This is the second amendment President Johnson has requested. Thus far, the Congress has shown little interest in his first proposal, which had to do with making the electoral college even more anonymous than it already is. Members of the House of Representatives, who regard themselves as second-class citizens, are certain to pursue his 4-year plan with vast enthusiasm. Senators, we may surmise, will restrain their joy.

The Senate historically has been cool to the idea of 4-year terms in the other body, for obvious political reasons. Such an arrangement would make it possible for politically ambitious Representatives to hold onto their House seats while running for the Senate. Senators BAYH and ERVIN, to mention only a couple of well-known figures, come up for election in 1968; God and the voters willing, they would come up again in 1974. But if the Johnson amendment had been ratified, Members of the House from Indiana and North Carolina, without the slightest risk to their own 4-year seats, could then make a fearful nuisance of themselves.

"Nothing is so hateful to the politician," Virginia's Bill Tuck once remarked, "as the

si-

cel

ır-

he

awful prospect of opposition." The maxim will not be lost on Messrs. Bays and Envire, who wield formidable influence on the Senate Judiciary Committee.

Political considerations to one side, does the 4-year plan have merit? Conservatives

will answer, not much.

Johnson made the familiar case for his proposal. "The present 2-year term requires most Members of Congress to divert enormous energies to an almost constant process of campaigning—depriving the Nation of the fullest measure of their skill and wisdom. Today, too, the work of government is far more complex than in our early years, requiring more time to learn and master the technical tasks of legislation. And a longer term will serve to attract more men of the highest quality to political life."

The Founding Fathers considered most of these same arguments long ago. The subject arose at the Philadelphia Convention on June 12, 1787. Roger Sherman of Connecticut wanted to limit Members of the House to 1-year terms. John Rutledge of South Carolina urged 2-year terms. James Madison of Virginia held out for 3-year terms; he thought this would "give the Government stability and induce gentlemen of the first weight to engage in it." But Elbridge Gerry of Massachusetts was afraid that 3-year terms would "alarm the people, as savoring of despotiam."

Temporarily, Madison's 3-year proposal was adopted. On June 21, however, the word "three" was expunged on the motion of Virginia's Governor Randolph, and the word "two" substituted. Sherman was still urging annual elections, lest Members of the House stay away so long they forgot their constituents. Alexander Hamilton preferred the 3-year plan, largely because of an argument advanced by Johnson. He felt that 3-year terms would encourage superior men to run for seats in the House.

In the end, of course, the 2-year term was agreed to. The following February of 1788, when they published Federalist 52 and 53, Madison and Hamilton defended the arrangement. They weren't as enthusiastic about short terms as Thomas Jefferson, who all his life clung to the view that "short elections will keep Congress right." But if they couldn't get terms of 3 years, they were ready to settle for 2: they never asked 4.

to settle for 2; they never asked 4.

The old principles still apply, despite
Johnson's valid point on the increasing complexity of legislation.

But nothing will come of all this until two-thirds of the Senators and three-fourths of the States agree to a change. Don't hold your breath.

#### An Action Program for Full Employment

EXTENSION OF REMARKS

# HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. SCHEUER. Mr. Speaker, I would like to call attention of the House to a report made by the Full Employment Steering Committee of the Democratic Study Group. This committee, composed of a group of freshmen Members of Congress, with myself as chairman and Mr. Reuss as adviser, includes Mr. Conyens, Mr. William Ford, Mr. Gilligan, Mr. Hathaway, Mr. Hicks, Mr. Indus, Mr. Jacobs, Mr. Kerbs, and Mr. Schisler. While all these members concur with the basic approach of the re-

port, not all of them agree with every one of the specific observations or proposals it contains, other than the employment program, in which they all concur.

The committee proposes the establishment of a program which would eventually provide perhaps 1 million "hard core" unemployed with basic education, training, and publicly financed employment in subprofessional jobs. jobs would be in the nature of aids to doctors, nurses, laboratory personnel, and orderlies in hospitals, as assistants to home nurses and physical and occupational therapists, as helpers in librarand assistants to teachers and administrative staff in schools, as museum aids and playground and recreation assistants, and as assistants probation officers and those fighting crime and delinquency.

Further subprofessional aids could be employed to improve the beauty of our Nation by working on highway maintenance, waterfront cleanup, park construction as well as maintenance and groundskeeping. Urban life could be further improved by provision of aids to building inspectors, public health officials, sanitation officials, and water and air pollution control personnel.

The key goals of the program are:

First. Providing vitally needed assistance to the health care and educational institutions of our country which are at present sorely understaffed with professionals, many of whom must spend valuable time in tasks which could be performed by aids.

In the light of current programs for expansion of medical services and educational facilities, our health and education professionals will be in increasingly short supply in the future. These aids, by adding to our effective labor supply in urgently needed job categories, are a basic necessity now that rising demands of the war in Vietnam threaten to create inflationary pressures which will be aggravated in the months ahead by an increasingly tight labor market.

Second. Strengthening the system of voluntary health institutions which must rely in large part on the efforts of voluntary fundraising and volunteer services to supplement their incomes in order to meet their personnel and financial needs. The use of aids for whose salaries the local institutions will be reimbursed by the Federal Government, will not only permit the provision of better medical services by these institutions but will also reduce the fundraising burden of civic leaders.

Third. Lessening the drain on welfare and other supportive community services by providing a halfway house or way station for those who have never been a part of the employment pool and who, through the program, will for the first time find their way into the labor force.

Fourth. Recognizing that in 1966 jobs are at the heart of the civil rights struggle. The main lesson gained from the experience of the past year, particularly in recent months during which unrest has given vent to violence and near violence in urban centers throughout the country, is that the vital need for jobs

lies at the heart of the despair, bitterness, and frustration breeding such explosions

Investigators seeking the cause and prevention of Watts and similar destructive outbursts have universally reported the eagerness on the part of the poverty stricken to be gainfully employed. Efforts to convert the heretofore "untouchables" of our society into gainfully employed members of the labor force not only will enhance their status as human beings who can have pride in themselves as people but will also give them satisfaction that they are providing critically needed services for their communities and their country

I would also like to call attention of the House to the perceptive and thoughtful editorial which appeared in the Washington Post on January 9, 1966. The editorial and the report follow:

[From the Washington Post, Jan. 9, 1966]

#### TRAINING FOR STABILITY

The news that the unemployment rate fell to 4.1 percent in December underscores the relevance of a proposal made by the Democratic Study Group for providing I million of the hard-core unemployed with basic education and vocational training. There were nearly 2.9 million Americans without jobs in December. If the present economic expansion is to continue without creating additional inflationary pressures, a way must be found to add them and other disadvantaged people who will shortly enter the labor force to the ranks of the gainfully

The Democratic Study Group report, pre-pared under the able chairmanship of Repsentative James H. Schwurk, of New York, envisions a public employment training program in which the unemployed would provide needed services in the fields of health, edu-cation, and urban imp. vement. Since the wages paid for such jobs would be at the low end of the wage scale, there would be a strong incentive for the better workers in the program to move into private industry.

This proposal effects a marriage between the need for more subprofessional service workers and the desirability of training those who tend to be disqualified for employment because of poor education. But it would better satisfy the demands of an economy that may soon be confronted with tight labor markets if the public employment program were tied to a parallel effort by private

As the rate of employment falls below 4 percent of the labor force, private employers are going to encounter difficulties in fill-ing positions on the lower rungs of the skill ladder. This average of the skill ladder. This squeeze on the supply side of the labor market might be eased by a coop-erative arrangement under which the Gov-ernment provides basic education in a public service-training program and private industry completes the task of selecting candidates for their own job-training programs.

Tight labor markets, as experience suggests, are the best antidotes to hard-core unemployment. But they are likely to intensify inflationary pressures unless steps are taken to augment the supply of basically educated labor. A program such as that suggested by Mr. Schrone's group, coordi-nated with the efforts of private industry, would smooth the transition to a higher level of national employment.

AN ACTION PROGRAM FOR FULL EMPLOYMENT (Issued January 6, 1966, by the Democratic Study Group Full Employment Steering Committee, Cong. SCHEUER, chairman) Congre JAMES

Twenty years ago Congress declared "\* \* \* that it is the continuing responsibility of

the Federal Government \* \* \* to create and maintain conditions which afford employ-ment opportunities \* \* \* for those able, willing, and seeking to work, and to promote maximum employment, production, and pur-chasing power." (Public Law 304, 79th Cong. Feb. 20, 1946, sec. 2.) This commit-ment to full employment and stable, noninflationary economic growth has been described by the Joint Economic Committee of Congress: "Full employment of labor and capital is a moving target; the labor force grows continuously; workers are released by laborsaving machinery and new techniques new investment increases the capacity of must expand rapidly just to keep from fall-ing behind rising potential output." (Re-port of the Joint Economic Committee, March 1964.)

Federal policies carried out, in cooperation with "\* " industry, agriculture, labor, and State and local governments, " " " have been successful in avoiding a deep, prolonged postwar depression such as followed World I and earlier conflicts. But in terms of achieving and maintaining full employment, the record is not good. In only 3 out of 20 years has unemployment averaged about 3 percent, and in only 5 out of 20 years has it been 4 percent or less. For the entire 20 years unemployment has averaged about 4.9 percent and for the last 5 years 5.6 percent. The latest figure is still slightly over 4 percent with a nonwhite male teenage unemployment rate of about 25 percent.

The Kennedy-Johnson administrations have had an interim target of 4 percent unemployment. This is a third above the 3 percent generally viewed as the acceptable long-term goal. It is far above the rates of 2 percent or less achieved during the post-World War II era in such other countri Britain, France, Sweden, Japan, and Germany. With the interim target of 4 percent now in view, we should now begin to prepare for early achievement of an unemployment

rate of 3 percent.

The setting of this 3-percent goal is no mere exercise in statistical definitions or abstract political philosophy. It is a vital necessity if we are to assure maximum efficiency in the use of our human resourcesopening avenues for millions to escape poverty and overcome racial and social barriers to full participation in our society.

For our Negro citizens, disproportionately high unemployment and lack of opportunity for advancement to better paying jobs are basic reasons for their frustration and resentment. The high overall unemployment rates of recent years have also meant limited opportunities for young people seeking a start in the labor market. Their unemployment rate has been double or triple the national average, creating a dangerously discouraging atmosphere for the Nations most precious

resource—its youth.

An unemployment rate of 3 percent or less continuously maintained over the years will open wide the doors of employment opportunity to Negroes. It will make it possible to hold unemployment among our youth to a minimum, providing maximum induce-ment for them to acquire the knowledge and skills needed to make their optimal contribution to our economy. Eliminating the hopelessness, disillusionment, and bitterness that is generated by high unemployment should do much to hold down crime rates, reduce delinquency, and direct energies in more constructive channels.

#### ACRIEVING FULL EMPLOYMENT

To achieve 2 percent unemployment in the next year or two we shall have to create over nett year or two we shall have to create over three-quarters of a million additional jobs and will have to produce a gross national product of over \$900 billion by 1970. In 1966, the gross national product will total about \$670 billion with unemployment

averaging about 41/2 percent of the labor

force. The Council of Economic Advisers has estimated that—at its 4 percent interim goal, now almost achieved—the economy in would produce about \$595 billion of gross national product. We believe it is imperative that the Nation aim for a more defensible and healthy long-term goal of 3 percent. Even this figure would be well above that which has been achieved in a number of other industrial countries where 2 percent and below are the accepted rates of unem-ployment. At this level, in 1970, the economy would produce about \$10-\$15 billion more of GNP per year. At this level, the economy would create over 1.3 million new jobs per year to absorb the expected increase in the labor force as a result of the increasing population of working age, and at least 2 million new jobs per year to take the place of those eliminated by technological progress—a total of over 31/2 million new jobs per

If we were to average 3-percent unemployment rather than 4 percent between now and 1980 we would have to create about 1 million additional jobs; if we are to do it within the next year or two, as we should, we would have to add over three-quarters of a million additional jobs. We believe this is entirely possible and should be an immediate goal of public and private economic policies. This implies an economy which can support almost 81 million civilian jobs by 1970 and almost 96 million civilian jobs by

In setting these dimensions for the economic opportunities of a full-employment economy, we recognize that they are but informed estimates. But practical men cannot wait until 1980 to find out what their

targets should be and we believe the estimates are sufficiently accurate for guiding thinking about how to achieve full employment in a year or two, and to maintain a vigorous economy. What is needed is an action program with a balanced combination of Government monetary and fiscal policies combined with improved public and private policies concerning wages, prices, and em-

#### MONETARY POLICY

Monetary eass accompanied by relatively low interest rates is emential to a full-employment policy. Ready availability of credit alone cannot get us to full employment but tight money can make it impos-

Achieving and maintaining stability in a growing economy requires that total demand business, and Government of consumers, should be equal to total output at full employment and that total demand and total supply should increase at the same rate from year to year. This is possible only if money and credit are continually available at reasonable rates of interest

Although ready availability of funds at low interest rates will not cause business in-vestment or expansion if demand is inadequate and profit expectations poor, more sanguine business expectations will fail to produce and maintain full employment if financial markets are tight and interest rates relatively high. Home building will be slowed if prospective purchasers find financ-ing difficult and rates excessive. Small businesses, which are the first to be refused credit, must restrict output, employment, and new investment. State and local gov-ernments also find that financing of needed public facilities becomes more difficult or ven impossible.

The financial system of the United States is so complex that it is easy to lose sight of the most important fact about monetary policy: it cannot guarantee full employment but it can either prevent it or facilitate it. Therefore, monetary policy must be coordinated with other policies if we are to re-

Footnotes at end of speech.

spond adequately to unemployment, balanceof-payments problems and inflationary pressures.

A prime example is the recent action of the Federal Reserve Board who by raising the discount rate to 4½ percent, the highest level in 35 years, may impede our advance toward full employment and a sustained full-employment growth rate. This dramatically illustrates the need for coordination of monetary policy with fiscal policy. Therefore, we recommend that the President initiate whatever action is necessary to assure this policy coordination in order to guarantee the ready availability of credit so necessary to sustain high rates of economic growth.

#### FISCAL POLICY

Federal fiscal policies should contribute to achieving and maintaining full employment without inflation. Given the support of appropriate monetary policies, they can largely assure success.

largely assure success.

The Federal Government's expenditures and tax policies affect every individual, business, and State and local government units.
Only within the past 2 years have we begun
to use these fiscal tools effectively to reduce unemployment. We have yet to demonstrate our willingness to use them to achieve and maintain full employment without inflation. In this case, the main task of fiscal policy is to stimulate the economy, either through expenditures or tax reduction, to grow rapidly enough to reduce existing unemployment and to absorb rising productiv-ity and a growing labor force. This can be ity and a growing labor force. made more difficult by a number of considerations. A prime example is the problem of adjusting policies in the light of the posaible inflationary impact of rising defense spending generated by the war in Vietnam. Another problem arises because with our progressive tax structure, as GNP grows, tax revenues grow even faster, thus tending to retard economic growth short of full employ-The first case may require reduction in non-defense spending and/or increased The second case would call for a re duction in taxes and/or increased public expenditures sufficiently large so as to stimulate growth and offset the fiscal drag. this, it can be seen that fiscal policy involves carefully balancing Federal tax and expenditure policies. The essential question is one involving allocation of resources. Thus when stimulation is needed, fiscal policy should be based on expenditures when the social benefits from these expenditures in areas such as education, health, urban development and transportation exceed the social benefits from additional resources devoted to private expenditures.2 The same question of priorities applies when fiscal policy is used to slow down an overheated economy.

Tax reduction and reform are essential ingredients in a full employment program which will contribute to the elimination of poverty.

The Federal tax system is made up of a complex of levies, some falling on individual and corporate incomes, and others on specific transactions. In general, as the economy grows, the ratio of Federal revenues to the gross national product tends to rise. At the present time, the addition to Federal revenues is about \$7 billion per year. Since expenditures are not necessarily related to the growth in gross national product, Federal revenues tend to rise faster than Federal expenditures leading to fiscal drag.

These features carry two implications for a full employment policy. First, the Federal tax system is the Nation's most powerful automatic stabilizer since any reduction in incomes or expenditures immediately results in a more than proportionate fall in Federal revenues. To maintain stability therefore it is important that the progressivity of the Federal tax system be main-

tained or increased, particularly since the State and local tax systems have very little cyclical flexibility.

Second, a Federal tax structure that provides a maximum of automatic stabilizing action will, at the same time, provide a maximum of fiscal drag if left alone for extensive periods of time. The amount by which Federal revenues increase will go up from year to year as the economy grows, creating larger and larger withdrawals of funds which may not necessarily be offset by increases in expenditures.

The Federal tax structure, therefore, can stabilize the economy at persistently high unemployment rates and, indeed, there are reasonable grounds to suspect that this is what happened in the late 1950's and early 1960's. Persistent and steady expansion of the economy toward full employment over the last several years is clearly related to the efforts of the Kennedy-Johnson administrations to reduce the drag of the Federal budget on private economic activity.

Another feature of the Federal Lax system is the large number or loopholes or special exemptions and exemptions which are incorporated in the tax code and relieve certain forms of income—or portions of income—from taxation. These special features erode the tax base, resulting in higher rates on the remainder of taxable income. Serious attention should be given to correcting these inequities.

Finally, we must recognize that over the years ahead we shall have to face the problems created by the immense productivity of the Federal tax system as a generator of revenue while, at the same time, State and local governments struggle desperately to make their tax sources provide the revenue for skyrocketing social needs, especially in our growing metropolitan areas. Some way must be found to use the broad, general, nationally applicable Federal tax system as a means of solving some of the mounting problems of State and local governments.

We urge that our colleagues in deciding the form this program should take will assure that it meets at least the minimum criteria of diverting a portion of the increased revenues to aid the State and local governments in financing the public facilities and services—a task which they are finding increasingly difficult to do in an equitable manner.

#### PROVIDING A MINIMUM INCOME

The time has come when we must begin to provide a minimum income for everyone. Although we cannot hope to return to the early American frontier society of individual independent family farmers, we can re-create in our modern industrial urban environment the economic conditions for that cherished independence and individualism. We can assure everyone an adequate minimum income.

Indeed, we now provide this after a fashion in a variety of programs that are too often subject to the indignities of a means test. Too often, it is also the case that these programs, hampered by inadequate funds and staff, perpetuate dependency and poverty rather than provide the means and motivation to break the cycle.

This goal could be implemented in two ways. First a floor could be provided through a negative tax on income. A scheme which could make an important contribution to the assurance of a living income can easily be devised. Second, our social insurance programs (OASDI, unemployment insurance, workman's compensation, etc.) could be improved and geared to provide a floor under individual and family incomes.

#### GOVERNMENT EXPENDITURE DECISIONS

Decisions on government expenditures should take into consideration their consequences for stability and growth in our economy and their contribution to the elim-

ination of poverty and the realization of opportunity for all.

Public expenditures—Federal, State, and local—must meet the test first of all that they provide services which individuals and private organizations cannot provide, or cannot provide efficiently and reliably. In addition, it is a first principle of sound programing of public expenditures that they should be as stable, predictable, and as closely geared to long-term needs as is feasible. Attempts to turn government expenditures on and off for purposes of stabilizing the economy inevitably run up against the hard fact that public spending is slow to start up and difficult to stop suddenly, unless we wish to build excessive waste into public budgets.

It is further characteristic of public expenditures that there must be continuing concern for the achievement of an appropri-ate balance between Federal responsibility for essential public services and the coordinate responsibility on the part of State and local units of government. Considerations both of economy and flexibility in adapting to differing local requirements call for deci-sionmaking at that level of government conalstent with the character of the specified program. Thus, it is clear that national defense and the space program must be tasks of the Federal Government, while it is equally clear that such functions as police and fire protection are local matters. However, there are a number of important areas where there are strong arguments for co-ordinated actions by all levels of govern-Familiar fields are education, health and welfare, conservation, housing, urban renewal, mass transit, and even encouragement of the arts and humanities

If public expenditure programs are guided by considerations of long-term needs, then the Government programs at all levels will make a maximum contribution to economic stability. Undoubtedly, we will not be able to make every conceivable expenditure that might be in the public interest. There are limits to our resources, large as they are. But in an economy in which per capits gross national product is growing by 2½ percent per year in real terms, and is—rapidly approaching a trillion dollars per year, we should certainly be able to afford sufficient public expenditures to meet many of these needs, providing a richer, and more interesting life to all and a minimum level of decency and comfort for every American.

## ANTI-INFLATION POLICIES

We must maintain a stable general level of prices if our programs for a full employment economy are to succeed in the long run.

Inflation is not a pressing danger when there is substantial unemployment of laborbroad scale idle capacity in industry, and severe competition for customers and jobs. It is only when economic policy is successful enough to generate full employment of labor and capital that inflation offers any serious problem?

Inflation encourages inefficiency in the allocation of resources; it leads to instability, recession, and unemployment; it contributes to balance-of-payments difficulties; and it jeopardizes the success of programs for income maintenance. It generally hits hardest those families and individuals who can least afford to bear its burdens.

Clearly, an appropriate balance between monetary and fiscal policies is the first prerequisite to an anti-inflation program.

Thus, to the extent that the war in Vietnam or other international developments require an increased proportion of our national resources, fiscal and monetary policies should be readjusted to insure that this does not produce inflation. In the process any curtailing of public programs or of private

Footnotes at end of speech.

spending should be concentrated where they will reduce the competition for scarce labor, materials, and industrial capacity. At the same time, we must continue the drive against poverty by programs carefully designed to provide jobs for those whom the normal labor market processes leave without work opportunities.

Over and beyond government monetary and fiscal policies, it is necessary that business and labor cooperate in generating wages and prices that are consistent with a non-inflationary, full employment economy. We believe that if labor and industry and government officials all understand the requirements of such a policy, they will find ways to operate a fiexible and, at the same time, noninflationary system of price and wage adjustments without need for direct wage and price controls.

The Council of Economic Advisers wageprice guidelines are a start in this direction and they have received Presidential endorsement as well as widespread congressional and public support. We should strengthen the existing wage-price guidelines activities of the President and his Council and should also investigate the possibilities for establishing procedures for making such judgments which allow the public, including industry and labor, to participate in their development. The possibility of regular congressional review of the guidelines and responses to them also merits analysis and consideration. Public hearings, giving the various interests a platform, might be another way to provide an atmosphere conducive to responsible decisionmaking.

In addition, it is necessary to preserve the benefits of free competition by vigorous governmental action, particularly antitrust action. Our living standards reflect our success in using free competition, decentralized, economic power, and marketplace allocation of goods and services. These have stimulated efficient production, technological progress, managerial innovations, and provided greater consumer choice than any other economic system known to man. Therefore, we urge the most vigorous efforts possible on the part of regulatory agencies to curb unfair business practices and to preserve the benefits of free competition.

EMPLOYMENT, EDUCATION, TRAINING: A WAY

Employment at a living wage plus basic education and training are ne ded by most of those now living in poverty. Full participation in American life and escape from poverty, discrimination and ghetto living require opportunities for jobs, education, and training far beyond those now being provided.

Poverty is not a homogeneous product, and the War on Poverty must use many weapons. In combating poverty, lasting benefits will come only from programs which enable the poor to take and keep themselves out of poverty. Any program which does not have this as a goal would require a continuation of the present and apparently unending flow of benefits to the same families, generation after generation.

For those for whom self-support is not possible, a comprehensive attack on poverty must be supported by other appropriate income-maintenance measures.

However, the primary emphasis in the comprehensive attack on poverty must be on programs designed to facilitate the escape from poverty by way of education, training, and employment. Progress will be facilitated in an economy where aggregate demand is adequate to provide a full employment environment. Changes in the level of demand have significant impact on the effectiveness of various components of the program. Thus, programs now underway to provide the basic and vocational shills required for successful entry into the labor

market can only be effective if there are job openings. Since one of the primary goals has been to change hopelessness and despair into confidence and determination, if there are no jobs for those who have qualified themselves the programs may have negative effects. Our dynamic economy has never, even in the depresion, been without job openings, and the notion of filling all of them is as absurd as the idea of elminating all, even frictional, unemployment. Thus, even if the economy stimulated by an expanded war effort in Vietnam should produce 3 percent unemployment less than 10 percent of those families now in poverty would be lifted above the poverty line and the level of unemployment among Negroes would be unacceptably high. Thus it is clear that there will not be jobs for the people we are trying to help unless positive steps are taken.

In our economy, more than 14 million people experience unemployment every year. This year, 500,000 were unemployed for over 15 weeks, and about 300,000 for over 26 weeks. Perhaps the most discouraging fact is that 2 million family heads who worked full time do not earn enough to live above the poverty line. In addition, it is estimated that about 2 million poor people have given up looking for jobs and are not counted as unemployed in the statistics, though they could, if given the chance, be productive members of society.

Table I estimates the changes occurring in the poverty status of families and unrelated individuals as national unemployment decreases from the March 1964 rate of 5.4 percent to 3 percent. As can be seen the effects are impressive—over 2 million people would be released from the shackles of poverty. However, even at this rate of unemploy-

ment there will remain many among the poor who lack the opportunity to assume a productive place in society. While this so-called hard core could be reduced by further increases in total demand through tax reduction or general expenditure increase the resultant inflationary pressures would be greater than we are able to assume. In these circumstances, creation of special programs to provide opportunities for about 1 million would be most effective particularly if in the process basic education and training are provided. Such an effort could, if necessary, be increased for as table II shows the potential for such tobs in our economy is very great. Such efforts would reduce unemployment while minimizing the risk of inflation. a byproduct, we would have a more skilled and productive labor force. This is critical when rising demands of the Vietnam war threaten to create inflationary pressures and a tight labor market.

Therefore, we propose a public employment-training program stressing subprofessional and aid-type employment and training for jobs which serve the public interest.

TABLE 1.—Changes in poverty population with fall in national unemployment rates

	Number of people in poverty in March 1964 at 5.4 percent unemployment rate	Estimated number of people moving out of poverty when unemployment rate falls from 5.4 to 4.5 percent	Estimated number of people moving out of poverty when unemployment rate fails from 5.4 to 3 percent

(including control and prevention of crime and delinquency)	300	
Total	5, 100	

<sup>1</sup>These figures are estimates and are used to illustrate orders of magnitude.

Such a public employment-training program could satisfy a coincidence of needs in our economy. The need for jobs for the poor, the need for better prepared workers, and the need for better prepared workers, and the need for public services for the Nation are equally important and compelling justifications for this program. A program to expand the opportunities for useful jobs would (1) give many of the unemployed poor a chance to lift themselves out of poverty by work and training which better prepared them while providing satisfaction and adequate wages and (2) at the same time, provide services in areas where resources have not been developed or allocated to meet long recognized public needs.

The program would not have to create either the needs or the labor resources; they already exist. It would bring into the active labor market those who otherwise would

be doomed to live out their lives outside of the economy. It would do this by providing Federal financial support for wages. The public has been crying for improved services in the fields of health, education, urban improvement, beautification, etc.

Under such a program, subprofessional jobs created in medical institutions could provide needed assistance to doctors and nurses. These jobs could include nurses' alds, physical therapy aids, dietitians' aids, and orderies. It would also be possible to provide better nursing homes and care for the aged by training aids for the nurses and therapists for home visitation services.

In the schools, there are needs for teacheraids, as well as for recreation and playsground aids. Added personnel would enable us to open schools, libraries, museums, art galleries, and playgrounds on evenings and weekends and during summers.

Additional subprofessional help can improve the beauty of our Nation by working in highway maintenance and gardening, waterfront cleanup, groundskeeping, park construction and maintenance, slum cleanup, and minor repair of public buildings. Urban life could be further improved by the work of aids to building inspectors, public health officials, sanitation officials, air and water pollution control personnel.

Outreach service provided by aids could help our welfare and social service agencies to reach those whom we have failed in the past. Homemakers and other home helpers could mean needed services for the chronically ill and large families. The control and prevention of crime and delinquency could

benefit from the insights and assistance provided by police and probation aids.

These are but a few examples; once the program is in operation private and public organizations will develop additional jobs of this type.

The ideal would be to furnish a job with beair education and training which could open opportunities in the public service for the poor. Ultimately, acquisition of education, work discipline and work experience will enable many to acquire upward mobility and make the shift into private employment.

The structure of the program should be one of direct employment by public and nonprofit private institutions receiving Federal reimbursement for the wages, supervision, and training expenses. A cash contribution (perhaps 10 percent) by the employing institution would insure that the new employees were performing useful and constructive function. There would need to be a maintenance effort provision to insure that the program was not used to avoid increases to meet normal increases in loads.

The public employees will be trained on the job by the institutions which hire them. This approach to training for subprofessional jobs is current practice. In some cases, more extensive vocational training may be necessary before the employee starts working on the job, and it is expected that this would be provided for by the hiring institution, or by Government-sponsored

Success in breaking the poverty cycle will gradually reduce the number who cannot move up the vocational ladder for one reason or another. Hence, eventually the program should produce its own demise, out of

Its very success in reducing poverty.

A public employment-training program would have a number of spillover effects.

The program by increasing the demand for this type of labor would tend to reinforce existing statutory minimum wages. Since wages would be at the low end of the wage scale, there would be an incentive for workers to move into private sector employment. Further, the program could acquaint the employer with the advantages of non-discriminatory hiring of persons willing to work and eager to acquire new skills. The program would not require the initiation of a large amount of supportive services but would draw upon already existing programs.

The program represents an investment in individuals who through experience have been convinced that little is expected of them

and who fulfill this prophecy.

The philosophy of the program is simple: (1) The work to be performed is both useful and needed and (2) there is, among the poor, a tremendous reservoir of latent potential which can and must be tappeda nation we cannot afford to forgo the fruits of their labor. In a real sense, we can draw an analogy between many of these individuals and our returning GI's after World War II. Just as the latter had been deprived of 2, 3, or 4 years of education and training at a vital juncture in their lives, the former have been deprived of the opportunity to enter the mainstream of American life. the GI bill was, in large measure, an answer in the first instance; a well-balanced program of useful work, basic education, and training can be expected to assist the vast majority of the poor in finding a new sense of personal dignity and worth by making a substantial contribution to themselves and

With the rate of technological progress remaining high, it would be a bold man indeed who concluded that we would increase our real output per worker any less rapidly in the 1970's than in recent years. This would mean that with employment rising at 1½ percent per year and output per worker

their society.

at almost 3 percent per year, total real output of goods and services (real gross national product) would need to rise at least 4 percent per year during the 1970's if unemployment is to remain stable.

In addition, the general level of prices tends to go up about 1½ percent per year. (It appears that when wholesale prices are approximately constant, as in recent years, the average value per unit of gross national product (gross national product deflator) has risen about 1½ percent per year. The experts seem to believe that this reflects both imperfections in the measurement of quality changes in our price indexes and the treatment of Government wage increases as prices increase, though this is not the practice in regard to the private economy.) If we assume this will continue in the future as in the past, then in current prices gross national product would continue to increase at about 5½ percent per year at full employment and by 1980 would be more than double this year's output, or about \$1½ trillion in 1980 dollars.

The population might reach 245 million by 1980, which means that the amount of goods and services produced would be about \$6,200 per person in 1980 as compared to about \$3,500 in 1965. This would mean that a 75-percent increase in the output of goods and services per capits, including the effects of continued modest price increases.

<sup>8</sup> This does not mean the relevant choice is between all public or all private expenditures. When public expenditures are used, the initial increase in output occurs in the public sector, but succeeding increases occur in the private sector. The real choice is, therefore, between whether the initial round of expenditures should occur in the private or public sector.

s'In this country we are a good deal more sensitive to inflation than are other industrialized nations, including Japan and our West European allies. Over the past decade, our record of price stability has been unatched by any of these nations. On the other hand, these countries are a good deal more sensitive to unemployment as shown by their unwillingness to accept unemployment above 2 percent.

# New Look at Crops

EXTENSION OF REMARKS

# HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. GATHINGS: Mr. Speaker, the Jonesboro Sun, published in Jonesboro, Ark., serves that vast agricultural area in northeast Arkansas, and its editorial policies over the years have consistently served the farmer, the businesses serving the agricultural economy, and the best interest of this Nation.

On January 14, 1966, the Jonesboro Sun carried a most thoughtful editorial concerning hunger in the world and American agricultural policies curtailing production of food commodities. The editorial properly points out that the time is urgent to reappraise our approach to agriculture—which is the foundation of our own American prosperity and strength and which should be the basic tool in our international programs to oppose aggression and expand the domain of democracy and freedom.

The Farm Act of 1965 included a provision on cropland adjustment the purpose of which was to further reduce the size of the agricultural plant by putting cropland, alfalfa, and tame hay lands into this newly created soil bank for a period of years. I pointed out to the House the fallacy of such a program and urged that this title to the law be stricken.

The editorial follows:

NEW LOOK AT CROPS

After decades of promoting decreases in farm production, are U.S. agriculture officials about to trigger a let's-grow-more-food campaign? That question is heard frequently in Washington as uncertainty over the future of U.S. food in a hungry world begins to give way to a new look at agriculture.

Two factors have combined to stall the campaign to encourage farmers to produce less. Food shortages in the world which have reached famine proportions in India and threaten similar degeneration in parts of Africa and Latin America, and the disappearance from the surplus list of some of America's largest crops.

Except for normal reserves, surplus stocks face wheat and feed grains will completely disappear in another year. It may be necessary to remove some controls from these crops to keep production even with requirements. Even so, the 1965 farm law calls for removing 8 million acres a year out of production for the next 5 years.

the next 5 years.

Taking 10 percent of the Nation's cultivated acreage out of production at a time when India literally is staring starvation in the face may seem like poor public relations. But India's famine is so widespread, its docks and distribution systems so inadequate, shipping fleets of foodstuffs from the United States right now could not stop the impending disaster.

bending disaster.

Like many other countries which have been the recipients of large quantities of American food in the past, India has done little to improve crop production within its own borders. The President has said future shipments under the food-for-peace program will be tied to meaningful self-help by the recipients.

Those sentiments have been expressed before in high places, but until they are implemented the list of Indias may become distressingly long.

# Dr. Zenon R. Wynnytsky, an Outstanding and Courageous American

EXTENSION OF REMARKS

# HON. ROBERT E. SWEENEY

OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. SWEENEY. Mr. Speaker, I should like to draw the attention of the House to an article which recently appeared in the Ukrainian Catholic Daily, the official organ of the Providence Association of Ukrainian Catholics in America. The article itself is the speech of Dr. Zenon R. Wynnytsky which was delivered on the occasion of a rally held in Cleveland, Ohio, on October 16, 1965.

Dr. Wynnytsky is not only a distinguished member of the medical profession but in my opinion, an outstanding and courageous American who has cho-

sen to speak out repeatedly against the menace of international communism. Dr. Wynnytsky can be regarded as an expert on tyranny and aggression in the world in which we live for in earlier days he was identified as Prisoner No. 57377 and Prisoner No. 118497 respectively in the Nazi concentration camps at Auschwitz and Mauthausen.

In years past he felt the terror of fascism and how it destroyed the freedom of individuals and nations. He now speaks out with clarity concerning the terror of the international Communist conspiracy in the world.

His comments at the Cleveland rally on October 16, 1965, should be must reading for every American who today is being lulled into complacency and led by clever propagandists to believe that in the last analysis the free world has little to fear by reason of this spread of Communist influence in the world in which we live.

I seriously recommend that each and every Member of this House heed well the warning expressed in Dr. Wynnytsky's remarks lest we be lulled to sleep and ultimately awake to find our freedom and liberty has been withdrawn.

Dr. Wynnytsky's remarks follow:

I am a medical doctor and a resident of Metropolitan Cleveland since 1952, and now a U.S. citizen not by the coincidence of birth but by the free choice of a freeman. I emphasize this statement, for I know what slavery means. At one time I was prisoner No. 57377 and No. 118497, respectively, in the Nazi concentration camps of Auschwitz and Mauthausen during the Second World War years of 1941-45.

After being a freshman at the Lviv State Medical School in Ukraine, I came to value in the Razi universities of Auschwitz and Mauthausen the ideals of freedom for people and nations, the meaning of democracy and justice and came to fear the terror of the brown and red totalitarian political systems. Therefore, I came to the United States of America, to a stronghold of freedom and democracy which I never knew before.

As chairman of the advisory board of the Organization for Defense of the Four Freedoms of Ukraine, Inc. (an organization similar to the Jewish B'nai B'rith Anti-Defamation League), and executive director of the Ukrainian section of Cleveland's American Friends of the anti-Bolshevik Bloc of Nations, known as ABN, I certainly would like to assure all of you that our primary objective and the objective of all Clevelanders of Ukranian descent, is to safeguard our heritage as well as to maintain and preserve our U.S. Constitution and all the liberties which is guarantees. Accordingly let us say that the first enemy of the U.S. Constitution and our liberties, of our American way of life, and human freedom, and dignity is undoubtedly the world Communst movement.

A few months ago the Honorable Mary V. Beck, the first councilwoman of the city of Detroit, Mich., who recently visited several countries behind the Iron Curtain, made the following statement: "For communism, be it Russian or Chinese, has only one goal and it is world domination under Moscow's Pelping's rule" aiming at the destruction of the old Christian culture and tradition and of human freedom and dignity. A soft policy toward communism today may offer to us and later generations new Pearl Harbors, new Batasan Marches, new concentration camps and a new hell on this planet.

Considering such an outlook we may indeed be sure that we are supporting the proper policy of the U.S. Government in the Vietnam crisis. Our brave youngsters are defending our theistic culture, the principles of freedom of individuals and nations, and the integrity and security of our own homes, our families and our children. There is no substitute for victory. Therefore, down with communism. Let us unite our efforts to achieve victory in Vietnam.

In 1918 Ukraine was the first victim of Communist aggression. We learned that the Communists were ready to promise a paradise to achieve their goal of world domination. American youth. Awake. Do not follow the misleading slogans of Communist prophets. They are preparing a grave for you and all of mankind. Combat communism everywhere in the world; in Vietnam, in Cuba, in Latin America, and also here in our United States of America.

Americans, pray and work for our victory in Vietnam. Do not expose the future haspiness of your country and your children to the lies and experiments of the big Communist brother. And let me reassure you that when the time comes and we are called to arms, we—the Americans of Ukrainian descent, will fight and die if necessary for our beloved adopted land. There is no other more honorable way to die than as a free man in the defense of a free country. Don't wait to die as a slave. Don't kid yourself that Communists will provide you with an easy and joyful life. They may promise it to you. But nobody has seen it under their rule.

We must be victorious in Vietnam if we hope to maintain our freedom and the freedom of millions of people in Asia. Only a victory over Communist aggression can bring true peace to our troubled world. Carthaginam delendam esses

# Remarks of Mohammed El Fasi of Morocco at Bridgeport University

EXTENSION OF REMARKS

#### HON, DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. IRWIN. Mr. Speaker, our friendship with Morocco goes back to the founding days of our Nation when that country became the first nation to recognize the independence of the United States during the Revolutionary War period.

These ties have not lossened through the years, as was pointed out recently at the University of Bridgeport by Mohammed El Fasi, rector of Moroccan universities and chairman of the executive board of UNESCO, when he received an honorary doctor of laws degree from the university.

In the belief that Dr. El Fasi's speech as well as the introductory remarks of Dr. James H. Halsey, university chancellor, will be of interest to my colleagues, I am inserting them in the RECORD at this point:

## REMARKS OF CHANCELLOR HALSEY

Mr. President, members of the board of trustees and the faculty, students of the university, ladies, and gentlemen, I have the

honor to present his Excellency the Honorable Mohammed El Fasi, of Morocco, for an honorary degree.

Mr. El Fissi comes to our campus through the interest and courtesy of one of our trustees, the Honorable William Benton, U.S. Ambassador to UNESCO. We are sorry that official United Nations responsibilities prevent Ambassador Benton's presence today, because we had hoped he would present Mr. El Fasi for this honor.

As rector of Moroccan universities, Mr. El Fissi is the foremost figure in the field of Moroccan education. Not only does this responsibility involve administrative supervision of all higher education in Morocco, but it also means that he is in charge of all scientific research, art, archaeology, and folk-

lore activities of his country.

A distinguished scholar, who speaks six languages, Mr. El Fasi is now adding English as the seventh to his linguistic abilities, and today he will deliver the first public speech in English in his entire career. Mr. El Fasi has earned several degrees at French and Moroccan universities, he has written numerous articles and books on Moroccan literature, history, and biography, and he has held many positions of prominence and high responsibility in Moroccan education. One of these was as the personal tutor to the present King of Morocco, Hassan II, during this monarch's boyhood and youthful years.

Mr. El Fasi is a well-known internationalist who is profoundly concerned about world affairs, and these interests have taken him to many parts of the globe in pursuit of better international relations and world peace. He has been associated with the United Nations and UNESCO since 1958, and last year he was elected Chairman of the Executive Board of UNESCO.

Mr. President, it is a great honor and a rare privilege for us to have so distinguished a visitor as his Excellency, the Honorable Mohammed El Fast, on our campus, and I take great pride in presenting him to you at this time for an honorary degree.

## SPEECH OF DR. EL FAST

I would like first of all to convey to you the greetings of the teaching corps of a university which bears the name of our national hero, the late King Mohamed V, liberator of Morocco and champion of Africa's independence, this monarch who preferred exile and deportation in order to secure for his people a life of honor and dignity and who returned victorious from the remote island of Madagascar after more than 2 years of estrangement to proclaim the independence of Morocco.

If I believe it necessary at the beginning of this speech to recall these historical facts, it is in order to stress the common line between our two peoples, the one of attachment to liberty. It is not by a hazardous fact that Morocco was the first country to recognize the independence of the United States. On the throne of Morocco reigned at that time a great king, Mohamed III, the ancestor of the present King, known in our history for his tolerance and liberalism. At the proclamation of the independence of the United States, he hastened to show his great happiness at this event and gave orders to put at the disposal of the American authorities a building in Tangiers, the diplomatic capital of his Empire, to house their first Consulate in our country. After this recognition, a correspondence, famous in the history of our two countries, was established between King Mohamed ben Abdallah and the authorities of the United

Thus, on August 17, 1788, a letter was sent by the King to the President of the American Congress. Without waiting for an answer to his missive, some disputes having occurred between the United States and the Pachas of Tunis and Tripoli, Mohamed III wrote to these two Pachas in order to interyene in favor of the United States. After his election as the first President, Washington, addressed to the King the answer in which he told him particularly:

"The United States, having unanimously appointed me to the supreme executive authority in this Nation, Your Majesty's letter of the 17th of August 1788, which, by reason of the dissolution of the late Government, remained unanswered, has been delivered to me. I have also received the letters, which Your Imperial Majesty has been so kind as to write, in favor of the United States, to the Bashaws of Tunis and Tripoli, and I present to you the sincere acknowledgements and thanks of the United States, for this important mark of your friendship for them."

We noticed equally in this letter the following sentences: "The encouragement which Your Majesty has been pleased, generously, to give to our commerce with your dominions, the punctuality with which you have caused the treaty with us to be observed, and the just and generous measure taken in the case of Captain Proctor, make a deep impression on the United States and confirm their respect for, and attachment to Your Imperial Majesty.

It gives me pleasure to have this opportunity of assuring Your Majesty that, while I remain at the head of this Nation, I shall not cease to promote every measure that may conduce to the friendship and harmony which so happily subsist between your empire and them, and shall esteem myself happy in every occasion of convincing Your Majesty of the high sense (which in common with the whole Nation) I entertain of the magnanimity, wisdom, and benevolence of Your Majesty."

Since then, this friendship, established under these very high auspices, has not ceased to develop and to maintain itself despite all the vicissitudes of history. Thus, it is a great pleasure and honor for me to be the messenger of this friendship.

Mr. President, the council of your university and yourself conferred this distinguished honor on me by awarding me the title of doctor honoris cause. In expressing my very deep thanks, I would like to see this homage given to my country, to the University Mohamed V and to myself at the same time. In fact, Morocco, as you know, boasts the oldest university in the world, this Quaraouiyyine of the city of Fez which transmitted to the world, through Moslem Spain, the Arabic numbers, the basis of all modern science. We celebrated in 1959, the 11th centenary of this university of which I was president for 10 years and which was founded in 859 by a woman, Fatima Oumm al Banine.

During the last centuries of its long existence, this university had limited its activity to the studies of theology, law, and literature and preserved the medieval and scholastic methods of teaching. The opportunity was given to me to introduce a new spirit and disciplines that had been abandoned for a long time. But the need for a modern higher educational system was felt as soon as we regained our independence. And this is why, in continuing to give the greatest interest to the old University Quaraouly-yine, the Government of His Majesty in which I served as Minister of National Education during the first 3 years of independence, has studied this problem and has decided to create a modern university in Rabat. For some 40 years, there were few institutes that provided a higher education in the fields of science, law, and literature. These institutes were transformed into faculties and were

united as a coherent university system that took the name of University Mohammed V. During the month of December 1867, the solemn inauguration of this young university took place under the presidency of King Mohamed V and in the presence of several presidents of foreign universities. Our university has, therefore, only 8 years of existence, but during this short period, tremendous progress has been achieved. The number of students has increased from some hundreds to 8,000, a school of engineering was created which has already graduated many technicians for private and public sectors. A school of medicine, first in Casablanca, then a whole faculty in Rabat, achieved the cycle of the classical higher education.

Other higher institutes and establishments (sociology, political sciences, etc.) were created afterward. A university center for scientific research (which was formed 4 years ago) was put in charge of coordinating research in all fields and in supervising the publications of all faculties and institutes. In addition to the reviews that existed before, the university center of scientific research founded a review in Arabic, Al Bahth Al Ilmi (the Scientific Research) which is considered at the present time in the whole Arab world as a review of great value.

At the beginning, the activities of our university were limited to the city of Rabat, the administrative capital of the country. Later, annexes of some faculties were extended to other cities, in particular to Fes, the metropolis of Islam and culture, as well as to Casabianca, Tetouan, and Marrakesh. The general library, which is at the same time the National Library and the university library, has branches in all the cultural centers of Morocco. Its department of manuscripts is one of the richest in the world and attracts reconstituted in the later of the richest in the world and attracts.

researchers from all the horizons.

From the point of view of social work, two groups of university centers have been established in Rabat and in Fes for our students: they comprise dormitories, restaurants, libraries, lounges, and all the necessary installations for a fruitful student life. A special office takes care of the sports activities in which our youth participate with enthusiasm. A special day of university sports is held each year during which students from all the schools of higher learning compete in a healthy atmosphere of true sportsmanship.

Mr. President, ladies and gentlemen, this necessarily brief account of our university, I hope, will give you some idea of what we are doing to participate in the tremendous work of renovation and of economic and social development undertaken by our people and our Government since the dawn of independence. But what still remains to be done is much more important and our needs in this domain are huge. In fact, the actual number of our students is still small because the primary and secondary educational sources that feed the university were insufficiently developed during the protectorate. Gigantic efforts were put forth during the first years of independence.

Where formerly the primary schools received only 15,000 pupils per year, in the 2 years following independence as head of the Ministry of National Education I was able to put 500,000 new children of both sezmi into schools. We are, therefore, waiting to receive at the university in October 1967 more than 10,000 new students. This shows you all the keenness of the problem of higher education in a developing country that (even if its infrastructure is one of the more advanced on the African Continent) lacks sufficient resources to face its needs especially in the social field and above all in education.

If you add to these data, a population, whose rate of growth is one of the highest in the world (more than 3 percent), you will grasp the alarming nature of our problem. But we are counting heavily on the aid of our friends in order to find happy solutions to this situation. Solidarity among peoples is today a supreme duty. We cannot conceive an international life, founded on peace and security, without the exercise of this solidarity. It is not only an act of high moral standing

It is not only an act of high moral standing to help those who need resources to achieve their economic and social development, but it is in the well-understood interest of each nation enjoying wealth and progress to help others to have access to this life of dignity and happiness which is the sole one which can secure mutual comprehension and tranquility of minds, in one word—peace.

UNESCO, on which I have the honor to preside on the executive board and where my honorable friend, Mr. Benton, one of the most eminent persons of this Areopagus also sits, works tirelessly in this domain of aid to the developing countries in the fields of education, science, and culture which are under its purview. But the means are limited and far from satisfying the needs of those countries on the way to development.

on the way to development.

Other international organisations such as UNICEF, the Food and Agricultural Organisation, the World Health Organisation, and other nongovernmental organisations work also in this direction. But in my opinion, only direct action by the developed countries and their great foundations can bring efficient aid to the developing countries to uproot them from this tragic situation which is prejudicial to the world's peace. This aid must be shown first of all in the domain of higher education because it is unanimously known today that the essential elements of development are the formation of the high ranks of a nation and scientific research, the two poles of the activities of the universities and of all establishments of higher learning.

A country without engineers, without professors, without doctors, without administrators and without an educated elite cannot have access to a high standard of material and moral living. Even If it possesses sufficient natural resources, it cannot exploit and utilize them fruitfully if it does not have competent personnel. And it is exactly the university that forms the latter. A great responsibility devolves on us, the university people, and it is here that the greatness of our mission lies. But we need encouragement and comprehension on the part of those who are able to give us the proper means which will allow us to fulfill our noble duty. May God help us and inspire all men of good will with the determination to work in the cause of happiness and peace for all humanity.

Mr. President, thank you very much for this honor.

# Asian Bank Development Bill Being Introduced in House

EXTENSION OF REMARKS

# HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. PATMAN. Mr. Speaker, I am introducing in the House an Asian Development Bank Act which provides for the participation of the United States in the

is as follows:

HR. -

A bill to provide for the participation of the United States in the Asian Development Bank

Be it enacted by the Senate and House of Representatives of the United States of America in Congresss assembled,

#### SHORT TITLE

SECTION 1. This Act may be cited as the "Asian Development Bank Act." ACCEPTANCE OF MEMBERSHIP

SEC. 2. The President is hereby authorized to accept membership for the United States in the Asian Development Bank (hereinafter referred to as the "Bank") provided for by the agreement establishing the Bank (hereinafter referred to as the "agreement") deposited in the archives of the United

Sec. (a). The President, by and with the advice and consent of the Senate, shall appoint a Governor of the Bank, an alternate for the Governor, and a Director of the Bank.

(b) No person shall be entitled to receive any salary or other compensation from the United States for services an a Governor or Alternate Governor. The Director may, in the discretion of the President, receive such compensation, allowances, and other benefits as, together with those received by him from the Bank, will equal those authorized for a Chief of Mission, Class 2, within the meaning of the Foreign Service Act of 1946, as ended.

Sur. 4. (a) The policies and operations of the representatives of the United States on the Bank shall be coordinated with other United States policies in such manner as the President shall direct.

(b) An annual report with respect to United States participation in the Bank shall be submitted to the Congress by such agoncy or officer as the President shall desig-

Sec. 5. Unless the Congress by law authorires such action, neither the President nor any person or agency shall, on behalf of the United States, (a) subscribe to additional shares of stock of the Bank; (b) vote for or agree to any amendment of the agreement which increases the obligations of the United States, or which would change the purpose or functions of the Bank; or (c) make a which incres loan or provide other financing to the Bank, except that loans or other financing may be provided to the Bank by a United States agency created pursuant to an Act of Congress which is authorized by law to make loans or provide other financing to international organizations.

#### DEPOSPTORIES

Sec. 6. Any Federal Reserve bank which is requested to do so by the Bank shall act as its depository or as its fiscal agent, and the Board of Governors of the Federal Reserve System shall supervise and direct the carry ing out of these functions by the Federal Reserve banks.

#### PAYMENT OF SUBSCRIPTION

Sec. 7. (a) There is hereby authorized to be appropriated, without fiscal year limita-tion, for the purchase of 20,000 shares of capital stock of the Bank, \$200 million

(b) Any payment made to the United States by the Bank as a distribution of net income shall be covered into the Treasury as a miscellaneous receipt.

#### JURISDICTION AND VENUE OF ACTIONS

Size. 8. For the purpose of any civil action which may be brought within the United States, its Territories or possessions, or the Commonwealth of Puerto Rico, by or against the Bank in accordance with the agreement,

proposed Asian Development Bank. It the Bank shall be decemd to be an inhabitant of the Federal judicial district in which its principal office or agency in the United States is located, and any such action to a party shall be which the Bank shall be a party shall be deemed to arise under the laws of the United States, and the district courts of the United States, including the courts enumerated in Title 28, sec. 460, United States Code, shall have original jurisdiction of any such action. When the Bank is a defendant in any action in a State court, it may, at any time before the trial thereof, remove such action the district court of the United States for the proper district by following the procedure for removal of causes otherwise provided by law.

#### STATUS, IMMUNITIES AND PRIVILEGES

SEC. 9. The agreement, and particularly SEC. 9. The agreement, and paractularly Articles 49 through 56, shall have full force and effect in the United States, its Territories and possessions, and the Commonwealth of Pureto Rico, upon acceptance of membership by the United States in, and the establishment of, the Bank. The President, at the time of deposit of the instrument of acceptance of membership by the United States in the Bank, shall also deposit eclaration that the United States retains itself and its political subdivisions the right to tax salaries and emoluments paid by the Bank to its citizens or nationals.

#### SECURITIES ISSUED BY BANK AS INVESTMENT SECURITIES FOR NATIONAL BANKS

SEC. 10. The last sentence of paragraph 7 of section 5136 of the Revised Statutes, as amended (12 U.S.C. 24), is amended by striking the word "or" after the words "International Bank for Reconstruction and Development" and inserting a comma in lieu thereof, and by inserting after the words "the er-American Development Bank" words "or the Asian Development Bank".

SUCURITIES ISSUED BY BANK AS EXEMPT SECURITIES, REPORT FILED WITH SECURITIES AND EXCHANGE COMMISSION

SEC. 11. (a) Any securities issued by the Bank (including any guarantee by the Bank, whether or not limited in scope) in connecwith raising of funds for inclusion in the Bank's ordinary capital resources as defined in article 7 of the agreement and any securities guaranteed by the Bank as to both principal and interest to which the commitent in article 6, section 5, of the agreement is expressly applicable, shall be deemed to be exempted securities within the meaning of paragraph (a) (2) of section 3 of the Act of May 27, 1933, as amended (15 U.S.C. 77c), and paragraph (a) (12) of section 3 of the Act of June 6, 1934, as amended (15 U.S.C. The Bank shall file with the Securities and Exchange Commission such annual and other reports with regard to such securities as the Commission shall determine appropriate in view of the special character of the Bank and its operations and neces-sary in the public interest or for the protection of investors

(b) The Securities and Exchange Commission, acting in consultation with such agency or officer as the President shall designate, is authorized to suspend the provisions of sub-section (a) at any time as to any or all securities issued or guaranteed by the Bank during the period of such suspension. The Commission shall include in its annual reports to Congress such information as it shall deem advisable with regard to the oper-ations and effect of this section and in connection therewith shall include any views submitted for such purpose by any asso-ciation of dealers registered with the Com-

Mr. Speaker, the House Banking and Currency Committee will consider this legislation as its next item of business.

# Preschool Plan-School Election Result Ignored in New Board

EXTENSION OF REMARKS

# HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. ROUDEBUSH. Mr. Speaker. Mr. Ross Hermann of the Indianapolis News editorial staff has written an article depicting the results of Federal meddling in an Indiana school system.

The facts presented by Mr. Hermann, a most knowledgeable writer on these affairs, offer a sad commentary on the interference of the Federal Government with the wishes and desires of Indiana residents.

In order that all Members of Congress be apprised of the arrogant, wasteful and partisan activities of the Federal Gov-ernment in the area of education, I am submitting Mr. Hermann's article from the December 21, 1966, edition of the Indianapolis News, for the RECORD, under unanimous consent.

The article follows:

PRESCHOOL PLAN—SCHOOL ELECTION RESULT IGNORED IN NEW BOARD

(By Ross Hermann)

The Federal Government apparently dislikes the results of the last Indianapolis school board election.

That observation is prompted by the fact that Sargent Shriver's Office of Economic Op-portunity in Washington has put into sensi-tive positions in its preschool program here influential members of the losing side in the city's May 1965 board of school commissionelection, the Nonpartisans for Better Schools Committee.

In contrast, the victorious group, the Citigens School Committee, is unrepresented on the preschool program's board of directors, a federally financed offshoot of the Johnson administration's "war on poverty.

Citizens Committee leaders charge the "antipoverty" set-up, involving a sizable infusion of Federal funds, has the earmarks of an effort to build up the Nonpartisans for a second try at election to the school board.

President of the board of directors of Indianapolis Pre-School Centers, Inc., is Mrs. Amelia G. Cook, who waged a losing cam-paign for a school board seat as a nominee of the nonpartisans. Mrs. Cook, although rejected at the polls, heads an organization in charge of training preschool children from underprivileged backgrounds and, incidentally, directs disposal of an \$892,700 budgettwo-thirds of which goes for salaries.

Another member of the preschool centers

board active in the nonpartisans is Dr. F. Benjamin Davis, who served the unsucce ful campaign as second vice president,

Other preschool centers board members associated with the nonpartisan committee include Mrs. Pauline Morton-Finney and Mrs. James Spall.

No member of the board, on the other hand, is affiliated with the citizens school committee, according to its new president, Wallace S. Sims. Pointing to the citizens group as a dominant force in education since 1926 when it custed the Ku Klux Klan from school board control, Sims charges the pre-school setup is "totally unrepresentative of the entire community.

Circuit Court Judge John L. Niblack, pres ident of the citizens committee at the time

of its 1964 victory, makes the same charge. He calls the federally backed preschool board "highly unrepresentative and totally exclusive of the people who elected the present school board."

He charges further: "The Federal Govern ment has shown by the preschool program it is opposed to local self-government in Indianapolis and is doing everything in its

Mrs. Cook counters that political considerations did not enter into selection of preschool board members. "It wasn't organized on that level," she says. "It was organized on a service level."

The board's composition, in Sims' opinion, speaks for itself. "The preschool program," he says, "looks to me like an effective way to build up an organization for the next election by the use of Federal funds."

## Tribute to Air Force Systems Command

EXTENSION OF REMARKS

## HON, CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MATHIAS. Mr. Speaker, at a time when our national defense budget is reaching record heights, it is most heartening to know that the officers and men of our armed services are performing their vital tasks with full efficiency and economy. Recently a summary of the fine work of the Air Force Systems Command was sent to me by Mr. J. Cookman Boyd, Jr., of Baltimore, who visited several installations of that command as a member of a group representing the Maryland Academy of Sciences. Mr Boyd's comments on the hospitality and courtesy of Gen. Bernard A. Schriever, and the personnel under his command are worthy of attention by the Congress. As he concludes:

is

of

Suffice it to say, of the 30 persons in our expedition, none was left without a feeling of intense admiration for the personnel and manner in which they are carrying out their assignments.

Mr. Boyd's letter follows:

SAUERWEIN, BENSON & BOTD, Baltimore, Md., December 28, 1965. Hon. Charles McC. Mathias, Jr., House Office Building, Washington, D.C.

DEAR CHARLE: Recently it was my pleasure and profit as part of a group representing the Maryland Academy of Sciences to be the guest of Gen. Bernard A. Schriever, commander of the Air Force Systems Command, to visit the installations of that command at Andrews Air Force Base, Arnold Air Force Station, Brooks Air Force Base, and the installations at the cape in Florida.

Entirely aside from the courtesies extended and the excellent briefings we received, one cannot have such an experience without being impressed with the dedication, sincerity, and of particular interest to a reasonably conservative person like myself, a constant interest in economy wherever possible that runs throughout the personnel of this tre-mendously important organization.

It would be impracticable to try to discuss here the details which we found so interesting on our trip. Perhaps when we meet about the State there might be an oppor-tunity to speak in more detail. In the meantime, suffice it to say, of the 30 persons in

our expedition, none was left without a feeling of intense admiration for the personnel and manner in which they are carrying out their assignments in the Systems Comm Sincerely.

J. COOKMAN BOYD, Jr.

Must Back Viet Fight, Says Claude Callegary, National Commander of Disabled American Veterans

## EXTENSION OF REMARKS

### OF HON. OLIN E. TEAGUE

OF TEXAS IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, Claude Callegary, national commander of the Disabled American Veterans was interviewed by the Cincinnati Enquirer upon his return from Vietnam. The interview was carried in th eissue of January 7. I am pleased to insert a copy of this interview in the RECORD:

[From the Cincinnati Enquirer, Jan. 7, 1966] MUST BACK VIET FIGHT, DAV CHIEF SAYS HERE

(By Emil Dansker of the Enquirer staff) A man who knows war through his own

tragic experience spoke out here Thursday in full support of U.S. involvement in the conflict in Vietnam.

"Either we stand here or we fall here," declared Claude L. Callegary, of Baltimore, attorney and national commander of the Disabled American Veterans.

Mr. Callegary, seriously wounded in a plane crash while serving in the South Pacific in World War II, was in Cincinnati to announce a stepped-up DAV effort in sup-port of the war in Vietnam and on behalf of troops wounded while fighting with United States and South Vietnamese forces. These include-

A campaign that will involve the mailing of some 10 million "Support Our Fighting Men in Vietnam" bumper stickers and fund

Recomendations to Congress that Korean GI bill benefits be extended to Vietnam wounded.

A so-called "Amp to Amp" campaign to gather wheelchairs and artificial limbs for Vietnamese amputees.

The latter program, Mr. Callegary said, is based on the intimate knowledge of such a need by DAV members, many of whom are themselves amputees

He conceived the idea, he said, after visit-ing Vietnamese military hospitals, which he described as saturated with wounded and unable to supply enough artificial limbs.

This is especially important, he pointed out, since Vietnam is a nation in which the bicycle is standard transportation.

Mr. Callegary's tour took him from the United States to Hawaii last December 5 and then on to Formosa, Japan, Hong Kong, the Philippines and South Vietnam.

He received top-secret briefing along the way that added up, as he put it, to a view of the Vietnam conflict that "falls together just like a jigsaw puzzle."

When you visit these countries you find these people living in the shadow of Chinaand I deliberately don't say Red China because this seems to inflame some people which instead of concentrating on its own 750 million people has adopted an aggres-

China is diverting much of its resources

and its top talent to the building of a war

and its top talent to the balance machine, he charged.

"This is why the United States is fighting in Vietnam," he said. "If you control Vietnam you control Cambodia, you are just a short distance away from Manila, literally from every other place in the Pacific."

Mr. Callegary, a school dropout at 13 who later earned a law degree without gradwho inter carines a law adjace without grant the unation from high school or college, said he went to Victnam to fulfill a pledge made when he became DAV commander, to see for himself how the wounded are being treated.

In addition, he said, "after becoming in-terested in the idea \* \* \* I realized that in just going to Vietnam I would not really be

just going to vietnam I would not really be getting answers to the question I am being naked continually: "Why are we there?" The briefing schedule followed, he said, "and by the time I got to Saigon I was well briefed on why the United States is in Vietnam and why it is so important; why we have suddenly made this tremendous military commitment there."

He said the war begins to come home to the visitor when the incoming airliner ap-proaches the airport at Saigon in a spiral path intended to keep it over the city and away from snipers.

"Most people don't realize-I didn't realize it-that much of this area is under constant attack by the Vietcong.

He said there were electric lights in his hotel only intermittently because the Vietcong had cut the powerlines. Artillery, machinegun and mortar fire frequently could be heard by persons inside the city and aircraft could be men dropping flares at night to illuminate the area to keep the Vietcong from infiltrating.

"At some time during the day or night the B-52's would start dropping their bombs in an area 40 or 50 miles outside Saigon, making quite a bit of noise, doing a bit of damage, shaking windows," he recalled. "To the Vietnam people this is a way of

life, but to the visitor it is disconcerting."

The top man in DAV, which has its na-tional headquarters in Cincinnati, also had observations about-

Congressmen and Senators touring Viet-nam: "Those I met there were just as inter-ested as I was in getting the facts."

Understanding of the troops as to why they are there: "These people are better informed than we were. I think this is from seeing atrocities and fighting side by side with the Vietnamese and seeing their great devotion."

Reaction of the troops to antiwar demon-strations back home: "What about those guys back home?' they would ask. It's a hard question to answer because there has been a lot of confusion about these pro-testors."

Integration: "One of the interesting things that I didn't see in World War II was integration. There has been a big change. Colored men fight side by side with white men. They definitely have proven themselves to be good soldiers.

'There's no holiday time in Vietnam," he said regarding the visiting Congressmen.
"And when you went from one place to another they couldn't guarantee you'd come

He recalled one incident in which a truck convoy left the airbase at Da Nang, which he described as a fortress, and traveled only 5 miles before the lead vehicles were blown up.

The DAV leader said there is high regard among U.S. troops in Vietnam for statements of President Johnson on prosecution of the war and his promise that it will not become

another Korea.

In the meantime, he declared, DAV will increase its efforts on behalf of wounded veterans whose number goes far beyond the organization's 2.5 million members.

"There is no better organization to handle them than the DAV," he said. "We know what their problems are."

## Cooley Introduces War on Hunger Bill

EXTENSION OF REMARKS

## HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. COOLEY. Mr. Speaker, I have today introduced H.R. 12152, a bill establishing the legal basis and authority for a world war on hunger. This is a kind of war in which all Americans and millions of people around the world may join in common purpose. In view of the hope this legislation holds for hungry millions, and its direct relationship to the cause of peace, I am inserting in the Appendix of the Record, with the consent of the House, a press statement I issued upon introducing the bill describing its provisions and its purpose. The statement follows:

COOLEY INTRODUCES WORLD WAR ON HUNGER BILL

Legislation opening the way for a world war on hunger, through extension and expansion of America's food-for-peace program was introduced in the House today by Representative Harold D. Cooley, of North Carolina, chairman of the Committee ( Agricul-

The Cooley bill (H.R. 12152) would autho-

1. Deliberate use of the great agricultural production potential of the United States to help relieve hunger and mainutrition throughout the free world. Such relief no longer would be limited only to the distri-

bution of U.S. surplus food and fiber.

2. Deliberate employment of the agricultural commodities exported under this program to assist and encourage other countries in solving their own food problems.

The legislation would authorize an increase of \$1 billion a year over the next 5 years, including 1966, in the movement of food and fiber abroad under Public Law 480, the Foodfor-Peace Act.

Under Public Law 480 the United States has been exporting about \$1.6 billion a year of agricultural commodities, but such shipments have been limited to those commodities which were officially declared to be surplus under domestic farm programs designed to reduce the production of various

crops.

"In the legislation I am offering," Mr. Coolar said, "in order to undertake a world war-on-hunger, we would not limit our exports for foreign currencies under Public Law 480, or our donations to relieve immediate famine and other emergency, to surpluses. We would make available under these authorities any agricultural commodity which we have in adequate supply and which is needed in the recipient countries—and if necessary our farmers will be asked to produce these commodities deliberately for such export hungers.

export purposes.
"In order to make this changed emphasis possible, the basic provision of my bill is to strike out of Public Law 480 the word 'surplus,' in connection with agricultural commodities, whenever it accurs. This will make it possible for the Secretary of Agriculture to program for concessional sale or for donation, where necessary, any agricultural commodity grown in the United States, whether it is technically in surplus or not, and to adjust production of that commodity so as to

just production of that commodity so as to provide an adequate supply for all purposes." Public Law 480, which expires this year unless renewed, provides for sale of U.S. surplus food and fiber for the local currencies

of the recipient countries, where such sale does not interfere with established world commerce or normal trade in such commodities. It provides also for sale of such commodities for dollars under long-term contracts, for barter, and for donations to relieve famine and other emergency.

tracts, for parter, and for donations to relieve famine and other emergency.

"The objectives I propose in a world war on hunger," Mr. Cooley said, "do not require a new law nor a new agency. They require only a change in emphasis under the existing law, Public Law 480, and increased activity on the part of agencies and programs already in operation.

"I am immensely pleased and encouraged that the President, in his state of the Union message to the Congress on January 12, so eloquently stated these objectives I have proposed, in these words:

"This year I propose major new directions in our program of foreign assistance to help those countries who will help themselves. We will conduct a worldwide attack on the problems of hunger and disease and ignorance. We will place the matchless skill and the resources of our own great America in farming and in fertilizers at the service of those countries committed to develop a modern agriculture."

Mr. Coolsy declared:

"Our humanitarian instincts, the world population explosion, and the cause of peace, demand imaginative, sound and positive action at this time. The bill I have introduced today will be the vehicle for public hearings before the House Committee on Agriculture, exploring the whole area of food policy, as trelates to (1) human hunger and starvation now prevalent around the world, (2) to the worsening outlook inherent in the world population explosion, and (3) to the opportunities for improving the agricultural output of those nations where human needs are most acute.

"I expect the President at an early date to elaborate upon his state of the Union message, by sending to the Congress specific recommendations on world food and fiber policy. The President's suggestions, when they arrive, will be given first priority in the considerations by our committee.

"I personally am convinced that our world superiority in the production of food and fiber can be used to encourage great masses of humanity into peaceful pursuits, moving them toward self reliance and self sufficiency in the production of food and fiber. This should strengthen the bonds of friendship among free nations. Moreover, us I have said on many occasions, I am convinced that in the end bread will be more important that bullets in bringing peace to the world."

bullets in bringing peace to the world."

Mr. Cooley said the new emphasis upon world food and fiber policy he envisions through the bill introduced today not only would aid the recipients of our food and fiber but also would be beneficial to the economy and well-being of the people of the United States.

"I am not proposing," he said, "that we remove forthwith the restraints upon farm production now operating through voluntary farm programs. If we did this, we might again find ourselves buried in surplues. Neither do I suppose that the United States can feed everyone who is hungry around the world. But our farmers have mastered the arts of abundance and they can produce food and fiber, beyond our own needs, that can build the physical strength and morale of the populations in many countries where these people work in the direction of self-sufficiency in agriculture.

"The United States would expect to receive as great a return from its augmented exports of agricultural commodities as is reasunable and possible under the circumstances of each particular country.

"Food would be donated, where necessary If the country could pay for all or part of our exports in its local currency, it would be expected to do so. When its economy reached a level where it could pay in longterm dollar credits this would take the place of all or part of the local currency payments. From that it is to be hoped the country would develop into a commercial importer, as many of the countries which have received help under Public Law 480 have done.

"I expect this new emphasis I propose in the bill I have introduced to bring ultimateily a substantial expansion of the production of America's farms, lessening the need for 
programs to repress production. Our farmers would be the key to the whole program 
I envision. I would hope that this new 
program would keep millions of acres in 
production and employ on our farms many 
thousands of people who would be dislocated 
and crowded into our cities if we proceed 
with further restrictions upon agricultural 
output.

"I can see that this new emphasis will develop for the United States broad commercial markets around the world for our food and fiber in the years ahead. Moreover, it has been demonstrated that those countries which have developed their agriculture to the highest degree are the best customers abroad of U.S. agriculture and industry."

## National Police Academy

EXTENSION OF REMARKS

## HON. BILLIE S. FARNUM

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. FARNUM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from the office of the city clerk, city of Livonia, Mich., relative to a resolution adopted by the Council of the City of Livonia, urging the establishment of a National Police Academy.

OFFICE OF THE CITY CLERK,
Livonia, Mich., December 27, 1965.
Hob. Billie 5. Farnum,
House Office Building,

Washington, D.C.

DEAR ME. FANNUM: The undersigned, Addison W. Bacon, city clerk of the city of Livonia, does hereby certify that at a regular meeting of the Council of the City of Livonia, held on December 15, 1965, at 33001 Pive Mile Road, Livonia Mich., at which time and place the following members of the council were present: Rudolph R. Rieinert, Peter A. Ventura, Edward H. McNamara, John F. Dooley, Edward G. Milligan, Charles J. Pinto, and James R. McCann; absent: none; the following resolution was duly made and adonted:

"RESOLUTION 1207-65

"Resolved, That the council does hereby request that the United States of America consider the establishment of a National Police Academy for the purpose of giving professional instruction and training to State and local police enforcement officers on a tuition basis so as to increase the effectiveness of police enforcement, the uniformity of same, all of which will tend to improve the image of law enforcement agencies throughout the country; and the city clerk is hereby requested to forward a certified copy of this resolution to U.S. Senators Philip A. Hart and Patrick V. McNamara, to U.S. Congressmen Billie S. Parnum, and to U.S. Attorney General Nichalos Katzenbach."

The President declared the resolution adopted.

In witness whereof, the undersigned has hereunto affixed his signature on this 30th day of December, A.D. 1965.

ADDISON W. BACON, City Clerk.

## A Great Society or a Good Society?

EXTENSION OF REMARKS

## HON, GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. HANSEN of Idaho. Mr. Speaker, a Catholic layman, Mr. L. Brent Bozell, writing in the January 23 issue of "Our Sunday Visitor," the National Catholic Ecumenical Weekly, published in Huntington, W. Va., has drawn a sharp distinction between the so-called Great Society and what Mr. Bozell calls the Good Society. He also tells of the arrival of what some philosophers hail as the "post-Christian era."

While I am not of Mr. Bozell's church, Mr. Speaker, I commend him for his perceptive analysis of the trend our Government has been taking in recent years, and I join him in calling for a return to moral and ethical values—from which we have digressed so far—which were the guidelines of those who drew up our

Federal Constitution.

Mr. Bozell's article follows: Good Society: The Post-Christian Era

mutual respect, even reverence.

d

It is said—how truly, I-have no idea—that many persons cast their presidential ballots in 1960 primarily with à view to assuring to Catholics the status of "first-class" citizens. If that designation implies that a Catholic's influence on the American political order was thenceforth to be equal to that of any other citizen, there are some signs that the ambition has been realized. The late President, whose stature in the eyes of his countrymen seems to increase with each day since his assassination, was a Catholic; the Speaker of the House of Representatives is a Catholic; recently the incumbent President met in New York with the Roman pontiff on terms of

These developments have not, however, brought much satisfaction to me; and I question whether they are really a relevant measure of political influence. I think a political meaningful inquiry into a man's, or in this case, a group's, "influence" on society would to proceed along these lines: To what extent is the group's understanding of what the civil order should be and do (a) actually reflected in the day-to-day life of the society, or at least (b) acknowledged as the ideal and goal toward which the society purposively aspires? By this test, contemporary American society is frightfully un-Catholic; in-deed, is anti-Catholic in its bottom-most dimensions—and is becoming more so every day. So far have things gone that the de mise of Christian order has become in our time an occasion for public celebration: by philosophers, who hail the arrival of a "post-Christian era"; and implicitly by politicians, who agitate the Great Society.

ALARMING TENDENCIES

The last think I mean to suggest by this is that President Johnson and his supporters are morally censurable, in some sense in which his political opponents are not.

President Johnson is a man of his age, and while the Johnson administration has furnished a rhetoric and certain dogmatic overtones that were unknown to its predecessors, these are not emphases that a slightly postdated Eisenhower administration would find uncongenial.

Nor does the indictment imply a moral judgment against the concrete political programs associated with the Great Society—medicare, the antipoverty war, and so on. Indeed, one of the most alarming tendencies of our time, all too frequently indulged by exponents of the Great Society, is to make political disagreements the besis of a moral sentence—to remove political issues, as Prof. Gerhart Niemeyer of Notre Dame has put it, "from the realm of prudence to that of righteousness." It is not a practice that critics of the Great Society should imitate.

What is wrong with the Great Society is its vision-its own understanding, as contrasted with Christianity's, of what the civil order should be and do. But note that this vision is more a matter of tendency than of It is revealed partly by the attidoctrine. tudes and behavior which the Great Society either explicitly fosters or implicitly con dones, and partly by its recognizable indifference to the superior claims of another set of attitudes and behavior. It emerges from such minutiae as that when political slogans were being thought up for communicating the vision—and to be fair let us remember that slogans are devised less to please the than the buyers-the phrase that found favor was the "Great Society," not the 'Good Society."

There is much traditional wisdom regarding the configurations of the Good Society, which for Catholics is another name for the Christian order. To recall a few of theses, and to view in their light some of the values and practices that flourish in our country today, may be a useful way of grasping the tendency of the Great Society.

1. The good society, above all else, is Godoriented. Its institutions, its public life, its norms for private behavior—all are illuminated by the divine order, and subordinated to its requirements. No serious commentator would dream of describing modern American society in this fashion, either as it is, or as its present leaders are urging it to become. The ascendancy of the secular city is everywhere scknowledged, regretfully by a few, but triumphantly by many, not excluding, incidentally, some of the most influential Catholic intellectuals.

2. The good society facilitates personal virtue. Government itself will act sparingly in this area, but there are matters in which it can help other institutions foster conditions conducive to virtue. It will find ways, for instance, to clear the society's newsstands and movie houses of virulent obscenity, and if its highest Court is unable to distinguish between commercial prurience and the legitimate demands of freedom, its political branches will not supinely indulge the outrage.

3. The good society honors and fosters the family as the keystone of the social order. Here again its public authorities will recognize some responsibilities. They will not treat marriage as a contract less momentous than an agreement to buy a car. And another example: they will take care less schools and welfare programs usurp family functions, and in so doing dissolve those natural bonds of obligation that are essential to the integrity of the family.

4. It promotes Christian education. A society that enforces a compulsory school system (and tends to worship as its altar), and at the same time systematically excludes God and His Truth from the classroom—such a society may become "great" in a futile, pagan sense; but it can never be good.

5. The good society insists upon the principle of the limited state. Legitimate politi-

cal power is not sovereign; like any other aspect of the temporal order, it is answerable to the quite numerous constraints of the moral law. I do not recall when an authoritative spokesman for the Great Society has paused to make the point that there are some things that Government, in the very nature of things, can never do.

### ENGINE OF CONSOLIDATION

6. The good society rigorously enforces the principle of subsidiary. It will not tolerate a higher level of government doing what a lower level, or private institutions, can do as well or better. The Great Society, by contrast, is an engine of consolidation. Far from recognizing the self-aggrandizing tendencies of power-far from seeking to diffuse power, and to maintain effective barriers against its accumulation—the Great Society has become synonymous with the idea that no "problem" is too insignificant to be denied the attention of the Federal Government, and, should the White House deem the moment ripe for intervention, its ministrations.

7. The good society seeks to maximize personal freedom. While it does not accord absolute value to freedom, the good society is concerned lest the various expressions of individual freedom be stifled by collectives—by bigness. The proponents of the Great Society have so far displayed little interest in restraining the suffocting embrace of big business, big labor, big education, big science, to say nothing further of big Government.

8. The good society promotes, insofar as is-practicable, authentic self-government. It will therefore respect the spirit, as well as the letter, of the constitutional forms through which the society has chosen to register an authentic expression of the people's will. It deplores that parody of self-government that relies upon "consensuses" which are proclaimed from above, and to which the people, following the proclaimation, are asked to conform.

9. It respects the principle of hierarchy, alike in the political and social orders. While the good society abhors hierarchical atructures founded on false distinctions, such as race, it knows that no society based on doctrinaire equalitariansm can support a civilization, or do justice to the manifold and marvelous inequalities inherent in the human condition.

10. The good society enjoys civil peace. It can tolerate a certain amount of disorder—the usual depredations by criminal types, an occasional riot, a disruptive "demonstration." But when disorder has become characteristic of the society, when the streets of its cities, even its country lanes, can no longer be passed safely in the night, it has lapsed into a neobarbarism which is far more ominous for having emerged at an advanced rather than at an early stage of civilization. The custodians of the Great Society are by no means insensitive to the problem; but the Great Society's secular premises appear to have placed beyond the possibility of diagnosis and cure.

### TECHNOLOGY'S PRISUNER

11. Just as the good society subordinates man's concerns to those of God, just so it subordinates the artifacts of man to man. Technology, in the nature of things, is the servant of man. Yet in our time it is commonplace (though no less true for that) that man has become the servant of technology. And the Great Society's response is to breed more and better technicians. For the Great Society is also technology's prisoner, in spite of all its pretensions; and it may well be remembered by history as the society that could think of no better excuse for spending \$20 billion to go to the moon than that it knew how.

12. The good society does not presume. And so its efforts on behalf of the common good are always conducted with an eye to the limitations of the human condition. The good society is concerned with reducing poverty and disease and ignorance and ugliness and unhappiness. But it does not hold forth the prospect of "eliminating" such conditions from the human experience; it does not offer itself as an antidote to the Fall. Prof. Nils Brodin of the University of California has written of the student agitators on the Berkeley campus: "these young rebels have sought to " \* replace their cognition of the transcendence of God with a kind of immanence of meliorism inherent in man. This, the perfectability of man, is the cardinal error in their premise and constitutes the essentially anti-Christian propensity of their message." But if the students understand themselves to be "rebelling" on these grounds, I cannot imagine why, or against whom. For anyone who has listened attentively to the high priests of the Great Society will have recognized precisely this "propensity" in their message, and will thus have learned why contemporary philosophers can speak as confidently as they do of a "post-Christian era."

### Mickey Burnim

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Dallas Morning News for Monday, January 17, written by Mr. Thomas Turner.

Teague, Tex., has little more than 2,500 population but is the largest town in Freestone County. It is stories of this type which do not reach the headlines of the large papers as a general rule, but a story which needs to be read by more people than just the people of Teague.

Mickey Burnim is a scholar and an athlete, and as a result of popular vote of his classmates, is their leader.

NEGRO HEADS SENIOR CLASS AT TEAGUE HIGH SCHOOL

(By Thomas E. Turner)

TEAGUE, TEX.—The president of the senior class at Teague High School is a smart young man, naturally. An honor-roll student.

He's a good athlete, naturally. Quarterback of the team until he disclocated a shoulder.

He's quiet, but articulate, naturally. Even if he is probably the youngest member of his class.

He's Mickey Burnim, 17 years old as of Wednesday, January 19. He's a Negro, which is certainly out of the ordinary around Teague High School.

Teague is a blackland town with a strong Old South flavor. With slightly more than 2,800 citizens it is the largest town in Prestone County. Just west of the Trinity River, it's a fringe of central cast Texas.

It started integration last September by transferring the whole senior class of the Negro high school, Booker T. Washington, to traditionally all-white Teague High School. One of the 30 Negro students who made the historic move was 16-year-old Mickey Burnim.

The first week of school at Teague High School all the seniors met to elect a president. There were about four candidates nominated, including some of the city's most popular and well-to-do white youths. Mickey Burnim was surprised when he was nominated. The senior class has 75 members.

nominated. The senior class has 75 members.
"I was certainly more surprised when I was elected," he recalls solemnly. "I could hardly have been more surprised by any-

While the first integration moves have gone very smoothly in Teague it must have jarred some of the community when the news of Mickey's election was spread. If so, it never caused any trouble.

Says Mickey, "Everybody has been just wonderful. They have treated me as nice as can be. No trouble of any kind. I could not have been better treated."

He attributed much of that happy situation to football. Since the entire Negro senior class was moved to Teague High School, many football players were involved. At times the Teague High School Lions had nine Negro players on the field at once.

The quarterback, through the first five games, was Mickey. He was injured in the sixth game, against Marlin, and was out for the remainder of the schedule.

His father, Arzo Burnim, was head basketball coach and a football assistant coach at Booker T. Washington when the integration move was made. He now is an assistant football coach at Teague High School and its first full-time Negro teacher. Mrs. Burnim is also a teacher. They have a daughter in junior high and one in elementary school.

Mickey is an honor student in economics. He plans to attend Stephen F. Austin State College at Nacogdoches and major in international economics. He'd like a governmental career in that field.

Bill Hancock, Teague High School principal, says, "Mickey is certainly one of our best students. He has been completely accepted as such, with no extra problem."

It's a story not known outside of Teague. It isn't the kind that spawns headlines these days.

## Administration Doing Masterful Job Withholding Information From the American People

EXTENSION OF REMARKS

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. BERRY. Mr. Speaker, the President's request for a supplemental appropriation of more than \$12 billion for emergency financing of the war in Vietnam is evidence that the administration is doing a masterful job of figure juggling in withholding information from the American people.

The request for these essential, urgently needed funds was deliberately delayed until all the Great Society programs had been fully funded in the last session. Now we are handed the bill for our defense efforts, knowing it cannot be reduced.

The President's request for a speed-up in tax collections in this election year is another example of his figure juggling. Corporate and personal income tax collections would be accelerated, self-employed individuals would be asked to pay

Social Security taxes on a quarterly basis rather than annually as at present, which would thus provide an immediate increase in revenue and make the fiscal picture temporarily appear brighter.

## As the Twig Is Bent

EXTENSION OF REMARKS

## HON. ROBERT L. F. SIKES

OF PLOBIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. SIKES. Mr. Speaker, I have read with much interest an article, "As the Twig Is Bent," by Col. Harry C. Archer, U.S. Army, which appears in the February issue of the magazine, Together, and I feel that it will prove equally interesting to my colleagues. I submit for reprinting in the Congressional Record Colonel Archer's article, which follows:

As the Twic Is Bent

(By Harry C. Archer, colonel, U.S. Army)

Strange names once again are spreading across American headlines and creeping into the American vocabulary: Da Nang, Vietcong, and the Ho Chi Minh Trail. They are familiar because tens of thousands of our soldiers, airmen, and Marines are pouring into beleagured Vietnam. The buildup of combat forces there has brought increased draft calls and may lead to the mobilization of Reserve and National Guard units.

The demands of national security made upon the young men of our Nation are of obvious and direct concern to parents, clergymen, civic leaders—indeed to all Americans.

The first thought, of course, is for the

The first thought, of course, is for the physical safety and well-being of these lads. No less important is the concern over the effects of military service upon their moral fiber. Will they be coarsened and corrupted? Or will they emerge as self-reliant, better citizens?

As a soldier, a Regular Army officer, I have my own views. To illustrate, let me present an imagined but not unbelievable case:

an imagined but not unbelievable case:
The young soldier was not particularly drunk when he left the cafe. Just happy. He had had only a few beers. The girl lounging outside strolled up to him and struck a provocative pose. They chatted a few moments and then, with a shrug, the boy nodded and together they set off down the dimly lit street. Ten minutes later he was dead. They had not meant to kill him, just rob him. But there had been a scuffle, and now the soldier was very, very dead, lying in a foul-smelling alley thousands of miles from home and family.

Would such an incident have happened if the boy had not been drafted into military service? Of course that particular incident would not have occurred, but what about one like it? Would he have been as likely to drift off in an alcoholic haze with some other such girl? Was there, perhaps, some flaw in his character from earlier days, or did the Army cause him to follow this path?

After all, everyone who has read "From Here to Eternity," knows what the military services are like—sex-crazed, hard-drinking, profane, and completely controlled by sadistic sergeants and incompetent officers. Such an environment is bound to corrupt.

Balderdash. Let me lay it on the line for you, parents of America. With but a few exceptions, the boy coming out of the military is the same basic product that you created. So you want a good, clean kid to come home from the Army? It is easy. Just put a good, clean kid into the Army.

I am not being flippant. I have been in the Army more than 20 year, and I have seen the American serviceman at work and at play in the United States and in nearly 30 foreign lands. Bome of them started using narcotics while others started building an orphanage. One man dealt in stolen black-market goods, and the Army dealt him a dishonorable discharge. Another from the same platoon attended night school, receiving a high school diploma with his honorable discharge.

What made the difference? They were in the same army. Could the difference lie in the moral training they received before they came into the service? If it were not so trite, I would answer my own question with that old chestnut about "As the twig is bent." On second thought, I'll say it anyway. As the twig is bent, so grows the tree, and you had better believe it.

### FOUR KEY FACTORS

In the military, there appear to be four main factors that determine whether a twig will bend or grow straight—factors that determine how each young man will respond to the challenges of military life. It should come as no surprise that all four are directly connected with the home and community from which he came. The things which shape a lad's early life also tend to shape his career in uniform.

Here are the four factors:

Religion: The truly devout soldier is rarely in trouble. Even those who have relaxed somewhat in their church attendance are good risks if they have a background of sound Christian or Jewish training. Respect for the laws of God and man, as taught by the religious faiths, is the firmest foundation upon which to build a good soldier and a good citizen. The boys who take part in church activities and who have learned to seek their chaplain's guidance seldom see the inside of a military policy station.

the inside of a military police station.

Family: The products of unhappy or broken homes have some tendency to have unhappy, broken military careers. I do not mean that such a boy is an odds-on favorite to be a troublemaker. The vast majority of all soldiers serve honorably and well. Only a small handful are given dishonorable discharges. I simply mean that a boy who grew up with the love and guidance of two well-adjusted parents has a better chance of a satisfying career.

Education: The better the education, the better the soldier. There is a direct, almost invariable, connection. The reasons are

easily understood.

First, the well-educated soldier is assigned to better, more interesting duties. Often he is selected to attend highly technical schools which not only qualify him for promotion and better assignments but also prepare him for good jobs in civilian life. The educated soldier knows that receiving such opportunities depends in part upon his personal conduct.

Second, the better schooled soldier has a clearer understanding of why he is in the Army, why there must be a draft. If he is stationed in Europe, for example, he has some knowledge of American foreign policy and of why our Government believes that U.S. forces must be maintained there. Knowing these things, he has a sense of purpose and accomplishment that is not fully shared by his less fortunate fellows.

Last, he tends to associate with other well-educated soldiers. As a group, they are the ones most frequently seen in the post library, the chapel, the education center, and the craft shop—and more rarely seen in the nightclube and bars that spawn disciplinary problems.

The Girl Friend: If a boy has won the love or affection of a girl back home, he is

more likely to be a good soldier. If they are engaged, this influence is even stronger. A picture in the wallet, letters ending with little X's and O's—these are forces which never should be underestimated. The boy who wants a particular girl to be proud of him knows she will not be proud if his service is dishonorable. The lad in love is more apt to be economy minded. He saves his money for their future home, for gifts, or to squire the girl around when he returns home on leave. Such a soldier will spend less money, hence less time, in the cabarets that frequently cluster about military installations.

The letters from this all-important girl are a factor in themselves. If they are affectionate and chatty, speaking of familiar places and people, they are a strong link with all the more wholesome, desirable things in his life.

This matter of love is a double-edged sword, however. If the girl spurns him or turns to another, strange forces are sometimes loosened. While one boy might sit in his barracks to brood over his fate, another may embark upon a wave of rashnees, turning to the consolation of alcohol or the arms of some other, too readily available girl. Which course he follows is determined by the other factors of religious training, homelife, and education.

Note that I have not mentioned such things as the soldier's race, social, or economic position, his national origin, or rural versus urban background. Perhaps statistical study would reveal that some of these are important, but in my experience they are not. Give me a religious, educated boy from a happy home with a wholesome girl in his heart, and I have a good soldier. I do not care if he is black, white, or purple, rich or poor; he will serve honorably and well and will return to his community as a good man and a good citizen.

### PEAR OF CORRUPT INFLUENCES

Why do so many people fear the effects of military service on their sons or relatives? To my mind, the reasons are clear. In the first place, there are the newspaper headlines: "Soldier Rapes Teenager"; "Five Marines Killed in 100-MPH. Police Chase." How often do you see headlines blaring, "Salesman Robs Bank" or "Busdriver Slays Rival"? Rarely. And it is not because all salesmen and all busdrivers are above reapposed.

Exceptions are made, of course, when a civilian's crime is completely inconsistent with his occupation: "Choir Director Arrested in Opium Den" or "Bank President Charged With Shoplifting." As a rule, however, civil occupations are not headlined. Why the difference? I believe it is because

Why the difference? I believe it is because of the uniform. It provides a visible identity found in few other occupations. Policemen also wear uniforms, and I can well picture a headline proclaiming, "Policeman Slays Wife," but I cannot imagine one announcing, "Grocer Killed in Three-Car Accident." In short, I believe the headlines give a grossly distorted picture of the serviceman's standard of conduct.

There is a second, more concrete reason for parents to fear the corrupting influence of military life. After all, Jimmy did not smoke or use swear words before he went into the Army, and now he does both. Proof positive. Well, what would have happened to Jimmy if, instead of entering the Army, he had left home for the first time to attend some large university or to work for a construction company? Would he then have been less likely to smoke and say dammit? No matter where he goes, a lad will pick up superficial signs of toughness when he goes out into the world of men. I do not believe military life is any worse or any better in this regard than a thousand other occupations.

OBLIGATIONS OF THE MILITARY

It may appear that I wish to absolve the military services of any responsibility for the conduct of our citizen-soldiers. That is not my desire nor is it the desire of any officer I know. The service branches have a deep feeling of obligation to do their share in preserving and further developing the moral stamina of their men. The reasons are both idealistic and practical.

On the idealistic side, we in the services do not regard ourselves as being basically separate or different from the rest of the American community. As children, we, too, played marbles, went fishing, came home with bloody noses, and loved the smell of burning leaves. Putting on a uniform did not mean that we suddenly became indifferent to all but the military aspects of American life. We are citizens as well as soldiers, and we feel civic as well as military obligations.

To insure the protection of our Nation.

To insure the protection of our Nation, the President and the Congress have found it necessary to entrust a large number of American youth into our hands. We would be betraying that trust if we were indifferent to the moral, spiritual, and civic development of these young men. A great deal of time and effort goes into meeting those obligations.

Practical considerations lead to the same conclusion. From a purely military stand-point, we want men of strong moral character—for many reasons. The Army has found that the good citizen, with all that that implies, makes the better soldier. Of course there are some men without fear of God or love of man who also make good fighters. But military leaders prefer the soldier who is trained, educated, knows why he is fighting, and is convinced of the justice of his cause. Another, not inconsequential consideration, is the fact that the trained, disciplined sol dier has a much better chance of survival. He lives to fight another day. This is not only a matter of concern to the individual soldier but also to his commander, who knows that one man with one weapon may the difference between defeat and victory

Again, from a purely practical standpoint, it takes literally thousands of dollars to take a raw recruit and change him into a trained soldier. Our military and civilian superiors demand that we get the best in military posture out of each dollar provided by the taxpayers. We do not want that expensive soldier to spend one single hour in confinement.

At the relatively small post where I now am stationed are two chapels, a library, three clubs, a craft shop, an education center, a post exchange, a symnasium, skeet shooting and golf driving ranges, a bowling alley, a theater, and a baseball diamond. Why all this? It is to give each soldier wholesome outlets for his spare time to attract him to stay on post rather than to seek outside diversions.

These facilities, by themselves, would not accomplish the purpose. There must be the human touch. From the time an inductee enters the Army until he leaves, there is frequent counseling and guidance by his unit commander, chapiain, and senior non-commissioned officers. There are regularly scheduled training periods for character development, lectures on social diseases, and discussions of world events and national policies. My battalion commanders (lieutenant colonels) personally speak at least once a month to every man in their command about standards of conduct. Their company commanders do the same once a week.

The Army commander in my area, a fourstar general, has made it abundantly clear to all his subordinates that he considers control of the soldiers' conduct, both on duty and off, one of the big indications of a commander's competence. In times past, I can recall occasions when the armed services have been forced to take positions that ran counter to the social and economic desires of the civilian community. Young men have been taken from their homes and jobs to serve in uniform. Nike missile sites have been built on land needed for other facilities. Tax funds which might have built schools and roads have been diverted to buy planes, tanks, and ships. In today's world, these things are unfortunate but unavoidable.

But on the matter of the moral fiber of America's young men, there is no conflict of military and civilian aims. We in the military hope to obtain decent, intelligent, civicminded youths to serve with those of us who have chosen a career in uniform. We hope to return them to their homes changed, if at all, for the better.

## President Asks U.S. Part in Asian Development Bank as Another Constructive Effort Toward Lasting World Peace

EXTENSION OF REMARKS

## HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. ROYBAL. Mr. Speaker, I believe it is highly significant that President Johnson chose to make his first special message to this session of Congress a request for approval of U.S. participation in the newly created Asian Development Bank.

It is significant in my opinion because it indicates the top priority that the President places on the search for peace, and his desire to demonstrate again that the United States would much rather spend money and exert our energies on peaceful economic development than on the requirements of military defense.

Californians, both for historic and geographic reasons, fully understand and appreciate the President's desire that America play an important leadership role in promoting the cause of international cooperation and in building the foundations for peace among the nations of the world.

Located as we are on the shore of the great Pacific Ocean, and with many of our citizens having close family ties with the people of other Pacific nations, we Californians have an immediate and personal interest in establishing good, constructive relations with our neighbors in the Pacific community and in doing our full part to promote their best interests.

But all Americans can agree with President Johnson when he spoke of his "urgent belief that the works of peace in Asia—the building of roads, dams, harbors, powerplants, and all the other public and private facilities essential to a modern economy—are vital to peace in the entire world."

And certainly no one would challenge the truth of the President's statement that—

An Asia torn by conflict, depressed by hunger, disease, and illiteracy, deprived of the means and the institutions that alone can

offer hope to her people, must ever be a source of turmoil and anxiety for nations beyond her borders, as well as those within.

But Congress, by acting promptly to approve our active participation in the Asian Development Bank, can help express "the will of Asia to develop her manifold human and natural resources, and thereby to lift the burden of poverty that has been the lot of her people since ancient times."

In his eloquent message, President Johnson described the Bank as "an avenue of good will and sound policy for the United States." He continued:

For our destination is a world where the instinct for oppression has been vanquished in the heart of man. Given the means to work, to build, to teach, to heal, to nourish his family, man may yet achieve such a world—if not in our time, then in the generations that will succeed us on this planet.

Recalling his speech last April in Baltimore, the President spoke again of our dream of a world "where all are fed and charged with hope," and he repeated his promise that "we will help to make it so."

In urging the Congress to adopt his proposal, Mr. Johnson declared:

Our partnership in the Asian Bank is a step in keeping that pledge. It brings us nearer that day when our resources—and the world's—can be devoted to the constructive works of peace, not the destructive forces of war.

Mr. Speaker, I sincerely hope that the House and Senate act without delay to endorse American participation in this new self-help development effort—this unique adventure in international cooperation.

Sixty-five percent of the Bank's \$1 billion capital is to be put up by 19 Asian countries, and the rest by the United States, Canada, Belguim, Denmark, West Germany, Italy, the Netherlands, and Britain.

The \$200 million U.S. share is equal to that of Japan—the other largest single contributor.

In my opinion, the establishment of this Bank is an important step, because it will help create a nucleus around which Asian cooperation can grow. And it will follow in the successful footsteps of the World Bank, the Inter-American Development Bank, and the recently formed African Development Bank.

We must not fail to take advantage of this golden opportunity to unite our resources with the people of Asia in a common effort to achieve those goals which are the dream of all mankind.

Because of its importance, therefore, Mr. Speaker, I would like to include at this point in the Congressional Record the text of President Johnson's special message to Congress on behalf of U.S. participation in the Asian Development Bank.

The message follows:

U.S. Participation in Asian Development Bank—Message From the President of the United States (H. Doc. No. 361)

To the Congress of the United States:

I recommend that the Congress promptly

approve U.S. participation in the Asian Development Bank.

This new institution expresses the will of Asia to develop her manifold human and natural resources, and thereby to lift the

burden of poverty that has been the lot of her people since ancient times.

Conceived and sponsored by Asians, the Bank is open to all countries in that region, regardless of ideology, who are members of the United Nations or its specialized agencies. Of its \$1 billion authorized capital, 65 percent is to be subscribed by nations in the Asian area.

U.S. representatives—led by Mr. Eugene Black and a distinguished congressional delegation—signed the Charter of the Asian Development Bank at Manila last December 4. But only the Congress itself can authorize the final acceptance of U.S. membership.

That is the action I request today.

I take this step because of my urgent belief that the works of peace in Asia—the building of roads, dams, harbors, powerplants, and all the other public and private facilities essential to a modern economy—are vital to peace

in the entire world.

An Asia torn by conflict, depressed by hunger, disease, and illiteracy, deprived of the means and the institutions that alone can offer hope to her people, must ever be a source of turmoil and anxiety for nations beyond her borders, as well as those within. Because this is so—and because we have recognized our moral obligation to our brothers on this earth—the United States has committed itself over a decade and a half to major assistance programs in Asia, making food, development loans, and technical assistance

available to those who required our aid. We have sought no American empire. Our purpose has never been to exploit, but to encourage; not to master, but to magnify the works of those who truly served the Asian people.

Now the Asians themselves have formed an institution by whose hand new works of peace may be accomplished. They have committed precious resources to that institution. They are determined to join in a cooperative endeavor, uniting the talents and resources of diverse cultures in pursuit of a common vision of progress.

They have asked us to join with them—to subscribe 20 percent of the institution's total capital—and thus to help make that vision a reality.

I recommend that we respond quickly and affirmatively.

17

This proposal is neither utoplan nor vague. It is the product of careful deliberation by the foremost experts in international finance. It rests solidly on the lessons learned in building the World Bank, and other organs of international finance, into the powerful forces for good they are today. It will take its place among regional financial institutions alongside the Inter-American Development Bank and the newly formed African Development Bank and the newly formed African Development Bank.

Loan terms will be similar to those offered by the World Bank. Project justifications will be as rigorous as prudent management requires. Special efforts will be made to develop and finance projects involving more than one country so that the Bank may be an agent of unity as well as development.

The Bank will reinforce existing aid programs in Asia, and thereby multiply their effectiveness. It will link its resources—financial and human—to such institutions as the Mekong Coordinating Committee, already joining the countries of the Mekong River Basin in major water resource projects.

Its charter permits it to administer special development funds, contributed by either member or nonmember countries. Thus it will serve as a channel for funds beyond its own resources.

These advantages are developed further in the Special Report of the Secretary of the Treasury on the Anian Development Bank which accompanies this message. TIT

The largest share of the Bank's subscriptions will be provided by Asians themselves.

The United States has been asked to pledge \$800 million, equally divided between paidin and callable shares. The paid-in shares are payable in five equal annual installments of \$20 million each, half of which will be in cash, half in the form of a letter of credit.

The callable shares will constitute a guarantee for borrowings by the Bank in private capital markets. They would be drawn on only in the unlikely event that the Bank were unable to meet its commitments.

Our pledge is equaled by that of Japan. India has pledged \$93 million; Australia another \$85 million. More than \$100 million has already been pledged by European countries and Canada, and further pledges may be made.

Joint action with these major subscribers provides another instrument of cooperation between the donors of aid. That is a long-sought goal of the United States, for it offers the most efficient use of all the free world's aid resources.

Finally, our commitment to the Asian Bank should have little negative effect on our balance of payments. Procurement financed through the Bank's regular capital will normally be limited to member countries. Purchases of U.S. goods and services will approximately offset the dollar outflow occasioned by our \$10 million annual cash subscription.

TV

The Asian Development Bank is a necessity—not a luxury.

It was needed yesterday. It is needed even more today. Tomorrow, when the demands of Asia's millions on her struggling economies are more pressing still, it can mean the difference between opportunity and chaos.

It is practical and imaginative. It is the product of Asian initiative, and it offers the nucleus around which Asians can make a cooperative response to the most critical economic problems—national and regional.

Because it is all these things, it is also an avenue of good will and sound policy for the United States. For our destination is a world where the instinct for oppression has been vanquished in the heart of man. Given the means to work, to build, to teach, to heal, to nourish his family, man may yet achieve such a world—if not in our time, then in the generations that will succeed us on this planet. I believe the Asian Development Bank is an essential tool in providing the means of life for hundreds of millions of human beings who live between the Caspian Sea and the South Pacific.

It will become a reality when 15 signatories, 10 of them Asian, have ratified the charter. It appears now that this will be achieved by early spring. Our own constructive influence in the organization and management of the Bank will be increased if we can become active at its very beginning.

Last April in Baltimore I spoke of our dream of a world "where all are fed and charged with hope." I promised that "we will help to make it so." Our partnership in the Asian Bank is a step in keeping that pledge. It brings us nearer that day when our resources—an. the world's—can be devoted to the constructive works of peace, not the destructive forces of war.

I urge the Congress to adopt the Asian Development Bank Act. Asia's future—and the world's—requires it.

LYNDON B. JOHNSON.
THE WHITE HOUSE, January 18, 1966.

## Pratt & Whitney Celebrates 40th Anniversary

EXTENSION OF REMARKS

## HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. ST. ONGE. Mr. Speaker, one of the great industrial enterprises in Connecticut, the Pratt & Whitney Aircraft Division of United Aircraft, recently celebrated its 40th anniversary. First established in 1925, this company has become a great leader in American industry over these past 40 years and has helped our country in its defenses. It employs about 70,000 people and over the years has had a tremendous impact for the good of the Connecticut economy.

I wish to take this opportunity of extending my congratulations to Pratt & Whitney, its very able and progressive industrial leaders, and all its employees for their success and achievements. The State of Connecticut is very proud that this firm had chosen our State as its home, and we are providing it with the necessary skilled help needed for a great enterprise of this kind.

In connection with this anniversary, the company published a journal containing reprints of articles from Connecticut newspapers commemorating the anniversary. I have selected two of these for insertion into the Congressional Recorp: one, describing a tour of the Pratt & Whitney plant in East Hartford, written by Mildred Zalman; the other, describing the company's Washington office and its activities, written by William A. Garrett. They are as follows:

Magic Machines: Plant Tour an Eyr-Opener to Layman

### (By Mildred Zaiman)

I took a guided tour of the Pratt & Whitney aircraft plant in East Hartford and saw some amazing machines.

I saw computer-fed machines which are told what to do by tape.

I saw electrochemical machinery and electrodischarge machinery which perform precision work.

I saw the Zyglo test machine which has X-ray eyes to detect hidden imperfections in metal.

I saw the intricate electron beam welding apparatus which bombards pieces of metals into desired submission.

I saw the concrete-block test cells and heard the roar of powerful jet engines as they were subjected to rigorous tests.

I saw the might of Pratt & Whitney aircraft and in a nontechnical and nonmechanical fashion, learned about the jet engine power that leads the world.

Before admittance to the plant, I had to stop in an office manned by a crew of guards where I exchanged my visitor's badge for a higher level one—only after I had signed my name asveral times, and filled out a form which required information about my age, place of birth, and whom I was representing.

My guide eyed my high heels akeptically and said I'd never make it. The plant is nine-tenths of a mile long and the floor is pitted here and there with small apertures which might catch thin heels, he said. So he arranged for car service, and I was chauffeured in an electric buggy, one of two which are used for tour purposes.

The buggy resembled an overgrown golf cart with three rows of seats wide enough to seat three on each. A microphone was attached in the front for the benefit of backseat passengers who might have difficulty hearing above the clack, roar, and grind of the machines.

### TAPE-RUN MACHINE

The aisles were wide and uncluttered but we had to pull to the side several times to allow plant vehicles the right of way. There were all kinds. Most were bright yellow fork lift trucks dispatched by radio, which possessed two long fork-like prongs about 10 feet long by about a foot wide that protruded in the front on either side of the trucks. There was more conventional factory transportation and a lot of king-size tricycles with baskets hung on the rear for small stuff. There was one vehicle with treads like a tank.

The first machine we stopped to inspect was one operated by a computer. It was huge and though it was started and stopped by an operator, it responded to electrical commands issued by a tape. The company has about 100 of these machines, more than any other factory in the country.

A short ride away we mame to electrochemical machinery and electrodischarge machinery. They must be quite complicated to the uninitiated because in one area nearby a sign said the machine removes metal "through the principles of electrolysis according to Farraday's law established 150 years ago. The law states that if direct current is applied to two pieces of conductive metal submerged in a suitable electrolyte, metal will be removed from one and deposited on the other."

I didn't question the explanation but assumed the machine did its delicate work with the aid of electricity.

The electrodischarge machine did finer work than the other. On one side was a bath of salt water used as a conductor, on the other, a silicone and oil mixture used for flushing and as protection against electric current going where it wasn't wanted.

About a quarter of a mile away we stopped briefly in front of a large rectangular machine which I was told was a Zyglo test machine. This was a "detective" and through a chemical and photographic process detected flaws in metals deep in their innards, hidden from ordinary inspection.

### FUTURISTIC FUNNELS

Along the way there were hundreds of different kinds of machines, all whirring and clacking away, turning out intricate pieces of metals to fit into the larger scheme of things. I didn't know a tool from a die, but they were fascinating to watch. Some of the machines almost reached to the ceiling. Many had curiously twisted pipes and stacks bigger than the trunks of huge trees which spiraled up to the ceiling in a futuristic fashion. There were machines which moved on tracks, gigantic pressure to force metals into necessary shapes, there was a huge heat treating area, the largest in the country.

In a separate area I examined an electron beam welding machine used to subdue hard-to-weld metals. The electron beam operates in a lead-lined vacuum chamber and has a velocity of electrons of 102,000 miles per second. The single beam which shoots out from a small hole in the top-center of the machine can melt pure tungsten at 6,100 degrees. The machine is relatively new—1960 vintage.

### JET ASSEMBLY LINE

We next rode into the assembly plant where the thousands of parts are put together to make the whole. It was a huge srea, lined from one end to the other with jet engines of all sizes in various stages of assembly. Some of the engines were surrounded by elevators which went up as the engine grew so that it was accessible to workmen. All were on dollies for maneuverability. Some of the jets were in the initial stages of assembly where the low compressors were being installed and tested. Some were quarter-finished, some half-finished. And in one part of the plant there were about seven or eight giant jets ready to be tested. They were magnificent pieces of engine wizardry, aweinspiring in their naked exhibition of harnessed power.

The last stop was at the shipping area where the jets were wrapped in heavy plastic cavers for shipment by air to their destination. Engines not shipped by air, or not destined for immediate use, were placed in heavy, well-protected containers.

On our way back, we passed a room from which crackles of electricity came. The sign on the door said we were not allowed in without a No. 6 badge. Lacking the necessary credentials, it was left unobserved.

credentials, it was left unobserved.

The buggy was parked. A plug was inserted to recharge its batteries. I again entered the guard room, turned over my plant admittance badge, reclaimed my visitor's badge, and left.

It was a fascinating look into the world of the mighty jets.

### FIFTY-MAN STAFF KEEPS TAES ON CAPITAL (By William A. Garrett)

Washington.—United Aircraft Corp.'s headquarters here has become an important part of the company's marketing operations since its establishment 3 years ago.

The headquarters at 1725 DeSales Street, across from the historic Mayflower Hotel, is bright and cheerful but conservatively furnished. Each United Aircraft division has its own set of offices there, so arranged as to provide easy and informal physical communications.

The corporation and its operating divisions and subsidiaries fill a floor and a half in a nine-story structure. Such divisions as Pratt & Whitney Aircraft, Hamilton Standard, and Sikorsky were scattered about the Nation's Capital for several years prior to their concentration under one roof.

With increasing defense and space spending, coupled with ever more complex Government procurement and contractual procedures, United Aircraft's offices here have been performing the dual functions of sales and information clearinghouse.

United Aircraft says the Washington headquarters is a microcosm, in many ways, of the corporate operations in Connecticut. Each division operates as a separate entity, reporting directly to its divisional home office.

The chief here is Joseph M. Barr, a vice president of United Aircraft, who provides general guidance, liaison and coordination. His staff is modest in comparison with other major space and defense firms maintaining offices here.

Mr. Barr has an assistant who also serves in a public relations capacity, a secretary who doubles as office manager, a secretary who doubles as security officer with control of the many classified (secret) documents handled in the office, a switchboard operator and a mail clerk.

Employees, including all in seven operating divisions, United Research Laboratories and United Aircraft International, number about 50

The staff's Washington "beat" primarily takes in covering developments in the National Aeronautics and Space Administration, the Federal Aviation Agency, the Atomic Energy Commission, the Defense Department, State Department, Commerce Department, and numerous lesser Federal agencies.

Besides, UAC says, frequent contact is kept with the Washington headquarters of such organizations as the National Security Industrial Association, the Aerospace Industries Association, and the Air Transport Association, and with offices here of such commercial customers as the Boeing Co., Douglas Aircraft Co., Lockheed Aircraft Corp., and North American Aviation.

"Of course," Mr. Barr points out, "we enjoy

"Of course," Mr. Barr points out, "we enjoy cordial relations with the congressional delegation from Connecticut and the other State in which we have operations, and there is an exchange of information of mutual interest.

"Other than that, however, our visits to Capitol Hill are confined to attendance as observers at congressional hearings dealing with aviation, space or defense subjects."

Mr. Barr explains that proposed legislation affecting the aerospace industry is the concern of trade associations such as NSIA and AIA and not of individual company representatives.

Because United Aircraft does an annual business of over \$100 million in foreign sales, Washington is an important market link. All countries recognized by the U.S. Government have embassies here, providing a ready source of export information.

In addition, the city is visited frequently by trade delegations from foreign nations. As one of America's top convention cities, Washington also is the backdrop for a steady stream of conferences, seminars and meetings on space, aviation and defense. Attending such sessions is a regular assignment for United Aircraft personnel.

A typical example was the Air Force Association's annual fall meeting in midSeptember, featuring aerospace development
briefings and displays, and an international
aerospace education seminar. Here the Fratt
& Whitney Aircraft TF30 engine, which
powers the General Dynamics F-111 plane,
was shown publicly for the first time.

Mr. Barr, who was president of United Aircraft International until he was promoted to vice president of the parent corporation, came to Washington with a broad background of marketing experience for the whole range of UAC products. UAI represents all operating divisions in foreign sales efforts so Mr. Barr was familiar to an unusual extent with the wide capabilities of the corporation facilities.

James A. Shinkoff, head of Hamilton Standard's Washington office, has the longest Washington service among UAC's divisional menagers here. A former service representative for Hamilton, Mr. Shinkoff came here 15 years ago to set up a 1-man office.

The Washington representatives of all United Aircraft divisions have the challenging job of keeping abreast of developments in a world leaping ahead with scientific advances in the air, on the ground and under the sea.

## Why Crime Is Less in Chicago?

EXTENSION OF REMARKS

## HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. PUCINSKI. Mr. Speaker, in an editorial the Chicago Tribune today called the attention of the country to the magnificient work being performed daily by the men of the Chicago Police Department in protecting one of our largest cities.

Chicago today is setting the standard for police departments throughout America and the world,

Chicago's Mayor Richard J. Daley, deserves the gratitude of all Americans for the leadership and inspiration he has provided in helping to make Chicago a model American city. It was Mayor Daley who persuaded Orlando W. Wilson to bring his considerable talents to the task of supervising Chicago's enormous police department and Superintendent Wilson has been more than equal to the responsibility.

The men of the Chicago Police Department are men who serve our community with pride, with integrity and with a selflessness and a sense of duty which make them an example to law enforcement agencies everywhere. Under the leadership of Mayor Daley and Superintendent Wilson, they are demonstrating, capably and graphically, the tremendous strides which have been made in protecting the residents and property of Chicago.

We are proud of them, Mr. Speaker, and I call this editorial to my colleagues' attention today so that they may share this gratifying tribute. Mr. Speaker, the editorial follows:

### WHY CRIME IS LESS IN CHICAGO

The quick arrest of 4 robbers who held up 18 passengers on an early morning rapidtransit train is a shining example of good police work. It shows why crime rates have not been increasing in Chicago as they have in almost all the other big cities.

The four robbers are young men, but all of them have police records and four of them have served terms in the Bridewell. The crime was carefully planned. Three of the men had loaded pistols and one had a lariat, which could have been used to tie up anyone who resisted. They boarded the train at different stations to avoid attracting attention and to make sure no policeman was aboard.

After robbing the passengers systematically and threatening to kill them, the robbers left the train and called a taxleab from a gasoline service station at Fullerton and Seminary Avenues. In the meantime the motorman of the train had notified a CTA dispatcher by telephone and the dispatcher had called police. By the time the robbers reached the gasoline station a dozen police squads were looking for them.

They might have escaped except for the alertness of the squad composed of Policemen Robert Dvorak and Ray Hanley, who regularly patrol the neighborhood. They have an arrangement with business places

open at night to make an inspection if they fail to receive a prearranged all-clear signal.

When the squad passed the gasoline station the police .eam failed to get the signal. Suspecting the robbers were inside, the called for help and soon were joined by Po licemen Eugene Elander and Kenneth Restis in another squad car. The robbers were arrested and disarmed before they knew what had happened to them, and a shooting match was avoided.

The credit for these arrests belongs to the four brave, hard-working policemen and to the expensive communications systems installed by Police Supt. O. W. Wilson and paid for by the taxpayers. Criminals in Chicago are now on notice that within a few minutes after a crime has been reported they are being hunted. The blue cars of the police are patroling the streets constantly. In some neighborhoods, citizens are rarely out of sight of a police car.

Chicago once had the reputation of being a capital city of all kinds of crime. cagoan, crossing the border into Canada or registering at a European hotel, was likely

hear slurring comments about his city. Times have changed. Other cities now send their police executives to Chicago to learn how an efficient police department works

## Reuther Raps TWU's Walkout

EXTENSION OF REMARKS OF

## HON, LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. WOLFF. Mr. Speaker, following my inclusion in the RECORD last week of a recommendation made by the editors of Newsday relative to the dangers of inflation and its relation to the wage and price dilemma facing us, I noted in the Long Island Press a report on a state-ment by Mr. Walter Reuther who had either seen the Newsday editorial or came to a similar conclusion independently. Both Newsday and Mr. Reuther seem to agree on the urgent need for establishment of a wage and price board. a suggestion we might well consider, and I respectfully ask permission to include the Long Island Press report of Mr. Reuther's remarks in the RECORD:

REUTHER RAPS TWU'S WALKOUT

DETROIT.-Walter P. Reuther came out esterday against strikes in public service industries and deplored the recent New York City transit walkout.

"Society cannot tolerate strikes that en-danger the very survival of society." Reuther said

n

d

A

The United Auto Workers Union president, a leader of scores of strikes himself, proposed that machinery be set up in an effort to forestall strikes like New York's.

Reuther, in an appearance before the Eco-omic Club of Detroit, proposed creation of a tripartite group representing management, labor and the public be set up for this purpose.

"I don't think we ought to have strikes in public service industries," he said, in describing his proposal in a news conference and his formal speech.

"We cannot live in a situation where a few workers who are denied their equity can paralyze an entire community," he said. Workers should be able to get justice in the absence of strike action.

"I favor creating a mechanism which would make strike action obsolete in these industries."

Reuther also called for establishment of a price-wage review board to rule on both price increases as well as union demands. He said this could forestall strikes and act as a brake against inflation. The UAW has made the

ame proposal in past years. Reuther said he did not know enough about the New York transit settlement to to comment on President Johnson's criticism of it as inflationary. He said, however, the settlement would have "no impact whatsoever" in other labor negotiations.

## Peaceful Settlement of International Disputes

EXTENSION OF REMARKS OF

## HON. JAMES H. SCHEUER

OF NEW YORK IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. SCHEUER. Mr. Speaker, among the issues considered by the United Nations General Assembly in its recent session, was a British resolution on the subject of procedures for peaceful settlement of international disputes.

The U.S. Ambassador to the U.N., Arthur Goldberg, made a statement in support of the resolution which is an excellent expression of U.S. policies and goals. I am inserting his remarks into the Congressional Record at this time so that my colleagues and other readers of the RECORD will have access to this statement.

The remarks follow:

STATEMENT BY AMBASSADOR ARTHUR J. GOLD-BERG, U.S. REPRESENTATIVE TO THE UNITED NATIONS, IN THE SPECIAL POLITICAL COM-MITTEE ON PEACEFUL SETTLEMENT OF DIS-

I should like to begin by expressing our gratitude to the United Kingdom for placing on the agenda this item on the peaceful settlement of disputes.

We find it most appropriate that the United Kingdom should have taken this initiative. After all, the United Kingdom is the home of those concepts of due proce of law which have been the firm foundation of the legal systems of many of us here, and the United Kingdom has played a leading role in the effort to bring the rule of law to the relations between States.

Some 45 years ago, for example, it was the United Kingdom which formally proposed the use of rapporteurs or concillators in cases before the Council of the League of And some 15 years ago, it was the United Kingdom which proposed a procedure for conciliation in contentious questions before the United Nations.

The Government of the Netherlands, too, has made a major contribution by introduc-ing its proposals on factfinding. This is but ing its proposals on factfinding. This is but the latest in a series of constructive proposals by a country whose name has become synonomous with international law and peaceful settlement.

It is certainly fitting that we should turn to the question of peaceful settlement be-fore the close of International Cooperation Year. In the view of my delegation, there is no more important subject on the agenda of this General Assembly.

In world affairs, as in domestic affairs. there can be no lasting peace without in-

stitutions for peaceful settlement and peaceful change. When these do not exist, nations, like individuals, will take matters into their own hands.

The peaceful settlement of disputes, therefore, is not a utopian dream. It is a practical necessity for the survival of manthat in the nuclear age. Unless man learns the art of peaceful settlement, his tenure on earth will be short indeed. Peaceful settlement, in our view, is not only a requirement for survival. It is also,

with disarmament and peace together keeping, one of three interdependent ele-

ments of a decent world order.
History has demonstrated that nations will not be willing to disarm unless they have confidence that international disputes will be settled by peaceful means in accordance with justice and international law. This is why the United States made the strengthening of U.N. machinery for peaceful settlement a central element in our treaty outline for general and complete disarmament.

Progress in peaceful settlement is also essential to the success of this organization in containing violence through the use of United Nations peacekeeping forces

In the last two decades the United Nations has learned to respond to peacekeeping emergencies by dispatching military observers, truce supervisors, and armed forces. Once a peacekeeping operation is established, how-ever, there has been an unfortunate tendency to forget about the underlying problem which made the operation necessary in the first place.

The resulting situation was described for us by the Secretary General in his report issued last Friday on the U.N. operation in Cyprus. (S/7001, Dec. 10, 1965.)

It has become something of a pattern in United Nations peacekeeping operations," he said, "that although they are launched in the expectation that as emergency measures will be of short duration, the harsh realities of the conflict situations in which they become involved quite often require them to be prolonged, more or less indefinitely.

And he added: "The Cyprus operation now tends to conform to this pattern." Recent discussions in this committee and

in the fifth committee have reflected the growing concern of members with the prob-lem of financing peacekeeping operations. Many members do not want to bear these financial burdens. But how can such costs be reduced or eliminated, if we do not all take responsibility for solving the political problems which make peacekeeping operations necessary?

Clearly peacekeeping operations should not be a sofa to provide a comfortable respite from efforts at peaceful settlement—they should be a springboard for accelerated efforts to eliminate the root causes of conflict. And no less clearly, we must develop the same sense of urgency in dealing with the causes of conflict that we have demonstrated in the containment of conflict.

To quote the Secretary General once again: "The Cyprus experience is by no means unique in this regard. The United Nations has learned from other experiences that time and even relative quiet alone do not neces sarily in themselves induce or promote solu-tions of basic conflict situations.

"Persistent, determined effort is impera-tive on the part of the United Nations. Bu most of all, it is the parties themselves who have to show the necessary willingness to find an honorable and just solution.

In the view of my delegation, special and urgent efforts should be undertaken to at-tack the root causes of conflicts which have been temporarily arrested by the interposition of peacekeeping force

More should also be done through preventive diplomacy to anticipate and resolve situations which could lead to armed conflict. The burden on the U.N. fire department will become intolerable if we cannot

do a better job of fire prevention.

Julius Ayerere, the distinguished President of Tansania, has called on all of us to demonstrate what he so aptly describes as "the courage of reconciliation." The time has come to manifest that courage in the improvement of procedures for peaceful settlement and in the use of those procedures in concrete cases. After all, our organization was conceived as an instrument for the reconciliation of differences—not be merely as a forum in which they could manifest them-

Within our various countries, we have all seen the value of peaceful settlement pro-cedures. These procedures can serve several

purposes:

They can provide a "cooling off period" for the fever of controversy to subside.

They can help bring contending parties into touch with one another.

They can help find the facts.

They can help identify points of agree-

They can introduce the calming effect of impartial judgment.

They can mobilize public opinion against sive claims.

They can place responsibility on others for results for which the parties themselves could not accept responsibility.

In modern times, and particularly since the Hague Conferences of 1897 and 1907, enormous energy has been invested in the attempt to apply the arts of peaceful settle-ment to disputes between nations. As a result, there certainly is no lack of available machinery for the peaceful settlement of disputes:

There are now some 300 treaties in force for the peaceful settlement of disputes through inquiry, mediation, conciliation, ar-bitration, judicial settlement, or a combina-

tion of these methods.

There are now some 600 treaties in force which confer jurisdiction on the Interna-tional Court of Justice to decide disputes as to their interpretation and application.

Most of these instruments for peaceful settlement have been concluded since the Pirst World War. Many of them have been concluded since the Second World War.

It is tempting to conclude from these statistics that the international community is making great strides in the field. enormous incresse in the institutions for peaceful settlement has not been accom-panied by a similar increase in the actual esort to such institutions

Does this mean that the renewed effort called for in the resolution now before us is doomed to failure? My delegation is not prepared to accept so pessimistic a conclusion. Indeed, we believe the resolution might spark a renaissance in the use of peaceful settlement procedures and thus be a step in the long road to a just and lasting

We believe this resolution can serve this objective in at least three ways:

First, it can induce all of us to look again at our charter obligations to resort to peace-

ful settlement.

The charter of the United Nations, in arti cle 1, paragraph 1, declares that one of the purposes of our organization is "to bring purposes of our organization is to oring about by peaceful means, and in conformity with the principles of justice and interna-tional law, adjustment or settlement of in-ternational disputes or situations which might lead to a breach of the peace."

It states in paragraph 4 of the same article, that the U.N. is intended to be "a center for harmonizing the actions of nations in the attainment of these common ends."

It commits all members, in article 2, pars graph 8, "to settle their disputes by peaceful means in such a manner that international

peace and security, and justice, are not endangered."

And it further commits all members in article 33, in regard to any disputes the con-tinuation of which is likely to endanger the maintenance of international peace and secu-rity, "first of all" to "seek a solution by nego-tiation, inquiry, mediation, conclination, ar-bitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice."

These provisions are the great underdeveloped areas of the charter. The developed because none of us-They are under-us—and I specifically include my own country-has done to implement our solemn obligations

in this field.

Mr. Chairman, I suggest that the work we are beginning here could help to recommit us all to the solemn obligations contained in these articles. And I would further suggest that it might also serve to impress us with one aspect of these obligations which is often

overlooked and sometimes ignored.

It is quite clear that, while a dispute is still in a stage where it only threatens the maintenance of international peace, parties are obliged to settle that dispute peacefully. But what happens if for any reason—whether through accident, miscalculation, or design-a dispute is not settled peacefully and the parties resurt to force?

Quite clearly, when we look at the letter and spirit of the charter, we see that the obligation of peaceful settlement does not once conflict has broken out. Ratherand I think this point is worth emphasizing-the duty to settle a dispute peacefully is an obligation which continues from the moment the dispute first develops right through to the time when it is finally settled—even though armed conflict may have broken out.

As far as the United States is concerned.

I can reaffirm today our unconditional commitment to this obligation. We seek the peaceful settlement of every dispute to which we are a party everywhere in the world-and this commitment most specifically applies to those disputes which, tragically and against our will, are being dealt with on the battlefield rather than in the conference room

where they truly belong.

Second, the resolution now before us can encourage us all to make greater use of the machinery for peaceful settlement which we

already have.

The study called for in this resolution can serve to inform us of the rich resources for peaceful settlement now existing both in-side and outside the United Nations system. It can also stimulate the greater use of these resources

In the United Nations itself, we have developed many facilities for peaceful settlement. The Secretary General and his senior aids, as well as special United Nations mediahave contributed to the cessation of hostilities or the achievement of political settlement in such farflung places as Indonesia, West New Guinea, Kashmir, and the Middle East

We support the continued expansion of this work—and the continued implementa-tion of those fundamental charter principles of the efficiency and impartiality of the Sec-retariat without which this work would not

We support the further development of the impressive resources for peaceful settlement which have been developed by the Special-ized Agencies of the United Nations. I have ized Agencies of the United Nations. I have in mind, for example, the procedures for enquiry and conciliation used by the International Labor Organisation in the implementation of its members' commitments to fair labor standards; the methods employed by the International Telecommunication Union in resolving problems concerning the allocation of radio frequencies; and the tech-

niques of arbitration and conciliation which the International Bank is just now making available for the settlement of investment

sputes. We also favor a substantial strengthening of the peaceful settlement procedures of re-gional agencies. Those of us who belong to regional organizations or who have observ their work know of the accomplishments in this field of the Organization of African Unity and the Organization of American States—and wish them to make further

At the recent Rio Conference, my country, as well as others, put forth proposals for the further strengthening of OAS procedures in pacific settlement-and amendments to the OAS Charter will now be drafted with a view to strengthening these procedures.

While we place primary emphasis on inwithe we place primary emphasis on in-stitutions for third party settlement, we should not entirely ignore the resources available for bilateral settlement. For ex-ample, the United States has been participating with its immediate neighbors, Mexico and Canada, in joint international commissions dealing with specific types of dis-

putes arising in our bilateral relations.

We believe, finally, that greater use can and should be made of the International Court of Justice as an instrument for pacific settlement. We have accepted the pulsory jurisdiction of the Court.

It is true that we have made a reserva tion concerning disputes which are within

our domestic jurisdiction.

Let me amphasize today that this reservation means exactly what it says. It does not relate to disputes on matters of international law. I can state categorically that my Government stands ready to take to the International Court any outstanding dispute on any matter of international law with any other country which, like ourselves, has ac

cepted the Court's compulsory jurisdiction. Third, the resolution now before us can lead to improvements in our existing institu-

tions for pacific settlement.

We have no illusions that institutions alone can solve the problem. We recognize indeed we insist-that the central problem is one of national attitudes. The most important requirement for peaceful settlement is the willingness of nations to abide by the law and settle their differences in accordance with law.

But it does not follow from this that institutions make no difference. It is our view that institutions do matter and that the existing procedures for peaceful settlement can be improved.

Therefore, we propose nothing less than the creation of a United Nations Peace Service-a flexible set of procedures so efficient and so comprehensive that it will provide an adequate substitute for armed conflict. the opinion of my delegation, a U.N. Peace Service should include improvements in present procedures to meet three main needs:

In the first place, it should assure the greater availability of qualified persons for tasks of peaceful settlement. In all of our countries there are distinguished men whose personal qualities and practical experience anable them to discharge special responsibili-ties in the resolution of conflict. Let us find ays of making these men available to the and to other international agencies.

In the second place, it should provide additional incentives for governments to resort to peaceful settlement. Nations will use available resources for peaceful settlement only as they are convinced of the benefits of cooperation and of the costs of noncooper-

In the third place, it should incorporate new approaches to dispute settlement whose utility has been demonstrated in recent experience.

It is now 15 years since the United Nations last engaged in a systematic study of this In that time the membership of question. In that time are numerous the organization has more than doubled and the U.N. has accumulated all kinds of new experience in the peaceful settlement of disputes. Surely we have learned something during these years about the settlement of conflict both within and between countries.

The lessons of this experience should be examined by the group which this resolution proposes to establish. It might also be studied simultaneously by the relevant professional organizations and the great centers of learning in all of our countries.

My Government has a number of specific ideas which we will make available to the proposed committee in due course. We are considering, for example, whether the exist-ing United Nations panel for inquiry and conclination could be reconstructed on a new basis to make it a more efficient in-strument for the performance of its tasks. We are also considering whether greater use could not be made of rapporteurs or conciliators on contentious matters before the Security Council and the General Assembly—with a view to bringing the parties to-gether, finding the facts, and recommending possible solutions.

Our ideas on these and other subjects are not frozen. We are willing and anxious to examine each and every new proposal that

may be made.

We are flexible about means. We are only inflexible about the end-a comprehensive Peace Service which can provide an effective substitute for armed conflict.

President John F. Kennedy declared, in

President John F. Kennedy declared, in his speech at American University in June 1963, that "peace is a process, a way of solv-ing problems."

Mr. Chairman, we want to strengthen the process of peace. That is why we are proud

process of peace. That is why we are proud to join with the United Kingdom in sponsoring this resolution. That is also why we pledge our cooperation to the proposed committee in the effort to find practical measures to improve the work of the United Nations in the peaceful settlement of disputes.

### A Prayer for Vietnam

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, Mrs. R. L. Wheelock, Jr., of Corsicana, Tex., who has a son in Vietnam has sent me a prayer she wrote during the Christmas holidays. Under leave to extend my remarks in the RECORD, I wish to include

### her prayer. A NEW YEAR'S PRAYER

Let us pray that strength and courage abundant be given to all who work for a world of reason and understanding—that the good that lies in every man's heart may day by day be magnified—that men will come to see more clearly not that which divides them, but that which unites them—that each hour may bring us closer to a final victory, not of nation over nation, but of man over his own evils and weaknesses—that the true spirit of this Christmas sesson, its joy, its auty, its hope, and above all, its abiding faith, may live among us—that the blessings of peace be ours, the peace to build and grow, to live in harmony and sympathy with others, and to plan for the future with confidence.

## Boating Safety Awards

EXTENSION OF REMARKS

## HON, DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. IRWIN. Mr. Speaker, at the National Boat Show in New York City last week the eighth annual National Gold Cup awards for boating safety were presented. Two of the four awards went to organizations from my district in Connecticut. Both were justly deserved.
Radio station WICC in Fairfield was

honored in the press category for its informative marine weather reports broadcast directly from its own boat on Long Island Sound. WICC is the first com-mercial radio station to ever receive this

award.

One of the two awards for community activities promoting boating safety went to the Norwalk small craft safety training program, a joint operation of the Norwalk YMCA, the Norwalk-Wilton chapter of the American Red Cross, the Norwalk Power Squadron, the Girl Scouts, the Boy Scouts, the U.S. Coast Guard Auxiliary Flotilla 72 and the Norwalk Department of Parks and Recrea-

These two organizations have and are continuing to do their best that the thousands of persons who enjoy use of the beautiful waters of Long Island

Sound are able to do so safely.

WICC, which also won the New England Marine Trade Association's safe boating award for 1964, began its special broadcasts 7 years ago. The details of its unique contribution to boating safety were described last summer in an article in the New York Times.

The Norwalk program's activities were well described only last Friday in a special boating section of the Norwalk Hour.

The articles follow:

[From the New York Times, July 4, 1965] WICC BROADCASTS AID PEOPLE ON WATER MUTEOROLOGIST ON "BERVICE BIX" WEATHER REPORTS

### (By William N. Wallace)

Week in and week out, Long Island Sound is a perverse body of water for the thousands use it as a nautical playground. problem is the weather. It is hard to know what the sound will be like on any given day, a flat frying pan, a mean tank of froth, or something pleasant in between.

Predicting the idiosyncrasies of this great recreational facility has become the chal-lenging task of Walter Devanas, a 35-yearold meteorologist who deals with his subject at first hand for 12 hours every weekend and holiday through the summer boating season.

Devanas is one-half of the crew of a flexible floating laboratory sent to sea by radio station WICC of Bridgeport, Conn. The mother ship is a modest 27-foot Chris Craft skiff with its name, Service Siz, prominently

displayed on the topsides.

Bill Conover, a marketing executive from Old Greenwich, Conn., with a solid boating background, is the captain of Service Six. He plots her courses and gravitates to places where he can tap the knowledge of people to whom the sound is a way of life.

ON THE AR

The sum knowledge of Devanas, the pracans sum knowledge of Devanas, the practical meteorologist, and Conover, the knowling boatman, is then given to listeners of WICC (600 kilocycles on the standard broadcast band). This pair comes over loud and clear on a remote relay from Service Sir for 3-minute periods at 40 minutes after the hour beginning at 7:40 a.m. on Saturdays and 8:40 a.m. on Sundays, until 7:40 p.m

wicc, a powerful voice that has a vast audience on both sides of Long Island Sound, is one of a handful of radio stations that seek the boatman's ear. Its service for 7 years was recently cited by the New England

Marine Trades Association.

The association, which in 2 previous years had similarly honored the States of Massa-chusetts and New Hampshire, gave the radio station a safe boating award for promotion of safe and same uses of the boat.

With Devanas beginning his first year on the air, WICC is safer than ever. The station is now providing its floating meteorologist, by means of shore-to-ship high frequency radio, the radar advance warning transmissions as-sembled on a high-speed communications system by the U.S. Weather Bureau.

### BAD WEATHER LOCATED

The radar locates and tracks fronts, squalls, rain showers, and other aberrations, with given and moving azimuths. Armed with this information, plus the standard weather maps and other tools of the meteorologist, Devanas is prepared to stick his neck out.

We like to believe we can tell the boatman on the sound what he can expect for surface weather in the next few hours." Devanas said. "This is a challenge because what Mark Twain said about New England weather is essentially true: 'If you don't like it, wait a

Devanas admits that meteorology, espe-cially when applied to such a localized area as the sound, is an imperfect science as to prediction. "It's also a young science," he said. "We are just beginning to make advances through better communications. I admit I cannot always be right in such a small area. But I call the shots as I see them. From what we can gather through mail, phone calls and the salutations we receive on the water aboard Service Six, the people like

Devanas comes to his vocation with strong background. He spent 12 years in the U.S. Navy, almost all of the time at sea as an aerographer's mate whose task was to interpret weather for those who steered the ships.

### FOR THE GREEN AT SEA

The broadcasts of Devanas and Conover are not overly sophisticated. The pair recog-nizes the fundamental lack of knowledge among the boating public as to weather and general seamanship. They tuck into their broadcast all kinds of educational

fundamentals and only occasionally add something sophisticated, something "in."
"A couple of weeks ago," Devanas said,
"we had the effects of a heavy easterly wind which had blown into the Sound. I noticed on an oceanographic level, that the easterly had brought in a considerable amount of seaweed that is normally only found in the Gulf Stream and in other warm water cur-rents. We had a kind of Sargasso Sea in the Sound. I talked about it and a lot of people called in to say how much they appreciated that touch."

[From the Norwalk (Conn.) Hour, Jan. 14, 1966]

LOCAL SAFETY PROGRAM WINS GOLD CUP AWARD

A National Gold Cup Award for Boating Safety in 1965 was awarded to the Norwalk

small craft safety training program at a reception Thursday night, at the Park Sheraton Hotel, New York City, given by the Klekhaefer Corp., makers of the Mercury outboard motor and Mercruiser.)

Congratulations to the steering committee and appreciation and thanks for the splendid community contribution to boating safety through the Norwalk program were expressed by C. J. Koehler in behalf of Klekhaefer Corp.

Burt Benton, Norwalk, present chairman of the steering committee, Robert Hughes. Poundridge, N.Y., 1965 chairman, and Arthur Huck, Rowayton, treasurer, were present to receive the award at the reception.

During the summer of 1965 the Norwalk small craft safety training program had logged 5,200 hours of instruction in seamanahip and boat handling, both theory and practice, for youngsters in Norwalk and neighboring communities, with Gregory Geise, Darien, as head instructor.

Classes, which included 24 courses in basic

Classes, which included 24 courses in basic boating and basic salling and a course in advanced salling, were held during the summer at Calf Pasture Beach adjacent to the U.S. Coast Guard Auxiliary Flotilla 72 Station.

### FIFTH YEAR

The program, now in its fifth year, operates on a nonprofit, self-supporting basis with volunteers help from the community except for paid instructors. It has a fleet of five quad trainers which are used for rowing, scuilling, and sailing with cat or sloop rig. There is a powerboat for patrol and instruction.

Each of the advanced sailing classes last year spent one afternoon aboard Burt Benton's schooner, Six Fathoms, to gain experience handling a large sailboat.

In addition to Gregory Geise, a college student who holds an American Red Cross small craft safety instructors' certificate, there were two assistant instructors, Willis Lyman and Edna Whitehead, both of Norwalk.

Seven volunteer apprentices served for various classes during the summer. These included from mariner ship Eagle of Norwalk, Girl Scouts Joan Bender, Nora Blum, Carmen Jacquier, Barbara Prokupek, and Nancy Wines. Other volunteers were Shena Thomson, Norwalk, and Richard Geise, Darien.

Total enrollment for classes was 217. Students, many of whom took more than one course, came from Norwalk, Darlen, New Canaan, Rowayton, Stamford, Weston, Westport, and Wilton and Pelham and Poundridge, NY.

The steering committee, which directs and supervises the program, is comprised of representatives from organizations in the community interested in promoting boating safety and training youth in seamanship and boat handling.

### COMMITTEE

The 1965 steering committee included: for the YMCA, Raymond Corbin and Mrs. Paul R. Standley; for the Norwalk-Wilton Chapter Red Cross, Frank N. Zullo; for the Norwalk Power Squadron, Past Commander and Navigator Burt Benton; for the Girl Scouts mariner ship Eagle, Arthur Huck; for Sea Explorers, Post 6. Boy Scouts, Len Jacob; for the U.S. Coast Guard Auxiliary Flotilla 72, Robert Hughes; for the Department of Parks and Recreation, Joseph Andrews.

Additions to the committee for the 1986 season include: Mrs. James Flournoy, Witchen, secretary; Robert Pink, YMCA; Mrs. George Prokupek, Southwestern Council Girl Scouts; and Robert W. Meyer, in charge of equipment maintenance.

### Shipping to Vietnam

## EXTENSION OF REMARKS

## HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. GARMATZ. Mr. Speaker, the critical situation in regard to our U.S. merchant marine is especially apparent in the shortage of ships to carry needed supplies to our troops in Vietnam.

Also of great concern, is the lack of cooperation on the part of friendly nations, to prevent their ships from carrying cargo to North Vietnam, thus aiding the enemy in its fight against South Vietnam.

Two recent articles in the Baltimore Sun relative to this matter should be of great interest to our Members and therefore I am inserting them in the Appendix of the Record.

The articles follow:

[From the Sun (Baltimore, Md.), Dec. 27, 1965]

MILITARY NEEDS OVERTAX U.S. SHIPS (By Helen Delich Bentley)

WASHINGTON, December 26.—The Defense Department's Christmas message to the shipping industry emphasized once again that this country is short of sufficient Americanflag ships to handle the upsurge in cargoes moving to military zones throughout the world.

And, therefore, the Military Sea Transportation Service announced December 23 that it wanted firm offers from foreign-flag shipowners as well as American companies, knowing that it probably would not be able to do much more in getting additional American vessels without going up higher on its rates.

### BACKLOG MOUNTING

Even then it would be difficult immediately to get enough vessels registered in the United States to handle the military cargoes piling up in Oakland, Calif., New Orleans, New York, Norfolk, and Baltimore. There is a backlog, and the backlog is mounting daily as the discharging conditions in the Vietnam area continue in chaos. Shipe cannot get rid of the cargoes they have aboard fast enough to head back to the United States to pick up additional supplies. Instead they sit for 30 days, 60 days, 70 days, and more, waiting, waiting, waiting, waiting, waiting.

It's not too much of a Christmas present for the young men in Vietnam to know that their supplies cannot get through to them because of inadequate facilities and ships backed up. However, the Defense Department has maintained steaffastly that not a soldier has suffered from the lack of any

But there must be a serious slip-up somewhere when here the United States at a 6 months after President Johnson announced the buildup of troops in order to step up the operation in Vietnam, and the shipping picture is still pathetic.

### TOTAL OF 300 SHIPS CALLED OUT

In September, Representative Garmarz, Democrat, of Maryland, acting chairman of the House Merchant Marine Committee, called for an orderly breakout of the 300 "good" ships in the reserve fleet so that the ship repair yards would not become too jammed, and so there would be an even flow of reasels becoming available to MSTS.

Under such a program it was felt that a better job could be performed in readying the vessels, particularly if the Defense Department could be induced into spending what the industry considers an adequate amount of money on each ship to make certain that it will be completely operable for the duration.

Of the first 50 ships which were taken out of mothballs in July-August, rushed through the reactivation stages, and then into service, many have broken down in mid-mireaum because of penny-pinching ascribed to readying them. At least five are currently in Hawaii in such bad condition that the big question is—What do we do with them now?

### TWENTY-FIVE BEING READIED

Another 25 are being readied to begin hauling supplies to Vietnam, perhaps only from Okinawa or Subic Bay on a shuttle run. Shipping interests doubt that these vessels can hold up for very long in a Far East shuttle run without getting back to American shippards to be "revitalized" again because of the inadequate preparation bestowed on them when they go out.

stowed on them when they go out.
Yet even with the 25 more, MSTS admits
that it will fall far short of its needs. And,
therefore, it is inviting foreign owners to
help relieve the shortage that this country is
incurring.

Irony juts out from every porthole in the picture.

First of all, because of the vast numbers of ships in its reserve fleets, the United States since World War II has been listed as the country with the biggest merchant fleet in the world. Seldom has it been pointed out that the United States has slipped far down the line in the number of active ships.

Secondly, when a top official of the Maritime Administration last February wanted to break out just three ships from the mothball fleets in order to determine what they would ned "just in case" his suggestion was rejected by those above him as being a waste of money.

### WOULD LOSE CARGOES

When they did begin breaking out the ships, they merely pumped water through the boiler tubes the first time around, leaving the oil sediment and sludge at the bottom. When the ships began operating, the boiler tubes "blew up" and more repairs were needed. It was learned that by simply adding detergent, the wastes would disappear. Such a leason could have been learned by testing out three ships months ago instead of when they were critically needed.

Third, the "effective control" ships which the Defense Department has touted so loudly over the years are virtually worthless in an operation such as Vietnam because they are dry bulk carriers and tankers. Neither can transport the general cargo that must move to the Far East and military zones today.

Fourth, if the commercial trade routes established and promoted by American-fag berth liner companies are stripped of any more of their regular vessels, they will incur such severe losses of regular cargoes that they might never be able to recoup this trade.

And fifth, the matter of balance of payments becomes intertwined all along the line.

If American cargoes are diverted to foreign vessels on the commercial trade routes, this country loses in the balance of payments picture.

If the Defense Department has to pay increasing amounts of freight rates to foreign-flag ships to transport American military supplies, it means more gold flowing from this country.

### TESTIMONY CITED

Irony and incompetence appear to best de-scribe the sad, rather decadent scene concerning the U.S. power at sea.

It can all be traced back to 1961 when Robert S. McNamara, Secretary of Defense, testified before a House Committee that ships were becoming passé, that air transport was the answer

The Vietnam buildup occurred 4 years later. Two out of every three soldiers in that fighting have been moved there by ship. later. that igning have been moved there by single Minety-eight percent of the cargo and sup-plies going to back up the men has been transported by ship \* \* \* the ships which "we no longer need." we no longer need.

With all of the buildup on air transport, when the C-5A finally is completed in 1969-70, one airplane will be able to transport 50 tons at a time-which means that 260 planes could lift as much as a single C-4 type ship of today. And the cost abroad the C-64 as estimated now will be 4 cents a ton mile, versus one-half cent a ton mile on a ship.

[From the Sun (Baltimore, Md.) Jan. 3, 19661

UNITED STATES, BRITISH REPLIES CONTRASTED (By Helen Delich Bentley)

Washington, January 2.—The recent embargo slapped on Rhodesia by the United States carries considerable irony with it.

The United States acted to institute the embargo when Great Britain asked this country for such backing in the Commonwealth controversy over the African dependency's action.

There, did not appear to be hesitation on the part of the United States about taking such action even though Rhodesia was part of the British Commonwealth.

### BRITISH RESPONSE TO UNITED STATES

But the story has been different with Great Britain in connection with United States pleas to stop British-flag ships from serving

Cuba and North Vietnam.

When the appeal first went out with respect to Cuba in 1962, the British attacked the United States for even making such a request and ignored this country—even though there was a danger the Communists might engage in war with the United States just 90 miles from its shores.

The British are still sending their ships The most recent black list releas to Cubs. by the Maritime Administration showed that another British ship was added to bring to 75 the number of ships from the United Kingdom that have been and still are serv-ing Cuba against United States' wishes. The list currently contains 244 free world ships.

### ACCUSED OF HIGHHANDEDNESS

At the height of the Cuban trouble, the United States was accused by the British of trying to control the high seas by asking ships to stop trading with Cuba. Even more serious than the Cuban situa-

tion, and certainly more critical to the United States than Rhodesia, is the Vietnam war, because American GI's are being killed every day. They are dying in increasing numbers as this country makes an effort to defend freedom in southeast Asia.

The U.S. Government again has asked the free world nations to stop supplying the North Vietnamese as one way of helping the soldiers fighting in that country.

The only response to that appeal has been from Greece, which in November issued a decree to bar Greek shipowners from sending their vessels to North Vietnam.

Although the Greek Government in the

st has taken similar steps to support the United States, there are still Greek shipowners who defy its edict, changing the registry on their ships to either Liberian or Lebanese.

More recently it is noticed that several Cyprus-registered vessels are going to Cuba, as well as North Vietnam, which would in-

dicate that Cyprus is the newest "escape" nation for registering ships.

### TRADE WITH NORTH HUBER

All during the Korean war, the British and other shipowners sent vessels regularly into North Korea, carrying supplies of all kinds to the armed troops that the American GI's were battling for the rest of them,

Not once did the British pull back on

their ships going to North Kores.

And it can just as well be expected now

that not once will the British make any official attempt to halt British-flag ships from serving North Vietnam, from taking in ammunition and other supplies that are used by those who kill American soldiers.

The number of merchant ships supplying the enemy-North Vietnam-is said to be in the vicinity of 120 a week. There is no accurate figure available, but it is known to be substantial.

During the last session of Congress, Representative Rogers, Democrat, of Florida, several times appealed for legislation to bar countries serving North Vietnam from sending their ships to U.S. ports, or at least to keep them from carrying Governmentfinanced cargoes from these shores, which is what the Cuba blacklist stops.

But the administration appeared to ignore all such pleas.

The State Department would only say that there has been some curtailment of calls to North Vietnam by friendly nations to whom appeals have been made to halt such shipments.

There has never been any more than that. At the recent AFL-CIO Biennial Convention, organized labor called upon the Government to take drastic steps against ships and shipowners who persist in calling at North Vietnam. The maritime labor unions intend to follow through on this resolution.

Among the stories circulating regarding the supply ships going to North Vietnam is that many of them profit by calling on one trip at North Vietnam and, on another, at a South Vietnamese port.

### CONGESTION IN SOUTH VIETNAM

Of course, right now with the congestion in Saigon, Da Nang, and other southern ports, it would hardly seem profitable for any essel to call there unless hired on a daily time charter.

More of the irony is that many of the ships being used on the Vietcong supply route, as has been true with Cuba, were American built, Liberty type sold after World War II at greatly reduced prices to help our friends build up their fleets and get back into business on the high seas.

Could it be that one of the reasons the U.S. Armed Forces have been held back from mining the waters leading to Haiphong is that some of the ships that might be sunk would be those of Great Britain, Nor-way, Sweden, Germany, and other friendly

### Veterans' Administration Medical Care

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker. the Committee on Veterans' Affairs is currently in the process of tabulating a number of replies to a questionnaire on the quality of medical care sent to all recently discharged patients from Veterans' Administration general hospitals.

I plan to make a full report on this questionnaire at a later date.

However, I have today received a letter from a veteran in Maine, Mr. John R. Whittaker, which speaks in glowing terms of the care he received at the Veterans' Administration hospital, West Roxbury, Mass. Under leave to extend my remarks, I include the text of Mr. Whittaker's letter:

SANFORD, MAINE. Sms: I am writing this on separate paper, rather than the form, because I have some comments to make, as a reflection of my own experience at the veterans hospital,

Roxbury, Mass.

I first entered the hospital in September of 1960, at the age of 26. I'm a member of the Korean conflict, but am treated at the hospital for a non-service-connected kidney There is no question about the ailment. fact that I was scared when I was first admitted, because I had never been a patient in my life. They didn't know just what was wrong with me, at first, and as a result I had to undergo many tests-every one in the book, I believe. However, they found the trouble, did what they had to do, and I believe that I had the best of care possible. Well, that as 6 years ago, and I still go for periodic checks and tests, because my condition is chronic. I feel that I am being treated with the very best of everything available in this day and age. I feel I have cooperated fully with all doctors and aids, and as a result I have been treated accordingly. This is the only hospital at which I have ever been a patient, and so it goes without saying that I can't speak for others. My own personal hope is that as long as I must have a hospital to go to, every so often, I hope that VA hospital, West Roxbury is always available.

I was proud to do my bit for my country. I'm extremely proud to be a veteran of America. I'm thankful, beyond expression that I have the VA available to me, and I think that 6 years of hospital treatment is ample time to view my feelings on this subject. As far as I'm concerned, they are 100-percent OK, and I sincerely hope and pray that they keep up the good work—may God bless them for it.

Very sincerely yours,

JOHN R. WHITTAKER.

## GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publica-tions are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not fere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale ut Government publications under such regulations as shall be agreed upon by the Superintend-ent of Documents and the head of the re-spective department or establishment of the Government (U.S. Code, title 44, sec. 72s, Supp. 2).

### PRINTING OF CONGRESSIONAL RECORD **EXTRACTS**

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

## A Call for National Unity

EXTENSION OF REMARKS

## HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Thursday, January 20, 1966

Mr. DOUGLAS. Mr. President, I had the pleasure of receiving from Dr. J. H. Jackson, president of the National Baptist Convention, U.S.A., who resides in Chicago, Ill., a well-thought-out and well-written pamphlet entitled "A Call for National Unitey," a call which is certainly our foremost desire to heed.

Mr. President, I should like to call my colleagues' attention to Dr. Jackson's pamphlet and ask that the pamphlet be printed in the Appendix of the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

A CALL FOR NATIONAL UNITY

(By Dr. J. H. Jackson, president, National Baptist Convention, U.S.A., Inc., Aug. 31, 1965)

(Note.-The following call to national unity was unanimously adopted by the National Baptist Convention, U.S.A., Inc., in its 85th session in Jacksonville, Fla., September The call grew out of the conviction that all American citizens and that all groups within the confines of the Nation must work together not only to attain the good things of life for themselves but also to fulfill the Nation's life. The National Baptist Convention has a membership of  $5\frac{1}{2}$  million and is the largest organized body of Negroes in the United States.)

The United States of America is a great democratic Republic dedicated to human dignity, justice, freedom, and equality of opportunity for all. Her supreme law, the Federal Constitution, is so constructed and so structured that it allows for political, social, and economic evolution and busic changes by amendments. Therefore, all Americans—both conservatives and liberals—can support and be loyal to the Federal Constitution and to the Nation itself. All citizens can obey its fundamental principles and take part in its evolutionary changes through amendments when time, experience, and change demand it.

In this hour of crisis we call upon all American citizens and all groups to support the fundamental principles of the Nation's life. We would call upon all to support the following ideas:

1. Unqualified loyalty to and support of

the Nation as a whole.

2. Risk all that we have and possess for the life, soul, and salvation of the Nation, and trust a just Nation to protect and save us as citizens and all that we hold dear, so long as it does not include the values of religion which are above the dominion of the state.

3. Let us recognize that our common enemies are those persons and groups who by ideology and purpose are committed to the destruction of this Nation and that these enemies make use of all of our divisions to weaken and to destroy this Republic.

4. We must recognize the fact that it is better to live in an imperfect America with the freedom to work for its improvement and fulfillment than to be a helpless slave in a perfect totalitarian state without the freedom even to question its policies or to change its evil practices.

5. Let us always recognize the right of freedom of thought, freedom of expression, and freedom of action as well as the rights to differ with and to be different from others. But let us never seek to defend and protect these differences by denying to others their constitutional, just, and God-given rights as

freemen in a free society.

6. Let us be as wise as the enemies of this Nation who—when it is to their advantage will join with any groups in the United States and work through them for their evil purposes. If being a segregationist furthers their cause, these enemies will join the ranks of segregationists. If and when they find being an integrationist serves their purpose to negate the Nation's life, they will become integrationists and work through integration to achieve their negative ends. They will also play one group against another to divide and to weaken the Nation.

We are in a national crisis and at this moment are engaged in a bloody conflict with international communism in Vietnam and international communism in are potentially in conflict with the same forces throughout the world as well as at Americans can no longer afford the luxury and the negative weight of past prejudices, hatred, envy, discrimination, disrespect for law and order, disrespect for one another, race riots, and bloodshed. All of us must unite and work together as one for the Nation's life and cause, or we will eventually perish.

7. All groups are called upon to rise above the differences of creed, color, caste and to join together as Americans in order to work for, live for, and-if need be-die for the ideals, values, and principles of justice, freedom, and equality as proclaimed by this great

8. We are called upon not only to obey Federal law, but also to rise above it and make a good-neighbor policy of our own by which we will build a community spirit and erect community organizations based on good will for the education of our children. for the security and development of our family, for the advancement of culture, and for the moral and spiritual growth of all who dwell therein. This can be done only by cooperation and not by contest and conflict. Such community spirit will not only enrich our several communities but also will greatly strengthen our National Government both at home and abroad.

9. This call is for positive thinking and for positive action. It is not enough to be anti-Communist, antipoverty, antisegregationist, antiintegrationist; we must be pro-American, profreedom, projustice, and progoodwill. A commitment to build a great democratic society for the enrichment human personality is far more elevating and far more lofty than setting ourselves to the task of destroying the enemies that disturb us

10. A cooperative venture among the citizens of the United States for the advance-ment of the ideals of justice and freedom does not in any way jeopardise the legitimate privileges and the moral goods of free en-terprise nor does it imperii the personal rights of individuals and groups. To para-

phrase the historic statement of the great educator Booker T. Washington, in all things strictly personal and in all matters pure-ly private we can be as separate as the fingers, but one as the hand in all things tending toward the mutual progress of the individ-ual, of groups, as well as the fulfillment of the Nation's life itself.

### Praise for Economy

EXTENSION OF REMARKS OP

## HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. ROGERS of Colorado. Mr. Speaker, Americans have always believed that honest work is noble. By his hard work, the American provides his loved ones with the good life. Many a workingman who was not able to go to college himself has provided a higher education for his sons and daughters.

We can all be proud of the great strength of the American economy, which provides a solid foundation for the good life all of us strive to achieve.

The Council of Economic Advisers has felt that if 96 percent of the labor force could be on the job, it was about as close to full employment as the Nation could expect to come

The state of economic health in America is so good that it has almost reached that happy situation of full employment.

The Denver Post recently carried an editorial—"United States Has Achieved 'Full Employment'"—praising the administration's great strides in building and keeping a sound national economy. With permission of my colleagues I submit this article for the RECORD:

### UNITED STATES HAS ACHIEVED FULL EMPLOYMENT

Five years ago when the Nation was beginning to recover from its last recession, President Kennedy's Council of Economic Advisers set an unemployment figure of 4 percent of the labor force as a realistic target for the American economy.

The Council recognized that some people will always be in between jobs, that some will be untrained or unsuitable for the jobs available and that some will not be employ-

able at all.

If 9d percent of the labor force could be on the job, however, the Council said that was about as close to full employment as the

Nation could expect to come.
Since 1961, the United States has moved slowly but steadily toward the full employment rate the Council set. Last week, the Government announced that unemployment

Government announced that unemployment had dropped to 4.1 percent, which puts us only a whisker away from the goal.

When we reach 4 percent unemployment, the Council suggested, the supply of labor will not be excessively tight and the danger of inflation will not be beyond control. The economy, in fact, will be in a state of exuberant health.

If we go much below 4 percent, on the other hand, the Council thought we would face "substantial upward pressure on prices" and implied major steps would have to be taken to cope with infiation.

The American economy now appears to be in the state of health the Council described. The Government has announced that with 4.1 percent unemployment "there is still no evidence of a general shortage of labor." At the same time, inflation has not become a major problem.

The Council's 5-year-old warning, however, that there may be danger ahead if the trend continues, is well worth heeding. As we continue to work for a lower unemployment rate, we will need to be increasingly alert to the danger of labor shortages and the danger of inflation.

In the months ahead, both the Govern-

In the months ahead, both the Government and private industry can take additional steps to draw more people into the labor force and to train them for the new kinds of jobs that have to be filled.

Labor and industry, through voluntary restraint, can help to hold wages and prices in line and prevent a runaway inflation from developing.

There may be a time when the administration will have to press for a tax increase, and we will expect President Johnson to act quickly and forcefully if that time should arise.

In the meantime, we believe the President is wise not to molest the economy in its present state of health while he watches it closely for signs of future trouble.

As things stand now, the continuing decline in unemployment is a source of satisfaction and pride. For all practical purposes, the goal of 5 years ago has now been achieved.

## Summary of World Conference on World Peace Through World Law

EXTENSION OF REMARKS

## HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Thursday, January 20, 1966

Mr. McCARTHY. Mr. President, the October 27 issue of the Christian Century carried a summary of the World Conference on World Peace Through World Law, which was held in Washington last fall. The author is Mr. Howard Y. Williams, State field director for the Minnesota United World Federalists. I ask unanimous consent that his report be printed in the Appendix of the Record.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WORLD PEACE THROUGH WORLD LAW
(By Howard Y. Williams)
FROM MANY LANDS

"The quest for a world ruled by law must succeed if mankind is to survive," Chief Justice Barl Warren of the U.S. Supreme Court declared in the keynote address to the World Conference on World Peace Through World Law, which brought some 3,000 judges, lawyers, and interested laymen to Washington, D.C., in mid-September. He continued: "I believe we of our generation can translate the centuries-old dream of a world ruled by law from dream into reality. We must succeed in order to survive."

Of the participants in the conference, onethird had come from 110 countries other

than the United States. The Communist nations had been invited to send representatives, but none did so. Cost of the conference—around \$465,000—was borne by U.S. foundations and corporations and by individual lawyers. The proceedings opened with a procession of 263 judges and 59 ministers of justice or attorneys general representing every continent, marching in their judicial robes and wigs.

As discussions developed, a real difference of opinion appeared as to whether world law should be enforceable. In a particularly brilliant address Lord Denning of England, master of the roils and chairman of the Magna Carta Trust, called for a limited world government through law, with sovereign states existing under world law even as a sovereign exists under the law of his own country. On the other hand, Henry R. Luce, editorial chairman of Time, Inc., declared that world government is not only impossible but undestrable in the forceable future—a sentiment he insisted is shared by most people. Nevertheless, even he acknowledged that the notion of world government is not irrelevant: "At the rate at which the world is going, it is not difficult to imagine that one way or another, and like it or not, world government might become a fact—by, say, the year 2000."

### ESSENTIAL: ENFORCEMENT POWER

After the opening addresses commemorating World Law Day 3 days were giver to 12 workshops covering existing and proposed international courts, space law, international law in domestic courts, international communications, transnational trade and investment, arbitral tribunals, human rights, international judicial cooperation, disarmament, industrial and intellectaual property, creative research and education in international law, and expanding structure of international law; peacekeeping, general principles, international organizations.

Working papers were presented by out-standing authorities, considered by panelists, then opened to discussion from the floor. To this correspondent it seemed incomprehensible that anyone could sit through those sessions and not recognize that without enforcement world law is a very weak con-cept. Alex Quaison-Sackey of Ghana, a former president of the United Nations General Assembly, insisted that a resolution passed by a two-thirds vote in the Assembly should enjoy the status of law that nations must obey, and that absence of any sanction or authority to enforce the law makes the law of nations uneasy law. One can disagree with him on the two-thirds vote matter, since under the present "one nation, one vote" rule such a resolution might be passed by nations representing a minority of the world's population. But his emphasis on enforcement seemed essential.

Likewise, in the workship on disarmament, U.S. Senator Joseph S. Clark, Democrat, of Pennsylvania, said: "Disarmament won't work unless there is a law to enforce it. Disarmament will not be achieved unless all nations are prepared to yield a certain amount of sovereignty, and to be creative and imaginative in erecting new international institutions to carry out the job." He called for a vetoless international disarmament organization to insure compliance, an adequate world police force and international tribunals of mediation, conciliation, and adjudication.

### EUROPEAN ACHIEVEMENT

Allesandra Luini del Russo, professor of international law at Howard University, received a standing ovation at the conclusion of her working paper on human rights. She traced the growth of protection for human rights, culminating in the U.N. Charter, showing how this action was prompted by the desire to prevent any recurrence of the indig-

nities and atrocities perpetrated in World War II by totalitarian nations which had succeeded in gradually stripping their citizens of all fundamental freedoms, even of life, in the name of the supreme authority of the state. She reported that though no agreement has yet been accepted by the world community the U.N. Charter has inspired some 16 European nations to establish an international system of collective enforcement of human rights through the creation of a European Commission and a European Court of Human Rights. For that purpose each state has surrendered a portion of its traditional sovereignty over individual rights within its boundaries. The importance of this experiment and the effectiveness of the remedy are verified by the fact that in its 10 years of life the commission has received over a 2,200 individual petitions as compared with only three complaints filed by one member state against another. As a result other regional areas of the world are planning to adopt a similar plan.

In the plenary sessions held the last 2 days of the conference the judges and lawyers adopted a declaration of faith pledging to work for a world ruled by international law, under a global judicial system through which all disputes would be settled without resort to war. They called for an amendment to the U.N. Charter to establish compulsory jurisdiction for the World Court of International Justice, with individuals as well as nations entitled to bring cases before it for judgment; for the erection of regional courts to take advantage of common cultural ties and hear disputes between regional nations as well as individuals; and for regional human rights conventions like the one that now binds certain European nations. next conference will be held in New Delhi, India, in 1967.

## A Summary of Federal Assistance to All Forms of Education During Recent Fiscal Years in Hamilton County, Ohio

EXTENSION OF REMARKS

## HON. JOHN J. GILLIGAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. GILLIGAN. Mr. Speaker, education is the keystone of the democratic arch. It has become increasingly important to our free society as our social and economic structure becomes more complex, more difficult to understand, and less yielding to old and too-simple remedies for its ills.

This Congress has already passed legislation to improve the educational opportunities of our citizens which is truly historic. It is my hope that what we did last session will be supported and enlarged upon by our actions this session.

It is vitally important that the public be informed of how their national tax dollars are being spent. I am sure that many citizens of my district will be astounded to learn that over \$32 million was spent during the last fiscal year in Hamilton County on education and public health programs.

In order that the citizens are fully informed, I have compiled the following information, which deals with the size

and placement of national tax funds in the fields of education and public health in Hamilton County. I have used the word education generally, to include re-

### House Out of Order-A Book Review

stitutum Divithoms wish Hospital of Cir

EXTENSION OF REMARKS

## HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES Thursday, January 20, 1966

Mr. DOUGLAS. Mr. President, I ask unanimous consent, to have printed in the Appendix for the benefit of my colleagues Judge David Bazelon's review of Congressman Bolling's book entitled "House Out of Order." The book is a good one and well worth reading and considering.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

[From Commentary, December 1965] "HOUSE OUT OF ORDER," BY RICHARD BOLLING (Reviewed by David T. Bazelon)

"House Out of Order" was written to stimulate opinionmakers to "inform the American people about the wretched condition of their National Legislature." Considering the source, it is a startling book

thing like an event in American politics.

RICHARD BOLLING has represented a district from Kansas City in the House of Representatives for more than 15 years; and eight terms is a serious matter in the House. Even more significant, Representative BOLLING was for a number of years a prime protege of the late Speaker Sam Rayburn, so he is informed as to the inner workings of the House as few Members are ever privileged to be. He is, moreover, an important liberal leader—strong enough, a few years ago after

the death of Rayburn, to buck for the position of majority leader (unsuccessfully). But apart from the credentials of the author, the argument of the book is right. It concludes as follows: "The failure of the House is the failure of the Democratic Party of which I am a member. Its responsibility cannot be evaded much longer without reducing the national assembly to impotence, which would mean a vital failure in the democratic process itself."

Again considering the source, the book is at times nearly brutal. A politician still very in business, Bolling indulges in both honest and sharp remarks that one imagines his friends would have advised him against; and it would take a serious enemy—either of BOLLING personally or of politicians gen-erally—to fault him for not indulging the further honesty of which he is probably capable. As might be expected, the edge of BOLLING'S blade cuts most frequently into reactionary southerners: he characterizes his notorious colleague on the Rules Committee, William M. Colmin, of Mississippi, for example, as inhabiting a political position "perhaps slightly to the left of Ivan the Terrible." But reactionary southerners aren't his exclusive target. ADAM CLATTON POWELL, of New York, for instance, gets this one: "His attention span has been variously estimated as ranging between 40 seconds to 2 minutes." And concerning the recently defeated 15-term boss of the Bronx, he quotes a veteran reporter as saying "he wished 'Charile Buckley had stayed around a few ars; I would have liked to have met more ye

(It should be mentioned that wisecracks like these are probably the work of Bolling's writer-collaborator, an ex-newspaperman by the name of Wes Barthelmes who has earned honest knowledge of the House on his own as an assistant to Congresswoman EDITH GREEN, of Oregon, and who is now public

relations man for Senator Robert Kennedy. I would also guess that the shrewd and nasty chapter on the press, which is excellent, owes much to the same source. This chapter de-lineates the "client" or buddy system wherein a big public figure and a newspaperman collaborate regularly, so to speak. In Washington a reporter is about equal to his sources, and the latter naturally feel entitled to some consideration for serving as such.)
As I thumb through the book trying

to decide what must be mentioned in a review. and what may be left out, I am convinced, even more than I was before, of the importance of Bolling's act. This level of incisive candor, in an ambitious American politician, is nearly unheard of-it is culturally revolutionary.

Politicians have many more substantial reasons than the rest of us for not being honest in public. We demand that they tell us either that everything is all right, or that only the other guy is doing dirty. Meanwhile, we place this creature of ours in the kitchen where social policy is being cooked: no matter what his personal nature or pred-ilection, his immediate circumstance con-tinuously confronts him with the responsi-bility for applying power to the solution of problems—that is, concecting policy. This gives us two kinds of politicians—those who try very hard, and those who don't try so hard, to meet the responsibility; or, to put it another way, those who begin sconer and more strenuously to protect themselves from the kitchen heat, as against those who defend less and later. The difference is not between the noble battler and the crooked bum; the difference is not a matter of purity and honesty (politics, like most important activities, is impossible without a reasonable amount of corner cutting and lying).
The difference concerns that underlying goodness and seriouncess of soul (difficult or impossible to judge) whereby one does not

"give up" until one has run out of the strength to keep "giving." No more cover be asked of any man in any situation. No more can

BOLLING has told a story that many politicians could have told. The resson he did and others have not, is that he is a failen golden boy who has not yet run out of strength. He is too big to quit quietly (also he is probably—and justifiably—angry, although the book is written without rancor). During the 1960's, he was the bridge between Rayburn and the liberalsjust as Humphrey, on the other side of the Hill, was the bridge between Johnson and the liberals. But when Rayburn died and Bolline could no longer "deliver" him, the liberals decided in their august purity that Bolling had cut too many corners and defied too many pieties in his previous brokerage. So another Parnell was dumped.

His response has been to seek the last refuge of the politician, to tell the simple truth—the simple truth about power. But this is impossible: power is so intimately compounded of deception and vague threat that to state the truth about a power situation within the hearing of its inhabitants is to change the object being described—in-calculably. Unless, by chance, one of those rare moments is at-the-ready when nothing less than the simple truth can any longer resolve an intolerable situation.<sup>1</sup> As to this and Bolling's book, we shall see.

There is much structural detail of interest in the book. As BOLLING goes over the now-familiar facts concerning the committee system, seniority, the delicate cohesion of the Democratic Party, and so on, we become more and more aware that we are hearing the especially authoritative voice of Rayburn's representative for many years on the Rules Committee, the man who moved sensitively between the Democratic Study Group and the hierarchy—and the heirarchy means the Great Broker, Rayburn himself, who trained our current President in the realties of Amercan politics. For obvious reasons, therefore, most interesting of all is what Bolling has to say about Rayburn and his relation to he liberals, at this special point in Bolling's career where he is reduced to the final ploy of honesty.

The key to his view of Rayburn, as set forth in this book, is stated on page 69: "As Speaker, Rayburn used his strength spar-ingly. He subscribed to the belief that oftentimes withheld power is preferable to committed power that may not carry the day." Later, he says of Rayburn's relation to Howard Smith of the Rules Committee before the 1961 battle which, involving nothing but the clash of giants, will be appreciated mostly by historians—"on many occasions Rayburn virtually had to beg Smrrt to release important bills." For this frail giant who died, Bolling played "politics" with the liberals. And what of them?

He coins a phrase to describe the worst of them: "One species of House liberal is totalitarian in temperament and occasionally seized with fits of vuodooism. He sees the liberal program as a holy tablet to which lib-erals all must give unawering allegiance—or else risk being read out of the liberal ranks."

n

0

d

ıt

1 Not every otherwise-all-right observer agrees with this interpretation. Representative Bolling has a rather strange and beclouded "reputation" in Washington. He is characterized variously as an unemployed errand boy, a no-work specialist, a playboy, and an ineffective operator with only one foot in the Democratic Study Group. But outside of Washington, he was known as the coming liberal leader; and I personally like his general public appearance, in this book and elsewhere. The dimenity in evaluating his past role and failure is that it is so in-timately bound up with the much larger matter of liberal disorganization in the

There are, threafter, regular references to the "voodoo liberal" in Bolling's description of who did what, and why, and then what happened. He offers many additional characterizations of the "voodoo liberal," but this is the one (for me) that sticks: "He distrus power; indeed, he treats it as some sort of dirty weapon." Bolling's problem is that out of whatever type of frontline ambition he volunteered as a reconnaissance gunner. Then the troops he expected to fall in be-hind him went to church on court-martial Sunday.

When he says the House is "a lobby for arrogant brokers of special privilege," only knows what he is talking about, but he knows whom he is telling it to. How often does this happen, in public, in American political life?. Representative Bolling is-in a rather modern, agonized way—trying to tell the "voodoo liberals" in the House that they live in a kitchen in which "pure" thought has no more and just about as much relevance as a timely pinch of oregano.

Purity will not bring us through; after we get through anyway, it will not lead us anywhere. I hope that the other impor-tant congressional reformers like Senator JOSEPH CLARK and Representative HENRY REUSS will find the courage to support the clear, simple, practical, efficient, and revolutionary prescription which RICHARD BOLLING has presented with a superb economy of phrasing: "Basic flaws in party organization are reflected in the power structure of the They are entirely the responsibility of House Democrats, and the Democrats alone have the means at hand to correct them. His prescription is to lodge congressional power (control over committee chairman-ships and presumably the disciplinary effect of the distribution of all the factors that help in reelection) in the Democratic caucus, us ing the Speaker as the organizing instrument of the caucus (so that, for instance, the same caucus contests would not recur daily). With these power adjustments ac-complished, the party and its program— whether in control or in opposition—would be decently related.

This is the sole reform BOLLING proposes. It is all that is necessary; and nothing else will really help.

It is the only way to overcome the elaborate system of absurd and corrupt brokerage which is all that most of us understand the House to be, as if it were some kind of fatal American inevitability. It is not. Given a reasonable understanding of the nature of the natur power on the part of American liberals generally, it is so little inevitable that it probably need never have happened. However that may be, it can persist only as that par-ticular lack of understanding persists. And how it can persist while the same Ameri-can liberals support President Johnson as it he were a congressional magician, whereas in fact he merely understands our power system better than they do, is a spiritual problem I will not deal with here. Liberals are supposed to fail for lack of money, not for lack of intelligence.

## Education Is the Real Answer to Poverty and Unemployment

EXTENSION OF REMARKS

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1965

Mr. PERKINS. Mr. Speaker, this week the minority leader of the House came out wholeheartedly in favor of edu-

cation. He said what the House majority-and the Senate majority and the President-have been saying all along: that education is the real answer to the problem of poverty and unemployment,

This may represent a change in Republican policy-or it may not. It cannot be forgotten that 3 out of 4 of the Republicans in the House and nearly half of the Republicans in the Senate voted Elementary-Secondary the against School Education Act of 1965. But, if the Republicans have had a change of heart on this issue, they propose a rather strange way for solving the problem.

The only firm proposal in last night's speech was for a Federal income tax credit for college students and their parents. What they will do, in other words, is to make it easier for the well-to-do to send their children to college by transferring part of the burden to all the taxpayers. To the family whose entire income may be little more than the cost of a year in college, the Republican proposal would give nothing whatever. Such a tax break would reduce Federal taxes by perhaps a billion dollars annually. Yet, it could not guarantee that so much as one boy or girl who does not now go to college would be added to the rolls. Most emphatically, it would do nothing to guarantee that every youth should pursue his education as far as his talents would take him. The talented boy from an impoverished family would be no better off than he is today.

Our real aim in education must be to improve educational resources and to provide opportunities for every student whose family cannot afford to send him The best methods are scholarship, fellowships, loans—money placed at the disposal of those who need it, and not by providing tax windfalls to those families whose children already have

access to college programs.

### Constantino Brumidi

EXTENSION OF REMARKS OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

Mr. FINO. Mr. Speaker, today I introduced legislation to authorize procure-ment of a marble bust of Constantino Brumidi to be placed in the Capitol's first floor Brumidi corridor.

Certainly the Capitol should somewhere have a bust or portrait of the artist who did so much to beautify it. The Capitol is a far more beautiful place because of Brumidi's murals, paintings,

and free

Constantino Brumidi left mid-19thcentury Italy as a political refugee, vowing to find liberty. He found it in America, and beginning in 1855, worked 25 years to make the Capitol the inspirationally beautiful seat of liberty that it is today.

I hope that the Committee on House Administration will give this legislation serious and favorable consideration.

Address of Commissioner George H. only does not intend to lose its international commercial preeminence but indeed, is determined to enhance its record. Figures, Club of New York

EXTENSION OF REMARKS

# HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. MURPHY of New York. Mr. Speaker, on October 20, 1965, Commissioner George H. Hearn, of the Federal Maritime Commission, addressed the 23d Annual Steamship Night Banquet of the Foreign Commerce Club of New York. Under leave to extend my remarks in the RECORD. I include his address:

POREIGN COMMERCE AND ITS EFFECT ON THE PORT OF NEW YORK

It is always a pleasure for me to return home to New York City and it is a distinct honor to have been invited to speak at the 23d annual steamship night banquet of the august Foreign Commerce Club of New York.

I know we New Yorkers are often accused of being chauvinistic about our great city. But the record supports our claims. New York City is the hub of planetary govern-ment, and as the seat of the United Nations it is the pulsating nerve center of the world. Our incomparable Wall Street makes New York the world's financial capital. Our unexcelled broadcast media establish New York as the communications heart of the globe and the confluence of God-given natural advantages especially this harbor, the historical development of the United States and the throngs of men of trade genius who have always found their way to this great city, have made it truly the commercial focal point of the world. Consequently, I would be seriously remiss, tonight, if I did not publicly salute you who have contributed as the cont tly to the success of New York's, and the Nation's waterborne commerce down through the years. In this regard, I am happy to acknowledge the fact that the Foreign Commerce Club, dedicated, as its charter states "to the upbuilding of the foreign comerce," is well into its second half century. merce," is well into its second half century,
I naturally wish it well particularly for the
reason that the Foreign Commerce Club and
the Federal Maritime Commission share a
common mission, that this, the ever increasing growth of our foreign commerce.
It is my sworn obligation, to assist the flow
of our foreign and domestic water borne commerce, for that is the ultimate purpose of the statutes committed by the Congress to our Commission.

Before continuing, however, let us look at the recent record compiled here in New York. Aided and abetted by you and by your or-ganization, New York has been established as the largest and most influential trade center of our times. Our port has the serv-loss of over 20 steamship conferences. More liners alone maintain regularly than 55 liners alone maintain regularly scheduled service here in worldwide trades. In 1960 over 42 million tons of cargo, general and bulk, passed through this port in our foreign commerce. When we consider liner-type cargoes aloue, in 1963 the Port of New York handled cargoes amounting to almost one-quarter of the Nation's import and expect foreign commerce. Further world! one-quarter of the Nation's import and ex-port foreign commerce. Further, you dedi-cated trade-conscious men here, have ex-hibited admirable efforts to compile for New York this great record. We are hosts to the trade promotion missions of at least 18 foreign nations and 25 consulates. Our \$350 million World Trade Center, which will be a colossal reality in but a few years a newerful swidence that New York not is powerful evidence that New York not

particularly when they become astronomi-cally large, have a tendency to lose their true meaning and fail to project their real

Consequently, without attempting to burden you with the total dollar impact of foreign trade on Greater New York, state an obvious truism, a truism however, that many men, particularly men not involved in commerce, are unmindful of: Every man, woman, and child in this city derives a tangible, meaningful, and substantial economic benefit from the level of New York's international trade undertakings. And to my mind, the awesome possibilities of periods of commercial inactivity on our waterfront and on our sealanes, represent a most serious threat to New York's standing as the world's leader in oceanborne international commerce. In this vein, we have all witnessed right here in New York the unhappy, almost total, demise of the export grain business. A lesson should be taken from that experience so that the movements of other bulk cargoes and general cargoes are not adversely affected.

Now the Federal Maritime Commission, as I said, is also devoted to the movements of our foreign commerce. We are not, as many suppose, dedicated to the promotion of American-flag vessels. This promotional respon-sibility, since 1961, has not been the concern of the Commission. Our Nation has traditionally followed the doctrines of freedom of the seas. Indeed, this freedom aided our prosperity down through the years. Moreover, the Shipping Act tacitly, yet powerfully gives impetus to that doctrine. Foreign-flag gives impetus to that occurries. Foreign-nag carriers are welcome to participate in our international trades, and indeed they do so to a very great extent. The Shipping Act does not favor or disadvantage vessels of any particular flag, and any common carrier, flying any flag, may invoke the provisions of that act to protect its legitimate interests. The record incidentally, establishes that foreign-flag carriers have invoked that act, and, moreover, that the Federal Maritime Comsion has operated as a forum for hearing their grievances and issuing orders for their benefit as appropriate. On the other side of the coin, however, all carriers who engage in our trades do so, necessarily, subject to the provisions of the Shipping Act. And subject to the Shipping Act means more than merely not violating its explicit provisions. The his tory of the last decade or so has caused the Congress to add important amendments to Shipping Act.

Of these are included the obligation of carriers in our foreign trades to file with the sion and otherwise make public their schedules of transportation rates and charges. Hence, for the first time, the actual current rates of both inbound and outbound ocean cargo liftings are now matters of public record. Such rates cannot be increased, except by special permission for good cause own, on less than 30 days' advance notice, and where such rates pertain to exclusive patronage contracts, the familiar dual rate contracts, they may not be increased on less than 90 days' advance notice. These require-ments enable the shipping public to know at all times what their freight costs will be exactly, and permit them to plan their future des and purchases with greater assurances to their actual costs.

A very important feature of the 1961 amendment is that section which gives the Commission the power to disapprove any freight rate which it finds to be so unreasonably high or low as to be detrimental to the commerce of the United States. Now, we know that our commercial exports are at a healthy level. But we are painfully aware of the increasing difficulty our own exporters are experiencing in laying down their goods in foreign markets at competitive prices.

Mindful of the fact that the American enterprise is manufacturing finished goods overseas in ever-increasing numbers, n theless a comparatively small percentage of American manufacturers have braved the rigors or reaped the harvests of selling over-

Further, we all understand the commercial Further, we all understants are commercial challenge facing us today. We must, to put it succinctly, either trade or fade. And we at the Federal Maritime Commission are duty bound to insure that freight rates, and equally important charges for accessorial services, do not impede or impair our ability to export.

It is irrelevant, under the terms of the Shipping Act, that tariff barriers and other artificial impediments, or inherent high costs or production in this country bar foreign sales. We are committed to insuring that commodities which can be sold overseas, goods for which there is a present demand and goods for which a demand can be created and nurtured, are not foreclosed from the opportunity to compete in market places throughout the world by reason of rates and charges that are unreasonable. There is a national policy to encourage "sell American", and the Federal Maritime Commission intends to do all in its power to contribute to that program. In a word, wa contribute to that program. intend to use our lawfully delegated powers to insure that American exporters and importers get as fair transportation treatment. from a service standpoint as well as from a price standpoint, as do their international competitors

While the Commission's efforts in this area have met with some success, much remains to be done. Vessels of other nations carry an overwhelming amount of our liner commercial cargoes, as much as 75 percent. We have no desire to take cargoes away from any carrier or from any group. But we are concerned as we have a right to be, over the level of liner rates in all of our trades by all carriers who engage in them. And our concern has prompted in-depth cost studies in-volving our liner trades. Valid data have been exceedingly hard to come by, and recareful analysis before they can be used meaningfully. Yet the data which we have received have whetted our interest.

I think I can demonstrate why our interest has increased, why our efforts and resolve have been redoubled. Preliminary data covering the heaviest and most lucrative trade route, the North Atlantic European Conti-nent trade, establish that the disparity spread between inbound and outbound freight rates is less than 7 percent in favor of the inbound.

In this trade there is no outbound dual rate system, and the conference carriers are faced with strong and well established nonconference competition.

Conversely, in the North Atlantic-United Kingdom trade, an equally important if not as voluminous a trade, and in many in-stances involving the same carriers, vessels, and voyages as the continental trade, where there is a dual rate system and where inde-pendent competition is not anywhere near the magnitude that it is in the continental trade, the freight rate disparity approaches 31 percent. And interestingly enough, in five of our major trades in 1963, inbound revenue tons exceeded outbound revenue tons by a substantial ratio.

In light of this, coupled with the fact that In light of this, coupled with the fact that outbound rates are generally higher in these trades, can one honestly wonder why the Commission is so concerned with rate disperities? Let me give you another instance which is calculated to provoke concern. Of all the inbound trades to the United States, the trade from the west coast of Italy industrial Affectic protests of IS Worth Atlantic cluding Adriatic ports to U.S. North Atlantic ports is heavily proliferated with all manner of anticompetitive agreements. Oddly it is only in this particular inbound trade where the freight rate structure is actually higher

8

than in the reciprocal outbound trade, which does not have anywhere near the same competitive restraints

I have recited these instances to demonstrate that the Commission, in the discharge of its statutory obligation of insuring that freight rates are not unreasonably high or low to the detriment of our international commerce, has reasonable cause to pursue its legitimate interest in these matters

By and large, I believe that the conferences have served our commerce well. Nevertheless, the very fact that their existence represents a substantial departure from the long established, preeminently successful free enterprise system of this country demands that conferences must be subject to constant Commission solicitude. When, at their own option, carriers and other persons subject to the act elect to do business in concert they necessarily subject themselves to regulation. And for the Commission to properly fulfill its obligation it must be better informed.

Indeed, it must be fully informed and at all times. My own philosophy, not univer-sally shared I must confess, is that anticompetitive agreements between carriers and between other persons subject to the Shipping Act enjoy an absolute immunity from our antitrust laws, that such anticompetitive agreements must be preapproved by the Commission, and that the carrying out of agreements before approval or after disapproval constitutes a violation of the Shipping Act alone. This philosophy, of course, casts a continuing burden of review upon the Com-mission—Further, the public interest stand-ard of section 15, explicitly incorporated in the act in 1961, requires that the privilege of joint action must be conditioned upon the

joint action must be conditioned upon the consequence of a public benefit.

In every regulated business, monopolies or quasi-monopolies are countenanced on the premise that their existence is necessary for the benefit of the public. Utility companions of the public of nies, transit companies, and even taxeabs fall into this category. Yet no one denies that the franchises of such entrepreneurs require countervailing safeguards administered by public bodies. So too, in my opinion, it must be where quasi-monopolies in the ocean transportation world are permitted. Obviously, the overwhelming share of our international trade is carried by vessels, and a predominant number of these vessels are devoted to our extremely important liner or general cargo trades, and the vast majority of these liners are banded together, lawfully, into rate-setting or price-fixing conferences. It is unthinkable, I contend, that in the 20th century, reasonable men would suggest that quasi-monopolies should exist without a public body's surveillance. In a word, the international commerce of the United States is far too important a matter to be placed, unbridled, into the hands of laiseer faire business combines.

The plain facts are that our economy is freer than that of most of the international community, that our Government policy, in international shipping, involves less home-flag preference than does theirs and most importantly many nations in this hemi-sphere and abroad, have taken steps not only to protect and enhance their own international commerce, but have promulgated rules and regulations regarding the vessels on and regulations regarding the vessels on which commercial cargo must be carried. In the final analysis, the Shipping Act, as an expression of Congress pursuant to a constitutional grant, is designed for the protection and growth of our foreign commerce. Simply expressed the situation is this: our foreign commerce is open to all, and all those who wish to participate in it, do so under the ground rules that the Congress has laid down, Among those ground rules is the Shipdown. Among those ground rules is the Shipping Act, and that is administered by the Federal Maritime Commission.

Carriers are free to engage or not to engage in our foreign commerce, but once

having freely elected to participate in our trade they necessarily assume the obliga-tions, as well as the benefits, which, under law is a condition of such participation.
The phrase "unilateral regulation" has not been raised with respect to local pilotage rules, or to quarantine requirements or to health regulations, or to immigration re-quirements, or to contraband pronounce-

I submit that the phrase is equally inane when it is applied to economic safeguards and in the final analysis the Commission's regulations, pursuant to congressional mandates, are economic safeguards. Further, those safeguards are rarely interposed except where normal commercial intercourse has already been the subject of private trade restraints.

I trust that I have made the point that the orderly, efficient, and economic flow of our international export and import commerce is of prime concern to the Federal Maritime Commission; that carriers of all nations and conferences are welcome to p ticipate in our trades, while observing the spirit of the Shipping Act, and that the Commission intends to use its powers, without fear or favor, without recklessness or timidity, in meeting its public obligation.

## Big Red 1

EXTENSION OF REMARKS

## HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. BUCHANAN. Mr. Speaker, the citizens of Birmingham and of the Sixth District of Alabama, which I am honored to represent, have selected a most dramatic way to demonstrate their support of our military effort in Vietnam and the unfailing courage of our fighting men there. By official proclamation of Mayor Albert Boutwell, the city of Birmingham has adopted the 1st Infantry Division of the U.S. Army, more affectionately known as the Big Red 1.

Like so many other loyal patriotic Americans, the good people of Birmingham were disturbed and angered by the demonstrations and draft card burnings of a small misguided minority in this country—actions which have perplexed and even undermined the morale of U.S. Armed Forces engaged in a difficult and exhausting struggle thousands of miles The citizens of Birmingham determined to show in a concrete and convincing way they were behind our men in Vietnam all the way.

The idea of "adopting" the 1st Infantry Division, now stationed in Viet nam, was first conceived by retired Brig. Gen. Edward M. Friend, Jr. It was an apt choice. The Big Red 1 is this country's oldest division and has an outstanding and much decorated history. It was first to shed American blood in France in World War I and first to land in North Africa in World War II. It sparked the conquest of Sicily, stormed across Omaha Beach in the D-day assault on Normandy, and was first in Germany with the capture of Aachen. The 1st Infantry Division also swept across the Rhine into Czechoslovakia—the farthest advance

by U.S. troops in Europe in World War

The idea became reality through close and effective cooperation among the Birmingham Chamber of Commerce, the Birmingham News, and the officials of the city of Birmingham. A special com-mittee of distinguished citizens was formed by Mayor Boutwell to work on behalf of the city with the chamber of commerce. Those members are: General chairmen: Mayor

Boutwell, Cooper Green. Cochairmen: Donald Stafford, Crawford Johnson III, Brig. Gen. E. M. Friend, Jr., USAR, retired.

Steering Committee: Tom Bradford, Miss Evelyn Walker, M. E. Hackney, John A. Jenkins, Dr. John Nixon, Dr. Lucius Pitts, Drew Redden, and Vincent Townsend.

The support of the Big Red 1 took tangible form at Christmastime when hundreds and thousands of gifts and letters were sent from Birmingham to men in Vietnam who would not be home for the That support continues and holidavs will continue as long as U.S. forces must remain in Vietnam to combat communism and defend freedom.

A Birmingham roll of honor has been organized, saluting organizations, companies, churches, schools, and other groups that have adopted units of the 1st Infantry Division. Here is the list of sponsoring organizations and the units of the Big Red 1 adopted by them, as of January 1, 1965.

BIG RED 1 ROLL OF HONOR

Alabama Bridge Association—1st Platoen "C" Co. 1st Engineer Battalion. American Legion Post No. 35, Ensley—

Headquarters Company 2-18 Infantry 1st Infantry Division.

Andrews Appliance & TV Center-Maintenance Battalion, Company "E".

tery 8-6 Artillery.
South Avondale Baptist Kindergarten

Platoon "C" Company 2-28 Infantry. Sirote, Permutt, Priend & Friedman—3d Platoon "C" Company 2-28 Infantry.

Sertoma Club East--Headquarters Comany High 3d Brigade.

Shades Valley Jaycees-1st Military Police

Company. Ohnde Valley Kiwanis Club-"C" Battery 2-33 Artillery.

Tarrant Rotary Club-"B" Company 1-26 Infantry.

Temple Emanu-El-"A" Troop 1-4 Cav-

United Steel Workers Local No. 1489— Platoon "C" Company 1-18 Inc.

University of Alabama Town & Gown Theater—4th Platoon "C" Company 2-28 Infantry.

Woodlawn High School-Company "B" 1-28

Western Birmingham Jaycees—1st Aviation Battalion, "B" Company.
8th Avenue Branch YWCA—Company 1–16

Infantry. Men's Business Club-Company

Young Men's Busines "D" 1st Medical Battalion. Zonta Club of Birmingham-Company "B"

121 Signal Battalion. Gadsden has adopted the artillery brigade

attached to the Big Red One, and Roadruck Tool Engineering Co. of Guntersville has adopted the 2d Platoon of "C" Company 1st Engineer Battalion.

Mr. Speaker, here is, I know, the real mood and spirit of America: resolute and eager to support the fight for freedom in Vietnam. I salute the action of the city of Birmingham in adopting the 1st Infantry Division and I hope that other cities and towns across this great country will follow its inspiring example and let our men in Vietnam know that the overwhelming majority of Americans support their stand for freedom and against tyranny there.

### What's That You Said About High Taxes?

EXTENSION OF REMARKS OF

## HON. BASIL L. WHITENER

OF MORTE CAROLINA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. WHITENER. Mr. Speaker, the Gastonia, N.C., Gazette of January 15, 1966, had a very fine editorial entitled "What's That You Said About High

The editorial points out that there is a definite relation between the taxes we pay and the standard of living we enjoy. I believe my colleagues will find the editorial to be most interesting, and I insert it in the Appendix of the RECORD. WHAT'S THAT YOU SAID ABOUT HIGH TAXES?

Some day when you don't have anything better to do, stand on the street corner and listen to the moaning.

It's a special, hybrid kind of moaning. starts way down deep and rumbles up through the teeth and is spit out like the bitters of a pecan.

And what is it that prompts the moans? Taxes, friend. Taxes.

"Why, I remember back a few years ago," the complaint goes, "when my taxes weren't

Ramsay High School—1st Company "B" half as much as they are now. And they're Gompany 2–16th Infantry.

Roebuck Camera Club—Headquarters Bat—
And food, friend.

"Why, I can remember when we'd eat all week off \$5."

So it was. But "back then," the week's menu consisted of black-eyed peas and corn-bread, buttermilk, white beans, pintos, and maybe some fatback. Five bucks a week then was a king's ransom.

Now, check what the housewife brings home. Sixty-five different kinds of cereal, a like number of frozen foods—frozen, mind you; pickles by the quart, meat by the pound—all kinds of meat, mind you; rolls that melt in your mouth, doughnuts, buns and other bakery tastles that are products of oday's bakery genius, and on and on and on.
Of course, food costs more today. And it

will cost more tomorrow if we continue to demand and get that which is a little bit better, a little bit tastier.

But, getting back to taxes

So yours went up with the revaluation. That's tough. So did ours. So did almost everybody else's we have talked with. And your taxes went up before that. And you just be dad-burned if you'll vote for a hospital if your taxes are going up again.

Well, bully boy for you. Maybe you should be allowed to return to those good old days when you lay with pneumonia in the "fire room" and the wind howled through the cracks and the heater's best wasn't half good enough to fight back the cold.

Maybe you want to call back the days of yesterday's hospital, with its feebly heated rooms in the winter and its sultry rooms in the summer. Maybe you liked the flies that collected around your bed or that stuck to the flypaper on the ceiling.

Maybe you'd rather stay at home and have a doctor come by to see you instead of being fevered down in a bed that cranks up and down and cared for by attentive nurses and resting with the thought that the best of medical knowledge is somewhere nearby. "But my taxes \* \* " you complain.

Your taxes. Of course, your taxes have But have you ever stopped to congone up. sider just how much your standard of living has skyrocketed during the same time?

Do you realize that your demands on your governmental representatives for more and more services, that your insistence for gadgets and convenience and a "better day" is directly responsible for your taxes being higher

We don't deny that politicians held out the grapes; but it was you dear friend, who gobbled them up like selfish little foxes.

1

a

b

81

R

T

ai

th

L

wi

of

of

п

fig

If you're interested in knowing what's been happening while your taxes were going up, stand at the bank teller's windows and watch the hordes go by. Maybe some of them will show you their deposit slips.

Or gather your courage and fling yourself atop a bridge over I-85 and count the shining, new cars as they hurtle their drivers along that tremendous ribbon of concrete which your taxes are paying for. "back when." Remember the (Remember "back when." Remember the dusty roads and the T-Model with the "gas" and spark?"

Or, better yet, stand near the doorway of some furniture store and count the color TV sets as they're rolled out the back and into the waiting delivery trucks.

Taxes?

You can bet your life your taxes are up. But so are the luxuries you enjoy, the standard of living you cherish so much

Brother, if you want something bad enough, you've got to pay for it.

Don't get us wrong. You should complain about your taxes. You are the conscience of the man who spends them. Let up, and he'll go hog wild.

But while you're complaining, just reargument.

### Tribute to a Modern Patriot

EXTENSION OF REMARKS OF

## HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. BURKE. Mr. Speaker, at a time when heroic deeds are being performed daily by our men in Vietnam, we have unfortunately witnessed too, occasional lapses of patriotism within the country. Therefore, it is especially appropriate that I now bring your attention to the truly loyal and dedicated action of one man in Quincy, Mass., who has estab-lished for himself and his community a tradition which should serve as an inspiration to all who learn of it.

Archie Vallatini has earned for himself the tribute I pay to him today, and I respectfully refer you to an article which appeared in the Boston Herald-Traveler of October 29, 1965. both proud and humble to see such exemplary citizenship in a naturalized American.

QUINCY SALUTES FLAG RAISER—HONORS DUE 76-YEAR-OLD PATRIOT

(By Henry Bosworth) After 22 years, Quincy has finally caught up with Archie Vallatini.

And he's soon going to get what he deserves—citywide recognition.

hell

the

Now a white-haired 76, Archie walks with the aid of a cane.

But he still gets up at sunrise each day to raise the fiag of his adopted country to the top of a pole across from his Taber Street, south Quincy, home.

He's been quietly doing this since the mid-dle of World War II. So quietly, it has been a virtual secret until now.

And during this time he has worn out an estimated 15 flags and 1 flagpole. Archie, who came to America as a 13-year-

old Italian immigrant in 1902, has voluntarily been hoisting Old Glory at a city war memorial because:

"I love my country. This is the best country in the whole world—you betcha life."

For the past week or so he has been send-

ing up the flag with a little extra snap of the wrists still strong from his early years at a stonecutter. That's his reply to the recent draft card burning incidents.

"I don't want to say had things about anyone," he shrugs. "But those boys oughta be ashamed. Maybe they abould live in Russia for awhile. Then they'd be happy to have draft cards—you betcha."

Archie became a U.S. citizen in time to

serve in the Army during World War I.

Married 46 years to the former Elizabeth

Rosa, they have four sons and a daughter. Two of the sons, Frank and Archie, served in World War II. A third, George, saw service

Archie's flagpole, which actually belongs to the city, stands on a grass mall known as Liberty Square. Beside it is a handsome polished Quincy granite memorial with this inscription:

"In grateful tribute to the men and women who served our country to protect the cause of all freedoms. Erected 1951 by residents of Ward 3."

But the pole was there during World War II when residents put up a wooden tablet "Honor Roll" bearing the names of local boys fighting in that war.

At first, Archie took turns raising the flag with the janitor of the nearby Lincoln School. When the latter moved, Archie continued alone.

And unless the weather is bad he runs the flag up each morning and takes it down at nunset

Archie helped raise the \$2,300 for the granite memorial. He went door-to-door canvassing and helped in a wastepaper drive. The campaign was launched by the local

John Quincy Adams Club with Mayor Amelio Della Chiesa, then ward councilman, as chairman and Alfred H. Mecagni, treasurer.

Now, long overdue recognition is coming

Ward 3 Councilman John F. Koegler and Lawrence J. Ferette, past commander and present public relations director of Quincy Veterans Council, found out about Archie simultaneously.

their recommendation, the veterans council-representing 15 veterans posts-will appropriately pay tribute to Archie Novem-

He is being invited to be a member of the reviewing staff for the Veterans' Day parsde. Then, as a head table guest at a dinner at Sherry's, Veterans Council Comdr. Henry J. Williams will present him with a special commendation.

But a couple of other nice things have already happened.

A 20-foot-high new flagpole is being erected by the veterans services department at Koegler's request to replace the old one now bent from service, weather, and kids

swinging on the ropes.

And Anthony Famigletti, custodian of city memorials, gave Archie a brandnew flag to replace the latest worn one.

Archie ran it up the other day to see how it looked. But he had a little trouble seeing it. Tears got in his way.

## Monsignor John O'Grady

EXTENSION OF REMARKS

## OF HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MONSIGNOR JOHN O'GRADY

The death of Monsignor John O'Grady, while it has brought sorrow to all who kne him, has also brought rejoicing in the tri-umphant conclusion of a splendid life. The nature of the man, and the value placed upon him by those who best knew his charac and achievements, are well expressed in the editorial with which the Washington Post saluted his passing. Evidently speaking from the heart, the editorial writer began with the memorable exclamation: "What a glorious, triumphant, robust, and joyous Christian life came to a close when the Right Rever-end Monsignor John O'Grady died on Sunday." It is a strong temptation to make the eloquent words of this editorial tribute my own, as they compress so tellingly the many and varied contributions of this great man to America and to mankind, and carry over effectively to the reader the qualities of energy and compassion that made Monsignor O'Grady such a fighter for human needs and against injustice and intolerance.

Millions who have never heard of Monsi-Millions who have never heard of Monsignor O'Grady, and who presumably never will hear of him, are deeply in debt to his labors, and to those who have followed his lead. For more than 40 years he served with distinction as secretary of the National Conference of Catholic Charities, holding the title of secretary emeritus at the time of his death on January 2, 1966. In this office, he was a major organizer of Catholic social

welfare work both here and abroad, bringing weinare work both here and abroad, bringing both his scholarship and his boundless en-ergy to bear on the many enterprises that came within the scope of this organization between 1919 and 1961, when he retired on account of ill health.

account of ill health.

Even while carrying out the extensive duties of this position, Monsignor O'Grady became a founder of the National Catholic School of Social Work, in the Catholic University of America, and served as dean of that school from 1934 to 1933.

Monsignor O'Grady's was an effective voice

in contributing to the study of legislation in social matters, since he combined the scholar's mastery of details with the executive's grasp of essentials. In housing, in social security, in employment of the physically handicapped, in nondiscrimination in em-ployment, in immigration policies, in the resettlement of displaced persons, in the com-munity approach to social welfare programs, Monsignor O'Grady has been a major con-tributor in the making of laws and in the

we who come of Irish stock take particular pride in the fact that Monsignor O'Grady was one of the great number of fine priests that have been contributed to America by Ireland. He was born in County Clare and ordained in Dublin, at his death he was survived by a brother living in County Clare, and a sister in Limerick.

and a sister in Limerick.

Monsignor O'Grady's concerns and activities went beyond the borders of this country, not only in matters of the resettlement of refugees, and the liberalization of immigration laws, but in the far-fung benefactions of War Relief Services (later named Catholic Relief Services) of which he was vice president, and in his service as Consultant to the Economic and Social Council of the United Nations. In this capacity, he visited Africa to work on community develvisited Africa to work on community development projects, and in 1959 he was cited by Pope John XXIII for his contributions to the welfare of Africa through this work. The Most Reverend Patrick A. O'Boyle, archbishop of Washington, said, upon hearing of Monsignor O'Grady's death: "His influence on charitable works of the church in this country and throughout the world for wide-spread social reforms will be long remem-bered. He was truly a modern apostle of Christian charity."

Monsignor O'Grady's theoretical emphasis on community service was also carried out in his life. Despite his national and world-wide interests, in the National Conference of Catholic Charities, and in his services as a consultor to various branches of the U.S. Government and to the United Nations, he was active locally as organizer of the Catholic Charities of Washington, which he headed from 1920 to 1938, and as professor of sociology at Trinity College for many years, besides his continuing interest in the National Catholic School of Social Work.

a great priest, an outstanding American, a valued friend of mine for many years, Monsignor O'Grady was "One of God's Noblemen," during his many years of active, progressive, and constructive life. When progressive, and constructive inte. When things looked dark, Monsignor O'Grady was not only a bulwark of strength, but an in-spiration to progressive Members of the Con-gress to fight successfully for the passage of progressive legislation in the best interests of the people.

We may well mourn that such a man has left us, but the occasion of his death is truly, in the long view, the occasion for rejoicing, both in the splendor of his Christian soul, and in the lasting benefits which his career has brought to our Nation and to the world. May his soul rest in peace, and may his example inspire generations yet to come.

In my remarks, I include the text of the sermon delivered by Most Rev. Raymond J. Gallagher, D.D., Bishop of Lafayette, Ind., at the Requiem Mass of-fered at St. Matthews Cathedral for Msgr. John J. O'Grady and an editorial that appeared in the Washington Post of January 5, 1966.

### TRIBUTE TO CHARITIES PIONEER

### (By Bishop Raymond J. Gallagher)

With great wisdom Holy Mother Church encourages us to avoid the giving of a eulogy on the occasion of a person's death. This bit of advice is very wise since it enables those of us who are present for the ceremony to succeed in attaining the primary purpose of a funeral Mass, namely, a learning of the lesson which death itself teaches us.

Although the church recognizes the value of a life well lived, she endorses as more important the lesson of life taught by death. All of us have witnessed many times the entrance of death into our immediate circle under both tragic and ordinary circumstances. Regardless of how it arrives, attacking youth or old age, it presents us with a teaching unparalleled.

The recommendation that we consider the mystery of life and the inevitability of death provides an additional safeguard to both preacher and listener. By suggesting a relatively impersonal sermon, Holy Mother Church protects us from the caprice or unfortunate choice which a preacher might make among those qualities and characteristic possessed by the deceased.

### CHURCH GUIDANCE

On the one hand, some might be selected and emphasized for personal reasons. On the other hand qualities of great significance might be neglected or ignored, presenting a final picture of the individual which is neither true nor balanced.

We can be grateful for this guidance and for the motif of the ceremonies here being performed since they enable us to focus on the true and basic identity of man and help us set a priority on those threads of relationship which typify us. By reason of the very simplicity of these ceremonies, we are reminded of the fact of our creation by God. We are once more complimented by the realization that God created us to help achieve His purposes. We are sobered by the realization that we must give an accounting of our stewardship in terms of what given us.

No one of us will question the wisdom involved here, for it provides us edifying and compelling encouragement to redirect and reform our lives while we yet have the opportunity. It reminds us of our distinct and precious identity as a being created by God's hand, a matter of proof that we are not the product of some accidental process, in reminding us that even though science, with magnificent competence, succeeds in developing life from primary ingredients, that we, as individuals, represent the miraculous existence out of nothingness which required a God to solvies.

This intimacy in sharing the mission of God among His creatures clarifies not only its importance, but identifies the warmth and affection with which we must pursue this godly objective of prosecuting the needs of our neighbor through love. The talents which God has given to each of us were meant as a means toward this end and our right to share in the perfection of God's company depends upon our use of these

It is significant in the gospel story that the person who received the five talents put all five of them to the advantage of himself and his neighbor. Because of the striking similarity of our deceased friend and colleague to this utility of one's talents, as portrayed in the gospel, I am encouraged to depart from the advice of Holy Mother Church and become a little personal in this eulogy.

I have had the privilege of knowing Monsignor O'Orady for fewer number of years

than most of you and I, therefore, anticipate your indulgence if I have not seen everything in proper perspective. What I say is a reflection of the manner in which he affected me.

Here was a man of God who combined many characteristics. He often told me that he was not popular with some of our Irish brothers because he didn't seem to dislike the English sufficiently. Although he was no less our ideal as both Catholic and Irish, he still preserved a sense of proportion that enabled him to love his brother regardless of other characteristics.

We have often characterized him as an opponent of what welfare theorists identified as dramatic new thrust in behalf of the poor. Even with this great motivation, our friend could preserve a balanced mind that measured the costs of these thrusts in terms of personal rights and duties. A man, a student, an educator, and a social reformer are but a few of the facets of his long and arduous priestly life.

He was indeed intense and dedicated, fearless, and courageous. He was blunt and direct, but it seems to me, only in order to dull those thrusts made by individuals or programs which would invade areas of critical importance to individuals, areas of responsibility, self-direction, self-sufficiency and freedom. He knew no equal in identifying those philosophies which would have reduced ourselves and our brother citizens to the stereotype of sameness, dependence, and thoughtlessness.

In retrospect, all of us will conclude that he was ahead of his time in ability to perceive and describe the impact of social change on the character of our Government and upon the lives of its citizens. He was a giant, physically and intellectually, and his tail shadow has been cast over the format of the Catholic charities movement in this country and over progressive social policy abroad.

If it is prudent to single out one goal achieved by this missioner of charity, it would be his contribution in making men in this country and abroad conscious of the inestimable value of self-sufficiency and self-direction. I suppose most of us chuckled and chided him at one time or another as he made the expression "self-help" a byword. As with all great characters, he persisted in his fight until this principle became an accepted device by which people help people and nations sid nations.

### REY TO EQUALITY

The importance of preserving a man's identity as resourceful where his own welfare was involved is today and will remain for many days, a key to full and complete establishment of equality among all people. With the same wisdom as the evangelist in the gospel story, he has taught us that the talents granted us by God are our most cherished possession, our birthright and our basis of admission to the courts of heaven.

It is remarkable what we learn about people as they live their life under changing circumstances. Under pressure Monsignor O'Grady lived with great courage, without fear of criticism, committed to the achievement of commendable goals. Under suffering of handicap and illness he revealed a capacity for humility and patience. Under the hand of God in the fullness of his human and priestly life and under the limits of increasing years and declining health, he has etched on our memories a portrayal of heroic resignation and acceptance of the will of God.

Perhaps Holy Mother Church will endorse my departure from the recommended practice since in the final analysis we have concentrated on characteristics, principles, values, and goals. Perhaps we will be forgiven this venture into the personal because it has demonstrated the successful manner in which one individual's talents have been placed at the disposal and for the improvement of many thousands, if not millions, of his brothers in Christ.

It remains for us who have had the privilege of observing the manner in which his talents were thus exploited to continue them in our own pursuit so that they become solid rules of life for us in the particular apostolate which now involves us.

late which now involves us.

One further permission I seek of you and I am sure you will grant it to me since who are gathered here participate in indi-vidual ways of the family of charity developed by Monsignor O'Grady. As his associate and disciple, I consider it a privilege to thank some of those who have served him so well. To the sisters of Holy Cross at Dunbarton, to the Carmelite sisters at Carroll Manor, to Monsignor Coady and Archbishop O'Boyle, who have been his special guardian angels, I say a word of gratitude. garet Coffman and Miss Alice Padgett who served him and loved him with great devotion, a simple expression of gratitude. Jane Gallagher, may all of us be blessed with the affection, service, and devotion of a character as beautiful as yours.

### [From the Washington Post, Jan. 5, 1966] MONSIGNOR JOHN O'GRADY

What a glorious, triumphant, robust, and joyous Christian life came to a close when the Right Reverend Monsignor John O'Grady died on Sunday. Ordained in his native Ireland more than half a century ago when he was a lad of no more than 23, he became one of those priests whose whole life was a ministry, a consecration and a testament to the ideals of Christianity. Not for him the cloister. He was in the thick of every major social struggle of his time—and always on the side of the oppressed and the unfortunate, responsive always to suffering and to need, moved always by compassion and generosity. He was one of the great innovators and

He was one of the great innovators and developers of professional social service in the United States. Founder and dean of Catholic University's National Catholic School of Social Work, he served for more than 40 years as secretary of the National Conference of Catholic Charities. He fought for social security, for liberalization of the immigration laws, for enlightened aid to delinquent juveniles and to the indigent aged, for minimum-wage legislation, for interfaith tolerance and understanding and for a host of other measures designed to help his fellow man. He was a great lover of life and of humanity; and he will be mourned and remembered with love and with gratitude.

### Mark Twain and the Copyright Dilemma

EXTENSION OF REMARKS

## HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Dr. Edward G. Hudon, Assistant Librarian of the U.S. Supreme Court, which appeared in the American Bar Association Journal for January 1966. Dr. Hudon's remarks are most timely in view of Mrs. Lyndon B. Johnson's honorary sponsorship of "An Evening With Mark Twain," by Hal Holbrook, to be held on Monday evening, January 24, 1966, in the Department of State Auditorium.

# MARK TWAIN AND THE COPYRIGHT DILEMMA (By Edward G. Hudon)

(Samuel L. Clemens was an inveterate and effective battler against the literary pirates

of his time. Mr. Hudon, who has written on copyright history previously for the Journal, tells this story. He also recounts Mark Twain's efforts to have the copyright period extended and tells of his famous controversies with American publishers.)

The first copyright law, that enacted by the English House of Commons on January 11, 1710.1 brought to an end the period of literary piracy among British publishers that followed the expiration of the licensing acts in 1895. It granted protection to authors and publishers by vesting the copies of printed books in the authors or purchasers of such copies for a stated period of time.

In the United States the need for the same form of protection was recognized from the very beginning. Indeed, as early as 1785 the Continental Congress urged the several States to secure to the authors or publishers of new books the copyright of such books for a certain time, not less than 14 years from the first publication. When the Constitutional Convention met in 1787, 12 of the 13 Original States had enacted copyright laws of one type or another. Then, article I, section 3, of the Federal Constitution gave Congress authority "to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right of their respective writings and discoveries."

Congress immediately exercised this authority by enacting the Copyright Act of 1790.5 but both this statute and the State laws it superseded protected only citizens and residents of the United States. This situation continued for some time, although an international copyright movement was started early in the 19th century and immediately gained momentum, so that by 1854 all of the countries of the world (except the United States, Russia, and the Ottoman Empire) had adopted international copyright provisions based on reciprocity. The United States did not adopt an international copyright law until 1891.6

and

Meanwhile, in this country foreign authors were left to the mercy of literary pirates, and American authors suffered the same fate abroad. Thus, even though England adopted an international copyright law as early as 1838." British authors continued to be pirated mercllessly by publishers in this country, and American authors received the same treatment at the hands of publishers in Great Britain. As between the two, the American publishers were the bigger pirates since there was more for them to steal." So it is not surprising that British authors were louder and more persistent with their complaints.

But it was in vain that in 1837 the foremost British authors of the day gave vent to their grievances in the celebrated British Authors' Petition, which was submitted for them to the U.S. Congress by Henry Clay.'s It was also in vain that Charles Dickens complained bitterly of the "American robbers," as he called American publishers.'s and toured the length and breadth of this country in 1842 delivering lecture after lecture in which he preached the gospel of international copyright and pointed out the evils of literary piracy. American publishers continued to enrich themselves off Dickens, just as they had done earlier at the expense of Sir Walter Scott, whose works also were extensively published in this country without permission from or benefit to the author."

MARK TWAIN AND THE BRITISH PUBLISHERS

Among American authors, Samuel L. Clemens was doubtless the most celebrated and certainly the most militant to espouse the cause of international copyright. He had more at stake than most of the others because of his ever-increasing popularity abroad as well as at home. For that reason, his motive was perhaps more practical than ideal. Nevertheless, once he became ab-

sorbed in the international copyright movement he never lost interest, and he had the good fortune to live to see the cause won and to share in some of the fruits of the visitor.

to share in some of the fruits of the victory. But until Congress enacted the International Copyright Act of 1891, Clemens could not do much more than voice indignation as men like John Camden Hotten, one of the most enterprising of the British literary pirates, profited at his expense. For, no sooner had Clemens published "The Innocents Abroad" under his usual pen name of "Mark Twain" than it was pirated by Hotten. The success of this venture prompted Hotten to pirate Clemens "Sketches." This time, however, Hotten was not satisfied with simple literary piracy. Instead, he embellished and expanded what Clemens had written with pieces taken from the "Buffalo Express" and elsewhere, and he even attributed to Clemens the additional pen name of "Carl Byng." "

Quick to protest, Clemens wrote a letter to the editor of "The Spectator" in which he took Hotten to task as follows:

'Sir. I only venture to intrude upon you because I come, in some sense, in the inter-est of public morality, and this makes my mission respectable. Mr. John Camden Hotten, of London, has, of his own indinotion, republished several of my books in England. I do not protest against-this, for there is no law that could give effect to the protest; and, benides, publish-ers are not accountable to the laws of heaven or earth in any country, as I understand it. But my grievance is this: My books are bad enough just as they are written; then what must they be after Mr. John Camden Hotten has composed half-a-dozen chapters and added the same to them? I feel that all true hearts will bleed for an author whose volumes have fallen under such a dispensation as this. If a friend of yours, or if even you yourself, were to write a book and set your yourself, were to write a book and so it adrift among the people, with the gravest apprehension that it was not up to what it ought to be intellectually, how would you like to have John Camden Hotten sit down and stimulate his powers, and drool two or three original chapters on the end of that book? Would not the world seem cold and hollow to you? Would you not feel that you wanted to die and be at rest? Little the world wanted to the and be at rest? Intue the work
knows the true suffering. And suppose he
should entitle these chapters Holiday Literature, 'True Story of Chicago,' On Children,' 'Train up a Child,' and 'Away he Goes,'
and 'Vengeance,' and then, on the strength of
having evolved these marvels from his own consciousness, go and copyright the entire book, and put in the title-page a picture of a man with his hand in another man's pocket, and the legend 'All Rights Reserved. (I only suppose the picture; still it would be a rather neat thing.) And, further, sup-pose that in the kindness of his heart and the exuberance of his untaught fancy, this thoroughly well-meaning innocent should expunge the modest title which you had given your book, and replace it with so foul an invention as this, 'Screamers and Eye-Openers,' and went and got that copyrighted, too. And suppose that on top of all this, he continually and persistently forgot to offer you a single penny or even send you a copy of your mutilated book to burn. Let one suppose all this. Let him suppose it with strength enough, and then he will know something about wee. Sometimes when I read one of those additional chapters constructed by John Camden Hotten, I feel as if I wanted to take a broom-straw and go and knock that man's brains out. Not in anger, for I feel none. Ohl not in anger; but only to see, that is all. Mere idle curiosity.

"And Mr. Hotten says that one nom de plume of mine is 'Carl Byng.' I hold that there is no affliction in this world that makes a man feel so downtrodden and abused as the giving him a name that does not belong to him. How would this sinful aborigine feel if I were to call him John Camden Hottentot, and come out in the papers and say that he was entitled to it by divine right? I do honestly believe it would throw him into a brain fever, if there were not an insupersble obstacle in the way.

"Yes—to come back to the original subject, which is the sorrow that is slowly but surely undermining my health—Hr. Hotten prints unrevised, uncorrected, and in some respect, spurious books, with my name to them as author, and thus embitters his customers against one of the most innocent of men. Messrs. George Routiedge & Sons are the only English publishers who pay me any copyright, and therefore, if my books are to disseminate either suffering or crime among readers of our language, I would ever so much rather they did it through that house, and then I could contemplate the spectacle calmly as the dividends came in.—I am, Sir. &c.

Samuel L. Clemens ("Mark Twain")14

"London, September 20, 1872."

One week after Clemens published his letter, Hotten addressed a reply to the editor of "the Spectator" in which he defended his actions and denied the accusations that had been made against him. "However, Clemen's letter did more than produce denisis from Hotten and cause him to lose some of his boldness; it apparently also caused all British bublishers to refrain from taking advantage of a flaw that existed in the copyright that Clemens obtained in Great Britain for "Roughing It." The copyright law whereby a British copyright could be obtained for a book first published in the British dominions, whatever the nationality of the author, if he was a resident of the dominions at the time of publication. "Roughing It: was first published by the London house of Routledge, it istrue, but although Clemens had been in London earlier to arrange with the Routledges for the future protection of his work, he was back in the United States when the

Gratiying as it must have been to Clemens to have publishers in Great Britain respect his copyright for "Roughing It," this respect nevertheless led to an income tax assessment that was levied against him in 1887 by Her Majesty's Internal revenue office. Clemens willingly paid the tax, but he took a different view of a receipt for his taxes that measured nearly a yard square and on which there was a considerable amount of poetage due." He wrote to his English publisher: "Look here, I don't mind paying the tax, but don't you let the internal revenue office send me any must receipts for it, for the poetage is perfectly demoralizing. If they feel obliged to print a receipt on a horse blanket, why don't they hire a ship and send it over at their own

Later in the same year he received another English tax assessment as the result of an erroneous newspaper report that he had leased Buckenham Hall, Norwich, for a year and would become an English resident." Always ready to convert any situation into a literary production, Clemens used the assessment as the besis for an open letter addressed to Queen Victoria. He analyzed and dissected the "printed document the size of a newspaper" that the Internal Revenue Office had sent him to sign," and he begged that of "justice" Her Majesty annul his letter in which, "in the confusion and aberration caused by the Document," he had ordered the tax paid. He concluded with the comment: "You will not miss the sum, but this is a hard year for authors; and as for lectures, I do not suppose your Majesty ever saw such a dull season." "

CANADIAN LITERARY PIRACY IRES CLEMENS MORE However irritated Clemens may have been by British literary pirates, he was even more

Footnotes at end of speech.

irritated by Canadian publishers who prac-ticed the same art. Not only were his books pirated in Canada, but the cheap editions published there found their way to this country, where they competed with his own and more expensive editions." times, this could cause him to become bit-ter, and nowhere is this more evident than in an unmailed letter which he wrote in in an unmailed letter which he wrote in 1887 "referring to the U.S. Customhouse as a "fence," a "legalized trader in stolen goods"; the copyright law of this country as it then existed he called "nasty," "filthy," and "unspeakable." To his own question, "Whom does it (the copyright law) protect, then?" he answered, "Nobody, as far as I can see, but the foreign thief—sometimes—

and his fallow forcing the U.S. Government. and his fellow-footpad the U.S. Government, all the time.

Apparently, his complaint was that to prohis own editions he would have had to pay duty on the 20-cent copies of "Roughing It" that the U.S. customs intercepted at the border before they would be released to him. He found the idea quite revolting—one in which he refused to participate and he blamed the whole thing on "the departmental interpreters of laws, in Washington," who could, he wrote, "always "always be depended on to take any reasonable good law and interpret the commonsense all out

Actually, at the time Clemens complained most bitterly about Canadian literary piracy, the Canadian copyright law was more liberal than was that of the United States.24 The Canadian Act of 1875 \* required citizenship or bona fide domicile as did the law of the United States, and a book had to be printed and published in Canada. However, unlike the law of this country, Canadian law recognized the principle of reciprocity--it granted to other nations the same privileges that other nations granted to Canadians. Hence, American authors were deprived of the benefits of Canadian copyright only because there was no American provision for international copyright. But from this it should not be copyright. med that American authors were com pletely without protection. There was still the British Imperial Act of 1842 " which ap-plied to Canada as well as to the other dominions. Clemens had already used this act to protect "Roughing It" in Great Britain. Its purpose was to further the interests of British publishers, and under it a copy-right could be obtained for the entire British dominions for the work of an author, a resident of Britain, if it was first published in the British Isles. Once Routledge v. Low was decided in 1868, so residence anywhere in the British dominions, no matter how temporary, was all that was required of the author at the time of publication. Moreover, "publication" did not necessarily include printing. Therefore, all that an American author had to do to meet the requirements of the Imperial Act was to send to London 50 or so copies of his book that carried an English imprint, publish there 24 hours before he published in this country, and be in Canada (or anywhere else in the British dominions)

t the moment of this first publication." A number of American authors availed themselves of the Imperial Act, which meant that their books could not be reprinted in Canada without their consent, but it did not mean that these books could not be imported there from abroad. Cheep editions could be and were printed elsewhere and the sheets imported on the payment of a 12½percent duty, which was supposed to be for the benefit of the author.

## Realism Praised

EXTENSION OF REMARKS

## HON. RICHARD FULTON

OF TENNES

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

FULTON of Tennessee. Mr. Speaker, the American people have been greatly blessed with many resourcesbut we have never asked that life be soft and easy. We have always asked that we be brave and strong and forthright enough to be realistic about what our problems-and our opportunities might be. We have asked that we be given the facts, and calm heads with which to choose the road ahead. The facts are what the President gave to the people in his state of the Union address.

He could have been emotional. chose to be realistic. He was realistic about his desire for peace and his determination to stand firm. He chose also to be realistic about the budget and other domestic matters.

Across the Nation editorials such as a recent one in the Baltimore Sun lauded the President's speech for its forthright appeal—his honest appraisal of the state of the Union. I ask permission to have

1783-1906. Copyright Office Bulletin No. 3 the editorial to which I have referred (1906). reprinted in the RECORD:

[From the Baltimore (Md.) Sun, Jan. 13, 1966]

### THE PRESIDENT'S SPEECH

President Johnson laid out a realistic course for the Nation last night in his report to Congress on the state of the Union. He could not promise peace in Vietnam, but he could promise an honest effort to find a basis for peace. He aimed no new threats at North Vietnam but renewed his promise to stand firm against the Communist move to take over South Vietnam by force. He shows every intention of trying to keep the war under control, and in perspective, while the United States stresses its desire for a set-tlement on reasonable terms, and in this position the President deserves public support.

On the domestic side his handling of the budget and the related issue of inflation also seems realistic. His forecast of \$112.8 billion in expenditures for the next fiscal year, after allowing for increases in defense items. indicates that he has carried out his pledge to hold down on nondefense items without sacrificing the continuing objectives of his Great Society program. If his forecast of \$111 billion in revenues proves accurate and it reflects an increase anticipated because of the rise in the gross national product— the deficit will be held to \$1.8 billion without new income taxes. This would keep inflationary pressures within control and would be a mark of prudent management, all the more so in conjunction with his estimate that the deficit in our balance of payments for last year was down to \$1.3 billion.

His proposals for new legislation—on the selection of juries and on crimes against civil rights workers, for a new Department of Transportation, for greater attention to the problems of the cities and pollution, for a 4-year term for Congressmen—will come into clearer focus after details are spelled The list is more modest than last year.

"I believe," he said, "we can continue the Great Society while we fight in Vietnam." He can expect wide support on both points long as his approach continues to he realistic.

## Irving Rivkin, Man of Principle

EXTENSION OF REMARKS OF

## HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. MURPHY of New York. Mr. Speaker, Commissioner Irving Rivkin, a close friend of mine and of my family, died last October, immediately after the adjournment of Congress. He was a model to our community as a husband, father, official of the city of New York, and as an outstanding practicing attorney. Under the leave to extend my remarks in the RECORD, I include an editorial and article from his hometown paper, the Staten Island Advance, which sums up the contribution that he made to our community and to our country:

[From the Staten Island (N.Y.) Advance, Oct. 25, 1965]

IRVING RIVEIN, MAN OF PRINCIPLE

The death of Tax Commissioner Irving Rivkin has deprived Staten Island of a dedicated and uniquely conscientious civic servant.

Throughout his career, Mr. Rivkin was re markably assiduous in defending his principles. As tax commissioner, he fought against what he considered unjust hiking of assessments on Island homes. Despite pres-sure from the commission's chief, he stuck to his guns and won considerable relief for property owners, as well as upsetting an arbitrary ruling the commission made which would prohibit anyone who sought a tax review from going to court later.

He was an indefatigable worker, and in 1960 personally reviewed more than 14,000 appeals for reductions of evaluations, touring the Island to see for himself the prop-

erties involved.

Rivkin was also an extremely loyal on. When the Herlands Commission trained its guns on his boss while Mr. Rivkin was an assistant district attorney, he re-mained steadfast despite others' advice to "lay off," and eventually won vindication. As law chairman of the county Democratic organization, regardless of his own feelings, he fought many election causes in court, and won most of them.

He set an example for those in politics and the practice of law-and for a new generation

[From the Staten Island Advance, Oct. 25, 1965]

TAX CHIEF IRVING RIVKIN DEAD AT 54

Tax Commissioner Irving Rivkin, 54, died in the emergency room of St. Vincent's Hospital yesterday morning, a half hour after suffering a heart attack in his home at 673 Pelton Avenue, West Brighton.

He attended Saturday night's annual dinner dance of the Banner Democratic Associa-tion at the Tavern on the Green, New Dorp.

Active in politics since he moved to the land from Queens in 1927, Mr. Rivkin island from first ventured into political controversy in the 1939 battle to unsent the then county Democratic chairman, the late William T. Fetherston. A member of the bar only 5 years at the time, Mr. Rivkin was chairman of the Coalition Democratic Movement, a resurgent group.

Mr. Rivkin was born in Columbia, S.C., and was brought to New York as a child. He graduated from Curtis High School, attended New York University and Brooklyn Law School, where he earned his master's degree in law in 1933. He opened a law office at 25 Hyatt Street, St. George, in 1934, from which he practiced law for 31 years.

In 1943, Mr. Rivkin represented the late Thomas J. Walsh in a successful fight for a recount to determine the victor in a tight election for the county judgeship against Thomas F. Cosgrove, the Republican candidate

In the same year, he was named to the legal committee of the Democratic organi-zation. He resigned his position 18 years later in disagreement with the county com-mittee's failure to endorse Borough President Maniscalco and the then Surrogate John C. Boylan for renomination. With a change in the party leadership, he soon resumed his law committee chairmanship and served to the present.

He conducted a successful campaign during World War II to liberalize the State's absentee ballot system for servicemen.

Former Surogate Boylan named Mr. Rivkin confidential clerk in 1945, the same year in which the latter was named county chair-man of the Affiliated Democrats of New York. Three years later, he was elected director of the Regular Democratic Organization of Rich-mond County.

The late District Attorney Methiessel appointed Mr. Rivkin assistant district attorney in 1951, a post he held until the defeat of Methfessel by Sidney O. Simonson the following year.

The names of Methfessel and Rivkin were in island headlines from September 1951 un-til August 1958 when they were accused of improper procedures in the arrest of Mrs. Anna Wentworth, of Concord. Mr. Rivkin fought the accusation and was exonerated by animous decision of the appellate division of the State supreme court in 1952.

District Attorney John M. Braisted, Jr., appointed Mr. Rivkin chief assistant district attorney in 1955, a position he held until he was sworn in as tax commissioner by Mayor Wagner in 1956. He was the first attorney to be appointed to the commission.

He first became involved in controversy as a commissioner in 1960 when he took sharp issue with a view of the State board of equalization and assessment that island real estate was underassessed. It was then he announced he intended to exercise the prerogative of a city tax commissioner to reduce assessments in particular cases.

In that year, he personally reviewed more than 14,000 appeals for reduced evaluations by island residents. He broke with Commission President William E. Boyland in March 1960, when he accused Boyland of brainwashing island assessors into considering

speculative prices

After the disastrous brush fire on the island's south shore in 1963, Mr. Rivkin campaigned for tax relief for homeowners whose property was damaged or destroyed in the fire. He personally visited hundreds of homes to witness the extent of damage.

In March of this year, he accused Boyland of trying to void tax reductions he had awarded as island commissioner. Mr. Rivkin awarded an estimated \$3 million in property evaluation this year for about 2,-

applicants.

Mayor Wagner settled another controversy raised by Mr. Rivkin this year. The latter claimed that the tax commission president's requirement of "A" forms was illegal. The form would have required all persons seeking a consideration of their assessment to promise not to seek a court review. The mayor agreed with Mr. Rivkin after the tax commission had voted against the latter, 6 to 2

Mr. Rivkin was elected president of the Livingston Heights Community Association three times, and had served as chairman of its board of directors from the association's

inception in 1940.

He served more than 10 years as secretary of the convention of the second judicial department. He was a member of the Richmond County Bar Association; the board of directors of the Brooklyn Law School Alumni Association; the New York State District Attorney's Association; the Forest Avenue Board of Trade; Jewish Community Center and Staten Island Lodge of Elks.

He had also been special deputy attorney eneral in the election frauds bureau of the State law department; president of the Horker Benevolent Society and honorary resident of the Men's Club of Congregation

B'nai Jeshurun, Tompkinsville.

Mr. Rivkin learned just 2 days before his death that his son, Robert S., of the home address, had passed the July New York State bar examination. The list was released Fri-

He is also survived by his wife, Sylvia; two daughters, Mrs. Myrna Lichtenstein of Merrick, L.I., and Miss Vivian B. Rivkin, a student at Ohio State University; his parents, Mr. and Mrs. Louis Rivkin, of Edge-mere, LI.; two brothers, Herbert, of Dela-field Avenue, West Brighton, and Solomon, of Lynbrook, LI.; a sister, Mrs. Evelyn Gofberg, of Malverne, L.I., and two grandchil-

Rabbi Murray Kohn, spiritual leader of Congregation B'nai Jeshurun, was to con-duct a service today at 2 p.m. in the Silvie Funeral Home, Port Richmond. Burial will be in Baron Hirsch Cemetery.

## Tax Bite Explained

EXTENSION OF REMARKS

HON, EDWARD J. DERWINSKI OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. DERWINSKI. Mr. Speaker, across the country the public was somewhat surprised and disillusioned at the sizable increase in their social security taxes. The Pointer, an outstanding independent publication serving south suburban Cook County, Ill., produced a very timely and practical editorial explaining the impact of social security increases to its readers.

The editorial follows:

[From the Riverdale (Ill.) Pointer, Jan. 13,

### 1966] TAX BITE EXPLAINED

Dolton, Riverdale, and South Holland residents found out this week that he who giveth also taketh away.

The year's first paychecks were noticeably lighter—and will be so most of the year—because of a sharp rise in the rate and wage base for social security. The increase, the 10th since social security was begun in 1937 at 1 percent of the first \$3,000 earned, is the sharpest ever.

How big a bite? Last year residents paid \$174 on the first \$4,800 earned; this year those earning \$4,800 will pay \$201.80 and those earning more will pay up to \$277.20. The searning more will pay up to \$277.20. Further, the bite will be taken throughout the year; the old pay raise when the sum was collected will disappear for many people.

Not only is the employee being nicked, his employer is being nicked for the same amount; of your real wages, 8.4 percent or \$554.40 is being paid into social security.

Bigger than taxes? In many cases, yes. Take a man earning \$91.50 a week with a and four children to support; his tax bite is \$104 a year but his social security bite is nearly double—\$199.84. The same man earning \$108.65 a week will find his tax bite is \$223.60 but his social security bite is \$237.30.

Why the increase? Surprisingly, only a small part is for the medicare program voted this year (although, if social security itself is any criterion, medicare will grow and grow). Most of the increase is needed to pay for extended benefits (7 percent across the board last year) and for the increasing number of eligibles.

Two forces have increased the number of eligibles and the demands on social security. For one thing, people live longer; the average life expectancy is near 72, yet Congress has almost annually lowered the age at which persons may become eligible. For another, Congress has constantly expanded the number of people—self-employed farmers, professional persons, while they are contrib-utors, they are also recipients.

Congress can hardly be forgiven for its generosity, which is thinly disguised vote buying (election year Congresses have been notably generous in dispensing new and bigger benefits). But a rapacious public which clamors for more and more largesse from the system, such as medicare, can hardly com-plain when the piper's price increases as the tune gets more complex.

It is paradoxical indeed that the administration which pushed through tax cuts of all kinds (income and excise) to spur the economy is now strangling that economy with ary but expensive social security deduction hike.

The rapid and rapacious growth of social security can be seen in this table. Increases already on the books, or planned, will bring the rate to 5.6 percent on the first \$6,600 or \$372.90 by 1987; this sum must be matched by the employer for a total of \$745.80.

Date	Rate	Wages	Maximum tax	
1987	Percent 1 134 134 134 2 2 234 234 234 334 334 334	\$3,000 3,000 3,600 3,600 4,200 4,200 4,800 4,800 4,800 6,600	\$30. 00 45. 00 54. 00 72. 00 84. 00 94. 50 120. 00 144. 00 174. 00

## Founding Convention of Hawaii State Federation of Labor, AFL-CIO

EXTENSION OF REMARKS

## HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. OLSEN of Montana. Mr. Speaker, on January 8, 1966, Congressman SPARK MATSUNAGA, of Hawaii, delivered a speech at the Founding Convention of Hawaii State Federation of Labor, AFL-CIO. in Honolulu.

I would like to share the thoughts expressed in this speech with my colleagues:

SPEECH OF HON. SPARK M. MATSUNAGA BEFORE FOUNDING CONVENTION OF HAWAII STATE PEDERATION OF LABOR, AFL-CIO, HONOLULU, HAWAII, SATURDAY, JANUARY 8, 1966

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is indeed a great honor for me to be here today, on the eve of the opening of the 2d session of the 89th Congress, and to share with you some of the thoughts which come to mind as you engage in the deliberations of this important convention.

The job for which you are assembled here is a monumental one, as you are well aware, but it also represents a significant milestone in the labor movement in Hawaii.

We know, of course, that the promotion or fostering of cooperative effort is a difficult task at best. If the various unions of the Islands can forget their differences, however real or imagined they may appear to be, and unite into a resolute federation as labor has done on the mainland, then real progress will be assured.

It has taken time, patience, and skill to bring this meeting together. The purpose and objectives in bringing a State federation into being must not fail.

into being must not rail.

Samuel Gompers, the man who brought the American Federation of Labor into being and who guided the federation through the sometimes brutal and tough years of formation until it was an established entity in labor's own behalf, was a great believer in Compers was more than aware cooperation. Gompers was more than aware of the value of the federation presenting a united front to the State legislatures in the States where the American Federation of Labor had the unions and the membership to be effective.

John L. Lewis, the founder of the CIO and ader of the United Mine Workers for three cades, and Philip Murray, president of the

CIO and the United Steelworkers of America, both strongly stressed a united approach when dealing with State legislatures. Both of these men could relate some and experi-ences they encountered in the Common-wealth of Pennsylvania, through the tragic failure of a disunited labor movement in the Commonwealth

Dan Tobin of the Teamsters, Dan Tracy of the International Brotherhood of Electrical the International Brotherhood of Electrical Workers, John Lyons of the Ironworkers, Dick Gray of the Building Trades Depart-ment, Al Hayes of the Machinists, and Presi-dent George Meaney, who came out of the New York State Federation of Labor, can all attest to the crying need for a united labor movement within the various States.

In the days before the Wagner Act the employer completely dominated labor relations. Employees were forced to sign "yellow dog" contracts which bound them not to join unions. They either signed or got fired. Those who were fired often were blacklisted. Individual working men and women were

Despite such intimidation unions managed to emerge, but many employers refused hargain with them rgain with them. Management resorted all sorts of tactics to break up unions: threats, intimidations, physical violence, use of spies, scabs, and strikebreaking detective agencies. State and Federal courts were asked to issue injunctions.

The decisive big step toward legal recognition of the rights of organized labor was section 7(a) of President Franklin D. Roosevelt's National Industrial Recovery Act of 1933. This section affirmed the right of employees to organize and bargain collectively through representatives of their own choosing without interference, restraint, or coercion on the part of employers.

The next big step was the Wagner Act of 1935. It provided an agency, the National Labor Relations Board, to administer and to enforce the legal rights of labor. The law protected the right of working men and women to organize unions of their own choosing and to bargain collectively through those unions. It also set up election ma-chinery for democratically selecting the

bargaining representative.

Industry bitterly opposed the Wagner Act.
The National Association of Manufacturers and leading corporation attorneys advised employers not to comply with the law because they claimed it was unconstitutional. When Supreme Court in 1937 established the constitutionality of the Wagner Act in five separate cases, most employers grudgingly

gan to comply. The NAM and reactionary employers b an intensive campaign against the Wagner Act. The campaign consisted of appealing slogans, half-truths, misinterpretation, and misrepresentation.

This campaign succeeded in deceiving part the American public into believing that unions and labor leaders had too much power.

Strikes in a number of industries during 1948 and 1947 played into their hands. The Labor-Management Relations Act of 1947 was the result of this campaign, with other factors playing a contributing role.

The major item of labor legislation in the 86th Congress was the Labor-Management Reporting Act of 1959.

The impact of this law, along with the so-called Taft-Hartley Act, has impaired the effectiveness of organized labor in many areas. It is generally conceded that the restrictions placed upon organized labor by this law have placed ubstacles in the way of unions organizing the unorganized.

As we all know by now, our State legislature and the Congress can set terms for collective bargaining, can fix minimum wages and maximum hours, and can vitally in-fluence working conditions. They can even determine whether there shall be unions.

It was Congress which outlawed the closed shop, and State legislatures which, in many

States, outlawed the union shop. Nineteen States now have misnamed right-to-work

Today, we are concerned with the direction our economy is taking. To the economists this is a matter of academic concern. To the building tradesman on the job site or the factory worker in the plant it is a matter of bread and butter, clothes, and shelter for himself and his family. It means the difference between meeting payments on his car or arguing with the repossesor, between meeting payments on the television set or watching it being toted out of the house.

What government policy is, and what it will be in the next few months, will hit each of us in the bread basket whether we like it We may agree or disagree with the theory that government should or should not exercise control over economic policy, that it should be left to the businessmen. What-ever theory we hold, the inescapable fact of life today is that government does determine economic policy and thereby the amount of food in the family pot.

Nor is our Government some vague group of people called "they." It is composed of men and women elected to public office for specified periods of time by each citizen who avails himself of the right to register and vote. (I can vouch for the specified time-which is 2 years for Representatives to Congress, and which means that before too long you will be hearing from me.) You prosper or struggle depending upon their wisdom, fore-sight, prejudices, and capacity. Sometimes I hear trade union people tell

me that, through their trade unions, they can set rates and determine conditions that will affect the lives of their members and that is the limit of their responsibility as trade unionists.

I don't quarrel with that statement. There is nothing wrong with self-interest. It may be—although I doubt it—that there was a day when this was so, but it is emphatically not so today. The trade union movement is not so today. The trade union movement is composed of 18 million members in a sea of upward of 186 million people in the United States, and more than 2 billion people in the world. We cannot live our lives apart from them, nor are we pursuing that course as a nation in the world today. As President Theodore Roosevelt stated: "When a band of 150 or 200 honest, intel-

ligent men, who mean business and know their business, is found in any district, whether in one of the local organizations or outside, you can guarantee that the local politicians of that district will begin to treat it with a combination of fear, hatred, and respect and that its influence will be feit."

Trade unions are instruments intended for the improvement of the welfare of its mem-When so much of the welfare of your members is determined in the field of politics and government it is impossible for trade unions to ignore it. That is why we trade unions to ignore it. must have in Hawaii a united federation of all the unions on the islands which will stand ready and able to see to it that when labor speaks in Hawaii it does so for all labor, and not just one or two unions.

The record of Congress, though not the 89th in its 1st session, reveals many at-tempts to restrict the rights of our trade unions, and the same is true of many of the State legislatures, though, thank God, those conditions don't apply in our State of Hawaii. But we must remember that eternal vigilance is not only the price of liberty, but also the price of true progress.

A strong united federation of all the

unions in Hawaii can and will make a real contribution not only to all union members. but also to our growing State and our Na-tion in this difficult and changing era upon which we are now entering.

I thank you for your invitation to be here today, and I wish you every success in your endeavors for a strong united trade union federation in our own State of Hawaii.

b

Thank you very much.

## Flexible but Firm Viet Policy Needed

EXTENSION OF REMARKS OF

## HON, FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mrs. BOLTON. Mr. Speaker, the first major issue facing the Congress this year is the U.S. involvement in Vietnam. It seems to be the No. 1 topic of discussion in the Nation

The American people desire peace for Vietnam, but they want a just and hon-orable end to the tragic war which is costing so many American and Vietna-

In the New York Times, January 18, there appeared a thought-provoking article stressing that we must be firm as well as flexible in our peace plans, that our actions will have far-reaching effects. It pointed out that the recent escalation of the Vietnam conflict stems from U.S. failure at the Bay of Pigs. Because of the timeliness of this reminder by Associate Editor James Reston, I take this opportunity to include the article in the RECORD.

RESTON CRITICIZES UNITED STATES OVER VIET-SAYS KENNEDY-KHRUSHCHEV TALKS LED TO WAR STEPUP

James Reston, an associate editor of the New York Times, said last night that the United States "got off the track" in Vietnam in the spring of 1961 as a result of Nikita S. Khrushchev's attempt to bully President Kennedy when the two met in Vienna. In an interview conducted by Paul Nive

and broadcast on the National Educational Television Network, Mr. Reston said Mr. Kennedy had told him that he thought the bullying by Mr. Khrushchev, then Soviet Premier, was a result of the "Bay of Pigs fissco," the ill-fated, U.S.-backed attack on Cuba by anti-

t

eal TS.

12-

on

ere

on

President Kennedy, Mr. Reston said, told him that he thought Mr. Khrushchev had decided that "anybody who was stupid enough to get involved in that situation was immature, and anybody who didn't see it all the way through was timid and therefore could be bluffed."

According to Mr. Reston, President Ken-nedy then said that it was necessary to take steps to make U.S. power "credible" to the Russians.

### A DIPLOMATIC POINT

Therefore, the military budget was increased, the Rainbow Division was sent to West Germany and the war in Vietnam was intensified, "not because the situation on the ground demanded it in Vietnam," according to Mr. Reston, but because Mr. Kennedy "wanted to prove a diplomatic point, not a military point.

"That, I think," Mr. Reston declared, "is where we began to get off the track."

Mr. Reston asserted that the war in Vietmain should be pursued as one of limited objectives, that the correct way was "the middle way." This, he said, would rule out both continued intensification of the war or peace on terms that would lose the country.

The United States can defend the perimeter of Saigon, Mr. Reston said, and the coastal areas where most of the people of South Vietnam live. This is very different, he added, from searching out the enemy through the elephant grass

"We are just at the beginning of an enormous battle of Asia," Mr. Reston said. "That battle will go an for the rest of the century

and Vietnam is not the end of it but the beginning. If we win in Vietnam, the bettle will still go on and what I am afraid of is that we will try to score a great smashing victory, thinking that will end it all, which it won't.

Therefore, I would limit the objective." he declared.

The interview with Mr. Reston was telecast in New York over station WNDT, channel 13. at 7:30 p.m.

### Peace at What Price

EXTENSION OF REMARKS

## HON, ABRAHAM J. MULTER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. MULTER. Mr. Speaker, I com-mend to the attention of our colleagues the following column by Robert G. Spivack which appeared in the January 4. 1966, edition of the New York Journal American. The article poses questions which must be answered before there can be peace in Vietnam.

One of the most important questions is whether Ho Chi Minh will agree not to try to overturn the Government of South Vietnam which its people determine they want for themselves

Whether we can trust an agreement is something to worry about if and when we get the agreement.

The article follows:

PEACE AT WHAT PRICE? (By Robert G. Spivack)

Discounting the revolutionary rhetoric and leaving aside the personal rivairies that have developed among the Communist factions in Vietnam, there is still another serious obstacle to preliminary peace negotiations.

The problem is how to convince the rank-and-file on both sides that "peace" and "sur-

render" are not the same.

Among the non-Communist elements supporting the South Vietnamese Government there is anxiety that after all these years of fighting they will be abandoned to the tender mercies of the Vietcong.

The Communists in the South, on the

other hand, have persuaded themselves after two decades of conflict that all is about lost, that their struggle will have been in vain, and that their comrades in the North, frightened by the U.S. bombings, plan to sell them out.

These are emotional dilemmas, not easily resolved.

To understand how the Communists have painted themselves into a corner one need only read Ho Chi Minh's recent frenzied letter to Pope Paul. Granted that he has to talk a tough line because of increasing, but still subterranean criticism, from the cong—the letter still shows the kind of po-litical paranois that results from years of war and revolution.

The United States, he wrote, has in 6 years "committed monstrous crimes." He proceeds to give a list of figures that bear no resemblance to any verifiable facts. The United States has established "a regime of fascist dictatorship." Even the "strategic hamlets," a noble effort to protect the Vietnamese peasant while encouraging his sense of self-reliance, are described as "a kind of concentration camp."

Although he is aged and rigid, Ho is supposedly one of the more reasonable of the North Vietnamese Communist leaders. Yet

if his letter to the Pope has been broadcast also to his own people, how can he turn around and tell them that he is prepared to it down with the "fascist" beasts and negotinte?

Even though the letter probably was written before President Johnson's new peace blitz, if Ho were abruptly to reverse positions he would open himself to the very charge that he seeks to avoid, that he would sell out the Victong in order to protect the cities and industry of the North.

To a lesser extent the same problem exists on our side of the conflict

Premier Ky is said to oppose all the "peace-mongering" lest it bring down his govern-ment. He seems to have done a fairly decent job since taking power and so far as we know there is no one with any popular following to substitute for him.

But our commitment is not so much to the

Ky government as it is to protect the South Vietnamese from political reprisals, terror, and all the inevitable consequences that would ensue if we were to leave the country now or in the foreseeable future.

For these reasons—to calm this emotional ferment—it would be advisable if the administration were to spell out once again, but in some detail, just what kind of settlement we envision in Vietnam. We have already said we do not aim to overturn Ho's regime although he hasn't said the same for the South.

## Latin Reds Set To Hike Guerrilla War

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. FLOOD. Mr. Speaker, as emphasized by me on many occasions, the significance of Cuba in the current Red revolutionary drive for Caribbean con-quest is its location on the northern flank of the Panama Canal approaches from the Atlantic. Not only that, this island has become a training base for training infiltrators for the overthrow of the governments of other Latin American coun-

An informative newstory on revolu-tionary activities in Cuba and their impact in Latin America follows:

[From the Washington (D.C.) Daily News. Jan. 10, 1966)

### LATIN REDS SET TO HIKE GUERRILLA WAR (By Virginia Prewett)

The tricontinental conference of leftist parties in Havana has produced two significant results so far.

First, it has provoked strong condemnation from democratic Latin American governments.

Second, it has revealed how the Moscow-line Communists mean to wage their struggle with the Peiping-line Communists in Latin America.

Venezuela's President Raul Leoni warned as the meeting opened:
"Venezuela considers that the tricon-

tinental conference presages new aggression against the internal peace of the democratic countries of Latin America. Aggression is in fact the precise objective of the conference."

Carlos Andres Perez, parliamentary leader of Venezuela's ruling Democratic Action Party, criticised the Organization of Ameri-can States for its "want of concern and lack of action" in face of the Havana Conference.

A former Minister of the Interior, Senor Peres is spoken of as a possible candidate to succeed Dr. Leoni in the presidency.

From Peru a warning—from Gen. Carlos G. Morau, head of Peru's War College—that the tricontinental meeting means to relieve pressure on southeast Asia by opening a front that threatens the U.S. southern flank.

Peru's President Fernando Belaunde Terry, who denied the existence of guerrillas in Peru till 6 months ago, assailed Cuba for exporting subversion.

At the meeting, the Castro regime and the Latin American delegates present have expressed a fierce determination to increase the Communist armed struggle against existing governments.

Due largely to its dependence on Moscow for arms and economic help, Havana today follows the Moscow line and is using the conference to try to gain control of the Communist movement throughout Latin America. At the Havana meeting, Castro revealed the strategera which he means to use to do this.

### STRATEGY LISTED

Havana's strategy is to preempt the left. At the Havana meeting Castro made it plain his Moscow-backed Communist drive means to capture and hold what has been the main Chinese line in Latin America—emphasizing guerrills warfare.

Castro has always been personally addicted to violent revolutions. Yet as Moscow and Pelping grew apart on ideology and began to compete for spheres of influence—and especially since Castro put the pro-Peiping "Che" Guevara out of the Cuban picture—it has even been hoped in some U.S. circles that Havana would let up in its subversion in Latin America.

The tricontinental conference has put an end to that hope.

## State of the Union Message

EXTENSION OF REMARKS

## HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. CHAMBERLAIN. Mr. Speaker, the President's annual state of the Union message commands the attention of all Americans and all the world. We have already seen and heard many statements and comments concerning the President's report on the war in Vietnam and, to the great surprise of many observers, his many new recommendations for domestic legislation. Because of the gravity of the decisions which the second session of the 89th Congress will face in the coming months it is of particular importance to have the fullest canvass of the reactions to the President's program.

Under leave to extend my remarks in the Recons and in keeping with my responsibility to give the views of the district which I serve their proper hearing in Washington, I wish to make a part of the Recons the views of the three daily newspapers situated in Michigan's Sixth Congressional District. These include the editorial appearing in the Friday, January 14, 1966, issue of the State Journal, of Lansing, entitled "Johnson's New Pians Raise a Question"; the statement of the editors of the Jackson Citizen Patriot of Priday, January 14, 1966,

entitled "Johnson Again Is All Things to All People"; and the editorial entitled "One Decision Will Govern the Others," of the Owosso Argus Press of January 17, 1966:

[From the Lansing (Mich.) State Journal, Jan. 14, 1966]

JOHNSON'S NEW PLANS RAISE A QUESTION

In his annual message to Congress on the state of the Union, President Johnson voiced two major determinations.

One is to keep U.S. military forces in South Vietnam until aggression against that country has ended.

The other is to not only press forward but also to expand the programs he believes are needed to build what he conceives to be a Great Society.

In expressing the latter determination, Johnson gave his answer to those who take the view that the Nation should not simultaneously have to bear the costs of the war in Vietnam and the Great Society programs at home.

To the President it isn't a case of having to make a choice between "guns and butter." In effect, he expressed confidence that the United States can afford all the guns that are needed to defend freedom and all the "butter" that he believes the American people should have in other areas.

Giving Congress a brief preview of his budget for fiscal 1967, Johnson said total spending will be \$112.8 billion with revenues estimated at \$111 billion, resulting in an estimated deficit of about \$1.8 billion which he said would be "one of the lowest in many years."

The Chief Executive recommended a series of tax changes to meet increased military costs in Vietnam and to support domestic spending.

Johnson called for increased tax withholding from paychecks, temporary restoration of automobile and telephone excise taxes, which were reduced only a few days ago, and a speedup in the collection of corporate taxes.

Some of the legislation he proposed would substantially expand the already extensive role of the Federal Government in the affairs of the States and local communities.

In this category were an urban rebuilding program "on a scale never before attempted" to reconstruct entire central and slum areas in some cities, a Highway Safety Act "to seek an end to the destruction on our highways which kills 135 Americans every day," and action "to attack the wasteful and degrading poisoning of our rivers, and, as the cornerstone of this effort, clean completely entire large river basins."

President Johnson's message on the state of the Union was in large part a report on the state of the war in Vietnam to which this Union is committed.

"The enemy is no longer close to victory," Johnson said. "Time is no longer on his aide. There is no cause to doubt the American commitment."

"We will stay," he said, "because a just nation cannot leave to the crueities of its enemies a people who have staked their lives and independence on our solemn pledge—a pledge which has grown through the commitments of three American Presidents.

"We will stay because in Asia and around the world, are countries whose course of independence rests, in large measure, on confidence in American protection. To yield to force in Vietnam would weaken that confidence, undermine the independence of many lands and whet the appetite of the aggressor. We would have to fight in one land, and then another, or abandon much of Asia to the domination of the Communists."

President Johnson accompanied his statement of determination to stay in Vietnam until the aggression has stopped with a pledge to continue a vigorous search for peace through negotiations "at any conference table."

In addition to defending the independence

In addition to defending the independence of Vietnam, Johnson said that this year he is proposing major new directions "in our program of foreign assistance to help those countries who help themselves."

He said the United States will "conduct a worldwide attack on the problems of hunger, disease, and ignorance" and that, to advance these ends, he will propose an international education act of 1966 and an international health act of 1968. "In the next year," he said, "we propose to dedicate \$1 billion to these efforts."

The President thus made clear an intent to use more U.S. resources to help build not only a Great Society at home but also a great global society.

His aspirations in this regard doubtless will receive widespread praise. The question is whether America can afford in the years ahead to expand its role as Lady Bountiful and at the same time serve as a policeman in protecting the independence of a large part of the world.

[From the Jackson (Mich.) Citizen Patriot, Jan. 14, 1966]

JOHNSON AGAIN IS ALL THINGS TO ALL PEOPLE
Christmas is nearly 3 weeks past, but President Johnson lighted another tree in his state of the Union message Wednesday evening.

In the best of the Yule traditions his report to Congress had something in it for everybody, not only in the United States, but in the whole wide world.

He even included a major portion of his prime audience on the gift list by asking 4-year terms for Members of the House of Representatives.

The bad news, such as it was outside the Vietnam situation, was administered in tiny doses. The worst shock, perhaps was his hint that restoration of excise taxes on automobiles and telephones might be sought.

As President, Lyndon B. Johnson obviously loves a consensus. He wants the vast majority of the American people cheering him on and telling him what a great guy he is and how brilliant are his ideas.

And so, again, he tried to be all things to all people.

The war in Vietnam, he assured the Congress and the American people, will be prosecuted as the need arises while great efforts are made to achieve an honorable peace. He spoke of sacrifices and of this Nation's commitment to a policy of opposing oppression. All of which is right, proper and in the American tradition.

But he insisted that the war will not interfere with his Great Society programs enacted last year, or with the expansion of them in the future.

While he gave lipservice to economy he overlooked a fear which is prevalent, even among some members of his own party: That the legislation adopted so hastily in 1965, is partially unworkable and is certain to become tremendously expensive.

Congress, even including many members and leaders of the President's own party, is in a mood to reevaluate the Great Society, to concentrate on correcting errors which may have been made, and to take on new projects only with considerable caution and a long, hard look at the costs.

The President apparently will have none of that.

He gives Congress and the people assurance that the economic strength of the United States is so great that it can carry on the war on whatever scale is called for, continue to extend its largess to nations all around the world and add billions to spending on domestic functions.

True, the President has going for him a boom of unprecedented strength and duration. The prophets of doom have been proved wrong by the business and labor statistics.

Moreover, many of the objectives outlined in his state of the Union message are worthy. Among these are bold action to reduce crime, modernization of the executive branch of Government, attacks on air and water pollution, increased efforts to find the answers to the riddle of highway safety, and the creation of a new Cabinet-rank Department of Transportation.

But listening to, or reading, the President's speech you can't avoid a feeling that he proposes the spending of money just because it is there—or may be there—or can be borrowed.

The President can claim that the 1965 session of Congress was the most productive in history from the viewpoint of new legislation placed on the books, breakthroughs in programs which have been waiting around for years, and the commitment of the Government to the spending of money.

Such a productive session of Congress should be followed by a sober evaluation of what has been done, an examination of the results of the legislation passed and a new assessment of the costs.

This would be a good time to do that. And the possible demands of the Vietnam war make it not only timely, but wise.

If the President has his way, the Nation will not hesitate for a second look at what it is doing. It will plunge ahead with vast increases in spending and will live in the hope that the boom will last from here to eternity and that nothing really serious will happen in southeast Asia.

### [From the Owosso (Mich.) Argus-Press, Jan. 17, 1966]

One Decision Will Govern the Others
Only the coming weeks will tell whether
President Johnson has effectively forestalled
the gathering opposition in Congress to any
expansion, or even a continuation on the
present level, of spending on domestic programs in the face of military demands in
Vietnam.

This Nation is strong enough and rich enough, he made clear, to meet its obligations both at home and abroad with but a moderate reinstatement of certain taxes and a modest budget deficit.

If things don't get worse in Vietnam, that is, which many will counter is more a proba-

bility than a possibility.

But if it comes to a choice between guns and butter, the President told the Congressmen forcibly, the sacrifice ought not to be asked of those who have difficulty in winning their daily bread, let alone something to spread it with.

His projected deficit of \$1.8 billion, when compared with those the Nation is used to deserves the adjective "only." But a projection is not a fact, and budget estimates at the beginning of a year have seldom borne much similarity to the final report.

Aside from the issues of getting and spending, the President has outlined a whole new set of specifications pertaining to the building of the Great Society.

For those who wondered what the overworked 89th Congress would find to occupy itself with in its 2d session, there are his proposals for a new Cabinet-level Department of Transportation, a Highway Safety Act, and a constitutional amendment extending the terms of Representatives to 4 years.

This last is assured of quick passage in one of the two Chambers and extended debate in the other.

The noble-sounding International Education Act and International Health Act, which the President did not detail, also promise to provide much meat for legislative cooking.

The President proposes and Congress disposes. In the past 2 years, with a topheavy Democratic majority, the one has followed the other with unaccustomed alacrity.

Whether this process is repeated in 1966, however, may depend not so much on the will of President or Congress in Washington but what certain other men do in Hanoi, Peiping, and Moscow.

For 1966 looms as the year of decision in Vietnam, and it is that decision that will govern all others.

## The Memoirs of Senator Brown

EXTENSION OF REMARKS

## HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. AYRES. Mr. Speaker, now that Congress is back in session, I take pleasure in noting the timely publication of the book, "The Memoirs of Senator Brown, a Capitol Cat," as told to Frances Spatz Leighton. Senator Brown, who resides at the Woodner Hotel, is Washington's only independent mouser, and is an advocate of such legislation as a Caticare-Veticare program. He is also passignately in favor of the establishment of a Cat Cultural Center, and believes that a mouse should be the first living creature sent to the moon to investigate certain persistent rumors that it is made of green cheese. Senator Brown originally comes from Montana, and is a descendent of a traveling bobcat and a worthy domestic. He presently lives with his loyal retainers, Reuben and Dorothy Fine, together with his legislative assistant, Blackie, and his AA, Alexander the Great. I have heard rumors that he has an unusually attractive secretary, Kitten Galore, whose parents have been nominated for the Nobel Prize for architec-

Senator Brown, since arriving in Washington, has shown his political acumen by specializing in that most important Capitol concern: status. His publishers, Fleet Publishing Corp. of New York, describe his book as "the ultimate inside guide to Washington, D.C." The tasteful illustrations, described as "Senator Brown's Status Wall," show our President with his dogs, the Vice President's cat, and a number of Washington personalities with their illustrious retainers.

Washington life, as recorded in these memoirs, is not without its lighter side. Anecdotes, both true and aprocryphal, are recorded of the adventures of Congressmen, Senators, and Cabinet members. There are also certain indirect references, possibly satirical in tone, to lobylists, social climbers, tax collectors, and members of the press. I particularly commend to Members, Senator Brown's "All Purpose Political Speech" and Senator Brown's "First Press Conference."

Frances Spatz Leighton, whom Senator Brown wisely chose as his ghost writer, originally comes from Geauga County in Ohio. She is a writer of many talents, and has worked with other notables and celebrities on memoirs of the Washington scene. Her coauthored books include "White House Chef," "My 30 Years Backstairs at the White House,"

"I Was Jacqueline Kennedy's Dressmaker," and "They Call Her Ladybird. She also recently edited a short book, "The Johnson Wit." Look, a New York pictorial magazine of popular nature, has described her as "Washington's classiest ghost" in its "Offbeat Guide to Washington." She is Washington editor of This Week, and other periodical publications.

Included in "the Memoirs of Senator Brown" are words and music of two of her songs, written especially for Senator Brown, "Fling Yourself on the Windowsill," and "Senator Pussycat." I am told that Senator Brown has asked Miss Leighton to write a musical play based on these memoirs.

Senator Brown, as is common with many here in the Capitol, has tried his hand at writing a regular series of reports to the folks back home. A chapter of his book, devoted to these "Mewsletters," embodies much homely wisdom. All in all, I wish to put on record that Senator Brown's view of life in Washington offers a suitable, lighthearted guide to the practical side of political life: how to get elected, how to deal with the press, and, particularly, how to get on with animals. After all, as the philosopher said, "Man is a political animal."

### Why the Silence?

# EXTENSION OF REMARKS

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. YOUNGER. Mr. Speaker, in view of the fact that the Vietnam war, together with the protests, demonstrations, and marches here in this country, is foremost in our minds, it seems to me that the editorial from the San Mateo Times of Monday, January 17, raises a very pertinent question. This question, so far as the public prints are concerned, has not been answered by those who have taken the trouble to

demonstrate. The editorial follows: [From the San Mateo (Calif.) Times, Jan. 17, 1966]

WHY THE SILENCE?

Singularly silent during President Johnson's peace offensive are those critics of U.S. policy who marched, picketed, harangued, and otherwise pleaded for a halt to the fighting in Vietnam.

If the professional peaceniks, dedicated pacifists, and their followers of varying sincerity have been firing off wires urging negotiation to Hanoi, Peiping, and Moscow, they have given no public notice of the fact. Considering their previous predilection for publicity, any such omission—due either to oversight or modesty—seems inconceivable.

One clue may be found in the Federal Bureau of Investigation's report on the wave of protest that passed through college campuses last fall and culminated in the November 27 march on Washington. The Communist Party, according to the FBI report, sent a directive to all districts giving instructions on alogans to be used.

If hatred of war—and not a desire for a Vietcong victory—motivated the instigators, they ought to be as busy now. They ought to be loading the cables to points east urging acceptance of an armistice. They are not. And only the naive and guilible will wonder why not.

## What Handicapped Workers Are Contributing to My Community

EXTENSION OF REMARKS

## HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. MOELLER. Mr. Speaker, Miss Mimi Hart, a senior at Lancaster, Ohio, High School, has written a perceptive essay, entitled "What Handicapped Workers Are Contributing to My Community." She wrote with understanding and clarity about a subject that deserves public notice. More than that, she cited case histories of individuals who, though handicapped, are leading productive

Miss Hart was 1 of 10 winners in the "Employ the Handicapped-Ability Counts" contest sponsored by Fairfield Unit No. 11, American Legion Auxil-I commend all the winners.

At this point, I insert in the RECORD the text of the essay by Miss Hart: WHAT HANDICAPPED WORKERS ARE CONTRIB-

UTING TO MY COMMUNITY (By Miriam Hart)

In recent years, the handicapped person has become socially accepted. The physically and mentally disabled of our community have, through their own determination, been able to lead normal lives as citizens in The handicapped person is no longer looked upon with sympathy, but with the respect and admiration that he deserves. He has worked himself up to a degree of equality with others.

It is because of this acceptance that many handicapped persons are able to get and to hold worthwhile jobs. Employers often find that a handicapped worker, because of his disability, will work harder and more persistently than will a person who is not handi-capped. Many disabled persons hold responsible office positions, while others work in factories or own private businesses. These persons can become self-supporting active citizens. There is proof of this fact in our

community alone.

Mr. John Raft lost his hands during the Many would feel that they could not exist without their hands, but with the use of hooks, Mr. Raft leads a normal life as an insurance salesman. Many people place the well-being of their loved ones in his "hands."

Jim Kaye, a victim of multiple sclerosis, is one of the town's most prominent attor-Although he must always remain in a wheelchair, he defends many of the townpeople who are involved in lawsuits.

Miss Diane Baker, a young giri of 23, was stricken with polio in her early childhood. Although she has undergone surgery many times, she is still unable to walk alone. But this disability has not interfered with her life. After having received a college degree, she now interviews people who are looking for employment. Her disposition is a pleasant and cheerful one, even though she has spent most of her life in a wheelchair

As one can see, the lives of handicapped people can be happy, normal ones. It is with our help, not our sympathy, that they may

go into the field of their choice. But these people may also help us. By their cheerful-ness, we see how grateful we should be, and that we should strive to make the best of our abilities. Most people are blessed with some particular talent, but the handicapped usually develops this talent to its maximum. They are motivated by a strong desire to compensate for their disability; therefore they work hard to reach their goal.

Wilma Rudolph was told that she would never walk again, but became a triple Gold Medal winner in the Olympics. Glenn Cunningham whose legs were severly burned in an accident, became the champion runner in men's track. These people displayed outstanding achievement in a field that was presumed impossible for them. Jim Kaye, the attorney, is an inspiration to all his colleagues. Although he must be aided in every movement he makes, he is determined to become a successful lawyer and he has achieved that goal. Because of their desire to do that which is deemed impossible for them, the handicapped reach their goals, no matter how unattainable these goals may appear to be. This motivation, if present in those who are not handicapped, could help them to pursue new goals and reach new

## Hilo Woman's Club in Hawaii Began Beautification Program in 1922

EXTENSION OF REMARKS

## HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. MATSUNAGA. Mr. Speaker, in connection with the beautification program now made popular by the First Lady of our Land, America is indeed fortunate in that it abounds with "women's These women's clubs, with their feminine, almost missionary zeal to beautify and improve their communities, have become familiar and respected institutions on the American scene.

The city of Hilo, in the State of Hawaii, has been blessed with an especially active women's club. The Hilo Woman's Club, under the leadership of Mrs. Anastacio Luis, president, recently observed its 45th anniversary. The organization has been an integral part of Hilo's growth and beautification. Among the club's many civic achievements is its continuing beautification program which was begun in the year 1922.

A grateful community headed by County Chairman Shunichi Kimura recently paid tribute to the club by designating Wednesday, January 12, 1966, as Hilo Woman's Club Day. As one who represents the city of Hilo here in the Congress, I join the citizens of that city in commending the women of the Hilo Woman's Club. And I submit for inclusion in the Congressional Record the following editorial from the Hawaii Tribune-Herald of January 12, 1966, which summarizes the club's 45 years of community service:

## HILO WOMAN'S CLUB

For 45 years Hilo has been fortunate to ave had a woman's club.

The Hilo Woman's Club celebrates its 45th anniversary today with a record of accom-

plishments that has made Hilo a better place in which to live

It is a record that the club can justly be proud of—and the community grateful for. Some of the accomplishments did not come

easily. The club has had to fight for them, sometimes with community support and sometimes by itself. Once the club decided on a course that it thought was right, there was no turning aside, as some politicians and business firms have found out the hard way.

Over the years the club has been criticized for some of the things it did. But time has proved the club right in varied ways.

Community beautification has been a major project. With the great emphasis on beautification throughout the Nation today, jor project. it is interesting to recall that the Hilo Woman's Club started its beautification program back in 1922.

Much of Hilo and its surrounding areas has been enhanced by the cleanup, planting and beautification programs of the club. Public grounds have been landscaped, trees and shrubs planted along roadsides and in parks and other public areas. Billboards have been banned and unsightly signs removed.

The club has a long list of achievements in the field of health, education and youth work. It helped, among other things, to establish a playground system, home for girls, dog pound, hospital recreation, a branch of the tuberculosis association, a baby clinic, and scholarships. It has sponsored concerts, works of art and symphonies.

Congratulations are in order today from a community grateful for the many contributions of the Hilo Woman's Club.

## Why Not a Bigger Welcome to Foreign Visitors?

EXTENSION OF REMARKS OF

## HON, ROY-H. McVICKER

OF COLOBADO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. McVICKER. Mr. Speaker, a most welcome editorial recently appeared in the Boulder Daily Camera, Boulder, Colo.—a newspaper in my district that serves one of the most active and intelligent communities in the Nation—the community that is the home of the University of Colorado—entitled "Why Not a Bigger Welcome to Foreign Visitors?"

The editorial emphasizes the need to press for a Foreign Visitors Committee set up in American communities to help our foreign visitors more easily become acquainted with us and with our ways.

I am pleased to insert the editorial at this point in the RECORD:

WHY NOT A BIGGER WELCOME TO FOREIGN VISITORS?

Last year the foreign travel "gap" found the United States \$1.9 billion behind. U.S. tourists and other travelers spent that much more abroad than their foreign counterparts spent in this country.

President Johnson warned early last year that a large increase in the annual tourist exodus to other countries could worsen the already serious balance-of-payments factor for the United States. He urged citizens to as America first, to forgo the impluse to go abroad.

That appeal might have been expected to backfire. Americans, being of independent spirit, don't relish being told how to conduct

their private lives. Often, out of sheer defiance of authority, they will even go out of their way to show that they can do as they durn please.

Rather than urge Americans not to travel in foreign countries, wouldn't it be more in keeping with the spirit of healthy compettion to urge foreigners to travel more in this country? The wonder of our land outnumber those in almost any other country you might name. Our national parks and forests, our many summer and winter resorts, our excellent ski slopes and fishing streams, our national capital and various preserved historical villages and buildings our "scientific and art museums—these are only a few of hundreds of major attractions that would entertain and enlighten our foreign neighbors.

One big complaint is that Americans have a tendency to treat foreigners with indifference or even mild contempt. The many things we have to show are offset by the human factor. We are not alone in this characteristic, of course, for U.S. tourists abroad may encounter a certain amount of unfriendliness too—depending sometimes on whether the current regime is headed by a DeGaulle or an Elizabeth.

But there is nothing that says we shouldn't assume leadership in the good neighbor attitude. By doing so, we not only would profit from tourist dollars but also would open the gates of understanding and strengthen the

ribbons of friendship.

One useful suggestion is that American communities set up foreign visitors committees to make foreign visitors feel at home, help them get acquainted with local families and bring influence to bear on local citizens to act like friends to their global neighbors. Committees might well be linked to a na-

tionwide coordinating agency.

If we show that we welcome and appreciate foreign visitors, we shall have them.

Speech of Commissioner George H. Hearn, of Federal Maritime Commission

EXTENSION OF REMARKS

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

e

t

p

ιt

ta

to

ro

to

Mr. GILBERT. Mr. Speaker, with permission to extend my remarks in the RECORD, I wish to call to the attention of my colleagues in the House the remarks of Commissioner George A. Hearn, of the Federal Maritime Commission, at the dedication of the Indies Terminal in Los Angeles, Calif., on October 14, 1965:

REMARKS OF COMMISSIONER GEORGE H. HEARN, OF THE FEDERAL MARITIME COMMISSION, AT THE DEDICATION OF THE INDIES TERMINAL IN LOS ANGELES, CALIF., ON OCTOBER 14, 1965

It is a special honor for me to respond to your warm invitation to participate in the dedication ceremony of this beautiful new terminal, and I am delighted to be here in Los Angeles. It is not as a stranger, or as one unfamiliar with your port that I return on this occasion. Last summer I was priviledged to inspect your entire port complex, from the vantage points of both shore and water, and I can assure you that all are impressed with your modern port.

The dedication of a marine terminal, like

The dedication of a marine terminal, like the christening of a vessel, is an auspicious occasion. Throughout history, the christening of a ship has stirred the hearts of men,

particularly seafaring men, and has fired the romantic inclinations of poets. A ship launching has always had an enchanting overtone. One may readily be mesmerized by the imagined intrigues of far-off lands, quaint customs, and high adventure. christening, if you will, of a modern ocean terminal facility, with its large storage sheds, open work space, and satellite administra-tion office, should equally stir and fire the minds, as well as the hearts, of men with respect to the importance of such a facility in the very real, if not romantic, world of international trade. For the entire spectrum of ocean commerce is culminated at a pier, the efforts of the manufacturer, buyer, seller, carrier, forwarder, port solicitor, and financial underwriter meet at one moment when the cargo is placed in the hands of the terminal operator. The imagination of business realists should certainly be stirred by the birth of a new terminal facility such as

The dedication of this particular facility is a concrete testament of faith by the people of this great port. It is an especial mani-festation of your faith in your ability to attract cargo and in your hope and reliance on the increasing effort being made by American exporters to expand their stature in the marketplaces throughout the world. over, it is an expression of self-determination which has been confirmed by the tremendous capital outlay, both private and public, in the wonderful facilities which we dedicate today. I compliment all of you who have invested your capital, applied your expertise and exhibited your resolve in bringing this facility into being. I know that you will not suspend your efforts until this ma nificent adjunct to your port reaches its optimum efficiency as a thriving nexus beween shipper and ship, ship and consignee. I am sure you all are aware of the tremendous efforts made by your able port commission and its staff, abetted and encouraged by the meaningful and farsighted administration of this great city in building this facility. We would be remiss, indeed, if the administration's noble perseverance in port development were not publicly saluted here today.

America, as the entire world knows, has long been a veritable cornucopia producing quality manufactured goods, recovering natural resources, harvesting agricultural produce, and supplying them to the world. As we all know engaging in worldwide commerce is extremely lucrative, it is a form of national wealth and a necessary source of foreign exchange. This has resulted in exceedingly keen competition in the free marketplaces of the world. And while our own products are in demand throughout the free world, because of their excellence, we are finding it increasingly difficult to lay down our goods in foreign ports at competitive prices.

Therefore we must continue to strive to do all we possibly can to insure that point to point transporting rates which include accessorial services, do not impair our ability to sell overseas or to buy here at home. Port and terminal operators in addition to others in the transportation family have the responsibility to insure that cargo-handling charges, which constitute a major element in overall transportation costs, are kept to a minimum. Naturally, due consideration must be given to insure a profit, however a profit which is fair and reasonable. lieve, and obviously the people of vision who have so greatly contributed to this new terminal believe, that it will become an important adjunct to the orderly flow of our import I am confident that and export commerce. the operation of this facility will enhance the validity of the slogan of the Port of Los Angeles that it is "The Cargo Capital of the

As all transportation men know, Cargo be-

gets cargo. But the "begetting" is not automatic. Actually the presence of cargo merely creates a favorable environment for more cargo. But that environment must be nurtured and the climate developed so that new and additional cargoes become a reality. None can contest that cargo has not pro duced cargo here. The record is plain, and thanks to your public-relations-conscious management, it is well known. Moreover, the fact that the Port of Los Angeles main-tains farflung offices for the development of cargo, for example in cities of Tokyo and New York, bespeaks strong evidence of your intention to increase your tonnage participation. This activity is one of the important reasons why the Port of Los Angeles has been in first place in total tonnage handled on this coast for over 40 years. shows that last year you moved over 4 million tons of general cargo, an all time high, and that early returns for this year point to a new record.

You can be justly proud of your accomplishments at this port. It is heartening to contemplate the impact you have made on the economy of this area, the program for constantly up-dating your harbor facilities and your resolve to generate and move cargo. The relationship and dependency of more than 200,000 jobs in this metropolitan complex to port operations very graphically portrays the economic importance of your undertakings. Your willingness to appropriate huge sums of money for long-range development is a matter of public record.

I understand that you have committed the expenditure of over 60 million dollars on port modernization in a single 5 year period and have on the drawing board projects in the future which will cost upwards of \$150 million. At this point, I would be remiss if I failed to acknowledge the fact that your multi-million dollar bulk loader will be in full operation in a few weeks.

I understand that it will be capable, during the very first year of operation, of handling I million tons of ore. Because of this, and in addition to your already impressive and enviable record, I em happy to note that this is a self-sustaining port. It is refreshing to see a modern port complex grow and thrive in this day and age without the aid of municipal subsidies.

We at the Maritime Commission, as you are aware, have regulatory jurisdiction over common carriers by water, freight forwarders, and terminal operators. These different transportation endeavors are regulated in varying degrees for the purpose of assisting the flow of American commerce on the seas. As you know we have long exercised almost public utility rate authority in our offshore domestic trades. Since 1961 freight forwarders have been required to be licensed by the Commission. Also since 1961, the Commission has required for the first time the filing of inbound and outbound water transportation rates in our foreign trades. While our rate authority over carriers in the foreign trades does not approach our au-thority in the offshore domestic trades it nevertheless contains meaningful safeguards for the protection of our public interest and the growth of our commerce. Our regulation over ports and terminal operators, on the other hand has traditionally been in the nature of insuring the observance of fair practices.

But with the advent of general rulemaking power given us by the Bonner Act in 1961 the Commission has recently adopted, after deliberate consideration, a rule which requires that all terminal operators who serve common carriers by water file their tariffs with the Commission and make them available to all their customers. This rule, popularly referred to as Docket 875 but now codified as General Order 15, requires that all terminal operators subject to the reach

CONGRESSIONAL RECORD — APPENDIX

of the Shipping Act, file with the Federal Maritime Commission, and make available to the public, a full schedule of their tariff

rates and charges.

I think it appropriate here and now to quote the purpose of the rule: "to enable the Commission to discharge its responsibili-ties under section 17, Shipping Act, 1916, by keeping informed of practices and rates and charges related thereto, instituted and to be instituted by terminals, and by keeping

the public informed of such practices."

For some time, now, some terminal operators have been filing their rate schedules with the Commission and have been making them publicly available, either as the result of ad hoc decisions of the Commission and its predecessors or in response to the Commission's requests for them. However, many terminals neither file their tariffs with the Commission nor make them publicly available. The port of Los Angeles has long filed its rate schedules with the Commission and has made them available for the world

to see and to take notice.

Now, I know that there are those who will cite the adoption of this rule as just another example of onerous regulation and needless interference with what are essentially private undertakings. But reasonable men, I think, will agree that the rule will henceforth enwhat the shipping public to know at all times what the price of an important segment of their total transportation cost will be. Moreover, it will enable those terminal operators who have long and faithfully filed their tariff schedules to know exactly what their com-petitions are doing. Personally, I am convinced that the thrust of General Order 15 will be signally salutary.

The Commission intends to use its powers over terminal operators not in an oppressive or arbitrary fashion but in a manner which will ennoble our commerce in a way which will redound to the public interest of the

United States.

Your burgeoning population, particularly here in the Western United States, offers you here in the Western United States, offers you a fantastic growth potential for foreign trade. The population in this area as you well know has jumped from about 4 million less year. In 1940 to over 11½ million last year. In portantity, this rate of growth shows no sign of abating in the foreseeable future. Consequently it is incumbent on you to use your every effort to guarantee that your port growth will keep pace with your area growth. In this regard a realistic search should be made to attract new and dif-ferent cargoes rather than to divert existing cargo from other port areas.

New concepts of marketing and financing should be exploited and, most certainly, painstaking efforts should be spent to increase port and terminal efficiency. In this vein, I am pleased to note that you have not had a serious labor dispute since 1959, and that the automation that has been implemented here has benefited shipper, carrier, port and longshoreman alike

The operation of this new facility represents a giant step forward in your avowed schedule of increased and ever-increasing

cargo handling efficiency.

Now, we all know of the keen competition between terminals and between ports. And we all realize, I sincerely hope, the obligation of ports and terminals to at-tract new and different cargoes rather than to engage in ruinous interport competition. Hand in hand with this obligation, modern, efficient ports are presented with a golden opportunity. It is an unhappy fact of our times that less than 10 percent of American manufacturers attempt to ship their goods to foreign markets. I know of no valid reason why this percentage should remain so anemic. The quality of our manufactures, s we all know, is the envy of the world.

It is your obligation to convince this vast untapped reservoir of American enterprise

that it is good business to export; that your port stands ready to assist this vast poten-tial of exporters in their participation in international trade by establishing foreign markets; and that your modern, efficient terminals can safely handle their products with economy and dispatch. In a very large measure and in a very real sense, the potential growth of our foreign commerce depends upon the efforts of enlightened port man-

I understand that the Indies Terminal Co. will operate this facility and that vessels bearing different national flags will call here. We at the Federal Maritime Commission welcome the participation of foreign-flag carriers in our water-borne commerce. The Commission, as we all know, does not recognize any particular flag when it administers or construes the Shipping Act. All carriers are welcome to participate in our trades and as long as common carriers fulfill their obligations under that act they may expect the protection afforded by it. These carriers will find, as they have found in the past, that the Commission is a forum for airing of their grievances and for the safeguarding of their legitimate interests.

The prime interest of the Commission is, as it must be, the protection of and development of our export and import commerce; in effect, to insure that the foreign com-merce of the United States is not prejudice

or disadvantaged.

Contrary to the claims of our critics, the Commission does not regulate for regulation's own sake any more than the Shipping Act was passed by Congress as a mere legislative exercise. The Commission's efforts have been addressed to the improvement of our commerce posture with a minimum of inter-ference with the studied and respected judgement of managerial excellence in our transportation media. As a matter of policy, the Commission, I submit, exercises its controls in an effort to increase competition, and only where competition is restricted or con-trolled by competitors, at their own option, has the Commission attempted to enforce safeguards in the public interest and for the benefit of our commerce.

Let us take a look at some important cases decided by the Commission recently. First, if not foremost, it approved a host of so-called dual-rate contract systems whereby established carriers dedicated to specific trades, could count upon a reservoir of cargo in programming their services. In so approving them, however, the Commission added meaningful safeguards for American

shippers and consignees.

It also undertook a broad program of li-censing forwarders and laid down ground rules for their conduct. Further, the Commission completed a project whereby literally hundreds of agreements between ports and terminal operators were measured against the standards of the anticompetitive provi-sions of the Shipping Act. And, finally, the Commission has adopted a rule, as I mentioned before, requiring the filing of tariffs observed by terminal operators subject to the jurisdiction of the Shipping Act. I believe that the weight of the evidence indicates that each of these programs has facilitated the flow of our commerce.

In addition to these activities, the Commission, as I am sure you are aware, is under-taking studies to determine whether ratemaking practices, and the level of conference rates unnecessarily inhibit the flow of our inbound and outbound trades. Protests to the very existence of these studies have been loud and clear. But I would remind those critics that the Commission has not yet passed upon the merits of such studies, and that they should take heart that absent a determination that our trade has suffered as a result of unlawful practices, it is not the custom of the Commission to interfere with

On the other hand. I want it made entirely

clear, that I for one will not countenance any combination of carriers which serves its own ends to the detriment of our foreign import and export trade. This brings me im-mediately to the question of steamship con-ferences. I do recognize their rightful place in our economy. I believe that by and large they serve our foreign commerce well. But the fact remains that their very existence represents a substantial and economic policy of free competition and that in the public interest, steamship conferences, like other combines limiting competition, must be subject to constant surveillance. History confirms, however, that on balance the conference systems has been the handmaid of our commerce. Nevertheless, it is interesting to note that while public awareness and Government scrutiny of conference agreements is on the increase, sophistication and complexity of anticompetitive agreements is likewise increasing.

Free competition is the rule in this country and it has been preeminently successful. Anticompetitive agreements in the shipping industry, when consonant with our public interest and beneficial to our commerce, have been permitted in our commercial society. One reason for this license is that international commerce always involves more than one nation. And traditionally our international trading partners have espoused a business philosophy which has encouraged business combinations. Thus, in an effort to give recognition to our own spirit of free competition and to accommodate the business spirit of our trade partners in international trade, combinations in the shipping industry are lawful when certain safeguards have been

The countenance of conferences demands a fealty to the legitimate commercial endeavors of American exporters and importers. most certainly, steamship conference agree-ments which provide for ratemaking or pricefixing, in order to merit the approbation of the Commission, must show a public benefit which overrides the interests of the combination of carriers on the one hand with which individual shippers and consignees must deal on the other hand.

I hope I have left you with the message that the Federal Maritime Commission has a public trust to exercise in the aid of our foreign commerce, that restraints or controls exercised by the Commission are essentially aimed at promoting our waterborne commerce, and that the existence of such controls comes into play, generally, only after the normal flow of commerce has been subjected to private controls or restraints which do not include countervailing safeguards.

In closing, I wish continued success to the great port of Los Angeles, its port commis-sion, the Indies Terminal Co., and the car-riers who will use this terminal. I am con-fident that this facility will form a lasting bridge for the conduct of growing interna tional commerce.

### Two-Year Congress Term Best

EXTENSION OF REMARKS OF

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. DERWINSKI. Mr. Speaker, the President very dramatically and cleverly wove an endorsement of a 4-year term for Members of the House into his controversial state of the Union message last week. Editorial attention from our leading newspapers on this specific topic has

been prominent and interesting. I submit for the RECORD an editorial from the Chicago Daily News of January 14 which very calmly and effectively discusses the length of House Members' terms.

### TWO-YEAR CONGRESS TERM BEST

President Johnson, as part of his long-range program to bring a little happiness into everybody's life, has turned his attention to Congress itself. He has suggested that U.S. Representatives be elected to 4year terms in place of the present 2-year

A current Gallup poll suggests that as many as 6 in every 10 voters would approve longer terms, chiefly because biennial elec-tions require almost constant campaigning and hence detract from the time a Congress-

man can spend on his duties.

There are good arguments to be made for both sides, but the arguments in favor of the present system are more persuasive. Consider, for example, the notion that, freed of campaign responsibilities, the Congressman would do a better job. Actually the Congressman who seem to do the best job do so in large measure because they spend considerable time back in their home districts talking to the voters. It may be campaigning, but it is also educational. One reason Congressmen go wrong is that they get caught up in the heady atmosphere of Washington, D.C., and forget their real home is Small Town, U.S.A.

Moreover, the Congress was intended by the Nation's founders to be the people's most direct voice in Federal matters. lower House was to be the barometer of a changing public opinion-something more permanent than what is produced by the periodic vote-of-confidence test of foreign nations, but flexible enough to test period-

ically the Nation's viewpoint.

The system has worked quite well through the years. With rare exceptions, the voters have bolstered the "outs" in off-year balloting for Congress-another of the checks and balances which seem to be the magical ingredient in our form of government. Some restraint on an all-powerful Presidency could result if the 4-year terms were filled in off-year elections, but at a cost of the flexibility of the present system.

Congress itself indirectly recognizes the fast pace of today's world by remaining in almost constant session. Much of its effective leadership comes from the stability of experience—the Members from "sure" disexperience—the Mambers from "sure" dis-tricts who have built up seniority and, in turn, leadership. But, from a quarter to perhaps a third of the Members are from "swing" districts and the every 2-year test does serve to approve or reject the trends of leadership.

### The Democratic Way

EXTENSION OF REMARKS OF

## HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. IRWIN. Mr. Speaker, Americans believe basically in the right of each American to have a voice in his government

A citizen is important. His vote counts. This is so basic that we call it our way of life. It is democracy.

If we can truthfully say that we believe these principles are the guiding light for our great Nation, then why

should we deny this same principle to one city—Washington, D.C.? Here, too, there are citizens. Here, too, they have the right to say how the city in which they live is to be run.

Along these lines, the Boston Herald makes some telling observations in an editorial entitled. "Home Rule in 1966." which I include in the RECORD:

[From the Boston Herald, Jan. 11, 1966]

HOME RULE IN 1966

Washington, D.C., is a city of 819,000. It is much like any other large American city except for two things: It is the seat of the Federal Government, and it is not self-gov-

For many years the residents of Washington have been trying to get home rule. There does not seem to be any particular reason why they should not have it. And there are many sound reasons why they should have it instead of having their city run by Members of Congress who do not always have the best interests of Washington

The real issue in the long controversy has been a rather crude one. It is whether Washington is to remain a southern city in the worst sense of the word, or whether it is to join the urban mainstream of America.

Certain southern legislators want to keep it a southern city in which the Negro is kept in the status of second-class citizen living in second-class housing, sending his children to second-class schools, and realizing second-

class opportunities.

Last year home rule bills came closer than ever before. The Senate passed a bill recom-mended by President Johnson. With the President's vigorous backing another home rule bill got to the floor of the House, but was foiled by complicated parliamentary maneuvering which resulted in the passage of a substitute bill. So now, with the reopening of Congress, the home rule battle will be

The bill passed by the Senate and the bill passed by the House are very different. Whether some compromise can be worked out between the two or whether the twain are too far apart to meet remains to be seen.

But if home rule is to be passed this session it will take the influence of the Presi-dent to do it. It will take the efforts and votes of New England Congressmen, too. It's time Washington should be allowed to join the United States.

### Efforts Are Praised

EXTENSION OF REMARKS OF

### HON. ROY H. McVICKER

OF COLOBADO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. McVICKER. Mr. Speaker, little children sometimes ask a teacher or a parent-"Why is there war?"

Men do wage war, but they also strive for peace. In this age of ours, communications are faster than ever before. have means of getting messages to other peoples. If people want peace, then they must talk about the possibilities of Deace.

American motives can and will help in the struggle for peace. We can with all truth say that while we are strong and willing to stand firm against aggression, in our hearts we want peace. no territory or expansion of our great

land. We want to return our soldiers home. As the Denver Post recently noted:

Whatever the future holds, we can ap-roach it in the knowledge that our peace effort was substantial and genuine.

This editorial entitled, "U.S. Peace Effort Is No Trick," praises the pursuit of peace which this administration has taken, and I include it in the RECORD: [From the Denver (Colo.) Post, Jan. 12, 1966]

U.S. PEACE EFFORT IS NO TRICK

The news that the United States has made a direct "contact" with Hanoi in the course of its peace offensive is encouraging, but not especially significant in itself.

Secretary of State Rusk disclosed 6 weeks ago that there have been a number of contacts with Hanoi and other Communist centers and that the contacts were due to continue.

He added, however—and the statement can hardly be challenged—that "the prob-lem with the other side is not a problem

The problem, in part, is what the United States and "the other side" communicate to each other when the contacts are made.

In the most recent contacts with the North Vietnamese and others, the United States has reportedly been attempting to convey the substance of 14 points disclosed in Washington at the end of last year.

The U.S. position, as embodied in these points, can be summarized as follows: First, the United States is ready to enter

formal negotiations or informal discussions, with or without a previous cease-fire, on the problems of southeast Asia or any part of it. The Vietcong could be represented at the sessions, but probably indirectly and not in its own right.

Second, the United States would be willing to proceed at these sessions on the basis of the 1954 Geneva agreements, which provide, among other things, for the reunification of South and North Victnam on the basis of free elections. Reunification, in the U.S. view, would have to result from the free de-

cision of the peoples involved.

Third, in seeking these negotiations or discussions, the United States wants no military bases in southeast Asia, does not want tary bases in southeast Asia, does not want a continuing U.S. military presence in South Victnam, agress that nations in southeast Asia can be neutral or nonalined and is willing to contribute \$1 billion to a regional development program in which North Viet-

nam could take part.
Fourth, the United States is willing to discuss at the peace table the four-point negotiating position of the Communists and to refrain from bombing if there are indica-tions that this will contribute toward a naceful settlement.

It is difficult to see how the United States could go much further than that, except on

could go much further than that, except on the question of seating Vietcong representa-tives directly at the peace table. This newspaper has previously indicated its hopes that the issue of the participation of the Vietcong will not be allowed to stand in the way of a peace conference. Since the Vietcong are still doing the bulk of the destine seather the except of

of the fighting against the government of South Vietnam and against us, they belong at the peace table. Our government would do well to make it clear that it will not block their direct participation.

Apart from the question of the Vietcong role, our 14 points are so conspicuously rea-sonable that they cannot have failed to im-press the world leaders to whom President Johnson's emissaries have been explaining

Although there is a great gap between stating principles and implementing them in the details of a working agreement, we can hardly be expected to close that gap until

we have a chance to sit down and try at the peace table. Unless we get the chance, no one can justly say that our peace offensive is a trick.

We do not know what measures this Nation will be obliged to take in the weeks that lie ahead. Whatever the future holds, we can approach it in the knowledge that our peace effort was substantial and genuine.

We have made the "contacts" that have

We have made the "contacts" that have to be made, both with Hanoi and with others. During those contacts, we have offered reasonable terms for peace talks and assurances of a reasonable negotiating position.

We ought to go on pressing this peace campaign, while we continue the pause in the bombing of North Vietnam at the same time. Our effort deserves to win us the understanding and support of most of the nations of the world. Perhaps, if we give it enough time and get enough help from other nations, it may even bear fruit in Hanol.

## Peace Corps Gains Able Leadership in Appointment of Jack Vaughn

EXTENSION OF REMARKS

## HON. DANTE B. FASCELL

OF PLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. FASCELL. Mr. Speaker, the Alliance for Progress and Latin America lost the full-time services of one of its most able and stanch supporters last Monday when President Johnson announced the appointment of the Honorable Jack Hood Vaughn as the new Director of the Peace Corps. I am confident that his ability and total effort which he has always demonstrated will keep the Peace Corps at the same high level and fine caliber which it has enjoyed since its inception.

Director-designate Vaughn appeared probably in his last official capacity in the Congress a week ago today when he appeared in executive session before the House Foreign Affairs Subcommittee on Inter-American Affairs. He explained in his modest and able manner the reasons why the Alliance for Progress is making great advances, and, contrary to many pessimistic viewpoints that we have heard predicted, 1966 is going to be the greatest year in history in terms of growth and improvement in Latin America. This enthusiasm which he displays is bound to be instilled in those with whom he will work in the Peace Corps.

Mr. Vaughn, in the 45 years of his life, has had a varied and superlative career. He served in the U.S. Marine Corps, was a university instructor, a professional boxer, served in the early days of the foreign-aid program, and was previously Assistant Director of the Peace Corps for Latin America before the President called him to be his right-hand man for the Alliance for Progress.

I am told that his short address before the U.S. delegation to the United Nations in December at the time when Ambassador Goldberg was inviting all the regional Assistant Secretaries to address that group, was one of the most sincere and honest evaluations of any situation that the delegation had heard.

I am sure my colleagues join me in wishing the new Director, Jack Vaughn, great success in his new assignment.

### A Newspaperman's Prayer

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YOLK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. MULTER. Mr. Speaker, Bob Considine has periodically offered a newspaperman's prayer as the code by which he tries to live as a journalist and as a man.

The innate good sense and compassion for his fellow man contained in this prayer can stand us all in good stead.

The article appeared in the January 4, 1966, edition of the New York Journal American and I commend it to the attention of our colleagues:

A Newspaperman's Prayer (By Bob Considine)

This is as good a time as any, at the start of a new year, to remind myself of something I pledged a long time ago—and try to live up to as best I can. I called it, in that happy long ago, a Newspaperman's Prayer.

Fasten seat belts, please, and no smoking: Dear God, may I be fair. Circumstances and dumb luck have placed in my thumby paws a degree of authority which I may not fully comprehend. Let me not profane it.

Give me the drive that will make me check and countercheck the facts. Guide me when, lost for want of a rudder or a lend, I stumble through the jungle of speculation. Grant me, as the poet sang:

The courage to change
The things I can change;
The serenity to accept
Those I cannot change, and
The wisdom to know the difference.

The 26 sharp-edged tools we call our alphabet can do what other tools do; build or destroy. Let me build. But let me know clearly, also what should be destroyed, what darkness, what bigotry, what evil, what curse, what ignorance.

Never let me alip into writing down in fatuous fear that readers will not understand. Let me write from the shoulder, and always with the assumption that those who read know more than I.

Such news as I find or comes my way, let me tell it quickly and accurately and simply, with an eye to my responsibilities. For news is precious. Few could live without it. When it is stopped or thwarted or twisted, something goes out of the hearts of men it might have nourished. Confront a starving man with his choice of a succulent meal or the promise to reveal instantly news of great importance, and he will first take the news, "Think" pieces, as we say in the trade to identify articles and columns contrived out of airy nothingness, or from a prone position, can never replace the meat and potatoes of news.

Let me champion just causes, avoid expediency, never lose the stimulation engendered by printer's ink. Remind me to be kind to copyboys, for I'll meet them on the way back down—when they are editors. Protect the innocent from me when, with headlines pressing, my aim grows fuzsy.

Make me use my legs and eyes, the better to track down and see the truth, Deafen

me to the Lorelei song of ruthless hearsay, rumor, and the goesip of town loafers. If word that could cause harm comes to me, even from sources far above reproach, let me have the dexterity and decency to pick up a phone and sak the subject about it.

When the customers write in to accuse me of being a bum, let me consider carefully the possibility or probability that I am \* \* and try to do better. Let me work harder, try harder, and recall with proper humility that history produced some notably abler reporters, including four journeymen named Matthew, Mark, Luke, and John.

Let my stomach rebel at plucking meat from publicity handouts and let me not be mified when someone says, "You had a pretty good piece last week, but I can't remember what it was."

As long as our men fight, sweat, and die in actual or cold war, sacrifices which at times should make our food stick in our throats and our luxuries a torment, let me never cheaply use the words "courage" or "guts" to describe the means by which a pitcher wins a ball game, a gridman bucks a line, a golfer sinks a putt, or a fellow makes a speech.

And above all, let me recall repeatedly what the great teachers of the past \* \* \* Moses and Socrates and Christ \* \* \* would have done if by some alchemy they had been given the breathtaking break of swift and farfiung communications.

### Travel Within the United States

EXTENSION OF REMARKS

## HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. DOWNING. Mr. Speaker, as the Member from Virginia's First Congressional District which has within its boundaries a number of our Nation's impelling tourist attractions, I am understandably very deeply interested in the "Visit U.S.A." and "Discover America" programs. Attraction of travelers is one of the Virginia Commonwealth's major economic activities. Virginians are, therefore, always interested in efforts to increase travel to and within the United States.

For this reason, I was pleased recently to have the Chairman of the Civil Aeronautics Board, Mr. Charles F. Murphy as a guest in my district recently. Mr. Murphy delivered an address before the Air Traffic Conference of the Air Transport Association at Williamsburg, Va. I believe his talk will be of great interest to my colleagues because of widespread congressional interest in encouraging our people to travel within the United States.

I believe my colleagues will find Mr. Murphy's talk worthy of their attention, and I would like to insert it in the Appendix of the RECORD:

REMARKS OF CHARLES S. MURPHY, CHAREMAN OF THE CIVIL AERONAUTICS BOARD, AT THE ARE TRAFFIC CONFERENCE OF THE AIR TRANS-PORT ASSOCIATION, WILLIAMSBURG, VA.

I want to talk to you today about a subject in which we have a very keen mutual interest: encouraging more people to do more traveling by air to the United States and within the United States. I want to urge you

to increase and strengthen the very considerable efforts you are already making for this purpose, and to pledge my cooperation in

our efforts.

This subject is important to us for a numsons, reasons that extend beyond the well-being of the air transportation in-dustry itself. The Congress has indicated dustry itself. clearly in the Federal Aviation Act that the air transportation industry should be developed to serve national purposes, to bring benefits to our Nation as a whole and to all its people. I would think it clear that one measure of how well the industry is serving national purposes is the extent to which people patronize the industry.

If you look upon your recent phenomenal traffic growth as of importance only because of its beneficial effects upon airlines, I suggest that you are taking too narrow a view of the world, and are not doing justice to

yourself.

You are entitled to great credit for the benefits you are bringing to our whole

economy and our whole society.

It is frequently said these days that the airlines came of age in 1965. They have had a fantastic development over the past 20 This didn't just happen. You have worked hard to provide the best possible product. You have succeeded in making product. air travel invaluable to an estimated 20 mil lion people who will fly in 1965, people who will make more than 90 million separate trips to domestic and foreign destinations. You can be justly proud of these accomplishments but you cannot relax in your en-

The fact that you are doing well and that the future looks bright does not make the task easy from here on out, either for you or for the Board. It does make it more in-teresting and in a sense more challenging. You now have good strong tools to work with and can set your sights upon new horizons. This is a much more satisfying task than a struggle just to keep your heads above water.

Among these new horizons, high priority should be given to a vast increase of pleasure travel by air to and within the United States. This is made urgent by the U.S. balance-of-payments problem. When the air transportation industry is looked at as a whole, including sales of aircraft by U.S. manufacturers to foreign air carriers, the net adverse effect on the U.S. balance of payments is much smaller than when you look only at the expenditures of travelers to and from the United States. Nevertheless, the margin of expenditures by Americans going abroad above expenditures by foreign travelers coming to the United States is so large as to present a very serious problem. It clearly behooves our air carriers in their own interdo all they appropriately can to narrow this so-called travel gap in order to avoid the need for more drastic remedies.

The carriers do recognize this problem and are doing something about it U.S.A." fares have been made available to foreign nationals. Transatlantic excursion fares have been made available, and the recent IATA Conference in Bermuda has proposed further reductions in these excursion fares as well as the establishment of tour basing fares. It is too early to say with certainty whether these proposed tariff changes will become effective; but if they do, we must make every effort to see that they increase travel to the United States even more than they increased travel from the United States.

One thing that is clearly called for is more destination advertising by U.S.-flag carriers in foreign media to promote travel to the United States. This kind of advertising is growing. I'm glad to say. I commend you for what you are doing already and for the larger efforts you are already planning. I urge you to accentuate your promotional campaigns in other countries as much as you

Now I wish to turn to the promotion of pleasure travel by air by our own people with-in our own country. It seems to me that perhaps we have at the same time one of our greatest potential markets, one of the biggest gaps in our promotional activities to date, and one of our best opportunities to improve the adverse balance of payments.

Discover America" is a program close to the heart of this administration, as you know. Quite apart from the urgency due to the deflicit in the balance of payments, this program can contribute richly to the social and economic opportunity of our citizens. have much yet to do to bring this country to the doorstep of its own residents. Another aim of the administration is to get people out of their cars and off the crowded highways. I am sure you share this goallong as it means getting them off the ground as well. No one holds out serious hope that all those who drive are potential vacationers by air. However, it is worth remembering that if you can attract only 1 percent of thes drivers, it will mean an increase of 15 percent over your present market.

At this point, it seems to me that the public and private interest fuse. In this era of unprecedented prosperity, the public is entitled to new travel experiences, experiences which are possible only with the savings in time and cost which the jets offer. The other side of the same coin is that you need

their business

We would all be acting like the proverbial ostrich if we let your current profit position-gratifying indeed as it is, obscure the fact that 45 percent of your capacity is flying empty. This amounts to 37 billion sest miles a year, equal to the total capacity which you offered just a short 8 years ago in 1957. are fortunate indeed that American nology has produced the amazingly efficient Otherwise, we could well be in deep trouble at the moment. For I know no other industry which could approach a profitable state operating at little more than half of its capacity. But even in your industry, it would be folly from the standpoint of your private interests, the national economy, and the public welfare to accept such a waste of potential as just one more regrettable fact of

To accentuate the problem, you are going to have a tremendous increase in capacity during the immediate years hence. Firm orders are on the books for some 700 aircraft, most of which will enter domestic service. for one welcome the improvement in service. which will make jets the order of the day across the country, at many of our smaller a well as large communities. However, there is no denying the fact that the prospective capacity is staggering. We will need a sustained and substantial increase in traffic just to hold onto the present relatively low-load factor level.

The bright side of this picture is the marvelous efficiency of jet aircraft. They have produced the lowest seat mile cost in airline history. Coupled with this is the rather incredible leverage which you have above the break-even point. As of June 30, the break-even load factor for the domestic trunkline carriers stood at about 48 percent. Above this point, every sent flying unsold means a revenue loss; every seat sold means that gross profits on the order of 80 to 85 percent can be tapped from the additional revenue. This is an enviable range of opportunity to have tucked under your

To put this basic fact another way, in 1963 you had a net income (after taxes) of only \$13 million. Traffic for the year ended June 1965, was up 23 percent over 1963, unit expenses were down 10 percent. These trends are the kind we like to see. But the real leverage shows when it comes to net incomeup more than 1,200 percent from 1983 to an alltime high of \$180 million. I hardly need

to remind you that this leverage can cut both ways. Just as passengers above the break-even load factor brings profits up sharply, empty seats below the break-even load factor can mean large los Thus. there is every reason for you to build new traffic to match your new capacity.

I have no doubt that our buoyant economy can sustain the capacity explosion of the next few years. Air travel has long since become indispensable to the businessman. It is now inextricably woven into the fabric of our economy. The savings in time which it makes possible have improved efficiency and allowed us to reduce the cost of goods and These benefits will continue and magnify, probably for some time to come at an even greater rate than the pace of the economy as a whole. The business traveler is "time" poor. You have served him well with an excellent product which has no peer in terms of speed, safety, and reliability. He terms of speed, safety, and reliability. He has responded accordingly and this market is highly dependable.

But I am convinced that in nonbusines markets the airlines are in a position to do more, that they should do more, and that they will make even greater profits in the process. A recently published survey by the Port of New York Authority reports business travel at that major city up 84 percent from 1956 to 1963. Growth in pleasure travel, on the other hand, lagged at half the pace. These people are "money" poor. They are interested in speed, but for a different pur-pose and only at a price. If the price is beyond their means, or out of line with other consumer products, they will again content themselves with a holiday at the nearby beach or mountain resort. These are the

people that you must reach.

Creating attractive and salable products arket presents a real challenge to your merchandizing talents. The seats on your airplanes may all look the same, but mean very different things to the personal traveler and the businessman. To both they represent a means of getting to a cho tion. However, for the business traveler the cost is defrayed at least in part by the increased efficiency of his company. For the personal traveler, the cost represents a te among various objects of nonessential ding. Economists call this the discrespending. pary dollar. Right now, I'd be willing to bet that a lot of people are suffering a real conflict of interest between a 2-week holiday or a 52-week color TV set. The competition is keen, and it can only become more so as population, income, and leisure time in-

I am particularly pleased to see that you are working toward a joint marketing study the travel agents and others e in the business of tourism. I hope and trust that you will get this project off the ground promptly. It is an important step which should not be allowed to bog down over parochial issues, to die the lingering and painful death which is too often the fate of such pilot projects.

Despite the long-range value which we can

expect from this study, I do not think we should wait for its conclusion before moving ahead. Certainly, it should help to clarify the most effective path to follow. But the general direction of that path is known to-And there is an old saying that the

perfect is the enemy of the good.

Travel agents and tour organizers can offer a wealth of assistance in reaching out to the personal traveler. They have been in touch with him for years. They know how he looks at things, what he wants here, what he will settle for there, in the interest of time and budget. They have also worked closely over the years with hotels, restaurants, sight seeing organizations, and car rental agencies, all of whom stand to gain immea ably. It makes good sense to marshall their expertise in opening doors to the domestic travel scene, offering them tools to work with

and enlisting their imagination in develop-ing attractive new tourist packages.

As a practical matter, I think that we can expect only limited success in getting their most enthusiastic support for travel within the United States as long as there continues the United States as long as there continues to be a disparity in the incentives for selling domestic and international transportation. At the moment, agents are more interested in selling the latter. Quite understandably. They get a higher commission on these sales. What is more, it is generally cheaper and easier to get acquainted with what they are selling. And it is pretty hard to sell some-

thing you have never seen.

I would put a solution to this problem down as a high-priority task for the Board and yourselves. We are working on it, and and yourselves. We are working on it, and we want to work with you. It seems to me that the answer lies somewhere between the very liberal system which has been followed internationally and the very stringent one which we have held you to domestically. The agent has a valid business interest in acquainting himself with the product he sells. This should be accommodated. But the very great discount which he has handed to him great discount which he has handed to internationally, coupled with virtually wide open rules on the number of permissible trips, go far beyond this need. It can only lead to the abuse which we all know exists entry into the field of what has been called the dilettante agent, intent basically upon gaining access to low-cost travel for himself. This profits no one; neither the public, the airlines, nor the legitimate hard-working airlin

On the other hand, I think we need a more satisfactory system domestically, a system which promotes more realistically the agent's business needs and potential productiveness, a system that will at the same time protect

against proliferation and abuse.

against proliferation and abuse.

It may well be that the solution is to be found in a conference administered program, both domestically and internationally. This would foster a pofessional—if you will, non-alined—application of ground rules agreed upon by all, and avoid the intervention of competitive pressures between carrier and carrier, agent and agent. We would welcome your thoughts, suggestions, and specific proposesis.

I understand that the question of costing out the sale of a ticket may be encompassed within your joint study. I hope that this will be the case. Nevertheless, this should will be the case. Nevertheless, this should not be used as an excuse to avoid interim measures which will place the level of commeasures which will place the level of com-missions more closely in parity. One such step would be to raise the commission rate on family plan sales to the 7 percent which generally prevails internationally. I am told that you all concur on this, despite the fact that it fell by the wayside when your overall proposal to revamp the structure was with-drawn. Another step which occurs to me drawn. Another step which occurs to me would be a higher commission rate on the sale of packaged tours which will give due recognition to the promotional role of the tour develop

sak of developing tourism will inc tably call for price reductions—selective but substantial. For there is another very real substantial. For there is another very real difference between personal and business travel which it is well to keep in mind, the net cost of the seat to each. This is close to the heart of airline economics. The businessman's transportation is paid for with pretax dollars, personal travel with after-tax dollars. Oversimplifying the arithmetic a bit, a \$100 fare is actually only about \$60 to the businessman. This creates a distinctly different set of economic considerations, and indeed an anomaly. An airplane seat which different set of economic considerations, and indeed an anomaly. An airplane seat which has become something of a necessity to the businessman costs him half what it costs a vacation traveler, to whom it is a luxury. It is a small wonder that the pleasure traveler has his ear close to the ground when it comes

With a lot of empty seats disappearing into thin air every hour of the day, it is just plain good sense for you to find ways to fill them. There is no doubt in my mind that you can fill many of them. This country harbors some of the most magnificent rec-reational areas in the world. You do not You do not have to go to Switzerland to ski or enjoy the vistas of a great mountain range. Aspen. Colo., and the Grand Teton range are quite as inspiring. The sun in Florida, Hawaii, and Puerto Rico is quite as much a soothing tonic as in the Mediterranean. New York is probably unique in the world; as are the at desert stretches of Arizona and New xico. 'San Francisco is a match for any in sophistication, and the French Quarter of New Orleans is as intriguing as any quaint little village in Europe.

Moreover, the fact is that this is a very big country. It simply cannot be explored by car or rail in the limited vacation time which most of us have at our disposal. Only the airlines can fill this bill.

I was very interested in a recent article in Aviation Week which discusses your experi-ence with the liberalized family fares. These fares seem to be proving the wisdom of selective price concessions targeted at particular markets. Some of you are quoted as having realized a doubling of family plan More significant to me and I am sure to you is the increase in the number of full-fare paying passengers coupled with a noticeable increase in the average size of the family unit. This means a solid return you, and it certainly bespeaks success in tting the mark with that person whom we call the potential traveler.

If you are a traveler from abroad, you can now fly anywhere on the systems of most local service carriers and a number of trunklines at a flat charge. This is a wonderful opportunity, and would be even more wonrful, of course, if it could be made available by the entire domestic industry on a joint across-the-board basis. I wonder if something comparable could be available to our own citizens. Any one of us in this room can travel all the way around this whole country on one \$09 ticket, taking 99 days to do it, as long as we go by bus. Unfortu-nately, not many of us have that kind of

Have you thought of trying to devise an industrywide package along these lines? Perhaps it could be on a space-available basis to protect your regular fare, or appli-cable only on of-peak flights which operate primarily for mail or equipment rotation purposes and hence at very low passenger load factors. Perhaps it could be developed as an all-expense tour proposition. And perhaps this approach would not be feasible at all. It may well be that the most effecchannel to new traffic is a series of individually designed excursion fares. These are some of the questions which need are some of the questions which need thought. We look to you for some answers. The point which we must not lose sight of is that the traffic we are talking about is top off" in terms of profits.

The concept of the all-expense tour seems to me to hold out exceptional promise as a means of bringing tourism within reach of the average income. It pools the advantage of wholesale buying for the producers, with obvious benefit to the consumer. The promise can be fulfilled, however, only if the airlines will be generous in carving tour-basing fares which will really stinulate the tour organiser's interest and activity. You are familiar, I am sure, with the rather dramatic popular clamor for such travel in Eu-rope. Blue and white collar workers fly in droves to a holiday in the Mediterranean sun. It is now generally accepted that these are brandnew customers to airline service. We have in this country the most highly developed and most efficient air transport system in the world. I find it inconceivable

that we cannot bring the same sort of advantage to our people.

In summary, let me repeat my urging that

you make every effort to increate and within the United States.

This is important in order to: Achieve a fuller realization of the benefits of air travel for individuals in their personal lives; stimulate general economic activity through expenditures related to air travel; improve the U.S. balance-of-payments position; and broaden and strengthen the economic base of the air transportation industry.

As to how this laudable objective with re-

ect to U.S. travel is to be achieved, I certainly do not have all the answers, but suggest that the means which should be given your most urgent consideration include the following: Increased destination advertising with respect to places in the United States, addressed to potential trav-elers both within the United States and abroad; better arrangements to take full advantage of the traffic-generating abilities of travel agents and tour operators: wider use of all-expense tours—available to travelers originating in the United States or abroad; and extension of special "Visit U.S.A." fares of some kind of travelers originating within the United States.

In this area I am discussing with you today, the stakes are high in terms both of your profits and the contribution which air transportation can make to an improved standard to work together in pure to of this future. I assure you that the Board will bend every effort to help work out mutually satisfactory solutions to whatever problems we may run into along the way. We might also prod, into along the way. into along the way. We might also prod, if prodding seems to be indicated. For I believe that the Board feels a certain sense

of urgency about this.

A week or so ago I spoke to the ATA's Airline Finance and Accounting Conference. I took that opportunity to discuss the Board's approach to profits, earnings, and fares. I sincerely hope that I dispelled any uncertainties and fears which there may have been about the Board's dedication to good profits. So that there can be no lingering doubt, let me say again that we like to say. We like and prosperous as you are today. We like to see your profits healthy and climbing. We seek also seek to secure those profits. We seek also a new dimension of opportunity for the public. These two objectives go hand in

## Control of Strategic Waterways: Aden Crisis Poses Threat

EXTENSION OF REMARKS

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. FLOOD. Mr. Speaker, as stressed by me on previous occasions when discussing Panama Canal problems, a prime objective of the world revolutionary movement known as the international Communist conspiracy has long been to secure effective control over vital sea transportation routes:

In a statement to the House on September 9, 1965, entitled "Soviet Strategy on the High Seas: Control of Narrow Waters," I listed the Strait of Bab el Mandeb at the southern end of the Red Sea as one of the key points on the round-the-world maritime route because of its relation to the Suez Canal and quoted an illuminating article by Gen. James D. Hittle, U.S. Marine Corps, re tired, distinguished military and naval analyst of the Veterans of Foreign Wars. In that article, he dealt comprehensively with the subject.

A growing crisis in Aden, a British protectorate in southern Arabia next to Yemen, emphasizes the strategic location of this country in the control of the southern approach to the Suez Canal. In a recent news story General Hittle clearly shows what is at stake in the current drive for "liberation" of Aden

In order that all agencies of our Government and the Nation at large may have the benefit of General Hittle's latest appraisal, I include the indicated article as part of my remarks:

[From the San Diego (Calif.) Union, Dec. 4, 19651

ADEN CRISIS POSES THREAT TO SEA LANES (By Brig. Gen. James D. Hittle)

WASHINGTON.-The fast heating crisis in Aden, England's protectorate at the southern end of the Arabian Peninsula, is no homegrown variety of trouble. And there is far more involved than the issue of so-called independence.

Longtime observers of Mideast affairs say that the native demand for independence is only a subterfuge. The real objective is to kick the British out of their Aden base. If that can be accomplished, it means the loss of another strategic control point to the free world.

Aden's importance is obvious.

Once again, it is a matter of geography, the common denominator of strategy. Brit-ish Empire builders long ago realized Aden's strategic importance when they hoisted the Union Jack there in 1839 and quickly made Aden a key British base in the Indian Ocean

#### LIFELINE CHANGES

Commanding the southern-Indian Ocean-entrance to the Red Sea which, in turn is the northern approach to Suez, Aden's importance vastly increased when the canal opened in 1869. Suez meant the end of the long haul around Africa from Europe to India and the Far East. The life-line of the Empire now ran from Europe through the Mediterranean to Suez, down the long Red Sea corridor, and then into the Indian Ocean at Aden.

Aden was an essential part of the power complex that permitted Britain, well before the end of the 18th century, to establish an effective control on the Indian Ocean basin.

Britain held Singapore, controlling the Malacca Straits, the eastern entrance to the Indian Ocean. The Aden base commanded Indian Ocean. the western entrance.

#### MANY CHANGES NOTED

Things began to change, however, with the end of World War II. There basic fac-tors hastened that change and the ensuing turmoil: First, the loss of India to the Crown; second, the virtual disappearance of the British Navy from the Indian Ocean; third, the Soviet Union's drive for control of the narrow water corridors.

Moscow knew that Red control of the sea gates would mean the strategic fragmenta-tion of the free world. Results of this aspect of Communist pressure are evident in Soviet Caribbean policy now focused on Panama, and in the fast-worsening Singapore situation.

But Kremlin planners didn't forget Aden. The terror, assassination, subversion and rebellion in Aden are the cumulative result of the Soviet penetration of Egypt which gathered momentum in the mid-1950's. INVASION POUNDATION

This laid the strategic and political foundation for Egyptian President Gamal Abddel Nasser's invasion of Yemen which earted the spearhead of aggression southward to the ill-defined Yemen-Aden border.

Now violence has reached the point in Aden where Britain recently suspended constitutional rights.

It is increasingly evident that Russia is driving to push England out of both Singa-pore and Aden so it can replace England as the keeper of the eastern and western sea gates of the Indian Ocean.

"The 'Voice' Speaks: All Must Pay More for the Bankers' Product"-An Analvsis of the Federal Reserve Board's Interest Rate Hike

> EXTENSION OF REMARKS OF

#### HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. PATMAN. Mr. Speaker, our former colleague in the House, Jerry Voorhis, has distinguished himself as a champion of the consumer for many years. Jerry Voorhis was an outstanding spokesman and fighter for the consumer when he served as a Congressman from California, and he has continued his invaluable service to the "little man" of the country as executive secretary of the Cooperative League of the U.S.A.

He has been a consistent opponent of the consumer's No. 1 enemy-high interest rates. Following the Federal Reserve Board's decision to raise interest rates on December 3, Jerry Voorhis analyzed in dramatic and eloquent terms what this action means to the consumer and to the ecnomy as a whole.

The analysis appeared in "The People's Business," a feature service distributed by the Cooperative News Service. I insert a copy of this excellent document in the RECORD:

THE "VOICE" SPEAKS: ALL MUST PAY MORE FOR THE BANKERS' PRODUCT—I

(By Jerry Voorhis)

Once more the voice has been heard in the land.

It is the voice of the greatest special privilege ever granted by any nation to any group of private citizens in all history.

It is a voice to which the wise men of the country, almost all the newspapers and com-mentators, the Secretary of the Treasury, and even the President of the United States listen and bow their heads and genufiect.

The voice says: This country is too prosperous.

"There is too much money in circulation." "Unemployment has been reduced and industries are producing at or near emoe

"The value of money has been going slowly down and the money value of goods and services has been going slowly up."

"These things must not be." So sounds the voice, the voice of the Chairman of the Federal Reserve Board.

From one point of view, these things which have been happening are bad. From every other point of view they are good.

They are bad from the point of view of the they are bed from the point of view of this banks, which have—swongly—been given the privilege of creating the money of this sup-posedly "sovereign" nation. They are good from the point of view of

the workers who were unemployed but who now have jobs again. They are good from the point of view of farmers, manufacturers, merchants, everybody that produces or sells

But as has happened so often when the single interest of the private creators of money clashes with the interest of all the rest of the people in the country, the interest of the bankers has prevailed.

It has prevailed not through any act of Congress or the President or the Secretary of

Congress or the Fresident or the Secretary of Treasury or anybody else who is responsible to the people of this country. The bankers have prevalled because their own private "government," the Federal Reserve Board, which is accountable to no one but itself and the private banks which own the Federal Reserve Banks, has so decreed. (The only sense in which the Federal teserve Board can be said to be accountable to any public body is that Congress could, of course, amend or repeal the law that created the Federal Reserve System.) Even the Federal Reserve Board voted only

4 to 3 for the increase in interest rates.

Four-sevenths of a group of private bankers responsible to nobody but private bankers for their actions has decided that:
1. Interest rates throughout the country

shall be about 10 percent higher than they are now. (They increased the Federal Reserve's discount rate from 4 to 41/2 percenta 11 percent increase.

2. Every home shall cost about 10 percent more than it does now.

3. Every farmer must repay his debts in money that is about 10 percent harder to get and worth 10 percent more than when he

borrowed it.
4. The cost of everything we buy or us shall go up about 10 percent because the cost of money or credit is the one element that enters into the cost of almost everything we buy or use in all our economic life.

5. The taxpayers of the Nation shall be forced to pay at least \$1 billion more in interest on the national debt than they do

6. And every piece of household furniture, every washing machine, every automobile, every other thing bought on credit shall cost the family that buys it-rich or poor-10 percent more than it does now. will happen not because any of these goods are actually worth a single penny more than they were before, but solely because four private bankers say it must—four out of seven on a Federal Reserve Board which can control the whole Nation's economic fate.

RESERVE BOARD'S ACTION MAKES MONEY-LENDING MORE PROFITABLE-II (By Jerry Voorhis)

William McChesney Martin, Jr., who has just told the President of the United States to go sit in a corner, has an excuse. Yes. The four out of seven members of Mr. Martin's Federal Reserve Board have their stand-ard excuse for the blow they have struck at the Nation's economy.

It is the same excuse that the Federal Reat is the same excuse that the Frederal Re-serve Board used in May of 1920 when it deliberately caused a deflation of the cur-rency as severe that America's agriculture was plunged into a depression from which it did not recover until the middle of World War II.

It is the same excuse that was used in 1938 when most of the gains in economic activi-ty which had been accomplished during the preceding 5 years of the Rooseveit admintration were wiped out in a couple of months.

It is the excuse that "We must curb in-

Everybody is supposed to remember the disastrous inflation that took place in Germany after World War I. And the inflation recently suffered in Brazil. Then everybody is supposed to become frightened and to say, "Oh, yes. By all means we must curb inflation."

But still it seems a bit odd, if we really wish to "curb inflation," to adopt measures that will absolutely assure the sharp inflation of every price and cost in the entire economy of the Nation.

This hardly seems a sensible way to pre-

vent inflation of prices or costs.

But it does make money more valuable in terms of all real wealth. And it will make all real wealth less valuable in terms of money.

Which is the real reason why it is done. But it is a reason involving so many undestrable implications that hardly anyone—least of all the Federal Reserve Board ever talks about it.

Another reason is being alleged. It is being suggested that the raising of interest rates will discourage American investors from investing their money abroad and cause them to invest at home, thus correcting the balance of payments. But the result, the immediate result of the action, has been to cause a slump in the stock market and in the value of almost all American securities. This is a strange way indeed to encourage investment in these sound American securities.

No. The reason for this Federal Reserve Board action is rather simple. It is taken to increase the value of money and reduce the value of everything else in our economy.

the value of everything size in our economy. Who would want to do such a thing? The people who deal in money, who have money to sell at interest, who indeed have the privilege of creating new money and drawing upon the credit of the entire Nation and all its people to give value to that newly created money.

created money.

If you are in the business of creating and lending money, as the commercial banks and the Federal Reserve banks are, then quite obviously if you can get a 4-to-3 decision to increase your income by 10 percent, all of a sudden, it's a very good thing to get done for you.

But from the viewpoint of the Nation as a whole, one or two sobering thoughts occur. One is that every single depression or recession which we have ever suffered has been preceded by a period of shortage in the money supply. And many people believe that, far from having increased too rapidly, our money supply in very recent years has not been increasing fast enough and that this is the reason for our persistent unemployment, for the failure of many industries to operate at anywhere near their capacity, and for the flow of investment funds out

of the country.

Another thought is that a number of other countries, notably Japan and Western Europe, have experienced much more rapid growth rates since the close of World War II than has the United States. And in every one of those countries the key to that rapid growth has been monetary policies which have assured a growth in the money supply which was always a little ahead of the growth of industry and commerce. In other words, these countries have brought about, quite deliberately, a controlled expansion of their

Some people—four-sevenths of the Federal Reserve Board among them, no doubt—might call this an infiation. But certainly it has not been a harmful infiation. Indeed, the question arises as to whether the price our country is being asked to pay to curb a bogey of infiation may not be altogether too great a price. And whether, from the point of view of everyone except the dealers in money, it might not have been better to reduce the rates of interest instead of increasing them.

THE BANKERS HAD A BETTER, SAFER CHOICE—

#### (By Jerry Voorhis)

To understand the full significance of the recent action of four-sevenths of the Federal Reserve Board in boosting interest rates, it is necessary to examine the strange phenomena of what is called the monetary system of the United States.

It hardly deserves the name of a "system," for it is based upon no reason or logic or justice or economic wisdom.

Most of the so-called money of the United States consists of what we call bank credit. Must of our business transactions are carried on not by exchange of cash but by the drawing of checks. "Money in circulation" is regularly defined as "cash plus demand bank deposits." And seldom does the cash amount to more than a fifth or a quarter of the "demand bank deposits." In December 1964, for example, our total money supply as reported by the Federal Reserve Board consisted of \$34.2 billion of currency and \$125.2 billion of demand deposits.

But the really important factor is how our money is created. For it is obvious that as our economy grows and our production and commerce increase, there must be additional money brought into circulation to accommodate the increased volume of business. And indeed this was the stated purpose of Congress when it passed the Federal Reserve Act in the administration of Woodrow Wilson.

Many people think the Government of the United States creates the money of our Nation—as indeed it should and as the Constitution provides.

But the Government does no such thing except for the pennies and dimes and quarters which we use for change.

All the rest of our money is created by the private banking system. It is possible for the private banks to create money in the form of demand bank deposits because of what is called the fractional reserve system.

This means that if a bank has \$10 million of demand deposits on its books—that is, if it owes its depositors \$10 million which they think they have in the bank—then the bank is required to have in actual cash money not \$10 million but only perhaps \$1 million or \$1,500,000 or at most \$2 million. The exact amount of cash reserves which banks must have behind the demand deposits on their books is decided by the Fedral Reserve Board and is called the reserve requirement. It may be 10 or 13 or 15 or 20 percent. It is never more than 20 percent, usually much less.

Consequently, if a bank has actual cash deposits in its vaults of \$1 million and the reserve requirement is 10 percent, it can have on its books as much as \$10 million to the credit of holders of its "demand bank deposits." In such a case it can create some \$9 million of new money that did not exist before. It can do this by giving the borrowers checking accounts and entering an its books demand deposit credits for those borrowers. Furthermore, if it finds itself in need of additional reserves it can usually borrow them from the Federal Reserve bank in its district.

Now the proper definition of money infiation, as distinguished from price or cost inflation is this: Monetary inflation takes place when the amount of money in circulation is increasing faster than the flow of goods and services to be bought with money is increasing.

And under our so-called fractional reserve system, the way we get inflation is that the banks create more new demand deposits than are needed to keep up with the growth of the economy and the flow of trade.

The theory then of curbing inflation by increasing interest rates is that if the interest rates are higher fewer borrowers will borrow from the banks and the banks will therefore

create less new money in the form of demand deposits.

But even if this works, it involves so many undesirable effects that a very heavy burden of proof should rest upon anyone taking such a step. It should be taken only by a body which has a direct responsibility to the American people and which is subject to the dily elected representatives of the people.

duly elected representatives of the people. The Federal Reserve Board is neither so responsible nor so subject. And this is why Congressman WEIGHT PATMAN, chairman of the Banking and Currency Committee of the House of Representatives, has introduced legislation which would make the Federal Reserve banks national institutions as they should be and make the Federal Reserve Board a body responsible to the Nation's duly elected administration.

Furthermore, even assuming that there is a real danger of infiation—a thesis far from proved at present—there is another very obvious remedy available to the Federal Reserve Board. This remedy is to increase the reserve requirements in the banks.

Such action would have the immediate effect of reducing the ability of the banks to create money. If they had to have, let us say, a 20-percent reserve instead of a 10-percent reserve, this would mean that their ability to create new demand deposit, or checkbook, money would be cut in two.

Why is this remedy not used by Mr. Martin and his three companions? Only they can answer that question. But increasing reserve requirements would be even more certain to curb any threat of monetary inflation that might possibly exist. The one thing, however, which it would not do would be to cause the value of money to go up and the monetary value of real wealth to go down. It, therefore, would not give the kind of bonanza to the creators of our money supply which increasing interest rates gives.

Could this be the reason why the four did not choose this course?

One additional question arises. How long should we wait to establish for our country as sound, effective monetary system, one wherein money would be created by the only agency which has a right to exercise that power—the Government of the Nation—and one wherein the possibility of either inflation or defiation could be forever prevented?

COOPERATIVES KEEP INTEREST DOWN, HELP WHOLE ECONOMY—IV

#### (By Jerry Voorhis)

Certain financial institutions in the United States probably won't raise their interest rates even though the Federal Reserve Board has given them an excuse to do so.

The ones that won't raise their rates if they possibly can avoid it are cooperative financial institutions—the ones that belong to their borrowers.

The reason they won't raise their rates is that they will not want to. They'd hurt their owners if they did.

Credit unions, cooperative farm credit institutions, and mutual savings banks are in business to reduce the burden of debt, not to increase it. They exist because groups of people have created them to help each other by owning together the savings and lending institutions they need. These consumers of credit are not interested in raising interest rates to make more money for investors.

Credit unions did not raise their interest rates a few years ago when the Federal Reserve Board took action similar to that recently taken. This was because credit unions are in business to help their Aembers reduce the burden of debt—not to increase it. Their motive is different.

Banks for cooperatives and other cooperative farm credit institutions raised their rates only slightly—because they get part of their money for making leans by sale of debentures in the money market. But even if cooperative farm credit institutions do raise interest rates somewhat, the net effect upon their owner-borrowers may not be to For if as increase the cost of credit at all. a result of the higher rates a bank for cooperatives, production credit association, or Federal land bank association increases its earnings, those earnings all belong to the borrower-owners and will be returned to them in patronage refunds. So the net interest rate may not be increased at all.

The difference lies in motive. If the motive, the reason for being in business is service and mutual aid, then a financial institution will keep its interest rates as reasonable as it can. And in so doing, such institutions are certain to exert a very beneficial competitive influence—for the protection of all borrowers, even those who borrow from in-

vestor-owned institutions.

The very fact that cooperative financial institutions are in existence provides our entire Nation with the best protection it can have at present against really extortionate interest rates. And they provide that pro-tection in the best way it can be provided in a supposedly "free" economic order. That way is by the competition of businesses whose motive is mutual aid and the service of people.

#### Korean Premier Warns Us on Truce Talks

EXTENSION OF REMARKS OF

## HON, ABRAHAM J. MULTER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. MULTER. Mr. Speaker, the Premier of South Korea has offered us some wise counsel on dealing with Communists as recorded in Roscoe Drummond's column in the New York Herald Tribune of January 7, 1966.

The South Koreans have good cause to know the enemy well, and I am sure their warning will not be lost on the ad-

ministration.

The article follows: KOREAN ASSAYS PEACE BASKET: WARNING ON TRUCE TALKS BY STATE THAT GOT BURNED (By Roscoe Drummond)

Washington.—It would be well to read and ponder, side by side, comments by two of the more knowledgeable people on the

Vietnam war: The Vice President of the United States, HUBERT HUMPHREY: "All of the eggs are in one peacebasket, except the surrender of South Vietnam."

The Premier of South Korea, Chung II Kwon: "We have already learned the lesson that, when free nations negotiate with a Communist country, the result is always disadvantageous to us.'

There it is, well put by two officials who know what they are talking about—a full-bodied offer to Hanoi to negotiate everything but surrender and a full-bodied warning that such negotiations could be perilous bordering

on the fatal.

g

st

42

The truce talks in Korea took 30 months, during much of which the Communists mounted their bloodiest attacks and now, nearly 13 years later, there is still no political settlement.

The United States, is, I think, absolutely right in offering unconditional talks, that is, in offering to Hanoi that it put everything it wants on the peace agenda and we'll do the same

But, in doing so, Premier Chung's warning couldn't be more timely and more valu-

The head of the one nation that went through such negotiations is saying that we must be everlastingly alert against the kind of negotiated settlement which will have within it the seeds of surrender of South

This makes it imperative that we search out in advance the point at which the seeds of surrender could be planted and be ready to stand at that point unwaveringly.

There will be numerous vulnerable area of negotiation which will have to be watched. But the central and fateful danger is Hanoi's demand that the Government of South Viet nam be given over the the Communist National Liberation Front-which is the political arm of the Vietcong which is the guerrilla arm of North Vietnam.

Have no doubt about it, such an ingredient embedded in any settlement would in the end destroy South Vietnam's independence because the seeds of self destruction would be injected into its bloodstream. Even as erful a leader as General de Gaulle saw that he had to get rid of the Communists in his government to save France.

For 10 years the Vietcong have been waging a war to take over the Government of South Vietnam. Is there any reason to think that with representatives of the Victoria inside the Government they would be any less determined to take over?

One way to surrender South Vietnam is to allow those who have been fighting to destroy its Government to come in and help

Do the Communists permit an opposition party in any country they control or minority representation in any government they dominate? It is anathema to them. ample: Only a week ago the Communists fired a professor at the East Berlin Academy of Science because he dared advocate that non-Communist parliamentary party be allowed in East Germany.

When and if Hanoi chooses the road to negotiation, its foremost aim will be to ne-gotiate the Vietcong Communists into the Government of South Vietnam.

If we every yield on that point, we will indeed have negotiated the surrender of South Vietnam. This is why Premier South Vietnam. This is why Premier Chung's warning that the negotiations will be perilous is timely and valuable.

#### Adroit Shift in Economic Plans Lauded

EXTENSION OF REMARKS OF

## HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. VANIK. Mr. Speaker, the proposal currently before the House Ways and Means Committee reinstituting certain excise tax reductions reflects sound economic planning. It restores revenues which would otherwise be lost to the Treasury and would serve no great economic need if this action were not taken. The President's proposal serves to ease inflationary pressures without straining the normal economic growth which is essential to conduct our defense efforts in Vietnam and at the same time provide for a stable national economy at home.

The following article by Mr. Harold B. Dorsey, of the Washington Post, on January 17, 1966, makes a constructive analysis of the effect of President Johnson's proposals.

ADROTT SHIFT IN ECONOMIC PLANS LAUDED (By Harold B. Dorsey)

New York, January 16.—Those who understand the unusual complications now influencing the formulation of the Government's fiscal policies will find it difficult to criticize the economic aspects of the President's state of the Union message.

Little complaint is being registered among business executives and investment man-agers in New York, at least up to this point. In fact, the evidence of the administration's desire to restrain the exceptionally sharp upward trend in the aggregate demand for goods and services is quietly applauded as a highly intelligent piece of economic reasoning.

Furthermore, this moderate shift in the thinking of the economic planners is being handled so diplomatically that there is no shock to confidence. The small group of men who have worked out the details and presented the facts to the public deserves a great deal of credit for both their skill and finesse. Although investors were very anxious to see whether the statement of fiscal policies would have inflationary or defla-tionary implications, their first view of the shape of those policies did not even caus ripple, one way or the other, in security markets.

Within the past few weeks, most economists had come to agree that the primary question about the business outlook for 1966 as whether or not the indicated sharply rising demand for goods and services could be accommodated without squeezing supply and causing significant inflationary pre-

sures on costs and prices.

The long-term upward trends in the size of the working force, in the physical capacity to produce goods and in output per worker are broadly recognized. But the evidence has suggested that these upward trends on supply side would be outpaced on an inter-mediate-term basis by the increase in de-Therefore it has appeared that mand. only way to avoid the consequent inflation pressures--again on an intermediate-term asis—was to cause a modest slackening in the upward trend of demand.

The administration indicated its inten-

tion to contribute to that objective when the President stated that total Government expenditures in the 1967 fiscal year, except for defense, would only increase \$500 million over the current fiscal year. One item alone, over which the Government has no control, would account for this much increase in next fiscal year's expenditures-interest charges.

In addition to the increases in automobile and telephone excise taxes, the President recommended an acceleration in the payment of income taxes, without changing actual tax rates or the total tax liabilities of the individual and corporate taxpayers.

Assuming that Congress acts promptly on these measures, it is estimated that tax re-ceipts will thereby be boosted \$1.2 billion for the current fiscal year ending next June 30 and \$4.8 billion for the fiscal year begin-ning July 1. This means that the cash puring power of the private economy would be lower than others vise by these sums in the next year and a half.

With a little slower uptrend in cash to spend, there may be a little slower uptrend in spending. But for the personal sector the amount of money involved is quite small. Corporate spending is not likely to be retarded very much because if the spending decision is sound, and is justified by sustained after-tax earnings, the corpora-tions will probably resort to bank credit or the capital market for the necessary cash.

A major problem for economists at this juncture is to try to determine the degree to which the demand for goods and services of the non-Government sectors might be dampened down by (1) the January 1 in-crease in social security taxes, (2) the ac-celeration of income tax payments and (3) the higher interest rates. There is a pretty good chance that the slackening in the excessive current growth rate in such spending will be just about enough to make room for the rising trend in defense expenditures without either significant inflationary or deflationary effects on costs and prices.

#### The Threat From Below

EXTENSION OF REMARKS

## HON. RICHARD T. HANNA

OF CALLFORNIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. HANNA. Mr. Speaker, we found in an article published in the January edition of the organization organ called V.F.W. much of the general tenor of remarks we have previously made in the House regarding the importance of oceanography. We believe that the very fact that Mr. Kenneth Wilson was given the prime location in the magazine's pages indicates how urgent the organization thought the message was. It is also indicative of the mounting sense of urgency and concern that many of our citizens feel about this subject.

The Committee on Merchant Marine and Fisheries has a subcommittee under the able leadership of the gentleman from North Carolina, Congressman Lennon, which has done yeoman service in this congressional session for this great cause. Regardless of the claims made upon us in other and contending directions, gentlemen, let us not diminish our support for a more aggressive, dynamic program in ocenography. The great benefits and profits to our economy that are potential in such effort strongly suggest it, but the threat to our security in its absence sternly demands it.

Mr. Speaker, I include the contents of Mr. Kenneth Wilson's article in full below and commend its serious and sober consideration by all:

THE THREAT FROM BELOW: RUSSIA FAR AHEAD OF UNITED STATES IN EXPLORING THE BOTTOM OF THE OCEAN

#### (By Kenneth Wilson)

Just as astronauts are exploring the universe, a less spectacular but no less important program is underway to probe the ocean and its floors, or "inner space," as these depths are called.

More and better knowledge of the seas is one of today's most important military problems. Strategists rate it at the top of their priority list.

Research in such fields as the physical and chemical properties of the ocean, temperature, and salinity, are essential to improving, detecting and tracking devices and techniques for antisubmarine warfare, for deep submergence and polar ice navigation. The sea facors—almost complete blanks on charts today—have to be mapped.

First it was the battleship that ruled the seas then the aircraft carrier. Now, nuclear-powered submarines outmode all surface craft, bringing a completely new arena to naval warfare. The battlefield of the ocean floor is already a reality. To counterattack this imposing threat today, which many experts regard as far more serious than the threat of attack by air, some 90 percent of the U.S. Navy's efforts alone are directed toward anti-submarine activities.

Just before he retired as U.S. naval chief of operations, Adm. George Anderson was asked:

"Do you believe it is possible or probable we will work out a defense against misslies that might be lobbed or sent by ballistic force from submarines into this country in the event of war in future years?"

Admiral Anderson replied: "I have hopes, but no confidence at this stage of the game." The Admiral said that the Navy had used the best talent available but no one could cite anything that would be a measurable step forward.

The barrier, as all Navy technical men agree, is our lack of oceanographic knowledge.

In this vital field, Russia is well shead of the United States. The Soviets have more than 60 full-time oceanographic research ships and at least a dozen oceanographic institutes. Assigned to the Ministry of Fisherles for oceanographic studies is the Soviet submarine Severianka, equipped with portholes and underwater TV and lighting, among other sophisticated gear. In all, there are more than 55,000 scientists and technicians engaged in Soviet oceanographic stud-

Of the much-publicized fleets of Russian trawlers operating off both coasts of the United States, all engage in oceanography research, if not in electronic spying on Western activities. With relatively simple measuring devices and only semiskilled crews, they continuously record data on currents, temperatures, salinity, magnetic and gravitational fields, and scores of other phenomena. Such a simple thing as daily reports on water temperatures from trawlers at hundreds of locations is of tremendous military value, particularly in the use of sound for discovering the presence of fast-moving submarines running deep.

But sound in water is even more eccentric than it is in the sir, where sound waves may bounce over broad areas to be heard far beyond their source. Where warm and cold currents in the sea intermingle, listening devices run into all kinds of trouble. Thermoclines, or sharp differences in water temperatures, refract or divert a sonar's ping and provide ideal havens for prowling subs.

Unfortunately for the United States, some of the best thermoclines are to be found along the edges of the Gulf Stream, a comparatively short distance offshore and within easy missile-firing range of most of the cities and heavily populated parts of the eastern seaboard.

Weird underwater sound ducts caused by temperature variations, for example, can each a merchant freighter miles away, or mask a submarine under the very nose of a search plane or ship. Differing temperatures, combined with pressure changes at great depths, also form sound channels. If the favorable areas are known, low-frequency signals can be sent thousands of miles. Large numbers of today's Red trawlers also carry electronic and photographic gear for ocean-bottom mapping.

Recently, I visited aboard the 6,000-ton Russian oceanographic ship Mikhail Lomon-coor when it put into St. John's, Newfoundland. It is as big as a large ocean freighter and regarded as the most modern research vessel affoct. The chief oceanographer aboard, a member of Russia's Academy of Science, told me that the vessel worked with Hed fishing trawlers in the Atlantic, receiving and processing their oceanographic information. Among projects on which the ship is engaged, he told me, are the mapping of the ocean bottom; high altitude meteorological observations; salinity tests; a study of how winds transmit energy to the surface of the water and an investigation of the process of interchange between atmosphere and sea.

The Russians have been hard at work on worldwide oceanographic studies for the past dozen years at least. It wasn't until 1959 that a National Academy of Science report focused attention on the lack of ocean research by the United States.

To find the answers to oceanographic questions which are fundamentally important in peace, critical in war, the report cited the need for doubling U.S. basic research in the marine sciences.

"In the period 1960-70," the report recommended, "the research, development and survey fleet should be greatly increased. This means that 70 ships should be constructed at a total estimated cost of \$214 million. This is the minimum required to keep the United States abreast of scientific activity. First priority must be given to construction of research ships."

One of those research ships, the Sealab II, spent 45 days during September and October some 200 feet down on the Pacific Ocean floor off the California coast.

Inhabiting the \$850,000 12- by 57-foot chamber were 3 crews of 10 aquanauts, including Astronaut Scott Carpenter, which each did a 15-day stint in this U.S. innerspace capsule. Daily, at least two of the aquanauts would don wet suits, breathing equipment, and venture out of Sealab II to explore the sea's mysteries.

Strange fish were tagged to observe their movements. The weird seascape of the under-ocean was photographed for later study and marine life specimens collected.

But the main purpose of the 45-day-long Sealab II project was to see how man can perform deep underwater. The conclusion was that man can live and work about as well on the ceen floor as on the earth's surface or, as the astronauts are proving, far out in space.

In the first Sealab experiment in 1964, four navymen stayed submerged for 15 days at a depth of 192 feet off Bermuda.

Such vessels, along with other advanced types, will go a long way toward lessening our profound ignorance of the seas. Today, man knows less about the ocean floor than he does about the face of the moon. For instance, an expedition from California's Scripps Institution of Oceanography to the South Pacific mapped an underseas mountain range some 12,000 feet high—about as tall as the Sierra Nevada Mountains and as long as the Coast Range from San Diego to Seattle—whose very existence was previously unknown.

Similarly, in the study of water during the last few years, two major ocean currents of very great size, each with a flow about 1,000 times that of the Mississippi River, have been discovered. One of these is an undercurrent running below the Gulf Stream but in exactly the opposite direction. The other is a fast-moving stream—200 miles wide and carrying a billion cubic feet of water a second—moving eastward, 1,000 feet below the surface, along the Equator.

Not all oceanographic research is aimed at military use. Fish studies are being carried out by dozens of nations. The United States is also studying how to extract hydrogen for energy from the seas. The goal is cheap electric power.

Increasingly, as we gain knowledge, the seean floors are beginning to give up some of their vast store of mineral treasure—oil, gas, diamonds, gold, silver, platinum, iron, tin, and phosphate.

According to Dr. John L. Mero of the University of California, there is enough manganese, copper, cobalt, and nickel in the ocean depths to meet man's needs for a million years at present consumption rates.

As Joseph Conrad wrote: "The sea never changes, and its works, for all the talk of men, are wrapped in mystery."

This is true, but the wrappings are beginning to be unwound a little. Even so, our knowledge of the seas is still so meager that each new discovery now raises more questions than it answers.

## Report From Washington

EXTENSION OF REMARKS

## HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. DERWINSKI. Mr. Speaker, to paraphrase Winston Churchill, never before in history has a government been involved in so many dubious undertakings and withheld as much information from as many people.

Government by secrecy, bribery, deceit, and corn has descended on Washington as the public relations policy of the present administration.

A most effective commentary on this situation is the "Report From Washington," by Walter Trohan, chief of the Chicago Tribune's Washington bureau, which appeared in the January 19 edition of that newspaper.

The article follows:

REPORT FROM WASHINGTON (By Walter Trohan)

JOHNSON'S NEWS MANAGING POLICY GRADUATES
INTO NEWS DENIAL

Washington, January 18.—News management, one of the hallmarks of the Johnson administration, has graduated into news denial, and there are some frightening parallels of the rigid control of news under a police state.

It has long been the fashion of Democrats in power to blast the press as opinionated and against their party. Franklin D. Roosevelt made it a theme song, which was adopted by Harry S. Truman and John F. Kennedy. Even though the overwhelming majority of the Nation's newspapers supported Lyndon Baines Johnson, he and his aids sing the old familiar notes.

President Johnson has virtually abandoned the press conference. He has confided to intimates that he can't keep his mind on questions and on presenting the best possible image on television at one and the same time. He prefers to read speeches rather than to face questions.

No one can maintain, except one whose livelihood depends upon Mr. Johnson, that this promotes, the public's right to know. The public was not told that a direct peace bid was made to Hanoi around Christmastime and still hasn't been told how or where the Communist North Vietnamese were approached.

ISSUED BY WHITE HOUSE

The State Department has been mum. So has the Pentagon. In fact, the entire Government has been rather effectively gagged. If any department or bureau has any important news, it is released through the White House. It is true that the White House holds briefings on important news, but those made available to press questioning at such briefings are officials who dare not compete with the President for news headlines by going very far beyond the language of whatever message or report is the subject of any briefing.

In the State Department or the Defense Department, reporters must get official approval before they can visit any official to get information on any subject he is interested in. Almost invariably, the official refuses to be quoted. The White House has criticized the press for "very poor judgment" and being "very poorly informed." If this be so, it is because the news managers have laid down the ground rules.

Now the press has learned of a curious espionage system within the Great Society under which the telephone calls of White House staff members are noted, including those of members of the press seeking information. The places staffers visit, including homes of newsmen, and the persons they seek including newsmen, are subject to cheek. The White House says that this is being

The White House says that this is being done to achieve operating economies. During the campaign year Mr. Johnson turned out the White House lights to let an economy image glow, but the budget has been set at \$112.8 billion for the fiscal year which will begin July 1 and will undoubtedly run higher.

FOR CONVENIENCE OF L.B.J.

With the press protesting the abandonment of the full dress news conference, Bill D. Moyers, the White House press secretary, frankly stated that the news conferences are designed to serve the "convenience of the President, not the convenience of the press."

Moyers admitted that he had planted questions at news conferences to let the President "say what is on his mind." Of course, another object of the planted question is to capture headlines and editorials. More ominous was the Moyers statement that speculation in the press on what the President might or might not do "is to deny to the President that latitude he needs in order to make, in the light of existing circumstances, the best possible decision."

This does not square with the President's call for the help of the people. What it asks the press and the people to do is to wait until the great man acts, which would mean that the only role of the prass and the people the President really favors is to applaud and give thanks for whatever he does.

This goes beyond news management. It would seem to be news control pure and simple, under which the administration is contending the President could be free to withhold the facts of any national situation, prevent frank and open discussion, and barcriticism. Police state, here we come.

#### Truth In Government

EXTENSION OF REMARKS

#### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. PELLY. Mr. Speaker, in the Senate the other day, Senator WILLIAMS of Delaware made some interesting comments, following President Johnson's state of the Union message. He referred to the President in his message having advocated new legislation to provide truth in packaging and truth in lending. The Senator suggested a third recommendation; namely, truth in government. He said that if the President wanted to protect Americans from misrepresenta-tion he might well include protection of American taxpayers from misrepresentation with respect to the true cost of his administration's proposals and the truth about the Federal budget. The people, Senator WILLIAMS said, should know that the expenditures of this administration are the most extravagant in history.

President Johnson's request this week for a supplemental appropriation of more than \$12 billion for financing of the war in Vietnam is a case in point with regard to budget juggling and withholding of information from the American people.

In other words, the President's request for these essential funds was deliberately delayed last year until all the Great Society programs had been funded. Now, Congress gets this emergency request for defense which must be funded when it is too late to make cuts in existing non-essential, nonmilitary programs.

As to truth in budgeting, the proposal of the President for a speedup in tax collections in this election year is another example of juggling the figures. The acceleration of corporate and individual income tax payments and the payment of self-employed social security taxes on a quarterly instead of annual basis will make the fiscal picture look better prior to the election next November, but by the fiscal year's end, the true situation will be apparent, when it is too late for voters to do anything about it.

Mr. Speaker, as pointed out by the minority party congressional leadership, Republicans intend to fully support needed appropriations for defense. the other hand, it is our responsibility to scrutinize the administration's spending, and especially on nonmilitary appropriation requests, Mr. Speaker, we Republicans intend to do just that. We are frank in saying that in this time of stimulated prosperity and high employ-ment, we think the public debt during the past 5 years should have been reduced inplanned deficits exceeding of \$31,500 million. This present fiscal year, which ends June 30, will increase our huge national debt by another \$6 billion and the legal debt ceiling will have to be increased again.

Of course, President Johnson did not admit this in his message, but instead predicted the deficit for fiscal 1967 would be reduced to only \$1.8 billion.

As to this prediction, let me recall that a year ago, in his 1965 state of the Union message, President Johnson talked about continuing along the path toward a balanced budget. Actually, that 1965 path is now estimated to be a deficit of \$7 billion for that year alone, not including \$2,687 million resulting from accelerated corporate taxes approved last year.

But getting back to truth in government, the taxpayers of America have a right to know the facts. Indeed, the Treasury's own figures show the estimated deficit for 1967 will not be \$1.8 billion, but rather it is given as \$9.2 billion.

The difference in these two estimates is due largely to some nonrecurring items, which are shown as general revenue by the President. One of these is the \$2.5 billion which the Government expects to receive over and above cost in the coining of new silver quarters and 50-cent pieces with a new low silver content. Also the President includes as revenue the proceeds from the sale of millions of dollars worth of materials from the defense stockpile. Good bookkeeping and truth in government, it seems to me, should require this income to be listed separately as special receipts. The President should have explained that his figure of a \$1.8 billion deficit

was based on Congress acceding to his request that tax collections in fiscal 1967 be accelerated so that \$3.2 billion in taxes from corporations would reach the Treasury in fiscal 1967 instead of fiscal 1968.

The withholding tax acceleration for individuals suggested by the President would add another \$400 million to this amount ahead or regular schedule.

This new juggling proposal is the same as obtaining an advance payment on a worker's next week's salary. In the end his finances are not improved. He

is just as badly off.

Under these planned tax accelerations, plus the estimated profit on coinage, the Treasury would collect an extra \$2,687 million in fiscal 1966 and \$7,440 million in fiscal 1967; and, as I said, these are nonrecurring items. This situation should be shown and explained to the American people. Certainly, this information should not be withheld until after an election. Furthermore, right now when Congress is considering the advisability of a "guns and butter" policy, the true facts should be known. President Johnson, in asking Congress to continue his Great Society programs and at the same time to support the huge cost of the Nation's war in Vietnam, should spell out the truth as to our overall financial condition is essential.

The Commodity Credit Corporation has had billions of dollars of losses that have not been reimbursed. Likewise, the civil service retirement fund is owed approximately \$40 billion by our Government. Obligations such as these are covered up and not openly mentioned.

So, Mr. Speaker, I fully support our Republican minority leader in calling for truth in budgeting and likewise in questioning the President's wisdom in calling for increased Federal spending on domestic, nonmilitary programs. The American people have always supported austerity in war time and the United States is at war, whether the administration cares to admit it or not. I do not mean cutting health research, or education or funds for the care and needs of the elderly. I mean cutting down on duplication and waste and delaying new low priority programs that can just as well wait until peace comes in southeast Asia.

The honest thing to do is to forgo political boundoggling Mr. Speaker, the country cannot afford it in peacetime, but even more so in time of war.

## Restore Veterans' Pensions Cut by Social Security Increase

EXTENSION OF REMARKS

#### HON. FRANCES P. BOLTON

OF CHIE

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mrs. BOLTON. Mr. Speaker, today I have introduced a bill to restore non-service-connected veterans; pensions which have been reduced or eliminated

because of the receipt of increased social security benefits.

Last year when the badly needed increase in cash social security benefits was enacted many of our veterans were moved into a higher income bracket. Since non-service-connected pensions are based on income limitations, some of our ex-servicemen and their widows had their pensions reduced or terminated entirely.

The income test for pension purposes is made up of only a few broad income brackets with very sharp drops in pension amounts as one moves to a higher bracket. The result is that the additional money received from the higher social security payment does not offset the loss in pension payments suffered by those pushed into a higher income bracket, to say nothing of those whose pensions were terminated entirely.

Most of the group whose pensions have been cut are disabled, on limited incomes, and in their advanced years. A reduction in their pension is a real hardship and the situation should be corrected. I hope the Committee on Veterans' Affairs will take action in the very near future.

## Nashua Telegraph Pays Inspired Tribute to Richard Chaput

EXTENSION OF REMARKS

## HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. CLEVELAND. Mr. Speaker, on January 12, I paid tribute in the House, page A62, to Mr. Richard Raymond Chaput, author and public speaker who, although paralyzed by boyhood polio, was named 1 of the 10 outstanding young Americans of 1965 by the National Junior Chamber of Commerce.

Mr. Chaput was flown to St. Paul last Saturday to receive his award and, on February 3, the junior chamber of commerce in his home city of Nashua, N.H., will pay him further tribute at a testimonial dinner.

Mr. Chaput's hometown newspaper, the Nashua Telegraph, edited by Mr. Fred Dobens, paid its own tribute to Mr. Chaput last Monday in an inspired editorial. The national recognition won by Mr. Chaput is a source of immense pride to his community, a pride that is reflected beautifully in this editorial. I am honored to share it with my colleagues by placing it at this point in the Recorn:

RICHARD CHAPUT—AN INSPIRATION TO ALL

A lesson in courage—an inspiration to all—describe Nashua's Richard Chaput, who received a very distinguished honor Saturday night in St. Paul, Minn.

He was recognized by the U.S. Jaycees as one of the 10 outstanding young men of 1965. He travels in select company. Among the award winners were Astronauts Conrad and White and Presidential Secretary Bill D. Moyers.

And past honorees include the late President John F. Kennedy, Pat Boone, Leonard

Bernstein, and former Vice President Richard M. Nixon.

Chaput's story needs telling and retelling. It represents a challenge, not only to those afflicted by sickness and physical handleaps but to those hale and hearty.

Despite being paralyzed completely from

Despite being paralyzed completely from the neck down, he has become a successful author and a noted speaker.

Now 29, he has been bedridden since he was 9 when a severe attack of polic left him paralyzed. He still spends several hours daily in an iron lung.

What makes the Nashuan so outstanding is that he has accepted his situation. And through courage and perseverance, he overcame these hardships to make noteworthy

contributions to society.

He was able to graduate from high school through private tutoring. Working with Rivier College, he mastered a home-study program equivalent to a bachelor of arts degree. He studied creative writing and English and his keen mind, coupled with high interest in this field, produced a contribution to society through writing.

But all this took desire and an unbeatable spirit in the face of his disabilities. Aided by a specially designed typewriter

Aided by a specially designed typewriter activated by a stylus held in his teeth, and a tape recorder adapted to his requirements, he has written and sold scores of articles and short stories. In 1964, his autobiography, "Not To Doubt." was published.

"Not To Doubt," was published.
Of this publication, Richard Cardinal Cushing, archbishop of Boston, said, "Not To Doubt' is the story of a young man, bedridden for many years. He found his place, Lord, in Your plans. He understands the meaning of suffering. So did I, after reading his story. I pray that every reader will profit by it in a like manner."

For years he has been an officer and a leader in the Nashua Friendship Club and he has been active in raising funds for this

organization.

Residing in a nursing home, he ventures out on his portable cot to attend meeting of the Nashua Jaycees, the Friendship Club, the National Association for the Physically Handicapped, the Catholic Young Adult Organization, and others.

Last year both the Nashua Jaycees and the New Hampshire Jaycees selected him as their Young Man of the Year in separate awards. He was also the outstanding member of the Friendship Club in 1963.

The Jaycees will pay tribute to Chaput at a testimonial dinner in the Bishop Guertin High auditorium February 3.

High auditorium February 3.

And when all the facts are weighed, it is evident that Richard Chaput is indeed a shining example for all—a marvel despite his paralytic condition.

### I Live on the Edge of Paradise

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. BOW. Mr. Speaker, one of the great men of Ohio and of the Nation retired from active duty last month after most of a lifetime devoted to the creation of beauty, the conservation of resources and the protection of our national heritage for later generations to use and enjoy.

Bryce C. Browning has been the father, the driving force, the dreamer and the guiding genius of the Muskingum Watershed Conservancy District, a project that has transformed one-fifth of Ohlo into a conservation wonderland that attracts acclaim from all over the world.

Fifty years ago this was an area of marginal and submarginal farms, mined out and subject to the devastation of floods. Today 10 beautiful lakes held to control floods while providing recreation for hundreds and thousands of people, and the surrounding hills and valleys show the rewards of a farsighted reforestation project that yields income for the conservancy district as well as conservation and recreation benefits for the entire area.

Bryce Browning was not content with flood control. He was not content to lock up the woods and hills like some kind of outdoor museum piece. He was not content to build only a playground. His vision produced the almost perfect blend of all of these: a project that prevents flood, conserves the soil, yields valuable timber, provides enjoyment for the naturalist, the camper, the millions who enjoy water sports and the city people who simply want to spend a day in the woods.

Moreover, this conservation project, unlike any other of which I am aware, pays for itself. It even pays real estate taxes on the land that it owns.

No one will ever know and few can imagine the hours and days of planning, pleading, selling, convincing and cajoling that were required before Bryce Browning could begin the creation of this wonderland. No one can measure the effort and energy he has devoted to it over the years. And no man has left in finer legacy for his neighbors and for all others all over the world who may be enspired by the Muskingum to do something similar in their own homelands.

I have been proud to be associated with Bryce Browning and to help a little bit along the way during my years in Congress. I hope our association will continue for many additional years as he enjoys his retirement.

Words of praise are nothing new to Bryce Browning, but I have the feeling that he cherishes especially a description of his project by Ohio Novelist Louis Bromfield, himself a noted conservationist, which was printed in the Saturday Evening Post some years ago. Mr. Bromfield's world famous farm was in Muskingum country and he referred to the project by saying "I live on the edge of paradise." Mr. Bromfield described the genesis of the project as follows:

"One April morning (in 1913) it began to rain—not merely a good heavy rain, but a downpour described by the natives as 'raining pitchforks and hay ladders.' It rained all that day and the next and the sudden but brief cloudburst such as the West and the Southwest sometimes experience. It resembled more closely the 40 days and 40 nights of rain described in the Old Testament.

"For days the heavy rains continued without a break until even on the watershed of Ohio, in the highest part of the State, cities like my hometown of Mansfield were flooded. Trains on the transcontinental lines ceased running, powerhouses were flooded and cities were left without light or power. Flooded sewage plants polluted the water supplies, and residents of cities were forced to drive

into the country to springs for safe supplies of water. Bridges were washed out and farmhouses swept away by such currents as the oldest inhabitant could not remember, while towns and sections of towns were submerged up to second-story windows.

"When the rains finally ceased and the waters had gone down a little, it was discovered that nearly 500 people had lost their lives and more than \$300 million of property damage had been done. This became known, and will remain known so long as there is a State of Ohio, as the great flood of 1913.

"Now, Ohio is a State unused to disasters. It knew periodically the flooded lowlands along the Ohio River and its tributaries. People had grown accustomed to them, but the citizens of Ohio had no experience with wild tornadoes or forest fires or earthquakes, or the periodically disastrous floods familiar in some regions. They were resentful and indignant that Ohio should be visited by such a catastrophe.

"Fortunately, the indignation did not die away. The citizens, especially in the areas which suffered most, decided that something must be done about it.

"The citizens of the area which had suffered most in the valley and watershed of the Muskingum River, the biggest of Ohlo's in-State rivers, finally drew up a plan known as the Muskingum Watershed Conservancy District. It became a reality in 1933, and since then has operated to the benefit of those in the watershed itself.

"The area was organized as a public corporation with the power to pian and to construct and administer flood control and conservation projects, issue bonds, and levy assessments and taxes. It also possessed the power to enter into contracts with the Federal Government or the State of Ohio for cooperation in any project undertaken. Making decisions for the corporation were a board of common pleas judges and a board of elected directors.

"It has created handsome forests and helped vastly to check all the destructive erosion which was eating up rapidly some of the finest agricultural land in the world. It has created a necklace of 10 beautiful lakes as lovely as any to be found in the English lake country. There is boating, bathing, fishing, camping and hunting close as hand for the Ohio millions who live in great industrial cities like Cleveland, Youngstown, Akron, Toledo, Columbus, Cincinnati, Dayton, and many smaller industrial communities. City dwellers need drive only a couple of hours at the most to find beautiful lakes and some of the finest fishing in the world."

In closing, I include with my remarks an editorial tribute to Mr. Browning from the Canton Repository:

#### MEMORIAL TO BRYCE BROWNING

Ever since the devastating flood of 1913 left a toll of life and property loss on Zanesville. Bryce Browning has known his calling was conservation.

The Muskingum Watershed Conservancy District, which extends into Tuscarawas County, was the first great one in this State and credit for it goes to no individual more than Bryce Browning.

During the more than 30 years since its start he has seen it reduce flood losses along the Ohio River and its Muskingum watershed tributaries many times at a savings of many millions of dollars.

The U.S. Corps of Engineers has followed the same pattern of flood control elsewhere in the Ohio Valley and along other rivers. The success of the Muskingum project

The success of the Muskingum project showed the way. The idea of damming small streams to hold back heavy runoff during periods of excessive rainfall is catching on in more and more areas. It not only reduces flood losses but helps preserve the upstream water tolks.

Mr. Browning has been generous with his genius. He has helped develop the gorgeous

Atwood Lake area and has served as consultant and inspiration in other areas seeking to duplicate the Muskingum feat.

He described his career perhaps best himself when he said his entire vocation, avocation, and vacations have been tied up with conservation.

Now, at year's end, he has retired officially from active participation.

But it is safe to predict Bryce Browning will not remain completely inactive. He is sure to be unable to resist heeding any call for help where he might be of help. And his name and works will live for generations.

## Ukrainian Independence Day

EXTENSION OF REMARKS

## HON, HENRY P. SMITH III

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

Mr. SMITH of New York, Speaker, today, amidst our preoccupation with a struggle being waged by South Vietnamese and United States forces in the jungles and rice paddies and cities of Vietnam, we pause to remember the fate of another people-who also struggled, who lost, but who have not given up hope. January 22 is the 48th anniversary of Ukrainian independence, an occasion not for celebrations but for tributes to the valor of Ukrainian martyrs and to the noble efforts of a long-suffering people. Indeed, 5 years ago, when we observed the centennial of the Ukrainian poet Taras Shevchenko, we were reminded that by eloquent words as well as by valorous deeds, Ukrainians have contributed to the cause of freedom and independence everywhere.

For over 300 years, the people of the Ukraine dreamed of independence while suffering under the oppression of Russian czars. Then as the czarist regime crumbled during 1917, the long-awaited opportunity came. A group of Ukrainian patriots declared their intention to seek independence in December 1917, and declared it achieved on January 22, 48 years ago. The newly independent Ukraine was a war-torn country, however, surrounded by aggressive and feuding neighbors. The preservation of independence was to prove impossible. The Red army invaded the Ukraine in the spring of 1920. In 1923, the Ukraine was made a constituent republic of the Soviet Union; the Ukrainians were among the first victims of a new imperialism.

The Ukraine experienced no respite during World War II. As in World War II, the country became a battlefield for the contending forces of East and West. The Soviets withdrew only to be replaced by other cruel masters—the Nazis. Following World War II, Soviet authority was reasserted, and tightened. Cruelest of ironies, the Ukrainians, on Soviet insistence were given a delegation to the United Nations. But this delegation is a sham. The facade of independence cannot disguise the ugly fact of subservinge.

The Ukraine has a population of more than 45 million, and a territory which exceeds in area that of several Western European nations combined. Ukraine is rich in human and material resources; the history and culture of the Ukraine are more than a thousand years In an era which has seen the rise of many new nations, some of them throwing off colonial bonds after long periods of subjugation, is it not a singular injustice that the Ukrainians along with their neighbors in Eastern Europe continue to be subject to exploitation by the worst colonial system of modern

Today, as we fight in southeast Asia on behalf of a small, brave people striving to maintain its freedom and independence, let us not forget that there are many areas of the world where the cause of liberty has yet to prevail, and that we must not relax our vigilance or abandon our struggle until that cause has prevailed.

## Morris Weinberg-Four Score and Ten

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

Mr. MULTER. Mr. Speaker, today the family and many friends of Morris Weinberg will join with him and his wife Dora in celebrating his 90th birthday and their 65th wedding anniversary.

For more than 50 years Morris Weinberg has been an outstanding journalist and one of the most dynamic forces in American Jewish life.

Morris Weinberg founded the Day-Jewish Journal in 1914, but his career in journalism began when he arrived in this country from the Ukraine in 1894.

If more of our present-day journalists would follow the principles that Mr. Weinberg has lived by, we would have much better mass media helping to promote peace and prosperity at home and abroad. I am pleased to add my heartlest congratulations and best wishes for his continued good health and many more years of useful service to our Nation and a hearty "mazeltov" to his good wife.

The following article from the Synagogue Light briefly describes some of the many accomplishments of Mr. Weinberg during his long public career:

THE LIGHT OF THE DAY

#### (By Stanley Garten)

The saying, "there's no business like show usiness," which is the title of a current business," which is the title of a current motion picture, can well be challenged by the career of Mr. Morris Weinberg, publisher of the Day and Jewish Morning Journal, one of the Yiddish dally New York newspapers.

Mr. Weinberg's connection with the news paper business started when he came to this country from the Ukraine in 1894, at the age of 18, and became a copyboy on the Abend-blatt, an important paper as that time. By 1900 he had accumulated enough capital to be one of the founders of Metropolitan News

Co., a wholesale distributor of newspapers in New York. Selling his interest in that com-pany shortly after the company was estab-lished, he started the Weinberger News Co.

His first venture as a newspaper publisher was the Brownsville Jewish Post, a Yiddish paper for the Brownsville section of Brooklyn, which was a forerunner of other neighborhood papers in various parts of this city. Between 1900 and 1914, Brownsville was the focus of much Jewish settlement and many newly arrived immigrants from Eastern Europe went to live there. Mr. Weinberg went there in about 1901. Characteristically almost as soon as he came there, he became one of the founders of the Brownsville and East New York Dispensary, where the poor could get medical aid at little or no cost. He was also active in establishing the Brownsville Labor Lyceum and in founding Talmud Torahs. For many years he was the president of the National Hebrew School Machelkel Talmud Torah

To meet the need for housing of the thounds of newcomers to Brownsville, Mr. Weinberg engaged in building construction on a large scale, but retained his interest in journalism and acquaintance with Jewwriters. He was so well regarded by the Yiddish-writing journalist that in 1906, when the writers for the Jewish Morning Journal went on strike, they sent a com mittee to Mr. Weinberg to enlist his aid. Going among his friends in Brownsville in their behalf, Mr. Weinberg raised money for

them in what was, at that time, a fair sum. Mr. Weinberg's activities in building houses were, however, more actively inter rupted a few years later, during the fateful year 1914 at about the time of the outbreak of World War I. During that summer, while Mr. Weinberg was building two apartment houses on Eastern Parkway, Brooklyn, he was asked to become one of the founders of a new Yiddish daily. Associated in this project were Rabbi J. L. Magnes, who was greatly interested in the establishment of a United Jewish Community or Kehiliah: the great philanthropist Jacob Schiff and his son-in-law, Felix Warburg, and several others. Despite the burden of his other enterprises, Mr. Weinberg consented to make an investment in the proposed newspaper, with the understanding that one of the other parties would actively manage the paper; but, at the last minute, that party withdrew, both as investor and manager, and Mr. Weinberg found himself cataputed into the position of publisher or manager of the newspaper, the Day. His plan was to issue a Yiddish daily which would be not merely the house organ of a political party or the vehicle of its editor's prepossessions and which would not represent either the extremely conserva-tive or ultraradical viewpoints of the other Yiddish papers, but to express the senti-ments and opinions of the more modern and impartial liberal element of the intelligent middle class, including their Zionist outlook, and to afford a means for dissemioutdook, and to allord a means for disseminating the new Jewish literature and encourage literary creativity of a kind that was desired by the large public who were without what Mr. Weinberg thought was representation in the Yiddish press of those days.

The Day quickly established its place

in competition with the other Yiddish papers

and rose to a circulation of 100,000 daily.

In 1923, Mr. Weinberg retired from ownership and management of the Day. For the next 18 years he was in banking and building construction. Late in 1941, he received an urgent call to resume the ownership and direction of the Day. Eight months earlier, the editorial and composing room staffs of the Day had bought the paper from the estate of David Shapiro, one of Mr. Weinberg's former associates. Unfamil-Mr. Weinberg's former associates. Unfamiliar with management techniques, the new owners soon found themselves in difficulties arising from a strike by the paper's Guild

unit. To save the paper, they called Mr. Weinberg back to resume its direction. Re-luctantly, he agreed and bound himself to accept no salary for 3 years. In less than that time he had the paper back on solid ground and added 10,000 circulation.

Previously, the Day had absorbed one of its competitors, the Warheit, which was a prosperous daily when the Day began publication. In 1953, came another merger, when the old Jewish Morning Journal, after 53 years of existence, was purchased together with its weekly magazine, the Jewish Amer-Today there are only two major Yiddish-language newspapers in New York-the Day and the Forward, both morning Sunday

Despite his many interests and the vagaries of Yiddish newspaper management, Mr. Weinberg has always been active in many fields of Jewish endeavor. Mr. Weinberg has always been an ardent Zionist, serving on the executive board of the Zionist Organization of America for many years and for several years as treasurer. He was long a director of the United Palestine Appeal and of the United Jewish Appeal. He was one of the founders of the Hebrew Free Loan Association (Gemillot Chasodim). He was a director of Hebrew Immigrant Aid Society, HIAS, and in 1921-22, as the representative of HIAS, traveled on a U.S. diplomatic passport to investigate and report concerning those who wanted to emigrate to the United States, carrying on his work in all the ports of Europe—Hamburg, Bremen. Havre, Marseilles, Southampton, etc. He has been abroad at least 10 times.

He has been cochairman of drives on be-half of Israeli bonds, and, previously, had been cochairman of many drives for United Palestine Appeal and United Jewish Appeal. For a number of decades, he has been

consulted as one of the elder statesmen of ZOA

He was a founder of the Brooklyn Jewish Center, the largest Conservative synagogue in this country, and has been one of its trustees since its inception in 1919.

Mr. Weinberg married Dora Rubin in 1900. They have three children, two daughters and one son. Their eldest daughter, Ruth W. Jacobs, is the wife of Arthur L. Jacobs, general manager of the "Day." Their son, Goodwin G. Weinberg, is assistant to the publisher. Their daughter Naomi is married to Solomon Bochner, professor of mathematics, Princeton University, and a member of the Academy of Science.

Mr. and Mrs. Weinberg have three grandchildren and one great-grandchild.

One of the important posts in which Mr. Weinberg has rendered public service, and, as always in his public career, without pay, was when he served as a trustee of Bellevue and Allied Hospitals. There were two Cathtwo Protestants, and two Jews on this board. Mr. Weinberg was the first East European Jew ever to be appointed to it. He served for 11 years, which was by far the longest period anyone had ever held this office. During his tenure of that office, he was able to protect the interest of Jewish interns and employees from anti-Semitic discrimination and did not hesitate to assert and strongly contend for fair treatment of Previously there had been a tendency shrug off such practices and to avoid forthright discussion of grievances of the Jewish members of the staffs of these hospitals. Mr. Weinberg, however, believed in open consideration of these matters and in firmly opposing injustice and oppression based on bigotry or religious prejudice.

He was equally firm and courageous in formulating and following the policy of "The Day." In the history and development of the Jewish community of New York during the crucial years since 1914, when the "Day" began publication, this newspaper played a significant part and Mr. Weinberg, as its publisher, exercised an important influence. The

First World War created difficult problems for many Americans of foreign birth or their descendants, whether Jews or Christians. The Irish had no love for England and the Jews had good reasons for antipathy czarist Russia. Many of our native-born Americans, who had been students under German-educated college professors, had a high regard for German "Kultur." There was also a widespread belief that this was a war between great imperialist powers engaged in a struggle for commercial advantages. The traditional American desire to avoid "foreign entanglement" was very strong and was rein forced by the desire to keep out of wars which seemed to seek territorial aggrandizement with which we were not concerned. Not until our own entry into this war on April 6, 1917, was it easy to get many people to see that, despite their dislike of Russia and England, the danger to world freedom, including our own, was German militarism. The national election of 1916 had been very close and the slogan of the victorious Democratic Party on behalf of President Wilson had been: "He kept us out of war." The years of World War Il preceding our entry also raised stormy disputes. All of these issues were reflected in the "Day." Jews whose forebears had come here from Germany often seemed patronizing toward East European Jews who felt that they were treated as poor relations. numerically larger groups of these more recent immigrants many of whom were in-creasingly successful in business and other activities, resented this and the relations between these two groups were often strained.

The "Day," under the guidance of Mr. Weinberg, followed a policy of sturdy selfrespect for the new Americans of the Jewish groups who had come here from Eastern Europe. It was neither the moss-back con-servatism of the older Yiddish dailies nor the "class-conscious" socialism of the radi-"The Day" was not chauvinistic on behalf of any group nor a sycophant of any other element. The courage and wisdom of Mr. Weinberg, through the medium of the led to a better understanding and rapprochement among New York Jews which was most beneficial.

The "Day" has also maintained a high

standard of literary values, thanks to Mr.

Weinberg's good judgment.

This is of great importance to Yiddish papers, as their content differs from the dailies published in English in New York, in onsisting of many items of a cultural nature, like special articles, serialized novels, short stories and a "feuilleton." All of these features carry the name of the author. The articles deal with a wide range of subjects; articles deal with a wine range or subjects; some of current general news interest, some with developments of particular concern to Jews; others discuss social, political or eco-nomic problems. The "Day" has an article in its Friday issue concerning the Scriptural portion of the week. In short, the proportion of "straight" news reporting is far less in the Yiddish papers than in the English dallies and a substantial part of the paper consists of what might be called magazine material. The "feutileton" is an article, usually in a lighter vein than the other special articles, and which frequently deals with literary topics. It is not a book review. Its prototype appeared in continental papers when they were at their best, before the

world war.

Mr. Weinberg's career in the newspaper business has thus covered over 65 years of the most critical period of the Yiddish daily in America. He saw the circulation of these in America and saw it greatly decreased as the result of the practical cessation of immigration since our "quota law" was enacted in 1924. He has nevertheles continued to maintain the higher standards he set for "The Day" and is still a great influence for enlightenment and

democracy in the Jewish community of New York. May that influence long continue as the light of "The Day."

#### Robert C. Weaver-Excellent Choice

EXTENSION OF REMARKS OF

## HON. WILLIAM S. MOORHEAD

OF PENNSTLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. MOORHEAD. Mr. Speaker, the President has made an excellent choice of Mr. Robert C. Weaver as the newest addition to his Cabinet. As a member of the Housing Subcommittee of the Committee on Banking and Currency, I have known and worked closely with Mr. Weaver during the years he has been Administrator of the Housing and Home Finance Agency. I have come to respect and admire the ability and intelligence he has displayed in that position. I am confident he will be outstanding as this Nation's first Secretary of Housing and Urban Development.

Under leave to extend my remarks I include the following editorial from the Pittsburgh Post-Gazette of January 17 at this point in the RECORD:

A NEW URBAN ERA

President Johnson has set in motion the machinery which could implement long-advocated but often-frustrated changes in the pattern of urban living. On Thursday the President appointed Dr. Robert C. Weaver to be Secretary of Housing and Urban Development. The establishment of the new department, designed to give the cities a voice in the Federal Government, was itself delayed for years by a negative attitude in Congress.

The day before the Weaver nomination, the President in his state of the Union me sage outlined two objectives with which the Department of Housing and Urban Development will be vitally concerned. He called for Federal legislation to prohibit racial dis-crimination in the sale or rental of housing. And bearing in mind the great urban slums that symbolize racial discrimination, the President said:

"We must help rebuild entire sections and "We must help rebuild entire sections and neighborhoods containing, in some cause, as many as 100,000 people. Working together, private enterprise and government must press forward with the task of providing homes and shops, parks and hospitals, and all the other necessary parts of a flourishing com-munity where our people can come to live the good life."

As a housing expert and a Negro, the first of his race to be a member of the President's Cabinet, Dr. Weaver will be able to give both knowledge and understanding to the achieve ment of the new goals of his department. In bringing together various Federal agencies concerned with housing and urban affairs (including the Housing and Home Finance Agency, which Dr. Wesver now heads), the 1965 law already provides for the organizational structure of the new department. But the role of the Department of Housing and Urban Development in revitalizing urban life will depend on the leadership of the new Secretary, as well as on the response of the President and Congress to the still undis-closed proposals of a special presidential study committee on urban affairs appointed lost fall.

The President and Congress will also shape the proposed new Federal weapon against discrimination in housing. Though Mr. Johnson did not give any details of the re-commended law, it would presumably cover all housing that is directly or indirectly aided by the Federal Government. An executive order against racial discrimination in hous-ing has been in effect since 1962, but it applies only to construction with mortgages insured by the Federal Housing Administra-tion or the Veterans' Administration, which means that it covers only about 17 percent of housing starts. If Congress should by law extend the ban against discrimination to mortgages handled by any federally super-vised or aided lending institutions, the impact on racial barriers in the housing market ould be far reaching.

By activating the new department and urging effective Federal action to end arbi-trary curbs on the purchase of housing, the President has laid the groundwork for a new era of quality and equality in city life.

The Great Debate: Vietnam

EXTENSION OF REMARKS OF

## HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

Mr. LAIRD. Mr. Speaker, it is important that we in the minority party here in the House of Representatives insist on a full and complete debate on the foreign policy of this country in this session of the Congress.

It is evident from the many statements being made even by members of the President's party in Congress that there is not an awareness of the short-term aims and long-term objectives of our Nation's policy in Vietnam.

This week, my friend and colleague, Senator Gaylord Nelson, the junior Senator from Wisconsin, made some very significant statements questioning the policies of the Johnson administration's escalation of the war in Vietnam on the ground during the last 12 months. In June, I first raised a similar question about the planned escalation of our about the planned escalation of our ground forces in Vietnam. In 12 months e have increased our ground forces from 20,000 men to 200,000 men. Are we indeed drifting toward a major ground war in Asia? Are we giving these fighting men adequate protection and support? Are we properly using our conventional sea and air power in Victnam? Has a stable government been established in South Victnam? These questions and many like them must be answered before those of us on the Defense Appropriations Committee approve President Johnson's new request for an increase in regular ground forces of the Army and Marines.

Under unanimous consent, I include in the RECORD the January 17 editorial, which appeared in the Marshfield News Herald, entitled "The Senator Is Right." I also include the Milwaukee Journal interview which appeared on Sunday, January 16, which served as the basis for the News Herald's editorial.

The articles referred to follow:

[From the Marshfield (Wis.) News Herald, Jan. 17, 1966]

#### THE SENATOR IS RIGHT

We find ourselves in general agreement with Senator Nerson's statement in his in-terview with the Milwaukee Journal Sunday in which he declared that for more than a year he had "considered each step of the escalation of the war in Vietnam as a tragic

He labeled as completely fraudulent the administration's argument that if Vietnam were lost, American commitments elsewhere would be meaningless and many other countries would fall to communism.

This is a boid declaration for a Democratic Senator to make in the face of the Johnson push for stepping up the war in Asia if North Vietnam and the Vietcong continue to refuse to join the United States at the peace table. Sensior Nelson must have given the situation long and careful study over the

We have felt from the outset that we should not, as a Nation, be involved in a shooting war in Vietnam. We agree with NELSON that President Eisenhower had no thought of sending American soldiers to fight in southeast Asia. At the most, he sent them there as advisors; our great fear was that eventually we would become involved in the conflict, and so it has come about.

It is not the intention of the American people, in our opinion, to attempt to dom-inate world affairs through force of arms. Thinking people admit our inability to estab-lish a stable government in South Vietnam. The present Premier promises the establishment of a constitution by October and the election of a stable government thereafter. There hasn't been a semblance of stability since this Government entered the picture in South Vietnam and there is no sign of it right now. Our great fear is that the South Vietnamese people might ask us to leave their country because we are doing a vast amount of destruction in our efforts to

we think President Johnson should take another look at our foreign policy; where our sent tactics may lead us as a nation is terrifying to contemplate. Senator Nelson does well to put his opinions on the line for all to study. We are glad to note his willingness to lead the opposition to our southeast Asian policy. He can be more effective than Republicans because their opposition might considered political rather than sincere and honest opinion.

We can hope that Congress will debate our foreign policy in the present session. It is most unfortunate that the war has escalated to the point where nearly 200,000 soldiers are in Asia and more are being prepared to move into battle. We must give the adminrestration credit for striving to bring North Vietnam to the peace table and, in this re-spect, we agree with Senator Ninson when he said that there are no easy answers to the agonising dilemma facing America, but of all the alternatives, the wisest choice is to continue to seek a negotiated settlement while firmly refusing to escalate the conflict

There will be criticism of Senator NELSON's statement. Bome of it will come from the fighting men in Asia who may feel from the lighting men in Asia who may feel he is undermining them in their fight to bring st.bility to South Vietnam. This is understandable, as they remember their fallen comrades who they hope have not died in vain. But the tragic fact is that unless hostilities are stopped, the conflict may go on for years with attendant human losses, because we are doing the very thing the Communical want in the document our the Communists want us to do-expand our manpower and resources without accom-

plishing our purpose.

We hope Senator Nilson's statement is carefully considered by the Congress in the coming session. The Nation must take a

second look at the southeast Asia situation; we must analyze the dangers of further escalation of the conflict which, after all, is not a declared war but which is just as deadly dangerous to the Nation and its

[From the Milwaukee (Wis.) Journal, Jan. 16, 1966]

## ESCALATION OF WAR TRAGIC

#### (By John W. Kolf)

WASHINGTON, D.C.-Senator Nelson, Democrat, of Wisconsin, said Saturday that for more than a year he had "considered each step of the escalation of the war in Vietnam as a tragic mistake."

Nelson also labeled as "completely frauduthe administration argument that if Vietnam were lost American commitments elsewhere would be meaningless and many other Asian countries would fall to com-

Only Wednesday night, President Johnson reaffirmed this theory in his state of the Union address by warning that if the United States yielded in Vietnam it would "abandon much of Asia to the domination of Communists."

The Senator thus issued his clearest challenge yet to Johnson's conduct of Vietnam

#### WOTED AGAINST FUNDS

In May, Nelson was one of only three Sen-ators who voted against Johnson's request for an emergency \$700 million Vietnam appropriation.

His protest, however, was more against the haste in which the measure was jammed through Congress than the substance of the

There also have been times when NELSON

has been unusually silent on Vietnam.

One such occasion was in July, when he declined to comment on Johnson's an-nouncement that 50,000 more men would be sent to Vietnam and the draft would be doubled.

#### ADMISSIONS CLAIMED

In an interview, Nerson was asked to elaborate on his position that the so-called domino theory—that other non-Communist Asian nations would fall if Vietnam was -was fraudulent.

"I have had top administration officials admit this to me privately," he said. "For example, let us say we did get out of Vietnam. I can't believe that Red China would then conclude that it could attack India. If it did, we obviously should go right in and defend India."

#### COMMITMENT DENTED

The crucial difference, NELSON said, is that India and a number of other Asian countries have viable governments. Such is not the case in South Vietnam, he said, because the Government is largely our creation and lives only by our support.

NELSON said he believed that the Johnson administration had seriously exaggerated our in Vietnam during the last commitment year. He said it was clear that former President Eisenhower never contemplated such involvement back in 1954.

"We never made a commitment to any gov-ernment in South Vietnam," he said.

If and when free elections are held throughout Vietnam, NELSON added, he would not be disturbed if the country did come under Communist control.

"I just can't see that such a small country is all that important in the world power structure," he said.

NELSON, who was back in Wisconsin Saturday for the start of a 10-day speaking tour, conceded that "there are no easy answers to the agonizing dilemma facing America in

#### WARNS OF "SLAUGHTER"

"But of all the grim alternatives, the

wisest choice is to continue with great patience to seek a negotiated settlement while firmly refusing to escalate the conflict fur-ther," he said.

NELSON said he believed that there was "no practical hope in through escalation. in achieving our

He warned that escalation carried with it "a very real possibility of an Asian-wide war in which America would waste her resources and young men in a slaughter that could achieve nothing but those desperate conditions of chaos ideal for the spread of communism.

NELSON said he agreed with George F. Kennan, the foreign policy expert and former Ambassador to Russia, who recently advocated a campaign to deescalate the Vietnam war.

"In a world where a nuclear holocaust is a distinct possibility, the survival of us all de-pends on containing armed conflict to as narrow an area as possible," the Senator said.

#### WANTS PAUSE CONTINUED

NELSON added that the pause in the bombings of North Vietnam-now in its fourth week-should be continued in-definitely unless there was some compelling reason for resumption.

He said that, through the pause "President Johnson has taken a long step toward localizing the war and achieving negotia-

Almost a year and a half ago, in August 1964, Nelson spent parts of 3 days on the Senate floor to argue against giving Johnson a blank check in Vietnam.

"Our basic mission in Vietnam \* \* \* is one of providing material support and advice," he said then. "It is not to substitute our Armed Forces for those of the South Vietnamese Government, nor to join with them in a land war, nor to fight the war for them.

"I personally feel it would be very unwise under any circumstances to put a large land army on the Asian Continent."

There is some indication, however, that NELSON'S periodic reticence on the subject is now at an end. After Johnson's state of the Union message, the Senator called for extensive congressional debate on Vietnam.

#### IT WOULD BE INSANITY

NELSON said Saturday that "our top military leaders agree that it would be insanity for the United States to become engaged in a large Asian land war."

He said that even if a million American soldiers (there are about 190,000 there now) were sent to win the war in Vietnam, and an open clash with Communist China was avoided, "we would leave behind us only a charred, desolate country with little hope that it could maintain its independence one moment beyond the time we left."

#### BOMBS DIDN'T HELP?

Nelson said it was important to recall that "our military advisers have been con-sistently overoptimistic when not actually dead wrong in their public statements of the Vietnamese situation.

"Defense Secretary McNamara's estimate that the Americans could begin to pull out by Christmas 1965 is only the most famous example," he said.

"Those who look for a cheap victory through airpower should recall the glowing assurances last February that a few bombs on North Vietnam would quickly bring that country to the conference table in a tractable mood. If anything, the opposite has been the case."

Nelson's comments demonstrated more clearly than ever how much his views on Vietnam conflict with those of Wisconsin's other Senator, Democrat WILLIAM PROXIMER.

Only last week, PROKMIRE declared that the war was "the price we must pay."

## Housing Groups Express Bitter Disagreement With Federal Reserve Board

EXTENSION OF REMARKS

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. PATMAN. Mr. Speaker, last week the Housing Subcommittee of the Banking and Currency Committee conducted an important hearing into the effects of rising interest costs on home buyers and home builders. My good friend and colleague from Pennsylvania, BILL BAR-RETT, who is chairman of the subcommittee, is to be commended for undertaking a study of an issue so vitally affecting millions of Americans.

Without question, the homeowners and would-be homeowners were a forgotten group when the Federal Reserve Board decided in secret on December 3 to raise interest rates. The Federal Reserve's action threatens to place a massive veto on the Nation's housing programs and threatens to place decent housing out of the reach of many citi-

Rising interest costs and a tightening money supply always hit the home buyer and the building industry hard. For example, a 1-percent increase in the interest rate on a \$20,000 home adds more than \$4,700 in interest costs over the life of a 30-year loan. With the national median income at \$4,600, means that many wage earners will have to contribute a year's income just to pay the added interest costs.

Nearly everyone in the housing field is deeply concerned about the implications of the Federal Reserve's recent ac-The National Housing Conference tion. has denounced the Federal Reserve Board's action in forthright terms. I place in the RECORD a copy of a resolu-tion adopted by the Board of Directors of the National Housing Conference on December 13, 1965:

Resolved, That the Board of Directors of the National Housing Conference in regular quarterly meeting assembled on December 13, 1965, shares the concern expressed by President Johnson on the impact of the Federal Reserve Board's action in increasing the discount rate, particularly on the housing economy

This further impetus to rising interest rates cannot fail to have an adverse effect on housing production and financing. It will mean increased costs to the consumer and a tighter mortgage market, and could result in a serious slowdown in homebuilding in the coming year.

This is no time to allow housing production to drag. Congress has given the President a far-reaching set of programs to bring our production of good housing closer to our rising needs and to speed up the improvement and redemption of our urban areas. It has established a consolidated agency to effectuate this mission by creating the Department of Housing and Urban Development.

We must not now erase these hopes by diverting and denying adequate financing to the housing market and the people who need housing. Already, as interest rates have risen, the annual homebuilding rate by October had declined to the lowest point

since January 1963. We must reverse this

trend, not accelerate it.

We urge the President and the Congre to take such actions as may be necessary to assure an ample flow of mortgage financing at reaonable rates into housing production. to take such actions as may be nec We recommend that the President make full use of the new and expanded programs for housing for the low- and moderate-income group, as contemplated in the 1965 legisla-tion, and to implement these programs administratively as quickly and fully as possi-We recommend also that the Congre as it did in 1958, give the President standby authorization for the purchase of mortgages on the private market at the present interest rates through the Federal National Mortgage Association to counter any decline in housing production as the spring building season gets underway. Any setback in the housing economy at this time would have serious and costly consequences for the Nation for years

## The War on Poverty and Federal Manpower Policies

EXTENSION OF REMARKS OF

## HON, CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. GOODELL. Mr. Speaker, a major contribution to the success of last summer's Republican intern program was made by a distinguished Georgetown University professor of economics who supervised it, George Viksnins. During his 3 months with us, Dr. Viksnins also researched the poverty program and made arrangements for the hearings conducted by the Republican task force on economic opportunity.

Recently, he addressed the Industrial Relations Research Association on the subject of manpower policy. I feel the views contained therein would be of value to all Members of the Congress, and therefore, I wish to insert Dr. Viksnins statement at this point in the RECORD: THE WAR ON POVERTY AND PEDERAL MANPOWER

#### (By George J. Viksnins)

Let me confess that I come before you flying false colors or something like that, since my primary field of interest is monetary policy. However, during the past summer I was fortunate in being able to learn a considerable amount about the field in which all of you are knowledgeable. This summer was spent working with the task force on economic opportunity, which is one of number of study groups working with the Republican conference of the House of Representatives. Our primary concern last sum-mer was an investigation of the war on poverty and the examination of possible alternatives, in terms of both content and form. I shall return to a few of these alternatives, but first let me try to construct a reasonably general framework

During the past 5 to 10 years a major diffi-culty encountered by the economy has been the combination of unreasonably high unemployment rates with varying degrees of price increase. The stability of wholesale prices and the relatively minor increase in consumer prices, which we experienced from 1958 to 1964, were in effect "bought" at the price of unemployment rates well above 5 percent. On the basis of this crude relationship, the economy seems to be incapable

of attaining full employment; that is, 4 or, preferably, 3 percent of the labor force out of work—without inflation. To put it in another way, the aggregate supply curve becomes inelastic before full employment levels of production are reached. An analysis of why this is the case is beyond our scope here, but one part of the solution undoubtedly involves manpower policy. It can be taken as virtual article of faith that a skilled and mobile labor force would shift the curve and/or change its elasticity.

Thus, to begin with a definition: manwer policy involves programs to match the skills of workers with job requirements and their location with job availability. Whether manpower policies are best carried on by the Federal Government is an important and serious question, but it is, of course, quite unfashionable to ask it. At present, the vast majority of manpower programs are still carried on by private business and local (both State and municipal) government.
The Federal Government's relatively recent entry in this field provides a marginal contribution, but its influence will continue to grow, hopefully, not at the cost of eliminating entirely private and local efforts.

Federal manpower programs, as the term is commonly understood, involve the Department of Labor and the Office of Economic Opportunity. We might note, parenthetic-Opportunity. We might note, parenthetically, that at the limit all Federal expenditures have manpower implications in both demand and supply terms. Certainly, shifts in the Defense Department's budget, such as from manned long-range bombers to missiles, will create an excess supply of bomber pilots and a shortage of missile button pushers, and a shortage of missile button pushers, not even to speak of the stresses created in the production of these items. Coming closer to the traditional meaning of the term "manpower policy," the various programs of the Office of Education are certainly important in affecting labor supply. Voca-tional education and the important work in vocational rehabilitation carried on by the Vocational Rehabilitation Administration and the Veterans' Administration are obviously relatively similar to that of the two agencies discussed in further detail below.

First, the Manpower Administration of the epartment of Labor is responsible basically for occupational training associated with the ower Development and Training Act of Although amended in 1963, this set of Manpow programs gives priority to older workers: in particular, to unemployed, experienced work-ers (those who have had at least 2 years least 2 years of gainful employment") and to members of farm families whose income is less than \$1,200. Manpower Development and Training Act trainees normally receive an allow-ance equal to the average State unemploy-ment insurance benefit, but this may be increased to the extent of \$10 weekly. The length of training is normally a maximum of 1 year, but this can also be expanded—by up to 20 weeks for "basic language and number skills." ber skills.

How is the Manpower Development and Training Act program going? At present data are available for the August 1962 to December 1964 period, which is a relatively short time period for a full-scale appraisal. In numerical terms, about 350,000 phave been involved and about 70 have been involved and about 70 per-cent of trainees in courses completed by mid-1964 had been placed in jobs within a few months after completing training. The majority of the employed trainees felt that their employment was training-related. The cost of their programs has been quite reasonable—by the end of 1964, development and training programs had cost about \$300 million, which comes to somewhat less than \$1,000 per trainee.

There are some shortcomings, but these may well be inescapable. As the last manpower report of the President pointed out, "youths under the age of 19 represented only

half as many of the young trainees as of the young unemployed in 1963." This fact was due largely to restrictions of youth allowances; which had since been modified. Sec-ond, older workers are not being reached very -workers 45 and over comprise somewhat more than 25 percent of the unem-ployed, but somewhat less than 10 percent of all Manpower Development and Training Act trainers. Third, the undereducated— less than 9 years of school—are about one-third of all unemployed persons, but about 15 percent of Manpower Development and Training Act trainees.

In addition to these participation prob-lems, only 8 percent of all trainees were in on-the-job training programs, which seem to to be vastly preferable to institutional training and all sorts of demonstration projects. Using but a single fact to support my ertion-"2 out of every 3 on-the-job training trainees were being prepared for skilled or semiskilled jobs, compared with less than half of those in institutional projects." We might note, in this connection, that the Federal Govenrment sponsored programs in vocational education—involving something over 4 million people—are really just the same ing as the manpower programs under the Manpower Development and Training Act institutionally sponsored training schemes. Why these two programs need to be run under different auspices is really beyond ms. The second major set of manpower pro-

grams involves the much publicized war on poverty, recently escalated to roughly twice its levels for the next fiscal year, consists of roughly 10 or 11 programs all of which have more or less relevance to the Federal Government' manpower policies. The largest—and by far the most controversial—is the comunity action program under title II of the conomic Opportunity Act. During the last fiscal year, something in excess of \$150 million was spent by this program. Despite the fact that this is the largest of the programs run by the Office of Economic Opportunity, its relation to manpower policy is hany at best. In fact, although I spent 3 whole months in working on the poverty program, I am still not really sure about just what community action programs involve and what they hope to accomplish. This category cer-tainly does cover a great variety of things: The Head Start program of preschool centers initiated last summer, consumer edueation of various kinds (ranging from information about interest costs and carrying charges on installment contracts to the price differentials between different merchandisers), legal services, political action efforts, and weight-control programs for the ladies. I see two major problems in this part of the poverty program—first, is any kind of action at all useful and second, just who is to be

In the former connection, it seems to me that we are just initiating action or actions of various and sundry kinds without having any idea of what they will accomplish—for example, in Syracuse, the school of social work was organizing rent strikes, marches on city hall, and the like, in direct opposion city had, and the new, in direct opposi-tion to the programs run by the city, one of the most progressive in the field of social welfare. In the latter connection, commu-nity action programs are allegedly adminis-tered in line with the so-called three-legged stool principle. Local governments, existing welfare agencies, and the "poor" themselves are supposed to be involved in the planning and the execution of these programs. As has been brought out time and time again, these programs have turned into "giant fiestas of political patromage," to use Representative ADAM CLATTON POWEL'S phrase, and the above-mentioned stool has one, two, or even all three of its legs missing and we wind up sitting squarely on the floor.

In addition to the community action pro gram, which is to cost almost one-half of a billion dollars in the 1966 fiscal year, a num-

ber of other OBO programs may be characterized as supportive or even peripheral to our Federal Government's manpower policy. There are special programs of loans for those few farmers that have not already got them from the Farmers Home Administration of the Department of Agriculture and a similar program of small loans for small businesses. the education field, we have a beefing up of adult basic education programs, already in existence for a number of years almost everywhere; the work-study program for college students; and Project Head Start for preschool youngsters. There is aid for migrant agricultural workers; there is something called the foster grandparents program; there is VISTA; and there is s thing known as upward bound, although existing legislation gives us no clue as to what that might be.

In discussing manpower policy (in the sense that I have used the term), there are three major programs under OEO auspices. The largest of these, in terms of the number involved during the first year of operation, is the Neighborhood Youth Corps program. which served about 278,000 teenagers at a cost of \$134 million. This program provides part-time work in "newly created jobs in nonprofit or municipal agencies" and pays at the rate of \$1.25 per hour. We might mention that the decision to pay the na-tional minimum wage is an administrative decision of the Department of Labor, which

administers this program.

Second, again in terms of numbers, is the work experience program, usually for people on relief rolls. This program involved about 80,000 participants and its total cost was somewhat in excess of \$100 million during the 1965 fiscal year. Administered by the Welfare Administration of the Department of Health, Education, and Welfare, an example of this program is provided by a million-dollar grant to the Rhode Island Department of Social Welfare where about 1,000 men and women will receive "training in good work habits and attitudes \* \* \* through beautification activity as nurserymen, gardeners, and truckdrivers" (hearings before subcommittees of the Committee on Appropriations, House of Representatives, supplemental appropriation bill, 1966, p.

However, by far the best known and the most controversial manpower program-run by the OEO itself, which fact may well be sponsible for these two characteristicsis the Job Corps. As you know, the Job Corps provides remedial education and job training for out-of-school and out-of-work men and women between 16 and 21. About 40 residential centers were established during the 1965 fiscal year and the Job Corps had an enrollment of something under 10,000 at that time. These centers are both rural and urban—in fact, the law required that 40 perent of all enrollees be in something called the Youth Conservation Corps or rural cen-ters. The total cost per participant has been substantial in the first year of operation— the average exceeds \$8,000, since more than \$30 million was spent in fiscal 1965. For its second year, the Job Corps plans to have about 50,000 participants and the budget request was about \$300 million. Thus, the coat per enrollee is likely to decrease somewhat (to about \$6,000), but Mr. Shriver has indicated that he does not expect it to fall much below \$4,000 to \$5,000.

In comparing the effectiveness of the two main programs—the Manpower Development and Training Act and the OEO—in terms of their manpower impact (as opposed to social, paychological, and political aspects), it seems to me that the benefits of the former exceed those of the latter, given the present level of costs. The Job Corps, the Neighborhood Youth Corps, and the work experience pro-gram are seldom geared to particular man-power shortages and often provide no specific training. While it may be socially useful to

take a Washington, D.C., youth off the streets and send him to the Catoctin or even the Tongue Point Job Corps Center in Oregon, teaching him to wield an axe may constitute hoax. It is also socially useful to teach him to get up in the morning to brush his teeth, and not to slurp soup, but at the cost of \$8,000 per year?

Let me soften my criticism by admitting that it may well be too early to evaluate fully and fairly both of these programs. The Manpower Development and Training Act has been in operation for a bout 3 years and the war on poverty for a year-the one test with the most meaning would be to take a sizable group of graduates from both pro-grams and to follow their employment and earning experience. At present, my vague comparison of benefits and costs suggests devoting more resources to the Manpower Development and Training Act, but more information is certainly necessary.

As a final topic, let me mention a few constructive alternatives in the field of man-power policy. In the 1965 Economic Report of the President, there is an interesting set of statistics regarding training taken by persons in the civilian labor force (table 17, p. 129). The majority of respondents to a survey undertaken by the Department of Labor indicated that they had learned their job skills by on-the-job training; the next largest response indicated "casual methods"; and formal training as well as those reporting needing no training showed the lowest response rates. The point is, of course, that on-the-job training is most important and, I suspect, most successful. Yet, the increases in overall labor productivity and labor skills are usually paid for by a single employer, though they benefit the society and the economy as a whole. needing no training showed the lowest re-

An attempt to recognize this fact is provided by the Human Investment Act of 1965, which was introduced but, unfortunately, not afforded the attention that it deserves, in the 1st session of the 89th Congress. bill, S. 1130, was introduced in February 1965, by Senator Proury and cosponsored by er of other Republicans in the Senate. A reworded measure, H.R. 10934, was intro-duced in the House by Representative Thomas B. Curris and 43 cosponsors in September 1965.

The Human Investment Act provides a 7-percent tax credit as an incentive for the employment and training of presently unemployed workers. The maximum amount of credit allowable would be \$25,000 plus 25 percent of the taxpayer's tax liability in excess of \$25,000. The expenditures that can be used for this credit include, among others, wages of apprentices in registered programs; the wages of workers in on-the-job training under section 204 of the Mannower Development and Training Act of 1962; employee training expenses paid to colleges, business or trade schools (as well as accredited correspondence schools); and the wages and salaries of workers participating in cooperative education programs involving alternate periods of work and study.

A second major area of assistance to manower development involves maximizing labor mobility and minimizing restrictions on hiring and firing. In the last few decades, the fixed custs and nonwage costs—most Government determined—of adding a new worker have increased greatly. Unemploy-ment insurance contributions are based on a so-called experience rating, which actually works against workers receiving the necessary experience. Employer contributions to social insurance of other types also increase the cost of adding new workers as does the not inconsequential paperwork involved. The national minimum wage may well be a restrictive influence on the hiring of teenagers—although exemptions can be secured from the Department of Labor under the apprentice and trainee provisions of the Pair Labor Standards Act, employer reaction seems to have been less than enthusiastic in securing such permissions.

In this second connection, then, I would favor granting an exemption from minimum wages for marginal workers—let us say, those between 16 and 21 as well as those who have not had steady work for the last year or two. Also, I would propose granting a similar exemption for social insurance contributions by the employer, with the Federal Government making direct contributions to the trust funds involved for a specific period of time. To conclude, I would want to minimize the Federal Government's direct intervention in the manpower field—only after tax incentives and elimination of restrictions are shown as not doing the job adequately should we embark on programs of the Job Corpa type.

#### Peace Offensive in Vietnam

EXTENSION OF REMARKS

## HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. BRAY. Mr. Speaker, on December 24, 1965, the administration halted the bombing of North Vietnam and at the first of the year launched a concerted peace offensive. U.N. Ambassador Arthur Goldberg talked to Pope Paul VI; W. Averell Harriman went to Poland, Yugoslavia, and India; McGeorge Bundy met with the Prime Minister of Canada; and Vice President HUMPHREY, in the course of less than a week in the Far East, met with three presidents, an emperor, and a prime minister. And, on January 10, 1966, the White House admitted that the Government of North Vietnam accepted a secret letter from the U.S. Government during a meeting between an American official and a representative from Hanoi.

The bombings still have not been resumed and it is reported that the administration is under considerable pressure from abroad to extend the pause in these raids for several more weeks or even months. This is supposedly to give Hanoi more time for diplomatic maneuver.

An inordinately high percentage of non-Communist commentary on this peace offensive seems to be marked by great optimism. Perhaps it would be more accurate to call it wishful thinking. Hanol's reactions to date have been negative, to say the least. Nhan Dan, the Hanol dally newspaper, in a commentary on the President's state of the Union message, said, on January 16, 1966:

Lying in the framework of the noisy peace campaign of the U.S. ruling circles and being one of its keynotes, Johnson's message was no different from the previous statements of the U.S. ruling circles; that is, in spite of its varied form, it remains a statement full of contradictions and smells strongly of colonialism and war. Facts have proved that each time the U.S. aggressors launched a noisy campaign about peaceful negotiations on the settlement of the Vietnam problem, they took a further step in the intensification of the war.

The analysts waxed hopeful again when the Vietcong announced they would observe a 4-day truce in the fighting over the religious and festive Vietnamese holiday of Tet, the lunar new year; 23 hours before this truce was to go into effect, a platoon of Vietcong guerillas massacred 33 civilians, wounded 54 and kidnaped 9 men in an attack on a South Vietnamese refugee camp, 350 miles north of Saigon. Men, women, and children were killed; the only explanation for this vicious and wanton murder seems to be that the Vietcong were taking revenge on refugees from a village that had been overrun by the Vietcong in November. Many of the villagers had fled to the refugee camp at Tu Hiep, where the massacre occurred.

In addition to this mass murder, after the cease-fire was supposedly in effect, the Vietcong made four attacks on outposts near Saigon and an assault on a village near Hue.

What the analysts who now speculate so hopefully on an eventual favorable response from Hanoi will make of this is hard to say. If the present peace offensive runs its course and the war is resumed, we can safely assume that the analysts will find some way to blame it all on the United States, for not allowing Hanoi more time for diplomatic maneuver.

Leaving aside the merits and the wisdom of the administration's peace offensive—some serious criticism has been leveled at its manner, timing, and method—I think it is appropriate to ask that familiar question that always comes up when any sort of attempted deal with the Communists goes sour: "After all, what more could we have expected?"

One of our most perceptive and competent journalists is Joseph Alsop. Two of his recent columns, one appearing in the Indianapolis News of January 5, 1966, entitled "Johnson Peace Offensive Ignores History's Lessons," and one appearing in the New York Herald Tribune of January 19, 1966, entitled "L.B.J. Meet Sun Tzu," will, I hope, go a long way toward bringing some people back to the grim realities of the Vietnamese situation

In his January 5 column he exposed the naked, harsh truth of what negotiations mean to the Communists and stripped away the columns of hopeful prose that seem to have camouflaged the real issue:

The Communist leaders, who are hard-headed men with a sound historical back-ground, are fully aware of the central fact that the negotiation mongers always forget. No negotiation in history has ever done anything except register the hard facts of the situation being discussed at the time agreement was reached. And if negotiations are opened, while the pressure is remitted in Vietnam at this stage, the result is most unlikely to command the admiration of historians and even less likely to be admired by the American people.

On January 19, he invited the administration to become better acquainted with the writings of the Chinese military tactician Sun Tzu. The column begins:

"When without a previous understanding the enemy asks for a truce, he is plotting."

So runs the 28th proposition of the ninth chapter of Sun Tzu's "Art of War." On this proposition of the master's, the authoritative commentary was written by the worthy Ch'en Hao.

After discussing the influence Sun Tzu's writings—and Ch'en Hao's commentaries on them—have had on both Mao Tse-tung and the North Vietnamese Gen. Vo Nguyen Giap, Mr. Alsop states:

One can be quite certain, then, that proposition 28 of the ninth chapter and Ch'en Hao's commentary have been solemnly quoted 50 times a day by policymakers in Hanol, ever since the Johnson peace offensive began.

Mr. Speaker, I have no doubt that Mr. Alsop has stated the exact case. Let us look at a few more of Sun Tzu's maxims; some of them could be used as lead paragraphs for many stories coming out of Vietnam today:

All warfare is based on deception \* \* \* when we are near, we must make the enemy believe that we are away; when far away, we must make him believe we are near.

A recent major operation in what was believed to be heavily infested enemy territory found few Victoria.

Attack where he is unprepared, appear where you are not expected.

In Saigon, crowded restaurants are bombed and the American Embassy there is probably the most heavily guarded structure in all southeast Asia.

Military tactics are like unto water, for water in its natural course runs away from high places and hastens downwards. So in war, the way to avoid what is strong is to strike the weak.

The New York Herald Tribune of January 20, 1966, reporting on the massacre of the refugees at Tu Hiep just before the Victoring truce, said:

Survivors said one Vietnamese mother got down on her knees to beg for her baby's life, but a Red guerrilla shot her in the face and riddled the baby with submachine-gun bullets.

What Arthur Goldberg said to Pope Paul VI, what Averell Harriman said to Tito, what Vice President Humphrey said to the Prime Minister of Japan and the contents of that mysterious letter from the U.S. Government to Hanoi have probably had just the opposite effect of what was intended. Instead, as Mr. Alsop points out, the peace offensive has very likely provided Hanoi with "arguments to persuade doubters within the North Vietnamese politburo that American weakness of will and lack of resolution can still be counted on to bring victory in the end."

I hope Mr. Alsop's articles receive the careful study they deserve:

[From the Indianapolis (Ind.) News, Jan. 5, 1966]

JOHNSON PEACE OFFENSIVE IGNORES HIS-TORY'S LESSIONE

(By Joseph Alsop)

Washington.—Behind the current turmoil there is a central fact. Without much reference to the opinions of his advisers, President Johnson has been carrying on a personal peace offensive.

Orders have gone out to U.S. diplomats overseas. High officials have been phoned from the ranch. This man has been sent to see Soviet Ambassador Anatoly Dobrynia. That one—Gov. W. Averell Harriman, as it

turns out-has been hurried off to Warsaw with a measage for the Poles. All have been commanded to pass the word that the President is a man of peace who longs above anything for peace in Vietnam.

One consequence, obviously, is the visit to Hanol of the Soviet delegation headed by Alexander Shelepin. It has officially been denied that this visit was concerted by the Soviet and U.S. Governments; but if this denial is not an outright lie it is at least

rather gravely misleading.

For one of the prime aims, if not the sole aim, of the pause in the bombing of North Vietnam was clearly to promote such a Soviet visit by opening the way for it. The message conveyed to Ambassador Dobrynin
was clearly, "Now's the time, and make the
best of it." The Soviets have clearly the best of it. The Soviets have clearly been assured that bombing will not be resumed while Shelepin is in the North Vietnamese capital. And Shelepin's mission is clearly to urge the Hanoi leaders to seize the oppor-

tunity to go to the negotiating table.

The pall of official secrecy is total. But a child of 3 can see that the foregoing must be hard statements of fact, unless the American Government or the Soviet Government, or both, have reached a stage of near-lunatic

imprudence

anwhile, from Hanoi at this writing, there have been only two signs of respon A New Year's truce was offered the South Vietnamese—like the truce last year that Vistnamess—like the truce last year that ended with the attack on the American bar-racks at Piciku. And Hanoi radio has loudly praised the aid given North Victnam by Communist China, including the promise of large numbers of "volunteers."

Beyond much doubt, the Chinese Com-

munist leaders are exultantly informing the North Vietnamese leaders that this Johnson ace offensive proves once again the eternal peace offensive proves once again the everima-rightness of the formula of Mao Tse-tung that "America is a paper tiger." Equally be-yond doubt, the North Vietnamese may easily be persuaded by the Chinese argument. As they have said quite openly, the Hanoi leaders have always built their hope of vic-

tory in South Vietnam on their apparently sincere conviction that the Americans, being soft, self-indulgent and lacking in serious resolution, will eventually get tired of fight-ing in South Vietnam and quietly go away. Short of actually ordering the troops to begin embarking, it would be hard to find a more likely way to bolster this North Vietnamese conviction than the peace offensive that is now going on.

Yet there can be little question that the shelepin mission will expose the Hanol lead-erahip to considerable, although probably unspoken pressure. When someone says, "Seize this opportunity," it is not necessary to add the warning, "There may not be another." Thus the cuttorne at another in the cuttorne at other." Thus, the outcome at present is quite unpredictable.

A provisional prediction can be offered with complete confidence, however. If President Johnson's peace offensive does in fact lead to negotiations at this time, it will not be remembered with much admiration by historians of the future.

The word "unconditional" was originally inserted in the President's offer of "unconditional negotiations" because the lesson of Korea was at that time well remembered by the President and his advisers. They were, therefore, ready to talk-as they ought to have been, ought to be now—but they were not ready to have preconditions imposed that would have weakened or ended the pressure on the North Vietnamese and the Vietcong.

The Johnson peace offensive has created circumstances, however, in which keeping the negotiations unconditional will be almost impossible if they begin now. After what has passed already, woolly people in this country and around the world will surely give way to total hysteria if the United States merely does what is obviously rational

and in full accord with recent harsh lessons—keeping the pressure up until a reason-able and acceptable peace has been agreed upon

The Communist leaders, who are hard-headed men with a sound historical background, are fully aware of the central fact that the negotiation-mongers always forget. No negotiation in history has ever done anything except register the hard facts of the situation being discussed at the time agreement was reached.

And if negotiations are opened, while the ressure is remitted in Vietnam at this stage the result is most unlikely to command the admiration of historians and even less likely to be admired by the American people.

[From the New York (N.Y.) Tribune, Jan. 19, 1966]

> L.B.J., MEET SUN TZU (By Joseph Alsop)

Washington,-"When without a previous understanding the enemy asks for a truce, he is plotting.

So runs the 28th proposition of the 9th chapter of Sun Tzu's "Art of War." On this proposition of the master's, the authoritative commentary was written by the worthy

Ch'en Hao.

"If without reason one begs for a truce it is assuredly because affairs in his country are in a dangerous state and he is worried and wishes to make a plan to gain a respite. Or otherwise he knows that our situation is susceptible to his plots and wants to fore-stall our suspicions by asking for a truce. Then he will take advantage."

These words, here given in the admirable translation of the scholarly American ma-rine, Gen. Samuel B. Griffith, are of almost measureless antiquity by American stand-Sun Tzu himself appears to have been a Chinese general of the early period of the warring states, which means that his probable date was in the neighborhood of 350 B.C.

As for Ch'en Hao, he stands about midway in the long succession of important com-mentators on Sun Tzu; he flourished during the Tang dynasty, rather more than a mil-lennium ago. Yet in this season of Lyndon Johnson's noisy peace offensive, Sun Tru's proposition and Ch'en Hao's commentary

are of very great current importance.

For Sun Tzu is the Clausewitz of the Far East (and far more brilliant and perceptive, as well as miraculously less verbose than the wordy German theorist of war). And Sun Tzu's "Art of War" was the unique founda-tion of Mao Tse-tung's theory and practice of guerrilla warfare, and of the development of Mao by the masterly North Vietnamese Gen Vo Neuvan Gion Gen. Vo Nguyen Giap

In both the Chinese Communist and North Vietnamese staff schools, students therefore quite often learn by rote both the basic text and the main commentaries of Sun Tzu. One can be quite certain, then, that proposition 28 of the ninth chapter and Ch'en Hao's commentary have been solemnly quoted 50 times a day by policymakers in Hanol, ever since the Johnson peace offensive began.

It will seem very odd indeed to the countless American authorities on Asia who have never studied Asian history or set foot on Asian soil, yet the deadly seeming apposite-ness of Sun Tzu and Ch'en Hao may be as-sumed to have impressed the North Viet-namese Government a lot more than such richly comic gestures as sending Arthur Goldberg to talk the ear off the poor Pope.

The betting is increasingly heavy, to be sure, that the prime motive of the Presi-dent's peace offensive was the domestic politics, as astutely defined by Ch'en Hao. Furthermore, since negotiations are obviously undesirable at this time, the almost viciously negative North Vietnamese response to date should be a matter of deep relief.

But before the jet-propelled takeoff of an-other international diplomatic fuss of this type, a little more consideraion really ought to be given to the character of the intended audience. In the present case, there were several other things to consider besides the characteristic modes of thought and standards of judgment of the North Vietnamese and Chinese Communists.

There was, to begin with, the enormity of the price of a prolonged pause in the bomb-ing of North Vietnam. Bombing attacks on lines of communications are not the most damaging possible kind of attack on North Vietnam; but the American pilots, who have risked and sometimes lost their lives in these attacks, have nonetheless done a brilliant

Before the pause, repairs of roads and rail lines had caused such an acute manpower shortage that only women were left to till the fields in a good many provinces. Veryoung girls were being mobilized as road Interprovincial communications coolies

were already breaking down.

In other words, the pressure, although not of the most severe sort, was already beginning to produce quite crippling effects. prolonged pause has therefore acted as a heaven-sent breathing spell, permitting all serious damage to be put right again. And thus the fact should be faced, it has prob-And ably helped to prolong the war.

Then, too, the internal political situation in Hanoi deserved some consideration. Briefly, failing health has almost certainly reduced Ho Chi Minh to a figurehead. real power is in the hands of the secretary of the Communist Party, Le Duan. And Le Duan not merely made his party reputation by criticizing the decision to negotiate with the French in 1954; he was also the original organizer, and he is still the principal dictor, of the "war of liberation" in South Vietnam.

Le Duan's personal situation, therefore, will always compel this man to reject negotiation, except under irresistible duress or with an abject promised surrender as bait. A peace offensive and a longed-for respite from bombing are not duress. Instead they have no doubt given Le Duan exactly what he wanted most—arguments to persuade doubters within the North Vietnamese politburo that American weakness of will and lack of resolution can still be counted on to bring victory in the end.

#### Support of U.S. Policy in Vietnam

EXTENSION OF REMARKS

## HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. MILLER. Mr. Speaker, in my congressional district there is a group of young men who have banded themselves together into an organization dedicated to honor, friendship, and justice in service to their community and to numerous charitable activities. This organization, known as Sigma Beta Alpha, was founded in 1954.

Added to the fine record of the club is the fact that they recently gained new luster to their civic activities when their membership passed a resolution that stated very simply, "As members of Sigma Beta Alpha we place our names with honor in support of our Government's policy in Vietnam." The covering letter which forwarded this resolution to me said that "being sensible young men we dislike war, but we feel the fight in Vietnam is not a war but a fight for freedom. We support our Government's policy and are grateful to the men who are fighting

and dying for peace."

I firmly believe that the action of Sigma Beta Alpha is representative of the thinking of thousands of men and women throughout our country who firmly support our President and our Nation in those efforts to confine Communist aggression in southeast Asia. I am very pleased to insert in the Congressional Record the names of the men who signed the resolution referred to show.

As members of Sigma Beta Alpha, we place our names with honor in support of our Government's policy in Vietnam.

Salvador Vic Huerta, Robert L. Martinez, Robert R. Kuck, Tom Mattsson, Jerrie Powers, Ron Stone, Gene Andrews, Thomas M. Rivas, Wayne Bollan, Theodore John Moes.

Thomas Alan Peddecord, Stan Giorgi, Ronald Caviglia, Roger Hall, Maitland E. Elderts, Rich Redman, Steve Larson, Alan R. Baitinger, Steve Ojeda, Bruce Lee.

Tony Martinelli, Stephen Powers, Rich Redman, John Kuck, Robert A. McAuliff, Jr., Bill Thomas, Don Carmody, Bob Tatum, Steven V. Giorgi.

## WTOP Speaks Out Against "Foolish Loyalty Oath"

EXTENSION OF REMARKS

## HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. RYAN. Mr. Speaker, on the first day of this session of Congress, I introduced a bill (H.R. 11922) that would strike out of the medicare bill those provisions upon which the Department of Health, Education, and Welfare has relied to require the filing of a disclaimer by some 2 million persons who will be enrolling in the medicare program but who are not covered by social security, railroad retirement or civil service.

I believe that the required filing of this disclaimer is an infringement of the rights of free Americans and have urged the Secretary of the Department of Health, Education, and Welfare to eliminate it. If he fails to do so, I believe that Congress should act promptly. Many senior citizens have refused to file for medicare benefits because of this indignity. The deadline is March 31.

I want to call to the attention of my colleagues an editorial which was aired over station WTOP radio and television here in Washington on January 18 and January 19. I commend WTOP for its forthright stand.

The text of the editorial follows:

This is a WTOP editorial.

đ

t

Never underestimate the ability of government to go dashing down strange, unproductive bypaths.

Take, as an example, that ridiculous business of compelling about 2 million old persons to sign a kind of loyalty oath as a condition for receiving medicare benefits.

These 2 million men and women will receive medicare benefits from the general Federal tax revenues. To do so they must make formal application. The present application form, prepared by the Department of Health, Education, and Weifare, contains the following question: "Are you now, or have you been during the last 12 months, a member of any organization which is required to register under the Internal Security Act of 1950 as a Communist-action, a Communist-front, or a Communist-infiltrated organization?" Answer "yes" or "no."

HEW spokesmen, who are understandably embarrassed by all this, explain that the loyalty provision is required by an obscure section of law which is too tedious for us to go into. What is really involved is the dogged belief of some legislators and bureaucrats that they can prevent treachery by requiring everyone to affirm his loyalty. It's a kind of ritual conducted with little regard for logic.

Let us say this about affirmative loyalty oaths: except in very mare instances, they are of absolutely no use to anyone. The patriot is insulted to have to testify to his own trustworthiness. The subversive would not hesitate to lie about his connections. All the affirmative loyalty oaths administered in recent years are nothing more than a pile of paper junk awaiting appropriate disposal—by huming or by huming.

by burning or by burying.

Congressman William Ryan, of New York, has introduced a bill to remove the Communist disclaimer from the medicare application. That legislation should be whooped through, so that all elderly persons may receive medicare payments without being subjected to a loyalty inquisition.

This was a WTOP editorial, Jack Jurey speaking for WTOP.

## Leading Educator, Dr. Robert M. Hutchins, Warns That "Independent" Fed Limits Democracy

EXTENSION OF REMARKS

## HON. WRIGHT PATMAN

OF TENAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. PATMAN. Mr. Speaker, many important voices are being raised against the Federal Reserve Board's unwarranted action of December 3, 1965, which imposed another round of high interest costs on the country. Among these is the distinguished and highly respected educator Robert M. Hutchins, former chancellor of the University of Chicago who is now head of the Fund for the Republic, Inc. His remarks appeared in a recent issue of the Los Angeles Times, entitled "Another Look at Interest Rates." His column follows:

Anorher Look at Interest Rates
(By Robert M. Hutchins)

Three courses, I have suggested, are open to the country if it wants to prevent the sconomy from overheating as a result of the war in Vietnam.

The first is to stop the war. The second is to raise taxes. The third is to increase interest rates by the action of the Federal Reserve.

If it is impossible to stop the war, the equitable and democratic procedure is to raise taxes. This can be done only by the elected representatives of the people. It can be done with a view to the just distribution of burdens. The rate and incidence of taxation can be made a matter of intense public

Nothing of this sort applies to the increase of interest rates by the Federal Reserve. The board is not responsible to the people. It is not elected by them. No President can be sure it will follow the policies of the Government; and it may make the execution of those policies impossible. It may prevent the adoption of an integrated economic program. It may disregard public discussion of fiscal problems and public criticism of its decision.

Yet these decisions are vital to the wellbeing of the people. To deny the representatives of the people a voice in them is to limit the scope of democracy.

The only certain beneficiaries of an increase in interest rates are the banks. They benefit by a higher price for what they have to sell. The losers are those who need what the banks have to sell, those who need money to build something, to develop something, or simply to live.

It must be more than a coincidence that on one day it was announced that construction permits had taken the severest downturn in 10 months and on the next Standard & Poor's predicted an average increase of 6 percent in the earnings of major banks,

No doubt there may be times at which a country will have to raise interest rates and taxes simultaneously. This may be one. The representatives of the people should decide. But in any case the agency fixing interest rates should be in fact a part of the Government and not a paragovernmental, nonresponsible group of experts.

All this seems clear enough, so clear that the bankers who have attacked ms for saying it have not cared to argue these points. They have contented themselves with claiming that the Federal Reserve System has worked very well, forgetting that in 1935 it stopped working altogether. They say it has generated prosperity, a perfect example of the Chanticleer fallacy—the roceter believes the sun rises because he crows.

My friend Louis Lancaster, of the Santa Barbara National Bank, says of the Federal Reserve, "It has produced enough surplus wealth to relieve Mr. Hutchins of working with pick and shovel."

Two hundred years ago, long before the Federal Reserve was invented, Fenuel Hutchins left the ancestral farm in Connecticut and became a doctor. Ever since that time his descendants have lived by their with

After the Federal Reserve was established, my Uncle Grosvenor became a banker. We were very polite to him: he was the most prosperous member of the family.

## LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Fublic Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

# Daily Digest

## HIGHLIGHTS

Both Houses received President's message recommending changes in House Members' terms and in electoral college.

Senate cleared three sundry bills for White House and passed D.C. minimum wage law revisions.

See Congressional Program Ahead.

rights	110,000.00
S. Res. 202—Refugees and Escapees	105, 400. 00
S. Res. 203—Revision and Codification	42, 500, 00

President's Message—Term of House Members: President transmitted message with his recommendations for adoption of an amendment to the Constitution to increase from 2 years to 4 years the term of Members of the House of Representatives and to revise the electoral college-referred to Committee on the Iudiciary.

Pages 655-657

Pages 658-660

Rio Grande Bridge: Senate insisted on its amendments to H.R. 10779, authorizing construction of a toll bridge across the Rio Grande near Pharr, Tex., agreed to conference requested by House, and appointed as conferees Senators Fulbright, Sparkman, Morse, Hickenlooper, and Aiken.

D.C. Minimum Wage: By 60 yeas to 10 nays (motion to reconsider tabled), Senate passed with amendment H.R. 8126, to broaden the coverage of D.C. minimum wage laws, after adopting committee amendment (in the nature of a substitute) as to which the following actions on amendments had first been taken:

Adopted: Modified Prouty amendment to remove from the bill certain recordkeeping requirements and all posting requirements and criminal penalties with respect to employers of domestic servants in private residences; and Prouty amendment redefining the term "wage" for purpose of the legislation and specifying what shall be included in ad hoc advisory committee reports on revision of wage orders; and

Rejected: By 28 yeas to 42 nays, Prouty (for Dominick) amendment to eliminate power of D.C. Commissioners to raise arbitrarily the minimum wage above the statutory limits in the proposed legislation.

Senate insisted on its amendments, asked for conference with House, and appointed as conferees Senators Bible, Morse, McIntyre, Kennedy of New York, Tydings, Prouty, and Dominick.

Legislative Program: Majority leader announced that it is the intention on Monday, January 24, at the conclusion of the morning hour to move to take up H.R. 77, right-to-work repeal.

Bills Cleared for President: Senate passed without amendment and cleared for President the following three Finance Committee bills:

Building and Loan Associations: H.R. 327, exempting from taxation certain nonprofit corporations and associations operated to provide reserve funds for domestic building and loan associations;

Hawaiian Contribution to Protectorate of Democracy: U.S.S. "Kamehameha" (SSBN 642)

EXTENSION OF REMARKS

#### HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. LEGGETT. Mr. Speaker, on January 16 last, the Mare Island division of the newly formed San Francisco Bay Shipyard commissioned the U.S.S. Kamehameha as the 32d U.S.—SSBN—Polaris nuclear submarine. We honored in the West a year ago when we launched this great Hawaiian namesaked submarine many congressional leaders from Hawaii and California gathered for the occasion.

We are proud of our workmanship at Mare Island and particularly this great new instrument in our protectorate of democracy.

Adm. Hyman Rickover points up more particularly this matter as follows: U.S.S. "KAMEHAMEHA" (SSBN 642),

San Francisco, Calif., November 1, 1965. Hon. Robert L. Leggert, U.S. House of Representatives,

Washington, D.C.
DEAR MR. LEGGETT: We have just successfully completed the first sea trials of the U.S.S. Kamehameha, our 32d Polaris nuclear submarine. We also have in operation 22 attack-type nuclear submarines, making a total of 54. The Kamehameha was built at the Mare Island Naval Shipyard, Vallejo, Calif.

This ship is named for a man who was neither by birth nor choice American, who knew little about America, had few close contacts with Americans and never set foot on American soil. Scion of a royal family, he belonged to an alien race and religion. His political preference was for Britain, not for the United States. He was Kamehameha, King of Hawaii from 1810 to 1819.

If it seems strange that the name of a

If it seems strange that the name of a Hawaiian king should be borne by an American warship, the paradox resolves itself when we remember that he was the most striking figure in Hawaiian history and Hawaii is now our 50th State. We honor his memory because in our philosophy the heritage of every State of the Union is part of our common heritage. There is room in the pantheon of America's great for the herces of every sector of this vast Nation.

Kamehameha was a great warrior. Having fallen heir in 1782 to a small chieftaincy, he set out to conquer all the islands. Others had tried before but he was the first to succeed. It took 28 years before all resistance was quelled, but the bitter fratricidal fight brought an end to the continuous interisland wars that mar so much of Hawaian history.

Kamehameha proved himself an extraordinarily able and wise ruler. His power was absolute but he used it benevolently. Under

him the people were assured of justice and domestic peace. It was said of Hawaii under Kamehameha—as of Saxon England under King Alfred—that along any highway a child, woman, or old man could lie down to sleep in perfect safety.

At whatever time he had lived, Kamehameha would have deserved to be called the great, but his schievements were enhanced by the fact that they occurred at a time when Hawaii needed as never before to be united and well governed. His adult life coincided with the dangerous and difficult period that followed Captain Cook's discovery of the islands in 1778, when trading ships from Europe and America in ever-growing numbers made the islands their way station for rest and revictualing.

The visiting seamen brought weapons and tools that aroused the admiration of the Hawaiians, but also new vices and diseases that decimated their number. The rowdy behavior of the visitors was a constant threat to the independence of the islands, for any incident brought with it the danger of foreign intervention. By maintaining public order and treating foreigners with scrupulous honesty and cordial hospitality, Kamehameha gained his people almost a century of political treatom.

After a thousand years of self-contained remoteness, the Hawalians were ill prepared to cope with the sudden influx of strange new ideas and ways of life. An indigenous Stone Age culture, no matter how highly developed, rarely survives contact with modernity. Kamehameha, who had grown up in old Hawali, cherished its ancient religion and customs but realized his people must master modern techniques. He had an eye for what was good and what was bad in foreign ways. Against the latter he sought to protect his people, while enlisting the help and friendship of several foreigners in order to acquire such technology as would be useful for Hawali. He deserves much of the credit for easing the transition from an old to a new culture, and for whatever remains today of the spirit of old Hawali and its attractive way of life.

It is fitting that one of our swift new nucclear submarines should bear the name of this illustrious son of a race of intrepid seafarers whose swift cances made landfall with amazing accuracy across the wide spaces of the Pacific, whose superb seamanship and knowledge of stars, winds, and currents still arouse wonder and admiration.

Respectfully,

H. G. RICKOVER.

Constantino Brumidi—The Michelangelo of the U.S. Capitol

EXTENSION OF REMARKS

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1966

Mr. DOUGLAS. Mr. President, on January 17, I introduced legislation to honor Constantino Brumidi, Capitol artist who labored from 1855 to 1880 to grace our walls with his artistic genius.

The nationwide appreciation of the work of this man is most gratifying and a source of immense pride, a pride reflected in this article by Mr. Anthony Cama of Lynn, Mass., commissioner of Italian culture for the Order of the Sons of Italy. I am honored to share it with my colleagues by placing it at this point in the appendix of the Congressional Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTANTINO BRUMIDI-THE "MICHELANGELO OF THE U. S. CAPITOL"

(By Anthony Cama)

It was truly a great pleasure not so long ago for this writer to have a most pleasant correspondence with Lt. Gov. Elliot Richardson, who, besides his many other statesmanship qualities, has a great love of art. One of his unforgettable experiences is coming to know and love the beautiful paintings and murals of Constantino Brumidi which adorn with grace and Italian glory the U.S. Capitol. This article is the promise kept between Lieutenant Governor Richardson and the writer, Cama. We also have discovered another lover of Brumidi's art, Senator Faul. H. Douglas, Democrat, of Illinois, who will introduce legislation to have a bust of Brumidi placed in the U.S. Capitol.

This writing, therefore, is a cry to all lovers of art, to all Italo-Americans, and, especially, members of the Order of the Sons of Italy in America, to sit down and write cards and letters to Senator Dovenas to help him in this worthy crusade. A portion of this superb story is hereby presented to the readers of the Lynn Sunday Post.

Senator Douglas noted Brumidi's genius has thrilled millions of the visitors to the Capitol who have walked its spacious halls and historic rooms and viewed the beauty of its painted walls, particularly in the Senate corridor, appropriately titled the "Brumidi Corridor," the corridor in which Senator Douglas' office is located.

Constantino Brumidi, often termed the "Michelangelo of the U.S. Capitol," was born in Rome, Italy, July 36, 1805, and was one of the three Roman artists in his native Italy commissioned to restore Raphael frescoes in the Vatican loggia in Vatican City. He was exiled to America because of political activities in 1852 and was hired by Capt. Montogomery C. Meigs, to decorate the Agriculture Committee room at the Capitol in 1855. After he was commissioned, Brumidi remarked, "No longer have I any desire for fame and fortune. My one ambition and my daily prayer is that I may live long enough to make beautiful the Capitol of the one country on earth in which there is liberty." His brush was very busy in succeeding years, and the Nation's Capitol was his canvas. His work included the Senate extension, the Benate floor corridors, the House of Representatives committee room, the Capitol rotunda, containing his magnificent frescoes frieze of 15 historical groupings and capped by his huge frescoed canopy in the eye of the Capitol dome, measuring some 4,644 square feet of concave freezo. His work flourished until his tragic fail while

working on the rotunda frieze terminated his labors. He died in 1880, and was buried in an unmarked grave in Washington's Glenwood Cemetery, and it took 72 years for a grateful nation to acknowledge its debt to this man. Led by the persistence of Dr. Myrtle Cheney Murdock, wife of then Congressman Murdock, Democrat, of Arizona, Congress authorized a bronss marker for Brumidi's grave in Glenwood Cemetery.

Senator Douglas noted that some 86 years have passed since Constantino Brumidi com-pleted his final act of love in gracing the valls of the most important citadel of freedom in the world, the U.S. Capitol, and not a single bust or statue of him is to be found in our Capitol. It is certainly the least we can do for a man who signed his work with pride as "C. Brumidi, Artist, Citizen of the pride as "C. : United States.

So, today, for over 100 years, the splendor of Italian art so masterfully executed by Brumidi reflects the dignity, the perma-nence of our Capitol, and the greatness of our belowed United States of America.

## Two Columns by Arthur Hoppe

EXTENSION OF REMARKS

## HON, J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

One, published in the San Francisco Chronicle on January 13, is entitled "Private Drab Contemplates War" and the other column entitled "Now It's Time for Show and Tell" appeared in the San Francisco Chronicle on January 19. His columns follow:

[From the San Francisco Chronicle, Jan. 13, 1966]

OUR MAN HOPPE: PRIVATE DRAB CONTEMPLATES WAR (By Arthur Hoppe)

"Do you think," said Pvt. Oliver Drab. 378-18-4454, scrunching lower in his foxhole as the sniper fire whistled overhead, "that we ought to declare war on those fellows out

"Who says we should?" asked his buddy, Corporal Parts, tugging his helmet down as far as it would go.

"Some of the experts back in Washington and please take your foot out of my face," said Private Drab. "They say as long as we're shooting them up and bombing them, declaring war is the honorable thing to do. And then we could hang all the demonstrators back home as traitors."

I don't like civilians either," said Corporal Parts. "But if we're not fighting a war, what are we fighting?"

"Why," said Private Drab with some sur-rise, "I'm darned if I know. I'll go ask the prise, "I'captain."

So when there was a lull, Private Drab crawled to the command post, lifted his neck, saluted and asked Captain Buck Ace respectfully: "Excuse me, sir. But why are we

"Dammit, Drab," snapped the captain,
"are you starting that again?"
"Oh, no sir, it's that me and the corporal
were a little confused about what we're
fighting for."

The captain clapped the private on the shoulder in fatherly fashion. "The manual says a soldier fights better if he knows what

he's fighting for, Drab. So just keep in mind that you're fighting to honor our commit-ments and to preserve our national integrity. That's why you're in this war, soldier.'

"Oh. But we're not at war, are we sir?'
"Not technically," conceded the captain,
virling his bushy mustache. "Technically, twirling his bushy mustache. "Technically we are providing aid and military advice t loyal allies who are engaged in civil strife.

Just then, a mortar shell exploded nearby. "Keep your fool heads down or you'll get killed," cried Private Drab. "Excuse me, sir," he added. "I was providing military advice to our loyal allies."

"No need, Drab," said the captain. "We don't have any loyal allies with us on this operation. You see, it's a surprise attack and we don't trust them."
"Yes, sir," said the private, frowning.

"Anyway, soldier,' said the captain, patting him on the back, "I guess you know now why you're here."
"Yes, sir," said Private Drab thoughtfully.

guess it was mainly because I was drafted."
"With peacetime soldiers like you, Drab," said the captain exasperatedly, "I don't know how we'll ever win this " " this " " Dammit, Drab. Get back to your foxhole or

Jaminte, Drab. Get back to your realize of I'll shoot you myself."
"What'd he say?" inquired Corporal Parts as Private Drab flopped back into the foxhole half a second ahead of a machinegun burst. "Do you think we ought to declare war?

"Nope," said Private Drab, spitting out a mouthful of dirt "To tell the truth, I think we've got enough troubles already without having a war on our hands."

[From the San Francisco Chronicle, Jan. 19,

(By Arthur Hoppe)

"I'm mighty glad to see all you fellows home again. And I'm right proud of the way you went flying all over the world in 68 different directions in search of peace. And now it's time for Show and Tell. You first, Hubert."

"Yes, sir. And let me say, sir, I was pleased as punch you sent me to India for the funeral. I mean it dispelled a lot of vicious rumors that there was some reason you didn't wish me to represent you on these grim and sorrowful occasions."

"Stop smiling, Hubert."

"Yes, sir. Honest, I didn't smile once over there. And I had this great peace talk for hours and hours in New Delhi with Premier Kosygin, who was there, too. See? Here are my press clippings. They say it was the longest conference in years between us and

"And what did Kosygin say, Hubert?"

"Well, here's the 248-page transcript of our conversation, sir. You'll find his remarks on the very last page. See? Where he says,

"That's fine, Hubert. I'm sure my send-ing you over there convinced everybody I'm a peace-loving man. And quiet-loving, too. Now what about you-ah \* \* \* What's your name? Dean?"

"Sorry, sir, my name tag slipped. But Averell and I had a fine trip. As you know we were the only ones to visit Victnam. And I'd like to show the agreement we hammered out over there

"With the Vietcong, Dean? You been talking to them?

"Oh, no, bir. Not on your life. The agree ment's with our ally, Fremier Ky. See? We promise to go right on sending him troops and money. And he promises to go right on accepting them."

"I never lost hope that one of you fellows would bring home an agreement. And such a lasting one, too. That's mighty fine, Dean. Now it's your turn, McGeorge. And stop scowling."

"Frankly, sir, I was a little hurt that you'd only send me far as Ottawa in search of peace. Think how I feel at Georgetown cocktail parties when people say, 'Hi, there, McGeorge, and where have you been lately?' When I mumble, 'Ottawa,' they arch their

when I mumble, Ottawa, they arch their eyebrows and go off to talk to Joe Alsop."
"Trouble with you, McGeorge, is you haven't got your heart in your work any more. Look at Soapy, here. He goes all through Africa in search of peace and this time he doesn't get punched in the nose once. You know what he found Or Arthur, here. out in Rome? He found out the Pope's in favor of peace, too. Headlines everywhere. Yet, thanks to all these fine fellows flying millions of miles everybody now knows I'm a peace-loving man. What a tremendous ccess. What a strategic triumph. What a blow for peace."

"But, sir, we don't seem any closer to peace than before."

"Nonsense, Dean. Seeing it's my turn, let me show my latest private poll. Look at that. I'm up 12 points. Yep, due to the greatest peace offensive the world ever saw, I'm going to get a little peace at last."

"In Vietnam, sir?"

"Vietnam. Nope, I mean where I need it most. Here at home. And now that Show and Tell is over, it's game-playing time. Robert, get out the board and the dice and we'll have another round of Risk."

#### Men of the Year Awards

EXTENSION OF REMARKS OF

## HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, January 24, 1966

Mr. COOPER. Mr. President, I ask unanimous consent that the article, "Men of the Year Awards," from the January 1966 issue of Progressive Farmer, honoring Dr. Aubrey J. Brown, of Kentucky, and Mr. Jesse Safley, of Tennessee, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

MEN OF THE YEAR AWARDS

Dr. Aubrey J. Brown, chairman of the department of agricultural economics, Uni-versity of Kentucky, has won the respect of farmers and fellow workers. His service to Kentucky farmers in the fields of marketing, farm management, and agricultural policy has brought him national recognition. He is a member of the National Tobacco Industry Advisory Committee and a member of the agricultural committee of the American Bankers Association,

He and his staff are continuously helping farmers and farm organizations with management and marketing problems. In 1961, he played a major role in organizing and de-veloping Kentucky's first farm analysis group. Each member of the Ohio Valley farm analysis group pays an annual fee, and, in return, an area farm management specialist assists him in summarizing records and making future plans. This service was extended to 76 farmers in the Bluegrass area hast year. Now Dr. Brown and other University of Kentucky workers are preparing to extend this service to interested farmers near Louisville and Bowling Green.

Burley tobacco growers have profited many times from Dr. Brown's studies and research. In 1956, he studied the markets for burley in Spain and later a similar study was made in Egypt. Both studies paved the way for greater burley export sales. He also provided manpower to study the operations of tobacco warehouses to help bring about a more efficient marketing plan for Kentucky's main cash crop.

During the past 6 years, he and his staff members have held farm management schools in 30 counties. More than 1,200 farmers attended these sessions. He also had a series of schools for tax consultants who file returns for farmers.

Dr. Brown is the founder of Kentucky Farm Economics, a biweekly neweletter. The publication carries current information on outlook, marketing, agricultural policy, and farm management to 500 farmers and businesses. Dr. Brown also serves on the editorial board of the Agricultural Policy Review, a regional publication.

Cooperating with members of the University of Kentucky Animal Science Department, Dr. Brown has made market studies for feeder calf and feeder pig associations. And he helped with the reorganization of the Louisville Fruit and Vegetable Market.

Dr. Brown and his staff have rendered valuable service to Kentucky's future agriculture. Their studies and projections were used when Gov. Edward Breathitt launched his program to help farmers obtain a \$1 billion annual income.

It is for these deeds and services, plus many others, that the Progressive Farmer names Dr. Aubrey J. Brown as 1965 Man of the Year for outstanding and loyal service to Kentucky's agriculture and its rural families.

The City of East Point

EXTENSION OF REMARKS

HON. CHARLES L. WELTNER

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. WELTNER. Mr. Speaker, the Federal Government's war on poverty has long been needed. However, the efforts of the Government are not intended to and cannot replace the charitable efforts of individuals and private organizations. The two attacks—by Government and by private endeavor—must complement one another.

The city of East Point, in my congressional district, deserves special recognition of the manner in which it serves its people. This is accomplished through fine community pride and the concern of civic organizations of the city.

h

de de One example of the successful work of the civic organizations is the Tri Cities and Forest Park Clothing Bank, begun on Christmas Eve 1959 by the East Point Moose Lodge. From small quarters in a building on Main Street, the project has grown to occupy new quarters at 1949 Grove Avenue, East Point. This new building and land, valued at \$27,000, was built through the donation of money, material, and labor by individuals, business firms, and civic organizations. The mortgage on this property will be burnt on February 3, thanks to the dedicated efforts of Ed Crumley and his associates.

Over 500 children in South Fulton and Clayton County receive their clothing free of charge from the bank. Volunteer women sort clothes and serve families on Saturdays. As a result of the success of this activity, 27 clothing banks have been

established and are thriving throughout the State.

The Lay Committee of the East Point Health Council is a civic advisory board which supervises all welfare work in the city of East Point. It raises funds and provides assistance in necessary charity cases. It works with health nurses in administering all sorts of services to the poor, sick, and needy citizens, financed by allocations from the city and from individual contributions.

J. Lester Holt, chaplain of the city of East Point, is a dedicated servant of his community. The freezer locker and storehouse of food in his office is a source of needed assistance in family emergencies, and in 1965 he was responsible for 106 families receiving food, he counseled with 78 individuals, and visited 227 newcomers to East Point. In recognition of his tireless work in charitable causes, Chaplain Holt was chosen as "Mr. East Point" by the East Point Moose Lodge several years ago.

The city of East Point can take great pride and satisfaction in its accomplishments, which have earned for it a wide reputation as an energetic and civicminded community.

Agriculture With Sea Water

EXTENSION OF REMARKS

HON. JOHN SHERMAN COOPER

OF BENTUCKT
IN THE SENATE OF THE UNITED STATES
Monday, January 24, 1966

Mr. COOPER. Mr. President, the National Rivers and Harbors Congress which, since its organization in 1901 has been dedicated to the development of our water resources, has proposed that a study be made of the food and fiber which could be grown in saline waters. I ask unanimous consent to have printed in the Appendix of the Record the very provacative editorial which appeared in the November issue of the Monthly Reporter: "Agriculture With Sea Water."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGRICULTURE WITH SEA WATER

The noticeable crescendo in legislation and technology with respect to an adequate supply of suitable water for the various needs of our future population prompts us to reprint here our editorial published nearly 2 years ago under the title "The Future of Agriculture."

In doing so now, we go a step further and suggest-that we should breaden our research beyond attempting to make "fresh" water out of sea water, and explore thoroughly the possibility of breeding agricultural plants that can thrive in sea water itself. Nature has long since transmuted plant life in the sea to plant life on land. Possibly, with some help, she can reverse the process.

"It started when one of our directors, a farmer in a big way and reputedly the largest individual cotton grower in the world, asked us—'Why attempt the mass desalinization of sea water instead of adding something to it to make it suitable for plant growth?' When we, with a chemical education, told him that there are several basic reasons why

such procedure would be impractical, he remarked—You know too much to dream.

"Somewhat disturbed by that remark, because the director is a man of brains and experience, we passed along the question to a biologist who promptly agreed with us as to the present impracticability of finding a means of using sea water for plant growth, and the enormous difficulties presented, but he declined to say that it would eventually He pointed out that the impossible. inability of most land vegetation to thrive on sea water is merely a result of adaptation to environment; that there are vegetable forms, some of them land-based, which grow in sea water. He also told us of animal life in the sea with blood similar to that of our own, also a result of adaptation to environment. He did agree with us, however, that the areas which could profit most from landbased plantlife adapted to sea water, are those where combined transpiration and evaporation presently exceed precipitation. These are the areas which, after all other problems have been solved, would see a gradual increase in the saline content of the soil which might well prove to be an insuperable difficulty. By this time we were not so sure that our director had suggested an impossi-bility. With the help of science, plantife bility. With the help of science, practice, which has already proven its ability to adapt itself to greatly varying degrees of salinity, given time and breeding, might prove to be further adaptable. So we asked a biochemist.

"Why bother with the problem? said the blochemist. There is a nearer goal, and one probably more likely to be reached. The function of all agriculture is to furnish, directly or indirectly, food and certain materials for human use. We have come a long way on the road to producing a number of these materials by synthesis from inorganic sources. We have made a good start on the way toward synthesising, also from inorganic sources, all foodstuffs essential to the healthy existence and growth of mankind. For the far-distant future, focus your efforts on synthetic blochemistry, and cease to

on syntactic flucture of agriculture."

"By this time we were thoroughly confused, and we decided to ask our friend the economist. "Your problem is only temporary, he told us. "You were given the key by your blochemist friend. Every use of agriculture is for the satisfaction directly or indirectly, of human demands. Limit the number of human beings in a given self-supporting area, and, barring permanent major changes in climate, your problems of water supply for all purposes become more or less permanently controllable." We asked him for a good formula for limiting population, but he did not have one.

"We have been thinking over all of this, and we are inclined to agree with our director that—We know too much to dream. His suggestion is indeed provocative."

If solvable, the problem of breeding agriculturar plants which will thrive in untreated sea water will probably occupy researchers for many years and will cost a great deal of money, but the possible rewards are so great that we should not longer delay an organized attack.

American Policy in the Americas Restated

EXTENSION OF REMARKS

OF

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. LEGGETT. Mr. Speaker, in the 1st session of the 89th Congress rather broad Latin American policy statements were enacted into law which have caused America considerable embarrassment in Latin American diplomatic circles and in the press.

In reply to a letter I sent to the State Department soliciting their position on congressional foreign policy statements subject to misinterpretation, I received the following reply.

The policy stated by Secretary Rusk is a good one which adherents to the Alliance for Progress policy can certainly support:

SEPTEMBER 30, 1965.

Mr. JACK H. VAUGHN.

Assistant Secretary of State, Department of

State, Washington, D.C. DEAR MR. VAUGHN: Pursuant to the telephone conversation today between special assistant, Mr. Diego Ascencio and Mr. Wilber of my office, I respectfully request that you provide me with the State Department's official position respecting House Resolution 560.

I wish to further request the Department's position on Sensis Concurrent Resolution 56 introduced by Senator Jacon K. Javrs.

As this matter will be further debated in the House Chamber early next week, I would appreciate your immediate attention to this

Very truly yours.

ROBERT L. LEGGETT, Member of Congress.

DEPARTMENT OF STATE. Washington, January 11, 1966. Hon. ROBERT L. LEGGETT, House of Representatives,

Washington, D.C. DEAR CONGRESSMAN LEGGETT: Thank you for your letter of September 30, 1965, asking for

the Department's views on House Resolu-tion 560 and Senate Concurrent Resolution 56, as introduced by Senator Javirs. I have deferred my reply to your letter until the Second Special Inter-American Conference completed its work so that I might send you the address of the Secre-tary of State made on November 22 at that

Conference. The address makes a full presentation of U.S. policy, including the views of this Government on specific improvements ry in the Inter-American system to enable it to act more promptly and effectively in time of crisis.

It is the Department's view that the Sec retary's statement sets forth the position of the U.S. Government on the various points contained in the resolutions in ques-tion. The Department would prefer that the Secretary's address of November 22 at Rio de Janeiro stand as the single, authoritative expression of U.S. policy.

If I can be of further assistance, please do

not hesitate to call on me.

Sincerely yours,

JACK H. VAUGHR, Assistant Secretary.

ADDRESS BY THE HONORABLE DEAN RUSK, SEC-RETARY OF STATE OF THE UNITED STATES OF AMERICA, DELIVERED AT THE FIFTH PLENARY SESSION OF THE CONFERENCE HELD ON NO-**VEMBER 22, 1965** 

Mr. Chairman, distinguished delegates and friends in the Americas; we gather once more as representatives of the American community of nations to join in making more effective the great purposes which move our

peoples.

We are privileged to be in the beautiful city of Rio de Janeiro as it celebrated its 400th anniversary. In his founding proclamation in 1565, Estacio de Sá said: "Let our land be free, let us build a city, let these words remain as a memorial to our

resolution and labor." May our resolution and labor at this Conference add to that memorial.

Seventy-five years ago our governments launched the inter-American system—the oldest and most successful experiment of its

kind in international cooperation.

Today the influence of its principles and mechanisms may be seen in regional arrangements throughout the world.

The secret of our relationship is our common ideals. If we have not always been able to live up to these ideals, we have known better than to forsake them. The conscience of the New World-rooted in freedom and justice—remains solid and unchanged. At every critical moment of choice its asserts and determines the path we follow. Embedded deeply in the minds and hearts of our peoples, that conscience is the engine that drives us forward against all obstacles: whether we strive throughout the Hemi-sphere to implement the Charter of Punta del Este or—in my own country—to carry forward President Johnson's Great Society program.

Our purpose at this special Conference is to examine our regional system in the light of new circumstances and requirements within our hemisphere, as well as in the world around us. This is what our predeces-sors did in 1945 at Chapultepec as World War II drew to a close. This has been the pattern of development of the inter-American system since the beginning. The success of our system lies in the flexibility of its institutions-in its capacity to face unfolding reality. We have known how to experi ment and to adapt—how to preserve that which serves our foreseeable needs and when to alter that which has become obsolete.

Probably no two decades in the history of mankind have witnessed such sweeping political, social, and technological transformation

Since 1945 we have moved into the nuclear and space age. This has given a new dimension to the threat of war and to the necessity

Rapid advances in communications and transportation have removed the barriers of geographic isolation. Our interdependence within the hemisphere and in relation to other continents is greater today than ever before. No longer can we afford to view what takes place in Asia, Africa, or the Middle East as removed and unrelated to our security and welfare. And developments within each of our countries have become matters of vital concern to all.

Old colonial empires have all but disap-peared. From them have emerged more than 50 new nations—some strong, some -enriching and complicating our international relations.

This family of sovereign states, old and new, is becoming day by day, a world political community; and no one knows this better of us who serve as foreign ministers.

Within that community underprivileged citizens in every society throughout the world have been swept up in the revolution of rising expectations, which we must now convert into a revolution of rising opportunities. They no longer regard their condition of poverty, isolation, ignorance, and disease as immutable. They insist that the lives of the children shall be better than their own. They clamor for change—rapid, far-reaching

Our hemisphere has experienced profound-ly this universal phenomenon; and our governments, peoples, and international institu-tions have responded creatively.

The greatest and most complicated task which the inter-American system has faced in the past decade is the mobilization of

collective efforts in support of a peaceful and democratic, economic and social revolution

To accomplish this it has been nece to adapt and devise regional institutions capable of assisting governments in their development and reform programs. The Act of Bogotá in 1960 for the first time placed social progress on a par with econ-omic development. In 1960, the Inter-Amer-ican Development Bank opened its doors. In March 1961, President Kennedy called on all the people of the hemisphere to join in a new Alliance for Progress, a vast cooperative effort unparalleled in magnitude and nobility of purpose to satisfy the basic needs of the American people. In August 1961, the Inter-American Economic and Social Council approved the Charter of Punta del Este and launched the Alliance for Progress as the blueprint for a decade of development. The creation of the Inter-American Committee on the Alliance for Progress (CIAP) in 1963 strengthened the original concept of the Alliance as a coopertaive effort. At its energizing core the Alliance has thus become truly multilateral.

The Alliance for Progress has seen some disappointments. Clearly there is still an enormous job to be done. But we in Washington have watched its unfolding with increasing hope and confidence. President Johnson last August described the 4 years of the Alliance as "the greatest period of forward movement, progress and peaceful change that we have ever made in the history of this hemisphere."

The statistics tell, in overall terms, a story increased momentum throughout the hemisphere. Our general impression is confirmed by the expansion of schools and universities; houses and hospitals; measures for land and tax reform; the increase in the number and quality of development plans and programs; and by the expansion of job opportunities in the modern sectors of the Latin American economies.

Wherever one travels in Latin America. the earth is being turned and new founda-

But our confidence in the success of the Alliance goes beyond what can be read in statistics and the fact of physical construction. What we see is that in one country after another governments and private citizens are focusing with increased seriousness, competence, and determination on practical measures of economic and social development. There is emerging—in both the public and private sectors—what one might call an Alliance for Progress generation.

We see the vision of our hemisphere fully modernized, absorbing and making regu-larly available to all the people the best that a rapidly unfolding modern science and technology can afford; a hemisphere loyal to its own rich history, tradition, and culture; loyal to the values of social justice, individual liberty, and representative democracy em-bedded in the Western civilization of which it is a vital part; offering to its citizens a widening range of opportunities to express their unique gifts, engaged in passionate struggle—not in class struggle but in common struggle against the ancient enemies of man: hunger, disease, and ignorance.

And, I would add as a North American, a vision of this modernized Latin America, in-creasingly integrated, bringing its special gifts responsibly to bear as a partner in all the great affairs both of the Atlantic and of

This is a vision worthy of the highest values of a proud past—a vision in whose fulfillment a generation of Latin Americans will find a proud destiny.

In the next few months we will reach the halfway mark in the decade of the Alliance for Progress. Looking ahead for the next 5 years—and beyond—President Johnson has asked me to bring to you the following per-

sonal mes

"As I stated on August 17, on the fourth anniversary of the Alliance for Progress, our vital Alliance is perhaps the greatest adventure that this hemisphere has embarked upon since Columbus reached our shore centuries ago. I also pledged my administra-tion to helping all of our countries meet the goals of the Alliance

"Recognizing that fulfillment of our goals will require the continuation of the joint effort beyond 1971, I wish to inform conference-and through you, your respective governments-that the United States will be prepared to extend mutual commitments beyond the time period foreseen in the Charter of Punta del Esta. In determining the scope of the U.S. effort, we will want to examine carefully with you at that time the requirements of the hemisphere, in the light of progress made through self-help measures and the contributions which by then some of your countries will be able to make to one another to further the common effort.

We are conscious that as the national plans and programs of our countries take shape and take hold, two great issues are coming to the fore: the question of accelerating Latin American economic integration and measures to increase Latin America's capacity to earn needed foreign exchange

as its economies mature.

The future of Latin American economic integration is, of course, a question for you to decide. But we in the United States also have a deep and positive interest in it. hope decisions to hasten integration will be taken sooner rather than later. Let no one in this hemisphere suppose that we United States are fearful of your unity—we welcome it. We have, therefore, noted with pleasure that in recent meetings of foreign ministers in both the Latin American Free Trade Area and the Central American Common Market decisions have been taken which give promise of accelerating the integration process.

We cannot now foresee the final structure of a Latin American economic community. We cannot foresee the role which your gov ernments might wish the United States to play in relation to it. Our earnest hope is that it will maintain an intimate, cooperative, and constructive relationship with the United States. If together we can achieve that result, it would carry into the future the hemisphere tradition consecrated in the Charter of Bogotá and renewed and rededicated in the Charter of Punta del Este and the Alliance for Progress.

For there is an intimate relationship between national development and regional integration. A vital, integrated regional market must be based on vital, integrated na-tional markets and, I would add, on an expanding, diversified international trade.

We accept wholly the proposition that trade and development are closely linked. What we need now are practical, concrete steps taken by both the developing countries and the industrialized countries that will in fact expand trade. The United States will continue to help Latin America to earn more foreign exchange from its own resources and

Working with countries inside and out side the hemisphere, we will do what we can to promote and participate in arrangements to stabilize and sustain the prices of the traditional products on which your foreign exchange earnings capacity still substantially depends. We are doing this in the ruse of the coffee agreement. We are also joining in a search for ways to develop a stabilizing arrangement in comea. We participated in the conference which developed Third International Tin Agreement and we now have under active consideration the question of signature by the United States to that agreement.

shall do what is possible to keep the U.S. market open to the traditional products of Latin America. The recent de-cision to remove quota restrictions on U.S. imports of lead and sinc, the elimination of the special import fee on sugar. and the allocation of sugar import quotas are earnests of our intentions. We shall also continue to press for the elimination of those criminatory practices which work against Latin America on a world basis. And, as you know, in the Kennedy round negotiations on GATT, we are seeking the broadest possible degree of tariff reduction in both manufactures and agricultural products.

We support the programs of the IMF and IBRD looking to devices which would cushion short-term fluctuations in income resulting

from export price fluctuations

But we are all conscious that the future of Latin American trade must lie in the diversification, quality control, and competitiveness of its exports. In our work in the for Progress we are prepared grant priority status in the supply of capital and technical assistance for such efforts. Each of your countries must design its own measures to encourage the diversification of exports. Our contribution will be geared to these national programs. But in the end only Latin Americans can overcome the habits and heritage of an industry and commerce built up in past generations behind excessive tariff barriers—tariff barriers which gave an initial impulse to industrialization but which now inhibit further ex pansion. Quite objectively I would suggest that this heritage may be the greatest single obstacle to both regional integration and the expansion of Latin American export earnings.

At the same time, we believe there would be great value in establishing an inter-American entity to support and coordinate export promotion activities to promote in-vestment and research in Latin America, looking toward production for export and provide support and encouragement for national export promotion activity in each of the Latin American countries. We beit would be desirable for the Inter-American Committee on the Alliance for Progress (CIAP) to carry out studies looking toward the establishment of such an en-Perhaps it could also develop plans for a model national export promotion agency, appropriate, with suitable adaptation to local conditions, for establishment in each of the countries. We realize that several of Latin American countries have active and increasingly successful export promo-tion programs. But, clearly, there is a long We believe that an inter-Amer ican agency, charged with the specific pur-pose of promoting Latin American exports, might make a useful and significant contribution.

The letter of CIAP to the presidents last August placed special emphasis on meeting the needs of rural Latin America. It is where half the men, women, and children of Latin America live—and they are the poorest half. It is here where the strugto build modern economies in America will be won or lost. A radical and sustained increase in agricultural productivity in Latin America is a sheer nece But we must also devise ways to meet the social needs of the rural population—for housing and food, education and health. At the same time, we must help the campesino to increase his production, diversify his crops, and sell them at a fair and reliable price. This is an imperative area for improvement if Latin America is to grow the food, produce the raw materials, develop sound industrial plants, provide the national markets for industry, and sarn the foreign exchange that will guarantee prosperity and dignity for the individual and the nation.

In this connection, I would repeat the re-cent pledge made by President Johnson.

The United States is ready to assist in a continentwide effort to develop production within Latin America of fertilizer, pesticides, and other products that are needed to increase agricultural output.

One of the frontier areas of applied science which we have begun to explore is the use of atomic energy for large-scale water de-salination. The international symposium recently held in Washington has opened new vistas. A practical application is the feasibility study agreement signed between Mexico, the United States, and the International Atomic Energy Agency for a plant along the United States-Mexican border. As we look into the future, we see these be-As we fook into the tatute, we state of com-ginings—as well as the possibilities of com-munications satellites and other advanced technologies—offering great opportunities for the development of our hemisphere. When I speak of the problems which Latin

America confronts in the economic and social fields and of the work we must do together under the Alliance to solve them, the problems we face in North America equally in my mind. There are too many citizens in my country who are not par-ticipating fully in the social, material and political mainstream of our society. The dynamics of advanced industrial life and of exploding cities pose problems as searching and challenging as those confronted at ear-lier stages of development. This is why President Johnson launched his Great Society program, coupled with a major fort in the civil rights field.

We intend that every one of our citizens all be able to exercise his right to vote; that the elderly citizens of our country shall have available the best of medical care; that our educational system will reach out, find, and develop every talented child and youth in our society and train the next generation so that they can cope with the problems of the future, not of the past; that pockets of poverty be eliminated; that the great prob-lems of urban society be overcome. None of this will prove easy. None of it will be done overnight. But these are our active purposes.

In a real sense, the Great Society program is to be understood as our national effort to achieve the goals we have all set for ourselves in the Charter of Punta del Este. For, as President Johnson said last September, announcing a new international effort in the field of education: "This Nation's dream of a Great Society does not stop at the water's

The United States believes it would be desirable for the members of the Inter-American system to undertake charter commitments, one to another regarding the pursuit of those goals. These would be commitments among the members to take steps, severally, and together, in aid of the economic and social progress and the well-being of the namembers of the OAS should undertake to act individually—through measures of self-help—and, in conjunction with the efforts of individual states to mobilize their own resources, to act cooperatively. Each member of the organization should be pledged to lend its assistance reciprocally to others in ac-cordance with its constitutional processes.

It is built deeply into our common values that economic development and social justice must be accompanied by respect for hutice must be accompanied by respect for hu-man rights and strengthened representative-democracy. We have come to recognize that these two vital objectives are indivisible. For democratic institutions to prosper and personal freedom to flourish, the social and material needs of a people must be met. But, the reverse is also true. In order for a mod-pers section, to achieve surfained genomesociety to achieve sustained econo development, it is essential that its members have the freedom of expression and choice, of initiative and experimentation, to stimu-late the creativity and drive which fuel the

fires of modern economies. As we observe the performance of Communist regimes, we are increasingly convinced that human freedom is not only morally right, it is also the most efficient route to progress.

There are the underlying premises of our

Charter of Punta del Este.

The other side of freedom is responsibility. The other side of the assertion of man's rights is his duty to respect and uphold the rights of his neighbor and the interest of the community. The earliest and most basic democratic texts, coming to us all from our common Mediterranean heritage, distinguished liberty from license, freedom from enarchy

This dimension of democratic life has been driven in on us in my country as we have struggled to reconcile full employment with the avoidance of inflation; as we have worked ssure the political and social as well as the economic rights of all our citizens regardless of race or color; as we have set about to eliminate in our society the pockets of poverty. These enterprises require coopera-tion among every important segment of our national community, regardless of politics or social status. Such enterprises require, in a widespread consensus and ac-

ceptance of responsibility.

As I have observed the work of the American Republics—each seeking to carry out its government's commitments under the Charter of Punta del Este-I have been struck by the increasing recognition of this dimension of the democratic equation. I see coalitions beginning to emerge which, essentially, place national development plans above day-to-day politics. I see the begin-ning of efforts to check inflation by cooperaong government, industry, and labor. The building of this sense of common purpose will, I suspect, prove as important in the southern as in the northern portion of our hemisphere in the years and decades ahead. In free societies the struggle to preserve human freedom, to assure each of our citizens a full measure of participation in the democratic process, and to build what North Americans would call consensus what some of our Latin American friends might call the social contract—is never

sound point of departure in considering se issues is recognition of the fact that ect for human rights and the responrespect for numan rights and the state state of representative democrac; must grow from within, murtured by eco sentative democracy nomic progress, social maturity, and cultural advancement. The integral approach to development and reform under the Alliance for Progress is designed to help create these

In the field of human rights much remains to be done in our countries. Mine is no exception. Other nations of the hemisphere confront problems peculiar to their own societies. Looking back over the last few decades, I think notable progress has been made in the hemisphere in extending basic democratic rights to all our citizens. Prog ress may, perhaps, not be uniform.
may grow impatient with the pace.
the trend is definitely forward.

The Inter-American Commission on Human Rights is playing a significant role in this process. The responsible and efficient manner in which its members have performed their duties also deserves our warm praise. The confidence placed by the Domin-ican people in the Commission during recent months is to tribute to its effectiveness. Its efforts added to the moral sussion of govemorts—added to the moral suasion of governments through encouragement, reaffirmation of principles and example, and the Alliance—constitute, I am convinced, the most effective tools now at our disposal to advance the cause of individual freedom.

We confront comparable difficulties in trying to promote representative democracy and constitutional government. In this area

perhaps the problems are even more complex than in the field of human rights. overthrow by force of constitutionally elected governments is to be deplored. But we all know that political development is a complex historical process and that simple, abstract formulas are not necessarily the guide to wise assessments.

Therefore, we need to examine coups not in general but in particular—on a case-bycase basis. A proposal advanced several months ago that the American governments agree to consult together when unconstitutional changes occur in the hemisphere, is In this way the facts can be a good one. examined, and each government can decide on the course which it will follow in the light of those facts and of the views of the other governments.

The regular ministerial consultations which many of us now envisage might permit us to discuss intimately and with candor problems of this type before they become By deepening our common understanding of the political forces at work in the various parts of the hemisphere, we might be able to contribute to the strengthening of democratic process.

I turn now to the problems posed for us by the hard, continuing fact of aggressive Communist activities on the world scene and in our hemisphere.

Freemen fight communism because Communists-as a matter of doctrine, policy, and action-have sought to divert, subvert, and destroy what freemen aim to build.

World War II international communism has moved aggressively on the world scene with doctrines and tactics for world conquest. Behind the false banner of "wars of national liberation," communism seeks to accomplish by subversion what it knows it cannot achieve by democratic process or by open warfare. This is the Issue in Vietnam. This explains the betrayal of the Cuba revo-This was the design when Latin lution. American Communist Parties met in Havana a year ago. This is the objective of the guerrillas fighting in several of your coun-tries. This is why all of us in this hemisphere must be constantly on the alert against subversive action whether inspired from Moscow, Havana, or Peiping.

Communists are apparently now dusting off one of their older doctrines for renewed emphasis in this hemisphere: the doctrine of emphasis in this nemisphere: he decembe the popular fronts." A Soviet writer recently described developments in the Dominican Republic "the beginning of a new period in which the conditions are being created for broad national, anti-imperialist fronts." In broad national, anti-imperialist fronts." In Marshal Lin Piao's famous article of September 2, he also counsels, as a first step toward Communist takeover, "using the weapon of the united front." And he adds weapons to minously: "Within the united from, and communist Party must maintain its ideological, political, and organizational independence \* \* and insist on its leading

In all conscience, after a generation's ex-perience of Communist tactics, there is little mson for any of us to be deceived by their familiar, old-fashioned tricks.

I would like to touch for a few moments on the situation in Vietnam. This is but the latest of a series of efforts by Communist powers to extend their imperialism by force Since 1945 we have seen these efforts in Greece, in Berlin, in Korea, in North Vietnam, in India, and now in South Vietnam. These engagements were not isolated, local incidents. They were part of a pattern to probe the defenses of the free world—to test our will, to sap our strength, to open doors for greater conquests. We have been required to meet the challenge. The cost in blood and treasure has been high. But this is the price for protecting freedomonly of the countries directly concerned, but

of freedom throughout the world. For what is taking place today in Vietnam is not only the struggle of the Vietnamese people and those fighting by their side: it is also your struggle and that of every other free nation.

The impact of Communist aggression has been sharply felt in our hemisphere. In 1959 communism gained a footbold in our hemi-Turning his back on the inter-American system, Castro joined forces with the Soviet Union and converted Cuba into a base for Communist subversion. At Punta del Este in January 1962, we moved to protect ourselves by declaring communism to be incompatible with the principles of the inter-American system and suspending the Castro regime from further participation in the system. At the same time, we urged member states to take those steps they may consider appropriate for their individual or collective self-defense in the face of Communist indirect aggression.

National and collective action has reduced.

although it has by no means yet eliminated, the flow of arms and funds and subversive propaganda; the training of men in guerrilla warfare; and other actions designed to un-

dermine the security of our peoples.

In October 1962, we faced the grave threat of Soviet offensive missiles in Cuba. By acting swiftly and decisively under the Rio Treaty, we brought about their prompt withdrawal.

Two years ago, Venezuela was the victim of a flagrant subversive effort directed from Cuba. Again the Rio Treaty operated to help the Venezuelan people meet this challenge. In the process, the system served notice on the Castro regime that indirect aggression, like direct armed attack, would not be tolerated by the Americas. We made clear that the principle of individual or col-lective self-defense may be applied in either circumstance.

Our common hemispheric purposes in the Dominican Republic are simple. In 1960, the governments of the hemisphere decided that the actions of the Trufillo regime required the imposition of political and economic sanctions. In 1962 we declared Marxist-Leninism incompatible with the inter-American system. What we are doing now is providing the citizens of the Dominican Republic the opportunity to choose a govern-ment which is neither of the Trujillo nor the Castro variety; for we know that when the people register their consent in the Dominican Republic—as elsewhere through-out the hemisphere—they will reject both extremes.

Given the tragic history of the Dominican Republic in the past two generations, we know the task will not be easy. But we all can play our part confident that our mission conforms to the most basic shared values and purposes of the inter-American system.

WE

There is, I think, a general and increasing awareness of the need for vigilance by the American Republics to safeguard its own institutions and democratic processes against threats of totalitarian takeover and rule, whether coming from the extreme right or from the extreme left. This is a national responsibility—one for each nation to solve for itself in its own way. Apart from the requirements of national action, this Con-ference can usefully consider what developments and changes in our organization would strengthen its ability to act in support of hemispheric peace and security.

ability of the inter-American system to act promptly in times of crises has been reassuring for the future. But it is well for us at this stage in our development to take another look at our institutions and our methods in order to see whether we can

improve upon them.

This Conference should decide how we might best proceed with the consideration of specific improvements in the inter-Amer-

ican system which our deliberations disclose as necessary. It seems to me that the task might be entrusted after this Conference to one or more bodies which would carry forward our work in preparation for a special conference, under article III of the charter, to meet possibly within the next 6 months.

At this stage I should like to advance for

consideration some of the ideas that the United States believes could contribute to making our organization a more effective instrument.

First, the United States favors annual OAS meetings at ministerial level. The interac-tion and speed of developments in our hemisphere and elsewhere make it highly desirable that we meet with more regularity and frequency than we have before. consultations should not be confined to our hemispheric problems alone. Developments in other areas might be reviewed both for their implications for us, as well as for what we might do to further the cause of peace and freedom elsewhere.

Second, we should strengthen the organizational relationship among the key organs of the system: the Ministers, the Council, the Economic and Social Council, CIAP, and the Secretariat. Our objective should be to integrate the various facets of our collective effort; to insure they are responsive to the agreed policies of governments; to insure that cooperation in the political, economic, social and cultural fields are mutually reinforcing and to insure that new operational tasks are carried forward with administrative efficiency and dispatch.

Third, in our forward planning we should think not only of measures to deal with a confiagration once it has broken out, but also preventive steps the Organization might helpfully take in a dispute or situation in this hemisphere before it has reached the There is wisdom in the old dipcrisis stage. lomatic tradition—incorporated in United Nations doctrine—that bilateral disputes are best settled bilaterally. Nevertheless, Council might be empowered to consider a dispute or situation at the request of one or more American Republics; to recommend procedures for peaceful settlement; and perhaps to recommend provisional measures designed to prevent an aggravation of the situation. The Council, in carrying out such functions, could avail itself of assistance from the Inter-American Peace Committee, from special commissions, and from the Secretary General.

Fourth, the United States would also support strengthening the institution and role of the Secretary General, authorizing him to bring to the attention of the Council any matter which, in his opinion, may endanger peace and security in the hemisphere.

Fifth, there is the question of joint action. Both in the Cuban missile crisis and in the Dominican situation, the discharge by the OAS of its responsibilities involved not erely the assumption of political responsi bility but also the employment of units of the armed forces of various member states. These were contributed voluntarily and operated collectively under a combined com-mand. In the crises of 1962, this action was decisive. In the case of the Dominican Republic, the Inter-American Peace Force made a vital contribution to the avoidance of needless bloodshed and the creation of conditions for the Dominican people to determine their own future by votes and not by arms. Its importance is attested by the fact that the Provisional government has called upon it for continued assistance in the maintenance of peace and stability.

The United Nations has, of course, had much more experience than has the OAS in this type of multilateral peacekeeping force. Many of your countries have made personnel available for both United Nations observation and military operations in several crisis situations.

It may, therefore, be useful for us to examine, in the light of experience and the nature of our collective responsibilities for paece and security in the hamisphere, and elsewhere, the desirability of establishing these voluntary contributions to international peacekeeping operations on a more orderly basis in advance of their puture use by the OAS or by the U.N.

If we face the fact that we live in troubled times, if we face the fact that there are those who seek with purpose and persistence to destroy democracy. I believe, if we are patient, we shall find a creative way to recognize two important principles: first, we ought to be prepared to move fast and effectively and, if possible, together when a dangerous situation arises in the hemisphere: second, none of our governments is prepared to engage its military forces except by a national decision, at the highest level, in the

light of particular circumstances.

Sixth, I would note the need to avoid within our hemisphere competitive arms Our resources are desperately needed for economic and social development. all its imperfections we are blessed by the most mature and reliable system for regional security and peacekeeping on the face of the planet. As military budgets are formulated we should keep these facts before us and the examples, past and present, of the burdens and consequences of all arms races

The experience of the Cuban missile crises gave to the Western Hemisphere a heightened awareness of the need to control modern weapons and to prevent the proliferation of nuclear weapons. One of the initiatives that received added impetus in 1962 was the proposal to create a nuclear-free zone in Latin America. The United States has followed with keen and sympathetic interest the efforts of Latin American countries to work out agreed arrangements for excluding the proliferation, the stationing, or storage nuclear weapons within the territory of Latin American States. We have noted the encouraging progress toward this end which was made during the current year at discussions in Mexico City. The United States believes the project of a nuclear-free zone in Latin America is constructive statesmanship in the best tradition of the hemisphere. We welcome the effort and would be glad to see it reach a successful conclusion.

I should also note that our membership may expand.

The emergence of two new, independent states—Jamaica and Trinidad and Tobago caused our organization to devise a formula for the admission of members. We found the formula without need to alter the char-The door is now open to additional countries to join the OAS. We will welcome them wholeheartedly at such time as they wish to avail themselves of this opportunity.

VII

This, as we see it, is the panorama of our common tasks.

The intent of my country to work with you in the common quest for freedom and prosperity has never been as strong as it is today—to build together and together to pro-tect what we are building. President John-son has summed it up this way:

"Our charter charges each American country to seek to strengthen representative democracy. Without that democracy and without the freedom it nourishes, material progress is an aimless enterprise, destroying the dignity of the spirit that it is really meant to liberate. So we will continue to join with you and encourage democracy until we build a hemisphere of free nations from Tierra del Fuego to the Arctic Circle."

Thus we would reaffirm the faith of my Government in the effectiveness and vitality of our regional system. It has served to bring new levels of understanding and good will between our peoples. It has served to promote freedom and democracy. It has served, and is increasingly serving, as a means for achieving material well-being and social justice for our nations. It has served to keep the peace in this hemisphere and to protect us from our enemies.

The Organization has demonstrated its flexibility and adaptability to change in the past. I am confident that it will continue to do so in the future.

The challenge in this old hemispheric sys tem is like the challenge of domestic political life: to transform and modernize policies and institutions in harmony with abiding principles and values, so that the problems of today and tomorrow can be met.

Together I am confident we shall meet that challenge.

## The 48th Anniversary of the Proclamation of Independence of the Ukraine

EXTENSION OF REMARKS

## HON, MILTON R. YOUNG

OF MORTH BAKOTA

IN THE SENATE OF THE UNITED STATES Monday, January 24, 1966

Mr. YOUNG of North Dakota. Mr. President, January 22 marked the 48th anniversary of the proclamation of independence of the Ukraine. On this occasion, Americans of Ukrainian descent all across the land took part in special observances to once again bring to the attention of the world how a free, independent nation was forced under the voke of communism

In a recent letter to me, Dr. Anthony Zukowsky, president of the North Dakota branch of the Ukrainian Congress Committee of America. Inc., discusses the special programs planned for North Da-These included special religious services which were broadcast over radio and television throughout a broad area of North Dakota.

In his letter, Dr. Zukowsky made an excellent case for setting forth the necessity of maintaining our commitment to the people of the Ukraine and other nations who live under Communist tyranny. We cannot forget these people and their desire to obtain freedom. must continue to support them and help them to advance in every possible way the independence they seek.

Mr. President, I ask unanimous consent to have Dr. Zukowsky's letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, INC. STATE BRANCH OF NORTH DAKOTA. Steele, N. Dak., January 15, 1966. Hon. MILTON R. Young, U.S. Senate Office Building,

Washington, D.C.

DEAR SENATOR YOUNG: We want to again call to your attention that in the month of January Ukrainians all over the world includour State, will mark the 48th anniversary of the proclamation of the independence of or the proclamation of the independence of Ukraine, which took place on the 22d of January in Kiev, the capitol of Ukraine, also the 47th anniversary of the Act of Union on January 22, 1919, whereby Western Ukraine united with the National Ukrainian Republic into one sovereign and independent republic of the Ukrainian people.

Although the Ukrainian Republic was

Aithough the Ukrainian Republic was recognized by a number of States, including the Government of Soviet Russia, it had no durable peace nor prosperty because Communist Russia invaded the Ukrainian state despite its previous pledges to respect and honor the Ukrainian independence.

For nearly 3½ years, without assistance from the Western World, the Ukrainian people waged a heroic war against Communis Russis in the defense of sovereignty of their country but the gallant struggle came to a tragic end. The free Ukrainian state was subdued to a puppet regime of the Soviet Socialistic Republic.

Since the Russian Communist enslavement with brutal oppression and domination there has been much suffering among these people. But despite the Communist yoke imposed by Moscow, the Ukrainian people never accepted the foreign domination and are continuing to struggle for freedom and national independence. Through a series of heroic and bloody uprisings and a steady resistance through underground warfare, the Ukrainian people have demonstrated their undying love of freedom and their opposition to alien slavery and oppression.

ery and oppression.

Both the Congress and the President of the United States have recognized the legitimate right to freedom and national independence by enacting and signing respectively the "Captive Nations Week Resoltuion" in July 1959, which enumerated the Ukraine as one of the captive nations enalayed and dominated by Communist Russia, and is entitled to recognition and moral support by the American people and the free world at large. During the debate on colonialism in the U.N. Assembly in 1960 and 1961 a number of Western statesmen, including our Ambassador to the U.N. raised their voices in protest against the persecution of the Ukrainian people by the Communists.

The cause of Ukrainian freedom and independence is no longer a patriotic desire since the Communist menace has spread into Asia, our shores in Cuba and Latin America, it has become a political necessity for the free world to recognize that an independent Ukraine would substantially weaken the Communist

Americans of Ukrainian descent in our great State of North Dakota are planning to celebrate the forthcoming 48th anniversary of the Ukrainian independence on Sunday, January 23, 1966, in a solemn and fitting manner with special religious services and programs which will be heard on radio and TV over stations in Bismarck, Mandan, Minot, and Dickinson.

We firmly believe that you are fully aware of the importance of Ukraine as an ally in the struggle against Russian Communist imperialism. We, therefore, respectfully request that you make an appropriate statement on the floor of the Senate on or about the 22d of January in commemoration of the 48th anniversary of the Ukrainian independence. This anniversary provides an appropriate occasion not only for the U.S. Senate and American people but also for the U.S. Government to demonstrate their sympathy and understanding of the aspirations of the Ukrainian people.

It may also provide better understanding by extending diplomatic relations to Ukraine, which is a charter member of the United Nations, by nominating an American of Ukrainian descent to serve on some diplomatic post, and by the issuance of a commemorative stamp in honor of Europe's freedom fighter and Ukrainian poet, Taras Shevchenko.

We extend our sincere thanks and appreciation for the favorable response in the past on this and other matters, and we appe

that you will continue to accept our expressions with meaningful understanding. Sincerely yours,

Dr. Anthony Zukowsky, President, UCCA, State Branch of North Dakota.

## No Quick, Easy Solution to Vietnam

EXTENSION OF REMARKS

## HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. MOORHEAD. Mr. Speaker, after a visit to Vietnam last month I concluded that the most important contribution the average American can make to the war in Vietnam is patience. There is no quick and easy solution.

The nationally syndicated writer, Ralph McGill, in a recent column, compared the fighting conditions in Vietnam to an episode in our own history. He noted that Marion the Swamp Fox, using guerrilla tactics, "kept a large force of well-equipped British troops engaged across a long period of time." Four major expeditions by the British against him were unsuccessful.

Indeed it is frustrating to hold the power to devastate completely an entire enemy country and not be able to use that power.

Mr. McGill's column, published in the January 13 issue of the Pittsburgh Post-Cazette, is an excellent answer to the question: "Why not win in Vietnam?"

Under leave to extend my remarks I include it at this point in the RECORD:

NEITHER POWER NOR VICTORY ARE ENOUGH FOR VIETNAM (By Ralph McGill)

ATLANTA.—"Why not victory now?" "Why not win in Vietnam?" "Why don't we get it over with?"

"What's wrong with winning?" "Why can't this great power kick out that rabble of guerrillas in Vietnam?"

These and other idiocies, born of frustration, echo in the land of the free and the home of the brave. (It is a land that ought to understand, out of its own history, the frustration in Vietnam. Our own history includes Marion, the Swamp Fox. He based himself in a swamp and kept a large force of well-equipped British troops engaged across a long period of time. On four occasions, major expeditions were mounted against him. He cluded them. Marion was one of the factors that enabled final victory to be won. The more effective units of our continental army were, in effect, guerrilla troops, operating out of their knewledge of terrain and of living off the country.)

The United States would win. Winning

The United States would win. Winning would, in a sense, be easy. Congressman CHARLES WELTNER, speaking in his Georgia district, said to the impatient and frustrated:

"Certainly, it would be a simple matter to bring about, within 24 hours, the utter devustation of all of North Vietnam. We could kill every able-bodied fighting man there-along with every little child, every woman, every old man—all within the twinkling of an eye. We can win—if winning means wiping out 18 million human beings; and if winning includes the very real chance of direct military engagement with Commu-

nist China; and if winning includes the probable necessity for using nuclear weapons against Pelping; and if winning includes the possible destruction of Russia—after, of course, Russia has simultaneously destroyed 100 million American lives.

"We have the power to win—if we want to win under these circumstances. That power has gone unexercised, to the mounting frustration of us all, and to the increasing demand that we do something. We sincerely seek an honorable peace and, I am convinced, are willing to go the extra mile. We will not, however, negotiate a peace that would mean the inevitable loss of southeast Asia to the thralldom of China."

The world should have learned out of its many wars and "victories" that great power is not enough—not nearly enough. Nor is "victory" enough. Two tremendous wars enveloped most of the earth. They were "won" with a vast mobilization of power, men, materials, and food. A Korean war was waged, bloodily and indecisively.

It was said of this harsh conflict that it was waged to contain Communist aggresion. That was true. But it was not all the truth. We were then, as now, confronted with two Communist giants. Since that time, the second one, China, has detonated two nuclear devices. More are on the way. Russia, believing that communism eventually will triumph, seems willing, in the face of power, to build her own economy and avoid aggression. China, with a growing birthrate and an increasingly serious lack of food and viability in her economy, believes in and seeks aggression. Yet, in the last 2 months her attempts to infiltrate and subvert African governments have failed. A plot to make Indonesia a Pelping puppet was thwarted.

Peiping-trained Thailanders now are in open opposition in north Thailand. The story goes on and on.

Neither power alone, nor victory alone, is enough. What this country seeks to do is to mobilize all our power—our wealth of goods, money and arms—to seek the slow way, a new sort of "victory."

#### Heart Group

EXTENSION OF REMARKS

## HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, January 24, 1966

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the New York Times of January 10, 1966, noting the election of Philip P. Ardery of Louisville, Ky., as chairman of the board of directors of the American Heart Association.

Mr. Ardery distinguished himself in World War II, leading an air squadron on D-day and since has been equally distinguished as a member of the bar and as a devoted worker in the field of civic affairs.

I am sure that he will continue to provide effective leadership to the American Heart Association as chairman of the board of directors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOUISVILLE MAN HEADS HEART GROUP

The election of Philip P. Ardery as chairman of the board of directors of the American Heart Association was announced yesterday. Mr. Ardery, a Louisville lawyer, succeeds John D. Brundage. Gen. Dwight D. Eisen-hower continues as honorary chairman of the association.

Mr. Ardery retired last July as a major gen-rel in the Air Force Reserve. In World War eral in the Air Force Reserve. In World II he won seven U.S. decorations and the Croix de Guerre

Active for more than a decade in heart association work, Mr. Ardery has been a mem-ber of the group's national board and executive committee since 1958. In 1962 he re-ceived the association's award of merit for distinguished service to its programs,

#### One of Our Commissioners Is Missing

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. HOSMER. Mr. Speaker, the following communication has been sent by me to the House Republican conference, but I believe it may prove of interest to all our colleagues:

ATOMIC ENERGY COMMISSION VACANCY-FAILURE TO FILL

For almost 7 months—since July 1, 1965—vacancy has existed on the U.S. Atomic Energy Commission. This vitally important body with an annual budget exceeding \$2 billion is functioning at 80 percent of statutory manpower level. The management of its vast complex of scientific and industrial activities rides heavy on the shoulders of four rather than a proper complement of five supervising Commissioners. The input of thought, judgment, experience and wisdom into Commission decisions affecting both U.S. nuclear defense and American progress in peaceful uses of the atom continues month after month to remain starved by a factor of 20 percent.

Yet the Johnson administration remains totally unconcerned. Washington hears not the slightest rumor whatever of any possibility of a new Commissioner to replace Dr. Mary I. Bunting, who returned to the campus of Radcliffe College last June 30.

This regrettable state of affairs follows on the heels of an equally regrettable body blow to the Commission's force level dealt by the same Johnson administration in 1964. involved the appointment of Dr. Bunting herself in that year with the understanding and agreement of the White House that she would remain away from her teaching responsibilities only for a year. During her year in Washington, Dr. Bunting proved to be a brilliant, hard working, and able Commissioner. Expectedly, however, most of her year was devoted to learning the job. She left, therefore, at the very moment of emergence into a capability to assume her full share of the Commission's workload.

The administration knew, or should have known, at the time it appointed her that such would be the case. There were other candidates for the 1954 vacancy who were willing and able to serve the full term, which Dr. Bunting was not. Nevertheless, she was selected, because at that moment the administration was going through one of its periodic "appoint women to office" weeks.

All of this is a record of bad government administration. The people should know it. They are entitled to something better. The

#### Roy Wilkins on Hogwash

EXTENSION OF REMARKS OF

## HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. JACOBS. Mr. Speaker, a great deal of nonsense is being spoken and written today by individuals in an effort to ridicule this Nation's efforts to cope with the causes and effects of poverty.

Two columnists writing in the current issue of the Indianapolis Observer provide a most welcome change from what appears to be an increasingly active and deliberately misleading campaign.

Neither Roy Wilkins nor John Ackelmire, the Observer's columnists, will al-low to go unchallenged the bumper stickers which smugly proclaim, "I'm fighting poverty. I work for a living."

These two writers display honesty and realism in discussing the difficult circumstances in which the unwilling vic-tims of the "new technology" find themselves. For that reason, I take this opportunity to insert their comments in the Congressional Record:

[From the Indianapolis (Ind.) Observer] ROY WILKINS ON HOGWASH

It is easy for most white people to think of Negro life as one long physical hardship. They remember lynchings and the victims of beatings and shootings. They know about bombings and burned-out homes and churches.

Where Negroes are free of all this, or most of it, the public cries out, along with the young California guardsman in Watts: "What do they want? They never had it so good. These are not slums like Harlem."

There are other cruelties besides lynching and the Negro is not insensitive to them. One is the popular myth that the race doesn't want to work, that it prefers welfare payments.

Today the not-so-subtle insult is repeated roday the not-so-and speakers and parrots belonging to this or that society, but calling themselves generally, "conservatives." The latest dig is to be found on automobile bumper stickers:

"I'm fighting poverty. I work for a living." The implication is as plain as it is smug. It says there is work aplenty for those who want to work. It says that those who do not work are deliberately choosing the assistance of antipoverty and welfare programs. It says, further, with an air of self-righteous-We who work are paying the bills for those who choose to enjoy poverty."

Every student of the most elementary eco-nomics of a capitalistic society knows this to be hogwash, and pretty smelly even for that concection.

Statistics don't mean so much to people who think and live by slogans, but the fact is that 3 million Americans are hunting for work and cannot get a job. In the midst of our affluence we simply have not salved the problem of what to do about workers dislodged by technology, not by laziness,

One element of the formula for unemploy ment is a dark skin. It is true nationally that the unemployment rate for Negroes is

Commission vacancy should be filled twice that for whites, but in some locali-promptly by a person of high competence ties it is as much as four times the white who will agree to serve the term. ties it is as much as four times the white last August 1 out of every 3 Negroes was unemployed.

In Michigan computers are bringing thou-sands of different cars off the assembly line equipped by orders on punchcards. In Ohio a machine drills 250 cylinder blocks at once. In Louisiana a computer fills drums with chemicals. In Chicago a computer mixes and bakes cakes. On a single Dixie plantation a cottonpicking machine displaces 50 Negro families.

These changes and wholesale regional and family disruptions and the myriad personal tragedies that flow from them will not be remedied by the auto-bumper philosophers. They are too busy working—until they reach the brutal cutoff age of 45, that is.

[From the Indianapolis (Ind.) Observer] JOHN ACKELMIRE: THE DISINHERITED

Come along to the slave market. It is in front of the old city hall at Ohio and Ala-The scene could be-but won't bebama. The scene could be—out won't be-especially instructive to those social illiter-ates one generation removed from honest Hoosier bernyards who have managed to translate their fiscal luck in this fabulous economy into a self-righteous contempt for the unemployed.

Each morning long before sunup 2 dozen or more jobless Negroes gather at the curb-stone on North Alabama in hope somebody will come by and offer them an honest day's There are a few winos and incompetents among them. But the vast majority are versatile, able-bodied men about as perate for employment as it is possible to be. They arrive, poorly clad against the predawn's icy bite, and they stand on the sidewalk in orderly array until picked up or hope is abandoned.

Do they enjoy poverty? Are they living high off the hog on welfare? Do they deserve to be insulted by bumper stickers reading, "I'm fighting poverty, I work for a living"?

Fred Gibson is 63. He lives at 2238 North College and walks the distance each morning to the curbatone in the 200 block of North Alabama. He is twice a widower; his second wife died last February after a 26-year mar-riage. He has 4 grown children and 13 grandchildren. He is the sole support of one daughter, now separated from her husband, and two grandchildren. The daughter is expecting a third child in 3 months.

Fred Gibson has lived in Indianapolis more than 40 years. He never got beyond the fifth grade, although his felicitous manner of speech and wide range of self-gathered knowledge suggest considerably more formal education. In his time he has had some fair jobs—landscape gardening, construction work, hod carrying and fry cooking. The only really well-paying job he ever had, though, was a brief stint in a World War II war plant. He never has owned a house or

But neither has he ever been on public sut neither has he ever been on public welfare nor has he ever gone to a township trustee for relief. He has no police record. "I have always tried to be a man," he said the other day, "and part of that is holding attack to he." a steady job.

In recent times a steady job has eluded Pred Gibson. So he goes down to the curbstone each morning in hope of a day's pick-and-shovel or tile-laying work. If he is lucky, he may make as much as \$25 or \$30 a week. His rent takes \$16 of that. ("I don't know how I'm going to pay this week's rent," he said.)

Roy Conn, 55, of 308 West 10th, has lived in Indianapolis since 1928. He is a graduate of Louisville Central High School. For 17 years he parked cars in a downtown lot, but of late he has had to catch as catch can at the curbstone. Neither he nor his wife ever has been on relief.

Edward Taylor of 810 North Illinois made it through the eighth grade. He was in civil service work at Oak Ridge, Tenn., then was transferred to Fort Harrison "until the soldiers took over" in 1949. Since then he has een unable to find steady employment. Most of the other men I talked with have

similarly steady, modest backgrounds. are grateful to have the curbstone job mart as a door to temporary employment. They prefer that it not be called the "slave mar ket." Their pay runs from 75 cents to \$1.25 or \$1.50 an hour as a rule, depending upon the type of work they get.

Most of these good men are victims of the new technology. They are among 3 million employable but unemployed Americans. To most of these beyond the twenties or thirties, retraining and other war on poverty devices offer scant prospects.

What they need is what Fred Gibson said is part of being a man—steady jobs. And they need them now. This strongly suggests a need for Federal action to create those jobs. It was Abraham Lincoln, not Karl Mark who said the Government "should do for the people what the people cannot do themselves or as well themselves."

#### Affirmation: Vietnam

SPEECH OF

## HON, CHARLES L. WELTNER

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. WELTNER. Mr. Speaker, university and college students of Georgia have initiated and organized Affirmation: Vietnam, a project which has my approval and unqualified support. My colleagues here in the House have expressed their pride in these young people, and I join with them in applauding this expression of constructive patriotism.

The original impetus came from s group of students at Emory University in Atlanta, and now includes representation and support from most colleges and universities throughout the State. Its sponsors include Senators RICHARD RUSSELL and HERMAN TALMADGE and other notable Georgians and Atlantans, as well as the entire Georgia delegation to the House of Representatives. Remar M. Sutton, Jr., is providing excellent coordination of the movement in his capacity as general chairman.

The culmination of Affirmation: Vietnam will be a rally at Atlanta Stadium on February 12. It is a very special honor that Secretary of State Dean Rusk, a native Georgian and product of Georgia schools, will make the major address

Students have traditionally and historically occupied a unique place in our Their enthusiasm and intellisociety. gence have been joined to many causes, and they have not hesitated to debate the issues with clear candor, and without regard to personal gain.

In recent months, the students voice has often protested our commitment in southeast Asia. Therefore, this spontaneous movement by Georgia students is deeply gratifying and reassuring.

I am proud to be connected with this project, and I hope that the demonstration of support for the reasoned principles of our country's commitment will be noted by the rest of our Nation.

#### Johnson and Party Repairing Image

EXTENSION OF REMARKS OF

## HON, J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. YOUNGER. Mr. Speaker, recently, under leave to insert my own remarks and include extraneous matter, I had inserted in the RECORD an article by Walter Pincus relative to the Demo-cratic National Committee finances. Another of his articles on the same subject appeared in the Sunday Star of January 23. In order to complete the story, the article follows:

MONEY AND POLITICS-JOHNSON AND PARTY REPAIRING IMAGE

(By Walter Pincus)

Stung by recent criticism, President Johnson and his top political aids are moving to improve the Democratic Party's darkened fundraising image.

At the same time, however, financial de-mands of this year's congressional election activities may resurrect the bad image just as fast as the Democrats try to knock it down.

As a first step in image building, negotiations are underway to transfer some \$600,-000 raised by the newest \$15,000 a page Democratic ad book to a bipartisan foundation which—with matching funds from the Republican National Committee—would openly conduct voter registration drives prior to next fall's election

The ad book, which drew funds from 68 corporations, was promoted by the Demo-crats last summer behind a veil of secrecy. As originally conceived, the proceeds were to go to Democratic candidates who distribute the books at fundraising movie premieres.

DIRECT MAIL PLAN

As a second image-building step, the Dem-As a second image-building step, the Democrats soon will begin a modest direct mail solicitation for small contributions. In recent years, the Democrats have received almost 80 percent of their funds from donors of over \$100—most of them \$1,000 givers.

An effort last year to stimulate small contributions through a contest was a dismall.

tributions through a contest was a dismal failure. So few people entered that win-ners at the State level have not even been announced.

President Johnson, himself, started off the new fundraising approach with his campaign fund reform proposals in the state of the Union message. Among the sugges-tions—still to be transmitted in detail to was a tax relief proposal for political contributions. This is aimed at stimulating small donations.

In contrast to the Democrats, the Republican Party has since 1962 reported raising a simble proportion of its funds from donors of \$100 or less

As politically attractive as the imagemaking proposals are, they actually will cost more money than they will raise.

With the need to raise some \$4 million this year to support the national D-mocratic program, party leaders hope their top fund-raiser—the President—will be able to carry out appearances at five or six dinners around

the country.

The President's recent gall bladder operacost the national committee some \$1 million. Almost \$400,000 of that figure would have been collected at a California function Johnson had planned to attend. he was unable to go, the California promo-ters refused to hold the affair and held onto some \$300,000 already collected. That event apparently has been rescheduled for April.

TWO WASHINGTON EVENTS

Several fundraising appearances of Vice President HUBERT H. HUMPHREY, which bring in additional funds to Washington, were canceled when the President asked him to stay in Washington during his postoperative

This year, along with out-of-town Presidential appearances, the Democrats are planning on two affairs in Washington to bring in money.

The financial attraction of the Nation's Capital as a campaign fund source is irre-sistible. The entire take of an affair rather The entire take of an affair, rather than just half the proceeds, go to the Demo-cratic National Committee. In addition, the city is bulging with people who understand politics and respond to requests for contri-

Lobbyists, trade association representatives, and Government employees to make the city the best place to hold either a dinner-a has been suggested for this spring-or an entertainment gala—as is being talked of for midsummer.

However, fundraising in Washington has its drawbacks—the prime one being the up-roar over organized Democratic solicitation of Federal employees. Such protests have developed over the past 5 years. All the attempts at imagemaking could

be destroyed if the party resumes its intri-cate, organized, and illegal solicitation of Federal employees by their more politically oriented coworkers.

INQUIRY IS CLOSED

Last year, the Civil Service Commission and the Justice Department were forced to review the activities of officials in the Rural Electrification Administration after allegations were made and partially confirmed that tickets to the 1964 Johnson gala were being sold on office time to subordinates.

Justice recently announced it had closed the inquiry without finding sufficient evidence to warrant prosecution.

Such organized in-house soliciting also

was planned for last year's Democratic congressional dinner. Though it was stopped in some departments after being revealed in the press, other agencies carried it on suc-

Another aspect of Democratic 1966 fundraising will be promotion of the \$1,000 a membership President's Club, which since 1964 has supplied a heavy proportion of the party's funds. Though it creates the "fat cat" image, the President's Club funds will be needed to provide the major part of this vear's campaign money.

Tomorrow, HUMPHREY and other top administration and party leaders will attend the New York City President's Club kickoff meeting. Over 500 have been invited to attend the closed briefing-and subsequently

contribute \$1,000 to the party.

Similar events are being set up around the country, and probably will precede both the Washington and out-of-town fundraising appearances of Johnson.

RECOND AD BOOK DOUBTEUT.

The bad publicity generated by this year's ad book limits chances that another book will be attempted this year. However, if the need for funds demand it, the Democrats may put together a volume to accompany the gala.

Over 100,000 of this year's book—a valen-tine to President Johnson entitled "Toward

an Age of Greatness"—have yet to be distributed. Since less than 80 movie premieres were held—and some of the Congressmen sponsoring them barred distribution of the controversial book—the Democrats have been scratching around for ways to put the volume in circulation.

Advertisers were promised a circulation of 250,000 in order to justify their \$15,000 as a legitimate deductible advertising expense on their tax returns. In order to protect these corporations, the Democrats now plan to send the books out to State party headquarters for distribution to party members.

## Iowa Students Launch Crusade for Stamp Honoring Servicemen

EXTENSION OF REMARKS

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. GROSS. Mr. Speaker, I have noted with pleasure that students and faculty members at North Junior High School in Sioux City, Iowa, have launched a crusade in behalf of a new postage stamp honoring American servicemen. They are to be commended for this patriotic action and I would hope that the Post Office Department will act favorably on their suggestion.

Following is an article about the crusade which appeared in the Sioux City Journal:

NORTH JUNIOR'S SERVICEMEN'S FLAG PROJECT GROWS INTO STAMP CRUSADE

An idea has blossomed into a near-crusade among students and faculty members of North Junior High School here. And out of it all may come a new postage stamp to bring America closer to her fighting men around the globe.

An artist's conception of an 8-cent air mail stamp, using the design of an American flag with the words "American Servicemen, We Appreciate You," has been sent to Lawrence O'Brien, Postmaster General. The proposed stamp grew out of the same design that appears on a billboard here along Gordon Drive.

#### RECEIVES NATIONAL PUBLICITY

That billboard was the idea and project of students of the school, to show their moral support of American servicemen on duty throughout the world. The large sign, put up last week, received national publicity when a photograph of it was sent to newspapers in the Nation from the Journal, via Associated Press wirephoto.

Ultimate goal of the 600 North Junior students, however, is to have the design made into a stamp that will be seen by servicemen abroad.

In a letter to Mr. O'Brien, Robert M. Shockley, geography teacher at the school, said:

"Since the most prized possession of American servicemen is a letter from home, we know American fighting men would be most appreciative if their letters from home came with a U.S. postage stamp showing American gratitude."

To become an official stamp, a proposal is given to a citizens' stamp advisory committee, made up of prominent persons and philatelists throughout the United States, who have criteria that a stamp must meet.

OFFICIAL STANDARDS

Official standards are that no living person may be portrayed, the design must be of na-

tional appeal, cannot be for fraternal, political, or religious organizations or for commercial enterprise contributions and must not portray cities, towns, or counties.

About 15 commemorative stamps are issued each calendar year, in quantities of approximately 125 million.

It normally takes a year or more to have a design approved, although a stamp honoring the late Adlai Stevenson appeared just 6 months after his death.

"The best bet is to get a Senator or Congressman to get behind the matter, to present it," said Daniel K. Murphy, Sisua City post-master.

He noted, however, that the issuing of samps is one area reserved as much as possible for nonpolitical subjects and thought the proposed stamp could become controversial. There is a debate going on in the country over America's part in the Vietnam war—where most servicemen are fighting—and some people will like it and some won't.

GROWS INTO CRUSADE

But the project has almost become a crusade for North Junior students, and there has been a steady flow of letters from them to persons in all parts of the country, asking for support. One class has sent letters to person in 17 States, "to anyone they think might be of help." Mr. Shockley said.

person in 17 States, "to anyone they think might be of help," Mr. Shockley said.
Senators, Congressmen, President Johnson, and former Presidents, television and movie personalties—people in all walks of public life—people in and out of public office—have been contacted. And letters of support are now returning, he said

Within the city, support has come from other schools. Larry Reese, campaigning for student body president at Central High School, has made the project an election platform, say he will call on the students there and at other city schools to back it.

Chleo J. Weins, North Junior principal, and Tillie Luitgens, dean, have taken the matter to meetings with respective officials of other schools aid have received promises of help.

"This thing is just beginning to start," Mr. Schockley said. "Future moves may include a petition drive," he added.

## Missing Atomic Reactor Parts and Pieces Mystery

EXTENSION OF REMARKS

## HON, CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. HOSMER. Mr. Speaker, today I am making a report to the House GOP conference which may be of interest to others as well. Although the report discusses only certain nuclear reactor power station components, it is understood that considerable additional ALD supplies for India are similarly missing. The report follows:

MYSTERY OF THE MISSING TARAPUR REACTOR
PARTS AND PIECES

At Tarspur, India, a fine nuclear power station is being built costing over \$100 million. Of this sum \$80 million is being supplied by U.S. taxpayers via the Agency for International Development.

Early last September when the war between India and Pakistan broke out several hundred thousand dollars worth of parts and pieces for the Tarapur reactor where in the hold of a ship bound for India. The ship happened to be in a Pakistani port when hostilities commenced.

The Government of Pakistan immediately

siezed this cargo which consisted of a 20-ton airlock and precisely formed pieces of sheat steel. These were prefabricated components of the reactor containment vessel without which it could not be completed. The cargo was removed from the ship by the Pakistan Government to a place unknown.

AID and the State Department both were notified promptly of the situation. The Joint Committee on Atomic Energy requested that every effort be made to obtain release of this property. It was given assurance by the Secretary of State that such efforts were being made. For week after week no results were obtained. The U.S. contractor involved (General Electric) eventually became discouraged and in order to avoid interminable delay in completing the reactor—and consequent heavy financial losses—ordered replacements fabricated and shipped from the United States all the way to India.

The original parts and pieces are still somewhere in Pakistan still being held by that Government. Apparently neither the State Department, AID, the contractor, or anybody else outside of Pakistan has the remotest notion where they are even today.

Nevertheless, since the seizure, not only has President Johnson entertained the Prime Minister of Pakistan at the White House, but on January 19 AID saw fit to make a loan to Pakistan, making \$8.2 million American money available to that Government to assist in construction of the Mangla Dam and 100,000-kilowatt power station in West Pakistan. (The Tarapur reactor's initial power is scheduled at 380,000 kilowatts.)

It is difficult to formulate a moderate comment regarding this course of events, therefore, I am not attempting to do so.

# Ninetieth Birthday of Speaker Rainey's Friend

EXTENSION OF REMARKS

## HON, BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. O'HARA of Illinois. Mr. Speaker, on March 9, 1933, my friend and fellow Illinoisan, the Honorable Henry Thomas Rainey, was elected Speaker of the House of Representatives of the Congress of the United States. He filled with honor and distinction that high office for less than a year and a half, dying on August 19, 1934.

I am reminded of all this, and of the great pride we in Illinoic experienced at the election of Congressman Rainey to the Speakership, by the receipt of a copy of the Times-Echo of Eureka Springs, Ark., with a featured news article on the 90th birthday of the Honorable Claude Albert Fuller, Member of the 71st and the four succeeding Congresses.

Claude Albert Fuller was born in Prophetstown, Whiteside County, Ill., and, while as a small lad he went to Arkansas with his parents, he never forgot that he was a native son of Illinois. The part he played in the election of Speaker Rainey 32 years ago and how later he cashed in on much beneficial legislation for Arkansas is told in the following excerpts from the article in the Eureka Springs Times-Eche of January 20, 1966:

"Mr. Puller came to Eureka Springs at the age of nine with his parents.

Graduating from the Eureka Springs High School in 1896, he went on to law school in Chicago, returning home in 1898 to be

admitted to practice at the bar.

In 1928 Mr. Fuller was elected to Congress from the Third District and served his country in that position until 1939. He conducted the campaign to elect Rainey as Speaker, and was named to the powerful Ways and Means Committee, holding over under Speakers Byrns and Bankhead.

In Congress Mr. Fuller was the father of the White River program of flood control and development of hydroelectric power. He introduced the first bill which included Norfolk and other dams to follow. With just the completion of Beaver Dam just above his old farm, he lived to see the completion of that dream.

He secured new post office buildings for Berryville, Bentonville, and Siloam Springs, the Veterans Hospital at Fayetteville, secured funds for schools and roads.

He purchased both the Crescent and Basin Park Hotels in the 1920's and rehabilitated them. He is at present owner of the Basin Park Hotel and president of the Eureka Springs Bank.

Mr. Speaker on behalf of myself and others in Illinois who knew and admired Speaker Rainey, and his good wife, who worked by his side, throughout the years, I extend heartlest congratulations and good wishes to this stalwart young veteran of Arkansas on his 90th birthday.

## Publisher Carl Estes of Longview, Tex.

EXTENSION OF REMARKS

## HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. BECKWORTH. Mr. Speaker, I include in the Congressional Record an editorial which appeared in the Dallas News concerning one of the most outstanding men and publishers in our Nation, Publisher Carl Estes of the Longview Dally News.

BAST TEXAS' ESTES

In East Texas, New Year's Day came in with a monumental edition of the Longview Morning Journal—566 pages check-full of information about the past, present, and potential of that prospering, growing region and city.

"Opportunity Land," title of the frontpage editorial, aptly describes the area, industrial developments, new lakes and other tourist attractions, over 33,000 jobs in Gregg County, alone, plans for navigation of the Sabine River are but a few of the hundreds of evidences of opportunity developed or developing from the Louisiana boundary to the doorsteps of Dallas.

Key figure in many of these advancements today, as he has been for many years, is Carl Estes, publisher of the Longview newspapers. Aided by an able staff, he produces a January 1 edition each year that is the envy of fellow publishers and a keepsake for historians, business analysts, and others.

His 1966 achievement not only is the finest yet, but a newspaper to challenge the best efforts of everyone in the future. And everyone includes not only the staff of the Longview Morning Journal, but newspapermen from California to the Carolinas.

Massive changes have taken place in East Texas. Hills that once ran red with water eroding betweens rows of corn and cotton now are brightened by the crimson of clover grased by beef and dairy herds. Where mules not long ago turned syrup mills now stand plants turning out huge machines, beer and containers to put it in, to mention only a few.

few.

"The foundations are laid and new walls of progress are going up in the mighty Sabine-Cypress inland empire," comments our neighbor to the east of Dallas. This city and newspaper heartily concur and proudly team up with East Texans to help build those foundations and walls.

#### Warren A. Seavey of Harvard Law

EXTENSION OF REMARKS

## HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. HUNGATE. Mr. Speaker, the world of law and humanity itself is poorer today for the loss of Warren A. Seavey. By the same token all men are richer because of the contributions of his life. He worshiped reason and smashed idols. As a teacher, his field was law, torts, agency. More important he taught young men to think. To have him as an instructor was to get a glimpse—perhaps a clear one—of what it was like to have known Socrates. I submit herewith the New York Times obituary of this departed friend:

[From the New York Times, Jan. 19, 1966] WARREN A. SEAVEY OF HARVARD LAW—RETIRED PROPESSOR, EXPERT ON TORTS, DIES AT 85

CAMBRIDGE, MASS., January 18.—Warren Abner Seavey, Bussey Professor of Law Emeritus at Harvard University, died today of a heart attack in Weston, where he made his home. He was 35 years old.

Dr. Seavey was an authority on the law of torts, agency, equity, judgments, and restitution. Wide teaching experience abroad as well as in this country had also made him something of an authority on international affairs.

In November 1944 he headed a group of Harvard professors who asked the War Department to give German prisoners of war "a full education on the ideals of democracy." The department rejected the suggestion as "unworkable."

In the days before the Japanese attack on Pearl Harbor, Professor Seavey wrote to the newspapers on many occasions warning of the growing danger in the Far East. In October 1940, he wrote to the New York Times, "If we act now and destroy the economic stability of Japan, by complete embargo and by ald to China, we have little to fear." On October 14, 1941, he wrote, "It has been our past failures to speak clearly which have led Japan on." And of the appointment of Adm. Kichisaburo Nomura as Japanese Ambassador to Washington he said, "While Nomura smiles and placates, the (Japanese) army and pany poles to spring."

(Japanese) army and navy poise to spring."
He was born in Boston, took his A.B. and
Ll.B. at Harvard. After starting in law practice in Boston, he became a professor of haw
at the Imperial Pei Yang University, Tientsin, China. Later he taught at Harvard,
Oklahoma State, Tulane, and Indiana Universities.

He was dean of the Nebraska University College of Law from 1930 to 1926, and pro-

fessor of law at the University of Pennsylvania in 1926-27. He was appointed to Harvard Law School from the Pennsylvania post, and served until 1955.

Professor Seavey wrote "Cases on Agency,"
"Cases on Equity," "Restatement of Restitution," "Restatement of Torts," "Cases on
Torts," and other books pertaining to those
branches of law.

A captain of infantry in World War I, he directed the College of Law of the American Expeditionary Forces, in Beaune, France, in 1919. In 1947 he was president of the Association of American Law Schools.

He leaves his wife, Mrs. Stella Crowell Seavey; a son, Robert; a daughter, Mrs. Allan M. Cormack; and eight grandchildren. There will be a funeral for him in Memorial Church in Harvard Yard at 4 p.m. on Monday.

#### Firemen Necessary on Railroads

EXTENSION OF REMARKS

## HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. OLSEN of Montana. Mr. Speaker, I wish to call to the attention of my colleagues an ad in the Washington Dally News, Wednesday, January 19, 1966. This ad was inserted by the Brotherhood of Locomotive Firemen and Enginemen under the enlightened presidency of H. E. Gilbert. The article contains very interesting information concerning the train accident increase which has occurred since the layoff of firemen. I hope that my colleagues will give necessary attention to this ad:

WHY DO THE RAILROADS FEAR A REAL FACT-FINDING STUDY OF OPERATIONS WITH AND WITHOUT HELPERS (FREMEN)?

The railroads have prevented any valid joint study of the increase in train accidents, the decrease in railroad efficiency, and the loading of extra work and hazards on other employees since the removal of locomotive helpers (firemen).

Obviously the railroads do not want the public and Congress to know that, without helpers (firemen)—

Train accidents in 1964 increased an average of 24 percent over 1961, 1962, 1963—an increase the Chairman of the ICC called alarming.

On-duty deaths and injuries increased 10 percent among railroad operating employees (engineers, conductors, breakemen, etc.)—the group most affected by the fireman-off ruling.

Many accidents were not reported to the ICC by railroad managements.

Railroad efficiency declined, as evidenced by a decrease in average freight train speed a reversal of a longtime trend of faster train speeds.

Supervisors and other employees were assigned to do firemen's work in an attempt to hold down accidents and boost efficiency.

Locomotive engineers, nationwide describe their job as more hazardous and more burdensome without helpers (firemen) in locomotive cabs.

#### THE JOINT BOARD HOAX

The National Joint Board, created to study the effect of the firemen-off ruling, never investigated the increase in train accidents nor the decline in railroad efficiency. In fact, it never made any joint labor-management study of any factor related to the fireman issue. The truth is, it never functioned

as a joint board in any sense even though it was charged with conducting "a continuing and intensive study of railroad operations with and without firemen."

Instead of agreeing to a full and open investigation, the railroads, with the help of the Brotherhood of Locomotive Engineers, used the Joint Board as a self-serving propaganda vehicle. The Board's "report" based almost completely on secret management-controlled surveys, secret managementdirected studies. The report itself was management written and signed only by management members and an officer of a union rep-resenting less than 5 percent of all helpers (firemen). The railroads' attempt to pass off this report in the Nation's press as beacon of truth" is an insult to the intelligence of the Members of Congress, the American public and, above all, the perceptive leaders of the railroad industry.

Obviously, the railroads will not permit a penetrating study of what has happened since the removal of railroad firemen.

The reason: they are afraid of the results.

"Whereas people occupying property in urban renewal areas frequently must forgo opportunities to purchase other homes because of this delay; and
"Whereas vacant property is frequently
vandalized during the delay, causing substan-

tial financial loss to the owners when the property is finally acquired; and

Whereas the existing procedures for early acquisition of property in urban renewal projects are unwieldy and do not lend themselves to the alleviation of the hardships: Therefore be it

"Resolved, That the Department of Hous-ing and Urban Development is urged to de-velop procedures whereby funds for early acquisition of property in hardship cases can be received by the local community at the same time planning funds are made available upon the approval by the Department of Housing and Urban Development of the survey and planning application for an ur-ban renewal project."

Respectfully yours,

THOMAS D. LEADBETTER, City Clerk.

#### Urban Renewal and Property Acquisition

EXTENSION OF REMARKS

OF

## HON. MARTHA W. GRIFFITHS

OF MICHIGAN

TW THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

GRIFFITHS. Mr. Speaker. lengthy delay in acquiring property under urban renewal projects has resulted in considerable hardship to many property owners. The following is a resolu-tion adopted by the Detroit Common Council pursuant to this matter:

DETROIT, MICH. January 21, 1966.

Pursuant to action of the common council. the following resolution by Councilman Miriani was unanimously adopted by that body on January 18, 1966, and is herewith forwarded to you for your favorable consideration:

Whereas the Common Council of the City of Detroit has long been concerned about hardships caused some property owners as a result of lengthy delays in acquiring prop-

erty in urban renewal projects; and "Whereas the following are typical exam-ples of cases in which early acquisition might

alleviate undue hardship:

"1. Because of a heart condition, a man must move immediately into a home with all rooms on the first floor.

The owner of an apartment building limes tenants and income because of impending urban renewal.

"3. A retired couple now living in Florida can no longer attract tentants and have difficulty in protecting their vacant home from vandals.

4. A small market on the fringe of an urban renewal area loses a large percentage of its trade and must operate at a lose until it

"5. A family wishes to purchase a new home and must use the equity in their present home for a downpayment.

"6. A flourishing business wishes to relocate but needs the time and money which would be afforded by early acquisition to cowould be afforded by early acquisition in order to transfer operations without serious loss.

7. A widow receiving Aid of Dependent Children can no longer afford to maintain her house. She desires early acquisition so that she can move to an apartment.

"8. A family wishes to sell a vacant house which is part of an estate being diminished by taxes and insurance, and

In the Circle: Carl Albert

#### EXTENSION OF REMARKS CIF

## HON, TOM STEED

OF CHLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. STEED. Mr. Speaker, the January issue of Washington World magazine contains an article describing the talents and the achievements of CARL ALBERT as majority leader. This article recognizes his significant contribution to the record of the 89th Congress and also includes an analysis of his concept of the high role of the legislative branch of our Government. I am certain many Members will share my interest in this appropriate tribute to his work, which I will enter herewith in full:

#### IN THE CIRCLE: CARL ALBERT

In the 1st session of the 89th Congress, in a period of 174 days of legislative activity, of 469 proposals submitted by the President of the United States to the Congress, 321 were approved representing a batting average for the Johnson administration of 68.4 percent.

Many political spokesmen have pondered many political spokesmen have pondered the reasons for this spectacular achievement by the President. The Congress has been called a rubberstamp to the will of an im-perious Executive. The Congress has been termed "responsive" for the first time in years to the will of the people. Somewhere between these theories is the fact of the matter.

One of these "facts" is the presence on the scene of Democratic majority leader of the House of Representatives, the Honorable Carr Almer, of McAlester, Okla. Almer is the leader of the largest one-party majority since 1936. The task of the majority leader ince 1936. The task of the majority leader is to map strategy to fulfill the party's goals in any given legislative session. What the task has boiled down to through the years is the acceptance of a legislative platform from the titular head of the party—in Mr. Alexan's case, normally the White House in-ALERT'S case, normally the White House in-cumbent—and wielding the use of power, office, personality, and human relations to unite the diverse elements of his party to insure unity on any given issue.

To accomplish this task, the majority lead-er, working with the Speaker, wields the tremendous informal and formal influence

on House procedure, protocol, patronage, and

the inevitable opportunity for the chosen few to share the spotlight of national attention. In using this power, the leader must share it wisely with the chairmen of the House standing committees, traditional prima donnas in their own right, and somehow balance out to answer positively the demands of the White House.

It is sheer nonsense to believe that the 295 Democrata in the House simply gave a "yes" vote to Mr. Johnson's every whim. It is not nonsense to say that, among the 71 is not nonsense to say that, among the '11 freshmen Democrat Representatives, the average of support for the Great Society's legislative program was 59 percent on '2 key rolicalis and 83 percent on 66 rolicalis through early August 1965 (source, Congressional Quarterly). Such support might represent a case of knowing where one's bread is buttered; or, it might be that the freshmen elected in the Johnson landslide were truly of the Great Society cloth. At any rate, someone had to be able to mobilize this support among the freshmen as well as to hold in line the sizable number of incumbent Democrats conscious of their preroga-tives as House regulars. Most commenta-tors on the Capitol Hill scene believe that the genius who came into his own in deliver-ing the Johnson majorities was Carl Albert, a man far opposite from Johnson in public image or personality.

In contrasting the years of the Johnson administration to that of the Kennedys, observers believe that a partial answer to the ease with which the Great Society passed through the Houses of Congress rests in the shrewd use of House leadership by the President.

Someone, however, had to be there for the President to utilize. Someone had to granse the wheels, as it were. Someone had to be aware of the thousand nuances of House personalities; had to know the House as Lyndon Johnson knew the Senate in his days of leadership in the Upper Chamber. Speaker McCoamacx, a gentleman of the old school, has respect and admiration from many of his colleagues. He is not basically the same stuof personalities and of procedure—the combination that make a great House leader—as was Sam Rayburn or, for that matter, his predecessor on the other side of the aisle, JOB MARTIN, of Massachusetts.

The signs all point to the gentleman from

Oklahoma as the man who delivered for L.B.J. Why?

CARL ALBERT is a professional politician. He revels in the word "politician" from its classic meaning of involvement in people to its idiomatic use in our day with overtones of power and influence—of people and bosses. Carl Albert is a total unity as a politician. His background, his formal training, his personality bring a unity of heart and mind, into the play of the political arena.

As an astute scholar of the legislative -he wrote a brilliant scholastic record in his major of government at the University of Oklahoma and went on to academic achievement as a Rhodes Scholar obtaining two law degrees at venerable Oxford University, the ultimate in academic respectability for any American (Harvard notwithstanding)—Carl Albert understands the many sides of government by the people.

As a man, Cam Albert has a reputation of intense integrity among his colleagues. He is introspective in mien. He is not a "hall-fellow-well-met" who must be rewarded constantly by the smile of his companions to survive. In short, he is a man who knows himself, understands his life, and realizes to the nth degree what he is doing and where

As a man who knows politics, Carl Alexer respects loyalty. He recognizes that many a potential great in politics falls by the wayside because he does not understand the process of loyalty, of respectable compromise to insure such loyalty, and the necessity of

give and take; the art of the favor and gift of bestowing. The man who cannot come to grips with such can never be truly a master of our system of government. The man who can advance the party is the man who can control—who can direct the individual loyalties and build them into a workable majority. Carl Albert recalls the attention given him by Speaker Sam Rayburn and by then Majority Leader JOHN McCormack. He also recalls the union at an early date with the Johnson destinies. From his appointment in 1955 as party whip, Albert has been preparing for the role he plays today.

ALSERT is a realist even as he is a rationallat. From these standpoints, he is a natural
for a Speaker of the House. From the personal standpoint, no man committed to legislative government could avoid the thrill
in anticipating the position as Speaker. Difficult to understand on the part on of an
outsider, to the dedicated Member of the
House the position of Speaker is all that
the Presidency implies. Certainly Alsser
realizes that he is one on whom the light

may shine.
Such a view of the Speaker, gives further insight into Albert's dedication to the legislative success of the Johnson program. Albert is an avid and totally committed legislator. His experience and education have pointed him toward this area of government. First elected to Congress in 1946, Albert has been returned to Washington by his loyal constituents for 17 years. After four terms, Members of the House inevitably begin to view themselves as "clubbers." They become immersed beings. To the country at large, this is mere semantics. To the Washington dweller, characterizing a Congressman as a "clubber" simply means that this Representative is committed to a "life term" in the House and regards it as the first step of heaven.

Alsear himself terms his own romance with the House as being set in the ways of the Chamber. He readily confesses that to him the House of Representatives is the embodiment of the people's part in their Government. He quotes unashamedly and with real the words of Alsxander Hamilton that the House is "where the people truly rule."

Alban believes the House is the one area or government where the people have direct and constant control. To him here is government of, by, and for the people, where the people can direct and control it through the frequency and regularity of elections.

In his understanding of the integrity of the House, he regards it as the absolute balance point between the other spheres of government because it does reflect the will of the people.

In accepting ALBERT's analysis of the House and in his involvement in its mystique, one then faces the problem of reconciling the "rubberstamp" epitaph of the 89th Congress and Lyndon Johnson.

Questioning ALBERT on this point evokes an angry response from this taciturn man whose short stature belies the height of his fervor when aroused. ALBERT maintains that the program approved by the 89th Congress reflected the mood and temper of its Members and not the strength of any one man. He insists that neither the executive branch nor the judicial have usurped the power of the legislative. He maintains that each measure of the Great Society was developed in the Congress and not in the executive branch of the Government.

Perhaps the truth of the matter lies in ALBERT'S evaluation of President Johnson's role in the successful parts of the Great Society's program. ALBERT views the President as first and always a legislator—steeped in the traditions and the procedures of the legislative branch. He terms him the most skillful legislative tactician in our century.

The inference is obvious that such a President would know how to develop and

obtain passage of his programs. Certainly, any student would accept Alberar's view of President Johnson. Whether or not every measure of the Great Society was written in the legislative or executive branch is not determined. It is important to the continuing integrity of this branch, that its majority leader is willing to vocally insist on its prerogatives.

In large measure Great Society programs have been enacted into law. The ability of Carl Albert was a key here and the little attention he attracted in the last session, is a tribute to his wisdom and understanding of his Chamber and its Members. Certainly, the Republican Party has no legislative strategist of dual caliber on the scene and it surfers accordingly.

In forecasting the second session of the 89th Congress, observers will watch Car. Albert to see what is shead. With its measures law, the Great Society now faces the problems of administering, in some cases even creating, and certainly of funding its specific programs. It was one success to obtain approval of these measures; it may be another to obtain funds. At any rate, here will be a real test of Albert's ability to undergird his President's ideas with necessary cash.

In the days ahead for the Congress and its continuing role in our ever-evolving democracy, Case Armer will be a strong and central figure on the legislative stage for at least the next 15 years. In fulfilling his view of Congress as the instrument of the people, Carl Albert's philosophy of legislative government will be important to the America of the future. As he puts it, "Congress is an agency for accommodation and compromise, bringing public thinking into consensus. To be successful, Congress must act within the realm of public support. In building this support Congress must continue to be a broker of new ideas and be a partner with every aspect of our community life."

In bringing together the consensus which is the Great Society, CARL ALBERT is achieving his ideal of government by the people.

#### Mrs. Tom C. Gooch

EXTENSION OF REMARKS

#### OF

#### HON. LINDLEY BECKWORTH

OF THEAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. BECKWORTH. Mr. Speaker, I desire to include in the Congressional. Record some articles that appeared in connection with the passing of Mrs. Tom C. Gooch, of Dallas, Tex. I knew Mrs. Gooch and her late husband, Publisher Tom Gooch. They were very outstanding in many, many ways. The people of Texas forever shall miss them both.

MRS. TOM C. GOOCH DIES-CULTURE
BENEFACTOR

Mrs. Tom C. Gooch, widow of a former publisher of the Dallas Times Heraid, died in a Dallas hospital Sunday after a long illness.

The 82-year-old resident of 3724 Armstrong left a gentle but distinctive imprint on Dallas.

She was not only a benefactor of cultural ventures but an active participant. For a time, in her youth, she was a violinist with the Dallas Symphony Orchestra.

Last May she was awarded an honorary doctorate in humanities from Southern Methodist University. She was a well-known supporter of SMU. The Gooch family gave the university a journalism scholarship.

Two weeks ago when a Dallas elementary school was named after her husband, Mrs.

Gooch gave the school a grand piano, a color TV set and a portrait of her husband, publisher of the Times Herald from 1941 to 1952.

She was an honorary director of the Dallas Art Association, and a member of the Dallas Museum of Fine Arts League and the Dallas Woman's Club.

Many of her philanthropies were quietly done. She helped a number of young authors and artists. She was an important supporter of the Christ Child, an organization established to assist children of the poor.

Her voice was often heard favoring beautification projects in Dallas. She was a member of Highland Park Methodist Church.

She was 11 years old when she came to Dallas with her family. She had been born, Lula Flateau, in Pittsburg, Camp County. Her mother was the daughter of Maj. William Harrison Pitts, founder of that east Texas town.

Her father was Capt. Louis Falteau, a former steamboat skipper and son of a pioneer Texas couple.

In 1908, she was married to Thomas Carbry Gooch, the son of a buffalo hunter who, as an artist and writer, was already attracting attention in journalism circles.

Mr. and Mrs. Gooch had no children. She is survived by two sisters, Mrs. George Clifton Long, of Hartford, Conn., and Mrs. Eugene D. Nims, of St. Louis, and several nieces and nephews.

Funeral arrangements were pending Sunday night at Sparkman's Funeral Home, 2115 Ross.

#### [From the Dallas News, Dec. 1, 1965] Mas. Tom C. Gooch

Dallas mourns the death, at 82, of Mrs. Tom C. Gooch, whose influence and contribution to the life of city and area have been notable for more than half a century. Her interests covered a wide range of activities in educational, cultural, and philanthropic fields.

The former Lula Plateau was a grand-daughter of Maj. William Harrison Pitts, founder of the east Texas city of Pittsburg. Her father was Capt. Louis Flateau, former steamboat captain and son of a pioneer Texas couple. She was married in 1908 to Tom Carbry Gooch, longtime Dallas and Texas newspaper writer, editor, and publisher of the Dallas Times Herald at his death in 1962.

Mrs. Gooch was an honorary life member of the Dallas Museum of Fine Arts, on whose board she served for more than 40 years. She was a patron of the Dallas Art Association, and a member of the Dallas Woman's Club and the Daughters of the Republic of Texas.

Her interest in music dated from the early days of the Dallas Symphony Orchestra, in which as a girl she played the violin. With her husband, she was greately interested in the development of Southern Methodist University and the Southwestern Medical Foundation.

At SMU's commencement exercises last spring Mrs. Gooch received an honorary degree of doctor of humanities, a fitting honor of her personal achievements in which the whole community concurred.

#### MRS. TOM GOOCH LABORED ON ROSES

In a wide-brim hat, garden dress, and gloves, Mrs. Tom C. Gooch was a familiar figure among the roes bushes at her home, 3724 Armstrong Avenue.

Her flowers provided a seasonal show of bloom for passersby.

Before leaving her home for Dallas Medical and Surgical Clinic when she became ill on October 30, she spoke to Troy White, the man who had driven her auto for many years.

"Take good care of my flowers," she urged.

Mrs. Gooch, widow of a former publisher
of the Dallas Times-Herald, died Sunday
in the hospital.

From the time of her husband's death on June 13, 1962, Mrs. Gooch focused her energies and gifts on two important Dallas institutions. They were Southern Methodist University and the Southwestern Medical Foundation, whose growth, welfare, and pub-lic service had been Mr. Gooch's interest and concern for many years.

At the top of her personal list of organizations, charities, and good causes—numbering more than 50 through the years—was the Dallas Museum of Fine Arts. She was a member of the board of directors for more than 40 years, an honorary life member and a major patron from its founding days.

As a girl, she played violin in the Dallas Symphony Orchestra and the orchestra held her deep personal affection as a vital force in the growth of the cultural life of Dallas. Mrs. Gooch, a lifelong Methodist, in recent years spent her Sundays before a television

set following televised religious services. She was a charter member of the Dallas Woman's Club and was a member of the Daughters of the Republic of Texas.

Of her many honors, the honorary doctor of humanities degree, awarded her at commencement ceremonies this year at Southern Methodist University, perhaps touched her

most deeply.

Her illness prevented her attending the November 13 dedication of the Tom C. Gooch Elementary School in Dallas. During this ceremony, an oil portrait of Tom Gooch which had hung in her drawing room was unveiled at the school. The portrait was given by Mrs. Gooch in addition to her own

grand piano and a television set.

She loved to fish in Little Sandy Lake near Hawkins in Wood County. This summer she went on three fishing expeditions to the lake, just across the road from the farm where she and Mr. Gooch spent their sum-

mers in the old days.

The farm is in east Texas forests where her pioneer ancestors had hunted and -according to family lore-her grand-

father killed a deer on his 80th birthday.

Mrs. Gooch enjoyed her home, her flowers, her neighbors, and old friends. After the death of Tom Gooch, she never left Dallas except for the brief summer excursions to

## Resolution Providing for Brumidi Bust Gains Support

EXTENSION OF REMARKS OF

#### HON. FRANK ANNUNZIO

OF TLLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. ANNUNZIO. Mr. Speaker, I am delighted at the overwhelming response of my colleagues who have joined me in introducing identical concurrent resolutions urging the House of Representa-tives to authorize the expenditure of \$2,500 in order that a bust of Constantino Brumidi may be placed in the Capitol.

I have received many letters from my colleagues advising me of their wholehearted support in this effort to bestow recognition on Constantino Brumidi. It is my pleasure to insert these letters in the Appendix of the RECORD.

My heart is filled with joy and gratitude at this encouraging response and I take this opportunity to express my appreciation to all of you who have pledged support for this long overdue recognition of Brumidi.

I have talked with the distinguished chairman of the House Administration

Committee, Hon. Omar Burleson, of Texas, and he has assured me that the subcommittee of the House Administration Committee, which is chaired by the Honorable PAUL C. JONES of Missouri, will hold hearings on this legislation as soon as possible. I am certain that the members of the House Administration Subcommittee, as well as the House Administration Committee, after reviewing all the facts, will unanimously approve this worthwhile endeavor.

Once again, I thank all of my colleagues for their enthusiastic support of this resolution. Your active efforts will insure its early enactment.

The letters from my colleagues follow: CONGRESS OF THE UNITED STATES,

House of Representatives, Washington, D.C., January 18, 1966. Hon. FRANK ANNUNZIO.

House of Representatives, Washington, D.C.

DEAR CONGRESSMAN: I have your letter of January 12, and its enclosures—a copy of House Concurrent Resolution 531 which you have introduced to authorize procurement of a marble bust of Constantino Brumidi for placement in the Nation's Capitol and your press release on this matter.

share your concern that this talented artist, who contributed so much to the beauty of the U.S. Capitol, be honored in a fitting manner, and I will be pleased to give House Concurrent Resolution 531 every consideration when it comes to the floor of the House of Representatives for action.

Sincerely yours,

EDNA F. KELLY.

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES. Washington, D.C., January 20, 1966.

Hon. Frank Annunzio, House of Representatives, Longworth House Office Building, Washington, D.C.

DEAR FRANK: Just a short note to tell you that I am more than happy to be able to introduce an identical resolution such as House Concurrent Resolution 531.

I have this day put it into the hopper and shall look forward to receiving my confirmation copies.

With kindest personal regards, I am, Sincerely yours,

JOHN H. DENT, Member of Congress.

HOUSE OF REPRESENTATIVES Washington, D.C., January 17, 1966. Hon. FRANK ANNUNZIO, U.S. House of Representatives,

Washington, D.C.

DEAR FRANK: Following your note about
Brumidi, I will introduce a like resolution. This is mainly because I admire Congre ANNUNZIO just about as much as I do Artist

Yours,

Washington, D.C.

JOHN G. DOW.

CONGRESS OF THE UNITED STATES HOUSE OF REPRESENTATIVES, Washington, D.C., January 19, 1966. The Honorable Frank Annungio, House of Representatives.

DEAR FRANK: Pursuant to the excellent suggestion made in your recent letter, I have on January 18 introduced a concurrent reso-lution which is identical with your House Concurrent Resolution 531.

My bill is known as House Concurrent Res-

Please be assured of my continued sup-port to obtain passes of this legislation which will bring due recognition, however

belated it may be, to Artist Constantine Brumidi, "Citizen of the United States." Aloha and best wishes.

Sincerely,

SPARK M. MATSUNAGA. Member of Congress.

CONGRESS OF THE UNITED STATES. HOUSE OF REPRESENTATIVES. Washington, D.C., January 20, 1966. HON FRANK ANNUNZIO

House of Representatives. Washington, D.C.

DEAR COLLEAGUE: Thank you for contacting me with reference to your proposal that a marble bust of Constantino Brumidi be placed in the Capitol.

I'm for your bill wholeheartedly. With kind regards, I am,

E. C. GATHINGS.

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES Washington, D.C., January 19, 1966. HOD FRANK ANNUNCTO

House of Representatives.

Washington, D.C.

Dear Frank: Thank you for your letter and copy of your resolution to honor

I appreciate your sending me this resolu-tion, and I will introduce it shortly.

With best wishes, I am, Sincerely yours,

PAUL A. PINO. Member of Congress.

CONGRESS OF THE UNITED STATES. HOUSE OF REPRESENTATIVES Washington, D.C., January 18, 1966. Hon. Frank Annunzio, Suite 1429, Longworth House Office Build-

ing, Washington, D.C. DEAR FRANK: Thank you for your letter of January 12 and enclosed copy of your resolution, which would authorize the procure-ment of a marble bust of Constantino Bru-

midi for placement in the Nation's Capitol. I am happy to inform you that I have today introduced a similar resolution, and I hope this legislation will be enacted during this

session of the 89th Congress. With warm personal regards, I remain, Sincerely yours,

WILLIAM T. MURPHY, Member of Congress.

CONGRESS OF THE UNITED STATES. HOUSE OF REPRESENTATIVE Washington, D.C., January 19, 1966. Hon. FRANK ANNUNZIO,

Longworth House Office Building.

DEAR FRANK: I thought you might be interested in knowing that today I introduced in the House a concurrent resolution identical to House Concurrent Resolution 531 which you introduced on January 12.

With kindest regards, I am Sincerely yours,

JOHN N. ERLENBORN. Member of Congress.

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES Washington, D.C., January 14, 1966. Hon. Frank ANNUNZIO,

Longworth House Office Building.

DEAR COLLEAGUE: Thank you for calling my attention to House Concurrent Resolution 531. You have done well in securing recog-nition for an outstanding artist and a great

I am proud to support you in giving this well deserved recognition. Cordially and sincerely,

BARRATT O'HARA, Member of Congress. CONGRESS OF THE UNITED STATES.

NTATIVI House or Representatives, Washington, D.C., January 17, 1966.

HOD. FRANK ANHUNEIO, House of Representatives. Washington, D.C.

DEAR FRANK: I appreciate your writing me with reference to your House Concurrent Resolution 531 which would recognize the outstanding artist and great American, Constantino Brumidi.

As you know, this legislation is pending before the House Administration Commit-tee, of which I am a member. It certainly shall have my support and vote.

Sincerely.

SAM M. GIBBONS, U.S. Congressman.

CONGRESS OF THE UNITED STATES, HOUSE OF REPRESENTATIVES Washington, D.C., January 21, 1966.

HOD. FRANK ANNUNZIO. e of Representatives, Washington, D.C.

DEAR FRANK: I am happy to join with you in this long overdue tribute to Constantino rumidi and will put my bill in next week.

Kind personal regards. Sincerely yours,

JOHN M. MURPHY. Member of Congress.

CONGRESS OF THE UNITED STATES, House of Representatives, Washington, D.C., January 17, 1966.

Hon. FRANK ANNUNZIO, House Office Building, Washington, D.C.

DEAR COLLEAGUE: Thank you for sending me your resolution and information on Con-stantino Brumidi.

I support your resolution, and will vote for it when it comes before the House.

With best wishes. Sincerely.

DONALD M. FRASER.

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES, Washington, D.C., January 18, 1966. HOD. PRANK ANNUNEIO,

House of Representatives, Washington, D.C.

DEAR PRANK: It is my pleasure to introduce a bill identical to your House Concur-rent Resolution 531 giving recognition to Constantino Brumidi.

Be assured of my support in securing pasage of this resolution.

Very truly yours,

ROBERT L. LEGGETT. Member of Congress.

CONGRESS OF THE UNITED STATES. HOUSE OF REPRESENTATIVES. Washington, D.C., January 14, 1966.

HOD. PRANK ANNUNZIO. House of Representatives, Washington, D.C.

DEAR COLLEAGUE: This is in reference to your letter of January 12. I will be glad to support House Concurrent Resolution 531, to rocure a marble bust of Constantino trumidi to be placed on the first floor of the procure Brumidi Senate wing of the Capitol. With best regards,

Sincerely,

RICHARD BOLLING.

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES, Washington, D.C., January 14, 1966. Hon. Frank Annuncio, House of Representatives,

## Polish People Became United as a Nation a Thousand Years Ago

EXTENSION OF REMARKS

## HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. WILLIAM D. FORD. Mr. Speaker, the year 1966 marks the 1,000th anniversary, or millennium, of Christianity in Poland. Some 30 million Poles in Poland, and some 12 million others of Polish descent throughout the world, will celebrate this memorable milestone in the history of a great nation.

The important role played by Polish-Americans in the history of the United States is too well known to need documentation. The recent appointment of the distinguished John A. Gronouski as our Ambassador to Warsaw typifies the many key positions held in the United States by Americans of Polish ancestry. The Warsaw assignment has taken on deeper significance in recent months, since it has been openly acknowledged that this is our unofficial contact with Red China

The thousands of Polish-Americans in my congressional district are joining with their fellow Poles everywhere in observance of the millennium this year.

An article in the January 13 edition of the Dearborn Heights Journal, published in my district, exemplifies the pride which the Polish people feel on this historic anniversary. This article, writ-ten by Mr. Robert Selwa, himself a Polish-American, is a well-written and moving tribute to one of the oldest of the Christian nations. For this reason, I ask to have it read into the Congressional RECORD, and brought to the attention of my colleagues and to all Americans:

From the Dearborn Heights (Mich.) Journal, Jan. 13, 1966]

MILLENNIUM 966-1966-POLISH PEOPLE BE-CAME UNITED AS A NATION A THOUSAND YEARS AGO

(By Robert Selwa)

"Poland is not yet lost," the Polish Na-tional Anthem states. "While we live she is existing, Poland is not fallen \* \* \*

"Poland shall the foe enslave thee sadly and forever; and we hesitate to save thee? Never, Poland, never."

The Polish National Anthem was written in 1797 when the country was partitioned by its more powerful neighbors, Russia, Prussia, and Austria. Today, with Poland again under the domination of foreigners, the words are just as applicable. Following World War I, Poland emerged

as a nation in its own right. The brave resistance of the Polish people to the Nazis during World War II and to the Russians today give reason to believe that Poland will

once again emerge as an independent state. The Polish people became united exactly 1,000 years ago when Duke Mieszko married the Catholic princess Dabrowka, daughter of King Boleslaw of Bohemia.

szko became a king and converted to catholicism. He agreed with Rome to establish a Catholic mission in Poland. Since then, Poland has been a Catholic nation of its own status in the world.

During those 1,000 years the Polish people fought off invaders from sust and west, established centers of learning, and developed a spirit and a culture of its own.

The University of Krakow was established

and served as one of the beacons of thought and culture during the Middle Ages. But the Polish people remained for the most part the hardy peasant folk tending their sheep and their farms that they had always been. Those who migrated to the United States tended to set up farms here. The Polish, in America as in the home

country, are individualists and hard workers who resist any yoke other than that which they undertake themselves.

Rutgers University: 200 Years Old and Virile

> EXTENSION OF REMARKS OF

## HON, EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. PATTEN. Mr. Speaker, in 1966 one of America's oldest and most respected higher education institutions-Rutgers, the State University, of New Jersey-is celebrating the 200th anniversary of its founding.

Since 1766, when it was called Queens College, Rutgers has educated and trained many thousands of students, who are now leaders in education, industry, science, government and other vital fields. I know that its achievements will be even greater in the future, because it has a fine president in Dr. Mason Gross and a real friend in Gov. Richard J. Hughes.

As a graduate of Rutgers and as the U.S. Representative of the congressional district in which it is located, I submit with pride an editorial from the Courier News, of Plainfield, N.J., entitled, "200 Years Old and Virile."

TWO HUNDRED YEARS OLD AND VIRILE

Rutgers University can look back 200 years to its founding in 1766, but its sights are set today on the future and the potential for growth on the University Heights campus and elsewhere. There is a crying need for New Jersey to respond to its opportunity.

In 3 successive days last week, we witnessed the official opening of Rutgers University bicentennial celebration; we heard Dr. Mason Gross, president of Rutgers, present an exciting picture of the potential of the university, and we reported that the State educational department has proposed a \$108 million college construction program for Rutgers and other State colleges to ac-commodate 18,000 new students by 1970. Governor Hughes is expected to say more about that in his address to the legislature tomorrow.

It will cost money to build the educa-tional facilities and to hire the faculty that New Jersey needs. But we agree with those who see the expense as an investment which will return a profit and pay dividends.

We see that return measured in terms of future undergraduate students staying in New Jersey for their education and continuing here as responsible, self-supporting citi-zens in a burgeoning economy.

We see business and industry attracted to a State which has facilities for research, an expanding educational program and a con-tinuing source of well-educated employees for a variety of work and specialized serv-

The picture ties together in an integrated hole. It does not exist at present. The whole.

whole system needs revitalizing, both for quantity of students and for quality of edu-cation. But the potential is here.

## The Woods Go to Washington

EXTENSION OF REMARKS OF

## HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. MORSE. Mr. Speaker, the appointment of Robert Wood as Under Secretary of the new Department of Housing and Urban Development brings to Washington not only one of the ablest men in the field of metropolitan problems today, but his charming wife as well. Peggy Wood has been an active participant in the community life of Lincoln, Mass., where she is the current president of the Lincoln League of Women Voters. No doubt her work there will be missed, but I feel certain that she will find new outlets for her many talents here in Washington.

Under unanimous consent, I include an article by Carol Liston regarding Mrs. Wood, which appeared in the Boston Globe and the Washington Post, in the CONGRESSIONAL RECORD:

THE WOODS GO TO WASHINGTON

(By Carol Liston)

Mrs. Robert C. Wood of Lincoln, whose hus-band just became Under Secretary for Housing and Urban Development, is enjoying the excitement of her new life.

Suddenly being in the limelight "is fun." according to Margaret Wood, who quickly adds, "I don't want to sound immodest. I don't seek attention. But the last week has been exciting."

A casual woman, who favors tweed skirts and flowered blouses, Mrs. Wood, 34, admits that life in Washington will require some

"I imagine," she says, "life will be more formal, more dressy. I'll find this difficult. But this is just another thing I'll have to master."

So far, there's been no time for adjust-ment, for Mrs. Wood or her family. She had 2 hours' notice to ready her three children and herself to fly to Washington for her husband's White House swearing in.

As a result, son Frank, 5, was wearing tired brown corduroy pants, with denim knee patches, for the auspicious occasion.

And Mrs. Wood recalls the horror of searching for stockings without runs, and a spot-free outfit for the same trip.

Amid a dosen community commitments, Mr. Wood is trying to get a house in Wash-ington, hopefully in the District. She also is trying to rent her modern home, situated

a woodsy plot off Trapelo Road.

A visit to her house involves catching fleeting bits of conversation while this attractive onde answers phone calls from friends and

the League of Women Voters in Lincoln.
Although her two daughters, Frannie, 10, and Maggie, 7% (she insists), are in Lincoln public schools most of the day, Mrs. Would maintains a hectic pace.

One night I sat down and counted up all of my activities," she recalls, "and I found I had 11 jobs for 6 organizations."

Such work includes, the board of directors for the local League of Women Voters, presi-dency of a local cooperative nursery school, soliciting blood donations, charity fund raising, and church choir.

Peg Wood also notes she once held elective office as a trustee of the Bemis Lecture Fund in Lincoln. "One of my jobs then was to make scrambled eggs for Robert Frost, when the fund invited him to read his poetry

Slowly, she is moving out of her local jobs, to devote her attention to answering contulatory mail, a task she enjoys.

"I'm going to have a new role, now," she nuses. "I decided my own program before. was more independent. Now my work will be as a wife."

Her first experience as an assistant to her husband came during the press conference, just after he was sworn into office. "I felt so "I felt so funny. There we were and all I could se familiar faces from Meet the Press. I felt like waving at them," she recalls.

She did spy a real friend, Saville Davis, chief of the Christian Science Monitor Wash-"He used to live just down ington bureau. "He used to live the street. So I winked at him."

Washington has a very warm spot in Mrs. Wood's heart, as she met her husband there in 1951, when she was a Radcliffe student and he was with the Bureau of the Budget.

They were married in 1952 and she completed college at George Washington University. Later, in 1954, she received a masr's degree from Radcliffe in history. In 1955, the Woods moved from Cambridge

to the house they had built in Lincoln. The switch from suburban living, to city dwelling, is an appealing change to Mrs. Wood.

Til like the convenience of city life. And it will be nice not to have to depend on the automobile for every little errand," she says. "And it means the children can be more independent, too."

The girls agree they are going to miss Lincoln and their schoolmates. concerned member of the family is Frank.

His father had promised him a visit to Yellowstone National Park, to see the bears. Now there won't be time for such a visit.

But Frank has agreed he will be satisfied with Washington, if the zoo has a lot of handsome bears.

#### Understanding Juvenile Delinquency

EXTENSION OF REMARKS

OF

## HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. BROYHILL of Virginia. Mr. Speaker, juvenile delinquency is a very serious problem about which all of us are very much concerned.

I wish to call the attention of my colleagues to an excellent speech on the subject of juvenile delinquency made by a constituent of mine on January 12, 1966, Mr. Anthony J. DelPopolo, Sr. The speech was given to the members of the Parent Teachers Association of the Lorton Elementary School, Lorton, Va.

Mr. DelPopolo is certainly an authority on the subject he chose, for he is the assistant superintendent of the D.C. Youth Center at the Lorton Reformatory.

I commend his speech to all for careful attention:

UNDERSTANDING JUVENILE DELINQUENCY (By Anthony J. DelPopolo, assistant super-intendent, D.C. Youth Center, Lorton, Va.)

Juvenile delinquency is a serious social problem today. In fact, it has always existed, but the pattern and number of delinquencies have changed. Even in past generations

they were wondering how to cope with this selfsame problem. For example: "Times are not what they used to be. The world Children no must be coming to an end. Children longer obey their parents." This she observation was discovered on a clay te This shrowd not far from Babylon—over 4,000 years ago.
And how about these words of concern:

"Our youth now love luxury, they have bad manners, contempt for authority. They show disrespect for elders and love chatter in place of exercise. Children are now tyrants, not the servants of their households. no longer rise when elders enter the room. They contradict their parents, chatter fore company, gobble up their food and tyrannize their teachers." And so spoke Socannize their teachers." And so spoke Socrates, the Greek philosopher, in fifth century B.C.

Juvenile delinquency has long been considered an urban slum problem, it has been increasing in suburban, middle- and upper-class areas. The total number of crimes committed by persons in their early teens has increased at an alarming rate. This has caused public interest and indignation throughout our country, as is evident from the coverage of the subject given at meetings such as this. Lengthy articles have been written in the newspapers and maga-Studies, long and expensive, have been undertaken by private and public universities, by both congressional committees and the Department of Health, Education, and Welfare. Illegal behavior is no small

is increasing faster among girls than boys. Over one million minors are arrested annually, and one-third of these end up as court cases. Does this frighten you? Well, it does me.

problem, when two major crimes are com-

mitted every minute. It is no laughing mat-

The annual cost of law enforcement alone is about \$4 billion. And what is additionally disturbing crime and delinquency

I am not here this evening as an expert in the problems of delinquency-in fact, there are none. I am here as one who is interested in the solution of these problems and would like to share with you some of my ideas about the subject.

Just what do we mean by this "juvenile deinquency"? The terms "juvenile" and "delinquency" have varied meanings—dependent upon the point of view in which the erm is discussed.

To some people "juvenile" is a dirty word. It frequently refers to small children, as for example when one speaks of "juvenile furniture." However, any relation to childhood is quite distasteful to many an adolescent on: that's something which he asserts he's left for good. Large numbers of adults assume that "juvenile" means delinquent. "Juveniles" are overgrown, sex-crased

"Juveniles" are overgrown, sex-crased teenagers according to them, who have no respect for authority, are completely without morals, are in fact only one step from becoming full-fledged adult criminals. Small wonder, then, that the label "juvenile" is often resented by those to whom it is applied.

What does juvenile delinquency mean? In a legal sense juvenile delinquency involves the commission of a minor crime or some serious behavior. The definition of 'minor" in regard to crime varies from State to State, but generally it applies to a person over 6 and under 15 years of age. Under the legal definition juvenile delinquency might include habitual truancy, conduct endangering the person or morals of others, infraction of governmental laws and regulations, and uncontrollable disobedience. delinquency typically displays overtly disrespect for socially accepted values concerning property and persons. He often engages in acts of violence and vandalism.

How about the psychologist? How does he feel about "juvenile delinquency?" To him the legal definition would not do at all.

He would only classify antisocial behavior as delinquent behavior only when it is repet-tive behavior. Such as, when a child steals again and again; or when he deliberately destroys property or attacks other persons; or if he, over and over again, truants from school or from home; or, if he habit-ually runs the screets at night in questionable company—these are the delinquents by psychological standards.

There are many people who hold the pro-fession of psychiatry in high esteem. Let's hear what he has to say about delinquency. To the psychiatrist juvenile delinquency may be defined as a child who is hostile, defiant toward authority, whether it be vested in the policeman, the teacher, or the parent. Generally, the child in question is striking against the world for reasons which become apparent as he is studied psychiatrically.

And how about the educator, what does he think of this matter? A superintendent of schools in a southern State notes that juvenile delinquency is a serious type of deviation contrary to law. An incorrigible youth is a delinquent. In like manner, a midwestern educator remarked that delinquency is antisocial behavior outside the pattern of normal misbehavior which is so extreme as to endanger society and the delinquent himself.

And how do you personally feel about the matter? From one point of view many of us did violate some legal statute in a moment of foolishness, daredevilishness, or rebellion. The difference between us and many legally adjusted delinquents lies in the fact that we were fortunate enough not to get caught, or, if caught, were dealt by understanding adults.

May I present to you some facts about denquency. It will help you understand the linquency. problems much better. Young people be-tween the ages of 15 and 17 seem most prone to delinquency. They are more often charged with offenses than the group from 18 to 20. The decrease in the number of delinquencies after age 17 is partly explained by the fact that the children reach the age at which they can leave school and obtain em-Two to four times as many boys ployment. as girls are arrested for delinquent acts. In all, those included in the delinquency sta-tistics account for less than 2 percent of all the children of the United States.

The most frequent offenses by boys are stealing, malicious mischief, and property damage. For girls, ungovernable behavior, running away, and sexual promiscuity top the list. There are three times as many urban cases as rural ones.

These figures cannot be considered conclusive because many children who commit such acts do not come to the attention of the proper authorities. In some cases, children are referred to clinics or sent away to private schools by parents to avoid legal action, and are not counted.

We are all interested in the causes of de-linquency. With this in mind-much research is being done-in and out of correctional institutions. However, in the surveys and investigations already made, the results point to one general conclusion—"there is no one single cause of juvenile delinquency."

It is an inaccurate oversimplification to say that delinquency is caused by bad books, had movies, or bad TV programs, or to say that it is caused by broken homes, working mothers, father absenteeism, inadequate discipline, overcoddling, or lack of religious training, or crowded schools, or slum neighborhoods.

We find that factors such as these have a bearing upon delinquency and many such influences are found in the life histories of individual delinquents. Yet we know by observation that there are nondelinguent children who read bad books, and who have seen bad movies; nondelinquents come from bad homes and from homes with mothers; nondelinquents who have been cod6

dled, or who have little, if any, religious training, or who were educated in crowded schools, or who lived in a slum neighborhood.

As we look at juvenile delinquency, it does not indicate necessarily a life of later crime. Many who have been apprehended once go on to lead useful lives. There are a multiple of causes of juvenile delinquency, as I have indicated, and these are combined in countless ways in the individual child.

Groups studying juvenile delinquency usually agree that the most frequently occur-ing factor is the presence of some form of family disorganization. Parents may be separated, and the family disrupted. Some parents may be disinterested in their children, or may not be able themselves to act maturely. In most instances, this means that the child has not received the comfort of parental concern and love, or the discipline noted out with sincerity, fairness, and love in well-adjusted families.

A child may suffer from physical or mental deficiencies, or his basic needs may not be met. If a child feels deprived of love, attention, and recognition, he may express his dissatisfaction or unhappiness in an aggressive, delinquent manner. His actions may express a rejection of his parents, a reaction to his surrounding, an attempt to seek approval of those in his own age group, or an effort to gain attention.

Other causes may be directly related to the unpleasant reality of the youngster's environment. They may include family disharmony, slum environment, poverty, unem-ployment, racial and class discrimination, lack of adequate education, language difficulties, or any circumstance that produces conflict, tension, and anxieties. Members of social groups that are considered inferior by others will sometimes use antisocial behavior to bolster feelings of inadequacy or inferiority. This is often the case with children who form gangs. These provide both a means of identification and of acceptance.

Children lacking proper home guidance may look to the society or the community for standards. If the society is tself, in-secure, is in the process of changing standards, or seems to sanction violence, the child may reflect the confusion he finds.

It must be pointed out, however, that for every juvenile delinquent there is a brother, classmate, or playmate, subjected to identi-cal or similar hardships who never commits a delinquent act and who goes on to become a successful member of the community. There is no adequate answer to explain the differences. Some specialists think that the outcome depends on the determination and ability of the individual to overcome such

Another reason children may use delin-quent behavior to defy authority or to show their independence is because parents unwittingly sanctioned or encouraged such behavior. The indirect sanctioning occurs in all classes of society.

It seems evident that no child is immune

to delinquency, that there is no single cause for it, and that there is no magic formula to prevent it. Society's alertness to the many pitfalls to be avoided can ultimately play a positive role in reducing delinquency.

For the past several minutes we have reviewed juvenile delinquency—its meaning, its causes, and its impact on the American child and American society. And now, what steps can we use to prevent, if we can, or at least to minimize the blow that juvenile delinquency has on our families, our schools, and our community. I believe that the parents, the schools, the church, the community, and all the children themselves have a stake in this prevention.

#### I believe that the school-

1. Should not be merely an information center and make mimeograph minds, each exactly like the others, but instead should teach the child the thrill of absorbing knowl-

edge, the need of possessing knowledge, the pleasure and satisfaction in the attainment of knowledge.

2. Should not employ teachers who are only teachers 3 hours a day but those whose attitudes, whose ideals, whose activities should gravitate around the fact that they are teachers every waking moment

3. Should teach children how to think more than what to think.

4. Should teach children as if every day presents a new opportunity to teach them the importance of being oneself—of being an individual.

5. Should accept some of the blame for the pupil who has failed and acted against so-ciety because they should have taught him to have avoided that misdeed.

6. Should look at the future of the class room and its children and use their power to make the children's future brighter and richer in mind and heart.

7. Should be proud for the good job they are doing in directing the future leaders of our Nation.

I believe that parents—

1. Should not become barking Army sergeants, barking orders to their children, but instead guide them to their own perfect examples

2. Should not treat their erring son or daughter as a criminal but shall remember that he or she is but a chip off the old block.

3. Should not chase the almighty dollar so furiously that they become bears instead of fathers, or workhorses instead of mothers.

4. Should not let their appearance go to pot, nor conduct themselves in such a way that their children become ashamed of them. 5. Should give their children the attention,

the love, the understanding they require 6. Should pray with and for their children morning, noon, and night.

I believe the community-

1. Should accept a major share of what is

happening to our young people today.

2. Should provide recreational, cultural, educational facilities to stimulate young people to worthy citizenry.

3. Should provide young people opportuni-ties for community service early in their stage in life.

4. Should provide medical, psychological, and psychiatric facilities for those young people in need of these services.

5. Should provide the type of law enforcement officials and juvenile courts who have a

thorough understanding of our growing children.

I believe that the children themselves 1. Should not look upon their parents and teachers as policemen.

2. Should not use their home as a base of operations from which they go forth for pleasure, but shall wash a dish and mow the lawn now and then.

3. Should remember that someday they will become a parent and consider how they wouldn't like a child who puts furrows in

their brows and gray hairs in their heads. 4. Should take counsel from their parents and teachers, for it may be possible they

haven't found the answer.

5. Should honor their father and their mother so that the days may be long and happy in the home the parents give them.

I believe that the church-1. Should use its peculiar skills and meet its mission in preventing delinquency.

Should provide spiritual guidance in such a way that young boys and girls reflect God's goodness in all their actions.

Should provide time, space, and leader-ship so that young people may engage in worthwhile activities.

You and I have a choice to make we can be complacent and let the world and our children travel at an erratic pace, or we can take action both as individuals and as a united group—knowing that delinquency is a social cancer that can destroy the fabric

of our society. Either we admit that this problem does not concern each and everyone of us—or it is of the utmost importance to our school, our family, our children, and community, and to the future of our Nation. We must decide whether we shall be conwe must decide whether we small be con-cerned with the superficial symptoms of de-linquency or with its basic causes " " and steps toward its prevention. The an-swer we give—here and now—will have a decisive impact not only upon today—but upon toward—and the day after compreupon tomorrow—and the day after tomor-row—and the day after that. Your answer and the answer of millions like you to a great extent may be a positive factor in determining the structure and the content of American civilization in the years to come.

# New Labyrinth for Banking

EXTENSION OF REMARKS

# HON, CHARLES L. WELTNER

OP GEORGIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. WELTNER. Mr. Speaker, today I filed dissenting views to the majority report of the House Banking and Currency Committee on H.R. 12173, amendments to the Bank Merger Act of 1960. One of the principal reasons why I oppose this bill is that it attempts to sub stitute for well-defined antitrust standards developed by legislation and case law ever the past 75 years, a vague, un-defined standard for the approval of bank mergers which will require years of litigation before anyone will know what this standard really means.

It is interesting to note that an edi-torial in the New York Times of today, January 24, 1966, entitled "New Laby-rinth for Banking" attacks the proposed bill on similar grounds. As the editorial points out:

The bill threatens to make the merger issue more difficult and confusing rather than cleaner and clearer.

I include a full text of the New York Times editorial in the RECORD at this point:

#### NEW LABTRINTH FOR BANKING

A bill modifying the standards for bank mergers has been approved by the House Banking and Currency Committee after a heated and highly technical debate. It is of course a compromise, and like most compromises, especially those conceived in haste, it is a grab bag that offers something to evervone with an interest in the proposed leg-

The banking industry wanted more liberal merger requirements and gets them—in the form of guidelines calling for banking supervisors to consider "the convenience and needs" of the public as well as competitive needs" of the public as well as competitive factors in ruling on mergers. It also wanted action in a hurry because several mergers have been challenged in the courts. It got that too. The banking lobby won exemption for three mergers challenged by the Justice Department that took place before June 1963, when the Supreme Court decided that ban were subject to the antitrust laws and effectively changed banking's ground rules.

The Justice Department lost its fight against modification of the law, but it was tossed a few bones. The most important is that mergers approved by Federal supervisors can still be challenged on antitrust grounds within 30 days; and the Attorney General may bring suit at any time if he decides that a banking merger crustes a monopoly. But the bill also offers bank supervisory agencies an opportunity to intervene in court against the Department, a provision reportedly added to win the support of the Comptroller of the Currency.

There is a real need for new ground rules to banking, but it is doubtful that this hasty compromise, which tries to reconcile some justified grievances of the banking industry with the need to protect the public, does the job. By adding to the already complicated and extensive muse of bank regulation, the bill threatens to make the merger issue more difficult and confusing rather than cleaner and clearer. The banking industry professes to be satisfied, yet it may well be more deeply embroiled with more authorities—the supervisory agencies, Justice and the courts—than ever before.

Certainly the proposed legislation will not be the last word on bank mergers. The prospect is that Congress will soon be engaged in modifying its present modifications. It could be in everybody's interest, but especially the public's, if Congress shelved the committee's handiwork and started all over again in an effort to write legislation that had a chance of meeting the test of time.

#### "Poverty and Postive Thinking"

EXTENSION OF REMARKS

HON. ED REINECKE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1966

Mr. REINECKE. Mr. Speaker, along with many of our colleagues, I have sponsored the Human Investment Act, which will authorize a tax credit to those employers who engage in retraining their

employees in needed skills.

Throughout the country, there is being generated an immense amount of

support for this legislation, and I was especially happy to note the endorsement given the Human Investment Act by the Los Angeles Times in its lead editorial for January 18, 1966. I believe that this editorial should be read by all of our colleagues. Mr. Speaker, and I commend it now to their attention:

POVERTY AND POSITIVE THINKING

After taking the pulse of their constituents during adjournment, Members of Congress have returned to Washington in a critical mood toward President Johnson's war on poverty.

There is a widespread feeling that the guidelines laid down in the legislation enacted under White House pressure hat year are too vague, leaving too much discretion in

the hands of new and inexperienced officials.

The critics, who include friends as well as foes of the program, charge that confusion, waste and inefficiency have resulted—and that the benefits to the poor are questionable thus far.

No one should be surprised, of course, that an untried program of such massive and ambitious proportions should expericence growing pains.

However, enemies of the antipoverty program—using the cost of the Vietnam conflict as an excuse—would like to scuttle the whole thing. This would be tragically short-sighted.

To many Americans, the war on poverty seems less urgent now because of the Nation's unprecedented prosperity and the decline of

unemployment to a 7-year low. There is actually a shortage in many job categories.

But the antipoverty program was designed to help the hard core of poor and unemployed who lack basic job skills, and whose children are all but condemned to the same kind of existence by an environment of hopeleganose.

Such marginal workers will remain jobless even in today's tight labor market unless special steps are taken. Given job training and employer interest, however, their opportunities will be better in this labor-short period.

Two Republican members of the House Labor Committee—Representatives Albert Quie, of Minnesota, and Challes E. Goodell, of New York—have come up with some proposals that merit serious consideration.

They suggest more help for the rural poor, who make up half of the poverty community but receive only 5 to 10 percent of the community action money.

Especially intriguing is their proposal, similar to one by Representative GLEM LIPSCOMM, Republican of California, earlier, that tax incentives should be offered to private employers to train and employ the uneducated and unskilled.

Even before the Vietnam price tag grew so large, moderates such as Senate Democratic Leader Mixe Manyrell, of Montana, urged that 1986 be a year of stock taking—a time in which the programs voted last year should be assessed and improved.

The breathing spell is here. Republicans should be in the forefront of those using it constructively to find means of fighting the war on poverty as effectively and economically as possible—but fighting it, nonetheless.

Meanwhile, Sargent Shriver's departure from his Peace Corps post should enable him to devote full time to the job of improving the war on poverty.

#### Defense Study May Be Healthy

EXTENSION OF REMARKS

# HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. LIPSCOMB. Mr. Speaker, the Los Angeles Times on January 13, 1966, carried an editorial commenting on the role of congressional inquiries into our defense policies.

It correctly points out that "House and Senate committees which deal with military affairs have not only the right, but the duty, to keep themselves informed on developments—and, within the bounds of national security, to air honest differences of opinion."

The editorial, which cites several areas that warrant attention relating to the bomber issue, missiles, inventory policies, and source of supplies for ammunition, goes on to state that "In this undertaking, they act as watchdogs for other members of Congress and for the public at large, whose lack of access to secret information makes it difficult for them to make intelligent judgments on defense contraversies"

Under leave to extend my remarks, I submit the Los Angeles Times editorial for inclusion in the Record.

DEFENSE STUDY MAY BE HEALTHY

The House Armed Services Committee's scheduled inquiry into U.S. defense policies

may be a healthy thing—or it may turn out to be a personal vendetta against Defense Secretary Robert S. McNamara.

It all depends on the sense of responsibility displayed by Chairman MENDEL RIVERS, Democrat, of South Carolina, and his fellow committee members.

McNamara stepped on some sensitive political toes with his decision to close 149 military bases and his effort to force a merger of the Hesserves and the National Guard.

The Defense Secretary, convinced that he was acting in the interest of economy and efficiency, failed to be deterred by criticism from powerful figures on Capitol Hill, including Rivers.

It will be unfortunate if Rivers tries to use the investigation, amounced Tuesday, as a punitive expedition. A responsible inquiry, on the other hand, is definitely in the public interest.

House and Senate committees which deal with military affairs have not only the right, but the duty, to keep themselves informed on developments—and, within the bounds of national security, to air honest differences of opinion.

In this undertaking, they act as watchdogs for other Members of Congress and for the public at large, whose lack of access to secret information makes it difficult for them to make intelligent judgments on defense controversies.

Certainly there are several areas of legitimate inquiry at the present time.

Heading the list is the recent decision to phase out most of our big B-52 bombers and, as partial replacement, to build 200 bomber versions of the F-111 jet fighter.

Even though plans also call for a 25-percent increase in our long-range missile force, critics charge that the net effect will be to reduce America's nuclear striking power by about half.

There may be a valid reason, but the Nation is entitled to know more about what it is.

Secondly, reports have circulated that niggardly inventory policies caused serious shortages of certain military equipment for a time in Vietnam. It may not be true, but the facts should be aired within security bounds.

Finally, the Nation was shocked to learn during a recent strike that there was only one source of supply for certain types of ammunition.

Congress should satisfy itself that we are not leaving ourselves vulnerable to enemy sabotage or attack through a short-sighted effort to save money by buying key items from one supplier.

## The Polish Insurrection of 1863

EXTENSION OF REMARKS

#### HON. GLENN CUNNINGHAM

OF NEBBASICA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. CUNNINGHAM. Mr. Speaker, on January 22, Americans of Polish descent in my State celebrated the 103d anniversary of the Polish insurrection of 1863. That heroic event has been a symbol to generations of Poles who have loved liberty but have been deprived of it. It continues to be so today.

The uprising against Russian rule broke out in the middle of religious ceremonies. There were collisions with Russian troops and victims fell in the streets of Warsaw. In response, the pro-Russian ruler, Count Aleksander Wielpolski, ordered that the revolutionary youth be recruited into the Russian Army. young people fled to the forests, and on January 22, set up a revolutionary committee. The struggle of the ill-equipped but gallant insurgents lasted for almost 2 years in many parts of the country. A secret national government was set up in Warsaw. However, the promised assistance of Napoleon III never materialized and wholesale executions and deportations followed the suppression of the revolt. Poland became a Russian province.

But the Polish people have never forgotten the young patriots of 1863. On this occasion I wish to reaffirm my personal dedication to the cause of freedom in Poland. The history of the Polish people gives us reason for hope.

#### GOP Leaders Perform Important Service

EXTENSION OF REMARKS OF

# HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. CHAMBERLAIN. Mr. Speaker. the action taken by the minority leaders of the House and Senate in presenting formal response to the President's state of the Union message has been widely applauded as a constructive effort toward more vigorous two-party con-gressional government. As unique as this step is in our own time, it is not without some precedent. After hearing President Washington deliver the first state of the Union message on January 8, 1790, to a joint session of Congress, the House appointed a committee of three to prepare a reply, "with assur-ances that this House will without delay proceed to take into their serious consideration the important matters rec-This ommended to their attention." This was, of course, before the introduction of the two-party system into the legislative branch.

y

n

n

f

What links the action of the Republican congressional leadership with that of the first Congress is the concern to indicate that the Houses of Congress are established to conduct debate among the people's chosen representatives for the purpose of determining what is in the general welfare of the country. The state of the Union message is not the last word, it is only the first word in that debate. The establishment of the practice of a formal response to the President's message was and is clearly intended to underscore that fact. Unfortunately in recent years there has been a growing tendency merely to see Congress as a place of ratification for executive branch decisions, a convenient means for holding plebiscites, as it were.

Under leave to extend my remarks in the RECORD, I wish to bring to the attention of my colleagues an indication of the impact that this first minority party state of the Union message has had in

Michigan's Sixth Congressional District, as found in the cogent editorial of the State Journal of Lansing on Thursday, January 20, 1966:

GOP LEADERS PERFORM IMPORTANT SERVICE

The presentation Monday night of the Republican appraisal of the state of the Union was a praiseworthy display of the loyal opposition in action.

The old Supreme Court chamber in the National Capitol was the forum for the historic event. It was the first time the minority in Congress has formally offered its views on the state of the Nation.

The manner in which the views were pre sented was in keeping with the highest traditions of a nation whose foundations include the vital element of the right to dissent.

The occasion was wholly free of expressions of personal or partisan animosity. Criticism was offered with dignity and was aimed not at personalities but at programs and policies which the Republican leadership deems

Representative Gerald R. Ford, Jr., Republican, of Grand Rapids, House minority and Senator EVERETT M. DIRESEN, leader, Republican, of Illinois, Senate minority leader, shared the microphone. Fore spoke on domestic issues and Dirksen voiced party policy on international affairs.

In his share of a "loyal dissent" to Presi-

dent Johnson's state of the Union message, Ford said no tax increase will be necessary if Federal spending is prudently restrained.

The Michigan Congressman vowed an effort to trim the \$112.8 billion in Federal spending Johnson recommended to Congress and called on the President to submit a budget with expenditures rated according to priority.
"If he fails to do so," Form said, "w

upon the Democrats in Congress to join us in eliminating, reducing, or deferring low-priority items \* \* \*.

Whatever is needed-really needed-for national security must be provided. Urgent domestic programs \* \* need not be sacrificed \* \* \*."

Form said Republicans will back programs that really aid the needy, contribute to economic growth and advance the cause of equal opportunity but that "we must liberate the war on poverty from waste, controversy, and

the bad odor of political bossiam."

The poor, he said, should have an important role in policy decisions and the States should be partners in the war on poverty.

In his discussion of foreign affairs, Senator

DIRKSEN expressed agreement with President Johnson's basic policy in Vietnam.

Johnson pledged in his message last week to continue the quest for peace in Vietnam but promised also: "We will stay until ag-gression has stopped."

DRIKSEN said Monday night: "Let the peace efforts continue. Who can object to

peace efforts continue. Who can object to any honorable effort to secure peace where young blood is involved?

Let the military effort continue. onstrates our determination to keep our word. Let it be intensified if necessary as sound military judgment dictates."

Like Johnson, Draksen said any American retreat would undermine confidence in America's will to resist Communist expan-

On the matter of foreign aid, DIRKSEN said billions of dollars have gained the United States little respect and less appreciation. called for a precise auditing of foreign aid spending, together with a careful check on future aid programs, to see "whether there will be dividends in the form of good will and real devotion to peace and freedom."

We believe Representative Fond and Senator Dmesen have performed an important service to their country and to their party and that the way in which they presented their views deserves the commendation of

all Americans—Republicans and Democrats

and those with no political party affiliations. We also believe President Johnson and other Democrats who must shoulder the re-sponsibilities imposed on the majority party, would do well to accept the counsel and constructive criticism in the fine spirit in which they were offered.

#### A Plan That Would Weaken Congress

EXTENSION OF REMARKS

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. RUMSFELD. Mr. Speaker, the President's proposal to extend the term of Members of the House to 4 years, to be elected during presidential election years, has elicited considerable interest throughout the country. In the coming weeks there undoubtedly will be extensive debate on this and other proposals to lengthen the term. Such debate will be beneficial, and certainly all arguments must be given careful consideration and evaluation. A Chicago Tribune editorial of January 21, 1966, presents compelling arguments against the President's proposal for a 4-year term. I for one do not favor the President's proposal, and urge my colleagues to take a few minutes to read the Tribune editorial, which follows:

A PLAN THAT WOULD WEAKEN CONGRESS

President Johnson seems to think that the Founding Fathers of the Republic were old

fogies.

"Our democracy cannot remain static, a prisoner to the past, if it is to earlich the lives of coming generations," he said in a message to Congress urging a constitutional amendment to lengthen the terms of Members of the House of Representatives from 2 to 4 years.

The same proposal was made by the President in his state of the Union address, and it got more applause than anything else. Nevertheless, there are many Members of Congress who doubt that the terms of Rep resentatives should be lengthened.

The question was debated at length at the Constitutional Convention in Philadel-phia in 1787. The terms of Senators had been fixed at 6 years, with one-third of them to be elected every 2 years. Elbridge Gerry, of Massachusetts, and other New Englanders urged that House Members should have 1year terms so that the House would con-stantly provide a constant flow of power

from the people.

David Jonifer, of Maryland, proposed a 3-year term, arguing that a shorter term would make the job "precarious" and unattractive to prudent men. The Convention compromised on a 2-year term.

Under President Johnson's proposed amendment, candidates for House would run for office during presidential election years. He said the 4-year tenure would attract "the best men in private and public life" and would free House Members from pressures of biennial campaigns.

We think it more likely that the Johnson plan would assure a House composed principally of Presidential coattail riders—a group very much like the weak, supine Congress elected in the Johnson landalide of 1964. Previous recommendations for lengthening the terms of Representatives have sought to avoid this objection by having half of the Members elected every 2 years.

The present system of electing all the House Members every 2 years serves as a useful national referendum on the Federal Government's policies. Four years is too long for the people to wait to register their confidence or their lack of confidence in an administration

President Johnson, in his massage to Conhold an election every 2 years to allow the voice of the people to be heard. Modern methods of communication and public opinion polls leave little doubt about popular

feelings, he said.
Under this theory, all elections are unnecessary: Members of Congress could be appointed for life with instructions to vote according to the latest public opinion poll.

The President's protest that 2-year terms require Members of the House to engage in continuous politicking has some merit, but it affects only a minority of the House Memis affects only a minority of the House Mem-bers. Those from Chicago and other large cities are merely appointed by the political machine, and few of them have to do any politicking to be reelected. Many House Members are returned year after year, as the seniority records show.

Nothing in the history of the United States indicates that the Founding Fathers were wrong in deciding on 2-year terms.

# A Better Way

EXTENSION OF REMARKS OF

# HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. DERWINSKI. Mr. Speaker, the bitter and hostile transit strike in New York City is not a problem unique to that city. The growing cost of public trans-portation and the need to effectively erve our metropolitan areas are problems facing the entire Nation.

It is obvious, however, that the settlement achieved in New York City was not in the public interest and, in effect, rewarded Mike Quill and his fellow union officers for abusing the public interest.

A very timely and practical editorial comment was carried by the Economist newspapers, serving south Cook County, Ill., on January 19, and I believe it reflects rational public opinion throughout the country:

#### A BETTER WAT

Taxpayers of the entire State of New York are going to have to contribute \$100 million a year to make possible the \$52 to \$70 million increase in wages won by the city of New York's transit workers after tleing up the metropolis for 9 days with their strike.

But, more importantly, the \$100 million statewide levy is intended to preserve the 15cent rate of fare charged on the city's subwavs and buses.

Of course, if the taxpayers of the State have no objection to subsidizing the subway and bus riders, we shouldn't either because it won't cost us a dime.

But the situation offers a lesson for Chicago and that is the fare on the rapid transit and bus lines should always be adequate enough to defray the cost of the service. In contrast to the New York fare of 15 cents, the Chicago fare is 25 cents.

New York City got into subsidizing its transportation facilities more than 20 years

ago when the party in power decided at was important for its welfare to maintain the 5-cent fare. So it passed the load of the extra cost on the city's taxpayers. During the intervening years, the cost of the taxpayers has been staggering. In fact, that is why Gov. Nelson A. Rockefeller decided to pass part of the burden on to the State.

From our point of view, subsidizing transit facilities is unfair. It compels those who do not use them to contribute so that those

who do ride may do so for less.

Chicago Transit Authority should hold down costs, of course, but if the present rate of fare is insufficient it should be raised to offset any deficit. In other words, those who use the lines should pay the cost.

# Job Training Incentive Needed

EXTENSION OF REMARKS

# HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1956

Mr. LIPSCOMB. Mr. Speaker, it is gratifying to note the widespread support for the human investment legislation pending in Congress.

Seeing to it that we have sufficient trained minds and skilled hands to keep up with the pace being set by the technologies of today and that all the people can have full and productive lives is a great challenge. It is to this challenge that the human investment proposal is addressed.

Under leave to extend my remarks, I submit to the RECORD an editorial that appeared recently in the Los Angeles Times expressing support for this legislation

JOB TRAINING INCENTIVE NEEDED

As a spur to investment in plants, machinery and equipment, the Federal Govern-ment wrote into the 1952 Revenue Act a 7-percent tax credit for such capital improvements.

Bills awaiting congressional action in January would allow a like credit to employers who establish training programs to upgrade the skills of their employees.

The theory is that the present law provides an economic incentive for corporations to rate investment in machines and bricks above investment in people.

Such and intriguing idea is gaining support despite the fact that some questions have been raised as to the scope proposal.

Almost 2 years ago a U.S. Senate labor committee researcher proposed a training subsidy at a Los Angeles hearing. In June 1964 a special Federal committee on apprenticeship programs made a similar recommendation. It noted that cost to employers was the greatest single bar to expension of onthe-job training.

The "human investment" bills now before Congress—there are more than a score of them—were drawn by a Republican research team. Proponents contend that job training by private industry minimizes the necessity for Government intervention and regulation, and eliminates the bureaucratic middleman.

Several safeguards have been written into the program since it was originally intro-duced. It is probable that remaining questions can be clarified in hearings to be con-ducted by Senate and House committees.

Representative GLENARD P. LIPSCOMB, Republican, of Los Angeles, one of the spon-

sors, points out that letting free enterprise do the job is in the American tradition.

We agree with that view. The need for "human investment" is apparent. Hopefully, Congress will be able to write a program to meet that need.

## Auto and Telephone Taxes Not Justified

EXTENSION OF REMARKS

# HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. CHAMBERLAIN. Mr. Speaker, of the many recommendations put forth by the President in his state of the Union message, perhaps none has aroused more concern on both sides of the aisle in Congress, outside the Vietnam situation, than his request to cancel the repeal of the long-standing temporary, discriminatory excise taxes on automobiles and telephone service.

I have already voiced my own protest against reimposing these unfair burdens on the consumers of two of our Nation's businesses simply because the automotive and communications industries are presently prosperous. There is no good reason to reinject in our tax structure an inequity that has taken years to remove. The President himself has complimented the automotive industry for its cooperation in passing along the 3-percent reduction in the automobile excise tax initially put into effect. It is clear, therefore, that it is the automobile consumer who will pay for this tax.

Under leave to extend my remarks in the RECORD, I wish to point out to my colleagues that I am far from alone in holding these views, as is clearly indicated by the editorial appearing in the Jackson Citizen-Patriot of January 21, entitled "Auto and Telephone Taxes Not Justified" which calls particular attention to the timely and compelling arguments against the auto excise tax recently put forth by my distinguished colleague, the gentlewoman from Michigan [Mrs. GRIFFITHS].

AUTO AND TELEPHONE TAXES NOT JUSTIFIED Why has the President requested a cancellation of Federal excise reductions on automobiles and telephones?

The question is being asked in various

ways by many persons.

And the query always is accompanied by the statement that telephones and automobiles hardly are luxuries—which they are not. And the incongruity of restoring excise taxes on these items while permitting them to be lifted from merchandise which definitely falls into the luxury class generally manages to creep into the discussions.

Asking the question where it counts is Representative MARTHA W. GRIPPITHS, Democrat, of Michigan, whose home town of Detroit prides itself on being the center of the automobile industry. Mrs. Garrerrus prom-less to be a dissenting minority of one, if necessary, when the House Ways and Means Committee approves the President's request, as it is expected to do.

"The automobile," says Mrs. GRIFFITHS, "is the lifeblood of the U.S. economy." She adds that one of every aix persons in the country now is directly or indirectly employed in the automobile industry. Thus does it make sense to restore a 1-per-cent tax which was dropped at the first of the year, in order to bring in some \$60 mil-lion in added revenue? Mrs. Gallytths believes that it does not and many will agree with her. They also like her comment that to put excise taxes back on automobiles and telephones, while leaving it off "dia-monds and sables," is unjustified.

What is happening here, of course, is something that is as old as the tax system itself. That-is getting quick and easy money with little regard to the justice of the thing.

The U.S. Government admittedly will need more revenue if it is to carry on the war in Vietnam and finance all the Great Society programs at the same time. Deficits inherently are bad because they

tend to contribute to inflation.

But even assuming that more revenue is necessary, it is hard to make a case for restoration of the automobile and telephone

The reasoning in the White House may be correct—but it isn't right. It is that both the automotive and communications industries are prosperous and expanding at the moment. And because the effects of the January 1 tax reductions scarcely have been noticed by the public, restoring the levies would be relatively "painless" to the

n

e

y

S

e

n

d

r

n

n

e

t

n

18

y

е

s

11

That kind of reasoning has rought about the mixed-up and generally unjust system of excise taxes which have grown up in the past 30 years.

One of the things which is bad about the automobile tax is that the owners of motor vehicles carry a tremendous tax burden-much of which is justified.

They pay tremendous amounts of money into public treasuries at both the State and National level to finance the construction of roads. These are users' taxes and they are quite proper. Without them, the highway system would be in worse trouble than it is. Cars would not be sold ir great quantities and the industry would not make its all-important contribution to the economy and general prosperity because there would be no place to drive.

Lawmakers and the President possibly move on the theory that the automobile owner is so accustomed to paying taxes that he won't mind another small bite, such as 1 percent of the cost of a new car. Probably he won't. He paid 10 percent on his new cars for years before the tax was reduced by 3 percent last year. But it is just possible that this reduction in the excise levy contributed to the banner year the industry enjoyed in 1965. The 1-percent cut which went into effect January 1 might be just the spark that is needed to keep automobile sales rolling and all the persons connected with the industry gainfully employed—and paying individual income taxes into the Federal Treasury.

The morality of the thing, however, is just as important as the economics.

Why automobiles and telephones?

Why must these necessities be singled out for treatment as luxuries when more tax money is needed?

# Proportional Representation: For Better or for Worse?

EXTENSION OF REMARKS

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. CELLER. Mr. Speaker, a major underlying principle of our American

form of government is that of representative government. It is true that in the American system of government, the consent of the people is projected through their chosen representatives in the halls of Government-local, State, and National. These are elected repre-sentatives and are the means whereby society establishes its order. Thus, it is politics that constitutes the search for governmental power and influence. In this quest for political position, the interest of various groups must always be considered. The final determination, however, under our American system is the will of the majority. Of course, one must be mindful of the rights of the minority as guaranteed by our Constitution and laws. It is in that light that we have established the separation of powers and the checks and balances within the structure of our Government. The result is that the stability of law is established.

In our Government methods have been established such as voting, the right of petitions, referendums, and constitu-tional conventions, in order to reflect the expressions of the various interests of the people, both majority and minority, in order that the consent of the people may be garnered to favor one policy or the

I do not believe that proportional representation is consistent with the general traits of our American democratic representative system. In theory, proportional representation purports to foster individualism and freedom of action in representative government. In practice it falls far short of those goals. Historically, a major consequence of proportional representation has been the increase and cohesivensss of political groupings. European experiences under proportional representation demonstrate the instability of the governments it spawned. Efforts are made to organize and control a quota of voters because only a part of the electorate, a mere quota, is needed to elect a single representative. There is no need for a plurality: thus, what is commonly known as "bullet voting" is encouraged. The experience of the city of New York is a concrete example of such results. I recall our experience of the late thirties in the city council where representatives of minority groups, including the Communist Party, were able to foist upon the city of New York membership in that body. That was accomplished solely by the "bullet vote." Moreover, many votes are also wasted under that system.

I am a firm believer in the two-party system in American politics. Proportional representation militates against a strong two-party system. It seeks to carve party slates for office into quotas and encourages a system of preferred candidates over party candidates. Such a system is not in the best interest of all the people. A preferred candidate of a particular local group may achieve a seat in the representative chamber of government but that preferred individual will then become the voice of one crying in a governmental wilderness. He will not represent majority opinion, nor the consent of the governed. His interests

are not those of all the people but only some of the people-a select group. Such politics is not American politics. It is not good government, it is not true representative democracy. Our political system must represent the will of the majority and respect and preserve the rights of the minority at all times and in all places.

## Buffalo Booster John Galvin Is Chamber of Commerce Man of the Year

EXTENSION OF REMARKS CIP

# HON, RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. McCARTHY. Mr. Speaker, John M. Galvin is one of Buffalo's truly outstanding business and civic leaders. It was more than 20 years ago that he began his civic and charitable activities. Over the years, he has been an officer or director of at least 50 business, philanthropic, community, and religious organizations.

It would be hard to select one activity as Mr. Galvin's outstanding accomplishment. But, in my opinion, it has been the vigorous leadership he has given to Buffalo's exciting multimillion-dollar downtown renewal program. This dynamic rejuvenation effort is thrusting up new skyscraper office buildings into Buffalo skies, giving Buffalo a dramatic new look and recharging it with new energy. civic pride, and enthusiasm.

As the chief executive of one of the Nation's few billion-dollar banks, the Marine Midland Trust Co. of Western New York, Mr. Galvin has a high position of leadership and responsibility. He has filled this post and many others with distinction and dedication. I am proud to say that I am his Congressman.

Mr. Speaker, Saturday, John Galvin added another high honor to his impres sive list of laurels. He was cited as the "Man of the Year" by the Buffalo Area Chamber of Commerce.

Under leave to extend my remarks and include extraneous matter, Mr. Speaker, I here include articles from the Buffalo Evening News and Buffalo Courier Express of January 20, which report on John M. Galvin's latest high honor:

[From the Buffalo (N.Y.) Evening News, Jan. 20, 1966]

BUFFALO BOOSTER, JOHN GALVIN, IS CHAMBER OF COMMERCE MAN OF THE YEAR—WILL RE-CEIVE AWARD TUESDAY EVENING AT 1220 AN-NUAL RECEPTION AND BANQUET

John M. Galvin, a banker who has made boosting Buffalo a full-time job, is the 1965 Man of the Year of the Buffalo Area Chamber of Commerce.

Mr. Galvin, 60, chief executive officer of the Marine Midland Trust Co. of Western New York, will receive the award Tuesday evening at the chamber's 122d annual reception and banquet in the Statler Hilton.

A chamber official said 34 men were nomi-nated for the award "but it was no contest. John won going away."

Mr. Galvin, who began his 45-year bank-ing career as a "trotter," or messenger boy, in

1921 for the Lafayette National Bank, now is one of the top managers of the Nation's few billion dollar banks.

#### SINCE THE EARLY PORTIES

A product of South Buffalo, Mr. Galvin's rise in the financial world has been paralleled by "an almost inexhaustible capacity for good works," as a chamber director puts it.

He began his civic and charitable activity in the early forties with the Buffalo Junior Chamber of Commerce and Catholic Charities and in 25 years he has been an officer or director of at least 50 business, philanthropic, community, and religious organizations. Mr. Galvin will add the chamber's Man of

Mr. Galvin will add the chamber's Man of the Year Award to a host of other honors, ranging from the Silver Beaver Award of the Boy Scouts of America of investiture in 1962 as a magistral knight of the Sovereign Order of Malta in the United States.

"just get carried away," he said, explaining how he takes on one civic assignment after another, "but you have to let yourself get carried away to get anything done."

#### SO MUCH TO OFFER

One job he pursues with relish is working as chairman of the chamber's Boost Buffalo Committee, and he wishes more people shared his enthusiasm for Buffalo.

"We have so much to offer," he says, "how many cities have as much? And we haven't even scratched the surface. But we often get ourselves so submerged under a few setbacks that we don't see the bright side."

Dr. Edward Teller, one of the world's great nuclear physicists, will be the speaker at the chamber banquet.

[From the Buffalo (N.Y.) Courier-Express, Jan. 20, 1966]

By Area Chamber: Galvin Is Named 1965 Man of Year

John M. Galvin, chief executive officer of Marine Midhand Trust Co. of Western New York and one of the most active boosters of the Niagara frontier, has been selected by members of the Buffalo Area Chamber of Commerce as the 1965 man of the year.

The silver-haired banker, who rose from messenger boy to a top post in one of the Nation's largest banks, will receive the award at the chamber's 122d annual dinner Tuesday night. He will be featured in the January issue of Buffalo magazine, official monthly publication of the chamber, which sponsors the award.

#### BUFFALO NATIVE

Galvin was born October 30, 1905, in Buffalo and was graduated from St. Joseph's Collegiate Institute. He began his banking career as a messenger at the old Lafayette National Bank when he was 16. He attended Millard Fillmore College of the University of Buffalo while working at the bank and later attended the American Institute of Banking.

He stayed with the bank when it became part of the Buffalo Trust Co., which, in turn, was merged into the Marine Trust Co., now Marine Midland Trust Co.

#### PROMOTIONS CITER

Galvin was made an assistant treasurer in 1833 and became an assistant vice president in 1945, taking charge of the Midland time plan of the Marine Midland Group. He was elected vice president in 1948 and became director of public relations for the bank in 1951.

He rose to senior vice president in 1956, executive vice president in 1961, and was elected chairman of the executive committee and chief executive officer in May 1962.

Throughout his career Galvin has been active in civic, religious, and governmental affairs and has for many years been among the leaders of any activity which would serve to promote the interests of western New York.

He was cited by the Courier-Express as Good Fellow of the Year in 1958. He was the 1963 Man of the Year of the Greater Buffalo Advertising Club and received the 1964 National Brotherhood Citation of the National Conference of Christians and Jews and many other awards.

He is a director of the chamber and chairman of its Boost Buffalo Committee and has served as a board member or officer of countless charitable and civic enterprises. He also served for 10 years as a member of the old Erie County Board of Social Welfare while it was responsible for the administration of welfare in the county.

The chamber, in announcing the award, said that 34 men were nominated for the award this year but that Galvin was the overwhelming choice, drawing more than twice as many votes as the runnerup nomi-

Galvin and his wife, Grace, live at 25 Woodbury Drive, Snyder. They have three children.

At the annual banquet scheduled for 7 p.m. in the Terrace Room of Hotel Statler Hilton, other highlights will include the presentation of the Buffalo Jaycees' Donald F. Stillwagon Memorial Gold Key Award and address by Dr. Edward Teller.

## Resolution for a Redwood National Park, Adopted by Democratic Central Committee of the State of Michigan, January 9, 1966

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the Congressional Record a resolution adopted unanimously by the State central committee of the Democratic Party of the State of Michigan on January 9, 1966, enthusiastically supporting the concept of a Redwood National Park to preserve some of the small remaining area of what was once over 2 million acres of virgin redwood forest. The resolution follows:

RESOLUTION FOR A REDWOOD NATIONAL PARK ADOPTED BY A DEMOCRATIC STATE CENTRAL COMMITTEE OF THE STATE OF MICHIGAN, JASTARY 9, 1965

Whereas the California redwood forests are some of the Nation's most outstanding scenic resources, and the demand of the people of the entire Nation for such irreplaceable areas of spectacular natural beauty is ever increasing; and

Whereas of the over 2 million acres of virgin redwood forest that once forested the northern coast of California there is only one remaining major block of land suitable for a national park; and

Whereas the area of the proposed park is being logged right now, and the time is almost past when it will be possible to save this area from damage by logging and freeways, and the flood and storm damage which result when the watershed is destroyed; therefore be it

Resolved, That the Democratic State Central Committee of Michigan go on record in support of the establishment of a 90,000-acre Redwood National Park on the northern coast of California in the Prairie Creek-Redwood Creek groves and Gold Bluffs wild

beach area, as recommended by the National Park Service; and be it further

Resolved, That the Democratic State Central Committee of Michigan request President Johnson and Secretary of the Interior Stewart Udall to make every effort to arrange a moratorium on logging in the proposed park area until Congress has acted on the proposal now before it; and be it further

Resolved, That copies of this resolution be sent to Senators McNamana and Harr and the Democratic Congressmen from Michigan.

## What the Repeal of Section 14(b) Would Mean for New York State

EXTENSION OF REMARKS

# HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. BINGHAM. Mr. Speaker, I have been receiving a number of letters recently which indicate that there is a great deal of misunderstanding about the real significance of section 14(b) of the Taft-Hartley Act, which the House of Representatives voted by a large margin to repeal last year.

For purposes of clarification, I should like to make the following brief statement on the subject "What the Repeal of Section 14(b) Would Mean for New York State."

The so-called right-to-work laws are misnamed: they do not give anyone a right to work, nor do they protect jobs. What these laws do is to interfere with free collective bargaining, by prohibiting voluntary contracts between unions and employers which require that all who enjoy the fruits of bargaining share equally in the cost of such representation. Section 14(b) permits States to enact such laws.

New York State has no such law and the repeal or retention of 14(b) would therefore not affect any rights now enjoyed by the workers in our State. The 19 States—primarily southern—which do have such laws use them to try to lure industry from New York to their States. The repeal of section 14(b) would therefore stop this unfair competition and would help maintain job opportunities in our State.

It is important also to understand what repeal of 14(b) would not do. It would not affect the prohibition in the Taft-Hartley Act against requiring a man to join a union to get a job—that is, the closed shop.

It would not take away the existing right of employees covered by a union shop contract, by secret ballot, to suspend enforcement of the union shop if a majority desire to do so.

It would not take away any employee's right to refuse to join a union—even under a union shop the employee can, if he prefers, pay to the union an amount equal to membership dues.

In short, repeal of 14(b) would protect New York workers' jobs against unfair competition while retention of this provision gives them no rights they do not presently enjoy.

#### The Vietnam Decision

EXTENSION OF REMARKS

# HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. McCARTHY. Mr. Speaker, the New York Times, in its lead editorial Friday morning, makes several pertinent points regarding the decisions now facing the administration in light of the apparent lack of a response from Hanoi to our peace offensive.

The Times emphasizes that "many factors counsel patience. The 2-month absence of North Vietnamese army units from combat in South Vietnam—which may signal a Hanoi desire to continue the diplomatic exchanges—is one such factor. Far more important is that fact that the military balance in South Vietnam has been fundamentally transformed in the past year."

The decisive new element, the Times points out, is the ninefold increase in American troops in South Vietnam.

Meanwhile-

en

nt

0-

nvis

do

The newspaper observes-

it has become evident that the bombing of North Vietnam failed to achieve either of its original two objectives. It failed to slow down the infiltration of men and supplies, which increased as the bombing intensified. And it failed to bring Hanoi to the conference table.

Warning against further escalation of the war, the Times warns:

A further large-scale buildup would not end the military statement in South Vietnam. As in the past, it would be matched by increased Vietcong recruiting, infiltration, and additional North Vietnamese units and ultimately—if the ground war expanded into Laos, Cambodia, and, perhaps, North Vietnam—by the entrance of Chinese troops into the conflict.

Apparently alluding to a letter from Gen. James M. Gavin, appearing in the latest Harper's magazine and to which I alluded in the Congressional Record of January 18, 1966, the Times concludes as follows:

At the present, American forces are secure in their coastal positions and cannot be involuntarily dislodged. General Gavin's recent advice not to expand the war but to continue efforts to negotiate the peace, has the force of logic on its side.

Under leave to extend my remarks, I include here the New York Times lead editorial of Friday, January 20:

THE VIETNAM DECISION

Failure of the Johnson peace offensive thus far to bring about formal negotiations with Hanoi inescapably raises the question: what course should the United States now follow?

Much depends on Washington's evaluation of Hanoi's ambiguous public and private replies and on the official estimate of how long it is safe to keep the bombers grounded. Is Hanoi holding out for concessions? Or is Hanoi seeking to avoid a conference out of the conviction that the United States will get tired and withdraw? President Johnson expressed the latter belief yesterday. But his conclusion from this remains unclear, since he also said: "The door of peace must be kept wide open."

Many factors counsel patience. The 2-month absence of North Vietnamese Army units from combat in South Vietnam-which may signal a Hanoi desire to continue the diplomatic exchanges—is one such factor. Far more important is the fact that the military balance in South Vietnam has been fundamentally transformed in the past year.

The decisive new element has been the minefold buildup of American troops in South Vietnam to a strength of about 190,-000. South Vietnamese armed forces, including militia and police, now exceed 635,-000. With South Korean, New Zealand, and Australian units, there are upward of 850,-000 men in the field. And the backing of American air and naval strength gives these forces devasting firepower and unparalleled mobility.

This buildup, in the words of President Johnson's state of the Union message, has put the enemy on notice that "time is no longer on his side" and that a Victoong vic-

tory now is "out of reach."

Meanwhile, it has become evident that the bombing of North Vietnam failed to achieve either of its original two objectives. It failed to slow down the infiltration of men and supplies, which increased as the bombing intensified. And it failed to bring Hanoi to the conference table. The bombing did force North Vietnam to turn from Feiping to Mescow for antiaircraft missiles and, even more important, for massive economic and technical aid. But this unexpected dividend argues for a continued suspension of the bombing, rather than for its resumption.

As White House Security Adviser McGeorge Bundy recently observed: "It has been made clear to us over a long period of time that the Soviet Government hopes there can be a peaceful settlement." And Moscow has also made it clear that peace efforts cannot be carried on while North Vietnam is being bombed.

The critical decision that confronts President Johnson, therefore, is not whether to resume the early bombing of the north—which even Republican leaders no longer press—but how to conduct the war in the south while continuing the probes for peace. The ground and air war in South Vietnam undoubtedly will resume fully after the lunar new year truce. What the President now must decide is whether to escalate that war in the south to a wholly new level by yielding to military requests for a doubling of American forces. Such a more would finally convert the struggle from a Vietnamese conflict into an American war against Asians.

A further large-scale buildup would not

A further large-scale buildup would not end the military stalemate in South Vietnam. As in the past, it would be matched by increased Vietcong recruiting, infiltration of additional North Vietnamese units and ultimately—if the ground war expanded into Laos, Cambodia, and, perhaps, North Vietnam—by the entrance of Chinese troops into the conflict.

At present, American forces are secure in their coastal positions and cannot be inwoluntarily disloged. General Gevin's recent advice, not to expand the war but to 
continue efforts to negotiate the peace, has 
the force of logic on its side.

The Late Honorable John Taber

SPEECH

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. FISHER. Mr. Speaker, the late John Taber was a most valuable Member of this body. He served with great distinction for nearly 40 years. As a member of the Committee on Appropriations, once as chairman, he became known as the watchdog of the Treasury. In that capacity he was instrumental in saving American taxpayers untold billions of dollars. It is doubtful if any one Member has ever done more in that respect.

John Taber was indeed a great American. He was devoted to the cause of good government, of sensible restraint in the function of the Central Government, and of those fundamentals which make the competitive free enterprise succeed. During his long period of distinguished service Mr. Taber did more than his share in the preservation of our institutions. We need more men of his dedication if our Republic is to be preserved.

An Intern's Views on Vietnam

EXTENSION OF REMARKS

HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. RONCALIO. Mr. Speaker, Members of Congress have had numerous occasions to utilize the fine services of summer interns and are particularly grateful for the enthusiams and interest they bring to their responsibilities.

Last summer I was pleased to have the services of Dan Spangler of Cody, Wyo., as a summer intern in my office. Dan, the son of Judge and Mrs. J. O. Spangler of Cody graduated in 1964 from the University of Wyoming with a degree in political science. He was attending Stanford University when he was selected as an intern for the Wyoming congressional office.

After a most satisfactory summer of employment Dan enrolled at the University of London under a Rotary International scholarship. His exposure there to students from many countries has broadened his outlook on American foreign policy. At a time when the sentiments of some college students have created apprehension in the minds of many Americans, I am happy to note his thoughtful and responsible approach to this serious matter. I respectfully recommend his essay on Vietnam to the consideration of my colleagues as a worthy example of the mature outlook youth can offer when stimulated to take an active interest in the affairs of government. His essays follows:

VIETNAM

The greatest problem of our time is how to achieve world peace. A world war could destroy edvilization as we know it. Nuclear weapons have enabled the two great powers, the United States and the Soviet Union, to achieve a state of mutual deterrence. The threat to peace does not come from any direct conflict between these two states but from the possibility that they will become involved in what would begin as a limited war, then expand into a regional war until the interests of these two powers were directly involved, leaving no other alternative but a world confiagration. The existence of

large numbers of new, unstable states creates a number of opportunities for limited wars to expand into regional and world wars. In this situation, it is essential that the United States maintain fiexible policies so that an escalated war will not be the only alternative. Before the present war widens any further, it is essential that the U.S. Congress conduct a public debate to explore fully the alternatives to a wider war and to insure that U.S. policy in southeast Asia expresses the will of the American people.

Historically, the area now know as North Vietnam has been the smallest but most densely populated sector of Indochina. North Vietnam was once controlled by China but in 939 A.D. its people revolted and established their own kingdom. Due to popula-tion pressures and poor agricultural land, after 1069 the North Vietnamese advanced steadily into neighboring lands of the south and west, overrunning large portions of what is now South Vietnam, Laos, and Cambodia. This expansion continued for 500 years until it was halted by the imposition of French colonialism. After the Japanese invaded the area during World War II, French authority was never reestablished in the north and the northern drive to the south and west began once more. The French attempted to arrest this drive until their defeat at Dienblenphu in 1954. The Geneva Agreement of that year, which was never signed by the United States, called for a united Vietnam within 1 year The agreement was never carried out, mainly because it was unrealistic and dangerous.

#### THE DIFFERENT FACTIONS

It is unrealistic to attempt to unify areas which offer as many contrasts as North and South Vistnam. Life in North Vietnam is still greatly influenced by Chinese ways due to China's former domination of the north and to the close proximity of the north that the contract of the north to China. Geographically, North Vietnam is more closely linked with China than with South Vietnam. The north has adopted China's subtropical agricultural methods while the tropical south has a different way of life. There has long been a rivalry between Hanol, a former Chinese capital and a cultural and administrative center, on one hand, and Saigon, a French-created port, commercial, and agricultural marketing city on the other. Communications have never been good between the two areas.

During World War II, Hanoi took its orders from the Vichy regime while Salgon was the center for the Gaullists. In opposition to Prench colonial rule, nationalist leaders in the north identified with the Kuomintang in China while the Cao Dai and Hoa Hoa factions led the nationalists in the south. With these profound differences in the development of North and South Victnam, it is unrealistic to suppose that they could form a viable state.

#### THE AREA

The unification of Vietnam under the aggressive Communist regime of the north would be dangerous for the neighboring states as well, which have not forgotten the earlier period of Vietnamese invasion and domination. For, with the seisure of the rich rice lands in South Vietnam, the well-trained and equipped northern army would easily have Laos and Cambodia at its mercy. Laos is the largest, least populated country in Indochina, and it has the least capacity to defend itself. The country is deeply divided ethnically an politically. Cambodia is also sparsely populated and is in a vulnerable strategic position.

Ships using the Cambodian capital, Phnom Penh, on the Mekong River, have to pass through South Vietnam. The Mekong Delta is open to attack from coastal and interior routes which can be commanded from North Vietnam and Lacs. Thus, it is essential to the security of Cambodia that South Vietnam and Lacs are in friendly hands. To the

west of Laos lies Thailand. The bulk of the Lao people live in Thailand, which has much reason to fear a Vietnamese-Laos combination. In addition, from 50,000 to 80,000 pro-Communist refugees from Vietnam have settled in northeast Thailand since World War II.

The instability and remoteness of northeastern Thailand make it imperative that the northeastern border is occupied by a stable Lacs. These compounded problems of national security would be the consequences of a Vietnam united under a Communist regime. The expansionist tendencies of a Communist-controlled Vietnam would engulf the entire Indochinese Peninsula in large-scale warfare. As the war would expand, China would become more anxious to protect its borders and would play a larger part in the struggle. Eventually, the vital interests of such powers as India, Indonesia, and the Soviet Union might become directly involved.

The security of Australia and New Zealand, both close American allies, depends upon a stable situation in southeast Asia, as World War-II demonstrated. Britain is pledged to the defense of Malaysia and could become drawn into a wider struggle. If the eventually victorious powers in southeast Asia maintained close relations with China or fell under Chinese domination, the United States could be subject to a grave threat.

#### THE CHINA ROLE

It is difficult to tell if the Chinese always mean what they say but the Chinese leaders have pledged themselves to the destruction of the United States. In light of these pronouncements, the United States must keep a close watch on China, which is now a nuclear power. In the coming years, it may be expected that China will achieve the capacity to deliver its nuclear weapons around the world.

From our experience with the Soviet Union, it is clear that the best way to meet a nuclear threat is with another nuclear threat. But, if southern Asia were in the control of hostile powers, the United States would face great problems in mounting a credible deterrent to a Chinese nuclear force. Present-day missiles fired from the continental United States, can reach China only by crossing Soviet territory. This only increases the danger that the Soviet Union would aline with China in a war against the United States. Although relations are tense between Russia and China, the Soviet Union has given no indication that it would prefer a non-Communist Chinese regime.

#### BALANCE OF POWER

Thus, the U.S. presence in Vietnam can be seen as an effort at limiting the scope of armed conflict in southern Asia, to insure that the great powers are not drawn into an open conflict in a wider war. Such a wider war would be certain to result if the United States did not provide a balance to the forces of North Vietnam. A balance of power strategy is utilized to guarantee that no one power has enough strength to subdue the other states. Without the balance provided by the United States, and with North Vietnamese possession of the rich riceiands of South Vietnam, the balance in southeast Asia would be torn asunder.

This would happen because the states of southeast Asia are so weak internally. But if the policies of the United States are successful, these countries will someday be able to stand on their own feet. Before this happens, great changes must take place for the area is weefully underdeveloped and many of the people lack any sense of national identity and loyalty. These changes may come about in one of two ways—violently or peacefully. The Communists advocate violent change while the United States has always realized that peaceful change, through foreign aid and technical assistance, is in its best interests.

POVERTY THE REAL EVIL

Any successful foreign policy must be defined in terms of national interests and backed with adequate power. An American policy aimed at preserving the territorial integrity of Asian states while assisting in their economic and social development is in the American interest. The question that the American people and the U.S. Congress must now answer is whether or not that policy is backed by adequate power.

There is no doubt that the United States

There is no doubt that the United States is able to apply enough military power to prevent an overt Communist takeover. But this tactic, by itself, will never bring stability to the region. American foreign policy in southeast Asia must receive more support from another form of power, which is the ability of the United States to encourage social and economic development. Stability can be achieved only if progress is made in this area, for poverty is a necessary prerequisite for the success of Communist revolutionary guerrilla warfare.

Every successful Communist revolution, whether in Russia, China, Cuba, or Indochina, has been based upon impoverished masses. The Vietcong would have collapsed long ago without support from the people in the countryside. It is futile for the United States to remain in South Vietnam unless a massive effort is made to unite the South Vietnamese people behind their government. This task cannot wait until the war is over because the war will never end until social and economic changes are made.

Besides intensifying our efforts in present developmental programs, we should give renewed thought to the development of the Mekong River, which affects the livelihood of the entire Indochinese peninsula. The political fragmentation and strategic weaknesses of northeast Thailand, Cambodia, South Vietnam, and Laos are due partly to obstacles which make the Mekong difficult to navigate. By helping the southeast Asian nations to harness and develop this vital waterway, the United States could score a great victory in the battle for peaceful change by stimulating the imagination and loyalties of people in the most troubled parts of the region and by providing the opportunity for a better life to millions of Asians.

#### CAUTION

In defending our national interests, we must proceed with restraint and must view the scene from the vantage point of other nations, as well as our own. We must not allow ourselves to be placed in a position in which we no longer have any reasonable alternatives. As regard our policies in southeast Asia, the words of Bolingbroke are particularly relevant:

"Victories, that bring honor to the arms, may bring shame to the councils, of a nation. To win a battle, to take a town, is the glory of a general, and of an army. \* \* \* But the glory of a nation is to proportion the ends she proposes, to her interests and her strength; the means she employs, to the ends she proposes; and the vigor she exerts, to both."

This is a time when momentous decisions must be made concerning future American policies in southeast Asia. The decisions we make can be of vital importance to the future of mankind. Therefore, in this session of congressional debate, let all opinions be voiced, let all factors be considered, and let us coldity calculate the effects of our past, present, and future actions. And finally, let us remember the judgment of our posterity with the words of Abraham Lincoln:

"Fellow citizens, we cannot escape history. We will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation."

#### Man Will Be Free

EXTENSION OF REMARKS

## HON, L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. RIVERS of South Carolina. Mr. Speaker, the eyes of the world are focused on the Far East today.

For it is there that the question most sharply asked is: "Will men be free or will men be slaves?"

And the answer from courageous men is that man will live as a free individual.

n

t

d

trial n in on." Mr. Speaker, the Honorable William Jennings Bryan Dorn—my distinguished colleague from South Carolina and a great American—underscored those points in a stirring speech January 23 at Talpel, Republic of China.

His remarks are an inspiration to those who cherish freedom, a ray of hope to the nameless faces enslaved behind the Iron Curtain. His message was clear and should give pause for thought to those misguided despots laboring under the delusion that America is soft, or will fail her commitments in the Far East.

His speech is of such import that I commend it for reading by the Members of the Congress. Under leave to extend my remarks in the Appendix of the Record, I hereby insert his message for the information of this body:

#### MEN WILL BE FREE

(Address by Congressman William Jennines Bran Doan of South Carolina at the 12th annual Freedom Day Rally Taipei, the Republic of China, January 23)

Mr. Chairman, distinguished guests, ladies and gentlemen, I bring you the greetings and the admiration of the Congress of the United States and the American people. As a member of the advisory board of the National Captive Nations' Committee and on behalf of that committee I bring to you the best wishes of captive peoples all over the world. You, of the Republic of China, have won the enduring admiration of free peoples everywhere by your valiant and successful struggle to maintain the freedom of this island. You are the hope of freedom throughout the mainland. Your past is an inspiring saga of man's indomitable will to be free. Your present is a source of pride and hope to all who hate tyranny. Your future is nothing less than a promise to

We gather here today to commemorate the courage of the 22,000 freedom fighters who defied tyranny and chose freedom instead. We gather here today to commemorate those throughout the world who have similarly struggled to escape terrorism and torture, those who continue the struggle for freedom. We commemorate and pay homage to the millions who have died to preserve freedom.

It is fitting and proper that we observe Preedom Day. May we be encouraged and inspired to go forth from this spot as the spark of a great crusade to free the world of enslavement and oppression. The valor of these 22,000 Chinese and Korean prisoners will remain forever an inspiration to those who cherish freedom.

The eyes of the world are today focused on the Far East. For, as Abraham Lincoln

said with reference to my own country, the world cannot continue half slave and half free. And it is here, in the Far East that the question is today being most sharply asked—will men be free or be slaves? It is here that the answer is being most plainly given. Men will be free.

It will not be easy—and there is no reason to think that it will be quick—for freedom faces a massive challenge in Asia, a challenge led by those as determined as they are evil. There will be disappointments, frustrations, and setbacks in the future as there have been in the past. But men will be free.

They will be free because the determination on the side of freedom is inexhaustlible—and you are the proof of that. They will be free because the resources of the side of freedom are more than sufficient and the will to use those resources is as firm as rock.

Let no one be 'in any doubt about the commitment of 'he United States to the cause of freedom in Asia. The propaganda from Hanoi and Peiping expresses the constant hope that the determination of the United States will weaken, that the effort of the United States will falter. They are engaging in a dangerous delusion if they believe their own propaganda. They are making the fatal mistake of tyrants when they misinterpret a freeman's love of peace. Love of peace does not mean that we will purchase it at the cost of freedom—ours or anyone else's. As President Johnson said earlier this month in his state of the Union message, "We do not intend to abandon Asia to conquest."

The Far East is the key area of the world geographically, economically, and politically. It totalitarianism should conquer the Far East, then all of Asia would fail. With Asia in Communist hands, Africa would be conquered. Western Europe would be outflanked and the forces of freedom would be in grave part!

in grave peril.

In Asia there are vast untapped resources of manpower, rubber, tin, oil, and uranium. These resources, under the control of Communist aggressors, would be used for conquest and war. These resources, under Communist control, would not be used for peace or enlightment, for improved health and education. Under Communist control these vast resources would not be used for the advancement of freedom. They would be used for war and enslavement.

May I remind you that the Communist aggressors consider the individual as mere grains of sand on the seashors to be used by the masters of tyranny for their own selfish aggrandizement. We believe man is created in the image of an all-powerful being. We believe that man has individual rights and aspirations, that he is entitled to dignity and individual liberty. This we believe. This we will defend.

Lenin is reported as having said the road to Paris is the road through Peiping. The Communists are ruthlessly liquidating the opposition and are proceeding on that road to Paris by way of southeast Asia, the Noes East and northern Africa. To halt this blue-print for tyrannical power, conquest, and enslavement, the United States is spending is blood and wealth in South Vietnam The United States manifested its devotion to the cause of freedom by expending the flower of its young manhood to defend that cause in Korea.

Our Commander in Chief, President Lyndon B. Johnson, is very wisely supporting with strength the freedom fighters in South Vietnam. President Johnson will not preside over the liquidation of freedom in Asia. He will instead preside over the restoration of freedom in Asia. He is a determined leader in the tradition of the Founding

Fathers of my country. By his courageous action, President Johnson has encouraged people throughout the world who are devoted and dedicated to the cause of freedom.

We support you, here in the Republic of China, with our wealth and with our armed might. Your struggle for freedom is ours. We will not withdraw and leave you to fight this battle alone. We are here to stay until freedom is secure in Asia and the aggressor collapses in his own evil structure.

In the history of the struggle for freedom you have produced one of the giant figures of our time. General Chiang Kai-shek was among the first to understand the diabolical tactics and sinister designs of the Communist world conspiracy. He began his heroic struggle to oppose communism on the mainland in the 1920's, and he has been a world-renowned champion in that struggle from that time to this. He and Madame Chiang long ago won the hearts of the American people and of freedom lovers everywhere. Madame Chiang is now in my country, and we welcome her both as a valiant ally and as a warm and honored friend.

The Republic of China stands ready on the flank of Communist aggression. The Republic of China is blocking the road of Communist expansion to the islands of the Pacific. The Republic of China and the magnificent forces of the Republic of South Korea are a deterring force to the announced Communist plans to conquer India, southeast Asia, and move into the Middle and Near East. I salute you for this magnificent contribution to world freedom.

I salute you also for the assistance you are giving to the free world effort in Vietnam. You are one of the almost 40 nations which are helping the gallant people of that beleaguered land build a better life at the same time that they defend themselves against a cruel aggression. Your country is giving assistance in the field of agriculture. You have built power stations. You have sent medical teams. You have trained more than 400 Vietnamese technicians. You have given warehouses, agricultural equipment, seeds and fertilizers, veterinary equipment and cattle, boats, airplanes, and over half a million textbooks. And you have been generous in extending to our forces fighting in Vietnam both material facilities and hospitality. You are playing your full role as part of the fraternity of freemen opposing aggression in Vietnam.

The United States is fighting in South Vietnam as a member of that fraternity of freemen. We are fighting there against stark Communist aggression by terrorism, infiltration, sabotage, deception, and murder—the most diabolical and dangerous form of aggression. We are fighting in South Vietnam to preserve the right of self-determination of nationalities. We are fighting for peace, as opposed to the spread of war. We are fighting to help all of you in a righteous cause. We are fighting to prevent a world war. We are fighting to prevent a world holocaust of unparalleled carnage and destruction.

We are daily growing stronger on land, on sea, in the air, and in space. This strength is for freedom. This military might is dedicated to your independence, to your liberty. It will never be used for aggression, slavery, and conquest. The United States has no territorial designs anywhere in the world. We are for liberty and individual dignity and freedom for peoples everywhere. We believe in lending a heiping hand to the diseased and the underprivileged throughout the world.

We are for liberty and individual dignity and freedom for peoples everywhere. We believe in lending a helping hand to the diseased and the underprivileged throughout the world. We are standing beside all of you in this struggle for freedom to preserve your ancient heritage, your art, your culture—which precedes ours—to preserve your civilization, which began thousands of years before ours. We share your hopes and your aspirations for

the future. In this age of science and astronautics, there is no room for Communist suspicion, hatred, bigotry, and deceit. I look to the future with hope and with confidence. I believe we are on the dawn of a new era.

The magnificent progress made on this island shows what free societies can accomplish. The growth in your production of both agricultural and industrial goods can only be described as startling. Your exports are rising, your economy is strong, your currency is sound. Most important of all, the benefits of this prosperity are going to the people. I am proud that my country has assisted you in your efforts. And I know that you are proud that through your own efforts you have done so well that in your country we have been able to and our foreign aid program.

The iron curtain in Europe and Asia is a manifestation of an interiority complex. The iron curtain is necessary to hide tyranny and promote totalitarianism. The Iron Curtain is designed to keep people from knowing the truth—to prevent them from knowing the joys of freedom and self-determination of peoples, individual liberty, dignity, and economic opportunity.

I can assure you that the United States will stand firm throughout the world. We fought in Korea. We are fighting in Vietnam. We are with you in Korea, in Quemoy, and in Matsu. We are supporting SEATO in southeast Asia and NATO in Europe. We will oppose Communist aggression wherever it rears its ugly head.

The time has come to launch an offensive an offensive of truth about freedom, the truth about stark Communist aggression and its sinister designs. We must offer hope for the captive peoples of the world to throw off the yoke of tyranny and again live in the sunlight of freedom. We must spread the truth, throughout the world, about Communist imperialism and colonialism. We must tell the truth about class hatred and race prejudice of Communist imperialists—the truth about their liquidations, murder, and deceit.

We must not reward Red Chinese aggression by giving Red China a seat in the United Nations. We must not dignify Red China by giving her a forum and a vote on the cause of freedom. We must not bolster her economic system with the trade of free nations and peoples dedicated to the cause of human dignity. It would be a grave mistake to bolster her sagging economy with the products of free enterprise nations. We must not make this same mistake again. The free nations of the world promoted trade with the dictators of World War II. It was their acquisition of products from free enterprise nations that largely enabled them to launch a war against private enterprise, property right-dignity, and freedom of the individual. We cannot make this mistake again. Red China has the atomic bomb. She is perfecting the hydrogen bomb. Trade with the free world will enable her to have the hydrogen bomb, with which to launch an onslaught against civilization, in mass production at an early date. We must push our freedom offensive now.

Captive nations and peoples hold the key to the future security, independence, and freedom of the world. Remain steadinst in your struggle for freedom. Captive nations are the "Achilles heel" of Red imperialist aggression. Communism fears your yearning, your desire for freedom. Communism fears your courage and your ability to someday rise and turn back the tide of tyranny.

You have our hearts. You have our sym-

You have our hearts. You have our sympathy, our support, and our understanding. We share your applrations. Most of all, we share your super and certain vision of the future: Men will be free.

#### Misuse of Foreign Aid

EXTENSION OF REMARKS

# HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. PELLY. Mr. Speaker, a constituent of mine, Mr. Jack Bird, who is a member of the Alaska Fishemen's Union, has posed some serious questions and charges pertaining to our foreign aid program in the Republic of Chile.

Following one of the major earth-quakes in Chile, the U.S. foreign aid program was stepped up to aid in the recovery from this major disaster. However, it seems that this aid and subsequent aid, according to Mr. Bird's memorandum, has not been allowed to filter down to those who were in greatest need. Charges of graft and corruption have often been voiced in this area and there is no valid reason why we should not establish rules for administering foreign aid.

Mr. Speaker, the American public cannot be placated forever with pious answers and doubletalk which has no substance of meaning

I have asked that the following memorandum from Mr. Bird be investigated by the House Foreign Affairs Committee. Also, I am sending a copy of this memorandum to the officials of the CARE program so that they, too, may have the opportunity to look into the matter of CARE packages being sold, thus not reaching the poor.

Mr. Speaker, with the thought that my colleagues and other readers of the Congressional Record might be interested in Mr. Bird's observations I include herewith the text of his memorandum:

I would like you to take this matter up with interested parties, regarding aid donated by the American people.

nated by the American people.

In 1960, I was living in Coronel, south of Concepcion, Chile, in a very poor section. The industry is mostly coal mining and the wages were very low. While I was there we had the largest earthquake in Chilean history. Here in America the quake made headlines in all the newspapers and there were vast sums of money and materials donated for that area, which was the center of the quake. I resided in that area for 3 months after the quake. And I didn't see any sign of materials or aid that were supposed to be donated for relief of the victims. When I left Chile, people were still camping in front of their ruined houses. Hundred of thousands of people never knew of any aid. Where does this aid go?

Four years later I was again living in Chile. This time in the north, in the small

Four years later I was again living in Chile. This time in the north, in the small city of Iquique where I resided for 18 months. At various times, I have seen CARE packages on display in the store for sale. I purchased 8 kilos of flour for 3½ escudos, nearly \$1. In the 18 months that I lived in Iquique, I never met anyone who had ever received a CARE package and there are hundreds of thousands of poor people there. They didn't even know such a thing existed.

If we don't supervise the aid after it enters these countries, we are wasting our time and money.

I think this is a job for our highly rated Peace Corps in those areas. It would at least give them something useful to do. 'I have worked in many areas where the Peace Corps people are stationed and only about 25 percent are qualified to contribute anything to these areas, such as doctors, nurses, teachers and skilled technic ans—the rest are just there for 2 years.

Example. I have seen pictures in magasines showing Peace Corps workers digging ditches in Latin America, when those people have known how to do that for 500 years.

have known how to do that for 500 years.
Also, two Peace Corps workers came to
Iquique, age about 20, to teach fishing.
When they got on a fishing vessel, they were
lost; they had to learn from the Chilean crew
members, much to the amusement of the
Chileans.

There are more Communists in Chile than I have seen anywhere else where I have worked. Most of the crew members that I instructed in fishing were Communist. Allende, the Communist Party leader, gained in most depressed areas of Chile. And if we don't get to these poorer classes of people in the next 4 years, the Communist Party has a good chance of getting in.

Therefore we must make sure we get credit for every dollar in aid we send there.

I think that is where the Peace Corps would come in useful, to see that anything we send to these countries gets to where it is supposed torgo.

A national drive for good used clothing would be very welcome to these poor people. Nearly all American families have closets full of clothing they will never use again because they are tired of them. This material could be distributed by the workers of the Peace Corps, to be sure it gets to the right people.

My information is that aid donated by the American people is delivered to the principal port in each country, and then trusted to some local agency which may or may not be honest.

As an American taxpayer, I want to see us get full value for each dollar spent.

Jack Brad, Seattle, Wash.

# Concurrent Resolution of Michigan State Legislature Supporting President Johnson's Position on Vietnam Issue

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the Congressional Record House Concurrent Resolution 40, adopted by the Legislature of the State of Michigan, in support of President Johnson's position on the Vietnam issue:

House Concurrent Resolution 40
Concurrent resolution supporting President
Johnson's position on the Victnam issue
(Offered by Representatives Burton and
Marshall)

Whereas the United States has for many years been committed to a definite policy in southeast Asia, which policy has declared intentions of the United States to support those governments of southeast Asia who are fighting communism; and

Whereas this policy has been supported by the two preceding Presidents of the United States as well as having such policy continued by the Johnson administration: Now,

therefore, be it
Resolved by the House of Representatives
(the Senate concurring), That the members
of the Michigan House of Representatives
and Senate hereby declare their firm belief
and faith in President Johnson's policy in
South Vietnam and southeast Asia and urge
him to resist all tempting offers to negotiate
a settlement which would be detrimental to
the Government of the United States; and
be it further

Resolved, That the members of the legislature respectfully urge the President of the United States to continue with his cautious but firm policy in matters involving southeast Asia and that the great majority of the peoples of this country heartily support the position being taken by his administration and the majority of the Congress of the United States; and be it further Resolved, That a copy of this resolution be

Resolved, That a copy of this resolution be transmitted to President Johnson and to the Michigan delegation to the U.S. Congress for their consideration.

Adopted by the house December 9, 1965.
Adopted by the senate December 9, 1966.
BERYL I. KENYON,
Secretary of the Senate.

NORMAN E. PHILLES, Clerk of the House of Representatives.

# HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. WOLFF. Mr. Speaker, more than two-thirds of all Americans are city and suburban dwellers.

In a real sense, the job of the Federal Government is now concerned with the care of the people in these areas.

The job facing the newly appointed head of the Department of Housing and Urban Affairs, the very able Robert C. Weaver, is a tremendously important one. His new Department must become the clearinghouse for urban and suburban problems.

A recent editorial in the New York Times calls this appointment "the beginning of another road along which vast new strides must be taken toward better living conditions."

I respectfully requested that the Times editorial on Dr. Weaver's appointment be included in the Record, and commend it to the reading of the membership of this body:

[From the New York (N.Y.) Times, Jan. 15,

# THE WEAVER APPOINTMENT

President Johnson's appointment of Robert C. Weaver as Secretary of the new Department of Housing and Urban Renewal has been long expected.

A Harvard-trained economist, Dr. Weaver hav Government experience dating from the early days of the Rooseveit administration. He is dedicated and knows the field to which he has been assigned; he was deputy State housing commissioner and later New York State Rent Administrator under Governor Harriman. President Kennedy subsequently

named him to the top housing post in the country. He has attained Cabinet level—first Negro in American history to do so—despite some criticism of his abilities and his imagination.

If the appointment of Robert Weaver to his new post is the end of the road in the sense that the struggle to put a Negro in the Cabinet is won, so is it the beginning of another road along which vast new strides must be taken toward better living conditions. "In some of our urban areas we must help rebuild entire sections and neighborhoods containing as many as a hundred thousand people," the President said in his state of the Union message. "Working together, private enterprise and government must press forward with the task of providing homes and shops, parks and hospitals, and all the other necessary parts of a flourishing community where our people can come to live the good life." It is Robert Weaver's task to direct and coordinate such an ambitious effort, and we wish him the best of luck in this monumental job.

#### **Eccles Speaks Out on Vietnam**

EXTENSION OF REMARKS

# HON. GEORGE E. BROWN, JR.

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. BROWN of California. Mr. Speaker, in view of the continuing efforts by the President to seek a negotiated peace in South Vietnam, for which I am most grateful, and the pressure which he is undoubtedly being subjected to from many persons advocating total victory, I think we would all do well to note the recent words by Financier Marriner S. Eccles. I would like to request unanimous consent to have printed at this point in the RECORD an article which appeared recently in the Los Angeles Times, January 4, 1966, wherein Mr. Eccles joins in urging that we not escalate the war in Vietnam:

SAN FRANCISCO.—"Under no circumstances should we escalate the war in Vietnam. Our position there is indefensible," says financier Marriner S. Eccles.

Eccles declares, "Contrary to Government propaganda, we were not invited by and have no commitment to any representative or responsible Government of South Victnam.

"We are there as an aggressor in violation of our treaty obligation under the U.N. Charter."

Eccles' remarks appeared in the "Letters to the Editor" column of the Monday morning edition of the San Francisco Chronicle.

Now 75, Eccles was assistant to the U.S. Secretary of the Treasury in 1934 and has held several positions on the Federal Reserve Roard

#### U.S. AUTION CITED

Eccles said that after the Vietnamese victory over the French and the signing of the Geneva Treaty in 1954, the U.S. refused to allow free elections in Vietnam, "knowing that Ho Chi Minh, the Communist leader of the north, was so popular he would unquestionably win."

"The South Vietnamese Catholics, about 10 percent of the population, property owners, and business interests in the large cities, are the strong anti-Communist supporters of

South Vietnam, and are the minority," he continued.

"We have provided large amounts of military and economic aid and supplied them with military advisers," Eccles said. "But until the present administration came into office, we did not furnish American troops to help fight their war, until it was apparent they were being defeated.

"We have gradually taken over the direction to their Government as well as their war until now it has become an American war rather than a Vietnamese war."

rather than a Vietnamese war."

As a result, Eccles asid, "we now have alined against us the powerful countries of China and Russia, including all the Communist world, with practically no support from the rest of the world in spite of Rusk's and Mc-Namara's recent appeals to NATO.

Namara's recent appeals to NATO.
"Under these conditions," he concluded,
"we cannot win."

## World Is a Small One for Harriman

EXTENSION OF REMARKS

# HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. MORSE. Mr. Speaker, world leaders have continued to be amazed at the vitality and effectiveness of one of our most able Ambassadors, Gov. W. Averell Harriman. Governor Harriman's familiarity with the principal world figures for more than a generation has assured his missions a friendly and respectful welcome wherever he goes.

Yesterday, Chalmers Roberts of the Washington Post reported on an interview with the Governor following his most recent peace mission regarding the situation in Vietnam. I ask unanimous consent to include Mr. Roberts' article in the CONGRESSIONAL RECORD:

[From the Washington (D.C.) Post, Jan. 23, 1966]

World Is a Small One For Harrison
(By Chalmers M. Roberts, Washington Post
staff writer)

In the dark of last Wednesday evening W(illiam) Averell Harriman, who will be 75 next November 15, ran down the ramp from his presidential jet at Andrews Air Force Base in nearby Maryland. It was the end of yet another talking trie

another talking trip.

Harriman has been talking straight talk to presidents, prime ministers, dictators, and other assorted political potentates since Harry Hopkins introduced him to the Roosevelt inner circle in early New Deal days.

For 22 days he zigzagged around the world as one of President Johnson's peace offensive envoys. Mr. Johnson put a lot of people into diplomatic orbit but somehow the memory fades of all but the extraordinary durable Harriman.

For Harriman the only word is extraordinary. On this 35,000-mile trip he touched down in 12 world capitals—he was in Bangkok 3 times—and none of them was new to him. Not only had he been to them all before but he had met every one of the leaders before with the single exception of Egypt's Gamal Abdel Nasser.

#### GREETED BY MENZIES

That wealth of experience clearly paid dividends. Australia's Robert Menzies, who came out to the airport in the late evening to greet him, was an old friend from World War II days in London when the Aussie sat

with the British War Cabinet.
Or take Yugoslavia's President Tito.
"I saw him in Brdo"—where they met

again this time -"back in 1951 when Yugoslavia, after the break with Russia, feared Stalin would turn the satellites loose on

him. We gave him planes and tanks."

Harriman paused and added: "When you've seen a man in his tough times, there's

certain relationship."
In Warsaw, Communist Party Boss Wladislaw Gomulka saw Harriman for old time's sake." He once had been a house guest in Harriman's New York residence, years after

Harriman's New York residence, they first met during the war. "The Shah of Iran," says Harriman, "con-siders me one of his oldest friends. He stayed at my cottage in Sun Valley." Har-riman, whose father created the Union Pa-cific Railroad, was of course the man who

ted that ski resort. Harriman has a newspaperman's instincts about travel and he hasn't missed many corners of the world.

"If you haven't been to a country," as he puts it, "no matter how much information you have, you can't get a feel of it."

In fact Harriman feels so strongly about

the right of Americans to travel that he once hired Dean Acheson to fight a potential car for him right up to the Supreme Court. Back in the Eisenhower years, when he had finished a term as Governor of New York (he was involuntarily retired by the voters in favor of Nelson Rockefeller) Harriman de-cided he wanted to go to Communist China.

#### THE 1959 TRIP CALLED OFF

At that time the State Department forbade such trips. But the test case never came off use at the last minute he received a m rage from Peiping saying it would not be convenient to receive him that year, 1959.

Of course, Harriman has been to China.

He stopped off in Chungking, the wartime capital, to see Chiang Kai-shek en route home from Moscow in 1946. Everybody told him he ought to go on to Peiping but he had a date with Gen. Douglas MacArthur in Tokyo, and so he missed his only chance to get the feel of today's center of the Asian Communist world.

"I was very serious in those days," he says with a sense of regret that he didn't put off the visit with the general another day or two

to take in Peiping.

The Governor—everybody calls him that and he loves it despite the fact that his political skills turned out to be in an almost totally inverse ratio to his diplomatic abilities—had only 8 hours' warning of his latest trip. President Johnson called his at noon and he was airborne from Andrew at 8 p.m

But the Governor was not unprepared this time even though he thought it was to be a trip of only a few days.

"Tve been caught several times before,"
he explains, "on being sent to the tropics. So
I usually take some tropical shirts along. I
anily wear one weight of wool suit anyway."
Although the presidential jet, with its huge
"United States of America" legend emblazoned on each side, has a pair of bunks, the 6-foot-1-inch Harriman spent only 3 or 4 nights aboard in bed. At each stop, too, embassy wives reached for the solled shirts and returned them in time for the Governor and his two globe-girdling aids, Asian Commu-nist expert David Dean, and Christopher Squire, who is in charge of Hungarian af-

Harriman took no secretary. He penciled his dispatches on a yellow pad and got them off at the next stop. Dean and Squire alternated as note takers at the talks with the foreign leaders and then wrote up the detailed reports.

Harriman has his own philosophy about

fairs at State.

diplomatic messages.

"I write them short to the President and and the Secretary of State. More people read the short ones. But I make them very much to the point. They have got to be reasonably entertaining. I learned that from the British. They pass around the Cabinet table the telegrams they get from their ambassadors. They never have a leak, either; I wish we could do as well.

"The Ambassador in Britain who writes the best has his career made. They have literary style. Sometimes exact reporting is not as important as being descriptive."

Harriman, of course, won't discuss the substance of his peace mission other than to say that "I got the impression that all the people I saw were anxious to see the fighting stop, although for differing rea-

"The crocodile" method is to come to the point and wrap it up quickly. He had 45 minutes at the Peshawar airport with Pakistan's President Ayub Khan who, naturally, he has known since 1959.

#### IN WARSAW AT 3:30 A.M.

When he arrived in Warsaw, nonstop from Andrews, it was 3:30 in the morning by his wristwatch. But 45 minutes after the touchdown he was closeted with Poland's Foreign Minister Adam Rapacki

"You can do an awful lot in an hour." he says.

Harriman, of course, was acutely conscious of the critical role the Sino-Soviet dispute plays in the war in Vietnam. Like other administration leaders, he feels that Moscow wants to see the war ended, that Peiping wants to see it continue and that Hanoi is trapped in between the two Communist

It was Harriman, after the German surrender and before Japan fell, who inspired James Forrestal to write in his 1945 diary: 'He said the outward thrust of communism was not dead and that we might well have to face an ideological warfare just as vigorous and dangerous as fascism or nazism." that at a time when most Americans were putting their postwar hopes on a continua-tion of the wartime alliance with the Soviet Union.

Stalin himself confirmed Harriman's dire views that October when he told him that

"we've decided to go our own way."

It was President Kennedy who first deeply involved Harriman in the Par East, especially in the China problem. Today he takes very seriously the hard words from Peiping such as Lin Piao's pronouncement that the underdeveloped nations of the "countryside" will surround and defeat the "cities" of North erica and Western Europe

He wants Americans to fully appreciate the anger from China. But he does not worry that in turning their eyes to the Far East they will be bemused into thinking that Washington and Moscow are about to be-

come allies. He figures the Russians will make it evident it can't come to that.

Averell Harriman did not bring peace to Victnam but he clearly enjoys the satisfaction of yet another job well done. The trip was titing, a cold turned into an early information of the control o was tiring; a cold turned into an ear infection because of too-rapid descent and change in the cabin air pressure coming into Darwin,

Winging home across the Pacific, he played bridge with Secretary of State Dean Rusk, Senator JOHN SHERMAN COOPER, Dean, Squires, and Rush's aid, C. Arthur (Buck) Borg. Rusk, who had joined up in New Delhi and and who lives on his earnings, picked

up a bit of change from Harriman who in 1952 was reputed to be worth \$40 million.

When they got to Honolulu and the luxury of the Royal Hawatian Hotel, Harriman ducked into a sports shop, bought a \$6.95 pair of wildly yellow swimming trunks and headed into the sea at Waikiri.

There was no surfboarding this time. But he mused to a companion: "In my day, it was much more dangerous; they didn't have that stabilizing fin on the back of the board then.

# George Paul Miller: The Conscience From California

EXTENSION OF REMARKS OF

# HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. KARTH. Mr. Speaker. It has been my rare privilege during the last 7 years to know and to work with Congressman George P. MILLER, on the House Committee on Science and Astronautics.

Under his leadership the committee has considered the National Aeronautics and Space Administration authorization bills which have brought the country's space programs from very preliminary stages to full operation. Much credit for this successful achievement is due to Chairman MILLER's knowledge and patience and parliamentary skill.

The magazine Challenge published by the General Electric Missiles and Space division recently printed an article about Congressman MILLER. So that our colleagues can have the opportunity to read this excellent portrayal. I include it in the Appendix of the Congressional Record: GEORGE PAUL MILLER: THE CONSCIENCE FROM

CALIFORNIA

(One of the first things a boy learns on getting a drum is that he's never going to get another one. One of the first things a nation learns about getting a George Miller is that we need more like him. The capable chairman of the House Committee on Science and Astronautics relies on experience and com-monsense in encouraging the Nation's space efforts. Here he speaks out on competition—among people, in industry, and with Russia.)

In a highly technical world like space, saturated with semantics like thermodynamics, gravity gradient, and accelerometers, if you were going to handpick a man in Gov-ernment to head up the House of Representatives Committee on Science and Astronau-tics, you wouldn't pick the manager of a travel agency that failed, or a man who was on relief in depression days, or an ex official of a State fish and game commission.

You wouldn't, that is, unless the combina-You wouldn't, that is, unless the combina-tion of all three turned out to be Gusars Paut Mr.Les, Congressman from California's 8th District, now in his 11th term in Wash-ington, just shy of his 78th birthday, and still building momentum in a life he waited so long to begin.

And you might pick him for this job of spearheading the annual authorization of America's \$5 billion space program not be-cause of his technical background (though he's an engineer and has learned the lan-guage); not because he's a tactful politician (though associates say he can settle disputes better than most), and not because of his experience (though he's served five Presi-

You pick Gronge Miller because he's trustworthy guardian of the public invest-ment; because he asks questions until he gete answers we can all understand, and because he's dedicated to the idea that America will not ride on the back of the space bus, clinging to the teasing tall of Russian achievement.

"We all know that this Nation has the brainpower to continue the technical lender-ship we've always enjoyed," he said. "It's essential that we achieve unquestioned superiority in every aspect of space exploration, because of the knowledge to be gained, the security potential, and the economic value of applying what we learn to the way we live."

#### OUTSPOKEN AND QUALIFIED

Assigned to the committee in 1959, Congressman Miller backgrounded himself carefully in many phases of the space business before ascending to the chairmanship in 1961. An outspoken endorser of the space program, he's quick to call attention to its widespread importance:

"By any standard, this Nation's space program is a massive enterprise, in terms of money and human resources. Since it opened its doors for business a few years ago, the National Aeronautics and Space Administration has received approximately \$22 billion in appropriations.

"More than 30 percent of this money is spent for contracts with industry and this means that about 300,000 people are working on NASA programs. If you accept the rule of thumb that there are 6 people—the butcher, the grocer, the real estate man, etc.—serving the needs of each of these individuals, then approximately 2 million people are benefitting indirectly from NASA payrolls.

"Do we spend too much? Hardly. In my first year as chairman, the House endorsed the appropriation by a vote of 343-0 and the support since has been just as impressive. Actually, the Soviet Union spends much more on its space program in relation to its gross national product than we do. We are not paying anywhere near the price for our space exploration that is being paid by the average Soviet citizen. He is paying in terms of less bread on his table, lower quality shoes on his feet, and poorer housing for himself and his family.

"I have little patience with the critics who cry out that our tax money is being thrown away in the exploration of space, or that going to the moon will result in the neglect of our problems here on earth."

of our problems here on earth,
"It should be obvious to those critics, if
they take the time for a short historical
review, that many years of experience have
shown that the indirect payoff in human
terms for technical innovation is many times
more valuable than the original investment.
"The benefits to all of us from space re-

"The benefits to all of us from space research are spectacular. I can see it in communications, in weather prediction, in navigation, in education. But I can also understand why the average housewife, or the Texas cattleman, or the Iowa farmer, or the California fisherman finds it difficult to relate earth satellities or deep space probes to personal economic welfare.

sonal economic welfare.

"What we must understand is that any national effort such as our space program will directly affect every aspect of our national community and will have an impact on nearly every individual."

George Miller will be 75 years young in January. Experience autographs his face. It's a face that has a lived-in look. He entered politics when he was near 50 because he "was too old to get into anything else." Sometimes he's known more problems than works.

But Miller realizes that problems are the price of progress. He's proudest of his "good fortune to have been born in America."

It's an America that saw Grosce Miller win his degree as a civil engineer in 1912, practice engineering for 5 years, then enter World War I as a lieutenant in the field artillery. In the early 1920's he spent 4 years on the staff of the U.S. Veterans Bureau, forerunner of the current Veterans' Administra-

tion. Then in 1925, he returned to the practice of civil engineering.

With a friend he became coowner in 1928 of a travel agency which failed during the depression ("We just hung on too long, thinking things would get better, and pretty soon we were broke"). Minlam was thrown on relief, and began sweeping streets in the city of Alameda, Calif. When you're nearing 40 and sweeping streets in northern California, it takes a pretty healthy brand of optimism to predict that in about 10 years you'll be in Congress.

"I had a lot of time to do some thinking back then," he recalls. "I had always been interested in politics. I had some friends and they helped me to run for the State assembly in California. You only needed \$20 and 20 names to run. I announced, and I won, and things began to happen."

Things not so much happened, as he made them happen. He was more than just a politician who favored motherhood, green grass, and an early spring. A distinguished 4 years in the assembly led to an appointment as executive secretary of the California Pish and Game Commission ("having interest in neither the commercial nor the sportsman aspects, I was considered just right for the job").

#### THE WASHINGTON ARENA

In 1944 voters sent George Miller to Washington and his congressional credentials have grown ever since. He's worked on civil service, immigration, irrigation, post office matters, and in more recent years on Congress' stake in the Nation's scientific activities.

"It must be remembered that the responsibility for direct congressional judgments with regard to research and development to a great degree depends upon the knowledge and wisdom of comparatively few men. Members of Congress, because of the wide variety and diverse nature of their responsibilities to the people they represent and to the country at large, are able to develop real depth in very few areas. They must rely on committees.

"About 2 years ago, I established a Subcommittee on Science, Research, and Development. It's the job of this subcommittee to concern itself with analyzing Government support of research and development, and to help evaluate how efficiencity those programs are satisfying Government needs.

"Congress has been thoroughly aware over the past 20 years that human problems were arising within our steadily increasing population that had to be resolved through technological solutions.

"In view, however, of the very nature of research, and its obvious need to maintain a rate of progress that would satisfy our national needs, Congress has been very careful not to set up criteria through legislation that would inhibit scientific investigations. We're here to encourage a research climate that will lead to practical benefits for all of

"I'm especially pleased at the boon education has received. The NASA budget for example, included \$48 million last year for grants and fellowships. In achieving a vigorous, healthy society, well-balanced between technology and culture, between science and the arts, and between material achievement and philosophy, we must continue to stimulate our educational resources. Nothing is more important to our future."

GEORGE MILLER'S confidence in America's

system of competition between companies and between people has never been higher. He feels it's the kind of competitive picture that makes this Nation an odds-on favorite in space competition with Russis.

"The Soviet launching of Sputnik I in October of 1957 was a political factor of the first magnitude. Its implications, international and domestic, were enormous.

"We had to face the grim reality that Russia had achieved a totally surprising tech-

nological breakthrough that we could not then come close to matching. We should now derive great satisfaction from the fact that engineering and science, which have been daring and confident, have made our comehack space program so successful.

comeback space program so successful.

"In this Nation of doers and hardworking people, engineering in the hands of private enterprise has provided the tools with which the American people have been able to transform in 180 years a wilderness into the most powerful Nation in history and to create through technology an unprecedented superabundance of human benefits.

"It is a significant expression of our national spirit and courage, that we stand unafraid to invite the people of the world to be witnesses to the successes—and failures—of our space scientists and engineers.

"From the start we have recognized that an accelerated space program designed solely to serve military ends would be very limited scientifically, and would place a severe burden on the resources, both human and material, of the Department of Defense.

"For these reasons, and more, the congressional committee, as a basic premise, first declared that the exploration of space for peaceful purposes and for the benefit of all mankind was to be our national goal. This was wisely written into the 1958 Space Act.

"Certainly what's happening out in space is getting the attention of the world, but the promise from this adventure extends far beyond our success in space. We can apply some of what we learn to our problems right here on earth. Let me cite four problem areas which face this Nation at the present moment.

"There's beach erosion. We're losing many of our finest beaches. There's pollution of the air and water. There's a misuse in the consumption of water, not only in this Nation, but around the world. There are immense problems in communications.

"The point of all this is that much of what we learn in space exploration can be applied to all of these very real problems. I think some of the work being done in my home State of California is a good indicator of things to come. There aerospace engineers are seeking to solve problems in education, waste disposal, transportation, the State people system and in other earthly mattern and in other earthly mattern and in other earthly mattern and in other earthly mattern.

waste disposal, transportation, the State penal system and in other earthly matters. "We must push on without hesitation. Mankind has survived in the past through his intimate knowledge of the environment in which he has had to contend. This is as necessary today as it has ever been. We must learn as much about space, our solar system, and our galaxy as is possible.

"Who, in the light of historical evidence, would dare presume now that mankind need not extend its investigation of the space environment?"

For 21 years Grosce Miller's wife, Esther, has been his secretary. It started out of financial necessity. It continues out of success. Miller is not a rich man, but he likes his job and says it pays well.

His personal fund of experience, his understanding of people, and his appreciation of America, are admired by many, equaled by few. In World War I, in working with veterans, in sponsoring legislation to aid victims of paralysis, in 21 years in Washington, the great common denominator has been his genuine interest and confidence in people.

Some people say GEORGE MILLER got started too late. Others figure he came along just at the right time.

"The best thing you can do," he comments, "is to serve your country. You ought to be willing to make some sacrifices, take a little hell now and then, and keep right on working."

To him the exploration of space is more than an expression of national ego, more than a demonstration of technological superiority. He believes our national space program represents an obligation to our children and our traditions.

Chairman Miller concludes: "Our space

Chairman Mn.Les concludes: "Our space program is in the hands of men of outstanding solitity and patriotism, whose driving motivation is to bend every effort possible to fulfill the guiding principle of the 1958 Space Act, that activities in space should be devoted to peaceful purposes for the benefits of all mankind.

"I think the record shows that we have been true to our ideals."

# Johnson Versus Malthus

EXTENSION OF REMARKS

# HON, PAUL H. TODD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. TODD. Mr. Speaker, we are presently engaged in consideration of how best to assist several foreign governments to provide food for their peoples. We will send grain. With an eye to the long view we will help to improve agricultural methods. I agree entirely that these projects must be undertaken. However, with the words of President Johnson in mind—"Five dollars invested in population control is worth \$100 invested in economic growth"—I wish to add the following corollary:

Family planning programs must be included in all our assistance programs both foreign and domestic. The problem of feeding the present world population is staggering. Let us avoid as much as possible increasing the growth of human numbers so rapidly as to be unable to increase food production to meet their needs.

The following editorial from the New York Times of January 24, 1966, enlarges on this line of reason:

#### JOHNSON VERSUS MALTHUS

President Johnson envisages a sweeping cooperative effort to better conditions in the developing world. Citing the progress made under the point 4 program of technical assistance that began 17 years ago, Mr. Johnson has promised additional funds and other sid to developing nations willing to help themselves in combating illiteracy, disease, hunger and uncontrolled growth in population. It is time, he said in both the state of the Union message and in dedicating the Harry S. Truman Center for the Advancement of Peace, to "help improve the life of man."

This is a noble objective, meriting support from other rich industrialised countries as well as the United States. But there is a need for establishing a clear order of priorities. The President seems to be suggesting that the poor countries, having achieved a substantial degree of development, are now poised for a great leap forward to higher living standards. Unfortunately, this is not the case. Millions of the world's peoples are fighting a grim and losing battle for mere survival and many millions more are on the border-line between hurger and starvation.

If anything, the situation threatens to grow worse. Pamine stalks the great subcontinent of Indic, where Government spokesmen predict that the food shortage will curtail the already inadequate diets of as many as 100 million people. Drought in Africa will mean increased deprivation—and rising tensions—in many newly emerging nations. Even in

areas where food output is rising, the rapid growth in the number of mouths that must be fed has outstripped the additions to supply.

Because man must be fed before he can be educated, the highest priority must go to alleviating the hunger now so widespread. This effort requires a vast expansion in the campaign to control births and an accentuated effort to increase agricultural production throughout these education are supported.

Even the immediate problem cannot nearly be met with the \$1 billion that Mr. Johnson pledged for his new program. But should the President seek support for an amount more in keeping with both the needs of the developing world and the resources of the richest country on earth, there would still be a sizable gap. Other rich nations must contribute; and in any event multilateral aid is preferable to unlisteral aid. And there is ample room for private initiative—by universities and foundations and business groups—which is sorely needed all over the developing world.

Helping the poor nations reach the stage where they can think in terms of improving the life of their peoples will be expensive—in time and effort as well as money. But it is no longer a question of whether it can be afforded. It is failure to do so that cannot be afforded. Mr. Johnson's dream of a better life cannot be realized in a world where the Maithusian specter, more terrible than Malthus ever conceived, is so near to being a reality.

#### Ukrainian Independence Day

EXTENSION OF REMARKS

# HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. RODINO. Mr. Speaker, on Saturday, January 22, over 1 million Ukrainian-Americans observed the anniversary of an event that holds great significance for them as well as for their fellow Americans. Forty-eight years ago, on January 22, 1918, the people of Ukraine declared their independence. This act culminated a struggle that had been waged throughout the years of the 19th century and the early years of the 20th century. During those years of struggle, the people of the Ukraine consistently looked for encouragement and inspiration to a country that had earlier fought to free itself from colonial rule and had declared itself devoted to the cause of freedom and self-determination for others who re-mained oppressed. That country was the United States of America.

Today, Ukrainians everywhere lament that their homeland knew the blessings of liberty for only 2 brief years, that their country has fallen under the sway of an imperial power which has consistently exploited the riches of the Ukraine and has sought to stamp out Ukrainian nationalism. In America, Ukrainians who have been fortunate enough to escape Soviet tyranny and to participate in the life of a democratic society are especially moved by the plight of the people of their former homeland. Surely, their fellow Americans should be similarly moved. For today, as yester-

day, all Americans remain committed to freedom and self-determination for peoples living under the yoke of foreign tyrannies. And today, as yesterday, Americans are dying on faraway battle-fields as they give proof of that commitment. As we observe an anniversary that Ukrainians everywhere hold dear, we cannot forget that we thereby also affirm our dedication to principles cherished by all Americans.

## What Is a Person?

EXTENSION OF REMARKS

## HON, WAYNE N. ASPINALL

IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1966

Mr. ASPINALL. Mr. Speaker, each one of us is constantly trying to bring into focus man's relationship between our scientific world and his spiritual existence and his beliefs on immortality. One of the most interesting and well written articles that has come to my attention in many years is an article entitled "What Is a Person," by Dr. Richard Aspinall. I commend the reading of this article to my colleagues. It is a contribution which I am sure will be most valuable to the reader.

The article follows:

WHAT IS A PERSON? (Richard Aspinall, Ph. D., LL.D.)

In recent years there has been, particularly in the field of genetics and biochemistry, a phenomenal upsurge of efforts to analyze the self, or the person. Upon this topic, long shelves of books and innumerable articles have been written and painstakingly reviewed in scientific magazines. Television and radio programs have been shown and heard at attractive hours for the benefit of those desirous of scientific information. Consequently, there is little escape from reading, seeing or hearing the subject dis-One is reminded of the hubbub fomented in lay circles by the theory of evolution, by the introduction of the Menelian law into the study of heredity, by the results of psychologic tests and meas urements of behaviors, and by the therapies and medications of psychology and psychiatry upon the mentally normal and the naturally advanced, as well as upon the defectives, dependents, and delinquents of society. And last but not least, are the almost frighteningly bold assertions made by physical science concerning the relationships of protoplasm and the genes to the origin and development of life, besides the centinuous affirmation of the probable deciphering of the genetic code.

#### PURPOSE OF STUDY

Two questions are dominant in this study. First, how may the human race learn to understand more fully the procedures for improving the different selves that make up society? That is to say, who and what in a general sense is such individually different person and, more specifically, how may every mentally normal human being improve himself? It is axiomatic that the race will improve as each person in it improves. By our behaviors we lift up the world in which we live, or we pull it down. There is no claim advanced here that this approach to our subject is either original,

or demonstratively scientific. Second, what can one do to understand more fully and continuously improve more wholesomely one's own self? Even though there have been millions upon millions of humans born and developed on this planet and doubtless there will be millions and more millions born and developed, I am, by definition, more concerned about my own status and my own future than I am about the rest of all humanity. This is neither a selfish nor a facetious remark. I have more equity in a facetious remark. I have more equity in myself than I could possibly have in any, or all other persons. It might appear noble for anyone to claim he would be happy to annihilate himself for the good of humanity, but it is impossible for a person to ob-literate himself. One may believe that he will be reincarnated, and possibly he may be, but when one's person is destroyed, he cannot assume possession of it again, no matter into what status he might be reborn. Christians believe that God, the Father Almighty, became incarnate and gave His Only Begotten Son to save the world from sin. Among Christians this doctrine is known as the Atonement, or At-one-ment between God and man. Those who believe this doc-God and man. Those who believe this doc-trine readily admit that no one can explain it; yet amid all the mystery, God, the Pather did not destroy His identity nor per-mit Himself to become some other being in order to affect the Atonement. Every religionist believes in an atonement between God and man; otherwise, there would be no need of any religion that calls for an individual's worship of Deity.

#### IS MAN IMMORTAL?

If perchance on the one hand, man is only mortal and this life is the end for him, then our creation has not been an unqualified success. It would be most lamentable and an anticlimax if man has developed to where he now stands, only to have reached a cul-de-sac. I am virtually at the end of my sojourn on earth, and the situation appears all the more distressing to seniors if humans are biologically only mortal carriers in the eternal lifestream, whether we were created as such or brought into it by processes of evolution. On the other hand, if man is immortal as an individual, then his potentials are boundless and reasonable. Such a status would make all persons—at all times and in all places—much more interested in each other's welfare than if mankind were only mortal. The more important points are not how man came to be here, but why we were brought here, what we are destined to be, where we are meant to go, and whether or not the whole creation is under control.

We realize—whatever we are or may become—that we are, that we shall be, and that is that. There is no way to prove or disprove that the human race would fare better if its individual components were immortal; but personally, I am infinitely happier in believing that I, along with the incomprehensible number of people born since the beginning of time and all those yet to be born, have been created to live forever.

#### APPLICABLE SCIENTIFIC RESEARCH

#### Genetics

An acceptable definition of genetics is that it is a study of heredity and the beginnings of life. The urge to procreate the human family has ever been part of us, but the articulation of the miracle of human birth into understandable language is not as old as the human race; yet it is as old as civilization. It is now common knowledge that human birth is produced by the act of co-habitation wherein an ovum of the female is impregnated by a sperm of the male, and that the thus fertilized ovum and the sperm become a single cell in the womb of the mother. In due course it was learned that, contemporaneous with conception, nothing

is ever added to the single cell. Still later (relatively recently) it was discovered that the single cell has the ability to create, while in the womb, other molecules identical with those in itself. In short, all the anatomic and physiologic potentials are present in the initial constellation of molecules making up all the genes; or, by way of a crude analogy, all the giant oak trees come from the tiny acorn. The foremost project confronting the geneticists today is the explanation of how the vast complex of genes initiates and guides a definitely persistent species from the fertilized egg to the matured human heing.

When this writer began to teach college genetics in 1915, the emphasis of the text we used were upon the application of the Mendelian Law, along with ample stress upon the dominants and recessives, as well as the rou-tine arguments for and against the inheri-tance of acquired characteristics. One over-all picture brought to the attention of the students was the necessity of having appro-priately mated parents, if mentally and physically normal children were to be born barring such exceptions as accidents at birth. The author of our text was Herbert E. Walter, professor of biology at Brown University, and the book was written in 1912. At that time reference books were scarce, so perforce we selected families from the general biologic literature (for example, the Jukes, Kallikaks, and the descendants of Jonathan Edwards) and also interviewed whichever social groups were available to us. A most fruitful source of acceptable data came from a sizable colony of Negroes, American In-dians and Caucasians, who lived together as a village community and were usually referred to locally as Guineas. This group of inhabitants was located only 20 miles from our college, so that our students had somewhat free access for talking to them, to study the low mentality, the weaknesses of unin-hibited inbreeding, and the inherited pov-erty of these pitiable citizens. This mixed colony had been there for many generations and proved to be better ground for the study of eugenics than it was for genetics, but that was not deemed a drawback by the students in our course.

Many years were required for genetics, as a new course of study, to "win its spurs" and qualify as the stuff of which curricula are made, but educators know that such is the experience with all new subjects for which accreditment is sought towards a degree in a liberal arts college. But when genetics did come into its own, it did so with a great flourish. The news of discussing sex in classes 50 years ago in a church-supported conducational college soom spread around—too far and too wide perhaps—but be it said that the sizes of our genetic class enrollments were governed each year by the available sents in our largest classroom.

The approach and attitude toward genetics have undergone numerous changes of late. The greatest impetus to the broaden-

The approach and attitude toward genetics have undergone numerous changes of late. The greatest impetus to the broadening of this science has been the varied experiments on the fruitfly, Drosophilia, since the 1930's. Presently, the genetics departments in colleges and universities are highly organized, adequately staffed, and enjoy up-to-date equipment for the testing of human, lower animal, plant, and all other forms of life. Moreover, genetic laboratories are now divisions of large commercially controlled research centers, and altogether this entire study demands and receives large budgets. It is easier as well as temporarily more satisfying to conduct tests and measurements in crossbreeding, leading to pure line species of plant and lower animal life, than it is to control similar tests and measurements among humans, with the inevitable result that this science as a teaching and experimentation subject has naturally been drawn into the agricultural colleges. In this

connection West Virginia University, through its agricultural college, has recently released a press bulletin announcing the 50th anniversary of the discovery in that Sta the Golden Delicious apple. The bulletin states that the Golden Delicious was known in 1912 only to the Porters Creek area of Clay County, and pomologists claim it is probably an offshoot of an eldtime apple known both as a Golden Reinette and as a Golden Russet. It is estimated that 24 million Golden Delicious trees have sprung from the original, and this new tree is now grown throughout Europe, South Africa, New Zealand, Tasmania, Canada, and the United States. Not even a remotely similar experiment could be consummated anywhere with human beings. It has been claimed that some controlled experiments were attempted by the Nasis among selected state pers and female prisoners of World War II, but the scientific value was negligible because the whole project was an inhuman type of modified rape.

The study of genetics has wrought miracles in terms of exploring wide vistas of heredity, for which all scholars are very grateful; but it is a moot question whether or not we know more about persons by reason of experimentation with insects, plants and lower animals than we might learn about human beings by applying vigorous research to men, women and children. In the autumn of life it seems paramount to me to learn who I am in my own relation to the rest of the universe and to endeavor to learn where I am going as a traveler in this life, regardless of what my molecular condition was when I was

#### Biochemistry

An acceptable definition of this science is that it is a study of the chemistry of plant and animal life. The objectives at this point are to incorporate relevant data from blochemical research in terms of what mankind can do in helping people understand life better and to approximate who the individual is as a person. I am not a blochemist, but hasten to acknowledge my gratitude to personal acquaintances who are authorities in this field, for assistance in the selection of data for this article.

Biochemistry is definitely in the forefront of genetic research projects. Many eminent scholars in the subjects of mathematics, chemistry, and physics have turned their abilities to the exposure of the individual molecules of living organisms. Incidentally, the number of biochemists has increased stupendously in the past few years. An announcement in the New York Times, July 26, 1964, stated that the Sixth International Congress of Biochemistry would hold its first annual meeting in America this past summer. From the Soviet Union, France, Japan, Argentina, Israel, Great Britain, and from all parts of Canada and the United States, an attendance of 6,000 members was expected—including 15 Nobel laureates. There were 700 reports to be read in technical sessions, and an additional 1,100 research reports to be included in the books of abstracts for the reading public. Among the subjects for discussion were the chemistry of life, the moleculer dynamics of aging, heredity natural resistances to disease, and the action of antibiotics against bacteria and tumors.

Biochemistry in its research projects has had most gratifying results, and every other science is constantly alerted to the progress being made. This science has already paved the way in large measure for a better understanding of a practical approach to the unsolved problems of heredity, but it savors of wishful thinking when enthusiastic scientists confidently predict that biochemistry holds the key to unlock all the secrets of life. The range of this article makes unnecessary anything more than a very limited review of

centered.

the research, except as it may affect the beginings of life. It is common knowledge
to the biology student that every person
begins life as a cell, and that the most consequential part of the cell is the nucleus
within which are the 46 chromosomes that
are found in every mentally normal human
being. In the chromosomes are the genes,
which are the determiners in the chromosomes, each one being a protein molecule.
The molecules are composed of atoms, and
in the atoms are various ultimate particles—
electrons, protons, mesons, and many others.
Even energy may be broken down into very
small units and quanta, a feature hardly
relevant to our study.

The origin of life is completely unknown. When science analyzed the fertilized egg from which the human being emerges, it was learned that the center of control lies in protoplasm, the physical basis of all life. Prois defined by Edmund Sinnott of Yale University (in "Cell and Psyche," p. 19) as "a bridge anchored at one end in the simple stuff of chemistry and physics, but at the other end reaching far across into the mysterious dominions of the human spirit." This me author, in his "Biology of the Spirit," further states regarding protoplasm that it is a much more complicated study than biologists thought it was a generation ago, and that it is a complexity in physical structure, chemical composition, and physiologic activity far beyond former ideas on the subject. Protoplasm is not a random, indeter-minate thing, but is the same all the way ba to the fully developed hufrom the ame man being; life has its basic physical prob-lem in that remarkable natural system called protoplasm, and in this aggregation of proteins, watery, formless, and flowing, which is at once deceptive in its visible simplicity and amazingly complex in its ultimate orga-nization, all the problems of living things are

Another viewpoint is expressed in Reader's Digest for June 1964 (p. 198) by George Palade of the Rockefeller Institute, who stated that protoplasm is an elaborate structure within cells, that nature had already done most of her job when she evolved the cells, and that there was nothing more to be done except put the cells together as horses, elephants, birds, fishes, and even human beings. There are many other scientific evaluations of protoplasm. Although human life is the acme of creation, it is also the greatest of all mysteries. The door to useful information must never be closed to scientific research, and by the same token, every hypothesis is admissible to open discussion. In sum, it would seem undeniable that science has consummated with meticulous efficiency an analysis of the initial fertile cell which spells that life emerges from protoplasm, and that life's earliest known ingredients are chemical.

In this connection the most fantastic results have been the findings relating to DNA (deoxythonucleic acid). These may be demonstrated best through the pertinent studies with X-rays. DNA was discovered about 1870, but has received the intense study of all sciences only since 1961, when Dr. Marshall Nirenberg and his associates in the National Institutes of Health, succeeded in partially breaking the genetic code, a four-letter alrhabet of the molecular language. The current major problems for biochemistry and the other physical sciences are learning how to spell with the four letters of the code thus far broken, and therewith write the genetic messages about the secrets of life.

DNA is spiral in shape and crowded with thousands of coils. Its weight is only one ten-quadrillionths of an ounce, yet it contains sufficient coded information to acsemble, by chemical processes, a full grown adult. Each DNA molecule has four basic chemicals—adenine, thymine, guanine and cytosine. Science confidently claims that

heredity qualities stem exclusively from DNA. This specific acid never leaves the nucleus, but it assembles an assistant known as RNA to carry the necessary instructions to form protein in the cell. Both DNA and RNA are ribose acids, but DNA has one less oxygen atom in it than has RNA; hence they are respectively named deoxyribonucleic acid and ribonucleic acid. There is flawless coopera-tion between these two compounds. Nirenberg and his associates determined that RNA was employing an alphabet of 4 letters, under instructions from DNA, to make proteins out of 20 aminoacid building blocks, and these scientists were convinced that each amino acid had a specific RNA word for its own With this knowledge as a basis, they ultimately made a dent in the genetic code Some enthusiasts have declared that when genetic code is completely broken, this achievement will make, by comparison, the harnessing of the uranium atom appear very simple indeed.

Another slant on the DNA theory was proposed by Peter Fong, a Cornell University physicist, to the effect that twisted DNA can unwind. He told the American Physical Society in Washington, D.C. (as reported in the New York Times, May 3, 1964) that DNA molecules must unwind in order to transmit their messages; yet in some instances they are twisted together like a rope with as many as 20,000 turns. He elaborated by explaining that when the hydrogen bonds which hold the twist are broken, the coil tries to wind and unwind in the random manner of atoms and molecules; and when it cannot wind itself any tighter, it unwinds. The entire coil unwinds itself in less than a minute.

Still another viewpoint regarding DNA was expressed by A. S. G. Curtis, a biologist from London University, whose thesis was reviewed in Newsweek for January 6, 1964. The thesis maintained that DNA is not the only factor involved in the control of heredity; also that DNA may not even be in the picture at all. It may be that there are sources of data basides DNA that have direct bearing on the secrets of heredity; or perchance, the Curtis experiment may not have been thoroughly documented or correctly reported; or it may be an illustration of "one swallow does not make a summer."

Biochemists as well as other scientists have accepted the wise words of warning from F. B. Wilson in The Cell in Development and Inheritance (p. 670): "We cannot hope to comprehend the activities of the living cell by analysis merely of its composition \* \* modern investigation has, however, brought ever increasing recognition of the fact that the cell is an organized system and one in which we must recognize some kind of organized structure, or organization." That is another way of stating that a living cell cannot be formed synthetically, now or later. The most significant problems of all living things are centered in man, for the living things are made of roteins and nucleic acids rather than of earth, dust and ashes, as some Christian funeral services are formulated to remind us.

#### Psychology and psychiatry

These two sciences will be discussed simultaneously at this point. The psychologists study the manifold ramifications of the mind, and the psychiatrists are psychologists who are graduates in medicine. Besearch in these areas has revealed immense amounts of dependable data in the analyses of behavior habits, and has plotted courses of action for the diagnosis, interpretations, and therapies in connection with mental and physical maladjustments of the person. Clinical and experimental research projects by educational, social, religious, child, abnormal, applied, and the rest of the psychologies, have not been with us very long. Time was, well within the memory of many, that

the study of psychology was just becoming a requisite for a degree in philosophy. Older alumni will also recall that any given student had a decided edge on other debaters in their college literary societies, for instance, if he were a psychology major.

The phenomenal growth of psychology and psychiatry has been due largely to the substitution of experimental for clinical data. It would now require a sizable library to house all the scientifically documented material that has been published by psychologists, psychiatrists, and their affiliates, for the benefit of education, medicine, and all the other agencies of welfare and rehabilitation throughout the world. Probably the greatest social contribution of these two sciences has been to alert laymen to the necessity of consultation with experts regarding mental adjustments. At a recent meeting of the First International Congress of Social Psychiatry in London, England, Norman Brill spoke on the subject of divorce in that country; but the interesting phase of this news was not so much what was discussed, as that there existed a large organized International Congress of Social Psychiatry.

Sigmund Freud, 1856-1939, founded psychoanalysis. He and his associates, among whom were Adler, Yung, Brouer, Charcot, James, Ferenzi, and Watson, were the early luminaries who did the ground work in charting the movement for correct diagnose and improved methods in the treatment of mental diseases. Every beginner in psy-chology soon learns of Freud's concept that the organization of the person is divided into three layers: the id, the ego, and the super-ego. Briefly, according to Freud, the id is influenced althogether by heredity; it exists at the unconscious level, and it embraces dynamic forces such as motives, urges, yearnings and instincts. The ego is reflected in the individual's conscious experiences in his ordinary mental processes. The superego acts as a judge, or conscience, over the ego. The super-ego also demonstrates the influential power of other persons over the individual. It may not be too far afield to bring into the discussion the findings of an unplanned questionnaire research carried out in some of my recent psychology class The record shows that from 55 papers sub-mitted on the assignment, "Contributions of Sigmund Freud to Psychology," there were which unreservedly stated that Freud was a most outstanding psychologist, and that his interpretations of dreams and the structure of the ego were the best of his contributions. These data are not offered as scientific evidence, nor are they the direct or indirect quotations from the instructor, but they do seem to reflect a sample cross-section of student opinion on Freud as an eminent

Psychiatry and psychology involve the diagnosis and classification of behavior in the various types of mentally deficient, and prescribe the therapy most suitable to the needs of the patients. Both of these mental sciences also serve the public by preventive measures. In brief, just as a medical patient delays or prevents serious bodily aliments by consultation in ample time with his physician, so may a potential mental patient, by early consultation with mental experts, avoid the phases of psychosis.

#### GROUP EVALUATIONS

The foregoing are brief independent reviews of some comprehensive research projects on heredity and personality, studied by means of genetics, blochemistry, psychology, and psychiatry. It is now proposed to evaluate the same projects simultaneously in terms of how they are related, in whole or in part, as a group to the purport of this article. To be more specific, we shall pinpoint the areas in these four sciences that names all citizens to live a better and fuller. life, and that also alert me as an individual

citizen in terms of who I am, and just where I may fit best into the scheme of things.

Biochemical research reveals that if an error obtains in a parent's DNA, a child of such a parent may not be able to make the efficient enzymes needed to regulate the e sential reactions in the metabolism, and it is highly probable that such a child will inherit feeblemindedness. Also, if any 1 of the 20 amino acids-chemical building blocks that make protein-is out of alinement in any of the 574 possible combinations forming a hemoglobin molecule, the child inheriting such a maladjustment is prone to sickle-cell anemia. Another angle of this research reflects the fact that DNA carries the secrets of life, as its molecules are present in every living cell. DNA has the power to divide itself, thus forming new molecules like itself, and thereby ultimately amassing a phenomenal amount of knowledge that is termed the genetic code. This entire code must be an organized stockpile available inviolate for further use, or else disaster, chaos, disease, and death would result. It is not an accident that when we plant a coconut, we reap coconute; nor do we expect to pick cherries from a mango tree, or lemons from a poinsettia bush.

The molecular biologists hopefully predict that if the work begun by Nirenberg in 1961 could be improved to the point of mastering the genetic code, messages could be sent to DNA for implementation; then the cure of many diseases, as well as the lengthen-ing of the span of human life, would inevitably follow. It is admitted that the results already achieved are stupendous and verge on the miraculous, but careless predictions in this field, or in any other science, may meet at least three formidable barriers. First, the mastery of the genetic code and how it possibly can thwart the laws of metabolism may be more than we can expect, either presently or in the foreseeable future. A second barrier to an acceptable interpre tation of predictions concerning the potential of the genetic code is its psychosomatic phases. There is constant strife regarding how the normal individual meets the miracle of death.

The question constantly arises concerning those who die a natural death as against an accidental or suicidal death, as to whether or not there will ever be a predictable law which determines the manner in which a person will be required to pass to "the great beyond." For instance, a tantalizing question is whether the body will remain healthy as the mind goes berserk, as whether the body will collapse as the mind remains active. A third barrier lies in the fact that human beings in general are unwilling to act as guinea pigs, in terms of permitting their sperm cells and ova to be under the control or at the disposition of science or any other outside agency. It is a matter of record, however, that only a relatively small number of females have willingly submitted to artificial insemination.

It has been speculated—possibly by journalistic feature writers—that certain blends of manufactured DNA fed to a person will improve, or even govern, his memory. Such statements may be shots in the dark, but the problem remains whether memory can be extended appreciably by consuming synthesized DNA. For instance, can human beings, by any manufactured processes, be conditioned to such a degree that they will remember anything about themselves at birth or as two-year-olds, or recall their own activities in this life when perchance they reach the next life? Every normal person agrees that experimental research should be continued as much as possible, and that any speculations which may tend to revolutionize generally accepted bellefs should be scientific in approach. By the same token, these who look to entelechies for solutions should also be realistic in approach, and not prone to

use ridiculous analogies for evidence to substantiate their tenets. It is of no value to individual persons to be told by one group of researchers to hold to this or that theory, and at the same time be influenced by still another group which promotes opposing theories. Until the sciences interpret the documented data in terms of what a person is, then the varied and debatable conclusions are confounding. It is most essential that researchers delve more and more into understanding and clarifying the human element, and then relate it to the astounding revelations made daily by all kinds of studies pertaining to every facet of life.

The hypotheses regarding how DNA affects the healing of diseases, the prolongation of the lifespan, the length of memory, and the possibility of breaking the genetic code, are fascinating intangibles which constantly offer challenges for achieving a better and fuller life. In addition, DNA can create molecules like itself and can transmit basic genetic secrets. It is a keeper of the code for all life and for all time, whether in a microbe, a tree, a fish, or a human being. On the other hand, the administration of medication such as adrenaline to stimulate the heart or to make it start again a surprisingly long time after it has ceased to beat, is an entirely extraneous act, and not in the same blologic category as DNA.

#### PRACTICAL PHASES OF RESEARCH

Sooner or later, a practical application of the research findings already reviewed is in-evitable at all levels. Therefore, instead of spreading our efforts over an area too large for rewarding results in a short paper, have arbitrarily limited this part of the discussion to mental retardation, one of the most tantalizing afflictions in our society. It is authenticated information that 3 percent of our population need professional care as mental patients, and hundreds of thousands of them need hospitalization. The retarded ought to receive treatment parallel to that for the physically handicapped in terms of appropriate medication, surgery, and therapy. Much of the professional care for the physically handicapped is only temporary. sulin and certain pain killers are not perma-nent cures for diabetes and arthritis respectively, yet they are veritable boons to sufferers from these specific ailments. The same deductions can be made concerning surgery and other therapy in many instances

The mentally retarded come mostly from the high-grade morno class with intelligence quotients of 70 or slightly below, and they are classified as mentally deficient. Some causes of mental retardation are shortage of oxygen during pregnancy, partial strangulation at birth by the umbilical cord, prenatal brain injury, or chemical maladjustments. Very few of these unfortunates are criminally prone. Some can be cured, more of them can be greatly assisted to care for themselves without being a constant burden to their families, and all of them should be afforded every available professional assistance.

Continued neglect by the rest of society will leave most of these ill-favored citizens to their own devices, with tragic results that are best left to the imagination. It is nausestingly cruel even to think that the mentally retarded should be culled out and destroyed, somewhat in the manner of shooting a horse if he breaks a leg. But the retarded have received worse treatment than that when society, in the not too distant past, incarcerated them in prisons with the criminally insame and the vilect of felons. This grussome reference is a statement of fact, and should shame all of us. It is well established that a very thin mental thread usually differentiates the normal from the mentally deficient, and the normal from the genius.

There is no room for anyone to boast of superiority. It is unjustifiable, when we fail

so palpably to make ourselves available for work in the programs of assistance to the retarded, and fall so short of genuine aid and comfort to the mentally normal but bewildered parents of retarded children. Virtually all the world religions share a common that their members and adherents should pray for guidance from the Creator as they attempt to fulfill their obligations to everybody in sickness and distress. that standpoint we have arbitrarily named Christianity as illustrative in demanding that its membership care for the sick and A most definite mandate was given by Christ to John the Baptist in the words: Tell John what things ye have seen and heard; how that the blind see, the lame heard: walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the Gospel is preached." That command covers the "law preached." That command covers the "law and the prophets." Some other religions impose similar obligations on their follow-

In the great venture of creation, it would eem that the matters of highest import are the functions of humanity in terms of how it rises to meet its obligations, how it has reacted all along to entailing rewards and punishments, and how it interprets the struggle for survival and improvement of the human race from the beginning to the end. It is illogical for any person to assume in-nocence of responsibility regarding the welfare of other people, whoever they are or wherever they may live. Every average good person will assist his fellow citizens in diswithout exception, unless physically unable to do so. A persistent question is whether the human race will elect to care adequately for its mental and physical defectives, delinquents, and dependents, or whether such procedures will go by default, and men will continue to rush at each other's throats to prove some imagined supremacy. A solution to this problem will determine A solution to this problem will determine who shall inherit the earth—the meek, or the warmongers. As this worldwide picture passes before our eyes, it leaves the impression that there is not a Messiah waiting to save His people, but a "Tiger at the Gates."

The overall situation is not altered substantially by the thesis of a new hook "We Are Not Alone" by Welter Sullivan whose are Not Alone" by Walter Sullivan, whose en-thusiastic reviewers claim that this book is by far the best and most fascinating story of the possible existence of life on other known or undiscovered planets within com-municable range of the earth. These highly speculative suggestions have only a minor effect upon the thinking of those in the upper-age brackets, and do not excuse anyone from present obligations to his fellow men on this planet.

There is no necessity to accept, without reservations, the incomplete findings of research, regardless of tactt endorsements. Indeed, the judgments of a wide cross-section of our populace often are more reliable than those of some so-called experts in a given field. A well-written application of this point (quoted from a John O'London's leading article in Time and Tide, December 1983) states: "If the critics, who are supposed to be experts and occasionally make vague claims of omnipotence cannot agree, what is a poor layman to make of the whole business? Is it not better for him to rely on his own judgment, such as it is, and is it not further proof that after all, the critics only express their own personal opinion which is not basically any more valuable than the next man's?" The quest for truth is not new. Although science has changed our thinking habits, and the content of the physical world also has changed during the last century, is that in itself any reason why an embryologist, for instance, must turn agnostic or atheist, or that religiously motivated entelechies must be fought doggedly by mechandstic explanations of life? The conclusions of philosophers caught the at-

PERSONAL EVALUATIONS

tention of the cor.mon people long ago. Thales, in the sith century B.C. went further than inquiring what happened, and asked why it happened. Anaxagoras (500–429 B.C.), Hippocrates (460–370 B.C.) and Democritus (460–370 F.C.) discussed with their pupils in classes and with the populace in public gatherings, such subjects as atoms, evolution and mental diseases. Roger Bacon (1214–1224) was the reputed father of experimental science, but that honor entails many qualifications. Galileo (1564–1642), who felt the cruel and senseless oppression of religious and other bigots, was the genuine boon to modern science. The grateful appreciation of all scholars is laid at the feet of the remembered, and those of the forgotten ploneers in experimental research. After all, there is no technique by which mortais can document metaphysical data. When nothing more can be done in a situation, such as explaining the miracle of birth or deciphering the dawn of self-consciousness, it should be accepted as is without reserving the privilege to name it.

It is a matter of shame that in the Christian era, supposedly the most enlightened of all periods, there have been so many wide read, long, bitter, fanatical, and totally about by what the populace thought their God wanted them to do. At present there is a stalemate along that front, but only make room for the ever-waiting oppor tunity to set the proletariat against the bourgeoisie. As though it were not sufficient to have some kind of death struggle ever with we are reminded matter-of-factly by physical scientists that there is a modern Sword of Damocles hanging over our heads in the form of the second law of thermodynamics, which reads, in a standard dictionary: "When free interchange of radiant energy or heat duction takes place between two bodies at different temperatures, it is always the hotter of the two that loses energy and the colder that gains energy." Thus there have been inestimable geologic cons during which this planet was too hot for human existence; then came the period during which humanity has been table to live on earth; but the time will come when man will be unable to survive here any longer because the earth will have unwound itself to a point where its at-mosphere will be too cold for human habitation. This changing cycle of atmosphere has been discussed by theologians at least throughout the Christian era, but with no reference to thermodynamics or homeosts nor the slightest intimation that anything might occur to disrupt the day of judgment.

Parenthetically, it is definitely incumbent upon both religion and science to make known specifically whether there looms a silent mental death struggle between them. That is, whether science assumes that it is will be only a short while until experimental research outmodes orthodox religion, or whether religion, in the security of its tenets, assumes that nothing can prevail against it. Obviously, there is no open declaration of war. Science on the one hand maintains that it is a technical subject, totally foreign to religion, and religion on the other hand tenaciously clings to such intangibles as are expressed in the famous Browning couplet that "God's in His heaven, all's right with the world." Religious forces can overcome ignorance and paganism by education. Every scholar knows that if the church had not fostered education through the centuries, there would have been little science to date. This is not a time for shadowboxing, nor for emphasis upon the segmentation which divides our society into professional and anti-professional causes, and sets one group aganst the other to ludicrous limits. It should be kept in mind that no group has any monopoly on training, and no group dominates loyalty to purpose.

In line with the tenor of this paper, let us now spell out in general terms, who we are as persons, and where I or any other person blends into the world pattern. The impelling force of the data on the miracle of birth as discovered by physical science, and the data on human behavior as discovered by the mental and social sciences are not terminal in themselves. An individual person as a distinctive unit of mankind, according to DNA pattern, is a small piece of protoplasm which developed into an adult; in the natural coarse of events all along the way, his habits, attitudes, skills, knowledges, interests, and ideals have been scientifically measured and recorded by appropriate authorities.

In a discussion of the individual's importance, it is irrelevant whether or not he too small, in a telescopic view of the universe, to merit consideration. When it is realized that the speed of light is 186,000 miles per second, the tremendous mileage in a light year, and the number of light years quired for some far-off stars to become visible on earth, it is not much wonder that amateur astronomers are lost in the vast distances involved. Until quite recently most people believed that mankind existed in a physical universe composed of three levels: a middle one, part of our solar system, where we lived: a lower one where those who had sinned were consigned; and a high one with the sky as its floor—a place called heaven. Such a conception obtained until it was learned that, outside our own atmosphere, ther is no north, south, east or west, and no higher and lower.

It is also irrelevant to argue that man as a unit is too large for comparative considerations, since the microscope reveals that there are 5 octillion hydrogen atoma in one human body, and that if all the thermonuclear energy contained in one person could be released at once, the explosive force would be 100 times greater than the A-bomb dropped on Hiroshima. It is further irrelevant to maintain that I, as an average human, have either much or little equity in the universe, but it is highly relevant to realize that all I am is my equity in it. For that reason I am more interested in me as a person that I am in any or all other persons combined.

Man has always found it easy to follow his own inclinations, and irksome to conquer his own shortcomings. It seems natural to conclude that life is a riddle, and the more he endeavors to resolve it, the more confused he becomes. The riddle is eternal, and crops up at every crisis. The more we learn about the world, the wider become the domains of the unknown. As a threefold aside: (a) this is not the place to hazard even a guess as to how much blame can be charged against the billions who, through the ages, never had an inkling about the formulation of consistent concepts of right and wrong; (b) it depends entirely upon what kind of God and what kind of persons we are; if there is no God, what matters whither we are bound, or whether there is any place to and (c) is it justifiable to assume that losing mental functions while maintaining a normal state of bodily health, is a fault in the structure of creation?

In the cotton mills where I was employed more than 60 years ago, I was perforce associated with many who, after the manner of the "orators" in Hyde Park, London, harangued in the factories and in the public aquares, that the world was all awry. They often projected the theme that there is no basis in fact for teleological argument to establish the reality of God, and they seemed to gloat over the thought of making the blood run cold in the hearts of believers. It was then, as it is now, the vogue to write letters in the local press for the assumed edification of the populace. These agitators

quoted detached statements from such scholars as Sophocles, Lucretius, Voltaire, Darwin, and Spinoza, which they recled off as "sweet morsels." My own reactions to such antics were not born of antagonism so much as of dread. The real attitude of these noise-makers was a defense mechanism, a term not much used at that time, and it never dawned upon me how easy it is to garner verbal ammunition from random out-of-context quotations. These same noncommitment advocate think they "play it asfe" in the active arena of religious endeavor. They presume that if there is no hereafter, they will do just as well for themselves to have made no profession of faith. But if there is a hereafter, they will plead innocence and throw themselves on God's mercy.

At this late date in my life, I am tremendously concerned to learn who I am as a person and what, if any, are my obligations to work out my own salvation. My personalwhich is comprised of the traits, modes of adjustment, behavior habits, and relations to others in my environment-warns me against treating my religious obligations flippantly and assuming to dismiss them with a figurative wave of the hand. A fable I first heard 7 decades ago comes to mind. The story concerns three grasshop-pers on a cement sidewalk, solemnly debating the origin and status of mankind. One insisted that man was the pride and joy of the Creator, and only a little lower in rank than the angels; the second maintained that man was an insignificant nobody; the third grasshopper had just taken charge of the meeting and was about to affect a compromise in the proceedings, when an errand boy from the local bakery came running down the street; by chance he stepped on all three grasshoppers—and they were no more. It is not unexpected among us seniors that so many of our friends and acquaintances pass by, never to return, but it is rather tragic that the only comment we seem able to make is that the departed are better off. Such a sentiment does handsomely for a closing climax in "A Tale of Two Cities," for instance, but it fails to impress me in reference to my own demise.

There is, admittedly or otherwise, a religious aspect of our lives. All people mentally capable of contemplation on matters eschatological are more or less interested in what becomes of themselves after this life, even though there is no incontestable answer. It is erroneous to classify people as believers or nonbelievers, without any qualifications. Religion is the one great separator of mankind into classes and sects, with numerous variations. Indeed, it is part of man's personality. Each person's problems and the solutions of them are privately his own, and he works them out from time to time. No man's problems can be resolved by others.

I feel privileged to ask God for help in iving a fuller and happier life by obeying, among other regulations, a dictum in the Old Testment (Micah 6:8): "What doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God"? It is somewhat of an affront to ask the Almighty to do for us what mortals are unable to do for themselves, such as govern the weather, or keep us always in the best of health. I thank God every night that I have lived another day, and I feel better when I have told film of my appreciation. I am boundlessly comforted in my religious experiences whenever I hear this particular hymn, for instance, that a very dear friend sang so often during her more than 2 score years of valient service in church worship. The lyrics of the first stanza and chorus are:

"I come to the garden alone, While the dew is still on the roses, And the voice I bear, falling on my ear, The Son of God discloses. "And He walks with me, and He talks with me.

And He tells me I am His own; And the joys we share as we tarry there, None other has ever known."

A whole battery of objections can be inid against the theology in these lyrics, but all hymnody gives me a spiritual lift, and who is to gainsay it? I elect to go my way because I know the direction; and because I know my way, I propose to go to the end. So, I wait, alone.

## The Right of Dissent

EXTENSION OF REMARKS

# HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. IRWIN. Mr. Speaker, while I have consistently supported President Johnson's actions regarding Vietnam, I have also consistently defended the right of any American to disagree with those actions and policies. In that spirit, I am pleased to insert here a statement by the Committee To Stop Escalation in Vietnam reflecting such a dissent. This committee is located in Westport, Conn. which is in my district. I know many of its members and I respect them personally. But this matter I strongly disagree with their view, as they disagree with mine. However, they do have a right to be heard, and I therefore submit for them the following statement from David G. Lyon:

STATEMENT OF DAVID G. LYON

The ad hoc Committee to Stop Escalation in Vietnam was started in the spring of 1965 after the United States bombed North Vietnam. It originated with a nucleus of people who had been in the leadership of the Independent Committee for the Election of Johnson. This committee consisted of Republicans, Independents, and Democrats in our community who had contributed substantially to the President's campaign and who had worked hard to build his plurality in the area because he repudiated the prowar policies of Barry Goldwater.

policies of Barry Goldwater.

This preelection, anti-Goldwater stand reflected the mood of the American people and it was clear to the world that Johnson's return to the White House was a mandate to the administration to seek peace-oriented alternatives in our domestic and foreign policies. Instead, the course of our administration, with respect to the rest of the world, assumed the same orbit as, and an eventual rendezvous in an ideological vacuum with the Goldwater-Nixon complex, which contemplates a world at war for the next 20 years with a better than even chance for a

nuclear doomsday.

The concept of settling political differences with war is unthinkable in a nuclear age. Moreover, we will never be able to achieve the "Great Society" or to prove the efficacy of democracy by expending our maximum potential in the pursuit of war.

There are now 200,000 of our young men in Vietnam. Our military are now talking about increasing the Armed Forces in Vietnam to 400,000, How many after that? Are we developing a society which thrives on war at the expense of the minds, bodies, and lives of incalculable numbers of youth for an indeterminate number of years? Does it make sense to visit brute force and massive

destruction on other people in other lands in the name of world freedom and peace?

Inasmuch as this war was negotiated 11 years ago in Geneva, our Government is acting illegally by pursuing the war in Vietnam The United States has never declared war, nor has it submitted the question for con-

gressional study.

In view of the administration's rapidly disintegrating machinery for peace and the dominance of the "hawks" in our Government, the committee continues its work to preserve as much as possible a climate of reason in which people who, for practical as well as humanitarian purposes, want to offer civilized alternatives to the solution of world problems and to encourage the representatives in the Senate and Congress to speak out for a settlement of the Vietnam war through the legally constituted bodies of the United Nations and Geneva Conference.

Our committee now receives the support of hundreds of people in the area of Fairfield County and includes in its membership business and professional people, educators, artists, clergymen, and people who work in the communications industry, advertising and public relations. It also coordinates its activities with many other peace organizations in Connecticut. As Americans concerned about the future of our country and the world, we appeal to our representatives in Government to stop the bombing and proceed toward a political settlement of the war in Vietnam.

## Clarksburg, W. Va.—Birthplace of Stonewall Jackson

EXTENSION OF REMARKS

# HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 20, 1966

Mr. MOORE. Mr. Speaker, my State of West Virginia was born of the strife of the Civil War. It was the scene of numerous Civil War battles which pitted brother against brother and friend against friend. Several of the great Civil War generals were born in the hills and valleys of West Virginia, as it was known prior to secession from Virginia and becoming officially admitted to the Union on June 20, 1863. Among the Civil War leaders who called western Virginia their home was Stonewall Jackson, who was born in Clarksburg, W. Va., on January 21, 1824. It was ironic that Stonewall Jackson was killed in battle in 1863-the year West Virginia became a State. He was 39 years old at the time. I would like to bring to the attention of my colleagues the following extremely wellwritten article which appeared in the January 21, 1966, edition of the Clarks-burg, W. Va., Exponent on Stonewall Jackson:

STONEWALL JACKSON WAS BORN IN CLARKS-BURG 142 YEARS AGO TODAY

Today marks the 142d anniversary of the birth of Gen. Thomas Jonathan (Stonewall) Jackson, born in Clarksburg, January 21,

S. J. Birshtein, chairman of the Stonewall Jackson Historical Committee of the Chamber of Commerce, informed the press that two local organizations are honoring the occasion with appropriate wreaths.

The United Daughters of the Confederacy have placed a wreath on both the Stonewall equestrian statue and on the bronze plaque erected on the site in the 300 block of West Main Street where the famous general was born.

The Stonewall Jackson Civic Club has remembered the 142d anniversary by placing a wreath on the striking equestrian status located on the plaza of the Harrison County Courthouse

The Clarksburg chapter of the UDC erected the bronze plaque in August 1911 to commemorate the famous general's birthplace. On May 10, 1953, the equestrian statue was dedicated.

The magnificent work of art was sculptured by the late Charles Reck of New York and the base of the statue was designed by William Grant, Clarksburg architect. Birshtein furnished the press with the

Birshtein furnished the press with the following information regarding Clarksburg's great general and renowned military tactician:

Clarksburg's brilliant officer during the War Between the States acquired the sobriquet or nickname of "Stonewall" with the stubborn defense of his 1st brigade in the first Battle of Manassas (Bull Run) on July 21, 1861.

Gen. Barnard E. Bee in rallying his men exclaimed "See, there stands Jackson like a stone wall." A near rout for the Confederate forces was turned into an overwhelming victory. Throughout the Confederacy and the world he became "Stonewall Jackson" from that moment on.

General Jackson was one of the ablest of the Confederate officers, and was probably the greatest corps commander on either side during the war. He had a deeply religious nature and has often been compared with the Cromwellian leaders in England, historians contend.

He deprecated secession but was a strong believer in States' rights, and when Virginia withdrew from the Union he maintained his allegiance to the State.

The military tactics of "Stonewall" Jackson are studied at West Point, Virginia Military Institute, Fort Knox, in St. Cyr, France, and at Sandhurst, England. It is said to be the consensus of military experts that his genius has seldom been equaled and never surpassed.

One of the finest tributes to "Stonewall" was sent in a telegram by the great general of World War II, Douglas MacArthur at the unveiling of the bronze bust of "Stonewall" in the Hall of Pame at New York University, May 19, 1967:

"Perhaps the most prized message I ever received came from the famous historian, Douglas Southall Freeman, who wrote me at the close of my campaigns in the Southwest Pacific area of World War II. "The mantle of Robert E. Lee and "Stonewall" Jackson has now fallen on your shoulders."

Two of "Stonewall's" favorite maxims are "You may be whatever you resolve to be" and "Never take counse! of your fears."

Birahtein said that few persons in West Virginia realize that the Clarksburg Public Library has an original letter by Stonewall. This letter is on exhibit together with a miniature replica of the Polaris submarine, the Stonewall Jackson, and other diversified mementos dealing with General Jackson.

Miss Charlotte Balley, librarian, has extended an invitation to the public to visit the Clarksburg Public Library and examine the Jackson items being displayed.

Also on display is an excellent sketch by Bruce Haymond of Jackson's birthplace (234-328 West Main Street) now occupied by a mercantile store. The sketch graphically reveals a neat 3-room brick cottage with semiattic and inset porch, of a type now fast disappearing.

A large oil painting by David Van Pelt is also on exhibit in the library. This painting of Stonewall is by Edwin F. Draughman and is a fine copy of the famous original by John A. Elder in the Corcoran Gallery of Art in Washington, D.C. A ladderback rocker which belonged to Stonewall's mother can also be seen in the library.

The original letter by Jackson was presented to the library by the late D. H. Hill Arnold of Elkins, grand nephew of Stonewall.

The letter, postmarked West Point, is addressed to Jackson's sister, Mrs. L. (Laura)

A. Arnold of Beverly, Randolph County.
Stonewall wrote his sister of his preparations for the annual examination at West
Point and reported that his health was "very
good at the present." He requested that his
sister inform him as to the subscription rates
of "the Democratic paper published in
Clarksburg."

Jackson's paternal grandparents, his father Jonathan, and Stonewall's sister Elisabeth, are buried in the historic cemetery located in Jackson Park located on East Pike Street in Clarksburg.

The general's mother is buried in Ansted, W. Va. His sister, Laura, is buried in Buckhannon, and his brother Warren is buried near that city.

Btonswall Jackson died May 10, 1863, at the age of 39, near Guinea Station, Va., and is buried in Lexington, Va. He had led the army corps around Hooker's flank at the battle of Chancellorswille, routing the right wing of the Federal army.

He was wounded and died of pneumonia.

His death was a severe blow to Gen. Robert E. Lee and the southern cause. Jackson was a religious man who always prayed before battle. He was a tactician of the first rank and although a strict disciplinarian, was popular with his men. He was Lee's ablest and most trusted lieutenant.

## Speaker McCormack Looks at the 1966 Session

EXTENSION OF REMARKS

# HON. WILLIAM L. ST. ONGE

OF CONNECTICOT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. ST. ONGE. Mr. Speaker, the monthly publication New Englander, a business news magazine published by the New England Council, contains in its January 1966 issue a well-written and informative article by our distinguished Speaker, the Honorable John W. McConmack. The article is entitled "Congressional Legislative Outlook for 1966."

It provides us with an excellent insight into the current session of Congress as seen by a man who has been a Member of Congress for more than 47 years, served for many years as majority leader and for the past 4 years as Speaker of the House. Although the article was written before the session started, I am sure my colleagues will find it of great interest.

Under leave to extend my remarks, I wish to insert this article into the RECOND.

CONGRESSIONAL LEGISLATIVE OUTLOOK FOR 1966 (By JOHN W. McCormack)

While my assigned topic is to set forth the likely congressional legislative program for the upcoming year with particular reference to its effect on New England, I feel, as the Congress which will meet in January is the same Congress which adjourned in October, a brief backward glance, by way of introduction, at what the 89th Congress did during

its let session might provide valuable clues as to its likely course of action during its 2d session. The 89th Congress responded in a responsible and humanitarian manner to the complex economic and social problems with which mid-20th century American society is faced. The legislation passed by this Congress has already produced a robust and expanding national economy, and it acted in a statesmanlike manner to carry out our military and moral commitments as the leader of the free world and thus help maintain peace.

It is unnecessary to belabor the point that

It is unnecessary to belabor the point that the maintenance of national prosperity and world peace is of overriding concern to New England as it is to every other region of this country, dwarfing into insignificance any purely regional matters.

In cooperation with the splendid leadership of President Johnson, this Congress has
written the most outstanding record of legislative achievement in American history.
In its deliberations and actions in the domestic area it has been the coauthor with
the President in formulating a whole battery
of programs which, by alding and uplifting
our less-fortunate fellow citizens, will make
this country truly a more perfect democracy
and thus bring us closer to the attainment
of those ideals set forth in the Declaration of
Independence and the Constitution. I feel
certain that in broad general terms the 89th
Congress will in its 2d session continue
to move in this same progressive, humanitarian direction.

As to specifics, it would be impossible and I feel most inappropriate for me at this time to try to set forth in any detail next year's congressional legislative program. Shortly after the first of the year, I am certain the President will hold a meeting with the Democratic congressional leadership at the White House, outline his legislative objectives for the upcoming congressional session and submit them to the leadership for tactical advice and guidance. Only then would I be in a position to enumerate at any length the bills which the Congress will be likely to act on during 1966.

#### VITAL INTEREST TO NEW ENGLAND

Nevertheless, we shall be required to take action in a number of areas all of which I feel certain will be of vital interest to New England. First, it is mandatory that the several Great Society programs enacted during 1965 be adequately funded in 1966. Many of these programs were long-term in nature, providing for a relatively small beginning initially but authorising a greatly accelerated operation in future years. Because of this, in many cases they will require substantially larger appropriations for fiscal year 1967 than were provided in last year's Appropriation Acts.

Included among such programs are those authorizing Federal assistance to combat air and water pollution, highway beautification, urban renewal and planning, grants for community facilities, mass transportation, anti-poverty, and Federal sid to education, higher, secondary, and primary. The primary thrust of many of these programs will be in the urban areas. New England, being almost exclusively urban, therefore has an important interest in their successful long-term implementation.

In addition, two of the truly great social reform messure emacted during the let season of the 89th Congress—namely, rent supplements and the Teacher Training Corps—were not provided with any funds prior to adjournment. The Teacher Training Corps—would provide Federal financial assistance to send specially trained experienced teachers into poor areas, both rural and urban, to enable those areas is uplift the quality of their teaching. Complete control of educational policy would, of course, continue to reside in the local communities. Both pri-

vate and public schools would be eligible for this aid.

The rent supplement program would afford private enterprise an opportunity to rehouse our poorest citizens in decent housing; it would be in addition to and not replace the existing public housing program. The importance to the New England States of these worthy programs is, I believe, self-evident and it is imperative that both be adequately funded by the Congress early next year.

#### SEVERAL BILLS PENDING

Despite the unprecedented legislative output during the past session, several vital bills remained pending before the Congress when the first session ended. A proposal to strengthen fair employment practices has been reported by the House Education and Labor Committee and made in order for consideration by the House under the 21-day rule. It will be programed for early floor action in 1966.

Another measure raising the minimum wage and broadening its coverage has like-wise been favorably reported by the House Education and Labor Committee. I have always strongly supported minimum wage legislation, having helped pass the original Fair Labor Standards Act in 1938 and voted for every subsequent improvement in that law. I shall therefore, of course, give my full support to legislation to raise the minimum wage and expand its coverage when the measure is considered by the House early next year.

President Johnson has strongly recommended to the Congress that our unemployment insurance system, which has not been substantially modified since its inception 30 years ago, be updated so as to better implement its objective of strengthening our family life. A bill to carry out the President's recommendations is now pending before the House Ways and Means Committee, and it will be quickly programed for action in the House as soon as it is reported by that committee.

#### NEW ENGLAND CAN GAIN A GREAT DEAL

I am firmly convinced that the New England economy has a great deal to gain from the passage of all of this legislation as indeed is has benefited from the Great Society laws already passed. The enactment of all three measures will result in increasing the purchasing power of the great mass of American workers who then in turn will be good customers from New England's manufactured products. Legislation such as FEPC, minimum wage, and unemployment insurance are sometimes pictured by their opponents as antibusiness proposals. Nothing could be further from the truth. Quite the contrary, they are truly probusiness measures of the most basic nature because they provide social justice.

It behooves the New England business community as well as all business to give its support to this type of legislation, not only because such legislation is morally right and strengthens the social fabric of this Nation, but because the prosperity and welfare of business in the last analysis always re upon the availability of customers with adequate purchasing power. It is upon mass effective demand that continued business expansion is dependent, and the only way such mass demand can be sustained over any period of time is to make sure that this country has full employment for all of its citizens without regard to creed or color, at adequate wages and enjoying the type of economic security which a modernized unemployment insurance system would provide.

In conclusion, I would state that our economy is now a truly integrated one. New England as a region, while of course possessing unique assets and problems, can only prosper and flourish as a part of an overall dynamic national economy. The policies and

programs being pursued by President Johnson's administration and the 89th Congress are without doubt those best suited to the continued expansion and health of that national economy.

#### **Downtown Progress**

EXTENSION OF REMARKS

OF

# HON, CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. MATHIAS. Mr. Speaker, at the invitation of Mr. Robert C. Baker, the distinguished and genial president of Downtown Progress, I attended last Thursday the annual luncheon of that important organization, a group which contributes so much to our National Capital. A significant portion of the program was devoted to the report of the vice president, Mr. Robert H. Levi, on the activities of Downtown Progress under the leadership of Mr. Baker during the past year. Mr. Levi's interesting and stimulating report contains much information of interest to the entire Nation, and indicates the need for congressional action in many areas to help encourage the growth of our Capital City. Mr. Levi's report follows:

REPORT ON DOWNTOWN PROGRESS

(By Robert H. Levi)

As 1966 gets underway, it is my function to look back at 1965 and then to the future. The year 1965 was a significant year for Washington and for downtown progress. Several key decisions were made which will insure the forward direction of the downtown revitalization program. A number of other major decisions must be made, however, if we are to attain the development goals established in the action plan for downtown. In short, this is a "much has been done, but much remains to be done" report on downtown progress.

Let us review briefly the status of down-town revitalization:

1. The District of Columbia now can use urban renewal to help solve the problems of downtown Washington and to stimulate private development. This authority was granted by a provision of the Housing and Urban Development Act of 1965. The District of Columbia Redevelopment Land Agency, District of Columbia government, and the National Capital Planning Commission have begun a downtown feasibility survey to develop basic information required for the preparation of an urban renewal plan for downtown. Downtown Progress is serving as a consultant to the public agencies on the feasibility survey.

2. Work has been started on a rail rapid

transit system for Washington. In 1965, the Congress authorized a transit development program prepared by the National Capital Transportation Agency, and made an initial appropriation of #6.2 million for design and engineering studies. Construction of a sub-way below downtown G Street is to begin in

3. The District of Columbia is acquiring property in downtown for the right-of-way for a section of the center beg freeway, from Constitution Avenue to New York Avenue NW. During 1965 the alinement of the center leg freeway tunnel below the Mall was changed from a curve to a straight line, as proposed originally by the District of Colum-

bia Department of Highways and Traffic, thus improving driving safety and reducing costs.
This decision was possible because of agreements involving the National Park Service,
the Architect of the Capitol, and the Temporary Commission on Pennsylvania Avenue to construct a reflecting pool on the Mall above the freeway tunnel. No definite sched-ule can be established for the construction of this freeway, however, until the Congress passes legislation to permit the District of Columbia to finance its highway program.

This legislation is needed badly.

4. Architectural and engineering drawings are being prepared for the F Street demon stration blocks, from 12th to 14th Streets NW. The key to this action was a demonstration grant awarded to the District of Columbia by the Housing and Home Pinance Agency in 1965. The District of Columbia Department of Highways and Traffic will start reconstruction of these two blocks of F Street in the spring of 1966. The purposes of the demonstration are to reduce traffic congestion, to increase pedestrian safety, and to stimulate private business and private development activity. The F Street design by Chloethiel Woodard Smith & Associates is being developed with the participation of propowners and proprietors of businesses in the demonstration blocks. Downtown Progproject manager to the District of Columbia Department of Highways and Traffic.

5. A design for Lincoln Place is nearing

completion. Downtown Progress retained design consultants for this proposal in 1965, to create an appropriate setting on downtown 10th Street for the historic Ford's Theater and the Petersen House where Lincoln died. Ford's Theater is being restored to its original appearance by the National Park Service, and means now are being studied to develop Lincoln Place within as close a time as pos sible to the completion of the restoration

project.

6. An important and historic decision, of course, was the approval by President Johnson of the designation by the Secretary of the Interior, Stewart L. Udall, of the Pennsylvania Avenue National Historic Site. This will provide the framework for design and development action under legislation now being considered by the Congress to establish and provide funds for a Commission on Pennsylvania Avenue. The Pennsylvania Avenue National Historic Site includes 28½ blocks in downtown. The relationship betw proposal and downtown will be clarified dur-ing the downtown feasibility survey.

7. I can report significant progress on public building construction in downtown: the U.S. Court of Claims and Court of Customs and Patent Appeals is nearing completion overlooking Lafayette Square; restoration of Ford's Theater is nearing completion, as I noted earlier; property is being acquired at the corner of Ninth and G Streets for a new downtown library. Downtown Progress car-ried out the studies of space requirements and site possibilities for this library at the request of the District Commissioners.

Property has been acquired and plans are being drawn for the FBI Building on Pennsylvania Avenue, between 9th and Streets. This major structure, to house approximately 7,000 employees, is being designed to conform with the Pennsylvania Avenue plan.

The Old Patent Office at Eighth and F Streets is being remodelled for the National Portrait Gallery and the National Collection of Fine Arts, to be under the supervision of the Smithsonian Institution. These will be added attractions in downtown for residents and for visitors to Washington.

And the District of Columbia and the General Services Administration have agreed to a location for a new building for the Depart-ment of Labor to house 7,000 employees. This structure will be built on air rights above the center leg freeway at Constitution Avenue.

8. The increase in private development activities sast of 15th Street since down-town progress began in 1960, has been encouraging. For 10 years prior to that date, only six substantial private, commercial, and residential buildings had been started in downtown east of 15th Street. In the 5 years from 1961 through 1965, however, 27 substantial private buildings were started. This record of 27 starts in these past 5 years compared with 6 starts in the preceding 10 years is impressive.

I should like to make it clear, at this point, that downtown progress isn't claiming all the credit for this change in attitude toward private development. I do believe, however, that the existence of this organization of business and civic leaders interested in and working for a revitalized central city has certainly been a major factor in the change in attitude on the part of private

The things that have been accomplished have involved high levels of cooperation be-tween private organizations and public agencies, and among individuals representing a wide variety of civic, business, and government groups.

The things that remain to be done will require a continuation of this process of

problem in downtown.

private and public cooperation:

1. The parking problem in downtown and in other congested parts of the city must be solved. Every survey that we have done, and we've interviewed and questioned thousands of people—residents, shoppers, employees, and visitors—has shown insdequate parking to be the most serious physical

We believe that the storage of automobiles is as essential to the public interest as are roads, mass transportation, and traffic con-In order to assure sufficient parking at proper rates and at the right locations to serve the general public, there must be a serve the general public, there must be expensible, effective public agency. Since the parking job is not being done adequately by private enterprise, public action and assistance is required in order to meet the needs of the community. Such public action has been precessary in pearly all of the major. has been necessary in nearly all of the major cities across the Nation.

Legislation is required to permit the District of Columbia to lease sites to private developers to build on air rights over the center leg freeway and over other freeways. Such action would open up opportunities for the development of air-rights structures such as illustrated by Downtown Progress for parking, motor hotels, office space, and other activities which would benefit by the accessibility provided by the freeways, and which would be welcome additions to the tax base of the District of Columbia.

3. Legislation also is required to establish the National Visitor and Student Center, for which the Union Station would be an excellent location. We are pleased that President Johnson indicated his interest in 1965 in the development of a visitors' center to provide "perspective and understanding regarding the Federal Government to the myriad students and tourists who come to Washington to see and learn."

4. And in conclusion, we look to the Dis-trice of Columbia government, the National Capital Planning Commission, the National Capital Transportation Agency, and the Dis-trict of Columbia Redevelopment Land Agency, and other public agencies, to fulfill their responsibilities for sound planning and for early action to make the District of Columbis an even better place in which to live, to work, and to enjoy the benefits of our

A good start has been made toward the revitalization of downtown Washington, but much more remains to be done. Toward these objectives we pledge our full cooperation and support: to assist in every way the revitalization of the Nation's Capital in the same manner as other cities throughout this great country are rebuilding themselves to meet the requirements of the present and future generations of citizens.

# Ukrainian Independence Day

EXTENSION OF REMARKS

# HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. WIDNALL. Mr. Speaker, on January 22, 48 years ago, the Ukraine declared its independence from the thennew nation of the U.S.S.R. done in good faith by the Rada, or central council, of the Ukraine, acting in accordance with the Soviet Gov-ernment's proclamation of the right of self-determination for the peoples of the old Romanov empire of the tsars. As could be expected, however, the Communists soon proved how much their declarations were to be trusted, as they have many times since, by proclaiming that independence movements were bourgeois and counterrevolutionary. In the autumn of 1919, the Ukraine helpless against the onslaught of Soviet force, unwillingly became a Soviet Socialist Republic. Despite nearly a half century of Communist oppression, the Ukrainian people have maintained their unique and rich heritage, and their desire for freedom

Indeed, the annals of Ukrainian Russia are older and more significant than those of any of the Soviet Republics, including the largest and most powerful—the R.S.F.S.R. In fact, the very history of Russia begins in the capital city of the Ukraine—Kiev. The city lent its name to an era—Kievan Russia—almost three centuries in duration, from the 900% to the 1100% A.D. The rich legacy which this Ukrainian period left to that part of the world is unmatched. The art, architecture, literature, public and private institutions, its society and culture have all had their impact on the Communist state which now occupies that unfortunate territory. History, 1,000 years hence, will tell which era—Kievan Russia or Communist Russia—is remembered for its greatness and its heritage.

Since the 12th century and the Mongol invasion, however, the Ukraine has been conquered and divided numerous times between its greedy neighbors, including the Soviet Union. Throughout these long centuries of oppression, the Ukrainian people have shown great fortitude, courage, and unity, and when the Rada proclaimed independence on January 22, 1918, these people could see a dream materialize, a dream of freedom and an end to long-endured sufferings. The Communists, however, soon smashed this dream and gave the rest of the world one of the first signs of how they were to behave in the international arena. The short-lived nation of the Ukraine

was one of the first victims of Soviet aggression; aggression which has continued to the present day.

The Ukrainian experience cannot be considered in isolation to the events of today. Its connection with the current situation in Vietnam is aprly expressed by Prof. Lev E. Dobriansky, president of the Ukrainian Congress Committee of America, Inc.:

Although Vietnam engrosses our national attention, we cannot ever afford to ignore the broader interrelated facts of Sino-Soviet Russian imperio-colonialism, the syndicate of Red totalitarian regimes, their increasing psychopolitical warfare against the free world, and the underlying captive nations in the Red empire, including 17 million North Vietnamese. To divorce Vietnam from these basic facts would be the height of folly. The techniques of intensive revolution, the Russian-bred Hanoi elite, and Red objectives in Vietnam are no different from those witnessed in 46 years of cumulative Red conquest, commencing with the many non-Russian nations new held captive in the U.S.R. Itself.

Mr. Speaker, we have forgotten neither the people of the Ukraine nor the people of other nations more recently victims of Communist imperialism. On this 48th anniversary of Ukrainian independence, let us not only think of the past, but also the future. History is not done with the Ukraine, nor its unfortunate sister republies, and someday, the Communist yoke of oppression will be broken and freedom will be established again.

#### Adopted Chinese Boy Now Soldier

# EXTENSION OF REMARKS

# HON. JOHN J. RHODES

in the house of representatives
Thursday, January 13, 1966

Mr. RHODES of Arizona. Mr. Speaker, this article from the Phoenix Gazette of January 10, 1966, tells an interesting and polgnant story of hardship, love, and devotion to duty. Most of all, the sense of duty to country of this Chinese boy, a naturalized American, is in stark contrast to the shameful behavior of some of our comparatively well-endowed natives of these shores who burn draft cards. The article follows:

PRINTS FOR UNCLE SAM: ADDPTED CHINESE BOY NOW SOLDIER Eighteen years ago a baby boy was left to

die on the Chinese-Burmese border.

Today, he is a proud member of the U.S. Army.

His story begins with Dorothy Sterling, who grew up in Phoenix and graduated from Good Samaritan Nursing School. In 1939 she obtained a degree in theology from Cincinatti, Ohio, Bible Seminary, and at the close of World War II went as a missionary nurse to the Lisu tribe in Burms, on the border of Communist China.

She lived among natives who were so poor they often ate tree bark and plant roots to survive. They were made poorer by frequent raids by the Chinese.

It was during one of these raids that Miss Sterling found a Chinese baby who had been left to die after his parents were killed. They

had just escaped across the border into Burma.

Miss Sterling adopted the baby and named him David Mark after her favorite characters in the Bible. Six years later, under similar circumstances, als found her second baby a Chinese girl she named Judy. Raising the children, while she continued

Raising the children, while she continued her work with the Lisu tribe, she began to prepare in 1956 for a visit home. Realizing that if she was to get the children into the United States and back into Burma, she'd have to obtain citizenship for them, she wrote Pirst Christian Church in Phoenix which had been providing support for her work. The minister, Dr. William S. Boice, asked

The minister, Dr. William S. Boice, asked the help of then Senator Barry Goldwater, Republican, of Arizona, and John J. Rhodes, Republican, of Arizona, who introduced con gressional bills giving the children cizenahip. In 1957 David Mark and Judy came to the United States.

While they were here, however, the Burmess Government changed hands and its attitude toward U.S. missionaries. Burma refused to grant return visa.

Undaunted, Miss Sterling enrolled in Pacific Christian College at Long Beach, Calif., and won her master's degree in theology, supporting her family by nursing at Long Beach Hospital.

In 1960, she took her children to Thailand, where with the support of First Christian Church, she worked among the natives.

David returned to the States in 1962 to complete his last 2 years of high school at Seattle, Wash, then went back to help his mother operate the clinic.

A recent letter from Miss Sterling, dated Bankok, Thailand, said she was there with David who had gone to enlist in the U.S. Army. She said David felt he wanted to enlist because "I owe this service to my adopted country."

# The Puerto Rican Lawyer in the City of New York

EXTENSION OF REMARKS

# HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. RYAN. Mr. Speaker, I want to bring to the attention of my colleagues an article of great importance by three distinguished officers of the Puerto Rican Bar Association of New York. Messrs. Roberto Lebron, Raymond F. Narral, and Barry Ivan Slotnick—in the New York Law Journal of August 2, 1965—outlined their view of the role and responsibility of the Puerto Rican lawyer in New York City. They point out how necessary proper legal representation is for those confronted with problems of unemployment, housing, violations of civil liberties, exploitation in the purchase of merchandise, welfare, and—of course encounters with criminal law. The authors are to be commended for their deep understanding and for speaking out for legal services for the poor-an issue the Federal antipoverty program is just beginning to face. Their remarks, as follows, incorporate a position paper presented by these gentlemen at the recent conclave of the Inter-American Bar Association and the American Bar Association at San Juan, P.R.:

[From the New York Law Journal, Aug. 2, 1965]

THE PUERTO RICAN LAWYER IN THE CITY OF NEW YORK

(By Roberto Lebron, Raymond P. Narral, and Barry Ivan Slotnick)

(EDITOR'S NOTE .- The article which follows is the text of a paper presented at the recent jointly held meeting of the Inter-American Bar Association and regional meeting of the American Bar Association at San Juan, P.R. The authors of the paper are president, vice The authors of the paper are president, and acting secretary, respectively, of the Puerto Rican Bar Association of New York. The article reflects the views of those who represent the indigent Puerto Ricans in New York City.)

"For a person to hold rights in theory satisfies only the theory. We have to begin asserting those rights—and help the poor assert those rights. Unknown, unasserted rights are no rights at all," Nicolas deB. Katzenbach, Attorney General of the United States.1

The above remarks uttered by a most distinguished jurist encompass the awakening tinguished jurist encompass the awakening of the lawyer to the needs of the poor. No longer can the legal profession stand idly by while inequities and injustices surround its judicial island. No longer can the lawyer

The needs of the poor Puerto Rican have become vivid to the Puerto Rican Bar Association of New York by the advent of our all-out efforts to service our community in that great metropolis of New York City.

The Fuerto Rican community in New York City consists of approximately 750,000 inhabitants. It has at times been classified

as the largest migration of any single group in the Western Hemisphere. Indisputably, the reason for such a large scale migration is the search for a better life, better educa-tional opportunities for the young, better job opportunities, better housing, and an overall desire to lift themselves from the clutches of poverty.

Seeking the pot of gold at the end of the rainbow, the Puerto Rican has gambled away his customs, norms, and mores. He has achis customs, norms, and mores. He has ac-cepted the challenge of living in a new en-vironment which is regulated by different standards of behavior, many foreign to his own. He has thrust himself from a rural environment to a highly complex urban society which has, as an added barrier, a different language of communication.

The migrant Puerto Rican has inherited from earlier migrants to the urban metrogois of the United States the slum dwellings, the unskilled jobs, the high rate of unemployment, the prejudices and other maladies inherent in the lives of the poverty stricken.

The grassroots areas of the law which have its greatest impact on the Puerto Rican in New York are no longer found in the "or-dinary courtroom—but in the antercom of a city, State, or Federal agency as he awaits a determination of vital signifiance to him and his family." a

#### UNEMPLOYMENT

The Puerto Rican in New York City has inherited the unskilled jobs, making them vulnerable to seasonal slacks, automation, and the whim of employers. Statistics show that those most vulnerable to long periods of unemployment are the poor, the migrant, the Puerto Rican. Can lawyers provide assistance to alleviate the serious consequences of unemployment on the Puerto Rican family? Can we decrease the number of broken homes, abandoned and neglected children whose parents turn their backs on responsibility when unemployment runs rampant throughout a poverty stricken community? Unemployment is certainly not restricted to the Puerto Rican community in New

York City. In 1929, when the United States was gripped by a "great depression," social legislation was adopted to combat the identi-cal problems which exist today. New York State has adopted similar legislation and provides for the alleviation of the harsh conequences of unemployment through its unemployment insurance laws. The purposes of the law are spelled out in the Unemployment Insurance Law of the State of New York.\* However, "unknown, unasserted rights are no rights at all." The Unemploy-ment Insurance Law of New York is com-plex and its interpretation based on reported

ase precedents.

unsophisticated Puerto Rican who seeks benefits cannot possibly prepare or cope with the mandates of statutes and regulations which he does not understand. written in a language foreign to his own and administered by people who have lost the true meaning for its existence. Due to the latter reasons, an unemployed member of our community, with a wife and 11 children is thrust upon the relief rolls when he fails to request a hearing before an impartial referee within the 30-day limitation required by statute, after a discharge from his em-ployment, undisputably through no fault of his own. This lack of comprehension by our community leads to suspensions of greatly needed benefits because of willful misrepresentation, voluntary "quita" and poor or unrealistic job efforts.

An explanatory pamphlet, how to seek benefits, written in Spanish and inade-quately distributed, is not sufficient to meet the mandate of the law. Diligent and forceful advocacy is required by our association to bolster the members of our community into seeking that which they are entitled to by right, not by charity, and to apprize ad-ministrators of the full intent of the law.

The complexity of seeking unemployment insurance benefits has become burdensome to the members of our community. Unable to articulate the justifiable reasons for these benefit applications, they have come to look upon the agency, specifically set up to assist. as an opponent, ready to take advantage of as an opponent, ready to take advantage of their lack of knowledge and understanding. The latter opinion is formed when the ap-plicant enters the agencies' riffices on any given day and finds large numbers of his countrymen on line. He is fearful of not being able to make himself understood because he lacks the assistance of interpreters or Spanish-speaking employees. Are we, the Puerto Rican Bar Association of New York, to abandon our responsibility—we think

Representation by lawyers before the agency administering unemployment insurance benefits can no longer be considered a privilege, but a necessity. Puerto Ricans are those greatest in need of this representation inasmuch as they are those who most need these benefits and are less able to ar-ticulate their needs.

We cannot allow a young Puerto Rican mother who diligently searches for work as a salesgirl to be suspended from receiving benefits because her "job efforts are unrealistic." "her job searches must be restricted to factory work in which she has some ex-perience." S Nor can we allow suspensions for willful misrepresentation because the claimant, unable to make herself the claimant, unable to make herself understood, allowed a fellow claimant to insert in her work booklet "N's" instead of "Y's," nor for work booklet "N's" instead of "Y's," nor for a summary of interviews taken by agency employees who speak no Spanish from claimants who speak no English and, subse-quently, use these interviews to prejudice the position of the claimant.

If we are really to combat poverty let us start correcting the wrongs which exist in the programs adopted at a much earlier stage HOTSING

"A lawyer \* \* \* can serve to fill an enormous need which exists among slum dwellers to have legal assistance to aid them in their perennial battle with the landloard."

The Pureto Ricans in New York City have inherited the slum dwellings of the Lower East Side and the Bronx, and have even managed to have part of the island of Manhattan, a slum, coined as "El Barrio." The slums were certainly there before the advent of the Puerto Rican; he has only served to crystalize the stereotype of the sium dweller. The Puerto Rican slum existence is vividly

portrayed only because his mode of living is not ordinarily an urban enclosure but the outdoors. His walks around "la plaza" have become jaunts to the corner of a block or the brownstone stoops. The Puerto Rican is not the invisible "Other American" portrayed by Michael Harrington in his fine work by the The Puerto Rican is boist alive and much too full of life to be "the silent poor." It is because of this that at times he is erroneously portrayed as "happy" in his "Barrio"

Is it not for us, the Puerto Rivan Bar Association of New York, many of us the product of this sium, to ask ourselves whether or not we will allow our community to conform to this existence. Our association will no longer stand by and allow a slumlord to collect rents from our community while at the same time he allows his property to deteriorate to its lowest ebb. Can we stand idly by while rats bits our bables, death strikes because of lack of heat and plaster walls fall unmercifully on our families? We will not.

We will make it possible as lawyers for the Puerto Rican tenant to exercise his rights by leading him through the mase of pro-cedural technicalities and advocating his rights in the courts and administrative agen-In the area of landlord and tenant law, it is for us, the lawyers, to establish social change by novel legal premises. Novel questions of law must be advanced in this area of law so long ignored. Is it not feasible for a lawyer to advance the established prin-ciple of contracts that a breach occurs when the article contracted for is not delivered and, consequently, a breach occurs when heat and hot water are not supplied. It is not a constructive eviction when a tenant's family is relegated to sleeping in one room of a fourroom apartment because in the other bed-

room the ceiling is in danger of falling.

The lawyer will insure that a tenant will have at his disposal all the rights, privileges and remedies available to the tenant.

In New York City great publicity was re-cently provided to the "rent strikes" in two areas of New York-Harlem and the Lower East Side. Responsible community leadership spoke in anger because "rent strikes" suggested that the tenants absolutely resulted to pay rent. (In reality the practice was to have the tenants pay their rent into court.)

That slum tenants would refuse to pay rent to alum landlords was in some circles considered evil. However, slum tenants found no other way to bring justice to bear. Their failure to pay rent would bring on a summary proceeding for nonpayment of rent. Once the siumlored instituted a proceeding to evict for nonpayment the tenants would interpose the defense of violations of record; ask for a stay pursuant to section 755 of the Real Property Actions and Proceedings Law, permitting the tenant to pay his rent to the court until the landlord corrected the viola-

The small inroads made by our brethren who provided representation during the "rent strikes" and raised a defense based on section 755 of the real property actions and proceedings law may not have eradi-cated the slums. But it was because of dilient and forceful advocacy that such a de-

fense was first interposed on a large scale.
"Legal scholarship is beginning to enter this new field—to analyze the rights of wel-fare recipients, of installment purchasers, of people afflicted by slum housing, crime, and despair. These are signs too, that a new breed of lawyers is emerging, dedicated to using the law as an instrument of orderly and constructive social change. The Puerto Rican community of New York will not lack proper representation.

#### CIVIL RIGHTS

It is unnecessary to note in this paper the great strides being made in the area of civil rights. However, for many years the Puerto Rican community has failed to have its leadership articulate its need in this area. It was not until recently that the National sociation of Puerto Rican Civil Rights was formed. Our association is a leader in this field. Violations of civil liberties must be guarded with all the strength at our disposal; they are basic to a civilized society. Our president has recently been engaged in high-level discussions with the New York City Police Department and the mayor of New York City so that we can assure of New administration of all city agencies proper administration of all city agencies which, if ignored, can dangerously approach civil liberties violations.

#### CONSUMER PROBLEMS

The office of Louis J. Lefkowitz, the attorney general of the State of New York, recenly released a report indicating a record er of complaints of fraudulent prac-by the gyp merchant. "Swindlers prey tices by the gyp merchant. "Swindlers prey on people with language difficulties or in the lower economic brackets." 8 No doubt a high number of those swindled were the non-English-speaking Puerto Ricans. The num-ber of Puerto Ricans who discover that they have an obligation to pay a finance company for low quality furniture or for a TV set which was never delivered is innumerable. The lack of sophistication enhanced by the lack of knowledge of the language spoken by the swindling merchant makes the Puerto Blean easy prey to disastrous income obliga-tions. It is interesting to note that the highest percentage of fraudulent merchan-dising is found in the poverty stricken com-

The great need for legal assistance to the Puerto Rican community was pointed out by Dr. David Caplowitz, of Columbia University, in his recent study entitled "The Poor Pay More." Caplowitz states: "I became personally aware of these problems when, in 1960, I was asked by several settlement houses in New York City to do a survey of the consumer problems of low-income families. interviewed almost 500 families living in low-income housing projects in the city. The median income of the families in our sample was about \$3,300. Some 15 percent were receiving welfare assistance. Most of the families were members of racial or ethnic minorities. Forty-five percent were Puerto Ricans, 30 percent Negro, and 25 percent white, exclusive of Puerto Ricans."
Mr. Caplowitz found that the majority of

those interviewed were paying exorbitant prices for shoddy merchandise; that the ma-jority were involved in critical installment obligations and were unable to overcome the potpourri of legal entanglements because of their installment purchases, which often led to catastrophic financial obligations. Mr. Caplowits further states: "If the poor did not have consumer problems requiring

legal services several generations ago, this is no longer true today. Unfortunately, substantial numbers of today's poor have met with exploitation in the marketplace, have become almost hopelessly entangled in in-stalment debt and have been faced with the legal penalties stemming from missed pay-

Our association has undertaken a speakers bureau, which will make available to all our "Puerto Rican hometown groups" in New York a member of our association, expert in the field in which they desire to be oriented. It is our hope that a concentration in the area of consumer matters will help educate our community to the ways of the gyp mer-

#### WELFARE ADMINISTRATION

The Puerto Rican community in New York City is plagued by the midnight raid, the inhuman investigator and in many cases the almost complete loss of all civil liberties including his right to privacy and his right as an American citizen to travel to any part

Serious constitutional questions have been raised over what Time magazine described

"The early morning visit, in which investigators charge into a woman's flat at 5 a.m. like gangbusters, and if a man is present, try to find out whether he is fliching welfare money or dodging child support. Not surprisingly, some welfare workers object to the technique. Is not the welfare recipient mother entitled to the same constitutional safeguards as is the common criminal?"

Suspensions of welfare benefits for "failure to properly manage funds," or because "it is socially more valid for your family to reis socially more valid for your family to re-turn to Puerto Rico," or "your intent in coming to New York City was to get on the welfare rolls," are all reasons which must be challenged, especially by the Puerto Rican, who is subjected to the greatest num-ber of decisions of this type.

Welfare recipients must be overly assured that the rights guaranteed all our citizens

that the rights guaranteed all our citizens will not be diminished because of the need of welfare assistance. Our association cannot allow poverty to breed helplessness, fear of retaliation or a concession to defeat. Few, if any, Puerto Ricans, indeed, have any concept of their inalienable rights and their rights to appeal.

Lawyers must be prepared to appeal de cisions of suspension of benefits because "it is socially more valid for the client to return with his family to Puerto Rico," or a suspension of benefits to a woman and four children because she allegedly "came to New York without a proper support plan." this sufficient reason to allow the woman and four children to starve or house themselves in public hallways? We think not.

It is important to note that case precedent exists which makes it mandatory for a city agency to provide emergency assistance until a hearing is held and a determination endered: The Puerto Rican community has falled to take . dvan age of these decisions simply because welfare recipients rarely, if ever, have the legal assistance necessary to pursue their claims. It is our community which suffers the most blatant injustices in this area of poor man's law.

#### CRIMINAL LAW

New York has been one of the leading States in supplying legal aid to the indigent. This counseling to the impoverished was supplied long before Gideon v. Wainoright decreed it to be mandatory.

Per capita, the Puerto Rican community of New York City finds itself before the criminal bar of justice with greater frequency than other minorities. The platitude that "poverty breeds crime" is enacted every day in our criminal courts.

The trumpet of Gideon to is being sounded through the use of the Legal Aid Society and assigned attorneys. However, the music it plays is sometimes flat and its overtures occasionally faiter instead of reaching the cres-cendo of full protection of human rights and adequate representation.

The highest court of the land has decreed that all indigent defendants have the right of counsel in criminal cases.<sup>21</sup>

However, the plight of the Puerto Rican defendant differentiates itself from the prob-

lems facing other accused.

More often then not the defendant does not understand either the language or the court proceedings.
(The problems inherent from arrest to ar-

raignment are manifold and will not be discussed in this paper.)

Upon arraignment, the Puerto Rican defendant is usually unable to post bail. Consequently, he is returned to the county jail. Even if VERA " were applicable, his comparatively short period of residence and uninterrupted length of employment would not place him among those eligible for consideration. If the defendant makes bail he finds he is no longer eligible to be represented by court assigned counsel.

From the time of his arraignment until trial may take a period from 30 to 90 days. During this time the accused is incarcerated (nonbail case) and perhaps sees his courtappointed attorney on one occasion. legal aid attorney is usually not bilingual and vainly attempts to prepare a history of the defendant.

The final notes of Gideon's trumpet usually end with: "Your Honor, the defendant wishes to plead guilty to the charges of \* \* \* to cover the information." \* to cover the information." last few bars of our concerto have been written by the district attorney in conference with the appointed attorney, who then attempts to explain the arrangement to the defendant (through a court interpreter). Finally, he will persuade the accused to accept the plea. Judge Rossbach 13 has categorized this system as "Go, go, go justice." Regrettably, the elements of mass production are applied to a situation that merits more esthetic standards.

However, all is not as bleak as presented above. There are times when court-ap-pointed attorneys are able to more than adequately represent defendants. The latter is unfortunately the exception rather than the rule.

The problems faced are not those of inadequate attempts or lack of interest. On the contrary, adequacy of the legal aid attorney is unquestionable. The interest taken by the public defender is manifested each and every day in his anxiety to aid the wards of our society. The problems are presented by an overcrowded caseload and an understaffed court. In New York County the average daily arraignment calendar lists over 60 cases. The legal and lawyer must handle over 100 files a week. Therefore, to facilitate matters, the "plea" system of justice has been contrived.

Ab initio, the problem must be met by a total reorganization of the Legal Aid Society, together with an enlargement of their staff and budget. It is further necessary that our criminal court philosophy of justice be reexamined to avoid the assembly line method of justice. Of course, the perennial cry for an increase in the number of judges will be left to the State legislature-(once more).

The average Puerto Rican defendant who retains private counsel is in a somewhat similar position due to the fact that he is not financially able to adequately compensate his private attorney. Therefore, the "plea" system of justice is involved once more; this for a lesser remuneration. Arraignment, a plea of guilty and sentencing reduce the number of court appearances, research, and investigation. Preparation for trial is ex-pensive and generally beyond the means of the average Puerto Rican defendant.

Ignorance of the law and its workings tend to perpetuate the continuation of this un-fortunate system of jurisprudence in the Puerto Rican community. However, we must once more mention that the aforementioned is simply the rule and there are occasional

The indigent Puerto Rican must be assisted in exercising his rights, because rights cannot fully exist unless they are fully exercised. We fall short in the full protection

of those rights.

Right to counsel means more than mere representation by an attorney—it has within its meaning a full and adequate counseling with the full use of all means and remedies available. It stands for the proposition that a defendant has a right to an attorney of his own choosing who will use every weapon of the law in the defense of the indigent. means that the accused shall receive the time, attention and consideration that is sary—not to be met by an already overburdened legal aid attorney who finds him-self compelled to arrive at a speedy and often not unrealistic disposition.

Generally, the cause of the Puerto Rican

defendants' appearances before the criminal bar begins with poverty and ends with a total incomprehension of the proceedings. difficulty with language, custom and financial inability makes him vulnerable to criminal convictions, the consequences of which he must add to the already overburdening

number of maladies.

In the teeming metropolis of New York, where we are proud of our heritage of freedom, democracy and equal justice for all, we find that the latter phrase sometimes does not manifest itself in a full protection of the individual rights of all.

"We must be \* \* \* concerned with the broad difficulties of the 20 percent of our population which is \* \* serving a life sentence of poverty. It is justice rather than charity which calls on us to see to it that the law and the lawyer are involved in the effort to reverse that life sentence." 1

Attorney General Nicholas deB. Katzenach, relating to the problems outlined above, has stated: "To be sure, these are not new problems. It is our appreciation of them that is new. There has been long and de-voted service to the legal problems of the poor by legal aid societies and public defenders in many cities. But, without disre spect to this important work, we cannot translate our new concern into successful action simply by providing more of the same. There must be new techniques, new services and new forms of interprofessional cooperation to match our new interest."

President Johnson has committed his administration to eradicating these specific ills and has established as a tool the Economic Opportunities Act of 1964. We implore the

use of this tool.

North American Aviation Article Discusses Transportation Systems for Tomorrow

> EXTENSION OF REMARKS OF

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. REUSS. Mr. Speaker, the need for efficient transportation in our cities is one of the most pressing problems facing the Nation. Today outmoded and antiquated systems are expected to move thousands and millions of people about large metropolitan areas, but they just cannot do the job. What we need are new modes of urban transport which can move people about cities quickly, efficiently, and safely without the delays of waiting at the bus stop or transferring to other vehicles.

In order to spur this development, I have introduced H.R. 9200, which amends the Mass Transportation Act of 1964 to provide for a program of urban

transport R. & D.

Twenty-one other Members of the House have introduced identical legislation. In the Senate, the Senator from Maryland [Mr. Typings] introduced an identical bill, S. 2599, which was cosponsored by 10 other Senators.

The sponsors of the legislation in the House, in addition to myself, include: the gentleman from Ohio [Mr. ASHLEY]. H.R. 9201; the gentleman from Texas [Mr. Cabell], H.R. 9202; the gentleman from New York [Mr. FARBSTEIN], H.R. 9763; the gentleman from Minnesota [Mr. Fraser], H.R. 9995; the gentleman from Ohio [Mr. Gilligan], H.R. 9826; the gentlewoman from Michigan IMrs. GRIFFITHS], H.R. 9996; the gentleman from New York [Mr. HALPERN], H.R. 9997; the gentleman from Connecticut [Mr. IRWIN], H.R. 10857; the gentleman from New Jersey [Mr. Josuson], H.R. 9998; the gentleman from Maryland [Mr. Long], H.R. 9999; the gentleman from New York [Mr. McCartry], H.R. 10000; the gentleman from New Jersey [Mr. MINISH], H.R. 10001; the gentleman from Pennsylvania [Mr. MoorhEad], H.R. 10002; the gentleman from New York [Mr. MULTER], H.R. 9203; the gentleman from Illinois [Mr. Ronan], H.R. 10003; the gentleman from New York [Mr. ROSENTHAL], H.R. 9204; the gentleman from Wisconsin [Mr. STALBAUM], H.R. 10279; the gentlewoman from Missouri [Mrs. Sullivan], H.R. 9205; the gentleman from Ohio [Mr. VANIK], H.R. 9206; the gentleman from Georgia [Mr. WELT-NER], H.R. 9207; the gentleman from Illinois [Mr. YATES], H.R. 9208.

The sponsors of S. 2599, in addition to the Senator from Maryland [Mr. Ty-DINGS], include: the Senator from New Jersey [Mr. Case], the Senator from Pennsylvania [Mr. Clark], the Senator from Michigan [Mr. HART], the Senator from Indiana [Mr. HARTKE], the Senator from Hawaii [Mr. INOUYE], the Senator

from Washington [Mr. Jackson], the Senator from Massachusetts (Mr. Ken-NEDY], the Senator from California [Mr. KUCHELI, the Senator from Connecti-cut [Mr. Ribicorr], and the Senator from Massachusetts [Mr. Saltonstall].

North American Aviation, Inc., has been one of the leaders seeking solutions to the urban transportation problem. In an article in the current issue of Skyline, published by NAA, Jack J. Jones, assistant to the president for transportation, discusses the techniques used by his company to plan transportation systems for the future and some of the new modes which are in the offing-modes which could be developed under the program proposed in H.R. 9200:

TRANSPORTATION TOMORROW

(By Jack J. Jones, assistant to the president, Transportation, Los Angeles Division)

On March 17, 1965, North American Avia-tion was issued a challenge by Edmund G. Brown, Governor of the State of California. The challenge came in the form of a 6-month study contract to investigate the problems of transportation in the State in the coming half-century.

The company was asked to consider everything that moves in the State of California for the next 50 years, whether by land, sea, or air. Communications was included because of the major role it plays in travel.

We were to look underground, under the ocean, as well as in the air. We had to consider the city problem and the recreation problem, the regional problem, the agricultural problem, the industrial problem, the entire problem of movement in California for years. Now this is the sort of challenge that the aerospace industry likes. It's a complete systems problem. In order to get our feet on the ground we had first to conduct a survey on the technological improve-ments that can reasonably be expected in the next 80 years. We had to do this to "size" the problem and the computer models that we are recommending.

The task of analyzing and planning Cali-The task of analyzing and planning California's future transportation requirements is very complex. Just as transportation needs are influenced by many things, so does transportation influence many things. Transportation goes where the people and industry go, but the freeway system has shown the opposite is also true: the direction of growth can be guided by transportation. But, people and industry require water, power, waste disposal, education, communications and other nublic avatems and servenications, and other public systems and services as well. These also must be provided.

## A LONG LOOK AHEAD

How much industry and how many people will there be in 1990? In 2015? Where might they be distributed; how will the land How much, for what purposes, and between which points will people travel? How many goods will be produced and consumed in California, and from where and to where will they be transported? How much and what will be imported and exported by or through the State? How much land will or through the State? How much land will recreation require, and how much abould be devoted to transportation? What will be the likely characteristics, performance, costs, revenues and taxes of each of the possible future land, sea, and air transportation systems and networks? How will these systems interface, and what will be the coordination and integration requirements? How will better communications influence transportation demand? What are the long-range budgeting and legislative implications? These are significant questions requiring timely answers. Each case should be analyzed under several sets of assumptions and the sensitivity to these assumptions measured. Each case will necessarily draw upon quantities of data if it is to reflect all the assential factors.

#### SYSTEMS APPROACH

At present, there is no operating device that can encompass this task in a single frame of reference or can master its complexity and handle the data and computations required. But such a device can be made available and can be practically ap-

The systems analysis approach was developed to master the predictable, complex problems of the Nation's areospace and defense activities. In its study, North American applied it to the total transportation problem. The systems analysis study includes building that planning device needed to provide the quantitative measurements that will support human judgments and decisions. This device would be constructed by specialists in many fields and would incorporate advanced analytical techniques. It would be flexible, could accept a range of assumptions, and would display options.

The capacity and capabilities of modern computer and display equipment form a major element of this planning device. Many bits of data, together with the appropriate mathematical formulas and relationships, are inserted into the computer. After presentation of the problem to be analyzed with the assumptions to be used, the computer would perform the mechanics of the many computations required. Results would be printed out in words, numbers and graphs, supplemented by visual displays which could be cooled and retained.

The other major element of this planning device would be the humans who compile the formulas, relationships, and programs, who pose the problems and assumptions, and who must apply judgment to the results, make decisions, and implement actions. The computer network simply makes the analysis practical. By handling large amounts of data and performing computations quickly, it provides the decisionmaker a wider and more penetrating frame of reference upon which to base his decisions.

The troubles of transportation today are symptoms of major problems tomorrow, if left untended. Shortcomings in the total transportation system of the State should not be tolerated, and obsolescence cannot be afforded, for transportation moves people and goods and in so doing moves the accomony.

In California today the single major transportation headache is that of urban congestion, mostly within but also out of and into the large metropolitan areas.

#### AVOIDING TOMORROW'S TROUBLES

Two primary factors have led to urban congestion: first, the increased number of trips within the metropolitan area, caused by many factors; and second, a lack of choice in urban transportation in that only one, the automobile, offers flexibility, convenience, and seemingly some measure of economy of time and money to the individual.

Without sufficient insight, planning, and action, the troubles of today could grow to be more costly, perplexing and far reaching tomorrow. If the undesirable impact of these problems is to be reduced or eliminated, the initial effort must be understaken now. The planning and provision of timely transportation systems and networks will be a vital element, greatly influencing our way of life, our economy, and our total environment.

North American's study has pointed us in the direction of a number of new approaches to transportation. Most of them sound like something out of science fiction, but they are feasible now, and many of the techniques and methods of transportation dealt with in the report will be in use decades ahead of the study's 50-year terminal point.

One of the most interesting concepts covered in the study was the tube train. Traveling in the 300- to 600-mile-per-hour range, the tube train would compare with today's commercial jet aircraft for speed, while having the capability of transporting far greater numbers of passengers between major urban centers.

There are currently half a dozen serious types of tube trains. Depending on the terrain, they can travel above, on, or below the ground. The tube itself serves a relatively simple function; it protects the train from such hazards as cattle on the track to rocks in the hands of small children.

#### THE GRAVITY TRAIN

One of the most unique of the tube-train proposals is the gravity train. It uses the pendulum principle. Beginning at each station, a tunnel is laid out following a pendular path. In this case the tube is evacuated, developing a vacuum ahead of the train so it sucks it in like a piece of wet spaghetti and starts it down the track, using gravity to provide acceleration.

It drops about a mile below the surface in about 8 miles of travel and it is doing 500 miles per hour at that point. It then levels off a mile below the surface and reverses the process as it comes up the other side. Why the expensive tunneling? In this case, the propulsion is practically free once the tunnel is dug. Is it worthwhile to dig a tunnel to get free propulsion for the next 50, 100, or 150 years? If people will ride in it, the answer is probably yes. The question of whether people will travel in such a thing as this has become one of the key elements of our study: the human acceptance of any personal travel device.

#### GROUND EFFECT TRUCES

Another interesting device probed by the study is the ground effect machine. A possible future use is the ground effect machine truck. This would travel a so-called ground effect machine track on a guideway. This has advantages in that the guideway has a lip on each side which solves the lateral stability problem. It would be a 150- to 300-mile-per-hour truck from 200 to 300 feet long. Where it loads and unloads it would probably have to move in small areas so it would have to be articulated in order to get around corners. It would probably travel on low-speed wheels when it left its track to move over surface streets. There are a number of ground effect machines presently being proposed.

One of the most familiar is a Department of Defense special skimmer project. The device, similar to the hovercraft in San Francisco Bay, is under consideration as a machine for use in Vietnam and for landing on beaches. Now, they presently all have disadvantages. But as we see them, they're the type of disadvantages that will be tested and engineered out and a successful device will result.

When we talk about shipping, and ocean shipping, we run into a very interesting situation. The U.S. merchant marine has problems. This has been recognized for some time. The Maritime Commission hopes to find a solution to get it off its knees. They are pressing hard to find a new type of ship and this spring they issued a report of some interest. They are looking for a breakthrough in shipping. One such possibility is a device called a surface effect ship. It is similar to ground effect machine, but instead of riding on a bubble of air, it actually flys over the water. This is a 200- to 300-mile-per-hour ship probably 500 feet long. It would go from here to Hawaii in about 10 hours. It is automated so that a crew of about five would run this entire ship. It is a cargo ship that would be run somewhat

like an airliner. A check of weather reports would indicate the best route to avoid large waves which would slow the craft.

Turnaround time for a high-speed vessel would have to be much better than anything we now have. The current scheme for overcoming the turnaround problem is the rotation technique.

#### SHORT TURNAROUND TIME

The ship is brought up to a floating pier, which eliminates the difficulties caused by tidal changes, and the cargo inside the ship is rotated out on a conveyor belt device at the same time, as the return-trip cargo is rotated in. Using this procedure, the entire ship could be turned around in less than 45 minutes. Additional fueling of the ship could be accomplished during this brief "down time." This much is certain. There will be a breakthrough in maritime shipping in the next 50 years. With a major effort, the breakthrough could come in less than half that time.

Our airspace represents a different type of problem. With the exception of supersonic commercial transport, which is still several years away, we aiready have reached a high level of efficiency in moving people and goods rapidly from one point to another.

What we are looking for now is a way to move people relatively short distances, up to 600 miles, at modest speeds, and, most irriportant, with the capability to take of and land on very short runways.

An application of this type of circust particularly suited to California is to the State's recreational areas. In many of the hard-to-reach areas, it is nearly it possible to create access without destroying a.me of the natural beauty which makes them attractive. This type of aircraft could go a long way in solving that. Landing strips could be located in the periphery of our cities. Concrete runways would not be needed, merely a 1,200-foot strip of open land. It is our belief that once people get into the recreation areas they are not interested in going 80 or 100 miles per hour down a concrete strip; that they would just as soon go 10 to 30 miles an hour for the last 5 or 10 miles of the trip as they go through the redwoods or other natural beauty that has drawn them to make the trip.

#### EXPERIMENTAL DEVICES TODAY

Finally, we must consider private transportation. There are a number of devices and it is difficult for us today to select one and say it is the best of the ones that will take place. But as an example, we chose a vehicle now in display at the new transportation fair in Munich, Germany. It may not be just a ground effect machine, to skim a few inches off the ground, but may be capable of attaining 4,000 to 5,000 feet of attaining 4,000 to 5,000 feet of attaining else, we feel certain in the next 50 years there will be individual air cars, and they won't be of the helicopter type.

Certainly one of the west coast's greatest assets in the consideration of transportation is the Pacific Ocean. California, for example, possesses an enormous coastline, and with it, a unique potential for moving a wide range of supplies by floating pipeline. Such a system is feasible because fresh water weighs less than salt water. If the pipe is selected properly, a pipeful of fresh water will have neutral buoyancy.

#### USE OF THE SEA

This means it is possible to move large quantities of fresh water from northern California, Oregon, Canada, or Alaska down the coast at sea level without requiring expensive tunneling and pumping. Just enough pumping is required to overcome the frictional loss. Such a system could supply what may be needed next beyond the Feather River requirements of southern California or maybe even central California 50 years from now. Likewise, these pipelines can be used

HC

to turn around and move our finished petroleum products or vegetables back to the north. Our studies show that phelines are an extremely economical, fast method of transportation. It is conceivable that the movement of a large number of commodities that we haven't even dreamed of today, such as lettuce and carrots, will be made by pipeline in this 50-year period.

All of these ideas and proposals, for tube trains, STOL airplanes, high-speed ocean vessels, and ground effect machines, have merit and a place in the future. What is needed most at present is an integrated plan to take what we now have, what we want to have at a later date, and combine them in a meaningful and useful manner.

#### MANY CONSIDERATIONS

This means systems analysis, encompassing the full range of transportation modes in a single frame of reference. To do this study properly we must include the considerations of population, land use, the economy of the State, and current and future technology. It is a large order, but one which can be reduced to size through systems analysis.

Three factors must be taken into consideration in any estimate of how much movement of people and goods will be required. These are population, personal income, and manufacturing productivity. Within 29 years, for example, the daily number of passenger miles in California will double; in 50 years it will increase five times. The figures for commodities are even more startling. Twenty-five years from now, the indication is that there will be about three times the current number of commodity miles. By 2015 we can expect 7 to 10 times the current volume of goods to be in motion every day.

This brings us back to systems analysis, an approach which the aerospace industry has evolved in order to be able to examine predictable, complex problems. The method uses computer technology to handle an amazingly large amount of data and run it through mathematical formulas in an amazingly short time. The computer is simply a tool. It does not make judgments, but it does enable men to make better ones through its use.

When considering California as a system, it is important to note that the State is only one of a number of similar systems interconnected to form a large network extending through the United States to encompass the entire world. It is readily apparent that what occurs in California depends to some degree on what is going on throughout the entire world. Therefore, any study of the California system and its future transportation requirements must investigate activities which might take place beyond the State's borders. This is emphasized by the fact that California serves as a gateway to the Pacific and experiences a high import/export rate agross the State.

Three prime factors are involved in considering California as a system. They are population, land use, and the State's economy. From a computerized balance of these factors a State profile can be drawn.

factors, a State profile can be drawn.

Because this is not like a weapon system, it is not possible to satisfy a specification and know that the customer will buy. It is necessary to come up with something that people are going to want to use. This is why human judgment remains a key factor.

#### COMPUTERS TO GIVE ANSWERS

What the North American systems analysis approach requires is that the State of California describe itself and its transportation possibilities to a computer so that problems can then be presented to it.

n

t

When the computer responds with possible answers, it is up to the man who requested them to say what is acceptable and what is not. In the final step, the most attractive

options can be passed along to the State's top officials for their decisions.

A vast array of complicated transportation problems await further study today in Callfornia. Systems analysis offers an opportunity to plan today to assure the development of a smooth transportation complex in the next 50 years.

# The 200th Anniversary of the German Friendly Society

EXTENSION OF REMARKS

# HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Monday, January 24, 1966

Mr. RIVERS of South Carolina. Mr. Speaker, in Charleston we like things that endure. We are very proud, both for its endurance and its achievements, of the German Friendly Society, which celebrated its 200th anniversary on January 19. Think of it—a society that is older than the Republic itself. And that has endured despite periods of national enmity and war.

The 200th anniversary celebration of the society, held at the Francis Marion Hotel, was a truly outstanding event. The society was privileged to have as its guest speaker General Hans Speidel, of the Federal Republic of Germany, and I am proud that I had some small part to play in bringing General Speidel to Charleston for the event. On hand to introduce General Speidel was another very distinguished military man, Gen. Lyman L. Lemnitzer, now our Supreme

Allied Commander, Europe.
General Speidel, who was imprisoned during World War II on the personal orders of Himmler, left the quiet chair of a history professor in 1951 to help the Federal Republic of Germany build its defense forces. He was the first commander of the Federal Republic's armed forces and later spent 7 years as commander in chief of allied land forces, central region—which put him in command of the builk of NATO-assigned ground forces of Germany, the United States, France, England, Luxembourg, Belgium. He is now president of the Foundation of Science and Politics.

General Speidel's address is one of the clearest explanations I have heard of the strategic importance of Western Europe and reflects the knowledge of a man deeply schooled in the military and political history of Europe. He points out that the permanent aims of the Soviets are unchanging and warns us not to plan our defense according to the temporary policies forced on the Russians by momentary international developments.

It is also heartwarming to hear a Western European voice say that his countrymen appreciate that what we are doing in Vietnam is done for the freedom of all people.

General Speidel's speech will improve the understanding of all who read it and I urge my colleagues in the House to do Mr. Speaker, I include General Speidel's address and General Lemnitzer's introduction as a part of my remarks:

REMARKS BY GEN. LYMAN L. LEMNITZER, SUPREME ALLIED COMMANDER, EUROPE, ON INTRODUCING GEN. HANS SPEEDEL AT THE 200TH ANNIVERSARY CRIERATION OF THE GERMAN FRIENDLY SOCIETY, FRANCIS MARION HOTEL, CHARLESTON, S.C., JANUARY 19, 1966

Mr. President, General Speidel, Congressman Rivers, and gentlemen, the opportunity to be here tonight is extremely welcome to

me, for several reasons.

To begin with, it is always a pleasure to return to Charleston. Some 25 years ago, in 1940, when I was stationed for a time at Fort Moultrie, I first became acquainted with this attractive and historic city. Since then I have had extensive contact with many Charlestonians. One of the most distinguished of these is my good friend and associate, with whom I have had close relationships for many years, Congressman Ruyses, who now occupies the highly important position of chairman of the vital House Armed Services Committee. In addition, General Clark, General Harris, and General Tucker, and a number of others with whom I have served in the Armed Forces and whom I admire have come to Charleston to make their homes on retiring from active military duty. For me, therefore, a return to Charleston is, in a sense, a sort of homecoming.

Beyond this, however, I regard it as a special privilege to be here in connection with the 200th anniversary of the German Friendly Society. For two centuries it has played a highly responsible and valuable part in the life of this city—lending vital aid in time of private need and public disaster, fostering education, serving patriotic causes, and promoting the fraternal virtues of fellowship and mutual assistance. Truly, it provides a splendid symbol of the combination of the best qualities associated with the German and American characters.

Pinally, I consider it a signal honor to introduce to this audience a man of such outstanding attainments as its guest of honor tonight. The German Priendly Society of Charleston has in its time welcomed many distinguished visitors both from the United States and from abroad. I can assure you from my personal knowledge that Gen. Hans Speidel is fully worthy of their company.

Speidel is fully worthy to their company.

As a sort of footnote to his presence here,
I think it is an interesting fact that one of
the society's original 16 members, who also
served it as its clerk from 1767 through 1779,
was a man named Abraham Speidel.

I do not know what connection, if any, this may reflect. I do know, however, that it is a privilege for all of us to be addressed by a man of such impressive and diverse achievements as General Speidel.

Entering the German Army in 1914, when he was only 17 years old, he served during World War I on the Western front. After earning his commission as an officer, he rose to be, successively, a company commander, then second-in-command of a battalion, and eventually a regimental staff officer.

Staying in the Regular Army after the war, he also carried on advanced studies in economics and history, and in 1925 was awarded the degree of doctor of philosophy, magna cum laude, by the University of Tübingen. Throughout the next several years he had a succession of assignments in command of troops and as a general staff officer.

In World War II, he took part in the campaign which ended with the allied evacuation at Dunkirk. For the allied side in World War II, that campaign is not the happiest of memories, but every student of military matters recognizes that in both conception and execution it was nothing less than brilliant. During the next 18 months, General Speidel was chief of staff of the military command

for France; but by early 1942, because of his disapproval of the policies being imposed on the military authorities by the notorious security service, or S.D., he obtained a transfer to the eastern front, where he served until the following year as chief of staff of an

army corps.

Later, he returned to the Western theater as chief of staff of General Rommel's army group. However, in early September of 1944, General Speidel was arrested on orders of Himmler, and was held in prison until he liberated by the French First Army in the final week of the war in Europe.

With the war over, General Speidel turned to scholarly pursuits, becoming professor of modern history at Tübingen University. But the demand for his talents did not allow him to retire for long to a purely academic life. By the beginning of 1951 he was summoned to serve as a military adviser in conferences the contributions which the Federal Republic of Germany could make to the defense of Europe. This led to his ap-pointment as the Federal Republic's Chief Military Delegate to the committee studying the proposal for a European Defense Com munity which was being considered at that time.

When the Armed Forces of the Federal Re public of Germany were established in 1955, he was the logical choice for their first commander.

Shortly over a year later, he was named to the position, under the North Atlantic Treaty Organization, of commander in chief of all Allied land forces in the central region. that assignment—which he was the first Ger-man officer to hold—he was in command of all or the bulk of the ground forces assigned to NATO not only by the Federal Republic of Germany, but also by Belgium, France, Lux-embourg, the Netherlands, the United Kingdom, and the United States

General Speidel occupied this post of vital responsibility for almost 7 years parture from that assignment in September of 1963, however, did not mark an end to his contributions to the cause of European se-

On the contrary, he became, first, the Federal Republic's special adviser on matters of Atlantic defense, and later was chosen to be president of the Foundation of Science and

From this outline of General Speidel's career, it is obvious that he is a man of broad ackground and high attainment. I am sure that we shall be hearing today not solely from General Speidel or from Dr. Speidel. Rather, we shall be getting the benefit of the blend of knowledge and experience of a man of wide achievements, who represents in himself a rare combination of soldier, scholar, and statesman. I know that I speak for everyone here in saying that we look forward eagerly to his address.

#### GENERAL SPEIDEL'S EVENING ADDRESS TO GERMAN FRIENDLY SOCIETY

My English will be easier for you to understand and will perhaps appear more famil-iar as well, if you will do me the courtesy of mistaking it for Pennsylvania Dutch.

It is a great honor and pleasure for me to address you today. We commemorate an important historical event, the 200th anniversary of the foundation of the German Priendly Society. I should like to thank you, above all, the president of the society, and Congressman Rivers, for having invited me to come to Charleston on this wonderful asion.

I was grieved to learn of the untimely passing of Mr. Attaway, the former president of your society. We wrote to each other a number of times and he was most helpful in preparing me for this visit with you. I would like to wish greatest success to the new president, Mr. Viohl.

I am deeply touched to be called to speak here to old friends, perhaps even to some relatives. Some of us have probably the same roots, since many of you came from my own home region, from Württemberg. More than 200 years ago, your ancestors came to South Carolina and brought with them your pioneer spirit, your creative strength, your customs and religion-let me only recall the founder of your society, Michael Kal-teisen, my namesake Abraham Speidel, and so many others. It is in their spirit that I bring you today the greetings of the old country that dues not forget you. I have been charged in particular to convey to you the best wishes of the president of the Federal Republic of Germany, Dr. Lübre and of the German Chancellor, Prof. Dr. Ludwig Erhard.

Yours is indeed a proud city with a magnificent tradition. It makes me very happy get acquainted with your town and its forthright and liberty-loving people.

Before saying some words about the German-American friendship and about the problems of the peace and of our mutual security, I wish to acknowledge a great debt. Germans have found our place in the political field, in Europe and in NATO. that we have been able to take upon ourselves responsibilities for the defense of the free world together with our allies, all this has been made possible only by your-by the United Statesmoral, human, and material help. Without this assistance, we could not have achieved our economic recovery andto mention my own military profession-we would not have been able to set up our army, the Bundeswehr. We shall never forget this proof of true friendship you have conveyed through your support. fully conscious of it. We shall remain

e cannot deal today in detail with all the events that separated and united our peoples in the course of a history of more than 300 Your detachment from world affairs, which lasted roughly until 1917, has to be understood within the context of the atmosphere of the past centuries. Surrounded by two oceans, living on your own a hard exist-ence, you have made of your country everything humanly possible.

However, since then, the two World Wars and the stormy technical boom have changed the situation completely. Today, you not only march on or, better, fly on the top of progress, but carry commitments and re-sponsibilities for the whole free world. Since the end of the Second World War our two nations have had to meet the same

task of reconsidering the political situation and of finding ways and means to counter the steadily increasing dangers in the world. You, the United States, as the great protector of the Occident; we, the divided Germany, as the most exposed country in the conflict as the most exposed country in the commot between East and West. Any foreign policy of our era cannot but be world policy. Thus, for us, historically a continental landpower, it is a basic new element to be an ally of the strongest landpower, airpower, and seapower of the Western World. This alliance originated in the East-West conflict, in particular in the war in Korea. Political considerations combined with a changing psychological attitude resulted in the pleasant climate be-tween the United States and Germany.

A strong link in the German-American restations is NATO. By its creation the United States entered into an engagement in Eu-rope, unknown before in history. The pre-condition for the foundation of NATO on American initiative one and a half decades ago remains unchanged; the threat to our existence continues to be the same.

The United States has successfully prevented the expansion of the Soviet system of society to Western Europe. Unfortunately, it has been imposed on the Eastern European countries and other areas like Cuba. The structure of society and foreign policy are interlaced. Each country with a Communist system of society necessarily becomes from the point of view of world policy a satellite, or at least an ally of the Soviet Union.

We realize full well what you did for us in Korea and what you are doing in Viet-nam for the sake of freedom for all of us. We follow your battle wholeheartedly and appreciate it gratefully. As the German Chancellor stated last December 21, we Germans, and I quote, "are grateful to President Johnson and the American people for the sacrifices in blood and lives that the United States is making in Vietnam for the cause of freedom and for our freedom too.

We feel a close solidarity with you."

Now, allow me to tell you something about my country, about the security of Europe and with it that of the Western World. As I mentioned earlier, the menace we face remains the same. The expansionist bid for world conquest of the Soviet Union con-tinues to prevail. It is true that the Soviets reckon with longer periods of time and adapt themselves more to reality with its manyfold counteracting factors. Paramount among these factors is the economic and social stability which Western Europe has achieved. The ideological urge for expansion of the Soviet Union has nevertheless not vanished, nor the military pressure which results from The Soviet leaders consider the situation only more soberly.

Moreover, for the time being, they are andreover, for the time being, they are forced by international political developments like their present tense relationship with Red China, the shifting of the main military conflicts to Asia, to desist from activating their political offensive against Europe. How long this condition will last difficult to estimate. It would the second control of the condition of the condition will last a difficult to estimate. It would the condition to the condition of the condition will be at the condition of the condition o is difficult to estimate. It would, therefore, be extremely dangerous to submit that they will remain peaceful forever and to renounce our military defense efforts. It would be even risky if we let considerations of detente determine our defense exclusively. Moreover, we have to keep in mind that Germany, being the immediate bordering area of the Soviet empire and a divided country, is in a special situation. One part of Germany is governed by a totalitarian Communist mi-nority. This minority is not supported by its completely oppressed population, but is kept in power by the Soviet Union and is being used as an instrument of Russian world

n

d

The political conception of the rulers in the Soviet occupied zone of Germany is based on the idea of spreading a civil war into the western part of the country. This conception is determined by the ideology of class struggle. The Communists are aiming at a violent overthrow in Western Germany. West Berlin, in its difficult situation, is particularly vulnerable. The Communist regime in the Eastern rone has notwithstanding to adapt its moves to the political interest and the security of the Soviet Union. They can-not, therefore, plunge at any given moment into expansionistic adventures. Neverthe-less, they endanger the security of the Fed-eral Republic of Germany and that of the whole Western World. We should be careful in talking prematurely about diminishing tensions just because there have been initiated some measures of relaxation. For the time being these measures concern almost exclusively the political atmosphere. The process of relaxation is only then a real one when the causes of the political conficts have been settled by negotiations and compromises. A real detente requires inevitably the renunciation of the ideology of class struggle and antagonism which the Soviet Union is still pursuing with regard to the so-called capitalistic West.

The change in the attitude of the Soviet Union vis-a-vis the free world is not of a basic nature, but a mere tactical innovation as reflected in the doctrine of the so-called peaceful coexistence. Thus the Soviets use the question of disarmament as an instrument of their foreign policy. We often misunderstand that reductions and increases in armament are phenomena which do not exclude each other. Often they exist at the same time. Sometimes they even condition each other. This is the case when disarmament measures in one particular field do not result in a strengthening of the balance of power but lead to an unbalanced situation. armament in some other field usually follows. Let us recall only the time between the two World Wars, the first era of disarmament conferences in Geneva. cannot be excluded that we might possibly be entering again such an era of simultaneous disarmament and rearmament. In view of this we should try to avoid any confusion that such a situation might provoke. Let us not deceive ourselves and be the victims of a wrong feeling of security. Disarmament agreements in special fields unfortunately do not mean that eternal peace has been achieved. Peace can only be preserved if the West takes into account during the present disarmament negotiations with the Soviet Union, the military requirements which assure the existing balance of power and by that our security. Limitations of armament that our security. Limitations of armament which impose on the West unilateral political and strategic disadvantages should envisaged. Thus disengagement plans in central Europe, as the Polish Rapacki-Gomulka plan, which is being promoted by Moscow, would inevitably lead to a recog-nition of the Soviet occupied zone of Eastern Germany and to a neutralization of the potential of the Federal Republic of Germany. This would be a disadvantage, which the West cannot afford.

A regional disarmament, a military thining out or a demilitarization of specific areas central Europe would provide the Soviet Union with decisive advantages because:
The vital centers of the West European

community are within reach of the light air force and the medium range ballistic missiles stationed in Poland and western Russia.

A military vacuum can be filled far quicker

by a totalitarian power than by a community of free countries. The former are able to camouflage their preparations and start their aggression all of a sudden.

The attraction that militarily unoccupied areas exercise on the Communist leadership is well known. Such an area would be a propitious target for their practice of sub versive action and infiltration, as well as for the sending of so-called volunteers following a demand for help by a rioting minority. The paramilitary formations and organiza-tions of the Eastern-bloc countries would gain in importance.

Under such circumstances a defense zone between the Rhine and the Atlantic would leave no space for a strategic return blow. The operational liberty of the West would thus be lost.

A departure of the U.S. Armed Forces from Europe would secure the superiority of the Soviet Union in conventional armed forces. would secure the superiority of the nuclear destitution of central Europe would trigger such a development. Once de-parted to the United States, it would take too much time to bring the American divisions back.

A disengagement of the forces of the two blocs under the prevailing conditions would be equivalent to a renunciation to the security which the Atlantic Alliance has created with great sacrifices 16 years ago.

Disarmament negotiations, therefore, can-not be successful until the Soviet Union drops her unequivocal demands for a change of the military balance of power between West and East to her advantage.

The military problems of the defense of

Europe lead us to the following thoughts about the strength of our potential Communist adversary: We should always be aware of the way of thinking of the opponent. present and future importance of all nuclear means and possibilities occupies a major place in the Soviet strategic doctrines. believe, however, that modern arress of mass destruction with intercontinental reach will not shorten a future war, but extend it in space and time. They therefore have not built up their long distance strategic arms at the cost of conventional armed forces. the contrary, they dispose of armed forces which are equally ready for a nuclear as well as for a conventional war. I do not want to burden you with details of the Communist threat against Europe. Let me just mention 700 bases of medium range ballistic missiles which are targeted on Western Europe. In summarizing, it may be said: there cannot be noticed any tendencies of retreat or reduction of forces, neither in the Soviet occupied zone of Germany nor anywhere else in Eastern The forces have stayed numerically the same. The material—tanks, planes, sub-marines—has been modernized. The satellite countries, including the Soviet zone of Eastern Germany, have been provided with nu-clear-arm carriers. The strategic and tactical conceptions of the Soviets, their strength and equipment lead us to the conclusion that in case of war, they would pursue the following aims in central Europe:

The destruction of the allied nuclear

capacity.

The destruction, or at least neutralization, of the NATO forces.

The occupation of the European countries in order to utilize their strategic possibilities and their economic resources

Between the Iron Curtain and the River Seine there is, on 850,000 square kilometers, a conglomeration of population of 125 million and nearly the whole industrial and economic potential of continental Europe. There is the Ruhr district, the coal mines of the Baar and Belgium, the iron mines of Lorraine, the centers of heavy industry of Liege, Charleroi, Denain-Anzin, Pont-a-Mousson, Metz and Luxembourg, and in addition, five European ports: Hamburg, Bremen, Roterdam, Antwerp, and Le Havre. If the Soviets could get hold of such an enormous industrial and economic potential they would have a definite superiority over the United States. This fact, among others, has created the link of common destiny between the United States and the free parts

Divided Germany is most of all endangere A glance over the wall in Berlin shows daily the distressing realities of the situation. The Soviet Union continues in her desire to make the division a permanent one include Berlin into the power sphere of the Soviet Zone, and to make the rest of Europe ripe for a Communist takeover. This danger has only been averted until now by the protection of the most powerful military force of the Western World, the United States of America. Without it, Europe cannot be defended for a long time to coms.

Side by side with the 12 divisions of the Federal Republic of Germany and those of the other allies, the 7th American Army, with the greatest firepower ever achieved by an army on European soil, occupies the front line of our forward defense. Until a front line of our roward desense. Usus a year and a half ago, it was under the command of my good friend Gen. Hugh Harris, now the president of the famous Citadel. He then bestowed on ms the great honor of honorary membership in the 7th Army. For 6½ years, it had been under my command in my former capacity of com-mander of the land forces central Europe. This was a period of wonderful cooperation with your excellent officers and your admir-

able boys. It provided me personally with

an unsurpassed military satisfaction.

The Supreme Allied Commanders in Europe, Generals Eisenhower, Ridgway, Gruenther, Norstad, and Lemnitzer, whom it is my great pleasure to see here today, symbolthe best tradition of your great military leaders: of Washington, Steuben, Lee, Pat-ton. They are shining examples for us in their strength of character and qualities of leadership. They, as well as many of your Members of Congress, second to none Con-gressman Rivers, have always shown a great understanding for Germany's security requirements. Germany, as the most endangered country in Europe, needs the protection of the nuclear arms and has, of course, a fundamental interest in the defense plancentral Europe and in a shared rening for sponsibility within the NATO alliance.
We share the conceptions of the United

States about coordination of foreign policie Every military strategy presupposes a unity of will in foreign policy. Without this unity, no unity of strategy is possible. The alliance requires both.

Enough now, dear friends, of these things which trouble us daily. We are extremely thankful for your help and achievements. It is you who carry 75 percent of the entire defense expenses of the Western World, be-

sides sending your boys abroad.

Our nations should never forget the words of General Eisenhower: "In the final choice, a soldier's pack is not so heavy a burden sa a prisoner's chains.

Of course, we should not see the proble defense unilaterally from the military point of view. All the problems of defense are determined by military, historical, politi-cal, economic, philosophical, and religious questions. We should keep in mind the scale of values we are standing for. On its first place rank moral values, a culture of long standing and the freedom of the indiiong standing and the freedom of the indi-vidual. We have—precisely in this tech-nological age—to make room for true per-sonality and slidetrack, petty functionaries. As the philosopher Karl Jasper puts it: "The spiritual contents of life should be stressed in the Western World more than until now, to distinguish it from the Communist East, where mere technical training is everything."

We soldiers have always had a saying: In we soldiers have always had a saying: In the final run it is always the human being who battles. It is the individual we have to care about. It was in this sense that Gen-eral Patton cans said: "Wars may be fought with weapons but they are won by men. It is the spirit of men who follow and of the man who leads that gains the victory."

Let us act in accordance with these ideas and we will have in all fields of our con-stitutional and community life a true harmony, the lifeblood of democracy. Free in spirit and strong in character, we shall march into the future.

It is this spirit, dear friends of the German Priendly Society, that we feel with you. No nation has shown so much understand-ing for the security of the old world, for the liberty of Berlin and for the reunification of Germany as you have. You are today the true defenders of peace and liberty. We live indeed in an imperiled world, and the United States bears a tremendous responsibility. The man of our time has to prove that he is able to master the forces he himself has unleashed. We are full of admiration for unicaned. We are full or admiration for your successes in all fields, especially in outer space, and we are convinced that to-gether with you we will master the future. We share a common responsibility for the future of mankind and for our freedom, which is its basis. Let us face together our problems and difficulties and keep our friendship in the spirit of your song. "The Flag of Our Nation": United we stand, Flag of Our divided we fall.

#### The Late Honorable Herbert Bonner

SPEECH

OF

# HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. FISHER. Mr. Speaker, I join in the eulogies that have been accorded to my late friend and colleague, Herbert Bonner. Quiet, calm, and sensible, he was a faithful and devoted Member of this body. Always honorable and conscientious, Herbert commanded universal respect. With his passing I have lost a close personal friend, and the Nation has lost a valuable public servant. To the surviving family I extend my deepest sympathy in their bereavement.

#### LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STILE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. [Jan. 12, 1895, c. 3, 113, 28 Stat. 603.]
TITLE 44, SECTION 182b. SAME; ILLUS-

TITLE 44, SECTION 182D. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Bercoza without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 45 Stat. 1646.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record.—The Public Printer shall arrange the contents of the daily Record as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the Record shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rolicalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Record is sued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the fol-

lowing morning.

5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.——addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

printing of the RESCORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional. Rescord any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

S. Corrections.—The permanent Racons is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Fublic Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

 The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). Appendix to daily Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congressional Record.

10(b). Makeup of the Appendix.—The Appendix to the Congressional Record shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or

arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead term among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the Congressional Record, nor to Records printed after the sine die adjournment of the Congress.

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Recom which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

in the proceedings.

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Code, title 44, sec. 140, p. 1938).
Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the settinate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

# Appendix

# A Connecticut Architect on Low-Rent Housing

EXTENSION OF REMARKS

# HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. ST. ONGE. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an article "High Standards-Low Rental," about an interesting and successful lowrent housing project in my hometown of Putnam, Conn. This project may serve as a guide for similar housing projects in other areas, and for this reason I am inserting it into the RECORD.

The article was written by the late Arthur E. Thomas, who was a prominent architect in Norwich, Conn., and served as president of the Connecticut Society of Architects in 1963. He died last year. His article appeared in a recent issue of

the Connecticut Architect: HIGH STANDARDS—LOW RENTAL: HAMPSHIRE HEIGHTS HOUSING, PUTWAM, CONN.

(By Arthur E. Thomas, architect)

Spectacular architecture can be breathtaking. Comfortable, people-oriented architecture can be breathgiving. Pive years of use have proved out the planning, design. and administration which have resulted in an attractively maintained multiple dwelling community in northeastern Connecticut.

Government sponsored housing projects are not uncommon in this day, and they are seldom outstanding. Practical, utilitarian, sturdy, adequate—but not outstanding. In Putnam, Conn., the Hampshire Heights lowrental housing project may well be the excep-

tional variation from the rule.

Following the devastating 1955 flood, some 11 acres of farm and pasture land on the outskirts of the city of Putnam were designated for emergency housing use. is somewhat hilly and contained a wooded The vision of Putnam's then Mayor John Dempsey and Housing Authority Chairman Robert W. Bulger, translated into a concrete design by Architect Arthur E. Thomas, of Norwich, has been completely fustified by time.

At the groundbreaking ceremony in May 1958, the first shovels of earth were turned by Senator (then Governor) ABRAHAM RIBIcoff and Gov. (then mayor) John Dempsey. Connecticut's Governor Dempsey played an active part in the preliminary project work, as did Attorney William St. L. Once, U.S. Congressman from the Putnam area who also provided much of the initial motivating

tes

As common in such public works, State and Federal agency requirements and an extremely limited budget sharply circumscribed the scope of the architect's design efforts. For example, a proposal to incor-porate poet and beam construction had to be dropped because one of the agencies in-volved was unfamiliar with this type of work and would not consider it. In the words of Architect Thomas, the project "can

almost be considered a victory for the State and Federal agencies involved" rather than a special architectural achievement.

Despite these problems, very livable apartment housing was provided. It is well arranged in plan, comfortable and modern, and contains all essential facilities. The project consists of 28 buildings with four to six dwelling units in each building. Of the total 124 units, 12 are one-bedroom, 12 are four-bedroom, and there are 50 each of two-bedroom and three-bedroom units. Each unit has its own basement where many tenants have installed playrooms and workshops, and each has its own front and rear yard. In many instances, tenants have done extensive landscaping to improve their

A central community facility houses the heating plant, mechanical equipment and services, a social hall and kitchen, and administrative offices of the housing authority.

All buildings are of brick veneer construc-tion with built-up bonded flat roofs. Th heating system is forced hot water with cast iron radiation and central temperature con-Windows are double-hung aluminum. Buildings are two-story duplex, with onebedroom apartments forming one-story addi-

tions to some buildings.

The paved roads and walks connect to city streets, and are well lighted. Storm and sanitary sewer lines are also connected to the city system, and fire protection is provided. Within the project site, existing trees were retained in the landscaping wherever possible, and new ones added sparingly. Playground areas and clothes drying yards are included in the plan.

Interior walls are plastered, and except for kitchens and bathrooms all floors are

In a bare description of the physical elements of this low-rental apartment home complex, there is little to distinguish it from countless others across the land. It might, in fact, be classed as a typical public housing project with everyday functional design, built within a limited budget. But, there is a difference which is a credit to Putnam and to the people who make their homes at Hampshire Heights.

Today, the apartments have been occupied a 5 years. They contrast sharply with for 5 years. They contrast sharply with many other similar projects which have depreciated and regressed in the same number of years or less. The feelings of the tenants of years or less. The feelings of the tenants are manifested in many ways unusual in this

type of housing.
Flower gardens abound in season, and each plot is maintained in true neighborhood by the occupants, not by the housing authority. Many physical improvements have been lovingly made by the tenants at their own expense and labor.

In part, this happy result is due to the planning and thought given to placing the buildings on the site. Advantage was taken of the terrain, leaving it as natural as possi-Trees were incorporated in the landscaping program which took every advantage of the existing assets. The open areas give a feeling of roominess rather than man-made stripped land. Although of the same design, each building seems to fit the environment and have individual character.

Equally, if not more important, is the attitude of the housing authority and its chairman, Robert W. Bulger. Sometimes referred to as "Mr. Housing Authority," he has somehow managed to instill in the ten-

ants of this particular low-rental project a pride of ownership and an appreciation of what they have in Hampshire Heights. It is unusual, if not unique.

Even the name has a particular flavor. Following the 1955 flood in Putnam, the State of New Hampshire offered aid in the form of temporary housing and financial assistance. The streets of Hampshire Heights are named after New Hampshire

The buildings were constructed by H. U. Ball & Sons of Southbridge, Mass., whose low bid for the job was \$1,425,900.

The success of this development project which has appreciated in appearance and value over the years has encouraged the com-munity to undertake another low-rental project which is now on the drawing boards. In addition, nearby is an apartment complex for elderly people, also designed by Arthur Thomas and sponsored by the Putnam Hous ing Authority.

"I am very proud of this low-income projct. It is not an architectural gem because was designed to meet a basic required specification. The limited budget meant we had to work within a narrow design con-cept, closely administered by Federal agency. cept, closely administered by receive agency, representatives. It is, however, sound prac-tical architecture which will provide good, comfortable homes for its tenants for many years to come," Mr. Thomas said.

#### Soviet Colonialism in the Ukraine

EXTENSION OF REMARKS

# HON. ALBERT H. OUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. QUIE. Mr. Speaker, in admiration of the more than 10,000 Minnesotans of Ukrainian descent and all U.S. Ukrainians, I wish to note the observance on January 22 of another Ukrainian Independence Day. I believe that American foreign policy should have as its ultimate goal the right of freedom of national determination for people every-where and this is a policy we are today vigorously defending in southeast Asia. Unfortunately, there are few people on the globe more deserving of this right, or who have been more consistently deprived of it, than the Ukrainians.

The rich Ukrainian lands have been a prize for conquerors for many centuries, but the Ukrainian people have always dreamed of independence and the right to mold their own destiny.

This desire has never seemed more re mote than under the present Ukrainian condition, which sees the Ukraine as a state entirely subsurvient to the Soviet Union. Article 67 of the Soviet Constitution reads:

The decisions and decrees of the Council of Ministers of the U.S.S.R. are binding for the whole territory of the U.S.S.R.

This does not prevent Soviet propagandists from speaking of the Ukraine as "the sovereign and independent Ukrainian SSR," nor does it impede the Soviets from gaining an extra seat in United Nations by exploiting the

myth of Ukrainian independence.

After the Russian revolution of 1917. the Ukrainian people formed a revolutionary parliament in Kiev, declaring independence. In 1918, the Ukrainians fought the Red Army for independence. Having defeated the Red Army, it had to, in turn, fight the White Army which s attempting to reinstate the czarist but the White Russians fell, in turn, to the Red Army. In 1920, the Ukrainian People's Republic attempted to liberate the Ukraine from Bolshevism with the aid of Poland, only to again be divided between Russia, Poland, Rumania, and Czechoslovakia. At the end of World War II, the entire Ukrainian region ended up in the Soviet Union.

The Ukraine is, of course, of great economic importance to the Soviet Union. The Ukraine provides Moscow with some 55 percent of its iron ore, 52 percent of its pig iron, 40 percent of its steel, 41 percent of its rolled ferrous metal, 34 percent of its coal, and 61 percent of its It is the second largest producer in the Soviet Union of meat, milk, and grain.

To lose this economic wealth would be a serious blow to Moscow's world ambitions. But those who may be tempted to believe Soviet charges of colonialism against the West, which has given up the vast bulk of its colonial holdings, should also remember the sad fate of the Ukrainians under the yoke of Russian colonialism.

# Have You Registered To Vote?

EXTENSION OF REMARKS OF

## HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. O'HARA of Michigan. Mr. Speaker, on March 24, 1964, I intro-duced a bill designed to encourage greater voter participation in our national elections. It was my contention then, as it is now, that this could be accomplished by authorizing the Post-master General to establish a special postal cancellation mark bearing the words "Have You Registered To Vote?" The 88th Congress adjourned without taking action on my bill.

I introduced the postal cancellation bill in the firm belief that it would be an excellent way to encourage the American people to go to the polls. The 1964 elections did nothing to change my opinion. The desirability of constantly reminding voters of the need to register and vote remains important, and I am today reintroducing my postal cancellation bill.

Most of us are familiar with the public services performed by the American Heritage Foundation and the Advertising Council and their efforts to encourage Americans to vote. Their campaign for increased registration and greater voter participation at the polls has been based on this slogan:

Vote-and the choice is yours. Don't voteand the choice is theirs. Register-or you have no choice.

Despite the efforts of the American Heritage Foundation and the Advertis ing Council, as well as those of both of our great political parties and other groups, registration and voter turnout were not as large in 1964 as had been

Of the nearly 114 million Americans of voting age only 70,643,526 voted for President on November 4, 1964. This means that only 62 percent of this country's eligible voters were interested enough and took the time to cast ballots in the 1964 presidential election. Not only was the turnout well below expectations, but it also represented a decline in percentage compared with the 63.8 percent turn-out in 1960. This is a record which leaves much to be desired.

I submit, Mr. Speaker, that we must have greater participation in our democratic system if we are to have a truly representative government. I suggest that one way to promote more participation would be through passage of the postal cancellation bill which I am introducing today.

After introducing this legislation in 1964, I wrote to Mr. Theodore S. Repplier, president of the Advertising Council, and Mr. Thomas D'Arcy Brophy, president of the American Heritage Foundation, advising them of my interest in this subject and requesting their views on my bill.

Mr. Speaker, I ask unanimous consent that the responses I received from Mr. Repplier and Mr. Brophy, as well as the text of my bill, be printed at this point in the RECORD.

THE ADVERTISING COUNCIL, INC., Washington, D.C., July 6, 1964. Hon. James G. O'HARA,

Hon. James G. O'Hara, U.S. House of Representatives, House Office Building, Washington, D.C. DEAR CONGRESSMAN O'HARA: Thank you DEAR CONGRESSMAN O'HARA: Thank you greatly appreciate your commendation in connection with the forthcoming register and vote campaign

It seems to me that the bill you have introduced, H.R. 10580, contains an excellent ides. Naturally, we are all for it and wish you success with it. The only difficulty would seem to be coordinating it with the registration periods in the various States which, as you know, tend to differ considerably. In some States, I believe, they go on into Octo-

With kindest regards. Cordially,

T. S. REPPLIER.

THE AMERICAN HERTTAGE FOUNDATION.

New York, N.Y., July 7, 1964. Hon. James G. O'Hara,

House Office Building,
Washington, D.C.
DEAR CONGRESSMAN O'HARA: Your letter of
July 1 commending the American Heritage

Foundation for sponsoring the current drive to encourage a larger turnout at the polls i very much appreciated.

The foundation has been conducting these campaigns for a number of years and with considerable success, but it requires constant effort and continuing work to maintain the level of citizen participation in our political

We heartily endorse H.R. 10580 which you introduced in the Congress in March of this year. The special canceling stamp or postmark bearing the words "Have you registered to vote?" used in all first and second class post offices would indeed be a great help in publicizing the importance of registration.

There is one other thing that might be done and it is quite possible that you could help if you approve. I am enclosing one of the poster advertisements prepared for this year's campaign by the Advertising Council. This message will appear in many magazines and newspapers during September and October and will be seen on television programs and heard on many radio programs. It would be wonderful if we could persuade the Post Office Department to permit the use of the panels on mail delivery trucks for displaying this message in the month of Octo-

We would be glad to supply the posters if it could be arranged with the Post Office De-partment. I would greatly appreciate your views on what we might be able to do to bring this about.

Thanks again for your cordial letter. We would be happy to do anything you suggest to support your proposal and will be glad to write to anyone whom you might suggest. With all good wishes.

Sincerely. THOMAS D'ARCY BROPHY, President.

Community Antenna Television Service

EXTENSION OF REMARKS OF

# HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. HUNGATE. Mr. Speaker, the proposed Federal Communications Commission regulation of community antenna television service is a matter of great concern to some 300 of my constituents, who have written me the following let-ter which I would call to the attention of this body for its consideration:

DEAR CONGRESSMAN HUNGATE: I subscribe a community antenna service (CATV) in Kirksville, Mo., because it provides more sta-tions and clearer pictures than I can re-ceive otherwise. Without CATV, color re-

ception is poor or impossible in Kirksville.

The Federal Communications Commission prepared to upset my family's television viewing habits by restricting the present service provided by the CATV system. I understand they are taking this action

without the authority of Congress, and even without the same thorough study of the CATV industry undertaken by the Senate and House subcommittees. Congress has studied the industry but has not reached conclusion. How can the FCC, thorough study and hearings take such action?

I understand the necessity of controlling transmission of radio and television, but am appalled to learn that an agency of the Government now proposed to dictate which of the signals in the air I can watch.

Please convey my concern to Congressman WALTER ROGERS and support any efforts he might undertake to stop the FCC's actions. A letter or call from you to Chairman Henry would also be helpful

Thank you very much. Sincerely,

JOE A. ALLEN. Kirksville, Mo.

#### Hawaii, a Growing Market for Korean Goods

#### EXTENSION OF REMARKS OF

# HON, SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. MATSUNAGA. Mr. Speaker, we are all aware that the power and strength of the free world is dependent in large measure on the power and strength of each nation that comprises the community of free and independent

We are therefore especially gratified to see an ally make rapid progress toward becoming a strong, economically independent nation. Such a country is our stanch ally, the Republic of Korea, which has been making deep inroads toward attaining economic self-sufficiency.

In a recent article written by Toni Withington of the Honolulu Star-Bulletin, South Korean Consul D. Y. Lee said that Korea has exported an estimated \$170,000 worth of Korean goods to my own State of Hawaii in 1965, which is \$50,000 more than the 1964 figure. The most recent item that has contributed toward the increased exports is the ukulele, originally a Portuguese musical instrument which is identified today with all Hawaiian music. Our State of Hawaii has been a growing market not only for the "Made in Korea" stamped ukuleles, but also for imported Korean foods.

We are indeed happy to be able to help Korea improve her economic position, I should like to submit for inclusion in the CONGRESSIONAL RECORD the article written by Toni Withington, which appeared in the Wednesday, January 12, 1966, issue of the Honolulu Star-Bulletin:

(From the Honolulu (Hawaii) Star-Bulletin.

Jan. 12, 1966] THE KOREAN UNULELE: AT \$2.99, A GOOD START

(By Toni Withington)

The plinkety-plunk of the ukulele is musically signaling another nation added to its cosmopolitan history.

The Portuguese instrument that became an internationally known symbol of Hawaii and an economic boon for Japan is now being stamped "Made in Korea."

The initial success of the low-cost Korean ukulele is only in Hawaii, but it may be a happy indication of a new economic blossoming in the Republic of South Korea.

At \$2.90, the darkwood ukulele competes favorably with higher priced Japanese and American ukuleles that it copies.

#### ENTERED MARKET LAST YEAR

"We started buying the Korean ukuleles when they entered the market last year after an 8- or 9-month scaracity of inexpensive ukuleles," said R. D. Smith of Longs Drug The New York World's Fair bought out

thousands of the ukuleles from Japan and we were really hard pressed to find them," he

Long, at Ala Moana Shopping Center, has sold more than 600 of the Korean instru-

ments. Other branches also sell them.

The Japanese ukuleles have reentered the Hawaiian market, but have found they must share it with Korean ukuleles and guitars.

"Korea is making many things Japan makes, with the same price and the same or higher quality," said Charles Lee, vice president of KBS Trading Co., Hawaii's largest importer of Korean merchandise.

BOUGHT IN KOBEA FOR \$1.45 EACH

Lee's company buys the ukuleles from the Korean manufacturer for \$1.45. It ships the instruments here, paying a 34-percent duty on the way.

"Last year was great. Our merchandise was really going strong." Lee said. Korean Consul D. Y. Lee estimated that Korea exported mure than \$170,000 worth of goods, most of it Korean foods, to Hawaii last This was a jump of more than \$50,000 over 1964. Most of that increase was consumer goods.

Such an influx of Korean Herns may be only a small indication of the goods, especially electronic goods, that will soon rival Japan's on the world market, according to the report in the newspapers.

#### TWO NEW KOREAN FACTORIES

The report heralded the near completion of two new Korean factories which will pro-

duce household electronic equipment.

The Korean ukuleles, like most of the Korean merchandise, are competing with Japanese goods on a market once belonging chiefly to Japanese firms.

"The Korean ukes have driven down the price of the Japanese ones," Smith said. "For their money they are very good. They do have a slight problem with the peg screw. have a slight problem with the peg acrew. We had 15 complaints from the 600 we sold. "Of course, the \$16 Kamaka ukulele def-

initely sounds better, but the customer must ask himself whether it sound \$13 better.' Samuel K. Kamaka of Kamaka & Sons, Honolulu ukulele makers, agrees that the cheaper ukuleles are "passable," but the tone an entirely different type of sound.

"The \$3 and \$4 ones are more like toys. We could never compete with them pricewise," he said.

#### SOME ARE GOOD, SOME ARE BAD

Some of the (Korean) ukes are very good and some are very bad, said Alfred Harned, a ukulele teacher at Harry's Music Store in

They seem to be able to copy the design of the good American ukes, but the quality is not always there," he said.

"But some of the cheaper ukuleles compare favorably to the Kamaka ukuleles," Harned

Other Korean goods compare favorably, too. According to the Korean consulate, last year Hawaii imported items from pianos to sewing machines, from bright silk shirts to plastic raincoats. Korean handicrafts have met a ripe market, he said.

#### ISLE UNULELES SOLD IN JAPAN

But because Korean and Japanese ukuleles are selling so well here, Sam Kamaka has decided to sell his ukuleles in Japan.

He recently completed arrangements to manufacture one model of the Kamaka koa wood ukulele in Japan to sell to the

# Aiding Leukemia-Stricken American Children

EXTENSION OF REMARKS

# HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES. Tuesday, January 25, 1966

Mr. CORMAN. Mr. Speaker, I am pleased to be able to report that our youth in Vietnam have no corner on dedication and service. A recent example of this took place in my district, where a 16-year-old schoolgirl from Pacoima spearheaded an effort to organize the Nation's first junior chapter of a nationwide group called Aiding Leukemia-Stricken American Children (ALSAC). This charitable organiza-tion—with chapters in all major U.S. cities—collects funds annually through a teenagers march and turns them over to the famed St. Jude Hospital in Memphis. Tenn., where important research work into such diseases as leukemia is going on constantly.

The young lady in question is Donna Eubank, daughter of Mr. and Mrs. Clar-ence B. Eubank, and a student at Polytechnic High School. For 2 years Donna worked as a member, then cochairman and finally as chairman of the Teen-Agers March for ALSAC in the community of Pacoima. Her efforts in the 1965 campaign were so effective that Pacoima, not the richest nor the largest community in my district, led all the others in the amount of contributions, roughly one-sixth of the total. Television star Danny Thomas, whose work for St. Jude Hospital is well-known, paid Donna and her fellow workers a resounding and deserved tribute after this year's drive.

Now Donna is well on her way to having the Nation's first junior ALSAC chapter organized and operating.

Through this new youth-oriented organization. Donna believes she and her fellow ALSAC volunteers can involve still more teenagers, and keep them active and motivated throughout the year, rather than just during the teenagers' march every October. In her work, of course, she has had the help of others, and she took time out recently to salute some of these people at a public awards ceremony in Pacoima. There, certificates of merit and honorary membership in ALSAC were presented to community leaders of such groups as the chamber of commerce and the local Moose Lodge. among others.

In the year ahead, the Pacoima junior ALSAC chapter will be holding various teenage activities-dances, talent shows, and cookouts-and Donna's fertile brain is at work on setting up a teen club somewhere in the Pacoima area to attract still more ALSAC volunteers. In some respects, this long-range challenge is even more difficult than the organizational chores, but from what we have seen of Donna Eubank, no challenge is too great.

H.R. 12040: A Means of Protecting Laboratory Animals From Avoidable Pain, Fear, and Stress, Without Impeding Necessary Research

> EXTENSION OF REMARKS OF

# HON. JOHN J. GILLIGAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. GILLIGAN. Mr. Speaker, I have recently introduced H.R. 12040, a bill to provide for the humane treatment of research animals.

For some time now evidence has been provided the Congress by doctors, reearchers, and their technicians establishing the fact that animals in some research laboratories are being subjected to unnecessary suffering, pain, fear, and stress, and are being housed and cared for in appalling and atrocious conditions. Researchers themselves have told me. Some deplorable conditions have existed up to now, but we are trying to improve.

That statement is one reason why I have introduced H.R. 12040. I not only want to protect animals in our research laboratories from such deplorable conditions, but I want to see the benefits to research which will stem from legislation designed to correct these deplorable conditions. As a civilized nation we cannot sit by any longer and allow unnecessary suffering to be inflicted on any living being when we have the power to prevent it. Let me make it very clear from the beginning, Mr. Speaker, my bill is in no way an antivivisectionist bill. It will not impede necessary research. It is not an antiscience bill; it is an anticruelty bill.

H.R. 12040 incorporates seven basic

principles:

First. An independent Office of Laboratory Animal Welfare will be established not only to formulate and administer the regulatory provisions of this act but also to work constructively to improve conditions in laboratories by conducting studies, disseminating information, providing training programs, which will contribute to the most productive and reliable scientific results from the use of research animals under optimum humane conditions.

Second. The best care will be provided for all laboratory animals in comfortable uncramped quarters with adequate space and facilities for normal exercise and food, water, sanitation, ventilation, temperature, lighting, and handling as is appropriate and normal to each spe-

Third. Pain and discomfort will be reduced to the utmost minimum by issuance of directives requiring the use of humane techniques. Painful procedures will be allowed only when absolutely necessary as a means of directly achieving the alleviation of suffering, the prolongation of life, the prevention and cure of disease, or the promotion of national safety, and only when there is no less painful way to accomplish the purpose. Interested scientists and animal welfare organizations will be consulted for their recommendations in these determinations of what is necessary and what is the least painful way of proceeding, thus bringing the best minds in the country to bear in this problem of infliction of pain.

Fourth. The number of animals used for research will be reduced by pro-moting improvements in experimental design, the substitution of nonsentient materials or less sensitive forms of life for higher forms, the elimination of needless duplication of experiments, and the elimination of worthless experiments.

Fifth. This broad coverage will be extended to virtually every laboratory in which animals are used, not only to Government laboratories and institutions receiving Federal funds but also to laboratories making and testing products for interstate commerce and for sale to the Federal Government.

Sixth. Effective enforcement measures will be maintained including eligibility requirements for individual experimenters, special rules for students, certification of laboratory heads, required pertinent records, unannounced inspections, and penalties for noncompliance including loss of Government grants and funds, revocation or suspension of certificates or loss of the privilege to use animals in any laboratory covered by this act.

Seventh. Recommendations will be sought from interested scientists and animal welfare organizations, thus enabling humanitarians and scientists to participate in establishing the highest standards of humane care and use of research animals.

In other words, Mr. Speaker, H.R. 12040 will provide protection on all levels to insure that laboratory animals are housed and cared for humanely and spared avoidable pain, fear, and stress, but it will accomplish this without impeding necessary research. Just as safeguards are woven into the bill to protect the animals, so are safeguards woven into the bill to protect valid research.

Mr. Speaker, H.R. 12040 is the companion bill to that introduced by Representatives Paul Rogers of Florida; Leo O'Brien, of New York; William SPRINGER, of Illinois; OLIVA HUOT, of New Hampshire; WILLIAM RANDALL, of Missouri; CLAUDE PEPPER, of Florida; and Senators Thomas McIntyre, of New Hampshire; and BIRCH BAYH, of Indiana. The bill that we have introduced is supported by the two largest national humane societies of the humane movement, The Humane Society of the United States and the American Humane Asstates and the American Humane Association. Thus, this legislation has strong congressional support and the strongest support of humanitarians throughout the United States. I since the state of the states of the cerely hope that it will receive early passage.

And Store Day Alend and a garage troof becomes a raw parental season of the store of the season of t

Col. Frank Borman Day in Gary, Ind.

EXTENSION OF REMARKS

# HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. MADDEN. Mr. Speaker, on January 14, over 200,000 people greeted Gemini Astronaut Colonel Borman in his home city, Gary, Ind.

This editorial from Gary's Post Tribune recalls a few recollections from the colonel on space future possibilities:

TECHNOLOGY AND TACTICS

It's a long way from Gary's Col. Frank Borman Day to the rice paddies of Vietnam, and there are vast differences between a helicopter and a space capsule-and yet there are connections.

The awkward, slow-moving helicopter was regarded as a freak at its inception. First suggestions of its military potential brought laughs. Standpatters admitted it might have some value as a rescue vehicle, but feared it would be too much a sitting-duck target for tactical military value. Still, some who prefer innovation pressed on and the Marine tactic of "vertical envelopment" in which copter-borne fighting men are droned in behind enemy lines was adopted as theory.

Well, this week the Army which has had a real chance to test this concept in the long, dreary struggle in Vietnam had a special press conference in Washington. Among the startling statistics was the fact that only 62 choppers had been lost in 1,100,000 sorties

flown in that jungle fighting.

Where Borman and Borman Day come into the picture is that one of the questions asked the astronaut here was about the potential military value of space capsules. The question was so phrased as to indicate a space capsule would be invulnerable to ground attack.

Borman made three points in his answer: (1) That, contrary to the asker's views, any fixed orbit vehicle would be susceptible to attack; (2) that the space program was primarily devoted to peaceful exploration, not the military, but (3) that any new develop-ments—Borman went back and cited the automobile—could be adapted to military

In other words, while the space program is essentially peaceful as of now, the Govern-ment is not blinding itself to its military potential. In another context Borman that same day made the point that the entire space program is an "instrument of national olicy" which must be fitted in where high authorities decide.

And in awarding medals to Borman and his three fellow rendezvousing astronaute in Houston late in December, James E. Webb, Administrator of the National Aeronautics and Space Administration (NASA), made a salient point. It was that the President's "strong initiatives" in his peace offensive were "made possible at least to some degree salient point. by the fact that all the world saw in Gemini 6 and 7 a magnificent capability to use machines and men \* \* \*."

The connection is that American technological skill coupled with tactical ingenuitywhether helicopters or space capsules are involved—is sufficiently impressive to make even the Communist nations often pause to think.

# Excerpts From Remarks of Secretary of the Interior Stewart Udall at Kenosha, Wis.

EXTENSION OF REMARKS

# HON. LYNN E. STALBAUM

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. STALBAUM. Mr. Speaker, the Secretary of the Interior, Stewart L. Udall, our country's determined and forceful fighter against pollution and the desecration of our country's great natural resources, harnessed a startling collection of facts to an engaging style of presentation on November 3, 1965, in a speech before nearly 1,000 people in Wisconsin's First District. He spoke at a testimonial dinner give in my honor in Kenosha, Wis., at the Eagles Club.

Secretary Udall is catching the ear of America in telling the Nation what it needs to preserve its resources, its beauty, and the inspiring qualities of the country. It is gratifying to have a man of such great drive and high intelligence guiding this Nation's program of conservation in these immediate critical times.

I know my colleagues will enjoy sharing a portion of his excellent presentation:

This year of 1965 has been, in my judgment, a year of incredible climax in terms of the accomplishments. It involved the teamwork of a President of the United States and a Congress of the United States.

If you will look at it for a moment, this great high tide that washed ashore this year as a result of Democratic leadership in the Congress and in the White House solved most of the great issues that have been before the American people in this whole postwar period since the end of World War II. It was Harry Truman himself, two decades ago, who first talked about or sketched in what we now call medicare. Who said there was a need to change our immigration laws and make them more equitamore Democratic? Who about aid to education, and the need for civil rights in this country? The American Con-And yet, as we talked and argued in the Congress, in the country these issues were the battleground politically.

Today, the 89th Congress has done something about these things. And, I think that you can look back with great satisfaction in the fact that your Congressman was one of those who made these great programs possible—that you had people in the Congress and in the Senate of the United States representing you. They participated vigorously and actively in providing the leadership to make these programs move forward.

b.

8

ni

0-

And so, the question that we're confronted with, since it is this type of leadership that made the difference this year, is whether we can, as a party, move on from here, or are we going to reat on these laurels? I say it is contrary to our tradition to ever feel that the American people have achieved enough, or have done enough in terms of achieving that measure of excellence which should be expected of the greatest democracy of the world.

Six years ago there were two deeply imbedded traditions of American politics that, in my judgment, did more to diminish and limit the meaning of democracy in this country than almost anything else that affected our national political life. The first

was a tradition that no Catholic could be President of this country. The second, a tradition of nearly a hundred years' duration, was that no one from the southern tier of States could be President. This was far from the American political folkways. It has been proven that these truisms of American political life were wrong, that American democracy was a larger and more expansive thing than this. Therefore, we nominated two men in the year of 1960—one a Catholic, and the other a person from the southern tier of our country. These two men, by a tragic accident of history, by a combination of teamwork between them, have exploded these two myths of American politics. I would simply say to you that I think as a result of this and the Democratic ideas in our country, that the American people are stronger and that our political system is stronger. I think this is something in which we should take a very special pride at this time.

But, let me speak for a few minutes about what I said are to be new issues in which our party will provide leadership. Having ved many of these basic questions about our economy, about our social life and our political life, where do we go from here? There may be those in this country today who think that we are doing so well that we have moved up on a new plateau and we should complacently be satisfied with what we have. And, in truth, there is much to be satisfied about. I suppose this is the danger, because in terms of whether you measure it by a standard of liv-ing or gross national production, or the workers, or the comforts and luxuries available, or the mobility of American people, or our military power, or the performance of our economic system, we are the richest and most powerful country in the history of the world, no question about it. But the question is, is this enough?

This is a rich society, but is it a Great Society? What will people say if we were to settle this as an American performance at this point? Would the historians say that we were a great civilization, that we left an example for other generations to come that was imitated, or must we go ahead and rebuild our cities and make them cities of which we can be proud? I am afraid this is not true in the man of America today.

Lest we do great new things, the type of things Senator Garloon Nizson talks about, preaches about and acts for, and Representative Lynn Staleaus, too, in conservation, in terms of achieving an America that contains the very best in terms of resources and out of doors, are we going to go ahead and build our educational system into something that is not just good, but truly great?

Are we going to do as your Congressman suggests—see to it that the American suggests—see to it that the American granary is a granary for the hungry people of the world and to let our affluence and wealth ripple out into other parts of the world and help these people lift themselves up, as they must, if we are to have a stable world. These are only some of the listies that we're confronted with today. And I could discuss this at length because its the thing that I preach about week in and week out. I am talking about some of the conservation objectives that we think are so vital if our country is to preserve some of these essential things that add an indispensable element to American life. Basically, we have been a people that loved and treasured the things of the land—you people in this part of the world, particularly.

I attended a water pollution conference in Detroit only last Saturday, called by the United Auto Workers, with an indication that they are going to crusade on this subject, and Senator Naison and I were discussing this on the plane, coming in today, because every American who is concerned about leaving a legacy to his children that is at least as good

or better than he inherited, knows that one of the great tasks that we are confronted with in this country is the task of pollution, of contamination of air and water, and of our whole environment. This is an area of great failure. We must face this as a fact. You only have to look at your own Great Lakes as a threat, particularly Lake Eric. I know that Lake Michigan is not Lake Eric, but it is subject to the same laws of nature, and that should be a sufficient warning to you.

As recently as 8 years ago, just with one variety of commercial fish in Lake Erie, there was harvested by commercial fishermen, fishery products worth over \$1½ million. Last year the value was \$120. That is a lake that is seriously threatened. Its very vitality and life is in danger today. Of course, this is repeated all across the land. There came to my desk only last week a brochure of a newly formed organization in one of the most superb settings of the United States. It calls itself the League to Save Lake Tahoe, and if any of you have ever seen Lake Tahoe, you know of the great beauty that is there. Yet, it is threatened, too. This is a story that I can tell over and over again.

So, whether we talk about saving some of our remaining superb seashore areas or lake-shore areas, such as your Apostle Islands, as Senator Nrison and Congressman Stainaum have proposed; whether we talk about adding to our National Park Systems or saving forests, wildlife areas nearby for people to enjoy; whether we talk about our fisheries or preserving our wildlife or saving the best of our wild rivers as trout streams and outdoor areas for people to enjoy, we're talking about your tomorrow. There's a big job

I read a story to my young boys a few months ago. It was a beat seller a couple years ago, and if some of you haven't read it, get it and read it to your children. The story is about a man now late in life, and his boyhood in southern Wisconsin and northern Illinois, 50 years ago. It's a story about a young boy and his pet raccoon. You only have to read it to realize what we have eliminated, and what we are lacking in our life today, in terms of the relationship of people and thier environment. I also read something the other day that one of your people from this part of the United States wrote. He is Eric Sevareld, one of the most eloquent spokesmen today. Let me read you this, because he wrote it after he went out on a duck hunt in the Chesspeake Bay area

"We spend our frenzied lives, meet of us, feeling east or west of Eden, but never in it. Its identity depends upon our particular obsession and concern, and mine increasingly with the years, is for the lands and waters of America. They are wasted in soil by crowding and greed and heedless habits until one despairs of one's children's inheritance. It is the spreading of concrete over the land \* \* greedy commercialization of mountain valleys, the poisoning of rivers by cities, sewage, and industrial wastes, their sickening accourging of the American land. If all this is not checked and regulated as severely as hunting and fishing are limited now, our grandchildren will read about an America where the geese once filled the sky over Chesapeake Bay and where the great buffalo herds roamed, but they will never see it." This is his indictment of the present time.

So, there is a great work to be done; there are areas of failure where we must move in with new successes in the conservation field. I can talk to you about so many of these areas, about the need to do something about preserving the history of this country.

We're talking about preserving trails all over the land, perhaps some of them that would follow the early pioneering trails—the Lewis and Clark Trail, the Oregon Trail—the trails that richly lead into this

country, so that young men and women on foot, on horseback, on bicycle, could move through the land. This is the concept embodied in me, and I say it's a proposal that

we're going to view tomorrow.

I think that I sense in the American people, in this part of the land particularly, an unwillingness to esttle for mere material accomplishments, however important they are to us. I think there is a yearning in the American people for true greatness.

#### Beauty Is the Topic of the Day

EXTENSION OF REMARKS

# HON. LYNN E. STALBAUM

OF WISCOMBIN

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. STALBAUM. Mr. Speaker, my attention has been called to an article which appeared in the January 1966 edition of the Wisconsin Hairdressers & Cosmetologists Review, detailing the visit of Secretary of the Interior Stewart L. Udall to that organization's Kenosha affiliate meeting on November 8, 1965.

The Secretary and Mrs. Stalbaum and I were the guests of Vi Christensen, Kenosha, the gracious and highly capable program chairman who is a leader in

her field.

The Kenosha affiliate is part of the National Hairdressers & Cosmetologists Association which offers, as a part of its excellent, overall program, unfortunate women and children in hospitals and institutions throughout the United States an opportunity to improve their appearances during National Beauty Salon Week

I commend the Kenosha affiliate for putting its talents to this fine purpose and for its dedicated work in its com-

The article follows:

[From the Wisconsin Hairdressers Cosmetologists Review, January 1966] U.S. SECRETARY OF INTERIOR UDALL VISITS KENOSHA

Members of the Kenosha affiliate were honored when the U.S. Secretary of the In-terior addressed their meeting which was held on November 8 at the Midway Motor Lodge in Kenosha. As Mr. Udall said. "My work as Secretary of the Interior on President Lyndon Johnson's Cabinet is to make dest lyndon solmson's Cabines is to make the women of America beautiful." Mr. Udall was visiting Kenosha due to the fact that there was a testimonial dinner for Representative Lynn Stallaum, First District Congressman from Wisconsin, that same evening. Mr. and Mrs. Stalbaum were in-vited to the hairdressers meeting so sug-gested that Mr. Udall might also enjoy com-

gested that Mr. Udall might also enjoy coming. This was indeed a great honor made
especially so by the interesting address by
both Mr. Udall and Congressman Brazsava.
Margaret Vinci Heldt, of Chicago, who was
the guest artist instructor of the evening
invited Mrs. Stalbaum to be her model for
a recomb. Her husband approved of the
restyle and praised the cosmetologists for
their effects.

their efforts

The members of the affliate were thrilled and excited as Secretary Udall is the first U.S. Cabinet member to visit Kenosha in many years. All agreed, after the visit, that National Beauty Salon Week would have

added meaning in view of the fact that its purpose is to keep all women everywhere in the United States beautiful. National the United States beautiful. National Beauty Salon Week will continue to offer the unfortunate women and children in hospitals and institutions a chance to improve their appearance through the efforts of members of the National Hairdressers & Cosmetologists Association throughout the United States. All State and local affiliate NBSW chairmen are urged to follow through on their instructions to gather the publicity stories from the news media in each area including the dates of publication and send to the State NRSW chairman Dorothy Field. Janesville. Mrs. Fields is also a vice president of the Wisconsin Hairdressers & Cosmetologists Association. National Beauty Salon Week begins February 13 and ends February 19 and it is the largest single in-dustry promotion in the United States.

The importance of the visit by Stewart L. Udall, Secretary of the Interior, was em-phasized by the presence of Secret Service men and plainclothes officers who waited in the hall while he was attending the meeting. However, there was nothing austere about popular gentleman's presence. friendly, gracious manner and stimulating talk assured everyone that we are all in this project together to "make America beauti-

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. EDWARDS of Alabama. Speaker, as everyone knows, high school and college age people often come up with some of the most refreshing and stimulating ideas of all, perhaps because their imaginations are so free to

A group of these young people recently got to talking about Government aid. They concluded that one of the reasons for the great migration of people in this country from the farm to the city has been the massive programs of Government aid to farms over the past years.

Victims of farm assistance, they said, have tried to escape to the city where they hope to have a better chance to be of bureaucratic control, and generally live more independently of the Federal Government.

But now, these young folks said, the Government is moving into the city in We will have rent subsidies, strength. Federal playgrounds, job-hunting bu-reaus for people who are already em-ployed, Federal teachers, and goodness knows what all.

We already have a Job Corps program we can get into if we can manage to drop out of school. And they have started a computerized matching system for getting dates. We won't even have to worry about who to go out with: the Feds will handle everything.

Someone in the group asked if the Federal teachers would be required to join the union whether they wanted to or not. Another person replied by asking, "How else do you expect we can

achieve uniformity of standards in the

Still another of the young people said that last year's housing bill includes a whole raft of programs, including new ways to make public property out of private property, and plans to extend urban renewal projects beyond blighted neighborhoods into adjoining areas.

ghborhoods into adjoining and one This is wonderful," shouted one excitedly. "Do bright-eyed young man excitedly. you realize what this all means? It means that city people will now become victims of Federal aid. And when there are enough of these city victims they will begin to move back to the farm."

"Roger has come up with another of his tremendous insights into life," a blonde college girl said. "What the Government is really trying to do is reverse the migration of farm people to the cities; get people out of the crowded urban areas and back to the peaceful farm

"There certainly is more to this Government business than most people realize," said another young man. really know what they're doing. It just doesn't seem that way at first."

VICTIMS OF FARM ASSISTANCE

After hearing that refreshing conversation I came across an item in the Christian Science Monitor of January 20, which relates further to this matter of victimizing our farm people. It follows here:

DISPATCH PROM THE PARM: POLITICAL PIPPLE (By John Gould)

LISBON FALLS, MAINE.—It's getting so you can't simply dislike anybody any more, but must line up a gang and have a demonstration. I heard a city politician say the other night it is high time to stop spending all this money on the farmers and begin help-ing the cities—the gravy train has been bogged down in the puckerbrush too long. This setting of class against class is now our great national way, and when urban renewal and the farm policy come to two falls out of three it will be the high point in our culture.

It is easy to quote Marcus Aurelius, or to point out that a Government loan to put up a silo in Hartland Four Corners. Vt., can be projected to 1,000 families in Somerville, Fifth Avenue, New York, has the lowest average yield per acre in the Nation. But in the passion of political piffle, which now fools all of the people all of the time, such use of gray matter is unfriendly to the Republic, and establishing the megalopolis as a have-not ought to be good for three consecutive terms.

After a couple of generations of farm aid, I think many farmers will be glad to see the cities get some of the assistance. In surveys alone, the amount of money available is ronomic, and some day there may even be money to do something after the survey is completed.

We folks out in the country have never known just how to cope with all this. Maybe the superior intellects of the urban areas can figure something out. Four times a year, for instance, I am surveyed at great expense by the Department of Agriculture. Our submarginal Maine farm is incorporated into the national statistics as regards cotton, tobacco, sorghum, and peanuts. Under a similar appropriation, dedicated to city uses. Under a Boston would be surveyed on the Mardi Gras; Hartford about its subway system; Memphis about the Chicago Cubs; and Den-ver about its tidal estuaries. The cities will discover that Pederal aid is not always unbridled joy. One of my

neighbors ran a milk route, and one day years ago a Government man came to see him and said, "How many quarts of milk a day do you sell" My neighbor told him, "Cive or take a few, about 125 quarts."

So the Government began to lavish a subsidy on him, and for some time he got regular checks based on 125 quarts a day. This is roughly equivalent, teeter for totter, to taking down the elevated in Charlestown, and my friend couldn't wait for election day so he could rush in and vote for the administration two or three times.

But one day another Government man came around, and he found that my neighbor, although he was selling 125 quarts a day, was only producing about half of it, and was buying the rest from another farmer. This constituted a violation under Code Umpty-doo, fraud against the U.S. Government, and it took 7 minutes for the lawyers prosecuting him to pass a given point. Most of us expected him to be shot at sunrise, but some felt it would be life in Alcatraz. The judge, however, was a human being (he has since been replaced) and he thought the Government had overexercised. He hove the thing out.

The Government lawyers were pretty mad, and spoke about an appeal to the Supreme Court, and my neighbor didn't get any more subsidy on either his own milk or that of contributory accomplices. He later sold out and now operates an elevator in one of our more depressed cities, where he says he ups and downs are about the same, but he misses the fresh air. He is an out-and-out victim of farm assistance. Maybe when city assistance gets rolling a few victims may move out into the country and keen cows.

out into the country and keep cows.

I would say about 125 percent of the farm subsidy runs to salaries. Long after activating funds are exhausted the field crew and the office staff continue their great efficiency. You have no idea how much help this is. I take notice that in Boston the first facelifting in 350 years is the erection of a new Government complex. Makes sense. I am sure they will include a fish pond. Here in Maine a great many fine rural improvement projects turn out to be fish ponds. And one of our brightest events is the annual pageant to select Miss St. Francis River Valley Soil Conservation and Water Resources Management. She is always very pretty.

I prognosticate that it won't make too much difference. Federal spending in the cities will be about the same as Federal spending in the boundocks and puckerbrush. I hope I can hear about it when springfield, South Bend, and Salt Lake City encounter the lime routine. The Government paid for lime on condition the farmers spread it before a certain date in the fail. One year it was so dry it was foolish to spread it until we had a rain, and the next year it was so wet they couldn't get on their land to spread it at all. Everybody in the lime program was a criminal, facing a \$10,000 fine and 10 years in prison. For my part, I never signed up for any of it, and I have never had a penny of Federal farm aid. You good city people can have my share.

### Recognition of Brumidi Long Overdue

EXTENSION OF REMARKS

OF

### HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mrs. BOLTON. Mr. Speaker, I am introducing a concurrent resolution authorizing the Joint Committee on the Li-

brary to procure a marble bust of Constantino Brumidi, for placement in the U.S. Capitol. Many of our colleagues have introduced similar legislation.

Evidence of Brumidi's genius is found everywhere in the Capitol. Thousands of visitors from every State of the Union and many overseas countries have viewed with admiration his artistic achievements.

Brumidi began his work in the Capitol in 1855 and for 25 years worked devotedly with all his strength and talent. His stirring murals, his colorful and expertly executed paintings, bronze stair rails, and bold and moving frescoes can be found in the corridors, in the committee rooms, and in the rotunda. While trying to finish the frieze in the rotunda, Brumidi died tragically as a result of a fall at the age of 75. He lay buried in an unmarked grave in Glenwood Cemetery for more than 50 years. Then, in the 1930's, Mrs. Myrtle Cheney Murdock, wife of our former colleague. Congressman Murdock, of Arizona, took a great interest in Brumidi and began gathering information about him. It was largely through her efforts that a bronze marker was finally provided in 1950 by the Congress for the Brumidi grave. No other tangible recognition of this great artist's contributions can be found in Washington today.

It is entirely fitting and appropriate for the Congress to demonstrate our Nation's gratitude to this great man who took such pride in his adopted country that he signed all his works simply, "C. Brumidi, Artist, Citizen of the United States."

## Taxes and Patriotism

EXTENSION OF REMARKS

## HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. RUMSFELD. Mr. Speaker, the suggestion that Americans who object to restoring excise taxes on automobiles and telephone service are unpatriotic is most assuredly a misguided one.

The following editorial from Chicago's American of January 15, 1966, discusses this matter:

### TAKES AND PATRIOTISM

President Johnson has added a curious posteript to the tax proposals made in his state of the Union address Wednesday night. At a press conference Thursday, he was asked about congressional criticism of his plan to restore excise taxes on telephone service and new automobiles—taxes that were dropped only 2 weeks ago—rather than cut back domestic spending.

The President's reply ran, in part: "I think most of the people are patriotic and I would expect in the light of our economy that, if we are going to have substantial increased expenditures in Vietnam \* \* the Congress and the people would be willing to forego the repeal of the excise tax on long-distance telephone calls and new automobiles. \* \*"

If these comments really reflect Johnson's views, they strike us as disturbing for two reasons. One is that the word "patriotic,"

as he uses it, seems to mean "willing to pay more taxes without complaint"; the corollary, we guess, is that people who object to the administration's tax plans are unpatriotic.

Another cause for uneasiness is that Johnson meems to be using Vietnam as a handy way of choking off criticism of his tax policies. The gist of his statement seems to be that the excise taxes are needed for the war effort, and anyone who opposes them is somehow undermining us in southeast Asia.

This gimmick, if it is one, is highly unconvincing. Johnson himself is plainly unwilling to divert one dime of his domestic spending programs to fighting the war; any sacrifices will come from the taxpayer, not from the Great Society planners. And those who complain about these sacrifices risk the charge of lacking patriotism.

We do not think the President is consciously adopting any such approach. But if his words are a clue to this thought processes, that's worrisome enough. When the Chief Executive starts feeling that it's unpatriotic to oppose his wishes, we start feeling a distinct chill.

### Ukrainian Independence

EXTENSION OF REMARKS

# HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. WILLIAM D. FORD. Mr. Speaker, I should like to address myself to a topic which is of deep concern to me. On January 22, Americans of Ukrainian descent in my State celebrated the 48th anniversary of Ukrainian independence. On January 22, 1918, the Ukrainians proclaimed their independence at the ancient city of Kiev. Within 3 years Ukrainian independence had been crushed by the heavy hand of Soviet tyranny, but the spirit which inspired the patriots of 1918 lives on in the hearts of the Ukrainian people. They have not forgotten their brief taste of freedom.

Today I should like to discuss a very arly period of Ukrainian history. the 9th to the 13th century the Ukraine was an outpost of Byzantine civilization. The Ukrainian people's pride in this period has contributed to their sense of national identity and was one of the factors which has enabled them to maintain their independent spirit through centuries of foreign domination. Herodotus described in detail the early history of what is now the Ukraine, and Byzantine historians traced the history of the various invading tribes. In the ninth century a strong figure organized the separate clans into a strong state, with its capital at Kiev. By this time the people in this area were already speaking a Slavic language which has been described as ancient Ukrainian.

By the end of the 10th century the country had been converted to Christianity and had accepted the main outlines of Byzantine culture. At a time when most of Europe was engulfed in the Dark Ages, Kiev was a city of learning and enlightenment. Under Yaroslav the Wise, who ruled from 1036 to 1054, schools and libraries were established and scholars and artists were encouraged.

Yaroslav also established a code of laws. In form, it was patterned after the Byzantine law, but in content it summarized what Yaroslav considered to be the best rights and procedures which had established by custom. Byzantine help the great Cathedral of St. Sophia was constructed. Klev became a meeting place for merchants from all over the civilized world. Despite Kiev's close ties to Byzantium, the Kievan rulers began to establish links with the rest of the world also. Dynastic ties, so important in those days, were made with England, France, and Norway.

The Kievan period is only a small part of the stirring history of the Ukrainians. The Ukrainian people have reason to be proud on their national independence We all fervently hope that the Ukrainians may someday regain their

freedom.

### Unpaid Tax Collectors

EXTENSION OF REMARKS OF

### HON. H. R. GROSS

OF TOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. GROSS. Mr. Speaker, I am confident thousands of small businessmen throughout the Nation will applaud the actions of a Waterloo, Iowa, man to call attention to the injustice of requiring American businessmen to spend countless hours as unpaid tax collectors for the Federal Government.

D. J. Spensley has presented a \$3,000 bill to the District Director of Internal Revenue in Des Moines for rendered. He contends that he has spent a minimum of 800 hours during the last 5 years in collecting money, keeping books, making reports, and assuming the responsibility of collecting social security and withholding Federal income taxes

What particularly concerns him is the fact that, if he fails to perform the duties assigned to him by the Federal bureauche will be made to pay stiff racy, he penalties.

It is doubtful that Mr. Spensley will receive sympathetic consideration from the architects of the Great Society, but this does not make his cause any less

I commend to the attention of my colleagues the following articles and editorial which appeared in the Waterloo Daily Courier:

[From the Waterloo (Iowa) Daily Courier] ASKS PAY FOR COLLECTING TAXES—WATERLOO BUSINESSMAN TRIES TO BUCK SYSTEM

(By Harrison Weber)

Des Monres.-A Waterloo businessman is

trying to buck the system.

As an employer he objects to filling out forms and collecting money for social security and withholding of Pederal income

D. J. Spensley, who operates Triangle Dry Cleaners, believes employers are entitled to remuneration for performing these services. Aithough 62, Spensley is a man of action. He visited for over an hour with Ernest

Bacon, district director of Internal Revenue for Iowa

After explaining his position—that he is a forced unpaid collector for the Federal Government—Spensley informed Bacon that he feels justified in filing a claim against the Federal Government for these ervices.

ESTIMATES 638 HOURS

Spensley estimates that in the past 5 years he has spent 838 hours keeping books for the Federal Government to say nothing of the responsibility he assumes in performing this

During this period he has withheld \$29,-298.19 from the paychecks of his employees.

Presently, he employs 21 people.

Spensley, who lives at 121 Eiston Avenue, contends the Federal Governmnt hired him when it sent out tax forms and asked that they be completed and returned.

Bacon informed Spensley that since Congress has not allocated any funds for this express purpose, he would have to take the matter up with his superiors.

Spensley did not present a bill to Bacon because he did not know how much a rookie tax collector makes and he wanted to find out the hourly wage so that he could com-pute the bill. Spensley learned that the average hourly pay of a tax collector is about \$3.75.

Bacon pointed out that Congress makes the laws and that he is merely carrying out these laws.

Spensley's reply to that was, "There is something greater than the law and that is fustice."

VRGES OTHERS TO FOLLOW

The Waterloo businessman, a lifelong Iowan, said he realized that one voice could not do much in changing the law. He suggested that other businessmen follow his example and file claims against the Pederal Government for performing these services.

"This is a free country, but that doesn't mean that we must collect these moneys for the Government for free," he charged.

Spensley called this (collecting withholdsocial security) and discrimination against the employer.

HE'S FOUND A CAUSE

He points out that he is not in this for any publicity. In fact, he would prefer not to have any personal publicity. But D. J. Spensley, a very sincere man, has found, as he puts it, a nause.

But, he is only one man and he is bucking a big system.

[From the Waterloo Courier]

SAYS HE'LL DEDUCT WAGES-SPENSLEY PRE-SENTS HIS BILL AS TAX COLLECTOR

D. J. Spensley, Waterloo businessman, who has been carrying on a one-man campaign against working for the Federal Government for free, has presented District Internal Revenue Director Ernest W. Bacon, Moines, with a \$3,000 bill for his services W. Bacon. Des

He contends that he has worked a minimum of 800 hours during the last 5 years "collecting money, keeping books, making reports, and assuming the responsibility of collecting social security and withholding Pederal income taxes

Spensley arrived at the \$3,000 total by computing his services at \$3.75 an hour, which he ays is about the average wage paid collectors for the Bureau of Internal Revenue.

CITES POSSIBLE PENALTIES

He declared in a letter to Bacon that accompanied his statement that "at first the demands" made on his services by the Federal Government were reasonable and "did not require too much of my free time. But in the st 10 or more years it has become a great, increasing responsibility. I find I am being forced to perform all demands and if I fail to do so, I am penalized, charged interest and my personal assets are at stake, even as an officer of a corporation, and to date without er of a corporation, and to date without compensation

Spensley told Bacon that "by forcing me to perform this work for free my freedom is eing restricted and I do not believe that the Department of Justice would knowingly allow this to happen to any citizen, and I respectfully request you refer this existing condition to the Department of Justice."

#### LABRILS SELF COLLECTOR

He told Bacon that he (Spensley) has performed all the duties Bacon "has directed and demanded me to do, the same as any other employee or collector in your department, and therefore I must be an employee and entitled to wages for my time."

Spensley said that he would make it easy on the Government by deducting his "wages" from the money he is required to send the

He suggested that this would be a "pain-less way" for the Government to pay. Spensley further declared that "when the

next appropriation is made, the only person on the appropriation committee that could object would be the one who has not accepted wages for his services" to the Government.

#### HAS LITTLE HOPE

He has little hopes of collecting the \$3,000

from the Government.

Bacon said that "despite Spensley's strong feelings on the subject, he is not listed as a Government worker. We just don't have any money for that sort of thing."

He added, however, the request will be

WOULD URGE OWHERS

Spensley says he didn't expect to win his hattle right off the bat. His hope is to encourage other employers to do the same thing—demand pay for their Government bookkeeping every time they deposit withheld income taxes and social security funds.

Eventually, he said, Congress may feel the pressure and do something about it.

What really gripes him, he explains, are the penalties, fines, and bank account at-tachments threatened by the Government if he doesn't follow regulations.

He says the publicity about his crusade also makes him uncomfortable, but he feels it is the only way to enlist others in the battle.

[From the Waterloo Daily Courier] .

GOVERNMENT USING UNPAID TAX COLLECTORS Should American business be paid for acting as the major tax-collecting agency in the

D. J. Spensley, a Waterloo businessman, thinks so. In order to dramatize this belief, he went to Des Moines last week to present his bill for services as a tax collector to the district director of the Internal Revenue Service.

Spensley estimates that his business in 5 ars spent 838 hours keeping books and filling out forms in connection with the Federal withholding and social security payroll deduction duties. If this were paid for at the going rate for tax collectors of \$3.75 an hour, this small business with 21 current employ ees would have received \$3,142.50 from the Federal Government,

The Waterloo businessman obviously has a reasonable argument. Why should one group citizens, just because they engage in a particular type of vocation, he required to act as unpaid tax collectors for the whole Nation? This is patently unjust. It happens simply because this group of citizens numerically do not have enough votes to obtain consideration of their complaints,

Moreover, this system results in arguments for increasing Federal dominance in tax collection. One study reports that for every \$100 collected in taxes the Federal Government pays only 44 cents for collection, State governments average about \$1, and the local government costs range from \$5 to \$10.

the Federal Government is so cient" partly or even largely because it does not pay anything for such a large part of its collection services. It is true that the computerized payroll bookkeeping of the collection expenses. But the small businessman is doubly handicapped because his records must be kept by hand.

In addition to Federal income tax withholding and social security deductions, the businessman in many States, including Iowa, must handle State income tax withholding and collection of the State and, in some cases, local sales taxes.

While keeping these records is a cost of doing business, it often cannot be passed on to the public in the form of higher prices because of intense competition. One unfor-tunate aspect of the enormous bookkeeping work required by the Government is to make it increasingly difficult to start a small business or for small business to survive.

We don't know if Spensley will get anywhere with his crusade; but he has a just

### Art Buchwald on the Medicare Disclaimer

EXTENSION OF REMARKS OF

# HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. RYAN. Mr. Speaker, clearly the decision of the Department of Health, Education, and Welfare to require of some applicants for health benefits under medicare a declaration of non-Communist affiliation has opened a most unappetizing can of worms.

Consider the case of Art Buchwald's Uncle Harry, suffering with rheumatism, yet worried about his eligibility for hospital care under medicare because of his membership in the Retired Friends of the Forest Hills Library.

Why should Uncle Harry be con-rned? The requirement of the discerned? claimer is aimed at denying health benefits only to bad old people, not good old people, as Mr. Buchwald points out. This is indeed comforting to the good old people.

But maybe it would be even more comforting to all old people if we did not try to make this judgment of who are the good old people and who are the bad old people in providing medical care. With this in mind, I have introduced H.R. 11922 striking out the provisions on which the Department of Health, Education, and Welfare is requiring of the Uncle Harrys a disclaimer.

The full story of Uncle Harry, which appeared in Art Buchwald's column in the New York Herald Tribune on January 9, follows:

SUBVERSIVES FOR MEDICARE (By Art Buchwald)

Washington.—One of the provisions of medicare is that any person not covered by social security or railroad retirement insurance is ineligible for hospital and nursing home benefits if he is a Communist or a member of a Communist front.

To enforce this, a person in this category must answer the following questions: "Are you now or have you during the past 12 months been a member of any organization which is required to register under the Internal Security Act of 1950 as a Communist-

action organization, a Communist-front organization, or a Communist-infiltrated organization?"

I hadn't realized what chaos this question vas causing until I got a call from my Uncle Harry, who was all excited about it.

"How are you, Uncle Harry?" I asked. "My rheumatism is killing me. That's what I'm calling about. What is all this business about not being a member of the Communist Party or a Communist-infiltrated organization in order to get medicare?"

'It's quite simple, Uncle Harry. We don't want people who would overthrow our Government to get free hospital and nursing

With my rheumatism I can't even get to the doctor, much less overthrow Government."

"Ah, Uncle Harry, that's just it. If you were a Communist and you got hospital you might become well, and then you would be in a position to overthrow the Government."

"If I could get rid of my rheumatism, I'd be willing to join the John Birch Society."
"But, Uncle Harry, I don't know what

you're all excited about. You're not a mem-ber of the Communist Party, are you?" "I should hope not. Have you ever seen anyone with rheumatism who wanted to be part of a sit-in?"

"Then what are you worried about?"

"It's these Communist-front and Communist-infiltrated organizations. know if I belong to any or not."

Well, what organizations have you joined in the past 12 months?"

The Bideaway Village for Senior Citizens, \$10 down and \$10 a month."
"I'm sure that's not on the subversive

"What about the Retired Friends of the

Forest Hills Library?" That I'd better check. Anything else?

"The Planned Parenthood Association?" That sounds bad, Uncle Harry.

on the list now, but you never can tell."
"I knew it," Uncle Harry said. "I'll never get my rheumatism cured."

"Now don't be discouraged, Uncle Harry. This law is only aimed at bad old people, not good old people. I'm sure they didn't have you in mind when they wrote it.

"At your age you can may that. If you want my opinion, I think the Government's trying to save some money."

"Uncle Harry, you don't seem to understand. The United States is out to eradicate the Communist Party. If their members don't get hospital care, they'll be eradicated that much sooner.'

"Now that you explain it to me, it does make sense. I have only one problem."

"What's that?"

"With my rheumatism my hands shake so much I can't even answer 'No' question."

### The Dangers of Leviathan

EXTENSION OF REMARKS OF

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. YOUNGER. Mr. Speaker. Mr. Lawrence Fertig, a columnist for the San Francisco Chronicle, recently wrote a column entitled, "The Dangers of Levia-than," which certainly points out clearly and concisely the increasing difficulty re-

sulting from the concentration of power in Washington.

His column follows:

THE DANGERS OF LEVIATHAN

(By Lawrence Fertig)

When administration officials first intervened to control prices for steel aluminum. and copper the public seemed unconcerned despite some adverse comment in the pres Many people seemed to feel that officials in Washington are reasonable men who will use with restraint the power they arrogate to themselves

When Congress passed the education bill which for the first time in American history started the Federal Government on the path of spending billions of dollars to subsidize primary and secondary education, Columnist Joseph Alsop reflected popular opinion when he said, "Education Commissioner Francis Keppel and Secretary of Education and Welfare John Gardner are going to use their leverage with care."

Ever-increasing economic and political control by Government officials has been condoned on the ground that this power will be used with care and restraint. But a number of recent actions by Washington officials have caused some soul searching by many who have gone along with this view. They now begin to fear the dangers of Leviathan, the all-powerful state. They have the uneasy feeling expressed by Supreme Court Justice Louis Brandeis who was a leading liberal of his day. "Experience should teach us," he to be most on our guard to protect liberty when the Government's purposes are beneficent. \* \* \* The greatest dangers to liberty lurk in insidious encroachment men of zeal, well-meaning, but without understanding."

Good intentions in no way atone for arbitrary government action. The administra-tion claims that it wants to curb inflation. The elementary fact is that only the government can cause inflation by its monetary and fiscal policies—by creating an excer money and commercial bank credit, and by Federal overspending. If the Government curbed these policies there would be no need for price policemen.

Instead, however, administration officials, looking for a scapegoat, attack steel com-panies for raising prices on a mere 7 percent of their output. No law gives the administration this right, but its coercive power is so great that it can intimidate any in-

Officials claim they are protecting the public interest. In this case the public interest is defined not by Congress but by the prejudices of administration officials.

In another instance, former Education Commissioner Keppel (he who was supposed to use his power with great restraint) withheld \$30 million of school funds from Chi-He wanted to penalize Chicago because it was not doing all it could to advance integration in public schools. Only intervention by President Johnson reversed the Commissioner's ruling.

However worthy any other objective may be, education of youngsters should be the sole objective of Federal education funds. Plainly when a Government agency has vast sums to distribute it can undercut education in behalf of any other objective it has

School superintendents in cities throughout the country have publicly expressed the fear-and with good reason—that Federal money and power will be used to dictate the curriculums and control the educational systerns of communities throughout the counpresident of try. Already Charles Cogan, presidenthe American Federation of Teachers. urged Government "to set nationwide educa tional standards as the price for Federal aid to schools."

Another man of seal (an official in the antipoverty program) recently presented a plan to use the leverage of Federal school subsidies to change their textbooks. He suggested that school texts should be revised to give a higher evaluation to the achievements of Negroes in American life. The proposal by a government agency to alter history to its liking has a frightening implication. It sounds like Orwell's "1984."

nistory to its liking has a frightening implication. It sounds like Orwell's "1984."
In still another area, Federal urban renewal officials are using their power and money to literally force some cities and tuwns (such as Berkeley Heights, N.J.) to condemn sections as "sium areas," aithough these cities and towns protest they are not alum areas. But it is hard to resist Federal money and Federal power.

Urban renewal destroyed 126,000 low-rent housing units in 12 years of operation while it created only 28,000 new homes. It up-rooted many people from low-rent homes in established communities. They were forced out into higher-rent dwellings. Urban renewal removed from city tax rolls valuable assessable property which formerly yielded income to tax-hungry cities.

As the Federal Government assumes new

As the Federal Government assumes new and greater power over jobs, prices, housing, education, medical care—in fact, over all vital aspects of daily life—some doubt is arising in the minds of thoughtful modern liberals.

## Speech by Secretary of Commerce John T. Connor, Before Economic Club of Detroit, Mich., January 24, 1966

EXTENSION OF REMARKS

# HON, JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the Congressional Record a speech made by the Honorable John T. Connor, Secretary of Commerce, at the Economic Club of Detroit, Mich., on January 24, 1966.

The speech follows:

American life.

REMARKS BY SECRETARY OF COMMERCE, JOHN T. COSNOR, AT THE ECONOMIC CLUB OF DETROIT, DETROIT, MICH., JANVARY 24, 1986 The United States has many capitals. Washington is our political capital; New

York City our financial capital; and Detroit is the capital of the automobile industry an industry that epitomizes the bountiful efficiency and continuing progress of our free enterprise economy.

Right as the outset I want to say that Washingtonians are the first to admit that better automobiles can be made in Detroit I than in Washington. So today in Detroit I plan to talk mostly about the automobile

industry, and the far-reaching ramifications it has for all of us, whatever our pursuits.

The motor vehicle has done more than lift the celling on our economic statistics. It has revolutionized the style and quality of

The very success of the industry has given rise to challenges which would not exist if Americans had not taken the automobile to heart so naturally and so completely. Its success, however, has also given you the strength and resources to meet these challenges. I would like to look at both sides of the coin with you, against the backdrop of a broader, national challenge which faces all of American business today.

In the first year of automobile production in this country, 65 years ago, the industry turned out a little more than 4,000 units, valued at about \$6 million. Last year more than 11 million units were produced, with a value of \$21 billion—an all time record. Those two sentences tell the greatest industrial success story of the century.

The auto industry has had an important and far-reaching effect on the pattern of employment throughout the entire Nation. More than three-quarters of a million businesses are based on the automobile. One out of every seven wage earners is dependent upon the industry in one way or another.

Of tremendous significance to all of us is the fact that the automobile industry is the largest single employer in the United States—with around 700,000 persons. Only government and wholesale and retail trade employ more people. Autos uss up half of our petroleum output, three-fifths of the rubber, more than half the lead, more than one-fifth of the steel, one-third of the sinc, and about 15 percent of the aluminum, copper, and nickel.

But these facts and figures suggest only one aspect of the industry's contribution to

our economic life.

The principles of factory efficiency developed in the auto industry have been widely oppled in other areas. The assembly line was first placed in effective operation in the auto industry. The industry ploneered in developing intercompany technical standards, as well as cost control and management techniques. Decentralized operations and responsibilities—with coordinated control, now an accepted concept in business management, were ploneered within the motorcar industry.

Detroit has played an important role in upgrading the skills of our labor force. To day, the industry is making a contribution toward the solution of one of our major problems—the wider employment of Negroes at all levels—blue collar and white collar, as

well as management.

The auto industry's place in our economy is dramatically illustrated by a major analytical tool recently put into use by the Commerce Department. This is input-output analysis, which enables us to measure the effects of a given level of output in one industry on all related industries.

The production of \$1 billion worth of automobiles, for example, requires nearly \$203 million from the iron and steel industry, \$51 million from nonferrous metals, \$48 million from the rubber industry, \$16½ million from the glass and glass products industry, and more than \$20 million from finance and insurance. And there are many other industries which similarly benefit from auto sales.

In the immediate future—1968 or 1969— America will be traveling 1 trillion vehicles miles a year, and we will be producing 12 million trucks and cars. The prospects are that this enormous output of motor vehicles will require 22 million tons of steel, 1,200,000 pounds of aluminum, 1 million bales of cotton, 1,600,000 tons of rubber. And we will be consuming more than 80 billion gallons of gasoline.

Motor transportation has a massive atimulating effect on all segments of economic activity. Our economy literally move on wheels, the wheels of Detroit.

And this economic activity involves thousands of small entrepreneurs who supply parts, products, and services to be the manufacturers and the motoring public. Included within the automobile-based segment of the economy are more than 2,000 manufacturers of vehicles or equipment who employ less than 250 workers. There are almost 50,000 individuals repair shops with less than 8 cm ployees, more than 100,000 service stations with less than 4 workers. So the economic benefits of motor transportation are widely dispersed throughout the country.

But what does the far future hold for the auto industry? The number of licensed drivers is expected to double by the year 2000. Automobile production will almost have to double between now and then even if we only maintain the present ratio of automobiles to licensed drivers. But we will probably better this record. Increases in per capita income and in population, brighten the future of the industry. We estimate that annual production will have to reach 20 million passenger cars to meet the demands of the year 2000.

The motor vehicle industry also has a great potential for growth in the developing countries. Transportation facilities are a necessary prerequisite for the achievement of even the first steps of economic development. Without transportation, little can be done to bring land into production, build industries, provide necessary channels between factory, farm, and markets, and translate the wealth of forests and mines from potential into reality.

We estimate that in Latin America per capita GNP will more than double by the year 2000. Population there is expected nearly to triple. These gains may mean registrations of about 26 million cars by the end of this century, compared with the current level of 3 million cars.

The prominent international position of the auto industry gives it a key role in President Johnson's voluntary program to improve the balance of payments. The postwar years have witnessed an extraordinary expansion in the foreign operations of your industry. The basic pattern has been the creation of major manufacturing facilities abroad rather than any substantial expansion of exports from the United States. Taking the American transportation equipment industry as a whole, the book value of foreign affiliates increased from about haif a billion dollars in 1950 to almost \$3½ billion in 1954. There were correspondingly large increases in the earnings of these affiliates and in their remitted profits.

I am very pleased to be able to report that the auto manufacturers rank with the top performers among participants in the 1965 balance-of-payments program. From recently submitted estimates, it appears that the auto farms registered an improvement in 1965 of more than 20 percent over their 1964 contributions to the U.S. balance of payments. This is more than twice the percentage improvement expected for all of the participating companies collectively.

ticipating companies collectively.

In fact, preliminary data indicate that the auto companies contributed about one-fourth of the botal improvement of \$1.3 billion expected under the 1985 voluntary program. This was a response to our country's need of which the automobile industry can be deservedly proud. The overall increase in contributions by the motor vehicle companies was accomplished mainly through increased exports and through reductions in capital outflows. The major firms made sizuits increases in their foreign borrowings so as to carry out foreign investment schedules while restricting the outflow of U.S. funds.

Our efforts to improve the balance of payments naturally led us to examine closely our export position and to strive for ways in which exports can be expanded. The motor vehicle industry has managed to expand exports in the face of more than a normal amount of difficulties. Its products must contend not only with all of the common hinderances to foreign trade and operations but they must cope, in addition, with others specifically almed at that industry. Sales of American automobiles abroad have long been inhibited by internal taxes of various forms that effectively discriminate against the U.S.-built car. Customs duties many times larger than the U.S. duty are a major deterrent to our exports. The Common Market countries and the United Kingdom have a duty rate of

22 percent compared to the U.S. import duty

of only 61/4 percent.

These factors create a sharp difference be tween the retail price of a U.S. car in this country and the price tag it carries in foreign markets. For example, one particular car with standard equipment has a suggested retail price in the United States of just under This same car has a list price of #3.000. over \$7,000 in France, over \$6,000 in Austria, over \$5,000 in Belgium, over \$6,000 in Italy. Obviously, the inflation of medium-priced American cars to such high values in other countries is a severe deterrent to exports of these cars.

Despite these difficulties, however, exports by the industry increased \$300 million between 1957 and 1964. However, the inhibiting effect of the barriers, and the incentives se barriers provide for production overseas, can be seen by the remarkable per-formance of sales from foreign production facilities. During the same period, sales from foreign plants increased more than 10 times

as much as exports.

We in Government are constantly pressing for removal of unjustified import restrictions and for equitable tax treatment where discrimination against U.S. products is involved. In the Kennedy round negotiations, we are seeking tariff concessions on automo-We are also seeking more equitable tax treatment in the application of road taxes of certain European countries.

We are pressing the Japanese to modify the commodity tax on automobiles, which amounts to 40 percent of most U.S. vehicles and either 20 or 30 percent on most other

nations' vehicles.

A major recent accomplishment in the ground rules governing international trads was the recently enacted Canadian-American agreement which provides for free trade in original motor vehicle equipment between the two countries. This agreement promises to benefit both countries significantly and is a milestone on the road toward freer trade between Canada and the United States.

What we see then, as we survey the automobile industry in modern America, is a dynamic center of strength in our economy, based on a technological invention that has had widespread social, cultural, educational, political, and many other consequences in the lives of every citizen. America literally drove into a position of world leadership during the 20th century on the wheels of the

motor vehicle.

America has become a motorised Nation. We have taken automobile products into every corner of the country, into every facet of our lives. We have become dependent upon automobiles for the essentials of life, well as for the pleasures and diversions of life. Our economic growth is inextricably linked with the healthy growth of the automobile industry. The integration of cars into our daily lives, however, because it has been so widespread, has been accompanied by some problems and challenges which are new attracting national attention.

Highway safety, the beauty of our country-side, a clean environment, the role of private cars in urban transportation, these subjects are on the current agenda of social observers, economists, government and professional leaders, and a host of other groups who are concerned about the nature and direction of national life. All too often, the automobile is seen as the one and only cause of many of our problems. This is a gross over-

simplification.

But the automobile does play a part in these problems, and the automobile industry has a responsibility to help meet the chal-lenges posed by these problems. For-tunately, the intellectual and material re-sources which have brought the industry to a position of great prominence in national life will serve it well as it prepares to meet these challenges.

We have come a long way, in highway safety, from the situation that existed dec-ades ago. Mile for mile, the fatality rate for highway travel in this country is half the rate of Western Europe and one-fourth the We take no comfort from these statistics, however, and we are deter-mined to do better in the future.

There are a number of actions at the Federal level of Government which reflect mounting national concern with the problem of highway safety. Beginning in 1968, for example, each state will be required to have a highway safety program which meets uni-

form Federal standards.

Two years ago, President Johnson spurred a special effort to eliminate danger along older Federal-aid highways. The State of Virginia, to cite just one example, reduced accidents 66 percent under this spot improvement program. So we know that many lives and much loss can be saved by engi-

The Interstate Highway System itself rep ents a significant advance in the area highway safety. The fatality rate on the Interstate System is 2.8 per 100 million vehicles miles, compared with a rate of 9.7 on other roads, truly a remarkable example

of what can be achieved.

As you know, there has been a great stir interest and action on highway safety by both Houses of Congress in the past year and this activity will no doubt accelerate during the coming session, highlighted by President Johnson's proposed Safety Act of 1966.

of the most encouraging developments, in my view, is the recent announce ment by the University of Michigan that a highway safety research institute will be established, supported by the automobile industry. The significance of this announcement arises, not so much from the substantial amount of funds involved, nor from the research program which will be carried out, ut rather as one more dramatic example of a responsible industry helping to meet the challenge of highway safety. And the special public information program initiated recently on all phases of automobile driving by a leading automobile manufa turer certainly deserves a special word of

In the field of landscape beauty, Government has responded with the Highway Beautification Act, controlling billboards and junkvards along highways that benefit from Pederal aid. I note, with satisfaction, that one of the leaders in the automobile indus-try has decided to buy the equivalent of a quarter of a million junked cars each year, in the form of fragmatized steel. Here is a combination of public service and technolog-

ical ingenuity at its very best.

Maintaining a clean environment is becoming an increasingly difficult problem in our urban and highly industrialized society. There are may causes of air pollution. There are many essential requirements in modern life, however, where we have had to balance a certain level of pollution against other social objectives and needs.

It has been gratifying to me to note that industry's voluntary efforts to solve the air pollution problem, with respect to motor ve-hicles, have predated the insuance of Federal regulations in this area.

Finally, the role of the individual auto-mobile in our total transportation picture has come under close and sometimes critical scrutiny in recent months. The automobile is attacked, defended, and interpreted in terms of land use, economics, city planning, cost-benefits, mass transit, and even Freudian psychology.

I don't pretend to be an expert in any of nose areas, but one thing is clear—transportation in this country will increasingly be approached from a total systems point of

view. This trend is clearly reflected in President Johnson's announced intention to create a Cabinet level Department of Transporta-tion. Thus, more than ever, the automobile industry has a responsibility to help define the role of private motor vehicles in the national transportation picture.

All of the challenges I have mentioned call for resolute programs of action by our most important industry. But there is an addi-tional element which must not be ignored. To the extent that the automobile industry ercises responsible leadership in matters of public concern, there will be correspondingly ss pressure for governmental action. judgment, in matters such as these, is ultimately based on public confidence dence among the general public that the industry is acting in a responsible manner.

I would encourage those of you interested in this industry, as you shoulder your public service responsibilities, to make your story known. In this less than perfect world, it is not enough merely to do the right People must know that you are doing the right thing. A solid bond of confidence between the public and the automobile industry would help provide the foundation to solve every problem I have mentioned to-

day.

It is important to recognize that in our complex, interdependent society, business shares mutual interests not only with the public, but also with Government. Every Government activity, every Government program depends for its support on the strength and vitality of the economy. This situation requires a spirit of close cooperation between

the two parties.

Recognizing this fact, business and Government in recent years have demonstrated genuine effort and good faith in making this partnership work. And the record of the past 5 years proves beyond doubt that the partnership has worked for the benefit of veryone: business, labor, Government, and the general public.

Pive years ago the Nation was in the depths of a recession. Gross national product was about \$500 billion. Corporate profits were \$45 billion. Personal income was about \$400 billion. Pive and one-half million Ameri-

ans were out of work. Today, we are in the 59th month of uninterrupted economic growth. Gross na-tional product last year was more than \$675 Corporate profits were more than billion. Personal income was over \$630 billion. Unemployment was down to less than 2.9 million. Eight million new jobs have been added to the economy in the 5-year period. And 1966 looks just as good.

I might point out that during this same period, the auto industry put together 4 consecutive good years, a feat never before accomplished.

What happened to cause this dramatic up-turn in the economic life of the Nation? There is no single simple explanation. An increasingly skilled labor force was a factor. So were the vitality and initiative of business management. Government did its part, through sound fiscal and monetary policies. Put these things all together and they spell cooperation. In fact the cooperation has worked so well that our problem today is not how to get the economy out of a recession, but how to handle unparalleled growth and record prosperity with wisdom and finesse.

The natural pressures generated in any expanding economy have been complicated, in our case, by the greatly increased military reour case, by the greatly increased military requirements arising from the situation in Vietnam. The gap between our potential output and our actual output has been narrowing in recent months. As the gap narrows, the challenge facing us is: Can we maintain a balanced prosperity? There is no question about our ability to produce all the goods and services the Nation requires. The

problem is to do this without disruptions caused by labor and material shortages, and to do the job without inflationary pressures

to do the job without inneatonary presences on wages and prices.

In my view, we can meet these challenges.

In my view, we can meet these challenges.

The can; that is, if business, labor, and Government continue to work together. The competing and sometimes conflicting demands of all groups in our society, at a time such as this, ultimately come into focus at 1600 Pennsylvania Avenue in Washington, D.C. What does the situation look like from the White House? Put yourselves, for a moment, in the place of the man who occupies that seat, President Lyndon B. Johnson.

What are the alternative courses of action

he sees when prices and wages threaten to escalate to inflationary levels? Should we fall back on laissez-faire economic theory? Should we let an expanding economy and growing military requirements simply collide? Should we accept the inevitable inflation which would follow? This course is out of the question, for it would wipe out many of the social and economic gains of the past 5 years and impose intolerable burdens on our older citizens and others of fixed income who can least afford the consequences of inflation.

Or should we consider some form of legislative controls over wages and prices? Con-trols which would be centrally administered. by people far removed from the complicated workings of supply and demand in the marketplace? The President doesn't want this. The public doesn't want this. Labor doesn't want this. And business doesn't

Finally, should we seek some middle course, a course based not on legislation and com-pulsion, but on good faith and cooperation? Given the alternatives, I see this as the only reasonable course of action. If we want to preserve the economic gains of the past 5 years, if we want to maintain our free work leadership, if we want to make good on our social and humanitarian obligations, then what we need is not less cooperation, but more cooperation and understanding between business and Government. ars, if we want to maintain our free

We need a course of action in which there is give and take on both sides, a course of action which recognises that there are bound to be differences, but which also recognizes

that good sense must, in the end, prevail.

On any mature basis of appraisal the forces that bind business and Government in common purpose are far stronger than the strains that tend to divide us.

We need statesmen in business no less than we need statesmen in Government. to recognize that these are exceptional times, and exceptional times call for exceptional acts of sacrifice and understanding, based on confidence and good will and concern for the public interest.

The continued maintenance of wage-price stability is a challenging task. business and banking communities demon-strated by their magnificent response to the ce-of-payments problem, a challenge of this type can be successfully met if there is understanding and cooperation on all sides. In saying this, I recognize that countering

inflationary pressures is, in some ways, more difficult than most other tasks. In the bal-ance-of-payments attuation, for example, nearly all the variables are subject to management actions by corporation executives. Cost-price levels, on the other hand, frequently involve factors which are beyond the direct control of the average business

We hope, and we expect, that in 1966 the American economy will rise to record heights of achievement. We also hope, and we ex-pect, that in 1966 American business will rise to new heights of public service, to new levels of cooperation with Government in the pub-lic interest, so that we may meet all of our goals and commitments, both at home and

### How Cooperative Extension Serves the People of My District

EXTENSION OF REMARKS

# HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. ST. ONGE. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a progress report of the Cooperative Extension Service, a division of the College of Agriculture, University of Connecticut, located in my district. The report covers the year 1965 and describes the accomplishments and services to the people of the Second Congressional District of Connecticut.

For over a half century the extension service, as a part of the land-grant university, has helped the people of eastern Connecticut with their goals of social and economic development. Over the years, the program has expanded greatly in scope and in the number of people served, so that during the past year over 200,000 men, women, and youth were aided in various ways as described in the report. This unique arrangement of informal education has proven successful in the application of modern technology which is essential to the continued growth and development of Connecticut.

The report was prepared under the direction of W. B. Young, dean of the College of Agriculture and director of the extension service, and H. M. Hansen, associate director of the extension service. I commend it to the attention of all my colleagues who believe in helping people to help themselves through education. I am indeed very proud of the achievements attained by this extension service, and particularly for the people of my district.

The report reads as follows:

PROGRESS REPORT: COOPERATIVE EXTENSION SERVES THE PEOPLE OF CONGRESSIONAL DIS-TRICT No. 2

(By H. M. Hansen, associate director of extension, College of Agriculture, University of Connecticut, Storrs, Conn.)

Congressional District No. 2 in Connecticut is served by the cooperative extension service, a division of the College of Agriculture, at the University of Connecticut, Storrs. The service operates county extension centers at Norwich, Rockville, Brooklyn, and Haddam where specialists and agents conduct educational programs in agriculture, home economics, 4-H youth work and community development. They are aimed at helping both with and advantaged to the state of the state both rural and urban people improve their

farms, homes, businesses, and communities.

During the last 12 months the local extension program, dedicated to educative action through the application of research, directly assisted 217,279 men, women, and youth in individual and group conference and meetings. These individuals received or requested information on production and marketing of agricultural products; farm and home business management; insect and dis-ease control; foods and nutrition; health and family living; safety; civil defense; con-sumer education; clothing construction and selection; home and community beautifica-tion; home furnishings and equipment; com-munity development; and public affairs. In addition, extension personnel (many hold advanced degrees in their specialty fields)

reached many of the approximately 500,000 people in this district with 121,611 publications, newspaper articles, radio and television programs and circular letters.

Following is a sampling of the types of programs conducted by the extension with the support of trained and dedicated volunteer local leaders. The latter help to determine the content of these activities, thereby tailoring them to meet the needs and to solve the socioeconomic problems of people throughout the district.

Economic Opportunity Act aids community development: The provisions of this act provided extension an additional means to further assist communities with programs for orderly growth and development. Specialists and agents spent much time conducting discussions and meetings on the purposes of this with local leaders and resource people in 10 towns, commonly referred to as the Quinebaug Valley. This so-called town grouping is located in the northeastern section of the district. Extension assisted in the establishment of a Quinebaug Valley Action Committee (QVAC). The group has pre-pared a regional development plan and ap-plied for a grant for its antipoverty work.

With extension's assistance, QVAC has several projects underway or in the planning stage. Program Head Start provides preschoolers from culturally deprived families with happy educational experiences to better

prepare them for school life.

Another project, Handup, encourages potential high school dropouts to stay in school and at the same time give them nome income and job training in forestry and con-servation practices. Other activities include the establishment of a Neighborhood Youth Corps for underprivileged youths to perform tree planting projects: remedial classes for the poorly educated and unemployed so that they can better prepare themselves for fu-ture employment; and instructions on improved use of surplus foods and available oney for low income families.

In another activity, extension assisted the Quinebaug's Valley Mental Health and Welfare Council in involving other resource persons in its planning activities. For ex-ample, the local agricultural agent brought to the council's attention the ingh rate of alcoholism among farm laborers in the area. He explained that many poultry farmers were willing to hire these people if they ere rehabilitated. Consequently, the coun cil has applied for a grant to set up a halfway house to help those mentally disturbed people make the necessary socio-economic adjustments for eventual employment. Meantime, extension's community organizadevelopment specialist assisted council in collecting, analyzing and inter-preting data on the status of mental health illness within the area. He helped them develop action programs aimed at intelligent solutions of this critical problem.

Open spaces promote wise use of natural esources: The extension staff has been very active in providing educational assistance to communities interested in participating in the Connecticut open spaces program. met with numerous groups concerned with the establishment of town conservation commissions, planning agencies and individuals who desired to preserve land for recreation, conservation and other open space use.

An outstanding example of extension's

ole in educating citizens on the intent of this program, enacted into law by the 1963 general assembly, was its work in the town of Durham. Here the service brought together other public and private agencies to explain the need and long-term benefits of managing wisely the community's natural resources. Subsequently, the town established a conservation commission whose members developed a comprehensive open space plan that will benefit present and future generations. Basically, it consists of acquiring lands, using town, State, and Pederal moneys, to assure a nonpolluted source of water for home and industrial use as well as to provide areas for family picnicking, fishing, hunting and other recreational potential. As a first step in implementing this plan, Durham's Conservation Commission proposed and won approval of local residents voting in referendum to buy a 100-acre farm. Purchases such as this one point to extension's successful efforts in educating the citizenry on the crucial need for effective open space planning. In effect, it has set the stage for other towns and cities performing or planning similar programs of preserving the beauty and natural resource of the Connecticut countryside.

Regionalization leads to improved service: Commercial agricultural and resource development people are now being served through a recent realinement of extension work beyond the county lines. Agents who had been serving one country now serve a single producer group in a multicounty area. Some State specialists also now work directly with farmers and related groups. The moves were made to release county stuff time to work directly with problems of resource development affecting communities and to better serve farmers ad others with highly technical information. This approach, first implemented in Middlesex and New Haven Counties, is now being expanded to involve agents in all counties of the Constitution

Building aids for poultrymen: Agricultural engineers and agents provided plans and educational assistance to poultrymen in remodeling and expanding their operations. Some 300 producers attended two meetings on housing aimed at helping them become more efficient and competitive in the poultry busines. Already 100,000 square feet of Con necticut panel poultry houses are under con-struction, representing the largest poultry building boom in eastern Connecticut since the 1950's. The 4 counties in this district, incidentally, continue to rank within the 100 leading counties in the United States in the production of poultry meat and chicken eggs. Keeping this agricultural industry technically alert means the continuation of thousands of jobs for area people.

Dairy farmers learn to cope with the agricultural drought: Farmers during these past 2 summers have been hard pressed to grow adequate crops for livestock and home use because of very low rainfall. Extension advised dairy farmers on what substitutes to use to formulate balanced rations for animal feeding programs. They slan worked with dairy, vegetable, and fruitgrowers on determining actual water nueds for livestock and crops.

Safety stressed with agricultural chemicals: Safe and effective use of agricultural chemicals were strongly emphasized in the production of agricultural products, home lawn and garden care and preservation of wildlife. The service in Middlesex County participated in an intensive educational campaign to inform the public about a massive outbreak of gypsy moths and the necessity for control. This insect since 1960 has infested more than 58,000 acres of woodland, defoliating thousands of trees and killing many of them. Extension assisted Government officials in several towns to appraise this situation and to attain suppression through aerial spraying.

Consumer education helps homemakers in many ways: Thousands of homemakers received information on better management of family resources through programs in consumer education. Windham and Tolland Counties conducted a special series for home and farm owners or buyers on "Selection of Housing." They studied house planning, remodeling, construction details, utilities, and septic tanks, financial matters, and home grounds beautification. Comments about this activity ranged from "I got some help on

n

how to better coordinate my farm building with the outside living area" to "I know now what to look for when buying a home."

Another major extension program, nutrition education, aims to maintain and to improve the health and fitness of local families. A series of three 2-hour classes in the morning and repeated in the evening attracted 55 homemakers in one county. In addition, Extension provides instruction in this subject and other home economics fields to 171 homemaker study groups whose membership totals 3,000.

The 4-H prepares youth for adult responsibility: Youth, the district's greatest source, is served through Extension 4-H Club program. Originally centered in rural areas. the program now attracts many members of suburban and urban areas as well. District membership now totals 3,916 boys and girls, ages 9 to 19, and 435 volunteer local adult leaders. The latter assist Extension club agents and specialists in preparing these youths for successful adult living in a changing world. Club activities stress develop ment of citizenship, leadership, responsibility, self-confidence, cooperation and qualworkmanship, along with the learning scientific principles in over 50 fields. Among the more popular are poultry and dairy, automotive safety, clothing, foods and nutrition.

Summer camping is another favorite activity. More than 1,000 members attend at least 1 week of 4-H camp at the three sites in this district. Their parents and other individuals and groups have donated some \$200,000 to support these popular camping programs. They provide the youngsters an enriched experience of outdoor living, playing, and working together. Recently, the Middleeser County 4-H camp committee had bond-burning ceremony to highlight the raising of \$58,700 for the purchase of their campaite. In this work, no Government funds are used for operating and maintaining these camp facilities. They are run and manuel solely by public-spirited men and women and groups, in cooperation with extension, on behalf of youth.

Other significant 4-H programs, include

Other significant 4-H programs, include countrywide fairs, career exploration tours, and work with the handicapped and mentally retarded. A new pilot project, one of three in the country, will soon feature training meetings for 4-H'ers on emergency preparedness in Tolland County and also Windham County. Participants will learn how a community can prepare itself to meet any kind

of emergency or disaster. Agricultural centers receive strong support: Over the years the people in gressional District No. 2 have provided strong financial support and the leadership neceseary to conduct Extension's educational programs. More recently, thousands donated about half of the \$450,000 to buy, build, and maintain the four agricultural centers housing the Extension staffs. Moreover, the Extension Service was instrumental in providing office space and facilities to house all agricultural agencies in these centers. It n offers one-stop educational service and technical assistance to farmers and other groups. Such strong support as seen here mak tension's efforts to help people help themselves more vital than ever.

### Why Adam?

EXTENSION OF REMARKS

OF

### HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1966

Mr. DON H. CLAUSEN. Mr. Speaker, a bill to require Senate confirmation of a

new Director of the Federal Bureau of Investigation when J. Edgar Hoover eventually retires has been passed by the Senate and is now pending before the House. I would like to urge quick passage of this measure by this body.

There is no reason to believe that the universally respected and admired Mr. Hoover will not be active for a long time. We all want him to continue his activities as long as he is able to. However, there are dangers if we do not act on this bill soon.

Most of us are probably unaware that Adam Yarmolinsky, who was prevented by Members of this body from becoming Deputy Director of the poverty program, was named to a top security post in the Pentagon. It is interesting to note that Yarmolinsky was appointed to this \$26,000 a year post by the Secretary of Defense only 2 days after the first session of this Congress adjourned. There is speculation that Mr. Yarmolinsky is being prepared to take over the FBI when Hoover leaves. I for one would like to see Senate confirmation of this vital position required.

The Washington Observer, a Washington newsletter, recently published an article on this subject. I am placing this article in the Record at this time.

#### WHY ADAM?

As the new year begins Washington insiders are wondering about the unfolding situation in the Department of Justice. Seventy-year-old J. Edgar Hoover, the FBI Director, will soon step down and already the political wolves are howling with glee.

For Mr. Hoover has indeed been a credit to his calling. He first entered the Department of Justice in 1917 and later served as a special assistant to the Attorney General. He then was assistant FBH Director from 1921 to 1924, and in 1924 was appointed Director. Aithough the FBH itself had been in existence some 16 years at the time of his appointment, Mr. Hoover's great leadership ability and personal mystique have left an indelible imprint upon the office of Director. In effect, Mr. Hoover and the office are now one and the same and so far this has been a boon for all law enforcement in America.

The true measure of Mr. Hoever's long reign however must be left for history to judge because, without question, he has been subjected, especialy since President Kennedy took office 5 years ago, to increasing presures from above to abuse his trust. That he has by and large held firm against these pressures is a compliment to his noble character and great determination.

But all good things must come to an end. As Mr. Hoover rapidly approaches the age of retirement a struggle is developing within the administration to name his successor.

Only 2 days after the 89th Congress adjourned, one Adam Yarmolinsky was appointed by Secretary of Defense Robert Mc-Namara to the top security post in the Pentagon; that of Deputy Assistant Secretary of Defense for International Affairs, at an annual salary of \$26,000. This post does not require Senate confirmation and carries a title permitting Yarmolinsky to later claim "security" experience for the top FBI position.

That Yarmolinsky, who wrote a slanted book for the Ford Foundation-sponsored Fund for the Republic against Federal security procedures, should be named to a ranking Defense security job shows how far the wheel has turned. Not a public word was said against this appointment despite the Yarmolinsky record.

The truth is that the public believed Yarmolinsky had been eased out of the Federal Government after an influential group of responsible Congressmen refused to vote for LBJ/s multibilion-dollar poverty program if Yarmolinsky assumed the post of Deputy Director, to which he had been appointed. Instead, this man, whom most Congressmen regard as a dangerous leftist, continued as special assistant to McNamara at \$24,500 a year. He just haid low awhile until the 8th adjourned and McNamara, who has reached new heights of influence with the President,

was able to promote him

Why is McNamara so solicitous for Yarmolinsky's future in the Government service?

Why does he always go to bat for the hottest hot potato in Washington, even to the point of reversing his own security officer who refused to clear Yarmolinsky after reading the FBI report on him? One reason is because McNamara himself was brought to President Kennedy's attention as a potential Cabinet appointee largely through the efforts and influence of former Ford Fund for the Republic Big Shot Adam Yarmolinsky. Back in August 1960, Yarmolinsky, joined the Kennedy for President committee as an assistant on a fee basis to Candidate Kennedy's brother-in-law, R. Sargent Shriver. Yarmolinsky's job was that of screening personnel and finding prospective high-ranking Government appointees for the Kennedy administration. In addition to McNamara, Yarmolinsky picked Deputy Secretary of Defans Gyrus R. Vance as well as some 75 lawyers, largely extreme leftwingers, who are now spotted in key decisionmaking Federal Jobs.

#### MOM AND DAD

Yarmolinksy's past record is a security officer's nightmare. Poor Adam had two strikes against him (from a security point of view) even before he was born; namely, his father, Avraham, and his mother, Babette. Both Papa and Mana Yarmolinksy are pro-Communist. In fact, A. F. Canwell, former chairman of the Washington State Joint Legislative Committee on Un-American Activities, has referred to Adam Yarmolinsky's parents as two top U.S. Communists. Father Avraham was actively affiliated with the Communist John Reed Clube (named after one of the founders of the American Communist Party) of the United States, while Mother Babette wrote for the Communist publication Soviet Russia Today. Adam, of course, insists that his parents' political views have not influenced him; just as did Berkeley's "free speech movement" free-wheeling beatchick, Bettina Aptheker (daughter of CP theoretician, Herbert Aptheker), right down to the day she found it expedient to announce her longstanding Communist Party membership in California. Here follow a few of Yarmolinsky's more

blatant activities:

(1) While at Harvard, he was head of the campus Marxist club; (2) he was a founding member and on the editorial staff of the campus Marxist magazine Yardling, which presented to students the viewpoint of the Young Communist League; (3) in 1941, while at tudent at Harvard, he attended the Communist-controlled American Youth Congress; (4) while at Harvard he also attended meetings of the Communist Youth League; (5) he solicited funds for the Spanish War Relief on behalf of the Young Communist League, (6) he said of the Young Communist League, "they believe, and I was inclined to believe, that the so-called Communist government was a desirable end."

After these earlier "experiences," Adam became active in more respectable leftist enterprises. He became secretary of the Ford Fund for the Republic and a lawyer and consultant to several other tax-exempt foundations. Curlously, it was soon after Yarmolinsky entered the Pentagon as a special assistant to the Secretary of Defense that agitation was started for the successful mussing of the military, and a commissar type "civilian control" setup was imposed on our military leaders.

Clearly, there is much more involved in Yarmolinsky's amazing move into the Federal security field than simply the repayment of old political debts. There is a concerted, well-organized, powerful drive behind him. Even before McNamara acted, influential columnists Evans and Novak write an article for a national publication trying to clean up Yarmolinsky's Red record and claiming that he shouldn't be blamed for his parents proclivity toward communism. Amazingly. the Observer has learned that, although Yar-molinsky's name has been prominently mentioned dozens of times in the Halls of Congress these last few years, the name "Yarmo-linsky" is strangely absent from the Con-SIONAL RECORD'S permanent index for this period. Normally, every name mentioned in the RECORD is carefully indexed; but then Adam has always been shy when it come to publicity. The Index Office of the Joint Committee on Printing is simply not that inefficient; somebody, somehow, must like Adam Yarmolinsky.

#### BIG AND BOLD

The radical left, as usual, thinks big and bold but neglects no detail in carrying out its projects. Their plan is simply this: if possible, take over complete control of the Ffi and gradually turn it into a "special" or "parallel" secret police force to insure that the opposition is kept in its place; much the same as in Gaullist France.

Barring this, they intend at all costs to keep this important post out of the hands of anti-Communists; they don't intend to get stuck with another Hoover and the fact that this important job does not require Senate confirmation and consequent public debate gives them a golden opportunity.

How can they lose with Adam? Of course, Mr. Hoover and the Congress have yet to be heard from but when McNamara and company sit down to "reason" with L.B.J., even if Adam is knocked out of the picture, they will certainly have a veto over a hard anti-Communist candidate. But more on this later.

### "Boy of the Year" Contest

EXTENSION OF REMARKS

### HON, F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. MORSE. Mr. Speaker, each year the Boys Clubs of America conduct a national "Boy of the Year" competition. Outstanding young men are chosen from communities around the country to compete.

Representing Greater Lowell, Mass., in this year's contest will be David Mask-aluk, son of Mr. and Mrs. John Shanahan of 26 Lisa Lane in Lowell. Mr. Maskaluk is one of the most distinguished competitors for the award and I am sure will bring great credit to his community.

An article outlining David's achievements recently appeared in the Lowell Sun. I include it in the Congressional Record.

LHS STUDENT IN NATIONAL "BOY OF THE YEAR" CONTEST

Lowell.—A 17-year-old high school senior who has been nominated for appointment to the U.S. Air Force Academy, has been selected to represent Greater Lowell in the Boys Clubs' nationwide "Boy of the Year" contest.

David Maskaluk, son of Mr. and Mrs. John Shanahan of 26 Lisa Lane was selected "Boy

of the Year" for the local Boys Club and was awarded a plaque by Mayor Edward J. Early during ceremonies at city hall yesterday. His local selection puts Maskaluk in the

His local selection puts Maskaluk in the race for the Boya Clubs of America's 20th annual Junior Citizens contest.

He will compete with nominees from Boys Clubs throughout the country for the \$3,200 scholarship which is awarded yearly by a nationally distributed magazine.

Enrolled in the college preparatory course at Lowell high, Maskaluk is a captain in the boys regiment, member of the student council, was a guard on the LHS football team, and a member of the wrestling team.

Active in religious, civic, and fraternal affairs, Maskaluk is a member of St. Patrick's church, served as an altar boy and in CYO affairs of the parish.

Lowell's "boy of the year" served his community in Heart Fund, United Fund, and March of Dimes drives and as a volunteer worker in the city civil defense shelterstocking program.

At the boys club he is a member of the Keystone Club, a gym volunteer, and assists in athletic and special club affairs for younger boys.

Words of tribute for the boy have been received from city, school, and religious leaders and their letters of commendation will go into the folder to be sent to the judges in the national contest.

Mayor Early termed the Lowell nominee "a boy of outstanding scholastic and athletic ability as evidenced by the fine record he has compiled in the college preparatory course at LHS, and as cocaptain of his LHS football team."

Lowell High Headmaster Raymond Sullivan, Bartlett School Frincipal John Cronin, teachers, clergymen, and March of Dimes officials also sent letters of commendation to the "box of the way".

the "boy of the year."

Veteran football Coach Raymond Riddick, in his letter, stated: "As his football coach I found him to be one of the most active, cooperative, and unselfish boys I have had the privilege of coaching or associating with." The coach called Maskaluk "an outstanding example for the youth of the area."

William Lapointe, civil defense director,

William Lapointe, civil defense director, and active boys club worker, has conducted the "boy of the year" contest for the club for the past several years and feels that the community has a wonderful chance of winning national honors with this year's nominee.

Boys club Executive Director William Vrettas, in a letter that will be sent to judges in the national contest, stated that Maskaluk has "given untold hours of his time and talent to supervising younger members in the gymnasium program, on bus trips, and had helped the club in waterfront programs.

Vrettas also lauded the boy for his "community service" and said he was proud to recommend him for "boy of the year" honors.

### Truth in Government

EXTENSION OF REMARKS

# HON. JACK EDWARDS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. EDWARDS of Alabama. Mr. Speaker, every schoolchild in the United States learns that our system of government is based ultimately on "the consent of the governed."

Our governing institutions derive their original authority from the people, and their continuing operations are, according to this idea, dependent on the will of the people.

One of the first essentials to the success of this system is clearly public access to the important facts of government action. If important truths about government are obscured, distorted, or hidden entirely, then we have not only a moral problem but a threat to our basic system of government as well.

The need for truth in government was further discussed in the Evening Star of Washington on January 20, both in an editorial and in a column by Mr. David Lawrence

I ask that the two items be reproduced here in the general interest.

### TRUTH IN GOVERNMENT

Delaware's Republican Senator Williams, who played a key role in digging up facts in the Bobby Baker case, thinks the President was less than candid last week in submitting his fiscal 1967 budget estimates to Congress. He urges that Mr. Johnson, while plugging for truth in packaging, should also put in a good word and a few good deeds for truth in Government.

The President said next year's deficit, if Congress approves all of his recommendations, will be only \$1.8 billion, the lowest in many years. Senator Williams believes a more correct estimate of the deficit (and this does not take into account a probable request for a large supplemental appropriation for the war in Vietnam) would be \$9.2

billion, not \$1.8 billion.

This results, according to the Delaware Senator, from the President's treatment as regular income of such items as accelerated tax payments, the profit from lowering the content of silver coins, sale of copper from the stockpile, and similar items. not include in his calculation the request that the reduction in telephone and automobile taxes be restored. Tax acceleration and the profit on the new silver coins alone, again according to the Senator, will amount to \$7.44 blion in fiscal 1967. Since these are nonrecurring revenue items, he thinks this sum should be added to the President's estimated deficit, thereby producing a true deficit of \$9.24 billion. Senator WILLIAMS says the basis for the President's estimate is like borrowing on next week's salary to pay this week's grocery bill, and it seems to us that he is right. If he is right, and especially if the cost of the war goes up. Senator WILLIAMS is amply justified in predicting that the President will have to come back to Congress with a request for a drastic tax increase, probably after this year's elections, or accept a destructive and wild inflation. Should there be such an inflation the people who would suffer most are the retired and the aged, all of those living on fixed incomes, for whom the administration professes deep concern.

Senator Williams made another interesting point. During the last 5 years, he said, the deficits of the Kennedy and the Johnson administrations have exceeded \$31.5 billion. This deficit, and the end is by no means in sight, is greater than the total expenditures of the New Deal during the 5-year period from 1933 to 1938.

This comparison prompts two thoughts:
(1) Franklin D. Rooseveit, despite the anguished cries of his fiscal critica, must have been a pretty tight man with a dollar. (2) And now, in 1966, the country certainly could do with a little more truth in Government and a little less fiscal aleight of hand.

# SENATOR ASKS TRUTH IN GOVERNMENT (By David Lawrence)

Senator John J. Whilams, of Delaware, who has uncovered many irregularities in Government, is a man of rare courage in politics. He now has undertaken in a speech to the Senate to prove that the administration has resorted to sleight-of-hand tactics in the figures given to the public about the budget.

The Delaware Senator calls attention to the fact that President Johnson in his state of the Union message asked for legislation to provide truth in packaging and truth in lending. Williams says that what is even more necessary is truth in Government.

The American people perhaps do not understand as yet that the Federal Government is collecting this year from corporations much of what it would normally have collected next year, and that, under an accelerated program, the Government for at least 3 years will be collecting more than 100 percent of the taxes actually owed for a given calendar year by corporations.

The Senator says that the withholding-tax acceleration for individuals would bring in \$400 million in the next fiscal year. He adds: "Stated otherwise, this is the same as bor-

rowing on next week's salary to pay this week's grocery bills, and that is exactly what it is.

"I say that a program of truth in Government is needed. The American taxpayers liave a right to know whether the labels being put on the Government's financial package are accurate, true descriptions, because based on the Tressury Department's

own figures, the estimated deficit for fiscal

1967 is not \$1.8 billion, but \$9.2 billion.
"In the President's message of last Wednesday night, a further acceleration of the corporate tax payments was recommended. If Congress accedes to the President's request, the Government will collect in fiscal 1967 an additional \$3.2 billion in taxes from the corporations.

"This is not counting increased taxes to be received from the reinstated telephone and automobile taxes. I am speaking now only of the accelerated corporation taxes under the President's request. It would move forward \$1 billion extra of the corporate taxes into fiscal 1966 and into fiscal 1967, another \$3.2 billion."

The Delaware Senator also points out that the Government, by taking away a certain amount of the content of silver in coinage, will be able to credit itself with receipt of \$2.5 billion in the next fiscal year over and above what it would have received if the silver had not been commandeered by the Government. This extra money, he says, is, of course, a nonrecurring revenue, but is being included as though it were additional or continuing revenue.

WILLIAMS also reveals that the Commodity Credit Corporation, which handles agricultural commodities, owes the U.S. Government more that \$12 billion, but has assets much less and shows a deficit of \$5.9 billion. He argues that this actual loss "has not been faced by the administration in its budgetary requests," and that a truth in Government policy would correct this misleading information."

Summing up the present financial status of the Federal Government, Williams de-

"The deficits of the past 5 years alone have exceeded the total cost of all Government expenditures during the 5 years between 1914 and 1919, a period which included the total cost of World War I."

Williams insists, moreover, that trustfund receipts are ir no way to be confused with the administrative budget, and that to quote such figures as an indication of a balanced budget is misleading and does not represent truth in Government.

Senator Group D. Arkew, of Vermont, one of the liberal Republicans, commented later that WILLIAMS' speech would probably have been more effective as the Republican state of the Union message than what was given over television on Monday as the party's response to the President's televised broadcast.

Strangely enough, what was said by Wn-LIAMS in his speech to the Senate got very little attention in the press and wasn't the subject of any extensive broadcasts on the air anywhere.

### Cleveland Heights High School Patriotism Program

EXTENSION OF REMARKS

### HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mrs. BOLTON. Mr. Speaker, January 1966 graduating class of Cleveland Heights, Ohio, High School chose patriotism as their theme. To carry out a program based on this theme, the young people are printing and distributing some 20,000 booklets on how to display and properly care for our flag. These will be placed in all homes and business places of the Cleveland Heights and University Heights area. In addition, four-man drum and bugle corps participates each day in the formal flag-raising and lowering ceremony. Members of the senior class each year will be eligible for the corps and the color guard. ceremony started this semester will be continued each year as a tradition.

This emphasis on patriotism by these young people is something that could well be spread all over our Nation, particularly at this difficult time. When young people such as these seniors at Cleveland Heights High School demonstrate their belief in their fiag and country as these do we can rest assured that the future of our Nation is in good hands. As part of my remarks I include an article from the Cleveland Press and a letter written by Mr. Earl A. Graske, 13th District Council Americanism chairman, Ohio American Legion.

Ohio American Legion.

HEIGHTS SCHOOL HAS A PROJECT—PATRIOTISM (By Rick Weiner)

About 20,000 four-page folders on the American flag will be distributed soon to all homes and businesses in Cleveland Heights and University Heights.

Entitled "Stars and Stripes—Our Emblem of Freedom," the folders represent part of the class project of the January 1966, class at Cleveland Heights High School, Members chose patriotism as their theme.

They intend to picture the American flag on the cover of the folder, with the Pledge of Allegiance copied underneath.

Inside pages will list the history of the flag, the flad code and dates it should be displayed, while the back cover will carry the verses of the Star-Spangled Banner.

verses of the Star-Spangled Banner.
Goal of the class is to "help educate the people of the proper times and way to display the American flag in our community."

Since the school will print the folders, the only expense involved in the project will be for the paper, estimated to cost \$40 to \$50. The Cedar-Center Kiwanis Club has agreed to meet this.

Along with the folders the class has started a flag raising and lowering ceremony each day at the school. A four-man drum and bugle corps accompanies a color guard that formally takes care of the flag.

This ceremony, which Principal Eugene Myslenski said will become a tradition at the school, was initiated and is headed by a member of the June 1966 class, Durban Keeney.

Myslenski said the ceremony will be carried out daily. Members of the graduating class will be eligible for the drum and bugle

crass will be eligible for the drum and bugie corps and color guard. Chairmen of the January 1966 class proj-ect are Larry Zeiger, Dale Abrams, Susan Ettinger, and Alice Lautman.

THE AMERICAN LEGION, 18TH DISTRICT COUNCIL. Cleveland, Ohio, December 7, 1965.

Mr. E. W. Myslenski, Principal, Cleveland Heights High School, Cleveland Heights, Ohio.

DEAR MR. MYSLENSKI; It was a pleasure for me to observe the fing-raising ceremony at your high school last Monday morning. After reading about the program of patriot-ism in the Cleveland Press I just had to come and see it. Please don't get the impression that I came to spy on you and your students that raw, cold day. I came to observe "teen-age America" in action and saw it.

age america" in action and saw it.

The flag was raised properly. The drum
and bugie corps was excellent and the drill
sergeant was tops. This outilt would be hard
to beat in competition.

Please extend my compliments to your

senior class for their program of "patriotism."
When young people like that believe in their
flag and country as they do we citizens and
parents may rest assured that the future of

parents may rest assured that the future of our Nation is in good hands.

This program of your students places them in the "typical teenage" group. They are the kind of kids that we as parents are so very proud of. We know that they represent rwhelming majority of our youth today. Might I steal an expression from the present teenage vernacular and say "Your kids at Cleveland Heights High School are the greatest." Well, they are. Sincerely.

EARL A. GRASKE. 13th District Americansim Chairman, American Legion Ohio.

### A Questionnaire From Your Congressman, Richard L. Ottinger, 25th District, New York

EXTENSION OF REMARKS

# HON. RICHARD L. OTTINGER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. OTTINGER. Mr. Speaker, last eptember I sent my congressional newsletter to approximately 160,000 postal patrons in the 25th Congressional Dis-trict of New York. I included in that newsletter to a questionnaire on what I considered to be the major international issues at that time

The response to this questionnaire was most gratifying. Nearly 15,000 recipients took the time to complete the questionnaire and return it to my office in Yonkers, N.Y. Many took the addi-tional time to include additional comments and a high proportion sent me thoughtful letters dealing with the subjects covered in the questionnaire.

I feel the results of this questionnaire will be interesting and informative to my colleagues in the House of Representatives and I offer herewith a tabulation for inclusion in the RECORD:

A QUESTIONNAIRE FROM YOUR CONGRESSMAN, RICHARD L. OTTINGER, 25TH DISTRICT, NEW

1. VIETNAM

Do you favor a policy to:

(a) Expand war, bomb North Vietnam cities and Red China sanctuaries and go allout to "win", despite dangers of Russian and Red Chinese involvement and threat of nuclear war: 24 percent.

(b) Continue administration policy of using limited military force necessary to stop Communist advance in South Vietnam while making initiatives to achieve satisfactory settlement through negotiations and offers to economic assistance: 51 percent.

(c) Stop bombing of North Vietnam, re-strict efforts to South Vietnam and settle now on any available basis: 8 percent.

(d) Withdraw U.S. forces from Vietnam unilaterally: 6 percent.

(e) Other (specify): 11 percent.

2. DOMINICAN REPUBLIC

that the same of property of the coast Control of the said that the said of the said U.S.S. "Glover" (AGDE-1) Commissioned: Admiral Weakley Hails Unique

EXTENSION OF REMARKS

### HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. BATES. Mr. Speaker, among the historic events which took place during the recent congressional recess was the commissioning of the U.S.S. Glover (AGDE-1), the Navy's first escort research ship, at the Boston Naval Shipyard on November 13, 1965. It was my privilege to be present as this vesselnamed in honor of Brig. Gen. John Glov-

er of Marblehead, Mass.—joined the fleet. Vice Adm. Charles E. Weakley, USN, commander, Antisubmarine Warfare Force, U.S. Atlantic Fleet, delivered the Warfare principal address, hailing the unique role the Glover is designed to perform, and I believe his message holds interest for all concerned with our defense and our efforts to assure peace. Before I present his remarks, however, I wish to record a few other facts about the U.S.S. Glover, her historic namesake and her commissioning ceremony.

General Glover gained fame as the organizer and commander of what became known as the "Amphibious Regiment" of the Revolutionary War and as the owner of the first vessel of the so-called Washington Fleet, the schooner Hannah. This American naval pioneer, who was born in 1732 in my own home city of Salem, Mass., but resided most of his life in nearby Marblehead, was the man who. with his especially trained personnel, ferried General Washington and his troops across the Delaware for the attack on Trenton.

Thus, it is highly appropriate that a pioneering ship of our modern Navy should bear the name of General Glover. This 3,426-ton escort research vessel is 414 feet, 6 inches in length. Her primary mission during peacetime is to test advanced antisubmarine equipment, procedures, and tactics which may be used on future classes of escorts. To perform their wartime missions, Glover class escorts will employ antisubmarine rockets, drone antisubmarine helicopters, and acoustic homing torpedoes. As a pioneer, the Glover has a propulsion system unlike most other ships; instead of propellers, she employs a directed water jet to push her through the seas. For this method of propulsion, water is picked up in the forward part of the vessel, accelerated, and discharged at the stern.

The U.S.S. Glover was built at the Bath Iron Works Corp. shipyard in Maine, where she was launched on April 17, With numerous other descendants looking on, her sponsors were two great-great-granddaughters John Glover, Mrs. William F. Pederson, Sr., of Wollaston, Mass., and Mrs. Claude Vernon Signor of Coos Bay, Oreg.

17

Rear Adm. William B. Sieglaff, USN. Commandant of the 1st Naval District,

placed the Glover in commission at Boston last November 13. Assuming com-mand was Comdr. William W. Wilson, USN, of New York City, whose ship's company of 14 officers and 211 enlisted men are now carrying out her assignment with the U.S. Atlantic Fleet, with Newport. R.I., as her home port.

The U.S.S. Glover's mission was further cited in this commissioning address delivered by Vice Admiral Weakley, Commander of the Atlantic Fleet's Antisubmarine Warfare Force, following his introduction by the vessel's new commanding officer:

Thank you very much Captain Wilson Congressman Barss, Admiral Sieglaff, Mrs. Pederson, distinguished guests, personnel of the ship's company, U.S.S. Glover, ladies and gentlemen, it is an honor and a particular pleasure for me to participate in this splendid and traditional ceremony in which the Navy's first escort research ship is to be commissioned.

An honor because of the character of the commissioning-it is a unique moment in the life of a ship.

A pleasure for a number of reasons, not the least of which is that it brings me back into this New England area of fine people and splendid workmanship; an area steeped in the traditions of our beloved country.

From the moment Commander Wilson gives the order, "Set the watch," this ship becomes an instrument to carry out the national policy.

From that time onward, she assumes a character, and will gain a service reputawhich form her structure, but a reputation which stems from the combination of personalities of the people who will find their work and their lives within her.

The utility of the U.S.S. Glover will not be limited to wartime combat. She is one of a kind. Her peacetime role is to assist in research in the field of antisubmarine warfare; a form of warfare which has been described by our fleet commander, Adm. Thomas Moorer, as the most difficult and complex of all.

What is the importance of antisubmarine warfare to this great country of ours? World Wars I and II resulted in a shift of the power balances in the world. Whereas in times past we carried on behind the benevolent shield of British seapower, and the benevolent shield of French landpower, following the general line of isolationism which, for our young country, was so wisely dictated by our first great President, more recently e have found it necessary to build our own shield

I would note in passing that we had to construct a shield which we could carry in-definitely, without deleterious effect upon our own way of life, because the shield was to be a defense, and not an aggressive mech-

Faced with the threatening posture of international communism, we knew that the shield must be carried, not in a 100-yard dash, nor a quarter-mile run, but it must be carried throughout a marathon of indefinite length.

In this situation we helped develop the United Nations, and then we entered into NATO, and then into SEATO. We belong to the Organization of American States. are maritime coalitions, joined together by the seas—not separated by them.

In addition, the technological explosion has brought forth the need for many new materials, not all of which are available in sufficient quantity within our boundaries.

Our economy demands many imports from overseas, imports of large bulk and weight, for which the most economic transportation is by ship. Of the 38 different materials

which go to making up the telephones in your homes, more than half are imported. Of the 77 strategic materials required for the building of the implements of war and peace-missiles, rockets, jet aircraft, tanks, electronics—some 66 come to us from overseas.

The ships which come into our country with these imports must be defended where they are, on the surface of the world's осеаля

The ships which go forth to carry support and aid to our allies must be defended where they are, on the surface of the oceans.

The ships which serve to project our power outward, amphibious forces, deckloads of aircraft, gun batteries, missiles, and the necessary support to our own forces which are emplaced in so many countries overseas, these too, we must be prepared to defend where they are, and in time of war their major opponent on the high seas is the submarine.

Antisubmarine warfare capability is not an end in itself, but it is a necessity to the success of almost every seagoing operation.

The U.S.S. Glover, by extending the horizons of the state of the art, can contribute mightily in this essential matter. She represents a bold and unique approach to extending our capability in surface ship antisubmarine warfare. Incidentally, not many people realize the tremendously significant change that has taken place since World War

During both World Wars I and II, the destroyer did an almost impossible job. Destroyers had to physically pass through the complete weapon range of the submarine before they could lay a finger upon their opponent. This is no longer true.

Under reasonable environmental conditions the destroyer and detect and attack how

tions, the destroyer can detect and attack her quarry before good torpedo ranges for the enemy are reached.

It is most fitting that this ship be named

for Brig. Gen. John Glover.
General Glover was a Revolutionary War hero who as the war drew near formed an "amphibious regiment." This. too, was a bold and unique approach to a military prob-

General Glover's amphibious regiment was made up of hearty sailing men from Marble-head. They made good seagoing infantryment since they had learned the disciplines of the sea. His troops were first used to protect Marblehead and nearby Beverly. They were instrumental in providing the amphibious lift needed in the retreat from Long Island. His amphibious troops transported Washington across the Delaware and ed the advance on Trenton.

When American fighting men engage in amphibious warfare, they are following in the wake of General Glover and his Marble-head sailor-soldiers. We would call them marines, today.

The ship which now bears his proud name will continue to improve protection for the amphibious fighting man. The ship as we see her now is an amazingly complex ma-She represents the most advanced scientific knowledge and technology available in a wide variety of fields. All of these have been carefully, even lovingly, combined in her by shipbuilders whose work is more nearly an art than a science.

So today as she is poised before us, ready for active service, she represents many ad-vanced, forward-looking concepts. All of these technical advances will place unusually heavy burdens upon her crew. They must master this complexity. They must learn master this complexity. They must learn how to operate and how to maintain Glover's equipment and how to employ her efficiently.

Since much of this equipment is new, no final doctrine exists for its employment. Glover's crew will be blazing a trail for other crews to follow. Although many of their problems will be new ones, many others will be old and familiar to Navy men.

Principle among these problems are those concerned with men. This is a problem that Gen. John Glover also faced. Then as now, the studiest fighting ships were only as good as their crews made them.

If it is to have effect, the fine technology and shipbuilding skill which has gone into this ship must be complemented by its me with diligent training, meticulous seamantip, and unswerving devotion to duty.

The standards of excellence and the spirit

they will establish in Glover, beginning to-day, will set the tone for their ship for years

The knowledge of the importance of their mission to the destroyer type ships of the future will be a handsome compensation for

I congratulate you, Commander Wilson, and your ship's company upon your new

Good luck, and smooth sailing.

### Eleven Hundred Pay Tribute to Retiring Mayor Della Chiesa

EXTENSION OF REMARKS

### HON, JAMES A. BURKE

OF MASSACHUSETES

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. BURKE. Mr. Speaker, on Sunday evening, November 14, 1965, I was privileged to attend the farewell dinner for retiring Mayor Amelio Della Chiesa, of Quincy, Mass

For 12 consecutive years, this dedicated public servant has supervised the growth and improvement of a city which has successfully combined pervasive historical tradition with a 20th-century outlook.

During the years that Mayor Della Chiesa and I served together in the Massachusetts General Court, I came to know him well, and to respect his fine personal qualities and abilities. many occasions since, the dispensation of my duties has brought me in touch with Quincy's city hall and the always courteous cooperation of its mayor. His sense of duty and compassion for his people have endeared him permanently to the heart of this great city.

I would like to insert here for the attention of my colleagues and the Nation an article which appeared in the Quincy Patriot Ledger of November 15, 1965, as well as a copy of the evening's program: ONE THOUSAND ONE HUNDRED PAY TRIBUTE TO RETIRING MAYOR DELLA CHIESA

(By Howard White)

-"Amelio Della Chiesa monuments and wants none. Nor does he even need this testimonial dinner tonight. For he has received his greatest testimonial time and again at the polls."

So observed Gov. John A. Volpe last night. But need a testimonial or not, Mayor Della Chiesa and his wife were honored by some 1,100 persons, a capacity crowd at the Surf, Nantasket.

NO MONUMENT NEEDER

The friendship dinner marked Mayor Della Chiesa's impending retirement after 12 years as the city's chief executive. He will continue, at least through next year, as one of the city's representatives in the general court.

"We need more men with the character, the dedication, and the integrity of Mel in public life," said Governor Volpe, principal speaker at the dinner. "We need more citens like Mel in Massachusetts and in America

'And while we are sorry to see him leave one of his public roles, our regret is tempered by our knowledge and our gratefulness that his services are not entirely lost to us," the Governor added.

"The citizens of Quincy will not need to erect a monument to Amelio Della Chiesa," the Governor said, "and he would not want one, because he would not want anyone to spend the money." His reference to the mayor's reputation for a tight-fisted control over the taxpayer's money drew laughter and applause from the audience.

But the vital new public buildings constructed in Quincy at economical cost during his administration will be the best monuments to Amelio Della Chiesa. They will be living monuments to his concern for the welfare of his community, monuments which future generations will use and enjoy and by which they will remember a great and devoted mayor who planned ahead of them," said Governor Volpe.

#### "PAUL REVERE PATRIOT"

And he made Mayor Della Chiesa a "Paul Revere Patriot," an honorary order whose privileges, he noted, include dumping tea into Boston Harbor. Mayor Della Chiesa, later referring to his new privilege, suggested a lot of people might prefer that h be allowed to dump the city's rubbish into Boston Harbor instead.

Toastmaster for the dinner was Paul C. Reardon of Hingham, associate justice of the State supreme judicial court. Judge Rear-don, a former Quincy resident, noted that "standards of public service were set nearly two centuries ago, many of them in the farm kitchens of what is now Quincy. They have found adherents in those to whom city and town affairs were confided from time to time. We honor the mayor as the latest and as an entirely worthy captain of the local government." he said.

"He did not take his duties lightly, and he worked at the job," added Judge Reardon.
"Who among us has given more to Quincy and the country in these last years than has

"He has long been aware that the noblest motive is the public good," said Justice Reardon.

Like many of the other speakers, the general chairman, William J. Martin, Sr., paid tribute to Mrs. Della Chiesa as well as to the And he presented Mrs. Della Chiesa mayor. two tickets for an all-expense-paid vacation in Bermuds—leaving it up to her to decide whom she would take with her.

Democrat, of Milton, a former state-house colleague of Mayor Della Chiesa, paid tribute to him as "a fine, dedicated, devoted public servant."

### HUMPHREY TRIBUTE

Praise for the mayor from the Federal Government also came in a letter from Vice President Hubert H. Humphrey, whom the mayor earlier this year made an honorary citizen of Quincy.

You will always be an integral part of all that you helped create and nurture," the vice president wrote. "You will be remembered with gratitude and affection."

Praise for the mayor from his colleagues in the house of representatives was brought by Representative Sidney Q. Curtiss, Republi-can, of Sheffield, house minority leader, who read a resolve of congratulations that house passed in one of the mayor's rare absences several weeks ago. "It took about 3 sences several weeks ago. "It took about 3 weeks to get the mayor out of his seat so we

Mayor Della Chiesa's response to an eve ning praising him was to praise Quincy and its employees, officials, and citizens.

I always praise Quincy and that comes right from my heart, because I know that we have a good city. I don't know of any city that renders the services that we render here in the city of Quincy," he said.

And with characteristic attention to finan-

cial detail, he cataloged some of those serv--the schools, streets, fire and police departments, hospital, recreation programs, li-braries, and other programs. He said the city's budget has risen about 600 percent, from \$5 to \$30 million-since he has been in city government-while the tax rate inhas been much less sharp.

And he urged people to help him leave the city in sound financial shape for his successor by paying their bills.

Head table guests at the event included the Reverend John D. Banks of Bethany Congregational Church who gave the invocation and benediction; the mayor-elect, Senator James R. McIntyre, Democrat, of Quincy; and Mrs. Edna B. Austin, former city councilor, who presented the bronze plaque that was the city's principal gift to the mayor.

### GROUP TRIBUTES

Representatives of several organizations ented their groups' tributes to Mayor Della Chiesa

They included—the Norfolk County American Legion Council, represented by Robert Leo Eng, and the Quincy American Legion.

PRIENDSHIP DINNER IN HONOR OF MAYOR AMELIO DELLA CHIESA, AT THE SURF BALL ROOM, NANTASKET BEACH, NOVEMBER 14, 1965 "MEL"

Born in Quincy July 31, 1901, of Italian parents, Amelio Della Chiesa is the first man of his race—the race that gave the world Dante, Verdi, Raphael, Michelangelo, and Leonardo DaVinci—to be elected mayor of Quincy. His 12 years in the city's top municipal office is a record.

His services as city councilor, mayor, school committee chairman, and State representa-tive are concentrated in 23 successive years, as he served concurrently in several offices Had his elective service been spread out, it would have covered 52 years.

Hard work has been the motif of his life. At 10 he was selling soda pop to stoneworkers in his native South Quincy; at 16 he was a Quincy Trade School graduate and a jour-neyman plumber; at 17, a master plumber, the youngest in Massachusetts; at 18, the head of his own plumbing concern while still a teenager; at 52, retired from a successful business career to devote his entire time to public service.

Mayor Della Chiesa's normal workday begins at sunup and ends at midnight. "I can ount on the fingers of one hand the quiet nights I have spent at home in the past 12 years

While the badge of success is hard work, Mayor Della Chiesa believes that hard work is not enough—honesty and frugality are its necessary hand maidens. These three quali-ties, translated into action, have enabled him to get things done while holding the tax rate in reasonable check.

When critics called him a pinchpenny mayor, Mr. Della Chiesa hocks back at the total vote of the last four elections and smiles: Della Chiesa, 70,773; opponents,

Achievements during the Della Chiesa regime include: Reorganization of the cemetery department, street construction by pri-vate contractors under competitive bidding, and contract collection of rubbish and garbage—effecting a total saving of \$700,000 a year which is \$3.50 on the tax rate. His austerity budgets, his no-hire-no-fire policy, his nonpolitical appointments resulted in

further saving. His conservative spending policy is reflected in major capital outlay projects such as the \$10,000,000 school construction program, an enlarged hospital, a new library and fire station.

The Patriot Ledger recently summed up Mr. Della Chiesa's long mayoralty: "Quincy will have to look long and hard for a person with the intimate knowledge of municipal government, the high standard of integrity, and the willingness to devote the long hours to the job that Mayor Della Chiesa has demonstrated."

Mayor and Mrs. Della Chiesa, the former Miss Evelyn Resell, gave their only son, Lt. Walter Albert Della Chiesa, a West Pointer, to their country when his jet fighter crashed off Korea June 22, 1950.

FRED HUNT.

#### PROGRAM

master.

Invocation: The Reverend John D. Banks. Dinner: Introduction of head table guests, toastmaster.

Remarks: Congressman James A. Burke. Speaker: Gov. John A. Volpe.

Presentation of the citizens of Quincy:

Mrs. Edna B. Austin. Response: Mayor Amelio Della Chiesa.

Benediction: The Reverend John D. Banks. Reception.

Music: Baron Hugo's orchestra.

AMELIO DELLA CHIESA PRIENDSHIP DINNER

William J. Martin, general chairman; Hes lip E. Sutherland, treasurer; Mrs. Hattlemay

Thomas, secretary.

Banquet committee: John F. Wipfler, chairman; Russell Halley, and G. Ralph Di-

Flower committee: Mrs. Joseph O. Morris, president, Bayside Gardners of Squantum; Mrs. Edward O. Gourdin, president, Germantown Garden Club; Mrs. F. Arthur Heath, president, Wollaston Garden Club.

General committee: A. Wendall Clarke, chairman; James D. Asher, and John P.

Flavin.

Gift committee: Douglas A. Randall, chairman; Thomas S. Burgin, and Dr. Edward S. Mann

Program committee: Forrest I. Neal, chairman; Willi Sargent IV. William C. Edwards, and Winthrop

Protocol and decorations: Mrs. Joseph Mac-Ritchie, chairman; Miss Dorothy Osborne, and William O'Connell.

Publicity committee: Percy Lane, chairman; Herbert Fontaine, James Collins, Henry

Bosworth, William J. DeLargy. Reception committee: Dr. Charles Djerf, chairman; James F. McCormick, Sr., Dr. Edward S. Mann, Mrs. Alice Mitchell, Francis F. Anselmo, Charles T. Sweeny.

Social hour committee: Matthew Cushing, chairman; Chief Thomas F. Gorman.

Ticket committee: Alexander Smith, chairman; Edward T. Lewis, Carmine D'Olympio, William J. Short, Jr., Henry J. Williams, Mrs. G. Leland Stevenson, Lino A. Ponti.

### GOD BLESS AMERICA

"God bless America, land that I love, Stand beside her and guide her

Through the night with a light from above:

From the mountains, to the prairies, to the oceans white with foam,

God bless America, my home sweet home." -Irving Berlin,

### HEAD TABLE

The Reverend John D. Banks, minister, Bethany Congregational Church; the Honorable James R. McIntyre, mayor-elect, city of Quincy; William J. Martin, board chairman, South Shore National Bank.

Mrs. Amelio Della Chiesa, the Honorable Amelio Della Chiesa, mayor, city of Quincy; the Honorable Paul C. Reardon, associate justice, Supreme Judicial Court of Massachuetts; the Honorable John A. Volpe, Governor

of the Commonwealth of Massachusetts; Mrs. Edna B. Austin, attorney.

The Honorable James A. Burke, Congre man, 11th Massachusetts District; the Honorable Sidney Q. Curtiss, minority leader, State house of representatives.

#### THE PUBLIC SERVICE RECORD

Ward 3 councilor, three 2-year terms, 1944-49; councilor at large, four 2-year terms, 1950-57; city council president, 1948; mayor under plan E, two 2-year terms, 1954-57 (elected by the council); mayor under plan A, four 2-year terms, 1958-65 (elected by the people); State representative, seven 2-year terms, 1953-66; chairman of the school committee, six 2-year terms, 1954-65.

# Associate Justice Paul C. Reardon, toast- Sea Research Receives More Recognition

EXTENSION OF REMARKS OF

# HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. ROGERS of Florida. Mr. Speaker, the field of ocean exploration, or the probe of the earth's "wet space," is receiving more and more recognition. The oceanographic pursuits of the United States are becoming a matter of concern to not only scientists, but those in Government circles as well.

Recently one of our distinguished colleagues, Congressman Joseph Karth, of Minnesota, addressed the National Space Club on the benefits of sea research, and how they compare to the economic aspects of outer space.

Congressman Karth, a member of the House Merchant Marine and Fisheries Committee as well as the House Science and Astronautics Committee, is in a position to bring to the Congress a unique blend of experience. He has knowledge of uses of outer space, as well as the seas, or inner space.

I ask that Congressman Karth's address of January 18 before the National Space Club be included in its entirety at this point in the RECORD.

### POTENTIAL OF OCEANOGRAPHY

Perhaps I should begin with a personal note on why I am talking about oceanography at a Space Club luncheon.

Last summer I became a member of the Merchant Marine and Pisheries Committee. Later, in the fall, I went on the Oceanog-raphy Subcommittee because I think it deals with an extremely important area, and because oceanography is becoming increasingly related to space.

I should be quick to point out that I am no expert on oceanography. But I have been digging into it and want to outline some of preliminary thinking, particularly cause we're at a critical stage on deciding how to proceed with oceanography develop-

One of the earliest congressional oceanog raphy experts is here in the audience today. From March to June 1959 Chairman Miller (Congressman George Miller, California) nesded a special subcomimttee which reviewed "Oceanography in the United States." He has consistently advocated a stronger national program and a more sensible organi-mational approach. Mr. Chairman, in addi-tion to other things I think it only fair that I recognize you as the real congressional father of oceanography.

A moment ago I mentioned the relationship between oceanography and space activi-For a few minutes I intend to outline, what seems to me, some of the important points about this relationship.

One important contribution of aerospace technology has been general acceptance of the "total systems approach." A closely connected idea is the growing awareness that we need to view our world environment as a And I have a hunch that in retrowhole. spect, historians will consider this concept as one of the truly significant ideas of our century.

As part of our environment, the sea is not pendent"-it is greatly affected by outside forces: the rotation of the earth and the movements of the sun and moon result in events we all can observe every time we go to the beach. Less apparent are the effects of the direct income and outgo of radiant solar energy and the vital interchange between sea and atmosphere and land.

This suggests that, as in the broad field space, hardly any aspect of the sea is of space, capable of adequate analysis without coor-dination of all the fundamental natural sciences and engineering. In this sense, as with the study of space, oceanography is not a science in itself. Rather, it is a combina-tion of various sciences and fields of engineering to study the sea in all its aspects including the complex interrelationships with our total environment.

An approach of this kind leads directly to what a number of people are suggesting as specific correlation between space "know-how" and the problems being faced in oceanography. Fil just mention a few major areas: (1) Reliability and efficiency require-ments, (2) systems management experience, (3) structures and materials, (4) operating in a hostile environment outside the atmosphere, (5) instrumentation and sensors especially in standardizing, (6) computer, guidance and power systems, and finally (7) vehicle design and construction.

But I'm just summarizing when I talk about specific areas such as these. Most certainly, I'm not telling you anything that is startling. Many aerospace firms have already grasped the point. For example:

(1) North American Aviation has a new ocean systems facility which will draw heavily on the firm's space effort. It's no accident that it is located in their space and information systems division.

(2) Lockheed has established a marine

laboratory. (3) Nortronics is working on the Navy's

deep submergence systems project.
(4) The underseas division of Westinghouse is now building a new research and test facility.

And (5) General Dynamics' Electric Boat Division has been in the field for a long time.

Incidentally, I understand that some people have become somewhat disenchanted because certain corporate investments of the early 1960's haven't started to pay off yet. My advice is this: Stick around for a while. Small opportunities are often the beginning of great enterprises

Just this month, there have been two solid indications that space and oceanography are more than "kissing cousins":

(1) The Naval Oceanographic Office has undertaken the coordination of all investigations about possible applications of manned earth orbital operations in the field of oceanography. I intend to suggest that their interest be expanded formally to include unmanned operations as well.

(2) A symposium was held here in Washington last week on "Man's Extension Into the Sea." It was interesting to note that its cosponsors included not only such expected organizations as the Marine Technology Society—but the AIAA as well.

Having, I believe, established why I'm not out in left field by talking oceanography to

space group, I'd now like to turn to why

the subject is so important.

For most of human history we have considered the oceans as little more than hu ing grounds for fishermen and highways for ships. Of course, the shores have always pro-vided recreation—and recently there has been

the added pleasure of "bikini watching But for the future I strongly believe that we can expect a greatly expanded "ocean consciousness" as man turns to the sea with new eyes and new ideas. I see this as part of a broad scientific advance which may lead to profound changes in life as we now know it on this planet. In effect, we are taking the first, awkward steps to eventually con-trolling our environment—rather than let-

More specifically, as far as the sea is concerned, there is a growing consensus that:
(1) We will be able to obtain economically

much of the world's fresh water needs from sea water within the next 10 years or so. (2) We will be able to harness tides as

a source of power.

ting it dominate us.

(3) Ways can be found to help control the world's climate by controlling or using ocean

(4) The oceans and, of course, the seabed and subsoil of the ocean basins are a vast potential source of many metals which are rapidly becoming in short supply.

(5) We can look to the oceans to solve

some of the world's food problems as we learn to "farm" instead of just hunt.
While more than 70 percent of the earth's
surface is covered by water, not more than
1 percent of its total food supplies are de-

I would like to dwell on this point for a moment. Recently, Dr. Lawrence Gould, Director of the U.S. Antarctic program during rector of the U.S. Antarcuc program during the latest IGY reported, "These Antarctic waters are so protein rich that it is generally agreed among scientists that acre for acre they are potentially richer food sources than any other equivalent areas of our planet " " " clearly here is an enormous, potentially rich food supply for an increasingly hungry planet.

I don't think Dr. Gould's comment can be lightly dismissed. Our planet's food prob-lem is acute, and despite the superb per-formance of the American farmer, he can't solve it all by himself. Even if all of our surplus food were somehow provided to the rest of the world, it wouldn't be nearly enough. In fact, some experts tell us that in 10 years, U.S. citizens will consume every the ingenious American farmer can

produce.
Comments are being made widely "that there have always been hungry people and famine is part of the history of man." But what these people miss is a growing determination to attack and defeat one of man-

kind's most ancient enemies. The potential benefits of oceanography will clearly be pow-erful weapons in this attack. While there seems to be relatively little controversy about the potential benefits of work in oceanography, how to go about realizing these benefits has been a cause of continuing debate for several years. The reasons for this debate are as complex as Government itself, but I'll take a crack at

One reason seems to be that the focus of our attention in oceanography has under-gone radical changes during the past decade. Yesterday, we were interested in it as a science. Today, we are thinking more about man working and living on and in the ocean. We are thinking about the engineering and technological problems connected with har-vesting the resources of the sea. This kind of transition from science to use is never made easily—but it must be made.

Another reason for the extensive debate is rooted in the fact that several administra-tions and the Conghess have had differing

points of view on how the Nation's effort in oceanography should be organized.

No small factor in this debate has been

congressional concern that 22 agencies (by one count) are involved with oceanography. I can't find any record of it, but I'd be willing to bet that even the Army and the Air Force have an oceanography office tucked away somewhere-just in case

The activities of these 22 agencies are brought together by the Interagency Com-mittee on Oceanography which is under the Federal Council for Science and Technology. Basically, administration witnesses before the Congress have said this arrangement is satisfactory. The Congress has not agreed with them. Over the past several years it has considered these alternatives:

(1) Beefing up the present coordination setup.

(2) Establishing a new independent tency—I might add it has been referred to a "wet-NASA."

(3) Establishing a National Oceanographic Council headed by the Vice President—it would be much like the present Space Coun-

And (4) Establishing a national commission to study and recommend an overall plan

for an adequate national program.

Of these various approaches, only the first, in the past, has been acceptable to administration witnesses. However, during the first session of this Congress, both the House and Senate passed a bill based on other approaches

(1) The Senate bill, S. 944, proposed a Council at a higher level than the present Interagency Committee on Oceanography. The Council would be headed by the Vice President. A study commission also is provided for to recommend plans to the Council for implementation.

(2) The House version omits the National Oceangraphic Council, and anticipates that the President would use existing mechanisms in the Office of Science and Technology, and the Federal Council to implement these proposals. It also establishes a self-liquidating Commission which would recommend plans

for a program to the Presiednt.

Actually, I believe both hills agree on far fore points than they differ. Both broadly define "oceanography" and marine science." This is a major contribu-on to our understanding of the scope of the national effort.

Both set forth a declaration of national policy and purpose so badly needed to give direction and stability.

Both provide for a representative, self-liquidating study commission.

Both call for annual Executive reports and the development of long-range annual plans

and budgets.

Both provide funds for independent, governmentwide central planning.
Importantly, both bills emphasis

for political action now. They differ only in the degree of required action and the level at which this action and leadership should be exercised. In proposing the Cabinet-level Council, with its own staff, the Senate bill tends to go much further than the House, tends to go much further than the house. The House prefers its version because we believe the legislation has a better chance of being approved by the administration.

In any event, it is my opinion that recent discussion and action in the Congress has gone a long way toward focusing attention on two very important points:

(1) Oceanography is not getting satisfacturable.

tory attention within the administration under existing organizational arrangements.
What seems to be needed as much as anything is to get oceanography out into the open in a more conspicuous position.

There is a distinct feeling within the Congress that the ICO—Interagency Committee on Oceanography—is buried too far down in the Government hierarchy. On this point,

you don't need to be connected with space to know that Jim Webb heads NASA—but I would guess that a relatively few would know who is the Chairman of the ICO.

The existing organization gives rise for concern on the part of the Congress as to whether there is a national program. I mean this in the sense of whether it is screened and adopted to fit a set of national priorities in contrast to it being a simple addition of priorities arising from 22 different agencies

(2) A second major concern on the part of the Congress is that oceanography is not receiving an adequate allocation of resources. Aside from the Navy antisubmarine warfare effort in fiscal year 1966, our oceanographic budget totaled about \$140 million. Perhaps it's not a valid comparison to make, but this past week, Sears Roebuck announced that it would spend \$200 million on store expansion during 1966.

In a nutshell, an investment of \$140 million for oceanography does not seem to be consistent with our present capability and the potential benefits. The present rate of growth of the composite budget is about 8 to 15 percent per year. I won't presume to say what it ought to be-because I think this is the kind of question that we in the Congress would like to have considered by either a council or a commission. I will say, however, that I do think such a rate of growth is not

In making this judgment, I am not unaware that there is danger in building up too rapidly. Professional oceanographers have, in fact, expressed their fears of swift prolif-eration—beyond the capacity of the existing qualified and experienced scientists and engi-neers to train increasing numbers of re-

There is something to be said for this point of view; when it is considered that there are only about 3,000 professionals working the field; and when it is considered that there are only 12 schools teaching 300 graduate students and turning out 20 Ph. D.'s a year. But this view overlooks one vital point.

An expanded oceanographic program will require the talents of many disciplines-not just those of professional oceanographers. In a sense, then, oceanographers will no longer have the isolation they have been accustemed to—but will be exposed to the rough and tumble world of teamwork on a large scale. Therefore, it seems to me that a shortage of oceanographers is not as critical as it might appear at first glance.

This is not to say our educational program is in good shape; it isn't. Twenty Ph. D.'s a year—of whom about half are replace-ments—won't be sufficient for the long pull. Energetic afforts should be taken to step up the pace—as has been done in the area of space. For example, we could well use the NASA-type facility grant for universities on an expanded scale in the field of oceanography, with emphasis on an interdisciplinary

In concluding, I want to return to another facet of the space-oceanography relationship. As we move to considering more ambitious space programs—such as manned expeditions to Mars or the moons of Jupiter and Saturn-you all know what happens to the price tags. By comparison, Apollo may look

Frankly, I don't foresee general acceptance of the enormous outlays for such programs until we have solved the continually worsening home planet problems of hunger and poverty. This leads me to believe that in years to come there will be much greater remphasis on fields such as oceanography which have the potential for helping to solve them. By greater emphasis I mean far more than any of us might realize today, because true progress, it has been said, consists not so much in increasing our needs as in diminishing our wants.

I choose not to talk about this in termsof an "oceanography gap," even though I'm
convinced we are not preeminent in the field.
But I hope we don't wait for a sharp stimulus which forces us into a competition. Perhaps we should move more rapidly because
we have the capability and it ought to be
done for the benefits it can provide for us
and the rest of mankind. How fast we move
to meet the challenge of the ocean depends
in large measure on the political action we
take today.

### The 9,500 Fourth-Class Post Offices

EXTENSION OF REMARKS

OF

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1966

Mr. PICKLE. Mr. Speaker, the December 1965 issue of Postmasters Advocate, the official publication of the National League of Postmasters of the United States, devoted its cover picture to a recent historic event in the 10th Congressional District of Texas.

I refer to the swearing-in ceremonies of the new Postmaster General, Lawrence F. "Larry" O'Brien, in the little

post office at Hye, Tex.
Under leave to extend my remarks, I wish to include from this issue of Postmasters Advocate a splendid editorial of tribute to President Lyndon B. Johnson, for the special recognition he gave on this occasion to our Nation's 9,500 fourth-class post offices.

The article follows:

THANK YOU, MR. PRESIDENT

Who said that fourth-class post offices are a thing of the past and all washed up?

Observe our cover this month; that picture was made in a post office of the fourth class—at Hye, Tex., which is located 3 miles from the LBJ Ranch, home of our President.

Yes, President Lyndon B. Johnson deliberately chose a fourth-class post office as the site for the swearing-in ceremony of the new Postmuster General, Lawrence F. "Larry" O'Brien, as a remifider that the large and the small are equally the concern of Government.

Incidentally, Hye Postmaster Levi A. Deike, who is a member of the National League of Postmasters, also is in the picture. Postmaster Deike, who has been the President's friend since childhood, showed his two distinguished guests around the combination post office, general store, bus stop, and feedstore—following a snack of crackers and cheese in the backroom.

We're thrilled that our President has emphasized the importance of rural America in his thinking. As he pointed out, both the rural post office and the country store made very important contributions in the development of the frontier lands.

We state unequivocally that the small post offices, and the postmasters thereof, will always make a significant and important-contribution to the development of America.

We thank President Johnson for this recognition of the 9,500 fourth-class post offices and their postmasters.

After all, the Postmasters Advocate was originally named, the Fourth Class Postmaser. And, everyone knows, that the National League of Postmasters has long been the

champion of the small poetmasters and post

We hall—and salute—President Lyndon B. Johnson on this historic occasion.

### The Holding Strategy

EXTENSION OF REMARKS

# HON, RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. McCARTHY. Mr. Speaker, support for the views of Lt. Gen. James M. Gavin relative to the war in Vietnam is growing.

The New York Times on Friday, Jan-

The New York Times on Friday, January 21, editorially declared as follows:

At the present, American forces are secure in their coastal positions and cannot be involuntarily disloged. General Gavin's recent advice not to expand the war but to continue efforts to negotiate the peace, has the force of logic on its side.

On January 17, in an interview telecast in New York over station WNDT and reported the following day by the New York Times, Associate Editor James B. Reston, of the New York Times, took a position almost identical to that expressed by General Gavin. Mr. Reston asserted that the war in Vietnam should be pursued as one of limited objectives, that the correct way was "the middle way." This, he said would rule out both continued intensification of the war or peace on terms that would lose the country.

The United States can defend the perimeter of Saigon, Mr. Reston said, and the coastal areas where most of the people of South Vietnam live. This is very different, he added, from searching out the enemy through the elephant grass. Mr. Reston said:

We are just at the beginning of an enormous battle of Asia. That battle will go on for the rest of the century and Vietnam is not the end of it but the beginning. If we win in Vietnam, the battle will still go on and what I am afraid of is that we will try to score a great amashing victory, thinking that will end it all, which it won't. Therefore, I would limit the objective.

In an interview published in the Milwaukee, Wis., Journal, on January 16. Senator Gavloop Nelsow conceded that "there are no easy answers to the agonizing dilemma facing America in Vietnam." He continued:

But of all the grim alternatives, the wisest choice is to continue with great patience to seek a negotiated settlement, while firmly refusing to escalate the conflict further.

Senator Nelson said he believed that there was "no practical hope in achieving our aims" through escalation.

He warned that escalation carried with it "a very real possibility of an Asianwide war in which America would waste her resources and young men in a slaughter that could achieve nothing but those desperate conditions of chaos ideal for the spread of communism;

Senator Nelson said he agreed with still another distinguished American who

has expressed a similar view: George F. Kennan, former U.S. Ambassador to the Soviet Union, who recently advocated a campaign to deescalate the Vietnam war.

Since last July, the distinguished Columnist Walter Lippmann has held this basic view of the situation.

In the latest issue of Newsweek magazine, dated January 31, 1966, Mr. Lippmapn again asserts this view stating that:

The holding strategy enables us to honor our commitments to the South Vietnamese, who would be lost if we withdrew precipitately from the whole country. The holding strategy, moreover, relieves our troops of the impossible task of occupying the villages of South Vietnam and keeping the Vietcong from overrunning them when we leave. The holding strategy is built upon our seapower, which is our strong right arm, not upon the ability of American soldiers fighting 8,000 miles away to make secure 2,500 villages.

Mr. Lippmann goes on to note that the holding strategy advocated by General Gavin "is now receiving wide support in the Congress and in the press." In an identical vein in his column in

In an identical vein in his column in today's Washington Post, Mr. Lippmann makes the point that:

It is often said by the President's supporters that his critics propose no alternative to what he is doing. If that was ever true, it is no longer true today. It has was ever true since the Mannfield report and since the Gavin statement. The President should reduce his war aims, which today are impossibly high in the light of the conditions described in the Mannfield report. He should alter his strategy along the lines proposed by General Gavin, making it a holding operation pending the eventual negotiation of a political settlement.

Under leave to extend my remarks and include extraneous matter, I include here Mr. Lippmann's column from the January 31 issue of Newsweek magazine and the January 25 issue of the Washington Post.

[From Newsweek, Jan. 31, 1966] THE HOLDING STRATEGY

(By Walter Lippmann)

Toward the end of the year we had arrived at a turning point in the Vietnamese war. There had to be new and great decisions about the strategy and objectives of the war. The turning has been marked by a suspension of bombing in North Vietnam and by the President's worldwide diplomatic campaign to bring about a negotiated truce.

At the sametime, just as Congress was reassembling. Senator Manarizes published his report, which is the first official, responsible, and adequately informed account of the state of the war. The Manafield report was followed by the first deep criticism of the strategy of the war on the part of a military man especially competent to judge it. The judgment came in a letter to Harper's magnize from Lt. Cen. James M. Gavin, who was the Army's Chief of Plans and Operations at the time when the French were facing defeat at Dienblenphu.

There was also a movement of popular opinion, which is, I believe, just under the surface of what the polis report. It was precipitated by the proven failure of the strategical decisions taken last July. After all the bombing and the multiplication of our forces, the best that can be said is that out of the impending defeat of the Saigonese forces a year ago we have anatched not a victory, nor any credible prospect of victory, but a bloody and costly stalemate.

The President has three choices open to him. One is to expand the war by bombing Haiphong and Hanol. But that opens up the possibility that the crowded harbor and city of Saigon will be bombed in return, and also that China, perhaps even the Soviet Union, will be drawn actively into the war. A second choice is to expand our ground forces for a big land war. The third choice is to concentrate the U.S. military forces along the coast, and, holding fast, try then to negotiate a truce.

### UNDECIDED BASIC ISSUE

As I write this article, the President has made it reasonably clear that he is resisting the idea of a much bigger war. Thus, he has continued the pause in the bombing of North Vietnam. But the basic issue is not, it appears, decided. He has not yet adopted the atrategy of restricting the American intervention to a holding operation in Saigon and along the coast.

If he does this, he will not be adopting a new idea. He will be adopting a strategy which was urged upon him last July before he escalated and Americanized the war and sent American troops out into the jungle to find and destroy the Victoong. The President rejected the holding strategy last July. There is a strong case why he should now fall back upon it. For, as it was argued last July, the holding strategy enables us to honor our commitments to the South Victnamese, who would be lost if we withdrew precipitately from the whole country. The holding strategy, moreover, relieves our troops of the impossible task of occupying the Villages of South Victnam and keeping the Vietcong from overrunning them when we leave. The holding strategy is built upon our scapower, which is our strong right arm, not upon the ability of American soldiers fighting 8,000 miles away to make secure 2,500 villages.

### POLITICAL CONSEQUENCES

The holding strategy is what General Gavin advocates, and it is now receiving wide support in the Congress and in the press. It would be, I have thought since last July, the best of a bad business, not glorious, but the least costly way of repairing the grievous mistakes of the past.

But we must not deceive ourselves about the probable political consequences. The adoption of the holding strategy would amount to an acknowledgment that the Vietcong have defeated the Saigonese forces in most of South Vietnam. It recognizes a de facto military partition of South Vietnam. If we are indeed committed, as some people say we are, to reconquer the whole of South Vietnam and to get rid of all of the Vietcong and to establish General Ky as the ruler of all South Vietnam, then in the holding strategy we would indeed renege on our commit-

The question is whether the American Government under any of the three Presidents who have dealt with South Vietnam ever made such an absurd, such a fantagically unreal, commitment. I do not think so, and if someone turned up a piece of paper signed by John Foster Dulles or Dean Rusk, I would feel about it as I would feel about a better the American II would be about a feel about a

We can with a good conscience adopt a holding strategy. If it enables us eventually to disengage our military forces from the Asian mainland and to retire to the sea and the islands where our power is at its maximum, we shall have acted honorably, humanely, and wisely.

[From the Washington (D.C.) Post, Jan. 25, 1966]

TODAY AND TOMORROW-WELL, WHAT CAN HE DO?

#### (By Walter Lippmann)

The reason why the peace offensive failed is most cogently revealed in the Mansfeld report on the state of the war. Mr. Johnson has been trying to obtain by propaganda the victory which he has not been able to obtain on the battlefield—that is to say, the acceptance in the whole of South Vietnam of a government which has lost control of a very large part of South Vietnam. The peace offensive was bound to fail, and the grave decisions which the President hoped to circumvent and avoid-are now before him.

If he is to make these decisions wisely, he must recognise that in international politics peace settlements are possible only as and when they reflect the real balance of power. In the World War, for example, Churchill and Roosevelt had to settle with Stalin for a Soviet political frontier in the midst of Germany and of Europe. That is where the Red army had arrived when the peace negotiations began. The same principle will hold in Vietnam. There will be no settlement until the terms of peace reflect the military reality.

The President will be disappointed again and again as long as he and Secretary Rusk ask for a settlement which in effect demands that the defeat of the Saigon forces be transmuted at the conference table into a victory for the Saigon forces. Nor should he indulge in any illusion that the informed opinion of mankind really thinks as Secretary Rusk talks merely because American envoys have been politely and sympathetically received in so many capitals.

What then should the President do? It is often said by the President's supporters that his critics propose no alternative to what he is doing. If that was ever true, it is no longer true today. It is not true since the Mansfield report and since the Gavin statement. The President should reduce his war aims, which today are impossibly high in the light of the conditions described in the Mansfield report. He should alter his strategy along the lines proposed by General Gavin, making it a holding operation pending the eventual negotiation of a political settlement.

The Mansfield report shows that Mr. Ruak's objective—the rule of General Ky or his successor over the whole of South Vietnam—is unattainable no matter how much the war is escalated. The burden of disproving the conclusions of the Mansfield report is on those who have been proved wrong about the escalation of last summer, on those who are now asking for another escalation in order to redeem their failure, on those who want to redouble the stakes in order to recoun their losses.

If the Mansfield report contains the truth of the matter, it follows inevitably that our war aims should be reduced and our strategy revised. We should put aside the hopeless task of searching out and destroying the Vietcong, and we should take our stand, as General Gavin advises, on a holding operation in the coastal cities.

This is not a policy for a glorious victory or for some kind of dazzling political triumph. It is no trick for pulling rabbits out of a hat. It is a formula for liquidating a mistake, for ending a war that cannot be won at any tolerable price, for cutting our losses before they escalate into bankruptcy, and for listening to commonsense rather than to war whoops and tomtoms.

Because we are neither omniscient nor omnipotent, we, even we Americans, cannot always win. But I cannot help feeling in

my bones that a display of commonsense by a proud and imperious nation would be a good moral investment for the future.

### Draft Card Burners

EXTENSION OF REMARKS

# HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. IRWIN. Mr. Speaker, recently I received a copy of a letter Mrs. Richard Shaffer, of Norwalk, Conn., wrote to President Johnson.

Mrs. Shaffer expresses a feeling that many of us have about the possibility of draft card burners and other similar types undermining the morale of our fighting men in Vietnam. I agree that it is important that our service men and women know we are solidly behind them. In the belief that Mrs. Shaffer's letter will be of interest to my colleagues, I am inserting it and a letter sent to our men in Vietnam in the Congressional Record. The letters follow:

To the Officers and Enlisted Men:

Enclosed is a copy of a letter written by me today to President Johnson. Never before have I felt so strongly that I would bother him with a letter from soneone as plain and ordinary as me and I'm sure in the course of human events my letter is unimportant. But I can't think of a better way to let you know how so many millions of us feel.

Sincerely,

VIVIAN E. SHAFFER.

SHOREFRONT PARK,

Norwalk, Conn., December 10, 1965.

THE PRESIDENT, The White House, Washington, D.C.

DEAR MR. PRESIDENT: The publicity given to peace marches and draft-card burners is undermining the morale and spirit of our fighting forces in Vietnam and our service men and women around the world. The American forces have never been defeated and the only thing that will ever defeat them will be a complete breakdown in their morale and the inner spirit that helps to create the beet trained, best equipped fighting force this world has ever known.

We know why our men are in Vietnam our great freedom carries with it a grave responsibility, and they are carrying out our responsibility. The men know why they are there. But unless we, the plain ordinary people here at home, back them up with strong encouragement and make clear to them our appreciation and understanding for the job they are doing, they will surely be defeated, not by the enemy, but by their own broken morale caused by our seeming indifference.

We ask that you help us get the message to each fighting man this Christmas that there are millions of Americans at home backing up their efforts and their sacrifices in Vietnam. We are backing them and will continue to do so with hard work, sacrifice, and prayer. We will do whatever you ask of us to help reinforce the spirit so necessary to maintain each member of our forces.

If you take this opportunity to speak for all of us in a dramatic and forceful way, the headlines of your message and the radio and

TV coverage will wipe from the hearts and minds of these men any doubts that they might have about their mission and how we at home feel.

This country is indeed fortunate to have you for its President. Your steady hand, your wisdom and experience guide the freedom of this Nation and its people and give thope for the rest of the world. The same steady hand, wisdom, and experience is need-ed to remind us of the grave responsibility that goes with our freedom, for without an equal amount of responsibility our freedom cannot survive.

Please tell our fighting men that they are in our thoughts and prayers and will remain there until the job is done.

Respectfully,

VIVIAN E. SHAFFER Mrs. Richard Shaffer.

### Alder Springs Job Corps Dividends

EXTENSION OF REMARKS

# HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. LEGGETT. Mr. Speaker, after 6 months of diligent efforts molding and remolding men in the Alder Springs Job Corps Camp in my congressional district, I am pleased to report the following direct appraisal of results: Ed Davis, of the Willows Daily Journal, on January 12 published the following:

CHANGE IS NOTED IN JOB CORPSMEN

ALDER SPRINGS. Letters from parentsand, in one instance, a newspaper clipping are giving heartening evidence that the Job Corps Center here is doing a job for its corpsmen; and that they are doing a job for themselves.

Parents have been quick to praise the changes they noted in their sons during the Christmas vacation, says Camp Director A. R. Groncki. "The mails have been bringing one heartwarming letter after another.

Especially noteworthy have been the comments, in a letter and in a Pennsylvania newspaper article, about John Lee of Berkeley and Steve Maust of Everett, Pa.

ee's guardian, Mrs. Josephine Davis, expressed her gratitude in the following mesange received this week by Groncki:

I can't find words to say how much you've

done for John Lee

You have brought about such a change. I really can't say enough praise for you men for taking so much pain and worry with my boy, for he has shown a lot of improve-

"Please continue the good work."

Lee readily admits that before he entered the Job Corps he had a penchant for getting into trouble:

"I used to be a follower," he said. "There wasn't anything else to do.

"When the gang got caught doing some-ning wrong, I was with them and got thing wron

"If I hadn't joined the Job Corps, I know I'd be in trouble now." Buckling down to the camp's work and study schedule, Lee has almost completed its basic math and reading programs.

He has been promoted to assistant leader and is working in the infirmary as an assistant to the camp's medic, Carl Buterbaugh, a retired Navy chief warrant officer

Lee's ambition is to pursue his medical training further, either in the service or by

getting a job as a hospital orderly, in order

to become a qualified medic.
Steve Maust's change in attitude, and his warm feelings about the Job Corps camp, were reported in an interview with him by the Everett, Pa., Gazette.

The newspaper noted that Maust's father operates an Everett-area farm for its owner, and commented, referring to the youth:

"He wasn't much for working around the farm before he left last summer for the Job ps camp. 'I guess I was at the age when ought I didn't have to take orders.' Corps camp. The Gazette reporter found Maust help-

ing his father by operating a tractor. The youth didn't think it detracted from the free time of his vacation from camp.

Maust, who dropped out of school in the eighth grade, has completed his basic math program at the camp, and has only three of eight reading levels to complete.

"They sure spend more time with us than they did in our school," he told the Gazette reporter.

Most of us think it's an all-right camp. We want to learn, and the teachers are really good."

The 19-year-old youth is concentrating in a work schedule on learning how to weld

and how to operate heavy equipment.

When he graduates from the camp, he wants to return home and get a skilled job which his training will have equipped him to handle

Groncki recounts that the Alder Springs camp exerted perhaps the strongest influence of all people, a guy who had been "booted."

"It wasn't that he got into big trouble," Groncki said, "but after a continuing serie of difficulties with the boy we sent him home to Chicago—we thought for good."

Came the end of the Christmas holiday period, and there at Alder Springs, bright as a button, was the youth waiting to sign in. "I thought we sent you home," the annaed

camp director exploded. "You did," he replied.

"But I wanted to come back."

It turned out that somehow he had smuggled himself aboard a chartered plane bringing the eastern corpsmen back to the coast, smuggled himself aboard a highway bus and then the bus to camp, and there he was.

Groncki, forced to admire the boy's spunkness and determination, in spite of his highly irregular conduct, asked if he thought he might behave himself.

He said he did.

His reapplication is being submitted to Washington and, if he continues on good behavior, it looks as if he'll stay.

### Ukrainian Independence Day

EXTENSION OF REMARKS OF

### HON, DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. IRWIN. Mr. Speaker, in the life of every nation celebration of its day of independence is a joyous occasion. How proud and happy we in the United States are to commemorate each year the signing of our Declaration of Independence. But how sad it must be for Ukrainians the world over to know each January 22. their day of independence, that in their country there is no independence. January 22 is for them a proud day. In 1918 after 21/2 centuries of foreign rule.

an independent Ukraine was proclaimed. It was a daring act, an act for which the Ukrainians paid dearly in the ensuing 3 years. It has been 48 years since that day of Ukrainian independence in 1918. During those years nation after nation has become independent. The huge colonial empires are gone—except for that of the Soviet Union. Within that empire lies the Ukraine. Some day this great land north of the Black Sea may again be free, may again celebrate its independence day in freedom. We can do no less than work toward that end.

### U.S. Housing Policies Have Done More Harm Than Good

EXTENSION OF REMARKS OF

# HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. DAVIS of Wisconsin. Mr. Speaker, a valued and serious-minded constituent of mine recently called to my attention the front-page article in a recent issue Barron's Business and Financial Weekly relating to our far-reaching and expensive housing programs.

Those of my colleagues who will take the time to read this article will find cause for some second thoughts about accelerating the programs to which we have been committed in the past.

The article follows:

U.S. HOUSING POLICIES HAVE DONE MORE HARM THAN GOOD

Panaticism, in Santayana's words, corsists in redoubling your effort when you have forgotten your aim. By this definition the President's state of the Union address, dethe matter-of-fact tone in which it was delivered and its frequent appeals to reason, eminently qualifies. Although over 10 million of his fellow Americans still were suffering physical and financial hardship at the hands of unbridled union power, the Chief Executive repeated his plea to strike down State right-to-work laws. Nearly 200,000 U.S. troops are facing a united Communist front in South Vietnam; nonetheless, the Commander in Chief recommended that Congress "build bridges" between East and West. Finally, heedless of a consistent record of fullure, Mr. Johnson urged an ex-panded Federal effort in the realm of housing and home finance. "In some of our urban areas we must help rebuild entire sections and neighborhoods \* \* \* I will offer other proals to stimulate and to reward planning

for the growth of entire metropolitan areas."
By taking his stand four-square in support of better shelter, Lyndon Johnson reaffirmed a pledge dating back to the depression, when FDR eloquently proclaimed that one-third of a nation was "ill-fed, ill-clothed and ill-housed." Since then, housing has become the object of greater and more persistent Federal solicitude than anything but social security. Year after year Congress has passed sweeping multibillion-dollar laws designed to enhance the quantity and quality of American homes. In 1965 the administration succeeded in establishing the Department of Housing and Urban Development, of which career official Robert C. Weaver last week was named head.

For its vast investment of time and money, Washington on the constructive side has re-

markably little to show. Relative to the gross national product homebuilding in the post-war era has failed to match the peaks set in the palmy days of the twenties; since 1963, it has been in a slump. On the other hand, thanks largely to a perennial official bias toward sasy credit, construction costs, which have far outrun other price indexes since World War II, continue their relentiess climb. The same holds true of delinquencies and foreclosures. Inflated appraisals, loose mortage practices and overextended borrowers and lenders have become less the exception than the rule. "We must change in order to master change," said President Johnson the other night. In housing and home finance, it's plainly time for a change.

What the Great Society promises, however, is more of the same. Though housing, as noted, has been far from neglected (FHA-insured and VA-guaranteed mortgages outstanding now exceed \$70 billion), the Johnson administration last year pushed through Congress perhaps the most sweeping and costly measure of its kind. The Housing and Urban Development Act of 1965 authorized outlays put at upwards of \$8 billion for such purposes as urban renewal, public housing (including a controversial program of rent supplements) and subsidized private housing. In line with longstanding custom, it lowered FHA down payments by \$500 or so, or to less than 10 percent on higher-priced homes, and set up a new program covering insurance of no-down-payment loans to veterans. The legislation, averred the Chief Executive when he signed it, "will take us many longer strides" nearer the desired goal: "the legist of every family to a decent home."

If that's the goal, it remains as elusive as ever. Private nonfarm housing starts in 1965 slipped to an estimated 1.5 million, down 4 percent from 1964 and even more from 1963. Until recently, perennial optimists in and outside the trade were forecasting a recovery for 1966. However, according to the Wall Street Journal last week, builders and lenders alike now have lowered their sights. Despite everything the Government may do, they look for a further slide in housing starts. "I don't see how the home-building industry can hope to avoid a decline in the number of new units constructed this year," said the economist for the U.S. Savings & Loan League.

For the latest setback to their plans, builders tend to divide the blame between the war in Vietnam and the Federal Reserve. What alls homebuilding, however, goes deeper. Despite the proliferation of the Federal housing establishment, the number of private dwelling units started reached their postwar peak 15 years ago. In 1959 Dr. Emerson Schmidt, then director of commerce, testified that relative to total output of goods and services or to population, homebuilding since 1946 has failed to match the record of the twenties. The burgeoning influence of Government, it thus would appear, has yielded the Nation not more housing but less.

As a mounting weight of evidence suggests, far more serious distortions must be laid at Washington's door. One is the unbroken advance in residential construction costs, which, on the authoritative E. H. Bocckh index, have more than doubled since 1946, a climb exceeding that of the cost-of-living by over two-thirds. The rise in delinquencies and foreclosures, notably in homes financed by Federal Housing agencies, has been equally relentless. In the third quarter of last year, 29,000 home mortgages were foreclosed, 4 percent ahead of the like 1964 period (and twice as many as in recession-riden 1960). Mounting defaults on FHA-insured multifamily home loans, which were running over 9 percent last summer, prompted a concerned letter from the White House to Robert C. Weaver,

then HHFA Administrator; since then, such foreclosures have risen to nearly 10 percent. Scant wonder that losses on loan portfolios exceed all expectations. Last week Far Western Financial Corp. disclosed that a loss on the sale of foreclosed properties, coupled with a reserve against similar future losses, had more than wiped out last year's operating profit.

The heaviest toll cannot be measured in dollars and cents. Thanks in large measure to U.S. housing agencies, the national landscape has been strewn with small, often shoddy structures; which affront the eye no less than a billboard. For a generation cities have been defaced with thousands of public housing projects which HHFA officials now candidly label "high-rise ghettos." From the notorious "608" scandals of the late forties to the recent shocking disclosures of fraudulent mortgage valuations, the lure of easy credit—and easy money—has done its worst to corrupt builder, appraiser, mortgagor, and mortgages. For the crack in the picture window—and in the industry's code of ethics—decades of misguided Government largess must share the blame.

"We can get on a bus labeled economic reform," so Prof. George J. Stigler has writen, "but we don't know where it will take us." To judge by all the foregoing, those in the driver's seat have lost their way, and not merely in the murky realm of housing and home finance. In the circumstances, the rest of Professor Stigler's strictures are worth citing. "When we undertake a policy reform or improve some part of the economy, there is one way, and only one way, to find out whether we have succeeded—to look and see. We have not studied the experience of economic reform, and know not its successes nor its failures, its lessons on ways to proceed and ways to avoid." Before appropriating another \$112.8 billion of the taxpayer's money, Congress would do well to pay heed.

Remarks of Vice President Hubert Humphrey at the First Annual Public Affairs Conference, Atlanta, Ga., November 19, 1965

# EXTENSION OF REMARKS

# HON. CHARLES L. WELTNER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. WELTNER. Mr. Speaker, on November 19, 1965, Vice President Hubert Hubert Hubert Hubert Hubert Hubert Hubert spoke to 5,000 high school honor students in Atlanta, Ga. The occasion was the first annual public affairs conference, and his speech was a stirring declaration of the future responsibilities and challenges awaiting our young people. It is with great pleasure that I attach his speech to my remarks at this point in the Appendix of the Record:

REMARKS OF VICE PRESIDENT HUBERT HUM-PHREY, FIRST ANNUAL PUBLIC AFFAIRS CON-PERENCE, ATLANTA, GA., NOVEMBER 19, 1965 I always welcome the opportunity to speak

to young people.

President Truman has often said that young people are the best audiences. They listen intently—weighing each word with a scholarly mixture of skepticism and objectivity—and then ask questions that make you wish you had stayed in Washington.

And he is right.

My pleasure is enhanced by meeting with you in Atlanta—this bustling, growing, active city \* \* \* this city filled with a spirit of faith in itself and in the future.

This pause today with young people is truly the pause that refreshes.

A young friend of mine, who only a few years ago was also a high school student in a southern city, told me recently of the visit he made this summer to his college reunion. He found his college to be, on the surface

at least, unchanged.

The one change that caught his eye was the bulletin boards.

The bulletin boards were filled with evidence of concern and activity which had not existed only a few years before.

There were placards describing the life of

Peace Corps volunteer.

There were brochures explaining how students could devote several hours each week to working in the city's slums.

There were organizational brochures for students' political groups ranging across the whole spectrum of the American political scene.

And there were copies of letters from classmates or recent graduates who had spent their summer working for causes in which they believed—on an Indian reservation in Oklahoma, or a village in Peru, or a town in Mississippi.

My young friend believed, and I believe, that the symbol of your generation of Americans is the builetin board—filled with evidence of concern and commitment which young people today feel, and understand, and act upon.

What is it that has motivated young people to be interested in and concerned about their country, their world, and their future? Today let us examine some of the chal-

lenges ahead.

We are challenged first and foremost by the need to insure that history's mightlest instruments of destruction will never be used. We are challenged to pursue the cause of a tust and enduring peace.

We are challenged by our need to comprehend and to master the wonders of science

and technology.

Of all the scientists who ever lived in all the history of mankind, 95 percent are now living and working. We must channel scientific revolution toward the creation of a better life for ourselves and for our children.

We are challenged by the vision expressed by our President: "An America in which no young person, whatever the circumstances, shall reach the age of 21 without the health, education, and skills that will give him an opportunity to be an effective citizen and a self-supporting individual."

We are challenged to lift the yoke of poverty from one-fifth of our fellow citizens

\* \* to reverse that tragic equation which
has too often decreed that poor shall beget
poor and ignorance shall beget misery.

Nowhere is that equation more accurate, or its consequences more devasting, than in our own American Southland where almost one-half the families live below the poverty line.

What a burden this is on the South—in terms of welfare costs, of lost productivity, of stress on your society.

We are challenged to make our cities decent places in which to live and learn, to work and play.

And this is a challenge which means as much to you here in Atlanta as to any people in all the world—for Atlanta is a city which is still young enough to avoid the mistakes which have fouled the atmosphere and shattered the hopes of millions of urban dwellers across our land.

And, finally, we are challenged to make good the promise of our Constitution—to insure that all Americans shall, as citizens, have equal opportunity to enjoy the blessings of our Republic.

These then are the challenges. Americans can share a sense of pride in what we are doing to meet them. You know the record of this remarkable #9th Congre This Congress has passed laws which build a base for our American future: laws for better education, better housing, better medi cal care, laws to extend opportunity to people and places bypassed by opportunity.

Most of those laws directly benefit the American younger generation, as well they

But, as the late President Kennedy so often aid, "You must ask not what your country can do for you-you must ask what you can do for your country.'

Atlanta's great editor, Ralph McGill, re cently wrote: "Today's generation of young people is our best. It is better educated, more poised, possesses superior information, and is in general more determined to commit itself to beliefs and principle."

He was right. Here and in the world. young men and women are showing what this generation of Americans can do:

More than 10,000 young volunteers—in-cluding 62 from the State of Georgia—are now serving in the Peace Corps. Another 3,000 have already returned after tours of duty. But most significant, more than 100 .-000 have asked to take part in the bold and imaginative experiment.

When VISTA (Volunteers in Service to -the domestic Peace Corps) was Americalaunched, more than 3,000 inquiries were received from young people on the first day of business.

No fewer than one-quarter of the members of our armed services are under 20 years old. Specifically, what can you do for your community and your country?

You can, first of all, stay in school and finish school

The young person who does not educate himself to the limit of his ability dissipates

his most precious possession.

Unemployment among younger workers is already three times as high as among older

A diploma is the key to a job. Without it you may find the door of opportunity locked.

will hear that success is simply a matter of being in the right place at the right time—or of knowing the right people. Do not believe it.

As Louis Pasteur said, "Chance favors the prepared mind."

You make your opportunities.

Today—as you never will again—you have a priceless chance to prepare your mind, to seise opportunity.

You can be sware of what is happening in the world—and this public affairs conference is a tribute not only to the foresight of your teachers and principals but also to your own interest in what is happening around you. And as you enhance your awareness of the great issues of our time, exercise your precious right to vote.

More than half the electorate today is under 35. By next year half of the popula-tion will be under 25 years of age. Work and vote for the candidates and the party you believe in. Improve the quality of politics.

O

You should give serious consideration to the opportunities for service which can be afforded best by public office. I do not mean to imply that only through elective or appointive office can you make your contribution to our progress as a civilization. Oliver Wendell Holmes said: "Every ca Oliver Wendell Holmes said: "Every calling is great when greatly pursued."

For American business, labor and agricul-ture need the vitality, the idealism and the dedication of young men and women. They welcome the spirit of adventure, and enterprise so characteristic of youth.

Holmes also said, "As life is action and passion, it is required of a man that he should share the passion and action of his time, at peril of being judged not to have lived.'

No State offers a better example of the opportunities for young people in public service than your own Georgia. For this is the State that produced RICHARD RUSSELL elected Governor of Georgia at 34, the young-est Member of the U.S. Senate at 35, as was HERMAN TALMADGE later. This is the State that produced your young Governor Sanders. This is the State which produced such farseeing men as Secretary of State Dean Rusk, Walter George, Carl Vinson, and Gen. Lucius Clay, who entered public life as young men.

There is a proud tradition of service in Georgia—and you would do well to turn your thoughts toward a role in carrying forward

that tradition.

Finally, you should not put off until mid-dle age those tasks which call for the zest and vigor of youth.

The story is told that Pericles of ancient Greece in his later years came across a young lawyer of Athens who was deeply involved in public affairs.

Pericles chastised the young man for being too bold and too brash—for concerning him-self with things better left to older men. Pericles said: "Of course, I understand,

for I, too, was overeager in my youth. now that I am older I have learned better. Take my advice and do not become so in-

To which the young man replied: "I regret I did not have the privilege of knowing you when you were at your best

In the years immediately ahead you will be at your best. So do become involvedfor only by becoming involved in the needs and aspirations of others, can you truly sat-isfy your own inner needs and aspirations. And I hope you will become involved right here in your own community.

after the Civil War that Atlanta became the symbol of the new South. Rising like a phoenix from the ashes of that tragic Atlanta—under the Constitution's editor Henry Grady and others—came to epitomize the spirit of that new South.

Atlantans took bold action, recognizing the urgent need to reestablish relationships with the rest of the Nation, to restore business, to build a more stable future for young

Today, as then, Atlanta symbolizes the new buth. This is a city on the move—and South. America knows it.

In your hands lies Atlanta's future, and the future of America.

Here in the South there lies before you the immediate task of extending opportunity and defeating poverty—of building a society equal and not separate.

And in this task you are joined by your President and the citizens of this Nation— a Nation unified in its belief that all people and places in America shall be full partners

in our American tomorrow.

All of us bear responsibility for those left It is the fault of no one section of

the country, or political party.

And all of us bear responsibility for righting past wrongs, for practicing what we ch in this country.

In America today we seek to create a great society: a society of opportunity, and jus-tice, and human dignity where each child can step forth into life with his eyes up and on the stars.

You young people, coming of age in this community, have the chance to make this dream come true.

I know of no place on earth where men more love their country than in the South.

More than once have I heard one of my colleagues in the U.S. Senate say: "I love the South."

And he has meant: I love the soil, I love my family, I love the people, I love the spirit of the place that bore me. I love a sense of duty and responsibility. I love men and women who hold their heads high in adversity and face tomorrow with determina tion. I love my country.

It is in this spirit that I charge you with

responsibility for tomorrow.

May you work toward the goal expressed eration ago by the author Thomas Wolfe:

"To every man his chance, to every man regardless of his birth, his shining golden opportunity—to every man the right to live, to work, to be himself and to become whatever thing his manhood and his vision can combine to make him—this is the promise of America.

Remarks of Charles S. Murphy, Chairman, Civil Aeronautics Board, Before the Association of Local Transport Airlines. Houston, Tex.

EXTENSION OF REMARKS

OF

# HON, ALBERT THOMAS

OF TREAS.

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. THOMAS. Mr. Speaker, I request unanimous consent to include in the RECORD the address of the Honorable Charles S. Murphy, distinguished Chairman of the Civil Aeronautics Board, which he delivered before the Association of Local Transport Airlines at Houston, Tex., on November 5, 1965. The address follows:

REMARKS OF CHARLES S. MURPHY, CHARMAN OF THE CIVIL ACRONAUTICS BOARD, BEFORE THE ASSOCIATION OF LOCAL TRANSPORT AIR-LINES, FALL QUARTERLY REGIONAL MEETING AT HOUSTON, TEX., NOVEMBER 5, 1965

I understand it has been the custom for board members meeting with Association of Local Transport Airlines to note some of your success in your business; and also to speak frankly about some of the problems in whose solutions we have a mutual interest. I shall not depart from that custom. I also make the cutomary disclaimer that my staten do not necessarily representational control of the arily represent the views of the

I saw in the trade press several days ago that your top item of discussion here would be strengthening of the local service airlines route patern. I saw that you were also going to talk about class mail rate No. IV and the "CAB staff" position on surcharges. You may have exhausted all these subjects

already, but I will run the risk of addir few more observations, in case you are interested in my point of view—which may be somewhat different from yours. I might also toss into the list of topics a few more—like new flight equipment, and carrier earnings, and public service.

This is a tough set of problems. They are all so closely tied together—the handling of one depends so much on what happens with respect to the others—that it is not only difficult to sort them out for the purpose of dealing with them, it's even difficult to know where to start talking about them.

I don't mean to suggest that the picture is all dark. Indeed, your increasingly successful experience of the last few years is bright and shining proof to the contrary. I do me to say that the economics of the local service air carrier industry are tough. For you to perate your carriers successfully is a diffi-ult and challenging task. The fact that you cuit and challenging task. The fact that you have succeeded as well as you have is a tribute to your skill, your ingenuity, your business acumen—and not least of all your tenacity. For all this, I salute you.

Just 5 years ago the total local service carrier investment added up to only \$57.7 million; and overall rate of return earned on

that investment was only 5.81 percent. By way of contrast, on June 30, 1965, your investment had grown to \$122.3 million, and reported earnings before interest deductions were more than \$15.8 million, a rate of 12.97 percent on investment. This has been a healthy development. It has permitted you to make the necessary investment for improved flight equipment. It has enabled you to upgrade salaries so that you can compete, on somewhat more equal terms, for capable executives and employees. And it has contributed to almost a threefold increase in the average price of local service carriers'

stocks which are publicly traded.

Service too has increased, its quality has improved—and traffic has responded. In 1962 there were 79 cities that received less than two round trips daily, and 120 that generated less than five passengers daily. As of June 30, 1965, there were only 58 cities eiving less than two daily round trips, and only 60 which generated less than 5 pas-The number of city pairs that sengers. averaged less than 7 passengers on board per aircraft mile decreased from 214 in 1962 to 140 in calendar 1964, and is expected to show

further decrease in 1965.

In 1960, 70 percent of all local service was eprformed in that heroic workhorse, the DC-3; in 1965, 73 percent of all local service was provided in more modern aircraft. The first local carrier has now introduced pure jet equipment into service, and, of the re-maining carriers, all but three have introduced turbo-prop equipment. And much additional modern equipment is scheduled for early delivery.

All who participated in the effort that has made possible these advances—the industry people, the congressional leaders who have interested themselves in aviation and the CAB and its staff-have the right to be proud

of all this.

As a recent arrival at the CAB, let me tell you that in my long experience in Govern-ment I have never enjoyed personal associations more thoroughly than with my fellow Board members, and never have I had an opportunity of working with more able or dedi-

As you know, we have recently regrouped some of the staff in a new Bureau of Eco omics. We hope that this will enable the Board to use its staff more effectively.

We intend to place more emphasis on planning, programing, and research to help us with the increasingly complex probl of air transportation. We also believe that the Board can profitably place a greater em-phasis on its promotional responsibilities in the coming months and years. The staff re-organization is intended to assist in this objective

Certainly no segment of the industry stands to benefit more than you from an increased emphasis on the Board's promotional onsibilities. There is almost no area in which we could stimulate the use of air ervice in which you would not receive some

eneficial fallout

Your "Visit USA" tariff for foreign visitors Your "visit USA" tarin for foreign visitors has demonstrated your ability to contribute useful promotional ideas. This tariff is of particular interest to the administration in connection with its program to encourage travel to and within the United States. We expect you to continue the same type of creative action in the coming months. We need e action in the coming months. the benefit of your experience and insight for greater progress. We want your thoughts and greater progress. We want your thoughts and ideas on how other industry segments can contribute to growth and service, as well as ideas relating to your own immediate interests and service. If we are to take full advantage of the expanded opportunities which our great national prosperity has made available, we need the constructive suggestions of ter progress. everyone. We especially want your help in developing additional ways in which to fill some of the empty seats in the planes our arriers are flying.

I should like now to return to a more par-ticular discussion of our local service problems

First, as to route strengthening. I some times hear it said that a particular route should not be awarded to a local service carrier because the carrier wants it to satisfy its ambitions for expansion. To me, this is not a good kind of a reason for withholding a route. There's nothing wrong with wanting something. If a person wants something, that's one reason in and of itself to give it to him. When someone asks me for something, I'd rather be able to say "Yes" than have to say "No". Neither is there anything wrong with having ambitions. In fact, in the business you're in you need ambitions-along with a considerable amount of optito spur you on toward a solution of your problems. Nor is there anything wrong per se with expansion. In fact, as I see it. one of the best hopes for strengthening local service carriers, and reducing Government subsidy, is through route expansion.

Fortunately, changing conditions such as growth in traffic and the availability of new types of aircraft may well present new opportunities for route strengthening which simply

did not exist before.

Let me hasten to add that this route exansion has to be a highly selective proc There are good route expansions and bad route expansions. I'm in favor of the good ones and against the bad ones. Each has to be examined on its merits—carefully but not necessarily interminably—and decided on the basis of the facts in the particular

Without undertaking to mention all the criteria for determining whether a particular route expansion is good or bad, let me say that among the factors which seem to me to be important are the effect on service to the traveling public, the effect on Government subsidy, the effect on the earnings of the carrier seeking the expansion, and the effect on other carriers. It is not always cer-tain that a new route sought by a carrier will be a profitable route. I believe the CAB does have a responsibility to share in the decision as to whether a subsidized carrier should be allowed to take on a route that may be unprofitable. However, in this kind of decision I tend toward more rather than less freedom of choice by air carrier management-particularly where the carrier willing to assume the primary risk by taking the route on a nonsubsidy basis.

It appears that there are significant opportunities for strengthening your routes without undue risk to the welfare of our trunkline industry. Among the top 300 domestic markets, there are 101 markets under 300 miles in distance. These are markets for which your equipment and experience would appear especially adapted. Yet the total traffic in these 101 markets is less than 6 percent of the trunkline revenue passenger

miles

In 1964, the local service carriers carried more than 25 percent of the passengers in only 27 of these markets and in 47 markets they carried less than 10 percent of the traffic. In 58 of the 101 markets, the local carriers have route restrictions which adversely affect their opportunity to serve. course, I recognize that each market must be separately appraised, both as to its ability to support economically the service you may propose, as well as the impact of that service on the carriers already in the market.

One kind of danger we must guard against is the development of local service carriers in such a way that they neglect service to the smaller towns and cities—the very pur-pose for which they were created. This word of caution is applicable with respect to new flight equipment as well as route struc tures. The use of better aircraft is good, and I applaud it. They provide better service for the public and can provide better earnings for the carriers where properly adapted. I have been pleased that, in the various presentations of your reequipment plans made to us, you have all stressed your ability to operate this equipment over your present routes with decreased subsidy need.

There is now some evidence that the change to better equipment actually generates substantial new passenger traffic for local carriers. This is wonderful. There is every reason to hope the transition to let prop jet equipment will greatly strengthen your industry. At the same time, it is most important for you to exer-cise the greatest care to get the kind of equipment that is best suited for the job you are supposed to do. To me this means selectivity in matching types of equipment with particular types of routes. This is a matter which I believe the Board should and will take into account in fixing subsidy rates. We don't propose to forget the small towns, and we don't want you to. On the other hand, I don't think we should pay for flight equipment of a kind that is grossly in excess of the needs of these small towns, and I don't believe you would expect us to.

To return to your route structures. I suppose it is obvious that one way in which they could be made more profitable would be by eliminating loss points that you serve. This raises the question of the public interest in providing service to such points-and under the law I believe it is the responsibility of the CAB on a case by case basis to balance the public benefit against the public cost. Since you are profit-motivated institutions, and very properly so, we cannot expect you to conduct your total operation at a los at least, not intentionally. We might ask you to take some of the lean along with the fat, if there's enough fat. I hope there will be more fat as time goes on. But frankly, I doubt if your route systems will ever be as strong as the route systems of the trunk carriers, and I believe that, apart from questions of fairness and equity, this raises questions as to the extent of your ability to crosssubsidize service to loss points.

This impels me toward the view that we should seek to differentiate more clearly between the routes where you can reasonably expect to make a profit and those where a subsidy is necessary. If we don't recognize the difference between these two situations. we might end up with the wrong kind of

treatment for both.

This brings us to class mail rate No. IV. It is generally agreed the class rates have been an improvement over the earlier systems. I fully share that view. But as gain more experience, and as conditions change, we must continue to seek improvements in the class rate We are now in the midst of a major effort of that kind. Our target date for its effectiveness is January 1,

You have been good enough to provide us with a great deal of information that is useful and is being used for this purpose.

are studying it diligently.

From the beginning, the class rate has been designed to give the industry a fair opportunity for profit; to encourage management efficiency; and to permit the industry

to attract necessary capital.

No one thought that the class rate No. 1 was perfect. But it did end the cycle of cost-plus ratemaking, or as some described it, cost-minus ratemaking. There have since been two modifications of the rate formula. Each of the previous rates adopted by the Board was designed to meet the economic needs of each carrier's system as a whole. Each carrier's system consists of a con-glomeration of routes ranging from those which are commercially self-sufficient to those which require a varying degree of public assistance. It has, therefore, been necessary to modify the formula in an effort to have the subsidy follow the economic need, rather than have payment made indis-criminately for profitable as well as unprofitable services. However, on a carrier system basis, it is possible to do this effectively only

to a limited degree.

The board has, therefore, adopted many devices to protect the public against unnece sary subsidy payments. There is the profit-sharing formula under the class rate; the rate adjustment, and the subsidyineligible certificate condition where a new service appears capable of self-supporting operations. These devices have helped, but they do have shortcomings.

The profit-sharing device has obvious negative incentives for business efficiency. ad hoc rate adjustment lasts only for the lifetime of the particular rate. It is wiped out, as if it has never existed, by the adoption of the succeeding class rate. The subsidy, ineligible certificate is good and effective, as far as it goes. But it does not cover comparable routes—capable of selfsufficiency—on which service was inaugurated either at a point in time when their potential profitability was not apparent, or prior to the adoption of the policy of attaching such conditions to carriers' certificates.

I believe that most of you recognize the limitations of a class rate tied to the operations of a carrier's system. Surely you are anxious to have an opportunity to operate in a more normal commercial environment where success will flow from your ability to maximize your commercial revenues and minimize your expenses. You have great respect as I do, for the value of the profit system to secure economic and efficient operations. I am concerned, as I am sure that many of you are, about the long continuation of any system, in which there can be a question as to whether a service is being provided, or being discontinued, more because of its impact on subsidy payment than because of its market success or its public benefit. I do not doubt that we would both rather have the rules so shaped as to assure that an executive would be judged on how well he runs his airline rather than on his 'class ratesmanship.'

The need for a change in the class rate moving toward a segment basis has been apparent for some time. It is an admittedly difficult technical task to accomplish. But just as important a goal now as was the adoption of the original class rate. Accordingly, we must not wait for perfection, but should attempt to get the best result that we can in the immediate future.

Now just a word about the "CAB staff" osition on jet surcharges. I shall not dwell position on jet surcharges. on this because I talked about fares at some length in Miami last night, and the text of that talk will be available to you.

I do want to say that the current CAB position in this matter is a Board position, not a staff position. We are getting most competent technical assistance from our staff, but the reality is that the Board itself is determining its current policy on fares in fact as well as in theory. The policy may be right or it may be wrong, but we're the ones

who are setting it.

Perhaps I should say that in the broader sense the Congress has determined the policy on fares in the Pederal Aviation Act, and we are undertaking to carry out the mandate of Congress to the best of our ability. The law requires us, in fixing rates, to consider the need of the public for transportation at the lowest cost consistent with furnishing the service. I believe that provision of law has some applicability to the passenger fares of subsidized as well as nonsubsidized carriers. I'm sure you would not expect us to ignore this responsibility.

In conclusion, I wish to salute you again for your accomplishments. You have come I am sure you will go much further— er airlines, better airplanes, better airlines,

profits, better public service.

The path toward progress is one which you and the CAB will necessarily have to tread, or fly, together. Your part of the job will be the larger part, but our part is also in-

dispensible. We are conscious of our obliga tions to you, as well as our obligations to the Government and the public. We pledge you our best efforts.

There is going to be a lot of arithmetic done in the CAB, on your problems in the

months ahead.

Fortunately, the liaison between your carriers and the CAB seems to be very good. We enjoy our personal associations with you and we feel that our channels of communication are good. I hope it will remain so.

We must recognize that although you and we have common goals, we have different responsibilities and from time to time are certain to have different points of view about how to pursue our goals. I'm sure we will both do our best according to our own lights.

I am reminded of the Catholic priest and the Methodist minister who had become good personal friends. One day, at the end of a long and pleasant conversation, the priest rose from his chair and said: "Well, John, I have enjoyed this. But now we should both get on with the Lord's workyou in your way, and I in His."

### F. Edward Hébert: Dynamic Legislator Completes Quarter Century of Service in Congress

EXTENSION OF REMARKS OF

# HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. RIVERS of South Carolina. Mr. Speaker, a full-length portrait of our colleague, F. Edward Hébert, was unveiled on January 3 at the Louisiana State Museum. The unveiling took place at precisely 1 minute after noon on January 3 at the moment when Mr. HÉBERT completed a quarter century of service in the House of Representatives. congratulate the First District of Louisiana for choosing such a Representative, I congratulate the museum on this splendid commemoration, and I congratulate the artist, John Clay Parker on getting EDWARD HÉBERT to stand still that long.

F. EDWARD HÉBERT has not stood still very often. He is a restless, driving man, a mover, a man who has to be doing things. Any one of several of Mr. HÉBERT's notable achievements would be career enough for most successful men. He was a great reporter, a great city editor and perhaps the most outstanding congressional investigator of his time. In 1933, when a sergeant named Batista overthrew the Government of Cubs. the first reporter to interview him was F. EDWARD HÉBERT. In 1939, the New Orleans States broke one of the legendary scoops of our time, the "Louisiana Scandals" story which won the paper the Sigma Delta Chi Award for courage in journalism. The city editor who directed coverage of that story was F. EDWARD

Since coming to Congress, he has carved a singular reputation as an investigator, a legislator, and an orator.

As a member of the House Committee on Un-American Activities, he took part in the famous Hiss-Chambers hearings in 1948 and Whitaker Chambers later referred to him as "the most un-sparing of interrogators." As chairman of the Armed Services Investigations Subcommittee, he directed investigations which recovered millions of dollars in overcharges on defense contracts and untold millions more of the taxpayers' money have been saved because of reforms he forced in military procurement procedures. As an orator, he displays a command of the language matched by very few of all the men who have tread these Halls. His stamp and his influence are reflected in a great deal of important legislation passed by the Armed Services Committee in the past decade

F. EDWARD HÉBERT Is the first man in Louisiana history to serve 25 consecutive years in the House. He long since established the longevity for his own district. In fact, he has served more than twice as long as all but one of his predecessors. Of the 84 men who entered Congress in 1941, only 1 other besides Mr. HÉBERT has served consecutively to this very hour. That other man ought to have a pretty good appreciation of the talents and character of F. EDWARD HEBERT. Mr. Speaker, I am that other man and I do have an appreciation. A public man deserves to be judged on the record of his achievements. If he is also a man of warmth and humor, capable of deep friendship and unchanged by the wine of greatness, that is a bonus that we do not always have a right to expect. the case of F. EDWARD HÉBERT We have One could not have a finer the bonus. friend and there are few men who are called friend by more people. He is one who, in the words of Kipling, "can talk with crowds and keep your virtue, or walk with kings—nor lose the common touch." EDWARD HÉBERT has never lost the common touch.

The commemorative ceremony included a very moving address by Hugh M. Wilkinson, president of the Louisiana Historical Society, and a special prayer by the Most Reverend Philip M. Hannan, Archbishop of New Orleans. I would like to place both of these in the RECORD. I also place in the RECORD a list of the men who have represented the First Congressional District of Louisiana in the U.S. Congress since 1805:

PRAYER BY THE MOST REVEREND PHILIP M. HANNAN, ARCHBISHOP OF NEW ORLEANS

Almighty and eternal God, at the beginning of a new year, we beg you, in your infinite goodness to bless our guest of honor and all of us to your service and to the pursuance of our country's good. We beg that our hopes for peace with justice and freedom so recently kindled, may not be frustrated, but may rather be realized through your almighty power. May our country, through your grace, ever champion the cause of free dom, justice, righteousness and charity, and may we ever uphold the dignity of man both at home and among the nations of the world.

On this solemn occasion we thank you for the 25 years of distinguished service by the Honorable F. Edward Hissart in the Congress of the United States to the cause of our country; we pray that you may bless him and his family and those who are devoted to him; and we ask that he may enjoy your special graces in his future service to our countryand to our community.

Through Christ our Lord. Amen.

ADDRESS OF HUGH M. WILKINSON, PRESIDENT, LOUISIANA HISTORICAL SOCIETY

Mr. Chairman, reverend clergy, and other distinguished guests, Congressman and Mrs. Hébert, Mrs. Duhe, ladies and gentlemen, each of us will recoilect, I am sure, the familiar verse by the poet, Longfellow (and an occasion such as this brings it very forcibly to memory):

"Lives of great men men all remind us We can make our lives sublime, And, departing, leave behind us Footprints on the sands of time."

When he penned this metaphorical deduction, Henry Wadsworth Longfellow must also have been impressed with the extreme and diamaying fleetness of fame. Sand, shifting with every caprice of the winds, washed out by each flooding tide, could scarcely supply permanency to a reminder of great-

Since the dawn of civilization, however, mankind has succeeded in achieving more enduring means of preserving memories of a nation's greatness and the men who made it great, its heroes, its statesmen, its philosophers, its leaders in the arts and sciences. Chisels of sculptors have bequeathed to us in everlasting bronze and marble, brushes of painters have given us in almost equally durable pigments laid upon canvas, the likenesses of the immortals of almost every age and clime. Centuries after a famous personage has passed from life's stage—whether he be among the ancients or the his bust or portrait, or perhaps both, is handed on to posterity as a perpetual reminder of who and what he was and the example of the inspiring life for which his name and reputation stand.

Today we are gathered in this building—itself a monument of Louisiana's fascinating colonial past—to mark a very important date in the career of a great Louisianian of the present era—one of the very greatest, I do not hesitate to affirm, of his day and time; to furnish him, by our presence, a testimonial of respect, admiration, esteem, and even our deep affection; and to be witnesses to the unveiling and first public viewing of such a re-creation, full length, on a painter's easel, of his features and figure as we know them so well, a portrait from a master articles bush, and ans upon which men, women, and children, for generations and generations to come, may look and be pridefully reminded that the subject of this portraiture is one of the truly great statesmen, not only of Louisians, but the entire constitutional Republic of these United States of America.

Let it be well spoken of him, my friends, as we may paraphrase the lines of the poet Byron:

"His are deeds which should not pass away, And his a name that must not wither."

Twenty-five years ago, almost to this hour, on Friday, January 3, 1941, at the opening of the 1st session of the 7th Congress and in the Hall of the House of Representatives in the Capitol at Washington, D.C., Fellx Enward Hisbert, native-born New Orleanian, then 39 years of age, was for the first time administered the oath of office as Representative from the First Congressional District of Louisiana, and there and then he solemnly swore to preserve, protect, and defend the Constitution of the United States.

In the 25 consecutive years of his congressional service that have followed since that oath by him was first taken, it is our sincere belief, founded upon close observation, that no member of the Federal Government has kept that oath more sincerely, more conscientiously unselfishly, more honerably and with a greater degree of scrupulous fidelity, realistic understanding and effective ability in the discharge of his legislative duties than Eddity.

"Man and his littlenees perish, Erased like an error, and canceled; Man and his greatness survive, Lost in the greatness of God."

A number of records have been established by EDDIE HÉBERT'S survival, physically and politically, for a tenure of a quarter century in the Congress. Although in my humble opinion, his most distinguished record has been made, not by the length, but in the quality of his service to his district, his State, and to the Nation, the other records deserve a passing mention; and the most pertinently important of these, of course, is the fact that he has faithfully represented the people of his district, embracing the population of the lower half of New Orleans and the parishes of St. Bernard and Plaquemines, for a longer period of time than any of his predecessors in the office-an illustrious line, it may be remarked, which was started with Daniel Clark 160 years ago, as territorial representative in 1806.

And it may justifiably be interpolated here that, despite his independence of action, his refusal to zestfully play the game of partisan politics, his unswerving adherence to principle rather than a surrender ever to expediency, in the 13 times Hissen has gone before the people of his district in an election, serious opposition to his candidacy never has been mustered, nor has he ever suffered even a close decision in the results at the polls. And that, my friends, is a record of trust and confidence by a constituency unsurpassed in the history of this State.

Of 84 new Members who entered Congress with Hisserr on January 3, 1941, only 2 remain today with uninterrupted service, himself and his close friend and congressional ally in many undertakings, Mewber Rivers of Charleston, S.C.

He has served under five Presidents—and that of itself is a record. He went in under the next to the last term of Franklin Rooseveit, who, of course, has been succeeded, in order, by Truman, Eisenhower, Kennedy, and now President Johnson.

He has served during what history may come in time to record as the most frantically moving period of our national lifemore pressing even upon a legislator than ars of the 18th century which witnessed the formation of the Republic, or the tragic era of the 19th century which saw the fratricidal strife of the Civil War. in the first 12-months of Hisery's service. the day of infamy at Pearl Harbor occurred. and the United States was plunged into World War II. The dawn of the atomic age came with the first use of the A-bomb at Hiroshima, bringing about the termination of the Japanese war. The experiment of the United Nations began with its charter in 1945, suggesting a new and even a very questionable problem of national legislative service; and the so-called United Nations police action in Korea followed, putting our country back again into what was, after all, a bitter and bloody war, just as we are now experiencing its parallel of the conflict in Vietnam. In his time as a Congressman, HÉBERT has participated in the admission of 2 new States, Alaska and Hawaii-admissions to statehood which had not happened for approximately 30 years before he went to the Congress, or since the admission of New Mexico and Arizona in 1912.

Now Congressman Hasser Is witnessing at close range and participating legislatively in the beginning of the conquest of outer space, with all its individual heroisms and the technological accomplishments which stagger one's imagination and even belittle the supposed imaginings of science fiction of only a generation ago. In these and other developments of international and even interplanetary scope, and in the very recent and revolutionary and often violent changes in

social and political life in America, no Member of Congress, since the Nation began nearly two centuries ago, has faced any greater challenge to ability, industry, enterprise, and patriotism than did Eddus Hissar in his incumberous since 1941.

in his incumbency since 1941.

Time does not permit me to catalog his many notable accomplishments in Congress; but, in war and in peace during that 25 years—like the Father of our Country—Hissar has always been foremost in the esteem of the people of this portion of Louisiana, and deservedly so.

Samuel Johnson referred somewhere to what he called the salutary influence of example. George Chapman is quoted as expressing it:

"So our lives, in acts examplary, Not only win ourselves good name, But doth to others give Matter by virtuous deeds By which we live."

The example to the youth of the land which EDDIE HÉBERT has set, by his quarter century of public service, is the consequence of a task to which he came well equipped and dedicated.

First by an honorable lineage, descending from families of the Héberts and the Naquins, tracing back to the early history of Louisiana as a French colony.

Secondly, by the teachings of his parents, particularly his devoted mother, Mrs. Lea Naquin Hébert, who was perhaps to take the greatest pride in his election to Congress in 1940.

Thirdly, by the closeness of affection which exists in his little family; his wife, Gladys, a real helpmate in his often burdensome official life, and his lovely daughter and only child, Dawn Marle, now Mrs. John Malcolm Duhe, Jr., of New Iberia. Today, we also have the beautiful spectacle of Eddress four little grandchildren, sitting with him and Gladys, and I dare say this splendid ceramony in honor of their grandfather is something they will remember with pride for the rest of their lives.

Fourthly, by a profound sense of religious duty, nurtured in an educational institution—to judge by his frequent recollections of it—the Jesuits High School of New Orleans and its faculty, of whose members I have heard him so often speak.

Fifthly, by years of training, before he entered political life, as a New Orleans newspaperman: reporter, columnist, and editora rigorous indectrination in the ethics of journalism which no doubt concrete-set on his conscience the rules of conduct he has since followed in public life.

And lastly, but not least, by an innate instinct to seek the truth, and to follow the path of righteousness, which has always governed EDDIE Hisser's thoughts and deeds in personal as well as public life.

"No beggar ever felt him condescend, no Prince presume, For still himself he bare at manhood's sim-

ple level,
And where e're he met a stranger,
There he left a friend."

And EDDE HESERT'S friends are legion, as this gathering, in inclement weather this

day, so well attests.

Disraell once remarked that "the world is wearled of statesmen whom democracy has degraded into politicians." The great British prime minister would never have had to be concerned about the genuineness of Hésser's loyalty to the public service. To Hésser the virtue has always been in the struggle, not the prize. His accumulation of this world's goods is modest, because he has never sacrificed principle to selfish advantage. Politically, he has never worn any man's collar, nor even any faction's badge which he could not readily put aside when his country's best interest so required.

In short and in conclusion, I consider F. Edward Hérrar the closest example of, and exponent of, real statesmanship and genuine patriotism whom the Congress of the United States has afforded in the last 25 years. In the hands of men such as he, we can rely that the Constitution and the Nation always will be safe against communism and every other peril of this exceedingly perilous

Therefore, today I take a very great pride in having this honor, this priviledge and this opportunity to make the presentation, in effort to posterity, of this portrait, in order that it may serve as an enduring reminder to future generations of the memory of a truly great Louisianian and a great American.

#### F. Edward Hébert: Newspaperman— Congressman

Born October 12, 1901. Son of Lea Naquin and Felix J. Hébert; husband of Gladys Bofill, father of Dawn Marie (Mrs. John Malcolm Duhe, Jr.), grandfather of Kim Marie, Jeanne Louise, Edward Malcolm, and Martin Bofill Duhe.

Entered the U.E. House of Representatives on January 3, 1941, as a Member of Congress from the First Congressional District of Louisiana. On January 3, 1966, became the first individual in the history of the State of Louisiana to serve for 25 consecutive years, a quarter of a century, in the U.S. House of Representatives.

# THE PORTRAIT (By John Clay Parker)

In this life-size portrait I have attempted to vividly capture the personality and character of Congressman Hissar and have surrounded him with the most important symbols of his colorful life and sureer.

To the right in the background is the U.S. Capitol in Washington where Congressman Hisbear began his service in 1941. In the lower right-hand corner is a world globe bringing to mind his world travels as a member of the Armed Services Committee. At the upper left are the three flags under which the Congressman serves—the American, the State of Louisiana, and the city of New Orleans.

On the deak are the gavel, symbol of authority as chairman over the many committees in Congress which he had headed; the cannon symbolic of his close association with the armed services in peace and war; the quill recalling Congressman Hissen's writings as a reporter and newspaperman and finally the bust of the Greek orator Demoethenes suggesting Congressman Hissen's reputation as a forceful and dynamic orator and speaker.

The book being held by Congressman Hérestr is a copy of "I Went, I Saw, I Heard" which he wrote upon his return from wartorn Europe in 1945. The Cathedral of Rheims is easily discernible on the back cover. The Hébert coat of arms can easily be seen engraved on the ring which he is wearing and which was a gift to him at a testimonial dinner in 1962 and which is inscribed "To Finwan Hérestr from a grateful neonle."

F. EDWARD HÉBERT from a grateful people."
The size of the canvas is 88 inches by
52 inches exclusive of the goldleaf frame.

### THE MEN OF THE PIRST

Here are the man who have represented the First Congressional District of Louisiana in the U.S. Congress:

Daniel Clark (territorial representative),

n

n

1805-09.

Julien de Lallande Poydras (territorial representative), 1809-11.

Vacant: Senators Allen Bowle Magruder and Eligius Fromentin accorded privileges of House floor, 1811–13.

Thomas Bulling Robertson, 1813–18. Thomas Butler, 1818–21. Josiah Stoddard Johnston, 1821–23. Edward Livingston, 1832–29.
Edward Douglass White, 1829–34.
Henry Johnson, 1834–39.
Edward Douglass White, 1839–43.
John Slidell, 1843–45.
Emile La Sere, 1846–51.
Louis St. Martin, 1851–53.
William Dunbar, 1853–55.
George Eustis, Jr., 1855–59.
John Edward Bouligny, 1859–61.
Benjamin Franklin Flanders seated in 1863.

by wartime resolution, 1861-63.

Vacant; credentials presented by M. F. Bonzano, A. P. Field, W. D. Mann, T. M. Welles, and Robert W. Taliaferro but their claims were not finally disposed of, 1863-65.

Vacant; credentials presented by Jacob Barker, Robert C. Wickliffe, Louis St. Martin, John E. King, and John Ray and referred to the committee on reconstruction; no further action taken, 1865-67.

Jacob Hale Sypher, 1867–75.
Effingham Lawrence, 1875.
Randall Lee Gibson, 1875–83.
Carleton Hunt, 1883–85.
Carleton Hunt, 1885–87.
Theodore Stark Wilkinson, 1887–91.
Adolph Meyer, 1891–1908.
Albert Estopinal, 1908–19.
James O'Connor, 1919–31.
Joachim Octave Fernandez, 1931–41.
F. Ebwan Héseszt, 1941 to date.

### Address by Senator Len B. Jordan at Idaho Reclamation Association Convention

### EXTENSION OF REMARKS

# HON. GEORGE HANSEN

# OF IDAHO IN THE HOUSE OF REPRESENTATIVES

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. HANSEN of Idaho. Mr. Speaker, on December 13, 1965, Senator Lew B. Jordan, of Idaho, spoke to the annual convention of the Idaho Reclamation Association on the subject of water resources.

Mr. Speaker, Senator Jordan is one of the most knowledgeable men in the Pacific Northwest on this subject. As Governor of Idaho for 4 years he was very active in the formation of the Columbia River Compact Commission, which seeks to guarantee water for present and future needs for the participating States. He was cited by the other member States of the Columbia Basin for his outstanding achievements in this regard.

After completing his term as Governor, he was called to Washington, D.C., to act as chairman of the three-member U.S. delegation of the International Joint Commission, formed to work out water problems with our friends and neighbors to the north, the Canadians.

So it is that, when Senator Len Jordan speaks of water and water problems, he speaks with authority. His talk of December 13 is a keenly perceptive analysis of current and future water problems in the Pacific Northwest. I commend it to my collegues.

REMARKS BY SENATOR LEN B. JORDAN, IDAHO
RECLAMATION ASSOCIATION CONVENTION,
BOISE, IDAHO, DECEMBER 13, 1965

I am honored to be asked to keynote your annual convention. You, representatives of

the Idaho Reclamation Association, are meeting at a time when the challenges of developing our State's land and water resources takes on added emphasis because of increased interest nationwide in the value of our water resources.

Your fine organization, with which it has been ray pleasure to work for many years, has had a leading role in the development of Idaho. I am confident that you will not shirk this role at a time when our State's water resources are being coveted by people across the Nation for a variety of purposes other than making our desert bloom and produce for Idaho.

Water is more than a natural resource it is a necessity of life. Here in the United States we have lived more than 200 years before the water problem became generally acute. But the uses we make of water in modern society are so tremendous that they stagger the imagination.

The coming of our industrial era, the raising of our living standards, and the increased application of water to land have now high-lighted the problems until in much of the Nation there is grave and increasing concern over water resources.

Planning for the development of water resources has undergone a marked evolution during the past 50 years. At the turn of the century the use of water resources was planned largely on a single-purpose, single-project, single-agency basis. Too frequently other equally important uses of water were overlooked. This was because no agency was authorized to plan for comprehensive development. Each carried out its specific function as prescribed by law.

The local people, through established agencies, such as State water resource boards and/or interstate compact commissions should have an effective voice, along with the Federal agencies in this planning which would recognize and properly weigh all the varied and sometimes contrary programs affected by the proposed development of water resources.

In the Northwest we are especially favored with an abundance—cometimes a super-abundance—of potable water. This is not to say that our water is always available in the right place at the right time. The problems of distribution are always with us. How to capture nature's rainfall on our watersheds and then by proper storage and supply management mold this water resource to best achieve its multipurpose benefits is a real challenge, but one that is richly rewarding. These multipurpose benefits must include domestic, industrial, reclamation, power navigation, recreation and fish and wildlife. No longer can we tolerate single-purpose planning.

Here in Idaho finances are the greatest stumbling block to Idaho's desire to put its water resources to beneficial use. We must look to new financial sources as our traditional ones are growing short. Water user payments, power generation revenues and flood control benefits from our projects now being studied will not in most cases provide needed finances for the project.

Idahoans are almost unanimous in their belief that to assure that we do not lose our water, we must put it to use on the land. We have a similar unanimity for such projects as the Lower Teton Dam, Lynn Crandail Dam, supplemental water for areas south of the Snake River in Cassia, Twin Falls and Owyhee Counties, the southwest Idaho development project and other projects as yet unannounced. However, it is when the subject of getting these projects financed that we see our water resource development hopes stalemated.

Projects with a high benefit-to-cost ratio that could be paid out largely by water users have long since been constructed. After these were built we used power revenues to supplement water user fees to insure project

feasibility. But the remaining water development projects in southern Idaho are far beyond the ability of water users to pay out in a reasonable length of time even with added power revenue benefits from the

With the reduction of rates for Federal power generation now under the Bonneville Power Administration, power revenues which might have been available to future Idaho projects have been reduced. And to date we haven't been able to get funds for Idaho projects from Federal projects downstream in the BPA system even though Idaho watersheds provide a substantial portion of the water which turns the turbines at these downstream sites. Thus, the financial strait-jacket on Idaho water resource development becomes tighter.

Flood control benefits of Idaho projects are another help in financing. However, the recent signing of the Columbia River Treaty with Canada has preempted much of the flood control values that could have come from Idaho storage, because of the huge amount of Canadian storage, we have already purchased for this purpose. Here we see another financial source being materially

One basic point I wish to emphasize early in this statement is the interdependence of land and water. Any serious study or planning for one must necessarily and inevitably involve the other. Sound water resource development depends first of all on a healthy, well-maintained watershed. This is of primary importance.

mary importance.
Several years ago I spent a summer in Afghanistan investigating the economic feasibility of a large reclamation development. There I found that centuries of watershad abuse had first removed all of the fimber from the slopes and the higher elevations. Overgraing land had contributed to the destruction of the brush and grass cover, leaving insufficient vegetation to retard the runoff. Erosion was inevitable and devastating almost beyond belief. Soil movement had bared the hillsides to bedrock so that there was little more runoff retardation than from the roof of a building.

Masonry arched bridges perhaps a quarter of a mile long stood stark and desolate in the desert, mute evidence to the fact that a rampaging river had dammed its own channel by lodging debris against the bridge piers and then cutting a new channel as if in defiance of man's effort to contain it. At flood stage the river was a monster out of control. In the heat of summer when water was most needed the river would shrink to a docile, sluggish stream, an altogether insadequate fraction of its flood stage.

In Afghanistan I have seen drifting sand dunes uncover the houses of a village that was once the center of an irrigated agricultural community. Here are the ghosts of a civilisation that perished for lack of water—a silent indictment of man's refusal to observe sound conservation practice.

This is where I learned more of the im-

This is where I learned more of the importance of watershed protection against complete ruination. Here is was indelibly printed in my mind that we cannot take for granted that water will always be available downstream, no matter how we abuse the watershed upstream.

In the Columbia Basin most of the water-

In the Columbia Basin most of the watershed is federally owned. This poses a real problem because the funds available for watershed protection on public lands are not adequate. Moreover, funds which provide technical assistance to private landowners for soil conservation have been substantially reduced in the administration's budget.

In order to protect our watersheds, sometime in the not too distant future, it may be necessary to levy against power sales for headwater conservation purposes, including additional headwater storage. A very small assessment per kilowatt hour on all power

sold, public, private, Federal, and non-Federal alike could provide a fund to keep the water-sheds healthy. A prudent businessman employs similar methods to protect his long-range interest. No less prudent should be our approach to sound conservation and watershed protection.

A second point I wish to make is that there is no single uniform policy, no magic formula relating to water resources which can be applied to all parts of the country at all times and in all places. The problems involve particular needs and uses of water from State to State, from basin to basin and from region to region.

While it is generally sound to plan coordinated development of water resources by large river basin areas, it is possible to place too much importance on this concept without giving full consideration to the states as sovereign units in basin complexes because the large river systems have no respect for State lines. For example, basin planners must concede the validity of water rights that are perfected under State law.

Too often the upstream states of a river basin are short changed in the allocation of benefits derived from main stem plants downstream. A case in point is the Columbia Basin. Testimony before congressional committees indicates that some 13 million average kilowatts of hydroelectric power can be developed in the U.S. portion of the Columbia River Basin that will be cheaper than an alternate source. Most of this power development will be in the State of Washington or on its boundary. Yet the watersheds of the State of Washington will supply but a small part of the water that passes through these mainstem turbines.

Washington watersheds contribute less than 3 percent of the water at Grand Coulee, 8 percent of the water at Chief Joseph, and 13 percent of the water at McNary. Thus most of the water originates on upstream watersheds, but the downstream reclamation projects receive a lion's share of the benefits. Simple equity would call for a sharing of downstream benefits with upstream States which supply the water.

Insofar as upstream Ganada is concerned the United States-Canada Treaty gives recognition to the contribution that will be made by yet-to-be-built Canadian storage. A cash payment of more than one-quarter of a billion dollars has been made by the United States to Canada. This will pay for Canada's entitlement to a share of increased production at U.S. plants downstream made possible by Canadian storage for a 30-year period. Bear in mind that not 1 gallon of new water will be added to the Columbia. What will be accomplished is a partial regulation of the steamflow, storing the flood peaks and releasing the water when normal streamflows are lowest. In addition Canada will receive \$64 million for flood control benefits to the United States.

This treaty is a great step forward in river basin planning. As a former chairman of the U.S. section of the International Joint Commission, I was privileged to work on the early stages of the Columbia Treaty and I know firsthand the months and years of assembling the basic data which preceded the additional months and years of hard bargaining. The significant fact is that an accord was reached and consummated in a treaty thus indicating, at the international level, a meeting of trained minds as to the value of upstream watershed and storage resources.

Likewise the upstream watershed and storsge resource of Montana, Idaho, Wyoming, and Oregon make a contribution similar to, and perhaps even greater than, that to be made by Canada.

Now someons will probably challenge this comparison on the basis that much of the U.S. headwater storage is for reclamation and that part of this water is consumptively

used. The answer is that the purpose of upstream storage is to capture the floods at or near the source and to release the stored watern as needed.

Irrigation accomplishes this purpose admaterially. Even the water that is lost by transpiration or evaporation is returned in the form of added precipitation. Only that small part which becomes a part of the plant is truly lost.

In Idaho, on the Smals River alone, we have between 8 and 9 million acre-feet of storage new through reclamation projects. Two-thirds of this water returns to the Smake River during its low flows. Thus, by shaping and improving the runoff pattern, reclamation contributes substantial flood control benefits and hydropower benefits as well.

At present time no provision is made for upstream States to share in downstream benefits and there is no provision in the law for such a sharing. Nor is there any provision in the law that would prohibit some such arrangement as a Columbia Basin project account through which upstream reclamation projects might share in the downstream power revenues as an aid to reclamation beyond the ability of the water users to pay. This is not an unreasonable arrangement.

Let us review briefly, the evolution of reclamation law. The basic reclamation law, beginning in 1902, required that the cost of irrigation facilities be repaid, but without interest. Even though such projects benefited directly many other people in the community, the water users were responsible for the repayment of the total cost. Under this general requirement the projects which were relatively simple and easy to build were constructed, leaving the more complicated and expensive ones undeveloped. Although many of these more complicated and expensive ones undeveloped. Although many of these more complicated and expensive irrigation projects are desirable and worthwhile, the water users are unable to return the irrigation costs in full and it is thus impossible to establish their feasibility under reclamation law without repayment assistance from sources other than the project lands.

In recognition of this situation the Congress has from time to time, enacted legislation providing for the use of power revenues to assist in the return of costs of a reclamation project.

Up until now only an individual project-by-project approach has been legislated in the Pacific Northwest. To illustrate: the Columbia Basin Reclamation project in the State of Washington of 1 million acres will require financial assistance in the amount of \$474 million from power revenues from Grand Coulee Dam. By 1975 the power costs of Grand Coulee with interest will have been paid back to the Federal Government. The net power revenues from 1975 to 2022 are pledged to pay that part of the Columbia Basin reclamation project beyond the ability of the water users to pay. The water users en this project will pay \$125 million.

This project is an outstanding example of a thoroughly sound reclamation project integrated physically and financially with a specific power project and using a substantial block of assistance from project power revenues.

However, under this piecemeal approach, the development of a reclamation project depended entirely upon the accident of location and the physical possibility of developing power in connection with irrigation on each side specific project. Other reclamation projects of equal merit but having no direct tie-in with a hydropower installation could not be developed unless power assistance was made available from another source not directly a part of the reclamation project.

Congress has met this problem in three major river hasins of the West by providing

for the use of power revenues to aid irrigation on a basinwide basis. The effect of this action has made possible the development of desirable but isolated irrigation projects or desirable but isometh irrigation projects by providing financial assistance from the pooled net power revenues of all Federal power projects in the basin after power coats and interest have been repaid to the Federal Government. The basins where this basin account principle applies include the Missouri, the Upper Colorado, and the central

valley of California.

To date all efforts to implement a basin account for the Columbia have been unsuccessful. In lieu of a basin account a few isolated irrigation projects in the lower basin have been tied to a specific Federal power project not physically a part of or in any way connected with the irrigation project for

connected with the irrigation project for which financial assistance is sought. In my opinion this practice discriminates unfairly against an upstream State which supplies much more water for main stream powerplants than the downstream State which is the sole beneficiary of all funds that might be available for irrigation assistance from these downstream plants. More-over, it could lead to the rejection of a sound reclamation project in an upstream State in favor of a downstream project of less merit.

The use of political muscle to reserve all power benefits downstream exclusively for downstream reclamation assistance does violence to the concept of the interdependence of land and water resources. It works a gross injustice on upstream States simply be-cause the accident of a State boundary may separate the upstream watershed from the downstream hydroplants.

For many years the National Reclamation Association has been on record to the effect that reclamation development on a basin wide multipurpose basis is the only manner in which full utilization of river basin water resources can be realized.

A basinwide Columbia project account

should be properly funded. I do not contend that the Federal power projects alone shall carry the whole burden of assistance to future reclamation. Every hydro power-plant in the Columbia Basin should contribute to the project account whether it be

Federal, private, or non-Federal public.
Federal power projects do not require licenses from the Federal Power Commission. All other hydroplants do require 50-year licenses. As in other river basin accounts no funds would be available from Federal hydro projects until the power costs plus interest are repaid to the Federal Government and then only such unassigned revenue that has not been already pledged as authorized financial assistance to reclamation.

In the case of licensed projects no financial assistance should be required under existing licenses but should be a part of rate base for a license renewal.

The amount of assistance required and what legislation is necessary to implement a Columbia Basin project account are matters that should be discussed in a proper forum between the States involved and I believe the proper forum is a Columbia Basin compact meeting.

Back in 1951 when I was Governor of Idaho, at my instigation, a Columbia Basin compact proposal was made by Idaho to the other basin States. Over the years numerous meetings were held and more than once an acceptable compact seemed near accomplishment. Having worked on the Columbia Treaty, I know how worthwhile and productive such discussions can be. It is my hope that agreement among the State will soon be reached, for I earnestly believe the compact concept has a very real and mutually valuable place in interstate negotiations.

o

r

At present, the compact seems to be stalled. I regret that this is so. But a new approach to cooperative planning may be provided by the Water Resources Planning Act of 1965

which I was pleased to cosponsor. The need is great for serious conferences between suthorized representatives of the several states in the Columbia Basin. All of the States now have proper agencies to engage in open discussions of our many common problems. Idaho's new water resources board is off to a good start. I applaud its effort and its willingness to tackle the problems without fanfare or delay.

I turn now to another matter which should be of grave concern to Idaho reclamationists and conservationists. Recently there was introduced in the Congress the administra-tion's wild rivers bill which would designate five rivers in the United States to be preserved in their wild state. Included in the five are Idaho's Salmon and Clearwater Riv-

Both of these rivers are part of a compre-hensive plan for Columbia Basin develop-ment as detailed in House Document 581 adopted by the 81st Congress, 2d session. This document indicates that the combined runoff of the Salmon and Clearwater Rivers is greater than the total runoff of the Coloradio River Basin and that the combined hydroelectric potential of these two rivers is greater than this hydroelectric production of Grand Coulee Dam.

Do not forget that the Grand Coulee Dam is the paying partner for the "cash register" which supports the 1-million-acre project in the State of Washington. This will point up the magnitude of the exonomic values which will be lost to Idaho if the wild rivers bill

passes in its present form.

Now we in Idaho agree that our two rivers have wild characteristics in abundance. We are not unmindful of the need to preserve for posterity something of this irreplaceable resource. We know, too, that two-thirds of the area of Idaho is federally owned, and that, of all the States in the Union, Idaho has the largest area set aside for a single purpose a wilderne sa that is traver wilderness us by many miles of streams of unsurpassed wild

So in Idaho we have a double loyalty in our great love for the wild, in our determination to protect our great wildlife and recreation resources and in our desire to grow and de-velop agriculturally and industrially. We be-lieve that these objectives are not incom-

We are pleased that Idaho can contribute so much in wild beauty, spawning grounds, wildlife and recreation resources, and water in great abundance to the community Northwest States, but frankly we believe that some place in this whole picture there should be a measure of reciprocity.

Because they are important to Idaho reclamationists, I quote the minority view of Senaturs THOMAS H. KUCHEL, GORDON ALLOTT, LEN JORDAN, MILWARD SIMPSON, and PAUL FANNIN, on S. 1446, the wild rivers bill:

We agree with the concept that certain of our Nation's great scenic rivers should he pre served in their free-flowing condition. We agree that such rivers should he set aside to promote sound water conservation and the public use and enjoyment of the scenie, fish, wildlife, and outdoor recreation values. We agree that the policy of the Congress to pre serve, develop, reclaim, and make accessible for the benefit of all the people selected parts of the Nation's free-flowing rivers is a commendable objective. This is a highly praiseworthy use of America's dwindling re to meet the ever-increasing demand of our pleasure-seeking population and has its rightful place in the overall plan of national outdoor recreation.

"We agree in the proper use of river basin planning for additions to the system as outlined in section 3(e) of the proposed legisla-tion, as well as the general procedures set forth in sections 3(d) and 3(e).

"A river or rivers should not be included in the wild river system if such inclusion would seriously disrupt the present or po-

tential higher beneficial use of the river or the economy of the area through which the river flows or which it serves. No river should be set aside in perpetuity from future harnessing to supply water for our cities, for agriculture, for flood control, to generate hydroelectric power, or to aid navigation without careful and thorough study to determine whether it is feasible and desirable in the public interest. Heview should be made of all comprehensive river basin plans, and potential alternative uses of the water and related land resources involved must be

Section 3(b) and following, of S. 1446, provide the procedure whereby certain designated and new rivers may be added to the wild river system. Such additions are sub-jected to a most thorough study and evalua-tion at all levels of government and by any and all agencies which may profess an interest. This is not so with respect to those rivers designated in section 3(a). The rivers listed in section 3(a) become 'instant' wild rivers upon the signing of the legislation, notwithstanding the fact that such rivers may be a part of a comprehensive river basin plan or subject to future study under State or Federal laws.

"Congress, at this session, enacted into law the Water Resources Planning Act of 1965 (Public Law 89-80). Its specific purpose is to inventory and evaluate the water resources of the Nation, river by river, State by State, havin by beain, with Federal, State, and local participation. Congress also unacted into law the Federal Water Project Recreation Act (Public Law 89-73), whereby it expressed its intent to encourage non-Federal development and operation of recreation and fish and wildlife enhancement features of Federal water resources projects. The act recognizes that there are non-Federal as well as Federal responsibilities with respect to the provision of outdoor recreation opportunities and fish and wildlife enhancement and it is anticipated that the Federal water agencies will work with the States and local governments in the determination of the scale and devel-

opment of these aspects of recreation.

"Both of the above acts contemplate comprehensive study herors further action. We do not feel that such study has been given, or a complete investigation into the feasibility of including in the wild river system the two wholly Idaho rivers, the Salmon and the Clearwater, has been made.

the Clearwater, has been made.

"The committee considered and rejected amendments submitted by Senator Jossaw which would have removed the two Idaho rivers from the 'instant' section, section 3(a), and placed them in the study section, section 3(b), while at the same time placing a moracrium on any further development of the rivers pending a full and comprehensive study of the potential economic need for future development of the rivers. It is our future development of the rivers. It is our belief that further study would not defeat the purpose of this legislation and that the public has the right to know.

"Both of these rivers are a part of a com-prehensive plan for Columbia Basin develop-ment, incorporated in House Document 531

adopted by the 81st Congress, 2d session, "The combined runoff of the Salmon and Clearwater Rivers is greater than the total runoff of the Colorado River and the combined hydroelectric potential is greater than Grand Coulee or greater than all hydroelec-tric potential on the entire Colorado River.

"Back through the years these rivers (especially the Salmon) have been protected as sanctuaries for anadromous fish spawning. Until the dams versus fish controversy is set Until the dams versus has controversy is set-tled no development plans are being pressed. Ever since the building of Grand Coulee Dam, which destroyed all upstream anad-romous fish runs above that point, the few remaining spawning beds have increased in value and importance. "The salmon problem will be solved in one of two ways: no salmon at all in the

upper reaches (as appears possible now) or a means will be found to pass salmon over dams. (The new 750-foot Dworshak Dam will have facilities for migrating salmon.) In either case, it may be possible to have both fish and dams in the not too distant future. Until this is solved no one proposes dams and we do not. "The importance of the decision to be

"The importance of the decision to be made here must not be taken lightly. We are not arguing for dams in wild rivers. We do argue for the right to evaluate the effect of

plan changes.

"The economic effect of an abrupt change for the Saimon and Clearwater from the plan adopted in House Document 531 is a subject of great concern. A Columbia Basin account does not exist. Thus the full economic shock of this change from full development to freeflowing status will be borne by Idaho alone. This is unwarranted, unnecessary, and inequitable. Idaho's greatest resource is water—it has no fossil fuels. To deprive one State of the right to evaluate the economic potential of two great rivers with a combined value equal to that of a fully developed Grand Coulee with its million-acre reclamation project or the equivalent of a fully developed Colorado River is the greatest inequity in this bill.

"The defeated Jordan amendment would have placed these two Idaho rivers in the study section with full guarantee to protect their free-flowing status until the economic dislocations are studied and worked out. The Green River in Wyoming, which faced similar controversy, was moved from the 'instant' section to the study section of the bill for further study.

"This present bill creates a National Wild Rivers System. But there is no language in the bill that would provide even partial compensation to a State for economic losses resulting from a change of plans from full development'to freeflowing status of its rivers. Surely it is not intended to penalize one State excessively. Under the circumstances, the least that should be done is to regard the inclusion of the Salmon and Clearwater Rivers in the "instant' section of the bill as a Columbia Basin account status for Idaho in the community of Columbia Basin States. For this there is ample precedent. Even in this bill the segment of the Missouri River, now in the study section, if placed in the wild river system would be a Missouri Basin contribution to the system rather than a contribution wholly and solely by Montana.

"We think it is important that wild rivers be designated where the people are so that many more can enjoy this resource. The bounties attaching to wild river designation should not be confined to areas already served by abundant resources for outdoor recreation. This is so important that perhaps no State should have two rivers until all States have one river so designated. The stated purpose to reclaim and restore could very well apply to such rivers as the polluted Potomac which is a national disgrace.

"As has been mentioned before, the primary

"As has been mentioned before, the primary purpose of the bill is to keep the wild rivers in a freeflowing condition. A report from the Geological Survey, Department of the Interior, indicates that the Salmon River and the Clearwater River may be too wild. These rivers are the worst flooders on the Columbia River system.

"While these two rivers in an average year contribute only 14 percent of the normal flow of the Columbia River at the Dalles, in 1948, when millions of dollars of damage was done by the flood waters of the Columbia, the Salmon and the Clearwater contributed 27 percent to the floodflow. In the disastrous flood of 1964, the two rivers contributed 30 percent. Dworshak Dam, now under construction on the north fork of the Clearwater, would only reduce these percentages to 23 and 25 ½ percent, respectively.

"The bill prohibits the Federal Power Commission from authorizing a dam or other project work under the Federal Power Act in any wild river area except as specifically authorized by Congress. It should clearly be understood that no legislation could prevent Congress from authorizing necessary and desirable flood control projects or other public works of any kind if any subsequent Congress made such a decision.

#### WATER RIGHTS

"During the consideration of this bill by the Interior Committee, certain amendments submitted by us were adopted by the committee and are a part of the bill as sections 5(d) and 5(h). These amendments clearly express the intent of the committee that, by the passage of this legislation there will be no change in the established principles of Federal-State water law.

"There will not be a reservation or appropriation of all unappropriated water of the rivers and streams included in the wild river system areas. There will be a reservation of waters only for the purposes outlined in the bill and only in quantities necessary to accomplish these purposes.

"When acquiring water rights for wild river purposes, rights which are vested under established principles of State or Federal law, just compensation shall be paid.

"The jurisdiction of the States over waters of any stream included in a wild river area should not be affected by the passage of this bill. The Federal Government should be required to comply with State laws when acquiring water rights or vested interests therein.

"We shall reoffer amendments for consideration by the Senate which will expressly confirm these principles. Subsequent to committee action, the Department of the Interior has advised that it does not object to the adoption of these amendments."

In his letter to the President of the Senate endorsing the national wild rivers system, Secretary of Interior Stewart L. Udall had this to say:

"The President, in his state of the Union message of January 4, 1965, called attention to the need to protect the beauty of America, which he noted has sustained our spirit and enlarged our vision for more than three centuries. He expressed the hope that some of the unspoiled stretches of our waterways will be preserved under a wild rivers bill. There is a need to act now to protect this part of our heritage.

"In his February 8 message on natural beauty the President recommended the establishment of a national wild rivers system. The enactment of the draft bill enclosed with this letter will carry out that recommendation. The bill is designed to preserve, reclaim, and make available for the benefit of all the American people specifically chosen segments of the Nation's diminishing resources of free-flowing rivers.

"While river flows have been harnessed to aid navigation, control floods, increase farm productivity, and hydroelectric power, too little attention has been given to the importance of protecting the very water we drink and the values of fish and wildlife, scenic, and outdoor recreation resources. These values, although often measureless in commercial terms, should be preserved by a program that will guarantee America her heritage of unspolied, free-flowing rivers. Our belief is shared by a wide range of public and private authorities, and the time to act is now, before it is too late."

So I repeat that I do not disagree in principle with the purpose and objectives of a National Wild Rivers System. I repeat also from the language of the minority views that no provision is made to compensate a State for economic losses resulting in a change of plans from full development of its rivers to less than full development in order to pro-

vide free-flowing wild rivers "for the benefit of all the American people."

I believe the wild rivers bill, S. 1446, should be amended to correct what obviously might be an unreasonable diminution of a State's natural resource potential for a national purpose.

Without attempting to suggest the wording of such an amendment, certain basic equities should be maintained. For example: If the dedication of the output of the watersheds of a State is made "for all of the people" then all of the people should make fair restitution to the State for the loss of potential economic alternate development. The language of the amendment should be broad enough to cover any wild river in any State.

It just happens that Idaho is asked to contribute two of the five rivers of the initial Wild Rivers System. It just happens that Idaho's two rivers have greater economic value under alternate development than all the other rivers mentioned in the bill.

The amendment should provide, therefore, that whatever net economic lossess are sustained, that State should receive from the Federal Government a nonreimbursable credit for application to water resource development as determined by that State, approximately equal to the loss sustained.

There is a wealth of precedence for the use of nonreimbursable costs in resource development. Let me cite a few:

The rivers, canals, and harbors of the Nation have been improved and maintained from the Federal Treasury. There is no reimbursement. The users of the waterways pay nothing for the transportation arteries into which hundreds of millions of dollars have been poured. It is justified on grounds that cheaper transportation by water is a national asset.

A second precedent is found in the Flood Control Act. Hundreds of millions of dollars have been spent by the Federal Government to protect people, farmlands, home, and industries from the ravages of floodwaters. No portion of the funds so paid is reimbursable, or ever has been. This is based on the proposition that safety from flood damage makes for a greater national prosperity.

A third and even more illuminating precedent is found in the authorization of several recent projects wherein the benefits calculated for recreation and for fish and wildlife are capitalized and treated as nonreimbursable items. To illustrate, the Touchet division of the Walla Walla projects will cost \$15,709,000, of which nearly \$8 million, or more than 50 percent, is allocated to fish and wildlife enhancement, a nonreimbursable item. Again, under the justification that such development is a national asset.

8 6

e

t

n

is

t

What, then, could be so unfair in recognizing the need to make a State whole if certain of its resources are taken for all the people of the Nation—resources which, under alternate development, would enrich the economy of the State concerned.

Senate bill 1446 provides for a review board consisting of the Secretary of the Interior, who shall be its chairman, the Secretary of Agriculture, the Secretary of the Army, the Chairman of the Federal Power Commission. and the Governors of the several States.

The purpose of this board is to consider the change of circumstances of the status of any river included within the National Wild Rivers System and to report to each Congress any significant changes that might call for legislative action.

The duties of this review board could be expanded to include making a determination of economic losses to a State arising from inclusion of a river or rivers in the National Wild Rivers System for the benefit of all the people. Restitution could be provided in the form on nonreimbursable credit for such water development assistance as the preempted resources might have made to a State's economy under full or at least an

alternate plan of development. Such nonreimbursable credit should be utilized entirely at the discretion of the affected State.

I ask you as reclamationists to weigh carefully the merit of the plan I suggest here. This plan is definitely in the interest of wise use and proper conservation of our land and water resources without imposing undue burden on any area. I urge the proponents and the sponsors of S. 1446 to join me in my effort to make a wild river bill workable and equitable.

The amendment should be written in general language to cover all dislocations in all other States where wild rivers are involved. This is simply the application of the accepted rule in water resource development that recreation and fish and wildlife enhancement are nonreimbursable items.

What is Idaho's stake in such an amendment? Let us look at some figures on 3. 1446 which are used here for illustrative purposes only, subject to the refinement that proper research will provide. On the credit side of the account the Northwest will gain the preservation of a fish resource calculated by the Fish and Wildlife Service to be worth \$11.082,000 per year.

On the debit side idaho will lose potential hydroelectric production estimated in House Document No. 531 as being in excess of 2 million kilowatts valued conservatively at \$40 million per year. Idaho will also lose the flood protection that proper stream regulation would provide. But, from a reclamation standpoint by far the most important point, is that Idaho will also lose the reclamation assistance that this hydroelectric production would provide in a total amount not less than \$400 million based on the fact that a comparable hydroelectric output at Grand Coulee Dam provides that amount of assistance to about 1 million acres of new land.

I have spent enough time at the bargaining table with our Canadian neighbors on similar water resource problems to know that Idaho has an interest in wild rivers legislation that must be protected and defended by proper amendment before the bill is passed.

To sum up: I repeat what I said at the beginning: Finances are the greatest stumbling block to Idaho's future reclamation development. There is general unanimity for such projects as Lower Teton, Lynn Crandall, for supplemental water for Salmon Falls, new water and supplemental for other wast areas on both sides of the Snake River in eastern and southern Idaho, the southwestern Idaho development project which must include also the Weiser, Payette, and pumping projects in the Bruneau and Wickahoney areas.

ects in the Bruneau and Wickanoney areas.
Idaho's reclamation future depends on developing a reliable paying partner to supplement what the water users can pay.

Idaho must look to the output of its own watersheds for this source. This is Idaho's entitlement—our resource heritage.

Before we surrender—without compensation—Idaho reclamation's potential cashbox to a National Wild Rivers System, let us be sure we know what we are doing.

### Like Father, Like Son

EXTENSION OF REMARKS

# HON. PETER W. RODINO, JR.

OF NEW JERSET

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1966

Mr. RODINO. Mr. Speaker, one of the greatest handicaps any young man may experience in growing into manhood is following in the footsteps of an illustrious father. Not that dad deliberately

does anything to overshadow his son; but the fame of the father just rubs off on his son's shoulders.

One of my dear friends, and a constituent, has a son who already has made a name for himself. His father, Dr. V. D. Mattia, 340 Kingsland Road, Nutley, has capped a brilliant career recently when he was chosen to be the president of Hoffmann-LaRoche, Inc., one of the world's major pharmaceutical companies. Dr. Mattia served with distinction at sea in the Naval Medical Corps during World War II and Korea, and combining a brilliant business sense with his equally brilliant medical aptitude, has risen rapidly through the ranks to the very top of his company, and his profession.

His son, Peter, is a fine student and athlete who a few days ago was honored in his hometown as the Athlete-Student of the Year. Such an award is always worthy of praise, but this year especially so, for Peter does not attend the local high school in Nutley. And this year marked the first time in the long history of the award that the selection committee chose a young man who did not attend the local school system. This will help give an idea what a superlative lad Peter must be. But the story is better told in an editorial by the publisher of the Nutley Sun, Frank A. Orechio, in the current edition of his paper.

As you will see, in Nutley they will be referring not to "the doctor's son," but to "Peter's father" when they talk about a Mattia these days:

[From the Nutley (N.J.) Sun] Like Father, Like Son

Three weeks ago a proud son with beaming eyes observed the Nation applaud the spectacular achievement of a famous father.

On Saturday night the roles were reversed. A proud father, in the company of an equally proud mother, sat allently in the audience listening to speakers extol the virtues of their honored son.

The proud father was Dr. Virginius (Barney) Mattia, who, at the age of 42, on January 1, became president of Hoffmann-La-Roche, Inc., one of the world's largest pharacteristical comments.

maceutical companies.

The honored son is Peter Mattia, a champion wrestier and recipient of all-State honors as a linesman at St. Benedict's football team. On Saturday evening Peter was awarded the American Legion's Annual Scholastic Sports Award. Young Mattia's achievements at St. Benedict's were of such magnitude that local American Legion officials responsible for the selection broke precedence this year to name a non-Nutley High School athlete as the award winner.

It is not easy for a son to establish his own identity while living in the shadows of a famous father. His father's attainments have proven to be a stimulating inspiration for Peter. Peter has been offered 30 full 4-year scholarships to the Nation's leading colleges—overwhelming proof that his outstanding accomplishments serve to carry out his own unmistakable image.

The American Legion officials who headed up the selection committee were Vincent Donohue and William Pratt. They and their committee members are to be congratulated for developing nomination procedures which permit our community to honor our most outstanding athletes by throwing the contest open to all local students regardless of the school attended.

The Donohue-Pratt committee is also entitled to congratulations for awarding the Legion's Amateur Award to a former Nutley High School star. Policy Statement on Vietnam

EXTENSION OF REMARKS

### HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1966

Mr. RYAN. Mr. Speaker, the Synagogue Council of America, in a statement approved on January 14, 1966, has added its voice to the chorus of thoughtful Americans who are asking for a peaceful solution to the war in Vietnam.

The Synagogue Council of America, which represents the united voice of Orthodox, Conservative, and Reform Judaism, is an organization of the following six national Jewish religious bodies: Central Conference of American Rabbis, Rabbinical Assembly, Rabbinical Council of America, Union of American Hebrew Congregations, Union of Orthodox Jewish Congregations of America, United Synagogue of America.

The council's policy statement ex-

Having searched our conscience, we have come to the conclusion that peace and the cessation of hostilities must remain our major objective.

The statement goes on to commend the President's current peace offensive and to urge the administration not to be swayed from this course by those who would escalate and expand the war.

I am pleased to call to the attention of my colleagues the thoughtful statement of the Synagogue Council of America, as follows:

POLICY STATEMENT ON VIETNAM ISSUED BY THE STNAGOGUE COUNCIL OF AMERICA

A decisive contribution of Judaism to the morality of international affairs is the affirmation that nations, like individuals, must be guided in their actions by justice and morality.

morality.

Nations, like individuals, cannot escape God's judgment, for "He will judge the universe with justice, and nations with righteounness" ("rehu yishpot tevel betwedek, yadin le'umin bemesharim"). Because nations are comprised of individuals, it is ultimately the individual who must assume moral responsibility and moral judgment in the affairs of his country. This we must do not only because of the imperatives of our religious commitments but also because we cherish the prerogative of citizens in a democratic society to express their views.

No one course of action in this complicated attuation can clearly solve the moral dilemma in which we find ourselves. The U.S. commitment to the Government of South Vietnam has created a moral responsibility which we cannot ignore in our quest for peace. Yet, having searched our conscience, we have come to the conclusion that peace and the cessation of hostilities must remain our major objective.

Along with Americans of all faiths, we confront with deep sorrow the loss of American and Vietnamess lives, both North and South, and the suffering of the civilian population in that agonized and war-torn country. Our religious conscience compels us to exert every influence so that the action in Vietnam can be moved from the bettlefield to the negotiating table.

We therefore note with gratification that President Johnson has an numerous occasions committed the administration to the principle of unconditional discussions leading to the negotiation of the cessation of hostilities

and a peace settlement.

We particularly wish to commend President Johnson and the administration for the recent halt in bombing of North Vietnam. It serves as a convincing demonstration that despite pressures from some quarters for a military solution to the problem, the purpose of our military effort in Vietnam re-mains one that is aimed at speeding an honorable settlement. It is also a convincing demonstration of the integrity of President Johnson's public expressions of our willing-

ness to negotiate unconditionally.

We are deeply concerned that in the event present halt in the bombing of North Vietnam fails to elicit the prayed-for response from Hanoi and the administration feels constrained to resume these bombings, discouragement and frustration may alter the present character of the conflict as a limited war for limited goals; i.e., the integrity of South Vietnam. The danger of new pressures for unlimited escalation of the war resulting from impatience and disappointment is grave Such an escalation would not only fail to achieve our goals, but would ultimately involve the world in a war of mutual destruction.

We therefore urge the administration-

To persist in its present efforts to pursue every possible avenue, including channels of United Nations, that may create more favorable circumstances in which negotiations can begin; and

To steadfastly adhere to the principle that there cannot be a satisfactory military solu-tion to this problem, and until a negotiated settlement is achieved, not to permit a change in the restrained character of this

conflict through military escalation.

We further recommend that the United States should consider the following sug-

gestions:

1. Request the United Nations to begin negotiations wherever and whenever possible for a cease-fire agreement (including cessation of terrorist activities) under United Nations supervision, among the governments of the United States, of North and South Vietnam, including representation for the National Liberation Front, and other interested parties, and to convene a peace conference to explore the basis of a settlement of the long-term issues and the means to give such a settlement effective international guarantees

2. Make clear that a primary objective of a settlement of the Vietnam conflict is the independence of South Vietnam from outside interference, with complete liberty to determine the character of its future government by the result of a peaceful, free, and

verified choice of its people.

3. Declare itself in favor of the phased withdrawal of all its troops and bases from the Vietnamese territory, if and when they can be replaced by adequate international peacekeeping forces, composed of military contingents capable of maintaining order while the peace settlement is being carried

4. Make available, through Congress, in fulfillment of the President's proposal, immediate reconstruction assistance and long-range economic development funds for southeast Asia, preferably through an effec-tive international organization in which the beneficiary governments fully participate.

We do not lay claim to moral certitude and refrain from moral dogmatism in this complex and agonizing situation. Within the range of religious commitment and concern, differences as to specific policies can and do exist. We recognize that those who see the need for checking Communist subversion by military means are no less dedicated to the cause of a just world peace than those who believe the United States must cease hostilities in Vietnam. We do believe, however, that the imperatives of our religious commitments call for the recommendations we prayerfully put forward and commend to

the attention of our synagogues throughout

### Franklin Delano Roosevelt Birthday Anniversary

EXTENSION OF REMARKS OF

### HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. PICKLE. Mr. Speaker, yesterday was the 84th birthday anniversary of the late Franklin Delano Roosevelt—one of the greatest Presidents of all time. I ask my colleagues to join with me in paying special tribute to this truly outstanding humanitarian and distinguished world

Under leave to extend my remarks in the RECORD, I call to your attention a portion of page 809 of the Congressional RECORD of January 30, 1948. The letter published therein and reproduced below was written by the late Fleetwood Richards, Sr., of Lockhart, Tex., whose son, Fleetwood Richards, Jr., now serves as my administrative assistant in Austin. Senator Richards was one of the greatest honest-to-goodness humanitarian leaders who ever lived. He knew human nature better than any man I have known.

Few men have been more loyal to the ideals of a President than Mr. Richards, Er., was to President Roosevelt. His letter to his lovely wife is a warm and touching reflection of the love our country held for President Roosevelt. Similarly, the letter written to the then Congressman Lyndon B. Johnson was a tribute to the love and affection he held for Mr. Johnson whose cause he supported from the first day. He recognized then, as we all do now, that Mr. Johnson, a close friend and supporter of President Roosevelt, was an unusual leader-a warmhearted man whose star was ascending and who possessed qualities similar to those of President Roosevelt.

The letter was placed in the RECORD 18 years ago yesterday by the Honorable Lyndon B. Johnson, my predecessor, who now serves as our great President.

Both the letter and Mr. Johnson's remarks, then as now, are fitting memorials to the late F.D.R. They are as follows:

THE LATE FRANKLIN DELANO ROOSEVELT

Mr. Johnson of Texas. Mr. Speaker, on this day in 1882 was born a man destined to guide his country through its greatest perils. As Franklin Delano Roosevelt loved his country-men, so they loved him. That affection of one man for the many-and of the many for

one man-bound our Nation together in a unity we have missed since he left us.

The altogether personal affection so many

millions of us felt for Mr. Roosevelt was brought into poignant focus when he died. In our teeming cities, in small towns, at crossroad stores, and along lonely country trails, almost unbearable grief came to the people of America.

To those shocking words, "Roosevelt is dead," men, women, and children reacted as though the news concerned one near and dear to them. Some wept. Some were swept by black despair. Some were appalled at the unfillable gap left in the world's leadership.

In the small town of Lockhart, Tex., in my congressional district, one who loved Roose-velt found some comfort in the way so many of us find it: He told his wife what was in his heart. She was away from home, and he wrote her. I lately obtained a copy of that letter, written by Fleetwood Richards, of Lockhart.

Mr. Richards has a distinguished record of public service in our Texas Legislature. Be-cause his letter so beautifully expressed the sorrow so many of us felt on that fateful day in 1945, and expressed it in language beyond our capacity, I have presumed upon my friendship with Mr. Richards to offer the letter today as a memorial to Franklin Delano Roosevelt:

LOCKHART, TEX.

April 13, 1945.

MY DEAREST GUSSIE: Roosevelt is dead. Sorrow and gloom shrouds the town of Lockhart and its people. Business and people are almost at a standstill. Golf has not been mentioned in almost a full day. The report of his death reached me in the Domino Hall. That is where Americanism lingers in the There is where it is most typical. rough. There is where Roosevelt is most loved and appreciated. There is where labor relaxes and recreates. The news stopped every game. No sounds were audible, except sighs. The leader of their hopes, the prince of their cause, their refuge, had gone. Silently, they went away. They walked slower, they talked less, and they thought more. It was the saddest moment in all American life. Their ship was without a rudder.

In his going, anxiety reached its greatest peak. Determination did not seem to falter or hesitate. It seemed to absorb vengeance. Hope was uncertain. It must wait. The fu-ture must build and sustain it. World peace took a body blow. It did not fall. It did not take the count. It is disappointed, and that disappointment should be, and must be, its inspiration and determination to work, sacrifice, and to succeed. It is humanity's

only hope.

In a weak and humble way, on every occasion, and at every call, I have tried to shoulder my responsibility to him and the cause that he represents. Maybe I have been a small part of a great undertaking. I feel so. I served him and his cause, and the people's cause, as I see it, with an apostle's devotion, free of selfish motive.

I say, and maybe I never could have said it before, a man is dead that I never doubted or questioned. Somehow, I followed him and his leadership with a faith and confidence, free of every doubt. He gave a part of his life's span to the cause of humanity and liberty. In it all, I think that he was conscientious. To the downtrodden, he was as faithful as Paul was to Christ. He served and saved others. "Himself he could not

I never committed an act or spoke a word that made his road longer or his burden heavier. I never added weight to his weak-ened body or his troubled mind. I tried to give him strength. I might have been, and I think that I was, a little more diligent and devoted to him, and the purposes and ideals that he championed, than I have been to myself and my own soul. In it all, I am satisfied.

Love, PLEETWOOD.

# Thanks for the Lift

EXTENSION OF REMARKS

### HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. HALL. Mr. Speaker, recently I received a letter entitled "Thanks for the Lift," from Mr. W. R. Luckfield, chairman of the Congressional Action Committee of the Springfield Chamber of Commerce. The suggested letter, hypothetical though it may be, will no doubt fit many situations, and I ask unanimous consent to insert it at this point in the RECORD:

THANKS FOR THE LIFT

JANUARY 15, 1966. With the passage of the Medicare bill now a certainty we hope that all senior citizen will write letters of gratitude to their children, grandchildren, neighbors and friends who are still of the burden bearing age.

Most of the elderly can honestly say that they seriously need the assistance in meeting hospital costs and that the increase in their monthly social security checks will just about cover the steady rise in the cost of living.

However, a hundred thousand or so of the social security and medicare recipients will have to go into a little more detail and their letters might run somewhat along these lines:

Dear Nephew: I just had to write and ex-press my gratitude for your generosity in shouldering a heavier tax to make things easier for me and your aunt in our retirement years.

I know that many of us elderly people have spouted off a lot about the shortcomings of the younger generation, but I must say that the cheerful manner in which you are accepting those increases in the social security rates is an indication of your generosity, unselfishness and devotion to us old folks.

You know of course how much it costs to live comfortably these days and your own experience when your kids had their tonsils removed last year shows how much a few days in the hospital can cost.

Your Aunt Mamie was in the hospital for a week last year after she fell and broke her arm while getting out of our new cabin You should have seen the billcruiser. and I had to cash in two shares of my Tid-

widdy Consolidated stock to pay it.

As you know, your aunt and I must make
do on the \$12,000 a year pension the directors voted me when I retired as corporation president and the \$8,000 or so that my investments bring each year plus our monthly social security checks.

That may sound like a pretty good in-come, but you have no idea how much it costs to maintain the winter place here in Florida and the summer home in Maine. And it's a scandal what wages you have to pay cooks, maids, gardeners, chauffeurs, and cruiser pilots these days.

I was going through my old check stubs just the other night and found that your

# Appendix

Aunt Mamie spent almost a thousand dollars last year in beauty treatments alone. And, boy, I don't even dare tell you how much we spent on that Mediterranean cruise and the fishing trips in the new cabin cruiser. It's a 36-footer and sleeps five, but crew wages, fuel, and upkeep just about keep me strapped.

We ran into another big expense last year when we redid the five bedrooms and stalled the swimming pool at our Florida place. These interior decorators and contractors sure know how to charge and their bills looked like the national debt. (I'm sorry we're passing that debt on to your generation but that's the way the old ball bounces sometimes, eh?)

Well Nephew, if you can get your nose away from the grindstone some of these times, drop in on your aunt and me in Florida or Maine after wa get back from the world cruise we're planning for this spring.

I hope the few extra bucks they will soon be taking out of your paycheck won't inconvenience you and the family. You can always cut a little here and there when you know you're doing it for a good cause Just keep your chin up and remember how grateful your aunt and I are for the extra

Well, keep the checks coming, work hard and get ahead, and I hope the social se-curity system is still working when you reach retirement age in 1995.

Your UNCLE BEN.

### Proposed Repeal of Section 14(b) of the Taft-Hartley Act

EXTENSION OF REMARKS

# HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Wednesday, January 26, 1966

Mr. MORTON. Mr. President, the membership of local 481, International Ladies Garment Workers Union, Glasgow, Ky., has urged my support of efforts to repeal section 14(b) of the Taft-Hartley Act in a telegram dated January 21. In accordance with the members' request, Mr. President, I ask unanimous consent that the telegram be printed in the Appendix of the RECORD.

There being no objection, the tele gram was ordered to be printed in the RECORD, as follows:

> GLASGOW, KY. January 21, 1966.

Hon. THRUSTON B. MORTON, 437 Senate Office Building, Washington, D.C.

DEAR SE: Please vote for the repeal of 14(b) of Tait-Hartley Act. Here is your chance to prove, to us working people, you are our friend. We request that this telegram be entered into the Congressional RECCED.

> LOCAL 481, ILGWU, Glasgow, Ky.

### Democratic Dismay

EXTENSION OF REMARKS OF

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. YOUNGER. Mr. Speaker, Messrs. Rowland Evans and Robert Novak, in their column "Inside Report." published in the Washington Post of January 25, 1966, make a very interesting analysis of the problems confronting the Demo-cratic Party today. Their column fol-

INSIDE REPORT: DEMOCRATIC DISMAY (By Rowland Evans and Robert Novak)

"A national committee has no claim to existence if it abolishes voter registration. The very willingness to even suspend it for any period of time is appalling."

So reads a private memorandum from an eastern Democratic political pro now being privately circulated in Washington. The memorandum reflects a rising concern among Democratic professional policitians that the party faces deep trouble in the fall elections.

Considering Mr. Johnson's record plurality in 1964 and the topheavy Democratic majorities in Congress, this alarm may seem misplaced. But the confidential memorandum pinpoints a decline in vigor and inner strength of local Deomcratic organizations. This decline fully justifies the doleful forecast of possible heavy losses in congressional and State elections this fall.

A major reason for the decline is the revolutionary but almost unnoticed switch in Democratic fundraising techniques—from a large number of small contributions to a small number of large contributors

Fundraising now is concentrated in the President's club, instituted by President Kennedy and expanded by President Johnson. Composed of well-heeled business and industrial leaders (most of them not having the remotest connection with local Democratic organizations), the President's club has minimized local fundraising.

Consequently, the special favors that used to go to the local politicians, such as well-publicized White House dinners with the President, now go to the business fatcats. This costs local leaders prestige at home and reduces their stake in the party's national fortune

But the fundraising change is only one of many factors contributing to erosion of the Democratic Party's historic and basic strength: its local organizations.

Almost as important is President Johnson's politics of consensus. The President's consensus knows no party lines.

In short, the President's strength de-pends today not on local Democratic Party pends today not on local Democratic Party organizations so much as it does on a wholly unique Johnson organization, cutting across party lines. A Republican banker such as New York's David Rockefeller can get inside the White House easier today than a Demo-cratic leader such as Brooklyn's Stanley Steingut. Local party leaders don't like it.

The identity of the men who control na-tional politics for President Johnson today

illustrates how far he has moved party control from its traditional power centers.

Democratic National Chairman John W.

Bailey, an experienced professional from Connecticut, is a figurehead. Texan Clifton Carter, national committee executive direc-tor, runs national headquarters on a day-today basis. But the controlling figure is White House Aid W. Marvin Watson, Jr., whose political experience was limited to the rightwing—the controlling faction, usual-ly—of the highly factionalized Democratic Party in Texas.

Like Carter, Watson's knowledge of big-city industrial-State politics is scant. With Watson, non-Southern Democratic politicians have no sense of identification. Watson's world of politics has no relevance to the politics of Philadelphia, Chicago, or Detroit. This was shown in Watson's decision to

cut the heart out of the national committee's registration division last month (for economy reasons). The step infuriated not only local party leaders but also Democratic Connen.

Beyond this, moreover, is the lack of new attractive Democratic candidates for major offices this fall—a lack explained perhaps by the dominance of the Kennedys and Lyndon

Johnson the past 5 years.

In New York, Ohio, California, and elsewhere the party is split by internal friction. Heap on top of this the decline of local organization and the urgency behind that confidential memo is apparent. It's no won-der worried Democrats hope the President himself will take notice of his party's dis-

### Taxation of Antitrust Treble Damage Payments

EXTENSION OF REMARKS OF

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. CELLER. Mr. Speaker, Internal Revenue Service rulings on private treble damage actions under the antitrust laws have given favored tax treatment to antitrust violators. These rulings have weakened the vigor of our antitrust policies, penalized the victims of unlawful predatory business practices, increased the tax burden on the general public, and benefited convicted antitrust criminals. I am introducing a bill that is designed to reaffirm Congress direction for an effective antitrust program and correct the mistakes that have been made by the Internal Revenue Service.

On July 24, 1964, the IRS promulgated Revenue Ruling 64-224 for the benefit of the electrical equipment manufacturers industry. This ruling permits amounts paid to persons for injuries resulting from antitrust violations to be deductible as "ordinary and necessary" business expense by the violator. When the IRS issued this regulation, Senator HART, as chairman of the Senate Antitrust and Monopoly Subcommittee, I, as chairman of the Judiciary Committee, and of its Antitrust Subcommittee, jointly denounced the ruling as a tax giveaway, at the expense of other taxpayers, to corporations which had been found guilty of criminal antitrust violations.

We pointed out that the ruling rewarded lawlessness, and that the Government would lose millions in tax dollars.

As a result of these and other protests, the Joint Committee on Internal Revenue Taxation on November 18, 1964, under the leadership of Senator Harry F. Byrd and Representative WILBUR MILLS, decided to review the entire matter. The staff was requested to collect and summarize, for the use of the joint committee, relevant legislative materials and viewpoints of various groups of interested parties as to policies and probable consequences of the Revenue Ruling 64-224. I submitted an extensive analysis of the legislative history and relevant judicial decisions, which to my mind made it clear that the IRS ruling is erroneous and contrary to the policies established by Congress.

The Department of Justice submitted weak and equivocal statement to the Joint Committee. In its statement, the Department of Justice pointed out that, although the IRS position was not one that the Department would have reached had it been charged with responsibility. and although the Department would have been prepared to defend in court a rule of complete nondeductibility, it nonetheless deferred to the position taken by the Treasury and relied upon Congress to be the final arbiter in balancing the competing antitrust and tax considerations. On November 1, 1965, the Joint Committee staff submitted its summary, without recommendation, to the Joint Committee for further con-The staff suggested, howsideration. ever, that legislation may be appropriate to correct errors made by the IRS.

We need legislation that clearly defines congressional intent as to the priority of the policy embodied in the antitrust laws over tax questions with respect to private antitrust treble damage actions. This will eliminate any possibility that the IRS in the future would again distort congressional policy through changes in

The IRS ruling has its origin in one of the most callous antitrust cases to reach the courts: the price fixing and bid regulating cases in the early 1960's against General Electric Co., Westinghouse and other electrical equipment manufacturers. In these cases the Government indicted 20 companies for conspiring to fix prices in sales of electrical equipment to Government and to in-The defendants admitted their dustry. responsibility and pleaded guilty to the charges. Substantial fines were imposed and several corporate officials were sent to jail. In the wake of these Government victories, more than 2,000 private cases were filed against General Electric Co., Westinghouse and other electrical equipment manufacturers. Conservative estimates placed the potential total liability of the defendants in these private cases at nearly \$300 million.

Since it reduces treble damages to approximately double damages, the effect of the IRS ruling is to award a gift of nearly \$150 million to these admittedly guilty electrical equipment manufacturers. Other American taxpayers, who already have been victimized by the con-

spirators and required to pay higher prices for electrical equipment and for electrical service, must make up the loss in revenue that the Government suffers through the ruling.

Private actions to collect damages from antitrust violators traditionally have been relied upon as an important adjunct to antitrust law enforcement. To stimulate private actions, Congress authorized treble damages, with the intent, always, to provide an additional method to punish antitrust violators. Until the IRS made its ruling, no one believed that defendants, who had caused damages through violations of the antitrust laws, would be allowed to deduct treble damage payments as "ordinary and necessary" business expenses. There is a long history in our legislative and judicial precedents that establishes that a treble damage requirement is punitive in nature. To allow such damages in antitrust cases to be deducted under our tax laws frustrates the national policy that makes price fixing in interstate and foreign commerce a criminal offense.

Since its ruling became public, I consistently have protested the IRS gift to the electrical equipment manufacturers. During all of this time, I have hoped that the IRS would repudiate its ruling. I believe the IRS should, even at this late date, repudiate its ruling. Repudiation would correct their error, and at the same time would permit the companies to try the issue in court and in that forum establish, if they can, a right to a deduction. Unless the ruling is repudiated, however, no individual taxpayer can go to court to test its validity.

The IRS, however, seems to be more amenable to the argument of the antitrust conspirators. I have given up hope that the IRS will move to correct the situation. Legislation is required. bill I introduce, of course, can only have prospective application. If the IRS would repudiate its ruling the effect would be retroactive and the electrical equipment companies would not enjoy this tax windfall. This cannot be accomplished by legislation.

In keeping with my conviction that legislation is needed to clarify and emphasize the overriding public policy involved in private treble damage antitrust actions, my bill also remedies IRS and judicial rulings as to the tax treatment of damages recovered by the plaintiff in a successful antitrust suit. At the present time, such recoveries are treated as income to the successful plaintiff. The effect of this ruling, which was affirmed by the Supreme Court in the Glenshaw case—Commissioner of Internal Revenue Glenshaw Glass Co., 348 U.S. 426 (1954)—reduces the amount of damages the successful plaintiff is able to recover and retain. Reduction of this recovery lessens the incentive to bring private actions, and the Government loses the benefits of supplementary private antitrust enforcement. My bill makes it clear that recoveries in excess of damages sustained shall not be treated as income to the successful plaintiff.

The text of the bill follows:

HR. 12919

A bill to amend section 4 of the Clayton Act (15 U.S.C., section 15), and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That section 4 of the Act entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (15 U.S.C., sec. 15), is hereby amended by inserting "(a)" after Section 4, and by adding at the

end thereof the following new subsection:

"(b) In any action pending or instituted under subsection (a) of this section on or after the date of enactment of this subsection, the amount recovered in excess of the damages sustained shall not be treated as income for purposes of any law of the United States imposing a tax on income. In any action pending or instituted under subsection (a) of this section or under section 4A of this Act on or after the date of enactment of this subsection, no payment made by any defendant pursuant to any judgment or settlement of such action shall be deductible as ordinary and necessary expense under any law of the United States imposing a tax on income."

### Representatives Cautioned To Watch **Excesses of Commission on Civil Rights**

EXTENSION OF REMARKS

# HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

MARTIN of Alabama. Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to include a statement made before a meeting of the Associated Industries of Alabama on Monday during the annual Washington conference.

The following statement was made by Mr. James B. Brand, director of industrial relations, of James B. Clow & Sons, of Birmingham, Ala. Mr. Brand's statement deals fairly and honestly with the enforcement of the civil rights law of 1964 and the investigations conducted in Alabama by the Civil Rights Commission.

STATEMENT IN THE INDUSTRIAL RELATIONS FIELD, PRESENTED BEFORE THE ALABAMA CONGRESSIONAL DELEGATION, JANUARY 24, 1966, BY JAMES B. BRAND

Subject: Equal employment opportunity, H.R. 10065.

In November and December 1965, the U.S. Commission on Civil Rights held committee hearings in Birmingham, Mobile, and Huntsville on title VII of the 1964 Civil Rights Act.

Mr. Jacques E. Wilmore, director of the mid-South region, stated the findings of the committee indicated that major Alabama employers have taken title VII seriously and were complying within their capabilities. In fact, Alabama has done more than most States in this area

Our association has distributed numerous bulletins explaining the responsibilities of employers and how they should go about complying with title VII. In addition, AIA has sponsored workshops on this subject throughout Alabama. We feel our efforts contributed to the favorable findings of the Civil Rights Commission

Although the Civil Rights law of 1964 has

been effective for 7 months, a new law-H.R. 10065 (equal employment opportunity) has been reported by the House Education and Labor Committee

. Without going into minute details, I will point out some of the bill's salient features:

1. Upon enactment, any business which employs 100 or more would be covered; 50 or more on June 2, 1966, and 8 or more on June 2, 1967. A radical change from title

2. This bill would allow the filing of a complaint based on an unlawful practice which occurred up to a period of 1 year prior the filing of the charge-a substantial extension of the present legal 90-day statute of limitations. Facts surrounding an alleged discriminatory act could very easily be illusionary after a 1-year period.

3. The Commission would have the authority to issue cease-and-desist orders and require action including reinstatement or hiring, with or without pay. Such orders could require the respondent to make reports periodically showing the extent to which he has

4. The Commission could petition a circuit court of appeals or any appropriate district court for enforcement on its orders. findings of fact by the Commission, if supported by substantial evidence, would be conclusive and binding on the courts.

5. The bill directs the Commission to conduct a continuing survey of opportunity and other training programs to determine unlawful employment practices. The Commission would have access to any record maintained by the employers.

6. This bill would place a substantial measure of enforcement within the authority of the Commission, whereas until title VII the enforcement is in the hands of the Attorney

Gentlemen, it may well be that changes in the civil rights law of 1964 will be necessary, but this bill is not the answer. We agree with Representative GLENN ANDREWS who stated: "This bill is ill-timed and unneces-

We call on you today to study carefully the far-reaching effects H.R. 10065 will have on Alabama employers, labor organizations, or joint labor management committees. fact that title VII has been in effect only 7 months indicates the prematureness of such action. Employers are complying with "good intent." The Commission is just beginning intent." The Commission is just beginning to function, and any further legislation could very easily impede desired compliance.

We are confident that your decision will be that this bill is not in the best interest of the people of Alabama.

### PRESENT TITLE VII PROBLEMS

We, in AIA, would like to request that you, our Representatives, watch carefully those investigative activities of the Equal Employment Opportunity Commission, whereby rep entatives of this Commission "read into" title VII requirements over and above those as set out by the law—specifically requesting the placement of women into impractical job positions and in investigating "group general" complaints instead of specific charges.

### **REA Reduction**

EXTENSION OF REMARKS OF

# HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1966 Mr. BERRY. Mr. Speaker, the President's budget for fiscal 1967, recommending a reduction of \$435 million from the \$672 million REA Director Norman M. Clapp had requested, is not only serious, but at the same time the President has impounded \$132 million presently un-spent but seriously needed by REA for

This is no time to cripple REA when communication lines and extensions are urgently needed to provide electrical distribution to the farms of South Dakota and the Nation.

If the administration were actually making this cut in an effort to economize, then I would recommend that we tighten our belts and go along, but while he is cutting the heart out of REA and the farmer generally, he is asking for millions to pay the rent for city dwellers whose incomes vastly exceed the annual incomes of most farmers.

I shall continue to fight to help bring the farm standard of living up to somewhere near the standard of those the President would subsidize with rent payments from the Federal Treasury.

### Globe-Democrat Publisher Speaks on Vietnam

EXTENSION OF REMARKS

# HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. HALL. Mr. Speaker, Mr. Richard H. Amberg, the outstanding editor and publisher of the St. Louis Globe-Democrat, spoke recently on developments in Vietnam, before the meeting of the American Association of University Women in Springfield, Mo.

Mr. Amberg's remarks were carried in the Drury College Mirror, of Springfield, Mo., and because they are so pertinent to the present situation, I ask unanimous consent to insert the article at this point in the RECORD:

VIETNAM IS TOPIC OF TRUSTER'S TALK (By Scott Chalmers)

Richard H. Amberg, editor and publisher of the St. Louis Globe-Democrat since 1955, and a member of the board of trustees of Drury College, spoke on developments in Vietnam Wednesday night at the annual joint meeting of the University Club and the American Association of University Women. The meeting was held in the VIP Room at

the Lampliter Motor Hotel.

In his speech amberg advocated that the United States should continue and strengthen its policy in Vietnam. He condemned past policy of this country's leaders, including President Johnson and his position of a few months ago, which he said was to refuse to take a positive and determined stand as to what this country was going to do in Vietnam.

Amberg said, "We have three alternatives: pull out entirely, negotiate, or win the war." He pointed out the troubled situation and precarious geographical location in which Vietnam is situated.

Red China immediately to the north and the revolutionary unrest present in Indo-nesia located to the south, combine to put Vietnam in a critical position overlooking the important Malacca Straits that are the vital supply routes for virtually all of south-

east Asia, he explained.

From these facts he pointed out that a fatal mistake that could result if we pulled out, letting down our few friends in this area of the world and leaving it vulnerable Communist domination.

Since there is really no government to negotiate with and since they negotiate only

by requesting that we "get out," the reasonable alternative is to "win the war."

By win the war Amberg declares that we should take a stand and fight for total vic-"at least until we can negotiate on onable terms.

To do this he said we need to go ahead and blockade ocean supply routes, bomb missile sites and Hanol, where industrial complexes are centered. He also it, "Immoral for our friends such as Canada to sell wheat to Red China, freeing laborers to work in arms factories, which supply the Vietcong."

s stated that "to be successful you need be strong." Historically speaking he noted that history is on the side of countries that think there is salvation in strength. "To win," he said; "we must have the determined will to win."

Mr. Amburg does not advocate a wider war effort that would extend into North Vietnam. He wants the United States to only secure South Vietnam, where our commitments lie and perhaps use air strikes north of the 17th parallel to sever supply routes to the south. "Let North Vietnam do what it wants."

Mr. Amberg and the paper he heads both re determined battlers against Communist are determin elements. While not calling any of the anti-Vietnam demonstrations Communist inspired, he called them actions that indirect-"prolong the war, and add fuel to anti-U.S. propaganda machines.

Although the Wednesday night audience's applause voiced their agreement with his views on the developments in Vietnam, he and the Globe-Democrat recently came un-der fire from Washington University's news-paper, Student Life.

On the front page of the Globe, a story linked Theodore Rosebury, professor of bacteriology in the Washington University Dental School with "Communist infiltrated and exploited teach-ins."

Amid exchanges of front page editorials and stories in the Student Life, Amberg stated that, "In all fairness I do not feel that our faithful reporting of the news and our criticism of disgraceful Communist tactics, whether they apply to Aptheker, one of the leading Communists in the country, Rosebury \* \* \* or the criticism of American foreign policy by fringe student groups or by university professors, warrants the description used of this great newspaper, (Globe), by Randy Flachsbart, editor in chief of Student Life, even by a juvenile."

# Changes in Public Laws 815 and 874

EXTENSION OF REMARKS

HON. DAVE MARTIN OF NEUBASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MARTIN of Nebraska. Mr. Speaker, I am today introducing a bill which would amend Public Laws 815 and 874 in order to bring them more in line with their original purpose.

These laws had their genesis in late 1949 and early 1950 when the Subcom-

mittee on Education of the House Education and Labor Committee conducted extensive hearings all across the country, the printed record of which extends to some 2,400 pages. In the report of that committee, it was stated that

Federal assistance as called for in these recommendations is restricted to meeting the Federal responsibility only in these affected school districts; it is not intended to provide assistance that would be available under proposals for general Federal aid.

Over the years since 1950, however, due largely to various amendments, the program has become a kind of general aid to education, "under a poor formula" as one authority put it. While I would be opposed on principle to a Federal program of general aid to education, if we are to have such a program it should be drawn up, introduced, and debated on its own merits. It should not be foisted off on this Congress and on the public by hacking up, amending, and distorting a bill designed to meet a limited and specific problem. It is with an eye toward eliminating some of the more serious inequities and unjustifiable provisions of these laws that I am proposing the following changes.

ELIMINATE ONE-HALF OF NATIONAL AVERAGE

First of all, my bill would eliminate the one-half of national contribution rate as an alternative basis for computing the "local contribution rate." At present, the local school district can use as its "local contribution rate" any one of three different figures—the amount spent per pupil from local revenue sources in "generally comparable" school districts within the State, one-half of the State average per pupil cost, or one-half of the national average per pupil cost in the continental United States

This latter alternative should be eliminated since

Such a rate bears no reasonable relation to the revenue losses or financial burdens occasioned for a particular school district by Federal property tax exemption. Its effect, indeed, is a Federal payment of the full cost per "A" category pupil to many school districts which receive in addition substantial State aid for these same pupils. (State ment of Francis Keppel, Commissioner of Education before the Select Subcommittee on Education, House Committee on Education and Labor, Apr. 2, 1963.)

The original purpose behind the onehalf of national average contribution rate was to make the payments to school districts throughout the Nation nearly equal. Before the amendment, there was a very wide discrepancy among payments to school districts in different States. This was due to the fact that Federal payments were based on local contribution rates, and in States where the State contribution to education was high, the local rates were low, and vice versa. It was felt by many to be inequitable for a State which contributed highly to education to be penalized by the terms of the act. Again, however, the present act is being confused with a program of general Federal aid to edu-

As was said by Elliot L. Richardson, Assistant Secretary of Health, Education, and Welfare in 1958:

The relevant measure is that amount which will put the school district in the same situation as other school districts in the State.

The purpose of Public Laws 815 and 874 is to alleviate the burden caused by Federal activities; its purpose is not to equalize the quality of American education or to provide a gratuitous boon to fortunate school districts. This amendment would save \$17 billion.

REDUCTION OF PAYMENTS FOR 3(b) "OUT" CHILDREN

The second change would provide that, in a situation where the parents work on tax-exempt Federal property but live in a school district other than the district in which the property is located, payment for each child would be reduced from 50 to 25 percent of the local contribution rate. Under the existing laws, all "B" category pupils are compensated for at the 50-percent rate, whether the Federal property is located within or without the district of residence. Yet, it is obvious that the burden is greater in the one case than in the other.

When both the Federal property and the residence are in the same school district—the B "in" pupils—school revenue per "B" pupil is cut one-half by reason of the Federal property tax exemptionretaining the other one-half which comes from the residential property. On the other hand, when the Federal property is located outside the district of residence. there is no reduction due to Federal tax exemption. In many States, however, the contribution to local school districts from State tax funds is fairly substantial. Tax-exempt Federal property located anywhere in the State would reduce this State contribution to the local district. To compensate for this reduction, this bill does not entirely eliminate payments for B "out" pupils, but rather provides that they will be compensated for at a rate of 25 percent of the local contribu-

In addition, if payments were reduced when the Federal installation is not in the school district, there would be an incentive to consolidate school districts, a procedure generally supported by educators and others who have concerned themselves with the problems of the American school system. This amendment would save \$52.411.662.

THREE-PERCENT ABSORPTION REQUIREMENT

A third change would revive the 3-percent absorption requirement. In Public Law 874, as it stood in 1951, it was provided that the school district should absorb a number of federally connected students equal to 3 percent of average daily attendance, the theory being that the Federal installation brings certain benefits to the district which should offset to a certain extent the burden caused by the federally connected pupils. Implementation of this provision was postponed for a year in order to give the local school districts time to prepare for its effects. Yet, when it came time to put this section of the law into effect, the opposition of school district suprintendents throughout the country was loud and vocal, since it would, of course, cut down, or in some cases eliminate, their allotment. As a result, the provision was again postponed and eventually eliminated. In its place, it was provided that there should be a 3-percent eligibility rather than an absorption requirement. Thus, a school district would receive payment for all federally connected pupils as soon as their number reached 3 percent of all pupils in average daily attendance. This provision is both inequitable in its effect and unjustifiable in terms of the original purpose of the laws. It is inequitable in that a district which has 3 percent federally connected pupils is compensated for all of them, while a district with 2.99 percent receives no help at all. What has been done, in effect, is to eliminate the absorption requirement in some cases and retain it in others. If the absorption requirement were revived, this inequitable situation would be remedied.

The provision is unjustifiable, since it fails to take into account the benefits which a Federal installation brings to a community. In the words of M. L. Reese, county manager, Montgomery County, Md., testifying in 1958 before the Subcommittee on Education of the Senate Committee on Labor and Public Welfare:

The loss of assessable base resulting from incoming Federal installations is, to a great extent, offset by a general tendency of stimulation to local commerce and area property

Reviving the 3 percent absorption requirement would recognize these benefits. This amendment would save \$44,111,023. ELIMINATION OF PAYMENTS UNDER PUBLIC LAW

874 WHEN PRESCRIBED ELIGIBILITY CONDITIONS ARE NOT MET

A further provision of my bill would eliminate the so-called Purtell amendment. This amendment, approved in 1958, provided that a school district that has met the 3 percent-or 6 percent-eligibility requirement in any year but fails to meet the requirement in the next 2 succeeding years is still eligible for payment for the actual number of federally connected children in average daily attendance in the school district the first year, and for 50 percent of such payment the second year. This is designed to lessen the strain on the school budget which would result from a sudden elimination of Federal funds. With a 3-percent absorption requirement substituted for the present 3-percent eligibility requirement, such a phasing out would, of course, no longer be necessary. The school district would only be receiving payments for those students in excess of 3 percent, not for all students or for none as at present.

Yet, even if the 3-percent eligibility requirement were to be continued, the Purtell amendment could not be justifled. According to L. G. Derthick, Commissioner of Education, testifying on June 9, 1959, before the Subcommittee on Education of the House Committee on Education and Labor:

This amendment is manifestly discriminatory as respects a school district which barely meets the 3-percent condition of eligibility in a given year and barely falls to meet that condition in a subsequent year, as against another school district which barely falls to meet such eligibility condition in either year.

### Furthermore:

B

he

16

le

d

16

ir

as

Such phasing out of Federal payment is unnecessary since Section 3(f) of the law

permits a 1-year continuance of payments in the case of a decrease in the number of Federally-connected children for which a school district had reasonably prepared in anticipation of eligibility for Federal payment when such decrease is due to a ces tion in Federal activities. (Statement of Francis Keppel, Commissioner of Education, before the Select Subcommittee on Education, House Committee on Education and Labor, Apr. 2, 1963.)

Thus, the Federal Government would aid the local school district only when the need is a direct Federal responsibil-Again, it should be remembered that this is not a general Federal aid to education program based on need, but, rather, it is a limited program to fulfill a specific Federal responsibility. amendment would save \$528.467.

TO PREVENT THE REDUCTION OF STATE PAYMENT TO IMPACTED SCHOOL DISTRICTS

Finally, there are a number of States that reduce the local school district's entitlement from State funds when these local districts receive aid under the impacted areas program. The State of California is the best example of this. Under California law, 60 percent of the funds received by the local school districts under Public Law 874 are considered to be local resources. Since the State contribution to the local school district is based on the local resources of the district, this provision has the effect of cutting down the State contribution to the local district by an amount equal to 60 percent of their entitlement under Public Law 874. As a result, the Federal Government is not only aiding the impacted school district, but may be providing a form of general aid to education in the State if the State funds that would have been available to the impacted school districts, if they had received no Federal payments, are used for other education purposes in the State.

My bill provides that Public Law 874 payments to the local school district are to be reduced by an amount equal to the reduction in the State entitlement. The State would thus be deterred from reducing its payment to federally impacted school districts.

I firmly believe that if these changes in the impacted areas legislation are adopted, a long step will have been taken toward making these laws both more equitable and more in line with their original purpose.

### On Being Serious

EXTENSION OF REMARKS

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1966

Mr. YOUNGER. Mr. Speaker, I was delighted this morning to read in the January 26 issue of the Washington Post Mr. Joseph Alsop's column sent from He so clearly points out the possible increase of sacrifices which our servicemen will undergo as a result of the buildup, both in personnel and materiel, which the North Vietnamese have

been able to accomplish during the cessation of bombing. It is almost unbelievable that those conducting the war in South Vietnam would knowingly fail to give our servicemen every possible protection available to this country. I hope this on-the-spot advice will be read by those who seem to feel that this country is not duty-bound to see that our servicemen are protected from every offensive move by the enemy. His column follows:

> ON BEING SERIOUS (By Joseph Alsop)

Saigon.—From the perspective of Saigon, the noisy month of the President's peace offensive seems a very strange interlude indeed.

Before this reporter left for Vietnam, it had already begun to be hinted here and there in Washington that the peace offensive had been launched in the face of expert warnings that it was likely to do far more harm than good in both North and South

Vietnam. This was certainly the case.
Furthermore, the outcome has justified the experts, for much harm has quite visibly been done. Here in the South, in the center of the war effort, dismay, uncertainty and doubt have been implanted.

The South Vietnamese Government was not consulted—indeed, it was hardly informed in advance-shout the President's rormed in advance—about the President's vast venture in mass diplomacy. The neglect of consultation, of course, increased the impact. All sorts of questions were raised, on every side, about the U.S. Government's strength of will and sternness of resolution.

When such questions are asked in South Vietnam, the result is always the same. Instability immediately sets in, and in the spirit of devil-take-the-hindmost, this group or that begins scheming for an antigovern-mental group. Thus the promising government, which has maintained stability for the first time since the death of Ngo Dinh Diem, was momentarily endangered.

Fortunately the military directorate, the real core of the government, did not lose its unity. The coup impulse was only felt among certain officers of lower rank. If anything had been attempted, it would not have succeeded. But even the mere attempt would have been deeply, almost irreparably demoralizing.

As it was, the attempt was probably averted only by the calming and reasouring visit of Secretary of State Dean Rusk, which resulted from the infuriated protests about lack of consultation by the Vietnamese Ambassador in Washington, plus the accident of the tragic death of Prime Minister Shastri, of India. This was what lay behind Premier Nguyen Cao Ky's recent dark references to dissident

It was going pretty far, to risk this kind of quite foreseeable trouble in South Vietnam. The risk might have been justified by a real gain in North Vietnam. But the loss in the north has been more grave, by a wide margin, than the loss in the south.

On the one hand, there is the practical loss. Almost without cease since last March, at great peril and cost to the pilots doing the job, the lines of communication in North Vietnam have been hammered by American air attacks. The effects were never so great as the White House and Pentagon sometimes claimed. But by the end of November, the cumulative effect was still very great indeed.

By sheer accumulation of damage and disruption of internal communication and steadily mounting demands for manpower for urgent repairs, the bombing was at last beginning to exert heavy pressure on the whole northern structure. The pause for the peace offensive has allowed all the worst damage to be repaired, new defenses to be moved into place, and huge forward stock-ages to be built up for added pressure on the South. Thus most of the fruits of the hard effort of the last 8 months have now

ben thrown away.

Worse still, however, has been what may be called the morale loss in the North. It is a truism that just as the South Vietnamese build their hopes on comfidence in America's strength of will, so the North Vietnamese. namese build all their hopes on the belief that America lacks the strength of will to survive the present test. Every Vietnamese expert in the service of the U.S. Government agrees on this point.

agrees on this point.

Every sign indicates that the peace offensive has strongly bolstered this North Vietnamese belief that they can count on victory in the end, because the United States

is basically weak willed.

To be sure, this strange episode is not yet at an end. But it can be predicted with confidence that the North Vietnamese will at an end. not negotiate, unless they are secretly as-sure that the United States will come to the conference table on terms amounting to surrender in advance of the conference.

The North Vietnamese have publicly said

as much, in the most unvarnished language. And their main response to the peace of-fensive has been to push into South Viet-nam, with much aid from the bombing pause, more and more of North Vietnamese regular troops. So many are now present in the South that they add up to a major invasion.

It is said, of course, that all the President's senior advisers concurred in the per offensive, no doubt on domestic political and world opinion grounds in view of the all too accurate expert warnings above noted. But when the country is at war with 200,000 troops in the field, the only serious consideration should be the gains and losses in the war. And as far as the war is concerned, the balance sheet shows no gain and much los

### School Appropriation

EXTENSION OF REMARKS

# HON. E. Y. BERRY

OF SOUTH DAROTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. BERRY. Mr. Speaker, for the current fiscal year, it is estimated that from \$400 to \$415 million will be needed to meet all school districts' entitlement. Yet budget figures released Monday called for the appropriation of \$183 million to be used during fiscal 1967 for the operation of school districts with students whose parents work on or live on Government installations.

This slash in funds for operation of the federally impacted school program is unjustified, inequitable, and a breach of promise on the part of the Federal Government. It indicates the problems we can anticipate as the Federal Government moves further toward taking over the financing of our schools.

This cut of more than 50 percent will leave many South Dakota school districts far short of necessary fundsfunds they had been led to believe they would receive and had included in their budget estimates. They simply had not taken into account the fact that they are

at the mercy of the all-powerful cen-tralized Government in Washington whose whim it is to cut these essential funds to make room for more popular programs in this election year.

### A Salute to India

EXTENSION OF REMARKS OF

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. POWELL. Mr. Speaker, today is a great day in the world, for the Republic of India celebrates the 16th anniversary of her independence. It is a great day in India because the promise of new leadership, in the person of Mrs. Indira Gandhi, India's new Prime Minister, hopefully will lead this magnificent country into the future with her head held high, full of confidence and en-

This is an opportune time, therefore, Mr. Speaker, for us here to extend warm felicitations to His Excellency Dr. Sarvepalli Radhakrishnan, President of the Republic of India; to Her Excellency Mrs. Indira Gandhi, India's Prime Minister; and to His Excellency Braj Kumar Nehru. India's Ambassador to the United

Upon the shoulders of Mrs. Gandhi have fallen some weighty problems, but her faith in her country and her countrymen will give her the wisdom and guidance she will need to lead this great nation in these times. Our hopes and prayers go out to Mrs. Gandhi at this time. She follows in the illustrious footsteps of the late Prime Minister Shastribut she, we are sure, will be able to continue the good work of this great man.

We join with our Indian brothers today in commemoration of a landmark in their political history-January 26, 1950, the day upon which the constitution of a free and independent India went into effect. That event marked the establishment of India as a Sovereign Democratic Republic, consisting of a Union of States. It represented a triumph for dedicated Indians who were determined to create a secular democracy in which every person would have the essentials of a decent government and in which inequalities would be reduced to a minimum.

Like our own Bill of Rights, the Indian Constitution named and guaranteed the basic rights of every citizen. It gave the right to vote to everyone 21 years of age and older. The constitution prohibited unequal treatment because of race, religion, social class, sex, or place of birth.

The 16 years that have passed since the Proclamation of the Republic have been as but an instant in the rich history of this 5,000-year-old land. In this period India has grappled heroically with mammoth difficulties. Extreme loyalities of religion and community have been divisive forces, impeding the coalescence of a strong national unity. The Indian economy has been beset with countless

problems, in particular the inability to produce enough food for her 465 million people. The ravages of heart-rending poverty, illiteracy, and disease have been etched upon the face of India. The threat of further aggression by the Com-munist Chinese has added yet another obstacle to the tremendous task of achieving economic self-sufficiency.

Despite these great handicaps, the cumulative effect has been to produce relatively minor distortions in Indian democracy India today can hoast a vigorous press, free trade unions, a growing number of articulate intellectuals, and growing national unity. The ideals of the constitution have been held in reverence, and, more important, have been translated into meaningful action. Having just passed through the crucible of the loss of the great leader Lal Bahadur Shastri, India has again proved the mettle of its democratic system.

Today in this new year of 1966 the democratic way of life stands threatened by Communist aggression. We here in America may take comfort in viewing India as one nation of the vast and teeming Asian land mass that shines forth as a major functioning democracy. To this great land, Mr. Speaker, we send our congratulations and best wishes.

### A Time of Bitterness

EXTENSION OF REMARKS

# HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. JOHNSON of California. Mr. Speaker, sometimes it seems to me that the people of this Nation, and especially the demonstrators against the American policy, or any policy, in Vietnam do not appreciate this Nation's responsibilities to their country.

It has been my experience that the one group of individuals who are absolutely convinced as to the importance of our mission there are the servicemen, who are facing death daily in an effort to preserve freedom for a small part of the world. I believe the following taken from the Chico-Enterprise Record of January 18, 1966, speaks for itself:

An American serviceman in Vietnam can be excused for being confused about how Americans at home feel about the war. doesn't like being there in the first place so is understandably bitter about the anti-Vietnam demonstrations in the United States.

That bitterness is apparent in a poem received recently by Mr. and Mrs. T. L. Arnold of Chico from their Marine Corps son, Hospital Corpsman Lee V. Arnold, who has seen duty in Vietnam but who, at last report, was being treated on Guam for malaria.

The Enterprise-Record doesn't usually print poetry, leaving that to the poetry magazines whose editors are much better judges of poetry than we are. However, feeling expressed in this poem—not the quality of the poetry—prompts us to make an exception to our no-poetry policy.

The poem is entitled "Who Is He." "You sit at home and watch TV. You're sipping a refreshing, cold iced tea. The news comes on and then you hear The All-Star game is drawing near. Then you see a far-off land Where men are dying in the sand.

A frown appears across your face,
You're tired of hearing about that place. Who cares about Vietnam across the sea, It's far away and it doesn't concern me. You'd rather hear the Beatles play Than learn about the world today. But stop and think for a moment or two, And ask yourself, 'Does this concern you?' It's great to be alive and free. But how about that guy across the sea? He's giving up his life for me, So that I can live under liberty. He's far away to fight a war Instead of fighting it at my front door. This guy who lives in filth and slime, How can he do it all the time?

"He's about my age so why should he care About a war someone else should share. You call him names and make fun of his

Yet he's always the first to go and win your

You lucky guy, you just laugh and sneer Because you've never known fear. But this brave man faces death each day, Yet he's always got something funny to say.

"No mail again, a twinge of sorrow,
Oh what the heck; there's always tomorrow.
The morale is low and the tension is high,
Some men even break down and cry.
He wants to go home to see a loved one
But he won't until he gets the job done.
He works all day and stands guard all night,
Ho's tired and slok but he continues to fight.

"The college crowd thinks he's a fool, But that is what makes him so hard and cruel.

You don't appreciate the things he will do Like giving up his life for you. He sacrifices much, yet asks no return, Just so you can stay in school and learn. He believes in freedom and the American

He'd rather die than live a Communist life.

way of life.

"No parties and dances for this brave young man.

Until he comes back home again.
The days are hot and the nights too,
What wonders a cold can of beer can do.
He dreams of cold beer and a thick, juicy
steak.

Then someone shouts, 'We've got a hill to take!'

Some will be heroes, because they are brave, And others will just get a wreath on their grave.

"You'll recognize him when he walks by, There's a saddened look within his eyes. He walks so proud, yet looks so mean. He's called the world's greatest fighting machine;

No wonder he's proud; he's a U.S. Marine."

### Associated Industries of Alabama Take Stand on Retention of 14(b)

EXTENSION OF REMARKS

n

y

# HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MARTIN of Alabama. Mr. Speaker, this week the Associated Indus-

tries of Alabama held its annual Washington meeting. The entire Alabama congressional delegation was privileged to meet with these representatives of the great industries in Alabama and to hear their views on pending legislation. I would like to share some thinking of these keymen in Alabama industry with all the Members of Congress. Following is a statement by Mr. Frank Mattox, southern division manager, of Arvin Industries, Inc., from Fayette, Ala. Mr. Mattox sets forth in clear and understandable language the position of the association on the proposed repeal of section 14(b) of the Taft-Hartley Act.

I am especially proud to begin this series with the statement by Mr. Mattox because Fayette is one of the fine communities in the Seventh District of Alabama, the district I have the high honor to represent. Arvin Industries is contributing greatly to the economy of the district and the State, thereby helping all the people. Mr. Mattox's statement follows:

STATEMENT IN THE INDUSTRIAL RELATIONS FIELD, PRESENTED BEFORE THE ALABAMA CONGRESSIONAL DELEGATION, JANUARY 24, 1966, BY FRANK MATTON.

Subject: Retention of section 14(b), National Labor Relations Act.

On behalf of Associated Industries of Alabama's 987 member companies and numerous citizens of Alabama, I congratulate each of our Representatives on his vote to retain section 14(b) of the National Labor Relations Act.

To you, Senator Hill and Senator Sparkman, we are indebted for your active participation in the extended discussion held on this subject and your vote against cloture just prior to adjournment of the 1st session of the 89th Congress.

The Associated Industries of Alabama believes that the natural and inalienable right of every person to exercise freedom of choice should be vigorously protected by the agents and agencies of Government at every level of authority.

To assure this freedom of choice, AIA has continuously urged retention of section 14(b) as a part of the Taft-Hartley Act. The following thoughts in support of retention are offered.

REPEAL OF 14(b) WOULD OPEN THE DOOR TO DISCRIMINATION OF THE WORST SORT

This is inconsistent with our Nation's efforts to wipe out discrimination. Is not the administration putting itself in the paradoxical position of sponsoring discrimination against a person in violation of section 8(a) (3) which forbids an employer to discriminate in employment so as to encourage or discourage membership in a labor union?

Is not the administration's effort to repeal 14(b) in conflict with the antidiscrimination principle of this Nation as expressed in title VII of the Civil Rights Act of 1964?

We submit that the enactment of repeal legislation would place the Federal Government in the situation of switching its position from one of antidiscrimination to one of discrimination against the worker in his employment situation.

THE UNIONS USE THE VERY QUESTIONABLE "FREE-RIDER" ARGUMENT IN SUPPORT OF RE-PEAL OF 14(b)

This argument seems to be inconsistent because of the fast that the unions eagerly sought and pressured for the privilege to represent all employees in an appropriate bargaining unit, regardless of the wishes of

the minority employees, who are, in reality, "unwilling passengers."

Why should the unions be given a second big privilege because of their complaint with their first big privilege? Would it not be the better part of wisdom for them to seek changes in Taft-Hartley that would require them to represent only their bargaining-unit members?

THE UNION'S CLAIM THAT RIGHT TO WORK IM-PEDES PROGRESS AND PROMOTES LOW WAGES IS OF DUBIOUS VALIDITY

The Bureau of Labor Statistics and other nationally recognized reports show that, in the 10-year period from 1983 to 1963, 3 right-to-work States led the Nation in the rate of new jobs created in business and industry, and that 3 of the top 5 and 7 of the top 10 States in the Nation in rate of gain in manufacturing hourly wage rates were right-to-work States.

Too, isn't it a fact that wages, to a very great degree, are a function of productivity and capital investment, and thus tend to be highest where such investment has been most intense? Regional differences in wage levels, which appear to have little to do with union organization, also enter the wage picture to some degree.

In the final analysis, must not the measure of wages, to be meaningful, be considered in terms of "real wages?" As to whether they sre "low or high" must be decided in terms of what the wages will buy.

THE UNIONS CONTEND THAT RIGHT-TO-WORK IS A MISNOMER IN THAT IT DUES NOT GUARANTER EMPLOYMENT

Granted, but unions cannot guarantee employment either. Productivity and capital investment in an atmosphere of voluntarism create the most dynamic employment opportunities. Restrictions, whether by labor or government policy, cause the employment opportunities to go elsewhere as in the case of jobs associated with steel wire products; that is, nails, barbed wire, et cetera. "Made in Belgium" now appears on many shipments received in the United States; and the job opportunities have gone overseas where, incidentally, there is a widespread dedication to the principle of voluntarism.

UNIONS CONTEND THAT THE MAJORITY WILL SHOULD BE IMPOSED ON ALL

Isn't this an attempt to equate the union with a sovereignty? We have long recognized the rightful place of majority decisions at the various levels of government, but the principle of voluntarism has prevailed otherwise in private organizations. Has the time come when labor unions are to be accorded the status and privileges of a sovereignty?

EXPOSURE TO UNIONS NOTWITHSTANDING, MANY WORKERS CHOOSE NOT TO BELONG

All of the reasons for this choice are not based on a desire to avoid dues and assessments; among the other reasons are:

First, confidence in the leadership of management; second, objections to the union leadership; third, objections to the union policies; fourth, objections due to conscience; fifth, objections leased on religion; and sixth, objections to the union in principle.

In fact, 39 million of almost 56 million workers in nonagricultural establishments have not joined unions, and a substantial number of the nonjoiners have had many years of exposure to unionism.

In the event of repeal of 14(b), the union leaders will surely use their new power to insist on (and possibly get) a union shop in every bargaining situation. And those great numbers of employees who have elected to reject the union will be coerced, on pain of losing their employment, into the union fold against their wishes and in violation of their natural right to choose.

EXPANDED UNION PRIVILEGES WILL TEND TOWARD A POWER STRUCTURE THAT WILL SURELY CUR-TAIL THE PERBONAL FREEDOMS OF ALL AMERI-CANS

What are the union leaders really after—complete domination of the political, social, and economic life of this Nation? If this is true, repeal of 14(b) will greatly enhance their position of dominance.

Dominance of the several branches of our Federal Government could ultimately bring the administration to the position of "housekeeper" for the AFL-CIO Executive Coun-

#### CONCLUSION

And in conclusion speaking for the Associated Industries of Alabama and a vast majority of Alabama citizens, we are calling on you, Senator Hill and Senator Sparkman, and the entire Alabama delegation to continue your efforts in any extended discussion of H.R. 77 to insure the retention of section 14(b).

### In Search of a Solution

EXTENSION OF REMARKS

# HON. THOMAS M. REES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1966

Mr. REES. Mr. Speaker, I am pleased to bring to the attention of my colleagues the following article by Mr. Walter Lippmann which appeared in the Washington Post on Monday, January 24, 1966:

> WELL, WHAT CAN HE DO? (By Walter Lippmann)

The reason why the peace offensive failed is most cogently revealed in the Mansfield report on the state of the war. Mr. Johnson has been trying to obtain by propaganda the victory which he has not been able to obtain on the battlefield—that is to say, the acceptance in the whole of South Vietnam of a government which has lost control of a very large part of South Vietnam. The peace offensive was bound to fail, and the grave decisions which the President hoped to circumvent and avoid are now before him.

to circumvent and avoid are now before him. If he is to make these decisions wisely, he must recognize that in international politics peace settlements are possible only as and when they reflect the real balance of power. In the World War, for example, Churchill and Roosevelt had to settle with Stalin for a Soviet political frontier in the midst of Germany and of Europe. That is where the Red army had arrived when the peace negotiations began. The same principle will hold in Vitenam. There will be no settlement until the terms of peace reflect the military reality.

The President will be disappointed again and again as long as he and Secretary Rusk ask for a settlement which in effect demands that the defeat of the Saigon forces be transmuted at the conference table into a victory for the Saigon forces. Nor should he indulge in any illusion that the informed opinion of mankind really thinks as Secretary Rusk talks merely because American envoys have been politely and sympathetically received in so many capitals.

What then should the President do? It is often said by the President's supporters

What then should the President do? It is often said by the President's supporters that his critice propose no alternative to what he is doing. If that was ever true, it is no longer true today. It is not true since the Mansfeld report and since the Gavin statement. The President should reduce his

war aims, which today are impossibly high in the light of the conditions described in the Mansfield report. He should alter his strategy along the lines proposed by General Gavin, making it a holding operation pending the eventual negotiation of a political settlement.

The Mansfield report shows that Mr. Rusk's objective—the rule of General Ky or his successor over the whole of South Vietnam—is unattainable no matter how much the war is escalated. The burden of disproving the conclusions of the Mansfield report is on those who have been proved wrong about the escalation of last summer, on those who are now asking for another escalation in order to redeem their failure, on those who want to redouble the stakes in order to recoup their losses.

If the Mansfield report contains the truth of the matter, it follows inevitably that our war aims should be reduced and our strategy revised. We should put aside the hopeless task of searching out and destroying the Vietcong, and we should take our stand, as General Gavin advises, on a holding oper-

ation in the coastal cities.

This is not a policy for a glorious victory or for some kind of dazzling political triumph. It is no trick for pulling rabbits out of a hat. It is a formula for liquidating a mistake, for ending a war that cannot be won at any tolerable price, for cutting our losses before they escalate into bankruptcy, and for listening to commonsense rather than to war whoops and tomtoms.

Because we are neither omniscient nor omnipotent, we, even we Americans, cannot always win. But I cannot help feeling in my bones that a display of commonsense by a proud and imperious nation would be a good moral investment for the future.

John Watts Day, Fine Idea

EXTENSION OF REMARKS

### HON. FRANK CHELF

OF RENTUCKY

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. CHELF. Mr. Speaker, on Monday, January 24, a John Warts Appreciation Day lunch, sponsored by the Lexington-Fayette County Chamber of Commerce, was given in Lexington. Ky.

Upon this occasion, all of the Members of the Kentucky delegation in the House, Republicans and Democrats alike, sent a joint wire of congratulations and warm good wishes to our highly esteemed colleague, John Watts, as a way of expressing our own appreciation for his magnificent contribution of distinguished service to his district, the State of Kentucky, and the Nation.

It is a pleasure to include an editorial entitled "JOHN WATTS Day, Fine Idea" from the Lexington Herald, Lexington,

JOHN WATTS DAY PINE IDEA

The Lexington-Fayette County Chamber Commerce has come up with an excellent idea in planning an "Appreciation Day for Congressman John C. Warts." No Kentucky Representative in recent years is more deserving of this fine tribute to his work in behalf of his district, his State, and his country.

country.

Representative Warts first went to Washington as the Representative of the Sixth

District after winning a special election in April 1951, and has been reelected every years since then. He is an A.B. and law college graduate of the University of Kentucky and is a farmer and banker in Jesamine County. He is perhaps better informed on burley tobacco than any member of either House of Congress and has been recognized for his wide interests in legislation by being named to the all-important Committee on Ways and Means, perhaps the top assignment for the House. He got early legislative training in the Kenutcky Legislature where he served at one time as floor leader for his party.

While he has been identified with the Democratic Party during his political life. Representative Warrs has served all interests and both parties in Washington. He is elected and reelected by the votes of members of both parties and this fact is recognized in the nonpartisan promotion of the testimonial dinner that will be held on January 24. Advance ticket sales attest the great popularity of the flixth District's Representative and a sellout of accommodations for the 1,000-seat Phoenix convention hall seems assured at this early date.

Representative Warrs always finds time to attend to the requests of his constitutents. He reflects in his voting the opinions of the people who send him to Washington. Too often voters fail to tell their representatives how well they are doing and this testimonial luncheon will let Representative Warrs know that the voters of this district appreciate what he has done and is continuing to do to make this a great country. The chamber of commerce is to be congratulated on its idea.

Half a War

EXTENSION OF REMARKS

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1966

Mr. YOUNGER. Mr. Speaker, it rarely happens that the Washington Fost editorially criticizes this administration and I was quite surprised to read the leading editorial in the January 26 issue. It appears that even the Fost can see through the thinly veiled misrepresentations in the budget message. I am delighted that they have called attention to this procedure to their readers. The editorial follows:

HALF A WAR

President Johnson's new budget for the war on poverty is a disappointment to hopes that the President himself has raised. It represents a sharp cut in the plans that the Johnson administration itself had held before cities throughout the country, and a drastic reduction in the goals that the President in his own speeches has enunciated to the Nation.

The new budget can be said to expand the war on poverty only in a narrow and mis-leading sense. The Office of Economic Opportunity says that it will actually spend \$1.2 billion in the current fiscal year, but will spend \$1.7 billion in the next fiscal year. It is an increase of nearly 40 percent; is it not?

Unfortunately, this kind of arithmetic conceals the reality of the broad and powerful programs that Mr. Johnson has begun to create. Most of these programs have begun actual operation only since the beginning of this fiscal year, last July 1. Since they were spending next to nothing at the beginning

of the summer, and since they will have spent \$1.2 billion by the end of next spring, obviously they will be spending at a much higher annual rate by the end of the fiscal year. In fact, the OEO will have to cut exist-ing programs to hold its expenditures to the figure that the President has set.

The whole OEO operation has been run on the assumption, until very recently, that its budget would be approximately doubled next year. The President's figure-including the alleged increase—is the bare amount essential to keep it from collapsing. To maintain even this figure, it will probably be neces-sary to finance some of the OEO's present educational activities with the money provided by the new Elementary and Secondary Education Act.

The effect of this retardation of the poverty program is best understood by examining specific cities. Detroit, which is ambarked on an immensely promising plan, will spend less than \$10 million in OEO funds this year. But it is building toward an annual level of about \$20 million. If its progress is cut off at this point, it will remain perilously incomplete. None of the OEO money for manpower training, for example, has yet arrived in Detroit; but a poverty program that cannot train men for jobs is a disaster. Detroit, like other cities, has discovered that the slums are in desperate need of modern health services, and intends to put clinics into each of its four commu-nity action centers. The OEO has even been pushing Detroit to expand this proposal. An OEO inspection team looked at the city last fall and forcefully recommended a very substantial enlargement of the clinic system. Nearly \$1 million of the cost has been obligated, but very little of it has been spent be-

After community action in the cities, the most expensive and controversial of the OEO's enterprises is the Job Corps. President Johnson said in his message on poverty. less than 2 years ago, "A new national Job Corps will build toward an enlistment of 100,000 young men." The new budget calls 100,000 young men." The new budget calls for an enlistment of 45,000. As recently as last September, President Johnson announced the expansion of Project Head Start and declared that it would institute "yearround centers for 3-year-olds and up. We expect to enroll \$50,000 needy children in the first year." The new budget will permit only 200,000.

"We are citizens of the richest and most fortunate nation in the history of the world," the President said in his original message on poverty. That is still true. "The new program I propose is within our means," he then And that also still is true. But the program that is projected in the new budget does not reflect either of these truths.

Wednesday, January 26, 1966

Mr. HUOT. Mr. Speaker, the following editorial comment appeared in the January 21, 1966, edition of the Carroll County Independent of Center Ossipee, N.H. I believe this editorial brings out in an excellent manner the feeling of a

great majority of New Hampshire citizens regarding Federal assistance under the Elementary and Secondary Education Act of 1965.

This editorial was signed by Mr. A. H. Chapman of Chocorua, N.H.

NEW OPPORTUNITIES IN EDUCATION-SHALL WE GRASP THEM?

The Education Act of 1965 is raising some curious speculations and some hot issues. As of this writing, 64 New Hampshire towns have had to decide whether to accept or retect Pederal funds made available under title 1 of the act.

Title 1 provides money so that the local primary and secondary schools may obtain facilities and undertake procedures which are aimed at special training of youngsters who, for a variety of reasons, are unable to make normal progress. It is within this group that dropouts are most likely to occur. Their backwardness in learning also serves to retard the progress of their more fortunate Clearly, the application of careclassmates. fully tailored techniques can vastly improve the general level of educational achievement, and at the same time overcome the frustration and heartbreak of the slow learners.

Ever since Lincoln signed the Land Grant College Act in 1862, the Federal Government has continually made funds available to lo-cal education. Thus the passage of the 1965 Education Act is by no means an innovation. In New Hampshire, the most recent Federal contribution is about 6 percent of total school expense. The Federal action is paternalistic rather than political; it provides aid to victims of social inequities for which the Federal Government rightly feels a responsi-

Of the 64 towns which have already voted, 56 have accepted and 8 have rejected the title 1 funds. Though this result indicated the general acceptability of the plans provided for in the Act, some of the 8 towns which voted "No" have based their action on inexcusable misinformation and unfounded predictions that-"The Federal Government aims to take over control of our schools.

On the question of control, it is significant to read section 604 of the act which states, "Nothing contained in this act shall be construed to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over the curriculum, program of instruction, administration of personnel of any educational institution or school sys-This section forcefully refutes the misleading implications contained in a 1961 memorandum issued by the Department of Health, Education, and Welfare. There is a great deal of difference between a Bureau memorandum and a law of the land.

Furthermore, the act clearly states that the State education department and the local school authorities shall retain full responsibility for the designation of methods and facilities, and for complete administration of the programs. All the Federal Government asks is that well-recognized standards be maintained and that the local authorities undertake to evaluate the success of their programs.

The critics may get some kind of satisfaction from accusations that the Congress of the United States is trying to invade our villages, brainwash our educators, and pervert our school kids. The real victims of these critics, however, are the needy and handi-capped children in eight of our towns who are thoughtlessly being deprived of educa-tional benefits which—because of our inadequate tax system-we are unable to provide ourselves.

A. H. CHAPMAN, Chocorua, N.H.

#### John Borland

EXTENSION OF REMARKS

# HON. EMILIO O. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966 Mr. DADDARIO. Mr. Speaker, during the period of time while the 89th Con-

gress was in recess, a fine friend and an outstanding newspaperman for whom I had the greatest respect died unexpectedly in Connecticut. I want to pay tribute to him now, and to call the details of his career and the fine standards he set to the attention of the House. Jack Borland covered the State capitol

in Hartford, and many sessions of the general assembly, with skill, ability, and dedication. He displayed some of the innate caution toward the fine men who have served in those bodies, but withal he respected the hard work and effectiveness with which they served.

I want to extend my deepest sympathies to his fine son, who was serving in the Vietnam area when death took Jack from us, and to his widow and the family.

I offer the account of his death for the RECORD:

[From the Hartford (Conn.) Times, Nov. 22, 1965]

JOHN K. BORLAND, JR.

As a veteran member of this newspaper's team of State government reporters, Jack Borland was one of the best-known newsin Connecticut. It stressing the obvious to say that he was well liked—his ready smile, his quiet voice with ita persistent Pennsylvania accent, his kindand integrity made him both popular and respected.

His work put him into close association with men and women of position, with politicians on their way up or down the ladder, and he acquired a gentle skepticism about them that enabled him to recognize the human being behind the title and the ceremony surrounding it.

When he was not busy on his beat or at his typewriter, he could often be found in the sports department. His favorite sport was football. It amused and pleased him that his own small college, Washington and Jefferson, had once played in the Rose Bowl. He was walking to his seat at a game at Storrs on Saturday when he died.

The vacancy he leaves in our affections will remain, and we shall miss, too, his professional competence and dependability as a newspaperman.

[From the Hartford (Conn.) Times, Nov. 22, 1965]

TIMES' J. K. BORLAND DIES--RITES WEDNESDAY AT I

Funeral services for John Kelso (Jack) Borland, Jr., 52, veteran Hartford Times State capitol reporter who died on Saturday, November 20, 1965, will be held Wednesday at 1 p.m., at the Burnside Methodist Church, ust Hartford

Mr. Borland was stricken as he was about to enter the University of Connecticut Memo-rial Stadium to watch the University of Connecticut-Holy Cross game at Storrs and died almost immediately.

He lived at 5 Higble Drive, East Hartford.

The Rev. G. Albin Dahlquist, pastor of the church, will officiate. Burial will be in Hill-

side Cemetery, East Hartford.

"Jack," as he was known, joined the Times staff 20 years ago, in August 1945. A year later, he was given the State capitol beat and staved with it ever since.

Born in Washington, Pa., August 4, 1913, he was the son of the late John K. and Grace Brownles Borland. He was a graduate of East Washington High School in 1932 and in 1936, a graduate of Washington and Jefferson College, where he was active on student publications.

From 1937 to 1941, he was an English and debating teacher at a suburban Pittsburgh high school, working summers in steel mills and glassmaking plants in the area.

Mr. Borland came to wartime Hartford in 1941 and worked the next 4 years as an inspector at Pratt & Whitney Aircraft. In 1942 he began part-time reporting for the Times. Particularly interested in economics and government affairs, he was happiest when he

government affairs, he was happiest when he could dig into a good State financial story.

Mr. Borland felt an obligation to keep a

sharp eye on State agency operations to protect the taxpayer.

"You can't expect the politicians to police each other," he was fond of saying. "Both sides have too much on the other. The press must enlighten and expose."

In a 1960 publication, he stated: "The more of government that can be opened to public view, the better the government." And he dedicated himself to opening this view.

Mr. Borland took particular satisfaction when he wrote a series of stories in 1953 to arouse taxpayers over longstanding State car abuse and "the State car racket."

As a result of the series, former Gov. John Lodge cracked down, ordering a new rigid set of standards for use of State cars.

of standards for use of State cars.

His State capitol coverage concentrated on finance and tax offices, and he prided himself in making his stories easily understandable to the reader.

Mr. Borland, who most recently covered the constitutional convention, had been covering gubernatorial press conferences since 1946. About Governors, he used to say: "I have liked each one. Each has tried

"I have liked each one. Each has tried honestly to do a good job, often suffering political consequences as a result."

political consequences as a result."
For relaxation, he enjoyed sports, other outdoor activities, and gardening.
Mr. Boriand was a past president of the State Capitol newsmen's Laurel Club.

He also was a member of the Association of Political and Legislative Reporters, the 20year Club of the Hartford Times, the Burnside Methodist Church, and the men's club of the church.

He leaves his wife, Mrs. Jane Cowden Borland; two sons, Lt. (j.g.) J. Bradford Borland; two sons, Lt. (j.g.) J. Bradford Borland, with the Navy in Vietnam, and Douglas K. Borland at home; a daughter, Miss Beverly B. Borland at home, and a sister, Mrs. David W. Weaver, of Baltimore, Md.

Friends may call at the Newkirk and Whitney Funeral Home, 318 Burnside Avenue, East Hartford, Tuesday, from 3 to 5 and 7 to 9 nm

Memorial contributions may be made to the Memorial Fund of the Burnside Methodist Church or to a charity of the donor's choice in his memory.

Governor Dempsey said today he was "deeply distressed by the death of Jack Borland whom I have known for more than 15 years both as a friend and as a reporter dedicated to keeping the readers of the Hartford Times fully informed of the news of the legislative and executive branches of State government.

"He was a veteran member of the capitol press corps whose loss will be keenly felt by his paper, his readers, and his many friends and acquaintances in official State circles.

"My most sincere sympathy is extended to his widow and children."

# Hawaii Reaps Benefits From Matson's Containerization Program

EXTENSION OF REMARKS

# HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MATSUNAGA. Mr. Speaker, America is known for its eagerness to encourage and promote new ideas, whether it be in private industry or in government. The people of Hawaii are presently reaping the rewards of this pioneer spirit in the shipping industry.

The Matson Navigation Co., by experimenting—as far back as 1958—with containerization, has made it possible for Hawaii's importers to save a large percentage of shipping costs.

"Containerization" means shipping by container. The goods to be shipped are packed and sealed in containers at the point of origin and the containers are not opened until they reach their destination, irrespective of the different modes of transportation employed en route. Containerization has reduced insurance costs because of a marked reduction in damage and pilferage. Loading and unloading costs, too, have been greatly reduced as the ship's time in port has been shortened.

Honolulu Advertiser's business editor, Emil A. Schneider, citing from the Kaiser Steel Corp. periodical Westward, says that containerization has been partly responsible for Matson's great increase in overall tonnage from 210,000 in 1958 to 700,000 tons in 1965.

Matson, he says, is planning to extend its containerization program to the Far East. Thus, Hawaii can look forward to a still wider variety of commodities at reasonable cost from all over the world.

I commend to the readers of the Con-CRESSIONAL RECORD the following article about containerization written by Mr. Schneider and which appeared in the Sunday Star-Bulletin and Advertiser of January 9, 1966:

ISLAND FREIGHT CHARGES CUT BY CONTAINERIBATION

## (By Emil A. Schneider)

The people of Hawaii would be paying one-third more in freight charges for cargoes from the mainland if Matson Navigation Co. had not adopted its containerization program.

This statement, attributed to a Matson official, is Included in an article describing the rapid growth and acceptance of containerization throughout the entire U.S. transportation system. The article is printed in Westward, periodic pamphlet published by Kaiser Steel Corp.

"Shipping by container," the article says,
"can mean an average saving of 15 percent
for the shipper, and savings double that
have been recorded."
One of the principal savings, the article

One of the principal savings, the article notes, stems from speeding up loading and unloading operations.

Containerization, it says, "permits a ship to spend 80 percent of her time at seamaking money. A conventional freighter is in port 80 percent of her lifetime, and time in port is money lost."

In addition to eliminating expensive multiple handling of cargo, it adds, containers have greatly reduced cargo damage and

pliferage. This in turn has led to lower insurance costs, it notes.

Also, the article points out, "containers eliminate the need for conventional steamship packaging of export items, making them more competitive in the foreign market."

The author, Fred Reicker, describes containerization as "a beautiful blend of rugged durability, efficiency, and versatility." He refers to containers as "footloose warehouses" because once packed, the container remains sealed until it reaches the consignee, regardless of how many different modes of transportation may be used throughout the container's journey.

He notes that containers can carry a wide variety of cargo—dry, refrigerated, liquid, even livestock.

Reicker cites such examples as refrigerated meats and produce to Hawali, grains to Latin America, bourbon to Hong Kong, radios to America, cookies to Germany, "top secret" Paris originals to Chicago, and radar components to an isolated 'Alaskan outpost.

He adds that containerization is spreading rapidly throughout the railroad and trucking industries as well as the steamship industry, and experts expect it to mushroom in the years ahead.

The article says that as much as containerization has grown to date, it still accounts for only I percent of the Nation's freight that can be containerized.

"Sooner or later, the advantages of the container will bring us that other 98 percent," a shipping official is quoted as saying.

One estimate, the article says, is that the 300,000 containers—8 feet and longer—now in use in the United States will double by 1975.

Foster Weldon, Matson's research vice president, expressed growth possibilities of containerization in this way:

"During 1966, each of our 6,000 containers will make over 10 round trips to support a community of 800,000 in Hawali. Just apply these figures to any major population center in the United States and you have a rough idea of containerization's future."

The article notes that Matson started its container program as a modest experiment in August 1958.

"The experiment blossomed into an overwhelming success, and the company now has a fleet of 7 specialized container vensels providing 60,000 container round trips a year between the west coast and the islands," it

Recently, Matson applied to expand its container program to the Far East on a nonsubsidized basis. The application currently is pending before Federal maritime authorities.

The article adds that American President Lines of San Francisco (which also serves Hawaii) already has 420 containers in use in its Far Eastern shipping service. The containers are carried by four APL ships, two of which have been specially equipped to carry both containers and general cargo, it says.

APL soon will add 1,000 more containers to its container inventory, the article notes.

A containerization leader on the east coast, the article says, has been Sea-Land Service, Inc., a steamship firm that operates a coastal shipping service around the continental United States and also serves Central America and the Caribbean area.

Sea-Land, it adds, has 11,000 containers in use, and plans to purchase 6 new container ships. Each will be able to carry 1,200 containers. The firm plans to use some of the new vessels on a proposed New York-Europe run.

The article points out that "almost all shippers agree a container is a moneymaking machine," but adds that there is considerable difference of opinion on container sizes.

For example, it says, APL uses 20-foot containers, Matson prefers 24-foot lengths,

and Sea-Land uses mostly 35-footers and will add 40-foot units. A variety of other sizes also are in use.

The article quotes Matson's Weldon as saying that Matson studied all practical container lengths from every aspect—econ-omy, capacity and flexibility.

The 24-foot unit proved to be best for

our Hawaiian trade.

"In my opinion," he adds, "standard size increments are impractical. Container sizes should be governed by the economies of a particular trade. Then equipment, compatible with whatever that size may be, will have to be developed.

"Transportation will have to specialize to achieve maximum economy in particular trades, just as industry specializes for par-

ticular markets"

Containerized cargo also is causing considerable upheavals at ports where this kind of cargo is handled, the magazine notes

J. F. Parkinson, assistant general manager of the Port of Los Angeles, notes that containerization has meant an initial drop in income for many west coast ports.
"Before containerization," he says, "wharf-

age rates were based on either a dimension or weight basis. Rates calculated on dimension usually resulted in a good income. Container rates, determined solely by weight, are somewhat lower and mean less income.

"The resulting savings, however, have been passed along to the manufacturer, who can now afford to ship items which were once

marginal in profit.
"Consequently," he adds, "overall tonnage across the pier has increased."

has jumped at the ports of Oak-

land and Long Beach, the article says.

Matson's tonnage, for example, has jumped from 210,000 tons in 1968 to a current tons at its terminals at Alameda in the Bay area. Volume in 1966 is expected to reach 800,000 tons, the article says.

An Oakland port executive is quoted:
"Intercoastal trade was dead before Sea-Land established its facility here 3 years ago Each year since, this operation has brought a quarter-million tons of business to us."

To accommodate anticipated increases in containerization in the future, the article says, San Francisco is developing a 60-acre, \$27 million container dock at its Army St. Terminal. The facility is scheduled to be ready for use late this year.

# Address of Paul Hall, President, the Seafarers International Union, Before the **Japanese Labor Confederation**

EXTENSION OF REMARKS OF

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MULTER. Mr. Speaker, one of the most effective labor leaders in the trade movement unions is Paul Hall, president of the Seafarers International Union.

Last week Mr. Hall addressed the Japanese Labor Confederation at its second national convention, which opened in Tokyo on January 18. Mr. Hall, in the finest tradition of American labor, made a strong plea in his address for the elimination of poverty and social injustice and for the continuation of the free world's struggle against Communist imperialism.

From example, 41 agrs. APD, may 30 far-

It is with pleasure that I commend his remarks to our colleagues.

The address follows:

TEXT OF PRESIDENT HALL'S SPEECH BEFORE JAPANESE CONFEDERATION OF LABOR

It is indeed a great pleasure to be here with you today. It is a privilege to bring you fraternal greetings from President Meany, the officers and executive council, and the more than 13 million members of the AFL-CIO. In so doing, I emphasize again the bonds of friendship that already bind our two labor organizations, a friendship that was the tired by the appearance of President Meany leading the American delegation to your converse in November 1964. The organizations, a friendship that was drama-AFI.—CIO regards Domei as its counterpart organization in Japan, as the representative of democratic trade unionism in your coun-

It is natural for me, as president of the Seafarers International Union, to add special greetings to my colleagues of "Kalin," the "All Japan Sesmen's Union" of Domei, which has been engaged during this period in a sharp struggle with the Japanese shipowners for the betterment of the conditions of the seamen. Considering the difficulty and danger of the work of seamen, the demands of the union are just. I assure you most heartily of my sympathy and support in your struggle.

Japan is the most dynamic and industrially developed country in Asia. It is destined to play an increasingly important role in the affairs of Asia and the world. Indeed, it is necessary that Japan do so, for it has much that it can teach, much which it can help the less economically advanced countries,

especially in Asia.

In this important and inspiring task, Domei, the democratic labor movement of Japan, can play a significant role in advancing the cause of freedom and social justice. Perhaps more than any other Asian labor movement, Domei is in a position to do this by virtue of its experiences and international responsibility. Indeed, Domei has for a long time been aware of its duty in helping others, and your leaders have alre expended much time and energy in activities outside the borders of your own country. Brother Takita, is your representative to the executive board of our international organization, the ICFTU, and head of the textile ction of the Asian Regional Organization (ARO) of our ICFTU. Brother Wada is president of the ARO. There are, I know, plans under consideration by Domei to extend its aid in certain spheres of endeavor. this. Domei and its leaders deserve the greatest credit.

MUTUAL GOOD WILL

Our two countries are very friendly. That is as it should be. That friendship must con-Indeed, it must be deepened and hened. The continuance of that strengthened. The continuance of that friendship is a guarantee of the strength of the democratic idea and the cause of human freedom. Economically, our two countries need each other. To date, our economic relationship is beneficial to both countries, for we are each other's largest market for products. True, there are trade problems, even differences over trade and other problems that arise periodically. This is natural and inevitable. But in democratic societies, these differences can be discussed with mutuni good will and tolerance. They never need create insuperable obstacles to good relationships, for certainly what binds our two countries together is deeper and more fundamental than any disagreements which may arise.

We realize that you are engaged in a con-tinuous struggle to raise the living standards of your members. That is the central func-tion of a trade union organization. The working people of every country must have

a just and adequate share of the wealth they produce. There is no excuse for misery and poverty or social injustice in the 20th century, especially in these days of great technological advance, where we have the ca-pacity to produce enough for everybody. Yet, in spite of this, because of the lack of social vision and moral concepts of human decency still existing in the minds of too many of our employers, we still have millions of people existing on the edge of poverty, too many millions actually starving and bereft of all hope.

It is the age-old struggle of trade unions to improve conditions and to do away with inhuman conditions of suffering in a society of potential abundance. That is your struggle and it is our struggle also. We have sectors of poverty in our country, although we have made great progress in improving the living conditions of our members. Unemployment, though declining, is still too big in our country, due to the inroads of automation. This problem of automation has not to date been handled satisfactorily in our country. tomation must not be allowed to be an end in itself. It must be subordinated to the hu-man needs of the members of society. A comprehensive program must be worked out which can help us realize the productive potential of advanced technology, but which can safeguard and enhance the living standards of the workers. The AFL-CIO has such a program, and is spending much time and energy in its promotion. Our Government and the employers are being coached by the labor movement to take appropriate and effective action.

#### EQUAL HUMAN RIGHTS

The AFL-CIO is also in the forefront of the fight against any kind of racial discrimination. We are for equal rights—economic—political and social—to be granted to every citizen of our country, no matter the color of his skin, national origin or religion. In this struggle it is right and just to say that our Government officially and energetically is working overtime in the cause of civil rights and human justice to eradicate as rapidly as possible the remnants of discrimination. And the great majority of American people are with us in the struggle.

What I said before about the relation between our countries is true also of the relations between our two trade union movements. We may not see eye to eye on every-thing, but what binds us together is funda-mental and strong. I remind you, in this connection, of what President Meany said in his address to the historic founding Congress of Domei:

"What is decisive is that we must meet the common dangers and tasks. What is most important is that we share a common faith in freedom and peaceful progress. Whatever differences might arise can and should be resolved in a spirit of serving best our mutual interests. I am sure that close and expanding cooperation between the Japanese and American labor movements would go a long way toward insuring a relationship between both our countries based on mutual confidence, equality and justice."

That our two movements share a common faith in freedom, democracy and peaceful progress is certain. We both understand that the measure of a strong democratic society is a strong free trade union movement. is why our two movements are resolutely op-posed to all dictatorial, antidemocratic groups and ideologies. That is why we have together fought against the maneuvers and aggressive acts of Communist totalitarianism. the new imperialism. We can see their intent to subvert and destroy democratic societies, both from without and within, whether they are stable and fully developed or struggling to attain stability as in the newly independent countries of Asia and Africa.

If a world of peace and freedom is to be built, these attempts of Communist imperialism must be beaten back. We are certain that Domei and the AFL-CIO will stand shoulder to shoulder together in fighting against colonialism, whether of the old brand or the new and even more dangerous kind of Communist imperialism, whether its head-quarters be in Moscow or Peiping; to help the cause of national independence and human

rights wherever it may be in need.

The world needs peace more than anything else. Who more than workers desire it deeply or can benefit more by it? The free trade unions have always worked for a world peace of freedom. But we want a just peace. With all the difficulties of achieving it, we must nevertheless he realistic and responsible in our approach. Emoting shouting of slogans in the streets do not help at all. Lasting peace can be achieved by effective international inspection and suspension, not only of nuclear weapons, but also all other weapons of mass destruction. I cannot stress too strongly that real and total disarmament, which is our common objective, can be attained only through such international inspection and control. Let us work together for this great goal.

I wish you success in your deliberations. I am sure they will lead to benefits for your members and strengthen the forces of democracy in Japan.

# Head Start Becomes Key to the Future

EXTENSION OF REMARKS

# HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. GIBBONS. Mr. Speaker, under leave to extend my remarks, I wish to insert in the Record a very excellent article from the Washington Star of January 25, entitled "Head Start Becomes Key to the Future." I commend it to the reading of all of the Members:

CHANCE TO CATCH UP—HEAD START BECOMES
KET TO THE FUTURE

(By Dr. Benjamin Fine)

New York.—Operation Head Start, the far-reaching project to provide schooling for underprivileged preschool: children, has proved successful. Started as a summer program, it has now been developed into a year-round operation, financed by the Federal Government at a cost of millions of dollars.

Last summer, 561,000 children throughout the Nation were enrolled. President Johnson called it a landmark, "not just in education, but in the maturity of our own democracy."

When Project Head Start was announced, its sponsors wanted to provide preschool centers in which each child would have the opportunity to develop to his full potential. It is known that the early years of childhood are critical. A pattern of failure often develops among the children in poverty homes. This follows them into the schools, with resultant failures, dropouts, and intellectual handicaps.

The summer program, those responsible for it believe, succeeded in helping preschoolers improve their health, develop self-confidence, increase their verbal skills, and bring the home and school closer together.

The program cost \$95 million, of which \$83 million came from Pederal antipoverty funds. More than 40,000 professional workers were employed at 13,344 centers. They were assisted by 45,000 neighborhood residents and 250,000 unpaid volunteers. The

Director of the Office of Economic Opportunity, R. Sargent Shriver, called it the greatest voluntary effort in peacetime this country has ever known.

As one byproduct, the medical examinations uncovered 100,000 cases of eye difficulties, 50,000 cases of partial deafness, 30,000 cases of nutritional deficiency, and 75,000 cases of nonimmunization.

The year-round Head Start centers are now underway in many parts of the country. President Johnson has estimated that 350,000 needy children, from 3 to 5 years of age, would be enrolled in the first sessions, and many more within the next 5 years. The President said that follow-up programs such as special classes, home visits, and field trips would be provided to sustain the progress made by children enrolled in Head Start.

However, the schools must provide equal education opportunities for all children. It is known that in many underprivileged areas, the children who need the best schools have the poorest. It is difficult, for example, to get experienced teachers to remain in poorly equipped schools, or schools in needy neighborhoods.

Kindergarten and first-grade teachers have complained that some of the benefits of Project Head Start are being lost by over-crowded, underequipped public school classes. However, it is expected that a substantial part of the \$1 billion Federal funds under title I of the Elementary and Secondary School Act of 1965 will provide special educational programs to help the children in underprivileged communities.

The implications of this program go beyond the antipoverty aspects. Millions of underprivileged children may, upon entering school, be able to keep up with their more fortunate classmates. The I or 2 years of preschool education will offer the youngsters confidence in their relations with people, and will—in the best sense of the term—provide them with a headstart toward learning.

#### Ukrainian Independence

SPEECH

#### HON, WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. BROOMFIELD. Mr. Speaker, I am proud to join in the observance marking the 48th anniversary of the independence of the Ukraine, which was proclaimed on January 22, 1918. Although that freedom was short lived, that important event, the proclamation of Ukrainian independence and the establishment of the Republic, symbolized the realization of a centuries-old dream.

The Ukrainians are one of the oldest and largest of the Slavic ethnic groups. They are known as one of the most peaceloving, industrious, and democratic peoples in Eastern Europe. For centuries they have been denied the benefit of these wonderful traits by the oppressive measures inflicted upon them by the Russians.

During all these centuries, the Russians were not able to eradicate Ukrainian nationalist feelings. The idea of complete freedom has always been nurtured in the people's hearts.

Today, Communist totalitarian tyranny has turned the Ukraine into a large prison camp in which more than 42 mil-

lion freedom-seeking and hard-working Ukrainians are crushed under the yoke of the Soviets. There is no freedom of movement, and no freedom of expression. However, the Ukrainians in the free world, and particularly those in the United States, observe each year on January 22, Ukrainian Independence Day, with due solemnity.

Mr. Speaker, I join my fellow Americans in bringing congratulations to the Ukrainian people, and in the hope that the freedom we enjoy in the United States can become a way of life for all the lands now controlled by communism.

#### Spirit of Freedom: The Ukrainian Genius

SPEECH

# HON, JAMES A. BURKE

OF MASHACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. BURKE. Mr. Speaker, 48 years ago, on January 22, 1918, the Ukraine broke the chains of Russian rule. This day marked a glorious culmination of the dreams of freedom which Ukrainians

had harbored for hundreds of years. Yet upon gaining independence, the Ukraine was beset from all sides by nations greedy for its abundant natural resources and strategic geographic location. Germany and Austria-Hungary seized the Ukraine and installed a puppet ruler. After its defeat in World War I, Germany withdrew, but the French then landed at Odessa in an attempt to bring the Ukraine into France's sphere of influence. White Russians fought through the Ukraine in their efforts to overthrow the Russian Bolsheviks. Poland invaded, trying to annex the Ukrainian lands west of the Dnieper River. Meanwhile the Bolsheviks constantly attacked in order to reannex the Ukraine to Russia. In 1922 the gallant Ukraine was forced to succumb to the strength of the U.S.S.R. and thus lost its last vestige of independence.

Today the beautiful and rich land of the Ukraine stands crushed in the paws of the Russian bear. Even so, Ukrainian patriots have never relinquished the most dominant theme of their national history—the will to be free. The world has witnessed this will many times. After World War II, when the Ukraine lost so much of its wealth, its people never once flinched from the hard task rebuilding. In the early 1950's Ukrainian nationalist guerrillas still fought against the forces of communism in west Ukraine and Polish-Slovak-Carpathian borderlands. Such is the spirit of Ukrainians that the Russian press has made many attacks on Ukrainian literature for its nationalism.

The man who embodies the spirit of nationalism most perfectly in Ukrainian culture is Taras Shevchenko, poet and national hero. His power was such that his poems in defense of freedom, written in the 19th century, caused the Russian empire to quake and Czar Nicholas I to

command him to desist from writing. For the first time a Ukrainian had risen to express the feelings of his people in their own tongue. Earlier writers had made some use of Ukrainian, but Shevchenko worked almost exclusively in his native language, thus placing the literature of his homeland in the ranks of the great Slavic writings.

In his earlier works Shevchenko idealized the lives of his people, their troubles, and their bitter struggles to gain independence. His words are still cherished by Ukrainians, who, just as Shevchenko chafed under the rule of czarist Russia 100 years ago, dream today of attaining freedom from the Russian Communists.

On this day it is fitting that we pay tribute to the genius of the Ukrainian people—their undying will to be independent and to take their rightful place among the free nations of the world. As Americans we must ever remember that as long as courageous Ukrainians remain under tyrannical Russian rule, as long as any nation remains subjugated to another, as long as men are denied the ideals of democracy and individual liberty, our task is not done. It is my privilege today, Mr. Speaker, to salute the Ukraine and all its valiant sons throughout the world.

# Longer Terms for Members of the U.S. House of Representatives

EXTENSION OF REMARKS

# HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 26, 1966

Mr. HAMILTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 12, 1966, issue of the Columbus (Ind.) Evening Republican evaluating the President's proposal for a 4-year term for Members of the U.S. House of Representatives:

LONGER TERMS

There are several good arguments for lengthening the terms of Members of the U.S. House of Representatives, but no good argument for giving them 4-year terms concurrent with the election of the U.S. President.

Supporters of President Johnson's request for a constitutional amendment to change the Representatives' terms from 2 years to 4 can argue that Members of the House must spend too much time campaigning and that they cannot concentrate on legislative work.

But there is only one argument for election of the Representatives every 4 years at the same time the President is elected and that is a bad one. It is the argument that there are larger turnouts of voters in the presidential election years. It could be expected to result in a House heavily influenced in not completely dominated by Members carried into office on the coattails of the successful presidential candidate. This would only result in making the House more of a rubber stamp than it is now turning out to be, further increasing centralization of power in the President's office.

in the President's office.

The alternatives, if a 4-year term is decided upon, would be to elect half the Mem-

bers of the House every 2 years or to elect all of them in the off-presidential election years. In any event they must not all be elected at the same time as the President.

During the drafting of the U.S. Constitution, James Madison of Virginia argued for a 3-year term, as opposed to some who favored a 1-year term and others supporting 2 years. The 3-year term was temporarily adopted, but later changed to 2 years in completion of the Constitution.

A 4-year term was never proposed, the Founding Fathers holding to the idea that the Lower Chamber of Congress must be directly and immediately responsible to the people and if not doing what the people wanted could be replaced within the 2-year election period. There is still nothing wrong with that idea and the only thing to be considered is whether the complexities of modern government do require that Members of the House devote more time to legislative work. If so, why should not a 3-year term be considered instead of 4?

# Bob Hope, The Old Trouper, Does It

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MULTER. Mr. Speaker, one of the finest men in show business is Bob Hope. This gentleman, during his entire professional career, has devoted innumerable hours, days, and weeks to charity. But one of his really great contributions to our society has been his annual Christmas visit to those places around the world where American servicemen have been stationed and sometimes, as during this past Christmas, fighting and dying.

It is with pleasure that I commend to our colleagues one of the many tributes to Mr. Hope, written upon the televising of excerpts from his most recent trip.

The following review is by Atra Baer and is from the January 20, 1966 edition of the New York Journal American:

> BLESS 'EM ALL (By Atra Baer)

Bob Hope's annual Christmas show—90 minutes culled from 12 days in Vietnam and on stepping-stone islands with haunted names like "Guam"—cannot and will not be reviewed as if it were any other show, any other show at all.

His yearly trips to our fighting fronts and to the distant "hotstove league" outposts where the war may be cold but the powder is being kept warm, are testimony to the state of the world.

Last night's NBC credits should properly have read: "Produced by The Way Things Are; Directed by Democracy; Starring the Audience, the Young Men and the Old Soldiers."

And yearly with this unchanging script, in settings as farfung as they are unvarying. Bob Hope—who doesn't need the money, doesn't need the recognition—can take a one-line vulgarity, updated from the frowsiest days of burlesque, and turn it into a hymn. A hymn to the gallantry that is a lonely man's laughter, a frightened man's courage, a wounded man's wholeness. And a hymn to that part of normalcy of individualism, that God knows how stays with men who find

themselves where nothing is as they have known it before, where there must be little individualism except in dreams, and where life goes on, or perhaps, does not.

Bob Hope can introduce a shimmering bit of fluff like, "Miss North Cal'ina," graduated to "Miss U.S.A.," Dianna Lynn Batts, and listen while the sbyly (actually), intones:
"I'm not a performer, but this experience really rounds you out as a person." He can stand there as 6,000 men react to this "in-nuendo" that is subtle as a tidal wave, react with raucous hoots that might have Sadie Thompson fleeing in tears. But Hope's arm was around her, as she was X-rayed by eyes that were simultaneously seeing other women. And it must have been at once an absolutely impersonal and deeply personal thing that this pale-haired junior goddess from home was experiencing. An experience that may really "round her out as a person." The men sat in the slashing rain not moving except to applaud; sat in a vicious downpour, unconcerned and sunny as if they were in the grandstand on a blue-sky doubleheader Sunday back home. Not moving until a GI came onto the platform with a piece of paper.
"You read it, I can't do it" said Hope. The
GI did: "Will all of 412 report immediately
to—" and here and there men get up and walked away from laughter. When it comes to a cynical realism, Hope

has never underestimated his GI audience.
At Guam he assured them: "You boys have
a very important job. We wouldn't want the
Communists taking over all this grass. I understand you made a very important sirsirihe
the other day, hit that 12-inch pipeline that

brings in the soy sauce from Peiping."
The show ended on the decks of an aircraft carrier with Anita Bryant leading the cast—wriggly, white-booted Joey Heatherton, Carroll Baker, Jerry Colonna, Kaye Stevens, Jack Jones, the Nicholas Brothers—in the traditional closing: "Silent Night." And team for that Christmas Eve had to have blurred millions of screens last night, in January. At home.

#### Ukrainian Independence Day

SPEECH

OF

# HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1966

Mr. DADDARIO. Mr. Speaker, we who love freedom pause to honor the se rifices and the valor of the people of the Ukraine, in commemoration of the 48th anniversary of their independence. long-suffering people, whose centuriesold dream of nationhood flowered with such tragic brevity from 1918 to 1920, still aspire to independence and freedom. Numbering some 45 million people, and occupying one of the most productive agricultural areas in Europe, these brave people have continued to rebel against the crushnig domination imposed upon them by the Soviets. They have suffered indignities, tyranny, and deportation of their political leaders to Siberia. Notwithstanding these outrages, they have repeatedly asserted their desire for freedom and independence, and staged active acts of rebellion to these ends during the

At this time, we proffer our respect and our deep compassion for the long and continuing struggle of the Ukrainian people. We hope earnestly for their eventual emergence from foreign domination. We hope that their aspirations and those of their millions of friends and descendants throughout the world may be realized, and that this captive nation may once again be numbered among the free nations of the world.

# Police Capt. Roland Sagum, of Honolulu: An Outstanding Community Leader

EXTENSION OF REMARKS OF

# HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MATSUNAGA. Mr. Speaker, there are many different paths which man may take to help his fellow men. And in our modern society the extent to which he succeeds in his efforts to help his fellow men is often determined by his ability to choose the right profession. An example of a man who made the right choice is Capt. Roland D. Sagum of the Honolulu Police Department.

Captain Sagum, as evidenced by his innumerable civic activities, is a man of many talents. Besides his police duties, he is president of the Hawaii International Finance Corp. and a director of 16 community organizations. He has re-ceived many local and national honors for his professional and community activities.

Captain Sagum's desire to serve his fellow men started early in his career. In an interview with Charles A. Ware, of the Honolulu Advertiser, Captain Sagum revealed that one of the reasons he chose police work as a career in 1932 was to "help my people-the Filipino people." He felt that immigrants from the Philippines, who belong to one of the last ethnic groups to arrive in Hawaii, frequently got into "trouble" because of cultural and language barriers. The son of a Filipino immigrant himself, Captain Sagum felt that with his fluent command of Tagalog he would be able to help bridge the gap between this ethnic group and the community at large. Captain Sagum is truly a credit not only to the Honolulu Police Department, but to all Hawaii as well.

I am pleased to submit for reading in the Congressional Record the article by Ware on Captain Roland Sagum which appeared in the Sunday Star-Bulletin and Advertiser of January 9, 1966:

POLICE CAPTAIN SAGUM ENTERED SERVICE TO AID HIS PROPLE

(By Charles A. Ware, assistant to the managing editor, the Advertiser)

Roland D. Sagum is the captain of police in charge of the Halawa jail.

He also is president of Hawall Interna-tional Finance Corp., and he has won a host of both local and national honors for his work as a police officer and for community service of many kinds.

Yet 40 years ago, the odds were weighted pretty heavily in favor of his winding up on the other side of the bars.

Sagum is a cheerful man, and today he can find plenty to chuckle over in the incidents of his early life in Hawaii. But he looks

back with a certain sense of wonder, too, that he escaped the fate of many of his youthful companions who took an easier route to crime and prison.

"I spent my boyhood down in Aala Park," he said last week over midmorning coffee at a Keeaumoku Street restaurant. stopped en route from conferences at police headquarters in the Pawaa Annex to his office at the jail, in the hills above Pearl Harbor.

"We would play cards down in the park until a policeman chased us out sometime late at night," he said. "Even when I applied for my first appointment in the police department years afterward, I found I was apprehensive. I was still a little bit scared of policemen.

At one time as a boy, Sagum lived in Honolulu home that was practically a fulltime gambling headquarters.

think there were five rooms in the house," he said. "There would be a sakura game in one room, a dice game in another, a monte game in a third, and pangigi—a Filipino card game—in the fourth room.

"But there never was any kind of a game in the kitchen. That was because there was always 'swipes' being made under the sink. "I tasted it a few times," Sagum confessed. "Hasten it's first brewed, it's sweet, you know, and I thought it didn't taste bad.

Yet despite all this—or perhaps because of it—Sagum never became a drinker, he never became a gambler, and he never took up

At that time, he recalled, "I was always looking for a way to get away from that kind of life."

INFANT IMMIGRANT

Sagum was born January 1, 1912, at Ba-tangas, in the Philippine Islands, the son of Macario and Dionicia Sagum.

He was only 8 months old when his parents came to Hawaii as sugar plantation immigrants. The family lived for some time on Maui, first at Kipahulu, then at Hana, and finally at Pauwela

But young Roland's brothers died as children, and when he was 12 his mother died

A little later, his father went back to the

Philippines to visit, and while there re-married. When he returned, the family came to Honolulu.

When he was 14, Sagum went to live in a men's dormitory which was operated under auspices of the Congregational Church. There, he did janitorial work for his board and room.

"That was a hard job," he said. "There were 30 rooms where I mopped the floors every day, and changed the linen, and did all of that kind of work.

But he stuck it out, and when he was 15 he

entered McKinley High School.
"There werent' any junior high schools at that time," Sagum recalled, "and I en-"There wer at that time, tered as a freshman. Actually, our class was the last freshman class at McKinley.

We were hazed, of course, as freshmen, and I remember thinking that next year we'd have our turn. But the next year there weren't any freshmen, and we still were the youngest class."

After his graduation from high school in Sagum entered the University of Hawaii, but after 2 years had to leave to support himself.

His first job was as a freight clerk for Castle & Cooke Terminals. It was while there that he applied for appointment to the police force

#### CHANCE TO HELP

"I was a quarter of an inch too short, so my appointment was deferred for awhile." he said. "But I was fortunate. The de-partment needed another Flipino officer badly right at that time, and in 1934 I was

appointed. really were two reasons that I wanted to join the police force.

"For one thing, I was thinking of my own security. That still was during the depression, you remember. And then I thought that I might be able to help my people the Filipino people.

"There were a lot of them who did get into trouble of one kind or another, and usually they didn't have anyone to turn to.
"In those days, especially, they were faced

with a lot of cultural conflict," Sagum said. "Take all the fights, for example. They almost always started because of sensitiv-They ity-somebody felt that his pride or his honor was at stake.

"Or it might be that they just didn't understand how things are done here. If there was a theft, the man who was the victim might come into court to testify. Then, if the defendant was fined, say \$25, the victim would think it was coming to him.

"When he didn't get the money, he'd feel cheated, so maybe he would go out after the defendant, to take it out on him.

"At least I knew about these things and could understand them. And I was fluent in Tagalog, so I could talk easily to the

Besides his decision to become a police officer, 1933 was important for another reason. In August of that year, Sagum married a McKinley schoolmate, Genevieve Anguay.

Today, they have five children: Roland Jr., who is married and who is an electronics technician for the Federal Aviation Agency; Mrs. Ginger Vea, a housewife; Marvin, a senior at the University of Hawaii, and Nelson, a sophomore, both studying engiand Catherine, a freshman at the university, in education,

As a rookie in the police department, Sagum was assigned first as a foot patrolman, but after only a few weeks he was détailed to the detective division.

That was at the time of a bitter sugar strike, and Sagum recalls that he spent a lot of time out at the sugar plantations "just finding out what was going on."

THE BOAD UP

At the end of the year, he was appointed officially as a detective. He remained in that division to win a series of promotions over the years that by 1947 made him a lieutenant

in charge of the theft detail.

From there, he was transferred to the planning and training division, and then to the crime prevention division to work with juveniles.

He was assigned responsibility for the jail administration in 1961 when, under Honolulu's new city charter, that function was transferred from the old sheriff's office to the police department.

He has been the police department's officer in charge of security for all high ranking officials of the Republic of the Philippines when they visited here.

Through his early years in the police de-partment, Sagum continued his education by attending night classes of the University of Hawaii.

In 1958, he was awarded a scholarship and did postgraduate study at the University of Southern California in the field of controlling juvenile delinquency.

Thinking back, Sagum can pick out several individuals and groups who influenced him profoundly and created the drive to "make something of myself" that has been a major force in his life since boyhood.

The first was a teacher at Hana, Miss Louise Mitchell, who inspired a belief in the value of education. "I know I'll never forget her," Sagum said, "even though I don't remember the names of most of the other people there."

0

t.

FIVE WHO CARED

Then there was a group of five Hawaiian women at Pauwela, whose names Sagum never did know.

"I just walked into the Hawaiian church one day, and the little group of ladies there took me into a circle with them and prayed with me.

"I was leaving soon for Honolulu, and I couldn't help thinking that this was some-thing fine for them to do. I appreciated knowing that there was someone who cared about me and wanted to see me make some-thing of my life," he said.

A good deal later, after he had become interested in work with the Nuuanu YMCA, there were two others, who awakened his interest in business affairs.

One was Financier Chinn Ho, who then wa serving as an adviser to the YMCA-affiliated Civic Associates Club which Sagum founded. The other was Hung Wai Ching, who was on the staff of the Nuuanu Y and had not yet begun his rise in the financial world.

Nevertheless, it was some years before Sagum developed any active business inter-

He became a director of Hawaii Interna-tional Finance Corp. a little more than 3 years ago, and was elected to its presidency in August 1964.

Through all of his adult life, however, his overrriding interest has been in work with young people, much of it through the YMCA. After 26 years, he still is adviser to the Civic Associates Club. He has been a mem-

ber of the Nuuanu YMCA board of managers for 25 years and now is chairman of its youth committee.

All told, he is a director now of 16 com-munity organizations and serves a dozen others in various capacities, from lay leader of Aldersgate Methodist Church, to general chairman of the Flesta Filipina and member of the management committee of the Police

Activities League. He is a Mason and a Shriner, a member of the Waikiki Lodge No. 774, York Rite and Scottish Rite bodies, and the Aloha Temple.

As Sagum said at the beginning, it's lucky thing for him that he alts on the right side of the bars at Halawa jail.

It's a lucky thing for Hawaii, too.

#### Postscript on Braceros

EXTENSION OF REMARKS OF

# HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. COHELAN. Mr. Speaker, on two occasions this month I have reviewed the effect on American agriculture of having operated for the first time in 14 years without a mass importation of foreign farmworkers.

The record, as I have previously indicated, is quite clear: 1965 was an excellent year for the growers, and at long last, for American farmworkers. In my own State of California, which had been the largest user of braceros, we found at the end of 1965 not that disaster had struck, but that farm income, farm wages, and farm employment all were up while prices remained generally stable.

Mr. Speaker, I would like to call our colleagues' attention to two editorialsone from the Arizona Republic and the other from the Washington Evening Star—which speak further and perceptively on this subject:

4157000

[From the Arizona Republic, Jan. 11, 1966] CHANGEOVER FROM BRACEROS PROVES NO GREAT DISASTER

#### (By Robert W. Glasgow)

The past year has been a frenetic, often hysterical, one for growers of produce in the Southwest. This time last year growers in California, and in Arizona, too, were at the threshold of panic as they contemplated the impending horrors that were surely to result from the termination of the bracero program. The 12 months that followed, while often confusing, were far from the disaster that too many growers pessimistically predicted. In most of the cases where growers realistically accepted the fact that the Government was no longer going to guarantee them a labor supply, where growers proceeded to accept some of the responsibilities of labor recruitment themselves—these were growers who, given good market and weather conditions, came through the ordeal very well.

The most critical area of all was California, because of a giant agricultural economy which had used some 100,000 braceros in Various economic reports are now in on California's fruit and vegetable production during 1964. The results are hardly of disaster proportion; in fact, California's farm income reached a record of \$3.7 billion in 1965, although quantitatively farm production in 1965 was about 2 percent below what it was in 1964. And all this was done with a labor force that included only 3 per-cent who were Mexican nationals.

Strawberries and asparagus were crops where growers were not able to harvest all they had grown because of the inability to get sufficient numbers of domestic workers. Nevertheless, both strawberry and asparagus growers grossed considerably more than their preceding 5-year average. Actually, it would have been interesting to see what would have happened to the prices these growers received for their products had each grower been able to harvest all that he had grown.

And in the matter of prices the Depart-ment of Labor has released comprehensive figures from a major crop survey which show that consumer prices, while up or down in certain situations, were virtually unaffected by the abolition of braceros. One would have to admit the likelihood of a certain bias in these figures, since Secretary of Labor Williard Wirtz was the whipping boy throughout this situation. But even granting that there was such bias, anyone who has listened to grower complaints through the years knows that it is almost impossible to establish any cause and effect relationship between labor costs to the grower and consumer prices for particular items of produce. Growers themselves have long grumbled about the fact the prices for which produce is sold at the sumer level often seem to have no relationship to the prices which the growers received for the product.

Why this disparity is not at all clear, though many, many different kinds of reasons have been offered. One thing that is clear is that the fruit and vegetable industry is not economically a rational one. First place, this agricultural group, operating under free market conditions at one level, have not been able to establish very orderly mar-ket conditions. They have constantly been caught between the extremes of overproduc-tion and scarcity. And in the instance where they departed from the free market philoso-phy, that case being the bracero program, which was a guaranteed labor supply, pro duction conditions were worsened. An unlimited labor supply only encouraged overproduction.

Add the vagarles of weather as another factor, and it is easy to see that growing produce can be like playing Russian roulette. To survive in this industry through the years

has required a pretty rugged individual. And many oldtime growers, those who have been producing since depression days, recognized that the bracero program actually encouraged inefficient producers to enter and remain in the market.

One depressing social consequence of all this was that it provided all kinds of pseudo-economic rationalizations for maintaining the cheapest labor market of any industry in the country. The elimination of the bracero program demonstrated that the growers could pay better wages, and provide better working conditions, and still make a profit, if market and weather conditions pront, it market am weather competition for a work force many growers this past year calmly accepted this fact and did raise wages and did improve the conditions under which migratory workers are required to live. Many other growers did not.

A study committee, headed by UCLA Law Prof. Benjamin Aaron, recently reasserted that improved housing is still a great need. The committee also recommended that there he a national minimum wags for farmwork-Many growers do not object to the idea of a minimum wage if it is imposed nationally.

This heightening of competitive condi-tions has, of course, hastened the introduc-tion of mechanization. This will not only insure higher wages, because of the higher insure algaer wages, occause or the higher skills involved, but it also will mean the disappearance of more and more farm jobs. Some opponents of the minimum wage for farmworkers oppose it on the grounds that it can only lead to fewer farm jobs. This is But the kinds of jobs that have been available to farmworkers in the past, both in terms of wages and working conditions, were not much of an alternative to unemployment and relief.

The displacement of these farmworkers by improved technology simply emphasizes the urgency of a national policy that will seek to create new fields of employment for the unskilled.

From the Washington Evening Star, Jan. 20, 1966]

#### POSTSCRIPT ON BRACEROS

When Congress more than a year ago permitted Public Law 78 to expire, closing the door on Mexican bracero labor used to harvest produce, dire predictions were heard in California. Farmers spoke of leaving acre-California. Farmers spoke of leaving acreage unplanted, warning that Americans
would not perform the distasteful stoop
labor. Although Labor Secretary Wirtz
later allowed some Mexicans to enter, this
failed to calm the growers. Judging from all
the talk, rotting crops and farm bankrupteles
were just around the corner.

Well, the disaster never occurred. As Representative COHELAN, of California noted the other day, the State's farm income hit a record of \$4.7 billion in 1965. Domestic work-ers received higher wages. Tens of thou-sands of additional jobs were made available to Americans. And because an estimated 75 percent of bracero earnings had been returning to Mexico annually, an outflow of about \$50 million has been halted, aiding the balance of payments.

Even more intriguing has been the rapid development of machinery to help harvest fruit and vegetables. Tomato picking machines, for example, handled more than 20 percent of the crop and proved so successful that they are expected to gather 85 percent next year. Such devices, which use a 20-man crew, do the work of 80 fieldhands.

Development of other equipment, aided by grants from the University of California, is now being accelerated. The day does not seem far off when automatic harvesters for asparagus, cantaloupes, lettuce, and celery

will be perfected. And the rapid increase in productivity that such equipment promises is bound to transform the large American farm even as industry has been revolution-

New problems will arise, of course, with automation in the fields. But at the same time, the trend will eliminate a good deal of drudgery, require a more highly trained employee, and pay him better. If that's wrong, then so is the whole historic direction of our mass production economy.

# Statement by Vice President Hubert **Humphrey at Associated Press Poverty** Conference, Washington, D.C.

EXTENSION OF REMARKS

## HON. SAM GIBBONS

OF PLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

GIBBONS. Mr. Speaker, the Mr. President of the United States, Lyndon Baines Johnson, has called this Nation to arms to do battle on two distinct fieldsto battle relentlessly against Communist aggression in South Vietnam and to wage a tireless battle against the poverty. misery, and ignorance which still grips 35 million of our fellow Americans.

Abroad, the forces of communism are learning that, even though the price for freedom comes high, the American people are willing and able to keep our commitment to its protection and preservation for friends and allies thousands of miles away.

Here at home, perhaps the greatest concentrated assault on poverty ever launched in man's recorded history is underway. Across this Nation, Job Corps centers are preparing young men and women to find useful roles in our society; neighborhood youth programs are taking young Americans off street corners and putting them into centers where they learn the skills of belonging and producing for society. On August 22, 1964, President Johnson signed into law the Economic Opportunity Act establishing the war on poverty. The Vice President of the United States, HUBERT H. HUMPHREY, has been designated by the President to act as the coordinator of the various, vast Federal programs fighting shoulder to shoulder together in the war on poverty. On November 8, 1965, the Vice President, speaking at the Associated Press Poverty Conference, On November 8, held in Washington, D.C., reviewed the first year of the war on poverty. His remarks at that occasion were noteworthy then and they hold a message for all Americans today. Under unanimous consent I insert the Vice President's remarks in the RECORD:

OPENING STATEMENT BY VICE PRESIDENT HUBERT HUMPHREY AT ASSOCIATED PRESS POVERTY CONFERENCE, WASHINGTON, D.C., **NOVEMBER 8, 1965** 

Last December the President informed the Cabinet-level Economic Opportunity Council, at its first meeting, that he had asked me "to take a leading role in the war on poverty—to be sure that this is a well-coordinated, concentrated attack on poverty throughout the country." The Pre

also asked me to serve as Honorary Chair-man of the Advisory Council established by

the Economic Opportunity Act of 1964. In the past year, I have worked with Sargent Shriver and his effective staff in the Office of Economic Opportunity. I have traveled throughout America carrying the age that this administration intends to win the war on poverty.

I also have b en doing some looking and listening regarding public reaction to the poverty program in its first year.

I think I can sum up public reaction by saying that the war on poverty has broad general support, but that there is also some misunderstanding about how it works, what it seeks to do, and how it ties into other public and private programs.

This is to be expected. Poverty has a wide range of causes and creates a wide range of problems. There is no single remedy for it. No single program will meet all needs. There are at least three levels of actions required, and we have been moving on all

three.

First, there is the need for stepped-up economic activity.

We are now in our 56th consecutive month of economic expansion--an expansion created by a positive partnership for prosperity between the public and private

GNP, wages, and profits are up. Unemployment is down. Prices are relatively

We in Government have made our contribution to this expansion through careful use of fiscal and tax policy. We have pur-sued policies designed to avoid inflation. And we have, through economic develop-ment programs, sought to bring the benefits of economic expansion to all areas of the

Second, there is the need for programs for the aged, for widows and orphans, for the sick, and unemployed—for those who need society's immediate help.

In this past session of Congress we passed

new and improved legislation for medical care, social security, housing, and social serv-

Finally, there is the need for development of our human resources.

This is where the Economic Opportunity Act. with its nine new programs, comes in. But we must not overlook also our national investments in vocational education and manpower training, in the new education laws, the Older Americans Act, in health research—all aimed at providing opportunity for Americans to lift themselves to fuller, more productive lives.

I think it is important to understand that the war on poverty is much more than the Economic Opportunity Act. It is being waged on many fronts.

The OEO programs alone—in less than a year—have already reached into over a thousand communities, have directly involved

millions of people.

In this first year there have been some mistakes. We can expect that mistakes will mistakes. We can expect that mistakes will occur in a program this big. The question ogram this big. The question Will we learn from our misof course:

WE MUST DROP OR CHANGE PROGRAMS THAT DO NOT WORK

Under the direction of Dr. Joseph Kershaw, we are now giving every Federal poverty program, new as well as old, searching eva-luation. If any program isn't helping to get people out of poverty, we must know. We cannot stay with it one day longer than nec-

THE WAR ON POVERTY REQUIRES INTERAGENCY COOPERATION, AND WE HAVE BEEN GETTING

Last March I was widely quoted in the press after I had told a group that the pover-ty effort would require "interagency cooperation, the likes of which this city hasn't

And I added. "I hope it can be done peace-fully but if it can't, it will be done."
Well, cooperation has proceeded peaceful-ly. Federal agencies are pulling together, in the Job Corps program, in Project Head Start, and in many others. During the course of these sessions, you will see much evidence of this.

THE NEW PROGRAMS HAVE CAUSED SOME PRICTION IN OUR CITIES

One of my principal assignments is that of liaison with the Nation's mayors.

I know that the new community action programs have created some problems in the cities. Some of these have been difficultbut I am confident that they are all possible of solution.

In the great majority of cases, it has been possible to work out the kind of program that reflects both of these objectives: full utilization of the local government machinery and maximum feasible participation on the part of the poor themselves. I do not think that these are incompatible. Hundreds of communities have already proved

THE POVERTY PROGRAM IS NOT A CIVIL RIGHTS PROGRAM; BUT IT IS PART OF THE ANSWER TO THE CIVIL RIGHTS PROBLEM

Three out of every four poor Americans are white. But for the American Negro, poverty is a special problem.

In his historic address at Howard University, President Johnson told us that it isn't enough to open up doors of opportunity, that it must be possible for each person to walk through those doors.

The economic opportunity program can

provide the important next step for millions of Americans previously denied opportunity. THE WAR ON POVERTY HAS MOBILIZED NOT ONLY

THE PEDERAL GOVERNMENT, BUT EVERY SEG-MENT OF OUR NATIONAL LIFE

Fourteen distinguished Americans from every walk of life have been serving on our National Advisory Council.

Today, the wealthiest and most powerful Nation on earth, we can make that promise come true.

# What 14(b) Is All About

EXTENSION OF REMARKS OF

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. MULTER. Mr. Speaker, one of the great problems facing this session of Congress is the effort to repeal section 14(b) of the Taft-Hartley Act.

Too many of our citizens have been confused about this issue by the catch phrases and cliches designed by the opponents of repeal to muddy the legislative waters.

A very concise and clear explanation of what this fight is all about appeared in the January 21, 1966, edition of the Seafarer's Log, a publication of the Seafarers International Union, and I commend it to the attention of our colleagues.

The article follows:

The key argument of the labor movement this year is that the Senate should have an opportunity to vote on 14(b)—up or down, right or wrong.

But let's not forget, even while we press this basic point, that we are also right on the issue.

Section 14(b) offends practically every serious student of constitutional law. It files in the face of the Constitution that makes Federal law superior to State law. Obviously Congress would not allow the States to establish lower minimum-wage rates than the Federal standard.

Moreover, 14(b) encourages regressive competition among the States based upon low wages and freedom from union organization. This is contrary to the public interest by any measurement.

Workers themselves want the union shop. For almost 4 years the law required a secret-ballot, Labor Board vote before a union could sak for a union shop; the results were so embarrassing (97 percent of the elections won, 91 percent of the votes cast) that the sponsors of the requirement also sponsored its repeal.

People in general are also opposed to the compulsory open shop. Consider the State votes against so-called right-to-work laws in California, Colorado, Idaho, Ohio, Washington, and Oklahoma; only Kansas voted "for."

In addition, of course, in both the 1960 and 1964 campaigns the party platforms were in total disagreement on the issue, and the prorepeal party won.

The union shop is intrinsically fair. Under the Federal law, a union that has won recognition as bargaining agent has an inescapable legal obligation to give equal protection to every worker, including any who may have opposed the union. In view of this absolute legal obligation it is reasonable and correct for the union to seek a contract requiring all workers to share in the responsibility of maintaining the union—which is all that a union shop requires.

n

m

e,

n

ul

Personal liberty, or freedom from compulsion, is not a legitimate argument against the union shop. American society is replete with examples of instances where a minority is bound by the majority decision. A householder has to pay his share of taxes to support a fire department he did not want, for the fire department has to protect him along with everyone else. In many States, a lawyer can only practice if he belongs to the bar as sociation. A union shop is one more condition of employment, established only when the employer agrees to it. If at any time a majority of the workers do not want a union shop, the law establishes a procedure through which they can abolish it.

The repeal bill makes provision for the tiny minority of workers who have genuine religious scruples against membership in secular organizations.

Repeal of section 14(b) would eliminate one aspect of destructive interstate competition—luring industry by low wages and weak unions.

In short, there is no apology we have to make or need to make on the substance of 14(b) repeal. And we have an absolute right to a vote on the issue. WHAT ABOUT 14(b)?

Repeal of section 14(b) has been a public issue for months and it will be more so in the months to come. Your friends and neighbors, even your wife and children, will be asking you what it's all about. Here are some of the questions you can expect—along with answers that may be helpful to you. Question. What is 14(b), anyway?

Question. What is 14(b), anyway?
Answer: Section 14(b) is a part of the
Taft-Hartley Act—the basic labor relations
law. It allows the States to pass laws that
forbid unions and employers from bargaining over union security, called the union
shop.

Question. What's so important about the union shop?

Answer. A union shop—which requires every worker who is protected by the union contract to be a member of the union—protects the union from being undermined by the employer; assures it of enough income to do its job; and helps it to be strong enough to live up to the terms of the contract.

Question. That sounds all right for the

Question. That sounds all right for the union as an organization, but what do the workers get out of it?

Answer. First of all, the workers get better representation from a stronger, more secure union. And they have the satisfaction of knowing that everyone in the workplace is paying his fair share toward the costs of the union.

Question. Why can't unions just depend on workers to join because the union does a good job in the plant?

Answer. There are many remons. Lots of employers, where there is no union shop, actively discourage workers from joining. In antiunion communities, as in the South, some workers who vote for the union in a secret ballot do not join because they are afraid, or because they are currying favor with the boss. In all areas, some workers don't join because they think it's smart to get something for nothing.

get something for nothing.

Question. But isn't it un-American to force a worker to join a union if he doesn't want to?

Answer. It isn't any more un-American than taxes. A homeowner may be opposed to a plan to build a new firehouse in town. But if he is outvoted, he still has to pay his share of the cost in taxes.

Question. That's all right for government; but why should a union have that kind of

authority?

Answer. Because the Government has assigned a specific obligation to unions which they are legally bound to fulfill. A union that is the established bargaining agent for workers in a factory or other place of employment must provide equal protection to all workers, even those who are against the union. This obligation can be enforced through the labor board and the courts. Therefore, it is fair and reasonable for a union to seek a contract that similarly requires all workers to assume their share of the responsibility—which is all that a union shop requires.

Question. If there's a union shop, doesn't the worker lose the power to protest against union policies he doesn't like, because he can't resign from the union?

Answer. It is simply not true that they lose the power to protest. They can fight for their point of view within the union itself—something that goes on every day. They can petition for a labor board vote desurthorizing the union shop, while leaving the rest of the contract alone. They can petition for a vote to decertify their present union as bargaining agent. These remedies are not only adequate; they are far more in keeping with democratic principles than quitting in a huff.

Question. How about my neighbor, whose church tells him he can't join any other organization of any kind?

Answer, Most unions have met this problem sympathetically on a local and indi-

vidual basia. Moreover, the Senate repeal bill as it now stands sets up a procedure for exempting genuine legitimate religious objectors.

Question. Isn't a lot of dues money spent on politics and other activities, besides just union affairs?

Answer. No. By far the greatest share of the dues dollar is spent on direct trade union activities—negotiations, administration, grievance procedure, organizing the unorganized, training local officers and staff, preparing necessary economic data—the bread-and-butter operations. But beyond this, the labor movement has realized for more than 50 years that it cannot live apart from the rest of the country. Education, social security, medicare, minimum wages, unemployment insurance, housing, hospitals, highways—all these and more are as important to the well-being of workers as the terms of their contract. So politics and legislation are also "union affairs." Finally, no dues money at all is contributed to political candidates in Federal elections; the law forbids it. Only voluntary COPE dollars can be used for that purpose.

Question. Just the same, won't repeal of

Question. Just the same, won't repeal of 14(b) force millions of workers into unions they don't want, and give unions a dangerous amount of power?

Answer. Not at all. The only union shops that will go into effect automatically will be in companies where union and management had earlier agreed that they would have a union shop as soon as the law allowed it. Elsewhere in the 19 States that now have compulsory open-shop laws the issue will be the same as it is in the rest of the country—a matter of negotiation and agreement between the employer and the union. The only increase in "union power" will be, in some causes, an increase in a union's ability to protect its members—a goal which Congress has said is in the best interests of the Nation.

Question. How about those public opinion polls that show most people are in favor of keeping 14(b)?

Answer. All of these poll questions, by nature, have to be stated in simple terms. The 14(b) question, by nature, is complicated. Therefore the polls cannot reflect true opinion. It is more instructive to look at the results of seven State referendums since 1958 (labor won six), and the national elections of 1960 and 1964, when the party positions were totally opposed and the prorepeal party won.

Question. If section 14(b) is harmful and most people favor its repeal, then who actually wants it kept in the Federal law?

Answer. Support comes primarily from the selfish interests who have utilized right-towork laws as a means of keeping unions weak, wages and social conditions poor, and as a lure to bring industry into their areas. These same persons who claim to seek "freedom" for the worker are, for the most part, the same groups and individuals who have opposed civil rights legislation, one-man, one-vote, higher minimum wages, medicare and all forward-looking legislation in the United States.

There are more questions, and more answers. The AFI-CIO hopes that theme few will contribute to a public dialog on 14(b) as it is, rather than what it is said to be.

# Politics, the L.B.J. Way

EXTENSION OF REMARKS

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 20, 1966

Mr. RUMSFELD. Mr. Speaker, as is simply and forthrightly stated in an edi-

torial in the New York Times of January 15, 1966, the President maintained silence during the 12 days of the crippling transit strike in New York City, then, when the strike had finally been settled, he broke his silence by loosing a blast at New York for paying too high a price for its freedom.

Such behavior might be easier to understand if it were on the part of someone other than the President of the

United States.

The President might have maintained a silence throughout the crisis in New York and continued that silence after the crisis was settled. Then it could be reasonably argued that the President did not feel an obligation to become "involved.

But the President applied one standard to the 12-day strike period-one of noninvolvement-and applied another standard to the poststrike period-one of unfounded, poorly timed criticism of a city administration which explored every avenue possible in its attempts to reach an honorable settlement of the strike.

Of course, when the steel companies announced intentions to raise prices, the President felt a compulsion to become Yet, when a strike tied up the involved. largest city in the Nation and caused the loss of many millions of dollars in wages and salaries and business, the involvement compulsion was absent.

It is certainly difficult to understand

this behavior.

The New York Times editorial on this subject follows:

[From the New York (N.Y.) Times, Jan. 15, 19651

POLITICS, THE L.B.J. WAY

Through all the 12 days that New York was crippled by a transit strike called in de-fiance of law and court order, President Johnson had not a word of condemnation for the union leaders responsible for this exercise in economic blackmail of a city. Now that the siege has been lifted with a costly settlement, Mr. Johnson suddenly finds his voice, and censures New York for paying too high a price for its freedom.

The President is quite right in stating that the peace terms breach his anti-inflation guidelines. As we observed in these columns yesterday, none of the adroit arguments advanced in support of the pact by Dr. Nathan P. Feinsinger, chairman of Mayor Lindsay's special mediation board, could make it fit inside even an elastic interpretation of the guidelines. It was a compromise accommodation made under duress; and only the mayor's resolve not to "capitulate before the law less demands of a single powergroup" pre-

vented outright surrender.

If Mr. Johnson had seriously wanted to act against an inflationary settlement, he had ample opportunity to do so. On any one of the 12 days he could have denounced the strike as a threat to the national in-terest—which the chairman of the President's Council of Economic Advisers, Gardner Ackley, now acknowledges it was—and he could have supported Mr. Lindsay in the mayor's unheeded call for arbitration, fact finding or a retroactive contract extension. But the President did not choose to do so.

Such help from Mr. Johnson would have been doubly meaningful in the light of at-tempts by some elements in the old-time Democratic-labor cabal in this city to exploit the strike as an instrument for humiliating the new Republican-fusion mayor, thus hop-ing to kill his future political career.

Now that Mr. Lindsay and the city have

survived the strike, the President contributes his meed toward discrediting the settlement. The blatantly political character of his comment is underscored by the continued ab sence of any direct criticism of the Transport Workers Union for its coercion of the com-munity. He declares himself "quite disturbed that essential services could be para lyzed for so long"; but there is not a hint of who is to blame. Not a word about flouting the law and the courts, not a syllable about the damage to the moral and judicial structure of this, the largest city in the United

The President's remarks provide a discouraging setting for the recommendations he has promised to send to Congress to protect the public interest against such strikes. ports from Washington indicate that his state of the Union pledge of tighter strike curbs was toned down before delivery in response to objections voiced by George Meany. even the promise must be diluted before it gets to Capitol Hill, what real hope is there in this administration for effective protection for the public against public-service

# Charles O'Bevan Outstanding Labor Leader in Hawaii

EXTENSION OF REMARKS OF

# HON, SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. MATSUNAGA. Mr. Speaker, last year, one of Hawaii's outstanding citizens was accorded well merited recognition for his long association with the International Typographical Union and his active and devoted service to the labor movement, from which not only the workers but also the State of Hawaii has benefited. Hawaii is indeed fortunate to have such a man as Charles K. O'Bevan, who celebrated his 50th year as a member of the ITU in 1965, and who has unstingly contributed his knowledge, experience, and daily life to promote the cause of labor and the betterment of our

Mr. O'Bevan has served in the public interest since his arrival in Hawaii in 1945, for 10 years as a labor commissioner and at present as chairman of the labor and industrial relations appeals board. He is also active as a member of the executive board of the Central Labor

Charles O'Bevan well merits the thanks of the people in and out of organized labor for his dedication to his work and unselfish efforts. I am happy, although belatedly, to join the Central Labor Council and the Senate of Hawaii in extending hearty congratulations to Charles O'Bevan for his record of 50 years' membership in the ITU.

The esteem with which he is held by the Legislature of Hawaii and the Central Labor Council is expressed in the resolutions adopted by them, which I hereby request to have inserted in the RECORD.

SENATE RESOLUTION 147, CONGRATULATING CHARLES O'BEVAN

Whereas in 1945 Charles O'Bevan from Minnesota's clime did come to the sunny

Sandwich Isles with his wife Eunice; and Whereas he has throughout his lifetime en active in the labor movement; and

Whereas his expertise in labor was recognized by his service as a labor commissioner for 10 years, and his present service as chairman of the labor appeals board; and

Whereas for the last four sessions he has striven mightily to crank out the bills, resolutions, and committee reports of this senate in the wee hours of the morning; and

Whereas this year marks his 50th year of membership in the International Typographical Union; and

Whereas he has contributed his experience and wisdom to the betterment of our State by his service to the labor movement and to this State: Now, therefore, be it

Resolved by the Senate of the Third Legislature of the State of Havaii, general session of 1965, That it does hereby congratulate Charles O'Bevan for the long and remark-able association with the International Typographical Union; and be it further

Resolved, That a certified copy of this resolution be transmitted to Mr. and Mrs. Charles O'Bevan.

RESOLUTION K. O'BEVAN, BY THE CENTRAL CHARLES. LABOR COUNCIL OF HAWAII, AFL-CIO, AFL-CIO LABOR TEMPLE, HONOLULU, HAWAII

labor movement throughout his lifetime; and

Whereas he has contributed many volunteer hours to the central labor council and COPE: and

Whereas he has also represented the AFL-CIO as a labor commissioner and also in his present position as chairman of the labor and industrial relations appeals board; and

Whereas Charlie has served and is presently serving as an executive board member of the central labor council: Now, therefore, be it

Resolved by the Central Labor Council of Hawaii, AFL-CIO, at this regular meeting of May 4, 1965, That it does hereby congratulate Brother Charles K. O'Bevan for his long and remarkable association with the International Typographical Union and also his service to the Hawaii labor movement; and

Resolved, That we express our thanks to Charlie's wife, Eunice, for her generosity in sharing him with us; and be it further

Resolved, That copies of this resolution be distributed at the next regular meeting of the Central Labor Council of Hawaii, AFL-CIO, and transmitted to Mr. George Meany, president of the American Federation of Labor and Congress of Industrial Organiza-tions, and to Mr. Eimer Brown, president of the International Typographical Union, AFL-CIO.

Adopted unanimously by the delegates assembled at the regular meeting of the Central Labor Council of Hawaii, AFL-CIO, on May 4, 1965.

# Michigan City (Ind.) News-Dispatch Endorses 4-Year Terms for Congressmen

EXTENSION OF REMARKS OF

# HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent to insert in the REC-

ord the text of an editorial dated January 20, 1966, from the Michigan City, Ind., News-Dispatch, published in my own congressional district, which endorses President Johnson's recent proposal for a 4-year term for Members of the House of Representatives.

The text of the editorial follows:

FOUR-YEAR TERMS FOR CONGRESSMEN

President Johnson's proposal for a 4-year House term struck many Members as the most admirable idea they have heard from the White House since the last congressional pay raise.

The political rose that the Chief Executive offered the House in his state of the Union message looked good to many Members who hardly finish one campaign before starting another.

Under the Constitution, all 435 House seats are up for grabs every 2 years. In the 100-seat Senate, only 33 or 34 seats normally are at stake every 2 years and terms run for 6 years.

6 years.
Thoughtful political scientists and campaign-weary politicians have been suggesting for years that the system be changed. But they never have had the kind of endorsement that Mr. Johnson gave.

that Mr. Johnson gave.

As a result of Mr. Johnson's totally unexpected recommendation, a constitutional amendment providing for a 4-year House term probably will get early consideration.

Mr. Johnson said: "To strengthen the work

Mr. Johnson said: "To strengthen the work of Congress I strongly urge an amendment to provide for a 4-year term for Members of the House of Representatives—which should not begin before 1972.

"The present 2-year term requires most Members of Congress to divert enormous energies to an almost constant process of campaigning—depriving the Nation of the fullest measure of their skill and wisdom. "Today, too, the work of Government is

"Today, too, the work of Government is far more complex than in our early years, requiring more time to learn and master the technical tasks of legislation. And a longer term will serve to attract more men of the highest quality to political life. The Nation, the principle democracy, and each congressional district will be better served by a 4year term. I urge your swift action."

g

0

of

bi

0.

year term. I urge your swift action."

During his speech Mr. Johnson was applauded 60 times. His reference to changing the 2-year terms to 4 years understandably drew the most vigorous applause.

It's a good suggestion and should be put into effect as soon as possible.

#### It's Time for the Hard Particulars

EXTENSION OF REMARKS

# HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. ROBISON. Mr. Speaker, it is evident from today's headlines that some hard decisions are being made at the White House, not only for Congress but for the American people.

For those of us who sit outside that circle of leaders who have participated in the discussions at highest levels these past few days, this is proving to be a rather frustrating experience. I am sure we, all, recognize and respect the fact that the Constitution places upon the President the principal responsibility and authority for the conduct of not only our Nation's foreign policy but, in his

dual capacity as Commander in Chief of our Armed Forces, for the conduct of our national defense, as well. By an overwhelming vote, and well aware that he would have to be dealing with the crucial problems already then troubling us in Vietnam, the American people by an overwhelming vote in the last presidential election entrusted President Johnson with these awesome responsibilities.

I am sure that trust still prevails, even today when the need to choose the proper course to follow now in that complex and dangerous conflict has assumed proportions unthought of a scant 15 months ago.

Still, Mr. Speaker, this Congress—this House of Representatives—has a clear and constitutional responsibility, proportionately borne by each one of us alike in behalf of those individual citizens we represent, to assure itself that the decisions now so evidently being made are the right ones, both for America and for the cause of world peace with freedom.

It is because of my own individual awareness of my share in this responsibility that, on several occasions during the first session of this Congress, I urged that full hearings be held by the appropriate committees in this and the other body of Congress, for the purpose of going into and reviewing in depth and detail not only our more immediate problems in Vietnam but our whole policy, whatever it might be, in southeast Asia.

Mr. Speaker, I again urge that this be

In doing so, I am fully aware of the present burdens—and the time problems—placed upon not only the President but on the Secretaries of State and Defense, as well as on our military people who are in charge of the day-to-day military operations in Vietnam. I do not wish to add to those burdens.

But I also wish to be assured that all the various options—or alternatives—available to us, if indeed there be any, have been fully and freely considered. At present, I have no way I know of for gaining that assurance, and I know full well that time, right now, does not permit us here in Congress to utilize the cumbersome committee system for such purposes.

Still, those of us who must needs sit here and wait, for now, can present some of those possible alternatives, or at least some contrasting viewpoints about the military aspects of Vietnam, for each consideration. In line, then, with that, I now include—under leave granted January 18 to extend my re-marks and include extraneous material the following column by Vermont Royster, as taken from the January 25 issue of the Wall Street Journal, commenting on the recent article written for Harper's magazine by Gen. James Gavin in which he presents some critical military questions concerning the war in Vietnam which questions, surely, should have our consideration:

THE GENERAL'S PARTICULARS
(By Vermont Royster)

Gen. James Gavin's comments on the war in Vietnam, appearing in the current issue of Harper's, seem to have attracted a good bit of public attention. Well they might, and well they ought.

For General Gavin is the first militarily knowledgeable person to discuss publicly the cold, hard military practicalities of that war, shunning sentiment, broad abstractions, or philosophic generalities.

Proceeding thusly, General Gavin comes to some conclusions about our military posture in Vietnam that are controversial, and must be very disturbing to those who will hear the general out.

In brief, he says that the military objective of freeing the entire country of South Victnam from the Vietcong is stretching our military resources beyond all reason. To increase or extend the bombing of North Vietnam, or otherwise escalate the war, will, in his opinion, add to our problems rather than detract from them.

He proposes that we accept a much more limited objective which he thinks is feasible and practical. This is to deploy our forces not over the whole country but to hold several anchaves on the coast where our sea and air power can be fully effective. Presumably these would include Saigon for political reasons. As bases for military operations he mentions Danang and Camranh Bay, places where we are already established.

This obviously offers no satisfaction to either those hawks eager to clobber the Vietcong even if it means taking on China, or to those doves who in the name of peace would have us come home and hand over the whole place to Communist Hanoi. Here is a general saying we must accept a substitute for victory.

This view of the war, however controversial, deserves everyone's thoughtful reflection, both because of the reasoned manner in which he arrives at it and because of the credentials of its author.

General Gavin is no newcomer to this vexing problem. Although perhaps better known recently as Ambassador to France, he has had a long and distinguished record as a soldier from private to general. In World War II he was a daring paratroop leader, but more to the present point he was Chief of Plans and Operations for the Army at the time of the French defeat and ouster from Vietnam.

At that time General Gavin was intimately involved in the decision whether to send U.S. forces into the Hanoi delta. The further that agonising appraisal proceeded the more apparent it became that we would really be fighting not Hanoi but China, which would be providing the arms, ammunition and other supplies even if no troops.

That being the case, the military planners concluded that by any deep engagement in a land war in Vietnam we would be fighting China "in the wrong place on terms entirely to her advantage." This conclusion was presented to President Eisenhower, who concurred, and it was on the basis of this hard military analysis that the United States then decided not to intervene.

General Gavin is of the opinion that there is no reason now to alter that basic analysis. His military judgment is that today we are not only fighting the wrong war on the wrong terms but that we are exposing ourselves to grave military perils.

His reasoning is quite straightforward. The large forces we have committed there stretch thin every resource and leave our fanks exposed. If we enlarge them we can expect a reopening of the Korean front or an attack elsewhere, or both. "This seems to be," he writes, "the ultimate prospect of the course that we are now on."

He does not accept the so-called domino theory that a check on one battlefield would topple everything. "Economics, science and technology \* \* will in the long run serve our strategic interests well if we handle our national resources wisely. On the other hand, tactical mistakes that are allowed to escalate at the initiative of an enemy could be disastrously costly."

A civilian will not find it easy to assess

the correctness of this military judgment. Nonetheless, General Gavin has raised the right questions and joined the issue where it ought to be joined—namely, whether or not the present military policy in Vietnam makes military sense.

The country must, as General Gavin does, to look at that war without myopia. The tactical problem mustn't be fuzzed up with sentiment or fears about injuries to pride or prestige; a general would be a fool who let pride keep him from withdrawing his troops to a ridge that would give himself, not the enemy, the advantages of the field. And we must be willing to see this particular battlefield in the context of an enduring strategic struggle over Asia.

In that long-range struggle the first objective is safeguarding the military strength of this country, the United States. That way, and only that way, can the United States serve as a shield of the civilized world.

It follows, then, that what weakens us weakens the shield, that any tactical mistakes "disastrously costly" to ourselves will be equally so to all who depend upon us for succor. It also follows, in General Gavin's phrase, that "we should be realistic about the course we are now on."

Being realistic does not mean being de-It does not mean agreeing with General Gavin. It does not mean a reversal of the policy of resisting aggression in Viet-nam. All it means is an honest effort to avoid military misjudgments fathered by

Perhaps the present military leaders have a different military assessment of our tactical position in Vietnam. They may have military reasons to believe that the risk is not so grave, or that victory on this particular battlefield can be more easily achieved. In short, General Gavin may be Wrong

But if so, should we not hear the cold, realistic assessment of those presently en-trusted with the military judgment? It is trusted with the military judgment? It is hardly enough just to say we "must" win because we are "pledged" or because we have a "moral duty." All can be lost in Pyrrhic victories.

With so much at stake it's time the debate moved from the easy generalities to the hard particulars.

EXTENSION OF REMARKS

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. REUSS. Mr. Speaker, the 89th Congress created the Cabinet Department of Housing and Urban Development to deal with the urgent problems facing our great cities.

President Johnson searched long and hard to find the man best qualified to fill this post because he, too, recognized that our great cities are in crisis. Through his appointment of Dr. Robert C. Weaver, this new Department will reap the advantages of continuity, experience, and a broad view of the problems.

In an editorial praising President Johnson's appointment, the Milwaukee Journal called Dr. Weaver and his first assistant, Prof. Robert Wood, "a promising team to manage the very complex and terribly responsible job of fulfilling HUD's destiny to be a key Department in the Cabinet of a predominately urban Nation.

The full editorial, from the January 14, 1966, Milwaukee Journal, follows:

THE WEAVER APPOINTMENT

President Johnson has named the first Negro in history to the U.S. Cabinet. The choice of Robert Weaver had been publicly discussed and anticipated for several years. President Kennedy had said he would name him as soon as the Cabinet Department of Housing and Urban Development (HUD) was created, but the opportunity fell to Johnson instead.

The fact that Weaver is a Negro cannot help but stand out in this country and in the world. It is a milestone in the history of his race and a splendid personal achieve-

ment by himself.

It is vital to observe, however, that he is not being elevated to this unprecedented eminence because he is of the minority race. He has worked for it and earned it on his own, as a skilled and experienced public official for more than 30 years. With a Harvard Ph. D. in economics, he became a public housing administrator in the New Deal, has both administered and taught in the fields of housing and urban renewal ever since-most recently, of course, as head of the Housing and Home Finance Agency. which has become the new HUD.

As a onetime head of the National Association for the Advancement Colored People, his credentials as a civil rightist are com-The thing about this is that he plete. The thing about this is that he has also proved his complete integrity as an administrator on behalf of people: he has been just as "color blind" as any white official would have been expected to be, and this is publicly recognized even in south-ern quarters of the Senate that must confirm him.

The President did put his individual stamp on the manning of HUD by imaginatively choosing Prof. Robert Wood of the Massachusetts Institute of Technology to be Weaver's right-hand man. The brilliant young Young may well be the Nation's top academic expert in the field of urban af-

It looks like a promising team to manage the very complex and terribly responsible job of fulfilling HUD's destiny to be a key de-partment in the Cabinet of a predominantly urban nation.

#### The President's Annual Message

EXTENSION OF REMARKS OF

#### HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. RHODES of Arizona. Mr. Speaker, with his usual incisive style, W. R. Mathews, long-time editor and publisher of the Arizona Daily Star of Tucson, has analyzed the President's state of the Union message. Mr. Mathews presents thoughts which I feel should be brought to the attention of all Members.

The article follows:

[From the Tucson (Ariz.) Daily Star, Jan. 14, 1966]

THE PRESIDENT'S ANNUAL MESSAGE The state of the Union message, such as that delivered by President Johnson before Congress Wednesday, has become by custom an annual event in the life of our country. Although Presidents have done this since the beginning of our country, it was Presi-Wilson who started the custom dent Woodrow of appearing before Congress in person to deliver it.

Actually, according to the Constitution, every message that the President address publicly to Congress is a state of the Union The Constitution, article II, secmessage. tion 3, reads as follows: "He shall from time to time give to the Congress information of the state of the Union, and recommended to their consideration such measures as he shall judge necessary and expedient."

President Johnson's Wednesday night message was literally a state of the Union one. He covered the waterfront without missing anything, and made plain that the status of domestic affairs shall come ahead of everything else. Nearly every organized minority will get what it seeks, while every social welfare project initiated by him and passed by Congress will be continued without any reduction in appropriations.

He has become the first President to call for the adoption of a constitutional amendment authorizing a 4-year term for Members of the House in place of the present 2-year term. This is a wise and badly needed re-form. The shocking increase in the cost of political campaigning every 2 years justifies the change. If Congress itself will pass the legislation, it probably will get a quick ratification by the State legisla-

His suggestion that our foreign trade be liberalized so that there can be increased trade between our country and the countries of Eastern Europe, is also a wise suggestion, although it is an unpopular idea in some sectors of American life.

He asks for "new measuers to enable us effectively to deal with strikes, which threaten irreparable damage to the public interest." He offsets that unpleasant note to labor bosses by again urging repeal of that con-troversial section 14(b) of the Taft-Hartley law, which would nullify right-to-work laws in 19 States, of which Arizona is one.

Although the war in Vietnam has become one of the most bewildering and pressing issues before the American people, he adds not one thing new to what he has said in the past, and by his silence on the bombing of North Vietnam indicates that his present policy of no bombing there shall continue. As usual, he pleads for peace, just as nearly every American does; but most Americans know from history that when they get involved in a war, their armies have to do more than just stand guard and give sanctuary from bombing to the country of the enemy we are fighting.

Continuation of this soft, indecisive policy in the name of peace defies the experiences of history. When in history has such a of history. When in history has such a restrained military policy brought peace? It has been mistaken as a sign of weakness, which our enemy sees confirmed by the various pacifist demonstrations in our coun-

North Vietnam will have no reason to answer the President's constant overtures about negotiation and peace, until it is hurt and hurt badly. The industrial complex of North Vietnam must be destroyed. Life in the cities of North Vietnam must be paralyzed by bombing. This must be done until the Communist leaders of North Vietnam plead

Wars cannot be fought with feather dusters, as, figuratively, we are doing now. We have to use our battleares. Our Army, Navy, and Air Force must unleash their power and make war. Not until we do, will there be the slightest chance of peace.

We must not be tricked by agreeing to restrict our warmaking abilities by any offer of negotiations. Certainly if any offer is

made for negotiations, we should accept, but we must not agree to a ceasefire. We will weaken our whole position of negotiation, unless we continue to make war with all of our power while negotiations go on.

President Johnson's present policy of con-stantly talking about how willing he is to negotiate and make peace is wrong. Instead of promoting peace it is prolonging the war, not shortening it. His reluctance to use his military forces offensively make him appear Vietcong and Peiping as an irresolute weakling whom they eventually can defeat, and thereby win their major objectives. He can change this image the enemy has of him and our country only by waging war offensively and, in particular, hurting North Vietnam so badly that it pleads for peace instead of defying it.

# H.R. 8282 Discriminatory and Damaging to Higher Education

EXTENSION OF REMARKS OF

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. RUMSFELD. Mr. Speaker, I want to call to the attention of my colleagues a bill, House bill 8282, which I believe could have a damaging effect on the 43 private colleges in the State of Illinois.

House bill 8282 threatens to upset the teamwork of tax-supported and private institutions of higher education by making unemployment insurance payments not-for-profit private colleges and universities compulsory. The bill would lump the private colleges and universities with other nonprofit institutions that have a higher employee turnover and a higher need for such employee protec-Under the bill, tax-supported intion. stitutions are exempted from the new tax.

I agree with the Federation of Independent Illinois Colleges and Universities which has described House bill 8282 as r.ow written as "discriminatory and damaging" to higher education. Also, damaging" to higher education. other nonprofit institutions like the YMCA and Goodwill Industries would be irreparably hurt by the imposition of this new tax.

2

to

In opposition to House bill 8282 are the following Illinois colleges and universities: Augustana College, Aurora College, Barat College, Blackburn College, Bradley University, College of St. Francis, Concordia Teachers College, De-Lourdes College, DePaul University, Elmhurst College, Eureka College, George Williams College, Greenville College, Illinois College, Illinois Institute of Technology, Illinois Wesleyan University, Kendall College, Knox College, Lake Forest College, Lincoln University, College. Loyola Murray College, McKendree College, Millikin University, Monmouth College, Monticello College, Mundelein College, National College of Education, North Central College, North Park College, Northwestern University, Olivet Nazarene College, Pestalozzi Froebel Teachers College, Principia College, Quincy College, Rockford College, Roosevelt University, Rosary College, St. Xavier College, St. Procopius College, Shimer College, the University of Chicago, and Wheaton College.

It is my hope that the Members of the House will seriously consider the impact of House bill 8282, keeping in mind its detrimental effect on not-for-profit institutions.

I submit for inclusion in the RECORD the following editorials from the December 8, 1965, edition of the Chicago Sun-Times and from the December 13, 1965, edition of the Chicago Daily News: [From the Chicago (III.) Daily News,

Dec. 13, 1965]

#### UNFAIR TO PRIVATE COLLEGES

When Congress reconvenes in January it will consider legislation that threatens to upset the balanced teamwork of tax-supported and private, not-for-profit institutions of higher education. Neither would benefit.

House bill 8382 would make unemployment insurance payments by non-profit colleges and universities compulsory, lumping them with other nonprofit institutions that have a higher employee turnover and a higher need for such employee protection, supported institutions are exempted.

This measure would throw an additional burden on the strained finances of the private schools and impair their ability to get on with their basic task, education. This in turn could only mean a greater burden on the taxpayer since more students would turn to State-supported schools.

Private schools must be kept strong. virtue of their political independence they are indispensable in the American education system. The private school, moreover, despite the vast growth of tax-supported education, continues to carry a significant share of the student load. In Illinois alone, 42.8 percent of the 312,180 students in colleges and universities attend private institutions, and a greater percentage of these students are de-gree candidates than those in State schools.

The desire to extend unemployment insurance to the employees of not-for-profit institutions is an understandable one. But to do so by a bill that doesn't take into account the differing work experience and responsibilities of these institutions is unwise. We agree with the Federation of Independent Illinois Colleges and Universities which, in a recent statement, described H.R. 8282 as now written as "discriminatory and damaging" to higher education.

[From the Chicago (Ill.) Sun-Times, Dec. 8, 1965]

# UNNEEDED JOB INSURANCE

The Federation of Independent Illinois Colleges and Universities has called our attention to a bill now before Congress that would seriously impair the operations of not alone private colleges and universities but other nonprofit institutions.

This is House bill 8282, which would impose compulsory unemployment insurance upon nonprofit institutions. One curious spect of the bill is that it does not impose the same tax upon tax-supported schools. This omission, as the federation points out, "would place the privately supported colleges and universities at an unwarranted dis-advantage in their efforts to provide higher education for a large percentage of the stu-

dents attending Illinois institutions."

The private colleges are too important to Illinois, and to the Nation, for them to be burdened with this disadvantage and ex-pense. Preliminary estimates indicate that private institutions have enrolled 42.8 percent of the 312,180 students attending colleges and universities in Illinois, and the percentage is even higher if you deduct the numbers in tax-supported junior colleges who are not studying for academic degrees. It takes no slide rule to demonstrate that an insufferable tax burden would be created if all the students were enrolled in State

Furthermore, the employees of the colleges do not need the protection of unemployment insurance, which is designed to protect workers during periods of depression or in seasonal or erratic industries. Colleges and universities offer steady, permanent employ-ment that is not radically affected by season or business cycles. And other nonprofit in-stitutions, such as the YMCA and the Goodwill Industries, which employ workers under very special circumstances, would be irreparably disrupted by the imposition of the tax.

The plan, in a word, seems to be a thoroughly unfortunate one that Congress should kill once and for all. It would create many problems and solve none.

# A Good Way To Lose Contact With Grassroots

EXTENSION OF REMARKS OF

# HON, THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, January 20, 1966

Mr. PELLY. Mr. Speaker, a question which will command much interest during the present session of Congress will be the question of extending the terms of Members of the House of Representatives to 4 years.

Our whole system of government presupposes responsibility of House Members to reflect the majority will of their constituents when that can be determined. In this regard, I feel it is essential to our system of government "of, by, and for the people" that those who elect Representatives be able to review the work and record of their legislators, and make changes if they see fit, at as frequent intervals as practical.

As I see it a 2-year term is a desirable protection of the people against tyranny and rubberstamp government. Otherwise the House of Representatives will lose much of its accountability to the people it is supposed to represent.

Mr. Speaker, the Bremerton Sun, Bremerton, Wash., discussed this question quite well in an editorial on January 18, and believing the views expressed therein will be of interest to my colleagues and all readers of the Congres-SIONAL RECORD I ask that the text of this editorial be printed hereafter.

The editorial follows:

FOUR-YEAR TERMS FOR CONGRESS IS A GOOD WAY TO LOSE CONTACT

Among the other suggestions made by the President in his state of the Union ads was one that would extend the terms of Representatives in Congress to 4 years.

This is not a new suggestion; Congress tries something like it every year. The argument is that Congressmen who have to spend most of every other year campaign-ing back home can't keep their minds on legislative matters. The not so insignificant matter of expense of campaigning is also raised as an issue.

We hope that such a suggestion fails

It has been our belief that the Congress is made up of two parts for a very good reason; the Senate, whose Members are elected for 6 years and whose function is more on the policy level, and the House of Representatives, whose Members serve for 2 years and who are truly the "voice of the people" in the legislative branch.

To maintain close contact with the folks back home, it is necessary for Representatives to return at least every other year and put their records on the line for the voters. They must, by circumstance, explain, defend where necessary, and try to convince the voters that their performance has been in the best interest of those whom they represent

We think this is a good arrangement.
U.S. Senators sometimes don't get home very often. They naturally, feel that they are secure for at least 6 years and don't have to do so much explaining—until the last couple of years of their terms. Then they're home quite a lot.

It is in the best interests of the original intent of the framers of the legislative branch of government that Members of the House of Representatives stay close to their constituents. Having to come back every other year and work for reelection is one of the best ways, we believe, for that intimacy to be maintained.

## Ukrainian Independence

EXTENSION OF REMARKS

# HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1966

Mr. WYDLER. Mr. Speaker, January 22 marked the 48th anniversary of Ukrainian independence. On that day Americans of Ukrainian descent celebrated the cause of Ukrainian freedom. It is a cause to which I am personally deeply committed. On January 22, 1918, Ukrainian patriots took advantage of the Russian revolution and proclaimed their national independence. But within less than 3 years the national hopes and aspirations of the Ukrainian people had been brutally crushed by the numerically superior Red army.

Today I should like to discuss the period of history in which the Ukraine's independence was declared, for it constitutes a stirring chapter in the story of the Ukrainian people. In November of 1917 the Bolsheviks overthrew the provisional Russian Government under Alexander Kerensky in Moscow. But in the Ukraine, the beginnings of a democratic republic were evident. On November 20 the Ukrainian Rada or Parliament issued its third universal, which showed how far Ukrainian thought had Although the Rada did not yet advocate a complete break with Russia, it provided for the establishment of a democratic republic and guaranteed to all citizens those democratic rights that form the basis of a free country.

Although Lenin nominally accepted Ukrainian independence in December he also presented the Rada with an unacceptable ultimatum. The Ukrainian bravely defied the ultimatum, although they knew that their defiance might re-

sult in an invasion from Moscow. Even as Soviet troops were approaching Kiev the brave Ukrainians declared their independence on January 22, in the form of a Fourth Universal issued by the Rada. The Soviets entered Kiev only a few weeks later and instituted an unprecedented and brutal reign of terror.

But the Ukrainians fought on, for almost 3 more years. The withdrawal of the Ukrainian National Republic forces in November of 1920 marked the close of a chapter in the heroic struggle for national independence. But it was not the end of a book. For the Ukrainian people remember the heroes of their past and are determined that someday they shall be vindicated.

I should like once again to affirm my complete dedication to the cause of liberty and national self-determination for the Ukrainian people.

# Coach Dan Jessee

EXTENSION OF REMARKS

# HON. EMILIO O. DADDARIO

OF COMMECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. DADDARIO. Mr. Speaker, not long ago in Washington the American Football Coaches Association selected a man of whom we in Connecticut and New England are justly proud to be its president

Dan Jessee has had good teams at Trinity College in Hartford for longer than many of us care to remember. I was privileged to play against some of them, although I recall that at the time the energy and effort they showed did not always make it feel a privilege. Trinity was the arch rival of the university I attended, and we knew each year that they would be a formidable opponent.

I was proud to be invited to attend a gathering of Connecticut coaches arranged here in Washington concurrently with the meeting at which he assumed his new office. We were pleased at the chance to salute his accomplishments, and I request that a news story of his fine career be placed in the Record so that the House may be familiar with his story.

The article follows:

[From the Hartford Courant, Jan. 9, 1966]
Dan Jesse: Profile of a Coach

Nore.—Veteran Trinity College Coach Dan Jessee will become president of the American College Football Coaches Association this week. The following article on his illustrious career at Trinity was written by Mr. Louis deRonge, a fellow townsman from West Hartford, a graduate of Trinity in the class of 1914 and a longtime admirer of the teaching talents of Mr. Jessee.

(By Louis deRonge)

One of the country's ablest offensive football coaches, in the opinion of Lou Little of Columbia and others, is Daniel E. Jesses, who holds the longest unbroken tenure as head football coach at one college. He came from the west coast to Hartford in 1982 and will

be starting his 34th year with Trinity College's Bantams in September.

He has established records any coach might

He has established records any coach might envy.

Trinity's first undefeated, untied team came in Jessee's third year—1934. Other undefeated, untied teams were 1949, 1964, and 1955. The Connecticut Sportswriters Alliance named him coach of the year after the 1949 season.

Jessee's success on the offensive is due to great creative ability. This is not only a natural talent but is partly due to his preoccupation with, and love for, the game. A graduate has said that Dan's red corpuscions are shaped like footballs and baseballs—
about evenly divided. In baseball season, his concentration is also intense; but probably because beyond a certain point a coach cannot be as creative in baseball, his skill as a tactician and master of improvisation has revealed itself especially on the gridiron. An opponent once said of his own coach:
"We know what he's going to do; we never know about Jessee."

During the first game of the season a few years ago, someone told Dan that he was worried because scouts from next week's opponents were taking notes on Trinity's plays. Dan's reply was to the effect that the scouts couldn't learn much because he himself didn't know what plays he'd use next week.

#### TWO STARS HONORED

6

of

ab h b pt go c V li b h

ab

y

b

I'M

te

Bi Y

h

pribit

No other active coach has seen two of his star players, from one college, commemorated by Sports Illustrated on the 25th anniversaries of their graduations. Charles T. Kingston, Trinity 1934, who played every minute of every game when he captained the 1933 team, is a successful insurance man in Hartford. He was the first president of the All-America Foundation. Robert O'Malley, 1937, a well-known Holyoke, Mass., doctor, is still discussed in awed tones by those who witnessed his performances as both passer and receiver.

Jessee naturally likes to talk about the men who were stars, but he has respect and liking for the less gifted who always do their best. Often these boys who can't make the team are the most valuable men on the squad because of their fine example of pluck and persistence. To such men Dan is someone to whom they turn for advice either while in college or later. Many of his former students are proud to call him friend. For men who loaf on the job, Dan has little use and no sympathy.

and no sympathy.

In both baseball and football he is recognized as a great teacher. Men who have played on his teams stress this point—particularly those who have acted, or are acting, as professional or volunteer coaches of school and college teams. The first book published on baseball was written by Jessee. Entitled simply "Baseball," it is well written and well illustrated. It is still used as a textbook by many institutions.

#### DAN'S A PERPECTIONIST

In appearance the "Old Professor" as one admiring sports writer calls him (he's a full professor of physical education) is clean cut and slightly stern. He isn't large but looks sturdy and physically fit. It's unlikely that you'd guess that his graduation from Pacific University, Oregon, was as long ago as 1926. On the field he seldom shouts, and though he can use picturesque language, he is never blasphemous. He uses few words in praise of an assignment well performed. He is satisfied with nothing less than a man's utmost.

Being a perfectionist, he drills his teams in fundamentals—repeating, repeating and repeating the small points which, after a while, make the player an expert within the limits of his capability. Of Trinity's baseball teams it has been said "even when they're beaten they look good." They do things the way Jeasee expects a "pro" to do

them. Dan started on a professional baseball career with the Cleveland Indians but

an injury stopped him.

He treats his players like men. He believes that the greater the knowledge of busic things and the more habitual the use of that knowledge, the more enjoyment the players will have. To one of his football stars who was trying to explain why he hadn't carried out an assignment very well, he said coolly: "Do you want me to pat you on the back?"

Bill Scully, one of Trinity's greatest pitchers, had been a student of the game from boyhood but found "I didn't know anything when Dan started coaching me." Once, in a game. Scully was irritated by one of the coach's suggestions, and growled: "Will you shut up and let me pitch?" Out of the game he came. Dan acts quickly, is a disciplinarian and is lavish with neither praise nor forgiveness.

#### WENT FOR RACQUETS, TOO

Until he went to Trinity, Dan had not blike the game and became so good at it that he was induced to coach the college team. He did this for 20 years, winning about 60 percent of the games. Now, with baseball, football, and a full schedule of physical education classes, he has turned this fine minor

sport over to another man. Jessee has a sense of humor, and a good one, "but," says one of his old stars, "not from September through the middle of November." He enjoys his work but is serious about it. He wants his players to have fun but not of the frivolous variety. However, he can be broken up as well as the next man by the ridiculous. Don Viering, Trinity 432, prominent Hartford businessman, recalls that Jessee, between halves of a game in 341, got the team so fired up that they dashed out of the fieldhouse determined to overcome a 13-point deficit. Tension was acute. Viering, jaw set, charged toward the door like a battering ram and stepped in a wastebasket, wedging his foot so firmly in it that he had to get a teammate to help him-the way a cavalry officer needed aid, occasionally, with tight boots in the days when there as cavalry. Tension dissolved, but not the will to win. Trinity's victory was 14 to 13. Stressing Dan's ability as a teacher, Vier-

Stressing Dan's ability as a teacher, Viering—who coaches winning Little League baseball teams, credits him with his success. "Start the kids right; otherwise they'll later have to unlearn and start over." For instance, it is instinctive for a green infielder seeing a grounder smashed at him, to kneel so that one leg, at right angles to the path of the ball, will act as a barrier. Jessee won't allow it. Charge the grounder, scoop the ball with an away-from-you motion and you're set to throw, he says.

#### PLAYER'S TESTIFY

Other alumni interviewed who are or have been coaches, were Joe Beidler, 1942; Felix Karsky, 1955; Ted Knurek, 1941; Bob Barrows, 1950; and Charlie Sticka, 1956. Robert Morris, 1916, a fine end in "the old days," and author of "Pigskin Parade at Trinity," was also consulted. Members of a recent team sang the same song as their predecessors. A former basebail captain called Dan "a wonderful person. There's no pretense. You always know where you stand with him." Another graduate says: "How right he is in everything he preaches."

Jesse will back up his men in a dispute if they're right.

Jesse will back up his men in a dispute if they're right. He tells them never to object to an umpire's ruing unless they're positive the call was wrong. Knowing all the rules as well as he knows the shape of a ball, Dan won't hesitate to call down an err-

ing official.

8

t

e

91

b.

d

n

Kingston thinks that one of the greatest changes in football philosophy brought about by Jessee's arrival at Trinity was abandonment of the "we didn't win but we

played a good game" type of thinking. Dan is fiercely competitive and wants to win not because losing would endanger his job, which it wouldn't—but just because he doesn't like to lose. Men who know him well that he has mellowed, but he still has that strong urge to win. This feeling is imparted to his players. He expects his teams to play hard, bruising ball, but never dirty. During the week he reasons with the players rather than lectures down to them. If every man knows a play in detail, the individual will know his own part in detail. Years ago a somewhat confused line-man asked; "Which way do I push who?" Jessee left it to the English department to straighten out this man's grammar. He makes sure that before a game all the men know just what victims are to be pushed and where. His knowledge of player paychology is so thorough that his instructions will sometimes run counter to a student's in-A recent player was told what move to make in order to induce his opposite to move away from the upcoming Trinity play. To the player the advice seemed exactly wrong, but he did as he was told, and "by golly, Dan was right. He's practically al-ways right."

If Jessee can develop a good quarterback

If Jessee can develop a good quarterback (and he has molded some top-notchers) a man whose thinking about strategy is similar to his—there's little coaching given or needed during a game. Charles Sticka, captain in 1955. Little All-American praises Dan as an individual and as a coach who expects 100 percent effort. He quotes his advice: "Never give a sucker a break or he'll

kill you."

Noting that Dan generally has 26 to 28 men on his squad, he thinks the decision to avoid contact work during the week is sound. Injuries can happen in practice scrimmage as well as in a game, and Jeases wants to start a game with all his men in good condition.

One of Trinity's finest halfbacks, William Goralski, 1952, captain of the 1951 team, sustained the severest injury ever suffered by a Trinity player—the same sort of paralysis suffered by pole-vaulter Sternberg. "Bill," characterized by Jessee as a wonderful fellow and a great team player, has overcome his disability to a large extent. He is a teacher at Simsbury High School. He is a member of Trinity's athletic advisory council, so he and Dan see such other often and are firm friends. Goralski's recovery, Dan says, is largely due to hard work and determination.

No man is an angel, we told ourself, as maybe Dan—a cigar amoker—drops ashes on the rug or hangs his clothes on the floor or is guilty of some other annoying petty crime. Mrs. Jessee, a charming woman, dashed this base hope to darken his character. Her home in West Hartford could be an advertisement for soap, polish, and vacuum cleaners. It's easy to keep that way because Dan-likes a clean house as much as she does. She shares the opinion of his athletes: "He's a perfectionist. He enjoys his home and spends most of his spare time here. Sometimes he'll just sit for long periods, thinking. Then suddenly he'll whip a pencil out of his pocket and write something." When this occurs, she knows that he has dreamed up a new play for the Trinity 11. While we were talking about him he was outside giving another demonstration of his desire to have things right; he was washing his car which always looks well scrubbed.

The Jessees have one child, a married daughter who lives in Fennsylvania, and one grandson, a handsome little boy whose photograph is prominently displayed in their living room. Mrs. Jessee was Charlotte Allen, of Forest Grove, Oreg, before they were married in 1928. Men who have played for Trinity during the Jessee era often go to see the Jessees. Both Dan and Mrs. Jessee treasure

these associations. Sometimes during the college year when there's a prom and one of Dan's students is inviting an out-of-town girl, he knows that the Jessees will gladly have her as their guest.

There's another record Jessee may hold—the coach who has done the most traveling. During World War II and subsequently he conducted coaching clinics for the Armed Forces in Europe, South America, the Far East, and Greenland. He has flown over 100,000 miles on these missions. That isn't all. He and Mrs. Jessee both enjoy driving, and since they moved to Connecticut they've made 29 round trips across the United States. In 1962 on his sabbatical leave, he visited about 35 colleges and conversed with most of their coaches. He found that mearly all of them wanted the return of the two-platoon system, as he did. Naturally he is pleased with the new rules. He thinks there isn't enough practice time for college students to learn both offense and defense adequately. With two units—one offensive, one defensive—each can be thoroughly trained and more boys will be able to play. Better football will result.

Dan has sometimes been adversely criticized for not doing enough, substituting, Many a man has sat, game after game, hoping that he'd replace some weary player, but at the final whistle he'd still be on the bench. Nothing would please Jessee more than to give all the men on his squad chances in every game, but in recent years the rules on substitution have made this aimost impossible for the coach with a small squad. This difficulty has not been generally understood and in fact has probably been encountered only by the so-called Little Ivy League colleges where there are no athletic scholarships. Furthermore, there's no real recruiting at Trinity. Dan takes what comes and what he does with some of his material is remarkable. It isn't much of a trick if you can hire whatever players you need to plug weak spots; and in effect hiring is what happens in many large institutions. If Jessee could indulge in such financing he'd be able to take on almost any college in the country.

Dan uses substitutes in case of injury or fi Trinity's margin of victory is so large that he can safely use men of lesser ability. He plays no favorites. He selects the best men from his small squad and trust those 11 to win. Why use any but the best? He is sure that he is fair. "I don't try to please any particular individual."

He believes in football as a character builder. The game is rugged; so is life. From his players he expects promptness and self-discipline. Teamwork develops a feeling of group loyalty. Dan thinks that in colleges where panty raids and other outbursts of excess energy occur, it is unlikely that many athletes participate. He was a star athlete himself—a nine-letter man—and he thinks the demands of the athlete minimize the appeal of such nonsense.

When he decided to make coaching and physical education his life work, he entered Columbia University where the head of the physical education department rated him as one of the finest football students in Columbia's history. To Trinity he brought a modified single wingback system but he has been quick to develop new methods of offense.

Among the outstanding Trinity men who have gone on to play professionally are Roger LeClerc, 1980, great field goal kicker with the Chicago Bears; Bill deColigny, 1980, with the Canadian Football League; "Moe" Drabowski, 1957, one of baseball's bonus babies; Bob Alexander, 1955, quarterback drafted by the Bears, and Sticka, 1956, who was prevented from playing professional football by a baseball injury. In the fall of 1955, Sticka set a Trinity rushing record for one season—900 yards. Other greats were Dr. Milton Kobrosky, 1937, Little All-Ameri-

can halfback, and Lambert "Whitey" Oberg, 1961, All-New England and All-East on the unbeaten 1949 team.

ee is a trustee of the National Foot-Coaches Association. He served for ball Coaches Association. He served for several years as a member of the National Pootball Association Rules Committee and in 1961 was on the Lambert Trophies Selection Committee. Last year he was made a mem-ber of the Pootball Hall of Pame.

Dan is considered to be an Oregonian, but he was born in Kentucky. His family moved west when he was 3 years old. Although he does indulge in protracted periods of just thinking, he can talk interestingly and is nd as a speaker for men's groups such as Rotary, Kiwanis, and men's clubs of insurance companies. His memory is remarkable. He can talk at length about sports, athletes, and the many parts of the world he has visited or read about. Georgraphy is a hobby and the National Geographic one of his favorite publications. Always, though, in the background—and not very far back—are baceball and football, and they'll come to the fore at less than the drop of a helmet.

# Toward Better United States-Canadian Relations: A Real Pacemaker

SPEECH OF

# HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 24, 1966

Mr. HALPERN. Mr. Speaker, for a great length of time the United States has worked together in peace and harmony with our neighbor to the north, Canada. In business, in government, and in other fields of endeavor, the two eoples have enjoyed a warm and

friendly relationship.

In commerce and industry, the development of close ties has been a key element in our mutual economic progress.

In Canada, numerous American firms have established subsidiary companies. Trade relations between our two countries must continue to reflect the interests of both the United States and Canada. The unhindered growth of two-way business relations between Canada and the United States is a laudable achievement in a troubled world. My interest here led me to survey the records of some respected international

Typical of the good-neighbor business policy is the relationship of a dynamic young Canadian concern, whose success vividly illustrates my point. Clairtone Sound Corp., Ltd., which sells electronic entertainment equipment such as highfidelity systems, has established a solid relationship with American business and, in so doing, clearly shows the way in accomplishing mutually beneficial commercial ties.

Demonstrating the firm's exportoriented complexion, the Clairtone Sound Corp., has erected a nationwide sales organization in the United States, with permanent offices in such major cities as New York, Chicago, and Los Angeles. One of Canada's most respected companies, it also maintains branches

abroad in France, Great Britain, and Germany. The company is an enthusi-astic exhibitor at trade shows throughout the world.

Because of my interest in nongovernmental relations, I have taken the liberty of reviewing the record and background of this company in view of its undoubted Much of its achievement is due to the vision and ability of the two founders, Mr. Peter Munk and Mr. David Gilmour. Both have wide experience in the export-import field.

It seems to me that the extraordinary success of this company should serve as an inspiration to free enterprise everywhere. Equally important, it inevitably affects United States-Canadian relations as a source of goodwill.

In examining the development of the company, it becomes clear that its two founders, recognizing certain ills in the electronic entertainment market, embarked upon an expansive program of re search. Their first models of rapid audio equipment and cabinet design won instant awards from the Canadian National Industrial Design Council. The productions were termed "outstanding in good design, on the basis of appearance, usefulness, and consumer acceptability.

The enterprising spirit of the project was, from the first, the key to success. The company stressed advanced sound engineering and simplicity of cabinet de-

products which the Clairtone Corp. introduced were singularly attrac-tive in appearance and of superb technical quality. They won widespread praise and evoked instant demand. The company, however, did not stand still; in 1961, Clairtone presented its first television-stereo console to the North Amer-Early in 1962 the firm acican market. quired the Middlesex Furniture Co., Ltd., a long-established manufacturing operation in Strathroy, Ontario.

The historical growth of this company exemplifies the hemispheric widening of free enterprise markets. The success of the Clairtone Corp. underlines the steady development of economic ties between Canada and the United States. Un-doubtedly, this development serves the interests of both countries. It should be encouraged by public policy.

The Clairtone story represents an awareness of both economic self-interest and the resultant goodwill bred within and outside of the business community. The forward leadership of this typically fine concern reminds us anew of the great gains to be won through private economic undertakings on a world scale.

#### Ukrainian Freedom

SPEECH

OF

#### HON. DONALD RUMSFELD

OF BLDHOIS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. RUMSFELD. Mr. Speaker, January 22 marked a solemn occasion for

Ukrainians everywhere, and I am proud to join in commemorating this significant date in the history of the Ukraine.

Forty-eight years have passed since that memorable day when patriotic Ukrainians proclaimed their freedom and independence after centuries of subjugation by the Russians. Tragically, their period of independence was short-After 31/2 years of fighting vallived. iantly against the onslaught of the Communist techniques of propaganda, "civil war," and "liberation front," which are the weapons for the subjudgation of free people, the Ukraine was brought under the regime of the Soviet Socialistic Republic by the forces of its Communist

Oppression, banishment, and persecution followed-but despite the sufferings visited upon them, the Ukrainian people have not lost sight of their dream of freedom. Their aspirations for selfdetermination and human dignity are as natural as the air we breathe. Since the dawn of history, man has longed and hoped for individual freedom and national independence. In commemorating this day of Ukrainian Independence. let us rededicate ourselves to the cause of freedom and to the preservation of the rights of all mankind throughout the world—and let us not forget that "freedom is the sure possession of those alone who have the courage to defend it."

EXTENSION OF REMARKS

# HON. GEORGE P. MILLER.

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. MILLER. Mr. Speaker, in October 1964, I was invited to speak at a ceremony in San Leandro, Calif., when Kaiser Aerospace & Electronics Corp. dedicated a new numerical control machining plant.

In December 1965, I returned to the same plant to take part in another ceremony when the plant manager was presented with the coveted U.S. Air Force Zero Defects Achievement Award.

Such a fine achievement in so short time is, I believe, worth bringing to your attention. It illustrates pride of workmanship among aerospace crafts-men. Such a pride is essential not only for the defense of our country but also for the success of our exploration of outer

As we rely more and more on missiles to provide the major deterrent to a nuclear attack, we are utterly dependent on the craftsmanship and dedication of all the thousands of men and women who make the components that fit into a missile. After a missile or spaceship leaves the launch pad, it cannot be repaired like the car that breaks down on a free-

The zero defects program aims at improving workmanship and stimulating a feeling of personal responsibility in all aerospace personnel. The program was il

implemented by the Air Force in February 1965, and has already saved the taxpayers thousands of dollars by reducing waste and scrap.

The program is based on the principle of defect prevention through in-ducement and motivation and is designed to encourage members of the defense industry to promote programs of efficiency and perfection through individuals.

Kaiser Aerospace & Electronics was one of 229 companies which pioneered the program, and on June 2, 1965, the corporation was presented with a participation award, which recognizes those companies who voluntarily agree to join the program.

The citation on the participation award reads:

The Kaiser Aerospace & Electronics Corp., an Air Furce prime contractor and subcon-tractor, and its employees voluntarily estab-lished and agreed to participate in the U.S. Air Force zero defects program. Kaiser Aerospace & Electronics Corp. initiated the program on October 1, 1964, and more than 95 percent of the employees freely pledged them-selves to strive constantly for improved qual-ity of workmanship. Measurement provisions were established in three areas, and the performances record from point of inception has been fully validated.

In recognition of Kaiser Aerospace & an recognition of Kaiser Aerospace & Electronics Corp. employees who participated in the contractor-sponsored zero defects program and who met or exceeded those parameters established for the award, their contribution in the defense preparedness effort entities them to the U.S. Air Force Zero Defects Program Participation Award. ination Award.

Of the 259 defense contractors who have joined the zero defect program, only 65 have qualified for the participation award, and 17 for the achievement

The achievement award is presented to those plants which have demon-strated significant achievements or improvements against contractor-established goals.

The citation for Kaiser reads:

Kaiser Aerospace & Electronics Corp. em-ployees have distinguished themselves by at-tainment of significant achievements during the period October 1, 1964, to June 30, 1965.

During this period the combined efforts of management, engineering and administra-tion employees have significantly contributed to the achievement of a 36-percent improve-ment in manufacturing areas. A cost sav-ings and cost avoidance of \$169,000 was real-ned through the reduction of defects and the improvements in work performance.

These noteworthy achievements are recognized as significant milestones in furtherance of the Air Force zero defects program objective of efficiency and perfection through peo-ple. The distinctive accomplishments by the employees of Knissr Aerospace & Electronics Corp. have reflected great credit upon them-selves and have identified their corporation

The award and citation were presented to Plant Manager Thomas W. Lee at a ceremony in San Leandro on December 21, attended by employees of the morning and afternoon shifts.

Clay P. Bedford, president of Kaiser Aerospace & Electronics Corp., congratu-Clay P. Bedford, president of Kaiser
Aerospace & Electronics Corp., congratuated his San Leandro employees on their tained performance and outstanding achieve-

achievement and read a poem—a favorite of Henry J. Kaiser, the distinguished founder and head of the Kaiser enterprises. He said this caught the spirit of the vast Kaiser organization:

All have a share in the beauty, All have a part in the plan. What does it matter what duty Palls to the lot of man?

Someone has blended the plaster, And someone has carried the stone; Neither the man nor the master Ever has builded alone

Making a roof from the weather, Or building a house for the king, Only by working together Have men accomplished a thing.

Thomas Lee outlined the slogan contest which is held every month at the plant to popularize the zero defects pro-An electric carving knife is presented to the family which suggests the best slogan. Four wives and one daughter won the first prizes, and this illustrates that the families of the employees are backing the program as well as the employees themselves.

In September, Mrs. Clara Harris, wife of Machinist Leon Harris, won the prize with the slogan: "Be it big or be it small; do it right or not at all."

In October, the best slogan of: "If perfection is the game; zero defects is the aim" won a prize for Mrs. Helen Stayrook, wife of Machinist Roy Stayrook.

In November, it was Mrs. Brigida Valle, wife of Inspector Juaquin Valle, who won with the slogan: "Zero defects is our goal; full speed ahead let her

The December award was won jointly by Miss Dixie Ding, daughter of Helen Ding, and Mrs. Jeanne Turnage, wife of Materials Manager William Turnage. Miss Ding's slogan was: "Get in the groove and really swing; go zero defects in everything."

And Mrs. Turnage coined:

"To stop those little defects, To stop those big ones too, To prevent all of the rejects Zero Defects is the clue."

Col. W. K. Ashby, director of quality assurance and head of the zero defects program for the San Francisco region. pointed out that Kaiser won the achievement award in record time.

Brig. Gen. Daniel E. Riley, U.S. Air Force, commanding general of Air Force Contracts Management Division at Los presented the award, congratulated Kaiser employees and said it was a fine example of team spirit.

We all benefit from your work-

There comes a moment of truth during the blastoff of a missile, when the value of zero defects comes home to us.

This award is to recognize the part you all play in the defense of our country. Do not relax now. When we say "zero defects," we really mean zero. That is our aim. That is

what we are training our sights on.

I would like to challenge you all to go one stage further and make a bid for the crafts-manship award—the highest in the zero

ments in such activities as cost reduction, product reliability, safety, reduction of errors, and amount of scrap.

In my brief remarks, I observed:

If we can be sure that each missile is so constructed that it contains no defects, and if every plane that files through the skies is flawless because every man, who helped to make the parts, gave of his best, then we would be a happy nation.

The Kaiser organization can be proud of you. I want to thank you all on behalf of the Government.

In addition to its production of air-craft parts, solid rocket nozales for the Minuteman and Polaris programs and spaceship components, Kalser Aerospace & Electronics Corp. produces the Kaiser Flite-Path system—an advanced system of aircraft cockpit instrumentation-at Palo Alto, Calif., for Grumman Aircraft Corp., for use in Navy planes.

The company has an electronics plant at Phoenix, Ariz., which produces ground support equipment for the Kaiser Flite-Path and has recently entered a new field, community antenna television equipment.

#### The Great Society Must Not Die

EXTENSION OF REMARKS

# HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 26, 1966

Mr. RYAN. Mr. Speaker, Hans Steinits, the acting editor of Aufbau has writ-ten an article about the Great Society which makes it clear that Aufbau will continue its progressive, humanitarian

In underlining the responsibility of this great country to provide butter no matter how fast it produces guns, Mr. Steinitz speaks to all of the Aufbau's readers who know all too well the cost of war. As he says, "The Great Society Must Not Die." His article, which appeared in the January 21 issue of Aufbau,

[From Aufbau, Jan. 21, 1966] THE GREAT SOCIETY MUST NOT DEE (By Hans Steinitz)

In his recent message on the state of the Union, the President of the United States has presented his plan of action for 1986. It includes military measures to stop aggression in southeast Asia, and it includes as well numerous domestic programs of social improvement and overdue liberal reform.
Straightforward and courageous, the President is fighting for his conviction that both are equally necessary, and that this Nation cannot afford to stand still and forget its social progress and liberal improvement programs engaged upon last year.

The President admits that we are faced The President admits that we are faced with the hard and ugly problem of our military commitments in Vietnam and that more men, more weapons, more military hardware, more sweat and more money may be required to cope with it. He admits that last year, when he presented his first state of the Union message after his overwhelm. ing election victory, the horizon looked brighter and the chances for his broad pro-

gram of social reforms were better. He got them through Congress, all right, in the course of a congressional session full of dy-namic vigor and historical achievements and the danger is imminent that this year things may turn out differently.

The spokesmen of the Republican opposition have just announced their plans to do their utmost to stop all further progress toward a Great Society right here and now—because, you see, social progress is expensive, it is luxury, and we cannot afford it in harsh times of war, when priority must be given to all elementary purchases of survival and military necessity. Who wants to embellish our highways and our landscape, when our boys are bleeding in a faraway jungle? Who wants to rebuild our big cities and spend more tax money for social insurance, when all we need are more tanks and more guns? Who wants to dream about the vision of a Great Society when Peipingtrained Communists are up and about to take over the whole of Asia?

Well, yes, we keep dreaming about the Great Society, and we think its forward march should not be slowed down. Yes, we keep thinking about social security and the oval of slums and the fight against air pollution, and we think the more we improve life in this country, the better are our chances to defend it against all comers. Yes, we agree with the President of the United States who proclaimed proudly that this country is indeed mighty enough to do both, the defense of our way of life abroad, and the fight for a better life at home.

Yes, we rally behind the President in his courageous double endeavors to help protecting our allies and friends—and go on helping our old people as well, our sick ople, our victims of poverty and ignorance

right here in our own country's backyard.

There are the economy boys in Congress lamenting the expenditures and doubting our capacity of paying all these bills, and their only wisdom is, as it always was, to cut down all programs and governmental actions designed to improve the lot of those who have trouble helping themselves.

They have always been wrong, and they are wrong now: our economy is in reason-ably good shape, our labor force is increasour tax income is rising, our budgetary deficit is stationary or even shrinking; and every dollar spent for the pursuit of happiness creates new jobs, new income, and new

tax revenue.

Let the opponents of Federal aid to education and of federally supported medicare beware. There are plenty of people around who don't believe that for the sake of our war effort in Asia all elementary actions of simple decency have to be cut out, destroyed, trampled down, torn asunder, and our vision of 20th century social solidarity to be reduced to the happy-go-lucky level of the gay nineties

The war in Vietnam is too serious a business to permit the forces of yesteryear to use it as a pretext for evil purpose. The Great Society must not die, and its progress not be allowed to be arrested.

#### LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Congres-SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Concassional RECORD semimonthly during the sessions
of Congress and at the close thereof.
(Jan. 12, 1895, c. 23, \$13, 28 Stat. 603.)
TITLE 44, SECTION 182b. SAME; ILLUS-

TRATIONS, MAPS, DIAGRAMS,-No maps, dia-TRATIONS, MAPS, DIAGRAMS.—NO maps, chargrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in the representations of the property application.

order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is

respectfully invited:

1. Arrangement of the daily Record.-The Public Printer shall arrange the contents of the daily RECORD as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecu tive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: *Provided*, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet produc-

tion and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and de-bates of the Senate and House of Representa-tives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.—When manu-

script is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD is-sued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight. 4. Tabular matter.—The manuscript of speeches containing tabular statements to be

ublished in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the fol-

lowing morning.
5. Proof furnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Recome style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.-If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the

printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional RECORD any speech or extension of remarks which has been withheld for a period ex-ceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections.—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Fublic Printer within that time: Provided, That upon the final adjournment of each s

of Congress the time limit shall be 10 days, unless otherwise ordered by the committee:

Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10(a). Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceed-ings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Mem-ber, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the CONGRES-SIONAL RECORD.

10(b). Makeup of the Appendix.-The Appendix to the Congressional Record shall be made up by successively taking first an ex-tension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective

Houses

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the Congressional Record, nor to Records printed after the sine die adjournment of the

Congre

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legis latures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manu-acript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

# Appendix

# The 142d Anniversary of the Birth of Stonewall Jackson

EXTENSION OF REMARKS

#### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1966

Mr. RANDOLPH. Mr. President, Friday of last week was the 142d anniversary of the birth of one of America's most illustrious sons—Gen. Thomas Jonathan Jackson. On January 21, 1824, Thomas Jonathan Jackson—later known to his troops and to the world as "Stonewall"—was born in the western region of Virginia in what is now the city of Clarksburg, W. Va.

We are all keenly aware of Jackson's numerous accomplishments during the Civil War. Feats of battlefield genius which prompted the great Victorian military leader, Field Marshall Viscount Wolseley to comment:

The fame of Stonewall Jackson is no longer the exclusive property of Virginia and the South; it has become the birthright of every man privileged to call himself an American.

I shall not enumerate the historical events associated with the era in which he lived nor recall his brilliant tactics on the battlefield which gained him this world acclaim.

But I am inclined to comment briefly on certain aspects of "Stonewall" Jackson's character. It has been a matter of deep concern to me that too often we have stressed the methodical and rigid nature of this outstanding West Virginian. We have heard on many occasions the story of Jackson sitting the entire night in the superintendent's waiting room at VMI because the superintendent forgot their appointment and left by another door. Also, there have been printed and reprinted articles on what many persons have termed his "religious fanaticism." Lest this idea of the so-called inflexibility of the Jackson character go uncorrected. I submit today several excerpts from his own writing and that of historians.

In his letters from Mexico, shortly after his graduation from West Point, Jackson noted:

The morning hours I occupy in studies and business, and generally taking a walk after dinner, and sometimes a ride on the Pasco. \* \* The book I am now studying is Lord Chesterfield's letters to his son translated into Spanish; eo that whilst I am obtaining his thoughts, I am also acquiring a knowledge of the Spanish tongue. \* \* \* Subsequent to this I shall study Shakespeare's work.

Can this be the comment of a person with limited interests?

After the birth of his daughter, Jackson wrote to his wife:

Don't you regard it as the most precious little treasure in the world? Do not spoil it, and don't let anybody tease it. Don't permit it to have a bad temper. \* \* \* Give her many kisses for her father.

At a later date, he wrote:

I am glad to hear that she enjoys outdoors, and grows, and coos, and laughs. How I would love her sweet ways. That her little hands have lost their resemblance to mine is not regretted by ms.

Certainly, these comments in "Stone-wall" Jackson's letters are revealing and dispel the idea of his complete rigidity and stern nature. His correspondence to his wife concerning her absence and the new child provides substantial evidence of the human side of this famous general. Burke Davis, author of "They Called Him Stonewall," gives us considerable insight into Jackson's capacity for light banter and moments of galety. This book on Jackson is excellent reading.

Tangible examples of a more rounded and more logical man are found in the writings of Lenoir Chambers, another prominent biographer of Jackson.

Mr. President, I ask unanimous consent that extracts from an address by Mr. Chambers at a Stonewall Jackson commemorative dinner in Richmond, Va., in 1963, together with an article from the Clarksburg, W. Va., Exponent of January 21, 1966, be printed in the Appendix.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY LENGTH CHAMBERS AT "STONEWALL" JACKSON COMMEMORATIVE DINNER, RICHMOND, Va., MAY 1, 1963

Before Jackson had completed 10 years at Virginia Military Institute, where assuredly he was no real success as a teacher of physics, he had written a record of another kind, he had bought a home and a farm. He had bought other real estate for investment. He owned stock in a tannery. He had traveled widely, nearly always in Northern States, once in Europe. He had married twice, each time to the daughter of a college president. He had decided to join the Presbyterian Church, and he more than met his responsibilities there.

He could make a political speech. He had been elected to the board of directors of the oldest bank in Rockbridge County, and there he sat with half a dizen of the town's best known and most respected businessmen. Obviously some people thought the major was more than "Fool Tom Jackson."

The second package of evidence discloses that this general, who sometimes made officers angry could attract and hold a remarkable group of staff officers and aides.

The character, capacity, and versatility of these officers was not easy to match on any other staff among Confederate generals. Their presence at this headquarters—the most important of them for virtually the whole 2 years—suggests something more than administrative impracticality at the top.

For a third package we have the evidence of General Jackson's fondness for men in public life—for politicians if you will—and

their fondness for him, and their large role in his career.

The list of those men leaves no doubt that as a boy, as a young officer, as a teacher, and as a general, Jackson was at home with politicians, knew their values and their ways, and understood with them the fine art of the possible.

These characteristics deserve a place beside the sometimes more frequently recalled fondness for theological discussion and even the delight in the company of gentle old ledies

It would never do to try to write General Jackson down as a bench philosopher only—not this man of action, not this personification of the aggressive spirit, not this general-on-the-move who made time his ally and surprise and deception his aids, not this creator—rather than follower—of precedent.

Nor would it ever do to ignore those manifestations of the Jackson personality which are his alone just as some of his movements in the field were his alone.

STONEWALL JACKSON WAS BORN IN CLARKS-BURG 142 YEARS AND TODAY

Today marks the 142d anniversary of the birth of Gen. Thomas Jonathan "Stonewall" Jackson, born in Clarksburg, January 21, 1824.

S. J. Birshtein, chairman of the Stonewall Jackson Historical Committee of the chamber of commerce, informed the press that two local organizations are honoring the occasion with appropriate wreaths.

The United Daughters of the Confederacy have placed a wreath on both the Stonewall equestrian statue and on the bronze plaque erected on the site in the 300 block of West Main Street where the famous general was born.

The Stonewall Jackson Civic Club has remembered the 142d anniversary by placing a wreath on the striking equestrian status located on the plaza of the Harrison County Courthouse.

The Clarksburg chapter of the UDC erected the bronze plaque in August 1911 to commemorate the famous general's birthplace. On May 10, 1953, the equestrian statue was dedicated.

The magnificent work of art was sculptured by the late Charles Keck of New York and the base of the statue was designed by William Grant, Clarksburg architect.

Birshtein furnished the press with the following information regarding Clarksburg's great general and renowed military tactician:

Clarkburg's brilliant officer during the War Between the States acquired the sobriquet or nickname of "Stonewall" with the stubborn defense of his 1st brigade in the first Battle of Manassas (Bull Run) on July 21, 1861.

Gen. Barnard E. Bee in rallying his men exclaimed "See, there stands Jackson like a stone wall." A near rout for the Confederate forces was turned into an overwhelming victory. Throughout the Confederacy and the world he became "Stonewall Jackson" from that moment on.

General Jackson was one of the ablest of the Confederate officers, and was probably the greatest corps commander on either side during the war. He had a deeply religious nature and has often been compared with the Cromwellian leaders in England, historians contend. He deprecated secession but was a strong believer in States rights, and when Virginia withdrew from the Union he maintained his

allegiance to the State.

The military tactics of "Stonewall" Jackson are studied at West Point, Virginia Military Institute, Fort Knox, in St. Cyr, France, and at Sandhurst, England. It is said to be the consensus of military experts that his genius has seldom been equaled and never

One of the finest tributes to "Stonewall" was sent in a telegram by the great general of World War II, Douglas MacArthur, at the unveiling of the bronze bust of "Stonewall" in the Hall of Fame at New York University,

May 19, 1957:

May 19, 1957:
"Perhaps the most prized message I ever received came from the famous historian, Douglas Southall Freeman, who wrote me at the close of my campaigns in the Southwest Pacific area of World War II, The mantle of Robert E. Lee and "Stonewall" Jackson has now fallen on your shoulders.' "

Two of "Stonewall's" favorite maxims are "You may be whatever you resolve to be" and "Never take counsel of your fears."

Birshtein said that few persons in West Virginia realize that the Clarksburg Public rary has an original letter by Stonewall. This letter is on exhibit together with a miniature replica of the Polaris submarine, the Stonewall Jackson, and other diversified mementos dealing with General Jackson. Miss Charlotte Bailey, librarian, has ex-tended an invitation to the public to visit

the Clarksburg Public Library and examine

the Jackson items being displayed.

Also on display is an excellent sketch by Bruce Haymond of Jackson's birthplace (234-328 West Main Street) now occupied by a mercantile store. The sketch graphically reveals a neat 3-room brick cottage with semiattic and inset porch, of a type now fast disappearing.

A large oil painting by David Van Pelt is also on exhibit in the library. This painting of Stonewall is by Edwin F. Draughman and is a fine copy of the famous original by John A. Elder in the Corcoran Gallery of

Art in Washington, D.C.

A ladderback rocker which belonged to Stonewall's mother can also be seen in the

The original letter by Jackson was pre-sented to the library by the late D. H. Hill Arnold of Elkins, grandnephew of Stonewall.

The letter, postmarked West Point, is addressed to Jackson's sister, Mrs. L. (Laura) A. Arnold of Beverly, Randolph County.

Stonewall wrote his sister of his preparations for the annual examination at West Point and reported that his health was "very good at the present." He requested that his sister inform him as to the subscription rates of "the Democratic paper published in Clarksburg."

Jackson's paternal grandparents, his father Jonathan, and Stonewall's sister Eliza-beth, are buried in the historic cemetery located in Jackson Park located on East Pike

Street in Clarksburg.

The general's mother is buried in Ansted, W. Va. His sister, Laura, is buried in Buck-hannon, and his brother Warren is buried near that city.

Stonewall Jackson died May 10, 1863, at the age of 39, near Guinea Station, Va., and is buried in Lexington, Va. He had led the army corps around Hooker's flank at the battle of Chancellorsville, routing the right wing of the Federal army.

He was wounded and died of pneumonia.

His death was a severe blow to Gen. Robert E. Lee and the Southern cause. Jackson was a religious man who always prayed be-fore battle. He was a tactician of the first rank and although a strict disciplinarian, was popular with his men. He was Lee's ablest and most trusted lieutenant.

#### Police Prophecy

EXTENSION OF REMARKS OF

# HON. CARLTON R. SICKLES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. SICKLES. Mr. Speaker, one of my constituents, Dr. Peter P. Lejins, was recently named by President Johnson to serve as a resource person to the United Nations on matters pertaining to American criminological techniques. I am personally acquainted with Dr. Lejins, who serves on the faculty of the University of Maryland, and have had occasion to benefit from his vast knowledge in the field of criminology. I am extremely pleased that he will be representing our country in world councils. To give you some idea of the caliber and quality of his background and philosophy, I commend the following article, which appeared in the January 17, 1966, issue of the Baltimore Sun, to your at-

#### POLICE PROPHECY

#### (By Lowell E. Sunderland)

Around Christmas a couple of years back, Baltimore was searching its soul about an annual crime wave. During all the talk about what to do about crime and how things certainly weren't what they used to be, someone turned to a gray-haired, glasses-wearing professor at the University of Maryland and asked for some consoling thoughts.

"I think the main point—that something may be wrong with the basic program of law enforcement-remains untouched," was the professor's answer. The professor was

Dr. Peter P. Lejins.

Dr. Lejins was then, and is now, an internationally respected criminologist whose ideas and advice are sought—although not always heeded-by all levels of government. The 56-year Latvian-born professor heads the criminology program in the university's sociology department. He has been on the faculty since 1941.

#### REVOLUTIONARY STEPS

His answer was not consoling, and although he was not talking then specifically about Baltimore, his answer proved almost prophetic in the city's case. charges of mismanagement and inefficiency leveled at the city's police department fall right in line with Dr. Lejins's thinking.

is his contention that police departments have fallen behind the times. lice departments must continually modern-ize themselves," he explained the other day. "If a department becomes entrenched the ways of the past, then the problems will have to be solved by revolutionary steps, and not in the revolutionary steps

would be to the departments' interests."

Added to this failure to keep up with modern thinking, police departments in general are also being confronted with sharp changes in society, he said. "Ours is an urban, mass society today. It prevents dif-ferent problems than when towns were isolated from one another. Too few large police departments have apparently realized this

#### BASIC REVISIONS

By this very fact alone, Dr. Lejins said, "it is clear that there are some areas of law enforcement which might need very basic revisions."

A squarely set man with a firm voice and a steady, probing gaze, Dr. Lejins is every

inch an academician. He admits it. "I'm very cautious," he said, "very academic." He talks crime in broad, theoretical terms,

and when he talks people listen. What he says comes from long study and observation as a scholar whose background includes extensive work in sociology and law, as well as

thorough training in criminology.

He is considered by many to be the leading authority on crime statistics in the Nation. In line with this, he was chairman of a three-man panel which in 1958 revised the methods of reporting in the Federal Bureau of Investigation's "uniform crime reports," the most reliable American crime

He still serves as a consultant to the FBI, as well as to the U.S. Department of De-

#### STATISTICS UNUSED

It would appear obvious that accurate statistics should help increase the quality of law enforcement. Yet nationally, Dr. Leline said, "crime statistics are not what they should be, a very painstaking operation. And many departments which keep statistics of sorts are not using them.

"The cities are getting more and more reliable," the professor said. "But even this has happened only in the past 10 or so years. Gradually procedures are being standardized, of improvements are needed."

He pointed out, for example, that there are no criminal court records kept on a national basis, none on parole and probation and only a small sampling of individual "crime career records," which he calls the "dream of all criminologists." This latter sampling has been kept for about 3 years by the FBI.

One of Dr. Lejins's prime concerns today is the recognition of criminology as a profession unto itself. "Criminology is divided among the professions now," he said. So-ciology and psychology claim it as part of their realm. "There is no agreement on a system of instruction."

He visualizes a criminology program start-ing at the undergraduate level, "just as is done in chemistry and political science, for instance," and continuing through the graduate levels.

Along these lines, Dr. Lejins is vice chairman of a national committee expecting a \$2,100,000 Federal grant. The committee will begin next month exploring means of resolving "the critical shortage of qualified manpower in the field of correctional rehabilitation

Dr. Lejins sees as the only answer to cop-ing with rising crime rates "professionaliza-tion of both the police and correctional agenctes." To accomplish this would require 'more training, education and all the devices that go toward making a profession."

He is critical of promotion policies with police departments across the Nation. Promoting to higher ranks from within a system only serves to enhance the system's weaknesses, he said.

#### RECRUITING SHIFT

Instead, he suggests recruitment of "mid-dle rung officers" from other police departments, thus providing a national movement of thought in police work. He also advo-cates starting men with high levels of education in police work at ranks higher than patrolman.

"This would stimulate educational ambitions among police," he said, admitting how-ever, that "this is practically impossible at

this time."

Since coming to Maryland in 1941, Dr. Lejins has been active constantly in correctional matters of the State. He holds two gubernatorial appointments on the boards of the Maryland Training School for Boys and the Maryland Commission for Children and Youth. He is also an adviser to the Patuxent Institute and has served as chief adviser of the Maryland children's centers for 6 years. He is a former president of the Maryland Prisoners Aid Association.

He evaluates Maryland as "always being a fairly progressive state" in correctional matters, "progressive but streaky." The Patuxent Institute, where convicted criminals get psychiatric help, and the children's centers are progressive thinking, he asserts.

ALCOHOLIC ISSUE

But he chides the State for lagging in physical facilities (overcrowding at the Mary-

land Penitentiary, for example).

He is especially interested in the alcoholic, arguing that the problem is medical in nature and not criminal. "The general public lacks any idea of the magnitude of this problem," he contended, adding that putting a drunk in jail has proven itself to be "completely ineffective."

Another matter which concerns Dr. Lejins is what he calls "youthful crime," as distinguished from juvenile delinquency. "This is an international problem, you know," he said. "Even the Iron Curtain countries are finally admitting it now. They call it 'hooliganism'."

"Youthful crime"—performed by persons 16 to 25 years old—was the main item of talk last August at the International Congress on the Prevention of Crime and Treatment of Offenders sponsored by the United Nations in Stockholm.

Dr. Lejins, incidentally, has been a U.S. delegate at these conventions, which meet every 5 years, since their start in 1950.

#### NEW U.N. POSITION

The University of Maryland professor, who came to the United States from Latvia in 1940, will have more to do with the United Nations now. Last month, over the signature of President Johnson, he was appointed one of three American correspondents to the United Nations in the area of "social defense." His term expires in December 1970.

fense." His term expires in December 1970.
"What it means is that I am to be a resource person for American methods and policies in criminology," he explained.
The list of his honors is extensive. Dr.

The list of his honors is extensive. Dr. Lejins is a former president of the 1,500-member American Correctional Association and is currently chairman of its research council.

He is a onetime president of the District of Columbia Sociological Society and has served as a member of the executive committee of the American Sociological Association. He is a member of the professional and research councils of the National Council on Orime and Delinquency. Too, he has been active in Prince Georges County affairs on the same subjects.

He writes prolificly in criminology, and his work keeps him traveling. This weekend, he was in New York for a Governmentsponsored meeting.

#### ADDED DEGREES

With masters degrees in philosophy and law from the University of Letvia, Dr. Lejins earned the Ph. D. in sociology from the University of Chicago under a Rockefeller Foundation grant.

After studying in Chicago, he returned to more study at the University of Paris in law and criminology. He makes his home in Coilege Park, and his wife, Nora, is assistant chief of the division of languages for the State Department.

His tiny office on the second floor of Taliaferro Hall at the university is lined with heavily laden filing cabinets and orderly bookcases. A part-time secretary has her own desk.

The office, however, contains a hint that Dr. Lejins can sometimes be less than clinical. Three spindly trees—a California pine, a rare pine from Nepal, and a Japanese tree—stand almost ceiling high in wooden pots. On a window ledge is a hefty looking Bougainville.

Asked about them, Dr. Lejins smilled and said somewhat sheepishly: "Those are my hobby. I have a three-acre arboretum at home. That's what I could really get lost in."

#### Jonathan Winters for President?

EXTENSION OF REMARKS

#### HON, J. W. FULBRIGHT

OF ARKAMSAS

IN THE SENATE OF THE UNITED STATES
Thursday, January 27, 1966

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Northwest Arkansas Times of January 24, 1966, by Allan Gilbert, Jr., entitled "Jonathan Winters for President?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JONATHAN WINTERS FOR PRESIDENT? (By Allan Gilbert, Jr.)

Even if he were alive today and living in California, you don't think for a minute that Abe Lincoln would vote for Ronald Reagan, do you? Not after his experience at the theater.

And that's not all.

The disclosure recently that certain Texas interests have been urging Greer Garson (who is married to a wealthy Texan) to run for senator in that State indicates to me that we have a potentially dangerous trend on our hands. If Paul Revere lived down the street from me I would be tempted to ask him to gallop down to the courthouse and hang up a lantern.

The idea of the professional thespian prolonging his career by entering politics somehow has an insidious ring to me. Yul Brynner, for instance, may look the part, but would he make a good circuit judge? The Three Stooges look like they'd make a good city-street committee, too, but the proof is in the doing, and I have the feeling that most actors' political talents would end on election day. That's the insidious part.

With a good set of dentures, courtesy of the studio, and a clever writer, there is little question that an actor has a better than even chance to win a lot of votes in any election. Such a response comes ready made by way of television and the ad man.

The late Dick Powell, for instance, could have been a powerful candidate for Governor of Arkansas, had he lived, and had he been inclined to file for that office. (Bob Burns, on the other hand, probably wouldn't have fared nearly so well against the present Governor since their styles are so similar.)

Winthrop Rockefeller admits these days that he was ill at ease and unprofessional in his televised appeal for votes in the last gubernatorial campaign. He has, with professional guidance, worked on this, and secured a good deal of polish, since last time around.

No announcement has been made as yet, but it stands to reason that Win will add some sort of entertainer or actor to his program for the hot days of this summer's campaign. Buddy Epson and Jayne Mansfield, for instance, might provide a better-rounded campaign program than, say, Willis Ricketts and Cy Carney, Jr.

On the local scene there appears to be very little of the bard in any of the directional candidates, but Dave Burieson, who has announced for Congress, is an old bass fiddle player. Burieson, in fact, has picked his

fiddle with a wide variety of bands dating back to his days in the famous varsity club at the university.

It is possible that he will form some sort of tasty little combo this summer to jazz things up when Representative Jim Trimers is busy talking politics.

A few choruses of "Tp a Lazy River" would be in the best political traditions, I'd think. Of course if Burleson uses the "River" bit, Uncle Jim can be expected to secure the services of an old-fashioned choir for a few renditions of that wonderful old refrain: "My Time Is Your Time."

It's hard to beat a tune like that.

The worst, of course, may still be on the other side of the hill as far as any marriage of politics and entertainment is concerned. There hasn't, for instance, been any sort of effort to "cast" the candidates yet.

California's George Murphy, for instance, would hardly be the man you'd expect Cedi B. DeMille to hire as lead in an epic on constitutional law. Neither, for that matter, would the smiley Mr. Reagan be expected to win if John Ford decided to film a sequel to "The Last Hurrah."

Without doing a lot of research, it seems relatively obvious that even if Raph Bellamy and Raymond Massey are potentially the presidential type, Mickey Rooney and George Raft aren't. You can probably think of certain actors that would be great for mayor, Governor, director or dogcatcher, and some that just wouldn't do at all.

Therefore, proper casting holds a hidden power over our Government that few may yet realize. Think what a vote-getting combination a ticket headed by Spencer Tracy, John Wayne, James Cagney, and Fabian would be. Contrast that with a ticket headed by Dean Martin and Sam Davis, Jr.

#### Bias of National Labor Relations Board Discussed

EXTENSION OF REMARKS

# HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. MARTIN of Alabama. Mr. Speaker, a very important report was presented to the Members of Congress from Alabama at the annual Washington meeting of the Associated Industries of Alabama. This report, dealing with the prolabor record of the National Labor Relations Board, was presented by Mr. Peyton Finch, vice president, U.S. Pipe & Foundry Co., of Birmingham. I include it in the Record to enable all Members of Congress to consider the points Mr. Finch makes.

STATEMENT IN THE INDUSTRIAL RELATIONS FIRED PRESENTED BEFORE THE ALABAMA CON-GRESSIONAL DELEGATION, BY PETTON FINCE, VICE PRESIDENT, U.S. PUPE & FOUNDRY CO., BIRMINGHAM, ALA., JANUARY 24, 1966

Subject: National Labor Relations Board.

In discussing the prolabor bias of the National Labor Relations Board, one must begin with the original Board which was established by Presidential Executive Order 6763 on June 29, 1934, and continued by the National Labor Relations Act of July 5, 1936.

In the 1930's the employees of the regional offices of the Board had little to do; therefore, they aided the organizing efforts of unions by obtaining signatures on authorization cards.

To really understand how the Board felt about the National Labor Relations Act, you need only to read the words of J. Warren Madden, Chairman of the NLRB in 1987, in an address to the U.S. conference of mayors, delivered on November 16, 1937, in Washington, D.C.; or read the words of Board member Edwin S. Smith in an address before the International Judicial Association in New York on January 15, 1938. Mr. Madden stated: "The condition of the law in placing all legal responsibility for labor trouon the workers who were frequently the victims of the real wrong, and were obliged to get into the street to preserve their self-respect, was a public scandal and was

cognized by Congress as such.
It therefore provided that there should be some law for employers, to accompany the large amount of existing law for employees. Mr. Smith stated: "The Wagner Act was assed to remedy a major evil in American life. Our social system was suffering gravely because employers in powerful positions were preventing their employees from exercising their right to join and assist labor organiza-It is now seriously proposed that the law shall be made equal by imposing new and crushing burdens on unions. It is time to se such hypocrisy for what it is. It has too frequently happened that legislation designed to aid one economic group has re-bounded to the benefit of another; this has en particularly true of legislation designed to aid labor."

Thinking such as that expressed by Messrs Madden and Smith continued up to and through 1947 when the NLRB was amended by the Taft-Hartley Act. In fact, one Board member resigned because he did not believe

in the philosophy expressed in Taft-Hartley.

After Taft-Hartley, what happened? A study of the Board's history after 1947 gives this answer rather clearly; and to understand the happenings, one must look at some cold These facts are as follows:

First, the first act was passed because of

union pressure on Congress.
Second, Taft-Hartley was passed because management convinced Congress that the unions had talked it into going too far.

Third, the union pressure on Congress was

as heavy as ever—probably heavier.

Fourth, the law was amended but the Board and its employees did not materially change. This meant that the same carrying adopted during the period they were carrying adopted strictly for labor continued to exist after an attempt was made to balance the scales.

was made to balance the scales.

Pitth, these employees of the Board realize that the reason for their existence lies in labor unions. The percentage of cases brought to the Board by companies is low as compared to those brought by labor.

Management would never bring a case to the Board unless a union forced them to do so. Sixth, it is a truism of the democratic

process that political appointees tend to favor the group which they feel is responsible for their appointment.

Now, after the background information et out above, there are a great many people who are not knowledgeable in this field, and they might ask why management throughout the United States feels that the National Labor Relations Board is prolabor. By tak-ing a look at the restrictions and limitations placed upon management in the following areas, one can readily determine why the feeling persists:

1. The area of mandatory bargaining.

The limitations put on management's preelection speeches and propaganda.
 The determination of appropriate units

for bargaining.

4. The techniques used by the Board for differentiating between organizational and publicity picketing.

5. The techniques used for differentiating between secondary and primary strike action.

6. The decisions of the Board concerning lockouts, even when used to counterbalance strike threats or actions.

7. The techniques used by the Board for resolving and minimizing jurisdictional dis-

8. The creation of remedies that supposedly give more protection to the rights of selforganization and discourage unfair labor practices. These remedies normally arise from some isolated incident but the Board applies the same rules to everyone after such an incident.

Let's take a look at the evidence of prounion bias the Board has evidenced in the past few years. If you will remember, during the Eisenhower administration with the socalled Eisenhower Board, the members of the Board dismissed an unfair labor practice charge in the now famous Fibreboard case. Over a year later when the Kennedy appointees were placed on the Board, the case was reconsidered and the Board ordered reinstatement and back pay because the com-pany had not bargained about this subcontracting matter. Of course, the Supreme Court in 1964 finally felt that the Board had the authority to order reinstatement and back pay but the Court also stressed that its was reached on the facts in this particular case and did not encompass other forms of contracting out or subcontracting which arise daily.

After the Board's wrists had been slightly slapped by the Supreme Court, the Board along in the Westinghouse car laid down some subcontracting ground rules. This approach seemed to be an attempt to appease the Court, but a close look at these ground rules will bring out the prounion

bias of the Board.

If you will remember, in the Darlington Mills case the Board held that it was an unfair labor practice for a company to out of business without bargaining with its union about the matter, or to go out of business in an attempt to defeat unioniz This seems to be another definite attempt to show prolabor bias. Why should a company have to bargain with a union about a management decision not to put any more money into a business, or not to continue taking the risk involved in doing business? It is well to note that here again the Supreme Court disagreed with the Board and overruled their decision. In the Supreme Court's decision, the Court stated: "The termination of part of a multiplant enter-prise will violate the Taft-Hartley Act if its purpose is to chill unionism in the remaining parts of the business if the employer can reasonably foresee that the partial clos-ing will have that effect." On October 25. 1965, the Labor Board reopened the case to receive additional evidence to bear on the "purpose" and "effect" of the closing of the Darlington Mill. There is not a shadow of a doubt as to what the Board's decision will be after they have received this evidence.

In the recent Brown Foods case, having to do with lockouts, the Board stated that it is an unfair labor practice when members of a multiemployer bargaining unit lock out their employees and continue to operate with temporary replacements even though union used whipsawing tactics called a strike against one member of the Here again is prounion bias. group. again the Supreme Court disagreed with the

Board's ruling.

In the recent American Shipbuilding Co. case, the Board stated that an employer did not have the right after negotiations have reached an impasse to temporarily close his plant and lay off employees for the sole purose of bringing economic pressure to bear in support of his legitimate bargaining po-sition. Again, prounion bias. Again, the Supreme Court disagreed with the Board's

You can look at many of the recent Su-

preme Court decisions and you will find that they have disagreed with the Board's biased attempts to rule in favor of labor unions.

Any legislation which attempts to remove and prejudice from rulings NLRB, whether that bias be for business or labor, will be wholly favored by the Associated Industries of Alabama. We hope that you, our Representatives, will take a long, favorable look at Representative Robert Griffin's bill—H.R. 11217—which will bring impartiality to NLRB decisions.

# Edward Marcus, Texas Alliance for Progress Head, Cited by State Department

EXTENSION OF REMARKS OF

# HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Thursday, January 27, 1966

Mr. YARBOROUGH. Mr. President, Mr. Edward Marcus of Dallas, chairman of the Inter-American Coordinating Committee of the Partners of the Alliance, has been awarded the first "Partners of the Alliance Leadership" award by Jack Hood Vaughn, retiring Secretary of State for Inter-American Affairs and U.S. Coordinator for the Alliance for Progress.

I am proud that this award has been given to a leader in the Alliance for Progress program of my home State of Texas, as the Texas-Peru Alliance has been marked by many successful programs and mutual benefits. Mr. Marcus has turned his large business talents to the field of aiding our international work

with Latin America.

To illustrate the progress we have made and the success of the Texas-Peru Alliance, I ask unanimous consent that a Washington Post article of Wednesday, January 26, 1966, entitled "Inter-American Salesman Cited" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

#### INTER-AMERICAN SALESMAN CITED (By Lorraine Barnes)

The State Department presented a first of its kind citation yesterday to a famous fashion merchandiser who also works as a

salesman for the Alliance for Progress.
"It makes a very full life," said Edward Marcus, explaining how he manages to be, at one and the same time, executive vice president of Dallas' Neiman-Marcus specialty shops and chairman of the Inter-American Coordinating Committee of the Partners of the Alliance

The Alliance program gets its members weekends and vacations and often a good bit more, Marcus said. He explained he has been to Peru twice and Costa Rica once in the past year and, come to think of it, is going back to Peru on Sunday.

Jack Hood Vaughn, retiring Assistant Secetary of State for Inter-American Affairs and U.S. Coordinator, Alliance for Progress, gave the Partners of the Alliance Leadership Award to Marcus in a ceremony in Vaughn's

Similar citations will go to other leaders

from time to time, a spokesman said.

Vaughn said Marcus was actually a triple chairman, since he also heads the partners in Texas and served as chairman of the first Inter-American Partners Conference.

"I have high hopes for the partners program because of people like you," Yaughn declared, emphasizing the volunteer aspect of Marcus' service. "If I have had a certain amount of preoccupation with the partners program it's because I understand what volunteer operations require in spirit and service and what they accomplish."

Vaughn's appointment to direct the Peace Corps was announced by the White House

Inst week.

In an interview, Marcus told how the Alliance partnership is working for Texas and Peru.

The Texas Hospital Association is making an inventory of surplus equipment; a Peruvian hospital will check what it needs on the inventory and the equipment will be delivered without cost. Also, Marcus said, four Texas doctors will spend their vacations

working in a Peruvian charity hospital.

There may be significant developments in
the next few months in the program of encouraging Americans to go into business in
Peru. Marcus expects construction projects
and a textile mill to be among projects that
with reenforce their economy.

The time he spends in Latin America is having a secondary effect on Neiman-Marcus, its vice president said. He explained that his and other U.S. stores become aware of beautiful Latin American products.

Marcus summed the project up by stating,
"The money being spent is not large and it
isn't nearly so important as the number of
people involved.

"We are for the partnership idea because it's hard to get mad at somebody you're making money with."

# Why Peace Plans Not Working in Vietnam

EXTENSION OF REMARKS

#### HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. MICHEL. Mr. Speaker, I have unanimous consent to have printed in the Appendix an editorial which appeared in the Peoria Journal Star on January 25:

WHY PEACE PLANS NOT WORKING IN VIETNAM
Well, we've had our Christmas truce and
our Lunar New Year's truce, and have held
back our bombers from North Vietnam for
weeks. We have scattered high-ranking officials around the world in a peace offensive,
and we've had a new outbrack of sensored

and we've had a new outbreak of senatorial silliness and "peace" pitches. And what has been physically accomplished?

The Vietcong murdered a flock of civilian refugees, assassinated a couple of village chiefs, and made numerous attacks on United States and Korean forces, notably in South Vietnam.

In North Vietnam, they energetically moved in more missiles and antiaircraft guns taking full advantage of the opportunity we graciously gave them. Meanwhile British and other international vessels, plus Communist vessels, continue to unload the materials for killing American troops at Halphons and in the unper Metorcops

terials for killing American troops at Halphong and in the upper Mekong.

Between North and South Vietnam, free from aerial attack, new heavier weapons, and new fighting forces moved down to where they can kill Americans and shoot down our helicopters and aircraft more readily.

Our troops, under order, stood by, guns ellent, while these preparations went forward. Our pilots held fire while watching the means for their own destruction being erected.

This is the painful reality.

Meanwhile, we did not lose any planes or pilots over North Vietnam for a while, it's true. By keeping them home and using mostly photo drones, we kept the planes intact and the pilots alive.

intact and the pilots alive. We had lost almost 200 planes so far attacking second-rate targets there—operating under wraps. But if and as they go back, it is apt to be a lot tougher than before. The sites for missiles and guns that were smashed have had time and freedom to rebuild, and new once have been saded.

Instead of keeping the numbers down by smashing those under construction and thus maintaining the costly gains of putting them out of action in the first place, we now have that whole job to do over again if we are to resume action in the North.

Such is the peace victory we have won. Such is what has been accomplished by the miracle men who saw peace as attainable if we would just seek it and show our good intentions.

Now, as evidence of their good intentions, the Vietcong threatens to murder American prisoners of war, while urging new and harder blows against us—as they have been doing all through the peace talk and truce.

The Vietcong has said there is no peace this side of total surrender and the complete abandonment of South Vietnam into their hands by the U.S. forces. The North Vietnam Government has said over and over, again and again, and is still saying there is no peace this side of total surrender and complete abandonment of that part of the world by U.S. forces.

Red China has said and is saying, over and over, that there is no peace this side of U.S. surrender and abandonment of the people of southeast Asia.

Even "friendly" Russia has repeatedly said and is saying, there is no peace this side of U.S. surrender and abandonment of southeast Asia.

We have advised them all and every neutral government in between and every other capital in the world that we would negotiate unconditionally. The Communist countries have all replied, over and over, "No; surrender first. Get out first."

We have advised them all that we would stop our bombing and remove our troops if they would stop sending troops and guns south from North Vietnam. They have spit

These are the unpleasant facts, and why and how do people manage to cheerfully pretend they do not exist, and to read what they wish "between the lines" of messages written in hate and print and blood so plainly and so often and so categorically?

It is painfully clear that any time the Communists are willing to deal and really want to negotiate, or enjoy a truce, or whatever—they have only to hold up one finger and we will come running and panting to selase the opportunity.

But no finger is raised.

What then is all this pompous gibberish about "new steps" on our part to seek a meeting ground and a peaceful solution? What world are these folks living in? Certainly, not this one.

How in Heaven's name could Senator HENRY JACKSON stand up this past weekend and soberly propose as his great new idea to end the Vietnamese war that we simply make a deal to stop bombing the north in exchange for their stopping the sending of troops, etc., south?

Where has he been all these months? What does he think the situation is? What world is he living in?

We have just offered them much more than that for the same thing and it has accomplished what? Insults and new attacks.

This is shocking, irresponsible incompetence in the U.S. Senate, to so blandly ignore the facts of the situation as they already exist.

It would be more responsible to propose that we tear up our pledges, surrender the Vietnamese people up to slaughter and slavery, and abandon the policy of containing communism. We might as well notify India to quit resisting Red China; the Philippines and Thailand to forget their ties with us and make whatever accommodations they can with the Reds; Japan to forget any promises or pledges and completely review their attitudes toward Red expansion and cooperation; the Germans that our promises regarding Berlin are kaput, and they are on their own; the NATO countries, that our promises to Europe are just as good as our promises to South Vietnam—i.e., worthless; and tell Latin America to read the future without counting on us.

If it isn't worth it; let's face it, and let fall the burdens of world power, and toss our role in the ash can, and our system and power and freedom—and standard of living and former moral concepts, too.

Then, we can make our own accommodation to a world dominated by Communist economics and Communist social system (if they will let us), and see how we like it.

There are three alternatives: (1) we can violently resist; (2) we can systematically surrender; or (3) we can resist until they accept a "live and let live" coexistence.

The other "choices" offered seem to us to be imaginary, emotional, or subversive. They either imagine, against all the evidence, that the Communists are willing to make peace—or else they must argue that we can surrender South Vietnam but resist in other "better" places and still "hold the line."

But the whole argument and attitude of "buying peace" in Victnam applies anywhere and everywhere " and once you start paying a blackmailer, he never stops. It is as true in the history of nations as in criminal history.

Do we resist as best we can? Do we pay the price? Is it worth it, terrible as it is? Or do we give up? Do we pay that price of peace? And is it worth it? That's the question, and we ought to quit fuzzing it up with phoney plans that have aiready been rejected by the Reds \* \* and, above all, let us quit sabotaging the effort, if we are to make it at all, to resist effectively until the Reds decide to live and let live.

Meanwhile, loyalty isn't a one-way street. The fighting men are doing their fullest part for their commander in chief. He owes them a better deal than they got in this last "trues."

#### The Late Honorable Herbert Bonner

SPEECH

# HON. HORACE R. KORNEGAY

OF HORTH CARGLINA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. KORNEGAY. Mr. Speaker, my distinguished predecessor in the House, the Honorable Carl T. Durham, has sent me a statement to place in the RECORD in the memory of his lifetime colleague and close personal friend, the late Honorable HERBERT COUNGTON BONNER.

It is a pleasure and a privilege to comply with Mr. Durham's request, particularly in view of his intimate association with Mr. Bonner in the House and his personal affection and regard for him. Mr. Durham's statement follows:

I wish to extend to Mrs. Bonner and the people of the First Congressional District of North Carolina my deep and sincere sympathy in the loss they have sustained in Her-BERT'S passing. For more than 40 years HERwith him in the Congress for more than 20 years. His personal popularity and the high esteem in which he was held extended throughout the House of Representatives and the Senate as well. During the many years in which he served the first district he gave to his constituents a dedicated service. He will now take his place in the history of our State of North Carolina as one of the great and effective men to serve in the U.S.

But the canvas of his achievements was not restricted to his district and State, for, as chairman of the House Committee on Mer-chant Marine and Fisheries, he made significant and enduring contributions to our national maritime policy which will long be remembered.

My heartfelt sympathy goes out to Eva and the family in their great bereavement, which is shared by all who knew Heasen and his sterling worth to his district, State, and Nation.

#### Rabbits From the L.B.J. Hat?

EXTENSION OF REMARKS OF

# HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. ADAIR. Mr. Speaker, the Elk-hart Truth, Elkhart, Ind., recently had excellent editorial comment on the President's state of the Union message. am pleased to include it herewith:

[From the Elkhart (Ind.) Truth, Jan. 14, 1966) RABBITS FROM THE L.B.J. HAT?

In his state of the Union message Wednes-day evening, President Johnson concocted a formula to finance the expanded Vietnam war, carry on an extensive Great Society

program, and still avoid inflation.

And if the President had pulled 27 rabbits from a hat in full view of his prime-time TV audience, the feat hardly could be considered.

ered more amazing.

The question is whether he really can pull ose political rabbits out of his big Texas hat.

Not without reason, skeptics are question-ing that the budget deficit can be held any-where near as small as L.B.J. envisions from his program.

If it can't a likely result is more inflation and higher prices.

And his idea of temporarily restoring auto

and mis these at temporarry resorring and telephone excise tax cuts, which took effect January 1, is justly criticized, too.
The President wants to help people with small and moderate means, but such people

also use phones and cars.

Besides, a main idea of the cuts was to stimulate sales, production, and jobs which in turn would mean more income and corporate taxes also needed to finance the Fedportion that all needed to inhance the red-eral Government; to large extent raising the excise taxes again would be taking money from one pocket to put it in another.

As for inflation, the White House exerted quiet but heavy pressure against steel price hikes; but where was the White House pres-

sure (even vocal) before the city of New York had to give in to the transit workers' court-defying strike, and allow a massive new benefit package? What will that do to the cost of living?

(Even if the White House couldn't do anything officially about the transit impasse, it might have expressed its moral judgment against defiance of the court).

L.B.J.'s idea of extending terms of House Members from 2 to 4 years has much to recommend it. True, a new House Member hardly learns the ropes before he has to go out and campaign again; and, for all House Members, campaign time comes around too often and this intrudes on regular business. It is also true that, coming at a time of a big Democratic majority, such a measure will tend to freeze Democrats into office longer.

We applaud the President for seeking legislation which will let the Government "effectively deal with strikes which threaten irreparable damage to the national interest"; for a coopertaive effort to make rivers clean; and for the creation of a new Cabinet-level Department of Transportation to pull to-gether 35 present agencies thus involved.

As for the President's suggestion of stimulating trade with Communist Eastern Europe and the U.S.S.R., we certainly wouldn't favor such policy in case of those countries now aiding the Vietcong, as Senator Dirksen

says some are doing.

We approve of Mr. Johnson's determination that U.S. fighting men will stay in Vietnam as long as Red aggression continues; like him, we don't want the war to continue a moment longer than needed to halt such aggression.

But we're plainly skeptical of his every-thing-but-the-kitchen-sink fiscal policy.

# Survey Says Negroes Lift White Area Value

EXTENSION OF REMARKS OF

# HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. DIGGS. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following:

SURVEY SAYS NEGROES LIFT WHITE AREA VALUE

A nationwide survey shows that prices of owner-occupied housing rise when Negroes move into white, inner-city neighborhoods.

"This should finally destroy-once and for all—the myth" that Negroes cause private housing prices to fall, Sherwood Ross, infor-mation and research director of the Wash-ington Urban League, said yesterday in issuing the results of his survey. Ross made the study on his own initiative and not for the Urban League.

The survey was based on comparative market value and population statistics for 1950 and 1960 in U.S. Census tracts in 47 large cities.

Ross said that it is the first nationwide survey of privately owned and occupied houses in center cities. He added that his results were confirmed by three prior stud-ies of individual cities and by a spot check system employed by the U.S. Census Bureau to verify its own census studies.

The survey was based on every measurable census tract, a total of 1,810, in 47 cities with populations of 100,000 or more.

It counted 1.3 million private inner-city homes of which 100,000 were nonwhite, most-

ly Negro. Ross excluded from his survey about 1,200 tracts which were mainly com-mercial, industrial, or had their boundaries so changed in 10 years that they could not

be compared accurately.

The survey showed that while housing prices for predominantly white neighborhoods (85 percent white or more) increased about 35 percent in the 10 years, prices in predominantly Negro neighborhoods increased 61 percent.

But Ross pointed out that the average Negro inner-city home still remains much lower priced than the white inner-city home.

Changing neighborhoods—areas which lost about 10 percent of their white populations and gained Negro residents—showed a market-value increase of 42 percent.

Integrated neighborhoods—areas which re-mained racially stable over the 10-year census period-showed an increase of 45 percent in market value.

Ross pointed out that prices are skyrocketing in predominantly Negro neighborhoods because there is not enough good housing available and because the increasingly afflu-ent Negro middle class is spending much of its income to improve existing housing.

## Alabama Industry Leaders Warn of Danger in Proposal To Legalize Situs Picketing

EXTENSION OF REMARKS OF

# HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. MARTIN of Alabama. Speaker, Congress will again be called upon to amend the Taft-Hartley Act. to permit secondary boycotts. Under pres-sure from labor lobbyists we are constantly deluged with propaganda designed to force favorable action on this amendment.

This week, members of the Alabama delegation in Congress heard another side of the story, presented at the annual Washington meeting of Associated In-dustries of Alabama. Mr. Luther W. Hallmon, personnel manager of O'Neal Steel, Inc., of Birmingham, made the report, and I include it here for the enlightenment of all the Members of Congress.

STATEMENT IN THE INDUSTRIAL RELATIONS FIELD, BEFORE THE ALABAMA CONGRESSIONAL DELEGATION, BY LUTHER W. HALL-MON, PERSONNEL MANAGER, O'NEAL STEEL, BIRMINGHAM, ALA., JANUARY 24, 1066

Subject: Common situs and reserved gate picketing.

In discussing what effect an amendment to the Taft-Hartley Act, such as that pro-posed by the Industrial Union Department and the Building and Construction Trades Department of the AFL-CIO, would have on labor-management relations, it might be well to take a look at what we are really talk-ing about. Let us take, for example, com-mon situs or reserved gate picketing concerning a manufacturing plant which is being built at a cost of \$60 million. As the plans to build the plant mature, a prime contractor is hired to build the plant. When the prime contractor receives the go-ahead to begin construction, there immediately becomes a need for subcontractors since very

few-if any-prime contractors have the men and equipment to handle all aspects of such a job. Normally there will be a subcontractor engaged to clear the ground on which the plant is to be built. Next, excavation will be needed and normally another subcontractor becomes involved. Next, piling will to be driven for the foundation of the building. This requires another subcon-tractor. Then different subcontractors will used to lay the foundation, erect building, install the piping, do the electrical work, install the tile, and install equipment of all descriptions; such as boilers, machines, Subcontractors will be used to et cetera lay the railway track into the plant site and, in all, literally dozens of subcontractors and their hundreds of employees will be involved in the construction of this one plant.

Now, let us assume that the prime contractor and the union with which he has a labor agreement become involved in a dispute, and the union walks off the job and sets up a picket line. What happens? mediately upon being notified that there is a picket line at the gate, all crafts walk off the job because of the old union theory: "I won't work behind a picket line." Now, what is the purpose of the picket line? Of course, the answer to this is quite simple. The object of the picket line is to bring pressure upon the prime contractor in or der that the union will be able to get what

it wants.

Naturally, pressure results from the picket line since the prime contractor wants his employees to work since he has a completion date with a penalty for not completing on time. He also has contracts with dozens of subcontractors who have jobs to complete at other sites and these jobs all have completion dates. A delay on this particular job or any of the other jobs would make it ex-tremely hard to be at the right job at the right time in order that work continuity would be realized.

If the picketing shuts down the entire job instead of merely shutting down the portion being done by the employees of the prime contractor, then more pressure is brought to bear on the prime contractor. Now, the question arises: Is it more important to allow the picketing union to exert more pressure on the prime contractor, or is it more important to allow hundreds of employees of other subcontractors to continue to be able

to feed their families?

t

t

an

11

r.

n

Throughout the history of collective bar-gaining, unions have usually been successful in their attempts to negotiate a good contract for their members or to wrangle con-cessions from employers by simply striking the employees involved. It is unreasonable to assume that this success will not continue. In fact, the union has further safeguards to insure their success at the bargaining table. These safeguards were set out by the Supreme Court in the General Electric case. In this case the Court made it clear that in order for a union to be violating Taft-Hartley when picketing a re-served gate, the subcontractor's employees must not be engaged in work concerned with the day-to-day operation of the plant. simply means that if the prime contractor used the employees of a subcontractor to perform work normally done by his employees, then the union has the right to picket the reserved gates.

When you look at the elements set out below which are encompassed by an ordinary strike, it certainly appears that the union has

at least a 50-50 chance of success.

1. Ordinarily, it calls out the employees of the contractor or subcontractor having the dispute and suspends the functions they normally would perform.

If the strike is between an industrial plant and their union, it cuts off the struck firm's access to the market by stopping deliveries and pickups.

3. If the strike is between a union and a manufacturing plant, it prevents the employer from neutralizing the impact of the strike by using the constian of operations as an occasion for performing certain work such as machinery overhaul which would normally require an interruption of activity.

4. If the strike is between a subcontractor and his union on a construction job where there are many subcontractors and a prime contractor, the strike will-if effectivethe men (employees) of the struck employer out of the construction site; it will cause pressure to be brought by the prime contractor on the subcontractor because it is very important that the continuity of the work kept up; it will cause pressure to be brought by the owner of the plant site on the prime contractor because of a compledate which will be held up should the strike last for a long period of time or even for a short period of time.

If there is not a reserved gate set aside for the employees of the particular subcontractor involved in the strike, then his employees can picket the main entrance to the construction site and close the entire job.

As you know, the differences between craft and industrial unions over common-situs picketing were supposedly smoothed over by an agreement reached in February 1965 be tween the Industrial Union Department and the Building and Construction Trades Department of the AFL-CIO. The two union groups agreed to support a Taft amendment on common-situs picketing that would apply to the construction industry only. It would permit building trades unions to picket a site a dispute with a subcontractor even though the picketing caused employees neutral contractors to stop work. Up us Up until this agreement was consummated the inunions had demanded that any changes in the Taft Act picketing rules inprotection for industrial union employees where a plant reserves a gate for use by employees of neutral construction firms.

If such an amendment passes, all of the expertise in handling such matters which the courts and boards have gained since the Moore Drydock case in 1950 (92 NLRB 547, 549) or the Denver Building Trades case of 1951 (315 U.S. 675, 678) will go down the drain, and the intent of Congress to protect the rights of individual employees in their relations with labor organizations will be

completely nullified.

For the purpose of fully understanding what will be lost if the Taft-Hartley Act is amended as proposed by the AFL-CIO, one should know what the laws now my on this question. Set out below are excerpts from leading court and board decisions on this

In the 1950 Moore Drydock case the LRB set up standards for determining the legality of common-situs picketing. standards are as follows:

Picketing must be limited to times when the primary (struck) employer's employees actually are present at the common site.

Picketing must be limited to places "re sonably close" to the operations of the primary employer's workers.

The pickets must show clearly that their dispute is with the primary employer alone. The primary employer's workers must be ngaged in the employer's normal business at common site.

In the 1951 Denver Building Trades decision, the U.S. Supreme Court rejected the much-used union theory that the prime contractor and his subcontractors on a construction project are "allies" for the purpose of the secondary boycott prohibition. In applying the boycott provisions, the Court said the contractor and subcontractors must be treated as separate employees. This means that on construction sites, if one subcontractor is struck the other subcontractors

and the prime contractor are neutral and not involved in the dispute.

In the 1961 General Electric decision the U.S. Supreme Court agreed with the Board in that where a union, in support of a dispute with an industrial company, pickets a gate reserved for the exclusive use of employees of neutral contractors, the picketing would appear to come within the secondary boycott provision of the Taft-Hartley Act. At the same time, the Court added this qualification: The employees of the contractors must be doing work that is "unrelated to the normal operations of the plant."

In order that one does not feel that the unions are being mistreated by the doctrines adopted by the courts and the Board, let us look at union rights in this matter.

1. A union may picket a reserved gate if the work being done by the employees using the gate is necessary to the normal operations of the plant-routine maintenance work, for example.

A union may picket a gate used by those making regular plant deliveries if the dispute

involves the plant union.

3. A union may picket a common gate as long as there is no gate reserved for employees not involved in the dispute.

4. A union may, under many circumstances, picket two or more sites where employees of a contractor or subcontractor involved in a dispute with the union are work-

5. Unions may picket the premises of an employer who "is cooperating with a pri-mary (struck) employer and " " doing the work which he (the struck employer) is unable to do because of the strike."

6. Unions may picket in many instances

other plants owned by the struck employer.

When arguing the rights of unions to involve neutral employees in a dispute between a union and a company which the union is picketing, the most important question to be answered is: Why should a union have this right? The answer is quite simple: It shouldn't.

Union attorneys argue that when you are picketing a jobsite where several crafts of the building trades unions are at work, you are picketing an integrated single operation or all subcontractors on the site are allies. A cursory glance at this argument shows the lack of depth it has. Even unions would hesitate to say that separate companies occu-pying plant sites in an industrial complex which happens to have a fence around it are allies or that they are one company. Yet, it may be that these plants come much closer to being allies than subcontractors on a construction site. For example, the manager of each plant in the industrial complex may meet monthly or otherwise to establish rules in the complex. Plants may operation have to work very closely to coordinate rail shipping procedures since one set of railroad tracks serves all of the companies within the complex. The companies might lease ware house space from the complex itself and stor-age problems would have to be worked out ween the companie

Now let us look at subcontractors at a new construction site. As a beginning we might consider the fact that in many instances the company having the work performed does not give the entire job to a prime contractor but reserves the right to let contracts to other contractors for various phases of This means that in many instances subcontractors on a job will have no connec-tion whatsoever with the so-called prime contractor or his subcontractors. The only connection such a subcontractor would have with the prime contractor would be that his employees work or want to work at the site where the prime contractor or one of his subcontractors is being picketed. Look at other possibilities. Let's say that the com-pany having the plant built retained the right to have a company come in and-photograph the job daily during the construction. A union having a dispute with the company taking the photographs could shut down the entire job each time a photographer appeared on the scene if the "ally" doctrine was followed by the courts and the board.

For this reason, we in the AIA oppose mendment to the Taft-Hartley Act, as pro-

posed in H.R. 10027.

# American Parents Committee Lauds Republican Efforts

EXTENSION OF REMARKS

# HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. MICHEL. Mr. Speaker, on Jan-uary 24, I joined with the distinguished ranking Republican and other minority members of the House Appropriations Committee in pointing out that President Johnson's \$112.8 billion budget wa a phony. Among other items, I pointed out that the cuts in the school lunch and milk programs were actually a fraud.

These are very popular programs and Congress will undoubtedly put these amounts back up to more realistic figures.

I am glad that the American Parents Committee, Inc., feels very much the way I do on this matter and has as a matter of fact, written to the President under date of January 18. I ask unanimous consent, Mr. Speaker, that the full text of this letter to the President, written by Mrs. Barbara D. McGarry, executive di-rector of the American Parents Commit-tee, be reprinted at this point in the RECORD.

THE AMERICAN PARENTS

COMMITTEE, INC. Washington, D.C., January 18, 1966.
Re: Withholding of national children's milk

program appropriations.
The PRESIDENT OF THE UNITED STATES,
The White House,
Washington

Washington, D.C. Attention: Mr. Gardner Ackley.

DEAR MR. PRESIDENT: The American Parents Committee is distressed to learn that the Bureau of the Budget has decided to withhold \$3 million of the funds already appropriated by the Congress for fiscal 1966 operations of the national children's milk

program.

The American Parents Committee has consistently supported this vital ongoing program, with the conviction that it offers indisputable benefits to all our Nation's children. Both in schools and centers for underprivileged children, its success has been atsted by an average 5-percent annual creases in participation.

To eliminate \$3 million from preating funds would mean denying the last 2 years' proven growth in this program. The years' proven growth in this program. The U.S. Department of Agriculture has advised us that, with this cut in effect, all requests a state of the cut in effect, all requests that, with this cut in effect, all requests the cut in t by participating schools will have to be 10 percent disallowed, as of February 1, 1966.

As a logical and beneficial means of al-As a logical and beneficial means of al-locating surplus whole milk, this program also reflects such sounder economic practice, than the Government's alternative of pur-chasing surplus milk at 75 percent of party for price support, only to go to the additional expense of powdering and storage of the milk. In fiscal 1965, the Commodity Credit Corpo-ration acquired \$23 million of dried (pow-

dered) milk, and suffered a subsequent loss of \$13 million in sales.

The Bureau of the Budget would seen to have disregarded the expressed philosophy of the state of the Union message, which pledges that our children shall not be the victims of a false economy. Surely, in humanitarian as-well as economic terms, our Nation's children represent our greatest national investment. Respectfully.

Mrs. BARBARA D. MCCARRY, Executive Director.

A Christmas Package With Your Name on It

#### EXTENSION OF REMARKS OF

#### HON. ROBERT P. GRIFFIN OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. GRIFFIN. Mr. Speaker, I ask my colleagues to recall briefly what it is like to observe Christmas at home in the United States. Then, for a moment, try to picture what Christmas would be like for our fighting men in Vietnam.

When Christmastime 1965, arrived in Vietnam, the 7.500 men fighting from Michigan who are there did not expect much. Imagine their reaction when they received Christmas gifts from the people of their home State, each gift individually addressed to a particular serviceman.

Operation Michigan Christmas is a wonderful true story. It ought to inspire other projects to let our fighting men know how much the folks back home really care.

The following article was printed in the January 23, 1966, edition of the Grand Rapids Press, a member of the Booth newspaper group, which launched and cosponsored this inspiring and unbelievably successful project:

The 7,500 Michigan men in Vietnam didn't expect much for Christmas last year. War has a way of destroying expectations. It took many hours of effort, contributions,

and donations from an entire State to prove them wrong.

Called Operation Michigan Christmas, the project was more than a mere expression of forced concern; a duty that simply had to be

Rather, for the servicemen who were surprised to receive gift boxes of Michigan prod-ucts, cards, and letters from individuals they had never heard of before, the special holiday effort was a testimonial of their State's genuine concern and respect.

It was a time for the fighting man to re-member loved ones, families, and friends they had to leave when they put on the uniform of their country.

It was also a time to reassess and reaffirm their country's stand against an enemy they had learned to respect—and hate.

As one marine said: "It made a fellow feel pretty good."

The idea for Operation Michigan Christ-mas came from the Lansing Bureau of Booth Newspapers, which publishes the Grand Rapids Press and eight other papers in Mich-

It resulted in an appeal from Gov. George Romney last November for gift donations and servicemen's address

The response was overwhelming.

Volunteers were called in from through-out the State to join hands in compiling the lists of names, sorting, packing, and labeling the mountain of gifts and contributions that arrived daily. Burroughs Corp., Detroit, coordinated much of this effort.

Booth Newspapers paid for flying the boxes om Willow Run Airport to Vietnam.

The Chirstmas boxes contained such items as soft drinks, aspirin, preserves, razor blades, gun oil, toothpaste, and other items donated or purchased from a fund of about \$10,000 sent in by residents and organizations.

The servicemen have shown their appreciation in the only way a man can when he is

far from home.

More than 2,000 letters of appreciation have been received by the Governor's office, most of them addressed to the people of Michigan.

They came from marines, soldiers, and sailors hailing from Muskegon to Detroit; Monroe to Ironwood; from cities and townships and rural routes in between-all over Michigan

The gift boxes reached most of the men on Christmas Eve. They were delivered in combat zones, on ships and in hospitals.

Their impact was the same.

"I witnessed approximately 30 marines from my State receive their Michigan boxes," writes Lance Cpl. Daniel W. Bisher, Hillsdale.

"I saw an 18-year-old infantryman hide a tear that I am sure was shed for happiness. "I saw several Michigan marines walking out of their unit post office with grins from ear to ear."

Capt. Sherwood J. Kok wrote this:

"You should have seen the happy smiles on the faces of the men from Michigan as they unpacked their gift boxes." Some of the packages were never claimed. Bisher explained this:

"I saw one box that had no owner—he was dead."

Included in each package was a special 4-page paper prepared by Booth writers rethe hometown situation at the holfday time.

The messages contained in the paper were enough to warm a December snow.

"When we opened the package," said Lt. John C. Andreoni, an Ohio native, and CWO Harold E. Stoelt, Wyandotte, "our men's eyes lit up like thousands of children back in the States.

"I read the greetings from the various cities and everybody quieted down and remained that way even after I finished. "I saw a couple of tears, and the effect that

reading had on our men was more powerful than any prayer ever written, or Christmas carol composed.

"It showed our men that people do care, and that fact alone made our Christmas so very, very happy.'

Said Sgt. J. R. Henson:

"The stories printed by the different papers of Michigan made us feel and know that we weren't forgotten over here.

"I'm sure you won't mind if a little orphan boy received my box.

"The little plastic model car, the peanuts and rock candy made a wonderful Christ-mas gift for this little waif."

Not all the plans for generous sharing were accomplished.

We decided to give them (the presents) to the children at the orphanage in Qui Nhon. We were also going to put on a Christmas party for these 187 children who are very underprivileged," wrote Sp. 4c. Gerald A. wrote Sp. 4c. Gerald A. Nagy of Warren.

81

80

CO

"Yesterday, one of the sisters who takes care of these children received a letter from the Vietcong saying that if the GIs gave the children a Christmas party, they would bomb the orphanage.

"Our company immediately stopped all plans for the party, so now all we can do for

these children is share out.
with them."
Some of the men made practical use of the children is share our good fortune

Sgt. Robert W. Dell is a tank commander

in the 4th Cavalry, 1st Infantry Division. His driver is from Detroit.

Wrote Dell: 'I found many uses for some of the items on our tank. The lens tissues we can use to clean the lenses on our sights, since none

of us wear glasses. "The zipper ease will be good for our flak

jackets if the zipper gets hard to close. That there are those who care and understand proved a vital factor in the life of one soldier who sometimes is still puszled about the nature of a war that has become so much

a part of him. Explained Pvt. Rank W. Barber:

"You can't imagine how much it helps us over here to know that the people back home really care."

For Raiph Johnston, Ann Arbor, the gift box meant the beginning of a friendship among his comrades in arms. "I think the best part was that it made me

ware of men in the area who are also from Michigan, and since then we have become good friends.

"For a friendship, sir, thank you is not enough."

The thoughts, prayers, and concern contained in each package renewed a sense of loyalty, dedication, and love for a State and

The operation also enabled some to stand a little taller, walk a little prouder.

"I felt very proud as my fellow marines gathered around and commented that the package was addressed not to 'A Serviceman in Vietnam,' but to me personally, with name, rank, serial number, and complete address," boasted S. Sgt. Dale B. Cowan.

"My eyes grew misty and my throat tightened when I realize that the people of Michigan had sent this very warm and pleasant greeting as a personal way of saying that they are behind me and my fellow service-men in Vietnam."

Others kept the empty boxes as mementos. "I'm proud to leave the empty box sitting by my rack with those big letters facing out so the guys can read 'Season's Greetings from the People of Michigan.'

"Thanks, thank you so very much Michigan," wrote Lance Cpl. Thomas J. Roehrig.
Another letter, from James N. Bogema,

Kalamazoo, says:
"I am proud I was born, educated, and served my State as well as my Nation. I pray that the wonderful State of Michigan will always have such wonderful and understanding people."

One future college student volunteered his services for next Christmas.

'I am returning in January and will begin college at Eastern Michigan University in Ypsilanti. If this war is still going on next year, you can count on me to lend a helping hand for another Michigan Christmas in Vietnam," promised Sgt. Thomas B. Dawson.

There were feelings of disgust and shame voiced about those students who protest against U.S. involvement in Vietnam.

ery

kes

om

mb

all for

The consensus is that a brief exposure to the actuality and purpose of the struggle against communism in a once defenseless land would change a few opinions.

There is a realization, however, that not all students make a sport of draft card burning.

"I have a funny hunch that some of those college kids who got unfavorable publicity had a lot to do with making this Operation Christmas in Vietnam possible," said Michael E. Cimoli, a helicopter crew chief.

It makes it a little easier to know that someone understands.

From Capt. Charles E. Tennant, a helicopter pilot:

"We realize that only a small percentage of Americans are against our presence in Viet-nam, but at the same time, it is conforting and reassuring to receive this concrete example of the moral support of the folks back home."

The cards and letters in each package written with the innocence possessed only by small children brought tears to the eyes of grown men, and made them remember.
"The letter in the box from the little girl

made a couple of tears come to my eyes. I have six kids of my own," wrote S. Sgt. Jack Grundy.

One youngster had orders for S. Sgt. Richard Hurlbut:

"To the sergeant \* \* Dear Sarge—do not boss around too much—do not be too mean. "Merry Christmas."

Hurlbut replied, "All sergeants are not mean \* \* \* and really, we try not to 'boss around' too much. But thank you for being concerned with the welfare of your soldiers.

It isn't difficult to think of children in Vietnam. The letters made it clear their half starved, war mangled and many times dis-eased bodies and dirt-streaked faces are everywhere.

Many of the men felt a need to share their unexpected good fortune with these children.

"I assure you that everything will be put to good use. What I can't use myself will be contributed to the Tan Mai Orphanage," one letter, signed by four privates and a specialist fourth class said.

Cpl. Donald Barbee, Kalamazoo, had this to sav:

"I want to thank \* \* \* the people of Michigan for the Christmas gift. It was the nicest gift I could have gotten—next to being sent home to my wife and three little angels."

Some of the presents were just not practical

Wrote a marine: "My buddy gave me his razor blades, he doesn't shave yet."

For youths aged by battle and the veteran who has fought in two World Wars and Korea,

t indeed was a memorable Christmas.

Their jobs were diversified, from infantryman to file clerk, but their sentiments were

the same.
Several made apologies for their spelling, the inability to properly express what they felt, the time it might take for a busy man like a Governor to read their letters.

They did not make apologies for the job they were doing and the job they will con-tinue to do.

They were, and still are, determined to come home a winner.

Sp5c. Floyd Rozewski summed it up: We all hope that you back home will think of us not only during these holidays, but for the duration of this war.

For we will always need your support."

# If Troops Need Handguns, Let United States Provide

EXTENSION OF REMARKS

#### HON. THADDEUS J. DULSKI

OP NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

DULSKI. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I wish to bring to the attention of my colleagues an editorial which appeared in a recent issue of one of our newspapers, the Buffalo Courier Express, Buffalo, N.Y., concerning the use of handarms by our troops in Vietnam. I wholeheartedly support the views ex-

pressed in the editorial and have intro-duced legislation in this respect.

IF TROOPS NEED HANDGUNS, LET UNITED STATES PROVIDE

It is the responsibility of the U.S. Government to provide its servicemen with the best possible equipment—both as to type and to quality. Their lives and their effecand to quality. Their lives and their effec-tiveness depend upon the weapons with which they are equipped. The Defense Department should be alert to combat conditions which indicate the need for special equipment.

A case in point is a dispatch from Denver to the effect that a young marine private first class in Vietnam had written his family asking them to send him a pistol for use against the Vietcong. He said his issued weapon, a rifle, was not suited to the job of flushing guerrillas out of caves and other fortifications. He said many of his buddles were also requesting and receiving pistols from their families. His father sent him a from their families. His father sent him a regulation 45 automatic. The suggestion here is that if handguns

are proving effective in jungle and fortressarea warfare and are desired by the troops doing the fighting, then it is the Government, not the families, which should be doing the supplying.

# Associated Industries of Alabama State Position on H.R. 1153

EXTENSION OF REMARKS

# HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. MARTIN of Alabama. Mr. Speaker, under permission to extend my remarks in the RECORD I would like to include the third in a series of reports made to members of the Alabama delegation by the delegates to the annual Washington meeting of Associated Industries of Alabama. This report states the position of the association on H.R. 1153, labor-management program. It was submitted by Mr. James B. Brand, director of industrial relations, James B. Clow & Sons, Inc., Birmingham:

LABOR-MANAGEMENT PROGRAM-H.R. 1153

(Statement in the industrial relations field presented before the Alabama congres sional delegation by James B. Brand, di-rector of industrial relations, James B. Clow & Sons, Inc., Birmingham, Ala., Jan-uary 24, 1968)

On August 10, 1965, the House passed by voice vote and sent to the Senate an amended bill H.R. 1153—labor-management program. The bill would amend the Taft-Hartley Act to permit employer contribu-tions for jointly administered product promotion programs or committees for interpretation of collective bargaining agreements.

Section 302 of the Taft-Hartley Act prohibited, with certain exceptions, payments by employers to employee representatives. The purpose of the restriction was to prevent corrupt practices, such as bribery or extortion.

This bill would legalize jointly administered product promotion programs and committees for the interpretations of collective bargaining agreements by adding them to the list of exceptions.

AIA is of the opinion that if this bill is passed as written, it will simply grant a union "veto power over the public relations programs of the company with respect to the promotion of its products."

Although the bill states that the joint

Although the bill states that the joint programs are not a mandatory subject of collective bargaining, you know, as we do, the unions have ways of making sure these things are negotiated into the contract.

For these reasons, we feel that H.R. 1153 is not in the best interest of sound labor-management practices and should not be enacted.

#### The First Day of Democracy

EXTENSION OF REMARKS

# HON, E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. ADAIR. Mr. Speaker, we all realize the importance of the Magna Carta, not only to the English, but to ourselves and freemen everywhere. The December 1965-January 1966 issue of Kiwanis magazine carries an article by J. A. Maxtone Graham entitled "The First Day of Democracy." It is an interesting account of what the Magna Carta does and does not do, and I include it herewith:

THE FIRST DAY OF DEMOCRACY (By J. A. Maxtone Graham)

Neither side was in the best of tempers—the one, because of the long and evasive delays engineered by the other; the other, because of the feeling that the rights of their principal, rights that had stood unchallenged for centuries, were being removed by threat of force. At the daily meetings on the long green meadow beside the Thames, in gay tents and pavilions, there was little good will. Both sides were constantly on guard for treachery. Few strayed from the open field toward the wooded hill that overlooked the river for fear of ambush. In the evenings, when the barons and their followers retired to their encampment at Staines, King John and his man would ride back to the safety of the thick walls of Windsor Castle, where they would confer far into the night on how these monstrous, unjustifiable demands could be answered.

At length, after endless discussion in the upper class language of the day, which was still Norman French, and with as much acerbity and lack of understanding as would now be felt between labor and management in a big contract dispute, terms were drafted that, as a compromise, completely satisfied neither party, yet would allow the business of the country to continue. On Monday, June 15, 1215, before a gathering of several thousand people, Ring John, a siy-looking, bearded man of 48 who stood only 6 feet, 5 inches high, gave assent for the final draft to be sealed, for a seemel was unable to write.

No one at Runnymede that day would have been anything but surprised had he the fore-knowledge that in 750 years' time the Magna Carta (called "the Great" only to distinguish it from a minor one dealing with forests) would be the subject of worldwide celebration and scholarly analysis. Written in 54 lines of medieval Latin on a 12- by 26-inch piece of parehment, the deed's main purposes were local and temporary, to correct certain abuses that had grown up during the reign of John and his predecessors, and that were in danger of becoming customary. For convenience, later historians divided the 1 continuous paragraph into 63 clauses, only 12 of which are still valid today, and only a few of any modern importance:

"1. The English Church shall be free, and shall have its rights undiminished, and its liberties unimpaired.

"9. A debtor's land shall not be seized while he has movable goods to discharge the debt.

"20. A man shall be fined only in proportion to the degree of his offense, but not so heavily as to deprive him of his livelihood.

"39. No freeman shall be seized or imprisoned, or stripped of his rights or possessions, or outlawed or exiled, or deprived of his standing in any other way; nor will we proceed with force against him, or send others to do so, except by the lawful judgment of his equals or by the law of the land."

These four are typical of the best and most lasting of the clauses; yet to the barons who drafted the Magna Carta it was the correction of specific royal abuses that mattered most. The King's officials had acquired the habit of requisitioning food, fuel. and transport of their travels, and of moving on either without paying or with the promise, seldom kept, to pay later. The administration of the law had fallen on slack times; there had been no eyre (itinerant court) in circulation for 6 years, and people had no redress against the wrongdoings tyrannical local officials. Taxation, in the form of "scutage" of "shield money" paid in place of military service, had reached a new high. Justices and sheriffs, in many cases people who had little knowledge of cases people who had averaged their or care for the law, were discharging their duties brutally and dishonestly. The King had reized hostages from the families of seized hostages from the mutinous nobles as a surety for good behavior, and most of John's soldiers were unruly, scoundrelly mercenaries whom he had brought in from abroad to protect him, and whom he rewarded with civil service posts and high offices.

For 2 years a band of barons had been fulminating against John's abuse of his power. Each time the King promised that he would behave better in the future; each time he made no effort to do so. In the meantime the Pope in 1213 had appointed Stephen Langton Archbishop of Canterbury, for England was still a Roman Catholic country. Langton, 62, a scholar, poet, and man of great patience and wisdom, was appalled at the straits into which his country had fallen after 20 years of maladministration. He took several of the angry barons aside and showed them the wording of a vague charter of rights drawn up more than a hundred years before by Henry I. He convinced them that the only hope they—and the country—had was to produce a new written charter that the King would accept. After busy scribes had covered many sheets of parchment with tentative clauses in draft after draft, a document, called the "Articles

of the Barons," was finished.

The barons and their men then marched south, to London. When the gates of the city were eagerly thrown open to them (for the cities and boroughs, a growing force in what had been a predominantly rural nation, were among the most abused sections of the country), John realized that he no longer controlled the balance of power. He agreed to meet his opponents at Runnymede, and formally sealed the articles of the barons as a basis for further discussion.

Under the articles, all the wrongs caused by John's evildoing would be righted; services to the Crown would be paid for immediately; two justices would visit each county four times a year; scutage would not be levied without the counsent of a committee of nobles; only people who knew the law would administer it; all hostages would be given up; the unpopular mercenaries would be deprived of office and sent home; and the barons would choose 15 of their number to be guardians of the terms of the charter.

These terms might at first seem a massive

blow for the people against the State; yet an examination of the clauses shows that the principal beneficiaries were to be the earls and barons, their families, and the higher ranking of the many underlings who, in the day of the feudal system, depended on them. The few clauses benefiting the common people, the townsfolk, or the church were craftily inserted by the barons (led by Robert Fitzwalter, who was no less unscrupulous than the King) to attract more support for their movement. Even the apparently altruistic stipulation that men were not to be deprived of the tools of their trade in lieu of payment of debt had a back-handed purpose, for a landlord too would suffer if his villeins had no plows with which to work his soil.

A serf guiding a set of harrows through the black fens of Lincolnshire was as little affected by the events at Runnymede as would an Australian aboriginal by a meeting of the United Nations. Nor was his way of life greatly altered when in the following autumn the Pope ordered John to cancel the charter as illegal and excommunicated the barons who had been behind it. (Archbishop Langton refused to publish the excommunication, and had to relinquish his post.)

It was not a time for easy communication of ideas. The 3 million inhabitants of England led quiet, isolated lives. Perhaps a hundred thousand or two dwelled in London and the larger towns; the remainder, unless well enough born to inhabit keep or castle, lived purely rural existences in villages of 200 or 300 people. Accurate news was hard to come by; only the rich traveled. The villager's life was the village, except perhaps for occasional excursions along rutted roads to a fair or market a few miles distant.

A man who was wronged by his neighbor

A man who was wronged by his neighbor or by the state would find it hard to get redress; local officials were elected by nepotism and robed in graft. The villein was little hetter off than a siave, owning no property, receiving no wages, and faced with the choice either of working properly for his lord or starving. He was tied to the land where he lived, and could be bought and sold with the property. If his daughter married onto another property, he was fined by the landlord for the loss of the labor of her and her children.

A freeman fared somewhat better. He could practice as a craftsman or a small tradesman, but still was liable for considerable dues and services to his superior. Above him was an esquire or a knight who could exact services from his inferiors, but who, in turn, owed allegiance—and liability for military service—to his overlord, the baron. It was the responsibility of these men to supply armed forces to the Crown (the numbers and conditions were known by long custom, and had been the conditions under which land grants were made by William the Conqueror and his successors), though there was an arrangement whereby, at the King's discretion, they could pay scutage instead of sending men. The recognized maximum for the infrequent emergency demands for scutage in the two previous reigns had been 2 marks per soldier, enough money to buy nearly a ton and a half of wheat, worth \$100 today.

Terribly spoiled by his parents as the youngest of eight children, John grew up to disregard all convention. Insolent, moody, unpredictable, lecherous, totally unable to accept advice, yet bringing disaster after disaster upon himself by his own actions, immediately greedy for anything he desired, and liable to Hitlerian tantrums of ungovernable rage, when he would roll on the floor and gnaw the rush mattings, John bore all the marks of the psychopath. He made no effort to conform to the unwritten agreements of the past, and begin exacting scutage every year, as well as personal service.

In 1210 he demanded scutage twice for his wars in Wales and Scotland, to the tune of 8½ marks. Four years later he demanded another 3. This was equivalent to asking a \$10,000-a-year man today for an extra \$1,000 in income tax. It was crippling to the barons, especially to those in England's poorer northeast country who had already been in debt when John took the throne.

The two kings before John had been his father and brother, Henry II and Richard I. Henry was a wise, excellent administrator, and can be numbered among the very best English monarchs. His son Richard, known as "the Lionheart," is remembered as a hero, a great crusader, and an upholder of Christianty, of right, and, therefore, of England. The truth is less kind, however. Richard was basically a sportsman, and it was as a particularly pleasing form of bloodsport that he regarded the crusades. In the 10 years that he was theoretically ruling England, he was so busy directing the slaughter of the insolent Saracens that he spent no more than 6 months in the country of his throne.

It is hardly surprising that such absenteeism in the days when the King's power was
indeed absolute, and when there was little
in the way of an executive government to
make policies and decisions in his behalf,
should lead to a considerable slide in the
affairs of state, and it is only fair to King
John to explain that he inherited a daunting amount of inefficiency and crisis when
he unexpectedly ascended the throne in 1199
at the age of 33—unexpectedly, because
Richard has nominated his nephew Arthur
to succeed him, and only on his deathbed
did he change his mind. (Just to be on the
safe side, John then murdered Arthur.)

England was not the only territory John had to be concerned with. There was the unruly populace of Ireland to be held in check. The jealous, patriotic, warlike peoples of Scotland and Wales were sources of constant trouble. In addition, the English kingdom stretched acroes the Channel, through half of France, and all the way to the Fyrences on the Spanish border. Normandy, Brittany, Aquitaine, Anjou, Maine, Gascony, Poitou, and the Channel Islands were all, reluctantly, under the English sway. And as the French grew more and more restless in their demands for freedom, more and more soldiers were needed to put down local rebellions.

By means of his colossal taxation John raised army after army; but he conducted his campaigns with less than his brother's boldness and efficiency. John Lackland, as he was called in his youth, was the only one in the family with no property of his own; now it was John Soft-sword who was losing one battle after another, so that by 1205 he had nothing left in France except the Channel Islands, Poitou, and Aquitaine. Once again John returned to England, determined to equip himself so that he could win his property back. It was now that he made the excessive demands that led to the Magna Carts.

There was no foundation in law for the Articles of the Barons except for the fact that John had guaranteed to observe certain specific freedoms during his reign. It was no more possible to enforce these than it would be to hold a Senator or Congressman to his election promises. Subsequent efforts on the part of scholars and jurists to regard them as the basis for a British Constitution are quite without foundation. "Magna Carta was the product not of a rebellion," wrote Historian Arthur Bryant, "but of a revolution carried out by the process of law."

It is a common misconception that habeas corpus, that complete British and American safeguard against wrongful detention, originated at Runnymede, when in fact the Habeas Corpus Act was not passed until 1679. Nor was trial by jury part of the charter; its origins lay in reforms during the previous

century to replace trial by ordeal, in which a suspected felon could prove his innocence by remaining unharmed after grasping a red-hot iron, being plunged into icy water, or some other such ordeal. There was no mention of any kind of parliament, unless one counts the baronial committee of 25. It fell to Simon de Montfort to father the first Parliament 50 years later, in 1265.

In later centuries, by the setting of precedent after precedent, and as representatives from the counties and then from the boroughs were summoned to Westminster to help with the business of government, the modern principles of universal suffrage and universal representation gradually emerged to become the democratic system enjoyed today on both sides of the Atlantic. The growth of popular elections to choose representatives was a slow and gradual process that did not finish until 1920, when American women got the vote, and 1928, when the British suffragettes got their way.

Nevertheless, the importance of the Magna Carta must not be underrated. When, in 1776, the colony of Virginia found itself chafing under the yoke of another needy and greedy tryant, George III, one of the most important and basic clauses of its bill of rights was that "no man be deprived of his liberty except by the law of the land or the judgment of his peers"-almost a repetition of clause 39 of the 13th century charter. And when the State of Massachusetts, in 1780, drafted her own bill of rights, section XI was no more than a mere echo of the Magna Carta: "Every subject \* \* \* ought to obtain right and justice freely, and without being obliged to pur-chase it; completely, and without denial; promptly, and without delay, conformably to the laws." For brevity, clause 40 of the 1215 charter is to be preferred: "To no one will we sell, to no one deny or delay right or justice." A careful reading of the Constitution and its amendments will uncover other reminders of Runnymede: that private property should not be taken for public use without just compensation; that a trial must be held in the State where the crime was committed.

(By a curious freak of fate, one of the four surviving copies of the original charter was on exhibition at the 1939 New York World's Fair. When war broke out in September, the British Government, afraid to risk its passage across the Atlantic, had the ancient parchment placed for the duration under perpetual guard in the Library of Congress, alongside the Declaration of Independence and the Constitution.)

But these are merely trivial instances of the general principles embodied in the charter. What is important is not so much the wording of the document, but thus it came into being at all. After John died in 1216, king after king, throughout the Middle Ages, readily confirmed on his amessum that he would honor its conditions. For the first time in the history of the nation, despotism gave way to the idea that others in the kingdom should have a say in the way it was run. Moreover, the terms were actually incorporated in the statute rolls of England. Seven hundred years later, the jurist and historian Lord Bryce wrote about the Magna Carta: "It was the starting point of the constitutional history of the English race, the first link in a long chain of constitutional instruments which have moulded men's minds and held together free governments, not only in England but wherever the English race has gone and the English tongue is spoken."

The charter by no means defined democracy as we know it today; there was no question of any but a clique of the highest born contributing to the government of the land. It was as if Britain today were ruled by the Queen in consultation with the House of Lords. For many, many years after the tense

and inimical doings at Runnymede, most people in England would live, marry, and dis in wretchedness, without even the slightest chance of electing anyone to represent their interests.

The Magna Carta, then, might seem an inadequate basis from which to evolve a modern life of individual freedom for 300 million English-speaking people, but it was a useful start.

Katzenbach Opens New Vote Drive in South—Promises U.S. Help if Whites Try To Coerce, Frighten Negroes

EXTENSION OF REMARKS

# HON. CHARLES C. DIGGS. JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. DIGGS. Mr. Speaker, under unanimous consent I include in the RECORN the following report, by Simeon Booker, of Jet magazine, concerning Attorney General Katzenbach's visit to Alabama, opening a new vote drive in the South:

KATZENBACH OPENS NEW VOTE DRIVE IN SOUTH—PROMISES U.S. HELP IF WHITES TRY TO COERCE, FRIGHTEN NEGROES

(By Simeon Booker, Jet Washington bureau chief)

Negro civil rights officialdom described him as "timid and cautious." Southern lawmakers harangued him as "bold and aggressive." The daily press mirrored him as "colorless and drab."

Against this backdrop of conflicting impressions, U.S. Attorney General Nicholas deBelleville Katzenbach undertook an unprecedented civil rights mission. He flew into the deep South and stars, along with meteorites, fel all over Alabama.

Recognized as the Cabinet member with the controversal task of smashing barriers to Negro voting, Katzenbach selected the seaport city of Mobile, Ala., for an adventurous crusade. He appeared at a Negro vote rally to state the Government's position, to encourage Negroes to flock to the polls and finally to urge moderate whites to join in the democratization of one of the country's racs relations wastelands.

Few Cabinet members would dare visit a Dixie town and address a Negro audience, fearful of antagonizing the Southern law-making powerhouse on Capitol Hill. Few VIP's would be courageous enough to speak their minds in the South on firm implementation of the civil rights laws. Most would concoct fanciful statements from huge Washington offices and sit back and count the press clippings.

When leaders of three civil organizations (Nonpartisan Voters League, Mobile County Coordinating Committee, and the Mobile County Movement) singled out Eatzenbach as their main speaker for the 103d anniversary Emancipation Day celebration, none had any idea he would accept the invitation. It was a process of thinking big, and it paid off when the Attorney General replied that he was "pleased with the idea." "Don't emberrass the Attorney General" became the cry as a flood of leaflets, filers, and cards circulated in Mobile as well as areas in two surrounding States.

"We couldn't afford to have this man speak to an empty hall," said C. H. Montgomery, a voter-registration chairman. "We knew our opponents would laugh at us." In past years the emancipation program was held at a Negro church and 500 filled the sents. The 1966 affair loomed as the giant in the municipal auditorium with a 10,000person capacity. The prospects of seeing a U.S. Attorney General in the fiesh proved to be a tremendous attraction as 4,500 arose and applauded when the former Air Force navigator, who was shot down over Europe and captured by the Germans, was introduced.

As the symbol of U.S. might in civil rights, Katzenbach, in a calm, unruffled style, detailed President Johnson's plan to unlock the voting rights, reaffirming his determination to add more voter registrars. He warned against any "slow down tactics," promising that "any qualified Negro who wants to register to vote will be registered." He called for er hours of registrars and announced that he was sending shortly letters to 518 registrars spelling out the Government's program.

eavy applause erupted when he said, "I have a message for those noisy few who may entertain thoughts of trying to frighten or coerce a Negro citizen-or any citizen trying to register to vote. If you do, you will have the Federal Government to reckon

Katzenbach was forced to pause 23 times during his speech for outbreaks of applause. He was greeted warmly and affectionately even as the State's Negro leadership called for broader Justice Department action. A farmer had wet eyes as the Attorney General ended his speech on this note: ago, it was Lincoln who emancipated the Negro. A generation hence, we may very well recognize that it was the Negro who helped emancipate the Nation." At the close of his 29-minute talk, the Alabama Negroes, plus a sprinkling of whites, stood frenzied, clapping hands and shouting.

During the 2-day visit to Alabama, the Attorney General conferred with Federal authorities, attorneys, and integrated gather-There were always the reminders that he was in the Deep South. The daily news paper refused to publish Negroes in pictures with the Attorney General (despite the his-toric occasion) and a local bar association which invited him to speak, discourteously allowed a presiding officer to criticize Katzer back during an introduction. The official charged that the Attorney General provoked "race riots" because of his visits. There was little doubt that the trip stimulated Negro voting which was a purpose of the mission. Katzenbach was winning a new image.

# The State of Controlled Thermonuclear Research

EXTENSION OF REMARKS

# HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. HOSMER. Mr. Speaker, as chairman of the House GOP conference committee on nuclear affairs. I am issuing a summary of the present state of controlled thermonuclear research to members of the conference which also may be of interest to others. The document also contains recommendations for improving U.S. efforts in this area and is reproduced below:

THERMONUCLEAR STATUS REPORT AND RECOMMENDATIONS

During two decades since the blasting birth of the Atomic Age at Hiroshima in

1945, man has made great progress harnessing the uranium atom for peaceful produc-tion of electricity. But while controlling and converting the power of the A-bomb to peaceful u e has become reality, converting the H-bomb to peaceful use by controlling the release of its even greater energy to produce heat for generating electricity rem in the dream stage. In 1945 this accomplishment was predicted to be 20 years into the Today the prediction is still 20

It has been estimated that the boundless reserve of hydrogen in the oceans of the globe—if it can ever be brought to man's disposal—will provide his energy requirements to infinity.

Uranium and plutonium atoms release their energy by fission—the process of breaking down into lighter elements. lost converts into energy as predicted by Einstein's equation: Etmo. In contrast, hydrogen atoms release their energy by fusion—the process of combining, or fusing, together to form a larger atom, helium. The weight, or mass, converted to energy in the fusion process is greater than that involved in the sion proc

The resultant energy E, is considerably greater because ca-the factor in the formula by which mass, m, is multiplied to calculate E-is a very large number. It is the speed of light—around 186,000 miles per second—

In addition to the advantage of drawing on a practically limitless fuel supply, controlled thermonuclear reactors possess at least two other substantial advantages: (1) They will not produce large quantities of radioactive waste as do existing reactors. (2) Their product is less easily diverted to weapons use.

The vast difficulty with controlling the process of thermonuclear fusion is that temperatures similar to that of the sun are needed to fuse hydrogen atoms together. Such temperatures can be achieved momen-tarily in an H-bomb. But schieving them indefinitely in a peaceful power producing reactor is quite another matter. At such temperatures the hydrogen atoms become what is known as a plasma. The plasma is exceedingly unstable and hard to control. Its gyrations spread out, temperature is lost, and the fusion process stops.

No physical materials will stand up under the sun-like temperatures involved, and none can be used to confine the gyrations and instabilities of the plasma. Instead, scientists have been attempting to do it by the use of very strong magnetic forces which are impervious to heat. Our knowledge of these forces and perhaps others which might be employed similarly—is still rudimentary. The principal effort of scientists engaged in thermonuclear research is almed at learning to employ such forces to stabilize

Once that is accomplished they will face the less complex, but nevertheless difficult, problem of devising a means to transform the heat released into useable electricity. This will involve using it to make steam to turn turbo-electric generators or the development of thermionic and thermoelectric devices which transform heat directly to electricity by generating a steady stream of electrons to feed into the transmission lines bringing electricity to our homes

In the United States the Atomic Energy Commission supports controlled thermonu clear research at a level of about \$31 million per year—about one-fifth the total world effort. The AEC believes that even though our expenditure is this fraction, the effective work we do amounts to about one-third the The other countries involved in this research are West Germany, France, Great Britain, and the U.S.S.R. During the past 4 years these countries have been expanding their work rapidly with new devices,

new facilities and vigorous, youthful staffmen.

During the same period the U.S. budget been static and largely inflexible. Unthe United States is to be overtaken and become second to other nations in this field, our expenditures must increase. to attract talented young scientists and engineers into it. The AEC's Ad Hoc Review Committee on U.S. Controlled Nuclear Fusion Programs, chaired by Prof. Raymond G. Herb of the University of Wisconsin, recommends at least doubling the numbers of scientists and engineers over the next 5 years. This projects, in budgetary terms, to an annual spending level con-siderably in excess of \$100 million.

The AEC now carries on controlled ther-monuclear research at four major laboratories: Princeton Plasma Physics Laboratory, Oak Ridge National Laboratory, Los Alamos Scientific Laboratory, and Lawrence Radiation Laboratory in California.

Programs also are being carried on without AEC support at the Naval Research Laboratory, at General Atomics Corp., at General Electric Corp., and at Aerojet General-Nucleonics Corp.

In addition to increasing the size of the U.S. effort, we should take immediate steps toward establishing a definite national center for plasma studies and controlled nuclear fusion research. The new center should have broadly based research programs with close ties to one or more universities so that it may play an important role in the teaching and preparation of students for careers in thermonuclear research. The Ad Hoc Review Committee concurs in this view.

# Asia Awakening to China Threat

EXTENSION OF REMARKS OF

# HON. VERNON W. THOMSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. THOMSON of Wisconsin. Mr. Speaker, the Milwaukee Journal in its lead article of the editorial section for Sunday, January 16, 1966, carried the following account by our distinguished colleague, Hon. CLEMENT J. ZABLOCKI. knowledgeable and dynamic chairman of the Subcommittee on the Far East and Pacific of the House Foreign Affairs Committee. Congressman Zablocki led a group of nine Congressmen on a recent 35-day study mission to 15 countries on the periphery of Communist China. am sure his observations of conditions in that explosive area of the world are of interest to my colleagues, and I submit them for the RECORD for the benefit of the Members of the House and others.

ASIA AWARENING TO CHINA THREAT

a W

n

fr

(By Representative CLEMENT J. ZABLOCKI) To the eye of the American observer, the often seems a kaleidoscope of chaotic and often puzzling patterns. It is all too easy, in such a situation, to retreat into stereotypes about what the Asians want and what they think about certain world issues. Such generalizations can be dangerous because they cause us to lose sight of the important racial, cultural, religious and political differences which exist among na-tions in the Far East.

A Tokyo workingman, for example, might have much more in common with a Mil-waukee worker than with his counterpart in Thalland. The goal of our congressional study mission was to see things for ourselves. Of course, 5 weeks is insufficient time to conduct indepth surveys of every nation in Asla. It is long enough, however, to visit certain key countries and to benefit from the wisdom of top Asian statesmen and U.S. officials stationed in the area. This is what our delegation attempted to accomplish.

The dominant impression left with me by the trip is the increasing recognition in Asia of the dangers to peace and stability posed by Communist China. It is clear to most non-Communist Asians that the Peiping regime is determined to make all of Asia its sphere of influence.

In Thailand, Korea, Japan, India, and Taiwan, the realization is growing that the Chinese are a constant grave threat; that South Vietnam, as serious a situation as it is, constitutes only the current target for Communist expansionism in Asia, and that, if the Peiping-inspired efforts are successful in Vietnam, other countries soon will be under similar siege.

#### SHASTRI WAS WORRIED

The Thai Foreign Minister, Thanat Khoman, for example, informed us that infiltration of North Vietnamese into remote areas of northeast Thailand has been confirmed. A Thai "national liberation front" currently is in China waiting for an opportunity to begin widespread guerrilla action in Thailand, which has been a stanch friend of the West.

In our conversations with the late Prime Minister Shastri, that Indian leader voiced great concern about a recent Chinese military buildup on the northern borders. There is a grave danger that the Chinese may soon attempt to move into Sikkim, a small protectorate of India in the Himalayas.

("It is indeed tragic," Representative ZABLOCKI said last week after Shastri's death in Tashkent, "that in this time of strained world relations this great Asian leader should be taken from our ranks. In our recent meeting I found the Prime Minister dedicated to the welfare of the Indian people and the cause of world peace.")

In view of the Chinese threat, many Asian nations are taking steps to defend themselves against Communist aggression and subversion. The Indians are strengthening defenses along their northern borders. The Thai are sending increased numbers of police forces into their northeastern provinces, where they are most vulnerable to infiltration. The Nationalist Chinese on Talwan have done an almost incredible job of creating a bulwark of strength against communism, with U.S. aid.

It was my good fortune to be able to visit Kinmen (Quemoy), the Nationalist-held inland several miles off the Red China shore. Once simply a rocky peak jutting from the Pacific Ocean floor, the island today is a fortress of strength and a thorn in the side of the Peiping regime.

Only in Japan did we find a reluctance to arm against China. The antimilitary reaction to World War II still is strong. But the attitude of the Japanese toward taking a more dynamic, positive role in Asian affairs seems to be improving. We are given assurances at the highest levels that Japan will increase its economic assistance to the less developed nations of Asia during the coming years. Japan is expected to play a major role in the founding of the Asian Development Bank for financing long-term economic development.

#### ONLY UNITED STATES CURES CHINA

The military and economic efforts of the free Asian countries cannot by themselves withstand the pressure from Red China. Without U.S. assistance, it is clear, these countries soon would fall under Communist domination. Only the United States stands between China and its goal of utter suprem-

acy in Asia. That is why the Communists are so shrill in their demands that we withdraw from Vietnam and our other positions in Asia.

This was recognized by the Asian leaders to whom we spoke. None of them, it should be noted, believed the United States had "neocolonialist" ambitions or was any threat to their sovereignty. Most, in fact, would welcome increased American commitments.

It was disheartening, indeed, that the only persons from whom we heard "Get out of Vietnam" were Americans. These were the U.S. students who picketed our delegation outside the American Embassy in New Delh. It is unfortunate that their learning experience in India did not dispel their ignorance over the strategic designs of Communist China.

Much of the instability in Asia, of course, is caused by the animosities between noncommunist nations. The prime example, of course, is the bitterness between India and Pakistan over Jammu-Kashmir. Our visit to both countries has convinced me that further conflict by these neighbors in south Asia would seriously harm their economies—to the benefit of Red China. Already both countries have been forced to divert funds to military uses which are desperately needed for economic development.

#### HEARTENING SIGNS

Yet despite the recent conflict, India and Pakistan have continued to cooperate on the luge Indus River Basin project which will conserve and eventually bring precious water to irrigate their farmlands. The need for water in being felt most keenly because south Asia experienced its most severe drought in a century last year, and widespread famine may result. It is vital that India and Pakistan somehow resolve their differences and get on with the job of making a better life for their people.

Our mission observed heartening evidence that longstanding grievances between Asian nations can be solved to the benefit of all.

We landed in Tokyo on the historic night when the Japanese Diet ratified the treaty restoring normal relations with South Korea. This pact will make possible fruitful cooperation between those countries. The United States has encouraged this action by two of our allies as a move which strengthens anti-Communist ties in the Far East.

Another example of regional cooperation is the Mekong River development project in which Thailand, Laos, South Vietnam, and even Cambodia are participating.

Still another example of Asian cooperation in the cause of freedom has been the contributions of Asian nations to the Vietnam war.

The South Koreans have provided an entire division for combat duty against the Vietcong and are proud of the distinguished service which their fighting forces have rendered.

Chiang Kai-shek—who is aging, but is still as alert as ever—was proud of the technical assistance which his government is giving to South Vietnam.

In the Philippines, we were assured by the new President, Ferdinand Marcos, and members of his government that the Philippine Legislature will soon take up the question of sending combat troops to Vietnam.

In Vietnam itself, it is evident that real progress has been made on the military front by the addition of U.S. combat troops to the Vietnamese fighting forces. Our soldiers have demonstrated their ability to cope with the type of hit and run guerrilla warfare at which the Vietcong are so adept. There is good evidence that the morale of the Communist guerrillas is sagging. At the same time, however, the increased infiltration of regular North Vietnamese troops has prevented any significant tipping of the balance in favor of the South Vietnamese.

The political situation in South Vietnam

continues unstable. Although the government of General Ky has stayed in power for some time and has been prosecuting the war with more success than most of his predecessors, he is supported principally because there seems to be no other non-Communist alternative.

The lack of national unity among the South Vietnamese—certainly their most serious domestic problem—seems even more pronounced today than it did at the time of my last visit there in the fall of 1963, just prior to the overthrow of President Diem.

In summary, it is my conviction on the basis of my observations that the United States is going to be needed in Asia for some time to come. Regardless of the outcome in Vietnam, Pelping will remain aggressive and threatening.

The most important foreign policy problem which our Nation will have to meet during the coming decade is almost certain to be the containment of Communist China.

## Wise Selection

EXTENSION OF REMARKS

# HON. WILLIAM R. ANDERSON

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. ANDERSON of Tennessee. Mr. Speaker, this is a country which lives under the law. However, much depends on who administers the law.

Many newspapers, such as the Nashville Tennessean, have praised the selection of Dr. James L. Goddard as Commissioner of the Food and Drug Administration.

As doctor of medicine he is a man of science, an extremely important qualification for the man who will be ultimately responsible for safeguarding the public from fraud and health hazards.

President Johnson has referred to Dr. .Coddard's quality of leadership that will enable the Food and Drug Administration to meet fully its vast and varied responsibilities for consumer protection.

The editorial to which I refer is entitled "Good Selection To Head the FDA," and with the consent of my colleagues I ask that it be included in the RECOND:

[From the Nashville Tennessean, Jan. 14, 1966]

GOOD SELECTION TO HEAD THE PDA

President Johnson has made a wise selection in naming Dr. James L. Goddard the Commissioner of the Food and Drug Administration.

Dr. Goddard is Assistant Surgeon General of the U.S. Public Health Service and Chief of the Communicable Disease Center at Atlanta, which carries out programs in the control of infectious disenses. He has spent 14 years in public health work.

The new Commissioner is known as a tough, independent-minded administrator who has a strong concern for the public's welfare.

The FDA has come under congressional fire for acting slowly and indecistvely when the anfety of new pharmaceutical drugs was in doubt. The appointment of Dr. Goddard should five the agency renewed zeal and decisiveness.

The challenge is rather formidable, for the FDA must make scientific judgments on literally thousands of new preparations each

year. But it now has an experienced administrator with a grasp of scientific issues, and the FDA ought to be a more effective agency in protecting the public.

# Ukrainian Independence Day-Echo of a Great Freedom Fighter

EXTENSION OF REMARKS

# HON. RAYMOND F. CLEVENGER

OW MECHANIAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. CLEVENGER. Mr. Speaker, it is with great pleasure that I take this opportunity to extend congratulations to the Ukraine on the 48th anniversary of its proclamation of independence. On that long-awaited day, January 22, 1918, Ukrainians experienced the exhilaration of freedom from Russian rule.

In keeping with our commemoration of this day, I would like to speak of one of the most eloquent and powerful voices of freedom—the Ukrainian poet, Taras Shevchenko. His own life, in which he enjoyed personal liberty for only a few years, mirrors the struggle of the Ukraine to obtain—and keep—its freedom as a sovereign state.

The bard of the Ukraine was born a serf in 1814 and spent the first 24 years of his life in slavery. Not until 1838 was he granted his lifelong dream of freedom, being redeemed by the poet Vasili Zhukovsky and the painter Karl Bryullov. In 1840 his first work of poetry appeared in the form of a slender volume called the "Kobzar."

His advent into the literary world was sudden, startling, and swept his compatriots up in a wave of great admira-tion. Such poetry as flowed from the pen of this young man had not been known in the Ukraine before. His words were bright, singing, emotional, cloaked in the language of the Ukrainian folksong, but underneath their grace throbbed a heartfelt attack upon tyranny.

In 1845 the poet associated himself with a revolutionary society which was determined to create a great, free union of all Slavonic peoples. This led to his arrest in 1847 by agents of the czar and conscription into the army, in which he was forbidden to write or draw. Yet he continued to compose, writing poems in notebooks which he sewed together and hid in his boots. After 10 years he was pardoned, but remained under police supervision for the rest of his life.

Thus, of his 47 years, Shevchenko enjoyed only 9 years as a freeman. This finds a parallel in the history of his country, for, after achieving independ-ence in 1918, the Ukraine again came under Russian domination in 1920.

Just as Taras Shevchenko kept the spirit of freedom burning throughout his years of captivity, so does the Ukraine today hold ever before it the hope of independence and of liberty for its people. We salute the Ukraine and join with her sons everywhere in the hope that their dreams of freedom for their homeland may soon be realized.

# California in Ocean Study

EXTENSION OF REMARKS

# HON, LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. VAN DEERLIN. Mr. Speaker, the science of oceanography is reaching an exciting stage in California, where commercial enterprise now provides important backup to governmental and academic inquiry.

Because much of this new activity is centered in my home community of San Diego, I was interested in a résumé carried by the Christian Science Monitor in editions of Saturday, January 22:

CALIFORNIA AIDS STUDY OF OCEAN

(By Kimmis Hendrick, staff correspondent of the Christian Science Monitor)

Los Angeles .- California is stretching toward stage 2 in exploration of its sea frontier, Gov. Edmund G. Brown says that so far the State has just "dipped its big toe" in oceanography. Soon, he promises, it will take the plunge.

This looks inevitable. California faces a population of 28 million just 15 years away. For food enough, new mineral wealth, and play space, it must mine the sea.

Stage 2 will be legislative action and moves by private industry. Stage 1 came 2 years ago when Governor Brown called a symposium on "California and the World Ocean.

Industrialists and State officials, as well as specialists in the Federal Government, participated. The symposium led to the formation of a Governor's Advisory Commission on Ocean Resources.

Its chairman is Prof. Milner B. Schaefer, director of the University of California's Institute on Marine Resources at La Jolia. Dr. Schaefer is an eminent world expert on fisheries, the law of the sea, and oceanog-

He organized University of California scholars into research teams. Recently they brought forth a thick tome of reports and recommendations called "California and the Use of the Ocean."

LECTURES SCHEDULED

Governor Brown says that in its way, this book is just as historymaking as the dra-matic experimental work done this fall along the California coast by the Navy's Ses Lab II. Research, indeed, linked the two events in numerous ways.

California's report puts together what is doubtless the first comprehensive study by a State of its relation to the ocean. It deals with factors vital to the State's \$200 million fishing industry. It deals with mineral prospects at least as promising as the gold rush. It deals with problems of urban focus on the sea coast, with weather, with engineering challenges, with recreation.

Beginning February 7, another shaping-up project will get under way. University of California Extension will start a statewide lecture series by and for scholars on the practical problems of ocean use. Speakers will include Dr. George F. Bond, officer in charge of the Navy's man in the sea pro-Dr. Schaefer, and many other au-

Stage two for California will come, Dr. Schaefer indicates, as findings are trans-lated into terms of legislative action. His commission's assignment is to provide de-tails for the State planning office of the department of finance

He points out that California's opportunity partly involves being ready to

vantage of the Federal Government's growing involvement in oceanography. Washington's concern is both defensive and civilian benefits. California's is to learn how its own public and private enterprise can profit.

"The lecture series," says John F. Brahtz, who is coordinating the lecture program, "is really a plan of action to bring us from where we are now to our goals."

Dr. Brahtz, lecturer in engineering at the University of California, Los Angeles, and staff adviser to the office of the Director of the U.S. Naval Civil Engineering Laboratory, has a ready adjective for "where we are now." His word is "exciting." As for goals, he says they are unlimited.

EXCITING PERIOD

But there is much to be done," he explains. He lists a few needs: Further development of the law of the sea, a matter initiated by Geneva conventions in 1958 and since. The problem of atomic waste and the pollution of ocean depths. Engineering skills for work in "hydrospace," meaning structures for operation at tremendous depths.

I contend men must be able to go down on the Continental Shelf in their exposed state," Dr. Brahtz declares. "Men are not just workhorses. They are decisionmakers." California is not the only State concerned

with the ocean. Hawaii, for example, held a Governor's Conference on Oceanography and Astronautics late last September. Brahtz comments that Hawaii's involvement may be smaller than California's but that he is impressed by its linking the two fields.

"Men involved in what California is doing with the ocean," he observes, "resent the Federal space program. They tend to feel the ocean holds the key to meeting human needs.

"I believe we may come to see that the two are complementary. They can serve each

#### The Balance of Payments

EXTENSION OF REMARKS

#### HON, MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mrs. GRIFFITHS. Mr. Speaker, the Nation's economic record during the past year was remarkable for combining unprecedented advances at home with a decisive improvement in our balance of payments with foreign countries. We cut the national deficit by more than half in a single year-from nearly \$3 billion to little more than \$1 billion. And the great forward stride in our international payments last year reaffirms the soundness of the American dollar.

This record is a tribute to the administration's voluntary program, and to the businessmen and bankers of this Nation who made it work. As the President's economic report points out, we cannot relax and claim victory; indeed, we must strive for further improvement this year. But we have clearly brought the balance-of-payments problem under control, and we have demonstrated that our progress in international payments can go hand in hand with full prosperity.

For years, many spokesmen abroad and a few here at home have urged a tight money policy to keep dollars from flowing overseas. We were urged to throttle all credit—domestic as well as foreign-in order to correct our payments imbalance. This counsel of despair would have meant a stagnant economy. The President and his advisers wisely rejected such advice and, instead, fashioned a successful strategy. The Government did its share directly by cutting the foreign exchange cost of essential military and aid programs to the very bone. Banks and businesses also did their share.

Bank loans to foreigners, which had increased \$2½ billion in 1964, rose less than half a billion dollars in 1965, staying within the guidelines set by the Federal Reserve. Corporations returned to our shores more earnings from foreign subsidiaries, and brought back funds deposited in European banks. This cost them some earnings in 1965; but it preserved the longrun prospects for growing and healthy markets at home and abroad.

For 1966, we have a reinforced program. It should bring new gains by moderating the corporate programs for direct investment which remained high in 1965.

The Council of Economic Advisers' report explains how our voluntary program works. It demonstrates that we are continuing to add to our investments and assets abroad, while holding their growth within bounds that preserve that soundness of the dollar. We can all look confidently forward to continued success of the President's strategy and to a growing world respect for the dollar.

#### Closing the Educational Gap

EXTENSION OF REMARKS

# HON. W. PAT JENNINGS

OF VINGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. JENNINGS. Mr. Speaker, Vice President Hubert Hubert Hubert Booke to the Southern Regional Conference on Education last December. It was a significant and far-reaching address—and I wish to bring the text to the attention of my colleagues.

Vice President Humphrey spoke on the need to improve educational opportunities and outlined the many educational advances that can be expected as the result of legislation we approved in the last session of Congress. His remarks undoubtedly made a great impact upon the delegates to the conference.

Under unanimous consent I insert the text of the Vice President's remarks in the RECORD, as follows:

REMARKS OF VICE PRESIDENT HUBERT HUM-PHREY AT THE SOUTHERN REGION CON-PERRINGE ON EDUCATION, RICHMOND, VA., DECEMBER 2, 1965.

Let me open with a prediction: This conference will be remembered in the history of southern education and of southern

There are two reasons.

s

0

re

d.

nt

ht

er

at

ta

y.

ad

8

m

to

First, the far-reaching legislation passed in the last session of Congress clearly marks 1965 as the threshold of a new era for all American education.

And second, the South itself is clearly in the opening phases of a new cycle of productive development—a new development which will in large measure be fostered and sustained by its educational resources.

The American people have always believed in education and have seen in it the hope of a new day. This has been particularly true of the South.

But while there has been great ambition for good education in the South, the economic realities have limited educational opportunity. This polymer must be an

portunity. This no longer must be so.
During the last 3 years the per capita income for the South has risen to almost \$2,000—20 percent below the national level, but a far higher figure than ever before for the South

The transition from an agricultural to an urban economy is rapidly changing the South, and the gap is closing between the region and the Nation.

The economic gap is closing. There must be, too, a closing of the educational gap.

The last Congress has been called the education Congress because of its many major new programs of Federal assistance to education. We have all been staggered by President Johnson's tremendous accomplishment in breaking logiams accumulated for 25 years and longer.

Taken together, these new laws will make for profound changes, not only in the educational world, but in the nature of our future economic and social life. New programs will offer tremendous stimulus to people and communities previously left behind.

Under these new circumstances you, as leaders in education, will occupy pivotal roles in your communities. Education's financial worries are not over—they never will be—but for the first time many of you will be able to "think big."

You will find that, in the councils of government, the educator will no longer be sitting below the salt. His chair will be moving closer to the head of the table.

The educator will cease to be regarded as the humble mendicant in the statehouse. Tomorrow the educator will be seen as the man who brings wealth into the community—and not just Federal money for aid to education. For education attracts and holds business and industry, and creates new resources.

The voice of education will carry new weight in your communities and in your States.

I am here today to congratulate you upon it. And if I were to offer one word of advice I would say this: Let no false modesty dissuade you from pressing your advantage.

The young people in your care are in some respects the lucklest generation in American history. Across the board, rich and poor, they will have opportunities for life preparation and self-development such as no previous generation ever enjoyed.

But if these young people are blessed with advantages, we should remember that in the years ahead they will also be confronted with challenges which will test every ounce of their new-found strength. For every Theseus that we raise up there will certainly be a Minotaur to slay.

Let us look at some of the challenges which face this new generation:

We are challenged first and foremost by the need to insure that history's mightiest instruments of destruction will never be used. We are challenged to pursue the cause of a line and endurence.

of a just and enduring peace.
We are challenged by our need to comprehend and to master the wunders of actence and technology. Of all the scientists who ever lived in all the history of mankind, 95 percent are now alive and working. We must channel scientific revolution toward the creation of a better life for ourselves and for our children.

We are challenged to lift the yoke of

poverty from almost one-fifth of our fellow American citizens \* \* \* to reverse that tragic equation which has too often decreed that poor shall beget poor and ignorance shall beget misery.

We are challenged to make our cities decent places in which to live and learn, to work and play. A vast sprawing motorized population—living impersonally with computerized institutions—must somehow again become a community.

People must know each other by name, respect each other and care for such other, as people, as neighbors. The alternatives is mechanized, dehumanized chaos.

We have not yet begun to scratch the surface of this problem of retaining essential humanity in a vest new cybernetic wonderland of efficiency.

And, finally, we are challenged to make good the promise of our Constitution—to insure that all Americans shall, as citizens, have equal opportunity to enjoy the blessings of our Republic.

Education will help us broaden our productivity, should give the rising generation the tools to achieve a better life and should free it from burdens which have oppressed its parents: burdens of social disability and poverty and of self-defeating prejudice.

poverty and of self-defeating prejudice.

To meet these great challenges of our time, the Congress has laid the foundations of magnificent new educational programs. Members of Congress from the Southern States have played a leading role in the struggle to enact this legislation. Under the formulas which Congress has promulgated, the Southern States will, as a group, gain most from this legislation.

The Elementary and Secondary Education Act will help approximately 5 million educationally deprived children from low-income families. It authorizes grants to school districts in approximately 95 percent of the Nation's counties.

As you know, this act includes several important programs. It provides ald to low income districts—that is, districts with a substantial number of families with incomes of less than \$2,000. Some \$775 million this first year is earmarked for this type of grant.

first year is earmarked for this type of grant.

Then there is an item of \$100 million for school libraries and textbooks.

Another program provides for grants for supplementary education. There is a program for regional education libraries, and there is a program for grants to strengthen State departments of education.

Taken together, we expect the programs in the Elementary and Secondary Education Act to bring \$1.3 billion to education throughout the Nation during the first year of its operation.

Roughly a half bilion dollars will be channeled into the elementary and secondary educational systems of the States represented at this conference.

Your States will benefit handsomely from this act. You will receive more than your proportionate income tax contributions.

This is as it should be. It is our national goal to achieve a general and even prosperity. And I think we should pay tribute here to legislators from high-income States who have consistently, over the last 25 years, worked to enact programs based on this kind of formula, even though they knew that it would cost their taxpayers more than the programs would bring into their States.

Now let us look at the sums which Congress has made available for higher education. The U.S. Government will make about a half-billion dollars in grants during fiscal year 1966—the present fiscal year—under the Higher Education Act, 1965.

Under this act, the South will receive a total of almost \$115 million out of a national total of \$604 million.

Other Pederal programs directly related to education will bring a total of almost \$1.2

billion to education during the present fiscal

And more than a third of that total will come to your States.

Given this new assistance—and this new momentum—how can your educational institutions better discharge their responsibilities?

I have some strong opinions on that subject. I think that the educational institu-tion must move back into the community. It must abandon some of its aspirations for isolation. It must be not a tower of ivory, but a tower of strength in the daily life of the people.

must go back to the early European ideas of the university as part of the city, and away from the English idea—so prevalent here in the 1800's-that the institution of higher learning must be isolated from

life by acres and acres of well-tended lawn.
You have a great deal to give to our cities,
and your cities have a great deal to give you.
There are many community problems
which would benefit more from research than from argument, and the university should be in the midst of all of them.

The learning of its faculty should always be at the service of the community. University expertise is urgently needed for the solution of dozens of complex problems— problems of transportation, of housing, of management, of law enforcement, of urban and area planning, of public welfare-yes, and of human relations. (The Higher Education Act, I might add, authorizes aid to

colleges and universities entering into com-munity service programs).

The college or university can become an integral, catalytic part of the growing part-nership for constructive action increasingly seen today in America among government, business, labor, finance.

And, in participating in community affairs, the faculty will broaden its viewpoint and

the faculty will broaden he viewpoint and its sense of responsibility.

We have learned a great deal from our agricultural colleges, which have been closely related to the work-a-day needs of rural America for many years. We now have a State Technical Services Act which points toward greater usefulness to all parts of the community.

President Johnson has called it the "sleeper" of the 89th Congress.

Under this act, Government will put into the hands of private enterprise the latest

fruits of research and development.

This new information will be made available to private business through 250 colleges and technical schools throughout the country.

This program will be administered by State and local officials close to the problems of their own areas.

As the President said, if we had passed this legislation 25 or 30 years ago, we might have prevented the economic problems of Appalachia today.

Here certainly is a creative opportunity for American education. This is the direction of the control of the control

tion in which we must continue to move.

We need infusion, too, of more and more talented professors and teachers into schools where they are most needed. And this year's education legislation provides assistance

education legislation provides assistance toward this end.

For those in our society who most need education are too often today those less likely to receive it.

Students whose home environment is drab and dulling are, more likely than not, in educational environments equally drab and duli-ing. What hope for them in a world de-manding excellence and Secondary Education Act provides grants for innovations in our

ool system for new and effective teaching techniques which can lift these childrenchallenge them—stimulate them, before it is too late in their lives to do so.

In addition, the adventure of learning itself should be more broadly shared. concept of clearly demarked school years with the gates tightly shut after the graduate receives his diploma and returns his rented robes—is long outmoded. It does not fit into a way of life in which so many people have so much leisure, and so much interest in learning.
It does not fit in an era when so much of

the subject matter of learning is also the subject matter of life. The relationship of the school to the individual must be a con-

tinuing one.

And this is true at the low end of the edu cational scale as well as the postgraduate end. The doors of the elementary schools, too, should always be open to everyone who can benefit by educational opportunity.

We are helping older people who want to

we are helping ofter people who want was achieve literacy and improve their job-skills. We are helping preschool youngsters from deprived homes to receive additional train-ing so they can start their school years on the same level as children from more prosperous homes.

Project Head Start, in fact, will go down as one of the most successful educational programs ever undertaken in this country. For experience shows that children coming from homes of poverty and illiteracy are often too far behind to catch up in life even before they enter school. Intensive preschool programs can at least give them a more equal

People who, for one reason or another, have dropped out of school are encouraged to come

back and resume their education.

And let me say that both President Johnson and I have very special feelings about programs of this kind, because both of us, as young men, found it necessary to drop

out of school, to later return.

So let us stop thinking of schooling as a product packaged in tidy little 3- or 4-year cellophane-wrapped packages. Education is experience and experience is life. The school that lives in isolation is doomed to sterility and irrelevance.

Finally, may I say this: In the past and present, the South has given to America, and to the world, men and women of leadership. We must see to it that all the people of the South have a chance to obtain education that will allow them to develop their potentials leadership.

There is a tremendous transition taking place in the South today. No other region of America has a greater opportunity.

The South has long led the Nation in a regional approach to graduate education. Is this not the time when a regional approach in all southern education might literally lift your States by their bootstraps?

We would welcome proposals or initiatives toward greater use of regional efforts in education, working with Federal programs.

We would welcome, in fact, any initiatives you might undertake for better education. The great new Federal education programs enacted by the Congress do not mean Federal education programs. eral control of education. In fact, each act and title was written with the objective of stimulating State and local responsibility in For this is where it must come education. locally and in the States.

Know the new laws. Then use them so that they best may fit the needs of your own schools, your own children.

Let us heed President Franklin Roosevelt who 32 years ago, in Savannah, Ga., quoted the words of John Stuart Mill:

"The unwise are those who bring nothing constructive to the process, and who greatly imperil the ruture of mankind, by leaving great questions to be fought out between ignorant change on one hand, and ignorant opposition to change, on the other.'

Today all of us have the chance to be constructive. We have the chance to make change a force for good and enlightenment.

Let us recognize that the true source of national power is our power of intellect of our wealth, of our wealth of ideas our resources, our resources of human skill and energy.

Let us accept the challenge of the time and prove ourselves to be among the wise people.

#### Revision in Our Tax Structure

EXTENSION OF REMARKS

# HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. UTT. Mr. Speaker, it is my firm conviction that revision in our tax structure is a must if we are to encourage the individual capital investment so necessary for providing jobs for our everincreasing working force.

The amount of new risk capital required to keep our economy healthy at any given time is obviously related to population-to the demographic facts of births, deaths, longevity, retirement, and other germane matters over a period of time. As I read the figures, it now requires over \$15,000 of new risk capital o bring one new little job into the world. An examination of the available data on babies growing up and wanting jobs. on automation's replacement of old jobs. with more costly new ones, and on in-flation's toll on the cost of maintaining and replacing wornout or obsolete ma-chinery, it would seem that we now need annually not only over \$40 billion of new risk capital to meet our new job needs, but also at least another \$40 billion of new capital each year to keep in good repair the tools of the jobs we already have.

This new capital can come directly or indirectly, from only one source—the invested savings of the individual citizen And high taxes and unwise taxes which impede incentives to thrift, savings and investment, pose a serious threat to economic growth and full employment.

On the other hand, I well realize the fiscal plight of a Federal Treasury faced with a budget deficit of \$8 billion and the inflationary consequences that might result at this time from intemperate tax reduction schemes that would merely shift our tax burdens from one group to another and thereby stifle economic growth and further choke off the reservoir from which all taxes must be paidthe excess margin of real productivity over consumption, which we call savings.

Nevertheless, there is one area of Federal tax reform which would go far toward encouraging equity investment in new and small businesses, creating new job opportunities and providing additional revenues to the Federal Govern-ment. This area exists in that portion of our Revenue Code which deals with taxation of so-called long-term capital gains. To begin with, this tax is a very poor revenue producer because of its voluntary nature and because of its unrealistic high rate.

It is my firm belief that this is an unwise, and an unfair tax. It is largely a levy on capital and not on income. It penalizes elderly owners of homes and farms who wish to sell and retire into smaller and less expensive quarters. It penalizes owners of investments who wish gradually to shift their holdings into more conservative securities as they gradually attain their less productive years. It prevents many constructive business transactions that would be in the public interest, espe-cially the ability of small and weaker enterprises to merge with stronger organizations rather than be forced to discontinue operations which provide our citizens with jobs. And last, but not least, it has sterilized vast pools of risk capital, substantial portions of which otherwise would find their way into risk investment in new and small business ventures and thereby afford vast new employment opportunities, new productive capacity, and new sources of tax revenues to the Treasury

It is for these reasons that I am introducing a resolution which provides that the alternate rate of tax on long-term capital gains be reduced from 25 percent to 121/2 percent.

It is my firm conviction that this bill is a revenue-producing measure.

If this tax rate were so changed, investment in our economic system would receive substantial encouragement, new jobs would be created and the Treasury would actually gain revenues as a result thereof. After all, no one has to sell his capital assets, but a great many would willingly do so if the tax rate were made more realistic.

I welcome the bipartisan support of my colleagues in bringing this bill to early committee consideration, separate and apart from other revenue measures. I am sure the evidence produced before them at the attendant hearings will con-vince them of the wisdom of enacting this legislation.

#### We Do What We Must

EXTENSION OF REMARKS

# HON. GEORGE W. GRIDER

đ

ıŧ

×

C

y

ni

11-

n-

h

al

ry

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. GRIDER. Mr. Speaker, the prevailing topic among most editorial writers and other commentators has been "Can this Nation afford both guns and butter?"

Last week Mr. Norman Brewer, news director of television station WMCT in Memphis, gave an incisive commentary on the President's state of the Union message, pointing out that we must give first priority to the conflict in south-

east Asia.

I certainly agree with that. If it can be done, I think it is most important that we continue with our programs to provide everyone in the country with adequate medical protection and to give all of our children a

good opportunity to acquire a first-class education.

Keeping in mind that the gross national product of this Nation is now three times what it was in the Korean conflict, it seems to me quite possible that this high goal can be achieved.

At this point in the RECORD, I include

transcript of Mr. Brewer's remarks:

WE DO WHAT WE MUST

(The Norman Brewer report, WMCT, Jan. 13, 1966)

President Johnson said last night the state of the Union is that it has "children to teach, sick to be cured, men to be freed, poor to be lifted up, cities to be built, and a world to be helped." The President said "we do The President said "we do all. Mr. Johnson spoke with eloquence, clarity, and determination on the war in Vietnam. He began by what we must" and he urged that we do It Vietnam. He began by saying that conflict must occupy the "center of our attention." He said we will star in Winter He said we will stay in Vietnam "as long as aggression commands us to battle."
To yield, the President said, would "undermine the independence of many lands and whet the appetite of the aggressor and abandon Asia to the domination of the Commu-nists." But with our guns and steel, Mr. Johnson made it clear that we seek only a just peace, In the meantime, our fighting men must have "every gun, every dollar, and every decision.

The great burden of an Asian war should be enough for this Congress. But Mr. Johnson put the crusher on. He asked the people's representatives to pursue with equal attention and vigor, the domestic programs with which he hopes to build the Great Society. He asked not for a mere continuation of all the myriad welfare programs begun last year. But an expansion of them and the opening of new Government responsibilities: From the rebuilding of "whole

city slums" to highway safety.

The President spoke glowingly of a deficit this year of "only \$1.8 billion." To hold it to that figure, he called for an increase in the automobile and telephone taxes reduced only 12 days ago and by some as yet vague method of "improving" the system by which Government withholds taxes from our paychecks. The possibility of further tax increases was not ruled out. This is, as Mr. Johnson said, the wealthiest Nation on earth. How long it can stay that way, Americans must wonder tonight.

Americans, already feeling the new pinch of the new social security-medicare tax, must wonder about the wisdom of accelerating domestic programs that traveled too fast for efficiency last year. They may not question that this Nation will "do what it must"—but they must question how much it can do.

The goals set by President Johnson last night—peace, health, and prosperity for all—are the goals of any humane, civilized society. The methods proposed by the President—the building of Rome in 1 day—is something for this Congress to pass on. And let the Congress remember that soon the people will have a chance to pass on this

#### James Dooley: Past President of the Central Labor Council of Hawaii

EXTENSION OF REMARKS

HON. SPARK M. MATSUNAGA OF PLAWATE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. MATSUNAGA. Mr. Speaker, the Central Labor Council of Hawaii during

the immediate past 5 years was guided by a dedicated and talented president in the person of James M. Dooley. Under his able leadership, the council proceeded with extreme effectiveness through the achievement of solidarity among the ranks of the AFL-CIO, never before known.

Mr. Dooley has now left the 50th State to accept the responsibility of the position of port agent for the Sailors Union of the Pacific in Portland, Oreg. His leadership and demonstrated concern for the public weal will be sorely missed in Hawaii. He takes with him Hawaii's heartfelt gratitude and best wishes for his future success and happiness in his new endeavor, as expressed in the resolution adopted by the Central Labor Council. I insert this resolution in the RECORD:

RESOLUTION OF CENTRAL LABOR COUNCIL OF HAWAII, AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS Whereas James M. Dooley has been presi-

dent of the central labor council for the past 5 years; and Whereas James M. Dooley has served with distinction and very often performed serv-

ices above and beyond the normal call of duty; and

Whereas the central labor council has flourished and grown with Brother Dooley at the helm; and

Whereas James M. Dooley's talents as a political statesman, diplomat, and prime mover have helped to achieved solidarity among the ranks of the AFL-CIO in Hawaii: Now, therefore, be it

Resolved, That the delegates assembled at this central labor council meeting do on behalf of themselves and the local unions, which they represent, commend James M. Dooley for his contribution to Hawaiian labor and offer him our sincerest appreciation and heartlest best wishes for success and happiness in his new assignment; and be it

Resolved, That a copy of this resolution be sent to President George Meany and Brothers Paul Hall and Morris Weisberger and to the on State Federal of Labor and the Portland Central Labor Council.

Unanimously adopted this 19th day of October 1965.

#### A Day To Celebrate

EXTENSION OF REMARKS

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. NELSEN. Mr. Speaker, Mr. Alexander Melnychenko, Jr., of Minneapolis, has written to call my attention to Ukrainian Independence Day which we celebrated January 22, and which the House has officially noted.

I want to join the courageous Ukrainian people and their relatives in this country in noting this historic Independ-ence Day, proclaimed so proudly in 1918. Even though Ukrainians found their newfound freedom and independence cut short by brutal aggression, those in this country are well aware that these human aspirations continue to be the goals of the united Ukrainian people.

Mr. Melnychenko has done an excellent job of indicating why this is the case, and I take the liberty of quoting him:

Ukraine is the largest non-Russian nation under Soviet domination behind the Iron Outsian. Its population of over 40 million ranks with that of England, France, or Italy. The territory exceeds in square miles that of France.

Economically, this rich territory has placed Ukraine second in the world in the mining of iron ore, third in pig iron smelting, fourth in coal mining and steel production, and at or near the top in agriculture, being particularly outstanding in livestock, sugarbeet, and grain production.

Historically, the centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. One of the first victims of Russian Communist aggression, Ukraine has proved to be the Achilles heel of the Soviet Union. The destruction of its national churches, the horrible manmade famine of 1932-33, the mass murder at Vinnitas in 1937-39, and the vast purges and deportations decreed by Mossiaw have falled to exterminate the spiritual and moral resources for national freedom in Ukraine.

The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and independent.

# Why I Oppose Vietnam Critics

EXTENSION OF REMARKS

# HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. DIGGS. Mr. Speaker, I ask consent to include in the Record the following article by Dr. John P. Roche:

A DISTINGUISHED PROFESSOR EXPLAINS; WHY I OPPOSE VIETNAM CRITICS

(By Dr. John P. Roche)

(Note.—Dr. John J. Roche is Morris Hillquit, professor of labor and social thought at Brandels University in Waltham, Mass, He was national chairman of Americans for Democratic Action from 1962 to 1965, and is the author of numerous works on American politics, the most recent being "Shadow and Substance, Essays on the Theory and Structure of Politics."

(The article expressing his views on the anti-Vietnam movement was written specially for the Detroit News.)

I have been actively involved in arguments over American foreign policy since the eve of World War II, but I confess that never in my memory has there been such an intense outpouring of irrational bitterness as we are seeing today.

Only the high point of "McCarthyism" could possibly match the tirades that are appearing on the subject of Vietnam, and not since I denounced the John Birch Society in print some 5 or 6 years ago have I received the kind of hate mail that has been coming in lately: "Drop dead you — baby-burner."

What is peculiar about the anti-Vietnam movement (or movements—there is no monolithic organization) is that its headquarters are found in what is often called the "intellectual" sector of American society, but that the atmosphere in which it operates is remi-

niscent not of intellectual argument and discourse but of the primitive religious camp meeting complete with hymns, chants, and apocalyptic visions.

And what passes for argument is, at least to case who has made a life's commitment to rational discourse, appailing beyond belief. Recently, for example, after I had presented my views in support of the administration's policy a young man leaped to his feet and impaled me with "Would Christ have carried

policy a young man leaped to his feet and impaled me with "Would Christ have carried a draft card?" The best I could do was say that one intelligent question deserved another and saked him, "Would Christ have carried a social security card?"

#### ANTIWAR ARGUMENTS EXAMINED

Since the opponents of our intervention in Vietnam have refused to carry the logical burden of setting out their premises in coherent fashion, let me try to examine what I take to be the different grounds on which an American can rationally come out against the Vietnam war.

Starting at the simplest level, an individual

Starting at the simplest level, an individual may oppose the war because he does not want to take any time out from his career for military service, because it would make his mother nervous if he were in the Army, or war because the new is insufficient.

even because the pay is insufficient.

These are quite rational stands, though hardly adequate as a foundation for national policymaking. Nor—it must be emphasized—do they supply much of a base for a radical critique of the "warfare state"—whatever the content of "radicalism" may be, it is certainly not built around the propestion "twent to survive".

osition "I want to survive."

Everyone has a constitutional right not to be a hero (I have exercised my privileges under this heading on occasion), but he has no right to dress up his human failings in a halo of higher morality.

By definition then, the "radical intellectual" must base his opposition to our involvement in Vietnam on principled rather than expediential grounds. And anyone claiming the status of an intellectual—radical or otherwise—is under the compelling obligation to formulate his views with logical consistency: he cannot leapfrog his premises anytime one of them begins to seem inadequate.

If he rejects violence, he must do so on the basis of generic commitments. If he says "I reject war because innocent people are killed," he is forbidden any favorite wars.

Now on what principled grounds can an intellectual denounce the war in Vietnam? It seems to me there are two principled bases of opposition.

The first is an absolute rejection of war as an instrument of international policy which should be accompanied by an equivalent rejection of violence in personal relations. This is, of course, the classical pacifist

This is, of course, the classical pacifist position nobly exemplified in our time by A. J. Musts and the American Friends Service Committee. The pacifist, whether religious r humanist. has made a total dedication to a world without violence, has adopted what Max Weber called an ethic of ultimate ends, and is quite prepared to "speak truth to power" whatever may be the personal consequences.

I am unable to accept the final demands of pacifism. Yet I am quite prepared to recognize and honor those who take this position. They are spokesmen for what is probably an impossible ideal, but I hope, in the interests of my descendants, that their ideal will triumph.

However, I must live with my limitations, and I am simply not capable of arguing that the Indians should passively submit to the Chinese, the Israelis to the Arabs, or the black Rhodesians to the whites (or for that matter the Negroes of Mississippi to the Eu Kiux Klan) in the name of this ultimate vision of nonviolence.

Thus, while I cannot accept his premise, I have no quarrel with the pacifist who objects to our intervention in Vietnam: He is,

in Thoreau's phrase, marching to a different drum and his dedication to his objective transcends the mundane criteria of international relations as we know them. In the Augustinian sense, he is in this work but not of it—his allegiance is to a city of God which the rest of us can only imagine as a misty, remote aptration. His witness demands our respect.

If one is not a pacifist, he may still find a moral basis for condemning American policy in Vietnam by arguing that—while violence per se is not necessarily evil—the goals of public policy are immoral and corrupt all the instruments. It is not that innocent women and children are dying, but that they are dying unnecessarily as a consequence of an evil policy.

An individual with this approach could logically support war in defense of India or Israel while opposing our activities in Vietnam. But this line of argument requires considerable support. One cannot simply say that he is prepared to use violence in attuation X but in situation Y on grounds of personal taste, because he likes Indians or Israelis. Any charge of immorality, in sum, has to be formulated on some consistent theoretical infrastructure.

#### THERE CAN BE ONLY ONE ANSWER

What basis is there for charging that we are engaged in an immoral war in Victnam? Pacifists excepted, there can only be one one answer: that the Communists are right and we are wrong, that we are engaged in an "unjust war." The techniques of warmaking are irrelevant—if we are wrong, it would be as immoral to fight with crossbows

as with jets and napalm.

Similarly, the fact that innocent women and children are dying is in itself irrelevant—
if we were right, as we presumably were in fighting Nazi Germany, the death of the innocent would be written off as an unfortunate hypothesis of precessory and just acts.

mate byproduct of necessary and just acts.

We must then turn to the question of the justice of the Communist cause in Vietnam since this and this alone can provide principled grounds to the nonpacifist opponent of U.S. policy. (There are a number of expediential grounds for opposing the war and taking an isolationist posture in Asia, but we are here concerned with the moral bases of opposition.)

Prof. Eugene Genovese, of Rutgers University, stated very frankly: "I do not fear or reject the impending Vietcong victory in Vietnam. I welcome it." From his vantage point as the prophet of the Marxist weltgeist, Genovese sees the confrontation in Vietnam as one between an historically progressive north and a reactionary neocolonialist south.

If one shares Professor Genovese's Marxist religious convictions, it is patent that the United States is the "buttress of reaction," that we are trying to derall the locomotive of history, and that we are fighting a rearguard action against the forces of "historical progress."

By definition a war against socialism must be immoral—Professor Genovese and those who agree with him have thus set forth a consistent case for opposing the war. Those of his persuasion and the integral paciets are, I submit, the only individuals who have established their standing as moral critics of American intervention.

#### PRACTICALITY RATHER THAN MORALITY

Plyti

0

Let us now turn to the other types of antiwar argument which can be broadly designated as expediential or pragmatic.

Here we have a broad spectrum ranging from new-fashioned isolationists on one extreme to the "American protection is more hazardous than Communist tyranny" position at the other. These objections to our actions run against their practicality or productivity rather than their morality.

An interesting development has been the conversion of a number of liberals, and even geopolitics, traditionally a reactionary entertainment.

The great expectation among these neo-Machiavellians is that, with the proper bribe, Ho Chi Minh will become a "Tito" and pre-sumably rush to contain Red China. The problem with this is that the Red Chinese have not been leaning on Ho: Tito, after all, did not become a "Tito" for the sheer novelty of it. But our geopolitical finagles: may de-vise some way of getting the Chinese Com-munista to put the arm on Ho (perhaps with a research grant from the CIA).

a research grant from the CIA).

A variation on the geopolitical theme suggests that we should turn the South Vietnamese over to Ho, make the Russians happy, the Red Chinese mad, and thus stimulate the Sino-Soviet schism. Somebody has, I think, suggested that we could improve this scenario by giving the South Vietnamese to the Russians to give to Ho.

I think this bush league Machiavellianism is childish nonsense: for one thing, it is

unwise to dabble in the heresies of other men's churches. Moreover, E. H. Carr's ob-

servation on a similar effort in geopolitical horse trading sticks in my mind as a warn-ing to our self-styled "realists."

"The negotiations," Carr remarked in 1939, which led up to the Munich Agreement of September 29, 1938, were the nearest approach in recent years to the settlement of a major international issue by a procedure of peaceful change." Unfortunately, the Nazis refused to stay bought and Carr had to do some rewriting for the next edition of this

The most persuasive argument for getting out of Vietnam rests on what might be called updated isolationism. Ironically, isolationism is in the 1960's a functional position; i.e., it is feasible for the United States to devote itself wholeheartedly to affluence in one country and let the rest of the world slide off into chaos

Weapons technology has ended our need for foreign bases: with ICBM's and naval powno longer have any military rationale for involvement outside of the Western Hemisphere. (The Soviet Union is in roughly the same position and obviously there are strong drives toward isolationism within the

Soviet leadership.)
The Tory shadow Minister of Defense, Enoch Powell, recently suggested to the Con-servative Party Conference that the British should liquidate their commitments cast of Suez-and watch development from the sidelines; a leftwing Laborite intellectual (with the casual racism which is so pervasive in British conversation) put it to me more bluntly: "Let the woggies fight it out."

#### SELFISHNESS IN FOREIGN POLICY

In this spirit-which is profoundly conservative in the psychological sense—an American can argue that the game in Asia is not worth the candle.

What difference does it make in the overall balance of world power whether South Vietnam is inside or outside the Communist sphere? Why lose American lives and waste American resources? Why generate internal tensions, risk a revival of "McCarthyism," chance a general war? Why get involved in a quarrel in a faraway country between pe ple of whom we know nothing? More broadly, what difference does it make to us if the Africaners butcher the Bantu, the Arabs overrun the Israelis, or the Chinese crush

Now that "Fortress America" is a militarily viable proposition (vulnerable only to a nuclear attack which a policy of disengage-ment from the world could hardly provoke), why not pull back behind the most and enjoy ourselves?

After all, who are we to impose our value system on other people; Sukarno may have known his customers better than we do when he observed that democratic government

some alleged radicals, to the dogmas of was not "in harmony with the Indonesian soul."

It is not my intention to caricature this ocition—although I obviously have no use or it, it has to be understood as the most flective rationale for disengaging, not merely from Asia but from Africa and even Europe,

There is a liberal version which emphasizes cultural relativism ("What right do we have to tell Asians how to run their affairs?") and a reactionary version which pushes racism ("Asians—or Africans—are incapable of building free societies"), but the net result is a united front of utilitarians in full agreement that national selfishness should be the foundation of American foreign pol-

And what strikes me about the current dabase on Vietnam is that most of the opponents of our intervention spout moral axioms like a geyser but in fact rest their position on precisely this new isolationism, this modern international application of what Karl Marx called the "pig philosophy." I have no objection to Sermons on the Mount, but I have no interest in hearing

one from Machiavelli.

As I am out of sympathy with the antiVietnam movement and only the pacifist critique has any attraction for me, I should briefly explicate the basis of my support for the defense of South Vietnam.

I dislike war intensely; 3 years of my life were excised as neatly as an appendix by World War II, and the last thing I would wish for anyone is a similar journey into limbo, if not Hell. But I am not prepared to turn 15 million South Vietnamese over to the Communist terror regime in Hanoi.

#### EFFECTIVE MILITARY CONTROL

Yet this is what unilateral disengage ment-no matter how much it is pretti up—amounts to. One demographic point should be made perfectly clear: 95 percent of the population of South Vietnam lives on roughly 20 percent of the land area. Thus the allegation that the Vietcong "controls" 80 percent of the countryside" has no representational significance. About 80 percent of Vietnam has no significant population (less than 20 per square kilometer) and it is these jungle plateaus which the Vietcong "control."

In other words, in effective military terms the United States and South Vietnamese forces "control" those sections of South Vietnam—the cities, the coastal plains— where the population concentration rivals that in Belgium.

I emphasize this because the casual news-paper reader might have the impression that most of the population of South Vietnam is already under Vietcong control so that our departure would have only a marginal im-

This demographic situation is also important in two other contexts: first, it makes portant in two other contexts: first, it makes the "enclave theory"—which I was one of the first to propose—quite feasible. We can hold the population centers indefinitely, en-tablish ground security (particularly in the delta), and let the Victoong and the NLF ex-ercise unlimited sovereignty over the bush. The enclave theory provides a sound basis for fighting a limited war.

Second, if one examines carefully where in the South there has been intense bombing, he discovers that the overwhelming percentage of strikes have been in areas of low population intensity. In Pleiku Province, for example, where the heavy bombers have been extremely active, the normal civilian population is about 5 per square kilometer; in Binh Duong, another prime target, the population is less than 100 per square kilo-meter and this population is concentrated in five towns which the bombers have avoided.

#### MINIMAL IMPACT ON THE PEOPLE

In short, the common notion that American aircraft are bombing and strafing the

Vietnamese equivalent of Dearborn, Mich. is completely inaccurate. Indeed, there has not been a single bomber strike, or strategic air-to-ground strike by fighter aircraft (i.e., a strike which is not part of a ranging battle) in any administrative subdivision of South Vietnam with a populaton concentration of more than 190 per square kilometer.

The United States has made every effort to operate with minimal impact on the Vietnamese people—and the 700,000 to 800,000 refugees from the Vietneng who are thronging camps in the South obviously voted with their feet for the Salgon Government.

The nub of the matter is that the Hanol regime is a brutal, ruthless dictatorship. (Ho and Giap disposed of their version of Students for a Democratic Society in 1946-47—
"unreliable elements," "Trotskyties," and hemi-demi-semi-Marxists, who had fought for independence against the French were summarily executed.

I recently met a Vietnamese doctor who was, in 1945-46, a leader of the Viet Minh in the South, was deemed a "Trotskyite" Giap, invited to an underground meeting in Giap, invited to an unergivent meeting in Hanol, and betrayed to the French. Fortu-nately, the French officer assigned to execute him turned out to be a former classmate at the Ecole Polytechnique who permitted him to escape.

The Hanoi regime has operated a massive terror in the North-murdering perhaps 200,000 alleged "kulaks" in the course of collectivizing agriculture—and has sought to extend its terrorist hegemony to the South, where about 30,000 South Victnamese officials have been murdered since 1960. Hanoi's aim, clearly expressed, is the "liberation" and "unification" of the South and only American power has stood in the way.

I am glad that we have rejected the seifish counsels of isolationism and intervened to defend the South. Rightly or wrongly, I beleive that the American people have an obligation to other human beings, that our power in the world should be used within the limits of prudence to forward the ideals that we cherish.

This does not mean that we impose democratic institutions on the South Vietnamese, but it does involve our making it possible for the South Vietnamese to continue the search for alternatives rather than being assimilated into a frozen dictatorship.

Unfortunately, we rarely have a nice clean choice in this world between good and evil and the South Vietnamese Government and the South Vietnamese Government hardly inspires the enthusiasm generated by the late Spanish Republic. Yet difference of degree are crucial, nobody can argue that South Vietnam is a dictatorship (its key problem is weakness) and the possibilities of future growth in freedom de exist. It is perhaps unreasonable to ask Ameri-

cans to fight and possibly die for such a tenuous objective. As Norman Thomas pointed out in 1940, it was absurd to ask Americans to die for a crew of Polish fascists (he has updated the same speech for current use). But in 1940 (as in 1966) the real was not the relative immorality of the Poles (or the Salgon regime) but the character of the aggressor.

After agreeing with Norman Thomas marching around in antiwar demonstrations in 1940-41—I came later to realize that in opposing American intervention against Hitler, I had unknowingly countersigned the death warrants of perhaps 30 million people.

I resolved that never again would I sup-port—to recall E. H. Carr's phrase—a "settle-ment of a major international issue by a procedure of peaceful change" which in-volved turning human beings over to a dictatorship.

This is perhaps a hopelessly naive position for a professor of politics to endorse, but it has the virtue of simplicity in a world where complex explanations are generally an excuse for inaction or for escaping from the stark-

When all is said and done, the fact is that Ho Chi Minh would put me against a wall and shoot me—a sound action from his ideological viewpoint. He would also shoot most of the intellectual leaders of the antiwar movement-indeed he already has shot any North Vietnamese intellectual who wed signs of independent thought.

At the risk of seeming anti-intellectual, I long ago decided never to give an inch to anyone who would shoot me or those who share my ideals. Those intellectuals who enjoy the luxury of living in a society where dissent is a magazine and not a capital offense, seem to me to have lost sight of this vital human imperative.

## The Menace of Drunken Drivers on Our Highways

EXTENSION OF REMARKS

## HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. MICHEL. Mr. Speaker, last December there was a tragic accident caused by a drunken driver on an interstate highway which resulted in the death of the wife and youngest daughter of the Stark County superintendent of schools. Stan Perrin has been a longtime personal friend of mine, a very fine Christian gentleman, an outstanding citizen and pillar of his community. He raises the question as to whether Federal legislation is in order.

The matter of drunken drivers on our streets and highways is certainly a matter of concern in the area of highway safety, which the President in his state of the Union message says should be dealt with in this session of the Congress. I would ask unanimous consent, Mr. Speaker, that the full text of Mr. Perrin's letter be printed at this point in the RECORD and commend its reading to my colleagues, with the hope that it might put some wheels in motion to remedy this unconscionable carnage on our high-

OFFICE OF COUNTY SUPERINTENDENT OF SCHOOLS, STARK COUNTY, ILL. Toulon, Ill., January 17, 1966.

Hon. ROBERT H. MICHEL,

Member of Congress, House of Represent-atives Office Building, Washington, D.C. DEAR BOB: As you no doubt know by now that a drunken driver killed two of my loved ones, my wife, Gertrude and my youngest daughter, Judy, on December 18, 1965, in Missouri. We were driving to California to spend Christmas with our folks out there. We were traveling on Interstate 44 between Springfield and Mount Vernon, Mo. The driver, who was drunk, was driving down the direction on a four-lane highway.

My daughter cried out, "Dad, here comes a car." For a moment I was so startled when I heard this as I was in the passing when I heard this as I was in the passing lane and was watching the traffic on my right and naturally was not expecting any traffic coming toward us. By instinct I pulled the car to the left to try to avoid him, as I could not turn to the right because we were passing cars which were in the right lane. If I had had a little more time I could have missed him, but as it happened he hit my right fender in front and tore through the entire right side of the car killing my loved ones instantly. They never had a chance. When I finally stopped we were down in the median and by some chance the cur did not upset. I was dased for a couple of minutes and finally got out of the car to assess the damage. I went around on the other side and there I found my wife and daughter laid out. It was a horrible pic-ture that will remain in my mind forever. I hope you never have to experience such a

Here is a case of two fine talented, Christian people killed by an irresponsible known alcoholic who had had several other wrecks previously. This is no different than letting a criminal run at large with a gun shooting at people. Judy was to graduate from Brad-ley University on January 30, 1966, and had a posttion waiting for her in the Cak Park, Ill., schools beginning February 1.

Many people in this area and elsewhere, Many people in this area and eisewhere, who know us, are certainly up in arms over this and have asked ms to write to you seeking your help in getting some Federal legislation to protect others from drunken drivers. The U.S. Constitution guarantees each individual the right of life, liberty, and the pursuit of happiness. Gertrude and Judy were deprived of this by a drunk. It seems that the Presideent, Congress, and the Supreme Court are so obsessed with spon-soring civil rights. They should be equally obsessed in trying to put a stop to drinking and driving, which is just as much a part of civil rights as the Negro situation. There is a Federal law against kidnaping punishable by death. It is much more serious for a drunken driver to kill innocent persons as it is to kidnap someone.

Therefore, I strongly urge you to do every-thing in your power to enact a Federal law that will be tough that it will deter this carnage on our highways. More than one-half of the highway fatalities are due to drunken drivers.

I would like to see a law that automatically carried a penalty of life imprisonment of a drunken driver who killed a person on the highway and 10 years imprisonment of an individual who is caught drinking and driving. Also included in such legislation should be provision for requiring a test of an indi-vidual who is suspected of drinking and a further provision similar to the Dram Act in Illinois that will hold tavern operators responsible for selling liquor to individuals after they have had too much and then go out to drive on the highway.

Probably the liquor interests will fight this kind of legislation, but something drastic must be done.

It is ironical that all of my life I have been against drinking and then have two of my family killed by a drunk.

If you would sponsor such legislation and could get it enacted into law you would gain the esteem and admiration of many people in this area as well as in other parts of the country. My relatives and their friends in California are writing to officials out there to back some legislation relative to implied consent for testing drivers suspected of drinking. I understand Gov. Pat Brown is against this. That figures

I plan to do everything in my power to get protection for others against drunken drivers, so they will not cause others to suffer the heartaches I am experiencing due to such individuals. I plan to write some open letters to various newspapers using some of the ideas expressed to you.

Please do everything you can to help me and others, Bos. Your efforts will be gratefully appreciated.

Sincerely yours,

STAN PERRIN.

P.S.: If you have the opportunity, please show this letter to Senstons Dinksi Douglas, as well any others in the House. Thanks.

STAN.

## Scrimping at Veterans' Hospitals Strains Ties With Medical Schools

EXTENSION OF REMARKS OF

## HON. HORACE R. KORNEGAY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. KORNEGAY. Mr. Speaker, during the 1st session of the 89th Congress, on October 19, 1965, I introduced a bill, H.R. 11668, which would provide for closer cooperation between the medical training schools of this country and the Veterans' Administration.

Earlier this month, the National Ob-server, one of the Nation's foremost newspapers published an article which points up the problem which H.R. 11668 intends to correct. The author, Walter A. Damtoft, who, I might parenthetically point out, is another North Carolinian who is distinguishing himself in the field of journalism, has very cogently de-scribed the "fraying partnership" be-tween the Veterans' Administration and our Nation's teaching hospitals.

This news article eloquently supports the argument for immediate attention to a very serious problem, the deterioration of relationships between the VA and the medical schools which are affiliated with the veterans hospital program.

I would like to have Mr. Damtoft's story printed in the Appendix of the RECORD so that other Members of the House may have the opportunity to become more familiar with the problem. The article follows:

A FRAYING PARTNERSHIP: SCRIMPING AT VET-ERANS' HOSPITALS STRAINS TIES WITH MEDI-CAL SCHOOLS

#### (By Walter A. Damtoft)

For several years physicians attributed the severe chest pains suffered by a middle-aged World War II veteran to psychosomatic reaction to an earlier heart attack. Whether the pain was real or imagined, the veteran was unable to work. Finally he was examined at the Veterans' Administration Hospital in Durham, N.C., a stark, red-brick structure a long block from the Gothic buildings of the Duke University Medical Center.

VA and Duke Hospital physicians made intensive tests and examinations, including cineangiographs, or movie X-rays, of coronary blood vessels. The patient was found to have real cause for pain: A heart muscle wasn't getting adequate blood. The veteran now awaits an operation to sew blood vessels from his chest wall to the heart muscle to supplement its blood supply.

The diagnosis and the heart operation that likely will enable this veteran to return to work are among the medical advantages of a work are smooth the medical advantages of strikingly successful affiliation of many medical schools with VA hospitals. But these partnerships, fashioned in desperation at the end of World War II, are beginning to fray. As is the case in so many marriages, the basic problem is money.

#### EQUIPMENT GROWS OBSOLETE

a h

fi

to

In surveys conducted by both the VA and the Association of American Medical Colleges (AAMC), many medical-school deans have complained that VA hospitals are becoming understaffed and that much of their equip-ment, particularly X-ray devices, is becoming Some deans even speak reluctantly of terminating their affiliations unless the Government sees to it that VA hospitals are operated at a level comparable to medical school hospitals.

"The end of the Veterans' Administrationmedical school relationship is preordained; if more Federal money is not forthcoming, says Dr. S. Richardson Hill, dean of the Medical College of Alabama at Birmingham.

"We would be highly reluctant to give up the advantages" of the partnership, say Dean William G. Anlyan of the Duke Medical School in prefacing comment that termination of the school's affiliation with the Durham (N.C.) VA Hospital may have to be considered.

#### A DRAMATIC GESTURE?

The dean of a medical school in the Chicago area, who insists on anonymity, is sharply critical of the VA system of allocating funds on the beals of average daily patient count in a hospital. "They just don't realize that that is not the criteria of good care these days," says the dean. "Good care today means get them in fast, give them excellent care, and get them up and out in a far shorter stay." The dean adds it would not surprise him if one of the Chicago medical colleges dropped out of the program in a dramatic gesture to point up the problem.

Dean Robert Glazer of the Stanford Medical School at Palo Alto, Calif., typifies many deans in speaking well of the rapport that has existed between his school and its affilated VA hospital. The two, he says, "are facing together the problem of inadequate Government funds." But Stanford, he adds, woud have "no choice but to change this relationship" if the VA hospital is unable to maintain "what we consider adequate training facilities."

Deans have come to Washington to ask Congress for more money. But the problem, some of them feel, is not lack of interest by Congress but in official Washington's preoccupation with holding down domestic Government costs in the face of rising war bills from South Vietnam.

### UNDER PRESIDENTIAL PRESSURE

The Bureau of the Budget, says one medical educator, is under "fairly obvious pressures" by the President to hold the line on VA medical costs.

d

at

n

10

n.

ve

m

at

to

di-

he

nic

nd

ing

ip-

tly

the

The result, says this educator, is that VA hospitals are having "to shift money for running elevators into dislysis machines and that is not the way to run a hospital." Frustrated in his quests in Washington for mure money, this educator is thinking of using the mounting number of veteran casualties from South Vletnam as the basis for a new appeal. The VA hospital would be emphasized as a defense resource, a distinction now muddled, since only about 20 percent of the 107,002 patients now in VA hospitals are there for treatment of disabilities connected with military service. The rest are veterans who say they cannot afford private medical care.

Today, however, a compelling argument can be made that the wounded veteran returning from Vletnam is entitled to the best of care. Such an argument might well be harder for the administration to ignore than the contention that the quality of VA medical care is slipping.

#### JUST "GOOD SERGEANTS"

Top VA officials do not concede that money is a major problem. This may be sincere conviction but, then, they may also be acting as good sergeants in a command dedicated holding the line on VA medical costs now running at about \$1,192 million a year.

Medical school deans have a double reason for insisting that VA hospitals be topflight. They insist, first, that the veteran is entitled to the best. But they also insist that VA hospitals and medical school hospitals be substantially equal in staff and facilities so that medical students or residents have equal opportunity to advance their education, regardless of whether assigned to a VA or a school hospital.

Dean Anlyan, of Duke, one of the educators most concerned with what he regards as deterioration in the quality of cars in VA hospitals, says that "as medicine has become more sophisticated and hospital care has become more expensive, the VA has not kept up with the ability to give the VA patient the same level of care as given in our (Duke) hospital.

#### HE IS GROWING RELUCTANT

Leaning forward in his chair and clasping his hands together, Dr. Anlyan explains that Duke supervises all medical staffing at the VA hospital with which it is affiliated. He is becoming rejuctant to sak bright young doctors to serve residencies at the VA hospital because, he says, lack of Government funds is causing curtailment of staff and use of some obsolete equipment at the VA hospitals.

Dr. Barnes Woodhall—Duke's provost in charge of medical affairs, a former dean of tts medical school and chairman of a liaison committee between the VA and medical schools—describes what he and Dr. Anlyan regard as some of the inadequacies of the Durham VA hospital. The hospital should have four radiologists but has funds for only two. It received \$33,000 in the past 5 years to modernize X-ray equipment; in the same period Duke ordered new equipment worth

In Birmingham, Dean Hill says the care of veterans at the VA hospital would be substandard and its residency program subject to serious doubt if the University of Alabama were not subsidizing it with medical services valued at more than \$600,000 annually.

#### FRESH FROM MILITARY DUTY

VA-medical school partnership was established when the VA urgently needed hundreds of young physicians to help care for the influx of World War II veterans. But at that time the VA hospitals had a reputation as second-rate medical institutions. Most young doctors, many of them fresh from military duty themselves, preferred to round out their medical education as residents in hospitals where they could learn their specialties under medical teachers of stature.

By affiliating VA hospitals with medical schools, the services of leading medical professors became available to VA patients. Residencies in VA hospitals then became more attractive to young doctors. The quid proquo for the medical schools was more teaching hospitals and thus a greater variety of medical cases for the students to study.

For 19 years, veterans, school deans, and VA administrators have been all but unanimous in their enthusiasm for the plan. The cooperative venture currently involves 69 general VA hospitals and 18 psychiatric hospitals in an association with 76 of the 85 U.S. medical schools. More than 16,000 medical students now receive at least a part of each year's medical training at a VA hospital.

#### PATIENTS FROM REMITTE AREAS

Ment new VA hospitals are being constructed close to medical schools. Hospitals located in medically remote spots, often as the result of political pressure, frequently refer their difficult cases to the nearest VA hospital with a medical-school affiliation. And that, say Dr. Anlyan and Dr. Woodhall in North Carolins, is a major factor in what they regard as the growing inadequacy of Federal funding of VA hospitals. Dr. Anylan contends that VA hospital

Dr. Anyian contends that VA heepital budgets are based on per day patient-cost formulas that, while possibly adequate for the care of the more routine cases at VA hospitals not affiliated with a medical school are now far too low to pay for the intensive patient care that Duke Insists must be maintained in the VA hospital to keep it comparable with the Duke Hospital.

The per-day cost of care of a patient at Duke Hospital now runs around \$40; at he

Durham VA hospital it is \$31.27. Duke has a resident physician for every two beds, the VA hospital one for every four. Duke has one staff physician for every 4 beds, the VA one to every 17. Duke has three hospital personnel, excluding physicians, per patients; the VA has one.

Dr. Anlyan argues that though the per-day cost at Duke is higher, the per illness cost is less because the intensive care enables the hospital to discharge a patient after a stay that is usually only a half or a third as long as a comparable veteran patient would spend in the VA hospital.

Perhaps because this is the Federal budgetmaking season, the VA's defense of its funding of hospitals is cautious and a little ambivalent. Dr. Marc J. Musser, the VA's deputy chief medical director defends the per patient per day system of allocating funds as a method that permits each hospital's budget to reflect local salary scales. He says that, by and large, Congress has given the VA what it wanted to finance medical care of veterans.

But in disputing Dr. Anlyan's contention that VA college-affiliated hospitals are being starved for funds. Dr. Musser manages to suggest that the VA could use more money. The VA is "keenly aware," he says, that hospitals like the Durham VA facility have special cost problems because they serve as referral hospitals for other VA hospitals and tend to get the most complicated medical cases. Says Dr. Musser: The VA is trying "very desperately" to equip and fund these hospitals to carry out this special function.

Establishment of the VA-medical school partnership in 1946 went a long way toward ending the medical isolation of the VA hospital. The current ferment, if it evolves according to the hopes of the medical-school deans, may make these hospitals full-fledged members of the U.S. medical community.

## Humane Slaughter

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. MULTER. Mr. Speaker, every once in awhile well-meaning people not acquainted with the facts subscribe to an attack upon the method of slaughtering animals in the manner required by the Jewish faith. This matter has in the past, been a subject of discussion on the floor of this House.

Everyone who is familiar with the subject knows that shechita is a humane method of slaughter, but in view of the campaign presently underway in New York, I commend to the attention of our colleagues the following article from the Congress Bi-Weekly of January 10, 1966:

#### THE MEAT YOU EAT

We are happy to learn that Brigitte Bardot cannot bear the fact "that the ment you eat is seared with pain," as a recent anguished ad in the New York Times proclaimed. We applaud Mademoiselle Bardot's humanitarian instincts in assuming the honorary chairmanship of the Friends of Animais and pay our respects as well to the other luminaries who signed and we presume helped pay for the ad.

We have distinct reservations, however, about their judgment. Any intelligent reading of the ad should have made them war about its thrust—an effort to undermine shechita (Jewish ritual slaughter) in the

public eye. Without analyzing specifically the hints, innuendoes, half-truths that comprise the ad, it suffices to observe that its aim is to draw a distinction for the consumer between the humane and kosher, a distinction which the U.S. Congress refused summarily to draw when it enacted its humane slaughter bill and specifically stated that shechita is a humane method of slaughter, perhaps the most humane method in practice today. The ad seeks members for the FOA and,

naturally, funds for advancing in New York and Hausbeck bill which "will end the cries of pain and terror for all animals." We are equally concerned to end this horrifying din but we subscribe to a humane slaughter measure which is supported by every longstanding and respected organization con-cerned with the welfare of animals, such as the New York Humane Association and the ASPCA, and which does not disingenuously

impute evil to shechita.

is, incidentally, a commentary on the ad's probity that it seeks to imply that the Hausbeck bill is opposed only by Orthodox rabbis. The fact is that it is opposed by all six major Jewish rabbinical and congre tional organisations, Reform, Conservative, and Orthodox. It is true and unfortunate that a small but vocal group of Orthodox rabbis oppose all legislation on the subject, fearing that any legislation may subse-quently outlaw shechita—a fear that is un-derstandable if unfounded.

We suggest to Mademoiselle Bardot and the other stars of stage, screen, and pulpit that they would do well to give the same attention to the ads they sign as they do to the scripts they recite for public edification.

## Bypassing the Courts

EXTENSION OF REMARKS

## HON. PAUL H. TODD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. TODD. Mr. Speaker, I commend the Wall Street Journal on its editorial of January 24, entitled "Bypassing the

Americans enjoy the privilege of dissent through lon-honored, legal heri-

To use service in the Armed Forces as punishment is to demean the worth of the soldier and the meaning of his contribution to his country.

To press a young man into the service as punishment for his political views is to violate all democracy means to us.

To mete out justice without the benefit of the courts is to fly in the face of the American Constitution inasmuch as it insures certain rights of individuals.

BYPASSING THE COURTS

When the Justice Department finds it necssary to assert that the Selective Service Act cannot be used to stifle any "constitutionally protected expression of views," such as student protests against U.S. policy on Vietnam, the public can hardly feel overwhelming confidence in the way the draft law is being administered.

The Government's position is stated by Assistant Attorney General Vinson in a letter to Senator Harr. The Michigan Democrat had questioned the reclassification to 1-A of soms University of Michigan students who had staged a sit-in at the Ann Arbor, Mich., draft board offices to protest Vietnam policy.

The students were found guilty of trespass, under a local ordinance, and were fined. Selective Service Director Hershey then declared that an existing Executive order permits the Selective Service System to recla ify anybody "found to be delinquent" under the act. He ruled that the student demonstrators were delinquent because they interfered with the local draft board's operations, such interference being a violation of the

The Justice Department, on the other hand, states that no such Executive order "Where opinion is expressed, if there is no transgression of law, then no sanc-tions can be imposed," the Department's letter continued. "If there is a transgression, then the sanctions which attach to it" in this case, punishment for trespass—"are all that should be applied." Although Draft Director Hershey says he

agrees that the draft law should not be used to punish people for their opinions, he has not yet retreated from his position that the students broke the draft law with their sitin and thus were punishable. And Michigan Selective Service officials have made it clear they won't move without fresh orders from headquarters.

Whatever the exact legal rules in this case, equity certainly demands that anyone accused of breaking a law get a fair trial. If administrators acquire the right to bypass the courts and assess arbitrary punishment, then the safety not only of draft-age youth

but of all of us will be the less.

## Illinois Resolution Adopted at National Convention of American Legion

EXTENSION OF REMARKS OF

## HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966 Mr. DERWINSKI. Mr. Speaker, I am pleased to direct the attention of the Members to Resolution 222, adopted by the 1965 convention of the American Legion, as proposed by the Illinois Department. I also wish to point out that the immediate past commander of Argo-Summit Post No. 735, in my district, is Mr. Anzelm A. Czarnowski, who performed a great public service as an undercover agent of the FBI:

RESOLUTION 222 (ILLINOIS)

Resolution commending persons who combat communistic and subversive activities by undertaking dangerous missions necessary to the security of the Nation

Whereas in defense of our Nation many are called upon to undertake dangerous mis sions into the ranks and country of the enemy by infiltration or by parachute drop, to seek out information valuable to the military or to disrupt the internal affairs of the enemy country. This type of service is to a great extent considered glamorous or ro-mantic, and volunteers are fairly masy to ob-tain, and the exploits of these courageous individuals have been well publicized all to their glory, and nothing herein is to detract from these great exploits.

Whereas there is another important mission, necessary to the security of the Nation, that of infiltration into communistic and other subversive groups on the home front to obtain information as to the extent of enemy action actually within the country itself, which has the aim of overthrowing the U.S. Government; and

Whereas many courageous civilians have been called upon to assist the law-enforcement agencies, particularly the FBI and the several committees of the U.S. Congress to perform this nonglamorous trying and drudgery work of actual infiltration and, in many cases, becoming members of communistic and subversive groups and the reports, information and testimony supplied by these courageous civilians have been the basis of important legislation, as well as exposure of the enemy within and the dangerous conditions present also which alerted many other patriotic groups to combat communistic and subversive activities; and

Whereas when the identity of these courageous civilians became known at the time they publicly appeared to testify as to their findings, including the identity of individuals associated with Communist and subver-

sive causes: and

Attest:

Whereas these courageous civilians were denounced by the Red press and others who joined in the chorus and referred to these courageous civilians as stool pigeons, stooges, and other derogatory terms, all with the aim of deprecating this valuable work so important to the internal security of the Nation: Now, therefore be it

Resolved, by the American Legion in national convention assembled in Portland, Oreg., August 24–26, 1965, That it does hereby commend these courageous civilians for their dangerous and valuable work in the

service of their country.

JOSEPH C. MURPHY, Department Commander. CHESTER F. NEWBY, Department Adjutant.

## Ukrainian Independence Day

SPEECH

OF

## HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 25, 1966

Mr. BOLAND. Mr. Speaker, this year when we pause to pay tribute to the courage of a brave and proud people on the 48th anniversary of independence on the Ukraine, we do so once again in the face of tragedy and cynicism. For the Ukrainians remain enchained by the bonds of an alien power, the Communist empire of the Soviet Union.

The Ukrainians have remained more or less under the heel of Russian tyranny ever since the 17th century, and the independence day which we are now cele-brating marks the beginning of a mere 2 years of freedom, a brief flicker of the light of liberty amid centuries of darkness. The Ukrainians fought bravely to preserve the liberty they had achieved on the first day of November 48 years ago. It was a glorious day, but already the young Republic was surrounded by powerful enemies—the imperial dynasties of Austria and Germany and the arrogant young Communist state in

With Germany finally out of the war, the newly formed Red army moved quickly into the eastern sector of the country in early 1920. Before long the entire country had been overrun and the freedom of the Ukrainians had been brutally smashed once again.

Behind the Red army came the Communist commissars who stood ready to crush the spirit of liberty along with the political freedom of the Ukrainian people. But where the brutal might of the Red army was able to succeed, the assimilating process of the Communist commissars has failed, and failed miserably. Despite their desperate plight, the Ukrainians have not allowed the Communists to bend their unbreakable spirit. Amidst the ashes of defeat, the spirit of liberty in the Ukrainian people burns brightly.

That, I submit, is why this anniversary of Ukrainian independence is so terribly important to freedom-loving people everywhere. For the spirit of the Ukrainians, their refusal to submit to everywhere. the harshest possible attempts at acculturation into a totalitarian Communist society, stands as a shining example to us all. Western visitors have reported that a brief trip to the Ukraine brings this point home even to the most casual observer. After the dreary, dark, and sullen atmosphere of the typical Communist country that pervades much of the Soviet Union itself, it is a refreshing pleasure to simply observe the cheerful and independent spirit of the Ukrainians, not to mention the rugged beauty of their homeland.

The present fate of our Ukrainian friends represents one of the great tragedies of modern man, the totalitarian enslavement that seems peculiarly a part of the darker side of the 20th century. On the other hand, their undying courage and independent spirit stand as a monument to the strength of man in the face of the cruelest odds.

This 48th anniversary of Ukrainian independence must necessarily be a solemn occasion. Nevertheless, in the faith and courage of the Ukrainian people there is always a good deal of cause for rejoicing.

SPEECH

## HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. BUCHANAN. Mr. Speaker, I am most pleased to participate in this commemoration of Ukrainian Independence Day by the House.

This date, January 22, is as significant to the people of the Ukraine as our own Independence Day, July 4, is to us. In addition, it holds great significance for this and every other free nation because it serves to remind us that there are hundreds of millions of people who live under the heavy hand of Communist imperialism.

The United States must never forget the plight of the enslaved citizens of the Ukraine, of the captive nations of Eastern Europe and of every other nation in the world which suffers today under the yoke of communism. This is why we are fighting today in Vietnam—to prevent the people of that embattled country from slipping into the waiting hands of tyranny.

This day is also an excellent occasion upon which to declare our support, once again, for the creation of a Special Committee on the Captive Nations in the House of Representatives—at a time when there are more than two dozen Communist-dominated nations in the world, when the peoples of these countries have no real voice in their government, nor freedom nor self-determination, and when every fighter for freedom looks for a sign from this cradle of liberty that he is not alone in his fight and can depend upon the United States for continued support and encouragement.

# The Small Business Administration Loan Fund

EXTENSION OF REMARKS

## HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. TENZER. Mr. Speaker, I have today introduced legislation to authorize issuance and sale of participation interests based on certain pools of loans held by the Small Business Administration, and for other purposes. Under the bill, proceeds from the sale of such participation certificates would be credited to the Small Business Administration's revolving loan fund.

On July 23, 1965, the Honorable Eugene Foley, then Administrator of the SBA, addressed a congressional forum on the Small Business Administration which I sponsored in the Fifth District of New York. The forum, held at the Freeport High School in Freeport, N.Y., was attended by more than 250 businessmen to learn more about the programs and services of the agency.

As a result of the forum, many businessmen on the south shore of Long Island applied for small business loans. While a large number of the loans were approved and the recipients are pleased with the services and programs offered, other applicants later in the year were told that a moratorium had been placed on all small business loans as a result of the hurricane disaster in New Orleans.

The proposed legislation would increase the efficiency and turnover of the revolving fund; reduce the need for additional congressional appropriations to the revolving fund as the demand for loans increase; and the increased availability of funds would prevent future moratoriums on the individual loan program as a result of disasters such as Hurricane Betsy.

This legislation was introduced in the Senate by Senator Proxmirs and hearings were conducted by the Senate Banking and Currency Committee last October, just prior to adjournment. Representative Wright Patman, the distinguished chairman of the House Banking and Currency Committee introduced the bill in the House.

Ninety-five percent of all businesses in the United States is small business and we should make every effort to strengthen the Small Business Administration programs and loan fund. In recent years the number of applicants for small business loans has more than doubled and Congress has appropriated additional amounts to the Small Business Administration revolving fund.

Last year the hurricane damage to small business was so great that a temporary freeze on all individual loans was announced. I believe the Congress should pass legislation to strengthen the existing programs and if necessary separate the individual loans fund from the disaster fund. By authorizing Small Business Administration to sell participating interests in such loans on the private market, we will strengthen the resources for small business loans.

This legislation does not require additional appropriations—rather it would reduce the necessity for continuous additions to the revolving fund.

### Gen. Courtney Hicks Hodges

EXTENSION OF REMARKS

## HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. GONZALEZ. Mr. Speaker, on January 16, 1966, at the age of 79, one of our Nation's most famous generals died in San Antonio, Tex.

Gen. Courtney Hodges was one of the heroes to defeat Nazi Germany in World War II. Under his command the famous 1st U.S. Army was the first to reach Paris and to enter Germany. It was elements of his army that crossed the bridge at Remagen. The 1st Army also captured Aachen, Germany, participated in the bloody battle of Huertgen Forest in November 1944, and after 2 weeks of bitter fighting broke through in the Battle of the Bulge.

With his Army he crossed the Rhine at Cologne on March 7, 1945. On April 15, 1945, he was promoted to a four star

General Hodges was born January 5, 1887 at Perry, Ga., the son of a newspaper publisher. After entering West Point at 17, Hodges dropped out because of difficulty with geometry. He promptly enlisted as a private in the 17th infantry at Fort McPherson. Three years later in 1909, he won a competitive examination and was commissioned a second lieutenant in the infantry. His career as an officer took him to the Mexican Border Expedition and both World Wars. He was regimental commander with the 5th Division in Larraine, Meuse-Argonne, and St. Mihiel offensives in World War I.

After the war, he was graduated from the Army Field Artillery School at Fort Sill, Okla., in 1920. He then became the first non-West Point graduate to become an instructor at the famed Military Academy. In 1944 General Hodges became deputy commander to Gen. Omar N. Bradley, then commanding general of

the 1st U.S. Army.

When General Bradley took over the 12th Army Group, General Hodges took over the 1st Army. He was an officer who enjoyed democratic relations with his troops and once said: "We are a democracy and we have a democratic army. That is one of our great strongpoints." General Bradley characterized Hodges as "a spare, soft-voiced Georgian without temper, drama, or visible emotion, who was left behind in the European headline sweepstakes." Bradley also wrote that Hodges "was essentially a military technician whose faultless techniques and tactical knowledge made him one of the most skilled craftsmen of my entire command."

Among the numerous decorations earned by General Hodges in his 43-year-old career in peace and war were: Distinguished Service Cross, Distinguished Service Medal with two oak leaf clusters, Silver Star, and a number of foreign decorations including the Croix de Guerre with palm from France.

The following editorial from the San Antonio Express of January 18, 1966, very aptly describes the superb service that the late General Hodges has rendered to the people of this country:

GENERAL HODGES' SUPERB SERVICE

The names of Remagen Bridge, Aachen, the Hurtgen Forest, and "the Bulge" flashed back across the years this week in millions of minds at the news of the death of a distinguished American citizen and a superb general, Courtney Ricks Hodges.

General Hodges was an unassuming man but a man with almost boundless confidence rooted in competence. He commanded the U.S. 1st Army in its dramatic sweep across Europe during World War II. His commander, Gen. Omar Bradley of the wartime 12th Army Group, anid of General Hodges that he war "essentially a military technician whose faultless technique and tactical knowledge made him one of the most skilled craftemen of my entire command. He probably knew as much about infantry and training as any man in the Army."

The general was a career soldier, a veteran of both World Wars and holder of numerous medals, including the Distinguished Service Medal with two clusters and the Silver and the Bronse Stars, the latter two awarded for personal gallantry and bravery.

As a San Antonio citizen since 1949, he won widespread affection and admiration among this community's residents. Mrs. Hodges and other members of his family can take comfort in knowing that he served his country to the limits of his enormous capacity and that his countrymen and the free world is grateful for it.

## Constance Baker Motley

EXTENSION OF REMARKS

## HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. FARBSTEIN. Mr. Speaker, I am delighted at President Johnson's selection of Mrs. Constance Baker Motley, for a seat on the Federal bench in the State of New York. Mrs. Motley, as you know, has been a dedicated responsible leader of the civil rights movement for many

years. She has carried the fight for Negro rights into courts throughout the land and she has, by the brilliance of her mind as well as by her stunning presence, won the respect of friend and adversary. As president of the Borough of Manhattan she showed a capacity for administration and a profound understanding of social problems. Mrs. Motley's qualifications for a Federal judgeship armany, but perhaps the most important is that she is a magnificent lawyer, with a deep and sensitive feeling for the meaning of the law. The Federal judiciary will be richer for her presence.

I congratulate Mrs. Motley and I commend the President on this superb appointment.

## Daniel Sullivan, Justice, Dies

EXTENSION OF REMARKS

## HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. BINGHAM. Mr. Speaker, a distinguished resident and a neighbor of mine, Justice Daniel Sullivan, died a few weeks ago. While we did not always agree on political questions, I always respected Justice Sullivan as a man profoundly convinced of the rightness of his convictions.

Under unanimous consent I ask to have printed in the RECORD at this point a brief biography of this longtime public servant:

[From the N.Y. Times, Jan. 3, 1966]
DANNEL SULLIVAN, PROSECUTOR, DIES—EXBRONX DISTRICT ATTORNEY AND CITY COURT
JUSTICE, 79

SARANAC LAKE, N.Y., January 8.—Daniel V. Sullivan, District Attorney of Bronx County from 1955 to 1960, died today in Saranac Lake General Hospital. He was 79 years old and lived at 1 River Crest Hoad in Riverdale, the Bronx.

Mr. Sullivan was a justice of the city court designated by the appellate division to sit on the State supreme court bench when he was named by Gov. W. Averrel Harriman to the Bronx County post. He succeeded George B. DeLuca, who became Lieutenant Governor. Later in 1955 Mr. Sullivan was elected to a full 4-year term.

Mr. Sullivan led a vigorous fight against juvenile delinquency in the Bronx and investigated a practice in which defective television tubes were reprocessed illegally and brand names were forged.

Before becoming District Attorney he had served in the city court for 4 years, and in the municipal court for 16.

ELECTORAL COLLEGE SECRETARY

After his retirement in 1960, Mr. Sullivan became a consultant to the New York law firm of Barry, Treanor, Shandell & Zachary and a director of the Security Mutual Insurance Company of New York.

surance Company of New York.

A lifelong Democrat, he served as secretary of the electoral college after 1960. He was a delegate to the 1960 and 1964 national conventions.

Mr. Sullivan was born in New York and was graduated from the New York Law School in 1910. After establishing a law practice in New York, he became secretary to the State Supreme Court Justice John E.

McGeehan in 1934. That year he was named to fill a vacancy in the municipal court.

He was a past president of the Fordham Alumni Sodality, a life member of the Friendiy Sons of St. Patrick, a fourth degree Knight of Columbus and a member of the Royal Arcanum. For 53 consecutive years Mr. Sullivan had been a retreatant at the Jesuit House of Mount Manresa on Staten Island.

Surviving are his widow, the former Marie Antoinette Clermont, and a brother, Leo M. Sullivan, of Linden, N.J.

A requiem mass will be celebrated on Wednesday morning at St. Philip Neri Roman Catholic Church, 3025 Grand Concourse, the

# University of Michigan: An Education for Excellence

EXTENSION OF REMARKS

## HON. WESTON E. VIVIAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. VIVIAN. Mr. Speaker, the University of Michigan, located in Ann Arbor, in the Second Congressional District, which I am privileged to represent in this distinguished body, has been the recipient of more than its share of honors and recognition, during almost 150 years of distinguished service to the people of its State and Nation.

Mr. Speaker, the University of Michigan currently serves our country in many ways. Scientific and technological research performed at the university currently amounts to over \$40 million annually, much of it done under grants and contracts from the Federal Government. Michigan's distinguished graduates occupy positions in the top echelons of government, including several Members of the U.S. Senate and of this body, and a number of important posts in the executive branch.

In the December 1965 edition of America magazine, a Russian language publication of the U.S. Information Agency widely distributed in the Soviet Union, one of the featured articles was entitled, in translation, "University of Michigan: Education for Excellence." The article was liberally illustrated with photographs by the distinguished American photographer, Alfred Eisenstadt.

Mr. Speaker, I am proud to place in the Congressional Record for today the English translation of the text of the article:

University of Michigan: An Education for Excellence

Snow blanketed or sun dappled, the University of Michigan is an impressive sight. Sprawled across more than 2,000 acres in and around Ann Arbor, its facilities rank with the world's finest. But the achool's prominence goes beyond that. Like the great campus itself, intellectual life spreads far and wide, into every facet of the mind, every corner of the world.

Here, noted scholars lend their wisdom to eager young minds, world-renowned composers perform and create, and researchers probe the secrets of science. Of its 17 schools, 2 are especially well known: the law school and the music school. Both are ex-

amples of Michigan's use of specially designed classrooms. The law school has an authentic courtroom presided over by ex-

authentic courtroom presided over by experienced judges. The music building hoasts two organ rooms and a rehearsal hall large enough to hold the university's symphony orchestra or the 206-piece marching

band.

Standing on the campus today, one would not guess that Michigan, which opened its doors in 1841, is among the oldest U.S. universities. New buildings and residences are constantly being built to accommodate the freshmen who storm the gates each fall. (Total enrollment this year is more than 30,000.) But physical expansion, continuing by leaps and bounds, hasn't diluted the school's quality. The University of Michigan continues to be an outstanding example of vastness-cum-excellence.

FIRST-RATE FACILITIES EASE THE TEACHING TASK

Michigan may be one of the oldest schools in America, but it's far from being old fashioned. In order to handle the tidal wave of students and yet maintain standards of excellence, the university has embraced electronic teaching aids on a wide scale. The medical school, with 4 color and 11 black-and-white cameras, is noted for having the largest television installation of any U.S. medical school. In the department of education, student teachers can observe on TV the methods of instructors conducting classes nearby. Similarly, law school students have the proceedings in a local court piped into their classroom via closed-circuit TV.

In the language labs, one can dial directly for any of 432 taped lessons in 22 languages. Not only in electronics, but in many fields of science and technology, Michigan stays in the forefront. With its laboratories, hospital, aquarium, and other facilities, the university is a valuable center of research.

#### LOOKING ON THE LIGHTER SIDE

"Enjoy yourself, it's later than you think," says the song, and students at Michigan take this advice. Concerts, plays, sports, and songfests fill their leisure hours. The giant campus bursts with so much culture that one student from New York marveled, "Where else, unless I just stay home in Manhattan, can I hear as many different kinds of music, see as many plays, look at so much painting?" There's plenty to cheer about on the athletic fields, too, for year after year Michigan's teams rank with the Nation's leaders. And for those not content to be spectators, there is a wide variety of sports such as tennis, archery and hockey. But the most common form of relaxation can also be the most enjoyable—those satisfying gabfests shared with friends.

#### Congratulations to Paul A. Miltich

EXTENSION OF REMARKS

## HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MACKIE. Mr. Speaker, Paul A. Miltich, a correspondent for the Booth newspapers of Michigan, has been elected to membership on the standing committee of correspondents.

Paul's election victory—he received the highest number of votes cast—indicates he is held in high esteem by his col-

leagues.

We join other members of the Michigan delegation in congratulating Paul Miltich in his victory and he has our best wishes for a successful term of office.

## **Ouiet Solution to Vietnam**

EXTENSION OF REMARKS

## HON, PAUL H. TODD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. TODD. Mr. Speaker, I have recently received a number of letters asking, "When are we going to win the war in Vietnam, and why not?" Some of them say no more than this. I have replied to these letters with the request that they advise me where they are obtaining their "canned" question, but to date have not had a response.

I have advised these people that their question was hostile and by implication misreads the intentions of the United States as enunciated by our President and by Secretary of State Rusk. Furthermore, I have pointed out to them that exceptionally skilled and capable students of foreign affairs have indicated the complexities of the problem with which we are faced. I feel that these questioners should know of the relationship of our difficulties in Vietnam with the problems elsewhere in the world.

An article by George Kennan, widely respected for his astuteness in foreign affairs, clearly points out this interrelationship. I commend it to my colleagues, and ask permission that it be inserted following my remarks.

QUIET SOLUTION TO VIETNAM: U.S. EXPERT ON COMMUNISM CITES FUTILITY OF FURTHER ESCALATION

#### (By George F. Kennan)

(Note.—Former U.S. Ambassador to the Soviet Union and Yugoslavia, Kennan is an authority on world communism.)

There are, I am sure, many besides myself who would have preferred to remain silent in the face of a discussion so shrill and confused as that which has revolved around the Vietnam problem in recent months.

But the challenge advanced a few days ago by the Freedom House statement, "Placing the onus on those who remain silent and fail to make clear the American consensus," is a fair one and its authors can have no complaint if it is responded to, in this instance, by one whose voice not all of them always hear with sympathy.

Our adversaries in Vietnam are people for whose predilections and purposes no one in this country need have the faintset sympathy. Allowed to have their way, they would impose a ruthless dictatorship in any area under their control; and the experience of other Communist countries (leaving aside, for the moment, Yugoslavia) does not suggest that this would be followed by economic or social benefits remotely commensurate with the loss of liberty and the isolation from the world community this tyranny would involve.

#### DEMONSTRATORS' INTENT

The young Americans who march around with Vietcong flags or profess to favor a Vietcong victory are choosing a very strange way to demonstrate an attachment to the cause of either independence or freedom, if this is indeed what they are interested in.

On the other hand, to recognize that this is so does not mean that is necessarily the duty of the United States of America to set all this to rights. Understanding of democratic ideals it not widely spread among the human race. There are more instances of oppression and of the abuse of power in this world than the United States alone can ever

hope to remedy, and some of them are closer

to home than Vietnam.

Nor is it clear that such Vietnamese as we might find to install in power in the unlikely event of a sweeping military success (for surely who would not wish to hold the country indefinitely under direct colonial administration) would be inclined, or even able, to rule with any markedly greater liberality.

#### TWO QUESTIONS

The questions we have really to ask ourselves when we think of the future of Vietnam are primarily two: first, to what extent a future Vietnamese regime would be likely to accept a status of subordination to one of the two great Communist states and to represent an extention of its political and strategic power; and secondly, what would be the effect of the settlement on the neighboring areas.

As to the first of these questions: It is unlikely, in the face of the Chinese-Soviet conflict, that even a Communist regime in any part of Vietnam would find it necessary or desirable, in normal circumstances, to subordinate itself entirely to either of the two great Communist powers. If Hanoi has today come into a one-sided and unhealthy relationship of dependence on Pelping, this is surely primarily the effect of the discipline exerted by the war itself. In the event of a termination of hostilities, there would be neither necessity nor advantage from the North Vietnamese standpoint in retaining a wholly one-sided alinement. But for a smaller Communist country to attempt to preserve a balance in the relationship to the two great ones means, as we see from other examples, to exercise a high degree of independence in external relations generally.

Thus even in the event of a complete Vietcong victory (and I am not suggesting we settle for anything of this sort), the result would probably be something less than the automatic extension of Chinese power that many of us fear.

As to the second question, that of the reaction of other countries: This is of course a very serious consideration. Our Government is justified in citing it as a main reason why we could not contemplate any precipitate and disorderly withdrawal. But the elements of this "third country" problem have undergone important alteration as a result of recent events in Indonesia and probably in India and Pakistan as well. One wonders whether these changes have been fully taken into account. Our latitude of action would seem to be greater than it was when we first committed our forces to action in Vietnam on a serious scale.

#### DISBALANCED POLICIES

The most disturbing aspect of our involvement in Vietnam is its relationship to our interests and responsibilities in other areas of world affairs. Whatever justification this involvement might have had if Vietnam had been the only important problem, or even the outstanding problem, we faced in this world today, this not being the case, its present dimensions can only be said to represent a grievous disbalance of American policy.

For nearly a year now we have sacrificed to this effort all serious possibility for improvement of our relations with the Soviet Union. with all this implies from the standpoint of the ultimate danger of nuclear war; and this we have done at a time when prospects for such improvement were otherwise not unfavorable. We have placed a great and deeply regrettable strain on the friendship and confidence of the Japanese people. A pall of discouragement has been cast over those responsible for the conduct of the United Nations. Constructive treatment of the great problems of Germany, of nuclear disammanent, of the future of the United Nations, and of China in the wider sense has everywhere been placed largely in abeyance, in defrence to this one remote involvement.

All of these problems are more important, for the long term, than what happens in Vietnam; and there is none of them that will be usefully met even by such further military successes as we may have in the Vietnam area—rather the contrary.

#### UNFORTUNATE CONCENTRATION

The effects of this unbalanced concentration of resources and attention on a single area of world affairs are unfortunate enough even as things stand today. They could be much more unfortunate if we were to be suddenly faced, as we easily could be, with a simultaneous crisis in another area where our interests are importantly engaged.

This being so, if we can now find nothing better to do than to embark upon a further open-ended increase in the level of our commitment, simply because the alternatives seem humiliating and frustrating, one will have to ask whether we have not become enslaved to the dynamics of a single unmanageable situation—to the point where we have lost much of the power of initiative and control over our own policy, not just locally but one world scale.

None of this should be taken as inferring that our Government has been guilty of obvious stupidities. At no time in the history of this whole unhappy affair have its choices been easy or obvious ones; and the worst feature of the many violent demonstrations of opinion in this country, pro and con, has been that they have so vehemently suggested that they have been. Questions about past decisions, furthermore, are not answers to the problem we face at this particular moment.

problem we face at this particular moment.
On the other hand, it will not do for the administration simply to turn to its critics outside Government and say: "What would you suggest?" No one who is not privy to all the available information and who cannot give a large proportion of his time to the study of public questions could make useful suggestions for specific action in a situation so vastly complicated as this.

The administration could perhaps get more help from public discussion if it could find less exaited and more meaningful terms in which to describe its own predicament. Public understanding is not aided by the demands that the North Vietnamese cease their aggression which fall so regularly from the lips of senior State Department officials. We are not dealing here with established sovereign states. The situation does not lend itself to classification under established concepts of international law.

Nor does it help us much to be told that our Government is determined "to live up to our commitments." Commitments to whom? To some South Vietnamese Government? If so, to which one? When and where did we assume the obligation to sacrifice to its defense the whole balance of our policy and the wider interests of world peace? And is this commitment conceived as something related to its own performance, to its own ability to command the confidence of its people? Or is it the people of Vietnam themselves to whom this commitment is conceived

#### NEGOTIATION OUT

Obviously, there feelings cannot today be consulted in any orderly way; but can we be sure, on the basis of what we now know of their reactions, that to have this confinite to be fought out on their backs is really preferable in their eyes to the consequences of even the most unfortunate political settlement?

If, in short, what we are actually fighting over is the preservation of some balance of power in that part of the world, which is something about which we have every right to be concerned, let us then discuss the problem in those terms and not try to drape our action in legalisms and moralisms.

No one can question the thesis that a precipitate withdrawal, representing the

total capitulation of our entire position in that region, would be one of the worst of the alternatives before us. No one will deny that the other side is today wholly unresponsive to any and all suggestions for negotiation—particularly negotiation with us. I wonder, however, whether negotiation—particularly early negotiation between Hanol and ourselves—is the only, or even the most promising, way out of this situation. Proepects were never good, at any time, for agreement between the North Vietnamese and ourselves on any sort of publicly-negotiated, formal contract, defining what political conditions should henceforth prevail in the disputed area. Hanol cannot join us, the "imperialists." in publicly instructing the Vietcong, partially a South Vietnamese force, to be politically unsuccessful.

#### ARBITRATOR NEEDED

There would be a better chance of this of reciprocal unilateral actions on the part of the main protagonists, to a point where it becomes somehow manageable, as so many other tense situations have done in recent years, than of its being resolved by contractual agreement between ourselves and one portion of the other side. If we wish to develop this possibility of a simmering-down (and it is, unhapplly, the most promising of all the possibilities we face) then we must be prepared, it would seem, to let the talking be done for us, quite privately and without elbow-jogging on our part, by our friends and others who have an interest in the termination of the conflict; and then we must be prepared, depending on such advice as we receive from them, to place limited restraints at some point on our military efforts, and to do so quietly, without published time limits or ultimata, where we have reason to hope such restraints will meet with adequate reciprocation from the other side.

#### NO GUARANTEE

No one can guarantee the success of this approach; and there are many who, in the light of the pretentious terms in which our objectives have often been cast, would consider it inadequate even if successful. But is is hard to imagine anything better. I would not know what "victory" means in these conditions. In this sort of a war, one controls what one can take and hold and popolice with ground force; one does not control what one bombs.

And it seems to me the most unlikely of all contingencies that anyone should come to us on his knees and inquire our terms whatever the escalation of our effort. If it be once accepted that in the present difficult situation the security of our own forces is the cardinal consideration, that it is better to hold smaller areas securely than to hold larger once insecurely and that immediate objective is not to bring the adversary to the negotiating table but to bring about a mutual lowering of the intensity of hostilities, then perhaps the advantages and disadvantages of such an approach will appear in a different light.

#### Ukrainian Independence Day

SPEECH

#### HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. McCARTHY. Mr. Speaker, on January 22, the Ukrainian Americans in my State celebrated the 48th anniversary of the Independence of the Ukraine, On that day, in 1918, the Ukrainian Rada, or Parliament, proclaimed Ukraine's independence. The Ukrainian declaration of independence was called the Fourth Universal. Although the Ukrainians had taken advantage of the Russian revolution to proclaim their independence, they soon found that the new masters of the Kremlin were no more willing than the czars to allow them their right of selfdetermination. For 2 gallant years the Ukrainian patriots held out against the superior numerical strength of the Bolsheviks. But although the Soviets finally conquered the Ukrainian land they could not win the allegiance of the freedomloving Ukrainians.

Peasant uprisings continued long after the Red army had occupied the Ukraine. During the Second World War Ukrainian patriots organized against both the Nazis and the Soviets. Even today stories of opposition to Soviet rule reach Ukrainian Americans.

I am sure I speak for the Congress and the American people when I reaffirm my dedication to the cause of independence for the Ukraine. For the American people, Mr. Speaker, have always believed deeply in the self-determination of all nations. As the Ukrainian experience clearly demonstrates, the fires of freedom are not only unquenchable, in our shrinking world they are also indivisible.

## Address by Harold L. Tweedy Favoring Federal Charters for Mutual Savings Banks

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. MULTER. Mr. Speaker, it is with pleasure that I learned today that President Johnson in his Economic Report has urged the enactment of legislation to provide Federal charters for mutual savings banks.

I have introduced legislation to accomplish this for many years and I hope that during the current session we will see this proposal enacted into law.

An increasing number of savings and loan associations favor Federal charters for mutual savings banks, and in an address to the 19th midyear meeting of the National Association of Mutual Savings Banks on December 14, 1965, Harold L. Tweedy, president of the First Federal Savings and Loan Association of Pittsburgh spoke of the reasons for this favorable attitude.

I commend Mr. Tweedy's address to the attention of our colleagues:

WHY AN INCREASING NUMBER OF SAVINGS AND LOAN ASSOCIATIONS FAVOR FEDERAL CHAR-TERS FOR MUTUAL SAVINGS BANKS

(Address by Haroid L. Tweedy, president, First Federal Savings & Loan Association of Pittsburgh, presented at the 19th midyear meeting of the National Association of Mutual Savings Banks, December 14, 1965, New York City)

In the last year or two I have had the privilege of exchanging ideas on the subject of Federal charters for mutual savings banks with fellow savings and loan managers in different parts of the country. My distinct impression is that there is a growing understanding of the fundamental issues involved and their critical nature with respect to the future of the savings and loan business.

On the one hand there is deep concern over preservation of our basically mutual image. On the other there is strong opinion favorable to the stock form of capital organization. In same quarters, unfortunately, there is opposition to the effort you are making to obtain Federal charters for mutual savings banks.

Moreover, and this is especially disturbing to a last-ditch mutual proponent like myself, pressure is developing for legislation authorizing the chartering of stock Federal savings and loan associations.

Candidly, as I look at my business today I see distinct evidences of split personality.

The savings and loan business has been

The savings and loan business has been rolling along under a full head of steam since the end of World War II. But in my conversations with other managers I sense an increasing appreciation of the fact that we are approaching a critical juncture with respect to the kind of institutions we want to be in the future. And, as we ponder this question, I believe that a substantial and growing number of savings and loan people are becoming convinced that provision should be made for the Federal chartering of mutual savings banks. I believe I may fairly summarize this thinking in the following manner:

FIRST OF ALL, WE BELIEVE THAT THE MUTUAL FORM OF ORGANIZATION IS BEST FOR SAVINGS INSTITUTIONS

Fundamentally, for an institution which deals exclusively in the savings accumulations of the public, and especially people of modest means, the stewardship principle seems to us to be superior to ownership of the institution by one person or a small group standing to make money out of the enterprise.

I want to emphasize that we have nothing against the old line stock savings and loan associations as they were known in years gone by and still are known in States like Ohio and aoms others. What we do object to, and stremously, is the exploitation of the good name of the savings and loan business through conversion of mutual associations to the stock form by people who have little regard for the fine traditions of our business and who are motivated essentially by the pursuit of a fast buck.

On this matter of making money, I want to avoid being misunderstood. While I don't think it is appropriate to have savings institutions bought and sold for personal profit by means of the stock device, this does not mean that I regard the mutual form of organization as inimicable to the profit motive. You know and I know that in the operation of mutual savings institutions most of us are highly profit oriented. We have to be if we are to survive. The only difference is that instead of striving for profits for a relatively small owning group we are striving for profits which will be distributed on a broad base to

d

8

1

d

f

8

0

D

h

of our institutions.

All of this is not just pure idealism. As managers of mutual institutions you and I are not so dedicated that we are prepared to work for nothing. I think the record will show that the typical profit oriented mutual savings institution can and does compensate management in a reasonably generous manner and that adequate compensation and financial reward in our field is not dependent upon the holding of an equity interest.

the entire body of savings account holders

THE SAVINGS BANKS OF THE COUNTRY APPEAR TO BE THE BULWARE OF MUTUALITY IN THE SAVINGS FIELD

Since our commercial banking friends some years ago reached the conclusion that savings deposits once again are desirable and there-

fore deserving of a fair rate of return, this segment of the savings field has developed rapidly. It is of course strictly nonmutual in character.

Among savings and loan associations, the trend as I already have indicated has been rather strongly toward the stock form of organization and away from mutuality. This is true insofar as numbers and assets are concerned and it is true insofar as geographic spread is concerned.

As I suspect you may know, there are only a handful of State chartered savings and loan associations left in California which are not of the stock type. Moreover this form of organization has spread persistently into other States which previously were exclusively mutual.

An illustration is the State of Illinois which until only a few years ago was strictly mutual as to savings and loan associations and which today has some 75 stock type institutions. Looking over the savings and loan problems in Cook County with which they have been called upon to deal in the recent past, I would think that the Illinois supervisory authorities might view this trend toward stock type associations with somewhat mixed emotions.

In the savings field among major types of thrift institutions, it is only the savings banks that display a clear disposition to preserve and nourish the mutual principle avaluation.

Of course I have to recognize that this situation could very well prove illusory. That is to say, the idea of conversion to stock type banks could germinate and grow within your business as it has in mine. We are prepared to gamble that this won't happen.

In that connection, one of the things

In that connection, one of the things which I find particularly admirable in the pending Federal savings bank bill is the 10-year prohibition against conversion of a Federal savings bank to a nonmutual type of institution. It seems to me that without discernible detriment to the financial structure of the country this prohibition could be increased from 10 years to 100 years.

#### AN OPEN ROAD TO CONVERSION IS ESSENTIAL

To those of us who feel that the mutual form of organization is best for savings institutions and who see the mutual bank system as the principal bulwark of mutuality in the savings field, it is more important that the avenue of conversion from a savings and loan to a Federal mutual savings bank be made available. With the passage of the Federal savings bank bill there would be open to savings and loan associations which wish to remain clearly identified with the mutual principle, an escape route, if you please, to be used in the event the savings and loan business continues to go increasingly stock and comes increasingly under the stock image in the public mind.

I am not prepared to say to you—as A. D. Theobald did 2 years ago and as some others in the savings and loan luminess have asid point blank with respect to their institutions—that First Federal of Pittsburgh would immediately convert to a Federal savings bank once the pending bill is approved. But I cannot emphasize too strongly that we want that route open to us. I trust that my support of your efforts on these terms will be acceptable. After all, you already have a number of fine, substantial savings banks in Pennsylvania.

Although I think it has received more emphasis than is warranted by the facts, it nevertheless is true that for us in the savings and loan business conversion does hold a measure of appeal from the standpoint of terminology. The term "bank" probably is a little more prestigious and certainly a whole lot shorter and easier for the public to use than the term "savings and loan association."

In the last analysis, the term "Federal muings bank" is about as descriptive and succinct as it possibly could be. It emphasizes all of the main things we want to convey to

the public. Each word tells its own story: Federal, savings, bank.

Another major consideration is the high esteem in which savings banks are held by the public. This grows out of your long and honorable history, the high quality of stewardship which has characterised the conduct of your business, the generally large size achieved by individual institutions and their exceptionally favorable record during the depression. I am not sure that all of this glory would rub off on a newly converted institution but it is a factor which does have appreciable weight.

Finally, there is the matter of broad powers. Savings and loan associations, like mutual savings banks, want to be the bank for the man in the street, for John Q. Public. They want to be able to offer a full range of related services for the individual—as distinguished from financial service to commerce and industry which, as their name implies, is the province of commercial banks.

Considering the historic authorisations granted savings banks along these lines of service to the individual, the important precedents established in many savings bank States and their deeply rooted status as banks, it is argued by many that this broadening of opportunity for financial service to the individual can most effectively be made available to savings and loan associations via the route of conversion to Federal savings banks. Here in this new form of Federal banks for people, the best of both our systems would be combined.

Believe it or not, there are those of us in the savings and loan business who feel that mutual savings banks are here to stay and that as a major part of the country's financial structure they are just as deserving as any other type of banking institution of the herefits of a dual system of chatters

the benefits of a dual system of charters. I know you have been somewhat painfully reminded that there have been occasions in the past when savings banks might readily have obtained Federal charter legislation. But those who were then calling the turn for you did not choose to move in that direction. Nevertheless, in the eyes of many of us in the savings and loan business this is water long since over the dam. The fact is that a dual system of Federal and State charters would be good for the savings banks, would be in the public interest and in all fairness it ought to be made available to you.

Some people in the savings and loan business are under the misapprehension that the passage of Federal savings bank legislation would create additional competition for them. Those of us who favor such legislation believe that this nancern is not justi-

If a savings and loan association were to convert to a Federal savings bank no new institution would be added that wasn't there before. As to the chartering of additional newly organised Federal savings banks, the pending legislation provides that no new charter may be issued in the absence of a clear showing that the locality in question stands in need of additional services. Thus no greater threat lies in the possibility of the establishment of new Federal savings banks than already exists with respect to the establishment of new Federal savings and loan associations or State chartered institutions of either type.

of either type.

We believe the day is coming closer, and coming closer rapidly, when the mutual savings and loan associations and the mutual savings banks must and will be drawn together into a single great thrift system.

As far as a growing number of us are concerned, the quicker this happens the better. We believe the trend is inevitable and that it should be accelerated by provision of Federal charters for savings banks now.

We feel that the objective of bringing the two systems together is more important than any question of relative advantage. That is, we feel it is more important to bring the two systems together than to be overly con-cerned, for example, about the name of the ultimate institution or the surviving trade association. The technical differences between our institutions are of no real significance, our ideals and objectives are identical and yet we are not united in our approach to the public nor in our defense against those who would injure or destroy us.

From the standpoint of the public interest and the well being of the mutual savings business as a whole, the important thing is to get behind the consolidation effort and move it forward. We feel that the proposed chartering and supervision of Federal savings banks through the Federal Home Loan Bank Board which has responsibility for Federal savings and loan associations can only result in a closer tie and an easier transition to a single system.

In the interim, while we are working to-gether toward this goal of ultimate unification of our systems, there are a number of areas where it seems to me we can profitably continue and in fact should increase the degree of our collaboration.

Obviously, we should continue to stand shoulder to shoulder with respect to equita-ble tax treatment by the Federal Government. In this area we have collaborated effectively in the past and there is nothing in the existing attitude of the commercial banks to suggest any lessening of need for continued joint action between us.

As you are aware, there is a relatively new organisation on the scene, known as the Council of Mutual Savings Institutions and headquartered here in New York, which has been working actively in conjunction with your own national trade association, both your own national trade association, out-in the talloring of the proposed Federal sav-ings bank charter and in shaping up joint positions on matters of mutual interest. Recent events lead me to hope that it may be possible to develop further the Council of Mutual Savings Institutions and increase its effectiveness as a vehicle for joint action.

Federal Home Loan Bank membership is

another most important area where we have an opportunity to further our common objectives. The number of savings bank members in the Federal Home Loan Bank System has increased from 33 in 1962 to 47 at the present time, or by 40 percent.

I am happy to say that in my own neck of the woods, the first of Pennsylvania's seven mutual savings banks last year became affi-liated with the Federal Home Loan Bank of Pittsburgh. Nothing would please me more than to see the remaining six also join the Bank and I think it would be advantageous from both our points of view were they to

There are many persuasive reasons why savings banks that want to see passage of the Federal charter bill should affiliate with the Federal Home Loan Bank System. In particular, I invite your thoughtful considera-

tion of these four points:

The Bank System provides a dependable secondary liquidity reserve which enables a member institution to invest a higher pro-portion of its assets in mortgages than would otherwise be prudent. This means just one

thing—higher earnings.

The Bank System offers a dependable source of long-term funds for relending pur-poses. Used within conservative limits, this gain means just one thing-increased earn-

ing power for your institution.

The Bank System affords an excellent meeting ground on which all of us can become better acquainted, exchange ideas, and work toward the realization of our common

goals.

The clincher is the strong representation you have on the Federal Home Loan Bank Board and the fact that the Board is actively supporting your Federal charter effort.

As you know, the cost of membership in the bank system is measured simply in terms

of the required stock investment. This is a small price to pay for the advantages just

Just before I left Pittsburgh to come to this meeting I received advice that the current dividend on our Federal home loan bank stock had been declared at the rate of 3% percent per annum.

The largest mutual savings bank in the country, the Bowery Savings Bank here in New York City, became a member of the Federal home loan bank of New York some-thing over 2 years ago. Both it and the Federal Home Loan Bank System seem to have withstood the shock and are doing quite

For all of the reasons I have touched on, but especially because of the help it can be in your Federal chartering effort, I think that each of your institutions should take up this matter of Federal home loan bank member-ship and act on it now, rather than putting it off for later consideration as perhaps many of your institutions have been doing. You have strong enemies. I think you ought to be standing shoulder to shoulder with your

An additional area where we can col-laborate to advantage is through participa-tion in our respective educational organizations. At First Federal of Pittsburgh one of our key officers has completed the savings management development program at Dartmouth and by next summer another of our vice presidents also will have grad-uated. In addition, one of our loan officers this year completed both sections of the NAMSB mortgage clinic conducted at Meri-den, Conn. The more of this sort of thing we can encourage, the more closely our people and our systems will be drawn together.

Finally, let me remind you of the opportunities we have for collaboration in the public relations field, particularly as a result of the action taken this year by the Financial Public Relations Association, to close the door to any new savings and loan association members. This as you know, had the inevitable consequence of causing us to form our own organization—the Savings Institutions Marketing Society of America. it behooves all of us to support this new and lively organization. Membership in SIMSA is inexpensive and the possibilities for effective collaboration far reaching.

In conclusion, I want to go on record with the unequivocal prediction that you will be successful in your efforts to obtain Federal savings bank legislation, and that in attaining this goal you will be strongly supported by a not inconsiderable number of savings and loan associations. Next year will be the 150th anniversary of the establishment of mutual savings banking in this country and I hope that, appropriately enough, this will be the year in which your long battle will be won.

#### Iron-Fisted Notice

EXTENSION OF REMARKS OF

## HON. EDWARD J. DERWINSKI

OF BLLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. DERWINSKI. Mr. Speaker, the administration seems intent on killing the goose that lays the golden eggs. In its haste to socialize the world, it is killing the American free enterprise system. A brief but most pertinent editorial comment on this fact appeared in the Thursday, January 20 edition of the Lansing

Journal of Lansing, Ill., and I insert it in the RECORD at this point:

IRON-FISTED NOTICE

It is alarming to read man-in-the-street interviews and find most of the public agreeing with President Johnson's interference in industry.

In effect today is one-man price control. It has not been established by acts of Congress. It is not practiced as a war measure. Whatever else it is, it is a spectacular exercise to the vast power of the White House. It is the iron-fisted notice that industry in the United States is the pawn of the Government of the United States.

Our great Nation was built on the principles of free enterprise and that a government which governs the least is the best government. These two great heritages are rapidly vanishing from the American scene. There is very little free enterprise today amid overwhelming Government oppression.

### Agriculture in Developing Countries

EXTENSION OF REMARKS OF

## HON. PAUL H. TODD. JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. TODD. Mr. Speaker, today, the Honorable LYNN STALBAUM, of Wisconsin, my colleague, has introduced legislation to encourage improved methods of agriculture in the developing countries. I congratulate him and heartily endorse his efforts.

The world faces a situation of dire emergency in regard to the feeding of all its people. The United States has for so long been able to send its surpluses abroad that it is hard to understand that these surpluses are all but depleted.

The U.S. Department of Agriculture says that if we "bring into production all cropland now diverted to nonproductive uses through acreage diversion programs we could produce an additional 40 million tons of grain in addition to the 175 million tons now being produced per

Prior to World War II the underdeveloped regions of Africa, Asia, and Latin America exported 11 million tons of grain per year to the developed regions, principally Western Europe. By 1964 these regions were importing grain at the rate of 25 million tons annually from the developed regions, largely North America. This flow of grain from the "haves" to the "have-nots" is expected to rise even more rapidly in the years just ahead.

Simple arithmetic exposes the fallacy of relying on increased U.S. food production alone. We cannot make up the world food deficit. It is imperative that farmers the world over be helped to improve their methods and yields. No less important is it that family planning information and programs be given strong support.

Birth rates are rising at a rapid pace in the parts of the world which cannot feed its present populations. All programs of help to these countries must

incorporate population control advice else, instead of being helpful benefactors we will have come only to give false promises and to encourage false hopes.

### Another Big Lie Nailed

EXTENSION OF REMARKS

## HON. PRENTISS WALKER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

WALKER of Mississippi. Mr. Mr. Speaker, my State of Mississippi, along with many of her sister Staes, has in the past several years received much unwarranted public attention relating to socalled police brutality. The following editorial by my good friend, Mr. Erle Johnston, Jr., editor of the Scott County, Miss., Times, appeared in his paper on Wednesday, December 22, 1965. This editorial points out just one case where sensational charges of police brutality were never proven. But, the fact that no formal charges were ever brought forth by the Justice Department does not erase the libelous headlines that appeared in newspapers and on network television when the original claims were

I commend to my colleagues this honest expression of concern.

ANOTHER BIG LIE NAILED

Last June, several hundred demonstrators picketing a special session of the Mississippi Legislature—which incidentally was revising registration and election laws—were arrested by Jackson police for parading without a permit and refusing orders to disperse.

During arrest and confinement at the Mississippi State Fairgrounds compound, they were under surveillance of civil rights attorneys, agents of the Justice Department, and national news media. There were no reports of brutality.

Then out of the blue, a three-man team from the National Council of Churches made an investigation of the compound and spent a total of 2 hours—by their own admission—interviewing the demonstrators.

The committee made an official report at a congressional briefing charging the Jackson police with Hitlerlike tactics, including "gassing" of prisoners, kicking pregnant women in the stomach, forcing prisoners to put their arms in boiling water, making women strip before policemen, unwarranted beatings, denying medical treatment, and depriving inmates of adequate food.

These charges shocked Mississippians and the efficient personnel of the Jackson Police Department, one of the best-trained and most conscientious in the Nation.

Jackson Mayor Allen Thompson denounced the charges as "pure falsehoods" and demanded a Presidential investigation to refute the statements, Mississippi Congressmen attacked the report as "vicious propaganda."

In the meantime, the northern press picked up the NCC report and made sensational headlines. Weeping Congressmen from other States made speeches for the CONGRESSIONAL RECORD, deploring brutality in Mississippi.

Prodded by the NCC committee, prisoners signed at least 70 affidavits against the Jackson Police Department.

It's now been nearly 6 months since the charges were publicized. It is well known that Federal authorities long ago completed their investigations. And not one single case against the police has been filed by the Justice Department.

The significance is apparent. Either the NCC committee was duped by lies from the prisoners or the committee deliberately conceived these distortions to smear Missis-

sippi.
On prior occasions, the Justice Department—given sufficient evidence—has filed brutality charges against Mississippi law enforcement officers in at least three counties.

But despite the strong language of the NCC report, not a single affidavit against the Jackson police has merited legal action.

It would seem that a great injustice has been done to Jackson police and to Mississippl, now struggling with the problems of a transition period which has made the State a target for hate mongering.

a target for hate mongering.
In a recent article in U.S. News & World
Report, FBI Chief J. Edgar Hoover said that
in 1965 his department investigated 1,787 allegations of police brutality in the United
States with only 13 indictments returned
against 23 officers. In 1964 there were 1,592
complaints and 16 indictments, and in 1963,
over 1,300 charges and only 12 indictments.

Every State has its problems with defendants accusing law enforcement personnel of brutality when they are dutifully attempting to protect society.

The Jackson Police Department is due an apology.

Those guilty of distributing the stories clergymen supposedly dedicated to truth and light—must make peace with their own consciences.

# Federal Tax "Victim" Wants To Turn Tables

EXTENSION OF REMARKS

#### HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. NIX. Mr. Speaker, I noticed when reading the Washington Star of January 20, 1966, that Mr. D. J. Spensley, an Iowa businessman, has made a point that my Subcommittee on Census and Statistics has been trying to make for some time. Mr. Spensley is the operator of a drycleaning shop which employs 21 people, and he resents the endless hours he has to contribute to Federal paperwork. This is not unusual, but presenting the Internal Revenue Service with a bill for his services is. Mr. Spensley is attempting to charge the Federal Government for 800 hours of work at the rate of \$3.75 an hour, the rate paid Internal Revenue Service collectors. Of course Mr. Spensley does not have a chance to collect, but he has made it abundantly clear that the time put in by citizens on Federal forms does cost money and is a burden to the business community.

Mr. Speaker, at this time, I offer my congratulations to Mr. Spensley for his action and insert in the Record the article, "Federal Tax 'Victim' Wants To Turn Tables":

FEDERAL TAR "VICTIM" WANTS TO TURN TABLES
DES MOINES, IOWA.—D. J. Spensley, an Iowa
businessman, figures the Government owas

him \$3,000 for involuntary servitude. And he aims to collect.

The 61-year-old drycleaning shop owner at Waterloo is embarking on a crusade for himself and every other businessman who has to spend hours toiling over employee income tax withholding and social security forms.

"I resent being forced to collect money and make reports without compensation," said Spensley.

So the businessmen entered the district office of the U.S. Internal Revenue Service here yesterday and asked for \$3,000.

He figures that's a conservative estimate of what he has coming for some 800 hours of work spent over the last 5 years computing and filing various Government forms for his 21 employees. He based it on the rate of \$3.75 an hour paid to regular Internal Revenue Service collectors.

Spensley said he didn't really expect to triumph right away but hopes to encourage other employers to make the same demand. Eventually, he said, Congress may feel the pressure and do something about it.

### Demonstration Cities Act of 1966

EXTENSION OF REMARKS

## HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. PUCINSKI. Mr. Speaker, I have today introduced legislation known as the Demonstration Cities Act of 1966 and which, as stated by the President in his message the other day, can make 1966 the year of rebuilding America's cities.

History already will record President Johnson as one of the truly great Presidents of this country. But I should like to add that with the enactment of his impressive program for rebuilding America's urban areas, Mr. Johnson will make one of the most significant contributions toward the growth of America in the second half of the 20th century.

The last census shows that more than 78 percent of the American population now lives in this Nation's urban communities. This 78 percent of the American population actually occupies less than 1 percent of America's entire land area.

With the advent of technological and industrial growth, there can be no question that America's large cities are the very heartbeat of this Nation.

We are today confidently predicting a \$1 trillion gross national product by 1975; and the overwhelming majority of this tremendous industrial expansion will occur in our Nation's urban areas.

I can think of no single proposal brought before this Congress during the past decade which will have a greater impact on rebuilding the backbone of America than the legislation proposed by President Johnson and incorporated in this Demonstration Cities Act of 1966.

President Johnson quite properly stated that this Congress can set in motion forces of change in great urban areas that will make our cities the masterpieces of our civilization.

It is my fervent prayer that Congress will not delay in approving this legislation. Let me hasten to make one thing crystal clear. This legislation is not just another slum clearance project designed to serve only the less fortunate.

This is a bold, imaginative, all-encompassing proposal to make the life of every person living in a large city—whether he lives in the slums or in the silk-stocking districts—be able to enjoy the full pleasures of urban life on the scale never imagined before.

Mr. Speaker, I represent a district on the Northwest Side of Chicago which has the second highest per capita average income in the United States. My district for the most part is made of lovely homes and middle-income families. My district is far removed from the blighted areas of Chicago.

Yet, my constituents have as vital an interest in seeing that Chicago's depressed housing areas are eliminated as quickly as possible as the victims of this blight themselves.

For a large city cannot exist half prosperous, half slum; no more than the world can exist half slave and half free.

The homeowners of my community are now paying tremendously high real estate taxes only because large areas of Chicago are unable to carry their share of the load because of urban blight.

Aside from the moral obligation that we all have to eliminate blight, there is a material reward because as blight is removed and properties restored to the tax rolls the overall cost of Government is more equitably distributed.

My constituents can look forward to the day when we can hope for a significant further reduction in the crime rate in Chicago as we eliminate blight and let all families live in dignity and comfort.

By rebuilding these huge areas of blight in our cities, we can reduce the cost of fire protection, police protection, and all the other social services that are required today.

Mr. Speaker, I am confident that by rebuilding on a massive scale all the aspects of these communities, we can reduce the tragic cost of public welfare in America. Certainly in this day and age there can no longer be any doubt in anyone's mind that blight and all the social ills associated with it breed poverty.

We in the State of Illinois alone spend \$680 million every 24 months on the cost of public welfare.

In Cook County alone we are spending in excess of \$18 million every 30 days for public welfare.

We are now spending \$1.7 billion on a Federal antipoverty program.

We are spending another \$1.5 billion for additional remedial education for children whose families are in poverty.

Mr. Speaker, this legislation proposed by President Johnson will do more to eliminate poverty in America than any other single piece of legislation ever approved in this country.

It has been properly said that when a Nation invests in a man it frees that man.

This modest proposal by President Johnson is the first step in helping give our cities the tools they need to eliminate blight and with it all the tragic circumstances and consequences that fester in areas of blight.

Mr. Speaker, the other day I confidently predicted that because of the dynamic antipoverty program now being carried on in Chicago, my city will be the first major city of the world to eliminate poverty.

No man in our generation has done more toward that goal than Chicago's mayor, Richard J. Daley.

I am confident that with the enactment of this additional legislation against poverty, Mayor Daley and the people of Chicago will make good our confidence that, indeed, Chicago shall become the first metropolis of the world free of blight and poverty.

Mr. Speaker, the provisions of the legislation I introduced today follow:

#### H.R. 12343

A bill to assist city demonstration programs for rebuilding slum and blighted areas and for providing the public facilities and services necessary to improve the general welfare of the people who live in these areas

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Demonstration Cities Act of 1966".

FINDINGS AND DECLARATION OF PURPOSE

SEC. 2. The Congress hereby finds and declares that improving the quality of urban life is the most critical domestic problem facing the United States. The persistence of widespread urban slums and blight, the concentration of persons of low income in older urban areas, and the unmet needs for additional housing and community facilities and services arising from rapid expansion of our urban population have resulted in a marked deterioration in the environment of large numbers of our people while the Nation as a whole prospers.

The Congress further finds and declares that cities, both large and small, do not have adequate resources to deal effectively with the critical problems facing them, and that additional Federal assistance is essential to enable cities to plan, develop, and conduct programs to improve their physical environment, increase their supply of adequate housing for low- and moderate-income people, and provide educational and social services vital to health and welfare.

It is the purpose of this Act to provide

It is the purpose of this Act to provide additional financial and technical assistance to enable cities, both large and small, to plan, develop, and carry out programs to rebuild or revitalize large slum and blighted areas and expand and improve public programs and services available to the people who live in such areas.

It is further the purpose of this Act to provide the additional financial aid needed to enable cities to participate more effectively in existing Federal assistance programs.

It is further the purpose of this Act to assist cities to coordinate activities aided under existing Federal programs with other public and private actions in order to provide the most effective and economical concentration of Federal, State, local, and private efforts to improve the quality of urban life.

SEC. 3. The Secretary of Housing and Urban Development (hereinafter referred to as the "Secretary") is authorized to make grants and provide technical assistance, as provided by this Act, to enable city demonstration agencies (as herein defined) to plan, develop, and carry out comprehensive city demonstration programs.

## COMPREHENSIVE CITY DEMONSTRATION PROGRAMS

SEC. 4. (a) A "comprehensive city demonstration program" is a locally prepared and

scheduled program for rebuilding or restoring entire sections and neighborhoods of slum and blighted areas through the concentrated and coordinated use of all available Federal aids and local private and governmental resources, including citywide aids and resources necessary to improve the general welfare of the people living or working in the areas.

(b) A comprehensive city demonstration program is eligible for assistance under sections 6, 8, and 9 only if the Secretary determines that—

(1) the program is of sufficient magnitude in both physical and social dimensions (i) to remove or arrest blight and decay in entire sections or neighborhoods, (ii) to provide a substantial increase in the supply of standard housing of low and moderate cost, (iii) to make marked progress in serving the poor and disadvantaged people living in slum and blighted areas with a view to reducing educational disadvantages, disease, and enforced idleness, and (iv) to make a substantial impact on the sound development of the entire city;

(2) the rebuilding or restoration of sections or neighborhoods in accordance with the program will contribute to a well-balanced city with adequate public facilities (including those needed for transportation, education, and recreation), commercial facilities adequate to serve the residential areas, good access to industrial or other centers of employment, and housing for all income levels;

(3) the program provides for educational and social services necessary to serve the poor and disadvantaged in the area, widespread citizen participation in the program, maximum opportunities for employing residents of the area in all phases of the program, and enlarged opportunity for work and training;

(4) adequate local resources are, or will be, available for the completion of the program as scheduled;

(5) administrative machinery is available for carrying out the program on a consolidated and coordinated basis, the local governing body has approved the program, and local agencies whose cooperation is necessary to the success of the program have indicated their intent to furnish such cooperation.

(6) there exists a relocation plan meeting the requirements of the regulations referred to in section 9;

(7) the program is designed to assure maximum opportunity in the choice of housing accommodations by all citizens; and

(8) the program meets such additional requirements as the Secretary may establish to carry out the purposes of this Act.

(c) In making the determinations under subsection (b), the Secretary shall give maximum consideration to whether—

 substantive local laws, regulations, and other requirements are, or can be expected to be, consistent with the objectives of the program;

(2) the program will enhance neighborhoods by applying a high standard of design and will, as appropriate, maintain distinctive natural, historical, and cultural characteristics;

(3) the program is designed to make maximum use of new and improved technology and design, including cost reduction techniques:

(4) the program will encourage good community relations and counteract the segregation of housing by race or income; and

(5) the program is consistent with comprehensive planning for the entire urban or metropolitan area.

FINANCIAL ASSISTANCE FOR PLANNING COMPRE-HENSIVE CITY DEMONSTRATION PROGRAMS

SEC. 5. (a) The Secretary is authorized to make grants to, and to contract with, city demonstration agencies to pay 90 per centum of the costs of planning and developing comprehensive city demonstration programs.

(b) Financial assistance will be provided under this section only if (1) the application for such assistance has been approved by the local governing body of the city, and (2) the Secretary has determined that there exist (i) administrative machinery through which coordination of all related planning activities of local agencies can be achieved and (ii) evidence that necessary cooperation of agencies engaged in related local planning can be obtained.

FINANCIAL ASSISTANCE FOR APPROVED COMPRE-HENSIVE CITY DEMONSTRATION PROGRAMS

SEC. 6. (a) The Secretary shall review plans for comprehensive city demonstration programs in order to determine that (1) such plans satisfy the criteria for such programs set forth in section 4, and (2) the various projects or activities to be undertaken in connection with such programs are scheduled to be initiated within a reasonably short period of time.

(b) The Secretary is authorized to make grants to, and to contract with, city demonstration agencies to pay 80 per centum of the costs of administering approved com-prehensive city demonstration programs, but not the cost of administering any project or activity assisted under a Federal grant-inaid program.

(c) To assist the city to carry out the projects or activities included within an approved comprehensive city demonstration program, the Secretary is authorized to make grants to the city demonstration agency of not to exceed 80 per centum of the aggregate amount of non-Federal contributions otherwise required to be made to all projects or activities assisted by Federal grant-in-aid programs: Provided, That the amount of non-Federal contribution required for each project in a Federal grant-in-aid program shall be certified to the Secretary by the Federal department or agency (other than the Department of Housing and Urban Development) administering such program, the Secretary shall accept such determination in computing the grants hereunder.

(d) Grant funds provided pursuant to subsection (c) of this section may be used for projects or activities assisted under a Federal grant-in-aid program which are undertaken as part of an approved comprehensive city demonstration program, or for other projects or activities undertaken as part of such demonstration program. If used for projects or activities mainted under Federal grant-in-aid program which are undertaken as part of such demonstration program, funds provided pursuant to subection (c) shall be credited as part or all of the required non-Federal contribution to such projects or activities.

(e) The Secretary shall not make any grant under this section unless he has obtained satisfactory assurances that the locality will maintain, during the period an approved comprehensive city demonstration program is being carried out, a level of aggregate expenditures for activities similar to those being assisted under this section not less than the level of aggregate expenditures for such activities prior to initiation of the comprehensive city demonstration program.

OFFICE OF THE PEDERAL COORDINATOR

SEC. 7. There shall be established for each locality having an approved comprehensive city demonstration program an office to be known as the office of the Federal coordinator headed by a director who shall be designated by the Secretary. The director shall perform such functions as the Secretary shall from time to time prescribe with respect to helping achieve the maximum effective coordination of Federal grant-in-aid programs undertaken in connection with comprehen-sive city demonstration programs. Nothing in this section shall be construed to vest in the Secretary any authority to exercise or delegate any function or duty vested by law

in any department or agency of the Federal Government other than the Department of Housing and Urban Development.

#### TECHNICAL ASSISTANCE

SEC. 8. The Secretary is authorized to un-dertake such activities as he determines to be desirable to provide, either directly or by contracts or other arrangements, technical assistance to city demonstration agencies to assist such agencies in planning, developing. and administering comprehensive city demonstration programs.

RELOCATION REQUIREMENTS AND PAYMENTS

SEC. 9. (a) A comprehensive city demonstration program must include a plan for the relocation of individuals, families, business concerns, and nonprofit organizations displaced or to be displaced in carrying out the city demonstration program. cation plan shall be consistent with regulations prescribed by the Secretary to assure that (1) the provisions nad procedures included in the plan meet relocation standards equivalent to those prescribed under section 105(c) of the Housing Act of 1949 with respect to urban renewal projects assisted under title I of that Act, and (2) relocation activities are coordinated to the maximum extent feasible with the increase in the supply of decent, safe, and sanitary housing for families and individuals of low or moderate income, as provided under the comprehensive city demonstration program, or otherwise, in order to best maintain the available supply of such housing for all such families and individuals throughout the city.

(b) To the extent not otherwise author ized under any Federal law, financial assistance extended to a comprehensive city demonstration agency under section 6 shall include grants to cover the full cost of relocation payments, as herein defined. Such grants shall be in addition to other financial assistance extended to such agency under

section 6.

The term "relocation payments" means payments by a comprehensive city demonstration agency to a displaced individual. family, business concern, or nonprofit orga nization which are made on such terms and conditions and subject to such limitations (to the extent applicable, but not including the date of displacement) as are provided for relocation payments, at the time such payments are approved, by section 114 (b), (c), (d), and (e) of the Housing Act of 1949 with respect to projects assisted under title I

(c) Subsection (b) shall not be applicable with respect to any displacement occurring prior to the date of the enactment of this

CONTINUED AVAILABILITY OF FEDERAL GRANT-IN-AIL PROGRAM

SEC. 10. Notwithstanding any other provision of law, unless hereafter enacted expressly in limitation of the provisions of this section, funds appropriated for a Federal grant-in-aid program which are reserved for any projects or activities assisted under such grant-in-aid program undertaken in connection with an approved comprehensive city demonstration program shall remain available until expended when so provided in appropriation acts.

#### CONSULTATION

SEC. 11. In carrying out the provisions of this Act, including the issuance of regulations, the Secretary shall consult with other Federal departments and agencies adminis tering Federal grant-in-aid programs. The Secretary shall consult with each Federal department and agency affected by each comprehensive city demonstration program before entering into a commitment to make grants for such program under section 8.

APPROPRIATIONS

SEC. 12. There are hereby authorized to be appropriated such sums as may be necessary

to carry out the provisions of this Act. Appropriations authorized under this Act shall remain available until expended when so provided in appropriation acts.

#### DEFINITIONS

SEC. 13. As used in this Act

(a) "Federal grant-in-aid program" means program of Federal financial assistance other than loans and other than the assistance provided by this Act.

"City demonstration agency" means the city or any local public agency established or designated by the local governing body to administer the comprehensive city demonstration program.

(c) "City" means any municipality (or two or more municipalities acting jointly) with respect to urban areas outside incorporated municipalities, any county or other public body (or two or more acting jointly) having general governmental powers.

"Local" agencies include Stata agencles and instrumentalities providing services or resources to a city or locality, and "local" resources include those provided to a city or locality by a State or its agency or instrumentality.

#### TERMINATION OF AUTHORITY

SEC. 14. (a) This Act and all authority conferred thereunder shall terminate at the close of June 30, 1971: Provided, That the functions, powers, duties, and authorities vested in the Secretary under this Act may be retained by the Secretary for the purpose of liquidating the affairs and functions conducted under this Act.

(b) The termination of this Act shall not affect the disbursement of funds under, or the carrying out of, any contract, commitment, or other obligation entered into pursuant to this Act prior to the date of such termination, or the taking of any action necessary to preserve or protect the interests of the United States in any amounts ad-vanced or paid out in carrying on operations under this Act.

#### Space Age National Debt

EXTENSION OF REMARKS

## HON. ROBERT P. GRIFFIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. GRIFFIN. Mr. Speaker, the distinguished news editor of the Muskegon, Mich., Chronicle. Mr. William May, has come up with a translation of the national debt which makes its enormity a bit more comprehensible—and frightening—for those who seldom find it necessary to deal or think in billions.

Bill May's description of the size of our monstrous national debt should carry some meaning and impact for today's space age generation.

Mr. Speaker, the editorial which follows is taken from the December 18, 1965, issue of the Muskegon Chronicle:

GEMINI TRIP: How BIG IS THE DEST? William A. May, the Chronicle's news editor, has tried for years to find effective ways to get people to realize the staggering size of the national debt. So have many others.

After studying the recent headlines, Mr. May came up with another comparison in the hope that public interest in Gemini 6 and Gemini 7 might be translated into still another illustration of the fact that the national debt is incomprehensively big.

Gemini 7 traveled 5,149,400 miles before successful splash-down this morning. This is equal roughly, to 21.6 times the distance to the moon, or nearly 11 round trips. Currently, the national debt stands at \$321 890 million.

That sum, News Editor May has calculated, doesn't mean much standing by itself. But figure it this way: If you spent the entire national debt on the number of miles traveled by Gemini 7, how much would you be spending per mile?

You'd be spending \$64,000 per mile. in terms of Moon travel, the present national debt would be equivalent to spending \$64.000 a mile for 11 round trips to the Moon.

Does that give anybody a better picture of the extent of this country's national debt?

## Formal Statement of Professors of International Law to President Johnson

EXTENSION OF REMARKS OF

## HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. PICKLE. Mr. Speaker, a few misguided Americans are issuing irresponsible statements condemning our Nation's military action in the defense of South Vietnam. Fortunately, these demonstrations are slacking off because the country resents them. But, this militant minority of misfits, as a group, is still grabbing a great amount of publicity and headlines-in much the same manner as the "Man Bites Dog" story.

I know that every Member of this distinguished House of Representatives is disgusted and disturbed over these headline-hunting hoodlums who brazenly burn draft cards, demonstrating contempt for the country's courageous leadership.

They have castigated our countrymen as criminal aggressors who are violating international law and the Charter of the United Nations.

But, I was exceedingly proud when a group of distinguished professors of in-ternational law from 31 universities throughout America recently sent to President Johnson a formal statement emphasizing the legality of our military assistance to the Republic of South Vietnam.

We hear very little about the fundamentals of established international law and order under which civilized nations of the world operate-compared to what we see, hear, and read from unqualified, irresponsible sources—so I proudly com-mend to my colleagues in the House the statement these distinguished professors of international law made through Dr. E. Ernest Goldstein, of the University of Texas School of Law, at Austin. It concerns the basic rights and responsibilities all sovereign nations have under customary international law as well as the Charter of the United Nations. Thestatement follows:

As teachers of international law we wish to affirm that the presence of U.S. forces in South Vietnam at the request of the Government of that country is lawful under general principles of international law and the United Nations Charter. The engagement of

U.S. forces in hostilities at the request of the Government of South Vietnam is a legitimate use of force in defense of South Vietnam against aggression. We believe that the evidence indicates that the United States and South Vietnam are taking action that attacks neither the territorial integrity nor the political independence of the People's Republic of Vietnam-action that seeks only to terminate aggression originating in North Viet-

of Law William H. Roberts, Catholic University of

America School of Law. Louis B. Sohn, Harvard University Law

School. Sherwood M. Sullivan, University of Ne-

braska College of Law.

Howard J. Taubenfeld. Southern Methodist University School of Law.

A. J. Thomas, Jr., Southern Methodist University School of Law. W. J. Wagner, Indiana University School

of Law.

Zigurds L. Zile, University of Wisconsin Law School.

Professor Goldstein suggested that the legal and factual propositions upon which the statement is based might be summarized as follows:

First. The Republic of South Vietnam is a recognized state.

Second. Each state has an inherent right of self defense, which may be exercised either individually or collectively, and this inherent right is recognized by the United Nations Charter for members and non-members alike.

Third. The actions of the People's Republic of North Vietnam constitute an armed attack sufficient to bring into play the inherent right of self defense.

Fourth. The Republic of South Viet-

nam has the right to ask for defense assistance from any state, including the United States of America, and such rendering of assistance is not aggression.

Mr. Speaker, the important thing we should remember is that South Vietnam has asked-over and over-for our help. That is why we are there. That is why we shall stay.

#### International Peasant Movement

EXTENSION OF REMARKS OF

## HON, JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. WYDLER. Mr. Speaker, recently, in the Islander of Anna Maria, Fla., an article appeared about Paul Horvat, a former Yugoslav freedom fighter and an active anti-Communist.

I have had the pleasure of meeting Mr. Horvat and discussing with him his idea to mobilize the peasants of the world to fight communism.

It is Mr. Horvat's personal conviction that the peasants of the world hate communism and would be an effective force in destroying that ideology.

In this critical time in our history, I believe the article from the Islander deserves to be brought to the attention of my colleagues. The news article follows:

PAUL HORVAT, FORMER YUGOSLAV FREEDOM FIGHTER, NOW WINTER RESIDENT OF ANNA MARIA ISLAND—ACTIVE ANTI-COMMUNIST Freedom means many things to different

people. To Paul Horvat, of Wilmette, Ill., and Anna

Maria, it meant the end of more than a year in prison and the threat of execution for his activities as a Yugoslav freedom fighter.

His fight has been waged against government misrule and foreign and Communist oppression through two world wars and the period between them. Now a softspoken, smiling suburbanite, and winter visitor to the island, he continues to work for the freedom of his countrymen and others under Communist domination through the Inter-Communist domination through the Inter-national Peasant Movement, of which he is president ("peasant," according to the dic-tionary, means: "one of a chiefly European class of persons tilling the soil as small land-owners or as laborers." That is the sense in which it is used here.)

He writes leaflets and articles and speaks before many organizations. A New Trier Kiwanis Club member, he spoke at the club's Independence Day meeting. And during the past summer, he and representatives of 25 European and Latin American countries attended a meeting of the Peasant Movement in Munich, Germany.

Paul Horvat became a freedom fighter as boy of 18 during World War I. of peasants in Austro-Hungarian Slovenia, now a section of Yugoslavia, he helped to organize the Slovene Volunteers to combat misrule and foreign exploitation of his people and to try to establish Slovenia as an independent state.

For this he was sentenced to die.

World War I ended before he could be captured, and the state of Yugoslavia was formed. But the peasants' life did not improve. Government officials took advantage of the farmers and Communist agitators tried to exploit their plight.

"The Communists tried to gain followers by pretending to help solve our problems,"

Horvat explained.

He helped to organize the peasants and formed a peasant export and import as-sociation, then a farmers' savings and loan association, and later a newspaper, which he edited. He also helped to form agrarian reform, education, and youth groups as the peasants became a strong enough voting bloc to elect some of their members to the Yugoslavian legislature.

Then Nazi invaders struck. Horvat and his wife, Mary, fled with their four children to nearby Croatia, where he began to organize persons to help refugees, political prisoners and other victims of the war. Arrested by the Gestapo, he once again was sentenced to die. He was herded with other political prisoners onto a train for Slovenia.

He found himself with 80 others in a small, dirty, unheated room. Prisoners took turns sleeping on the floor—because it was too small for all to lie down at once. Food was

scarce, but interrogations long.

"Executions were held every Tuesday, Horvat recalled matter-of-factly. "I was to be shot with 150 other men and women on October 2, 1942. I hoped I would be among the first killed, so I wouldn't see the others being shot."

But only minutes before the time set for the execution, Horvat was ordered once again onto a train, headed for a prison in Croatia. As the train rolled through the town where his family had settled, it stopped. Paul Horvat jumped off and fled into the forest.

He learned later that his wife and friends had arranged his transfer, and a sympathetic railroad worker had stopped the train near

the forest.

0

r

n

.

5

t

n

The Horvats' return to their home in Slovenia was not happy. In a few days Harvat was arrested by the Communists, who feared his popularity as a peasant leader.

was released, but he fled when his rearrest was ordered and his land confiscated. Police imprisoned his wife and their children to force his return, and kept Mrs. Harvat in an unheated basement without warm clothing. When she became severely ill, the family finally was released. They also fied Yugoslavia and joined Horvat in applying to enter the United States as displaced persons.

More delays again split the family as the three oldest children went to England under work program. Mr. and Mrs. Horvat and their youngest son, Paul, waited 6 years in

Austrian refugee camps.

was during those years that Horvat organized the Congress of International Peasants Movement. In 1948, 3,500 delegates met in Austria and elected him president

After more delays and hardships, the Horvats and their youngest son finally arrived in New York in 1952—with only \$10 with which to begin a new life. A strike ended Horvat's first job, in a Gary, Ind., steel mill.

But a newspaper ad for household and gar-den help in Illinois opened the door to opportunity. The Horvats were hired, and within a year had saved enough money to begin their own landscaping business. in the next few years, they saved enough money to bring their three oldest children to the United States-and to aid many other refugee families.

Horvat now operates his nursery business in Illinois with his son Branislav. The Horvats' other children also live on Chicago's North Shore.

But Horvat feels there still is much work to be done for freedom. He says, "The farm-er is the key to liberating the world from communism." "The peasant is a very strong individual who, by his nature and tradition, tied to the land. The peasant has the

most vital interest in defending his land or fighting to regain it.
"Farmers also tend to be nationalistic and

religious, forces which counteract commu-

"In addition, communism thrives misery. To fight communism, we must fight misery, not wars-which kill people, rather than ideas.

"People in the free world often minimize the importance of freedom," the freedom fighter reflected, "but like sand in our hands, if we do not hold it firmly, it will slip away

between our fingers."
(EDITOR'S NOTE.—The material in the foreoing article was taken from the Wilmette,

Ill., Life.)

### No Time for Haste

EXTENSION OF REMARKS OF

## HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1966

Mr. DADDARIO. Mr. Speaker, the Saturday Review this week contains an interesting editorial which evaluates the proposal to extend the term of a Member of the House of Representatives from 2 to 4 years. The purpose of the editorial is to urge caution and most careful debate over this proposition and I believe that the reasoning which the editorial sets forth deserves review by all the Members of the House

My own thinking has been drawn to the historical and constitutional reasoning behind the original establishment of a 2-year term. The system has worked well through most of the years of our history. At times it has resulted in some balkiness during periods when smoother transition might have been expected. On the whole, however, it has provided flexibility and established certain safeguards in maintaining a balance of Government which have worked well.

Consequently, the hesitation which I have felt about possible change without appreciable major gain has been strong. I believe that the responsible committee should look closely at all arguments relating to this constitutional change and that we in the House should debate it thoroughly in seeking the proper action. For that reason I hope that these arguments may be part of the measures we apply to the amendment when it comes before the House.

I recommend that this editorial be published in the RECORD.

NO TIME FOR HASTE

President Johnson's proposal to extend terms of Members of the House of Representatives from 2 years to 4 is understandably popular with the Congressmen themselves and, if the Gallup poll is substantially correct, with two-thirds of the electorate as The President, urging swift action, told Congress the other night that the present 2-year term "requires most Members of Congress to divert enormous energies to an almost constant process of campaigning—depriving this Nation of the fullest measure their skill and their wisdom." term the President argues, would attract more men of the highest quality to political life since they would have greater security and would not be forced constantly to go home and mend fences, but could concentrate their reelection activities in those years divisible by four.

But flexibility and fluidity must ever be the watchwords of government in an atomic age. Before Congress too hastily alters the intricate system of checks and balances that ed reasonably well in the American government system, we atrongly urge caution and the most careful debate rather than the "swift action" the President re-quests. The 2-year House term was not a quixotic, offhand notion, and to fix our legislative processes into a less subtle and more rigid form might be a disastrous mistaks in the atomic age.

The Founding Fathers had sound reasons indeed for placing the House of Representa-tives on a biennial basis, reasons as true today as they were in 1787.

A lower House elected every 2 years more perfectly reflects the changing moods of the common people than one that stays in office for the same 4 years as the President. One does not have to go back further than 1928 to realize the sensitivity of the electorate to rapidly changing political and economic con-ditions, for had Herbert Hoover's majority remained intact in the House until the eve of the inauguration of Franklin Roosevelt, no one knows how near open revolution the country might have come. Similarly, the biennial election reflects much more swiftly and accurately changing population patterns. Faced with a 4-year wait until redress, many exploding urban areas might gradually be disfranchised at times when such highly metropolitan issues as civil rights, public housing, air pollution, and integrated transportation were being debated and voted on in an unrepresentative House.

Flexibility was the keynote and corner-stone of the Federal Constitution. Those wise souls who produced the incredible document sought checks and balances wherever they could find them so that no one man or branch of Government could force a foolishness permanently on the common people. Members of the House have always been elected every 2 years by popular vote, but Senators were elected by the State legislatures as recently as 1913. And the continuous overlap of the 6-year Senate term with three separate and much more sensitive Houses did not result from chance or whim but came about after great deliberation and as a careful compromise between the big States and the small.

Under the British political system, a majority in Commons can come tumbling down at any time under the stress of public dissatisfaction with an issue or trend. Popular as he was, Churchill suddenly was no longer His Majesty's First Minister when, as World War II drew to a close, the British people felt that the time was ripe for domestic reform and that Labor could accomplish it faster than Tory Churchill. This sensitivity to vital to the democratic system, though it can induce bad overtones sometimes through the constant bickering of the position. But since the U.S. legislative tem does not even have this much sensiopposition. tivity to the pressures of new lesues and new equations in an atomic world, any measure designed to reduce representative sensitivity by a longer House term should be debated carefully and thoughtfully and not be rammed through by voice vote without thought for the consequences to the checks and balances originally intended in the bicameral philosophy.

Bicameral legislation historically recognized the distinction between the nobility and clergy—the lords and ladies of inherited wealth and position—and the curimin peo-ple. The dualism now prevalent throughout the democratic world is, fundamentally, an application of the principle of checks and balances that the Jeffersons, Madisons,

Franklins, and Marshalls foresaw when they wrote and interpreted the early Constitution. Not the least of the reasons behind their logic in a 2-year House term based on population and a 6-year Senate term giving equality to every State was this very check-and-balance philosophy, for which no better substitute has ever been devised. Adding to the formula, the executive branch, re-placed each 4 years, and a judiciary more or less permanent and traditional, we seldom face the embarrassment of harsh and hasty legislation or, on the other hand, of a Congress totally incapable of action at a time when action is vital. With a 4-year House term this balance might be upset.

In any case, we ought to talk out thor-eughly and logically any drastic change in the highly workable government equation we have built by now—R.L.T.

## A Dirty War

EXTENSION OF REMARKS

## HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. MULTER. Mr. Speaker, each time human beings take up arms against each other then God must repent just a little that He created a species which has such difficulty getting along with its own kind.

Any war is terrible; but the war in Vietnam is particularly terrible.

Self-righteous, self-proclaimed, liberators of that stricken land, the Vietcong and their North Vietnamese allies, think nothing of murdering civilian populations which defy them. This includes—almost as a matter of course women and children.

I think we will all agree with the sentiments expressed about the latest incident of this type in the following editorial which appeared in the Washington Evening Star of January 26, 1966:

DIRTY WAR

The cruelties inflicted on the Vietnamese people by the Vietcong are so commonplace that it takes a savage incident to get the world's attention. Such an incident occurred on the eve of the recent Tet truce, in the refugee camp of Tu Hiep. Communist guer-rillas stormed the unarmed camp, burned it to the ground and murdered 33 civilians.

Children were cut down with submachineguns. A school built for the refugees was destroyed.

The motive for the massacre seemed to be evenge. Several of the Tu Hiep refugees revenge. Several of the Tu Hiep refugees had fied from a nearby village shortly after the Vietcong overran it. This apparently was insulting to the guerrillas, who constantly proclaim that they symbolize the true aspira-tions of the Vietnamese people. So they punished the villagers by slaughtering them. And to make sure that the world didn't misunderstand the butchery, the guerrillas scattered several leaflets among the bodies, de-nouncing America for its "dirty war of aggression against the people of Vietnam."

The Tu Hiep massacre rebuts the argu-

ment, popular among Vietcong apologists in this country, that the guerrillas enjoy the affection of the Vietnamese villagers. Guerrilla influence seems to extend no farther than the snout of a submachinegun. When the guns recede, the villagers flee—and the standard Vietcong reaction is more bloodshed among the innocents they claim to represent.

#### Letter to President Johnson

EXTENSION OF REMARKS

## HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. OTTINGER. Mr. Speaker, last week 72 of our colleagues signed an excellent letter to the President urging him to continue efforts toward a peaceful resolution of the conflict in Vietnam. I was out of town at the time this letter was circulated or I would have been one of the original signators.

I associate myself with the views contained in that letter and so informed the President yesterday. I submit herewith the text of my letter to President Johnson

JANUARY 26, 1966. Hon. LYNDON B. JOHNSON, President of the United States.

The White House, Washington, D.C.

DEAR MR. PRESIDENT: I would like to associate myself with the view expressed in the letter to you of January 21, 1966, signed by some 72 of my House colleagues. Unfortunately, I was out of town when it was sent or I, too, would have been an original signer.

I heartily endorse their support for your peace initiatives combined with your deter-mination to show Peiping and Hanoi that their policy of aggression and subversion cannot succeed.

I join in their hope that you will continue unceasingly our efforts to bring the Vietnamese conflict to the conference table. must always keep the burden of continuation of these hostilities on the Communists. I hope you will reconsider U Thant's proposal to acknowledge a Vietcong role in negotiations and in an interim government. seems so eminently inevitable, sensible, and important to demonstrate the sincerity of resolve to achieve peaceful settlement. I hope you will also reconsider bringing the conflict before the United Nations.

I feel you have the confidence of the vast majority of the people of this country in your thoughtful and restrained handling of this difficult and frustrating situation.

Very sincerely yours,

RICHARD L. OTTINGER, Member of Congress.

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when

presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937)

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is lo-cated in room H-112, House wing, where or-ders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Memhers of Congress to purchase reprints from the RECORD should be processed through this office.

## CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressionar Recorp, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Hermine B. Kuhl, Three Bridges, N.J., in place of Eva Case, retired.

#### NEW MIXICO

Edward N. D. Fitzgerald, Jemez Springs, N. Mex., in place of B. M. Mann, retired.

# Appendix

### **Budget Becoming Political Weapon**

EXTENSION OF REMARKS

## HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. DAVIS of Wisconsin. Mr. Speak-David Lawrence's recent column which appeared in a recent issue of the Washington Star is worthy of attention. It seems to pinpoint that in order to arrive at the rosy picture of a fiscal 1967 budget deficit of under \$2 billion, the President's bookkeepers have relied upon first. Government-generated inflation: second, \$5 billion in tax accelerations or reduction deferrals; third, \$1% billion in Government profit through cheapening silver coins; and, fourth, other confus-ing juggling of bookkeeping figures.

The above mentioned follows:

BUDGET BECOMING POLITICAL WEAPON

How many presidents of large businesses could inform their stockholders 18 months in could inform their stockholder. A new much advance of a specific date exactly how much money is going to be taken in during the interval and how much is to be spent? Yet the President of the United States has just given the country an estimate that on June 30, 1967, receipts in the preceding 12 months will have increased by the enormous total of \$11 billion over the previous year and that the budget will show a deficit of less than 82 billion

Naturally, Johnson doesn't do all this forecasting by himself, but is dependent on a lot of financial experts. The sad truth, however, is that, no matter how conscienhowever, is that, no matter now conscientious they are, they cannot read the future. They cannot know what will be the ups and downs of business and how much taxes are going to be collected as a result of the business activity in the country.

During a period of 20 years-from 1947 to 1966 inclusive—budget receipts of the U.S.

Treasury have been overestimated in exactly half of those years, while budget expenditures have been underestimated in 12 years. An example of how erratic some of the estimates have been is shown by adding up the deficits and surpluses from 1955 to 1966, inclusive. For those years, the original estimates equalled an accumulated net deficit of \$18.4 billion, but the actual figures finally showed a net deficit of \$49.5 billion, or almost three times as much as the original estimates.

The last 2 fiscal years, 1964 and 1965, have run counter to previous experiences. Budget receipts at the end of each of the fiscal years were higher than estimated, and outlays were lower. But, despite all this, the net result was an actual combined deficit of \$11.6 billion, against an estimated deficit of \$16.8 billion.

It is less than 6 months now to the end of the current fiscal year on June 30, 1966, but the official estimate now by Johnson is that the deficit, which he forecast in January 1965 at \$5.3 billion, is likely, 18 months later, actually to come to \$6.4 billion—an underestimate of more than a billion dollars.

The January 1966 estimate for the fiscal year which ends June 30, 1967, may turn out the same way. It may reveal an over-estimate of receipts and an underestimate of expenditures. There was a time when a budget document was regarded as a book-keeping or economic tool, designed to gage impact of Federal finances on the econ-y. In the past 10 years, however, this omy. has changed drastically, and the estimates of the budget 18 months in advance have become more and more a political weapon wielded by the incumbent party.

Johnson startled many observers by his announcement that receipts are going to jump \$11 billion in the next fiscal year. It is true that in war years, when huge tax increases are made, this has happened, but never in any peacetime years. Receipts have jumped considerably at different times, due to sharp increases in tax receipts or immediately after a recession. But it is surprising to find a Presidential estimate of \$11 billion increase in receipts in 1 year after at least 3 years of continuing prosperity.

Some of the figures, of course, which are

placed among expected receipts of the budget are not derived from taxes owed in that same year, but represent accelerated payments. Instead of letting the corporate tax-payer pay his taxes at the end of a calendar year or fiscal year, as the case may be, a business is expected to pay sums one year that normally it would not pay until the next year. In effect, the Government is borrowing from the following year's tax payments without paying interest on the advance. The object, of course, is to put corporate taxes on a pay-as-you-go basis. But, once the change has been made, the ensuing years will not show any doubling up of tax payments. What is being done today might be called borrowing from Peter to pay Paul.

Likewise, when the coinage is changed and the silver is taken out of quarters and halfdollars, and the metal thus saved is regarded as a profit by the Federal Treasury, it seems strange to record this as a receipt in the same category as other annual levies, when it is a nonrecurring item. So it's hard to get any idea of whether the Federal Government is truly approaching a balanced budget or getting farther and farther away from it.

The Honorable Oren Harris

SPEECH

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 27, 1966

Mr. HERLONG. Mr. Speaker, the Federal bench will be greatly enriched, but this House will be impoverished, when our dear friend, OREN HARRIS, leaves to take up his new duties.

I know of no man who has graced the position that OREN HARRIS has held with more dignity, more fairness, and more just plain commonsense than he has. He has fielded a great many of the tough ones in his tenure as chairman of the

House Committee on Interstate and Foreign Commerce, and he has fielded them cleanly and handled them deftly without too much fanfare and with no seeking of personal publicity. He has shown a rare ability to bring together dissidents and to bring out workable legislation.

These rare traits he takes to the Federal bench. They will stand him in good stead. The House just will not be the same with OREN HARRIS gone.

## The 1964 Income of Male Cold War Veterans

EXTENSION OF REMARKS

HON. OLIN E. TEAGUE OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I include statistics provided by the Veterans' Administration on the 1964 money income of male cold war veterans:

THE 1964 MONEY INCOME OF MALE COLD WAR VETERANS (PERSONAL, FAMILY, AND UN-RELATED INDIVIDUALS)

The 1964 median personal money income of the estimated 3.3 million cold war veterans (men who have served in the U.S. Armed Forces only after January 1955) was \$5,100, according to a sample survey of the civilian noninstitutional population of the United States in March 1965.

About 2 out of 3 of the 3.8 million cold war veterans worked at year-round, full-time jobs in 1964, and 1 out of 3 worked part year and/or part time. Only 4 percent of the cold war veterans did not work in 1964, and included in this group are men recently separated since work experience relates only to civilian jobs.

The 2.2 million cold war veterans who worked year-round, full time had a higher median income (\$6,000), as would be expected, than the 1 million part-year and/or part-time veteran workers (median—\$3,-100) or the 150,000 veterans who did not work (median-\$1,000). As indicated earlier some of the cold war veterans were only recently separated from the Armed Forces; others were full-time students, as well as the ill and disabled and the unem-

Of the 3.3 million cold war veterans, 1 out of 4 (800,000) were relatives (usually the sons) of family heads, 1 out of 16 (200,000) were living alone or with a nonrelative (un-related individuals), and 7 out of 10 or 2.3 million were heads of their own families.

The median income of the 2.3 million cold war veteran families amounted to \$6,600 in 1964. Half of these families had incomes between \$5,000 and \$8,900. About onefourth received less than \$5,000, and of these about 25 percent had under \$3,000. These relatively high incomes are in part the reflection of the general economic expansion during 1964, with increases in employment and declines in unemployment. Family income includes income of other members of the family (almost exclusively wives of cold war veterans). One out of five cold war veteran family heads was 20 to 24 years old, while almost eight out of ten were 25 to 34 years old.

Of all cold war veteran families, 99 percent were husband-wife families. These husband-wife families had the same median income in 1964 as all families \$6,600. In half of the veteran-wife families, wives contrib-uted to the family income by working. Sixty ercent of the wives of cold war veterans 20 24 years old, and 47 percent of the wives of 25-34 year-old veterans were in the labor force during all or part of 1964. Working wives increased the family income on the average by \$1,000, to a median of \$7,200, compared to the \$6,200 median family income when wives had no earnings.

The 800,000 cold war veterans who lived with relative had a 1964 median personal income of \$2,400, compared to a medain personal income of \$4,600—almost twice as much-for the 200,000 veterans who have taken up independent living as unrelated in-dividuals. Those living in a relative's family ere younger-over half (55 percent) 20-24 years old, as compared to about a third (37 percent) of the unrelated individuals in this age group. Many of these young veterans were only recently discharged from the Armed Forces—the median age at separation is 22.6 years; some were going to echool; and many had not yet entered the labor force on a permanent basis.

Half of the unrelated individuals received between \$3,000 and \$6,700 in 1964. Onefourth received under \$3,000, and 1 out of 16 had less than \$1,500.

Altogether, there were about 470,000 cold ar veterans who had under \$2,000 income

in 1984. Almost 3 out of 4 or 340,000 of these low-income veterans were living with rela-tives and most of them (2 out of 3 or about 230,000) were 20-24 years old. Another 1 in 7 (70,000) was a married veteran 25-34 years

The income distributions presented in this report and attached tables are based on approximately 1,500 sample cases of male cold war veterans. Data in the tables are presented in considerable detail for use by analysts in making various combinations of ingrouped or not, they should be used in conjunction with the statement on "Reliability of the Estimates" and the standard error for the estimates derived from the sample survey results. The information in this note is from special tabulations of the Census Bureau's Current Population Survey, made under contract for the Veterans' Administration.

(Committees not listed did not meet)

## NOMINATION

Committee on Aeronautical and Space Sciences: Committee ordered favorably reported the nomination of Dr. Robert C. Seamans, Jr., of Massachusetts, to be Deputy Administrator, National Aeronautics and Space Administration.

Prior to this action, committee held hearings on this nomination where favoring testimony was received from Senators Kennedy of Massachusetts and Saltonstall. The nominee was present to testify and answer questions on his own behalf.

## FOREIGN AID

Committee on Foreign Relations: Committee held hearings on S. 2793, authorizing an additional \$415 million for the foreign aid program, receiving testimony from Secretary of State Dean Rusk and Administrator of the Agency for International Development David E. Bell.

Hearings were recessed subject to call.

## **NOMINATIONS**

Committee on Labor and Public Welfare: Committee approved for reporting the following four nominations: Harold Howe II, of North Carolina, to be Commissioner of Education, HEW; Franklyn A. Johnson, of California, to be an Assistant Director of the Office of Economic Opportunity; Dr. Stewart G. Wolf, Jr., of Oklahoma, and Dr. William B. Bean, of Iowa, both to be members of the Roard of Regents, National Library of Medicine, Public Health Service.

EXTENSION OF REMARKS

OF

## HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1966

Mr. BECKWORTH. Mr. Speaker, under unanimous consent, I include in the Appendix of the Record a splendid editorial which appeared in the Longview Daily News, January 26, 1966.

We all are proud of the great progress which has characterized our area.

No one man has exerted more successful efforts to bring about this progress than Publisher Carl Estes, of the Longview Daily News-Journal:

THE PRODUCERS

Constructive history is a moving chronicle of the producers. It wastes little time on the foibles of men, even less on their failures. Its emphasis, for the guidance and inspiration of new generations, is upon ideas and their originators, plans and their improvisers, results and the men who produce them.

reis, results and the men who produce them.

Thirty-five years is a brief span of time, as history is measured. Into the short period since the Lathrop discovery well put Longview and Gregg County in the national spotlight as the greatest oil producing area in America has been compressed the record of a speed and variety of progress seldom if

ever recorded in history.

If our hundreds of guests for this 35th anniversary celebration—headed by our distinguished Gov. John B. Connally and other high State officials—could look into the record of Longview's growth, they would find these marks of progress, comparing 1930 figures with 1965; population 5,026, up about 10-fold to nearly 50,000; bank deposits \$1,464,000, now \$76,117,992; water customers 958, now 14,905; electric customers 1,302, now

Longview today has some 130 industrial plants, and 5 planned industrial districts offer new industry every dealred facility. The Longview-Gregg County labor market affords 33,430 jobs, a record high. From our diversified economic base flowed estimated individual income of \$188,489,000 in 1965, resulting in estimated, sales of \$140,800,000.

e

m

Industrial and commercial growth in Longview in 1965—including new plants, business and public buildings, residences, schools, and churches—totaled some \$55 million. Another \$12 million of highway improvements were under way. The Gregg County Airport, expanding and adding new facilities, by latest report was No. 1 in East Texas in passenger boardings, with large gains recorded in air express, airfreight, and airmall tonnage.

The famed Lethrop and two other discovery wells alerted the petroleum industry to the existence of a glant oil reservoir and the east Texas field developed into a \$15 billion bonanza with more than 25,000 producing wells. It has produced 3.7 billion barrels of oil and has another 1.7 billion barrels of recoverable reserves—thanks to the early vision and hard work of a few pioneers in conservation who helped bring order out of early choos.

Preserving reservoir pressure through hardwon conservation measures and as major secondary recovery program has assured the field another 40 years of production at near current rates, and many wells are expected to be producing oil 100 years from now. The oil industry payroll in Gregg County lastyear exceeded \$13 million, and added productive life of the field will long continue to bring major benefits to producers, royalty owners, service and supply firms, industry officials and workers, and to wholesale and retail business in this area.

Spotlighted in the perspective of a 35-year time span, credit for the discovery and development of the great east Texas field, for its preservation through orderly production and conservation, for the diversified industrial progress that has some in more recent years, and for the commercial, educational, and cultural prosperity that has followed, must go to a group of leaders whom we shall call "the producers." These have been the men with vision, ideas, and plans, and the courage and energy to produce results.

As we welcome our guests today, we salute the pioneers of oil, the prime movers of industrial development, and the producers of civic and educational and governmental progress.

Because of the pioneering vision and spirited leadership of one particular man who has given unreservedly of his physical strength and means to so many of the phases of progress, we who have worked closest with him across the years believe we bespeak the feelings of the people as we dedicate this 35th oil anniversary issue to our publisher and the friend of Longview and east Texas, Carl L. Estes.

THE STAFF OF THE NEWS AND JOURNAL

# Franklin Delano Roosevelt Birthday Anniversary

EXTENSION OF REMARKS

## HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. PICKLE. Mr. Speaker, yesterday was the 84th birthday anniversary of the late Franklin Delano Roosevelt—one of the greatest Presidents of all time. I ask my colleagues to join with me in paying special tribute to this truly outstanding humanitarian and distinguished world leader.

Under leave to extend my remarks in the Record, I call to your attention a portion of page 809 of the Congressional Record of January 30, 1948. The letter published therein and reproduced below was written by the late Fleetwood Richards, Sr., of Lockhart, Tex., whose son, Fleetwood Richards, Jr., now serves as my administrative assistant in Austin. Senator Richards was one of the greatest honest-to-goodness humanitarian leaders who ever lived. He knew human nature better than any man I have known.

Few men have been more loyal to the ideals of a President than Mr. Richards, Sr., was to President Roosevelt. His letter to his lovely wife is a warm and touching reflection of the love our country held for President Roosevelt. Similarly, the letter written to the then Congressman Lyndon B. Johnson was a tribute to the love and affection he held for Mr. Johnson whose cause he supported from the first day. He recognized then, as we all do now, that Mr. Johnson, a close friend and supporter of President Roosevelt, was an unusual leader—a warmhearted man whose star was ascending and who possessed qualities similar to those of President Roosevelt.

The letter was placed in the RECORD 18 years ago yesterday by the Honorable Lyndon B. Johnson, my predecessor, who now serves as our great President.

Both the letter and Mr. Johnson's remarks, then as now, are fitting memorials to the late F.D.R. They are as follows:

THE LATE FRANKLIN DELANO ROOSEVELT

Mr. JOHNSON of Texas. Mr. Speaker, on this day in 1882 was born a man destined to guide his country through its greatest perils. As Franklin Delano Rooseveit loved his countrymen, so they loved him. That affection of one man for the many—and of the many for one man—bound our Nation together in a unity we have missed since he left us.

The altogether personal affection so many millions of us felt for Mr. Roosevelt was brought into poignant focus when he died. In our teeming cities, in small towns, at crossroad stores, and along lonely country trails, almost unbearable grief came to the people of America.

To those shocking words, "Rooseveit is dead," men, women, and children reacted as though the news concerned one near and dear to them. Some wept. Some were swept by black despair. Some were appalled at the unfilleble cap left in the world's leadership.

unfillable gap left in the world's leadership. In the small town of Lockhart, Tex., in my congressional district, one who loved Roosevelt found some comfort in the way so many of us find it: He told his wife what was in his heart. She was away from home, and he wrote her. I lately obtained a copy of that letter, written by Fleetwood Richards, of Lockhart.

Mr. Richards has a distinguished record of public service in our Texas Legislature. Because his letter so beautifully expressed the serrow so many of us felt on that fateful day in 1945, and expressed it in language beyond our capacity, I have presumed upon my friendship with Mr. Richards to offer the letter today as a memorial to Franklin Delano Roosevelt:

LOCKHART, TEX.,

April 13, 1945.

My Dearest Gussie: Roosevelt is dead.
Sorrow and gloom shrouds the town of Lock-hart and its people. Business and people are almost at a standstill. Golf has not been mentioned in almost a full day. The report of his death reached me in the Domino Hall. That is where Americanism lingers in the rough. There is where it is most typical. There is where the is most loved and appreciated. There is where labor relaxes and recreates. The news stopped every game. No sounds were audible, except sighs. The

leader of their hopes, the prince of their cause, their refuge, had gone. Silently, they went away. They walked slower, they talked less, and they thought more. It was the saddest moment in all American life. Their

ship was without a rudder.

In his going, anxiety reached its greatest peak. Determination did not seem to falter or hesitate. It seemed to absorb vengeance. Hope was uncertain. It must wait. The future must build and sustain it. World peace took a body blow. It did not fall. It did not take the count. It is disappointed, and that disappointment should be, and must be, its inspiration and determination to work, to sacrifice, and to succeed. It is hummanity's only hope.

In a weak and humble way, on every occasion, and at every call, I have tried to shoulder my responsibility to him and the cause that he represents. Maybe I have been a small part of a great undertaking. I feel so. I served him and his cause, and the people's cause, as I see it, with an apostle's devotion

free of selfish motive.

I say, and maybe I never could have said it before, a man is dead that I never doubted or questioned. Somehow, I followed him and his leadership with a faith and confidence, free of every doubt. He gave a part of his life's span to the cause of humanity and liberty. In it all, I think that he was conscientious. To the downtrodden, he was as faithful as Paul was to Christ. He served and saved others. "Himself he could not save."

I never committed an act or spoke a word that made his road longer or its burden heavier. I never added weight to his weak-ened body or his troubled mind. I tried to give him strengh. I might have been, and I think that I was, a little more diligent and devoted to him, and the purposes and ideals that he champloned, than I have been to myself and my own soul. In it all, I am satisfied.

PLEETWOOD.

## Aerospace Technology Help for Tomorrow's Cities

EXTENSION OF REMARKS

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. RUMSFELD. Mr. Speaker, monumental problems of residential and commercial blight, air and water pollution, traffic congestion, street crime and delinquency, and others await solution. In the 1965 fourth quarter edition of Sperryscope, a publication of the Sperry Rand Corp., Karl G. Harr, Jr., authored an article on the application of aerospace technology and systems analysis techniques to the burgeoning problems of our major population centers. Mr. Harr, president of Aerospace Industries Association, has a distinguished record of Government service.

The article follows:

APROSPACE TECHNOLOGY HELP FOR TOMORROW'S CEXTES

(By Karl G. Harr, Jr.)

I do not make any claim to knowledge about urban problems in general. My credentials are limited to matters of concern for that unique industry called aerospace—the large but rather rarefied industry which is primarily engaged in producing the Nation's

complex equipment for defense and space exploration. The times have made the acrospace industry a fascinating business, a glamorous one, and one intimately involved in the Nation's security and well-being.

There is much more to be learned from the sercepace industry's experience over the past decade or so than the straightforward stories of how it became what it is today and what its problems are for the future. Because of the pressure under which it has operated it has, in turn, forged some rather uncommon industrial capabilities, and because of the unique relationship which it has both suffered and enjoyed with its principal customer, the Government of the United States, this experience has potential application to the problems of our cities.

Tangible and intangible manifestations of the space age-or more properly, perhaps, the areospace age—are all around us. They even pervade our advertising commercials and "Space age cirpublic relations programs. cultry" is advanced as the key to superior TV sets; "jet," whether it be jet age fashions or the New York Jets, has become a common term to describe that which is favorably modern. Our children's interest and our own attention as TV viewers and newspaper readers is heavily engaged by aerospace matters. In short, the speed and scope of the accelerating technology of our times and its impact on our lives have been largely accepted psychologicaly by the public. In the most super-ficial sense, the implications of the aerospace age have been accepted as something positive.

At the other end of the spectrum, in the pursuit of genuine aerospace activities, the aerospace age is fully upon us. Government and private customers and their industrial suppliers of aerospace equipment have had to come face to face with the realities of moving at full speed into this complex new dimension. What is still sometimes lacking is an appreciation of the implications of this age in the approach to our hard present and future problems of a nonaerospace nature, In short, whereas space-age thinking is prevalent at the most superficial public level and within the actual aerospace itself, it often is totally lacking in between.

#### SOME KEY ELEMENTS

Aerospace has become a very large industry, which today stands as the Nation's largest manufacturing employer, employing well over a million people. It is the Nation's second largest manufacturing industry in terms of sales. Its products and services are highly technical and it is, therefore, a technically oriented industry. More than one-fifth of the Nation's scientists and engineers are employed in the aerospace industry. While it produces all of the Nation's commercial and private aircraft and helicopters, each year about 85 percent of its product is sold to the Federal Government. It is highly competitive for this government business, and the principal commodity with which it competes is its rarefied engineering skill and capacity to manage the research, development, and production of highly complex systems.

Advancing technological knowledge has rendered the task of meeting the Nation's defense needs unbelievably sophisticated. And, of course, the simple physical absolutes of exploring space in and of themselves produce this same challenge. Thus, for an industry to be in this game, as contrasted with any normal commercial enterprise, has involved entering a whole new ern and a whole new dimension of industrial considerations.

Some of these considerations have to do with devising radically new industrial techniques, manufacturing processes, reliability and quality assurance safeguards, uses of materials, and even the materials themselves. Some have to do with learning to live with a single and peculiar customer such as the

Government. Some have to do with setting standards and living with tolerances such as industry has never faced before. Some have to do with systems, management challenges of a complexity not provided on our industrial scene except by defense and space requirements.

The capability essential to defense and space efforts is that one required when making complex systems analyses. It is this capability that must be called upon when the objective is a fixed, but nearly impossible one, such as the need to analyze 10 years in advance what will be required on each of a threat will be required on each of a transactive to the moon and back. In one form or another, the problems our cities are faced with offer challenges in systems analysis of a comparable order.

President Johnson, on signing the bill creating the Department of Housing and Urban Development, declared: "We are going out to meet tomorrow and master its opportunities before its obstacles master us. \* \* \* Unless we seize the opportunities available now, the fears some have of a nightmare society could materialize. \* \* In the next 35 years we must literally build a second America."

#### CHALLENGE OF THE MEGALOPOLIS

On the east coast, there is a sprawling conglomeration of cities and towns that stretches all the way from Back Bay Boston to the Chesapeake Bay. Thirty-seven million people, or almost one-fifth of our national population, are jammed into this area, which comprises less than 2 percent of the land area of the United States. By the year 2000, or just 35 years from now, there will be 64 million people in this northeast corridor.

Similar concentrations of population, with all their attendant problems, are forming in the great central valley of the United States, along the west coast, and across the gulf coast Our present population of 200 million is expected to double by the year 2000, and the overwhelming majority of these people will be city dwellers. In other words, we will have a population about equal to that of present-day India. Those who would spread alarm at this fact suggest that on New Year's Eve, in the year 1999, standard celebration equipment should be a padiocked personal water bottle and an oxygen mask.

The rapidly increasing population and the even more rapidly accelerating trend toward urbanization have disrupted patterns of housing, schools, transportation, and all the thousands of services that a modern urban center demands. Monumental problems of residential and commercial blight, air and water pollution, traffic congrestion, street crime and delinquency on a scale never before experienced are either here or just around the corner as the pressures increase.

No private individual, no company, no citizens' group, or municipal agency alone can grasp these problems in their entirety. They are so interrelated that to try to solve any one of them in isolation from the others is often to create more new ones than are cleared up by the effort. This dilemma so far has frustrated most attempts to come to grips with these problems.

This condition of paralysis need not obtain. None of the aforesaid challenges lies beyond our already existing capacity to cope with them. The tools are already at hand. Included among those tools not only are the technological capabilities but also the experience in systems management and systems analysis as well as proved patterns of joint public and private effort.

#### THE EXPERIENCE OF AEROSPACE

The two decades of intense experience of what is today's aerospace industry have an important message. What have been the principal elements of this industry's experience during that period?

First, it has had to design and produce at the very threshold of our technology; additionally, it has had to foster research that would constantly advance that threshold. The technological challenges presented by the worst of any big city's problems cannot compare in complexity with some of those presented by our national defense and space efforts.

Second, aerospace industry has had to adopt and adapt every aspect of industrial performance to these stringent requirements. Where personnel had to be motivated to absolute standards of performance-zero defects as one company calls it—devices for such motivation have been created. Where standards of reliability require environmental conditions of suprasurgical cleanliness, in which temperature changes and even human perspiration could not be allowed, such environmental conditions also were created. Where adequate metals or other materials were not available, they had to be invented; and for virtually all standard materials, new means of working and using them had to be devised. Production managers had to learn to live with requirements that called for machining tolerances down to millionths of For an idea as to the size of a an inch. an inch. For an idea as to the state of a millionth of an inch, try to visualize a pile of quarters three times as high as the Empire State Building in New York City. A mil-lionth of an inch would be represented by just one quarter. "Man-rating" the most complex equipment American industry has ever been called upon to produce had its impact on every aspect of manufacturing.

Third, it was necessary to evolve a whole new philosophy and modus operandi for the Government-industry partnership in the pursuit of its mammoth tasks. Never before had so large a segment of private industry worked for so long in such close proximity with the Government. No one on either side had a manual describing how much Government control was necessary to protect the public interest and how much freedom of action must be retained by the contractor in order to preserve the vital aspects of free Even today, no one can say with any exactitude just where the lines should be drawn in every case. But it has been established through experience and with growing recognition of the true values that a workable and efficient and productive system can be evolved that will get these jobs done, fully preserve the public interest, and yet promote the continued viability of free enterprise.

Finally, and perhaps most important, just by having to look these staggering challenges in the face and find a way to cope with them efficiently, a whole new approach—perhaps a whole new profession—has evolved. It is generally called systems analysis.

#### STSTEMS ANALYSIS

Systems analysis is not a new term. Many members of other industries will ask, "What do they think we've been doing in our industry?" Quite right. Many of today's industrial challenges require a high degree—compared to earlier times—of what may fairly be described as systems analysis.

But no industry geared to the commercial marketplace has had to face challenges of a technological complexity or size even approaching those which have become the steady diet of the aerospace industry. For that industry has had to move as far and as fast as science and technology would permit, given the pressures of national defense and space requirements. Moreover, the accelerating rate of scientific and technological advance has permitted the levying of national requirements of fantastic complexity. Lunar exploration, though perhaps the most dramatic of these, is but one such complex system.

What has all of this to do with the future of our great cities? What has it to do with

the role a civic-minded man who is a lawyer, a banker, a teacher, or a businessman, can play in his community's future? Simply this. Much of what lies ahead is no mystery. We know much of what the future will bring in terms of problems. We know they will be big, complex, and serious. And we know what many of them are. These problems represent the "givens." We know they will be there—and we know they will overwhelm us if we do not find the means to cope with them. What we lack, thus far, is conviction that there is a means of getting hold of them. They seem so staggering in their size and complexity, so far beyond the capability of any single institutional segment of the community, public or private.

They are not. The State of California has called on the talents of the aerospace industry to take the first step toward measuring these problems and analyzing them. Research contracts were let to that industry to study four key areas: transportation, pollution, information collection, and crime control. Governor Brown made these comments about the first of these contracts to be completed, the one on crime:

"The systems engineers put California in a laboratory, so to speak, and in just 6 months, they have documented many methods of dealing with crime they think could be improved. They believe that in 5 years we could rearrange our court procedures, improve our methods of predicting outbreaks of crime, change our approach to parole, and produce a more efficient system for dealing with crime at a lower cost." Governor Brown went on to say, "We intend to call this report to the attention of efficials in Washington, to point out its national applications, and to ask for financial help in pushing through the followup work that must be done to put this new systems approach into operation."

I do not mean to state or imply that only the aerospace industry can solve urban problems. The aerospace industry does not have a monopoly on modern problem solving or systems analysis techniques. However, the approach, the attitudes, the acceptance of the realities of today and the future as they are—not as we might wish they were—which have been brought about by the aerospace age are essential to cope with the future.

Despite all the gloom and doom about what faces us in the urban areas, the space age is going to be our greatest era here in the United States in all respects. The challenge of space has both emancipated our thinking and better equipped us to cope with problems of a new and greater dimension. This is the true fallout of the space age, not the new metals, the new techniques, the new processes that will make better automobiles and TV circuits. It is the confidence and determination to tackle the problems of the future positively, whether their size, complexity, or nature. Given the problems that face us, such emancipation, stimulus, and determination could not have come at a better time.

#### Budget's Brinkmanship

EXTENSION OF REMARKS

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. YOUNGER. Mr. Speaker, in the Wall Street Journal of Tuesday, January 25, Mr. Richard F. Janssen had an article entitled "Budget's Brinkmanship," in which he gives a very good analysis of

the recent budget submitted by the President as to its inflationary prospects. His article follows:

BUDGET'S BRINKMANSHIP—IT STEERS ALONG A NARROW ROAD BETWEEN ECONOMIC STIMU-LUS, INFLATIONARY DESPAIR

#### (By Richard P. Janssen)

Washington.—The Federal budget that went to Congress at noon yesterday, quite unlike all the others in the Kennedy-Johnson era, isn't intended to boidly spur the economy into ever-speedier expansion. It features tax increases instead of tax cuts, blocks Federal spending from carving out a bigger share of the whole economy, and boasts the skimplest deficit in 7 years.

Yet, this budget is the one that surely will send the economy galloping closer to the brink of inflation than any of its five Democratic predecessors.

What makes the crucial difference is that, thanks at least in large measure to the tax cuts and spending increases of the last few years, the administration has just about succeeded in closing the once-wide gulf between what the economy is actually producing and the potential that its manpower and machinery provide.

Once the economy comes in sight of this Camelot of full employment, it's treading into long-unvisited territory that holds not only the promise of unparallel abundance but the peril of manpower-barrel scraping, factory bottlenecks, and, consequently, ballooning prices and wages.

#### POISED TO PULL BACK

The peril appears sufficiently real, in fact, that authorities are already watching for roadsigns that will tell them if they must yank back on the fiscal reins. Should spending head up only a billion or two from what's now budgeted, probably nothing new would happen. "But if it's up by 3 or 3½ billion we'd have a real hard choice," one official frets. And a rise of \$5 billion would surely mean a rise in taxes.

If the administration weren't worried about the risks of plunging too rapidly into this long-sought realm, of course, it wouldn't be taking such considerable pains to avoid arriving with a final dramatic burst of speed. "The most present danger before us," Treasury Secretary Fowler said last week, "is the danger of economic access, not economic deficiency." In his budget message, Fresident Johnson found himself constrained to tell would-be bigger spenders that "even a prosperous nation cannot meet all its goals at once," and to assert that "inflation need not be the price of social progress; nor should it be the cost of defending freedom."

Thus, the administration is willing to attempt a hasty about-face on auto and telephone excise taxes, to ask Congress to make corporations pay up their income taxes more promptly, and to pull personal income taxes in more rapidly by scaling up withholding rates for middle and upper income groups. It's willing to stir grumping among air travelers by seeking a ticket tax increase, and to risk the political crossfire that's apt to pepper its budget bid for savings on such sacrosanct items as milk for schoolchildren.

But despite the revenueraising, the cost cutting and the unaccustomed words of restraint, the fact of the projected \$1.8 billion deficit shows that revenues aren't expected to quite match the growing outlays for the Great Society and the increasingly great war in Vietnam. A deficit there is still to be, when considering that the figure is preshrunk by the planned selloff of billions of dollars worth of stockpiled mortgages and metals. The Government still plans to spend \$6.4 billion more in the fiscal year starting July than it's spending in this one, bringing the administrative budget total to a record \$11.28 billion. An obscure account back on page 394 of the budget document, moreover, shows

that the new year's gross spending and lending by the Government (without the usual offsets of loan repayments and the like) will mount by \$12 billion from this fiscal year and by a much steeper \$30 billion from the last one, to a mammoth \$175 billion.

#### A LEGITIMATE QUESTION

There's always some question, of course, whether any budget that calls for more spending than taxing is one of restraint, and it's a question that officials recognize as legitimate. In his weekend budget press conference, Mr. Fowler was careful to say only that the budget is "moving in the direction" of exercising restraint on the economy.

Perhaps the best way to appraise administration intent on this score is to say that, instead of either positive stimulus or outright drag, it's aiming for fiscal neutrality. This shows up more clearly in the two alternative budget measures which economists generally consider a better guide to economic impact than the headline-getting administrative budget. The cash budget, which includes the big social security and other trust funds, actually projects a \$500 million surplus, and the national income accounts (which show corporate income taxes as they accrue rather than as they're paid) projects an equally modest \$500 million deficit.

But even this greatly watered-down injection of red ink, considering everything else going on in the economy, could conceivably prove too rich a mixture. Indeed, the budget itself cautions candidly that with the "proposed substantial increase in Federal spending added to the expected further strong rises in private investment and consumption," the 7-percent advance estimated for the whole economy in calendar year 1966 will bring it "sufficiently close to full employment of its resources to raise the threat of price instability."

And lately, both Federal spending and the whole economy have a way of surpassing the Government's forecasts. A year ago, the Budget Bureau was projecting \$99.7 billion of Federal spending for this fiscal year, a sum that's now seen as \$106.4 billion. Also a year ago, the Council of Economic Advisers was forecasting that gross national product in 1965 would grow by 6 percent; as things turned out, GNP spuried 7.5 percent. Mr. Fowler's forecast that overall prices this year will rise about 1.9 percent, or slightly less than the 2 percent of 1965, is already viewed as perhaps too comfortable an assumption.

## TAX INCREASES CONSIDERED

The prospect of bursting the infiationary bounds seems real enough that officials are already talking privately about the stern actions they might have to take. Even greatly favored civilian spending programs in the Great Society realm of health and welfare would suddenly become much more vulnerable, and rate increases in individual or corporate income taxes, or both, would come under very serious consideration. There's still a margin for budget bulges left in the economy, planners say, but it's much thinner than in other recent years.

Even without the need for any such fiscal actions being established, administration officials are starting to talk a harder-than-ever line to businesses about holding back on price increases. Significantly, it was Commerce Secretary Conner, openly unenthusiastic about "guideposts" when he moved in from the drug business last year, who told the Economic Club of Detroit yesterday that "the only reasonable course of action" is "not less ecoperation, but more cooperation and understanding between business and Government" at a time when the President sees that "prices and wages threaten to escalate to inflationary levels."

Mr. Connor denounced as "out of the question" the thought of falling back on laisser-

faire economic theory and accepting "the inevitable inflation" that would follow a
collision between an expanding economy and
growing military requirements. The other
option, "some form of legislative controls
over wages and prices," is one that nobody
wants, he said. He didn't denounce it as
"out of the question," though. Perhaps he
couldn't, when the administration is committed to a budget that's designed to keep
the economy galloping happily along the
brink of inflationary despair.

## What's a Billion Dollars?

EXTENSION OF REMARKS

## HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 31, 1966

Mr. RUMSFELD. Mr. Speaker, I think very few really understand the immensity of the \$112.8 billion budget of the Federal Government.

As was observed by Mr. David Lawrence in his nationally syndicated column of January 25, 1966, the Federal budget was well below \$1 billion in 1910. And the dollar at that time was worth four times what it is today.

The great depression of the 1930's apparently set the deficit multiplication program in high gear. We have been in that gear ever since.

In the interest of a better understanding of the meaning of the Federal budget, I commend Mr. Lawrence's column: [From the Washington (D.C.) Evening Star,

#### Jan. 25, 1966] What's a Billion Dollars?

(By David Lawrence)

What's a billion dollars? How many people, when they read about President Johnson's proposed budget for next year, can readily imagine what an expenditure of \$112.8 billion really means?

How many people are aware also that the United States not many years ago got along on less than one-hundredth of the sum that is going to be spent next year by the U.S. Government?

When this correspondent came to Washington in 1910 to write about governmental affairs, the Federal budget was well below \$1 billion. Thus, for the fiscal year 1911, expenditures amounted to only \$691 million and there was a surplus of \$11 million. The public debt itself, covering all the years since the start of the Republic, amounted to less than \$1.2 billion.

But the dollar had a big purchasing power in those days. In fact, expressed in terms of 1965 dollars, it was nearly four times as large as it is today.

as it is today.

Yet, \$691 million paid in 1911 for all the expenses of the Government of the United States—all pensions, all costs for the Army and the Navy, and all expenses in foreign lands, as well as the cost of operating the legislative expensive and indical hypersham.

legislative, executive, and judicial branches. The Federal budget, moreover, stayed well below \$1 billion until the United States entered World War I in 1917. While the annual expenditures rose to \$18.4 billion in 1919, the Federal budget steadily declined afterward so that in the fiscal year 1927, when Calvin Coolidge was President, the budget expenditures were only \$2.5 billion, and there was a surplus of over a billion dollars. the public debt, which had reached \$25.4 billion in 1919, was gradually diminished in the 11

years thereafter until by 1930 it reached a low point of approximately \$16.2 billion. The depression of the 1930's again raised

The depression of the 1930's again raised the public debt as the deficits multiplied. Then came the big expenditures for World War II, which left the United States with a debt of approximately \$359 billion in 1945.

The public debt since World War II has risen to \$320 billion. This has been due not to any major war—though the Korean war temporarily increased the debt—but to rising expenditures for armament and a series of unbalanced budgets.

Today, the defense budget alone as proposed for next year is to be \$58.3 billion. While \$10 to \$12 billion of this sum will be used for added costs of the Vietnam war, most of the money is appropriated to maintain large armaments in preparation for any third world war that may come.

third world war that may come.
Federal expenditures today, however, are large in nonmilitary categories. The Federal Government has undertaken to supplement the appropriations of the States and cities in many fields of human affairs. As population has grown, the Federal Government's intervention in the economic and sociological life of the country has increased.

But the basic factor—how to maintain stability in the purchasing power of the dollar—has been a dilemma faced not just in war years but in many of the peacetime years that have preceded or followed major wars. The purchasing power of the dollar has steadily gone down. Even in the last 10 years, the public debt has gone up from \$272 billion to \$250 billion, and the accumulated deficits of the last 10 years have been approximately \$47 billion.

Interest on the public debt alone now amounts to \$12.8 billion a year, which is more than 18 times what it cost to run the whole Government when this correspondent was first covering the White House.

So when there is talk of nearly \$113 billion for next year's budget, it is pertinent to observe that the dollar doesn't buy as much as it did 10, 20, or 40 years ago, and that the big figures in the annual expenditures nowadays reflect, to a large extent, the steady decline in the purchasing power of this dollar and an indifference to balanced budgets.

## New Cold War GI Bill of Rights

EXTENSION OF REMARKS

## HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1966

Mr. DORN. Mr. Speaker, today, I join my distinguished chairman and able colleague, OLIN TEAGUE, in introducing a new cold war GI bill of rights.

My recent visit to South Vietnam reemphasized to me the urgent need for this legislation. Servicemen in all branches of the service from private to General Westmoreland said this bill would boost the morale of our fighting men and is just and fair.

Mr. Speaker, the new features of this bill include a clarification of veterans preference rights, extension of wartime presumptions to chronic and tropical diseases, extension of medical care to nonservice-connected veterans, and payment of education and training fees for servicemen, who, after 2 years' service are still in uniform.

While visiting hospitals in Vietnam, I learned that over half the casualties suf-

fered by our servicemen are a result of hepatitis, malaria, and countless jungle diseases.

This new bill would retain the educational, vocational training, and on-farm training, job counseling and placement, and loan features of the bill which I introduced earlier this year.

I believe, Mr. Speaker, that this new bill will have a better chance of final passage because it will have more widespread support in the Congress and among veterans' organizations.

## Use of Nuclear Weapons in Vietnam War Is Inadvisable

EXTENSION OF REMARKS

## HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. HOSMER. Mr. Speaker, as the chairman of its Nuclear Affairs Committee, I have issued to the House GOP conference the following communication which may be of interest to others also: INADVISABILITY OF USE OF NUCLEAR WEAPONS AGAINST NORTH VIERYAM

Frequently Members of Congress receive letters recommending that atomic weapons be used against North Vietnam "to win the war." As chairman of your Nuclear Affairs Committee I have made an analysis of this proposition which concludes that this type of weapon is unsuitable for use under present circumstances.

The President and other administration officials have directly or indirectly indicated these reasons for not using such weapons in Vietnam: (a) Fear that this degree of escalation would cause North Vietman's Communist nuclear allies, the U.S.R. and Red China, to come into the war with their nuclears and a general escalation into nuclear world war III, could ensue; (b) reluctance to even talk much about atomic weapons use because it might impede the administration's drive for a nonproliferation treaty.

Reason (a) is an application of the "no threshold theory" which assumes that any nuclear weapons use, no matter how limited and discrete, will grow into a general holocaust. The theory is far from universally accepted. Reason (b) is an arguable assumption—the effect might be just the opposite.

Sounder reasons for rejecting use of atomic weapons at this stage of the war include—

1. Tropical forest areas are not particularly suitable ones for effective use of nuclear

suitable ones for effective explosives.

2. Urban areas of North Vietnam, even including Hanol and Halphong, are of insufficient size to indicate any advantage of nuclear over conventional explosives.

 Radioactive aftereffects of nuclear explosives are a nuisance which is unnecessary to create in order to accomplish desired military objectives.

4. Psychological attitudes—justified or unjustified—relating to nuclear weapons would provide opportunities for worldwide anti-American propaganda of greater detriment to our cause than benefits calculable from using them.

5. Even the use of conventional explosives against a backward, underdeveloped country like Vietnam has proved only marginally productive. Employment of a "bigger bang" cannot be expected to remedy this difficulty.

Of course, should Red China enter the war openly with large military forces, all beta would be off and the use of both strategic and tactical nuclear weapons most proabably would be indicated.

In order to make this study on nuclear weapons vis-a-vis the Vietnam war it has been necessary to make a careful analysis of the nature of the war itself, both in the north and in the south. This study reveals several major miscalculations by President Johnson and Secretary McNamara which appear to support charges that the U.S. affort is being seriously and tragically mismanaged at the very top by these civilian chiefs of our Military Establishment. This topic will be discussed in subsequent communications.

## Community College System Can Be a Model for Nation, Conferees Told

EXTENSION OF REMARKS

### HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. PERKINS. Mr. Speaker, the University of Kentucky under Dr. John Oswald is making great strides in bringing higher education to added thousands of young Kentuckians. The following story from the Louisville Times illustrates what scholars from the State of Florida think about our great community college system. I ask unanimous consent to insert the article in the Appendix of the RECORD:

[From the Louisville (Ky.) Times, Jan. 6, 1966]

COMMUNITY COLLEGE SYSTEM CAN BE A MODEL. FOR NATION, CONFERES TOLD

LEXINGTON.—A Florida college administrator says the Kentucky system of community colleges is on its way to becoming one of the best in the Nation and a model for other

Dr. Robert Wiegman, director of the Kellogg junior leadership program at the University of Florida, addressed some 300 delegates yesterday at a community college conference sponsored by the University of Kentucky here this week. UK oversees the community colleges.

Dr. Raymond Schultz of Florida State University praised the community college as offering a way to overcome the deficiencies of huge senior colleges. He said it offers a liberal education for students who do not plan to go on to a senior college as well as training students who do expect to transfer

Florida's community colleges had nearly 75,000 students last year, nearly two-thirds of its total college enrollment.

Wiegman noted that three factors indicate Kentucky's community college system is going to succeed:

The commitment to the program by Dr. John W. Oswald, UK president.

The selection of blue-ribbon people for advisory boards at each of the community colleges, bringing existing community leadership to bear on the problems they face.

The imminent construction of community college service centers at each of the existing schools.

The conference brings together directors, faculty members and advisory board members from the nine community colleges in the University of Kentucky system.

## Where Is L.B.J.'s Old Realism?

EXTENSION OF REMARKS

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. YOUNGER. Mr. Speaker, Mr. John Chamberlain's column in the Washington Post of January 29 emphasizes the change which has taken place in President Johnson's attitude from the time that he was Senate majority leader. This is a thought-provoking analysis worthy of study. His column follows:

These Days: Where is L.B.J.'s Old Realism?

(By John Chamberlain)

When Lyndon Johnson was bose of the U.S. Senate, he had an exquisitely tuned sense of realism. He knew when Wayne Mosss, the wild man of Oregon, could be driven in tandem with say, Duck Russma, of Georgia. He knew how to alter a phrase in a bill to win a kingdom. As Tommy Corcoran of New Deal days fame said of the old conjuror, "If a vute is needed, Lyndon can find it in a rathole."

The Presidency, however, seems to be doing something to well the eyes of the old master. He is pressing too hard to clinch victories that he has already won, and he is neglecting to push at some barriers that are ready for toppling.

The change was apparent in the emphases of his state of the Union message. There was all that strain to assure the liberal community that even if he had to mastermind an accelerated war in southeast Asia, there would be no important diminution in the push to the Great Society.

The net effect of this was to scare half the people into thinking that we are on the threshold of terrifying deficiency appropriations which will lead to a had inflation, while the other half was frightened into thinking that we must cut and rum in South Vietnam in order to save up enough money to purify the Hudson River and rebuild 30 major cities.

The old Lyndon Johnson wouldn't have risked the confusion and the dispiriting cross arguments that have resulted from promising to get a million and one extra things out of an economy that is already employing just about everybody who is capable of adding to the gross national product. Realism would have impelied the President to say that, since mass unemployment was disappearing, many of the problems of 1964 and early 1965 were vanishing, too. In other words, many of the Great Society goals were being brought within the reach of individuals for the simple reason that they now had money in their pockets to pay for what they needed, including beautifying their yards to please Lady Bird.

The old Lyndon would have taken all the credit in the world for the current prosperity. He would have gone on from there to congratulate the teenagers who had found jobs. Addressing himself to the school dropouts among them, he would have advased them to spend some of their new wages on make-up courses in night school, warning them against the day when the job market might shrink. And he would have said something reassuring about the advantage accruing to the Federal budget when bushnesses are in a position to recruit and train their own work forces without asking for Government assistance.

The old Lyndon Johnson would have had a word to say about the easing of the civil rights problem that must come when jobs are plentiful. He would have pointed to the experience of President Jerome Holland of Hampton Institute, one of the older Negro colleges.

Just 6 years ago, says Holland, "we had six major corporations recruiting our graduates. Last year, we had 150 corporations on our campus recruiting our graduates. And in 1968 we expect over 200. The youngster in themistry, for many years, either went into medical school or perhaps he was drained off into graduate school. But now, this youngster is thinking about Dow Chemical, Du Pont and Union Carbide. It's a wonderful feeling to an old-timer like myself to walk into an airport and see one of my students. I'll ask him 'What are you doing in the airport? Are you going home?' 'Oh, no, Dr. Holland,' he'll say, 'I'm going out to California to be interviewed by Kaiser Aluminum.' Things really look good."

With a Negro educator talking that way, the old Lyndon Johnson would still have called for more money for Operation Head Start in the slums. But he would also have noted that the Government need concern itself less with providing jobs for the tal-

As for Secretary of Labor W. Willard Wirtz's mean-spirited drive on foreign agricultural labor, the old Lyndon would have told him to relax and let the Mexicana take the farm jobs. This would permit native-born Americans to go to the factories, where they are needed.

Thinking it over, Lyndon Johnson didn't tell us about the real state of the Union. Could be that his mind was on 1935 and the days of the WPA.

### The Renewed Bombing of North Vietnam

EXTENSION OF REMARKS

## HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1966

Mr. PELLY. Mr. Speaker, a few moments ago the Democratic leadership announced to the House that President Johnson had ordered resumption of bombing in Vietnam. Of special interest to me was the statement that the issue of peace in Vietnam had been referred by the President to the Security Council of the United Nations.

I have had misgivings about resumption of bombing and still have with regard to acceleration of the war. Especially, Mr. Speaker, I do not understand the failure—indeed the opposition of our State Department to a policy of asking all free world nations to boycott North Vietnam. I have felt we should bar our ports to foreign ships that supply the enemy.

Furthermore, I have urged that Congress bring out all the facts by a full debate on the war.

But, today, Mr. Speaker, I must support our President. Right along I have said that if I had any doubts or uncertainties about what the United States should do, I would support President Johnson. He has the full facts; I do not.

So, Mr. Speaker, I join today the Members on both sides of the aisle who have spoken out in support of President Johnson's decision. He has done what he believed to be in the best interests of our

Nation. I know he has had a difficult decision, and I think the least I can do, as a Republican, is indicate a solidarity that exists across the aisle of the House of Representatives.

So I say to President Johnson: I support you. You have taken the course you believe best will protect and support our GI's in southeast Asia.

This, I say to the President, is a time when you need my support, and you have it.

#### General Westmoreland's Responsibility

EXTENSION OF REMARKS

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1966

Mr. DORN. Mr. Speaker, in South Carolina we are proud of Gen. William C. Westmoreland. The American people and the people of the free world are proud of his superb leadership and dedication to the cause of freedom. The following editorial appeared in the State, Columbia, S.C., January 22. I commend this splendid editorial to the attention of the Congress and the people of the country:

[From the Columbia (S.C.) State, Jan. 22, 1966]

AN AWESOME COMMAND

The commander in Vietnam does indeed work under fundamental policy as set in Washington, but the responsibility of Gen. William C. Westmoreland is nevertheless an awesome one.

Every decision cannot possibly be made in the White House and the Pentagon. The onthe-scene judgment of General Westmoreland is constantly under severe test.

One misjudgment, in this sensitive situation, could conceivably trigger the enlargement or internationalization of the conflict and possibly become a spark of destructive world war.

Even an incident, one beyond the control and vigilence of the commander, could set off the fires of general war and, in the circumstances, the blame can fall on the commander.

General Westmoreland is responsible not only for his men and the success of this stand against communism under most difficult circumstances, but he directs an effort which could easily and perilously expand itself and affect millions. This is a world responsibility. Out of it, and out of his able exercise of it, have come honors this South Carolinian richly deserves. His designation by Time magazine as "man of the year" is an outward manifestation of General Westmoreland's distinguished service to his country—and to the free world. Time makes its annual selection on an international basis.

Before this year's selection by the magazine was announced, Columbia's stations WIS-TV and WIS had determined upon the designation of General Westmoreland as its choice for "man of the year" in South Carolina

Undoubtedly, Americans generally join South Carolinians in their pride over the general and his conduct of his complex assignment. And if there should be any lack of appreciation and recognition elsewhere in the free world the negligence is

not excusable. He is directing a resistance to totalitarianism in the interest of free men everywhere, and the responsibility is staggering.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity chasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recoap.

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).
