### Philadelphia's Remarkable Mayor Tate

EXTENSION OF REMARKS

## HON. WILLIAM A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. BARRETT. Mr. Speaker, under adverse circumstances and unforeseen crises, Mayor James H. J. Tate took over the reigns of the Philadelphia city government.

During this period Mayor Tate was faced with the difficult task of administering a safe and efficient government.

Jim Tate is continuing to do an effective and productive job as you will see while reading the enclosed article entitled, "1966: Mayor's Aim Is Progress," which appeared in the Philadelphia Bulletin on Sunday, January 2, 1966:

1966: MAYOR'S AIM IS PROGRESS

(By Kos Semonski of the Bulletin staff)
Mayor Tate yesterday took an end-of-therear look at his administration and scoke of

its accomplishments, disappointments, and plans.

He was speaking as the city's acting mayor for 2 years, its elected mayor with 2 more years in office, and candidate for reelection

n 1967.

Looking forward he said:
"We want to implement the President's
Great Society program in Philadelphia on as

extensive a scale as possible.

"For this purpose, we have six task forces working—on housing, city beautiful, public

works, medicare, open space, air pollution."
The welfare department, Tate said, has a
medicare program nearly completed. It will
be ready for announcement early in January.

be ready for announcement early in January.

New programs for the elderly and added emphasis on commercial and industrial development are also in the offing, the mayor said.

OUT OF STEP

The city's economic growth alone will not be sufficient to provide the money needed to deal with Philadelphia's problems, Tate said. Success in solving them will depend upon the amount of Federal and State aid the city is able to get. One of the most significant acts of his

One of the most significant acts of his administration to date, Tate said, was the saving of the Philadelphia Navy Yard.

One of his greatest disappointments, he said, lies in the delays that have beaut construction of the \$25 million sports stadium to be built at Broad Street and Pattison Avenue.

"Every time the stadium situation seemed to be solved," the mayor said, "another debate broke out. I hope the latest one can be resolved quickly so as not to further delay construction."

#### THE HIGHEST OFFICE

Tate succeeded Richardson Dilworth as mayor. Dilworth was elected to the office when Joseph S. Clark, the city's first Democratic mayor in modern times, went to the U.S. Senate.

# Appendix

Tate became acting mayor in February 1962, when Dilworth resigned to run for Governor, a race he lost to Governor Scranton. Tate, president of city council at the time, stepped into the city's highest office. Here are some of his comments on the first 2 years:

"It was a time of transition. It was a time when I picked up the commitments of Clark and Dilworth, commitments designed to give the city progress," Tate re-

called.

"The immediate problem was to keep the city payroll from growing too quickly. We held down the number of employees and tried to keep the number down to about 30,000."

THE PROMISE

To do this, he explained, a "freeze board," headed by the mayor was established. The board acted to establish only jobs that were needed, Tate said.

"We had to cut back annual appropriations for some departments to make good a promise there would be no tax increase for 4 years," Tate said.

The cutbacks created new problems, Tate said, but helped to better the city's credit rating.

A year after he replaced Dilworth, Tate found himself faced with civil rights issues and civil disobedience.

Pickets ringed city hall, the new Municipal Services Building. They showed up at schools and held stidowns in the mayor's reception room and the offices of the managing director. The North Philadelphia riots followed in August 1964.

LAW AND ORDER

"It was the beginning of a change in the responsibilities of the mayor in Philadelphia," Tate said. "No longer was the mayor's job to oversee routine housekeeping. It became very obvious that the mayor's responsibilities were now to maintain law and order and to work to eliminate the causes of an extraordinary crime situation.

"A mayor also has to take an active interest in causes of mass demonstrations and group complaints. He has to be concerned with civil rights, welfare services, better living conditions, congestion and blight, proper balance in residential redevelopment, commercial and industrial development.

"We found it necessary to resurvey the police needs for Philadelphia and attempt to establish a crime prevention program. We had to begin building better police protec-

BETTER COMMUNICATIONS

"We put on 300 more policemen and found that this was not enough. Some police districts were thinly organised. Police cars were too slow. They were purchased in the past to save money, but they provided little efficiency for police.

"We have now replaced almost the entire fleet. We found it necessary to improve radio communications. These and other improvements required more money and other departments had to be out back. We had to maintain a sound financial structure.

"One of the casualties was the streets department which lost \$2 million in its 1965 budget. This hurt our street cleaning program. Men had to be put to work out of job classification.

"Laborers had to drive trucks. Others had to be upgraded. Many of the men were not getting paid well at all. This led to a survey out of which came a new plan."

Another difficulty of the first 2 years was city-county consolidation.

"We tried to carry out the Clark and Dilworth program for city-county consolidation, but were held back because certain real estate and political interests wanted to protect the board of revision of taxes," said Tate.

After his election as mayor in November 1963, Tate began pushing for acquisition of PTC by an authority. Dilworth had proposed acquisition by the city.

The Southeastern Pennsylvania Transportation Authority was established. SEPTA began negotiations and court actions to acquire PTC.

"We were aided by Dilworth who became counsel for acquisition on my recommendation," Tate said.

HARD WORKER

There were others who joined the administration forces. Tate singled out some of them but heaped praise on City Solicitor Edward G. Bauer, Jr., who, Tate said, "worked hard on the SEPTA project."

Other highlights of 1965 included the

Other highlights of 1965 included the preparation of plans for the extension of the Broad Street subway into the Northeast and to the navy yard in South Philadelphia.

One of the key projects is a tunnel con-

One of the key projects is a tunnel connecting PRR suburban station with Reading terminal.

A LOT OF PENANCING

In addition to acquiring FTC, SEPTA is to acquire the Had Arrow Lines and other lines which would fit into a mass transportation system serving five counties.

"To take over the railroad commuter lines and other transportation systems will require a lot of financing." Tate pointed out. "The railroads are for coordinating the commuter lines, but at the moment they are concerned with future profits. They also want to protect the interests of their stockholders. These are problems that have to be worked out.

"Philadelphia has extraordinary responsibilities. It must get at the cause of the economic ills. It must provide good shelter. It must provide jobs, cultural and health centers, open space. We have to eliminate fire hazards, cut down on crime, provide for open space and lead in a program against air pollution," he continued.

"We need the support of the people who not only think about these problems, but those who contribute to them," Tate said.

The past year, Tate said, was a "year of progress." The city got more money from the State. It had asked for \$37.2 million and received nearly \$30 million.

A new pay plan for city employees was established, and the police department was given more men and equipment with which to fight crime, he said.

During the year, council passed a record operating budget and, with it, increases in real estate and wage tages.

THE YEARLY QUESTION

Describing the saving of the navy yard from a Defense Department shutdown, Tate said:

"Thanks to the many people who worked, keeping the 10,000 jobs was one of the greatest shots in the arm Philadelphia got in more than a generation. "From year to year, we were faced with the question whether the navy yard was to be closed. Even some of the business interests gave up on keeping it open and suggested that it be turned into an industrial park.

"Now we have to move to increase the work force to 15,000 and then to 25,000 employees. I think that we can do this and this is one of the projects for 1966 and the future," Tate

said.

Other accomplishments, said Tate, were the sity's antipoverty program, completion of the Municipal Services Building, establishment of a port rehabilitation program, continued redevelopment, code enforcement and advances in industrial development.

#### A Salute to the Union of Burma

EXTENSION OF REMARKS

## HON. ADAM C. POWELL

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. POWELL. Mr. Speaker, on January 4, the Union of Burma celebrated the 17th anniversary of her independence. Today it gives me great pleasure to extend heartiest congratulations, belatedly since the Congress was not in session, to His Excellency General Ne Win, Chairman of the Revolutionary Council of the Union of Burma; to His Excellency U On Sein, the present Burmese Ambassador to the United States; and also to His Excellency U Tun Win, who will become the new Burmese Ambassador to the United States very soon.

The peoples of the world have long been fascinated with this beautiful and mysterious land. To her neighbors in India Burma is known as the golden peninsula because of the large reserves of uncrowded land and forests and plentiful minerals and gems. Rudyard Kipling expressed the Englishman's wonderment with Burma in his poem "Mandalay":

Come you back to Mandalay,
Where the old flotilla lay:
Can't you 'ear their paddles chunkin' from
Rangoon to Mandalay?
On the road to Mandalay,

Where the flyin' fishes play,
An' the dawn comes up like thunder outer
China 'crost the bay.

Burmese leaders characterize their nation's policy in international affairs as one of nonalinement, or the determination to resist entanglement in either of the power blocs of the cold war. A corollary of this neutralist posture is active support for the United Nations and its specialized agencies. Burma joined the United Nations in 1948 and has since worked to strengthen its many activities. She has participated in the UNESCO Research Center on Social Implications of Industrialization, in southeast Asia as well as in the Colombo Plan Council for Technical Cooperation, in south and southeast Asia. The specialized agencies to which Burma has given particularly outstanding service are the International Labor Organization and the Food and Agricultural Organization.

Symbolic of Burma's engagement in international relations is U Thant, Burmese citizen and presently the Secretary General of the United Nations. Formerly a Burmese civil servant, he is the first citizen from the developing nations to serve in this important post.

In addition to efforts to promote international harmony, Burma seeks forms of social, political, and economic order so that the Burmese people can enjoy national unity and economic prosperity. General Ne Win. Chairman of the Revolutionary Council of Burma, has sought to solve many of his country's problems through a plan known as the Socialist economic system for Burma. This project calls for the nationalization of such activities as industries, mines, and banks. Illustrative of this is the recent Government move to take over the administration of many civil hospitals and health centers in order to maintain uniform health service throughout the country.

Another example of the nation's effort to achieve economic well-being is a 5-year plan for construction of a hugh dockyard at Sinmalaik on the Hlaing River. Burmese students are being sent abroad for training in dockyard management so that when the dockyard is completed, there will be enough trained Burmese to run it efficiently.

Today we pause to send warmest wishes to the Burmese people and to reaffirm our belief that Burma's economic and political growth as a free nation is important to southeast Asia and to all the countries of the free world.

The Great Boston Power Play

EXTENSION OF REMARKS

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. YOUNGER. Mr. Speaker, I am not at all surprised that the locating of the Electronics Research Center in the Boston area has run into difficulties, as evidenced by the following story by William Hines, science editor of the Washingston Star, which was printed in the Reader's Digest of January 1966:

THE GREAT BOSTON POWER PLAY (By William Hines)

One of the more appalling chapters in the long annals of Government empire-building can now be told. It is the classic case of how two tax-fed bureaucracies, one supposedly concerned with slums, the other aiming at the moon, have made a bizarre rendezvous in Boston, Mass. It typifies what can happen in America today under the banner of technology and progress.

The action began in the fall of 1962 when EDWARD "TENDY" KENTHED WAS elected to the U.S. Senate on the alogan, "He Can Do More for Massachusetts." Shortly afterward, the National Aeronautics and Space Administration (NASA) delivered the more: the space

<sup>1</sup> William Hines is science editor of the Washington Star and a national syndicated columnist specialising in space exploration.

agency announced that it would construct a \$50-million electronics research center (ERC) in the Boston area. The center, which was to be one of a dozen test-andresearch installations, would in 10 years employ 2,100 persons and would boast a \$77million annual budget. The need, argued NASA, was urgent.

But some things didn't ring true. Urgent? No such center had been advocated publicly prior to the election. Further, numerous experts were quick to note that the job proposed for ERC could easily be carried out at existing Government installations. A Senate committee passed a motion eliminating the center, but the vote was quickly reversed amid reports of phone calls from the White House. Most curious, NASA never bothered to send a site-selection board around the country before picking Metropolitan Boston. With this knowledge, the House Space Committee in late 1963 decided that the center's need was not conclusively proven and held up funds until further site studies could be furnished.

To no one's surprise, NASA bounced back in February 1964 with a thick volume favoring Boston over eight rival regions. "The decision was not intended to be changed, and it was not changed," snapped Ohio Senator Frank Lausche. With the new NASA justification, the project was quickly nourished by a preliminary \$3,900,000 alloca-

tion.

Now events took an even more curious turn. Originally, NASA had proposed payment of \$3 million for 1,000 acres somewhere in Boston's suburbs. This would save the tax-payers the cost of a split operation, since there would be room within the center for the 400-acre testing ground that was needed. But, as summer approached, NASA was found to be hungarily eyeing an area called Hendall Square in Cambridge, directly across the Charles River from Boston proper.

ENTER URBAN RENEWAL

Crammed with industry and business concerns, Kendall Square lies at the back of the sprawling campus of the Massachusetts Institute of Technology, one of the world's leading scientific universities. Since World War II, more White House science advisers have come from MIT than from any other school. One of these is Dr. James R. Killian, Jr., its current chairman.

In the spring of 1964, three Boston urbanrenewal officials came to Killian to discuss a seductive idea. Why not clear out a 42acre tract in Kendall Square with urban renewal funds and sell most of the property to NASA for its electronics center? Not long after, behind closed doors, Cambridge Mayor Edward A. Crane and the city council listened to the same scheme, while Killian, whose name carries tremendous weight in

Cambridge, sat by.

The action quickened. On July 2, NASA Chief James E. Webb let it be known that he thought Kendall Square had the greatest potential of all the sites NASA had seen. On July 27, the Cambridge City Council decided to apply for Federal urban renewal planning funds for the 42 acres and to offer 29 of those acres to NASA. That very day, Urban Renewal Administrator William Slayton gave his preliminary approval to the site as an urban renewal project. And on August 19 MASA formally accepted Cambridge's offer on the condition that it "provide cleared land to NASA under the Federal urban renewal procedures."

It was a splendid arrangement. The glamour of a Federal space center would grease the way for urban renewal which, realistically, didn't otherwise stand a chance of tearing up this thriving industrial area. NASA had captured a prize piece of real estate at a bargain-basement price—roughly \$4 million—thanks to the fact that urban renewal

S

would pay most of the "real" cost of the land and would take on the expense and dirty work of removing the occupants. And the Cambridge-Boston area was going to have all that money spent there.

#### FLY IN THE OINTMENT

There was only one catch: nobody had bothered to ask the opinion of the 94 businessmen and their 3,500 employees who were on the Kendall Square chopping block. Most didn't realize what had happened until they read the newspaper headlines on August 21; "\$60 million NASA Plant To Be Built in Kendall Square." <sup>2</sup> Thus began a nightmare.

Arthur B. Kettle, Sr., executive vice president and general manager of the Austin-Hastings Co., Inc., a supplier of machinery and metal piping, was one of hundreds caught by surprise. He knew that his company could suffer a half million dollar loss just trying to move, and that wasn't the worst of it. Ninety-five percent of his orders had to be shipped within 24 hours for him to compete. Yet it would take at least 2 years to move inventory while trucks tried to run back and forth between two plants. "How many customers will we lose in a changeover?" he found himself wondering.

Then there was the problem of the company's employees. Austin-Hastings had a \$750,000 yearly payroll of 100 employees and a record of never having laid off a worker. Kettle knew that 3 out of every 10 firms uprooted by urban renewal never reopen. Other executives all over Kendall Square began to face similar harrowing realities.

Taken together, these taxpaying companies (NASA wouldn't pay a cent of taxes) compose one of the most productive industrial areas in Massachusetts. More than two dozen have been in business for 30 years, many for five decades. They have an annual sales volume of \$75 million, a \$40-million-plant-and-equipment value, payrolls of \$18 million a year.

But there was more to it than valued businesses. There were people—individuals who would suffer if the businesses moved or collapsed. Among them were refugees from previous urban-renewal projects in Cambridge and Boston who had relocated in Kendall Square in the certainty that it was safe. One filling station operator, for instance, had finally built up steady customers after years of sweat. "No one can compensate me for that," he says. Or take the olderly owner of a wrought-iron equipment firm—too discouraged and too far in the hole to make a second move because of urban re-newal.

#### VOICE OF DISSENT

Still, because NASA was coming to town, they were supposed to give in meekly. But the planners, politicians, and university titans had miscalculated. Shortly after Labor Day 1964, the businessmen of Kendall Square formed a Committee for the Preservtion of Cambridge Industry. Dr. John Brennan, vice president of the Electronics Corp. of America, was named chairman, and the battle was on.

"The use of the urban renewal statutes to allow NASA in here is a fiagrant distortion of the fundamental purpose of the law." Brennan declared. He and others were shocked, because, with 20 ares going to NASA (70 percent of the tract), the deal made a mockery of Massachusetts law, which says that urban renewal must give maximum opportunity to privately financed development. The dissenters also flercely contended that Kendall Square's industrial area, while no garden

spot, was far from a decadent area, as local urban renewal authorities desperately tried to prove. The single fact that the 94 concerns were doing \$75 million a year worth of business raised grave questions as to the morality of bringing in the Federal buildozer.

Confronted by organized opposition, NASA mounted a high-powered campaign to promote the space center. It set up temporary headquarters in an office building, partly lewred by MIT, next to the proposed site. And Edward Martin, a former Trody Kennezov aid, was hired to handle public relations. Added to this was a never-ending string of local speaking engagements by ERC officials. These talks coxed with juicy statictics. The center would bring 5,800 jobs to the area and \$450 million buying power. That didn't count codles of construction jobs over a 5-year period. And out of a \$35 million budget for operating costs, much would be contracted to local industries.

#### LET THERE BE BLIGHT

Meanwhile, the urban renewal forces moved in for the kill. Late in 1964, a press release from Washington announced a \$100,000 feasibility survey to determine whether Kendall Square was eligible for urban renewal. There was no pretense as to the outcome, however, the release sweepingly labeled the area as blighted.

As this campaign of disparagement went on, debate raged over how much the land taking and clearance would cost. The industrialists contended that the total expense could easily climb over \$40 million. Urban-renewal authorities stuck to a ridiculously low \$20 million figure. Only one thing was sure: U.S. taxpayers would ultimately have to pick up most of the bill, whatever it turned out to be. And the 400 acres of testing ground still had to be purchased somewhere in the suburbs.

In explaining just why the Eendall Square location was so vital, NASA outdid itself. The ERC should be within walking distance of MIT, it pointed out. An extra inducement was needed to draw some 450 junior scientists to NASA for work at \$6,000 to \$9,000 a year. With this location, said NASA, these young men could, if they wished to study for an advanced degree, get to graduate school classes at MIT and Harvard with a minimum of lost time.

To businessmen who saw generations of enterprise going down the drain, this was almost the last straw. Why, they asked, should 3,500 persons be uprooted to pamper 450 junior scientists?

It was all the more preposterous because a mere 3 miles down the Charles River from MIT the Defense Department's 119-acre Watertown Arsenal was in the process of being closed down. A simple solution was apparent to every rational mind; let the Army move out and NASA move in. But simple solutions are not Washington solutions. NASA rejected Watertown, giving as its main argument that the arsenal was too far from MIT. By private auto it is 10 minutes away; by public transportation (20 cents), no more than 20 minutes. No go: apparently the public transportation problemone transfer—was too complex. (For an electronics engineer?)

Representative Silvio Conts, of Massachusetts, angrily observed: "Any private business that bungled its affairs in this way would go bankrupt."

#### SMEAR TACTICS

In April 1965, another announcement issued from urban renewal headquarters. Surprise. The \$100,000 feasibility study showed that the Kendall Square site was an eligible urban renewal ares. So \$401,200 more was funneled out to begin survey and planning activities. Now a tax-fed smear of Kendall Square was a simple matter. Owners complained that urban renewal investigators tried to muscle their way into buildings with

city fire inspectors to look for defects in order to make the area appear decadent. One owner discovered a photographer on his property attempting to get an unfavorable angle on a warehouse behind his parking lot.

angle on a waterbuse season. The going was to get even rougher. During congressional testimony, housing and Home Finance chieftain Robert Weaver dropped the remark that if NASA didn't get the center in Kendall Square "they will not do it in Massachusette at all." Protesting businessmen suddenly discovered that friends and colleagues considered them unpatriotic and selfish for standing in the way of the space program.

#### MOMENT OF TRUTH

Finally, on August 30, a public hearing on the urban renewal plan was held in the Cambridge City Council Building. Just days before, NASA unveiled a model of the center's 26-story building, and one newspaper reported that space officials beamed like players on a winning football team. Then, at the meeting, ERC Deputy Director Albert Kelley, leading off for NASA, delivered the familiar sales pitch: the center would create at least \$460 million of induced income in the area over the next 10 years.

over the next 10 years.

Dr. Brennan arose. "Our companies exist now," he replied. Nathan Matz, president of Automotive Warehouse, stood up. "Not one of you has ever visited us," he told the council. "No one has taken the time to come in and see what this leaf.

in and see what this is all about."

Then an outraged citizen, John L. Warden, spoke: "Fixing up neighborhoods is one thing. But destroying the property of one person so that another may have it for his own use is immoral, unconstitutional, and detrimental to our city. If this sort of program is allowed, it will not stop until people who want to build new buildings at the public expense have taken every scre they happen to desire."

Minutes later, the council voted 6 to 3 in favor of the urban renewal plan. Another community had succumbed to the lure of the Federal dollar—and the space age. A month passed, and the property owners, which can be courted to take their case to the courts, made one last presentation to the Division of Urban Renewal of the Massachusetts Department of Commerce and Development, which must pass on all urban renewal plans. This agency held a hearing, but on the same day word was let out by urban renewal officials in Washington that Cambridge had received approval of \$15,330,000 for the Kendall Square project. The onrushing Federal bureaucracy had not even bothered to wait for the State's rubber stamp. (The State agency approved the plan on October 8, and the Kendall Square property owners have gone to court.)

"This approval," proclaimed the Urban Renewal Administration, "will permit the start of land acquisition, relocation of site occupants, and site clearance and prepara-

Then came these words: "The National Aeronautics and Space Administration has expressed interest in building a new space center in the major part of the area."

center in the major part of the area."

Surely that will go down as the understatement of the year.

#### Price Notice Bill

EXTENSION OF REMARKS

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. CELLER. Mr. Speaker, today I introduce a price notice bill, to require

The project's price tag had already risen by \$10 million.

<sup>&</sup>lt;sup>a</sup> MIT had already said it would be willing to help develop the other 13 acres set aside for private (nonindustrial) use.

companies in basic industries to give notice to the President of any proposed price increase, and to require a 60-day waiting period prior to the effective date of the price increase.

My bill would give both industry and Government time to review fully results that are likely to flow from a proposed price increase in a basic industry. It will provide a forum in which private interests and officials charged with Government responsibilities can have freedom to act.

Four times in the last 3 years the President of the United States has been confronted with announcements that companies in industries basic to the wellbeing of the entire economy were going to raise prices, in the face of and notwithstanding the concern of the President's economic advisers that excessive inflationary pressures necessarily would result. In 1962, the steel industry proposed such a price rise, and in 1965 the aluminum and copper industries tried to increase prices in an inflationary manner. In 1966, elements of the steel industry wanted a price hike in structural steel, which according to the President's economic advisers, would have been inflationary, and injurious to the economy. In each instance the President has had his busy schedule abruptly disorganized, and has had to resort to vigorous action to safeguard the interests of all of the people.

Such confrontations between the President and industry are undesirable, destructive, and are incompatible with orderly Government-business relationships. The bill that I am sponsoring will ac-

complish the following:

First. Provide a method to identify basic industries in which the private pricing action of one firm is of nationwide concern and is contrary to the in-terests of the public to avoid inflation. One standard relates total industry sales to the gross national product. Information needed to establish the precise percentage relationship on an informed basis will be secured during the hearings on the bill.

Second. Afford a waiting period, prior to the effectiveness of such a price increase, during which time the forces of both sides can take the matter to the public, and explore likely results of the proposed price increase. During the waiting period, if appropriate to the circumstances, hearings could be held by interested congressional committees.

Third. Panic buying of articles af-fected by proposed price increases would be avoided. After the completion of the waiting period, the price increase would be retroactive to the date of announce-

Fourth. Maximum freedom from direct Government interference in the private sectors of the economy is retained. The Government would not establish mandatory price ceilings or direct price controls. If the Government is unsuccessful in its efforts to cause a recision, the proposed price increase would be effective at the end of the waiting period.

Fifth. Administrative problems that attend direct Government regulation, and expenditures that would be involved in the establishment of a new Government agency, are avoided.

The text of the bill follows:

H.R. 11870

A bill to amend the Sherman Act, as amended, by requiring prior notification of price increases in certain industries, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DECLARATION OF POLICY

Development of the interstate and foreign commerce of the United States in certain basic industries has resulted in an undue concentration of economic power. Pricing actions of individual companies in basic in dustries have a direct effect on the public dustries have a direct enect on the public interest, and may be detrimental to the general public welfare. It is the intent of Congress in this Act to provide a method for private interests to be coordinated with the responsibilities of the Government in the pricing of goods and services in such basic

SECTION 1. The Act of July 2, 1890, as amended, commonly referred to as the Sherman Antitrust Act (15 U.S.C. 1, et seq.) is amended by adding a new section, to be sec-

tion 9 thereof, as follows:

"SEC. 9. No person in the industries designated in this section 9, or to be designated by the Secretary of Commerce pursuant to the provisions of this section 9, shall increase the price of goods or services manufactured or supplied by such person until 60 days after delivery to the Government official designated by the President of notice of the proposed price increase. Such notice shall include: (1) the name and address of the person making the price increase, (2) the basic in-dustry in which such person does business, and (3) the goods or services involved in the price increase. During said 60 days, the President may take such action as he determines to be appropriate. Unless the notice is withdrawn prior to the termination of said 60 days, the price increase that was the sub-ject of such notice shall be effective as of the date the notice was delivered.
"Within 60 days after enactment of this

Act, and annually thereafter, the Secretary of Commerce shall publish in the Federal Register a list of the basic industries that are subject to the provisions of this Act. The basic industries that are subject to the pro-visions of this Act are the steel industry, visions of this act are the steel industry, the atuminum industry, the petroleum refining industry, the copper industry, and the automobile industry, and such additional industries that are designated after the Secretary of Commerce finds there is compliance with the following:

"(1) Industries in which the combined sales of the four largest persons amounts to 75 per centum or more of aggregate sales in the industry, and aggregate sales in the in-dustry amount to — per centum of the Gross National Product, or

"(2) Goods or services produced in the in-ustry are included in the list of strategic and critical materials pursuant to the provisions of the Strategic and Critical Materials Stockpile Act (50 U.S.C. 98, et seq.), and

"(3) Such additional standards as may be established by the President.

"The provisions of this section 9 shall not apply in any industry in which the price of goods and services is subject to direct control by an agency of the United States."

SEC. 2. This Act shall be effective on and after 60 days after the date of enactment.

Averell Harriman: The Man for All Seasons

EXTENSION OF REMARKS OF

## HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very interesting article which appeared in the New York Journal-American of January 3, 1966, with reference to Ambassador Averell Harriman, a distinguished American who has unselfishly served his country for many years and who continues to serve now at a time in his life when other men would have laid aside the heavy burdens of public office. He is an elder statesman who is held in the highest respect throughout the world. He has accepted every challenging assignment offered to him without thought of personal considerations.

Ambassador Harriman served the great State of New York as Governor and has held numerous high diplomatic and Government posts. We are fortunate, indeed, to have available at this difficult period in our history a man of Ambassador Harriman's background, integrity and ability. It is my hope that God will grant him the strength to serve for many

more years to come.

AN OBSERVER'S OPENION-AVE: A REAL MAN ON A MAN'S ERRAND (By William S. White)

WASHINGTON .-- No matter where the pendulum of fate may at last come to rest in Vietnam-whether fixedly pointed to an honorable peace or to the flames of a larger war-the new year finds one of the old boys showing the young how duty is done at the center of the crisis

Averell Harriman, at 74 an elderly party by a chronological test, is putting one of this country's dearest cliche-myths, the cult of

youth worship, to a severe test.

The most roving of all our roving ambassadors, he was more or less endlessly airborne at the approach of the new year. In his somewhat dull but absolutely tireless and determined way, he was carrying climactic messages from President Johnson to national leaders half around the world in America's final spasm of effort to reach a decent and nonappeasing peace to end the Vietnamese

His journeys then would have exhausted most men of half his years. And beyond doubt there will be many other journeys be-fore this curiously ageless man lays down at last a public career that began before many of his diplomatic colleagues had put on their

first long pants.

His highest professional qualification is his record as President Truman's Ambassador to the Soviet Union, now a long time ago. Moscow he became the first Western envoy totally to sense—and to report back home with no trimming—that a thing we now call the cold war was about to be opened by the Communist world.

But his highest human qualification is something else. His very age is the strength of his career. For alone among current high officials he cannot possibly be suspected, by

So it is that all Washington knows one thing at least—that if he says something he believes it, purely and simply. He is not

running for anything.

He is a man, this Harriman, who was twice cruelly disappointed in politics. The first time was when he was denied the presidential nomination that Harry Truman had earnestly sought for him. The second time was when Nelson Rockefeller unseated him as Governor of New York.

Many would have curied up and quit when the last and unsuspected blow had fallen. Harriman, instead, stolidly came here to work in the State Department, in his grumpily quiet way, for President John F. Kennedy. He was a poor politician. His speeches,

He was a poor politician. His speeches, howeven written, were unconquerably pedestrian in his mouth, and in affectionate impatience he evoked the nickname of "Honest Ave, the Hair Splitter." For elective office, the knack was simply not in him. He became instead a most superior public official of the appointive sort. He had, in spite of himself, found his place. This is perhaps why he is able to show the younger men how duty is at last done.

Avereil Harriman is a good type to have around when the heat is on and they need a man for a man's errand.

## The Peace Corps and Protest Demonstrations

EXTENSION OF REMARKS

OF

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. GROSS. Mr. Speaker, during the recess, an article of an alarming nature came to my attention. The article concerns the Peace Corps and the recent student protest demonstrations on banning the bomb, integrating Mississippi into the United States as they refer to it, abolishing the State Department, or turning the Metropolitan Opera House over to folksingers. This article may not have been so disturbing had it not been for one detail—it appeared in the Peace Corps News, a semiofficial publication of the Peace Corps itself.

The Peace Corps News is published twice a year by the Peace Corps in cooperation with the U.S. Student Press
association, an arm of the leftwing U.S.
National Student Association, and the
Associated College Press. This publication purports to reach more than 1
million students through the Nation's
college newspapers.

d

t

13

m

11

he

th

Mr. Speaker, I hesitate to request unanimous consent that this article to which I have referred be included in the RECORD, for I dislike making it a part of the history of this body. However, knowing no other way that the text of the article may be conveyed to my colleagues, I ask unanimous consent that it be included in the RECORD:

SITING BORING? TRY PEACE CORPS

Have you been arrested five times in the last 5 months for sitting in?

Do you think we should ban the bomb, integrate Mississippi into the United States, abolish, the State Department and turn the Met over to folksingers?

The Peace Corps is just your cup of espresso.

Once you can sneak through the glorified college boards they use for selection (forge some good references and tell them you're from Berkeley and you're in), and endure the glorified Boy Scout training program (be stole), you're on your own, free to foment ferment and to organize community spirit to build ever higher standards of living and topple innerialists.

There's no business like revolution to stir your blood, give you experience in fighting injustice, round out your education (the educated man simply must know how to debeak chickens) and alienate the establishment. It's the way out of every identity crisis

It's the way out of every identity crisis (and-if you aren't having an identity crisis, the Peace Corps doesn't want you), the road to unification of the world behind a program of eradicating evil.

What have you got to lose but your anonymity?

## Independence Day of Chad

EXTENSION OF REMARKS

## HON, ADAM C. POWELL

OF HEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. POWELL. Mr. Speaker, I take great pride in calling to the attention of this Congress the 11th of January, which marks the national holiday of the Republic of Chad. This former colony of France achieved its independence on August 11, 1960, but proclaimed January 11 as its national holiday.

On this occasion, we wish to extend warm and personal felicitations to His Excellency Francois Tombalbaye, the President of the Republic of Chad; and to His Excellency Boukar Abdoul, Chad's Ambassador to the United States.

It is fitting that the hearty and industrious people of Chad should adopt "Unity, Work, Progress" as their motto. Since gaining their independence, they have kept these goals clearly in mind, and have constantly striven to make them a reality.

The Republic of Chad is the largest of the former French Equatorial African countries, more than twice the size of France. Its population, estimated at close to 3 million, is divided roughly into two main parts. The segment in the north is mostly Arabized while the group in the south is largely animist in religion but with Christians among the leaders.

Little has been written on the early history of Chad. Europeans did not begin exploring the region until the early 19th century, and at that time the trade in slaves was being carried on in various parts of the region. During the period when France was engaged in various military campaigns in west Africa, Chad was viewed as an area of great strategic importance. As a result, it was organized as a French military base area in 1900.

Chad became an administrative territory of the Federation of French Equatorial Africa in 1913. In the early stages of World War II, Chad was the first of the Prench territories in Africa to rally to the support of the Pree Prench, and served as a supply base for Allied operations in East Africa and the Mediterranean.

The year 1946 saw increased autonomy and French citizenship conferred on Chad and other dependencies. The enabling act of 1956 and constitutional referendum of September 1, 1958, set the basic framework for full Chadian independence and membership in the French Community in 1960.

Chad's economy, which is agricultural, has two strong pillars: cotton and stock raising. Cotton is the principal money crop and accounts for approximately 30 percent of Chad's exports. During 1964 imports were up 15 percent while exports increased by 11 percent. France continues to be the leading customer and supplier, although trade with the U.S.A. has also seen a steady increase.

Chad's landlocked position has thus far proved to be a major handlcap in overcoming some of her economic difficulties. This has resulted in the Government's placing highest priority on a rail link to the sea via Cameroon.

Judging from the facts I have mentioned, it would appear that Chad is well underway in its quest for "Unity, Work, Progress." Her friends in the Congress and the American people as a whole extend best wishes and congratulations to the Republic of Chad, her Government, and her hardworking people on their national independence day.

## Servicemen Should Be Able To Mail Gifts From Combat Zones Duty Free to Their Families in the United States

EXTENSION OF REMARKS

## HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1966

Mr. MIZE. Mr. Speaker, today I am introducing a bill to liberalize the dollar limitation on gifts which can be mailed duty free from foreign countries into the United States. I have drafted this legislation to apply specifically to our servicemen in combat areas because I know that some of the families of servicemen had to pay customs duties on gifts which they received from Vietnam last Christmas. I had one specific instance brought to my attention. I know there must be others.

An editorial in the Junction City (Kans.) Daily Union on Wednesday, November 24, called attention to the fact that the wife of a Fort Riley soldier, now in Vietnam, received a shipment of Christmas gifts from her husband on which she was required to pay customs duties. The editorial writer was upset, as well he should have been, and I became upset myself when I learned all of

grees of av

Beon

W

the details in a letter from the wife of the serviceman involved.

She received a Christmas package from her husband with two sweaters and a camera for her two daughters and herself. She had to pay a 421/2-percent duty on the sweaters and a 15-percent duty on the camera. All told, it cost her \$10.81 in customs duties before the mailman would release the gifts.

This is definitely not right. I have no argument with the imposition of customs duties on foreign imports, but I certainly think we should make an exception when it comes to the gifts which servicemen send home from combat

Most of the time these men must buy the gifts whenever they have a free moment. Their shopping is usually limited to the PX and they have to purchase what is available and not give too much thought to the customs duties.

Gifts valued under \$10 can be mailed from foreign countries under present regulations as long as not more than one gift is sent to any one person in any one day. This is all well and good for tourists who can take the time to be selective and can make separate mailings. It does not help a serviceman though, who has to make his purchases at one time and mail them in one package.

The bill I have introduced would increase this \$10 limitation to \$50 and it would apply only to servicemen in combat zones as designated by the President. I think the \$50 figure is a realistic one and will cover most of the gift purchases which servicemen make for their families at Christmas time or whenever there are birthdays and anniversaries to be remembered.

Mr. Speaker, this is a little thing, but it will mean a great deal to the members of the Armed Forces and their families. I would hope that hearings could be scheduled on this legislation right away. I am certain that the testimony will bear out the soundness of making this special concession for these people. I would hope that this change could be made so that another Christmas would not pass without making some provision for servicemen to send home duty free gifts on a basis which is reasonable and just.

## Eighty Years of Happy Marriage for Pioneer Sholbergs

EXTENSION OF REMARKS OF

### HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. LANGEN. Mr. Speaker, it was my privilege last week to send a telegram of greetings and congratulations to a couple in my congressional district who cele-brated their 80th wedding anniversary on January 5. These remarkable people are Mr. and Mrs. Ole Sholberg, of Fergus Falls, Minn., who represent the strength of the pioneering spirit that made this Nation so great.

The Associated Press carried a wire story on the remarkable accomplishments of the centenarian Sholbergs, and I would like to share these observations with you.

CENTENARIANS TO OBSERVE SOTH WEDDING ANNIVERSARY

PERGUS FALLS, MINIS.—Ole Sholberg, 103, and his little wife, Otila, 101, who live contentedly while 'waiting for the Lord to call us," will observe their 80th wedding anniversary Wednesday.

"We have never had an serious quarrel,"

said Mrs. Sholberg in a soft voice.

been a good man, and we have had a happy life. We still have a happy life."

Ole sat with his arm around Otila. He tried to smile but the attrition of his years made it difficult. His wife caressed his hand, and smiled for both of them.

#### HARD WORKERS

Sholberg has poor hearing and vision. His snoiberg has poor hearing and vision. His face is strong, marbled by the winter spray of the North Sea where as a boy in Norway he helped his father fish. There are lines too which somehow tell how he, as a frontier husband and father in western Minnesota, shielded his family from blizzards and forest

Families of the couple came to the United States 2 years apart. Sholberg's from near Kristiansund and Otila's from near Skarnes. Sholberg's from near

As a boy of 15, Ole customarily walked 16 miles day a to get the mail. One day he found a short cut, which took him past a country home where Otila Hill was picking wild flowers. On his way back home with the mail, Ole mustered courage to go to the

house and ask for a drink of water.
"It seemed that Ole got very thirsty," his wife recalled. "He came back again."

#### BUILT PIONEER HOMES

On January 5, 1886, 7 years after their first meeting, the two were married in the Hills' farm home. Sholberg borrowed \$100 as the down payment on a farm and hauled 60 loads of hay into town the first summer to pay for the lumber he used to build his first tworoom home. Ole was a good carpenter, and

room home. Ole was a good carpenter, and he helped build many other pioneer homes. The Sholbergs' six daughters and two some will be with the old couple to help observe the anniversary. They will include Julius, of Elizabeth, Minn., who celebrated his 55th wedding anniversary last year. On January 9, sitting in their tidy Pergus Falls home which Ole built when he was 80, the couple will listen by radio to a special

the couple will listen by radio to a special church service at Bethlehem Lutheran Church, another building which Ole helped build. The service will be dedicated to the Sholbergs and letters of congratulations, including one from President Lyndon Johns will be read. Otila said she will repeat for Ole any parts of the service he is unable to

#### LIVE WITH CHILDREN

Two of their children, Clara and the widowed Mrs. Frank Meder, live with the Sholbergs. Sholberg has never spent a day in a hospital. He and his wife get along on social security payments, and relatives say, the couple has never thought about asking for public assistance.

Mrs. Sholberg about in a wheelchair and can walk by holding onto things. She spends her time reading the Bible, daily devotionals and a Norwegian language news-

Her husband sleeps most of the time but

comes to the table for all his meals.

The Reverend Otto Dale, their pastor, says the Sholbergs are not afraid of death.

"They have had a long and glorious life," the Lutheran minister added. "They have given something good and lasting to this country. They are the people on whom this country was built.

"They have a beautiful marriage."

## Dividends From Korea-Nation's Aid in Viet War

EXTENSION OF REMARKS OF

## HON. JOHN M. MURPHY

OF NEW YORK

Mr. MURPHY of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues, an excellent article by Roscoe Drummond which appeared in the New York Herald Tribune of January 10, 1966:

DIVIDENDS FROM KORRA-NATION'S AID IN VIET WAR

#### (By Roscoe Drummond)

Washington .- It is 13 years since the nightmare of the Korean war. And what did it all mean?

Was it wasted strife or incalculable boon? What is the answer from South Korea today? The answer is that the American people

can be proud of what the United States did for South Korea and has reason to be grateful for what South Korea has done for itself. This is the record:

With the help of a dozen other nations, but primarily on its own, the United States turned back the aggression to the 38th paral-lel which divided the two Koreas.

Today, South Korea is secure, tranquil, and

It has a democratic government ruling by the consent of the governed.

It is carrying forward significant social re-

It is stable—so stable that, despite some demonstrations, it was able last year to establish diplomatic relations with its once

establish diplomatic relations with its once hated enemy and occupier, Japan, which is now providing it with \$800 million in grants and loans over a 10-year period.

South Korea is proving itself resourceful and increasingly self-reliant. It is making steady economic progress and, while U.S. aid has been substantial, the South Koreans

has been substantial, the South Koreana have been showing what self-help can really be. Their gross national product has been rising at the rate of about 8 percent a year; industrial production is up 15 percent. Grievously short of land to enable its people to be self-sufficient in food, the government of Chung Hee Park, by literally carving terraces out of mountains, is doubling its arable land. ling its arable land.

ling its arable land.

South Korean industry is making rapid strides. Exports are up from \$20 million in 1959 to \$170 million today.

But this is only half of it. These are some of the things South Korea has been doing for itself. These are the ways South Korea has been using its security from aggression.

And now what is the other dividend besides a free people secured from oppression? What is the earned dividend, which has not been asked, but which is now so welcome

been asked, but which is how to welcome and so helpful? South Kores's dividend to the United States is in South Vistnam today. Defended against Communist aggression by the United States, South Kores is today. helping the United States repel the Commu-nist sugression against South Vietnam. Not just with truck drivers and medical

Not just with truck drivers and medical supplies and behind-the-lines support. But with 15,000 battle-hardened South Korea freedom fighters trained for action in the jungles and rice paddies where the Vietcong are deadliest—plus 2,000 combat engineers.

Little South Korea, with a population of 28 million, is doing far more than any

other country except the United States and is contributing more fighting men per capi-ta than even the United States.

And why did the Government and Parliament of South Korea make this tremendous decision to commit 17,000 men to the defense of South Vietnam?

They know from their own experiences the crucial need to defeat aggression in South Vietnam—and are doing what they can to help.

## Neighborhood Youth Corps

EXTENSION OF REMARKS OF

## HON. BILLIE S. FARNUM

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. FARNUM. Mr. Speaker, under leave to extend my remarks in the REC-ord, I include the following resolution adopted by the Michigan State Board of Education, under date of September 24, 1965:

Resolution adopted by the Michigan Curriculum Committee on School Holding Power on September 24, 1965, requesting the Fed-Office of Economic Opportunity, U.S. Department of Labor, and the Mem-bers of Congress from this State to increase the number of available training spaces to a number sufficient to meet the purposes for which the Economic Opportunity Act of was conceived.

Whereas the Economic Opportunity Act of 1944 was approved by the Congress of the United States for the purpose of breaking the cycle of poverty; and

Whereas the Neighborhood Youth Corps a created as a result of this act to give financial assistance to youth to stay in school and to give needed work experience to youth

have left school; and Whereas the developing evidence indicates that this program has already achieved a

degree of success; and
Whereas an ever-increasing number of
youth were being involved; and
Whereas a retrenchment in an on-going program to which the Federal Government has already committed itself can only cause confusion and resentment on the part of the youth and the community; and

Whereas it will be difficult to replace staff laid off as a result of cutbacks should the program be increased in the future; and Whereas the U.S. Department of Labor has seen fit to reduce the number of training

spaces available to present on-going pro-grams for in-school and out-of-school youth in Michigan: Now, therefore, be it

Resolved, That the Michigan Curriculum Committee on School Holding Power here-by goes on record as favoring the provision for an adequate number of training spaces for both in-school and out-of-school youth who can benefit from them; and Be it fur-

Resolved, That the Michigan Curriculum Committee on School Holding Power re-quests the Michigan State Board of Education to use its good offices with the Federal Office of Economic Opportunity, the U.S. Department of Labor and the Members of Con-gress from the State to increase the number of available training spaces to a number sufficient to meet the purposes for which the onomic Opportunity Act of 1964 was conSalute to Cameroon

EXTENSION OF REMARKS OF

#### HON, ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. POWELL. Mr. Speaker, on January 1, the Republic of Sudan celebrated the 10th aniversary of her independence. As you are aware, the 2d session of the 89th Congress had not yet convened. However, I did not want the opportunity overlooked to extend to the people and the Government of Sudan the warmest felicitations of this country on this oc-Congratulations are therefore extended on this occasion to His Excellency Ismail el Ezhari, the President of the Supreme Council of State; and to His Excellency Abbash el Obeid, the Sudanese Ambassador to the United States.

Traditionally, most Americans anxiously await the end of an old year and look forward to the approach of the new year in anticipation of prosperity, progress, and peace. But January 1 has even more significance to the people of the Republic of the Sudan.

It was on this date in 1956 that this huge country was proclaimed an independent and soverign state. Comprising an area almost one-tenth of the African continent, this young and dynamic Republic is a land of more than 12 million inhabitants

However, it should be noted that while the Sudan is celebrating its 10th anniversary as an independent Republic, its historical legacy goes back very far indeed. Ancient Egyptian inscriptions and references in the Old Testament—to the Land of Kush—bear evidence of the Sudan's past greatness. During most of the 19th century, the Sudan was under Turkish-Egyptian subjugation with a short period of independence between 1885 and 1899. Following the joint British-Egyptian reconquest of the country in 1896-98, a new governmental system had to be devised. This resulted in joint Anglo-Egyptian administration or condominium, as the system was called.

The Sudan is a land of sharp con-trasts, divided between the economically developed Moslem North and the largely pagan and Christian underdeveloped South. However, strong efforts are being made to overcome these and other handi-

Sudan's somewhat small and scattered population and lack of known resources has forced the country's economy to remain primarily an agricultural one. Cotton is the mainstay of the Sudanese economy, and accounts for approximately 70 percent of the country's total exports and about 30 percent of the total world production of the long staple variety. The Gezira scheme, which developed a large portion of the south to relative wealth, has proved itself a model of agricultural achievement which other undeveloped areas conceivably could adopt.

Extensive irrigation could increase the chances for an even more diversified economy. Liberal foreign trade policies have aided in stimulating Sudan's exports and imports. Its world trade balance is satisfactory and foreign exchange reserves have steadily grown to over \$150 million. Annual capital formation is at approximately 10 percent and development investments are growing at a rate of more than 8 percent of the gross national product, which has been estimated at \$900 million.

Internal problems have not prevented the Sudan from taking an active part in international affairs, as its membership in the United Nations Economic Commission for Africa has demonstrated: in addition, the Sudan is an important member in such organizations as the League of Arab States, the Organization of African Unity, and the International Cotton Advisory Committee.

Though the Sudan has been experiencing what one might call growing pains there is little doubt as to the resolution and determination of this large and friendly country to meet the challenges and overcome the difficulties which beset

I am certain that the entire American people join me in extending warm and sincere congratulations on this, the 10th anniversary of the independence of the Republic of the Sudan.

## Hon. Myron Cowen

EXTENSION OF REMARKS OF

#### HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. KEOGH. Mr. Speaker, Ambassador Cowen was my good and close friend for more than 25 years. He was an out-standing diplomat and served his country with great distinction as Ambassador to the Philippines, Australia, and Belgium. He was also widely known in legal and business circles. Ambassador Cow-en's passing is a great loss not only to his family but to his many friends who were privileged to know him over the years and who profited by his wise counsel and experienced views. I mourn the loss of an old and dear friend.

[From the New York World Telegram & Sun, Nov. 4, 1965]

MYRON COWEN

Pifteen years ago the Communist Huks in the Philippines were starting off about as menacingly as did the Victoria subsequently in South Victnam. And financial problems in the Philippines were even more trouble-

But America, and the anti-Communist Western World, were fortunate to have as U.S. Ambaseador in Manila a skilled diplomat and businessman, Myron M. Cowen. Work-ing closely with President Eipidio quirino and Defense Minister Ramon Magsaysay, Mr. Cowen lent a most effective hand in helping

to solve both problems. The eminent Philippines stature in Asia today stems from surmounting those crises of 1950.

Mr. Cowen's death Monday night at 67, in

Mr. Cowen's death Monday night at 67, in Washington, will be widely mourned. His illustrious career included ambassadorships also in Australia and Belgium. He distinguished himself as a diplomat, lawyer, and businessman of consistent achievement.

## Americans Have Not Been Told About Communism

EXTENSION OF REMARKS

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. YOUNGER. Mr. Speaker, recently there came to my attention an editorial entitled "Americans Have Not Been Told About Communism," published in the St. John News of St. John, Kans. It seems to me that the editor, Clelland Cole, makes a very important point in his editorial about the lack of information furnished our people about why we are in Vietnam and the ultimate result which we expect. The editorial follows:

AMERICANS HAVE NOT BEEN TOLD ABOUT COMMUNISM

President Lyndon Johnson and his mighty machine evidently became so engrossed in powering an avalanche of new programs through the last session of Congress that they forgot to explain to the American people our reason for being involved in the war in Vietnam.

As a result there is a national apathy, and hardly one person in a thousand understands that we have any valid reason for the war; ask the next hundred persons you meet and see if any of them can really explain why it is mandatory that we stay in that war—and that we win it.

The American people simply have not been advised. There has been no particular political appeal, and no building of an image in the grisly business of explaining why we are pouring men into an angry meat grinder away off on the other side of the world, so that to-day there is bewilderment, anxiety, frustration, bitterness, and a seething sea of misunderstanding, plus a lack of knowledge.

Why are we in Victnam?

If we were ever to finally take a stand against total world communism, it had to be taken, but the American people have not been told. They have not been told that the Communist program of absorption, envelopment, and adoption has been, and is, moving ahead steadily, relentlessly, and that the Communist program by which schools, churches, cities, and nations, are enveloped leaves but few opportunities for challenge. The challenge was made in Vietnam. Should that area be lost, Asia is lost. Should Asia be lost, South America is almost certain to be lost. Africa has been lost for years. Should South America be lost, Australia, New Zealand, and the United States would be sitting ducks. And if the Vietnam struggle is continued long enough so that Red China can mount a formidable nuclear attack, America's peril would be too ghastly to even consider.

But America has not been told. Evidently L.B.J. and McNamara underestimated the power of the Vietcong and thought the brush fire could be stomped out at will, or they refused to take the American people into their

confidence to the point of telling the stark and shocking truth.

If America had been told, if all the highsounding spending programs had been chucked so that we could get on with winning the war—if Americans were told how effectively the Communists are moving against us, within our borders and without today there would be less draft card burning, less public apathy, less resistance, and a public patriotism which would place the Communists, the radicals, the demonstrators, the beatniks, and Red sympathizers in their proper perspective.

We are in a wicked, desperate, terrible war. We cannot win it on a manpower basis.

We cannot win it and carry on public squandering at home with a business as usual attitude in Washington and across the Nation.

Should we make the horrible mistake of letting it drag out until such time as Red China builds an effective nuclear arsenal, we have led ourselves and whatever friends we have left into the certainty of atomic warfare.

Political analysts, commentators of high repute, all agree now that for all his acumen in driving his will through Congress, L. B. J. has almost a total inability to cope with vast foreign problems. This, coupled with his failure to explain, frankly and honestly, the reasons back of the Vietnam war and the absolute need for winning it if freedom is to survive, has led to the pathetic public bewilderment today.

If we don't get ourselves united in this war effort quickly, tragedy of the most terrible proportions could greet us on the morrow.

## L.B.J.'s Funny Money

EXTENSION OF REMARKS

## HON. H. R. GROSS

OF TOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. GROSS. Mr. Speaker the appearance last fall of Lyndon Johnson's funny money prompted the following timely verse by Charlie Gebhard in his "Nowadaze" column in the Waverly (Iowa) Democrat:

#### WE'VE BEEN SLUGGED

Now listen, friends, and you shall hear Just why I'm crying in my beer. It really is a tale of woe That started many years ago.

My dad worked hard and saved his cash, And taught me not to do things rash. He said, "Now, son, please stay awake And wooden nickels do not take."

I shunned the poolhalls in my youth And booze and dames and things uncouth; Yes, I was prudent all my life And found myself a thrifty wife.

We worked together, side by each, Till wealth was nearly in our reach. But then there came the fateful day; That "two-bit move" by L.B.J.

For coins he ruled that silver's out And copper slugs he's spread about. He says they're just as good as gold; Farewell to honest coins of old.

Now I recall my father's words:
"Wooden nickels are for the birds."
New copper slugs seem worthless, too,
But what are you and I to do?

The day of reckoning is here; That's why I'm crying in my beer. Life's no longer milk and honey— Here we are with funny money.

#### Coast Guard Helicopter Rescue

EXTENSION OF REMARKS

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. WYATT. Mr. Speaker, immediately before Christmas the Coast Guard helicopter unit stationed near the mouth of the Columbia River, at Astoria, Oreg., proved once again conclusively the value and wisdom in establishing this squadron at this location.

Six people are living today who would certainly be dead were it not for the prompt, efficient, and heroic reaction of the Coast Guard helicopter squadron commanded by Comdr. Robert Lawlis.

A helicopter flying from the Shell Oil Co. exploratory ship off the Oregon coast experienced a loss of power and was forced to ditch approximately I mile west of Seaside, Oreg., and the six men aboard were soon in the water clinging to the floats of the lost helicopter. The temperature in the water was between 30 and 40°.

help

When the Coast Guard was alerted, surface vessels and the helicopter from Astoria were at once dispatched and within a very short period of time the helicopter located the six men. Four were immediately hoisted aboard and taken to the Seaside Hospital and the other two were saved within 20 minutes.

The survivors estimated that two of them would not have lasted in the water for more than 5 minutes and that the remaining four probably could not have survived for more than 20 additional minutes. Surface vessels certainly would not have located them within this time.

The rescue helicopter was commanded by Lt. Comdr. Robert Burns and piloted by Chief Aviation Pilot Clyde M. Causley. All of the rescued survived without serious aftereffects.

I would like to emphasize that these are not the first lives saved by this great squadron but this is the largest number saved at any one time and certainly the most dramatic rescue. This emphasizes the arguments made prior to the location of the helicopter squadron at the mouth of the Columbia River, and certainly if the squadron had engaged in no other activity since its formation, this one rescue would have justified its existence.

Likewise, I am pleased to point out that the Coast Guard command has heretofore pressed for and secured authority to creet a permanent hangar at the Clatsop County Airport which is even nearer than the present base of the helicopters near the town of Astoria itself.

This squadron presently has two helicopters and in normal course of events one helicopter is apt to be engaged operationally and it is always possible that one may be on the ground for repairs or normal maintenance.

It would seem to me that the proved effectiveness of this squadron would strongly justify the assignment of more helicopters to the squadron which has done such an outstanding job in search and rescue during the past many months.

We in Oregon salute Commander Lawlis, Commander Burns, Chief Causley, and all members of this fine Coast Guard unit in Astoria.

## Letters From Korea

EXTENSION OF REMARKS OF

## HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include the following two very interesting letters written from Korea by Jerome I. Udell, director of the Bank of North America, during a 2-month period while he was on an assignment to advise the Korea Trade Promotion Corp. in connection with their program to increase exports:

DEAR —: Here we are in Seoul, Korea, 3 weeks and 11,000 miles away from New York. In case you didn't know, or don't remember, I came here on a 2-month assignment to ad-vise the Korea Trade Promotion Corp. in its program designed to increase exports.

We came by way of Tokyo and learned, to our disappointment, that in the past 8 years since we were last there. Tokyo has lost a great deal of its Far Eastern quaintness and is being westernised at much too fast a rate

including a plethora of automobiles.

From the time our plane set down in Seoul and we were garlanded with beautiful flowers, life here has been delightful and busy. find myself saying often—"Home was never like this." Thanks to our friend, Mickey Most, and his wife, Eleanor, there was very little for us to arrange. We were immediately quartered in a lovely spacious house next to them on the Army post. They had engaged a cook/maid for us and I must blush when I say that the monthly stipend is 5,000 won, or a little less than \$20. She sleeps in, cooks, cleans and even polishes my shoes, hands me my raincoat, umbrella and rubbers as I leave. I mention these because within week of our arrival, we have had a steady downpour with brief, sunny interludes.

Unfortunately, the rains became so steady and heavy that the Han River overran its banks. It is reported that here in Seoul and throughout the rest of South Korea, 182,000 people had to fiee from their homes and a couple of hundred were lost. Everything possible is being done for the homeless. It seems unreal that within a few miles of where we live, there could be so much suffer-The heavy rains have now ended.

As you can surmise, the cost of living here unbelievably low whether we buy on the Korean economy or from the wonderful Army post exchange and commissary where adequate types of American foods or commodities are available. Dry cleaning a pair of pants costs 30 cents but, if you should think that is too high, it is probably due to the fact that they pick up and deliver. One can't help being struck by the remarkable efficiency with which the Army takes care of every-

thing from water purification to supplying a car and chauffeur for official business. Unlike Tokyo, Seoul is completely oriental

and fascinating

Last Sunday we drove about 100 miles south in the Most car through rural areas, visited a model village and a pilot hill-terrac-ing program, and then attended a conference of Korean businessmen at Onyang at which

Mickey spoke.

On the way down we saw endless miles of rice paddies with the farmers lined up, sometimes as many as 20 or 30 in a row, doubled over and ankle deep in water, planting rice seedlings. They were working when we went south and were still working at dusk when we went north. What is more, they were working at feverish speed in order to make up for the time lost during the 60-day record, long, drought. We were told that the whole community pitches in and takes one rice paddy at a time until all have been finished. In some cases, the Korean soldiers help to take advantage of the long-awaited rain.

The Koreans are energetic, bright, extremely affable, and clean. Thanks to the Agency for International Development (AID), the industrialization process is grow ing apace. In 1964 the exports reached \$120 million after starting several years ago from close to zero. The goal this year is \$170 million and, judging from the first 6 months, they will meet this goal and possibly exceed

We had dinner at a Korean home with the kind of setting of which you have no doubt heard. There were 20 courses and we ast on the floor. There was no sign of our host's wife. When we were leaving the host explainted that the the state of the set of the state of the plained that she was not at home—I guess because he was conscious of the fact that we do things differently in our culture. Maybe theirs is a better system. After two oriental meals—sukiyaki and Korean—I am positive I will never learn to like that kind of food.

The National Assembly has just opened. The Democratic Republican Party, which has a great majority, is advocating the normalization treaty with Japan. The Koreans have good reasons to mistrust and dislike the Japanese who ruled here with an iron hand from 1910 to 1945 and found many ways of humiliating the Koreans. In the first session, the Minjung the minority party, which opposes the treaty with Japan, mounted the trum and a free-for-all melee followed. Sophie wanted to attend a session but our Embassy strongly frowns on any American visiting the National Assembly.

Let me hasten to reassure you that I do not plan to write a book on Korea, but I thought that these few comments would be interesting to you. Our AID program has certainly proven itself and is continuing to prove itself here. In Taiwan, where the program has run for many years, they have finally reached the point where they can do without any further American aid.

I hope that this finds you in good health and enjoying the summer. It would be a real pleasure to receive a letter or even a postcard from you at the address below. All the best

Sincerely.

JEROME I. UDELL, ED/PE USOM/Korea

New York, N.Y., November 1965.

A SECOND LETTER FROM KOREA

Korea is now behind us. You will recall that I was sent there by the U.S. State Department's Agency for International Development (AID) to advise the Korean Minister of Commerce and Industry in connection with the operations of the Korean Trade Fromotion Corp. (Kotra) and its effort to increase Korean exports. After spending 12 weeks in Korea, mostly in Seoul, a city of 3 million people, we learned a little about the country. This second letter from Korea is

inspired by the numerous requests for additional information that followed the first and by my preference for writing rather than This can be talking about our experiences. read at your leisure, if you wish to. Make allowances for the fact that I was afflicted, as are many others, with the tendency to be-come highly protagonistic in similar circumances. Many of the thoughts are Sophie's. There seems to be a widespread haziness

about Korea, a haziness in which I shared until I went there. Many have posed such questions to me as—"So you speak Chinese now?" or "How did you enjoy Vietnam?" or "Tell me about your stay in Japan." Most people don't know that Korea is a peninsula bordered on the north by Manchuria and Siberia and separated by seas on its east from Japan and on its west from Red China.

Little is known about the antiquity of the Koreans, except that their origins seem to be similar to that of the Japanese. language is their own, known as Hongul, for language is their own, known as hongui, row which one of the rulers had some learned men create a special alphabet. Korea pre-viously was called Chosun, which means "Land of the morning calm." The coun-try was many times the victim of attacks by neighboring countries, with the result that it adopted a policy of rigid seclusion and it adopted a policy of rigid sectuation and became known as the hermit kingdom. It was invaded in the 12th century by the Chinese, who established a loose suzerainty. Thereafter, under native kings Korea developed a high degree of civilization. For 1,300 years they were ruled successively by the Silla, Koroyo, and Yi dynasties.

We hed the viscent of the contraction of the place of the place

We had the pleasure of meeting one of the last living male descendants of the Yi family. At one time called prince but now known as Mr. Ku Yi, he is an architect graduated from M.I.T. and is married to a delightful, bright American woman. The Government has provided quarters for them in a building on the grounds of an old palace, but they don't have the comforts of a USOM home. The Ku Yi's lived in the States but with the incapacitation of his father he returned to Korea as head of the family, in keeping with Korean tradition.

Korea never emerged, as Japan did, in the mid-19th century. Nor did it have a chance to emerge in this century because it was part of and under the domination of the Japanese Empire from 1910 to 1946. It is only since the end of World War II in 1945. and realistically since the end of the Korean civil war in 1953, during which the whole country was tragically devastated, that we have begun to learn more and more about the country. For those who want to know more about Korea and its people, I recom-mend reading a book which I found inter-esting, Pearl Buck's "Living Reed," depicting so well the life in Korea and the struggle for independence. Korean names represent a peculiarity of the nation. It is said that if you drop an object from a window anywhere in Korea it would land three times out of four on a Lee, a Kim or a Park. Lee, by the way, can be spelled Li, Yi or Rhee; Park can likewise be spelled Pak or Paik.

Korean export products include a large ariety of manufactured consumer goods which run the whole gamut from slippers, shoes and other apparel to bicycles, from textiles to pianos, grass wallpaper, radios, sewing machines and handicrafts; also canned marine products, minerals, agricul-tural products and a host of others. The chief of the Asian office of America's largest chainstore came to Seoul for 10 days to investigate the market. I wish you could have heard his rhapsody of praise for Korean

The quality of Koreai workmanship and materials is generally high and prices are extraordinarily low. One good reason for this (I guess it isn't so good) is that workers here earn from about \$11 to \$36 per month with the average about \$21. In many in-

dustries they work 11 hours a day, from 8 a.m. to 8 p.m., allowing an hour for lunch, 7 days a week, except that they get two Sundays off each month. This will help you to understand why the values are so appealing. It's no wonder, therefore, that exports have soomed from \$23 million in 1960 to \$120 million last year. They will reach \$170 million this year and there is no question that they will continue to rise sharply.

Twelve weeks of intensive work resulted in a 41-page report to the Korean Government on how to increase exports. Though I worked many Saturdays and Sundays, the change in my activities and surroundings made it something of a vacation. We lived in a very attractive five-room house on the USOM Post. In the evenings on the way home I was able to stop regularly at the 8th Army Officers Club for an outdoor swim, which I enjoyed while gasing up at the mountains that surrounded Seoul. It is said that you cannot stand anywhere in Korea without seeing a mountain.

A word about the personnel of USOM, which represents the AID agency operated by our State Department. These American nean and women, with rare exceptions, are sealous, dedicated and able, fully on a partial the control of the contr with those in private industry at home. They provide the technical and administra-tive guidance needed by Koreans in various fields, including government, agriculture, minerals, marine products, and a whole variety of consumer products. They are pursuing a unique way of life and, with an sional break for home leave, are rotat to places like Nigeria, South Vietnam, wan, and many other far-off countries. Talntitled to great admiration because they must in the nature of things make sacrifices must in the nature of things make sacrances and cast off home ties and friendships. There are compensations, of course, as they meet a great many interesting people, Korcan and others. By way of example I might mention Mrs. Louise Yim, the president of the control of the course of Chung Ang University, formerly Minister of erce and Industry under the late Syngman Rhee. Mrs. Yim has been somewhat westernized so that dinner in her home was served on a table, although the food wa entirely Korean. On one evening at a friend's home we had a very interesting presentation by two outstanding representa-tives of the U.N.'s World Health Organizatives of the U.N.5 world Heaten Organisa-tion, Dr. Liu Huang whose wife, Pearl, was, like him, Chinese and Dr. Harold van der Wall and his wife, Irene, both Ceylonese. On another evening we met Mr. Roy Lucas, Director of the United Nations in Korea, whose very beautiful Chinese wife is British whose very beautiful chinese with Mr. chul Sung Lee, Deputy Minister of Commerce and Industry, a brilliant, homespun man whose mind seemed to work at an exceptionally swift pace. His charming wife and lovely daughters made good company and were rapidly assimilating some Western customs. They took a fancy to figs and some other refreshments served them which they had never eaten before. The Minister him-self, Mr. Chong Hoon Park, with whom I es, was a highly cultured man several tim and a man of keen perception. There were many other interesting people including members of the USOM staff.

Total United States aid to Korea since 1946 will reach more than \$6 billion. I think this includes expenditures for the civil war. In 1965 grant aid has been reduced to \$72 million plus about the same amount in U.S. surplus foods and loans, and it is expected that the grant aid will be reduced further next year. I know all the harsh things that have been said about our foreign aid. It is time we were reminded that such aid restored many countries in the Far East and elsewhere nearer to self-sufficiency. Too often we talk about the faults of our efforts and forget the signal successes. People often wonder whether this aid reaches the right people or

finds its way only into the hands of the upper crust. One of the major purposes of for-eign aid is to help people help themselves and I firmly believe that this has been accomplished even though there have abuses. Aid funds cannot simply be handed out to the needy. They have been used in Korea and elsewhere under USOM guidance for building such things as irrigation pipes. powerplants, and factories. In the area agricultural research, USOM assistance is directed toward improving the rice crop and the quality of silk yarn, as well as to diversify the types of crops grown. Large holdings of absentee landlords have been broken into small farms for the benefit of the rural population. population. They are regrettably too small to permit the use of the most modern agricultural machinery; however it has just be reported that despite a record drought, ended by record floods this past summer, South ean farmers achieved a bumper harvest Greater know-how, improved fertilizer, and better tools can be credited with this result. It is confidently expected that Korea, hither-to troubled by a food deficit, will in the near future be self-sufficient in food.

The Koreans are a highly cultured people. Some 50 years before Gutenberg, a Korean movable type. Literacy is exceptionally high. This culture is expressed to-day by an abiding desire on the part of nts to have at least one membe family get the benefits of higher education. This is not easy because practically all of the universities are privately owned and operated for profit. While the tuition fee is nominal, according to our standards—it could be \$75 a year—it represents a great sacrifice to the Koreans. In the city of Seoul alone there are 16 universities and ey can't begin to accommodate all the students who would like to attend. Middle and high schools also charge tuition fees. Unfortunately, once graduated, the Korean has trouble finding a job that is culturally suitable and that pays adequately. One GI told me that in his compound a group of his fellow soldiers employed 14 houseboys to whom they paid \$18 a month each. Some of these houseboys have baccalaureate de-

In a lighter vein, we laughed many times about the universal practice of Koreans to say yes where we would say no. A conversation might run something like this: "Have you any bananas today?" "No." "Oh—you have no bananas?" "Yes." We came to the conclusion that whoever wrote "Yes, We Have No Bananas" got his inspiration in Korea.

The average per capita annual income is now \$95; wages run as low as 500 won or \$1.70 a week. Good pay for executives in manufacturing or administration posts averages about 240,000 won a year, or \$900. Despite the low-income rate, there is no sign of the acute hunger that comes with dire poverty. True there are many children begging in the streets of Seoul, at the instigation of their mothers, but they don't have the kind of swollen bellies we have seen in other countries where starvation was the order of the day. Even the poorest seemed to dress neatly. Both men and women were wearing clean, starched clothing and they were good to look at. One doesn't know whether the same impression would be created during the colder months. On many an occasion I have had a summer opinion of a city changed on a winter visit. Seoul has its share of deplorable slum areas and unfortunately the government is not in a position to do much in the way of welfare aid. Private lenders charge whatever the traffic will bear and this could run anywhere from

Private lenders charge whatever the traffic will bear and this could run anywhere from 60 to 100 percent per annum. In order to make loans more readily available at the banks, the National Assembly in August raised the legal maximum that the banks may charge from 20 to 36 per annum. This

doesn't mean that everybody pays 36 percent to the banks. The prime rate is much lower for top credit risks and only 6½ percent for loans against foreign letters of credit received to cover export orders. The sharp increase in the bank rate has, at this writing, already begun to accomplish its purpose. It has attracted to the banks a huge increase in short and long-term savings accounts—which earn interest up to about 30 percent a year—and has thus produced important new sources of capital for economic expansion. The higher interest rate on deposits has also, of course, attracted funds from usurious lenders. Since the beginning of 1964 the exchange rate has been quite well stabilized. In the past 6 months it has not varied more than a few won up or down, 270 to the dollar.

We happened to know a young American foreign exchange student who was living in a Korean home. He came to dinner one evening and, at our invitation, brought with him the 19-year-old son and 17-year-old daughter of his Korean hosts. This was their first experience in a Western-type home; they were very shy and ill at ease, sitting on the edge of their chairs. We were told that they don't address their father directly at any time. If there is a question to be asked, they transmit it through the mother who gives them the answer. Marriages are arranged by the parents and this seems to be accepted by the children. At least that's what we were advised. However, we had a very attractive Korean maid by the name of Kyungsan. She returned one Sunday evening from a visit to home and we found her in tears. father had informed her that she was to be married in the next couple of months. She knew the young man slightly. He lived in Pusan, way off on the southeast coast of

In Seoul, as well as in the other places we visited through the country, we saw surprisingly few older people, and most of these were at work in the rice paddles. At a concert given by Arthur Fiedler in Seoul, the audience was probably 98 percent young people under 30. The huge theater was filled to overflowing. I was informed that 50 percent of the population is under 16 years. No doubt this is due, in part at least, to the decimation of the population in the recent civil war and to the high birth rate that followed.

Those Koreans, to whom we spoke, seem to feel that the United States is doing a good job in protecting them from the incursion of communism, and they like this. Just the same, they point out that the United States of America is not altruistic, but is in Korea for its own specific purpose of preventing the apread of communism. What some resent is apread of communism. What some resent is the fact that we are encouraging ties with Japan for whom the average Korean has an intense dislike and fear. The normalization pact with Japan was passed by the National Assembly and will, when ratified by Japan, restore trade and other relations between the two countries for the first time in 55 years. While we read reports of some 10,000 students demonstrating on university grounds and in front of the National Assembly on August 25, we didn't see any of this. We were asked by USOM to avoid these areas and were requested not to attend any National Assembly ssions at any time for fear there might be an incident. The ROK troops and the police have been trained to break up these demonstrations. Tear gas and clubs are rarely used. The technique is to isolate a segment of the mob at a time and haul them away. On August 25, 715 students were arrested and hundreds were injured, including demonstrators, police, and soldiers, but the injuries were minor. Those arrested are almost all immediately released.

The United States has approximately 55,-000 troops in South Korea. Most of them are, understandably, lonesome, particularly those who are stationed in small towns where entertainment and diversion are limited mostly to what the Armed Forces can provide—and they make a magnificent effort to satisfy such needs. Even in Seoul communication is hampered by language and this frustrates the GI's. The result is that they are not very laudatory in talking about Korea except for those who have been there

long enough to change their attitude.

There has been an appreciable amount of intermarriage between American troops and Korean girls who, with their slender builds, gleaming white teeth and fine features, are, for the most part, quite attractive. Unfortufor the most part, dute attractive. Unfortunately, there have been some cases of abandonment of wives and children when the soldiers return home. Personally I don't think these cases are as widespread as some people do. There is a feeling of antagonism toward children of mixed blood. Several organizations have done an excellent job in trying to keep families together. One in particular is called the foster parents' plan. This organization selects a needy child whose mother, a widow, has several other children mother, a widow, has several other chuters to support. These are widows who don't want to see their families broken up and who go to work to preserve their homes. The foster parents' plan obtains for each such child a private contribution of \$15 a month which, together with the widow's earnings, is enough to support the entire family.

These families are visited by case workers rness families are visited by case workers regularly. The donor pays each month so that if a family is dropped for some reason, the contribution ceases and it can be used for another family if the donor wishes.

Korea has its version of Geisha girls, called Korea has its version of Geisha girls, called Kisaeng girls. I was invited to quite a few of the Kisaeng parties but attended only twice—largely because of the language prob-lem, partly because of the Korean food, which I didn't like, and perhaps because I am a year or two too old for the Kisaeng girls. Actually I didn't find them as attractive as many other girls I saw. The Kisaeng girls sang and played a special kind of musical instrument, but I will take Mary Martin or Carol Channing instead.

hem larly We had the opportunity to make many excursions outside of Seoul, sometimes in connection with my work and other times on weekend holiday trips. There are palaces and temples to be seen almost everywhere but when I found most intractions we are but what I found most interesting was the opportunity to meet with the people, talk with them—mostly through interpreters— and observe them. Wherever we went we found beauty in the mountain scenery, the landscape and the traditional Korean elather

In Taegu we were taken on a tour of one of the most modern worsted textile mills I have ever seen. It is a huge plant with over a dozen buildings arranged so as to provide a perfect assembly line flow for the various The equipment is the finest and in large part the most modern. The cleanliness of the buildings struck me wherever we went. You could virtually eat from the floor. In this particular plant there are 2,000 girls and some 600 men who live in dormitories provided for them, as well as residences for a few hundred married men and their families. Married women are not permitted to continue to work in the factory. Employees are provided with lunch rooms, beauty parlors, sewing rooms, television rooms and a great many other conveniences.

As you may recall, there is a demilitarized zone called the DMZ at the 38th parallel. It crosses Korea for a distance of 151 miles. It dwarfs the Berlin wall. Parties to the truce meet here at the call of one side or the other. The particularity is the Atlanta. the other. The participants in the Armistice Commission are representatives of the United Nations on the one side, and the North

Koreans and the Red Chinese on the other. We made it a point to visit on one of the days when a meeting of the Armistice Commission was called by General Yarborough who heads the U.N. component of the Commission. We were told that his predecessors had allowed the Communists to make vicious and mendacious accusations and had replied with only polite denials. The Communist charges of truce violations, over the 12 years, have exceeded 3,000. Of these the U.N. component Commission has acknowledged some nominal number—perhaps 50 over the period. Accusations from our side have been limited. The Communists have admitted two violations in all.

General Yarborough has changed tactics to the extent that he doesn't hesitate to de-nounce the Red charges as lies and he seizes every opportunity to mock them and their One of his techniques is to speak facetiously of our side as "imperialist warmongers" thus attempting to deprive them of their favorite name-calling practice. I think he could find a more delicate way of calling them liars. It was my feeling that he was, at least in part, descending to their level and could have been equally effective without any loss of dignity or forcefulness.

When we arrived near the DMZ there was an air of tension. The roads were lined with barbed wire and there were warning signs on the side of the road that the area had been mined We were cautioned not to talk to the North Korean guards, who appeared to me to be a sullen and unhappy group.

These meetings have been going on for 12 ears, the longest cease-fire in recorded history, and no end is in sight. Nor will there bu any end until the United Nations and Peiping get together on a solution. The principals meeting at the DMZ have no authority, and what they say to each other seems aimed at propaganda purposes. It is a travesty on human intelligence that this sert of thing can continue for such a long period, and it has degenerated more or less into a namehas degenerated more or less into a name-calling game. The only happy note about it is that both sides keep talking rather than shooting. There is absolutely no contact between North and South Kores, either by land or sea; no travel, no communication, no reuniting of families—just a biank wall. The East and West Germans at least have an opportunity to communicate and visit; and the East Germans even have an occasional chance to escape. Compared to this the DMZ is a water, air, and land proof closure.

Our experience in Korea will linger long in our minds as a very rewarding one. It is a country that is growing and taking its place in the world. The Koreans are genuinely appreciative of the help they are getting, and this is at least one instance where there is a minimum of traditional resentment against the benefactor for helping. Rather there is much gratitude.

We were tremendously impressed with the spirit of sacrifice and hard work that is evident among Koreans at every level and on all sides. Making due allowances for AID help, the job that is being done should be called Operation Bootstrap. Korea can properly be Operation Bootstrap. Korea can properly be compared to a chrysalis that has broken out of its cocoon and is flying higher and higher with ever-increasing strength. Foreign vestors are finding appealing opportunities in Korea, and, as results become known, the of these investors ought to grow continually.

If I should be asked again next year to fill a temporary duty assignment in Korea or elsewhere, the chances are that I would gladly accept, putting it somewhat as Eisenhower did—if selected, "I will go to Korea."
And now I'm back in the thick of corporate acquisitions and finding it fascinating.

JEROME I. UDELL.

## Macon Pays Last Tribute to Athlete

EXTENSION OF REMARKS

## HON. ROY A. TAYLOR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. TAYLOR. Mr. Speaker, I recom-mend to the attention of my colleagues an article entitled "Macon Pays Last Tribute to Athlete," appearing in the Asheville Citizen, Asheville, N.C., and written by John Parris. This article shows a deep respect and affection between the races in western North Carolina which much of the Nation does not understand.

The article follows:

MACON PAYS LAST TRIBUTE TO ATHLETE (By John Parris)

Franklin.—The people of this mountain town turned out by the hundreds Monday to pay their last respects to a young Negro athlete credited with doing more for race rela-

tions here than anybody else in the county.
They filled the auditorium of the First Baptist Church, the town's largest, where two white ministers conducted funeral services for 18-year-old Thomas Walter Scruggs, killed Christmas Eve when his car and another driven by his brother collided head-on.

They came from all walks of life and from both races. They included judges and law-yers, doctors and educators, businessmen and farmers, rich and poor, young and old.
Dr. Rufus Morgan, the famed mountain

Episcopalian minister, spoke for the whole community when he said:

We thank God for the spirit that has dominated this boy and for the way he stood out before us, an example of what all of us should be, one to another.

"In this tragedy there is a challenge to each of us. It is an example here of the power of the spirit of man to overcome the obstacles of life."

And Dr. W. Thomas Lane, pastor of the Pirst Baptist Church, quoted from the Scriptures the words of Ephesians:

"But now in Jesus Christ, you who some times were far off, are made nigh by the blood of Christ \* \* and now therefore you are no more strangers and foreigners, but fellow citizens with the saints and of the household

The services were simple and brief, but there were few dry eyes in all the crowd of more than 1,000 persons.

The body of young Scruggs, one of the first of his race to integrate at Franklin High School, lay in a gray metal casket covered with a blanket of red carnations and white mums at the front of the church.

His former high school coach, and members of the 1964-65 Franklin High championship basketball team on which he starred, were among the pallbearers.

And back of them sat the 1965-66 team from Piedmont College at Demorest, Ga., where Scruggs had become the first Negro to attend that institution and where, since October, he had become a star player.

Among the mourners was the president of Piedmont, Dr. James E. Walter, and head basketball Coach O'Neal Cave, and some 30 members of the student body.

Dr. Walter, who came here as soon as he heard of the accident, said earlier that Scruggs had become one of the most popular boys on campus.

"He was a good boy," Walter said. "He was very well liked, and I think all of us were "He terribly fond of him. He was well-accepted by both the faculty and the students."

The Franklin freshman, 1 of 10 children, a starting forward on the college baskethall team.

But it was in his hometown here that he was really loved and where he made an im-pression that will not be soon forgotten. All day Christmas and then Sunday, a

steady stream of folks came to the funeral home here, where the body lay.

All remembered him and had something to say of his good work.

He did more for race relations here than anybody," was a comment that could be heard over and over. "He made integration work at Franklin High."

Bob Sloan, editor of the Franklin Press, aid, "This is a boy we must never forget." And the city policeman said, "He was really

a fine boy. H. Bueck, superintendent of Macon County schools, said that "young Scruggs has left us something to live up to." And J. P. Brady, a newspaperman and civic

And J. F. Dray, a newspaper.

leader, said: "Nothing has ever shock up the community like his death. The people loved him and respected him. You can see by community like his death. The people loved him and respected him. You can see by how they turned out for his funeral. There's never been as big a funeral here before."

When the funeral was over, his former teammates and classmates wheeled the casket from the church to a waiting hearse.

And then, some 30 minutes later, Thomas Walter Scruggs was laid to rest in the cemetery of St. Ciprian's Episcopal Church.

"They have buried him," said a leading citizen, "but his spirit will go marching on. Of that, you can be sure."

## Work Experience of War Veterans in 1964

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. TEAGUE of Texas. Mr. Speaker, I have received from the Veterans' Administration the latest information available in that agency on work experience of war veterans in 1964. I believe it will be of interest to all Members, and, therefore, I extend my remarks and include therein this text which I have received from the Veterans' Administration:

WORK EXPERIENCE OF WAR VETERANS IN 1964

During 1964, 92 percent of the male non-institutional war veterans in the United States were gainfully employed. About 8 percent or 1 in 12 did not work during the year, having been retired, sick or disabled. or unable to find a job. Of the 20.9 million veterans surveyed in March 1965, 75 percent (15.7 million) worked year round (50-52 weeks) the previous year, and 17 percent (8.4 million) worked only part of the year (less than 50 weeks).

Nearly all of the 15.7 million year-round Nearly all of the 18.7 million year-round workers worked full time (99 percent or 15.5 million); only 0.2 million (1 percent) worked part time. Likewise, 85 percent of the 3.4 million part-year workers, when they were employed, had full-time jobs (2.9 million), and only 15 percent (0.5 million) had part-time work. In summary, 96 percent (18.4 million) of the employed veterans were full-time employees in 1964 either at year-round. time employees in 1964 either at year-round or part-year jobs, and only 4 percent (0.7 million) were part-time employees, working

mostly at jobs lasting only part of the year.
Looking specifically at the 1.1 million veterans 65-69 years old, the age when many persons have already retired, about half (51 percent) were still working. Of those who percent) were still working. Of these who were employed, 6 out of 10 worked year round, and most of these held full-time jobs; about 4 out of 10 were employed only part of the year, and about half of these worked full time and the other half, part time.

Moving to the 1.1 million veterans 70 years and older, the age when most persons have retired, 29 percent still worked during 1964. Of those who worked, about half worked year round—7 out of 10 full time and 3 out of 10 part time; the other half worked part year— 1 out of 4 full time and the other 3 part

The attached tables present additional detailed data. Special tabulations of the Cen-sus Bureau's current population survey, made under contract for the Veterans' Administration, provided this information.

Source of data

Information about the 1964 work experience of male civilian noninstitutional war veterans in the United States (obtained in February 1965) was derived from the Bureau of the Census' matched February—March current population survey sample of approximately 25,000 households. The work experience distributions by age were applied to the independent VA estimates by age of the male civilian noninstitutional war veteran population in the United States to develop the work experience data presented in this report. Although work experience data are for the year 1964, the age refers to March 1965. (For details of the survey see Consumer Income, Current Population Reports, series P-60, No. 47, Sept. 24, 1965, U.S. Bureau of the Census, Washington, D.C.)

War veterans are men who served in the Armed Forces during a war period (Spanish-American War, World War I, World War II, Korean conflict) and are now in the civilian noninstitutional population of the United States. The civilian noninstitutional population excludes all members of the Armed Forces and inmates of penal institutions, chronic disease hospitals, nursing homes, and the like.

#### Reliability of the estimates

Since the estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and intreviewers. As in any survey work, the results are subject to errors of response and reporting, and to sampling variability.

The standard error is primarily a measure

of sampling variability; that is, of the variatioms that occur by chance because a sample rather than the whole of the population
is surveyed. As calculated for this report,
the standard error also partially measures
the effects of response and enumeration errors but does not measure any systematic
blases in the data. The chances are about
66 out of 100 that an estimate from the sample will differ from a complete census figure
by less than one standard error. The
chances are about 95 out of 100 that the difference would be less than twice the standard error. The following table shows the approximate standard error of an estimated
for both the numerator and denominator of
the percentage. The size of the standard error depends upon both the size of the percentage and the size of the class upon which
the percentage is based.

Standard errors of estimated percentages (68 changes out of 100)

#### Vietnam

EXTENSION OF REMARKS

## HON. HERBERT TENZER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. TENZER. Mr. Speaker, as the 2d assiston of the 89th Congress begins, people throughout the world are deeply concerned about the war in Victnam and the course which will be taken in the year ahead. The Members of this distinguished Chamber have a responsibility to express themselves to their constituents, to the Nation, and to the world on this, the most vital issue of the day.

During the period of adjournment, I had the opportunity to address thousands of my constituents in 43 speaking engagements and appearances, during which I discussed a variety of subjects. Invariably the first question raised was on the subject of U.S. policy in southeast Asia and our commitment in South Vietnam. While the greatest number appeared to support the administration policy, they seemed unanimous in urging that we find an avenue to peace.

I also visited Thailand where I discussed the situation in South Vietnam with servicemen, some of whom reside in Fifth Congressional District of New York. They all seemed to under stand the reasons for our commitment in southeast Asia and they questioned why some at home falled to understand as well. They

also shared the desire for peace and urged that every diplomatic channel bekept open to encourage initiation of negoliations for peace

gotiations for peace.

Our Nation is the strongest and greatest power in the world today—but with that power goes responsibility. No nation can have great power and a quiet conscience. Its leaders and its people must sometimes suffer either the represence of having used force or the reproaches of having failed to use it.

I am distressed by the increasing U.S. losses and the increased role of our troops in combat zones. I abhor war and the misery caused by human conflict. Our President had made it clear that our bipartisan foreign policy is to defend South Vietnam so long as aggression from the north continues. Our Nation wants

peace and President Johnson has made it clear that we stand ready to engage in unconditional discussions to consider any solution which will bring peace to this troubled area of the world.

On December 18, 1965, in response to the voices of my constituents, I sent the following telegram to the President:

Hor. LYNDON B. JOHNSON, President of the United States

White House, Washington, D.C.:
In light of the offer for a 12-hour truce to permit American boys to celebrate Christmas, I respectfully suggest that you announce the acceptance of the offer and implement immediately negotiations to extend the truce. I further respectfully recommend that as evidence our announced intentions to negotiate and to demonstrate American compas-sion, you direct cessation of the bombing in sion, you direct cessation of the bombing in North Vietnam pending the negotiations now under condideration. The month of December should not be the only period to practice peace on earth and good will toward men. We must work at it 365 days a year. HERBERT TENZER,

Member of Congress.

I was as pleased as you were to listen to the voices which followed and to see how the administration responded to the voice of the people. Diplomatic channels were opened with dynamic and energetic force. Every effort was made to convince the nations of the world that the United States truly wanted peace in southeast Asia

While we continue to meet our com-mitment in South Vietnam we must always bear in mind that to negotiate is not to capitulate. In the nuclear age when man is capable of self-destruction there is even greater reason to strive for peace, however, in so doing we cannot turn our back on tyranny and injustice anywhere in the world.

In one of our southern cities, the home of the 1st Air Cavalry Division, which has the greatest number of families with men in Vietnam per capita of any city in the United States, there was a demonstration of women and children asking that we "support their daddies in South Vietnam." Not one sign read "Send my daddy home.

Let those who demonstrated and participated in paying for full page ads, urging a cessation of bombings in North Vietnam, now take ads urging Hanoi to understand that our Government is serious in its efforts to transfer the war from the battlefield to the conference table.

There were less ships of our allies reaching the port of Halphong with supplies during 1965 than there were in 1964. The progress in this area, while significant, is not yet enough. We should consider seriously the termination of any and all aid to nations carrying supplies to

We should also give consideration to the blockade of the port of Haiphong thereby cutting off the supplies which our enemy uses to support their aggres-

I favor a continuing dialog-both public and in the Congress—on this most vital issue of the day. The voices of our Representatives should echo through this Chamber during the session which started today so that people in the United

States and throughout the world may look to the strongest democracy in the world for guidance and strength in the trying hours and days which lie ahead. This Chamber of freemen must not shrink from its responsibility of sounding the commitment for freedom and the search for peace in the world. It should distinguish itself by being both a forum for freedom and a forum for peace. Our President needs our support and the people deserve our continuing expression of their hopes for peace.

Wyoming: Nation's No. 1 Oil State

EXTENSION OF REMARKS

#### HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. RONCALIO. Mr. Speaker, the men who come to Wyoming assist in its development and contribute much to the culture and personality of this great State. Such a man is Roy H. Guess, a Texas native who received his bachelor's and master's degree in geology from the University of Texas. After his graduation in 1940 he spent 4 years in the Air Force during World War II.

Two and a half years ago Mr. and Mrs. Guess and their two children transferred their base to Casper, the center of a "wildcatters paradise," where he can pursue his hobby of skiing and breathe the fresh air of Wyoming.

He has written several articles. called "What Lures Drillers to Wyoming," appeared in the May 10, 1965, issue of Oil and Gas Journal; another "Oil Exploration in Wyoming" appeared in the South Texas Geological Society Bulletin in April 1965.

Most recently, Mr. Speaker, is "Increased Drilling Seen in Wildcatters Paradise'" which was published in the December issue of Independent Petroleum Monthly.

The article follows:

The general health of the independent egment of the oil industry today reminds me of the story of two skeletons hanging in a closet. One skeleton turned to the other and said, "How in the world did we get locked in here?" The other skeleton rattled back, "I don't know, but if we had any guts we'd get out."

A great deal of the highly infectious, irresistible urge to "wildcat" for the yet un-discovered wealth in giant cilfields seems to have disappeared from the ranks of the independent producer today. We study mergers, sellouts, stock swaps, diversification, etc.; but if we have to consider pulling up stakes and moving to greener pastures, obstacles are just too great.

During 1965, the Shell Oil Co. clearly demonstrated that 100 million barrel oil-fields can still be found in Wyoming. Their Reno unit discovery is currently producing 2,500 barrels per day and has been confirmed by two offsets of equal caliber. A 6-mile step-out to the west appears to be most promising at the present time. The industry in Wyoming probably would have

assigned odds of 50 to 1 against Shell's discovery being a commercial well in the Minnelusa (Tensleep) prior to drilling and, no doubt, the odds of finding a 100 million barrels would have been beyond estimation. Undoubtedly, 1966 will bring intensive ef-

forts to find other large fields in the deep, virtually unexplored interior portions of half a dozen of Wyoming's basins that are ringed by shallow highly prolific oilfields. Ten seismic crews are currently working in the Powder River Basin, trying to obtain information that will help duplicate the Shell discovery.

It is certainly true that most of the shal-"sheepherder's structures" have been drilled in Wyoming, but prospecting for stratigraphic traps is just in its infancy. Sophisticated stratigraphic studies are certain to play in increasingly important role in future exploration plans of both major and independent oil companies. The Sundance formation may be a real "sleeper" in several

Thermal recovery projects, in the shal-low heavy oil and tar sand areas of Wyoming, have ben included in the 1986 plans of several companies. The next 5 years should bring rapid increases in this type of production. Due to the completion of several 1,000 barrel-per-day fractured shale wells during 1965, this type of exploration will re-ceive a great deal of attention during the coming year. This will give subsurface information that will lead to additional discoveries in other formations.

Perhaps "Wyoming, the Wildcatter's Paradise," the title of a recent address by Dr. George R. Wulf, is a slightly optimistic description, but with proration, a favorable marketing situation, an abundance of unexplored but highly prospective acreage, this area come closer to fitting this description than any other area in the United State believe these factors will cause a gradual increase in drilling activity in Wyoming and surrounding States by aggressive independent oil companies in 1966 and beyond.

## On Throwing Tantrums

EXTENSION OF REMARKS OF

#### HON, J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. YOUNGER. Mr. Speaker, the following editorial from the Wall Street Journal of October 27, 1965, on the present youthful demonstrations against the Vietnam war strikes a very respon-sive chord in the minds of those opposed to such demonstrations:

a aliti

is de ti

de hi si be sti be isse of as

### ON THROWING TANTRUMS

Even after all the discounting is duly done. the current rash of youthful demonstrations against the Vietnam war must puzzle the mind and conscience of thoughtful men. it a case of young people failing society or the other way around? Or some of both?

Granted, the eruptions do not represent majority American opinion, including that of college students themselves, however discollege students themselves, nowever cus-turbing may be the plain thread of extreme leftist instigation or encouragement. It is perhaps indicative of the general mood of the country that the purported pacifists are evoking counter-demonstrations in support of the administration's Vietnam policy. In any event, taking to the streets with a griev-ance is nothing new. Finally, it can be conceded that this is a peculiarly massy, disagreeable war, despite its broad objective of containing communism.

Still, the protesters, whether committing illegal acts like burning their draft cards or indulging in peaceful marches, are giving a certain amount of aid and comfort to the enemy. And all too evidently there behavior is part of a broader pattern of disrespect for law and order. While their conduct is not to be condoned, it is at the same time instructive to see where their elders have let them down.

For whatever reasons, this century has witnessed a decline in the disciplines of home, school, and church; indeed, in the attitudes of the courts and governmental officials. The atmosphere has been one of pervasive permissiveness, part of which is the notion that to impose standards of behavior on a child is somehow to stunt his development. What too often turns out to be stunted,

What too often turns out to be stunted, of course, is the child's sense of the importance of an orderly society. His view of his role is likely to become a self-centered arrogance to do as he pleases without regard to the consequences. Former President Eisenhower is among those who clearly understand this tendency toward erosion of "the old virtues."

Without presuming to make a precise allocation of the blame, we think it beyond question that the contemporary liberal philosophy which has dominated the intellectual fashion of a generation has made a sizable contribution. For it is preeminently a philosophy of irresponsibility; that is, the individual is not regarded as particularly accountable for his actions. If he goes wrong, or criminal, or delinquent, or otherwise antisocial, the society is presumed guilty. The curious cure recommended is for the society in the form of government to take over more and more of the responsibilities abdicated by individual, family, minister, and teacher.

Given the prevailing winds, it seems to us equally undeniable that the civil rights movement has provided fresh impetus to the fad of disrespect for law and order. While most Americans sympathize with the aims of the movement, it has nonetheless brought a sort of status to mob action. More significantly, it has enshrined the doctrine that people are morally obliged to obey only the laws they think just and to disobey the rest—taking to the streets if they want until the offending authority has buckled under.

A viewpoint more corrosive to a society conceived in the framework of both liberty and order is hard to imagine. Not surprisingly, some of the same students and leaders and professors who have been foremost in advocating disobedience of laws they don't like are also the most vociferous objectors to the Vietnam war. Any cause, so long as it anti-law-and-order apparently will do.

et

in

are

ort

ev-

the Vietnam war. Any cause, so long as it is anti-law-and-order, apparently will do. By now this variety of free speech-which is devoid of intellectual content; invites no debate, tolerates no rebuttal, trades on emotion, bases its appeal on shear numbers of demonstrators and beckons to exploitation—has become so accepted it is employed on the slightest impulse by dissatisfied groups of every description. In our opinion, it cannot be too strongly emphasized that most of the street action is not an expression but a debasement of honest public discussion of the issues, Vietnam or anything else, and in fact of the whole constitutional concept of free assembly.

Probably in many cases the youthful pacifist will outgrow their enthusiasm for hose thumbing. For more disquieting than their antics of the moment is that we the adults have done so much to foster the childish idea that anyone can have his own way just by throwing a tantrum.

## Independence of Cameroon

EXTENSION OF REMARKS

## HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. POWELL. Mr. Speaker, on the 1st of January, the Federal Republic of Cameroon celebrated the 6th anniversary of her independence. Congress was not in session on this, and I am therefore, belatedly, extending warm felicitations to His Excellency Ahmadou Ahidjo, President of Cameroon; and to His Excellency, Joseph Owono, Cameroon's Ambassador to the United States.

This date marked the anniversary of the independence of a most unusual African state. This pleasant and beautiful country is Africa's only example of a federation of English-speaking and French-speaking states. The federation is almost as large as the State of Texas, and has a growing population, numbering at present in excess of 4 million.

The Cameroon was a German protectorate from 1884 to 1916 but was split following World War I into two League of Nations mandates, one British and one French. Following World War II, these areas were converted into United Nations Trust Territories. Each Cameroon attained independence in 1960 and, after plebiscites in the British Cameroons—February 1961—the present federation was created. The northern part of the British Cameroons, whose citizens rejected federation with the Cameroon Republic, became an integral part of the northern region of Nigeria in July 1961.

Agriculture is the main occupation of the vast majority of the population and agricultural produce accounts for approximately 80 percent of the country's exports. Cameroon is nearly self-sufficient in many food resources, some of which are peanuts, bananas, millet, and palm oil products. This fact alone gives it an advantage over many newly independent states.

Another bright spot in Cameroon's economic picture is the potential of its mining industry. There is a large variety of mineral deposits such as gold, diamonds, manganese, mica, lignite, bauxite, and rutile—a primary source of titanium. Thus far, however, only bauxite—aluminum ore—has been found in large quantity. Work is now well underway on the construction of a north-south railway route that will facilitate the transport of bauxite from the newly discovered Tibati deposit of East Cameroon.

Though the federation has been beset with problems arising largely from cultural differences which are a remnant of the colonial past, Government officials have been steadfast in their determination to keep these issues from fragmenting the federal structure.

I am certain that the Congress and the Nation join me in a salute to the gallant struggle for unity and progress which

Cameroon is striving to achieve. On this, the sixth anniversary of the Federal Republic of the Cameroon, I offer my warmest congratulations and best wishes for the future.

#### State of Law and Order

EXTENSION OF REMARKS

#### HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. POFF. Mr. Speaker, last July at a meeting of the State Bar of Texas in Fort Worth, the then president of the American Bar Association, Lewis F. Powell, Jr., Esq., made an address which was most topical and timely and one which I think should be made available

nationwide audience.

Accordingly, under leave to extend my remarks, I quote herewith the entire text of Mr. Powell's speech entitled "State of Law and Order."

through the Congressional Record to a

STATE OF LAW AND ORDER

In traveling about the country, talking with lawyers and judges, I find a deepening concern over the deteriorating state of law and order in our country.

You are, of course, familiar with the nationwide crime problem. President Johnson has aptly said: "Crime is a malignant enemy in America's midst."

The President did not exaggerate. Major crime is increasing annually, five times faster than population growth. More than 2½ million serious crimes were committed in 1964.

J. Edgar Hoover, saying that many urban areas are jungles of terror, has warned citizens to stay off the streets and out of the parks at night.

Mr. Justice Clark, in a splendid address to the Chattanooga bar, recently summarized the situation:

"One of the sordid tragedies in America today is the malignant growth of disrespect for law and order. The evidence is all too clear. It can be found in incidents of outright mob violence. It can be found in the unprovoked attacks upon police officers who are carrying out their official duties, as well as the incredibly callous attitude of citizens who have refused to aid, in any manner, helpless victims of street crimes. Indeed, marauding gangs, purse snatchers, robbers, and rapists have turned our public aidewalks and streets into places of fear for the law-abiding citizen " " ". There has been an alarming increase of serious crime in every community across the Nation."

While there is debate as to the causes of crime—and these are complex and deep rooted—there is wide agreement that is is a first duty of government, at all levels, to protect citizens in their persons and property from criminal molestation.

Government is now moving on a broad front. President Johnson has voiced his concern, and the Department of Justice has taken a number of constructive steps.

The ABA also has a major criminal justice project, in which several distinguished Texas lawyers and judges are participating.

So much for a thumb-nail and oversimplified picture of the crime altuation. This may indeed be our No. 1 domestic problem.

But at least the public understands this problem and its relation to law and order. Indeed, the public is now alarmed and is demanding remedial action.

Lawyers are also concerned about a different aspect of deteriorating law and order. This relates--not to crime as such-but to the growing lack of respect for law and for due process, and the unwillingness of many to resolve differences by established legal

There are many contemporary symptoms of this. Yet the public is largely unaware of the scope and implications of this trend. In a brief talk, I can only mention certain attitudes which are of special concern to

lawyers.

These are not usually held by persons with any conscious intent to be lawless. Indeed, the attitudes are often expounded by persons of good will and fine intentions—including those who advocate them in the

name of justice and morality.

But whatever may be the motives, certain widely held attitudes today reflect a failure prehend the significance of due proces and the importance of lawful means.

One of these attitudes, which contributes to the lack of respect for law, is the growing belief that laws and court orders are to be d, constitutional safeguards honored, and the rights of others respected only so long as they do not interfere with the attainment of goals believed to be just.

It was seriously argued in many areas of

the South, following Brown v. Board of Education,1 that massive disobedience of court orders and decisions was a proper form protest. Indeed, there were some who sincerely espoused the right of each State to interpose its own will against Federal laws and decisions.

Today, there are others—with quite op-site goals—who insist with equal fervor that civil disobedience of laws deemed to be unjust is a legitimate means of asserting

desired rights.

Ghandi's heroic struggle for India's independence is the precedent often cited for the doctrine of civil disobedience. Yet this technique was used in India, not as a means of enforcing recognized legal or constitutional rights, but to attain national independence. There were no courts and no democratically established political institutions in which the issue of independence could be contested. Indeed with lawful remedies unavailable, Ghandi's alternatives were civil disobedience or bloodshed. There is no parallel situation in America where wrongs may be redressed in the courts and through established political institutions.

This is not, contrary to popular misconception, a question of civil rights. I am concerned only with the principles involved. The issue is the fundamental one of law and order and due process. Mr. Justice Black has spoken eloquently on this subject:

"The streets are not now and never have been the proper place to administer justice. Use of the streets for such purpose has al-ways proved disastrous to individual liberty in the long run, whatever fleeting benefits m the long run, whatever fleeting benefits may have appeared to have been achieved. And minority groups \* \* \* are the ones who always have suffered and always will suffer most when street multitudes are allowed to substitute their pressures for the less glamorous but more dependable and temperate process of the law. Experience demonstrates that it is not a far step from what seems the earnest, honest, natroitic kind, suited the earnest, honest, patriotic, kind-spirited multitude of today, to the fanatical, threat-ening, lawless mob of tomorrow. And the growds that press in the streets for noble goals today can be supplanted tomorrow by street mubs pressuring the courts for pre-cisely opposite ends.

"Those who encourage minority groups to believe that the U.S. Constitution and Federal laws give them a right to patrol and picket the streets whenever they choose in order to advance what they think to be just and noble end, do no se ervice to those minority groups, their cause or

In our complex society power is diffused among many groups and seldom remains static. Public opinion is capable of abrupt s. Individuals and particular groups ecordingly never be certain that they will always be strong enough to furce others to respect their rights. They can be assured that they will remain free to speak their views and be protected in their persons and property only so long as laws are observed

and due process followed.

Disrespect for law and an impatience with orderly processes have begun to appear on college campuses. With student riots making headlines around the world, it is to their credit that American students generally have behaved so maturely. But the major campus eruption at the University of California last winter was ominous. Reasonable discussion of alleged grievances was abandoned in favor of massive sit-ins and mob action. \* Even certain elements of the faculty condoned rather than condemned this resort to physical coercion.

e brand of civil disobedience which virtually paralyzed the University of California has been exported to some other campuses. Leaders of the Berkeley revolt are moving out as missionaries, urging student discord

and uprisings elsewhere.

The new "cause" is opposition to America's foreign policy—especially in Vietnam. This is a popular cause for various reasons, and perhaps it is natural that it should have appeal to the youth.

There are, indeed, sound reasons for the widest debate of the dangerous situation in whose debate of the dangerous situation in southeast Asis—both on and off the college campus. And there have been constructive and responsible discussions in so-called teach-ins and seminars by students and faculties at many universities. This type of discourse is to be commended.

But the frenetic attack sometimes made on the administration's policy in Vietnam illus-

trates the thin line that may exist between legitimate protest and irresponsible conduct. For example, a small student group at Columbia recently forced the university to cancel the annual award ceremony for the Naval Reserve Training Fair The Control of the Co Naval Reserve Training Unit. The familiar tactics of civil disobedience were employed. This was not legitimate protest. coercion.

James Reston, noted columnist of the New York Times, has referred to the mood on some campuses as one of "violence" with att-ins and inflammatory demonstrations taking the place of reasoned discussion. Mr. Reston pointed out that some of the student and teacher demonstrations have been "backed by (anti-American) propagands of the most victous nature."

It is happily true that only a small minor-

ity of American students have shown this

reckless disregard for orderly proce the rights of others. In deploring this conduct we must of course keep it in perspective But history has demonstrated the disruptives power for evil of small lawless groups, especially where their movements are infiltrated by trained subversives or determined extremists 4

Traditionally our universities have been the citadels of free inquiry, devoted to the proposition that rational discussion was the surest way to truth. Those who now recklessly break this tradition of respect and tolerance for the differing views of others by resorting to coercion, whether violent or nonviolent, menace the spirit of responsible inquiry so essential to an institution of They also contribute to the growarning. ing disrespect for orderly processes—whether they be prescribed by law of the land or as duly adopted rules of a great university.

The frightening aspect of the civil dis-obedience concept—in all of its various manifestations—is that it tends to escalate. It spreads geographically. The worthiness of causes becomes increasingly marginal—and sometimes are patently indefensible. Also, it becomes increasingly difficult to maintain the distinction between genuine peaceful protest and legitimate demonstrations, on the one hand, and disorderly conduct and mob violence on the other.

However successful the tactics of civil dis-obedience may be in the sort run, and whatever the justification, they are selfdefeating and imperil individual freedom in the long run. An ordered society cannot exist if every man may determine which laws he will obey, and if techniques of coercion supplant due process. Many centuries of human misery show that once a society departs from the rule of law, only the strongst remain free. In the end, tyranny is the inevitable result of this form of anarchy.

And here, as a lawyer, may I emphasize that the right of dissent is surely a vital part of our American heritage. So also are the rights to assemble, to petition and to test the validity of challenged laws or regula-tions. But our Constitution and tradition contemplate the orderly assertion of these There is no place in our system for either the lawless instrument of the mob or the hooded vigilante who rides in the night.

We have preserved individual freedom under the Anglo-American system of law for perhaps the longest sustained period in pernaps the longest sustained period in human history. We have done so by accepting the rule of law and by adherence to lawful means. The fundamental difference between a totalitarian society, and one in which the individual is afforded freedom of conacience and protected from arbitrary force, is that in the latter "means" are of the essence. Under our system, the "end," however worthy, should never justify resort to unlawful means.

Justice Douglas has put it quite simply:
"We reject the philosophy that the end
justifies the means. The vitality of human
rights means respect for procedure as well as respect for substantive rights. court cannot render dispassionate justice in the presence of a howling mob. History shows that man's struggle to be free is in large degree the struggle to be free of oppressive procedure." \*

\*Douglas, address before Judicial Conference of the Americas, San Juan, P.R., 16, 20 1065.

<sup>1 347</sup> U.S. 483 (1954).

We will continue to preserve individual freedom and protect human rights only so long as we adhere to this fundamental prin-ciple. The courts and legislative halls, rather than the streets, must be the places where differences are reconciled and indi-vidual rights are ultimately protected and secured.

There are certainly no easy solutions to these trends and attitudes which so deeply concern lawyers. And yet I think most of us would agree upon the essentials: America needs a genuine revival of respect for law and orderly processes, a reawakening of individual responsibility, a new impatience with those who violate and circumvent laws, and a determined insistence that laws be enforced, courts respected, and due process

At the same time, we must ever strive to eliminate injustice and discrimination; we must minimize the social and economic con-ditions which breed crime and unrest; and, perhaps most important of all, we must assure adequate and equal educational opportunities.

But underlying and sustaining all else-indeed, the indispensable cornerstone of our liberties and our opportunities—is the rule

The average citizen, as well as lawyers and judges, must understand the enduring values of lawful means, and be as willing to rebuke a departure from such means as we all are to condemn crime.

Our freedoms can only survive in an ordered society, where there is genuine respect in action as well as words, for law and orderly processes.

The bringing about of this understand-ing must ever be a first duty of the orga-nized bar and each individual lawyer.

"The final answer will not be found in armed confrontation but in the process of law. We have acted to bring this conflict from the streets to the courtroom." Presi-dent Johnson at his Mar. 13, 1965, news conference as reported in the New York Times, Mar. 14, 1965, p. 62.

#### Worldwide Population Explosion

EXTENSION OF REMARKS OF

## HON. PAUL H. TODD. JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. TODD. Mr. Speaker, although the press has done an excellent job of telling us what we will be doing in the session which opens today, I have yet to see included in the subjects for action the establishment of a policy to deal with the worldwide population explosion. The press has forecast that the Congress will deal with the symptoms of this explosion, that we will attempt to prescribe pain-killers to make them hurt a little less. But the press has not forecast that we will discuss the fundamentals of the problem and take action which seems appropriate.

Let us be blunt, Mr. Speaker. There are a number of important issues which will be acted upon by this 2d session of the 89th Congress. But no issue is more important and no set of problems are more pressing than the world population explosion. I would submit that if this

Congress will accept its clear responsibility to establish policies to deal with the population explosion, it will be remembered far more for this reason than for any other.

We can take constructive action in this field. We can support the efforts already initiated by President Johnson. We can encourage their expansion. And we can pass legislation establishing our belief that family planning information, services, and supplies should be made available to all who request them. We should also make it clear that such information, services, and supplies should be a part of our AID programs, upon request of the foreign governments involved.

And, Mr. Speaker, we should make it clear that we see no possibility whatsoever of providing enough surplus food from our own lands to prevent mass starvation in countries whose populations will at least double in the next 25 years if family planning programs are not undertaken on a broad scale. We would delude both oursleves and countries abroad if we claimed otherwise.

It is my greatest hope that this session the Congress will address itself squarely and vigorously to the problems of family planning, birth control, and the population-both here and abroad.

We made 5 days of progress last year, but the problem grew by 365 days. cannot afford to allow another year to slip by with no action. For the problem will soon be so great that no solution within our values will be possible.

#### Mail Mess

EXTENSION OF REMARKS

OF

#### HON. DONALD RUMSFELD

OF TULINOTS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. RUMSFELD. Mr. Speaker, several occasions in the past I have called attention to the deteriorating postal service and am inserting in today's RECORD another telling example of a Government plan gone awry. Mr. Steven M. Lovelady, writing in the Wall Street Journal of November 22, 1965, relates the story of snarls and long delays in rural mail service.

The Congress has a responsibility to see that these conditions are corrected promptly—and I urge the House Committee on Post Office and Civil Service to look into the situation and recommend whatever funds are necessary to improve

the service.

Mr. Lovelady's article follows:

MAIL MESS: PLAN TO SPEED DELIVERIES BACKFIRES IN MANY AREAS

(By Steven M. Lovelady)

ROCHESTER, IND.—How does a piece of mail get from this sleepy county seat of 4,900 in the heart of central Indiana corn country to Mentone, a hamlet of 800 a dozen miles to the northeast?

It travels 190 miles in four different directions, none of them northeast, that's how. Mentone-bound mail goes first to Kokomo, 50 miles south. There it's sorted from the

flood of mail that pours into Kokomo from 87 towns in the area. Next, it's trucked 80 miles north to South Bend, bypassing both Rochester and Mentone on the way. From South Bend, it goes 60 miles southeast to Warsaw, and, finally southwest to Mentone, where it's delivered, as much as 4 days after leaving Rochester.

Paradoxically, the long, looping path this mail takes is part of a complex Government plan nimed at speeding deliveries and boosting the efficiency of the postal system. But talks with angry Hoosiers affected—and this includes everyone from smalltown businessmen to overworked postal clerks—indicate that the new system, far from speeding de-liveries, is resulting in long delays, particu-larly in rural areas, and is swamping some post offices with incoming mail. These men point to the decline in mail service brought

point to the decline in mail service brought about by the new system as one more example of Government planning gone away.

The system is based on 558 sectional centers across the country. Each center sorts all mail going to and coming from smaller towns in a particular ZIP code district. The first three numbers of a ZIP code designate a sectional center. In cases where local train routes have been discontinued, the sectional centers do the sorting that was formerly done in mail cars. The sectional centers are one step in the Post Office plan to get the ZIP system in gear by January 1967.

#### THE BOOF FELL IN

Although the first sectional centers were actioning the first sectional centers were set up as long ago as 1961, new ones continue to be opened. The snaris are particularly bad during the period when an area is changing over to the new system or rearranging its established sectional centers. In fact, here in Indiana, mail service under sectional centers, while far from stream-lined, brought few complaints until June, lined, brought few complaints until June, when four new sectional menters were opened and four old ones abolished. Then, as one Indiana postmaster says, "The roof fell in. On paper, the new setup looks smooth as glass, but in practice it's led to logiams of mail in the sectional centers and deliveries as much as 7 days late." as much as 7 days late.

as much as 7 days late."

This official points out that the letter from Rochester to Mentone first go s to Ko-komo because Kokomo is now Rochester's sectional center. It then goes north to South Bend before being swnt to Mentone because South Bend is Mentone's new sectional center—even though Mentone is just a few fields of corn up the road from Rochester.

Ideally, a letter could take that long, roundabout path overnight and still be delivered the next morning. That was the Post Office's original intent. However, what postal authorities didn't count on or prepare for was the overwhelming avalanche of mail that poured into sectional centers such as Kokomo and South Bend on initiation of the new system. The Kokomo post office, in fact, was buried under such a mountain of mail that first week in June that it gave up trying to deliver second- and third-class mail and concentrated on trying to handle the first class. "The sectional centers just don't have the men or equipment needed to move that much mail," comments another Indiana postmaster.

Ferhaps hardest hit by slow mail deliv-eries are Indiana's 291 small local news-papers—all of the State's weeklies and those dailies with less than 10,000 circulation. Most of them are delivered by mail to subscribers, many of whom live on farms and

in nearby towns. Typical is Jack K. Overmyer, editor of this town's daily Rochester Sentinel, a thriv-ing enterprise with a circulation of 4,239. As Mr. Overmyer sits in his office looking out on the century-old Rochester courthouse square, he tells an inquirer that "slow mail service can kill a small newspaper. When we get to subscribers 2 or 3 days late, we stand a good chance of losing those subscribers and then advertisers who aim ads at those subscribers. By taking that roundabout route, the post office winds up delivering 'Thursday's paper on Monday. Who wants Thursday's news on Monday? What advertiser wants his Thursday sale ads read by customers the next Monday?

After several fruitless complaints to postal authorities, Mr. Overmyer gave up. He now sends papers to Mentone subscribers by truck and pays for it from his own pocket.

truck and pays for it from his own pocket. Just as affected, but less vocal than the newspapermen, are businessmen in Indiana's small towns. L. J. Castaldi, vice president of the Midwest Spring Co., in Mentone, says he must "keep in constant and quick mail communication with our offices in Chicago. But an airmail, special delivery letter from Chicago to Mentone—120 miles—usually takes 2 days to get here." Mr. Castaldi says the sams letter would have made the trip "in a matter of hours" before sectional centers. He estimates he has filed "100 to 150" complaints with the post office.

While permanent sectional centers are new to Indiana, and this no doubt has caused some of the trouble, checks in nine States where the system has been in operation for from I to nearly 2 years indicate that in most cases slow delivery and jammed poet offices don't disappear with time. Pikeville, Ky, has been a sectional center for 18 months, but there was such a jam-up there in recent weeks that second- and third-class mail was stuck in the office for as much as 7 days before harried mall clerks could sort it and send it on its way.

"We're really in a mess here," says Zach C. Justice, editor of the weekly Pikeville County News. "We're barraged with more delivery complaints from rural subscribers than I've ever seen before. Besides that, every day in the mail I get anywhere from five to eight letters that don't belong to me."

Similarly, in Pueblo, Colo., which has been a sectional center for 13 months, postal clerks are still working 56-bour weeks in an attempt to move the mountain of mail which

descends on their station.

And in Wisconsin Rapids, Wis., which has been part of a sectional center district for 18 months, the chamber of commerce kept tabs recently on 2.087 pieces of first-class mail sent to distant points. The chamber says 57 percent of the letters mailed to Milwaukee, Minneapolis, and Chicago took 2 days to arrive and 12 percent took 3, 4, and 5 days. Further, one letter mailed to Wisconsin Rapids from New York was 23 days in transit and another from Fort Wayne, Ind., made the trip in 17 days.

#### WANTED: MORE MONEY

Bombarded by complaints from these diverse geographical points, the Post Office Department in Washington is scrambling to pump extra men and equipment into the overloaded sectional centers. "But," says a spokeaman, "we're operating under tight manpower and budgetary ceilings." The Department has requested a \$41.5 million emergency appropriation which it expects Congress to approve once it reconvenes. Meanwhile, "We're spending the money before we've got it," a spokeaman says.

This move contrasts with statements made

This move contrasts with statements made last spring by former Postmaster General John A. Gronouski to the effect that sectional centers and ZIP coding could save the Post Office \$61 to \$71 million a year in labor costs and that the new system would allow the post office to eliminate 10,000 clerks

from its payroll.

W. L. Pierceson, Illinois president of the
United Federation of Postal Clerks, says sectional centers and ZIP coding can and will
meet post office promises of speedier delivery
eventually. "But they were sure wrong," he
says, "when they said they could do that
at lower costs and with less men at work."

To beat up his sain. Me

To back up his view, Mr. Pierceson points to the Rock Island, Ill., secional center, which

has been in operation for 2 years and which, apparently, does speed mail delivery. "Rock Island is successful," Mr. Pierceson says, "because when it became a sectional center personnel from nearby post offices—Davenport, Iowa, and Moline, Iil.—were transferred to Rock Island to handle the load."

The feeling among some postmasters in that with a new Postmaster General, Lawrence F. O'Brien, the Department might be less committed to meeting Mr. Gronouski's goal of lower costs and fewer employees. Freed from these qualifications, they say, the ZIP code system might well deliver on Mr. O'Brien's recent promise of "overnight mail delivery from any point in the Nation."

But until that day, in small hamlets across the country similar to Rochester, men like Mr. Overmyer would be more than happy if they could get overnight delivery to towns just across the nearest hill.

## Extend GI Bill Benefits to Vietnam Veterans

EXTENSION OF REMARKS

## HON. JOHN A. RACE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. RACE. Mr. Speaker, there is growing sentiment in this country for Congress to look into the matter of providing some form of special recognition for our military veterans returning from Vietnam.

Recognition similar to the 3I bill for veterans of World War II and Korea.

Carl Zimmermann, director of news and public affairs for WITI-TV in Milwaukee, editorially commented on this subject on December 28. Since WITI is a major news voice in Wisconsin, this editorial should be of particular interest to Congress. I'do, therefore, request that it be printed in the RECORD:

EXTEND GI BILL BENEFITS TO VIETNAM VETERANS

It's a warm, good feeling to see all the things that are being done for our fighting men in Vietnam. Like Operation Christmas Star, in which thousands of Americans sent packages of presents to those serving the cause of freedom in southeast Asis. You can be sure this thoughtfulness by the people at home will mean so much to the men in uniform over there. And this was only one example of many programs still underway.

Yet, there's more that should be done. To truly award those men for the sacrifices they're making, we need early approval of a new GI bill of rights. The individual Vietnam veteran makes the same effort in the defense of our country as any of the men who served in World War II or Kures.

You can't minimize the Vietnam fighting

You can't minimise the Vietnam fighting by the hundreds of thousands of men we've committed by telling them this is not a real war, not a "declared" war. Try explaining that technically to the man pinned down by machine gun fire, or the man hopelessly surrounded by Vietcong guerrillas. No, he's fighting as valiantly and with the same dedication as the men of those officially "declared" wars, and deserves the same benefits.

The most important part of the original GI bill was the provision for advanced education. If we can open the door of our universities and colleges for the men returning from Vietnam, we are not only helping that individual serviceman. we're enriching our

entire country. What better investment in

TV-6 feels that investment should be assured. Let's tell our Representatives in Washington we want to see our Victnam veterans receive the benefits of a new GI bill of rights.

#### Life in Vietnam

EXTENSION OF REMARKS

## HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. BROOMFIELD. Mr. Speaker, recently a missionary and his family from the Church of Christ, Royal Oak, Mich., returned to the United States after 21 months of living daily with danger in Vietnam.

In a letter to me, the Reverend Maurice C. Hall outlined the steps he believed our Federal Government should take to end the war there.

Reverend Hall, his wife and his son intend to return to Vietnam in March, despite the fact that they had to live behind barbed wire in constant fear of terrorist attacks. As long as our Nation continues to produce families with the courage and the dedication to God and country that this family has so amply demonstrated, we should have no doubt about the future.

H

For the benefit of my colleagues, the letter from Reverend Hall follows:

CHURCH OF CHRIST,
Royal Oak, Mich., December 15, 1965.
Hon. WILLIAM BROOMFIELD,
Member of Congress, State of Michigan,
House of Representatives,

Washington, D.C.

DEAR CONGRESSMAN BROOMFIELD: I am a missionary of the Churches of Christ and served in South Vietnam for the past 21 months. Presently, due in part to a general buildup of nervous tension, especially by my son Ronnie, 9 years of age, we are home on a brief work furlough.

During World War II, I served in the European and South Pacific campaigns, rising to the rank of captain. However, I make no claim to being either a religious, political, diplomatic, or military expert. I simply desire to express my opinion as an individual American citizen sincerely concerned with the welfare of every human being; rogardiess of race, creed, color, or national origin.

On the whole, I support your policies in Vietnam. Nevertheless, permit me to humbly call to your attention a few matters I believe most pertinent to the conclusion of a just and lasting peace.

First, and I believe you are aware of this, the enemy we are dealing with is entirely different from anyone we have ever met in America. He has no concept of individual rights or human dignity. He is obsessed with the lust for power and world domination by the atheistic Communist state. To this end, any means is justified in his twisted mind. Any agreement is kept by him only as long as it is to his advantage.

I would suggest a tight blockade of all North Vistnamese ports; including mining, naval and air patrol. (This, of course, would be publicly announced so no one could criticize any resulting ship loss.) There should also be naval bombardment, at least of Haiphone.

An increase in the bombing targets to every vital supply line and industrial center.

This to include Hanol, after, perhaps, a 30-day grace period for the Vietcong cessation

of shooting.

Also, the increase, as rapidly as practical, of man and firepower, limited only by necessity for complete and total victory. I prayfully make this recommendation with my eldest son serving as a marine in South tnam

The defoliating of jungle areas that af-The decomand of jungle areas that are ford refuge and protection to the Victors. The bombing of any country's supply routes that provide and/or permit transpor-tation of Victors troops and/or supplies.

The immediate reclassification and induction of everyone, within the legal age limits, participating in public demonstrations and er distribution of material detrimental to morale and the prosecution of the war effort.

A promise of use of every effort of your good office to expose congressional Members (especially, those experts who have spent a couple of days in officers' clubs while on a self-edifying Vietnamese tour) whose conduct and public statements impede the war

I humbly submit these viewpoints for your consideration.

onsideration. Yours very sincerely, MAURICE C. HALL.

### History Will Award McGeorge Bundy an Honored Place

EXTENSION OF REMARKS OF

### HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. MOORHEAD. Mr. Speaker, a distinguished American will soon leave the Government for private life after a unique period of service to two Presidents and to his country.

None but those two Presidents, at this stage, can know how very valuable Mc-George Bundy's service to his country has been. History, however, will award him an honored place in our Nation's

hall of fame.

11

Under leave to extend my remarks, I include two assessments of Mr. Bundy's work in the Appendix of the RECORD. One is the column by Mr. Joseph Alsop, as published in the Washington Post, December 10, 1965, and the other an editorial in the same paper of the same date:

> MATTER OF FACT: AN ERA ENDS (By Joseph Alsop)

Now that McGeorge Bundy's prospective departure from the White House has been formally announced, it is worth asking what gave this remarkable man his remarkable influence and leverage.

He is, to begin with, a man with rather strongly marked personal traits. He is youthful, both in his rest and his appearance (which probably prevented him from becoming, first, president of Harvard and, later, Secretary of State. He enjoys pleasure, loves good company, likes simple jokes, and has a remarkable capacity for friendship.

He is also oddly puritanical, in an old-fashioned Bostonian way; and the fact must be faced, he has a certain Philistine strain. (The arts and even the more abstract learned disciplines, like archeology, may well suffer slightly while he remains at the head of the Ford Foundation.) Add that he does not

suffer fools gladly, and if these be flaws, you have the full list.

As can be seen, however, the notion of these superficial traits by no means offers an explanation of Bundy. Nor is his role explained by the opportunity that was given to him by President Kennedy's decision to be his own Secretary of State. What he did with that opportunity is the measure of the man, and it is this that needs to be explained.

The explanation, clearly, must begin with his strong disinterestedness and deep sense of public duty. It may be asked, of course, how a man can be disinterested who is also so obviously ambitious and so evidently en-

joys the exercise of power.

But the answer is that a public servant who is not ambitious and does not enjoy the exercise of power is at least a flawed if not an entirely useless instrument. A hesitancy in the face of power was in fact the flaw in the late Adlai E. Stevenson. Disinterestedness merely consists in putting public duty before ambition, whenever circumstances may require this disagreeable choice.

This kind of disinterestedness Bundy has more than amply proved he had, not least when President Johnson was making his painful but courageous basic decision about Vietnam. To this basic quality, Bundy adds two others of essential importance—the courage to face hard decisions without boggling at the consequences and the energy to do an

inordinate amount of daily work.

His power to work alone would have been sufficient, all by itself, to set Bundy apart from other men. For more than 6 years, and for 7 days a week, with only the rarest holiday interruptions, the whole foreign business the United States of America has passed across Bundy's desk; and every detail in this enormous volume of business has been handled with brisk dispatch and orderly effi-

Yet one may still guess, oddly enough, that Bundy's key quality is neither in the moral category of his disinterestedness nor in the physical category of his power to get through five or six normal men's work. His key quality, in fact, is intellectual; and it may be cribed as simple intolerance of guff.

In a happier time, intolerance of guff ould be taken for granted among the American policymakers. It was, indeed, the distinguishing mark of the heroic postwar era of U.S. foreign policy. In those days, no one of any mark (except of course poor Henry Waliace) proceeded from wishful as-sumptions to ridiculous conclusions.

Nowadays, however, guff rises round us like a horrid tide. Empty slogans, cheap self-delusions, glaringly obvious nonfacts, are solemnly peddled on every side and on an enormous scale. Deceptive word substitu-tions—"negotiations" for "surrender," for enormous example—are the common currency of politi-

cal discourse.

But Bundy, who does not gladly suffer fools, is even more intolerant of wishful assumptions, counterfeit ideas, nonfacts and verbal disguises. This characteristic has verbal disguises. This characteristic has made him a good many enemies. For fools not only expect to be suffered, and not merely with patience, but with every evi-dence of unalloyed delight; in the intellectual realm, the counterfeiters also are wonderfully self-righteous, and hence they grow wonderfully indignant when their counterfeit is rejected.

But one cannot think of an enemy of

Bundy's whose enmity is not in fact an honor. He has been a public servant in the tradition of Stimson and Root, Lovett and McCloy, Acheson and Forrestal. As these men dominated American foreign and defense policymaking in their day, Mc-George Bundy and Robert S. McNamara have been the dominant advisers of President

Kennedy and President Johnson.

An era will therefore end when Bundy goes. And it must be added that President

Johnson will have to search very far and very hard if he is to have equally intelligent, guff-free and courageous advice hereafter.

#### BUNDY'S DEPARTURE

McGeorge Bundy will have no successors at the White House—and no predecessors at the Ford Foundation. This is only to say that the former Harvard dean is a man who so puts his own imprint upon any situation that the job at hand becomes uniquely his. ssment of his role in two adminis-A full ass trations will await a later estimate—and that estimate probably will have scant benefit of his own contributions to it, for he is not a "kiss and tell" public man. His method of operating is institutional-notwithstanding his individuality.

The President will have to fill the job with different man, but beyond this, he has a different job to fill. In the Kennedy administration, Bundy was the ideal agent through whom the President could exert his direct leverage on foreign affairs. In the Johnson administration, the Eundy role altered and in a way even broadened). His organization probably acquired an even larger role in helping to make Presidential decisions and framing up the available alternative policies. This was especially important in the first period of the Johnson administration.

No doubt Bundy's successors will have a much different charge and assuredly they will carry it out differently. In this sense, his departure closes a period and ends a re-lationship to governmental policy unique in American history. There will be new and different channels between the President and Defense and State Departments. changes can occur in the loose and flexible and plastic American Government without and plastic American Government english profound constitutional crisis or political upprofound crisis or political uppro heaval. The Government apparatus speedily adjust to a new relationship.

When he departs from Washington in Feb ruary to go to the Ford Foundation, Mr. Bundy will be able to look back upon a reble record of service to his country. is gratifying to know that the President has made arrangements to make further drafts upon his judgment, wisdom and experience. Whatever institutional arrangements are made, of course, such men forever remain first at the disposition of their That is the impulse that brought him to Washington and the one that kept him here and the one that sooner or later may bring him back.

#### It's Uncle Billy Frost's 103d Birthday

EXTENSION OF REMARKS

## HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. ROGERS of Texas. Mr. Speaker, Mr. William B. "Uncle Billy" Frost of Pampa, Tex., is celebrating his 103d birthday today, and his many hundreds of friends in Pampa, the Texas Panhandle, and all over the United States are flooding him with messages of congratu-

lations and best wishes.
"Uncle Billy" is an institution in our hometown of Pampa not only because of his personal charm but also because he is one of the true pioneers of the U.S. petroleum industry. Uncle Billy's father drilled a well in Drake, Pa., credited with being the country's first. Uncle Billy, when he was 14 years old, went to work pumping oil wells and followed the petroleum boom through fields in Pennsylvania, Kansas, Ohio, Oklahoma, and Texas before settling in Pampa, in the heart of the great Panhandle oil and gas field.

We in Pampa and the Texas Panhandle are proud to salute Uncle Billy Frost on the occasion of his birthday and, God willing, hope to enjoy his warm friendship for many more years.

### **Behind Those Campus Demonstrations**

EXTENSION OF REMARKS

## HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. DAVIS of Wisconsin. Mr. Speaker, I think all of us have felt pangs of concern, even worry, relating to the campus demonstrations of recent months.

As I have mentioned to my colleagues before, it very often takes a smalltown newspaper editor to cut through the words and acts of others, to bring farreaching events into focus.

C. W. Brown, editor of the Oconomowoc Enterprise, Oconomowoc, Wis., has done exactly that and I use this means to call one of his recent editorials to their attention:

BEHIND THOSE CAMPUS DEMONSTRATIONS

"Behind Those Campus Demonstrations" is the title of an article in the January issue of Reader's Digest, page 48, that should be "must" reading for every citizen. It was written by Eugene H. Methvin following a 5,000-mile tour across America's campuses.

The article should be of particular interest to those brilliant and sincere students who are participating in and sometimes leading these campus demonstrations. Their public image is that they are in the weird position of attending a university presumably to become educated but in fact are, without depth of actual practical experience, trying to "educate" their university.

Members of another group on the university campuses represent those who just want to join excitement.

Still another group consists of faculty members who under the guise of personal liberty indefensibly lend their influence to creating turmoil not only at their places of employment but also to the interruption and obstruction of orderly teaching of young minds the education essential to attaining the foundations for sound judgment and responsible citisenship.

It would do no good for the radical leftwing agitators to read the article. They would only giost over the stupidity of permitting them the liberty to openly work under the cloak of the right of freedom so that they may destroy freedom itself. To those who do not believe that is the truth just read the article. There is no difference between these known Communist leaders on campuses and their counterparts that have created the Vietcong and the progressive uprisings that are increasing in Central and South America and the Caribbean area. Even in Puerto Rico, the showpiace of the Caribbean in progress and liberty, they are successfully accomplishing their dirty work.

Consider that American students in India receiving U.S. Government scholarships under a program administered by the University of Wisconsin demonstrated against the American Government policy and were rude

to a visiting congressional delegation which included Wisconsin's Representative in Congress, Thomson. One editorial writer interpreted this as something to be proud of, pointing out that it is evidence that we honor the rights granted in our Constitution. American students use of that right in India, will, in fact, be teaching Indian students and the general public to do the same thing against their own government—and if that doesn't threaten destruction to free governments in those troubled countries, nothing does. How stupid can we be? We at least ought to see that students go over there who will not exercise their rights in any such manner. It's outright dangerous to the whole effort to maintain freedom in the world. It is high time that we faced that fact.

It is fuzzy thinking when the rights of free speech are interpreted to extend to the commission of subversion and treason itself and if it isn't treason, what is it?

#### Second City Syndrome

EXTENSION OF REMARKS

## HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. ROSTENKOWSKI. Mr. Speaker, under leave to revise and extend my remarks, I would like to have printed in the RECORD the editorial of Standpoint, the editorial voice of WBBM-TV Chicago, broadcasted Thursday, December 9, and Friday, December 10, 1965. Titled the "Second City Syndrome," it is as follows:

THE SECOND CITY SYNDROME

Chicago wears the label of "second city."
That's mostly because it has fewer people
than New York City. And, by other normal
measuring rods, it is second to New York.
Less money is counted in our counting
houses, we have fewer theaters, fewer advertions exercise.

We think that if we got some new, more logical measuring sticks, Chicago would measure up to the title of America's No. 1 city. Here is our case: Behind New York's glittering facade is corrosion so deep that the city is staring wide eyed at a \$300 million budget deficit. New York is now paying more interest on its debts alone than Chicago is to run the whole city. While Manhattan is losing industry at a rapid-fire rate, Chicago is leading the Nation with a billion dollars worth of new plants and equipment in the last 10 years alone. And, we're known as the Nation's automation capital with one out of every seven workers in fully or partially automated jobs.

When New York's major crime rate jumped

When New York's major crime rate jumped a jarring 17 percent last year, Chicago's dropped 16 percent—a note underscored by New York's recent attempt to hire our police superintendent, O. W. Will.— At the public welfare level, New York's aid to dependent children rolls have risen more than 48 percent in the last 3 years. Chicago's dropped 5 percent, the only major city in the Nation to show a decline.

St'll parched from a crippling water shortage and faced with the fact that its World's Fair was a flop, New York can cast covetous eyes on Chicago's brimming lake and booming convention business—a business that incidentally has already booked up sprawling McCormick Place for 1966, has it 80 percent booked for 1967, and 66 percent reserved for 1970. New York's per capita

debt is more than \$430; Chicago's slightly more than \$60, the second lowest in the Nation next to San Diego.

While New York has been battling over a lower Manhattan expressway since the start of World War II, Chicago has built the Kennedy, Eisenhower, Stevenson, Dan Ryan, and Edens expressways. Still another, built on stilts, has been proposed for Chicago's West Side. And even now, as the threat of a major public transportation strike glares at New Yorkers, Chicago has ironed out a new CTA contract—at no increase in fares—and a million-dollar survey is in the works to expand our subway system by some \$150 million. Chicago's port is having a record year; our airport is the world's busiest and fast becoming overcrowded. Skyscrapers—new, shiny and towering—have hoisted our skyline to new heights and they're still sprouting, evidence to a building boom that has led the Nation for the last decade.

Chicago knows how to move, and it is moving, with the same kind of "go" that makes the Chicago Bears go. But we've still got a long way to go. We have slums yet unremoved. We have racial problems yet unresolved. We have a taxation system that need to be revised. Perhaps, most important of all, we still have Chicago citizens with a second city frame of mind.

That's where you come in. You have a right to be proud of Chicago, and a right to work to make it better, even though we think we've already captured the title of the Nation's No. 1 city in everything except numbers. Perhaps it was because, being second, we tried harder.

EXTENSION OF REMARKS

## HON. EDWIN W. EDWARDS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. EDWARDS of Louisiana. Mr. Speaker, as we commence this 2d session of the 89th Congress amidst widespread and irresponsible criticism of our Government's position and policies regarding its relentless and admirable defenses against Communist aggression throughout the world and, particularly in south-east Asia, it is with great pride that I now add to the overwhelming voices of countless millions of free and loyal Americans who are in vigorous support of our Nation's stand against communism by offering the resolution of the City Council of the City of Lake Charles, La. unanimously adopted by it on November 17, 1965:

RESOLUTION 92-65

Resolution commending the American youth who offer their lives in the service of their country in Vietnam

Whereas it is the policy of the Government of the United States to be concerned about the health and welfare of all people; and Whereas the Government of the United

Whereas the Government of the United States has given aid to all poor and distressed nations in the world: and

nations in the world; and
Whereas it is the policy of the Government
of the United States to oppose the ensiavement of the weak by the spread of atheistic
communism; and

Whereas our Government has sent American troops and American goods to Vietnam to help that country in its fight against communism: Now, therefore, be it

Resolved by the City Council of the City of Lake Charles, La., in regular session convened, that:

SECTION 1. The Council of the City of Lake Charles, La., recognizes the plight of this distressed nation and sends its best wishes and prayers for victory over their communistic enemy, and commends the American youth who offer their lives in the service of their country in Vietnam, for their devotion to the ideals of democracy, their dedication to the principles of freedom, and their sacrifices and suffering to prove to the world that the American way of life is a treasure that all mankind should seek.

DAN WISE, President of the Council.

Attest:

JUDY TRAMMELL, Clerk of the Council.

#### Fairness in Phoenix

EXTENSION OF REMARKS

Mr. ROUDEBUSH. Mr. Speaker, the ability of a free press to keep a tight rein on the excesses of a powerful central government has been one of the keystones of our American system.

com-

A.

Eugene Pulliam, of Indiana, is one of the real giants in the field of newspaper publishing, and the people of our State have benefited from the efforts and service of Gene Pulliam for many years.

The two largest newspapers in our State, the Indianapolis Star and the Indianapolis News, as well as the Muncie Star and the Muncie Press, are products of the Pulliam drive and initiative.

There are no finer or more respected newspapers in the United States than the four papers I have mentioned, and central and east-central Indiana owe a great deal of the current prosperity and well-being to the works of these outstanding publications.

Fearless and responsible journalism are a Pulliam trademark and have contributed greatly to the success of his enterprises. The Pulliam credo that public office is public business has brought our State a brand of journalism and a standard of publishing excellence unequaled in the Nation.

All Hoosiers are proud of the recent honor accorded Mr. Pulliam as the recipient of the 12th John Peter Zenger Award, and I wish to add my congratulations to his achievements. An article in the January 7 issue of Time magazine also featured the accomplishments of Mr. Pulliam.

In order that all Members of Congress be apprised of the tremendous contribution to our Nation by Mr. Pulliam, I offer, under unanimous consent, the Time magazine article, and a story from the front page of the Sunday, January 9, issue of the Indianapolis Star.

The articles follow:

[From Time magazine, Jan. 7, 1966]

PAIRNESS IN PHOENIX

A few years back, a joke was making the rounds of Phoenix, Publisher Eugene C. Pulliam asks one of his managing editors: "What did Barry Goldwater say today?" The editor replies: "Nothing." "Fine," says Pulliam. "Put it right on page one, but keep it down to two columns."

Times have changed. Goldwater is very cool to his old friend Pulliam these days. And Pulliam's papers, the Arizona Republic and Phoenix Gazette, have lost their partisan image and greatly inproved and broadened their news coverage. This week Pulliam receives the University of Arizona's John Peter Zenger Award' for distinguished service in support of freedom of the press and the people's right to know. (Among previous recipients: the New York Times' James Reston and Washington Post Editor James Russell Wiggins).

Pulliam's papers, the only two dailies in Phoenix, no longer piay up only the conservative view of news and dismiss what is distasteful to them. Now they give equal space to varying shades of opinion. The editorial pages not only support Democratic Senator Carl Hayden as well as Republican Senator Paul Pannin; they also balance liberal columnists, such as Walter Lippmann, against conservatives, such as Walter Lippmann, against conservatives, such as William Buckley. Morale was once so low that innumerable staffers quit in disgust, and many were fired. Now, Pulliam runs a happy shop. "We are all Pulliam's bables," says one veteran staffer, actually brushing sway a tear.

ON THE MERITS

Of the two papers the morning Republic (circulation 156,000), has changed more dramatically than the afternoon Gazette (100,000). In the last 4 years, the Republic has boosted its reporting staff from 65 to 100, stationed 1 reporter in Victinam while others roam the globe. Arizona staffers have delved into such topics as poverty, the new math, smog, pornography, and corruption in the State tax commission. The paper fought successfully to save nearby scenic Camelback

Mountain from private developers.

This new look in newspapers is not unique to Phoenix. Papers across the United States are no longer reacting to issues in quite so ideological a way; instead, they confront each issue on its own merits. Still, much of the improvement in the Pulliam papers can be chalk. I up to Pulliam himself, who has always been portrayed as more of an intransigent conservative than he actually is. At 76, Pulliam is one of those publishers who is a newspaperman first. "Why in hell," he asks, "should a man want to sell newspapers? If I wanted to make money, I'd go into the bond business. I've never been interested in the money we make but in the influence we have."

The son of a Kansas Methodist missionary, Pulliam attended DePauw University, later joined the Kansas City Star. At 23, he gave up working for a newspaper to buy one: The Atchison (Kans.) Champion. From them on, he bought and sold papers until he built up enough equity to land four that satisfied him: the Indianapolis Star in 1944, the two Phoenix papers in 1946, the Indianapolis News in 1948. Deeply in debt, Pulliam kept nervously reshuffling his staffs for several years and baidly promoting his conservative opinions. But after gaining confidence, he decided that his papers were too doctrinaire even for him. He began to give all of his papers more freedom, and in 1960, when J.

Edward Murray lost his job as managing editor of the Los Angeles Mirror, Pulliam invited him to Phoenix. "Tm no pink." Murray told Pulliam, "but I'm too liberal for your blood." Pulliam disagreed and put him in charge of the Republic.

AN AVERSION TO POWER

Murray encouraged staffers to think for themselves and stop trying to read Pulliam's mind. He slugged it out a few times with Pulliam over issues, but mostly the two have seen eye. to eye. Pulliam's papers supported Goldwater for President, but lukewarmly. "It isn't fair to the Democrats to give him extravagant support," Pulliam told Murray. "He is not a superman, and I don't believe in supermen." Murray hastened to agree. "The old conservatism is changing into a new sophistication in Phoenix," and the papers must guide the town.

The Pulliam papers now exert so much influence that Pulliam is worried. Like other thoughtful conservatives, he fears vast power, even his own. He refuses to add special news or advertising sections to his papers to increase their sales in the suburbs. "Competition is good for us," he says. "There's plenty of room for the suburban papers. Let them live." He will not serve on company boards in Phoenix and discourages people from coming to the papers for advice an civic projects. "They should go ahead on their own," he declares, true to his individualistic creed. "We will support them if we think they are right, and oppose them if we think they are wrong."

[From the Indianapolis Star, Jan. 9, 1966]

Tucson, Anz.—Publisher Eugene C. Pulliam yesterday received the University of Arizona's 12th John Peter Zenger Award and a message of commendation from President Lyndon B. Johnson.

After accepting the award, voted him by a panel of U.S. editors and publishers for "distinguished service in freedom of the press and the people's right to know," he addressed the awards luncheon sponsored by the Arimun Newspapers Association.

Pulliam called on the American people and the press to be partners in freedom in the continuing battle to protect their liberties from government tyranny.

A founder of Sigma Delta Chi, professional journalism society, he is publisher of the Indianapolis Star and the Indianapolis News, a number of smaller Indiana newspapers and the Arisona Republic and the Phoenix Gasette, both at Phoenix.

Pulliam asserted that the right of the people to criticize their government is the central issue of human liberty in 1965, as it was in 1735, when John Peter Zenger's trial provided the heritage for the press' work today.

## Government Should Prosecute Aptheker, Lynd, and Hayden

EXTENSION OF REMARKS

OF THE

HON. O. C. FISHER

OF THEAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. FISHER. Mr. Speaker, the press reports that the Justice Department is making a study of the violations of Federal laws which were committed by three American citizens who recently went to Hanoi. The trip was admittedly made without authority and in open defiance of law.

<sup>&</sup>lt;sup>3</sup>Named for the colonial New York newspaper printer who was falled for criminal libel against the British Crown in 1734. Zenger's acquittal by a local jury established not only truth as a defense against libel, but also the principle of freedom of the pressin America.

The three culprits were Herbert Aptheker, Staughton Lynd, and Thomas Hayden. The alleged mission was to contact Communist authorities and discuss with them our efforts to bring about a peaceful settlement of the war the Communists are waging against the South Vietnamese

Upon their return these anti-American emissaries reported in Moscow they had talked at length with the North Vietnamese Premier, Phan Van Dong, and others. Their report was hazy and meaningless. Among other things, they decided the Communists did not know about President Johnson's unconditional offer of negotiations, and the United States was at fault.

Does this conduct constitute a violation of our laws? That is the question the Justice Department is now trying to determine. If there is substantial evidence of their guilt, then it would seem that they should be prosecuted.

Press reports state the Justice Department is reviewing several laws that might be applicable to the unauthorized trip. Among them are violation of State Department travel and passport rules, sedition, treason, and an 18th-century law—the Logan Act—which prohibits negotiations with foreign powers by private U.S. citizens.

From their own admissions it would seem that they did some negotiating.

Moreover, their travel in defiance of the law which requires them to clear the trip with the State Department would seem to present an open-and-shut case against them.

Federal law provides penalties of up to years in prison and a fine of \$5,000 for this unauthorized trip.

Mr. Speaker, these violations are serious and should be treated accordingly. At the very time that our troops are fighting and some dying in a fight against Communist aggressors, these characters go to Hanoi and give aid and comfort to the enemy.

While these three are obviously mentally, morally, and emotionally imma-ture, they should nevertheless be made to answer for their subversive activities. Being mentally sick is in this instance not a valid excuse.

After all, who are these crackpots? Aptheker is an admitted Communist of the old Stalin school. He is an enemy of the United States. He is described as the Communist Party's leading intellectual at the Institute of the Marxist Studies in New York. He revels in bloodletting and anarchy. Of the Negro riot in Los Angeles he was quoted last September as saying: "Of course, Watts was glorious."

Lynd, an associate professor of history at Yale, is likewise a revolutionary. He was affiliated with the pro-Peiping Progressive Labor Party; and was also identifled with the Socialist Workers Party and the American Youth for Democracy-both cited as subversive by the Attorney General. He led the August 9 demonstration in Washington against the administration's policy in Vietnam, and got himself arrested for violating the

This man once called for "civil disobedience so persistent and massive" that the President, Secretary of Defense, Secretary of State, and other high officials would have to resign. In a speech last September. Lynd was quoted as saying a Socialist scholar should be ready at any moment to put aside his books and devote himself "to the jugular" to bring about a better world, and added:

I wonder whether every teacher who calls himself a Socialist does not have a duty to become a professional revolutionary.

In speaking of the march on Washington last August, Yale's professor said:

Nothing could have stopped that crowd from taking possession of the Government. Perhaps next time we should keep going.

Thomas Hayden, the third member of the trio, is a founder of the left-wing Students for a Democratic Society, and is obviously pro-Communist.

It is evident that this motley crew are all retarded intellectuals and trouble-They should be made to anmakers. swer for their crimes.

### World War on Hunger

EXTENSION OF REMARKS

#### OF HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. COOLEY. Mr. Speaker, on December 9, 1965, in addressing the organization meeting of the Committee on the World Food Crisis, I said that I feel it is the destiny of this country to attack starvation around the world.

Moreover, I told the dedicated people gathered for this important meeting that I am convinced this mission of our country is so urgent, its rewards to all mankind so promising, that nobody can head

So deep is this conviction, Mr. Speaker, that I am now proposing a world war on hunger.

I disclosed my plans for legislation in a release to the press for Sunday, January 9. Because of the broad interest of the Members of this body in this important undertaking, and with the consent of the House, I am placing this press announcement in the Appendix of the RECORD. The press statement follows:

COOLEY TO INTRODUCE WORLD WAR ON HUNGER BILL

Chairman HABOLD D. COOLEY, of the House Committee on Agriculture, announced today he will introduce early in the new session of the Congress a bill opening the way for a world war on hunger, through extension and expansion of America's food-for-peace pro-

The bill would authorize financing of the export of \$14 billion worth of food and fiber in the next 5 years, over and beyond U.S. normal dollar exports of agricultural com-

"We live in a hungry and dangerous world," Mr. Cooler said. "I am told that 12,000 persons die each day of starvation around the world, and many millions of peo-

ple are hungry and ragged." Then he declared:

"Our humanitarian instincts, the world population explosion, and the cause of peace, demand imaginative, sound, and positive action at this time. There are two magic words in all the languages of the world-food and raiment. I am convinced that our world superiority in the production of food and fiber can be used to encourage great masses of humanity into peaceful pursuits, moving them toward self-reliance and self-sufficiency in the production of food and fiber. This should strengthen the bonds of friendship among free nations. Moreover, I am con-vinced that in the end bread will be more important than bullets in bringing peace

He emphasized also that such an under-taking as proposed in his bill should, in the long run, contribute substantially to the economic stability of rural America.

The new Cooley bill would establish as

policy of the United States:

1. Deliberate production of food and fiber America's free-enterprising farmers to feed hungry people and to clothe those who are ragged, in friendly nations around the world. Such relief no longer would be lim-ited to distribution of U.S. surplus food and fiber

2. Aids to these nations in building their own agriculture to meet the needs of their

peoples.
"I am not proposing," Mr. Cooley said, "that we remove forthwith the restraints upon farm production now operating through voluntary farm programs. did this, we might again find ourselves buried in surpluses. Neither do I suppose that the United States can feed everyone who is hun-gry around the world. But our farmers have mastered the arts of abundance and they can produce food and fiber, beyond our own needs, that can build the physical strength and morale of the populations in many places around the world where these people work in the direction of self-sufficiency in agricul-

"It is my thought that our war on starvation and destitution should be directed to those areas where governments and people are trying to help themselves. We can supply temporary relief with food and fiber in programs to develop agriculture in many Moreover, we could supply fiber, food, and other aids while people in these other nations are developing harbors, transporta-tion, storage, and other facilities, to accommodate the improvement in their own food resources.

"I caution again against anyone supposing that I propose a sudden unleashing of our total agricultural potential, for if we did this we certainly would pile up new surpluses in our own warehouses, since there are now so many places around the world that have very d facilities for receiving, storing, and

distributing food and fiber."

Heretofore the United States has shared with other nations through the food-forpeace program only the surpluses in the operation of programs designed to reduce the overabundant production of America's farms.

"I propose now, since our surpluses are vanishing," Mr. Cooley said, "that we produce food and fiber deliberately as a matter of national policy, for sharing with those underfed and ill-clothed peoples who under-take sound programs to build up their own agricultural production and, thereby, to achieve self-sufficiency in the face of the world population explosion.

"The bill I am drafting is simple. Its major provision will be in the form of an endment to Public Law 480—the food-forpeace law—to provide guidelines and rules for the worldwide distribution of food and er from our farms—this distribution not fibe to be limited to surplus food and fiber as now provided by Public Law 480.

"The food-for-peace program has helped feed millions of hungry people in many countries. We are fortunate now, in looking toward a world war on hunger, to have the machinery and the know-how in our Department of Agriculture to undertake such a new program in combination with programs to develop the food and fiber sufficiency of countries where there now are millions of people ill-fed and ill-clothed.

"Our farmers would be the key to the whole program I envision. Their income, and the well-being of rural America, must be protected and advanced in this new undertaking. I would hope that this new program would keep millions of acres in production and employ on our farms many thousands of people who would be dislocated if we proceed with further restrictions upon our agricultural production."

The Agriculture Committee chairman said

The Agriculture Committee chairman said he hopes to open public hearings on the legislation early in February.

## Need for a Breakthrough in Urban Transport

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. REUSS. Mr. Speaker, during the last session I introduced legislation—H.R. 9200—to establish a federally supported research program designed to achieve a technological breakthrough in the development of new urban transportation systems. Such systems are desperately needed by our cities today. If they are not forthcoming soon the urban transportation crisis will reach unmanageable proportions

Twenty-one other Members of the House have introduced identical legislation. In the Senate, the Senator from Maryland [Mr. Tydnos] introduced an identical bill—S. 2599—which was cosponsored by 10 other Senators.

The sponsors of the legislation in the House, in addition to myself, include: the gentleman from Ohio [Mr. ASHLEY], H.R. 9201; the gentleman from Texas [Mr. CABELL], H.R. 9202; the gentleman from New York [Mr. FARBSTEIN], H.R. 9763; the gentleman from Minnesota [Mr. FRASER], H.R. 9995; the gentleman from Ohio [Mr. GILLIGAN], H.R. 9826; the gentlewoman from Michigan [Mrs. Garr-FITHS], H.R. 9996; the gentleman from New York [Mr. HALPERN], H.R. 9997; the gentleman gentleman from Connecticut [Mr. IRWIN], H.R. 10857; the gentleman from New Jersey [Mr. Jorlson], H.R. 9998; the gentleman from Maryland [Mr. LONG], H.R. 9999; the gentleman from New York [Mr. McCarthy], H.R. 10000; the gentleman from New Jersey [Mr. MINISH], H.R. 10001; the gentleman from Pennsylvania [Mr. MOORHEAD], H.R. 10002; the gentleman from New York [Mr. MULTER], H.R. 9203; the gentleman from Illinois [Mr. RONAN], H.R. 10003; the gentleman from New York [Mr. ROSENTHAL], H.R. 9204; the gentleman from Wisconsin [Mr. STALBAUM], H.R. 10279; the gentlewoman from Missouri [Mrs. SULLIVAN], H.R. 9205; the gentle-

man from Ohio [Mr. Vanik], H.R. 9206; the gentleman from Georgia [Mr. Weltner], H.R. 9207; the gentleman from Illinois [Mr. Yares], H.R. 9208.

The sponsors of S. 2599, in addition to the Senator from Maryland [Mr. Typings], include: the Senator from New Jersey [Mr. Case], the Senator from Pennsylvania [Mr. Clark], the Senator from Michigan [Mr. Hart], the Senator from Indiana [Mr. Hartk], the Senator from Hawaii [Mr. INOUYE], the Senator from Washington [Mr. Jackson], the Senator from Washington [Mr. Jackson], the Senator from California [Mr. Kuchel], the Senator from California [Mr. Kuchel], the Senator from Connecticut [Mr. Ribicoff], the Senator from Massachusetts [Mr. Saltonstal].

In the winter 1965 issue of the Transportation Journal, published by the American Society of Traffic and Transportation, appears my article explaining H.R. 9200 and the need for new urban transport systems:

RESEARCH IS NEEDED TO DEVELOP NEW MODES OF URBAN TRANSPORT

#### (By Representative HENRY S. REUSS)

Today our Federal Government is committed to substantial research to develop new transportation modes for travel to other cities by rail, to other countries by SST, and to other planets by rocket. Unfortunately, it has no plans to develop new modes for travel within our cities, just the areas where new transportation systems are needed most. Here is what the administration is plan-

Here is what the administration is planning. It has committed \$50 million over a 3-year period to develop a new system of high-speed ground transportation for travel between cities. The new system, once in operation, will be a boon to the intercity traveler who neither likes to travel by automobile nor by airplane, but who now is discouraged from taking the train because of the bumpy, slow ride he must endure.

For the traveler who does like to fly, the administration is going ahead with a program for the development of a supersonic plane which when operational in the 1970's will travel at speeds between 1,800 and 2,000 miles per hour. The total project will cost an estimated \$1 billion or more, a substantial portion of which will be in Federal funds. A great asset to the intercontinental traveler, the SST will also insure that the U.S. aircraft industries continue as makers of the most advanced planes in the world.

Finally, for the ultimate in travel the Pederal Government has committed itself to developing a transportation system for sending a man to the moon—at an estimated total cost of \$30 billion in Federal funds. This program is fine for boosting our international prestige and advancing selentific understanding. It, like the others however, does little for the urban traveler.

What the urban traveler needs most is a transport system what will carry him about the city rapidly, safely and economically.

The transportation problems confronting our cities today is extremely serious. People are forced to rely primarily on automobiles. As a result, city traffic is highly congested. It is a long and frustrating experience to travel from one part of a metropolitan area to another. Where public transportation does exist in the form of a bus or subway system, the urban traveler rarely can gu from origin to destination without transferring or walking some distance to complete the trip.

#### FEDERAL RESEARCH PROGRAM NEEDED

In response to the need for better urban transportation systems, I, along with 20 other House Members, have introduced legislation in the B9th Congress amending the Mass Transportation Act of 1964 to provide

an additional \$10 million a year for each of the next 2 years—or the remainder of the life of the program —earmarked exclusively to carry out a research program to achieve a technological breakthrough in the development of new modes of transportation for the city traveler.

From discussions with a wide variety of transportation expertis, 1 know that the technological expertise for developing the new modes is available in our universities and in industry, and what is needed is a Federal incentive to bring this expertise to bear on the problems of urban transport. At the same time, under this program, other available talent could be put to work on the analysis of social and economic problems confronting our cities as they relate to transportation. For instance, a report by the Cornell Aeronautical Laboratory, Inc., for the Department of Commerce on new ground transportation technology that might be used between now and 1960 suggests that the city traveler wants a transport system which retains the individual freedom now available to him in the automobile. The research program I have proposed, besides developing the new system itself, could also study the attitudes of people toward various different modes.

#### SHORTCOMINGS OF FRESENT SYSTEMS

Present-day urban transportation systems, heavily oriented around the automobile, leave much to be desired. Here are some of their drawbacks:

#### Air pollution

Automobiles are the chief cause of the air pollution which hangs over our cities. The result of the air pollution is that the city dweller is more subject than his country peighbor to all types of represent diseases.

neighbor to all types of respiratory diaenses. One substance from automobile and dissel exhaust that becomes a part of the air is a hydrocarbon known as benzpyrene, which tends to induce cancer. Motor vehicles are also a principal source of carbon monoxide and oxides of nitrogen, both of which have varying degrees of ill-effect on health. The consequences in large metropolitan areas can be serious. Breathing New York City air, for instance, is like smoking two packs of cigarettes a day.<sup>3</sup>

The problem could have even more serious long-term consequences. An expert on air pollution, Prof. Morris Nelburger, of the University of California at Los Angeles, predicts that polluted air may well doom humanity within the next century if steps are not taken soon to replace the automobile with a vehicle propelled by a system other than the internal combustion engine. Dr. Nelburger maintains that devices to eliminate exhaust from cars will not be adequate and as the population expands and living standards rise, increasing numbers of people—not only in America but in countries where the automobile is now a rarity—will acquire and drive their own cars. He has said, "the world's atmosphere will grow more and more polluted until, a century from now, it will be too poisonous to all human life to survive, and civilization will pass away."

vive, and civilization will pass away."

A good urban transport system could greatly reduce air pollution.

#### Traffic congestion

A commuter taking the bus to work may spend 45 minutes or more traveling a few miles from home to office. If he drives his car he may move more rapidly, but he has the problem of parking it and every day upon leaving work he runs the risk of being caught in a monumental traffic snarl. The greatest of these—to date—clogged the streets of Boston for 5 hours on the evening of December 30, 1963.

Heavy traffic, too, is a danger as well as a frustration to the individual, whether he walks or drives. The National Safety Coun-

Footnotes at end of speech.

cil has reported that in 1964 there were 14,500 deaths from motor vehicle accidents in urban areas and 980,000 personal injuries. A good urban transportation system could

make city travel much safer.

#### High costs

Whatever his personal choice of transpor-tation, the city dweller pays more than he realizes for the present commuting patterns heavily reliant on roads and freeways. Not only does he pay between 10 and 12 cents only does he pay between 10 and 12 cents a mile to drive his automobile to and from work—or half this if he goes by public transportation—but taxes on property, gasoline, and other items are higher than they might be because of the expense of constructing urban freeways, usually at the cost of \$10 to \$15 million a mile.

In addition, the cost of accidents is high, In addition, the cost of accidents is high, raising the price of insurance policies. The National Safety Council reports that damage bills for all urban accidents in 1964 amounted to \$4.6 billion, with property damage accounting for over half, or \$2.6

A new urban transport system, more efficient and cheaper to build than those we now have, could cut costs, both for the in-dividual and for the city.

#### Urban planning

Because our cities' transportation systems are dominated by the automobile, highways are often the predominant structures in urban areas, creating ugiy sites and taking up valuable real estate. Also, once the cars are downtown, they must be parked while their drivers work or shop, thus taking up more valuable land

City planners now have little choice but to build freeways. They are pushed by the demands of travelers who want their own cars, and pulled by the Federal grant-in-aid program that gives States 90 percent of the cost of constructing freeways

A good urban transportation system, more desirable than the automobile, would free the city from its shackles to the expressway and provide an opportunity for better urban

planning.

Good public transportation would bring other advantages to the city. If the system were automated and the vehicle traveled on restricted guideways, it could be used for restricted guideways, it could be used for carrying cargo other than passengers during nonpeak hours. In the early morning, the system could be closed entirely to passenger travel while goods were distributed about the city. Special containerized vehicles carrying goods to downtown stores could, in the period of a few hours, replenish the shops entirely. Thus it would be unneces-sary for trucks to clog central city streets during the day, thereby making the down-town area more enjoyable for the pedestrian.

The practice of supplying the stores might also be reversed so that those orders taken by marchants during the day over the phone could be delivered to decentralized distribution points in the early morning hours. next day the housewife could have all her deliveries presented to her door in time to free her for other activities that day.

#### ALTERNATIVES TO HIGHWAYS ARE POOR

Cities today have no sensible alternatives to building massive urban highway systems. They can turn to the conventional modes of public transportation, but these, too, have their shortcomings. Subvays, like freeways, are expensive to build, costing up to \$20 million a mile where the underground area is not already utilized for other public services. ses are little improvement over automobiles, since they still contribute to air pol-lution, cause traffic congestion, and can also run into other vehicles or pedestrians.

If a city does decide to develop a conven-tional public transportation system, it has little help available to it outside its own financial resources. The Federal program

authorized by the Mass Transportation Act of 1964 and now administered by the new Department of Housing and Urban Development is modest in scope and funding, with the result that only limited benefits fall to the city. The act carries a grant authority of \$375 million over a period of 3 years to pay two-thirds of the cost of establishing new urban transit systems or making improve-ments on existing ones. Since it would cost an estimated \$10 billion to properly equip our Nation's cities with conventional mode of public transportation, the Mass Transportation Act of 1964 is no more than the proverbial drop in a bucket.

The program, thus, is not designed to bring about the needed revolution in urban transportation. All it can do is help some cities hold the line a while longer with obsolescent systems which some day will have to be supplanted or supplemented if the city's residents and workers are to maintain any mean-

ingful degree of mobility.

The 1964 act does contain a provision which authorizes the expenditure of \$10 million a year, out of the total authorization of \$375 million, for research, development, and demonstration projects in all phases of urban mass transportation.

Because the pressures on the whole program for help in providing more buses and subway cars are considerable, the administrators of the program have made the decision for the time being to apply all of the \$10 million for research, development, and demonstration to the demonstration of already developed systems.

#### ONE NOVEL IDEA THE COMMUCAE

Amending the Mass Transportation Act of 1964 to provide another \$10 million annually exclusively for research and development of new modes of urban transport would complement the existing program by preparing for the greater demands for good public transportation which will most certainly develop as our urban areas continue to swell in population.

The research program would focus on developing systems which were fast, safe, and economical, do not pollute the aid, and satthe apparent need of people for individual transport while at the same time make good city planning possible. The program would be able to capitalize and improve upon the numerous ideas which already have been put forward for new systems of urban trans-port, among the most imaginative of which is the commucar, developed by a group of students and faculty at the Massachusetts

Institute of Technology.

The commucar is a small, lightweight vehicle capable of carrying up to four pass It can be driven independently under its own electric power or along public guideways, getting its electricity from a side rail. On the guideway, the vehicle is controlled by a computer system which takes its pas gers directly to their destination without transfer. Under its own power, a commucar could travel about 50 miles an hour, while on the automatically controlled guideway it could travel as fast as 100 miles an hour. Since the system would be automated, the density of traffic along the guideway would be much greater than along freeways, while at the same time the possibility of accidents would be greatly reduced.

Because the vehicle is compact and light,

it could be easily parked. Because it could be automatically controlled, it could be put k on the system, driverless, to be used back of the system, invertees, to be used by another commuter or shopper. Thus it would be possible either to own the vehicle or merely to rent it for a trip downtown. And the system might be adapted for use, as suggested earlier, for transporting goods

about the city.

The commucar is only one of many idea that could be developed and demonstrate under a federally program. sponsored

Another proposal, quite similar to the com-mucar, is the starrcar—for self-transit rail and road car—devised by the Alden Self Transit Systems Corp. of Westboro, Mass.

Still a third proposal is the teletrans, a system of individual vehicles which, unlike the commucar and starrear, are confined to guideways running either underground or in enclosed tubes supported above streets by metal arches. Powered by electricity and en-tirely automated, the teletrans vehicle is designed to run at an average speed of 45 miles signed to run as an average speed of as filles per hour. Stations, sidetracked off the main course, are spotted along the guideway ap-proximately every half mile. Since the ve-hicle would not have to go through each station, the trip would be nonstop, and since the entire system would be automated with the destination of the vehicle set by computer before the passenger embarked, no transferring would be required. This system has been under development by the Teletrans Corp. of Detroit, Mich.

#### TRADITION OF FEDERAL SUPPORT

It is by no means alien to Federal policy to use technology derived as a part of a concerted national program to develop a service of benefit to the general public. The Manhattan project, for example, one of the greatest Federal undertakings of all time, resulted in nuclear power for civilian use.

Like it is doing in the supersonic transport and high-speed ground transport projects, the Federal Government would join in the development of a transport system that will benefit everybody. Once the system is operational, the Federal Government would release it to private firms who would then produce and operate it.

Such a research program, although federally sponsored, would in all likelihood be carried out jointly by universities and industry with the most up-to-date technological expertise. The electrical industry, for instance, could develop the systems which will guide the vehicles from origin to destination, and the automobile and aerospace industries could design and construct the actual

Today nearly 75 percent of our population lives in cities. By 1980 nearly 80 percent of all Americans will be living in urban areas. This 80 percent—over 200 million—will have to get about the cities for the ordinary events of day-to-day living. They will need a system that will be quick, as and economical, which does not pollute the air, and which fulfill their desire for individual transport while at the same time making good city planning possible. This is the system that can be developed under a federally sponsored research program.

## Gemini Feat Puts United States in Space

EXTENSION OF REMARKS OF

## HON, OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. TEAGUE of Texas. Mr. Speaker, recent editorial in the Fort Worth Star-Telegram of December 17, 1965, well describes the current status of our manned space program. The brilliant achievement of rendezvous of Gemini 6 and 7 needs now to be followed by the docking of two vehicles. The lead which we hold in the space program, as so aptly put in this article, can only be maintained by our continued full support of our national space program. The editorial follows: GEMINI PEAT PUTS UNITED STATES IN SPACE

The American public does not get quite as excited over space flight now as it did when the first few flights were made. To a lay-man who knows little about the fine details of space science, space flights are space flights. It was amazing to all of us that man was able to orbit the earth in a space capsule and return safely to earth. It still is amazing. But after it has been done more than a dozen times it is natural that public excite-

dozen times it is natural that public server ment should show a slight decline. Most of us are not able to understand enough of the scientific problems to share the excitement of space scientists over proof that some intricate calculations are accurate or that some device will work under certain

The flight of Gemini 7 has turned up i problem that the filling station man deals with here on earth—a dirty windshield.

The pilots have had difficulty looking out

the windows, which were shiny clean at liftoff. The obscuring substance is not dust, which an electrostatic field might have coilected, but a kind of film, as if it were oil

That raises the question of whether there are greasy particles in space, which nobody can answer. The substance presumably could be analyzed if it were wiped off and the wiping cloth sent to the laboratory, but

reentry burns off the whatever-it-is.

Offhand it would appear the astronauts may have to send somebody outside to wipe the windshield, or else equip future space crafts with windshield wipers.

But when Gemini 6 and Gemini 7 accomplished their historic rendezvous in space we could be about as excited as when Navy Omdr. Alan B. Shepard, Jr. became the first American in space or when Marine Lt. Col. John H. Glenn, Jr., was the first American in orbit. Flight Director Christopher Eraft confirms the basis for our excitement over the new feat by saying that it was "the big-sent milestone since the flight of John H.

The Russians had put a man in orbit be fore Commander Shepard made his suborbital flight and had their second in orbit before Colonel Glenn made his orbit. They got

the jump on us in space flight because they had more powerful rockets. For some time it was being noted by a few that the Russians were able to make the most spectacular shows but that the Americans were proceeding with a broader base of scientific experimentation which in time would prove its value. Now there is evidence that it has.

The space meeting of two vehicles traveling around the earth at more than 17,000 miles an hour was a feat that took the utmost precision in equipment, in calculation and in execution. It also was something that had to be done before there can be a manned expedition to the moon. The Russians also have to master this technique, and they have not yet done it.

they have not yet done it.

The next step is to dock, that is, bring two
vehicles into physical contact. Gemini 6 was
launched while Gemini 7 was in orbit.
Gemini 6 went 105,000 miles on its course
before the two came to within 6 to 10 feet of each other. They did not attempt a docking exercise.

This was a spectacular operation as well as an important scientific and engineering achievement. It gave America a definite lend in space.

## A Private Job Corps

EXTENSION OF REMARKS

## HON, THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. CURTIS. Mr. Speaker, I wish to call the attention of the House to an editorial I am placing in the RECORD today entitled "A Private Jobs Corps," written and distributed by the U.S. Press Association, Inc. Although the editorial refers to the Prouty-Curtis Human Investment Act, the observation is well made that this act is not in any sense a partisan proposal. Manpower training and retraining is of such importance to our economy and general welfare that I would hope that this proposal receives bipartisan consideration as an important adjunct to our employment efforts.

The article follows:

## A PRIVATE JOB CORPS

A bill to give private industry a break— eccifically a tax break—on the costs of job training within industry, has recently been introduced in the House of Representatives. We find ourselves very much in agreement with the basic concept on which the bill appears to be based.

With some exceptions, of course, the Government-run job-training programs have been noted for their lack of success. And there are several factors which would seem to guarantee that job training by private industry will be more effective and also more

There's the experience factor for one thing; rivate industry has been giving job training in one way or another ever since the first master craftsman took on his first apprentice. master craftsman took on his first apprentice. There's a more definite purpose in a private industry's training program, and an interest in high-quality training, because a company knows just what skills its workers need. It wants to be sure that the traines can do work that will meet company standards. About the only way a Government-run jobtraining program can readily measure its performance is by the number of people

pushed through the course. The number of trainees, rather than the quality of training, happens also to be the basis in a Government

program for hiring additional instructors and raising the pay of the director. Although this new bill to encourage job training in private industry was introduced by a group of Republican Congressmen, it by a group or Reputation Congressmen, it doesn't strike us as being in any sense a par-tisan proposal. We're confident that, given the chance, private industries will do far better at job training than any Government agency has done or can do, for the simple reason that a private employer wants to train

a man to do a job, not just to get one.

It's been our observation that the man who can really do a job rarely has to worry

about where to get one.

### Statement by Latvian-Americans of Detroit

EXTENSION OF REMARKS

#### OF HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the Congressional Rec-ORD a statement adopted by Latvian-Americans of Metropolitan Detroit, assembled at the Detroit Institute of Arts on November 14, 1965, to commemorate the 47th anniversary of the independence of the Republic of Latvia.

I am sure all right thinking Americans and freemen everywhere join in the sentiments expressed in that fine resolution regarding restoration of freedom and self-determination for the Baltic States and indeed for all of the nations behind

the Iron Curtain. The statement follows:

STATEMENT BY LATVIAN-AMERICANS OF DETROIT

The American-Latvians of Metropolitan Detroit, assembled at the Detroit Institute of Arts, 5200 Woodward Avenue, Detroit, Mich, on the 14th day of November 1965, to commemorate the 47th anniversary of the independence of the Republic of Letvia, unanimously agreed to issue the following statement:

 As we pause today to observe the 47th anniversary of the Republic of Latvia, we again thank the U.S. Government for refusing to recognize the forcible seisure by the Soviet Union of the Baltic States of Latvia, Estonia, and Lithuania. We urge that this policy be continued.

We would like also to thank the U.S. Congress for passing House Concurrent Res-olution 416 which asks that the world opinion be mobilized to the end that the Baltic States be restored to the family of free na-tions. We heartly support this resolution and we hope that the question of the Baltic States will be brought before the United

3. We urge favorable action by the U.S. Senate on Senator Thomas J. Dono's resolu-tion (S. Con. Res. 51) which calls for the right of self-determination for the Baltic States and free elections in those Communist oppressed countries of Latvia, Estonia, and

4. We join with our fellow Americans in urging passage of Congressman John D. D. D. D. D. Con. Res. 382) that

would establish a permanent House Com-

mittee on the Captive Nations.

5. We oppose the ratification of the treaty with the Soviet Union to establish consulates in the United States. Passed experience shows these offices are nothing but nests of spies and centers of subversion. We also fear spies and centers of subversion. We also fear that the Soviet consulates in the United States will be interpreted as American recognition of the Soviet seizure of Latvia, Estonia, and Lithuania.

6. As Americans of Latvian descent who have seen the evil methods of communism in our native land, we view with alarm the demonstrations against American involvement in Vietnam, carried to the extent of even trying to stop American troop trains. We feel that a blow against communism anywhere in the world in a blow struck for America, for Latvia, and for freedom. cannot understand how Americans, born and reared in liberty, can use their freedom in such a manner as to destroy their freedom and we fully support the policies of the President of the United States. We are solidly behind American Armed Forces fighting the free world's battle.

7. We deplore the continued attempted 7. We deplore the continued attempted russification of Latvia by the Soviet Communists. The purpose of this is nothing more than genecide, the destruction of a nation and imposition of foreign colonial rule. We pray that God will give strength to our brethren in Latvia to maintain their resistance asginst the terror that stalks Latvia.

Done in Detroit, Mich., this 14th day of November, A.D., 1965.

### Press and Public Misled on Christmas Truce

EXTENSION OF REMARKS

## HON, GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. LIPSCOMB. Mr. Speaker, on December 31, 1965, the Los Angeles Times carried a column by Ruben Salazar en-titled, "Press and Public Misled on Christmas Truce."

In view of the mounting gravity of the situation in Vietnam and the right of the press and public to know about the effect of administration policies, I believe this article will be of interest to many.

Under leave to extend my remarks, I submit the column for inclusion in the RECORD:

PRESS AND PUBLIC MISLED ON CHRISTMAS TRUCE

(By Ruben Salazar)

SAIGON.—Tet Nguyen Dan, the Vietnamese

lunar New Year, comes January 21 this year, and with it a new cease-fire crists.

The year 1966 being the Vietnamese "Year of the Horse," it is hoped that some horse-sense will be used by our side in dealing with the touchy and emotional subject of a Viet-

cong-inspired case-firs proposal.

For the Vietcong have again taken the initiative by tantalizing the war-weary world with a 4-hour cease-fire proposition on the most important Vietnamess (North and

South) holiday.

It is doubtful that we can afford to pass up the proposal even while ignoring it offi-

As we did after the Victoong Christmas cease-fire proposal, we will undoubtedly come up with a better plan, a more sincere sug-gestion, a more practical solution.

But with all our Madison Avenue training, all our alleged propaganda knowhow, we may

botch it again—as we did during the Christ-mas cease-fire flasco—just for the sake of sentimental and cheap publicity.

For it has now been established that our Government decided not to let us know the hard facts on Christmas Day. It apparently felt that the truth is more palatable the day

And that is why such headlines as "Christ-mas Sun Rises on Peaceful Vietnam" ran in newspapers across the United States on Christmas Day.

Reporters here will not soon forget that as late as midnight Christmas Day (Saigon time), U.S. information officers were still telling us that there had been "some minor cease-fire violations by the Vietcong Christ-mas Eve and Christmas Day but that they were probably due to misunderstandings.

Once the magic day of Christmas had ssed and the more mundane December 26 had arrived, however, the officers changed neir tune. The official U.S. Military Assistance Com

mand Vietnam (MACV) press release for the 5 p.m. briefing December 26 reads:

The Vietcong resumed hostilities with a vengeance by hitting outposts and district headquarters, sniping and small arms at-tacks, and continuous harassing action all over the Republic yesterday (Christmas)

"There was a total of 84 significant initiated incidents reported during the period 6 p.m. December 24 and 6 a.m. today, Decem-

wenty of these incidents, we were finally told on December 26 happened between 6 p.m. and midnight on Christmas Eve. (The Vietcong's cease-fire proposal had been for 6 p.m. Christmas Eve to 6 a.m. Christmas Day).

The Christmas Eve incident occurred in Binh Dinh Province where the Victoria "penetrated Ky Son hamlet and threw gredes at local inhabitants," killing two

nades at local innabitants." Filling two civil-ians, one Vietnamese soldier and wounding five civilians and three Vietnamese soldiers. By the time we were told at midnight Christmas Day that here had been some minor incidents, "probably due to mistakes," 26 other "incidents" such as the one in Binh

Dinh Province had occurred.
Had we been told that the incidents were minor because headquarters did not know about their significance?

It was learned that Washington had ordered information officers here not to tell correspondents about the seriousness of the incidents "until we (Washington) determine

that the incidents follow a definite pattern."
Put in English, it means that Washington had decided to play it smart and not rock the boat on Christmas Day but allow the Vietcong violations to add up and announce them dramatically on December 26.

That's why the poor information officers here had to resort-after saying the violations were probably a mistake—to such lan-guage (on December 26) as the "Victory reed hostilities with a vengeance

But, as so often happens when the Gov-rnment tries to manage the news, things happen while news is being withheld that upset the bureaucratic applecart.

For while the unfortunate information ers were saying the Vietcong violations omeers were saying the vieccong violations were probably a mistake, reporters in the field learned that the 1st Cavalry Division (Airmobile) had not stopped its artillery until 4 hours after our cease-fire period began and that the marines had been out on defensive patrols during that time had fought it out with the Vietcong—probably out also on defensive patrols.

And so now that we are faced with another cease-fire period during the Vietnamese lunar new year January 21, please, Wash-ington, just give us the news as it comes.

The American public can decide how evil-the Vietcong are without a dramatic an-nouncement a day after the news has hap-

If Improvement Is the Genuine Objective

EXTENSION OF REMARKS OF

## HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. YOUNGER. Mr. Speaker, much has been written about the subversive activities on the University of California campus at Berkeley, but perhaps some of the background and reasons for these activities can be laid at the teachings of the faculty. A recent publication reported that Steven Smale, a mathematics professor at Berkeley, has made the following statement:

We want the Vietcong to defeat the United States for international reasons. If the United States is defeated in southeast Asia, this will help break American power elsewhere in the world. This would give new impetus to revolutionary social change (wars of liberation) in such places as Africa and Latin America. And if surrounded by revolutionary change, it will in turn make it easier to achieve radical change in the United States.

If Professor Smale is accurately quoted, it is plain to see the influence he would exercise over the students with whom he comes in contact.

This is certainly in direct contrast to an address made by Dr. John Howard, president of Rockford College-Illinoisat the opening convocation on September 22, 1965, in which he made the following statements relative to the activism of the present college generation:

IF IMPROVEMENT IS THE GENUINE OBJECTIVE (Excerpts from the opening convocation ad-

dress, September 22, 1965, at Rockford College (Illinois) by the president, Dr. John Howard)

Activism has become a dominant feature of college life in America. A new set of cir-cumstances now prevails. Unless the stu-dent and the professor recognize their new milieu and respond to it thoughtfully and constructively, the educational process may, with increasing frequency, be at the mercy of the unscrupulous demagogs and self-serving bullies who assert themselves in the midst of change and in the absence of firm and purposeful leadership. Serious-minded attractive and purposeful leadership. students must come to recognize that their mass actions can lay waste at least as readily as they can bring about constructive change.

I suggest three criteris by which a cause might be judged. First, is it affirmative? It takes no brains, no courage, and no spe-cial talents to criticize or destroy. Since man is imperfect, his institutions, even the best of them, are imperfection compounded, and any fool can find fault with them.

d

The difficulty is that as a student begins The difficulty is that as a student begins of this world, the inequities, and the injustices, he becomes understandably discatisfied and impatient with the generations that have preceded him and with the evident failure of their methods. But before he disposes of their works and systems, he must remember that man's institutions, imperfect though they be, are the social instruments which have made possible the allow progress. which have made possible the slow progress from isolated creatures of the wilderness to a human society of problems, yes, but also of enormous potential for human comfort and human kindness. These institutions have been slowly built by trial and error, pain, sweat, and sacrifice and should not be petulantly discarded. Room for improvement

they all have, if improvement is the genuine objective.

A second basis for judging whether to take part is whether the decision is made thoughtfully or whether it is the product

of emotion.

Finally, and this is undoubtedly the most critical question, Will the proposed undertaking actually serve the ends claimed for it? Everyone can respond warmly to a rallying cry of "peace," or "freedom," and consequently the rascals of the day chant the magic words even louder and more fervently than the saints. Since both goals are as diment to attain as they are desirable, progress toward them is seldom achieved by hasty or superficial techniques. As Leo Rosten has stated, "We must learn to meet fanaticism with courage, and idealism with great care, for we must be skeptical of what is promised, even by virtuous men, but has not been mored."

## A Bill To Enable the Joint Economic Committee To Combat Inflationary Price-Wage Behavior

EXTENSION OF REMARKS

## HON, HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. REUSS. Mr. Speaker, I have today introduced H.R. 11916 to amend the Employment Act of 1946. This bill would help the Federal Government in its battle against inflation and enable the Congress to play a more important role in it.

Unjustified price advances and wage settlements can threaten our economic growth and stability. H.R. 11916 would help to bring an informed public opinion to bear on such wage and price increases. At the same time, it would help us avoid hasty and inappropriate steps such as imposing mandatory controls, or raising taxes or interest rates before we have achieved our national employment goals.

have pain, etunent The bill is designed to prevent inflation stemming from administered prices and wages—price and wage levels which are determined by decisions in industries with large firms or unions, without effective restraint by competitive market forces. When such increases occur in these pace-setting industries, great inflationary pressure results.

Restrictive monetary policies have a dampening effect on the economy as a whole. But they are relatively ineffective against inflation caused by administered price increases or wage settlements.

MORE EFFECTIVE MECHANISM NEEDED

In order to stabilize prices without ending the unparalleled expansion we have enjoyed for the past 5 years, we need a more effective mechanism to operate on administered prices. H.R. 11916 provides such a mechanism. It will allow our economy to continue to grow, and it will let us continue to reduce unemployment, without our experiencing

employment, without our experiencing inflationary price increases.

The bill follows the same voluntary approach which the Council of Economic Advisers has used in recent years.

Since 1962, the Council has formulated wage-price guideposts which have been utilized by the President in urging industry and labor to refrain from price and wage increases which exceed the guideposts. The bill strengthens this existing arrangement by establishing a regular procedure for focusing an informed public opinion upon price and wage increases.

My proposal would enable Congress to aid the executive branch in fighting inflationary practices. Under it Congress, through the Joint Economic Committee, would participate both in establishing the guideposts and in determining whether they have been violated.

PROVISION FOR PUBLIC HEARINGS

The bill calls for the Joint Economic Committee to pass each year on the guideposts recommended to it by the Council of Economic Advisers. The Committee could hold public hearings, at which both industry and labor would have an opportunity to make their views known. If the Committee disapproved of the CEA guideposts, Congress would make the final decision on them.

Once the guideposts became effective, the Committee would be advised by the CEA of possible breaches of the guideposts which threaten national economic stability. The Committee would then hold public hearings to determine whether the guideposts have been breached, and whether such breach in fact threatened national economic stability. If it did, the Committee could make recommendations to the President or to the parties involved concerning possible actions which would be in the public interest.

These recommendations would be advisory, and would not be binding on anyone. But they would certainly be infunction in restriction.

fluential in restraining harmful action.
H.R. 11916 does not create any new bureaucracy. Under it, the CEA would continue to initiate the guideposts. Through the Joint Economic Committee, which is experienced at holding hearings on inflationary price advances, Congress would bring its opinion to bear on potentially inflationary actions.

THE ROLE OF COMGRESS

The American people have a substantial interest in price and wage decisions which affect the national economy. An informed public, aware of the significance of major price and wage decisions and having a standard by which to judge whether individual actions are in the public interest, can help the parties involved to make responsible decisions in the national interest.

Through their representatives in Congress, the people of the United States will acquire representation in the wage and-price-setting process. And the mere knowledge on the part of management and labor that they may be invited to justify price or wage action before a public body would encourage more consideration of the public interest.

I hope that management and labor in the pace-setting industries will recognize the necessity for this measure. But in any case, the interest of the American people as a whole in the stability of our

economy is paramount, and must take precedence over the right of any private group to take action injurious to the economy without review of any kind.

EDITORIAL COMMENT

Two November 1965 editorials from the New York Times and the Washington Post underscore the need for a more orderly procedure toward inflationary price-wage increases:

From the New York Times:

After a mystifying display of internal confusion the Johnson administration has apparently decided to fight higher aluminum prices as a menace to the Government's antiinflation program.

We share the administration's conclusion that the increases put into effect by the major aluminum producers are inflationary and thus destructive of the national interest. But the contradictory signals the White House gave the country before arriving at its decision point up the need for a more orderly system for policing the wage-price guideposts Washington has erected to protest the concentry.

tect the economy.

Such cat-and-mouse tactics are a poor way to enforce a program of voluntary economic restraint; yet they are unhappily characteristic of much of the White House approach to maintaining its hold-the-line precepts.

The country wants no mandatory wageprice controls.

price controls.

A systematic procedure is needed through which the Council of Economic Advisers would give the country a full report on the economic justification for wage or price increases in strategic industries whenever their effect might be to unstabilize living costs.

The Council ought not have veto power; merely letting the public know when labor or management overreaches itself will be corrective enough. It will also guard against the apparent willfulness of the present machinery.

## From the Washington Post:

What clearly emerges from the tangled tale of negotiations are the weaknesses inherent in stabilising wages and prices by intermittent doses of moral suasion, exhortation, and occasionally, coercion.

But as the economy moves closer toward full employment, the disciplines of the marketplace are weakened and the burden borne by Government policy grows correspondingly heavier. That is why a set of rules—a uniform code that would guide Government in its effects to restrain inflationary pressures—is sorely needed.

Rule one is that there abould be a mini-

Rule one is that there should be a minimum of uncertainty about the Government's immediate intentions. Whatever the cause, the administration's handling of the aiuminum affair has been maladroit. It opensitself to charges of disingenuousness when it disavows a connection between stockpile sales and the increase in aluminum prices. It creates an image of fickleness and indecision when it suddenly reverses its position after leading observers to believe that an agreement with industry had been reached. There is no room for uncertain trumpets in the struggle to hold the price line.

the struggle to hold the price line.

Rule two involves criteria. Admittedly the Government is given little warning of impending price hikes. But when the Government finds it necessary to act, great care should be taken to justify its position in a white paper or shorter statement. Such utterances would serve to establish standards—whether hased on the adequacy of industry profits or competitive position in world markets—for the application of restraints.

Rule three deals with the crucial question of equity, the fairness of laying the restraining hand on some corporations and some labor unions while allowing others complete freedom to make inflationary decisions.

Until now the efforts to stabilize prices have centered almost exclusively in the man ufacturing sector of the economy where big business and big labor confront one another in the glaring light of publicity. Yet it makes little sense to stabilize the prices of manufacturers when construction costs and the prices of services are permitted to climb. has the administration always exhibited the political courage required for consist-ency. The outsized wage settlement in the automobile industry, coming as it did before the last presidential election, was blinked at. And little effort has been made to secure the decreases in auto prices which are clearly indicated by the guideposts.

If the twin goals of full employment and price stability are to be achieved, the Gov-ernment must provide the counterweight of restraint to the market power that is weilded by business and labor. But restraints that are intermittently applied or based upon improvisations are not likely to be effective under conditions of high level employment. It is time to formulate detailed rules of the

It is clear that administered price increases have a substantial effect on our economy. The bill deals with these increases in such a way as to interfere as little as possible with the wage-andprice-setting processes of private enter-prise. It would help relieve fears that economic growth will be further restrained by heavyhanded fiscal and monetary measures. And it would enable us to devote our energies and resources to dealing with the vital problems which confront us at home and abroad.

The text of H.R. 11916 follows:

FIR. 11916

A bill to amend the Employment Act of 1946 to bring to bear an informed public opinion upon price and wage behavior which threatens national economic sta-

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DECLARATION OF POLICY

SECTION 1. The Congress hereby declares that a new mechanism is needed to carry out the aims of the Employment Act of 1946 to promote maximum employment, production, and purchasing power (which includes the concept of reasonable price stability). Restrictive fiscal and monetary measures are appropriate and effective for controlling price and wage behavior caused by overall ex-cessive demand. But in the absence of overall excessive demand, restrictive fiscal and monetary measures may be both harmful and monetary measures may be both harmful and ineffective. Such measures are harmful because they dampen the demand necessary for maximum employment and production. They may be ineffective with respect to individual price and wage behavior in indfatries with large firms or unions. This Act provides a mechanism for bringing to bear an informed public opinion in order to restrain such price or wage behavior when it threatens national economic stability by causing inflation.

DETERMINATION OF PRICE-WAGE GUIDEPOSTS

SEC. 2. (a) Section 4(c) of the Employment Act of 1946 is amended by striking out the period at the end of paragraph (5) and inserting a semicolon, and by adding at the end thereof the following new paragraph: "(6) to transmit to the joint committee

not later than forty days from the enactment of this paragraph, and not later than Jan-uary 20 of each year thereafter, price-wage guideposts which would, if observed, achieve noninflationary price and wage behavior;".

(b) Section  $\delta(b)$  of the Employment Act

of 1946 is amended by striking out "and" at the end of paragraph (2), by striking out the period at the end of paragraph (3) and in-serting a semicolon, and by adding at the end thereof the following new paragraph:

"(4) to review the price-wage guideposts transmitted to it by the Council. If the joint committee determines that such guideosts are not appropriate to their purpose, it shall promptly report to the Senate and House of Representatives a bill or resolution setting forth appropriate price-wage guideposts. The price-wage guideposts transmitted to the joint committee by the Council shall take effect upon transmittal, and shall remain in effect until such bill or resolution is enacted, or until superseded by the Council. Any bill or resolution relating to price-wage guideposts shall be referred to the joint committee. Such bill or resolution shall be eligible to be reported to the Senate by the members of the joint committee who are Members of the Senate, and to the House of Representatives by the members of the joint committee who are Members of the House of Representatives; and ".

DETERMINATION OF PHICE-WAGE BEHAVIOR INCONSISTENT WITH GUIDEPOSTS

SEC. 3. (a) Section 4(c) of the Employment Act of 1946 is amended by adding at the end thereof the following new paragraph:

(7) to study actual or imminent price wage behavior, in industries with large firms or unions, inconsistent with the price wage guideposts; and to report promptly to the joint committee any such price or wage behavior which threatens national economic stability.

(b) Section 5(b) of the Employment Act of 1946 is amended by adding at the end thereof the following new paragraph:

"(5) Promptly upon receipt of a report from the Council pursuant to section 4(c) (7) if it deems it advisable, or upon its own initiative, to hold public hearings, to determine whether price or wage behavior is in-consistent with the price-wage guideposts, and threatens national economic stability; and promptly to file a report with the Senate and House of Representatives containing its findings and recommendations of actions in the public interest to be taken by the President or the parties concerned.'

Section 5 of the Employment Act of 1946 is amended by redesignating subsections (e) and (f) as (f) and (g), respectively, and by inserting after subsection (d) the following new subsection:

"(e) For the purpose of carrying out its functions under paragraphs (4) and (5) of subsection (b), the joint committee or, on authorization of the joint committee, any subcommittee or member thereof, may administer such oaths, and require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents as the joint committee or such subcommittee or member may deem advisable. Subpenas may issued over the signature of the of the joint committee, of such subcommit-tee, or any duly designated member, and may be served by any person designated by such chairman or member. The provisions of sections 102 through 104 of the Revised Statutes of the United States (2 U.S.O. 192–194) shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section '

Remarks by J. M. Bertotti, Manager, Educational Relations, General Electric Co., Gardner-Webb College Celebration Dinner, Boiling Springs, N.C., December 17, 1965

EXTENSION OF REMARKS

## HON, BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. WHITENER. Mr. Speaker, Mr. J. M. Bertotti, manager of educational relations for the General Electric Co., made a very fine address on December 17. 1965, at Gardner-Webb College located in my congressional district at Boiling Springs, N.C. Mr. Bertotti's address was delivered at a dinner celebrating the conclusion of a highly successful fundraising drive for Gardner-Webb College.

The college is an outstanding institution of higher learning in western North Carolina. Under the able and dedicated leadership of Dr. Eugene Poston, the school is experiencing rapid growth. Gardner-Webb College is dedicated to scholarship, community servcie and to those wholesome Christian principals fundamental to our American way of life.

The speech delivered by Mr. Bertotti at the college on December 17, 1965, describes the part that fine institutions of higher learning, such as Gardner-Webb, have in our complex modern society. I believe my colleagues will find the speech to be most interesting, and I include it in the Appendix of the RECORD:

I am indeed grateful to Congressman WHITENER and President Poston for inviting me to join with you in this most significant day in the history of Gardner-Webb College.

When I first received the invitation to appear, I was reluctant to accept because of real concern of the message I could bring to

te

In my work, I frequently address groups, as I did last week on Wednesday: 300 college placement officers at Northwestern University interested in industry's views of career opportunities for their students who would shortly be entering the work force. Or, on Friday, in New York, when I ad-

ed several hundred members of the Rubber Manufacturers Association interested in knowing about developments in the training and upgrading of employees at all levels in the enterprise from apprentice machinists. to top management training.

I felt you weren't particularly interested in a discussion of General Electric's latest developments in building better turbines or tousters or light bulbs-but if I erred in that I'll be happy to stay on and conduct a sec-ond session after this one is concluded. Then—as a stroke of good fortune—and real thoughtfulness by President Poston, I received a copy of Francis Dedmond's book.
"Lengthened Shadows—A History of Gardner-Webb College, 1907–56," and as I read the remarkable story of how this fine institution has come into being as the result of voluntary efforts of a group of dedicated people, it mads me immensely proud to have been invited to join with you here tonight—and very humble about what I could bring that might be relevant—but the tone or direction of my remarks was quite clear, to me at least.

Tonight, I'd like to return to a short discussion of the basic principles or purposes of education—of educational institutions like Gardner-Webb College—and how we as citizens can do something to help the overall This may most truly be a case of taking coals to Newcastle, because, as I said ear-lier, the remarkable voluntary achievements of you folks here in western North Carolina

sparked these thoughts in the first place.

First, I'd like to talk a little about voluntary action by the citizens in the United

tary action by the citizens in the United States of America.

When I was studying French at Eastern Michigan University many years ago, we read De Tocqueville's "Voyage en Amerique," which I found delightful and particularly so because his trip in 1831 took him to my hometown of St. Charles in the then logging center of Michigan. Later I was to find that the Tocqueville was not an idle traveler but. De Tocqueville was not an idle traveler but a most perceptive observer of democracy in action. His book "Democracy in America," published in 1835, is still a classic well worth reading. His visit occurred while Jacksonian democracy was at its height, and his com-ments were concerned in large part with the ments were concerned in large part with the theme of the inevitable leveling influence of democracy and with the tyranny of ma-jority rule. He provided such prophetic in-sight into the inner workings of this country, that generations of scholars have been forced to either argue with his conclusions or accept

them. At least they cannot ignore them.

De Tocqueville saw the American impulse to act independently on the public business as our most remarkable trait. He marveled not so much at our economic success and our political machinery as at our tendency to handle public business directly and spon-

taneously. He wrote that our associations were the key to a social system that he deeply admired. He saw the vigor, ingenuity, and enterprise of these associations, and sensed the bound-less potential of their work, stating:
"The Americans work

least.

lun ople, been and that ction "The Americans make associations to give entertainments, to found seminaries, to build inns, to construct churches, to diffuse books, to send missionaries to the antipodes; in this manner they found hospitals, prisons, schools. \* \* \* Whenever at the head of some new undertaking you see the Government in France, or a man of trade in England, in the United States you are sure to find an

That was 1831, but where do we stand today?

A study by the University of Michigan Survey Research Center (1952) showed that 62.8 percent of heads of households did not take part in any formal group or organization—only 10 percent were active in two or more organizations. Small wonder that

or more organizations. Small wonder that Eritain's D. W. Bragan in his recently published book, "American Aspects," wrote:
"It is inevitable, even if regrettable, that the unique character of the American and of the American experiment is over."
I'm not stree that all hope is lost. Just when the situation is gloomlest, we see new manifestations of independent action in the United States. To be sure not all is good—because sometlines the independent sector, because sometimes the independent sector, as individuals or as groups, gets involved in ally things—or even ugly unsavory acts. However, it often responds the most dramatically when the going is the most difficult.

My good friend, Richard Cornuelle of Burlingame, Calif., is one who thinks there is still time to save the day. His book, "Beclaiming the American Dream," recently published by Random House, has stirred up interest across the Nation with Look maga-zine, the Wall Street Journal, the Washing-ton Post, the National Association of Man-ufacturers, and across of others discussing its massage of how the independent sector its message of how the independent sector

Cornuelle points out that there are 190 million individuals in America, 50 million families, who group and regroup themselves in various ways: Over 320,000 churches with 118 million members; over 100,000 voluntary welfare groups which do everything from tutoring underprivileged children, to birdwatching, providing culture through operas and symphonies in over 1,200 communities to discussing great books, etc.; over 6,000 private foundations with \$14.5 billion in assets; hundreds of fraternal and service organizations with 36 million members; hundreds of labor unions with some 13 million members; 3,500 independent hospitals and thousands of other private nursing homes; 1,357 private colleges and universi-ties enrolling 1.7 million students; 17,000 private secondary schools; 2,000 United Funds and Community Chests; over 4,755,-000 business firms which contribute \$2 bil-lion annually to voluntary groups of all types, including \$300 million annually for igher education.

What a tremendous force for good if we

ould only learn to unleash it for its opti-mum impact. How can we, for instance, capture the spark of independent action that not only kept a school like Bolling Springs Junior College from dying—but brought it to an exciting new life as Gardner-Webb Col-

This example alone belies the observation of Bragan that "the American experiment is

over."

The growth of corporate support of education is in taelf a rather remarkable development. Very little in the way of corporate contributions for education had been made prior to the hearing of the A. P. Smith case in the courts of New Jersey in 1953.

This historic case upheld the right of corporations to make contributions in behalf of rations to make contributions in behalf of education even though such contributions were not directly related to the interests of the corporation.

In the decade that followed, corporate contributions for education have risen steadcontributions for education have risen steadily until they presently approximate \$300 million per year—a sum greater than that contributed for any other single area including United Funds, Red Cross, hospitals, etc. As you might expect, the word has gotten pretty generally around that corporations have an interest in education—and are making contributions of some meanitude.

ing contributions of some magnitude

As a result, a virtual stream of solicitors and special pleaders have been rapping on ann special pleasers have been rapping on corporate doors across the Nation—each with his own particular cause—most of which have considerable merit. As an example, we totaled up the needs of some 100 capital fund drives launched by colleges and universities in 1963 and found that they exceeded \$3 1/4 billion-over more than 10 times the annua rate of giving for all corporations.

Naturally with such a condition before it,

Naturally with such a condition before it, most business firms have had to organize and plan their contributions work if any semblance of reason is to preavil. In our case, for example, we conducted a rather complete review of our educational contributions program and developed three basic objectives that underlie our efforts:

The development of educated manpower through competent, inspired teaching.
 The development of new knowledge of

the type needed by industry and society

The development of a social, economic and political climate necessary for the survival and growth of the competitive market

Within these three broad objectives, we have identified air specific criteria against which we evaluate each of the individual opportunities brought to our attention. Thus, we seek to support those projects which would—

Stimulate innovation and improvements in

educational methods so that the funds available for educational purposes could both serve more students and provide more competent instruction.

Broaden the base of educational support, through encouraging parents, students, alumni, and other givers to assume a larger share of the overall cost of education.

Embody a multiplier element by which benefits tend to be spread or passed on to many beyond the immediate recipients of the

support.
Contain elements which can make pos sible continuation of worthwhile activities through other types of support, with the original grants acting as seed money.

Encourage higher levels of excellence, set higher standards for achievement, and pro-vide aid to institutions and individuals that show real promise of attaining excellence if given financial support.

Assist in achieving a better balance of superior educational offerings in all geo-graphical areas of the Nation.

graphical areas of the Nation.

The corporate alumnus program of the General Electric Foundation is an excellent example of one activity that embodies several of these criteria. Under this program, first announced in 1955, the General Electric Foundation matches gifts to colleges and universities made by employees of General Electric up to a maximum of \$2,000 per year. This program has now been adopted in one form or another by over 300 other business form or another by over 300 other business firms and foundations, thus contributing greatly in helping spread the base of support to our educational institutions.

An estimate by the CFAE indicates that this one project has resulted in over \$43 million in new funds being made available in the last 10 years—and the current rate of contributions is in the order of \$7 million annually.

annualy.

Next week, we will announce a new step in our own program by which we will make all 280,000 of our employees eligible for participation in the program so that any gift to any institution is eligible for matching, whether the employee attended that institution or

I spoke earlier of how impressed I was by the book, "Lengthened Shadows," how Gard-ner-Webb has risen to its present position from most humble beginnings—the college that wouldn't die. But where is it to go in

Arnold of Rugby is reputed to have said that "no one should meddle with a university who does not know it very well and love it very dearly."

While I am tremendously impressed with the developments at Gardner-Webb College and particularly its growth over the last decade—I must confess that I do not know it very well—yet I would like to speak a few minutes about the role of educational institutions in our land today and in the forse able future as one observer, at least, sees it. I do hope that these observations may be of some interest to you.

I can well understand the interest of all who know this institution well and love it who know this institution well and love it very dearly in not wanting to stop at the present stage of development—remarkable though it has been—but to push on toward an even greater 4-year institution. And after visiting Gardner-Webb today and meet-ing so many of you who have contributed so much of yourselves to its current success, I feel confident you will attain this greater

My great concern is that you do not sacri-fice any of the factors that give your school its present distinctiveness in this stratch for even a larger place in the sun. I refer to a tradition of over 60 years—through some of the most difficult of circumstances of almost complete self-reliance on the control of your

In a day when it is almost automatic for institutions, organizations—and individuals—to turn to government, and particularly the Federal Government—for a solution to every conceivable type of problem, the proud record of Gardner-Webb in moving forward with no tax support or Federal aid is living testimony that the spark of self-reliance that De Tocqueville observed in our Nation over 100 years ago is still alive in

I salute you for your program whereby tuition and fees account for almost three-fourths of the total revenues needed to operate this fine institution. What a contrast to the city where my home office is based where all students attending the city university pay no tuition whatsoever regardless of the affluence of their parents and where all efforts to impose even token tuition payments are used as a ploy by the politicians to show how they serve their constituents by seeking more and more State and Federal aid rather than asking those who can well afford to pay for educating their offspring to do so.

Secondly, I was struck with the emphasis that Gardner-Webb has placed for over 60 years on preparing its students for a place of service in society. The practice of including offerings in both liberal arts education and what is commonly referred to as terminal vocational education has much merit. Unfortunately, this same understanding of the value of diverse educational approaches to meet the multiplicity of needs of society is not sufficiently understood by educators, parents, and students.

For decades, men have philosophized and debated as to the role of the university. Ortega, Scheler, Becker, and other European thinkers felt that university teaching comprised three functions:

1. The transmission of culture.

2. The teaching of the professions.
3. Scientific research and the training of

While they had general agreement on these points, they did not, however, agree on whether these functions were to be performed by a single institution or various institutions. This debate still goes on today, and I venture will be with us for some time in the future.

Ortegs, however, was disturbed by the emphasis on scientific education to the exclusion of the others. As he put it: "There is no good reason why we should try to teach the ordinary man to become a philosopher."

Today we have what amounts to a virtual obsession about more and more exposure to higher education for our young people. An obsession that appears based on the premise that such additional exposure will add considerably to a person's usefulness to society—and satisfactions to himself—regardless of his individual capabilities.

On those occasions when I have visited Europe in recent years and participated in international conferences on manpower policy and training, I have been struck with the marked differences between our attitudes toward vocational and technical type pursuits and the attitudes of the Europeans.

John Gardner summed up the problems such a preoccupation posed for us as a nation in his book "Excellence," when he stated:

"An excellent i imber is infinitely more admirable than an incompetent philosopher. The society which scorns excellence in plumbing because plumbing is a humble activity and tolerates shoddiness in philosophy because it is an exalted activity will have neither good plumbing nor good philosophy. Neither its pipes nor its theories will hold water."

Third, while Gardner-Webb is dedicated to a community-service concept, I would hope that your definition of a community would be a broad one. It is significant that America has over 2,000 institutions of higher education as contrasted to a relative handful

in the Western European nations who got started in this business centuries before us. Much of this is due to the fact that education in Europe was concentrated, while in the United States it was fragmented. Thus, by as early a date as 1770, infant America had nine colleges, while England boasted but two, Scotland four, and Ireland one. Only in the last decade have Europeans begun to critically examine their hallowed traditions, i.e., the 2-track system symbolized by the 11-plus examinations for youngsters, the limiting of higher education in many respects to an elite group—and the deleterious effects of such a system on the total economy of their nations. A direct consequence has been a definite move toward the Americanization of their educational systems.

tion of their educational systems.

On the other hand, the very system of fragmented, community approaches to edu-cation has led to some unfortunate consequences in America. While various sectors of the United States could be quite provincial in their attitudes in the 19th century with such broad generalizations that New England was the textile area of the United States, the Deep South the area of plantations and relaxed living, Pittsburgh the steel capital of the world, Detroit the city of autos-or, more recently, southern California as the aircraft center--we no longer can base our planning on such provincialism. Our population has become mobile, our young people more inclined than ever before to seek opportunity across the Nation—or across the seas—to enable them to make their greatest contributions. Hence, a plea—don't give an inch on your principle of education as a contributor to community service. But do think broadly about what is the community

that your graduates will serve.

Abraham Flexner, who probably more than any other individual, led to a much needed upgrading of medical education in the United States of America—when discussing the modern university complained that our institutions were becoming too many things. They try to be secondary schools, vocational schools, teacher-training schools, research centers, uplift agencies, businesses—these and other things simultaneously. They engaged in incredible absurdities, a host of inconsequential things. They needlessly cheapened, vulgarised and mechanized themselves. Worst of all they became service stations for the general number of the service stations for the service s

chespened, vuigarized and mechanized themselves. Worst of all they became service stations for the general public. Clark Kerr, president of the vast University of California, in his book, "The Uses of the University," hits the same point when he

"Some picture the university as autonomous a cloister, when the historical fact is that it has always responded, but not as quickly as today, to the desires and demands of external groups—sometimes for love, sometimes for gain, increasingly willingly, and in some cases, too esercia."

some cases, too eagerly."

Clark Kerr, incidentally, touched on another subject of much interest when he pointed out that the university is regarded as a radical institution, when in fact it is most conservative in institutional conduct. Few institutions are so conservative as the universities about their own affairs, while their members are so liberal about the views of others. Often the most liberal faculty member in one context is the most conservative in another.

President James Perkins, of Cornell, in a series of three lectures at Princeton University only last month indicated that the questions raised by Ortega, Flexner, Kerr, and many others are still with us awaiting solution. Note these typical quotations—

On the involvement of faculty in external affairs: "It is legitimate for a university engineer to design a bridge—but not to involve the university in building it."

On the question of the role of the university: "With the faculty in orbit, students out looking for their lost identity, and ad-

ministrators out setting off dynamite under foundation vaults—Who is taking care? Who is in charge?"

Again with additional thoughts on growing enrollments: "Only the most mature and self-reliant students should be admitted as undergraduates to a university campus. The student is a student. He is at the university to learn—not to manage; to reflect—not to decide; to observe—not to coerce."

I agree wholeheartedly with President Perkins when he says the student is at the school to learn, to reflect, to observe. But this also implies a commitment on the part of the institution to provide an atmosphere, and a faculty, that motivates the student in the right direction.

In too many of our institutions, the faculty is gravitating more and more to graduate education (perhaps an area where they are needed the least); to turn to research instead of teaching, to spend their time on leave as visiting professors at foreign institutions, or serving on evaluation teams for foundations or government agencies helping dispense grants. As one wag put it, the term "full professor" in many cases means full time away from the classroom.

Recently, the vice president of academic affairs of one of the Big Ten schools launched a new program aimed at strengthening the teaching at the undergraduate level of his institution embodying a five-point program of:

1. Establishing means to provide compelling reward and recognition for good, undergraduate teaching. 2. Reorienting its teaching assignment

2. Reorienting its teaching assignment patterns to bring associate and full professors into freshmen and sophomore classes as a routine and regular thing.

3. Devising a carefully conceived, rigorous, systematic, ongoing program for the monitoring and training of apprentice teachers from among its graduate students.

4. Redoubling efforts to find more effec-

Redoubling efforts to find more effective techniques of teaching including imaginative, fresh ways to delivering knowledge.
 Bringing the most creative thinking to

b. Bringing the most creative thinking to bear on the distillate of wisdom, or knowledge, that should be accommodated or integrated into the general education curriculum.

Not a had program for any institution, large or small, old or young, if it is to meet the challenges ahead.

Like the fifth grade youngster who wrote a theme about "The World and Other Things," I've covered a number of items here this evening. If I've been too presumptive, I apologive to you—but I have been struck by a number of the unique features of this emerging institution. You have come a long way—and there is even greater promise for tomorrow. I wish you every success, but particularly that at accomplishing your goals without sacrificing any of the wonderful attributes of self-reliance that you have demonstrated.

I'm sure that Richard Cornuelle had places like Boiling Springs and Gardner-Webb College in mind when he wrote about how there were still many hopes for "Reclaiming the American Dream."

## One Billion Dollars Private Capital for Appalachia

EXTENSION OF REMARKS

## HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. DORN. Mr. Speaker, the General Assembly of South Carolina unanimously supports Duke Power Co.'s plans to invest \$1 billion in Appalachia. The South Carolina General Assembly is unani-mously supporting Duke plans for both the \$210 million steamplant at Middleton Shoals and the \$700 million complex at Keowee-Toxaway.

The people of South Carolina overwhelmingly support Duke's dynamic proposal. The people of the entire Appalachian region of eastern America support the Duke proposal. The Duke power generating complex when com-pleted would use from \$135 to \$140 million worth of coal annually from the depressed coal fields of Appalachia. This would be good news for the unemployed coal miners.

Last year the general assembly adopted resolution supporting the Keowee-Toxaway project. Last week, on January 6, both houses of the general assembly unanimously adopted a concurrent resolution memorializing Congress to pass the bill I introduced today which would authorize a retaining wall across the Savannah River at Middleton Shoals.

Mr. Speaker, I commend to the attention of the Congress and to the taxpayers of the entire country this important and timely resolution which was adopted by the South Carolina General Assembly last Thursday:

1.

CALENDAR No. S. 455

Concurrent resolution memorializing the Congress of the United States to authorize the construction of a dam across the Savannah River and Duke Power Co. to construct an electric generating plant on the Savannah River.

Whereas Duke Power Co. announced plans more than 4 years ago to construct a giant 2-million-kilowatt steam electric generating lant on the Savannah River in Anderson County, S.C.; and

Whereas the subject plant will cost in excess of \$210 million and would be the largest steamplant for the generation of electricity

in the entire world; and in the entire world; and
Whereas to date 55 percent of all industry
locating in the two Carolinas has located in
the area served by the Duke Power Co.; and
Whereas such a piant as envisioned by
Duke is one of the most desirable single in-

dustries that could come, not only to Ander-con County, but to South Carolina; and Whereas it is estimated that by the year

1985 the demand for electricity will exceed four times the present requirement; and

Whereas this development would require virtually no investment by the local community for service facilities nor would it require a great expenditure for waterlines, sewerage, access roads, or public facilities;

Whereas the Duke Power Co. is merely seeking permission to build a steamplant which would furnish an abundance of inexpensive electricity and pay to Anderson County more than a million dollars each year in tax revenue and to the State of South Carolina over \$5 million annually; and

Whereas this plant would provide permanent employment for a goodly number of people and during construction would provide jobs for over a thousand persons for a number of years; and

Whereas the experience of investment in those areas served by the Duke Power Co. has reflected #3 in either new or expansion of old industry for each dollar invested in the generation of electricity; and

Whereas the members of the general assembly recognize the tremendous asset such

a plant would be for the future development and prosperity of the State and of its people: Now, therefore, be it

Resolved by the senate (the house of repre-sentatives concurring). That for the above reasons the members of the general assembly wish to record themselves as favoring the Congress of the United States to take such action as may be necessary in order that the

Duke Power Co. may construct a dam across the Savannah River and proceed with the construction of the plant; and be it further Resolved, That a copy of this resolution be forwarded to the president of the Duke Power Co. and to the following officers and Members of the Senate and House of Representatives of the Congress, the Vice President of the United States and President of the Senate, the Speaker of the House of Representatives, the chairmen of the Committees on Public Works of the Senate and the House of Representatives, and each Senator and Member of the House of Representatives from South

#### A Salute to the Rural Press

EXTENSION OF REMARKS

## HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. COOLEY. Mr. Speaker, the dif-fusion of agricultural knowledge from the laboratory to the land in America has been truly a great service provided by our rural press. I want to pay tribute to the enduring dedication of agricultural magazines, rural papers and local newspapers to the science of American farm-

It is no wonder that other nations consider American agriculture our greatest success story

The constant flow of information from the laboratory through the publisher to the producer on the farm has contributed vitally to the abundance of food and fiber that has blessed our Nation. Famine stalks in many lands that do not have the facilities for such communication with people on the land.

Our rural press must be given every encouragement to continue this invaluable service to America, and to find ways of assisting other nations of the world in developing similar systems of scientific communication.

The harsh challenges of both famine and abundance must weight constantly upon the minds of world leaders. The resolution of the enormous problems will contribute immeasurably to a lasting vorld peace.

In this connection, Mr. Speaker, with the consent of the House, I shall place in the Appendix of the RECORD an exchange of letters between the Agricultural Publishers Association and the Secretary of Agriculture, Hon. Orville L. Freeman. The letters follow:

AGRICULTURAL PUBLISHERS ASSOCIATION,
Chicago, Ill., December 27, 1965.
Hon. Orville L. Freeman,
Secretary of Agriculture,
U.S. Department of Agriculture,
Washington, D.C.

My DEAR Ms. SECRETARY: For more than 50 years, the Agricultural Publishers Associa-

tion has dedicated its efforts to the service of the Federal Government, science, and the American farmer. Many of our publica-tions are over 100 years old. We believe our contributions to the growth of American agriculture, that stands as a miracle before a hungry world, are self-evident.

a hungry word, are sen-evacent.

This past year foreign nations have been in touch with our association and its members to study the methods used in providing farmers with a constant flow of vital information. For it is well known that many nations have technical data, but lack an inexpensive method of making it available, personally, have been invited to visit Europe next spring and will assist in any way I can.

way I can.

The wisdom and foresight of our Government in promoting agriculture is reflected in the Second Class Mail Act of 1879 which provided low-cost distribution to periodicals, "originated and published for the dissemination of information of a public characteristics." acter, or devoted to literature, the sciences, arts, or a special industry; and has a legitimate list of subscribers." We sincerely believe we have made our contributions to a special industry; namely, farming.

Although agriculture is a booming industry in the United States, we, like our cus-tomers, have not shared in the Nation's prosperity. As if to parallel the decline in farm income, our advertising revenues are 10 per-cent lower today than in 1967. We share your hopes and ambitions for an upsurge in farm income to the rural family between now

President Johnson has clearly reflected the challenge, that lies ahead, in his message of November 3, 1965. Upon signing the Food and Agriculture Act, he stated, "In a time of technological revolution and rapid change, which is occurring on our farms no less than in our factories and laboratories, we must constantly look to the future. New ways must be explored to keep agriculture and agricultural policy up to date, to get the full benefit of new findings and of new technology, to make sure that our bountiful land is used to the best of our ability to promote the welfare of consumers, farmers, and the entire economy.'

Mr. Secretary, we pledge our full resources in order that our farm people will continue to receive "the full benefit of new findings" and to rededicate our efforts that, through cooperation with your Department and the land-grant colleges, we can assist agricul-ture in reaching the new horizons you have so clearly outlined.

For your review, I am enclosing material that reflect our past cooperation and with which we shall help you lead us to new levels of prosperity.

Yours very sincerely, JAMES MILHOLLAND, Jr., President.

DEPARTMENT OF AGRICULTURE, Washington, D. C., January 6, 1966 Mr. James Milholland, Jr.,
President, Agricultural Publishers Association, Chicago, Ill.

DEAR Ms. MILHOLLAND: Thank, you for your interesting letter of December 27. I assure you that the uniquely valuable serv-ice which the members of the Agricultural Publishers Association have rendered American agriculture for more than haif a century is both recognized and appreciated.

I was particularly interested in your com-ment that people of other nations have contacted your association and its members in an effort to learn more about the methods used to provide American farmers with a constant flow of vital information. This is a highly encouraging development. On my own travels abroad it has been very plain that one of the higgest agricultural problems facing the world in its efforts to combat hunger and improve nutrition is how to close the gap which exists between technical data in the laboratory and the application of these dats on the land. Whatever contributions you and your associates can make to help improve the diffusion of agricultural knowledge, especially in economically emerging nations, will be a truly great service.

Here at home we have devised policies and programs to improve farm income, revitalise rural America, take better advantage of the opportunities created by agricultural abundance, and use food and agricultural knowhow in the intersts of world peace and eco-

nomic development.

We have made substantial progress toward these objectives. Farm net income last year was \$14 billion—a gain of 20 percent since 1960. Net income per farm exceeded \$4,100—40 percent above 1960 and easily the highest ever.

ever.

More than 100,000 local and rural leaders are now working for community growth and new economic opportunity in over two-thirds of the Nation's counties.

The American people enjoy an abundance of top quality foods and spend only about 18.5 percent of their disposable income for it. Nowhere else in the world is food so plentiful and never has it been relatively so cheap. In addition, over 40 million Americans, many with low incomes, have a better diet due to expanded food distribution programs.

Agricultural exports in 1965 are estimated at \$6.2 billion—two-fifths more than in 1960. About one-fourth of our exports are foodfor-peace shipments that meet food needs and foster economic development in friendly nations all around the world.

New programs have enabled us to nearly eliminate the astronomical grain surpluses of 1960 and 1961. And the Food and Agriculture Act of 1965 now gives us new longterm farm programs running through 1969.

On the basis of its present progress agriculture can look forward confidently to new horizons.

We expect another rise of perhaps a half billion dollars in farm income this year with additional increases after that.

We expect accelerated progress in the creation of new jobs, new industries, new opportunities throughout rural America.

We expect further reductions in the real cost of food. By 1970 we will be spending only about 17 percent of our disposable income for food, and for a better diet too. As a result, a family of four will have \$160 more a year to spend on other things.

We expect grain surpluses to disappear before 1970 and we look for substantial reductions in the surpluses of cotton and tobacco.

We expect continued growth in farm exports, perhaps as much as 25 percent by 1970—pushing exports well beyond \$7 billion.

But, as President Johnson pointed out in signing the Food and Agriculture Act of 1965, new ways must constantly be explored "to keep agriculture and agricultural policy up to date, to get the full benefit of new findings and of new technology." In pursuing our agricultural goals, we need, we seek, and we confidently expect the continued assistance of the magazines and rural papers affiliated with the Agricultural Publishers Association.

Again, many thanks for your letter and your promise of support in helping agriculture and rural America reach the new herimons for which it strives.

Sincerely yours, ORVILLE L. FREEMAN. The 150th Anniversary of Southbridge, Mass.

EXTENSION OF REMARKS

## HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very fine article on the 150th anniversary of Southbridge, Mass., by the able staff reporter, Mr. Frederick L. Welch, of the Worcester Sunday Telegram, which recently appeared in that celebrated newspaper.

This article is exceptionally well done and it is in fact a veritable historic review of the early origins of the town and much of its subsequent development.

I want to compliment Mr, Welch. The material in his article will be very valuable to me and others when we are making our own remarks on this very significant celebration of the 150th birthday of the town of Southbridge, one of the finest and most patriotic communities in the Nation.

The article follows:

As Anniversary Approaches: Southbridge Early Times, Later Growth Are Recalled

(By Frederick L. Welch, Telegram staff reporter)

SOUTHERINGE.—This is the year that Southbridge, incorporated February 15, 1816, observes its 150th birthday.

A sesquicentennial committee is now working on plans for an observance which is scheduled for May 21 through May 28.

To those who in recent years have watched and listened to heated discussions at town meetings or by members of various elected town boards and committees, it might be interesting to note that more than 4 years elapsed from the time a movement was started to form a town until the charter was actually granted.

## VIOLENT MEETING

Historians confirm that the same spirit of discussion prevailed in the early days. In describing a meeting held December 6, 1814, at which an act of incorporation was drafted for a town, and a name for the new town was being determined, one historian wrote: "The discussion of this point led to greater warmth of passion, excitement, and violence than was ever before or since witnessed in this place at any public meeting. Each one brought forward his favorite name of the proposed town that one be selected from the list."

Pirst white men in this area, according to history, appeared in 1633 when one John Oldham and three other persons came for two purposes; to spy on the Dutch, and to establish trade relations with the Indians. They traveled through Nipmuck territory and found friendly Indians in the village of Tantusque (Sturbridge-Southbridge area). After accepting Indian hospitality, they returned to Boston with beans, hemp, and lumps of lead.

The first settler appeared here in 1730. He was James Deneson who left Scotland at the age of 16, bought land in this area, and was

ments encouraged by home of the liquid with

the first white man to settle here. In the fall of 1730 he settled in what is now known as Dennison District and lived in a cave formed by rocks which is still in existence.

Legend has it that Deneson and Daniel Fisks hearing each other felling trees, first met at the banks of the Quinebaug River and felled trees to make a crossing.

CENTER VILLAGE DEVELOPED

As other settlers appeared in the area and activities increased, what was known as Center Village, now the heart of Southbridge, developed.

Communities making up the Southbridge of the 1730-33 era comprised the Center part owned by Moses Marcy, Globe Village area owned by William Plimpton and Westville area owned by John Plimpton, From Center Village to Saundersdale was owned by Col. Thomas Cheney and nearby land by John Vinton. The north side of the Quinebaug River was owned by Joseph Savin where he settled in 1733.

In 1740 Moses Marcy sold his property, now the Elm Street area, to Samuel Freeman, a blacksmith. Moses Marcy was granted an additional 50 acres in 1733 on the condition he build a grist mill by his saw mill. In 1736 Moses Marcy bought more land from the Oxford area, which adjoined his land, from Captain Papillion. By 1738 some 50 families were in the settlement.

#### SETTLER DROWNED

The first settler in Globe Village in 1738 was Aron Martin who, history relates drowned in March 1751, as he was fording the river.

The Quinebaug River played an important role in choosing this Center Village site for a settlement. It was pointed out that the river with its excellent seats for mills and other waterworks, are circumstances highly favorable to the introduction of useful mechanics, and rendering it a place of activity and business.

The goodness of the soil, with the excellent forests abounding with all kinds of timber for building, were also estimated as being of great value to the general plan of settlement there.

#### NO CHURCH IN AREA

There was no church in the Center Village area. Those attending meetings had to wall as much as 5 or 6 miles through the woods and cross the Quinebaug River on felled trees. Mothers carried their children. Some rode horseback. All this was to attend a 6-hour service in a church unheated even in zero weather except for a few foot warmers. Simple, informal dress was worn in summer to meetings. There were stocks in the rear of the church as a constant threat to those who simplered or became restiess.

in ab 18

tic

fro His

Vio

Str

me

low

and lead pres

Was Stre

This eventually led to a movement to form a separate community centering around Center Village.

The first meeting held preparatory to establishing a poil parish or town by including within its limits a portion of each of the three towns of Dudley, Southbridge and Charlton was held at the tavern house of the late Col. Benjamin Preeman early in the year of 1795.

Petitioners for the poll parish said: "We are subjected to great inconvenience by being compelled to travel 6 miles or more to enjoy like privileges (religious, political, and social relations) which would be localized if a separate town or parish was formed."

#### MEETING HOUSE RAISED

A meeting house was raised July 4, 1797, and finished early in 1800. The first meeting in it was on April 6, 1800. There were no

A Comment of the part of the

pews, only loose boards for benches. It was dedicated July 4, 1800.

An art of incorporation was adopted February 28, 1801. It read: "To incor-porate a number of the inhabitants of the southeast part of Sturbridge, southwest par of Charlton, and the west part of Dudley, all in the county of Worcester, in a parish, by the name of the Second Religious Society in the town of Charlton."

Jedediah Marcy April 13, 1801, deeded 1 acre and 130 rods to the proprietors of the meeting house for \$1 (this included site of the present Central Baptist Church).

#### PETITION PRESENTED

The parish November 25, 1811, voted to form a town. A plan was prepared May 12, 1812. The petition was presented to Commonwealth of Massachusetts June 1814, with name of town left blank but the petition was rejected.

A committee from the Commonwealth viewed the land October 10, 1815, for a second time and reported favorably. A parish meeting January 31, 1816, voted "to accept the territory given us by the last court's com-mittee for a town by the name of Southbridge.

Poll Parish had been known as Honest Town and was referred to by this name by the justice of the peace May 19, 1815. This caused one historian to write: "It may have been attached to use by someone in the old town from which we had separated in a moment of resentment at our obstinacy in not being satisfied to go some miles to meeting; it may have come from some way or barroom joker over his mug of flip, or possibly some one of our own really honest inhabitants who firmly believed that there was more true honesty here, than in any other place in this part of the country."

The names of Southbridge and Quinebaug had been considered when an act of incor-poration was drafted December 6, 1814. Finally in January 1815, another meeting wa beld to reconsider the name. The name Vienna was considered. Vienna was recon-sidered January 20 and Southbridge substituted with the understanding that if the name of Southbridge was already in use, the names of Newbury or Newbern be used Southbridge won out.

The town voted March 2, 1837, to build a townhouse. The building was completed in 1839 at a cost of \$3.809.78. The sum of \$3,211.98 was received from the Federal Government for this house. (A survey in 1959 estimated the cost of a new town office building at from \$360,000 to \$390,000.)

Population figures and other statistics during the early years were: 1801, 450-500; 1816, about 900 persons; 1820, 1,066; 1830, 1,444; 1836, nearly 1,800; 1836, 50 dwellings within one-quarter mile of Eaptist meeting house

and nearly 20 dwellings in Globe.

The 1965 State census showed the population to be 19,384.

#### VILLAGE TRIES TO SECEDE

In 1856 Globe Village attempted to secede from Southbridge and form a separate town. History relates there "had been bitter and violent rivalry between Globers and Towners for many years."

Hamilton Street, now a major business

street, was constructed in 1851.
Other streets which aided in the development of the town were constructed as follows: Pirst road into Southbridge, built in March 1739, began at Sturbridge meetinghouse; 1828, county commissioners laid out and ordered to be constructed a county road leading from Southbridge to Dudley; 1832, present Eastford Road to Connecticut line was built; 1833, road down present Central Street across Quinebaug River toward Charl-ton Center; 1851, Hamilton and Worchester Streets built; 1866, Foster Street; 1883, Chapin Street.

Work was started in 1887 on construction of the present town hall. After much controversy the building was planned to hous the high school. It was built on the site of the original building. The cost was about \$90,000. The cornerstone was laid July 4, 1887.

Industrially, American Optical Co. has been in existence, including its early days, for 132 out of the 150 years the town has been incorporated.

It was started when William Beecher, son of a Connecticut farmer, came to Southbridge in 1826 after an apprenticeship in Providence where he had learned the jeweler's trade.

#### SAW SPECTACLES

He practiced this trade here 7 years before he came in contact with what was described as crude spectacles. The spectacles he saw were an imported pair as were most spectacles found in America at that time.

"I can do it better," Beecher is reported to have said to himself. He bought the spectacles and went to work.

The American optical industry was born at that moment.

Beecher retired from the business in 1062 and Robert H. Cole became head of the firm

He hired George W. Wells, an 18-year-old Connecticut farm boy. He was to have an influence on the American optical industry as deep as that of Beecher.

Wells became so important to the company that when he decided to go into business for himself in 1869 he was offered a membership in the firm to persuade him to stay. He accepted.

The business was then reorganized to be-come the American Optical Co.

The company now has about 12,500 employees spread throughout this country and its foreign operations. More than 4,000 of them are employed in Southbridge. Com-pany assets are approximately \$100 million.

Hyde Manufacturing Co., manufacturers of industrial machine knives and fix-up and paint-up tools, is another long-time industry. It had its beginning in 1863 with the construction of wooden pails and boxes by Charles Hyde who came here from Brookfield although a native of Winchendon. The company was incorporated in 1875. It now employs about 225 persons.

#### SOUTHBRIDGE PIRSTS

First white men to visit area: John Oldham and three others in 1633 to establish trade relations with Indians and spy on Dutch

First settler: James Deneson who settled in a cave formed of rocks during fall of 1780. First road into Southbridge area: March 739. Began at Sturbridge meetinghouse.

First business: Sawmill on Quinebaug River, north side, just above present Central Street bridge in 1782. Built first grist mill

1734, Moses Marcy.
First "Upright house": Built by Moses
Marcy on site now occupied by Notre Dame
Church, 1738. (Another source gives 1740 as date.)

First schoolteacher: Mary Manning, Deneson's barn, 1736.

First fire engine: 1820.

Pirst aqueduct company: 1825. To provide water for new Ammidown Hotel.

First French Canadian: Abraham Marois

First librarian: Moses Plimpton. Elected January 7, 1833, social library.

First town clerk: Timothy Paige, Esq. First town meeting: March 6, 1816.

Pirst bank: Incorporated March 31, 1836. First Roman Catholic mass: 1840 in a private home in Globe Village by Father Pitton, of Worcester.

Pirst high school: 1841 in room over town

First telephone: 1880. Headquarters of Southbridge Journal, four phones installed. First sidewalks: 1877, along Hamilton, High, Maine and South Streets. Waterworks: 1882.

Electric light system and street lights: 1887

First Frenchman elected selectman: Joseph T. Blanchard, 1888.

First French-speaking pupil to be graduated from Southbridge High School: Alexis Boyer, 1894.

First Carnegie Medal for bravery awarded in Southbridge: Patrick H. Pitspatrick. First woman elected to office in South-bridge: Mrs. George W. Wells, school com-

mittee, 1892.

First Greek pupil graduated from South-bridge High School: Katna Manthue Mi-

## Russ Lynch on Clear Writing in Science

EXTENSION OF REMARKS OF

## HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. REUSS. Mr. Speaker, as our society grows more complex, so does our language.

Particularly in science, there has sprung up a whole vocabularly quite un-known to the layman. Most Americans find it very difficult to understand scientific writing, and are often unable to keep up with our tremendous strides in the field.

A distinguished Milwaukee journalist, Russell G. Lynch, has shed a great deal of light on the problem.

Mr. Lynch is a veteran newspaperman who has won several writing awards. In addition, he earned for his paper—the Milwaukee Journal—a merit award from the Soil Conservation Society of America. As the first full-time natural resources reporter for a major newspaper, Mr. Lynch has long recognized the serious barrier which language can present to the layman interested in scientific

Last year the Department of Agriculture printed a most informative and helpful article on this problem by Mr. Lynch. Demand for the article has been so heavy that it has already been reprinted six times. As I feel it will be of great interest to Members, I include it herewith:

#### LINGUISTIC BARRIERS IN SCIENCE WRITING (By Russell G. Lynch)

Beatniks use a peculiar lingo which is meant to exclude others from their private little world. Some scientists and technologists are guilty of the same kind of snob-bishness when they use jargon. The cost is a breakdown in communication which they

Jargon, however, is not the only barrier to communication, nor is snobbery the sale explanation for the use of words that convey little or no meaning to the average person.

Good scientific and technical terms, uncommon words, and foreign expressions or quotations—all fine in the right company can lose ordinary readers or listeners and may even antagonize them.

A British writer, Rebecca West, who has devoted much thought to the motivation of

The

traitors, speculates that a certain type of scientist, because of his mastery of one field, develops a kind of intellectual arrogance. She was writing about nuclear physicists, but it is likely that this type of mind exists in other disciplines and may in rare cases account for failure to communicate.

More often, it is a feeling of inferiority that compels the use of important sounding words, a lack of confidence in one's material

the presentation of it.

Sometimes the one failing to communicate may be unconscious of his fault or only dimly aware of any such responsibility. tense preoccupation with his specialty has isolated him.

Whatever the fault may be--intellectual smobbery or arrogance, fuzzy thinking or erudite ignorance—all of the guilty ones limit their usefulness and sometimes their accomplishments, particularly if they are in public agencies and emphatically if they ers, at any level.

Scientists and technologists are not the only offenders. Men with less excuse, because their business is communication, are

guilty.

Reporters on scientific and technological matters must guard against a common fail-ing—writing for the specialists instead of the public. Or they may simply start using technical words which become familiar to An able medical reporter for a newsone of his words. A simple word that anyone should know? Ask a few people. Why not use "swallow" and be sure that every reader will understand?

Newspaper and magazine writers, per-ticularly columnists, like to show off a bit. They substitute ponderous words for simple ones at the sacrifice of communication, and sometimes they sacrifice the specific meaning of a useful word.

ing of a useful word.

"Fragmatic" has been popping up in columns and articles. It is also a currently
popular word among research workers. The
diverse definitions of this word, particularly
its intrinsic meaning, give it little utility.
What these writers usually mean is "practical" and if they used that word their readers would not be wondering what they

Similarly, the use of "anticipate" to mean

"expect" has just about left us without any word to express anticipation. The once-dignified word "research" has fallen into common use to give false importance to routine chores. On the jacket of a book recently offered for popular sale I read that the author had been in Europe for "auctorial research." Advertising and promotion writers may be chiefly to blame for such misuse, but even men in science and technology abuse this word. They are also whittling "parameter" down

ere measurement.

At this point, readers doubtless are saying to themselves that this article was written

from ignorance, and they are quite right.
A decade ago, I began to write about natural resources for the Milwaukee Journal the first newspaper in the country with a full-time reporter in the whole broad field of resources. I attended meetings where scientists and technologists spoke, worked from their papers and summaries, and read extensively for background information. I had to give myself a short course in every new phase I tackled. For a while, I was deed by my ignorance.

alized that there was a very Then I realized that there was a very serious lack of communication between some scientific and technological people and the public. I realized that ignorance was an asset, because my task really was to interpret what these men said; to explain resource matters to people with as little grounding as I had, or less, and also more or less

Lack of communication is particularly erious in Latural resource fields, where research and studies must solve problems or velop approaches to them. Men assigned e tasks are too inclined to confine their discussions to the knowing circle. After they reach decisions or prepare plans, they spring their proposals on the public and ex-pect them to be received gratefully and imented. This seems to me a major rewhy progress has been so slow toward wise ement of resources.

It is important that the public be taken along on the whole trip. Usually some changes are required, support must be generated, money must be provided. People just do not accept changes unless they are con-vinced by good reasons. They or their representatives will not dig up money for things not understood. Except when they are frightened, I should say, and that pro vides a valid excuse for such a vulnerable document as "Silent Spring."

Now, I do not want to be misunderstood. I admire fine writing and polished discourse. I understand and appreciate the need for exactness in scientific and technical terms Friends in various disciplines have pointed out that scientific papers must be written so that scientists everywhere can understand and use them. Many research authors do this and at the same time communicate very well with the public. But some carry their jargon outside and use it in speaking or writing for the public. Then communication breaks down.

An example is "discipline." I used the word here but I would not use it in a news paper article. Stop 100 persons on the street and ask what "a discipline" is and I will be surprised if you get one right answer.

Even in their own meetings, scientists and technologists are sometimes less than com-prehensible. At a luncheon one time, I sat with two technologists who talked two different dialects of the same jargon.

At a national seminar on aquatic biology that I attended, radioactivity was the sub-ject of the first session. The "radiobiologists" talked a language that other biologists at times had difficulty in following.

TLM was one of the terms. A speaker, hearing the rustle of questions in the audience, explained that it was about the same as LD-50. Like others, I knew this meant that the dose lethal to half an experimental population, so I groped along with the

on the way out, I asked a Ph. D. of my acquaintance what TLM stood for. He said, "Oh. about the same as LD-50." I said, "I heard the man, but what do the letters repre-

sent?" He laughed and said he didn't know.

Another man turned around and said,
"Toxicity limit median, I think." A third
man corrected him, saying, "No, it's tolerance limit median."

Subsequently I received a notice of another teminar in California on "benthic biology." I looked in my "Webster Collegiate Diction-I looked in my "Webster Collegiate Dictionary" and found "benthos" (in the new word section) defined as fresh water bottom-dwelling organisms. Then I lugged my big "Merriam Webster" to the dining doom table and found that benthos was the fora and fauna of the sea bottom. Next I consulted encyclopedia at the office. "Americana" said benthos was the found of overs depths under 100 fathoms: fauna of ocean depths under 100 fathoms; 'Britannica" said it was the sedentary bottom-living animal and plant life of the se

aid, "Why don't people say what they mean."

I resent men who flaunt their erudition with frequent interpolations of exotic words where English would serve as well and with occasional whole paragraphs in text or foot-note of untranslated Greek, Latin, French,

Any man who has something of value to

say, I think, does not have the right, ethically, to deny it to any mind capable of understanding the facts or the thoughts, simply because the possessor of that mind lacks his own high-level education.

Such men seem to forget that semantics, too, is a science and communication an art. And nothing has contributed as much to the

advance of civilization as communication.

Where one author deliberately throws up linguistic barriers for his inferiors, some ers fail to communicate because they are mentally marooned on chosen islands.

A few years go, a Midwestern university published a remarkable work on the vegeta tion of its State. Publication notice book jacket said that the book was written with a minimum of technical terms, for the use of (among others) farmers, conservation workers and men in weed control and recrea-

The author really had me wearing out my dictionaries. I found 20 or 30 words in the first 2 or 3 chapters that were not in "Collegiate," and some were not even in "Merriam." I stuck with it and was well rewarded, but I wondered how many farmers, weed control men, and conservation workers went beyond such expressions as "varietal endemism," "morphological subspeciation," "altitudinal retardation of phenological events," or "Gaussian amplitude

How many readers will use a dictionary, much less read with one at hand? And when the offering is oral, there is no diction-

when the orienting in oral, there is no dictionary and a man can lose his audience quickly. A nationally known specialist on water resources recently addressed a Milwaukee gathering of conservationists. His paper was a polished masterpiece. My admiration was tarnished as I left the hall, when a lawyer commented, "I should have brought along a dictionary."

Perhaps it is a good omen that scientists and technicians who understand the necessity of communicating with the public have become critical of their associates who ignore

become critical of their associates who ignore their responsibility.

Marston Bates, University of Michigan zo-ologist, referred in one of his books to a new word, "blocenosis," coined as a substitute for "community."

"Biocenosis," he wrote, "leads easily to biomes and biochores, to ecosystems and eco-tones. These are all lovely words but they don't really say anything new. The trouble is that the word-coiner, sinking blissfully into his additions, gradually loses all communication with the outside world. He emerges from time to time to complain that the world doesn't really understand or appreclate his important thoughts-meaning his big words.

Joseph Hickey, a University of Wisconsin professor, while he was editor of the Journal of the Wildlife Society, told me he ran across such gems as this:

While piloting a Polar Cub 30 miles west of Churchill, two foxes were seen in a highly abnormal condition."

Aside from indicating that two foxes seem to have been piloting an airplane, this was not very informative.

And this one: "A porcupin

"A poscupine covered with Sarcoptes scabeli was brought to the laboratory in a morbid condition."

That journal once had a fuss in its letter column over editorial requests for polishing up manuscripts, which led Justin Leonard, sistant conservation director of Michigan, to comment:

"The Ph. D. in science can make journal editors quite happy with plain, unadorned, eighth-grade level composition."

Joseph P. Linduska, who edited the Interior Department's book, "Waterfow! Tomorrow," of multiple authorship, had quite a struggle getting some of the contributors to use plain

language, suitable for popular reading. The Agriculture Department doubtless has had a similar problem with its yearbook.

As I explained to one of Linduska's authors, who sought my help, there is a simple rule: If an ordinary reader would have to look up a word, look it up for him and use the com monest synonym in the dictionary. Most readers won't bother; they will pass over the word or pass up the article.

ord or pass up the article.

They might not be helped by a dictionary instances. Example: "Soil amendin some instances. Example: Soil scientists like to use this one probably to add a touch of dignity to earthy things. In a technical publication, it's prob-In a technical publication, it's prob ably all right. But the plain truth is that they are talking about fertilizer.

Scientists, particularly those in academic circles, are very wary of newspaper reporters. They are fearful of being made to "look bad," one explained to me. Look bad to Surely not the newspaper readers in general? And just as surely not to fellow scientists, who will know that any fumbling was the reporter's, even if they do rib the victim.

If a scientist has a story that should interest a fair segment of the public, he should be glad to give it to a reporter. He has a right to ask the editor for a conscientious re-He has a er if he does not get one the first time. He should take pains to see that the reporter understands the facts (a good reporter will see to that himself.) If something is wrong when the story appears in print, this should not call forth anguished outcries but lead to a friendly and helpful explanation of where the writer went wrong.

This attitude can be very rewarding both for the individual scientist and for fellow scientists who may find that reporter use-

As a reporter, I was fortunate to get such help from scientists and technologists well equipped to communicate. I ran into others, typified by a man who was asked to check sypined by a man who was sased to deaded the irrigation section of a report I wrote on Colorado River salinity problems. My task was to make it simple enough to appeal to newspaper editors. The expert found it "difficult to review" because it was "oversim-

Watson Davis, director of Science Service, in an address some years ago at a scientific communication conference held by the American Association for the Advancement of Science, said this:

"The great art in telling is to make the words mean what you want them to, not in your own mind but in the minds of others. There is little need for 'writing down.' is demonstrated by the daily newspaper which serves children and old folks alike.

Clearness and vividness are more needed than vocabulary limitations based on word lists."
Given the chance, I think that I could convince Mr. Watson that vocabulary limitation is necessary-not in the concept of word lists" but in bilingual ability.

Scientific terms and the popular tongue surely are two different languages. The "great art" is, as Mr. Watson said, to make words meaningful in the minds of others. The simplest way, and really the only practical one, is to talk the other man's language.

The alternative is to interpolate frequent explanations to make scientific or techn cal words meaningful. A little of this is good; too much will bore the listener or der, if it does not affront him.

As for "writing down" (or talking down), it is dangerous even to think in such terms. and yourself that in the present state of biological evolution the people you address are apt to have minds as good as yours. They just lack the tools to use their minds you use yours. Your job is to supply the

Words are the tools of the mind. It has en written that man was unable to think

much better than lower animals until he

provided symbols and then words.

Ask yourself what your objective is. To impart knowledge? Or to parade knowl-

If you want people to think about things concern you and your work, use work they know or supply new, useful words. Do it casually, not in a way that seems to say, "See how much more I know than you do." The author of the aforementioned book

about a State's vegetation occasionally tried to do this. He used "podzolization" with the explanation that it meant topsoil impover-ishment by leaching and translocation. But he needed simpler words even in his explana-

I heard some years ago about a game biologist, talking to a group of farmers. He got off a string of big words and knew from the facial expressions that he was over his listeners' heads. So he said, "I won't attempt to explain that; you wouldn't understand it anyhow." Right there he lost them beyond

Be sure, if you are talking or writing "down," people will get the message just as plainly as those farmers did, even if you don't do it as crudely as that.

As a writer or speaker, you should recog-nize that three areas of communication call for different efforts:

 Your own group or discipline.
 You may expect the language of a discipline to be familiar to is disciples, but not the jargon, or oral shorthand, of a specialized group within the discipline.

2. Others who may want your information and can be expected to put forth a reasonable effort to understand.

Some of the burden of communication may be placed on these people, but not all of it. You may make them reach a bit, expect them to ask questions and look up things. But a good writer or speaker will take on more than his share of the burden. Those you want to interest, or should,

who lack the specialized vocabulary. This group comprises most of the people to whom a man in the public service must address himself, from citizens to legislators. The burden of communicating is entirely on the writer or speaker. He must assume that only fairly common words will convey mean ing and, in speaking, be alert for signs that

the audience is not following him. If you accept the duty of communicating and work at it successfully, more of your material will get into newspapers. Competition for news space is murderous. editor's waste basist is large and his re-porters' assignment sheet is crowded.

If your press releases do not get into print, if reporters do not come to your med or, having come, walk out and print nothing, mine your efforts.

Maybe your papers are too full of the kind of language I have described, or your summaries, which usually are more useful to the press, are equally foggy. I think that authors should not prepare summaries. That is a job for an interpreter.

In my observation, communication is much more effective if a press relations man is a good newspaperman who can pick up the scientific or technical knowledge he needs, rather than a scientist or technologist who may never be able to understand the newspaper business or what may seem to him its useless whims.

At the aquatic biology seminar mentioned earlier, some papers contained material bound to interest large segments of the public, but it took some winnowing and translating. So the only local newspaper coverage was in the form of interviews with a couple of guest speakers from the conservation field, Ernest Swift and Seth Gordon. The interviews had very little relation to the seminar program but gave the newspapers

a chance to get the seminar into their columns.

Later, at the National Conference on Water Pollution, there was a wealth of g material buried in the papers of top-ranking scientists and engineers. But it was what I said as leader of a panel on "Public Awareness and Citizen Responsibility" that pro-vided the Associated Press with a lead for

both its day and night stories.

In both cases, reporters used material they knew would be understandable and perhaps interesting to their readers.

Readers of this article, I am sure, have seen similar occurrences. They are food for thought rather than cause for chagrin.

People are not compelled to listen to you or read your papers. You are in a buyer's market, competing with murder, rape, politics, lukewarm war, aerospace travel and comics in the newspapers; entertainment on television; and sex, whodunits and westerns on drugstore book counters.

At the very least, you must make what you say understandable, and if you have the talent you had better make it interesting,

Regard it as a challenge, for that it surely

## Eulogy to Chief Justice Tsukiyama of Hawaii

EXTENSION OF REMARKS

## HON, SPARK M. MATSUNAGA

OF HAWAIT

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. MATSUNAGA. Mr. Speaker, I am sure that my honorable colleague will agree with me that the 50th State, despite many alleged handicaps, has made its transition from a territory to statehood with more ease and finesse than anticipated by many. That we were able to do this was due in large part to the outstanding leadership of Hawaii's citizenry. And so I stand here with heavy heart to inform you that one of the trailblazers of our great State has passed on to history.

He is Wilfred Chomatsu Tsukiyama, the first chief justice of the Hawaii State Supreme Court and a pioneer in many public endeavors. Justice Tsukiyama was many things to all of Hawaii's people. As jurist, legislator, attorney, and community leader, he devoted his life to principles which contributed to the best interest of Hawaii and its people.

Born in Honolulu of Japanese immi grants, he was one of the early leaders in the fight to prove that Americans of Japanese ancestry were loyal to their country, the United States, prior to and during the trying years of World War II. After the war, he won a seat in the territorial senate and rose to become the first person of oriental ancestry to be chosen president of that legislative body. chief justice of the infant State of Hawaii, Tsukiyama won national recognition by being elected to the seven-member executive council of the Conference of Chief Justices

With the passing of Justice Tsukiyama, Hawaii has suffered the loss of one of its ablest and most dedicated citizens. As Hawaii's Representative to Congress, as

one who has long admired and highly respected the late chief justice, and as his personal friend and that of his surviving family, I wish to express my deepest sympathy to his widow and his children

I also submit for inclusion in the Con-GRESSIONAL RECORD the article written by Harriet Gee which appeared in the Honolulu Star-Bulletin of January 6, 1966, summarizing Justice Tsukiyama's exemplary career:

JUSTICE TSURIYAMA DIES AT AGE 68

(By Harriet Gee)

Wilfred Chomatsu Tsukiyama, 68, first chief justice of the Hawaii Supreme Court statehood, died today in Kuakini Hospital.

caused by cancer of the common the liver. He died at 6:20 a.m.

duct and of the liver. He died at 6:20 a.m.
Tsukiyama entered the hospital December
8. He resigned as chief justice effective December 31 in a letter dated December 17. He was born in Honolulu March 22, 1897.

Justice Tsukiyama, a Republican, distinguished himself during his colorful lifetime as an attorney, jurist, legislator, community leader, and athlete.

Although short in stature, he had a reputation for being long on oratory, a talent ripened by his many years in the territorial senate.

His mastery of the English language played no small part in his effectiveness as a speak-er, no matter what the setting.

He was appointed chief justice in 1959 by former Gov. William F. Quinn, a 7-year term which was to expire in October 1966. Justice Tsuklyama's own life and many

achievements were an exemplification of the American way of life, something he believed

His appointment as chief justice—the first American of Oriental ancestry to hold the position in any State in the Union—was a shining example of the American way.

Tsuky, as he was popularly known, led is first recorded crusade to prove that locally born Americans of Japanese ancestry as loyal as any other kind of Americans.

He was in the nucleus of a movement in the 1930's to have all Japanese with dual citizenships change their allegiance to one country only-either America or Japan.

But the battle was uphill all the way, and on two fronts.

On one side he had to fight the indiffer-

ence of the Japanese people themselves.

The procedure in surrendering their Japanese nese citizenship was complicated and cumbersome, entailing involved correspondence and long waiting.

As a result, an appreciable number was still left in the undesirable status of dual

Tsukiyama said this caused tension and misunderstanding, "bringing upon the heads of us Americans of Japanese ancestry much undeserved and unwarranted suspicion on the part of some of our fellow citizens."

Then there was the second front-others in the community who questioned the loyalty of persons of Japanese ancestry.

Tsukiyama addressed this criticism to the

"second front" in a public speech in 1938:

"Although loud accusations are being di-rected against the citizens of Japanese an-cestry, it is significant that nary a whisper is d against the dual citizens of other racial ance stries.

He found it necesary again in 1940 to say the "second front," during a large public meeting in Hilo:

"The day is coming when the haole Americans will regret that they criticized us American citizens of Japanese ancestry.

"" \* That day will come when they realize that we are as loyal as they are to the United States of America.

"If these haole Americans wish to help us, they should build and not destroy; they uld show us kindly guidance and toler

ance, and not criticize our every action
"Even now, I challenge them to show me
wherein we have been disloyal.

"Loyalty is a spontaneous love manifested by a man for the country of his choice, and his willingness to pay the ultimate sacrifice for his country when the moment comes.

"We American citizens of Japanese ancestry are ready to do anything for our country, the United States of America."

try, the United States of America.

His talk resulted in immediate repercussions throughout the territory, prompting Tsukiyama to explain later that he meant only to say there is a group of persons who are prone to criticize citizens of Japanese stry unfairly. en came the Selective Service

Then which, Tsukiyama observed, has been a boon to the Americans of Japanese ancestry in demonstrating their loyalty.

He took the opportunity to remark in April 1941:

"There has been very little talk lately, even on the part of skeptics, regarding the loy-alty of Hawaiian-born Japanese because of the large number of citizens of Japanese who have been called into the oncestry

Justice Tsukiyama himself volunteered in 1942 for active military service but was not called because of his age. He was than 45.

In January of 1943, he again offered his ervices to his country by being the first Nisel in Hawaii to volunteer for combat units of Americans of Japanese ancestry being organized then by the Army.

This was 3 days before the drive was an-

nounced publicly.
"Although I'm 46 years old," Tsukiyama told newspaper reporters, "I'm going to pull as many strings as possible to become a member of the organization. I'll take anything they give me."

He was turned down again, though he claimed he was as physically perfect as a 20year-old because of his active participation in sports.

He was then concentrating on golf and

had an eight handicap.

Throughout World War II, however, he served as chief warden of zone 1 (Nuuanu to Damon tract) in the warden's division of the Office of Civilian Defense.

#### SURPRISE CANDIDATE

In 1946, Tsukiyama became a surprise candidate for the territorial senatorial race as a Republican, since it was known that he had previously declined requests from party members to make the race

He said he yielded to calls from citizens of all walks of life, and filed his papers half an hour before the deadline.

By 1947, newsmen covering the legislature had agreed Oahu's freshman senate of the outstanding members of he upper

Tsukiyama was appointed chairman of the Judiciary Committee, one of the two top committee posts, and handled the job as if he had been doing it for years, newsmen

Two years later, his alma mater—Coe College in Cedar Rapids, Iowa—honored him with a doctor of civil laws degree in recogni-tion of his legislative career and public serv-

He was then president of the territorial senate, the first American of Japanese ances-try to be so chosen. He was reelected, unopposed, as president of the senate in 1951,

Justice Tsukiyama was one of the most active, diligent and effective supporters of Hawaiian statehood.

In 1950, after he had testified before the U.S. Senate's Interior and Insular Affairs Committee on the issue of race in Hawaii. Chairman Joseph C. O'Mahoney told him:

"Senator Tsukiyama, the committee has heard with a great deal of interest your persuasive statement, and is moved to know that a man of your ancestry has risen to a place of distinction under the American flag."

Then came 1954.

Tsukiyama was reelected to his third term in the territorial senate but by then the Republicans were in the minority, after a Democratic landslide at the polls.

#### MINORITY LEADER

He was elected senate minority leader and continued to hold the respect of colleagues, regardless of party affiliation.

He controlled business with dignity and restraint, but was known to unleash strong criticism on those who tampered with senatorial proces

In 1957, he led the fight against a bill calling for the end of capital punishment, but lost by a 10-to-5 vote.

One newspaper reported:

The protest "stormed into a thundering filibuster by Tsukiyama.

"The filbuster, believed to be only the third in Hawaii senate history, created perhaps the greatest excitement on the floor this session and had Democratic senators stymied for a while.

'Giving his personal views against abolishment of capital punishment, Tsukiyama blazed on for an hour before the senators seemed to realize he was filibustering against the bill.

When it appeared he might roar past the midnight deadline of the session in an attempt to prevent stopping the clock—thereby ending the session—they (Demoin an cratic senators) pulled the clock plug shortly after 9 p.m."

The Democrats had managed to stumble on a senate rule on a point of order, and thereby halt Tsukiyama.

Tsukiyama won his fourth 4-year term as senator in 1958 and again became minority floor leader. He was the only Republican

among the five senators from his fifth dis-U.S. SENATE RACE

Then came statehood, and Tsukiyama stepped into the U.S. Senate race ut he had trouble engaging his foe, the

late Oren E. Long.

Reporter Don Horio, of the Star-Bulletin, now Governor John A. Burns' press secretary, recorded this happening thusly:

"Long has remained steadfastly aloof, re fusing to be lured into even the mildest acrapes with Tsukiyama, who recently expressed his frustration before an 11th district GOP meeting:

'I'm up against an invisible candidate. can't debate with him because he's mute and doesn't say anything. It's extremely difficult talking to the wall."

Horio wrote that Long "ducked this jab deftly" by replying with a typical "no com-ment."

Tsukiyama was defeated in his bid for national office, but another great honor was bestowed upon him, that of being the first chief justice of the new State's supreme

Those who know Tsukiyama say the job of chief justice caused him to tone down his stentorian style of speaking, and his remarks, to fit the dignity of the court.

Recognition continued to come his way. In 1960, he was elected to the seven-mem-er executive council of the Conference of Chief Justices, an organization of the country's 50 State supreme court justices.

'I consider it an honor that they reached out to Hawaii, which is only a neophyte as a State," Justice Tsukiyama said of his selec-

In 1968, Premier Hayato Tkeda, of Japan picked Justice Tsukiyama to receive the highest award ever given an American of Japanese ancestry, with the approval of

Japanese ancestry, when the approval or Emperor Hirohito.

Justice Tsukiyama, accompanied by his wife, went to Japan to personally receive the second class of the Order of the Sacred Treasure from Premier Ikeda.

It was given him in recognition of the American way of life and his contributions toward promotion of better American-Japanese relations.

Justice and Mrs. Tsukiyama also enjoyed a personal interview with Emperor Hirohito during which no interpreter was present.

Tsukiyama's ability to converse in formal Japanese was a high tribute to his early language school training in Hawaii.

Being chief justice was like most any other

job, in that it had its trying-and plea

publicans—their parties promised in 1962 to provide more judges. "The demands of judicial administration cannot be put off indefinitely," he said. Finally, five more circuit judgeships were

created by the legislature during the 1965 session in February.

#### SWORE IN HIS SON

It was a memorable day in May 1963, when Chief Justice Tsukiyama swore in eight new attorneys. One of them was his son, Donald.

Each attorney approached the bench to receive his commission, handshake, and whispered congratulations from the chief funtice.

When Donald was handed his commission, the chief justice said in an audible voice, "Congratulations, son." This touched off a moment of laughter in an otherwise formal

#### STUDIED IN CHICAGO

At the University of Chicago Law School, he aqueezed in 1 year of varsity baseball. He returned with his law degree and be came associated with the law firm of Huber, Kemp, and Stainback before joining the city and county attorneys office as a deputy He was premoted to chief of the city attorney's office in 1933 and served until 1940.

One of his deputies was Hram L. Fore, now a U.S. Senator from Hawaii.

After leaving the city attorney's office, Justice Trukiyams went into the private practice of law as a partner in the firm of Tsukiyama and Yamaguchi.

Justice Tsukiyama was a member and officer of many business firms, and served in just about every worthwhile community rganization.
One of his greatest satisfactions cam

from helping Okinawans and Japanese coming to Hawaii.

In recognition of his numerous accomplishments and devoted service to the community, he was chosen overall Father of the Year for 1945 by the Betail Board of the Honoiulu Chamber of Commerce. Surviving are his wife, Marian; three sons, Owen, Donald, and Roy; and three daughters, Mrs. June Amil, Mrs. Doris Hatanaka, and

### Tribute to Memory of Adlai E. Stevenson by Robert Moses

EXTENSION OF REMARKS

OF

# HON. BARRATT O'HARA

OF BLEDWOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the address of Robert Moses, president of the New York World's Fair 1964-65 Corp. at the Adlai E. Stevenson Memorial ceremonies on the occasion of Illinois Constitution Day in Lincoln Theater of the Illinois Pavilion on August 26, 1965:

Governor Kerner, Ambassador Goldberg, Mr. Newman, and friends, only a short time ago in this very Illinois Pavilion, where the animated image of the Great Emancipator has held so many visitors spellbound, Adlai Stevenson addressed Illinois, the fair and the world beyond on behalf of brotherhood and world peace.

That occasion brought back vividly to me the events which led to the establishment of the United Nations headquarters in New York, the prolonged arguments over location here and abroad, the debates about a great do-square mile compound off in the wider-ness or suburbs, on the order of Laputa, Ultima Thule, Utopia, Canberra, New Delhi, and Brasilia, isolated, self-contained and im-mune from infection, as against a 20-acre midtown park, surrounded on three sides by towers and canyons.

The early croakers and prophets of doom as usual were wrong. New York City was not swallowed by the United Nations, and the United Nations was not engulfed by New York. Great polyglot cities have learned to absorb newcomers, no matter how strange, the property and any inspirator. We like helps York. Great polygiot claims have reached absorb newcomers, no matter how strange, impressive, and awe-inspiring. We like being the world capital. We have faith in the United Nations. We know no substitute. If we have any misgivings about the ultimate outcome of this parliament of man, it is about prolonged, futile oratory, which is another way of saving that, if generally we had other way of saying that, if generally we had an economy of words, all the other economies would take care of themselves. The average would take care of themselves. The average observer cares little whether the rules and etiquette follow Hoyie, Hansard, parliamentary law, the Marquis of Queensberry or Amy Vanderbilt, so long as something tangible

The United Nations has been singularly The United Nations has been singularly fortunate in its executives. I remember Trygve Lie, the rise of the United Nations from shambles to glory, the headquarters committee, and the famous architects from the four corners of the glods. As chairman of the coordinating building committee, I had a ringside seat at contests unequaled since the gladiators fought in the coliseum. How could Noah and the architect of the Tower of Babel get along without a headquarters committee and simultaneous trans-lation? Lie had the bluff, hearty forthright-ness and tenacity of the Vikings of the North. He needed these qualities and characteristics at that time. Dag Hammerskjöld, who succeeded him, was a statesman by inheritance instinct, and training, and served admirably in his time, ending as a martyr to a great cause. U Thant, independent, de-tached, unperturbed and dispassionate, now seeks to find the common bond which will reconcile the apparently irreconcilables.

Adlai Stevenson became our own chief representative when his moral courage, inrepresentative when his moral courage, in-nate courtesy, sharp wit, subtle irony in debate, broad experience in government and politics, his splendid record, his American, midwestern idealism, his essential simplicity and his gift of words, unequalied in our public life since that other great Prince-tonian, Woodrow Wilson, were indispensable. tonian, Woodrow Wilson, were indispensable. He may at times have been discouraged, but he never ceased to labor for at least a durable truce based on our common humanity. I suppose that no other American in his time could have presented to the world so frank and winning a picture of America as an awakening giant in world affairs, a world power without as yet a world outlook. No one could have explained better our characteristic impatience with devicusness, with acteristic impatience with deviousness, with protocol, with language to disguise thought and our bewilderment as we found that many

and our bewilderment as we found that many recipients of our largease were not only unappreciative, but positively resentful of our generous responses to their demands.

Obviously, heading the U.S. delegation to the United Nations is no sinecure. It is no place for a sensitive plant. Having been a Governor, candidate for the highest office, diplomat, judge or Cabinet member guarantees no immunity. He must help to persuade an impatient citizenry, still in the pioneer stage, against every instinct and contrary to its normal temperament, to fight battles which are not wars, to act under no traditional, accepted rules, to am at a stale-mate instead of surrender of the enemy and traditional, accepted rules, to am at a stale-mate instead of surrender of the enemy and complete victory. He must represent exec-utive policies with complete, unswerving loyalty, implement them with every talent he possesses and absorb immense punish-ment in the process. To the superlatively decent statesman the contrast between word and deed becomes appalling. We cunningly develop in our soldiers the instinct for the jugular and then command them to behave

jugular and then command them to behave like gentlemen on an arrand of mercy.

When, in November 1956, the news of the Egyptian invasion reached the U.N., I happened to be in a box at the Metropolitan with Sir Pierson Dixon. They kept sending for him to come to headquarters to face the music there. At the first intermission Henry Cabot Lodge came over to get him, but Dixon refused. Finally, in the second act a peremptory call came and Dixon had to a peremptory call came and Dixon had to go. As he left to face the critics, I heard Lady Dixon whisper, "Just another crisis, I suppose." Dixon did not invent the in-vasion of Egypt. He simply had to stand the gaff.

the gar.

Our Ambassador must cultivate the friendship of nations who don't want to be in the U.N. but can't afford to stey out. He must sit through charges that Uncle Sam is an imperialist and shylock. He must welcome to our ranks new republics from India with half a billion, African states of

small numbers and Singapore with a handful. He must in his own person refute the weary, homegrown sophisticates who tell the eager critics abroad that American democracy is hopelessly torn, miserable, decadent and bound for the ash heap. He must study time and practice timing. He must anticipate and accept with equanimity the fact that many of yesterday's friends are today's acquaintances and tomorrow's

It has been said that all institutions are the lengthened shadows of great men. Certainly here at the fair the enormous popularity of Michelangelo's Pieta, the Illinois Lincoln and the Churchill Pavilion prove the truth of this adage: It is idle to pretend that ours or any other is a government of laws and not of men. Most people comprehend leaders rather than laws, and men rather than institutions. No cause gains accept-

ance until it is personified.

Many class Stevenson as a liberal. I don't know today what that is, unless it is a leader with an open mind, unafraid of change, with faith in the improvability of mankind, happiest on the side of the angels and willing to battle for them. What Stevenson said of Nehru might well have been said of Steven-son himself, that "He has a common touch that excites the devotion and understanding of all kinds and conditions of people, and he has a pen and tongue that stir the hearts of millions," and that "The hope of the world rests with leaders who have the gift of firmness and of flexibility.

The eloquence of Adlai Stevenson will no longer enliven and electrify the chambers of the Security Council and the General Assembly of the United Nations, but his voice, orded and remembered, will be heard long after he has gone to where beyond these voices there is peace. And if he comes back, it is in the guise of the "Prairie Lawyer, Master of Them All," painted by Vachel

Lindsay:

"He cannot sleep upon his hillside new. He is among us—as in times before. And we who toss and lie awake for long Breathe deep, and start, to see him pass the door."

# LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44. SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the Concessional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional HECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 18, 28 Stat. 603.) TITLE 44, SECTION 182b. SAME; ILLUS-

TRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record.—The Public Printer shall arrange the contents of the daily Record as follows: the Senate proceedings shall atternate with the House proceedings in order of placement in consecu-

tive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer essary in order to meet producdeems it nee tion and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents and other matter authorized to he inserted in the RECORD shall be printed in 61/2-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor 6-point type. words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. These re-strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal repro-duction is necessary.

3. Return of manuscript.—When manu-script is submitted to Members for revision it

should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight 4. Tabular matter.—The manuscript

ches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the fol-

lowing morning.

5. Proof furnished .- Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever ossible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Recome style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If man-

uscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. Thirty-day limit.—The Public Printer sall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period ex-ceeding 30 calendar days from the date when ils printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days,

unless otherwise ordered by the committee.

8. Corrections.—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each as of Congress the time limit shall be 10 days, or Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not wiblish in

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10(a). Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Mem-ber, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congress STONAL RECORD

10(b). Makeup of the Appendix.—The Appendix to the Congressional Record shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both House are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an ex-tension submitted by a Member of the House S

bat

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the Congressional Record, nor to Records printed after the sine die adjournment of the

11. Estimate of cost.-No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Recond by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of de-bate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p.

Mr. TEAGUE of Texas. Mr. Speaker. the feature article by Hugh Aynesworth in the Dallas Morning News of December 18, 1965, catches the excitement of the successful rendezvous of Gemini 6 and 7 and its importance as a stepping stone to a manned landing on the moon by 1970. It is an inspiring portrayal of our astronauts rendezvous in Gemini 6 and 7 and it provides a magnificent example of our space work by the personnel of NASA and the Department of Defense in supporting this difficult operation. This is a clear demonstration that our national space program personnel are developing the capability of assuring a landing on the moon by 1970 and will be successful if provided the support to complete the next crucial steps in the Gemini program of docking two vehicles in space and pushing on to the Apollo manned flight. The editorial follows:

SPACEMEN TO DROP HOME TODAY

(By Hugh Aynesworth)

HOUSTON, TEX.—Gemini, 7 space pilots, Frank Gorman and Jim Lovell, bearded and dirty, but in apparently good condition, will steer their cluttered spacecraft back to earth Saturday morning—winding up the most prodigious space mission in history.

They are scheduled to drop into the Atlantic Ocean, about 690 miles east of Cape

Kennedy, Fla., about 8:05 a.m., Dallas time. Meanwhile, in Houston, some truly amazing pictures, both color and black and white, released by the National Aeronautics and Space Administration. They were the ones taken by Wally Schirra and Tom Stafford during their highly successful Gemini 6 redezvous flight.

Told that all three television networks were showing the pictures "live," Borman remarked:

"Great. And here we are in our under-

The Gemini 7 crew could not be seen in the pictures. Several more reels and magaes were being developed late Friday night in hopes that Gemini 6 might have captured some closeups of Borman or Lovell, as they pressed close against their windows.

Schirra was fearful that the pictures would be poor because of the smudging on his windshield, but they were as good as or better than the ones taken during Ed White's his-toric space walk a few months ago.

When Astronaut Elliot See told Gemini 7 how good the photographs were, "They're just tremendous," he said, Borman replied: "It was a tremendous experience, really, "I hope we have some good shots of them,

The pictures clearly showed the trailing wires mentioned by Gemini 6's crew Wednesday, as they pulled close for the first rendexvous. In one of the movie reels, you can

see the Gemini 7 rolling over and over, trying to dump the water out of their water boller. Brilliant orange flames streaked out into nothingness when the "7" fired its thruster. estimated they were 20 to 30 feet

apart

apart.
Flight officials were pleased Friday night as they updated Gemini 7's flight plans, fed the computers reentry and splashdown data and retired for a good night's rest before Saturday's sometime hectic operation.

These Pleaster Chris Fright Flight Sur-

Flight Director Chris Kraft, Flight Surgeon Dr. Charles Berry and several others had kept a long vigil Thursday night when it looked as though Gemini 7 might have to be brought down a day short of its 14-day goal. Borman had expressed excited concern that the return of the second Delta "p" on this pilot panel might foretell the decline of the No. I fuel cell section. "I'd hate to pass that carrier if we weren't

sure," he radioed at least three times

Kraft assured him they would be certain

or bring them home early.

The No. 2 Delta "p" light came on the first day of the flight, but that fuel section offered no trouble for several days.

The No. 1 light blinked on—then off—then on again Friday, but still the fuel cells showed no degradation and Kraft said Fri-

day night they had worked "admirably."

The "7" crew spent much of the day shooting the remainder of their film, stowing most of their equipment and winding up what experiments they could with minimum usage of fuel. They fuel remaining. They reported 5 percent of their

Borman was particularly interested in exactly how close Schirra had come to the recovery ship, the carrier U.S.S. Wasp. He was told NASA considered it officially 2 nautical miles past the ship and 12 to the right. "Tve got to get the accurate figures because I've got a lot riding on that," Borman returned. Borman and Schirra had made a bet, about which spacecraft would land closest to the "footprint"—the planned splashdown

Schirra's instruments were minutely in-correct, causing him to steer the Gemini off vourse to the right, Kraft said. Kraft told Borman he might have a hard time collecting from Schirra even if he did

"But if Wally wins, he'll claim it was a fair bet," laughed See. Meanwhile, Schirra and Stafford fiew back to Cape Kennedy, Fla., to begin intensive debriefings. Schirra had lost 3 pounds during the flight, Stafford 10½ pounds. As usual, they quickly regained the weight, said Dr. Berry. Schirra weighed more Friday than he did Wednesday morning at lift-off, Stafford had regained 8 pounds by Friday afternoon.

Told by See that Schirra and Stafford looked fresh, "Like they've just been up for a local flight in a T-38," Borman replied: "That's all they have been, for crying out

Weather in the recovery area is expected to be near perfect for Gemini 7's return, See advised the crew.

Lovell, expecting to become a father again, momentarily (his fourth), asked if his wife, Marilyn, had come through yet.

Dr. Berry answered him: "She said to tell you that we had a little bit of a scare the other night, but it didn't amount to anything, and she's sorry she couldn't deliver."

"Well, that's the way it goes," Lovell re-

Abraham Lincoln as Seen From the Eyes of Ambassador Mehdi Vakil of Iran

EXTENSION OF REMARKS

# HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. O'HARA of Illinois. Mr. Speaker, among the treasured friendships the molding of which enriched my service as a delegate to the 20th General Assembly of the United Nations was that with Ambassador Dr. Mehdi Vakil, the permanent representative of Iran to the United Nations. He is a statesman and a diplomat of the highest order and one of the influential leaders in the deliberations of the United Nations.

I am extending my remarks to include the television address on Abraham Lin-coln delivered by Ambassador Mehdi Vakil on October 15, 1964, by request of his personal friend and coworker, Adlai

E Stevenson

What theme would Abraham Lincoln have chosen to develop were he, rather than an Iranian, occupying this place today and under an obligation to say something more than perfunctory to you. Note that I do not ask what words he would have utered; they would have soared and I have no power to fly my kite so high.

Reflecting on the context in which he found Reflecting on the context in which he found himself obliged to speak, he would very likely have wondered whether there was anything in his own experience that would be valuable to relate to the purposes served here. At first glance the prospect is not promising. This is an international setting and Lincoln was not an international man. The horizons of his time were much more described that the specific property of the server of the foreshortened than our own and the problems of his administration required him to turn his gaze inward rather than beyond the country's limits.

You already know, of course, that I shall not put you off with such an answer. The reason is not merely that I could hardly take up the time allotted me with mere naysaying and expect to hold your attention.

It is that the meaning of this man and of his experience belongs not to the United States alone, much less to Illinois. He is, as was said of another moral hero who was martyred in a political struggle, a man for the ages and his name is a byword among all peoples and in all places for moral achievement. His story remains fresh wherever men still aspire to a fairer world.

The winds of equality are blowing irresistibly throughout the world today. It was Lincoln who unchained them. It was not a decision to which he came willingly or quickly. The conviction which finally requickly. The conviction which finally resulted in the Emancipation Proclamation suited in the Emancipation Proclamation took most of his grown lifetime to mature. He was not one to be glib about the relevance of moral precepts to political life, for he knew that statecraft is not an exercise in the application of ethical aphorisms offering easy choices between indentifiable alternatives of black and white. Union speech if you want a masterly analysis of how difficult it is to practice the art of reconciling moral and political choices.

Lincoln knew before he died that he had guided the ship of state safely past the rocks of disunity. What he would be most likely to want to learn is the outcome of the agonized decision he had made in 1863. I think he would not be much surprised to learn that the course since then had not been smooth and that the politics of equality were still giving the world trouble.

The idea that his country had become the world's leader would please him, but he would be likely to search deeper into the meaning of this leadership. Master politician though he was, he would, I suspect, ask wither this leadership was tending, what its purposes were and what principles informed it. I imagine he would have been impatient with talk about power and national interest which neglected to say something other than commonplace about the purpose to which the national power is put and the principles which informed the relations between one nation's interest and its neighbor's. He would guess that there were problems and that they showed some continuity with the problems of his own time.

Once he understood that only in the century since his death had the historical scene been fully revealed and that the newcomers on the stage vastly outnumbered those who had held it earlier, he would be bound to ask what part they were cast in. He would not, I think, be much surprised to learn that they were acting the role of aspirants to equality in a drama entitled "The Politics of Inequality."

Trailing heaven's draperies as he would, he might now be readier to declare it a law of politics that what is morally unacceptable in the relations of man and man tends in time to become politically unacceptable also, and tends therefore to be an impediment to unity of political purpose and action.

unity of political purpose and action.

Though he might at first find the scale of the world's absorption in getting and spending breathtaking, he would, I am sure, have less difficulty than some of our contemporaries in understanding why the problem of livelihood had become so important. A hundred years' absence would give him an advantage in perceiving the importance of adaptaing to the changes between the bread and butter principles of his time and the more complicated economic imperatives of our own.

The name and notion of international organization would be strange to him, but his sympathy would leap to the news that there was a house of nations or general assembly. The name United Nations might move him to ask whether this denoted promise of

Would he be dismayed to learn that although the government of this house purported to rest on the rock of the equality of men and nations, practice belied the noble promise of the charter; and that when room had to be made for newly fledged nations this was done at the expense of the poor and weak? An amendment to enlarge the membership of the Security Council and the Economic and Social Council is now making the rounds of the world's capitals. Twenty-three nations have ratified it, not one of them a major power, although it might have been supposed that, if unwilling to scriftce any of their own advantages, they would at least be willing to provide additional places which would cost them nothing.

The history of the trade relations of the rich and poor nations offers no better vistas. The so-called developing countries remained englaved to the economic power and decisions of the developed countries, dependent on export revenues from primary products subject to catastrophic fluctuations of price. Experience does not support the belief that a serious purpose to enable these

countries to develop independent economic strength underlies the policies of those who have already arrived. Whatever is won comes only after protracted and bitter struggle. Deference to equality may not be easy, but unity cannot be won and maintained for less.

less.

Long before Lincoln, a great Persian poet,
Saadi, wrote of man's inhumanity to man
as follows: "You who can keep aloof from
the misfortunes of your other you, have no
claim to the title of man."

You will pardon me, I hope, if in this connection I point to the six-point program of economic and social emancipation developed by His Imperial Majesty the Shah of Iran. The program rests on the Shah's conviction that the human imperative so movingly phrased by the poet, must be accepted as the principle governing the relations of men in society.

What Lincoln would make of East-West tensions I don't know, but the reference to difficulties between North and South would seem familiar. He would grasp readily how political inequality, when compounded by economic inequality, induced frustration and despair, and that political dangers were bound to follow.

In short, he would not be long in perceiving the perils to peace and human existence in disunity, and the cardinal importance of equality as the key to unity.

One more observation before I close. In the Cooper Union Address, Lincoln declared that no slave insurrection was being fomented or was likely. It is almost the only passage in his speech without relevance to our own day.

# A Logical Question

EXTENSION OF REMARKS

# HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the following editorial which appeared in the Granville Sentinel, Granville, N.Y., on December 202

In my opinion, the editorial raises some proper questions with respect to draft deferments. It is my hope that the Selective Service System will take whatever steps might be necessary to review the 11/2 million class II deferments before we start inducting married men with families. One of the prime targets of the anti-Vietnam civil disobedience campaign is the Selective Service System or the draft. The get-out-of-Vietnam movement from the very beginning has placed strong emphasis on efforts to incite young men to either refuse to serve in the Armed Forces or to evade the draft. I personally think it is time we reconsider the individual merits of the 11/2 million students deferred in order to determine whether or not class II deferments are in fact contributory to the best interests of this country.

I am pleased to call this editorial to the attention of my colleagues:

A LOGICAL QUESTION

Draft deferments in class II are for the purpose of disrupting as little as possible civilian activities which are contributory to the national health, safety, or interest. There are no blanket deferments; each case must be considered on its individual merits.

The question has been raised as to whether the Selective Service System has the right to classify out of class II-S students who interfer with the functioning of the System. The question really should be, can any local board, under the provisions of selective service regulations, keep any registrant in any class II deferment who in any way takes actions which are not in the best interests of the national health, safety, or interest.

The Selective Service System certainly must defer those registrants in industry who are engaged in essential activities and are employed in critical occupations within those industries. It must also defer those who are employed in the production for market of a substantial quantity of those agricultural commodities that are necessary to the national health, safety, or interest. It must also defer students when it is found that their activity in study is necessary to the maintenance of the national health, safety, or interest. Should registrants deferred in industry or agriculture who take action which is detrimental to the interests of the Nation continue to be deferred?

When a registrant within the age group being inducted is deferred some registrant has to take his place in Selective Service System processing toward induction. Now that the System is about to induct married men should not those single men who are deferred in class II have their deferments reviewed to determine whether their current performance within the essential activity justifies a continuation of their-deferment in the national interest? There are over a million and a half students deferred. Are all these deferments in the best interest of the Nation?

# Congressman Horton's Tribute to WBBF's Editorial Position of Concern Over Federal Threats to Steel Industry

EXTENSION OF REMARKS

# HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. HORTON. Mr. Speaker, many of my constituents were the beneficiaries earlier this month of a broadcast commentary on the administration's role in confronting the Nation's steel industry. It is an expression of editorial opinion which very precisely parallels my view of the situation, and does so sharply and succinctly.

So that my colleagues in Congress and the readers of the Congressional Record throughout the country may similarly benefit from this thoughtful analysis, I take pleasure in sharing it herewith:

THE GOVERNMENT AND THE STEEL INDUSTRY

The Government and the steel industry have come to what appears to be an agreement: the steel industry has agreed not to raise its rates as much as individual companies had intended, and the Government has given its nod of approval to the slight price increase on which the industry seems to have settled.

We suppose that many people consider that news worthy of a long sigh of relief: the Government has maintained the price stability it feels it needs in the battle against inflation, and the steel industry has to raise its prices. Everybody should be happy.

Please don't count WBBF among the happy ctators. We confess that we're please the Government has successful spectators. has successfully guarded against an inflationary move, and e're delighted that the steelmen have made at least a token move in the direction of free

But we are deeply troubled by the price we are paying for a stable economy. price is freedom. Clearly, some large industries in our Nation no longer have the freedom to decide what their prices should be. The factors of supply and demand—long considered to be the factors determining prices in a free economy-must now make for an additional element: Government control.

That's why WBBF does not join the cheering for the peace in the steel war. The arm government has reached pretty far alfurther it will reach.

# Editor Seltzer-In Love With Cleveland

EXTENSION OF REMARKS

# HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MINSHALL. Mr. Speaker, the following story from the January 7 issue of the Cleveland Press contains the remarkable story of a remarkable man.

I know my colleagues will enjoy sharing this inspiring article:

EDITOR SELTZER: A MAN IN LOVE WITH HIS HOMETOWN

In 37 exciting and fruitful years as editor of the Press, Louis Benson Seltzer has served the city of Cleveland. His role has been varied: reformer, watchdog, press agent, spark plug of Ohio's largest daily newspaper, friend of all the people.

He has, in his own words, "walked with the people in their hour of problems and their hour of happiness," and perforce has shared their dreams, their frustrations, and their not infrequent disappointments.

In so doing, Seltzer shaped an extraordinary career in the image of a Horatio Alger character and left an imprint on his city per-

haps unmatched by any editor in the land.
"It would be possible," historian Bruce
Catton wrote in 1956, "to argue that he
(Seltzer) is today the best and most effective

editor in America.

However that might be—and there are those who maintain Catton understated his premise-it is true that Seltzer's stature as an editor is such that he repeatedly turned down offers to edit papers in larger cities, including New York and Chicago.

His stature as a citizen is suggested by the

fact he was offered appointment to the U.S. Senate in 1952 to fill out the term of the late Robert A. Taft. He declined that, too. Robert A. Taft.

Seltzer rejected these offers, and many more, because he was in love with Cleveland never considered leaving it. Twenty years ago he wrote:

This is my town. I love it. Some men adopt a place and stay. This is where I was born; this is where I stay. To me, Cleveland is the greatest place on earth. There is no

On another occasion, Seltzer justified his decision to stay in his hometown with the words, "I like people more than I like

The monetary rewards of being editor of the Press were not inconsiderable, of course, but it was the contact with people-people he grew up with and solicitously cultivatedthat kept Seltzer in Cleveland. He could not possibly have established the same tacts anywhere else.

Ninth in the line of Press editors, Seltz harnessed a unique mixture of sentimentality and toughness to the helm of a newspape which long before had built a reputation for crusading in the people's interest.

Seltzer's Alger-esque rise to editor began, really, with his birth in a three-room house on Seymour Avenue at Fulton Road on September 1897.

His childhood was spent in poverty—so ex-treme sometimes that small loans tided the family over while father Charles Alden Seltzer, a carpenter by trade, hunched over a writing table turning out western tales that weren't to sell until much later.

Knowing his family's desperate need, and possessed of uncommon ambition to rise above the neighborhood. Seltzer obtained his father's reluctant permission to quit school at 13 and take an office boy job with the old Cleveland Leader.

One day, on a message pickup, Louis saw something that looked like a news story. wrote it up and it landed on page 1. Seltzer's writing career was launched

He became a reporter at \$15 a week for the Leader at 15, but was soon fired by a city editor who advised him to "get out of the newspaper business; you're not cut out for

Eventually, after service with an ad agency and after a short hitch in the Army, young Seltzer approached the late Victor then editor of The Press, and asked for a job. 'I want more than anything in the world

to be on the Press," he pleaded. Me gave him the job on October 31, 1916. Morgan

Shortly thereafter. Seltzer had his only encounter with the late E. W. Scripps, founder of the Press and the Scripps-Howard newspaper group. Dashing out of the building to cover a story, the young reporter ran into the massive publisher, just coming in for a visit.

"Let me go, sir. Let me go, sir," Seltzer exclaimed "I'm covering a story."

Apparently his eagerness to get at the job impressed Scripps. In any event, when Seltzer was just 19 he was made city editor. Three months later, he startled Editor Morgan by asking to be restored to reporting. 'I need more experience," he said.

Seltzer became a general assignment reporter, city hall reporter and then city editor again. At one stage, during the rise of the Van Sweringen brothers, Seltzer became a vice president in charge of the vans for the Press

In 1924 Seltzer became politics editorone who didn't hesitate to get Gov. Harry Davis, former mayor of Cleveland, out of bed

at 6:30 and give him a rough questioning. Soon Seltzer was chief editorial writer and in line, everyone thought, for the next editor of the Prese

Seltzer's first big disappointment came, in 1926, when Ted O. Thackrey, the paper's boyish managing editor, was named editor. Another newspaper offered Seltzer the job of editor at 50 percent increase in salary but he decided to stick with the Press

The decision was wise, for 2 years later, on July 9, 1928, Seltzer was named editor.

A year later, Editor Seltzer and his chief editorial writer, Carlton Mateon, were charged with contempt of court and fined for a Pres editorial criticizing a judge. Their fines were set aside by a higher court but Seitzer was well on the way to recognition as a con-

went on the way to recognition as a con-troversial public figure.

Under Seltzer's leadership, the Press quickly won an international reputation for courageous crusading and fastless reporting.

It also added a major new dimension—public

Its achievements in that journalistic area were described by Richard L. Williams in a

Life article on Seltzer, entitled "Mr. Cleve-' in 1950. He wrote:

"The Press is the world's most solicitous aper. It registers Clevelanders in a cradle roll at birth, sends their mothers bulletins on their care and feeding, polices their govern-ment for them during their taxpaying years, throws parties for them in their old age and prints a knowledgeable obituary when they

'From there on, it reluctantly leaves them on their own.

As editor, Seltzer was the spark plug behind almost every major step the Press made either to endear itself to its readers or to impress upon them the fact of its indispensability to

Under Seltzer, the Prese has sparked drives that raised many thousands of dollars for worthy causes. In 1956, at the time of the Hungarian revolt, it dispatched a relief plane to the aid of refugees pouring over Austrian border.

Even now, it has underway Hong Kong Reunion, a Press-sponsored and financed visit of three Cleveland families with their servicemen from Vietnam.

These feats, and others, wun many professional honors for the Press over the years.
A little over a year ago it received Time magazine's accolade as 1 of the 10 best newspapers in America.

ver the years, Seltzer has written hundreds of personal editorial page essays signed only "LBS." Mostly these were warm trib-utes to people who otherwise might never be singled out for newspaper mention.

Not all or Seltzer's campaigns have been successful. One of the first pieces he wrote after becoming editor was addressed to city hall and asked:

"How long are we going to continue to weet neck-twisting traffic signals at street

intersections? If so, why?"
Thirty-seven years later, the traffic lights

are still twisting people's necks.
Under Seltzer's editorship, The Press has been primarily a local newspaper featuring local news. He feels strongly about the priority of such news, expressing himself thusly in an article in 1956 in the Saturday

"Local situations are the conversation pieces for nine-tenths of the talk among newspaper readers. Most papers, however, give nine-tenths of page 1 to news from remote and less controversial areas.

"Nobody's going to do the local diggingreporting if the newspapers don't. Some of the good magazines may do the job in naal or international situations probably won't come into the smaller towns for obvious reasons. Nor will radio and TV Their field has settled down to be mostly entertainment."

A dapper man who once possessed 61 suits at one time, each flaunting an overblown silk handkerchief from the breast pocket, Seitzer long ago became a conspicuous figure at ctions where an adroit toastmaster needed.

His participation in community affairs, of course, has gone far beyond that. headed numerous local organisations—the welfare federation, Cleveland Convention and Greater Cleveland Safety Bureau. Council, among others—and, on the national scene he is a member of the Pulitzer Prize Advisory Board and a founder of the Amer-

ican Press Institute.
One of his most prized possessions is the Brotherhood Award given him in 1951 by the National Conference of Christians and Jews in appreciation of his long labor in that vine-

Because of his commitments as editor, involving speeches and personal appearances by the dozens every week, Seitzer's family life has necessarily been of a special sort.

Away from home much of the time at night, he nevertheless tried to have an early

fan

wer (8)

Nu

dinner with Mrs. Seltzer at home before setting out on his evening itinerary. Often Mrs. Seltzer accompanied him—even in the last months of her life—and his solicitude for her was often commented upon by persons in the audience.

Seltzer met his bride-to-be by the simple and direct process of writing her a note while ahe played piano in a movie theater. This began a courtaint that ended in their marriage at 17. Their marriage of almost 51 years—blessed with two children—came to an end a month ago when Mrs. Seltzer died of cancer.

Their two children are Mrs. Shirley (Arthur E.) Cooper of Cleveland and Chester, a newspaperman in Bakersfield, Calif. Seltzer's lone surviving brother, Robert, is a columnist for The Press.

There are also five grandchildren, Chester's two sons in California, and the Coopers' three children, Ted, at Indiana University, Laura at Rocky River High, and Mrs. John (Leigh Cooper) Eastman whose 1-year-old daughter was named Marion Elizabeth Eastman II to honor her grandmother.

### Birthday Salutation to Republic of Chad

EXTENSION OF REMARKS

# HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. O'HARA of Illinois. Mr. Speaker, as chairman of the African Subcommittee of the Committee on Foreign Affairs, I am happy and honored to extend birthday greetings to the Republic of Chad, to Francois Tombalbaye, the able President of the Republic, to Boukar Abdoul, Chad's distinguished and popular Ambassador to the United States, and to all the people of this proud and happy land. Although independence came to Chad on August 11, 1960, it is January 11 that is celebrated as its national holiday.

Chad is the largest country, both in area and population, of former French Equatorial Africa. With an area of over 500,000 square miles, it is more than twice the size of France, or approximately as big as California, Texas, and Oklahoma. Chad is bordered by Libya on the north, Sudan on the east, Central African Republic on the south, and Niger, Nigeria, and Cameroon on the west. The capital, Fort Lamy, is near the Cameroon border just south of Lake Chad.

France organized Chad as a military area on September 5, 1900. In 1910 it became one of the four territories of French Equatorial Africa, which was dissolved in 1959 when Chad, as well as the three others—the Middle Congo, now Republic of the Congo, Ubangui-Shari, now Central African Republic, and Gabon—became fully autonomous members of the French community.

The independence of Chad, as well as that of the other former French territories in West and Equatorial Africa, climaxed a series of measures on the part of France tending toward increased autonomy for its overseas territories. These measures were inaugurated by the French Constitution of 1946 which con-

ferred French citizenship on inhabitants of black African dependencies and other overseas areas, decentralized certain powers, and initiated participation by local advisory assemblies in the political life of the overseas territories.

The enactment of the Overseas Reform Act, known as the Loi Cadre of June 23, 1956, introduced further liberalizing reforms. These forms, in addition to removing remaining voting inequalities, provided for the creation of governmental organs assuring a measure of self-government to individual territories. On August 11, 1960, Chad became an independent nation.

Under its third constitution approved April 14, 1962, the Republic of Chad adopted a presidential type of government. The chief of state has the title of President of the Republic and is also the Chief Executive. The constitution established a unicameral National Assembly with a 5-year term, an Economic and Social Council, and a Supreme Court. Election of Assembly members is by universal adult suffrage.

Chad is self-sufficient in food production, with room for expansion of both yield and acreage, and has extensive fish resources as well as an estimated 4 to 5 million head of cattle. Fish, cattle, meat, and hides constitute the principal potential for increased exports, of which cotton now constitutes 30 percent.

In planning for economic and social development initial emphasis is being given to education and technical training, the establishment of local processing industries, the construction of tourist accommodations and facilities, and improved transport within the country and to the Atlantic ports. The extensive game reserves and relatively pleasant climate during part of the year make the country potentially very attractive to tourists.

Relations between the United States and Chad are friendly. The United States maintains an embassy in Fort Lamy, and the Republic of Chad has an accredited ambassador in Washington.

At present there are no direct U.S. commercial interests in Chad; the Chadian Government hopes to interest an American company in prospecting for oil in the northern desert area. The climate for American investment in such areas as hotel construction and joint ventures in small industries—such as a tannery, a meat-processing plant, or a cottonseed-oil plant—however, is believed to be good.

Recently when I was a delegate to the 20th session of the General Assembly of the United Nations, it was my privilege to become well acquainted with the competent Ambassador from Chad to the United Nations, His Excellency Boukar Abdoul, who is also Ambassador to the United States.

I also had the privilege of hearing the representative of that proud country in the general debate on October 7 emphasize the need for international cooperation and harmonious economic development. It was indeed a great pleasure to me to work with Ambassador Boukar Abdoul and others in the peace-seeking tasks of the United Nations.

Year 1964 Money Income for War Veteran Families and War Veteran Unrelated Individuals

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. TEAGUE of Texas. Mr. Speaker, the Veterans' Administration regularly compiles information on the income of war veterans and their families. The latest information on this subject is dated December 8, 1965, and relates to the calendar year 1964.

Under leave to extend my remarks, I include excerpts from the text of this latest report of the Veterans' Administration:

YEAR 1964 MONEY INCOME FOR WAR VETERAN FAMILIES AND WAR VETERAN UNRELATED IN-DIVIDUALS, DECEMBER 8, 1965

The 1964 median family income for the 18 million was veteran families was \$7,900, up \$500 from the 1963 median, according to a sample survey of the 20.9 million male was veterans in the civilian noninstitutional population of the United States.

Median personal income of the 1.5 million veterans living alone or with a nonrelative (unrelated individuals) was \$4,400—a decrease of \$500 from the 1963 median. A factor in this decrease was the smaller proportion who were under 45 years of age (44 to 42 percent)—the ages with the higher median incomes—and the higher proportion who were 70 years old and older (8 to 13 percent) where low median incomes are prevalent. The 1.4 million veterans living in a relative's household had a median personal income of \$4,400 in 1964—the same as in 1963.

The highest median family income was \$8,600 for the 45- to 54-year-old war veteran families, and the lowest was \$3,300 for families of 75-year-old and older war veterans. Median family income rose steadily, by age, from the \$7,500 received by the younger families to the peak of \$8,600, and then dropped off to \$3,300. Two sharp declines in the medians occurred: one for the 60- to 64-year-old war veteran families—a drop of \$1,500-reflecting the early retirements from the labor force during these years; and the other for the 65- to 69-year-old families—a considerable drop of \$2,500—at the normal time of most retirements from the labor force. Median family income ranged from 53 percent to 42 percent of the median for all families during the retirement years (65 years of age and over).

The 1.4 million war veterans living with a relative's family, and the 1.5 million warveterans living alone or with those unrelated to them (unrelated individuals) had the same median income in 1964—\$4,400. However, in the age groups under 55 years, containing most of these veterans (85 percent of the relatives of the head, and 65 percent of the unrelated individuals), veterans living alone had higher median incomes than those living in a relative's household.

Of all war veteran families, 97 percent or 17.5 million were typical husband and wife families. These families had a median income of \$7.900 in 1964—an increase of \$500 from the 1963 median.

In 4 out of 10 veteran-wife families, the wife contributed to the family income by working during 1904. Altogether there were over 7 million working wives. Nearly half of the wives of veterans 45 to 54 years of age were in the labor force. Even 1 out of 5 wives

3

e g 0 I S

N

p 1 u n e

0 r n

n 8.

d e -

er iof e-it 96 h ar 10 Vnt nt in OF te 00 he by of of older veterans, 70 years of age and over, worked at some time during 1964. The work-ing wives increased the family income by \$1,600 on the average, and provided a median income of \$8,900 in comparison with the \$7,300 median family income where the wife had no earnings. For veterans 70 years and over, the wife's earnings added significantly to the level of living. Median family income amounted to \$6,100 in contrast to \$3,300 for

families where the wife had no earnings.

Although most of the war veteran families were fairly well off, about 1.5 million families (8 percent) had money income under \$3,000, the family income level used to measure the economically deprived. In one-half of the families (750,000), the veteran breadwinner was relatively young, under 55 years of age. In 1 out of 5 of these families (300,000) the wife worked, and still the family income was less than \$3,000. These working-wife families were not the older families, for 7 out of 10 (210,000) of the veterans were under 55 years of age, and over one-half (110,000) were in the age group 35 to 44 years, generally considered the prime earning years.

The poverty income level for unrelated individuals (those living alone or with non-

relatives) is \$1,500 or under. In 1964, about 1 out of 6 (250,000) veteran unrelated individuals had under this amount of income. Over one-half of them (130,000) were under 55 years old, and 1 out of 5 (50,000) were 70 years old and over.

Altogether, about 1 out of 12 war veteran families and unrelated individuals (1.8 million) were among the Nation's poor.

The detailed data presented in the attached tables are from special tabulations of the Census Bureau's current population survey, made under contract for the Veterans' Administration.

TABLE 1 .- Money income in 1964 of male war veteran families in the United States, by age

# Of All Our Statesmen Carlson Ranks First

EXTENSION OF REMARKS

# HON. GARNER E. SHRIVER

OF KAWSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. SHRIVER. Mr. Speaker, a few weeks ago the Honorable Clifford R. Hope, a longtime member of the house and himself a distinguished Kanzan, wrote a weekly newspaper column in which he paid tribute to the Honorable Frank Carlson, our respected senior Senator from Kansas.

It was my privilege to serve in the Kansas House of Representatives during Senator Carlson's tenure as Governor of my State and I have been a Member of the Congress during a part of Senator Carlson's outstanding service to Kansas and the Nation in the other body.

I heartily concur with the thoughts expressed by our former colleague, Mr. Hope, regarding the contributions which Frank Carlson has made to the lives of every Kansan and the high esteem which has earned through more than 30 years of public service.

The following column was published in the Hutchinson News and Salina Journal and I proudly call it to the attention of the Members of the House:

OF ALL OUR STATESMEN CARLSON RANKS FIRST

(By Clifford R. Hope)

During its 105 years as a State, Kansas has sent many men and one woman (Kathryn O'Laughlin) to the U.S. Congress. Some have had distinguished careers. It is doubtful, however, if any of them have had as broad an experience in government or have contributed as much to the State and Nation as Frank Carlson.

Since his election to the House of Representatives in 1934, he has served 12 years in that body and 15 more in the Senate. In between, he sandwiched 4 years as one of our ablest Governors. Prior to his congresional service, he was in the State house of representatives for two terms and chairman of the Republican State Committee for 2

He is the only Kansas Governor who also has been a member of both Houses of Congree. Only three Kansas Senators—Ingalis, CURTES and Capper, have served longer than he. A mere handful of Representatives have had longer service in the House.

When Frank Camson went to Washington this was a Nation of 125 million people. Today it has 194 million. Its domestic and world problems have multiplied many times. The duties and responsibilities of members of Congress have increased proportionately. Frank Camson has grown with the job.

Today he holds high rank on the two most important committees of the Senate, Finance and Foreign Relations. One deals with taxes, tariffs and trade. The other with the delicate problem of our relations with other nations in these disturbing times. He is also a member of the Committee on Post Offices and Post Roads and of the prestigious Joint House and Senate Committee on Internal Revenue Texation.

FRANK CARLSON is also one on the agricultural leaders of the Senate, particularly in the fields in which this and surrounding States are interested. His membership on the Committee on Finance and Foreign Relations puts him in a position to deal with our

interests as far as agricultural exports and imports are concerned. The wheat provisions of the farm bill passed this year are almost identical with bills introduced by Senator Carlson and Senator Young of North Dakots in previous years and earlier this year.

During most of Frank Carlson's congressional service, he has been in the minority. In fact, during his 27 years' in the House and Senate, the Republicans have controlled Congress in 1653 and 1654 when he was just beginning to acquire seniority in the Senate. Thus Senator Carlson has never been chairman of a committee. There haven't been any important bills passed bearing his name because these honors are always given to members of the majority party. But his minority position does not diminish Senator Carlson's standing and induence. He is respected by both Republicans and Democrats and recognized by both as being a competent, experienced and dependable legislator.

Finally, and above all, Frank Carlson understands our problems here in Kansas. While keeping in mind the interests of the Nation as a whole, he never forgets that if Kansas Senators and Representatives fail to look after our interests, they won't be looked after. With him, our problems come first.

I don't usually approve attaching labels to public men. But of Frank Carlson I think it can fairly be said—that while usually a conservative, he is never a reactionary; while a belt rer in the two-party system, he is not a hid-bound partisan; and while he has a head and uses it, he has a heart also.

# Doesn't Mean Anarchy

EXTENSION OF REMARKS

### HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. SKUBITZ. Mr. Speaker, I recommend to the attention of my colleagues an editorial which recently appeared in the Winfield, Kans., Daily Courier. I believe this article makes a very important point relative to campus protest movements when it states, "Where does freedom end and anarchy begin?" We should all weigh this question in our own minds in assessing the recent revolts that have sprung up upon so many of our college campuses.

The article follows:

[From the Winfield (Kans.) Daily Courier, Jan. 4, 1966]

DOESN'T MEAN ANARCHY

"Academic freedom" is the rallying cry on

the campus today.

The phrase is somewhat of a misnomer, for it does not have to do so much with the right of teachers to pursue intellectual truth as they see it as it does with the right of students to promote a particular political or social idea, to proaelyte, to demonstrate and—

most revolutionary of all—to have a strong voice in university policies and administration.

Initially, the campus revolt may have sprung from real grievances and have been a logical consequence of the "academic explosion"—the doubling and redoubling of enrollments, increasing competition and costs and the appearance of the "multiversity" in which some students felt they were being reduced to faceless IBM cards.

As such it was a needed and healthy breath of air amid the cloistered halls of vy. But there is danger that the breze is changing into a smog that threatens, at least on some campuses, to blight more than it revitalizes.

Indeed, charges one political scientist, American colleges stand in peril of being converted from academic institutions, where knowledge is transmitted and enlarged, into political institutions, where the prevailing doctrines of the day are enshrined and promulgated.

Dr. Albert Lepawaky of the University of California, on whose main campus at Berkeley the students' protest movement really got started, attacks the pressure tactics being employed by many students and not a few professors and their increasing use of the university "as a sanctuary from which to project upon society their own political preferences" under the guise of academic freedom.

Academic freedom, says Lepawsky, means more than the guarantee of intellectual integrity or political liberty.

It also includes "the freedom of members

It also includes "the freedom of members of the academic community to carry on their work unhampered by colleagues and students who engage in political activity and exert pressures to the point of disturbing the teaching, research, and other relevant functions of the university."

Unless colleges have the power to discipline themselves, he warns, to fire teachers and expel students who show by their intolerant behavior that they lack the qualities required for membership in the academic community, the result will be to "downgrade academic standards to the lowest common denominator of political conduct in our society."

Where does freedom end and anarchy begin? This is a question apparently facing not only the emerging nations of the world but the emerging university in America as wall

### National Fury Might Right Some Wrongs

EXTENSION OF REMARKS

# HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. HALL. Mr. Speaker, a few days ago, the Washington Evening Star carried an outstanding column by Mr. James J. Kilpatrick, entitled, "National Fury Might Right Some Wrongs."

This column describes in precise terms some of the dilemnas that face our Nation. It also reflects a significant national apathy which exists in our society today. In fact, history may well record this era, not as the Great Society, but the Apathetic Society.

I commend the column to the attention of my colleagues:

NATIONAL FURY MIGHT RIGHT SOME WRONGS (James J. Kilpatrick)

By the time this appears, the great transit strike of 1966 might be over; the city of New York will have made some further surrender to the Transport Workers Union; and an outraged city will have gone back to work.

The question arises: Will anything be done to prevent a recurrence of the outrage? And the answer comes drearily floating back: No not really. Will the Congress now be goaded to enact laws to curb the excesses of labor unions? The answer is, no, probably not.

We have lost our capacity for outrage in this country. We have become so anesthe-tized with the gassy drugs of moderation and tolerance and take it easy that nothing of honest wrath remains. The strong, compul-sive emotions seep away: Patriotism, religious faith, pride in the achievements of honest toil. Our houses of worship are packaged with people who go to church but miss the meaning of religion. On holidays, who dies his country's flag? We can manifest irritation, or vexation, or a fretful sense of annoyance. But sustained anger? The anger that moves and transforms? It has vanished. New Yorkers are not essentially different from other men: Most of the country would rather switch than fight.

At its peak, the transit strike was costing this great city an estimated \$100 million a day. Theaters were closed. Retail sales were off. The movement of vital supplies was disrupted. Thousands of innocent and unoffending citizens were grossly inconveni-enced. In the afternoons, 33d Street was jammed with strike victims, waiting to push into Pennsylvania Station. Within New York, nothing moved by public transit. An essential public service has collapsed, ren-dered impotent by the uncheckable arrog-ance of a few willful men.

If the transit workers had been genuinely oppressed, or underpaid, or overworked, it might have been a different story. If their demands had been reasonable, public opinion might have taken the workers' side. here was a union with demands for a \$680 million package over a 2-year period, a 4-day, 32-hour workweek, a 30-percent hourly pay increase, a 5 weeks' vacation after 1 year's employment, retirement at half pay after 25 years regardless of age. Mike Quill never began to negotiate seriously. Contemptuous of law, contemptuous of the public welfare, contemptuous of the rights of other men, he sought to whip the city to its knees and make John Lindsay crawl.

But who will remember all this a month from now? New York newspapers would not stand up to Bertis Powers; he whipped them singly and in combination. For the past-5 years, the country has been fed on a diet of Jimmy Hoffa. Has the Congress been moved to action? We suffer from a paralysis of the will, a fiabliness in the national guts, and we spin in rudderless circles eternally ecting all sides of a question.

It is not a matter of organized labor alone While the transit strike was on, the steel producers undertook to raise some of their prices, and the President responded, in effect, by using the massive powers of his office to fix a price on steel. He would agree to an increase of \$2.75 s ton, but not \$2.80, or \$3, or \$5. His will was to be substituted for the actions of the marketplace. Yet the whole incident provoked no spirited public response—not against the steel producers, as a bunch of profiteers; and not against the President, as an economic czar. The national ambivaience found something to be said on both sides, and meanwhile, the Packers and the Browns were in the third quarter, and how about another can of beer?

The Supreme Court of the United States hands down a series of opinions that deny even the most voluntary exercise of religion in the schools. The first opinion produces a wave of resentment; the second produces a smaller wave; the subsequent decrees provoke no ripple of dissent.

The High Court tusses aside a century of restraint, and undertakes to impose its novel construction of the 14th amendment upon the composition of State legislatures. Frank-furter protests. Harian cries out in alarm. Senator Dirksen waves his arms. But now half the States have docilely abandoned old systems of check and balance, and no more is heard of the States' right to be masters of their own assemblies.

In almost every major city in the Nation, crime rates have climbed out of sight. No-where has public resentment been manifested in genuine anger or in an overwhelming demand that the public safety be restored. Traffic clogs our streets and destroys our central cities: Who is sufficiently wrought up to compel reforms? Every day brings some new account of the waste of public funds, in foreign aid, in the Job Corps, in the pov-erty program; and we yawn. The United erty program; and we yawn. The United States willingly supports Great Britain in imposing sanctions on Rhodesia, but last month the British increased the number of United Kingdom vessels in active trade with Who cares?

No one denies that ours is a great and pow-erful country, capable of sudden generosity, of occasional sentimentality, of spontaneous sympathy or affection. But ours would be a still greater country if now and then we lost our national good humor, got fed to the teeth, and acted out of national fury to right some national wrongs.

#### Marines' War in Vietnam

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, on Sunday, December 26, Mr. Richard Critchfield wrote an article on the civic action programs being carried on by the Marines in Vietnam. During the con-

gressional adjournment, I visited in Vietnam and had the opportunity of visiting with most of our combat units in that part of the world. The work all of our people are doing in Vietnam, Laos, and Cambodia is short of miraculous. I believe the following article is a trib-

ute to these men and the work they are doing and I commend its reading to all in this body:

THE MARINES' WAR IN VIETNAM: A MICROCOSM

#### (By Richard Critchfield)

Da Nang.-To most young American soldiers in Vietnam, this country is a nightmare of mountains, marsh, and hostile villages. There are paddies and jungles where they can wade knee deep for days through searing sun or lashing rains and be shot or blown to bits at any moment without even seeing the invisible enemy.

Many GI's naturally come to feel it is a war where the frontlines are everywhere and no man with slanted eyes and a yellow skin can be trusted.

And yet as the marines here have learned from hard-won experience, it is precisely on building mutual trust with the local Vieton building mutual trust with the local Viet-namess peasantry that defeating the Vietcong depends.

Now nearly 8 months after they landed in Da Nang as the first U.S. combat troops in Vietnam, the mission of the 37,000 marines is still to defend the three big airbases at Phu Bai, Da Nang, and Chu Lai. The old aim was to gradually push out their perime-ters and link up all three bases in a coastal pacified zone

#### VIETCONG TERROR

But today many senior Marine officers maintain that such talk of winning terrain is meaningless until someone comes up with a better formula, more money, and a lot more manpower to win over the loyalties of the

Vietnamese peasants behind their lines. The marines have now pushed about 12 miles north, south, and west of Da Nang airbase; but sizable numbers of Vietcong have begun infiltrating back behind them. By kidnaping and ass assinating those who speak out for the Saigon Government, the Vietcong are trying to regain the villagers' support through terror. In this manner, they get information on Marine movements and some

information on Marine movements and some of their intentions ms well. On October 28, Vietcong infiltrators at-tacked Da Nang East airstrip and destroyed and damaged 47 helicopters, mined 2 jeeps, dynamited 7 buildings of the new, partly constructed naval hospital, and barraged a battalion of Seabees with fifty 60-mm. mortars. It seems no accident that the local village chief disappeared a few days before and that 3 weeks earlier the nearest hamlet chief was found mutilated and stabbed to death.

Such incidents have brought the Marines to the hard conclusion that as much as three-fourths of their battle ahead lies in civic action, that is, building the confidence and respect of the villagers with the aim of winning support for the government and gaining military intelligence for themselves. An imaginative civic action effort by the 1d Battalion, 3d Marine Regiment, at Le My, north of Da Nang, has been so successful the Vietcong can no longer plant even a road mine without the Vietnamese villagers reporting it to the Marines.

Elsewhere around Da Nang, the going has been tougher. How tough was brought home to this reporter this week in a visit to the little hamlet of Nui Kim Son, which lies at the foot of Marble Mountain, just south of the Vietcong's October attack.

As we drove out of the headquarters of the 9th Battalion, 1st Marine Regiment, and headed for the sand dunes toward Marble Mountain, I asked Lt. Mike Cox, the 24-year-old battalion civic action officer, how he thought the Vietnamese peasantry could be won over to the Government's side.

Mike, a redhaired Irishman from Mike, a redunited trishman from the Bronx, said, "My personal opinion? Well, it's strange, almost anything pleases these people. Seems to me whoever gives them the most will win. These people are awful ignorant but you can't judge them by our candada."

Along the rutted road we passed a series of familiar looking red and white signs:

"Don't bunch up
As you patrol about
Or you'll be picking The fragments out. Burma Shave.

I asked Mike what he wrote his parents about Vietnam.

#### WRITE VERY LITTLE

'My mother is a little old gray-haired lady and I don't want to make it any grayer. I don't write much. Dad's an old Irishman; he thinks it's all a big mess. Blames it on the French for failing to leave a government

Lance Corp. Roger Michalk, 22, of Boise, Idaho, who rode along with a rifle just in case, said he wrote home as little as possible. "Just enough to keep 'em from writing the commanding officer to find out whether I'm dead or alive.

The biggest concern the marines had, said Mike, were the university student demonstra-tions back home in the states. "I dislike the group that does it." he said. "They're looking for some kind of moral absolution, to wash their hands of these people's troubles. They're trying to go back to the Middle Ages, turn the university into a sanctuary and shut out the world. That's no good." Mike said he graduated in philosophy from a small college in New Jersey.

Marble Mountain, a jagged out-cropping of white rock rising about 1,000 feet out of the sandy coast and covered with lush green vegetation, loomed just ahead of us. An immense staircuse of discolored white marble curved up the mountainside through dense foliage with strange crimson and yellow blossoms and huge waren leaves.

#### MONKS TEND SHEINES

After a strenuous climb, we reached a Buddhist monastery where several monks were pruning rose lushes in a walled garden. All but one had pallid, ivory complexions; the marines said the monks epent most of their time tending religious shrines in the underground network of caves and grottos that led deep into the mountain. The single exception was a tall, ruddy and vigorous-looking Vietnamese in a maroon monk's robe looking Vietnamese in a marcon monk's robe who was amoking a cigarette. He said he was a disciple of Thich Tri Quang, the Buddhist leader of Hue. He motioned for us to follow him down a forested trail which led up to the mouth of a giant cave. Outside was a huge statue of Buddha's mother, gray and eroded with weather and green with moss. A group of six Vietnamese men came out of the cave and passed by; they were unsmiling and looked steely eyed. "Vietcong?" "Probably just tourists," said Mike. We followed the monk into the cave and after a short walk forward through the damp

after a short walk forward through the damp darkness stepped down into a huge cavern. "It's beautiful," Corporal Michaik exclaimed. The cavern was immense, perhaps 60 feet high; shafts of sunlight fell from cracks in

the marble ceiling above; the marble floor giltered like water. Dragons with lionlike heads and huge bearded stone warriors with scimitars guarded the entrance. Across the gloomy shadows and the haze of incense as giant Buddha sat, green and silver as the cavern walls, grinning and empty handed, like all Buddhas. Water dripped from above and was echoed from falling water deep within the series of black caves that led off the central chamber.

central chamber.

Mike whistled. "Shangri-la. Ronald Colman will come out-any minute." The drip,
drip, of the water, the cloying odor of incense and the silence of the tall monk werunsettling. "We'd better give the old padre
a couple of plastres and go," Mike said.

#### FEARED AMBUSH

We hurried down the mountainside fairly rapidly since the lush foliage along the winding statresse provided perfect cover for an ambush. The corporal said that in the evenings back at battalion headquarters you could hear the monks beating a big gong from somewhere inside the mountain. "It's an eerie sound and in an irregular pattern. I bet it's some kind of signal."

Two little boys, stonecutters who made their living carving pilgrims' initials into the marble steps, talked the corporal into having his name immortalized on the mountain. As we paused Mike said: "These kids are fabulous. The VC came into Nui Kim Son one night and wanted to know how many marines were up at the outpost on the mountain's peak. The kids said more than 100, too many for the VC to handle. When the VC found out they had lied, they came back and beat the hids until their legs were black and blue; they could hardly walk afterward."

As we walked down into Nul Kim Son, Mike explained that almost all of its people mixe explained that almost all of its people made their living sculpting little figurines out of marble from the mountain. Even though it was Sunday, groups of men and women squatted on the dirt floors of their huts, chipping away. Their wares were ar-ranged on shelves in front of each hut-lunging tigers, reproductions of the Virgin Mary, and grinning little white marble Sud-dhas.

Mike said the people of Nui Kim Son sold the figures in Da Nang for cash and then bought their food from the farmers to the

A Vietcong battalion had been garrisoned just south of Marble Mountain until the Ma-rines reached there in August, and the 7th Vietcong Regiment just 3 miles to the south. Now several Marine companies had routed the Vietcong but these still had to be resupplied by helicopter or with an armored convoy of tanks; the roads in between were mined and everything south of a bridge just below Nui Kim Son was still pretty much Vietcong country.

"Nui Kim Son just got caught between the VC and the government and couldn't move. The VC told the villagers south of here not to come in and trade and to keep away from the Marines. They'd like to choke off the people from us so we won't get intelli-gence. But the people come into the mar-ket from VC territory anyway. We spray the market with DDT and keep the files away and they like that. It seems to me if you can open an economy in a place the people will respond to it, no matter what the VC SAV.

I suggested we stop for a coke at one of he village teahouses but Mike said, "We can't trust them. One minute they're smil-ing from ear to ear and the next selling pop with acid or ice cubes with glass slivers. One guy's still in the hospital."

One shack had a life-sized cardboard figure of a buxom girl draped against a harp propped up outside as advertising. Someone had torn the nose off. Inside two pretty Vietnamese girls in slacks were waiting for customers. The single room was sparsely furnished with cheap lawn chairs, a table and wash bucket and some cases of beer; a red curtain hung across an alcove. When I asked what was behind it, Mike said "probably a bed" and the girls giggled something about "Mama san."

#### CHANGE ARMY OUTFITS

We lifted the curtain aside; it concealed Buddhist memorial shrine to the dead. The faded protograph of a thin little Vietnamese boy in spectacles was set above the altar. The girls volunteered, "Boom, boom, Pull back almost any curtain in Vietnam and you'll find human suffering

"All these girls pay VC taxes," Mike said as we walked down the street again. It's hard to tell people back home what the war in our area is really like, Pan Am stops in Saigon not Nui Kim Son. The national government to these people is nothing; they've never heard of Saigon. We want the Vietnamese to come in here. Get the government to come back with nurses and civil affairs people.

"ID eards don't mean a damn thing out here. Many people carry both VC and government identification. Then a lot of the government's NCO's get their training and go off and join the VC. And some of the VC join the government army. These guys change outfits like a suit of clothes.

"Another problem you've got to overcome is being a white man. These people were all Viet Minh, many of these men knocked off French soldiers. They didn't like the French. One old man told me, You're better than the French, you treat us better. But I don't like you Americans. You have too much money, you're rich, you think we are stupid and undeveloped. But its some-thing when they start telling you stuff like that. It means they have the freedom to criticize and they know it."

#### NEED MEDICAL AID

Mike said three of the village chiefs from the area to the south lived in Nui Kim Son.

"Actually the chief of this village was captured 2 weeks ago. He went south of the bridge and didn't tell anyone. His uncle bridge and didn't tell anyone. His uncle was supposed to be a big VC. Trinh, the chief of Hoa Hai village, lives within our battalion's perimeter now. About a month ago two VC came in and threw a bomb in his house. Trinh saw him and shot at him. He's got more guts than Superman. He says the VC was a hardcore terrorist who chopped off the right hand of a number of children from pro-government families in the neigh-borhood."

Mike said one big need, he felt, was medical aid; a good program might be to take thousands of Vietnamese back to the States or to secure areas and give them crash courses in basic medicine.

These people need so much. We got books from the Embassy and I wrote home for some maps, you have to scrounge around.
These kids here had never seen a geographical outline of their own country. But each cal outline of their own country. But each area is different. You just can't have a for-mula for everywhere. For instance, these people south of the bridge sometimes use North Vietnamese money with Ho Chi Minh's picture on it."

We had reached the end of the hamlet and crossed the road into an old long-aban-doned Prench fort the Marines were using as a supply dump. If the grotto on Marble Mountain had been Shangri-la, this was Beau Geste. Carved on the weather eroded stone walls were ghostly messages from its successive occupants. "March Forward. successive occupants, "March Forward, Comrades" and "Brave Men Died Here" in Vietnamese; the single word, "fear," scribbled in French by some forgotten Legionnaire and "San Antonio, Tex.," the latest addi-

#### PLAYS CLASSICAL RECORD

"Good living," said Mike, "but nothing like the Air Force up on Monkey Mountain; they've got flush toilets and movies."

The present commander of the fort, Marine Lt. John N. Rogers of Washington Grove, Md., a graduate of George Washington University, told Mike he had a new Antonio Vivaldi record and invited us up to one of the ruined towers to hear it. One of the radio men was shipping a new stereo home from the Da Nang PX and we could play it on The lieutenant put on Vivaldi's Concerto in C Minor for Flute."

As the sound of mandolins, flutes, violins and a harpsichord burst into the tower, Lieutenant Rogers grinned, "This movement sets the mood for the third; it comes out with all its joy."

Mike sank into reverie. "It's almost a year since I heard music like that. It takes you back to listening midway through the book "It's almost a year review section on a Sunday afternoon with a cup of fresh coffee, lighting up a good cigarette."

For a moment the music seemed to wash away the constant tension and the treacherous world of enigmatic monks, soda pop that could mean painful injury, and terrorists who mutilated little children.

The slit in the stone wall was like a post-The slit in the stone wall was like a post-card in an 18th century Venetian landscape: great towering cumulus clouds, cobait blue sky, pine trees, white sands, glittering mar-ble cliffs, a golden little Buddhist temple with pink arched roofs, children bathing in a green pond, the wind rippling the water's surface, transparent dragoniles against the dim blue outline of the Annamite Cordillera's lumpy peaks. Then two whirring helicopters, like monsters out of science fiction, flew into the postcard and the present came rushing back.

"Don't stick your head up too much near that slit." Mike said. "There's VC anipers out there."

# Hawaii Businessman Combines Idealism With Business Acumen

EXTENSION OF REMARKS

# HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MATSUNAGA. Mr. Speaker, I am sure my esteemed colleagues will agree that in our modern industrial world. man's efforts to give form and substance to his ideals is a seemingly impossible task. We therefore admire any man who is able to bring together his idealism and his practical business acumen. And we are further impressed when this fusion is made in a project which would contribute culturally to our American way

I am proud to call attention to one of Hawaii's foremost businessmen, who has undertaken this difficult task and has already attained a great measure of suc-He is Mr. Masayuki Tokioka, president of National-Braemar, Inc., which was formed to spearhead the ambitious business and cultural center in San Francisco's Japanese-American community. National-Braemar combines Honolulu's National Securities and Investment Co. with Braemar Associates, a Los Angeles development concern.

Mr. Tokioka, a 1927 graduate of the Harvard School of Business Administration, in an interview with Mr. Charles A. Ware, assistant managing editor of the Honolulu Advertiser, said that his decision to undertake the huge project involved idealism as well as business considerations. Born of alien Japanese parents who came to Hawaii in 1898, Mr. Tokioka explains his views thus:

Japanese Americans have gained much from the United States. Now we can do something for America. If we don't contribute in this way, we are not doing our

A manifestation of this idealism is a concrete Peace Pagoda which will be erected on the 1.5 acre shopping center.

h

8

I submit for inclusion in the Congressional Record Mr. Ware's article on the phenomenal success story of Mr. Masayuki Tokioka, which appeared in the Sunday Star-Bulletin-Advertiser of November 14, 1965:

#### HE GREW WITH THE COMMUNITY (By Charles A. Ware)

Masayuki Tokioka, operating head of a group of six local investment and insurance whose combined assets now approach \$40 million, is a quiet-spoken, slightly built man who is given to conservative dress and to very unconservative dreams

The important thing is that his dreams have a way of coming true, no matter what the obstacles and delays.

The latest is a \$15 million Japanese Com-mercial and Cultural Center in the heart of San Francisco—a project that now is under construction after nearly 5 years of planning and negotiations.

Its central feature is to be a 100-foot Peace Pagoda, a gift of the Japanese people, which is Masayuki Tokioka's special dream.

#### WORKED HIS WAY UP

All of this seems an astonishing achieve-ment for an immigrant boy from Japan who

once trimmed lawns in Honolulu and helped his father deliver plants by horse and wagon from a little family-operated nursery in Waikiki.

Yet Tokioka remains modest

Yet Tokioka remains modest

dent—about his rise in Honolulu's business
world. "It's not because of any special
world. "Just my that our companies have grown with the community. That's what our story has

Tokioka was born May 22, 1898, in a farming area of Okayama Prefecture, in southern Honshu

Just about that time, his father came to Hawaii for what was intended as a fairly brief visit to study sugarcane culture here. (A small quantity of cane was being grown on a family farm in Japan, and the father, Tozo Tokioka, hoped to learn how to make it a more successful venture.)

But my father fell in love with Hawaii,"

Tokioka said. "He never went back."

Tokioka's mother and an older brother, Bunji, joined the father here at the turn of the century, but Masayuki remained with relatives in Japan until 1909. Then he, too, was brought to the islands, completing the family reunion.

#### CONTEMPORARY QUARTERS

As he recalled his boyhood in Waikiki, Tokioka leaned back in his chair at the modern headquaters of International Savings and Loan Association.

His modest office, only steps from the Savings and Loan public area, is furnished in contemporary style.

His own desk, likely to be piled high with current operating reports of the companies he heads, dominates the room. Behind is a long countertop cabinet with a special rece for rolls of blueprints and architectural drawings. Within an arm's reach are file drawers filled with detailed statistical and financial

Five of the six companies that Tokioka heads are housed in the International Savings and Loan Building at King and Bethel Streets. The other is next door

The arrangement, he says, "makes possible some operating economies we wouldn't have otherwise.

Father Tozo Tokioka probably wouldn't have spoken in those terms when he came to Hawaii, but he obviously did have a strong business sense and a sound feeling for efficiency.

When he decided to remain in the islands, Tokioka said, "My father didn't have much capital.

"He knew that one big problem in any kind of merchandising was excess stock. That's why a merchant has to have an annual sale, to reduce his investment in items that don't sell," Tokioka said. "Nowadays, the annual clearance seems to come every months, or even every 3 months," he added with the trace of a grin.

"Well, my father looked around, and de cided that in a nursery you would get around this, because the unsold stock would continue to increase in value instead of depreciating.

"Then, too, he came from a farming district, where the soil was the thing—the earth and the sky, and growing things bringing them together."

The nursery was well established, located on land that now is part of the Hilton Ha-waiian Village site, when young Masayuki arrived in Honolulu.

#### RAPID ADJUSTMENT

He slipped quickly into the life of his contemporaries, attending school, helping with the family enterprise, and finding tim outdoor fun as well. And presently he was at McKinley High School, where he "made the team" in football, playing fullback, and achieved a scholastic record that allowed him to enter the University of Hawaii.

It was at the university that he made two important decisions. One was that he would er business, and the other that he would peare himself with the best education in the field that he could obtain.
"At that time." Tokioka recalled. "many

young men of Japanese origin were seeking to better themselves by entering the professions, becoming doctors or lawyers.

"I fust did not want to be a doctor: I I wasn't suited for it by temperament. And because I could not then become an American citizen, I knew I would be greatly restricted as a lawyer. So I decided upon a business career instead."

At the start of Tokloka's junior year, a young instructor named Gerald R. Kinnear joined the faculty of the university's com-merce department, fresh from winning his master's degree at the Harvard School of Business Administration.

Kinnear, later to become treasurer of the University of Hawaii, was highly articulate and persuasive.

He impressed local audiences with a series of public talks on business subjects, including one on benefits that might result from establishment of a "free port"—comparable to the foreign trade zone that today is about to begin operations.

And he impressed his students with the excellence of the Harvard business school.

#### THE VERY BEST

"I felt that if I were going to invest money and my time in graduate study, I ought to try for the very best," Tokioka said.
"Kinnear had told us we would find it

difficult to get in and even more difficult to get out—to graduate. That made it seem a challenge, and I was determined to go if possibly could," Tokioka said. He did "get in," and when he "got out" in

1927, he was one of the first if not actually the first student of Japanese ancestry to be awarded the master of business administration degree at Harvard.

In an aside, Tokioka recalled that "when I left the University of Hawaii, I was greatly interested in international trade and com-The thing in which I was least interested was insurance and finance." spread his hands. "So here I am \* \* \*

"Back on the east coast in those days, they hardly knew where Hawaii was: So I was something special, coming from such a far-off place, and I'm pretty sure I got some special breaks because of that," Tokioka said.

"Special breaks" or no, his scholastic record was good, and as graduation neared he and his classmates were interviewed by representatives of major corporations seeking junior executive talent.

#### IMPORTANT ADVICE

"The dean of students made a talk to the class then, and he gave us some advice that I've never forgotten." Tokioka said. "I have passed it on to young men many times since.

"He told us that it is fine to look to a big company for success and advancement. he said not to forget that you can find success in a small company, also,

"In a big organisation, you're apt to be stuck in a corner at first, and you have to face strong competition for any advancement, while in a small company you are likely to have more responsibility from the start, and if you really are something you have a chance to show it.

That turned out to be the course that Tokioka followed.

"When I came back to Hawaii I didn't have any preconceived ideas about where I wanted to work or where I would apply," he said. "Then, one day, a friend said International Trust Co. was looking for a young trained person. So I applied, and that's how I came to start there." to start there."

Both International Trust and Interna-tional Savings & Loan were young com-panies, both founded by the same group,

who as individuals were affiliated with isad-ing firms in the Caucasian and Japanese business communities of the time. The founders hoped to achieve two goals: To retain in Hawaii a larger share of the

savings of Japanese immigrants, who tra-ditionally transmitted their funds back to their hos neland, and to make available a new source of longer term loan funds, particu-larly for Japanese businessmen. Pirst president of both firms was Wade

First president of both firms was Wade Warren Thayer, attorney-businessman, a onetime newspaperman, and former terri-torial attorney general and secretary of Hawaii

Tokioka's first years with the trust company were active

#### VARIETY OF ENDEAVORS

Soon after he began work there, he and two young associates bought the Newfair Dairy, then located on Kapahulu Avenue. Their downpayment, he recalls, was borrowed from his elder brother, who by then was a doctor here. Tokioka retained a prinwas a doctor here. Tokioka retained a principal interest in the dairy and an active role in its management until 1946, when it was sold to Dairymen's Association.

Meanwhile, in 1928, the trust company sent him to the big island for a year as manager of a Hamakua coffee plantation.

By 1930, he was cashier and chief account-ant for International Trust. And in that year, on August 2, he married Miss Harus Pujiyoshi of Maui, a senior at the University of Hawaii.

A new company in the growing family of related firms, National Mortgage & Finance Co., Ltd., had been organized in 1929 to deal in personal loans, real estate mortgages, trade

in personal toans, real scatter morrages, trades acceptances, and general financing. Tokioka was one of its vice presidents.

National Mortgage in 1930 named International Trust Co. as its fiscal agent, and the arrangement continued for nearly 5 years. But then their positions were dramatically revised.

International Trust, which had weathered the depression years successfully, in 1935 became the victim of conflict between the foreign policies of the United States and

This was the era of "the Manchurian incident" and establishment, under Japanese sponsorship, of the State of Manchukuo. The United States opposed the entire expansionist movement, and did not recognize the new Government.

In Honolulu, the directors of International Trust, including citizens of both countries, found they could not resolve questions of company policy without coming into conflict with the official position of one nation or the other.

"Hather than let bitterness develop over this conflict, the directors, decided to dis solve the company and part as friends," Tokioka said.

National Mortgage & Finance took over a number of the functions of the trust coma number of the functions of the trust com-pany, including some of its insurance agen-cies and its role as fiscal agent. It now oper-ates in many respects as the overall manage-ment and service organizations for the en-tire group of related firms.

#### EXPANSION

The list of these companies grew with the incorporation of Island Insurance Co., Ltd., late in 1939, which now writes all lines of general casualty and fire insurance. Its sub-sidiary, Tradewind Insurance Co., Ltd., was

formed in 1955.

National Securities and Investment, Inc., was chartered in 1958, and the following year joined with Daiwa Securities Co., of Japan in establishing Daiwa Securities of Hawaii, Inc. The new firm is one of two major brokerage houses in the islands specialising in the securities of Japanese businesses.

Through these years, Tokioka continued to advance in the various companies. He had

become acting manager and secretary of Na-tional Mortgage and Finance in 1982, later to be named executive vice president and then president.

He was elected president of Island Insur-ance in 1957, and in 1959, after the death of Thayer, president of International Savings and Loan Association.

#### QUITE A BUSTORY

The three-story concrete International Savings and Loan Building was built in 1940 by International Enterprises for the House of Mitsukoshi, a major Japanese department store chain.

When it opened in the fall of that year, one of its greatest attractions was its escalatorthe first in the territory. This was a oneway installation, traveling up only, from the first floor to the mezzanine, but every youngster in town sought to ride it in the

months it was in operation.

In World War II, the building became a major USO center, and soon after the war the regional office of the Veterans' Administration was established there. The VA remained in that location until 1959.

International Enterprises merged with National Mortgage and Finance Co. in 1958, and soon afterward an extensive remodeling and renovation program was undertaken to con-vert the old House of Mitsukoshi to the modern International Savings Building. It was completed in 1960.

It was in that same period, too, that the huge San Francisco project was conceived.

#### DREAM COMES TRUE

Tokioka recalls that three Japanese ican businessmen called on him "out of the blue" to ask assistance. An urban redevelopment project was proposed, they, including what had been the Japanese business center of the city.

The idea of establishing the new business and cultural center there had wide accept-ance in San Francisco's Japanese-American community, they reported, but no one had

been able to get the project under way.

After studying the plan, Tokioka agreed to
join in backing the center, through National
Securities and Investment Co. That firm,
with Braemar Associates, a Loe Angeles development concern, formed National-Braemar, Inc., with Tokioka as president, to undertake the project.

There were many delays, including one caused by debate over design of the Peace Pagoda. (It finally was agreed that it will be a contemporary concrete structure, des-igned by Prof. Yoshiro Taniguchi of the Uni-versity of Tokyo, architect for the palace of the Crown Prince.)

Finally, however, ground-breaking cere-monies were held last March 18, and the firm of Haas & Haynie, the general contractor, estimated completion in 18 months.

The center's facilities are to include a 13-The center's ractifies are to include a state story hotel, a 1-story building for local businesses, a 1.5-acre shopping center, a 2-story trade center building, a theater-restaurant, and underground parking facilities for 800

#### CULTURAL CONTRIBUTION

The decision to enter the huge project, Tokioka admits, involved idealism as we'll as business considerations.

"The American culture comes from many sources, and this is its strength, this combination of the best from many different

tions and many different cultures," he said. "Now, Japan can contribute to America and its culture, and enrich it further."

He thinks that the process already is un-der way, given its greatest impetus by the postwar occupation of Japan. "Many, many postwar occupation of Japan. "Many, many Americans then were brought into close con-tact with the Japanese culture for a time, and now the results can be seen all across the country, especially in architectural in-fluences," he said.

Tokioka wants to see the trend continued and strengthened.

"Japanese Americans have gained much from the United States. Now we can do something for America. If we don't con-tribute in this way, we are not doing our duty," he said simply.

# Informational Picketing of Nonunion Restaurants

EXTENSION OF REMARKS

#### HON. JOEL T. BROYHILL OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. BROYHILL of Virginia. Mr. Speaker, I would like to call to the attention of my colleagues a speech given by the owner of a nonunion restaurant in which he explains a problem experienced as a result of informational picketing by some of the union representatives trying to enforce the restaurant employer to become unionized. The speech is selfexplanatory and may be helpful to some of my colleagues who are interested in legislation to correct such unfair and improper practices.

The speech follows:

The purpose of this meeting is to discuss for those who are already familiar with in-formational picketing, and to enlighten others who are not. Also, we shall discuss and explore the alternatives that we have, as businessmen, in the restaurant industry, in fighting this so-called informational picketing which is nothing short of legalized blackmail, supported by existing laws. At the moment, and since November 4, 1965, continually, from 7 a.m. until 2 a.m., our Old Angus Restaurant and Rob Roy Lounge, in the Holiday Inn, 17th and Rhode Island Avenue NW., is being picketed by a group of professional picketers, paid by the union to carry placards that read, "To the public: Please do not patronize Old Angus Restaurant and Cocktail Lounge. Old Angus Restaurant and Cocktail Lounge has no contract with our union. This restaurant pays sub-standard wages and has substandard work-ing conditions. Please do not patronize Old Angus Restaurant and Cocktail Lounge. is signed by Joint Executive Board of the Hutel & Restaurant Employees & Bartenders International Union, AFL-CIO of Washington, D.C. In addition to that, handbills we passed continually, to all pedestrians which read very much the same.

Our first reaction in seeing the picketers in front of our restaurant door was one of confused and mixed feelings, since we were totally uninformed and didn't know the first thing about this type of picketing. As a matter of fact it was nearly a month later that we finally learned all about informational picketing, recognitional picketing, or-ganizational picketing, secondary boycotts, unfair labor practices, union contracts, sweet-

heart contracts, National Labor Relations Board decisions, etc., etc. This powerful weapon in the hands of the union which is entitled "Informational Picketing" was enacted into law by Congress on September 14, 1959, under the title "Labor Management Reporting and Disclosure Act of 1959." The purpose of the act, then, was to eliminate illegal picketing of business establishments by unions forcing them and their employees to sign a contract with the union, even though the union did not have 51 percent of the employees' representation.

The law passed giving the union the right to recognitional picketing if 51 percent of a company's employees informed the employer that they wished to be represented by the union and the employer refused to recognize that. However, the labor lobbyists were successful in tacking a proviso to amendment which reads, and I quote, "That nothing in this subparagraph shall be conto prohibit any picketing or other publicity for the purpose of truthfully advising the public, including consumers, that an employer does not employ members of, or have a contract with a labor organization."

Now, gentlemen, you have just heard the do in the first place. On one hand, Congress passed a law forbidding unions to picket an employer without employee majority wishing to join the union; yet, on the hand, the same law says that it's alright to picket an employer, carrying placards and informing the public that it has no contract with the labor union. Gentlemen, this is the union's weapon and the ironic part is, that even though they've had weapon in their hands since 1959, they decided, little over a year ago, to use it and successfully, I might say, and they make no about it. Through the grapevine, word comes out that they intend to organize every restaurant in town, whether the employer or the employees want it or not, and one by one, they say, we will all fall.

At this point, you may ask, "How can they picket, trying to organize you when it's illegal, the law says?" The union, during this picketing, no one, none of them, is talk-ing anything except, "We don't want to or-ganize anybody. We are merely informing the public. It is our right." This is when the ridiculous game starts: we, the employers trying to prove to the National Labor Rela-Board and the Government that the true purpose of their picketing is not to inform the public, but to actually force us to force our employees to join their union, which in itself is illegal, since the law clearly states that no employer shall force any of his employees, against their will, to join any labor organization.

d

f

t

d

r

n

So, the picketing continues. The frustrations, aggravations, general harassment and economic boycott that this picketing brings upon an employer is absolutely exasperating, to my the least. You feel helpless, feeling can take place in a free country like ours and you, the employers, the businessmen, the taxpayer and one of the sustaining members of our society have no rights and nowhere to go and tell your side of the story. Some of you may ask, "Well, what's so bad about the or, "What effect would it have on our business if the union is successful in organizing our employees with un operating under a union contract?" Briefly, I will try to give you a few examples. In quoting our attorney who once said, "Once the union is in the restaurant, you have a partner." And that, gentlemen, is exactly what would hap-pen if we lost to the union. In addition to n approximate 10-percent increase on your weekly payroll due to the union's demands, you will have to contend with the union's interferring in your business and in your decisions in trying to run your business successfully. When you have to give your cooks ree bottles of beer daily, because the union says so, you can imagine what that alone could do to the efficiency of your kitchen operation if your cooks should report to work with their usual hangovers; all they would sed to be reactivated again is a bottle of Or imagine you, the boss, making a rule in your place of business and you ex-pect your employees to observe it and instead you find yourself arguing and fighting with the shop steward (who would be the spokes-man for all your employees) because he happens to disagree with the rule that you

issued. Or, a busboy, or any of your polyces, dropping a tray of dishes in the middle of your dining room and while you are telling him to help clean it up, he is tell-ing you that it is not his job and that you should get your porter to clean it. And, to top it all, I have heard of a case where a union employee was fired three times for being drunk on the job and the union forced the restaurant to reinstate him every time. As a matter of fact, you could hardly fire anyone, except on rare occasions.

Now, I ask you, how long our industry would survive under those conditions?

Our industry is plagued by hundreds, if not thousands, of irresponsible and incompetent employees. One of the keys to our success and very survival in our business has always been the ability, on management's part, to dictate policies or make swift changes in personnel where situations deemed it nec sary. The union has no place in our industry; particularly nowadays, when competition in our industry is keen and the main product we are all selling is still service and service is nothing else but the attitude and the way our employees perform during the course of our operation, and that, gentlemen, the most important, or, I should say, the heartbeat of our business, will be in the hands of the union if we should fail to face facts and try to fight hard in winning this battle that could mean our success or failure in our husiness

If the union is successful in organizing the entire restaurant industry in Washington, we will find ourselves in such predica ment of having to negotiate, every year, a new contract with the union and, every year, the customary union exorbitant and unrea-sonable demands will be asked from us, to be delivered without regard or concern, whether we could afford them or not. The only recourse that we will have in meeting their unreasonable demands would be: (a) cutting quality, (b) reducing portions, (c) reducing payroll, and (e) increasing prices. All these moves, if forced on us, are tailor made to eventually put us out of business.

The stakes are high and anything we at-

tempt to do individually in countering the union's efforts will undoubtedly fail, since strength, which the union has, cannot be challenged with weakness, which one individual operator would represent. However, the union strength can be challenged successfully if all of us stand together, united, pre senting a strong front in meeting and dealing with this dangerous problem that is threatening our business.

Thank you very much.

#### What We Don't Need

EXTENSION OF REMARKS

#### HON. GARNER E. SHRIVER

OF HANSAS

Mr. SHRIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wichita (Kans.) Eagle, which effectively points up the reservations which many Members of Congress and responsible journalists have regarding Federal subsidization of our free press, even in the name of fighting poverty. The editorial follows:

WHAT WE DON'T NEED

One of the unlikeliest proposals in a long time was made in Washington the other

One of the city's community action ceners has saked for \$150,000 in antipoverty funds to enable one of its clients to start

an eight page weekly tabloid newspaper.
What this country does not need is a federally subsidized press, on no matter how small a scale. If the young man who has made application has sufficient background made application has summer becarround and experience to operate his own paper, he will have no trouble finding a job on an already established newspaper. If he doesn't have those qualifications, even the Federal Government would have trouble keeping his head above water in so competitive a field.

Moreover, there's enough management of

the news in Washington without giving the Government a proprietary interest in a

newspaper.

#### We Volunteer

EXTENSION OF REMARKS

OF

# HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MOORE. Mr. Speaker, for years now, I have contended that West Virginia has been repeatedly been misrepresented by newspaper and magazine articles circulated nationally which depict my State as filled with barefooted, feuding, uneducated, and culturally starved people.

The latest example, I would like to call to the attention of my colleagues, is found in a recent issue of Look magazine which carried an article describing a West Virginia family in Randolph County as facing a bleak Christmas.

How true was this article?

Legwork by Jim Comstock, astute editor of a West Virginia weekly, brings out that the head of this family admitted he had accepted \$100, more than a year ago for posing for pictures and authorizing this article, which only recently made its appearance.

To me, an apology from the editors of Look magazine to the people of West

Virginia is in order.

Just how poor is this West Virginia family?

For the benefit of my colleagues, here for the record is an editorial on this by the weekly newspaper, Republican-Delta of Buckhannon, W. Va., ably edited by Herbert Welch.

#### WE VOLUNTEER

Jim Comstock down Richwood way often has some wayout ideas—like his "Sexual Be-havior of the Richwood Female," or like calling his Hillbilly weekly magazine a news-paper, although it makes no effort to supply

But every once in a while he comes up with a good idea. In Hillbilly magazine's Christmas edition, he came up with two good

First, he does a masterful job of debunking the Look magazine piece of fiction which purported to present facts upon a Randolph County family facing a bleak Christmas.

Second, he recalls that he did a similar sob-sister story on life in Harlem following another "Poor West Virginia" piece a few years ago in the Saturday Evening Post.

Jim points out that Look should take another look at the family of Coleman Currence, an ADCU worker who takes home \$160 a month, who has free hospital, dental and medical services, who gets 70 percent of his groceries free while his children get free hot lunches and school transportation—and who pays no taxes

The Mill Creek State road worker admitted to Jim that he accepted \$100 from Look in return for posing for pictures and authoriz-ing the article a year ago. Just how Cur-rence knew a year in advance that Santa would miss his family in 1965 is not explained.

In his article Jim weeps for Currence who, as Look points out, has to walk maybe 3 miles to work—and as a result, as Jim points "can't hardly coon hunt all night some

But enough about the coon hunter, his wife and eight kids. Look has already said more than enough in libelously maligning West Virginia. It's Jim's second idea which intrigues us now.

Jim recalls his expedition to Harlem to report factually the living conditions there. Suppose every West Virginia newspaper were to send feature writers and photographers to cities all over the country. Suppose they were to look for only the worst, just as Look did and just as Saturday Evening Post did. Suppose just 50 of West Virginia's news-papers published these articles simultaneously so everybody in West Virginia could feel sorry simultaneously for the people of every other State and in the District of

This might not be as exciting, Jim, as the "Sexual Behavior of the Richwood Female." But it could be a great deal more construct tive. The Delta volunteers to be a part of any such expedition which might be orgad. And we'd like either Washington, D.C. or Austin. Tex

### Louis Seltzer Retires as Editor of Cleveland Press

EXTENSION OF REMARKS

# HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MINSHALL. Mr. Speaker, announcement was made last Friday of the retirement of Louis Seltzer as editor of the Cleveland Press and of the appoint-ment of Thomas L. Boardman to succeed him.

The following front-page story carried the news to Press readers last Friday. January 7:

SELTER RETIRES-TOM BOARDMAN NAMED EDITOR

Thomas L. Boardman will become editor of the Cleveland Press Monday, succeeding Louis B. Seltzer, who today announced his retirement after nearly 50 years of service with this resumence. with this newspaper.

Boardman, 46, was named editor by Jack B. Howard, president of Scripps-Howard Newspapers. The new editor began his news-paper career as a copyboy on the Press in 1939 after his graduation from Oberlin

College. Boardman returns to Cleveland from Indianapolis, where he was editor of the Scripps-Howard newspaper in that city, the Indianapolis Times, from May 1962, until it

was discontinued in October of last year. He will be jointed later by his wife Cynthia, and their children, Thomas J., 17, and Caro line, 15.

Seltzer steps down after 37½ years as editor the Press and will take on, in his words,

"the simple task of a citizen of greater Cleve-

Boardman has nearly 20 years of experience as a Cleveland newspaperman and as an active participant in civic activities. Except for 5 years of service in the Navy during World r II, he was a Press staff member from 1939 to 1962 when he went to the Indianapolis edi-

At the Press, he advanced steadilyboy to labor reporter, to assistant city editor, to editorial writer and to chief of editorial

"It is quite impossible for me fully to exss my personal and professional pleasure in returning to Cleveland and to the Cleve-land Press," Boardman said.

"This community and this newspaper always have had much in common. They have shared the same hopes and the same dreams—and they have shared the same struggles.

To bring these hopes and dreams to reality, the Press and the community have shared the same devotion to integrity in government, to decency and fair play in human relations, and to the exercise of energy and daring in dealing with the tough problems of a big and growing metropolitan area.

"I had the personal good fortune to work with and learn from Louis B. Seltzer over many years.

"Now it is my further good fortune to continue what he has done, and at the same time to rejoin good friends on the staff of the Press and throughout this community.

"Needless to say, these are opportunities for which I am deeply grateful." An early story about Boardman back in the forties said that when ha first came to the

"he was a quiet young man, tall, thin, and sandy haired.

Associate Editor Norman Shaw recalls that Boardman came to the Press staff as a result of a call from Prof. Ben Lewis, of economics department at Oberlin, who suggested Boardman as a very promising bright young man.

Boardman was editor of the Oberlin Reand had qualified as an alternate Rhodes scholar.

The new Press editor was born in Arcadia, Mo., and attended schools there and elsewhere in the Midwest before entering Oberlin College.

He went on duty in the Navy in May 1941, as yeoman; came out in 1945 as a lieutenant commander after demolition and bomb disposal cuties all over the war areas of the world. He is now a captain in the Naval

chief editorial writer of the Pre-Boardman was frequently called on for speeches. Before the Ohio Municipal League in 1961 he set forth a credo for a modern metropolitan attitude.

Too many municipalities have fallen into the belief that what is to be will be, the old status quo notion that if a city is meant to progress it will progress and if it is meant to ay, it will decay.

This is the dreary, gloomy line of the fainthearted.

"The truth is that the growth and development of our municipalities is controlled just as much by the alertness of its leadership as it is by the shifting of economic patterns.

"To believe that change, good or bad, is inevitable, is at best to invite a dreamless ep and at worst to die."

During his years with the Press in Cleve land, Boardman was involved in many civic and professional activities. He was president of the City Club and later treasurer of the City Club Forum Foundation.

He was president of the board of trustees for the Golden Age Center and a trustee on the board of League Park Center. He was chairman of the recreation board of Shaker Heights.

Boardman also was a trustee of the Adver-

tising Club. For several years he taught a

news writing class at Cleveland College. He was a member of the Cleveland Rotary Club and Mid-day Club. For several years he served as a member of the Cuyahoga County Library Board.

JACK HOWARD HAILS SELTZER

Jack R. Howard, president of the Scripps-Howard newspapers, flew into Cleveland to-day from California to be with Louis Seltzer the editor's last day at the Press.

In a statement Howard said: Louis Seltzer's devotion to Cleveland is exceeded only by his devotion to the calling he has served so faithfully and brilliantly for more than half a century, 37 of those years as editor of the Cleveland Press

The Press' contributions to the Nation and Ohio, and particularly to Cleveland, stand as tribute to these twin devotions and hence as tribute to Louis himself, who would ask for nothing more.

Louis is retiring as editor of the Press as dictated by business policy, but he is not retiring from the stream of life whose many and complex currents so intrigue and interest

His experience and wisdom will continue to stimulate the thought of Scripps-Howard newspapers which have benefited from them over the years. For this we are all grateful.

His successor, Tom L. Boardman, is himself, in a way, a tribute to Louis' wisdom and foresight. For Louis early recognized and developed in Tom the man who would some day take his place. That day has come, and leadership now passes with no slackening of

# The Plight of the Little Businessman

EXTENSION OF REMARKS OF

# HON. EDWARD HUTCHINSON

OF MICHIGAR

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. HUTCHINSON. Mr. Speaker, during the recess, in traveling about my part of Michigan, I was of course pleased to note the general feeling of prosperity, but was dismayed to observe the number of truly small businesses that have closed their doors; small merchants on the main streets of country towns. I am certain this condition is not peculiar to my district but is general throughout the Na-The really small businessman, managing his own store, running his own shop, employing a few people, has been much more than a symbol of enterprise in the rural communities of America.

Much of the plight in which the little businessman finds himself today is due to governmentally imposed regulation. No one outside these groups of doughty competitors realizes the economic burden which a multitude of increasingly complex reports for governmental agencies casts upon them. Burdensome and equivocal regulations, sometimes misinterpreted by Government employees in the field, to impose impossible economic burdens, have been enough to drive the smallest enterpriser from the ranks of the self-employed.

Mr. Speaker, it has been truly said that a business enterprise never stands still. In business you either go forward or backward. These small business people do not complain about the rigors of 2

competition. They are willing to take their chances with their competitors. Their plea is to be freed from Government regulations written with big business in mind, which overburden them but are taken by their bigger competitors in stride as part of overhead.

In recent months I have received several letters from small businessmen in my district making this plea. Among them is a letter from Fred Koning, a restaurateur in Douglas, Mich., with-in my congressional district. The Sau-gatuck-Douglas area is one of Michigan's fine summer resorts, and Fred Koning, in a long-established business, has been successful thus far. But he writes me as follows:

During the last three decades, we have sen fit to subsidize the world, the farmer, the laborer, the Negro, the poor, including the ones that could work but won't. There

are families that have prospered on relief.
On the other hand, the Government has guaranteed big business a profit by letting contracts on a cost-plus basis.

Have the powers that be ever considered the little businessman? I don't mean the small businessman; I mean the little ones, like myself.

We have never asked for nor wanted any subsidies. All we want is a chance to survive. How many of the legislators who are so concerned with the welfare of the masses have ever been in a competitive field and have had to earn a living by competition, let alone meet a payroll?

Wouldn't it be possible to think of all of us instead of the select groups they have seen fit to sponsor?

As little business people, all we ask is the right to run our own business—sink or and pay our taxes. Respectfully,

Mr. Speaker, we would do a better job at lawmaking, and the bureaucracy would write fairer regulations, if the concerns of little businessmen were taken into account. All big business started small. The man or woman who has an idea and the ability and courage to venture it in competitive enterprise still contributes much to our progress; and Government should take care in its laws and regulations that an economic, political, and social climate encouraging small business is fostered.

# A Call for a Public Awareness of U.S. Maritime Plight

EXTENSION OF REMARKS OF

# HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. PELLY. Mr. Speaker, in the Jan-uary issue of the magazine Navy, published by the Navy League of the United States there is an article which I wish to call to the attention of my colleagues. This article consists of excerpts from a speech by Capt. James E. Heg, U.S. Navy, and is entitled "A Call for a Public Awareness of U.S. Maritime Plight."

Captain Heg, in his speech, calls upon the public to awaken to the facts about the critical state of our merchant marine. He astutely points out the fact that the Soviet Union is planning a modern automated merchant marine and that it is ironic that we as a nation compare all of our forms of power to that of the Soviet Union with the exception of our merchant marine power.

Mr. Speaker, within a few years, Captain Heg points out, the Soviet Union will be in a position to dominate the sea lanes and he leaves it to his readers' speculation as to what such a situation could portend for the United States. He goes further by pointing to the great amount of money that is being spent in other areas of transportation.

This article points out that since the Merchant Marine Act was passed in 1936 that the United States has spent more on the development of one single aircraft than it has in all 29 years in the area of merchant marine development. As a matter of fact, during 1966 the U.S. Maritime Administration is slated to spend no more than the minuscule sum of \$250 .-000 on research and development toward advanced ships and systems. Compare this with what we are spending for air transportation and other means of defense.

I commend this article to my colleagues.

# Reagan's Top Secret Wasn't

EXTENSION OF REMARKS OF

#### HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. UTT. Mr. Speaker, under unanimous consent to insert my remarks in the Congressional Record, I wish to include an article appearing in the Washington Post on January 11, 1966, regarding the efficient spy apparatus operated by Gov. Edmund G. (Pat) Brown of California.

While all may be fair in love, war, and politics, it would seem to me that there should be a limit to the complete disregard of ethics. I feel that Governor Brown breached all ethical standards in this feat of political espionage and that he showed a lack of morality in this undercover operation.

[From the Washington Post, Jan. 11, 1966] REAGAN'S TOP SECRET WASN'T

(By Gerry Robichaud)

Los Angeles, Jan. 10.—It will never go down as any great shakes in the annals of California crime. But as a feat of political espionage, it left the Ronald Reagan camp severely shaken and the forces of Democra-tic Gov. Edmund G. (Pat) Brown somewhat smugly self-satisfied.

The fact is that one or more of Brown's undercover agents managed to infiltrate the Reagan security apparatus

The agents surreptitiously obtained an advance copy of the top-secret television scenario in which Reagan announced his candidacy for the Republican gubernatorial

nomination. This enabled Brown's own cam paign organization to issue a point-by-point "refutation" of what Reagan had to say several hours before Reagan's half-hour politi-cal show, which had been taped in utmost secrecy, was presented to a 15-station California audience.

How the security breach was engineered remains a mystery. But those who tried to reconstruct what happened feel that it would require at least 24 hours for the Democratic Coordinating Committee, which is pushing Brown's third-term bid, to prepare its de-tailed analysis of Reagan's script and its answers thereto.

If the "crime" did occur as early as is now generally supposed, that would rule out an inadvertent leak to the Brown forces through the news wire services or other media-for none had the full text of Reagan's TV speech until a short time before it was aired.

Indeed, most reporters had received the Democratic commentary on Reagan's remarks considerably before getting the Reagan text from his campaign handlers.

#### Who Wants To Win?

EXTENSION OF REMARKS

# HON, SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. DEVINE. Mr. Speaker, there is much talk of "hawks" and "doves" and thousands of self-appointed "experts" expound on U.S. involvement in Vietnam.

In the January 9, 1966, issue of Our Sunday Visitor, Rev. Daniel Lyons, S.J., expresses some important historical facts and excellent conclusions which I commend to the attention of the Members of Congress:

RIGHT OR WRONG: WHO WANTS TO WIN?

(By Rev. Daniel Lyons, S.J.)

Senate Majority Leader MIKE MANSFIELD praised the cease-fire on Christmas Day, ex-pressing the hope that "perhaps it could be stretched further." House Speaker John McCommack expressed the hope that "the cessation will restore reason to the Communists."

We hear a great deal about a cease-fire, about negotiations, about ending the war, and about getting out of Vietnam. Unfor-tunately, all four of these can be treacherous. The cease-fire, for example, has been a major Communist weapon in the cold war for a generation. When the Communist armies in China were weak, after World War II, Mao Tse-tung arranged for a temporary cease-fire on the mainland, with the United States serving as the moderator. Of course, the Communists could not be controlled, but General Marshall insisted that the Nationalist troops observe it.

When Chiang Kai-shek complained that the Communists were not observing the cease-fire, George Marshall replied: "Never cease-nre, George Marshall replied: "Never mind, you keep it, so you can come to the conference table with your hands clean." Chiang's hands were clean, but the Chinese were cleaned right out of their country. The phony cease-fire enabled the Chinese Eeds to arm themselves with former Japanese weapons, and to keep on conquering.

#### LEARN PROM MISTAKES

When the Communists faced defeat in Korea, they asked for truce talks. Because of the talks, the United States halted its big drive to the north. The Chinese talked and talked until they had built up their forces and reinforced their positions. The buildup meant that it would have been much more costly for the United States to resume fighting. Uncle Sam had been put in a much weaker bargaining position, and we ended up with an agreement so weak that the Communists broke it at will. One of the keenest and most experienced military minds in American history, Gen. Douglas MacArthur, had said repeatedly that there is "no substitute for victory," but our diplomats refused to listen.

How often must the American military shed their blood and give their lives in the detense of freedom throughout the world, only to have American statesmen fumble the peace through timidity and fear? Of the 33,000 American soldiers who died in Korea, two-thirds were killed after negotiations began. Yet our roving Ambassador, Averell Harriman, said he told the Russians last June that "we will not stop bombing the North until negotiations have started."

Shortly before Mr. Harriman went to represent the United States at the Geneva Conference over Laos in 1962, he told the Reverend Raymond J. deJaegher: "We have to give some places on the Lao Government to the Communists." Mr. Harriman was trained at Yalta and has reflected that training ever

The negotiations over Laos were used by North Vietnam to strengthen its military positions. Harriman agreed, for some strange reason, to remove Laos from the protection of the SEATO Treaty. Had we not forced a coalition government on Laos, just as we had done on Nationalist China, there might well be no war in Vietnam today. We must learn from our mistakes, or we will keep on repeating them.

During the last 20 years the American Government seems to have taken military decisions almost entirely away from the military. In these same 20 years America has lost sight of victory. When the Secretary of Defense remarked recently from Saigon that he was "surprised" at what the Victoria are doing, it is because he is not a military man and knows so little about how to win a war. The administration never talks about having the aggressor surrender. We only want him to talk to us, and we hold out concessions to encourage the enemy to "negotiate." Our policy is still one of weakness, instead of strength.

People in foreign countries are astonished that America cannot seem to win a war aganst 180,000 invaders, even with the help of 600,000 South Vietnamese troops. Our civilian strategists tell us we are not winning because it is a totally different kind of war. But it is basically the same type of war we fought during World War II in the Pacific. Our enemy then was 50 times more formidable. The only real difference is that General MacArthur fought to win, and he had the authority to do no; something that was denied him in Korea, something that is denied to the Joint Chiefs of Staff today. For example, they wanted to blockade the harbor of Hanoi but were overruled.

#### WE CAN WIN

If MacArthur had been allowed to defeat the aggressor in Korea, the Communists in Asia would hardly have started another war so soon. They have never doubted we can beat them. They only doubt our intention to do so, and they have good reason to doubt it. In the past they have been able to influence us with their propaganda. Their approach has changed, but their propaganda is just as effective as aver.

A year ago our Commander in Chief made a statesmanlike decision when he decided to abolish our policy of sanctuary. His decision saved South Vietnam from being conquered, and for this he will go down in history. What

is needed now is a decision to win the war. Not a cease-fire based on mutual concessions, as Senator Fulbricher has suggested; not negotiations based on a compromise of justice; not a bargaining away of the rights of others; but a just and lasting peace based on the surrender of the aggressor. In the words of Gen. Thomas A. Lane:

"The idea that forbearance increases the prospect of a negotiated settlement is an illusion. American lives are being squandered in Vietnam, just as they were in Korea. As in Korea, the Communists are quite satisfied to chew up American forces in a protracted war of attrition."

Can we win? Of course we can, and the

Can we win? Of course we can, and the communists know it. But we never even talk about winning, and the Communists are not convinced we really want to. America has never lost a war, but for 20 years we have been valuly seeking substitutes for victory.

### The Honorable Homer Thornberry

EXTENSION OF REMARKS

# HON, OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, on Tuesday, December 7, I had the honor of attending the annual Dallas Chamber of Commerce banquet and the guest speaker was our former colleague, Homer Thornberry who is now judge of the U.S. Court of Appeals of the Fifth Judicial District of Texas.

Under leave to extend my remarks in the RECORD, I wish to include Judge Thornberry's remarks:

REMARKS OF JUDGE HOMER THORNBERRY, U.S. COURT OF APPEALS, PIPTE JUDICIAL DISTRICT, AT ANNUAL DINNER OF DALLAS CHAMBER OF COMMERCE HONORING MEMBERS OF TEXAS DELEGATION IN CONGRESS TUESDAY, DECEMBER 7. 1965

This is a significant day—significant for two ressons. First, it is the anniversary of Fearl Harbor, and we are reminded once again of the sacrifices made by a great many in order that we can enjoy countless privileges as Americans. Secondly, today marks the 125th anniversary of the founding of the city of Dallas, and you have chosen this day to honor some of the best friends I ever had.

Anyone who has been privileged to serve with this great Texas delegation would be pleased to be here tonight to join you in honoring them. That is why—when my long-time friend, Dale Miller, called me—I felt that everyone would understand it if I would lay aside the judicial robes and rejoin, for a while, the camaraderie this association calls to mind.

It is possible for me to do so because you have made this an entirely nonpartisan affair. You are gathered on a community and civic basis to pay honor to a great team of distinguished Texans who represent this State in the Halls of Congress. Such an occasion as this is in the finest traditions of a great State whose people have long respected public service.

It is tragic, but it is true, that not all State delegations in Congress can gather together or even relly together. This delegation can, and all of us are proud that it

It can gather and rally together because it is made up today of men who have the judgment and the capacity to work to-

gether for those things on which they are agreed and yet to take opposing views when their individual judgments dictate they must, without reflecting on the motives of those whose views are different.

It would be difficult to overstate the depth and the current of the friendships that service in this delegation generates. It is not an exaggeration for me to say that outside my parents' home and my own home, I have found no other association so rewarding. Let me hasten to add, lest I be misunderstood, that I am not announcing for office again.

The opportunity to serve in this delegation, to cast my talents with theirs, to represent my district and my State alongside my colleagues; to face, with these men, at times of crisis and the times of victory, to wait with them through the nights of sorrow and despair for the mornings of hope and the days of success—all these things have made me appreciate how richly a man is endowed when he learns to work in a partisan environment without rancor, when he is able to accept defeat without recrimination, and when he can share victory without jealousy. For every occasion such as tonight, there

are many occasion such as tonight, there are many occasions that are quite different. There are those who always find fault. If a Congress writes into law a large part of the platform on which it ran and the recommendations of the Nation's President, some spite-

fully call it a rubberstamp Congress.

However, when it shows great independence and spurns the President's recommendations and rejects the party platforms, it is dubbed a "do nothing" Congress.

A Member of Congress works harder than do most of his fellow Americans. He is a statesman when his critics agree with him and a lackey of the pressure groups when they disagree with him. These days the blind critics of the Congress sometimes speak louder than do its judicious observers.

But the judicious observers are being heard, too. And they say that what the Congress needs is support, understanding, and appreciation. A Member needs his constituents' considered advice, not their veiled threats. He needs their judgment of what is best for the country, not their demands for what is beneficial to a few. He needs their rejection of attacks on the institution of the Congress when it strives to equip and staff itself to meet the demands of the times.

He needs your trust and support when he gives you honest and faithful service. In this way a State bullds a tradition of service which in itself strengthens its delegation in the Congress and extends its influence in the counsels of the Union.

The late Speaker Sam Rayburn's wisdom and understanding were a legend in his lifetime. He left our State a heritage of many treasures. One of these is his record of the longest service in our Nation's history as Speaker. Consider that during his service in the Congress, Mr. Rayburn served with a Texan who became President, two Texans who were Vice President, two Texans, including himself, who were Speakers of the House, one Texan who was majority leader of the Senate, and two Texans who were leaders of the House. Our greatest pride is in having a native son in the White House. Our pride is not so much related to the fact that President Johnson is a Texan as it is to the faith and confidence we share in his masterful leadership.

I believe in the right to express our opinions, the right to differ, the right to petition, and the rights of the minority. As a matter of fact, I think, even more than we have in the past, as Americans we need to support these rights. At the same time I think we need to recognize that the Constitution of the United States names the President as the Commander in Chief and vests in him the responsibility to guide our foreign affairs.

I remember Mr. Rayburn when he sain that President Eisenhower was our leader— "that if he was not our leader, as President of the United States, we had no leader and that in the conduct of our foreign affairs we should support him to the best of our ability. The President of the United States needs our trust, our understanding, and our prayers as he tries in this difficult time to find a way toward peace and stability for the men and women of the world.

But when Texans look east from the White -down Pennsylvania Avenue to the Capitol-there is another source of great

pride in our State.

There this Texas delegation continues its leadership in both Houses of the Conress. The U.S. Senate, where Tom Connally, Morris Sheppard, and Lyndon Johnson entered ms young men, now hears the strong voices of Texas' senior Senator, RALPH YARBOROUGH, and junior Senator, JOHN TOWER.

The House of Representatives rarely debates any bill which has not come to the floor of the House through a committee on which Texans have powerful positions of leader-anip and trust. It would not be possible, on this occasion, to detail them all, but consider these things:

Of the 20 standing committees of the House, the chairmen of 4 are Texans.

On these same committees, the first ranking member below the chairman is a Texan on four of them-with only one overlap-and the second ranking member on yet four more is a Texan.

Even this does not include the many subcommittee chairmen, the many special committee chairmanships and memberships rep-

ented in this delegation.

d d

a

10

y ie is

13

es

n

11

r-

n.

in

rt of

Above, beyond, and quite aside from these formal offices of leadership, this delegation has a place of honor and trust within the Congress. It is variously referred to in Washington as "the powerful Texas delegawashington as the powerful reas delega-tion" or "those hard-working Texas Con-gressmen" (and here I use the term in its broader sense, to include both Houses of Congress)—or some other term descriptive of the impact of this group. One remark-able fact about these men is that because they number among their members, like as well as sometimes diverse views, and yet can work together, they are able, as a team, to carry your representation into all the counand before the entire membership of the Congress.

Truly, for you, for me, for our State, and for our Nation, the service, the talent, the experience, and the leadership represented here fustly earns our appreciation.

Those of you who have made this occasion possible, have by your very act somewhat lightened the burden these men carry.

Strong leadership in the Congress, supported by an appreciative and understanding people, makes for a bedrock on which the torch of freedom may long burn.

# Quarrel With Louis Seltzer

EXTENSION OF REMARKS

OF

#### HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MINSHALL. Mr. Speaker, I have no wish to quarrel with my longtime good friend, Louis Seltzer, who is retiring as editor of the Cleveland Press after a 50year association with that great newspaper.

I never thought that I would have to point a finger at a flagrant error in reporting on the part of one of this Nation's most brilliant journalists.

But I must.

Louis Seltzer's farewell editorial in January 7 edition of the Press declares. 'I write the traditional '30' to a career in fournalism.

Those of us who know and admire Louis must chide him with fond respect for that statement. It just isn't so.

There is no "30" for a career which has had such dynamic and worthwhile influence on literally millions of readers.

There is no "30" for a young and energetic mind which will continue to probe and uncover and bring to the printed page sound solutions for knotty prob-

There is no "30" for a man whose good works, noble ideals, and countless benefactions will outlast all of us.

Under leave to extend my remarks, I now include Louis Seltzer's beautiful editorial, asking only that readers discount the first sentence of the last paragraph: [From the Cleveland Press, Jan. 7, 1966]

L.B.S. WRITES "30"

(By Louis B. Seltzer) Another name replaces mine at the top of

this page with Monday's issue. It will read, "Thomas Boardman, editor." It will be the first change of name in that

spot in nearly 38 years.

The man who relinquishes the title of editor assumed it when he was 30. He is now approaching 69. For a half century he has worked exclusively for this newspaper, lived for it, fought for it, dreamed for it.

He had help. He had the best group of men and women throughout that period any editor in America could conceivably wish or have. They made the Cleveland Press. They helped make it one of what Time magazine not long ago listed as among the 10 best newspapers in America.

With Tom Boardman, one of the ablest journalists in America, on the bridge of this journalistic ship, it will sail on to greater glory and achievement. Of that I am sure. He will make Greater Cleveland proud of him. He will make the Press proud of him. He will make the men and women of the Press proud of him.

As I take my leave of the newspaper which has been my sole professional life for 50 years I set aside one title and assume an-

I will be proud to wear for the rest of my life the simple title of "Citizen of Greater

For that is what I intend to be, to live here, to be at the side of Marion's and my family, to work for it, dream for it, and everlastingly fight for it. This is a great city. It will be greater than ever in the future. It is on the way. It needs all the help and inspiration all of us can give it—our sweat and sinew, our dreams and hard work, our faith and our greatest hopes.

Marion in her gentle way used to say she didn't know which came first in my life, the paper, the city, or herself. She said that but she knew which came first. No one server the city of the said that but she knew which came first. No one server the city of t knew which came first. No one ever doubted that. But the other two, the city and the paper, were so inextricably inter-mingled I never knew for sure which was

And now that someone else will guide the paper's destiny I will devote my effort and my love for it to my home community—the community in which I was born as a child in a struggling family, and which endowed me with those qualities, such as they were,

that enabled me to stand up in the race of

life these many years.
Some men and women at the Press at whose side I worked through the years are still here. Many more have gone. Some are editors of other newspapers and magazines. Others are in different professions and business. The Press alumni are scattered all over America. I am proud of them.

I am most proud of those who are still here. They have been the stalwarts. They have given of themselves as much or more to this paper than have I. They have always been

at my side.

From the Scrippe-Howard Newspapers, of which the Cleveland Press was the first, and which today is preeminently the foremost newspaper group in America, I have had throughout the almost 38 years as editor the utmost support, cooperation, understanding. and latitude in adapting it to the especially sensitive requirements of this vast and wonderful community. At no time have I ever been inhibited or circumscribed in the use of whatever judgment or enterprise needed for doing that which was either essential, desirable or called for.

For the past 15 years I have had the bless-ing of one of America's ablest newspaper business managers in George E. Carter, whose candid, searching, cooperative qualities have strengthened and buoyed me immeasurably. He has stood solidly at my side.

One other was at my side. She is no longer here, and yet she is—ever present, stimu-lating, inspiring and beckoning me on, and on, and on, always as she did. I look up to her today as I always did—and always will. For her I thank God. For the opportunity

to be editor of this newspaper through so many of its exciting and significant years I am thankful. For the privilege now of serv-

ing my city as a citizen in any way, shape, or form I may, I will also be grateful.

I write the traditional "30" to a career in journalism. I will now write the book I have been requested to write—and bend my back and put my muscles and sinew to the community's plow to help furrow its future.

#### Time of Reckoning

EXTENSION OF REMARKS OF

### HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. SKUBITZ. Mr. Speaker, the El Dorado Times, Eldorado, Kans., for January 5, 1966, had an excellent editorial "The Time of Reckoning." entitled With a full-scale war looking us in the face, I think this Congress must face up to its responsibilities and take another hard look at the Great Society programs which we enacted with little thought, and less debate, during the first session of this Congress

The editorial is as follows:

TIME OF RECKONING

Despite rumblings of a Federal iax boost this year to pey for the war in Vietnam, a first-page story in recent afternoon news-papers carried the news that the President is unlikely to ask Congress to take such action in 1966—an election year.

For the same reason, Congress—which is always politically skittish—is also unlikely to respond to any call for new taxes.

The rumors still persist, however, and hang like a sword over the heads of tax-

payers who have finally come to the conclusion that whatever happens to them will be unpleasant.

In fact, what Adlai Stevenson called the moment of truth has finally arrived for the present administration. After 5 years of unparalleled national prosperity, during which the country sailed along on plenty with the goose hanging high, the time of reckoning has come to pass. The United States, richest country on earth, finds itself seriously overextended.

The Hutchinson News, which was friendly to President Johnson during the election last year and still is, comments pertinently as follows:

"Lyndon Johnson wanted, and nearly got, everything at once. He wanted to get to the moon the day after tomorrow, to settle the Communists' hash in Vietnam, abolish racial discrimination, eliminate poverty, care for the sick and the aged, educate the young up to today's capacities, beautify the countryside, restore cities, have prosperity without inflation, and be conservative in fiscal matters

"It won't happen that way, simply because it can't. We haven't enough horses to gallop in so many directions.

One can't fault the President for trying. Indeed, national neglect over the past two decades bred such a sense of national urgency.

"But one must begin to ponder the serious imbalance between our commitments, at home and abroad, and our intellectual and

Furthermore, the Hutchinson newspaper observes that the "administration gets the highest marks for a valiant fight to preserve highest marks for a valual light to promote fredom, maintain world stability, promote fustice and relieve suffering at home. But it has not yet demonstrated the capacity for matching the good fight with the price. mostly in manpower, necessary to pay for tomorrow.

With a new budget of over \$100 billion oming up, after Congress last year appro-priated expenditures of, at least, \$118 or \$120 billion, it is natural that as the war expands a few severe headaches now pre-vail on the Washington front.

# Seventy-one Percent Think Congress Is Doing a Great Job

EXTENSION OF REMAP'S OF

# HON, JOHN J. GILLIGAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. GILLIGAN. Mr. Speaker, as the 89th Congress convenes again I think it is proper that many of us take pride in noting the acceptance by the American people of our efforts during the first session in 1965. A poll by Mr. Louis Harris, that appeared Sunday, January 9, in the Washington Post, revealed that 71 percent of the American electorate gives a favorable rating to the job done by Congress in 1965.

Because the term "rubberstamp" is being bounced about politically, I would like to suggest that this poll indicates the American people have put the rubberstamp of approval on the legislation of the first session. I also would like to suggest that if those of us who supported this legislation are "rubberstamps" for the administration then the Republicans

who opposed it consistently are rubberstamps for the Goldwater position so overwhelmingly rejected by the American voters in 1964

The story outlining the poll results follows:

#### SEVENTY-ONE PERCENT THINK CONGRESS IS DOING A GREAT JOB

(By Louis Harris)

When Congress reconvenes this week, it will be riding the crest of the highest public approval registered in modern times. percent of the American electorate gives a favorable rating to the job done by Congress in 1965. This compares with only 35 percent who felt this way 2 years ago, shortly after the death of President Kennedy.

The reason for the increase is the wide-

spread and almost uniform praise that now abounds in the country for the legislative program adopted after President Johnson took office.

Medical care for the aged, considered by the public the most important to them per sonally, now is backed by 82 percent. Federal aid to education, judged the second most important piece of new legislation, is supported by 90 precent. Cutting excise taxes, third in the list of popular priorities, is looked on favorably by 92 percent.

It is evident that many of last year's most controversial measures have been accepted and even become popular.

In fact, Congress has impressed the peo-ple so much that it is more popular than the President—four points higher than the Chief Executive's last recorded positive rating at 67 percent.

A carefully drawn cross-section of the

public was asked:

"How would you rate the job Congress did this past year in 1965—excellent, pretty good, only fair, or poor?"

Excellent, Fair, pretty [Percent] good poor 20 December 1965\_\_ The most dramatic gain in popularity for

Congress was recorded in the South, while its top overall rating continues to be in the Here is a regional breakdown of those who rate Congress positively:

	Carried Committee of the Committee of th	DOG.	DOU.
	[Percent]	1965	1964
East		. 79	69
Midwest		. 66	65
South		- 66	49
West		66	63

In 1964, the South was still smarting over civil rights legislation. A year later the pulling power of other legislation apparently has rehabilitated Congress' reputation.

The public was also asked:

"Now, I want to hand you a list of bills passed by this last Congress. For each, tell me if you approve or disapprove of that bill from what you know or have heard of it."

As	)	Disap
[Percent] pro		prove
Voting rights for Negroes	95	5

ban Affairs Supports and payments for farm-	67	33
013	02	38

Not only is there solid endorsement of the major bills passed by Congress, but those with the highest public approval also tend to be considered the more important to

voters personality. The cross section was

"If you had to choose one bill, which one would you say is most important to you personally

Most	
[Percent] import	ant
Medical care for the aged	28
Federal aid to education	21
Cutting excise taxes	18
Voting rights for Negroes	14
The antipoverty program.	8
Immigration revision	3
College scholarships	3
Farm program	2
Department of Urban Affairs	2
Highway beauty	1

The widespread public approval of the 1965 congressional record could have important implications for the 1966 off-year elections. Despite new-found levels of confidence, however the Democrats cannot count on any automatic repeat of 1964's smashing victories in the House and Senate.

# Bellamy Award Address by David Henry of Waterloo

EXTENSION OF REMARKS OF

# HON. H. R. GROSS

OF TOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. GROSS. Mr. Speaker, representing the State of Iowa and West Waterloo High School at the 24th annual Bellamy Award presentation to the State of Delaware at the Pierre S. du Pont High School in Wilmington on October 13, 1965, was David Henry. His school was the Bellamy Award winner in 1962.

I am also pleased to note that this young man is one of two students to receive a silver Americanism medal for the outstanding manner in which he served as an ambassador of his school, community, and State.

The excellent Bellamy Award address by David Henry reads as follows:

On behalf of the nearly 2,000 students of West High School, Waterloo, Iowa, the 1962 Bellamy Award winner. I wish to congratulate Pierre S. du Pont High School upon the accomplishments which have resulted in the achieving of this outstanding award.

At West High our school motto, duty, honor, service, is our goal. All of our school activities can be classes under these three categories. First comes our duty: Our duty to our school, our community, our teachers, and our fellow students. Last spring when Waterloo was faced with the threat of serious and extensive flooding, the students of West and the three other high schools of Waterloo joined in the successful effort to save the lives and property of those in our community. The similar action of our stu-dents in 1961 was one of the criteria for our selection as a Bellamy Award recipient in 1962.

Under honor, we at West have many areas of concern. The school paper, the Specta-tor, has won several Freedom Foundation awards and twice this year was recognized for its 16-page spring fashion issue and its editorials by the Newspaper Fund Incorpor-ated sponsored by the Wall Street Jornal. Our metals class won first place in the lows Industrial Arts Fair with a class project. West has won the State wrestling title for 6 of 15 years and has been runnerup for 5 years. Our athletic, speech, and music departments have excelled in their respective areas for many years.

Under the area of service, our future nurses club sends volunteers to the Waterloo hospitals during the year, and many of our students hold offices of responsibility in

community organisations.

These, then, are the goals of West High School, duty, honor, and service. May the fundamentals which they represent be upheld by the students of the high schools in the Bellamy family, for it is through these basic ideals that freedom and democracy, at home and abroad, will be perpetuated. Congratulations, Pierre S. du Pont High School.

### How Not To Help Depressed Areas

EXTENSION OF REMARKS

# HON, JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. BYRNES of Wisconsin. Mr. Speaker, I include, as part of my remarks, a story from the Appleton, Wis. Post-Crescent which tells, better than I can, how the Government should not help depressed areas.

Briefly, after Government intervention in its economic life to the tune of over a half a million dollars, one depressed Wisconsin community is now worse off than when the Government-inspired operation began.

It is not necessary to point out, I believe, that Republicans warned against this job-killing effect when the Area Redevelopment Act was under consideration. Unless we get sounder administration of the Public Works and Economic Development Act of 1965, we can expect—similar contraproductive results under that law.

BANKRUPTCY FILED—FEDERALLY SUBSIDIZED
PAPER COMPANY DIES QUIETLY IN TOMA-

#### (By Dick Lyneis)

TOMAHAWK.—Death struck quietly and without fanfare here last week in this economically depressed northern Wisconsin community of 3,300 people.

It wasn't a usual death; it was the demise of a paper company that began operations on the strength of a \$414,000 Federal Government.

It wasn't a usual death; it was the demise of a paper company that began operations on the strength of a \$414,000 Federal Government loan, subsisted with another \$150,000 loan from the Government, hoped to thrive on the strength of a Federal Government contract, and finally ended with bankruptcy papers filed with a clerk of a Federal district court.

Critics of the idea upon which Tomahawk Paper Co., Inc., was launched, and there were many critics, aren't surprised; they say the plan was III-conceived and doomed from the beginning.

But people in this small town, where unemployment is a big problem, don't care why a big plant sits idle, they're only concerned about the money they personally invested in what they thought might be a bright future and about 50 people who are now receiving unemployment checks.

#### PROPLE STUNNIE

The people here aren't bitter, but they are stunned. An attorney, who himself

purchased stock in Tomahawk paper firm and who served for a short time on the company's board of directors, summed up reaction this way:

"If anyone else ever comes in and tries to sell the town on an idea like this, they're going to have a hard time trying to get anyone to listen to them."

one to listen to them."

The community's investment in the financing of the firm which manufactured low-cost toilet tissue was significant.

low-cost tollet tissue was significant.
People here began listening when John
Anderson, who had been the chief cost accountant for Peavey Paper Mills, Inc., Ladysmith, along with Dennis Kichefski, Peavey's
plant manager, and Chester Adamczyk, a
Peavey engineer, approached the Tomahawk
Area Development Corp., with their proposition for starting a tissue mill.

The three men sold their plan and, with the help of Democratic Senator WILLIAM PROXMIRE, secured the initial \$414,000 loan from the Federal Government's then Area Redevelopment Administration. A local and a Milwaukee bank put up a \$129,000 mortgage loan, the development corporation put up another \$64,000, and another sum was raised by selling stock to several townspeople.

#### ANDERSON NAMED PRESIDENT

A board of directors was formed and Anderson was elected president of the firm, Kichefski was named vice president and general manager, and Adamczyk became secretary. This was in May of 1963,

Operations began, but working capital grew short in the summer of 1964 and another Federal Government loam was arranged; this time a \$150,000 participation loan with the Small Business Administration (SBA) putting up 83.3 percent of the total and the balance coming from a bank.

More working capital was needed, but, according to Anderson, when the SBA approved the \$150,000 loan, officials of the agency said "this is the end of the line." Anderson said, "the Government has been awful businesslike all the way through. We tried to raise money from other sources, too," he said, "and we were told we didn't have the record of stability and earnings to win confidence."

But help came from the Federal Government in a different way. Tomahawk Paper bid for a Government contract to supply tissue for military and civilian sources. Tomahawk's bid was low. However, as in all General Services Administration (GSA) procurement contracts, a GSA inspector must examine the product before delivery to see if it meets specifications. The GSA inspector came to the plant, and decided the tissue paper didn's meet specifications. Specifications couldn't be changed once the contract was let. As a result, what had been hope became one of the principal causes of failure.

#### PAPER INDUSTRY ALARMED

When the project was launched originally in 1963, spokesmen for the paper industry and some politicians were slarmed by the Federal Government's involvement.

One of the most influential critics, Eighth District Republican Representative John W. BYRNES of Green Bay, released a statement to the Post-Crescent after learning about the paper company's failure:

"I take little personal satisfaction in having warned against the Federal leans which made this ill-conceived venture possible.

The leases and suffering in Tomshawk which will be caused by the closing of Tomshawk Paper Co. are tragedies which give pleasure to no one.

"I can only repeat what I said in February 1963: "This is a perfect example of Government bungling and waste."

"The ARA and SBA were warned that this enterprise, because of economic factors, had

little chance of success. In the face of these warnings, these two agencies pumped hundreds of thousands of dollars—taxpayers dollars—into this company, sucking along tens of thousands of dollars of local funda

#### "WILL BE REPEATED AGAIN

"The sad fact is that the story of Tomahawk will be repeated again and again as the attempt to substitute Federal benevolence for sound economic judgment brings on more failures in the so-called redevelopment area."

Anderson said here last week that is wasn't a lack of sound economic judgment that caused the company to fail, "but a concerted effort by other paper companies to squeeze us out because of our Federal financing.

"The best way to eliminate future competition," he said, "is to squeeze it out at the start.

"When we began the project," Anderson said, "The whole paper industry was booming, but by the time we were ready to start, the whole market picture had changed. Several large mills expanded and cut into our potential market. Georgia-Pacific opened a new plant in Arkansas and began manufacturing a low-priced tissue which it sold in the South. Then Fort Howard and Sterling (paper companies) lost much of their market in the South and began selling up North in what we had considered our primary market areas."

At this point, Anderson explained, Tomahawk Paper changed its line and went into the industrial tissue field.

#### QUOTED LOWER PRICES

"All this time," he said, "our sales force had to compete with salesmen from other paper companies who followed our people into customers' offices and quoted prices 50 cents a case cheaper than anything we offered.

"But, nevertheless," Anderson stated, 
"when we shut down we had enough orders 
and contracts to carry us for 2 years. It was 
not a lack of business that caused our problems, but the lack of ability to produce 
enough."

Asked how helpful Senator PROXMER was in getting the original Federal Government loan. Anderson said. "He didn't do as much to help us as some people say. His office was just the contact point for us in Washington. We got the loan because the ARA has designated Lincoln County as having excessive unemployment.

"In fact," he added, "we had over 400 applications for the 50 jobs that were available."

Asked to comment on claims that the officers had paid themselves excessively high salaries, Anderson said, "We never gave ourselves an increase since we started. Each of us lost between \$10,000 and \$20,000 on this venture. We lost everything we had saved and our lives and I'd say that personally, this was a hell of a blow."

#### PREE ENTERPHISE HELP

Although they are stunned, people in Tomahawk haven't given up—they expect that free enterprise may ball them out. Several people here say that at least two For Yalley paper companies are interested in buying the plant and equipment.

"I would expect" Anderson said, "that within a month arrangements will have been completed to reopen the mill."

Today, telephone service has been disconnected to the snowbound mill and a sign hange on ale front door which reads—"this office temporarily closed."

If it opens again, someone else will have to turn the key. "Right now," Anderson said as we left, "I'm looking for a job. Do you know where I can get one?" Salute to Sudan

EXTENSION OF REMARKS

# HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. POWELL. Mr. Speaker, on January 1, the Republic of Sudan celebrated the 10th anniversary of her independence. As you are aware, the 2d session of the 89th Congress had not yet convened. However, I did not want the opportunity overlooked to extend to the people and the Government of Sudan the warmest felicitations of this country on this occasion. Congratulations are therefore extended on this occasion to His Excellency Ismail el Ezhari, the President of the Supreme Council of State; and to His Excellency Abbash el Obeid, the Sudanese Ambassador to the United States.

Traditionally, most Americans anxiously await the end of an old year and look forward to the approach of the new year in anticipation of prosperity, progress, and peace. But January 1 has even more significance to the people of the

Republic of the Sudan.

It was on this date in 1956 that this huge country was proclaimed an independent and sovereign state. Comprising an area almost one-tenth of the African continent, this young and dynamic Republic is a land of more than 12 million inhabitants.

However, it should be noted that while the Sudan is celebrating its 10th anniversary as an independent Republic, its historical legacy goes back very far indeed. Ancient Egyptian inscriptions and references in the Old Testament-to the Land of Kush—bear evidence of the Sudan's past greatness. During most of the 19th century, the Sudan was under Turkish-Egyptian subjugation with a short period of independence between 1885 and 1899. Following the joint British-Egyptian reconquest of the country in 1896-98, a new governmental system had to be devised. This resulted in joint Anglo-Egyptian administration or condominium, as the system was called.

The Sudan is a land of sharp contrasts, divided between the economically developed Moslem north and the largely pagan and Christian underdeveloped south. However, strong efforts are being made to overcome these and other handi-

Sudan's somewhat small and scattered population and lack of known resources has forced the country's economy to remain primarily an agricultural one. Cotton is the mainstay of the Sudanese economy, and accounts for approximately 70 percent of the country's total exports and about 30 percent of the total world production of the long staple variety. The Gezira scheme, which developed a large portion of the south to relative wealth, has proved itself a model of agricultural achievement which other undeveloped areas conceivably adopt. Extensive irrigation could increase the chances for an even more diversified economy. Liberal foreign trade

policies have aided in stimulating Sudan's exports and imports. Its world trade balance is satisfactory and foreign exchange reserves have steadily grown to over \$150 million. Annual capital formation is at approximately 10 percent and development investments are growing at a rate of more than 8 percent of the gross national product, which has been estimated at \$900 million.

Internal problems have not prevented the Sudan from taking an active part in international affairs, as its membership in the United Nations Economic Commission for Africa has demonstrated; in addition, the Sudan is an important member in such organizations as the League of Arab States, the Organization of African Unity, and the International Cotton Advisory Committee.

Though the Sudan has been experiencing what one might call growing pains there is little doubt as to the resolution and determination of this large and friendly country to meet the challenges and overcome the difficulties which beset it

I am certain that the entire American people join me in extending warm and sincere congratulations on this, the 10th anniversary of the independence of the Republic of the Sudan.

### Can We Tolerate Nonconformity?

EXTENSION OF REMARKS

# HON. EUGENE J. KEOGH

OF NEW TOLK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Rzcon, I include the following interesting essay by Miss Bridgid Regan, age 17, a political science student at Alverno Heights Academy, Pasadena, Calif. Miss Regan is the granddaughter of Mr. and Mrs. Phil Regan of Pasadena and Palm Springs, Calif.

CAN WE TOLERATE NONCONFORMITY?
(By Bridgid Regan)

Can the health of a society be determined by its toleration of nonconformity? To answer this question one must first decide what is nonconformity. That man is an individual, original and different from his neighbor, is an accepted fact. For each man has aims and desires belonging to him only. The real question lies in how far can this nonconformity extend. Can society as we know it exist without a certain amount of conformity? I think not.

In our society it seems to be the trend to be radically different: to challenge authority, national policies, and seemingly all standards of society; to be a nonconformist, blindly disagreeing with all social groups. Yet I believe the nonconformist falls into either of two distinct types. One absolutely is essential to the health of any society while the other weakens and disrupts any semblance of organization.

The first is the true individual. He believes that man should think for himself, have original and creative ideas. Yet he also knows that he must conform to certain rules of society or man living in community cannot exist. Using reason and conscience, he

determines his degree of conformity. He remains true to his ideals in morals and other areas where compromise would prove fatal.

The second type comprises those who disagree with everything, thinking it is a mark of extreme intelligence. In reality their inability to conform can be attributed to immaturity and insecurity. These nonconformists are the marchers demonstrating against the war in Vietnam. They fail to realize that the mature, intelligent person accepts his responsibilities and stands behind his Government. The students rioting in Berkeley last year are another example of this type. They fail to conform to authority. These nonconformists may be considered in a sense to be "rebels without a cause."

A healthy nation tolerates nonconformity to the extent of allowing each man to be an individual in thoughts and ambitions. The hasic tenets of democracy, freedom of religion, speech and press, are based on nonconformity. Our Nation is founded upon individualism. However at the same time we must conform to certain rules of society. Our rights are relative. An example of our conformity is that we are the United States of America not 50 independent countries. We must accept our responsibilities as citizens of America, for a healthy nation both conforms and nonconforms, each in the right proportion.

# Statement of Col. D. George Paston Before the Cabinet Committee on Federal Retirement Systems

EXTENSION OF REMARKS

# HON, LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. FARBSTEIN. Mr. Speaker, the question of proper retirement pay for members of the Military Establishment, so important to the Congress, was ably discused by Col. D. George Paston, of New York, before the Cabinet Committee on Federal Retirement Systems. It is my pleasure to submit to the Congress the study made by Colonel Paston which should prove very useful in devising and promulgation of appropriate legislation covering such retirement pay:

STATEMENT OF COL. D. GEORGE PASTON BEFORE THE CABINET COMMITTEE ON FEDERAL RE-TREMENT SYSTEMS, WASHINGTON, D.C., JULY 14, 1965

Mr. Chairman, and the other distinguished members of this summit committee, I am the judge advocate of Empire Chapter (New York, New Jersey, and Connecticut) and national executive committeeman of the Disabled Officers Association (organized in 1919), and chairman of the committee on military justice of the New York County Lawyers Association (the largest local bar association in the Nation). My address is 56 Liberty Street, New York City. I am accompanied by Capt. Paul F. Shaughnessy of 186 Main Street, Marlboro, Mass., who is the past national commander and a member of the national executive committee of the Disabled Officers Association, and the past commander of its Massachusetts chapter. He is also a past president of the Middlesex County Bar Association of Massachusetts.

It is our privilege and honor to accept your kind of invitation to appear here and endeavor to assist you in solving the problem which yo: posed to us, to wit: How the uniformed retirement system can be made more responsive (1) to the meeds of management (2) as well as to the needs of individual retirees.

We recommend reenacting the traditional law that retirement pay of those retired for disability shall be 75 percent of current active duty base pay based om grade and length of service.

From 1858 to 1958 (except from 1922 to 1926) whenever active duty pay was altered, the retirement pay was computed to conform. Congress strayed from traditional retirement pay computation in 1922 and restored it in 1926 (Public Law 204, 69th Cong.). The Senate, in its report (S. 364, 69th Cong.), said that the 1922 legislation: "deprives all officers retired prior to that date of said benefits, thereby violating the basic law under which these officers gained their retirement rights. There is no justice in two pay schedules for equal merit and equal service." The 1968 Career Compensation Act abandoned this equitable principle.

tion Act abandoned this equitable principle.

Those retired prior to 1958 for permanent injury or disability sustained in line of duty are paid 75 percent of the active duty base pay of their grade and length of service.

Those retired under the 1958 Career Compensation Act may elect to receive either (a) their base pay multiplied by the percentage of disability, not to exceed 75 percent of their base pay, or (b) 2½ percent of base pay multiplied by the number of years of active service. The 1963 Pay Act provided for increases in retirement pay based on future cost of living increases as determined by the Consumers Price Index. In other words, captain A, retired 1 day before April 1, 1963, would be paid considerably leas than Captain B, retired 1 day after that date, even though Captain A was a World War II casualty, and Captain B served only in peacetime. This resulted from the pernicious provision that retirement pay shall be based on the active duty pay on the date of retirement which happened to be less before April 1, 1963, and more thereafter.

The 1963 pay law provides future percentage increases equivalent to rises in cost of living as determined by the Consumer's Price Index. It sounds popular but is basically unsound. It erroneously assumes that the retirement pay of those retired before April 1, 1963, was equivalent to the cost of living. It also ignored the fact that less than \$3,000 annual pay is in the poverty category declared by the President. If the Consumers Price Index indicates a 3-percent rise in the cost of living, and we add \$75 to a man's \$2,500 annual pay, he is still not being paid a cost-of-living pay.

Reasons for our recommendation: Such traditional law, if reenacted—

1. Would be more responsive to the needs of management in the procurement and retention of personnel, and would reduce considerably the delay and tremendous cost of training new personnel. Simple basic training costs the Government \$4,000 per man. The cost of training a B-52 commander is \$1.24 million. Approximately 80 percent quit the armed services at the end of their obligated terms. The cost of training 80 percent of a million-man army replacement exceeds \$3 billion.

n

n

is

ď

e

of

18

ty

d

1-

2. Would be more responsive to the needs of individual retirees, since theme who were retired "yesterday" need as much retirement pay as those who are retired "today." Today's cost of living is the same for a man whether he was retired before or after April 1, 1963. The 1963 pay law which gives less retirement pay to those who were retired prior to April 1, 1963, and more retirement pay to those who were retired after that arbitrary date, is obviously fallacious, unreasonable, inequitable, senseless.

3. Would render unnecessary recurring legislation to recompute or adjust retirement pay. By tying in retirement pay with current active duty pay, retirement pay would

automatically adjust itself whenever Congress should adjust active duty pay to meet changes in cost of living, Federal civilian pay, or civilian industry pay.

I. SEPARATE BETTREMENT SYSTEM FOR THE

Congress, in its wisdom, may decide on a separate retirement system for those in the uniformed forces who are retired for disability incurred in line of duty, or it may evolve a retirement system for all uniformed personnel and divilian employees.

We speak only for the military who are retired on medical findings that they sustained in line of duty a permanent injury or disability which prevents performance of full field duty.

Since your problem encompasses a wider scope, we will also indicate how the competing civilian industry pension systems have been growing and continue to grow by leaps and bounds, with Government tax exemption encouragement as a key element in the recruitment of personnel, to encourage their continuation in service during their productive years, and to foster a vital work force conductive to the efficiency and success of their respective businesses.

When their obligated terms of service come to an end, 80 percent of those in the uniformed services refuse to continue in service. Like civilian industry, we must have a good retirement system to encourage these trained men, who are vital to the efficiency and success of the armed services, to continue in such service.

Civilian industry has found that "A boy today is more interested in his future than his present," as we will show, and Congressman Rivers has said that he knows of "no single benefit or privilege accruing to military personnel that contributes more to career attractiveness than the military retirement system." It follows that unless we revert soon to the traditional retirement pay law, we will have only ourselves to blame for the failure of the present unattractive military retirement law, to attract and hold adequate trained personnel.

#### II. PENSIONS

(Vol. 12, World-Scope Encyclopedia.) A pension is an allowance of money paid to a person who previously rendered services, or to the widow and children of a deceased person. Pensions are paid as periodical allowances as rewards for service rendered in a civil or military capacity. In a number of countries they are granted to persons who have served the government in the time of peace for a specified length of time, whether in a military or civil capacity. In such cases the pension is not based on injury or disability, but wholly upon valued services covering a long period of time. There is an additional provision for the payment of pensions in case of injury or disability.

In the United States pensions are paid upon injury or disability, but Congress has in many cases made special provision for persons who were left in indigent circumstances after having served their country devotedly for a long time. In addition, pensions (more commonly known as "retirement pay") are granted to many categories of civil and military personnel after specified periods of service.

The pension system in the United States dates from a resolution adopted by the Continental Congress, August 26, 1776, promising pensions to soldlers and seamen who might be disabled in the Revolutionary War. By the law of 1789, the Federal Government assumed the obligation of paying war pensions granted by the States. In 1828 as a act was passed granting all survivors of the Revolutionary War service pensions. In 1822 existing legislation was written into the general pension law which, with amendments, is still in effect. Subsequent congressional enactments have provided pensions for

disabled veterans of all succeeding wars in which the United States has been involved. In many cases pensions have been provided for uninjured veterans of advanced age and for their dependents or survivors.

In 1890 a dependent pension law was passed. By its provisions all persons who served at least 90 days in the naval or military service of the United States in the Civil War, and who were honorably discharged, were entitled to pensions in came of suffering from any permanent disease or disability not caused by vicious habits, whether or not such injury or disability is the result of disease or injury contracted while in the service.

This law was subsequently revised, and the present scale of benefits distinguishes be-

tween war and peace disabilities.

In lieu of pension or compensation, Reserveofficers called to active duty and officers appointed in the Army of the United States,
meeting the requirement of the Army regulations pertaining to the retirement of officers
of the Regular Establishment, are retired and
their retirement pay is equal to 75 percent
of their base pay.

#### III. CIVILIAN INDUSTRY PRNSION SYSTEMS

1. Private industry employees receive some additions to salary which Federal civilians and personnel in the uniformed services do not receive, e.g., savings and benefit pians, year-end and other special bonuses, time-and-a-half pay for work after the regular 8-hour daily stint, and double pay for work on holidays, living with their families in the same place for years without interrupting the schooling of their children, are not forced to sell their homes, the right to change lobs and profit sharing.

2. The private pension systems, in effect since 1875, have been growing at a terrific rate since World War II. In 1950, 10 million people were covered by company pension plans and 450,000 were drawing the benefits. Since then, the number of employees covered has increased to 25 million which is 40 percent of private industry's work force, and 2.3 million retired workers are drawing about \$2.4 billion a year in pension benefits. The average pension increased 25 percent in that period.

The National Labor Relations Act of 1935 (NLRA or Wagner Act), which did not mer refer to "wages" and "other conditions of employment." It gave employees the right to organize and bargain collectively, and made unfair labor practices employer interference with, restraint and coercion of employees in the exercise of their rights. The specific extension of the terms "wages" and "conditions of employment" to employee benefit plans-already in existence or to be established—came in rulings of the Labor Relations Board and court decisions affirming such rulings. The Inland Steel case was the first, perhaps the most famous, litigation of an employer's responsibility to bargain on employee benefit plans. Early in 1947, the NLRB ruled that pension benefits fall within the meaning of "wages," and the other pension plan provisions come under "conditions of employment." It upheld the union's right to bargain over Inland Steel's established pension plan, which previously had not been a subject of negotiations. The applicable a subject of negotiations. The applicable rulings and judicial decisions are: Inland Steel Co., 77 NLRB 1 (1948); Inland Steel Co. v. NLRB, 170 F. 2d 247 (1948); and Inland Steel Co. v. NLRB, 336 U.S. 990, 69 S. Ct. 287 (1949). The employer's objectives in a settlement lieu include. retirement plan include a desire to retain valuable, trained and experienced employe to reduce labor turnover and its attendant costs, and to reward long service.

The representative of all the insurance companies testified that the interest of the employer in pensions for his employees stems from the fact that a pension plan affects importantly the welfare of a business or corporate enterprise; it is advantageous to an

employer in attracting the right kind of employee, in stimulating such employee's contribution to the enterprise, in encouraging his continuation in service during his productive years, in providing opportunities for advancement for younger people by making provision for the replacement of older employees at retirement age, and in general in fostering a vital work force conductive to the efficiency and success of the enterprise. Prom the employer's vantage point, pensions constitute a key element in employee relations and employee compensation. These plans ease the anxieties of individual workers as to their future security. In periods of intense competitition for skilled workers a sound pension plan is essential to attract and retain a competent work force.

#### IV. PENSIONS OF ATHLETES

Uniformed personnel retired for disability sustained in line of duty receive far less retirement pay than those engaged in sports instead of in defense of our country.

Government statistics show that of every 100 who reach age 65 in the United States, 84 are broke, 8 are close to it, 6 are comfortable, and 2 are well off. We won't be sur-prised if within the next 30 years, those last two are professional athletes. At 65, Stan Musial will be receiving at least \$723.25 a month from baseball's pension plan; if Bill George, of the Chicago Bears, stays in one piece for 2 years, he will receive at least \$321 a month when he's 65. And if Gordie Howe continues terrorizing National Hockey League goalies for the remainder of this and all of the next, he will quality for \$1,640 per month at the age 65. And that doesn't include social security benefits. A 5-year veteran in the National Football League already is assured of a higher income at 65 than a 5-year executive at General Motors. To qualify for a GM pension, an employee must have worked for the firm at least 10 years. Consider a typical executive at General Motors. He starts to work at age 29 and eventually works his way into a posi-tion paying \$20,000 a year. After 35 years of employment, he retires at 65 with \$729.29 monthly pension. Not bad. Now consider the pro football player who also works in the off season for GM and then continues the off season for GM and then continues after his playing days are over. If he plays 5 years in the NFL and serves GM for 35 years at a salary of around \$12,000 he will receive three pension checks at age 65, including social security, which total \$1,162 a month, or \$13,944 a year. Pension plans in sports are phenomena of our times. In the 1930's, 1930's, and 1940's, a majority of the athletes faced the future with nothing more than a handful of newspaper clippings. Everybody knows how many loaves of bree Everybody knows how many loaves of bread a newspaper clipping will buy. Of the six sport organizations which are considered major league, only the youthful American Football League is without a retirement plan, and an AFL spokesman has reported that the league will have one operating this year. "There's no doubt that the NFL pension when when the pension when t year. "There's no doubt that the NFL pension plan hurts us in recruiting the new players," he said. "A boy today is more interested in his future than his present. Joe Namath's contract provided for a fantastic retirement program, and he demanded that in his negotiations with the Jets." These lucrative pension plans didn't just grow from the kindness of owners hearts. There have been negotiations, disputes, and, in one se, a law suit.

#### V. MEN IN THEIR MIDDLE TWENTIES ARE CON-CERNED ABOUT THEIR OLD AGE

"In my conversations with lawyers who go to the law schools to hire young men to come into their firms, they find that men in their middle twenties are concerned about their old age. We find an increasing tendency on the part of these young men to go to corporations that offer benefits such as retirement plans, profit sharing, pensions, and so

forth, rather than go out into the active practice of law, into the forum, where only opportunity exists, but with none of the benefits." (Testimony of William F. Dickson, Esq., attorney at law, Norfolk, Va., chairman, Special Committee on Retirement Benefits Legislation, American Bar Association, accompanied by Donald E. Channell, director, Washington office, American Bar Association, and Charles M. Nisen, attorney at law, Chicago, Ill., p. 60, hearings before the Subcommittee on Employment and Retirement Incomes of the Special Committee on Aging, U.S. Senate, 89th Cong., 1st sess., March 4, 1965.)

As the demand for inside law services climbs, more and more corporations are seeking new talent through active law school recruiting programs.

"With industry interviewing here now along with law firms and government agencies, the competition for students is getting to be fantastic—it's like fraternity rushing," says William Hill, assistant dean and director of placement at the University of California School of Law at Berkeley. Indiana University Law School, the 10th largest in the country, reports on-campus interviews by corporations have doubled since 1963. Even at Harvard Law School, traditionally a training ground for large law firms, the number of companies recruiting students has climbed 60 percent in the last 5 years.

Until a few years ago, law students weren't interviewed by prospective employers until fall or spring of their third year. But to-day's high-pressure competition is forcing corporations, as well as law firms, to woo second-year students. The companies offer well paying summer jobs and a chance to gain practical experience in corporations.

gain practical experience in corporate law.

Permanent job offers go to the most promising students at the close of the summer or during fall recruiting periods.

Despite the recent tremendous growth of inside law departments, it's still an uphill battle to interest the cream-of-the-law-school crop in corporate practice, complains Daniel C. Smith, general counsel of Weyer-haeuser Corp. "There's a lot of romance to the big Wall Street firm. We're still suffering from the image of 30 years ago when house counsels were merely conduits that channeled the important and interesting legal problems to outside law firms."

Weyerhaeuser, a forest products company, tells law students that they will receive more responsibility at an earlier age as corporate lawyers than will their contemporaries in private practice. "We don't have to worry about impressing a client with an older, more experienced man if a younger guy can do the job," says Mr. Smith.

However, most young lawyers realize that as house counsel they can't look forward to the eventual \$50,000-plus annual incomes of their contemporaries who become partners or senior members of Wall Street law firms. A 1964 U.S. Bureau of Labor Statistics survey lists \$23,700 as the average annual salary of the more experienced house counsel. Excluded from the average were the higher salaries of heads of law departments, who often are company officers as well.

Corporate attorneys counter such income comparisons by pointing to fringe benefits such as pension plans and health insurance, which are generally unavailable to private practitioners. In addition, they say, law departments are proven training grounds for the upper levels of company management. Roger M. Blough, chairman of United States Steel Corp., is a former house counsel, as is Robert H. Gerdes, president of Pacific Gas Electric Co., one of the Nation's largest utilities. Recently, Chas. Pfizer & Co. elected its former general counsel, John J. Powers, president and chief executive officer. Mr. Powers joined his company's law department

#### VI. SOCIAL SECURITY

- At the foundation of all industrial retirement programs is, of course, our social security system, the greatest insurance system in the world.
- Also basic is the fact that social security benefits, climbing steadily since the 1930's, are still rising.
- 3. But social security is just the foundation of an individual's financial independence in retirement, not the whole—and it was never meant to be the whole thing. As private pension programs have boomed and company benefits have been steeply increased, the gap between the circumstances of the hundreds of thousands who retired in past years and who are now retiring has widened perceptibly.
- 4. This gap is what highlights the importance of efforts by corporations on their own to upgrade the pension status of already retired employees.

# VII. PAST RETIREMENT PAY IS VOLUNTARILY INCREASED BY CIVILIAN INDUSTRY EMPLOYERS

In 1963 General Electric granted a 15 percent across-the-board hike to employees to whom it owed nothing. They were 25,000 exemployees who had already retired under pension contracts geared to the formulas and salaries of past years. Since 1960, GE's "raises" amounted to 45 percent for all workers who retired on or before September 1, 1948—at a cost to GE of \$20 million during this period alone. In addition, medical and hospitalization insurance coverage was more than doubled for retired employees. In increasing numbers, private industry is remembering its "Grogotten" employees who retired a decade or more ago, when salary and cost of living levels were far below today's averages. What GE is doing is a dramatic illustration of this practice, but its only one illustration.

Testifying before the U.S. Senate Subcommittee on Employment and Retirement Incomes of the Special Committee on Aging, Mr. H. L. Severance, secretary of Standard Oil Company of California, said: "As to those of our more than 3,000 annuitants who left some years ago, the company makes an outof-the-till payment to bring their retirement income up to a more reasonable relationship to current retirements." His company's annuity plan has been in effect since 1903. Its supplementary plan to protect its employees against inflation and the deteriorating purchasing power of the money coming from its annuity plan was inaugurated in 1952. Other leaders in efforts to revise formulas of retired workers to meet current conditions include American Telephone. United States Steel, Bankers Trust, RCA, Detroit Edison, and Columbia Gas

Periodic reviews of past pension contracts to adjust them to today's realities come voluntarily from private industry. It's costly, but the overall return to a company may dwarf the actual money outlay. The importance of community goodwill cannot be shrugged off—retired workers have a rising voice and vote. Nor can the appeal to employees a corporation wants to hire and to employees it wants to hold be shrugged off. Just the simple fact that our population is aging so rapidly warns us that the number of retired individuals will soar in coming years and the push toward earlier retirement both by corporations and unions will lift the figures even higher. Equalization of a retired worker's benefits is a social welfare trend which will broaden and take on new dimensions in our society.

#### VIII. GEORGE WASHINGTON AND THE CONTI-NENTAL CONGRESS

(Vol. III, "History of the United States of America," by J. A. Spencer, entered according to act of Congress, in the year 1874 in the office of the Librarian of Congress, Washington, D.C.) In a council of the officers, a great variety of opinions was expressed as to the most eligible place for winter quarters for the Army. Washington, compelled to decide the quention himself, fixed upon Valley Forge, a deep and rugged valley, about 20 miles from Philadelphia, bounded on one side by the Schuylkill and on the other by ridges of hills.

The Legislature of Pennsylvania, vexed at the loss of Philadelphia, found it in their hearts to complain of Washington going into winter quarters. This drew from him some pretty plain words on this point: "We find. gentlemen, without knowing whether the Army was really going into winter quarters or not, reprobating the measure as much as if they thought that the soldiers were made of stocks or stones, and equally insensible of frost and snow; and moreover, as if they conceived it easily practicable for an inferior army, under the disadvantages I have described ours to be, which are by no means exaggerated, to confine a superior one, in all respects well appointed, and provided for a winter's campaign, within the city of Philadelphia, and to cover from depradation and waste, the States of Pennsylvania and New Jersey. \* \* \* I can assure these gentlemen that it is a much easier and less distressing thing, to draw remonstrances in a fortable room, by a good fireside, than to occupy a cold, bleak hill, and sleep under frost and snow, without clothes or blankets. How although they seem to have little feeling for the naked and distressed soldiers. I feel superabundantly for them, and from my oul I pity those miseries, which it is neither in my power to relieve nor prevent."

The soldiers were too miserably deficient

The acidiers were too miserably deficient in suitable clothing to be exposed to the inclement winter under tents merely, it was therefore determined that a sufficient number of huts should be erected, to be made of logs, and filled in with mortar, in which they would find a more effectual shelter. The whole army began its march toward Valley Forge in the middle of December; some of the soldiers were seen to drop dead with cold; others, without shoes, had their feet cut by the ice; and left their tracks in blood. After the most painful efforts, the troops at length reached their destined quarters. They immediately set about constructing their habitations upon a regular plan. In a short time, the barracks were completed, and the soldiers lodged with some slight degree of comfort.

p

ff

is

nt

It is impossible, however, to express in words, the intense suffering which the army was called upon to endure at Valley Forge. Utterly destitute of almost everythin sary to support life: tattered and half naked: some few of the soldlers had one shirt; many only the moiety of one; and the greater part, none at all. Numbers of these brave men for want of shoes, were compelled to go barefoot over the frozen ground. Few, if any, had blankets for the night. Great numbers sickened; others, unfitted for service by the cold and their nakedness, were excused by their officers from all military duty, and either remained in their barracks, or were lodged in the houses of the neighboring farmers; and nearly 3,000 men were thus rendered incapable of bearing arms. Sadly want of even straw, to render their huts fitted, in this slight degree, for the occupancy of human beings, the soldiers, overwhelmed with lassitude, enfeebled by hunger, and benumbed with cold, in their service by day and by night, had no other bed in their huts the bare and humid ground. cause, joined to the others that have been related, propagated diseases. The hospitals were as rapidly replenished as death evacuated them, and their administration was no less defective in its organization than that of the camp. The unsuitableness of the number ings in which they had been established, the excessive penury of every kind of furniture, and the multitude of sick that crowded them.

speedily produced its natural result. The hospital fever broke out in them, and daily swept off the vigorous and more active, as well as the feeble and worndown defender of his native land.

It was not possible to remedy this and state of things, by needful changes of linen, for they were utterly unprovided in this respect; by a more salubrious diet, when the coarsest was scarcely attainable; nor even by medicines, which were either absolutely wanting, or of the worst quality, and adulterated through the shameless cupidity of the contractors: for such, in general, as been justly said, has been the nature of these furnishers of armies, that they should rather be denominated the artisans of scarcity; they have always preferred money to the life of the soldier. Hence it was, that the American hospital resembled more a receptacle for the dying than a refuge for the sick: far from restoring health to the diseased, it more often proved mortal to the well. This pestilential den was the terror of the army. The soldiers preferred perishing with cold in the open air, to being buried alive in the midst of Whether it was the effect of inevitable necessity, or of the avarice of men, it is but too certain, that an untimely death carried off many a brave soldier, who, with better attentions, might have been preserved for the defense of his country in its distres

Certainly nothing could be imagined to equal the sufferings which the American Army had to undergo in the course of this winter, except the almost superhuman firm ness with which they bore them. A small number, it is true, seduced by the royalists, deserted their colors, and slunk off to the British Army in Philadelphia: but these were. for the most part, Europeans, who had entered the continental service. The true-born Americans, supported by their patriotism, and by their profound veneration and love for Washington, displayed invincible pers verance; they chose rather to suffer all the extremes of famine, and of frost, than to violate, in this dark hour of peril, the faith they had pledged to their country. Had Had Howe possessed enterprise enough to attack the patriot army at this time, disastrous must have been the consequences. Without mili-tary stores, and without provisions, how could the Americans have defended their entrenchments? Besides, to enter the field anew, in the midst of so rigorous a season, was become for them an absolute impossibility. On the 1st of February 1778, 4,000 of the troops were incapable of any kind service, for want of clothing. The condition of the rest was very little better. In a word, out of the 11,000 or 12,000 men that were in camp, it would have been difficult to muster 5,000 fit for duty

One cannot fail to have been surprised, that the Army should have been deficient in supplies of food, in a country abounding with provisions. A few words of explanation seem to be needed, to account for such a fact. Early in the war, the office of commissary-general had been conferred on Colonel Trumbull, of Connecticut, a gentleman well fitted for that important station. Yet, from the difficulty of arranging as complicated a department, complaints were repeatedly made of the insufficiency of supplies. The subject was taken up by Congress; but the remedy administered, served only to increase the disease. The system was not completed till near midsummer; and then its arrangements were such, that Colonel Trumbull refused the office assigned to him. The new plan contemplated a number of subordinate officers, all to be appointed by Congress, and neither accountable to, or removable by, the head of the department. This arrangement, which was made in direct opposition to the opinion of the commander in chief, drove Colonel Trumbull from the Army. Congress, however, persisted in the system; and its effects were not long in un-

folding themselves. In every military division of the continent, loud complaints were made of the deficiency of supplies. The armies were greatly embarrassed, and their movements suspended, by the want of provisions. The present total failure of all supply was preceded by issuing meat unfit to be eaten. Representations on this subject had been made to the commander in chief, and communicated to Congress. That body had authorized him to seize provisions for the use of his army within 70 miles of headquarters, and to pay for them in money or in certifi-cates. The odium of this measure was increased by the failure of the Government to provide funds to take up these certificates when presented. At the same time, the provisions carried into Philadelphia, were paid for in specie at a fair price. The temptation was too great to be resisted. Such was the dexterity employed by the inhabitants in eluding the laws that notwithstanding the vigilance of the troops stationed on the lines, they often succeeded in concealing their provisions from those authorized to impress for the Army, and in conveying them to Philadel-Washington, urged on by Congress, issued a proclamation, requiring all the farmers within 70 miles of Valley Forge, to thresh out one half of their grain by 1st of February, and the rest by the 1st of March, under the penalty of having the whole seized as straw. Many farmers refused, defended their grain and cattle with muskets and rifle, and in some instances burnt what they could not defend.

It may well be believed, that Washington

It may well be believed, that Washington was filled with anguish at the calamities of the Army. But nothing gave him more pain, than to see his soldiers exposed to the most injurious example; the officers openly declared their design of resigning their commissions; and many of them had already left the Army, and returned to their families. This determination was principally owing to the depreciation of paper money: it was become so considerable, and the price of all articles of consumption, as well for this reason as from the difficulties of commerce, was ro prodigiously advanced, that the officers, far from being able to live as it became their rank, had not even the means of providing for their subsistence. Some had already exhausted their private resources; others had become deeply involved in debt; and it was evident that, unless some steps were taken to prevent it, the Army would ere long be deprived of nearly all its best and most efficient of the contract of the contra

to prevent it, the army would ere long be deprived of nearly all its best and most efficient officers.

Washington spared no exertions to remedy this evil; besides holding out every encouragement in his power to his officers, he be-

sought Congress to take some steps to meet the emergency. With great force and clearness, he urged upon Congress to secure half pay to the officers after the war, either for life, or for a definite term. Disclaiming absolutely any personal interest in the settlement of this question, he observed, that it was easy to talk of patriotism, and to cite a few examples from ancient history, of great enterprises carried by this alone to a successful conclusion; but that they who relied solely upon individual sacrifices for the support of a long and bloody war, must not expect to enjoy their illusion long; that it was necessary to take the passions of men as they are, and not as it might be wished to find them; that the love of country had indeed operated great things in the commencement of the present revolution; but that to continue and complete it, required also the incentive of interest and the hope

of reward.

Congress manifested, at first, very little inclination to adopt the propositions of the Commander in Chief, either because they deemed them too extraordinary, or from reluctance to load the state with so heavy a burden, or, finally, because they thought the grants of lands to the officers and soldiers

ought to satisfy the wishes of men possessed of any moderation. But at length, in the spring of 1778, submitting to what seemed to be a necessity, they decreed an allowance of half pay for life to the officers of the Army, with the reservation, however, to the Government, of the power to commute it, if deemed expedient, for the sum of 6 years' half pay. A short time after, this resolution was reconsidered, and another passed, which restricted the allowance of half pay to 7 years, dating from the end of the war. These measures, though salutary, were not taken till too late, and, moreover, were not sufficiently spontaneous on the part of the Government. Already more than 200 officers of real merit had given up their commissions; and it was again exemplified on this occasion, that a benefit long delayed, and reluctantly conferred, loses a large part of its value in the eyes of those whom it is intended to

#### IX. RETTREMENT PAY OF FEDERAL JUDGES

A Pederal judge, we have been informed, may retire at age 70 after 10 years' service or at age 65 after 15 years' service, on 100

percent active duty pay.

A retired officer of the uniformed services, other than those retired for permanent disability incurred in line of duty, must serve at least 20 years on active duty, and his retirement pay may never exceed 75 percent of his basic active duty pay. Such 75-percent figure is misleading and is actually far less, since it is only a percentage of basic pay and does not include the extra pay for subsistence, quarters, and hazardous duty which is paid to those on active duty in addition to basic pay.

A retired officer may be ordered to active duty without his consent (sec. 675, title 10, United States Code).

A retired officer is subject to the Uniform Code of Military Justice (sec. 802, art. 2, title 10. U.S.C.)

#### X. INCENTIVES TO INDUSTRY

Incentive, as an adjective, is defined by the dictionary as "having power to arouse, encourage, or stimulate." As a noun, it is defined as "that which moves the mind or operates on the passions; that which incites or has a tendency to incite determination or action; spur—as the love of money and the desire of promotion are two most powerful incentives to action."

We have shown that civilian employers compete with each other and with the Federal Government in offering better retirement pay as incentives to obtain and retain skilled

Our Government now finds that, by offering incentives to its contractors, it increases efficiency, speeds production, and saves money.

Defense Secretary McNamara is doing away with cost-plus-fixed-fee contracts. He is substituting an incentive contract which provides bonuses for speed and efficiency in performance of a contract and penalties for failure to meet the terms set by the Defense Department.

Last October, 16 days before it was due, a new twin-engine jet fighter built for the Air Porce and Navy rolled out of General Dynamics Corp.'s mile-long plant at Fort Worth, Tex. Called the F-111, the plane was in the air December 21, 10 days early for its first test flight. By January 6, a full 24 days ahead of schedule, test pilots demonstrated the craft's unique variable-sweep wing in flight. Such speed in developing the first F-111 and 22 sister aircraft on a \$480 million contract is earning General Dynamics simble Defense Department bonuses—\$675,000 alone for beating the deadline on testing the movable wings in flight. In all, the company is eligible for some \$25 million in incentive payments plus a scheduled \$30 million profit on the contract.

II. TO RECRUIT AND RETAIN ADEQUATE, KEPERI-ENGED AND TRAINED PERSONNES, THE AUTHOR DUTY PAY AND THE RETREMENT PAY OF THE UNIFORMED SERVICES MUST BE MADE MORE ATTRACTIVE, OR OUTWEIGH, THE INCENTIVES OF PRIVATE INDUSTRY

Navy Secretary Nitze recently testified before the Rivers congressional committee that personnel "stands out clearly as the most important single ingredient in our posture. This ingredient exerts a predominant, controlling influence upon every aspect of our department endeavors. It governs the efficiency, reliability and effectiveness on weapons and equipments. It determines the read-iness of our combat forces. It is the basis for our selective response to worldwide contingency demands, and it provides the driving force toward progress and improvement. These people furnish the ideas, skills, and energies which transform dollars and resources into effective naval forces. important problem which confronts me to-day as Secretary of the Navy involves procurement of personnel and the retention of skilled, experienced military personnel as careerists in the naval service. These intelligent young gentlemen look closely at long-range prospects for advancement at various stages of a career as a line officer. They are also careful to weigh the advantages of a career as an officer against those offered by alternative civilian occupations in and out of government. It is difficult to convince em that the intangible rewards and satisfactions of faithful service to the country outweigh the tangible incentives of civilian employment. Many segments of industry, for example, more than match the salary, fringe benefit and retirement inducements of a military career without demanding long hours of unpaid overtime, family separations, or personal hazard.

Gen. Wallace H. Greene, Jr., Commandant of the Marine Corps, testified: "All too many of the really talented people are leaving at the end of their periods of obligated service. Large numbers of highly competent young men, both officers and enlisted, who would genuinely like to follow a military career, turn away to civilian enterprise. These people are thinking of their futures. Our surveys indicate that in making this assessment they reluctantly conclude that the military pay scales will not afford them the opportunity to provide properly for their families and to educate their children" (p. 729).

Mr. McNamara, Secretary of Defense, tes-

Mr. McNamara, Secretary of Defense, testified: "We cannot compensate the man in uniform for the unique hazards of the military profession but we can and should see to it that he at least shares with the civilian population the rising American standard of

living" (p. 450).

Congressman Rivers said: "I know of no single benefit or privilege accruing to military personnel that contributes more to career attractiveness than the military retrement system" (p. 441). In view of this he added that he favors annual recomputation. As pointed out above, if we revert to the traditional law that retirement pay shall be 75 percent of current active duty pay, retirement pay will automatically self-adjust itself and recomputation will be unnecessary.

Testifying before the same congressional committee, army Chief of Staff, Gen. Harold E. Johnson, said that "The Army has always considered its people to be its most important asset" (p. 1322), and "I believe it equally important to the overall problem of career attractiveness to give proper recognition to retired military personnel" (n. 1323).

career attractiveness to give proper recognition to retired military personnel" (p. 1323). Congressman William H. Bates, ranking Republican member of the committee, saked the Army Chief: "Well, now, historically wa have always equated retire pay with active duty pay until recently. Do you believe wa should revert to that policy?" General Johnson replied: "Yes, sir" (p. 1335).

In connection with the Uniformed Services Pay Act of 1965, H.R. 9075, the June 24, 1965, report of Mr. Rivers included an Actuarial Analysis of the Department of Defense Retirement Adjustment Factors, prepared for the House of Representatives Committee on Armed Services by the Wyatt Co., actuaries and employee benefit consultants, beginning on page 73. Among other things they said:

"Military and civilian pay systems are not identical. l. For military officer personnel, ay constitutes only about three-of the total direct compensation basic pay fourths (including subsistence, quarters, reenlist-ment bonus, extra pay for hazardous duty, etc.) other than pension costs. For enlisted personnel, basic pay is about two-thirds of the total. For typical civilian groups, basic pay would usually run between 90 and 100 percent of total direct compensation other than pension costs. \* \* The ultimate goal of both the Department of Defense and the House of Representatives Committee on Armed Services is to provide the military services with such a balance in base pay, other allowances and pension, as to enable them to compete successfully with private industry for new personnel. The retirement adjustment factors have been analyzed with this ultimate goal in mind. \* \* \* There are inequities inherent in this aggregate process that are hard to justify. \* \* \* The appro-priateness of the military compensation evels will continue to be measured by their ability to attract new recruits and retain the best military personnel in service with-in the framework of any budget limitations on aggregate compensation and any esti-mated military manpower requirements. An increase in basic pay in the course of an active duty career increases expected retirement benefits because such benefits are tied to highest basic pay. This is equivalent to saying that past retirement accruals for the years spent in the active duty force prior to the pay raise are insufficient to cover the increase in expected retirement benefits resulting from the pay raise."

#### XII. CONCLUSIONS

1. (a) A boy today is more interested in his future than his present.

(b) While money is not the sole goal, it, nevertheless, facilitates all relations and is important in the choice of a vocation. The individual stud is the income probabilities of his interests, as he realizes that he will be happier if he is paid for doing what he is interested in than if he is forced to be interested in what he is paid for. Immediate income in the early years is not a safe guide. Making a decision involves considering not only the income producing power of the vocation at the moment, but also the possibilities for producing income over a long period of years and eventuating in an attractive retirement income.

(c) Civilian industry attracts and retains

trained and experienced personnel— By offering better retirement pay than that offered by competitors and the Government; and

By voluntarily revising the past pension contracts of retired employees to adjust them to today's realities, thereby generating goodwill, a key factor in obtaining and retaining satisfied employees, the value of which dwarfs the monetary cost involved.

2. (a) The service my and retirement pay of our uniformed services are far below the incentives of civilian industry where an employee draws extra pay for overtime work, may change his jobe at will, is not separated from his family, is paid end-of-year and other bonuses, and is not subjected to combat and other military hazards. As a result, we have never been able to recruit and retain adequate personnel, and must resort to the draft with the waste of valuable time and tremendous cost of training these draftees.

Eighty percent of our uniformed personnel leave the service at the end of their obligated term of service. Any civilian concern would be bankrupt if it had a constant 80 percent personnel turnover.

(b) Granted that a boy today is more interested in his future than his present, and civilian incentives are more alluring than those offered by the uniformed services, we must revise the active duty pay and retirement pay of the uniformed services to match or surpass that of civilian industry.

3. The uniformed retirement system can be made more responsive to the needs of management as well as to the needs of individual retirees, by reenacting the traditional law that retirement pay shall be 75 percent of the current active duty pay for the grade and length of service of the retiree.

4. Aside from the recruitment and retenances.

4. Aside from the recruitment and retention problem, morality and fairness requires that those retired, whether before or after 1963, shall have their retirement pay based on current active duty pay instead of on the different active duty pay scales prevailing on their different dates of retirement. Calm, deliberate reason, candor, a dis-

Calm, deliberate reason, candor, a dispassionate, and yet a determined resolution to do your duty, will, I am persuaded, be the principles by which you will be guided in the solution of your problems.

I believe we have offered a simple, clear, and effective solution to the particular problem posed. I am willing to answer any questions which you esteemed gentlemen may deaire to ask, if I can possibly do so.

Respectfully.

D. GEORGE PASTON.

General Bens. Regarding those companies you cited, do they adjust retirement pay on a recomputation basis or are they making some other adjustments to retired pay to bring it in line?

Colonel Paston. As to those who retired in previous years on retirement pay geared to formulae and salaries of past years, they revise those formulas of retirement pay geared to today's salaries. We continue to hear arguments that retirement pay should be recomputed. I reemphasize that if we reenact the traditional law that retirement pay shall be 75 percent of current active duty base pay, retirement pay will automatically adjust itself and there will be no need for recurring legislation to recompute retirement pay. Have I answered your question, General Revel

General Bras. You have, sir; thank you.

#### George Perrin

EXTENSION OF REMARKS

# HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TRIMBLE. Mr. Speaker, George Perrin, president of Plastics Research & Development Corp., Fort Smith, Ark., is a resident of the district which I am honored to represent. In December he was named to receive the 1966 American Success Story Award, 1 of only 10 bustnessmen throughout the country to be so named, by the Free Enterprise Awards

Association, Inc.

Mr. Perrin was cited for one man's ability to build a prestige independent business by seeking out and filling industrial needs. From a modest start, he built Plastics Research & Development Corp. to a 60,000-square-foot plant with

completely coordinated facilities for product development, mold building, custom molding, assembly, packaging and distribution serving leading manufacturers and distributors. Divisions of Plastics Research manufacture and distribute home decorative products, toys, military identification and fishing tackle, with worldwide sales employing 200 people. Especially noted are his 124 models of realistic fishing lures.

We are proud to have him in our area. He is doing a wonderful job for the State of Arkansas and for the country as a whole. My heartiest congratulations to George Perrin.

#### Polar Bear Association

EXTENSION OF REMARKS

# HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mrs. GRIFFITHS. Mr. Speaker, when U.S. servicemen are fighting with their lives to defend freedom, I feel it would strengthen the troubled hearts of Americans to read a resolution adopted by the Polar Bear Association and the Polar Bear Post 436 of the Veterans of Foreign Wars of Detroit, supporting the President and the Armed Forces in the effort to combat tyranny. Americans will always remember the courageous men of the Polar Bear Association, who were part of the American North Russian Expeditionary Forces in World War I. The resolution, which I am pleased to insert in the Congressional Record, follows:

JOINT RESOLUTION ADOPTED BY FOLAR BEAR ASSOCIATION AND POLAR BEAR POST 436, VFW, of DETROIT, MICH.

Whereas we the members of Polar Bear Association, a national organization and Polar Bear Post 436 of the Veterans of Foreign Wars of Detroit, Mich., whose membership are World War I veterans of the American North Russian Expeditionary Forces who served in the arctic region of European north Russia and fought with guns and bayonets in an undeclared war against the Bolshevikt, now commonly known as Communists, under most trying conditions in subsero weather, poorly equipped and poorly rationed, fighting on the side of the anti-Communists in a civil war in which nearly 300 American men died and as many or more wounded and disabled, from a total force of 5,500 who were detached from the 85th Division; and

Whereas our military forces are presently engaged in aiding Vietnam in their fight against the Communist Vietcong; and

Whereas Lyndon B. Johnson, our President and Commander in Chief of our Armed Forces, also the Congress of the United States have deemed it wise and necessary to support Vietnam with military and financial aid in its struggle against international communiam: Now, therefore, be it

Resolved, That we the membership of the Polar Bear Association and Polar Bear Post 436, Veterans of Foreign Wars, who were privileged to serve our country in a somewhat similar situation, do hereby declare our full and unqualified support of our President, our Congress, and the Armed Forces of the United States, whenever and wherever they may be serving in the cause of freedom

against tyranny and particularly against communism: and further be it

Resolved, That a copy of this resolution be sent to the President and Congress of the United States, also to the Secretary of Defense and to the commanding officers of our military forces in Vietnam, Santo Domingo, and wherever they may be serving in the cause of freedom.

Adopted November 16, 1965.

# Henry Mitchell Writes of the Rendezvous in Space

EXTENSION OF REMARKS

# HON, GEORGE W. GRIDER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. GRIDER. Mr. Speaker, one of the most stirring events in our Nation's history occurred during adjournment, when two orbiting capsules bearing the flags of

the United States rendezvoused in space.
The crews of these two ships are heroes in every sense of the word. As Americans, we all feel a great surge of pride and share their great feeling of accomplishment.

Most of us followed the events on television, and the medium caught the mood of the day perfectly. The brilliant TV critic of the Commercial Appeal in Memphis also caught the great feeling of this event and vividly put his thoughts on paper. Under unanimous consent, I would like to share his column with my colleagues:

[From the Memphis (Tenn.) Commercial Appeal, Dec. 16, 1965]

GLORY ENOUGH FOR EVERYONE RINGS IN STANDING OVATION

(By Henry Mitchell)
The room was full of flags. Everybody

stood up.
So they said on channel 3, when our four brothers met in the total wilderness of empty space.

Well, what did they expect? Did they expect anybody in that room, that control center, to sit there on his plump rump then?

When all space was full of sweat like our own sweat? When all space was full of learning, more than our own, and full of risk and daring? Full of triumph? Everybody in the control room atood up.

Everybody in the control room atood up. And so did all of us.

Half our astronauts, of course, were dirty and smelled bad. They hadn't shaved or bathed for 11 days. They announced they felt crummy.

felt crummy.

Well, that's too bad but it doesn't make all that much difference. Our golden hope hung on their arms. Let 'em smell, let 'em itch. We paid a lot for them and yesterday was their day to pay us back in samphires.

their day to pay us back in sapphires.

And when it happened—when we sensed beyond any doubt that we had done something no men have ever done before, when we perceived we opened up what was never opened up before, when we saw our own crummy beards in the sky itself and when we saw our own silly heads with crowns—

Well you're damned right we stood up.
What did anybody think? That you and
I are worms or toads?

I can tell you about us. We see glory walk in our house, we see everything we wanted to trust being trustworthy. We see what was risked and given and know it was given for us. And we get up on our feet for it.

Yesterday, it was rather awkward, rather emotional. A whole continent of people with their hearts in their cupped hands. Trust in their big eyes. Pride in their straight legs

You're right we stood up. And don't ever let me or you or anybody forget what makes

a guy stand up.

Wally Schirra, 42, was the special baby of television commentators, who perhaps did not notice how much more they mentioned him than the others.

Because he is what every guy wants to be? Hardly. But because he is what every guy really is. And he reminded everybody of his own common splendor. And so did they all.

We paid for them. We made them pos-ble. They paid for us. They made us pos-

And there aren't really any words. Yester-day—well words are almost everything, but we didn't need them yesterday.

We are all together in the room. And we see a special kind of honor walk in. And we get up off what we were sitting on.

### VISTA Week in Baltimore

EXTENSION OF REMARKS OF

# HON. CARLTON R. SICKLES

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. SICKLES. Mr. Speaker, the success of the Peace Corps in establishing a meaningful relationship with the people of other countries has been a significant development of our foreign policy. The creation of a domestic Peace Corps VISTA—designed to permit Americans to help other Americans has shown the continued unselfishness and desire of Americans to participate in improving our social life.

I would like to insert in the RECORD the proclamation issued by Mayor McKeldin, of Baltimore, designating December 6 through December 11, 1965, as VISTA Week in Baltimore, a proper recognition of the importance of this new program. PROCLAMATION BY MAYOR THEODORE R. MO-

KELDIN DESIGNATING THE PERIOD OF DECEM-BER 6 THROUGH DECEMBER 11, 1965, AS VISTA WEEK IN BALTIMORE

The war on poverty is the concern of all citizens, and its successful waging can bring new hope to those of our neighbors who suffer from economic and social depriva-

One of the most effective means of eradicating poverty is through the efforts of in-dividual persons who live and work with the poor, and through example, advice and counsel enable them to help themselves.

The Volunteers in Service to America, often

called VISTA volunteers, are fellow citizens who have chosen to devote a year of their lives to the noble cause of helping their felman, and these same volunteers are now seeking others to join their ranks.

Now, therefore, I, Theodore R. McKeldin,

mayor of the city of Baltimore, do hereby proclaim the period of December 6 through December 11, 1965, as "VISTA Week" in Balti-more, and urge all who can do so to cooperate with the VISTA program to the fullest extent possible.

In witness whereof, I have hereunto set my hand and caused the great seal of the city of Baltimore to be affixed this 6th day of December, in the year of our Lord, 1965 THEODORE R. McKELDIN, Mayor.

Underground Maps

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 10, 1966

Mr. CELLER. Mr. Speaker, all of us were amazed and shocked on the evening of November 9, 1965, when our entire Northeast was blacked out and on the brink of disaster. Many of our Government agencies have been inquiring into the situation, and have been seeking ways and means of preventing a repeti-Unfortunately none of them has been able to assure us that this could not reoccur anywhere in the country-and perhaps even on a far greater scale.

That is why I noted with great interest a recent meeting of officials of the Office of Civil Defense, the District of Columbia, and other interested parties with the top executives of a company called Sanborn Map Co., of Pelham, N.Y. They demonstrated for their audience an entirely new concept in underground

Why do I call attention to underground maps?

As we all know, beneath the surface of our great cities are many miles of cables, sewers, pipes, gas mains, vaults, and other vital facilities. Frequently these underground conduits abut upon or overlap each other. It is obvious, therefore, that repair or maintenance work on any one may set off a chain reaction that could seriously damage others. Certainly urgent repairs necessitated by a major power failure could be seriously hampered.

It is a fact that each utility normally has a map of its own underground facilities. However, frequently it knows little or nothing about contiguous facilities of other agencies. Under the new process created by Sanborn Map Co., all of the various installations are clearly shown on one basic grid. In addition, each of the municipal and private utilities is shown individually with its own overlay. The result is that repair and maintenance crews can operate with greater ease and safety. Precious hours may be saved. Hospitals and manufacturing plants, homes and schools will be functioning far sooner after a power

This is, of course, an important service to assist our municipalities. Nevertheless, I know from experience that it is human nature to put things off, and I fear, therefore, that in the normal course of things it may be many years before all of our municipalities have this protection.

These underground maps and surveys can be of inestimable value in determining breaks and interruptions of power transmission. They could result in the pinpointing of disconnections of lines, cables, belts and transmission conveyances and save vast expenditures.

In cases of fire and flood these maps would be of great value to our municipal-

I do not venture to state that another power blackout, break, or shortage could

be prevented but these maps would materially aid in the work of restoration and report.

Also with these maps cities could reduce the cost of urban renewal projects. They would aid in municipal fire protection and sanitation. They could be helpful in matters of traffic control, subways and tunnel construction, building of highways and bridges and for setting up telegraph and telephone systems.

The uses are legion.

# Paralyzed at 9, Dicky Chaput Wins Jaycee Outstanding Young Man Award

EXTENSION OF REMARKS OF

# HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. CLEVELAND. Mr. Speaker, next Saturday in St. Paul, Minn., Richard Raymond Chaput, of Nashua, N.H., will honored by the National Junior Chamber of Commerce as 1 of 10 outstanding young men in America for 1965.

The great dimensions of this achievement become clear when one realizes that Richard Chaput has been paralyzed from the neck down by childhood polio for 21 of his 28 years. For much of his boyhood, his adolescence and now in his young manhood, Richard Chaput has been confined to bed. His nights must be spent in an iron lung.

In his book, "Not To Doubt," Mr. Chaput describes the physical and mental torment through which he passed and how he overcame the blackest depression and despair, with the aid of his native cheerfulness and a rocklike faith in God. He is also the first to recognize the essential love and support received from his family and friends, particularly his parents.

#### INSPIRATION TO THOUSANDS

Through his book, his articles, and stories. Richard Chaput has touched and inspired countless thousands. The act of writing is immensely difficult for him. Because of his affliction, it is hard for him to speak and he cannot use his hands or arms at all. Dictating letters or other writing is very difficult. Most of his writing is done on an ingenious electric typewriter specially designed so that he can operate it painstakingly with his tongue.

pi vi hi to hi

ac leg

pr

Vic

I first met him in person last year when I called on him at the nursing home where he was staying. It was apparent at once that here was a most unusual person. He had accepted his grievous condition philosophically, not without question, but without wasting time in railing and complaining against a situation which was beyond the power of man to change.

#### NASHUA MAN OF THE YEAR

He was named Man of the Year by the Nashua Junior Chamber of Commerce last year and soon thereafter the process was started to nominate him for the national honors now accorded to him. was honored to endorse this nomination on his behalf and I now feel honored once more to pay him this tribute in the House of Representatives.

He is a truly outstanding and most inspirational American. I congratulate him on his award and I congratulate the Jaycees on the wisdom of their choice.

# Freedom of Speech and the Vietnam Protest Movement

EXTENSION OF REMARKS

# HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. EDWARDS of California. Mr. Speaker, as the 2d session of the 89th Congress begins, the issue which bears heavily on all our thoughts is the grave and complex situation in Vietnam. Many questions come to mind—the conduct of the war, the operations and aid programs of our Nation in the social and economic development of southeast Asia and the direction and role we are to have in underdeveloped regions of the world.

These are problems of how we are to proceed in our relations with other nations. Just as serious is this question: what effect is the war to have on our own national life. The formulation of the budget is one aspect. Another is whether we are going to allow the cold war atmosphere, intensified by Vietnam, to narrow and possibly choke off political debate. It is very easy to label dissent unpatriotic during periods of crisis. To have a national definition of all these issues, however, a vigorous and substantial debate is essential.

ous

out

in

nan

the erce cess nalion nce An excellent statement on the need for free speech and a climate of critical and unfettered discussion was adopted by the Jewish Community Relations Council on November 7, 1965. This statement is clear and concise and contains a number of important points. I recommend it highly to the attention of my colleagues:

PREEDOM OF SPEECH AND THE VIETNAM
PROTEST MOVEMENT

Americans across the political spectrum are now engaged in vigorous and at times heated debate over our country's role and purpose in southeast Asia. We are convinced that such probing of public issues, however shrill, however irritating and distasteful to those who may disagree, is in the highest and best tradition of our democracy. The American political system depends upon unfettered public discussion to test the wisdom of national policy.

The aims and directions of our country's actions abroad therefore are not merely a legitimate subject for national debate. They constitute an area in which the authentic national interest requires us to provide full opportunity for public speech and for the assertion of diverse points of

In the political realm there are no truths so absolute and no judgments so wise that they may be withdrawn from public scruthy. Especially on such fundamental mat-

ters as war and peace, which touch upon the life of every American citizen, it is necessary for our country's position to be subject to the corrective influence of public review and criticism.

One would suppose this principle to be a truism of the democratic process. Nevertheless it appears to have been forgotten or at least temporarily set saids by some of our most influential national leaders of both political parties. The desire of administration spokesmen to mobilize public endorsement for U.S. military intervention in Vietnam unhappily has been accompanied by a corollary desire to discourage criticism and by an apparent willingness to countenance limitations upon free speech and free assembly inconsistent with the tenets of an open society.

We, therefore, believe it imperative publicly to reaffirm that the right of vigorous pro test-including demonstrations, parades, rallies, peaceful picketing, and the distribution of literature—is protected by the first amendment; and further that this right of demonstration may not be limited by police on the ground that such behavior might incite others to retaliatory action. We believe that academic freedom requires that members of the teaching community be allowed the liberty outside the classroom to express their personal views on controversial matters without fear of punishment or reprisal. With respect to current protests over U.S. policies in Vietnam, the task of Government authorities and law enforcement agencies is to insure that all those seeking peaceably to express their views, no matter what they may be and no matter how extreme they may seem, are afforded the opportunity to do so without exposure to penalty, interference, or the threat of violence

Recent actions by various Government officials do not accord with this understanding of the public responsibility. Government figures on all levels have contributed to the evolution of a public mood in which any criticism of American foreign policy in the Far East becomes hazardous. The Attorney General has threatened a full-scale investigation into the demonstrations and has warned that "we may have some prosecutions in this area." The Director of the FBI announced that the Communists are exploiting the protest against the Vietnam war. A Senate Internal Security Subcommittee report charged that the demonstrations had passed into the hands of Communists and extrems elements—an obvious attempt to frighten off participation by Americans of moderate views who may nevertheless be genuinely troubled by our present course in the Far

Even more disturbing are threats by various State officials of the selective service program to revoke the deferment of student protesters, to "run down these people as their names appear in the papers" and generally to employ the selective service system as a vehicle for punishing political dissent. These plans have been announced with no word of disapproval from General Hershey, the national head of selective service, that would remind these Government officials they are empowered solely to administer the law and not to harass lawful political activity.

The atmosphere engendered by these pronouncements is best exemplified by the legislation hastily enacted last August to punish those members of the protest movement who have sought to dramatize their opposition by the public burning of draft cards. We do not condone the burning of cards but we do not believe this practice constitutes the kind of ciear and present danger to our national security necessary to justify such new and drastic legislation. The fact is that the burning of a draft card in itself has no

substantial consequences and in any case was already actionable under statutes requiring those subject to the draft to carry their draft cards on their persons at all times. The burning of the card in no way releases, excuses or immunizes anyone from the operation of the Selective Service Act or from the obligation to serve. It is a minor form of agitation whose sole meaning is symbolic and hortatory. Under these circumstances it is a demonstration of legislative excess that those who destroy draft cards will now be subject to maximum penaltice of 5 years imprisonment or \$10,000 fine or both. This punishment stands in absurd contrast to the penalty for those guilty of descerating the U.S. flag, who face no more than 30 days' imprisonment or a \$100 fine or both. The dignity of this country—and we believe its ultimate safety—would have been better served if American officials had had the composure to treat draft card buring as a routine infraction subject to such sanctions as were already prescribed under existing law.

This growing intemperance has evoked a menacing climate intolerant of any expression of difference. This is manifest in the contrast in public demeanor at the two parades that recently marched down Fifth Avenue in New York City.

Whatever may be said of the arguments of those who marched in protest over current American policies, their conduct throughout was restrained, orderly, and peaceful. They were, moreover, subject to extreme provocation in the form of vituperative and obscene vocal attacks from the sidewalks and frequently to physical assault from onlookers who repeatedly broke through police lines in order to disrupt the assembler.

On the other hand, although the overwhelming majority of those who marched in
the officially sponsored counter-demonstration several weeks later were similarly disciplined and orderly, the fact remains that
any one in the vicinity of the march who
dared murmur dissent or who carried a placard even remotely disagreeing with the established position was immediately set upon
both by demonstrators who left the line of
march and by zealous sidewalk patriots all
too eager to help. It is noteworthy that
none of the personages who sponsored the
march or who occupied positions of honor on
the reviewing stand found it appropriate to
disassociate himself from these acts, to denounce those who perpetrated them or to
call for better appreciation and protection
of the rights of those who disagreed.

We are mindful of the difficulties posed by
the participation of Communists and other

We are mindful of the difficulties posed by the participation of Communists and other extremists in protests against U.S. policies in Vietnam. But they represent only a small minority of the many who are concerned. The protest movement includes thousands of loyal and law-abiding Americans, including members of the U.S. Senate, who have sincere reservations about our Vietnam policies. At the very least therefore we believe it incumbent upon Government authorities to link any pronouncement they make on the Vietnam protest movement with an affirmation of the content and purposes of the first amendment, with the clear pronouncement that lawful protest and dissent are not disloyal, and with the assurance that no punishment or obloquy will be assessed against those persons who exercise their constitutional right to speak their minds.

We are deeply cognizant of the challenges our Government faces in Asia and in other parts of the world. We venture no simple solution to these complex, even agonizing problems. We urge only that great public debate that must ensue be allowed to proceed untrammeled and unafraid.

# The Young Marines

EXTENSION OF REMARKS

# HON, JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MONAGAN. Mr. Speaker, I recently had the privilege of attending and participating in the ceremonies in which Burton P. Daugherty, national commandant of the Marine Corps League, presented the first National Young Marines Charter to the Young Marines of the Valley Detachment at Ansonia Conn.

I want to pay a very special compliment to all of the men and women of the Naugatuck, Conn., Valley who have worked with the commanding officer of the Ansonia detachment, Steve Zuraw, in the formation and development of

this youth program.

The Ansonia detachment was initiated in 1962 and it draws its membership from Ansonia, Derby, Shelton, Seymour, Beacon Falls, Oxford, and Southbury. The charter ceremonies attracted nationwide attention focusing on an organized youth group whose purpose is the improvement of health, education, and citizenship of youngsters ranging in age from 8 to 17 years.

The January 1966 edition of the Leatherneck, the magazine of the Marines carried a feature article entitled "The Young Marines" by Sgt. George Broadley, with photos by Cpl. Gary Scarbrough,

on the Ansonia detachment.

With your permission, Mr. Speaker, I include the article here in order that this deserving and developing program may properly be called to the attention of my colleagues:

THE YOUNG MARINES

(By Sgt. George Broadley)

The sounds of boot camp vary little be-tween Parris Island and San Diego. The same gruff voices give the same deep com-mands, and the same boots scramble to obey the orders.

Older marines with "time in" usually stand by and smile, remembering their own experiences at the hands of D.I.'s. Then, with memories intact, they go about their daily routine.

Now the San Diego or Parris Island atmosphere is present at other boot camps and stations throughout the Nation.

Working under the direction of the Marine Corps League, its members have started a youth group called the Young Marines.
Youngsters ranging from 5 to 17 years old

are now wearing the forest green utility uniform. They wear it with as much pride and neatness as do their older counterparts in the regular Marine Corps.

While still too young to serve their country in the armed services, these young men work hard at being better citizens, and possibly future regular marines.

They are learning the meaning of personal pride, integrity, and faithfulness to their fellow man. Also, they have a headstart on other boys their age, for they are learning the meaning and value of discipline.

The Marine Corps League is sponsoring the program and has given the first National Young Marines charter to the Young

Marines of the Valley Detachment at Ansonia, Conn.

Steve Zuraw, the energetic commanding officer of the Ansonia detachment, said that the boys get a shock treatment similar to that of a new recruit at either Parris Island or San Diego. They soon get to know the words "Yes, sir," "No, sir," "Double time" and the meaning of military courtesy

Their boot camp usually lasts for about 20 The 21/2 -hour class sessions are held on Friday nights. Upon completion of boot training, the youths are "graduated" into

the regular unit.

While the rank structure is the same as the regular Marine Corps, their promotions entail far more than having the required time in grade and passing the current GMST. The League's Young Marines are marked on the Leagues 10 mg maintaines, poet attendance, physical health and school marks. If a Young Marine's school marks fall below average, he is asked to leave the organization.

This seems to have its desired effect because the Young Marines are well above the average in scholastic markings. Teachers credit this fact to the training that the youngsters receive from their D.I.'s, and an

avid desire to learn.

The lads also have a physical fitness program in which they are instructed in boxing, simple judo and wrestling. They are also taught craftsmanship, model building, outdoor survival and some military subjects including drill, inspections, national history,

and pride in Corps and county.

Mr. Burton P. Daugherty, National Commandant of the League, presented the Young Marine charter. He said, "there can be no better way for the league to demonstrate its determination to fulfill its purpose than to sponsor a program for American youth designed to preserve and perpetuate our Nation's heritage of a free society."

The Ansonia detachment was started early in 1962, and its serves the cities of Ansonia, Derby, Shelton, Seymour, Beacon Falls, Ox-

ford, and Southbury.

The first formal presentation of the Young Marines, in a parade, took place at the Ma-rine Corps League national convention in Cleveland, Ohio, in 1963.

Due to this particular performance, League members decided to adopt the program and form other units throughout the country.

Units are presently in operation in Connecticut, Florida, California, Missouri, Washington, Louisiana, New York, and Illinois.

Our Young Marine program is definitely one of the finest and most worthwhile projects the league has even undertaken," said Marine Corps League Commandant Daugh-"We're giving it everything we've got."

#### Morris Weinberg

EXTENSION OF REMARKS OF

# HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. FARBSTEIN. Mr. Speaker, on January 20, Morris Weinberg will celebrate his 90th birthday. At the same time, he and his gracious wife, Dora, will celebrate their 65th wedding anniversary. It gives me great pleasure to salute these fine people who have contributed so much to the enrichment of American life.

Morris Weinberg is the founder of the

Day-Jewish Journal, a paper which has been an important voice in Jewish-American affairs since 1914. But even before that, Morris Weinberg was a dynamic force. Since the turn of the century, he has been a man who has devoted himself to noble causes. His is a name that evokes the warmest feelings of admiration and respect. He has served his people and his country very, very well

Mr. and Mrs. Weinberg are currently enjoying in Palm Beach, Fla., a retire-ment which they have both earned. I am certain that my colleagues, of whatever faith they may be, join me in extending their salutations and best wishes to Morris and Dora Weinberg. I wish them many, many more years of fruit-ful and happy life. They are a wonderful example of fine Jews and fine

Americans.

### The Late Prime Minister Shastri, of India

EXTENSION OF REMARKS OF

# HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

Nehru was a man of strength who be-lieved passionately in peace, a world leader who saw his dreams of a neutral and economically strong India Surrounded by peaceful neighbors exploded by Red Chinese attacks on Indian soil.

Shastri was a man of compassion who believed in strength in the face of threats from outside its borders and who turned inward toward domestic problems rather than outward toward the world.

tiT

CE

pe as ai:

fii

hi

th

m

fr

Shastri was also a man of courage, who pegotiated a ceasefire with neighboring Pakistan on the day of his death, even though such negotiations were dangerous to him politically.

Prime Minister Shastri's time in office was short. But his accomplishments may well prove to be among the greatest

in Indian history.

His efforts to bring peace to Kashmir, to feed the people of India and find the means by which India could defend itself from Red Chinese aggression are deeds which many thought impossible achievement.

Out of the death of this man so small in physical stature but so large in heart and mind could come peace and stability for India and the subcontinent and a richer life for its people.

# Why Should Open Dealing Be Suspect?

EXTENSION OF REMARKS

# HON. JOHN R. HANSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. HANSEN of Iowa. Mr. Speaker, every American President since 1954 has offered support to the people of South Vietnam. Over the years, we have made a national pledge to help that country defend its independence.

President Johnson also took up this task. Indeed, he expanded the American involvement by many times believing that to withdraw from one battlefield means only to prepare for the next. We are no longer losing the war in Viet-nsm—nor, however, are we really win-ning it. We are at least in a position where we can seek peace terms with honor and without surrendering South Vietnam to the aggressors.

President Johnson has launched an all-out peace offensive to achieve a cessation of the hostilities. He was im-mediately attacked for his "grandstand play" and his "insincerity." Previously he was severely criticized for his so-called indifference to enemy peace feelers, and now he is being attacked for taking the initiative in this area.

Perhaps this is just an element of our American democracy. Whatever our leaders do, we mistrust their motives and make the most of our freedom to criti-

A recent editorial by Loudon Wainwright in Life magazine deals with this very subject. I submit this excellent very subject. I submit this excellent article for the benefit of my colleagues.

The article follows:

the

WHY SHOULD OPEN DEALING BE SUSPECT? (By London Wainwright)

It has been interesting during these days of President Johnson's peace offensive to hear the bleats of those who are opposed to it. The President is variously accused of participating in worldwide vaudeville, of practicing amateurish diplomacy, of negating gains we have won in Vietnam, of polishing up his own image as a man of peace before he advises the Congress and the people that we will have to escalate the war.

Certainly Mr. Johnson thrives on theatri-cality, and he delights in taking devious routes to hidden objectives. Yet I am astonished that more people have not inter-preted this dramatic, high-level missionary assault around the globe as evidence that he sincerely seeks an honorable end of the con-flict. In fact, I think the skepticism about his methods and his aims not only deme the man but renders to the enemy a full measure of the same sort of comfort they get from our peace marchers. See, it might will be said in Hanol, the Americans themselves have little faith in this diplomatic stunt-flying; it is a sign of trickery or weakness, and we will have nothing to do with it.

The reason for the skepticism lies, I think, in a national trait we don't boast about or even really believe we possess. If we are cheerful, generous, and courageous, we are cheerful, ge also highly suspicious a good bit of the time, especially about a situation where the cards appear to be out on the table. On occasions where there is some room for bargaining, like buying an automobile, most of us, I sus pect, go into the deal with the feeling we are going to get clipped and wind up the negotia-tions sure of it. In the field of diplomacy, Americans have become conditioned to sus pect that nothing really worthwhile can be arrived at openly, and that all meaningful activities must take place in secret. We sift a bucket of innuendo for a drop of truth. Like the man in psychoanalysis who is pus-nied by his friend's "Hello," we often wonder what is really meant by the simplest things. Used to the notion that big things are brought off in whispers, we doubt the honesty of a loud, clear voice. Of course, the North Vietnamese, Chinese, and Russians all share this characteristic of suspicion, so there is a lot of mutual distrust. But must that rule out bare truth as a tactic of international communication? There has been a considerable amount of

speculation about the factors that might have impelled the President to undertake this personalized, global expression of his and this country's nims toward peace. Some of this speculation holds that Mr. Johnson was driven to this extreme in order to confound and silence the critics of his administration's policies in Vietnam. The peace marchers, the draft card burners, the self-immolators, so this notion goes, have forced the President into a new and unusual stance.

I very much doubt that this is so. can be no question that the President has been disturbed by the current agitations of one sort and another, and certainty he must have been upset by the allegations that in the recent past the United States had been reluctant to find a peaceful settlement. Surely, too, he has been aware—though his favorite indicators, the polls, do not always clearly show such things—of the fact that the national conscience is troubled by the bloody dilemmas of Vietnam. Yet it seems more reasonable to me to believe that the President is not simply acting in response to these things, but rather that he is testing out direct truthfulness as a possible approach to the practical solution of a terrible problem. Why on earth does that have to be such a poor idea?

For one important thing, there appears to be no evidence that we have been getting any closer to a peaceful settlement through the techniques of a mounting escalation. The enemy simply increases his commitment, and it is decidedly unclear how much escalation as in avoidedly unclear how much escalation it will take to bring Hanot to what U.N. Ambassadar Arthur Goldberg, in an interesting reminder that he was once a bigtime labor lawyer, referred to in Rome as "the bargaining table." I suppose that, if we ever reach ing table." I suppose that, if we ever reach that place, it will indeed be a bargaining table, with certain clauses tipped into the contract here and there to mollify the variparties. Assuming that our principal goal is peace, assuming also that we do not intend to betray our obligations to the South Victnamese or to cut and run to achieve that peace, I cannot understand how we minimise our chances for it by saying so to everyone within jet range.

When I heard Pope Paul say in New York, "No more war, war never again," I believed that he thought such an astounding condition was possible. When I hear that a covey of emissaries named HUMPHREY, Harriman Goldberg, Bundy, and Williams has fanned out all over the world, I find myself believing that the man who sent them means what he says. And from the strident tone of the squawks now coming from Hanol, I'd guess

that some powerful quarters are whispering to them that he means it, too.

Virtually wherever one finds himself in the spectrum of American opinion—unless he is in favor of all-out assault or, on the other hand, total withdrawal from Vietnam—most people, from the peace marchers to the Pentagon, should be able to take some encouragement from the peace offensive. Among other things, it has clarified our aims to a great part of the world. If some remain unconvinced we are at least emphatically on the record. Whatever the results of this offensive are, it seems to me entirely worthy of us

Which raises, of course, the question of failure. What if the North Vietnamese refuse to take the lull in the bombing or the President's peace talk as an opportunity to move toward a settlement? Do we then— our homest intentions spat upon—fall back on the cruel logic of escalation and an expanded war? Do we, our worst suspicions apparently proved out about the uselessness of straightforward diplomacy, return quickly to the upward spiral of death? On precisely that matter New York Times Columnist James Reston asks a very good question: "What's the rush?" What, indeed? The peace offensive has been a good effort and I believe we should not easily abandon it just because it does not immediately work. The stones grind slow.

# "Maggie" Higgins

# EXTENSION OF REMARKS

# HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

### Wednesday, January 12, 1966

Mr. HARVEY of Indiana. Mr. Speaker, I ask unanimous consent to enclose this editorial from the Muncie (Ind.) Star titled "'Maggie Higgins' in the issue of January 7, 1966.

The article follows:

#### "MAGGIE" HIGGINS

Fragile, blond Marguerite Higgins wore

mud like other women wear makeup while she was covering the Korean war. But as she told the general who ordered her to leave the combat zone, she wasn't working in Korea as a woman. "I am here," working in Korea as a woman. "I she said, "as a war correspondent."

She was, and a good one, who slogged through the thick of it with the foot-soldiers, aring slacks, khaki shirt, sneakers, and a

fatigue cap.
She was 24 when she had her baptism of fire with the 7th U.S. Army on the Austrian front. She accompanied the liberating forces in their surge across Hitler's dying empire. Her dispatches on the horrors of the concentration camps at Dachau and Buchenwald were detailed, crisp and strong. So, also, vere her stories from Korea, which won her a Pulitzer Prize.

She had the superior reporter's habit of refusing to accept the surface picture as the true one. Her sixth and last book, "Our Vletnam Nightmare," boildy traces the intrigues in the upper echelons of the Ken-nedy administration which led to the overand assassination of President Ugo

throw and assassination or President Ugo Dinh Diem and his brother, Ngo Dinh Nhu. "Maggie" traveled light at the front— just carried a toothbrush and towel. But she traveled far. It was a tropical liness picked up during her travels that cost her life. But not before she had made her special contribution to help her country un-derstand the kaleidoscopic events of a vio-

# Where Does Space Fit in a War Budget?

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, the editorial in the Sunday Star of December 19, 1965, is a most thoughtful analysis of the role of our space program in a wartime situation. This editorial clearly identifies the essential features of the NASA effort and its place in meeting our national commitments in the Vietnam struggle.

WHERE DOES SPACE FIT IN A WAR BUDGET?

There is more than a little irony in the fact that a cutback in space spending, at least in some degree, is almost certain to follow close on the heels of last week's splendid achievements by our astronauts. Even so, and however incongruous it may seem, the demands of the war in Vietnam are hearing down hard on a beleaguered President.

The outlook in this respect has been somewhat clouded by the peace feeler from Hanol. If Ho Chi Minh was serious, this overture might have led to a ceasefire and peace negotiations. Any such hope, however, seems to have gone down the drain as a result of premature publicity and the obvious ambiguities in the proposal itself. Hanol is now saying, untruthfully, that the whole thing was an American "fabrication."

This probably means that the war will go on and that its costs can be expected to rise by billions of dollars. And if we are to avoid budget deficits of very dangerous proportions the Government will have to retrench in the area of the nonessentials or push through a major tax increase.

No easy choices are in eight. A tax boost in an election year, especially after all the self-serving applause which followed the most recent tax reduction, will be a bitter pill for Congress to swallow, particularly for those Members who will be up for reelection. Significant retrenchments can and should be made in some of the Great Society's massive social programs. But this, too, will be politically difficult. The Reverend Dr. Martin Luther King, Jr. has already served notice that if the President tries to take this way out of his dilemma "we will have no alternative but to use our lobbying and protent activity to get Congress to reverse it." The President, with his keen ear for the political nuances, will need a great deal of fortitude to stand up to this threat.

So, quite naturally, the budget pruners are taking a hard look at prospective space spending. What NASA projects can be canceled, stretched out, or pushed back? Realistically, what is the outlook for significant economies in this area?

Space spending in this fiscal year, which ends June 30, will be about \$5.17 billion. NASA would like an additional \$500 million for next year, but probably won't get it. A halt in further work on the Advanced Orbiting Solar Observatory has been announced. A nuclear power unit for the Voyager project, envisioning an unmanned journey to Mars in the 1970's, may be in danger. And other as yet unidentified exploratory undertakings are expected to get the ax.

Development of a nuclear power unit would be expensive. This is not generally true, however, of unmanned space exploration. Consequently the opportunity for economies in these projects, at least in the short run, are not great. For practical purposes this leaves as areas of possible substan-

tial savings, the remaining Gemini flights and the forthcoming tests of Apollo, the spacecraft which has been counted upon to land Americans on the moon by 1968.

The lunar project is the big dollar consumer. Estimates of the eventual cost range

from \$20 to \$30 billion.

The moon program grows out of the National Aeronautics and Space Act of 1958, strongly backed by the then majority leader. Lyndon Johnson, and a proposal in 1961 by President Kennedy which looked toward a manned flight to the moon and back by the end of this decade. Among the considerations was the prospect that we might beat the Russians to the moon, and thereby offset some of the prestige they had won through their sputnik flights and the great power of their launching rockets.

Support for a crash program to get to the moon has been considerably less than unanimous. One of the dissenters is Dr. Warren Weaver, a distinguished mathematician and former president of the American Association for the Advancement of Science. In a copy righted interview earlier this month with U.S. News & World Report, Dr. Weaver said that if we are doing this as some "ridiculous race" against the Russians it is "just plain stupid." The moon, he added is some to stupid." The moon, he added, is going to be there, and "I think we are utilizing at the present time altogether too much money," \* too much of our Nation's technical competence and too much strategic material. Dr. Weaver believes the really important questions which may be answered through a \$30 billion moon project could have been sensibly answered at a cost of \$500 million over a 5-year period. Presumably, what he had in mind was the landing of instruments, not men, on the moon.

Quite a different view is held by Dr. George E. Mueller, NASA's associate administrator for manned space flight. In an address to the National Conference of Editorial Writers a year ago, he said the principal goal of the manned space program is not to beat the Russians to the moon, but to make the United States first in space. Apparently calculating that the 8-year Apollo program will cost about \$20 billion, Dr. Mueller said: "We found that if the remaining 6 years of work were stretched out over 12 years the total cost of the presently approved manned flight program would increase by about \$6 percent, or about \$6 billion. Thus, the economic considerations support the maintenance of the present well-paced schedule."

What this seems to mean is that a cutback over the next few years, assuming this to be feasible, would increase the final bill by the very large sum of \$6 billion. And if an eventual higher cost is thought to be worthwhile for the sake of reduced expenditures in the immediate future, the problems of a stretchout still remain formidable.

The financial commitments already made for the Apollo program, not to mention the remaining Gemini isunchings, cannot be dishonored. The first Saturn rocket, the IB, is ready for its initial test. The Saturn V, expected to produce 7.5 million pounds of thrust, is far advanced. So is work on the vehicles which these powerful rockets can hurl into space. It is difficult to see how this work can be stopped or significantly slowed down without losing more than would be gained from a temporary dollar savings. Then there is the problem of holding together the space team we have so carefully built up, including not only the astronauts themselves, but also the 300,000 highly trained technicians who back them up. To let some or most of them go could have disastrous consequences on our whole future in space.

The very existence of this space-and-thebudget problem rests, of course, on the assumption that we are in for a long war, a war which will make increasing demands on our men and our resources. If the new

peace-feeler report should prove to be the real thing, if indeed we get to the conference table before much longer, the President will not have to concern himself unduly with budget cuts in the nonmilitary areas. But Mr. Johnson as of now cannot bank on such a happy issue out of all his afflictions. He must plan to cut spending where he can cut. And while the space program can be trimmed here and there, the really big item in that program—the journey to the moon—does not seem to hold much promise for the pruners.

Which means that the squeeze must be ap-

plied elsewhere.

### A Supertrain

EXTENSION OF REMARKS

# HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. PATTEN. Mr. Speaker, one of the most gratifying legislative achievements of the first session was the high-speed ground transit act. Many hope—and I am one of them—that this program will help railroads regain the popularity and prosperity they once enjoyed in the passenger field.

I am proud that one of the test projects of this program will take place in late 1966 between New Brunswick and Trenton, N.J., because of the area's unique rail facilities and physical qualities.

It was satisfying to read in late 1965 that the Department of Commerce awarded a contract to the Budd Co. for the cars that will conduct the experiments and tests. And service on the Boston-New York-Washington run is expected to start about April 1967, with train speeds ranging to 150 miles per hour. Because of the many merits of New Brunswick and the surrounding area, I hope that this "Hub City" will be one of the stops on the run.

In short, notable progress is being made on this historic and challenging rail program. As one of its several cosponsors and as a resident of Middlesex County, where part of the tests will be held, I submit an editorial by the New Brunswick Daily Home News of December 15, 1965, entitled "Next Year, a Supertrain."

OI Se

fo

Sis

In

gt

The editorial follows:

NEET YEAR, A SUPERTRAIN

You won't be on it but by this time next year you'll see a shiny four-car supertrain whooshing along the Pennay mainline between here and Trenton at a cool 150 miles per hour. That's 2½ miles per minute, and that's pretty fast.

The Department of Commerce's Northeast Corridor project has awarded the Budd Co. of Philadelphia a near-million-dollar contract for a crash program to get the four new cars on the rails late next year.

The cars are not strictly new. They'll be basically the shiny self-propelled Budd cars that a lucky traveler occasionally finds on the Philadelphia-New York run. A streamlined new design and a souped up power-plant (more than 60 percent more powerful than the cristing ones) will raise the train's speed from its present 90 miles per hour to the desired 150 miles per hour.

The project people say this stretch of track between New Brunswick and Trenton has been chosen because it has welded rails which give a smooth ride. It is likely another factor leading to locating the experiment here is the fact that this stretch is virtually curve-

While this test of high speed rail equip-ment is being made here with electrically powered units, the project will conduct aner experiment on a stretch of nonelectrifled track somewhere between Boston and New York on the New Haven Railroad. The er in this second experiment will be gas Contracts are expected to be let turbines. soon for this experiment.

The results of the two tests will be evaluated, and then it is expected that the Department of Commerce will chose the better system and order 50 cars at a cost of some \$10 million and put them into service be-

tween Boston and Washington.
The benefits which 150 miles per hour meeds will bring to different communities will vary. A key factor will be the choice of stops for the high speed trains. Obviously they can't stop at every station or they never attain the terminal-to-terminal eed which is the chief reason for establishing the service.

We would hope and expect that New Brunswick would be a regular stop for the high speed trains. Our area is growing rapidly in population. Rutgers will continue to generate more and more passenger poten-tial. Some of our largest industries are headquartered in cities on the Boston-New York-Washington run and their executives will find the high speed service convenient if there is a stop here. New Brunswick would also be the logical stop for travel between Princeton and New York and the Northeast.

While the new service is being tested here, New Brunswick will be a center of interest for all people interested in railway progress, d the refurbishing of the Pennsylvania Station here for the Rutgers bicentennial will come at a time appropriate in railroad history too.

### Wyoming VISTA Week

EXTENSION OF REMARKS

# HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. RONCALIO. Mr. Speaker, one of the most encouraging fronts in the war on poverty is VISTA. The Volunteers in Service to America have asked and answered the question of what they can do for their country. VISTA initiated a program in October at Fort Washakie in Wyoming. The understanding and assistance of VISTA volunteers has won the respect and gratitude of our entire State. In this regard, I am pleased to enter the statement of Gov. Clifford P. Hansen in proclaiming this week as VISTA Week in Wyoming.

The proclamation follows:

1

PROGLAMATION

Whereas the war on poverty is the concern of all citizens and its successful waging can bring new hope and opportunity to those fellow Americans who do not share in this Nation's promise; and

Whereas one of the most effective means of radicating poverty is through the efforts of adividual persons who live and work with the poor; and

Whereas the Volunteers in Service to America are fellow citizens who have chosen to devote 1 year of their lives to this nationwide effort and are now seeking others who join their ranks; and

Whereas many people in Wyoming are eligible to join VISTA—retired teachers, technicians, young college graduates, hus-band and wife teams who are seeking new programs to offer encouragement and assistance, can work with people in 1 of the 50 States and U.S. territories; and

Whereas the Wyoming courage and experience in fighting hardship is an important asset for VISTA volunteers; Wyoming people can carry their spirit and skill to the poor people of America, in rural and urban communities wherever poverty exists:

Now, therefore, I, Clifford P. Hansen, Governor of the State of Wyoming, do hereby proclaim the period of January 9 through January 15, 1966, as VISTA Week in W oming and urge all who can to explore this opportunity to serve America on its diverse home fronts.

In witness whereof, I have hereunto set my hand and caused the great seal of the State of Wyoming to be affixed this 4th day of January, 1966.

CLIFFORD P. HANSEN. Governor.

# Invocation for Navy Day Luncheon

EXTENSION OF REMARKS

# HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. DON H. CLAUSEN. Mr. Speaker, the invocation for the Navy Day luncheon celebration, given by the Reverend Howard Dalton of the First Methodist Church in Santa Rosa, Calif., was unquestionably one of the most impressive opening prayers I have had the privilege of hearing.

In observing the comments and reactions of the Navy personnel in attendance at this luncheon, I was convinced that they were equally impressed. Therefore, I take this opportunity to include Reverend Dalton's prayer in the CONGRESSIONAL RECORD for the benefit of my colleagues in the Congress

INVOCATION FOR NAVY DAY LUNCHEON

Dear Lord and Father of all mankind. We come unto Thee with gratitude in our hearts and words of praise upon our lips. Receive our thanks for the good earth, upon which we are privileged to live, and all the blessings that come unto us from Thee

We praise Thee for the ideals of our forefathers who lived dangerously, fought heroically, and served courageously to gain and maintain our freedom. Give us a renewed vision of the true meaning of freedom and a determination to preserve and extend it unto

all Thy children.

May Thy richest blessings be upon the
Commander in Chief of our Nation and all others who guide the policies and destiny of our Nation. Endow them with divine wis-dom that in all decisions made Thy will shall be done on earth.

As our attention centers upon the Naval personnel who have and continue to serve so faithfully, we give thee thanks for each of them who have given so much for us. Gra-ciously bless the officers and men of our Navy. Guard the ships that plow through the waters of the seas in their efforts to pre-

serve peace, relieve the oppressed and maintain freedom in our world.

Bless all nations of mankind on the face of the earth and hasten the time when the principles of holy religion shall so prevail that none shall wage war any more for the purposes of aggression and none shall need it as a means of defense.

Bless the food of the hour and strengthen our bodies to do Thy will in all things, we pray in Thy Holy Name. Amen.

# Gemini 7 Nearing Final Laps

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, the Dallas Times Herald featured an article by Alvin B. Webb, Jr., on December 17, 1965, which catches the flavor of the final laps of the flights of Gemini 6 and 7 and the total dedication of our astronauts reaching the objective of landing on the moon by 1970. The dialog between the Houston control and astronauts Frank Borman and James Lovell typifies their dedication to ful-filling our national objective. I commend the reading of this dialog in the last hours of the flight:

GEMINI 7 NEARING FINAL LAPS: PICTURES TAKEN AT RENDEZVOUS ELATE SPACEMEN

(By Alvin B. Webb, Jr.)

SPACE CENTER, HOUSTON.—Space kings Frank Borman and James Lovell, joking and cheerfully recalling their tremendous experience of rendezvous with Gemini 6, sped today toward their 14th and final day in orbit and an Atlantic splashdown tomorrow.

While earthlings viewed the first spectacular film of that nose-to-nose formation flight. the Gemini 7 crew fought off problems with a pesky fuel cell electrical supply system and

eceived a "go" for their 14th day.
Their space buddles, Gemini 6 Pilots Walter Schirra and Thomas Stafford, returned today to Cape Kennedy. Gemini 6 brought back the first pictures of a spaceship in ora fantastic view of Gemini 7 close to

within 6 feet of it Wednesday.

Astronaut Elliot See told Borman and Lo-Astronaut Enfort See told Borman and Lo-veil the pictures "are remarkably clear " " " just every little detail as clear as a bell. You look just great sitting up there."
"Well, thank you," the obviously pleased Borman replied. "It was a tremendous ex-

perience.

We're really in pretty good shape." reported. They were in their 195th man orbit.

They were also told the filmstrips shown over television networks, to which Borman quipped in jest: "And we are in our

Borman also had a word to say when ground stations told them Schirra and Staf-

ford stepped from their capsule Friday as if they had been up for a brief jet plane ride: "That's all they did, for crying out loud." Flight Director John Hodge said he was "very happy" today with the erratic fuel cells on the Gemini 7.

"All the systems we have looked at are going extremely well," Hodge said. "There's no reason why we shouldn't just go straight on downhill from here on."

Hodge said Gemini 7 had about 8 to 10

nds of fuel left and would have half of that Saturday for reentry.

The fuel cell problems were considered so serious Thursday that it seemed possible the 14-day flight might be cut short. But there was no talk of that today either at the space center or in the spacecraft where Borman and Lovell, cheerful and relaxed, chatted with pround controllers.

Both astronauts awoke chipper and re-sponded crisply when See radiced an up-dated flight plan to them.

"Hi, there, Houston, how are you this morning?" Borman said "Did you sleep well last night?"—turning the tables on ground controllers, who have been asking continual questions on the astronauts' condition. See filled Borman in on Schirra's pinpoint

landing near the carrier Wasp Thursday, and Borman said: "Get that right. There's a lot riding on He and Schirra made a bet Wednesday during their historic rendezvous flight as to which would get the closest to the carrier on

Lovell asked about his wife Marilyn, who is expected to give birth to their fourth child this month. Flight Surgeon Dr. Charles Berry told him there was "a little bit of a scare the other night but it didn't amount

He said Mrs. Lovell was sorry she didn't have the baby while Lovell was in orbit. The first photographs showed the Gemini

7 spacecraft looking brandnew and glid-ing over the brilliant blues and whites of earth 185 miles below.

(The dramatic pictures, believed taken by Schirra, showed straps dangling from a thermal blanket attached to the rear of the adapter section to protect it from the bitter cold of space.

(The straps were left when the spacecraft eparated from the launch vehicle.

(The object which Gemini 7 astronauts said hit their windshield shortly after launch December 4 apparently was one of the raps.)
The Gemini 7 spacecraft was also having

troubles with two of its maneuvering rockets but the problem was not serious and the fuel

cells were receiving most of the attention.

Space agency officials denied they were gambling on the troublesome fuel cell electrical power supply units. They said the fuel cells would carry through with plenty

"I think nothing means more to Frank Borman and James Lovell than to complete this mission as planned" said Astronaut Eugene Cernan at a midnight news confer-

If all goes as planned, the champion astro-nauts will fire their four powerful braking rockets at 8:28 a.m. e.at. (7:28 a.m. Dallas time) Saturday and end their record-smaahing cosmic journey with an Atlantic Ocean splashdown at 9:05 a.m. e.s.t. (8:05 a.m. Dallas time).

#### Ski in Pennsylvania

EXTENSION OF REMARKS OF

# HON. JOHN P. SAYLOR

OF PERINSTLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. SAYLOR. Mr. Speaker, as a member of the Congressional Sponsoring Committee, I call your attention to the first annual Pennsylvania Ski Ball which will take place next Saturday evening. January 15, at the Statler-Hilton Hotel in this city. The affair is designed to promote our State's rapidly growing recreation industry, particularly the out-

standing ski resorts, as well as to make a contribution to assist in financing the U.S. ski team at the next Olympic games.

Winter sports enthusiasts in this area should be especially interested in the excellent winter sports facilities now available in Pennsylvania. It is a long day's trip to New Hampshire or Vermont, but Pennsylvania's winter wonderlands are between 2 and 4 hours by car from the Nation's Capital. Many groups and families leave Washington on Friday afternoons to enjoy full weekends of winter sports in our State.

Gov. William Scranton and Senators HUGH SCOTT and JOSEPH S. CLARK, Jr., are honorary chairmen of the Pennsyl vania Ski Ball sponsored by the Pennsylvania Society of Washington. General chairman is Attorney William D. Patton, of Johnstown, who is vice president of the society. We all invite you to take advantage of the healthy recreational facilities that are in such easy reach of this area.

# German Government Statement Supports President Johnson's Vietnam Peace

EXTENSION OF REMARKS

# HON, JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. KARTH. Mr. Speaker, on January 7, 1966, the Federal Republic of Germany issued a statement which gives strong and unequivocal support to President Lyndon B. Johnson's effort to bring peace to Vietnam.

I am personally pleased that the Ger-man Government at Bonn has endorsed this U.S. diplomatic initiative.

The statement follows:

STATEMENT ISSUED ON JANUARY 7, 1968, BY THE GOVERNMENT OF THE FEDERAL REPUBLIC OF GERMANY IN BONN

At the end of the past year, President Johnson announced that the bombing of Vietnam has been temporarily discontinued. At the same time, he repeated that the United States is ready to enter discussions or consultations with any government at any time, and without preconditions.

The sincerity of the American efforts for

peace, and the desire to reach a negotiated settlement, become clear from the 14-point program in which the American Government points out that the Indochina Geneva agree ments of 1954 and 1962 could well form the basis for peace in southeast Asia.

The German Government has always maintained that the defense of the freedom and independence of Vietnam, by the United States, is of the greatest importance for the entire world. It supports all efforts toward a peaceful conclusion of the conflict, aiming at the maintenance of a free and independent Vietnam. It especially welcomes the declaration of the American Government that the Vietnam question must be solved by the people of Vietnam on the basis of their own freely arrived at decision.

Within the framework of a far-reaching diplomatic initiative, the United States has demonstrated its will for peace. Its efforts deserve the concurrence of all who love peace. The German Government and the

German people welcome and support this position of the United States of America, borne as it is by a high sense of responsibility.

# Private Foundations and Community Funds

EXTENSION OF REMARKS OF

# HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. CORMAN. Mr. Speaker, Mr. Lawrence M. Stone, tax legislative counsel, Office of the Secretary of the Treasury, recently delivered a most incisive speech on taxation and charitable giving before the Jewish Community Foundation of Greater Los Angeles.

Mr. Stone's remarks provide a most valuable analysis of public policy concerning the tax status of publicly supported and privately supported foundations. His speech points out both abuses and benefits of our present tax laws. The operation of foundations is an area of deep concern to all Members of Congress and I commend Mr. Stone's speech to their attention as a fine contribution in this field:

PRIVATE FOUNDATIONS AND COMMUNITY FUNDS (Address by Lawrence M. Stone, Tax Legislative Counsel, U.S. Treasury Department, Before 3d Biennial Seminar on Taxation and Charitable Giving of the Jewish Com-munity Foundation of Greater Los An-geles, Beverly Hills Hotel, Beverly Hills, Calif., Dec. 2, 1965)

Neither charity nor organized community charitable enterprises are new to the Jewish people. Indeed, such endeavors are among our most ancient traditions. They are, per-haps, one of the reasons for the stubborn survival of the Jews through centuries of hostile environment.

The modern notion that the poor have a right to assistance is deeply imbedded in Jewish tradition. The Hebrew word "mitavah," frequently used to connote "good van, requestly used to common deed," means "commandment." The common term for charity, "tsdokeh," can be defined as "social justice." In the meanings of both of these words one finds a clear sense of the obligation which charity carries for those who can do it and the entitlement which it establishes for those who need it.

D

ac to de

pa

oc ca ita

fo te

to do sta an for pri

The Jewish people have, moreover, looked upon the obligation to do charity and the right to receive it as principles to be enforced by the community. Community leaders are charged with responsibility for conducting charitable campaigns. The community as a whole judges the ability of each of its members to give. Those who fall to give according to their resources must answer to the community. In these very real senses, Jewish tradition makes charity a plain and important public matter.

Yet charity is not necessarily performed only through community action; good works do not always spring from such public sources. Indeed, one of the more remarkable sources. Indeed, one of the more remarkable phenomena of American society in the last 25 years has been the growth of the so-called private foundation. Charkable organizations of this type are ordinarily established, endowed, and directed by a single individual or a family; and, in that sense at least, they are private. Today a number of such foundations have assets worth many millions of

dollars. The largest—the Ford Foundationhas assets of several billions of dollars. total number of private foundations in the United States appears now to be well over 15,000. In both wealth and quantity, then, the privately supported charitable enterprise has become an increasingly significant fea-ture of modern American charity.

A number of important differences attend the distinction between charity which draws its support and direction from a broad public base and charity which finds its origin in the decisions of one individual or a limited group. The existence of those differences and the significance of their social implications have received clear recognition in our tax laws and in pending proposals for revision of the tax It is to the character of these two forms of charity—the publicly supported and the privately supported—and the difference in their tax status that I should like to address myself tonight.

The most prominent illustration of privately besed charitable endeavor is the pri-vate foundation. Early this year the Treasury Department submitted a report on or-ganizations of this class to the Senate Finance Committee and the House Ways and Means Committee. The product of more than a year of investigation, research, and analymis, the report discusses the part which the private foundation plays in American philanthropy, appraises the actual performance of such foundations, points out areas of abuse which have developed, and recommends leginlutive action to deal with these problem

The report begins with a recognition that the accomplishments of private foundations have been impressive ones. Beyond that, the report reflects, I believe, a firm and abiding conviction that the private foundation, as institution, pomesses characteristics which make it capable of unique and essen-tial contributions to the conduct of charity in this country. Readily informed, available even to persons of relatively modest means, often capable of simple and informal man-agement, the private foundation has very special qualifications to develop and harness individual creativity, promote new ideas, advance new causes, and move with speed and feribility into emerging areas of need. The frequent freedom of private foundation funds from commitment to specific, budgeted operating programs enhances the flexibility of the institution and enables it to provide verful impetus for growth and evolution in the focus and direction of charity.

On the other hand, any thorough examina-tion of the activities of a broadly representative group of private foundations forces one to conclude that serious, quite fundamental shuses have arisen among a substantial minority of these organizations. The Treasury spartment Report describes six major area of difficulty. The absence of clear and easily administrable restrictions upon dealings beween private foundations, their managers, donors, and related parties has permitted un-fortunate diversions of foundation assets to private advantage. Protracted retention of income by some private foundations, or investment in assets of low current yield, has occasioned unwarranted delay in the application of funds to the support of active chartable projects. The involvement of private foundations in the conduct of business enterprises unrelated to their charitable functions has produced a variety of unfortunate consequences. Contributions to private foundations of stock in corporations over which the denor continues to maintain control (or contributions of interests in other donor-controlled property) have, in many in-stances, given rise to little benefit for charity and sharp conflicts of interest for donor and foundation. The present brond powers of private foundations to borrow and lend, or to trade and speculate with their assets, have created a number of abuses. Donor control

of unlimited duration has permitted the mis use of foundations for private purposes, the perpetuation of dormant or obsolete foundations, and the development of rigidity and parochialism in foundation management.

Some examples of these abuses are, I think, enlightening.

One private foundation made 29 loans to its principal donor during a single 5-year

period.

A group of three private foundations, all controlled by one individual, made a wide variety of large loans to that individual's friends and business acquaintances. businessman, for example, owed the three foundations \$6,571,448 at the end of 1956.

Another private foundation has which are very conservatively estimated at half a billion dollars. It is thus one of the largest foundations in the country. During the period from 1947 to 1965 the organization devoted a total of only slightly over \$51/2 million to charitable projects. Its annual support of charitable activities during that period, in other words, averaged less than one-tenth of 1 percent of its asset value.

A different private foundation holds controlling interests in 26 separate corporations 18 of which operate going businesses. One of the businesses is a large and aggressively competitive metropolitan newspaper, with assets reported at a book value of approxi-mately \$10,500,000 at the end of 1962 and with gross receipts of more than \$17 million for that year. Other corporations in the for that year. Other corporations in the group operate the largest radio broadcasting station in the State, several banks, three large hotels, a lumber company, a variety of office buildings, and a garage. Concentrated largely in a single city, these properties constitute an economic empire of very substantial power and influence.

A different private foundation controls 45 business corporations. Fifteen c.i them manufacture clothing; seven conduct real estate businesses; six operate retail stores; one owns and manages a hotel; others carry on printing, hardware, and jewelry businesses

Another private foundation owns a minor ity interest in a family controlled corpora-tion. The members of the family claimed charitable deductions of almost \$2 million for their contributions of stock in this corporation to the foundation, but the stock has paid no dividends in the years from 1948 through 1957, none for 1962 or 1963, and only token dividends for the years 1958 through

Another private foundation, entirely through the mechanism of investment borrowing, was able to increase its net worth from \$1,000 to \$1,150,000 in 5 years. This remarkable financial expansion took place quite without the benefit of contributions and, therefore, without the salutary outside scrutiny which reliance upon contributors implies.

These examples are striking; but they are not unique. On the contrary, they fairly represent types of actions and practices of which there are many other instances. I believe that all of us would agree that the ac-tivities which they illustrate are ones in which foundations simply should not be involved. The Treasury Department report recommends specific legislative action to deal with each of these areas. On August 27 of this year, in a joint statement, Chairman Wilsus Mills and ranking minority Member JOHN BYRNES asked for written comments from the public on the Treasury Department's report. Statements of Representative WRIGHT PATMAN and Senator ALBERT GORE also indicate strong congressional interest.

also indicate strong congressional interest.
All point to the clear possibility of congressional action in the near future.
The Treasury proposals would heighten the tax distinctions which Congress has already made between private foundations and other types of charitable organizations—generally, e publicly supported charities.

In 1950 rules concerning prohibited trans-actions and unreasonable accumulation of income were applied to private foundations.

In 1964, when Congress increased the gen-eral limitation upon the amount of deductible charitable contributions which individuals can make each year from 20 percent of adjusted gross income to 30 percent, it exadjusted grass income to 30 percent, is ex-cluded donations to private foundations from the increase. At the same time, Con-gress placed special limitations upon the kinds of private foundations which can qualify to receive the unlimited charitable contributions permitted to individuals in certain instances.

third differentiation between private foundations and other classes of philan-thropic organizations occurred in the 1964 legislation: in initiating a provision allowing individuals a 5-year carryover of charitable contributions which, in a particular year, exceed deductible limits, Congress did not extend this benefit to contributions made

to private foundations.

The clear tax differentiation between private foundations and publicly supported charitable organizations stems in part from a fundamental conviction on the part Congress that charitable enterprises which lack the watchful and active participation of the public are particularly susceptible to abuse. The specific instances of abuse which I have described, and the current Treasury legislative proposals designed to deal with the problems which they exemplify, demonstrate the soundness of that convic-The view is not that privately based charity is not good: the long continuation of tax deductions and exemptions for such charity provides a convincing affirmation of the congressional belief in its value. Rather, the view is simply that, in the case of private foundations, care must be taken to prevent misuse of charitable wealth and to protect the public interest in such wealth,

By way of contrast, let us turn our atten-tion for a moment to a class of public charitable organizations with which you are community funds or community foundations. A variety of important attributes lend an essentially public character to these organizations. Their management, for example, ordinarily is genuinely public. In many instances the persons charged with responsibility for the disburseof their funds are public officials or other prominent members of the community. Commonly these persons are chosen for their knowledge of the affairs and needs of the community, for their experience in dealing with public problems, for their close relationship with active charitable endeavors in the community, and for their abilities to invest and manage wealth wisely. They are not selected for their relationship to one of the foundation's donors, or for their willingness to submit to his desires—as is often the case with the managers of private foundations. While such managers of private foundations often act for the public good, they still are not representatives of the general public. The freedom from such private pressures of community foundation managers, however, enables them to act as effective representa-tives of the general public.

Another public characteristic of the community foundation is its special qualifica-tion to identify and cope with the problems the particular segment of the public which it serves. By drawing Its direction and financial support from the residents of the community, the organization enlists in its affairs those most likely to be aware of, and responsive to, the needs of the community. Persons with sufficient means can create individual funds within the general frame-

<sup>1</sup> The distinction rests also upon a second ground: it represents a careful congressional balancing of the financial requirements of operating charitable institutions against those of private foundations. work of the foundation if they wish their contributions to be devoted to the solution of particular community problems. Other members of the community, whose contributions are not of sufficient magnitude to justify the creation of separate trusts or who wish to provide the foundation with flexibility by allowing their contributions to be applied to the general purposes of the organization, can give to the foundation's general fund. This broad availability to the different elements of the public whish to support charitable works within the community contributes significantly to the public character of the community foundation.

In fixing the guidelines for use of their funds, community foundations have been careful to avoid an essentially private often crippling-feature of some private trusts and private foundations. We are all familiar with notorious cases of trusts created in perpetuity for purposes which have long since become obsolete. Perpetual funds have, for example, been established to provide for retired windjammer seamen, to purchase and locate horse troughs "wherever they may be needed," and to assure an adequate supply of spinning wheels for re-tired spinsters. In cases of this kind, the donor's effort to set his perpetual, private imprint upon the funds which he consigns to charty results, over time, in the diminu-tion and ultimate cessation of the social utility of his gift. The judicial principle of cy pres, which under certain circumstances permi's application of charitable trust funds to uses other than those specified by the grantor of the trust, has proved to be of quite limited flexibility; and resort to it is sarily both time consuming and expen-Community foundations have dealt sive. ely with this problem, by insisting that their donors accord them freedom to vary the uses to which donated funds may be put if social changes make variation appropriate. In that way, they have rejected the encrustations of perpetual private restric-tions and have maximized their ability to discharge their public responsibility by re-sponding to the changing conditions of their communities. Similar problems often arise when the donor of a private foundation unduly restricts the investment powers of the trustees by insisting that corpus be kept invested in a particular asset. Such re-strictions often become impractical and detrimental with the passage of time. A community foundation can also avoid such

Community foundations manifest their character as public charitable institutions in yet another way. Commonly, they make detailed periodic reports of their activities to the members of the community which they serve. By doing so, they expose their charitable projects and their investments to searching public scrutiny. This full disclosure of their operations to public view minimizes the opportunity for abuse and contributes substantially to the development of public confidence in them.

The broad public base of the community foundation confers other advantages upon it. By consolidating within a single entity the resources of many individual donors, such foundations are able to secure administrative and operational benefits which would be unavailable if their contributors established their own separate and discrete private foundations. Investment and other financial services can be obtained more cheaply. Fund-raising costs can be spread more broadly, and their share of each charitable doller can, therefore, be minimized. Capable, experienced, professional personel—whose salaries would be prohibitively expensive for small individual private foundations—can be hired. In these respects, too, the community served by the foundation profits by the public nature of the institution.

Because of that nature, community foundations and those who contribute funds to them ordinarily receive very special Federal tment. Contributors may dee tax tres duct their contributions to the extent of 30 percent—rather than the usual 20 percent of their adjusted gross incomes. in excess of the amount currently deductible may be carried over for deduction in the 5 following years. Donations may qualify for the unlimited charitable contribution deduction, granted to individuals who meet certain additional requirements. The restricwhich Congress has deemed it necessary to apply to the self-dealing and accumulation practices of private foundations have never been extended to the community foundation

The existence of these special tax rules constitutes impressive testimony to the belief of Congress in the worth and the integrity of the publicly supported charity. thoroughly public institutions, possesses a variety of traits which fasten them firmly to the needs, support, and control of the segment of the public to which they address themselves, community foundations 9.76 prominent among the organizations wh performance has produced and justified that belief; and they share in the unique tax privileges to which it has led. With those privileges, however, there constantly remains an important public responsibility—a re-sponsibility to maintain and improve tha levels of performance of the pest; to pre-serve complete freedom from abuse; to avoid lending its exemption to questionable tax saving maneuvers which may cause public loss of confidence in the wisdom of the tax benefits granted for charity; and, above all, to persist in energetic and imaginative response to emerging public problems. Familiar as I am with its achievements and principles, I am certain that-in the great tradition of Jewish charity—the Jewish Commu-nity Foundation of Greater Los Angeles will tinue to contribute its full share to the discharge of that vital responsibility.

Thank you.

#### Travel Has Its Values

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MULTER. Mr. Speaker, during the adjournment many of the Members of this body traveled outside the country. In my view—and in the view of many of our colleagues and fellow citizens—this is one of the many ways we learn about our jobs and how to do them better.

It is difficult, however, to pick up a newspaper or magazine that comments on this traveling without finding some slur cast upon the concerned Members. I am happy, therefore, to correct the impression that all journalists believe that the Members of the Congress live it up on the taxpayers' money while traveling during adjournment.

The following editorial appeared in the November 22, 1965, edition of the Honolulu Star-Bulletin and I commend it to the attention of our colleagues:

#### TRAVEL HAS ITS VALUES

Elsewhere on this page are three comments on travel by public officials, our own on Senator Mansfield's touring "diplomats," Marguerite Higgins' on Governors who went

to Vietnam, and Drew Pearson's on junketing Congressmen savoring the sunny delights of Hawaii (although many of them arrived during our recent "monsoon").

Government junkets are not in themselves wasteful of the taxpayers' money, although too many of them obviously are pleasure tours at public expense.

A conscientious public official on a study mission related to his public business can learn much of value to his constituents. The idea that we can provide all of our own answers for all of the problems that beset us is indefensible.

Hawaii has suffered from the provincialism of many of its earlier day politicians, who had no idea how things were done in other jurisdictions. That is being corrected, both by the election of more widely traveled people to public office and by a more liberal travel policy for both appointed and elected officials.

Certainly, public funds will be wasted on unproductive travel, and we should do what we can to prevent this. But it would not serve Hawaii—or the United States—to forego travel simply because a few junketeers abuse their trust.

# Let's Remove Politics and Profit From the War on Poverty

EXTENSION OF REMARKS

OP

# HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. GOODELL. Mr. Speaker, under the leave to extend my remarks in the Record, I include the following speech by Representative Dow H. CLAUSEN, of California, before the California State Chamber of Commerce. Representative CLAUSEN is a great independent thinker with a wealth of fresh, interesting, and new ideas. His speech offers an incisive analysis of the poverty program.

The speech follows:

LET'S REMOVE POLITICS AND PROFIT FROM THE WAR ON POVERTY

(Address of Congressman Don H. CLAUSEN before the California State Chamber of Commerce, Los Angeles, Dec. 9, 1965)

The so-called war on poverty got off to a bad start and is still in deep trouble. In the past few days, scandalous headlines were appearing with increasing frequency as I left Washington. Many Members of Congress pointed out in the congressional debate this year the problems inherent in the law. It is not enough to put a good label on a bill and then to neglect meaningful standards and guidelines. The first thing that is wrong with this act is that it was not written by Congress but by the administration. As problems in the war on poverty have gained increased attention by the public, the administration, in its sensitivity, has refused to allow amendment to the act.

Last year when hearings on the amendment of the act were opened by the House Education and Labor Committee, Chairman ADAM CLATTON FOWEL charged that the war on poverty was a "giant fiests of political patronage—a political porkbarrel" and made assurances that needed directives would be

written into the law.

It appeared that something substantial would be done, but as witnesses appeared, testifying to the alipshod manner in which the program was being implemented, pressures were applied and the hearings were stopped after only 5 days of testimony. A few meaningless amendments were forced

through Congress speedily and then, with the poverty program doomed to another year of operation without direction, Chairman Powers hastily called for a complete examination of the program. A large committee staff was assembled, hearings were promised in the field, but following 3 months of investigation, nothing substantial has resulted.

The major issue of the war on poverty, according to the attention it has received in recent months, has been the issue of the involvement of the poor. A truly effective war on poverty will not do things for the poor people-it will do things with the poor This is the difference between welfare-dole approach of the past and the potential of the future.

Almost any social worker or person working with the poor can tell you what the poor's problems are—lack of education, lack of a job and lack of motivation, among others. One of the characteristics of poverty is that it is generally handed down from generation to generation. No wonder many of the poor have become cynical, bitter and without hope.

If we cannot involve the poor in the solu-tion of their own problems, they will have no place to go but to the streets. No one knows their problems better than the poor them They must be involved in policy decisions of the program where proposed solutions to the problems are being developed.

Make no mistake about it-all the public relations work on the war on poverty has raised great expectations among the poor. We had better make this program work or its failures will generate a new and more serious revolt among the poor.

is another reason why the poor should be involved in policy roles. Many of their frustrations derive from their conflict with the big city governments and institutions. In some ways they have good reason for frustration. Certainly our big city governments leave a great deal to be desired. If the poor are not involved they are going to fight and circumvent the existing institu-This means picket lines, riots and demonstrations that waste energy and talents that could be otherwise employed. Involvement can show the poor that they can work through existing agencies

be

tial

This does not mean that local government. social agencies, and the State should not have anything to say. I am an advocate of local With the right kind of representacontrol. tive community action boards, dictation from Washington should become virtually unnecessary. To date the States have been comessary. To date the States have been pletely bypassed and so have the poor.

During the debate last year, the Republicans proposed an amendment that would insure balanced representation on commu-nity action boards. Belatedly, the Office of Economic Opportunity has been applying our proposal, but it is not written into the law. Consequently, many communities have been torn asunder in the strife over the establish-ment of a program. Proper legislation could avoid this waste.

When the guidelines were first established for running the program, the administration showed little interest in the requirement that the poor participate in running their own programs. The first directives did not even mention representation of the poor, although the law requires "maximum feasible participation of the poor."

Mr. Shriver apparently now believes that the poor should not only help at the service level, but also at the highest policy level. The Bureau of the Budget and the administration apparently do not agree with Mr. Shriver

Why is it important that the poor be involved? What will involvement mean? First, involvement will mean motivation. Being involved provides a glimmer of hope for people—that their opinions are heard and listened to. They see a channel of working

out their frustrations and finding solutions to their own problems. Second, involvement means responsibility. In order for a person to act responsibly, he must be given respon-sibility. If he has no decision concerning the factors that affect his life, he will not fe that he is responsible to carry out the decisions made for him.

Why have the administration spokesmen suddenly become so cautious over this issue of involvement of the poor? The poor and their advocates have seen participation as an opportunity to change or overthrow existing institutions and government. The program, the administration conceived political boon, or boondoggle, has suddenly boomeranged. The poor will simply not be pacified by another handout program when something new and better was promised and is available.

There is more to the poverty program than the question of involvement of the poor. There are other programs beside the community action program in which political motivation has compromised the effectiveness of the program. I am speaking par-ticularly of the Neighborhood Youth Corps. This program, properly administered, could provide training for the great numbers of unemployed and unemployable youth. Instead, politicians have again stepped in to use this program for their own ends. Recent newspaper studies of Rhode Island Neigh-borhood Youth Corps programs are indicative of what is happening throughout the country. Rather than enrolling poor youths to whom this program would give needed income, training and motivation, enrollees are typically from families whose income is in excess of \$7,000 per annum. Although this income level is not high, it is far above the poverty standard. Some of the youths, I was appalled to learn, were college enrollees. People have been placed on the payrolls of the program as supervisors, when they were performing no functions for the corps, but holding other municipal jobs. The list of abuses goes on and on. The Boston pro-gram is the most recent example of corruption. There, enrollees collected paychecks long after their names were off the payroll, and some employees of the program colseveral salaries through the use forged identification cards provided to them by the program's employees

The Project Headstart section is generally recognized as the best part of the poverty program. It is interesting to note this section was originally proposed 4 years ago by Republicans, but turned down by the Democratic majority. It was included in an education bill I coauthored, H.R. 6422.

The question is, Where do we go from here? The Republicans in Congress joined by a number of Democrats, the National Chamber of Commerce and other organisa-tions were opposed to the original legisla-tion. The reason was not that we were against helping the poor; rather we were against the manner in which we felt this loosely drawn program would be adminis-It is unfortunate that many of our objections have been borne out. Those include the lack of coordination, confusion, flaunting of established governmental structures and the cruel hoax of raising people's expectations far above the ability of this program to fulfill.

spite objections, the war on poverty has become an economical, social, and political fact of life. We must deal with it as a fact of life. What are our alternatives? vigorously oppose the program, and by so doing, be charged with being against the The second alternative is to ignore, or refuse to take part in, the war on poverty because this problem is not of our making. This approach would be to bury our heads in the sand, and, again, we would be charged with the responsibility for failure. Our final alternative is to take an active

part in the program. This is my recommen-

Our major targets should be the removal of politics and profit from poverty.

The war on poverty is making many changes, some distasteful and some necessary, in most localities across the Nation. At this point, it may be to our best interests to take over and direct the poverty program with the dynamic and creative leadership that we know is available in the private sector. It is not only to our benefit, but it is our responsibility to take an active interest in these programs to insure that the decisions being made are carefully weighed and carried out in a proper manner. I am suggesting that the chamber members become, when possible, members of the community action boards. There may also be roles for you to fill in offering training experiences for program en-rollees. This could be of benefit to the employer and the employee.

In this way, the poor can watch you in ac-They will gain knowledge from your participation. You will gain more respect as a responsible community leader. As we all realize the war on poverty is far from the solution to the problem of economic deprivation in our country, we must seek other means of alleviating the problem. One of the primary problems of poverty is lack of employment by the poverty-stricken. Jobs employment by the poverty-stricken. Jour must be developed for these people and more importantly, the people must be developed for the jobs. Those of us who have worked for a living or developed business enterprises know that the only real answer for reduction of poverty and unemployment is to create opportunities for the individual to be-come self-motivated, increase his productivity and add his effort to the acceleration of economic growth. Human energy is the mainspring to progress. Our continuing challenge is to develop programs that spark the enthusiasm of a young man or weman who is attempting to propel himself into orbit in the mainstream of American life.

With this thought in mind, a group of de-termined Republicans, myself included, have coauthored legislation that we think will truly provide this type of opportunity for working Americans. Rather than creating a working Americans. Instant treating a new bureaucracy that might inhibit the management of the program, we have chosen to accentuate the positive aspects of existing institutions and enterprises. We have introduced the Human Investment Act package The first of two bills in this package would encourage employers to increase their job training and retraining programs significa ly by permitting them to deduct as a tax credit up to 7 percent of funds spent in such programs. When they provided the 7 percent tax credit for machinery investment incentives, I believe they left out the most ingredient-incentives for upgrading the qualifications of human resources. The purpose of this legislation is to correct this oversight.

The second bill would permit employers to hire persons over 45 without serious con cern over the extra costs involved for health insurance and retirement plans. This, too, would be accomplished by allowing tax cred-Its to balance, in part, any such added costs.

In case you haven't guessed it, I'm trying to use the tax structure to help create incen-tives for people to advance their way in life rather than destroy their initiative through excessive taration. As we seek means of im-proving our education, employment, and other programs for social progress, we must seek positive means of making the tax struc-ture a constructive tool in our way of life, not a destructive tool. Proper tax reform is

Rather than taking away initiative by way of free money and help, people should be en-couraged to become mutivated volunteers by permitting them to take measured tax deductions if they, in turn, accept certain social responsibilities.

This approach may not fit the Great White Tails approach may not be the creat white Father's protocol of paternalism, but it provides unlimited opportunities for a man to chart his course toward a life of dignity, self-respect, and the cherished independence that remains the dream of freemen every-

# A Breakthrough in New Urban Transport Systems

EXTENSION OF REMARKS

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. REUSS. Mr. Speaker, last session I introduced H.R. 9200, which would have amended the Mass Transportation Act of 1964 to provide for an urban transport research and development program.

Twenty-one other Members of the House have introduced identical legislation. In the Senate, the Senator from Maryland [Mr. Typings] introduced an identical bill. S. 2599, which was cospon-

sored by 10 other Senators. The sponsors of the legislation in the House, in addition to myself, include: the gentleman from Ohio [Mr. ASHLEY], H.R. 9201; the gentleman from Texas [Mr. CABELL], H.R. 9202; the gentleman from New York [Mr. FARBSTEIN], H.R. 9763; the gentleman from Minnesota [Mr. Fraser], H.R. 9995; the gentleman from Ohio [Mr. GILLIGAN], H.R. 9826; the gentlewoman from Michigan [Mrs. GRIFFITHS], H.R. 9996; the gentleman from New York [Mr. HALPERN], H.R. 9997; the gentleman from Connecticut [Mr. IRWIN], H.R. 10857; the gentleman from New Jersey [Mr. Jorson], H.R. 9998; the gentleman from Maryland [Mr. Longl. H.R. 9999: the gentleman from New York [Mr. McCarthy], H.R. 10000; the gentleman from New Jersey [Mr. MINISH], H.R. 10001; the gentleman from Pennsylvania [Mr. MOORHEAD], H.R. 10002; the gentleman from New York [Mr. MULTER], H.R. 9203; the gentleman from Illinois (Mr. Ronan), H.R. 10003; the gentleman from New York [Mr. ROSENTHALL, H.R. 9204; the gentleman from Wisconsin [Mr. STALBAUM], H.R. 10279: the gentlewoman from Missouri [Mrs. SULLIVAN], H.R. 9205; the gentle-man from Ohio [Mr. VANIK], H.R. 9206; the gentleman from Georgia [Mr. WELT NER1, H.R. 9207: the gentleman from Illinois [Mr. YATES], H.R. 9208.

The sponsors of S. 2599, in addition to the Senator from Maryland [Mr. Typings], include: the Senator from New Jersey (Mr. Casel, the Senator from Pennsylvania (Mr. Clark), the Senator from Michigan (Mr. Harr), the Senator from Indiana [Mr. HARTKE], the Senator from Hawaii [Mr. INOUYE], the Senator from Washington [Mr. Jackson], the Senator from Massachusetts [Mr. KEN-NEDY], the Senator from California [Mr. KUCHEL], the Senator from Connecticut [Mr. RIBICOFF], and the Senator from Massachusetts [Mr. SALTONSTALL].

The January 1966 issue of Traffic Quarterly carries an article by me ex-

plaining the need for Federal research and development into the problems of urban transport, and outlining the provisions of H R. 9200:

A BREAKTHROUGH IN NEW URBAN TRANSPORT SYSTEMS

(By Representative HENRY S. REUSS)

The most pressing transportation problem facing the country today is to devise systems of public transport capable of meeting the needs of large metropolitan areas.

As a cure for the intracity transportation

problem, we are relying on the Mass Trans-Unfortunately, the portation Act of 1964. act can do little more than help cities purchase new buses or replace wornout way cars. While this program has been helpful, the Federal Government has not taken the additional step it should take. has not sponsored substantial research in an effort to develop new, dynamic systems which will provide urban dwellers with good public transport.

Within the past year, the administration has committed \$90 million to a 3-year program to develop new modes of high-speed, intercity ground transportation. It has also given the go-ahead to a program to develop a supersonic air transport which could re quire as much as a \$1 billion investment of public funds.

We should be making a comparable effort to develop new systems of moving people about within our cities rapidly, safely, economically, and efficiently.

Today, nearly three-quarters of our popula tion lives in urban areas. By 1980 the urban population will be 80 percent of the total, or over 200 million people-more than the ent population of the entire country. All of these people will have to move about the cities in which they live. We cannot forever depend on existing transportation systems. The Federal Government must promote the development of systems which will supplement existing modes.

In view of this need, during the last ses sion of Congress I introduced legislation, H.R. 9200, to amend the Mass Transportation Act of 1964 setting up a research pro gram aimed at achieving a technological breakthrough in the development of new modes of urban transportation. Twenty other Members of the House have introduced identical legislation.

The bill carries an authorization of \$10 million annually for the next 2 yearsremainder of the life of the mass transit program—and makes it mandatory that the research be undertaken. The research, the legislation specifies, must be designed to create completely new urban transit systems, rather than merely finding ways of improving existing ones.

#### SPACE AGE TECHNOLOGY IS NEEDED

Technological breakthrough is a space age phrase which has yet to be applied generally to earthly space age problems. Wonders have been accomplished in our efforts to end a man to the moon. There is no res son why this same genius cannot be put to use to send a man more speedily from his home to his place of work or other city destination.

A comparison of the Federal Government's expenditures for research and development illustrate dramatically how these efforts neglect common areas of human need. For fiscal 1966, the administration requested nearly \$15.5 billion for research and development. Most of the funds were earmarked for the Department of Defense, the space program and the Atomic Energy Commission—\$13 billion. Other agencies, including the Department of Agriculture, the National Science Foundation, and the Department of Health, Education, and Welfare, got lesser amounts totaling \$3.5 billion.

Some Federal research and development

funds do go for improving transportation systems. But here again the effort is badly of balance, with no funds earmarked specifically for intracity transit problems.

Secretary of Commerce John T. Connor, in testimony May 25, 1965, before the House Committee on Interstate and Foreign Commerce on the administration's proposal, since enacted, to set up a Federal program to develop new modes of high-speed transportation for travel between cities, re-ported on Federal transportation research expenditures. He said that in fiscal 1963 the Federal Government spent \$275 million for aviation research. \$24 million for highway research, \$15 million for water transportation research, and \$7 million for research into intercity rail problems.

The funds invested in highway research, for example, were largely devoted to safety problems and ways to improve road design. construction, and maintenance.

Rail transportation research is being augmented during the current fiscal year by an additional \$10 million as a result of enact-ment of the high-speed ground transport The remaining \$10 million of the \$20 million authorized for this program, familiarly known as the northeast corridor project, is being used for gathering statistics on ground transportation needs and demands—\$2 million—and setting up a demonstration high-speed train to run along million. corridor-\$8 The Congress authorized a total of \$90 million for the program over a 3-year period, with increasingly larger amounts going for research. Of the entire \$90 million, the Department of Commerce has earmarked \$8 million for the statistics program, \$18 million for demonstra-\$64 million for research and and development

#### THE NEED IS FOR INTERCITY TRANSPI

It is well that the Federal Government intends to help achieve a technological breakthrough in rail transportation between cities, and in the supersonic air transport which will be able to fly at speeds up to 2,000 miles per hour. But we should recognize the equal, if not greater, need for a technological breakthrough in intracity transportation.

Few statistics are available on the demand for intercity, as opposed to intracity, travel. However, one of the ways of measuring the need for service, as Secretary Connor onstrated in his testimony, is in population density. The Secretary reported, as part of his justification for Federal assistance to the northeast corridor project, that the population density of the area which the proposed system would serve was 854 people per

square mile.

The population tables for 1960 show that in the 120 largest cities in the country, those with populations over 100,000, the popula-tion density ranges from 6,000 to nearly 25,000 people per square mile. While these figures are admittedly at best a rough guide, they do give an indication of where the need

In addition, the advantages which truly effective and efficient urban transportation systems would offer cities are numerous.

Air pollution, caused to a large extent by automotive exhaust which continues to aggravate the city dwellers and to injure their health, would be reduced. Prof. Morris Neiburger of the University of California at Los Angeles, an expert on air pollution problems, has predicted that polluted air may well kill off our civilisation within the next century unless the automobile population ex-plosion is checked. In order to prevent this he suggests we need to develop a vehicle which has the advantages of the automobile but is not powered by the internal combustion engine.

Accidents as a result of transportation would be reduced. Private motorcars are the

most serious cause of vehicular accidents, and in 1964 automotive traffic caused 1.7 million injuries, of which 47,800 were deaths. In urban areas alone there were 980,000 injuries and 14,500 deaths. In addition, the costs aresulting from accidents are considerable. In 1964 the damage bills for all urban accidents amounted to \$4.6 billion, with property damage accounting for over half, or \$2.6 billion.

Good urban transport systems would reduce commuter costs. Automobiles are expensive to operate. Including depreciation, maintenance and repairs, fuel, insurance and other related expenses, a car costs between 10 cents and 12 cents per mile to run.

Finally, strangulation of city areas by urban highways, excessive numbers of parking lots, and all the rest that goes with present commuter traffic results in making our cities ugiler rather than more beautiful places to live and work. Establishment of effective urban transportation systems would help to reverse this trend.

### ACT NEEDS RESEARCH MANDATE

The Mass Transportation Act of 1964 authorized a total grant appropriation of \$375 million over a 3-year period. The funds are given to communities to meet part of the cost of improving mass transportation facilities and equipment. The law also stipulates that of the \$375 million, up to \$10 million a year can be appropriated for a program of: "Research, development and demonstration projects in all phases of urban transportation (including the development, testing, and demonstration of new facilities, equipment, techniques, and methods) which he determines will assist in the reduction of urban transportation needs, the improvement of mass transportation service, or the contribution of such service toward meeting total urban transportation needs at minimum cost."

This is not a proper mandate for the type of research program that is needed, for under this provision all the funds for research, development, and demonstration have been devoted to demonstration projects.

The cost of equipping our cities properly with existing mass transportation facilities has been put as high as \$10 billion. Obviously, \$375 million will not move us very far toward this goal. Thus, the demands on the program are considerable, and the administrators apparently have felt it necesary to apply all the program's financial resources (including the \$10 million annually for "research, development, and demonstration") toward meeting the demand.

Writing in this journal for July 1964, John C. Kohl, Assistant Administrator (Transportation) of the old Housing and Home Finance Agency, the predecessor to the Department of Housing and Urban Development, described the Agency's policy toward the pilot mass transit demonstration project, which preceded the 1964 act:

"Further, the emphasis of the law upon 'carrying out urban transportation plans and research' has been interpreted to mean that demonstration projects should be oriented to operational problems and the pracetical evaluation of specific plans or the procecution of basic transportation research."

The policy of the Department remains unchanged today.

While the demonstration grants no doubt lead to greater knowledge and understanding

Ìs

at

11

le

ile

18-

on

of urban transport problems, they do not begin to explore the possibilities that are on the horizon and where the real solution to our intracity transit problems lie.

Demonstration projects, as described by the Department, are categorized under three main types. The first type consists of testing the effect in changes in service and fare structure. The second tests new equipment and operating techniques (e.g., exclusive bus rights-of-way, new signaling devices, new fare collection equipment and new types of transportation systems), in order to evaluate their performance under actual service conditions. The third tests new techniques or methods for organizing, managing, promoting or coordinating transit operations.

An example of the type of new systems which the Department has assisted include Pittsburgh's skybus consisting of amall light-weight vehicles capable of carrying approximately 30 people and operated along a separate right-of-way. Another example is Oakland's air cushion vehicle which is propelled by a turboshaft engine and capable of traveling over both land and water.

While steps in the right direction, these systems do not constitute a technological breakthrough. They are only a glimpae of what can be done as a result of extensive research.

### INDIVIDUAL TRANSPORT DESIRED

The American people have an apparent desire for transportation systems stylized to their own individual needs. They want transportation which enables them to leave when they wish and go directly to their destination without transferring. Because existing urban transport systems do not satisfy this criterion, the city traveler today relies heavily on his automobile for getting about the city.

An October 1964 report by the Cornell Aeronautical Laboratory, Inc., of Buffalo, N.Y., for the Office of the Under Secretary for Transportation Policy in the Department of Commerce documented this point in reviewing new urban transportation systems still in the drawing board stage. The study on which the report was based was contracted as part of the Department's analysis of transportation needs in the Northeast Corridor running from Washington to Boston between now and 1980 and designed to forecast new highway technology which might be utilized in that area.

According to the Cornell report, an urbmobile system which gives the city traveler "individual freedom, dispersal of origins, and feeder capability on the street networks, coupled with a capability to reach the city center under automatic control on a high-density track system" is the mode of urban transport which should be developed because it would meet the desire of people for individual transport.

The report stated that a new urban transport system "must, to a high degree, be immediately compatible with people and their established way of life, else it will not even survive its childbirth and growing pains." Therefore, it suggests, the "direction for development in commuter transportation that appears to hold more promise is that of an automated system of small individual urban vehicles." The report concludes:

"The automated portion of the system could properly be routed and integrated with existing streets and urban expressways to best serve the origin-destination requirements of both the suburban and the urban population. This system would, at least in its initial applications, be designed to supplement the existing street system rather than replace it."

### THE COMMUCAR-A GOOD EXAMPLE

A good example of the urbmobile and the type of new system which could be developed under an extensive Federal research program is the commucar which has been proposed by the Massachusetts Institute of Technology.

The commucar was the result of a cooperative faculty-student effort in the spring of 1964 stimulated by the institute's natural interest in transportation problems generally and by its work for the Department of Commerce on preliminary aspects of the northeast corridor project.

The commucar is envisioned as a small, lightweight vehicle which can carry up to four passengers. It could travel along guideways getting power from an electric siderall, or it could be driven independently under its

own power. Besides safety and speed, the commucar, as conceived, would have the advantage of taking its passengers directly to their destination without the necessity of transfer. Because the vehicle as designed would be light and compact, it could be parked easily and in constricted quarters, even perhaps racked one upon the other.

Other systems include the starrcar developed by the Alden Self Transit Systems Corp. of Yestboro, Mass., and the teletrans devised by the Teletrans Corp. of Detroit, Mich. The starrcar is quite similar in function to the communear, while the teletrans system confines its vehicles to the guideways, keeping them under automatic control at all times.

While technologically feasible, more research is needed before model demonstration systems for the commucar for example, can be constructed. Because of the scale of the project and the expense involved, this research is unlikely to be undertaken unless it is sponsored by the Federal Government. While conducting the research, the engineers could undoubtedly take advantage of advances made by the space industry, patricularly in the area of propulsion and computer control. Perhaps some of the space advances could be adapted to urban transportation

The automotive industry, too, would be able to contribute its expertise in developing the vehicles to be used in new systems, and then in manufacturing them.

In fact, the research program could, and should, go beyond merely developing the technological features of a new system. It should seek to determine the impact it would have on the society in which it will operate. As John Kohl stated in his July 1964 article in this periodical with regard to the pilot mass transit demonstration program then in operation, "Overall, the problems of urban transportation are being considered as integral parts of the physical and social complex of urban growth and change; they are not treated as isolated technical problems, to be solved entirely by transportation considerations." This is entirely a proper undertaking for any federally sponsored research program.

### FEDERAL INCENTIVE NEEDED

Private industry, as it is expected to do now, cannot carry the burden of this research. Mr. Kohl in a speech to the National Transportation Engineering Conference in Cincinnati, Ohio, on February 19. 1964, pointed out that the transportation industry is slow to undertake its own research and development programs because of the difficulty of getting that investment back through the sale of the new equipment and Thus, only a federally financed program can get the job done. The histories of the Manhattan project which ultimately produced atomic energy for civilian use, and of the National Aeronautics and Space Administration which has contributed so much to our knowledge in the use of space vehicles demonstrate the value of a concerted Federal effort into a particular problem.

If the Federal Government had not taken the initiative in the development of atomic energy and space actelites, we would never have reaped the harvest we enjoy today. Without a considerable Federal effort to devise new urban transportation systems, it will be many years before we successfully cope with this problem. If we launch today a Federal research program for the development of new modes of urban transport, we can enjoy the fruits of the work in the 1970's.

The report of the Cornell Aeronautical Laboratory concludes that the Federal Government should undertake a research program to develop new modes of urban transport. Among its major recommendations for improving transportation along the northeast corridor it says:

"Initiate a program to define, design, and develop an experimental prototype urban

individual transportation system employing a specialized form of vehicle and guidance." The report goes on to point out that many of the technical and system aspects of new urban transport systems still in the drawing

board stage have not yet been solved. Consequently, it savs:

"Technical study in greater depth, ac-companied by experimental development, is necessary before the technical feasibility, eco-nomics, and public acceptance can be realis-tically evaulated."

Furthermore, John Kohl, in an April 16, 1964, speech before the Conference on Responsibilities for Urban Transportation Plansponsionities for Orban Transportation Fining in Newark, N.J., predicted that a Federal stimulus would be necessary to foster the research necessary to develop new systems and that the stimulus would be forthcoming in the then pending Mass Transportation Act of 1964. He said:

"It is confidently believed that a very modest Federal effort coupled with the pro-gram to improve the financial climate of the transit industry can unlock the great re-search and development talents of American industries and universities so far as urban transportation is concerned. As a result, there can be available in the not-too-distant future, better and more appropriate transit systems to complement our unexcelled high-way facilities and to round out an effectively balanced system of community transportation

"If we recognize the true nature of the present crisis—that of avoiding the loss of

public transportation—we can avert it be-fore it assumes staggering proportions." Unfortunately, the stimulus that Mr. Kohl suggested would be forthcoming fr. m the 1964 act has not materialized. Thus if we are to recognize the true nature of the present crisis we need to establish soon a federally sponsored research program that will unlock the great research and development talents of American industries and universities

We know the technological breakthrough is needed: to develop systems which can carry people quickly, safely, and econom-ically from place to place within urban areas, icany from place to place within uran areas, without polluting the air, and in such a way as to meet the needs of the people for in-dividual transport, and at the same time contribute to good city planning.

# The Rise and Fall of an Empire

EXTENSION OF REMARKS OF

### HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. EDWARDS of California. Mr. Speaker, in the midst of the revolutionary fever of the 1770's, Thomas on declared as a self-evident "that all men are created equal." As the young nation pushed forward to become the large, diverse, rich nation that it is today, this truth seemed to be forgotten. While the United States suffered the growing pains of internal conflict, industrial develop-ment, and external threat, the question of equal rights was not often raised. Following the Second World War, Americans could no longer ignore the fact of unequal opportunity shared by so many fellow citizens.

This poem, written by Mr. Leon W. Grossman, a businessman and resident

of San Jose, Calif., drives home the point that until the words of Jefferson are a reality, no nation can be truly great am pleased to ask unanimous consent that this poem be inserted in the RECORD:

### THE RISE AND FALL OF AN EMPIRE

(By Leon W. Grossman) Between those rugged widespread shores The greatest of all nations Contained the highest known to man In modern civilizations,

A mere two hundred years of time Had placed them on this steeple, In all reality they were God's truly chosen people.

Indeed they owe their fortunes To great men who preceded Entrusted with this heritage In turn to be succeeded.

But at the pinnacle of height Without warning or prediction,
There crept into their hearts and minds
A poisonous affliction.

With hate, mistrust, and prejudice For selfish reasons beamed. The streams of propaganda Caused splitting at the seams.

Yes, history does repeat itself. The Romans knew the sequel, For to achieve the greatest heights No man can be unequal.

# Modern Relationship Between the Farm and City

EXTENSION OF REMARKS OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. FISHER. Mr. Speaker, on last November 19 it was my privilege to attend a luncheon at the downtown Kiwanis Club in San Antonio. speaker for the occasion was Mr. Brentano C. Harnisch, president of the Texas Grain and Feed Association. A resident of San Antonio, Mr. Harnisch is also secretary of the Pioneer Flour Mills of that The occasion commemorated city. Farm-City Week in San Antonio and Bexar County. The address was both timely and eloquent. It follows:

Several weeks ago President Johnson issued a Presidential proclamation declaring No-vember 19-25 National Farm-City Week. In announcing this annual event, the Presi-

dent's proclamation said in part, and I quote:
"Whereas the American consumer enjoys such a great abundance of farm product manufactured goods, and services that his standard of living is the highest in the

Whereas the farmer similarly looks to his fellow city workers for a myriad and quantity of manufactured goods, and the machines and power he needs for his work; and

"Whereas the American consumer now spends a record low of about 18½ percent of his disposable income for food compared with 27 percent during the lists 1940's, I do hereby designate the week of November 19 through 25 as National Farm-City Week."

It is, therefore, a great privilege to come before you ladies and gentlemen today to dis-cuss "Agribusiness Is Your Business."

When you try to analyze the relationship that exists between the city and the farm

you are only trying to describe a parade that changes continually while you describe it. It is as if you were looking into a kaleido-arope where colors and patterns change so fast that the only theme you can find is the theme of change itself.

I guess I am in that middle period. Between the old and the new—young enough to remember that I used to chase women, but old enough to have forgotten why I chased them. I do not pretend to know farm life intimately, although in the flour milling business we are part of that great industry called agribusiness. I am a city man who has tried to understand farming from a seat on the sidelines, like a young student who hopes to gain a medical knowl-edge by watching Ben Casey and Doctor Kildare on the TV.

In a representative audience of about 100 men today, ask for a show of hands of all who have been born on farms: about 20 to 25 would respond. Then ask how many have sons who were born on farms; less than 10 would raise their hands. In this fact is the story of what has happened between country life and urban life.

One hundred and sixty years ago, just as the industrial revolution was getting underway, it required 19 men on American farms provide enough surplus food and fiber to maintain 1 man in the city; today 2 men on the farm can provide for 18 men in the cities, and have considerable surplus. There are men still living who remember when more than half our employed men were on farms. The change has been that rapid.

For almost 2,000 years of Western history farmers had been in the great majority, so that both custom and law recognized needs of an agricultural people. In the Western world the precepts of Christianity fitted well into the developing moral code of agriculture; our Ten Commandments were revealed to a farmer-sheepherder. But city people, from earliest days, tended to stray away from this ancient code. Wealth was centering in the cities, and an old philosopher noted that "where wealth accumu-lates religion decays." Cities became examples of transgression; historians have told lurid stories of the licentiousness of cities; stories of Babylon, and of Sodom and Gomerrah. A deeply spiritual farm people have always distrusted the life of the cities. Thomas Jefferson thoroughly distrusted city life, and sought to plan a nation that would forever be dominated by small and independent farmers. Alexis de Tocqueville of France, that most gifted political scientist of the 19th century, came to America 130 years ago to study our young democracy in depth. He was impressed by the very high value pisced on two things: individual freedom and social equality, two of the cardinal points in the dream of an agricultural people.

He could not then foresee, of course, that He could not then foresee, of course, that within a hundred years other great societies would emerge into history to proclaim the virtue of mass rights against individual rights. He could not foresee this day when one-third of the people of the world officially reject the idea of private property, and, like sodom, deny that there is a God. The old mornhood of our sericultural people is obtained. moral code of our agricultural people is challenged throughout lenged throughout the world today; the ancient faith of the farmer is pitted against the changing faith of industrial man.

I have used the word "farmer" as if it had specific definition, which, of course, it does not have. A man may be classed as a farmer on 10 acres, or upon 10,000. He may be identified in the census as a farmer when he earns the greater part of his annual income from off-farm industrial work. He may be a successful farmer or rancher, or may ne'er-do-well practicing failure on the same number of acres. He may be an orchardist in California who hasn't the slightest knowledge of wheat growing in Texas, or a bean

grower in Colorado who thinks that Florida avocados are some species of small burrow-ing animal. There is no generalization for the word "farmer." A Kentucky tobacco grower was visiting on a Texas ranch. Seeing some calves he remarked: "I suppose you would call them cowlets." The rancher rewould call them cowiets." The Fancher re-plied quickly, "no, we call them bullets." Farming is surely a many-sided thing. Take, for instance, the inclination of our politicians to talk of farmers as the very low

income people-all farmers as a class. we have some 3 million so-called farmers and almost one-third of them are either subsistence farmers, or farmers earning much of their income at off-farm jobs. Perhaps a third of the men classed as farmers today could, if required, produce all the food and fiber needed by our people at home; these are the so-called commercial farmers, whose annual incomes can match or surpass the average income of city professional people; there are individual farmers who gross \$1

million or more per year.

When you take the big commercial farmers, the small farmers, the part-time farmers and the subsistence farmers and put them all on one adding machine, the average income comes out pretty small, as would the average for all so-called businessmen. Some of the best of them, of course, like the best of businessmen, have years of loss. I remember explaining to a farmer friend how our Texas grain and feed association is a not-for-profit organization. He thought a minute, then said that his farm was also a not-for-profit business, although he hadn't planned it that way. Our Nation is still afraid of the larger commercial farmers and various States have sed laws to prohibit corporation farming In every Congress proposals are made to limit the amount that the larger farmers may draw in crop support money. The Congress seems to have some complex about protecting the family farm; when, in fact, the percentage of farms owned and operated by families is growing every year without Government urg-ing; and while farms grow.rapidly in average size, they drop sharply from year to year in the number of hired helpers. The explanation, of course, is bigger and better machines.

Only in the big cities of the East do you find still existing that old image of the farmer as an uneducated "hick." Out here we read the agricultural statistics. We know that the average commercial farmer today is better educated than his city cousin; that he has more money invested in plant and equipment than has the average businessan in the city; that he is the remaining bulwark of conservatism because he is the largest body of property owners in our Nathat farmers are predominately the managerial class, while the majority of city people are in the wage-earning class. Some well known economists have painted a rosy future for American farmers. They predict the day when the line of population growth will cross the line of food production, creating a demand that will press hard against supply and permit farmers to adinister their own prices. This is assuming, of course, that our society continues to sup port the principle of private property, and the law of supply and demand.

Some farm people have already had a glimpse of this future situation and have already started agitation for guaranteed minimum prices from processors, an agitation ems certain to fail as long as they can and do produce more than the market can absorb. But the agitation probably will continue, for the farmer begins to realize the sible price situation which forces him to buy his supplies at retail, and sell his production at wholesale. A part of the farmers restlessness has been shown in his long political pressure for Government suport of his prices or control of his produc-ion, and it is just here that some of the confusions inherent in the democratic method

d

st

d

ne

show up. Neither of the political parties show up. Neither of the political parties, neither of the major farm organizations, and very few of the big agribusiness groups have ever been able to agree upon a national farm program. We have tried about everything, and some of our experiments have been plain stupid. Only in this decade has the Congress finally decided to make a scientific and non-political survey of the whole farm with a view toward a permanent and national farm plan.

We have all poked fun at these clumsy political approaches to the farm problem; some of the experiments have been endured with patience by the people; other times the public has indicated a clear no to some proposal, such as the recently proposed bread tax. To some people this stumbling progress has been just a political farce, but to most of us it has been only a demonstration of the way that democracy works. We may fit and test, with frequent failures, but we consciously prefer this way to the man-date of a dictator whose snap judgment seldom is as safe as the flower judgment of the

Both city and farm people have been partners in one of the most unusual programs of history. Never before has any nation of people given so much, so freely, of its wealth to the betterment of other nations. Whether it was from the desire to just make friends, whether it was from purely humanitarian instinct, we have divided our wealth of food and fiber with the have-not peoples, in an amount that is almost immeasurable in terms of money. So influential and important has this program become, that today our leaders have openly talked of a greater program whereby American food production can close the world hunger gap.

This would not be a small task. thirds of the more than 3 billion persons living today are undernourished people, or cople on the literal edge of starvation. international economist figures that the per capita food production in the world today lower than it was before World War II and still is declining. India is a chronic supplicant for the surplus from our food upplies: Both Russia and China have in these very recent years needed important sup-plies of food from the free world of the West; outh America is struggling through a nev ending rebellion of have-nots against the

In the face of the world's hunger, American humanitarians have urged that we open our reserve acreage for maximum food production, in the hope that the Western world can close the gap of Eastern hunger.

It is painful, almost dangerous, to sound estioning note here. If there is a hunger gap, there is also a world population explosion. Some of our more prudent statesare suggesting that our almost unlimited bounty be conditioned upon control of the numbers to be fed. It would be of questionable morality, they say, to nourish a ociety into even greater population poten-ial. There is even the question, they add. whether our charity would, after a short term of years, become a vested interest of the beneficiaries, and that our inevitable future inability to produce in proportion to continued increase in numbers, would eventually multiply enemies where we had only sought to make friends.

Today we are engressed in matters of space travel, in torturing explorations of an elusive peace, and in the restlessness of groups which claim the right to choose which, if any, of our laws they chose to ob serve. Basically, the changeover into the industrial age, and now into the approach-ing age of automation, will become a probover into the lem of numbers of people. A group of 70 of the world's acknowledged scientific leaders met in California last fall to study world problems. Their group judgment was that the increase of population is the "problem

of our time." Dr. George Borjstrom of Michigan State University, at almost the same time made the flat statement that "the world's population is already two times too large." Dr. Earl Butz of Purdue University, within the same week, said that interna-tional agriculture is in a race against time and capital to meet the onslaught of the world population explosion. There is a slowly growing realization of this threat of numbers of people against happiness of people. But the exigencies of modern politics make it almost impossible to carefully test solutions.

A generation ago our city people were generously paying taxes to bring better informa-tion to farm people; we took pride in the re-search of experiment stations, and the devoted agricultural extension service. For we were then still largely farm people, in town as well as on farms, and the betterment of farm living consumed our whole interest.

Today the confusion of our cities demands reversal of this flow of education and eighborliness. Farmers, by the very nature neighborliness. of their occupation, have time to think, and now they have the educational background and culture for implementing their think-ing. Perhaps from this group, the farmers, may we expect leadership in the transition from the agricultural past into the indus-trial future. Perhaps they can translate the moral code that is derived from christianity into the disciplines needed by an urban majority that is drifting with every wind of selfish pleasure and group license. In the beginning our Nation was led, economically, politically, and morally, by farmer-statesmen, from George Washington of Virginia to John Adams of Massachusetts. From men who have the inheritance of our old moral code, and time to meditate away from the crowds, we may expect again the resurgence of the prophets of old.

For the old legends and the old faiths of the prophets do not die quickly. It is from the deep memory of many generations that you and we, city people and farm people, understand the significance of the phrase "bread cast upon the waters." Our accumulated racial conscience knows the warning of asking for bread, and receiving a stone. Who among you here today has not heard the parable of the loaves and the fishes? Who pretends that even the nuclear age has wiped out the meaning of earning bre the sweat of one's brow?

Yes, our people have become an urban people, and we are caught in the tempests change from an agricultural moral code to a different city moral code. The times demand leaders, and leaders, you know, are always teachers, just as Jesus was himself the great teacher of mankind.

If you who are farmers, and we who are city people, do not find some means of producing the teachers for a new age, we must face a world in confusion and torment, and lack the means to prevent Armageddon.

Come, let us counsel together in the name of our people. Let us accept the challenge of leadership, even at a time when leadership is dangerous; let us join together at some altar where we may break bread in memory of the broken body of Christ, who gave us the perfect example of leadership. Let us give meaning to the countless mil-lions of human souls who open every morning's prayer with the ancient plea: this day our daily bread."

Let us resolve that man's gift of mental capacity shall not finally be declared a mistake in evolution. Let us so unite the better minds of both city and country that we shall know with surety that the "dwelling of God is with man; He will dwell with them and they shall be His people; He will wipe away every tear from their eyes, and death shall be no more \* \* \*"

### America's Deep Sea Frontier

EXTENSION OF REMARKS

# HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. ST. ONGE. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a very timely and most interesting address by Roger Lewis, president of General Dynamics, entitled 'Our Deep Sea Frontier.

This address was delivered by Mr. Lewis at the 63d anniversary dinner of the Navy League of the United States, held in New York on October 27, 1965. I feel certain that many of the thoughts and views expressed by Mr. Lewis are extremely interesting, and I am there fore pleased to bring this address to the attention of my colleagues. It should prove to be thought-provoking and profitable reading.

The address follows:

OUR DEEP SEA FRONTIER (By Roger Lewis)

I am delighted to be in such distinguished company and to have an opportunity to talk ou about our deep sea frontier.

If a man truly is known by the company he keeps, I'd be inclined to rest my own case on where I stand tonight—among friends of our great Navy and with those who believe that American military power is power for

The theme of this meeting, "Our Deep Sea Frontier," is exciting, timely and urgent. The concept of the frontier has a deep and special meaning for Americans.

special meaning for Americans.
Since our earliest beginnings ours has been a frontier country. We have played a dominant role in the conquest of many frontiers—on land, in the air, in space. So intimately is the development of our country and its emergence as a world power dominated by conquest of frontiers that it is hard to say whether we stand today as the product of whether we stand today as the product of our frontier experience or whether some unique quality in our national personality has made it possible for us to force and use these vast frontiers for the common good.

Whether we are entitled to do so or not, we act as if any frontier is a special province for the American people—and often the rest of the world seems to regard it so. It's been said that we are a restless, mov-ing people. How could it be otherwise?

Since our earliest beginnings, we've had mag-nificient frontiers of challenge and oppor-tunity into which to move. Certainly anybody who reads a novel or looks at television. today knows that the stamp of the frontiers-man and of his hopeful, courageous and in-dependent outlook on life are deep within us

First there was a land frontier. Less than I generations ago, about the time Michel-angelo was painting the Sistine Chapel, there was not a single permanent colony on the North American continent and the new world was one vast frontier.

Perhaps this is where it all started. For certainly our forebears, most within the last two or three generations, left their homes to come here because it was a frontier—a place of adventure, of opportunity, of free-

In a hundred years or so, the eastern sea-board changed from frontier to thriving col-onies—soon to be independent as is so-reign States. In the next hundred years, first the Ohio Valley, then the Midwest,

finally the Great West were opened, settled, and bound together as parts of the United States.

The transcontinental railroad and the final Indian wars completed our westward land expansion and ended our land frontier—just in time to see the dawn of another great one, the air frontier.

Was it, after all, so surprising that the air frontier should be opened by two brothers from Dayton, Ohio, at Kitty Hawk, N.C., in

1903, with man's first powered flight?

Does it surprise anyone that Americans for 60 years have been in the vanguard of man's minute exploration and exploitation of the arth's air blanket?

Or that today's tremendous air commerce is carried largely in airplanes powered by American engines and developed by Ameri-

Or that this new servant of man has led to powerful naval and air forces with which we help to keep peace and order in a troubled and changing world?

Probably not-for the air frontier was, to most of us, simply an extension of the land

Now we are well into the space frontier, the earliest beginnings of which were American too. In 1926 Robert Goddard opened the space frontier by developments in rocket engine technology that provided the key to travel outside the earth's atmosphere, either in orbit or in space flight.

In less than 40 years we have built space-craft in one of which two men orbited the Earth for 8 days. We have photographed the surfaces of the Moon and of Mars. In this decade we will land three American men on

the Moon to open the planetary frontier.

It is true that space is infinite and our But our efforts thus far only a beginning. scientists and engineers are clear about our Our people understand its importance, and its orderly exploration is planned and funded. Even if we don't know exactly where it will take us, we have a sense of its potential and its importance, and we are on OUF WAY.

But what about our deep sea frontier, perhaps the last and greatest of earth's physical frontiers? We've got a pretty good start, and so far it has a strong American flavor.

Since the construction of the first practical submarine for the U.S. Navy by John Holland in 1900, technology and the frontier spirit have broached the surface of the sea and begun probing the mighty and mysterious deep.

Driven by military necessity, the major burden has fallen on the Navy. Our great-est attention has been directed toward ge-curing the undersea approaches to this continent and to vital lanes of sea commerce.

Recently, however, a wider horizon has opened. Research submarines such as Asherah, purchased by the University of Pennsylvania, and Aluminaut—which will be able to operate at depths down to 15,000 feet— purchased by Reynolds International, have opened the door to scientific exploration.

The Navy's Scalab II experiment off La Jolia, Calif., recently demonstrated that man can live and work directly in the ocean 200

feet below the surface for weeks at a time.

Our Navy has taken the lead in opening the deep sea frontier and, with an estimated budget of \$130 million for oceanography, has enlisted the help of science and industry to

develop more tools for deep sea exploration.

Eight other Government agencies will spend an additional \$70 million in oceanography this year. The entire national effort is being coordinated through the Interagency Committee on Oceanography, headed by the Assistant Secretary of the Navy for Research and Development.

The promise is enormous. Just how enormous we cannot say, though we're certain that it is so. Even Jefferson, in authorizing the Louisiana Purchase in 1908, and Lincoln,

in authorizing the transcontinental railroad in 1862, scarcely could have foreseen that our most populous State would one day be on the Pacific coust.

The Wright brothers, practical, shrewd, and imaginative as they were, wanted their invention limited to peaceful uses. They did not expect that an airplane would be able to fly either ocean in their own lifetime.

Bold and brainy as he was, I doubt very much if Dr. Goddard in his wildest dreams foresaw today's \$20 billion Apollo program or tomorrow's man on the moon.

Perhaps it's foolish to try to define the future. Experience has shown us that, in the fields of science and exploration at least, we are constantly overestimating what we can do in 5 years and vastly underestimating what we can do in 30.

But our thinking has to start somewhere; you cannot begin until you start. So just what are some of the possibilities of the vast deep sea frontier now opening before us?

Within 5 years we could:

Build swift research submarines to take cientists anywhere in the ocean for extended observation, measurement and photography.

Begin underwater mining of minerals and ingredients for fertilizers.

Develop new drugs, antibiotics and hormones from marine life.

Develop a world network of oceanographic buoys to collect surface and underwater data on temperatures, salinity and currents to be telemetered back to land on command. (A Navy-sponsored prototype of such a sys-tem has already been built and is under-going sea trials off Florida.)

Begin transporting oil from wells beneath the Arctic ice cap.
Within 10 years we could:

tì

Develop nuclear submarines capable of 60knot speeds.

Emplace underwater sonar beacons as submarine navigation aids.

Develop techniques to raise even the larg est lost ships (perhaps by injecting buoyant foam into sunken hulls).

Develop scientific husbandry of sea food, improving the quality and quantity of lob-sters, oysters and other marine delicacies in

offshore farms and ranches, for example.

Develop systems to predict the weather and eliminate or divert destructive hurri-

Within 25 years we could:

Build underwater resorts from which vacationers could hunt game fish or prowl the oceans in mass-produced sport submarines. Develop artificial gills that would let man reclaim directly from the sea the oxygen he

recain directly from the sea the oxygen he needs for underwater work.

Great, wonderful, exciting possibilities?
Yes, indeed. The deep sea frontier promises both adventure and hope for an exciting and wonderful world. But will it be an Ameri-can frontier in the same sense that the land. the air, and the space frontiers have been American?

Unfortunately, I see no assurance on this point whatsoever.

A frontier is truly a no man's land. the world of the underocean in 1965 is a different world from that of the air in 1903 or the world of space in 1926. We have com-petitors—bold, imaginative and competent-to whom the undersurface of the sea is perhaps even more important than it is to And they are hard at work to understand and to use for their own purposes the sea's

An international convention has preserved for each maritime nation its own continental shelf, but it has also opened up the ocean depths to any nation that can exploit them.

in a supplementary agreement, the Dutch, Danes, Norwegians, British and Germans have divided up the oil rights in the North

Russia is reported to have a fleet of 230 ships working in the marine sciences.

France is planning man-in-the-sea experiments to a depth of 300 feet and has built a vessel designed to go to 36,000 feet. Japan has had a 650-foot-depth research

submarine since 1960 and commissioned a 2,000-foot-depth vessel last year.

All the maritime nations are at the threshold of the deep sen frontier. There is active, aggressive competition and we must expect that it will increase.

Thus, to you who would take comfort and excuse delay because of our final successes in the air and in space, I must recall that, for many years subsequent to the inventions of the Wrights and of Dr. Goddard, development of air and space vehicles was more aggressively and more effectively pursued by Europeans than it was by Americans.

peans than it was by Americans.

World War I was fought with European-designed and European-built airplanes. The first jet engines and the first jet airplanes were British, Italian, German.

In World War II, advanced rocketry was developed at Peenemunde, not Cape Kennedy. Necessity and the frontier spirit first gave the United States the tool by which man can hope to explore and realize nature's vast undersea treasures.

Perhaps the most thrilling words in the long history of ship construction came from the submarine Nautilus as she sailed from Groton, Conn., January 17, 1955. She radioed: "Underway on nuclear power."

Since then, we have circumnavigated the globe under water. We have gone deep, and can go deeper still. We go fast and can go faster still. We are beginning to understand how to live in the silent and deadly deep.

But we must press on. The race is still to the bold and the brave.

Listen to what Comdr. Scott Carpenter, one of the Navy's astronauts who recently spent 30 days living and working under water in the Sealab II experiment, says: "In the space program I have seen how very much can be accomplished when a country gets behind a program. The oceanographic program very urgently needs more r. en, more talent, more money, and more public understanding than it has now."

tch.

The national space budget for this fiscal year is nearly \$3 billion—15 times the national budget for oceanography.

Perhaps the time is not yet right for a national oceanographic program on the scale of the space program. Perhaps we do not yet know enough about this strange new world to mount such a priority effort and to spend

such vast amounts of money wisely.

But certainly we must mount a greater effort to explore and probe its farthest reaches than exist today.

We need more and better undersea vehicles—nuclear and nonnuclear—small and large. We need detailed exploration, analysis and recording of every aspect of marine life. If we are to be the first masters of the ess, there is no time to be lost.

We need more tools, more effort, a wider scope. These are matters of vital national urgency now.

Our Navy has led us to a great beginning, but we have seen that invention and dramatic beginnings may not be enough. Now it is up to the Nation, to our total scientific, industrial, and military establishment to carry on and make the most of this glorious beginning.

This is where you and I come in. For this is a job of public knowledge and understanding—a job which the Navy League set out to do many years ago and has done so nobly.

The deep sea frontier may be one of the last and, perhaps, the greatest of all frontiers, but its exploration and exploitation will be time consuming and demanding.

The prize will be rich, but will it fall to us?
Will we be the ones to lift the veil and
free her limitless bounty for the benefit of
mankind?

# One-Quarter Century of Farm-Labor-Consumer Action

EXTENSION OF REMARKS

# HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. EDWARDS of California. Mr. Speaker, in commemoration of its 25 years of service, the California Farm Research and Legislative Committee published an interesting and colorful brochure entitled "One-Quarter Century of Farm-Labor-Consumer Action." The purpose of the brochure is to review the history and accomplishments of the committee, and this purpose is certainly well achieved.

The Farm Research and Legislative Committee had its beginning in February 1941, when, due to the loss of an export market in war-torn Europe and the subsequent sharp drop in the price of fruit. Santa Clara County prune and apricot growers banded together to ask for purchase by the Federal Government of some of the unsold fruit. This first unified effort resulted in an appropriation of \$25 million and a successful increase in the market price of fruit.

Behind the developing variety of programs which the committee has worked for, the overriding commitment was and is to the family farm, the farm which provides a living for a farm family, members of which do most of the work rather than directing the work of others. To help insure the economic survival of the family farm the committee places top priority in establishing jointly owned and operated farmer-to-consumer marketing and distribution eooperatives. To achieve this goal, the committee is working with farm groups, other cooperatives, and organized labor.

The hope is that such cooperatives will help to reduce the sometimes very great spread between consumer prices and what the farmer receives. For while the general standard and cost of living have been rising, the level of farm income has been a consistent problem. As "One-Quarter Century" illustrates, "from 1953 to 1964, net farm operator's income dropped at an average annual rate of 1.4 percent. In 1964 per capita non-farm income was \$2,595; in contrast per capita farm income was \$966."

The Farm Research and Legislative Committee is not concerned only, however, with the level of farm income. The committee has taken an active role in the advocacy of a Federal food stamp program to provide a better diet for low-income families, of a Federal school milk program, and of lower gas and electric rates in the region. Further, their international concern is evident in the committee's early support and educational

campaign for the establishment of the United Nations as well as the Food and Agriculture Organization's freedomfrom-hunger campaign.

Accurately described in this brochure as the "nerve center" for the Farm Research and Legislative Committee is its executive secretary Mrs. Grace McDonald, who doubles her tremendous workload by serving as executive secretary for the Northern California Freedom-from-Hunger Campaign. Judging from the achievements of the past 25 years, I feel confident that Mrs. McDonald and her associates on the California Farm Research and Legislative Committee will continue to work successfully with and for farmers, laborers, and consumers in California.

# Federal-Aid Secondary Roads—Our Stepchild Highways

EXTENSION OF REMARKS

# HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. DON H. CLAUSEN. Mr. Speaker, following my recent speech before the County Supervisors Association of California on the need for a more balanced highway system throughout the Nation, I have had numerous requests for the full context of my remarks.

Serving as a member of the Roads Subcommittee of the House Public Works Committee, I believe the material contained therein would be of interest to other Members of the House. Therefore, under leave to extend my remarks, I request unanimous consent to its inclusion in the Appendix of the Recogn.

SPEECH BY CONGRESSMAN DON H. CLAUSEN BEFORE THE COUNTY SUPERVISORS ASSOCIA-TION OF CALIFORNIA, OCTOBER 22, 1965

It is an honor and a privilege to have this opportunity of speaking to my beloved alma mater, the County Supervisors Association of California. As a former member of this political fraternity. I can assure you that it gives me a great deal of pleasure to welcome your organization to my congressional district. The fact that you brought this convention to our beautiful north coast is, I am sure, appreciated by the people of Humboldt County. But, I am also certain that these fyou who are visiting the redwood country for the first time are equally pleased with the hospitality and exposure to this land of the tall trees.

In selecting a topic for today's presentation, I decided to touch briefly on a subject that certainly must remain close to each and every member of the boards of supervisors throughout this great State of Callfornia. It has often been said that "a supervisor who doesn't concern himself with the roads in his district can expect to be a one-term supervisor."

While we are interested in all types of roads—expressways, freeways, parkways, access and seemic roads, connecting roads, etc.—I believe the roads that require and attract the attention of county supervisors are the Federal-aid secondary roads.

are the Federal-Aid secondary roads.

During my service on the board of supervisors, it seems, we were always waiting for

our allocation of funds so as to accelerate the construction of another section of roadway that was "crying" for improvement

With this background, you can certainly understand why, when the opening occurred, I jumped at the chance to be appointed to the Road Subcommittee of the House Public Works Committee. In the years to come, I hope my position and service on this important committee will prove beneficial to all concerned with highway matters.

In reviewing the progress of highway construction over the past decade, one must con-clude that substantial headway has been made. Since 1947, nearly \$6 billion have been spent on Federal-aid secondary high-That money has improved more than 252,000 miles of roadway. In 1948, there were 378,000 miles of secondary highways. Since then the mileage has nearly doubled to 620,-000 miles with about 18,000 miles in urban areas. This money has built 32,000 bridges, it has eliminated 600 railroad crossings and s protected over 3,600 railroad cro with warning devices or gates. By any stand-ard—this is a good record—it is an impressive record-but it is still not enough

The needs, the backlog for construction and the deficiency lists continue to mount. In my judgment, the importance of our

secondary roads has never been fully realized. The financial resources have not kept pace with the increasing demand for improvement.

Speaking quite candidly, it has never made much sense to me to build great expressways and freeways for the enjoyment or safety of our traveling public and then subject this to narrow roadways or same traveler trails" when driving on county roads. Certainly there is room for a more balanced recognition of our overall highway transportation requirements.

It would seem quite obvious to anyone that as we step up our efforts to improve the interstate and primary highways, we should certainly do the same for our secondary road

As highways begin to receive more and more attention because of the increasing number of vehicles, the growing number of miles traveled each year and the resultant increase in gas tax revenue, it would seem only logical that secondary road improvement would keep pace. Regrettably, I do

nems would keep pace. Regretably, I do
not see this to be the case.

Secondary roads comprise about 20 percent of the total road mileage in the country, but the money authorized for improving
and maintaining them amounts to only about

2 percent of the total.

It seems to me that as we seek a balance in our entire system of highways in this country, a more realistic allocation of the tax revenues to Federal-aid secondary ro would go a long way toward providing the

With the State and Pederal Governments having preempted the gasoline tax source of revenue—it would seem reasonable that we have the continuing responsibility to re-appraise our revenue allocations with ade-quate attention given to the changing needs ne cities and counties. Certainly, withof the cities and counties. Certainly, without the tax source directly available to them,
the supervisors hands are tied. If additional
funds are needed to fund the programs, we
at the State and Pederal level must assume
the leadership role and I can assure you,
this is taking place. As you know the Ways
and Means Committee has juriediction over
additional revenues and again, our Road Subcommittee of the Public Works Committee
has forthrightly presented our case to the
committee. The Transportation Committee
of your State legislature have been equally

committee. The Transportation Committee of your State legislature have been equally aggressive at the State level.

At this point, however, I believe I should make known to you that your financial problems are not the only problems we must

As you know, highway legislation before the House Committee on Public Works is generally handled in a bipartisan way. shortly after the latest estimate of the cost of completing the Interstate Highway System was submitted to the Congress, the cinti man and ranking member of our Road Su committee introduced bills which would ha approved the cost estimate for this purpo of apportioning interstate fun have authorized the appropriate of additional \$5 billion to meet the "ne" costs of the Interstate System. authorization of \$37 billion now re-Enactment of either of billion. would have provided for the 190 the Interstate System on schedule &...

H.R. 6548, was overwhelmingly by our Committee on Public Works ferred to the Committee on Ways and to take appropriate action with regard financing. However, it soon become obvious that the Committee on Ways and Means had no plans to act on the bill despite the fact that in many States, the highway gram was being delayed pending apportion-ment of additional Federal-aid highway

funds

As a result, it was necessary to act upon Senate Joint Resolution 81, which permitted apportionment Federal-aid of authorized highway funds for fiscal year 1967 only but did nothing to proride the additional funds necessary for completion of the Interstate Highway System on schedule by 1972. So, as you can see, we all have our work cut out for us. As you know, we in California want the complettion on schedule so that Highways 101 and 50 can be added to the Interstate System.

The only alternative would be to extend the scheduled completion date. To me, this is totally unacceptable in view of the that completion of the Interstate Highway System will result in an annual saving of 8,000 lives and \$11 billion in transportation

In order to emphasize my interest in the econdary road problem, I think it would be appropriate for me to read my comments made during the debate on Senate Joint Resolution 81:

"Mr. Speaker, I rise in support of Senate Joint Resolution 81, a resolution to amend the Federal-Aid Highway Act of 1956 to increase the amount authorized for the In-June 30, 1967, to authorize the apportionment of such amount, and for other pur-

"I want to draw the particular attention of my colleagues to section 2 of the bill which authorizes the Secretary of Commerce to make a comprehensive study of the needs of the Federal-aid highway system after 1972. The Secretary would be required to submit a report of his findings to Congress not later

than January 1, 1967.
"This study will include, among other subjects, the extension or improvement of the present Interstate System, the possible development of freeways or express routes on a different basis, special urban highway problems, classification revision for Federal-aid primary and secondary systems, and their urban extension, and other matters. I am particularly anxious that the study in-clude a comprehensive review of the Federalaid secondary highway system, and officials of the Bureau of Public Roads have stated that the study will do this. In a speech be-fore the county engineers on February 21, 1965, Mr. Raiph P. Agnew, Chief of the Sec-ondary Roads Division, Bureau of Public Roads said:

'Such examination (of the secondary sys tem) on an intensive scale is scheduled in the study being planned by the Bureau of Public Roads in cooperation with State and local officials to provide a sound basis for such a highway program in the future.

"Mr. Rez Vhitton, Federal Highway Administrator, has also indicated that the study of future highway needs will include review of the Federal-aid secondary system. "While the dramatic interstate highway

gram attracts most of the public attenof critical importance to the It is in the development coondary system that of the county and other local road s will most effectively be heard. Under the law, programs for projects on the ederal-aid secondary system must be seected by the State highway department and the appropriate local officials in cooperation with each other. Ir addion to this, under the policies adopted by the Bureau of Pub-lic Roads, not less seem 19 percent of the "ederal-aid secondary funds apportioned to State for any assal year after diversion highway planning survey funds shall made available to the appropriate road officials and shall remain so available not on the State highway portion of the Federal-aid secondary system.

"The total mileage of routes designated on the Federal-aid secondary system, as of December 31, 1963, was 626,438 miles. The actual traveled ways of these routes totaled 618,041 miles. Of this mileage, nearly 180,-000 miles do not have a paved surface.

"The highways on the Federal-aid secondary system are essential for the day-today activities of our citizens, particularly in view of our rapidly shifting population pat-It is necessary that highways on the Federal-aid secondary system be improved to adequate standards in the interest of not only adequate transportation but also in the interest of reducing loss of life, injuries, and property damage which result from vehicle accidents on the secondary system.

"In light of these considerations, I was surprised and disturbed at the proposal of the President to divert one-third of all funds apportioned for the Federal-aid secondary highway system to the construction of scenic and recreational roads and landscaping and roadside development on roads, irrespective of whether they be on the Interstate primary or secondary system. I am certainly in favor of measures designed to protect and enhance the beauty of our highways, but I cannot believe that such should be done at the expense of needed highway construc-tion. The diversion of needed highway funds from the Federal-aid secondary sys tem, in my opinion, is deplorable. This is further emphasized by the fact that the pro-This is al was not based upon any comprehensive study of actual needs of the Federal-aid secondary system and, in fact, was made in the face of the fact that, a study of all high-way needs, including those of the secondary system is about to get underway, under the provisions of Senate Joint Resolution 81.

"Mr. Speaker, I strongly support Senate Joint Resolution 81 and urge my colleagues to join me in its support. I am particularly interested in the highway needs study provision, and am looking forward to the report of the Secretary of Commerce and its findings and recommendations concerning the Federal-aid secondary system."

In conclusion, I want to extend my sincere thanks to the supervisor of my own district and your great organization for sending Bill MacDugall back to represent you during the hearings on the previously mentioned move to divert funds from the FAS program.

I need not remind you of how magnifi-cently Bill presents your case before legis-lative committees. Everyone on the committee was greatly impressed and the results speak for themselves. The pressures were so great the administration finally withdrew request for fund diversion and ask that the beautification package be financed from the general fund. This was indeed

a great victory.

Believe me, we have every reason to accelerate the construction programs now be-fore us. We must meet whatever requirements are necessary to complete the system, but in the meantime, it behooves all of us to expand the cooperation and coordination of highway planning. We must restudy our highway needs with particular attention given to a functional reclassification of our highway systems.

During the past few years, we have con-centrated on the critically needed Interstate and Defense Highway System. However, in my opinion, we should not concentrate solely on freeways and expressways—more attention must be given to the farm-to-market and secondary road systems. The Interstate System is a model achievement of what can be done with proper and coordinated planning. And yet, the Interstate System is only cted to carry 20 percent of the estimated 1 trillion miles that will be driven by 1976-10 short years from now. other 80 percent-800 billion miles-will be driven on the primary and secondary highways.

It seems only logical to me-that our goal must be a balanced highway system. With transportation and highways recognized generally as the economic lifeline to a community, one can only conclude that a "bal-anced highway system" would mean a "balanced economic development" throughout our land

With the acceleration of funds and a new emphasis on secondary roads, a comprehensive system could be developed that will speed motorists to their destinations in the safest possible manner.

And then one day, perhaps, we can mini-mize the slaughters on our highways that cost more American lives over one weekend than have been lost during our entire involvement in the war in Vietnam

I thank you for the privilege of being with

### Parrots of Penance

EXTENSION OF REMARKS OF

# HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. EDWARDS of California. Mr. Speaker, what constitutes loyalty is an age-old question—the answer varies from nation to nation and within nations, from era to era. Our own Nation, with constitutional and historical guarantees for the freedoms of speech, press, and association, is subject to wide variations in the level of tolerance to critical discussion and dissent. Too often, the "loyal" American is the orthodox, the quiet, and the unquestioning American.

In verse form Dr. Gene Gordon brilliantly describes the relationship between loyalty, the social and political atmosphere, and "the very perfect model of a member of the faculty." Dr. Gordon wrote this poem in the midst of the loyalty oath controversy at the University of California around 1949. He was, at the time, a clinical instructor in neurology and studying neurology and psychiatry. "Parrots of Penance" has been printed anonymously in a journal of the New Mexico Association of Pro-

fessors, the Northern California Civil Liberties News, and the magazine Mon-Its wit and message commend it for all to read and ponder and so I in-"Parrots of Penance" in the RECORD:

'PARROTS OF PENANCE'

(Tune: "I Am the Very Pattern of a Modern Major General"—Sullivan.)

I am the very model of a member of the of lovalty. use I'm simply overcome with sentiments

of lovalty. I daily think of reasons why I'm glad to be

American, And thank the Lord I've always been a registered Republican.

The thoughts I think are only thoughts approved by my community.

I pledge allegiance to the flag at every opportunuity.

I haven't had a thing to do with Communist conspirators,

And neither have my relatives, descendants, or progenitors.

I try to keep away from propositions controversial;

I've no opinions social, politic, or commercial. And so you see that I must be, with senti-

ments of loyalty,
The very perfect model of a member of the

CHORTS

faculty.

And so you see that he must be, with sentiments of loyalty,

The very perfect model of a member of the faculty.

I'm qualified to educate in matters of heredity.

Unsullied by the taint of any doctrinaire rigidity.

I teach the Darwin theory with valuation critical, Uninfluenced by dogmatists religious or

political.

I understand the economic forces that have made us great;

system of free enterprise I do not underestimate.

I'm well equipped objectively to point out flaws in Marxist thought, Because I've never read his work; and rest

assured that I will not.

I freely follow truth in ways which I am sure will satisfy,

The Board of regents, William Hearst, and Hoover of the FBI.

And so you see that I must be, with sentiments of loyalty, The very perfect model of a member of the

faculty.

And so you see that he must be, with sentiments of loyalty.

The very perfect model of a member of the

faculty.

# Big Red 1

EXTENSION OF REMARKS OF

# HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. BUCHANAN. Mr. Speaker the citizens of Birmingham and of the Sixth

District of Alabama, which I am honored to represent, have selected a most dramatic way to demonstrate their support of our military effort in Vietnam and the unfalling courage of our fighting men there. By official proclamation of Mayor Albert Boutwell, the city of Birmingham has adopted the 1st Infantry Division of the U.S. Army, more affectionately known as the Big Red 1.

Like so many other loyal patriotic Americans, the good people of Birmingham were disturbed and angered by the demonstrations and draft card burnings of a small misguided minority in this country-actions which have perplexed and even undermined the morale of U.S. Armed Forces engaged in a difficult and exhausting struggle thousands of miles from home. The citizens of Birmingham determined to show in a concrete and convincing way they were behind our

men in Vietnam all the way.

The idea of "adopting" the 1st Infantry Division, now stationed in Vietnam, was first conceived by retired Brig. Gen. Edward M. Friend, Jr. It was an apt choice. The Big Red 1 is this country's oldest division and has an outstanding and much decorated history. It was first to shed American blood in France in World War I and first to land in North Africa in World War II. It sparked the conquest of Sicily, stormed across Omaha Beach in the D-day assault on Normandy, and was first in Germany with the capture of Aachen. The 1st Infantry Division also swept across the Rhine into Czechoslovakia the farthest advance by U.S. troops in Europe in World War II.

The idea became reality through close and effective cooperation among the Birmingham Chamber of Commerce, the Birmingham News, and the officials of the city of Birmingham. A special committee of distinguished citizens was formed by Mayor Boutwell to work on behalf of the city with the chamber of commerce. Those members are:

General chairmen: Mayor Albert Boutwell, Cooper Green. Cochairmen: Donald Stafford, Crawford Johnson III, Brig. Gen. E. M. Friend, Jr., USAR, retired.

Steering Committee: Tom Bradford, Miss Evelyn Walker, M. E. Hackney, John A. Jenkins, Dr. John Nixon, Dr. Lucius Pitts, Drew Redden, and Vincent Townsend.

The support of the Big Red 1 took tangible form at Christmastime when hundreds and thousands of gifts and letters were sent from Birmingham to men in Vietnam who would not be home for the holidays. That support continues and will continue as long as U.S. forces must remain in Vietnam to combat communism and defend freedom.

A Birmingham roll of honor has been organized, saluting organizations, compaines, churches, schools, and other groups that have adopted units of the 1st Infantry Division. Here is the list of sponsoring organizations and the units of the Big Red 1 adopted by them, as of January 1, 1965.

Mr. Speaker, here is, I know, the real mood and spirit of America: resolute and eager to support the fight for freedom in Vietnam. I salute the action of the city of Birmingham in adopting the 1st Infantry Division and I hope that other cities and towns across this great country will follow its inspiring example and let our men in Vietnam know that the overwhelming majority of Americans support their stand for freedom and against tyranny there.

# Service of General Wadsworth Outstanding

EXTENSION OF REMARKS OF

# HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. FUQUA. Mr. Speaker, Sunday, January 16, 1966, will mark the retire ment of Brig. Gen. Louie C. Wadsworth from the National Guard.

With his retirement a chapter closes in Florida National Guard history and his place will be difficult to fill. His has been a record of dedication and service. and I join with his friends throughout the State and Nation in paying tribute to him as he concludes a distinguished military career.

Ceremonies Sunday will see General Wadsworth promoted to Major General and retired.

So closes a career that began when he enlisted in Company E, 154th Infantry, Florida National Guard in Live Oak, Fla., April 18, 1923.

General Wadsworth rose through the ranks, being commissioned a second lieutenant in 1936. He held this rank when called to active duty in November 1940. He served with the 124th Infantry as platoon leader, company commander, battalion executive officer, and battalion commander at Camp Blanding, Fla., and Fort Benning, Ga., in January 1944.

He later served as regimental executive officer and regimental commander of the 3d Student Regiment, the Infantry School.

He served in the Asiatic-Pacific Theater as G-3 with general head-quarters, Armed Forces, Pacific, from June 1945 until December of that year.

Released from active duty at Camp Blanding, April 26, 1946, with the rank of colonel, he accepted an Organized Reserve Corps appointment prior to release from active duty, and served in this capacity until named battalion commander, 1st Battalion, 124th Infantry Regiment in grade of lieutenant colonel. He was promoted to colonel and July 29, 1962, was promoted to brigadier general and served as assistant division commander until reorganization in 1963 when he was redesignated as deputy commander of the division, the position which he held upon retiring.

His decorations and awards include the American Defense Service Medal, American Campaign Medal, Asiatic-Pacific Campaign Medal, World War II Victory Medal, Army Forces Reserve Medal and two hourglass devises, Philippine Liberation Medal, Florida Distinguished Service Medal, Florida Service Medal, and Active State Service Ribbon.

In addition to his distinguished military service, General Wadsworth has been an outstanding citizen in his role as publisher of the Suwannee Democrat, respected weekly newspaper in Live Oak.

Under his leadership, the Suwannee Democrat has been cited with most of Florida's major weekly newspaper awards and has been in the forefront of activities which have led to progress for the county and its people.

Born May 30, 1906, in Mayo, Fla., he moved to Live Oak at the age of six and has made his home there since that time with the exception of the time spent in college and the armed services.

The son of the late Charles Randell Wadsworth, Sr., and Mrs. Nellie Wadsworth, he attended Suwannee High School and graduated with the class of 1924. He graduated from Davidson College in North Carolina. After working for a year with the Addressograph Co., he returned to Live Oak in 1931 to become editor of the Suwannee Democrat and has been connected with the paper since, with the exception of the time spent in military service.

He served as president of the National Guard Officers Association in Florida in 1950. He served two terms as president of the Suwannee County Chamber of Commerce, and in 1955 was named Man of the Year in Suwannee County.

Another primary interest in his civic life was his membership on the board of trustees of the Suwannee County Hospital, a position he held many years.

He is a member of the Kiwanis Club and has been active in various other civic groups. He served as lieutenant governor of the Florida district for Kiwanis Clubs.

He served as president of the Rotary Club in 1938 and was president of the junior chamber of commerce in 1940. He served as commander of the Suwannee Post 197 American Legion in 1951

Post 107, American Legion, in 1951.

One of his continuing interests has been the Suwannee County Fair, serving several times as president. He was one of the founders of the present fair and is the only director left of the original

He served as postmaster in Live Oak from July 1947 to September 1948.

In 1956 he served as chairman of a county commission-appointed committee to construct the coliseum building in Live Oak.

The publication of the newspaper and the operation of its plant has been the primary interest and concern of the publisher through the years. Active in the Florida Press Association, he served as president in 1948-49, and served for 11 years as a director of the association.

As publisher of the paper, he has directed the Suwannee Democrat to a position of high regard among the press of Florida.

a

n

П

He also published the Dixie County Advocate in Cross City, the Mayo Free Press in Mayo and the Branford Herald in Branford for a number of years.

The Wadsworths make their home on the corner of 11th Street and Pine

Avenue in Live Oak. He is married to the former Miss Clara Staley, and they have two daughters, Mrs. Gayle McCrimon, and Charlotte.

CONGRESSIONAL RECORD — APPENDIX

General Wadsworth is a warm, personal friend, and I wanted to take this opportunity to pay tribute to him as he concludes his distinguished service in the National Guard. His shoes will be hard to fill, and I know that he can look back with a great deal of satisfaction and personal pride in the great contributions which he has made.

### Bill Lee

EXTENSION OF REMARKS

# HON, DAVE MARTIN

OF NEBBASKA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MARTIN of Nebraska. Mr. Speaker, Bill Lee, my administrative assistant, passed away on November 30 of last year as a result of a heart attack. Bill had also worked in the office of Senator Roman Hruska, of Nebraska, and had served as administrative assistant to Congressman Ralph Beermann for 4

Bill was a topnotch newspaperman, highly respected in his profession, and was the recipient of the British Military Medal, second to the Victoria Cross.

Many editorials and newspaper articles were written in Nebraska about Bill Lee, but the one which captured his personality the best was the following story written by Tom Allan of the Omaha World-Herald. I reprint this in the Congressional Record as a salute to Willie.

Another fine tribute to Bill was written by Vern Scofield, secretary of the Nebraska Press Association and it follows the Omaha World-Herald article.

[From the Evening World-Herald, Dec. 1, 1965]

So Long Willie-It Was Foot-to-the-Floorboard With You

(By Tom Allan)

So long, Willie.

I called you Willie because you were something special, a real buddy.

They called you William P. Lee back in Washington where you were an aid to Senator HRUSKA, Representative Ralph Beermann and, of late, Representative Davs Mar-

Newspaper colleagues and a host of readers and friends knew you as Bill Lee, a go-getting Nebraska newspaperman.

Your salty "On the Lee Side" column in the Ord Quis won the National Editorial Association's award as the best printed in any weekly newspaper in the United States in 1963.

I knew you as Willie, as lovable a roughtalking orphan, flophouse habitue, guardhouse soldier, war hero, officer batter, phonydeflator, practical philosopher, astronomer and martini mixer as ever graced the Nebraska scene.

We met in March of 1952 when you were editor of the South Sioux City Dekota County Star and I came up to caver the Missouri River flood.

"Well, where in the hell have you been?"
you asked when I walked in. "We've got
work to do."

Just like that. Like we'd known each other

Then like the old sergeant you were between busts for decking a military policeman for slighting the infantry—you started bellowing orders:

"The World-Herald just thinks you are working for them. You are now working for me. So write those stories long, take lots of pictures and make damn sure I get the mats. Unfold that Army cot. You'll sleep here in the shop. I'll supply the booze, the grub and the transportation. So let's so."

the transportation. So let's go."

Then we took off in his convertible in a snowstorm at 70 miles an hour—with the top down—to cover the food.

down-to cover the flood.

From then until your death this week it was always foot-to-the-floorboard and go-go-go with you when we were together.

The next day we got trapped when the dike broke.

"Don't stand there like the dumb ex-officer you are," Willie anorted. "Save the camera and film. Climb on my back."

Then you waded chest deep across the surging floodwaters protecting your investment—

We made radio history that morning. You didn't tell me you were about to broadcast a bulletin on the dike break in a tieup with a Sioux City radio station. I was struggling to get out of a wet pair of Army fatigue pants I'd worn over my regular trousers. Just as the announcer switched to you, my voice calling to your wife came booming over the broadcast:

"Marcella, come help me pull these damn pants off."

You had a contagious zest for life and a real love of people. An unwanted orphan, you had a way of seeing the humor in life's worst kicks in the teeth and the humility to graciously accept the rewards of good living.

graciously accept the rewards of good living.
Who but you, Willie, when the British wanted to awari you their British Military Medal, second to the Victoria Croes, went AWOL from the ceremony and spent your social convalescent leave living it up instead?

The British Ambassador, Lord Halifax, had to mail the medal to you.

Old soldiers everywhere chortled over your advice to Korean rookies in your column: "Under no consideration act like you have any intelligence. As soon as they find someone who acts like he has a grain of sense, the Army makes a sergeant or corporal out of him. Then you have to spend all of your time running after other soldiers who are smart enough to follow my advice:"

But you didn't fool anybody with all that rough talk. I remember you'd get all "meity inside"—that's the way you put it—when you talked of Christmas in the orphanage. When you talked about God those nights, you used layman's words but they had a special dignity and reverence.

How many young journalists did you start on their way? You, the guy in a T-shirt who walked into the office of the Dakota County Star without a lick of training and won a job by selling a full page ad.

I remember your telling me:

"Hell, I was a war hero. It was easy. When the merchants wanted to buy me a drink, I told them: 'Buy an ad instead; I'm learning the newspaper business'."

Washington put a lot of polish on that old hide of yours. But all of us remember you best as the diamond in the rough you were.

So long, Willie. For now.

[From the Nebraska Newspaper, January 1966]

MEMO FROM THE SECRETARY
(By Vern Scofield)

Six friends of Bill Lee took a sad ride together the first part of last month down Dakota Avenue in South Stour City. The six were honorary pallbearers at Bill's funeral.

Yet, in a way, it wasn't as sad as you might think

Sacrilegious, the above statement?

I don't think so, because during that ride all six of us were talking about the fun things in Bill's short 57 years on this earth, and we figured that this is the way Bill would have wanted us to be-honest, frank, sincere. We were all of those. We were talking Bill's

Someone mentioned—I guess it was Tom Allan of the World-Herald—that maybe the thoughts which ran through our minds were sacrilegious. But we all knew Bill so well he wouldn't think we were, and it was really Bill whom we were leveling with at the time

There were many facets to Bill Lee. suppose the average person, who didn't know Bill like we did, will remember him for his rough language. It shouldn't be that way. Under that rough language (and Bill was

one of the few who could use a dirty word and make it come out like poetry) was a

generous and dedicated man.

I guess the thing I'll most remember about Bill was his disgust and rough words about Bill was a doer, and he cut through redtape any chance he got. He wasn't much of a guy for committees, either. He knew committees are a "way of life," but he would rather "get the thing taken care of" now. He didn't want any part of delay and horsin' around—although Bill didn't use such a parlor word as "horsing."

To many others Bill will be known for his light and humorous columns when he was with the Dakota County Star and later the Ord Quiz. "On the Lee Side" was one of the best, and one year it won NEA's Best Column

in the Nation award.

The six of us in that big limousine December 4 talked about the things Bill did. All of us knew some things about Bill Lee the others didn't.

But we all knew Bill as a dedicated news-paperman, maybe the most dedicated the State has known in recent times. And we all knew the kind, rough-spoken Bill Lee who was always for the underdog.

The loss of a friend is great, but the loss of a man like Bill Lee to newspapering can't

quite be measured.

"Bill lived 100 years in his 57," one friend

To that we agree, and add—he did more for his fellow man in his few short years than most do in 100.

# Students Discuss Education and "Dropouts"

EXTENSION OF REMARKS OF

# HON, WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. ST. ONGE. Mr. Speaker, several months ago a very fine weekly newspaper in my district, the Windham County Transcript, published at Danielson, Conn., and in existence since 1848, announced an essay contest for high school and technical school students on the problem of school dropouts and the need for continuing education. When the managing editor of the newspaper, my good friend, Adriaan R. J. Herklots, informed me of the contest and the scholarship awards offered to the winners, I replied that if the views and comments expressed in the winning essays prove to be of general interest I shall be

glad to have these essays inserted into the Congressonal Record.

Several weeks ago the winners were finally selected and last week I received clippings of the essays as published in the Transcript. In his letter to me, Editor Herklots states:

We hope you will find them as educational as we did.

The essays most certainly are educational, and also informative and inspirational. They should serve to encourage our educators to continue their efforts. and they should serve to inspire our youth to continue their education toward the attainment of a vocation or profession. This is a matter which is of vital importance not only to the young people themselves, but to the Nation as a whole.

I wish to extend my congratulations and appreciation to Mr. Herklots and the Windham County Transcript for their campaign against school dropouts and for encouraging young people to continue their education. I am also happy to congratulate the winners of the essay contest for their achievement and their parents for making it possible for these young people to seek higher education. The following are the winners and their essavs:

MARK J. PATTON, ELLIS TECH. FIRST

"Dropout? Not me. I intend to graduate because \* \* \* " I want a decent life. Most because \* \* \*" I want a decent life. Most dropouts end up with cheap jobs with inadequate pay. They are the ones who think school is unimportant, and they say they can get ahead a lot faster if they quit.

There are many reasons that compel a student to drop out. If he is a poor student he feels inferior. He feels no one needs him and teachers neglect him because he is dumb. A student may be bored with school because it is not colorful or rewarding. If he only did his part the rest would come naturally.

Of course, there are some students who re left back. Many of them quit because are left back. they think if they couldn't do it the first

time why try again.

I intend to finish school because I don't want my friends and relatives to think of me as a quitter which I have mostly been. marks may be low and all but I like school

because I know it will do me good.

There are many jobs open for skilled workers which I will be if I graduate, I hope. I want to graduate because it is for my own good and the good of my future family.

PHYLLIS CODDING, KILLINGLY HIGH SCHOOL, SECOND

"Dropout? Not me. I intend to graduate because \* \* ." I need the growth experi-I need the growth experiences which school provides. These experiences are vital; without them, I would be more confused and unstable than I am already.

One of the lessons I am learning is selfdiscipline. Teachers can use time more profitably if I discipline myself, rather than making it necessary to be disciplined. After school, there is no teacher standing over me with a stick, forcing me to study. I must discipline myself to do my homework if I am to succeed.

I am learning to think in wide circles, not excluding the unfamiliar. I am encouraged to explore the unfamiliar that it might befamiliar. I am increasing my understanding of the world in general.

I am learning to get along well with others. Since school lasts almost 32 hours a week, it would be quite unpleasant if I did not learn to get along. Life is school on a large scale, and the miseries of discord in life are greatly multiplied in comparison to the scale. It is

easier to learn this lesson in school than to learn it the hard way, in life.

Dropout? No: I would rather make my mistakes and learn my lessons now.

PAUL REID, KILLINGLY HIGH SCHOOL, TIED FOR THIRD PLACE

REQUIEM FOR A DROPOUT

The small white ball bounced haphazardly down the street. Free, at last, to be what the ball really wanted. Get a job—as a baseball, football, maybe a ball bearing.

"No, no, a job here as a pool ball, no, no,"

echoed the different employers. "We need a guarantee, a piece of paper saying you'll

qualify."

Despair set in; the little ball no longer had its high, clusive bounce, but began to slow

and barely roll on down its path.

The graying, pudgy ball rolled into the deeply calloused hands of the bombardier. Falling, falling, downward it flew. Waste. The lack of a diploma leading to one fateful mistake increased the deadly speed. Reminiscences? Yes, probably. But was it too late for this remnant of a ball? Definitely. The bomb hit the ground, destroying a city block, for bombs just don't bounce. Such is the destiny of our human tragedy, a drop-

LINDA STODDARD, KILLINGLY HIGH SCHOOL, TIED FOR THIRD PLACE

"Dropout? Not me. I intend to graduate, because " \* " an education is a giant step toward a better future and will give me a fighting chance to cope with the social and conomical problems I will encounter during life. To succeed I need not only ambition but also a sound education.

People yearn to be needed, to be useful, and to belong. They need to be understood, or their lives have no meaning for them. Peace comes through understanding, and understanding comes through learning. An educated person will be able to cope with himself and the world about him.

The high school dropout cripples

chances of obtaining suitable employment and an adequate income in this highly technological age. His lack of education breeds malcontent that might develop into something far more serious.

Every individual reaches a magic point in life when he begins to really come alive and takes a sincere interest in the world around him. Better that this happens in an institution of learning than in any other place.

I want to graduate from high school, because education can help me to open up my potential and can give me needed assurance in my ability for greater achievements.

MARJORIE DICKINSON, ELLIS TECH, FOURTH "Dropout? Not me. I intend to graduate because " " " Let's look this horse of a problem square in the mouth. Setting aside the more obvious side of monetary benefits; examine the personal aspects of dropping out

Our country didn't get where it is today by dropping out. George Washington didn't say, "I quit," when left with few men and even fewer supplies. Thomas Jefferson and say, "I quit," when even fewer supplies. Benjamin Franklin didn't give up when the Continental Congress were seemingly hopelessly deadlocked by sectional interests.

h

tl

81

ly

Nor did the homesteaders or the minority groups who pushed out our boundaries to the Pacific. The Mormons, one of the most ruthlessly persecuted minorities in history, didn't give up their faith and their beliefs when their homes were burned, farms ravaged and men beaten. No, they screwed up their courage and left behind the thing they

loved; because they wouldn't quit.

Anyone can quit. It doesn't take effort to give up on whatever you're doing. But it does take plain old-fashioned guts to stick it out, to make the grades, do the homework

and stay with school.

No, our country didn't begin with quitters and get where it is today by quitting. So we owe it to those who struggled before us to keep this country strong—and free. We can only do this by keeping our education and learning ability on top. That is why I will complete my education and stay in school.

ERNEST BESSETTE, PLAINFIELD HIGH, FIFTH

"Dropout? Not ms. I intend to graduate because " • " I was 16 when I graduated from the eighth grade. That was when I realized that an education meant more to me than anything else. In my family not one has completed 8 years of grammar school and 4 years of high. The reason why, was that they had to quit to help support their families. I feel that I have to fipish school for my parents. I already have a job at 16 working after school and on Saturdays. But working after school doesn't affect my studies.

It's my handicap that is stopping me. My handicap is going into a class and sitting down and really put my mind to work. If I can overcome this problem, I feel I can go through my 4 years of high and even more. I feel that I am overcoming the problem very nicely. With this accomplishment I know what I want and what I am going to do. I now know I want to finish high and I know now I am going to do it. With the backing of my parents I will go ahead and finish high.

KATHLEEN CHASE, KILLINGLY HIGH SCHOOL, SIXTH

"Dropout? Not me. I intend to graduate because " \* \*." I am of a low-income family as my father and mother never had the chance to even graduate from grammer achool.

My oldest brother was a dropout, but when he entered into the service he took a special course in order to graduate from high school. My other brother stayed back once and in later years received extra help, so he graduated too.

I have stayed back in school twice but I still have faith and trust in God that He will help and guide me in trying to graduate.

Last year I stayed after school almost ev.

Last year I stayed after school almost every night for extra help and I just barely

made it in credits for the next year.
Since I'm the only girl in my family I feel that it is my duty to try to the best of my ability and to graduate from high school so that my mother, father, friends, and relatives might someday be proud of me, and that I might have a good, clean job for my reward after I have finished high school.

CHARLES G. HOFFMAN, ELLIS TECH, SEVENTH "Dropout?" Not me. I intend to graduate because " \* "." I work after school in a mill making about \$1.30 an hour. This would or might be the biggest pay if I drop out. I worked there now for almost i year. I work real hard really for nothing. I had a big

troublesome matter since I've been working.
I lost my finger. Sure I am not the only
ans who did but if I would have graduated
this might never had happened in my case.
Other people older than myself have no

d

y.

C

ey

to

hands, fingers and in some cases legs.

I am minus a finger, and minus a brain, without a diploma, it will all stay the same.

JOSEPH W. WOJCIK, ELLIS TECH SPECIAL AWARD (EDITOR'S NOTE.—This valued commentary could not be judged with the other contest entries because of its length.)

I suppose you think I'm going to start this letter off with the same old reasons, which are, better pay, more promising future, self-satisfaction, and for better wants and needs of life. Well, I just did, and what did it prove? Nothing that's what, absolutely nothing. Now I'm going to tell how it really feels to drop out of high school. First

of all, you feel very insecure, that is, you don't have a thing to turn to, anything that is half decent anyway. Now then, I'm going to get very frank and down to earth on an excellent example of why you shouldn't leave high school, "Me." I'm the example, I dropped out. I made the big mistake and most of all I asked for it and in a way I wanted to leave school. I actually was a real down to earth troublemaker, and I've got the 34 detentions to prove it. I might as well be honest about the fact that I detested every single day, hour, minute and second. It seemed like all the teachers were against me, and were just waiting for the chance to jump at my throat. I never did homework or hardly ever studied, well I never did to be truthful.

As time went on things began to change; that is, they got worse. Oh, pardon me for giving you a let down. But it did get worse. I got to a point where I was actually scared stiff of the place. I'd have a cold unwelcome air of being unwanted and neglected. Things got so bad I even picked the habit of slang talk and I mean slang. At home I would fight with my folks and in a real sense a 16-vear-old brat or Frankenstein.

When I knew I'd never make it through when I knew I'd never make it through high school, I went to the guidance effice to get information on going to the Berklee School of Jazz. I couldn't make it in there because I didn't go far enough in school. Well to be truthful again about the only subject I could really pass was shop. Especially the mechanical drafting. I would get A's and B's. One night at home I thought about myself and that wasn't much to think I finally sorted out the things I could do well, play music and draw. Boy sometimes I'd sit outside and draw all day, anything that was in seeing distance. And when it came to music, we'll put it this way I'd blow that lousy, no good sax till I cried. And sometimes I'd just look at it and cry. Not because I hated it, but because I loved it, it was the closest thing to me I had. Wanting to master that horn is one of the reasons I failed out of school. But I would not let nobody take it from me. It became my only chance to become somebody. I started to play in nightclubs, not at the age of 16 but 15. Some of them were all right but some were as holy as the devil himsels. All this kind of work brought me in front of people I even towered over. This gave me the feeling that I still had class and brains, and all that other important sort of stuff. This made me put my thinking cap back on I thought my other natural talent, drawing, I found that I respected and appreciated a single line as much as a 9/8 time on a sax. I also thought of the future and how secure I wanted it. The horn was OK but n reliable enough. So the drawing was left. remembered going to the first open hou at Ellis Tech. The part that fascinated me most was drafting. All those little lines and figures that were so intricate and detailed. And the idea of knowing that the person who drew them had a heavy responsibility on his shoulders. So immediately I knew what I had to do—beg. Yes, beg, beg, and plead, and sak please. I know I couldn't by all facts be admitted into Ellis Tech, but I had to try

Well it was this way. I remember being told in high school that I probably wouldn't get past first base in trying to get it. But is was the other way around. I was accepted under a trial basis.

Believe me, if you know what it is like to come to the surface when you're almost dead out of breath in deep water, you probably know how I feit and how relieved I was. It was like morning all over again. But, I couldn't get into drafting. My marks, weren't anywhere near good enough. But I managed to squeeze myself in general construction trades. It was OK but I didn't love it. To do something good you've got to love

it and worship it, and I didn't feel that way about GCT. Even though I tried my best, still looking forward to what I really wanted, drafting.

I found the school and teachers different, and every teacher seemed to care, or have a personal part in what I did. I again was relieved. I made it through all the way. I passed all my subjects. I felt more intelligent and more dignified. And held my head up again, which was larger now because my brain grew, and had added additions. Now, I figured I could get into drafting. I knew I had to be at the mercy of my superiors once again. And as last time I pulled through. I am now in architectural drafting and I'm proud of it. I felt a little more superior myself because of the fact that I did what many people told me I couldn't do. I still bawl my head off when I can't get a certain song or run on the sax, and cuss a little when my 2-H lead breaks in the middle of an object line.

But who cares now, I'm half way up that ladder of success. And take my word about dropping out of school, it isn't worth it at all. I came close to being a dropout all the way and when I think about it now it makes me shiver all over. So don't be foolish, stay in school. I was tucky.

# Korean Aid in Vietnam—An Earned Dividend

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MULITER. Mr. Speaker, this week we witnessed aid being given by South Korea to the South Vietnamese by the 17,000 troops committed to that country's struggle against communism.

Since their part in this fight for freedom from Communist domination is little known, I commend to the attention of our colleagues the following article by the distinguished columnist, Roscoe Drummond. It appeared in the New York Herald Tribune of January 10, 1966:

HERE IS THE RECOED: DIVIDENDS FROM KORRA NATION'S AID IN VIET WAR (By Roscoe Drummond)

Washington.—It is 13 years since the nightmare of the Korean war. And what did it all mean?

Was it wasted strife or incalculable boon? What is the answer from South Korea today? The answer is that the American people

The answer is that the American people can be proud of what the United States did for South Korea and has reason to be grateful for what South Korea has done for itself. This is the record:

With the help of a duzen other nations, but primarily on its own, the United States turned back the aggression to the 38th parallel which divided the two Korsas.

Today, South Korea is secure, tranquil, and progressive.

It has a democratic government ruling by the consent of the governed.

It is carrying forward significant social reforms.

It is stable—so stable that, despite some demonstrations, it was able last year to establish diplomatic relations with its once hated enemy and occupier, Japan, which is now providing it with \$600 million in grants and loans over a 10-year period. South Korea is proving itself resourceful and increasingly self-reliant. It is making steady economic progress and, while U.S. aid has been substantial, the South Koreans have been showing what self-help can really be. Their gross national product has been rising at the rate of about 8 percent a year; industrial production is up 15 percent.

evously short of land to enable its people to be self-sufficient in food, the government of Chung Hee Park, by literally carving terraces out of mountains, is doubling its

arable land.

South Korean industry is making rapid strides. Exports are up from \$20 million in

1959 to \$170 million today.

But this is only half of it. These are some of the things South Korea has been doing for itself. These are the ways South Korea has been using its security from

And now what is the other dividend besides a free people secured from oppression? What is the earned dividend, which has not been asked, but which is now so welcome

and so helpful?

and so helpful?

South Korea's dividend to the United States is in South Victnam today.

Defended against Communist aggression by the United States, South Korea is today helping the United States repel the Communist aggression against South Victnam. Not just with truck drivers and medical worlder and health the lines are health of the lines agrees.

supplies and behind-the-lines support. But with 15,000 battle-hardened South Korea freedom fighters trained for action in

the jungles and rice paddies where the Viet-cong are deadliest—plus 2,000 combat combat engineers.

Little South Korea, with a population of 28 million, is doing far more than any other country except the United States and is contributing more fighting men per capita than even the United States.

And why did the Government and Parlia-

ment of South Korea make this tremendous decision to commit 17,000 men to the defense

of South Vietnam?

They know from their own experience the crucial need to defeat aggression in South Vietnam—and are doing what they can to help.

# Railroads Are of Vital Importance to the Economy

EXTENSION OF REMARKS

# HON. SAMUEL N. FRIEDEL

OF MARTLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. FRIEDEL. Mr. Speaker, the recent merger of the Pennsylvania and New York Central Railroads has raised many questions in the areas formerly served by each of these great companies, including the city of Baltimore which I represent.

It is important for us to know how these railroads plan to solve some of the long-range problems of the Eastern States and there have been recent reports which have caused grave concern regarding the future plans of the combined Pennsylvania and New York Central.

However, two recent articles in the Baltimore Sun shed light on these plans and I include them at this point in the RECORD. The statements made by Mr. Stuart T. Saunders, chairman of the board of the Pennsylvania Railroad, at a meeting in Baltimore last Monday indi-

cate that the merger will be of great bene-fit to the city of Baltimore as well as to our great port, and his statements are reassuring to us.

The articles are as follows:

[From the Baltimore (Md.) Sun, Jan. 11, 1966]

### Mr. SAUNDERS EXPLAINS

Stuart T. Saunders' statement in Baltimore vesterday was pretty much what the call a plea in confession and avoidance. Yes, said the president of the Penn-sylvania Railroad, he did say the things in a recent speech at Newcastle which seemed to threaten Baltimore railroads with substantial losses of ore and grain traffic. But he misspoke the Pennsy position because he was talking extemporaneously. In avoidance of the impression thus created, he rend from a carefully prepared text to make several points including these:

1. When he spoke at Newcastle of diverting freight from railroads, he really meant that railroads could divert freight from other transport modes, having in mind, no doubt, water traffic on the St. Lawrence Seaway.

2. Shippers control shipping destinations in any case, and so select the ramous bloved. Those who prefer the port of Baltimore will designate railroads serving that port

3. The examiners assigned by the Inter-state Commerce Commission to the Pennsy-New York Central merger plea concluded the merger will benefit Baltimore. The prospective partners have no new plans. As of now, that is.

4. The ICC examiners specifically underwrote traffic agreements by which the Pennsy and the Pittsburgh and Lake Erie (New York will cooperate with the Western Maryland as a channel to Baltimore. (The Western Maryland has, however, already secured a reopening before the ICC of argument on one point in its relationship with

the Pennsy and other reopenings in general would be possible under the law.) 5. The Pennsylvania is planning new in-vestment in the port of Baltimore of some \$17 million and—announced for the first a Pennsy-Central merger could well require a new tunnel through Baltimore to

cost \$125 million.

Mr. Saunders did not expand in any degree on Baltimore's special geographical and in-stitutional advantages as against the north-ern ports. That is for Baltimoreans to do. Mr. Saunders did indicate the obvious sound management would require full ex-ploitation of special port advantages by all parties concerned. That is all Baltimore expects and the expectation conditions the support Baltimore interests have given to the Pennsy-Central merger proposals.

[From the Baltimore (Md.) Sun, Jan. 11, 1965]

PENNSY ENDS LONG SILENCE-RAILEOAD DIS-CLOSES PLANS FOR CITY AND PORT (By Helen Delich Bentley)

For the first time in decades, the Pennsylvania Railroad—through its board chair-man—yesterday made public commitments as to what it intends to do for the port and the city of Baltimore.

The pledges were made by Stuart T. Saunders at a public meeting in the board Saunders at a public needing in the board of estimates room yesterday morning. The session was called by Hyman Pressman, city comptroller, after it was disclosed last week that Saunders had stated in New Castle, Pa., that he intended to divert 1 million tons of ore and 15 million bushels of grain annually from the port of Baltimore to Philadelphia.

### OFFICIALS PLEASED

After the 90-minute meeting, which Press-man described as "clearing the air," top port officials commented that "this is the first

time we've been able to get on the record what the Pennsylvania intends to do in Balti-more. It sounds good."

Among the Saunders were: commitments

1. The railroad has a backlog of projects amounting to more than \$17 million in store for Baltimore.

2. The board of directors has authorized structural and electrical improvements to the Pennsy's Baltimore coal pier which will permit the handling of 100-ton capacity hopper cars and enable it to handle a greater volume of coal through Baltimore.

3. The Pennsylvania is working out a "mutually satisfactory arrangement for giving Rukert Terminal Corp. all the space it needs in Baltimore in order to continue to

develop business.

4. As the new high-speed railway along the eastern corridor between Washington and Boston is developed, the Pennsylvania will invest about \$25 million of its own money in upgrading right-of-way and high-level platforms in its Baltimore station.

5. With the city's cooperation, the Pennsylvania is prepared to push studies Immediately on developing air rights and other property on the "good many acree" adjacent to the station which could be included in Baltimore's "fine urban redevelopment program.

6. The Pennsylvania grain elevator will continue to be operated as a public grain elevator. The railroad has recently rejected 'several very attractive offers for sale of

lease" of its elevator.

Saunders did not deny that he had made the statements attributed to him regarding the traffic diversion from Baltimore. Mr. Pressman described the hearing as "clearing

Mr. Pressman said afterward that although he had not intended to make any statement, all of the testimonials in behalf of the proposed merger of the Pennsylvania and New York Central indicated that it would be beneficial to the port of Baltimore. He also noted that the tone of the hearing was "one-

sided" in favor of the railroads.
Saunders admitted that he had made the statements in New Castle, but attempted to ease the concern created by saying he had no idea of getting into a discussion of port situations when he went to New Castle

# Section 14(b) Analyzed

EXTENSION OF REMARKS OF

# HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. RHODES of Pennsylvania. Speaker, confusion and deception have clouded the controversy over legislation to repeal section 14(b) of the Taft-Hartlev law.

A public service was performed by the Reading, Pa., Eagle in an excellent editorial throwing light on the controversy and on the fundamental issue involved.

This is one of the most important issues in this 2d session of the 89th Congress.

The Eagle is the largest circulation paper in the Sixth Congressional District and one of our State's leading news-

Therefore, Mr. Speaker, I include this informative editorial with my remarks in the Congressional Record:

SECTION 14(b) ANALYZED

Repeal of section 14(b) of the Taft-Hartley labor relations law (the section that allows States to pass so-called "right-to-work" laws) is one of those subjects that commonly engenders considerably more heat than light when it is subjected to discussion.

One illuminating appraisal of the issue has just been offered by New York's Republican Senator Jacos Javrrs, as published in the

New York Journal-American.

"Section 14(b)," he wrote, "is neither the protector of individual freedom nor a restraint on abuses of union power, as is so often argued. On the contrary, this section, which permits individual States to depart from an otherwise uniform national labor policy by outlawing the union shop, is used primarily by southern and a few other nonindustrial States to perpetuate substandard working conditions and thereby attract 'run-away business' from industrial States like (And Pennsylvania, we might York."

"Opponents of repeal tend to leave the impression that without section 14(b), workers in right-to-work States will be compelled to join unions or lose their jobs. But repeal of this section will compel nothing of the sort. It will permit a company and a union to bargain about the union shop-just as they now bargain about wages and working conditions. \* \* • If they freely agree upon a union shop, then it is this agreement \* • •

that controls the situation.

"Even under a union shop agreement compulsory membership is not required in a union: All that is required is the payment of union dues. This unique legal treatment in the case of a union arises from the fact that the union is itself required by law to represent, at its own expense, all employees and

not just members

"While the right-to-work issue often is posed as one of individual freedom, nothing could be farther from the truth. Once the fundamental principle of collective bargaining is accepted, there are literally dozens of instances in which the union-representing the group—may agree on some term or condition of employment which displeases an individual employee. For example, every seniority system gives some employees supe rior tob rights over others and every negotiated wage scale has the effect of prohobiting individuals from bargaining for separate employment contracts on terms conflicting with the collective agreement.

"These are matters which have a far greater economic impact on the individual employee than a clause assessing \$5 per month

ud

ve

on

rt-

he

di-

rsy

ed.

int

9th

ion

rict

his

rks

"The controversy over 14(b) also has tended to focus public attention on the exercise of union authority throughout the country, and not just in so-called right-to-work

States

"But it is ridiculous to argue that such problems as may arise from the development of union authority in industrial States can be solved by perpetuating depressed wages in Arkansas, Mississippi, Alabama and other low-wage right-to-work States where unions never have had much bargaining power."

needs to be added that Senator Javirs endorses repeal of the controversial section

14(b).

### A Tired American Speaks Out

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MULTER. Mr. Speaker, Alan McIntosh of the Rock County Herald,

Luverne, Minn., has summed up in an editorial in that newspaper what many Americans have begun to feel about our society today. We are tired of hearing friends and enemies alike tell us how stupid, greedy, cruel, and ignorant we

Stop and think for a moment, if you will, of the last time you read or heard anything good about our country. Would it take a full minute to think of the last time you heard someone describe in great detail what's wrong with America?

Mr. McIntosh's editorial was reprinted in the November 10, 1965, edition of the New York Journal-American and I commend it to the attention of our colleagues:

A TIRED AMERICAN SPEAKS OUT

(The following editorial, by Alan McIntosh, is reprinted from the Rock County Herald. Luverne, Minn.)

I am a tired American

I'm tired of being called the ugly Ameri-I'm tired of having the world panhandlers

use my country as a whipping boy 365 days a year.

I am a tired American American Embassies and information centers stoned, burned, and sacked by mobs operating under orders from dictators who preach ace and breed conflict.

I am a tired American-weary of being lectured by General de Gaulle (who never won a battle) who poses as a second Jehovah in

righteousness and wisdom.

I am a tired Americanand all the other blood-sucking leeches who bleed Uncle Sam white and who kick him on the shins and yank his beard if the flow

I am a tired American—weary of the beat-niks who say they should have the right to determine what laws of the land they are

willing to obey

I am a tired American-fed up with the mobs of scabby faced, long-haired youths and short-haired girls who claim they represent the new wave of America and who sneer at the old-fashioned virtues of honesty, integrity, and morality on which America grew to greatness

I am a tired American-weary unto death of having my tax dollars go to dictators who play both sides against the middle with threats of what will happen if we cut off

the golden stream of dollars.

I am a tired American-who is tired of supporting families who haven't known any other source of income other than Government relief checks for three generations.

I am a tired American—who is getting madder by the minute at the filth peddlers who have launched Americans in an ob-scenity race—who try to foist on us the belief that filth is an integral part of culture

in the arts, the movies, literature, the stage.

I am a tired American—weary of the bearded bums who tramp the picket lines and the sit-ins-who prefer Chinese communism to capitalism-who see no evil in Castro, but sneer at President Johnson as a threat to

I am a tired American-who has lost all patience with that civil rights group which is showing propaganda movies on college campuses from coast to coast. Movies denouncing the United States. Movies made in Communist China.

I am a tired American—who is angered by the self-righteous breastbeater critics of America, at home and abroad, who set impossible yardsticks for the United States but never apply the same standards to the Prench, the British, the Russians, the

I am a tired American—sickened by the slack-jawed bigots who wrap themselves in bedsheets in the dead of night and roam the countryside looking for innocent victims.

I am a tired American who dislikes clergymen who have made a career out of integr tion causes, yet send their own children to private school

I am a tired American who resents those who try to peddle the belief in schools and colleges that capitalism is a dirty word and that free enterprise and private initiative are

only synonyms for greed.

They say they hate capitalism, but they are always right at the head of the line demanding their share of the American way

I am a tired American—real tired of thos who are trying to sell me the belief that America is not the greatest nation in all the world—a generous-hearted nation—a nation dedicated to the policy of trying to help the "have nots" achieve some of the good things that our system of free enterprise brought

I am an American who gets a lump in his throat when he hears the "Star-Spangled Banner" and who holds back tears when he hears those chilling high notes of the brassy trumpets when Old Glory reaches the top of the flagpole.

I am a tired American who thanks a merciful Lord that he was so lucky to be born an American citizen—a nation under God, with truly mercy and justice for all.

# "The Valley of the Potomac"

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted. I insert into the Appendix of the Congressional Record an excellent editorial appearing in the Washington Post of Monday, January 10, 1966, entitled "The Valley of the Potomac" pointing out the needs to preserve in its natural state the magnificent valley of the Potomac for the benefit of all of the people of the Nation and for generations yet to come:

THE VALLEY OF THE POTOMAC

The Potomac Interim Report to the President presents eight essential recommendations with most of which there will be widespread agreement by those who see the great watershed as a resource of many values, no one of which they are willing to sacrifice.

There will be especial satisfaction with the flat recommendation that the Seneca dam and reservoir on the main stem of the Potomac not be constructed at this time and the corollary advice that the area be confined to its present economic uses and withheld from intensive development that would preclude water storage purposes later on. There will be differences over the proposal that Bloomington Reservoir's construction go forward at once and even more over the proposal that three added reservoirs be authorized. If they are authorized, no construction irreversibly sitering the ment should be initiated until alternative methods of supplying water have been more fully examined. The establishment of a Potomac Valley Historical Park in order to insure a green sheath of recreational land along the Potomac will accomplish most for the areas of most concentrated population, and acquisition should commence there first. The inclusion of the Cacapon in the wild rivers bill is a good idea. Measures of water and soil conservation proposed in the report ought to be hastened by all appropriate action. The George Washington Memorial

Parkway certainly ought to be extended to link Mount Vernon and Yorktown and com-plete a net of parkways in the river basin.

The search for sources of water alternative to the construction of huge reservoirs with their attendant destruction of recreational lands should be pressed with great energy. The country needs to know the comparative costs and utility of measures such as the Susquehanna diversion, desalination, recla on and recirculation of waste water and utilization of the upper estuary. The time is past when urban communities could be ced into vast programs of construction and impoundment on the supposition that the choice lay only between water shortage and reservoir building. But unless there is an energetic pursuit of the alternative sources of water, the President's committee will have made proposals that will only defer and not prevent the eventual resort to large scale impoundment of waters and wholesale flooding of recreational and agricultural lands. The time gained by the temporary immediate irremeasures forestalling any immediate irre-versible alteration of the Potomac Basin must be used to assure future water wants of the area.

The great valley of the Potomac like other great river valleys of the country must not be monopolized to meet the water hunger of urban cities arising in great part out of the infamous pollution of streams, the shocking waste of existing water supplies and the utter failure to exploit the gains of science.

States-Canadian Relations-Address by Congressman Tupper, of Maine

EXTENSION OF REMARKS

# HON, F. BRADFORD MORSE

OF MARRACHUSITIES

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MORSE. Mr. Speaker, our colleague the gentleman from Maine edgeable Americans in the field of United States-Canadian relations. As a member of the United States-Canadian Interparliamentary Group, Mr. TUPPER has had frequent and productive contacts with our Canadian neighbors.

Believing that too many Americans take Canada for granted, he led a group of his Republican colleagues, in which I was proud to be included, in the preparation of a white paper on United States-Canadian Relations in which 26 recommendations for U.S. policy were discussed. The white paper has been enthusiastically received throughout Canada and the United States.

On the occasion of the Mapleleaf Dinner in New York City on December 8, Mr. TUPPER outlined the white paper and assessed its impact to that point.

Under unanimous consent, I include Mr. Tupper's speech in the Appendix of the RECORD:

MAPLELEAF DINNER SPEECH BY CONGRES TUPPER, OF MAINE, NEW YORK CITY, DECEM-BER S. 1965

The inimitable Art Buchwald, 6 weeks a suggested that, if Canadians seriously desired more attention from the United States, you would have to create such a serious prob-lem for us that we could not afford to ignore

you any longer. Buchwald suggested you might develop a serious internal Communist threat, or build your own atomic bomb, or demand that the United States give back the St. Lawrence Seaway, or build a Berlintype wall along the boundary, or burn the American flag at Niagara Falls. But not even Mr. Buchwald's vivid imagination could anticipate the course you chose to turn out our lights.

I suspect that throughout generations to come, a new cliche will be added to that long list of familiar phrases which are "trotted out" upon the occasion of every speech on United States-Canadian friend ship. In the future, our two countries will not only share the world's longest unfortified border, a common language, a common culture, and a common heritage, but a common fuse as well.

On last September 27, nine of my Republican colleagues in the House of Representa-tives and I issued a detailed white paper on United States-Canadian relations listed 26 specific recommendations to the U.S. administration for U.S. policy, covering such areas as education and journalistic exchange programs, U.S. business practices in Canada, trade relations between the two countries, expansion of the United States-Canadian International Joint Commission, problems of water sharing, U.S. immigra-tion policy, and the organization of the U.S. Government to deal with Canadian affairs.

It seems appropriate for me to review with you tonight the reception which this republican effort has achieved over the past 10 weeks. Our efforts received broad editorial endorsement by nearly every major Canadian newspaper. My own office has been flooded with letters of congratulations and appreciation from Canadian citizens-both private and public. And, contrary to the expectations of some skeptics, we were able to achieve the not inconsiderable feat of producing a provocative document on United States-Canadian affairs in the middle of the Canadian election without, at the same time, providing either candidate with an election

While we are, of course, gratified by the favorable reaction in Canada, the document was written primarily to influence Americans and the U.S. administration. U.S. newspapers have also been generous in their comments, we have not perceptibly budged the administration in its lethargic approach toward United States-Canadian

The chairmanship of the American section of the International Joint Commission is still vacant, as it has been for the last 477 days.

Canadian relations in the Department of State are still anachronistically conducted under the Office of British Commonwealth and Northern European Affairs.

There are still no plans, of which I am aware, to expand the Fulbright student exchange program to include Canada.

The Merchant-Heeney report of 6 months ago is still merely a skeleton of guiding principles with no meat yet put upon the

The more far-reaching of the Republican roposals of last September will take a long time to consider, to negotiate, and to imple But the simple steps indicated above could be taken now, by simple direction of the President. And though they are small steps, they could do much to restore to Canadian-American relations a sound basis upon which more progressive measures can

Permit me to pause for a moment to stress the need for a chairman of the U.S. section of the International Joint Commis-Throughout the 477-day American vacancy, the corresponding Canadian post has been filled by one of Canada's most out-standing public servants, the Honorable A.D.P. Henney, who on two occasions has

been Canadian Ambassador to the United States. His appointment has been a great honor to the United States. By comparison, the long U.S. vacancy is insulting.

Through all the ups and downs of Canadian relations, the IJC has remained a steady bulwark of close international cooperation. Its technical studies prepared the way for international agreements on the St. Lawrence Seaway and projects. Tod and the Columbia River Basin Today it is charged with examining the important problems of water pollution and decline in the water level of the Great Lakes. In these and its more routine tasks, the IJC is severely hampered without an American chairman. Most immediately relevant of all, it is the IJC which has the technical capacity, if provided with the appropriate political leadership, to undertake an intensive international study to prevent a recurrence of the frightening power failure of November 9.

My Republican colleagues and I, in a

statement on July 23, pleaded with the President to fill the vacancy. We urged him to do so in our September 27 white paper. In a personal letter to the President on October 19, I once more encouraged him to remove this increasingly serious irritant in United States-Canadian relations. Once more on November 9, the day after the Canadian elections and the day of the blackout, I again wrote to the President to urge his action. Perhaps a direct appeal from the officers and directors of the Canadian Society of New York would have a greater influence at the White House. In any event, I encourage you to send one.

One other subject requires special comment and immediate attention. On last September 30, the Congress passed new immigration legislation. I welcomed it and voted for it as a long-overdue change in U.S. immigration policy by removing the obnox-tous and discriminatory system of national The bill, nonetheless, contains a serious flaw—an annual limit of 120,000 immigrants from the Western Hemisphere that might seriously hinder the flow of immigrants to this country from our contiguous neighbors—from Canada and Mexico. The State of Maine's culture has benefited greatly from immigrants from the Province of Quebee and the Maritime Provinces.

During the fiscal year 1964, 139,284 persons, including spouses and children, emigrated from the Western Hemisphere countries to the United States. Over one-half of these came from our immediate neighbors—38,074 from Canada and 32,967 from Mexico.

If the rate of Western Hemisphere emigration to the United States remains at this level or, as is more likely, increases, and if the bill is administered on a first-come, firstserved basis, there is no assurance whatsoever that Canadian and Mexican emigration to the United States will not be affected.

I am sympathetic to the proposition that if regional immigration quotas are assigned to the rest of the world, they should also be assigned to the Western Hemisphere, for there is no inherent difference between these nations and others. There is, however, one vital distinction between Canada and Mexieo and all the other nations of the world. They are the only two countries which border directly on the United States—and in my opinion fully free and unlimited immigra-tion between the United States and its immediate neighbors should be maintained.

The bill provides for a study commission

f

C

ti

E III

C

W 01

tv cc ed Be

to review its potential effects on Western Hemisphere immigration before it goes into effect in June 1968. I hope the study com-mission will carefully consider the desirabil-ity of amending this legislation before that date, to provide for a continuing free flow of immigrants across U.S. borders with Canada

and Mexico.

As our September white paper warns, how-ever, "if no limit is placed on immigration

from Canada to the United States, the two Governments will nonetheless have to agree on a formula which will prevent citizens from third countries emigrating to Canada, meeting the requirements for Canadian citizenship and then emigrating again to the United States under the quota-free Canadian clause."

It is tempting to dwell here on some of the far-reaching, more provocative proposals of our Republican white paper, and I can assure you that our congressional group in the months to come will spell out in even greater detail the concepts which we have developed for a program of continued water sharing, for an expanded role for the LIC, for further study of how to expand United States-Canadian trade, for a systematic effort to increase student and journalistic exchange. But it may be more important here to stress a portion of that report which has, thus far, received only secondary attention.

We suggested that in addition to all the frequently cited and indisputably correct reasons for closer United States-Canadian ties, there is a new obligation that this highly complex and vulnerable world has imposed upon our two great nations. It is the obligation to set a standard in the conduct of international affairs, to provide a model for relations between independent states. If the United States and Canada cannot establish a model of peaceful and progressive relations, which nations can?

Throughout history, men have grouped to-

Throughout history, men have grouped together for their common security, for their common prosperity, and for both. The catalyst of unity for some was geography. For some it was religion. And for the last three centuries it has been the nation-state.

Nationalism as a unifying force has provided the impetus for progres. It has produced prosperity out of poverty and order out of chaos. Its virtues are evident. But the vices of nationalism are no less

But the vices of nationalism are no less evident. It has set people against people. It has allowed demagogues to lead by creating a mythical challenge from without. And in a world where man's capacity of destruction seems endless, national unity has become, in a real sense, a source of international disunity and intense peril.

It was misconducted nationalism which throughout the last three centuries fanned the latent embers of human emotion into the flames of war. It is a luxury the world can no longer afford. As the newly independent nations of Africa and Asia set out on the inevitable search for national power and national prestige, we must strive to provide for them a better example than the national history of their elders.

We said in September that the purpose of the efforts of the United States and Canada must be to seek to identify and reemphasize the constructive virtues of the nation-state system while minimising its destructive vices. In the transformation of men and nations, it is necessary to begin where the problems are small—and where the opportunity for progress is great. It is from this perspective that United States-Canadian relations takes on more significance and more promise than relations between any two other countries of the world. It is in this perspective that we share a greater obligation to set aside petty disagreements and differences in order to build on the North American Continent a model of cooperation between independent states which we would see repeated by nations

That obligation extends far beyond the two Governments to the peoples of both countries. Its beginning must be found in aducation about each other. We said in September that there is an appalling ignorance about Canada in the United States,

and we suggested that 1966 be designated as "The Year of a New Awareness of Canada." No matter how extensive its interest and dedication, the Government alone cannot create that new awareness, cannot itself forge the foundation of mutual understanding between peoples—an understanding which can allow our two countries to write the first chapter of a new and more noble history of relations between nations.

Therefore, I urge you and organized groups of Canadian citizens which exist in every major city in this country to declare 1968 as your own personal "Year of a New Awareness of Canada" in the United States. I urge the U.S. chambers of commerce, the Rotary, the Lions, the Kiwanis, our political parties, and trade unions, our church groups and educational foundations, the Leagues of Women Voters, and the World Affairs Councils to accept their share of responsibility for building a basis of understanding upon which our two Governments can build a model of international relations.

model of international relations.

The challenge and the opportunity are there. The challenge and the opportunity are yours.

### New Library Appropriate Tribute to Great Citizen

EXTENSION OF REMARKS

# HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. DULSKI. Mr. Speaker, last month the city of Buffalo, N.Y., dedicated a new library named for a great doctor, statesman, and humanitarian The Dr. Francis E. Fronczak Memorial Library is a most fitting tribute to this

outstanding citizen.
Dr. Fronczak was the health commissioner in Buffalo for 36 years during which time he initiated many new projects and programs for better health service. He was very active in many cultural and professional societies, and served his country by representing the United States under every President from McKinley to Roosevelt at interna-

tional medical conferences.
Dr. Fronczak served in World War I and was decorated by the United States, Belgium, France, and Poland, receiving their highest military honors. He also represented his fatherland, Poland, at the peace tables of World War I, and as an ex-officio member of Paderewski's

He was rewarded for his service to God and church when he was knighted a Knight of St. Gregory by the Pope.

It is indeed appropriate that this library should be named after this fine gentleman who stood as a pillar of greatness in the fields of medicine, military strategy, public health, literature, church work, statesmanship, and education.

Under leave to extend my remarks, I wish to include the article written by Mrs. Anne McIlhenney Matthews, which appeared in the December 15 edition of the Buffalo Courier-Express, giving a brief résume of the dedication ceremony for the Dr. Prancis E. Pronczak Memorial Library.

and we suggested that 1966 be designated New LIBRARY APPROPRIATE TRIBUTE TO GREAT as "The Year of a New Awareness of Canada."

CITEERN

(By Anne McIlhenney Matthews)

The shadow of a great citizen hung low and lovingly over the shiny brick and steel building at Broadway and Loepers Streets Sunday afternoon. As a new member of the Buffalo and Erie County Public Library Board it was a special privilege to attend the dedication of the Dr. Francis E. Froncsak Memorial Library, in this capacity.

As one who knew the late health commissioner over a long period and rather well, it was gratifying to see and hear that so many others also had hasked in his friendship and inspiration and were in agreement that his tireless, lifelong devotion to his own special people and his own special city now has continuing recognition and significant commemoration. Dr. Fronczak would have loved it.

### UNUSUAL

For one thing, as a ceremony, it was unusual in concept and dispatch. And this latter would have particularly delighted the doctor who had to sit through interminable ceremonies as a head-table luminary and often whispered to this reporter that he anyted our "greating cut the second hatch."

ceremonies as a head-table luminary and often whispered to this reporter that he envied our "sneaking out the escape hatch." Councilman Gus Froncsyk and City Court Judge Alois C. Masur started the dedication within 10 minutes of the planned starting time and ended it on the button.

time and ended it on the button.

The chief speaker, Prof. Joseph Wytrwal, of Wayne State University, was supposed to go on last but he went on nearly first and this was great because his message was as special as the event and everyone was fresh at listening and enjoyed it.

He compared Dr. Fronczak with another great doctor, Mme. Curle. There were many there who appropriately learned in a library that she was Polish and that her first great discovery was significantly named "Polonia" and that his insisted that the second, "radium," take its name from the Polish word meaning "humanity" which begins "rad."

Both discoveries she refused to patent insisting that they belonged to the whole world, said Professor Wytrwal.

### APPROPRIATE

Fittingly, since Dr. Fronczak had been an ex-officio member of Paderewski's Cabinet, the Paderewski Singing Society under the direction of Michael Siominski, entertained the gathering.

again, Dr. Fronczak would have loved this. No dirges for him. Like the library itself, the songsters took their theme from Mary Poppins and insisted that everything now is "supercalifragilistic expial doctous."

# Anniversary of Independence of Chad, January 11, 1966

EXTENSION OF REMARKS

# HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. BRADEMAS. Mr. Speaker, on January 11, 1966, a country formerly part of French Equatorial Africa, but with an area more than twice that of France, celebrated the anniversary of its independence.

That nation, Chad, had been one of the four territories in French Equatorial Africa since 1910. Through a series of progressive steps, which included the dissolution of French Equatorial Africa in 1959, Chad assumed a place among independent nations of the world in

Little is known of the early history of this landlocked area. At the time of first reports from European travelers in the late 19th century, individual domains were ruled by warring sultans and the territory served primarily as a hunting ground for foreign slave traders.

Today, President Francois Tombalbaye leads the nation under a constitution approved in 1962. President Tombalbaye and his 2.8 million fellow citizens are moving their new nation forward on all fronts—political, social, and

Although Chad has a desert area as large as the State of Texas, it is self-sufficient in food production. National imports reached \$34 million and exports \$25 million in 1964. The United States is participating in the economic development of Chad with a modest aid program which, since 1962, has averaged some \$700,000 annually.

Chad maintains friendly relations with our country and retains close ties with France as a member of the French Community. It has occupied a seat in the United Nations since 1960.

Therefore, it is appropriate that the United States, conscious of its own relative youth, acknowledge and offer congratulations upon the anniversary of independence of a still younger member of the community of nations.

## The St. Lawrence Seaway

EXTENSION OF REMARKS

# HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. GARMATZ. Mr. Speaker, the activities of the St. Lawrence Seaway and all activities by either the Canadian or United States Government or the St. Lawrence Seaway Development Corporation, are of great interest to all of the ports on the east coast.

When legislation authorizing the construction of the seaway was enacted by Congress, it clearly stated that tolls were to be high enough to amortize the cost of the seaway over a 50-year period. After that the tolls were to cover the cost of operations. Since that time efforts have been made and are still being made, to reduce or eliminate tolls, to increase the volume of trade through the seaway.

In this connection the report of the St. Lawrence Seaway Committee of the North Atlantic Ports Association should be of special interest to the Members and therefore I wish to insert it in the appendix of the Recorp:

SPECIAL REPORT OF THE ST. LAWRENCE SEAWAY COMMITTEE OF THE NORTH ATLANTIC PORTS ASSOCIATION, DECEMBER 1, 1965

It has been customary in recent years for the NAPA St. Lawrence Seaway Committee to prepare a report for the annual meeting in the spring in which the Seaway's performance during the previous operating year and the financial condition of the St. Lawrence Seaway Corporation is analyzed, along with a description of the committee's activities.

The committee believes it important to file an interim report at this time because, over the coming months, a number of major insues relating to the Seaway will evolve with which members of the association should be acquainted, and in the disposition of which they should take an active part.

By July 1, 1866, the Seaway Corporation and its Canadian counterpart are supposed to recommend to their respective governments a course of action to correct the fact that toll revenues to date have not made it possible for the Seaway to repay its debt to both Federal Governments according to the schedule set up at the time of passage of enabling legislation. That legislation required that the effectiveness of the toll structure was to be reviewed by July 1, 1864, but was postponed for 2 years to the new date. There are indications that the various committees of the Congress will hold hearings on the matter early in 1966, so that the NAPA should be ready, along with other interested organizations, such as the National Committee for a Nonsubsidized Seaway, to present testimony in this connection at that time.

Second, in September of 1965, a special stocked with the Senate Commerce Committee, released an extensive report on the Seaway which traces its history and its current problems and makes a series of recommendations, practically all of which are inconsistent with the basic theory under which the Seaway was developed. It is most important that considerable attention and publicity be given to correcting the errors of fact and the completely pro-Seaway bias of this report as soon as Congress reconvenes in 1966.

Lastly, the Maritime Administration conducted hearings this year on the essentiality of the Great Lakes overseas routes. The examiner who conducted these hearings reached the conclusion, as did the Senate committee, that something must be done to increase the percentage of total Seaway traffic carried in American ships from its present level of only 4 percent of total Seaway tonnage.

### SEAWAY PERFORMANÇE IN 1965

Before proceeding to a discussion of the above matters, it might be well to summarize briefly, on the basis of figures to date, the performance of the Samor division loss.

the performance of the Seaway during 1965. In recent years, the total tonnage handled by the Seaway has experienced a significant rate of growth; 1961 represented an increase of 15.3 percent over 1960. Similar figures for the 3 subsequent years were 9.3, 20.9 and 27 percent for 1964 versus 1963. According to preliminary figures through October 1965, the increase for that much of the current season was only 6.5 percent over last year. This obviously represents a substantial drop from last year's 27.2-percent growth.

At the same time. It is significant that general cargo shipments through October 1965 increased from 3.1 million tons to 4.7 million tons, an increase of 51.6 percent. Much of this growth is attributable to stockpling of steel import in anticipation of a steel strike, but increases are noted in other general cargo commodities such as agricultural machinery, vehicles, wines and liquors,

etc. The Seaway Corporation has extensively publicized this increase in general cargo, and it should be remembered that the tolls for general cargo are approximately double for those of bulk cargo.

those of bulk cargo.

Overall, however, there is no question that
the Seaway's 1965 performance represents a
definite tapering off from performance in the
recent years.

#### BEFORE OF SENATE COMMERCE COMMITTEE

A special subcommittee of the Senate Commerce Committee was appointed in 1963 to make a study of transportation on the Great Lakes-St. Lawrence Seaway and spent almost 2 years on the job, including holding a number of hearings in the East and in various guif ports. In its final report the committee discusses the background of the Seaway, its current status, and makes recommendations for future activities. However, no testimony by non-Seaway interests, such as that presented by Clifford O'Hara, then president of the North Atlantic Ports Association, is even mentioned in the report.

The committee originally had five members—Senators Lausche, of Ohlo, who serves as chairman; Harries, of Indians; Harr, of Michigan; Prourr, of Vermont; Beall, of Maryland. The latter two Senators from the East left the Senate and therefore the committee, at the end of 1964. Thus, the study and report had the benefit of no opposing views but was directly represented by the three Seaway States of Ohlo, Indiana, and Michigan.

The study was carried, to quote the report, "to review the causes which induced the creation of the Seaway, the results that have developed in the several years of its operations, together with its problems and considered remedies."

Much of the report and its recommendations recall events of the period in the 1850's
when we first opposed participation of the
Federal Government in deepening and improving the St. Lawrence Seaway and then
fought to have it at least established on a
self-sustaining basis. At that time various
people presented statements to committees
of the Congress which expressed opposition
to the proposed Seaway, chiefly on two basic
grounds: (1) that it was unnecesary from
the standpoint of either national defense or
benefit to U.S. commerce and navigation; and (2) that while it would impose a
stiff burden on U.S. taxpayers, it would at
the same time do substantial damage to the
livelihood of workers and facilities in many
of the Nation's ports, particularly those in
the North Atlantic range.

the North Atlantic range.

Despite strong opposition from the North Atlantic ports and many other sources, the bill authorizing the Seaway was passed by the Congress and signed by President Eisenhower in 1954. That bill provided Federal funds for the construction of a 27-foot channel between Montreal and Lake Ontario. This was to be accomplished by a new St. Lawrence Seaway Development Corporation working closely with its Canadian counterpart, the St. Lawrence Seaway Authority. Most importantly, the U.S. legislation provided the toils were to be levied at a high enough level to defray all of the expenses of the St. Lawrence Seaway Development Corporation, including the amortization of all list delta and obligations within 50 years.

Following passage of the act, the North Atlantic ports immediately turned their attention toward being certain that as the new corporation planned both the physical improvements and its financial structure, it abided by the provisions of the law by which it was created.

For example, in 1957 a spokesman for the NAPA pointed out that during its early years the Seaway would undoubtedly be unable to meet its annual debt service, so that tolls should be established at levels sufficiently high to make up the losses during the early years, as well as to meet the operating cost which were certain to increase with time and as traffic volumes increased. It was also pointed out at that time that further improvement would have to be made if the Seaway turned out to be successful, such as twinning the locks and otherwise increasing its capacity, and suggested that tolls be es tablished at a high enough level to "include the additional capital and operating costs and any others which could reasonably be foreseen

This history is significant because most of the recommendations contained in the recent report of the Senate subcommittee repeat many of these arguments which were, at least, theoretically disposed of when the legislation was passed, requiring the Seaway to stand on its own two feet in free competition with other ports of the country. The subcommittee's report reflects the

The subcommittee's report reflects the general idea that if the Seaway could be given preference and favored treatment, sufficient tonnage could be generated to make the project self-supporting. Most of the points raised were discussed fully 10 years ago. The present Seaway advocates are apparently trying to forget that many of the same questions were raised by opponents of the Seaway at that time and that the legislation finally adopted made mandatory a self-supporting Seaway.

### CONCLUSIONS OF THE REPORT

Following a comparatively accurate accounting of the history of the Seaway and its current operational and financial situation, the committee's report summarizes the problems cited most frequently by witnesses appearing before the subcommittee into five major problems.

1. Failure to achieve a 27-foot depth for all major Great Lakes ports and connecting

2. Scarcity of American ships using the Great Lakes.

3. Discrimination by the railroads against the Lake ports, particularly through section 22 of the Interstate Commerce Act by means of inland freight rated discrimination.

4. A wide variety of suggestions for improved operation, greater promotion of the Seaway and the effect of higher toils.

Recommendations of the subcommittee's report concludes with nine specific recommendations as follows:

1. The report recommends that funds should be appropriated to enable the Army Corps of Engineers to deepen and clear Great Lakes channels and harbors to 27-foot deaths.

Although it was not specifically stated, there is an implication that funds for this purpose should receive a special appropriation. If justified on a reasonable basis, there is no reason why ports along the Great Lakes should not be dredged to 27 feet, but they should be required to go through the same procedures as other channels and ports in getting authorization from the Army Engineers and appropriations from Congress in competition with all other requirements for similar port improvements.

2. The report recommends that there should be a program to utilize American ships for Seaway trade.

h

w

The report cities many reasons for the fact that only 4 percent of the tonnage on the Great Lakes is carried on American ships, including physical limitations of locks on the Seaway, which is, of course, a built-in handicap, the issue of which was stressed 10 years ago during preliminary discussions of the Seaway. The idea of separating the

Great Lakes from the North Atlantic ports in terms of availability of American ships for Government shipments and creation of specific trade route also implies specialized treatment for the Seesway.

treatment for the Seaway.
3. The report recommends that section 23 of the Interstate Commerce Act should be examined objectively and remain unchanged.

The report criticizes Government claims that section 22 saves the Nation as a whole some \$50 million per year when it also results in the Seaway being forced to default its obligation of \$2 million annually to the Government.

4. The report recommends that the shipping season on the Seaway be lengthened.

The report carefully points out that "an all year open Seaway is not now contemplated," but recommends that the season be extended by 30 days and that future studies should be made as to ways of keeping the Seaway year even longer in the future. In passing it should be noted that the recently passed omnibus bill authorizes a \$75,000 study of possible methods of deicing the Seaway.

5. The report recommends studies for Seasuy improved lock facilities and for waterways related to the Seaway such as the Champiain Waterway "which would provide for much shorter and direct ocean passage." The idea of expending further funds to

The idea of expending further funds to correct deficiencies in the existing locks to provide easier access for vessels by means of an improved Lake Champlain Waterway is recommended, but nowhere is any suggestion made as to how these additional costs could be met.

6. The report recommends that the continuing growth of the Seaway will overtax its present facilities in the next 10 years and that studies should begin for the planning for expansion of locks and other facilities before capacity is reached.

Again the question presents itself as to how such expansion could be justified until the present Seaway is made self-supporting.

7. The report recommends several alternative refinancing methods such as extending the amortisation period to 100 years at an interest rate of 2 percent, and which would not begin until the 27-foot depth is available in all major lake ports.

In connection with the financing, the report tries to carry water on both shoulders. In various places it has stated that the growth of Seaway traffic will make it become self-supporting in a few years, but in other places the point is made that in order to be self-supporting, changes should be made in the debt structure. The idea of increasing toils to make the project self-supporting is dismissed by the committee members as entirely unrealistic because of its alleged effect on future growth on Seaway traffic.

 The report recommends an expanded program of information and promotion to be carried out by the St. Lawrence Seaway Development Corporation.

The impropriety of using Federal funds for the promotion of one series of ports at the expense of other ports has been discussed many times before.

The report recommends that funds for promotion should come "from tolls alone and not from appropriated moneys."

This provides a variation on the above in an attempt to prove somehow that money collected by the Seaway and not sent to the Federal Government in repayment of debt is somehow less of a Federal subsidy than a direct appropriation.

### RECOMMENDATIONS FOR ACTION

The NAPA St. Lawrence Seaway Committee therefore recommends that:

1. The committee be authorized to take a prompt and active role in working with

such organizations as the National Committee for a Self-Supporting Seaway to create substantial public interest in the question of the Seaway and the importance of the forthcoming decision as to the future tells structure.

2. The committee be authorized to develop specific testimony to be presented at any hearings by Federal or other agencies and by congressional committees dealing either with the tolls structure or of any of the recommendations developed by the Senate subcommittee.

HAYDEN B. JOHNSON, Chairman. PETER SCHAUPTLER, CHARLISS R. SEAL, EDWARD J. KANE, GREGORY HALPIN,

## The Case Against Declared War

EXTENSION OF REMARKS

# HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. CORMAN. Mr. Speaker, a dangerous trend has begun to develop among certain observers of the Vietnamese conflict. Briefly stated, they are trying to play both sides of the political street concerning the American commitment to the freedom and independence of South Vietnam. Their call is "Escalate the war or get out." Their irresponsible appeal is designed to gather political support both on the far left and on the far right. Part of this campaign is the proposal to formally declare war. The Los Angeles Times has effectively stated the case against such an action at this time and its reasoning should be carefully studied by Members of this House.

[From the Los Angeles Times, Nov. 23, 1965]

THE CASE AGAINST DECLARED WAR

A formal declaration of war by Congress would appear, within the context of American history, to carry an implication of finality, of all-out effort, and—in the light of past experiences—of a great moral crusade serving both to unite the country and to foster a sense of implacable determination for seeing through the task at hand.

Perhaps this is why support for such a declaration, sgainst Communist North Vietnam, has recently been voiced by several prominent political figures. Representative General Promote House minority leader, was the first, and he has been supported by Representative Menus Lamb, Republican, of Wisconsin.

In view of the many frustrations the Vietnam conflict provides, this attitude may, perhaps, be understandable to some. But this doesn't mean that it is either desirable or practical. For, in the case of North Vietnam, the sivantages of a declaration of war are minimal, if indeed they exist at all, while the disadvantages are immense.

Thus far, in fact, no declaration of war advocate has really spelled out what he expects might be gained. Ronald Reagan has suggested that a war declaration would mean the current crop of anti-Vietnam demonstrators could then be treated as law violators. But if ever a case existed of using a cannon to smash a butterfly, this is it.

Both domestically and internationally a declaration of war essentially means a change in legal condition. At home, for example, it might mean invoking sweeping Presidential powers, say in control over the economy.

A state of war with a foreign nation af-fects economic, political, and cultural relations with that country. But the United States doesn't even recognize North Vietnam. Our only area of contact is on the battlefield. And that contact, needless to say, requires no formal state of war

The Vietnam conflict can be-is-pursued just as much as may be necessary under pres-ent conditions of undeclared war. A dec-laration, on the other hand, has these

advantages among others: It could, as Richard Nixon warned over the weekend, force both Russia and China into open intervention, and possibly lead

to nuclear war.

It would ignore the fact that we are legally in Vietnam not as a principal party, but as an invited ally to help the South Vietnamese stop aggression. Nor can we ignore the fact that that aggression, though instigated and strongly supported by North Vietnam, has had and retains some indig-We can't declare war on enous support. asants.

It would raise serious complications with our treaty partners in the Pacific, who, while they are already helping in Vietnam, don't want to face a full-blown war.

And, finally, it would virtually destroy any hope, however thin, for negotiating an end to the conflict. A war declaration is an irrevocable step. Whatever emotional appeal it might have to some, its legal, practical, and military appeals in the present se hardly exist.

## A Congressman Goes International

EXTENSION OF REMARKS

# HON, F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MORSE. Mr. Speaker, last fall one of our distinguished colleagues. Representative Peter Freylinghuysen, of New Jersey, was honored by an appointment to the U.S. delegation to the 20th General Assembly of the United Nations.

As we expected, Congressman Frey-LINGHUYSEN served with distinction. In fact, he is credited with a major diplomatic triumph in mediating a dispute on a resolution involving the Palestine refugee program. When the program was threatened with possible extinction due to a dispute between the Israeli and Arab delegations, Congressman FREYLINGHUYsen negotiated a compromise resolution which passed the General Assembly.

His hard work and persistence has been noted by at least two United Nations correspondents. Under unanimous consent, I include in the Congressional Rec-ORD an article by Louis B. Fleming, which appeared in the Washington Post, and an article by Max Wiener, which ap-peared in the Newark Sunday News:

[From the Washington Post] A CONGRESSMAN GOES INTERNATIONAL

(By Louis B. Fleming, of the Los Angeles Times)

United Nations.—A Congressman turned diplomat in order to rescue the Palestine

refugee program from a political disaster and possible extinction in the United Nations General Assembly.

Representative PETER Republican of New Jersey, one of the two Members of Congress serving on the U.S. delegation to the 20th General Assembly, has won widespread praise from delegates for his work on the delicate problem.

The solution involved not only strenuous corridor negotiations but some extraordinary sembly procedure. The final compromise, which made just about everybody emerged from an earlier unexpected defeat for the United States, which has a deep humanitarian and a ticklish political stake in the question of the Palestine refugees.

As the country which has put up 70 percent of the cash, the United States has been anxious to fulfill humanitarian needs without frustrating progress toward a compromise that would permit the 1.2 million refugees to

live normal, useful lives.

As a supporter of Israel as well as a country eking influences with the Arab nations, the States has sought to appear nonpartisan and has fought for even-handed resolutions in the General Assembly. This year, the United States lost. Israel amend-ments were resisted. But Arab amendments, sponsored by Pakistan and Somalia, were adopted by the razor edge of 43 to 39, with 23 abstentions.

Adoption of the Arab amendments to a esolution introduced by the United States forced the American delegation into the peculiar position of voting against its own solution, which had suddenly come to include what amounted to an endorsement of Arab military action against Israel as well as a liberalization of the relief rolls that would have compounded the already overtaxed and deficit-ridden U.N. budget.

Most of the big cash donors to the program joined the United States in not supporting the amended resolution as it finally ared the Assembly's special political com mittee. Usually, a committee report is adopted by the Assembly unchanged, and the vote is about the same because the committees include every U.N. member. But in this case, a final vote in the Assembly, with United States and the other cash contributors all voting no, would have jeopardized the future of the relief program.

So FRELINGHUYSEN went into action. Day 3½ weeks, he negotiated a new draft. after day, he met in the corridors and committee rooms with the delegates of the Arab neighbors of Israel, with the Israelis and with Ambassador Adnan Pachachi of Iraq, who coordinated negotiations for the Arabs.

There was one thing that helped FRELING-The Arabe were as anxious as anyone else to keep the relief program alive. And they realized the danger to the future of the program if the donors found the reunacceptable because of the Arab amendment

An acceptable compromise resolution finally emerged. All groups agreed to draft a new resolution and give it priority in the voting so that the unacceptably amended resolution would die. Nigeria, which had en neutral, agreed to sponsor the new resolution. It passed the Assembly by a vote of 19 to 1, with 7 abstentions. Israel cast the negative vote because of disagreement with the indirect references to repatriation of the Arabs who fied Israel during the fighting in the late 1940's.

Dark as the picture may be, it would have een darker, if not hopeless, had not the new resolution won approval.

"The closest I have ever come to something like this in Congres was negotiating the conference bill on foreign aid last summer. ELINGHUYSEN said.

He found the U.N. approach curious. The committee working on the refugee problem was preoccupied with the choice of words,

"much more concerned than we are in Washington when we write a bill," he said.

[From the Newark (N.J.) Sunday News, Oct. 3, 19651

FRELINGHUYSEN LABORS FOR PRESIDENT AT U.N. (By Max Wiener, News U.N. correspondent)

UNITED NATIONS, N.Y.—Representative PETER H. B. FRELINGHUYSEN, Republican, of New Jersey's Fifth Congressional District, is working here temporarily for the Democratic administration's executive branch—and finding it an intensive, arduous and fascinating erience.

There is nothing novel about this switchlegislative to executive-diplomatic Every year, two Members of Conone Democrat and one Republicanare selected as members of the U.S. delegation at the United Nations for the annual session of the General Assembly.

This year the two are members of the House Foreign Affairs Committee. Next year it will be the turn of members of the Senate Foreign Relations Committee. FRELINGHUYSEN'S committee colleague and temporary codiplomat at this session is Representative Bar-BATT O'HARA. Illinois Democrat.

Up to now, Frelinghutsen's main official contact with State Department diplomats has been to listen to them testify before his House committee. Now he's rubbing shoulders with them as a diplomat, "a member of Ambassador Goldberg's team," as he puts it, working to carry out the Democratic administration's policies at the world organization-at least while the Assembly lasts.

WORKING 11-HOUR DAYS

The Congressman is putting in an 11-hour day here at briefings, consultations, Assemand the Committee of the Whole meetings, and at working lunches, dinners, and receptions. He is finding out at first hand, he says, how U.S. diplomats work and is also having the new experience of personal contacts and exchanges of views with foreign delegates

And he disagrees with Representative WAYNE HAYS, Ohio Democrat, who said he wouldn't act an a Charlie McCarthy to Ambassador Goldberg's Edgar Bergen. Fre-Linghuysen feels it is a rewarding and patriotic assignment to represent his country at

"You get new insight into U.N. problems he said. "You're not at all a mere bystander. The demands on my time are far

greater than in Washington.

His main job is to represent the United States on the fifth, or budgetary commit-A second important assignment is to the Special Political Committee. On both, he finds himself dealing with the crucial problem of how the U.N. can bail itself out of its huge debt—largely caused by refusal of Russia and France to pay for peacekeeping operations—and what to do in the future about peacekeeping and its financing.

As a legislator who took an active interest in the U.N. bond issue which Congress approved to help the world organization, Fre-LINGHUYSEN finds it fascinating to hear the Soviets objecting to the U.N. paying off even interest charges on the ground that the peacekeping debt was imposed by the As-sembly instead of the Security Council, and is therefore illegal.

# NEW INSIGHT

His Foreign Affairs Committee some time ago approved cutting \$1,800,000 from the U.S. contribution to the care of 1 million Pales tinian refugees. This was designed to put sure on the Arabs to agree to some permanent solution, instead of Arab insistence year after year that the only solution is for Is

to take all the refugees back.

Now in the special political committee, FRELINGHUYSEN is discovering at firsthand the sentiments of the Arab delegates and of the representatives of other countries.

"I'm going to enjoy this all very much," he said. "In fact, I am enjoying it immensely already. It's an experience for me to have an Iron Curtain ambassador or one from an uncommitted African country seek me out at a reception for some informal discussion of difficult problems. I couldn't get the same insight any other way."
Obviously, his remarks as a diplomat pro-

tem must be somewhat more diplomatic than they were when he was a freewheeling legis-

letor

Thus, while wearing only his congressional hat. FRELINGHUYSEN voiced some definite and not altogether approving views after Goldberg, in his maiden U.N. speech in August, announced the United States was no longer insisting that Russian and France lose their assembly votes if they didn't pay their past peacekeeping assessments.

### LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181, CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES. The Joint Committee on Printing shall have control of the arrangement and style of the CONGRES SIONAL RECORD, and while providing that it shall be substantially a verbatim re-port of proceedings shall take all needed ction for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.) Title 44, Section 182b. Same; illus-

TRATIONS, MAPS, DIAGRAMS,-No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat, 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of

Senators, Representatives, and Delegates is respectfully invited:

Arrangement of the daily Record .- The Public Printer shall arrange the contents of the daily RECORD as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet produc-

tion and delivery schedules.

t

2. Type and style.—The Public Printer shall print the report of the proceedings and de-bates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These reunusual indentions be permitted. strictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. Return of manuscript.-When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD is-

sued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is ed later than 12 o'clock midnight. furnish

4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the fol-

lowing morning.

5. Proof jurnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If man-

uscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the

printing of the RECORD.

7. Thirty-day limit.—The Public Printer shall not publish in the CONGRESSIONAL Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congres the time limit herein fixed shall be 10 days. unless otherwise ordered by the committee.

8. Corrections.—The permanent Recomb is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than ne revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to

apply to conference reports.

10(a). Appendix to daily Record.-When either House has granted leave to print (1) a speech not delivered in either House, (2) a wspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Ap-This rule shall not apply to quota tions which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congress-SIONAL RECOR

10(b). Makeup of the Appendix.-The Ap pendix to the Congressional Record shall be made up by successively taking first an exfrom the copy submitted Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House ehall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses

are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead Items as indicated by the Official Reporters in the next issue of the Congressional Record, nor to Records printed after the sine die adjournment of the

11. Estimate of cost.—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, tele-grams, or articles presented in connection ith a speech delivered in the course of debate or to communications from State legis-latures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or with-out individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place

in the proceedings.

### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, buard or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representa-tives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond P. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Mem-bers of Congress to purchase reprints from the RECORD should be processed through this

## Medicare Planning Essential

EXTENSION OF REMARKS

## HON. ROBERT T. SECREST

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. SECREST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Mount Vernon (Ohio) News, January 7, 1966:

MEDICARE PLANNING ESSENTIAL

A new year brings new problems, and 1966 is no exception. One of the biggest problems—a whole nest of problems, in fact—will come with the implementation of the Federal medicare program.

With the program starting July 1, we have less than 6 months in which to prepare, and that means everyone concerned with putting the program into action should be starting

now to plan for it.

3,

Ne-

glas. ans. waii.

hite.

The program will be so immense, and will take us into so many unexplored areas of caring for the elderly sick that we can expect new and unanticipated problems will be cropping up when the program actually is underway. But there are many other factors that are already fairly certain, and for which we should be preparing in the next few months.

It seems certain there is going to be increased use of hospittal beds, a need for more doctor and nurse services, an increased demand for all of the services a hospital supplies—food, laundry, therapy, laboratory, rehabilitation. It is also generally expected there will be a great increase in need for nursing home facilities.

Some of the problems of medicare can be tackled in Washington, but the overall success or failure of the program can quite well hinge on how well it is handled in the com-

munities.

Doctors will have an extremely important role in the program, and the degree of care and restraint which they exercise in sending patients to hospitals or nursing homes may

well make or break the program.

Hospitals also face a great responsibility in seeing that facilities are used to the best possible advantage for the public interest as well as for the interests of patients. Competition among hospitals, resulting in costly duplication of services or even more costly idle facilities and personnel, can result in astronomical costs, not only for the medicare program itself but for the groups owning or supporting the hospitals. Nursing homes may face similar problems.

Finally, the success or failure of the program can ite largely with the public. Efforts

Finally, the success or failure of the program can ite largely with the public. Efforts to use the medicare program as a source of unnecessary care or as a means of getting rid of unwanted elderly members of the family could make it prohibitively expensive.

Even before the program starts, it looks as though cooperative and coordinated community planning is going to be essential if we are to make the best possible use of the doctors, nurses, hospitals, and nursing

Medicare can be a boon to the Nation, but only if communities do their best to make it work successfully.

We in Knox County are fortunate in having more hospital and medical facilities than many communities have, but we can be caught short unless we start planning now to make the best possible use of them.

### Law and Order

EXTENSION OF REMARKS

OF

# HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. THOMPSON of Texas. Mr. Speaker, the San-Jacinto District Board of the Texas Federation of Women's Clubs request that I call to the attention of the Congress a resolution adopted at a recent meeting pledging their support to law and order in the United States.

A newspaper article from the El Campo Citizen, El Campo, Tex., Tuesday, October 26, 1965, concerning this action follows:

WOMENS CLUB VOTE FOR LAW AND ORDER

At the San Jacinto District of Texas Federation of Womens Clubs board meeting held in Bay City, October 21, a resolution was passed unanimously to support the U.S. Government in the "enforcement of law and order to stamp out the seditious ugliness that is growing in America from lawless demonstrations, marches, and riots."

This womens federation district covers 15

This womens federation district covers 15 counties, including the cities of Galveston, Houston, Brazoria, Palacies, El Campo, Victoria, Yoakum, College Station, and all within this area. It involves 63 womens clubs with over 1,500 members. In El Campo members clubs are Sorosis and the Sesame. Club members who attended the district board meeting from El Campo were Mrs. Fred Melcher, Mrs. C. T. Boyle, Mrs. P. H. Longwood, Mrs. A. J. Issacson, Mrs. W. E. Ferguson, Mrs. Paul Lampley, and Mrs. M. L. Hansard.

The resolution reads: "The members of the San Jacinto District, Texas Federation of Womens Clubs in session October 21, 1965, deplore the ugly image that is being presented to the world by lawless demonstrations, marches, and riots. This is indicative of the lack of patriotism and devotion to our country. As loyal Americans we wish to impress upon our Representatives in Washington our desire to firmly stand behind them in their enforcement of law and order. We cannot stress too strongly the need for stamping out this seditious ugliness that is growing in the United States of America. We strongly urge investigation of this communistically impired attack that is growing more victous each day. We ask that the Texas Federation of Womens Clubs and the General Federation of Womens Clubs take similar action in demanding enforcement of law and order as presented by this resolution.

"Signed by Mrs. George P. Kelley, trustee, San Jacinto District TFWC: Mrs. Paul Lampley, national legislation chairwoman; Mrs. Ralph Morgan, resolution chairwoman."

Copies are to be sent to President Johnson, U.S. Congressmen, and Governor Connally.

# Representative Pelly Calls for a Full Congressional Debate on Vietnam

EXTENSION OF REMARKS

# HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. PELLY. Mr. Speaker, the Members of the House of Representatives, as the 2d session of the 89th Congress convenes, look forward to fulfilling our legislative responsibilities to the American people. It will require great patience, wisdom, and dedicated service to preserve and protect our Republic from enemies, both domestic and foreign, as under our oaths of office we are sworn to do.

Clearly, Yietnam is the No. 1 problem before the Nation. It will be the major question before the Congress this year.

Already, Mr. Speaker, I have had a number of private conversations with individual members of committees having jurisdiction over foreign affairs and defense. During the recess, these colleagues have been looking into the war in Vietnam and our military situation.

I have asked a question of one of our colleagues, who, as a member of the House Committee on Foreign Affairs, has been briefed recently by officials of the Department of State. My question was one I was frequently asked last fall by constituents; namely, why the conduct of the war and the policies we are pursuing is not a fit matter for congressional debate. In answer, I was informed that a high-ranking official of the State Department had told the House committer, in executive session, that the administration was "almost of a mind to allow such a debate." What a shocking statement. Imagine the implication that the Congress of the United States can only debate such an issue if the Department of State so approves. Certainly, such an implication impugns the independence of this great legislative body.

Personally, Mr. Speaker—and as one who have supported the President—I strongly favor a full and open discussion of the southeast Asia situation, and consideration by the Congress—as provided under the Constitution—as to a declaration of war on North Vietnam.

In this connection, I frankly doubt if the American people are being given the facts. For example, Secretary Mc-Namara has said that the United States has stopped losing the war, but my conversations with Members who have recently visited Vietnam and studied the situation lead me to believe that, on the contrary, in the overall picture this may well not be true.

Of course, the latest peace promotion has been gratifying to the American public and has no doubt somewhat improved the unfavorable world image that has burt our cause in the past.

Meanwhile, it seems to me that alternatives should be known. I refer to the fact that accelerating the war by bombing Hanol or major facilities and industries is not the only course before us. Nor is a tight blockade our only course. I am informed that all the United States has to do is to bomb North Vietnamese dikes and that country will be flooded and rendered economically helpless. The resulting floods, I am told, would completely disrupt the war efforts of the North Vietnamese.

Mr. Speaker, with more American lives being lost every day and with general lack of public knowledge as to our policies—except that we will talk peace anywhere, at any time, and with no conditions—I favor opening up the subject of Vietnam for full and free discussion by the Congress. Only on that basis can the country make the proper decisions and provide the right answers to this unhappy issue.

As I said, Mr. Speaker, at home, the people are raising questions about the war. Who will say that they are not

entitled to the facts?

Certainly, these facts, and the full and complete picture, were not included in President Johnson's state of the Union

The scheduled briefing of Members of Congress by Secretary of State Dean Rusk, in an off-the-record session, is all to the good. But the imposition of secrecy only serves to confuse the issue publicly. What is needed is a full debate, with all questions and answers on the record. Under our system of government, the public should not be kept in the dark.

As in the past, I will try to dig out what facts I can, and always refrain from partisan criticism. But, unless frank and full answers to the questions which my constitutents raise are fortheoming, I will feel impelled to protest and point up any such failures.

Mr. Speaker, other than this, the Democrats in the administration and in this House of Representatives can count on my support of a bipartisan foreign policy. But, as I have said, I must have the facts and I must know more about just what is our foreign policy.

Hour of Decision on Vietnam Near

EXTENSION OF REMARKS

HON. J. ARTHUR YOUNGER

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. YOUNGER. Mr. Speaker, it is fortunate that David Lawrence's article entitled "Hour of Decision on Vietnam

Near" appeared the same evening as the President's state of the Union message but I found nothing in the President's message that would indicate a decision actually has been made or is contemplated. The status quo seems to be the only solution recommended by the administration. David Lawrence's article follows:

Hour of Decision on Vietnam Near (By David Lawrence)

Nobody likes to see his country engaged in a war. As the lives of young men are sacrificed daily, the questions asked again and again are whether the Vietnam war is really necessary, whether it is America's responsibility alone, and whether the shedding of blood in defense of idealism—often vaguely expressed—is truly worthwhile.

Today in the National Capital, as Members of Congress who have been to Vietnam bring back discouraging descriptions of the jungle warfare and how hard it will be to win a victory, a certain skepticism concerning America's mission emerges. The people of the United States also may well express doubts, because neither the underlying issues nor the policy being followed by the President in limiting military operations has been fully explained.

It's one thing to fight a war with maximum power, and it is another to carry on a war with limitations placed on the use of full military force. Perhaps the best explanation of what is really going on came in a little-noticed speech delivered in Detroit on December 6 by Gen. John F. McConnell, Chief of Staff of the U.S. Air Force, after a trip to Vietnam. He said air strikes are designed to impede the flow of supplies and reinforcements being sent into South Vietnam from the north, and to make it "too costly" for the North Vietnamese to continue this support. He added:

"This strategy, which is best described as strategic persuasion," gives the President a highly flexible tool in inducing North Vietnam eventually to accept his offer of unconditional discussions.

"It is true that we could achieve this objective, virtually overnight, by destroying North Victnam and forcing its surrender. We certainly have the military capability to do so. But President Johnson has emphasized that it is our national policy to keep this conflict at the lowest possible level of intensity, for humanitarian as well as for political reasons.

"As both our Commander in Chief and head of our Government, he has the final decision on the exact level and scope of our bombing effort in North Vietnam, and that decision must be guided not only by military considerations and recommendations but by many other and possibly more compelling factors."

These words, carefully chosen, say, in effect, that the United States at present isn't fighting the war to win. This means that American boys are losing their lives in a strategic game which may or may not prevent a larger

But will temporising with the enemy achieve peace, or will it bring on the big war anyway? There is only one valid reason for the sacrifice of American lives in Vietnam today. It is to save millions of Americans from being killed or wounded later in the enlarged war that can come if the Communist governments in Moscow and Pelping are not thwarted in their ambition to take over control of small as well as large nations in Asia, Africa, and the Western Hemisphere.

Red China, meanwhile, is accumulating nuclear weapons. Based on past experience, recklessness in the expenditure of human life can be expected from Pelping. The realistic truth is that the United States is powerful enough today to win in Vietnam.

It can demonstrate by a single example of unlimited bombing that any risk necessary will be taken. This would simply be a recognition that the war of aggression in southeast Asia could be the forerunner of a direct attack someday on the American people by an irresponsible government possessing nuclear weapons.

Members of Congress are divided in their opinions, and for the most part are willing to let the President decide the policy that should be followed. Others think public discussion could be helpful. Here are some simple points involved: Is anything ever accomplished by procrastination in a military dilemma? If the United States gives the impression it is afraid to risk maximum force, doesn't this tell the enemy that it can continue the war indefinitely?

Maybe what is needed is a single example of heavy bombardment of North Vietnam and a threat to inflict similar blows unless the enemy agrees to go to the conference table to discuss a settlement. Certainly any manifestation of timidity will be misconstrued. So it becomes clear that the hour of decision on how to fight the Vietnam war draws near.

Resolution Adopted by the Brotherhood of Painters, Decorators & Paperhangers

EXTENSION OF REMARKS

OF \_\_

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. FINO. Mr. Speaker, I would like to bring to the attention of the Members of this House a resolution adopted by the Brotherhood of Painters, Decorators & Paperhangers, on November 15, 1965.

I hope the message comes through loud and clear. The American labor movement is beginning to suspect the Democratic Party of insincerity and foot dragging. Labor is beginning to realize that the Democrats want to milk and use organized labor rather than help achieve labor's goals. This partnership is a oneway street—labor produces and the Democrats profit.

The Democrats do not want to offend other groups by passing labor's legislative package—which labor has paid them well to support. No, the Democrats are trying to trick labor in this election year by selling them out on labor legislation and trying to blame the Republicans. Labor knows better.

The resolution follows:

RESOLUTION ADOPTED AND APPROVED BY THE GENERAL EXECUTIVE BOARD OF THE BROTHER-HOOD OF PAINTERS, DECORATORS & PAPER-HANGERS OF AMERICA, AFL-CIO, WASHING-TON, D.C., NOVEMBER 15, 1965

Never before the general elections of 1964 has organized labor succeeded in demonstrating their political strength so effectively. It was widely proclaimed that the labor movement was directly responsible for the election of more than 50 Members of the Congress from marginal districts. The campaigns to register voters as well as the drive to get out the voters on election day was highly successful. Labor's full-fledged political activities in 1964 were accelerated by the fact that the Democratic platform as well as the Democratic nominees' outright pledges included the repeal of section 14(b)

of the Taft-Hartley Act and the enactment of situs picketing legislation, and

Whereas the general executive board has carefully reviewed the events which culminated in the miserable failure of the U.S. Senate to enact the 14(b) repealer and the

aitus picketing measure; and Whereas the general executive board is of the opinion that neither the Chief Executive nor the Senate majority leader accorded the repeal of 14(b) with anything like the same degree of urgency as was accorded the long list of bills dealing with social legislation, all of which were vigorously and fully supported by organized labor; and

Whereas our brotherhood, including all of the affiliated district councils and local unions, worked tirelessly during the elections and during the session of Congress for enactment of 14(b) and situs picketing to no avail: Now, therefore, be it

Resolved, That the brotherhood and all of the members throughout the Nation will dedicate themselves to call upon the Memers of the U.S. Senate to make repeal of 14(b) the first order of business upon convening in January 1966; and further be it

Resolved. That all Members of the House of Representatives shall be urged by district councils and local unions as well as individual members of the brotherhood to enact the situs picketing measure H.R. 6363; and finally be it

Resolved, That the brotherhood shall send this resolution to the Congress and to the White House and publish it in the official journal of the international union.

### Housing Cutback Is Indefensible

EXTENSION OF REMARKS OF

# HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. BOB WILSON. Mr. Speaker, our dedicated military men continue to valiantly uphold American traditions and protect freedom around the world even though the Great Society is treating them like stepchildren. To illustrate the point, I ask my colleagues to read the following article borrowed from the Army, Navy, Air Force Journal on January 1, entitled "Housing Cutback Is Indefensible":

HOUSING CUTBACK IS INDEFENSIBLE

Secretary of Defense McNamara's "difficult" decision to defer construction of military family housing, BOQ's, barracks and hospi tals authorized and funded by Congress for fiscal 1966, is typical of the many "penny-wise, pound foolish" actions with which career military personnel have been comcareer military personnel have been confronted since the close of World War II.

No single program has been relegated more frequently to the role of Cinderella than family housing.

Over the past 20 years, the Armed Forces have had to make-do with just about every temporizing housing expedient anyone could dream up.

Families have had to create "homes" in shacks, Quonset huts, Lanham Act chicken coops, inadequate, and sparsely constructed Wherry Act dwellings, off-base Capehart Act houses (most of which, when the services were force, to purchase them, had to be overhauled to meet Government standards), and a great variety and number of substandard housing units better fit for kindling than human habitation.

The housing situation has been so critical that Secretary McNamara, himself, pasted an urgent label on the appropriated-funds construction of thousands of new units. When he told Congress last year that he would absorb a cut anywhere elss in the construc-tion program in order to obtain funds for housing, the Secretary forcefully under-scored the serious morale implications of the housing problem.

If Congress had given the Secretary all that he saked for, the services would still be lagging on the housing front. But, as every career member of the Armed Forces knows, the Senate chopped millions of dollars from the program

Now, construction of the smaller number of housing units that remained has been indefinitely postponed, and there is good reason to believe (The Journal, December 18) that no new housing will be included in the budget to be presented to Congress this month

The action—regardless of the mounting costs of supporting the war in Vietnam is impossible to reconcile with Secretary McNamara's previous stand. If the services required the housing on an urgent basis just a few months ago, the urgency is not

dispelled by the war.

Secretary McNamara says the deferred family housing projects "although necessary and desirable, can be undertaken at a later date without impairing military operations or effectiveness.

The nonsense of this statement is all too apparent. It is obvious that the Secretary is merely trying to put the best face on an awkward situation in which he has either decided or been told to cut costs whether he

deems them wise or not. He must know, as others do, that morale has an enormous impact on military operations and effectiveness, and that the housing cutback is as damaging a blow to morale as any action that could have been taken.

Surely, members of the Armed Forces should not have to fight the war in Vietnam, suffer the privations and discomforts of the war, be crippled, or die in combat, and have to pay for the privilege by giving up decent living quarters for their families.

Congress should demand that the housing be built.

### Stop Highway Slaughter

EXTENSION OF REMARKS

# HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. JACOBS. Mr. Speaker, the President of the United States last night in his state of the Union message announced he will recommend to this session of Congress legislation to arrest destruction of life and property on our highways.

The President said he would propose a Highway Safety Act of 1966 to seek an end to this mounting tragedy.

I think the President should be reassured that millions of American citizens share his dismay at the continuing carnage and destruction on our Nation's highways.

One of the most articulate expressions of this concern to come to my attention is recent comment by Rabbi Maurice Davis of the Indianapolis Hebrew Congrega-

Writing in the latest issue of the

Temple Bulletin in his regular "From Where I Sit" column, Rabbi Davis de-clared, "There is something wrong with a society that can mobilize wealth, intellect, energy, ingenuity to launch astronaut after astronaut without mishap, and still be unable to stop the wanton slaughter on our roads."

Because of the timeliness and effectiveness of this message by Rabbi Davis, I take this opportunity to include his statement in the CONGRESSIONAL RECORD.

STOP HIGHWAY SLAUGHTER

"Everyone loves a winner." We have been taught this with such intensity, and we are so in love with "coming in first" that we subconsciously carry it over into areas of sheer horror.

Take for example our latest achievement. We have established a new record for killing people with automobiles. We knew it was coming. One radio newsman said a few weeks ago, "We are in striking distance of breaking the 1941 record."

Congratulations. We made it. The year 1965 now takes the place of 1941 as the year of the greatest slaughter on our streets. In 1941 we killed 1,478 people, and after all that's barely more than 4 s day, or 28 s week. or 123 a month.

There is no form of accidental death that can remotely approach this carnage, and the worst is still ahead. I am terrified by the knowledge that members of our congr tion are going to die of automobiles in 1966. and we who speak about the sanctity of life are silent in the face of avoidable tragedy.

There is something wrong with a society that can mobilize wealth, intellect, energy. ingenuity to launch astronaut after astronaut without mishap, and still be unable to stop the wanton slaughter on our roads.

There is something wrong with a society that was able in the last recorded year to reduce the number of deaths by poliomyelitis to 43, while 43,600 people died of automobiles. It is time to bring this scandal out into the open. The blame cannot rest entirely with the driver, or traffic enforcement, or highway planning. It is time to talk bluntly to the automobile industry.

Too many people are dying of automobiles, and I refuse to believe that nothing can be done. It is time for the automotive industry to do more than sell cars. It is time for them to share the responsibility for what happens after the cars are sold.

It is time to pressure Congress to pressure the industry. Our task is to drive carefully and defensively, but our task is more than that. Our task, also, is to complain loudly,

and to the right people.

Write a letter today to BIECH BAYH, or VANCE HARKE, Or ANDY JACOBS, or any of the men who represent us. Tell them we broke the record, and we are ashamed, and we are angry, and we need help.

If you don't feel like writing, then tear out this column, and send it to one of them.

# Money Income for War Veterans and Their Families

EXTENSION OF REMARKS OF

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I include excerpts from a recent release of the Veterans' Administration on the income of war veterans and their families:

SOURCE AND RELIABILITY OF THE ESTIMATES Source of data

Information about the 1964 income of male civilian noninstitutional war veterans in the United States was derived from the Bureau of the Census' March 1965 Current Population Survey sample of approximately 25,000 households. The data were obtained for families headed by male war veterans, for war veterans living alone or with nonrelatives, and for war veterans living in the family of a relative. The income and family relationship distributions by age were applied

the male civilian noninstitutional war vet-eran population in the United States to develop the data presented in this report. Although income data are for the year 1964, the age and family relationship refers to March 1965. (For details of the survey see Consumer Income, Current Population Reports, series P-60, No. 47, Sept. 24, 1965, U.S. Bureau of the Census, Washington, D.C.)

The income of families (tables 1, 2, 3, and 4) was the amount received by all members of the family. The income of war veteran

to the independent VA estimates by age of relatives of the head (table 5), and war vetrelatives of the head (table 5), and war vet-eran unrelated individuals (table 6) was that received by the veteran alone. All families include family groups in which the war vet-eran was married (wife present or wife ab-sent), or he was widowed, divorced, or never married, but still the head of a family. Hus-band-wife families are only those in which the war veteran was married and his wife was present.

War veterans are men who served in the Armed Forces during a war period (Spanish-American War, World War I, World War II, Korean conflict); have been separated from active duty and are now in the civilian non-institutional population. The civilian non-institutional population excludes all members of the Armed Forces except those living off post or with their families on military reservations, and inmates of penal institutions, chronic disease hospitals, nursing homes, and the like.

### Reliability of the estimates

Since the estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and enumerators. As in any survey work, the results are subject to errors of response and of reporting, as well as being subject to sampling variability.

The standard error is primarily a measure of sampling variability, that is, of the variations that occur by chance because a sample rather than the whole of the population is surveyed. As calculated for this report the standard error also partially measures the effects of response and enumeration errors but does not measure any systematic blases

in the data. The chances are about 68 out of 100 that an estimate from the sample will differ from a complete census figure by less than 1 standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error. The following table shows the approximate standard error of an estimated percentage computed by using sample data for both the numerator and denominator of the percentage. The size of the standard error depends upon both the aize of the percentage and the size of the class upon which the percentage is based.

Standard errors of estimated percentages (68 chances out of 100)

Estimated percentage	Base of percentage (thousands) .												
	78	125	250 /	500	. 1,000	2,500	5,000	10,000	25,000

## May Craig

EXTENSION OF REMARKS

# HON, STANLEY R. TUPPER

OF MADNE

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. TUPPER. Mr. Speaker, a former distinguished Member of the House of Representatives, the Honorable Robert Hale, recently wrote a fine tribute to Mrs. May Craig, nationally known journalist, who recently retired as a columnist for the Guy Gannett Newspapers of Maine

I know that this will be of great interest to the many friends of May Craig:

May Craig

I cannot witness the retirement of May Craig without more than a perfunctory notice. The representatives of the press here in Washington include the ablest and most distinguished members of the profession both in this country and from overseas. In this group May has had a place quite disproportionate to the circulation of the papers for which she writes. Her appearances on "Meet the Press" have made her a national figure recognized by millions of TV watchers. Her faculty for going to the heart of a question and her facility of statement have made her outstanding. I remember once hearing Sam Rayburn, the late Speaker of the House, say: "May, you can say the meanest things in the sweetest way of anyone I ever knew." What Sam meant by "mean" things was not, of course, "low" or "unworthy" but "penetrating" and "defiating." May could—and can—take the stuffing out of any shirt.

May has been the intimate friend of five Presidents, F.D.E., Truman, Eisenhower, Kennedy, and Johnson. The friendship was based in every instance on the hearty respect that these men felt for her ability as a reporter, her acuteness as an observer of the national scene, and her character as a human being, full of affection and compassion for all people everywhere in the world who suffer under what a French writer has called the "Condition humane."

Coming from a small town in South Carolina, and working for papers outside the world's great metropoles, May's vision is

nonetheless neither meager nor provincial. She knows what life is like in Korea, in Africa in South America as well as in the White House or the Capitol Building where her life has been mostly spent.

has been mostly spent.

As a reporter, May is conscientious and fiercely diligent. I never knew her to "sian" a story or to try to squeeze the facts to support some particular theory or hypothesis.

May is certainly not an orthodox be an in the lifetime of F.D.R. above thing of a New Dealer, because the ognized the magnitude of the problems in which the Federal Government had to had and admired Roosevelt's affirmative appared. She has never been, however, a service admirer of any political party or of any main public life. She is conscious of the foibles and defects of the greatest political figures, and has never feared to mention them.

Any man who in the last 30 years has had the honor of serving in Congress from the State of Maine must acknowledge a great debt of gratitude to May. I can still hear the voice of a House page saying: "Mrs. Craig to see you in the Speaker's lobby." I would then go out and tell May everything I could think of and a lot more things that I couldn't think of but she could.

I always found it hard to talk about what I was doing. Before going to Congress, I had practiced law. The first principle with a lawyer is not to talk about his clients or to discuss their affairs. That feeling was deeply ingrained in me. I didn't like to talk about what I was doing in Congress. May worked hard over me and helped me to articulate, though I fear that she never considered me a completely satisfactory pupil.

I have talked to people who thought May Craig was a typical State of Mainer. I explained to them that she was not a native of Maine and had never lived in Maine. Nevertheless by repeated visits in the State, and making many talks to Maine audiences she knew the flavor of the State and some of it brushed off on her. Deepite her southern origin, her speech largely lost its regional characteristics. I doubt if even 'Enry Tggins could tell from May's speech just where she came from.

Readers of the Gannett papers have lost a lot now that May has retired. Those who succeed her will be capable and no less conscientious. But May was May. She was discursive. She jumped about. She would mix the gravest national problems with starlings and squirrels and what somebody wore to a party. But it was all and always inter-

esting. I confess that my wife and I looked for her column, when we first picked up our paper. In later years when her column wasn't in every set we would sometimes have to have to the colay." When we did, it

ent. Ih i žvili. I write her book. She has write of mit. She has known been to plenty of in every kind of plane and helicopog's anu pl ter. very type of vehiele c the rest of us who have u. last few years she has been sorts of a miliar and unfamiliar. nows her Nation's Capitol and A boot o feel the thrill of the great and the flags which mean that enate are in session and the tall DOUBS DE white shart of the Washington Monumentpointing into what was once considered inviolable space.

All of us are travelers on an adventurous and ultrahazardous planet. May is one who loves it and has helped us to appraise it, to see its prospects in squalor as in grandeur, in horror as in delight. Long may she live and prosper.

na prosper, December 16, 1965.

ROBERT HALE.

# Panama Canal and Guantanamo Vital for Caribbean Security

EXTENSION OF REMARKS

# HON, DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. FLOOD. Mr. Speaker, in a number of my addresses over the past few years dealing with Caribbean and Isthmian policy matters, I have stressed the interrelation of our Guantanamo Naval Base and the Panama Canal in regard to the security of the strategic Caribbean basin. What happens to one will inevitably have its impact on the other.

The Castro government in Cuba, following the example of Panama, is now demanding the renegotiation of the Guantanamo Naval Base Treaty. This is another reason why our positions at both Panama and Guantanamo should be made clear-that there will be no surrender of our treaty based rights, power and authority over these strategic points so vital for the security of the Western Hemisphere.

Two recent news stories on this subject follow:

[From the San Diego (Calif.) Union, Oct. 19, 1965]

NEW PANAMA TREATY SEEN STIRRING GUAN-TANAMO CRISTS

(By Brig. Gen. James D. Hittle, U.S. Marine Corps., retired, director of national security and foreign affairs. Veterans of Foreign Wars)

WASHINGTON .- Does the new treaty with Panama, as outlined by President Johnson, mean new trouble in the Caribbean? The answer, say some of the keenest Washington observers of Caribbean affairs, is "Yes."

They explain it this way:

While the authority of the United States in the treaty-established Canal Zone appears to be the immediate issue, there is good reason to suspect that it is neither the ultimate nor the most important issue from the standpoint of the Communists.

Long-range Kremlin-Cuban strategy calls for undermining the U.S. dominance in the Caribbean area. Diluting our longtime control of the Canal Zone is a necessary step

for the Moscow planners.

However, it is not the final step. portant as Panama is to U.S. security, the Soviet Union knows that its hope to turn the Caribbean into a Red lake will not be realized as long as the United States has full control of the great naval base at Guantanamo Bay, Cuba.

Therefore, Soviet Premier Alexi N. Kosygin and Cuban Prime Minister Fidel Castro long ago planned to use the Panama issue as a key part of their plan to kick us out of

the Guantanamo base.

Our renegotiation of the Panama Canal treaty can serve as a potent pretext for de-mands that we renegotiate the treaty by which we would hold that increasingly valnable base

This is not empty forecasting. It is exactly what the Communists have announced they would do. Their propaganda already has tied the two treaties together and thereby laid the basis for their demands for regotiation of the Guantanamo treaty.

Only a few months ago, it was carefully explained by a Havana broadcast. The broadcast said both treaties are archaic. Hence, a new Panama treaty proves the need for doing the same for Guantanamo.

"POLITICAL QUESTION"

Here are a few points from the Havana

"The standards of modern times apply everywhere, and Guantanamo-just as Panis an anachronistic survival of colonialism. The question of Panama is a political question \* \* \* not to be decided by adical question \* \* \* not to be decided by admirals or generals \* \* but between the states in accordance with international

Castro may be posing here as a stalwart supporter of peaceful solution of the issue, but again his hypocrisy is evident in his deeds. At the same time as this broadcast was being beamed from Havana, Castro, with Russian assistance, was busily engaged in building a ring of concrete fortifications around Guantanamo Bay.

It all fits into the Red grand plan to force us out of the base. On order from Moscow, Castro can fully man the fortifications. A few shots would heat up the crisis.

POINT TO PANAMA

Then Moscow, with its supporting chorus in the United Nations, would demand we renegotiate our Guantanamo Treaty, pointing to Panama as justification for our doing so.

Thus, a new treaty with Panama, however necessary it is from the administration viewpoint, would move us closer to a bigger crisis than the one it is designed to solve. As Moscow plans it, it would move the Soviet sub marine fleet closer to having Guantanamo Bay as a base for operations in the Gulf of ico and along the east coast of the United States

[From Human Events, Nov. 13, 1965] GUANTANAMO TROUBLES BREWING?

When Fidel Castro, an avowed revolutionary, poses as a stalwart proponent of peace and a champion of international law, it is time to hoist the danger signals.

The warring hand of Castro is at this moment evident in perhaps a dozen Latin American nations where Cuban-trained American nations where Cuban-trained guerrillas terrorize the countryside and threaten constituted governments. In the immediate vicinity of his own island forhowever, the Cuban dictator insists that the principles of international law must apply at the Guantanamo Naval Base. He. of course, will interpret the principles.

The whole affair might be ludicrous were it for the fact that the Castro charade could mean trouble for the United States in the future. His antics should serve as another lesson that atheistic Communist dictators fatten on free world concessions

In the case of Castro, the invitation to troublemaking began with an announcement by the United States that it is willing to give Panama more sovereignty over the canal, as Brig. Gen. James D. Hittle (USMC, retired, director of national security and foreign affairs for the Veterans of Foreign Wars, pointed out.

Dilution of authority over the strategically important Panama Canal is to the advantage of the Communists, seeking toeholds in the American hemisphere. They also are aware, however, that they can never dominate the Caribbean so long as the powerful U.S. Navv base remains at Guantanamo.

So Castro is trying to use renegotiation of the Panama treaty as a basis for renegotiating the Guantanamo base pact. Havana radio has declared: "Guantanamo—just as Panama-is an anachronistic survival of colonialism. The question of Panama is a political question \* \* \* not to be decided by admirals or generals \* \* \* but between the states in accordance with international law

Not trusting entirely to international law. Castro has built a ring of fortifications around Guantanamo Bay. A few shots, blasts of propaganda and an echo from Moscow and the United States would face another trouble spot.

We should make it plain at Panama and at Guantanamo that the United States of America will not relinquish a millimeter of its security plans as long as the Communist threat exists. International law, if it has any force, also recognizes that treaties are solemn obligations. The United States has longterm treaties at both Panama and Guan-

And if Castro wishes to follow interna tional law he might start thinking about his political executions, expropriation of billions in U.S. property and free elections in Cuba. Who Protects the Public?

EXTENSION OF REMARKS CON

# HON, LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. WOLFF. Mr. Speaker, I commend to this body an editorial that appeared in Newsday of January 5, 1966. It creates a number of questions that would be well worth consideration by this body and I wish to acknowledge my appreciation to Newsday for speaking out on this important subject at this time.

Under leave to extend my remarks I wish to insert the following editorial:

WHO PROTECTS THE PUBLIC?

President Johnson, who has no official power to regulate prices, has assumed that power informally. He has criticized three companies for raising the per ton price of structural steel, and three major Government agencies-Defense, Commerce, and the General Services Administration-will in effect boycott these companies, plus others that might later also increase prices.

The President's action, however much he may seem to justify it, is wholly illegal, and of a piece with similar actions taken by himand by the late President Kennedy to hold the line on the prices of metals. No similar action of such force has been taken against labor, which, through its wage and fringe-benefits demands, represents the other side of the problem of inflation.

This Nation does not yet recognize it, but we have come to the point where the public interest demands a method of fixing both prices and wages so that the economy does not suffer and so that national welfare plus national defense are best served. Collective bargaining has become a process of wheeling and dealing: Labor gets all or most of what it wants, and industry then raises prices. The dissent, but the end result is that the con sumer gets it in the neck.

A court of conciliation, as proposed by the lat : Bernard M. Baruch, appears no longer to be the complete answer. What is needed in be the complete answer. What is needed is a national agency to dictate wages and prices on the basis of fairness and the national benefit. Obviously the underpaid should be paid decently, and given the same fringe benefits generally enjoyed by most wage earn-ers. Obviously, also, these benefits must be weighed against the ability of each specific industry to earn a decent but not excessive profit while maintaining, enlarging, or modernizing its plant to keep pace with demand for the items it produces.

This may sound like socialism, but in effect this country is Socialist, anyway, in many respects. Free enterprise, as such, no longer exists. All businesses are subject to longer exists. All businesses are subject to some government controls or depend in part at least upon government subsidies or tax benefits. A wage-price board might well consist one third of representatives of industry, and one third of distinguished citizens representing the general public, the lattermost third to be chosen by the other two thirds. Congress, of course, would have to create such a board and to suparantee its independence from or course, would have to create such a heard and to guarantee its independence from political motives and pressures, as it has done with the Federal Reserve Board and a whole host of independent agencies. The purpose of such a board would be-to intervene when strikes would otherwise be

threatened in crucial industries. Whether it or metropolitan transportation, whether the monopoly is privately or pub-licly owned, there must be a body of dis-passionate citizens to weigh the issues and to take prompt action. Under such a system, the New York transit strike, with its shattering effects upon the people and the economy of the metropolitan area, never

could have happened.

No such legislation, however, can succeed without the proper climate and the support of the public. Unfortunately, it is likely to take many more near-disasters before an aroused public will demand of the President and of its representatives in Congress something more than half measures. That day will come if overweening labor leaders and overweening leaders of industrial monopolies continue to persist in ignoring the public interest in order to advance selfish interests. anyhow) the vital community action program has no intention of resigning but he is the subject of a weird assoriment of press leaks, office rumors, and interoffice power plays designed to force him to quit. He is Theodore M. Berry, prominent Negro

lawyer, former vice mayor of Cincinnati and board member of the National Association for the Advancement of Colored People.

Berry's troubles began last August when asked to take a subordinate position as Chicago Regional Director of the OEO. He

Reliable sources report the White House wanted Berry out to open up a job for Frank-lin Williams, who was angry over having been given 12 hours of notice that Roosevelt was coming to the United Nations to replace him as Ambassador and representative on the Economic and Social Council.

When Berry made it clear that he wouldn't be pushed around, Williams was named Amador to Ghana and the matter apparently was dropped.

Then, a leak was planted in a syndicated column that Berry was about to resign. Berry denied it and Shriver repeated Berry's denial in a press conference

NAACP officials in the Midwest tell me that one of them wrote Shriver on September 17 expressing concern that Berry might be leaving the war on poverty. Shriver replied on October 19 by repeating the press conference

mial. He concluded by writing:
"I personally shared Mr. Berry's sentiments in his statements to the press that he plans to stay on so long as he can be—as he cer-tainly is today—of real service to the Presiand this program."

Still, a New York Times reporter wrote last week that Shriver wants Berry to resign. Shriver hoped, according to OEO rumors, that after the major surgery Berry had recently, the latter would come back more doc-ile than he was in August and would bow out meekly.

Those who know Berry predict that he won't accommodate whoever it is who hopes he will resign. As a Presidential appointee, he can be asked to resign only by President Johnson. Berry seems to believe in the kind of integrity they had in the old days when. if you believed a man wasn't doing a good job and wanted his resignation, you faced him like a man and told him so. So far Berry faces only rumors—and silence on the part of those who could squelch the rumors.

Part of Shriver's or the President's reluctance to meet the issue head on obviously is administration concern about Berry's NAACP friends. But some OEO officers say the reluctance also springs from the honest knowledge that the attempt to ease Berry out is merely an effort to hand a sacrificial lamb those Congressmen who are most critical of the community action program.

Berry is discreet to a fault in responding to

s' querries. All he will say is that he joined the war on poverty for the duration.

I expect, however, that if anybody has a

discharge for him, dishonorable, medical, or otherwise, he'd appreciate a direct presentation

The Nation's poor would benefit from less intrigue and more direct action, too.

# Intrigue in the War on Poverty

EXTENSION OF REMARKS

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. YOUNGER. Mr. Speaker, Carl T. Rowan's column, which appeared in the Evening Star of January 12, is most interesting. In the first place, Mr. Rowan handled the publicity for the White House and certainly is knowledgeable about what is going on in the poverty program and has sources of information not available to the ordinary correspondent because of his former White House connections

It is common knowledge, of course, that many of the executives and top employees of the Office of Economic Opportunity are leaving the ship because of the various involvements which the Office of Economic Opportunity has gotten itself into, such as political intrigue, political appointments, and wasting taxpayers' money. Mr. Rowan's column fol-

INTRIQUE IN THE WAR ON POVERTY (By Carl T. Rowan)

If wars are won on the morale of troops prepare a victory for poverty. Morale is lower than a centipede's toenail among the bureaucrats here who are supposed to be leading the war on poverty.

Ranking officials have been quitting the

Office of Economic Opportunity at an alarming rate, robbing the programs of needed continuity of guidance. For example, the two top men running the Job Corps are new.

The public explanation of Sargent Shriver, OEO Director, that he prefers "the best man" for a short time to the continuity of a "less able" man is not being accepted, even with a grain of salt, inside the program.

More resignations are expected from offi-cers who complain that their authority is usurped and that Shriver's aids make deci-sions affecting their areas that they learn about only by reading the newspapers

Dr. Samuel Proctor, a former college pre dent who has served with distinction in the Peace Corps and is now New York Regional Director of OEO, has submitted his resignation twice in recent weeks. He was in Washington last week, getting his arm twisted by Sargent Shriver and Bill Moyers, White House press secretary and former Peace Corps colleague. He may stay on a while.

very fitting honors which were bestowed on the distinguished gentleman from Massachusetts, Silvio O. Conte.
On April 29, 1965, Congressman Conte

was honored by an honorary membership in Phi Sigma Alpha, political science honorary, at Northern University in Boston. Then in December, he was initiated in Phi Delta Phi legal fraternity.

In accepting the Phi Sigma Alpha award, our colleague said in part:

In politics, as much as in any other field, there is a mutually constructive and beneficial relationship between the theorist and the activist—between the teacher and the doer. We must exploit this relationship to the fullest. I think the future of the country depends in large measure on how successful we are in establishing a dialog between the poles of theory and action.

Today, at least as urgently as ever be fore in our history, this country is in need of enlightened public officials, men and women who are dedicated to some higher goal than simply winning elections and holding office.

We must have a recommitment to the ideals and principles of the Nation's founders who not only dreamed the great dream, but had the practical skill and wisdom to bring that dream to reality.

I do not wish to imply that such men are not in our midst today. I believe, by and large, most of those in public service are sincere, honest, forthright men who are motivated by the highest ideals and prin-Unfortunately, the political trum in which many of them must circulate does not always permit decisions or advocacles that are in the best interests of all the voters.

A man cannot bring much influence to bear on government until he comes to power, and the road to power is paved with political bargains, kickbacks, patronage, false promises, and all the other degrading, under-handed tricks that are designed to curry favor and serve the powers of vested inter-

By the time a man reaches the heights of power on this escalator, he is apt to be too corrupted or obligated to exercise it honestly and in a statesmanlike manner.

On the other hand, the sworn obligations of a Member of Congress, for example, are paradoxically at odds with the role of the academic theorist. A Congressman is too deeply committed to the day-to-day operations of the system in which he functions.

In that system, his role must be a partisan one. That is, he must operate to a very considerable extent on the basis of partisan commitments, on a very distinct political bias. Thus, he is compelled to give up a sizable measure of the objectivity which is an indispensable virtue of the scholar.

The scholar is not so pressured. He can and must assert his independence and his objectivity. He cannot allow his judgment to be even partially colored by partisan affiliations or commitments.

Not since the very dawn of our society, when our Founding Fathers forged a batch of revolutionary ideas into a republic have we seen the roles of practical politics and ob-jective scholarship woven together in a tight-

Our admiration of the Founding Fathers from the vantage point of history stems, in large part, from the fact that they combined the skills of practical politics with the wisdom and balanced judgments of classic schol-They were statesmen in the truest sense of the word.

It must be conceded that we have lost a measure of that erudition in our public leadership over the years. We have seen power pass through corrupt and abustve fingers. We have seen politics manipulated for gain and vested interest. We have produced a

## Congressman Conte Honored

EXTENSION OF REMARKS OF

# HON. STANLEY R. TUPPER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. TUPPER. Mr. Speaker, I want to call to the attention of this body two somewhat tarnished folk image which puts the politician a cut or two below the statesman. We have seen the separation of politician and political scientist.

There is, on the other hand, a very serious and respectable effort being made these days to resolve some of the complex problems that have grown up as a direct result of the separation of practical politics from political science. The process of academic inquiry goes on and, I think, is presently enjoying a unique resurgence among scholars and politicians allike.

There has even been, surprisingly, a gradual swing of the pendulum in some schools of thought away from the traditions and principles which have given them their lifeblood.

We seek a union of scientific rationale and the cold-blooded pragmatism of everyday politics.

On December 4, the Massachusetts Congressman was inducted into Phi Delta Phi, with which many of the Members of this body are associated.

The honor was bestowed at the National Lawyers Club by the Marshall Inn in recognition of our colleague's dedication as a law student when he completed a 3-year course in 2 years in addition to holding down several part-time positions; for his service to his community as a member of the legal profession, and for his outstanding political achievements.

By his initiation he joined the heritage of such men as the late, gifted statesman, John Foster Dulles; the former Speaker of the House, Sam Rayburn; Senator WILLIAM FULBRIGHT; Justice Hugo Black; Senator DAN INOUYE; and Senator LEVERETT SALTONSTALL, the senior Senator from Massachusetts.

At the initiation ceremony, the gentleman from Massachusetts [Mr. Contel] made some remarks of which, I think, the legal profession and the Members of this body should be cognizant so that they can give guidance to their ultimate fulfillment.

He said in part:

If there is some counsel which I, as practicing politician involved with the scope and activity of our Federal Government, could give you tonight, it would be to dedicate yourselves to safeguarding the preeminence of the individual to society; and, more specifically, to apply the great skills you have developed toward making law responsive to the needs of the individual, to making it the protector and servant of all the people, not just those who can afford to buy it.

not just those who can afford to buy it.

In all fairness, I must also tell you that
such a course is not an easy or materially
rewarding one. You won't get rich solving
the problems of the poor. But if you are like
me, you will find the psychic satisfactions
more than adequate. And, there is both a
challenge and a responsibility for each of us
in this work.

Let me tell some of the reasons why I feel it is so important.

Today this Nation and the world are in the midst of some of the most revolutionary social changes since the Germanic barbarians overran the Boman Empire. The thrust of this modern social revolution is moving us closer and closer to the lotus beds of a paternalistic welfare state in which the Federal Government will clothe and house and feed us; will plan our cities and pay our bills; will plan tour crops and fence our wilderness; and will tend our ills, deliver our babies, and bury our dead.

There are now programs of aid and assistance for just about every phase of life that could pose the slightest problem for us.

We have a broadly comprehensive program for aid to education. We have disaster aid for business, medicare for the aged, social security, housing grants and loans, and now we even have a program whereby the Government is going to subsidize rent payments for the poor.

In order to make all of these programs work, in addition to the controls and tax regulations and fair employment rules that set the boundaries, a vast body of administrative law has been created.

It is with this kind of law that the poor and underprivileged must deal in order to take advantage of the assistance programs which have been set up for their benefit. The paradox is that they are also the least equipped to deal with such law. They are the least able to understand, and the least able to pay for someone else's understanding and counsel.

This is not the spirit of the new jurisprudence. This is not preserving and upholding the preeminence of the individual. This is subordinating the individual to the clumsy, sluggish, random machinery of the state. It subordinates him to the institutions that are created to help him.

It is in this realm, I believe, that the greatest challenge lies for the legal profession today. It lies in bending this sudden new, mammoth body of administrative law applied in what Justice Brennan termed the administrative forum, as distinct from the judicial forum, to the individual. It lies in bringing that law to the individual. It lies in bringing that law to the individual and making it work for him; in establishing the recognition of human beings as the most distinctive and important feature of the universe; and in forcing upon government the limitations which, Justice Brennan argues, are necessary to preserve human dignity and our sacred heritage of freedom.

There is a job to be done here and I can tell you, from the vantage point of a U.S. Congressman, that job is not being done

today.

Probably 75 percent of a Congressman's time, on the average, is spent trying to help some poor guy back home get himself out of a tax jam, or get a fair shake on some land the Government wants, or to press a claim on his social security, or some other similar problem involving a confrontation with an agency of the Federal Government.

agency of the Federal Government.
Unfortunately, 75 percent of a Congressman's time—or even 100 percent—is not enough to help all the individuals with problems.

The gap persisted and the number of problems grows in direct proportion to the growth of the Government. If we are to create meaningful progress for society, we must make certain these programs serve the people who need them. We must bend every effort to keep them from becoming simply a rathole for tax dollars, a system for creating Federal jobs but little else.

Pay heed to the problems of the poor. Give of your time and talent to bringing the law to the poor, to giving them the legal assistance they so desperately need. It is an obligation you must face, an obligation to your country and to your fellow man.

# Open Letter to the President on Our Policy in Vietnam

SPEECH

### HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

with the text of an open letter on the subject of our policy in Vletnam which I sent to the President on December 8, 1965:

President Lywnon B. Johnson,

The White House, Washington, D.C.

DEAR MR. PRESIDENT: In my congressional district, as I am sure in others, there is a deep and growing uneasiness about the attuation in Vietnam. This feeling has been accentuated recently by the disclosures that our Government had been sounded out a year ago by U Thant, on the possibility of talks with Hanoi, and had reacted negatively. It has also been accentuated by the fact that Secretary McNamara, who ones spoke of getting finished in Vietnam in a few months, now talks of a long struggle, and that Secretary Rusk offers no plan for the achievement of negotiations looking toward an honorable and stable peace.

I do not mean to suggest that the majority of my constituents are not willing to support you on Vietnam. Of 8,000 replies I received last June to a questionnaire, 58 percent indicated support of your general policy or even more drastic measures. While the stepup since then in the scale of our military efforts, and the rising castualty rate, may have caused some diminution in this percentage, I believe the majority of my constituents are prepared to trust your judgment as to what is necessary. Nevertheless, the number of thoughtful, patriotic people who are expressing their unhappiness about what is going on is certainly increasing.

First of all, there is uncertainty as to what our position is. Last spring we were told that more Americans had to be sent to Vietnam because we were losing; recently we have been told that more men have to go though we are not losing. Statements that you make, indicating your determination to find a peaceful solution, seem to be contradicted by members of your administration. For example, last summer you stated that the issue of whether or not we should talk with representatives of the Vietcong would not be an obstacle to negotiations, but since then Secretary Rusk has repeated that we could not deal with the Vietcong. (As I have previously stated, I myself cannot see how we could refuse to include the Vietcong in any serious negotiations; they would be bound to be involved, for example, in any talks regarding the conduct of elections in South Vietnam.)

Second, there is a feeling, which I share, that we have somehow been drawn, step by step, into a situation which is to no one's advantage so much as that of the Communist Chinese, and that we appear to have no plan for extricating ourselves from this veritable trap. Increased military activity on our part leads to increased military activity on the part of the Communists to which we in turn feel we must respond with counteraction, and so on and on.

We talk about our desire to negotiate, yet our offers to negotiate—our alleged weekly feelers—often seem couched in terms that make it impossible for the North Vietnamese, as prideful nationalists, to accept them. For example, we say that we have repeatedly tried to find out whether Hanoi would be willing to negotiate if we suspended our bombings of North Vietnam. Can we not understand that, to the Communists, an affirmative answer to this kind of querry would seem like a surrender, a sign of national weakness?

Or we say that we will suspend bombing in the north if Hanci will pull out one division from the south. Again, from their point of view, what kind of deal would that be? To suspend our bombing would cost us nothing, and we could resume at any moment; but for Hanci to pull out a division would mean the waste of the enormous effort involved in bringing the division was the suspending the division would mean the waste of the enormous effort involved in bringing the division.

sion into South Vietnam, and to reverse the process and send the division back south would be equally costly. From the beginning, we should have been

trying to stimulate the natural Vietnames fear of the Chinese, and to keep Hanoi, if sible, from becoming wholly dependent on Peiping. Yet the effect of our actions has apparently been just the opposite—to drive a reluctant Hanoi into the embrace of Pelping. Hanoi's present apparent re-jection of any negotiations, except on terms that would represent a total surrender for us, parallels Peiping's position completely. Somehow we must find a way to reverse the

tend to agree with those who feel that we have not been imaginative in our efforts to negotiations started, that we have assumed, without justification and incorrectly, that we could pressure Hanoi to agree to negotiate by military action that would hurt. And I am emphatically opposed to the cur-rent argument that we can accomplish our objective by hurting Hanol still more; e.g. by extending the bombing to industrial and other targets in the Hanoi-Haiphong area. Such tactics would not only be likely to stiffen still more the resistance and determination of the North Vietnamese, but would

once again be driving Hanol more firmly than ever into total dependence on Peiping. I know that you, Mr. President, are des-perately concerned about American casual-ties in Vietnam, and that you want to see to it that our forces have every bit of equipment and supplies they need to carry out the tasks they are given to do. I feel the

I also believe, Mr. President, that you want to get the fighting stopped as soon as possi-ble, so as to put an end to the casulaties. These purposes are not inconsistent. Both are important. Both are in the interest of our fighting men.

Since our present course of action seems to be leading only to steady intensification of the hostilities, and does not seem to be bringing a peaceful settlement any closer, is it not imperative that we seek new approaches to the solution of our ghastly prob-

Specifically, should we not suspend the bombing of North Vietnam once again, and mobilize the influence of the nonalined nations of Asia to help us get negotiations started. In making such a gesture to emphasize our desire to end the hostilities, we would do well to link the announcement to the Duddhist religious helidays such as the the Buddhist religious holidays, such as the New Year which occurs in January, rather than referring solely to our own Christmas and Chanukah season. Instead of announcing a time limit to the suspension, which would once again have an ultimatum-like sound, we should, I believe, leave the matter of duration indefinite. An encouraging re-sponse might take time to develop and

Even more dramatically, we might well announce a unilateral cease-fire in the south, coupled with a proposal that the Victoria and the North Victnamese units suspend hostile action, also. If they refused to so re-spond, we would be free to resume military action ourselves within a matter of hours. Granted, it might be difficult to get the

South Vietnamese Government to agree to these procedures, but the effort should be made, and surely we are not without means of persuasion. If such persuasion proves impossible, we should proceed with the conciliatory moves on our own.

Let it not be said that such a course might ause political trouble in Saigon. That argument was somewhat persuasive when we still held to the position that this was Sai-gon's war to win. Today that position is in tatters. It has become our war—not to win, because a military solution is impossible— but our war to fight until we can find a way

to negotiate an honorable and lasting settle-ment. Our own involvement is now too great for us to allow the unpredictable political winds in Saigon to deflect us from the course we want to take.

I cannot say that such measures as I have proposed would lead to fruitful negotiations, or to any negotiations. They will not, I sure, if Peiping can help it. But I do a that I can see no better way for us to try escape from the morass we are now in. A They will not, I am we should explore every possibility of escape that is open to us, instead of stubbornly plowing deeper into the morass day by day. Sincerely,

JONATHAN B BINGHAM Member of Congress.

# Jerseyans Signing Up To Teach Viets Our Three R's

EXTENSION OF REMARKS

# HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. DANIELS. Mr. Speaker, I am very proud to insert at this point in the RECORD an article which appeared in the New York Daily News on January 9, 1966 concerning a very idealistic constituent

James Sansone is a very remarkable young man. I think his story is worthy of the attention of all Members. Under unanimous consent I insert this article at this point in the RECORD.

The article follows:

JERSEYANS SIGNING UP TO TEACH VIETS OUR THREE -R'S

(By Daniel O'Grady)

Triggered by the growing number of draft card burnings and other pacifist demonstrations, a 31-year-old high school teacher is organizing a statewide drive to recruit teachers to staff schools in Vietnam next summer

without pay.

The project, just begun, is expected to be in full swing next month in order to prepare the volunteers for the overseas assignment, according to James Sansone, a math teacher at Wallington High School in Bergen County, the man behind the unique movement.

"We feel that the handful of students and teachers connected with the demonstrations are giving educated people in general a bad name," Sansone, a bachelor, explained. 'That's why we started the program to teach the South Vietnamese

"We hope to demonstrate how most educated people feel about our country's policy in Vietnam," he added.

### SUMMONED TO WASHINGTON

Early in December, Sansone wrote to the State Department outlining his idea and, after an exchange of letters, was invited to Washington to elaborate on the plan.

There he met with State Department representatives December 16 and they urged him to begin his recruiting campaign. According to Sansone the officials also said that Uncle Sam would foot the bill for travel and living expenses of the volunteers if the re-

cruiting drive proved successful.

Sansone will meet with Governor Hughes during the coming week to ask for permission to recruit in the State's colleges. He also will ask for use of classrooms and some additional financing to cover the cost of the campaign. The classrooms will be used to teach volunteers the Vietnamese language in an intensive 20-week course.

The teachers who are ready to go after school closes next summer must be prepared to teach the equivalent of 1 year of school in 10 weeks. Including travel time, they will be away from home 12 weeks.

### THIRTY-ONE ALREADY ENROLLED

Thirty-one teachers already have volunteered for the program and Sansone receives more and more mail each day requesting information and application blanks. And the phone never seems to stop ringing in his home at 370 Liberty Avenue, Jersey City, and

"One of the State Department's field representatives said 200 teachers could be put to use right now in Vietnam," Sansone said. "We are hoping this program will mushroom all over the country, but we are only inter-ested in New Jersey teachers," he added. ested in New Jersey teachers," he added.

This program will be different from the

Peace Corps, he explained, because it will be privately administered and restricted to

teachers.

Sansone originally started out to be an electrical engineer and holds bachelor of science degrees in both electrical and electronic engineering from Fairleigh Dickinson University. When he realized he didn't want to spend the rest of his life as an enginear he attended New York University and Montclair State Teachers College to earn enough education credits to teach

Sansone was athletic director and assistant to the principal at Ferris High School, Jersey City, before joining the Wallington faculty

last year.

The energetic teacher, who looks fit enough to be a track star, said his group and future volunteers will be offering the thing they know best, teaching, to help the Vietnamese. Perhaps, he added, the tours in the future

could be lengthened to 1 or 2 years and spread to countries other than Vietnam. But right now he is only concerned with this summer's program and lining up volunteers.

### A House Stall on Home Rule

### EXTENSION OF REMARKS OF

## HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. EDWARDS of California. Mr. Speaker, at the close of the last session, the San Francisco Examiner wrote a strong editorial on behalf of home rule for the District of Columbia. Their reac-tion is an indication of the widespread national concern about the fate of proposals for District self-government. I commend it to the attention of my fellow Members:

[From the San Francisco (Calif.) Examiner, Oct. 2, 1965]

### A HOUSE STALL ON HOME RULE

Smithville (the name is fictional, the facts are not) is an undistinguished community of small population. But it selects its own public officials, operates its own municipal

Washington, D.C., is the National Capital. It has an 800,000 population. But it cannot name its own officials or set up its own mu-

nicipal policies.

The President and Congress handle it all—services, taxes, financing. The people have no direct say.

The case for home rule for the Nation's Capital City has been convincingly made, yet there are those in Congress who continue to drag their feet.

They prevailed in the House this week when that body approved a bill calling merely for a referendum on whether the residents of the District of Columbia want home rule.

This is a point so firmly established in the affirmative long ago that one can only conclude the House majority is only stall-

The Senate already has approved a workable home rule measure to become effective next year. It sets up a locally elected mayor and city council. The Federal Government would, under this proposal, retain the right of review in certain circumstances for the very logical reason that Washington is a federally purposed city and in that sense unique.

But the residents should not remain virtually without voice in the management of their own affairs.

The bill apparently is dead for this session, a sorry defeat for reason and justice.

## It Takes 'Em Off Welfare

EXTENSION OF REMARKS

# HON, SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

GIBBONS. Mr. Speaker, President of the United States has spoken to the American people of this Nation's continuing commitment to the poor and the hopeless.

I wish to call the attention of my colleagues to an article which appeared in the December 25, 1965, edition of the Tampa Times dealing with a unique effort in the war on poverty called Operation HOPEFUL. It is being carried out under the direction of the State of Florida's Welfare Department and is already turning frustrated, empty lives which have been dependent upon the welfare rolls into productive, hope-filled wage earners. The article speaks for itself. ask unanimous consent that it be included in the RECORD:

[From the Tampa (Fia.) Times, Dec. 25, 1965] OPERATION HOPEFUL: IT TAKES 'EM OFF WELFARE

(By Stewart Bryan, Times staff writer)

Just over 3 months ago, at the beginning of September, Operation HOPEFUL opened classroom doors to selected poverty-stricken mothers on the State welfare rolls.

Since that time, approximately 180 women have been enrolled in HOPEFUL, the fourth local project to be funded under the national war on poverty.

Of these enrolless, 140 remain at HOPE-

FUL's Albany Street quarters in basic edu-cation classes, while 41 have gone on to pay-ing jobs or on-the-job training.

Operation HOPEFUL got its name from the first letters of words in the phrase, "Help others produce effectively for useful lives composed mainly by Betty Cornette, District 7 director of State welfare. The project is

sponsored by the welfare department.

It got its official start in July with the appointment of Tampa attorney, Mrs. Raquel
Little, as project director.

Several experienced social workers from the welfare department were transferred to the project under the direction of Mrs. Crystal Kissinger. A work placement specialist, re-

tired Army Lt. Col. Russell P. McCallister, and two assistants, June Houghton and Viola Goldberg, were hired.

And the school system contributed a principal, F. H. Thomas, and 11 teachers. Thomas also serves as principal of the adult evening es at Jefferson High School. He and the teachers are paid out of poverty funds made available by a special contract between the school system and the Office of Economic Opportunity.

Basically, the idea of HOPEFUL is "to upgrade the enrollees' education and incre their work skills through training." Mrs. Little pointed out. Then the ladies can be placed in an employment situation, and wel-fare assistance can be stopped.

Prior to enrolling or on the first day, each lady is tested by the staff. Although there have been several high school graduates in the program, most of them dropped out of school.

"The test results are almost as varied as the individuals themselves," McCallister the noted

The ladies range in age from 20 to 49. Each of them has at least one dependent child, and each is the primary breadwinner

for her family.

According to initial testing scores, the en-

rollees are assigned to classrooms.
"These classes are ungraded," Thomas explained, "but the ladies are grouped according to achievement."

After a month, they are tested again to see what progress has been made. Then they may go on to another class, or they may be ready for employment.
"Even in one month," Thomas said, "you

can get back in the groove."
McCallister and his assistants maintain contact with prospective employers. They counsel with the ladies, find out what type of work they would like to do, and inform them what is available.

Various employees have various requirements. Some require a high school education, some a 10th grade education. Some want girls within a specific IQ range, others don't care.

As soon as a HOPEFUL enrolee attains the necessary level for the job she wants, McCallister places her. And he continues to check with her and her employer.
"A student expresses a desire for a particular job," McCallister explains. "If the job

requires a specific level of education, we try to get her up to it."

"Most of these ladies have given some thought to what jobs they want." McCallister continued, "but in some cases it has

lister continued, been mostly dreaming."
been mostly dreaming."
he lited the case of one To illustrate, he lited the case of one student with a sixth grade level of education, who wanted to be a practical nurse

LPN training requires high school graduation, and McCallister pointed out that it was impossible, within the scope of HOPE-FUL, to raise her educational level from the 6th grade to the 12th.

But in the majority of cases, the women recognize their own limitations, and are

happy with their new jobs.
"There has been no ill feeling in any instance," McCallister said, "nothing but praise. And we've placed no one in a job where she doesn't get at least the minimum

It's still too early to tell what the avera It's still too early to tell what the average stay of a student in classes will be, Mrs. Lit-tle said. Some of the ladies have been there since the project started, while others were placed in a week's time. But no one is likely to find fault with a project that has created 40 new wage earners out of welfare recipients, and shows every

indication that it will do so for at least three times that many more.

Interest on Poor Man's Bonds

EXTENSION OF REMARKS OF

# HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. TENZER. Mr. Speaker, the New York Times on January 11 had an edi-torial entitled "Fair Play on Savings Bonds" and because I agree with the sentiments expressed in the editorial, I am calling it to the attention of my colleagues by quoting it now at length.

FAIR PLAY ON SAVINGS BONDS

Alert investors have been getting much higher yields since the Federal Reserve raised interest rates in December. But buyers of savings bonds from the U.S. Treasury still receive just 3% percent on their purchases. Thus the Treasury is, in effect, shortchanging savings bond buyers, who are mainly peoin the low- and middle-income bra

Apparently these small severs are also learning that savings bonds are no bargain. Despite the fact that many bonds are bought through payroll deduction plans, sales in December were 11 percent less than they were a year earlier.

A higher rate of interest on Treasury sav-A higher rate of interest out areasery arrivatings bonds would protect small investors who do not know their way around the financial markets. By increasing purchases of the bonds, it would also help the fight against inflation. There is no need to make bond rates competitive with marketable Treasury obligations, which fluctuate in price, or even with the new high rates being offered financial institutions. Savings bonds are the safest of securities and offer a tax advantage as well; so a small increase would

The President has the power to raise the rate to a maximum of 41/4 percent. It will take at least 4 percent to play fair with small savers. We think 4 percent should be offered them—and soor

Because most of the holders of Treasury savings bonds are in the low- and middle-income bracket and have no lobby here in Washington, I am prepared to join others who articulate their problems, in endeavoring to get the President of the United States to exercise his power to raise the rate of interest on these bonds.

It is most significant that on the same day that this editorial appeared in the Times there were other articles in the Wall Street Journal which pointed up the necessity for Presidential action at this time. These articles contained the following significant information:

First. Yields on Treasury's latest issues of short-term bills hit a 6-year high. Yields on 26-week bills rose to 4.737 percent and the average return to investors on 13-week bills rose to 4.585 per-cent. These Treasury bills are purchased primarily by banks and large corporations

Second. Short-term interest rates resumed an upward course along a broad front since the Federal Reserve Board boosted the discount rate to 41/2 percent last December 5. Large New York City, Chicago, and west coast banks are offer-

ing 4.875 percent on certificates of deposit of 180 days and longer.

Third. GMAC and International Harvester increased their rate on 180- to 270-day paper to 4% percent.

Mr. Speaker, because of all of these events, I am urging the President and the Secretary of the Treasury to in-crease interest rates on Treasury savings

bonds to the maximum limit of the President's power, but in any event to at least 4 percent.

## Historic Fort San Lorenzo, Canal Zone: Rehabilitation Project

EXTENSION OF REMARKS OF

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. FLOOD. Mr. Speaker, one of the oldest fortifications still under the control of the United States is historic Fort San Lorenzo, located in the Canal Zone on a cliff at the mouth of the Chagres River. Completed in 1597, this fort has long served as the guardian of this strategic river in both peace and war, and has experienced both siege and shock.

It was gratifying to read a news story in the October 29, 1965, issue of the Star & Herald, Panama, R.P., that this ancient fortification is to be rehabilitated through a joint effort of Boy Scouts from the Canal Zone and Panama.

In order that all agencies of our Government may know of this worthy project. I quote the indicated news story:

[From the Star & Herald, Panama, R.P., Oct. 29, 1965]

PANAMA AND ZONE UNITS JOIN IN

REHABILITATION PROJECT Historic Fort San Lorenzo, one of the Isthmus of Panama's most outstanding archeo-

logical treasures, will be the site of a joint Panamanian-United States rehabilitation project beginning Saturday.

Rover Scouts of Panama and their Canal Zone counterparts, the Explorer Scouts, will begin cleaning vegetation which has been obscuring many parts of the centuries-old fortifications.

Tools for clearing brush and transportation tools for clearing brush and transportation to the site will be provided by Atlantic side units of U.S. Army Forces Southern Command (USARSO). Scouts from Panama City and the Pacific side of the Canal Zone will leave on the train from Ancon Station at 8:10 Saturday, Rover Scouts from Colon will join them there to work on the project.

The improvement project was conceived by Maj. Gen. J. D. Alger, USARSO command-er, and endorsed by Faname's National Com-mission of Archeology and Historical Monu-

In a letter to General Alger, Dr. Reina Torres de Araús, Commission chairman, wrote: "I would like to congratulate you for such a laudable project which represents an inestimable historical value. Also, I would like to advise you that this Commission is ready to cooperate at all times with this

Dr. Araux also expressed her appreciation of the general's assurance that all artifacts unearthed not used in the rehabilitation will be delivered to the custody of Panama's National Museum. It is expected that during

a later stage of the project; volunteer Army divers will search for items of historical value in the waters at the foot of the promontory on which the old fort stands.

Technical assistance will come later from Trennical sassitance will come later from Dr. Hale Smith, head of the department of anthropology and archeology of Florida State University. He recently inspected the ruins of Fort San Lorenzo and prepared an outline of useful activities which the Pana-manian and U.S. scouts will begin next Saturday.

Coordinating the participation of Panama's Rover Scouts is Dr. Teodoro Arias, a well-known physician. Ted G. Kellogg, Canal Zone Scout Executive and Lt. Col. Donald E. Gray are representing the Canal Zone and U.S. Army-sponsored Scouts, respectively.

The project will be under the overall supervision of Hugh H. Gardner, USARSO

staff historian.

Groups of scouts will work at the fort each Saturday for an indefinite period. As work progresses over the months, more complex restoration work is planned with the help of USARSO soldiers who possess the needed

Fort San Lorenzo, completed in 1597, once was one of the most important fortifications in the New World. Overlooking the Caribbean Sea at the mouth of the Chagres River, it guarded a vital point in the flow of goods back and forth across the isthmus.

Boats loaded with manufactured goods from Europe traveled up the Chagres to the town of Cruces, about halfway across Panama to the Pacific Ocean. Here the goods were transferred to mule trains and carried to

Panama City.

On the return trip, mules laden with the riches of western South America went from Panama City to Cruces. Here the shipments were transferred to boats which returned down the river to the town of Chagres, guarded by Fort San Lorenzo. The gold of Incas was stored in warehouses here while awaiting shipment to Spain.

The fort was sacked by Henry Morgan's pirates in 1670, but was rebuilt by Spain.

### A Preposterous Jobless Pay Bill

EXTENSION OF REMARKS

### OF HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. YOUNGER. Mr. Speaker, the following editorial which appeared in the San Francisco Examiner and News-Call Bulletin of January 9 is, in my opinion, a fair and honest description of the terms contained in H.R. 8282 if it is presented to the House on the same manner as presented to the Ways and Means Committee. The editorial follows:

A PREPOSTEROUS JOBLESS PAY BILL

The congressional hopper has an unem-ployment compensation bill, due for con-sideraton this month, that is far removed from its purported objective.

Unemployment compensation, as originally and almost universally accepted, has a legitand amost universally accepted, as a legit-imate purpose. That is to bridge the payless gap between jobs of a worker unemployed through no fault of his own. Nobody quarrels with that principle any more. Most States have the necessary laws.

Industry and employees fully support the system. Millions of jobless have been helped over the rough spots of involuntary unemployment. Improvements in the system have

been made as experience indicated necessity for them.

But the presently contemplated legisla-tion runs roughshod over all experience.

It would compensate not just workers who lost jobs, but those who voluntarily quit. those properly discharged for misconduct those who refuse to accept suitable reemploy-

These are preposterous departures from concepts of compensation for unemploy-

They would not merely tide over the job-

They would underwrite the shiftless and incompetent.

They would board the indolent, the shirkers, and the parasites at the table of the taxpayers.

One consequence would be a doubling of State unemployment insurance costs within

Another and worse consequence would be diversion of the resources of the unemployment compensation system to malingerers to the detirment of the deserving unemployed. The prime function of unemployment compensation should be to sustain a tobless family until the breadwinner can do

The system now proposed would not be insurance against unemployment. It would not be welfare in any conscionable sense. It would be a system of handouts, a place

the trough.

### Gold and the Balance of Payments

EXTENSION OF REMARKS

# HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MOORHEAD. Mr. Speaker, again this year we must address ourselves to the international balance-of-payments problem and, more specifically, to the question of what positive steps can be taken by the United States to deal with

It has been my position for some time that the United States should have a gold policy which does not protect speculators from loss.

In that connection, the Honorable Sherman J. Maisel, member of the Board of Governors of the Federal Reserve System, made a valuable contribution to the study of this problem in a Dallas speech last November 11 entitled, "Interest Rates, Gold, and the Balance of Pay-ments."

In that speech, Governor Maisel noted that we have already taken several steps to deal with the problem, including the interest equalization tax and the voluntary foreign credit restraint program. He noted, too, that some progress has been made toward a reconsideration of our income tax policy with respect to foreign earnings.

Another major improvement-

### Said Governor Maisel-

aimed particularly at speculative, short-term money flows, which have had a most desta-bilizing effect, has been promised by the advocates of widening the margin of permisable limits of exchange rate variation. They claim that broader limits would cut our short-term speculative capital outflow since the costs of covering forward would exceed the small interest differentials which now lead to capital exports. Trade would not be influenced, since it would still take place either in dollars or at agreed upon exchange rates.

Governor Maisel then said, and I emphasize this particularly—

They have suggested that we broaden the limits by widening our gold margins. This would have to be done by lowering the purchase price of gold, since we have a firm national commitment to maintain the selling price at \$35 an ounce. The Joint Economic Committee of Congress recently urged a much closer examination of this proposal.

Governor Maisel agrees that a study of the pros and cons of this type of proposal would be worthwhile.

As a further contribution to our study and understanding of this entire problem, I ask leave to include at this point in my remarks two editorials published in the Washington Post, December 10 and December 11, 1965.

### A POSITIVE PROGRAM-I

By restricting the outflow of dollars the administration may undermine this country's position of leadership and inhibit the growth of the world economy. If the balance-of-payments problem is ever to be solved and the dangers of a worldwide stagnation averted, the negative strategy of responding to attacks on the dollar with counterproductive restrictions must be replaced by a positive program.

by a positive program.

Although the fact seems only dimly perceived, the United States is the world's banker. Dollars provide the means for conducting most of the world's international trade. And with more than \$80 billion in overseas investments, this country has been the principal source of capital funds for both developed and underdeveloped nations.

But since the late 1950's the United States has not behaved as a banker should. Growing banks actively seek to attract more deposits. But the U.S. Government has been saying to its foreign "depositors"—the central banks, importers and others who hold dollars—"please, please, don't cash your dollars in for gold." And the foreign dollar holders react very much as domestic bank depositors would if they were asked not to demand cash. They become restive about holding large dollar claims even though the purchasing power of the dollar has held up much better than that of gold, and even though short-term dollar securities, unlike gold, earn interest.

The alarm which has caused this country to embrace protectionist policies in an effort to stop the outflow of capital funds does not stem from the weakness of the dollar. If the dollar were really weak it would not be widely held as a reserve currency; and there would be a massive flight of capital from this country. Instead of that, \$24 billion is now held by foreigners. What impels the Government to adopt unwise and unworkable policies is the fear that the gold stock will be depleted.

The policymakers reason that by eliminating the payments deficit they will protect the gold stock and at the same time force the Europeans to agree to a reform of the international monetary system that would presumably solve the dollar deficit problem. But those hopes rest on a fragile base. The gold thirst that caused France to cash in more than \$747 million in the first 9 months of this year is rooted in politics, not economics. There is, then, little reason to hope that an agreement can be reached on a workable scheme for monetary reform. And if there were an agreement, it is unlikely that the new or reformed mechanism would be capable of creating reserves on the

scale that would be necessary to finance deficits of the size incurred by this country.

Rather than pin hopes on ill-defined or defective proposals for international mone-tary reform, the United States as the world's banker should focus on the immediate problem of devising an arrangement that will make it more attractive for foreigners to hold dollars and riskier for them to hold gold. Such a plan will be outlined in another editorial.

### A POSITIVE PROGRAM-II

Instead of encouraging foreigners to hold more dollars and less gold, the policies of the United States produce the opposite effect.

the United States produce the opposite effect. By supporting the gold price within the narrow limits of 84 cents, plus or minus one-fourth percent on either sids of the parity price of 835 an ounce, the United States encourages those who expect that the dollar will be devalued through a rise in the Treasury's gold price. It is as if Americans, who are not permitted to buy or hold gold within this country, were assured that the Government would support the stock of the (mythical) Tasmoc Corp. to within one-fourth percent of its par value. If the supply of Tasmoc shares were more or less fixed, holders would be extremely reluctant to part with them except at very high prices. And so it is with gold. So long as its price is not permitted to fall much below \$34.91 per ounce, those who are betting on an increase have an almost certain, one-way option.

Suppose, however, that the United States were to widen the gold margins by 10 percent on either side of parity so that the gold price were permitted to fluctuate between \$31.50 and \$38.50 an ounce. Within that range, 40 times as wide as the present one, gold holders, fearing a substantial drop in the price, would tend to sell whenever the upper margin was approached.

A more freely functioning gold market, by making hoarding very risky, would provide strong protection for the U.S. gold stock. With a high price the Treasury gold stock would go farther in settling dollar claims. A low price would favor those countries that held on to their dollars. Increases in the price of gold by this market route would not involve a devaluation since the exchange rates between the dollar and other currencies need not be affected.

In fact one of the principal objects of widening the gold margins is to preserve the system of fixed exchange rates between national currencies. Business has a well founded preference for fixed exchange rates for the assurance that the dollar price of francs or the franc price of pounds sterling will not widely fluctuate from day to day. But the system of fixed exchange rates cannot survive if the United States, as the world's banker, is subjected to blackmailing threats on its stock of gold. Wider gold margins would place a price tag on the threats that the Europeans can now make at no cost to themselves. And there would be more farreaching consequences if cooperation in maintaining a system of wider gold points were not forthcoming.

Suppose that France and other countries, dissatisfied with the wide gold margins, decided to peg their currencies to gold—rather than to the dollar as they do now—and established narrow gold margins of their own. There would then be a "franc bloe" and a "dollar bloe" that would be linked by flexible exchange rates.

If the franc bloc countries dumped their dollars to buy gold, their currencies would appreciate—become more expensive in relation to the dollar. And with appreciated currencies, the balance-of-payments surplus of the franc bloc—if there were one—would soon be eliminated as their exports alumped and imports swelled. Conversely if the dollar bloc were in surplus and the franc bloc in

deficit, purchases by the franc bloc would soon cause the dollar to appreciate.

Unlike any of the proposals for international monetary reform, the widening of the gold points can be effected by a simple majority of votes in the International Monetary Fund. And this country could easily carry the issue under the system of weighted voting.

The administration's defensive policies point toward worldwide stagnation, the proliferation of protectionist measures and the ultimate breakdown of the international monetary system. Widening the gold margins offers a very real hope of reversing those dangerous trends and permitting this country to perform its functions as the world's hanker.

# Address by Commissioner George H. Hearn, of the Federal Maritime Commission

EXTENSION OF REMARKS

# HON, EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the Record, I include the following address by Commissioner George H. Hearn, of the Federal Maritime Commission, before the 1965 Biennial Convention of the Maritime Trade Department, AFL-CIO at San Francisco, Calif., on December 7, 1965.

REMARKS OF COMMISSIONER GEORGE H. HEARN, OF THE FEDERAL MARTITME COMMISSION, BE-FORE THE 1965 BIENNIAL CONVENTION OF THE MARTIME TRADES DEPARTMENT, AFT.— CIO. AT SAN FRANCISCO, DECEMBER 7, 1965

It is a distinct honor to have been invited, by your president, Faul Hall, to appear at this biennial convention of the maritime Trades Department of the AFL-CIO. Only 6 months ago I had the pleasure of speaking, also at Mr. Hall's invitation, at the Seamen's International Union Convention in Washington, D.C., and I can assure you that as one who formerly held union membership, and as one who appreciates the benefits that organized labor has conferred upon our entire society, I feel very much at home talking with the delegates of men organized in the furtherance of our noble maritime callings.

All of you will agree, I am sure, that this is a memorable date. Only 24 years ago today, December 7, 1941, a day of ignominous infamy, Americans were called upon to show their mettle, and in the ensuing 4 years the world witnessed the greatest example of the harnessing of resolve and ability that has ever been known. And you of the maritime trades, all too frequently subjected to "pork barrel" attacks, are entitled to esplaudits from the entire free world, for was not only no work stoppage or slow down in your trades during those awasome times, but a record of self-sacrificing, wholehearted dedication which enabled the American merchant marine and American shipbuilding to offer the free world the logistic wherewithal which was absolutely assential to successfully prosecute the war. In the immediate postwar years, your still unstinted efforts contributed to the rehabilitation of the free world which enabled the continuation of Western culture.

Historically, American shipping has been seemingly put upon and, sadly, cast aside as

the cycles of peril and security have been interpreted by men of short memory and convenient economy. As President Johnson stated in referring to the contributions made by these engaged in maritime matters, "International commerce and the ships which make it possible, have contributed immeasurably to America's greatness. The seas and ships and seafaring men are an integral part of this country's past, present, and future."

And Congressman JOHN ROONEY, an astute observer of Government spending, especially in the maritime field, has said, "Our country has gotten much more out of the merchant marine than the merchant marine ever got out of the country."

I wholeheartedly subscribe to these statements and agree that we can ill afford to neglect our merchant marine, particularly at the result in history.

this point in history.
So today is a signal day for me, on behalf of seafaring men, to call to the attention of our countrymen your devotion to Nation not only in peace and in war, in international hostility, but in worldwide commercial rejuvenation, as well.

The position of our Nation as the leader of the free world, the size and potential power of the uncommitted world, together with our commercial preeminence as a trading nation, apart from the aspects of national defense, seem to cry out for the continuation, swen the escalation of our ability to build, maintain, service, and operate ships. Consequently, your arts and skills which our Republic has found to be so essential at each and every crisis which our Nation has faced, must be preserved and nurtured.

Almost everyone in this country, I suspect, is aware that these are critical times for the American merchant marine, American shipbuilding, their related industries, and for American wage earners who, particularly in times of national peril, make these industries so efficient. And the debates centering about various remedies offered to cure shipping ills have virtually embroiled the entire Nation. So it is with some wonderment that I meet the realization that many people throughout the land—and I include people in shipping and related circles—assume that the Federal Maritime Commission has a role to play in the maintenance of an adequate U.S.-flag fleet, the administration of cargo-preference laws, vessel construction programs, vessel manning scales, and even safety of life at

While I am sure that no one here labors under that misapprehension, nevertheless, I would like to take this opportunity to state, albeit briefly, the functions and responsibilities of the Commission. As you know, the Commission was created in 1961, when the old Federal Maritime Board was abolished. The 1961 reorganization vested all regulatory responsibilities, primarily economic in nature, in the Commission, and left to the Maritime Administration, an agency within the Department of Commerce, the promotional responsibilities for maintaining a strong American merchant marine pursuant to the Merchant Marine Act of 1936. We all are aware of the truly difficult promotional problems that labor, industry, and the Government are faced with, and are familiar with the dedicated, if nevertheless diverse, efforts championed by various interests to come to grips with these enormous challenges.

The Commission, by reason of its enabling act, is not involved in these matters per so. I do not mean to imply, of course, that we do not have vexing maritime problems of our own. Basically, the Commission administers the Shipping Act and the Intercoastal Shipping Act. The Intercoastal Shipping Act empowers us to regulate common carriers in our off-shore domestic trades, terminal operators, and freight forwarders. Under this mandate, while we do not license carriers, as do the Interstate Commerce

Commission and the Civil Aeronautics Board, we do have very broad powers over the carrier's level of rates and practices, and under it we license freight forwarders not on the basis of convenience or necessity but under standards of fitness, and we oversee the operations of terminal operators, generally, on the basis of fairness.

Under the Shipping Act, the Commission exercises authority over carriers and conferences of carriers in our foreign trades. By far the lion's share of our work, and the more complex, delicate challenges, arise under this In carrying out its responsibilities under the Shipping Act, the Commission not regulate as to flag. American- and for-eign-flag vessels enjoy like privileges, and ch must measure up to the same standards of conduct. This fact seems surprising to many, but I feel that it should be understood readily when it is realized that the Commission does not regulate common carriers except in their posture as necessary instruments for American international commerce. In a very real sense, it may be said that one of the essential reasons for the Commission's existence is the obligation to insure that American exporters and importers are treated fairly by the carriers and conferences of carriers which they must rely on to conduct their business. This obligation of the Commission was plainly strengthened by amendments to the act in 1961, which require the filing of their tariffs by carriers covering both import and export rates, and by requiring that such rates may be charged These statutory requirements have resulted in shippers and consignees being able to establish, before they ship, exactly what their freight costs will be and, more importantly, in knowing what their competitors must pay for transportation. The difficult problems for transportation. The diments problems stemming from rate disparities which are most onerous for our export commerce, should be eased somewhat after January, when under our new General Order 13, inbound tariffs—as well as outbound—will be required to be filed in a particular form and manner. The economic strides now being made by our foreign competitors make it difficult enough for our exporters to lay down their goods in foreign marketplaces. justified rates which saddle American exporters with an unwarranted burden simply cannot be tolerated. The Commission has been wrestling with this problem long and hard, and I mention it here only as an ample of the fact that we too have trying ues before us, and to demonstrate the different responsibilities cast upon the Commission as compared to those of other de-partments and agencies. And we all agree that these problems must be satisfactorily solved for the benefit of all.

While you will be addressed here in convention by many other men from various walks of life with different obligations. I thought I would leave the maritime promotional field to those entrusted with that prime responsibility. I thought, however, that for a few moments we might all reflect on the responsibilities of delegates in the labor movement and your responsibility to the rank and file. And the historical development of labor philosophy, what your predecessors in the labor movement have gained for you and your members and what goals you are sttempting to attain.

Labor unions have been organized to help each individual man or member to better his conditions.

I need not remind you of the great foundation laid down in former centuries and even enunciated in the Bible from which much of our 20th century labor philosophy stems. "By the sweat of thy brow thou shalt earn thy bread," Genesis 3: 19. To labor is to exert oneself for the sake of procuring what is necessary for the purposes of life which most importantly is self-preservation.

A man's labor bears two notes or charac-

ters. First of all, it is personal, since the exertion of individual strength belongs to the individual who puts it forth. Secondly, man's labor is necessary; for without the result of labor he cannot live. Self-preservation is a law of nature, which must be obeyed. The labor of the workingman is not only his personal attribute, but it is necessary; and this makes all the difference, because the preservation of life is the bounden duty of one and all. It follows, then, that each man has the right to procure what is required in order to live, and the workingman can procure it only through work and wases.

While it may be assumed that workingman and employer should, as a rule, make free agreements, even regarding wages, nevertheless, there underlies a dictate of natural justice more imperious and ancient than any bargain between man and man, namely, that the laborer's remuneration ought to be sufficient to support a frugal and well-behaved wage earner. If through inequitable circumstances, the workingman must accept harsh conditions or insufficient wages because an employer will afford him no better, he is made the victim of force and injustice. these and similar questions, the role of labor unions is absolutely essential, and in order to supersede Government intervention, safeguard the interests of the wage earner. good faith labor-management administration must result in justice and equity for all.

Unless I miss the mark, your own serious deliberations here involve an assessment of your own past, an analysis of the present state of your affairs and a careful prognosis of the foreseeable future. You have, as have all of organized labor, much to be proud of. Apart from your contributions to national defense, your tenacious persistence has given our people the highest standard of living in the world. And your obligations as you discharge them not only here in convention, but in the daily conduct of your affairs, affects the warp and woof of our entire economy.

First of all you representatives of your fellow workingmen are in the nature of personal fiduciaries. Whatever you do, or do not do, directly affects the ability of your members to live in the dignity to which they are entitled. Thus your responsibility to them is one of the highest trust.

It is no longer revolutionary to urge, it was when Pope Leo XIII stated it in 1891, in the encyclical "Rerum Novarum," that working conditions which unduly endanger health and safety cannot be tolerated and that wages, due to the inherent dignity of man, must be such as to keep him and his family in reasonable comfort. Today, however, new economic dangers pose unknown threats to the well being and security of workingmen, and these dangers loom particularly large for Americans in the mari-Consequently, by the time trades. exercise of your obligations, you must act justly and wisely, in order to give to your members that degree of leadership and protection to which they are entitled. Yet your actions must not be such as to let short-term benefits result in longrun ruination. Good faith efforts must be made to accommodate, with as little human dislocation as possible, new and improved methods of carrying on business. For if the steamship, the terminal, or the shipbuilding industries cannot keep apace in this fast moving competitive world, by dovetailing the more efficient methods of operation with the workingman's right earn a living and enjoy his natural dignity, there well may be no jobs to protect and no profits to be earned. But I do not and no profits to be earned. But I do not envision the enlightened leadership of the labor movement in this country today blindly cast aside its obligations any more than it has cast aside its opportunities. As some evidence of responsible labor states-manship, I want to quote an accolade from the current issue of the First National City Bank of New York's monthly economic letter:

"Through most of the late forties and fifties, wages rose at a considerably faster pace than productivity, and unit labor costs rose accordingly. In the last 4-year period, not only have productivity gains been greater than in earlier periods, but wage increases have been somewhat less earlier and more nearly in line with pro-ductivity gains."

The problems now facing the maritime industries, of course, also, in different forms, confront labor. It may very well be said that maritime arts and skills have reached a crossroads. But reasonable men must postulate that, as a nation, we need a force of maritime skills and that we cannot afford to permit these skills to atrophy. As technology advances, socioeconomic concern must And this requires a firm voice on the pace. part of labor in the counsels of direction. Pope John XXIII, in his enclyclical "Mater et Magistra," in 1961, recognizing that indus-tries undergo "sudden and profound changes" stated: "workers should be allowed to play an active part in the affairs of an enterprise" and pointed out that, "those who are daily involved in an enterprise must not be reduced to the level of mere silent per-formers"; concluding "it is appropriate and necessary that, besides the holders of capital or their representatives, the workers also, or those who represent their rights, demands and aspirations, should have some place in such authorities or institutions."

Those who would deny labor's place in management counsels ignore not only natural justice and betray the concept of man's universal dignity, but they also deny the lessons of history. Labor has always been the well spring of prosperity, and organized labor has facilitated the distribution of wealth.

All of your deliberations, I am sure, will be tempered by your historical and well known, if not publicized, sense of duty: First to your members to whom you owe the highest obligation, secondly to the industry of which you are a most essential element, and thirdly, to the common good, to the public interest, if you will, whereby this Nation will prosper politically and socially, and will lead the

world to an era of enlightened peace.

In closing, I wish you the very best of success in your convention and trust that from it will come meaningful guides, not only for your own undertakings, but for the assistance of our necessary maritime industries.

## How Educational Broadcasters Can **Enslave Commercial Broadcasters**

EXTENSION OF REMARKS

HON. JOE R. POOL

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. POOL. Mr. Speaker, I commend to the attention of our colleagues the following keynote speech, "How Educational Broadcasters Can Enslave Commercial Broadcasters," by Mr. Gordon B. McLendon of station KLIF in Dallas, Tex. The speech was the keynote address before the 22d convention of the National Honorary Radio and Television Fraternity in Houston last year, and was distributed throughout the entire broadcasting industry. In my opinion, it represents a constructive approach to the needs of educational broadcasters:

HOW EDUCATIONAL BROADCASTERS CAN ENSLAVE COMMERIAL BROADCASTERS

(By Gordon B. McLendon)

I am honored to make the keynote address at this 22d convention of the National Honorary Radio and Television Fraternity.

am quite aware that many of you here tonight are educators and many more will All of you share my devotion to radio and television.

With each rising sun, the role of the educational broadcaster becomes more important, The careful watch kept by the Federal Communications Commission has made all thoughtful radio broadcasters more cognizant of their service responsibilities in educational programming. And the growing educational television industry—and it is an industry-is ever more powerful in its influence upon those who wish to learn.

And yet, educational broadcasters continue to miss their greatest opportunities for advancement. What if, for instance, you in educational broadcasting could make the most powerful commercial radio and television stations in your city your determined and aggressive allies? What if the commercial stations affirmatively promoted your programs on their airwaves, offered you cons assistance, and regarded you as a clear ally rather than, passively, regarding you as something a Federal agency required that one offer lip service?

There is a way. And thus the title of this eech: "How Educational Broadcasters Can Help Commercial Broadcasters"

In that title is the secret of making commercial stations your slave. Whatsoever ye mercial stations your slave. Whatsoever ye sow, that shall ye also reap. If one takes off life's conveyor belt, he must put back on in equal measure. What you want from commercial broadcasting operations, you must be prepared to return in kind.

But nonprofit, educational broadcasters have largely missed this richly rewarding ex-perience in quid pro quo. You in educational broadcasting are frequently calling upon commercial operations for help of all sorts-sometimes money, or support for a fund-raising program, sometimes equipment, sometimes promotion, sometimes advice but, whatever, constantly seeking the help and support of commercial operators. Not infrequently, we are asked by you for editorial support in a project important to edu-cational broadcasters. Almost weekly, in all of the markets in which we operate, we are asked for help by one or another educational institution. To quote a famous comic, "a friend in need is a pest." But to put it more correctly, a friend in need who receives and does not return, quickly becomes a crashing

Is this a one-way street? What have you offered in return? What have you put back on the conveyor belt? What have you done for or offered to commercial broadcasters to create a debt of gratitude from them? What have you sown? Let us now retitie our speech tonight; "How The Educational Broadcaster Can Enslave the Commercial Broadcaster." It can be done. It is easy. It will work. Here is how to enslave us:

First of all, we commercial broadcasters are asked by the Pederal Communications Commission to make periodic surveys of our community to determine the ways in which our stations may best serve not only the com-munity to which we are licensed and the area which our signal serves-it is our obligation to discover that programing not being either offered at all, or inadequately offered and that programing which is in surfeit and, further, it is our obligation to attempt program ourselves accordingly. The FCC's survey requirement is a good one, at least our stations, because we always learn

much in taking these surveys.

Let me suggest that you begin your effort to enslave the commercial broadcaster, as students or teachers, by conducting a similar

thoroughgoing survey of all commercial broadcasters in your area of service in an at-tempt to discover the needs of the commercial broadcasters and then assist them in fulfilling those needs to the best of your ability. This survey of management personnel, sales personnel, programing and engineering personnel will produce valuable information for you. Commercial stations will be flattered, appreciative, and, incidentally, amazed.

I can think of many questions for this survey of commercial station personnel:

What type of personnel do you particularly need?

2. Here, sir, is our course of study-what do you think is omitted?

3. How often have the personnel of our noncommercial station called on you to volunteer assistance, or ask if there was any-thing we could do for you?

4. Do you think we in educational broadcasting should editorialize?

5. What issues do you think we should

editorialize upon?
6. What information are you receiving about our station or communications or speech department?

7. What information would you like to receive?

8. If we provide you with releases, is it possible to set up a definite schedule of newscasts on which they will be heard?

9. How often, sir, do you listen to or watch

10. Which programs do you enjoy or appreciate the best?

11. Would you be willing to cross-plug ome of our programs if we cross-plug some of vours?

12. Can we set up some sort of specific

chedule of cross-plugs right now?

13. Have you ever visited our station, sir? 14. Could we set up an exact time now for your visit?

15. Have you any spare equipment—how-ever small? Would you ask your chief engi-neer to check? I will write you a reminder. 16. In which of your public service proj-

acts do you think we might assist?

17. Have you any commercial accounts you think our students could assist you with—for instance, by making surveys or by attempting to create attractive commercials? think you won't get his attention there

18. Do you need any market or other rearch data our educational staff could help you gather?

19. Would you like us to send certain of our personnel to work for you 2 hours each week at no cost to you?

20. Could we set up a specific schedule of their work hours right now?

21. Have you any on-the-air audience pro-motions in which we might consider a cooperative effort?

22. Do you have need for first-ticket an-ouncers? Can we train first-ticket men for you?

23. In the field of news, are there news-stories about our school's activities which you would like to have our department or

station feed to your news department?
24. Could you feed us any local news-stories? Under what circumstances?
25. Would you be willing, at your studies,

to answer questions from our students for 1 hour each month? Could we set up definite times and dates right now?

Now, these 25 questions are only the beginning. Now that you've made up your mind to put it back on the belt, you should be able to think of all sorts of questions be able to think of all sorts of questions to help you determine how you can help the commercial broadcaster and how he can help you. And he will help you if you help him. Don't be discouraged if he doesn't reciprocate all your kindnesses the first few times. Kill him with kindnesse embarrass him. And if one or two commercial operators fall to return your efforts at assistance, don't

-the others will not disappoint you. Keep plugging—everybody will be astounded at your persistence. And remember that where one or two operators don't show reciprocity, this is good, too-you've learned who work with and who not to work with. It's like your friends—it takes a while to sep-arate the producers from the nonproducers and the friends from the mere close acquaint ances. Get ready to be disappointed in some of them. More important, get ready for one of the greatest experiences of your life.

how do I further enslave the com-

mercial broadcaster?

First, to begin with, call him often and write him often. Keep your calls and your letters short. But keep in steady contact.

Second, keep the commercial broadcasters name on your airwaves—twice a month if possible. That'll keep his attention. How do you keep his name on the air? Well, do you keep his name on the air? Well, what station doesn't have something it wants promoted or publicized on your stationnews of expansion or earnings, or new per-sonnel, or new programing. What new boards of directors has the manager joined? What success stories or humorous features has the program director to relate? What news stories can you carry and credit the name of a commercial station's newscaster? Names are your most precious weapon.

Third, ask your commercial broadcaster for permission occasionally to use his editorials as "guest editorials." Don't fail to use

his call letters profusely.

Fourth, get your staff to monitor his station and put on regular public service an-

tion and put on regular public service an-nouncements of your own, plugging those shows on his station which you believe would be of interest to your listeners. Fifth, quite gratuitously, you can do a quantitative and even a qualitative survey of his listening audience and offer him, in confidence, the data for his particular sta-

Sixth, you can call up once in a while simply to ask for advice. There's nothing quite so flattering as being asked for advice.

Seventh, don't be afraid of use other stations' call letters on your airwaves. We do it often. It causes comment and it creates good will.

Eighth, offer him some of your own sta-tion or departmental editorials for use on his

commercial station.

Ninth, offer him music surveys showing musical preferences each week in your school. Tenth, exercise your imagination. can I do for this fellow broadcaster? What s subdivision of this 10th point, we come the most vital issue of all—the fact that in order to be effective in enslaving the commercial broadcaster you must regard and treat him as an equal—being neither con-descending nor disdainful, even though you may be younger. Too many educational broadcasters seem to me to treat commercial broadcasters with too much respect. We're not that busy, or unavailable, or preoccupied. We can be had and I'm telling you the way to take us. That commercial broadcaster is a good fellow, most likely, like you are, but you won't have his respect if you are menial or demonstrate an inferiority complex. And, above all—we might call this point 11 above all—we might call this point 11— you'll never perform at your maximum in the educational field if you feel that your life will end or that you will be fired if you make a single commercial broadcaster unhappy. I regret to say that, like any other business, we've got some real slobs in the commercial broadcasting business. There are a few you can't please no matter what you do—operators who hold their license ony because they have such a small audience that nobody even calls them to the attention of the FCC. You'll discover through experience who the

operators are. Forget them—the public al-ready has. And if you are still worried about

the possibility of somehow not pleasing every commercial operator, simply go to your

school's president in advance, present your plan of cooperation with commercial broad-casters, tell the president that he'll have an occasional letter of protest from some commercial station operator who either doesn't know what you are trying to do or feels he has been slighted in some regard. are that when the president sees what you're going to do, he'll begin right then thinking of promoting you, and you certainly will have cut off any chance that some so-and-so may cause you trouble with a protest to the Board of Regents.

You cannot be bashful. You must be bold, although courteous. You must work. Above all, you must think. If you don't think, don't expect the other fellow to think of you.

Tonight, we've purposely ignored what commercial station can do for you on the theory that you already know, or that you are capable of sitting down and listing all of the things you want and need from commercial broadcasters.

Now, in all likelihood, you won't do all these things I've suggested-you'll reject some, add others, and compromise on a few. Don't compromise on too many, though, for in the end there is no compromise with the

And so that is my blueprint for enslaving the commercial broadcaster. I want to enslaved. Those chains you use are only going to make the commercial operator more money, make his programs more listenable, and make him more responsive to the de sires of his community and, again, simply make him money and, not quite incidentally, benefit the public. It's a simple equation: you, plus intelligent aid to the commercial broadcaster equals money for him, benefit to the public, and a magnificent career for you. The cost in dollars? Zero. The cost of your time and mental effort—considerable. Really, the question is what you are worth to yourself-how highly do you regard yourself? How much do you care what becomes of you?

In the very end, I must say to you that I have a selfish purpose in this address tonight. As the father of four and the grandfather of two, I am ever more conscious of the training of young people. Being so conscious, I can only think of what radio meant in my own early years. When I was a boy, I played baseball and I dreamed youthful dreams of legendary players and leaping, twisting catches made by fielders who jumped higher than the wall itself, and I dreamed of bleachers baking in the summer sun and of huge -so high it seemed that no little boy could ever climb them. And with these wonderful childhood dreams, I listened so intensely on my old Majestic radio, to the great radio sportscasters of those years which seem so long ago—Ted Husing, Graham Mc-Namee, Bill Stern, great names—fraught with the memory of giants. My childish mind was their clay, and they will never know to what extent they molded that mind. And now I find myself here tonight, a veteran of many summers in radio, with many of my great childhood teachers gone. The old days are gone and will not return. But, like a life reborn, a new world opens for me-for today my son nears 19 and he, as a fine young athlete, dreams of high and unscalable green walls and pitches so fast and terrible and twisting that no catcher can hold them. also listens to the radio and watches the television and memorizes the great sports columnists and from them dreams his own magnificent visions and it is his mind that is now so much your responsibility. My days with him will soon be over, and I turn him over to you who will be the radio and tele-vision and journalistic leaders of tomorrow. Yours is an enormous challenge, and excitement beyond your own dreams, and might well smile in the anticipation of all of the wonderful days that are going to be. And it is to you, his associates and his teachers of tomorrow, that I commit one of my most priceless possessions—my son. Be

# Idaho Travel Promotion Program Wins Best-in-Nation Award

EXTENSION OF REMARKS OF

# HON. GEORGE HANSEN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. HANSEN of Idaho. Mr. Speaker, Idaho is a small State, but it is rich in natural resources-and it is rich in resourceful people.

Idaho, two-thirds of which is owned by government, must necessarily operate on a limited budget because the Congress, in its wisdom, has not seen fit to pass "payments-in-lieu-of-taxes" legis-What Idahoans can accomplish lation. on a limited budget is dramatically illustrated in the following press release which tells of a high award won by the Idaho Department of Commerce and Development.

I am proud of Idaho-I am proud of its commerce and development department-I am proud of Miss Shadduckand I am proud to be an Idahoan.

The release follows:

IDAHO TRAVEL PROMOTION PROGRAM WINS BEST-IN-NATION AWARD

For doing a big job with a little budget the Idaho Department of Commerce and De velopment has won the special award of merit for outstanding achievement in travel and tourist promotion. Presentation of the award was a highlight of a ceremony in Dallas on November 14 at the 25th annual U.S. Travel Conference of the National Association of Travel Organizations and was received by Louise Shadduck, head of the winning Idaho department.

Officially stated, the award was made "to the Idaho Department of Commerce and Development for its promotional efforts in the State's sharpshooting tradition, to make a little budget do a big job, mutliplying its tourist income fourfold in 10 years by careful, selective planning."

In evaluating Idaho's qualifications, the awards committee considering that the Idaho department avoids being overwhelmed by the advantages of its many supersized competitors in the tourist and travel fields, gaining objectives which can be won sensibly with the means at its disposal.

Giving credit to a staff that is always willing to make extra efforts to gain added results for Idaho's taxpayers and to the thousands of Idahoans whose devotion and support have made the overall success possible. Miss Shadduck said: "Idaho is an excellent product to sell and we stick to that purpose. We avoid using material which can be mistaken for anything but Idaho."

### NECESSITY RECOMES AN ADVANTAGE

'Our staff consists of only 10 persons. we make the personal touch an ideal. We have to make it work. Rotating jobs and assignments, covering several bases, is a must for our staff and I certainly am happy that their work has gained national recognition. Their record deserves it. All share in meeting the public and in guiding visiting travel editors and television and movie production staffs who so often work in our State.

"Further, our advantage in having Idaho to sell is enhanced by the cooperation we get from Idaho's people (the Basque Dancers are

a good example) clubs, organizations, and individuals have helped make Idaho more famous coast to coast and from small affairs to the world fairs. It was just this cooperation too, that tilted the balance in bringing Idaho the National Girl Scout Senior Roundup and the Boy Scout World Jamboree, two outstanding national and international recognitions right in succession."

#### Coast Guard Rescue Activities in 1965

EXTENSION OF REMARKS

#### HON, WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. ST. ONGE. Mr. Speaker, the press recently carried reports of the Coast Guard's rescue activities during the year 1965, including the fact that more than 15,000 persons had been rescued in various operations in all parts of the country. Although we are aware of these operations of the Coast Guard, it is well worth recalling them, emphasizing the heroic deeds of the men in the service, and expressing our appreciation to them.

I am pleased to insert into the RECORD two articles published in the New York Times and the New London (Conn.) Day dealing with this subject, as well as an editorial in the Day commenting on the Coast Guard's activities.

[From the New York Times, Jan. 3, 1966] COAST GUARD SAVED 15,000 DURING 1965

The Coast Guard has just closed the books on 1965, which, according to Adm. Edwin J. Roland, commandant, turned out to be one of the biggest lifesaving years in the service's 175-year history.

Outstanding in the service's far-flung activities which ranged from Saigon to Shreveport and from the Kara Sea to Cuba. last year, he said, were these accomplish-

The rescue of more than 15,000 persons.

The saving of close to \$1.9-billion in property, or more than four times the Coast Guard's annual appropriation.

FOCUS ON THE SOUTH

The launching of the 378-foot cutter Hamilton, the first of a new "Secretary" class of vessels, a high-endurance cutter with many advanced features.

The southern part of the United States and its offshore waters became the service's most active sector as a result of the Ouban exodue, Hurricane Betsy, and the springtime Mississippi floods, Admiral Roland noted.

Beginning in September hundreds of small craft, most of them unsuited to operate in the treacherous Florida Straits, began making their way between the U.S. mainland and the Cuban fishing port of Camaricas to transport Cuban emigrants to this country.

Working around the clock the Coast Guard aided about 3,000 persons in an operation reminiscent of the "matchbox fleet" which plucked nearly 1,700 Allied soldiers out of the English Channel during the Normandy invasion in World War II.

t

WIDE BANGE OF TALKS

When Hurricane Betsy slammed into Louistans, 11 Coast Guard helicopters were called upon to evaculate 1,144 persons. Small boats and vehicles evacuated 3,600 more hurricane victims and transported about 100 tons of food, water, and medical supplies.

At its New Orleans supply depot the Coast Guard helped to bring more than 8,000 persons from flooded areas to high ground.

In the spring about 800 rescues took place on the rain-swollen Mississippi River. In one case Coast Guardsmen herded bufalo to safety, and in another, helped parents salvage their children's Easter baskets. The Coast Guard icebreaker Northwind.

The Coast Guard icebreaker Northwind, Admiral Roland said, conducted a 5-month study of the little-known Kara and Barents Seas north of Russia.

For the first time, he added, scientists had an opportunity to secure important data on the nature, structure, and history of this remote part of the world.

As for new floating equipment to be added to the service's aging fleet, the year saw the launchings of one 210-foot medium-endurance cutter, three new 157-foot buoy tenders and the 378-foot Hamilton.

On the other side of the world, in war-torn Vietnam, the 17 Coast Guard patrol bdets were used to help choke off the flow of supplies by water from North Vietnam to Vietcons units in the south.

Admiral Roland said the boats gave a good account of themselves in action against the enemy, sinking several Vietcong junks and supporting ground action by South Vietnam and U.S. troops.

[From the New London (Conn.) Day, Jan. 4, 1966]

MORE THAN 15,000 PERSONS RESCUED BY COAST GUARD DURING BUSY 1965

The Coast Guard in 1965 saved or rescued more than 15,000 persons, Adm. Edwin J. Roland, commandant, said today.

The value of property saved was nearly \$1.9 billion, or more than four times the Coast Guard's appropriation for the year, Roland added.

Contributing to the high total were the Cuban small boat exodus, Hurricane Betsy and the spring Mississippi floods, Roland said.

In the fall of 1965, Coast Guard air and surface units patrolling the Stratts of Florida were confronted with a major emergency created by a heavy small boat exodus from Cuba which began shortly after Cuban Premier Fidel Castro announced a relaxation of his policy on migration from Cuba.

of his policy on migration from Cuba. Hundreds of small craft of all types undertook the hazardous journey from the U.S. mainland to the small Cuban fishing port of Camarioca to pick up relatives. Most of them were unsuited to operation in the treacherous Florida Straits. Coast Guard aircraft, in cooperation with surface units, kept close watch over these waters, alert for any emergency. The Coast Guard assisted about 3,000 per-

The Coast Guard assisted about 3,000 persons in an operation reminiscent of the "matchbox feet" which pulled nearly 1,700 allied soldiers out of the English Channel during the Normandy invasion of World War III.

Coast Guard rescue facilities were put to a stern test in September, when Hurricane Betsy stammed viciously into the southeast, centering her fury upon the New Orleans area.

By the time the storm had spent itself, 11 helicopters had evacuated 1,144 persons, trafsported 22 medicos and flown 140 sorties. They were assisted by units of the Navy, National Guard, Red Cross and local groups.

About 800 rescues took place during the disastrous floods in the spring of 1965 when the swollen Mississippi and its tributaries

rampaged over the adjacent countryside, causing havoc in America's heartland.

Coast Guard helicopters and small boats labored tirelessly to bring stranded men, women, and children to safety. In one instance, Coast Guardsmen herded buffalo to safety, evacuated flood victims, transported workers, medicine, and food and helped parents salvage their children's Easter basket.

The Coast Guard, through its AMVER program, saved additional scores of persons have year. Utilizing this computerized search at rescue operation, centered in New York City, assistance was brought to many distressed ships and persons. In the summer, AMVER was extended to the Pacific Ocean area. Headquarters for the western phase of AMVER are in San Francisco, Calif.

In Vietnam, 17 of the Coast Guard's 82foot patrol boats were on duty helping to choke off the flow of supplies by water from North Vietnam to Vietcong units in the south. They have a good account of themselves in action against the enemy, sinking several Vietcong junks and supporting ground action by South Vietnamese and U.S. troops.

As part of its expanding oceanographic program, the Cutter Northwind carried out a 5-month study of the little known Kara and Barents Seas north of the Soviet Union. The cutter carried marine scientists of the Coast Guard's Oceanographic Unit in Washington.

Under an agreement between the Navy and Treasury Department, five Navy icebreakers will be transferred to the Coast Guard. Effect of the transfer will be to make the Coast Guard, the chief icebreaking agency for the Government.

The agreement will be carried out over a 16-month period, having begun with the transfer of Edisto in October and to conclude with the transfer of the Navy icebreaker Burton Island in November.

Plans to modernize the surface fleet went ahead with the launching of the 210-foot medium endurance cutter Active, three new 157-foot buoy tenders, Red Wood, Red Birch, and Red Beech. In December, the Coast Guard launched its first new "Secretary" class cutter, the 378-foot Hamilton, a high-endurance cutter, incorporating many advanced features.

[From the New London (Conn.) Day, Jan. 4, 1966]

THE COAST GUARD'S YEAR

The drams in the race last week when Coast Guard vessels from New London and Fishers Island engaged in a 7-hour operation after a 50-foot ketch foundered only underscores the remarkable record this rescue service compiled last year.

More than 15,000 persons were aided by the Coast Guard in 1965, figures compiled by Adm. Edwin J. Roland, commandant, show. They were seafarers trapped aboard disabled vessels, occupants of pleasure craft in trouble, men, women and children menaced by floods in the Midwest and violent storms on the Gulf of Mexico and Atlantic Ocean.

But this is only part of the story. Coast Guardsmen are committed to war service off Vietnam and performed their missions with quiet valor. They saved an estimated \$1.9 billion worth of property—more than 4 times the Coast Guard's annual appropriation.

billion worth of property—more than 4 times the Coast Guard's annual appropriation.

A little known aspect of the Coast Guard's worldwide job was the 5-month oceanographic study of the Kara and Barents Seas, north of Russia. Remote, possibly dangerous, these areas needed to be plumbed, their

ous, these areas needed to be plumbed, their characteristics made known.

And then there are the less picturesque assignments, part of the unremitting program to foster greater safety on the sea. Coast Guard "detectives" investigate accidents to find out what can be done to prevent them. Coast Guard "teachers," including

members of the volunteer auxiliary, instruct small boat owners and inspect their craft and their safety equipment.

Semper Paratus is the Coast Guard's motto—always ready. To which might be added, anywhere.

Remarks of Charles S. Murphy, Chairman of the Civil Aeronautics Board, at the Airline Finance and Accounting Conference of the Air Transport Association, Miami Beach, Fla., November 4, 1965

EXTENSION OF REMARKS

OF

# HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. FASCELL. Mr. Speaker, in a speech recently at the Airline Finance and Accounting Conference of the Air Transport Association held in Miami Beach, Fla., the Honorable Charles S. Murphy, Chairman of the Civil Aeronautics Board, discussed his economic and sociological philosophy as well as the CAB's attitude toward airline earnings and passenger fares.

The CAB is charged with the responsibility of encouraging development of air transportation and regulating the industry and today the airline industry in the United States is unparalleled in terms of service to the public at the most economical cost. Also, the industry is prospering and thriving with profits at an allitime high.

Since air transportation is and will continue to be increasingly more vital to urban areas like Greater Miami and our entire Nation, Chairman Murphy's remarks are timely and significant. I am confident that all my colleagues are deeply interested in knowing the background and personal philosophy of the distinguished Chairman of the Civil Aeronautics Board, as well as learning about the Board's opinions, as it affects the public service and this important industry:

In the fall of 1937, President Franklin Roosevelt established an interdepartmental committee to develop comprehensive zero-nautical legislation for him to recommend to the Congress. The chairman of the interdepartmental committee was the then Assistant Secretary of Commerce. J. Monroe Johnson.

The White House invited Senator Renneth McKellar, of Tennessee, the chairman of the Senate Committee on Fost Office and Civil Service, to send a representative as an observer to the Interdepartmental committee. Senator McKellar asked me to act as his representative for this purpose, and I did. At that time, I was a legislative draftsman in the office of the Senate legislative counsel.

the office of the Senate legislative counsel.

The interdepartmental committee did develop a legislative proposal, which was recommended to the Congress early the following year and led to enactment of the Civil Aeronautics Act of 1936. In the Senate, there were two bills. One introduced by Senator Harry Truman, which was the administration bill, was referred to the Committee on Inter-State Commerce. The other introduced by Senator Pat McCarran, was referred to the Committee on Commerce. Both these bills were reported by their respective committees.

Eventually, the Senate considered and passed the McCarran bill.

In the House of Representatives, the administration bill was introduced by Congressman Clarence Lea, of California, chairman of the House Committee on Interstate and Foreign Commerce, and was referred to that committee. This bill was reported by the committee and passed by the House. The final product, the Civil Aeronautics Act of 1938, was worked out by a conference committee as a compromise between the Senate and House base.

As a legislative draftsman, I had the privilege of working with both Senste committees, with the House committee, and with the conference committee on this legislation. I was a member of a kind of staff team of six or eight people, including two brilliant young lawyers from the Treasury Department, who represented the administration—Stuart Tipton and George Neal. The group included another brilliant young lawyer who represented the Air Transport Association—Howard Westwood. I think Howard is writing a book about this and doing some research. I speak only from memory, but these are among the memories I prize very highly.

I think all of us who had any part in drafting that act, even a part as small as mine, can be proud of what we did. It has stood the test of time and experience. Most of its provisions have been carried forward into the Federal Aviation Act of 1958. The economic provisions of the 1958 act are virtually unchanged today.

Under this law, the industry has thrived and prospered. I won't burden you with the statistics about its growth—you know them better than I. Suffice it to say that this act, and the industry operating under the act, have been phenomenally successful in accomplishing the act's stated objective of encouraging the development of air transportation.

I would characterize the economic system the act prescribes as regulated private enterprise. Some may refer to it as Federal encroachment, which they deplore and would terminate—but at different stages. Some would deregulate the industry entirely—with freedom from regulation being matched by freedom of entry. They would scrap the present system of regulation altogether, in the belief that it does not serve the public interest well. I do not agree. I believe the law has worked too well to warrant casting it saide.

Others who decry Federal encroachment may have a different meaning. I suspect they might like to continue restrictions on entry into air transportation and have the diregulation apply only with respect to the way business is conducted by those who already have their certificates of public convenience and necessity. Frankly, I do not believe this is a viable economic or social proposition. If the Government limits competition in the industry by restricting freedom of entry, it has an inescapable obligation to the public to replace by regulation the protection it has taken away by limiting competition. I don't see how anyone could really believe you should have the one without the other.

Let me hasten to add that within this framework, I believe the degree of regulation should be held to the minimum that is necessary, and the area of freedom of action for private enterprise should be as large as possible. I abhor the ides of regulation for regulation's sake; I detest redtaps; I chafe under restrictions; and I like to get along with people. On the other hand, when and where I believe regulatory action is really required in the public interest, I will consider that I have no alternative except to support the necessary action.

I say these things because I have noticed lately a certain amount of interest in my economic and sociological philosophy and

I wish to be as helpful as I can in telling people what to expect.

Really, I'm something of a Pollyanna about all this. I believe that you and we working together can achieve the best of all worlds for everyone in the field of air transportation. In the long run, there is no conflict between the maximum public benefits and the maximum private benefits from the future growth and development of this industry. The industry can prosper most by providing the greatest possible public service.

I'm happy to say that I believe this philosophy of public service is held by the management of most of our air carriers. This is one of the most heartening things I have found in my work as Chairman of the Civil Aeronautice Board. Some afrine executives are quite frank in avowing their dedication to the public interest. Others seem a little reluctant to acknowledge that a hard-headed businessman might harbor such thoughts. Perhaps a few really put the almighty dollar ahead of everything else—but, thank goodness, they are only a few.

Even the airline executives who agree with our basic philosophy about public service and industry regulation will disagree with us from time to time about the application of that philosophy to particular circumstances. That is perfectly natural, entirely proper, and certainly to be expected. You have your responsibilities and we have ours. If the civil Aeronautics Board agreed with you all the time, there would really be no reason for the existence of the Civil Aeronautics Board at all. Although, we find it necessary to disagree from time to time, I will accord to all of you, in the absence of compelling evidence to the contrary, full credit for honesty of purpose. I hope you will find it possible to do the same for me.

Twenty-seven years ago, when I was working on the Civil Aeronautics Act, I had little thought that I would end up here tonight talking to you as Chairman of the Civil Aeronautics Board. It is, if you will permit me to say so a factinating experience.

me to say so, a fascinating experience. It happens that I came to this position at a time when the industry is in a very good condition. This is most fortunate, and I'm very happy about it. However, the industry's prosperity has made it necessary for the CAB to take a fresh look at some of its responsibilities. This is not because the CAB objects to profits; in fact, we are in favor of profits. Good earnings are better than poor earnings, and I see no reason why we should ever try to reduce earnings just for the sake of reducing them.

Such talk obscures the real issues. The real issues grow out of the fact that the law imposes on the CAB a duty, in fixing rates, to consider the need of the public for transportation at the lowest cost consistent with furnishing the service. To deal intelligently with these issues you must sooner or later get right down to arithmetic. But first we might try to provide a little policy back-

I have been asked many times in the past few months about the Board's attitude toward airline earnings and passenger fares. I always respond to this by saying what I'm going to say to you now. The best guide I know to the Board's attitude is to read what the Board has said in its opinions. This surprises some people and annoys others, and I doubt if very many ever actually go and read the Board's opinions. It's more sophisticated to get a line on the Board's thinking from almost any other source than what the Board itself says. Nevertheless, I stick to my story that the best way to learn the Board's views is to read what the Board says. My own statements here or clsewhere do not necessarily represent the views of the Board. I'm only one of fire Members and the others are not bound by what I say.

So, I'm now going to read to you some from the Board's opinions.

A landmark in the field of fare regulation is the Board's opinion in the general pas senger fare investigation, decided November 25, 1960 (32 CAB 291). In that case, the Board did not order any changes in fares, but it did establish some standards as guidelines for the regulation of fares.

First, the Board said the industry profit element should be regulated by the test of rate of return on investment. Then it found fair and reasonable rates of return to be: 10.25 percent for the big four domestic trunk carriers; 11.125 percent for the other do-mestic trunks; resulting in a weighted average for the domestic trunkline industry of 10.5 percent.

Then the Board spoke of something which seems to me to be forgotten all too often in discussions of rate regulation; namely, the requirements of the law itself, as follows: the Board is under statutory injunction in determining rates to consider such factors as: (1) the need in the public interest of adequate and efficient transportation of persons and property by air carriers at the lowest cost consistent with the furnishing of such service; (2) the promotion of adequate, economical, and efficient service by air carriers at reasonable charges; and (3) the need of each air carrier for revenue sufficient to enable such air carrier, under honest, economical, and efficient management, to provide adequate and efficient air carrier service (p. 321).

I think you might study that language with some care. Some people may feel that Congress put too much emphasis on the need of the public for air transportation at the lowest cost consistent with the furnishing of the service, too much emphasis on the reason ableness of the charges, and not enough em-phasis on the need of the carriers for a healthy profit. But for my part, unless and until the Congress changes the law, I expect to try to follow it the way it's written.

I would like to move on now to some other questions which seem to be of considerable current interest—the length of the period to be taken into account in determining the reasonableness of earnings and the application of the rate of return standard to particular sets of circumstances. Here I will quote again from the Board's 1960 opinion:

'(a) No party has suggested that we atto regulate fares so as to produce a particular rate of return for every 12-month period. It is manifest that in an industry in which costs and revenue factors tend to fluctuate and are difficult to forecast precisely for any short-term period, any attempt to maintain a constant rate of return would be futile. There is thus general agreement among the parties that the fare levels must be regulated to produce a reasonable return over an extended period of time.

This is not to say that short-term considerations need always be ignored. \* \* \* the extent to which short-term factors would be influential in affecting the fare level must depend on the length of time those factors are expected to remain operative and the magnitude of their impact on the carriers'

operating results.

From the foregoing it is apparent that the problem of determining when and for what periods fare adjustments should be what perious law adjustments another made cannot be rejeated for solution to any mechanical device. \* \* the determination of when to permit fare adjustments and the length of the future period which should be considered in making these adjustments can be resolved only on a case-by-case basis applying informed judgment to the task of balancing the relevant factors (p. 328).

I don't see how I could improve on that statement, so I'll move along to events sub-sequent to the 1960 opinions. For the next 4 years, the industry's profits were so low the 10.5 percent standard was academic. But in 1964 there was a sharp turn for the better. and in 1965 the rate of return on investment rose above 10.5 percent. It is worth noting that earnings did not just slowly creep up to

the 10.5-percent level and barely edge over. When they reached this level, they were rising rapidly and the trend is still strongly

The Board was called on to deal with this situation in July in disposing of certain fare increases that had been proposed in connection with an improvement in the free

baggage allowance.

In suspending the proposed increases in fares, the Board in an order dated July 27, 1965, stated some views with respect to the relationships between carrier earnings and the regulation of fares. In this statement, the Board made a particular effort to state its views as precisely as it could. The lan-guage it used then is still the best guide I know as to the Board's current views. Accordingly, I would suggest that interested persons who have not read the order itself might wish to do so, and I shall impose on you now by reading a part of it which I regard as particularly significant:

Fortunately, the earnings of the carriers are good enough to permit them to inaugurate improvements in service even when accompanied by the loss of some revenue. the general passenger fare investigation (docket No. 8008), 32 CAB 291 (decided November 25, 1960), the Board found that a weighted average return for the domestic trunkline carriers of 10.5 percent on invested capital is fair and reasonable. This rate of return has been reached in the 12 months ended March 31, 1965, and reports of current earnings show that the trend continues strongly upward. While the Board recognizes 'fare levels must be regulated to produce a reasonable return over an exte period of time, 32 CAB 291, 328, it is never-theless difficult to find justification for fare increases at a time when current earnings have reached a fair and reasonable level and are still climbing. The Board does conclude, therefore, that the fare increases herein proposed by the trunk carriers should be investigated and suspended.

"On the contrary, the Board believes that the present favorable earnings position of the carriers offers an excellent opportunity for the carriers themselves to consider reductions in fares, or improvements in service without fare increases, with a view to broadening and strengthening the economic base of the industry and improving service to the public. It would be very desirable for the carriers themselves to take the initia-

tive in this kind of activity.

I call your attention to four points about the langu age of this order:

1. The Board referred with apparent approval to the 10.5-percent rate of return tandard from the earlier 1960 opinion.

2. The Board again expressly recognised that fare levels must be regulated to produce sonable rate of return over an ex period of time.

3. The Board emphasized the desirability of tariff changes of a promotional nature that would build additional traffic.

4. The Board indicated a preference for ductions in fares and service improvements initiated by the carriers themselve

Just to keep the record straight, I suppose I should say the Board might someday feel that the industry has matured and stabilized enough to warrant reexamination of the 10.5percent standard. But I know of no cur thought or plans to do so.

I will say to you quite candidly, if I can have my first choice, I would like to see two things happen concurrently: One, reductions in passenger fares, and, two, continued in-creases in air carrier profits. Before you say I'm crasy, you'd better look at the record. Some weeks ago an airline executive whom

I greatly respect and admire gave me a paper which pointed out that airlines have made many voluntary reductions in their charges. and that in the past 2 years: "long haul first-class fares have been out 10 percent; mili-tary furlough fares have been cut 50 per-cent; family plan fares for a coach group of

three have been cut 33½ percent; excess baggage charges have been cut 30 percent; freight yields have been cut 3 to 5 percent; all rates have been cut 8 percent."

Now, let's see what happened to earnings and profits during these same 2 years: In the year ending June 30, 1964, the net

profits after taxes and special items for the domestic trunk carriers was 180 percent higher than the preceding year.

In the year ending June 30, 1965, it was 211 percent higher than in the year ending June 30, 1964, rising from \$57.7 to \$179.7 million.

example—transatlantic Take

Effective April 1, 1964, the largest and broadest fare reductions in the history of North Atlantic air transportation were put into effect. The annual reduction in fare has been estimated to approximate \$50 million. The net result has been a gratifying growth in volume of passengers, a virtually unprecedented improvement in passenger load factor and for most American and foreign carriers a major improvement in operating profits.

I will readily concede that these examples do not establish the proposition that any and all fare reductions result in increased profits. On the other hand, I think you must con-On the other hand, I think you must con-cede they do establish the proposition that the two things can exist amultaneously. This suggests the area where we should be working together to achieve the best possible

results for both the traveling public and the airlines. Our relationships should be straight-forward, candid, and, I would hope, friendly. Each of us should recognize that the other has a somewhat different set of responsibilities—and should respect the po-sition of the other in trying to meet those responsibilities.

We should get to work doing a great deal of arithmetic together to see where our dif-ferences in judgment really lie when we have the facts sorted out as best we possibly can. I think we might discover at that stage that our differences in judgment are suprisingly small.

For the present, I will leave this with the simple statement that in my judgment reductions in passenger fares are not neces-

arily synonymous with reduced profits.

I have been told that this particular group of airline executives includes those whose special responsibilities include worrying about where to get the money to make the payments on that 48 billion plus of flight the payments on that \$4 billion plus of night equipment you have on order. I suggest that one possibility you might examine is ways and means to fill up some more of those empty seats in the planes you fig. I think it likely some of the things you have done already—such as the family-fare plan and the stand-by fare for servicemen—have had already—such as the family-fare plan and the stand-by fare for servicemen—have had and are having just this kind of effect, for the benefit of everyone. Incidentally, I hope that with your help we can improve our techniques for evaluating the effect of changes in fares and particularly specific promotional fares.

In any event, I hope you will not have too much trouble finding the money to make the payments on those new alrerst, and I wish for you and your carriers much prosperity.

#### Old "Red Mike" Quill

EXTENSION OF REMARKS

#### HON. EDWARD J. DERWINSKI OF BLIMOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. DERWINSKI. Mr. Speaker, we are all relieved that the New York trans-

portation strike has finally been settled. However, the economic tragedy that struck the people of New York City will have repercussions for years.

The Suburban Eagle, an outstanding independent publication serving a number of communities in southern Cook County, Ill., carried a strong and pertinent editorial on this strike last week which merits review.

#### OLD "RED MIKE" QUILL

The international president of the transport workers union of New York City, Michael J. Quill is one of the last of the old-time labor leaders.

Quill's actions is a clear indication that "Old Red Mike" as Quill was called in the 1990's because of Communist association has no regard for the millions of poor people which depend upon New York's transportation system.

His act of publicly tearing up the courts injunctions against the strikes, based on the common law and New York's Condon Wadlin Act which forbid strikes by public employees: is one of utter contempt.

The statement Red Mike gave the New York newspaper in reference to Justice Abraham N. Geller's ruling on the antistrike injunction, "I will not call off the strike and the judge can drop dead in his black robes," is a very clear indication of the respect Red Mike has for the American way.

Mike has for the American way.

The "big stick" Mike Quill is swinging might well be the stick that will nail himself to the wall.

The question has arisen as to the reason for Mike's action, can the strike be the backlash of Lindsay being elected as mayor?

lash of Lindauy being elected as mayor?
Is this the "in crowd" way of getting even with the citizens of New York for breaking the political machine?

Whatever the reasons we must keep in mind the bargaining rights that are rightfully due labor unions are not being denied the transportation union of New York.

The only rights that are being denied are those of the poor citizens who depend upon New York's vast network of transportation to provide them the service that they so desperately need to get to and from work.

#### Sylvia Porter on the War on Poverty

EXTENSION OF REMARKS

# HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. MOORHEAD. Mr. Speaker, the sometimes deafening and ofttimes politically inspired chorus of criticism of the war on poverty has, in many instances, obscured the genuine progress that has been made in fighting this great national problem. It seems to me that one of the major lessons we must learn from this first year of the war on poverty is that we must be patient. We must not expect the millenium overnight. In support I cite a column by the distinguished financial writer Sylvia Porter, as published in the Washington Star, December 12, 1965.

I would call your attention, particularly, to her comment that "we have started a tough war which will be often frustrating and which will take at least a generation to win."

Under leave to extend my remarks I include Miss Porter's column at this point in the RECORD:

YOUR MONEY'S WORTH: FIGURES TELL OF POVERTY WAR

(By Sylvia Porter)

In the 12 months since the first Federal antipoverty grant was made under the Economic Opportunity Act, more than \$1.1 billion has been spent to fight poverty the Nation over.

Yet, welfare rolls and doles have climbed. Teenage unemployment remains at more than 18 percent. There are still 11 million poor adult illiterates. Some 750,000 high school students will have dropped out in 1965. At the same time there has been a mounting chorus of criticism about political sleight of hand with Federal antipoverty funds, lack of participation by the poor, Job Corps brawls.

Under the circumstances, a poverty progress report is distinctly in order. Exactly what has \$1.1 billion bought to date? How many of the Nation's 34 million poor citizens have been helped, and how many unemployed actually have received training, acquired vocational skills, learned to read and wartie?

Here is a head count:

 Nine hundred thousand needy individuals in 600 communities have been directly helped under local community action programs, through schooling, legal assistance, child care, health improvement measures.

 Five hundred and sixty thousand preschool children have completed summer courses to help bring them up to the academic-physical-social levels of their fellow students in kindergarten and first grade this fall.

3. Four hundred thousand high school dropouts or would-be dropouts have worked or are now working at full- or part-time jobs under the Neighborhood Youth Corps to acquire work experience and funds to stay in school or return to school.

 One hundred and seventy-five thousand college students have worked or are now working at full- or part-time jobs to help finance their education.

finance their education.

5. One hundred thousand hard-core unemployed adults—most of them on welfare—have been taught the elementary work habits essential for jobs.

habits essential for jobs.
6. Forty thousand illiterate adults have received instruction to bring them up to the eighth-grade level of schooling.

7. Sixteen thousand rural citizens have received loans for improving their farms or homes or for setting up small businesses. 8. Fitteen thousand disadvantaged high

 Fitteen thousand disadvantaged high school dropouts are now enrolled in 74 Job Corps centers to acquire education and vocational training for jobs.

This adds up to about 2.2 million individuals who have been helped directly through the Federal antipoverty program in its first year. In addition, statisticians at the Office of Economic Opportunity estimate another 2 million have been helped indirectly—such as the unemployed mother who can take a paying job because her child is being cared for in a day care center, the rural family whose breadwinner receives a small business loan. Still more thousands have been helped by VISTA—Volunteers in Service to America.

By the end of this year, the total number of individuals reached directly or indirectly by the antipoverty war is expected to be about 6 million—about 1 in 6 of the estimated poor.

Of course, the statistics aren't the whole picture. There are also intangible "pluees" that cannot be measured: The North Carolina 16-month-old baby who was recently fed her first solid food, the Oregon teenager "retardate" who, after an intensive 8-week tutoring course, turned out to have excep-

tional ability in mathematics. There is the nationwide awakening to the problem in a period of great prosperity—illustrated by the unprecedented numbers of serious volunteers who have enlisted in the war.

Most intangible plus of all, and yet profoundly significant, is our realization that no amount of money can solve the poverty problem in even 5 or 10 years—much less 12 months. Our experience has emphasized that we have started a tough war which will be often frustrating and which will take at least a generation to win.

#### A Tired American Speaks Out

EXTENSION OF REMARKS

#### HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1966

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I include an editorial by Alan McIntosh, which appeared in the Rock County Herald, Luverne, Minn., recently.

verne, Minn., recently.
The editorial, reprinted in the December 24 edition of the Buffalo
Evening News, Buffalo, N.Y., follows:

#### A TIRED AMERICAN. SPEAKS OUT

The following editorial by Alan McIntosh, which recently appeared in the Rock County Herald, Luverne, Minn., reflects the feelings that many—and perhaps most—Americans have about current conditions and attitudes:

"I am a tired American. I am tired of being called the ugly American. I'm tired of having the world panhandlers use my country as a whipping boy 365 days a year.

"I am a tired American—weary of having American embassies and information centers stoned, burned, and sacked by mobs operating under orders from dictators who preach peace and breed conflict.

"I am a tired American—weary of being lectured by General de Gaulle (who never won a battle) who poses as a second Jehovah in righteousness and wisdom.

"I am a tired American—weary of Nasser and all the other blood-sucking leeches who bleed Uncle Sam white and kick him on the shins and yank his beard if the flow falters.

"I am a tired American—weary of the beatniks who say they should have the right to determine what laws of the land they are willing to obey.

"I am a tired American—fed up with the mobs of scabby faced, long-haired youths and short-haired girls who claim they represent the 'new wave' of America and who sneer at the old-fashioned virtues of honesty, integrity, and morality on which America grew to greatness.

"I am a tired American—weary unto death of having my tax dollars go to dictators who play both sides against the middle with threats of what will happen if we cut off the golden stream of dollars.

"I am a tired American—who is tired of supporting families who haven't known any other source of income other than Government relief checks for three generation.

"I am a tired American—who is getting madder by the minute at the filth peddlers who have launched Americans in an obscenity race—who try to folst on us the belief that filth is an integral part of culture—in the arts, the movies, literature, the stage.

"I am a tired American—weary of the bearded bums who tramp the picket lines and the sit-ins—who prefer Chinese communism to capitalism—who see no evil in Castro, but sneer at President Johnson as a threat to peace.

"I am a tired American—who has lost all patience with the civil rights group which is showing propaganda movies on college campuses from coast to coast. Movies denouncing the United States. Movies made in Communist China.

"I am a tired American—sickened by the slack-jawed bigots who wrap themselves in bedsheets in the dead of night and roam the countryside looking for innocent victims.

"I am a tired American who dislikes clergymen who have made a career out of integration causes, yet send their children to private schools.

"I am a tired American—who resents those who try to peddle the belief in schools and colleges that capitalism is a dirty word and that free enterprise and private initiative are only synonyms for greed.

"They say they hate capitalism, but they are always right at the head of the line demanding their share of the American way of life

"I am a tired American—real tired of those who are trying to sell me the belief that America is not the greatest nation in all the world—a generous-hearted nation—a nation dedicated to the policy of trying to help the have note achieve some of the good things that our system of free enterprise brought about.

"I am an American who gets a lump in his throat when he hears the 'Star-Spangled Banner' and who holds back tears when he hears those chilling high notes of the brassy trumpets when Old Glory reaches the top of the flagpole.

"I am a tired American who thanks a merciful Lord that he was so lucky to be born an American citizen—a nation under God, truly, with mercy and justice for all."

#### State of the Union Address

SPEECH

# HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. ST. ONGE. Mr. Speaker, President Johnson's state of the Union address last night was a most sobering experience not only for all of us in Congress, but also for the Nation as a whole. It was a serious report to the American people, and to the world at large, on the problems confronting us at home and abroad in the trying days and months ahead.

The President minced no words. He described the situation in the world today as he sees it from his vantage point of leadership. As a capable leader of his Nation and one of the outstanding leaders of the world, he prescribed a program of constructive recommendations which should go far in coping with many of the problems facing us. I feel certain the Congress and the American people will uphold the President in most or all of his recommendations.

I believe that most of the President's proposals are in the best interests of America because their aim is to provide greater strength and security for our country, continued economic prosperity

for our people, and peace for a troubled world which is hungry for peace.

On the whole, it was a momentous address, earnest in tone, impressive in its presentation. I found the President's confidence in the strength of America most reassuring in these crucial days in world history.

#### Al Kealoha Perry: His Music Means Hawaii to Millions

EXTENSION OF REMARKS

# HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. MATSUNAGA. Mr. Speaker, Hawaii has in the last century gone through a metamorphosis from a romantic string of islands in the Pacific to one of America's most powerful bastions of defense. The islands have been able to retain their glamor and charm largely because of individuals who have devoted their lifetime to the perpetuation of old Hawaiian customs and music.

One of the most successful perpetuators of island music is Al Kealoha Perry, who for 30 years has been heard on the Hawaii Calls radio program. Mr. Perry, or "Al," as he prefers to be called, says that his "one aim as a musical leader has been to get the people of the world to enjoy our island songs and chants." He has, of course, been eminently successful in achieving his aim. Hawaiian music, wherever it is heard, evokes a nostalgic and romantic response.

Born of a Hawaiian mother, Emily Kanekoleakawahinekapuomua Kekuewa, and an English father, M. Hazard Perry, who came from Springfield, Ill. Al has had little difficulty in impressing his audiences with his sincerity. A glimpse into Al's boyhood, as revealed to Mr. Charles Ware, of the Honolulu Advertiser, convinces us that his island flavor is genuine and sincere. Al relates how, as a boy of 12, he used to sing "Pua Carnation" accompanied on the piano by Queen Liliuokalani, the last Hawaiian monarch.

A grateful Hawaii has showered many honors on him, not the least of which were two resolutions of congratulations by the Hawaii State Legislature. After recovering from a recent illness, Al is now looking forward to the production of Hawaii Calls as a television show. In true Al Perry tradition, he says:

The thing I want is to see that it keeps the same flavor it always has had. That's what is important to me.

And I concur with Mr. Ware's statement:

That's what is important to Hawaii, too.

Mr. Ware's interesting article on Hawaii's own Al Keoloha Perry, which appeared in the Sunday Star-Bulletin and Advertiser of January 2, 1966, follows:

[From the Star-Bulletin & Advertiser, Jan. 2, 1966]

AL KEALOHA PERRY: HIS MUSIC MEANS HAWAII TO MILLIONS

(By Charles A. Ware)

Al Kealoha Perry, whose rich baritone has been the image of Hawaii to millions of listeners over the last 30 years, didn't start out to be a musician at all.

He was an engineer first. And actually it was engineering that set him on the trail that led finally to his long-time post as musical director of the Hawaii Calls broadcast.

But first of all he is an islander of half-Hawaiian, half-English ancestry completely devoted to the special spirit and the special feeling of island music.

"My one aim as a musical leader has been to get the people of the world to enjoy our island songs and chants," Perry said. "To accomplish this, you have to win the admiration of the people of the islands, as well as that of the Hawaiian entertainer, no matter where he might be.

"To do this, your soul must be in it, Your

audience senses the sincerity."

That sincerity could be heard as clearly as the beat of the pahu drum in the nearly 1,500 Hawaii Calls broadcasts for which Perry directed the music from 1936 until he was stricken by a heart attack in September 1964.

Now well recovered, Perry paid his first visit to the breadcast as a guest 2 weeks ago. No one had forgotten. The audience that filled the Banyan Court of the Moana Hotel gave him a rousing ovation.

Last week, Perry sat relaxed on the lanal of his second-floor apartment overlooking the placid carp pond of the famous Willows restaurant, managed by his wife, Eathleen. Clad in dark slacks and an open-neck sport

Clad in dark slacks and an open-neck sport shirt, he talked quietly of the incidents in his long career. Later, he slipped into a conservative jacket before walking downstairs to the restaurant for a cocktail and lunch.

DAYS AT AWING

Perry was born February 2, 1901, in Kohala, on the big island, and his boyhood was at Awini, high in the Kohala Mountains.

His father was M. Hazard Perry, who came from Springfield, Ill., where he had known Lincoln by sight. He had served as a lieutenant in the Union Army during the Civil War and then migrated to the islands.

Perry does not know what brought his father here. "So far as I know, he just got on a boat and came," he said. But during Perry's boyhood, he was manager of the Kohala Ditch Co., which supplies water to the sugar plantation along the coast of the North Kohala district.

Perry's mother was the former Emily Kanekoleakawahinekapuomus Kekuewa. She was from the village of Haena on the Kohala coast, between Upolu and Mahukona.

You can reach it today by jeep, over a rough road across private ranch lands, Perry said. The stone walls of old cance shelters still stand, and he has located the foundation stones of the grass house where his mother lived as a girl.

The Hawaii that Perry knew in his boyhood is a far cry from Waikiki. It is a land of dark, forbidding cliffs and lush green forests, of frequent rains and, he recalls, of occasional hallstorms.

It's a mysterious land, cut by deep gorges where the sun penetrates only at midday, and where the clouds and fog swirl in from the sea in the early afternoon.

To glimpse it, you must journey to the northern point of the big island and drive past Hawl and the Kohala Courthouse to the end of the road, where an observation area looks out over Pololu Valley.

Across the valley, the black lava cliff rises sheer, and a faint zigzag line can be traced across its face. That is the trail to Awini.

And this is the trail that Perry remembers walking many times as a boy to get the mall at Poloiu Landing or with the men who were to carry back supplies. "Look," he said, pointing to bulging calves. "That trail gave me tremendous legs. They were like this even when I was a kid. And when I got into the Army, I thought the training hikes were nothing."

In the cold, damp climate of the Perry's mountain home, the kitchen was the center of family life. As youngsters, Al and his brothers and sisters played there often, or sat and watched the cooking.

And they heard their mother singing the

old songs.

"I didn't know I was learning." Perry said.
"But years later, when I needed them, the songs were there."

Al first went to school in Kohala in a privately supported one-room school. Then, when he was about 12, he was sent to Honoluiu to enter Iolani School.

It then was located on Beretania Street, next to St. Andrew's Cathedral, and its grounds adjoined those of Washington Place, which still was the home of Queen Liliuokalani.

He was a boarding student, and there were times after class when he slipped over the fence to gather coconuts. He was fascinated, too, to hear the former ruler playing the plane and ultimately she noticed her young admirer.

"One of the songs I knew as a kid was 'Pua Carnation,' " Perry said. "It was one of her favorites, and I used to sing it for her."

While he was a student at Iolani, he went to Sunday school at St. Andrew's, and he sang in the choir for services of the Hawalian Congregation. Later he was a member of the choir at Hawaliahao Church.

When he was 16, Perry took his first job, as machinist's apprentice for Catton, Neill & Co., which later was to be absorbed in Honolulu Iron Works.

Rowing was a popular sport of the day, and he joined the old Myrtle Boat Club, one of those which competed regularly in the Regatta Day races in Honolulu Harbor. He also tried to join the Canadian Army to fight in World War I, but was rejected because of his youth.

Finally, when he was 17 and America was at war, he was accepted by the U.S. Army, and served with it in France. He was wounded at Chateau Thierry, and besides the Furple Heart he holds a Battle Service Medal with five bars.

But it was the influenza epidemic of 1918 that felled him at the end of the war, giving him the greatest fright of his musical career. He was in the hospital on the first Armistice Day, and for a month he lost his voice completely.

It was May of 1919 by the time he got back to Honolulu and returned to work at Catton, Neill & Co.

And it was about the same time he met Kathleen McGuire. Both remember the occasion well. It was a dance of the Myrtle Boat Club, and Al—still in uniform—was taking tickets at the door.

They were introduced, and later he saked her to dance. "He stopped all over my feet," Kathleen sald, and Al replied, "Yes, but you liked it."

They were married in 1920, and have one son, Grandison (Grandy). He now assists his mother in management of the Willows.

On the job, after he returned from the war, Ferry worked as a draftsman. At the same time, he began studying by correspondence, taking courses in engineering and business administration from LaSaile Extension University, Alexander Hamilton Institute, and International Correspondence Schools.

He worked for a time as draftsman for Architect Guy Rothwell and then, in 1925,

joined the city and county building department as a project director.

From 1933 to 1935, he worked at Pearl

From 1933 to 1935, he worked at Pearl Harbor as a construction inspector, then returning to the city until after the time of the Pearl Harbor attack.

He was one of a group of musicians who played and sang at campaign rallies for Mayor Fred Wright. After the mayor established the Honolulu Hale Glee Club, Perry became its director in 1935.

He had been a member of the Aloha Temple's Shrine Chanters since 1929, while the group was under the leadership of Charles E. King.

It was from the city hall group that Perry selected the six members of his original Singing Surfriders. In 1936, that group replaced the Harry Owens orchestra as the regular musicians on the "Hawati Calls" broadcasts which had been originated about a year earlier by Webley Edwards.

In those days, the show went to the mainland directly by radio, and when 2 o'clock came, it was on the air. As the hour approached, the tension was far greater than in the later era of magnetic tape and delayed broadcasts, Perry recalled.

There were occasional moments of crisis, but always "Hawaii Calls" went to the networks on schedule, week after week and year after year.

There were changes, gradually, in the personnel of the Singing Surfriders and the Walkith Maids who joined them. Ferry and Edwards became the musical godfathers of whole generations of the islands' best-known entertainers.

But always, Perry insisted upon finished musical performance and adherence to the spirit of the old Hawaiian songs, even though there might be new songs and new arrangements.

After the United States was plunged into World War II, "there wasn't much left to do in the engineer's office at city hall," Perry said, and he soon went back to Pearl Harbor as an engineer in the 14th Naval District public works office.

He was assigned as engineer for projects on the big island. It was as result as one of those jobs that he received a citation in 1944 from the Secretary of the Navy for work "above and beyond the call of duty."

That was for the speedy construction of a rest camp in the Kamuela area for combat personnel returning from the western Pacific.

"One of the first things I had to have was a water supply," Perry said, "and to find it I walked along the whole length of the old Honokoa ditch.

"I found it was leaking all along the way. I don't think that more than 50 percent of the water was getting to the plantation lands. So I went to the manager of Honokoa Plantation, which controls the ditch, and I told him that if he would give us the water the Navy would repair all the leaks.

"We would have the water we needed for the camp, and when the war was over he would have the full supply from the ditch. But he turned me down.

#### INSTANT WATER

"I had to have water and I didn't have much time. So we went back up and we tapped the leaks. We got buildozers and other heavy equipment up into those nills and we used gunnite to concrete over the heads of two ravines," Perry said.

"We worked around the clock, with big floodlights at night. In a couple of weeks we had two reservoirs, one holding about 11 million gallons of water and the other about 9 million."

The Navy citation is only one in a series of honors that have come to Perry over the

In 1950, the chamber of commerce chose him as one of its men of the week, and in

1957 the chamber's retail board named him father of the year in the field of entertainment. The Navy Public Works Office in 1961 selected him as its candidate for the civil servant of the year.

Twice, in 1960 and last year, the Hawaii Legislature has adopted formal resolutions congratulating him for his long and valued association with "Hawaii Calls." The most recent Senate resolution, adopted during his illness, declared that the association should continue.

And it has

He is listed on the program as musical director, though since his illness last year his assistant, Benny Kalama, has carried on the duties. "He's done a grand job," Perry said.

The day before Perry went back to visit the broadcast, the "Hawaii Calls" entertain-

ers held a luncheon for him.

They presented him with a monkeypod cribbage board inscribed "To Our Boss." He's missed, they told him, and "they asked me to go on working for them."

Slimmed down by 70 pounds from the weight that used to inspire on-the-air quips about "you'll see two people when he turns around," Perry is feeling "just real good" these days.

He is happly with plans for the production of "Hawaii Calis" as a television show. "It is something that we all worked toward for a long, long time. The thing I want is to see that it keeps the same flavor it always has had," Ferry said. "That's what is important to me."

That's what is important to Hawaii, too.
That, and that other island musical institution, Al Kealoha Perry.

#### Man of the South for 1965

EXTENSION OF REMARKS

# HON. JAMES A. MACKAY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. MACKAY. Mr. Speaker, former Senator Harry F. Byrd, Sr., has been named the "Man of the South" for 1965 by Dixie Business magazine.

I believe the following news release concerning the distinguished Senator will be of interest to my colleagues as well as to my constituents in Georgia's Fourth District, home of Dixie Business magazine and editor, Hubert F. Lee.

MAN OF THE SOUTH

Former Senator Harry F. Byrd, Sr., who retired November 11, 1965, from the U.S. Senate after 50 years of distinguished public service, was today named the "Man of the South" for 1965 by Dixle Business magazine. He is the 20th to be honored since 1946.

Hubert F. Lee, for 36 years editor of Dixle Business, and that Senator Byrd was named from an honor group limited to 200 living leaders termed the South's "Hall of Fame for the Living." The group includes Winthrop Rockefeller, of Little Rock, Ark.; Daniel J. Haughton, Alabama-born president of Lockheed Aircraft Corp., Burbank, Calif; Virginia-born Owen R. Cheatham, Georgia-Pacific Corp., New York; and former Congressman Carl Vinson.

Senator Byrd is an eighth generation of the Byrds of Virginia and on June 14, 1964, was awarded the Magna Carta Day Award by the Baronial Order of Magna Carta, a patriotic organization of descendants of the sureties chosen at the time of the promulgation of the famous Magna Carta by the English barons at Runnymede on June 14, 1215.

A 33d-degree Mason, Byrd in 1963 was presented the Grand Master's Award by the Grand Master of Masons of the District of Columbia. Editor Lee is a 32d-degree Mason and a Shriner.

On May 15, 1965, the third annual "New Market Medal" was presented to Senator Byrd on the 101st anniversary of New Market Day

by Virginia Military Institute.

At the age of 15, Senator Byrd talked his father into letting him run the Winchester Star (Winchester, Va.) which he built into a valuable newspaper property. His son, HARRY F. BYRD, JR., who succeeded him as U.S. Senator, is editor of the Winchester Star and president of the Harrisonburg News-

Senator Byrd, Sr., is the world's largest applegrower and an outstanding business

Senator Byrd was named to the vacancy on the honor group caused by his death of his late brother, Adm. Richard Byrd, who was honored in 1953.

The late Bernard M. Baruch, who was the "Man of the South" for 1964, on June 11, 1958, nominated Senator Byrd, when the Senator planned to retire from the U.S. Senate.

In the 1965 advisory poli conducted by Lee for 20 years, the chairman of United Press International, Frank H. Bartholomew, wrote: "I think Harry F. Byrd, Sr. qualified in every way to be named 'Man of the South.'" Lee was manager and staff correspondent of the United Press Atlanta bureau in 1924 and 1925, before leaving to become advertising manager of the Anderson (S.C.) Independent in 1925.

Cranston Williams, retired executive vice president of the American Newspaper Publishers Association, now living in Lynchburg, Va., wrote: "I am delighted that Harry F. Byrd, Sr. has been suggested. My ballot shows that he is my first and only choice for this year. He is conspicuous, out standing example of a man serving his country in the face of pressures which other peo-ple do not seem to be able to withstand."

Sam Latimer, Jr., columnist and retired editor of the State, Columbia, S.C., morning newspaper, write: "I think Senator Byrd is fine. Don't get discouraged about your work. It is a nice thing that you do and appreciated. Sometimes when we do these civic chores, we wonder. So I know how you feel. But keep up your work \* \* \*.

Remmie Arnold, past imperial potentate of the Shrine and for 50 years a leading pen manufacturer at Petersburg, Va., wrote, "I am delighted to find Senator Byrd eligible. Yes, I approve. I think it is wonderful for you to do this."

Former Governor and Congressman Colgate Darden, Jr., another of the honor group of 200: "I approve."

Lee said that former U.S. Senator Harry P. Byrd, Sr. would be recorded by history as t man even if he had confined his great vitality and business leadership to any one of the fields he has excelled in—statesmanship-publishing-world's greatest apple-

Louis B. Seltzer Writes "30"

EXTENSION OF REMARKS

# HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mrs. BOLTON. Mr. Speaker, Louis B. Seltzer, editor of the Cleveland Press,

recently announced his retirement. In his 50 years of service with this Scripps-Howard Newspaper, including 371/2 years as editor, Mr. Seltzer has developed a proud national reputation not only as a journalist but in the fields of positive civic action and service to his fellow man.

His role has been varied; reformer, watchdog, press agent, friend of all the people. In his own words, he has walked with the people in their hours both of problems and happiness." has shared their dreams, their frustrations, their triumphs, and their notdisappointments. Under infrequent Louis Seltzer's leadership, the Press quickly won an international reputation for courageous crusading and fearless It also added a new dimension-public service. Mr. Seltzer has headed numerous local organizationsthe Welfare Federation, Cleveland Convention and Visitors Bureau, Greater Cleveland Safety Council, among others-and on the national scene he is a member of the Pulitzer Prize Advisory Board and a founder of the American Press Institute.

One of his most prized possessions is the Brotherhood Award given him in 1951 by the National Conference of Christians and Jews in appreciation of his long labor in that vineyard.

My reaction to the announcement of his retirement was that the Press without Louis Seltzer would be difficult to imagine and it will be. The paper will miss him and so will his thousands of readers. But if anyone ever earned a change, it is Louis Seltzer.

Of course, his retirement as editor does not mean he has nothing more to say. He will continue to write articles from time to time as well as a book which he has had in mind for some time. Few have so much to say in so many fields as Louis Seltzer; few have the gift of expression that he has. On the occasion of his retirement I express the hope that he be blessed with good health and the keen enthusiasm one associates with him. I find myself among those who will watch eagerly for his next venture.

As part of my remarks, I include the following articles from the Cleveland Press, "L.B.S. Writes '30,' " and "L.B.S. Welcomes His Successor":

L.B.S. WRITES "30"

Another name replaces mine at the top of this page with Monday's issue. It will read, "Thomas Boardman, Editor."

It will be the first change of name in that spot in nearly 38 years.

The man who relinquishes the title of editor assumed it when he was 30. He is now approaching 69. For a half century he has worked exclusively for this newspaper, lived for it, fought for it, dreamed for it.

He had help. He had the best group of men and women throughout that period any editor in America could conceivably wish or have. They made the Cleveland Press. They helped make it one of what Time ma not long ago listed as among the 10 best newspapers in America.

With Tom Boardman, one of the ablest journalists in America, on the bridge of this journalistic ship, it will sail on to greater glory and schievement. Of that I am sure. He will make Greater Cleveland proud of him. He will make the Press proud of him. He will make the men and women of the Press proud of him.

As I take my leave of the newspaper which

has been my sole professional life for 50 years I set aside one title and assume another. I will be proud to wear for the rest of my

life the simple title of "Citizen of Greater

For that is what I intend to be, to live to be at the side of Marion's and my family, to work for it, dream for it, and ever-lastingly fight for it. This is a great city. It will be greater than ever in the future. It is on the way. It needs all the help and inspira-tion all of us can give it—our sweat and sinew, our dreams and hard work, our faith and our greatest hopes

Marion in her gentle way used to say she didn't know which came first in my life, the paper, the city or herself. She said that but she knew which came first. No one ever doubted that. But the other two, the city and the paper, were so inextricably inter-mingled I never knew for sure which was

And now that someone else will guide the paper's destiny I will devote my effort and my love for it to my home community—the community in which I was born as a child in a struggling family, and which endowed me with those qualities, such as they were, that enabled me to stand up in the race of life these many years

Some men and women at the Press at whose side I worked through the years are still here. Many more have gone. Some are editors of other newspapers and magazines. Others are in different professions and busi-The Press alumni are scattered all over America. I am proud of them.

I am most proud of those who are still They have been the stalwarts. They have given of themselves as much or more to this paper than have I. They have al-

ways been at my side.

ways ocen at my suce.

From the Scripps-Howard newspapers, of
which the Cleveland Press was the first, and
which today is preeminently the foremost
newspaper group in America, I have had throughout the almost 38 years as editor the utmost support, cooperation, understanding, and latitude in adapting it to the especially sensitive requirements of this vast and wonderful community. At no time have I ever been inhibited or circumscribed in the use of whatever judgment or enterprise was needed for doing that which was either essential, desirable or called for.

For the past 15 years I have had the blessing of one of America's ablest newspaper business managers in George E. Carter, whose candid, searching, cooperative qualities have strengthened and buoyed me immeasurably. He has stood solidly at my side.

One other was at my side. She is no longer here, and yet she is—ever present, stimu-lating, inspiring and beckening me on, and on, and on, always as she did. I look up to her today as I always did—and always will. For her I thank God. For the opportunity

to be editor of this newspaper through so many of its exciting and significant years I am thankful. For the privilege now of serving my city as a citizen in any way shape or form I may, I will also be grateful.
I write the traditional "30" to

to a career in journalism. I will now write the book I have been requested to write—and bend my back and put my muscles and sinew to the community's plow to help furrow its future. LOUIS B. SELTER

#### L.B.S. WELCOMES HIS SUCESSOR

Tom Boardman is coming back home—to his very first newspaper home and love. This, the Cleveland Press, is where he started his journalistic career right off the campus of nearby Oberlin

It was here in 1939 that Tom, by steady, persistent and exceptional ability, started the series of upward moves from one posi-tion of responsibility to another, eventually becoming this paper's chief editorial writer— and, as such, its principal policy maker.

Except for a few years away in World War

of the Navy's youngest and most courageous officers, he was continuously at The Fress until 3 years ago when he was appointed editor of the Indianapolis Times.

To Torr Boardman, the man who takes the place I have held for nearly 38 years, I can and do pay the highest compliment: I say that Tom is the logical and natural

I say that Tom is the logical and natural choice to edit this newspaper. His assumption of this great responsibility brings a sense of comfort to me both for the paper, for its staff and for my home community in the future.

## Consolidated Edison Indian Point Plant

EXTENSION OF REMARKS

# HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. CELLER. Mr. Speaker, we, the citizens of New York, must welcome the announcement that the Consolidated Edison Co. plans to quadruple the capacity of its Indian Point nuclear generating plant in Westchester County. Indian Point is the company's second largest producer of electricity, surpassed only by its plant in Ravenswood in Queens County. The latter station is conventional, using coal and/or fuel oil. New York City, which must always be supplied with power—inordinate power—will have adequate electrical power with the enlarged nuclear capacity at Indian Point.

Thus, Consolidated Edison acknowledges public responsibility.

Nuclear generation of power has become competitive with other fuels in cost. But the real advantage of nuclear power is the absence of damaging substances pumped into the air, causing pollution. With nuclear power there is no smoke nuisance. Coal burning on the other hand, produces air pollution. No matter how much you try to prevent such pollution with expensive apparatus, there is no appreciable abatement of the soot in the atmosphere.

More and more energy is being used for commercial, industrial, and residential purposes. Almost everything moves by electricity—even toothbrushes. The Consolidated Edison's facilities are taxed to the utmost to supply the demand of electricity and it is hard put to develop new sources of power.

Despite the opposition aroused, mert of it unrealistic and unnecessary, to building a nuclear plant in Ravenswood, Queens, I supported that effort in the interest of progress and an answer to the city's needs. There was no inherent danger as charged. Public anxiety, however, triumphed despite the safety assurances and that project was abandoned.

At the time of the hearing on the Queens Ravenswood proposed nuclear plant, there was an emotional appeal that the safety of the city would be endangered by a possible nuclear explosion. Appropriate scientific evidence was developed to prove the contrary. There are numerous cities harboring nuclear proj-

ects, with no apparent danger. The public must sooner or later realize that nuclear power must have widespread use. The removal of the poison from the air more than compensates for whatever increased cost there may be in the generation of nuclear power.

Eventually, I presume, the generation of nuclear power will become cheaper than any other source of power. When the Indian Point project is fully expanded, that station alone will provide electricity to satisfy the needs of 2½ million people. In addition, I understand that this company will add a 500,000, kilowatt generating unit to its Arthur Kill Station in Travis, Staten Island, at a cost of \$65 million.

This will be a conventional unit. It will be set up to meet the additional needs of the population of New York City.

In a subsequent statement, I will have something to say about the company's hydroelectric plant at Cornwall, N.Y.

These additional facilities are clear indications that this company does not wish to risk another blackout in New York City. There are certain purblind people who always wish to stand in the way of progress. They are so addicted to the old ways that they fear the new. They would "rather bear those ills we have than fly to others that we know not But the scientists know the effects of nuclear energy and they see no danger if there are proper safeguards. The future reservoir of almost all power will be nuclear and the present skeptics will have to realize this sooner or later. These are the same skeptics who, in the 15th century, warned Columbus not to set out on his voyage to India which finally led him to America. These are the same skeptics who, in 1888, said the Brooklyn Bridge would fall down. These are the same skeptics that denigrated Kittyhawk and flying machines and these are the same skeptics who scoff at our efforts to seek to reach the moon.

#### The Late Herbert C. Bonner

EXTENSION OF REMARKS

#### HON, WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. ST. ONGE. Mr. Speaker, I wish to join my colleagues in paying tribute to our late beloved chairman of the House Merchant Marine and Fisheries Committee, the Honorable Herbert C. Bonnier, whose death is a grevious loss to all of us.

I have had the honor and the privilege of working with him as a member of the committee which he so ably headed. I found him to be a man of deep understanding, a devoted public servant, and a capable leader. His guidance and counsel were always most helpful. He was particularly helpful to me in matters pertaining to the U.S. Coast Guard Academy and other Coast Guard installations located in my district in Connecticut.

During the quarter of a century of his service in the House of Representatives, HERBERT BONNER not only left his imprint on Congress and on many legislative acts, but he also left a host of friends and admirers who had the highest regard for him. We shall always remember him as a man of wisdom, patience, courtesy, and able leadership. His death is a deep loss to those of us who had the occasion to work with him more closely.

I extend to his widow and to other members of his family my deepest sympathy in this hour of their great bereave-

# Draft Card Burners Should Be Laughed At

EXTENSION OF REMARKS

# HON, JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. MACKIE. Mr. Speaker, shortly after the 1st session of Congress adjourned, the Lapeer County Press, of Lapeer, Mich., had an excellent editorial on draft card burners.

I think the editorial will be of interest to my colleagues and I include it in the Congressional Record:

DRAFT CARD BURNERS SHOULD BE LAUGHED AT We don't like them deducting money for social security from our paycheck. So we burned our social security card. That's a joke. These young nuts who are burning

Not funny, you say? That's the trouble. Too many people are taking a few jerks too seriously. The card burners and sign carriers are getting too much publicity. What they should get is horse laughs until they blush beneath their beards. Will Rogers should be alive to squeich these clowns with a few choice tibes.

After all, is there anything funnier than a kid protesting war by burning his draft card? After he is drafted—and he will be—he can get even with a tough sergeant by dressing a doil in khaki and sticking pins into it. If he doesn't like the chow, he can burn his meal ticket. And if he has a lousy time on a 3-day page, he can burn the page.

a 3-day pass, he can burn the pass.
In other words—so what? Who cares if a few nuts burn eards? They have a perfect right to register their protests. The thing to remember is they represent the timiest percentage of our youth. They are getting attention far out of proportion to their importance. Certainly selective service would be wrong to advance the induction dates of these malcontents. There are enough inequities in the draft system without using it as a form of punishment. Besides, all most of these young clowns need is a little time to grow up, so give them all they have coming.

If you persist in worrying about what's happening to our youth, maybe some words from Bill Beckman will make you feel better. A student at MSU, Bill is the son of William Beckman, 112 South Lapeer Road. Lamenting the publicity given "the scum of our fair campus," Bill wrote the Press:

"I am sending along a clipping from the State News (our campus newspaper), which tells of how 15,872 students and faculty members at Michigan State University signed a petition supporting the President's policy in Victory

"I'm proud to say my signature was among the 15,872. I'm certainly not a warmonger, and I'm well aware of all the pain and suffering going on in Vietnam. But we've committed our soldiers and our country to this policy, and right or wrong, moral or immoral, I feel that above everything else I'm an American.

"Of course this is only the opinion of one, but I'll bet I can find 15,871 individuals who will back me up. So the next time you read about some campus clowns protesting Vietnam, remember this letter and the 15,872 signatures of campus students and faculty protested." aupported instead

So don't fret. Laugh at them. That's what clowns are for.

# Jim McDonough of Hawaii Completes Outstanding Service to Teacher Group

EXTENSION OF REMARKS OF

# HON. SPARK M. MATSUNAGA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MATSUNAGA. Mr. Speaker, a lifetime of eventful and outstanding service in the field of education in Hawaii has been the contribution of James R. McDonough who, on January 15, 1966, will retire as executive secretary of the 7.000-member Hawaii Education Asso-

"Mac," as he is affectionately known to at least two generations of school teachers, some of whom are his former students, began his career as a school teacher in Honolulu some 40 years ago. He drew a monthly paycheck of \$90 in those days. The fact that a teacher in the same school today draws a monthly salary of about \$700 is an example of the many tasks which Mac brought to noteworthy fruition during the 24 years that he served with the Hawaii Education Association after leaving the classroom.

Combining unusual talents as a top educator, an able administrator, and a most persuasive lobbyist, Mac has not only been able to win handsome salary increases for Hawaii's school teachers, but he has also won for them unusual and unlikely privileges such as full political freedom outside the classroom.

Mr. Speaker, as the people of Hawaii join the teachers whom Jim McDonough erved so long and so well in bidding him aloha and Godspeed as he enters upon a period of well-earned rest, I commend for the reading of my colleagues in the Congress the following story on Mac which appeared in the January 6, 1966, issue of the Honolulu Advertiser:

McDonough Looks Back on Hard-Won VICTORIES

#### (By Charles Turner)

When James R. McDonough was a teacher at Washington Intermediate School 40 years ago, his monthly salary was \$90. A teacher at that same school now gets

about \$700 a month.

m

bo

.

r-be

it

to

g.

ds

t.

of

d.

of

he

ch

ty

ed CY about \$700 a month.

Credit for this almost eightfold increase in salary goes in large part to McDonough, 60, who is retiring January 15 after serving exactly 24 years as executive secretary with the 7,000-member Hawaii Education Associa-

There is a possibility the "hard-nosed

Irishman" may remain on the job on a month-to-month basis after January 15, because the HEA board of directors is having a hard time filling his shoes.

The board has received some 45 applica tions, including about half a dozen from the mainland, for the job. The salary is \$15,500 a year. However, it is believed the board will have to negotiate with McDonough's successions. sor for a salary in the \$15,000-\$20,000 range.
The big problem in filling the post is that

the new executive secretary must be:

A top educator.

A top administrator. An experienced lobbyist.

McDonough was all of these things for the HEA during its formative years and won re-peated renewals of his 4-year contracts for his success in achieving the teacher orga-

nis success in achieving the teacher orga-nisation's goals.

These goals were finally reached last year, when the legislature granted a 22-percent increase in teacher salaries and added two additional classes, recognizing educational preparation beyond the 5th year (master's

"We now rate among the top 10 in educa-tional systems of comparable size," Mc-

Donough said.

McDonough, who has been connected with local and State educational institutions throughout his career, was president of the old Territorial Education Association before becoming its executive secretary in 1942.

There were only two employees them—Mc-Donough and a secretary. The organization had only \$4,000 in assets. Today, it has nine employees and at lenst \$500,000 in

It owns the building it occupies on Kala-At owns the building it occupies on Kala-kaua Avenue, as well as an adjoining build-ing and the land the two structures occupy. Its membership now consists of 5,000 teachers in service and some 2,000 student teachers and retired teachers.

McDonough recalls that teachers had little or no political freedom when he came to aii. The HEA spearheaded a drive to lift e restrictions and won its first victory in 1951. The old Department of Public Instruction amended the school code in that year to permit teachers to serve as delegates political conventions.

However, it was not until 1956 that the DPI commissioners granted full political freedom outside of the classroom.

McDonough said legislatures in the past 10 years have been "far more enlightened toward education than the early ones.

"The caliber of the legislators is far supe rior to most States—and I've seen a lot of them," he said. "Ours are more inclined to be sympathetic to the needs of education. They are top professional people."
What about the caliber of today's teachers?

"Hawaii now has by far the highest qualified teachers of any State in the Union," McDonough said. "More than 80 percent have 5 or more years of college training.

said Hawaii's certification standards are higher than those of mainland jurisdictions and there is a low turnover of teachers—only about 4 percent a year compared with the mainland average of 8 to 10 percent.

McDonough was asked for his views on professional bargaining, or teacher negotiations, and said:

"Professional bargaining is coming, that is certain. There are now seven States where boards of education are required by statute to negotiate with teacher organizations representing the majority of the teachers."

"The HEA will continue to press for such recognition," he said.

McDonough was asked whether this might raise the threat of teacher strikes.
"Not at all," he said. "Rather, the advent

of professional bargaining would eliminate the probability of teacher strikes. "This association, as well as the National Education Association, has and always will be opposed to teacher strikes."

# Population Can Bury Us

EXTENSION OF REMARKS

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. RUMSFELD. Mr. Speaker, a major problem of increasing concern to the American people is population growth, not only in our country but throughout the world. This is a problem that must be faced forthrightly. It will require vigorous leadership if mass hunger, misery, and social unrest are to be avoided or at least not dramatically accelerated. The following editorial which appeared in the December 13, 1965, issue of the Chicago Daily News once again calls attention to the need for a prompt and positive effort to meet this problem

I have introduced House Joint Resolution 742, one of several resolutions now pending before the House Committee on Agriculture, to establish a U.S. World Food Study and Coordinating Commission to undertake a comprehensive study of all-aspects of the present and projected world food and population situation in an effort to determine the U.S. potential for contributing to the solution of world food and population problems. I urge that prompt consideration be given to this proposal.

The Chicago Daily News editorial fol-

#### POPULATION CAN BURY US

The famine threatening to engulf India, poignant as it is in terms of individual suffering, is only the immediately visible part of the massive iceberg of human want. George Weller, writing from Rome in the Daily News series on world famine, cites a recent study showing the 3 million children die each year from protein-calorie malnutri-tion. Untold millions who survive are stunted and maimed.

In an earlier article in the series, James McCartney, of our Washington bureau, reported that the presumably bottomless reservoir of U.S. food surpluses, which have sustained hundreds of millions of the world's people in recent years, are dwindling toward minimum emergency needs. It was pleasminimum emergency needs. It was pleas-ant to think of an America so prodigiously productive that it could, if necessary, sustain a good part of the world. But the world has been changing, swiftly and ominously. Each day the world gains 192,000 people,

and has that many more mouths to feed. Most of these are born into lands already barely able, or unable, to support the people already there. That is one reason, for example, that Charles H. Percy could bring back such a discouraging report from South America: Chile gross national product in-creased 1.5 percent last year; its population increased 2.5 percent; thus, its standard of living suffered a measurable drop.

But Chile's plight is mild compared even with that of the less fortunate Latin American countries, let alone India, China, and the struggling little have-not nations of Africa. There the produce of primitive and inefficient farming methods falls further and inefficient farming methods fails further and further behind the need, and the world be-comes steadily less able to make up the lack. The fact that in some areas more and more people enjoy steadily higher living standards fails by a long shot to offset the fact that tens of millions are becoming steadily hungrier in the underdeveloped areas.

J

the efforts—in some cases monumental—to rev up the economic machinery of the underdeveloped lands are being largely nullified by the increasing hordes of new mouths to feed.

Mass starvation is never a mere local program. The agonies of hungry masses translate into desperate outthrusts for succor. An India unable to feed its people is a prime candidate for a Communist takeover. A China pressed by starving millions becomes a China reaching ruthlessly beyond its borders for the wherewithal to care for its own. There can be no such thing as a little island of plenty surviving indefinitely in a sea of want.

And the emergency is now. "There may still be a chance to avert a Malthuslan disaster," writes J. George Harrar, president of the Bockefeller Foundation. "The auguries are not all unfavorable when viewed in terms of contemporary potentials for achievements. If the world's leaders in government, religion, education, and science become convinced of the need for action, agree upon appropriate methods, and take responsibility for the wide dissemination of information, as well as for the organization of of positive effort, then there is still hope."

Warning, however, that "whatever is done must be begun soon," he adds: "At best, the apparently unequal race between human procreation and food production can be won only after an immense and prolonged struggle, during which man will be evermore precariously crowding the margin of safety.

Harrar says that science can not only determine and control an acceptable rate of population; it can enable man to "double or treble current annual world food supplies."

There are important beginnings in both directions. American agricultural methods have been introduced with impressive results in many of the world's nations, including the Soviet Union and India.

India has, moreover, launched a widespread, intensive, and continuing program of disseminating birth control information as a governmental project. And last week the Roman Catholic Church, while failing to produce a fresh doctrine, acknowledged once more that population control is a valid and pressing subject for concern and continued its study looking toward a revised doctrine.

These are small steps, but world opinion is massive and budges with glacial slowness. The hope is that mankind can presently lift its gaze high enough above its political and ideological skirmishes to see the tidal wave that threatens to make all lesser concerns academic.

# The 1,000th Anniversary of Christianity in Poland

EXTENSION OF REMARKS

# HON, RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. McCARTHY. Mr. Speaker, this year marks the 1,000th anniversary of Christianity in Poland. In recognition of this fact, the Roman Catholic Diocese of Buffalo, N.Y., invited Vice President Humphrey to speak at a civic banquet held on January 8, 1966, to begin this year of celebration. My wife, Gail, and I were privileged to accompany Vice President and Mrs. Humphrey to Buffalo

to join with Polish-Americans and non-Polish Americans alike in celebration of this memorable event.

Cold weather greeted us as we stepped out of the vice-presidential plane. But the enthusiasm and warmth of the several hundred people who waited in the cold for the Humphrey's arrival, more than made up for it.

The Vice President was first saluted with an old Polish custom of friendship—an offering of homemade bread and salt. This gesture set the theme for his entire visit, since it was soon obvious that he had conquered the heart of all Buffalo. A holiday atmosphere prevailed as the Vice President wound his way through the streets of East Buffalo on his way to the Statler Hilton Hotel.

Nuns, priests, children, and people of every description stood for hours in the 11° weather in anticipation of the Humphrey motorcade and burst into excitement as his car drove by.

As we entered the hotel, we were greeted by a band of small boys dressed in royal blue tuxedos, playing a gay polka. The St. Stanislaus Boys' Choir enthusiastically sang "This is my Country" and a bouncy original tune called "HI Humphreys."

The banquet began with a beautiful rendition of the national anthems of the United States and Poland, sung by Dr. Helen Sikorski.

The invocation was intoned by the Most Reverend Thaddeus F. Zielinski, D.D., bishop of the Buffalo-Pittsburgh Diocese of the Polish National Catholic Church. The opening remarks were then given by the Honorable Matthew J. Jasen, justice of the New York State supreme court. Frank A. Sedita, mayor of Buffalo gave the welcome and greetings were extended by the Most Reverend Stanislaus J. Brzana, D.D., auxiliary to the bishop of Buffalo and general chairman of the Diocesan Millennium Committee

We were subsequently entertained by the outstanding Paderewski Choir of Buffalo, directed by Michael Slominski. Remarks were then made by the Moet Reverend James A. McNulty, D.D., bishop of Buffalo and the Vice President was wittily introduced by Henry J. Osinski, lay chairman of the celebration.

Mr. Speaker, I would like to mention the names of the hosts and co-hosts of the millennium, since they were instrumental in making it the success that it was:

HOSTS

General chairman: Most Rev. Stanislaus J. Brzana, D.D., auxiliary bishop of Buffalo.

Honorary chairmen: Most Rev. Pius A. Benincasa, D.D., auxiliary bishop of Buffalo; Rt. Rev. Msgr. Peter J. Adamski, P.A.; Mr. John F. Aszkler, K.S.G.; Dr. Stephen A. Graczyk, K.S.G.

Vice chairmen: Very Rev. Msgr. William L. Wozniak; Rev. Joseph J. Stel-mach.

Lay chairman: Mr. Henry J. Osinski. Vice lay chairmen: Mr. Walter J. Urbanski, Miss Virginia E. Malecki.

Executive secretary: Very Rev. Magr. Chester A. Meloch.

Secretary: Rev. Philip A. Jarmack.

Cohosts: Hon. Joseph P. Kuszynski, chairman; Mrs. Hedwig W. Tomasik, vice chairman; Mr. Andrew Ciolek, ticket chairman; Mr. Walter Lohr, reception chairman; Rev. Alan A. Zielinski, Rev. Stanley J. Ogorzaly, Mrs. Walter Lohr, Mr. Anthony Keller, Mayor Thaddeus Orzech, Dr. Richard Nowak, Dr. Helen Sikorski, Mr. Anthony A. Majka, Dr. Eugenia Bukowski, Mr. Matthew Czeladzinski, Mr. Casimir Lotarski, Mr. Matthew W. Pelczynski, Mr. Thaddeus Sielski, Mr. Adam J. Pilarz, Miss Eileen Tomaka, Mr. Edward Kazmierczak, Jr., Mr. Anthony Nitkowski.

This is a memorable year for those of Polish descent and in recognition of the importance this year holds for your fellow Polish Americans, I will on Monday next, introduce a bill authorizing the Post Office to issue a commemorative stamp in honor of the Polish millennium.

In conclusion, Mr. Speaker, I would like to include an editorial from the Buffalo Courier Express, which is a good description of the significance this year has for all of us.

The editorial follows:

POLISH ANNIVERSARY DAY'S SIGNIFICANCE

This day promises to be a memorable one in local history, particularly for people of Poliah descent, for it will focus civic attention on this year's celebration of a great anniversary for Poland. Hubbert H. Hubbert H. Yice President of the United States, is here on a visit to participate in the ceremonies. Mayor Sedita has designated this Saturdays "The Millenium of Christianity of the Polish People Day." In presenting the proclamation to the Most Reverend Stanislaus J. Brzana, auxiliary bishop of the Buffalo Catholic Diocese and general chairman of the diocesan committee on the 1,000th anniversary of Polish Christianity, Mayor Sedita took official cognizance of Vice President Humphery's visit as "giving nationwide recognition to our citizens."

There are about 40 million Catholics of Pollah descent living the world over and many thousands in this preponderantly Catholic area. Their enthusiastic celebration of the Pollah people's millenium is not seif-giorification but a radiant reflection of the idealism of their cheriahed faith. They commemorate an historic miracle, the reorientation of a land once languishing in the darkness of idolatry to the light of the saving cross. The millenium marks Poland's adherence to Catholicism through 10 centuries—over half the length of the church's establishment on earth.

The 1,000th anniversary commemorates the Catholic baptism of Miessko, a member of Poland's first historical dynasty, whose acceptance of Catholicism signaled the entry of the entire diocesan committee on the 1,000th Polish people into the church. Their unanimity of faith made for a polarisation of Christian belief that has contributed to the spread of Christian civilization well over the globe.

Poland's special loyalty to the blessed mother of Christ has fortified it for years with indomitable resistance to the tyranny of communism in a way to compel the admiration of the world. As it has held fast to the faith, it has served as an exemplar to all nations to uphold Christian belief against infidel aggression. Thus the millenium of the Polish people holds significance for everyone who believes in the dignity of the human spirit and in its aspiration to freedom under God.

# Weather Modification Research

EXTENSION OF REMARKS

# HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MATHIAS. Mr. Speaker, the effects of weather modification activities continue to concern many citizens, including those in western Maryland. At a meeting which I sponsored in Hagerstown last November 11, Dr. F. W. Reichelderfer, retired Chief of the Weather Bureau, discussed the current status of the science with a group of interested citizens. After reviewing the growth of weather modification research since 1946. Dr. Reichelderfer listed the many climatic factors which have not been analyzed with precision, and concluded that current weather modification activities still involve many uncertainties.

One hindrance to progress is a lack of full information about all weather-modifying activities conducted in this country by public and private authorities and individuals. I have introduced a bill which would require reports to the Commerce Department from all persons engaging in such activities, and hope the Congress will consider the Mathias bill during this session. The establishment of a central registry of information has already been endorsed in a Weather Bureau report.

The need for a full review of American weather modification research grows more pressing every day, as more and more activities and experiments are being undertaken. In an article in the Baltimore Sun of December 31, 1965, Ralph H. Keenan summarized the many types of study now underway, and the many large questions which remain to be approached. He concluded:

Once man learns how to predict next month's weather with accuracy, then he can say something intelligent about weather con-trol. That means man has a long way to go.

Mr. Kennan's interesting article fol-

lows: THE PIPEDREAM OF CLIMATE CONTROL (By Ralph H. Kennan)

Man may be able to change the course of hurricanes or destroy tornadoes within the

next decade or so, but large-scale climate control is strictly science fiction.

Dr. J. Murray Mitchell, Jr., project scientist with the Weather Bureau's climate change project, feels that the experts have a lot to learn before they can even theorise properly on ways to control the earth's cli-

Dr. Mitchell notes that limited climate control is already in being and much of it by accident. Large cities, such as Baltimore, already warm their summers ever so slightly just by being built up and spread over a large Swamp draining has changed local weather conditions in some areas just a bit, from facand the output of carbon dioxidetories, engines, and other forms of combus-tion—has increased and has produced a measurable warming in the atmosphere.

The carbon dioxide accumulates in the atmosphere and serves as a sort of celestial greenhouse, but scientists estimate the atmosphere's carbon dioxide content has been

increased only 10 percent in the last century.

Research is being done on ways to change the course of hurricanes such as the one which struck the southeastern United States recently and did extensive damage to New Orleans. But controlling such a storm is still a long way off.

Experimental techniques are under study that may lead to destroying tornadoes, but once one tornado is knocked out, another is created by the force that the first one left behind.

Dr. Mitchell feels that cloud seeding has been greatly overrated in the last several years and suggests that some of the claims made about its rain-producing possibilities are unfounded. He notes that mountain clouds can be seeded to produce precipitation but that other clouds, especially those over the Great Plains, are not responsive to seeding

to any appreciable extent.

The basis for thinking about large-scale climate control is readjusting the circulation of wind and weather over a hemisphere. Pre-vailing winds are a result of temperature differences in various zones of latitude. Theoretically, these winds could be rerouted either by adding heat or taking it away. But the earth receives energyfrom the sun at the rate of several hundred thousand super-sized hydrogen bombs every day of the year, man would have to find additional energy sources to work any appreciable effect on the wind direction.

The Russians have proposed setting up a giant mirror in space to reflect the sun's energy onto the dark side of the earth as one way to adjust the climate. They have also proposed pumping warm water from the Pacific Ocean into the Bering Sea to melt the ice cap at the North Pole. And there are suggestions that nuclear energy could be used to heat sections of the ocean in an effort to

modify climate on a grand scale.

Dr. Mitchell sets these proposals saids as ridiculous, calling them science fiction in terms of what man is either able to do or what he knows about weather as a basis for anticipating the effect of such undertakings even if they were possible.

If man wanted to change ocean currents—using nuclear bombs to change the floor of the ocean-he might possibly be able to reroute the gulf stream or modify the Japane current. Either might have beneficial effects on North America, or either might not. simply does not know enough about thes things to predict with accuracy what really would happen or what sort of chain-reaction climate change he might bring about. Man also might wind up with an ocean with a high radioactive content that would be anything but beneficial.

There have been suggestions that nuclear energy might be used to blow dust into the atmosphere the way volcanic eruptions do. This dust serves in some ways like an um-brella for a while, producing a cooling effect. But because the dust would swing around the earth for several years before dissipating, it would be virtually impossible either to esti-mate the effect of the cooling or really to asemble the necessary nuclear energy in one

Other proposals have called for melting the polar ice cap as a way to warm the earth's the point ice cap as a way to warm the earth's weather. Dr. Mitchell points out that scientific estimates call for the use of 30 million 10-megaton hydrogen bombs to melt the Greenland ice cap alone, an energy requirement that puts that idea in the science fic-

Melting the polar cap by spreading it with dark-colored material like coal dust has also been proposed, the idea being that the darker color of the cap would cause the sun to melt it eventually. Dr. Mitchell suggests that even if this would do the job, the material needed would add up to 1 billion tons of coal just to produce a cover one-fiftieth of an inch

thick. The United States produces that

much coal in about 2 years.

Some still insist that man's nuclear testing has done things to the world's weather, but Dr. Mitchell points out that no nuclear bomb made has enough force to bring such a change about. While there are fluctuations in weather and climate, they cannot be attributed to the bomb-testing program.

He notes that the total energy of all nuclear bombs fired off so far by the United States and the Soviet Union amounts to the energy received by the earth as sunlight every 20 seconds. A similar amount of energy is added as solar heat to the world's atmosphere every 2½ hours just to maintain the world's wind circulation against loss by friction. Fourteen hundred times as much energy could theoretically raise the world's temperature momentarily by 1 degree, which would then be lost within a few hours.

Dr. Mitchell notes that the average hurricane during its lifetime—10 days to 2 weeks—expends energy roughly equivalent to 500 of the largest nuclear bombs yet developed. Scientists estimate that this energy is about the same as would be provided by off 21/2 Nagasaki-type bombs every second of the storm's life.

In passing, Dr. Mitchell adds that since the test ban has been in effect, there has been a slight cooling trend evident world-wide, but he ascribes this to coincidence and insists he is not entirely sure whether the trend should be called a trend. He'd rather call it a fluctuation.

He suggests that climate control on a small scale will be feasible to some extent in terms of irrigation, swamp drainage or more sophisticated procedures as yet far from perfected as changing the course of hurricances away from populated areas.

But large-scale climate control is so much pipedreaming, at least for the foreseeable future. He suggests that bending the climate may prove possible in certain areas under certain conditions but is certain that the methods eventually found practical-even possible—remain to be suggested.

He also feels that because so little is really known about the atmosphere and about weather and the effects of various components of weather ou the total picture that man will have to do a great amount of learning before he can even theorize practical means for causing any measurable, largescale change.

Once man learns how to predict next month's weather with accuracy, then he can say something intelligent about weather can say something intempets shout weather control. That means man has a long way to go. Accurate forecasts are now in the 1-and 2-day range although the Weather Bureau can make some educated guesses about the weather 2 and 3 weeks ahead.

#### What Hope for a Beautiful America?

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the Congressional Record an excellent editorial appearing in the Washington (D.C.) Sunday Star, of January 9, 1966, meriting careful considera-tion not only by the Members of the Congress, but also of the citizenry of our great land.

The time of decision for preservation of the magnificent American outdoor heritage is at hand. If we are to save this heritage-to preserve the pure water, clean air, glorious mountains, timber, soil, and wildlife—the Congress, the legislatures of the several States, and our local administrators must know that the time is now.

The editorial follows.

WHAT HOPE FOR A BEAUTIFUL AMERICA? There may yet be a fighting chance for the

preservation of "America the Beautiful."
This is true because, for the first time, Americans seem to be waking up to a realization of how close we are to losing it.

We are beginning to see what we have done to the natural surroundings that are our heritage. We see marginal farmiands and surplus crops wasting away the soil. We see drought and flood following in the wake of the destruction of forest and prairie. We see wild plant and animal life sorely threatened. We see our lakes and watercourses carrying more and more filth. see our air soiled by the noxious fumes of our material progress.

We sense that we have been blind to the fact that we are a part of the balance of na-ture, not beings standing apart. We begin to understand that the old American ideal of taming the wilderness, of conquering na-ture, constitutes a cruel deception that we have practiced on ourselves. We realize that have practiced on ourselves. We realize that we have overconquered, overtamed, overkilled, overexploited. We even glimpee the possi-bility that, like the great civilizations of the past, what some are calling the world's most overdeveloped nation could periah in its own filth in a land stripped and despoiled of all that had once made it great and bountiful. It is against this background of a new

awareness on the part of the American peo-ple that one should view the record of the last session of Congress, which earned the sobriquet "conservation Congress." It is against this background, especially, that one should view the call to husband and beautify the land that has been sounded by one of the most politically astute Presidents in history and by his wife-a call that already is bearing fruit in terms of detailed studies such as the Potomac watershed report made public

The legislative response to the procon-servation mood of the Nation so far is im-pressive. The Water Quality Act of 1965 represents the beginning of a really mean ingful attack on pollution. The Water Resources Planning Act of 1965 bears the same relationship to water supply. Research on desalinating water has been stepped up. A clean air act signals an attack in that quar-The Food and Agricultural Act of 1965 aims at accelerating the retirement and preservation of soil not required or not suitable for crops. A program of highway beautifor crops. A program of highway beautification has been at least begun. A hopper full of laws has added park and recreation lands to serve the growing need for places where people can fiee the pressures of our increasingly urban life. Still other legislation aims at restoring the spawning runs of fish in our rivers, protecting declimated wildlife species and their habitat, curbing floods, ameliorating the effects of strip mining. overgrassing, overgressing. ing, overgrazing, overforesting.

This and much more has come to pass in response to a steadily mounting public resolve to reverse, if possible, the effects of a century of misuse and exploitation. And there is every indication that the second session of the 89th Congress will continue the job so well begun by preserving some of our few as yet unspoiled wild rivers, as yet uncut virgin forests and as yet unextin-guished wildlife species, and add even more sorely needed recreational areas to the na-tional stockpile.

But, before we congratulate ourselves too freely, we should remember a few things. One is that what Congress has recently accomplished or may be about to accomplish represents a long-overdue backlog piled up by Congresses and administrations that did little or nothing to reverse the trend toward destruction of the land. Some of the legislation recently passed was needed in William McKinley's time, in Theodore osevelt's time or in Calvin Coolidge's time, but wasn't passed because a majority of Americans either didn't know or didn't care.

Another thing to remember is that what is now being done is only a beginning, in some cases only a small beginning. The task of controlling pollution alone is staggering, for example. The problem of stabilizing water resources is equally formidable.

Perhaps the greatest problem of all, however, lies in the character of the machinery that is expected to carry the job forward once the President and Congress have provided the stimulus, authority and funds. Unfortunately, at present we must look for tangible and visible progress to a welter of agencies that through pork-barrel politics, jealousies, trial and error, compromise and Parkinson's law share conservation responsibility. Several agencies with different legiances and viewpoints plan and build dams, for example. Public forests are administerd by one department, other public lands by another. Responsibility for water resources lies in one place, for water pollution abatement in another. That the agencies involved frequently work at cross purposes is common knowledge. Equally wellknown is the tendency of many agencies to acquire know-how without at the same time acquiring know-whether. It is fine to make ert bloom like a rose, but to make it bloom with surplus cotton is quite another

What is needed is a single executive force to give meaning to what is being promised and legislated an executive force that can truly coordinate the many-fronted effort that

must be made.

A bill introduced by Senator Moss. of Utah, last August may offer the type of solution we sorely need. In the main its provisions follow the thinking of the Hoover Commission. It would cut to the heart of the problem by substituting for the present Interior Department a Department of Natural Resources, transferring to it most if not all Federal functions having to do with con-servation. The Secretary of Natural Re-sources would be charged with developing an overall plan for our land and water, taking in all, not just some, considerations.

To apply the words of Gifford Pinchot, founder of the Forest Service and the first founder of the Forest Service and the first top-flight professional conservationist to serve in the Federal Government, each agency at present tends to "ride its own hobby in its own direction." The conservation of natural resources, Pinchot wrote, "is one single question with many parts \* \* \* one great central problem of the use of the earth for the good of man."

The problem is unlikely to be solved until one man, with authority to act, takes charge.

one man, with authority to act, takes charge.

#### A Tired American Speaks Out

EXTENSION OF REMARKS

# HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mrs. BOLTON. Mr. Speaker, the following editorial was read to the East

Cleveland Kiwanis Club on Monday, November 29, 1965, by Judge Stanton Addams, of the East Cleveland Municipal Court. A copy was sent to me by Mr. Paul F. Adsit, secretary of the Cleveland Association of Building Owners and Managers.

Believing that my colleagues will appreciate the contents of this editorial, I would like to share it:

From the Germantown Courier, Nov. 25, 1965 (reprinted from the Rock County Herald, Luverne, Minn.) ]

A TIRED AMERICAN SPEAKS OUT

I am a tired American.

I'm tired of being called the ugly American.

I'm tired of having the world panhandlers use my country as a whipping boy 365 days a year.

I am a tired American-weary of having American embassies and information centers stoned, burned, and sacked by mobs operating under orders from dictators who preach peace and breed conflict.

I am a tired American—weary of being lectured by General de Gaulle (who never won a battle), who poses as a second Jehovah in righteousness and wisdom.

I am a tired American—weary of Nasser

and all the other bloodsucking leeches who bleed Uncle Sam white and who kick him on the shins and yank his beard if the flow

I am a tired American—weary of the beat-niks who say they should have the right to determine what laws of the land they are willing to obey.

I am a tired American—fed up with the mobs of scabby faced, long-haired youths and short-haired girls who claim they represent the new wave of America and who sneer at the old-fashioned virtues of honesty, integrity, and morality on which America grew to greatness.

I am a tired American-weary unto death of having my tax dollars go to dictators who play both sides against the middle with threats of what will happen if we cut off the golden stream of dollars.

I am a tired American-who is tired of supporting families who haven't known any other source of income other than govern-ment relief checks for three generations.

I am a tired American—who is getting madder by the minute at the filth peddlers who have launched Americans in an obscenity race-who try to foist on us the belief that filth is an integral part of culture-in the arts, the movies, literature, the stage.

I am a tired American-weary of the bearded bums who tramp the picket lines and the sit-ins—who prefer Chinese com-munism to capitalism—who see no evil in Castro, but sneer at President Johnson as a threat to peace.

I am a tired American-who has lost all patience with that civil rights group which is showing propagands movies on college campuses from coast to coast. Movies de-nouncing the United States. Movies made in Communist China.

I am a tired American-who is angered by the self-righteous breastbeater critics of America, at home and abroad, who set impossible yardsticks for the United States but never apply the same standards to the French, the British, the Russians, the Chinese.

I am a tired American-sickened by the slack-jawed bigots who wrap themselves in bed sheets in the dead of night and roam the countryside looking for innocent victims.

I am a tired American who resents those who try to peddle the belief in schools and colleges that capitalism is a dirty word and

that free enterprise and private intiative are only synonyms for greed.

only synonyms for greed.

They say they hate capitalism, but they are always right at the head of the line demanding their share of the American way of life.

I am a tired American—real tired of those who are trying to sell me the belief that America is not the greatest nation in all the world—a generous-hearted nation—a nation dedicated to the policy of trying to help the have-nots achieve some of the good things that our system of free enterprise brought about.

I am an American who gets a lump in his throat when he hears the "Star-Spangled Banner" and who holds back tears when he hears those chilling high notes on the brassy trumpets when Old Glory reaches the top of the flagpole.

I am a tired American who thanks a merciful Lord that he was so lucky to be born an American citizen—a nation under God, with truly mercy and justice for all.

#### Needed: Men To Match Mountains

EXTENSION OF REMARKS

# HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. RONCALIO. Mr. Speaker, on Tuesday, January 11, it was my pleasure to accompany Mr. and Mrs. John Borzea of my hometown of Rock Springs, Wyo., to the first annual President's Conservation Awards banquet sponsored by the National Wildlife Federation and Sears Foundation, which was held at the Statler Hilton.

My host, John Borzea, received the honor that evening of a Governor's Conservation Award, and it was my particular pleasure to observe the awards to others who have made notable contributions to the field of conservation which

is so vital to everyone in the Nation.

The shocking blight which confronts the urban areas of America was touched upon in the main speech by Secretary Freeman. I could not help but contrast the problems of megalopolis America to the beauty of life in those areas of the Rocky Mountain West where we still have, as in Wyoming, considerably less than four human beings per square mile, where we still have clean air and clean water, and hope to keep it that way.

Mr. Speaker, I cannot help but ponder the historical presence of western problems of economic growth. In a book now a best seller in the West, the "History of Wyoming," by T. A. Larson, we find that the problems confronting Wyoming were precisely the same 75 years ago as today. They were, first, how to maintain the payrolls of its few industries; second, how to maintain the population growth; and third, how to attract more payroll from the public as well as the private

Secretary Freeman's speech touches on much of a program which can protect a worthwhile natural environment for society. But until man learns to move from the megalopolis environment, and

to love and live in harmony with an environment of higher elevations and of lower populations, the problems may be ever with us.

In any event, I believe that Secretary Freeman's speech is one of the best in my experience in Washington, and I am happy and proud to attach it to my remarks at this point in the Appendix of the RECORD.

ADDRESS BY SECRETARY OF AGRICULTURE ORVILLE
L. FRIEMAN PRISTARE FOR DELIVERY TO THE
FIRST ANNUAL PRESIDENTS CONSERVATION
AWARDS BANQUET SPONSORED BY THE NATHONAL WILDLIPE FEDERATION AND THE
SHARS FOUNDATION, JANUARY 11, 1966, AT
THE STATLER HILTON HOTEL, WASHINGTON, D.C.

We live in an age of revolution.

We have long enjoyed the benefits of the abundance revolution in agriculture, for no person in this country today need go hungry. The scientific and technological revolu-

The scientific and technological revolution enables man to walk in space today and consider walking on the surface of the moon tomorrow.

Electronic computers in dust-free, humidity-controlled, air-conditioned rooms have launched the cybernetic revolution and these machines now produce other machines, operate factories, regulate traffic, improve access to man's vast storehouse of information, write payrolls and talk with other computers doing the same thing.

And here tonight we are witnessing the beginning of another revolution—the conservation revolution. At least, a revolution in the concept of conservation.

A decade ago, the National Wildlife Federation might have given an award to the individual who did the most to preserve and protect wildlife.

But tonight the National Wildlife Federation concludes its first annual awards program with an emphasis on unity of purpose in conservation making awards for wildlife, soil, water, and forest conservation.

Awards in six other categories of individual achievement in conservation, together with the four at-large national awards dramatize the diversity of conservation activities—and the unifying purpose of guarding our renewable resources so they are available in undiminished supply to serve many uses today and tomorrow—and for all time to come.

It is an eloquent response to the plea which President Johnson made a year ago. In his message on natural beauty, he said:

"Our conservation must be not just the classic conservation of protection and development, but a creative conservation of restoration and innovation. Its concern is not with nature alone, but with the total relation between man and the world around him. Its object is not just man's welfare but the dignity of man's spirit."

This is a wise and perceptive statement. I will attempt tonight to interpret and apply it as broadly and meaningfully as the President intended. The point I want to make is that when true conservation principles are put in operation we will cease to crowd our selves into vast cities, and more and more Americans will return to the countryside to live and work. When that takes place America will be a better nation.

There is today great ferment among conservation groups; ferment caused not by competition, but rather by a new vision of what cooperation can accomplish—and the disaster which can befall this great Nation in its absence.

THE ASCS

A decade ago, the Secretary of Agriculture and the Secretary of Interior would not have traveled 3,000 miles across country to sit

down together with local people to discuss future development plans for land, water, timber, and wildlife resources in the area surrounding the community. But that is what Secretary Udall and I did last week.

A decade ago, a newspaper in North Dakota would not have written that "By far the largest operation in creating and restoring (wildlife) habitat on privately owned lands has been conducted through the agricultural conservation program administered by the (USDA's) Agricultural Stabilization and Conservation Service."

But today, ASCS the farmers commodity program arm is spending much of its time working with USDA's Soil Conservation Service, local soil and water conservation districts, and with State game and fish agencies to help private landowners including the use of incentive payments to produce wild-life along with farm cross on their agres.

life along with farm crops on their acres.

A decade ago, the advice of wildlife groups would not have been sought in establishing management programs and policies on land moving to other uses than crop production—nor would local communities and counties be encouraged and helped to convert cropland into much needed parks and recreation facilities.

But today, through the recently enacted cropland adjustment program, that is happening. We are assisting farmers to convert as much as 40 million acres of cropland to uses which will provide the Nation new access to the outdoors.

It is appropriate that I take this important occasion to announce appointments to a widdlife advisory board which will counsel the Department as we develop procedures under the Food and Agriculture Act of 1965 to improve wildlife. The Bureau of Outdoor Recreation is working closely with the USDA to assist local communities and county governments to acquire land under this program for recreational development.

#### DEPARTMENTAL COOPERATION

A decade ago, Soil Conservation Service would not have joined with Interfor's Fish and Wildlife Bureau to strengthen management and prevent policy conflicts within Public Law 566 small watershed projects. But this kind of cooperation is almost routine today not only for wildlife protection but also for recreation and for water for industrial and community uses—all conservation goals now financed by the small watershed program. Community organizations seeking to expand uses for renewable resources are being encouraged to participate in sponsoring and planning watershed projects.

A decade ago, the Departments of Health, Education, and Weifare, Interior, Defense, and Agriculture did not review together the use of pesticides on public lands so wildlife would be preserved while other resources are being protected. But we are doing this today; and the USDA has stepped up its research activities to develop nonchemical means as well as safer chemicals to control pests and plant diseases. The Department of Health, Education, and Weifare, Interior, and the USDA also have begun a broad cooperative research programs to determine and gage the effects of pesticides use in human health, animal life, and on soil and water to obtain vital Information lacking today.

Two decades ago, there were widespread concern that the Potomac, as with other major rivers of the United States, was becoming increasingly polluted and someday would be little more than an open sewer—inhospitable to fish and wildlife and too dangerous for recreation. For 20 years too little has been done, and our worst fears have been realized.

#### POTOMAC RIVER PLANS

But now a comprehensive Potomac River Basin plan has been prepared under the guid-

ance of Secretary Udall, at the direction of President Johnson, which will employ the re-sources and skills of many State and Federal agencies. This plan, which can serve as a model for other regions to follow under the River Basin Planning Act, can help to not only clean up the Potomac but also provide unparalleled wildlife and recreation opportunities in upstream areas and in ne

Five years ago, when smaller communities throughout the American countryside faced serious water shortages or growing pollution problems, there was not much community

leaders could do.

Plagued with declining population and an inadequate tax base, these communities usually found that credit resources to community improvements baste were not available. Today, the Congress has greatly enlarged the program of the USDA to anglet these communities to establish and improve water systems and sewage treatment facilities.

A decade ago, the need to develop many more outdoor recreation opportunities concerned only a few people-among them, was a new Governor of Minnesota. Yet anvone who took time to study the rapidly increasing recreation uses of parks and forests-State and national-could see what was coming.

TRUE MULTIPLE USE

In the last 10 years, the States have greatly increased their investment and in recent years the Federal Government has acted on a wide front to enlarge the capacity of land, timber, and water resources in the public domain to provide outdoor recreation. A give survey c? outdoor recreation needs has been completed, and a Bureau of Outdoor Recreation has been established in the Department of Interior.

The Congress recently created a number of national recreation areas and in 1964 passed the Wilderness Preservation Act giving permanent wilderness status to 9.5 million acres of primeval America—including almost 2 million acres it has been my privilege and

pleasure to move into that category by executive order of the Secretary of Agriculture.

Interior through the national parks and the USDA through the National Forests have tly enlarged the recreation potential of public lands. Today the USDA can provide financial assistance to farmers who wish to develop recreation as an income producing crop to supplement their farm income.

Thus, in recent years dramatic progress has taken place in conservation policies and It is marked by new emphasis on a unified approach and a new spirit of cooperation among groups and agencies, private and public alike, concerned with the Nation's renewable resources—and by an emphasis on wise and effective use, with greater concern for the needs of individual resource

Thus, a society which began soil and water conservation programs primarily as a means of protecting these resources for agricultural by those who owned the land now finds that the same principles and techniques must be applied to a vastly wider canvass of problems and needs.

Agriculture alone cannot support a vital and growing rural community that wishes to offer its young people an equally wide range of job and income opportunities, public serv-ices and cultural and recreational outlets as they can find in metropolitan areas. And the n areas, reaching out to consume la and water in prodigious quantity are finding that they must mend their ways for they have misuesd and wasted land and water to the point where life in the megalopolis in-creasingly is becoming more costly compli-cat and less satisfactory.

It is crystal clear that as a Nation we have make a given quantity of land, water,

timber and wildlife resources serve more than one purpose at the same time. Multi-ple use on private as well as public land will become an ever increasing necessity of life.

As a conservationist, I have always believed in this basic concept. As a public servant concerned with the kind of a society we build for ourselves and for our children, I know that we must practice it as a matter of commonsense—as a matter of conserving the values of a free society.

#### A GROWING NATION

Within the time span of one generationwithin the next 35 years, the population of the United States likely will grow by another 100 million persons. We already are having a difficult time making the renewable resources we possess in great abundance services the needs of 200 million Americans. Who to do when the demands we going another 100 million people are placed on the same quantity of renewable resources?

challenge that confronts the This is the

true conservationist today.

And I do not believe we will meet that challenge unless we begin now as a matter of National policy to spread out—to create and maintain greater opportunity for more people to live good lives where open space -rather than bunching up in our great cities.

I am not suggesting that we abandon the city and dismantle it. The great cities of America will continue to grow.

But I am suggesting that we should begin now to create other alternatives than megalopolis as a place to live. To crowd another million bodies into the large metropolitan complexes is not wise. Our cities today face critical problems in trying to maintain a decent environment for those already there-let alone absorb another 100 million bodies.

The water shortages which struck New York City are more serious than those which a drought and shortage create. They are indicative of the difficulty which the megalopolis has in providing adequate services for its citizens

In the recent power failure which struck the Northeast, the smaller communities were able to restore power much sooner than in New York City.

Smog-air pollution-no longer is the exclusive possession of Los Angeles, nor is air pollution any longer associated exclusively with heavy industrial concentrations. It is a blight which appears today wherever peo-ple crowd together. Washington, D.C., has very little industry, but there are days when smog mars the sunset over the Potomac.

When the commercial, business and cultural life of millions of people can be halted because of a dispute over transportationand when the prospect of people driving to work threaten a traffic jam even worse than no transportation at all—then it is time to consider other alternatives than larger and larger urban complexes.

hese conditions destroy the beauty and charm of the city; they erode the quality of life and the joy of living. And they are getting worse, not better.

We must, as President Johnson has said, practice creative conservation. We must not only restore what has been corrupted, but also inovate new techniques in the use of our renewable resources which will protect man's welfare and raise his spirit.

We must employ conservation to develop in rural America those conditions which will enable many more people than today to enjoy a better, more gracious, more abundant and healthful life. We must end the neglect of rural America.

As a place to live, rural America has great

It has a growing number of adequate family farms—and a farming economy which will provide food and fiber abundance and

contribute increasingly to a stable economic base for the local community.

It has space for new industry, for new homes and for outdoor recreation. It has water for communities and industry, for agriculture, for wildlife and for recreation. The programs which are becoming increasingly available at State and Federal levels help insure the wise development and use of these resources.

And rural America has the time to make certain that the development and use of these resources is planned to create the maximum opportunity for a good life for

millions of people.

Conservation alone-planning the wise use of our renewable resources-will not automatically create the broad range of job and income opportunities and related and cultural and recreational activities which rural America must offer, but without conservation the conditons which will make for a brighter more meaningful life for millions more Americans in the countryside U.S.A. will not be possible.

Conservationists-regardless of their special interests-can provide critical leadership in the restless quest for a better way to

I would close tonight with a little verse that frequently races through my mind:

"Bring me men to match my mountains, Bring me men to match my plains, Men with empires in their purpose.

And new eras in their brains.

Thank you and goodnight.

#### Worldwide Standards for Color Television

EXTENSION OF REMARKS

OF

# HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. HARRIS. Mr. Speaker, radio broadcasting and television in particular have become part of the American life. There are many facets of broadcasting technique contributing to the service being rendered to the American people.

It has been my pleasure to observe the progress and development in the broadcasting industry over the years. Today color television, profound and unique in broadcasting, is fast becoming the amazing technique for the American home.

Even television in itself is an achievement almost beyond description. technology of color television is almost beyond conception of the average person, but still it is fast becoming an everyday part of our lives.

As has been the case with so many other developments in this country, this technique of color television is being developed in other nations and will, no doubt, become worldwide in a relatively short time.

It is becoming apparent now that there will be a need for worldwide standards for color TV. This need is obvious by the substantial discussion and consideration given to it at the recent International Telecommunications Conference in Geneva, which I had the privilege along with others to attend for a brief time as a delegate.

Dr. Paul F. Geren, State Department adviser on telecommunications and transportation until recently, has written a most interesting article which appeared in the Department of State Bulletin of October 11, 1985. This most interesting article of Dr. Geren's points out that "a radio beam takes no note of national boundaries." The special article also points out that as in all such technological changes, the utilization does not only belong to the field of science but to the area of international relations.

In view of the importance of this subject and the knowledge and experience of Dr. Geren both in the fields of communication and foreign service, I am pleased to include Dr. Geren's article in the Appendix of the Recom and commend it to the attention of the Members. Even though it is technical, it is well written and points up some of the problems and difficulties for the future in this important field:

WORLDWIDE STANDARDS FOR COLOR TELEVISION

The amazing technology that has multiplied and diversified global communication possibilities has increased the demands on foreign policy. A radio beam takes no note of national boundaries, but it can only be transmitted internationally from facilities located in one nation and received by facilities in another. As in all technological change, how these facilities are arranged and coordinated belongs not only to the field of science but also to the area of international relations. Similarly, the arrangements between governments in the communications field influence for good or bad the freedom, the economy, and the efficiency of global communication.

The choice of color television standards offers a dramatic illustration of this thesis. As the nation with the greatest telecommunications resources, whose industry in 1953 was the first to operate color television broadcasts and now has equipped over 4 million homes to receive and over 550 stations to broadcast color television, the United States has considerable interest in the question of the standards chosen for transmission of programs from one country to another. The mutuality of government and industry interest is symbolized by a joint committee on color television.

Color television standards have been a subject since 1956 for Study Group XI of the International Radio Consultative Committee, abbreviated to CCIR from the initials of its French name. The CCIR is a permanent regan of the 127-member International Telecommunication Union (ITU) and, like its parent body, is concerned with facilitating international communications. The goal of the ITU is to help the people of the world talk and otherwise communicate with one another. The CCIR looks forward to a time, not many years distant, when color television will be wiedly available in many countries. Such a time casts its shadow on the present in the shape of the problem of compatibility of systems and technical standards.

Compatibility means the capacity of different systems to receive and transmit to and from one another. It has two aspects: the capacity of monochrome (black and white) sets to receive programs transmitted in color, and the capacity for color television program interchange between different countries. As the CCIR so accurately perceives, the time for action to secure compatibility is now, before governments, industries, and peoples in different countries invest great sums in incompatible systems.

Compatibility, or the lack of it, resultafrom the choice of standards. A telephone in New York must have compatibility with an instrument in Copenhagen if persons in these two places are to talk to each other. Additional dimensions of compatibility are required for the worldwide direct-dialing telephone system now being developed. Compatibility of standards has been approached in telephones and in radio, but only to a much lesser extent in monochrome television. The difficulty in exchanging programs is compounded in the case of color television by the complexities inherent in color transmission. In general, the more complex the form of communication, the greater the planning required to achieve compatibility.

Such an achievement seems to come naturally in adjacent countries which communicate extensively. More than 50 percent of Canadian homes with television sets are within reach of direct television transmission from the United States. Similarly, many television sets in the United States are within range of Canadian television transmission. Because Canada and the United States employ compatible monochrome television standards, the receivers along both sides of the border can tune in programs from either side. Furthermore, when Canadian authorities recently announced the authorization of color television for Canada by 1967, they likewise made clear that the color system would coincide with the standards in use in the United States.

in the United States.

The Dutch view West German television, and vice versa, Luxembourg the French. East Germany may view West Germany's programs, and vice versa. This is because adjacent monochrome systems are by and large compatible.

The long-distance exchange of programs via the Early Bird satellite between the United States and Europe employs cameras and gear of the American system in Europe to transmit programs to the United States and vice versa, whether in black and white or color. The direct exchange of programs between the United States and Europe would require a standards converter. The greater the degree of compatibility, the simpler the standards converter and the less the resultant technical degradation of the original television picture. No satisfactory converter has yet been developed for exchange of programs between basically incompatible systems.

#### DEADLOCK AT VIENNA MEETING

Some progress toward the adoption of worldwide standards for color television was expected at the CGIR meeting in Vienna March 24—April 7, 1965. Study Group XI had been assigned this question, and despite a basic incompatibility built into the monochrome systems, its members were unwilling to abandon the objective of a common system for transmitting color. The representatives at Vienna were persons of technical competence, and they sought a decision based on engineering facts.

However, this meeting was preceded and attended by remarkable events in other than the technological field. On March 22, 2 days before the conference in Vienna was to open, France and the U.S.S.R. announced conclusion of an agreement to unite their efforts in the development and introduction of a joint system of color television based on the French SECAM system and its standards, and General de Gaulle subsequently hailed the agreement in a speech at the Elysée.

the agreement in a speech at the Eiysée. At the Vienna meeting, the chairman of the Committee polled its members in writing on the question: What system do you choose for a public color television service? Twenty-one countries replied in favor of the SECAM system: Algeria, Bulgaria, Byelorussia, Cameroon, Czechoslovakia, France, Gabon, Greece, Hungary, Luxembourg, Mail, Monaco,

Morocco, Niger, Poland, Rumania, Spain, Tunisia, Ukraine, U.S.S.R., and Upper Volta. Four of these countries were not even present but had their votes cast by others.

The following 18 countries replied in favor of the QAM system, or one of its variants, whose technical features and name are explained below: Austria, Brazil, Canada, Denmark, Finland, Federal Republic of Germany, Iceland, Ireland, Italy, Japan, Netherlands, New Zealand, Norway, South Africa, Sweden, Switzerland, United Kingdom, and United States.

The nations which voted for SECAM have some 18 million television sets in operation, while the nations voting for QAM have 146 million, or 8 times as many. The SECAM list includes no country which presently has color television in regular service, while the QAM list includes the two countries which do: the United States, which has operated commercial color television since 1953, and Japan, which has had such a service since 1960.

As a result of this split poll of the participants, the CCIR could not make a recommendation for a single system. The deadlocked meeting's communique stated:

"All participants are concerned that efforts to secure agreement on a single system must continue and, indeed, the procedure of the Committee will permit the subject, as it then stands, to be examined in Oslo at the 11th Plenary Assembly of 1966."

11th Plenary Assembly of 1966."
In view of the clear need to agree on a universal system and the present division on the means, the color television question has gathered inevitable controversy.

#### THE SECAM SYSTEM

The two systems, QAM and SECAM, differ in the method of transmitting the color information. In the QAM family of systems, which includes the color system used in the United States, the technique is to transmit simultaneously the two color signals, hue and saturation, using quadrature amplitude modulation—hence the initials QAM. In the SECAM, the color signals are transmitted sequentially, using frequency modulation of the color subcarrier. A memory system in the TV receiver stores the color information, which is then reassembled to produce the color called for by the camera. This explains the initials SECAM, which stand for sequential a memoire. Because of the added delay line and switching circuitry, SECAM receivers are likely in the present state of technology to be more expensive to manufacture. There is also a grave engineering defect: The SECAM cannot make use of the powerful concept of constant luminance, which protects against noise and random interference.

#### THE QAM STSTEM

The QAM family includes several variants, all employing the simultaneous transmission of the color system but each having individual characteristics. The oldest of these in point of time, the NTSC, is based on the recommendations of the National Television System Committee (NTSC), a U.S. group of engineering and administrative representatives of the television industry. These color television standards were established by order of the U.S. Federal Communications Commission in 1953, after an earlier faise start with the field sequential system. The adoption of the NTSC standards in the United States represents a consensus of industry engineers achieved by thorough field tests. The NTSC standards were approved by the Canadian Radio Technical Planning Board in 1956. The Japanese Government adopted the NTSC standards in 1960 for the regular commercial service which began in that year.

In the United States, Canada, and Japan both color and black and white systems are 525 lines/60 fields. These designations specify the number of lines in a television picture

and the number of times per second the picture is scanned on the screen. The systems of color television with which the United Kingdom is experimenting are variants of the NTSC, modified for compatibility the existing black and white systems using 406 lines/50 fields and 625 lines/50 fields. The Netherlands is likewise experimenting with a variant of the NTSC using 625 lines/50 fields.

A third member of the QAM family is the PAL, which has been developed in the Federal Republic of Germany. The PAL system transmits the color information simultaneously but alternately, thus reversing the phase of the color signals.

All the variants of the QAM employ the quadrature amplitude modulation technique. The NTSC, whether 525 lines/60 fields, 405 lines/50 fields, or 625 lines/50 fields, and the PAL color signals can be received in monochrome on existing black and white receivers in use in the respective countries, and programs in color can be exchanged between NTSC and PAL systems that use the same field rates by the use of a simple standards converter. At present, color signals trans-mitted by SECAM can be received on conventional monochrome sets on the same scanning standard. Color signals trans-mitted by SECAM, however, cannot be re-ceived on color sets of any variant of the QAM system. A standards converter to permit exchange between SECAM and QAM systems has yet to be invented. Should a converter be invented, it would have to be more complex than the simple converters which now make possible the program exchange between the NTSC and the PAL when the field repetition rates are the same.

The achievement of compatibility in color television systems has been complicated by the existence of difference in field repetition rates: 60 fields per second in the United States, Canada, Japan, and some countries of Latin America and Asia, and 50 fields per second in most of Europe and many countries of Latin America, Asia, and Africa. A complete identity of standards is impossible ween two countries employing differing field repetition rates, but a measure of compatibility is possible. In spite of different scanning standards, it is worthwhile to strive for reduction to an absolute minimum of the number of variants of a system between which conversion is required. Theoretically this minimum is two: one variant for the countries using 50-cycle power and one for those using 60-cycle.

CHOICE OF STANDARDS ONLY A BEGINNING

In view of the dynamic character of color television technology, many nations are post-poning a choice of a system, especially be-cause they do not accord color television high priority. This is a tempting position ny nation now without color television to adopt, since in the long run the character of the choices to be made may be altered by technological development. However, as Lord Keynes reminded us, in the long run we are all dead.

One thing is sure: When a nation fixes a date to begin color television operations, it is not possible to play "Hamlet" in the date to begin color was "Hamlet" in mot possible to play "Hamlet" in mot possible to play "tampossible to at all, and begin operations on no system at all, and it is inefficient and uneconomic to begin opas contrasted to experiments-

several systems. While the choice of a system makes pos sible a beginning, it does not freeze the pos-sibility of improvement in the end product seen in color on the television screen. The choice of system defines the basic charac-teristics of the color signal, but leaves open

the future for all improvements in the components and circuitry. Indeed, the improve-ments in color television in the United States have all been made within the NTSC variant of the QAM system, adopted in 1953.

The suggestion made by some advocates of SECAM that the QAM-NTSC has exhausted its technological possibilities is a reckless conjecture rather than a technological fact. One is reminded of Karl Marx's claim, made in the latter half of the 19th century, that capitalism had exhausted its possibilities. This was before various countries which he described as capitalistic had brought forth X-ray, radio, the automobile, and the airto name a few of the unexhausted possibilities.

The dynamic character of the U.S. television industry is a convincing argument that QAM-NTSC standards are consistent with accelerated technological advance. Among the recent gains are the trend toward allsolid-state components, the development of rare-earth phosphors for kinescopes, the production of a four-tube color television camera, the production of rectangular shadow-mask color picture tubes making available wider deflection, and advanced work on camera tubes with electrostatic focusing and deflection.

On the technological horizon are possibilities more amazing still, such as the introduction of integrated circuitry and the conversion of color television from analog to digital transmission. In the case of the United States the choice of QAM-NSTC standards was not the end but only a part of the beginning.

#### THE U.S. POSITION

The choice of color television standards involves technological, economic, psychological, and political factors. Political policy in this realm must obviously take account of the technological facts. It disregards them at its peril.

We in the United States believe that obervance of the three following principles will serve to further the objectives of worldwide standards:

First, no limits should be placed on further research and technological investigation of color television. Field tests of QAM and SECAM systems should be available for countries while they are in the stage of choosing a system. After choice has been made, the system must be kept open for all the technological improvements which may be made in components.

Second, the progress already achieved in the QAM-NTSC system in operation in the United States since 1953 and in Japan since 1960 should be appropriately available for other countries which wish to use it. The means of sharing this branch of progress are the sale of equipment and components, the licensing of technology manufacturing rights, and the entire battery of methods by which the television industry operates across national boundaries. The relatively long headstart in color television enjoyed the U.S. industry is a factor of great significance. Considerations of both private profit and public international responsibility indicate that the advance should be shared.

Third, the fact that an identity of color television systems cannot be immediately achieved should not prevent the best efforts in the direction of maximizing compatibility. If more than one set of standards are to obtain, the number should be the smallest possible and the compatibility should be the greatest possible. The real choice the world ces is whether to move in the direction of the greatest possible measure of compati-bility or by default to reverse the direction and proliferate incompatible systems.

# Statement of Commissioner Erwin N.

EXTENSION OF REMARKS OF

# HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

RHODES of Arizona. Mr. Speaker, one of the great teachers and scholars of the law in our time is the distinguished dean of the Harvard Law School, Erwin N. Griswold. Dean Griswold is also a member of the U.S. Commission on Civil Rights. Recently, the Civil Rights Commission has published a report entitled "Law Enforcement; A Report on Equal Protection in the South." Included therein is a separate statement by Commissioner Erwin N. Griswold. This work is typical of the incisive, consise style which has always characterized the writings of Dean Griswold. In this statement is contained a challenge to the legal profession of the country in its activities in the field of civil rights. Too often, lawlessness has been associated with the civil rights movement. Nowhere in his statement does Dean Griswold condone lawlessness, but he states with emphasis and clarity his belief that when the law is applied in all sections of our country to all citizens without fear or favor, then those interested in "equal rights for all citizens, will surely present their grievances to the courts and stay off the streets." Since I regard this as an eloquent and timely appeal to the conscience of all Americans, and an appeal to all lawyers in their special role as officers of our courts, I present it with pride for reading by my colleagues.

The statement follows:

SEPARATE STATEMENT OF COMMISSIONER ERWIN N. GRISWOLD

S din N S C fi

tic evi co th ad Mo

As a lawyer who is proud of his profession, and as a legal educator who is concerned with the development of high professional standards in young lawyers, I have a deep concern in the administration of justice. It clear that the administration of justice in the South today is one of the key elements in the most fundamental domestic problem of the United States. Too long and too often has this fact been overlooked by citizens and by lawyers throughout the country. It is my earnest hope that this report of the Commission on Civil Rights will focus the attention of thoughtful people everywhere on the realities of this problem and, that especially, it will lead to an awakening of awareness and responsibility on the part of citizens and lawvers of the South.

As far as the ordinary Negro in the South As far as the ordinary regro in the Socati is concerned, justice is not administered by the Supreme Court of the United States, or even by the supreme courts of the several States. The place where State power makes its impact on him is when he encounters sheriffs, and their deputies, and police officers, and court officers, and magistrates and justices of the peace. From experience he tends to look on these officers of the State not as protectors but as persons to be feared. He knows that many of them will exercise

the discretion committed to them in such a way as to demean him and to deny him equality under the law. The Negro who knows his place ordinarily has little trouble—in his place. The Negro who is aware of the rights conferred on him by the Constitution and laws of the United States—and those who seek to help him—repeatedly encounters the long arm of the local law designed to intimidate him and to discourage him from any attempt to break out of the subservient place to which he has been assigned by the practices and the customs of the dominant elements of the community.

This injustice appears in mass arrests, such as those of the freedom riders who sought only to assert a simple citizen's right. It is found in the decision to arrest, or not to arrest, when a small group of Negroes walking to register to vote becomes an illegal parade. When there is some offense, the white man receives a warning, or is ignored. The Negro is arrested with all the conse quences of arrest. Discrimination is found in ball practices. White persons are released on their own recognizance, or with modest bail easily arranged; Negroes often have a higher ball and restrictions are imposed, such a refusal to accept cash bail, or requiring bail supported only by unencumbered real estate—which is hard to find in a Negro community. Very often bail cannot be arranged from bonding companies in so-called civil rights cases because local agents will not sign the bonds.

offiand he tate red. The Negro's plight is found in police brutality—perhaps almost as important, in police discourtesy, in constant reminders in many ways, large and small, that he is a subordinate, lacking the full dignity of a man. It is found in decisions of the minor judiciary, where the Negro goes to jail and the white man is released on parole or pays a fine. It is found in social practices still tolerated in many courts, where seating is still segregated, and where Negroes are addressed only by their first names. It is found in juries, where, by one device or another, Negroes are rarely—often never—found seated on the jury which actually hears a case with racial aspects. It is found in the fact that a Negro convicted of rape is usually given a death sentence, while this is rarely the fate of a white man convicted of this

Looming in the background of all this, is the fact, well known to Negroes, that a white man who harms them will rarely, if ever, be severely punished. The murderers of Mack Charles Parker, though known, have never been indicted. No one has ever been charged by the State of Mississippi with the murder of three civil rights workers in 1964. The trials of persons charged with the murder of Lemuel A. Penn and of Jonathan Daniels resulted in acquittals. The measure of progress in this area, and our present lamentable situation, is indicated by the fact that a person was actually charged with the murder of Medgar Evers, and was brought to trial, resulting in a hung jury; he was retried, with the jury hung again. Here the prosecuting officers and the judge did their duty—all credit to them—but juries are a part of our system of administration of justice, too, The trial of one of the persons charged with the murder of Mrs. Viola G. Liuzzo likewise resulted in a hung jury. A retrial led to an acquittal.

Jurymen take an oath to administer justice fairly and impartially, according to the evidence produced before them in open court. Until they do so, can it be surprising that Negroes have little confidence in the administration of justice in southern courts? More than a century ago, in recounting the situation in the distant past, Chief Justice Taney said that "The Negro has no rights which the white man is bound to respect." In these crucial matters—the physical safety

of the Negro in his life and body, and his human dignity—how much progress have we made in the last three centuries, or alas, in the last hundred years? Our sad lack of progress in the past 90

Our sad lack of progress in the past 90 years is strikingly shown by the charge given by a Federal judge in Tennessee 90 years ago which is painfully applicable to our present situation:

"In no country but our own is the dis creditable fact true that where murder and cruel shocking outrages are perpetrated by a dominant party in a narrow region of country, there is no power of punishment, save through the impractical instrumentality of those who have either committed or sympa-thized with the crime \* \* \*. Unless our statesmen, State or National, create some jurisdiction of wider scope and which will authorize indictments and trial beyond the narrow limits a majority of whose citizens abet the crime to be punished, the Nation must still submit to the disgrace of yearly additions of mean and courage-wanting mur-ders of the innocent and the helpless, without the slightest infliction of any legal pen-alty upon the offenders \* \* . It has been It has been our painful duty in repeated instances to charge juries that the Federal court had no cognizance of offenses where crimes so cruel and shocking have been proved that the court, jury, and audience could scarcely refrain from tears of sympathy, and where the elegantly dressed, socially well connected, and shameless murderers, had, in the communi-ties where they had shed innocent blood, not only confessed but boasted of their crime and who had either not been indicted at all, or, when tried, had been acquitted by juries, their coadjutors in crime, amid the acclama-tion of their coconspirators \* \* \*. It is believed by many of our best citizens that there should be here, as in every other government on earth, some power to bring such wicked men to justice, outside of, and uncontrolled by, the wills and hands which have united their atrocities.1

So long as lawyers, public officials, and State courts in the South continue to distort the process of public power so that Negro citizens may not enjoy the legal equality promised them or exercise the liberties as-sured them by the Constitution, Federal authority must continue to make itself felt. central irony in the situation in which the South now finds itself is the fact that the refusal of its lawyers and its judges to fulfill their plain responsibilities has been the principal cause of the intervention from outside against which the South so vigorously protests. So long as disregard of national law rules the southern scene, national power must make itself directly felt. Sometimes its bite will affect the electoral processes that have been misused to preserve discriminations. Sometimes injunctions will be issued to prevent continued harassment of Negroes. etimes cases that have been initiated for abusive purposes will be removed from the State courts where they are pending. The sconer the bar and the officials of the South recognize that this is one country and that the Constitution of the United Stace is law everywhere in the United States, the sooner they will find themselves partners in the en-terprise of American government.

On all these matters, progress can be made in the long run only in the South and through southerners. That is as it should be, but there should be progress—great and heartening progress which will really make the Negro an equal in all the aspects of the administration of justice—the little homely, personal aspects which are so important, and in the impartial actions of all officials concerned—police, sheriffs, magistrates, as well

In the hearings before the Commission, in which a number of lawyers of good will participated, it developed that there are only four Negro lawyers in Mississippi. Until just a few years ago, there was no place in Missispip where a Negro could study law, and it is well known that the admission of Negroes to the University of Mississippi was accomplished only with the aid of military force. There are still no Negro graduates of the University of Mississippi Law School. There are no white lawyers in Mississippi who will ordinarily handle a civil rights case. Much the same is true in ether States in the South. For this situation, the dominant groups in these Sates are responsible. The lawyers, there and elsewhere, bear a special responsibility.

In his address as President of the American Bar Association in August 1965, an able and public-spirited lawyer, Lewis F. Powell, Jr., spoke of the importance of safeguarding fair trial and of the "diminishing minority which still uses violence and intimidation to frustrate the legal rights of Negro citizens." He went on to urge that "the courts and legislative halls, rather than the streets, must be the places where differences are reconciled and individual rights ultimately protected." Appealing as this is, does it really get to the bottom of the problem? Are there any basic legal questions in this area which have not already been settled in the legislative halls or in the courts? The difficulties arise not because of doubts about the law—about schools, about voting, about public accommodations, about facilities in transportation, about juries, about employment—but because of persistent failure to accept and follow and apply and be governed by the clearly applicable law, and to administer the law fairly and without discrimina-

The Negro, and his supporters, march in the streete not because the law is not clear, but because it has not been followed. He knows from long experience that a resort to the courts will far too often result, initially, in delay, frustration, injustice, and denial of clearly defined rights. It is small comfort to him that 3 years later he will get justice from the Supreme Court of the United States. Justice—true and real justice—should be dispensed by voting registrars, sheriffs, the police, school boards, district attorneys, justices of the peace, and the others close at hand who represent the authority far too often to perpetuate a system of social control, which may represent what has been regarded as the southern way of life, but which is wholly inconsistent with rights established by valid Federal power as a part of "the supreme law of the land."

as judges and jurors. This must not only be the fact, but the Negro must know it to be the fact and have confidence in it. Perhaps this is the millenium. But America, the land of the Declaration of Independence and the Constitution, the land of liberty and the home of the free, cannot be content with less. Southern citizens, white and Negro, cannot wisely or in good conscience rest until these things are accomplished. In all of this, lawyers have a special re-

In all of this, lawyers have a special responsibility. They are persons trained in the law, with presumably a special interest in justice. They are officers of the courts. Through their training and background, they are often elected to our legislatures, hold executive and administrative offices, as well as at on the benches in our courts. Yet, too many of the members of the bar—it is not too much to say most of the members of the bar in the South—have been complacent about these things. Some have been concerned, but have felt that they could not speak up, a sad commentary on the situation which so distorts the administration of justice where racial factors are involved.

<sup>&</sup>lt;sup>1</sup> Emmons, J., charge to the grand jury, case No. 18,260, 30 Fed. Cas. 1005, 1006-07 (C.C.W.D. Tenn. 1875).

Thus the key to the greatest domestic problem of this country may well be found in the administration of justice by southern ce officers and in southern courts. The problem is by no means exclusively a southern problem, but it is more deep-seated and more pervading there. Not until justice can truly be found close at home, from officers of the law and local magistrates, can it be rationally expected that Negroes in the South, and their supporters, will present their cause in the courts rather than in the streets. The sad fact is that the streets have long been the only place where they could ordinarily get any sort of an effective hearing. Of course e matters should be gotten off the streets; but this can only be done when the administration of justice is not so deeply polluted at the source.

The lesson which these hearings drive home to me is the crucial importance of doing what we can to change the atmosphere in southern law enforcement officers. As Daniel Webster said in his funeral cration on Mr. Justice Story: "Justice, Sir, is the great interest of man on earth." And as Thomas Erskine said at the trial of Thomas Paine, The choicest fruit that grows upon the tree of English liberty" is "security under the law; or, in other words, an impartial administration of justice."

When the ordinary southern Negro has confidence in his local peace officers and in his local courts, when the people of the whole country can have confidence in southern justice at the grassroots, then the Negro, and others interested in equal rights for all citisens, will surely present their grievances to the courts and stay off the streets.

This is the great challenge to the lawyers of this country, and particularly to the lawyers of the South. "The place of justice is a hallowed place," as Francis Bacon said long ago. There is no justice without true equality, not only in court but in all law enforcement procedures. Too long have we too casually accepted a system in this area which too often, sometimes even unconsciously and unintentionally, has in fact been grossly discriminatory. When southerners, and particularly southern lawyers, can accept and face this deplorable fact, and begin to work, openly and assiduously, to correct it, we can have real hope that this situation will change to the great benefit of the South and of the Nation.

#### LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

Title 44, Section 181. Congressional Record; areangement, syvia, continuing, and inherests.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof, Jan. 12, 1896, c. 23, 118, 28 Stat. 603.)
Title 44, Section 182b. Same; ILUS-

Title 44, Section 182b. Same; Ellustrations, Maps, Diagrams.—No maps, diagrams, or illustrations may be inserted in the Recom without the approval of the Joint Committee on Printing. (June 20, 1936. c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congainssional Encount the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. Arrangement of the daily Record .- The

Public Printer shall arrange the contents of the daily RECORD as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: Provided, That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. Type and style.—The Public Printer shall print the report of the proceedings and deates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 71/2 -point type; and all matter included in the remarks speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in No italic or black 6-point type. type words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal ocuments or papers of which a literal reproduction is necessary.

3. Return of manuscript.—When manu-

3. Return of manuscript.—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Recomb issued on the following morning; and if all assued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Recomb for 1 day. In no case will a speech be printed in the Recomb of the day of its delivery if the manuscript is turnished later than 12 o'clock midnight.

furnished later than 12 o'clock midnight.
4. Tabular matter.—The manuscript of speeches containing tabular statements to be published in the Rucozo shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

lowing morning.

5. Proof jurnished.—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. Notation of withheld remarks.—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr.—addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. Thirty-day limit.—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: Provided, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. Corrections.—The permanent Recoan is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: Provided, That upon the final adjournment of such session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: Provided further, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). Appendix to deliy Record.—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: Provided, That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congressional Recons.

10(b). Makeup of the Appendix.—The Appendix to the Congressional. Record shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the CONGRESSIONAL RECORD, nor to RECORD printed after the sine die adjournment of the CONGRESSIONAL RECORD THE STATE OF THE STATE

11. Estimate of cost.-No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional RECORD which is in contravention of this paragraph.

12. Official Reporters.—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

# PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Concursional Riccom, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. SIMPSON. Mr. President, the Wyoming Farm Bureau Federation conducted an essay contest recently on the subject of "Keys to Freedom." A number of the prize-winning essays by Wyoming authors were forwarded to me.

I should like to call the attention of my colleagues to the essay by Mrs. Dick Masters, of Ranchester, Wyo., who won first place in the adult division. I ask that Mrs. Masters' essay be printed in the Appendix of the Congressional Record.

There being no objection, the essay was ordered to be printed in the RECORD,

KEYS TO FREEDOM

While civilization exhausts itself in useless efforts to find the keys to freedom, it is tragic that the one simple, proven, effective formula is permitted to lay unheeded in the dusty unturned pages of American history. Frantic men are searching for new concepts and fresh approaches to achieve universal peace and prosperity. I feel America needs no new discoveries in the realm of political ideas of the launching of any new social experiments. Our need now is for rediscovery and renewed understanding of the true and tried principles of authentic Americanism. These are the keys to freedom.

Nearly 200 years ago thousands of Europeans came looking for a place where a common man could, God willing, become uncommon—where a man could become whatever his dreams, faith, energy, intellect, and manhood combined to make him, without a government to harness and retain him to a common level for the benefit of the general welfare. The promise of our country was

Preedom is not, however, free. People cannot—as most Americans glibly claim—inherit freedom. We can inherit a desire for freedom, we can inherit a social system built on the principles of freedom; but freedom must be won anew by every generation. Freedom is not an easy way of life but it is the only noble way for creatures made in the image of God.

The attitude toward freedom is shifting. Today, a whole generation of Americans have absorbed the notion that freedom means ease and comfort. Only in the 20th censury have Americans begun to doubt and fear and lose their faith—lose the old confidence in the absolute rightness of American principles. Either they did not care or understand when leaders began to introduce wornout cuphemisms of old-world collectivism into the American system.

Our Founding Fathers regarded patriotism—love of one's own country—as a basic key to freedom. They made it quite plain that the responsibility of the American Government was to the American people. The preamble of the Constitution says that this

great document was ordained and established to secure the blessings of liberty to ourselves and our posterity. We have persons in this country, who, knowingly or unknowingly, are trying to destroy these ideas. Many persons in our country are against

Many persons in our country are against strong feelings of patriotism (which they call nationalism). They think it impossible for Americans to maintain their national independence as a free republic. They have completely lost faith in the central idea of the American Revolution; namely, that free men, under God, can manage their own affairs.

These same persons prefer government to be a big brother to care for us. The trouble here is that when Government has absolute power to promote the general welfare, the Government must also have the power to decide what the general welfare is.

The basis of this modern ideology is seem-

The basis of this modern ideology is seemingly founded on the assumption that political power makes men wise. These powers presume the individual does not have integrity or good sense enough to provide for himself education, housing, or medica' care, preparation for his future or ability to run his own business.

One business of prime interest to me is agriculture. Controls were long ago introduced. Here is an example of the contradictions of this program. Millions of dollars are spent to put land out of production (to control the overabundance of food) and additional millions are spent to reclaim desert land and put it into production. Along with this gross contradiction, the Department of Agriculture has more employees than there are persons actually employed in all agricultural fields. Despite this fact, Government controls only a small amount of agriculture. The cost from taxes of these programs are prohibitive and wasteful. Leading agricultural organizations supported by farmers and ranchers throughout the Nation prefer to see these programs gradually concluded. Legislation now indicates we will have to fight against more controls which will ultimately mean more taxation for everyone.

No nation in history has survived a tax burden that reached a third of the national income. Our current welfare state has achieved this point. Because of our enormous debt the Government has adopted proportionate taxation. This progressive system was created by Karl Marr. Social legislation is now at its greatest peak. Our only return to freedom is by reduction of and economy in Government. We must restore the right of man to keep the fruit of his labors.

Taxation brought about by social legislation such as the new poverty program is not only draining our pocketbooks but thwarting personal freedoms. The old American constitutional system of freedom never did and never could eliminate poverty; but it produced greater material abundance for more people than any welfare state, planned economy, or communistic-socialistic-fascist system on record. The Founding Fathers provided for unbelievable prosperity of America when they gave us a workable means of preserving personal freedoms.

Probably the greatest problem facing our Nation is the dispute between the free world and communism. We are fighting Communism in Vietnam but are we really fighting communism? I believe our only defense against communism is to regain our free society by restoring individual freedom and our free communism the keys to our freedom.

Now you and I must fight for the keys to freedom. You and I must answer again whether life is so dear and peace so sweet as to be purchased at the price of chains and slavery. "We are unwilling to piedge our lives, our efforts, and our sacred honor, then we must one day spend our sunset years telling our children and our children's children what it was like in America when men were free.

James Russell Lowell, as Minister to England in 1875, was asked how long he thought our Republic would endure. He answered that our Republic would endure as long as the people kept the ideas of the men who founded it.

You and I hold the keys to freedom. "We, the people \* \* \*."

"Hey Peace Corps-You're a Real Guy"

EXTENSION OF REMARKS

# HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. MOORHEAD. Mr. Speaker, it is obvious that much of the world's insecurity and unrest stems from misunderstanding. It is refreshing, therefore, to read an account by a former U.S. Peace Corps man in Ghana who tried, with some personal sacrifice, to close the understanding gap. He is Miles S. Pendleton, Jr., a 1961 magna cum laude graduate from Yale, who spent a year teaching English and French at the Chana Secondary School, Koforidus, and another year teaching English and history at Adisader College, Caspe Coast, Ghana. Mr. Pendleton, who was in the Andover class of 1959, has written a fascinating account of his experience in the Andover Bulletin, October 1965. Under leave to extend my remarks, I include his report at this point in the Record

"HEY PEACE CORPS—YOU'RE A REAL GUY"
(By Miles S. Pendleton, Jr.)

(By Miles S. Pendleton, 3r.)

When Prancis Broderick, 1930, the Peace Corps representative in Ghana, reads his morning newspaper, he is apt to feel that the United States in neither well understood nor fully appreciated in that West African nation. The Ghanaian Times may report that "Yankee imperialism has taken unto itself the job of protecting a misnamed 'free world' by which it means the enforcement upon the world's unwilling millions of a rotten capitalist social system." And he may be told rather unfatteringly that 'the Yankee gunrunning act has come to Ghana. The dopes and drunks who run the murder incorporation called CIA are after the blood of Cagyfo Dr. Kwame Nkrumah because he is the biggest thorn in their neccolonialist ambitions " \* " Broderick and his fellow Americans are frequently warned that "although the CIA agents and their Peace Corps subversionists have falled with the guns and bullets" and have had to resort to "treacherous rumors to create alarm and panic [sic] and

to confuse and divide our people," they will not be forgiven. "The people of Ghana," states the newspaper, "will work firmly to destroy them at their base and have the courage to tell these Yankee rogues that this can-not be the country of bloodsuckers and gun-running cowboys." If the Government-controlled press is to be believed, the ugly American—the literary creation of another Andover graduate—is a well-known personage in

Misunderstanding, however, is a two-way street. When Austin Ahanatu, a Nigerian who was a teaching assistant at the 1965 Andover summer session, reads the Boston papers, he may very well come to feel that his country is misunderstood by Americans. Part of the blame must fall on the shoulders of an Andover student who never quite graduated. Edgar Rice Burroughs imprinted the image of Tarzan and his friends on the American mind, and it is an image that has not been easy to erase. Thus, the Boston Globe thoughtlessly entitles an article "Why a Barefooted Nigerian Chief Loved Steven-son" even though the sandal-wearing chief is a graduate of Oxford, a respected lawyer, a former chief justice of his region, and is

dor. now an ambase

The United States and the emerging or developing nations of the world have much of value to share with each other. At the moment however, they seem to share more than anything else a sense of mutual misunderstanding. Through the impact of colonialism in its broadest sense, the developed nations have for centuries affected the way of the underdeveloped areas of the world. Europe long felt little need to understand Asia, Africa, or Latin America, for it could force them to try to understand Europe. Today, despite our traditionally limited co-lonial entanglements, the United States is often considered by the "third world" to be the arch-example of a "European" nation. But no longer can we or anybody else force to see us exactly as we would like to be seen

Since the Second World War, more than half a hundred new nations have emerged from colonial obscurity onto the world scene. They can now demand that we try to understand them just as we want them to under-stand us. Individually they are weak, poor, self-conscious. Collectively, however, they are increasingly vigorous, powerful, and self-assured. They can affect the course of in-ternational life, and they know it. The majority of the world's population lives within their borders. They are storehouses and pro-ducers of raw materials which we badly need. They often seem strategically important. As a result, we have been prepared to play a growing role in their development as we have discovered how closely we are bound to them discovered how closely we are bound to them economically, politically, and strategically. Our commitment in Vietnam is an obvious example. The first American soldier killed in that country was a member of the class of 1956 at Andover.

During our early days as a Nation, the United States was like many of the newly independent countries of today. Like most of them, we were born of a revolution during which we threw off what we considered to be the yoke of colonialism. We were a poly-glot nation and we were to become more so before attempting to become less so. Our efforts to overcome disunity evenutally led to a civil war. We had our alien and sedito a civil war. We had our allen and to a civil war. We turned our backs on "entantion acts. We turned our backs on "entantion acts." to a civil war. We had our alien and sedi-tion acts. We turned our backs on "entan-ging alliances" and retreated into a pleasant sort of neutrality while we let the passage of time legitimise our new system of gov-ernment. Washington, the charismatic father figure, served as a focus for our sense of national identity. As we pushed west-ward, our States supported the construction of canals and railroads and encouraged the founding of banks and businesses with what

might seem today to be an almost socialist

Nevertheless, we easily forget our own history when we come to consider today's newly independent nations. Time snickers when a Ghanaian politician, perhaps seeking to help generate a sense of national identity in the land by elevating the status of its president, writes: "to us, his people, Kwame Nkrumah is our father, teacher, our brother, our friend, indeed our very lives, for without him we would no doubt have existed, but we would not have lived. \* \* \* " In a somewhat similar vein President Exra Stiles of Yale deleved to accrete in 1782. "O Weshinston. clared in a sermon in 1783: "O Washington, how I do love thy name. How have I often adored and blessed thy God, for creating and forming thee the great ornament of human kind." Attempts by the leaders of the new nations to develop political religions do not sit well with us. But those who saw the animated Lincoln at the World's Fair are familiar with his speech more than a century ago calling for a new political religion in hat was then becoming a divided nation. Despite such historical similarities, how-

ever, the gap between the United States and the countries which are underdeveloped is obviously an immense one, and it is this gap which helps to generate mutual misunderstandings. Perhaps the economic gap most readily understood, although it is by no means the only one. More than twothirds of the world's population lives in eco-nomically underdeveloped countries—coun-tries where more than 60 percent of the workforce is engaged in agriculture. In these countries the average yearly per capita in-come is less than \$100, whereas it is more than \$2,500 in the United States. Only Only 1 in 10 earns \$700 a year. Four out of five are illiterate, and the average life expectancy is only one-half of what it is in the United

e is a constant problem, but there are few doctors. In Ghana, for example, only 275 doctors attempt to care for 7 million potential patients while New York City, with about the same number of people, boasts 10 times that number of psychiatrists alone. The World Health Organization has estimated that close to 90 percent of the inhabitants of Chana would require hospitalization if they were living in the United States.

Mainutrition plagues the people of developing nations. A recent report by a Presidential task force estimates that about 70 percent of children in the less-developed countries are either undernourished or malnourished. Our food-for-peace program has often meant the difference between life and often meant the difference between life and death to starwing peoples. However, not until August of this year did we begin to fortify with vitamins the nonfat dry milk we have been sending abroad through the program. Even now, we refuse to send dried fish flour which is rich in badly needed protein because a number of Senators find the substance regulates even though it is rectifiedly now. repulsive even though it is medically pure.

Outside Timbuktu, I opened a can of tuna fish and was almost instantly surrounded by a group of children, their distended bellies crying malnutrition. When a sliver of fish accidentally fell from my fork into the dust, they dived after it and stuffed dirt into their mouths. Each child hoped that he had also captured the sliver of fish. That month the Reader's Digest carried an advertisement in-forming its American readers: "For 'chicken' we used pure savory chicken meat. In 'chicken and liver' we have a practically perfect paté. Then we made a wonderful, flav-orful, bountiful gravy and ladled it lavishly over succulent morsels of meat. \* \* Let your pet have a gourmet food for dinner tonight. \* \* Puss 'n Boots, maker of Amer-ica's No. 1 cat food."

Obviously, then, the economic gap between the United States and the developing nations

is immense. Our 195 million people represent only 6 percent of the world's population, Europe, but we have 38 percent of its income. with 22 percent of the world's population, has another 36 percent of its income. Thus, 28 percent of the people on earth have access to almost three-quarters of the world's income, and the situation is not changing. In the United States we spend more money advertising liquor each year than the sum com-prising the entire national budget of Ghana, the wealthiest nation on a per capita basis in tropical Africa.

The economic gap between the United States and the developing nations is obviously related to other gaps of a social, cultural, political, and ideological nature. We ent the modern and they the traditional because we have developed the skill and the resources to be modern in an indus-We emphasize cleanliness and health to what is often considered to be an extreme partially because we can afford to do We share with some other nations Western man's concern for the individual in a world which is, more often than not, concerned with the mass. We are literate in a world of illiteracy, monodeistic in a world of many gods, strong in a world of the weak, and predominantly white in a world of color.

No wonder Aimé Cesaire, the apostle of Negritude, did not strike a sympathetic chord in the hearts of many of us when he wrote:

Hurray for those who never invented anything; for those who never explored any-thing; for those who never conquered anything; hurray for joy; hurray for love; hurray for the pain of incarnate tears.

Cesaire was, however, addressing himself to the majority. Many, like Chief Remi Fani-Kayode, the Deputy Premier of Western Nigeria, see the United States as: "Rich, content, overfed, and determined to remain so at all costs \* \* \* the Santa Claus of the white races \* \* \* a great proponent of the dignity of all men. Yet with all this, the American people are the inveterate enemies of the black races of the world."

The strong national leader who snarls at the United States may be attempting to buy time for the legitimization of political power and the growth of a national consciousness in his own country. He is perhaps not un-like George Washington, who wrote in his Farewell Address: "With me \* \* \* a predominant motive has been, to endeavor to gain time for our country to settle and mature its yet recent institutions and to progress without interruption to that degree of strength and consistency which is necessary to give it, humanly speaking, the com-mand of its own fortunes." The Washingtons of our age, whether named Nehru, Nasser, or Nkrumah, would no doubt sym-pathize with our first President's personal

But progress without interruption often seems to them to require a strong one-party system controlling almost every facet of na-tional existence. For better or worse, a new— and, to us, often unfamiliar—definition of democracy must be devised. We are apt to ask whether Sukarno's "guided democracy" is democratic in anything but name. Whatever it is, it is certainly guided.

Hand in hand with the new democracy goes an emphasis on a pragmatic brand of socialism. Most new nations have only a limited amount of indigenous capital. of them have many entrepreneurs. have leaders who have been impressed with the economic strides made by the "socialist countries." As a result, the state is usually prepared to step in. Increasingly, however, the leaders of the new nations have come to realize that the form of socialism cannot be doctrinaire. Most admit that President Dacko of the Central African Republic was right when he asserted:

"Our socialism will be empirical. As required by circumstances, by necessity, we will adapt, we will anange, we will modify. We will not reject the imperative of facts, and we will strive to avoid the desperate experiences of certain other Africans. The state will recognize the private sector through which we shall naturally market our products."

Whether the brand of socialism is pragmatic or doctrinaire, however, it is not apt to appeal to Americans. The word leaves a bad taste in our mouths even if it means nothing more than social security. For the majority of people on this earth, the word "capitalism" has the same effect. Neutrality is a positive good to a leader of a new nation who can use it to attract economic ald from both East and West. To us, neutralism seems almost immoral. To many people in developing countries, the American way of life is acancer they see manifested in the form of cultural imperialism. Our songs and dances, movies and books, threaten to undermine the traditional way. Their very popularity makes them a target for the wrath of nationalist leaders.

Thus, the economic gap between the developed and the developing nations is accompanied by social, cultural, political and ideological cleavages. Very likely, closing the economic gap through population control combined with increased economic, technical and educational assistance would help to span other voids. At the same time, increased understanding of each other through study and personal exchange of ideas, aims and values would no doubt help to overcome the emotional gaps. On the individual level, as many Andover graduates have discovered, much can be done and is being done. Despite what Francis Broderick reads in the Ghanaian Times, he knows that when he walks through town, a young apprentice tallor is apt to call out, "Hey, Peace Corps, you're a real guy"—the highest compliment a young Ghanaian can give a "cowboy imperialist."

# First Jobs for Women's Job Corps Graduates

EXTENSION OF REMARKS

# HON. VANCE HARTKE

OF INDEAMA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. HARTKE. Mr. President, on November 30 the Washington Post published an article headlined, "Job Corps Girls Start To Work." The story dealt with the hiring of the first two graduates of the Women's Job Corps program.

ı

y

ny

l)

nt

I am proud that it was a leader of industry from my own State who not only hired these young women but whose company was also the first to hire male Job Corps graduates. The man to whom I refer is W. C. Hobbs, senior vice president of Consolidated American Services, Inc., and chief executive of its management and engineering services division. Mr. Hobbs is a former resident of Elwood. Ind.

In the views which Mr. Hobbs has expressed there is sound advice for other potential employers of the Job Corps graduates. The Corps will be successful only as it is fruitful in opening the doors to jobs through training, and the keys to those jobs are held by men like Mr. Hobbs.

Mr. Hobbs in this article has expressed his confidence in the work of the Job Corps trainees. "I feel very strongly," he says, "that in the Job Corps, industry has a natural young mine of flexibility and a pool of labor. Just because these are poor kids who have dropped out of school does not mean they are not good workers.

"Once industry realizes they have a pool, and can direct the skills and technical training they need, they are going to come to Job Corps and say, 'I need so many of this type of skill.'"

Mr. President, I ask unanimous consent that the article from the Washington Post may appear in the appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOB CORPS GIRLS START TO WORK (By Elizabeth Shelton)

The first two career girls to come to the Capital with Job Corps diplomas as their credentials are happily at work in the downtown office of a management consultant firm.

Juana Marie Waquiu, a 21-year-old from Jemes Pueblo, N. Mex., arrived here yesterday to double as a PBX switchboard operator and receptionist with the management and engineering services division of Consolidated American Services, Inc. She was the first graduate of the Los Angeles Women's Job Corps Training Center.

The second graduate, Willye L. Evans, 20, of Oklahoma City, Okla., has been on duty in the same office for a week as a clerk-typist. "It's just like home," Willye says. "Everybody is so friendly."

Both live on Buchanan Street NE., with the family of a member of the MES staff.

Neither has had a chance yet to sightsee around the city, but Willye went on a motor trip in Maryland on Sunday and thought it "very nice."

Her mother is a domestic worker in Idabel, Okla. Willye tried working her way through Langston University in Oklahoma but had to leave in her second year, because her salary as an assistant to the advisor of the New Homemakers of America was applied only to tuition and left her no money for expenses or to send home.

She plans to go to business college at night with an eventual goal of teaching business subjects. She attended the metropolitan junior college in Los Angeles and graduated in 5 months.

Juana, daughter of a carpenter, attended Albuquerque Business College, in New Mexico, for a year, but couldn't find a job in that city. She learned switchboard operation at the Los-Angeles Trade Technical College while provided at the Los-Angeles, 100 Corne Center.

enrolled at the Los Angeles Job Corps Center. Back at home are five brothers and two sisters. The older sister is married and the oldest of her brothers helps his father, but the others are still of school age and Juana helps to support them.

The brandnew white collar girls make \$2 an hour at their new jobs. They will receive in-grade promotions and the chance to rise, through training, to new grades.

W. C. Hobbs, senior vice president of Con-Am and executive chief of its MES division, is confident the Job Corps is producing a competent employment pool for industry. The organization was the first to hive male

The organization was the first to hire male Job Corps graduates as employees and found their work so satisfactory that two are being given additional pay and responsibilities. The third was assisted to return to high school so he will have a base for higher addression.

One of the reasons that Hobbs feels so assured is that the 24-hour-a-day living expe-

rience at a Job Corps center gets everything about the enrollee's abilities and habits down on the record.

"This provides a great deal more information than a series of interviews, or even a job trial," he said.

"I feel very strongly that, in the Job Corps, industry has a natural young mine of flexibility and a pool of labor," he said. "Just because these are poor kids who have dropped out of school doesn't mean they are not good workers.

"Once industry realizes they have a pool and can direct the skills and technical training they need, they are going to come to Job Corps and say, 'I need so many of this type of skill.'

"This is one place where the Government is spending money that is an investment. The kids will put money back into the country."

#### The Late John Taber

SPEECH

# HON. THOMAS M. PELLY

1005 Miley

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, October 12, 1966

Mr. PELLY. Mr. Speaker, one of the most able, conscientious, and influential Members of this House when I first came to Congress was the late John Taber, of New York. He had a wonderful grasp of government and complete courage to vote his convictions.

When he retired in 1962, it was because he did not feel able to continue, physically and mentally, to carry out his responsibilities. This was a real loss to the House and to the country, but I felt he was right, because he knew he was unable to carry on as he had done when he was a younger man.

Personally, I learned a great deal from John Taber, but most of all, I admired his integrity. His courage and example will always be an inspiration to me. He was a truly great man and I and many others are better for having been associated with him.

Mr. Speaker, one thing I recall about John Taber was his human understanding and warmth under a gruff exterior. Another quality I remember about him was that when he knew he did not have the votes to prevail, he did not complain or capitulate. Instead, he made his argument and then accepted defeat in good human.

Today, much of my viewpoint and many of the opinions I express are the result of listening to John Taber. He was no orator, but he had the figures and could forcefully defend his position. He was always highly respected by Members on both sides of the aigle.

His collaboration and long friendship and association with the late Clarence Camon, of Missouri, was widely known and served as a wholesome influence in maintaining good legislative procedure.

As it must to all of us, death came to John Taber. Now, Mr. Speaker, let us try to emulate his fine record on behalf of the Nation and fiscal understanding.

I was greatly distressed to read of his death, but his work was done—and well done—so, in spite of sorrow and a sense

of loss, those of us who knew him, it seems to me, should emphasize how fortunate we were. For that, we are all thankful. John Taber is at rest and his problems are over; we are thankful for that, too.

# Difficult Choices Confronting Our Government at the Outset of the New Year

EXTENSION OF REMARKS OF

# HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. SCOTT. Mr. President, I had the privilege of hearing a challenging speech delivered at the annual meeting of the Pennsylvania Society in New York City on December 11, 1965, by Thomas E. Dewey, former Governor of New York and the Republican candidate for President of the United States in 1944 and 1948. Governor Dewey outlined some of the difficult choices confronting our Government at the outset of the new year in the face of our growing involvement in the Vietnam conflict. I ask unanimous consent that Governor Dewey's speech be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE THOMAS E. DEWEY, FORMER GOVERNOR OF NEW YORK, AT THE ANNUAL DINNER OF THE PENNSYLVANIA SO-CIETY, AT THE WALDORP ASTORIA, DECEMBER 11, 1965

It is hard for me to realize that it was 26 years ago when I last had the great ple ure of appearing at the annual dinner of the Pennsylvania Society. On the other hand, in the light of my experience at that dinner, I am a little surprised to find myself back

here again at all. The truth is I was afraid to come back. Twenty-six years ago this month the society's gold medal was presented to a towering figure, the late Senator George Wharton Pepper. In honor of the occasion, Senator Pepper delivered an inspired speech review-ing all the frustrations of his life. I shall never forget it. Among other things, he described in detail how he had long aspired to scribed in detail now he and iong aspired to be Secretary of the Interior but in those New Deal days Harold Ickes was Secretary of the Interior. Senator Pepper observed that under those circumstances he had aban-doned his ambition because he now realised that in order to be Secretary of the Interior, he must share his interior with all the people of the country.

He spoke lovingly of his former aspirations to be Attorney General of the United States. But that aspiration, too, had withered away, he said, because in those bygone days you had to be a lawyer to be Attorney General of the United States.

So it went. One crashing wisecrack followed another for a full half hour and when

he sat down everybody in the room was

helpies with laughter and I may say ready to go home—or repair to the bar.

They faced an unhappy fate. Two minutes later, at 10 o'clock, we went on a national radio hookup and I was introduced, chained to a manuscript previously written and ai-ready released to the press. I was the most miserable prisoner in the room. Historians are still debating how long it took before

people stopped laughing at Senator Pepper and started listening to me. My own opinion is that nobody listened to any of the first half of my speech. I still doubt whether many people listened to the second half.

So you see I come back to the Pennsylvania ty filled with fear and trepidation.

The world was at war 26 years ago and Pearl Harbor was less than 2 years away. We have since seen a costly victory, an uneasy peace and 20 years of cold war. have engaged in a hot war in Korea. W We now fighting a war against the Communists in Vietnam while we defend ourselves at ome in a war by the peace beatniks against their own government; we have a wordy war by the national administration against inflation while it wages a hot war against the Federal Reserve Board for really fighting inflation. All in all, life does not seem to have become simpler.

My own views on Vietnam are somewhat different from many others—perhaps be-cause I have been there. When I first arrived in Saigon it was the only beleaguered capital in the world. The only practicable way to get there was by air. When we landed at the airport, I counted 18 gun empiace-ments and as we drove into Saigon our Am-bassador said, "You will notice that the jungle is cut back far from the road. reason is so the Communists nipers will have a poor chance of hitting us as we go along." And he added: "The landmines they plant every night are cleared in the morning be-

fore we go out to the airport."

That night a grenade was thrown four blocks away, in the center of Saigon, killing two soldiers. No lives were safe even in the capital of the nation.

In neighboring Cambodia they have different problems, including particularly his very eccentric Imperial Highness Norodom Sihanouk. He is the only King I know who resigned his office to run for Premier. That was the election in which the candidates for the parliament campaigned by selling ballots to the natives so they could have the privilege of voting.

In the course of that stop in Cambodia e flew up to Angkor Vat, which is still one of the wonders of the world. As we were walking through one of the great temples, four natives came up, all of them almost naked and carrying bows and arrows. I con-fess it was a relief to know that these local citizens were offering us the bows and arrows for sale. It took five people in four

languages to conduct the negotiations.

In Malaya the British were desperately fighting a jungle war against the Chinese Comunist guerrillae—a sacrificial and difficult war much similar to our present conflict in Vietnam. The Governor, Sir Henry Gurney, and I drove out to jungle headquarters to visit troops whose morale, I may say, was not being undermined by street march-ers in London. The troops were paying heavy penaities, too, and 3 weeks after I left, Sir Henry was assassinated while driv-ing with his wife down the same road.

Indonesia was as confused as ever. Jakarta, the capital, a Dutchman was shot on his front porch, one block from the American Embassy, the night before my visit.

You may be interested to know that the events I am describing occurred 14 years ago, in the summer of 1951. I have been back in the area since and things have changed, of course, some for the better, some for the worse. Indonesia may have been saved from Sukarno's Communist follies by its army. The British have won their war in the jungles of Malaya and that country is free and prospering today in spite of its federation problems with Singapore.

Now, is our involvement in South Vietnam the whole problem today? I wish it were. As you know, Vietnam, together with Cambodia and Laos, made up French Indochina These are to some extent artifically created

with borders winding vaguely

through the jungles.

Vietnam alone is about three times the size of Pennsylvania; Cambodia is nearly twice the size of Pennsylvania and Loas is still larger. Among them they have a population of 40 million people, almost as many as in France.

The land is rich and under-populated. As Sihanouk said to me, "Anybody who wants land can go out in the jungle, clear 20 acres, sign, his name on the village register and he owns it. He pays no taxes and it will sup-port him and his whole family and some more families too." The same is true in Viet-

So let's agree that we are not dealing with some insignificant piece of jungle land whose people are to be surrendered lightly into Communist slavery. And this, of course, is only a small part of the story. If you look at your map, you will see that long peninsula reaching down from the southern border of China. In addition to the former French colonies, it includes Thailand, with its ancient civilization and stout independence. It is four times as big as the State of New York, with nearly twice as many people. Then there is Burma, five times the size of the State of New York, as well as Malaya and Singapore.

These countries together have a population of more than a hundred million people, with rich land, half the tin of the world, half the rubber and huge reserves of oil.

Add to these the Republic of Indonesia, for which we are cherishing more hope today, with its 3,000 islands, 100 million people and incomparable mineral resources.

If you are willing to treat that part of the world as one which is ultimately likely to stand or fall together, then you must add Japan, with its hundred million people and Taiwan—yes, and the Philippines, too. There is no stopping place—there is no particular little country we can throw to the wolves to buy peace. Mr. Chamberlain tried that at Munich and very few are defending that action today.

We are facing a Communist imperialist threat to an area richer in resources than all of free Europe and greater in population. Many of these Asian countries have a strong tradition of freedom and independence but if they are stolen away one by one, our West Coast will finally lie naked on a Communist ocean. Worse than that there will be few left anywhere with the courage to stand up against the imperialist conquerors.

The Communists abroad and their friends here in the United States tell us that all this is really none of our business. They say that of these troubles around the world are really just wars of liberation conducted by the indigenous peoples themselves. want us to relax and placidly watch their puppets seize control of the world bit by bit, all in the name of "national liberation". They insist that any non-Communist government is fair game for them and that only Communist governments are legitimate.

To all those who are tempted to accept these views I suggest that they read and reread Mr. Kosygin's savage interview this week. We are told he spoke in calm and week. We are told he spoke in caim and pleasant tones as he expressed blind hatred for the United States and implacable hos-tility for the cause of freedom everywhere. It really should be crystal clear by now, even to the softest head, that the Soviet Union is determined to carry on its wars of subversion and conquest and is wholly dedicated to that end.

Our struggle for survival will be long and costly. Fortunately I believe our people know the nature of the danger and have the patience, the intelligence, and the character to win through.

As a people we know that freedom will not be defended nor gains made through the

peddling of falsehoods on placards in the streets or the burning of draft cards.

On the other hand, we will not win through by relying on snap judgments and armchair strategies. So long as our Government is soberly facing up to world problems and relying on the best of political, diplomatic, and military opinion, we should support its conduct with calm wisdom and patriotism.

Above all my message to you is that we

must learn patience. It took many centuries to win the liberties we enjoy. They are worth preserving, however, great the cost or long

the struggle.

It would be easier to support the administration in these affairs if it were not itself waging war against important segments of

our own society at home.

For several years now we have had a remarkable increase in productivity, a remarkable decrease in unemployment and relative stability of prices. This certainly gladdens the hearts of all of us and we would hope for its continuance.

Our free economic system has done pretty well for us over the centuries. It has done so much better than any other system anywhere anytime in history that we should cherish it,

teach it in the schools and build it up.

The free market has carried our country
to incredible heights. There is no limit to the future of the productivity of our country or the opportunities for our people. There is

no ceiling we cannot reach.

We may now, however, be at a point when
our power seems greater than it is. If so,
this is a danger point.

Prices have begun to rise over a broad spec-trum of the economy. As matters now stand they are likely to rise further and faster under the strains of the war in Vietnam and heavy deficit spending by the Government. It is not just one or two or three prices that are going up. They are rising across the board and every housewife and every purchasing agent knows it.

Our dilemma could be put in the form of a choice between continuing as we are, and going down a disastrous road of inflation or, on the other hand, heavily reducing our commitments to save the stability of the economy. I do not think either radical

economy. I do not think either radical method is necessary. Certainly we must continue supporting the war in Vietnam to the limit.

the

Certainly we want to implement the fine causes to which we have this year committed great new sums of money in the fields of education and scientific research and the efforts to reduce poverty and open the doors of opportunity to all of our people. Certainly, too, we want to keep our essen-tial commitments to all of our friends around

the world both in the form of defense, mili-

tary support, and economic aid.

Most of all we want to and we must mainain our economic strength for the long pull shead. It seems to me that with good will on all sides and some belt tightening, we can achieve all of our objectives.

Right now, at this stage, we are trying to do too much in too many ways, too fast. Broadly rising prices in a free market indicate a rising temperature. It may or may not be overheated and the debate on that subject is still raging. But for sure you can't make it any colder by talking at it or by putting a piece of ice on the thermom-

Now the administration says it is against inflation. When the price of aluminum went up a half cent they threatened to throw the up a hair cent they threatened to throw the stockpile on the market to stop it. The same occurred with copper and again with wheat. But when credit becomes short there is no atockpile of money to throw at the shortage—there is no stockpile—unless it be printing press money. Call it by any name you will, printing press money is inflation.

One of the time-tested steps to prevent inflation is a rising interest rate. The Federal Reserve Board has now raised the discount

rate and I believe the people owe a debt of gratitude to the Board and its distin-guished Chairman for their wisdom and

This action will also be helpful to our balance of payments. Furthering this cause, the administration has enlarged its program to induce business to reduce its overs vestments on what is euphemistically called a voluntary basis. Despite some reservations as to the permanent validity of the program the leaders of business have accepted it wholeheartedly. Some people are going to get hurt but the Nation comes first, and we may hope the program is successful.

Even if it succeeds, we will still be in trouble. I suggest the time has come for a sterner review of our overseas commitments. Nothing can be stinted in Vietnam so we must look at other areas.

We are maintaining expensive military establishments around the world. For example, 20 years after the end of the war, we are still maintaining large Armed Forces in Europe. This was a hard issue in the late 1940's and I fought vigorously in favor of it when it was proposed by President Truman. Times have changed, however. Europe is fully rebuilt and more prosperous than ever. At a time when we have heavy commitments elsewhere, it may well be time to reduce sharply this expensive program and I believe expert opinion will agree.

The Marshall plan was a tremendous success and accomplished its purpose in restor-ing Europe after the war. Our comparable programs among the developing countries are quite different and I think the time has come to take a very, very hard look at them in the light of our present necessities.

Surely no one would seriously contend that all of our aid around the world has been well spent. Loans and gifts to governments for the construction of new plants where there is no skill or capacity to operate the plants or market the goods have not been notably successful.

On the other hand, the World Bank and the International Monetary Fund have been successful.

Perhaps the most useful aid of all has been in the areas where American free enter-prise built facilities in cooperation with peo-ple of the developing countries.

When government money is involved there is a strong human tendency to find ways to spend it, whether the project is good or bad. If it is private money there is a strong tendency to make it go to work effectively to produce goods and services and to build a capitalist system which will support a free country. I think it is time that our foreign economic aid be substantially reduced and be redirected to the development of private enterprise.

There is more to be done. Many domestic programs started this year call for greatly increased expenditures in the next fiscal year. It seems to me that these commitents require this same hard look we are applying elsewhere and perhaps we might in the process get time to learn better how to manage some of the new programs.

Under these circumstances we can support the war in Vietnam and achieve, as we must, both a better halance in our international payments and in our national budget. This will also be good for the economy because it will be growing soundly with a sound cur-

The amount of artificial stimulants a society can take without damage is a bit like the degree to which an individual can take artificial stimulants without damage. There is a limit and it is well to know where it is. I believe we have reached that limit in our country today and we should take care to recover our balance.

In times of stress, it is well for each of us to respect the opinions of others and I hope I have done so tonight. We are all in the same boat together—a prosperous boat which

is carrying the hopes of all freemen in a perilous sea. Let us hope that we will all have the patience and the courage to pull our share at the oars for so long as we are

#### Pittsburgh's War on Poverty

EXTENSION OF REMARKS

# HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. MOORHEAD. Mr. Speaker, the city of Pittsburgh has benefited substantially from the antipoverty program. But much remains to be done. As I have indicated in previous statements to the House, our program in Pittsburgh might well be studied as a pattern for other cities of comparable size.

The distinguished mayor of our city. Mr. Joseph M. Barr, has written the President a letter outlining some of the significant achievements this past year of the Pittsburgh program and urging not only that funds for the national antipoverty effort be maintained, but that they should be increased if the war on poverty is to be won.

Under leave to extend my remarks, I include Mayor Barr's letter at this point

in the RECORD. CITY OF PITTS

January 5, 1966.

The White House, Washington, D.C.

Dear Mn. Personent: During the past few months, the economic opportunity program (the war on poverty) has come under fire for various reasons.

Such criticism, it seems to me, is perhaps inevitable in a large-scale program as creative and innovative as the war on poverty.

What is disturbing are the accompanying rumors that funds for the Economic Oppor-tunity act will be cut back at a time when this Nation should be strengthening and expanding this bold new effort to stamp out

Such rumors are baseless, I am sure, for I know of your own personal commitment and that of your administration to this pro-gram which has sparked new hope in so many homes and hearts across the country.

My purpose in writing to you at this time is to offer a capsule report of what the anti-poverty effort has made possible in one cum-munity, Pittsburgh, in little more than a year. For it was in November 1964 that the Pittsburgh community-action program was approved and funded for the first time. As a result, we now have the following activi-ties underway, activities that did not exist prior to the enactment of the Economic Opportunity Act.

Some 30,000 children from disadvantaged homes, ranging from preschool age to high school age, are now participating in special compensatory education programs that include preschool classes, reading clinics, tutorial programs, and special classes for the mentally retarded and emotionally disturbed.

Employment centers have been established in eight city neighborhoods, providing op-portunities for employment, manpower reraining courses, the Job Corps, and other training programs in the disadvantaged communities that need these services most. than 500 persons have found jobs through these neighborhood centers. More than 400 persons previously unemployed have been trained and employed as subprofessionals in their own neighborhoods by the community agencies providing services there. Their employability provides visible hope for the families and children with whom they work.

Several thousand Pittsburgh families are receiving a range of comprehensive health and family services including training in child care and home management.

More than 200 young men and women have been placed in the National Job Corps from Pittsburgh.

Legal aid services are available for hundreds of families and individuals who up to

now could not afford professional guidance. Literally hundreds of Pittsburgh citizens in poverty areas are participating in the decisionmaking that directly affects their lives and their community's well-being. They are learning that their views do count, that they can help plan and evaluate every service offered under the aegis of the Economic Opportunity Act.

Through the Neighborhood Youth Corps, we are providing employment for nearly 3,000 young people between the age of 16 and 21, helping them learn new skills, perform necessary jobs that otherwise would not be done in the community. For many of these youngsters, this is their first job, their first chance at economic independence.

Occasionally, a few of these youngsters will

Occasionally, a few of these youngsters will get into trouble. But the encouraging part of our experience is that the vast numbers of them don't; they are responding to supervision and counseling far better than we anticipated.

For example, in the city's own young corps section, more than 125 youngsters out of 600 were persuaded to resume their schooling in the evenings in order to earn a high school

I am convinced that thousands of young men and wemen throughout the country stayed off the streets and out of trouble in 1965 because of the job opportunities provided by the Neighborhood Youth Corps.

Nearly 1,200 preschool children, ages 4 and 5, from slum areas participated in Project Headstart last summer. Each child received a medical and dental examination, many for the first time; each child was exposed to special educational programs to help overcome the disadvantages of an impoverished background.

These are some of the highlights of Pittsburgh's experience under the Economic Opportunity Act. This program has touched the lives of nearly 50,000 of our citizens for the better.

I do not mean to suggest there is any magic formula involved or anything unique in the Pittaburgh experience. I am sure that the antipoverty program has made as good an impact or greater in hundreds of other communities.

We, in Pittsburgh, got off to a good start in this program because of advance community planning.

We have kept this program scrupulously nonpolitical. I consider this a must if essential programs like the war on poverty are not to fonder on the shoals of partisan bickering.

But beyond this, what is required to make the antipoverty effort work is a deep discontent with the eixstence of poverty in our midst and a strong commitment to do something about it.

There have been occasions when we encountered administrative difficulties at the local and Pederal level—and we probably will encounter still more. This is to be expected. At the same time, we are encouraged by the unstituting cooperation we have received from the OEO staff in Washington, beer competence, their enthusiasm, their availability at virtually any hour of the day.

In my judgment, the war on poverty is

the one program which can ultimately help achieve the goal of equality for all our citizens in terms of better education, improved health and welfare services and increased training and job opportunities.

In summary, we are encouraged by the results of 14 months of operation in the Pitteburgh war on poverty. But we are committed for the duration. To break the poverty cycle which has entrapped thousands of Americans for generations is no short-term venture. Such a commitment, in turn, will require a greater outlay of funds than anything that has yet been proposed.

Pittsburgh is one community that regards the war on poverty as one that must be waged vigorously—and the Economic Opportunity Act is the arsenal from which we draw our weapons for this struggle.

This arsenal must now be expended to enable more and more communities to give their less fortunate citizens a second chance for a better life and a better future.

We, in Pittsburgh, are grateful to your administration for having brought new hope into the lives of millions of Americans who are not aharing in the overall prosperity of this richest nation on earth.

We are hopeful the Economic Opportunity Act will be strengthened and expanded in the new Federal budget for the major effort that still remains before us.

Very truly yours,

JOSEPH M. BARR,

Mayor, President, Mayor's Committee on
Human Resources, Inc.

#### Wisconsin's Great Record in Vocational Education

EXTENSION OF REMARKS

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1966

Mr. PROXMIRE. Mr. President, Wisconsin has long been a leader in providing vocational training as well as the more formal classroom education for its young people. In fact, Wisconsin was the first State—more than 50 years ago—to establish such a program.

This leadership in an area so vital to the future of our Nation is clearly stated in a remarkable advertisement of the Marshall and Ilsley Bank in the Milwaukee Sentinel.

It points out that nearly every Wisconsin community with 5,000 or more persons has a vocational, technical, and adult education program. Smaller communities are served by traveling instructors.

This outstanding program is a tribute to the cooperative efforts of more than 2,300 local business, industrial, and labor leaders working with their community officials to provide an efficient and productive labor force.

This—in my judgment—is a prime reason why Wisconsin, in spite of many difficulties and vicissitudes, has been able to reduce its unemployment rate well below the national average.

I ask unanimous consent that the advertisement to which I have referred be printed in the Appendix of the Record.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

[From the Milwaukee (Wis.) Sentinel, Nov. 16, 1965]

WHY IT'S EASIER TO CLIMB THE ECONOMIC LADDER IN WISCONSIN

By taking part in Wisconsin's top-rated vocational, technical and adult education, our citizens can start at the skilled worker level and advance rapidly. No State has a better system. Although a relatively high percentage of Wisconsin students go on to college, there is an abundance of opportunity for those with special training and skills. Wisconsin was the first State in the Union to establish an independent vocational, technical and adult education program. After more than a half century of experience, Wisconsin is recognized internationally as a leader in vocational training.

Nearly every community of 5,000 or more population is now included in the program. Traveling instructors serve areas where local needs do not justify a full-time teacher. More than 2,300 local business, industrial and labor leaders work with 400 advisory committees to keep training up to date and geared to specific needs. In proportion of population enrolled in vocational programs, Wisconsin is 35 percent higher than U.S. average. Enrollment in vocational and adult programs reached 177,000 in 1963-64. About 15,500 were enrolled in full-time post high school programs. Writing in Harper's magaine, Edward T. Chase, consultant on public affairs, states: "Milwaukee, which puts more money into vocational education than any other city its size, has a model system."

In another area of job training, more than 7,000 State firemen, from industry as well as public departments, participate annually in a firemanship training program which has a favorable effect on Wisconsin fire insurance rates. Training on improved safety practices on the job, in the home, on the road and in recreation reduces industrial liability costs and decreases job absences from injury. A deep and constantly-renewable pool of skilled workers is only one reason why industries are turning to Wisconsin as a place to do business. They like it here.

#### The Tetons of Wyoming

EXTENSION OF REMARKS

#### HON. TENO RONCALIO

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. RONCALIO. Mr. Speaker, yesterday before any business except a notice of the President's state of the Union address, had been transacted by this body, my fine neighbor, the able and matchless from Colorado, gentleman BYRON ROGERS, called before the House a joint resolution which was immediately considered and agreed. It called for National Ski Week in recognition of the recreational, economic, and healthful aspects of this truly matchless sport. am happy to join him and other col-leagues in inviting the people of the United States to observe this week by participation in the appropriate ceremonies and activities. More particularly, I call to their attention the growth of an area in Wyoming matched only by Sun Valley and Aspen in the magnitude of its runs, the distance of its vertical descent, and the complete grandeur and indescribable beauty of its creation.

I refer to the new Teton Village now being completed at Jackson Hole—the result of 4 years of labor of my friends Alex Morley. Jr., and Paul McCollister.

Indeed, Mr. Speaker, it is with some degree of personal emotion that I bring these comments to the floor of the House, for were I not in Congress today I believe that the course I would have taken would have led me to be the third man in the development of this great area for Wyoming.

I am happy to call to the attention of my colleagues the lead article of the world's largest ski magazine, Ski, for January 1966, an excellent article by Bill Tanler, and take this opportunity to invite all readers of the Congressional Record who ski to ski Jackson Hole, and particularly to know the joy of being able to see the Tetons and to ski them in one grand and matchless experience.

The article follows:

BIG AND NEW ON THE ALPINE FRONTIER— JACKSON HOLE AIMS TO OPEN 4,135 VERTI-CAL FEET OF SKIING AND A HEADY MIXTURE OF FRONTIER WEST AND EUROPEAN ALPINE (By Bill Tanler)

When the Austrian ski team appeared in the Rockies last spring for a series of international races, instead of native green or gray Tyrolian hats, the official team headdress was the traditional white and Western 10-gallon hat. It was on that same gallop through the western Unitéd States that Austrian coach and head cowboy Pepi Stiegler was offered and turned down the job of ski school director at a promising new ski resort that had yet to open. But in the fall, Stiegler made another swing through the West, reconsidered, accepted the job and swapped a home in Liens for a bunk in one of America's picture postcard frontier towns, Jackson, Wyo.

The addition of a gold medalist to the Jackson Hole Ski Corp. staff further enhances the resort as the most exciting new ski area to open in the West since Vail. Stiegler, best remembered as the Austrian who edged Bill Kidd and Jimmy Heuga in the slalom at Innsbruck, also adds to that curious blending of European Alpine and American West, a kind of mixed atmosphere that encourages Austrian competitors to seek out cowboy hats and west them.

Despite a functional alpine style of architecture being adopted for Teton Village at the foot of the area's tram (pitched roofs with big overhangs and multistory buildings), the flavor is likely to remain frontier western under the influences of nearby Jackson, an easy 12-mile drive from the ski area.

The town of Jackson itself sits very much alone in the northwest corner of the State. It is bordered by the Teton Range to the west and the 13,766-foot Grand stands just to the north of the ski development. Directly to the north are famous Yellowstone and Grand Teton National Parks. To the south and east are great gaps of Wyoming countryside, rolling brown hills, high plateaus, the Wind River Range, and very little else. In spite of its relative isolation, approxi-

d-

ly.

ON

nt

n-

he

ful

he

by

re-

ar-

of

by

ade

cal

In spite of its relative isolation, approximately 2 million visitors funnel through Jackson every summer, most of them on their way to or returning from a visit to Old Faith-ful, the Paint Pots, or any one of a hundred natural surprises to be found in the national parks. This surplus of summer traffic has created accommodations for about 4,000 in the Jackson Hole country and the bountiful number of places to stay can only work to the advantage of the wintertime skier.

The appeal of the western atmosphere is undeniable. The scenery has been seen, at least subconsciously, by millions of movies goers. "Shane," "The Big Sky," and a dozen other movies have unraveled their western

plots with the Grand Tetons as a backdrop. But in looking at the region from the skier's point of view, the key, of course, is the mountain itself, a forbidding looking collection of cuts and rocks faces that surprising enough opens up for the skier int a variety of bowls, wide slopes, natural draws and glades. The reason for the deceptive appearance of the mountain from the valley floor is simply its size. It is a 2½-mile trip from the valley floor to Rendezvous Peak, a vertical rise of 4,135 feet; the 63-passenger cabins of the Jackson Hole tram will make the trip in about 8 minutes. Moreover, the resort's little mountain, without its bigger brother, would be considered a major area in its own right; its two chairlifts in tandem, provide 2,100 vertical feet of skiing.

vertical feet of skiing.

Aithough the size of the Jackson Hole area has an appeal for the better skier, much of the best terrain is no more than intermediate, and even the beginner will find plenty of room on easy slopes. A 2,300-foot double charifit, the area's third chair, serves a slope with only a 334-foot vertical cut out of timber near the bottom of the area. This is the teaching slope and beginners' area.

For this first season, there are three lodges open in Teton Village, the Seven-Levels, Alpenhof and Sojourner, pius about half a dozen private lodges completed on lots sold by the ski corporation. The Seven Levels houses a bar and rathskeller, restaurant, and ski shop. There is also a restaurant in the Alpenhof and a cafeteria in the Valley Station of the tram, a building that also contains ski patrol facilities and the business

Considering its relative remoteness, get ting to Jackson is not necessarily complicated, but if you drive, be prepared to spend some time on the road. Salt Lake City, for example, the nearest major city, is 265 miles to the south. Reaching Jackson by air is another story. Frontier Airlines has regularly scheduled flights into Jackson every day from Salt Lake City and Billings, Mont. Additional service has been planned directly from Den-Right now the drive from the airport to the ski area is approximately 16 miles, but if the State proceeds with plans to build a new bridge across the Snake River, the airport will only be 4 miles from Teton Village. Eventually the airport is expected to be enlarged to live it the capacity to handle fullsized jets, a particularly popular idea for clubs and groups considering charter flights Indeed, Jackson Hole is the first major ski resort in the world to rely on air transport as the prime means of bringing

Even if you accept the charm of its westsetting as a major asset, the Jackson Hole ski area built up a remarkable record of acceptance before the first lift had been put into service. As a starter, the area was chosen as the site for this year's U.S. ski team Christmas training camp. And then the ski movie crowd taking in the current John Jay, Warren Miller, or Dick Barrymore films, was exposed to considerable Jackson Hole footage. The principal coup, however, was the acceptance by the U.S. Ski Association of Jackson Hole as its nominee as the site of the 1970 FIS world ski championships. Although inherent qualities of the ski development were partly responsible for the early interest in Jackson Hole, much of the action was generated by a migrant California busian, Paul McCollister, who fell in love with the Jackson Hole country, bought a and became a permanent resident. McCollister, the ski corporation president, used the touch of a Pled Piper to coax a steady stream of visitors into Jackson for a firsthand look at the big mountain.

McCollister turned up regularly at ski meets, ski meetings and anywhere else skiers and ski officials were likely to gather, including the FIS meeting last June in Mamaia, Rumania, to explain away the fact that the ski area had missed its original opening

date by a full year and to spin tales of the wonders of Jackson Hole. Although it has never been widely publicized, McCollister had succeeded in reaching an agreement to have Bud Werner become aki school director following Werner's last appearance in the Olympics in 1964. Werner's death in the Swiss avalanche shortly after the Innabruck games also broke up a reunion at Jackson with Werner's lifelong friend and coach, Gordy Wren, now area manager at Jackson Hole.

It is true that much of the enthusiasm for the new six resort comes from the very size of the area, but skiing certainly isn't new in Jackson. The Snow King area, located just 6 blocks from the town's main street, has been in operation for 25 years and twice has been the site of the national junior championships. Snow King's chair-lift was built in 1948. With a vertical of 1,700 feet, the area offers challenging skiing by anyone's definition. But eyes are on the big hill now, and it's possible that at the next FIS meeting in 1967, Jackson Hole will outbid the Swiss, Austrians, Japanese, Italians, and Germans to bring the world championships to Wyoming. There is already strong evidence to prove that the frontier image of the American West is most appealing to the rest of the world.

## Free Enterprise Association Awards

EXTENSION OF REMARKS

# HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1966

Mr. MUNDT. Mr. President, last month in New York City, the Free Enterprise Awards Association headquartered at 507 Fifth Avenue, New York City, held its annual awards ceremonies in the Waldorf-Astoria Hotel. Among those selected among the top 10 business success stories in America was 1 of South Dakota's distinguished citizens—Paul C. Green, president of the Hub City Iron Co., of Aberdeen, S. Dak. He richly deserves this recognition.

I ask at this point in my remarks to have reprinted a news story of December 21, 1965, reporting this inspiring event and following that a brief historical report of the steady steps toward success achieved by South Dakota's Paul Green.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE ENTERPRISE AWARDS ASSOCIATION PRE-SENTS TREEM—RECIPIENTS COME FROM ALL OVER UNITED STATES TO CREDIT, PRAISE AMERICAN DEMOCRACY

New York City.—The 14th annual American Success Story Awards were presented today to 10 men "who symbolize the success possible to all under America's free enterprise democracy."

The recipients came from all over the United States to praise and credit the American way of life for making success possible.

Talbot T. Speer, who rose to own America's oldest paper, the 238-year-old Maryland Gazette, a newspaper chain, and Baltimore Business Forms, Inc., was the FEAA's awards chairman for the Waldorf-Astoria cere-

The awardees were cited for their contributions to the economic growth of their

communities, to their industries and for their dedicated work in civil, religious and

philanthropic causes

Speer has urged editors, government leaders and Americans in all fields to "get on a soapbox to counteract the Communist-orga nized anti-American demonstrations staged to subvert our people to communism and

He said that despite years of Red propa-anda, Americans—free to vote any "ism" ganda, Americanshave always chosen Americanism. He warned, however, that our Nation's life "is at stake in these days of crisis and I urge all Americans to cherish, champion and defend our democracy which allows private enterprise, religious freedom and the highest standard of living."

The Free Enterprise Awards Association, Inc., was chartered in 1952. With leaders in all fields it carries out its charter duties, \*\* \* \* to promote incentive and champion the cause of the American democratic system to bolster the faith of all people in the

American way of life."

The recipients, selected from various U.S. trades and areas to show the opportunities and success possible in all parts of the United

James S. Hunt, 67, of Port Lauderdale, Fla founder, president and chairman of Coral Ridge Properties, Inc., Fort Lauderdale, Fla.

Kenneth S. Kelleher, 42, of Alexandria, Va., president and founder of Keltec Industries.

Ted C. Wetterau, Sr., 76, of Frontenac, Mo., chairman of Wetterau Foods, Inc. of Hazel-

Everette E. Ballard, 64, of Park Ridge, Ill., president of All American Life & Casualty Co. of Park Ridge.

Harry C. Gravely, 47, of Martinsville, Va.,

president of the Gravely Furniture Co.

Morris B. Beschloss, 36, of Flossmoor, Ill.,
president of the Hammond Valve Corp., Ham-

Robert F. Hayes, 61, of Nashville, Tenn., president, chairman of the board, and found-er of the Hayes Garment Co. of Nashville,

James W. Sikes, 36, of Lakeland, Fla., president and founder of Florida Tile Industries,

George Perrin, 38, of Fort Smith, Ark., president and founder of the Plastics Rearch & Development Corp., of Fort Smith, Ark.

Paul C. Green, 67, of Aberdeen, S. Dak., resident of the Hub City Iron Co., the Hub City Iron Store of Aberdeen.

Mr. MUNDT. Mr. President, before reading into the RECORD the historical sketch of Paul Green's achievements, I ask unanimous consent to have printed in the RECORD an editorial of which I strongly approve appearing in the Evening Capital newspaper of Annapolis, Md.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AWARDS PROVE PREEDOM'S VALUES

Congratulations to the 10 men whose outstanding records of business and civic service have won them today's richly-deserved

American Success Story Awards.
Their stories are outstanding examples of what can be achieved under democracy, where freedom of choice and ability, based on the foundation of a belief in God and in the district of mean results.

dignity of man prevails.

They did not have to function under a system that places itself above the dignity of man as an individual, or have to please

party agents or leaders, to obtain success.
Russia's leaders would do well to take a lesson from this and give it deep thought. It would give them a better understanding of the democratic system, which they criticises and try to tear down, and also of the power and strength of the United States and other The Free Enterprise Awards Association deserves high praise for pointing out to the world the proof of the value of our free enterprise system.

Mr. MUNDT. Mr. President, in conclusion, I now call attention to the success story of Paul Green, of Aberdeen, S. Dak.

There being no objection, the historical sketch of Paul C. Green was ordered to be printed in the RECORD, as follows:

Paul C. Green, 67 (Residence: 1741 South Main Street, Aberdeen, S. Dak.); president, Hub City Iron Co., Hub City Iron Store, Aberdeen, S. Dak., director, Aberdeen Na-

To be a recipient of the Free Enterprise Awards Association's 14th Annual 1965 American Success Story Awards as an example of the success possible under America's free en-

terprise democracy.

Was raised in poor ploneer area. Starting at age 12 learned business from ground up in father's small machine shop while finishing high school. Had odd jobs. Was radio operator on North Sea minesweeper World Was National Guardsman and in Officers Reserve Corps. Took mail course in business administration. Risked meager savings and took over father's debt-ridden machine shop during 1932 depression.

Starting with 13 employees and after years of hard work, long hours, and many obstacles he built Hub City Iron Co., into one of Aberdeen's largest industries and worldwide leadership with a 12-building complex of 200,000 square feet. He trained and employed hundreds of craftsmen, installed modern machine tools, a gray iron foundry, developed and patented many diversified

engine and farm implement products.

Today Hub City Iron Co. makes (with stocks for immediate delivery) millions of precision made gear boxes, engine valve guides, valve seat inserts, cylinder sleeves and other engine parts, and shop equipment for all automobile, truck, tractor, and industrial engines and machinery. City is also a world leader in agricultural implement parts, power transmission units, spline shaft adapters and reducers and safeguard safety shielding assemblies. Hub also custom casts and machines parts for all industries and is now enlarging foundry for 50 percent more capacity.

Hundreds of distributors sell and service

its products throughout the United State Canada, Mexico, and the free world with over \$5 million in sales to small and major manufactures of all types of machinery and to Army, Navy, and Air Force. His Hub City Iron Store is a wholesaler of automotive, truck, tractor, and farm implement replacement parts, shop equipment and supplies, plus general machine shop service and weld-ing. P. C. Green works for many civic causes. He is executive reservist in the general in-dustrial equipment and components divi-sion of the commerce department, director of Dakota Wesleyan University, hoard president of Aberdeen YMCA and has served on its international committees and national council. Cited for his vital contributions to his field, to American industry and our national defense.

A Tribute to Herbert Bonner

SPEECH OF

HON, THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966 Mr. PELLY. Mr. Speaker, for more than 10 years it was my good fortune to

serve on the House Committee on Merchant Marine and Fisheries, while HERB Bonner was the chairman. During this time, I learned firsthand that HERB was a man of the highest integrity, dedicated to the welfare of all matters coming under his committee jurisdiction.

For a number of years, my wife and I lived right across the hall from the HERBERT BONNERS in an apartment house. It was during this time that I first learned to know HERB and to realize that, modest and quiet though he was, he had a wide knowledge and keen understanding of the problems confronting the maritime and fishing industries. Especially, I discovered the patient care he always gave to his committee responsibilities.

So it is that my association with himnow, unhappily, terminated-has left warm memories as well as deep respect and admiration.

It was a real honor to serve under HER-BERT BONNER, and I shall never cease to cherish this experience.

To his wife, who was so dear to him and always his close companion, my wife and I extend our most profound sympathy. We share her sorrow. The memory of her husband's fine character and wonderful record is something that Mrs. Bonner will retain along with the devotion of her husband's friends, and we hope these blessings will always bring her comfort and satisfaction.

# Award To Honor Memory of Lieutenant Hauschildt

EXTENSION OF REMARKS OF

# HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include the following news item from the December 10, 1965, issue of the Hydeparker, the paper of the Hyde Park High School in Chicago:

ROTC To GRANT HAUSCHILDT AWARD TO BEST HYDE PARK CADET

Each year one Hyde Park ROTC cadet will be chosen to receive the John C. Hauschildt Award. This award is being made by the Hyde Park High School Junior ROTC Cadet Corps to honor the memory of 1st Lt. John C. Hauschildt, USAF. Lieutenant Haus-childt, the first Hyde Park alumnus to die in the Vietnam war, was killed in action when his plane exploded after being struck by enemy gunfire. At the time he was making his third pass over a target about 200 miles north of Saigon.

During his high school years at Hyde Park, Lieutenant Hauschildt, a member of ROTO, yearned to become a pilot. He continually worked at building model planes and battle-

After high school he attended the University of Illinois for a short time before joining the Air Force. Within a year, he earned an appointment to the Air Porce Academy, from which he graduated 19th in a class of 500.

The winner of the Hauschildt Award will be chosen by a committee consisting of the military instructors, the assistant principal for administration and the chairman of the guidance department.

The winner of this award must be a junior or senior; must have no school record of disciplinary insubordination; must be eligible for the ROTC Neatness Ribbon Bar; must have earned the ROTC Extra Duty Ribbon Bar during the current school year; must have an average of "O" or higher in major subjects; must have an average of "B" or higher in ROTC.

The winner will have his name engraved on a permanent trophy donated by the Hyde Park ROTC and will be given a silver medallion presented by the Hauschildt family.

Henry W. Morrow, Able West Virginia Journalist, Calls for Thoughtful Participation of All Citizens in Developing Public Policies

EXTENSION OF REMARKS

# HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. RANDOLPH. Mr. President, I had the pleasure recently of reading a column by Henry W. Morrow, an able newspaperman and associate editor of the Spirit of Jefferson Advocate of Charles Town, W. Va. It is a thought-provoking article on the complacent thinking in our American society.

Mr. President, I ask unanimous consent that this material be printed in the

Appendix of the RECORD.

There being no objection

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Spirit of Jefferson Advocate, Jan. 6, 1966]

HARDLY WORTH MENTION SOMETHING FOR 1966

One of the most powerful forces in the world today, particularly in a free country, is public opinion. It prompts governments to act in one field and deters them in another. It provides more checks and balances than the Constitution ever dreamed of. And yet I shudder to think of how careless we are in forming it, collectively and individually. What better way to begin 1966 than to resolve to do something about the shoddy processes which characterize the way most of us go about forming—and expressing—an opinion? A few years ago an enterprising printer made himself quite a bit of money by printing small placards which were laughingly sold to thousands of executives across the Nation. The card said simply, "My mind is made up. Don't confuse me with the facts."

Everybody laughed, scarcely stopping to realize the ironical truth: that most of us do make up our minds prematurely, so to speak, and are loath to change them once they are made up, regardless of the facts. The "loath to change" may come about as a result of blind prejudice (which is probably as bad, if not actually worse, than an ill-founded opinion), or it may come about as a result of simple vanity and pride, born of an unwillingness to admit we were wrong.

n

ie

00

113

8

ng

0. vill

he

The best insurance against getting "caught with our opinions down" is to be reasonably sure we have all the available facts before we form and express them. Opinions, by their very nature, are never either right or wrong. But facts exist or they do not exist. There is no better way of shaking an opinion to its very roots than by showing it to be predicated on a false foundation; i.e., non-existent facts. Few things can make us look more silly than forming opinions on the

basis of erroneous or distorted information. Another favorite pastime is that of forming opinions without hearing both sides of a given proposition. Still another pitfall is the tendency to form opinions on the basis of hearsay evidence. Hearsay evidence is generally nothing more than gossip. We should also carefully scrutinize our own opinions and those of others when they are formed or expressed in sweeping generalizations. Many a good idea has been consigned to the trash heap simply because someone said it was socialistic or communistic. Labels of this sort are sometimes warranted. But usually they are employed by minds too incompetent to think things through, and give a judgment on the package instead of on the label on the package. Two of the favorite whipping boys in this country today are big Government and the Supreme Court. What the Government does in Washington and what the Supreme Court decides in Washington should, in the very nature of things, be subjected to the most searching inquiry and analysis. But there is not place in the thinking man's wardrobe for categorized condemnation—condemnation that is based on labels instead of being based on what's in the package.

At the present time we have a President in the White House making round-the-clock decisions that, in one way or another, affect each and every one of us. It is reliably re-ported that many of those decisions are made on the basis of consensus of public opinion. I am not altogether sure by any means that this is a good way to make de-cisions; but if this is so, as I am reasonably sure it is, it behooves each of us to be a whole lot more careful than we have hitherto en in arriving at our own opinions, all of which go to make up the national consensus. It is bad enough to be brand conscious about the nationally advertised products we use in everyday life, and in this field we sit docily by and let Madison Avenue techniques determine what we eat, what we drink, and what we wear. But when we let the Madison Avenue technique tell us what to think. when we permit the merit of an opinion to be weighted and determined not by our own testing but by someone else's, we are in trou-Reasoning from the authority of books, from the opinions of others, is not knowledge. It is faith. And when it comes to public opinion, I, for one, prefer not to be a blind, little sheep, following the leader, with a secondhand cart full of secondhand opinions, and with none of my own fashioning to sell or display.

If, by some magic mystery, I could have three wishes for 1966 they would be: That people would think; that people would think; that people would think. Here is the key to truth that will ultimately set us free.

# Sheridan Junior College Supports American Effort in Vietnam

EXTENSION OF REMARKS

#### HON. MILWARD L. SIMPSON

OF WYOMENG

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1966

Mr. SIMPSON. Mr. President, on this opening day of Congress with the specter of the continuing war in Vietnam ever present in the Senate and the House, I think it fitting that the RECORD of the first day's deliberations carry the very brief but eloquent statement in support of our war effort issued by 105 students of the junior college at Sheridan, Wyo.

I ask that the petition and the names of the signers be printed in the Appendix of the Riccord as one more bit of evidence that those irresponsible students who would send food and fiber to our Nation's enemies and work actively against our efforts to aid South Vietnam in repelling aggression are a minority—a very small minority—of our Nation's youth. The students of Sheridan Junior College understand why Americans fight in Vietnam, and they support our Government and our men in uniform.

There being no objection, the petition, with the signatures, was ordered to be printed in the Record, as follows:

PETITION CIRCULATED AT SHERIDAN JUNIOR COLLEGE

We, the undersigned, join with thousands of other students on the campuses of the United States in support of the American forces in their efforts in Vietnam:

LaVern Bjerk, Karen Barker, Lorretta Pendergraft, Alan South, Bob Finney, Dave DeLauter, Chris Sears, Lonnie Lindstrom, Dave Lenz, Fred Alley, Cedric Alley, Bernice King, Dick Legocki, Bill Workman, George Wing, Fred Buchanan, Chip Rhoads, Jerry Hampehire, Bill Petty, Judy Shannon, Coheri Haptionstall, Roger J. Themie.

Willa Miller, Jermaine Lehr, Janet Redies, Dave Parker, Fidding L. Childress, D. W. Clabaugh, Virginia Huzen, Judy Kirchman, Terry Harper, Stuart Briggs, Danny Heagney, Ray Barney, Tom Kinnison, Clayton Morris, June Montgomery, Linda Persons, Rocky Pedulla, Lois Garson, John Holstedt, Warren Kuhl, Tim Brown, Melvin Masted, Gregory White, Joan S. White, Virginia Walle

Forest Dunning, Steve Jacobson, Tom Logan, Mary Anne Quintana, Kay Wallick, Pat Stresky, Nydia Rodrigues, Jim Urbatchka, Maj. Don Robbins, Dan Young, Wesley P. Lyles, Jr., Geora Jean Lanz, Rod Ford, Michael Thompson, Richard L. Rasmussan, Jill Streklaw, Judy Baker, Richard Pueete, Richard Tabema, Neil A. Brown, Bill King, Mary Jean Reeves, Marla Roch, Jackie Ouarterman.

Martin Anderson, Robert Bowen, Jim Connor, Ed Moore, John Aldrich, Larry Wakefield, Rusty David Bennett Anderson, Eldon Reed, Jim Kuyatt, Jack Sarratt, Jacque Miller, Donald G. Lavigne, Bill Hansen, Peggy Collins, Susan Mitchell, Alice Janney, Billie May Vielhauer, John Richard Lopez, Irene Hull, Norman McEwan, Janice Donnafield, Fatricia Silla, Janet Schmidt, L. Bird, Jim Weddle, Joyce Bohnvack, Bill Stearns, Dave Conley, James Green, Wendy Westrick, Charlie Walker, Mike Sherman, Louie Torrence, Stanley S. Sheehan, Ken Calkins.

Space Wives Elated

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, we hear little of those who support our astronauts in reaching the goal of a lunar landing in this decade. Among our most important contributors to our national space effort are the wives of the astro-

nauts themselves. An article in the Dallas Times Herald of December 17, 1965, gives a brief, interesting insight into the wonderful support these fine women are giving to the men who have accepted the challenge of space. They serve as an outstanding example of all of those in the space program who support our astronauts both directly and indirectly. The story of Mrs. Schirra and Mrs. Stafford is a heartwarming example for all Americans. The article follows:

#### SPACE WIVES ELATED

SEABROOK, TEX .-- Mrs. Walter Schirra and Mrs. Thomas Stafford, thrilled by long-dis-tance personal reports on history's first space rendezvous from their husbands, sent their children off to school today and finished preparations for Christmas.

oth wives talked for 6 minutes by radiotelephone with their astronaut husbands from the aircraft carrier U.S.S. Wasp. They aid the conversations were "mostly about the flight."

Mrs. Schirra said her reaction to the sight of the astronauts popping out of the capsule and the Marine band on the ship playing "Anchors Aweigh" was "a feeling you can hardly describe."

Mrs. Stafford and the seven other astronaut

wives who dropped in to watch the recovery on television celebrated with champagne.

Mrs. Stafford said seeing the space capsule hoisted aboard the carrier and the astronauts' safe emergence was "the greatest thing in the

Karin Stafford, 8, said her father looked bald on television.

Mrs. Frank Borman, whose husband is still in space aboard the Gemini 7 capsule, watched the recovery at Mrs. Stafford's home. Mrs. James Lovell, expecting a baby at the end of the month, was home for the splashdown. She planned a visit to her doctor today.

Mrs. Lovell, who had several friends over for coffee and cake after taking a nap, said her telephone was "ringing off the hook" with calls from friends excited about the Gemini 7 flight and rendezvous with Schirra and Staf-

Jo Schirra and several friends later had a "Christmas tree raising" at the Schirras' home in suburban Timber Cove.

At the Stafford home for the recovery were Mrs. Borman, Jane Conrad, Jan Armstrong, Pat McDivitt, Marilyn See, Harriet Eisele, Barbara Young, and Mrs. Borman's sister, Buth Bugbee of Tucson, Ariz.

# Senator Muskie Urges Citizen Action

EXTENSION OF REMARKS OF

#### HON. FRANK CHURCH

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. CHURCH. Mr. President

In a free society, there is really no way to achieve a more beautiful environment un-less each individual citizen makes national beautification his personal responsibility.

Senator EDMUND MUSKIE, who spoke those words, has himself practiced what those words, has himself practiced what he preaches. As chairman of the Senate Subcommittee on Air and Water Pollu-tion, he has led the way to enactment of legislation to control the poisoning of air and water, and he has pointed toward further progress by emphasizing inter-

governmental cooperation and citizen participation.

Mr. President, I ask unanimous consent that an interview with Senator Mus-KIE entitled "This Must Be a Citizen Action Program," appearing in the General Electric Forum for October-December, be printed at this point in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS MUST BE A CITIZEN ACTION PROGRAM— AN INTERVIEW WITH SENATOR EDMUND S. MUSKIE, CHAIRMAN, SENATE SUBCOMMITTEE ON AIR AND WATER POLLUTION

Question. To be truly effective, any na-tional program must ultimately have the support and understanding of the individual citisen. In your view, why is a program of natural beautification important to the American people? What are some of the problems we face in this area?

The preservation of America's natural beauty really boils down to proper resource opment and use. And within this subject there are no more pressing Issues today than the twin problems of air and water pollution.

Not too many years ago, the demand of conservationists for water pollution abatement was greeted with the remark: "What do you want, payrolls or pickerel?" The answer, of course, was and is: "Both." We need ample supplies of high quality water for life, health, recreation, and industry. And, fortunately, more and more of our citizens recognize it.

The major difficulty is that air and water are limited resources. We have only so much of each, and we must find ways of reducing pollution if we are to survive.

When our Nation was founded, the abundant supplies of clean water seemed limitless. They became our highways, sources of power and irrigation, and refuge for fish and wildlife. Unfortunately, the waterways also became an easy place to dump waste products, without thought to the consequences to future generations.

On a national scale the problem of water resources today has grown into one of major dimension. Every day we make more demands on our water supplies—for industrial, agricultural, personal, and recreational uses.

Within just 15 years, our requirements for water in the United States will outstrip sup-plies by at least 85 billion gallons per day. By the year 2000, the daily demand is expected to be 350 billion gallons greater than the supply. This means that we must ac-celerate our efforts to clean up fouled waters and to reuse water wherever possible, not only for swimming and fishing, but for drinking and industry as well.

Under these circumstances, making sure that enough water is available to everyone, everywhere, at all times will tax our technical skills, our ingenuity, and our capital re-sources, both public and private. There is, unfortunately, no cheap and easy solution to the problem of water pollution control and

#### INDUSTRY DEPENDS ON QUALITY WATER

There is a very close relationship between water quality and industrial development. In fact, water quality is at the heart of this Nation's future economic growth. Industry cannot flourish without quality water, and some cannot even exist without it.

In an economically distressed area in e, for example, a cannery was nearly forced to cancel plans for a new plant be-cause no oxygen was left in the stream from which the cannery was to draw water for its processing. The problems were worked out, but this is a good example of how one area could have lost 300 jobs because of the condition of the river.

The problem is not limited, by the way, to

surface water pollution. There are similar examples of industrial location decisions which were affected one way or another by the quality of underground water for wells.

On the most coast of the United States, the evere drought conditions which plagued some areas for as much as 4 years have served to make everyone more aware than ever before of the difficult problems we have in managing water resources

Air poliution is also becoming an economic problem of serious proportions. Its effects on health have, of course, been well docu-mented and publicized. The most distressing example was the London smog of 1952, in which air pollution was blamed for some Many respiratory diseases are 4,000 deaths. being linked closely to air pollution by health authorities.

And air pollution also is responsible for roughly \$11 billion a year in property damage to agriculture, city buildings and monu-ments, and individual homes.

Question. What challenges to Government—at all levels—are posed by problems of national beautification?

Because this is a national problem, there are naturally a number of legislative measures which have been enacted by Congress or which will be voted upon in the near future.

In 1963, Congress passed the Clean Air Act to stimulate the national effort to abate and control air pollution. This year Congress amended this legislation to require all new automobile engines to be equipped with devices or modified to control engine exhausts. Automobiles are the single largest source of air pollution, and the new requirements should reduce harmful emission from automobiles by up to 30 percent.

The amendments also accelerate research

on the whole range of air pollution sources, and encourage municipalities to reduce air

pollution from solid waste disposal facilities.

The Water Quality Act of 1965 has been enacted to amend the basic Water Pollution Control and Abatement Act, which was passed in 1961. The Water Quality Act provides for an Assistant Secretary of Health, Education, and Welfare to supervise water pollution control activities. It also makes ossible grants for additional pollution research and development, increases grants for construction of municipal sewage treatment works, and authorizes establishment of water quality standards on interstate waterways.

One of the key measures in the President's natural beauty program is the Highway Beau-tification Act which was passed by Congress this fall. This legislation authorizes use of Federal funds to help States control outdoor advertising and junkyards along 41,000 miles of interstate highways and 224,000 miles of primary roads.

In short, the Federal Government has a substantial role to play in research in encouraging cooperative programs, stimulating and supporting interstate, State and local programs, in encouraging compliance with quality standards, and in enforcement in such areas as interstate navigable streams where there has been a refusal to accept public responsibility.

INTERGOVERNMENTAL COOPERATION NEEDED

However, one of the most important challenges to government, in general, is to im-prove the coordination between Federal, State, and local government units. Much of the beautification effort is tied closely to governmental problems of metropolitan areas, where more than two-thirds of our citimens now live.

In most of these areas, there is a great problem of numerous, overlapping, and compet-ing jurisdictions of local government. The average number of independent units of gov-arnment per metropolitan area is 87. There are 1,060 in the Chicago area, and 1,400 in the greater New York region.

The State government also bears a responsibility for strengthening the basis of re-

gional cooperation. Some States have reacted to this problem in a positive, forwardlooking fashion, but many others have largely ignored it.

Question. How confident are you that the American public can be sufficiently aroused to make national and local beautification

programs work effectively?

I think a great deal can be accomplished. We obviously need public support—for the same reason that we need such support for any legislative program. But outside the field of legislation, we must have public support because beautification is the responsibility of each citizen. Unless the individual accepts that responsibility in his daily life, we cannot possibly achieve a more beautiful environment.

Support comes easier for programs which are related to health or economics, such as air and water pollution control. I think the public is well aware of the seriousness of this

situation

But in the case of other beautification, the health and economic issues are not as clear-cut. Biliboard legislation, for example, involves cross currents of various benefits and disadvantages. Many motorists value highly the information on fuel, food, and lodgings which they read on biliboards. Others say they want the scenic beauty unbiemished by man-made structures. So we must balance the many interests of the casual motorists, the small businessmen, and the conservationists to work out practical compromises.

It may be that in the future, health and economic reasons for beautification efforts will be secondary. The quality of the life we lead may itself become the strongest motivating force for natural beauty programs. Question. What are some of the gains

Question. What are some of the gains which can be made in the next 10 years in pollution control and other beautification

efforts?

We are making a good start in the control of air pollution through legislation passed this year which requires exhaust control on all cars beginning with the 1968 models. Of course, even if 70 to 80 percent of the hydrocarbons and carbon monoxide that an auto discharges into the air is reduced, there is still not likely to be any visible change in the atmosphere of our cities by 1975. There will simply be so many more cars by then that the gains will be offset by the shear numbers of vehicles. On the other hand, if we do not achieve significant exhaust control, I do not like to think what our urban atmosphere will be like 10 years from now.

In the case of water pollution, over the next 10 years we ought to be able to achieve very dramatic gains in the appearance and quality of our rivers and waterways. It doesn't take long for streams to cleanse themselves, if there is a fast enough current flow, once the pollutants cease to enter them. This is going to mean a massive investment by Federal, State, and local governments in order to build the great numbers of sewage treatment plants needed.

Certainly, if we succeed in effectively controlling outdoor advertising on our streets and highways, there can be a dramatic improvement over a 10-year period. Tree and flower planting, various forms of landscaping, can produce dramatic changes in very short times, as already can be noted here in the Washington area.

But whatever beautification is accomplished cannot come by law or force from above. This must be a citizen action program. If each individual would take it upon himself to conduct a one-man crusade against litter and dirt, that alone would bring a startling change in the appearance of our cities—not in 10 years, but in 1 year.

In a free society, there is really no way to achieve a more beautiful environment unless each individual citizen makes national beautification his personal reaponsibility.

# Wisconsin Pioneer and National Leader in Education

EXTENSION OF REMARKS

#### HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, January 14, 1966

Mr. PROXMIRE. Mr. President, the people of Wisconsin believe that education is the best investment that can be made in our youth, our society, and our Nation.

Wisconsin pioneered the public kindergarien. Our State spends \$498 per pupil throughout our public school system, compared to the national average of \$455. Here is a big reason why only 8 percent of Wisconsin youth fail the selective service mental test, compared to the national average of 24 percent.

Equally important is the contribution to higher education. The Marshall and Ilsley Bank, in the Milwaukee Sentinel, reminds us that the University of Wisconsin confers 3.85 percent of the academic doctor's degrees in the United States. Yet Wisconsin has only 2.2 percent of the Nation's population.

Only three other universities enroll more students from other countries than does the University of Wisconsin. Only five have more full-time students. Only two have produced more holders of doctorates who have become Federal executives.

But that is not all. Wisconsin has 7 private junior colleges, 18 private colleges, and 2 private universities.

More than 90 percent of Wisconsin's high school graduates can reach a private or public college in less than 1 hour. Most are within 35 miles.

I ask unanimous consent, that this excellent digest of Wisconsin's educational achievements be printed in the Appendix of the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

You would be hard pressed to do betterof your son or daughter. Facilities and
faculty for higher education rank among the
best in the Nation. In fact, there are more
students from other States attending Wisconsin colleges than there are State students
who study elsewhere. Only three universities—California, New York, and Columbia
enroll more students from other parts of the
world. With only 2.2 percent of the population, Wisconsin grants 2.34 percent of bachelor and professional degrees and 3.85 percent
of the doctorates in the United States. Our
State university, sixth largest in the Nation
in full-time students, is a leader in both size
and reputation.

Only two schools in the country have produced more doctorate holders who have become Federal executives. The University of Wisconsin ranks 10th in number of alumni who have become presidents of the Batton's largest corporations. What may be even more important to you are the excellent private colleges in the State. There are 7 junior colleges, 18 colleges and 3 universities (Marquette and Lawrence). More than 90 percent of Wisconsin high school graduates are within 1 hour's drive of a public or private college. Most students are within a

radius of 35 miles. This is particularly important when you consider that the two most expensive items of a college education are room and board. Tuition amounts to only 20 percent of the total. Emphasis on education in our State starts early. Wisconsin is the birthplace of the public kindergarten. We spend \$498 per pupil in average daily attendance compared to a national average of \$455. This no doubt helps account for the fact that only \$1.9 percent of Wisconsin youths fail the Selective Service preinduction mental test—compared to a U.S. average of 24.5 percent. This excellent educational picture is only one reason why people and industries are turning to Wisconsin as a place to locate, to do business and to live. They like it here.

#### Keys to Freedom

EXTENSION OF REMARKS

# HON. MILWARD L. SIMPSON

OF WYOMENS

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. SIMPSON. Mr. President, the Wyoming Farm Bureau Federation recently conducted an essay contest on the subject of "Keys to Freedom," and a number of the prize-winning essays of Wyoming authors were forwarded to me.

I should like to call my colleagues' attention to the essay by Miss Bonnie Miller, of Albin, Wyo., who won first prize in the junior division. I ask that Miss Miller's essay be printed in the Appendix of the COMBRESSIONAL RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

KEYS TO FREEDOM

Today, according to a leading newspaper, we have 125,000 Americans fighting in Vietnam. They are fighting that this American heritage which we possess will remain free. There are 125,000 of our men there now, and I understand that by Christmas the draftees to that country will be increased to 250,000 to fight against the communistic forces of that area.

The draft board has called my brother to take his physical October 6, and if he should be drafted, he too, will be fighting with the others that they might find the key to unlook a door to freedom. Neither my brother nor any other one individual can win this war alone and neither do we have any assurance that these forces working together can win this war. But one thing is sure—each individual can do his duty and can assume his responsibility. And only if each one does assume his responsibility, can we expect the desired freedom for Victnam and a blockage of Communist forces against our own country.

Not only must our Americans fight on the field abroad, but we must assume our responsibility and fight for continued freedom

on the homefront as well.

Farm bureau members believe that the apparent lack of responsibility on the part of individual citizens is a great danger threatening our Republic and our system of competitive enterprise. Let me revise this to say that the lack of individual responsibility could take away our freedom. Each individual citizen is vitally important to this agricultural program, to this Victnam war, and to this world, as long as he does his best. Freedom is not given to us; our forefathers assumed their responsibility and fought for it. When our English ancestors

came to America as Pilgrims they suffered many hardships. During the first bleak winter in Plymouth Colony over half the English colonists died. But when the Mayflower sailed back to England that following spring the survivors stayed to make America their home and to carve the American heritage. These settlers did not take the easy way

However, the era when the slaves were imported into this country is a reverse story. Natives of this United States were seeking the easy way out by importing Negro slaves to do their work for them. They paid for They paid for their laziness dearly in the Civil War which was the second bloodiest war in history. World War II had the greatest number of battle deaths. So you can see that the easiest way is seldom the best way.

Not only must we fight for freedom but we must also exercise that freedom which

Freedom is likened to the parable Christ gave of the talents as recorded in Matthew 25. A master, solves on a few stales 25. A master, going on a journey, entrusted a talent to his servant, and the servant, being afraid he might lose it, put it a way for safekeeping instead of investing it. The master returned and seeing the unwise decision of his servant, in anger took the talent from him

By not taking advantage of our freedom we run the risk of losing it as the servant lost his talent. Each individual holds in his hand a key to freedom and we cannot leave the door locked. We cannot stand still and at the same time gain freedom. We must produce. Production is no doubt a familiar word to farm bureau members, so let each of us plant a farm bureau garden.

First, let's plant four rows of peas: (1) preparedness; (2) promptness; (3) politeness; (4) perseverance.

Preparedness to meet the challenge of each

day; promptness in doing the dutie day; politeness toward your neighbor each day; and preseverance in our responsibilities of each day.

Next plant three rows of squash: (1) squash gossip; (2) squash criticism; (3) squash indifference.

Now let us plant four rows of lettuce in our garden: (1) let us be faithful; (2) let us be truthful; (3) let us be loyal; (4) let us be unselfish.

Let us be faithful to this farm bureau organization; let us be truthful to our family, to our friends, to our enemies, and to our selves; let us be loyal to this great American country and its heritage; and let us be country and its unselfish toward all.

And no garden is complete without turnips so let's plant some: (1) turn up for volun-teer work; (2) turn up with a smile; (3)

turn up with determination.

Once this garden is planted in each in-dividual's heart and character, he will hold in his hand an important key to freedom: a key that can open a door and remove the dangers that are threatening this American Republic and our competitive enterprise system. A key that can defeat the communistic forces. I offer to you a challenge to assume your duties and to develop your individual responsibility—a key to freedom.

"Yes, Folks, There Is a Santa Claus"

EXTENSION OF REMARKS

# HON. KARL E. MUNDT

OF SOUTH DAEOTA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. MUNDT. Mr. President, we hear much these days about the Federal anti-

poverty programs and the good work they are doing. We don't hear much about the things left undone.

The Sioux Falls, S. Dak., Argus-Leader pointed this up on January 2, in a heartwarming letter to the editor entitled "Yes, Folks, There Is a Santa Claus." This letter details how one man, working on short notice, with the cooperation of public spirited citizens of his community, was able to provide a merry Christmas for 350 Indian children. There is a lesson for everyone in this article and I commend it to the attention of my colleagues.

Mr. President. I ask unanimous consent that the article be printed in the

Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

[From the Sioux Falls (S. Dak.) Argus-Leader, Jan. 2, 1966]

YES, FOLKS, THERE IS A SANTA CLAUS To the EDITOR OF THE ARGUS-LEADER:

Yes, folks, there is a Santa Claus. persons search all their lives, looking for a fat little man in a red suit, to bring them good fortune, but never find him.

because they do not know how to look. He is not a single person and not a myth, but a spirit which has its potential in every man. Santa Claus is the spirit of Christ-mas. Each must develop his own concept of the spirit of Christmas, but it is surprising to find exactly who does become Banta Claus when the chips are down. To illustrate my point, let me tell you a little story.

There are some very important people in a big city called Washington who are trying to create the Great Society. They want to be Santa Claus to everyone, especially the "underprivileged." They have developed a great poverty program which will bring aid, sistance, and benefit to all of the poor of this country and eventually to the entire

They have promised that all of the underprivileged will be helped, their lot will be made happier, they will receive more education so as to be able to make a better living for themselves. Unfortunately, some-where along the line the money which was appropriated for all this got lost and did not reach the people who needed it the most, the

Many of the Indian children who attend the Government schools in this State are about the needlest persons in South Dakota, but they are ineligible for the poverty program funds, because they are at a Gov ment school.

The gigantic sum of slightly less than \$1F is appropriated per year by the important men in Washington to clothe each Indian child at these Government schools. the necessary items of apparel are bought, there is not much money left for Christmas

About 18 days before Christmas I visited one of the schools for the Indian children. sems that for various reasons the children from this school are not able to go home for Christmas and must remain there over ys. Last year, only 1 child in a which housed 150 children rethe holidays. dormitory ceived a gift from his family at Christmas and very few of the parents visited their children during the holiday time. Attempts were made by officials at the

school this year to place children in homes of the local community and in neighboring towns, but with very little success. Most of the children do not have a very merry Christmas as each of us has come to think of it.

After hearing of this situation, where about 350 children could not be home for Christmas, who would probably not receive any

Christmas presents, who were resigned to Christmas as just another day, I took the problem to many civic-minded persons, businessman and merchants in our own commu-

nity.
Folks, I found Santa Claus. Despite the fact that my plea was late; the donations for Christmas long since planned and made; the late Christmas sales being in progress; the citizens of this community who were contacted responded almost unanimously with such generosity that I was overwhelmed. The gifts which they gave were taken to the Indian children in time for Christmas. am sure that these 350 youngsters experi-enced a Christmas which will live long in their memories.

In this letter I have not personally identified the kind persons who gave so generously to the Indian children, for this reason: We did not learn of this problem until it was toc late to contact each and every individual who might have liked to participate in this project. Some who were not contacted might feel slighted. If you desire to know who the generous people were, I can tell you.

Yes, folks, there is a Santa Claus. Santa Claus is every man and every man is poten-tially Santa Claus. You just have to find the right man at the right time. If you wait for the Great White Father in Washington to be Santa Claus, it will be a long, long wait. Perhaps, as in this instance, it would be better if we took care of more things like this ourselves.

JOHN B. GREGG.

SIOUX FALLS.

#### We Help Ourselves

EXTENSION OF REMARKS OF

# HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Friday, January 14, 1966

Mr. SCOTT. Mr. President, one of the most effective efforts to help disadvantaged persons break out of their cycle of poverty is being conducted in Philadelphia by the opportunities industrialization center under the leadership of the Reverend Leon Howard Sullivan. I ask unanimous consent that an article describing the center's activities, which appeared in the Reader's Digest of No-1996, be winted in the appendix

. . on, the article rdered to in the RECORD.

TVE House . ALVES (By Paul (Viggens)

new g d-steel skyscrapers of down-town Physicalphia lies a nightmarish Negro world: six city wards of squalid streets and rotting red brick tenements, packed with 270,000 people and faced with appalling want and social decay. This area, which Mayor James H. J. Tate declared had "the most crime, tuberculosis, venereal disease, unemployment and poverty in all of Philadelphia," is in fact one of the worst slums in the United States. Yet here, in an abandoned police station rented from the city for 1 dollar a year, a militant Negro minister, Leon Howard Sullivan, has launched one of the most exciting and hopeful programs in America.

"We help ourselves," is the program's motto and philosophy. Its "Opportunities Industrialization Center" (OIC), the first

enterprise of its kind in the Nation, is designed not only to give Negroes new job skills, but also to inspire them with hope, confidence, and a new way of looking at themselves and at life. It is this emphasis on attitude which distinguishes OIC from almost all other current job-training efforts, and which in just 19 months has made this bold venture, in the words of Mayor Tate, "a model for the rest of the country." Con-sider some of its significant accomplish-

Of OIC's first 500 "graduates," who took 8-week to 1-year courses in everything from power sewing and restaurant practices to electronics and sheetmetal work, a phenomenal 80 percent were almost immediately placed in good jobs.

Probably one-third of the OIC trainees now taking jobs are shifting from the relief rolls-good news indeed for Philadelphia, where Negro welfare costs have soared to over \$100 million a year.

In a notable innovation, OIC is giving spe-cial prejob training to some 1,000 Negroes at a time, helping them to brush up on their reading, writing, arithmetic, and to improve their speech and even personal grooming.

Originally aiming to train some 2,500 individuals a year, but swamped with over 6,000 applicants on its opening day, OIC is already expanding with two branches. To house the first, a Philadelphia philanthropist turned over a six-story office building. This new branch offers training in department-store selling, merchandising, and small-business A second, recently opened, gives training in laundry, dry cleaning, and build-

ing trade skills, among other courses.

Already, OIC has won the enthusiastic support of the Philadelphia Chamber of Commerce and the white power structure. "Businessmen have come to understand that the position of the Negro involves more than a moral principle; the future of our com-munity is at stake," W. Thacher Longstreth, executive vice president of the Philadelphia chamber, told me. "Either we give the Negro tools to compete, or we resign ourselves to perpetual handouts and unconscionable welfare problems." And, typifying the new spirit, Sullivan declares: "The Negro has learned to demonstrate and to protest, but in Philadelphia now we recognize that he must also prepare himself and produce."

#### TABLE D'HOTE AND A LA CARTE

One morning recently, I drove out to the North Philadelphia slums to see this inspir-ing project in action. At OIC, I was greeted by its creator, the Reverend Leon Howard

Six-foot-five and an athletic 235 pounds, the ebullient Baptist preacher showed me around the transformed police station. Using \$50,000 from an anonymous donor, and dime-to-dollar contributions from Negro parishioners and other well-wishers, Sullivan, with the help of carpenters, plumbers, and painters, had completely renovated a rat-infested former fail.

ıl-

he

in

's

Where once police had booked drunks, dope addicts, and muggers, I entered a spick-and-span restaurant, cheerful with canaryyellow walls, colorful curtains, and modern furnishings. "We painted everything bright: the Negro needs a lift," Sullivan explained. A class in restaurant practices was phaned. A times it is read and properly in progress, with a group of young Negro girls seated around their teacher. "We're learning table settings, and the difference between table d'hote and a la carte," their instructor told me.

But she was teaching infinitely more, I discovered: poise, positive attitudes of cour-tesy, and the importance of food service as an ever-growing industry. Later, I learned that a graduate of OfC had become night manager for a downtown branch of a food chain—motivation, indeed, for the trainees.

In another room, young Negroes sat before

a battery of chattering machines learning how to become teletypewriter operators. Th talk was all about two OIC graduates: a girl who had just got her first job after only 6 weeks' instruction; and a young man who "As soon was back for advanced training. as I finish another 5 weeks, I'm promised a transfer to a branch office where I'll be the main operator," he said proudly,

"We didn't

I followed Sullivan upstairs. "We didn't have even a screwdriver to start," he told "Now look at this-a quarter-million dollars of the finest equipment, all donated by Philadelphia industry: Philco, General Electric, Budd, and Bell Telephone, among We're in business."

Down the hall, in a huge sunny room, Negro housewives, many of them on relief, were learning power sewing in a 9-weeks' course. "We make actual garments for charity," a young mother said, holding up a dress. "Man, you should see me put in a zipper." Sullivan led the way to the basement: what had once been a dank, dark hole with ankle-deep water was now a sheet-metal and machine-tool shop complete with whirring lathes and eager trainees.

#### YOU ARE SOMEBODY

I talked to several OIC graduates: the young woman now holding her first good job in a garment factory; the papercutter who realized his 15-year ambition to get into electronics; and Bob Fisher, a 30-year-old man with a wife and 7 children. He had been 'reorganized" out of his steelmill job and forced onto welfare. Fisher took 9 months' training in machine-tool operation at OIC, and today earns \$3 an hour as a turret-lathe operator. "We're paying the bills now," he told me, with emotion. "It's like a year of storms, and then all of a sudden the sun starts shining

How has OIC succeeded where other schools

"I think the difference," Sullivan plained, "is that people come in here without fear of being ridiculed or turned away, and they see a job at the end." achool program is apt to be too academic; OIO tries to reach people where they are. It isn't the diploma or report card that counts, but a job.

"Here, they show you what other Negroes have done," a shy but ambitious student told me. Said another, "For the first time, they make you realize that you are somebody."

#### REACHING THE UNREACHED

With this fresh, uplifting approach, Sullivan's self-help program immediately paid dividends. But it also uncovered serious problems: thousands of these disadvan-taged—people from broken homes or on weifare, unwed mothers, some illiterates-

ed preliminary training even to enter OIC.

To overcome this deficiency, and also to give some training and incentive to the 6,000 hopefuls on the waiting lists, Sullivan pioneered his unique prejob program. He ob-tained another abandoned building, this time a synagogue, where 1,000 Negro men and women hurried to enroll in a 3 months' special course. The dingy, abandoned temple was partitioned into tiny, noisy cubicles scarcely conducive to teaching of any kind.

Yet here, under such inspiring banners as "Get ready for opportunity." I listened to some memorable classes. Frequently, Philadelphia businessmen were scheduled to talk about jobs and how to get them. Such N idols as Jackle Robinson have spoken to the trainees. "You have to face the same ob-stacles I had to face," Jackle told the prejob school. "But with faith and confid you will win."

As often as he finds the time, the tireless Sullivan visits the classes to preach attitude.

"Sit up straight, young man," he frequently
admonishes slouching students. "Stick it
out," he urges the frustrated and floundering. "You don't have to spend the rest of your lives on handouts and welfare. You are part of a historic demonstration, and upon your performance will depend the futures of 20 million persons in our big cities who have been brainwashed into thinking they are inferior. But I tell you the Negro is not inferior, and genius is colorblind."

Thus with Negro telling Negro, Philadelphia is embarked on one of the most farreaching and significant programs not only for the Negro race, but for our entire com-plex industrial society. "Reaching the unreached," Sullivan calls it.

Recently, the old synagogue was swept by a disastrous fire, but with the temporary use of a National Guard Armory offered by Gov. William Scranton, the resolute Sullivan and his devoted staff carried on with the vital prejob program.

#### BLUEPRINT FOR THE FUTURE

Leon Sullivan, himself a product Leon Bullivan, himself a product of Charleston, W. Va., alums, grew up in a broken home "on a dirt alley"—his mother was a \$13-a-week elevator operator, his father a janitor. After being ordained, he promptly took his ministry to the streets. He organized an outstanding youth-employment program in Philadelphia, for which he wan the Freedom Sundeiten Award. But won the Freedom Foundation Award. But not long ago, Sullivan's name was a fighting word in Philadelphia business circles.

In an attempt to win more jobs for Nogross, he had spearheaded an aggressive con-sumer boycott against 29 top Philadelphia companies. But the important thing was that jobs began to open, and Negro leads realized that unless something was done fast, there wouldn't be enough qualified Negroes around to fill them. So Sullivan conceived the idea of training through OIC.

Fortunately for Philadelphia, the business community and the Negro leaders shared the une fundamental concerns; even before Sullivan's boycott, the chamber of commerce was hard at work on the general problem.
"We had thousands of jobs going begging
while we had more than 100,000 unemployed," Keeton Arnett, then chairman of the economic leader group and now con to both the Philadelphia Chamber and to OIC, told me. "Our only resource," says Arnett, "was the unemployed labor force, largely unskilled and largely Negro."

When Sullivan's idea of Negroes training Negroes to help themselves came up, the chamber of commerce promptly threw in its resources and support. Recognising a venture that might well be a model for the Nation, the U.S. Department of Labor stepped in with a \$458,000 grant for the prejob school— probably the first program of its kind in the world. The Negroes raised \$100,000 in a city-wide drive; business and industry con-tributed, and during this past summer, OLC's program was granted \$1,756,163 by the U.S. Office of Economic Opportunity.

Yet for all of its success, the Philadelphia venture is still a pilot project, with prob-lems. "For one thing, the level of educa-tional achievement of most students is so low that it has taken much longer than we had anticipated to teach basic skills," says

Naturally, with its initial success, OIC is attracting a flock of visitors to study the program. "Will the blueprint succeed else-where?" they want to know. Philadelphia leaders with whom I talked are convinced it

will, but with some important qualifications: Negro and white leaders must sit down together; accept their mutual economic de-pendence; and recognize that this is a prob-lem not only for the Negro, but for every-body. The chances for success will be vastly greater if both sides are able to develop the tolerance, understanding, and constructive leadership represented in Philadelphia. leadership represented in Philadelphia. Whenever communities are able to achieve

this spirit, we can mark another milestone in race relations and opportunity in the United States.

#### Wisconsin College Students Support Vietnam Policy 3 to 1

#### EXTENSION OF REMARKS OF

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, January 14, 1966

Mr. PROXMIRE. Mr. President, if there is one group in America which is according to myth critical of U.S. policy in Vietnam, it is the college age, draft age youth. And if there is one section that has been at times more isolationist. it has been the Midwest and Wisconsin. In the light of this, recent polls on at-titudes toward our Vietnam policies at State universities in Wisconsin are very interesting indeed.

At Wisconsin State University at Whitewater, 73 percent of students polled in a Vietnam policy referendum support the present position of the United States. Of the remaining 27 percent, 5 percent responded as undecided rather than osed.

It is interesting and heartening to note that students of the freshman and sophomore classes most heavily voted in favor of our policy of refusing to yield to pressure and threats against the peo-ple of South Vietnam.

I also am informed that students at two other Wisconsin State universities showed their approval of their Government's policy. The vote at those universities was between 70 and 80 percent favorable.

I ask unanimous consent that a brief article from the Royal Purple, the campus newspaper at Wisconsin State University at Whitewater, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVENTY-THREE PERCENT SUPPORT U.S. VIET-NAM POLICY

Seventy-three percent of the student body who voted in Thursday's Vietnam policy referendum favor present U.S. policy ac-cording to Tom Hickinbotham, student council vice president.

Seven hundred ninty-five students voted in the referendum. Twenty-two percent said they did not favor present policy and 5 percent were undecided.

All students-6,322-were eligible to vote in the referendum.

The results will be sent to United Council Legislative Committee Chairman Frank Boyle to be included with referendum results at the eight other State universities.

The light turnout was probably due to student's ignorance of the Vietnam situation and U.S. policy, Hickinbotham said. Other State universities held rallies prior to referendums he said and the response was greater.

Other universities' results available at this time indicate strong student support for U.S. policy toward Vietnam.

#### BERANDOWN BY CLASSES

Senior class: men, yes 88, no 36, undecided 1; percent in favor, 70.4. Women, yes 24, no 4, undecided 4; percent in favor, 75. Total vote, 157; percent in favor 71.9.

Junior class: Men, yes 77, no 40, undecided 7; percent in favor, 62.1. Women, yes 38, no 10, undecided 5; percent in favor 71.7. Total vote 177; percent in favor 64.9.

Sophomore class: Men, yes 108, no 28, undecided 10; percent in favor 73. Women, yes 66, no 17, undecided 3; percent in favor 74.5.

Freshman class: Men, yes 119, no 28, undecided 3; percent in favor 79.3. Women, yes 68, no 13, undecided 3; percent in favor 89.9. Total vote 234; percent in favor 79.0. Total vote 234; percent in favor 79.9.

#### The Key to Freedom

#### EXTENSION OF REMARKS OF

# HON. MILWARD L. SIMPSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Friday, January 14, 1966

Mr. SIMPSON. The Wyoming Farm Bureau Federation recently conducted an essay contest on the subject of "Keys to Freedom," and a number of the prizewinning essays by Wyoming authors were forwarded to me.

I should like to call the attention of my colleagues to the essay on this subject by Mrs. Ellen Forbes, of Sheridan County, Wyo., who placed first in the senior division. I ask that Mrs. Forbes' essay be printed in the Appendix of the Con-GRESSIONAL RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

THE KEY TO PREEDOM

A key must fit its lock. In order, therefore, to consider what the key to freedom might be, it is necessary first to examine the concept of freedom itself. Since freedom has been synonymous with liberty throughout the American experience, I will use the two words interchangeably in this paper. To Americans, "freedom" and "liberty" are words which are known and used from earli-est school days. "Liberty" and "freedom,"

as words, occur again and again in those documents which have become sacred to our American heritage. They are attractive words and are consequently used often, but fre-quently without real thought or understanding. How many a first grader has gone through an entire year ending the flag pledge, "with liverty and justice for all"?

When considered seriously, however, freedom and liberty are more than words repeated in the flag pledge, memorized in the Gettysburg Address, or read in the Declara-tion of Independence and the Constitution. They are living concepts, vital to us as Americans. They cannot be taken for granted and will not be so ignored by anyone realizing the challenge offered by the totalitarian threat today.

A striking example today of a group of people who are vitally concerned with freedom as a true and living reality are the West dom as a true and living reality are the western Berliners. An ideal must be confronted with a challenge and tested for it to become a conviction. The West Berliners are people whose lives are a daily testimony to this truth. Preedom is no longer an ideal to them: it is convention. them: it is a conviction.

Crowded into a small casis of freedom, entirely urban in nature, over 2 million people live entirely surrounded by the Communist satellite nation of East Germany. The two sections of Berlin have been, since the erec-tion of the wall in 1961, virtually two different cities. The wall, topped with broken glass and barbed wire, its massive solidarity punctuated with watchtowers, pacing blood-hounds on 24-hour vigil, and occusional flashes of light as sunlight meets metal of

beyonet or binoculars, is the grim daily reminder to these people of how precious and tentative freedom can be. What a use for the barbed wire which was first invented for the cattlemen of the Western Plains. But in this small although crucial area of the world, freedom can be the width of one narrow wall or the nine persons who lose their lives for the one who escapes without harm.

Will we Americans have to be completely surrounded by an authoritarian system, surrounded by an authoritarian system, pushed to the point where each day our free-dom is held in delicate balance, before we no longer take our heritage for granted? Because historical and geographical factors for the America of the 1960's are far different from those which led to the phenomenon of a divided Germany and Berlin, physical strangulation may not be a threat. We could, however, fall prey to an ideological bondage, for ideas know no mountain, river, ocean, or manmade line as a boundary. Science and technology have virtually shrunk the physical world to the size of a pinhead; it is for us to see that social and economic problems which have mushroomed with urbanisation and a rapidly increasing popula-tion, do not reduce our ideological heritage

to the same minute scope.

Many of us have too long assumed that freedom was a gift miraculously handed down from generation to generation, and further that it would always be ours to pass on to our children. We have not bothered to com-prehend what life might be like were we to be denied this freedom. However, in-herent in the concept of freedom is the responsibility to preserve it. We cannot think of freedom as simply the absence of re-straints, the 7-year-old's dream of being able to do what one pleases. For man to be truly free, there must be a balance between truly free, there must be a basines between the individual's rights and the limits he has imposed on himself via society. Should the rights of the individual become too heavily weighted, the result would be anarchy. This is as antithetical to freedom as the other alternative: absolute authority.

The key to freedom today is education. In the first place it is education which enhances integrity of the individual so that he will feel strongly enough about his individ-uality to stand up for his rights and the rights of all mankind, and not become as inhuman as the numbers by which he is now identified.

Secondly, it is education which makes freedom meaningful in light of the totalitarian challenge. This includes insight into the nature of totalitarianism, the American heritage, and it involves travel, either actual or vicarious, to experience firsthand the uniqueness of each nation and realize by comparison those things which are a source of pride and are so precious to Americans.

Thirdly, and equally important, it is education which develops an informed and concerned electorate of individuals who tak active part in the political and economic life of the Nation, furthering the democratic form of government and the free enterprise system.

Education in this broad sense is not confined to the classroom nor to those between the ages of 5 and 21. It is a continuing and integral part of any vigorous and active life. A well-educated populace is vital to the fu-ture well-being of America and to the preser-vation of the concept of freedom for the next generation. A meaningful education which gets people to think for themselves in a constructive manner is the single sure bulwark against an authoritarian ideology. As a nation we must be morally strong. dom must be more than an ideal to which we give lipservice; to be secure it must become a conviction with each one of us. To assure a good fit, the lock must be reexamined on occasion and the shape of the key, but not its nature, should be adjusted accordingly. So, too, must we reevaluate our concept of freedom and adjust our philosophy of educa-tion so that the two may be congruent.

# Appendix

# Acheson on Our Vietnam Policy:

EXTENSION OF REMARKS

# HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. McCORMACK. Mr. Speaker, the Honorable Dean Acheson, one of our outstanding Secretaries of State, and during a trying period in our country's and the world's history has written an interesting and sound article on South Vietnam, which appeared in the Washington Star of January 16, 1966. The views of former Secretary of State Dean Acheson, which I include in my remarks, are worthy of profound consideration.

ACHESON ON OUR VIETNAM POLICY: AN ASIAN GREECE

#### (By Dean Acheson)

"I believe that it must be the policy of the United Slates to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure."

The country referred to was poor, its poverty aggravated by foreign occupation and years of warfare. Guerrillas were creating political chaos and making economic recovery impossible. The existence of the state itself was threatened by large forces supplied, organized, and led by neighboring Communist movements. Many of these forces had taken part in the struggle against foreign occupation.

le

in

21.

As

on

The Communist leaders had previously signed an agreement for peace but had hidden their weapons and resumed the conflict at the first signs of recovery. The national military forces were unequal to the renewed, foreign sided and directed attack.

The country's government was far from any democratic ideal. Previous aid had proved inadequate. The American Government had to decide whether to go further with funds, armaments, and the necessary military advisers. The President's conclusion was summed up in the sentence quoted

#### THE TRUMAN DOCTRINE

The year was 1947, the country, Greece; the President, Truman; and the policy enunciated, the Truman doctrine. It instantly received bipartisan support in Congress and for nearly 20 years, during four administrations, has been the policy of the United States. Under it necessary help was given in Greece, Turkey, Korea, Lebanon, and now in Vietnam to prevent Communist takeover "by armed minorities or by outside pressure," or by both.

Nineteen years ago, when the policy was first adotped, the United States was in the early stages of its education in methods of Communist conquest. In the immediate postwar years it learned how, in countries occupied by Soviet armies, Communist regimes were set up under the protection and opposition liquidated. This happened throughout Eastern Europe.

The next step was attempted in countries left in confusion by the war but not occu-

pied by Soviet troops. Here internal subversion, instigated and supplied and controlled by outside Communist states, made an armed bid to take over the government. This was the form used in Greece and eastern Turkey. The Truman doctrine labeled this as aggressive Communist expansion and announced the necessity of stopping it. The aggression failed due to massive help given by the United States. The next stage of the Communist assault

The next stage of the Communist assault did away with pretense. South Korea was openly invaded by organized army units from the Communist base outside. American and allied Armed Forces successfully came to the aid of South Korea.

#### WAS OF LIBERATION

The current method of Communist expansion, employed in Vietnam, is the so-called war of national liberation. In these wars there is an attempt, as there was in Greece, to cloak as an internal insurrection Communist subversion directed and supplied from outside, and there is added a Korea-like invasion by regular army formations from the neighboring Communist state.

Our decision to help South Vietnam resist this attempted subjugation involves principles and policies, all of which were already public and established by 1950. They in turn resulted from an appreciation of the lessons of the 1930's—Manchuria, Ethiopia, the Rhineland, Czechoslovakia—that aggression must either be met early before it has gathered momentum or it will have to be checked later under more adverse conditions.

#### SAME OLD COMPLAINTS

The complaints now raised at protest meetings on Vistnam are the same which have been directed against all our efforts to aid peoples resisting Communist subjugation. Our opponents are usually praised and those we are alding criticized.

We were told that the terrorists, guerrlas, and belligerents in Greece were patriots who had fought the Nazis and whose aim was to replace a cerrupt, demoralized government; that the evidence that they were serving foreign Communist purposes was films; and that the United States was intervening in a purely Greek civil war. On the other hand, the Greek Government was denounced as weak, unrepresentative of the people, particularly of the resistance, and as the creature of the Western allies.

Similar unflattering comments were made about the late Syngman Rhee, President of Korea. But the fact now seems too plain for argument that in both Greece and Korea, the intervention and help of the United States preserved the opportunity to develop toward democratic government by consent. No such similar development can be noted in neighboring Balkan States or North Korea.

So, today, it is argued that government in Vietnam is not and has not been democratic and, therefore, is unworthy of American support. But the existence of a democratic system is not the criterion of worthiness of American support. That criterion is determined and demonstrated effort in resisting attempted subjugation. Can there be more impressive evidence of such determination and effort among the people of South Vietnam than they are now giving? For they are fighting on after suffering military and civilian casualties which on the basis of comparative populations are equal to nearly I militon American casualties. Their purely military casualties on the same basis are

fully 10 times greater than those we suffered

When, as in China and Cube, a government facing Communist-led forces failed to retain the support of its people, its numerically superior forces simply melted away. But in South Vietnam the government forces continue to grow in numbers and aggressiveness.

Not a single political figure or politically significant group in South Vietnam at the time Diem was overthrown or since has shifted allegiance to the Vietcong or been unwilling to continue the struggle.

#### MILLION REPUGEES

Finally, there is the record of those who voted with their feet, the million refugees who left the north for South Vietnam after the Geneva accord of 1954 and the hundreds of thousands of refugees who in 1965 alone have left Vietcong areas for government-controlled ones. The South Vietnamese people and army are fully justifying American assistance by willingly continuing to bear the brunt of what remains their struggle for independence.

Fortunately, there is also in Saigon and in Washington not only determination to suppress the belligerency, but an understanding of the importance of political consent in furthering the struggle for independence.

In South Vietnam, even in the midst of devastating warfare, the maneuvering and instability which have characterized the government since the fall of Diem show both a shift in power and attempts to reach the new balance by taking into account the aspirations of the Buddhists, the Catholics, the civilian politicians, the military establishment, students, the sects, and the geographic regions.

The search for such a balance is not a substitute for political method, but there has also been progress in that direction. Though it seems to have largely escaped public notice, elections for the municipal and provincial councils were held in South Vietnam last May. Observers agree that they were conducted in a fair and orderly manner and that the candidates substantially reflected local sentiments. Over half the eligible woters were registered and over 70 percent of those registered actually voted. In North Vietnam there can be found, of course, no glimmering of democratic political method.

#### TITAL TO UNITED STATES

The fate of the people of Vietnam is of the same vital concern to the United States as that of those whom in the past we have helped to resist subjugation. Indeed the situation in Asia today is reminiscent of the problems the United States confronted in Europe in 1947. The United States faces in Communist China an aggressive nation imbued with the same primitive Communist theology which the Soviet Union had 20 years ago, and possessing (as the Soviet Union did) military resources far greater than those of her neighbors. The area to the south, afflicted by foreign occupation and years of war, offers an invitation to aggression by means of the war of national liberation. Only the United States has the resources to make resistance possible.

The Chinese Communists have made it

The Chinese Communists have made it clear that Vietnam is another test of that strategy in Asia for the aggrandisement of the Communist world. The Communist Chinese minister of defense, Marahal Lin Plao, in a speech on September 3, referring to North America and Western Europe as the "cities of the world" and to Asia, Africa, and Latin America as the "rural areas," declared that "contemporary world revolution also presents a picture of the encirclement of cities by the rural areas." In its policy of "encirclement of the cities." Southeast Asia has the strategic significance of flanking the Indian subcontinent, facing the Philippines, and straddling the passage from the Pacific to the Indian Ocean.

With appropriate discount for verbal bluster, Communist China has shown an appreciation of the realities of power. There is surely no territory which Communist China desires more ardently than Formosa. Nevertheless, China's recognition of the vast force which the United States can bring to bear in Asia has caused the Communist leadership to refrain from attacking Formosa. The same appreciation of superior might is shown by Chinese unwillingness directly to challenge the United States in Southeast

The American aim in South Vietnam is neither to destroy China nor North Vietnam. It is rather to continue the policy established by President Truman of assisting free nations to resist subjugation until the Communist states become convinced that cheap victories are not possible and that the cost of aggression is too great.

The success of this policy may be seen in the growing moderation which has marked Russian policy in the past 15 years. In time China, too, may grasp the fact that aggression is unrewarding and choose to focus her energies on her vast internal problems while playing a more mature role in the international system.

# Brooklyn Public Library Preschool Program

EXTENSION OF REMARKS

#### HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1966

Mr. JAVITS. Mr. President, this year the Congress will be considering renewal of the Library Services and Construction Act of 1964—Public Law 88-269. In this connection it is of interest to note the use the Brooklyn Public Library has made of these funds through its preschool programs.

From the start of the Brooklyn project in mid-February of last year to the end of October, a total of 2.442 programs had been presented for 36,217 children between the ages of 3 and 5. The programs were presented at day care centers, public and parochial schools, housing projects, community centers, churches, and libraries throughout Brooklyn.

The sessions have been conducted by preschool library aids, college graduates interested in working with young children. These aids have been given intensive training to introduce them to the Brooklyn Public Library's philosophy of service, the selection of materials for youngsters, as well as the techniques of presentation. There are 16 of these library aids and they present an average of 70 to 73 programs weekly.

A typical preschool program may be divided into two parts and last approximately an hour. The first and formal

half is devoted to telling stories, separated either by poetry, songs, finger games or imaginative play. During the second, or browsing part, the storyteller distributes books used in the program as well as others she has brought for the children.

Programs such as this play a constructive role in orienting young children toward learning and are illustrative of the dividends from Public Law 88–269, the Library Services and Construction Act.

#### Tournament of Roses, Pasadena, Calif.

EXTENSION OF REMARKS

# HON, H. ALLEN SMITH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. SMTTH of California. Mr. Speaker, I would like to include in the Appendix today for the benefit of my colleagues, the column by Mr. Ed Delaney concerning the traditional New Year's Day Rose Parade in Pasadena, which appeared in the January 10, 1966, issue of the Valley Times. It is as follows:

TOURNAMENT OF ROSES, PASADENA, CALIF.

There is still hope for the Nation. The traditional New Year's Day Rose Parade in Pasadena served to reasure us. It is Americana—particularly Western Americana at its colorful and cultural best. This year's event, perhaps all unintentionally, seemed to leave with us a most hopeful impression—that of American youth as they really are and not as a segment of them throughout the Nation would have us believe is the pattern for posterity to record.

In recent years we have been surfeited with scenes of unkempt, ill-mannered, grotesquesly dressed and obviously intellectually adolescent individuals who clutter up college campuses and get themselves photographed in "rights" parades that are often wrong. Those specimens of mentally arrested humanity—because of the undue publicity given them—have given a bad name to the millions of youths who undoubtedly detest the zany, noddy-nonny nondescripts for what they really are.

It seems that this year's parade had an unusually large number of fine, alert, smiling, tastefully attired and enthusiastic young men and women who could almost cause the whole event to be called Youth on Parade. It was a delightful treat to see the real young America. They were the very antithesis of the synthetic Greenwich Village breed of creeps of both genders, and their Hollywood counterparts, who get themselves into news pictures and in miles of TV films that add to the boredom of the viewers.

Those hundreds and thousands of healthy and happy young people in the Hose Parade were, for the most part, from sections of this country that the supercilious egoists in those older settlements along the Atlantic coart disdainfully refer to as the "hinterland." Thank Heaven. It distinguishes them from the borderline specimens who have been successfully projecting themselves into the lime-

Our State Department and the nabobs in Washington who determine the type of "cultural" displays and entertainment the United States should send abroad, can find nothing comparable to a film of the entire Pasadena parade. Send that to the unsanitary and often unappreciative parts of the world. It would be far more entertaining and educa-

tional than a covey of clarinetists, a bevy of ballet dancers or a motley array of Hollywood's part-time performers in something of dublous merit.

Nothing that is spawned in New York, Paris, London or any other part of the world even approximates the Rose Parade in imaginative creations, floral beauty, or artistic design. Having seen many of the "arty" exhibitions on five continents and both hemispheres for nearly 40 years, my vote for highest award must go to the designers of Pasadena's annual carnival of color.

Let the people on both sides of the Iron Curtain see this evidence of America's artistic achievement. Perhaps then the viewers will not put much credence in the Communist canard that the capitalist United States is a warmonger intent on building only missiles of destruction, instead of floral displays.

Although it was the glow of exuberant youth that seemed to permeate this year's parade, the older generation also rated high honors. The fathers and mothers who rode expensively saddled horses kept alive the colorful history of the Old West. But it was the boys and girls, the young men and women from California, Colorado, Arizona, Iowa, Montana, Nebraska, and other parts of the country who presented us with a new look. The marching bands, the seemingly indefatigable majorettes, the musicians and corps of young folk of the right kind, hold out a hope for future generations. God bless 'em.

# Testimonial Dinner to the Honorable Julius Foster, Jr., of Point Pleasant Beach. N.J.

EXTENSION OF REMARKS

# HON, CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1966

Mr. CASE. Mr. President, a few days ago the Honorable Julius Foster, Jr., of Point Pleasant Beach, N.J., was honored at a dinner on the occasion of his retirement as tax collector in the borough of Bay Head. This was an unusual tribute on several counts, and I ask unanimous consent to have printed in the Appendix a copy of the release announcing the event and the text of a telegram I sent to him.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TESTIMONIAL DINNER TO HON. JULIUS POSTER, JR., CARE OF BEACON MANOR HOTEL, POINT PLEASANT BEACH, N.J.

I wish I could be with you tonight as you gather in tribute to Julius Foster, who is retiring after 64 years as tax collector in the Borough of Bay Head. There is no question but that Mr. Foster has achieved some kind of record for longevity in a post that might have made any other person holding it very unpopular with fellow townsmen. Mr. Foster has managed to setract "Caesar's due" from the citizens of Bay Head in steadily increasing amounts over the decades he has served as tax collector without any ensuing loss of friendships. The salute to him this evening is an indication of the esteem and affection in which he is held by fellow residents. I can only wish for him many more years of satisfaction and happiness, surrounded by the friends and neighbors who have come to mean so much in the life of this public-spirited individual.

CLIFFORD P. CASE. U.S. Senator.

BAY HEAD, N.J.-The man who has made a business of collecting money during working hours longer than anybody else United States is calling it quits the first of the year.

Julius Foster, Jr., tax collector in the Borough of Bay Head since 1900, resigns the end of this year with the longest record in Nation of continuous service as a muni-

cipal tax collector.

Foster, 88 years old, will be honored for his 64 years in office at a testimonial dinner given Saturday, January 8, 1966, by the of-ficial family of the borough and friends and relatives, at the Beacon Manor Hotel, Point Pleasant Beach.

Having collected millions of dollars during his career, Foster surpasses the previous record of 57 years in office, held by a fellow New Jerseyite, Walter C. Black, tax collector of East Windsor Township, who retired in 1959.

The business of collecting taxes in Bay Head has increased many times since Foster took office on May 7, 1900. In his first year, he took in a total of \$5,005 in tax dollars;

in 1965, he collected \$455,348.17.

When he first got the job, he was told it was temporary "until someone permanent can be found to do the work." He was appointed to complete the unexpired term of his grandfather, Daniel T. Staniford, who moved out of the town to Brielle, N.J. In 1901, Foster was elected by fellow townsmen, a habit which was continued by the three following generations. He can't remember when anybody opposed him at the polis. "Surely, nobody ran against me seriously,"

Oldtimers here remember that Foster's father was tax assessor when his son became collector. The family team conducted the borough's tax business for more than a quarter century, from 1900 to 1927 when Julius Foster, Sr., died.

During his 64 years as tax collector, Foster

took care of his full-time job without extra help.

The next few days, before the year's end and retirement, he will rise as usual at 6 putter around his home until 9 o'clock, and then spend his customary 6-hour day in the tax office in the Borough Hall.

Over 40 years, Foster was in the plumbing business here. He was one of the pioneers in Bay Head who designed and produced the borough's sewerage system, built in 1911 far ahead of other local municipalities. is a charter member of the Bay Head Fire Department and served as its treasurer from 1936 to 1958.

Foster was never married. He lives today with two of his sisters, Miss Ruth C. Foster and Miss Esther Foster, in their home at 501 West Lake Avenue here. His brother, Samuel F. Foster, lives in Springfield, Mas and another sister, Mrs. Roy F. Striffler, lives

in Berkey, Ohio.

The veteran municipal official was born in Jackson Township in 1877, and moved to Bay Head early in his youth. He attended school here and in West Point Pleasant. When he was sworn in as tax collector for the first time, he recalls that Charles L. Clayton was mayor and John J. Forsythe was borough clerk.

In 1961. Foster was named senior tax colof New Jersey and received honors given him by the Municipal Receivers, Tax Collectors and Treasurers Association at the annual meeting of the New Jersey State

League of Municipalities.

Foster is a lifelong Republican. His record in office has been praised by Senator CLIF-Ford P. Case, Republican, of New Jersey, who plans to cite the veteran tax collector offi-cially next month before the U.S. Senate.

Similar expressions of congratulations for Foster's achievements have come from the Federation of Tax Administrators, the International Association of Assessing Officers, and the National Institute of Municipal

A special citation will be presented to Foster by the Ocean County Board of Chosen

Freeholders.

In reminiscing about his early days in Bay Head, Foster said: "The Borough didn't amount to much in the way of houses around 1900 although it was a popular resort. When I first took over the collector's job, the total assessment was \$215,000. The biggest place in town was the Bluff's Hotel on East Avenue. I guess it was built in 1898 or 1899, but it seems like it was always there

"I was here during the blizzard of 1888. That was really something. We were snowed in for a week. There wasn't any train service from a Monday to a Friday. I think some of the drifts must have been 8 to 10 feet high."

When he moved here there were only 10 houses in the borough, he recalls. Most of them were summer homes, he said, and the now fully developed bayfront on Barnegat Bay was then "inhabited by mosquitoes

Foster has a good word for his fellow townsmen as taxpayers. "Most of them pay their taxes with no trouble," he said. "And, besides, the law has a way of dealing with those who don't."

# President Johnson's State of the Union Message

EXTENSION OF REMARKS

# HON. PRENTISS WALKER

OF MIRSTSSIPPI

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. WALKER of Mississippi. Mr. Speaker, during the President's state of the Union message before this body, I was reminded of a Texas horsetrader, who brought horses into our community when I was a boy. He was always quick to tell you all about the horse's good qualities. but deliberately omitted the faults that might cause disaster later on.

Mr. Johnson told of all of the magnificent accomplishments of his so-called Great Society during 1965, and of the great period of prosperity that our country is supposed to be enjoying. But, there are some points of the so-called Great Society administration that Mr. Johnson did not mention in his annual report.

One of the many facts that he did not discuss was our Nation's cost of living. On two different occasions, once in July and again in December our cost of living jumped to all time highs. In telling how good our economy is, Mr. Johnson did not bring up anything about the condition of our gold reserves and how our gold stockpiles in Fort Knox reached a new record low this past summer. He did not tell us it was not the taxpayers but the "States' liabilities" that want home rule in the District of Columbia.

President Johnson asked Congress to take away the individual's freedom of choice, the freedom he has to choose whether or not he wants to join a labor He failed to mention that last year, the Supreme Court of our land, that applauded his every action, ruled that an individual could be a Com-munist and still be the head of a labor union in America. And, he forgot to tell us that strikes during 1 month alone last year, in the same unions we would be strengthening, put over 220,000 workers out of work.

President Johnson told us in his report how great our farm policy is, and how much better off the farmer is today than ever before. I have never seen the farmer making less profit and more dissatisfied than he is today. You heard nothing about how our farm debt has jumped up nearly 50 percent since 1961or that our Department of Agriculture is spending more tax dollars to serve less farms today than ever before.

When he talked about Vietnam, President Johnson forgot to mention that combat casualties over there last year amounted to over 5.500 men-or that we had 1,365 servicemen killed in action. The bad thing about the so-called Great Society's Vietnam policy is that we are exactly where we were 1 year ago. He is still operating on the policy of containing and appeasing communism. We're still not winning in Vietnam, and he made no claim that we intend to win.

The five-point foreign policy as outlined in the state of the Union message expanded beyond reason our present policy of appeasement at the cost of the American taxpayer. At one point the President said "The fifth and most important principle of our foreign policy is support of national independence." he made no mention whatsoever about why we haven't followed this policy with regard to Rhodesia-where we have done just the opposite.

In all of this, I come to one conclusion, it is not only what President Johnson said in his state of the Union message but what he did not say that is frightening

After 1 year of the so-called Great Society, with the increases in crime, immorality, bitterness, and insecurity, I think the citizenship of our Nation will admit that our society is in worse shape now than ever before in the history of our Nation.

# Job Corpsman's Mother Writes Christmas Letter

EXTENSION OF REMARKS

#### HON. THOMAS H. KUCHEL OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES Monday, January 17, 1966

Mr. KUCHEL. Mr. President, I received a letter from our very able commissioner of reclamation, Mr. Floyd Dominy, under date of January 11, 1966, enclosing a copy of an article from the Trinity Weekly Journal, of Weaver-ville, Calif., for December 23, 1965.

This article sets forth the text of the letter which a constituent of mine wrote to the Lewiston Job Corps Center.

The Lewiston Job Corps Center is maintained at the former construction camp for the Greater Trinity Unit of the Central Valley project near Weaver-

In the letter, the woman comments on her son, a member of the Job Corps. Her family is poor and is unable to provide the necessary education for the boy. The letter speaks in understandably glowing terms of the improvements this boy has made in the Job Corps.

I ask unanimous consent that the text of this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOB CORPSMAN'S MOTHER WRITES CHRISTMAS LETTER

LEWISTON.—The mother of a Lewiston Job Corpeman has written an unusual Christmas greeting letter to the staff of the conservation center here.

John C. Schaumburg, director of the center, made public the contents of the letter because "this area deserves so much credit for the success of the center."

Following is the text of the letter (author's

name withheld on request):
"To the Counselors and Staff Members of
the Job Corps Conservation Center in Lewis-

"Merry Christmas and a peaceful and better New Year. And thank you, and God bless you for what you have done for our son these past few months. We cannot praise the Job Corps enough because we know what has been done. We see the result.

NOTICE IMPROVEMENT

"Our son, who once couldn't write his own name, now writes to us. When we talk to him on the phone, we notice the improvement in his speech, his attitude toward his fellows, and we thank God for folks like you care enough to help a boy whose parents could not help him financially and otherwise.

"We read recently that a critic said \$6,000 a year per boy was being wasted on the Job Corps. But I say one boy who is reclaimed, educated, and started on his way will pay back to the U.S. Government this amount several times over in his lifetime.

"This is our hope for our son. We again say we cannot ever thank you folks enough. But we pray that God will bless your lives with every good thing. Our prayers and eternal gratitude are yours.

"God bless you all and a merry, merry Christmas."

#### The War on Poverty

EXTENSION OF REMARKS

# HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. BERRY. Mr. Speaker, I have asked consent to include in the Congressional Record the following editorial from the Daily Capital Journal, Pierre, S. Dak., which appeared this past week on the subject of poverty being a state of mind. I think it is so good I want all of the Members to have an opportunity to read it. The editorial is as follows:

THE WAR ON POVERTY

Poverty is a state of mind.

It exists among people who have no hope or aspiration for tomorrow.

For the past year or more this country has been witnessing an attempt on the part of an army of social reformers under the command of Sargent Shriver to wage a "war on powerty" that is about as expensive and a lot more futile than the war in Vietnam.

It was Juvenal who wrote that "we all live in a state of ambitious poverty." There is certainly a growing conviction on the part of a lot of people in this country today that Juvenal was right, and that the real distinction to be made among people is in the nature of their ambitions rather than in the nature of their bank accounts.

Shortly after the close of World War II the late Gen. George C. Marshall, at that time Secretary of State, made a speech at Harvard University in which he proposed the principle that the people of the United States should help the people of Europe to help themselves. That proposition aroused much enthusiasm at home and abroad, and it resulted in the sending of some billions of dollars abroad. More important it did result in an astonishing recovery of the productive capacity of millions of Europeans.

Subsequently the original program unfortunately was corrupted into a political maginot line against communism which resulted in the squandering of many more billions of dollars in ratholes all over the world.

When the "war against poverty" was first announced by President Johnson the concept was one of helping Americans to help themselves. We do not know just how much has been spent in this war to date, but of one thing we are sure. That is that it has not been waged in a way to change the state of mind or to arouse ambition on the part of very many people.

The surest way to reduce the amount of poverty anywhere is to create new opportunities upon which hopeful or ambitious people may seize. The man who invents a better mousetrap does more to eliminate poverty than a dozen social workers attempting to teach people how to make ordinary or obsolete mousetraps.

Poverty can't be eliminated by distributing existing gold among people. But a lot of poverty could be eliminated by eliminating a tax on production of gold, and even more by permitting gold to be sold in an open market. There would be miners working who aren't working now.

# New York University Establishes School of the Arts

EXTENSION OF REMARKS

# HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, January 17, 1966

Mr. JAVITS. Mr. President, indicative of the growing interest throughout the Nation in the arts is the establishment by the New York University of a school of the arts. This is the university's 15th major division and will be headed by Dean Robert W. Corrigan, formerly head of the drama department at the Carnegie Institute of Technology.

I ask unanimous consent to have printed in the Appendix an article from the December 1965, issue of the New York University Alumni News describing the new school of the arts.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York University Alumni News, December 1965]

SCHOOL OF THE ARTS ESTABLISHED TO FOSTER CREATIVITY, OFFER PROFESSIONAL TRAINING

A school of the arts has been established by New York University, it was announced last month by President James M. Hester,

The major aim of the new school will be twofold; to have a creative influence on professional standards in the performing and visual arts, and to offer professional training in the arts.

When all its activities are underway, the school will consist of an institute of the performing arts, with programs in theater and musical theater, an Institute of Film and Television and, ultimately, an Institute of the Visual Arts with programs in painting and sculpture.

Professional artists will serve as master teachers, working with the students in flexible programs of study that fit the special needs of developing artists. The students' training will involve professional-level performance through creative and performing opportunities within the school and, where appropriate, through liaison with professional performing groups outside.

#### TALENT ESSENTIAL

The primary criterion for admission to the school will be talent and evidence of professional promise. Undergraduate and graduate degree programs will be available, although students may also matriculate in nondegree certificate programs.

President Hester has appointed Dr. Robert W. Corrigan, former head of the drama department at Carnegie Institute of Technology, as dean of the school. Dr. Corrigan came to NYU in the summer of 1964 to serve as professor of dramatic literature.

The school of the arts will be the university's 15th major division. It will have its headquarters at the Washington Square center.

In the theater program, the first to begin operations, there are plans for a junior repertory company that will perform at the school for invitational audiences. A professional middle company will be drawn primarily from the NYU program and while continuing their training with master teachers, will present public performances of classic and modern plays, directed by distinguished directors from this country and abroad.

The members of the middle company will be drawn primarily from the NYU program and to a limited degree from other training programs throughout the country. In addition, liaison will be established with repertory companies across the country so that there will be a natural next step in the actor's professional development.

As a direct contribution to the New York theatrical community, the school plans to establish a theater center to be used by invited members of the profession—actors, directors, playwrights—for rehearsal, experimentation and discussion. Other programs are envisaged, including joint work with various educational theater programs in research and training; research, publications and public forums; hospitality to and benefit from visiting professionals from all over the world and public service.

The institute of the visual arts will include a training program for artists, usually 3 years long, and an apprentice program, in which students will work under master teachers and participate in major projects that the master teachers will undertake. It is hoped that these major projects will evolve in such areas as experimental work in light, color and motion; art created with and for architecture, and designs for the theater and films.

The master teacher concept is important to all programs of the school, for Dean Corrigan feels that it is essential for the growing artist to have constant and stimulating contact with distinguished professionals in the field.

#### TREAM ORIENTATION

"Creation of the new school of the arts is in keeping with New York University's urban orientation and its tradition of adopting new approaches to learning in the city," Dr. Hester said. "We shall draw upon New York City's rich resources in the arts and, in turn, we shall seek to strengthen the arts at the highest professional level. I am enthusiastic about Dean Corrigan's fresh approach to one of the most important areas of our national life."

The structure and purposes of the school will differ in striking respects from those of other such schools across the country, said Dean Corrigan. "Until now our universities have falled to provide training in the arist that is in any way comparable to that given in the sciences and humanities," he said. "Unquestionably, the universities have played a vital role in educating audiences, but they have not trained very many students who, upon graduation, are equipped to begin the professional practice of their art."

He also pointed out that universities have not played their proper role of leadership in the arts. "College programs in medicine, law, and dentistry not only train students within a university; they direct students out into the professions that they both serve and lead," he said. "The same opportunity now presents itself to New York University in several areas of the arts and the mass media."

Accordingly, all programs in the arts at the new school will have a dual purpose: (1) to give the students thorough and practical professional training and (2) to help improve and reshape the standard of performance and repertoirs in the profession.

formance and repertoire in the profession.

The program of the institute of film and television will be directed primarily to persons who have an undergraduate degree or have attained some measure of professional experience. The emphasis of the institute will be in three areas: on training for the field; on management training, and on experimentation in the whole area of the relation of sound to image, with special attention to developments in both media theory and technology.

Centers are planned for the institute of the visual arts and the institute of film and television that will be analogous to the theater center. Each will have a place at the university where professionals in the field may meet to study, experiment, watch films or performances and share their ideas with their colleagues.

The first activity to get underway will be the training and degree program in theater, which will began in the fall of 1966. The institute of film and television is expected to start enrolling students in the fall of the following year.

### Chad Independence Day

EXTENSION OF REMARKS

### HON. PAUL H. TODD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. TODD. Mr. Speaker, on January 11, Chad celebrated its Independence Day. I believe it appropriate for the House to take note of this fact and to extend its good wishes to the people of Chad.

Although facing extreme economic difficulties entailed by its landlocked position and its large desert area, the people of Chad have worked hard and efficiently to develop their economy. The country is self-sufficient in food production and exports have reached a new high.

Chad has played a responsible role not only as a member of the French community and as an associate member of the European Economic Community, but also through its participation in a number of United Nations activities.

On this day, let us offer the people of Chad our best wishes for continuing their successful development and our congratulations on their day of independence.

### The State of Elbie Jay's Union

EXTENSION OF REMARKS

### HON, EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. DERWINSKI. Mr. Speaker, there are times when a newspaper column tells a story so clearly that an introduction or postscript when inserting it into the Record is unnecessary. I believe this to be the case on the article by Arthur Hoppe which appeared in Saturday's Evening Star and which I place in the Record at this point:

THE STATE OF ELBIE JAY'S UNION

(By Arthur Hoppe)
Howdy there, folks. How y'all? Time for another tee-vee visit with the rootin-tootin' Jay family, starring ol' Eible Jay, who humbly enjoys nothin' more than a good, long rousin', drama-filled old-fashioned political speech. As long as it's bis.

As we join up with ol' Elbie today, he's just a-coming in the door, all happy and wrung out. That's his pretty wife, Birdie Bird, puttin' down her seed catalog to give him a

Birdie Bird: "How did it go, dear?"

Eibie: "Why, it was the best speakin' I ever did attend. I told them Congressman right out what the state of the Union was and exactly what I planned to do with it. And they darn near brought down the ceiling with their roaring, shouting applause."

their roaring, shouting applause."

Birdie Bird: "Marvelous, dear. How did you do it?"

Eible: "Well, I kind of warmed 'em up by telling them how I was going to cure the sick, enrich the poor, wipe out slums, clean up pollution, stop the population explosion,

and bring world peace."

Birdie Bird: "That's nice, dear. And which of your points brought on the roaring, shout-

ing ovation?"

Eibie: "When I told them I was going to let them run for Congress every 4 years, instead of every 2. My, it sure is nice to know those fellows feel deeply about something."

Birdie Bird (hesitantly): "Did you speak to them about—you know."

Elbie (frowning): "Yep, I told 'em again about how they'd only have to campaign every 4 years, so's they'd have something important to think about. And then I spoke right out on Vee-yet-nam. I told 'em how it was going to cost us billions and billions of dollars. And how all the things I'm going to do at home is going to cost us billions and billions of dollars, too. Then, just when all looked blackest, I told 'em not to worry 'cause I had a plan to finance the whole shebang."

Birdie Bird: "Of course you did, dear. But

Elbie: "Why, by restoring the tax cut on long-distance telephone calls."

Birdie Bird (absently): "Yes, you explained that to me last year. If you cut taxes, that stimulates the economy and brings in more revenue. Oh, I'm sure cutting taxes on telephone calls will bring in just billions and billions."

Elbie (irritably): "No, this year, I'm going to restore the tax to bring in billions. You never did understand high finance."

Birdie Bird (baffied): "But if you cut taxes to raise more money and now you restore taxes to raise more money—really, Elbie, I don't see how anyone can have confidence in you."

Eible (smiling foxily): "Confidentially, honey, I'm going to use the tax to beautify our highways."

Birdle Bird (clapping happily): "You're wonderful, dear. I have every confidence in you."

Eibie (with a wink): "I guess I just know how to appeal to folks. With one thing or another. And now, honey, shall we see if I'm on tee-vee? Or shall we just have a quiet family night and sit around looking at my scar?"

Tune in again, friends. And meantime, as you mosey on down the trail of life, remember what Elbie's ol' granddaddy used to say:
"Talk is cheap. So use plenty of it."

#### Jawaharlal Nehru

EXTENSION OF REMARKS

### HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. McVICKER. Mr. Speaker, the Denver Post, in its lead editorial several days ago presented a most fitting eulogy to Jawaharlal Nehru, the late Prime Minister of India.

In the belief that these words express the feelings of all Americans as to the loss that we too have suffered, I am inserting the editorial at this point in the RECORD.

### Peace Was Shastri's Legacy

"No one could wish for a better colleague," said Jawaharial Nehru of his close and loyal friend, Lel Bahadur Shastri.

These words were uttered by Nehru shortly before his death in 1964, and he made it abundantly clear that he wanted the slight, soft-spoken Brahmin to succeed him as leader of India's millions.

The Congress Party gave Shastri, who had won a reputation as a capable administrator, the opportunity.

For 19 months, Shastri taxed his frail health seeking to achieve the democratic, humane goals Nehru had set for India. Monumental problems at home and abroad thwarted most of his efforts.

Then when it appeared that Shastri had achieved new stature as a statesman, a heart attack Monday night took his life in the Russian city of Tachkent.

Shocking as his sudden loss is to the Indian people, it is fitting that Shastri's final legacy to them was peace.

Only hours before his death, he and Pakistan's Fresident Mohammed Ayub Khan had reached an agreement—with significant prodding by Soviet Premier Alexei Kosygin—to end hostilities between India and Pakistan.

The Tashkent pact did not solve the Kashmir conflict, which has brought considerable anguish to India and Pakistan, but it did reaffirm Shastri's deep conviction that international disputes must be settled at the conference table and not the battlefield.

Hopefully, India's new prime minister, Guizariial Nanda, can complete the mission of peace undertaken so energetically by Shastri.

President Johnson, who was to have conferred with Shastri in Washington in February, expressed well the feelings of most Americans over India's tragic loss:

"The world is a smaller place without him."

### Washington Report

EXTENSION OF REMARKS

### HON. JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. MARTIN of Alabama. Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to include my report to the people of the Seventh District of Alabama for January 17, 1966:

PRESIDENT NOT QUITE SURE OF THE STATE OF THE UNION

The best summary of Lyndon Johnson's state of the Union message was that it was delivered and received with a complete lack of enthusiasm. It seemed the President himself did not quite believe what he was saying. It demonstrated a lack of imaginative leadership at a time when the Nation needs inspired leadership. It was just a replay of the same old tired tune of spend and tax, more Pederal control over the States and the people, an a promise of a war in Vietnam that will "last for years."

#### ON VIETNAM

The biggest letdown for the American people was the failure of the President to offer any positive program for ending or winning the war in Vietnam. He seemed to be willing to let the Communists decide on how the war will be fought and on what terms it will be negotiated. He failed to explain why warefuse to cut off the supply lines of the enemy by blockading the Haiphong Harbor and the Mekong River. He has no plans, evidently, for bombing strategic military targets such as the two rail lines from Red China into North Vietnam where many tons of war materiel is coming into the country, missile bases, military airfields, military fuel dumps and oil depots or ammunition plants. He made no mention of the fact that he and his political advisers are tying the hands of the military which prevents action needed to end the war in the shortest possible time.

#### RENEWED ATTACK ON SOUTH

In the best Johnson demagogic style he promised new attacks on the South under the guise of civil rights legislation. The effort will now be directed toward control of the jury system. This is a most dangerous area to be made subject to Federal control because the whole foundation of our judicial system with its guarantees of a fair trial for anyone accused of a crime, rests with the right of the accused to be tried by a "jury of his peers" selected without prejudice and subject to no pressures. Now the President wants to invade the jury box by giving control of the selection of jurors to Nicholas Katzenbach.

#### ASSAULT ON OWNERSHIP OF PRIVATE PROPERTY

He made a direct assault on the ownership and control of private property by promising to push for legislation to give "the Federal Government power to prohibit racial discrimination in the sale or renting of housing." In plain language this means "open housing," which only a year ago was rejected in California by a vote of the people. Under this program Robert Weaver, lead of the Depart-

ment of Housing and Urban Development, and Nicholas Katzenbach will tell you to whom you may sell or rent your house or who is going to live next door to you. This is not a racial question. It deprives any individual of his fundamental right to manage his own property and to choose his own heighbors.

#### ECONOMIC FIGURES JUGGLED

The President's announcement that the Federal deficit will be only \$1.8 billion next year was met with amazed silence by both Democrats and Republicans. It was the general consensus of Members of Congress that this is a mere juggling of figures and a book-keeping transaction. Planned expenditures for the poverty office alone will cause a greater actual deficit than the figure quoted by the President, and the cost of the war in Vietnam cannot even be estimated.

In promising to push for funds for rent subsidies, the President provides for another open-end raid on the Tressury. Operating under regulations laid down by Robert Weaver's new Department many Government agencies and boards are already planning to move poor families into better residential neighborhoods by renting single houses at the going rate and having the Government make up the difference in what a poor family can pay and the actual rent of the house. This is integration by economics.

#### PAVING WAY FOR ONE-WORLD GOVERNMENT

Suspicions were aroused by the President's proposal to demand an International Education Act for 1966 and an International Health Act for 1966 in which the United States will finance education and health on a worldwide basis before we have even implemented the programs passed last year to solve these problems in this country. The suspicion is that this program is advocated by the proponents of one-world government as a first step toward eliminating national sovereignty and placing authority in the hands of an international tribunal. Perhaps it was more than significant that the President used the term "supreme association" in referring to the United Nations. America has always placed its faith in the Supreme Being and our national life has been guided by an adherence to religious principles. Now it scems we are being moved in a subtle way to accept an organization of men as the "supreme" influence and inspiration by which we are to live:

#### GREAT SOCIETY PROMISES UNFULFILLED

The rosy promises of the President last year for achievement by his Great Society were exposed for what they are, empty prom ises. The much publicized war on poverty to date has been a failure. Although hundreds of millions of dollars have been spent by the taxpayers in the hope the poor would be helped, the sad truth is that most of the has been wasted or has gone into the hands of a few selected and highly paid political appointees. The newspapers have een filled almost daily with stories of intradepartment squabbling, waste and corrup-tion. The only solution the President offered in his state of the Union message to expand the program, hire more political people, spend more money, encourage more by enlarging the welfare programs. He offered no positive approach to unleashing the tremendous power of the private enterprise system which alone will provide the jobs, the wages, and the incentive to put an end to poverty.

#### ECONOMIC PERIL TO THE SOUTH

In several key areas the President threatens the economy of the South. His demand, under pressure by northern big city bosses, that State right-to-work laws be repealed, is a prime example. While talking out of one side of his mouth about "individual freedom" at the same time he calls for depriving the right of the workers of Alabama to decide

for themselves whether or not they want to repeal these laws.

His demand for an increase in unemployment compensation and an increase in minimum wage is another move, according to the Chicago Daily News, for slowing down the movement of industry to the South. This will mean fewer jobs for our workers and greater unemployment. As the Chicago Daily News puts it: "There's more bad news for the South in the program of the 2d session of the 39th Congress. The Johnson administration is pushing three proposals that, if enacted, would seriously crimp the sales talk used by the South in recruiting new industry \* \* \* this phase of the Great Society could inhibit the industrial growth rate of the South." The three proposals are repeal of 14(b), increase in minimum wages, and Federal standards for unemployment compensation.

#### A NEGATIVE MESSAGE

A disappointment in the message was that it was so completely negative. The President tried to tell us that we are enjoying the greatest prosperity ever and at the same time he said we must spend more millions on more welfare programs because our people are in such a poor and miserable situation. He made no mention of the promise that we would get more tax cuts—instead he asked that excise taxes which have been in effect only 2 weeks, be put back on. He ignored the inflation caused by big government spending which is robbing all of our citizens of the purchasing power of the dollars in their pockets. People do not have more money because a dollar buys so much less than it did a year ago when you go to the grocery store or when you buy shoes and clothes for your children.

America needs positive leadership to free up the tremendous forces of the private enterprise system. It was through the operation of this system with its incentives to get ahead that we reached this point in history where our people enjoy the highest rate of employment and the highest standard of living for more people than any other nation in the history of mankind. Lyndon Johnson has failed to provide the kind of leadership necessary to meet the dynamic challenges of the sixties. It is now up to the Republicans in Congress, supported by those in the other party who have faith in America and its people, to provide the positive programs we need. That will be the purpose of our party and my own purpose in the session of Congress which is just beginning.

#### The Late Honorable John Taber

SPEECH

OF

### HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mrs. HANSEN of Washington. Mr. Speaker, I wish to join today the other Members of this House and pay tribute to the memory of John Taber who served this Nation long and served this Nation most effectively for over 40 years.

Congressman Taber was one of the most respected Members of the House Appropriations Committee and he was also considered as one of the watchdogs of the U.S. Treasury.

Even after his retirement he continued to speak in defense of the ideas in which he believed so thoroughly. His steadfastness, courage, integrity, and a deep sense of responsibility to the American taxpayer will always be remembered.

I extend my deepest and sincerest sympathy to the members of his family.

### No Sweat, No Strain

EXTENSION OF REMARKS

### HON. MASTON O'NEAL

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. O'NEAL of Georgia. Mr. Speaker, this is "open season" for editorial comments on the President's annual state of the Union message.

I have learned to look forward to the reaction and articulation of my friend James H. Gray, editor and publisher of the Albany (Ga.) Herald.

His recent front page comments entitled "No Sweat, No Strain," are helpful to a clear examination and evaluation. I heartily endorse them and share them with my colleagues:

#### NO SWEAT, NO STRAIN

President Johnson's report on the state of the Union before a joint House-Senate ssion ran along well-advertised lines. The main assertion was that the Nation's economy was so buoyant that the war in Vietnam could be efficiently waged the while the Great Society domestic program is pushed forward to new, lush grounds. This is a forward to new, lush grounds. This is a familiar sentiment that has about as many opponents as it does proponents; it advances the theory that judicious direction by the administration can "manage" an economy that seems to be heading into unwelcome areas of inflation. The Chief Executive has cast his lot with the economic "managers" on the basis that unless high Federal spending is maintained there may be an eco downturn, which could be the prolog to recession.

Disturbingly, Mr. Johnson is playing the political angle for all it is worth. It is an old axiom in politics that the boat should not be rocked in an election year. A dedicated practitioner of the art, the President has remembered this advice well. For whereas he summons the American people to the severe challenges abroad, demanding the best from all of us in the way of energy, resolve and patience, he hesitates to prescribe any belt tightening at home in order that heavy military commitments may be met without serious economic dislocation. Instead, he suggests that we can finance a comfortable Great Society and still be able to prosecute a war on the cheap. And as a sop to those who believe in the philosophy of "no sweat, no strain, and plenty of Federal handouts," he refuses even to talk frankly about the possibility of new taxes.

Displaying his customary fascination for devious routes to hidden goals, Mr. Johnson says now that he seeks only tax "adjustments," notably a reapplication of excise levies in some fields and a tinkering with the withholding process in others. In plain language, these "adjustments" represent tax hikes, but the President elects not to speak plainly, because Congress is understandably cool toward increased revenue measures in an election year. This objection is purely political on the one hand, but there do exist other important considerations, such as the diminishing confidence of the American people in

the brains and honesty of the Great Society spenders.

Hence the prospect is for a continuing and probably swelling Treasury deficit while the Vietnam war is going full stride. That means more Government borrowing and a rising national debt for the current fiscal year, for the following year, and others succeeding. It is a truism that deficit financing, which Mr. Johnson says that he truly deplores, is the taproot of a monetary inflation, which Mr. Johnson also says that he truly deplores. Yet, presumably, we are to have our guns and butter in huge amounts without exercising any fiscal discipline.

So round and round we are to go apparently, and where we stop nobody knows—at least until election-year politics has been safely determined by the White House.

We will admit that the President's ora-

torical task of putting the heated up cold war and the Great Society prospects in an agreeable political frame was immense, more difficult and more elusive than that of a "hot war" leader like Roosevelt or Church-ill. Those World War II chieftains were stirring total commitments from their people in a total military struggle. It was black and white, we or the enemy. But the cold war is a far different proposition. It is diffuse and shapeless. It is hard to make eloquence out of military necessities—especially with no immediate goal in sight. Undeniably, the Undeniably, immediate goal in sight. drama is there, but we doubt that the father image of Lyndon, who decided to say much than should have been said in this critical situation, made a first-class hit on America's emotions with the oversimplified observation that we are so strong that nothing can push us off our feet-not even politics as usual.

We feel that the President has failed to face reality. Most people distrust the Communists, fear a nuclear war and know in a general way that our country is in constant danger. But what the American people still do not know is what is being asked of them in everyday terms. They want to serve and help, but they do not know how. And Mr. Johnson, although citing some areas where public efforts must be made, never did spell out the sacrifices. They ware only implied—and that is scarcely enough to meet the harsh needs of deteriorating world condi-

JAMES H. GRAY, Editor.

#### Tribute to Hon. Herbert Bonner

SPEECH

OF

### HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mrs. KELLY. Mr. Speaker, I welcome this opportunity to join in tribute to our esteemed colleague, Hon. Herbert Bon-NER, of the State of North Carolina.

Over the past 20 years during which Congressman Bonner served his constituents and his country so well, he earned the respect and admiration of us all

His strength and quiet wit will long be remembered and will surely be missed by those of us who considered him a valued friend.

Having been brought up spending my summers on the shores of Long Island, where the sport of fishing was enjoyed by amateurs as well as professional sportsmen, I shared a common interest with Congressman Bonner. It was always a great pleasure for me to listen to his many fishing experiences,

I am sure the Outer Banks of the Carolina Coast will no longer be the same. The fisherman has gone to his eternal home.

### Medicare Oath

EXTENSION OF REMARKS

### HON, JOHN J. GILLIGAN

OF ORTO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. GILLIGAN. Mr. Speaker, I am today introducing a bill to eliminate from the Medicare Act the provision that allegedly requires some 2 million elderly persons to sign a non-Communist affidavit before becoming eligible for hospital and medical benefits. I believe that HEW erred when it made such a regulation for it was not the intent of Congress that it do so. This administrative decision to require that all those elderly persons who qualify for medicare, but are presently uninsured under social security, railroad retirement, or civil service programs take such an oath, is not only erroneous, but absurd and humiliating to those who must take it.

Miss Inez Robb, the noted columnist, the Cincinnati Post and Times-Star, and Mr. Frank J. Gorsler, of Cincinnati, all have, in the last few days, commented on this requirement. I would like to insert Mrs. Robb's column, an editorial from the Cincinnati Post and Times-Star, and a portion of the letter Mr. Gorsler wrote to me. Mr. Gorsler's letter expresses the sentiments of many elderly citizens who are puzzled and shocked by the loyalty oath requirements. I ask that these documents be printed in the Record.

[From the Cincinnati Post and Times-Star, Dec. 23, 1965]

BEFORE THE ASPIRIN, A LOYALTY OATH
(By Inex Robb)

Over the ages the testimony of a great many senior citizens indicates that old age is hell. The liste Somerset Maugham's testament to this is fresh in mind. And only a few weeks ago, on the occasion of his Sist birthday, another gallant oldster, Norman Thomas, indicated his agreement.

Now, in its majesty, the U.S. Government has added a new burden to the ordinary indignities and ills to which aging fiesh is heir. Before that fiesh can be hospitalized for treatment under the provisions of medicare, approximately 2 million senior citisens will have to sign a non-Communist piedge before receiving so much as an aspirin.

To protect this mighty Nation from the legions of the aged and the sick, crafty legislators wrote into medicare a joker requiring the aigning of such a Communist disclaimer. Senior eithers who are not covered by social security or railroad retirement programs are the targets.

It is estimated there are about I million such oldsters, whose fighting days, one would presume, are over. There is even a fixed belief in this country that age leads to conservatism as night to day, as witness all those little old ladies in tennis shoes and the corporation prexies who support the John Birch Society.

However, if television hadn't invented the phrase, "don't be half-safe," certain Congressmen surely would have done so. Rather than be half-safe—with the possibility that even one old Communist, "sans teeth, sans eyes, sans taste, sans everything," be hospitalized via medicare—2 million oldsters, whose only crime is that they are 65 or over, must submit to the indignity of a non-Communist cath.

"When will we grow up in this country? When will be become adult enough to do away with such nonsense?"—questions asked, in turn, by Senator Jacob K. Javrs, Republican, of New York, when questioned about the cath. "Why, at the end of their lives, harass senior citizens with such an oath? I see absolutely no necessity for it.

"No farmer is asked to sign a loyalty oath to get a crop loan; no small businessman is asked to sign a loyalty oath when he seeks financial help from the Government. And certainly the officers of no ship line are asked to sign such an oath when they seek and get a big ship subsidy."

The oath for oldsters reads as follows:

"I certify that I am not now, and during the last 12 months have not been, a member of any organisation which is required to register under the Internal Security Act of 1950, as amended, as a Communist-action organisation, a Communist-front organization, or a Communist-infiltrated organization."

A senior citizen, male or female, can without penalty, enjoy membership in the Ku Elux Elan, the American Nazi Party, the Minute Men, the John Birch Society, the Silver Hearts of America, the Circuit Riders, or support Dan Smoot, the Manion Forum, Billy James Hargis or Gen. Edwin A. Walker, all so far to right of center that they're out of the ball park.

With impunity, they can tape former President Dwight D. Eisenhower as a Communist sympathizer. They can be howling anti-Semites. They can be rabid racists. And no questions asked. Membership in such organisations listed above implies no lack of sound judgment in an elderly man or woman in need of a hospital bed.

[From the Cincinnati Post and Times-Star, Dec. 24, 1965]

SELLY MEDICARE OATH

Among the leser known provisions of the medicare law is one which, in effect, requires some I million persons to take a non-Communist cath before they are eligible for benefits.

Affected are those who don't qualify for regular social security or railroad payments. If they want medicare, they must certify that they do not belong to the Communist Party or certain other organizations ordered to register as subversive by the Subversive Activities Control Board.

The history of such oaths is that they (1) do not serve the purpose for which they are intended, and (2) do insult the integrity of the decent people who are required to sign them.

Few actual Communists are likely to be deterred from getting free medical benefits by the mere formality of having to sign a piece of paper. Many non-Communists, on the other hand, may feel it is degrading to be forced to swear their political beliefs before the Government will pay a hospital bill for them.

As Senator Javres, of New York, has pointed out, no such oath is required of farmers receiving crop payments, or those who get other forms of subsidy. Nor does the cath apply to members of the Ku Klux Elan or other groups which don't happen to be on the SACB list.

This is a silly requirement and should be repealed by Congress.

COMMENTS OF MR. FRANK J. GORSLER

I'm 65 years old, still employed, and have no plans for being relegated to a rocking chair in the immediate future but a couple of days before Christmas I applied for enrollment in the medicare plan. On the same day, I read Mrs. Robb's column. Now I'm not sure whether I want to enroll or not.

The clippings say that the cath will be required only of those not "covered" by or "qualified" for regular social security benefits. I'm not sure of the legal semantics and it may be that I am covered and/or qualified, even though I'm not receiving regular social security benefits.

But whether the requirement applies to me or not, I feel very strongly that this is bad law—if it really is the law—and I am puzzled as to why such a provision was included unless this was done by opponents who sought to make the law less acceptable. I would never take such an oath and therefore, if it is required, it would be foolish for me to pay even \$3 per month into the plan.

is required, it would be foolish for me to pay even \$3 per month into the plan.

I am wholeheartedly in agreement with the opinions expressed in both the Robb article and the Cincinnati Post editorial, although I believe a stronger adjective than "silly" is warranted in the editorial heading. "Asinine" seems more fitting.

I consider such a provision in the law not

I consider such a provision in the law not only humiliating but also futtle, discriminatory and even detrimental to the preservation of democratic processes in our society.

I think it's humiliating because it pre-sumes that the loyalty of certain citizens who have lived 65 years is automatically suspect and therefore proof of loyalty is needed when they are in need of hospitalization or medical care-although in their vigorous years they could obtain various Government sub-sidies without such proof. Is the alternative to let them die in the streets or to provide other forms of assistance? I call it futile because I believe any person dedicated to the overthrow of the Government would certainly have no scruples about signing a statement that he was not disloyal, whereas many loyal citizens will, I believe, reject this indignity. It "straws the wheat and saves the chaff." It's discriminatory because it seems to apply only to some oldsters and to certain classes and organizations and, I think, it's detrimental because it seeks to force loyal citizens out of any "infiltrated" organization, leaving the disloyal in full control. I believe good citizens should stay in and fight to oust the disloyal from power. If the Congress were to become infiltrated, would you resign and abandon the Government them?

Is such a provision really essential to the security of these United States or have those who drafted it merely lost faith in democratic processes?

I don't know who sits on the Subversive Activities Control Board now and I cannot foresee who will sit on it in the future. I don't know which organizations are now listed nor which some future Board may list. Conceivably, a future Board could be dominated by the Ku Klux Klan, the Nazis or the John Birch Society.

nated by the Ku Klux Klan, the Nazis or the John Birch Society.

I fervently hope that this provision of the law can be repealed and that you will assist in its repeal if proposed.

The Late Hon. Herbert C. Bonner

SPEECH

HON. JOHN J. ROONEY

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. ROONEY of New York. Mr. Speaker, I was saddened and shocked

when I learned that on November 7, 1965, the Honorable Herbert C. Bonner, of North Carolina, died in Walter Reed Army Hospital here in Washington. I wish to join my many colleagues in sadly saluting the memory of a man who devoted 25 years of his life to serying the people of North Carolina and the United States.

For most of the 25 years HERB BONNER spent in the House of Representatives, and in his service on the House Committee on Merchant Marine and Fisheries, he fought to strengthen and stabilize this country's maritime industry. He believed as most of us do, that the merchant marine was, and is a vital part of America's strength. For a decade as chairman of that vital committee, he fought for improved safety regulations at sea and technological advancement throughout the industry. In fighting to strengthen the merchant marine, a fight that I wholeheartedly did and do support, HERBERT C. BONNER was serving not only the great State of North Carolina. but all the people of this country. He shall be sorely missed.

To his family, I extend my deepest sympathy and condolence.

Not a Great Society for the Domestic Oil Industry

EXTENSION OF REMARKS

HON. ROBERT DOLE

OF KARSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. DOLE. Mr. Speaker, the independent oil-producing industry, not only of Kansas, but other States as well, continues to face tremendous odds in its struggle for survival due to this administration's policy on importing foreign crude oil.

I am inserting in the RECORD an open letter to Secretary Udall and the Johnson administration which appeared in the January 2, 1966, issue of the Wichita Eagle Beacon. This letter calls attention to the administration's discriminatory policy affecting this industry and should be of interest to all Members who represent oil-producing areas.

An Open Letter to Secretary of Interior Stewart Udall and the Johnson Administration in Care of the Department of Interior, Washington, D.C.

DEAR MR. UDALL: For the second time, the foreign oil import proclamation has failed to grant any relief to the midcontinent oil producing industry. On the contrary, it has either increased the tids of foreign oil, or, as in December, has opened the doors for almost unjunited increases in the future.

in December, has opened the doors for almost unlimited increases in the future.

This concerns more than a relatively few oil operators. It involves the basic economy of Kansas and a dozen midcontinent and Rocky Mountain States. It directly affects the lives of millions of people in thousands of small communities that have staked their futures on the just expectation of a stable

if not expanding economy.

Your administration has considered the facts and figures in numerous hearings. The declining state of the domestic industry was demonstrated with undisputed facts.

Deliberately, then, your administration saw fit to interpret the welfare of the American people, their small businesses and their livelihood, in the terms laid down by a few giant oil companies. The fruits of an industry that would have meant bread and butter to American citizens in ordinary walks of life were diverted to increase the swollen profits of international profiteers. The same interests are profiting again by U.S. offshore production in the Gulf of Mexico that is absorbing most of the growth in demand.

No credit is due to your administration for the now rising demand for domestic crude. It was built on the ruination of a substantial portion of the small business economy in petroleum States and a subsequent collapse of production and reserves. Temporary demand will not reverse the declining trend. It but accents the prediction now being realized—

Unless the U.S. oil policy is modified to serve the minimum requirements of domestic industry, American oil reserves will vanish. U.S. citizens will then be exploited by international interests in times of peace, and they will be at the mercy of their enemies at each threat of war.

This message is sponsored by members of the Kansas independent oil producing industry.

# Panelists Stress Need for Educational Funds

EXTENSION OF REMARKS

### HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. PATTEN. Mr. Speaker, with growing numbers of qualified high school graduates wanting to enter college, the need for more higher educational facilities becomes imperative, as well as the necessity of increased faculty salaries.

In New Jersey alone, 4,000 applicants were turned away by colleges last fall, because of a shortage of facilities. That problem is faced by virtually every State and the main obstacle is the same: insufficient funds.

The Higher Education Act of 1965, which I voted for, will provide some help to New Jersey. It will receive \$11,949,000 in the 1966 fiscal year from this program, including \$1,319,000 in educational opportunity grants.

Although this Federal aid is encouraging and appreciated, much more assistance is needed if the colleges and universities in our State are to provide the facilities required by high school grad-

In connection with this vital and urgent goal, the Daily Home News of New Brunswick, N.J., sponsored its sixth annual Round Table Conference, with three university presidents and an industrial executive comprising a panel which discussed, "The Future of Higher Education in New Jersey."

The article, written by Frank Kelly, entitled, "Panelists Stress Need for Educational Funds," follows:

PANELISTS STHESS NEED FOR EDUCATIONAL FUNDS

(By Frank Kelly)

The ever-increasing need for funds to provide for the State's burgeoning collegestudent population was underscored repeat-

edly at the sixth annual Round Table Conference sponsored yesterday by the Home News.

So too was the urgency for stepped-up salary scales for college faculty members to put New Jersey institutions of higher education on equal footing with counterparts in other States in the recruiting battle for topflight teachers.

These needs, it was stressed, are both current and continuing.

From New Jersey homes there are 50,000 students attending colleges within the State, said Dr. James Hillier, vice president of RCA Laboratories.

Hillier, who dug deep into the complexities of the college education picture as a member of the Governor's Committee on New Jersey Higher Education, said expansion is planned to accommodate 2,000 more students annually.

"But by 1970, we'll need about 40,000 new spaces, and another 60,000 on top of that by 1975. The situation is so big, so serious, and we've fallen so far behind that we're just numbed by the problem. The population boom is here now and will be with us for years to come."

The research management expert said that as of today, higher education in the State is between \$100 million and \$150 million in arrears in capital facilities.

Pinpointing the problem as getting the public to recognize its responsibilities. Hiller asserted: "It bothers me. We're living in this tax-free paradise, while sponging on other States."

This was in reference to his earlier statement that besides the 50,000 New Jerseyans who are staying in the Garden State for their education, some 60,000 are seeking it at outof-State Institutions.

of-State institutions.

While he believes that New Jersey's elementary and secondary school programs are solid, Hillier said industries in this State suffer recruiting losses. Prospective employees, out of staters with children, go elsewhere when they view New Jersey's "spotty" higher education system.

#### UNWILLING LEGISLATURE

The conference moderator, James Kerney, Jr., publisher of the Trenton Times and a former member of the State tax policy commission, ascribed much of the lag in higher education sid to an unwilling legislature. He believes the public, conversely, "is more willing to be taxed in this area and others \* \* \* where it wasn't 10 years ago."

By and large, the panel which also included Dr. Mason W. Gross, president of Rutgers University; the Most Reverend John J. Dougherty, auxiliary Bishop of the Archdiocese of Newark and president of Seton Hall University, and Dr. Robert F. Goheen, Princeton University president, agreed with the recommendations of the Governor's committee for setting up a cabinet-level agency to wrestle with New Jersey's needs in higher education.

The committee, headed by Dr. Carroll V. Newsom, former president of New York University, urged revision of the current administrative structure—the State department of education and the State board of education.

Quality in higher education—how to insure it when involved with a large student body—was discussed by Gross.

He said paying attractive salaries to faculty members is a necessary condition but not an absolute assurance of top-caliber instructional quality.

Gross observed that at Rutgers (where 4,000 New Jerseyans were turned away last fall because the university was filled) the present student body was assembled "from the top down," based on secondary school records.

#### COULD ACCOMMODATE MORE

Such a competent collection of students has made teaching much easier, he continued, but this isn't doing the job State in-

stitutions should. He indicated there's an obligation to a much larger segment of New Jersey's youth—who could be accommodated if sufficient funds were forthcoming.

At present, he said, Douglass College probably draws its student population from the top 10 percent among high school student bodies; Rutgers, from the top 20 percent.

Gross spoke of the dual aim of a university: To aid students to gain knowledge in a particular field they have selected; and to instill an interest in culture. Anything less, he said, and the student winds up with "a truncated education."

He said too that class size is a prime consideration, that ideally faculties should be augmented at a ratio of 1 instructor for every increase of 12 in the student population tion. But, because of a lack of funds, it "doesn't work out."

Biggest roadblock barring better salaries for Rutgers instructors, Gross went on, is the current arrangement by which State board of education approval is essential for pay increments.

And, as the Governor's committee pointed out: Fixed by the State board, salary schedules for various academic ranks are the same at State (teachers') colleges, Rutgers and the Newark College of Engineering.

#### PRESIDENT HANDICAPPED

Pay for a new faculty member is set at the minimum figure stipulated for his academic rank. Thus, the school's president is under a severe handicap when negotiating with prospective faculty members.

prospective faculty members.

Resultant inequities Gross cited included this one: State colleges in New Jersey compare favorably salarywise with those in other States but Rutgers lags substantially behind other States' universities.

Sounding the dilemma of the private institution was Biahop Dougherty. Reading from a report in a 1962 issue of the Seton Hall University alumni magazine, he said that from 1947 to 1962 a 104-percent increase in the student population occurred in public (tax-supported) institutions of higher education compared to only 20 percent in private (non-tax-supported) schools.

"In 1950, 50.7 percent of the Nation's students attended private colleges; in 1954, 44 percent; in 1961, 39 percent.

"Private institutions—the weaker ones—I conclude, will be priced right out of existence because of the competition (with public schools) hased an caliber of students and caliber of faculities."

Bishop Dougherty asked: "Can we (private institutions) match instructors' salaries with those paid by public institution?" He echoed a Citizens Committee for Higher Education suggestion that a stipend be given to the student who prefers to attend a private college or university in New Jersey—a stipend in proportion to his needs to finance such attendance.

"We feel this would be a definite help " " " in aiding the balance between public and private institutions."

#### MEED MORE PROPESSIONALS

Principal dynamos in American society since World War I ended, said Goheen, have been science and technology. He spoke, too, of the Nation's swelling populace and resultant changes in the economy, the need for more professionally trained men and wunten—lawyers, doctors, welfare workers.

"There's a need today for a diversified multilevel system of education throughout the United States"—from the 2-year community college to postdoctorate degree programs.

Higher education in New Jersey, he declared, is "badly undernourished, lagging in planning and in opportunities available."

However, Goheen voiced a measure of optimism: I'm deeply impressed with the degree of concern expressed by leaders and by just plain, ordinary people all ower the State. It gives me some hope that things will start to move to make up for some of these lags." Referring to a report of the Citizens Committee for Higher Education, of which he's chairman, Gobeen said of the group's urging of a 10-year capital construction program totaling \$427 million by 1975: "This may seem way out of the ballpark. But it's just that we in New Jersey haven't known what the ballpark really is."

### Twentieth Anniversary of the United Nations

EXTENSION OF REMARKS

### HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. HELSTOSKI. Mr. Speaker, I am pleased to bring to the attention of my colleagues the remarks of Mr. Ralph Feder, chairman of the Teaneck United Nations Committee which he made at the annual dinner sponsored by this organization. This dinner was held on October 23, 1965, at the Fairleigh Dickinson University in Rutherford, N.J.

It is my hope that the Members of this honorable body will take the few minutes time it requires to read these exceptionally well-phrased statements and will note that they have a very poignant meaning to us at this particular time.

The remarks of Mr. Feder follow:

Your excellency Ambassador Vinci, other distinguished guests on the dals and friends all of the United Nations:

For the third year it is my great privilege to welcome you to Teaneck's annual commemoration of the founding of the United Nations. Twenty years have elapsed since the hour of its birth, a blessed event, preceded by the pangs of a suffering humanity.

We are practical people. None of us is so naive as to imagine that the present is like that the note past, that the conditions of life today are exact duplicates of the situation in 1945. Two decades ago, life did not possess the revolutionary qualities it has today. The original 50 founding nations could not then have projected the quick demise of colonialism, and the proliferation of smaller nationalities in Africa and Asia, that would swell their membership to 117. Who then could have foretold the stumbling blocks yet to be encountered by nations whose national interests would conflict with world interests? Within 20 years, membership in the thermonuclear club has risen far beyond any expectations silently nursed in 1945. Nor have the years left us scarless, in the tragic and suddent deaths of devoted sons of the United Nations, who expended their lives in its service: Count Bernadotte, Dag Hammarskiold. America's Adial Stewasson.

And, nontheless, we rejoice. Despite our awareness of frustrations, we celebrate tonight a birthday. The very fact that, despite
the weaknesses that have bothered and continue to bedevil the U.N. we can still rejoice,
tells us a great deal about ourselves, about
the dimensions of our humanity, and about
the U.N. itself. As the late President Kennedy said, "Never have the nations of the
world had so much to lose—or so much to
gain. Together we shall save our planet, or
together we shall perish in its flames. Save

it we can, and save it we must, and then shall we earn the eternal thanks of man-kind."

To be able to enjoy a birthday, to be happy about someone's growing older, is a talent reserved for special kinds of people. For example, they are reasonable people, who have a capacity for enjoying the process of growth. Reasonable, or better, reasoning people, are those who rejoice at the birthday of the U.N. because they are convinced that each day of its presence brings us closer to the universal practice of reason, as the only way of overcoming tension among nations.

These are people who refuse to be victimized by fancy or myth. These birthday selebrants refuse to knuckle under the fantasy that only war can resolve national differences. They are people who have perceived the glorious vision that this globe is part of a different kind of creation, a creation founded upon a reasoned order, whose laws of physical balance approve and demand a similar balance in man himself, and in his dealings with other men.

Not only reasoning men, but freemen exuit at this anniversary of the U.N. The ensisted and those who ensiate others cannot exuit. For them, every tomorrow dissolves into yesterday's pain and emptiness. For them life has no importance other than to dominate or to be dominated. But freemen can exuit in life, for they know its value. They know the exuitation of the life that chooses to live. Free Americans can rejoice in this birthday of an organization that seeks to foster the self-determination of people long oppressed. They see their own struggle to be free magnificiently reflected in the U.N.'s work, in releasing human potential for creativity all over the world. In this extension of mankind's dimension, they themselves grow in their own humanity.

"Thy youth shall see visions." Yes, the very best birthday partyers are not only the reasonable and the free, but, and especially, the very young at heart. Youth is happy about birthdays, because it has a capacity to dream and to plan and to fashion a better tomorrow. Very quickly in life, they detect injustice and inequity, and they have the audacity to demand that life be better, that there be an end to the things that dehumanize us.

We who tonight rejoice at the U.N.'s existence, are we not as young as they? Are we not still filled with the vision of 20 years ago? Next week our children will collect for UNICEF. They will do so because they know that other children starve in our world, that other children go naked in our world, that they are homeless and motherless and friendless under a gaping sky. we can rejoice tonight, it is because, l them, we, too, are young and concerned and ashamed that other human beings are forced to lead substandard lives. We rejoice, bewe see the dent that the U.N. has made in the wall of man's pain and suffer-ing. We hall its unsung heroes, who have cured 37 million children of the yaws, and 11 million more of trachoms, and another million of leprosy. We rejoice for the U.N. teams that have protected 162 million people against tuberculosis, and lowered the incidence of malaria by over a hundred million people a year. We rejoice for those nameless men and women of the U.N. who have helped to find new homes and new lives for more than a million refugees.

Paith in reason, in freedom, in youthful idealism has made our Nation great, and helped create the U.N. It is our faith to-night. Let nothing, then, diminish our rejoicing at this birthday party.

### Have We Stopped Losing?

EXTENSION OF REMARKS

### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. PELLY. Mr. Speaker, a Member of the House just back from a tour of southeast Asia told me the other day that there were reasons to doubt that Mc-Namara was correct when he said last November that the United States had stopped losing the war in Vietnam.

Of course the Secretary of Defense has done more to confuse the American people as to the true situation in Vietnam than almost seems possible.

In 1962 he was quoted as saying he was tremendously encouraged. In October 1963 he gave as his judgment that the major part of the U.S. military task could be completed by the end of 1965. And a month later in Honolulu, he announced that American troops would start being withdrawn before yearend.

On March 17, 1964, he said the situation could be significantly improved in the coming months. A few days later he repeated that the situation in South Vietnam had worsened.

In May, however, he reported excellent progress, but 1 day later told a congressional committee that anti-Vietcong efforts had deteriorated.

In February 1965 he summed up his views saying that the past year had brought some encouraging developments. Last November after a sixth visit, he told the press, as I said at the start, "We are no longer losing."

Mr. Speaker, let me get back to the statement of the Member of Congress whom I cited at the outset as telling me he had reasons to question that we have stopped losing the war. This was from a Congressman fresh back from southeast Asia.

Since I quoted this in a House speech recently, I have been pressed for further details.

I do not know the final answer, of course, but I am told Americans and that United States and South Vietnam forces hold less territory now than they did a year ago. In the past it has always been the practice to gage victory in war, on the basis of which force won and held territory.

However, it looks like ultimate defeat or victory in Victnam will come, not on the battlefield, but rather at a peace conference. If this holds true, politics being what it is with the President and his party urgently needing a settlement before the next election, many people fear defeat could come at any time because Johnson and his advisers would sign on any terms. That is why I have so consistently called for all facts to be given to the American people. Otherwise, if the people are misinformed and confused, public opinion will have no bearing on the outcome, which could be disastrous.

A Congressman recently told the Wall Street Journal that the thing that scares him is the President signing his name to almost anything in order to get a settlement. My point is, no such thing will happen if the American people are told the full story because public opinion is a powerful influence.

Meanwhile, in spite of McNamara's statement that we have stopped losing the war, here are a few facts from Senator Mansfield's report which could con-

The Vietcong force in South Vietnam is double that of 3 years ago. Their strength is steadily increasing.

Introduction of U.S. forces—

The report says-

have blunted but not turned back the Vietcong drive. The lines remain drawn in South Vietnam in substantially the same pattern as when the United States increased its com-

The Mansfield report frankly admits that the war has expanded into Laos and is beginning to lap over the Cambodian border. Worst of all, it concludes that there are no grounds for optimism that the end is likely to be reached within the confines of South Vietnam or within the very near future.

Mr. Speaker, if these facts make it appear as though we have stopped losing, there is something wrong with my eye sight. Especially this opinion should be considered in the light of the fact that the Vietcong, as I have pointed out before, hold more territory today than they did a year ago. The picture is not bright and the people should know it.

#### Hon. Herbert Bonner

SPEECH

### HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. MAILLIARD. Mr. Speaker, in the passing of Herbert Bonner the Nation has lost a wise and able statesman. But, more particularly, the American Merchant Marine has lost a champion and skilled architect. No man labored more or gave more unstintingly of himself on its behalf throughout almost three decades than did HERB BONNER.

The fast, modern greyhounds of the seas, which today carry the American flag to the farflung corners of the globe, stand in living tribute as a monument to the endeavors of this one man. These same ships, constructed as a result of the vision and foresight of HERBERT BONNER, are today bridging the oceans to supply American troops in Vietnam. Seamen and American fighting men throughout the world owe a great debt to this man. Truly, one can say that memorials to his achievements are now in being throughout the world wherever American-flag merchant ships ply their trade.

But to me the death of HERB BONNER means much more. I have lost a warm and personal friend with whom I have labored side-by-side for more than 13

years. He was a close confidant. He was a man whose counsel I held in greatest respect. He was a man whom I grew to love more with each passing year.

Perhaps the English poet laureate, Robert Southy, best expressed my feelings when he said, and I quote:

The loss of a friend is like that of a limb; time may heal the anguish of the wound, but the loss cannot be repaired.

To his devoted and gracious widow, Eva, I can only say that her sadness is shared by HERBERT's legion of friends and admirers. Perhaps this fact will make her burden just a little easier to bear.

Remarks of Congressman William M. Tuck, Democrat, of Virginia, at the Annual Meeting of the Virginia Association of Soil and Water District Supervisors at Richmond, Va., January 11,

EXTENSION OF REMARKS

### HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. ABBITT. Mr. Speaker, on last Tuesday, January 11, the Honorable Wil-LIAM M. TUCK, of the Fifth District of Virginia, addressed the annual meeting of soil conservationists in Virginia and made a splendid address.

Congressman Tuck served as Governor of Virginia from 1946 until 1950 and has an intimate knowledge of the problems of water and soil conservation not only in our State but throughout the Nation. His remarks are so timely and so interesting that I would like to commend them to the reading of the Members of the House

I take pleasure in inserting his address in the RECORD at this point:

REMARKS OF CONGRESSMAN WILLIAM M. TUCK, DEMOCRAT OF VIRGINIA, AT THE ANNUAL MEETING OF THE VIRGINIA ASSOCIATION OF SOIL AND WATER DISTRICT SUPERVISORS AT RICHMOND, VA., JANUART 11, 1966

It is a pleasure to participate in your annual meeting, and to meet with you perts in the conservation and development of our land and water resources. There is nothing more basic to our economy and welfare than our natural resources. It is an inescapable fact that what we do with our natural resources will not only affect our social and economic welfare of today, but also pave the way for future developments.

Although I am not a conservation expert, I am well acquainted with the soil conservation movement. I am aware of the need for a technically sound conservation plan on all whether it is farmland or not. proud to say that my own farm is a better one for the use of the technical know-how that has been developed in the last 30 years.

I am not a stranger to the soil conserva-tion movement in Virginia. I have followed it as a member of the general assembly, as Governor, and as a Member of Congress. I have noted with great interest the concern of the people of Virginia in our great land and water resources. I have seen interest in soil conservation grow through the expanded soil conservation district programs. lieve in these programs and have expressed my support of them in the Congress.

In Virginia, we have already come face to ce with soil and water problems that every face with soil and water problems that every community faces today.

The rapid growth of population demands

space for homes, industries, highways, schools and playgrounds, shopping centers, and recreation areas, as well as the water, sewage, and other facilities that must accompany this growth. While in Virginia the expansion is most noticeable near the large metropolitan areas like Washington, Norfolk, Richmond, Roanoke, and Petersburg, it is by no means confined to them. Practically every small city and town is experiencing this growth. The State is actively encouraging industry to move in. The highway system is being improved and linked into the interstate systems. Tourism is big business and is grow-ing. State and local planning groups and commissions are working on long-range landuse plans. Health and sanitary agencies, county planning and zoning boards, housing developers, and county governing bodies are becoming aware that we need careful, long-term planning if we are to make the best use our land and water.
Our internationally famed Dulles Airport

in Virginia near Washington is a showcase for aviation industry. It is also a showcase for conservation and its part in developing land to protect a community during and after construction. It reflects credit on the work that soil conservation districts are doing, and the tremendous part they can and should plan in nonagricultural development of rural land. It is an example of teamwork between a soil conservation district and Federal agencies.

The Potomac River is another of our attractions. What is done on much of our northern Virginia land contributes either to the beauty and usefulness of this great river or to its pollution.

I know that the soil conservation districts within the Potomac River Basin have been working in the hope of making this stream a model of scenic and recreational values. I believe the work they are doing to keep the soil on the land is one of the important son on the man is one or the important phases of our program to beautify the Potomac. Nearer Washington, urban de-velopment and other problems are going to haveto be dealt with also. I hope that you as experts in conservation and development of our land and water resources will make your-selves heard and be a part of the campaign to clean up this historic river that has the potential to provide beauty, pleasure, and relaxation to those who live nearby and to those who come from all over the world.

The Potomac River and the Dulles Airport are showcases that are open to view by visitors from far and wide. However, the conservation work that you are doing throughout Virginia is no less vital to the health of our natural resources, to the economy of the State, and to the welfare of its people.

Congress, since it set up the mechanism through which the soil conservation movement began over 30 years ago, has continued to add tools for use in resource conservation. has supported sound conservation programs.

In this decade, the U.S. Congress has broadened the soil and water conservation program by new legislation and by amendments to the

The Watershed Protection and Flood Prevention Act has been amended to strengthen the assistance available from the Federal Government in order to make the program more effective. A 1962 amendment provided for Federal assistance in developing public recreation facilities and water storage for future municipal or industrial use. The amendment enables local communities to make greater use of the multiple-purpose

Fortunately, one resource can often be put to many uses. And when local people and public agencies work together, the re-suits are far better than those obtained

when development is piecemeal or through programs with single-purpose objectives. Our growing population and the complexity

Our growing population and the complexity of our economy are adding new dimensions to the problem of resource management in this Nation. There are more claimants for natural resources and resource products, and the result is conflict and competition. This increases the need for multiple uses so that several needs can be satisfied from a given source. It creates the need for coordination so that waste and mismanagement can be prevented.

The small watershed program provides for the multiple-use concept and it adds some other highly important ingredients—local leadership, local coordination, and local participation. Undoubtedly the involvement of local people is the reason the program has been so effective.

Our Mountain Run watershed project in Culpeper County has gained nationwide attention since it was dedicated in 1961. I am very proud of it. It is an example of the economic benefits a community can obtain through a multiple-purpose project that provides a dependable water supply and overcomes the threat of flood damages.

I am told that, since the national small watershed program began, reservoirs that have been built, or that have been authorized, will provide water to more than 100 cities and towns ranging in population from a few hundred to about 70,000, and totaling over 624,000. Since the 1862 amendment, interest in including water supply in watershed projects has increased considerably.

Development of public recreation facilities in watershed projects has also been stepped up considerably since the 1962 amendment. I understand that recreation is included in 67 of the projects designed since 1962, and that they will provide over 4 million visitor-days of recreation annually when completed.

I am well pleased that Virginia has taken advantage of the provisions of these amendments. Ten uf the 25 watershed projects you are installing are multiple purpose. Nine of them include municipal water supply and one of these also includes recreation. More than 100,500 people in Culpeper, Keysville, Madison, Staunton, Larry, Drakes Branch, Chatham, Louisa, and Mineral and in Albemarie and Augusta Counties will benefit from the water supplied from reservoirs in these projects.

During the calendar year 1965, congressional committees approved for operations 99 projects—the largest number in any 1 year since the Watershed Protection and Flood Prevention Act was passed in 1954. About 65 percent of these projects were designed for municipal water supply, recreation, or agricultural water management, in addition to flood prevention.

For this fiscal year, the Congress has increased the watershed protection appropriation to relieve the backlog of worthy watershed projects that have been planned and are ready to move ahead.

The drought conditions in the sastern United States during the last 3 years has made us all more conscious of the need to plan carefully for water supply. It has generated interest in local water problems. It has also brought farm and nonfarm people together to work out long-term plans and come up with something that is beneficial to all segments of the community.

Demands for land and water are increasing so rapidly that only by this type of teamwork can the available resources satisfy the needs. There is just so much land and water. We have to make the best use of it. This requires careful planning. You are experts in the conservation field. Your experience, your know-how, is sorely needed in resource planning. I urge that your soil conservation district programs include plans to make the best use possible of land and water

resources to enhance the economy of the entire community.

We cannot afford to waste water in our

We cannot afford to waste water in our homes, in industry, or on our farms. We cannot afford to let good usable water run off to waste, eroding our farmlands, flooding our valleys, and silting up our reservoirs and waterways in the process.

In 1965, the Congress added other tools

In 1965, the Congress added other tools through which the Nation's water and other resource problems can be evaluated and relieved

The Rural Water and Sanitation Facilities Act, for example, provides loans and grants to plan and construct community water supply and sanitation facilities in rural communities not in excess of 5,500 population.

The Water Quality Act provides for the establishment and enforcement of water quality standards for interstate streams. It increased Federal grants for construction of community sewage projects.

The Water Resources Planning Act provides for Federal and regional coordination of plans for water resources development. It authorized Federal matching grants for the States for development of water resource programs.

The Federal Water Projects Recreation Act provides uniform policies for fish and wildlife enhancement and recreation in Federal multiple-purpose water resource projects.

Other legislation is aimed at creating more jobs and economic opportunities in hard-pressed areas through resource development. The Appalachian Regional Development Act and the Public Works and Economic Development Act both provide for stepped up or expanded resource development activities.

The cropland adjustment program, aimed at zemoving surplus production, emphasizes shifting land into public benefit uses that also conserve soil and water to meet future needs. It also offers opportunity for land-owners to receive increased payments if they open their land to the public for recreation uses such as fishing, hunting, hiking, and trapping.

Future legislation will continue to reflect the needs and wants of the people. It will reflect the changes of the time—changes in resource demands and conservation and development problems, expanded population, changes in land use, leisure time, and the affluency of the Nation.

I consider resource conservation and development an important part of making rural America a place of opportunity for all who dwell there. I consider it extremely worthy of support by the U.S. Congress, by State legislatures, by cities, and by counties, and by the people—all the people, for they are the beneficiaries.

This year the Congress increased Soil Conservation Service funds 99.5 million over last year. The SOS contribution to soil and water conservation activities in Virginia during fiscal year 1965 will amount to an estimated \$4.5 million. This is more than double the 1960 figure.

The Virginia State Legislature appropriated \$232,000 for soil and water conservation work in fiscal year 1966. This includes \$93,075 for planning watershed projects and \$14,520 for installing projects. It also includes \$80,000 to help speed up completion of soil surveys in counties that have urban conservation problems or where problems are anticipated.

The value of local governmental contributions to help carry out the program of local soil conservation districts in Virginia for fiscal year 1966 is approximately 669,715.

One of the most important ingredients to the success of the conservation program is local financial support. As the conservation job becomes more complex, the State and local funds will need to be increased—not to take the place of Federal funds, but to supplement them or to extend their effectiveness.

Of the 25 million acres within the bound-

aries of the 31 soil conservation districts in Virginia, I note that basic conservation plans have been made on only 5.5 million acres. The plans have been fully carried out on only 2.4 million acres.

I realize that not as much technical help is available as needed. I know that Federal technical assistance in planning and applying conservation measures is limited. That is why government at all levels must give financial support to the conservation program. That is why I opposed the proposal before Congress last year that required farmers to pay part of the cost of the technical assistance that has been free from the Federal Government. I believe that it would curtail conservation work that benefits the farmers and the whole community. I believe that it would have set conservation back 30 years and have laid us wide open to future conservation problems.

The demands on our land and water re-

The demands on our land and water resources in the next few decades will grow tremendously. To meet the requirements for food, for recreation, for industry, for places for an expanding population to live, work, and to go to school, for highways, reservoirs, forest products, will call for wise planning and efficient management of our resources. We will need to prevent erosion and flood damages to our valuable land. We will need to improve water resources, to prevent water shortages, and to avoid water waste.

I think we have an excellent team. There is no doubt that we can do it. But it will take the involvement of both land users and consumers, both rural and urban people. Only then will we be able to go full steam ahead.

### **Smiling Fortune**

EXTENSION OF REMARKS

### HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. GROSS. Mr. Speaker, with thousands of young men being drafted, some destined to leave their wives and others their sweethearts for duty in distant lands, including Vietnam, the following editorial from the Washington Evening Star is well worth reprinting:

#### SMILING FORTUNE

The world may be a cynical old place, but now and then our faith is restored when fortune smiles in the right direction. On Patrick John Nugent, for example. Like many draft-age Americans, Pat faced a possibly long separation from his fiance—who happens to be the President's daughter, Luci. Fortunately, his basic training as an activated Air National Guardsman took place at a Texas Air Force base near the L.B.J. ranch. This allowed him to see Luci on weekends, and all was well.

But anxiety must have stalked the young couple. What happened when basic training was completed? What about those long 4 months remaining on Pat's military commitment? It was a dilemma, all right, but fate again intervened. By coincidence, Pat will spend the remainder of his active duty at Andrews Air Force Base. To be sure, Andrews it lo long miles from the White House. A kinder fate would have assigned him to the White House heliport. But the Air Porce managed to compensate for this cruelty by arranging for Pat to live off base when not

Some Congressmen have grumbled about the chain of coincidences which has kept Pat and Luci together. But this is the churlish viewpoint. We happen to believe it all came about quite by accident, with no pressures involved and no favoritism shown. We also believe in Santa Claus, the Easter Bunny, and the Great Pumpkin.

### Educational Benefits for Our New Veterans

EXTENSION OF REMARKS

### HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. ST. ONGE. Mr. Speaker, more than 21 years ago—on June 22, 1944-President Franklin D. Roosevelt signed into law one of our Nation's most successful acts of legislation: The GI bill of rights. Perhaps the most valuable and imaginative portions of this measure were its provisions for educational assistance. Among its beneficiaries are Members of this House, several Senators, Governors, and even Cabinet members. Those who took advantage of the GI bill of rights know personally its great worth: the benefits it afforded the Nation as a whole have been no less valuable, nor in any manner less dramatic.

The United States today possesses some 450,000 engineers; 180,000 doctors, dentists, and nurses; 360,000 school-teachers; and 150,000 scientists, educated with the assistance of the GI bill. It helped to finance the college expenses of 2.2 million veterans of World War II; moreover, it assisted 2.1 million GI's in paying for on-the-job training. A total of 7.8 million veterans benefited from the legislation. The quality of America, therefore, increased as almost a generation of its people was educated through the GI bill.

The total cost of this portion of the bill was unquestionably great: \$13 billion. The cost has, however, already been paid in full as approximately \$1 billion in tax revenues is gained annually from the increased earnings of those aided by the GI bill. The expense was, therefore, a well-justified loan to our own people—a wager on the future of our servicemen.

The GI bill enhanced the moral, as well as the material, condition of our country. It fulfilled a nationwide obligation to compensate servicemen for sacrifices on behalf of their Nation. It reemphasized our belief in the promise of our Nation's future. And, above all, it dramatized our faith in democratic values by expressing the primacy of our concern for the human quality of our It has been rightfully pointed citizens. out that the cost of this program can be counted in dollars, but there is no way to set a value on the far-reaching influence for good it has exerted in the course of our national life.

Unfortunately, the educational benefits under this act have been terminated for veterans who have served since 1955. A generation of veterans of the cold war, namely, those who have served during the past 11 years, are being deprived of the benefits of this inspired legislation.

There is no reason in the world that this should be so.

As in the years of World War II, we are engaged in a protracted struggle with an alien, ruthless, and totalitarian ideology. Our servicemen in Vietnam today are fully as important as were those of 20 years ago. The battle they wage is equally as essential to the security of our Nation. Today's conflict demands from its participants what was required of the military of the Second World War: readiness to sacrifice one's life, if necessary, for the protection of our country.

Hundreds of Americans have died in South Vietnam in the last few years. American servicemen were killed in recent years in Panama, in the Dominican Republic, in Lebanon, and Berlin. In these and other places, our military has demonstrated its readiness to sacrifice their lives for our Nation. We are therefore as indebted to them as we were to the soldiers of World War II. We would be derelict in the fulfillment of our obligations were we to deprive them of the educational benefits of the GI bill to which they are rightfully entitled.

For these reasons, Mr. Speaker, I introduce a bill to continue the educational provisions of the act of 1944. It is known as the Cold War Veterans Readjustment Assistance Act. An identical measure has been sponsored by Senator Raiph W. Yarborough, of Texas, and 38 other Members of the Senate. I urge that we in the Houes join our colleagues in the other body in renewing this imaginative, valuable, and eminently successful piece of legislation.

As a result of the benefits provided by the GI bill of rights, most of the veterans of World War II have been restored to the mainstream of the Nation's life and activities, they are better off in terms of health and education, they enjoy better housing and higher incomes than the nonveterans. It is no more than fair for the Nation to provide the same or similar benefits to those who have served in our Armed Forces in the past decade and those who are serving in Vietnam and will be the veterans of tomorrow. They must be given the same opportunity to acquire an education and specialized training that would not be otherwise available to them

Mr. Speaker, I have obtained some interesting figures from the Veterans' Administration on the educational benefits as provided under the GI bill during the years it was in effect. They are as follows:

Seven million eight hundred thousand veterans took advantage of these provisions at a total cost of \$13 billion: First, almost 2.2 million enrolled in colleges; second, 3.5 million enrolled in other schools; and third, 2.1 million received on-the-job training.

The following specialists were developed as a result of the opoprtunities furnished by the GI bill:

First, 450,000 engineers; second, 180,-000 doctors, dentists, and nurses; third, 360,000 school teachers; fourth, 150,000 scientists; fifth, 243,000 accountants; sixth, 711,000 mechanics; seventh, 383,-000 construction workers; eighth, 138,000 electricians; and ninth, 288,000 metal workers

The Bureau of the Census reports that an extra \$1 billion per year is gained in tax revenue due to the higher earning power of those educated through the GI bill. College graduates earn nearly twice as much in a lifetime as do graduates of high school.

Of the 5.5 million veterans of the Korean war, 2.3 million took advantage of this portion of the act.

Nonstatistical benefits of the GI bill, as analyzed in a study made in 1956 by a committee under Gen. Omar Bradley:

First. Economic effects: The GI bill helped to avoid the predicted postwar recession by increasing earning and purchasing power and by creating credit for capital investment.

Second. Political effects: The GI bill avoided economic, social, and therefore political postwar dislocations by assimilating military personnel into civilian life. Insofar as it created and fulfilled optimistic expectations of civilian life on the part of American servicemen, it aided the process of successful demobilization. The bill also created new sources of leadership.

Third. The bill paid a nationwide debt owed to the servicemen for their personal sacrifices on behalf of the country.

Fourth. The bill was a dramatic demonstration of democratic values as it represented an investment in human value.

### WHY COVER COLD WAR VETERANS?

First. About 5 million military personnel are not covered by the GI bill. These are the men who have enlisted since the Korean war and are the so-called veterans of the cold war.

Second. Despite the fact that the United States is not officially at war, the same sacrifices are required of today's servicemen as were made by those in World War II and the Korean war. American 'soldiers have been killed in Vietnam and other places. The same is demanded of today's soldiers as was demanded in former times: that they be prepared to die for the sake of national security. It must also be remembered that only a small portion of the 11 million men who served in World War II saw action, but all received the benefits of the GI bill.

Third. As in the time of World War II, it is necessary that today's servicemen not be excluded from the benefits of civilian life. With the high educational requirements necessary for employment, it is especially necessary that veterans be afforded educational opportunities after their period of service.

Fourth. The GI bill should be extended to help remedy the inequities of the current selective service system.

#### The Late Honorable John Taber

SPEECH

OF

### HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. ROONEY of New York. Mr. Speaker, it is with sadness that I join my

colleagues in paying tribute to the memory of the Honorable John Taber, of New York. I knew John Taber for almost 20 of the 40 years he served here in this House. I particularly came to know him through my service on the House Committee on Appropriations of which he was a member of 39 years. While I must admit that on many an occasion, we differed markedly on policy, I must at the same time salute his lifetime goal-efficient and economic Government for the benefit of the taxpayers and country as a whole. In the years that I had the honor of serving with John Taber on the Appropriations Committee, I also came to know him not as the gruff, angry man as the press so often likes to depict what it calls congressional "watchdogs," but rather as a fine, warm friendly, and considerate man.

When John Taber resigned from the House of Representatives in 1962 after 40 years of service, the loss was felt not only by the people of his district in New York, but by every Member of this body—regardless of which side of the aisle he

I have lost a firm, true and respected friend in the passing of John Taber.

### Mother Asks Why Great Society Favors Dropouts

EXTENSION OF REMARKS

### HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. DUNCAN of Tennessee. Mr. Speaker, I am pleased to be from the Volunteer State and especially happy to represent citizens who do not sit by idly and silently as time marches on. My people are proud and they are fearless, never afraid to voice their opinions on matters of the day.

I call the attention of my colleagues to two letters to the editor of the Knoxville Journal on January 8:

MOTHER ASKS WHY GREAT SOCIETY FAVORS
DROPOUTS

As the mother of a serviceman overseas, I would like to know why the Great Society is so against the clean American boys, who finish school, many times by working long hours after school to help pay for it. The society sends them to some distant land to stop the Reds (so they say), then give the Reds all the freedom they want in America (here in Knoxville, 500).

The service boy is paid less money (and he pays income and social security taxes out of it) than the dropouts and lawbreakers in the Job Corps. If he is lucky enough to get time off for a Christmas visit, he pays his own way. The society sure doesn't pay \$2 million or \$140 per person on the service boy's bus or plane fare.

Could it be that the ones who would put us under socialism, realize that first they would have to get rid of these honest American boys who prefer the challenges of life to the guaranteed existence; who would not rade their freedom for beneficence nor their dignity for a handout; who would not cower before any master, nor bend to any threat.

Mrs. HELLEN MITCHELL.

BLAMING RIOTS ON POVERTY DISGUSTS
MOUNTAIN WOMAN

After viewing the Los Angeles riots on TV and hearing them blamed on poverty and poor housing makes me sick. Those jokers have never seen any poverty,

Those jokers have never seen any poverty, and I don't see how there can be any excuses made for people that go out to kill, loot, burn, and destroy other people's property. I live in a community (near Wilder and Davidson) where there's no decent housing, no inside plumbing, and if you don't want to go underground and dig and load coal, there's no work.

Every morning we load our children on our 12-year-old school bus, send them to our drafty old schoolhouse, where there's no bathrooms, no furnaces, and nothing to play with.

Through the day the women carry coal and water, mind the young ones, and do their other daily chores.

other daily chores.

The men go to the mines, wade water hip deep and work like men.

There's no Communists here, and we never

There's no Communists here, and we never have or never will have a riot or a demonstration.

If things get dull around here we just turn on our TV sets and watch the demonstations, and the poor poverty-stricken Negroes loot, burn and destroy, and holler "kill the whites."

It sure would be an awful thing to run short of antipoverty and welfare funds, they might have to go to work and earn their living.

So I hope all us good taxpayers keep up the good work, and pay your taxes, but keep your fingers crossed and hope the citizen of Watts, Los Angeles, and Harlem don't take a notion for split level homes, race horses, and swimming pools, or we've had it again.

Here on the mountain, the people had hopes of getting roads, housing, decent schools, and jobs, they got nothing. But I'm sure if all you welfare-drawing, looting, rioting poverty-stricken citizens will just be patient you'll get a raise in your welfare checks and more poverty funds than you've been promised.

DELIA MULLEN.

RAWFORD.

#### Those Steel Prices

EXTENSION OF REMARKS

### HON. ROY H. McVICKER

DF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. McVICKER. Mr. Speaker, last week, the Arapahoe Herald, the weekly newspaper that serves Littleton, Colo., and, indeed, much of the 175,000 population in Arapahoe County in my district, editorialized on the Government's action during the recent steel price controversy.

The editor of this paper has been acclaimed as one of the outstanding weekly newspapermen in the Nation. Mr. Houstonn Waring does an outstanding job of keeping citizens of Arapahoe County informed not only of local matters, but often comments on national issues. I think he has performed a real service in the editorial which I am inserting at this point in the Excorp:

[From the Arapahoe Herald, Littleton, Colo., Jan. 11, 1966]

THOSE STEEL PRICES

In Truman's administration, Congress decided that it was the Federal Government's

job to provide full employment and maintain the economic growth of the Nation.

This was a wise decision, and Uncle Sam has seen to it that America has surged forward. Moreover, he has kept inflation all these years at a lower level than any other industrial power—around 1.4 percent per annum.

This has been done only by pulling many strings, some of which annoy businessmen, labor, and the common citizen. In recent days, it was necessary for the Government to advise steel companies to stay within voluntary guidelines in raising prices.

Many people feel that the Government has no right to interfere with private enterprise. Property owners, they say, must be allowed to set their own prices.

This right is still theirs, but the great corporations don't wish to lose their biggest customer, who is that bearded man with the red-and-white striped pants. They also like his tariffs which make them competitive with foreign producers.

It is a fiction that our huge companies are operated by the owners. The industrial giants are run by a self-perpetuating group of insiders, and they are trustees of the same citizens who also choose the men in Washington.

These citizens don't have as much say-so about who directs the corporations as they do about who runs the Government. They are now getting proxies from the corporations for 1966 stockholders' meetings, and they have the chance of voting for a single slate of candidates—a slate chosen by the "ins."

Any stockholder that doesn't like the way his corporation is operated may stay at home and sulk. The last outsider to make his proxies count at a stockholders' meeting was John D. Rockefeller, Jr., who regained control of Standard of Indiana by soliciting proxies on his own account. To put in his executives, who would make needed reforms, he spent \$800,000 to secure the necessary proxies and votes.

No one has offered a solution for this oneticket situation in the big corporations, but none should cry about the Government's interfering with the decision of private ownership. The owners have had no voice for a

half century.

It is regrettable that Uncle Sam needs to inject himself into the economy, but the moment he should step out of the picture this would cease to be the foremost nation on the face of the earth.

We now have a working partnership with big business, big labor, and big Government. Under this system we have high employment, adequate national defense, minimum

ment, adequate national defense, minimum inflation, and the greatest corporate profits in history.

# America's Airlines Today and in the Future

EXTENSION OF REMARKS

### HON. WILLIAM L. ST. ONGE

OF CONNECTICUE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. ST. ONGE. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address by Mr. Leslie O. Barnes, president of Allegheny Airlines, before the Aero Club of Washington on November 30. 1965.

Entitled "1965—The Year of the Trigger," the address deals with the publicinterest considerations of the airlines and it suggests certain actions to be taken by both the airlines and the Civil Aeronautics Board to improve service. The question of subsidies of the airlines is also discussed. In all, it is an interesting address and I am glad to bring it to the attention of my colleagues:

THE YEAR OF THE TRIGGER—1965 (By Leslie O. Barnes, president of Allegheny Airlines)

Twenty years is a long time—especially when you're waiting for an airplane.

Now the airplane has arrived—\$425 million worth of airplanes. This is the approximate cost of a reequipment program announced so far by 12 of the 13 regional, or local airlines in their conversion to turbine-powered aircraft.

The magnitude of this program is brought into sharp focus when you measure it against combined total assets of \$181 million at the end of 1964, and a combined net worth of \$50 million. Or, as a different point of measurement, consider that the total value of the Nation's trunk airline fleet, just prior to introduction of the Lockheed Electra, in December 1958, was \$1,500 million. By contrast, the trunkline investment today exceeds \$3,500 million.

These figures for our segment of the industry are causing uneasiness in some areas. Certainly they are thought provoking. But, as you contemplate the impact of this reequipment program on the future, you must first take a look at the past.

	Passengers carried	Ton-miles, mail	Ton-miles, express and freight
1945-54 1955-59 1950-64	9, 947, 711 20, 994, 079 40, 634, 866	5, 375, 518 8, 233, 488 18, 017, 117	10, 523, 960 19, 184, 675 56, 121, 188
20-year total	71, 576, 656	31, 626, 123	85, 829, 823

Will it shock you or cause any real surprise if I were to forecast that for the next 5-year period, commencing with 1965, our segment of the industry will carry more passengers, mail, express and freight than it did throughout its first 20 years?

Yet, without hesitation, I do this, I believe further that the Regional Airlines, as a group, will, over the next 5 years, carry over 100 million passengers, over 41 million ton-miles of mail, and nearly 200 million ton-miles of express and freight.

And since I have gone this far, let me add some additional elements of change which I believe to be as inevitable as day and night. I believe—

That we are on the threshold of a new era of certification for the regionals, with virtually no restrictions in the dense, shorthaul markets:

That the regional carriers will be the dominant carrier in most of the dense, shorthaul markets within their respective areas, and between areas;

That a new round of equipment interchange agreements is in the offing between regional and trunk airlines, and between regional airlines;

That these interchange agreements will involve both passenger carrying aircraft and freighters:

That there will be numerous agreements or contracts between the regional airlines and the Air Taxi operators; and

That there will be a definite movement toward consolidation of carriers which will more nearly conform to the natural boundaries of the Nation's principal marketing areas.

The year 1961 marked the start of a new growth cycle for the regionals with the adop-

tion of class mail rate 1. The class mail rate represents stability and the ability to plan—a previously undreamed of respectability in the financial community. Truly, it was the most significant single action ever taken by the Civil Aeronautics Board.

The equipment revolution now under way irrevocably commits us to the future. The year 1965 marks the beginning of a tremendous expansion, of our ability to develop new markets—to try new things—1965 is the year this new era was triggered.

Literally, the regionals' program has triggered the absolute necessity for rethinking old thoughts, for reshaping old policies, for revising old concepts. We must reexamine our role in the overall transportation picture; we must ask painful questions, and we must probe deeply into their answers.

We must start by reexamining our role in the overall scheme of things—not on an individual airline-by-airline basis at the outset, but on a national front. And we must do this with public interest considerations as the basis. If we do not do this, and do it thoroughly and honestly, then others will do it for us.

We must have the courage to spell out our role, and then have the stamina to fight for the implementing specifics of that role. We must dare to try new approaches, new experiments within our individual airlines as well as with other airlines—and we must be allowed and encouraged to experiment.

I have used the term regional in defining our class of carrier, and I believe the term to be descriptive of our role. All of Allegheny's planning and emphasis is bottomed on the philosophy—

That definite shifts in the Nation's primary marketing regions are occurring, and we must move in conformity to these movements.

That our role is to provide scheduled air transportation within one of those regions. That it is the trunk airlines' primary role

to provide scheduled air transportation between the regions.

Under this philosophy or concept, it must be made clear that the basic responsibility for providing scheduled air transportation to the smaller intermediate sized cities clearly remains on the shoulders of the regional airlines. Our equipment programs must be geared initially to the complete fulfillment of this responsibility.

this responsibility.

The specter that somehow we will fail in this responsibility, or neglect our primary duty, has been and to agms lesser extent remains a major deterrent to assigning the regionals operating rights in the more lucrative dense markets in our regions. Numerous warnings have been voiced to the effect that our equipment programs must include the smaller and marginal cities.

Allegheny's own program goes at least part way in meeting this responsibility. We have purchased ten 40-passenger F-2TJ's. These aircraft retire twelve 40-passenger Martins, and will give our smaller communities and markets modern, pressurized, turbine-powered air transportation. Because these aircraft will operate at lower cash costs than the Martins they replace, and because unquestionably these newer, faster aircraft will generate new business, we can provide more service to these cities at the same subsidy level, or the same service at less subsidy.

But at the risk of being misunderstood, the point must be made here that we are in business to make a profit. Where commercial revenues alone do not produce an acceptable profit, then to continue the loss services these revenues must be augmented by supplemental revenues from other sources. There are only two other sources—either from subsidy support, or profits from other routes and services. Thus, the quantum and quality of service to subsidy-requiring citics or markets, and therefore our continued dedication, must inevitably be bottomed on

Footnotes at end of speech.

our ability to perform this function at a measurable and satisfactory profit. But for the long run, our industry must

But for the long run, our industry must be dedicated to reducing dependence on subsidy. This means that profits from stronger routes must be generated in order to help carry the burden of loss services. And I think this will be a healthy development for all concerned.

In this connection, I am keenly awars that from a public interest standpoint the Board must be satisfied that subsidy reduction as a result of such "cross subsidization" will not result in inadequate service to the smaller cities. Allegheny for one is willing to commit itself to a cooperative program with the Board to insure that adequate services are maintained. I'm sure the other local carriers will join in such a program.

It is obvious that at some point there is a practical limit to establishing this end of the service spectrum. Presently there exists the requirement to board at least 5 passengers per day, or 150 passengers per month, or risk losing scheduled services. This criterion or measurement has been questioned. Our long-time friend and advocate, Senator A. S. Mike Monroney, pinpointed this concern when he said:

"I recognize the need to reevaluate the cities which should be served, and, in this connection, I do not believe we have adequate standards or accurate measurements to decide the difficult question as to which cities can justify continued service."

In this same speech I think he provided at least part of the answer to this basic question of service to the smaller cities when he said:

In this same speech I think he provided enough traffic to support service by F-27's. Convairs, or the new short-haul jets. But there are new, small, twin-engine aircraft available today, capable of carrying 6 to 10 passengers, which are being used for this very purpose in scheduled service by air taxi operators. More attention should be given to service with this type of aircraft, either through actual operation by local service carriers, or through contractual agreements with the many taxi operators in the country which aircsdy own these small aircraft."

It may well be that we are looking at the intermediate-sized airplane Senator Mixing was calling for in the Nord 262 recently introduced by Lake Central Airlines. The regional carriers, I am sure, will follow Lake Central's progress in this area with interest. But even beyond use of this size airplane by the regionals, we believe that there is and will be a natural and continuing affinity between the regional airlines and the air taxi operators. We have held and are holding discussions with some of them in our area.

I should emphasize here that any agreements growing out of these discussions will not be based on any abdication of our responsibilities; rather the agreements must be directed to tapping new markets and thus bringing new services to both presently certificated cities and to new cities not now certificated. I will have more to say on this subject at a later, more appropriate time.

I want to dispel the concern at both the congressional and Board level as to our interest and continued dedication to the smaller intermediate cities. Our discussions and objectives with the air taxl operators in our area and our purchase of the F-27 are evidence of this.

Four of these F-27J's go into service on December 1 of this year. The 10th one enters service in January. This 12th Martin liner will be retired on February 28. We will add additional F-27J's as requirements increase or new authorities are assigned to us.

Our first Douglas DC-9 will be delivered in May of next year and will enter service on July 1. This is the so-called series 10 aircraft with a 75-passenger capacity. It is a strange quirk, indeed, that this newest of all aircraft is to us an interim piece of equip-

ment. It will be replaced only 8 months later by the larger, more productive 100-passenger DC-9 series 30 aircraft. By the end of 1967's first quarter, we will be operating three of these new aircraft. Others will follow throughout 1967 and the first half of 1968.

Looking back on our management deliberations on equipment selection, I think that the most difficult part was in deciding which jet to order—a really wonderful dilemma. We decided to risk loss of position—both in delivery lines and markets—by waiting until what we wanted was available. Both Douglas and Boeing came through. It would be inappropriate here to set forth the several factors controlling our selection of a jet. Delivery dates were, of course, a predominant factor in choosing between two very fine air-

But, I must touch on one vital consideration which returns my comments to our concept of developments in the national picture and our role in it. I believe the next major breakthrough for our class of airlines will be the interchange of equipment at key transfer points between us and the trunk air-

An interchange, to be economically feasible, must utilize like equipment. To this extent we are still captives of our environment. To paraphrase an old axiom, "No airline is an island onto itself." Our final selection of the jet was therefore controlled by what we anticipated our larger neighboring brethren would do. It is not by accident that we have essentially the same equipment as that now ordered by Delta, Eastern, Northeast, and TwA.

We were concerned also that commitments to jet aircraft would have adverse political or community implications. But this concern was softened and ultimately submerged by the fact that we had developed our own "great society" in that our program gave each community service by modern aircraft according to that community's needs.

I come now to our selection of the Convair 580 as the touchstone of our equipment planning program. In a sense, this is our firstborn since we had to reach a conclusion on our basic workhorse first before proceeding to the respective ends of our equipment spectrum.

The selection of our middle-line aircraft was based upon two primary considerations: First, we reasoned that we could not afford a spare jet, and that we must obtain maximum utilization of those jets we did acquire. We reasoned further that there would be occasions when a jet would not operate and would be idle for unscheduled maintenance no matter how well it was built or maintained. Therefore, we must have other aircraft bucking up the jet aircraft. Such aircraft must have a make-good speed approximately that of the jet, and it must produce maximum capacity as close as possible to the jet capacity. Secondly, over many of our segments, and in many of our markets, we have a requirement today and will continue to have a requirement for an intermediate-sized aircraft in the 50-60 passenger range.

The Convair 580 met both these requirements. In many of the markets where we will schedule jet flights, the Convair 580's block-to-block time will compare favorably with any jet time. Thus, the 580 will effectively function as a backup to the jet without tearing spart our on-time performance or reliability. It also meets our increasing requirements for capacity at many of our points and in many of our markets where we do not presently plan pure jet operations.

Two Convair 580's were introduced on June 1 of this year, a third went into service on August 1, and our fourth enters service tomorrow. No. 5 is scheduled on February 1, Nos. 6 and 7 on March 1. No. 10 will be in service by June. Thus, over the span of 12 months we will have 20 turbine-equipped aircraft in scheduled service. We will also be about halfway through out objective of being

completely turbine equipped by the end of 1967.

I recite this particular background to our planning—not because I want to impress you with it, but more particularly because it is necessary background in those areas over which we have no control.

The Civil Aeronautics Board has the re-

The Civil Aeronautics Board has the responsibility for developing a sound national air transportation system. Its decisions, the enunciation of policy as reflected in its decisions, and the enunciation of individual concepts and philosophies by Board members have a tremondous impact on airline planning and upon the investor and financial community, making possible realization of our plans.

Despite individual and beneficial route or service decisions, and despite the very real significance of permanent certification, I think that the adoption of the class rate by the Board on January 1, 1961, was unquestionably the turning point for the local service airlines. The development of the locals from that point forward has been nothing short of dramatic. This Board decision also has had a tremendous impact on our posture in the investor and financial community. By this decision alone we enjoy a posture of stability and respectability seemingly impossible only a few years ago. While further refinements in the class-rate formula can be expected, it is not anticipated that these refinements will have any adverse effect on the financial stability of the airlines.

I cannot know, of course, how many of you assembled here today have studied the remarks of the Honorable Charles S. Murphy before the Association of Local Transport Airlines on November 5, 1965. I have read and reread his remarks several times since first hearing them on that date. I urge you to do the same.

Without qualification, I think his remarks are a most clear enunciation of thoughts and beliefs. Of greater significance, his remarks tie together in a most learned fashion the extremely complex mix of factors running through equipment selection, route development, subsidy reduction; and profits.

I focused particularly, I think, on his discussions relating to the dense, short-haul markets. Let me quote a short paragraph as the basis for some remarks of my own on this flubject. He said:

"It appears there are significant opportunities for strengthening your routes without undue risk to the welfare of our trunkline industry. Among the top 300 domestic markets, there are 101 markets under 300 miles in distance. These are markets for which your equipment and experience would appear especially adapted. Yet the total traffic in these 101 markets is less than 6 percent of the trunkline revenue passenger miles."

the trunkline revenue passenger miles."

I have singled out this paragraph because it concentrates on an area vital to our own planning. These 101 markets under 300 miles in distance are the dense, short-haul markets to which I referred earlier. It is in these markets that real pioneering effort and concentration is required. Given the opportunity to do so, we will provide this effort and concentration.

The 6 percent referred to by the Chairman has other connotations. Less than 10 percent of trips in markets under 300 miles are by scheduled air carriers. And to drive the nail deeper, the highway—private automobiles—account for 73 percent of all trips between 200 and 500 miles, and 90 percent of trips in the 100- to 200-mile bracket.

The primary reason the regional carriers have had difficulty in obtaining certification in these markets or of having their operating restrictions lifted so they could serve the markets, is because the trunks are already there. Yet the 6 percent is, in turn, evidence that concentration on these markets does not exist today. In all too many cases the trunk certification serves only as "entry mileage" used to combine loads from two large population areas for a long-haul flight.

A trunk to survive must maintain its competitive position and identity in the long-haul markets. For the most part it has little incentive or will to concentrate in the short-haul market. We will.

I don't know that anyone can specifically define what adequate service is. Most certainly unless a commuter type service is provided in these 101 markets, the market is not adequately served. The most graphic illustration of this is to be found 'n the Los Angeles-San Francisco, Washington-New York, and Boston-New York markets where real concentration has been given by the trunks in developing a commuter service.

Why shouldn't the same relative results be achieved in such markets as Baltimore-New York, Chicago-St. Louis, Seattle-Portland—to name only a few? Given adequate and frequent schedules, a fare structure and a service concept geared to attracting new customers—new air travelers—these 101 markets will double, triple, and even quadruple.

Our objective is not the 6 percent or the 10 percent—although given the opportunity we will get some of this. Our objective has been, and is, to dig deep into new markets; into the volume of people moving by surface means; or, more emphatically, those not moving at all. This is the real, long-term potential. But it takes the right to try it, the right equipment, maximum frequency, and a service tailored to compete—at least farewise—with surface transportation.

I have touched only briefly on the question of subsidy here today. Subsidy is both a complex and a simple matter—complex in its administration and simple in its purpose. But, it is not the alpha and the omega of our existence.

Nor is the \$65 million of subsidy paid for scheduled air transportation to the smaller communities significant when measured against farm subsidies, maritime subsidies, docks and harbors subsidy, or a host of other subsidized national activities.

Over the past 3 years subsidy payments have leveled and are now declining. With each succeeding year since 1961 subsidy has become an increasingly smaller part of the regional's total gross revenues. How fast subsidy declines, both as a total sum and as a percentage of total gross, is entirely the product of first a continued congressional intent and desire to provide scheduled air transportation to subsidy-requiring cities, and second, our own ability to generate profits in other areas and from other services. In this latter area, the Civil Aeronautics Board alone holds the trump cards,

So long as we do the job assigned to us so long as we continue to hold our costs to a reasonable level, so long as what we do produces a reasonable profit for what we do, then we will maintain and where possible expand those services for which subsidy is paid. But, determination of the ultimate balance is not ours, beyond the simple forces of our willingness to serve and our ability to serve within this context.

All the ingredients are today present for maximizing the potential greatness of the Nation's air transportation system at all levels. We have yet to realize that potential—particularly at the middle and lower levels. But to realize these benefits we cannot be shackled to the past.

We must rethink old thoughts, we must reshape old policies, we must revise and update old concepts.

We are ready.

<sup>&</sup>lt;sup>1</sup>This term refers to the formula which determines Federal payments, or "subsidy," to the regional airlines for providing air services at communities which do not produce sufficient revenues to cover the cost of serving them.

Before the Association of Local Transport Airlines in Houston, Tex., on Nov. 5, 1965.

### Castro Pushing Rice Fight With Red China

EXTENSION OF REMARKS OF

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. DERWINSKI. Mr. Speaker, we are all aware of the continued mismanagement of our domestic farm economy by the administration, but the tragedy is compounded when we note the mismanagement of the farm economy in Vietnam in a fashion which is detrimental to our interests in that land. I refer to and insert in the RECORD at this point an article by economist Eliot Janeway appearing in this morning's Chicago Tribune, which tells of the mismanagement of the situation there by our State Department strategists.

[From the Chicago Tribune, Jan. 17, 1966] POINT OF VIEW, JANEWAY: CASTRO PUSHING RICE FIGHT WITH RED CHINA

(By Eliot Janeway)

New York, January 16 .- For months, Castro has been nursing an exhibitionist's grievance against America. Our stand in Vietnam has stolen the spotlight from him. To get it back, he is picking a fight with Red China.

The war of words Castro has started with Peiping is about rice; that is, about the pow-er which countries with rice wield over countries without it. Nothing is more fundamental for Cuba or for China and her neighbors on the Asiatic side of the Pacific than rice.

And now Castro is charging that big brother has welshed on his rice ration. Red China's defense is that she needs the rice, and if the subsistence of her enormous population is any criterion, she certainly does.

The upshot of this fraternal exchange of compliments is that suddenly rice has begun to run neck and neck with price controls as a problem story on the fringe of the headlines. Over in Vietnam, rice and price controls are no separate problem stories competing for occasional headlines when and as something pops and a big shot pops off.

CONTROLS ARE CENTRAL

Together, behind the headlines, day in and day out, price controls on rice are central to the problem itself; to the instability of the social structure within the rice bowl, and to our confusion of political purpose in try-ing to defend it. The combination of social instability and political futility is a sure-fire

recipe for military frustration.

Believe it or not, we're experimenting with price controls on rice in war-torn, blackmarket-ridden Vietnam.

The amateurish price-control scheme wa have devised for her rice traffic has doubled the movement and frittered away the energy it should produce. Not only is the Washington-imposed system of price control not help-ing the war effort in Vietnam, it is actually hurting. Here's how:

Vietnam is an underdeveloped country and, therefore, by definition, rural. Washington's principal worry all along has been that the people—meaning again by definition, the by definition, cople—meaning again people—meaning again by definition, the Vietnamese farm population—are not for the war and are not hospitable to our being in the country. But as the rice movement goes, so of necessity goes the loyalty of the farm pop-ulation—that's the way cupboard levalty works down on the farm. We've alienated it by siapping ceilings on the price the farmer can get in the cities, where our control is based. CITIES GET BENEFIT

But the cities are getting the benefit of the huge dollar inflation we are pumping into the country. No boom town has ever had it so good as Saigon. Some of the dollars we throwing around there must spill over onto anyone able to catch. Our own errors and failures leave no doubt that we cannot do well unless we enable the farm population to do well. Contrariwise, we must continue to do badly as long as our occupation gives the farmer the short end of the deal.

This is exactly what we are using our price-control system to do. As if Vietnam were an industrial miniature of America, we are relying on rice ceilings to protect the small population of the cities, which we already ccupy, against the large population of the rice bowl, which is enemy country.

Our price controllers are giving the bargain buy to the cities, which are already cleaning up on our dollar; and they are making a present of the back country to the Vietcong, which is buying the farmer's rice and his loyalty with it-and no nonsense about price Worse still, the power in Asiatic power politics that goes with rice is now the Vietcong's by default.

#### ONCE RICE EXPORTER

For years on end, Vietnam was a rice ex-porter. She still is—though now the "jet-cong has taken over the business and, indeed, is making money and building fences for elf as the silent partner of the farmer who refuses to settle for the "American" penalty price in Saigon. Consequently, Vietnam is now an importer as well. She must be in

order to supply the price-controlled market. It's our scheme, and we're paying for it. America is now shipping nearly as much rice into Vietnam as she used to ship out. Little wonder that the harbor at Saigon is hopelessly bottle necked for military traffic, and presents a ripe target for enemy counterbombing.

### Four Columns by Art Hoppe

EXTENSION OF REMARKS OF

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. YOUNGER. Mr. Speaker, under leave to insert my own remarks and extraneous matter in the Appendix of the RECORD, I would like to insert four columns by Art Hoppe which were printed in the San Francisco Chronicle as well as some of the other papers throughout the country. Art Hoppe still ranks tops in the field of satire and from letters which I receive from readers of the Con-GRESSIONAL RECORD, they look forward to my inserts of certain of his columns from time to time. These columns fol-

GREETINGS, TAX FANS

"Ah," said the kindly old philosopher, "the humility of Thanksgiving, the joyousness of Christmas, the promise of the New Year and now, like always, I got my season's greetings from Mr. Sheldon S. Cohen." Who? "Mr. Cohen." said the kindly old

philosopher, "is our cheery Commissioner of Internal Revenue. Come January, regular as elm blight, he writes us 'A Spe sage to Taxpayers' on the front of our in-come tax forms. This year, he's done a bang-up job. I'll read it to you:

"Every year more than 60 million indi-viduals demonstrate their faith in America by filing income tax returns. The season has rolled around again and we are sending you this package of forms and instructions to help you do this."

Gosh, I said, a chance to demonstrate our faith in America. "That's right, son. I get all choked up just thinking about it. 'Course," he said, hefting the 40 pages of forms and instructions, "I'd favor demonstrating it in more simple fashion."

Like how? "Like maybe a form with just two questions: '(1) How much did you take in last year, you lying rat?' and '(2) Where's our cut, or else?" "

But how unfair, I said. For after all, our income tax system is designed to bring out the best traits in us Americans such as charitable contributions.

"Right, son. Our benevolent Government smiles on us giving to poor folk as long, of course, as they belong to an officially-certified Government-approved, tax-deductible organization.

"And it also encourages us, thanks to the blessings of the depletion allowance, to own an oil well. Which is a right good thing. As any man who owns one will tell you. And a nation of generous oil well owners is a fine goal.

"On the other hand, the Government encourages us to be sick-sicker than 3 percent of line 9, page 1. In the face of the population explosion, it will also gladly knock off \$600 for each new kid we have and at the same time reward us for being over 65.

"In addition, the Government in its wis-dom will forgive us the interest on our debts, the sales tax we spend on all the froo-fra we got in debt buying, and every penny we put out in bribing customers with whiskey, wine, and dancing girls. And if'n we can somehow cling on to our property for more than 6 months, it's a long-term capital windfall.

"So you see, son, the trouble with the system is there ain't enough oil wells to go around. And the only alternative for the rest of us is to become sick, old, overbreeding, debt-ridden, spendthree, corrupting misers."

Good heavens, I said, put that way, income taxes were ruining the country. I couldn't see why anybody paid them.

"It's faith in America, boy," said the kindly old philosopher, placing his kindly old hand over his kindly old heart. "Mr. Cohen never said a truer word. Us 60 million taxpayers file our returns 'cause we got faith particularly in the efficiency of our T-men, the incorruptibility of our Federal judges and

the security of our penitentiaries."

Well, maybe so, I said. But wasn't there one good trait the income tax system brought

out in us Americans?
"Yep," he said with a kindly old wink as he picked up his pencil and went to work.

### JUD JOAD'S CHOICE

"Won't you set a spell?" said Jud Joad to the Government man, who had dropped by the Joad's little shanty at Appalachia Corners. "Maude, fetch the chair."

'No thanks," said the Government man, "I just stopped by to say the Government's

going to want you folks to play a larger role in the war effort this coming year."
"Well," said Jud proudly, "I been fighting poverty man and boy nigh on to 60 years. And I ain't a-going to quit now. You tell the President he can count on ms and Maude here."

"Not the war on poverty," said the Government man. "The war in Vietnam. Frankly, Mr. Joad, it's putting a strain on our seen-omy. And it looks as though we're all going to have to choose between guns or butter."

"Oh, Jud." cried Maude, clapping her hands, "Take the butter. Just think how nice it'd be to taste butter again."

"Now, now, Maude, don't rush me," said Jud. "If'n I had a gun, I might pot a rab-bit or two and we could have a bit of meat."

"Now, just a minute," said the Government man

"I reckon you're right, Jud," said Maude, frowning thoughtfully. "Take the gun. But, my it's hard to make choices about things. I'm right glad we don't have many to make."

"Please," said the Government man, "I was just using a figure of speech. We're going to send the guns to Vietnam."
"See, Jud," said Maude, "I told you to take

the butter. We'll take the butter and thank you kindly."

T'm sorry," said the Government man, "there isn't any butter. I was " " "
"Whoa, there," said Jud. "First you take

our gun and now you took our butter. "Exactly," said the Government man. "That's what I'm trying to say. In order to support our fighting men in Vietnam, we're all going to have to give up things we want. Like butter. Naturally, the first thing the Government's thinking of cutting back on is the war on poverty. After all, we can't fight two wars at once."
"Nope, I guess not," said Jud.

"So we're going to have to ask you folks to make a few sacrifices this coming year. with a bit less. Tighten your belts. But But it's for your country, your flag and our boys

Jud squared his shoulders. "You tell the President he can count on us to do our part," he said. "Whichever war he wants to put

"It sure makes a man proud to serve his country," said Jud later over supper after

the Government man had gone.

"And I was so proud of you, Jud," said
Maude, reaching across the table to squeeze
his hand. "Course, it don't seem fair some-I mean when it comes to doing without, they always seem to ask us poor folks first instead of the rich."

"Well, I don't know," said Jud philosophi-cally, as he spread a little surplus lard on his grits. "You got to admit, Maude, when it comes to giving up butter, it's a sight easier for us than them."

### HUBERT GOES AWAY TO COME BACK

It's time for another chapter in that nostalgic series, "Where Are They Now?" So let us ask ourselves as always, where now is that all-time great liberal, the beloved, the unforgettable Hubert Horatio Whatshis-

Oh, there's joyous news today for the mil-lions of fans who never lost faith in Whatshisname. For though he retired to the humble obscurity of the Vice-Presidency, he is

now making a game comeback.

Not only has Mr. Johnson sent him abroad,
which is where Vice Presidents go to make a name for themselves, but Newsweek reports he is studying a new PR analysis designed to revamp his image.

He must, it says, engage in more "physical action." Such as: "moving, traveling, visiting, climbing, worshipping, hunting, fishing, sailing, boating, hobbying, reading, studying, thinking, sitting, gasing, looking, working, shirt-sleeving, gardening, flying, and cook-ing." On a scheduled basis.

So what a busy, happy scene we can envision in the humble cottage at No. 7 Memory Lane (a dead end street). Muriel his loyal wife, is helping him pack.

· Husser (head bowed). Praise be to him from whom all blessings flow. And Mrs. Johnson, too.

MURIEL (holding a watch). That takes care of worshiping. Now, let's see, you're going traveling, visiting, flying \* \* \* .

HUBERT. As I sit here in my shirt sleeves,

azing and looking at Mr. Johnson's portrait, cannot help thinking our beloved Presi-

MURREL. Oh, Hubert, stop talking. HUBERT (surprised). But that's my hobby.

MURIEL (checking her schedule): I know

dear, but it's time to start moving.

HUBERT (jumping up and down). I get so excited when I realize how generous wonderful President was to send me on this trip to such touchy trouble spots as Japan, Korea, Taiwan, and the Philippines. Oh, I sleep better just thinking of those extra glands in the White House.

MURIEL. I think that's Mr. Valenti's line,

HUBERT. But imagine our President entrusting me with the job of handing out his very own initialed ballpoint pens in Japan, Korea, Taiwan, and the Philippines. And he even said he didn't care how often I got my picture in the papers. In Japan, Korea, Tai-wan, and the Philippines.

MURIEL. Isn't there some other little trouble spot out there, dear?

HUBERT, Well, there's Vietnam. Of course, it's not on my itinerary, but I've been saying so often lately what a wonderful war he's waging that he may relent and even let me go there. Incognito.

MURIEL. Wonderful. Now, let's see, you've already been climbing, hunting, fishing, sailing, boating, reading, gardening, and cooking

this morning. So that leaves just— HUBERT. I know. And I just want to say, friends, what a wonderful, marvelous President we have, whose wise, humane administra \* \* \* adminis \* \* \* admin \* \* \*

MURIEL. Oh, I was afraid of that. All this physical action has got you run down. Turn around, dear, and let me wind you up. Whatever would the President say if he learned you'd stopped working?

#### THE STATE OF ELBIE JAY'S UNION

Howdy there, folks. How y'all? Time for teevee visit with the rootin'-tootin' Jay family, starring ol' Elbie Jay, who humbly enjoys nothin' more than a good, long rousin' drama-filled old fashioned political speech. As long as it's his.

As we join up with ol' Elbie today, he's just a-coming in the door, all happy and wrung out. That's his pretty wife, Birdie Bird, puttin' down her seed catalog to give him a

BIRDIE BIRD. How did it go, dear? ELSIE. Why, it was the best speakin' I ever did attend. I told them Congressmen right out what the state of the Union was and exactly what I planned to do with it.

darn near brought down the celling with their roaring, shouting applause. BIRDLE BIRD. Marvelous, dear. How did you

ELBIE. Well, I kind of warmed 'em up by telling them how I was going to cure the sick, enrich the poor, wipe out slums, clean up pollution, stop the population explosion and

bring world peace.

BIRDLE BIRD. That's nice, dear, and which of your points brought on the roaring, shout-

ELBIE. When I told them I was going to let them run for Congress every 4 years, instead of every 2. My, it sure is nice to know those fellows feel deeply about some-

BEEDIE BIRD (hesitantly). Did you speak to them about—you know.

ELBIE (frowning). Yep. I told 'em again about how they'd only have to campaign every 4 years, so's they'd have something important to think about. And then I spoke right out oh Yee-yet-nam. I told 'em how it was going to cost us billions and billions of dollars. And how all the things I'm going to do at home is going to cost us billions and billions of dollars too. Then, just when all looked blackest, I told 'em not to worry cause I had a plan to finance the whole

shebang.
Bindig Bind. Of course you did, dear. But how?

ELBIE. Why, by restoring the tax cut on long-distance telephone calls.

BIRDIE BIRD (absently)-Yes, you explained that to me last year. If you cut taxes, that stimulates the economy and brings in more revenue. Oh, I'm sure cutting taxes on tele phone calls will bring in just billions and billions.

ELBIE (irritably)-No, this year, I'm going to restore the tax to bring in billions. never did understand high finance.

BIRDIE BIRD (baffled) -But if you cut taxes to raise more money and now you restore taxes to raise more money—really Elbie. I don't see how anyone can have confidence in

ELECE (smiling foxily)—Confidentially, honey, I'm going to use the tax to beautify

our highways.

BERDE BERD (clapping happily). You're wonderful, dear. I have every confidence

ELSE (with a wink). I guess I just know how to appeal to folks. With one thing or another. And now, honey, shall we see if I'm on tee-vee? Or shall we just have a quiet family night and sit around looking at my

Tune in again, friends. And meantime, as you mosey on down the trail of life, remember what Elbie's ol' Grandaddy used to

Talk is cheap. So use plenty of it."

### Vietnam-Neither Escalation Nor Withdrawal

EXTENSION OF REMARKS OF

### HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. MOORHEAD. Mr. Speaker, my visit to the battle zone in Vietnam in December convinced me that escalation of the conflict would give no more assurance of a successful end to the fighting than would an unconditional pullout by our forces. The Washington Post in an editorial January 16 said that "Escalation might simply move the war to another and larger theater. Withdrawal also would be likely to move the conflict to another theater in another country."

Under leave to extend my remarks I ask that this editorial, entitled "After the Pause" be included at this point in the RECORD:

[From the Washington Post, Jan. 16, 1966] AFTER THE PAUSE

The President very wisely has put no terminal date on his peace offensive or on the pause in air operations against the north while the peace efforts go forward. Since there has been no known response from Hanoi, either affirmative or negative, it is too early to say whether there will be any results. Sooner or later, if there are no negotiations at all, consideration will have to be given to the next military moves

There is a powerful impulse in the Con-gress, in the country, and in some places in the Executive Department, for a resumption of air activity and for an initiation of fullscale warfare against the north to put a speedy end to a disagreeable war. Powerful as this impulse is, and strong as the support may be for the use of more military muscle, it is to be hoped that the President will reject the counsels of those who wish to escalate the war. There is not much reason to believe that an unlimited air war would

achieve decisive results. North Vietnam does not present the kind of industrial targets that are peculiarly vulnerable to mass bomb-ing. Even if the United States were indifferent to the moral arguments against mass bombing (and it is not indifferent), the practical results probably would not be any more decisive than were the results of area bomb-ing in World War II. While stepped-up interdiction of communications might further diminish the ability of North Vietnam to give logistic support to a conventional military invasion, there is not much hope that it invasion, there is not much nope that it would stop inflitration of troops in small units. And even if the bombing succeeded in all these counts, the Chinese Communist support of North Vietnam might make the results indecisive. As long as air operations are directed at North Vietnam (and not China), we are embarked upon the task of kicking the cart until the horse cries for

The unconditional withdrawal of U.S. forces is a course for which there is little responsible support in the country. And the primary reason is that no one can give any assurance that this policy would be any more successful as a means of ending the war in southeast Asia than the policy of escalating the conflict. Escalation might simply move the war to another and larger theater. Withdrawal also would be likely to move the conflict to another theater in another coun-

To continue or expand the present offen-sive against the Vietcong in the south, by the employment of the tactics now being pursued, is going to involve a heavier commitment than we have so far made if it is to have any reasonable prospect for succe Such an expanding commitment, accompanied by rising commitments of North Vietnam and China and Russia might easily produce another stalemate at a higher level.

The facts of the situation seem to argue strongly for a somewhat different application of the military power we feel we can appro-priately commit to the area. No doubt it is an alternative that already has been explored-and perhaps even rejected. But it can be argued quite persuasively that in the next phase of the war, the United States and its allies might wisely alter the character of the war in the direction of a more economical and efficient deployment. ent, we are engaged in an offensive-defense, employing both ground and air forces in the hot pursuit of Vietcong elements into terrain offering the greatest advantages of concealment and the most serious hazards to pursuing forces. To seek out and destroy a guerrilla force by such tactics, overwhelming force is required on a ratio of at least 10 to 1. The present ratio, counting all South Victnam and American and allied forces is 826,000 to 230,000 according to the Mansfield reportand the rate of North Vietnam infiltration is on the order of 1,500 a month. So the possibility or feasibility of achieving anti-guerrilla ratios like those in Malaysia and the Philippines is remote. hilippines is remote.

If it is difficult or impossible for us to annihilate the Vietcong without a military investment that looks excessive, it can be made impossible for the Vietcong to achieve their objectives without a deployment beyond their means. Were our tactics to alter from pursuit to a take-and-hold basis, the burden for the offensive could be shifted to the Viet-It is our purpose to deny North nam the fruits of a war of national liberation, and we can do that by successfully holding the areas now occupied and slowly and persistently enlarging them by territorial sweeps instead of jungle pursuit. The Amerame persecuty entarging them by territorias assessed instead of jungle pursuit. The American and South Victnam forces, while steadily expanding the occupied areas and pushing out their defense perimeters, would be chiefly engaged in garrison operations. These, of course, are wasteful in terms of manpower employed but economical in terms of man-

power expended. They are less hazardous and more feasible for a country in command of air power and thus able to maintain communications with scattered garrisons than they were for the French. Within the areas occupied by the South Vietnamese and by our forces, a program of rehabilitation and reconstruction could be pushed forward, once it becomes possible to afford the peasants and villagers security.

The military priorities under such a stra-tegy would be (1) securing of areas already held, (2) expansion of that territory only as rapidly as we are prepared to take and hold new real estate, (3) pursuit operations only where they can be carried out with greatest economy of force, (4) air operations chiefly in close support of territorial enlargement, and, as indicated, against large and vulnerable enemy concentrations, (5) air interdiction of routes from the north, scaled to the degree of infiltration, (6) no air attack on North Vietnam for the time being or unless surveillance discloses massing for of-

fensive operations against the south.

This is no quick and easy formula for an offensive military success in conventional military terms. It contemplates neither the annihilation of enemy forces, the crushing the enemy's will to resist or the solid gains of invasion and quick occupation. It projects the steady, slow and patient pacification reconstruction of South Vietnam. It must be acknowledged that success will consist of denying the victory of the North Vietnamese and the Vietcong in all the territory we are prepared to take and hold and then rebuilding that occupied area and providing the inhabitants with a higher standard of living. The forces required will be quite large; but the losses in combat should be much smaller with the defending forces enjoying the advantages of well-equipped men in strong defensive positions. It will cos more money; but it should cost fewer lives It will take more time-but we should not be

Away from the combat areas, the strategy has the virtue of making it clear to the world that our role is purely defensive. The war in South Vietnam will come to a stop if the forces of the National Liberation Front quit their attacks. Every dispatch from the war areas will make it plain that it is the Communists who are responsible for less of life and destruction of property. In the absence of negotiated peace there can be, under this formula, a tacit peace, whenever

the Victoong wish it.

This is no blueprint for either victory or peace in a hurry. But it is a blueprint that involves the surrender of no principle; it makes possible the descalation of the concontemplates the confinement of the war to the area now involved. It does not have the simplicity of "victory" or "surren-It plainly looks forward to an admittedly remote date when enough of the of South Vietnam will territory so that there can be normal elections under which the people can pick a government of their own choice—and decide for themselves whether they wish to affiliate with North Vietnam or retain their independence.

The Valachi Memoirs

EXTENSION OF REMARKS OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. ROONEY of New York. Mr. Speaker, an editorial appeared in the

January 9, 1966, edition of IL Progresso Italo-Americano, expressing the opinion that the Government should not give permission to publish the Valachi Mem-The views expressed in the editorial have long been my views on this very subject.

Under the permission heretofore granted me by unanimous consent, I include herewith the editorial:

THE VALACHI MEMOIRS

Startling announcements out of Washington are not new these days. One expects the dramatic and the sensational out of the Nation's Capital which is the center of activity for the preservation of world peace, the crusade for civil rights, the war on poverty, and the promotion of human wel-fare, among other things. But we were non-plused to learn that Joseph M. Valachi, the notorious gangster who told the Senate investigators a lurid tale of underworld ac-tivities and of the ramifications of the families dominating all segments of crime in America, has been given Government per-mission to publish his memoirs.

And what is the estensible reason for this unique departure from an inflexible rule, since he is the first Federal prisoner known to receive permission from the Government to publish the story of his life of crime? A spokesman for the Department of Justice declares, presumably with a straight face, that the exceptions we made because Voles. that the exception was made because Vala-chi's disclosures might alert the public to the crime syndicate's activities and be

the law.

What a ridiculous and childish expla Were it not for the fact that those responsible are involved in the serious problem of crime detection and crime prevention, it would indeed be a laughable one. What on earth could be accomplished by pe ting the public to buy a rehashed, if de-tailed, version of the disgusting "Valachi show" which the people of American watched on TV in 1963? We can just picture the great masses throughout the land queuing up to pay their hard earned money to read the story to recapture some detail they missed during the TV circus, and then run to the Justice Department with some tidbit which escaped those worthles.
"It was felt that Valachi's writing-

clares Information Director Jack Rosenthal of the Justice Department-would bring out intelligence information beyond what he had recounted in interviews." This astounding revelation cannot possibly some to fruition. Joe Valachi has voluntarily given the authorities, according to their own version, the most exhaustive and imaginative account of the structure and modus operandi of the crime syndicate. He filled thousands pages with his depositions and other information was elicited from him by the inquiring Senators at the TV hearings. What more can he add that would not be a repetition of the oft-repeated history of organized crime. Would it not be in keeping with traditional procedure to have the Valachi memoirs read experienced Department of Justice agents—experienced in separating facts from

fancy—rather than by the general public?
At any rate the original purpose of the Valachi hearing was to aid law enforcement. It is well known that Justice Department officials were disappointed at the reaction caused by the hoodlum's testimony at the TV hearings. They had hoped that public opinion would be outraged at Valachi's nar-ration of the crime syndicate and its opera-tions, but the public reaction apparently evaluated this performance as that of an un-reliable small-fry gangster whose testimony was mostly hearsay and added little to the Department of Justice's knowledge of the crime syndicate.

Certainly no useful purpose can be serve by the publication of this sordid materia

unless it is solely aimed at perpetuating the kind of image of criminality associated with the many Italian names in Valachi's testimony, an image which the millions of lawabiding Americans of Italian origin have consistently proven false through their outstanding achievements in the arts, in the sciences, in industry, in labor, in the professions, in government, and in the religious orders.

We would like to see the Department of Justice scrap this infamous plan particularly in view of the record which shows that the House Appropriations Committee released testimony by the Director of the Federal Bureau of Investigation, J. Edgar Hoover, to the effect that Valachi's disclosures had almost no effect on anticrime effects.

This should be reason enough to ban the memoirs.

### Truth in Packaging

EXTENSION OF REMARKS

### HON. ROY H. McVICKER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. McVICKER. Mr. Speaker, I am inserting into the Record at this point a memorial that was unanimously passed in the Colorado House of Representatives, being sponsored by 48 of the 65 members of that body, of both political persuasions, requesting the Congress of the United States to adopt truth-inpackaging legislation. This action represents a strong plea by the people of Colorado, speaking through their elected representatives, that such legislation be adopted. The memorial follows:

HOUSE MEMORIAL 1002

Whereas the purchase of packaged goods requires the spending of a substantial portion of the consumer's income; and

Whereas every Colorado housewife has the right to compare products, the right to compare prices, and the right to get what she pays for; and

Whereas, under modern packaging conditions, the consumer cannot see what is inside the package and she must rely upon the package to tell her the truth as to quantity and price; and

Whereas, under present law, a statement of quantity of package contents can be placed on the side, back, or top, rather than the front: and

Whereas the proliferation of packages in recent years has played havoc with our traditional system of weights and measures, through the use of odd fractional weights, and through the use of terms such as jumbo quart, full quart, and big 12 ounces; and

Whereas Colorado and nearly every other State in the Union has by statute or regulation established definite standards for weights and packaging of the sale of products from the producer to the wholesaler; and

Whereas Senator Phillip Harr has introduced a truth-in-packaging bill designed to fortify the consumer in her right to be informed; and

Whereas such bill is designed to halt hidden weight statements, to authorize regulations establishing reasonable weights and quantities for retail sale, and to halt the use of confusing or misleading adjectives; and

Whereas, the bill is designed to stimulate honest competition on the basis of quality

and price and to increase the consumer's real purchasing power by enabling her to make rational choices more easily; now, therefore.

Be it resolved by the House of Representatives of the 45th General Assembly of the State of Colorado, That this house of representatives hereby petitions the Members of the Congress of the United States to propose and enact legislation in the Congress for truth-in-packaging; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, Senator Philip Harr, and Members of the Congress from the State of Colorado.

ALLEN DINES,
Speaker of the House of Representatives.
EVELYN T. DAVIDSON,
Chief Clerk of the House of
Representatives.

### Don't Lie-Keep Silent

EXTENSION OF REMARKS

### HON, DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. RUMSFELD. Mr. Speaker, the people have a right to the truth from their public officials. If at any given time there is legitimate reason to with-hold information, the Nation is not well served if distortions and lies are resorted to instead of silence. This is forcibly brought out in the following editorial which appeared in a recent issue of the Chicago Sun-Times:

DON'T LIE-KEEP SILENT

Arthur M. Schlesinger, Jr., a former Harvard University professor, a Pulitzer Prize winner in history, and a confidant of the Nation's highest officials, has admitted that he lied to a newspaperman in 1961 about the nature and size of the Cuban refugee landing in the Bay of Pigs.

This was a case in which the newspapers were used for a nonjournalistic purpose—it was, if you will, "news management"—and it takes a bit of explaining.

In his new book, "A Thousand Days,"

In his new book, "A Thousand Days,"
Schlesinger writes that the Central Intelligence Agency, as early as December 1960,
abandoned its plans for a guerrilla operation
against Fidel Castro in favor of an invasion
that numbered 1,400 men.

At the time of the landings, however—as he now acknowledges—Schlesinger told a New York Times reporter in Washington that the landing force totaled no more than 200 to 300 men, and that the operation was not an "invasion" but an attempt to supply the Cuban underground. "This," he now says, "was the cover story. I apologize for having been involved in passing along the cover story."

Schlesinger himself, in December 1962, said in a speech that as a result of his participation in decisions in the White House, he could never "take the testmony of journalism in such matters seriously again."

"Their relation to reality," he said, "is often less than the shadows in Plato's cave." If they are so, then the fault lies in part at least with Schlesinger and others who have deliberately misinformed the press. Newspapers are not perfect instruments of truth—they are fallible because like every other enterprise, they are run by fallible

men. But more often than not they cannot be better than their sources of information. If men high in Government service lie to them, then the public is grievously misinformed, through no fault of the newspapers.

Obviously this game did not begin or end with Cuba. One remembers the misinformation fed the newspapers, and so the pub'c, about former President Eisenhower's ill1. s while he was in office, and one reads current evidence that military spokesmen are lying about operations in Vietnam in attempts to generate favorable reports from the field. Whatever their purpose or their immediate results in uplifted morale, such reports can in the end serve only to discredit the military and the newspapers and frustrate and anger the public.

There may be times, in days of great national peril, when the truth must be concealed. They are rare, however, and demand the greatest discretion on the part of those who do know the facts. In such times—and in lesser ones too—silence would be better than the ile. If they can't reveal the facts, let the officials remain silent.

### Hawaii Stargazers Lose Services of Astronomer Edwin H. Bryan, Jr.

EXTENSION OF REMARKS

### HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. MATSUNAGA. Mr. Speaker, Hawaii's newspapers have been very successful in promoting the varied interests of its populace. They have been able to do this partly with the help of individuals who have unselfishly contributed their time and resources to the newspapers. One such person is Mr. Edwin H. Bryan, Jr., curator of collections at the Bishop Museum.

He has for 42 years prepared a monthly series of star notes and charts for the Advertiser and now for the Sunday Star-Bulletin and Advertiser. So widely accepted is his series that it has been referred to as the "Bible" of the stargazers in the Islands.

One of Honolulu's most respected scientists, Mr. Bryan not only achieved prominence as the author of "Stars Over Hawaii," but is also known as a botanist, entomologist, geographer, historian, and bibliographer. Underlying his diverse scientific interests are two basic goals to which he has directed his activities. One is to make science comprehensible to the layman, and the other is to make scientific data about the Pacific available to the rest of the world. A many of many interests, Mr. Bryan is also actively involved in the development and expansion of the Pacific Scientific Information Center.

Mr. Bryan has recently relinquished his job as editor of the monthly charts to Mr. George Bunton, astronomer and manager of the Kilolani Planetarium and Observatory at the Bishop Museum. He leaves with the blessings and grattude, unexpressed though they may be, of his numerous reading fans. Hawali's

"stargazers" have indeed been fortunate to have had him for so many years.

The January 2, 1966 issue of the Sunday Star-Bulletin and Advertiser in Honolulu carried a story on Edwin H. Bryan's astronomical pursuits, which I submit for inclusion in the RECORD. The article follows:

#### FOR 42 YEARS HE MAPPED ISLE SKY

Edwin H. Bryan, Jr., curator of collections at the Bishop Museum, and one of Hawaii's foremost scientists, is retiring from an extracurricular public service that began 42 years

Since 1922-23 Bryan has prepared for the Advertiser and later for the Sunday Star-Bulletin and Advertiser, a series of star notes and charts that has appeared regularly each month.

The series was started as a result of Bryan's interest in astronomy—he was a charter member of the American Association of Variable Star Observers-and is today one of the oldest continuous features to be published by a newspaper in Hawaii.

The series is the "bible" of star-gazers in

the islands.

Because of increasing pressure of other duties, Bryan has turned over preparation of the material to George Bunton, astronomer and manager of the popular Kilolani Plan-etarium and Observatory at the museum. Bunton's first star notes and chart appear today.

Those who know Bryan as an astronomer, through this series and through his popular booklet "Stars Over Hawaii," published in 1955, may be surprised to learn he is also known as botanist, entomologist, geographer-for whom maps and mapmaking hold an endless fascination-historian and bib-

liographer.
He was first associated with Bishop Museum in 1919 as part-time assistant in entomology

Upon his graduation from the College of Hawaii (now the University of Hawaii) he turned to full-time work at the museum

Although there have been many interruptions studying at Yale and Stanford Universities, teaching at the Kamehameha Schools and at the University of Hawaii, serving in the U.S. Army, and participating actively on collecting and survey expeditions to many Pacific island groups—he is known as a man who thrives on multiple jobs.

addition to his scientific publications and the articles and book reviews in various scientific journals, Bryan has contributed many articles to newspapers in Honolulu and other Pacific cities.

He assisted in organizing the First Pan-Pacific Scientific Congress held, in Honolulu in 1920. He is a member of the Hawaiian Academy of Science, the American Association for the Advancement of Science, the Explorer's Club, and many other local and national scientific organizations.

Although his scientific interests are widely diversified Bryan has nevertheless focused them on two main objectives: To make science comprehensible to readers of the popular press, and to make available to scientists all over the world the rapidly ac-cumulating masses of data about Pacific geography, natural history, and the study of man in the Pacific.

In addition to his duties as curator of collections, beginning in 1927, Bryan has concentrated heavily in recent years on the development and expansion of the Pacific which Scientific Information Center, supported in part by the National Science

First organized in 1960 with an "office" consisting of a table and two chairs, the Center now occupies half of the ground floor of Paki Hall, one of Bishop Museum's re-search and office buildings.

### South Jersey Troops in Vietnam

EXTENSION OF REMARKS

### HON. THOMAS C. McGRATH

OF NEW JUNEY

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. McGRATH. Mr. Speaker, during my Christmastime tour of Vietnamese fighting areas, I was fortunate in meeting a number of fighting men from several services. The high state of their morale and training, their understand-ing of their mission, their respect for the Vietnamese people, and their eagerness to do the job they are in Vietnam to do was, I found, typical of all the American military men-officers and enlisted men of all services-with whom I spoke while in Vietnam.

Therefore, I feel it might be of interest to my colleagues to read of the reactions of the soldiers, sailors, and marines from New Jersey's Second District, which I enumerated in a news release which I have sent to newspapers and radio stations in my district. The news release reads as follows:

Washington, D.C.—Servicemen from the Second District fighting in Vietnam, visited by Representative THOMAS C. McGRATH, JR., Democrat, of New Jersey, at Christmastime, were all in high spirits and grateful for letters of encouragement and gifts from the folks back home," the Congressman said upon his return here.

During his tour of the fighting areas last month, Representative McGrath visited in-stallations of the 1st Air Cavalry Division, the 3d Marine Division, the Rung Sat Special Zone River Attack Group, a special forces fort near the Cambodia border, flew with the Air Force, and went aboard the nuclear carrier USS Enterprise in the South China

"At each stop on my inspection tour I looked for men from Atlantic, Cape May, and Cumberland Counties, and did locate eight of them and narrowly missed two others, for whom I left messages," the Congressman

"Without exception, I found them all in fine health and at the peak of training, their morale was high, and they were, to a man, fully aware of the reasons they were in Viet-nam and eager to do their part to end this terrible warfare against the Vietcong," Representative McGrath declared.

Serving with 3d Marines at Chu Lai, the Congressman talked with Sgt. Larry Mullin, son of Mr. and Mrs. George Mullin of 124 East Edgewater Avenue, Pleasantville, and Sgt. William B. McLaughlin, son of Mrs. W. McLaughlin of 224 North Dudley Avenue, Ventnor, and husband of Mrs. Diane Gruhler McLaughlin of 520 Broad Street, Pleasant-

Sergeant McLaughlin said that since his unit, the 4th Marine Regiment, landed at Chu Lai in early August, "we can see a defi-nite improvement in the situation." Sergeant Mullin told the Congres ssman, "There's no question that we're doing a lot of good

Lt. Larry Letzer of 341 31st Street, South, rigantine. had just arrived in Vietnam Brigantine, had just arrived in Vietnam when he encountered Representative Mo-Grath at Tan Son Nhut Air Base near Sai-Serving with a photo reconnaissance outfit, Lieutenant Letzer noted that he and all the other members of his unit had volunteered for duty in Vietnam. "It's a job that has to be done," he told his Congressman. Aboard the Enterprise, Representative Mc-"It's a job that

GRATH met Aviation Machinist's Mate 2c James B. Hill, son of Mr. and Mrs. James S. James B. Hill, son of Mr. and Mrs. James S. Hill of 412 Mulberry Avenue, Pleasantville, who has been aboard the "Big E" for 2½ years and has been aboard the "Big E" for 2½ years and was spending his fourth consecu-tive Christmas season away from hime. Attached to a reconnaissance attack squadron, Hill said "our morale has taken

an upward turn in the past month or so, and we realize now that the draft card burners in the States are just a small group of immature

Marine Pvt. G. M. Sorg, Jr., of 807 White Horse Pike, Egg Harbor, was on patrol when Representative McGrath visited the 4th Marine Regiment at Chu Lai, but the traveling sman left a message for the home district fighting man.

Two Infantry sergeants from Cumberland County, both serving with the 1st Air Cayalry Division at An Khe, were awaiting Representative McGrath when he arrived at that well-fortified enclave guarding Highway 19

from the coast to Pleiku.

Sgt. Frank C. Giordano, of 510 Oxford
Street, Vineland, a squad leader in the 1st Platoon of C Company, 1st Battalion, had served 3 years with the Marines before joining the Army 3 years ago. He told his Congressman "there's plenty of fighting here, but it's not as bad as I'd imagined it would

Sgt. Paul J. Maines of Bridgeton, although he has no address there at present, is serving in C Company of the Ed Battalion, at An Khe. He told Representative McGrart that "we're doing a job that must be done and getting it done the best we can."

"He told me he feels the main thing is to give the Vietnamese a chance to live the wa we do," the Congressman recounted.
"Sergeant Maines said he's sure the Vietnarecounted. mese will build a great democracy and they're very curious about life in the States.

Another Vinelander, Marine Pvt. Eugene Lewis of 505 North Third Street, was on duty when Representative McGratz toured the Chu Lai installation and, here, too, the Con-

gressman left a message for the leatherneck. Lt. Col. James D. Kennedy, son of Mrs. Irene E. Kennedy, of 1022 Maryland Avenue, Cape May City, was in Salgon on a supply mission for his special forces unit when Representative McGazrn met him. Colonel Kennedy is with an Army concept team, doarch and development work on con cepts and equipment used by the special forces all over the fighting area.

"Jim said he thinks the military situation is improving in Vietnam, and the morale of the Army of Vietnam (ARVIN) forces has gone sky high recently due to military suc-cesses against the Cong," the Congressman said. "He added our own soldiers are learning how to fight this strange type of war, and the planning and crash work which has gone into better preparing U.S. forces for warfare amazes even an old soldier like him."

At Chu Lai, Representative McGrarn met Marine Pvt. G. A. Defero of 1400 West Glenwood, Wildwood, who serves with the 4th Marine Regiment. Defero told the Con-gressman many men in his unit have been receiving anonymous mail from antidraft people in the States and added many of his buddies would like to go to the States and tell them off.

"I was tremendously proud of the job the men from our district are doing in the various branches of the military service in which they're serving in Vietnam," Repre-sentative McGrath said upon his return.

"As 'Christmas gifts,' I gave each of the fellows I met from home, and lots of other U.S. servicemen with whom I talked, ball-point pens and urged them all to write home and tell their folks and friends just what the war is like in Vietnam and what we're attempting to do there. They know people stateside read a great deal about opposition to our involvement in Vietnam and I said they'd be happy to know the morale among our troops is so high. They all seemed eager to write home," Representative McGratz

"I was sorry I couldn't meet more of our scond district fighting men, but at some of the installations I visited there were only a handful of American advisers, and none from our district among them.

"It struck me that if every American could see, as I saw, the conditions under which they're fighting, and learn first hand some of the civil complications and the psychological problems of the Vietnamese, our efforts to maintain the freedom of South Vietnam would have even greater support here," he added.

Representative McGrath visited Vietnam during the Christmas holidays at his own expense, and while there toured some of the U.S. installations in the midst of Vietcong territory. While leaving the special forces fortress at Minh Thanh, the helicopter carrying the Congressman sustained two rifle hits from Cong guns, narrowly es-

caping injury or worse.
"Compared to what our troops face every day and night, my close call was nothing," he said. "It only served to make me more proud and more appreciative of the job our men are doing there," he declared.

### **Testimonial to Opportunity**

EXTENSION OF REMARKS

### HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. LAIRD. Mr. Speaker, the Wausau Record-Herald in my congressional district, contained a timely and thoughtprovoking editorial on January 10, 1966, entiled "Testimonial to Opportunity," which should be of interest to every Member of this House.

The editorial deals with a letter written to the editor of the Milwaukee Sentinel by a Menominee Indian housewife and eloquently speaks for itself.

Under unanimous consent, I wish to insert the editorial, entitled "Testimonial to Opportunity," at this point in the RECORD:

TESTIMONIAL TO OPPORTUNITY

Opportunity is omnipresent in this great land for all who will grasp it, but seldom have we seen it expressed more simply, more sincerely than by a South Milwaukee house-wife who wrote a letter to the editor of the Milwaukee Sentinel last week. The letter reads:

"I reside in a lovely, quiet neighborhood.

"I am a Catholic by choice.

"Respect for both person and property is practiced by everyone in the neighborhood. "Cleanliness of self, abode, and surround-

ings are of paramount importance to them. "Everything that I possess was not given to me nor did I expect it to be. Much hard work and self-sacrifice were necessary to ar-rive at my present condition.

"I did not expect the Civil Rights Act to turn me white overnight as my color was no bar in the performance of downright hard work.

"Demonstrating, marching, and singing are appropriate in their place but they do not help much in performing necessary house-hold duties, furthering education, and earning respect.

"I am a first-class citizen. I am a Menomtnee Indian.

After all that has been written and said about the problems of civil rights (and, of course, problems do exist) and about the dire needs of the Menominee Indians in Menominee County (and they do have dire needs). this simple but significant testimonial to American freedom and opportunity from one whose skin is not white comes as a breath of fresh air on the troubled world scene.

### Children to Children Foundation Founded by Jeane Dixon

EXTENSION OF REMARKS OF

### HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. WYDLER. Mr. Speaker, one of the most remarkable women of our age lives here in Washington, D.C. I am speaking of Jeane L. Dixon whose prophesies have proven startling and correct. Her gift, which she attributes to God, has given this woman a prominent place in our society. This she has unselfishly used for the betterment of mankind.

In 1964 she founded the Children to Children Foundation based on her experiences in working with individual children and their families during the past 25 years.

In Mrs. Dixon's own words: "Our purpose is to beautify the souls of children-to help children discover their own purpose and talents; to help children 'learn to learn' so they may grow to 'earn'-and lead useful lives and make their contributions to humanity.'

EACH ONE-TEACH ONE: A TREE FOR EVERY SEASON

Spring: the maple tree. Summer: the fruit tree. Fall: the nutriment tree. Winter: the evergreen.

ecause the evergreen tree symbolizes the Christmas season, the Children to Children. Inc., Foundation has chosen it to represent

Each of the other trees-the maple, the fruit, and the nutriment trees have been chosen for their meaning to children during their respective seasons.

A tree has been selected for each of the seasons to symbolize the foundations concern for children on every day of every season throughout the year. The tree symbolizes the foundation's concern for future generations.

The primary aims of Children to Children, Inc.: First, to help children attain a continuing spiritual growth; second, to help children find their true talents and achieve their full mental and physical development; then they will know the true meaning of love, which is the first and great commandment. and is all important; third, to help children develop the means of self-help and, in their maturity, to strive to help others.

Mr. Speaker, I wish to enter a letter signed by Jeane L. Dixon as president of Children to Children, Inc.:

DEAR FRIEND: My lifelong dream of a charitable foundation, with the help of others, to help children, has now been realized. You will forgive me if I take this opportunity to tell you about it.

Children to Children, Inc., is a worldwide foundation dedicated to helping children of

all nations to help themselves. The everyday necessity of bringing up a large family can be applied throughout the world, let each one teach one.

The future of the world rests with the children of today. The foundation hopes to establish a better understanding within our own borders and between the peoples of all nations by helping to teach the children to help themselves.

Children to Children affords a vehicle for sustaining, encouraging, and promoting the natural understanding between the children of all nations. It is in youth that this feeling of friendship, mutual respect, and knowledge of the customs and beliefs of others can be seeded for the future peace of the world. As the twig is bent so will the tree

The foundation will encourage, sponsor, and facilitate cultural exchanges in the arts, crafts, sciences, music, drama, literature, and health by every possible means. Exchange hostels, fellow scholarships and conference travel will be encouraged. Small familystyle homes will be established. Schools will be given assistance. Ships will be fitted and equipped to help children living near the sea. Land and airborne vehicles will be utilized to meet children's needs in the interior. This foundation is set up to cooperate with all civic and governmental institutions to promote the spiritual and

mental and physical growth of children.
Contributions: The foundation will devote its entire resources to help children throughout the world. Your contribution made payable to Children to Children, Inc., 1144 18th Sirecet NW., Washington, D.C., 20036, will be used to teach children to help themselves. There are no deductions from the donors contribution for expenses. Sponsoring contributors will meet operating Your contribution is tax exempt. expenses.

Give while living: Children to Children is a long-range program. Contributions are needed now in cash or in kind. Your tax consultant or bank can best advise you on tax-exempt giving. Your attorney can assist you in estate giving by naming Children to worst will to Children in your will.

We welcome all contributions, however large or small.

Faithfully yours,

JEANE L. DIXON. President.

### Another Berlin Wall?

EXTENSION OF REMARKS OF

### HON. H. R. GROSS

OF JOWA

IN THE HOUSE OF REPRESENTATIVES Monday, January 17, 1966

Mr. GROSS. Mr. Speaker, almost in-credible are the efforts of President Johnson and his bunkhouse boys to control and meter out news to the press and the

smearing of Don Reynolds, a key figure in the Bobby Baker scandals.

Too little attention was paid to the 'leak" in the State Department that had for its purpose the discrediting of Otto F. Otepka, chief security evaluator in that Department.

Now comes Joseph Alsop, columnist for the Washington Post, who, in an article on January 17, describes the espionage and control system that has been established in the White House for the purpose of manipulating information from that

Alsop says that most Presidents have tried in one way or another to manipulate the front and editorial pages of the

But no previous President-

has claimed the right to keep from the country the basic facts of the national situation, unless he sees fit to divulge them. This is the novelty, and a most alarming novelty

Mary McGrory, feature writer for the Washington Evening Star, has written an amusing yet pointed open letter on the subject which is headed "Yellow Rose Calls White House," and Douglas Kiker, of the New York Herald Tribune, reveals that a start was actually made toward construction of a "Berlin Wall" at the White House, allegedly to further insulate the bunkhouse boys from newsmen seeking to supply the public with information concerning the operations of the Johnson administration.

Following are the articles by Mr. Alsop, Miss McGrory, and Mr. Kiker:

[From the Washington Post, Jan. 17, 1966]

#### FACTS AND UN-FACTS

### (By Joseph Alsop)

In the excitement over the state of the Union message, something of great signifi-cance has passed all but unnoticed. Rather glaring new light has been shed, in fact, on President Johnson's strange notion of the right way to deal with the public.

To begin with, a part of the curious pionage system to which members of the White House staff are subjected has been rudely brought into the open. All staff members' telephone calls are noted. All places they visit outside the White House are reported by the Government chauffeurs. these lists of contacts are nightly studied, for symptoms of dangerous associations, by the President's new alter ego, Marvin Watson.

The unfortunate White House Press Secretary, Bill D. Moyers, who more and more resembles a modern Saint Sebastian was required to explain that Watson's nightly list ersusals were solely motivated by a desire to achieve operating economies. This was said with a straight face, and the nearest that could be managed in the way of a show of indignation.

Yet it is of course an open secret that the telephone and limousine checks are only parts of a much wider system of surveillance that now covers most of the city of Washing-It is informal, but it works very efficiently.

In brief, a great many sleazy persons are how aware that the quickest way to make Brownie points at the White House is to pass the word that "X" has been seen talking to "Y." Thus it is now an odds-on bet ing to "x." Into it is now an odds-on bet that any "X-Y" meeting, in a restaurant or other public place, will soon be added to the White House's dangerous associations list.

In addition, a fairly complete news control system has long been in force at the Pentagon. It was installed even before President Johnson's time by Secretary McNamara, who cannot quite get it through his head that he has thereby deprived the country of almost all protection against a Louis A. Johnnon of the future.

Last week, finally, the State Department briefly tried to install a total news control system, and only retreated to installation of a partial system when sharp protest developed. And almost simultaneously the long-suffering Moyers, a good man trapped in a harsh predicament, gave the explana-tion of these puzzling phenomena in a television interview.

"It's very important for a President to maintain his options up until the moment of decision," said Moyers. "And for some-one to speculate, days or weeks in advance, that he is going to do thus and thus, is to deny to the President that latitude he needs

in order to make, in the light of the existing circumstances, the best possible decision." Taken literally, this extraordinary statement appears to mean that the President cannot do whatever his duty requires him to do, if someone or other has already suggested in print that this is indeed what his duty will require. At any rate, this statement tells us why the President's attempts at news control are so much more aggressive comprehensive, and one must add, repugnant to American tradition, than any such at-

tempts by other Presidents.

The key to the statement is that curious word, "options." In order to understand the strange meaning the President gives to this word, it is useful to recall the period, almost exactly a year ago, before President Johnson faced up to the realities of the Vietnamese situation.

At that time, in the highest circles of the Government, there was desperate and justified fear of an early Victoria victory in South Victnam. The same concern was felt by the U.S. Embassy and U.S. military staff in Saigon. From Saigon, the President was being repeatedly warned that nothing could save the situation except determined U.S. action, such as he later took after the attack on the Pleiku barracks.

In November and December, the fear in the Government and in Saigon, and all the the Government and in Saigon, and all the compelling reasons for this fear, were reported with some emphasis by a few persons, including this correspondent. The reports were strictly factual, if anything understating the true situation. But the President was deeply infuriated by this public ventilation of a crisis of the utmost public importance.

And it was later authoritatively explained that he was only angry because his "options" vere being restricted.

What he means by his "options," therefore, is the freedom to decide whether facts are indeed facts, or whether it will be more convenient to classify them as un-facts. The facts themselves cannot of course be wished away, nor can their impact be distincted by the description of the course be the decided by the description of the course be wished away, nor can their impact be distincted with the description of the description. minished on the American national situation. But if they are jut not mentioned, then they remain un-facts, as people who are unmen-tionable in the Soviet Union thereby become

Most Presidents have of course tried in one way or another, to manipulate the front and editorial pages of the press. But no previous President has claimed the right to keep from the country the basic facts of the national situation, unless he sees fit to divulge them. This is the novelty, and a most alarming novelty it is.

#### [From the Washington Evening Star] YELLOW ROSE CALLS WHITE HOUSE (By Mary McGrory)

Mr. MARVIN WATSON, Special Assistant to the President, The White House.

DEAR MR. WATSON: You know, of course,

that Press Secretary Bill Moyers has ex-plained and defended your practice of keep ing a record of incoming telephone calls at the White House on the grounds of "efficiency, economy, and security."

Naturally all of us are for that, but as a patriotic American citizen I think I should tell you that you are barking up the wrong

Take my own case. I show up on your lists as often as 20 times a day. But that's only half the story. What you need is the outgoing list. You'll never see me there.

No matter when I call or whom I call, he's "at a meeting" or "with the President" or "has some people with him." He's not spill-

ing any state secrets to me, I can assure you.

Maybe we should all take the hint that

the President will tell us reporters anything he thinks we ought to know, which you have to admit is not much. But we hear that a man's worth is gaged by the number of calls he gets, and he could lose his third telephone even his job if he isn't in demand.

So we keep dialing, and I personally have had many pleasant conversations with the secretaries over there. I have learned that one of them is looking for an apartment on Connectivity Avantage and a second connectivity a Connecticut Avenue and another is having trouble with her mother-in-law. I don't think these constitute breaches of the na-

tional security, and I hope you will agree.
Incidentally, would you consider giving us reporters code names or numbers? I have to spell my last name every time I call and it eats into my efficiency and also my morale. Could I be "Yellow Rose" or maybe 007? Or

are you saving that for Waiter Lippmann?
I want you to know that I have never descended to giving a fictitious name. A colleague of mine, whom I shall not name, on his sixth try for McGeorge Bundy, said he was Alexei Kosygin, and had to spell it.

Next week, he plans to be "Alexander Kerensky," and the week after, "Leon Trot-sky." I think I have talked him out of using "Ho Chi Minh" on the grounds that it will start up a new flurry about "direct contact between Hanoi and Washington," which could cause a jamming of the White House switchboard. I have pointed out to him that you people have enough to do checking up on each other, and he has promised to think it over.

But to get back to my point of the incoming list not giving the big picture. A week ago Tuesday, for instance, I show up as calling Joe Califano 10 times between 11 a.m. and 7 p.m. I forget what I wanted to ask him, but the thing is he should not be creditednor should I be charged—with the last two. I was merely trying to tell the secretary my deadline had passed and that he should not bother to call back. The first time, all his lines were busy, and the second time, I got through. The secretary promised to take my name off the list and she was as good as her word. I have not heard from him to this day.

Also you should not be misled by those six calls I put in to Bill Moyers on Thursday. He does not spend his day on the horn chinning with me. Actually, when I finally got him and asked him about the future of a prominent Government official, he advised ime not to write anything because "the President will make a statement about it in a few days." I'm still waiting.

Knowing Washington, you are naturally concerned that some people might just be calling up their White House acquaintance to scrounge some juicy morsel to drop into to scrounge some june, indeed to the conversation over a Georgetown dinner party. Some of us, Mr. Watson, never get to Georgetown dinner parties. We are att-ting in our offices waiting for the White House to call back.

A friend of mine went out recently and at next to a White House aid who sees the President all day. His conversation was con-fined to the adorable thing his 2-year-old had said that morning. His wife, during the

ladies' hour, confided that she was going to

name her next child Little Boy.

So, Mr. Watson, I can tell you there's no need to worry. Indiscretion has been practically wiped out in the executive branch. And your log of incoming calls would be cut right down to a splinter if you could persuade your boss to hold regular press conferences.

Sincerely yours,

YELLOW ROSE.

[From the New York Herald Tribune, Jan. 12, 1966]

WHITE HOUSE CANCELS "BERLIN WALL"
PROJECT

#### (By Douglas Kiker)

Washington.—White House Special Assistant Marvin Watson gave orders last fall that a high, concrete-block wall be built down one side of the White House to block the view of the adjoining Executive Office Building, it was learned yesterday.

Others on President Johnson's staff succeeded in canceling the job order, but only after ground was broken by workers at night

and the job was started.

The wall would have run from Pennsylvania Avenue down West Executive Avenue, past the West Executive entrance to the White House. Its principal purpose was to prevent reporters who use that entrance from looking into office windows of the adjoining Executive Office Building.

Most of the President's principal assistants work in the White House proper, but the huge, old, ornate Executive Office Building across the street houses offices of the Bureau of the Budget, the National Security Council, and the Office of Emergency Planning, among others.

#### CRITICISM

When other White House staff members became aware of the plan to build a wall, they intervened with the argument that such construction would result in widespread criticism and would be compared with the Berlin wall.

Yesterday White House Press Secretary Bill Moyers confirmed a story by Herald Tribune Columnists Rowland Evans and Robert Novak to the effect that, at Mr. Watson's direction, a record of all incoming calls to White House special assistants is being kept by telephone operators.

The record includes both the name of the person calling and the person called. But, Mr. Moyers said that to describe this as "gumshoe operation is a very clever but inaccurate and unwarranted description."

The press secretary also confirmed that questions sometimes have planted with reporters prior to some of the President's news conferences. But, he added, "it takes two to tango."

He was questioned at length by reporters on both White House security and press relations. The first was the result of the Evans-Novak column.

The second was the result of a television interview in which Mr. Moyers said the press is often "poorly informed," tends to write "its opinion" other than the facts, and that the President has neither a "statutory obli-

gation" nor a "moral obligation" to hold press

Yesterday Mr. Moyers said the telephone records are being kept only for reasons of economy and security.

"We are trying to study the different workloads of each special assistant," he said. And "one of the things that grew out of the Dillon report, which was based on the Warren report, was the necessity for better records on calls to the White House."

As for the names, he continued, "your names have always been taken down, either by the secretary or by the telephone opera-

He said names are taken for reasons of security. He said that other special presidential assistants informally report to him on calls they have received from reporters. But, he said, "there has never been, to my knowledge, an effort to keep White House staff assistants from talking to reporters."

Other reliable White House sources said yesterday, however, that, in fact, many of Mr. Johnson's assistants dislike the practice and hope to see it discontinued in the near future.

Mr. Moyers also confirmed that records are kept on all trips and stops made by White House Ilmousines.

But, he said, to suggest this is evidence of further "gumshoe" activity "is silly," because "a log has always been kept."

It is being used now, however, he said, to eliminate "unnecessary and unofficial trips, including taking one's wife to a party or buying groceries or other such unofficial requirements."

As a result, the White House chauffeur force has been cut from 100 to 60 in recent weeks, he said.

He said he expects the President, "with some regularity," to hold press conferences his last was on August 29— but said illness and other work have kept him from meeting with reporters "as often as he would have under other circumstances."

But, he added, "I think he has been accessible. I think you have had a chance to see him. I think the news has been made available."

Asked if Mr. Johnson has ever "evidenced any interest in discovering the source of an unattributable story which he might have preferred not to have had in print," Mr. Moyers said, "Any President is going to be interested in who gave what story to a reporter."

# PRINTING OF CONGRESSIONAL RECORD

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, stracts from the Congressional Record, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Recogn.

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for saie to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

### Four Chaplains Memorial Sunday

EXTENSION OF REMARKS OF

### HON. MARGARET CHASE SMITH

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1966

Mrs. SMITH. Mr. President, I ask unanimous consent that a communication of the director of public relations of the department of Maine of the American Legion be placed in the RECORD because of its timely reminder of the Four Chaplains Memorial Sunday on February 6, 1966.

There being no objection, the communication was ordered to be printed in

the RECORD, as follows:

ORRINGTON, MAINE, January 2, 1966.

FOUR CHAPLAINS MEMORIAL SUNDAY

MY FELLOW AMERICANS: On Sunday, February 6, 1966, the Department of Maine, American Legion, will lead the statewide ob-servance of the Four Chaplains Memorial Sunday. We urge all Legion and auxiliary and the churches of Maine to join with us in this observance.

with us in this observance.

The heroic story of the four chaplains—
George L. Fox, Methodist; Alexander D.
Goode, Jewish; Johnny P. Washington,
Catholic; and Clark V. Poling, Reformed
Church, is a legend in our time. Four men of God who gave their lives to save others on the sinking troopship USS Dorchester in the North Atlantic on that icy February morning during World War II. The ship, torpedoed by the enemy, was sinking when the four chaplains removed their lifejackets, gave them to others, and then stood together on the sinking ship praying for their ship-

We urge you to contact all churches in your area requesting special observance during the Four Chaplains Memorial Sunday. Contact the clubs and organizations of your community and give leadership to a special effort to promote the observance of Four Chaplains Memorial Sunday. Legion post commanders and chaplains

assisted by public relations officers should also contact local radio and television stations seeking to stimulate interest in this observance.

All posts, county and district organiza-tions are requested to hold a special Four Chaplains Memorial program during the month of February.

In a time of crisis for our Nation there is a message of strength in the story of the four chaplains. There is the courage of men of God and the living memorial of the sacrifices of all chaplains in the service of our Nation.

Maine and the Nation need to be re-minded of the religious heritage and the courage and devotion of all people of good faith. We can tell this story by our observ-ance of Four Chaplains Memorial Sunday and by the retelling of the story of the four men of God-Americans all-serving God and country.

Let Sunday, February 6, 1966, be a banner

day in the history of the Maine American Legion. Let it be a day of rededication to the principles of "for God and country." Let the message of the four chaplains told by all American Legion groups in Maine. Many thanks,

DANIEL E. LAMBERT,
Director of Public Relations, the American Legion.

Approved: Sidney H. Schwartz, Department Commander, the American Legion.

Subsidies by Any Other Name Are Still Subsidies

> EXTENSION OF REMARKS OF

### HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. GARMATZ. Mr. Speaker, at the present time the maritime situation is receiving widespread attention because of the maritime task force report recently released, the shortage of ships to carry supplies to Vietnam, and the shortage of licensed officers to man the ships.

The matter of subsidies for shipbuilding and ship operations is a favorite subject for criticism. In this connection, I believe several recent articles in the Baltimore Sun by Mrs. Helen Delich Bentley, the paper's very able maritime editor, will be extremely helpful in shedding some light on this matter and wish to insert them in the Appendix:

(From the Baltimore (Md.) Sun, Nov. 1, 1965]

WATERFRONT SIDELIGHTS

(By Helen Delich Bentley, maritime editor of the Sun)

New York, October 31.—A fellow maritime newspaper editor the other day saked whether we had read "This Is Marad," a booklet published earlier this year by the Maritime Administration regarding its operations.

We replied affirmatively and thought noth-

ing more about it. But our colleague pur-sued the matter with the comment, "Boy, you'd never think that the same person who put that out would put out the task force report or make all of the speeches he is making now."

His reference was to Nicholas Johnson, the Maritime Administrator, whose photograph appears on the page containing the foreword to "This Is Marad."

#### TARK PORCE REPORT

The 31-year-old Administrator also is often referred to as the one whose thinking produced most of the recently issued controversial recommendations of the interagency maritime task force as to how the American merchant marine should be reconstructed and operated in the future.

The last two paragraphs of the foreword

"In good times and in bad, in peace and in war, the United States needs merchant ships

to carry its trade, to contribute to its economy, to protect its worldwide interests. It is our job at the Maritime Administration to see that the American people have that kind of merchant marine; but this responsibility can be adequately discharged only if the American people understand the role of the merchant marine in our national life.

'I hope this booklet will help to promote

such understanding."

"FOR WAE AND PEACE" Under this title "For War and Peace," it

states:

"Merchant ships perform a dual service. In peacetime they carry on the trade be-tween nations; in war or national emer-gencies they serve either as an integral part or as an adjunct to the Armed Forces, carrying military goods and personnel or materials essential to war production or to sustain the civilian population.

"In peacetime American merchant ships must compete in the open market against foreign shipping for the world's trade; in wartime they usually work directly for the Government. To this dual role can be at-tributed the concern of the Nation for the adequacy of the merchant fleet."

"DEMONSTRATED MANY TIMES"

Under the heading of national security, the booklet says:

"Since the founding of our Nation, the importance of a strong American merchant marine has been forcibly demonstrated many times. \* \* \* As in the preceding centuries, the last 65 years have brought many occasions when the security of the Nation was dependent in large measure on the availability of a strong and active U.S. merchant marine."

It cites instances from World War I and World War II when this country had to provide the free world with most of its merchant ships, from Korea, the Saez Canal, and Lebanon.

"IN EVENT OF LIMITED WAR"

And then it adds, "Although war strategy plans have changed with the introduction of new weapons, present Department of Defense plans still call for the use of substantial numbers of merchant ships for purely military purposes in the event of a limited war."

The last paragraph under that heading states:

"There are separate but related needs for sustaining America's defense and civilian economies in time of war. The existence of a substantial, fast modern merchant fleet under the American flag is an essential element in any plan to meet these vital needs.

"To deter aggression in threatened areas throughout the world, we have positioned men and equipment in many lands. In 1963, 1,340,000 tons of cargo to supply these forces were carried by the U.S.-subsidized lines alone."

Under the heading "Economic Strength," "This is Marad" says:

"Less dramatic but fully important today is the contribution which a U.S. merchant fleet makes to the economic welfare of the country by assuring uninterrupted mave-ment of the agricultural, manufactured-and raw materials in the foreign commerce which is necessary to the continued and ever-increasing prosperity of the country.

#### "LARGEST TRADING NATION

"The United States is the world's largest trading Nation, accounting for 15 percent of all world trade. About 99 percent of this

trade moves by sea.

"We depend upon a large variety of imported foods, raw materials and other products to maintain our high standard of living, and to supply necessary elements of many of the manufactured exports which we in turn ship to other nations.

"As American oceanborne foreign commerce increases during the next 20 years from its present level of about \$30 billion to a projected level of nearly \$60 billion, it is essential that we maintain effective control over the rutes and services of the shipping lines which will carry our trade.

#### "DOMESTIC BENEFITS

"Finally, there are substantial domestic economic benefits from the merchant marine. The maritime industry, including the merchant portion of the shipbuilding industry, generates about \$1.5 billion in gross national product and pays about \$75 million in Federal and local taxes. In addition, the 100,000 maritime employees pay about \$80 million in personal income taxes.

"The provision of shipping services by U.S.-fiag ships conserves about \$800 million of our dollar exchange each year, thus alding our balance-of-payments position.

"It has been demonstrated that we cannot depend upon other countries to supply at all times the ships needed for the defense and trade of the United States.

#### "SHIPS AND SHIPBUILDING

"We must, therefore, maintain enough ships, shipbuilding capacity, experienced shipping companies, and skilled workmen and seamen of our own to provide a U.S. merchant marine adequate to the demands of both war and peace."

The above quotations—all from a booklet

The above quotations—all from a booklet published earlier this year by the Maritime Administration—reflect the thinking of most people about the American merchant marine. As we noted earlier, these were made over the signature of the Administrator.

The reason the President's Maritime Advisory Committee took such a strong stand against the task force report was its apparent initial aim—of providing a merchant marine only adequate to take care of one initial emergency needs of this Nation.

The justification given in the task force

The justification given in the task force report is that that proposal will give the Nation more ships than if the fleet continues on its present course.

Neither of these two courses is the answer to the problem. The answer should be a merchant marine strong and large enough to take care of this country's military and commercial needs.

The situation right now is strong evidence that, despite the large numbers of ships in the reserve feet, there is question whether the merchant fleet is adequate to do both even though Uncle Sam is involved in only a "brush fire" in southeast Asia.

#### MSTS DECLARES NEED

The Military Sen Transportation Service let it be known last week that more ships are needed on this run and has called all the shipowners in for a conference Tuesday.

Even before this, MSTS has had to use foreign-flag ships to supplement the American vessels to Vietnam. According to an affidavit submitted by Vice Adm. Glynn R. Donaho, MSTS commander, 14 foreign ships were chartered between June 10 and September 8.

Since that time, at least two foreign ships have been chartered—with Maritime Administration approval—to supplement the commercial operations of subsidized steamship lines on essential trade routes because they had so many bottoms serving Vietnam.

#### MORE CHARTERS LIKELY

And there have been indications that more foreign vessels may be chartered for this purpose—provided foreign ones can be obtained in view of the worldwide demand for moving military supplies to southeast Asia, moving Canadian wheat to Russia and Red China, as well as moving the regular everyday cargoes.

Certainly this would indicate that the U.S. active fleet at this time is not adequate to sustain America's defense and civilian economies in time of peace, let alone war—the administration keeps emphasizing the Vietnam situation is not a war, but a brush fire and everything is being handled on a business-as-usual basis.

#### CONDITION OF RESERVE FLEET

There appears to be considerable speculation about the condition of the reserve fleet, whether the remaining vessels are in condition to be broken out or whether the costs will justify breaking them out.

An independent ship surveyor who has visited most of the reserve fleets notes that the Liberty ships which are being sold for scrap are in better condition than many of

the Victory type being reactivated.

He explained that the Liberty is a simple ship and there is not too much electrical and electronic work aboard "to go bad," which means a minimum expense for reactivation. This is not true of the Victories and C-2's.

#### WAR MIGHT ABSORB COST

If ships are as sorely needed as MSTS would indicate, it seems the cost of breaking them out would be meaningless, would just be one of the items absorbed in the expenditure of the "brush fire" in Vietnam.

Despite all the pronouncements out of Washington that war strategy plans have changed, only last week the Navy Department said 93 percent of the supplies moving to Vietnam are going by sea.

to Victnam are going by sea.

This in itself should make some of the detractors of the merchant marine take

#### BOOKLET AND REPORT

How can one justify the booklet's words under the heading of "Economic Strength" and then turn around and say we can depend on foreign ships for these cargoes

That section emphasizes that merchant shipbullding along with the rest of the martitime industry generates about \$1.5 billion in the gross national product, and yet the task force is calling for shipbuilding in for-sirp varies hereafter.

The booklet also states that the Federal Government receives at least \$130 million in taxes from the maritime industry and that American-flag ships conserve about \$800 million of this country's dollar exchange, thus contributing to the balance of payments.

#### PROUBES SEEM STILL VALID

Do these figures no longer mean anything? Is it no longer important to this country to be able to control rates?

"This is Marad" states that the high standard of living in the United States— "of which we are most proud"—makes it difficult to provide and maintain a merchant fleet competing in international trade with other nations—and, therefore, Government assistance has been made available to offset these cost differentials.

#### NOW CRITICAL OF HIGHER COSTS

And yet the tone of the maritime administrator in recent statements has been critical of the higher costs in the United States and anxious for the United States to have "truly competitive shipbuilding and shipping industries."

Maybe the independent unnamed sconomists who have persuaded Johnson that it would be better to build in foreign yards

and lean toward foreign countries for this form of transportation could explain it all better.

My colleague and I are still confused.

[From the Baltimore (Md.) Sun, Dec. 13, 1965]

AROUND THE WATERFRONT: JOHNSON NOW ELABORATE IN TASK FORCE ADVOCACY

(By Helen Delich Bentley, maritime editor of the Sun)

San Francisco, December 12.—Nicholas Johnson, Maritime Administrator, has been arguing for the position of the controversial task force report.

Johnson was one of four high Government officials who addressed the Maritime Trades Department of the AFI-CIO during its 3-day biennial convention here.

In terms of rank, the four could be listed

John H. Henning, Under Secretary of Labor, Alan B. Boyd, Under Secretary of Com-

merce for Transportation.
George H. Hearn, one of five Commissioners

on the Federal Maritime Commission.

Nicholas Johnson, Maritime Administra-

#### OTHERS UNACCOMPANIED

Henning made this trip unaccompanied by any member of his staff and held no press conference.

Boyd likewise traveled without any aids and held no press conference although he had a frank and open discussion with the press after his speech. Although Boyd is chairman of the task force, he pulled no behind-the-scenes punches.

Hearn also traveled alone without any aids and held no press conference.

Nicholas Johnson had two men make the trip from Washington with him, although he has been loudly stressing Government economy.

#### TWO JOHNSON AIDS

One of those with Johnson, although not on the same plane, was Ivan Scott, who is being characterized as the "personal public relations" man for Johnson.

Scott was employed as of December 1 and his first assignment was that of traveling to the west coast to set up press conferences in each of the four areas visited by the Maritime Administrator. There already is a press information center in the Maritime Administration.

The other was George R. Griffiths, sometimes described as the Maritime Administration's liaison man with the military Sea Transportation Service and other times as a special assistant to Johnson, of which there are increasing numbers.

#### PRESS CONFERENCE OBJECTIONS

At the press conference in San Francisco the first of the four and the only one attended by this reporter—it was difficult to obtain direct answers from Johnson about the task force recommendations as differing from those of the President's Maritime Advisory Committee.

Johnson also had several members from the local staff of the Maritime Administration accompanying him a good part of the time he was in San Francisco, Portland, Seattle, and Los Angeles.

This array undoubtedly was impressive to some persons.

### SOME DISSENTING OWNERS

For example, when he tried to impress upon the press that the Advisory Committee recommendations were not accepted by three committee members, he failed to add, until questioned, that two of the objectors were major foreign-fing ablpowners.

Johnson failed to say that the third, a banker, had at first, refused to join the com-

mittee because he feared a conflict of interest in that his bank had foreign-flag cus-tomers. Purthermore, this member has attended almost no meetings, including the

Paul Hall, president of the maritime trades department, called Johnson "stupid," but was glad that he was because he had openly shown how the Government was going to sabotage the American merchant marine.

#### "GOING TO DO TO US"

Preceding maritime administrators had taken steps to undercut the merchant fleet, Hall said, "but never before one stood up and said publicly what they are going to do

Hall also in public accused Johnson of "deliberate misuse of statistics" and of jug-gling figures "to justify this lie" of how much the subsidy to individual seamen is in com-

parison with that to farmers.

Hall explained that when the Maritime Administration calculated how much the operating subsidy payments to seamen amounted to, it divided only the number of men actually going to sea aboard the subsidized ships into the amount of the subsidy rather than taking into consideration the persons backing up that operation on shore, such as the office staffs and shipyard workers.

#### MORE RECKONED PARMERS

On the other hand, to lessen the agriculture amount, the Seafarers' official said, the Maritime Administration adds up every family member on any 10-acre plot that produced \$50 worth in a year, plus 1.5 million retired farmers, several million farmers who receive no subsidy, to those who are sub-sidized and actually earn their pay at farm-

Thus, the farm figure comes out to about \$1,100 per person, while the seaman subsidy quoted by Johnson is \$7,500 to \$12,000 a man.

If the shipping industry was given the same broad general description as that of agriculture, Hall asserted the figures per person would be identical because shipping would then be \$1,190 per person.

### "SMALL-MINDED PEOPLE"

These small-minded people are killing off

this industry," Hall declared.

The description of a sneaking stumping tour applied to Johnson's trip did not come from labor, but from one of the country's outstanding management spokesmen—Paul St. Sure, chairman of the Pacific Maritime Association and a member of the President's Maritime Advisory Committee.

Other persons here feel Johnson is out to prove that he has been able to hold down the subsidy outlay to merchant shipping.

#### CALLS RESEASCH BETTER DRAW

St. Sure related that Johnson told ship ping executives here that although he could do nothing about getting more subsidy to build more than 15 to 17 ships a year in American yards, he could get \$2 billion for a research and development program.

American shipyards have contended right along that if they could get any assurance of a regular shipbuilding program—the 15 to 17 ships a year mean Government assistance of about \$100 million—they would be able to do more toward modernizing their facilities to reduce costs further.

This might be as good a place as any to put some of those research and development

[From the Baltimore (Md.) Sun, Dec. 20, 1965]

Around the Waterpronts Labor Gains Light ON SHIPPING

(By Helen Delich Bentley, maritime editor of the Sun)

San Phancisco, December 19.—The mari-time unions performed a monumental job toward getting the story of the maritime

industry moved "inland" when they succeeded in getting it placed on the congressional checklist of the AFL-CIO Committee on Political Education.

That action at the recent AFL-CIO con-vention is described as a major coup by the leaders of the seamen's unions because hereafter it will mean that 12 million mem-bers of the AFL-CIO and their families will confronted with the fact that there is a maritime industry in the United States and that apparently it is important to all organized labor-which means it must be considered when candidates are indorsed

#### MANAGEMENT'S CHANCE TO ADD

Now it will be interesting to see what management does to match this performance or to uphold its "share" of putting the mari-time industry across to the general public.

Never has the American shipping industry had the opportunity it now has nor is it likely to have it again if it flubs this time as it has done many times in the past.
The stage was set by Nicholas Johnson, the

outhful Maritime Administrator, in a speech last February 9 when he first said publicly that, as far as he was concerned, part of the industry was to be scuttled and the rest of

it was to be revamped.

A climax was reached October 7 when the contents of the Interagency maritime task force report were formally made public and found to be quite similar to the February 9 curtain raiser

Meanwhile, fortunately, functioning in another theater was a three-part cast—com-posed of public, labor and management members—known as the President's Maritime Advisory Committee with the assignment of developing a long-range program to improve the U.S. merchant marine.

They did not like the contents of the task force presentation and drew up their own.

#### CONTRASTS SEE SAME GOAL

ch program now is being performed with a different view in mind, because the basic lines are so different—such as building abroad, eliminating cargo preference and

American-flag passenger ships.

However, both claim to have the same goal—that of improving the merchant marine.

Johnson, with an entourage of aids and press conferences wherever he goes, has been conducting a tour to promote his curtainraiser thoughts.

Not following precedent, labor and management have engaged the same stage—the National Shipping Conference—and the same program as their theme to offset the task

### BOYD OFFERS OLIVE BRANCH

Alan S. Boyd, the chairman of the task force and Under Secretary of Commerce for Transportation, extended an olive branch here ten days ago and said, "Let's stop shooting each other and reach a common ground."

Reportedly, the Defense Department has apployed a "whiz kid" engineering outfit to employed a but the two reports side by side, compare them and come out with a middle-of-the-road program. There is confirmation of this.

And then, of course, there is the com-parative analysis of the two which the task force team made and which was not supposed to be made public—as was determined by the Advisory Committee and John T. Connor, Secretary of Commerce. However, Johnson released most of its contents in his first speech of his recent campaign.

#### JOHNSON ROUSES INDUSTRY

If Johnson has done nothing else, he has shocked most of the industry—labor and management—into realization that something has to be done and done soon if the maritime industry of the United States, first, is to be saved and, second, is to expand.

His statements described by his opponents as inaccuracies and half-truths have

helped toward the alert.

As a result of all this, there is more of a furor in the Nation over the merchant marine than perhaps at any time since 1936 when the act was passed.

#### VIETNAM CALLS ATTENTION

With the Vietnam situation becoming more critical and ships playing a large role there, shipping once again has the value of its contribution to defense being portrayed daily before the Nation.

Thus the stage has been set so that the in-

dustry has an opportunity such as it has not

dustry has an opportunity such as 1, had for three decades.

With knowledge of all this background, it was startling to hear that the west coast president of a subsidised steamship company remarked here Friday that, since his company that the startling the startling shock a high full pany's ships were sailing chock-a-block full, he could not see any reason why his com-pany should contribute money toward any type of an advertising or promotion campaign now.

It was particularly disheartening because there had been a bit of a reason to believe this man's eyes had been opened earlier in the week to the fact that the industry's continued negligence of promotion, of better un-

derstanding, has contributed to its rather squeezy position today.

Such narrow points of view are exactly what has been wrong with the American maritime industry for scores of years and apparently is coint to remain it his extinct. is going to remain if his attitude

parenty is going to remain it his attitude is an indication.

When business has been at a peak, the American shipping industry has abrugged its aboulders and said it was pointiess to put on a program of any kind because there was no need for it-business was good.

#### MONEY LAGS WITH BUSINESS

When business has slacked off and rides along at a low ebb with bludgeoning from every side, the industry declares it does not have the money then to do anything to offset

The shipowners' and shipyards' inconsist-ency has helped box them into their present undesirable position and sometimes it is difficult to sympathize with them.

It would not be surprising if other top industry officials feel somewhat like the west coast president.

#### UNION PROPAGANDA ARM

As was noted, the labor unions have made a major contribution toward getting the word into Dubuque, Iowa; Denver, St. Louis, and other places for next year's congressional election and thereafter. From now on there will be a space for each Congressman's name to show whether he voted the right way on maritime legislation.

The AFL-CIO Committee on Political Education is powerful in swinging votes, orga-nized labor claims, and is getting more so every year now that it has the full support of the AFL-CIO behind it.

For a while the committee floundered because the top echelon of the AFL-CIO was not supporting it.

But it kept plugging along until finally the executive council blessed it. The committee functions on a \$1-a-year contribution from each member of a union—or at least the dollar per member is its goal.

All of that is a real achievement, but there is considerable work to be done be-tween now and the congressional elections to put over a merchant marine program to the Nation—to let them know why they need a fleet adequate both for defense and com-mercial purposes. No more time should be rasted while the industry sits around and wonders, What do we do now?

#### NEED TO AID REPUTATION

Some definite strides toward a real improvement in public image must be made immediately—and that can only be done through a well-financed public relations pro-

And while they are thinking along these lines, both management and labor should knock their heads together and be willing to improve labor relations in the industry so that part of the way the public thinks of them will recover.

There is no doubt that the decrepit labor relations in the maritime industry—and both sides are at fault—has been a major assist to Johnson in selling his negative views and criticisms of the industry.

#### LEADERS ON BOTH SIDES

The individual leaders on both sides of the bargaining table should look in the mirror and ask what is more important: personal aggrandizement or the overall healthy industry.

dustry.

Yes, the stage has been set. The lines are partially written. The cast is available. Everything affirmative is there for the industry. But only if the members of the cast trust each other and cooperate with each other—management within management, labor within labor, as well as labor and management and public parties—and only if the lines are properly developed can a four-star performance be the result. Such a performance not only would be for the industry, but for the Nation as a whole.

[From the Baltimore (Md.) Sun, Dec. 26, 1965]

U.S. SUBSIDY PLANS COVER MANY AREAS—MER-CHANT MARINE NOT ALONE IN FEDERAL AS-BISTANCE

(By Helen Delich Bentley, maritime editor of the Sun)

San Prancisco, Dec. 23.—The merchant marine has been singled out for tremendous criticism about its subsidy in recent years, while the only other Government-assisted program referred to constantly is the farm subsidy.

However, a recently published report prepared for the Joint Economic Committee of Congress reveals nine pages of listings of various grants made annually by Uncle Sam to all elements of the Nation's business and economic life.

The introduction to chapter II, entitled "Scope of Studies," begins, "A better understanding and appreciation of the sweeping, amorphous character of subsidy programs may be gained by a mere listing of the various Federal programs, past and present, which, by one criterion or another, might be considered to partake of or involve an element of subsidy regardless of original intent of any particular program."

#### LISTED AS GRANTS

Under the heading of "Grants to business firms and corporations to carry out specific objectives," it lists the following:

Shipbuilding differential subsidy—Maritime Administration; shipbuilding subsidy for fishing vessels—Interior Department; ship-operating differential subsidy; subsidies to wartime producers of various raw materials and consumer items to etimulate production without violating price ceilings; land grants and cash contributions for railroad construction; Government subscriptions to railroad securities; subsidies for carrying mail—ship and civil air carriers; partial financing of plants to generate electricity from atomic fuels.

atomic fuels.

In the chapter on transportation subsidies, it discusses the assistance that has been given to the airlines since 1925 and noted that today the subsidy payouts in air transportation are devoted to the 14 local service carriers and carriers in Alaska and Hawaii.

These amount to about 485 million a year.

riers and carriers in Alaska and Hawaii. These amount to about \$65 million a year.

"Aside from these direct subsidies, air carriers have also benefited from such varied governmental assistance as airport and airway facilities, other navigation aids, aeronautical research and development conducted under governmental auspices, the

safety regulations of the Civil Aeronautics Administration and the sale of surplus aircraft, available to both new and existing companies engaged in civil transport," the report said.

#### WIDELY DEBATED

On the matter of motor carriers, it noted that whether the extensive expenditures on highway and street improvement constituted a direct subsidy to the motor carrier industry has been widely debated.

Representatives of the motor carrier industry have contended that through registration fees, gasoline taxes, and other charges which have gone into the construction of public roads, the industry has met all the costs properly attributable to it. This is denied by railroad spokesmen."

And in regard to railroads, the report contended that the total and net subsidies to railroads by Federal and State government are subject to some uncertainty.

# [From the Baltimore (Md.) Sun, Jan, 10, 1966]

AROUND THE WATERFRONT: CONGRESS HAS ITS CHANCE FOR MAJOR MARITIME CURES

(By Helen Delich Bentley, maritime editor of the Sun)

WASHINGTON, January 9.—Today's opening of the 2d session of the 88th Congress brings with it a call for some major changes in the Nation's maritime legislation—changes depending, of course, on whether the administration pursues the course promised by some of its lesserlings.

Whether much is done remains uncertain despite the two divergent reports on the American merchant marine that have aroused everyone in and around the maritime industry since last September.

This is the first time in recent maritime history—the last 30 years—that there has been so much turmoil over the industry in the months preceding the opening of Congress. It appears the path has been opened for major action.

In addition to dependence upon the administration's bidding, there will be the deaires of Congress itself—whether the committees responsible for the merchant marine are prepared or are willing to take steps on

their own.

The House Merchant Marine and Fisheries
Committee will be headed by a new chairman—Ebwang A. Gannarz, a Maryland Democrat, or
Washington, a former seaman, will continue
as chairman of the Senate Commerce Com-

This could be the first time in the last few years that these two committees work together, insemuch as Machusors and the late Representative Bonner, Democrat, of North Carolina, whom Garmarz succeeds, did not get along well together. Joining of hands in this direction could be fruitful for the industry and the process of the process.

try and the program as a whole.

GARMATE walks in as chairman at a time which affords him the opportunity as a whole to do more for the industry than any chairman has had since the 1936 act was passed.

He can also do his own constitutents considerable good since they are so closely linked to the American maritime welfare—provided overall welfare is properly handled and Gar-MATE has loval persons working on it.

overall welfare is properly handled and Garmark has loyal persons working on it. Since the 1986 act was passed, most of the legislation has been geared toward the subsidized end of the industry, which today is the best part of the American merchant marine. The tramps and independents did get the Cargo Preference Act, the trade-in-andbuild program, and mortgage insurance when

the Cargo Presence and, the state in and build program, and mortgage insurance when the Republicans were in power. It is the tramp or bulk-carrier segment of the merchant marine that has been cited by both reports as requiring improvement at once. Although legislation was passed in 1952 enabling bulk carriers to be built with

subsidy assistance, the Maritime administration has not approved any of the applications filed in recent years for the construction of such sorely needed vessels.

Perhaps new legislation is not the complete answer. Perhaps a thorough investigation as to why the administration has not paid any heed to congressional wishes concerning the merchant fleet might be more in order.

The House Merchant Marine Committee has never been considered a particularly strong or important committee—primarily because the industry has never made itself recognized properly as a truly important industry to the United States.

Certainly over the years the industry has shied away from making the committee members feel as if they actually had done a job and had more to do.

Contributions to political campaigns from the shipping industry have always been considered in the "niggardly" class in congressional circles.

And now it has all come home—and the industry recognizes that, with the attitude of many administration officials, its future is dependent upon Congress.

Regardless of any of the past or any personal feelings, the congressional committees have a responsibility to the people of the United States to provide them with a strong American-flag merchant marine and a healthy maritime complex built around that fleet.

It is on that premise they should act.

CHANCE FOR HOUSE GROUP

The House Merchant Marine Committee can become a very important one on Capitol Hill this year if the overall picture is properly encompassed and presented.

As the second session opens, there is not enly the question of a new policy for the American merchant marine, with two divergent reports serving as background, but there also is the fact that this country has found itself in rather a peculiar position in trying to supply ships to handle its own cargoes to Vietnam—although the reserve fleets are monumental in size.

And then there is the matter of the U.S.S. Yarmouth Castle, the Panama-flag passenger ship operating out of Miami on a regular run to Nassau, which burned with 90 persons—mostly Americans—losing their lives.

#### GOVERNMENT-AID CARGOES

Still undecided is whether U.S.-flag ships are receiving their share of Government-aid cargoes and, if not, why not.

All of these and more are matters that should be taken up by the congressional committees primarily responsible for the American merchant marine this year—first determining the adequacy of that fleet and how an adequate fleet can be maintained for this country so that when Vietnams break out there is no problem as to availability of merchant ships for both military and commercial use.

The committees might consider some way of finding out what is going on within the Maritime Administration. This might be something to consider as a permanent part of the committee staff work.

### MAY NEED MORE STAFF

With the Yarmouth Castle disaster, the task force-Maritime Advisory Committee reports, and Vietnam, the House committee naturally must expand its staff to be able properly to handle all these matters.

Representative Garmans months ago asked for an accounting of the ships in the reserve feet. As far as is known, he has never been given that information. If the information was kept on record as it should be and should have been, the new chairman could have had the proper answer to his request within a matter of days.

Yes, there is plenty to be done this year and the merchant marine and maritime industry is looking to Congress to lead the way.

[From the Baltimore Sun, Jan. 12, 1966] MERCHANT MARINE OF UNITED STATES THREATENED WITH OBLIVION

(By Helen Delich Bentley, maritime editor of the Sun)

Washington, January 11.—Commerce Department officials, it was learned today, have threatened subsidized shipowners that if they did not accept the interagency maritime task force report on a drastic new shipping policy, the American merchant marine "will be budgeted into oblivion."

This intimidation was made last month after Alan S. Boyd, Under Secretary of Commerce for Transportation and tusk force chairman, in San Francisco called for a "compromise" on the two contradictory reports— that of the task force and the other of the President's Maritime Advisory Commiton how the American-flag fleet should

#### NEITHER SIDE GETTING ANTWHERE

Although Boyd was not present when the threat was made, two officials from his Department who presumably had authority to speak conducted the conference. The general tone of the session was that the ship operators should go through the task force report, find what "you can swallow," and the rest "would be forced upon the industry."

At the time of his call for a compromise, Boyd said before the maritime trades de-partment of the AFL-CIO that neither side ras getting anywhere holding fast to its iews, that the United States had become great because throughout history there had been compromises, and he felt it was important for the future of the American merchant marine that a compromise be reached on the two policy reports.

.It was when industry officials went to the Commerce Department to find out what was meant by the call to compromise that the warning was given to them.

The Commerce Department holds the key to the budget of the subsidized segment of the American merchant marine now because Maritime Administration is an agency of that Department.

Therefore, whatever budget is sought by the Maritime Administration must then be fitted into the overall budget of the Commerce Department before it goes on to the Bureau of the Budget.

#### INDEPENDENT AGENCY SOUGHT

It is because of this hold of the Commerce Department over the merchant marine that several bills were introduced in the 1st session of the 89th Congress to have the Maritime Administration made an independent agency. Those bills are expected to be acted upon this session.

a£.

d

of

y

18

he

rt

ole

ed

ve

hi

The Budget Bureau had representation on the task force, as did several other Govern-ment departments not considered friendly to the American merchant marine. Among the controversial recommendations in that report are the building of American ships abroad; phasing out of all American ships from the passenger business; revamping the entire system of subsidy payments; building new bulk carriers, but only five a year; and holding down the amount of foreign commerce to be transported on American-flag ships to less than the present 9 percent.

It also would have this country depend on foreign-flag ships for commercial purposes should all of the U.S.-flag vessels be used for military transportation.

### ELEVEN SHIPS ENCOMMENDED

Whether the reported cutback in new ship-building to be presented to Congress in the new budget is part of that threat cannot be determined yet.

According to information available, the Budget Bureau is recommending that only 11 new ships be built in fiscal 1967. This is the lowe st number since the replacement

program got fully underway in fiscal 1968. It is said to be 4 less than what the Commerce Department called for and about 10 or so less than what the Maritime Administration called for.

#### Yellow Rose Calls White House

EXTENSION OF REMARKS OF

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. YOUNGER. Mr. Speaker, in the Sunday edition of the Washington Star of January 16, an article appeared which I am sure will be of interest to the readers of the Congressional Record. Mary McGrory's column "Yellow Rose Calls White House" is an excellent piece of satire on the White House order to report the comings and goings and phone calls of White House employees. Her column follows:

YELLOW ROSE CALLS WHITE HOUSE (By-Mary McGrory)

Mr. MARVIN WATSON Special Assistant to the President, The White House.

DEAR MR. WATSON: You know, of course, that Press Secretary Bill Moyers has explained and defended your practice of keeping a record of incoming telephone calls at the White House on the grounds of "efficiency of the property of the course of the property ciency, economy, and security."

Naturally all of us are for that, but as a patriotic American citizen I think I should tell you that you are barking up the wrong

Take my own case. I show up on your lists as often as 20 times a day. But that's only half the story. What you need is the outgo-You'll never see me there

No matter when I call or whom I call, he's "at a meeting" or "with the President" "has some people with him." He's not spiling any state secrets to me, I can assure you.

Maybe we should all take the hint that the

President will tell us reporters anything he thinks we ought to know, which you have to admit is not much. But we hear that a man's worth is gaged by the number of calls he gets, and he could lose his third telephone or even his job if he isn't in demand.

or even his job it he lish the demand.
So we keep disling, and I personally have
had many pleasant conversations with the
accretaries over there. I have learned that
one of them is looking for an apartment on Connecticut Avenue and another is having trouble with her mother-in-law. think these constitute breaches of the national security, and I hope you will agree.

Incidentally, would you consider giving us reporters code names or numbers? I have reporters code names or numbers? I have to spell my last name every time I call and it eats into my efficiency and also my morale. Could I be "Yellow Rose" or maybe 007? Or

are you saving that for Walter Lippmann?
I want you to know that I have never descended to giving a fictitious name. A colleague of mine, whom I shall not name, on his sixth try for McGeorge Bundy, said he was Alexei Kosygin, and had to spell it. Next week he plans to be "Alexander Kerensky," and the week after "Leon Trot-sty". I think I have talked him out of wellow

I think I have talked him out of using "Ho Chi Minh" on the grounds that it will start up a new flurry about "direct contact

between Hanoi and Washington could cause a jamming of the White House switchboard. I have pointed out to him that you people have enough to do checking up on each other, and he has promised to think it over.

But to get back to my point of the incoming list not giving the big picture. A week ago Tuesday, for instance, I show up as calling Joe Califano 10 times between 11 a.m. and 7 p.m. I forget what I wanted to ask him, but the thing is he should not be credited-nor should I be charged-with the last two. I was merely trying to tell the secretary that my deadline had passed and that he should not bother to call back. first time, all his lines were busy, and the second time, I got through.

The secretary promised to take my name off the list and she was as good as her word. I have not heard from him to this day.

Also you should not be misled by those six calls I put in to Bill Moyers on Thursday. He does not spend his day on the horn chinning with me. Actually, when I finally got him and asked him about the future of a prominent government official, he advised me not to write anything because the President will make a statement about it in a few days. I'm still waiting.

Knowing Washington, you are naturally concerned that some people might just be calling up their White House acquaintance to acrounge some julcy morsel to drop into the conversation over a Georgetown dinner party. Some of us, Mr. Watson, never get to Georgetown dinner parties. We are sitparty. Some of us, Mr. Watson, never get to Georgetown dinner parties. We are sit-ting in our offices waiting for the White House to call back.

A friend of mine went out recently and sat next to a White House aid who sees the President all day. His conversation was con-fined to the adorable thing his 2 year old had said that morning. His wife, during the ladies' hour, confided that she was going to name her next child Little Boy.

So, Mr. Watson, I can tell you there's no need to worry. Indiscretion has been practically wiped out in the executive branch. And your log of incoming calls would be cut right down to a splinter if you could persuade your boss to hold regular press conferences. Sincerely yours,

Yellow Rose.

### As the Twig Is Bent-Safeguarding the Spiritual-Moral Well-being of Young Americans in Uniform

# EXTENSION OF REMARKS

### HON. KARL E. MUNDT

OF SOUTH BAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1966

Mr. MUNDT. Mr. President, the February issue of Together, the magazine for Methodist families, carries an cle by Col. Harry M. Archer which highlights the provisions being made by our military services for safeguarding the spirtual-moral well-being of young Americans in uniform.

Colonel Archer, a 20-year Army veteran, outlines clearly the factors in a young man's life which provide the keys to what kind of soldier and later, what kind of civilian, he will become.

Because of the importance of this article to those thousands of families who have sons in uniform I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### As THE TWIG IS BENT

(By Harry C. Archer, colonel, U.S. Army)

Strange names once again are spreading across American headlines and creeping into the American vocabulary: Da Nang, Vietcong, and the Ho Chi Minh Trail. They are familiar because tens of thousands of our soldiers, airmen, and marines are pouring into beleagured Vietnam. The buildup of combat forces there has brought increased draft call and may lead to the mobilization of Reserve and National Guard units.

The demands of national security made upon the young men of our Nation are of obvious and direct concern to parents, elergymen, civic leaders—indeed to all Amer-

The first though, of course, is for the physical safety and well-being of these lads. No less important is the concern over the effects of military service upon their moral fiber. Will they be coarsened and corrupted? Or will they emerge as self-reliant, better citisens?

As a soldier, a Regular Army officer, I have my own views. To illustrate, let me present an imagined but not unbelievable case:

The young soldier was not particularly drunk when he left the cafe. Just happy. He had had only a few beers. The girl lounging outside strolled up to him and struck a provocative pose. They chatted a few moments and then, with a shrug, the boy nodded and together they set off down the dinju lit street. Ten minutes later he was dead. They had not meant to kill him, just rob him. But there had been a scuffle, and now the soldier was very, very dead, lying in a foul-smelling alley thousands of miles from home and family.

miles from home and family.

Would such an incident have happened if the boy had not been drafted into military service? Of course that particular incident would not have occurred, but what about one like it? Would he have been as likely to drift off in an alcoholic haze with some other such girl? Was there, perhaps, some flaw in his character from earlier days, or did the Army cause him to follow this path?

After all, everyone who has read "From Here to Eternity" knows what the military services are like—sex-crazed, hard-drinking, profane, and completely controlled by sadistic sergeants and incompetent officers. Such an environment is bound to corrupt.

Balderdash. Let me lay it on the line for you, parents of America. With but a few exceptions, the boy coming out of the military is the same basic product that you created. So you want a good, clean kid to come home from the Army? It is easy. Just put a good, clean kid into the Army.

I am not being flippant. I have been in the Army more than 20 years, and I have seen the American serviceman at work and at play in the United States and in nearly 30 foreign lands. Some of them started using narcotics while others started building an orphanage. One man dealt in stolen black-market goods, and the Army dealt him a dishonorable discharge. Another from the same platoon attended night school, receiving a high school diploma with his honorable discharge.

What made the difference? They were in the same army. Could the difference lie in the moral training they received before they came into the service? If it were not so trite, I would answer my own question with that old chestaut about "As the twig is bent." On second thought, I'll say it anyway. As the twig is bent, so grows the tree, and you had better believe it.

#### FOUR KEY PAUTOUS

In the military, there appear to be four main factors that determine whether a twig will bend or grow straight—factors that determine how each young man will respond to the challenges of military life. It should come as no surprise that all four are directly connected with the home and community from which he came. The things which shape a lad's early life also tend to shape his career in uniform.

Here are the four factors:

Religion: The truly devout soldier is rarely in trouble. Even those who have relaxed somewhat in their church attendance are good risks if they have a background of sound Christian or Jewish training. Respect for the laws of God and man, as taught by the religious faiths, is the firmest foundation upon which to build a good soldier and a good citizen. The boys who take part in church activities and who have learned to seek their chaplain's guidance seldom see the inside of a military police station.

Family: The products of unhappy or broken homes have some tendency to have unhappy, broken military careers. I do not mean that such a boy is an odds-on fayorite to be a troublemaker. The vast majority of all soldiers serve honorably and well. Only a small handful is given dishonorable discharges. I simply mean that a boy who grew up with the love and guidance of two well-adjusted parents has a better chance of a satisfying career.

Education: The better the education, the better the soldier. There is a direct, almost invariable connection. The reasons are easily understood.

First, the well-educated soldier is assigned to better, more interesting duties. Often he is selected to attend highly technical schools which not only qualify him for promotion and better assignments but also prepare him for good jobs in civilian life. The educated soldier knows that receiving such opportunities depends in part upon his personal conduct.

Second, the better-schooled soldier has a clearer understanding of why he is in the Army, why there must be a draft. If he is stationed in Europe, for example, he has some knowledge of American foreign policy and of why our Government believes that U.S. forces must be maintained there. Knowing these things, he has a sense of purpose and accomplishment that is not fully shared by less fortunate fellows.

Last, he tends to associate with other welleducated soldiers. As a group, they are the ones most frequently seen in the post library, the chapel, the education center, and the craft shop—and more rarely seen in the nightclubs and bars that spawn disciplinary problems.

The girl friend: If a boy has won the love or affection of a girl back home, he is more likely to be a good soldier. If they are engaged, this influence is even stronger. A picture in the wailet, letters ending with little X's and O's—these are forces which never should be underestimated. The boy who wants a particular girl to be proud of him knows she will not be proud if his service is dishonorable. The lad in love is more apt to be economy minded. He saves his money for their future home, for gifts, or to squire the girl around when he returns home on leave. Such a soldier will spend less money, hence less time, in the cabarets that frequently cluster about military installations.

The letters from this all-important girl are a factor in themselves. If they are affectionate and chatty, speaking of familiar places and people, they are a strong link with all the more wholesome, desirable things in his life.

This matter of love is a double-edged sword, however. If the girl spurns him or turns to another, strange forces are sometimes loosened. While one boy might sit in his barracks to brood over his fate, another may embark upon a wave of rashness, turning to the consolation of alcohol or the arms of some other, too readily available girl. Which course he follows is determined by other factors of religious training, home life, and education.

Note that I have not mentioned such things as the soldier's race, social, or economic position, his national origin, or rural versus urban background. Perhaps statistical study would reveal that some of these are important, but in my experience they are not. Give me a religious, educated boy from a happy home with a wholesome girl in his heart, and I have a good soldier. I do not care if he is black, white, or purple, rich or poor; he will serve honorably and well and will return to his community as a good man and a good citizen.

#### FEAR OF CORRUPT INFLUENCES

Why do so many people fear the effects of military service on their sons or relatives? To my mind, the reasons are clear. In the first place, there are the newspaper headines: "Soldier Rapes Teenager"; "Five Marines Killed in 100-m.p.h. Police Chase." How often do you see headlines blaring, "Salesman Robs Bank" or "Bus Driver Slays Rival"? Rarely. And it is not because all salesmen and all bus drivers are above reproach.

Exceptions are made, of course, when a civilian's crime is completely inconsistent with his occupation: "Choir Director Arrested in Oplum Den" or "Bank President Charged With Shoplifting." As a rule, however, civil occupations are not headlined.

Why the difference? I believe it is because of the uniform. It provides a visible identity found in few other occupations. Policemen also wear uniforms, and I can well picture a headline prociaiming, "Policeman Slays Wife," but I cannot imagine one announcing, "Grocer Killed in Three-Car Accident." In short, I believe the headlines give a grossly distorted picture of the serviceman's standard of conduct.

There is a second, more concrete reason for parents to fear the corrupting influence of military life. After all, Jimmy did not smoke or use swear words before he went into the Army, and now he does both. Proof positive. Well, what would have happened to Jimmy if, instead of entering the Army, he had left home for the first time to attend some large university or to work for a construction company? Would he then have been less likely to smoke and say dammit? No matter where he goes, a lad will pick up superficial signs of toughness when he goes out into the world of men. I do not believe military life is any worse or any better in this regard than a thousand other occupations.

#### OBLIGATIONS OF THE MILITARY

It may appear that I wish to absolve the military services of any responsibility for the conduct of our citizen-soldiers. That is not my desire nor is it the desire of any officer I know. The service branches have a deep feeling of obligation to do their share in preserving and further developing the moral stamina of their men. The reasons are both idealistic and practical.

On the idealistic side, we in the services do not regard ourselves as being basically separate or different from the rest of the American community. As children, we, too, played marbles, went fishing, came home with bloody noses, and loved the smell of burning leaves. Putting on a uniform did not mean that we suddenly became indifferent to all but the military aspects of American life. We are citizens as well as soldiers, and we feel civic as well as military obligations.

To insure the protection of our Nation, the President and the Congress have found it necessary to entrust a large number of American youth into our hands. We would be betraying that trust if we were indifferent to the moral, spiritual, and civic development of these young men. A great deal of time and effort goes into meeting those

Practical considerations lead to the same conclusion. From a purely military stand-point, we want men of strong moral charac-ter—for many reasons. The Army has found that the good citizen, with all that that implies, makes the better soldier. Of course there are some men without fear of God or there are some men without fear of God of love of man who also make good fighters. But military leaders prefer the soldier who is trained, educated, knows why he is fight-ing, and is convinced of the justice of his cause. Another, not inconsequential con-aideration, is the fact that the trained, dis-ciplined soldier has a much better chance of survival. He lives to fight another day. This is not only a matter of concern to the in-dividual soldier but also to his commander, who knows that one man with one weapon may spell the difference between defeat and victory.

Again, from a purely practical standpoint, it takes literally thousands of dollars to take a raw recruit and change him into a trained soldier. Our military and civilian superiors demand that we get the best in military posture out of each dollar provided by the taxpayers. We do not want that expensive soldier to spend 1 single hour in confine-

At the relatively small post where I now am stationed are two chapels, a library, three clubs, a craft shop, an education center, a post exchange, a gymnasium, skeet shooting and golf driving ranges, a bowling alley, a theater, and a baseball diamond. Why all this? It is to give each soldier wholesome outlets for his spars time, to attract him to stay on post rather than to seek outside di-

These facilities, by themselves, would not accomplish the purpose. There must be the human touch. From the time an inductee enters the Army until he leaves, there is frequent counseling and guidance by his unit commander, chaplain, and senior noncom-missioned officers. There are regularly scheduled training periods for character de velopment, lectures on social diseases, and discussions of world events and national policies. My battalion commanders (lieutenant colonels) personally speak at least once a month to every man in their com-mand about standards of conduct. Their company commanders do the same once a week.

The Army commander in my area, a four-star general, has made It abundantly clear to all his subordinates that he considers control of the soldiers' conduct, both on duty and off, one of the big indications of a commander's competence.

In times past, I can recall occasions when the armed services have been forced to take positions that ran counter to the social and economic desires of the civilian community. Young men have been taken from their homes and jobs to serve in uniform. Nike missile sites have been built on land needed for other facilities. Tax funds which might have built schools and roads have been diverted to buy planes, tanks, and ships. In today's world, these things are unfortunate but unavoidable.

But on the matter of the moral fiber of America's young men, there is no conflict of military and civilian aims. We in the mili-tary hope to obtain decent, intelligent, civicminded youths to serve with those of us who have chosen a career in uniform. We hope to return them to their homes changed, if at all, for the better.

### VFW Leader Supports YAF Light-Up-for-Freedom Rally

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. BROCK. Mr. Speaker, it was my pleasure to participate with many distinguished Americans in a great patriotic rally in Constitution Hall on January 8.

The historic event was sponsored by the Young Americans for Freedom and expressed broad support for U.S. policy in Vietnam.

I insert under unanimous consent the speech delivered by Hon. James E. Van Zandt, former Member of Congress and past commander in chief of the Veterans of Foreign Wars of the United States, be printed in the Appendix of the REC-

VFW LEADER SUPPORTS YAF LIGHT-UP-FOR-FREEDOM RALLY

Mr. Chairman, the Veterans of Foreign Wars of the United States-an organization of 1,300,000 overses veterans of America's wars—is honored in being invited to participate in this Light-Up-for-Freedom rally.

The VFW wishes to commend most highly the Young Americans for Freedom in sponsoring this freedom rally-which has brought together a group of distinguished Americans who are participating in this evening's pro-

By their presence—they are joining you loyal Americans in the audience—and in similar audiences throughout the Nation—in telling the world that the overwhelming majority of American people are behind our fighting men in Vietnam.

The position of the Veterans of Foreign Wars in support of U.S. policy in Vietnam was expressed in a recent statement by Andy Borg—present commander in chief of the VFW—when he said:

Everyone is entitled to express his own opinion—but we deplore the spectacle of ill-informed and irresponsible persons pro-claiming the Communist line against our Government.

"The so-called student demonstrators are stupidly playing the role of dupes for the

"Certainly they are not mature loyal American thinkers."

Recently Commander in Chief Borg re turned from a visit with our troops in

He declared that the American fighting men—carrying on the battle in that little country—are magnificent in their spirit.

He said they are dedicated to the cause-and waging an effective war against the

and waging an effective war against the Communist enemies.

While in Vietnam he told the American servicemen there that the overwhelming majority of the American people are solidly in support of them—and of the cause for which they are battling.

What Andy Borg said to our men in Viet-nam brings us right back to the spirit of this fredom rally.

It is unfortunate that today we have beatniks and other critics who demonstrate against our Government's anti-Communist

We also have the draft card burners, and the misguided college professors, and stu-dents preaching what literally has been termed "insurrection against our Govern-

The veterans of this country have fought

wars in defense of the right of free speech

and law and order.

They join the wast majority of the American people in condemning the handful of misguided Americans who preach civil dis-obedience which borders on treason.

Those of us who are veterans have been trying for years to cultivate and maintain a deep respect for American ideals—as exem-plified by the flag of our country—and de-fended by the blood of American patriots. That is why we veterans join other red-blooded Americans in Americanism pro-

plooded Americans in Americanism programs—such as this freedom rally—in a counterattack to the anti-American demonstrations that are looked upon with scorn by every right-thinking citizen who treasures his American citizenship.

A young soldier in Vietnam recently wrote

a long letter to his parents about these dem-onstrations, and I should like to quote a few sentences. He said:

"I'm really confused. It's my generation that's causing the trouble, and I don't understand them. Yet I think maybe it could be the little things. What has become of the Fourth of July parade and Veteran's Day parade and celebration?"

My answer to this young soldier is that he

is not alone in his confusion.

The great majority of American citizens are likewise confused and ashamed of the brazen conduct of the beatnik-peacenik draft card burners.

The spectacle of pickets and sitdown demonstrations, in and in front of the White House and in Government departments in Washington, are causing the American peo-

vashington, are cataling the American poo-ple to realize that the American concept of law and order is being replaced by some-thing allen, strange, and threatening. Recently former President Dwight D. Eisenhower expressed concern about the dan-gerous doctrine that if you don't like a law, you don't have to obey it.

An overwhelming majority of the American people concur in former President Eisen-hower's denunciation of the doctrine.

This doctrine of civil disobedience has been described as having been "perpetrated by a school of rebellion with a curriculum of chaos and a swelling student body crying 'Revolution.'

It is heartening to know that in the past several months, all over America red-blooded Americans have banded together as we have tonight, in heeding the advice of former President Eisenhower when he said that someone should "start a crusade to win re-spect for law and order."

These countless demonstrations for Americanism that have been and are being held across the Nation are a fitting answer to those who preach civil disobedience and contempt for law and order.

In addition, these programs proclaim to the world that the overwhelming majority of the American people are behind our fighting

Yes, these programs and this evening's freedom rally, are an answer to the ranting and raving bearded radicals, and long-haired social rebels who do not speak for the Amer-ican people, but instead have earned their

As I recall the young soldier's letter to his parents and the depth of his confusion over the conduct of his generation, there is en-couragement in the fact that the great majority of young Americans, given the chance, make excellent account of themselves in peace and in war.

To this young soldier I can only reply that these beatnik-peacenik demonstrations are to be regretted.

Yet, by awakening America, they recall to mind the words of Edmund Burke when he

"The most wonderful things are brought about in many instances by the most contemptible instruments."

### January 18, 1966

### Health Care Extended in Pennsylvania

EXTENSION OF REMARKS

### HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 18, 1966

Mr. SCOTT. Mr. President, last year under Public Law 89-97, the Social Security Amendments of 1965, Congress added a new title XIX to the Social Security Act providing an improved and more effective Kerr-Mills medical assistance program for the aged and extending its provisions to additional needy persons of other age groups. States were given 5 years to apply for participation in this beneficial new Federal-State grant program.

I am pleased to report that Pennsylvania's Scranton administration promptly applied for such participation and has sponsored a hospital care plan implementing the program in the Commonwealth. Credit for Pennsylvania's prompt action must go to Governor Scranton and his able and imaginative secretary of public welfare, Arlin M. Adams.

The U.S. Commissioner of Welfare and the Pennsylvania Council of Industrial Organizations, composed of former CIO unions, have complimented that Scranton administration for quickly taking advantage of this new expanded Kerr-Mills program. I ask unanimous consent that two news articles reporting these compliments be printed in the Appendix of the Recond.

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Patriot, Harrisburg (Pa.), Jan. 5, 1966]

Jan. 5, 1966] U.S. OFFICIAL LAUDS STATE MEDICAL CARE

Washington.—The U.S. Commissioner of Welfare yesterday complimented Pennsylvania for its speedy action in putting into effect on January 1 a new medical-aid program for needy persons.

Dr. Ellen Winston, the Commissioner said:
The Pennsylvania Department of Welfare
is to be commended for its prompt action in
bringing to the people of Pennsylvania the
benefits of the new federally aided medical
assistance program which was authorized
with the 1965 amendments to the Social Security Act.

"This paves the way for making highquality health and medical cars available to persons of all ages who could not otherwise afford it. The measure should do much to reduce the social and economic problems which are so often the end result of neglected health problems."

A Health, Education, and Welfare Department spokesman noted that the Pennsylvania program stems from the program of medical care for the elderly enacted by Congress last year. Included in the Federal program, the spokesman said, is provision for all to State programs which help needy persons of all ages.

Under the Federal act, the individual States must take action by 1970 to be eligible for the Federal aid. A few States are expected to act speedily but some may not be in a position to act until the later years of this decade, the spokemman said.

[From the Philadelphia (Pa.) Evening Bulletin, Jan. 6, 1966]

CIO Unions Praise Scranton for Sponsoring Pennsycare

(By Douglas Bedell)

Former CIO unions here last night commended Governor Scranton for sponsoring the Pennsycare hospital care plan that became effective last Saturday.

Delegates to the Philadelphia Council of Industrial Organizations said it was the first time they could recall that a labor group had applauded the Republican Governor.

"It's a far cry from the old Republican
Party of Pennsylvania when it used to operate the poorhouses and the poor boards,"
said Joseph T. Kelley, president of the PCIO.
A statement adopted at the council's

A statement adopted at the council's monthly meting at Textile Workers Mall, 4th Street and Lehigh Avenue, said the law will remove economic burdens from "thousands of people in lower and middle income groups" who have been putting off surgery and other forms of hospital care.

"Recognizing the fact that the bill as we understand it gives coverage to millions in the State who heretofore had no coverage, and to many of our people," the CIO unions said, "we are supporting the Scranton Pennsycare bill."

The new law provides that the State will pay up to \$25 per day for the hospital care of more than 2 million Pennsylvanians who have low incomes, are temporarily in difficult straits, or who run up unusually high medical bills.

Kelley said the endorsement of Scranton's plan "shows our bipartisan nature." The statement was passed unanimously by the 40 delegates present.

Kelley next lectured the council on the need to "stop the bickering" in the selection by candidates for political office. One way to do this, he said, is to put office-

One way to do this, he said, is to put officeseekers to the test of blunt questioning. He said CIO leaders plan to call in officials of the city Democratic and Republican committees and ask what they can do to get a number of labor-backed bills through the Republican-controlled State senate.

While noting that the notion is against AFI.-CIO policy, Kelley said it might be time for local unions to think about forming a labor party here.

"If we in labor were solid, with the parties split as they are," Kelley said, "I'm sure we could name the majority of the candidates."

Both CIO and AFL union blocks here were embarrassed by the victory of Arien Specter for district attorney over James C. Crumlish, Jr., the Democratic incumbent who had labor's official backing.

#### Firm Action Is Needed

EXTENSION OF REMARKS

#### HON, ROLLAND REDLIN

OF MORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1966

Mr. REDLIN. Mr. Speaker, the course of the Nation's agricultural policy is of primary interest to my State, the great agricultural State of North Dakota. Following the signing of the Food and Agricultural Act of 1965, the Minot, N. Dak., Daily News carried a perceptive commentary on this subject. I request unanimous consent that this editorial, carried

in the November 8, 1965, edition be printed at this point in the Appendix of the RECORD:

[From the Minot (N. Dak.) Daily News, Nov. 8, 1965]

FIRM ACTION IS NEEDED

In his last-minute signing of the new farm bill, President Johnson said he sees the need for a penetrating and long-term appraisal of the farmer's place in our increasingly urbanized society.

At the least it can be said there will be time for a relatively long look this time, because the new law will be in effect 4 years.

This can be called a fortunate fact, unless it turns out that the effect of the law will be a continuation of the virtually uninterrupted deterioration of the small independent farmer's economic position. In that case, 4 years might be too late for some.

The new bill has, we understand, some rather good features. Yet we remember that in the past 20 years the best farm bills that the Congress managed to enact have seemed to have all too little effect on the trend toward bigness. That is to say, the big farms have continued to get bigger, while the smaller farms have felt the pinch and many have gone out of existence.

Nobody in North Dakota, as far as we know, falls to recognize that the average farmer has to have price support and income stability. And as long as it may continue necessary to restrict his production of major crops, with wheat allotments that are very restricted, compensating payments of various kinds, call it subsidy if you will, must be at a high level. Unfortunately the programs we have had, and it remains to be seen whether this one is any different, have paid off in favor of the large operator to a greater degree than they have benefited the small independent farmer. That this is true hardly needs more proof than the evidence that the population of the countryside has declined.

Time and time again attempts have been made to reverse this trend, and to reverse the ty the simple device of putting a top limit on the amount of the payments that any one farmer could collect from the Government. Somehow Congress has never been willing to take that step, and such a limit was kept out of this law.

Yet there is much to be said in favor of a ceiling on farm subsidy to individuals. If one were in effect, it is safe to say the big farmers would no longer find it profitable to gobble up land, and the little farmers would stand a better chance of rounding out really economic units. It would be easier for people who want to farm, and who like farming as a way of life, to establish themselves on comparatively modest acrease.

We share the President's concern that our deteriorating cities, urban sprawls, and city ghettoe need attention. The present condition of life in the heavily populated portions of the Nation hardly can be reconciled with the conception of "the good society." Still, even a modern urbanized society hardly can be conceived as something separate from the open country, the rural and semirual hinteriand, and the food producing land. Let our great cities and their suburbs bustle with productive activity. Let them be clean and safe for the millions who live and work there in tolerant appreciation of the benefits of modern abundance for all. Let alums and tacky, delinquent neighborhoods be abolished as far as possible. When city dwellers get the centrifugal urge for recreation, and go forth to view the rest of America, will they want to find the hinterlands desolate? Will it ever cease to be important to America to have a happy, peaceful, presperous and well populated countryside?

Whether the President's new National Advisory Committee on Food and Fiber gives any attention to this aspect of the national scene—that is to say, of the value of a well populated prosperous countryside as part of the social economy of the Great Society—remains to be determined. The Commission remains to be determined. is heavily loaded with professors and economists and merchandisers, as if its focus of attention might be on exports and foreign These are matters that need to be considered, of course, if farm policy is to be geared to growth, as the President's statement said. We would feel better about it if there were on that Commission one bona fide producer who believes in farming as a way of life and who wants to see healthy, happy people making a good living on the land

Having lived most of our lives in a State where Bill Langer's embargoes and decrees as Governor are not forgotten, we can't help wondering what would happen if the man of action in Washington, Lyndon Johnson, took this moment to issue an executive order to put that ceiling on payments to individual The Congress having omitted from the new law any really stringent brakes on the race toward big agriculture, it might not be an unbearable step to have the President apply the brake by an interim decree, until the new commission makes its long-range appraisal, possibly 18 months hence.

The News is opposed to the plantation type farm operation, despite predictions of the Federal Reserve people.

While we have opposed the idea of the graduated land tax, as a last resort it is possible that we will be obliged to take a second look at this type of machinery to get North Dakota farming back where it should be.

### Secretary of Health, Education, and Welfare John W. Gardner Speaks on the Improvement of Government Service

EXTENSION OF REMARKS

### HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Tuesday, January 18, 1966

Mr. YARBOROUGH. Mr. President, at a U.S. Civil Service Commission anniversary ceremony last Friday, January 14. 1966, Secretary of Health, Education, and Welfare John W. Gardner delivered one of the finest speeches I have ever heard concerning the renewal of Federal service. This ceremony was to commemorate the 83d anniversary of the rigning of the Civil Service Act by

President Chester A. Arthur.
The understanding which Secretary Gardner has of our present civil service system is apparent, as well as his interest in improving it so that we may have an energetic, stimulated, growing Federal

service system.

Because of the excellent recommendations which Secretary Gardner makes in his speech, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

RENEWAL OF THE GOVERNMENT SERVICE 1 BY JOHN W. GARDNER, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

We are here to commemorate an important beginning and to honor a fine tradition. The Civil Service is one of our noblest social institutions and I am proud to have a part in this tribute to it.

But I have learned from long experience that it is not really necessary to congratulate institutions. They have built-in mechanisms for self-congratulation that are marvelously effective. Having participated intimately in the life of Government agencies, the military services, business firms and universities, I feel that I can make that generalization on the basis of fairly comprehensive experience.

So I am going to honor the Civil Service by talking about the goals ahead rather than the laurels already won.

First let me clear away some general ques tions. Is the Federal Government bureau-cratic? It is indeed. But so are business firms, colleges and universities, the military services. State and local governments, and philanthropic organizations.

Is the Federal Government in danger of going to seed? It is in the gravest danger. But so are all other organizations large and

small

I think most of you know my views on the decay and renewal of organizations.

Briefly, I believe that most human orga nizations that fail in their missions or fall short of their goals do so not because of stupidity, not because of faulty doctrines, but because of the internal decay and rigidification to which they are all subject. get stiff in the joints. They get in a rut. They go to seed.

know that many of you are familiar with my diagnosis of what brings that condition about. So I am going to limit myself today to a few brief comments on what I regard as the most important single line of therapy for moribund organizations.
(Please don't be alarmed by the word "moribund." I believe that in all large-scale organizations at all time the processes of decay are at work. If they are lucky, processes of rebirth and renewal are also at work.)

Organizations go to seed when the people in them go to seed. And they awaken when the people awaken. The renewal of organizations and societies starts with people. And since the first and last business of the Civil Service is people, this seems an appropriate occasion to examine the problem

Specifically. I want to talk about what the Federal Government does to develop talentafter recruitment. Recruitment itself is worthy of discussion, and there is a vastly better job to be done on that front, but that is not the problem that interests me at the moment.

As a society, we are pursuing energetically, almost feverishly, the identification and nur ture of gifted young people in our schools and colleges. In contrast, we are quite haphazard about the provisions for their continuing growth after formal education ceases That is true in every segment of our national life. Almost all organizations in our society today are competing desperately to get their share of the flow of talent. But few are developing that talent properly after they get it.

The still untapped source of human vitality, the real unmined resorvoir of talent is in those people already recruited and thereafter neglected.

The quickest and most effective road to renewal of the Pederal service is the mining of that untapped resource. It is not only a means of tapping unused talent and opening up new stores of vitality, it is a solution to the old, old problem of developing a Government service that is responsive—responsi-bly responsive—to changing top leadership. Vital people, using their gifts to the full, are naturally responsive. People who have naturally responsive. People who have stopped growing, defeated people, people who no longer have confidence in the use of their own powers, build bastions of procedure between themselves and any vital lead-

ership.

Now how does one go about renewing the people in the Government service—or any-where else for that matter? There are many sources of renewal, of course. One is the uninvited crisis. Wars and depressions bring a certain amount of renewal, though the price is far higher than sensible people are

willing to pay.

Another source is challenge and competi-tion, and in this respect our Constitution has built-in provisions for the renewal of elected officials. But appointive officials, not facing the challenge of an election, are

denied that stimulus.

Another source of renewal is rapid growth. Very rapid expansion of an agency is apt to have a highly stimulating effect upon the

people within it.

Still another source of renewal is the sheer vitality of top leadership. I think, for example, that President Johnson has been as vigorous, if not cyclonic, a force for renewal as we have seen in this Government

But what about the more mundane things that good government administrators can do to renew their organizations? What about the good personnel practices and procedures that will insure renewal? I'm going to give you an oversimplified answer, but an oversimplification based on having observed the personnel field with a professional eye for 30

I am going to assert that the best means of inducing growth, developing talent, and insuring continued vitality in the individual insuring continued vitality in the individual is change. The change may take many forms—a change of troubles, a change of assignment, promotion, living in different parts of the country, moving in and out of Government, sampling the different worlds that make up this society, serving abroad, serving in an organization that is itself rapidly changing.

It follows, I believe, that the single condition that would contribute most to greater vitality in the Government service today is flexibility of reassignment. In his state of the Union message, President Johnson pledged bold leadership to bring this about.

The size of the Federal establishment and the diversity of activities it encompasses offer unexampled opportunities for imaginative reassignment. With such an array of pos-sibilities it is unforgivable that any reasonably competent Government servant should suffer in a job that does not suit his talents.

It is unforgivable that any Government servant should lack the stimulus to personal growth that comes with change. The in-dividual should be allowed to move and the agency should be allowed to move him without damage to his status or his feelings.

Free, frequent, and fluid movement among all the agencies of Government should be the accepted rule. The ambitious or merely rest-less young person who wants to sample sevless young person who wants to sample several different lines of work should not be punished or penalized. Restlessness and vitality go together. And especially promising young people should be systematically reassigned through several agencies to insure that gonzeth.

As delivered at the U.S. Civil Service Commission anniversary ceremony, departmental auditorium, Washington, D.C., Jan. 14, 1966, 10 a.m.

Beyond that there should be a great increase in the planned movement of individuals between the Federal Government and the other worlds that make up American life—the world of business, the military, the universities, the labor unions, agriculture, State and local governments. I have moved in several of these worlds, and I am continually shocked at their mutual ignorance of one another. That ignorance breeds both complacency and paranols. Each of these worlds imagines that it is uniquely close to the moral center of American life, and believes that the other worlds aren't really quite to be trusted with the American future.

Of all these worlds, the Government service has the least excuse for being provincial. It should have the capacity to understand all of the other segments of society. Without that understanding it will not be able to serve them effectively.

I would also favor an overseas assignment early in the career of those young Government people who seek to rise to the top. We have gotten past the day when only those individuals who have an explicit "international" interest should think of going overseas. The work of Government at home and abroad needs the breadth of perspective acquired by experience overseas. Such experience is valuable any time during one's career, but the earlier it comes the better.

All the processes of refreshment I've mentioned are particularly needed in the case of professional, scientific, technical, and scholarly people. Government needs such people more and more. But it will neither get them nor keep them if it doesn't provide the opportunities for further growth that they value so highly.

There is no excuse for Government to lose out in the competition for talent. It has a builtin advantage over every other employer. The cynics would deny this but the truth is that talented people are attracted to Government because it gives them an opportunity to render service to the entire Nation. They come with the highest motives. They leave when their purpose is thwarted or when they begin to feel trapped. Government cannot afford to be inhospitable to these people.

The administration of the affairs of this Nation are complex and dynamic. They are going to become increasingly so. The Congress has just enacted a staggering amount of legislation which must now be translated into action. It would be hard to overstate either the magnitude of the tasks ahead or their importance to the Nation.

President Johnson made this abundantly clear in his state of the Union message on Wednesday.

Now, let me ask these questions: Is the Federal service capable of meeting this challenge? Of course, but to do so it must take some significant steps to renew its spirit and its people.

Is renewal compatible with the Federal merit system? It most certainly is. The merit system, now in its 83d year, represents a great advance in the personnel practices of Government. We are not about to return to smaller system.

But tenure was not designed to trap people, to make them inert. It was designed to free them from the capriclousness of politics. They need both the protection of a

career system and opportunities for growth.
We can preserve all the great traditions
of the system and still maintain the vitality
that is so essential in this rapidly changing
and infinitely challenging moment of his-

Recognizing that the very size and nature of the system make it particularly susceptfile to stagnation, we can make special efforts to build in arrangements for renewal.

We can turn the concept of tenure into a positive asset rather than a deterrent to the full use of our talent.

The momentum generated by the President and the flood of legislation enacted by the Congress have given us unparalleled opportunities to creats new patterns of work and to bring new strength and vitality to the career service.

I am optimistic that we will do so, and that optimism is based in no small measure on the fact that one of the boldest innovators in Government today, Mr. Macy, is also Chairman of this Commission.

John Macy introduced this session with some kind remarks about me and I want to end it with a tribute to him. I think he is a superb example of the best that the Federal service can produce, and I am proud to have shared this platform with him.

### The HUD Headache

EXTENSION OF REMARKS

### HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1966

Mr. YOUNGER. Mr. Speaker, the Washington Post of January 14 contained an article which I am sure will be of interest to our colleagues. The column "The HUD Headache" by Rowland Evans and Robert Novak brings to the fore problems in connection with our new Cabinet-level Department. The article follows:

#### THE HUD HEADACHE

(By Rowland Evans and Robert Novak)

Just 2 months old, the new Cabinet-level Department of Housing and Urban Development (HUD) is in danger of bureaucratic strangulation in its crib.

President Johnson's inability to find a toplevel national figure to be secretary of HUD is a symptom of HUD's malady, not the cause. Bureaucratic caution and feuding has so constricted HUD's scope that there was no waiting list of applicants to become Secretary or, indeed, to take vital middle-level jobs.

The HUD headache is a severe example of President Johnson's problem in transforming Great Society legislation into Great Society programs. This problem, created when the administration ramrodded bill after bill through Congress in 1965, now is coming home to haunt the White House.

Actually, the HUD problem goes back to the Kennedy administration. Like many other New Frontier schemes, the 1962 proposal for a new Department of Urban Affairs was novel in approach but fuzzy in detail. It was conceived as a glorified version of the Federal Housing Agency, which eventually would cover many city problems.

After the Kennedy plan was decisively rejected by Congress in 1962, the scheme reappeared in 1965 in new form. Under the cautious hand of the Budget Bureau, the "Department of Urban Affairs" became the "Department of Housing and Urban Development"—its function limited to the city's "physical" problems.

Prominent Democratic Senators who backed the original plan were flabbergasted. Why confer Cabinet status on the existing housing agency when what is needed is a department to coordinate all city problems—including poverty and civil rights?

This question was lost in the 1965 billpassing frenzy on Capitol Hill. Officials of the Budget Bureau and the housing agency cautioned Senators not to endanger passage of the bill by raising new questions (though the bill finally passed in the Senate by a 2-to-1 edge).

But a Presidential task force last month

But a Presidential task force last month took exactly the same position as the critical Senators: HUD definitely should be more than a glorified housing agency. The stillsecret report of the task force recommended that urban aspects of the much-harrassed Community Action antipoverty program be transferred to HUD from Sargent Shriver's Office of Economic Opportunity (OEO).

An overwhelming majority of the task force agreed. Contrary to published reports, its chairman—Robert Wood, a political scientist from MIT—was with the majority. Yet the President turned down the recommendation.

Why? Because the task force became en-

Why? Because the task force became entangled in bureaucratic politics. One proponent of broadening HUD's scope was AFL-CIO Official Jack Conway, recently resigned Deputy Director of OEO who had clashed with Shriver. Shriver's allies leaked word that Conway and the task force were trying to undercut the poverty program. Thus, acceptance of the task force report would be a vote of no confidence in Shriver. The President was not prepared to do this,

Similarly, many task force members agreed with Vice President Humphers's private view that the Community Relations Service to mediate racial disputes should be in HUD (instead of the Justice Department). But this decision already had been made by the White House against the Humphers position, and the task force did not consider the question.

All this put the President in a difficult position. He wanted a prominent national figure to be secretary of HUD. But by limiting HUD's functions to housing, he severly limited possibilities for the tob.

Consider Chicago Railroad Magnate Ben Heineman, wanted by Mr. Johnson for the job. Heineman was a member of the task force majority supporting an expanded role for HUD. But now, with his recommendation rejected, he scarcely hungered to come here.

Accordingly, the search for a Secretary returned to Dr. Robert Weaver, the Federal housing chief. The President is not high on Weaver. But political advisers told him that so long as he can't seem to get a big name, why not piek Weaver (a Negro, whose rejection would anger civil rights groups)? The President agreed, and named Weaver yesterday.

In prospect, then, is just a housing agency led by just a housing chief. That doesn't set pulses throbbing, as the first new Cabinet Department in a dozen years struggles to get out of its cradle.

### Prime Minister Shastri

EXTENSION OF REMARKS

### HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. WILLIAM D. FORD. Mr. Speaker, on January 10, 1966, death suddenly claimed a noble and dedicated statesman and leader of his people, Lal Bahadur Shastri, Prime Minister of India.

He was handed the reins of state in India under difficult and trying circumstances. There is no doubt as to his effectiveness and capacity as leader during his brief tenure as Prime Minister.

Beset by internal and international difficulties which might have caused a lesser man to waver, Mr. Shastri met each challenge with courage, conviction, and strength.

His wisdom and compassion in dealing with other nations was well known.

Death abruptly halted him in the pursuit of two goals he seemed to hold above all others: the quest for peace and the internal progress of India. The agreement he signed along with President Ayub Khan of Pakistan a few hours before his tragic death was his final act of service to his beloved country.

The burden of India's hundreds of millions is now on the shoulders of acting Prime Minister Gulzzarilal Nanda. It is my sincere hope and belief that the people of India will unite behind him and assist him in providing Indians with the good life for which Mr. Shastri worked so hard.

Let all of us who are in positions of leadership pledge ourselves to bring to fruition the world without war to which Mr. Shastri's life was so firmly committed.

He rendered faithful and honorable service to India and to the world. His counsel and inspiration have left an aching void in the hall of the world's statesmen. I take this opportunity to join the many persons for whom his passing was a grievous and shocking blow.

### Florida Applauds Dr. Robert C. Wood, Under Secretary, Department of Housing and Urban Development

EXTENSION OF REMARKS

### HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. BENNETT. Mr. Speaker, all of Florida, and especially Jacksonville, Fla., gateway to the Sunshine State, applauds President Johnson's appointment of Dr. Robert C. Wood as Under Secretary of the new Department of Housing and Urban Development.

Dr. Wood, 42, head of the political science department at the Massachusetts Institute of Technology, came to Jacksonville with his family when he was 18 months old. He attended the Duval County public schools and then entered the infantry in World War II. Since that time he has distinguished himself as one of the outstanding planners and thinkers in the urban development field.

I congratulate President Johnson for his appointment of Dr. Wood, and wish this brilliant young man from Jackson-ville, Fla., great success in his difficult and challenging position. I include in the Congressional Record two articles from the Florida Times-Union, published in Jacksonville, Fla.

EXECUTIVE COMMAND: WHITE HOUSE CALL PUT WOOD ON WAY TO POST

(By Joe Sigler)

The telephone rang in Robert C. Wood's office at Cambridge, Mass., and the voice on the other end directed, "Get yourself and your wife and children on a plane for Washington."

It amounted to an Executive command, as the caller was Bill D. Moyer, press secretary to President Johnson.

Wood, a former Jacksonville man and chairman of the department of political science at Massachusetts Institute of Technology in Cambridge, said the telephone call Thursday morning was the first positive indication to him that he was to be named No. 2 man in the new Department of Housing and Urban Development.

#### ON TABLE FORCE

Wood, however, may have been modest. As chairman of the President's task force charged with drawing up a still-secret program of organization for the new Cabinet Department, his knowledge and insight made him a logical candidate for Under Secretary—a post for which President Johnson nominated him during a White House ceremony Thursday night.

The nomination of Wood and Robert Weaver, named to head the department, are expected to be confirmed by the Senate next week.

The Department of Housing and Urban Development will be responsible in part for helping local governments face and solve their mounting problems.

Wood, a political scientist with four college degrees, told the Times-Union that his first interest in urban affairs started in Florida, when he was associate director of the Legislative Reference Bureau in Tallahassee in the late 1940s.

"When I first took the job in Tallahassee,"
Wood said, "I was assigned to the minimum
foundation program," which involves State
support of local school systems.

With his background in urban school districts here, Wood next went to Washington for 2 years with the Bureau of the Budget. There, also, he was involved in urban programs.

After he had joined the political science faculty at MIT, President Kennedy named him to serve on his task force on urban problems, and later President Johnson appointed him to the advisory board of the National Capital Transportation Agency.

In one of two books he has authored, Wood has urged unification of government serving a large metropolitan area, but he said last night he did not believe that recommendation is specifically applicable to Duval County and Jacksonville.

Wood, who moved to Jacksonville before he was 2 and went through the public schools here, said, "Tye followed some of your development there," and "the problem of conflicting units of government is not so serious in the South, with its strong tradition of county governments and large boundaries."

#### CITES N.Y. PROBLEMS

This, he said, is in contrast with the New York City area, for instance, which is caught up in the complicated network of 1,400 separate governments.

More important in Southern cities, he said, is recognizing that "local government is an active agent in economic development." Local government has to be active, he said, because it is providing "a bundle of services—investment in schools, housing and health—" that attract industry and promote the community's economic growth.

Wood said he believes that one of the primary roles of the Department of Housing and Urban Affairs would be lending assistance to cities to meet this economic challenge.

Wood, who volunteered that he is a former Times-Union carrier, said he last visited here in March with his brother, Dr. Jonathan H. Wood.

He said he will not step down as political science department head at MIT, but instead will take a leave of absence.

He and his wife Margaret, a Bostonian whom he met in Washington when he worked for the Bureau of the Budget, and their three children—Frances 10; Margaret, 7; and Frank Randolph, 5—will move to Washington within a few weeks.

During his work while heading the organizational committee for the new department, he said. "Twe spent every weekend for the past 3 months in Washington—at least that's what my wife tells me."

#### WOOD TOOK ACADEMIC PATH TO JOB (By Joe Sigler)

A product of the Duval County public school system, who early in life struck up a love affair with political science, heard himself nominated last night by President Johnson as Under Secretary in the newly created Department of Housing and Urban Development.

Dr. Robert C. Wood, 42, the nominee in the new Cabinet Department, moved to Jacksonville with his parents and two older brothers from St. Louis, Mo., when he was 18 months old

One of the brothers, Dr. Jonathan H. Wood, a Jacksonville surgeon, was waiting at about midnight for his brother to return from Washington to Boston so he could call and offer congratulations. Wood is head of the Department of Political Science at the Massachusetts Institute of Technology in Cambridge, Mass., near Boston.

Another brother, F. B. Wood, is head of the Department of Astronomy at the University of Pennsylvania in Philadelphia. Their father, T. Frank Wood, lives in Altamonte Springs.

Wood attended Ortega Elementary School, where his mother, the late Mrs. Mary Bradshaw Wood, taught for many years, John Gorrie Junior High School and Robert E. Lee High School, where he was graduated in 1940.

On a scholarship—supplemented by money he earned waiting tables—Wood entered Princeton University, but left before graduation to enlist in the infantry in World War II. After the war, he returned to Princeton and earned his bachelor's degree in political science.

Wood received a fellowship to Harvard, where he earned two master's degrees and his doctorate in political science. "He aimed all along at political science,"

"He aimed all along at political science,"
Wood's Jacksonville brother said, "and he
thought for a time of entering politics." But
instead, he followed a different route to high
Government office.

Wood served for 2 years with the Federal Bureau of the Budget, worked for a couple of summers for the Legislative Reference Bureau in Tallahassee and later joined the faculty at Harvard.

He served at Harvard until going to MIT, where he was elevated to department head in political science a year ago.

#### TAPPED BY KENNEDY

His knowledge of urban affairs resulted in his being tapped by President Kennedy to serve on his task force on urban affairs. President Johnson appointed him to the advisory board of the National Capital Transportation Agency.

Wood submitted to Johnson a still-secret report as chairman of the President's task force on the organization of the Department of Housing and Urban Development the Department to which Johnson yesterday nominated him as Under Secretary.

Along the way, Wood found time to write, two books, "Suburbla: Its People and Their Politics," and the more recent "1,400 Governments," a study of the political economy of the sprawling New York City political region.

Wood also has been sent on several missions to Latin America and the Far East as an adviser on urban affairs.

In an interview with Jayne Brumley, a former Times-Union staff writer, now with Newsweek magazine, Wood commented on today's big cities—a problem he will tackle increasingly in his new Federal assignment, "The American city," Wood said, "is not about to fly apart or explode. It works as an economic unit. The issue is not whether

about to fly apart or explode. It works as an economic unit. The issue is not whether it's spinning out of control, but whether we can make it more attractive and more liveable."

Mrs. Brumley's article on Wood appears in the January 17 issue of Newsweek.

### Mayor James E. Cummings Dies

EXTENSION OF REMARKS

### HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES
Thursday, January 13, 1966

Mr. MATHIAS. Mr. Speaker, all of Maryland was saddened by the death of Mayor James E. Cummings, of Brunswick, on January 3. Mayor Cummings was a man of extraordinary energy and zeal, unlimited enthusiasms and untiring dedication to the city of Brunswick and the people whom he served. Before entering public office as a councilman in 1952, he compiled a distinguished record during almost half a century in railroading, and was sought for counsel on railroad matters even after his full retirement from that field in 1959. During his 12 years as mayor of Brunswick, from 1955 until his death, he led the city through a period of great growth, developing municipal facilities and, more important, developing a new sense of community pride and faith in the future. This pride and hope, carried in the hearts of his countless friends, will be his most

I wish to bring to the attention of the Congress two tributes to James E. Cummings from the Brunswick Blade-Times, showing the great impact this fine gentleman had upon his community and his friends:

enduring memorial.

[Prom the Brunswick Blade-Times, Jan. 13, 1966]

MAYOR JAS. CUMMINGS DIES (By Jim Bryan)

While we all realize that there is an end to life on earth even though few of us care to face the fact, and in the case of our mayor there were indications time was running out, nevertheless when the word got out about 1 p.m. on Monday, January 3, that James E. Cummings had died, it was almost impossible to grasp the fact.

The reason is simple. He was well loved, and with our human frailities, we have yet to learn to accept death of those we love.

Without a doubt here was a man whom can be truly called "Mr. Brunswick" and we have doubt whether there will ever be another to come close to this title.

Without a doubt he was the most distinguished looking and most popular man in this community. It is gratifying to know that many called him "Brunswick's greatest mayor" in life, because there is no doubt that he was.

Mr. Cummings was born in Weverton. His father was a prominent blacksmith. At an early age, like so many of his cronice, he took up railroading and when he retired in 1959, he had more than 50 years to his credit.

Other than a brief time working in Philadelphia, most of his railroading career was right here in Brunswick. For more than half of his railroading years, he was a terminal trainmaster. Even after his retirement, his advice was often sought in railroad matters by many who started under him and worked their way on up the ladder.

worked their way on up the ladder.
His political career began in 1952 when he ran for councilman from the second ward and was elected in a fairly close vote. In 1954 he ran for mayor in what is recalled as Brunswick's most hotly contested election. He won by a narrow margin of 28 votes.

In succeeding elections, he won all by onesided margins.

Mr. Cummings was known as "the man who took Brunswick out of the mud" as he was responsible for most of the town's paved

streets.

While he did not have any trouble winning elections, Mr. Cummings had his "downs"

elections, Mr. Cummings had his "downs" as well as his "ups." Most of his "downs" came from the fact it was difficult for him to say no to those who sought favors.

He loved people. He loved action. He loved crowds. Despite his age, no one probleved crowds.

loved crowds. Despite his age, no one probably enjoyed bowling in the mixed league anymore than he. The same holds true for his many attendances at local dances and all other activities.

Brunswick's youth baseball programs were close to his heart. When the Little Leaguers and Babe Ruthians were playing, it was a safe bet he would be present.

He loved Brunswick and was proud of Brunswick. He loved out-of-town visitors, whether they were kids or adults, and reveled in being able to show off the community.

When the Babe Ruth All Stars went to Norfolk, Va., Hornell, N.Y., and Bridgeton, N.J., he was present. He didn't miss an inning of the games, but when the games weren't on, he was out looking, comparing, setting new thoughts and meeting people.

getting new thoughts and meeting people.

There are very few people in Brunswick who do not have fond memories of incidents and relationships with him.

We will never forget what one man once advised his friends when commenting on life: "Do your job so well that you will leave permanent tracks."

Mayor James E. Cummings has left many,

many, many tracks.

Mayor Cummings celebrated his 75th birth-

day last October.

He leaves his wife, Mrs. Bessye Long Cummings, four daughters, Mrs. Mary Kathleen Crawford and Mrs. Roms Hebb, both of Brunswick; Miss Kay Cummings of Baltimore; and Mrs. Dorothy Bennett of Brunswick; two brothers, John Cummings of Frederick and Mahoney Cummings of Harpers Ferry; two sisters, Mrs. Mary Lou Stephenson and Mrs. Martha Stewart, both of Harpers Ferry, and seven grandchildren.

He was a member of the Brunswick Lions Club, the Knights of Pythias, Fraternal Order of Eagles and Loyal Order of Moose, all of Brunswick. He was also a member of Steadman-Keenan Poet No. 98, American Legion, an honorary member of the Brunswick Fire Company and a member of the Brunswick Ambulance Company.

He served for many years as president of the Brunswick Community Chest, was a member of the B. & O. Veterans Association, the Isaak Walton League, Maryland Track and Grace Episcopal Church.

Funeral services were held Thursday, January 6, from the Grace Episcopal Church with Pather A. D. Salmon and Rev. Ralph E. Miller officiating. Burlal was in St. Marks Cemetery in Petersville.

A requiem eucharist was celebrated at 5 a.m. the same day as the funeral.

[Prom the Brunswick Blade-Times, Jan. 13, 1966]

THE MARK OF A MAYOR

(By Emkay)

The qualitative schievements of our late mayor will be a permanent monument to his energy and zeal as an administrator. His quantitative accomplishments attest to his ability to secure cooperation from sources not open to most men. No administration in our city's history can record comparable attainments of worthwhile civic projects that accrued during the past 12 years under Jim Cummings' determination and drive.

And there were many obstacles to overcome. A public official is either a Dr. Jekyll or a Mr. Hyde. His intimates and friends view his every act and deed with approval. On the other hand, there is always a group that looks with a jaundiced eye at ever and deed. No public figure would dare hope that he can please everyone. The ballots cast at an election pro and con prove the point. A mayor enters office under the critical gaze of the public. There is an implied challenge. How the challenge is met merit either public approval or disapproval. Then, there must always be the small hard core who will see no good in any personality in any situation at any time. These, together with those with personal dislike for whatever reason, can be dismissed. They are ever present and must be tolerated. Mayor Cummings met the challenge and the total of his accomplishments gives the challenge whomever is elected to succeed him.

We will miss for a long time the presence of the mayor. When he came to office he brought with him an abstract asset that cannot be measured in dollars and cents. It was never present before, and during his administration its value was enhanced. This asset is the respect the city's administration commands from the county government and the State government. As a consequence, the quality of our community is being recognized for what it is. Quite removed from the misquided and undeserved characterization that existed for years.

The mark of a major has been left by Mr. Cummings. It is indelibly inscribed in physical property and the civic pride of the community. His bereaved family can take solace in it. There exists today a community pride in our improved and additional streets, the ever expanding street lighting, the excellent school plants, athletic and playground facilities, the modern and adequate ambulance service and fire department, the efficient maintenance crews that maintain utility requirements and cleanliness on our streets.

The indelible mark of the mayor makes it implicit on the part of the community that it elect a successor not on the basis of sentimentality but on the basis of capability and civic mindedness. Unless this is done, the accomplishments of the past 12 years may deteriorate and the much needed civic projects already begun may languish for lack of leadership.

### Who Gets College Scholarships

EXTENSION OF REMARKS

### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. MULTER. Mr. Speaker, Sylvia Porter has written an excellent, concise, and to-the-point analysis of how to go about getting a college scholarship.

This often confusing area is made quite clear by Mrs. Porter and I commend her article to the attention of our colleagues:

#### WHO GETS COLLEGE SCHOLARSHIPS (By Sylvia Porter)

What does it take to get a college scholarship? How needy must a student's family be? What factors, in addition to academic standing, improve a student's chances for a schol-

arship today?

This year one-tenth of U.S. college students—about 500,000—are receiving more than \$200 million in scholarships to help finance their higher education. At a limited but growing number of colleges more than half of the student body is getting some type of financial assistance. Beginning next fall, another 140,000 needy students will go to college with the help of an additional \$58 million of Federal scholarships under the Higher Education Act of 1965.

Today college scholarships are multiplying as unprecedented numbers of students from middle- and lower-income families continue their education beyond high school. At the same time millions of American families in all but the highest income brackets are straining under the huge cost of sending their children to college.

#### COSTS SOAR

During the past three decades college costs have quintupled, and during the coming 10 years costs are slated to rise another 50 per-Clearly the competition for scholarships will become even more fierce than it is today.

Generally speaking, a high school student today must graduate with a least a B average and rank at least in the top half of his class simply to get into a good 4-year college. requirements are understandably tougher for scholarships. While a growing total of colleges will admit highly qualified students regardless of financial means and automatically extend scholarship aid if necessary, the tendency at these more affluent colleges also is to select strictly from the top 25 percent of high school classes and to demand at least a B-plus average.

But glittering grades are not the sole yardstick for college admission or for winning a Even without a superior acascholarship. Even without a superior academic record these other factors can help tremendously toward a scholarship: a student's outstanding personality, a demonstrated capacity for leadership, an unusual or special talent (say in music, art, sports, foreign

languages).

Special consideration is given too to candiwho have overcome a severe handicap

or misfortune during their lives.

How needy must the student's family be? "NEEDY" EXPLAINED

The gifted child of the very needy (in the \$3,000-\$4,000 or less annual income range) has the best chances for most scholarships. The new Federal scholarships are reserved exclusively for those who couldn't otherwise attend college.

But a rising sum of aid is also now avail-. able to students whose family income is as high as \$15,000 a year—if the family has other children to support at home or in college at the same time, if the family has other burdensome expenses, or if college costs are especially high at the institution the child wishes to attend.

For instance, a family with four children to support on a yearly income of \$5,000 is considered by today's colleges as in greater need—in terms of eligibility for a scholar-ship—than a family with one child and an income of \$3,000. Even the \$15,000-a-year family may be considered "needy" if there are five children to support and if the college charges \$2,000-\$3,000 or more a year.

While less needy students and their fami-lies are expected to contribute substantial shares of their earnings, savings and assets toward college costs, a family's total financial picture is now taken into account-and the amount the family is expected to pay is measured by what it can "reasonably afford." Today's student financial aid is designed to fill the gap between that sum and total college costs.

#### HOW COLLEGE COSTS AND FINANCIAL NEEDS ARE CALCULATED

Let's say your teenage son has superior academic qualifications that would put him in the running for a college scholarship. Let's also say that, while your family income is a relatively affluent \$10,000, you have three other children, your savings are next to zero and you can't see how you can squeeze an extra \$2,000 a year for your son's college education. Would a college consider you needy enough for your son to win a scholarship?

This is typical of the quandary facing many middle-income American families as record numbers of their children head into college. The answers are important to students and parents-because a college degree is becoming a minimum requirement for

many jobs

Scholarships are generally awarded to highly qualified, B-or-better students whose families have limited financial means. average scholarship is about \$400 a year, but it may range up to \$1,500 or more according to the individual student's need and the actual anticipated total college costs.

How are total costs and family need figured today?

Here are basic guidelines just published by the College Scholarship Service, a non-profit service of the college entrance examination board in Princeton which helps nearly 700 major institutions offering scholarship funds among students.

In calculating total college costs, the CSS includes not only tuition and fees, but also room, board, transportation, clothing, books,

spending money.

In calculating family need, it takes these major factors into account: Family income, number of other children to support, the breadwinner's age and retirement plans, unusual financial burdens such as other children in college at the same time, an expensive illness, whether the wife works, size of debts.

The CSS also weighs total family assets—cash savings, equity in the home, securities owned, etc.—and applies a share of this total to the amount a family can "reasonably atford" to contribute. This share, though, is comparatively small—less than 10 percent and assets up to \$7,000 are not counted. If the family head is over 55 years old, even

higher sums are disregarded.

The scholarship seeker himself is expected to contribute about 25 percent of his total

college costs. Typically, the student's contribution might include 20 percent of his accumulated savings each year that he is in college, about \$300 in summer earnings each year (including the year before he enters college), plus about \$200 in earnings from a part-time job

at school. Assuming your assets are limited and assuming you have no "unusal" financial bur-dens, here is what the CSS suggests you can afford to contribute annually toward one child's college expenses at various income levels and with various numbers of other

dependent children:

Number of other dependent children

3.4	None	One	Two	Three
Before-tax income:	\$540	\$330	\$160	(1)
\$5,000	1, 030	780	\$50	\$400
\$7,000	1, 570	1, 230	920	750
\$9,000	2, 170	1, 760	1,390	1, 140
\$11,000	2, 840	2, 360	1,930	1, 620
\$15,000	3, 590	3, 010	2,530	2, 170

1 No contribution.

These are just your suggested contribu-tions. They by no means bind any college to provide the balance of the costs. But they do give you a general indication of what financial efforts are expected today from the student and his family.

They also indicate what many colleges expect to provide through scholarships, loans

and student jobs

#### HOW TO GET A SCHOLARSHIP

Assuming you, a prospective coilege student, are qualified and assuming your family is financially needy, how do you go about getting a college scholarship? Today more than 500,000 college scholarships worth more than \$200 million are available to students the Nation over, and another 140,000 worth \$58 million will be available to exceptionally needy students entering college next fall. But competition is stiff and if a scholarship is a financial necessity for you, it's vitally important that you take the right steps in the right direction, now. Here, from a recent guide on "How To Get College Scholarships" by Gene R. Hawes and other authorities on student financial aid, are 10 basic rules for

the acholarship seeker:

(1) Decide on three or four colleges you might want to attend—without regard to cost—and for which you would qualify academically. If they're all high-cost colleges, add at least one lower cost institution to the Scholarships at lower cost colleges tend to be less competitive than those at the

prestige colleges.

(2) Request application forms for admission and for financial assistance from each institution and ask for details on scholarships from each. Colleges and universities themselves are the biggest scholarship sources today and they administer many of the nonuniversity funds-private and Federalwell. A request for financial aid will not affect your chances for admission.

(3) Explore outside sources of scholar-ships: One of the biggest—and most com-petitive—is the National Merit Scholarship program, for which most high school juniors routinely take qualifying tests. Also explore scholarships that may be offered by local churches, local governments, corporations,

civic groups.

Ask your State department of educa tion (in the State capital) for details on State scholarships and other forms of stu-dent financial aid. Find out whether a State scholarship would restrict you to institutions within the State-if this matters to you.

(5) Be sure to take college board or comparable examinations when they are given at your high school—or if they're not, find out when and where you can take them. Results of these exams are required by virtually all colleges today, and your score will be a major factor in whether you win a scholarship.

(6) If the colleges to which you apply quire it—and nearly 700 do—get a "Parents" require it Confidential Statement" from your high school counselor or from the College Scholarship Service in Princeton, N.J. Have your parents fill it out well before your college application deadline. This questionnaire on your family's financial position—and needsgoes to the CSS. The CSS, in turn, will forward copies of its evaluation to each college you designate.

(7) If the college to which you apply does not participate in the College Scholarship Service, you and your parents will have to maness your financial means and estimate your aid needs. In making this estimate your aid needs. In making this estimate take all college costs into consideration—including transportation, books, incidentals, etc.—and also consider your total family resources. Make the estimate realistic.

(8) Make sure you answer every question on your applications and send every required "supporting document"—photographs, transcripts, etc.—Don't be careless.

(9) Pay particular attention to the part of the application asking why you want to go to college and what you expect to get out of it. It appears on almost every application and the care you take in answering could be the key to your acceptance. Be brief and neither exaggerate nor underplay your statement.

(10) Apply early—preferably as early as the month of December, if you are a senior. Each college has its own application deadline and this you should beat by a wide margin.

### **Agriculture Becoming Monopolistic**

EXTENSION OF REMARKS

OF

### HON. MASTON O'NEAL

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES
Tu. day, January 18, 1966

Mr. O'NEAL of Georgia. Mr. Speaker, in rural Georgia the Market Bulletin, like the Sears catalog, is a welcome guest in almost every home. It is published by the Georgia Department of Agriculture and read religiously by farmers.

and read religiously by farmers.

The January 12 edition of the Bulletin contains an article written by Commissioner of Agriculture Phil Campbell who is not only a respected administrator but also a successful farmer. His experience, therefore, qualifies him to comment on the growing monopolistic trend in agriculture.

As a member of the House Committee on Agriculture I share the commissioner's concern over the small producer's plight. The farmer is fast finding himself in the same position as the producer of industrial goods.

The article follows:

AGRICULTURE BECOMING MONOPOLISTIC—
FOLLOWING INDUSTRIES PATTERN

(By Phil Campbell, commissioner of agriculture)

Until 26 years ago a mule and a plow stock were the only things necessary for a person to become a producer of farm products. Even with the highest priced mule and a few other pieces of mule-drawn equipment, farm goods could be produced with much less than a thousand dollars capital investment as rentable land was readily available.

With the small account of capital investment required to become a farmer, agriculture has been more competitive than any other industry with regard to the number of producers until the last 4 or 5 years.

Today this situation is drastically changed. To be a farm producer in 1965, capital investment requirements are in the tens of thousands and even hundreds of thousands of dollars with a minimum for the smallest producer who is to support a family and educate children being not less than \$50,000.

In many enterprises such as dairying, the bare minimum capital investment is \$100,000, with more substantial dairy farm operations being from \$150,000 to \$500,000.

For the first time in the history of American agriculture, economic forces are restricting and inhibiting production by limiting the number of producers capable of having the capital investment necessary to be a farmer today.

farmer today.
Until very recently the only restrictions known in America on agricultural production have been by Federal law and regulation under the Federal farm crop allotment and

price support program.

Production of agricultural goods for the first time in America is in the same position as the production of industrial goods in that the number of producing competitors is restricted by the amount of capital investment necessary to be a producer.

In industry, very few people have the capacity or the willingness to put \$500,000 into a shirt or pants factory, \$10 to \$20 million into a pulpwood mill, or \$500 million into an adequate plant development for the production of a line of automobiles acceptable to the consuming public.

American agriculture has been moving into this new situation during the most recent past and will continue in this direction in the future with fewer and fewer producers competing. Those in production will be very large operators with tremendous capital investments and a need for large amounts of money for annual operations.

Many enterprises illustrate this movement. In the dairy industry the number of milk oows has decreased steadily each year for 12 years, while at the same time the population of the United States has increased by 3 million people each year. Purchases of surplus milk by the Federal Government, as a consequence, have dropped drastically and unless conditions change, there will be a deficit of

Beef prices normally move slowly. When the prices do move up or down, they remain at a high or low level for a considerable period of time. However, several months ago when beef prices dropped drastically, the price did not follow the normal pattern, but went up in an unusually short period of time.

Converse to beef prices, hog prices normally react very rapidly, because hog farmers usually adjust supplies rapidly to the prices on the market. This is not true at the present time as hog prices have been extremely high for several months, and indications are that a downward adjustment is not indicated as rapidly as in past hog price changes.

Also net farm income realized throughout the United States is, for this year, approaching \$14 billion after staying between \$11½ and \$12½ billion for several years. Thirteen years ago farm net income was \$15 to \$16 billion, dropping 6 or 7 years ago to the \$11 billion figure and remaining there until recently.

The overall picture of agriculture is very bright for the next few years with the prosperity of the individual farm operator depending upon his knowledge, managerial skill and size of operating unit.

### The Bloomsdale Plan

EXTENSION OF REMARKS

### HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1966

Mr. CURTIN. Mr. Speaker, in this day of racial tensions and determination

of civil rights of our people, it is most helpful and encouraging to consider a plan for progress for our Negro citizens which is being developed in Bucks County, Pa., which is a part of the district which I have the honor to represent.

In order that all of us may be made aware of this practical effort for self-help, I request leave to insert a copy of "The Bloomsdale Plan" in the RECORD at this point. The outline of the plan is as follows:

THE BLOOMSDALE PLAN: A LOCAL APPROACH TO NATIONAL PROGRESS, PROPOSED BY THE BLOOMSDALE GARDENS-FLEETWING ESTATES CIVIC ASSOCIATION

#### INTRODUCTION

#### About lower Bucks County, Pa.

Lower Bucks County is situated in southeastern Pennsylvania, bounded on the east by the Delaware River. Its southern boundary is the Philadelphia city line, and it extends north to Trenton, N.J.

One-third of the Nation's total consumer market is within a 150-mile radius of lower

This area "exploded" populationwise when one of the largest United States Steel Co. plants was built at Morrisville, Pa., starting in 1950.

Thousands of the incoming white families to lower Bucks County, in the 1950's, were accommodated in vast, segregated, planned communities, such as Levittown, and Failies Hills. Both of these provided facilities for recreational, civic, and cultural functions.

During this same period, several hundred of the Negro families who settled in lower Bucks, bought homes in the integrated communities of Bloomsdale Gardens, Fleetwing Estates, and Magnolia Gardens. Others rented apartments in Bristol Terrace, a Government-built, wartime housing project.

Thus, geographically, the more populous Negro sections of lower Bucks adjoin Levitown. Two have Levittown post office addresses. Their children attend schools built principally for Levittown. They patronize the same retail and service establishments as the Levittowners.

There is, however, one large discrepancy.
Levittown was planned and built with
areas reserved for churches, schools, swimming pools, and recreational facilities, plus
a large civic center in the main shopping
center.

The swimming pools and recreational facilities were situated strategically, within walking distance of the Levittown sections they serve.

As Levittown neared completion, its residents, for practical and commonsense reasons, established a public authority, as permissible under Pennsylvania law. Use of the Levittown recreational facilities was restricted to paying members, composed only of those who bought Levitt houses, and paid for the facilities in the cost of their homes.

The anomaly of several hundred Negro families, who have Levittown addresses, and hundreds of white families who were living in the area when Levittown was built, is that they are excluded from the highly publicized, quasi-public, tax-free recreational facilities in their own community.

in their own community.

The Levittown Negro families found the situation difficult, particularly in respect to their children.

Levittown boys and girls have swimming pools and sports facilities, cultural, and civic activities open to them from which large numbers of their classmates are excluded.

#### Local group acts

The Bloomsdale Gardens-Fleetwing Estates Civic Association was incorporated at Doylestown, Fa., the Bucks County seat, on February 13, 1964, as a nonprofit, civic organization. Its memberahip is composed almost entirely of Negroes.

Association members discussed their problems with the Bristol Township Commissioners, in which a large portion of Levittown is situated-Levittown is not a political entity-and they spoke with the Bucks County Park Commission.

equently, the township commissioners Subsequently, the comming commissioners, by resolution in March 16, 1964, gave the association use of a 2-acre-plus plot, in a 10-acre township parcel, for the purposes of constructing a recreation building and

civic center.

The location is ideal as it is "off the beaten path" and within walking distances. It, too, can be reached without children having to cross high-speed highways which dissect the

Further, the civic center site borders a large, undeveloped county park area. Park officials have assured limited help in rec-

reational development.

Quite understandably, because of the heavy demands which fast population growth made on both the local and county govern-ments, no financial aid is in near prosepct

#### Birth of the Bloomsdale plan

The Bloomsdale group, after many discussions with numerous public officials, de-cided to launch a "self-help" program for themselves, their children, and their neigh-

In the scores of meetings which they held in private homes to weigh their problems, one point arose time and again. This was ment, and the absence of a strong Negro tradition, factors which marked the ad-vancement of other American minority the lack of a sense of cultural accomplishgroups.

an example, everyone had some scant knowledge of George Washington Carver. "He did something with the peanut," they would say when asked about him. But hardly anyone had a full understanding of his

work and its value.

work and its value.

Another point, which forcibly struck the group, was the fact that apart from sports, and entertainment, the Negro seldom is in a position interracially. Using their own situation as a basis, they asked themselves: "If we built the finest, largest civic center imaginable, would our white neighbors visit us as our guests?"

Without further qualifications, the answer

"No."

All of which begged the question: "What can we do to help ourselves, help our children, and at the same time, take a giant step to improve relationships between whites and Negroes everywhere?"

Consideration was given to the fact that visitor to the United States arrives with a long mental inventory of the injustices and the indignities which the American Negro has suffered.

Almost all that the visitor sees and hears in his U.S. travels is likely to be negative, no matter where he goes or to whom he

Similarly, the emerging nations represent-ed in the United Nations, and composed in the majority by dark peoples, receive double-negative exposures to "The American Way of

It was against this background that the Bloomsdale plan emerged.

### "Good" to offset had situation

First, the group will provide recreational and civic facilities needed by all "out" residents in their section of the Levittown area. Then it is going to establish a "National Negro Achievement Center," to further local,

national, and international good will.

In the center will be gathered originals, where possible, or otherwise prototypes, photographs, drawings, and mementos, together with graphic presentations of every American Negro, living and past, who made a significant cultural, scientific, or practical

contribution, that has been shared by other Americans regardless of color, religion, or racial origin.

All of the center's exhibits will be presented with dignity, and in a positive and constructive manner. Further, to set it spart from the more austere atmosphere of most such monuments, it will be surrounded by vibrant, vital, and vigorous group activities of both young and old.

As the center's exhibits are developed, the collective material will be incorporated into booklets, leaflets, and pamphlets national distribution. Their purpose will be to inspire, stimulate, and encourage all young American Negroes to profit from the examples of achievement by other Negroes.

Center literature will be distributed nationally through schools, libraries, churches, and existing Negro organizations.

Another important benefit of the center will be the training and preparation for leadership received by those planning and executing center projects. On the local and county level, the Blooms-

dale plan includes a program of plant, shrub. tree, and wildlife restoration and preservation. Upon completion of the civic center. everyone in the area with similar interests

will be invited to participate.

Housing, industrial and commercial development in lower Bucks, they explain, rapidly is depleting former natural beauty and wildlife. A bird sanctuary and an

arboretum are planned.

The association foresees big returns from this phase of its program. Such activities expose teenagers to experiences that serve as an introduction to rewarding careers—when supplemented with college training in agronomy and animal husbandry.

Another reason for the strong natural beauty emphasis, stems from the fact that the Pennsylvania Turnpike cuts through the area. They wish to make the turnpike traveler's first, or last, impression of Penn-They wish to make the turnpike sylvania the best possible

After equal rights, what?

In reviewing their own lives, Bloomsdale group leaders stress the need of Negro children for education, and more education. Also, they hold, the children must develop a feeling of belonging, and identifying with those who, with the same handicaps, did attain high cultural, scientific, or practical

Noting that the lives of young Negroes are devoid of even such fictional-inspiration counterparts as Horatio Alger, and Superman, they plan to present worthy Negro achievers, past, and present, as symbols of courage and strength

We want our children to achieve, and thereby merit consideration, is the consensus of opinion amongst the parents.

Presently there is no national center dediexted to accumulative, outstanding Negro achievement, the Bloomsdale group asserts.

agree that heretofore, and quite rightfully, the best efforts of many Negro leaders and organizations have been directed to the realization of equal rights. But, in the pressure of events, the emphasis on Negro achievement has not kept pace. The Bloomsdale approach is to encourage

more young Negroes to prepare now for the responsibilities inherent in equal rights. And to provide a cultural background from which they may draw the hope and inspiration needed for self-improvement.

From its wealth of case histories, the center will develop, all Negroes will bene-fit. And, for the first time, their young will be motivated by specific examples, and have patterns to follow in setting their own life goals.

Support for the Bloomsdale plan started at home. with the residents of the four communities, and with the area's business

Nationally, individuals, corporations, labor

unions and religious organizations, as well as philanthropies and foundations will be invited to help.

In this activity, the center again will innovate. It will ask all of its financial supporters to name Negro candidates who might qualify for achievement roles. This pro-cedure will open up national and local recognition opportunities for larger numbers of Negroes

National Negro Achievement Center founders see it as a rallying point from which only good, positive and constructive

forces will flow.

Commenting on its Pennsylvania location, the group makes the point that such a center would be lost in Washington, or in other large cities, where there are so many attractions.

Also, they feel its location compliments the national historical interest, and the splendid traditions which mark the Dela-ware River Valley region, and the Philadelphia-Trenton are

### Equity for Veterans Receiving Pension Benefits

EXTENSION OF REMARKS

## HON, ROBERT DOLE

OF HANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. DOLE. Mr. Speaker, I am concerned about the plight of many veterans who are in receipt of both veterans pension and monthly social security benefits. The recent modest increase in monthly social security payments has had the effect of reducing or terminating monthly pension benefits in approximately 29,000 of these cases.

These veterans, Mr. Speaker, in most instances, received a social security annuity that placed them slightly under one of the income limits established by law for entitlement to a certain rate of pension. When the President approved an increase in social security payments, though slight, it was sufficient to put the veteran in a higher income bracket, thus reducing or terminating his pension pay-Though the amount varied with the individual case, I understand that each of the 29,000 odd veterans affected lost considerably more in pension than they gained in social security. In a typical case, the veteran received an \$8 monthly increase in social security and lost \$48 monthly in veterans' pension benefits.

Now, I am fully aware of arguments being advanced that the 88th Congress authorized a 10-percent retirement income exclusion for pension purposes and that the pensioner is receiving more pension in 1966 than he did in 1964. fact remains, however, that their pension payments for 1966 have been reduced substantially from the rate they received in 1965. It is also a fact that the increase over the 1964 rate resulted from a general increase in pension rates voted by the 88th Congress. This increase would have been received whether or not the social security increase had adversely affected veterans' pension. Additionally, Mr. Speaker, many of these veterans were not on the pension rolls in

1964. They became entitled to one rate of pension in 1965 and then, a few months later, it was reduced substantially because of the receipts of a few extra dollars in social security payments.

In any event, Mr. Speaker, I believe this group of veterans and widows are deserving of consideration. I am, there-fore, today introducing a bill authorizing 20-percent increase in the income limits authorized by Public Law 86-211. This bill then will not only relieve the plight of those who were adversely affected by the social security increase, but will recognize that the spiraling cost of living also affects veteran pensioners. This bill will permit a modest increase in income without affecting pension entitlement. I am hopeful that the Committee on Veterans' Affairs will give early consideration to this and similar proposals.

The text of my proposal is as follows: H.R. 12123

A bill to amend chapter 15 of title 38. United States Code, in order to increase by 20 percent the income limitations imposed by that chapter on persons entitled to pensions thereunder

Be tt enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) column I of the table in section 521 (b) of title 33, United States Code, is amended to appear as follows:

	'Column	I
An	nual inco	пъе
More than—	but	Equal to or less than—
\$720 1, 440		\$720 1,440 2,160°

(b) Column I of the table in section 521(c) of title 38, United States Code, is amended to appear as follows:

	Column I
An	nual income
More than—	but Equal to
\$1, 200 2, 400	\$1, 200 2, 400 2, 600

2. (a) Column I of the table in se tion 541(b) of title 38, United States Code, is amended to appear as follows:

	'Column	1
An	nual inco	me
More than—	but	Equal to or less than—
\$720 1, 440		\$720 1, 440 2, 100°

(b) Column 'I of the table in section 841(o) of title 38, United States Code, is amended to appear as follows:

•	*Column	I
An	nual inco	me
More than—	but	Equal to or less than—
\$1, 200 2, 400		\$1, 200 2, 400 3, 600"

SEC. 3. Section 542(c) of title 38, United States Code, is amended by striking out "\$1,800" and inserting in lieu thereof '\$2,160".

SEC. 4. The amendments made by this Act shall be effective the first day of the second calendar month following date of approval.

### Food for Thought

EXTENSION OF REMARKS

### HON, STANLEY R. TUPPER

OF MATHE

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. TUPPER. Mr. Speaker, as a longtime exponent of national trade fairs I would like to call to the attention of the House an editorial in the Washington Post on January 14, 1966, relative to what the State of Maine is doing to promote some of its food products.

Some of my colleagues may have had an opportunity to visit the State maritime ship the State of Maine when it was in port in Washington last May.

It seems to me that the initiative my State has shown in this direction is an admirable example of salesmanship.

[From the Washington (D.C.) Post, Jan. 14, 1966]

#### FOOD FOR THOUGHT

The State of Maine has launched a project big with promise for international collabora-tion. To selected ports abroad it is sending a 10,000-ton ship named the State of Maine, fitted up as a floating restaurant, to demonstrate and dispense the good things to eat that Maine has to sell. Fried chicken, roast chicken, baked potatoes, french fries, shrimp, blueberry muffins, blueberry pie, and other products of Maine's farms, woods, and fisheries will be served to guests invited to the ship. A food tour is a sound idea. Nobody can fail to understand the message carby a smoking platter of fried chicken or a blueberry pie. The men from Maine, with the hard sense that characterizes them, plan to nourish good will with something both substantial and delectable.

The State of Maine may have pointed the way to a new development in international understanding. We might encourage the exchange of information about good foodwith samples. We would gladly learn about viands from other lands that tickle the palate, and we would happily share such food and recipes as our country can offer. Maybe the Peace Corps could recruit a few cooks to demonstrate their skill abroad—if food is not too mundane for idealists. On the level of the table perhaps we can reach understand-ing and good will that escape the higher reaches of political philosophy. Murphy's Law Catches Up With L.B.J.

EXTENSION OF REMARKS

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. YOUNGER. Mr. Speaker, under leave to insert my own remarks with extraneous matter, I insert the following article which appeared in the Washington Post on January 15. John Chamberlain's article "Murphy's Law Catches Up With L.B.J." will be of interest to our colleagues. His article follows:

MURPHY'S LAW CATCHES UP WITH L.B.J.

(By John Chamberlain)

A lot of people have been shedding tears the Republican Party, including this columnist. We have watched poor Ray Bliss bemoaning splinter groups and struggling to raise a few pennies for the orthodox organisation in competition with the fundraisers for Barry Goldwater's Free Society. But maybe our sympathy for the Republicans is not needed. Maybe, at long last, Murphy's law is working for the Republicans instead of the Democrats.

Murphy's law is that if anything can go wrong, it will. Sometimes, as in the "Era of Good Feeling of President Monroe," the law seems to have been suspended. But Monroe had it good only for a very short time. era was quickly followed by wrenching realinements of forces, culminating in the turbulence of the Jacksonian period. Lyndon Johnson, as the modern Monroe, has had a couple of years of consensus, which is another name for an era of good feeling. But suddenly the dew is off the rose and there is questioning everywhere.

The Vietnam struggle is the cause of this,

and it is a cause that can only be removed by something almost magical in the way of peace. If this isn't forthcoming, Mr. Johnson is going to have to choose between the vocal leftists in his following and the more numerous but comparatively silent patriotic

It is hardly in his character that he would It is narrily in his character that he would go unequivocably with the left. The Com-munists, the beatniks, the draft card burn-ers, the ban-the-bomb unliateralists, the various groupings on the so-called new left, and such strays from the old La Follette Progressive period as Senator WAYNE MORSE.

The result, given a continuation of an undeclared war in South Vietnam, must in the nature of things be a pullaway third party, a popular front manifestation similar to the Wallace Progressives of 1948. Already we have had hints to this effect; Yale's Prof. Staughton Lynd said before going to North Vietnam that radicals might do better their cause by putting up political can-

didates of their own.

A Wallace-type left, drawing away from the main body of the Democratic Party, would not in itself guarantee defeat for L.B.J. candidates. It should be remembered that Harry Truman survived the Wallace defection and even a Dixlecrat revolt that coincided with it. But Murphy's law is really hurting Johnson more at this moment than it hurt scrappy Harry in his 1948 fight with Tom Dewey.

For Mr. Johnson is not only in trouble with the pullout-of-Vietnam left, he is also faced with grumbling in the ranks of organized labor. He might count himself lucky that Mike Quill called his New York City transit strike against a nominal Republican, Mayor John Lindsay. But, in the long perspective, the New York labor troubles must recoil on Mr. Johnson. Mike Quill's behavior has presented such a picture of labor arrogance to the whole country that poor George Meany, the honest and eminently patriotic head of the AFL-CIO, has little chance of getting a vote for repeal of the Taft-Hartley Act's section 14(b) in this session of the Senate.

Unable to get their way on the symbolic issue of the State right-to-work legislation that is protected by 14(b), the labor boys, even those who follow Meany in supporting Johnson on Vietnam, are not very likely to deliver for Johnson candidates in some of the tougher election contests next fall.

Thus Murphy's law, in the absence of a magical peace, is working for the Republicans. Murphy's law makes the Republican worries about their own internal liberal-conservative split seem somewhat misplaced. Given enough trouble with the campus beat-niks and the instigators of Watts-type riots, the Democrate of California may very well toos the office of Governor of California into the waiting hands of Conservative Ronald Reagan. Given the same type of trouble in Illinois, the Democrate of that State might let moderate Republican Charles Percy become Senator. It would just be a matter of the ins throwing the game to the outs.

So cheer up, Ray Bliss. You may not even need any money to become a miracle man.

# The Late Honorable Herbert C. Bonner

SPEECH

# HON, JOE L. EVINS

OF TENNESSES

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. EVINS of Tennessee. Mr. Speaker, while Congress was adjourned, one of our most esteemed and dedicated colleagues, Hon. Herbert C. Bonner, of North Carolina, passed away. I was saddened to learn of his death and to realize that Congressman Bonner would not be with us any longer. We shall miss him—I want to join with my colleagues in paying a brief but sincere tribute to his memory.

HERBERT C. BONNER served in the Congress for a quarter of a century. Congress for a quarter of a century. Congressman BONNER was a great American. He served his country well; he served his beloved State of North Carolina well, and he served his district well and long and faithfully. As chairman of the Committee on Merchant Marines, he was known nationally as the father of the nuclear-powered ship Savannah, and for other work directed toward moderning our merchant marine fleet.

I knew Herbert C. Bonner as a dedicated American, an able colleague, and a man devoted to principle. He had a keen grasp of the responsibilities of public service, and he responded to those responsibilities.

He will be sorely missed in the Congress and most difficult to replace. His legacy of service will live for untold generations as a monument to his dedication.

I extend to Mrs. Bonner and other members of his family my deepest sympathy in their irreplaceable loss.

# The Greatest Blessing

EXTENSION OF REMARKS

# HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1966

Mr. GATHINGS. Mr. Speaker, northeast Arkansas and the Nation have lost one of its builders. H. C. Knappenberger of Blytheville has passed on, but the great work that he has done in Mississippi County and for the rural electrification program in the Nation continues.

The January 11 issue of the Blytheville Courier-News, in an editorial entitled "The Greatest Blessing," comments on the good that this fine man did for his neighbors and for his country. It is a pleasure to bring this editorial to the attention of the Members.

My friend Knapp—as we called him—was one of the builders of the rural electric systems in this Nation, and when the history of this great development is finally written, the name of H. C. Knappenberger will figure prominently in its chronicles.

The editorial follows:

THE GREATEST BLESSING

Last week's death of H. C. Knappenberger brought to mind the work which has been accomplished by that organization Mr. Knappenberger was closely identified with until the past few years—Rural Electrification Administration. Today, it is more difficult to appreciate REA just as tomorrow such 1966 marvels at the Interstate Highway System and commercial jet air travel will be prosaic as man reaches for the moon and great new ideas.

One man, who was raised on a farm in this area, even today calls REA "the greatest thing that ever happened to rural America." Of course, he may be prejudiced, because it may have been his particular chore to pump water for the stock (by hand) during those pre-REA years. Unless there is an outage (and these are rare) few of us realize the many jobs done by electricity. Most of those were done by hand.

Since labor on the farm was and is more ardious than it is in town, the absence of an auxiliary power force such as electricity made life on the farm at times almost unbearable. In reference to this area, REA must rank with drainage as the greatest thing that happened to the farm family. It may be assumed that without drainage, many farms could not have enjoyed the fruits of REA.

You must imagine the physical difficulties of preelectricity farm days in order to appreciate REA. "At nights in the summer," one ex-farm boy recalls, "I'd lie in bed in one spot until the perspiration from my back had soaked the sheet. Then I'd turn. The evaporation of the perspiration would give me a few minutes of coolness and in between turns I'd get a little sleep." The cream separator was turned by hand, the housewife cooked and kept house without even the simplest electrical help " " and this included washing clothes for the men-folks who were slogging around in that buckshot soil.

REA here was formed in 1936 when 147 farmers saked for the power to serve Number Nine, Goanell (then, an out-country community), 40 & 8, Promised Land, New Liberty, Haif Moon, Manila and Leachville. Earlier in 1936, Arkansas-Missouri Power Co. built an 8-mile line to make power available to 48 rural homes, but for depression-ridden public utilities, the risk would not warrant

the financial investment (all of it borrowed, probably) necessary to extend electricity to the wilderness which was northeast Arkansas and southeast Missouri at that time

REA was not organized until August of 1938. It was at this time that Mr. Knappenberrer was elected president.

Late in 1939, REA electricians began making connections to farm homes weet of Biytheville. By mid-1940, nearly 1,000 families lived in homes which were supplied by electricity. You might say the Mississippi County farmer was getting ready to join the rest of America. He was about to enjoy a few creature comforts, after years in the mud and wilderness, humorous but damnably uncomfortable and unhealthy backyard

Many farmers had already purchased electrical appliances. The greatest use the farmers of Mississippi County will make of electric power will be in the running of pressure pumps to supply water for the household and for watering stock. Many had purchased electric washing machines, electric ranges, radios, and electric refrigerators. Several farmers already had installed complete system of water works and modern plumbing.

All this, you understand, even before the first kilowatt lead westward toward Dell and the cooperative's first substation near the McDearman farm.

Mr. Knappenberger and those other REA ploneers brought a great gift to the rural family of the 1930's. Not one person who was old enough at the time to recall these pre-REA days on the farm around here ever will forget the advent of electricity to their home.

It had a profound effect on the people, their self-respect and on the economy of this region—and on Blytheville in particular.

It is another example of people helping themselves by helping others.

#### I Am the Nation

EXTENSION OF REMARKS

OF OF

## HON. W. E. (BILL) BROCK

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. BROCK. Mr. Speaker, I was recently moved by a statement entitled "I Am the Nation," which was published by the Norfolk & Western Railway and under unanimous consent ask that it be printed in the Appendix of the RECORD.

I AM THE NATION

I was born on July 4, 1776, and the Declaration of Independence is my birth certificate. The bloodlines of the world run in my veins, because I offered freedom to the oppressed. I am many things, and many people. I am the Nation.

I am 195 million living souls—and the ghost of millions who have lived and died for me.

I am Nathan Hale and Paul Revere. I stood at Lexington and fired the shot heard around the world. I am Washington, Jefferson, and Patrick Henry. I am John Paul Jones, the Green Mountain Boys, and Davy Crockett. I am Lee and Grant and Abe Lincoln.

I remember the Alamo, the Maine, and Pearl Harbor. When freedom called I answered and stayed until it was over, over there. I left my heroic dead in Flanders Fields, on the rock of Corregidor, on the bleak slopes of Korea, and in the steaming jungle of Vietnam.

I am the Brooklyn Bridge, the wheatlands of Kansas, and the granite hills of Vermont,

I am the coalfields of the Virginias and Pennsylvania, the fertile lands of the West, the Golden Gate, and the Grand Canyon. I am Independence Hall, the Monitor and the

I am big. I sprawl from the Atlantic to the Pacific; my arms reach out to embrace Alaska and Hawaii; 3 million square miles throbbing with industry. I am more than 5 million farms. I am forest, field, mountain, and desert. I am quiet villagesand cities that never sleep.

You can look at me and see Ben Franklin walking down the streets of Philadelphia with his breadloaf under his arm. You can e Betsy Ross with her needle. You can see the lights of Christmas, and hear the strains of "Auld Lang Syne" as the calendar turns.

I am Babe Ruth and the world's series. am 130,000 schools and colleges, and 320,000 churches where my people worship God as they think best. I am a ballot dropped in a the roar of a crowd in a stadium, and the voice of a choir in a cathedral. I am an editorial in a newspaper and a letter to a Congressman.

I am Eli Whitney, Albert Einstein, and Billy Graham. I am Horace Greeley, Will Rogers, and the Wright brothers. I am George Washington Carver, Daniel Webster, and Jonas Salk.

I am Longfellow, Harriet Beecher Stowe, Walt Whitman, and Thomas Paine.

Yes; I am the Nation, and these are the things that I am. I was conceived in free-dom and, God willing, in freedom I will spend the rest of my days.

May I possess always the integrity, the courage, and the strength to keep myself unshackled, to remain a citadel of freedom and a beacon of hope to the world.

This is my wish, my goal, my prayer in this year of 1966—190 years after I was born.

# Mr. Johnson Suddenly Found His Voice

EXTENSION OF REMARKS

# HON, HOWARD W. ROBISON

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the Recone. I include the following editorial from the New York Times of Saturday, January 15, which points up very well the very strange behavior of the President during the recent crippling, illegal transit strike in New York City.

POLITICS, THE L.B.J. WAY

Through all the 12 days that New York was crippled by a transit strike called in defiance of law and court order President Johnson had not a word of condemnation for the union leaders responsible for this exer-cise in economic blackmail of a city. Now that the slege has been lifted with a costly settlement, Mr. Johnson suddenly finds his voice, and censures New York for paying too high a price for its freedom.

The President is quite right in stating that the peace terms breach his anti-inflation guidelines. As we observed in these columns yesterday, none of the adroit arguments advanced in support of the pact by Dr. Nathan P. Feinsinger, chairman of Mayor Lindsay's special mediation board, could make it fit in-side even an elastic interpretation of the guidelines. It was a compromise accommoda-tion made under duress; and only the mayors' resolve not to "capitulate before the lawless demands of a single power-group" prevented outright surrender.

If Mr. Johnson had seriously wanted to act against an inflationary settlement, he had ample opportunity to do so. On any 1 of the 12 days he could have denounced the strike as a threat to the national interestwhich the Chairman of the President's Councli of Economic Advisers, Cardner Ackley, now acknowledges it was—and he could have supported Mr. Lindsay in the mayor's un-heeded call for arbitration, factfinding or a retroactive contract extension. President did not choose to do so.

Such help from Mr. Johnson would have

been doubly meaningful in the light of attempts by some elements in the old-time Democratic-labor cabal in this city to exploit the strike as an instrument for humiliating the new Republican-fusion Mayor, thus hoping to kill his future political career.

Now that Mr. Lindsay and the city have survived the strike, the President contributes his need toward discrediting the settlement. The blatantly political character of his comment is underscored by the continued absence of any direct criticism of the Transport Workers Union for its coercion of the com-munity. He declares himself "quite dis-turbed that essential services could be paralyzed for so long"; but there is not a hint of who is to blame. Not a word about flout-ing the law and the courts, not a syllable about the damage to the moral and judicial structure of this, the largest city in the United States.

The President's remarks provide a discouraging setting for the recommendations he has promised to send to Congress to protect the public interest against such strikes. Reports from Washington indicate that his state of the Union pledge of tighter strike curbs was toned down before delivery in response to objections voiced by George Meany. If even the promise must be diluted before it gets to Capitol Hill, what real hope is there in this administration for effective protection for the public against public-service strikes?

The Late Honorable John Taber

SPEECH OF

# HON. JOE L. EVINS

OF TENMESSEE

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 12, 1966

Mr. EVINS of Tennessee. Mr. Speaker, the Honorable John Taber, a distinguished former Member of the Congress. passed away while Congress stood in adjournment. It is my purpose today to pay a brief but sincere tribute to the memory of John Taber whose courage and adherence to principle stand unsurpassed in the Congress.

When I first came to Congress—the 80th Congress-John Taber was the chairman of the great Committee on Appropriations. I admired him then and later served with Congressman Taber as a member of this committee. My respect and admiration for Congressman Taber continued to grow. We disagreed at times but in disagreement I never failed to respect my colleague.

He stood forthrightly for what he believed-and he believed in the positions he took. Congressman Taber stood for fiscal responsibility and he espoused what he consider to be sound budgetary principles.

He was a colleague for whom all of us who served with him had the highest

regard. His integrity was of the highest degree and his devotion to his district, to his State and to the Nation was absolute

John Taber was a dedicated American, patriot, a servant of the people, a friend, and a devoted believer in this great institution, the Congress.

He served long and he served well, and was a stalwart citizen

# Democrats' Campaign Fund Reports Puzzling

EXTENSION OF REMARKS OF

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. YOUNGER. Mr. Speaker, on Sunday, January 16, Mr. Walter Pincus, staff writer for the Washington Star, presented an article which I am sure will be of interest to the readers of the RECORD. His column "Democrats' Campaign Fund Reports Puzzling," discusses a situation regarding the Democratic campaign fund reports which prompted the President to make recommendations on how the reports should be handled in the future. There is no question but what the oversights pointed out by Mr. Pincus do present a most puzzling situation. His column follows:

DEMOCRATS' CAMPAIGN FUND REPORTS PHESLING

(By Walter Pincus)

The Democrats are using previously un-reported funds—some of which came in as loans, some as cash donationsbills from the 1964 presidential campaign.

a result, Democratic committee ports filed pursuant to Federal law with the Clerk of the House show inconsistent entries.

Paradoxically, such entries in reports from President Johnson's own party highlight the need for "strong teeth and severe penalties to the requirement of full disclosure of contributions" that the Chief Executive men-tioned Wednesday during his state of the Union message in declaring his decision to seek campaign fund legislation reform.

The President's Club-the fund raising organization supported by Democratic donors of \$1,000 or more—reported 1965 receipts totaling \$378,244. The club ended 1964, its first reporting year, with a surplus of some \$3,000, giving it \$381,000 in reported 1965

receipts. However, the club's 1965 yearend filing itemized disbursements adding up to \$939,-238.75 for the entire 12 months, with almost \$870,000 of that amount being spent be-tween September 1 and September 15 last

Democratic officials were unable last week to explain how the President's Club report could show payments exceeding receipts by 8560,000.

However, a former party aid disclosed that large amounts of cash which the club received during the 1964 Johnson-Humphrey campaign were not reported officially as being received.

During the 1964 campaign, Democratic orkers in Washington were given per diem payments of \$20 a day before taking trips outside the city. In almost every case, such advance funds were paid in cash. Even White House staff members were reinsbursed in cash by the Democratic National Committee for campaign travel with the President last year.

Most of the excess President's Club payments went to printers, ad agencies, and Washington hotels to satisfy bills run up during the campaign year.

#### SECOND SUCH REPORT

The President's Club filing marks the second time a Democratic group reported spending far in excess of the funds it said it had collected. In its second-quarter filing in 1965, the Democratic National Committee reported it paid out over \$900,000 more than it previously had reported receiving. Though officials at the time said this represented a "deficit," the amounts involved were payments made rather than bills still remaining to be satisfied.

Several other types of discrepancies marked the most recent Democratic filings. Another fundraising group—the Johnson-Humphrey committee—closed out its activities last November 17, according to its filing with the House Clerk. On that day it reported transfering \$8,000 to the Democratic

National Committee.

That committee's report, however, fails to record receipt of the \$5,000 in November or December, although both committees were operated out of the office of Democratic National Committee Treasurer Richard Maguire.

Maguire recently resigned his post to enter private law practice.

In a similar transaction, the Democratic National Committee reported it transferred \$6,524.69 on December 1 to the President's

The President's Club, in turn, reported on December 1 it received exactly \$500 less—\$6,024.29—from "Salute to L.B.J." housed at the Democratic National Committee.

What happened to the \$500 and where "Salute to L.B.J." fits into the fundraising picture remain unanswered.

Such transactions, however, are seen as illustrating the need for another of the President's campaign reform proposals—action "to prohibit the endless proliferation of committees" which obscure the handling of campaign funds.

Another inconsistency within the recent Democratic report involves the date of alleged payments. The President's Glub report listed a September 14 payment of \$12,480 to Volpe Construction Co., Washington, D.C., which built the stage and platform at the Democrats' January 1965 inaugural gala in the District of Columbia Armory. But a Volpe official said last week the check was received in June rather than September.

received in June rather than September.
Similarly, Turnpike Press of Annandale,
Va., which produced a series of campaign
flyers for the Democrats, received a \$5,807.04
check in July rather than September, as the
Democrats reported.

By postponing the reporting date of payments, the Democrats can attempt to keep their publicly filed figures of receipts and expenditures balanced and thus give the impression of solvency at all times.

Another entry which has puzzled inquirers lists a payment late in November of \$2,407 as "reimbursement of expenses" to a former employee of the White House travel section.

This now retired, longtime civil service employee said last week he could not recall ever having received any funds or checks from the Democratic National Committee. He said, however, the committee called him last fall and asked him his home address, which was part of the report filed.

There has been no official explanation as to why, almost a year after the campaign, the Democrats decided to pay off several of their largest outstanding debts and report those payments as part of the President's Club filing. Recent stories have referred to an alleged \$1.7 million party deficit.

The recent filings would indicate the party still has unrecorded financial resources available to meet its financial needs.

One Democratic aid last week suggested President Johnson, faced with the need to replace retiring treasurer, Maguire, ind taken new interest in the party's finances. It also was speculated that criticism of the Democrate' \$18,000 a page ad book to raise funds for this year's congressional elections had stirred Johnson to action.

# Who Gets College Scholarships

EXTENSION OF REMARKS

# HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. BINGHAM. Mr. Speaker, since the enactment of the Higher Education Act of 1965, I have had many inquiries from constituents with regard to the procedure for obtaining a college scholarship. I am sure that many of our colleagues have had the same experience. The following articles by Sylvia Porter entitled "Who Gets College Scholarships?" answer many of the questions that perplex prospective college students and for which answers are difficult to find. I am inserting this material in the Record with the hope that our colleagues and other readers of the Congressional Record will find it helpful.

# WHO GETS COLLEGE SCHOLARSHIPS (By Sylvia Porter)

What does it take to get a college scholarahip? How needy must a student's family be? What factors, in addition to academic standing, improve a student's chances for a scholarship today?

This year one-tenth of U.S. college students—about 500,000—are receiving more than \$200 million in scholarships to help finance their higher education. At a limited but growing number of colleges more than half of the student body is getting some type of financial assistance. Beginning next fall, another 140,000 needy students will go to college with the help of an additional \$58 million of Federal scholarships under the Higher Education Act of 1965.

Today college scholarships are multiplying as unprecedented numbers of students from middle- and lower-income families continue their education beyond high school. At the same time millions of American families in all but the highest income brackets are straining under the huge cost of sending their children to college.

#### COSTS SOAR

During the past three fiscades college costs have quintupled, and during the coming 10 years costs are slated to rise another 50 percent. Clearly the competition for scholarships will become even more fierce than it is today.

Generally speaking, a high school student today must graduate with at least a B average and rank at least in the top half of his class simply to get into a good 4-year college. The requirements are understandably tougher for scholarships. While a growing total of colleges will admit highly qualified students regardless of financial nisans and automatically extend scholarship aid if necessary, the tendency at these more affluent colleges also is to select strictly from

the top 25 percent of high school classes and to demand at least a B-plus average.

But glittering grades are not the sole yardstick for college admission or for winning a scholarship. Even without a superior academic record these other factors can help tremendously toward a scholarship: a student's outstanding personality, a demonstrated capacity for leadership, an unusual or special talent (say in music, art, sports, foreign languages).

Special consideration is given too to candidates who have overcome a severe handicap or misfortune during their lives.

How needy must the student's family be?

The gifted child of the very needy (in the \$3,000-\$4,000 or less annual income range) has the best chances for most scholarships. The new Federal scholarships are reserved exclusively for those who couldn't otherwise attend college.

But a rising sum of aid in also now available to students whose family income is as high as \$15,000 a year—if the family has other children to support at home or in college at the same time, if the family has other burdensome expenses, or if college costs are especially high at the institution the child wishes to attend.

For instance, a family with four children to subport on a yearly income of \$5,000 is considered by today's colleges as in greater need—in terms of eligibility for a scholar-ship—than a family with one child and an income of \$3,000. Even the \$15,000-a-year family may be considered "needy"—if there are five children to support and if the college charges \$2,000-\$3,000 or more a year.

While less needy students and their families are expected to contribute substantial shares of their earnings, savings, and assets toward college costs, a family's total financial picture is now taken into account—and the amount the family is expected to pay is measured by what it can reasonably afford. Today's student financial aid is designed to fill the gap between that sum and total college costs.

# HOW COLLEGE COSTS AND FINANCIAL NEEDS

Let's say your teenage son has superior academic qualifications that would put him in the running for a college scholarship. Let's also say that, while your family income is a relatively affluent \$10,000, you have three other children, your savings are next to zero and you can't see how you can squeeze out an extra \$2,000 a year for your son's college education. Would a college consider you "needy" enough for your son to win a scholarship?

This is typical of the quandary facing many middle-income American families as record number of their children head into college. The answers are important to students and parents—because a college degree is becoming a minimum requirement for many jobs.

Scholarships are generally awarded to highly qualified, B-or-better students whose families have limited financial means. The average scholarship is about \$400 a year, but it may range up to \$1,500 or more—according to the individual student's need and the actual anticipated total college costs.

How are total costs and family need figured today?

Here are basic guidelines just published by the college scholarship service, a nonprofit service of the college entrance examination board in Princeton which helps nearly 700 major institutions offering scholarship funds among students.

In calculating total college cost, the CSS includes not only tuition and fees, but also room, board, transportation, clothing, books, spending money.

In calculating family need, it takes these major factors into account: Family income, number of other children to support, the breadwinner's age and retirement plans, unusual financial burdens such as other children in college at the same time, an expensive illness, whether the wife works, size of debts.

The CSS also weighs total family assets— cash savings, equity in the home, securities owned, etc.—and applies a share of this total to the amount a family can reasonably afford to contribute. This share, though, is comparatively small—less than 10 percent assets up to \$7,000 are not counted. If the family head is over 55 years old, even higher sums are disregarded.

The scholar:hip seeker himself is expected to contribute about 25 percent of his total college costs.

Typically, the student's contribution might include 20 percent of his accumulated savings each year that he is in college, about \$300 in summer earnings each year (including the year before he enters college), plus about \$200 in earning from a part-time job at school.

Assuming your assets are limited and assuming you have no unusual financial burdens, here is what the CSS suggests you can contribute annually afford to toward one child's college expenses at various income levels and with various numbers of other dependent children:

Number of other dependent children

Section 1	None	One	Two	Three
Before-tax income; \$5,000	\$540 1,030 1,570 2,170 2,840 3,580	\$330 780 1, 230 1, 760 2, 360 3, 010	\$160 550 920 1, 390 1, 930 2, 530	(1) \$400 750 1,140 1,620 2,170

1 No contribution.

These are just your "suggested" contribu-tions. They by no means bind any college to provide the balance of the costs. But they do give you a general indication of what financial efforts are expected today from the student and his family.

They also indicate what many colleges ex-ect to provide through scholarships, loans, and student jobs.

#### HOW TO GET A SCHOLARSHIP

Assuming you, a prospective college student, are qualified and assuming your family is financially needy, how do you go about getting a college scholarship? Today more than 500,000 college scholarships worth more than \$200 million are available to students the Nation over, and another 140,000 worth needy students entering college next fall. But competition is stiff and if a scholarship is a financial necessity for you, it's vitally im-portant that you take the right steps in the right direction—now. Here, from a recent guide on "How To Get College Scholarships," by Gene R. Hawes and other authorities on student financial aid, are 10 basic rules for the scholarship seeker:

(1) Decide on three or four colleges you might want to attend, without regard to cost, and for which you would qualify academically. If they're all high-cost colleges, add at least one lower cost institution to the list. Scholarships at lower cost colleges tend to be less competitive than those at the 'prestige" colleges

(2) Request application forms for admis sion and for financial assistance from each institution and ask for details on scholar-ahips from each. Colleges and universities themselves are the biggest scholarship sources today, and they administer many of the nonuniversity funds, private and Federal, as well. A request for financial aid will not affect your chances for admission.

(3) Explore "outside" sources of scholar-

s: One of the biggest—and most competitive—the National Merit Scholarship program, for which most high school juniors routinely take qualifying tests. Also ex-plore scholarships that may be offered by lo-cal churches, local governments, corpora-

tions, civic groups.

(4) Ask your State department of education (in the State capital) for details on State scholarships and other forms of student financial aid. Find out whether a State scholarship would restrict you to institutions within the State—if this matters to you.

(5) Be sure to take college board or comparable examinations when they are given at your high school-or if they're not. out when and where you can take them. Results of these exams are required by virtually all colleges today, and your score will be a major factor in whether you win a schol-

(6) If the colleges to which you apply require it—and nearly 700 do—get a "par-ents' confidential statement" from your high school counselor or from the college scholarship service in Princeton, N.J. Have your parents fill it out well before your college application deadline. This questionneire on your family's financial position—and needs—goes to the CSS. The CSS, in-turn, will forward copies of its evaluation to each college you designate.

(7) If the college to which you apply does not participate in the college scholarship service, you and your parents will have to assess your financial means and estimate your aid needs. In making this estimate, take all college costs into consideration including transportation, books, incidentals, etc.—and also consider your total family resources. Make the estimate realistic.

(8) Make sure you answer every question on your applications and send every required supporting document"-photographs, tran-Don't be careless. scripts, etc.

(9) Pay particular attention to the part of the application asking why you want to go to college and what you expect to get out of it. It appears on almost every applica-tion and the care you take in answering could be the key to your acceptance. Be brief and neither exaggerate nor underplay your

statement. (10) Apply early—preferably as early as the month of December, if you are a senior. Each college has its own application dead-line and this you should beat by a wide margin.

#### A Needed Reform for a Better House

EXTENSION OF REMARKS OF

# HON. ABRAHAM J. MULTER

OF NEW TORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. MULTER. Mr. Speaker, I know that all of our colleagues were delighted that President Johnson endorsed, in his state of the Union message, a 4-year

term for the Members of this body. I have sponsored legislation to accomplish this ever since 1949 and I urged it again before the Joint Committee on Organization of the Congress last year.

Additional support now comes from Ruth Montgomery and I commend to the attention of our colleagues her remarks on this subject which appeared in the

December 16, 1965, edition of the New York Journal American:

How To Build a Better House (By Ruth Montgomery)

WASHINGTON .- It is sad but true that under our system of Government, the second year of a Congressman's term is devoted more to currying his constituent's favor than to the Nation's business. The necessity of getting elected every 2 years keeps him running scared.

This is a poor return for the taxpayer on the \$30,000 a year, plus staff and office expenses, to which each lawmaker is entitled. For that reason many Capitol-watchers, including former President Eisenhower, have become convinced that Members of the House should serve 4-year terms instead of 2.

# The Faith of Freemen-Grand Cross of the Court of Honour, Brother J. Edgar Hoover

EXTENSION OF REMARKS OF

# HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. WYDLER. Mr. Speaker, on October 19, 1965, a great American, J. Edgar Hoover, Director of the Federal Bureau of Investigation, on the occasion of receiving the highest honor which the Supreme Council, 33d degree of the Ancient and Accepted Scottish Rite of Freemasonry, Southern Jurisdiction, United States of America, can bestow, the Grand Cross of the Court of Honour, made a truly outstanding address entitled "The Faith of Free Men." I believe that this speech is a message of such importance that it should be made available to my colleagues in the Congress of the United The message follows: States.

THE FAITH OF FREEMEN

This is the proudest moment of my 45 years' membership in the Masonic Order. To receive the Grand Cross of the Scottish Rite is an honor which I shall cherish always. This award is made all the more meaningful by the high respect which Freemasonary commands in the minds of all who have felt its wholesome influence and observed its good works.

The strong virtues of the Masonic movement are indelibly etched in every chapter of our Nation's history. Masons helped to carve our country's early settlements out of a hostile wilderness that was Colonial America. They added vital fuel to the fires of freedom which burned so intensely from Boston to Savannah some two centuries ago. They stood prominent among the bold colonists who affixed their signatures to the Declaration of Independence in 1776 and, 11 years later, to the Constitution of the United

George Washington, the Father of our country, was a Master Mason—a statesman of greatest courage and dedication who envisioned America as a land where men of all creeds might live together and worship to-gether in freedom under God.

The brave patriots who served under General Washington at Valley Forge—and their latter-day counterparts at San Juan Hill, Belleau Wood, Corregidor, the Yalu Valleymade grave sacrifices that liberty and justice might prevail. They fought then—as Americans stand prepared to fight today—to uphold a cause which draws its greatest strength from an abiding faith in man's ability to guide his own destiny with the help of God.

Today, our priceless heritage of freedom is under relentiess attack both at home and abroad. In the jungles and rice fields of southeast Asia, Americans in uniform maintain a constant vigil against the Communist hordes of a modern-day Genghis Khan to whom no commodity is cheaper than human life.

In Europe and the Near East, our country's patience and determination are constantly strained by the taunts and provocations of Iron Curtain slave masters who talk of peace while clandestinely plotting to spread their godless creed of utopia-in-chains.

Throughout Central and South America, we have had to erect guardposts of freedom against the sinister efforts of Communist henchmen to spread the malignant cancer of Marxism across the Western Hemisphere. Not only have we seen the results of their treachery in Cuba, but the Dominican Republic could be a Marxist satellite today were it not for the fast action taken by a courageous President and alert Americans to thwart a Communist takeover there earlier this year.

Communism is a vast international conspiracy which today dominates one-third of the earth's people. Here, in our own country, that conspiracy is represented by the Communist Party, U.S.A., a bold and defiant band of anti-American turncoats whose operations are directed and controlled by the Kremlin in Moscow.

The Communists profess to be a legitimate political organization. This is not so, Actually, the party constitutes a foreign outpost on America's shores. Its members—knowingly, deliberately, and willingly—are active tools of the Soviet Union.

Witness, for example, the programs which occupy the primary attention of Communist Party members in this country: withdrawal of Américan support from South Vietnam; noninterference with Communist terrorists in Santo Domingo; appeasement in all dealings with members of the Marxist world.

The Communists speak of peace, but peace at an exorbitant and heart-rending price-submission to Communist domination. From 50 years of dealings with the Stalins, the Ehrushchevs, the Brezhnevs, the Castros, the Mao Tse-tungs, this bitter lesson has been learned by the freedom-loving peoples of the world.

Yet, in country after country, there still remain the legions of uninformed, misinformed, and politically naive who are the non-Communist dupes and fellow travelers whom the Communists rely upon to carry forward their programs for world domination.

We find these dupes in shocking abundance here in our own United States where Gus Hall, the Moscow-trained general secretary of the Communist Party, U.S.A., boasted to newsmen last fall that there are approximately 100,000 Americans within the party's influence. About 10 percent of them, he said, are dues-paying members. The remainder he described as close sympathizers.

These sympathizers include growing numbers of young people—because the major target of Communist propaganda and exploitation in the United States today is the Nation's youth.

Standing in the forefront of the Communist campaign to confuse the minds, distort the thinking and win the support of our young people is the DuBois Clubs of America—an illegitimate spawn conceived by the Communist Party and nurtured by a trusted band of youthful adherents to the cause of world Marxism.

Leaders of the DuBois Clubs of America were prominent among the Communists who attended a special youth leadership school sponsored by the party last June to prepare

for a stepped-up campaign of recruitment and agitation among youth. Already, this fall, there are signs that these training sessions have begun to bear fruit—in the form of defant protests against law and authority.

of defiant protests against law and authority. Today, as never before, the Communists are confident of their ability to win recruits among this country's youth. That is why the party has placed such intense emphasis upon its campus speech program—a program that has seen skilled hucksters of atheism and treason appear at scores of colleges and universities from New York to California, without objection by the authorities of those institutions of higher learning and often with positive encouragement by members of the faculties of such universities.

What do these party spokesmen have to say to our young people? In the State of Washington, one Communist speaker loudly condemned the United States for its actions in helping to defend the cause of freedom in the Far East. He charged his audience that it was their duty to demand immediate withdrawal of American troops from Vietnam

drawal of American troops from Vietnam.

In Missouri, another party functionary told a group of students that the United States is the "most hated country" in the world.

And in Rhode Island, a third Communist explained that the wall of Berlin had been built to hold back undesirables from the West who were infiltrating East Germany.

The Communist movement, Communist regimes, and those who knowingly support them are really ultrareactionary. They are the worst enemies of freedom and social justice.

Our university professors and students would serve their country and professions with fruitful distinction if they were to study this historic development and become not only academic but dynamic fighters against the Communist drive to dominate the world and impose on mankind the Saviet system of tyranny.

It is one of the giaring contradictions of our day that the same Communist spokes men who are so glib tongued in their appearances before groups of college students immediately lose their voices when placed under oath in a court of law or before a committee of Congress. They always take refuge behind the fifth amendment. Our moral atmosphere would be better if they knew as much about the Ten Commandments as they do about the fifth amendment.

Communists refuse to testify at any proceeding where they are subject to fines and imprisonment for deliberate lies and distortions. In the dark world of communism, there is no room for truth—just as there is no place for freedom and decency and God.

In their campaign to weaken and destroy the cause of democracy, the Communists actually are receiving invaluable aid from far too many intended victims.

I refer to the pseudoliberals of the extreme left, as well as the misguided zealots of the ultra-right—modern-day Don Quixotes who mistakenly fight the transparent shadows of imaginary enemies rather than meet the challenge of the real and awesome problems confronting our beloved United States.

I refer to the Ku Klux Klan and other hatemongers, regardless of their color or creed, who practice a doctrine of intolerance, bigotry, and intimidation toward their fel-

I refer to the unkempt characters of pliable minds and persuasion who eagerly attach themselves to any "cause" which runs counter to convention—and to the morally corrupt opportunists who flagrantly exploit their naive enthusiasm and credulity for selfserving purposes.

I refer also to the highly vocal rabble rousers of dubious stability and motivation who encourage defiance of the law by counseling cynicism and disrespect toward family, law and order, and all forms of authority.

"Civil Disobedience," a seditious slogan of gross irresponsibility, has captured the imagination of citizens who are morally, mentally, and emotionally immature. It has been spread at street-corner rallies by those who would use it as an avenue to personal power and prestige. And it has been spread in the false guise of academic freedom in the hails of public and private institutions that have permitted emotional, and often obscene, harangues against morality and reason. What they really seek is license—not freedom.

I am greatly concerned that certain racial leaders are doing the civil rights movement a great disservice by suggesting that citizens need only obey the laws with which they agree. Such an attitude breeds disrespect for the law and even civil disorder and rioting. The citizen has no latitude as to what laws he must obey. If he feels a law is wrong and unjust, he has recourse to establish constitutional procedures to have it changed through his legally elected representatives.

It is reprehensible for any person to select those laws he will obey and those he will ignore. Such defiance is a form of anarchy. It is shameful and disgraceful for persons in high authority to condone or urge the breaking of established laws.

I have also become increasingly concerned about the influence wielded upon the impressionable minds of our youth by some so-called educators—such as the college professor who reportedly urged a group of students at the University of California to burn their draft cards, refuse to pay income taxes and, if necessary, go to jail for their actions.

Civil disobedience is not, and must not become, an accepted norm of behavior in a society of freemen. It leads to anarchy—and preempts all possibility of rational discussion

or appeal.

No longer can respectable citizens complacently stand by while celebrity status is accorded those sick minds and corrupt souls who tamper with and ridicule our orderly processes of Government under law.

We must choose between law and anarchy; freedom and chaos.

freedom and chaos.

Is America as a Nation being swept by an epidemic of spiritual malnutrition? I fervently hope not; but the danger signs are all too clear. I fear that the public may be coming to accept widespread lawlessness as an unavoidable adjunct to our way of life.

What has happened to the civic pride, the righteous indignation, of otherwise respectable citizens who turn their backs on helpless victims of beatings, robberies and sex crimes? The incredibly indifferent attitude of these people is exacting a heavy toll. It has helped to turn the streets and parks of many cities into virtual jungles of fear—where, according to a recent survey, nearly one half of the residents are straid to walk alone at night.

Despite the continuing efforts of some selfprofessed "experts" to minimize the crime problem, the undeniable fact remains that crime is increasing—in both numbers and intensity—at an alarming rate. It is growing six times as fast as our expanding population.

Last year, more than 2,600,000 serious offenses were reported to law enforcement agencies throughout the United States. This is the largest total on record. It means that more Americans felt the ravages of crime last year than ever before.

Today, the onslaught continues—with five serious offenses being recorded every minute. There is a vicious crime of violence—a murder, forcible rape or assault to kill—every 2½ minutes; a robbery, each 5 minutes; a burglary, every 28 seconds; and 52 automobiles are stolen every hour.

These figures are based on facts—unlike the illogical and inane criticism which has been voiced by that peculiar clique of sociologists and criminologists who are apparently suffering "armchair fatigue." These impractical theorists who attempt to "define away our crime problem should step from their paper castle s into the world of reality.

No one is more keenly aware of, or more deeply concerned with, the ravages of crime the President of the United States. month, in signing the Law Enforcement Assistance Act—a bill designed to help strengthen the delicate machinery of justice in this country—he declared, "The control of crime is a major target of this administration."

The President has appointed a special Commission on Law Enforcement and the Administration of Justice to look into and seek answers for the problems of crime con-trol. He has the support of every responsible law enforcement official in this vital undertaking.

There is an urgent need today for realistic thought and realistic action in meeting the challenge of crime and immorality. This is especially true in the critical area of youthful criminality—where society has too long been asked to endure gross abuses of public private trust by shallow-minded juvenile authorities.

The true meaning and intent of our great national holidays have been defiled by bands of defiant youths such as the arrogant young hoodiums who turned the Fourth of July this year into a nightmare of terror and destruction at resort communities in Ohio, Missouri, Iowa, and New York. Reports that participants in these orgies of lawlessness were being released after payment of small fines caused one great newspaper to observe, "About all that such slape on the wrist will do is bring them out in force again next year. What they need, and what they ought to get, is 6 months at hard labor."

Whenever dangerous young hoodlums are encouraged to develop an attitude of "I can get away with anything—I'm a juvenile," society suffers and justice becomes a meaningless expression. Parental neglect, excessive weakness, categorical leniency, destroy respect for the law and for those charged

with its enforcement.

In complaining last year of what it termed
"Turnstile Justice," a major newspaper in
New York demanded, "It's time that the
public was told just why so many young criminals and terrorists are passed through this turnstile and sent back to the streets to kill, rape, rob, and assault the innocent." Exaggerated charges? Not in the least.

Exaggerated charges? Not in the least. From 1960 through 1964, no less than 225 police officers were killed in line of duty. Nearly one third of the hoodlums arrested in connection with these murders were on parole or probation when the killings oc-

The lives of six of these officers were claimed by criminals who had been paroled for a prior murder. Eleven lives were taken by offenders who had been paroled after confinement for felonious assault; and 32 of these officers were killed by paroled robbers.

We recently completed an examination of the records of nearly 93,000 criminals who were arrested in 1963 and 1964. This dis-closed that 76 percent—more than three-quarters—had been arrested on at least one previous occasion. Over one-half of them had received lenient treatment, including parole, probation and suspended sentences parties, protested and subjective settlements, at some point in their criminal careers—and these criminals recorded an average of more than three additional arrests after their first encounter with the school of soft justice and official leniency.

Forty-one years ago, an experienced attor-ney and jurist in New York issued the strong hey and jurist in New York issued the saving warning: "It is not the criminals, actual or potential, that need a neuropathic hospital. It is the people who slobber over them in an effort to find excuses for their crime. The demand of the hour in America, above all

other countries, is for jurors with conscience, judges with courage, and prisons which are neither country clubs nor health resorts."

The same demands of the hour continue to exist today. Tragically, the atmosphere of many courtrooms is still polluted by some jurors who deliberately close their minds to the evidence before them. Too many of our judges seek out technicalities rather than guilt or innocence. A trial should truly represent an enlightened search for truth so that deception, surprise, technicalities, and delay will be obliterated. The jousting in legal mumbo-jumbo resorted to by too many of our judges makes a farce of our judicial system.

But even if he should be convicted, the criminal knows that regardless of his past record there is steadily increasing hope for a suspended or a probationary sentence or an early release on parole.

The decent people in all sections of the country—East, West, North, and South have suffered too long at the hands of terrorists set free with little more than a pretext of impartial consideration of their guilt.

They have tired of the street brawl tactics displayed by those lawyers-criminal who employ any means the courts will tolerate to at the interests of justice.

They are losing patience with systems of carole and probation that are little more than conveyor belts from our prisons and court chambers back to the underworld.

And they have become nauseated by the irresponsible actions of other sometime Americans such as those fair-weather pa-triots who eagerly grasp every right and privilege which our country guarantees its inhabitants—while ignoring the duties and obligations that citizenship entails.

Those who seek equal rights under the law should be taught to assume equal responsibility before the law. Certainly, civil rights and individual dignity have their vital place in life, but what about the common good and the law and order that pre-serve us all from lapsing back into the

We must have a world ruled by law. am not one of those who believe in adding a great many more laws. The crux of the problem is that we do not observe the laws we already have; nor is the spirit of these laws interpreted by our courts to give equal justice to the criminal and to law-abiding citizens who are the victims of the savagery perpetrated on our streets and highways.

During my early years, a strong and lasting impression was made on my life by a schoolteacher who told our class one day that, in order to receive passing grades and qualify for graduation, each of us would have to master the "three R's" of reading, writing, and arithmetic.
"But," she continued, "I hope you learn far more than that in my classroom be-cause, in order to achieve true happiness and success in life, you will have to master an additional set of 'R's' the 'three R's' Americanism—reason, respect, responsibility."

Then she added, "You will also find that there is a fourth 'R' which is sacred to America. It is religion." Today, there is a most urgent need for Americans to rededicate themselves to the

strong moral principles upon which our Na-tion was founded.

As Ralph Waldo Emerson said, "The true test of civilization is not the census, nor the

size of cities, nor the crops—no, but the kind of man the country turns out."

Faith dominated the atmosphere at In-dependence Hall in Philadelphia where the Declaration of Independence and the Con-stitution were framed.

Faith is our mainstay in the ideological struggle now raging between the camps of s communism and human freedom. godle

And faith remains our strongest bul-wark against the criminal and subversive enemies who would destroy our priceless heritage of liberty and justice for all. But faith without work will be of no avail there must be unity of purpose.

America will continue to progress in dignity and freedom so long as our people cherish liberty and justice and truth and honor God

Faith in God. That is the fortress of free-

#### Vain Visions

EXTENSION OF REMARKS

OF

# HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. RUMSFELD. Mr. Speaker, in these days of discussion and debate on the problems of war and peace, it is a pleasure to insert the following sermon by Dr. Russell C. Stroup. Titled "Vain Visions," it was preached in the Georgetown Presbyterian Church in Washington, D.C., in November 1965.

Dr. Stroup's sermon follows:

VAIN VISIONS

(A sermon preached in the Georgetown Presbyterian Church by Dr. Russell C. Stroup, Nov. 7, 1965)

(Text: Ezekiel 13: 1-7.)

I wish I had the answers to all the prob-lems of the world. I wish particularly that I had the answer to the primary problem of the world, which is the problem of peace. I agonize over the problem: I do not know the answers. When I was younger I thought I did. I thought I had all the answers, when, like so many young people in our own time I demonstrated for peace, when I remonstrated against war.

I have not lost my concern for peace. have not lost my hatred of war. I am as I have always been a conscientious objector. When I had a draft card (which was not burned) it indicated that I was a conscientious objector. I held that card and that position, and when I volunteered to serve as a chaplain in the Army, and did so serve,

this did not change my conviction. But out of bitter experience, But out of bitter experience, I have learned some things that I did not know then. I have learned something of charity and understanding and tolerance. When I was young I earnestly believed, as apparently many who demonstrate today believe, that all who disagreed with me were mili-tarists, warmongers who did not love peace as I love peace. Those who did not under-stand us when we demonstrated said we were Communists, and we said they were militarists. Both were mistaken. There were then and there are now Communists. And there were then and there are now mili-tarists. But the vast majority of our people neither. they whether against war or not.

If all who love peace would take to the streets, our cities could not contain the march. In such a march the place of honor at the head of the column would go to the legions of the dead, who we remember this day and week. The dead of wars past, the dead who died yesterday. The young men—and they are always young—who paid the awful price of war with their own bodies. I have known these men. I have seen them die. With few exceptions, they were not fighters, although they fought well. They were not killers, although they had to kill. They were not sadists, although they suffered and caused suffering. They hated war. They longed for peace. Not the peace of the grave that they found, but a life of peace and a world of They hated war. They longed for In any march they would have the

place of honor.

And next in the line of march would come, if they be spared, the men in Vietnam. They know, alas, what war is, as those who have not been there cannot know. War is But what hell is, only those know who have known hell. I could not tell you who have not been there what war is. There are not words to describe the horror of it, its agony, its savagery. All that is worst in man is revealed in war. There is no way to make war "decent." There is no way to make war 'pretty." War, for those who engage in it, a pleasant thing. Quite apart from the suffering and death, what can those who have not been there know of the emptiness of it, the boredom of it, the dirt and the wet, the heat and the hunger, the insects and the rats, the stench of rotting dead and the smell of fear itself? None can hate war as those who have known it. And none can love peace as those who have lost it.

So I think today of the men in Vietnam, men from this church, men from this land. I think of them with agony because I have been where they are. I know what this day and this night will be for them. And what of those who watch and wait at home? mothers, the wives, the fathers, the brothers? For those who watch and wait for the word that may come, or for those to whom the word has come. And I may say that there is not a man fighting in Vietnam today so cruel, so savage as those with anonymous voices who, here in America, have called the widows of the dead in Vietto whisper, "I'm glad your husband is

dead.

Let there be those who demonstrate against war. We need such demonstrations of varied opinion. But let us show humility, some understanding, some Christian charity. Let war be the villain, and not the President or the men who fight in Vietnam. Let there be criticism, but let us have done with that self-righteousness that seems to set "me" apart because I have these convic-Let us have done with reckless condemnation. Let there be sanity and sympa-We are all involved in the world's tragedy. No hands are clean, and we can not wash them clean so long as we are part of the human family.

Let us understand and acknowledge the fact that while there may be honest differences in our minds as to the best way to procure peace, the hearts of all are united in the deep desire for peace. Let there be peace among us in our quest for peace.

Something more I have learned out of the experience of the years, my own experience as one who calls himself a pacifist. The pacifist must be a participator. The truly Christian conscientious objector, when the world is in agony, cannot stand apart from the world's pain. If I use my conscience to shield myself from suffering, I will lose my conscience and my humanity. In World War II I could not have retained a semblance of self-respect if, when millions were suffering and dying, I had sought safety for myself. I might refuse to fight, but I could not refuse to serve and to suffer. es are raised, our cross must be there.

There are other fronts beside the battlefront where youth is needed. There are other battles being fought beside the battle with guns. There are wars against hunger and disease and illiteracy. If my conscience were sensitive to the suffering of the people

of Vietnam due to war, the same conscience might well be troubled by the suffering of millions in other lands where there is no war. Indeed, in Vietnam itself one might serve and suffer to bind up the nation's to care for those who have borne the brunt of the battle, and for their widows and orph-It has been said again and again that the war in Vietnam will not be won on the battlefields of Vietnam. The war, if it is won, will be won in the villages of Vietnam, where the people are, where they live in suffering, deprived of so much that is essential

I read this past week that if the job were done that should be done in the villages of Vietnam for the people, in wartime and the time that may follow the war, it would require 45,000 teachers, engineers, agricultural experts, doctors, nurses, and others. A minimum of 45,000 to serve this present need. Would that we had some way in which those who would not serve, could not serve in battle, would serve here. Their service and

sacrifice is desperately needed.

This, I think, is the Christian conscience that compels service. With our infantry outfit in World War II, there was a Medical Corps made of Seventh Day Adventists, all conscientious objectors, all refusing to bear arms where the Red Cross was no protection. They went unarmed into the battle, and they served and suffered and died. They had no protection; they refused any. They were firm in their faith, and they were glorious in their service.

At the National Institutes of Health, and in many hospitals in this country, there are young men who serve their tour of duty not in the armed services, but as living objects for experiment in the battle against disease. I have known these young men, and they give a glorious witness to their faith, to their convictions, through service and through sacrifice. Here, I think, is the witness that counts. And I think it is for us to offer this alternative increasingly to those who, for conscience sake, cannot bear arms, but who for conscience sake, should serve.

The conclusion I come to with great reluctance. I know the horror of war. I know that war will not and cannot settle the problems of Vietnam or any nation. How-ever unavoidable war may be, I am deeply cerned with the ever-escalating arma-ments race. I wish with all my heart that this insanity were ended, that senseless slaughter would cease, that the wealth of sure and talent wasted on might be employed creatively in the service of mankind. That nations would resolve their differences around conference tables or in courts of law rather than on the battle-fields. This I earnestly believe. But I also know, out of the experience of the years, that protesting is not enough, that personal pacifism is not enough. We must present a viable alternative to war. Peace must be positive. I have known for 40 years a pacifist quoted in the New York Times this morning as saying that if enough men burned their draft cards it would be impossible for this society to be at war, and "what Now this a glorious day that would be." sort of nonsense does no service to the cause of peace. This easy solution is no solution to the problem of war. It is a vain vision. We cry, "Peace, peace, when there is no peace." There must be a viable alternative peace." There must be a viacio at the to war before you may have peace. It is not to may be a supported by the support of the needed. And the alternative, as we have learned by experience, cannot be nonline-ment, noninvolvement, or unilateral dis-armament. These may well encourage war rather than prevent it. These are vain

How short our memories are if we forget the painful lessons of the past. We have tried in this country neutrality and non-involvement. We have tried unilateral dis-

armament. We were neutral when Japan invaded Manchuria and then China. We were neutral when Italy raped Ethiopia, when Hitler occupied the Ruhr, and then Austria and Czechoslovakia. We did not discourage the establishment of cruel dictatorships in Cuba and Santo Domingo, which were the prelude of the tragedies now apparent in these countries. We were not involved. We were nonalined. Prior to World War II we were not only neutral and noninvolved, but we were disarming in the face of the burgeoning military might of Nazi Germany, Fascist Italy, Imperialist Japan and Communist Russia. We did not Japan and Communist Russia. We did not prevent war for these are not the alternatives to war. Something more is needed. We face a similar situation today, but we must find a better solution lest our world bleed to death through small wars, Of commit suicide through one nuclear holocaust. But our opposition must be to all wars, not just to a war. We must find positive solutions, not simply negative actions.

Beyond that, as I have said, it is hopeless and senesiess simply to oppose war unless we provide an alternative to war in settling the problems of mankind. And I can see no alternative to war save the establishment of international law, and an international organization capable of administering that law. There is a splendid vision in the Bible of the day of peace "when nations shall beat their swords into plowshares and their spears into pruning hooks." But the Bible does not almply suggest the beating of swords and spears into the instruments of peace. The Bible says in prelude to that, "The law shall go out from Jerusalem." To the ends of the earth, the law. "And they shall rebuke strong nations afar off." The power to enforce that law—not simply against the weak, but against the strong. When the law goes but against the strong. When the law goes out, and the power is there to enforce the law, then we may in safety beat our swords into plowshares and our spears into pruning hooks. Then "nation shall not lift up sword against nation. Neither shall they learn war any more."

Prayer: Our Father, we pray for pure hearts, with sympathy and understanding for all men. We pray for those who differ from us. And we pray that all of us may be guided in wisdom to find in the perplexing confusion of our time, the way that shall lead the nations of the world to the establishment of peace on earth and good will among men. We ask it in Christ's name,

# Magazine Contradicted

EXTENSION OF REMARKS OF

# HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. MACKIE. Mr. Speaker, in recent weeks many newspapers and magazines have described the attorney general of Massachusetts as "the highest elected Negro" in America.

The following article, which appeared in the Flint, Mich., Journal on January 13, 1966, sets the record straight.

MAHAZIFE CONTRADICTES

WASHINGTON. Representative JOHN C. MACKIE, Democrat, of Flint, has gone to bat for State Supreme Court Justice Otis M. Smith, of Mackie's hometown.

Mackie has taken issue with a statement Newsweek magazine to the effect that assachusetts Attorney General Edward W.

Brooke, announced candidate for the Repub-Mean Senate nomination in the Bay State, is the "occupant of the highest elective office now held by a Negro in the United States." This, Markers says, simply isn't true.

As a member of Michigan's Supreme Court,

elected to that office in November 1962, Otis Smith occupies the highest elective office of

any Negro in the country, Markin points out.

Smith was named to Michigan's highest court after being elected auditor general of the Democratic ticket in 1960 and serving one term in that post.

# Congressman Horton Praises WBBF Editorial Reaction to State of the Union Address

EXTENSION OF REMARKS

# HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. HORTON. Mr. Speaker, again it is my pleasure to share with my congressional colleagues, through the medium of the Congressional Record, the editorial expressions of radio station WBBF in Rochester, N.Y.

Robert S. Kieve, WBBF's general manager, has kindly made available to me the text of his station's two-editorial reaction to the state of the Union message. I believe these commentaries incisively and intelligently call attention to the recommendations by the President which will be crucial to the work of our second

Therefore, I take pride in offering these statements, and I also am including the text of my current weekly column as evidence of my parallel concern with the issues raised in the WBBF editorials:

THE STATE OF THE UNION ADDRESS

JANUARY 13, 14, 1986.—How did you like the President's state of the Union address? Here are some of WBBF's reactions: We approved of Mr. Johnson's combina-tion of tough and conciliatory words on the

subject of Vietnam.

We were dismayed, though not surprised, we were dismayed, to see that he is still urging passage of a bill to prohibit State right-to-work laws, but we're pleased that he wants the Con-gress to consider measures to help the Na-tion deal with strikes that threaten the national interest.

We were pleasantly joited by the President's suggestion that Congressmen's terms of office should be 4 years instead of 2—and we were amused by the thunderous applause the suggestion drew—but we believe the proposal is new enough to call for a lot of careful thought before we take action on it.

We are highly favorable to the President's suggestion that the Congress should estab-lish tax incentives to stimulate small contributions to political parties and candi-

We applaud the President's interest in urging "legislation to strengthen the authority of Federal courts to try those who murder, attack, or intimidate civil rights workers " " and to increase penalties to a level equal to the nature of the crime."

And on the subject of the President's budget? We'd like to discuss that in a later

"STRINGENT. COST-CONSCIOUS ECONOMIES"

JANUARY 14-15, 1965.—At one point in his state of the Union address, President John-son told us: "While special Vietnam expendi-tures for the next fiscal year are estimated to increase by \$5.8 billion, all the other expenditures in the entire Federal budget will rise by only \$.6 billion."

We object to this way of describing the increase in the national budget. In the first place, "point six billion dollars" is really \$600 million. It is \$3 for every man, woman, and child in the United States. It is \$3 in addition to each individual's share of that \$5.8 billion in military expenses. And \$5.8 billion, incidentally, comes to \$29 per man, woman, and child.

And all of this—the \$3 per person, plus the \$29 per person—comes on top of the amount spent by the Government last year. It is an additional expense.

And if this way of expressing the expenditures oversimplifies, at least it is more accurate than the President's way of saving it. The President, after all, keeps talking about "stringent, cost-conscious economies" as if they resulted in cutting costs rather than in increasing them.

Since military expenditures are increasing significantly, we urge the President to keep nonmilitary expenditures right where they were last year. That's the least we can expect from "stringent, cost-conscious econ-

CONGRESS RECONVENES AND STATE OF THE UNION

(By Congressman Frank Horton)

One of the more eventful and event-filled weeks in Washington will be the subject of my report this week. Last week began with my returning to the Nation's Capital, after being home the week before to meet with the people I represent and tour the 36th Congressional District, and it ended with my departing from Capitol Hill for a round of weekend engagements in Rochester and our two counties of Monroe and Wayne. The days between held the reconvening of the 89th Congress for the 2d session, re-ceiving the President's state of the Union message, the introduction of 16 new Horton bills, conferences with constituents, and answering much mail prompted by problems our country is facing.

Many of these problems were mentioned in President Johnson's address to the joint House-Senate session last Wednesday night. However, as you heard and read, the President went well beyond the war in Vietnam, devoting fully half of his speech to expansions and extensions of domestic programs.

The question then that confronts Congress—and I foresee a very lengthy session if we are to cover all this ground—is de-fining and refining. First, I think we have the obligation of establishing more precisely than did the President's remarks, where we are headed in southeast Asia. We need this in order to assess that which it is prudent and proper to provide on the homefront during a period of combat and conflict.

I certainly do not want to lose our for-ward movement in education, health and other areas of Federal encouragement and support for local and State programs. There-fore, I intend to direct much of my work at setting priorities for domestic needs, pushing ahead with the essentials and exercising restraint with those items the American people will be willing to curtail because of our defense costs in Vietnam.

By sharpening the appropriations pencil, I feel we can ward off, at least temporarily, the reimposition of telephone and new car excise taxes and the other stringent tax me ures President Johnson is suggesting. I am especially opposed to excise taxes, which we

fought so hard to remove last year, becasue they strike hardest at those least able to

afford them, people with low incomes.

There are so many proposals the Fresident offered that a full reaction would run as long as the Chief Executive's 55 minute speech did. Although, I do plan to refer to them in the weeks ahead through this report, the point about expanding trade with Communist countries has me very concerned. I al-ready have brought this up to many of my colleagues and asked their support in seek-ing a detailed explanation of the proposal before we move any further.

The President said little that was new about our course in Vietnam. As I have indicated now for a number of weeks, this issue must be a central congressional con-cern and a full-scale debate is both desirable and demanded. The intensity of our involve-ment in Vietnam now must be matched by bringing this Communist confrontation into full view of the public.

# If We Defer and Appease We Mortgage the Nation's Tomorrow

EXTENSION OF REMARKS OF

# HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, January 18, 1966

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the Rec-ORD. I include the following letter from the Italian-American Veterans' Club of Chemung County in my congressional district. Simply but eloquently it sets forth the feeling of these veterans about the conflict in Vietnam and its meaning. TTALIAN-AMERICAN VETERANS' CLITE.

CHEMUNG COUNTY CHAPTE Elmira, N.Y., January 10, 1966. Representative Howard W. Robison.

Chemung-Tioga Counties, Ho Building, Washington, D.C., House Office REPRESENTATIVE ROBISON: In the last sev-

eral months, protests against the U.S. involvement in Vietnam has been sounded in scores of cities of this country. Most of the protesters are college students, al-though their numbers are comparatively few in relation to the schools they represent.

We do not know if the majority of these protesters are sincere in their beliefs that the United States should not be in Vietnam. What we do know and believe is that the majority of college students are behind their country wherever it may be committed to stop the growth of communism. In the November 1965 issue of the Reader's

Digest, a story appeared about one Capt. Christopher J. O'Sullivan. This man gave his life serving his country. His name could easily have been Jones, Schultz, Goldstein, or The point is that instead of this story inspiring pride in our country and the men who serve us, to some people it inspired derision. This story about one brave American soldier should make us as Americans proud and yet humble.

We, as a veterans organization understand. perhaps a little better than most, what our servicemen are being subjected to in Vietnam, Korea, and all overseas posts. We feel that the fight against communism is no different than the war against fuscism. The two, except for ideology, are the same: world domination.

The American people must face up to the facts that this is a war, perhaps not a total

war, but nevertheless a war. The stakes in Vietnam are high; victory in Vietnam will prove that the program of Communist aggression can be defeated. We could defer and appease, but history has proved that if we do, we mortgage the Nation's tomorrow.

Fraternally yours,

ALBERT BACCILE, Commander.

# Ma Turney Gets Mail Through

EXTENSION OF REMARKS

# HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966

Mr. MATHIAS. Mr. Speaker, we have been hearing a great deal in recent months about modernizing the Post Office Department to improve postal services. While studing new techniques and new tools, we must never forget that people, not machines, ultimately deliver the mail. In the midst of our criticisms of some aspects of postal service, we should pay deserved tribute to the many men and women who make their rounds faithfully and efficiently, day after day, in areas where this task is sometimes very difficult. One of these public servants is Mrs. Savilla Jane Turney, of Oakland, Md., who has been a star route contractor for the past 29 years. Ma Turney and her sons, Harry and Lloyd Turney, deliver the mail along a 60-mile rural route in rugged western Maryland. In recognition of their diligence and dedication to hard work, I would like to insert in the RECORD at this point a recent article from the Baltimore Sun about the Turneys and their route:

[From the Baltimore Sun, Dec. 30, 1965]
MA TURNEY GETS MAIL THROUGH

OAKLAND, Mb., December 29.—It's been years since Ma Turney were a pistol strapped to her ample waist, but the mail to and from this rugged western Maryland country still gets through, anyhow.

Getting it through is all in a day's work for Ma, formally listed in the records of the U.S. Post Office Department as Mrs. Savilla Jane Turney, star route contractor.

That's an independent carrier who hauls the mail, usually by truck and usually between towns not serviced by regularly scheduled trains or airplanes.

#### PAMILY AFFAIR

For 29 years, first with her husband until his death in 1948 and more recently with her two sens, Mrs. Turney has made the daily truck run linking points along a 60-mile route. It stretches from Terra Aita, W. Va., about 10 miles north of her Oakland home, to Cumberland, Md., 50 miles northeast.

Cumberland, Md., 50 miles northeast, "I like the work and the help I work with," said Mrs. Turney.

Half of the help is Harry Turney, 36. The other half is Lloyd Turney, 30.

To make their hauls, they use a pickup

To make their hauls, they use a pickup truck and a larger one.

"We've worn out about six others," said

About 50 years old, she still helps her husky offsprings load and unload their trucks. A blue denim apron protects her dark print dress, and a hairnet keeps her scarcely gray tresses in place. Her hands are big, gnarled, and calloused.

Mrs. Turney also handles the scheduling, does the paperwork, and accompanies whichever driver making the afternoon Oakland-Cumberland run.

They leave home at 5 p.m. and pull into Cumberland shortly before 7 p.m. After unloading their bulky canvas bags of cargo at the downtown post office, they catch a few hours of sleep in a nearby apartment, then return to load up again in time for a 6 a.m. departure for Westernport, Swanton and Oakland.

#### ONCE CARRIED GUN

The other son, driving the smaller truck, makes a later Oakland-Cumberland trip, arriving about 10 p.m. Four hours later he's off with a load of mail for Keyser, W. Va., Westernport and Oakland.

A reporter, thinking of the hazards in driving over snowswept mountains, recently asked Ms if she ever had any trouble. She misunderstood the question, and that's when she mentioned the pistol.

"Oh, I used to carry a .45-caliber gun," she said in the manner of a mail-hauler not to be trifled with, "but I don't anymore."

Back in Oakland after the Cumberland run, Ma sweeps up and scrubs down St. Mark's Lutheran Church. She's been the custodian there for 27 years.

One year she also baked huckleberry pies and passed them out to mail car crewmen on the end of her run. A woman has to do something with her spare time.

# G. G. Dowling: South Carolina Business Leader

EXTENSION OF REMARKS

# HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. RIVERS. Mr. Speaker, the Chamber of Commerce of South Carolina has just installed Mr. G. G. Dowling of Beaufort, a distinguished low-country attorney and community leader, as its State president.

I would like to take this opportunity to congratulate Mr. Dowling and to commend the chamber for such a wise choice. I cannot think of a more qualified person to head the organization. Well known throughout South Carolina and neighboring States, this dedicated public servant will bring energy, talent, and knowledge to the position. His enviable ability as a leader will do much to bolster the chamber's work. The News and Courier—one of my State's outstanding newspapers—paid an appropriate editorial tribute to the new president. Under leave to extend my remarks to the Appendix of the RECORD, I would like to include the editorial in my remarks.

BUSINESS LEADER

Installation Thursday at Columbia of a new president of the Chamber of Commerce of South Carolina brings a lowcountryman of distinction to the business leadership of our State. G. G. Dowling of Beaufort is a lawyer with a background of public service and a broad acquaintanceship with the people and the needs of South Carolina. He is a student of economics and politics who also has a practical knowledge of both fields. He has traveled abroad and has a feeling for the context of world events.

Mr. Dowling has a sense of obligation, supported by articulate skill, to impart his thoughts to others, both as an instructor in political science and economics at the University of South Carolina's branch in Beaufort and as a member of various committees and commissions. We congratulate the State chamber on obtaining such an able leader for 1966, and we thank Mr. Dowling for undertaking another assignment in public service.

# Year 1964 Money Income of Male War Veterans

EXTENSION OF REMARKS

# HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 12, 1966

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I include the latest statistics on the "1964 Money Income of Male War Veterans":

YEAR 1964 MONEY INCOME OF MALE WAR VETERANS, DECEMBER 30, 1965

The 1964 median personal income of war veterans was \$6.300, according to a sample survey of the 20.9 million male war veterans in the civilian noninstitutional population of the United States.

Median income varied considerably according to age. It ranged from a high of \$6,900 for veterans 35-44 years old (mostly World War II veterans) to a low of \$2,100. for veterans 75 or more years old (predominately World War I veterans)—a difference of \$4,800. Median income was \$6,400 for war veterans 25-34 years old; \$6,500 for those 45-54 years old; \$5,300 for those 55-64 years old; \$2,700 for those 65-69 years old; and \$2,400 for those 65-69 years old; and \$2,400 for those 70-74 years old. The median income of war veterans 75 years old and older, at \$2,100, was only one-third as high as the median of all veterans.

The 15.5 million war veterans who worked at year-round, full-time jobs (at least 35 hours a week for 50-52 weeks, including paid vacations and sick leave) had the highest median income in 1964, at \$7,000. This compares with a median of \$4,300 for the 3.5 million veterans who worked part year (less than 55 hours a week), and with a median of \$2,100 for the 1.8 million veterans who did not work at any time during 1964.

The year-round, full-time workers had higher median incomes in every age class than veterans who worked part year and/or part time or who did not work in 1964. At age 35-44 years, where the peak median income of all veterans occurred (86,900), the median income for year-round, full-time workers (87,300) was over half again higher than the \$4,700 median of part-year and/or part-time workers, and over 5 times the \$1,400 median of nonworkers. Most of these 35-44 year-old veterans (82 percent) worked all year at full-time jobs, while 17 percent worked part year and/or part time, and only 1 percent did not work at any time during 1964. At age 65-69 years, however, half or 2 out of 4 did not work, 1 veteran in 4 worked part year and/or part time, and another worked full time. There was still a

contrast in medians for this older age, but it was not so great. The veterans who were retired and did not work had a median of \$2,200, appreciably lower than the median (\$3,000) of the part-year and/or part-time workers, and substantially lower than the median (\$5,200) of 65-69 year old veterans who still worked at year-round, full-time

About 9 percent of the 20.9 million war veterans did not work in 1964, and most were out of the labor force on account of illness, disabilities, or retirement. Median income disabilities, or retirement. Median income for these veterans rose steadily from a low of \$1,400 for veterans 35-44 years old to a high of \$2,200 for veterans 65-69 and 70-74 years old—a range of \$800—and then dropped to si,900 for veterans 75 years old and older. Median income for the 1.4 million nonwork-ing veterans 55 years old and older, at \$2,100 was \$500 higher than the \$1,600 median of the 0.4 million nonworking veterans under A5 years old: nearly all older veterans received income from Social Security retirement payments, VA and private pensions, annuities, and other sources of income not available to most vounger men.

Although most war veterans were com-paratively well off, over 2 million had money income in 1964 of less than \$2,000. About 600,000 received between \$1,500 and \$2,000, another 600,000 received between \$1,000 and \$1,500, and 800,000 had income less than \$1,000. About 58 percent of these low-income veterans worked during the year, and of these, over 7 out of 10 were under 55 years of age, usually the prime earning years. Almost 23 percent (460,000) worked all year at full-time jobs, and about 8 out of 10 of these fully employed veterans (370,000) were under 55 years of age. About 35 percent worked only part year and/or part time, and of these, 7 out of 10 (500,000) were under 55 years old. Altogether, over 4 out of 10 of these veterans (870,000) with low personal incomes in 1964 were under 55 years of age. About 40 percent (830,000) of the low-income veterans had no earned income in 1964, and of these, only a relatively few (200,000) were younger than 55 years of age.

As a whole, war veterans improved their economic lot in nearly every age group in 1964, compared to their 1963 counterparts. Their median income, at \$6,300, was up 3 percent from the 1963 level of \$6,100. Nearly all of this increase occurred among year round, full-time workers with a median of \$7,000—up 4 percent from the median of \$6,700 in 1963. These veterans benefitted \$6,700 in 1963. These veterans benefitted most from the improved wages and business activity in our expanding economy.

The detailed data presented in the attached tables are from special tabulations of the Census Bureau's Current Population Survey. made under contract for the Veterans' Administration.

#### SOURCE AND RELIABILITY OF THE ESTIMATES Source of data

Information about the 1964 income of male civilian noninstitutional war veterans in the United States was derived from the Bureau of the Census' March 1965 Current Population Survey sample of approximately 25,000 households. The income distributions by age were applied to the independent VA estimates by age of the male civilian noninstitutional war veteran population in the United States to develop the income data presented in this report. Although income data are for the year 1964, the age refers to March 1965. (For details of the survey see "Consumer Income Current Population Reports." sumer Income, Current Population Reports series P-60, No. 47, Sept. 24, 1965, U.S. Bureau of the Census, Washington, D.C.)
War veterans are men who served in the

Armed Forces during a war period (Spanish-

American War, World War I, World War II, Korean conflict), have been separated from active duty and are now in the civilian noninstitutional population. The civilian non-institutional population excludes all mem-bers of the Armed Forces, and inmates of penal institutions, chronic disease hospitals, nursing homes, and the like.

## Reliability of the estimates

Since the estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and enumerators. any survey work, the results are subject to errors of response and of reporting, as well as being subject to sampling variability.

The standard error is primarily a measure of sampling variability; that is, of the varia-

tions that occur by chance because a sample rather than the whole of the population is surveyed. As calculated for this report, the standard error also partially measures the effects of response and enumeration errors but does not measure any systematic blases in the data. The chances are about 68 out of 100 that an estimate from the sample will differ from a complete census figure by less than one standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error. following table shows the approximate standard error of an estimated percentage computed by using sample data for both the numerator and denominator of the percentage. The size of the standard error depends upon both the size of the percentage and the size of the class upon which the percentage is based.

Standard errors of estimated percentages (68 chances out of 100)

Estimated percentage	Base of percentage (thousands)

## On Congressional Travel

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 18, 1966

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article concerning the value of travel by the Members of the Congress.

The article was written by the Honorable Douglas MacArthur II, the Assistant Secretary of State for Congressional Relations and one of the most able men serving our Nation.

The article appeared in the November 1965 Department of State Newsletter and follows:

MACARTHUR: ON CONGRESSIONAL TRAVEL
(By Douglas MacArthur II)

I have long believed, and my present asaignment has confirmed me in that belief, that there are few areas in which the Department and the Foreign Service have greater opportunities for constructive accompilanment than in dealing with the Congress.

During the postwar era, it has become increasingly apparent: that our foreign policy cannot be successfully executed without full congressional support; that the congressional role in foreign policy is growing in scope and complexity; that this is a legitimate and necessary development in the conduct of a leadership foreign policy by a democracy; and that the demands which this growth makes on the Department are matched only by the demands it places on the Members of Congress themselves.

Our function, of course, is not—and indeed never was—to resist congressional participation in the policymaking process, but rather to welcome it and to help make it an efficient and mutually profitable one—for the Department and the Service, the Congress, and above all, for the American people whose

interests we all serve.

There are countless ways in which this is being done here in Washington, such as: increased briefings of Members and committee staffs; greater contact by Members of Congress with the Diplomatic Corps and foreign visitors; assigning junior and middle grade FSO's to brief tours of duty in congressional offices; and the heightened and encouraging departmental effectiveness in the handling of congressional correspond-

A major area of immediate opportunity for increased understanding is the field of congressional travel. The misguided tendency to regard congressional travel duties as an annoying chore is, happily, a disappearing one. Those of us who have had repeated opportunities to deal with traveling Members of Congress and their principal staff assist-

ants have learned that congressional travel, if handled properly and with imagination, can be a great source of benefit to the Department as well as to the Congress.

Perhaps even more important for our FSO's in the field, it presents a unique opportunity to acquaint Members in detail with the problems we are facing abroad and thus engage their understanding and support. At the same time it gives those in the field a new insight into the concerns and worries of the American people and their elected Representatives in the field of foreign affairs.

It is difficult to imagine people who have heavier demands on their time and energies than Members of our Congress. They have their subcommittee work, their committee work, quorum calls, rolicalls, national problems, the problems of their constituencies, and a seemingly never-ending stream of visitors from their home district or State. Many of them simply do not have as much time as they would like when they are in Washington to devote to foreign affairs. When they travel abroad, on the other hand, they are free of many of these pressures and do have the time to focus on important foreign policy problems.

Contrary to the impression given in some irresponsible quarters, congressional travel abroad is neither frivolous nor insignificant, and I for one would recommend that every Member travel as much as his schedule will permit. It is a serious responsibility of their office enabling them to gather important material for further legislative work as well as deeper understanding of the great issues of war and peace in a troubled world. It is the occasion for them to observe at first hand how the Foreign Service functions and how, and why, our various programs overseas are working. My experience, and I am sure yours, has been that they are, almost without exception, eager to take advantage of

this opportunity.

It is thus vitally important that our officers make the most of this chance to show the Service at its best as an effective and efficient instrument. We can give Members first-hand experiences that they can draw upon in responding to their constituents' questions or criticisms about the Service as well as about programs and policies.

The proper care and handling of congressional visitors is a task that demands the priority attention and best performance of everyone in the Service from the Chief of Mission right on down. Nothing less than this will do.

#### People and Law

EXTENSION OF REMARKS

#### HON. CLAIR CALLAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 18, 1966

Mr. CALLAN. Mr. Speaker, it is not often a Member of Congress has the

opportunity and pleasure to discuss a concrete action program instituted by interested citizens because they saw a need and decided to meet it. I have that distinct pleasure today, Mr. Speaker.

A group of interested citizens of Lincoin, Nebr., have for some time been concerned with the phenomenal increase in crime in the United States and have decided that citizen action is one of the few really long-term, effective methods available to counteract this national disease.

Mr. Speaker, Lincoln, Nebr., is not faced with the massive increase in crime that has plagued other areas of the country. But any crime is too much and Lincoln is a growing city and planning for the future has always been one of its trademarks.

The Lincoln Junior Chamber of Commerce, led by a member of my human iresources committee, Mr. Ben Goble, has devised PAL which stands for people and law. An individual citizen may become a member for a small membership fee and participate in the activities of the organization—all of which are supported by the dues and other donations.

PAL will publish periodic bulletins on law enforcement, crime statistics, how the individual citizen may aid law enforcement officials, and training programs. In addition, PAL will sponsor a monthly award to a local law enforcement official who has distinguished himself as an officer and a citizen, sponsor a scholarship fund to be used by a student in the field of law, criminology or other related fields, and act as a resource group to promote the coordination and dissemination of information pertaining to law enforcement activities to schools, civic, service, and religious groups.

I commend the idea to those in other areas who face far greater problems in the area of rising crime rates.

#### Report on Vietnam

EXTENSION OF REMARKS

# HON, JAMES D. MARTIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 17, 1966

Mr. MARTIN of Alabama. Mr. Speaker, following the adjournment of Congress it was my privilege to make a study tour of southeast Asia, including

Vietnam. This trip was not made as a

part of any committee, but at my own expense so that I could report to the people of the Seventh District of Alabama, the situation in Vietnam as I saw it from firsthand inspection.

Upon my return I issued a report to my constituents on Vietnam and, under permission to extend my remarks in the Record I would like to include that report. Of course, there have been later developments since my return from Vietnam, including the massive peace drive launched by the President over the Christmas period.

I believe we should do all possible to seek a peaceful solution to the war in Vietnam and I find no fault in the efforts to do so. My concern is, that in our intense desire for peace that we may settle for less than victory. I would hate to think that Vietnam will become another Korea and that 12 years from now we will still have thousands of American boys still stationed in those jungles to maintain a peace that is not really a peace, but rather a stalemate. I would hate to think that we would get a peace in Vietnam by giving in to the Communists as we did in Laos and permit a Communist takeover under the guise of a coalition government.

We should be prepared to negotiate, but at the same time we should maintain our strength, our capacity for victory and make sure that the enemy knows we have that capacity and will use it if forced to do so by their failure to end their aggression.

My report on Vietnam, which was released in December, follows:

SPECIAL REPORT ON VIETNAM

(By JIM MARTIN, Member of Congress)

The cold war between the Communist conspiracy and the free world has become a hot and blazing war in Vietnam. Contrary to the statements of the pacifist and pro-C munist demonstrators, the war in South Vietnam is not a civil war against a tyrannical government. It is naked aggression of South Vietnam by Communist North Vietnam, encouraged and supported by Red China and Russia. I have just traveled more than 20,000 miles through all of Asia and into the Middle East for a firsthand investi-This report is based on conditions as I found them in my tours of the villages of Korea, Taiwan, South Vietnam, Thailand, and India; through briefings by our civilian and military leaders and through lengthy conversations with the businessmen, industrialists, political leaders, and the people of all the countries I visited.

Any study of the war in Vietnam must begin with the stated creed of the Communist leaders of Red China. Mao Tse-tung, head of the Communist Party in China, has stated:

"Every Communist must grasp the truths. Political power grows out of the barrel of a gun. Whoever has an army has power, for war settles everything. The theory of war and strategy is the core of everything."

Every action of Red China has been based on that creed. They have attempted to strup discontent and revolution in both Africa and Asia and where subversion did not work, they resorted to upright aggression as in Korea and now in Vietnam. This is the enemy we face, and the Communist goal of world domination has never changed. Even now the only differences between Red China and Soviet Russia is on how to accomplish the goal. The Russian leaders believe the world can be subverted through subtle means

while the Chinese leaders believe in the hard core Communist line of Lenin and Stalin, that the world must be conquered through war.

My first impression in my travel through Asia was the lesson of Korea. We may be making the same mistake in Vietnam. Twelve years after the armistice in Korea, the United States still has 50,000 American soldiers there facing the Communist enemy eyeball to eyeball across the 38th parallel. Our military was prevented from winning the war in Korea because of political decisions which gave enemy forces a safe sanctuary in Chinese territory across the Yalu River and because they were prevented from bombing the supply lines leading into North Korea from Bed China.

Today, in Vietnam our military forces are facing many of the same restrictions. We cannot win the war in Vietnam by sending American boys into the gristmill formed by the countless thousands of North Vietnames and Red Chinese which can be thrown against them from safe sanctuaries in Red China, Cambodia, and Laos. It is clear to me, and I am convinced my views are shared by our generals and commanding officers in Vietnam, that we should win the war and then negotiate the political problems.

We can win the war if we give the military the authority to win it. First. We should blockade the harbor at Hai Phong, mining it if necessary and warning all nations that no more material of war will be permitted. We should authorize the Air Force to bomb strategic military targets such as the two railroads and mountain passes in North Vietnam which are direct routes for shipping war supplies into North Vietnam from China. We should also bomb military airfields, actual missile sites wherever they are located even within the safe sanctuary around Hanoi. Bombing targets should also include munitions factories as well as gasoline and fuel storage tanks, all of which are now out of bounds for our Air Force within certain restricted areas. Third. We should make clear to any enemy troops threatening the South Vietnamese that there will be no sanctuary from which they may safely in-The United States has the potential forces to smash the Communist enemy in Vietnam, and we should assure our commanding general there that he will be given whatever forces and supplies necessary to The military is ready—the American people are in support of a policy to win-it is up to the administration to give the word.

CLEAR POLICY RACKED BY DEEDS IN NEEDED

While the hot war is in Vietnam, we can not isolate one single country in Asia. The target of Red China is all of Asia, then Africa. finally, the world. Like it or not, the United States is looked to for leadership by those nations and those people who still hope to remain free. From my conversations with people in all walks of life in the countries I visited, I find that the people of Asia are concerned about our intentions and our willingness to back our words with deeds. They are not sure we will stick with them when the chips are down. They are afraid of another stalemate such as Korea. They are afraid we may withdraw our troops before the victory won. The statement by the Secretary of Defense prior to the last election that will bring the boys home from Vietnam by Christmas," caused a shattering blow to the morale of the South Vietnamese. that we were getting ready to pull out, many of the village chiefs and others in South Vietnam prepared to make peace with the Vietcong. Sharing the belief that we would not stay, the Vietcong were able to consolidate their hold on nearly 80 percent of the land and the people of South Vietnam. and and the people of South Vietnam. In addition, American mothers were given the false hope that their boys would not have to fight. We are paying in blood for this mistake in judgment. We must make it clear that the United States stands with all those who want to be free and are determined to fight for their freedom. Then we must show by deed, that is by force of arms and determination, that we are prepared to win the war in Victnam and meet head on any future Communist aggression.

TRIP NO EXPENSE TO GOVERNMENT

In the months ahead I will report to you in greater detail on my tour of inspection. I would like to make two things clear. This trip was made at my expense. My administrative assistant accompanied me and he, too, paid his own way—as did Mr. Wallace Malone of Dothan. The trip was made with the encouragement of the Department of State and the commanding officers in the field because they feel it is most important that Members of Congress see at first hand actual conditions in Vietnam, the need for all-out effort, and the manner in which our troops are meeting the challenge.

Job Corps Has Backer in Flint

EXTENSION OF REMARKS

HON. JOHN C. MACKIE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1966
Mr. MACKIE. Mr. Speaker, the Office

of Economic Opportunity's Job Corps program is starting to pay dividends. Mr. Speaker, I urge my colleagues to read the following excellent story on one

mr. Speaker, I urge my coneagues to read the following excellent story on one Job Corps graduate that appeared recently in the Flint, Mich., Journal. The tax dollars used to train Leonard

The tax dollars used to train Leonard Hamilton will, I am sure, be repaid a hundredfold in the years ahead. The money being spent on the war on poverty is one of the best investments America can make in its future:

[From the Flint (Mich.) Journal, Dec. 26, 1965]

JOB CORP HAS BACKER IN PLINT
(By Herachel P. Fink)

Six months ago Leonard Hamilton had trouble finding a job.

He was 20 years old and had dropped out of school after the 10th grade. For a while he worked as a janitor. Then he found work clearing construction sites of weeds and pop

bottles. Sometimes he couldn't find work.

Today, Hamilton sits at a draftsman's table
a brightly lighted office at Consumers
Power Co. He has a trade that he hopes
will mean the start of a new life for him.

The Job Corps, part of President Johnson's war on poverty, gave Hamilton the chance to do something for himself. He is the first graduate of a Job Corps camp to return to the Fint area.

Since last May, about 30 area men, aged 16 to 21, have gone to Job Corps camps around the country for training. Many of them, like Hamilton, were high school dropouts who found that thier lack of job skills made them virtually unemployable or suited only for manial labor.

only for menial labor.

Hamilton looked at the Job Corps as "my last hope." He heard about it while watching television last April and applied at the Michigan Employment Security Commission's Fiint office, 706 North Street.

In June, he was assigned to the Gary Job Corps Center in San Marcos, Tex.

At the camp, Hamilton was allowed to choose from a variety of skills being taught. He picked a drafting course. Besides job

training, corpsmen take remedial arithmetic

Pay in the Job Corps is \$80 a month. The Government places \$50 of that in a bank account for the corpsman which can be col-

account for the corpann which can be con-lected when he leaves the center. Although corpanne are given 2 years to complete their training, Hamilton wasted no time. He completed the course last month.

Thomas J. Tomaskovich, employment rvice supervisor for the Flint MESC office, said that Hamilton completed the drafting course "with honors.

Hamilton's Job Corps report rated him excellent in connection with his potential in the drafting field."

Tomaskovich, also reported that Hamilton's progress at the camp was so rapid he was offered a job as an assistant instructor. "But I was in a hurry to get back and get to work," Hamilton recalls.

On the strength of his Job Corps record,

Hamilton was offered a job by Consumers as an engineering clerk. His department lays out power and gas distribution lines. In the job he will use his drafting skills to make layouts.

The job usually requires a high school diploma and drafting experience," said Ward Bloxson, personnel and safety supervisor Consumers. "We felt, however, that used on his outstanding record in the Job at Consumers. one of the highest there-he qualifled for a chance."

Hamilton considers joining the Job Corps "one of the best things a boy can do if he

wants to learn.

Life at the Job Corps camp wasn't easy, he said, "but if you want to do something bad enough, you learn to take the bad with the good.

He emphasizes that a youth "has to want to learn, to profit from the Job Corps."

He is happy about his decision to join. "When things get hard, you can't get unskilled work. But when you've got a trade, you don't have much to worry about."

Hamilton doesn't plan to end his educa-tion with his Job Corps graduation. He hopes to take advantage of a Consumers' program which will pay 75 percent of college tuition costs. He wants to take cla Flint Junior College. Eventually, he would like to earn a college degree.

#### Gen. James M. Gavin

EXTENSION OF REMARKS OF

# HON, RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, January 13, 1966

Mr. McCARTHY. Mr. Speaker, one of America's great soldier-statesmen is Gen. James M. Gavin. A beribboned World War II paratroop commander, General Gavin was a strong exponent of more aerial mobility for ground troops. This sky cavalry concept is now being used effectively by the United States in

After distinguished service as our Ambassador to France, General Gavin returned to the United States. He is now president of that eminent research firm, Arthur D. Little, Inc., of Cambridge, Mass.

In a letter appearing in the February 1966 issue of Harper's magazine, the general warns that a massive buildup of

U.S. forces in Vietnam could prompt Red China to send troops there and reopen the Korean war as well. He also emphasized:

To increase the bombing and to bomb Hanol-or even Peiping-will add to our problems rather than detract from them, and it will not stop the penetrations of North Vietnam troops into the South.

I concur with the general's view of this matter. Indeed, it was this conviction that motivated me to join recently with 16 of my House colleagues in writing the President to express our vigorous opposition to those, including Richard Nixon and Barry Goldwater, who have urged the United States to extend its bombings to the Hanoi area.

General Gavin also makes the following vital point. He said that the 190,000 U.S. troops already in the Vietnam theater would suffice "if we should maintain enclaves on the coast, desist in our bombing attacks on North Vietnam, and seek to find a solution through the United Nations or a conference in Geneva."

This proposal is similar to one made some months ago and repeated since then by the distinguished Columnist Walter Lippmann.

And the Washington Post, in an editorial Sunday, January 16, took a similar approach:

It is our purpose-

The Post declared-

to deny North Vietnam the fruits of a war of national liberation, and we can do that by successfully holding the areas now occupied and slowly and persistently enlarging them territorial sweeps instead pursuit.

Under leave to extend my remarks and include extraneous matter, I include here an Associated Press report on General Gavin's letter which appeared in the Washington Post of January 17, and the Post's editorial of January 16:

[From the Washington (D.C.) Post, Jan. 17, 19661

GAVIN SAYS HANOI BOMBING COULD BRING IN PRIPING UNITS

New York, January 16.—Gen. James M. Gavin declared today a massive buildup of U.S. forces in Vietnam may prompt Red China to send troops there and reopen the Korean war as well.

The 58-year-old former chief of U.S. Army research and development suggested that America concentrate instead on holding major bases along the South Vietnam coast

while diplomats seek an end to the fighting.
In a letter appearing in the February

issue of Harper's magazine, Gavin said:

"To increase the bombing and to bomb Hanot—or even Peiping—will add to our problems rather than detract from them, and it will not stop the penetrations of North Vietnam troops into the south.

Also, if we were to quadruple, for example, our combat forces there, we should then anticipate the intervention of Chinese 'volunteers' and the reopening of the Korean

ESCALATION SEEN LIKELY

"This seems to be the ultimate prospect of the course that we are now on.

Gavin said the 190,000 U.S. troops already in the Vietnam theater would suffice "if we should maintain enclaves on the coast, de-sist in our bombing attacks on North Vietnam, and seek to find a solution through the United Nations or a conference in

He asserted that an attempt to make all of South Vietnam secure from the Communists "would take many times as much force as we now have in Vietnam"—and risk a fresh outbreak of Red Chinese aggression in

the Korean pattern.
"I do not for a moment think that if we should withdraw from Vietnam the next stop would be Waikiki," Gavin said. "The Kra Peninsula, Thailand, and the Philippines can all be secured, although we ultimately might have heavy fighting on the northern frontiers of Thailand."

Emphasizing that he spoke "solely from a military-technical point of view," Gavin re-called that he was Chief of U.S. Army plans and operations at the time of the French military disaster in Dienbienphu.

He said Gen. Matthew B. Ridgway, then Chief of Staff, "directed that we go into the situation quite thoroughly in case a decision should be made to send U.S. forces into the Hanol delta."

"The more we studied the situation," Gavin wrote, "the more we realized that we vere, in fact, considering going to war with China, since she was supplying all the arms, ammunition, medical, and other supplies to Ho Chi Minh

"If we would be, in fact, fighting China, then we were fighting her in the wrong place on terms entirely to her advantage."

Gavin said southeast Asia is no place to take on Red China in military combat. "Manchuria, with its vast industrial com-

plex, coal, and iron ore, is the Ruhr of China and the heart of its war-making capacity," "There, rather than in southeast Asia, is where China should be engaged, if at

SHOWDOWN NOT YET DUE

Gavin added that if Red China continues aggression and arms itself with nuclear weapons "the time may come when China will bring upon herself a nuclear war. But that time is not here yet."

Gavin, a paratroop commander in World War II, retired from the Army in 1958 bee of differences with the Eisenhower administration over modernizing the Armed Forces. He was a particularly strong exponent of more aerial mobility for ground

Gavin called this "the sky cavalry concept, which we are now employing in South Vietnam" and commented:

When I retired in 1958. I said that I would be happy to serve as a private in the Army if it were the kind of an Army that I wanted it to be.

"I think it is that kind of an Army

[From the Washington (D.C.) Post, Jan. 16, 1966] AFTER THE PAUSE

The President very wisely has put no terminal date on his peace offensive or on the pause in air operations against the North while the peace efforts go forward. Since there has been no known response from Hanoi, either affirmative or negative, it is too early to say whether there will be any results. Sooner or later, if there are no negotiations at all, consideration will have to be given to the next military moves.

There is a powerful impulse in the Congress, in the country, and in some places in the executive department, for a resumption of air activity and for an initiation of full-scale warfare against the North to put a speedy end to a disagreeable war. Powerful as this impulse is, and strong as the support may be for the use of more military muscle, it is to be hoped that the President will reject the counsels of those who wish to es-calate the war. There is not much reason to believe that an unlimited air war would achieve decisive results. North Vietnam does not present the kind of industrial targets that are peculiarly vulnerable to mass bombing. Even if the United States were indifferent to the moral arguments against mass bombing (and it is not indifferent), the practical results probably would not be any more decisive than were the results of area bombing in World War II. While stepped-up interdiction of communications might further diminish the ability of North Vietnam to give logistic support to a conventional military invasion, there is not much hope that it would stop infiltration of troops in small units. And, even if the bombing succeeded in all these counts, the Chinese Communist support of North Vietnam might make the results indecisive. As long as air operations are directed at North Vietnam (and not China), we are embarked upon the task of kicking the cart until the horse cries for mercy.

The unconditional withdrawal of U.S.

The unconditional withdrawal of U.S. forces is a course for which there is little responsible support in the country. And the primary reason is that no one can give any assurance that this policy would be any more successful as a means of ending the war in southeast Asia than the policy of escalating the conflict. Escalation might simply move the war to another and larger theater. Withdrawal also would be likely to move the conflict to another theater in

another country.

To continue or expand the present offensive against the Victoong in the south, by the employment of the tactics now being pursued, is going to involve a heavier commitment than we have so far made if it is to have any reasonable prospect for success. Such an expanding commitment, accompanied by rising commitments of North Victnam and China and Russia, might easily produce another sixlemate at a higher level.

The facts of the situation seem to argue strongly for a somewhat different application of the military power we feel we can appropriately commit to the area. No doubt it is an alternative that already has been explored—and perhaps even rejected. But it can be argued quite persuasively that in the next phase of the war, the United States and its allies might wisely alter the character of the war in the direction of a more economical and efficient deployment. At present, we are engaged in an offensive-defense, employing both ground and air forces in the hot pursuit of Vietcong elements into terrain offering the greatest advantages of concealment and the most serious hazards to pur-suing forces. To seek out and destroy a guerilla force by such tactics, overwhelming force is required on a ratio of at least 10 to 1. The present ratio, counting all South Vietnam and American and allied forces is 826,000 to 230,000 according to the Mansfield re-port—and the rate of North Vietnam infiltration is on the order of 1,500 a month. the possibility or feasibility of achieving antiguerrilla ratios like those in Malaysia and the Philippines is remote.

um

If it is difficult or impossible for us to annihilate the Vietcong without a military investment that looks excessive, it can be made impossible for the Vietcong to achieve their objectives without a deployment beyond their means. Were our tactics to alter from pursuit to a take-and-hold basis, the burden for the offensive could be shifted to the Vietcong. It is our purpose to deny North Vietnam the fruits of a war of "national liberation," and we can do that by successfully holding the areas now occupied and slowly and persistently enlarging them by territorial sweeps instead of jungle pursuit. The American and South Vietnam forces, while steadily expanding the occupied areas and pushing out their defense perimeters, would be chiefly engaged in garrison operations. These, of course, are wasteful in terms of manpower employed but sconomical in terms of manpower expended. They are less hazardous and more feasible for a country in

command of air power and thus able to maintain communications with scattered garrisons than they were for the French. Within the areas occupied by the South Vietnamese and by our forces, a program of rehabilitation and reconstruction could be pushed forward, once it becomes possible to afford the peasants and villagers security.

The military priorities under such a strategy, would be (1) securing of areas already held, (2) expansion of that territory only as rapidly as we are prepared to take and hold new real estate, (3) pursuit operations only where they can be carried out with greatest economy of force, (4) air operations chiefly in close suport of territorial enlargement, and, as indicated, against large and vulnerable enemy concentrations, (5) air interdiction of routes from the North, scaled to the degree of inflitration, (6) no air attack on North Vietnam for the time being or unless surveillance discloses massing for offensive operations against the South

This is no quick and easy formula for an offensive military success in conventional military terms. It contemplates neither the annihilation of enemy forces, the crushing of the enemy's will to resist or the solid gains of invasion and quick occupation. It jects the steady, slow, and patient pacification and reconstruction of South Vietnam. It must be acknowledged that success will consist of denying the victory of the North Vietnamese and the Vietcong in all the territory we are prepared to take and hold and then rebuilding that occupied area and providing the inhabitants with a higher standard of living. The forces required will be quite large; but the losses in combat should be much smaller with the defending forces enjoying the advantages of well-equipped men in strong defensive positions. It will cost more money; but it should cost fewer lives. It will take more time-but we should not be in a hurry.

Away from the combat areas, the strategy has the virtue of making it clear to the world that our role is purely defensive. The war in South Vietnam will come to a stop if the forces of the National Liberation Front quit their attacks. Every dispatch from the war areas will make it plain that it is the Communists who are responsible for loss of life and destruction of property. In the absence of negotiated peace there can be, under this formula, a tacit peace, whenever the Vietcong wish it.

This is no blueprint for either victory or peace in a hurry. But it is a blueprint that involves the surrender of no principle; it makes possible the deescalation of the conflict; it contemplates the confinement of the war to the area now involved. It does not have the simplicity of victory or surrender. It plainly looks forward to an admittedly remote date when enough of the territory of South Vietnam will be secure so that there can be normal elections under which the people can pick a government of their own choice—and decide for themselves whether they wish to affiliate with North Vietnam or retain their independence.

Tribute to Hon, Herbert C. Bonner

SPEECH

HON. CHARLES A. MOSHER

OF ORIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 12, 1966

Mr. MOSHER. Mr. Speaker, I wish to join my colleagues in paying homage to the late Honorable HERBERT C. BOWNER. It was my privilege to serve but briefly

with this courtly gentleman on the Committee on Merchant Marine and Fisheries, which he so ably chaired for more than a decade.

My great regret is the brevity of my association with Herb Bonner. It is my personal loss that I did not know him sooner. He was a man whom I rapidly grew to respect and admire. Dedicated in purpose and undaunted by adversity. Chairman Bonner gave unsparingly of himself to the service of his constituents, the development of a strong American merchant marine, and the preservation of this Nation's natural resources. The product of his tireless efforts stand in tribute and memorial to his skill and dedication.

The late Father Edmund A. Walsh, S.J., of Georgetown University, was a stanch advocate for a strong American merchant marine. Men such as Congressman Bonner must have been in his thoughts when Father Walsh wrote:

A statesman is the rare thinker who keeps his gaze fixed on the next generation. He will have learned wisdom from past errors and schooled himself to distinguish the deep and permanent residue of economic history from the surface tones that speak only of quic. gains and enhanced profits. He will be a statesman in the measure that he teaches men to fasten on abiding values and rescues them from the lure of the temporary and the transient.

Such a public leader was the late Honorable Herbert C. Bonner. His untimely death is a loss not only for his beloved State of North Carolina, but for the Nation as a whole.

To the widow of our late beloved chairman and to other members of his family. I extend my heartfelt sympathy in this their hour of bereavement. All our hearts are saddened over their loss, but comforted in the knowledge of the privilege of having known and labored with the late Honorable Hersert C. Bonner. I knew him as a wonderfully generous, considerate, always fair, and effective chairman under whose leadership I was proud to serve.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for saile to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorise the resals of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72s, Supp. 2).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Resonen.

# Appendix

# Wage, Cost Increases Likely To Be Central 1966 Economic Issue

EXTENSION OF REMARKS

OF

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. YOUNGER. Mr. Speaker, under leave to insert my own remarks and include extraneous matter in the Appendix of the RECORD, I wish to insert excerpts from an address given by Dr. Leslie C. Peacock, vice president and economist of the Crocker-Citizens National Bank of San Francisco, entitled "Wage, Cost Increases Likely To Be Central 1966 Economic Issue." Dr. Peacock gave this address before the Commonwealth Club of California on Friday, January 7. Excerpts follow:

Wage, Cost Increases Likely To Be Central 1966 Economic Issue

(By Dr. Leslie C. Peacock)

The national economy is about to enter its sixth year of uninterrupted business expansion, and virtually all signs point to a continuation of strong economic gains in 1966. In the private sector, expansive forces which have contributed so strongly to rising levels of business activity are still at work. The sharp uptrend in business spending for new plant and equipment is as yet showing no signs of a significant lessening.

INCREASING STRAIN AHEAD

In the public sector, moreover, the outlook is for an even faster rate of increase in the level of government spending.

Combined, the prospects for a convergence of heavier public demands and still-rising private demands for goods and services suggest that the economy's productive facilities will come under increasing strain in 1966. The prospects for intensification of these strains are implicit in most of the forecasts for 1966 gross national product which now are being advanced.

PRODUCING AT CAPACITY

As time has passed, the Nation's economy has drawn progressively nearer the physical limits of its capacity to expand output, and for all practical purposes, we now have achieved virtually full utilization of our productive resources.

This is reflected not only in the low level to which unemployment rates have fallen, but also in the fact that most industries are either at or near their optimum operating rates. From this point on, further increases in output will have to come more slowly—as the labor force grows, as new capital equipment is brought into operation, and as the productivity of labor improves.

MUST RESTRAIN GROWTH

The Federal Government must turn increasingly toward the objective of restraining growth in private demand in order to preserve the cost and price stability which has been generally maintained over the past 7 years. Even at best, the prospects for preserving this stability of cost and prices are not bright, and the stage already appears

set for general price and wage breakthroughs in 1966.

The extent to which growth in private demand must be restrained by Federal policies in 1998 will depend heavily, of course, on the fiscal policy decisions which underlie the Pederal budget. Preliminary indications are that the amount budgeted for national defense may rise to something around \$50 billion in fiscal 1967. The progression to the higher level will be unusually fast.

INFLATION THE CENTRAL PISCAL PROBLEM

It is clear that normal revenue growth cannot finance all of the increased outlays in the defense ares. This raises the question whether or not cutbacks in civilian spending programs can be budgeted in order to prevent fiscal stimulus from becoming excessive. It appears unlikely that budget reductions can be scheduled.

In view of the inflationary impetus which is inherent in an enlarged Federal deficit, the problem of restraining wage and cost increases is likely to become the central problem of national economic policy in 1966.

The emergence of stronger inflationary pressures as a threat to economic stability suggests that increasing reliance on monetary policy will be required to restrain growth in private demands for goods and services. Such reliance ordinarily is associated with a rising level of interest rates and, although rates now are at levels which are relatively high, further upward adjustments may well lie ahead.

#### PRIVATE CREDIT DEMANDS STRONG

Private credit demands are extremely strong at the present, and they are not likely to lose any of their momentum in 1966. In some cases, including the demand for mortgage funds and the needs of business for credit, some increases are likely to occur. In the case of Government demands for credit, further increases will be fortheoming at both the Federal and the local levels.

For a number of reasons, it appears likely that interest rate pressures in 1966 will be feit most keenly in the short end of the market. In addition, thrift institutions (including banks) must compete aggressively with short-term money market instruments in order to retain their existing volume of savings funds at their disposal.

Looking ahead to the strength of demands expected to be made on the economy's resources in 1966; it is not certain that monetary policy alone can restrain cost and price increases without giving rise to a credit squeeze of undesirable consequences. In the short run, a tax increase probably would be more effective than a reduction in non-disfense spending as a means of curbing growth in private demands for goods and apprices.

# TAX INCREASE?

Naturally, a tax increase at this time would be an unwelcome development for both businesses and consumers. However, it may well be the lesser of the evils. The precise economic impact of a tax increase would depend on both its size and its structure, but under any circumstances it could be expected to exercise a dampening influence on rates of growth in consumer spending, corporate profits, and—with some lag—business investment.

WORST GOLD PROBLEM SEEIND US? At the moment, it is clear that the predominant influence in equity markets are the sharp rate of growth in corporate earnings, strong business prospects, and investor awareness of intensifying inflationary pressures. These considerations provide legitimate and time-honored bases for higher stock values. However, it may be well to continue to test at least two key assumptions.

First is the assumption that the corner has been turned by the United States and the United Kingdom in seeking permanent answers to the international financial problems which periodically have plagued us in the past. Neither the United States nor the United Kingdom has made sufficient progress toward the restoration of balance-of-payments equilibrium to warrant the assumption that the worst is behind us. The heightening of inflationary pressures in this country does not augur well for the future behavior of our gold and balance-of-payments position.

The second assumption is that our instruments of economic control have become so finely tuned as to allow us to avoid a temporary economic setback from time to time. No such setback appears in prospect for 1966, yet it is true that the kind of public and financial policies which now are required to limit inflationary pressures are not appreciably different from those which, in the past have served to take some of the steam out of economic expansion and set the stage for at least a moderate downturn.

The year 1986 will feature strong business activity, heavy credit demands, a stronger inflationary impetus, upward pressures on interest rates, more restrictive Federal financial policies (including possibilities of a ian increase), and little or no progress in the campaign to restore equilibrium to our balance of payments.

ANSWERS TO WRITTEN QUESTIONS FROM FLOOR

Question. Hilary H. Crawford: Is Secretary of Treasury correct in saying national debt can be reduced? Answer. Difficult to defend position that we could—rather likely to increase, ad infinitum.

Question. Should controls over savings interest rates be removed? Answer. Not in favor of complete removal of Government controls over commercial bank interest rates.

Question (Edgar M. Eahn). How discuss outlook without knowledge of outcome in Vietnam? Answer. Busis assumption is continued buildup; it's an imponderable. Any relief would permit greater expansion by private sector.

Question (R. Cathcart). Comment on Martin's statements regarding a likeness to 1929. Answer. Very constructive. Designed to dispel euphoria in some circles. Not predicting economic chaos. Haven's found secret of everlasting prosperity yet. Don't think he meant consequences would be same

Question (J. J. Rutkowski). Costs for ecenomic expansion tending to be higher, hence lower profits? Answer. Lower profit margins. Not necessarily decline of corporate profits.

Question. Does need for restraint in private demand imply income tax increase for 1988? Answer. Several possibilities: reduction in civilian defense expenditures; restrain growth in private sector via monetary policy; transfer purchasing power from private parties to government by tax increase; direct

price-wage controls. Latter is least attrac-

Question (Ian Campbell). Probable developments with respect to country's gold balance in 1966? Answer. President against capital outflow to foreign nations. Urged guidelines. As result, balance-of-payment deficit showed some improvement, even though gold outflow larger than 1964. Might have same difficulties in 1966. Reasons: Vietnam; foreign aid; bank lending overseas (portfolio funds). All improvements behind us—none foreseen for 1966.

hind us—none foreseen for 1966.

Question (Lloyd Graybiel). How much gold will we lose in 1966 and will it weaken confidence in dollar? Answer. Vietnam will probably impose additional strain. Possible balance-of-payments deficit around \$2 billion. Europe may be more willing to help finance deficit. France has made most of her conversions. Loss of gold in 1966 probably under \$1 billion.

# Lt. Gen. Robert W. Colglazier

EXTENSION OF REMARKS

# HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. GONZALEZ. Mr. Speaker, on January 31, 1966, Lt. Gen. Robert W. Colglazier will retire, culminating a brilliant and distinguished career of more than 41 years service in the U.S. Army.

I rise today to congratulate and commend General Colglazier for his outstanding leadership and service to this Nation. He is admired and respected both on a national level and a local level for his contributions to his fellow man.

I am proud to say that General Colglazier is a product of San Antonio, having attended high school and later serving as president of the Colglazier Mc-Kennon Construction Co. there. It is fitting and proper that we should honor him upon the occasion of his retirement, for he deserves the gratitude of each of us.

In 1925 he graduated from Texas Agricultural and Mechanical College with a B.S. in Civil Engineering. He was commissioned a second lieutenant in the Officers Reserve Corps on October 26, 1925.

Prior to World War II, General Colglazier was an officer in the construction firm of Colglazier & Hoff, Inc., in San Antonio, Tex.

In May 1941, General Colglazier was called to extended active duty and assigned to the Office of the Quartermaster General as assistant executive officer in the engineering branch, construction division.

General Colglazier was transferred to the North Ireland Base Command in January 1942, and placed in charge of construction there. For his outstanding service at the North Ireland Base Command, he was awarded the Legion of Merit. In November 1942, he was assigned as assistant executive of the engineering section, Mediterranean Base section; the following February he became chief of staff of the Eastern Base section in the North African Theater of

Operations. For his planning, organization and direction of the numerous activities of the headquarters staff during and subsequent to the Tunisian campaign, General Colglazier was awarded his first Oak Leaf Cluster to the Legion of Merit. In October 1943 he was appointed assistant chief of staff for supply of the Peninsular Base section in Italy.

In July 1944, General Colglazier became Assistant Chief of Staff for supply of the Communications Zone, Mediterranean theater, and in November 1944 assumed that position with the headquarters of the southern line of communications, European theater. In order to meet the problems of the newly organized southern line of communications, he formulated the policies and procedures for assuring an adequate flow of supplies and services to the combat elements of 6th Army group under constantly changing circumstances caused by a rapidly moving tactical situation. For this significant contribution to the allied war effort, General Golglazier was awarded the Bronze Star Medal. From February to October 1945 he was Deputy Assistant Chief of Staff for supply of the Army Headquarters in the European theater. During this period he was awarded a second Oak Leaf Cluster for the Legion of Merit.

General Golglazier was relieved of active duty on March 1, 1946, and returned to San Antonio, where he became president of the Golglazier McKennon Construction Co.

In July 1951, after the start of the Korean war, General Golglazier was recalled to extended active duty and appointed Chief of the control office in the office of the Assistant Chief of Staff, G-4, Logistics, at Army headquarters. In July 1953 he was named Deputy Assistant Chief of Staff, G-4, for plans and programs. He was appointed director of programs and budget, Office of the Deputy Chief of Staff for Logistics in September 1954 and was subsequently named as Assistant Deputy Chief of Staff for Logistics.

In January 1956, he was assigned to headquarters, U.S. Army Europe, reporting in April 1956, as commanding general, U.S. Army Europe, Communications Zone.

General Golglazier returned to headquarters, Department of the Army, in December 1957 and was again designated the Assistant Deputy Chief of Staff for Logistics. In July 1959 General Golglazier became the Deputy Chief of Staff for Logistics, Department of the Army, with the rank of lieutenant general.

It is significant to note that he has also been honored internationally. Among his citations and decorations for distinguished service are the Legion of Merit (with two Oak Leaf Clusters), the Bronze Star Medal, the Army Commendation Ribbon with metal pendant. The Legion of Honor and the Croix de Guerre were awarded him by France and in recognition of his outstanding service during World War II, the Honorary Officer of the Most Excellent Order of the British Empire, was awarded him by England.

# The Golden Touch of Julius Abernethy

EXTENSION OF REMARKS

# HON. BASIL L. WHITENER

OF NOBTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 19, 1966

Mr. WHITENER. Mr. Speaker, the January 1966 issue of Modern Textiles magazine presented a very interesting article on the life and works of Julius Whitener Abernethy, of Newton, N.C.

Julius Abernethy has contributed tremendously to the industrial, educational, and religious development of our State and Nation. He has consistently contributed his talents and resources to worthwhile activities in a manner seldom seen anywhere.

The privilege that I have had to be intimately associated with this outstanding North Carolinian is one of the finest opportunities that could come to any person. His warmth of personality and his genuine attitude and friendliness has meant a great deal to me as an individual. Hundreds of others have been similarly favored.

Since this article entitled "The Golden Touch of Julius Abernethy" tells the story of the American free enterprise system in a very tangible way, I ask unanimous consent that it be made a part of the RECORD for today in order that many Americans will have an opportunity to read it.

THE GOLDEN TOUCH OF JULIUS ABERNETHY

A few months ago textile management people were startled to learn that Whitin Machine Works, long-established, solidly respected maker of varn preparatory machinery, was going through the agony of being up for sale. Longtime holders of large blocks of shares, descendants mostly of the original founders of the company, were salt to be interested in disposing of their stock.

Whitin was a prize more than one growth-minded company seemed anxious to acquire. One contender, White Consolidated Industries, of Cleveland, seemed closest to getting control. Among the flood of rumors, the movements and countermovements of the contenders, it became apparent that someone outside the Whitin family owned something like 90,000 shares of Whitin and that the purchase of these shares, if it could be managed, would give control of the situation to the purchaser.

Who is the group that has ownership of 90,000 shares of Whitin Machine Works and where can it be found? This was the question that White Consolidated executives asked as they summed up their chances of getting enough stock to control Whitin. The answer, they learned, was through a man named Julius Whitener Abernethy who could be found almost any day in his little office in a little white cottage just off the town square of a small place in North Carolina named Newton.

The White Consolidated people lost no time in getting down to North Carolina to make the acquaintance of the mysterious Mr. Abernethy. As it so happened, they got together with him not in his little white cotage in Newton but in his comfortable summer home at Blowing Rock in the mountains of western North Carolina. There they sat with Julius Abernethy on his veranda overlooking the pretty scenery of the Great Smokles and talked and talked about their interest in acquiring the 90,000 shares of

Whitin. After 5 or 6 hours of talk pleasantly interrupted now and then to take some food and drink, an agreement was reached. Abernethy committed for the owning group 90.646 shares of Whitin Machine Works to White Consolidated for \$37.50 a share or a total of something like \$3.4 million.

While the Abernethy interest in Whitin thus ended, its participation in Roberts Co. was proving successful. In August 1964, he headed a private group that purchased Mimilion subordinated debentures and 200,000 shares of Roberts' stock at the then market price of #4 a share, and Julius Abernethy became a director and chairman of the finance committee.

In November 1965, within days after receiving payment for its Whitin holdings, the Abernethy group privately purchased from Roberts \$3 million subordinated nonconvertible debentures and 30,000 shares at \$14 a share to where Roberts had then advanced. As this goes to press in early December, Roberts is quoted around \$23 a share.

Julius Abernethy's involvement with the Roberts organization highlights the important part he plays in the industrial scene. Roberts had the products, the people, and the know-how but needed the financial backing which Abernethy's vision recognized.

Robert E. Pomeranz, Roberts' founder and president, stated recently, "Julius Abernethy is the most constructive man I have ever known. He is a builder and backs up his beliefs in a realistic and imaginative manner. Everything he touches expands. Everyone he meets improves financially. Nothing and nobody remains the same as before meeting him."

These two stories mark on one hand the end of control of a 75-year-old machinery maker by its founding family and the ascending star of a new machinery maker. They bring to sharp focus for the entire industry and for many in the broader financial world as well the personality and career of Julius Abernethy. He is a man who in the past, out of modesty and humility, had always tried to avoid aggrandizing publicity. This is not to say, of course, that he was unknown. On the contrary, to many in the textile industry, especially in the Carolinas, Abernethy for decades has been well known and deeply respected.

The respect felt for him was based upon two elements: Abernethy's uncanny ability to make money for himself and his friends in buying and selling textile stocks and his vast generosity—usually kept very quiet—to churches and church-related colleges and many other worthy causes. Julius Abernethy has been described as "an original." A close business associate and admirer says when they made Uncle Julius "they broke the moid. There will never be another like him." Abernethy himself will tell you that he has also been called a "lone woif"—a man who gues his own way without regard to the trend of the moment, making his own decisions according to his own best lights.

For the most part these decisions, generally concerned with buying and selling stocks in textile companies, have been remarkably right. They have caused Abernethy to become one of the richest men in the Carolinas, and a man held in awe for his astuteness in making his investments yield larger and larger returns. It is said in and around Newton, and indeed even in wider circles, that he has many followers—men and women who find out what Julius Abernethy is buying in the way of textile stocks or other securities and go and do likewise. How do they learn what he is buying? Some of the more devious find out. Abernethy says, "by asking around." Others, more direct and also perhaps because they know him personally, ask him pointblank what is a good investment. To such queries,

Uncle Julius has a fixed answer. "I say to them, I won't tell you what to buy (I never give such advice) but I will tell you what I'm buying."

Putting it another way, there is nothing secretive about Julius Abernethy. He is an open man, known to everyone in Newton and elsewhere in textile country and it is easy to see him. The door of his office in his little white cottage in Newton has a sign on it: "Walk In." People do every day and they find him sitting at his desk, s long cigar in his mouth, ready to talk friendly sense to any man.

The secret of Julius Abernethy's great success as an investor, according to his nephew, friend, and business associate, Jack Thompson, treasurer of Carolina Mills, is his faith in textiles. Uncle Julius, Thompson says, bought stocks in mills from the 1930's on during the years when confidence in textiles on the part of business men and the investing public was at a low ebb. It was Abernethy's conviction that textile stocks were the best buy on the speculative securities market.

He bought and bought, Thompson says. To do so he pyramided his holdings, putting up what he had in stocks as collateral to buy more stocks. Abernethy, like so many successful men in industry and finance, is not afraid to borrow when he sees a chance to make a promising investment. He has little use for cash. Cash money is something he likes to put to work as fast as possible buy something at a low price that he expects to climb soon to a higher price. And in this manner he has built his fortune—by exercising his remarkable skill as a trader. Those who know him well are quick to make this point about his investment operations: Julius Abernethy always acts on the principle that there is plenty for everybody. uses his own money to buy large blocks of stocks in companies. To his friends he offers these stocks at his purchase price even though the stock may have gone up since he bought it. What is left he keeps for himself.

The man who has become well known in textiles and beyond as one of the successful traders of his time was apparently born with this gift. That event took place on July 4, 1894, in Hickory, a town in the westerly part of North Carolina where the rolling country of the Piedmont gets more hilly with the approach of the Smokies still farther west. His father, Julius Franklin Abernethy, was a country storekeeper who also ran a livery Abernethy himself says today that stable. he gets his trading instinct from his father. erited or not, this instinct began to show itself at an early age. While still a child, the younger Julius Abernethy began to trade with profit to himself in such items valuable to small boys in a country town at the turn of the century as marbles, pigeons, pocketknives, bicycles and—so the legend in the Abernethy family goes-frogs.

From such part-time trading, Abernethy by the time he was 15 and a graduate of the seventh grade in the local school had moved on to the world of serious business. At that tender age, he was running a local flour mill, by name, he now remembers, the Hickory Rolling Mills, taking part of the flour in return for his service few years, however, Abernethy had found his way into a business where his innate abilias a trader had full sway. He bought bankrupt merchandise including at times the shops, fixtures, and buildings that housed Some of these stores he liquidated, transferring the stocks to retail outlets else where. Others he rehabilitated and kept in eration. In no time at all he had stores in Newton, Lenoir, Hickory, and many other towns in his native State.

So successful was the youthful Abernethy as a merchant that in 1915 he sold out his store interests of the moment for a net yield of \$60,000. He then moved to Newton

where he opened Abernethy's Cash Store, selling at bargain prices an assortment of apparel and short lengths of yard goods he picked up in job lots in Baltimore, New York, and other clothing centers and from milis in the Carolinas. An example of his merchandising skill during those years was his practice of buying at low prices tailormade suits, rejected by their original would-be buyers. Abernethy sold these high class garments in his store for a small profit. Short lengths of yard goods he sold at a profit of a penny a yard.

In 1917, Abernethy give up being a businessman—or so he expected—to enlist in the Army as a private ready for combat service. But to his disappointment, the Army, canning his enlistment questionnaire, learned that he had experience as a buyer of merchandise of all kinds. Fitting, for once, the right man to the right job, the Army promptly commissioned him as a lieutenant and assigned him to a Washington procurement office. From there he was sent out scouring nearby cities for badly needed items of apparel such as underwear and such sundries as combs, brushes, and shoelaces.

Riding in a motorcar with a general by his side to give sanction to his mission and followed by a fleet of trucks, he descended on jobbers and wholesalers, commandeered their stocks of things the Army wanted for the hundreds of thousands of men it was shipping to France. Buying with a knowing eye, Abernethy saw that the suppliers got fair prices, and maybe a little more, for their wanted goods. Although the jobbers hated to see him come, none could complain afterward that he was not treated fairly.

After Abernethy left the Army in 1920, he resumed his career in the Carolinas as a merchant, setting up stores, buying bankrupt merchandise and liquidating other stores when it seemed the best course. In 7 years he bought and reshuffled soms 25 stores. He worked closely at that time with Henry Belk, founder of the Belk chain of department stores so well known in the Piedmont today.

Gradually as time went on, Julius Abernethy moved into the field that was to be his greatest area of success—the buying and selling, the "trading," as he calls it, of textile mill stocks. Over the years, he had bought and sold stocks in innumerable mills. In some cases the mills in which he held stock were merged with others, or liquidated. In other cases, they were strengthened and expanded.

Among mills with which he has been closely associated as a heavy shareholder have been Mooresville of which he was president at the time it was merged with Burlington; American Efird; Textiles, Inc.; Fulton Bag & Cotton Co. At one time, the fastmoving Abernethy owned one-third of the stock of Burlington Industries, which, incidentally, he bought at \$30 a share and sold at \$90. Today he is the largest 'outside" stockholder in Dan River Mills.

Among textile mills in which he has had interests, a very special place in his affections is held by Carolina Mills with plants at Newton, Lincointon, Gastonia, Hickory, Maiden, and Statesville. For many years, Abernethy was president of Carolina—an active, working miliman, keenly interested in the mill's day-to-day operations, deeply respected by its employees. He stepped down as president in 1960, but still serves as chairman of the board.

These days, in the 72d year of his life, Abernethy remains, as in the peat, a man deeply involved in the buying and selling of stocks; he trades as instinctively as a bes makes honey. According to those who know him best, his mind is always working, analyzing endlessly the various possibilities of buying and selling stocks at a profit that may seem most urgent, must promising of

success. From these ceaseless reflections, these silent ruminations, he reaches the decisions on which he acts daily and hourly—decisions which results in a word or two to his nephew, Claude S. Abernethy, Jr., with whom he shares an office: "Buy so many shares of such-and-such. Or sell so-many shares." Claude, who is vice president of Interstate Securities Corp., a member of the New York Stock Exchange, is able at once to put Uncle Julius' decisions into effect.

Moneymaking is thus an instinctual, 24-hour-a-day activity for Abernethy; it must be recorded, however, that as fast as he makes money he gives it away. Unlike his activities in the business world, which have always been open for all to see, his gifts to worthy causes are performed with as little publicity as he can manage. During the last 15 years or so, he has given away 3 or 4 million dollars. He says, "I expect to give away that much during the next 4 or 5

Among the major recipients of Abernethy's generosity have been many church-related schools and colleges in the Carolinas and many churches. In Statesville, people like to recall that when the Front Street Baptist Church burned down in 1945 without a dollar in insurance, Julius Abernethy matched with a dollar every dollar the church raised on its own behalf for a new structure. Today the Front Street Church has been rebuilt with a bigger and more useful structure and has built also a bigger congregation to fill it. And this kind of help to a church near one of the mills in which he is interested is not an isolated case. Over the years, Abernethy has encouraged management in mills in which he had interests to contribute generously to churches of various denominations in their respective home communities. Currently, Abernethy has assumed personal responsibility for the construction of Negro churches in Newton and Hickory—churches now nearing completion.

Another example of his giving to worthy cause has been his help with money of a Methodist Church in Newton. His generous support led the trustees to adapt for the church the name Abernethy Memorial Church. Also in Newton, Abernethy's support has enabled the United Church of Christ to build a handsome commodious educational

wing, the Abernethy Fellowship.

The financial support and encouragement of religious groups is only one of Abernethy's activities as a benefactor. He is also generous with both money and wise counsel to many educational institutions. To mention a few examples, he was recently appointed to the board of trustees and also to a directorship of Crossnore School in Avery County, N.C. In this school two out of three of the students are either orphans or children of broken homes.

He is a director of the visiting board of Davidson College.

For Julius Abernethy, the regular and generous giving sway of his money to religious groups—"tithing," old-fashioned church-goers call it—is a solemn obligation arising from his religious convictions. Nevertheless, there is a lighter side to his persistent giving to religious organizations. "The more I give away," he says, "the more I make."

It would be a mistake in summing up the life story of Julius Abernethy to leave the impression that he has been nothing more than a man with an unusual gift for successful trading and thus for making money. His achievement has been far more bens fictal. The fact of the matter is that he has been more than simply a buyer and seller of textile stocks. His activities along these lines over the years have resulted in much good both for the individual companies in which he has invested and for the textile industry as a whole. He has been instrumental in merging and in liquidating smaller, obsolete mills, generally to the advantage of the stockholders, many of whom have been small in-

vestors and people who needed someone to protect their interests. In other cases, where such a course has seemed wise and promising of prosperity, he has strengthened and modernized mills into which he has burght.

In summing up his long career as the textile industry's unique trader in mill stocks, it can indeed be said that he is, as he has often been described, "an industrialist." But he is an industrialist of a rare and vanishing kind: a rugged individualist, a solitary operator, a "loner" in the sense of a man who goes his own way regardless of the prevailing winds of opinion. But he is also a rugged individualist with a generous heart; a man of deep religious beliefs who gives to church groups, and other worthy causes a great deal of the money his acumen as a trader has brought him.

## The Bureaucracy and Medicare

EXTENSION OF REMARKS

# HON, DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. HALL. Mr. Speaker, recently I had occasion to call attention to a drastic change in policy by the Social Security Administration, in regard to establishing proof of eligibility for medicare enrollment, by senior citizens not already drawing social security. That change in policy, in essence, was forcing thousands of senior citizens who possessed so-called delayed birth certificates to first obtain a Bureau of Census records check and to pay \$5 for an expedited investigation. After my discussions with the Social Security Administration, I issued the following statement on January 6:

How Johnson Redtape Raises Cost of Medicare

Congressman Durward G. Hall, Republican of Missouri, said today that several million senior citizens are being required to dig into their pockets to finance an administration change in policy which assumes that many older people were "hatched" instead of born.

Hall said the new policy, which was made effective on November 22, but not published in the Federal Register until almost a month later, will add an immense ball of redtape to the procedures required for older citizens to qualify for medicare and other social security benefits. It also could take several million dollars out of the pockets of our senior citizens who can least afford it.

Hall said the new policy could affect millions of older people who were born before there were established procedures in the various States for requiring birth certification. In many States, in fact in most of them, no birth records were kept before 1910, or even later. In the past, the Social Security Administration has accepted what are known as delayed birth certificates, affidavits signed by their parents or other knowledgeable people attesting to their date of birth. Under the new policy, these affidavits are no longer acceptable as proof of birth, either for medicare enrollees, or for anyone else reaching age 65 and applying for regular social security benefits.

Before these delayed birth certificates will be accepted, the new Johnson policy, in essence, requires that the applicant or enrollee first request a check with the Bureau of the Census records, and for such an investigation at the present time there is a charge of \$5 for each inquiry.

Its understandable to charge for such an investigation for the person's own use, but, certainly, not when the Government policy, itself, may require it. That should be a service which the agency provides since they're the ones that require it.

Furthermore, there is no clear-cut policy at this time with regard to waiver of payment by the individual. At the moment, it's left to the discretion of each social security office, whether the individual or the agency will pay the cost, and none of the older citizens who have contacted me were advised of any possibility of waiver. Such a policy is fraught with possibilities of political favoritism. It ought to be revised.

The agency, itself, admits there has been a

The agency, itself, admits there has been a wave of protest as a result of the current procedure. Under such pressures, I believe the Social Security Administration will want to reverse its position.

In view of this fluid situation, I am advising my constituents, who do not have the newly required birth data, to make no further moves now, and certainly not to pay the \$5 until the Social Security Administration has been given reasonable opportunity to reconsider its policy.

Hall said the new requirement will place a huge workload on the Census Bureau over the next few years, and there will certainly be an increase in administrative costs of the Bureau of Census.

Aside from the monetary consideration, there is the matter of considerable inconvenience, redtape, and exasperation for older people who had no idea that their delayed birth certificates would no longer suffice as proof they were indeed born.

Hall has filed a protest with the Social Security Administration, and has urged that the policy be relaxed or rescinded, until Congress has an opportunity for further investigation as to its propriety.

This new and largely unpublicized provision comes as a shock to many older citizens who have had to find out the hard way. Furthermore, this problem, if it is a problem, should and could have been anticipated, without causing the bureaucratic turmoll now evident. It's the type of thing that many Members of Congress warned about and I'm afraid only a forerunner of other problems, perhaps far more serious in the administration of the new program.

This example of expensive redtape is another reason why I thought eldercare was far preferable to medicare.

Shortly after I issued the foregoing statement to the news media, a representative of the Social Security Administration called at my office for a copy, which was provided.

In the Great Society, the first instinct of a bureaucrat is to protect his public image, and so it came as no great surprise to me that, like Pavlov's dogs, the Social Security Administration denied the charge and indicated they were following the same policy they had following the same policy they had followed for years. The following is the Associated Press story, item 98 on the AP wire, which was carried at 1:45 p.m. on the afternoon of January 6. The wire story follows:

A Social Security Administration spokesman said the agency does not require use of census records to establish the age of persons who do not have a birth or baptismal document, though that is one of several ways suggested in such cases.

The spokesman said this procedure has been followed for years.

The only recent change in policy regarding proof of age, the spokesman said, puts emphasis on use of the earliest available

documents, particularly those apparently establishing age before the person reached the age of 10.

When I was advised of this denial, which I knew to be false, I urged the wire services to keep me advised of any further statement on the subject that might be issued by the Social Security Administration. Not long afterward, I learned that another statement on the subject was to be issued by the Social Security Administrator. The next sequence of this incredible chain of events was recorded on UPI story No. 181, which was carried at 7:12 p.m. on the evening of January 6. The story speaks for itself and follows:

The Social Security Administration, which since November 22 has been asking benefit applicants for better proof of birth date, conceded today the new rules weren't working too well.

Commissioner Robert M. Ball announced, therefore, he was changing them to avert long delays in getting on to pension or medicare rolls. Hereafter the "best available proof" will be accepted, and verification sought

Ball made his announcement several hours after Representative DURWARD G. HALL, Republican, of Missouri, charged that the recent rule-tightening apparently was based on an assumption older people were "hatched" and

Those affected are persons without formal birth certificates issued by local government authorities. At the time of birth of many of those now reaching age 65, birth certificates were not being issued.

In their absence the Social Security Administration always has accepted alternative evidence, including so-called "delayed birth certificates" based on affidavits of parents or other knowledgeable persons.

With increased benefits made available, by the medicare bill passed by Congress last year. Ball said the agency decided to tighten the procedures to make sure the public interest was protected.

Under the rule put into effect on November 22, where an alternative document was presented in lieu of a birth certificate, at least one supporting document was required. HALL, in his statement, said in effect this meant that applicants had to apply for a check of old census records. He said this kind of search takes as long as 2 or 3 months. The cost to the applicant, the Congressman

Ball said that under procedure announced today, the applicants evidence of birth date will be accepted and the applicant placed on the roll. Then the agency itself will check the Census Bureau and pay for the cost of the search.

In an event, an agency spokesman said, any applicant delayed in getting onto the enefit rolls will be paid retroactively once his claim is established.

Representative Hall said he was pleased. He said he will keep watch, however, to make sure the latest word gets out fast to all the Social Security offices over the country.

Subsequently, I issued the following statement:

GREAT SOCIETY PAIN RELIEVED-FAST

Representative DURWARD HALL, Republican, of Missouri, today stated that as a result of his protest, the Johnson administration has agreed to cut the miles of redtape entangling senior citizens in their efforts to participate in medicare and other social security bene-

Representative Hall aired his views un "Comment," the weekly radio news program of the Republican National Committee.

The following is the text of the Congressman's remarks:

"Of course, it's a source of great satisfaction to me that the Social Security Commissioner has responded to my strong protest about the new rules which were forcing hundreds of thousands of our senior citizens to go to the extra expense and a great deal of inconvenience to establish their birth dates and thus qualify for medicare and other social security benefits.

"As a result of our protest, based on numerous complaints I received from older citizens. I am happy to say that the new rules which ruled out initial acceptance of the socalled delayed birth certificates, and usually required a \$5 payment for a records examination by the Census Bureau, were rescinded.

"Meanwhile, I know that our senior citizens around the country, most of whom do not have an original birth certificate but are sure they were born and not hatched, simply because few States had such certificates back in the early 1900's, are happy to know that they will not have to indergo undue delay during the signup period. Nor will they have to pay for the Census Bureau examination, cost of which will now be borne by the Social Security Administration, when and if they require it, albeit not the intent of the

As a footnote to all this. I might add a few comments. First, as of this date, I still have received no formal reply to my written inquiry of January 4 to Commissioner Ball. My last acknowledgement was an interim reply on January 12, indicating that my letter was receiving official attention. So far as I know. the social security announcement on the evening of January 6 gave no indication that the policy was being changed as a result of my complaint and some of the news stories carried by the local press left the implication that the administration was trying to make it easier for senior citizens to enroll for medicare, without any admission that they were reversing a previously imposed policy, which had made enrollment more difficult, costly, and exasperating for senior citizens. I believe the House will be interested in this article by Ralph de Toledano written for King Features Syndicate before he was aware of the agency response:

MEDICARE HAS BEGUN TO WRITE OFF THE SENIOR CITIZENS

(By Ralph de Toledano)

When medicare was dangled before the Nation's senior citizens, it was billed as a royal road to free hospital care. But the eaucrats have moved in and made it a redtape snarl that will make it difficult for those without means to get the help they were promised.

Representative Durward G. Hall, who has been both literally and figuratively from Missouri on the issue, has discovered what the medicare division of social security has been quietly doing to make life difficult for the aged-and to extract several millions of

dollars from thier pockets, Rules and regulations for receiving medicare benefits were quietly put into effect, without the usual publication in the Fed-eral Register, much to the annoyance and of those who lined up at Social Security Administration offices to qualify for benefits. Only a month after these regula-tions were in force was it considered important to let the country in on the facts

This is the background:

In the past, those seeking regular social security benefits were not required to present birth certificates. It was recognized by Federal authorities that most States did not keep birth records before 1910. Arisona did not become a State until 1912, and Terricolal records were to see the least partity. torial records were, to say the least, spotty.

The Social Security Administration was perfectly satisfied with affidavits (known as de-layed birth certificates) from responsibile sources as to the age of the applicant.

Under the new policy, Representative Hall has pointed out, these affidavits are no longer acceptable as proof of birth—either for medicare enrollees or for anyone else reaching age 65 and applying for the regular social security to which he has been contributing.

"Before these delayed birth certificates will be accepted," "Doc" HALL points out, "the new Johnson policy in essence requires that the enrollee or applicant first request a check with the Census Bureau records, and for such a check at the present time there is a charge of \$5 for each check."

Social Security Administration officials, moreover, have consistently failed to inform applicants without birth certificates that may be possible to waive the \$5 fee. Get the certificate and pay up the \$5, or else, is the attitude of those administering the program. In instances where no birth certificate exists, the check by the Census Bureau will be meaningless—throwing a tremendous new workload on the Government.

The flood of applications, moreover, will delay payment of medicare and social security benefits to those in need who were presumably the thoughtful concern of Congress and the administration. The utter futility of the new regulations is patent since most of those applying for medicare can demonstrate that they are well past the age to qualify.

"This new and unpublicized provision comes as a shock to many older citizens who have had to find out the hard way." Repre-sentative Hall says, and he has formally protested to the Social Security Administra-"This problem should and could have been anticipated, without causing the bu-reaucratic turmoil now evident It's the type of thing that many Members of Congress warned about, and I'm afraid only a forerunner of other problems, perhaps far more serious in the administration of the new program.

hat remains to be determined is what great brain in the Federal bureaucracy thought of this new regulation and why it was not given the proper publicity. This touches on one aspect of Federal activity that is callously forgotten by those who pile Once a government enters into relations with the individual, rights and conveniences are forgotten. The bureaucracy thinks in terms of masses, and people are reduced to helpless statistics. Government funds to pay hospital bills for the aged, on its face, seems like a noble idea. But when you get right down to it, the individual finds himself standing on endless lines, at the disharried and overworked whose interest is more in the job than in those who are presumably its beneficiaries.

"Doc" Hall is right to be angered by this new piece of Federal redtape. Those were led to believe that it would help them may learn there is a bill for everything whether it be in money or in frustration.

# The Record of the 89th Congress by Nathan Voloshen

EXTENSION OF REMARKS OF

# HON, JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include a splendid address by Nathan P. Voloshen, legislative representative of the Distillery, Rectifying, Wine & Allied Workers of America on the record of the 89th Con-This address is an excellent presentation of the accomplishments of the historic 89th Congress.

#### THE RECORD OF THE 89TH CONGRESS (By Nathan Voloshen)

It was just about a year ago, as you may recall, that we were on the verge of a na-tional election in which the social gains of the past 30 years—and, indeed, the economic, social, and political order of our country were at stake.

In view of President Johnson's overwhelming victory in November, it is perhaps a little difficult to remember just how great a threat Senator Goldwater's candidacy represented. The Monday morning quarterbacks and the political pontifs join in assuring us that even if he had been elected—and they pooheven in he has been elected—and taley poon pooh the very notion that he might have been elected—that things would not have been very much different. I think that any-one with an ounce of intelligence can sucsfully dispute that notion. The bills enacted by the current session of Congress give the lie to those who say that the choice of a President matters little in the overall policy of the Government.

#### JOHNSON'S PROGRAM

Not only would we not have the kind of leadership that President Johnson has been demonstrating with unabated vigor since his election, but we would have had a desperate struggle to maintain the social gains that are part of the very fabric of society. By his actions the architect of the Great Society has demonstrated his thorough commitment to liberal and progressive goals, and on the basic issues of his program—a program which coincides with that of the AFL-CIO—he has neither faltered nor compromised.

The will of the people, so strongly expressed last November, has been translated with unparalleled speed and scope—thanks largely to the direction given by President Johnson and the leadership in Congress of Speaker JOHN MCCORMACK and Senate Majority Leader MIKE MANSPIELD—into legislative action. And what a legislative record it is. The 89th Congress has written an indelible chapter in American history and has opened the way to a better life for the gen-erations now alive and those yet to be born.

# "HISTORIC" SESSION

The number and variety of legislative enactments have been so great that the very adjective "historic" has become a cliche. This is not to say that Congress has enacted in haste and without exercising considered judgment in every bill. In contrast to the famous 100 days of the New Deal in 1933— a session which, until now, was not chal-lenged as the most productive in history— this Congress has not been under the pressure of an economic emergency. It has un-dertaken the task of social reform as a deliberate obligation. With the exception of the repeal of section 14(b) of Taft-Hartley an issue to which I shall return shortlyhas weighed each proposal, modifying some and strengthening others.

In a word, the 89th Congress has reflected the spirit of President Johnson's campaigin in 1964—the first campaign in history in which an incumbent President, running at a time of unsurpassed prosperity, based his largest appeal upon the needs of the unprosperous minority.

We in the DWU-and in the labor move We in the DWU—and in the labor move-ment as a whole—gave full support to that campaign and that appeal. The results have more than justified our confidence, and the confidence expressed by the American people as a whole, in voting for that program and in electing a President and a Congress ca-pable of carrying it forward to success. Let us now turn to the record, and in so doing rethans we can follow the example of

doing perhaps we can follow the example of

President Johnson who—prior to leaving the hospital after surgery last month—proudly ticked off the record.

For understandable reasons, our Chief Executive started with education, The importance of education for our Nation can never be minimized. And it is a matter of historical record that when the labor movement first came into being a century and a half ago, agitation for the creation of a free public school system was first in its demands.

Exactly 1 year ago, President Johnson suggested that the 88th Congress, because of its contributions in that field, could properly be termed the "Education Congress." In my estimation the 89th Congress has an even greater claim to the title. After long years of futile effort, it enacted the first program of general Federal aid to primary and secondary schools in this country's 177-year history. For this act alone the children and the grandchildren of every American family—and their own children yet to come—will have reason to remember the 89th Congress.

But this was not the only education measure adopted. In literally every aspect of schooling—prekindergarten to college, vocational and professional, disadvantaged adult and aspiring postgraduate—existing pro-grams were strengthened and new ones started.

#### MEDICARE

Only education, with its tremendous longrange importance to American society, could be mentioned before the epic victory of medicare. This is a brilliant example of the congressional approach I mentioned a moment For it was the Congress which took our modest proposal—the legislative demand of the AFL-CIO which was given a No. 1 priority the DWU at the San Francisco convention in May 1964—and, impressed by the needs of the elderly, added to it a plan for covering other medical expenses as well. This great other medical expenses as well. This great new breakthrough, coupled with higher retirement benefits and other improvements. brings real meaning to the concept of old-age security.

Third on Johnson's list was the war on poverty. The conscious effort to attack poverty and its causes is both praiseworthy and unprecedented. Best of all, it seems to me, has been the eager response of young people to that goal. We have learned again that unashamed idealism, the quest for progress and even for perfection, can awaken in American youth the spirit that we like to think of as uniquely American.

The effort to bring more and more Americans out of their poverty and into the main-stream of American affluence is associated with an effort to rehabilitate areas that have suffered from economic catastrophes that were not of their own making. Because not a few of our members come from such areas, we in the DWU were among the earliest sup-porters of the concept of area development. We are delighted that Congress, in the face of tremendous pressure, moved to strengthen the program rather than write it off.

The \$19 billion cut in income and excise taxes has more than justified itself in terms of maintaining the high level of our economy without interruption. This measure, coupled with other steps taken by the Gov ernment to boiser the economy, makes it overwhelmingly clear that never again will the Federal Government turn its back on the Nation's economic plight and trust to the workings of the so-called free market, as President Herbert Hoover tried to do in the days of the great depression.

#### CIVIL RIGHTS

I have deferred mentioning civil rights antil now, not because it is less important—quite the contrary—but rather because the great civil rights breakthrough is properly associated with the previous Congress. But this front, too, the 89th Congress has been prompt to move. The voting rights bill should at last insure the rights of every American to full citizenship. The equal employment opportunities section of the 1964 act is certain to be strengthened. In a word, Congress has reaffirmed the determination of the American people that ancient injustices be allowed to tarnish the will no longer American ideal of the equality of man.

The orderly struggle of the past year and of the decade before that for civil rights has seen the AFL-CIO and civil rights organizations stand shoulder to shoulder in the fight for freedom and progress for all Americans. But civil rights, let me remind you, is just a key. It will open the gates only for those who are willing to shoulder the responsibilities as well as the rights that it offers. It cannot reverse at once those melancholy currents by which millions are swept along-in slum houses, in crowded schools, in the desolate streets where unemployment and boredom lead hopeless men to crime and

The death of hope where hope existed, and the sense of failure to change the conditions of life-these things no doubt lead to riots, such as we had in the Watts district of Los Angeles last August. But, as President Johnson said at that time, they did not justify such an outbreak. We shall never achieve a free and prosperous and hopeful society until we have suppressed the fires of hate and we have turned aside from violence whether violence comes from the night riders of the Klan, or the snipers and the looters in the Watts district. Neither old wrongs nor new fears can ever justify arson or

Yet beneath the discord we hear another -a theme to which we in the DWU are in complete accord and to which we will make our contribution. That theme speaks of a day when Americans of every color, and every creed, and every religion, and every region, and every sex can be trained for decent employment, can find it, can secure it. can have it preserved, and can support their families in an enriching and a rewarding environment.

#### MERELY A START

This then, is the legislative record of the 1st session of the 89th Congress, even though no brief summary can do justice to it. It would seem, off-hand, to close the books on the period that began with Franklin D. Roosevelt's New Deal in 1933, that merged into Harry S. Truman's Fair Deal ending in 1952, that stood still during the 8 years of Dwight D. Eisenhower, but that had a flam-ing new birth with the brilliance of the John F. Kennedy years and that now has reached a climax with the domestic triumphs of the Johnson administration.

These triumphs would make it almost seem that the President has no more worlds to Yet any candid examination of what the American people have accomplished through the work of the 89th Congress would underscore what is, in fact, only a prelude to the new dimension of the tasks that face them, as President Brandenburg told us earlier today, in a world that is changing with dramatic speed and, that is bringing new challenges every day of the week.

#### SECTION 14 (b)

Certainly for the organized labor movement the period ahead, far from being the culmination of the struggle for social justice and economic security, is merely a begin-ning. So long as section 14(b) of the Taft-Hartley Act—the spawning-ground for 19 State laws forbidding the union shop—remains on the books, there will be a drag not only upon organized labor but also on American society. History has shown that a strong, effective trade union movement is the buttress for a strong, effective America. We had the votes in the Senate to end Taft-Hartley if the issue came to a vote. But the registance of a hard-core, antilabor minorarmed with the weapon of filibuster in the Senate and capitalizing on the desire of Congress to go home—stood in the way. We lost this round but the battle goes on.

#### WAGE-HOUR IMPROVEMENT

Badly needed improvements in the wagehour law-probably the most powerful weapon in the war on poverty—are also essential.
We may have to wait until next year to raise the Federal minimum wage and extend it to additional millions of workers.
The House Labor Committee, under the chairmanship of Congressman ADAM CLAYTON PowerL, who spearheaded most of the antipoverty legislation in this session, has already recommended an increase from \$1.25 to \$1.75 an hour. It has also stated that extension of coverage to 8 million additional workers is necessary for the humanitarian goal of helping large groups of workers whose earnings today are unjustly and disproportionately low.

There is need, too, for a major overhaul of the workmen's compensation system. Federal workmen's compensation legislation is imperative if injured workers and their families are to receive protection that is Society. Recent years have seen few major improvements in State workmen's compensation statutes and prospects are dim for reform on the State level. Federal minimum standards are essential to bring them up to a realistic level of adequacy.

#### MAKING LAWS WORK

The first is to see to it that these great undertakings of the 89th Congress which we in organized labor have advocated for so many years and echoed in many re-gards the resolutions we adopted at our last convention—these statutes must fulfill their A good law on the statute books is goals not enough; it has to work.

This point has been stressed with respect to civil rights, and especially the equal opportunity section which we did so much to create. But it applies to every aspect of the drive toward that Great Society. It applies to the war on poverty, to the educational programs, to the goal of jobs at good wages for all-to all of them.

#### POLITICAL ACTION

Our second obligation is one that is too often overlooked in odd-numbered yearsand that is political action.

It should be apparent to every member of the DWU in this hall that political action can no longer be left to the few months before each national election.

I have just reviewed with you the recordthe pluses as well as the minuses—of the 89th Congress. Why were these pluses possible? Obviously, only because a substantial majority of those who sit in the House and the Senate share our aspirations and agree with our program-a program which we are sure is endorsed by a great majority of our fellow Americans.

Remarkable as that record was, Congress still left much to be desired. We still need the elimination of 14(b). We still need a higher minimum wage and greater coverage under the wage and hour law. We still need a positive program to meet the challenge of automation. These needs must be met by a Congress that is sympathetic to meeting these needs with legislative deeds.

There is no automatic assurance that future Congresses will be in the same pat-tern as the 89th Congress. Already there is a mood, which was already noticeable when the present session adjourned, for a period of breathtaking and consolidation rather than of sweeping new legislation. And political writers are already taking it for granted that many congressional liberals, especially new Members, will lose their seats to conservatives and reactionaries in 1966.

Perhaps we should take a warning from the lessons of history. President Roosevelt, for example, lost 71 seats in the House of Representatives in 1938 only 2 years after his landslide victory over Alf Landon. And in 1958, just 2 years after his decisive reelection in 1956, General Eisenhower lost 47 House seats

The political nundits assure us that this is the normal result in nonpresidential years when a President has been swept into office by an impressive mandate. I say that our country cannot afford that kind of normalcy. Any such cuts in liberal strength next year would endanger the Great Society programs and stall progress.

the political activity of the Therefore, DWU-and, indeed, of the labor movement as a whole-must be a continuing functionall year, every year.

Our opponents have grasped this basic fact. Despite their overwhelming repudiation by the people last November, the reactionaries and the rightwing extremists are already starting their campaign for 1966. New organizations have sprung up; new money is being raised; new recruits are being sought.

#### NO COMPLACENCY

We cannot afford to be complacent, trusting in our conviction that most Americans support the cause of social and economic We must do what we can to emphasize, among our members and among our friends, what this Congress has done and what remains to be done. And we must keep everlasting busy at the basic essentials—supporting our international union's COPE committee and carrying on the endless task of seeing to it that every eligible person is registered to vote-and does vote.

We are now commemorating the silver anniversary of our union and the gains we have made during the past quarter of a cen-tury. On the legislative front during the past year, we have had an unprecedented year of legislative progress. Just as we are resolved that the gains of the DWU will con-tinue year after year, so likewise let us resolve that legislative progress will continue year after year—until America is at last a land of unlimited opportunity, security, wellbeing, and freedom for all.

# Postal Rate Increase and Wage-Price Guideline

EXTENSION OF REMARKS OF

#### HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. OLSEN of Montana. Mr. Speaker. a recent article in the November 29 issue of the Advertising Age, written by Stanley E. Cohen, the Washington editor, contains some interesting and amusing comments on the wage-price guidelines which affect the Post Office Department. I would like to call the attention of my colleagues to this article, which follows: HERE'S FANTASY: HOW TO USE "CLOSSEE"
TECHNIQUE TO BEAT POSTAL RATE BOOST

(By Stanley E. Cohen)

Washingron, November 24.—"Hey, boss. Got any ambassadorships open?" Maybe that thought flashed through Postmaster General Larry O'Brien's mind as the administration mobilized to beat off the

aluminum price hike.

Former White House staffer O'Brien is supposed to "do something" about the \$900 mil-lion gap between his department's revenues and expenses. This involves going to Congress next year with a plan to pass along 4850 million—or perhaps as much as \$500 million—in rate hikes to the Department's patrons

No matter how he words the me creases of such size would do violence to the spirit of the wage-price guidelines which President Johnson has defended so faithfully. How does a Government which tells business and labor they must hold the price line go about explaining its own price hikes?

Confronted with this dilemma, Larry recently went to the top. The other day he picked up the white phone—the hot line to the White House.

Larry: "When you sent me here, you promised the presure would be off. But things

are rough."

Voice: "Whats' wrong, Larry? After all the arm twisting you had to do for the highway beautification bill, the Post Office must be a picnic.'

"The darnedest things happen.
run on 6-cent stamps. We can't Larry: Like the run on 6-cent stamps. print them fast enough."

Voice: "Same thing here with ballpoint pens. I give so many away every time I sign a bill, ballpoint pens have become a leading growth industry." Larry: "The 6-cent stamp mystery really

has us stumped. They're being gobbled up, but nobody is using them."

Voice: "Maybe it's the Ford Foundation—

discreetly underwriting your deficit."

Larry: "Talkin about deficits, chief, I've

Larry: "Talkin about deficits, chief, I've been balancing my books. I'll need a 32percent rate hike.

Voice: "You know what you were sent there to do " Larry: "But the guidelines allow only 3.3

Voice: "Couldn't you drop the decimal point?

Larry: "The publishers tell me their rate is already up 33 percent since 1960, and parcel

post rates have gone through the roof. Voice: "That was 3 years ago. Right now I need money to take those billboards down, make the rivers swimmable, and build that \$10 million aquarium next to the Potomac.

Larry: "Shouldn't we be taking a broader Sure the Post Office deficit is bigger. But the Government as a whole is doing fine. We are in our 58th month of continuou nomic growth. Taxes are down, spending is up—but deficits are smaller."

Voice: "Your department costs me \$900 million which I could spend for something

Larry: "Why not take a tip from the Tree ury: Cut prices and see what it does to volume?

Voice: "I can't believe this is the old Larry. Gronouski was a defeatist, too, and talked me into skipping a rate rise this year. Now he's in Poland—in cold storage."

Larry: "What am I supposed to say when

newspapers accuse ins of profiteering?"
Voice: "Obviously, Larry, you don't understand business. Don't raise rates; get a new product."

Larry: "What's new about delivering mail?"

Voice: "Abolish what you have now-first class 5 cents, airmail 3 cents. Then wrap it in a new package with the tag, 'expedited mail.' Everyone pays 5 cents. Cops, your books still won't balance. Maybe you'd better get 7 cents."

arry: "It won't work. All letters treated alike sounds communistic. Americans want the opportunity to pay a penny or so more for special stamps. Makes their letters look important.

Voice: "You could have another class: 'Security mail."

Larry: "What's that?"

Voice: "Customers pay a dime. The clerk reads the address twice. Assures a fighting chance to get the letter to the right destinaLarry: "No matter how you slice it, it still adds up to other people's costs. How will you explain it to the Treasury? Didn't Henry Fowler ask: "Why won't people stop, look and listen and count three before taking steps that will change the price-wage-profit

Voice: "With all these European tourists coming here, higher rates will help our bal-

ance of payments."

Larry: "De Gaulle already sells stamps cheaper than we do. Americans are printing more magazines and advertising overseas, and using his post office." Why don't you line up the un-

Voice:

Larry: "After you threatened to veto their pay hike if it exceeded 3.2 percent? Chief,

re you disappointed in me?"
Voice: "I wouldn't put it that strongly, Larry. But maybe we ought to let McNamara carry the mail, too. He seems to have the answer to everything else."

At this point a messenger entered with a special delivery letter, and the conversation ended. The PMG read:

"Dear Larry:

"About those 6-cent stamps. We've got them—billions of them. In fact way too many for stockpile purposes.
"We'll probably have to dump them, at

5 cents each—if you raise postage rates to 6 cents.

We'll be fighting inflation, and helping to keep our economy strong for the boys in Vietnam.

"Your customers "P.S.: Please ask Sheldon Cohen at Internal Revenue if it will be OK to write off our losses on the 6-cent stamps as a busines expense. Or is it a public service contribu-

tion?
"P.P.S.: If you are designing a new 6-cent stamp, how about a picture of an aluminum

# Freedom of Information

EXTENSION OF REMARKS OF

# HON. ROBERT DOLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. DOLE. Mr. Speaker, since the beginnings of our Republic, the people and their elected representatives in Congress have been engaged in a sort of ceremonial contest with the executive bureaucracy over the freedom of information issue. The dispute has, to date, failed to produce a practical result.

Government agencies and Federal officials have repeatedly refused to give individuals information to which they were entitled and the documentation of such withholding-from unauthorized press, the public, and Congress—is voluminous. However, the continued recital of cases of secrecy will never determine the basic issue involved, for the point has already been more than proven. Any circumscription of the public's right to know cannot be arrived at by congressional committee compilations of instances of withholding, nor can it be fixed by Presidential flat. At some point we must stop restating the problem, authorizing investigations, and holding hearings, and come to grips with the problem.

In a democracy, the public must be well informed if it is to intelligently ex-

ercise the franchise. Logically, there is little room for secrecy in a democracy. But, we must be realists as well as rationalists and recognize that certain government information must be protected and that the right of individual privacy must be respected. It is generally agreed that the public's knowledge of its government should be as complete as possible, consonant with the public interest and national security. President by virtue of his constitutional powers in the fields of foreign affairs and national defense, without question, has some derived authority to keep secrets. But we cannot leave the determination of the answers to some arrogant or whimsical bureaucrat—they must be written into law.

To that end, I join other members of this House in introducing and supporting legislation to establish a Federal public records law and to permit court enforcement of the people's right to

The bill that I am introducing today would require every agency of the Federal Government to "make all its records promptly available to any person," and provides for court action to guarantee the right of access. The proposed law does, however, protect eight categories sensitive Government information which would be exempted.

The protected categories are matters-First, specifically required by Executive order to be kept secret in the interest of the national defense or foreign policy;

Second, related solely to the internal personnel rules and practices of any agency

Third, specifically exempted from disclosure by statute;

Fourth, trade secrets and commercial or financial information obtained from the public and privileged or confidential; Fifth, interagency or intra-agency

memoranda or letters dealing solely with matters of law or policy;

Sixth, personnel and medical files and similar matters the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;

Seventh, investigatory files compiled for law enforcement purposes except to the extent available by law to a private party; and

Eighth, contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of any agency responsible for the regulation or supervision of financial institutions

The bill gives full recognition to the fact that the President must at times act in secret in the exercise of his constitutional duties when it exempts from availability to the public matters that are specifically required by Executive order to be kept secret in the interest of the national defense or foreign policy.

Thus, the bill takes into consideration the right to know of every citizen while affording the safeguards necessary to the ive functioning of government.
balances have too long been effective weighted in the direction of executive discretion and the need for clear guidelines is manifest. I am convinced that the answer lies in a clearly delineated and justiciable right to know.

A freedom of information bill passed the Senate in 1965 but the House has failed to act, perhaps because of opposition from the White House and other administration leaders in the executive branch. This legislation should be high on the priority list as the 2d session of the 89th Congress gets underway.

# The 442d Veteran Tommy Kakesako Displays Old "Can Do" Spirit

EXTENSION OF REMARKS OF

# HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. MATSUNAGA. Mr. Speaker, clearly, great victories are not limited to those that are won on the battlefieldthough it was on a battlefield in France that Tommy Kakesako's present victory had its start. Staff Sergeant Kakesako was wounded as he fought with his buddies in the 442d Combat Team to reach the lost Texas battalion in World War His wounds made him a Disabled American Veteran, and it is through the Hawaii Chapter of the DAV that former Sergeant Kagesako participated in his greatest battle in civilian life.

The fighters in this battle were disabled veterans who are now approaching middle age, not young able-bodied soldiers. They carried oil soaked torches-to burn and clear the land of hardy mangrove trees-instead of loaded rifles, and they manned bulldozers instead of tanks. The sacrifices they made were not of life or limb, but of sweat and toil. However, at stake was something as dear to their hearts as when they fought for their country. At stake was the long dreamed-of memorial to their departed war comrades at Keehi Lagoon in Honolulu, Hawaii.

The "battle" was not only fought in the field. Hundreds of hours were spent in organizing fund raising activities. Generous veterans donated time, money, and professional services for the cause. The long campaign for Tommy and his buddies lasted for 5 years and its victory was marked on Pearl Harbor Day in December 1965 by dedication ceremonies at

Keehi Lagoon.

Everyone involved in this mammoth project agrees that it was Tommy Kakesako's untiring leadership that made the dream a reality. Kakesako, when asked by Managing Editor A. A. Smyser, of the Honolulu Star-Bulletin, as to what had made him work so hard on the project, answered modestly and simply, in typical 'Go for Broke" style, "There was a job to be done."

Mr. Speaker, as an old DAV "buddy" of Tommy I commend Tommy Kakesako for a great victory. And I should like to submit for inclusion in the Congres-SIONAL RECORD the article written by Editor A. A. Smyser on Tommy Kakesako and the DAV Memorial which appeared in the Saturday, December 11, 1965, issue of the Honolulu Star-Bulletin:

TOMMT'S MEMORIAL (By A. A. Smyser)

The Disabled American Veterans Memorial that was dedicated on Pearl Harbor Day this week represented the work and contribu-tions of hundreds of people, many of them World War II Purple Heart cases who gave up weekends to do volunteer manual labor.

This is the story of just one of them—the man who made the difference.

The memorial as it stands now includes an obelisk as tribute to the dead and a meeting hall and youth center for the use of the living.

S. Sgt. Tommy Kakesako was almost one of the dead. In a French forest more than 20 years ago he got his insides shot up as and others of the 442d Infantry went to the rescue of the lost Texas battalion.

Tommy lived to come back and work as a with his brother in their shop on

Alakea Street

It was in 1960 that the local DAV chapter appointed Tommy as chairman of its committee to get the memorial built, a job he held until Alfred Los Banos, a paraplegic, took over last year. Tommy remains active

as project coordinator.

The National DAV started the project in It conceived it as a static memorial to

those who had died at sea.

Gov. Oren E. Long deeded 11 acres of land

for the memorial to the Pacific War Memorial Commission and the commission in turn had assigned it to the DAV.

Ground was broken on December 7, 1952,

and thereafter nothing happened.

Financial troubles caused the National DAV to call back the funds it had set aside for the Hawaii project and there finally began to be suggestions that Hawaii should revoke the 11 acres.

At this juncture, the local DAV decided to try to save the project on a do-it-yourself

basis Pleas to the DAV national conventions in 1959 and 1960 resulted in a decision to turn

national rights over to the State chapter.

Someone was needed to head a committee to coordinate the project and Commander Edward Tamanaha reached out and picked Tommy Kakesako.

He had 11 acres of land to develop, almost no money, and a plan for a huge edifice of

little or no utility.

The whole plan was restudied and the idea of a living memorial—something useful— It tied in neatly with the concept behind adjacent Keehi Lagoon Park that more recreation and park facilities are needed on the Kalihi side of town.

The new plan called for an obelisk, meeting houses, a rotunda and restaurant, a swimming pool, a marina, picnic and campaites,

and parking facilities.

Even the first phase was estimated at \$150,000 and assets were close to zero.

was envisioned that \$90,000 of this amount would be realized from a national sale of memorial medallions.

Evidence of the troubles that developed include the figure on medallion sales in a 1964 report-83.414.

The medallion sales were only one of sev eral disappointments. Local fundra efforts were none too heartening either. fundraising

Tommy Kakesako had moments when the going looked black. But he always shook off his discouragement and plowed on, encouraging and praising the work of others.

"I personally feel we would have dropped the project if it hadn't been for Tommy," says William C. Oshiro, now Administrator of the Veterans' Administration in Hawaii.

Then 50 DAV members each pledged a minimum of \$100 and that gave everyone

A phone call to Morrison-Knudsen, conors who were excavating the Lunalilo Preeway segment near Middle Street, brought something even more heartening-free fill for the area which was low, rough and not usable in its old form

Morrison-Knudsen even' supplied free a bulldozer and operator (a DAV member) shove the earth into place. The surface level has been raised 6 feet.

To clear mangrove trees on another part of the area, 50 DAV members volunteered their Saturdays and Sundays—and learned something about mangroves.

It took 5 months. The hardy mangroves resisted burning, finally yielded to oil-soaked junk rubber tires set ablaze at their base. Bill Beers, a retired Navy officer, won an award as "champion tire burner."

Members of the Kamehameha Lions Club also pitched in for 1 weekend of burning.

The National DAV made an initial con-

tribution of \$8,000 and the local chapter of

Then a past national commander, Frank Buono, took a special interest in the project and tied it to the 10-percent increase in pensions for disabled veterans voted by Congress in 1964.

He urged all recipients of the pension to give their first month's increase to the Ha-waii project. This brought in more than \$20,000 additional. Last year the National DAV added another \$20,000-raising total

out-of-State gifts to \$53,000.

The 1964 State legislature, well sprinkle with veterans, appropriated \$50,000 for an

access road and parking.
U.S. Senator Daw Inouve also made a spe-

cial fund appeal.

Meantime, a constant factor in all the planning was Kakesako.

He worried, pleaded, cajoled, and wouldn't take no for an answer.

Experienced in neither fundraising nor

project development, he kept plugging. Cash receipts pushed over \$100,000 but donations of materials and professional serv-

-earth fill, architectural designs and the like—came to possibly \$250,000.

The constant prodder, always planning, with his head always filled with thoughts on

how to make the project succeed was Kakesako.

State Representative Howard Mlyake has written a report that says the memorial would never have been ready for dedication Tuesday except for Kakesako.

Miyake puts it this way: "Like a symphony conductor, he played our individual talents to create harmony out of confusion, reality out of verbosity."

Mrs. Kakesako didn't see much of her hus-

band but supported him fully in all the work.

"We got so involved," she exclaims. Sundays, Mrs. Kakesako and her mother would drive to the lagoon to watch the sweaty, dirty progress of a bunch of World War II Purple Heart cases

Like her husband, Mrs. Kakesako stre the role of other people in the project—"that lagoon has involved a lot of people, rich and poor, young and old."

But she confesses they did eat and sleep with the lagoon always at the center of things for 5 years.

Now that the first phase of the lagoon is finished, the DAV hopes other veterans or-ganizations will join in, build some of the planned buildings and move their headquarters there.

Discussions on this are underway.

Plans will also have to be made to see the area used effectively as the youth center it is

Five years work is only the preliminary. When Tommy was asked this week why he plugged so hard and persistently, the dialog went like this:

TOMMY. I guess you want me to say something corny.

QUESTION. No, but why did you do it?

TOMMY. No, I didn't volunteer. I was assigned.

QUESTION. What made you work so hard at 14.9

TOMMY. There was a job to be done. QUESTION. Is that all?

TOMMY. That's all.

The 442nd's can-do approach to World War II led to a postwar movie, "Go for Broke" which has just been back on the rerun circuit.

The DAV memorial at Keehi Lagoon, built largely by veterans who were maimed and crippled themselves, stands as particular testimony that the "Go for Broke" spirit still lives—and a self-effacing ex-staff sergeant helped prove it.

# No Second Best for U.S. Navv

EXTENSION OF REMARKS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. GATHINGS. Mr. Speaker, the international situation today is the primary concern of this Congress. Our commitments in Vietnam, southeast Asia, in the Western Hemisphere, and in other areas of this vast world bring into sharp focus the problem of seapower. In the January 1966 issue of the Navy Magazine, Mr. Morgan L. Fitch, Jr., president of the Navy League of the United States, speaks words that Members would do well to read and ponder.

Mr. Fitch points out that we must modernize our Navy, maintain our carrier forces, reestablish our sealift capabili-ties and merchant marine, and proceed with the orderly nuclearization of our surface fleet. "Anything less," warns Mr. Fitch, "is at the peril of our coun-His remarks follow:

No SECOND BEST FOR U.S. NAVY

Congressman L. MENDELL RIVERS, chairman of the House Armed Services Committee, said on Navy Day, 1965, in New Orleans:

"To paraphrase a great leader of the world, did not assume the chairmanship of the House Armed Services Committee to preside over the liquidation and demise of American seapower and over naval supremacy. I do not propose to be a party to any program that will lead the United States to the position of being the second greatest seapower in the

However, the fact is that we have been alipping toward becoming something less than No. 1 in seapower. The lessons from the past, the teachings of the present, and the judgment for our future all seem to dietate that backsliding in seapower of the United States must be brought to a halt, if this country is to survive, much less enjoy anything like its present standard of living. It is time to say that the second-best equip-ment is not good enough, that commonality is not a substitute for capability, and that now is not the time to sacrifice proven weapon systems for hopeful devices. It is true that this may cost money, but this is nothing more than the sacrifice that Presi-dent Kennedy warned about. These mat-ters are nonpartisan and are of concern to all

#### PENNYWINE BOOMOMIN

Our past economizing in the Defense Establishment resulted in sacrifice of much of our sealift and an emasculated merchant

The prognostication that airlift would replace sealift would seem to be totally refuted as we now send about 98 percent of our supplies to Vietnam by ship. As a result we scramble to make up for this folly and we buy foreign bottoms to sustain our efforts.

Our economizing in the Defense Department has resulted in much substandard housing for our servicemen and something than the performance of essential main tenance on our bases. Now we are behind in adequate housing, and the current announcement of the Secretary of Defense that he is deferring the building of new military housing promises to put us further behind. We are trying to catch up on maintenance and indications are that essential maintenance will not be caught up.

Defense economizing has caused us to take something less than the best in the fossilfueled aircraft carrier USS John F. Kennedy. Such economizing has resulted in only one carrier being laid down since 1961. Modern-ization of the first has been slowed, with the result that tired ships are required to keep

ew-ship operating schedules. In order to beat the buck, we have sought to solve all airplane problems with the TFX, now dubbed the F-111. Latest reports indicate that this aircraft is flunking as a targed as the hopeful, if not prayerful, re-placement for the B-53, a proven airplane. All of this is great provided that we are not playing "Russian roulette".

Our ships are plying the seas on schedules hardly believable, and many of these ships which were aging, are now rapidly depreciating. We are approaching the point where the ships have to be replaced, if we are to maintain a Navy, the basis of scapower. Postponing this ship replacement cannot help but result in sacrifice of national defense.

# TOO LITTLE, TOO LATE

While we fumble along, the Soviet Union has been building a modern merchant ma-rine, a large submarine fleet, and modern ships of war. Our lessons on seapower seem to have been better learned elsewhere. We have been fighting Vietnam with too little, too late, and the best assurance we

can get is that we are not losing. But, at this writing, this is even doubtful. The worst of it is that even peace in Vietnam does not bring utopia to the world. Hopefully, we do not have to take on two Vietnams, but this is not assured. If we do fight elsewhere, during or after the Vietnam fracas, the per-centages are awfully high that the burden will fall upon seapower, ergo the U.S. Navy and Marine Corps.

If we are to avoid the position of being the second greatest seapower in the world, we must modernize the Navy, including pro-vision for at least standard housing; main-tain our carrier forces; reestablish our sea lift capability and merchant marine, and proceed with orderly nucleariaztion of our surface fleet. Anything less is at the peril of our country.

#### Speech by Miss Kathleen Kennedy

EXTENSION OF REMARKS OF

# HON. JED JOHNSON, JR.

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I am pleased to call attention of the Members of Congress of an outstanding speech by Miss Kathleen Ken-nedy, of Lawton, Okla., who won first place in the "Voice of Democracy"

speech contest in Lawton recently. Miss Kennedy, a 15-year-old high school student, is the daughter of Mr. and Mrs. J. C. Kennedy, 1119 Cherry Lawton, Okla. The contest was sponsored by the Veterans of Foreign Wars Post No. 1193 and VFW Auxiliary.

The speech, which won second prize in the State contest held at El Reno, follows, along with two articles from local newspapers:

#### SPEECH BY MISS KATHLEEN KENNEDY

On the 27th of January 1837, the tall figure of Abraham Lincoln gave these words to an audience in Springfield, Ill.: "This task, gratitude to our fathers, justice to ourselves, duty to posterity and love for our species, in general, all imperatively require us faithfully to perform."

Little did his audience realize that his yords on democracy would be cherished by all freemen. It seems almost impossible to try to tackle a word like democracy and tell you just what it means to me. It is a broad expansive word, it can take on many moods and colors.

There are two ways I think of democracy. First of all, I think what it has done in the past. I remember how it was interwoven with our proud heritage, and why men and romen fought, died, and suffered for its principles.

Second, I think what democracy means to me today. This form of government affects my family, church, city, and, of course, the Nation as a whole.

Looking back we see that during the Revolutionary War, thousands of men died to simply establish our standards of govern-ment. Thousands more died during the Civil War to preserve our form of democracy. During the two world wars, thousands of men died to protect our already established and preserved way of life.

Daniel Webster did not give his life to his country, but he expressed his feelings in these words: "Let the consequences be what they will, I am careless. No man can suffer too much, and no man can fall too soon, if he suffer or if he fall in defense of the liberties and Constitution of his country."

This man was risking his career, his political popularity, and his friends because of an idea or ideas he believed in so strongly. But as a student I don't hold the position of Lincoln, Webster, Jefferson, or Washington, nor do I have the influence that our Senators and Representatives do. But by being a student I have found a unique parallel with my school, and my country for the scademic freedom that we are allowed is the gift of democracy in action.

I find that with student government our school operates on somewhat the same principles as our country. Because the students are mature a high school moves and grows with its surroundings. And by being a stu-dent with interest and concern for my school, I find that at the same time I am working also for my country, the United States. Casual, friendly, sometimes heated discussions on government policies, religion, and politics are frequent with classmates.

Many adults have the vision of students going to school and doing nothing but studying dry facts from a textbook and then coming home to watch a television program. In many ways this is an inaccurate description. Students in high school realize that much too soon they will be deciding a career for life. Consequently adult interests and ideas are cultivated.

Adolescent interests and fads boost the American economy several million dollars each year. We realize that these are tempo-rary and our real, deep interests lie with current events. Why? Simply because we are the generation to come, the leaders, movers, the ones to carry the torch.

With democracy in our school we find an atmosphere of concern for each other and interest in our future. For just as our defense and preservation of democracy were important in the past, we must continue to recognize the value of democracy in everyday life in order to offer a proud heritage for the

[From the Lawton (Okla.) Constitution, Jan. 6, 19661

LAWTON HIGH SCHOOL GIRL FIRST IN SPEECH CONTEST

Kathleen Kennedy, a 15-year-old Lawton Righ School student, has won first place in the "Voice of Democracy" speech contest. The Wednesday night contest was spon-

sored by the Veterans of Foreign Wars Post No. 1193 and VFW auxiliary.

Other winners in the 19th annual competition were Kade McClure, 15, Eisenhower High School, second; Glen Huff, 16, Lawton High School, third, and Bill Baker, 17, St. Mary's High School, fourth.

Miss Kennedy received a plaque and a \$25 savings bond; McClure received a plaque and a check for \$15; Huff received a check for \$10, and Baker was awarded a plaque.

The winners were picked from 18 testants by the judges, Jim Williams, KCO Radio; Gary Smith, KSWO Radio; Mrs. Eve-lyn Evans, speech instructor at Cameron College, and Eugene Pate, speech instructor at Cameron.

Topic for the contest was "Democracy: hat It Means to Me." The same topic is What It Means to Me." used nationally.

Miss Kennedy, McClure and Baker record their speeches for entry in the State contest scheduled at El Reno at 7 p.m. Fri-day. Mrs. Deward Stringer, of the VFW auxiliary and a cochairman of the contest committee, will take the tapes to El Reno.

Alton Langford, VFW post commander, served with Mrs. Stringer.

First prize in the State contest will be \$100 bond, a plaque, and the opportunity to enter the taped script in a national con-test. Second will be a \$50 bond and third a \$25 bond.

Miss Kennedy is the daughter of Mr. and Mrs. J. C. Kennedy, 1119 Cherry; Baker is the son of Mr. and Mrs. Bert Baker, 1315 South 26th Place; Huff the son of Mr. and Mrs. J. E. Huff, 925 Oak, and McClure, the son of Mr. and Mrs. Kinley McClure, No. 12 South

The students were accompanied to the contest by their speech teachers, Mrs. Pearson Porter, Eisenhower; Mrs. Stanley Brown, Mary's, and Carl L. McClure, Lawton

[From the Lawton (Okla.) Constitution-Morning Press, Jan. 9, 1966]

LAWTON HIGH SCHOOL SOPHOMORE SECOND IN CONTEST

Kathleen Kennedy, a sophomore at Lawtatheen kennedy, a sopnomore at law-ton High School, placed second in the State Veterans of Foreign Wars "Voice of Demo-cracy" contest Friday in El Reno. First place went to Bob Nicholas, a Mus-kogee senior. The contest is jointly spon-sored by the VFW and auxiliary.

Winning third was Andy Hale, a Duncan funior.

Miss Kennedy will receive a \$50 savings bond. First prize won by Nichols was a 5-day expense paid trip to Washington, a \$100 d and a plaque. Hale received a \$25 bond.

Contest topic was "Democracy: What it means to me." Nicholas' script will be entered in a national contest in competition for scholarships totaling \$13,500.

A total of 22 Oklahoma high schools entered the contest.

Miss Kennedy, daughter of Mr. and Mrs. J. C. Kennedy, 1119 Cherry, was sponsored by Lawton VFW Post No. 1193 and

Bill Baker, a student at Lawton St. Mary's High School and Kade McClure of Eisenhower High School, also participated in the contest.

Mrs. Deward Stringer, president of the local auxiliary and contest cochairman for the local unit, and Mrs. Albert Hawkins attended the contest.

# Fiscal Policy Outlines

EXTENSION OF REMARKS

# HON, JOHN R. HANSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 19, 1966

Mr. HANSEN of Iowa. Mr. Speaker, much has been said concerning the state of the Union message of the President. One of the most incisive comments appeared on the editorial page of the Des Moines Sunday Register, January 16. In this editorial, President Johnson is recognized for his fiscal responsibility, not only for his proposals for the 1967 budget, but for the commendable way in which he has performed a very difficult task in the past 2 years.

It is my sincere conviction that the prudent programs proposed by the President coupled with continued fiscally responsible proposals will meet with favor in Congress

I would like to share the thoughts expressed in this editorial with my colleagues.

The editorial follows:

FISCAL POLICY OUTLINES

When President Johnson sends his budget message to Congress in the near future the administration's economic policy for the next fiscal year will be spelled out in more detail. But the state of the Union message gave the outlines. The proposed target is a balanced cash budget or possibly a slight surplus.

cash budget—or possibly a slight surplus.

The cash budget reflects the total income and outgo of the Federal Government, including not only ordinary Government spending and tax receipts but also the operations of the trust funds, of which the giant social security system is the most important.

The status of the cash budget measures the impact on total demand of the Federal Government. If the Government is pushing into the economy more money than it is extracting from the economy—as it has been doing in the last several years—the effect is to expand total demand and stimulate business activity and higher prices. If the Government draws more money from the public than it spends, then the effect is restrictionist and tends to curb price rises.

During the last few years it has been possible to operate an "inflationary" Government fiscal policy without actually causing price inflation. This was possible because the extra demand created by the Government drew more human and material resources into production, so that the rise in supply offset the increased demand.

Now, however, the economy is running almost at capacity. There is very little slack in the supply of skilled labor and plant capacity to meet an extra surge of demand from Government purchases. So the wise fiscal policy for the National Government now is to lower the steam of the Federal fiscal operation on the private economy. That is the meaning of President Johnson's budget proposals, outlined in the state of the Union Thessage.

The President is proposing an increase in taxes amounting to about \$5 billion for the next fiscal year. This would about take care of the increase in military spending he is calling for to meet the requirements of the Vietnam war. The extra tax money would come from more nearly current income tax payments, both personal and corporate, and from a delay in effectiveness of scheduled excise tax cuts.

Of course, the bulge in income tax payments would be only temporary. The extratax receipts from this source could not be enough to balance the budget, but the administration is counting on a continuation of the rise in total output. Most Government and private economists are expecting a growth in the gross national product from \$672 billion in 1965 to around \$715 or \$720 billion in 1966. This would result in a considerable gain in Government revenue without any tax changes.

A number of things could go wrong to upset this fiscal plan. Congress might not agree on the tax changes, and it might not agree on the spending plans. Any increase in spending, especially for military purposes, beyond the President's proposals would increase the danger of inflation. Military spending is particularly inflationary, since the money paid out to civilian workers and business is not offset by an increase in supply of goods and services for civilian use.

The President's first statement on fiscal polley sets forth a prudent program for the next year. Inflationary pressure is moderate now. But if Congress decides not to go along with the tax proposals, some cuts in spending will be necessary if price stability with continued economic growth are to be achieved. And if inflation pressures increase, it might be necessary to over-balance the budget instead of just balancing it.

Dr. Robert C. Weaver: An Excellent Choice for the Cabinet

EXTENSION OF REMARKS

# HON. BERT BANDSTRA

OF HIWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. BANDSTRA. Mr. Speaker, I would like to express my agreement with the views expressed Sunday by the Washington Poet in an editorial regarding the appointment of Dr. Robert C. Weaver, as Secretary of Housing and Urban Development.

Good appointments are good politics. An appointment should neither be made nor withheld on the basts of race, religion, or color since these factors are after all irrelevant under our system. The editorial carefully points this out. But what is important is that Dr. Weaver has proven his ability in the area of housing and urban affairs and for this reason the overwhelming majority of Americans approve of President Johnson's appointment.

The job of heading the new Department of Housing and Urban Development will not be an easy task. But that is all the more reason why the post should go to a man with Dr. Weaver's talent and experience.

The editorial from the Washington Post follows:

SECRETARY WEAVER

In appointing Dr. Robert Clifton Weaver, to serve as the first Secretary of Housing and

Urban Development, President Johnson chose the best available man for a difficult post. A ploneer in public housing whose experience goes back to the early days of the New Deal, Dr. Weaver served with distinction as the rent administrator in New York City, housing commissioner for the State of New York, and finally as the Administrator of the Housing and Home Finance Agency.

The fact that Dr. Weaver is the great-grandson of a slave will irk those whose prejudices are blinding where men of color, no matter how talented, are concerned. And it will by the same token enlist the equally biased support of those who hold that the new cabinet post should have gone to a Negro irrespective of his capabilities. Fair-minded Americans applaud the appointment of a great authority on urban affairs and housing who happens to be a Negro. And they are equally delighted by the appointment of Robert C. Wood as Under Secretary. Dr. Wood, a native of Florida and professor at the Macsachusetts Institute of Technology, has gained an enviable reputation in the field of urban affairs at the age of 42.

After describing the problems with which the new Department will be confronted, President Johnson turned to Dr. Weaver and aid, "May the good Lord have mercy on you." The new Secretary's legion of admirers share that sentiment, and have confidence in his ability to build an effective Department.

# The Cotton Program

EXTENSION OF REMARKS

# HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. GATHINGS. Mr. Speaker, Mr. Marvin Caldwell is the editor of the Marianna, Ark., Courier Index, which serves Lee County and a great portion of the eastern Arkansas cotton belt. Mr. Caldwell is a most perceptive publisher and is quite knowledgeable on cotton and the economics of our agricultural community.

Cotton farmers are making decisions at this time with respect to the diversion provisions of the new law.

For this reason, his signed article, carried in the January 13 issue of the Courier Index and his editorial in the same issue, will be of great interest to all who are now concerned with the implementation and operation of the new cotton provisions contained in Public Law 89-321 enacted at the first session of the 89th Congress.

Because of their value to such a study, it is a pleasure to call this article and editorial to the attention of the Congress:

[From the Marianna (Ark.) Courier Index, Jan. 13, 1966]

PARMERS FACE A DILEMMA IN NEW COTTON PROGRAM

#### (By Marvin Caldwell)

The cotton farmer has a problem. Perhaps we should say, he has a new problem.

Four choices are open to the farmer and most of them are still scratching their heads in an effort to select the best and most profitable path to follow. And it doesn't necessarily follow that best will also be most profitable for there are many considerations that will go into a farmer's choice of plans. They include such factors as equip-

ment, labor supply, technical know-how,

The Government offers the cotton farmer four choices this year and a decision must be made by March 1. The first choice is 'nonparticipation.'

"nonparticipation."
Under this plan, the farmer can plant
100 percent of his cotton allotment but
must sell the cotton at 90 percent of the
world market price which is 21 cents for
middling inch. This does not involve wideopen planting of cotton. The farmer must still stay within his farm acreage allotment which is the same as 1965. Most observers agree that we are not ready for 21-cent

Plans 2. 3. and 4 involve diversion of cotton land to nonproduction with the Government increasing the support price in relation to the amount of cotton land taken out of production. The only crops that can be inted on diverted land and sold are sunflower, castor beans, safflower, guar and ses-There is almost no market for any of these products. The land may be pas-tured November 30 to March 1.

Farmers can divert 121/2 percent, 25 per cent, or 35 percent and by a formula, the Government will make up the difference. The whole idea is that we are producing 35 percent too much cotton so the farmer is being encouraged to cut his acreage by 35

A farmer must reduce his cotton acreage by at least 12½ percent to qualify as a cooperator. This is further complicated by the small farmer clause which does not re quire a farm with less than 10 acres of cot-ton (or projected yield of 3,600 pounds or

less) to reduce his acreage.

County Agent J. O. Hill has calculated the difference in the four plans for an average operation of 100 acres with a projected yield of 650 pounds of lint cotton per acre. According to his figures there is so little difference in the three diversion plans that money will not be the consideration when a farmer makes his choice. On a gross profit basis, nonparticipation is not practical. However, other considerations just might and some farmers along this path.

gross profit if the entire 100 acre allotment were planted. The gross profit (when 12½ percent is diverted) would be \$10,718.05; for 35 percent diversion it would be \$10,718.05; Our sample farm would bring in \$7,150 95 percent diversion it would be \$10,611; for 35 percent diversion it would be \$10.529. se figures do not take into account cost of machinery and land, depreciation, rent,

It is obvious that diversion is the best plan for most farmers. It is also obvious that the choice most farmers will make will be determined by factors other than gross profit—for that will remain about the same no matter which diversion plan he follows. He may lose his labor if too much land is diverted. The machines he has purchased will depreciate just about as fast as they wear out so there is a limit to how much he can reduce his cotton acreage and still main-

tain an efficient operation.

Each farm is a different operation and each farmer has different problems and different considerations that will dictate the course of action he follows. He will not know for sure if he has followed the right course until next

One farmer has decided that this whole plan was devised by a computor and there is not much hope for the farmer with a pencil trying to outsmart an economist with a computor. He may be right.

[From the Marianna (Ark.) Courier Index, Jan. 13, 1966]

THE COTTON PROGRAM

The new cotton program may solve the problem of oversupply but it is certainly creating new problems in the Cotton Belt. And eeding, let it be known that we are not convinced it will go very far toward

The new problem is the depressing economic effect that the program will have on every area that produces cotton. The farmer may or may not come out as well financially. This is open to debate. But it is a dead letter cinch that the program is going to hurt everyone else in the community.

Almost every farmer, for his own protec tion, is going to plant from 12½ to 35 per-cent less cotton this year. This is going to mean that he will use less labor, less seed, less fertilizer, less everything. Our economy is based on the farmer (with some notable exceptions). When the farmer is spending less, all of us will suffer the consequences.
This includes the day laborer who did not finish the second grade as well as the business and professional man in downtown Mariana

The Government is spending billions of -a great deal of it right here in Lee County—to stamp out poverty. They will have to pump a lot more into Lee County to offset the adverse effect of this program on the economy of our community.

# Forty-eighth Anniversary of the Independence of Ukraine

EXTENSION OF REMARKS OF

# HON. ROLLAND REDLIN

OF NORTH BAKOTA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. REDLIN. Mr. Speaker, next Sunday, January 23, celebrations will be held in my State of North Dakota and throughout the Nation in observance of the 48th anniversary of the independ-ence of Ukraine. Dr. Anthony Zukowsky, Steele, N. Dak., president of the North Dakota branch of the Ukrainian Congress Committee of America, Inc., has written me a letter outlining the courageous struggle of the Ukrainian people for freedom and independence. Under unanimous consent I request that Dr.

pendix of the RECORD. URBAINIAN CONGRESS COMMITTEE OF AMERICA, INC., STATE BRANCH OF NORTH DAKOTA, Steele, N. Dak., January 15, 1966.

Zukowsky's letter be printed in the Ap-

Hon. ROLLAND REDLIN, Member of Congress, U.S. House Office Build-

ing, Washington, D.C.

DEAR CONGRESSMAN REDLIN: We want to call your attention again that in the month nuary Ukranians all over the world including our State, will mark the 48th anniversary of the proclamation of the indeendence of Ukraine, which took place on the 22d of January in Riev, the capital of Ukraine, also the 47th anniversary of the Act of Union on January 22, 1919, whereby western Ukraine united with the National Ukrainian Republic into one sovereign and independent Republic of the Ukrainian

Although the Ukrainian Republic was recognized by a number of States, including the Government of Soviet Russia, it had no durable peace nor prosperity because Com-munist Russia invaded the Ukrainian state despite its previous pledges to respect and honor the Ukrainian Independence.

For nearly 3½ years, without assistance from the Western World, the Ukrainian people waged a heroic war against Communist Russis in the defense of sovereignty of their

country but the gallant struggle came to a bitter and tragic end. The free Ukrainian state was subdued to a puppet regime of the Soviet Socialistic Republic.

Since then the Russian Communist enslavement with brutal oppression and domination has caused much suffering among these people. But despite the Communist yoke imposed by Moscow, the Ukrainian people never accepted the foreign domina and are continuing to struggle for freedom and national independence. Through a seof heroic and bloody uprisings and a steady resistance through underground warfare the Ukrainian people have demonstrated their undying love of freedom and their op-

position to alien slavery and oppression.

Both the Congress and the President of the United States have recognized the legitimate right to freedom and national independence by enacting and signing respectively the "Captive Nations Week Resolution" in July of 1969, which enumerated the Ukraine as one of the captive nations enslaved and dominated by Communist Russia, and is entitled to recognition and moral support by the American people and the free world at large. During the debates on colonialism in the United Nations Assembly in 1960 and 1961 a number of western statesmen, including our Ambassador raised their voices in protest against the persecution of the Ukrainian people by the Communists. The cause of Ukrainian freedom and inde-

pendence is no longer a patriotic desire since the Communist menace has spread into Asia, our shores in Cuba and Latin America, it has become a political necessity for the free world to recognize that an independent would substantially

Communist empire.

Americans of the Ukrainian descent in our great State of North Dakota are planning to celebrate the forthcoming 48th anniversary of the independence of Ukraine on Sunday, January 23, 1966, in a solemn and fitting manner with special religious services and programs which will be heard on radio and TV over stations in Bismarck, Mandan, Minot, and Dickinson. We firmly believe that you are aware of the importance of Ukraine as an ally in the struggle against Russian Communist imperialism. This anniversary provides an appropriate

occasion not only for the U.S. Congress and the American people but also for the U.S. Government to demonstrate their sympathy and understanding of the aspiration of the Ukrainian people.

This may also provide an opportunity for better understanding by extending diplo-matic relations to Ukraine which is a charter member of the United Nations, and by nominating an American of the Ukrainian descent to serve on some diplomatic post and by the issuance of a commemorative stamp to Europe's freedom fighter and Ukrainian poet. Taras Shevchenko.

Sincerely yours, Dr. ANTHONY ZUKOWSKY, President, UCCA, State Branch of North Dakota.

#### Six-Day Postal Service Reinstated

EXTENSION OF REMARKS OF

# HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. OLSEN of Montana. Mr. Speaker, I wish to note that last weekend President Lyndon Johnson restored parcel post and postal window service on Saturdays. This action was taken by the President despite the many fiscal economy measures for which the President is well noted. I believe the President acted wisely and I believe that every citizen who uses the postal service will praise the President for these wise actions. The vast amount of mail which the Department now carries and which we have every reason to expect will increase greatly over the years, can only be carried efficiently by expanding the services of the Postal Department. I believe the President and Postmaster General O'Brien both recognize this very thoroughly. This is, I am sure, why they acted to reinstate these valuable services.

Economy cannot be practiced in the true sense of the word by decreasing services performed of such a vital nature. We all know that very many people who use the postal money order only have access to the post office conveniently on Saturdays. I am sure many people across the country are praising President Johnson for this action.

# Two-Year Terms, or Three or Four?

EXTENSION OF REMARKS

# HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, January 19, 1966

Mr. YOUNGER. Mr. Speaker, it is quite interesting to follow the columnists in connection with their comments on the state of the Union message. One of the most interesting, I think, was by James J. Küpatrick, published in the Evening Star of January 18, entitled "Two-Year Terms, or Three or Four?" His column follows:

Two-Year Terms, or Three or Four? (By James J. Kilpatrick)

In the course of asking Congress the other night for the sun, the moon, the stars, and an end to yellow fever, our "peerless leader" asked also for a resolution proposing one more amendment to the Constitution. He believes that Members of the House of Representatives should have terms of 4 years, commencing with the elections of 1972.
