty of the graduates, and said that no nobler profession could be selected to do God's work here on earth. "You have both nature and science to help you," he said. "May you follow both their teaching well." J. Homer Smith was the valedictorian and acquitted himself with credit.

CAPS AND GOWNS NOW.

St. Louis, April 17.—The senior class at the St. Louis C. P. have changed their minds about black business suits for graduation and will appear in caps and gowns. This was a recent decision by a vote of 4 to 7, several members refraining from voting. Father W. Banks Rodgers of St. Louis University, has been decided upon by the faculty to address the class.

MINNESOTA UNIVERSITY.

Minneapolis, April 8.—Dean Patten, of the law department of the university, is giving a series of lectures on contracts, to the senior pharmacy students. These lectures are preparatory to a brief series which Dean Wulling will give later in the year, when he will discuss agency, commercial paper, bailments, etc.

The seniors will begin work in clinical microscopy, which includes urine, blood and sputum analysis, next Monday.

The various colleges of the university have arranged a schedule for the inter-department "baseball league." The pharmacists have elected I. H. Robitshek, manager, J. P. Cutting, captain.

The State Board of Pharmacy held an examination in the laboratories of this department on April 3.

H. Varney, '98, formerly in the drug business, is now assayer for the Copper Age Mining & Smelting Co., Encampment, Wyo.

F. H. Vaughn, '05, is with Dr. J. W. Harral, Minneapolis.

Dr. N. C. McClood, on March 28, began his lectures on "First Aid to the Injured." The seniors and middlemen are required to attend. The course extends over four weeks, with two lectures weekly.

Alexander H. Fjelstad, '95, was recently unanimously elected village recorder of Blooming Prairie, Minn.

Linn Bradley, '04, manager of the Star Drug Co., Great Falls, Mont., visited the college recently.

The Porely bill to remove the university from the supervision of the Board of Control of the State Institution and to restore the management of the university wholly to the Board of Regents, has passed the Senate, and now only awaits the signature of the governor to become a law.

PHILADELPHIA, C. P.

Philadelphia, April 17.—The Freshmen and Juniors have left College and the Senior Class has taken up the work of the supplementary course. A feature of the latter is dispensing. The student is given prescriptions which he compounds, labels and checks off just as he would do in a regular pharmacy.

"The Graduate," the name of the class book for 1905, promises to eclipse the issues of any previous class. It has been dedicated to Prof. Samuel P. Sadtler, and consists of 224 pages, in which are included pictures and sketches of all the members, the fraternities and other college organizations. It will be ready for distribution in May.

Many members of the Junior Class have secured positions in the city and will stay here until the Fall term.

Six members of the Class of '03 successfully took the Civil Service examinations for positions as pharmacists under the Government on the Isthmus of Panama.

The Senior Class last week were shown through the laboratories of the Smith, Kline & French Co.

About a dozen members of the graduating class have announced that they will try for places on the relay team that will be chosen to represent the College at the athletic meet to be held in this city next month, under the auspices of the University of Pennsylvania.

UNIVERSITY OF KANSAS.

Lawrence, April 8.—The school of pharmacy offers three complete courses of studies; one of two years and one of three years (for the Ph.C. degree), and one of four years for the B.S. degree. The two-year course is confined to pharmaceutical subjects, and prepares directly for drug store and dispensing work. The higher work of the other course opens the doors to the higher degrees, should the student desire to pursue his studies to that extent, and thus prepare himself for the higher calling of educational work.

Twenty-five members of the faculty of the university are members of the faculty of the school of pharmacy; eight of these teach nothing but pharmacy and chemistry.

The school of pharmacy is situated in a large three story building, known as the Chemistry and Pharmacy building. The building contains two pharmaceutical laboratories, five chemical laboratories, lecture, research and store rooms, and a fully equipped dispensing room.

The members of the senior class are busy working on their graduating theses and the annual pharmacy publication.

Prof. Edward Bartow is sick in the hospital, with typhoid fever.

Prof. L. E. Sayre, dean, has been in Kansas City during the recent vacation, where he delivered a course of ten lectures on the "History and Nature of the Pharmacopœia," before the University Medical College.

UNIVERSITY OF MICHIGAN.

Ann Arbor, April 15.—Paul I. Murrill, Ph.D., '99, has been appointed European representative of the E. G. du Pont de Nemours Powder Co., of Wilmington, Del., whose research chemist he has been for the last two years. His headquarters will be in London, England, and his field of operations will include all of the capitals of Europe. Dr. Murrill, as holder of the Frederick Stearns & Co. fellowship in Pharmaceutical Chemistry, was engaged under the direction of Prof. Schlotterbeck, upon the investigation of Boccacia and its contained alkaloids several years ago.

Claud W. Lewis, '04, has a position as pharmacist with the Conneaut Drug Co., Conneaut, Ohio.

Ambrosio Aguilar, '04, who recently returned to his home in Cuba, is manager of the Farmacia la Central in Santiago.

Dr. Paul C. Freer, formerly professor of general chemistry, and now director of the government laboratories in the Philippines, has obtained a nine months' leave of absence and is in Germany. In his absence A. M. Clover, '99, Ph. D., '04, holds this important position. Dr. Clover was formerly instructor in the department of pharmacy and chemistry at the University, and resigned his position here a year ago. He is now at the head of all scientific investigations conducted by the government in the Philippines.

The course in Accounts, given by C. C. Parsons, of the Shaw-Walker Co., of Chicago, has been completed, the final examination having been held on April 13.

Harold Dexter, '03, has become a partner in the Conneaut Drug Co., of Conneaut, Ohio. He is also lecturer to the Hospital Association and to the Ashtabula County Medical Association.

Theodore J. Wrampelmeier, '78, formerly assistant professor of pharmacy in the University of Michigan, has resigned his position with the E. G. du Pont de Nemours Powder Co., and is returning to New York City where he will open an office and analytical laboratory.

Oscar H. Haarer, '93, in charge of the prescription department of Eberbach & Son, Ann Arbor, since his graduation, has accepted a similar position with Peck Brothers of Grand Rapids, Mich.

Most of the students have returned to their homes to spend the annual spring vacation which began on the evening of the 14th and continues until the evening of the 24th.

Leonard D. Haigh, '00, M. S. '03, formerly assistant in organic chemistry, is now connected with the Columbus Laboratories, Chicago, as chemist in general organic and food materials. He is also assisting in the instruction in flour milling and testing in the milling and baking school of technology which is operated in connection with the laboratories.

BROOKLYN COLLEGE OF PHARMACY.

This year's junior class at the Brooklyn College of Pharmacy is the largest ever enrolled, numbering nearly one hundred and fifty students. Of these, eight are women. The class this year has adopted a class pin in preference to the college pin, consisting of a round base with an effective coin edge of five divisions. In the center is "B. C. P., '06," in letters of gold, surrounded by the college color, crimson.

During the past year, several theatre parties and stags were held, which have bound all the members into closer friendship. The officers of the class of '06 are as follows: Adrian F. Paradis, Jr., president; Thomas Gilmartin, vice-president; Sidney Arensberg, treasurer; Gustav G. Smith, secretary.

NEW LEASE BY MILHAU'S.

A five years' lease has been taken by Milhau's Drug Store, on the building 205 Broadway, this city, nearly opposite the Hegeman Corporation. The report was current in the trade that the building would soon be occupied by the Milhau store, and that a "skyscraper" would be erected on the present site, 183 Broadway, after which the store would be moved back. Manager Frank Ennis, however, would not confirm this rumor. "It's news to me," he said.

THE DE VILBISS PERFUME SPRAY.

The poet, Horace, refers to the practice in ancient times of keeping perfumes in shells. Had he lived in our day, he would tell how the DeVilbiss Perfume Spray "fills the liberal air with refreshing odors." This ingenious device, made by the DeVilbiss Mfg. Co., 1222 Jackson street, Toledo, Ohio, and advertised on page 26 of this issue, is designed to make the demonstration of odors in the most pleasing, refreshing and economical manner. The saving in perfume alone soon pays for the instrument. The manufacturers want to send you one of these sprays, which may be returned to them in thirty days if not satisfactory in every respect. Price 50 cents each. A booklet telling about the spray, will be sent on receipt of postal.

MAJOR'S STEAM BATH KETTLE.

The season is at hand when the up-to-date druggist will be busy at the soda fountain, and the wise dispenser is always alert to improve the flavor of his syrups.

It would be well, in this connection, for every druggist to inform himself about an article that was placed upon the market last season. We refer to Major's Steam Bath Kettle, manufactured by A. Major, of New York City.

By means of this kettle, chocolate syrup can be prepared free from all scorching; the cooking is done entirely by steam, so the syrup cannot boil over, and the druggist need give it no attention while cooking. The steam bearing down upon the surface of the syrup, prevents the escape of any of the aroma, making a syrup of surprisingly rich, delicious flavor, and with absolutely no precipitation.

Many of the largest stores in New York and other cities are now using it, and the druggists are enthusiastic about it. This kettle is also extremely useful in preparing cold cream; it will cook rice deliciously, so that each grain is separate and whole, and prepares all cereals perfectly.

CONVENIENT AND ECONOMICAL.

A lamp that possesses the convenience of electricity combined with the economy of gas light should appeal to the druggist who is on the lookout for a satisfactory method of illuminating his pharmacy. The General Gas Light Co., Kalamazoo, Mich., whose advertisement appeared on advertising page 6 of last week's Era, claim to make such lamp, better known as the Humphrey Gas Arc, more than 200,000 of them being in use. Their lamp is instantly lighted by simply pulling a chain and is as easily extinguished. The manufacturers guarantee their 4-burner lamp to give as much light and much more satisfactory illumination, with a consumption of 16 to 18 feet of gas per hour, than the so-called 2,000 candle-power electric arc. This means a saving in cost of from 25 to 50 per cent. If you are interested in better business, through better lighting, you should write the General Gas Light Co., Kalamazoo, Mich., for particulars regarding their system of store illumination.

THE "IDEALBAND."

Braun's Green Cross Idealband is the name applied to a woven, elastic bandage containing no rubber, elasticity being produced solely in the method of weaving. One of the strongest claims for this bandage is that it will adapt itself to any angle or curve of the body without folding, thereby rendering it easy of application, even for the non-professional. The "Idealband" retains its resiliency for an unlimited time and may be kept in stock in any quantity; may be washed with soap and water without impairing its elasticity, and, therefore, may be used time and again. It is particularly recommended as an adjunct for "first aid" boxes. It is made in widths from 2 to 8 inches, 5/8 yards in length. Write to the Bardella Co., 155 West Twenty-first street, New York, who are also marketing the Bardella bandage, and whose advertisement appears on another page of this issue.

“M.C.W.”

When ordering COCAINE HYDROCHLORATE from your jobber, kindly attach the above letters and you will receive an article that is CHEMICALLY PURE.

The brand preferred by physicians.

TRADE SECTION

THE MAPLE SUGAR INDUSTRY.

Observations of the Bureau of Forestry on Present Evils.

ADULTERATION VERY PREVALENT.—NOT THE FAULT OF PRODUCERS BUT CAUSED BY MIDDLEMEN.—THE FORMER ARE RECOMMENDED TO MARKET THE SYRUP AND SUGAR DIRECT TO CONSUMERS.

The Bureau of Forestry has been studying the maple sugar industry with the view of securing a larger use of the maple forests. Since 1850 the area of maple sugar farming has greatly changed and shrunk. In early days maple sugar was commonly made, even in many parts of the South, because cane sugar was virtually unobtainable. No longer is there even a limited production in South Carolina, Georgia, Alabama, Mississippi, Louisiana, and Arkansas. This is because cane sugar can now be bought everywhere at a low price, and is preferred to maple sugar for sweetening. In Indiana, Michigan, and Illinois the maple trees have been extensively cut for lumber, thus reducing the opportunity for tree tapping. In those States also the markets are glutted with imitations, which removes the incentive to extending the industry. In other States, as in western Maryland, West Virginia, Ohio, New York and in New England, the maple sugar industry has held its own or been increased.

The best sap flow is secured in the cooler northern States, yet good results can be expected in most of Pennsylvania and West Virginia, in western Maryland, all of Indiana and Kentucky, eastern Tennessee and western North Carolina. At present the largest producers of sugar maple products are Ohio, Vermont and New York. The sugar and black maples yield the most and the best sap, although some other species of maple may be worked to advantage when neither of these is available.

NATURE OF THE TREE.

The maple is a hardy and vigorous tree and readily reproduces itself, so there need be no fear of failure of sap supply. For sap production the all important consideration is for the tree to have a full and heavy crown. Yet it should also grow under forest conditions which maintain a ground cover of litter and humus.

As a result of the study recently made, definite directions for the management and improvement of existing groves, and for the establishment of new ones in suitable localities and under different conditions, have been prepared and will soon be published. Many valuable data regarding the profit in making maple sugar were also collected. From these it appears that a farmer can easily clear about \$3 an acre from a sugar grove. The expenses

in this estimate are placed at a maximum; all the labor and hauling are charged in at market rates, though as a matter of fact the sugar season falls at a time when the farmer has little other employment for himself or his horses. In actual practice, for the farmer who can do most of his own work the profit should be considerably larger. And the land thus utilized will yield little or nothing under any other use.

The old method of collecting the sap by making a diagonal cut in the tree was abandoned long ago, because it injured the tree so that it could be worked for but a few years. The approved practice now is to bore a hole one inch deep and three-eighths of an inch in diameter into the sunny side of trees over twelve inches in diameter, and to make but one hole in each tree, except possibly where the trees are especially large and productive. Vast improvements have also been made in appliances for handling the sap and boiling it down to sugar and syrup.

EXTENT OF ADULTERATION.

Maple trees now furnish but a small per cent. of the commercial maple syrup and sugar. While the demand for both these commodities has constantly increased, the output from maple trees has decreased during the last twenty years. The trade has been supplied only by radically adulterating the pure goods, or by manufacturing a product entirely from foreign materials. It is conservatively estimated that seven-eighths of what is sold as maple syrup and sugar is a spurious article. Most of the fabrications are entirely harmless, but they are not the real thing. Those fortunate enough to have eaten the genuine article will always demand it, and conditions should be such that they may get it, if they are willing to pay the price.

The fault does not lie with the producers, those who tap the trees and reduce the sap to syrup and sugar, but with the middlemen who buy the sugar and mix and adulterate it most profitably for themselves. The extent of this adulteration is illustrated by the fact that while the amount of the raw product has decreased, the whole quantity sold has largely increased and its market price has been reduced. Of late years the price has fallen in direct relation to the decrease in the price of cane sugar.

THE EVIL AND ITS REMEDY.

The most common substitutes used in the adulteration of maple sugar and syrup are other sugars and glucose. Much of the so-called maple syrup on the market is nothing but a combination of sweets with a little maple molasses added to give the maple flavor. There is also a maple syrup which contains no maple at all, but the flavor is obtained by adding to the compound an extract of hickory bark. This extensive adulteration forces the producers of pure maple syrup to compete with cheap imitations. The price of their

raw product is kept down, and the forests of maple are not as profitable to their owners as they otherwise might be.

The consumer is entitled to pure goods, and the producer is entitled to have his syrup and sugar bought and used for what it is. The remedy is in the hands of the producers, and they can effect a change for the better in two ways. They can associate themselves in State and large local companies, and, by selling direct to consumers, cut out the middlemen; and they can also put their product on the market in the form, not of sugar, but of syrup, which is most in demand. The public will not object to paying a little higher price for guaranteed pure goods. The cost of making and handling syrup might be a little more than that of sugar, but the net returns would be larger, the public better served, and the maple sugar industry profitably extended. The association plan has been adopted in Vermont with excellent results. Annual meetings are held, through whose influence improved methods of production have been adopted.

ANOTHER SIGNIFICANT VICTORY.

The Twentieth Century Sanitary Fountain was selected for exclusive use at the World's Fair, in St. Louis. Paragon Park, the great amusement enterprise on Nantasket Beach, Boston, ordered five Twentieth Century Sanitary Fountains, and now it is announced that the Twentieth Century Sanitary will be the only fountain used at the Lewis and Clark Exposition, Portland, Oregon, which opens June first. It is certainly significant that the Twentieth Century Sanitary should be selected for exclusive use, and it argues much for the tide of public sentiment, because it is plainly evident that the decisions for this fountain are in response to the public demand.

Another consideration is the important one that the same fountain that conserves the public health brings the most dollars to its operators by its superior attraction to public notice and by virtue of its absolute cleanliness and the tempting array of "syrups in sight." Concealed syrups and drippy spigots are doomed and the way to soda water prestige, enthusiastic soda trade—the confidence of the public that spells "success" in large letters—is through the installation, with the least possible delay, of "The Fountain That Makes the Money"—The Twentieth Century Sanitary.

Write at once to your nearest branch office: New York, 27 E. Twenty-second street; Boston, 36 Portland street; Philadelphia, 504 Arch street; Baltimore, 19 North Liberty street; Atlanta, 82 Marietta street; Denver, Thirteenth and Lawrence streets; Los Angeles, 372 So. Los Angeles street; Seattle, 207 Third avenue, South, or to the general office and factory of the L. A. Becker Company, the sole manufacturers, at 917 Halsted street, Chicago, Ill.

CINCINNATI SODA IDEAS

Fountain of Weatherhead Pharmacy in Rear of Store

Rubber Checks Used—Mr. Weatherhead Forbids Dispensers to Use Cigarettes When Off Duty—Own Syrups and Flowers Advocated—Believes in Seeking and Featuring New Drinks, as Novelty Appeals to Customers

The Weatherhead Pharmacy Co., at Sixth and Vine streets, has the largest soda fountain in Cincinnati and claims a trade surpassed by few other drug stores in that city. A conservative estimate is that between one thousand and fifteen hundred drinks are sold on a warm day. Their business has grown to such proportions that recently it was necessary to install a new fountain, one manufactured specially by C. H. Bangs, of Boston, Mass. It is twenty feet in length and made of marble, onyx and mahogany with silver and brass trimmings, and has a large plate glass mirror in the center, extending to the ceiling. An electric car

bonator in the basement, directly under the fountain, supplies the charged water continuously.

Printed cards, with a list of all the drinks handled and their prices, lie around the counter in profusion. Fresh flowers, the finest that can be secured, are put out daily and add to the general beauty of the fountain. Checks are given and payment is made at the cashier's desk. These checks are made of rubber, thereby avoiding the possibility of scratching the counter.

IN THE REAR OF THE STORE.

The impression, almost universal in

this city, that to be a success the fountain must be located as near the entrance as possible, is not shared by the proprietors of the establishment. Several years ago when the store was remodeled the advisability of placing the fountain near the door was considered, but after deliberation and in accordance with the desires of a number of older patrons, whose views had been requested, the fountain was placed in the corner furthest from the store's entrance. It was cited that the constant bustle of arriving and departing people was a source of great annoyance.

"Cleanliness is an important feature in the management of a successful fountain," said B. P. Weatherhead to The Era correspondent. "It is a strict rule with us that the attendants must abstain from the use of cigarettes. Nothing is more disgusting to a customer than to be waited on by a clerk whose fingers bear the yellow stain caused by smoking those things. The attendants are compelled to wear clean white jackets and aprons at all times, even in the early morning, when business amounts to practically nothing. Glasses and spoons must be removed as soon as the customer leaves his chair and the counter immediately wiped.

SYRUPS AND FANCY DRINKS.

"We are at all times on the lookout for new drinks and no matter how small a

A PROMINENT CINCINNATI FOUNTAIN.

Apparatus of B. P. Weatherhead's Pharmacy. Manufactured by C. H. Bangs, Boston. Length, 20 Feet. Finish, Marble, Onyx and Mahogany, With Silver and Brass Trimmings. Notice Glass Fronts of Syrup Tanks. Uniquely Placed in Rear of Store.

call we may have a drink that was bought from us once can always be gotten again. We handle from 75 to 100 different kinds of hot and cold drinks. Anyone who claims that there is no money in hot drinks should have dropped in here during the winter months. The "sundae" is perhaps our best seller, though the price is a nickel higher than the cost of ordinary drinks. Coca-Cola is a good seller, and, of course, there is always a good, steady call for such drinks as lithia water, ginger ale, etc. Drinks with eggs in them seem to have caught the public fancy. We make our own syrups. It is a satisfaction to customers, I believe, if they know where the syrups they are paying for are manufactured, especially in view of the fact that a great deal has been said in the papers recently concerning impure syrups."

RUBBER NOVELTIES.

Two new atomizers are on the market. The first possesses the peculiar advantage of ability to spray two separate liquids, the large outside bottle being used for the aqueous liquid, and the small vial, which slips inside it, for spraying minute quantities of heavier liquids. By a simple adjustment of the spray tip, this atomizer is regulated for either liquid. As will readily be seen, this arrangement saves the expense of two separate atomizers, while each liquid is kept entirely distinct, and can be used without waste. It is recommended especially for catarrhal cases, where the use of a cleansing liquid is generally followed by a healing spray composed of an oily preparation.

The second—a continuous spray atomizer for medicinal use—does not differ from the No. 26 Barclay atomizer which has been on the market for some time past. It is made by the Whitall Tatum Co., Nos. 46-48 Barclay street, New York. The atomizer has a straight tip and screw cap fitting of hard rubber, and a bulb and tubing of soft rubber. The distinctive feature of the new atomizer is in the use of black rubber for the soft parts, as being less likely to become soiled through use, and thereby insuring the continued good appearance.

A rubber soap tray has also appeared. Freely corrugated bottom. Color, maroon; but can be ordered in white or black.

A German rubber factory is manufacturing rubber imitation cigars, with even an ash on the end; realistically colored. The above novelties are fully described and illustrated in the India Rubber World.

Says the Alton, Ill., Sentinel-Democrat, in an editorial:

"A druggist, who has evidently been indulging in some sort of 'dope,' claims to have discovered a preparation which is a substitute for the razor. His announcement, which reads like a patent medicine ad, says that the cream when applied to the face, removes the hair completely, without injury to the most delicate skin, in six to ten minutes. The cream is applied to the face, allowed to remain a short time, and the face is sponged off, leaving it as clean and smooth as a child's."

Evidently the Sentinel has been asleep on post. The depilatories are fairly well known, even by daily papers.

APPRAISERS' DECISIONS.

Niger-seed Oil at 25 Per Cent.

Colby & Co. imported into New York, April 18, 1904, Niger oil, upon which duty was assessed at 25 per cent ad valorem as an expressed oil under paragraph 3 of the tariff act of 1897, and which was claimed to be free as an oil commonly used for soap making and fit only for such use under paragraph 568 of said act and other claims not insisted upon. The Board of General Appraisers overruled the protest, stating its position thus: "The merchandise in question is oil expressed from Niger seed, which is the seed of a plant botanically known as *Guisstia oleifera*, an Abyssinian oil plant, cultivated on a large scale in Abyssinia and India, also to some extent in Germany and West Indies. The sample produced is of a clear light straw color resembling olive or cottonseed oil. In India the oil is used as food by the poorer classes. It is also used as burning oil, as a lubricant, and for soap making. The *Guisstia abyssinica* is cultivated in many parts of India for the small black seeds known as Niger or rantiil seeds, from which an oil used for lamps and as a condiment is expressed. The plant, according to the Century Dictionary, is 'a small genus of composite plants resembling the sun-flower, natives of tropical Africa.'

"This oil is scarcely known in the United States, but is well known in England, France and Germany. The crude or refined oil is used in those countries as an adulterant for other oils of a higher price, used for illuminating and lubricating, and it is also extensively used in soap making.

"Upon the evidence before us we cannot find that it is commonly used in the United States for soap making, but assuming that to be a fact, it is clear that it is fit for other uses. We hold it to be dutiable as assessed."

Jubes Are Medicinal.

E. C. Rich imported into New York merchandise invoiced as "clear glycerin jubes," "clear licorice jubes," "clear menthol jubes," and "licorice wafers," which was classified as confectionery under paragraph 212, tariff act of 1897, and claimed to be dutiable as medicinal preparations under paragraph 68. The Board sustained the protest and summed as follows:

"The evidence shows that the articles in question are sold exclusively to druggists. A report of the chemical analysis of the official samples of each variety of the merchandise, made in the government laboratory, refers to them as follows:

"Exhibits 1 and 3 are substantially alike, consisting, approximately, of gum arabic, 92 per cent.; cane sugar, 3 per cent.; glycerin, glucose and menthol, 5 per cent.; while Exhibit 2 is composed of gum arabic about 85 per cent., glycerin, extract of licorice and cane sugar about 15 per cent. Exhibit 4 is composed of gum arabic, a compound of glycerin, glue and cane sugar, together with glucose and extracts of licorice.

"In regard to these particular samples (Exhibits 1, 2, 3 and 4), the inference

that they were expressly prepared for use as medicinal preparations seems quite justifiable, because they are deficient in the quantity of cane sugar they should contain and which is requisite to render them agreeable as confections. At the same time they do (in two instances, 1 and 3) contain so much menthol as to become positively unpleasant, indicating that they would only be used in a perfumery way to overcome physical disability."

"In our judgment, this record justifies a finding that the articles are chiefly used for medicinal purposes."

Carbonate of Strontia.

The merchandise, which was reported by the appraiser to consist of precipitated carbonate of strontia, was held to be dutiable as a chemical salt under paragraph 3, tariff act of 1897, and not free of duty, as claimed by the importers, the General Chemical Co., of New York, under paragraph 673, relating to mineral carbonate of strontia.

Glass Atomizers.

Blown glass tubing, permanently set or mounted in metal and intended to be used in conjunction with vials or other vessels of glass as atomizers or vaporizers, were classified as blown glassware, under paragraph 100, tariff act of 1897, when imported by the Abner Royce Company, who protested against the importers' contention that they should have been classified as manufactures of glass or manufactures of metal under paragraphs 112 or 193. The Board of General Appraisers sustained the protest.

Ground Pumice Stone.

Ground pumice stone, imported at Chicago, by M. L. Barrett & Co., was held to be dutiable as pumice stone manufactured, under paragraph 92, act of 1897, contrary to the protest of the importers.

Codoin Muriate Salt of Opium.

Codoin muriate, imported by Merck & Co., was held to have been properly classified as a salt of opium, under paragraph 43, act of 1897.

Protests by J. L. Vandiver.

As claimed by the importer, John L. Vandiver, of Philadelphia, so-called crown soap was held to be dutiable as soap not specially provided for; Propert's paste was held to be dutiable as an unenumerated article; Polishing cream, found to be similar in character and use to oclacking, was held to have been properly classified under paragraph 7.

Mustard Dross Free.

Max Ams protested against the assessment of duty on mustard dross imported at New York, claiming it free of duty, under paragraph 617, relating to vegetable substances, crude or manufactured. The Board of General Appraisers sustained his protest on the authority of several former decisions. The merchandise in question was so-called mustard dross, a residuum in the manufacture of mustard, consisting of the shells and hulls removed by a blowing process from crushed mustard seeds. It had been assessed by the collector as waste, under paragraph 463.

Enfleurance Grease.

The Board sustained the protest of Zinkeisen & Co. that certain articles invoiced as essence naturelle pure, rose, and

essence naturelle pure, jasmin, should have been classified free of duty as enburage grease.

Unusual Absorption of Moisture.

75 casks of ocher imported by J. W. Conlston & Co., at New York, absorbed an unusual amount of moisture, the weigher's return showing an excess of 4.818 pounds over the invoice weight. The Board found that the excess was due to the absorption of sea water or other moisture, and sustained the importers' contention for a reduction in the amount of duty assessed.

Spent Ginger Free.

The government has acquiesced in the decision of the United States Circuit Court of Appeals rendered in January, holding spent ginger free of duty when imported. This case has already been fully reported in *The Era* for February 9. The case is peculiarly important because the court's decision applies as well to all other spices covered by paragraph 667 of the free list. Spent ginger is a by-product obtained in manufacturing extract of ginger. It was classified for duty as a spice, not specially provided for, at the rate of three cents per pound, under paragraph 287 of the act of 1897. The importers protested, claiming the merchandise to be ginger root, underground, and entitled to free entry under paragraph 617 of the same act, which claim was sustained by the United States Circuit Court of Appeals for the second circuit in this case, the court finding that while the ginger had been run through cylinders, and cracked into small pieces about an inch around, and subsequently distilled and pressed to remove the moisture, it had not been ground within the commercial understanding of that term.

WOOLNER EMPLOYEES ENTER-TAINED.

Peoria, Ill., April 14.—One of the most pleasing social functions of the season was a complimentary dinner given at the Creve Coeur Club, last Thursday evening, by President Samuel Woolner, Sr., to the employes, associates in business, and representatives of the Woolner Distilling Co., of this city. Thirty-eight people sat down at the table, Mr. Woolner, Sr., acting as toastmaster. Goodfellowship reigned supreme and an opportunity was given to everyone to exchange ideas with his fellows and to get a better insight into the methods of manufacture and distribution of the Woolner products. Among those present, besides Mr. Woolner, Sr., were: Samuel Woolner, Jr., vice-president; W. B. Woolner, treasurer; Adolph Woolner, Jr., general manager; Frank Cahill and his force of twelve men, Mr. Anderson, Joseph Jett, Christ Teuffel, B. Mills, Henry Ling, Theodore Kipp and representatives from Kansas City, Denver, St. Paul, Chicago, Baltimore, Toledo and San Francisco; R. M. Caldwell, Pittsburg, secretary and general manager of the Economy Pennsylvania Rye Distilling Co., which the Woolners control. Many of the employes of this well-known company have practically grown up in the business, some of them having been associated with it for twenty-five years or more. Woolner & Co. are well known to the drug trade as distillers and blenders of whiskey, gin, alcohol, etc.

SHOW WINDOWS AND FEATURES.

Originality and Novelty Characterize Some Displays.

MINIATURE VINEYARD A FEATURE.—AN EXPERT'S SUGGESTIONS ON WINDOW DRESSING.—LIVE RATS AS AN ATTRACTION.—RAFFLING A DRUG STORE.—ANCIENT WEAPONS SHOWN.

A display which possesses the merit of being unique and original is to be seen in one of the show windows of the Zagat Drug Company, at 2117 Eighth avenue. It is a miniature vineyard, which is used to call attention to the merits of Welch's Grape Juice. Naturalness is the effect which the dresser has successfully essayed to produce. The result is a display which is simple and effective. This is the most noticeable feature about the display of the goods, showing that elaborate displays are by no means necessary to attain the desired end—the attraction of public attention.

Bottles of the product are shown on uncovered pine cases, which give the window the suggestion of a rustic air. Artificial grapevines are gracefully entwined about the lighting fixtures, from which they drop to the floor, being a fair representation of a grape arbor. Large lithographs, showing bunches of the red-purple wine grape are pasted on the glass in the window, making a most effective showing, and one which is attractive to the eye of the pedestrian, nearby or at a distance.

"Babeskin" Soap is being featured by Wilhelm F. Rawltus, of 2539 Eighth avenue. Large triangles are pasted on the window. This is a form of advertising this soap which has been used by many druggists.

The Kinsman Co., 280 West One Hundred and Twenty-fifth street, featured candy by using the boxes to build a viaduct. The arch side faced the window, the arch resting upon piers of masonry built from the boxed candy. In the center of the arch was an open box showing the candy.

S. J. Livingston, 729 Ninth avenue, features "own make" corn cure by a window display of field corn on the cob. The display could have been improved upon if he had been able to show a corn shock, with some ears of unhusked corn, the husks turned back and braided and hung up to dry, true country style. The yellow-covered boxes of saline could have been surrounded with the cobs from which the corn had been shelled.

A CIGAR DISPLAY.

Hetherington's Vanderbilt avenue window features a new brand of cigars. A large card shield occupies the middle of the window. This is surmounted by a spreading gilt eagle. Attached to the sides are card figured emblems of the different countries. The one on the left represents Cuba and the one on the right is Columbia and the one on the left represents Cuba. The face of the shield is divided into four parts. The upper right hand contains the national bird, as seen on army buttons, while in the section beneath appears the United States flag. The upper left hand division contains the Cuban flag,

while beneath it is a Cuban plantation scene, the whole being surrounded solidly by opened boxes showing the goods.

SELLS THE GOODS.

Regarding the practical side of displaying goods in artistically arranged windows, an Amsterdam avenue druggist said: "While it takes time, it sells the goods." Another method of attracting attention to his wares is to re-arrange weekly portions of his goods. He states it would confuse some clerks, but a bright clerk bears in memory the one or two articles placed in a new position, and there is no delay in serving the customer. The change attracts the eye of the regular customer, and he often finds that the article is just what he wants.

AN EXPERT'S IDEAS.

"The habit of displaying a leader at a very low price is not advisable. It gives the people the impression that you are trying to run a cheap drug store," said Mr. A. C. Field, the decorator of the Riker Brooklyn stores, in a recent talk on effective window advertising. "It is much better to have them carry away the conviction that you are conducting a pharmacy in which quality is the first consideration. Making too much of the low price idea is a mistake, for people carry their own important wants to a place where quality is assured. Cheap trade is not the most profitable, especially in the drug business."

MISTAKES OF SOME DRUGGISTS.

"Some druggists make no window displays at all; others figure too closely in the matter of expense. A short-sighted policy is bad in this as in everything else. The best material is not the most expensive. It is economy to buy good materials for display, good flowers, good quality in everything. Many druggists use crepe paper; if they but knew it, silk is cheaper than the cheapest paper. Paper can be used only once. At the end of the week it will be all faded out and not fit to be run. For a window, it would cost from fifty to sixty cents. Ten yards of silk a yard wide would cost about \$4, and five yards is enough for a window. That, at a first cost of \$2 per window, can be used at least a dozen times before it needs cleaning, and with proper cleaning, it can be used indefinitely."

Mr. Field uses only white silk, the different tints being apparently produced by other fabrics of heavier color which are hidden by the translucent light material. "Draping for background is distinctly passe now. Mirrors, flowers and ribbons are much more effective."

EXPENSE AND TIME.

"The question of expense is not a serious one for the average druggist. Occasionally it may run up to a few dollars, but at the end of the year the aggregate will not be great. The main thing is to buy good material, which will cost about a dollar a week. Sometimes it would not all be used, at others it might be necessary to spend the accumulation. A little outlay like that would give a fair showing the year round. Of course, an elaborate display would require a little greater outlay, but with the modest sum named and care in keeping material for later use, the results would soon be apparent."

"To dress windows does not take so much time as it does thought and attention. It often requires some study to work out a good plan, but after the arrangement is once decided upon, the actual placing of the goods is a matter of a few moments. The main thing is to be on the watch for ideas all of the time. It is not necessary or even advisable to watch the windows of other drug stores so very closely. The design does not depend upon the kind of goods shown. Dry goods store windows are often very suggestive to the observing druggist. Nor need there be fear of copying too closely. Different goods with the identical arrangement will give very different effects."

SOUTH CAROLINA.

Five rats with their tails interwoven were exhibited recently in the window of Hopper's drug store, at Bolton. This curiosity has attracted great attention. The Rev. W. T. Tate discovered the five rodents in his barn with their tails so interwoven with a cloth string that they could not get apart. They were as completely tied together as a whip, though all alive, each doing his best to get released. It is a mystery how they could have worked their tails into such a knot.

OHIO.

Mr. Sam Hopkins is raffling off his Second street drug store in Portsmouth. He chose this original and unique method of disposing of stock, having decided to leave Portsmouth for the West. The scheme briefly is as follows. A special souvenir edition of Portsmouth and a guess on the store is given for \$1, and Mr. Hopkins' brothers, Clarence and Will, started out recently, and in a short while disposed of hundreds of chances. The stock of goods, fixtures and soda water equipment are approximately worth from \$3,500 to \$4,000, and the same will be turned over to the person holding the lucky number. Mr. Hopkins hopes to be able to pull off a raffle, which will be conducted by three reputable business men within the next two or three weeks.

CALIFORNIA.

Ancient weapons were recently displayed by the Owl Drug Co., at 320 S. Spring St., Los Angeles. They were owned by Mrs. Mary Beauvais, who wished to dispose of them in order to obtain funds with which to return to France. Her deceased husband was a soldier descended from a line of military ancestors. The weapons were all used by some one of them. The Owl Drug Co. consented to display and sell the historic relics. Many of the weapons are valuable. One bears the mark of manufacture in 1414. It was presented to a Beauvais by Emperor Francis I, for bravery in battle. The Owl Drug Co. has experienced an increase of general trade through the exhibition.

A SPECIAL OFFER.

The April proposition of the American Peroxide & Chemical Co., which appears on the back cover of The Pharmaceutical Era, should be considered by all progressive pharmacists. Florifoam should prove a quick seller. Having the endorsement of many of those most prominent in dental practice, it is well recommended. It also appeals to the fastidious portion of the public. These considerations prompt carrying it in stock.

A KEY WEST SPONGE PACKING ROOM.

The illustration shows the sponge packing room of McKesson & Robbins, at Key West. Here Florida sponges are cleaned, sorted and packed for the New York market. Notice the heaps of sponges on one side. These are yet unsorted. On the other are the finished bales ready for shipment. The latter are formed by the hand press shown in the picture and one such bale may be seen actually in the press. The covering used for the bales is burlap. These goods are distributed through the sponge department of McKesson & Robbins, New York, Mr. Arthur Galay, manager.

DRUG TRADE JOTTINGS.

It is suggested that druggists who intend decorating in an Easter tone would make their windows more attractive if they would depart from artificial apple and peach blossoms, wisteria and daisies. Perhaps these have been overdone both by the druggist and dry goods houses. Why not use buttercups, crocuses or violets, which can be obtained for a few cents a bunch?

The Knickerbocker Drug Company, Broadway and Spring street, is having a price war with R. Sherick's new store across the street. Recently it was a run on Mennen's talcum powder, upon which the price was reduced hourly until the Knickerbocker placed it at six cents. The Sherick party withdrew on that. Thursday the Knickerbocker was offering it at eleven cents.

The annual catalogue of soda water requisites issued by Paxton, Horton & Gallagher, of Kansas City, Mo., has recently appeared. The range of soda fountain supplies listed is great and the various articles are profusely illustrated with attractive cuts. The whole make-up of the catalogue is excellent, in respect to paper, type and arrangement. The cover design is a timely representation of a dispenser serving a glass of soda to a young lady who is seated in a station car outside. She holds the reins with one hand and raises the glass with the other. The scene is true to life.

Alpers' Pharmacy, Broadway and Thirty-first street, New York, instead of the usual soda fountain signs, have every available space decorated with oranges. The reflection of these by the mirror, com-

bined with the yellow electric light shades, gives a very dainty and attractive effect. Mr. Heall possesses the attributes of a decorator, as well as understanding soda.

William Wilson's Broadway stores are featuring a corn cure by simply filling the show windows with the little yellow-covered boxes, surrounding them with a card, stating: "Walking made easy; it will save you carfare. No pain caused by its use."

R. Sherick's Pharmacy, Broadway and Broome street, New York, has just put in a new soda fountain. The feature is the counter, which is 40 feet long, 9 feet high, but only 14 inches wide, and is Tennessee marble. The fountain proper is Mexican onyx. The large, square mirrors, which are framed in walnut, are set at a slight angle, so they reflect the whole fountain.

The monthly price list of Charles Cooper & Co., for April, has been issued in its usual form.

The suit for alleged libel and the recovery of \$50,000 damages, which was brought in January, 1904, by Trygve Jervell, of Aalesund, Norway, against Edward P. Halk, of New York, was withdrawn October 13, 1904. The question at issue was caused by certain disputes over the status of Newfoundland cod liver oil imported into Norway by Mr. Jervell.

It would seem that many Brooklyn druggists have drifted into the custom of giving candy to children who come on errands to their stores. The children now expect it.

FACSIMILE OF ONE OF THE OFFICIAL AWARD BANNERS AUTHORIZED BY THE RECENT WORLD'S FAIR, ST. LOUIS.

A NEW PRICE LIST.

We are in receipt of a copy of Eli Lilly & Co.'s Druggists' Price List for 1905. This is a complete price catalogue of 160 pages, containing a full list of pharmaceutical and other products of the Lilly laboratories at Indianapolis. The list is systematically arranged and well printed. In addition to being cross indexed, a novel feature is the marginal index, which is sure to be of great service to both retailer and jobber. By its use any item or group of items may be quickly found by the busy druggist. A perusal of this catalogue emphasizes the great advances that have been made in pharmaceutical manufacturing during the last twenty-five years, and the nomenclature and scientific data there-in recorded are evidences that Eli Lilly & Co. have kept abreast of the times in this respect.

ICE AS FINE AS SNOW.

The Erie Specialty Co., Erie, Pa., have in their 1905 model Walker's Quick and Easy Ice Shaver, a machine that will shave every particle of ice in the cylinder as fine as snow. It can be used on the counter for shaving into a glass or can be used for shaving a large quantity at one time into a large receptacle. It is strongly made and put out on a full guarantee to work satisfactorily.

This and other useful goods for the soda fountain are illustrated in their 1905 catalogue, which will be sent on application.

BUSINESS RECORD.

ALABAMA.
Greenville.—Greenville Drug Co., succeeds E. M. Kirkpatrick.

ARKANSAS.
Benton.—Caldwell Drug Co., succeeds W. C. & R. Caldwell.

CALIFORNIA.
San Francisco.—McDonald & Foley, succeeds Andrew Olsen, 400 Geary St.

COLORADO.
Goldfield.—Palace Drug Co., new firm.
Haxton.—M. Anderson, succeeds S. P. Woodward.

CONNECTICUT.
Bridgeport.—J. W. Roberts, succeeds John J. H. Swinnerton, 128 E. Main.

FLORIDA.
Fort Meade.—Dyer Heagin, M. D., succeeds W. L. Stephens.

GEORGIA.
Atlanta.—Woods Phy., succeeds Head Drug Co., 814 Peachtree St.
Carlton.—Coulton Drug Co., (J. L. Baker & Son, Props., burned out.
Griffin.—Griffin Drug Co., succeeds C. L. Tucker Co.

IDAHO.
Genesee.—P. S. Beck, out of business.
St. Maries.—A. B. Anbus, new store.
White Bird.—W. A. Foskett, M. D., new store.

ILLINOIS.
Centralia.—Richardson Drug Co., succeeds C. F. Prickett, 134 E. Broadway.

INDIANA.
Bloomington.—T. J. Fenrod, burned out.
Carbon.—J. H. Throop, burned out.
Logansport.—Red Cross Phy., new store.

IOWA.
South Tond.—R. H. Woods, succeeds Woods & Heil.

INDIAN TERRITORY.
Madill.—R. C. Frame, damaged by fire.
Velma.—Roberson & Frensey, succeeded R. E. L. Rochelle.

KENTUCKY.
Denison.—Lamborn Drug Co., new store.
Hillsboro.—Oliver Scott, succeeds W. A. Sautz.

MAINE.
Menlo.—Mains Drug Co., out of business, no successor.
Mt. Pleasant.—C. A. Ott, succeeds A. H. Williams.

MASSACHUSETTS.
North Arlington.—F. M. Spitzer, dead.

MICHIGAN.
Kalamazoo.—Fredk. Mesick, dead.
Lowell.—A. P. Sturgis, damaged by fire.

MINNESOTA.
Chaska.—Chas. Watkins, succeeds P. A. Henk, Jr.
Le Roy.—G. E. Lomen, succeeds Lomen & Hatfield.

MISSISSIPPI.
Winona.—Chas. Quist, succeeds B. A. Stephens.

MISSOURI.
Jackson.—Hunter & Johnson, succeeds J. F. Hunter & Co.

MISSOURI.
Everton.—E. P. Olds, succeeds M. Wheeler.
T. J. Cackley, out of business.

MONTANA.
Osgood.—Daniel Holmes, succeeds J. A. McCracken.

NEBRASKA.
Beatrice.—J. W. Buswell, succeeds M. E. Shultz.
Milford.—W. C. Klein, succeeds H. C. Atwood.

NEW JERSEY.
Long Branch.—Richard W. Bennett, new store.
Newark.—Auw Chem. Co., Drug Store, 67 Wakeman Ave., damaged by fire.

NEW YORK.
Binghamton.—W. Deary, dead.
Geneva.—Earl Bryant, succeeds A. A. Allen.
New York City.—Jos. A. Braudie, succeeds Isidore B. Meyer, 311 W. 11th St.
Mr. Breslan, succeeds Cody & Berger, 1754 Lexington Ave.
M. Dlugasch, Prop. Broadway Drug Co., 229 Broadway, moved to 2d Ave. and 8th St.
M. Dlugasch, 1st Ave. and 3d St., new store.
Simon Friedman, succeeds Edward Pollock, 1707 Madison Ave.
Chas. Greenberg & Co., succeed Josephine Lorn, 740 Columbus Ave.
Chas. Langer, succeeds Geo. Rosenon, 1449 Ave. A.
La Salle & Co., 2831 Broadway, new store.
Louis Lasser, 1200 1st Ave., new store.
L. E. Michel, succeeds H. K. Eaton, 700 Columbus Ave., name listed.
Mr. Rosenhaus, succeeds H. L. Kessler, 34 Rutgers St.
Geo. Rosenon, succeeds S. Reinhart, 1344 5th Ave.

OHIO.
Brooklyn.—Adutte & McMaster, succeed Joseph Breslin, 544 Throop Ave.
F. W. Cable, succeeds A. E. Marsland, 2208 Fulton St.
Richard Grupp, succeeds J. H. Reinders, 318 Lewis Ave.
Andrew Grimmig, junction Harrison Ave. and Hooper St., new store.
Seymour & Seymour, succeed J. M. Kerligan, 25 Putnam Ave.
Saranac Lake.—Bradford B. Flint & Co., succeed Demay & Vincent, (Red Cross Pharmacy).

OREGON.
Wilson.—Jigalow & Sallsbury, succeed E. A. Jones.
Geo. A. Middleton, new store.

NORTH DAKOTA.
New Rockford.—O. E. Couch, succeeds Buck & Couch.

OHIO.
Cleveland.—Joseph Albrecht, succeeds Albrecht & Meyers.
Crooksville.—Taylor Phy., succeeds W. P. Taylor, at Newark, Ohio.
Edgerton.—Henry Long Co., succeeds A. C. Mortland.
Kirkersville.—H. H. Simmons, burned out.
Sandusky.—Jason Drug Co., succeeds C. L. Osberg.

PENNSYLVANIA.
Allentown.—Henry E. Peters & Co., succeed Henry E. Peters, 639 Hamilton.
Avoca.—Barnhart & Co., new store.
Bradford.—McAllister & Skelly, succeed Southwick & Co., 34 Main St.
Creekside.—J. S. Ewing, new store.
Philadelphia.—Bart & Snyder, succeed Asa H. Young, 154 Tasker St.
Scranton.—Frank J. Johns, 1114 Green Ridge St., from 920 Green Ridge St.

RHODE ISLAND.
Manville.—Edw. Houtmann, damaged by fire.

SOUTH CAROLINA.
Jonesville.—Jonesville Drug Co., succeed H. T. Hames.

TENNESSEE.
White Pine.—A. L. Courtney, damaged by fire.

TEXAS.
Chisholm.—McGuire & Dennis, new firm.
Poetry.—Stewart & Yates, sold out, no successor.

VT.
Scotfield.—Williams & Stillman, out of business, no successor.

VERMONT.
Newport.—Bigelow's Phy., succeeds C. F. Bigelow.

WISCONSIN.
Fadysmith.—H. A. Dimock, succeeds J. C. Webster.

PATENTS, TRADE MARKS, ETC.

PATENTS.

Issued April 11, 1905.

- 786,877—Charles W. Dasobry, Indianapolis, Ind., assignor, by direct and mesne assignments of two-thirds to Earle C. Perry, Jeffersonville, Ind. Bottling-washing machine.
- 786,892—Ernst Happe, Hamburg, Germany, assignor to Carl August Fischer and Albert Georg Foss, Altona, Germany. Capsule-entur.
- 787,006—Sigmund Sternau and Lionel Strassburger, New York, N. Y., assignors to S. Sternau & Co., New York, N. Y., a copartnership. Alcohol-lamp.
- 787,044—Samuel R. Kennedy, Philadelphia, Pa., assignor to The American Dairy Products and Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania. Condensed milk.
- 787,118—Maximilian C. Schweinert, West Hoboken, N. J., and Henry P. Kraft, New York, N. Y. Water-bottle stopper.
- 787,167—William G. Gates, Fort Benton, Mont. Respirator.
- 787,188—George T. Kenly, Baltimore, Md., assignor of one-third to Francis V. Moale and one-third to Charles L. Forbes, Baltimore, Md. Non-refillable bottle.
- 787,300—John J. Koono, Saratoga Springs, New York. Case for storing bottles.
- 787,309—Thomas W. Russell, Storrs, Mont. Bottle.

LABELS.

Registered April 11, 1905.

- 12,031—Title: "Wendel's Swiss Lozenges." (For Swiss lozenges.) Henry Edward Wendel, Philadelphia, Pa.
- 12,032—Title: "Singly's Hair Strength." (For medicine.) Bernard Singley, Glens Falls, N. Y.
- 12,033—Title: "Japanese Rapid Headache Powders." (For medicine.) Japamer Pharmaceutical Company, St. Louis, Mo.

- 12,034—Title: "Owlarino." (For medicine.) William F. Bente, Denver, Colo.
- 12,035—Title: "Fagan's Compound Wine of Tar." (For proprietary medicines.) Thomas F. E. Fagan, Brooklyn, N. Y.
- 12,036—Title: "Talpa." (For medicine.) Thomas Dyer, Providence, R. I.
- 12,037—Title: "Mexican Rheumatic Oil." (For rheumatic oil.) Maar & Johnson, New York, N. Y.
- 12,047—Title: "Anti Fade." (For a certain named preparation.) John Schutt, Jr., Buffalo, N. Y.

PRINTS.

Registered April 11, 1905.

- 1,265—Title: "Wine of Cardul." (For medicine.) Chattanooga Medicine Co., Chattanooga, Tenn.

PERFUMES FROM CONCENTRATES.

Can druggists manufacture perfumes profitably and dispose of them advantageously in competition with well-known brands? Mr. C. E. Metzger, of the Metzger Chemical Co., manufacturers of Perfume Concentrates, 54 Stone street, New York, answers the question by stating that it is not only possible and easy for the druggist to manufacture perfumes in this way, but the sale of the goods thus made gives him an opportunity to greatly increase his profit, for at least three-fourths of his calls for perfumery can be diverted to perfumes of his own manufacture. The Metzger Chemical Co., supply with their concentrates a booklet, giving formulas and complete directions for manufacturing extracts (costing from \$6 to \$16 a gallon), toilet waters, sachet powders, hair tonics, etc. Extracts made from their concentrates at a cost of \$10 per gallon, they say, compare favorably with other brands selling at 50 to 75 cents an ounce. The various odors are true to name—and the manufacturers supply, when necessary, handsome dispensing bottles and labels without charge, as well as all accessories for the manufacture and sale of the goods. See their advertisement on another page.

A RADICAL DEPARTURE.

Makers of proprietary medicines are freely charged by physicians of an ultra class with debasing the practice of medicine, by reason of the empirical tendency of the wide field of application which they assume for their respective products, as shown by the multitude of case reports which constitutes the mass of such advertising. This engenders a skepticism on the part of the progressive doctor, and he rejects the published clinical results as misleading and unfair. It is safe to say that the sequence of cases as published by the maker of the remedy cannot be matched with equal results by similar cases "as they come" in any physician's experience. Negative cases or failures are universally excluded from reports published by promoters. The ratio of success, as shown by such reports, is usually 100 per cent., which invariably excites a doctor's suspicion.

The departure of the Bioplasm Company from this quite usual method of promulgation establishes an anomaly in pharmaceutical promoting. This company has designed and constructed a compact (pocket) case containing the necessary apparatus for the quantitative determination of the constituents of the urine, which aids the doctor in diagnosis and treatment, and to go with this have published a manual of technique equally simple and applicable, being especially for reference at the visit. They give this freely to their patrons, but will not sell it, and this proclaims their motive as the promotion of their manufactured products. The maker tells the doctor that his remedial product will tend to restore, hence the doctor is requested to prove the manufacturer's assertion by scientific evidence not subject to controversy.

State precisely, the doctor is presented with instruments of precision in diagnosis of a kind and form not otherwise obtainable, for the avowed purpose that the doctor may either prove the claim of the manufacturer as to his product or detect the falsity of it. It is an example which should be cultivated. The field is a fertile one and is not occupied by this one tenant.

MARKET REPORT

A PLACID SITUATION.

No New Features, and Changes Unimportant.

CAMPHOR NOW FULLY REDUCED.—VANILLA BEANS DECLINE.—OPIUM AGAIN EASIER.—THE WEEK'S ADVANCES ARE LED BY CITRONELLA OIL AND SPIRITS TURPENTINE.—DEMAND IS OF BUT MODERATE PROPORTIONS AND SPECULATION IS NOT EVIDENT.

New York, April 17.—The various important changes of last week disposed of any decided tendency toward fluctuation in the market for the time being at least, so that this week has been rather featureless. The situation is favorable to the consummation of a satisfactory business by jobbers and with the nearer approach of warm weather the volume of transactions in seasonal commodities shows expansion. On the whole, however, trading is routine and the general tone steady. On certain lines local competition continues quite keen at first hands, but speculation is not general and buying of that order by consumers is very small. Sales appear to move immediately into consumption, being necessitated by actual requirements. The break in quinine has not resulted in as brisk a call as might have been expected. Opium shows further easiness and menthol is again lower. Jobbing prices on camphor have been generally reduced during the week to a level proportionate to the cut of four cents announced by refiners. Citronella oil shows pronounced strength, while codliver oil has again eased. The outlook is normally healthy.

OPIUM.—Each week brings further confirmations of the damage worked on the new crop by inclement weather in Turkey. Mail advices from Smyrna now estimate the yield this season at 3,500 cases, or but one-third of last year's output. This legitimate bullish influence does not affect the market as might be expected, for local competition is quite keen and stocks at primary points here and abroad are fairly heavy. The demand here is not very good and prices have again eased, cases being obtainable from jobbers at \$2.90. New values are quoted by jobbers as \$3.00@3.20 for nine per cent., and \$3.10@3.30 for eleven and thirteen per cent.; powdered remains unchanged at \$3.85@4.10 for thirteen per cent. and \$4.00@4.15 for sixteen per cent.

MORPHINE SULPHATE.—Nothing new has developed, the tone remaining steady and demand but moderate. Jobbing prices continue \$2.50@2.60 for eighths in ounce boxes, \$2.45@2.55 in 2½-oz. boxes, \$2.25@2.35 in ounce vials, and \$2.25@2.35 in 5-oz. tins, according to brand or quality.

QUININE SULPHATE.—The recent decline has not stimulated the demand to any extent, so that business continues routine and slow. The only news of the week is that Java bark shipments for the first half of April were 325,000 pounds, which compare with 615,000 pounds at the same time

last year. The results of the bark auction at London to-day are not expected to materially affect the situation. Jobbers are quoting 21@21½c. for bulk in 100-oz. tins, 21½@22c. in 50-oz. tins, 22@22½c. in 25-oz. tins, 23@23½c. in 15 or 10-oz. tins, and 28@29½c. in ounce vials, according to brand and amount.

CAMPHOR.—Last week's four cent cut by refiners has now exerted its full strength on jobbing prices, which are all proportionately lower. The undertone of the wholesale market continues easy, in spite of the decline, and buyers are cautious. Jobbers report a moderate demand at the new prices of barrels, 76@76½c. per pound, and less, \$2@87c.; 4-oz. blocks in cases, 76@77c. and less, \$2@87c. per pound; ounce cakes in cases, 78@78½c. and less, \$4@90c. per pound; 24s in cases, 80@80½c., and less, \$6@90c. per pound. Ounce cakes and 24s in 1-lb. boxes, 1c. per lb. additional.

CODLIVER OIL.—As the consuming season is about over, future deliveries of oil at wholesale are offered at lower figures, leaving spot quotations at a higher level. Buyers are therefore taking only for immediate needs, which are small. All the primary markets are easier and the general situation was well summed up by the Chemist and Druggist, recently, as follows: "The total catch of cod for the whole of Norway since the beginning of the season now amounts to 17,910,000, against 14,811,000 for the corresponding week of last year. The yield of oil is now 13,208 barrels, against 5,275 barrels in the same week of 1904. The fishing at West Lofoten still continues, and the prospects for a good fishing at Finnmarken are excellent. The market is therefore weak, and the lowest price now quoted on the Bergen market for finest non-congealing Lofoten oil is 95s per barrel, f. o. b." Under such influences the local jobbing market has eased further and Norwegian oil may be quoted \$38.00@40.00 per barrel, \$1.50@1.60 per gallon in 5-gal. tins, and \$1.50@1.75 for less, per gallon.

MENTHOL.—As the wholesale market is lower, under the pressure of offerings occasioned by heavy stocks and competition, jobbing prices have again been shaded somewhat and now are \$2.75@2.95 for crystals per pound, and 25@30c. per ounce.

BALM OF GILEAD Buds.—Lack of demand has resulted in a decline and jobbers now quote 45@50c. per pound.

CITRONELLA OIL.—A sharp upward movement has occurred this week in the wholesale market. Spot supplies are not very large and it is said that two leading interests, having quietly collected the oil for some time past, now control the market. At the source of production, Ceylon, the output has not been adequate to meet the demand, because of bad weather, and as many merchants sold the market short on forward shipments, they are now embarrassed to fill their contracts. All this has raised jobbing prices to the level of 60@70c. per pound.

AMMONIA WATER.—As the wholesale market has been on a proportionately higher basis for some time than jobbers, the latter have raised prices to 4½@5c. per pound for sixteen degrees, and 7@10c. per pound for less.

ANISEED, STAR.—Supplies are light and prices have risen, jobbers quoting 31@36c. per pound.

VANILLA BEANS.—There has been a good deal of competition at first hands for some time and supplies of certain qualities have been more than ample. There has been but a poor inquiry for the higher priced grades. But for cheaper Mexican a brisk demand has existed. Jobbers have readjusted their quotations, registering a net decline. New prices are: Mexican, long, \$6.50@7.00; cut, \$5.50@6.00; Bourbon, \$5.00@5.50; Tahiti, \$2.75@3.50, all per pound.

CARDAMOM, DECORTICATED.—Following the declines of last week, jobbers have lowered prices on decorticated 80@90c. per pound.

COLOCINTH APPLS.—The market has been so dull that jobbing prices have been made lower to move stocks. Quotations are 55@60c. for the whole, and 60@65c. for powdered, per pound.

GHIBNELLA ROBUSTA.—As frequently noted, producing regions have been short in output to such an extent that although the demand has not been active, jobbing prices have risen several times and now are: Whole 39@35c. and powdered, 35@40c. per pound.

OIL OF CLOVES.—The spice has been weak for a long time and this influence has induced jobbers to again lower prices on the oil. It is interesting to note that reports from Zanzibar indicate a now stronger market for the better grades of the spice. Lower jobbing quotations are \$5@95c. per pound.

SYNTHETIC SASSAFRAS OIL.—Manufacturers have reduced prices and jobbers follow, 46@55c. per pound.

SODIUM HYPOPHOSPHITE.—Dull conditions and competition have influenced jobbers to put the knife into prices. New schedule is as follows: Crystals in kegs, 2@2¼c., and less, 3@5c. per pound; 1-lb. cartons, 4@5c. and 5-lb. boxes, 3½@4½c. per pound; granular, in kegs, 2¼@2½c. per pound, and 1-lb. cartons, 4½@5½c. per pound. Pea crystals, in kegs and less, 2½@2¾c. per pound.

SPIRITS TURPENTINE.—As the wholesale market continues to rise under the influence of full manipulation in Savannah, local jobbing values have also advanced and now are 69½@70c. per gallon in barrels, and 78@85c. per gallon for less.

HELONIAS.—Lack of demand and better supplies have caused a decline. New jobbing prices are 60@65c. for the whole, 63@65c. for ground, and 65@70c. for powdered, per pound.

BAYBERRY WAX.—The scarcity continues extreme and no return to normal can be foreseen for a good while to come. The extraordinary rise at wholesale causes another advance by jobbers, this time to 70@75c. per pound.

CARNAUBA WAX.—Each succeeding week sees another advance. Supplies are hard to find. No. 1 wax is the worst in this respect. New jobbing prices are as follows: No. 1, 60@70c.; No. 2, 50@60c.; No. 3, 40@41c. per pound.

DAMIANA LEAVES.—It is reported that arrivals at producing markets on the coast are heavy, and the wholesale market is a cent lower. Jobbing prices are unchanged.

ALEXANDRIA SENNA SIFTINGS.—First hands have exhibited quite a little interest this week. Supplies are larger and a slight decline has resulted, but the jobbing market remains unchanged.

THE PHARMACEUTICAL ERA

EDITORIAL COMMENT

The Proprietors' Meeting.

The drug trade of the entire country will await with more than ordinary interest the results of the deliberations of the proprietors who assemble in this city next Tuesday morning. Questions of the utmost importance will be discussed—questions of vital interest, not only to the retailers but to the proprietors themselves. What success have the members of the so-called St. Louis Club attained in their limited contract plan? Will more proprietors adopt that or the direct contract plan? These things are uppermost in the minds of all who have been watching developments along the line of price protection during the past six months.

The retail trade has every reason to expect good treatment from the proprietors so far as the contract plan is concerned. When we recall the statements made by manufacturers who have been trying the plan, that it has brought them more business than ever before, we believe it is fair to assume that an increased number of proprietors will find it to their best business interests to adopt the plan and to announce their intention of doing so during the coming convention. Early declarations of this character would do much to augment the feeling of confidence in the sincerity of the proprietors among the retail trade.

A Code of Ethics.

In these days of intense commercialism it is refreshing to read a document that makes no reference to cut rates on proprietaries, but nevertheless does refer to some of the most important questions relating to the drug trade at the present time. We refer to the Code of Ethics adopted at the annual meeting of the Florida Pharmaceutical Association last fall, and which appears on another page. Among the "fundamental principles" stated in the Code are those which declare the relation that should exist be-

tween the physician and the pharmacist and the attitude of the members against the liquor traffic and the sale of drugs that enslave. Both of these points were well taken, but the statement referring to the sale of narcotics might have been made still stronger. There is an opportunity for Florida druggists, as well as druggists of other States, to cultivate a public demand for the enforcement of laws that shall restrict the sale of these drugs to the proper persons.

A Wise Decision.

In deciding that all contracts on proprietary goods shall go into effect May 1, the Executive Board of the Metropolitan Association of Retail Druggists has acted most wisely. The board must undoubtedly have been aware of the strong sentiment among the great body of pharmacists, that the operation of the contract plan would give the quickest relief from price demoralization. There could be no further delay after the news that over 1,700 druggists in Greater New York had signed the Peruna contract alone.

In itself this large number of signatures has special significance. It means that only about 100 druggists in the city have not signed the Peruna contract. The N. A. R. D. forces should have little difficulty in persuading fifty per cent. of these to join the ranks, while the rest will be attended to by the proprietor.

All in all, the situation in New York city at the present time looks more hopeful than it has done in many a day. With the contracts going into effect on May 1, and the Proprietary Association of America beginning its convention on the following day, there should be ample opportunity for the proprietors to appraise the direct contract and serial numbering plan at its full value.

A Canadian Formulary.

In this issue is presented a representative number of formulas from a pamphlet which in time is likely to become the Canadian National Formulary. The pamphlet is the result of the efforts of the Research Committee of the Council of the Ontario College of Pharmacy, whose

members seem to be alive to the fact that something must be done to bring into harmony and reduce to a common standard the various and conflicting formulas for what are intended to be similar preparations. Druggists on this side of the border can appreciate this effort, for they have passed through a similar experience in the production of our own National Formulary, a work that has earned its right to a place next to the Pharmacopœia in every pharmacy.

The next step for the Canadian brethren will be to popularize their formulary by securing the co-operation of the medical fraternity, a task which requires considerable discretion and ability. We believe, however, that it is a task that can be accomplished. The doctors on this side of the border are becoming more and more interested in pharmacy, and they are the power which must be secured to regenerate and redeem the dispenser's vocation. Physicians are interested in the legitimate side of pharmacy and surely they may be depended upon to support the object of so laudable an endeavor. A book like the National Formulary is a necessity, for there always will be a demand by the public and prescriptions by the physicians for preparations whose formulas for obvious reasons can never be accorded a place in the Pharmacopœia.

The Usefulness of a Price List.

In the latter half of this issue will be found our semi-annual price list. This feature is an old friend and guide to most of our readers, but for those who have not previously become acquainted with its usefulness, a word of comment may prove advantageous.

Every druggist recognizes the value of price lists and is familiar with their use. This of ours, however, is a combination of everything of the kind, in the trade, and is, therefore, of exceptional value for constant reference. Here will be found a prodigious array of all the staple drugs and chemicals, the proprietary preparations, and a list of their manufactures. And the prices are not those of any one authority, but are as nearly as possible true gauges of actual costs and market conditions. While some commodities fluctuate frequently, the majority remain firmly stationary for a good while so that this list will fully retain its value for a half year; until we publish another.

The present compilation is more complete and accurate than any we have previously offered. Some 40,000 to 50,000 names are included and

all the so-called new remedies will be found listed. It is evident therefore, that an up-to-date druggist needs this list, the very latest and best to be had.

No individual pharmacist could hope to remember all the articles called for at times in his line and he is, therefore, necessarily in need of some authority to which quick appeal can be made. Such information our list yields instantly and it is, therefore, a universally appreciated assistant throughout the drug trade. Many previous lists of ours are found in active use years after their date of issue. While this is highly complimentary, it is well to remind such loyal friends that changes have occurred and that, while some old books are best, a price list is not one of them. Consequently, this new list should be hung at the corner of the prescription or office desk in place of its ancestors. The very latest is what is wanted.

No druggist can be expected to know everything, but if he knows where to find any information speedily, his resources of knowledge are practically limitless.

Such a storehouse of information we offer to the trade in the list in this issue.

Chinamen Among Us.

To the seeker after knowledge in many lines appear from time to time certain opponents who block the road and cry, "Thus far, no further." And when he mildly inquires the reason they reply, "Beyond is our own country, and you must not know its secrets. If you learn them, straightway you would proclaim its beauties and others would acquire that by which we gain our livelihood, others would know how to imitate our methods and would make their own sterile ground as fertile as ours, thus decreasing our chance of profitably selling our harvests. What right to this have strangers who have not toiled as we to till and water for fraition?"

And when the seeker mildly rejoins that "because others grew good crops, too, how can that hurt the yield on their land, will it be any the less thereby, and will not a larger general yield be a universal blessing, increasing the total of the world's wealth?" they shake their heads and still bar the way.

Others before have done the same. The Chinese still pursue this method. The progressive Japanese abandoned it long ago. Knowledge, truth can not be suppressed and will out eventually.

If it is news of an event which is desired, why, if the right purport and details are not explained by the principals, then wrong reports and perverted statements will be given forth. And who loses the most thereby?

If it is a manufacturer who fears an exploitation of his methods, let him remember that a general description is not a working diagram and that few possess the desire or capital to imitate his ways. Those that do so wish will learn anyhow, no matter what he does. So will it always be as long as gold can purchase anything on earth.

A word to those fearing the truth about prices or the causes of their rise and fall. Exorbitant profits can not last long, for the news will leak out and competition arise. Why not recognize that smaller, legitimate margins mean confidence of clients, mean increasing trade, mean an aggregate reward far beyond that from their present medieval course?

Away with these antiquities, with their barriers thrown across the highway of the world's progress. They are like the farmer who refuses to sell a right of way for a large sum to a railroad. They care nothing for the common good. And more; they are too blind to see their own best interests.

Dreams of Conquest.

Commencement season in colleges of pharmacy is here and will continue until June. The graduates are helping to swell the ranks to take up the great and permanent interests of society. To the most of them Commencement Day marks the time of their entrance into the arena of active business life. On that day friends start them off with best wishes, some bouquets, and perhaps a little oratory. Much of the advice is at least harmless, and recalls Hamlet's reading, "Words, words, words." Yet commencement exercises are to be commended. They reflect the bright side of life, and personally accentuate the beginning of one's career. We have no reason to dispute the class orator who tells us that "the graduates of this year look out on life with more intelligent eyes than those who preceded them, or that the college has provided them with abundant facilities for acquiring a rich fund of professional knowledge, and it will be their task to use that knowledge in the fabrication of a better pharmaceutical structure." Who would banish these dreams of conquest? not one. Upon the contrary, it is for us to encourage and hasten the enterprise of what the valedictorian has called "the building of the Pharmaceutical Empire of the Future."

Ethical Proprietaries.

The creation of that advisory board known as the "Council on Pharmacy and Chemistry of the American Medical Association," has been the cause of much comment in the medical and pharmaceutical press. The purpose of this council is to examine into the composition and status of the various medicinal preparations which are offered to physicians, and which are not included in the U. S. P. or other standard text books, or formularies. Preparations which conform to the standard established by the ten rules governing the council in this matter will be incorporated in a book to be published by the journal of the American Medical Association and known as "New and Non-Official Remedies."

The following ten rules have been adopted as the guide for this council in the admission of articles to this new work:

The Governing Rules.

NOTE.—The term "article" shall mean any drug, chemical or preparation used in the treatment of disease.

Rule 1.—No article will be admitted unless its active medicinal ingredients and the amounts of such ingredients in a given quantity of the article, be furnished for publication. (Sufficient information should be supplied to permit the council to verify the statements made regarding the article, and to determine its status from time to time.)

Rule 2.—No chemical compound will be admitted unless information be furnished regarding its source, its identity, purity and strength, and if a synthetic compound, the rational formula.

Rule 3.—No article that is advertised to the public will be admitted; but this rule will not apply to disinfectants, cosmetics, foods and mineral waters, except when advertised in an objectionable manner.

Rule 4.—No article will be admitted whose label, package or circular accompanying the package contains the names of diseases, in the treatment of which the article is indicated. The therapeutic indications, properties and doses may be stated. (This rule does not apply to vaccines and antitoxins nor to advertising in medical journals, nor to literature distributed solely to physicians.)

Rule 5.—No article will be admitted or retained which the manufacturer, or his agents, make false or misleading statements regarding the country of origin, raw material from which made, method of collection or preparation.

Rule 6.—No article will be admitted or retained about whose therapeutic value the manufacturer, or his agents, make unwarranted, exaggerated, or misleading statements.

Rule 7.—Labels on articles containing "heroic" or "poisonous" substances should show the amount of each of such ingredients in a given quantity of the product.

Rule 8.—Every article should have a name or title indicative of its chemical composition or pharmaceutical character, in addition to its trade name, when such trade name is not sufficiently descriptive.

Rule 9.—If the name of an article is registered on the label, copyright, the date of registration should be furnished the council.

Rule 10.—If the article is patented—either process or product—the number and date of such patent or patents should be furnished. If patented in other countries the name of each country in which patent is held should be supplied, together with the name under which the article is there registered.

In the statement published by the council, additional to the above

rules are given several explanatory comments. These comments on the several rules are as follows:

Explanatory Comments on Rules.

Rule 1.—The physician not only has the right to know, but it is his duty to know, the composition of medicines he prescribes for his patients. While the council desires the formulas and the details as to the method of preparation to be sufficiently complete to enable it to verify the correctness of the assertions made regarding an article, the description to be published will usually consist of a statement of the amount of each medicinal agent or ingredient in a certain quantity—generally the ordinary dose—of the article, and in some instances, the general character of the solvent or vehicle and flavors.

In preparations for external use, the therapeutic efficiency is greatly influenced by the nature of the vehicle. Therefore, in such preparations, the character of the vehicle or base should be stated, so that it may be known whether the article is penetrative or simply protective.

Rule 2.—In order to avoid errors in the case of chemical compounds and to guard against adulterations, lack of potency or strength, and mistaking one chemical for another, it is necessary to have at hand suitable identity tests.

Rule 3.—While the correctness of the principle that physicians cannot be expected to favor any medicine which is exploited to the lay public will be readily conceded, this rule is to be modified in its application to articles not strictly medicinal.

Rule 4.—Experience has clearly shown, however, that it is not safe to enumerate on the package the diseases in which an article may be indicated, since this is also the means by which the laity, who are not competent to determine whether or not its employment is safe and proper, may be induced to continue its use or to recommend it to others quite regardless of the evident dangers of forming drug habits or of doing serious harm by employing a remedy that in reality may be contraindicated. It is the physician's prerogative to determine in what disease the article may be indicated, and he is supposed to go to the drug store for his knowledge regarding this. It is not the function of the pharmacist to recommend or to prescribe medicines, but only to be familiar with their pharmaceutical and chemical characters, strength and dosage, and with the best forms of administration.

Rule 7.—For the information of the pharmacist or dispenser and to enable him to act as a safeguard to the patient and to the physician, all medicinal articles containing such potent agents as the poisonous alkaloïds and other organic substances and the salts of some of the metals, should have the exact amount of these ingredients contained in the average adult dose stated on the label. A list of these potent substances will be prepared for more specific information.

Rule 8.—In order to prevent the confusion now existing with reference to many articles known only by more or less arbitrary selected or coined, usually protected, names, it is necessary that every article which is intended solely for physician's use or prescription be designated by a single name, or by a name descriptive of its pharmaceutical character, and, as far as practicable, of its principal medicinal constituents.

It seems to us that this action on the part of the American Medical Association is one that will meet with the hearty approval of all educated physicians and pharmacists.

We are not unconscious of the circumstances which compel manufacturers of new medicinal compounds to adopt the proprietary form for marking their preparations. It is the only method which they can pursue and by which they can reap their financial rewards. It protects the physician against imitations; but every fair-minded man will admit that the proprietary medicine business is being terribly overdrawn, and

if some check to this tendency is not forthcoming, the text book of the future will be a conglomeration of fanciful names more ingenious and amusing than those employed for any other line of commercial products.

The manufacturers of legitimate preparations have nothing to fear from this action on the part of the American Medical Association. On the other hand, they are to be congratulated that this Association has undertaken to separate the "wheat from the chaff." Every fair-minded man will admit that it is the duty of the physician to know what he is prescribing, and none of us would voluntarily employ a physician for our own families who was in the habit of prescribing remedies, the constituent parts of which were not known to him.

We are surprised at the comments on this subject by some of the pharmaceutical journals. Surely, these articles could not have been written or suggested by those who are familiar with the history of, or who believe in the ethics of the medical and pharmaceutical professions. It seems to us that the members of the American Medical Association are acting in perfect good faith, and that their efforts should receive the hearty support of all true friends of legitimate pharmacy.

We hope that the American Pharmaceutical Association will follow the example of the American Medical Association, and appoint a similar committee for a similar purpose. Better still, a joint committee from the two associations would be more effective, and if they do their work thoroughly and intelligently, they could render a most valuable service to the two professions.

Henry L. Stinson, president of the New York Association of the Students and Alumni of Phillips Andover Academy, says that the old-fashioned college spirit is dying out. The reason he finds is the great increase in the size of classes, the growth of the university idea, and the growing tendency to broaden the list of studies, and the substitution of lectures for recitations. None of these reasons applies to the small college or the pharmacy school.

A Missouri druggist recently swapped his pharmacy for a farm, the agriculturist immediately taking possession of the store and stock and the pharmacist removing to the farm in time for the spring plowing. Bets as to which will succeed best at his new occupation are about even, odds slightly favoring the new agriculturist.

✂ ✂ OUR ✂ ✂
LETTER BOX

REQUIREMENTS IN OHIO.

Secretary W. R. Ogier, of Columbus, O., sends us the following explanation of the requirements passed upon by the Ohio Board of Pharmacy, last fall:

In order to dispel any doubt as to the meaning of the term "equivalent" to one year in a high school of first grade (Ohio), used in the resolutions of October 13, 1904, the Board hereby specifies a minimum equivalent as embracing one year of instruction in each of the following branches: Algebra, English, natural science and history (United States or general history).

Any school of pharmacy may admit to a course in pharmacy an applicant who has received instruction in the branches herein named in a high school, academy or other educational institution for a period of one year.

W. R. OGIER,
Secretary.

Columbus, O., April 1, 1905.

THE RESOLUTIONS.

The resolutions of October 13, 1904, referred to above, follow:

Resolved, That on and after July 1, 1905, no school or college of pharmacy shall be recognized as in good standing by the Ohio Board of Pharmacy, which does not require of all applicants as a minimum condition of admission, a common school education, or the equivalent thereof, which shall include one year in a high school of first grade (Ohio), or an academy, legally constituted, providing a course of study of not less than four years.

Provided, That nothing in this resolution shall apply to students who have matriculated previous to November 1, 1904, in any school or college of pharmacy heretofore recognized as in good standing by the Ohio Board of Pharmacy.

Resolved, That on and after July 1, 1905, every school or college of pharmacy shall comply with the following requirements as a condition of being recognized as in good standing by the Ohio Board of Pharmacy:

1. It shall exact the requirements for admission to schools and colleges of pharmacy adopted by the Ohio Board of Pharmacy. (Oct. 13, 1904.)

2. It shall possess an adequate equipment for teaching pharmacy in all its branches, including laboratory facilities and apparatus.

3. It shall have an adequate and competent faculty for instruction in the following branches—Pharmacy, chemistry, materia medica, microscopy, physiology and botany.

4. It shall require an attendance of 80 per cent. upon two graded courses of instruction, in branches specified (in article 3) of not less than twenty-six weeks each, excluding holidays, in two separate years.

5. It shall exact an average grade of 77 per cent. on examination as a condition of graduation.

6. It shall admit students within thirty days after the opening of any school year, and it shall confer degrees in pharmacy only at the close of each school year upon

the completion of the prescribed course of study.

7. Any college may honor official credentials issued by other colleges of pharmacy in good standing as determined by this Board, so far as the work offered is the equivalent of or identical with the required work of the school to which credentials are presented, except in branches of study embraced in the last year of its own curriculum.

The secretary was directed to prepare such blanks as will, when properly filled out, give the Board the information necessary to determine whether or not the requirements are fully met for the admission of students to schools and colleges of pharmacy, and the heads of the respective institutions are expected to furnish from their records, when requested by this Board, an abstract giving the credentials, date of admission and length of course of instruction of each graduate of pharmacy who may apply to this Board for registration by examination.

By order of the Ohio Board of Pharmacy,
WM. R. OGIER,
Secretary.

RENT AND VALUES.

Red Bud, Ill., April 17, 1905.

Editor The Pharmaceutical Era:

On page 431, Era, April 13, 1905, (first column) I noticed the article referring to the A. Spiegel Drug Co., of Milwaukee. Every man is supposed to get full value for the rent he pays. As the renter virtually lives on this rented place in the name of the landlord and pays him for all the advantages of the location, even good government(?) and good neighbors are charged up in rent. Why should the renter pay again in taxes, licenses, etc., when he has already paid in rent? Of course, the renter's profits are immensely reduced by having to pay twice or still oftener for being protected by a paternal government and compelled to help maintain a whole army of useless officials and legally produced monopolists. It is the natural punishment for legal meddling.

Yours truly,
LOUIS LESAULNIER.

MR. BATT'S COMMENTS.

St. Louis, Mo., April 16, 1905.

Editor The Pharmaceutical Era:

Referring to page 1 of The Era, April 13, 1905, one "plain fact" is that, for a good long time past local news of St. Louis and Chicago has been neglected by The Era. I respectfully refer you to the silver anniversary number of Meyer Bros. Druggist. This is prized as a treasure by the host of graduates of the St. Louis College of Pharmacy, and those of the profession who have learned to admire such men as Dr. Sanders, Wall, Herman, Good, Whelpley, etc.

In re "Edward Bok vs. Patent Medicines," my experience as retail druggist and with retail druggists has taught me that the retailer would be better off without patents, even if sold at full prices. You say you have grown up in the trade and work for the interest of druggists alone, and that three-fourths of them are supplying the self-medicating public with "own remedies"; encourage the remaining one-fourth to do the same, but in such a manner that they do not offend the prescribing physician.

Pray, who is the "quack doctor" about whom you and the lally press are ranting? Is it the advertising specialist or is it the regular M.D. who uses and prescribes proprietaries?

If the first, a little investigation will show you that they are "grafters," but thoroughly good business men, like the patent-medicine men, but they certainly understand and treat their "special" advertised diseases with more skill and care than the average general practitioner. Of course, there are some "fake" specialists, the same as "fake" patent-medicine men and "fake" druggists.

As to the dangers of patent medicines, do you not admit that the best advertised and popular patents owe their success to the alcohol they contain or morphine in the case of cough syrups and diarrhoea mixtures, and cocaine in the case of catarrh cures, and that they educate and nurse as many "drug fiends" as the promiscuous prescribing of narcotics by the regular M.D.?

Yours truly,
BRUNO BATT.

LIKES OUR TREATMENT.

Detroit, April 15, 1905.

Editor The Pharmaceutical Era:

On behalf of the Detroit Drug Bowling League, I want to thank you very much for the nice write-up you gave us on our recent banquet. Again thanking you, I remain,

Yours very truly,
H. E. FERRY,
President.

Neurogene.

A mixture of salts called neurogene and used in the preparation of baths, is said to have the following composition: Sea salt, 79.8 per cent.; sodium sulphate, 12 1/2 per cent.; calcium sulphate, 2.3 per cent.; sulphate of iron, .6 per cent., and water and organic substances, 4.8 per cent.

FOOD PRESERVATIVES, THEIR ADVANTAGES AND PROPER USE.

The practical versus the theoretical side of the pure food problem. By R. G. Eccles, M. B., Phar. D., Fellow of the American Association for the Advancement of Science; Member of the American Chemical Society, etc. With an introduction by E. W. Duckwall, M.S., Member of the Society of the American Bacteriologists, etc. 8vo, pamphlet, 202 pages, paper cover. 50 cents. New York: D. Van Nostrand Co.

No one interested in the subject of pure foods—and who is not?—should fail to carefully read this book from preface to conclusion. Dr. Eccles' discussion covers nearly all the questions that have been raised in pure food legislation, and his views reflect much patient investigation and sturdy common sense. The chapter headings serve to show in outline his treatment of the subject: The Dilemma of the Food Packing Industry; Why Preservatives are Used in Foods; Food Preservatives in Common Use; Are Food Preservatives Harmful; Digestion and Food Preservatives; Effects of Preservatives on the Kidneys; Preservatives and Vital Statistics; Preservatives as Related to the Aged; Miscellaneous Objections to Preservatives; How the Use of Preservatives Benefits the Poor; Preservatives and the Temperance Question; Preservatives and Legislation.

ETHICAL PHARMACY AND ITS RECOMPENSE.*

By HENRY P. HYNSON,
Baltimore, Md.

I believe it can be successfully shown that in the large majority of our better pharmacies the changes required and the sacrifices necessary to make them entirely acceptable to the masses, the reasonable members of the medical profession, would be very few and immaterial. And why should they be acceptable to the medical profession? may be asked. I answer that a pharmacist who for cause is not in touch with the medical practitioners around him has lost his true mission. He is as much unlike the real pharmacist as is the ostracized medical man unlike the ethical physician; as unlike his acceptable brother as is the disabled lawyer unlike the recognized attorney. The feeling that would lead us to disregard the good will, endorsement and confidence of medical men must be closely akin to the feeling that leads the advertising specialist to become a world unto himself—a feeling for which the supposed or real faults and objectionable practices of a few medical men offer no reasonable excuse.

PHARMACY AS A SPECIAL BRANCH.

Assuming the possibility of pharmacy at last becoming a special branch of medicine, or even an allied profession, what would it cost?

Let us picture, if possible, one of medicine's most distinguished and respected branches, surgery, and, if not presumptuous, see if we cannot from it sketch the outlines of pharmacy as we would most like to find it, at the same time discovering some of its present greatest defects. The physician who selects to practice surgery acquires, of course, a general knowledge of medicine, but secures a special knowledge of those subjects with which his art has most to do: anatomy, histology, the pathology of surgical diseases. Having become learned in the sciences, he begins to practice the art, until he is proficient also in that.

CONDUCT IN BUSINESS.

Enjoying this proficiency in both the science and art of his specialty, he judiciously selects a location with due regard for convenience and prominence. Next he seeks to fully and properly equip himself. His reception rooms may be elegant with handsome furnishings, but yet are neither gaudy nor extravagant. No matter how attractive they may be, they will be inexpensive and altogether incomparable in detail and exactness with his operating room. To the light and capacity of this operating room all other considerations will be sacrificed; the equipment of utensils, appliances and instruments will be modern, of the most approved type, and ample. Great care will be exercised in the selection of assistants and attendants; there will be several classes, but each class will hold its competent and trustworthy *personelle*. He is known to be competent, practised, well situated and properly equipped. From whence will his patients come? We all know, from two sources;

the one helping the other. But if it happens he decides to do general practice in connection with surgery, there will be but one; he may expect to depend upon his own efforts and his own cases for success. It may not discredit him to do general work; but will he ever become a leading or quite so proficient surgeon? Should he indulge in misleading practices, pretend to possess unusual and secret means or knowledge, he will soon lose caste and be quickly relegated to his rank. He will be allowed to furnish material incidental to his practice, and although it may not be directly charged for, it will enter as a charge with services, "operating room, \$10" it reads, or "including charges for dressings, ligatures, ether." He may, with propriety, sterilize dressings, prepare ligatures, examine anesthetics. Indeed, he may have a hospital or sanitarium of his own, and charge for the board of his patients. All this he could do with perfect propriety. Indeed, he could own a farm, make an occasional deal in real estate or take "a dip" in wheat without sacrificing his professional standing. But *what would* be thought of him if he were to run an ice cream and confectionery saloon, with cigar stand and pool room attachments, in connection with his sanitarium? What would be thought of him if, when a patient is sent to him by a general practitioner for surgical treatment, he is willing and anxious to treat him for all other ailments and at all times, which willingness he expresses through conspicuous cards generously distributed around his waiting room. And, infinitely worse, if he should prescribe for a price any old advertised appliance, bath or treatment, about which he knew nothing, or which his very attainments told him were worthless. Oh, brothers, the case is sadly parallel! We need not cut outside lines if in carrying these our self-respect and personal dignity do not suffer and the attention they require does not too greatly interfere with the more serious demands of our practice. We may invite, if we will, the heavy, sickening odor of the burning Havana or the annihilating fumes of the scorched "Sweet Caporal," both very hard to bear by the delicate young woman waiting for the prescription to relieve that dreadful sick headache. We may thrust upon the aching heart of the languishing little one's heart-breaking parent the titter and nonsense of the soda-water girl and dude, while he patiently waits for the hope-giving potion. These are personal privileges, the right to exercise which cannot be disputed however much the policy may be questioned.

We cannot, however, as fair-minded, intelligent persons, knowing how difficult it is for the learned and skilled physicians to properly diagnose and treat diseases, undertake this service, even if the fair law of reciprocity does not appeal to us. And more, we cannot and must not, knowing as we do, as we are trained to know, the absurd claims, the falseness, the impudence of quackery, of quack medicines, "patent medicines." If you will, lend our services, our vocations, to their imposition upon, as to them, a poorly-informed, a credulous, a long-suffering public. Nor should we lend our associations and our journals to their pernicious influence. They are not worth it, even in dollars and cents, and no amount of organized work or effort will ever make

them worthy the recognition of so useful, so honorable a vocation as is our own.

ALL ETHICS ON SAME FOUNDATION.

In the light of all I have ventured to thrust upon you, and in the better light of your own conclusions, I would like to question as follows:

(1.) Are not pharmaceutical ethics and the ethics of all other useful vocations built upon exactly the same foundations, and are they not quickened by exactly the same spirit?

(2.) Are not the ethics of the pharmacist touching himself personally, his fellows, medical men and his customers, the ethics of the man, of humanity, the gentleman of honor and the accepted citizen of a Christianized community? And—

(3.) Does it not appear that when the pharmacist has become ethical, he may become, in fact, has become, very nearly professional?

OBSERVANCE OF LAWS.

It may be asked: Why should we be subservient to these laws? The answer is simple; it is because they are the laws of right; of truth and of justice. Even though you may have a birthright in the Kingdom, that birthright cannot be maintained except by obeying the laws. Remember, *entre* into even the smallest social coterie is through and by its laws and affiliation therein, is continued only so long as these laws are obeyed, which, to obey, you must know and understand. While so great an ethical authority as St. Paul wrote, "I had not known sin, save by the law," he has not said we may escape its condemnation, nor has he promised us recompense for its non-observance.

Undoubtedly, ethical pharmaceutical practice can proceed only through a knowledge of pharmaceutical ethics, and a more perfect knowledge of these can be best obtained by gathering and discussing the views of individuals. I trust not to appear cynical when I express the belief that it is to a desire to get my interpretation of these laws only, that I owe the honor and pleasure of appearing before you this evening; believing this, I must ask pardon for treating the subject more fundamentally than was desired, perhaps. I have taken this liberty that you might better understand "the faith that is within me" and appear more reasonable when I say of the pharmacy of to-day:

PHARMACY OF TO-DAY.

That it should be dignified and somewhat office-like in appearance, with ample space and equipment for pharmaceutical manipulations.

That in the arrangement and display of stock, the form and character of advertising, in advertising devices, it should conform to the importance and seriousness of its mission.

That supplying medicines, medical and surgical accessories should be emphatically paramount, distinctly evidenced, and, instead of irrelevant, all such articles as are extensively carried, all such articles as are peculiar to sick-rooms, hospitals, physicians' offices and their laboratories.

That competent and conscientious care, conformity to modern, intelligent and accepted practice, should rule its policy and conduct.

That in no attempt or desire to usurp the functions of the physician should be

*Part of a paper read at the March Pharmaceutical meeting of the Philadelphia College of Pharmacy.

found; no specifics prepared or supplied, and, by all means, no article of medical nature sold, upon the responsibility of the pharmacist or the customer, about which there is the slightest secrecy and for the reliability and safety of which the pharmacist could not vouch.

This, then, is ethical pharmaceutical practice, without great revolution but in the line of possible and healthy evolution, with but little sacrifice and at small loss.

THE RECOMPENSE.

Its recompense! What is its recompense; what in dollars and cents? Will it pay? will be, no doubt, asked. Yes, it will pay. It has paid in larger proportion to the amount invested than has the conventional pharmacy, and the percentage of failures has been much smaller than with these. A business started in the midst of successful and long established competitors, with such competitors ever present, that can, in its fourteenth year, if it does no more, comfortably maintain a firm of four members and pay holding salaries to a corps of twenty employees; that closely approaches 50,000 as the number of prescriptions filled, *annually*, may be thought to pay in dollars and cents. The character of this business is such as to lead customers to think that you must and do charge more, and they are willing to pay good prices; they are not attracted to such pharmacies by low prices. This money recompense, while necessary and desirable, is really incidental and not peculiar either to ethical conduct, or the reverse; some make the conventional pay, some do not; some will succeed along restricted lines, some do not. Many quack doctors make money—many qualified ethical physicians fail to make a living. Money making and money saving is something peculiar to itself and invariably follows no profession, no business. It is an individual characteristic, the dimensions which are poorly understood, even by its owner; certainly, it should not, must not, influence our ethics.

STILL GREATER RECOMPENSE.

Unquestionably the greater recompense comes through increased self-respect, through greater pride in our vocation, more interest in our daily work and through the consciousness of having done "our little best" for humanity, for ourselves and those who are to follow.

Peculiarly grateful is the recompense that comes from the community and our patrons. It is fortunate when you can do the best in the best way and for the best reasons—such wins its own compensation, while relief from many trifling annoyances, the absence of distracting, petty demands, leaves one with more to think of that is pleasantly uplifting.

The most pronounced and most unusual recompense that comes to us through this practice is the very encouraging and stimulating recognition it wins from the medical profession and the good feeling it there engenders. It is really worth the while, with excuses unnecessary and apologies out of place, self-respecting—you command respect—realizing that to him, only, cometh "that peace of mind which passeth all understanding"; to him, only, who follows the broadest, the best and most effective of ethical laws; who does unto others even as he would have them do unto him.

CODE OF ETHICS.*

Florida Pharmaceutical Association.

The pharmaceutical profession, being one which demands knowledge, skill and integrity on the part of those engaged in it, and being associated with the medical profession in the responsible duties of preserving the public health and dispensing the useful, though often dangerous, agents adapted to the cure of disease, its members should be united on the ethical principles to be observed in their relations to each other, to the medical profession and to the public.

The Florida State Pharmaceutical Association being an organization embracing among its members a large number of eminent pharmacists, manufacturers, chemists and scientists, being desirous that, in relation to professional conduct and probity, there shall be a corresponding disposition to advance, its members have subscribed to the following fundamental principles for the government of their professional conduct:

1. We accept the United States Pharmacopoeia as our standard and guide for all official preparations.

In compounding a prescription written in a foreign country, the pharmacopoeia recognized as authority in that country is to be followed. For unofficial preparation we advocate the adoption of uniform formulas in accordance with the National Formulary, or other standard works, published by national or international agreement.

2. While at present, the Association does not feel authorized in requiring its members to abandon the sale of proprietary medicines, it earnestly recommends the propriety of discouraging their employment.

3. The apothecary should be remunerated by the public for knowledge and skill, and the charges should be regulated by the time consumed in preparation, as well as by the cost of the article sold. Although location and other circumstances necessarily affect the rate of charges at different establishments, no apothecary should intentionally undersell his neighbors with a view to their injury.

4. No apothecary should be engaged in furthering the interests of any particular physician to the prejudice of other reputable members of the medical profession. We emphatically condemn the allowance of and percentage on prescriptions to physicians as unjust to the public and detrimental to both professions.

5. As the diagnosis and treatment of disease belong to the province of medicine, and as a pharmaceutical education does not qualify the pharmacist for the discharge of these responsible duties, we should, where it is practicable, refer applicants for medical aid to a regular physician. And we, likewise, hold that medical practitioners should recognize the value of pharmaceutical education and regulate the compounding of prescriptions and the dispensing of all medicines to pharmacists.

6. As medical practitioners occasionally commit errors in their prescriptions which may or may not involve ill consequences to the patient if dispensed, and be injurious to the character of the prescriber, it is held to be the duty of the apothecary in all such cases to protect the physician

and to have the corrections made, if possible, without the knowledge of the patient, so that the physician may be screened from censure. When the errors are of such a character as not to be apparent, without the knowledge of circumstances beyond the reach of the apothecary, we hold him to be blameless in case of ill consequences. As the original prescription is his guarantee, we recommend that it should always be retained by the apothecary.

Apothecaries, likewise, are liable to commit errors in compounding prescriptions, and we hold that in all such cases it is the duty of the physician to protect the interests of the dispenser, and stand between him and the patient, as far as possible.

7. The apothecary should be able to distinguish between good and bad drugs, and as the substitution of a weak or inert drug for an active remedy may be productive of serious consequences, duty demands that he should exercise his expert knowledge and good judgment in the selection and preparation of remedies. We hold that substitution or the sale of impure drugs or medicines, when pure articles can be obtained, is highly culpable, and that it is the duty of every apothecary or druggist to expose all such fraudulent acts as may come to his knowledge.

8. As there are many powerful substances that rank as poison, which are constantly kept by apothecaries and prescribed by physicians, and which are only safe in their hands, we hold that the apothecary is not justified in vending these powerful agents indiscriminately to persons unqualified to administer them and that a prescription should always be required when intended for medicinal use. When the poisons are intended for technical purposes, or for the destruction of animals or vermin, the sales should only be made to responsible persons and strictly in accordance with the State law governing the sale of such poisons.

9. While we recognize the value of spirituous liquors as therapeutic agents, and the necessity of pharmacists dispensing these legitimately in accordance with the physician's prescriptions, we condemn, as degrading and unprofessional any attempt to make such sales a prominent feature of the business.

We discountenance any attempt to foster or increase the use of opiates or injurious drugs possessing the power of enslaving the consumer to habitual use.

We hold that where there is good reason to believe that the purchaser is habitually using stimulants, opiates or other injurious drugs, that we should discourage such practice by every means possible, and we urge upon pharmacists the duty of exercising at all times a conscientious care in dispensing drugs liable to such dangerous abuse.

10. As pharmacy is a progressive profession, its followers should, by continuous study and application, keep abreast of the advances made in medicine and the sciences. It becomes our duty to encourage the elevation of our chosen profession by stimulating research, investigation and study.

Special care should be exercised in the selection of our assistants. No apprentice to the business of apothecary should be taken for a less term than four years, unless he has already served a portion of that time in an establishment of good character.

*Adopted at the annual meeting at Jacksonville, Oct. 27, 1904.

Assistants, at the first opportunity, should be entered as students in a college of pharmacy and encouraged to secure a thorough education. As the progress of our profession, in the scale of scientific attainment, must depend mainly upon those who are yet to enter it, it is recommended that those applicants who have had the advantage of a good preliminary education, including the Latin language, should be preferred.

NEW FORMULAS.

Selected from the "Compendium," or Canadian National Formulary. **Galen's Cerate (Cold Cream).**

- Liquid paraffin 16 fl. ounces
- White beeswax 4 ounces
- Spermaceti 1 ounce
- Borax 30 grains
- Oil of rose 10 minims
- Distilled water 8 fl. ounces

Dissolve the borax in the distilled water; melt the white beeswax and spermaceti with the liquid paraffin at a gentle heat; pour the mixture into a warmed mortar and add while yet hot the borax solution, previously warmed, with constant trituration, and finally the oil of rose; continue the trituration until cold.

In hot weather the quantity of white beeswax may be increased to 5½ ounces and the spermaceti to 2 ounces.

Elixir of Terpin Hydrate and Codeine.

- Terpin hydrate 320 grains
- Codeine phosphate .. 40 grains
- Gluside 10 grains
- Tincture of fresh sweet-orange peel. . . 1½ fl. ounces
- Alcohol (95 per cent.) 13 fl. ounces
- Glycerin 20 fl. ounces
- Elixir of orange, sufficient quantity to make 40 fl. ounces

Dissolve the terpin hydrate, codeine phosphate, and gluside in the alcohol with a gentle heat, add the tincture of orange, glycerin and enough elixir of orange to make 40 fl. ounces.

Each fl. dram contains terpin hydrate, 1 grain; codeine phosphate, ¼ grain.

Elixir of Terpin Hydrate and Heroine.

- Terpin hydrate 320 grains
- Heroine hydrochloride 13½ grains
- Gluside 10 grains
- Tincture of vanilla (1 in 10) 1½ fl. drams
- Brandy 5 fl. drams
- Alcohol (95 per cent.) 15 fl. ounces
- Glycerin 20 fl. ounces
- Distilled water, sufficient quantity to make 40 fl. ounces

Dissolve the terpin hydrate, heroine hydrochloride, and the gluside in the alcohol with a gentle heat; add the tincture of vanilla, brandy, glycerin and lastly, enough distilled water to make 40 fl. ounces.

Each fl. dram contains terpin hydrate, 1 grain, and heroine hydrochloride, one-twenty-fourth grain.

Liniment of Ammonium Iodide.

- Strong solution of ammonia 5 fl. ounces
- Tincture of iodine 5 fl. ounces

- Glycerin 5 fl. ounces
- Tincture of camphor 5 fl. ounces
- Mix and agitate.

Note.—On standing, the liquid will become colorless, usually with a slight deposit, which may be separated by filtration.

Essence of Pepsin.

- Glycerin of pepsin, B. P. 4 fl. ounces
- Sherry 5 fl. ounces
- Glycerin 5 fl. ounces
- Alcohol (95 per cent.) . 3½ fl. ounces
- Tincture of fresh sweet-orange peel 5 fl. ounces
- Distilled water, sufficient quantity to make 40 fl. ounces
- Mix and filter through paper sprinkled with talcum.

Aromatic Fluid Extract of Cascara Sagrada.

- Cascara sagrada bark, prime, two years old, in coarse powder . . . 5 pounds
- Licorice root, in coarse powder 10 ounces
- Calcined magnesia, fresh 12½ ounces
- Gluside 40 grains
- Oil of coriander 15 minims
- Oil of anise 20 minims
- Rectified spirit 15 fl. ounces
- Glycerin 10 fl. ounces
- Water 1¼ gallons

Mix the cascara, licorice and magnesia thoroughly; add the water in portions, mixing well. Place the mass over a water-bath or steam-bath, and heat for hours, or until all bitter taste has almost or entirely disappeared. Pack the mass in a percolator and percolate with distilled water until exhausted. Evaporate the percolate over a water-bath or steam-bath to 55 fl. ounces.

Dissolve the gluside, oil of coriander and oil of anise in the alcohol; mix with glycerin and mix with the concentrated; percolate by shaking thoroughly.

Note.—Other aromatic oils may be substituted for the oils of coriander and anise if desired.

Compound Resorcin Ointment.

- Resorcin 565 grains
- Zinc oxide 565 grains
- Bismuth subnitrate . . 565 grains
- Oil of cade 2½ fl. ounces
- Soft paraffin, white. . . 7 ounces
- Hydrous wool fat . . . 7 ounces

Triturate the resorcin to a fine powder with the aid of a little ether, and allow the ether to evaporate; then mix the powders and incorporate with the remainder of the ingredients.

Note.—Darkens on exposure to air and light, and should be kept in well-closed containers.

Compound Glycerin of Heroine.

- Heroine hydrochloride . . 10 grains
- Chloroform 20 minims
- Alcohol 40 minims
- Syrup of roses 10 fl. ounces
- Distilled water 2 fl. ounces
- Glycerin, sufficient to make 20 fl. ounces

Dissolve the heroine in the distilled water and add the syrup of roses gradually, shaking after each addition. Dissolve the chloroform in the alcohol, add to the syrup; then add sufficient glycerin to make 20 fl. ounces.

PRICES AND PROFITS.

C. G. Buchanan, Wellsburg, W. Va., Discusses These Questions.

PUBLICITY OF MOVEMENT TO RAISE PRICES OF PRESCRIPTIONS WILL CAUSE YELLOW JOURNALS TO CRY "DRUG MONOPOLY."—BETTER INFLUENCE.—PHYSICIANS TO WRITE PRESCRIPTIONS.

Will any benefit arise from the present much-discussed movement toward raising the prices of prescriptions? Personally, I believe not, and the sole result will be that the movement will be taken up by the "yellow journals" and made the excuse for a bitter tirade against what they will call "the drug monopoly."

They will produce statements to prove that the druggist makes 200 per cent. on his drugs, while the grocer must be satisfied with 6 or 7 per cent. upon his sugar (of course, neglecting to mention the enormous difference in the aggregate amounts).

This publicity will naturally alarm an already suspicious public and render them more susceptible to the cutter's plea or the dispenser's argument. It will also tend to produce more stores in the already overcrowded field, with the consequent financial loss to those now in existence.

The movement will prove of no benefit because the rate of charges is already fixed either by conditions or custom. It is, of course, impossible to accept any flat rate of profit to be fixed upon all prescriptions regardless of what their nature or quantity may be. Therefore, we all consider the details, analyze the situation, and charge just as much as we think the conditions warrant, whether it be a profit of 50 per cent. or 2,000 per cent. That is what the druggists have been doing in the past and that is what they will continue to do in the future, and increased publicity can only result in a disagreeable notoriety.

What the members of the drug trade need is someone to tell them how to receive larger profits on their patents and sundries, so that the prescription department may be relieved of some of the burden it is already carrying, and that a balance may be left on the right side of the ledger at the end of the year.

If there is any great fault to be found with the prescription business, it consists of the fact that the druggist has permitted the nature of the prescriptions to change until there is no great profit left thereon. If he receive a prescription for 4 ounces of bromidia, the preparation will cost him 75 cents by the time it is ready for dispensing, yet he can hardly get a profit of more than 50 per cent. to 75 per cent. for it without being called a robber or placed in serious danger of losing that customer's future patronage. But if he receive a prescription for 2 grains of permanganate of potassium in six ounces of water, the customer will gladly pay for it from 75 cents to \$1, or a profit of several thousand per cent.

And that is just the trouble with the prescription part of the drug business today—we are receiving too many of the first mentioned class and not enough of the second class.

If the conditions are to be improved,

then the physicians must be influenced to return to the ways of their "daddies."

There is no great obstacle in the road of doing this; every physician has the required knowledge, but the long-continued silence of the druggist, as a class, has permitted the courteous and smooth-talking detail men of the manufacturers and proprietary concerns to wean the attention of the doctor from the simple pharmaceutical ingredients of which the proprietary remedies must almost, if not entirely, be composed.

This has been to the retail druggists a loss and a disadvantage. They, as a class, must speedily realize their position and rise to their own defense, or else see conditions grow steadily worse.

This condition can only be rectified when a united effort is made by all druggists as individuals, and pharmaceutical societies as organizations, to influence physicians to write prescriptions which actually must be skillfully and scientifically compounded, and which shall not be for mixtures which may be simply transferred from one container to another.

The average physician is reasonable and he naturally desires his patient to receive that medication which will produce the best results or most quickly bring about recovery. He prescribes proprietaries simply because they are constantly brought to his attention and, consequently, are fresh in his mind.

If proof of this statement be needed, one has only to refer to the stock room of any retail store and there he will see dozens of partly dispensed packages of proprietaries. Each of these, at some time or other, had a run in the vicinity, but now are never called for, as the physician who prescribed them has had his attention diverted to others.

The druggist should simply follow the tactics of the detail man and by means of samples, arguments and literature, endeavor to persuade the physician that his patients will receive the best results if they are treated with freshly-prepared pills, emulsions, infusions, elixirs, etc., of which the physician knows every ingredient and whose quantity he has accurately calculated for that individual case.

In small communities this work, perhaps, would have to be done by individual druggists, but in cities where druggists are organized the association should employ qualified detail men. This work our national societies might aid by furnishing and distributing appropriate literature.

From personal experience, I positively believe that such a course would lead to the ultimate betterment of the entire fraternity.

Test for Pure Quinine Sulphate.

If 0.2 gram of the quinine salt be dissolved in 5 cc. of a mixture of 20 volumes of petroleum ether (spec. grav., 0.60) and 70 volumes of chloroform, the filtrate when diluted with three times its volume of petroleum ether, will remain perfectly clear, if pure quinine sulphate has been used. Other cinchona alkaloids, when present, will give a distinct precipitate. By this method, it is asserted, an admixture of 0.1 per cent. of foreign alkaloids in quinine may be detected.—*Amer. Jour. Pharm.*

MILK PREPARATIONS.*

BY W. A. PUCKNER.

Professor of Chemistry, University of Illinois School of Pharmacy.

BUTTERMILK.

When a mixture of sour milk and cream, sweet or sour, is submitted to a peculiar process of agitation, called churning, a solid portion separates out, which is called butter, and consists chiefly of the fat of milk (80-85 per cent.) holding in suspension some of the other milk constituents. The liquid portion after the butter is removed constitutes buttermilk.

The composition of buttermilk is variable and depends on the composition of the milk and cream submitted to churning, and completeness of the process of churning.

The amount of butter remaining in the buttermilk depends chiefly on the process of churning, but it is usually about 0.75 per cent. The acidity or sourness depends of course upon the amount of free acid in the cream and milk used; buttermilk ordinarily contains 0.25 to 0.50 per cent. lactic acid. Butter, after its removal from the churn, is washed with cold water to remove adhering and inclosed buttermilk, and then manipulated to squeeze out most of the water. These washings are added to the buttermilk, and by diluting it decrease the per cent. of the solid constituents. If preservatives were contained in the milk or cream from which the buttermilk was made these will, of course, remain in solution and constitute the buttermilk. It is claimed that salt in considerable quantities is added as a preservative to cream intended for butter making. This would, of course, materially increase the ash of buttermilk. The following figures¹ illustrate the average composition of buttermilk:

No.	Per cent. total solids.	Per cent. fat.	Per cent. solids.	Per cent. non-fatty acid.	Per cent. ash.
1.....	3.77	1.09	8.68	0.49	0.70
2.....	3.03	0.63	8.49	0.70	0.70
3.....	10.39	0.78	9.61
4.....	8.92	0.65	7.37	1.20	...
5.....	9.64	2.51	7.13	0.64	...
6.....	8.13	0.82	7.37	0.64	...
7.....	10.14	0.92	9.22	0.73	...
8.....	8.91	0.59	8.41	0.71	...
9.....	8.98	0.49	8.49	1.32	...
10.....	10.70	0.54	10.16	0.82	...
11.....	9.50	0.73	9.04	0.73	...
12.....	9.72	0.80	8.92	0.73	...

Because of its cheapness buttermilk is rarely adulterated. Should adulteration be suspected the methods of examination given for milk may be applied. This excessive watering may be shown by a determination of total solids, and so forth. Buttermilk may at times contain much free acid, and since it is then unpleasant to the taste, this should be guarded against. The sense of taste may safely be relied upon to detect excessive acidity. If, however, it is considered desirable to determine the acidity more accurately, so as to be able to sell a very uniform product, this may be done as follows: To 100 cc. buttermilk add a few drops of phenolphthalein solution. Prepare a solution of sodium hydroxide by dissolving 4 gm. of pure sodium hydroxide in sufficient water to make 100 cc. Measure 25 cc. of the sodium hydroxide solution into

a graduate and add this in small portions with constant stirring to the buttermilk containing the phenolphthalein until the liquid becomes pink. Note the number of cubic centimeters required to render the liquid red; this, multiplied by 0.03, will approximately indicate the per cent. of lactic acid in the milk.

KIMYSS OR FERMENTED MILK.

In Northwestern Siberia and adjoining countries an effervescent drink is made from mare's milk by a process of fermentation. The reaction appears to be caused by several organisms: one is a yeast which splits the disaccharide lactose of milk sugar into simple sugars and then decomposes these with formation of alcohol and carbon dioxide; another is a lactic acid producing bacterium, which acts on the sugar and ferments lactic acid, while still another body affects the casein of milk so that acids coagulate it but imperfectly.

In this country, where mare's milk cannot readily be obtained, cow's milk is used instead. Mare's milk contains more sugar and less fat than cow's milk, and when the latter is used to make kimyass, sugar (usually sucrose and not lactose or milk sugar) is added and some of the fat of the milk removed, or else the natural or "whole" milk is diluted with skim milk or water.

Many formulas for the manufacture of kimyass are in use. In all the prepared milk is treated with brewers' yeast, active fermentation is induced and allowed to proceed for a certain time, when it is moderated by moderating the temperature. In a well known formula² which yields an excellent quality of kimyass the ingredients, adjusted to closely approach the composition of mare's milk, are heated to 32-38° C., the yeast, mixed with some milk, stirred in and the mixture transferred to bottles, which are securely corked. The bottles are kept in a room having a temperature of 21-27° for 12-18 hours and shaken every six hours. They are then put in an ice box the temperature of which must be below 13° C.

As has already been stated, kimyass differs from milk chiefly in that the sugar originally in milk has been decomposed into alcohol, carbon dioxide and lactic acid. Since the fermentation induced in the process of manufacture proceeds slowly, even after the product is placed on ice, the composition of kimyass depends largely on its age. The following analysis of a kimyass, made when it was one, eight, twenty-two and ninety days old, shows how the per cent. of sugar decreases while the lactic acid and alcohol increase.³ It also shows that the albumen and casein are gradually converted into lactoproteins and peptone, bodies more easily digested than casein and albumen.

ANALYSIS OF COW'S MILK KIMYSS.

	Age in days.		
	1	22	90
Water	88.50	90.15	90.13
Alcohol	0.17	0.92	1.03
Fat	1.65	1.48	1.58
Casein	2.06	2.00	1.93
Albumen	0.32	0.22	0.21
Lactoprotein and peptones	0.32	0.56	0.74
Lactic acid	0.26	0.97	1.39
Sugar	0.16	0.14	0.22
Insoluble ash	0.42	0.34	0.35
Soluble ash	0.16	0.22	0.23

KEPHIR.

An effervescent milk drink called kephir is produced by the action of the "kephir ferment" on cow's milk. Kephir grains are fungus-like growths found on branches along the snow line on certain bushes in Russia. The fungus contains several micro-organisms; one is a ferment resembling yeast, another a bacterium resembling the lactic acid ferment, and when the fungus is added to milk a fermentation is started which produces a product somewhat resembling kumys. During the fermentation a considerable quantity of the ferment is also formed and this is removed, dried and used for future fermentations.

The method of making kephir is much like that used for kumys. The milk is kept at a temperature of 18-24° C. and a quantity of the ferment added to it and the liquid agitated frequently. After 24 hours, when the fermentation is well advanced, the liquid is bottled and kept in a cold place, when the fermentation will slowly continue, just as in kumys.

The following analysis¹ shows how closely the composition of kephir resembles that of kumys, and also the manner in which it changes on keeping:

	First day.	Second day.	Third day.
	Per cent.	Per cent.	Per cent.
Fat	1.75	1.70	2.00
Casein	3.74	2.87	2.90
Lactalbumin	0.11	0.03	0.00
Albumin	0.09	0.10	0.25
Hemialbumose	0.03	0.28	0.40
Peptone	0.03	0.04	0.08
Lactose	3.75	3.22	3.09
Lactic acid	0.54	0.56	0.65
Alcohol	0.80	0.80	1.00

MATZOON.

Before it is assimilated by the system the casein is precipitated or curdled by the acids of the stomach. If milk is curdled before it is consumed then the stomach is spared this amount of work. In many ailments it is advisable that patients depend largely or sometimes almost entirely on milk for their subsistence and it is then highly beneficial if the milk is in some way curdled before it is eaten. Weak stomachs which would soon be unable to digest natural milk can usually digest milk preparations in which the casein has been curdled by acid for an indefinite time. Similarly, in countries where the inhabitants are obliged for economical reasons to largely subsist on milk, the artificial curdling or partial digestion of the casein is very common. In Arabia, also in Armenia and adjacent countries, large amounts of milk that has been curdled artificially are used. In this country also such preparations are largely used as food by persons with impaired digestion.

A preparation sold as "Matzoon" is prepared by adding yeast to rich milk that has been warmed. The mixture is set aside in a warm place for six to twelve hours and when curdled is well stirred. A portion of this is then used to curdle another portion of milk, from which again a portion is used to curdle new milk, and so forth. The portions first obtained are rejected because they taste of yeast. It has a rich, slightly acid taste and ordinarily is of the consistence of bonny-clabber, and is therefore eaten with a spoon, often sweetened with sugar.

¹The composition of matzoon and prepar-

ations of this kind is similar to that of kumys, but since the fermentation is allowed to continue but for a short time the amount of acids, etc., produced by the fermentation is very small. Usually the fermentation is regulated so that just sufficient lactic acid is formed by the action of the lactic ferment on the milk sugar to precipitate the casein in a finely divided state and to give the milk a faintly sour taste, while at the same time but slight traces of alcohol and carbon dioxide are produced.

PEPTONIZED MILK.

When milk is taken as a food the casein in it undergoes several changes before it is finally absorbed by the system. First, a ferment or enzyme, called rennet, and produced chiefly by the mucous membrane of the stomach splits the casein into two new bodies, the chief product, paracasein, being insoluble. This change resembles but is not the same as that taking place when milk sours. Next, the paracasein is attacked by the pepsin of the stomach, another enzyme or ferment, and largely changed to peptone², which change is completed in the intestines by a ferment, trypsin, contained in the pancreatic juice. While pepsin and trypsin have a similar action on foods, they differ in that pepsin can act in acid solutions only, while trypsin is most active in alkaline liquids.

If, as was stated when discussing matzoon, artificially curdled milk is more easily digested because the stomach is spared this task, then milk which has been treated in such a manner that the casein is changed to peptone should be still more easily assimilated by weak stomachs. In accordance with this idea many predigeste foods and beverages are now in vogue, as an example of which peptonized milk may be considered.

"Pancreatin" or peptonizing powder is mixed with a little water, the milk then added and the mixture warmed to about 40 degrees Centigrade and kept at this temperature for ten to twenty minutes, or until it has acquired a slightly bitter taste, and then quickly cooled by placing on ice. Or, if the peptonized milk is to be kept for some time it is quickly heated to boiling before being placed on ice. This boiling destroys the enzymes and prevents their continued action on the milk, which would result in too bitter a product.

²It has been explained that the complex sugars or carbohydrates can, by absorption of water, break up into simpler sugars. Thus starch, a polysaccharide, can absorb water and form dextrines. These in turn absorb more water to become maltose, a disaccharide. Each molecule of maltose then absorbs one molecule of water and forms two molecules of glucose, a simple sugar. When starch is used as food it must undergo changes of this nature before it can be assimilated by the body. Similarly the very complex casein in the process of digestion is gradually decomposed into more and more simple bodies, and these are finally used by the system.

³"Pancreatin" is a mixture of enzymes extracted from the fresh pancreas of hogs or cattle. Its chief constituents are an enzyme which hydrolyzes starch and thus renders it soluble and which corresponds to the diastase of malt and is called pancreatic diastase, amylase or amylolysin, an enzyme which attacks proteins and changes them to simpler forms called trypsin, and a third enzyme, steapsin, which in some way aids in the assimilation of fats. It is a cream-colored powder having a faint peculiar odor and a meat-like taste. It is slowly but almost completely soluble in water.

MALTED MILK.

For many years baby foods containing milk, flour and malt have been much in vogue. Recently malt milk drinks have had considerable sale at soda fountains and hence must be considered here.

It has been explained that starch must be changed to soluble compounds before it can be absorbed by the system. Ordinarily this change is effected partially by a ferment or enzyme, ptyalin, contained in the saliva, and is completed by the starch digesting ferment of the pancreatic juice. A like or similar ferment is contained in malt, and the addition of malt to starchy foods renders these more easily digested. The protein-digesting ferment in malt also aids in the digestion of the casein in milk. The milk malt foods on the market may be divided into two classes, those which are mixtures of condensed milk, starch or flour and malt and those in which the malt has acted on the starch and the products of this action, mixed with milk, have been brought to a permanent dry form.

Use of Denatured Alcohol.

In France, where denatured alcohol is used in the arts, various devices are resorted to in order to render the liquid potable and thus escape the excise. Lindet *Inst. Soc. Chem. Sacr. et Dist.* states that the most common fraud consists of blending a certain proportion of the denatured alcohol with pure alcohol and disguising the flavor with aromatic bodies. Formalin, which is used in denaturing in the proportion of .5 per cent., may still be detected with certainty when the denatured spirit is mixed with fifteen times its volume of pure alcohol. If the denatured spirit contains 2½ per cent. of wood spirit, the presence of methyl alcohol can only be detected so long as the blending does not exceed the proportion 1 to 8. In order to prevent more certainly the use of alcohol for drinking purposes, it is desirable that pyridine, benzine or acetone should be present. A not uncommon form of fraud consists in removing the denatured agent by agitating the spirit with benzene or carbon tetrachloride and brine, redistilling it with aqueous vapor. This process yields 60 per cent. of an alcohol which may be used for drinking purposes, but it requires considerable apparatus. This removes benzine, pyridine and acetone, but traces of formalin can always be detected in the product. If the recovered spirit is to be used for mixing, the only guarantee would seem to be in a mixture of methyl alcohol which would escape detection in dilutions greater than 1 to 8.

Air-Tight Syrup Bottles.

Wiehelt recommends (Northwestern Druggist) filtering paper for hermetically closing bottles containing fruit syrups, etc., as follows: Fill the bottles (which should be small, and heated before filling) up to the very top and overflowing with the syrup, as near boiling hot as possible, then lay the piece of filtering paper on top. This immediately becomes saturated with the syrup, and as the latter cools off, water evaporates, and the edges attach themselves firmly to the bottle's lip. In the central portion, sugar forms in the tissues of the paper, and thus makes it practically air-tight. The bottles should have, of course, a lip as nearly smooth and symmetrical as possible.

¹Allen's Commercial Organic Analysis.

QUESTION BOX

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

Interstate Registration.

(M. C. R.)—"Will you please inform me what States and territories recognize the Michigan diploma of pharmacy? I would like to go West for a little while and thought that perhaps I might be able to work on my diploma from Michigan."

We assume that you have been registered by examination in Michigan; if so, you can become registered in certain States whose laws provide for interstate or reciprocal registration. Michigan has such law and the States named in the most recent list we have at hand as having similar provisions are: Arkansas, Georgia, Kentucky, Minnesota, New Mexico, North Dakota, Ohio, South Dakota, Washington and Wisconsin. There may be some others and it might be well for you to address the secretary of the Board of Pharmacy of the State or territory in which you wish to locate.

The subject of interstate registration is one which the National Association of Boards of Pharmacy has taken hold of with much interest and in a letter addressed to this journal by Dr. Murray Galt Motter, in February of this year, it was stated that the membership of the association comprised the following States and territories: Ohio, South Dakota, District of Columbia, Maryland, Louisiana, Alabama, Florida, Massachusetts, Indiana, Arizona, Oregon, Michigan and Oklahoma, and that the next step was indicated in the by-law: Upon the receipt of an application for registration in another State, the Secretary of the Board shall request the secretary of such Examining Board to furnish a certified copy of the applicant's examination questions and ratings; provided, that in all cases the applicant shall have received a rating of five per cent. higher than the minimum rate required by the Board before which he was examined; and such questions must be satisfactory to the Board from which he seeks registration.

Cannabis Indica of Aqueous Mixture.

(S. J.)—"Please inform me through the Question Box why I cannot obtain a clear solution from the following formula: Chloral hydrate, 5 grains; potassium bromide, 5 grains; fluid extract of cannabis Indica, 1 minim; fluid extract of hyoscyamus, 3 minims; alcohol, 3 fl. ounces; water, enough to make 1 pint."

The resin of cannabis Indica, which in the fluid extract is dissolved in the alcohol, is insoluble in water, and hence, when introduced into an aqueous mixture, as in the above formula, precipitation is sure to occur. Your formula differs materially in the quantities of the various ingredients employed from other approved formulas, and we strongly suspect that you have made an error in transcribing it. It is hardly possible that a physician would prescribe 5 grains each of chloral and potassium bromide in a pint mixture. The N. F. formula directs that each fluid dram shall contain 15 grains each of chloral and of potassium bromide, and 1/8 grain each of extract of cannabis Indica and of extract of hyoscyamus. In the N. F. formula the resinous extract of cannabis Indica is held in suspension by means of tincture of quillaia, and we presume this tincture might be added to your formula for a similar purpose.

Family Liniment.

(L. R. F.)—"The term "family" is an elastic one when applied to a liniment. However, under this title any number of formulas may be found. Here are three from *The Era Formulary*:

(1.)	
Oil of sassafras	6 fl. ounces
Oil of organum	1 fl. ounce
Oil of cedar	1 fl. ounce
Camphor	6 ounces
Alcohol	16 fl. ounces

(2.)	
Soap liniment	1 1/2 fl. ounce
Tincture of capsicum	1/2 fl. ounce
Spirit of ammonia	1/2 fl. ounce
Alcohol	1 1/2 fl. ounce

(3.)	
Camphor	4 ounces
Capsicum, in powder	1/2 ounce
Chloroform	6 fl. ounces
Oil of cajuput	2 fl. ounces
Oil of rosemary	3 fl. ounces
Oil of thyme	4 fl. ounces
Liniment of camphor enough to make	36 fl. ounces

For a "green" liniment, try the following formula from the *Pharmaceutical Journal Formulary*:

EMERALD OIL.	
Chlorophyll	30 grains
Menthol	40 grains
Oil of cassia	20 minims
Oil of eucalyptus	4 fl. drams
Oil of sassafras	3 fl. drams
Oil of sesame	20 fl. ounces
Oil of spearmint	10 minims
Oil of wintergreen	1 1/2 fl. ounces

Moxocolo Extract.

(H. L. S.)—"We cannot give the formula for the proprietary article. However, the following formula has been published for an extract containing bitter and "tonic" properties:

Tincture of avena sativa	3 1/2 fl. ounces
Tincture of cinchona comp.	2 fl. ounces
Angostura bitters	3 fl. ounces
Caramel	24 ounces
Tincture of nux vomica	1 ounce
Fluid extract of coca	1 ounce
Oil of wintergreen	1 dram
Oil of sassafras	1 dram
Mix.	

Mounting Pastes for Photographs.

(F. G. S.)—"The following are typical formulas:

(1.)	
Arrowroot	1/2 ounce
Gelatin	20 grains
Alcohol, methylated	2 fl. drams
Carbolic acid, liquefied 2 minims	
Water	3 3/4 fl. ounces

Mix the arrowroot into a cream with two fl. drams of the water; then soak the gelatin in the remainder of the water till softened, and boil together for five minutes. When cool add the alcohol and carbolic acid.

(2.)	
Gelatin	150 grains
Arrowroot	308 grains
Water	8 fl. ounces
Methylated spirit	2 1/2 fl. drams
Formalin (40 per cent. sol.)	20 minims

Soak the gelatin for a few hours in two fluid ounces of the water; then make a paste with the arrowroot and remaining 6 fl. ounces of boiling water; mix, heat gently till dissolved, and as it cools add the methylated spirit and the formalin solution.

(3.)	
Dextrin	1 ounce
Creosote	4 minims
Distilled water, boiling	1 fl. ounce
Mix.	

Laundry Bluing.

(Subscriber.)—"We do not know the exact process followed by the manufacturer in making the proprietary bluing in sheet paper form. However, we presume an article of this character might be easily made by impregnating suitable paper or paper pulp with a soluble dye, such as some good cotton blue (aniline blue, 6 B.) or indigo-carmine. The following solution has been suggested: Water, 15 parts; indigo-carmine, 1 1/2 parts; gum arabic, 3/4 part, or sufficient. The *Techno-Chemical Receipt Book* gives this formula for a concentrated liquid bluing which, presumably, might be made to answer a similar purpose: Bengal indigo, 2 parts; fuming sulphuric acid, 9 parts; gum arabic, 4 parts; water, 50 parts. Some experimenting is necessary to work out the details.

Alcohol and CO₂ in Fermentation.

Lindent and Marsuls (Compte rend.) have determined the quantities of alcohol and carbon dioxide produced at different stages during fermentation. Equal volumes of sterilized material were treated with equal quantities of the same yeast, the products of fermentation being collected. Tests made when fermentation had proceeded for periods of different lengths, showed that in the first stage the quantity of alcohol produced was distinctly greater than that of carbon dioxide, whereas later the quantities of the two products were practically identical. The temperature of the fermentation and the acidity of the juice had no appreciable effects upon the result. The preponderance of alcohol during the first stage is supposed to be due to the process of reproduction of the yeast, because the formation of new cells is practically confined to the first stage of fermentation.

NEWS SECTION

JOBBER EXPLAIN.

McKesson & Robbins Tell Why They Sold Loveland a Supply of Peruna.

THEY FIRST DECLINED TO SELL LOVELAND UNTIL THEY RECEIVED INSTRUCTIONS FROM THE PERUNA COMPANY AND ON RECEIPT OF THESE THEY FILLED THE ORDER, ACTING AS AGENTS ONLY FOR THE MANUFACTURERS.

For several weeks the gossips of the local drug trade have been busy on a story about McKesson & Robbins being in trouble with the Peruna Drug Manufacturing Co., over a sale of Peruna to one C. H. Loveland, of Binghamton, N. Y. It seems that Loveland was acting as agent for some western cutter or cutters, and when he received the shipping documents, he re-shipped the goods to some western point. The Peruna people, hearing of this, had the goods replevined at Hornellsville, and a lot of unpleasant notoriety to all parties concerned has resulted from the transaction.

Those who know of the standing of McKesson & Robbins were surprised at the transaction and believed that they had some good reasons for their part in filling this order. The following statement explains the matter from their standpoint. It seems that they first declined to sell Loveland and did not do so until the Peruna people rather took them to task for refusing to supply their goods to one whose name appeared in their February book. Here is their statement in full:

McKESSON & ROBBINS' STATEMENT.
New York, April 21, 1905.

"A misunderstanding has arisen between the Peruna Drug Manufacturing Company and ourselves, owing to a transaction we had with C. H. Loveland, of Binghamton, N. Y., the details of which are as follows:

"Mr. Loveland tried to place an order for Peruna with us, saying that he had signed the contract. We declined to accept it, stating that we would not do so until we received instruction from the Peruna Company. In the course of a few days, they sent us their book of authorized agents and the following letter:

THE PERUNA DRUG MFG. CO.,

Columbus, O., U.S.A., Feb. 18, 1905.

McKesson & Robbins, New York, N. Y.
Gentlemen:—Returning herewith signed contract from C. H. Loveland, Binghamton, N. Y., wish to advise you that his name appears in our February Book and we see no reason why you should notify him that he was not able to purchase our goods.

Awaiting your reply, we remain,

Yours very truly,

C.K. THE PERUNA DRUG MFG. CO.
per E. H.

"We accepted the order, demanding cash payment for it, simply acting as agents for the manufacturers in the transaction.

"In accordance with the regulations of the Peruna Company, we allowed freight charges, sending a bill for the amount to them on the day of shipment.

"It was upon receipt of our bill for the freight charges, that they, much to our surprise, after the letter we received from them, expressed their displeasure.

"We took all these precautions, notwithstanding the name (C. H. Loveland) was on their list of regular distributors.

"So far as our interest in the transaction is concerned, it ended when we obtained cash payment for the goods and shipped them, and our part in it as agents for the Peruna Company ended, when we sent them the freight bill and our check in payment, which were accepted by them.

"We think that the articles, appearing in the N. A. R. D. notes are, to say the least, unfair and unfriendly, as we have always desired to consult and further their interests.

"Respectfully submitted,

"McKESSON & ROBBINS."

A. PH. COUNCIL NOTES.

The president has appointed as members of the committee on U. S. Pharmacopoeia Messrs. A. E. Lyons, Charles E. Caspari, C. S. M. Hallberg, Geo. M. Beringer, E. L. Patch, E. G. Eberle, L. F. Kober, Thomas P. Cook, Reid Hunt and Smith E. Jelliffe. The committee will elect its own chairman.

President Beal has announced that the following schools and colleges have decided to offer as an annual prize to some meritorious member of the senior class a nomination to membership in the A. Ph. A. and the first year's fee of \$5: Ohio State University, by Prof. George B. Kauffman; Pittsburg College of Pharmacy, one each by Prof. J. A. Koch and Dr. J. H. Beal; University of Michigan, by Prof. J. O. Schlotterbeck; Scio College of Pharmacy, by Dr. J. H. Beal. President Beal has reason to believe that other colleges will make similar offers at an early date.

In accordance with a council resolution the president has appointed the following Committee on Publicity: H. M. Whelpley, W. R. Ogier, H. B. Mason, E. J. Kennedy, Henry Kraemer, C. A. Mayo, G. E. Gilhard, G. P. Engelhard, R. G. Eccles, Edward Kremers, Frank L. James, Francis B. Hayes (chairman). The committee has been instructed to suitably advertise the forthcoming meeting at Atlantic City and to report a plan for the organization and work of a permanent committee.

The secretary reports that favorable comment has been made upon the action of the Council in sending to the journals copies of its correspondence, twenty-one journals now being on the mailing list.

Seventy-two new members have been received since the Kansas City meeting last September. Of this number President Beal has presented forty-five.

CONTRACTS ON MAY 1.

Must All Go Into Effect Then, Says M. A. R. D. Executive Board.

OVER 1,600 SIGNATURES TO PERUNA CONTRACT ALREADY OBTAINED AND OVER 800 MEMBERS ENROLLED IN M. A. R. D.—NEW DISTRICTS ORGANIZING.—VIOLATIONS IN MURRAY HILL DISTRICT, BUT FINES ARE PAID.

All contracts on proprietary goods are to go into effect on May 1. This decision was reached by the Executive Board of the Metropolitan Association of Retail Druggists, last Friday, after reports had been submitted showing that Peruna led the number of contracts signed with over 1,600, and after attention had been called to the fact that proprietors were insisting that their contracts go into effect. The Executive Board also decided to call the next meeting of the M. A. R. D. for Wednesday evening, May 3, at the New York College of Pharmacy.

Over 800 members are now enrolled. Several districts have already met and organized, among them being the twenty-second and twenty-third, which were consolidated and organized into one district, owing to a scarcity of druggists in the territory. The district includes the west side north of One Hundred and Twenty-fifth street.

In the thirteenth district (Murray Hill), one of the first organized, about half the members were recently detected selling below schedule prices. Many of those who were caught laid the blame on their clerks, but no excuses were accepted. All the violators willingly paid the fine imposed, which for the first offense, by mutual agreement, amounts to the price at which the article in question is sold. Affairs in that district are now in good shape, and the quarterly election of officers is about to be held.

DR. JACOBI TO LECTURE.

Dr. Jacobi, the well-known specialist on tuberculosis, will lecture on that subject before the German Apothecaries' Society, on Thursday, May 4. Emil Roller, chairman of the Scientific Committee, who secured the services of Dr. Jacobi, announces that any pharmacists who understand German may secure invitations to the lecture by application to any of the members.

P. W. & R. INCORPORATE.

Articles of incorporation have been filed at Albany, N. Y., by the Powers, Weightman, Rosengarten Co., New York. The capital is given at \$1,000. H. B. Rosengarten, A. G. Rosengarten, of Philadelphia, and F. B. Perry, of New York, are named as directors.

ODD LITIGATION.

Peculiar Case Growing Out of the Sale of a Soda Fountain on the Instalment Plan.

Rochester, April 24.—Justice Foote last week decided in favor of the Fraley & Carey Company, in the odd litigation growing out of Frank C. Delmont's attempt to recover the purchase price of a second-hand soda fountain. The case was interesting in its latest phase of an injunction action in which Fraley & Carey, the department store people, named the Municipal Court and Judges Murphy and Hebard defendants with Delmont.

The action was put on trial on April 14. The story of the case is best told by an epitome of Justice Foote's finding of fact and conclusions of law. It appears that Delmont agreed with Fraley & Carey, in March, 1904, to sell them a soda fountain and set it up in the store "complete, in running order, ready for use and in first class condition." The agreed price was \$700, of which \$200 was to be paid upon installation of the fountain under the conditions contracted for and the balance at the rate of \$15 a month.

Delmont failed to fulfil his part of the contract, Justice Foote finds, in that the fountain was incomplete, unsanitary and unfit for use. Delmont sued Fraley & Carey in August, 1904, for the first payment of \$200 and the \$15 instalments for each of five months, with interest. Delmont received a judgment for \$298.55.

Fraley & Carey appealed to the County Court for a new trial, and that appeal is pending. Then Delmont sued again in the Municipal Court for \$15, the instalment due for December, but this action has not yet been decided.

Prior to the last action, Justice Foote finds Delmont "intended and threatened" to sue to recover each of the remaining twenty-nine instalments of \$15 apiece, planning to begin an action on the first day of each succeeding month. This would mean trial of several such actions before the appeal of Fraley & Carey could be heard and decided, and the store men would be without remedy against the judgments Delmont might get thus, should the County Court finally decide that they were not liable to him.

Refusal of the Supreme Court to take jurisdiction and dispose of the whole controversy would result in an unnecessary multiplicity of suits, says Justice Foote. He rules against Delmont's counsel, who fought the taking of the litigation to the Supreme Court in the action in equity decided yesterday.

Justice Foote's conclusions of law are, in brief, that Delmont did not fulfil his contract and is not entitled to recover any part of the price of the fountain; that Delmont be enjoined and restrained from bringing any further actions against Fraley & Carey, or prosecuting those pending undetermined; that the company's complaint be dismissed as against the Municipal Court and judges; that Fraley & Carey have judgment, with costs of this action, against the defendant, Delmont.

JERSEY TRAVELERS ORGANIZE.

Traveling men of New Jersey have recently organized under the name of the New Jersey Pharmaceutical Travelers' Association, with the following officers: President, W. P. Rich, of Parke, Davis & Co.; first vice-president, Henry Smith, of C. B. Smith & Co.; second vice-president and chairman executive committee, A. J. Stephens, of Johnson & Johnson; treasurer, C. W. Haviland, of Colgate & Co.; secretary, Harry Folsom, of Lazell, Dalley & Co. Already the members have gone to work to get members for the State Association.

A MYSTERIOUS PAIR.

Difficult to Reach Proprietors of Newport News Concern.

Considerable mystery attaches to a concern known as F. H. Carr & Co., of Newport News, Va., who purport to be "wholesale grocers and general commission merchants." They recently sent an order for a quantity of drugs to a large manufacturing house in this city, but before filling the order, the firm looked up the standing of F. H. Carr & Co. A lawyer in Newport News was consulted, who advised "extreme caution in dealing with this firm. They are a mysterious pair, doing a kind of business that nobody can get any information about—I have no claim against them, which was contracted under circumstances almost amounting to false pretences. One of the firm is said to be a man named Powell, who has rather a shady record."

Thinking that the "Powell" referred to might have some connection with the J. B. Powell who, according to a lawyer of Norfolk, Va., is the proprietor of the M. H. Love Co., in that city, The Era sent to Newport News for further information. Here is the result:

"The firm of F. H. Carr & Co. is a phantom, to all intents and purposes. From best information obtainable, a man by the name of Carr, from North Carolina and J. B. Powell are operating the machine. They have operated in Smithfield and also in Norfolk and Portsmouth. About five years ago this man Powell opened up here as J. B. Powell and sometimes as Powell Bros. & Co., and got together a considerable quantity of furniture. This he spirited away to Norfolk, where a good deal of it was located and Powell taken into custody." Our informant thinks he was taken into custody by the United States authorities for violating some of the mail regulations, which is what happened to Powell, of the Love Drug Co. The report continues:

"The house in which he has some goods stored here stays locked up nearly all the time and the neighbors say they see no one go in, except at rare intervals. The landlord has trouble with his rent. The stack he has on hand seems to be groceries."

The fact that Powell sometimes does business as "Powell Bros. & Co.," and that he deals in groceries, recalls once more the episode of last summer, when \$85,000 worth of groceries was shipped from Rochester to B. F. Powell, at 163 Greenwich street (address of the Crosher outfit). Neither the goods nor Powell were ever seen by those who owned the one and wanted to catch the other.

TRADING STAMP CO. FAILS.

Holders of Blue Stamps Rush New York Store to Get Premiums.

There was trouble in Twenty-third street last week when "blue trading stamps" went up in smoke—figuratively, of course. Many disappointed housewives, who had been buying things they did not need in order to save enough "books" to get a baby-carriage or a grand piano, tore each others' clothing in an endeavor to get premiums before the Benedict & Macfarlane Co. closed its doors for good. There was wailing and gnashing of teeth when the blow fell, and many were left premiumless. Here is the story:

A petition in bankruptcy was filed against the Benedict & Macfarlane Co., blue trading stamps, of No. 156 West Twenty-third street, and of Chicago, by the following creditors: New York Desk and Dining Room Furniture Co., \$187; Hermann Furniture and Plumbers' Cabinet Works, \$31, and Lanze & West, \$472. It is alleged that the company is insolvent and admitted in writing on April 19 its willingness to be adjudged bankrupt. Judge Holt of the United States District Court appointed Frederick A. Burlingame receiver with a bond of \$10,000. It is stated that if the redemption of goods by stamps is permitted to continue a large part of the goods will be disposed of in favor of the stampholders, to the exclusion of the merchandise creditors, many of whom furnished the goods comprising the stock.

The company was incorporated under the laws of this State on August 24, 1903, with a capital stock of \$1,000,000. Harry L. Benedict became president and Frances H. Macfarlane vice-president. The company established agencies in Baltimore, Boston, Syracuse, Chicago, St. Louis, Denver, Milwaukee, Brooklyn and other cities, and made contracts with some of the large department stores. One of its large contracts with a store in this city terminated recently, the news of which precipitated a run on the company's store at No. 156 West Twenty-third street. The liabilities are reported to be more than \$30,000. This is the second trading stamp company which has been petitioned into bankruptcy in this city.

P. A. OF A. READY TO MEET.

Prospects are bright for large attendance at the twenty-third annual meeting of the Proprietary Association of America, which begins its sessions at 10 a. m., on Tuesday morning, May 2, at Hotel Astor. Secretary Clarence G. Stone stated last week that numerous applications for reservation of rooms had been received, which would seem to indicate that the coming meeting will be one of the biggest and most important in the history of the association.

That the contract plan will receive full attention is shown by the fact that F. L. Seely, of the Paris Medicine Co., chairman of the Committee on Advertising, has made plates of everything in connection with the serial numbering plan in use by his company, and also photographs of all their advertising matter. These plates and photographs he will use in making his report to the association.

75TH COMMENCEMENT.

New York College of Pharmacy
Holds Annual Event To-night.

The seventy-fifth annual commencement of the New York College of Pharmacy, the second since its affiliation with Columbia University, takes place to-night at Carnegie Music Hall. Besides the usual addresses, awarding of degrees and prizes, etc., an excellent musical program will be rendered by the Seventh Regiment band, George L. Humphrey, bandmaster. Hon. William S. Bennett will address the graduating class, while Second Vice-President William Jay Schieffelin will preside.

W. H. Ebbitt will lead the post-graduate class when they enter at 8.30 o'clock. Prayer will be offered by Rev. A. Edwin Kelgwin. The prizes to be awarded are the alumni prizes, trustees' special prizes and the faculty's post-graduate prize. The Graduates in Pharmacy number 104 and the Doctors of Pharmacy 13. Following is the complete list:

Graduates in Pharmacy: William H. Abelling, Joseph Abramson, John G. Ahrens, James E. Aiguier, Miguel Alvarez y Figueroa, Charles L. Anderson, Peter C. Anselmo, George T. Bagoë, Henry E. Balcom, Henry Balson, C. Willington Baxter, Alfred J. Beck, Arthur S. Bigelow, Joseph A. Bracco, John G. Brennan, P. Altou Brewer, George M. Broemmel, Edward H. Burt, William A. Cleaver, Joseph Cohen, James G. Coles, Joseph A. Collins, Joseph A. Conti, Claude N. Cornell, John H. Crowe, Burt L. Daniels, James L. Dean, Daniel S. B. Dwyer, Charles G. Eaton, Clarence H. Eggleston, Charles H. Ellis, Jr., William Gale, Jr., Mannel D. Galvan, Morris Ghersin, Paul Goldberg, Lillian Goldblatt, Oscar Goldlust, Samuel A. Goldstein, James Gregg, James A. Hammond, Willard J. Hull, George J. Hurwitt, John A. Jannelle, Walter O. Jøbe, Frederick E. Jørgensen, Moerel C. Kaba, Martin Kaplar, Augustus L. Kinzel, Laser Klepper, Samuel Kraum, Otto Krause, Samuel Kutscher, Samuel Landan, Andrew Lang, Benjamin N. Levy, William T. Lins, Jr., Matthew A. Liotta, Maurice S. Lowenstein, Frank A. J. Luisi, Hugo A. Luthin, Stephen A. Maguire, William F. Maguire, Louis Marcalescu, Martin I. Marshak, Benjamin Maure, Frederick Messerschmidt, Jr., John A. Monohan, Paul E. Nielson, William G. Norton, George H. Opper, Morris Perla, Charles A. Petraglia, Carl W. Poetz, Lloyd W. Record, Alfred B. Robertello, Guy C. Rocheleau, Isidore Rosenblum, Joseph H. Ruffolo, John M. Schapiro, Louis Scher, Abraham J. Seld, Samweela Shibley, Nathan Siegel, Henry W. Sievert, William F. Silver, William W. Sitterley, William J. Slattery, Alphonso P. Spero, Simon P. Steckler, Ernest T. Taborelli, John E. Thomas, L. Townsead Tussaint, Henry E. Urstadt, John J. A. Voelker, Edward Vogler, Francis S. Vorel, Thomas A. Weaver, Hasson O. Von Wedell, Samuel Weiss, Rose J. Wilkes, John M. Williams, Andrew L. Wilson, John W. Wurthmann, Joseph Zrubek, Jr.

Doctors in Pharmacy: Joseph F. Armstrong, Alfred I. Cohn, John B. Heuser, Harry H. Holton, George W. Koch, William Mansfield, Frederick A. Leslie, Oakley A. Morbous, Eli Rosenberg, Edward F. Schuchmann, Hugo Tauszig, Dudley B. Turner, Jacob R. Zimmermann.

The senior roll of honor is as follows: George T. Bagoë, Henry E. Balcom, Burt L. Daniels, Samuel Kutscher, Martin I. Marshak, Carl W. Poetz, Nathan Siegel, Simon P. Steckler, Ernest T. Taborelli, John E. Thomas, Hasson von Wedell, Francis S. Vorel, John Worthmann.

The class officers are: President, Willard J. Hull; vice-president, Charles G. Eaton; secretary, John E. Thomas; treasurer, Clarence H. Eggleston; valedictorian, George M. Broemmel; class reporter, P. Altou Brewer; class historian, William G. Norton.

MR. KIRKLAND WEDS.

On Tuesday, April 25, at four in the afternoon, Mr. Howard McKesson Kirkland and Miss Elizabeth B. Swift, of 711 Park avenue, were married, at the Madison Ave.

HOWARD MCKESSON KIRKLAND.

ue Reformed Church, Fifty-seventh street and Madison avenue, New York, by the Rev. Dr. Kittridge, the step-father of the bride.

This event is of special interest to the drug trade, as Mr. Kirkland is superintendent of McKesson & Robbins. Moreover, his father, the late Mr. John L. Kirkland was actively associated in the management of the same house, besides being an officer and general manager of the New York Quinine and Chemical Works. It will be remembered that this gentleman died rather suddenly, in 1892, after attending the annual meeting of the N. W. D. A., at Montreal. He was one of the most popular men connected with the drug trade, and his memory is still affectionately cherished.

The mother of Mr. Howard McKesson Kirkland was a Miss McKesson, daughter of the late Mr. John McKesson, Sr. Thus, Mr. Kirkland by right comes to his present active position in one of the largest wholesale drug houses of the country, a position which he entered upon the death of his father. Mr. Kirkland is a graduate of St. Paul's School, Garden City, L. I.

Mr. and Mrs. Kirkland will spend the next three months or so abroad.

DR. DIEKMAN A CANDIDATE.

Will Probably be Endorsed for Re-Election by the G. A. S.

With the annual Board of Pharmacy election now only two months away, it seems practically certain that Dr. George C. Diekman, whose term expires January 1, 1906, will be a candidate for re-election. It is not at all unlikely, according to present indications, that the committee of the German Apothecaries' Society will report next Thursday in favor of endorsing him as the society's candidate. Dr. Diekman is entitled to claim legal residence in Manhattan, which he must have in order to be elected as a member from Manhattan.

One of the strongest arguments advanced in Dr. Diekman's favor is that many details in the working out of the prerequisite law, which have not yet been adjusted, have been left entirely in his hands. Hence for Dr. Diekman to leave the Board before the work is accomplished would cause much confusion and possible delay.

Up to the present no candidate has appeared in opposition to Dr. Diekman. Men prominent in the New York Retail Druggists' Association declare that should the professor decide to run, he will probably get the endorsement of their association. S. V. B. Swann, who was mentioned as a possible candidate, has stated positively that he will not run, preferring to see Dr. Diekman unanimously endorsed by all the associations.

DRUGGIST ASSEMBLYMAN
DEAD.

Rochester, N. Y., April 24.—Hon. Thomas B. Tuttle, former Assemblyman and until two years ago actively engaged in the drug business in LeRoy, died at the Buffalo State hospital on April 20, from the effects of a stroke of apoplexy which he suffered last fall. The remains were brought to his home in LeRoy.

Mr. Tuttle was born in Yates County, September 30, 1844, and at the age of two years he removed with his parents to Michigan. There he received his early education, afterwards taking a two years' course at the Hillsdale College. At the age of 21 years Mr. Tuttle went to Dubuque, Ia., where he was actively engaged in the drug business until 1871, when he sold out on account of ill health and came East. In 1872 he went to LeRoy and bought the store which he conducted most successfully until two years ago, when he sold out to Smith & Given and retired from active life. In 1884 Mr. Tuttle was a delegate to the Chicago convention and in 1892 he was elected as Assemblyman of Genesee County, serving two terms. Mr. Tuttle is survived by his widow and one son.

—D. W. Ramsaur, secretary, announces that the Florida Pharmaceutical Association will hold its annual meeting at Tampa Bay Hotel, Tampa, June 15 and 16. Mr. Ramsaur says that an elaborate program of entertainment has been outlined by the local committee of Tampa druggists and a pleasant and profitable meeting is anticipated.

WORKING GUM MACHINES.

Syracuse, N. Y., April 18.—George E. Thorpe, president of the S. D. A., and proprietor of the Yates Pharmacy, opened a gum machine which stood in front of his store, the other day, and found seventy-five iron slugs and fifty pennies, the machine being empty of gum. Mr. Thorpe telephoned over to the police department. He was not the first to report to the department, however, for of late a large number of druggists and cigar dealers had complained that some person in the city was manufacturing iron slugs and either selling them or giving them away, to be put into the machines. The police are looking after the guilty man, with small chance of finding him.

JUNIOR ROLL OF HONOR.

At the annual Junior Class Day exercises at the New York College of Pharmacy, last night, Dr. George C. Dickman read the following roll of honor, the first three men being prize-winners:

Wm. P. Maher, 91.9 per cent.; Charles Adler, 89.6; Nicholas Baker, 89.5; A. C. Brown, H. W. Kaiser, Hugo Elvyn, I. Goulko, O. H. Steckman, Ralph Seaman, W. C. Overton, G. W. Krause, C. E. Phelps, Chas. Kreplec.

INSPECTOR BURNS IS DEAD.

William Burns, one of the most efficient inspectors in the employ of the State Board of Pharmacy, Eastern Branch, died last week after a short illness in St. Mary's Hospital, where he was taken after his case had been diagnosed as acute Bright's disease. Later it was said that he died of spinal meningitis.

Burns had been inspector for the board since the secretaryship of Sidney Faber, from whom he received his appointment. He was formerly a policeman, for which duty he was peculiarly fitted by his sturdy physique and iron constitution. He was a deputy clerk of Kings County under William Wuest when the latter was county clerk.

NEW YORK NOTES.

—The graduating exercises of the Margaret Fahnestock Training School for Nurses took place Tuesday evening at the Training School building, 304 East 20th street. Twenty young women were graduated as full-fledged nurses.

—William A. Hamann, secretary of the Roessler & Hasslacher Chemical Co., has been away from his desk for the past four weeks owing to a severe attack of rheumatism.

—J. L. Buell, Parke, Davis & Co.'s representative in Massachusetts, spent a couple of days in town this week.

—Only routine matters were discussed at the regular monthly meeting of the Drug Trade Section of the Board of Trade and Transportation last Thursday. The recent reception to Henry S. Welcome, of London, was referred to and pending measures affecting drug trade legislation in the legislature at Albany were discussed.

—W. B. Bunker, of Utica, a member of the Executive Committee of the State Ph. A., has sold his store at Genesee and Devereux streets to H. E. Barnes.

—Seventy-one new members have just been added to the New York C. P. Alumni Association. One is a life member.

SABBATH OBSERVANCE.**Society Threatens Pittsburg Druggists With Vigorous Crusade.**

Pittsburg, Pa., April 24.—The coming summer will be an exceptionally "hot" one for retail druggists hereabouts, if the plans of the Sabbath Observance Society materialize. Efforts to have the ancient "blue laws" repealed by the recent legislature went to naught, and the attempt to have the penalty for violations reduced were similarly ineffective. Encouraged by what they term an endorsement of their radical policy the leaders of the Sabbath Observance Society threaten to conduct a more vigorous crusade against Sunday selling than ever before. The crusade is to be inaugurated the first Sunday in May and to be continued in strenuous and determined fashion until, well, until the winter stops the sale of the "harmful" beverage—soda water.

It is the sale of the latter on Holy Day that appears to bother the reformers mostly, and they persistently declare they will obliterate any wrong-doing on the Sabbath. The superintendent of police says he will take a liberal view of the laws and will not prosecute those who sell soda water on Sunday.

There is hardly a shadow of doubt but what the public is opposed to crusades of this sort during the summer, but the reformers are ignoring the public entirely in the matter. One of the most striking features of the whole matter is that the prosecutor is entitled to half the fine; perhaps this is an inducement to some of the reformers. What action the Western Pennsylvania R. D. A. will take in connection with the crusade against its members has not yet been definitely decided, but it is ascertained from an authentic source that the druggists will be defended against any of these spasmodic attacks.

DRUGGISTS ELECT OFFICERS.

Allentown, Pa., April 21.—The quarterly meeting of the Lehigh Valley Retail Druggists' Association was held at the Arlington Hotel at Slatington. A banquet was served, which was enjoyed by thirty members. At the business meeting officers were elected, after a warm contest, as follows: C. L. Freeman, president; James L. Hoffman, first vice-president; C. W. Horn, second vice-president; F. P. Semmel, Jr., third vice-president; C. B. Shoemaker, secretary; H. E. Peters, treasurer.

A lengthy discussion was held upon means for bettering the pharmaceutical profession. President Freeman made a speech, and extemporaneous talks were given by the other officers. W. F. Biery, of Weissport, was master of ceremonies.

BOARD EXAMINES LARGE CLASS.

San Francisco, April 13.—The largest number of applicants ever appearing before the California Board of Pharmacy—nearly 100—are to-day undergoing examination for registration in this State. Both colleges of pharmacy are well represented, and as their terms are nearly completed the boys are anxious to get through with the Board so as to be relieved of their worries after graduation.

CAMDEN PRICE LIST PROBLEM.

Camden, N. J., April 24.—The price-schedule, the stumbling block that wrecked the former retail druggists' association of this city, was the principal topic of discussion at the meeting on Friday evening of the reorganized Camden County A. R. D. In order that there may be as few difficulties as possible, the association has taken up the hardest problem first. The Committee on Legislation, of which G. M. Beringer is chairman, reported that an amicable agreement had been reached with several patent medicine manufacturers and jobbers, and that the fact that 80 per cent. of the pharmacists in the city were already enrolled in the association had led the committee to believe that the problem of the price-list would not assume the proportions that it had previously done. A price-list presented was not finally adopted, but will be considered at a special meeting to be held next week, when it is expected that there will be a large attendance. Refreshments will be served, and the meeting will be regarded as a jollification upon the reorganization of the pharmacists of Camden County.

The office of treasurer was filled by the election of Henry Curtis. Applications for membership were received from the Mahaffey Pharmacy of this city and from the Beek Pharmacy of Gloucester. They will be acted upon at the May meeting.

PHILADELPHIA NOTES.

—Howard Spangler, the young man who, with a party of friends in a launch, was run down by a schooner opposite Fort Mifflin on Tuesday evening, had been taking a course in chemistry with his uncle, Ellsworth Spangler, of the firm of Shoemaker & Busch, wholesale druggists. Spangler was 19 years of age and was the son of Thomas Spangler, of Lebanon, Pa.

—On Saturday evening smoke was discovered issuing from the cellar of the drug store of the P. N. Pinchback estate at 3401 Walnut street. Manager Rufus P. Smith and clerks soon had the fire under control. The loss was less than \$100.

—Many members of the drug trade attended the State convention of the Travelers' Protective Association held here last week. One of the most important matters discussed was that of mileage, and it was announced that a campaign was about to be instituted to secure legislation establishing a two-cent flat fare. Officers were elected as follows: President, Robert H. Hienniss; first vice-president, Charles E. Lukens; second vice-president, W. F. Lebzelter; secretary and treasurer, Alexander McQuilken. Board of Directors: H. B. Otter, Penrose Jones, Herbert Russ, Frederick H. MacIntire, H. O. Vall, William C. Hunter, E. M. Bloomberg, M. D. Johnston and E. J. Walker. The annual convention of the traveling men will be held at Savannah, Ga., on May 15.

A druggist who opened a new store in a district already well supplied with pharmacies, soon obtained the bulk of the trade. The population was largely German. He therefore made a feature of best chamomile, at very low prices, and so attracted custom on all lines. Chamomile tea is "first aid to the injured" in every German family.

BOSTON A. R. D. MEETS.

Boston, April 22.—Price conditions were discussed at some length at the meeting of the Boston A. R. D. last week. The schedule put in force March 23, President Canning reported for the Schedule Committee, was the best obtainable under present conditions, although in several respects it was unsatisfactory. Chairman Ernst, of the Executive Committee, urged the settlement of differences, as far as possible, by the local auxiliaries. Representatives of the Peruna Co. and Wells & Richardson Co. were present and gave information in regard to the progress of their plans.

It was unanimously decided that the next N. A. R. D. convention ought to be held in Boston. In order to investigate this subject a committee of five was appointed, to report at the next meeting.

BAY STATE ITEMS.

—The new drug firm of Webber & Walsh have opened the old store of Clinton Sprout in Taunton. The store has been completely renovated and refitted.

—Fire, originating in the rooms of the Franklin Holmes Medicine Co., on the third floor of the building 410-414 Atlantic avenue, Boston, caused damage aggregating \$2,500, several other firms also being sufferers.

FROM TRENTON, N. J.

—The Mercer Co. Retail Druggists' Association, which held its annual meeting on April 11, reports that it is in a prosperous condition, and that it has advanced the price schedule in Trenton during the past year. Most twenty-five cent articles are now sold at twenty-five cents and fifty cent articles at forty-five cents, \$1 preparations bringing eighty-three cents. Two former cut-rate druggists are now selling at these prices. At the annual meeting, the following officers were elected for the ensuing year: President, Charles H. Young; secretary, George F. Fitzgore; treasurer, David E. Stretch; executive committee, W. Scott Taylor, James L. Mathis, Albert L. Holcomb, David E. Stretch.

—Gilbert D. Laird, of South Clinton avenue, has recently put in a handsome soda water apparatus and made other needed improvements.

DRUG CLERKS ORGANIZE.

Fl. Wayne, Ind., April 17.—The retail drug clerks have formed a permanent organization here. The membership includes all the licensed drug clerks in the city. The officers are: President, Charles W. Friedman; vice-presidents, August Harber, W. F. Benninghoff; secretary, G. F. Miller; financial secretary, G. W. LaMaster; treasurer, W. F. Benz; trustees, W. F. Schele, E. Miller, W. F. Epple; delegates to the Federation, W. F. Benninghoff, A. Harber, G. W. LaMaster, G. F. Miller, C. W. Friedman.

—Fred H. Holmes, of Marine City, Mich., has just finished enlarging his drug store, made necessary by increase of business. He now has one of the most complete and metropolitan drug stores in that part of the State.

PROMINENT DRUGGIST DEAD.

Baltimore, April 22.—Arthur H. Nattans, one of the most aggressive and resourceful cutters in Baltimore, died here last Sunday, at his residence, 2432 Eutaw Place, after an illness which had extended over some weeks. In fact, his health had not been good for several years. Mr. Nattans was born in Germany sixty-two years ago, and came to this country at an early age. He first went to Washington, and there for twenty years he was engaged in the drug business. Eight years ago he transferred his activities to this city, purchasing the establishment of the Read Drug and Chemical Company, on the southeast corner of Lexington and Howard streets, in what is now one of Baltimore's busiest retail sections. He was twice married, and is survived by his second wife with eight children. It is thought that the sons will undertake the management of the store. The will of the deceased, which was admitted to probate in the Orphans' Court, last Wednesday, indicates personal property to the value of \$150,000, the bonds filed by the trustees and executors being for \$300,000. Mrs. Nattans is to have the Eutaw Place house with its contents and \$10,000 absolutely. At her death or remarriage the property shall revert to the estate. All the stock in the Read and Chemical Company is bequeathed in trust to Samuel L. Bachrach, a son-in-law, W. Burns Trundle and Mrs. Nattans, the trust to continue until the death of all the children.

At the death of all the children of the testator the trust property is to be divided among their descendants. Two codicils vary some of these provisions, but none of the changes are important.

In this connection it will interest the drug trade to know that Miss Koch, who is one of the beneficiaries of the will, is reported to be engaged to George H. Stuart, a retail druggist at the northeast corner of Carrollton avenue and Fayette street, and is therefore not likely to remain long a beneficiary to the extent of the net income of six shares. She has held a position of much responsibility in the establishment and is regarded as an excellent business woman. It is said that she will shortly resign. Mr. Stuart is a widower, his first wife having died about one year ago. That he again contemplates matrimony will cause considerable surprise among his friends.

MARYLAND COLLEGE OF PHARMACY.

Baltimore, April 22.—The commencement of the Maryland College of Pharmacy is drawing near, and May 13 has been decided on as the date. The event will be a joint affair with the medical school and will take place at the Lyceum Theatre. Rev. Harry T. Kirk, pastor of Franklin Street Presbyterian Church, will deliver the oration, and Provost Bernard Carter will present the diplomas. The committee of the Maryland College of Pharmacy Alumni Association met this week and also decided on the date for the annual banquet, which will take place the evening before the commencement, probably at the Mount Holly Inn. The committee is composed of David R. Millard, W. J. Westcott and John A. Davis. The dinner is to be of an especially elaborate character.

THIRTY-NINE APPLICANTS.

Baltimore, April 22.—At the last meeting of the Maryland Board of Pharmacy, thirty-nine candidates presented themselves for registration as competent pharmacists and as assistants. The Board took the papers and has been at work on them since. The result will be announced at the next session of the commissioners, on May 1. It is thought that a good showing will be made, most of the candidates for registration having shown up well in the answers to the questions put.

BALTIMORE NOTES.

—The Wedgewood Club will give its monthly dinner on the 27th inst., at the Mount Holly Inn. By way of a diversion in the arrangements, a bowling contest will take place in the alleys there.

—Miles E. Mixson, formerly the representative here for Mulford & Co., and now proprietor of the retail drug store at 1800 East Baltimore street, is reported to be very ill with acute gastritis.

—The retail drug firm of Morrison & Turlington, Linden avenue and Dolphin street, will be dissolved in May, by the retirement of Mr. Turlington. His place as the junior partner will be taken by G. W. Eifer, who has been for several years clerking in the pharmacy of Hynson, Westcott & Co.

—George T. Light, of Charlestown, W. Va., was here last week, in connection with his drug business. His principal mission, however, was to buy several horses, of which he is passionately fond. He is said to have bought a fine pair at a cost of \$1,200.

—Clarence Leadbeater, of Leadbeater & Son, wholesale druggists at Alexandria, Va., stopped in Baltimore, last week, on the way to Europe. It is his intention to make an extensive tour of Italy.

—Though Dr. Charles B. Henkel, of Annapolis, was not successful in having the Maryland Board of Pharmacy, of which he was president, enjoined from registering two proprietors of a drug store at Annapolis without an examination, and failed of reappointment at the expiration of his term, he appears to be making his influence felt in Republican politics in his town, where he has just secured the nomination as Republican candidate for mayor, over several rivals, after a most determined fight.

NEW FIRM IN NEW HAVEN.

New Haven, Pa., April 22.—George A. Markle has sold the stock and fixtures of his Central Drug Store to his son, Howard O. Markle, who has formed a partnership with Fred H. Harmening & Harmering, O., under the name of Markle & Harmering. The new firm has also bought the store of I. M. Hodgkins, in New Haven, which they will remodel. Both young men are graduates of the Philadelphia C. P.

—Since March 1 the druggists of Marine City, Mich., have opened their stores on Sunday only during the hours 8.30 to 12.30 a. m., and 5 to 7 p. m. This has been found to be a great improvement on the "open all day" Sunday, formerly in vogue.

CRUSADE AGAINST COCAINE.
