A SELECT LIST OF
FIELD GROWN ROSES
from
ROSEMONT NURSERIES
PAINESVILLE, OHIO

A. F. BERNARD, Prop.

Prices of roses.	Each	Dozen	Hundred
Heavy selected grade.....	\$0.75	\$7.50	\$50.00
First class grade.....	.50	5.00	38.00
Second grade25	2.50	18.00

Our Heaviest Selected Grade of roses we quote at 75c each; \$7.50 per dozen; \$50.00 per hundred. This grade we recommend as sure to please. It is the highest quality of plants. It is "something better" in roses.

Our First Class Grade we quote at 50c each; \$5.00 per dozen; \$38.00 per hundred. This grade is equal to or better than the "First grade," "Star size," etc., offered so conspicuously in catalogs generally. Altho this grade will be very satisfactory, we believe that for the small difference in price, it is good judgment to use our above mentioned "Heaviest Selected Grade." We also offer a second grade of roses at 25c each; \$2.50 per dozen; \$18.00 per 100. This grade is only offered for fall delivery, and altho good value at the price asked, are not to be compared to our larger grades.

REMITTANCES.

To avoid loss, remit by post office or express money order, bank draft, or registered letter. Money sent in any of these ways is at our risk. Stamps are often useless because they stick together. Silver will often be lost by wearing thru the envelope.

HOW TO SHIP ROSES.

The best way to send roses is by Express, and if so sent we will guarantee safe arrival. Our plants are too large to send by parcel post, except in case of very small orders. We do not pay shipping charges.

PLANTING.

Roses should be planted during October or November in Fall, and in April in Spring, and in either case will bloom abundantly the following Summer and the ever-blooming sorts in Fall also. Plant in ordinary good garden soil, the richer the better, but do not allow any fresh manure in contact with roots; it may be used in the soil, however, after roots are well covered. Rotted manure or rotted sod are better. Spade the soil to a depth of 12 to 15 inches and have it well mellowed before planting. Plant

so that the union of bud and stock will be two to three inches below the surface when bed is leveled after planting. Plant 15 to 18 inches apart; this will use the space to best advantage, and will not leave room enough to plant other things in the rose bed, which is often done to the injury of roses. We cannot too strongly recommend thoro cultivation, frequent mellowing of the soil to a depth of six inches or more. No one thing will aid growth and produce blooms more than this, and we may add no other thing is so often neglected.

PRUNING.

Directly after planting remove all weak shoots to one or two inches length from body and cut back from one-half to two-thirds of remaining wood, except in the case of climbers and those classes of roses which are summer bloomers only; these should be pruned more sparingly.

PROTECTION IN WINTER.

For the tender sorts, Teas, Hybrid Teas, Hybrid Perpetuals, and all but the hardiest classes, when freezing weather begins draw around each plant a small mound of soil a few inches high, and later when hard freezing begins, add a few inches of coarse strawy manure, leaving this on the ground till growth starts in the spring; do not uncover too early.

ROSEMONT ROSES.

We have been in our present location for 23 years, making a specialty from the first of field grown roses. We can truthfully say that in these years we have made an enviable reputation, as growing the best roses produced anywhere. We not only spare no labor and effort to grow a high class product, but we use care and judgment in packing and shipping our plants, and our customers are sure of sturdy, strong, vigorous stock; and more, they are received in fresh and healthy condition. We do not give any directions for the treatment of plants received in a dried condition—you will not receive ours that way. After once planting Rosemont roses you will not want any other kind. Our proprietor, Mr. A. F. Bernard, who has been in this business a lifetime, has personal supervision of our nursery, and orders sent us are given the care and attention which insures satisfaction.

We are situated one mile south from Stop 68 on C. P. & E. Electric, about four miles southwest of Painesville, O. This is a short walk from car line, and for any one loving roses, it is well worth while to come and see acres of roses in bloom from early summer till frost. We also carry a general line of stock, shrubs, vines, plants, bulbs, etc., as well as ornamental trees, fruits and berry bushes, etc., for which see our general descriptive catalog. As to our financial responsibility we refer, by permission, to The Painesville National Bank of Painesville, O. Also refer to Dun and Bradstreets commercial agencies.

Very truly,

A. F. BERNARD, Prop.

ROSEMONT NURSERIES

EXPLANATORY

Abbreviations used to designate class of roses: A. B.—Austrian Brier; CL.—Climbing or Hardy Climber; C. P.—Climbing Polyantha; H. C.—Hybrid China; H. N.—Hybrid Noisette; H. P.—Hybrid Perpetual; H. T.—Hybrid Tea; H. W.—Hybrid Wichuriana; M.—Moss; P.—Polyantha. Provence; Per.—Pernetiana; T.—Tea; H. R.—Hybrid Rugosa.

CATALOGUE

ALEXANDER HILL GRAY. T. (A. Dickson, 1911).

A lovely clear, deep, lemon yellow; large and high pointed buds; large open bloom of great substance and perfect form. Very free bloomer, strongly tea scented. Gold medal N. R. S.

AMERICAN BEAUTY. H. P. (Ledecheaux, 1875).

Deep pink to crimson; intensely fragrant; petals heavily veined. A well known sort.

ANNA DE DEISBACH. H. P. (Lacharme, 1859).

This sort will always be popular; of large size, delicious fragrance, handsome in bud, very large open flower, large petals of great substance, clear bright deep cerise pink, with a warm flame shading in the heart of the open flower. It is a fine, strong growing plant and a free bloomer. This is the famous "Gloire de Paris."

BABY RAMBLER. P. (Levavasseur, 1903).

This sort is always in bloom, grows bushy and dwarf in size, rarely over 18 to 24 inches in height. Every shoot and branch is crowned with a cluster of twenty to thirty roses of brightest crimson. The plant is often hidden with bloom. Just the thing to use for bordering a large bed of roses, or for a small group or bed, or for any spot where a continual flowering is wanted.

BALTIMORE BELLE. CL. (Feast, 1843).

A splendid hardy climber, and an old favorite; large to medium blooms, blush white.

BARON DE BONSTETTEN. H. P. (Liabaud, 1871).

Velvety blackish crimson in color, large size, strong grower and hardy; this sort has in large measure the rich heavy fragrance of its class.

BARONESS ROTHSCHILD. H. P. (Pernet, 1867).

This sort is the standard in its class and color. A clear soft pink, every flower true to type, petals large and shell shape. Usually one large flower on a strong stiff stem, with foliage grown right up to the bloom. Very hardy and desirable.

BETTY. H. T. (Alex. Dickson, 1905).

One of the recent valuable introductions. An Irish rose of the Killarney type. Blooms extremely large and fairly full, and of splendid form. Color ruddy gold or coppery rose, shaded golden yellow, and deliciously perfumed. Awarded the gold medal of the National Rose Society.

BRITISH QUEEN. H. T. (McGredy, 1912).

Some experts who have seen this rose growing agree that it is the finest white rose in existence, surpassing in beauty of form and elegance all other white varieties. The freedom with which it blooms is remarkable; it is in flower from June until winter. On well cultivated plants the blooms are a model of perfection. The type of bloom is between White Maman Cochet and Frau Karl Druschki, with tea rose form and refinement. Petals massive and reflexed, producing a pointed bud, together with a globular form. A vigorous grower and sweetly scented. Awarded a gold medal by the National Rose Society of England. You cannot afford to omit this rose from any list.

CAPRICE. H. P. (Vick, 1889).

The Variegated Rose. Large, fragrant, and attractive flowers of satiny pink, distinctly striped and shaded with white and bright carmine, slightly cup shaped, full and deep. A nearly constant bloomer and strong vigorous grower, and hardy. Unique and distinct.

CAPT. HAYWARD. H. P. (Bennett, 1893).

This rose is of the largest size, with thick heavy petals, a deep glowing vivid crimson. Globular and very full, a particularly fragrant sort, and attractive both in summer and in fall. A strong grower and hardy. It is sometimes called the "Red Druschki." We strongly recommend this sort.

CENTIFOLIA. (Provence).

The old sweetly scented garden rose, called the Cabbage Rose, or Hundred Leaf, pink, large and full, hardy everywhere.

CHATEAU DE CLOS VOUGEOT. H. T. (Pernet Ducher, 1908).

This is indeed the black rose. Its coloring baffles description, and it is not possible to reproduce with pigments the wonderful coloring of this remarkable rose; resembles heavy dark velvet, shading from deepest velvety maroon red, to blackish crimson. Blooms continuously, delightfully fragrant, well shaped, good sized, strong healthy foliage, spreading growth, and not the least of its valuable qualities is the ability to last much longer than roses

of this color usually do, blooms fully open lasting a week or more without an appreciable change of their rich color. Named after a vintage of famous old French wine.

CLIMBING AMERICAN BEAUTY. H. N.
(Hoopes Bro. & Thomas, 1911).

A strong growing, hardy climber, of the large size and rich fragrance of the popular Am. Beauty, possessing a heavy resistant foliage; color same as American Beauty.

CLIO. H. P. (W. Paul, 1894).

A really desirable sort of extremely strong, hardy growth, with heavy and leathery, bright, healthy foliage. Large clusters of flowers of the largest size. Soft pink blush, shading to a deep flesh center, has a delightful cinnamon fragrance. One of the leaders in its class, and a very distinct color.

COQUETTE DES ALPS. H. P. (Lacharme, 1868).

Large, full and fragrant, blush white in the bud when partly open, changing to pure white in the open flower. A hardy, constant bloomer, very desirable.

COUNTESS CLANWILLIAM. H. T. (Hugh Dickson, 1914).

Flowers very large and full, produced in endless abundance, buds long and pointed, opening to large full high centred flowers of great beauty. Color a delicate peach pink at base of petals, which are flamed and heavily edged with deep cherry red, making a strong color contrast. Awarded gold medal of N. R. S.

CRESTED MOSS. M.

This is undoubtedly the best of all the mosses. Soft peach pink. A large fragrant flower, opening from a bud which is almost covered with a heavy ruffle of moss. Crested moss rose buds give a touch that is irresistible to a collection of roses.

CRIMSON RAMBLER. C. P. (Turner, 1893).

Too well known to need description. Perhaps the strongest grower in roses. A well established plant will make growth of 12 to 15 feet in a single season. Used for porches, screens, and makes a grand effect when used as a hedge or fence.

DOROTHY PERKINS. H. W. (Perkins, 1902).

Beautiful shell pink in color, which lasts well, fading at last to deep rose. Very sweet scented flowers borne in immense clusters. The foliage is bright, glossy, and not subject to mildew, and makes a shade all season.

DUCHESS OF WELLINGTON. H. T. (Alex. Dickson, 1909).

Intense saffron yellow, stained with deep crimson, changing with the development of the flower to a coppery yellow, of a distinct new shade. Large petals of great substance, fragrant and free blooming. Is also known as the Orange Killarney.

DUKE OF EDINBURG. H. P. (W. Paul, 1868).

A strong growing, hardy sort, with heavy foliage. Rich scarlet crimson, shaded deep crimson. Large and full.

EARL OF DUFFERIN. H. P. (Alex. Dickson, 1887).

This sort is the best H. P. rose of its color, rich velvety crimson, shaded maroon, immense in size of bud and open flower; the large petals are charmingly reflexed. The most richly fragrant red rose we know of.

EDWARD MAWLEY. H. T. (McGredy, 1911).

Velvety crimson, deep and rich, on huge petals of great depth and perfect form. A truly immense rose of strong growth, and sweetly perfumed. Awarded gold medal N. R. S.

ELLEN POULSEN. P. (Poulsen, 1912).

The very best pink baby rambler. Immense trusses of brilliant dark pink blooms, which are of large size for its class, has the strong fragrance of an H. T. rose. Plant a robust, branching grower, with fine glossy foliage.

ERNA TESCHENDORFF. P. (Teschendorff, 1911).

The newest and best bright crimson baby rambler. A much brighter, richer shade of crimson than Mme. Nor-

bert Levavasseur, the original baby Rambler, from which it is a sport, and further it does not lose its coloring in hot weather and does not show purple shades. The dazzling red color is similar to that of "Gruss an Teplitz." Has received many awards of merit. It is a favorite for winter blooming in pots, as well as a continual bloomer from June till frost outside.

ETOILE DE FRANCE. H. T. (Pernet Ducher, 1904).

A magnificent great red H. T. that has come to stay. Plant an extra strong grower for its class. Intense brilliant crimson flowers on long, strong stems, very fragrant and free blooming. Advertised by some growers as "Crimson Maman Cochet." You need this sort.

EUGENE FURST. H. P. (Soupert, 1876)

This valuable H. P. rose is very distinct in color, a dazzling scarlet crimson, toned with deep crimson maroon, very large and very fragrant, supplied with a strong and glossy thick leathery foliage, which is very resistant to unfavorable weather conditions. It is at its best after other red sorts are done with first crop of flowers, and is much prized on this account.

EXCELSA. H. W. (Walch, 1909).

This sort is also known as "Red Dorothy Perkins," and carries the glossy varnished appearance of foliage shown by that sort, and assuring a constant shade all summer wherever placed. The flowers of scarlet crimson are borne in large trusses, are very double and large and are produced with the greatest profusion. It is the most valuable sort of its type.

FLOWER OF FAIRFIELD. CL. P. (Ludorf, 1908).

Also called the "Everblooming Crimson Rambler." Combines the beauty of the well known Crimson Rambler with a continuous blooming habit, the new growths bearing large clusters of crimson blooms thru the summer continuously. Be sure to include this sort in your selection.

FRAU KARL DRUSCHKI. H. P. (P. Lambert, 1901).

Also called "White Am. Beauty" and "Snow Queen."

Everywhere a hardy, vigorous grower, with strong, heavy, bright green foliage, it has everywhere become famous as the very highest type of snow white rose ever introduced and has become the standard by which all white roses are judged. Its size is nothing short of marvelous, the long heavy pointed buds are perfection, while the open flower with its huge saucer-shaped petals is glorious, and when in addition the fact is considered that its blooms are produced with great profusion, from early summer till autumn, it leaves nothing to be desired.

GEN. JACQUIMINOT. H. P. (Roussel, 1853).

The favorite Jacq. rose. Bright, rich, velvety crimson, exceedingly brilliant and handsome, both in bud and open flower. This old favorite is still the leading garden rose in its class and color. The strongest hardy grower of them all. In spite of the increase in plants raised each season we seldom have enough to go around.

GEORGE AHREND'S. H. P. (Hinner, 1910).

This is the wonderful new "Pink Druschki." The foliage and form of flower much resembles "Druschki," while the color is lovely rich pink; flowers borne on long stems.

GEORGE DICKSON. H. P. (Alex. Dickson, 1912).

This new rose is described by the originators as velvety black crimson, the back of petals being heavily veined with deep, pure, crimson maroon, petals are of splendid shape and of magnificent substance, delightfully smooth and built to make the form of flower perfection. Blooms are of the highest exhibition standard and regularly quite five inches across. It has wonderful lasting qualities, not only as to the retention of color, but also in its shape and freshness. One of the very strongest growers, with thick, strong, bright green foliage, to contrast with the rare coloring of the blooms. Awarded the coveted gold medal of the National Rose Society of England, besides many other first awards at various other shows.

GLOIRE DE CHEDANE GUINOISSEAU. H. P.

A new H. P. rose of uncommonly strong growth and vigor, a large globular shaped bud, expanding into a very

large handsome flower, large shell shaped petals, color bright vermillion, shading to velvety maroon.

GORGEOUS. H. T. (Hugh Dickson, 1915).

Flowers large and full, exquisitely formed and borne in the greatest profusion. Deep orange yellow, flushed coppery yellow and heavily veined with coppery red. Gold medal N. R. S.

GRUSS AN TEPLITZ. H. C. (Geschwindt, 1897).

Strong, hardy and of free growth, attaining a height of four feet or more in well established plants. Blazing scarlet-crimson, and continually in bloom. Color constant and not changing in hottest weather, blooms on long stems, and possessed of a rich lasting fragrance. The most popular red rose we know of. Plant plentifully of this sort and always have an abundance of fine blooms.

HARRY KIRK. T. (Alex. Dickson, 1907).

Deep sulphur yellow, passing to a lighter shade at the edges of petals, buds long and handsome. Gold Medal N. R. S.

IONA HERDMAN. H. T. (McGredy, 1914).

A very free flowering new sort, sweetly scented. A warm, clear orange flame color. The originator designates it the most beautiful yellow decorative rose in existence. Gold medal N. R. S.

JOHN CRANSTON. M.

The best red moss rose. Of very strong, vigorous growth, producing an immense number of bright crimson blooms.

J. B. CLARK. H. P. (Hugh Dickson, 1905).

Intense deep scarlet, overlaid and heavily shaded blackish crimson, an immense flower, a strong, vigorous grower.

JOHN HOPPER. H. P. (Ward, 1862).

Very large and full, bright rosy pink, very fragrant, strong, hardy grower.

JONKHEER J. L. MOCK. H. T. (Leenders, 1910).

This rose is often called the giant pink from Holland, has created more favorable comment than any rose in recent years. It is perhaps the strongest of all H. T. roses and produces its immense blooms on every shoot in wonderful abundance and on long, stiff stems. The color is a startling combination of vivid carmine pink on outside of petals and silvery rose inside, the petals are highly reflexed, giving the partly open flower a charm all its own. Blooms will outlast any other pink sort we know of, keeping a long time in perfect condition. Awarded two gold medals, one silver medal and five first prizes at European shows, including the highest award at international rose shows at Paris in 1911.

JULIET. Per. (Pernet Ducher, 1913).

This is one of the most wonderfully colored roses that has been produced in a generation. Great globular buds of a rich old gold on the outside, which open into an immense flower, rosy red inside, changing to a deep rose in the expanded bloom, deliciously fragrant, also the young foliage is fragrant. Has received an award of merit Royal Hort. Society of England.

KILLARNEY. H. T. (Alex. Dickson, 1898).

The finest and most popular H. T. rose ever introduced. It is rarely beautiful in coloring, being an ideal shade of deep sea shell pink, also ranging to a deep imperial pink in some blooms. The intensely fragrant flowers are long and pointed in the bud form, and the open flowers often show petals two and one-half inches deep. It is in bloom from early summer till frost, and is an extra strong, healthy grower. This rose should be planted by everyone.

LAURENT CARLE. H. T. (Pernet Ducher, 1907).

Brilliant velvety carmine, long buds borne on long stems, opening into large flowers of fine form and fullness. A vigorous grower with splendid dark green foliage.

LADY ALICE STANLEY. H. T. (McGredy, 1910).

Perfect formed flowers of shell-shaped petals, deep

coral rose outside, delicate flesh inside, flushed and suffused with bright pink. Of vigorous growth. Gold Medal National Rose Society.

LADY HILLINGDON. T. (Lowe & Sawyer, 1910).

One of the most beautiful roses ever seen. Color an intense apricot yellow, shaded to orange on the outer edge of petals, and to coppery yellow at the heart of the flower. An endless amount of flowers are produced on long, wiry stems, well above the foliage. A distinct feature of this sort is the deep yellow seen in the buds long before they attain full size. A healthy and vigorous grower. Gold medal N. R. S.

LADY PIRRIE. H. T. (Hugh Dickson, 1911).

Outside of petals deep coppery reddish salmon, inside apricot yellow, flushed fawn and copper. The perfect formation in bud and flower gained the gold medal of the National Rose Society. Free bloomer of vigorous growth.

LOUISE CATHERINE DE BRESLAU. Per.
(Pernet Ducher, 1912).

Exquisitely formed buds of coral red, finely shaded to rich chrome yellow, the large flowers opening to shrimp pink, shaded with reddish coppery orange, and chrome yellow, on reverse of petals. A rarely beautiful sort.

LYON ROSE. Per. (Pernet Ducher).

An unusually large and remarkably full flower, with huge reflexed petals of handsome rich shrimp pink, toning to salmon pink on edges and chrome yellow at base, flowers frequently five inches across when fully expanded and very fragrant. This variety scored 100 points at N. R. S. in Paris.

MADAM ABEL CHATENAY H. T. (Pernet Ducher, 1895).

A strong grower and constant bloomer, long pointed bud, and deeply recurved petals in the open flower, great beauty of form. Color carmine rose and golden pink, flushed fawn. A very popular sort.

MADAM CAROLINE TESTOUT. H. T. (Pernet Ducher, 1890).

Also known as the Giant La France. A globular flower of extreme size and broad satiny petalage. Brilliant clear pink, deepening at center, and bordered silvery rose. A strong vigorous plant and free bloomer. On the Pacific Coast, where roses attain their greatest perfection, this sort forms a majority of all roses planted. You can not have too many of this variety.

MADAM EDOUARD HERRIOT. Per. (Pernet Ducher, 1913).

The "Daily Mail Rose." Winner of the gold cup which was offered by the London Daily Mail for the best new rose at the International Horticultural Exhibition, held at London, England, May 1912, and to be known as the Daily Mail rose. In competition with the world's greatest rose growers, this much desired prize was awarded to M. Pernet Ducher, for this truly wonderful creation, and at the 1913 exhibition of the N. R. S. of England it was awarded the highest honor, a gold medal. Buds coral red with shades of yellow and rose, passing to prawn red or reddish copper, with flame colored shadings. It is also described as superb coral red, shaded yellow and rosy scarlet, passing to shrimp red. Words do not convey an adequate idea of the wonderful coloring of this great rose. It has been described as colored like sunshine on a copper red metal.

MADAM GEORGE BRUANT. H. R. (Bruant, 1888).

Long pointed buds, opening into a large semi-full pure white flower. Very fragrant and a continuous bloomer. This rose with its heavy lasting foliage is valuable for hedges or screens. Entirely hardy.

MADAM GABRIEL LUIZET. H. P.

Large bud and large open flower, of a lovely soft rose pink, long stems and heavy dark green foliage. A vigorous grower and very hardy. One of the earliest of the season to come into bloom.

MADAM PLANTIER. H. P. (Plantier, 1835).

This is the old fashioned garden rose of purest white,

blooms only once in the season, but is then entirely covered with bloom, very fragrant and entirely hardy. Altho classed as H. P. it really is not one.

MADAM RAVARY. H. T. (Pernet Ducher, 1899).

Long full buds of golden yellow, opening to large full flowers of orange yellow, shaded to deep nankeen yellow. This is said to be the most popular rose in Europe. Free flowering and fragrant, of strong growth resembling Test-out. Altho not a new sort this rose is in constantly increasing demand.

MAGNA CHARTA. H. P. (W. Paul, 1876).

Extra large full flowers of unusual depth and substance, bright rosy pink and very fragrant, one of the hardiest as well as one of the most rampant growers.

MAMAN COCHET. T. (Cochet, 1892).

The famous Pink Cochet. Silvery rose pink, shaded bright rose, large, full, firm buds, elegantly pointed, the large expanded flowers are very double and of splendid texture and substance. The beauty of the deeply recurved petals adds the last touch to its attractions.

MARGARET DICKSON. H. P. (Alex. Dickson, 1891).

A heavy, strong grower, with thick glossy foliage, an immense flower with thick waxy petals. Color creamy white with salmon center. Very hardy.

MARQUISE DE SINETY. H. T. (Pernet Ducher, 1906).

A new yellow H. T. of a remarkable shade, a brilliant clear lemon yellow in open flower, which in the bud is shaded bronzy red. Unlike many yellow sorts this color is constant, not fading in hot weather, very full or double, unusually so for a Hybrid Tea; a constant bloomer and richly fragrant. This rose is sure to be very popular.

MARSHALL P. WILDER. H. P. (Ellwanger, 1884).

We consider this sort the very best all around red H. P. rose in existence today. It is of the largest size, both in the full globular bud and in the wide expanded flower.

Deep, rich, glowing crimson, petals heavily reflexed, richly fragrant and an unusually free bloomer. A healthy vigorous grower and very hardy. Do not omit this sort when planting.

MRS. AARON WARD. H. T. (Pernet Ducher, 1907).

Indian yellow to orange copper in the opening bud, golden orange in the open bloom, often a delicate pink is seen in the fully developed flower. One of the rarely beautiful new roses, it is winning first place as a decorative variety. A free and constant bloomer.

MRS. A. R. WADDELL. H. T. (Pernet Ducher, 1908).

A strong grower with handsome foliage. Long and pointed buds of rosy scarlet, opening coppery salmon, very large and extremely showy, and in addition blooms continuously.

MRS. J. H. LAING. H. P. (Bennett, 1887).

This is a top notch rose, soft pink overlaid rosy pink, large size and exceptionally full, richly fragrant. A constant bloomer, with lovely pointed buds on strong stems. We recommend this variety strongly.

MRS. R. G. S. CRAWFORD. H. P. (A. Dickson, 1894).

Clear rosy pink, outer petals shaded pale blush, large perfect blooms of imbricated form, each petal terminates at center of outer edge in a well defined point, giving the bloom the beauty of a dahlia in form. Very fragrant and free in blooming. You can always cut blooms on this sort.

NAARDEN. H. T.

Large finely shaped bloom of creamy white, it is the type of K. A. Victoria but of more vigorous growth, and freedom of bloom. A hybrid raised from a cross between Druschki and Lyon.

NATIONAL EMBLEM. H. T. (McGredy, 1915).

Dark crimson, overlaid velvety crimson, shading to vermillion at the edges. Buds long and pointed, flowers full and perfect, a wonderfully free bloomer.

OPHELIA. H. T. (W. Paul, 1912).

Brilliant salmon flesh, shaded with rose on outer edges of petals, with center of flower glowing peach pink, with lemon and orange blendings. Perfect in form of bud and flower, erect habit, stiff long stem, great freedom of growth and bloom, strong healthy foliage. Is now being grown in a large way for the cut flower trade.

PAULA. T. (W. Paul, 1908).

A vigorous free tea rose, and most deliciously fragrant. Sulphur yellow with ochre center, form resembles Maman Cochet.

PAUL NEYRON. H. P. (Levet, 1869).

Color deep brilliant pink, very double, full and beautiful. Easily the largest rose known. The strongest and heaviest grower in H. Ps., richly fragrant and nearly thornless, constant bloomer, very long stems and very hardy. Probably the best one variety for all localities. We offer magnificent plants of this variety.

PERPETUAL WHITE MOSS. M.

The best pure white moss rose.

PERSIAN YELLOW. A. B.

Deep golden yellow, full and fragrant, hardy everywhere, of strong growth. Blooms the earliest of all roses. Should be pruned very little.

PHARISAER. H. T. (Hinner, 1903).

Exceptionally free blooming, producing long buds opening into large double flowers of rosy white, shading into a lovely salmon tint.

PRAIRIE QUEEN. CL. (Feast, 1843).

The hardy old favorite climbing rose. Perhaps the largest of all hardy climbing roses. Bright clear pink, globular flowers in clusters, a strong grower.

PRIDE OF CLEVELAND. H. R. (Horvath, 1902).

A new rugosa sort, which like all rugosas is entirely hardy. A constant bloomer with long pointed buds, and large semi double flowers, of a rich shade of claret, having large bright red fruits in abundance.

PRINCE CAMILLE DE ROHAN. H. P. (E. Verdier, 1861).

Often called the black rose, owing to its very deep velvety crimson color, passing to intense maroon, and attaining the shade found in dark pansies. Probably the best of all the hardy dark H. P. sorts. A strong, vigorous grower.

PRINCE DE BULGARIE. H. T. (Pernet Ducher, 1901).

Silvery flesh, delicately shaded to golden salmon in center, long bud opening to large full cupped flower, a vigorous grower, with large bright green foliage.

RADIANCE. H. T. (Cook, 1909).

Brilliant rosy carmine, shaded with rich opaline pink tints in the open flower, full form, large size and full with cupped petals. Of sturdy growth and is delightfully fragrant.

RED LETTER DAY. H. T. (A. Dickson, 1914).

An exceedingly beautiful sort, showing velvety brilliant glowing scarlet-crimson buds, and lovely cactus-like open flowers, with the reflex of petals satiny crimson scarlet. Awarded silver medal N. R. S.

SOLEIL D'OR. Per. (Pernet Ducher).

Or golden sun. A very large flower of rich orange yellow, shaded reddish gold and nasturtium red. A riot of rich color and possessed of a penetrating rich fragrance altogether different from any other sort.

SUNBURST. H. T. (Pernet Ducher, 1912).

Color is orange copper or golden orange and golden yellow, edges of petals lighter. Also described as cadmium yellow, all very intense shades. Said by some to be the yellowest of all roses in the everblooming class. It is one of the greatest roses ever added to the long list of H. T. sorts; every one who plants it is surprised and delighted.

TOM WOOD. H. P.

An immense bud and flower, of very full form, large thick petals, cherry red, shaded crimson and maroon, heavy glossy foliage, a free bloomer.

ULRICH BRUNNER. H. P. (Levet, 1881).

A glowing shade of clear scarlet vermillion, beautiful in bud form, and a very large open flower. A strong, hardy grower and very fragrant. Should be included in every rose list.

VEILCHENBLAU. H. W. (Schmidt, 1909).

This is the famous blue Rambler, produces immense panicles of blooms, opening a reddish violet, changing to a steely blue or amethyst color, a vigorous climber, with a bright glossy wichuriana foliage, which will neither mildew nor burn in hot weather.

WHITE DOROTHY PERKINS. H. W. (Cant. 1908).

A pure white climber, identical with Dorothy Perkins except the color. Without doubt the best white climber.

WHITE KILLARNEY. H. T. (Waban, 1909).

A pure white sport of the famous Killarney, the long buds and large open flowers surpass in beauty and size even its parent. This is one of the six best sellers.

WHITE MAMAN COCHET. T. (Cook, 1897).

A sport from Maman Cochet, with creamy white flowers, faintly tinged blush, long pointed buds, opening into large blooms with deeply recurved petals.

WHITE RAMBLER. CL. (Lambert, 1896).

Or Thalia. An exceedingly strong, vigorous, hardy white climber. Flowering in large clusters, similar to Crimson Rambler.

WILLOWMERE. Per. (Pernet Ducher, 1913).

Long, carmine coral-red bud, large open cupped flowers chrome yellow at base, shaded shrimp, toning to carmine rose at edge of petals. A seedling from Lyon, but a more vigorous grower.

YELLOW RAMBLER. CL. (Schmidt, 1895).

A yellow climber of strong growth, but shy in blooming.

YVONNE RABIER. P.

Similar to Baby Rambler, except in color, which is pure white.
