Hyacinths

for Forcing and Gardens

Hyacinths like other spring flowering bulbs are very easily grown. In the garden plant about 4 inches deep. A good general rule is to cover the bulb to a depth of about twice its height. Plant in well-drained soil. Soil may be enriched with bonemeal. It is advisable to avoid manures. Plant 6 inches or more apart. For indoor use Hyacinths may be potted during autumn. Plunge pots outside in the ground and cover with a coarse mulch. Leave so until a good root system has been established, generally in about 10 weeks. Keep in a somewhat cool location after taking the pots inside.

EXHIBITION HYACINTHS

Years of exacting culture were required to produce these large Hyacinths known as first size—18 to 19 centimeters. Generally these are grown in pots for use in the home, but may also be grown in the garden; however, since the spikes produced are very large, they would require support.

BISMARCK. Sky blue, broad spikes.

CITY OF HAARLEM. Pure yellow, large, excellent for show.

KING OF THE BLUES. Dark blue with purple richness. Spicy.

L'INNOCENCE. Best pure white, good forcer and bedder.

LA VICTOIRE. Glistening deep carmine-red. Good forcer.

LADY DERBY. Bright rose-pink, large, fine spikes.

PERLE BRILLIANT. Pale blue, large bells.

PINK PEARL. Deep rose with lighter edge.

QUEEN OF THE PINKS. Rose-red, good for late forcing.

Each 35c; 3 for 70c; 6 for \$1.25;

12 for \$2.30; 25 for \$4.20;

100 for \$15.00.

BEDDING HYACINTHS

The same varieties as offered above except in size—15 to 16 centimeters. These are ideal for bedding, but may be grown in pots as well. This size bulb produces a smaller spike which stands up better in the garden.

Each 25c; 3 for 50c; 6 for 85c;
12 for \$1.50; 25 for \$2.75; 100 for \$9.75.

FRENCH ROMAN HYACINTHS

Little Hyacinths much admired and used for early forcing. Numerous spikes bearing scattered, fragrant bells make them unusually attractive and useful for pots, bouquets, and vases. The white variety seems to be less hardy and most desirable for indoor culture. The blue ones multiply freely and frequently are kept for generations in old gardens. Easily forced in bulb fiber. (Page 9.) These are of the finest French-grown stock.

WHITE. Each 30c; 3 for 60c; 6 for \$1.10;
12 for \$1.95; 25 for \$3.55; 100 for \$12.75.

BLUE. Each 25c; 3 for 50c; 6 for 85c; 12 for \$1.50; 25 for \$2.70; 100 for \$9.60.

PINK. Each 30c; 3 for 60c; 6 for \$1.05; 12 for \$1.90; 25 for \$3.45; 100 for \$12.30.

HOW TO GROW HYACINTHS IN PURE WATER

Unpack the bulbs immediately upon arrival. Open the bags and place in a cool, dry, dark place until December 1st. The preferred storage temperature is 50 degrees F. Before placing the bulbs on the well known Hyacinth glasses the root base must be cleaned, so that all remains of the old rootplate and old roots are removed. When glasses and bulbs are clean, set the latter and fill glasses with clean, cool water until the root base is touched. Glasses are then placed in a cool, dark closet or cellar until the top-growth is nearly 4 inches above the bulb. Preferred temperature not over 50 degrees F.

When 4 inches top-growth has been made, the glasses may be taken to a window in a warm room and if necessary some water can be added; never change the water completely. If the air in the room is very dry, it may help to moisten the flower buds once a day with a wad of cotton dipped in cool water.

French grown Roman Hyacinths may be handled in the same way, but instead of December 1st, one can start October 15th.

Most gratifying and interesting results can be obtained by following these simple rules.
Vases—80c each.

Wyatt's NARCISSI or DAFFODILS

It would be difficult to make a better investment in any flowering bulbs than in Narcissi, or Daffodils, as they are frequently known. Their season begins extremely early and lasts until quite late. As cut flowers they have few equals. Culture is the easiest possible. Plant in any good garden soil covering to a depth of about one and one-half to twice the height of the bulb measuring from base to shoulder. Early planting is advisable however, many fine flowers are produced from plantings made after the first of February. Narcissi multiply quite freely and should be taken up during summer or early fall about every 3 or 4 years and replanted.

No garden is too small for a few Daffodils.

BOTANICAL TULIPS

"The Early Flowering Tulips"

Tulip species vary greatly in many respects, especially as to height, foliage and size and shape of the flowers—from the tiny graceful

flowers of Clusiana to those of the huge bold Red Emperor. Most species are early-flowering and are especially interesting subjects for rock gardens.

CLUSIANA. "The Lady Tulip." An interesting little Tulip, outer petals cherry-red, inner petals white, violet-colored center. About 8 to 10 inches in height. Plant 6 inches deep. Easily forced in bowls of bulb fibre. **3 for 40c; 6 for 70c; 12 for \$1.25; 25 for \$2.25; 100 for \$7.95.**

EICHLERI. Large crimson-scarlet flowers with a slight buff shading on the outside of the petals. A black base edged yellow greatly enhances interest in this fine species. Height about 1 foot. **3 for 30c; 6 for 50c; 12 for 90c; 25 for \$1.60; 100 for \$5.70.**

FUSILIER. (Praestans Fusilier.) Three to five orange-scarlet flowers per stem. Height about 1 foot. Rather unusual. **3 for 40c; 6 for 75c; 12 for \$1.35; 25 for \$2.45; 100 for \$8.85.**

KAUFMANNIANA. "The Waterlily Tulip." Creamy yellow outside shaded soft red, yellow inside. Flowers open flat to huge size in sunlight. Height about 6 inches. A Central Asia species. **3 for 45c; 6 for 80c; 12 for \$1.45; 25 for \$2.65; 100 for \$9.45.**

RED EMPEROR. (Mme. Lefebvre.) Often offered as the largest Tulip in the world. Enormously long petals of striking orange-red on a black base. Very early flowering. **3 for 40c; 6 for 70c; 12 for \$1.30; 25 for \$2.40; 100 for \$8.70.**

BULBS for INDOOR CULTURE

PAPER-WHITE NARCISSUS

Fine trusses of fragrant white flowers. The most generally planted of all Narcissi for use in the home. Occasionally they flower out-of-doors in good condition, but generally unfavorable weather spoils the blooms. Less hardy than most Narcissi. They will, however, commence flowering again in a year or so if planted out after flowering indoors. Our bulbs are of the finest French grown stock. **3 for 45c; 6 for 80c; 12 for \$1.45; 25 for \$2.65; 100 for \$9.40.**

SOLEIL D'OR. "The Yellow Paper-White." Perianth yellow, cup orange. Easily grown. **3 for 40c; 6 for 75c; 12 for \$1.35; 25 for \$2.50; 100 for \$9.00.**

CHINESE SACRED LILIES. (Narcissus.) Fewer but larger flowers than Paper-White. Fragrant. White or pale yellow petals with a deeper colored cup. **3 for 40c; 6 for 75c; 12 for \$1.35; 25 for \$2.50; 100 for \$9.00.**

CRAGFORD. An exceptionally fine addition to the group of forcing varieties. Four to six flowers per stem. Perianth creamy white with a dark orange eye. Wonderful for bowls and Hyacinth vases. May be flowered before Christmas. Eventually a strong competitor for Paper-White. **Each 75c; 3 for \$1.50; 6 for \$2.70; 12 for \$4.95; 25 for \$9.00.**

FEBRUARY GOLD. An early flowering small golden Daffodil. Start a few bulbs in pebbles and water in November, keep bowls or pans in a dark, cool place for 3 weeks and then bring into light. Or plant from 3 to 6 bulbs in a pot in October and keep pot in a cool, dark place, watering as needed. They will easily bloom by Christmas. Fine for growing in the garden, too. **Each 40c; 3 for 85c; 6 for \$1.50; 12 for \$2.75; 25 for \$5.00; 100 for \$17.85.**

BULBS NEED FOOD *THIS FALL*

Fall root development is important to successful bulb gardening. This root growth puts the plants in position to develop quickly when spring conditions are right for growth. Feeding all of your bulb plantings in fall with Vigoro helps them make this necessary root development.

The bulbs should also be fed in spring just as growth appears above the ground and once again after blooming.

This recommended feeding program will assure a full return of beauty from your investment in bulbs. The flowers will be prettier and longer lasting. You will get more full-sized bulbs for continued enjoyment the following year.

It is easy to get these added benefits from your bulb plantings. Merely mix Vigoro with the soil in the bottom of the planting trench at the rate of two pounds per 50 feet of trench. Before planting the bulbs, cover the mixture in the trench with $\frac{1}{2}$ inch of sand or soil. If you wish to plant in beds, apply Vigoro at the rate of four pounds per 100 square feet and work well into the soil before planting bulbs.
