By far the larger part of the territory consists of an unreclaimed wilderness, over which roam tribes of native Indians in search of game. The eastern and southern portions are broad open prairies, well watered and very fertile, but thinly timbered. The centre of the territory forms a portion of the Great American Desert, which is said to be for the most part wholly irreclaimable, and to present scarcely an oasis. On the west are outlying members of the Rocky Mountains. The chief river of the territory is the *Kansas*, the head streams of which rise near the eastern base of the Rocky Mountains, between the sources of the Arkansas and Nebraska. Its two principal branches, the Republican and Smoky Hill forks, run for a considerable portion of their course at a distance of 120 miles apart. Republican Fork issues from a rather large lake, in 39° 52' N. lat., 103° 30' W. long.; Smoky Hill Fork rises in the mountain region east of South Peak; their junction is near 39° N. lat., 96° 30' W. long. The united stream is known as the *Kansas*: its general course is east-by-north to its confluence with the Missouri, in 39° N. lat., 94° 32' W. long. It has a full body of water, is 340 yards wide at its mouth, and is said to be navigable for steam-boats for 150 miles, and for keel-boats, with its forks, for some hundred miles higher. Republican Fork, the larger of the two main branches of the *Kansas*, receives on its right side two considerable affluents, Solomon's Fork and the Grand Saline. Numerous smaller tributaries swell the main stream and its affluents. The chief of the secondary streams belonging to this territory which fall into the Missouri are the Nemawhaw and the Independence. The Missouri itself forms the eastern boundary of *Kansas*, and affords an invaluable outlet for its products. The Nebraska River, on the northern side of the territory, is a very wide but shallow river, with a rapid current and a bed full of shifting sand-banks: it is navigable by steam-boats for about 50 miles. The great emigrant and Frémont routes to Oregon, Utah, and California lie across the territory of *Kansas*, and follow the line of one or other of these rivers.

As far as the country has yet been examined geologically, its southern and eastern parts appear to belong to the Lower Carboniferous system; the rocks consisting largely of mountain limestone and sandstone. In the south-eastern corner is perhaps some portion of the basin of Upper Carboniferous Rocks, or Coal-Bed, of the Indian territory. The western and northern parts of *Kansas* seem to consist chiefly of strata of the Cretaceous group, but we have no detailed account of the rocks. The country, with the exception of the central wastes, is considered to possess a fertile soil and a salubrious climate, while almost every part is well watered. The prairies are of the best kind, but are deficient in timber. The river bottoms have a rich alluvial soil. The few settlers who have established themselves within the territory are said to report very highly of its capabilities, but as yet even the surface of the country is very little known. The only settlement beyond the recently-founded 'city' of Worcester and a few

scattered farm-houses is the military station of Fort Leavenworth on the Missouri.

The vast tract known as Nebraska, including an area of upwards of 136,000 square miles, of which Kansas forms the southern part, was a portion of the country purchased by the United States from the French in 1803. It has been left till the last few years to the undisturbed occupation of the native Indians, but the constant stream of western migration, which caused the growth of one and another territory and state on its eastern and southern borders, and still more perhaps the flood of emigration which poured across it to Utah and California, led to propositions which increased yearly in urgency for its organisation as a territory. The first bill for the organisation of the territory of Nebraska was introduced into Congress in 1845, but rejected. Subsequent measures met with a similar fate. But in the session of 1854 a bill was introduced for forming out of this extensive tract two territories, Nebraska in the north and Kansas in the south; and as the form of the bill re-opened the question of the admission into the Union of new slave states north of 36° 30' N. lat., which the measure known as the Missouri Compromise was understood to have settled should not be done, it was made the occasion of a most earnest struggle between the supporters and opponents of slavery. Eventually the bill was passed, empowering the organisation of the territories, but throwing open the occupation of the soil to all citizens of the United States, and to all who shall make the usual declaration of their desire to become citizens; and providing that the inhabitants of each territory shall determine for themselves whether the institution of slavery shall exist among them. The consequence of this provision is said to have been that a considerable number of the more ardent slaveholders of the southern states at once prepared to remove with their property into Kansas, with a view to obtain possession of it in the interest of the south, as well as to avail themselves of its rich agricultural and other resources. But the movement was immediately met by a counter-movement in the north. A corporation was at once organised, and received a charter from the legislature of Massachusetts, having for its primary object the colonisation of Kansas by free labour. The Massachusetts Emigrant Aid Company, as it calls itself, proposes, if sufficient funds can be raised, to send 20,000 labourers into Kansas in the first year, and to establish them on lands settled by itself; and to assist it in so doing branch companies have been formed in New York and elsewhere. The matter is said to have been set about with so much energy, and to wear so promising an aspect, that the southern slaveholders already hesitate whether to venture into a country where they run so great a risk of losing their slaves by the passing of anti-slavery measures. The first party of the Massachusetts Emigration Company have established themselves in a very promising locality, about 40 miles up the river Kansas, which they have fixed on as the site of their first city, Worcester. Other parties are (August, 1854) making ready to follow them immediately.

KANTURK, county of Cork, Ireland, a market- and post-town, and the seat of a Poor-Law Union, in the barony of Duhallow, is situated in 52° 11' N. lat., 8° 52' W. long., 126 miles S.W. from Dublin, at the confluence of the rivers Allua and Dallua, which after their junction flow into the Blackwater, 3 miles south of the town. The population of the town of Kanturk in 1851 was 3125, besides 3352 inmates of the workhouse. Kanturk Poor-Law Union, which is divided into 33 electoral districts, contains an area of 186,523 acres, and had in 1851 a population of 41,801.

The town of Kanturk is neatly built. The chief industrial products are beer, flour, and serge: wool-combing is carried on. Six yearly fairs are held. The Roman Catholic chapel, the bridewell, and the workhouse, which occupies a site of six acres, are the chief public structures. Near the town are the remains of Kanturk Castle, which was built by the Mac-Donough Mac-Carthy, prince of Duhallow, in the reign of Elizabeth. The building, which occupies the four sides of a quadrangle, 120 feet long by 80 feet wide, is four stories high: in each of the angles is a square embattled tower, five stories high. The estates of Kanturk were forfeited in the rebellion of 1641, and were conferred on Sir Philip Perceval, from whom they have descended to the earl of Egmont.

KARABAGH. [GEORGIA.]

KARAMAN, a town in Asia Minor, which gives name to a pashalic, though the pasha resides at Koniye, is situated 65 miles S.E. from Koniye, in 33° 23' N. lat., 37° 8' E. long., and has about 2500 houses and 15,000 inhabitants. As each house is surrounded by a garden inclosed by a wall, the town appears very extensive for its population. Most of the houses are in a dilapidated condition. The bazaars are ill supplied. The Turkish castle consists of a square keep strengthened by several round and square towers, and surrounded at a little distance by an outer wall within which about a hundred small houses are built. In the wall are inserted stones with Arabic and Turkish inscriptions, which probably were taken from other buildings. Among several ruined mosques of Saracenic architecture is one of striking gracefulness, with an entrance of marble adorned with arabesques. The Armenians, who are pretty numerous, have a large and handsome church in Karaman. A little way north of Karaman is Kara-Dagh, an isolated tractytic mountain steep, rocky and barren, rising to the height of 8000 feet above the sea. To the south of it is the range of

the Taurus. This town is supposed to have given name to the district of Asia Minor called Karamania, or Caramania, which is marked on some maps, but is wholly unknown to the Turks. Karaman was the seat of a flourishing petty sovereignty in the 14th and 15th centuries. It is identified with the ancient *Laranda*.

The name Karamania has been sometimes given also to the Persian province of Kerman. [PERSIA.]

(Hamilton, *Researches in Asia Minor*.)

KARAMANIA. [CARAMANIA.]

KARASUBAZAR. [CRIMEA.]

KARIA, or CARIA, a division of Asia Minor, which comprised the south-western corner of that peninsula. It was bounded S. and W. by the Mediterranean Sea, N. by the valley of the Mæander, and E. by Phrygia and Lycia. Herodotus (l. 142) places Priene, which was north of the Mæander, in Caria, and it is most probable that Caria comprised the lower valley of that river; and that the Messogis range, now the Kastaneh-Dagh, which forms the watershed between the Mæander and the Caystrus, was its northern limit. The natural limit towards the east would be Mount Cadmus and its great southern offshoot, now the Bos-Dagh, which runs at a little distance from the right bank of the Calbis (Dolomon-Chai); but according to Strabo it seems that Caria comprised a large portion of the basin of the Calbis also, which lies east of this range, and extended to the western base of Mount Dædala and to the mouth of the river Glaucus, the towns of Dædala, Araxa, and Calynda being included in Caria.

With the exception of the valley of the Mæander (Mendereh), and a strip along the south coast, west of the Gulf of Glaucus (now Bay of Macri), the surface of Caria is extremely rugged and mountainous. From the mass of Mount Cadmus (now the Baba-Dagh) ranges run west and south, and cover with their ramifications the greater part of the surface. The Bos-Dagh, the southern range, runs parallel to the Calbis (Dolomon-Chai), and at a little distance from its west bank, attaining in its highest point an elevation of 8000 feet above the sea. Near 37° N. lat. it divides into two branches, one of which, forming the high land anciently called Lide, runs west and terminates in the peninsula of Halicarnassus, between the Ceramic and Iassic gulfs, now respectively the gulfs of Kos or Budrun and Mandelieh. The Gulf of Iassus extended northward as far as the promontory of Poseideion, now Cape Monodendri. The other branch range has a south-west direction, and terminates in the lofty Mount Phoenix, and in the remarkable peninsula the Rhodian Chersonese, which stretches southward towards Rhodes and along the eastern side of the Gulf of Syme. The Cnidian Chersonese, which screens the Bay of Syme or Doris on the north, and terminates westward in the Triopian promontory, now Cape Krio. The Rhodian Chersonese terminates in two remarkable promontories—the Kynosema, now Cape Aloupe, opposite Rhodes; and the Paridion promontory, opposite the island of Syme. Between this Chersonese and the island of Syme lies the Gulf of Syme; and the part of the same inlet north of the island is called the Bay of Doris, which washes the Cnidian Chersonese on the south. On the north-western side of the Rhodian Chersonese, forming a subordinate part of the Gulf of Syme, were the bays of Thymnia, Schœnus, and Bubessus, or Bubassus. This last bay was the most north-eastern part or head of the gulf; it was named from a town of the same name; and near it, to the west, was the narrow isthmus which connected the Cnidian Chersonese to the mainland. The coast along these bays is bold, the limestone rocks rising perpendicularly in many places from the water, which is clear, deep, and abounding with sponges. The shores are remarkably well wooded. The Cnidian or Triopian Chersonese, which divides the Ceramic and Dorian gulfs, consists of two peninsular portions, the more western of which was formerly an island, and was connected by the Cnidians with the eastern portion by means of a causeway. [CNIDUS.] Through the narrow isthmus which connects this Chersonese with the mainland the Cnidians attempted to cut a canal in the time of Cyrus to protect their city and Chersonese from the Persians.

The high land called Lyde extends to the valley of the Mæander. Its northern slope is furrowed by several streams, the largest of which are the Mosynus (Kara-su), the Harpasus (Arpa-su), and the Marsyas (Tehina-su), which last rises in a region called Idrias by Herodotus (v. 118), and is skirted on its western side by the range of Latmus. Except the Calbis, which was also called Indus, no stream of importance flowed to the south coast. The Mæander, which carries off the drainage of the greater part of Caria, flows in a west-by-south course, and in ancient times entered the sea to the north of the peninsula of Miletus by the harbour of Latmus, which is now filled up by the deposits of the river.

On the south coast, east of the Rhodian Chersonese and the lofty Mount Phoenix, was a land-locked bay, at the head of which stood the town of Phycus. There was a road from Phycus to Ephesus. Farther east was another small Chersonese, which sheltered the Bay of Panormus on the west; and on the coast between this and the Bay of Glaucus or Macri, were the towns of Imbrus and Caunus, and the promontory of Artemisium. A few miles inland from the head of the Bay of Panormus and to the west of the Calbis is a large lake six or eight miles across, and with a number of small streams running into it; a channel twelve miles in length connects it with the sea.

Fellowes says its waters are brackish. All the southern coast of Caria eastward from Mount Phoenix, and extending to the mountains inland belonged to the Rhodians, and was called Persea. This district is very beautiful, and contains many fertile tracts. The irregular coast of Caria is most picturesque, indented by countless bays and inlets, whose shores, generally bold and well-wooded, are in parts diversified by extensive ancient ruins and belted by numerous islands.

Though Caria is extremely mountainous it contains some extensive high plains, and there is a good deal of fertile land in the valleys of the Mæander and its feeders. The mountains are in most parts well clothed with timber; firs, oaks, and plane-trees being the prevailing species. The chief products are wheat, figs, olive-oil, fruits of all kinds, and wine. The vine is trained to grow up the highest trees. The wine of Cnidus was celebrated in ancient times. The palm-tree and the orange grow luxuriantly. Cattle are fed on the mountain pastures, and sheep are numerous; the green slopes along the valley of the Marsyas are covered with flocks. The climate, owing to difference of level, varies greatly; in the lower grounds it is hot, while the high lands are cold, wintry, and snow-covered. At the source of the Mosynus the winter lingers to March or April. The limestone which everywhere abounds affords excellent material for building. Among other mineral products Fellowes mentions iron-stone of great purity as abundant between Stratoniceia and Mylasa, mica-schist, marble, &c. Warm springs abound, and there are gaseous flames.

The Carians maintained that they were an autochthonous people descended from Car, the brother of Lydus and Mysus. According to Cretan accounts they originally inhabited the Ægean islands, were subject to Minos, whose ships they manned, but they paid no tribute; and that driven from the islands by Ionians and Dorians, they came to the mainland where they displaced the Leleges and Pelasgi. Homer mentions the Carians with the Leleges, Caucones, and Pelasgi among the auxiliaries of the Trojans; and they were probably all continental people and related to each other. The Caunii, whose town Caunus was on the south coast, spoke a language akin to that of the Carians. Thucydides says that the early inhabitants of the Ægean islands were Carians and Phœnicians, and that they were pirates. There seems little doubt from Thucydides (l. 3.) that the Carians with some other people occupied the island of Delos at some early period.

In Homer's time the Carians occupied Miletus, the banks of the Mæander, and the heights of Mycale to the north of the river. The Ionian emigration drove the Carians from Mycale near which Priene was built, from Myus, and from the city of Miletus. The Dorians dispossessed them of Halicarnassus, Cnidus, the Triopian Chersonese, and probably from the island of Kos. The south coast was probably seized by the Rhodians about the same time. Thus the principal parts of the sea coast were occupied by Greek colonies, but not all, for in the time of Xerxes the Carians furnished 70 ships to the Persian fleet, while the Dorian settlements supplied only 30 ships. North of the Mæander and in the neighbourhood of the Greek colonies there was probably some intermixture between the Carians and their neighbours; but they maintained their language, and in the interior the population was pure Carian. They lived in small towns or villages, and formed a federation with common religious rites to Zeus Chrysaorea. The federation was called Chrysaoreum; its place of meeting for sacrifice and deliberation was the spot where the Macedonians after the time of Alexander founded Stratoniceia.

Caria was included in the kingdom of Croesus, on whose defeat by Cyrus it came under the Persian dominion. In the Ionian revolt (B.C. 499-494) the Carians fought bravely side by side with the Greeks, but were at last compelled to submit. Under the protection of Persia, Caria was ruled by a dynasty of princes, whose capital was Halicarnassus. Artemisia, who accompanied Xerxes to the battle of Salamis with five ships, was one of these petty sovereigns. The Athenians afterwards made the inhabitants of the coast tributary, but the Carians of the interior maintained their independence. In the time of Alexander the Great there was a queen of Caria, named Ada. She surrendered to Alexander the strong town of Alinda, in consideration for which he restored her to the royal authority of which she had been deprived. Caria afterwards became successively subject to the Greek kings of Egypt and Syria. The Romans having defeated Antiochus (B.C. 190) shared Caria between Eumenes king of Persia and the Rhodians, but left certain towns free. About B.C. 129 Caria was added to the Roman province of Asia.

The Carians were a warlike race, not addicted to commerce like the Greeks; they hired themselves as mercenaries, and served under the kings of Egypt.

Among the towns of Caria were CNIDUS and Halicarnassus, which were members of the Dorian hexapolis in Asia. Halicarnassus, now Boudroum, or Budrun, is particularly interesting as the birthplace of Herodotus and Dionysius the historians. It was founded by a colony from Troezen in Argolis, was the largest and strongest city in all Caria, and became the seat of a Carian dynasty under the protection of Persia. One of its rulers, Artemisia, wife and sister of Mausolus, erected in his honour the celebrated sepulchral monument called the Mausoleum, of which there are still remains as well as of the ancient walls. Some interesting sculptures, supposed to have formed part of the decoration of the Mausoleum, are now in the British Museum. Halicarnassus continued to be a stronghold of Persia till the time of

Alexander, who after a long siege burnt the city but was unable to take the acropolis. Though afterwards rebuilt Halicarnassus never recovered from the blow.

Among the other towns were *Alabanda*, now supposed to be *Arab-Hissa*, on the Tahina, or Marsyas, where are remains of a theatre and other buildings; it was noted for its luxury: *Coccinia*, higher up the Marsyas, identified by Leake with the village of Tahina where Pococke found considerable remains: *Labranda*, to the south-west of Alabanda, famous for its Carian temple to Zeus Stratios, to which the Carians went in procession from Mylasa along the sacred road which connected the two places. The site of Labranda, is unknown; *Iakli* which Fellowes erroneously takes for Labranda was Euromus, where are the remains of a beautiful Corinthian temple. *Mylasa*, in the interior and to the north-east of Halicarnassus, is now *Mellassa*, which is built chiefly from the ruins of the old town. There are still many beautiful remains of ancient architecture at Mellassa which was visited by Fellowes. East by south from Mylasa was *Stratoniceia*, which was either founded or rebuilt on a spot called Idrias by a Macedonian colony after the time of Alexander. Stratoniceia is identified by Fellowes with *Esky-Hirsa*, which stands in a delightful country. There are remains of several temples, the marble walls of which are covered with inscriptions. The ruins of the ancient town extend far beyond the village of *Esky-Hirsa*.

Caunus, the chief town of the Caunii, was a place of considerable trade, on the south coast in the Rhodian Persea. It was the birth-place of the painter Protogenes, and famous for its figs. It was for a long time subject to the Rhodians. In the massacre of the Romans in Asia in the time of Mithridates Eupator, the Caunii distinguished themselves by their ferocious cruelty to their victims. On a height above Caunus was the fortress *Imbrus*. Between Caunus and the Gulf of Glaucus was *Calynnda*, which has not been identified, but is supposed to be in the basin of the Talamon, or Dolomon-Chai, the Calbis of Strabo and the Indus of Livy.

In the north-east of Caria, near the Phrygian frontier, was *Antiocheia* at the junction of the Mosynus with the Mæander; its remains, which are described by Hamilton and Fellowes, consist of the massive walls of the acropolis and an inner castle, some sub-structures of buildings, a stadium, and a small theatre. Southward from Antiocheia, on high ground to the east of the Mosynus, stood the city of *Aphrodisias*, now *Ghera*, where are remains of a beautiful Ionic temple of Aphrodite, from whom the town was named. There was a city *Plarasa*, probably not far from Aphrodisias. Fellowes ('Asia Minor') says that Ghera is the representative of the ancient *Caroura*, which was east of Mount Cadmus, near the confines of Caria, Lydia, and Phrygia. It was famous for its hot springs on the banks of the Mæander, by which its site has been identified. Hamilton ('Researches') conjectures that the town was named from its position on the boundary of Caria towards Phrygia (*Καρίαν ὄρος*).

North of the Mæander were *Tripolis*, near the point where the river enters the plains (38° 1' N. lat.), where are remains of the city walls, a theatre, and some other buildings: *Mastaura*, west of Tripolis and north-east of the modern Nazeli, and near the modern village of Mastaura, has some ancient ruins, most of which are overgrown with underwood, and a fine spring of cold water: *Tralles*, situated on a plateau of the Messogis above the modern Aidin (a town of about 6000 houses); the plateau is covered with ruins, among which the Turks have quarried materials for the houses and walls of Aidin; the most remarkable ruin is that of a palatial structure, which is probably not ancient: *Magnesia* farther west near the mouth of the Lethæus in the Mæander: and *Priene*, on a lofty rock near the modern town of Samsun, where many ancient walls remain, and a theatre cut out of the rocky hill. Several of these towns north of the Mæander are usually given to Lydia, to which in later times they seem to have belonged.

Along the west coast beyond Halicarnassus were *Myndus*, once the capital of Caria: *Caryanda*, a city which seems to have stood partly on an island and partly on the mainland, the two parts being united by a causeway (now a narrow sandy isthmus), alongside of which was the harbour which Leake takes to be that of Pasha-Limani: *Bargyllia*, on the southern shore of the Iassic Gulf, between Myndus and Iasus, celebrated for its statue of Artemis Cindyas, upon which, though exposed to the open sky, neither rain nor snow (it was said) ever fell. *Iasus*, or *Jassus*, now *Askem*, *Asyn Kaleri*, on a small island at the head of the Iassic Gulf, was founded early by Argive colonists, but received additional settlers in the Ionian emigration under Neleus; it became a wealthy place owing to its fisheries; part of the city walls and a theatre cut out in the side of a rock still remain. *Branchidæ* was famous for its oracle and temple of Apollo Didymus, of the south of which there are still some remains; the temple was robbed and burnt by the Persians (B.C. 494), but it was afterwards rebuilt. A sacred way led from the sea to the temple bordered with monolithic statues seated on chairs, the feet close together and the hands on the knees—an imitation of the avenues of the temples of Egypt. (Leake, 'Asia Minor.') Branchidæ stood near a harbour, called Panormus, on the south of the Poseideion. *Miletus*, one of the most ancient and flourishing towns of Caria and famous for its woollen manufactures and for the numerous colonies founded by it on the Black Sea, was situated on high ground on the south bank of the Mæander and near its mouth

Its citizens were great traders and powerful by sea. They carried on long wars against the Lydian kings. It was subjected to the Persians by Cyrus the Great, and notwithstanding internal dissensions continued prosperous until the Ionian revolt, instigated by its tyrant Aristagoras; this event brought down upon it the vengeance of the Persians, who utterly destroyed it B.C. 494. It was rebuilt, and made a long resistance to the army of Alexander; but it never recovered its former importance, although it was a prosperous place under the Romans. Its site is marked by the modern village of *Pallatia*, where are seen the remains of an enormous theatre, an aqueduct, and a Christian church formed out of a Greek temple. South-east of Miletus, in the interior near the brackish lake of Baffi, which is probably part of the ancient *Latmicus sinus*, was *Heracleia* at the western foot of Mount Latmus, where some ruins mark the spot. Near it was shown the cave of Endymion. To the north end of this lake, near the *Mæander*, was *Myus*; and on the east side of Mount Latmus lay *Amyzon*, ruins of the citadel and walls of which remain.

(Pococke; Leake, *Asia Minor*; Sir C. Fellows, *Asia Minor*; Hamilton, *Researches in Asia Minor*; *Dictionary of Greek and Roman Geography*.)

KARLOVESCZ. [CROATIA.]

KARS, a town in Turkish Armenia, is situated in a high rugged plain, between 6000 and 7000 feet above the level of the sea, on the Arpa a feeder of the Araxes, about 100 miles straight line distance N.E. from Erz-rum, N.W. from Bayazid, and S.E. from Batoum on the Black Sea, in 40° 27' N. lat., 43° E. long., and has about 12,000 inhabitants. It stands in a rocky amphitheatre of black basaltic hills, and has a dark dismal look, from the total absence of trees, and from the circumstance that all the houses are built of black basalt. It contains about 300 houses, 20 mosques, and 4 baths. Part of the town is walled and has a citadel built by Amurath III.; but it is untenable against artillery, being commanded by heights within musket range on the opposite side of a deep narrow ravine traversed by the Arpa. The two portions of the town are united by two stone bridges thrown across the river which encircles the walled portion of the town on three sides. Kars was formerly a large town with from 6000 to 8000 houses, but a great part of the Turkish population abandoned it during the Russian occupation in 1828-9, and on the retreat of the Russian army all the Armenians emigrated to the neighbouring provinces of Russia; so that from Russian violence and the desertion of its inhabitants it fell into a state of ruin and decay from which it has not yet recovered. The Armenian convents and churches are mostly in ruins.

The pashalic of Kars includes the most northern part of Turkey in Asia, extending from the Araxes and Suvanli-Dagh to the Choruk-su, the Black Sea, and the Russian frontier. It is a rugged country of lofty mountains and high plains, drained by the Araxes, the Kur, and the Choruk-su.

The country is described in the article ARMENIA (vol. i. cols. 507, 508, 509). The town of Kars is about 45 miles W.S.W. from the Russian town and fortress of Gumri, or Alexandropol.

KARUN. [BAGHDAD, Pashalic of.]

KASAN. [CASAN.]

KASCHAU. [HUNGARY.]

KASKASIA. [ILLINOIS.]

KATMANDU. [NEPAUL.]

KEADY. [ARMAGH.]

KEGWORTH. [LEICESTERSHIRE.]

KEIGHLEY, West Riding of Yorkshire, a market-town and the seat of a Poor-Law Union, in the parish of Keighley, is situated in 53° 52' N. lat., 1° 56' W. long., distant 44 miles W. by S. from York, 206 miles N.W. by N. from London by road, and 204 miles by the Great Northern and Midland railways. The population of the town of Keighley in 1851 was 13,050. The living is a rectory in the arch-deaconry of Craven and diocese of Ripon. Keighley Poor-Law Union contains 6 parishes, with an area of 35,534 acres, and a population in 1851 of 43,241.

Keighley is situated in a deep valley, at the junction of two small streams; the united stream falls into the river Aire about three-quarters of a mile to the north-east. The parish church, which was rebuilt in 1847, is a spacious structure. There are places of worship for Independents, Wesleyan, Primitive, and New Connexion Methodists, Baptists, Swedenborgians, and Quakers. The Free Grammar school, which has an income from endowment of 240*l.* per annum, had 60 pupils in 1853. Quarterly payments are received from all the pupils. The mechanics institute had 309 members in 1851, with 2127 volumes in the library. There are National schools and a savings bank. The worsted and cotton manufactures afford occupation to many of the inhabitants. There are paper-mills and iron-foundries. Wednesday is the market-day; fairs are held on May 8th and 9th, and on the 7th, 8th, and 9th of November.

KEITH, Banffshire, Scotland, a market-town in the parish of Keith, is situated in 55° 33' N. lat., 2° 59' W. long., on the banks of the small stream called the Isla, about 20 miles S.W. from Banff, 178 miles N. by E. from Edinburgh. The population of the town of Keith in 1851 was 2101.

The town comprises three distinct villages, called Old Keith, New Keith, and Fife Keith. Old Keith is a very ancient village, and at

one time was a regality. It is now a mere hamlet. New Keith dates from the middle of last century. It consists of five principal streets, intersected by several smaller ones, with a square or market-place in the centre of the town. It contains the parish church, a court-house, an Episcopal and a Roman Catholic chapel, besides chapels for congregations of the Free Church and United Presbyterian bodies. There are a library and a savings bank. A grain-market is held weekly; and several cattle-fairs are held annually, the most important of which is 'Summer-Eve Fair.' Fife Keith, a modern village, on the bank of the Isla, opposite Old Keith, with which it is connected by two bridges, consists of several well-built streets. Many of the inhabitants of Keith are employed in the manufacture of woollens, flax-dressing, weaving, bleaching, and the manufacture of tobacco.

KELAT. [BELOOCHISTAN.]

KELLS, county of Meath, Ireland, a post, market and corporate town, and the seat of a Poor-Law Union, is situated on the right bank of the Blackwater, in 53° 43' N. lat., 6° 50' W. long., distant 31 miles N.W. from Dublin, on the mail-coach road and railway from Dublin to Enniskillen. In 1851 the population was 3997, besides 1224 in the workhouse and 15 in the prison. The corporation of the borough consists of a sovereign, two provosts, and 24 burgesses; it has no jurisdiction. Kells Poor-Law Union contains 25 electoral divisions, with an area of 108,982 acres, and a population in 1851 of 31,326.

The entrance to Kells from the Dublin road, through the rich well-wooded demesne of the Marquis of Headfort, is very imposing. The four principal streets are substantially but irregularly built, and have wide roadways lined with trees. The old church and ancient round tower, a handsome Roman Catholic chapel, and the sessions-house encircled by trees, give interest to the place. New roads have been formed in the environs; large schools have been endowed by Miss Dempsey, and there are a Fever hospital and the Union workhouse. The town has a considerable retail trade, a good market for agricultural produce, a lace factory, a bridewell, and a savings bank. Six yearly fairs are held, and there is a weekly market on Saturday. Headfort House, the residence of the Marquis of Headfort, is a plain but substantial and very large edifice. The grounds are adorned by the Blackwater, which forms an artificial lake in the centre of the park. On the Hill of Lloyd, a gently swelling hill 422 feet in height, to the north-west of the town, is a pillar above 100 feet high, erected by the first earl of Bective, from the lantern at the top of which a fine view of the country round Kells is obtained.

Kells is a place of considerable antiquity: it was originally called *Kentis*. A monastery was founded here in A.D. 560, by St. Columbkil, whose stone-roofed cell or chapel is still shown near the richly-decorated ancient cross which stands in the churchyard. The town gave title to a bishop, whose see was united to that of Meath in the 13th century. During the 12th century Kells was frequently plundered by the Danes. As a borough Kells has several charters, the oldest of which dates from 11-12 Richard II. It returned two members to the Irish Parliament previous to the Union. The staff of the county militia is stationed at Kells, where also quarter and petty sessions are held.

KELSO, Roxburghshire, Scotland, a burgh of barony and market-town in the parish of Kelso, is beautifully situated on the margin of the river Tweed, not far from where the Teviot falls into that stream, in 55° 36' N. lat., 2° 26' W. long., distant 52 miles S.E. from Edinburgh, 22 miles S.W. from Berwick-upon-Tweed, and within 5 miles of the English border. The population of the town in 1851 was 4783.

In a central square or market-place is situated the town-house. From this square the several streets diverge to the different quarters of the town. Bridge-street is a handsome street: the bridge built by Rennie is a very fine erection; it formed the model from which Rennie afterwards designed Waterloo Bridge, over the Thames at London. The streets are clean and lighted with gas. Many of the houses are elegant buildings. There are, besides the parish church, two chapels for United Presbyterians, and one each for Episcopalians, Independents, and Reformed Presbyterians. The chief employment in the town is the currying of leather: woollens, linens, and flannels are manufactured. The weekly corn-market is well attended. Several important cattle-fairs are held in the course of the year.

In the neighbourhood of Kelso is Fleurs Castle, the residence of the Duke of Roxburgh. At a short distance are the ruins of Roxburgh Castle. The most interesting object here is Kelso Abbey, which is in the early Norman style; it was built at the same time as the abbey of Melrose. The ruins, consisting of a part of the choir and transepts and of the centre tower, are close to the town. The abbey was founded by David I. when earl of Huntingdon, and richly endowed by him and his successors. The abbey was severely injured in 1522, and reduced to ruins by the English in 1545. Owing to its situation, Kelso has been the scene of many events of national interest.

KELVEDON. [ESSEX.]

KEMPSTON. [BEDFORDSHIRE.]

KEMPTEN (the ancient *Campodunum*), a town of Bavaria, in the old duchy of Suabia, is situated on the Iller, in 47° 44' 40" N. lat., 10° 18' 45" E. long., and has about 8000 inhabitants. It is an old-fashioned town, consisting of two parts—the Stifts-Stadt, or St.-Hildegard, which is situated on a hill, and is an open town; and the ancient free imperial city, which is in the valley. It has a castle, two

churches, a gymnasium with a library and collection of works of art, an hospital, and an orphan asylum. There are manufactures of cotton and linen, and considerable trade in furs, wool, salt, linen, &c. The ancient abbey was in the Stifts-Stadt. The prince abbot held immediately under the Pope. The abbey and the town were assigned to Bavaria in 1802. Kempten is a first-class station on the railway from Augsburg to Lindau (on the Boden-see), and is 64 miles S. by W. from the former city.

KENDAL, or more accurately Kirby Kendal, or Kirkby in Kendal, that is, the kirk or church town in the dale or valley of the Ken or Kent, Westmorland, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Kendal, is situated in 54° 20' N. lat., 0° 44' W. long., distant 22 miles S.W. by S. from Appleby, 262 miles N.W. by N. from London by road, and 250 miles by the London and North-Western and the Lancaster and Carlisle railways. The population of the borough in 1851 was 11,829. The living is a vicarage in the archdeaconry of Richmond and diocese of Chester. The borough is governed by 6 aldermen and 18 councillors, and returns one member to the Imperial Parliament. For sanitary purposes the borough is under the management of a Local Board of Health. Kendal Poor-Law Union contains 58 townships and chapelrys, with an area of 185,790 acres, and a population in 1851 of 36,557.

Kendal was made a market-town by licence from Richard I., and became, by the settlement of the Flemings, in the reign of Edward III., the seat of a considerable manufacture of woollen cloths (which took from the town the name of Kendals): the manufacture still continues, although greatly diminished in extent. The town was incorporated in 1576 by Queen Elizabeth. Before the turnpike-road was made in 1752 nearly 200 pack-horses were employed weekly, some of them making two journeys in the week, in bringing provisions and merchandise to the town, or in taking away its manufactures; besides two waggons twice a week from Lancaster, carrying in all about sixty horse-loads, and two or three carts making several journeys, and carrying altogether about forty horse-loads weekly between Kendal and Milnthorpe.

The town is chiefly built on the slope of a hill which rises from the right bank of the Kent; it has a neat and clean appearance, and is lighted with gas. Among the public buildings are the town-hall, a house of industry, a house of correction, the Odd Fellows' hall, a theatre, and the assembly rooms.

The church, dedicated to the Holy Trinity, is chiefly of late perpendicular character, and is only remarkable for its unusual width, which is 110 feet, its length being 140 feet; the nave has four aisles, and terminates at the east end in five divisions—the chancel and four chapels. St. George's church was erected in 1841 on the left bank of the Kent; St. Thomas's was erected in 1837. The Independents, Baptists, Wesleyan and Primitive Methodists, United Presbyterians, Quakers, Roman Catholics, and Unitarians have places of worship. The Free Grammar school, founded in 1525, is free for classics to all residing in Kendal parish: it has an income of about 50*l.* per annum; in 1851 it had 23 scholars. Kendal possesses National, British, and Infant schools: a Blue-Coat Free school; a Roman Catholic school; a mechanics institute, with 83 members in 1851, and a library of 1293 volumes; news-rooms; a natural history society, with 126 members in 1851, and an excellent museum; a savings bank; a dispensary; a fever-house, and several almshouses.

Kendal has extensive manufactures of cotton checks, kerseys, and other woollen cloths, linsey, blanketing, carpets, fancy waistcoating, girths, hosiery, sacking, and worsted. Rope-making, iron and brass founding, marble statuary work, and brewing give some employment. The market, held on Saturday, is the principal market in the county for corn and provisions; fairs for horses, horned cattle and sheep are held five times in the year. A county-court and quarter-sessions are held in Kendal. On the left bank of the river Kent are the ruins of the old castle of the barons of Kendal, consisting of the outer wall, with two round and two square towers. The Castle-How, or Castle-Law Hill, an ancient earthwork, is on the west side of the town, opposite the castle. On its summit is an obelisk erected in commemoration of the revolution of 1688.

KENILWORTH, Warwickshire, a market-town in the parish of Kenilworth, is situated in 52° 21' N. lat., 1° 35' W. long., distant 4½ miles N. by E. from Warwick, 90 miles N.W. from London by road, and 99 miles by the London and North-Western railway. The population of the town of Kenilworth in 1851 was 3140. The living is a vicarage in the archdeaconry of Coventry and diocese of Worcester.

There was anciently at Kenilworth a castle, which was demolished in the war of Edmund Ironside and Canute the Dane, early in the 11th century. In the reign of Henry I. Geoffrey de Clinton built here a strong castle and founded a monastery. In the reign of Henry III. Kenilworth received a grant for a weekly market and a yearly fair. The historical interest of this place attaches to its castle, which was one of the strongholds of Simon de Montfort, earl of Leicester, in his insurrection against Henry III., and afforded shelter to his son and others of his adherents after the fatal battle of Evesham in 1266. It was however, after a gallant defence, obliged to capitulate in 1266. Henry IV., son of John of Gaunt, united the castle, which he inherited,

to the domains of the crown, of which it formed part till the time of Elizabeth, who granted it to Robert Dudley, earl of Leicester. The magnificent entertainment given here by Leicester to Elizabeth has been made familiar to the general reader by Sir Walter Scott's historical romance of 'Kenilworth.' After the civil war of Charles I. the castle was dismantled, but extensive and picturesque ruins remain. The ruins include some Norman portions. The most ancient part is called Caesar's Tower, of which three sides remain, with walls in some parts 16 feet thick. The large and massive additions of John of Gaunt, known as Lancaster Buildings, are in different stages of decay; and Leicester Buildings, added by Dudley, earl of Leicester, though of comparatively modern date, present, from the friable nature of the stone of which they are built, an appearance of considerable antiquity. They contain the ruins of the noble banqueting-hall, 86 feet long by 45 feet wide. The gate-house erected by the earl of Leicester is in better preservation. There are very few remains of the monastery, which was first a priory, and afterwards made an abbey. It belonged to the Regular Canons of St. Augustine. An ancient stone bridge crosses a brook flowing into the Avon.

The town consists principally of one long street, extending nearly a mile along the road from Coventry to Warwick; another street leads towards the castle. The church has a rich western doorway of Norman architecture, in the lower part of an ancient tower which is surmounted with a spire of more modern date. One of the windows is filled with beautiful modern stained glass. The Independents have a chapel, and there are Endowed, National, and Infant schools. The manufacture of Prussian blue and other chemical substances is carried on; comb-making and the weaving of silks and gauzes employ some of the inhabitants. The market is on Wednesday, and there is a yearly cattle fair.

KENMARE, county of Kerry, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated at the head of Kenmare Bay, on the north shore of the estuary of the Roughty, in 51° 52' N. lat., 9° 34' W. long., 16 miles S. by W. from Killarney, 163 miles S.W. from Dublin. In 1851 the population was 1501. Kenmare Poor-Law Union contains 16 electoral divisions, with an area of 198,146 acres, and a population in 1851 of 21,282.

The town was a mere hamlet till the close of the 18th century; it now consists of one large street of neat well-built houses from which others diverge towards the Sound, a narrow part of the bay, which is spanned by the Lansdowne suspension-bridge. In the town are a Protestant church, a large Roman Catholic chapel, a news-room, market-house, petty-sessions house, a bridewell, and the workhouse, which affords accommodation for 540 inmates. A little below the town is a substantial pier; the depth of water at high-tide is 16 feet, and vessels of the largest size can come at all times within a mile of the pier. Coal, timber, iron, and slates are the chief imports: corn, salmon, and other fish, and copper-ore from the neighbouring mines, are the principal exports. The country on both sides of the bay for several miles belongs to the Marquis of Lansdowne.

KENNEBECK. [MAINE.]

KENNINGHALL. [NORFOLK.]

KENSINGTON. [SURREY.]

KENSINGTON, Middlesex, a western suburb of London, in the parish of Kensington. The population of the parish of Kensington in 1851 was 44,053, of which number 14,870 were returned for Brompton subdistrict. The living is a vicarage in the archdeaconry of Middlesex and diocese of London. Kensington parish is, for poor-law purposes, governed by a board of guardians.

The principal street of Kensington consists of ranges of well-built houses extending along the great western road; and there are other streets diverging from, and parallel to it, besides a district of villas-residences on the north of the Oxford road, known as Kensington Park. Brompton and Little Chelsea, and Kensington Gravel-pits are in the parish. At Kensington is a royal palace, commenced by William III., who having purchased a dwelling-house, converted it into a palace, rebuilding the principal parts, and making many additions to it, which succeeding princes have augmented. The edifice is of red brick, ornamented with columns and quoins of stone, and consists of three principal quadrangles. The gardens and grounds, which are agreeably laid out, are three miles in circuit; they are open to the public. Several members of the royal family have apartments within the palace. There are barracks for detachments of the guards. A calvary barracks is at the southern entrance to Kensington Gardens. Holland House, a quaint mansion in the Elizabethan style, erected by Sir Walter Cope in 1607, was the residence of Addison, who died in it. It is now the property of Lord Holland: it contains some interesting portraits. Kensington church, a large inelegant brick building, is near the principal street. There are several district churches in the parish. One on the highest point of Kensington Park, is of unusually elegant as well as picturesque form; it is in the decorated style. There are Independent, Baptist, Wesleyan Methodist, and Roman Catholic chapels; and National, British, and Infant schools. A proprietary Grammar school, in connection with the Church of England, had 225 scholars in 1853.

KENT, a maritime county in the south-eastern corner of England. It is bounded N. by the estuary of the river Thames, by which it is separated from the counties of Middlesex and Essex; E. by the

German Ocean and by the Straits of Dover; S. by the county of Sussex; W. the county is bounded by Surrey. A detached portion of the parish of Woolwich in Kent lies on the left bank of the Thames. The form of the county is irregular. Its principal dimensions are as follows: length of the northern boundary, from the neighbourhood of London to the North Foreland, 64 miles in a straight line; of the southern boundary, from the junction of the three counties, Kent, Surrey, and Sussex, to Dungeness, 43 miles; of the eastern boundary, from the North Foreland to Dungeness, 38 miles; and of the western boundary, from the neighbourhood of London to the junction of the above counties, 24 miles. The area is estimated at 1627 square statute miles, or 1,041,479 acres. The population in 1841 was 549,353; in 1851 it was 615,766.

Coast-line, Islands, &c.—The northern part of the county, along the estuary of the Thames, is skirted by a line of marshes extending inland a distance varying from a few yards to two miles. At the junction of the estuaries of the Thames and the Medway the marshes occupy a large portion of the tongue of land between these rivers, the extremity of which is termed the Isle of Grain. Eastward of the Isle of Grain, the Swale, an arm of the estuary of the Medway, cuts off from the mainland the *Isle of Sheppey*, of which the isles of Elmley and Harty are subordinate portions. The northern side of the Isle of Sheppey is upland; the cliffs rise about 90 feet above the river. The southern part of the island is a low flat. Its area is nearly 33 square miles; it includes the decayed borough of Queenborough, and the royal dockyard and town of Sheerness at its north-western point. The population of the liberty of Sheppey Island (which does not include Harty Island) was 13,136 in 1851. The surface is laid down for the most part in grass; but the upland part on the northern side produces good corn. The marshes terminate east of the Swale, and the coast again rises to some height in clayey cliffs, which extend to Reculver and the flats which form the western limit of the Isle of Thanet. In the *Isle of Thanet*, which occupies the north-eastern corner of the county, the cliffs again commence, and continue along the coast to Pegwell Bay, the boundary of the isle to the south-east. The North Foreland is on the Isle of Thanet, east of Margate. The Isle of Thanet contains about 40 square miles, with a population in 1851 of 31,798, and includes the well-known watering places, Margate, Ramsgate, and Broadstairs. It is separated from the mainland by the narrow channels of the Stour. The coast from the Isle of Sheppey to the North Foreland is skirted by sands which extend from a quarter of a mile to a mile from high-water mark; and for some miles farther out by 'the flats,' which, except in Margate Roads, rarely afford, when the tide is out, more than two fathoms water. Margate Roads are sheltered to seaward by Margate Sands, which are dry at low water.

The chalk cliffs of the Isle of Thanet are succeeded by the low coast of Pegwell Bay, which continues to Walmer Castle, near Deal. Here the chalk cliffs recommence, and continue round the South Foreland (a headland bearing 14 miles nearly due S. from the North Foreland), to Sandgate, between Folkestone and Hythe. Between Dover and Folkestone a portion of the chalk cliffs has fallen forwards towards the sea, so as to present an under cliff somewhat similar to that at the back of the Isle of Wight. The works of the South-Eastern railway are carried along here, partly in tunnels, in cuttings, and on an embankment close to the beach. From the neighbourhood of Folkestone the coast declines until it forms the extensive tract of Romney Marsh, the coast-line of which extends south-west to Dungeness, a point 19 miles in a straight line south-west of the South Foreland, and thence westward 6 or 7 miles to the border of the county of Sussex. Romney Marsh is in one part protected against the sea by an embankment called Dymchurch Wall. There are lighthouses at the North and South Forelands, and on Dungeness, and beacons in various other places. Opposite to the coast which extends from the Isle of Thanet to the South Foreland, lies the Goodwin Sand, the channel between which and the Kentish coast is the well-known roadstead of the Downs. The Goodwin Sand is about 10 or 11 miles long from north to south; its greatest breadth is 3 or 4 miles. It is divided into two parts by a narrow channel called 'the Swatch,' navigable by small boats. Another sand-bank, called the Brake, lies between the north-eastern extremity of the Goodwin Sand and the shore; it is about 5 miles long with a depth upon it, at low water, of from 3 to 12 feet.

The Downs, which are about 8 miles in length and 6 miles in width, are a safe anchorage, and are the general rendezvous of shipping leaving the Thames for the Channel, or returning homeward. To the north of the Downs are 'the Small Downs,' a roadstead immediately contiguous to the Downs properly so called, and sheltered by the Brake, as the Downs are by the Goodwin Sand.

Surface and Geology.—Kent is on the whole a hilly county. The chalk range of the North Downs enters the county on the west side from Surrey, not far from Westerham, and runs east-north-east to the valley of the Medway between Maidstone and Rochester. On the eastern side of the Medway, which completely interrupts the chalk range, the Downs rise again, and run to the east-south-east to the coast near Folkestone. This part of the range is divided into two parts by the valley of the Stour. On the north side the Downs gradually subside towards the estuary of the Thames.

The breadth of the chalk formation varies; west of the Stour it is from 3 to 6 miles; east of the Stour it occupies the whole extent of the county north of a line drawn from Folkestone to Wye, except where it is interrupted by the marshy valley that surrounds the Isle of Thanet. The height of the chalk hills reaches in some instances an elevation of 642 feet above the sea. The cliffs near Dover are about 400 feet high; Dover Castle hill is 469 feet.

The district between the chalk range and the estuary of the Thames is, for the most part, occupied by the plastic clay which immediately overlies the chalk. The tongue of land between the Medway and the Thames, including the Isle of Grain and the Isle of Sheppey, is formed of the London clay, which overlies the plastic clay. This formation also occupies a considerable district north and north-west of Canterbury, extending to the shore between Whitstable and Reculver. The London clay also covers a small tract near Pegwell Bay. Shooter's Hill, near Woolwich, which is an insulated mass of London clay, is about 446 feet high.

In the valleys of the Darent and its feeder the Cray the strata above the chalk have been washed away, and the chalk is covered only by the vegetable soil. Another strip of chalk, denuded of the superior strata, runs along the bank of the Thames from the valley of the Darent to below Gravesend. South of the North Downs the chalk marl and greensand crop out, and cover a belt of land skirting the chalk throughout the whole extent of the county from west to east. The breadth of this belt varies from 2 to 7 miles. Its southern slope, which is the steepest, forms what is designated 'the ragstone range' of hills, the higher points of which are from 600 to 800 feet high, and overlook the valley watered by the Eden, the Medway (from Penshurst to Yalding), and the Beult. The valley just referred to is occupied by the Weald clay, and forms another belt extending throughout the county from the border of Surrey to the edge of Romney Marsh, having an average breadth of 5 miles.

The remaining portion of the county, which forms a narrow belt or strip of land along the Sussex border, is occupied by the iron-sand, which forms the nucleus of the great Weald district of the south-eastern part of England. This formation constitutes a range of hills, amid which the upper waters of the Medway and its tributary the Teyse have their sources: and extends far into Sussex. It rises in some parts of the Weald clay district through the overlying strata of that formation.

The county thus appears, when viewed with reference to its geology, to consist of five parallel belts, extending nearly in the direction of its length, and occupied by different formations, occurring in regular order:—1, The London and plastic clays; 2, the chalk; 3, the chalk marl and greensand; 4, the Weald clay; 5, the iron-sand. The southern border of the chalk and greensand formations, and the iron-sand district, form three parallel ranges of hills separated from each other by the Holmsdale and Weald clay valleys.

What is termed the Weald (Saxon 'weald,' a forest, or perhaps generally, a wild uncultivated tract) was anciently an immense forest, inhabited only by deer and hogs, but has been gradually cleared and brought into cultivation. Iron-works were formerly numerous and important, but the introduction of coal in the manufacture of iron has caused this branch of industry to be transferred to other parts of the island where fuel is more abundant.

Beds of limestone occur in the greensand formation, and are quarried near Maidstone for common purposes of building, for road-making, and for burning into lime, which is used for stucco, or exported to the West Indies for refining sugar.

Hydrography and Communications.—Nearly the whole county belongs to the basin of the Thames. This river affords a ready means of communication with the metropolis and with other parts. The royal dockyards of Deptford and Woolwich are upon it.

The other principal rivers are the Ravensbourne, the Darent, and the Medway, which flow into the estuary of the Thames; and the Stour and the Rother, which flow into the sea.

The *Ravensbourne* rises on Keston Common, near the border of Surrey, and flows northward past the town of Bromley and the village of Lewisham, and between the towns of Greenwich and Deptford, into the Thames. It is navigable to Deptford bridge for lighters and other small craft. The *Darent* rises in Squirries park, near Westerham, close to the border of Surrey. Its course is first east-north-east, parallel to the course of the North Downs, to Riverhead near Sevenoaks, where it turns north and passes through a depression in the Downs by Otford, and other villages, to the town of Dartford, below which it is called Dartford Creek, and becoming navigable, flows through the marshes into the Thames. Just before joining the Thames it receives the Cray, which rises near Orpington, and has a course of about 9 miles. The *Medway* rises in Sussex, near the northern border between East Grinstead and Crawley, and flows eastward into Kent, which it enters near Ashurst. In this part of its course the Medway is swelled by many brooks, which drain the higher districts of the Weald of Sussex. At Penshurst, in Kent, the Medway is joined by the Eden, which rises about Godstone in Surrey. From Penshurst, where the navigation of the river commences, it flows east-north-east to Tonbridge, forming in its way two or three islands. From Tonbridge the Medway flows east by north to Yalding, in the Weald, near which it is joined by the Teyse or Teise and the

Beult. The Teise rises in the northern part of Sussex, and flows by Lamberhurst into the Medway. The Beult rises in the Weald of Kent, near Shadoxhurst, and flows north by west to Yalding. From this place the course of the Medway, though very winding, is for the most part northward; it passes through an opening in the greensand hills, across the prolongation of the valley of Holmsdale by Maidstone and Aylesford, through a great opening in the North Downs, and by Rochester and Chatham, into the estuary of the Thames at Sheerness. It is navigable for more than 40 miles. The tide flows up to Maidstone bridge, but ships and large vessels cannot ascend above Rochester bridge. Below Rochester the estuary gradually expands to a considerable width, and forms an important harbour for the British navy. Numerous arms of the river or creeks penetrate the marshes, which spread inland to a considerable extent from the banks of the river. The royal dockyard of Chatham is on the Medway, and that of Sheerness at the junction of the Medway with the Thames. The Medway is plentifully stored with fish: above Maidstone is an abundance of fresh-water fish; and below Rochester are soles, flounders, and other flat-fish, and smelts of excellent quality and large size. In the creeks in the lower part of the river are considerable oyster-beds. The *Stour* has two main branches, distinguished as the Greater and the Lesser Stour. The Greater Stour is formed by two streams, which flow along the valley between the North Downs and the greensand hills in opposite directions, and uniting near Ashford, turn to the north-east, pass through a depression in the North Downs, and flow by Canterbury to the neighbourhood of Sarre in the Isle of Thanet. Here the Stour parts into two branches, one of which falls into the estuary of the Thames near Reculver; the other into Pegwell Bay below Sandwich. These two arms cut off Thanet from the rest of the county, and constitute it an island. The Lesser Stour rises near Lyminge, about 3 miles north from Hythe, and flowing north by east to Barham, above which it sometimes becomes dry, turns north by west, and skirting Barham Downs, flows to Bridge near Canterbury. Here it makes another bend, and runs north-east into that arm of the Greater Stour which falls into Pegwell Bay. The two arms of the Stour, which insulate Thanet, were once a channel 3 or 4 miles over, called the Wantsume, which received several streams besides the Greater and Lesser Stour. In Bede's time the breadth was diminished to 3 furlongs. The channel was navigable for ships of tolerable burden in the reign of Henry VIII.; but subsequently the waters of the northern branch from the Stour to Reculver became too small for navigation, and it was for a period quite dry in the neighbourhood of Sarre, so that Thanet became a peninsula rather than an island. A cut from the Stour restored the continuity of the watercourse, but this north channel is not used for navigation. The Greater Stour, which enters Pegwell Bay, is navigable up to Fordwich near Canterbury. The whole length of the river from Lenham to Pegwell Bay may be estimated at 45 miles. Both the Greater and the Lesser Stour contain excellent trout.

The *Rother* rises in Sussex, to which county it more properly belongs. [SUSSEX.] It first touches the border of Kent at the junction of a small stream, which rises near Hawkhurst, and separates the two counties. From this junction the Rother flows by Newenden and Wittersham, below which it quits the border and re-enters Sussex. Several small streams from the Weald of Kent flow into it, and the arms of these, with the Rother itself, inclose the river island of Oxney (6 miles long from east to west, and 3 miles broad). The Rother is navigable in all that part which touches this county.

The principal canal in the county of Kent is the Royal Military Canal, which was formed, rather for the purposes of defence than of commerce, during the alarm of invasion in the late war against Napoleon. It runs along the edge of Romney Marsh from its commencement in the sea near Hythe to its junction with the Rother in the south-eastern corner of Oxney Isla. Three principal roads traverse the county. The Dover road enters the county at New Cross, 3½ miles from London, and runs east-south-east in a nearly direct line through Gravesend, Rochester, and Canterbury to Dover, 71 miles. The Hythe road branches off from the Dover road at New Cross, and runs south-east to Maidstone, and from thence by Ashford to Hythe, 65 miles. The Hastings road branches off from the Hythe and Maidstone road more than a mile beyond New Cross, and passing through Bromley, Sevenoaks, and Tonbridge, enters Sussex near Flimwell, 45 miles. The road to Rye branches off from the principal Hastings road just before it quits Kent, and passes through Newenden, 53 miles, where it crosses the Rother into Sussex. The roads to Margate and Ramsgate, and to Sandwich and Deal, branch off from the Dover road at Canterbury. The South-Eastern railway diverges from the Brighton line at Reigate, Surrey, and enters Kent near Edenbridge, whence the main line proceeds in a generally eastern direction to Dover, 56 miles. From the Tonbridge station a branch runs off southward to Tonbridge Wells, 5 miles, where it quits the county. At Paddock Wood a branch runs off northward to Maidstone, 10 miles. From Ashford a branch is carried south-westward to Rye, 16 miles, and thence to Hastings; another in a north-eastern direction to Ramsgate, 30 miles, from which a short branch for goods diverges at Canterbury, north to Whitstable; at Minster one, 9 miles, to Deal; and from Ramsgate one, 4 miles, to Margate. The North Kent railway, also belonging to the South-Eastern Company, leaves the main-trunk at Deptford, and

runs at a short distance from the Thames to Gravesend, 24 miles, and thence to Strood, 7 miles.

Climate, Soil, Agriculture.—The climate of Kent is in general mild and genial. The proximity to the continent of Europe exposes it to occasional north-east winds, which chill the air, but they carry off the superfluous moisture of the soil; and some of the most fertile spots are in the Isle of Thanet, which lies at its north-eastern extremity, and in the adjacent parts. The soil of this county may be divided into the gravel, chalk, and clay, which produce, where they mix in due proportions, an extremely fertile loam. The alluvial soils along the Thames and Medway, and in Romney Marsh, produce some of the richest marsh pastures in the kingdom. The chalk rises into hills between Canterbury and Dover, where are extensive sheep downs, but from Canterbury towards London it is mostly covered by a stiff clay, and only breaks out here and there on the banks of the Thames. The Wealds contain some very fertile clays and woods, in which oaks grow to a great size. Throughout the county the clay may be said to predominate, and the mode of cultivation generally adopted is that which suits the strongest soils.

Besides the usual crops which are raised on good clays, Kent produces several which are peculiar to it, such as canary and radish-seed, which grow chiefly in the Isle of Thanet. Other seeds are likewise raised for the London seedsmen, such as spinach, cresses, and white mustard. Kidney beans are cultivated in the neighbourhood of Sandwich.

There is comparatively a very small proportion of grass land in Kent, if we except the sheep downs on the chalk hills and the marshes. The marshes produce most of the hay consumed in winter. Romney Marsh, which is well known for the richness of its grass, contains about 44,000 acres; on the borders of the Stour are 27,000 acres; and along the Medway, Thames, and Swale, about 11,500 acres more. A great many sheep are reared and fattened in these marshes. There are very few dairies of any consequence in Kent. Cheese is made only for domestic consumption.

Hops are grown to a very great extent in this county; and, with the exception of those which are raised at Farnham in Surrey, are the most esteemed of any in England. In that part of Kent which is nearest to London there are many extensive market-gardens; and many hundreds of acres are laid out in asparagus beds. Great quantities of peas are raised for the London market. Apples, pears, plums, and cherries are raised in orchards, and the produce sent to London. Cider is largely made. In some places hops, apples, cherries, and filberts may be seen growing together in the same grounds. The hops last 12 years, the filberts 30 years; after which the apples and pears require the whole ground. There are still some extensive woods in Kent, but they are diminishing every year; and the produce of bark and timber is much reduced from what it formerly was.

Divisions, Towns, &c.—Kent has long been divided into five lathes. These divisions, in the opinion of some writers, take their name from the Saxon, 'ge-lathian,' 'to assemble;' they had formerly distinct courts superior to the hundred courts; each of them comprehends several hundreds, and other smaller divisions. The lathes are as follows:—Sutton-at-Hone, containing 8 hundreds; Aylesford, 12 hundreds, with the liberty of the city of Rochester, and the liberty of the Lowey of Tonbridge; Scray, 16 hundreds, and the liberty of the Isle of Sheppey; St. Augustine, 12 hundreds; and Shepway, or Shipway, 13 hundreds, besides the barony of Bircholt.

There are several parts of the county which have their particular 'liberties,' exempt from the jurisdiction of the county magistrates. They are as follows:—I. The county of the city of Canterbury, in St. Augustine Lathes. II. The city of Rochester, and—III. The borough of Maidstone; both in Aylesford Lathes. IV. The liberty of Romney Marsh, comprehending several hundreds, which is under the jurisdiction of its own bailiff and jurats. V. The liberty of the Cinque-ports, which comprehends:—1. Sandwich, including the borough of Sandwich; the ville of Sarre and the ville of Ramsgate, in the Isle of Thanet; the town and parish of Deal, the parish of Walmer, and part of that of Woodnesborough, near Sandwich; and the parish of Fordwich, near Canterbury: 2. Dover, including the town of Dover, with part of the neighbouring parishes of Charlton and Hougham; the parish of Ringswold, between Dover and Deal, and the town and parish of St. John, Margate; the parishes of Birchington, St. Peter's, and Wood, or Woodchurch, in Thanet; the town and part of the parish of Folkestone, in Shepway Lathes; and the town and part of the parish of Faversham, in Scray Lathes: 3. Hythe, including the town and parish of Hythe, and part of the parish of West Hythe: 4. New Romney, including the town and parish of New Romney, and part of the parishes of Old Romney, Appledore, Brenzet, Ivychurch, Snargate, and part of Bromhill, all near Romney: 5. Rye, the liberty of which includes in this county the town of Tenterden.

There are in the county two cities, CANTERBURY and ROCHESTER; the Cinque-ports of DOVER, HYTHE, NEW ROMNEY, and SANDWICH; the parliamentary boroughs of GREENWICH, CHATHAM, and MAIDSTONE, and 18 other market-towns, namely, ASHFORD, BROMLEY, CRANBROOK, DARTFORD, DEAL, FAVERSHAM, FOLKESTONE, GRAVESEND, LYDD, MARGATE, MILTON, RAMSGATE, SEVENOAKS, SHEERNESS, Sittingbourne, TENTERDEN, TONBRIDGE or Tunbridge, and WESTERHAM. There were formerly markets at AYLESFORD, ELHAM, St. Mary Cray, Eltham,

Goudhurst, Lenham, TOWN MALLING, Queenborough, Smarden, Wrotham, and Wye. Of the places printed in small capitals an account is given under their respective titles. The other towns, with the town of Whitstable, the port of Canterbury, we shall notice here, with their respective populations in 1851.

Broadstairs, 20 miles E.N.E. from Canterbury, population of the parish 2975, a watering-place on the eastern coast of the Isle of Thanet, is much resorted to in the summer for sea-bathing. In it are a chapel of ease (a handsome gothic structure), chapels for Wesleyan Methodists, Baptists, and Independents, National schools, and an Infant school. At Broadstairs is a station of the coast-guard. The harbour has a wooden pier. Two batteries defend the town. There are remains of a chapel dedicated to the Virgin Mary, once held in great reverence by seamen.

Eltham, 30 miles N.W. by W. from Maidstone, 8 miles E. by S. from London, population of the parish 2568, is situated at the foot of Shooter's Hill. Eltham formerly possessed a royal palace, in which Edward II. and other sovereigns resided. After the reign of Henry VIII. Eltham palace was not used as a royal residence, though it was visited by Elizabeth and James I. The great hall, erected by Edward IV. is the only portion remaining: it is a very noble room, 100 feet long, 36 feet broad, and 55 feet high, and has a remarkably fine carved wooden roof. A few years back it was repaired. The parish church is a neat structure with a spire. There are National and Infant schools, and a preparatory school for pupils intended for the military profession. Eltham gives the title of earl of Eltham to the Prince of Wales.

Goudhurst, 13 miles S. by W. from Maidstone, population of the parish 2594, stands on a hill about two miles from the Sussex border. The church, a handsome structure with a massive tower at the west end, contains some interesting monuments. There are here an Endowed Free Grammar school, and National and Infant schools.

Lenham, 10 miles E. by S. from Maidstone, population 2070, a small town in a valley at the foot of the chalk hills, has very little trade. The church is partly of the decorated and partly of the perpendicular style. Sixteen stalls, eight in each chancel, were for the use of the monks of St. Augustine, who had an estate here. At the entrance to the churchyard is an ancient ligh-gate. There are a chapel for Independents, new National schools, and some almshouses. Fairs are held on June 6th and October 23rd. Emigration has caused a decrease in population.

Lydd, 33 miles S.E. from Maidstone, population of the parish 1605, on the edge of Romney Marsh, and about 3 miles from the sea, is included in the cinque port of New Romney. The parish church is chiefly of the perpendicular style, but it has been much disfigured by injudicious repairs. It has a lofty square tower with pinnacles. There are a chapel for Wesleyan Methodists, and National schools. The inhabitants are chiefly occupied in fishing. A market is held weekly on Thursday, and a pleasure fair on the last Monday of July. The shingle headland of Dungeness, some six square miles in extent, runs out from near Lydd. At the extremity of it is a lighthouse 110 feet high. On the Ness is a coast-guard station.

New Romney, 31 miles S.E. by S. from Maidstone, population 1053; a member of the cinque ports, and once a flourishing sea-port, but now about a mile and a half distant from the coast. Previous to the Reform Act New Romney sent two members to Parliament. The church is a magnificent structure of the 12th century: the lofty square tower is a rich example of the later Norman architecture. The Baptists and Wesleyan Methodists have chapels, and there are National schools. Grazing is extensively carried on in the district, which forms a part of Romney Marsh. Saturday is the market-day. A yearly fair, chiefly for sheep and lambs, is held on August 21st. Southland hospital, for the maintenance of a governor and four poor men and the education of two poor boys, was founded in 1610 by John Southland, Esq.

Queenborough, a decayed borough in the Isle of Sheppey, 17 miles N.E. from Maidstone: population of the parish, 722. The present name of the town appears to have been given to the borough by Edward III. in compliment to his queen Philippa. Edward built a castle here, which was destroyed in the period of the Commonwealth: the moat is still traceable. The parish church, built about 1347, consists of a nave and chancel, and has a western tower. The Independents have a chapel. The oyster fishery affords occupation to some of the inhabitants, and there is a copperas manufactory in the town. The whole of the parish, about 500 acres, is an uninclosed grazing tract of land. Queenborough, till the passing of the Reform Act, returned two members to Parliament. A fair is held on August 5th and 6th.

St. Mary Cray, 22 miles N.W. by W. from Maidstone, population 1400, had once a market, which was discontinued in 1703. Besides the parish church there are chapels for Wesleyan Methodists and Independents, and National schools. There is an extensive paper-mill in the neighbourhood.

Sittingbourne, 11 miles N.E. from Maidstone, population 2897, situated on the main road from London to Canterbury, near the head of Milton Creek. The church is a spacious edifice, rebuilt, except the tower and the external walls, since 1762, when it was accidentally burnt. The parish possesses National schools. Queen Elizabeth

CHOC. DIV. VOL. III.

granted a weekly market and two fairs. The weekly market has been long discontinued; the fairs remain. A market is now held monthly. Paper-mills, a coach-factory, oil-mills, and flour-mills are in the parish. Malting, brewing, and brick-making are carried on.

Smarden, 14 miles S.E. by S. from Maidstone, population 1206, a small market-town, on the right bank of the Medway, has a large and handsome church with a square tower, two Baptist chapels, and a Free school with a small endowment. Some corn-mills are in the vicinity. The market-day is Friday; a pedlery fair is held October 10th.

Whitstable, 7 miles N. by W. from Canterbury, population of the town 3086, at the mouth of the river Swale, is the port of Canterbury. There is here an extensive oyster-fishery under the direction of the Incorporated Company of Dredgers. A considerable traffic is carried on in coals. There are copperas-works, breweries, rope-walks, and boat-building yards. A branch of the South-Eastern railway connects Whitstable with Canterbury. Besides the parish church, which has been recently erected, there are chapels for Wesleyan Methodists and Independents, and National schools. Roman pottery has been taken up from some of the oyster-beds, indicating the probable site of a former Roman station, now under low-water mark.

Wrotham, 11 miles W.N.W. from Maidstone, population 3184, at the base of the chalk hills, on the road from London to Maidstone, has a small market which is held on the fifth Tuesday of the month, when the month happens to have five Tuesdays. The church is a commodious edifice in various styles. There are National schools and four almshouses. Hops are largely cultivated: fruit for market is grown in orchards in the neighbourhood. At this place the archbishops of Canterbury had formerly a palace.

Wye, 10 miles S.W. from Canterbury, population of the town 1095, occupies a pleasant site in the vale of the Stour. The church is a fine old structure. There are a chapel for Wesleyan Methodists; the College Grammar school for boys, founded in 1434, which had 32 boarders and 9 day scholars in 1852; and National schools. Fairs are held on May 1st and October 14th. A commodious station and goods depot of the South-Eastern railway is at Wye.

The following are some of the more important villages in the county, with the population of the respective parishes in 1851, and a few other particulars:—

Appledore, 26 miles S.E. by S. from Maidstone, population 621, occupies an elevated site in the marsh district. The parish church is an ancient building with a beautiful porch. The Royal Military Canal between Hythe and Rye passes through Appledore. *Barham*, 6 miles S.E. from Canterbury, on the road to Dover: population, 1105. The church, an ancient building, is handsome, and has a lofty spire at the west end. In Barham are National and Infant schools. On Barham Downs are held the Canterbury races. *Beckenham*, 10 miles S.S.E. from London: population, 1688. The church is partly of the decorated style, but the larger part is more recent. At the entrance of the churchyard is an old ligh-gate. There are National and Infant schools, and three almshouses. Beckenham has numerous residences of wealthy London merchants. *Bexley*, 11 miles E.S.E. from London, population 4490, is situated on both sides of the river Cray. The church, which is ancient, contains some interesting brasses and monuments. There are National schools and some almshouses. Bexley manor was in the possession of Camden, the celebrated antiquary, and was bequeathed by him for the foundation of a chair of history in Oxford University. *Bexley Heath*, or *Bexley New Town*, about a mile N.W. from Bexley, is on the London and Dover road. A market-house is in the middle of the village. There are a neat gothic chapel in connection with the Established Church, chapels for Baptists and Wesleyan Methodists, schools for boys and girls, and many good dwelling-houses and shops. Numerous market-gardens are in the vicinity. A market is held on Saturday. *Biddenden*, 14 miles S.S.E. from Maidstone: population, 1457. The church is a neat building in the perpendicular style. There is a Free Grammar school, founded in 1566 for the education of 10 poor boys, which had 62 scholars in 1851. *Blackheath*, 5 miles E.S.E. from London, population included with Greenwich, Charlton, and Lewisham parishes. The heath is an extensive open common, on the margin of which are numerous handsome residences. [GREENWICH.] Blackheath possesses a district church, an elegant structure in the pointed style, with a lofty spire; two chapels of ease; chapels for Wesleyan Methodists and Baptists; National schools; a Wesleyan day school; a Proprietary school in connection with King's College, London, which had 127 scholars in 1853; another Proprietary school; a literary institute; a subscription library; the Blackheath and Lewisham Benevolent Society; and other benevolent institutions. Morden College, founded in 1695, provides a residence and support for decayed merchants, those in the Levant trade having the preference. The number of inmates was originally 30, but it has been more than doubled. The heath is a favourite rendezvous for holiday parties in summer. At Blackheath is a station of the North-Kent railway. *Boxley*, 2½ miles N.E. from Maidstone, population 1508, has an ancient church in which are several interesting monuments. Boxley Abbey, now a private residence, was formerly the site of an establishment for Cistercian monks. In this parish is Penenden Heath, where large county meetings have been held on remarkable occasions. *Brenchley*, 12 miles S. by W. from Maidstone, population 2693, near the small river Teise, a feeder of the Medway.

The church is an ancient stone building with a lofty square tower. In the village are a Wesleyan Methodist chapel and a National school. *Brompton*, [CHATHAM]. *Charing*, 13 miles E.S.E. from Maidstone, population 1321, has a handsome old church with a tower and a small beacon turret. There is here an endowed school. The site of a former residence of the archbishops of Canterbury is now occupied as a farmhouse, and part of the ancient structure has been converted into a barn. *Charlton*, 6 miles E.S.E. from London, population 4818, is pleasantly situated on elevated ground between Greenwich and Woolwich. The church is an ancient structure, containing some interesting monuments. There are National and Infant schools. Many of the inhabitants are employed in the government dockyards at Woolwich. *Chariton House*, the seat of Sir T. M. Wilson, Bart., is a very fine manorial residence, erected in the reign of James I. *Chiddingstone*, 19 miles S.W. from Maidstone, population 1260, on the right bank of the river Eden, has a handsome old church, with a very fine tower and spire at the west end. There are National and Infant schools. *Chilham*, 21 miles E. by S. from Maidstone, population 1247, is noticeable chiefly for its castle, now a private residence: the keep is of Norman date. The Romans had a station, and some severe conflicts took place here between the Romans and the Britons. Several of the Anglo-Saxon kings resided here. *Chilham church* is a handsome old structure. *Chislehurst*, 22 miles N.E. by E. from Maidstone: population, 2088. In this parish is Camden-place, the residence of William Camden the antiquary, where he wrote the 'Annals of Queen Elizabeth.' Several other fine mansions and some good parks are near the village. The church is a fine building, with a spire, and contains several interesting monuments. The Wesleyan Methodists and Baptists have places of worship, and there are National and Infant schools. A pleasure fair is held on the Wednesday in Whitsun week. *Cobham*, 14 miles N.N.W. from Maidstone, population 718, is chiefly worthy of notice on account of Cobham Hall and park, the seat of the Earl of Darnley. *Cobham Hall* consists of two wings, erected respectively in 1582 and 1594, which are united by a central building designed by Inigo Jones. The house was thoroughly repaired and modernised in the early part of the present century; it contains some spacious and elegant rooms, fitted up with great splendour. The picture gallery contains a fine collection of the works of the great masters; and in the other rooms are numerous portraits by Vandyke, Lely, Kneller, and others. The park covers an area of about 1860 acres, and presents a variety of pleasing scenery. In *Cobham church* is an altar-tomb, on which is a recumbent statue of Lord Cobham, who was executed in the first year of Queen Mary for the share he took in Wyatt's rebellion. It contains also a fine series of monumental brasses. The *Crays* are four villages situated near each other on the banks of the river Cray, about 22 miles N.W. from Maidstone. One of these, *St. Mary's Cray*, has been already noticed. The others are named *North Cray*, population 570; *Foot's Cray*, population 369; and *St. Paul's Cray*, population 554. At *North Cray* are the parish church and Hetherington's Charity school for boys and girls. *Foot's Cray* possesses a parish church, a Baptist chapel, National schools, paper-mills, and a coach-factory. *Paul's Cray*, besides its church, has a Wesleyan Methodist chapel, National schools, and a paper-manufactory. In the district are numerous mansions. *Crayford*, 22 miles N.W. from Maidstone, population 2935, on the left bank of the river Cray, has in its vicinity extensive silk- and calico-printing establishments, and flour-mills. The church is a large modern building. There are places of worship for Baptists and Roman Catholics, and National and Infant schools. Bricks are manufactured, and some extent of ground is laid out as market-gardens. Some curious caves of considerable extent are in the parish. *Dymchurch*, 34 miles S.E. from Maidstone, population 650, situated on the coast, is governed by a corporation consisting of a bailiff and jurats, under whose care is the embankment called *Dymchurch Wall*, which extends along the shore of Romney Marsh for about 3 miles. This wall is about 20 feet in height, and has two sluices through which the drainage of the marsh is carried off. *Edenbridge*, 21 miles W.S.W. from Maidstone, population 1718, so called from its position on the river Eden, over which there is a bridge. The parish church is a handsome and commodious structure with a spire at the west end. There is a chapel for Independents, and a National school. The South Eastern railway has a station at *Edenbridge*. The village possesses a considerable trade. There is a small weekly market for corn, a monthly cattle market, and a yearly fair. *Erith*, on the right bank of the Thames, 24 miles N.E. from Maidstone, population 2231, had formerly a market. A pier was erected some years back, and *Erith* has since been much resorted to by holiday visitors. The church is partly covered with ivy; in it are a carved wooden rood screen, and a tomb in alabaster, in memory of the Countess of Shrewsbury and Pembroke. There are a chapel for Wesleyan Methodists, a Free school for poor boys, and a Charity school for girls. *Belvedere House* occupies an elevated site, and commands some fine prospects. Many villa residences have been erected, and numerous orchards are in the neighbourhood. Brick-making is extensively carried on. The North Kent railway has a station at *Erith*. *Eynesford*, 16 miles N.W. by W. from Maidstone, population 1323, on the right bank of the river Darent, has a fine cruciform church of Norman date with a spire at the west end. The Baptists have a place of worship, and there are National and British

schools. On the Darent are some paper-mills. North of the town is the site of *Eynesford Castle*: the moat is now occupied by an orchard. Large quantities of fruit are grown in the district. *Farnborough*, population 920, about 24 miles W.N.W. from Maidstone, is surrounded by numerous orchards, which yield considerable quantities of fruit. A fair is held on June 4th. The church is an old building with a low square tower. There is here an Infant school. *Farningham*, population 701, being exactly the same as in 1831 and 1841, the proportion of males and females being a little different, is pleasantly situated on the right bank of the Darent, 17 miles N.W. from Maidstone. The Darent is here crossed by a handsome bridge of four arches. The church is a commodious edifice, in the early English style. The Wesleyan Methodists have a chapel, and there is a National school. A fair is held on October 15th. *Fordwich*, 3 miles N.E. from Canterbury, population 237, is on the right bank of the river Stour, which was once navigable for shipping up to *Fordwich*, but now only barges can ascend so high. *Fordwich* is nominally under the government of a mayor, jurats, and commonalty. It is a corporate town by prescription, and a subordinate member of the cinque port of *Sandwich*. Corn and coal are conveyed by the river Stour. The trout fishery, which is somewhat productive, is under the management of the corporation. *Gillingham*, 10 miles N. by E. from Maidstone, population 7952, is a suburb of Chatham. The church is an ancient structure; in the interior is a circular Norman font. There are National schools. *Gillingham Castle* was erected in the reign of Charles I. A palace of the archbishops of Canterbury formerly stood here. The hall, 110 feet long and 30 feet wide, has been in use as a barn. *Hadlow*, 9 miles S.W. from Maidstone, population 2395, has besides the parish church, chapels for Baptists and Wesleyan Methodists, and a National school. *Hadlow Castle*, a castellated mansion, to which a high tower has been added within the last few years, occupies a commanding position near the village. *Hawkhurst*, 18 miles S. from Maidstone, population 2704, on the southern border of the county, is pleasantly situated on elevated ground. There are a Free school for boys, six almshouses, and a dispensary. *Hayes*, 26 miles W.N.W. from Maidstone, population 552. The church is a very ancient building. There are National and Infant schools. *Holwood House* occupies the site of *Hayes Place*, the seat of the Earl of Chatham, and the birth-place of his son William Pitt. *Herne Bay* is on the north coast, about 8 miles N.N.E. from Canterbury, population of *Herne parish* 3094, of which *Herne Bay chapel* contains about one half. *Herne Bay* is a modern bathing place of considerable pretension. Villas, terraces, and rows of private houses have been built for the accommodation of visitors, with hotels, assembly-rooms, libraries, baths, &c.; also a chapel of ease, an independent chapel, National and Infant schools, a market-house, and a clock-house. The pier at which the London steamers receive and land passengers is a convenient promenade. The parade extends along the coast for about a mile. *Hever*, 20 miles W.S.W. from Maidstone, population 603, is chiefly noticeable for its castle, described elsewhere. A moat surrounds the building; the draw-bridge has been replaced by a fixed wooden bridge. The buildings form a quadrangle, inclosing an open court. *Hever church* contains several monuments to members of the Boleyn family; the finest of them is an altar-tomb which has on the top an effigy of the Earl of Wiltshire, the father of Anne Boleyn. *Ightham*, 11 miles W. by N. from Maidstone, population 1121, has an ancient parish church, in which are interesting monuments of the Selby family. The Wesleyan Methodists have a chapel, and there is a National school. *The Mote House* is a remarkable moated mansion of the 14th century. At old *Berry Hill* are traces of Roman fortifications. *Lamberhurst*, 16 miles S. by W. from Maidstone; the parish is partly in Sussex; population, 1734. The parish church is an ancient structure, with a lofty spire. The Wesleyan Methodists and Baptists have chapels, and there are National schools. At *Lamberhurst* were formerly extensive iron foundries, where were cast the iron railings which surround *St. Paul's cathedral*, London. *Lee*, adjoins *Blackheath*, 5 miles S.E. from London; population, 3552. It has a handsome new church, finely situated, a chapel for Independents, and National and Infant schools. The tower of the old parish church stands in the churchyard opposite the new church; in the churchyard is a monument to the memory of Dr. Edward Halley, the astronomer. There are numerous handsome private residences at *Lee*, occupied by London merchants and families of independent means. *Leeds*, 5 miles E.S.E. from Maidstone: population, 663. *Leeds Castle* is noticed elsewhere. *Leeds abbey mill* is distant from the castle about three-quarters of a mile. *Leigh*, 15 miles S.W. from Maidstone, population 1161, near the left bank of the *Medway*, has a parish church and a National school. A pleasure fair is held on June 16th. A mineral spring, similar in character to the springs at *Tonbridge Wells*, is in the parish. *Lympe*, 16 miles S. from Canterbury, population 552, is situated near the eastern extremity of *Romney Marsh*, about 2 miles W. from *Hytha*. During the Roman occupation it was a seaport known as *Portus Lemanianus*. [HYTHE.] There are traces of Roman works locally known as *Studfall Castle*. The parish church is an old and very massive structure; the remains of a castellated mansion called *Lympe Castle* adjoin the church: being situated on a steep inland cliff, they produce together a very striking effect. In the village are a chapel for Baptists and a National school. *Minster*, 12 miles E.N.E. from Canterbury,

population 1502, is situated in the Isle of Thanet. According to early legends, it was at Minster that the first Christian establishment was founded in Britain. The village occupies an elevated site along the edge of the marsh grounds, and contains several old half-timber houses. The parish church is ancient; the chancel, which is vaulted with stone, has been recently carefully restored. At the west end is a tower. There are here a chapel for Wesleyan Methodists, and National and Infant schools. *Northfleet*, 15 miles W.N.W. from Maidstone, population 5038, on the right bank of the Thames, is properly a suburb of Gravesend. There are at Northfleet extensive chalk and lime-works; ship-building and brick-making are carried on, and there are some market-gardens in the vicinity. The parish church is a fine ancient edifice, with a large and handsome chancel, and a richly carved screen. The Independents have a place of worship. Huggins's Hospital is a recent foundation, affording residences for 40 decayed tradesmen, to whom a weekly allowance in money is also given. A handsome church has been erected by Mr. Huggins, in connection with the hospital. The church and hospital buildings occupy a commanding site. A high causeway and flood-gates protect the north-west marsh from the incroachments of the Thames, by which it was at one time covered. *Oxford*, 17 miles W. by N. from Maidstone, population 837, has a church which was rebuilt about 200 years ago, on which occasion wooden pillars were inserted to separate the aisles: the eastern window was designed in imitation of that of the previous church, which had been burnt down. The Wesleyan Methodists have a place of worship. Malting, brick-making, and lime-burning are carried on, and some corn-mills are in the vicinity. A few fragments still remain of an ancient and splendid palace of the archbishops of Canterbury. *Penhurst*, 19 miles S.W. from Maidstone, population 1623, has a fine castle, noticed near the end of this article. This castle, which is situated in a finely-wooded park, contains some rich old furniture, tapestry, and numerous portraits and other paintings by celebrated masters. It is open to the public. The paper manufacture employs some of the population. *Reculver*, 11 miles N.E. by N. from Canterbury, population 273; the village is about a mile and a quarter from the site of the Roman station Regulbium. A monastery was founded here in 679. Two ancient towers formerly belonging to the parish church were purchased by the Trinity House in 1810 and repaired, that their use as landmarks might be continued. Coast-guard stations are at Regulbium Camp and Bishopstone. *St. Mary-at-Cliffe*, on the coast, 3 miles N.E. from Dover, population 763, is visited in summer for sea-bathing. It has a fine church of Norman date, which was repaired and restored in 1836. There is here a station of the coast-guard. *Sandgate*, 16 miles S. by E. from Canterbury, population included with the parishes of Folkestone and Cheriton, is a favourite resort for sea-bathing. Sandgate Castle was erected in defence of the coast in 1539. About 1504 it was repaired and converted into a circular redoubt, having in the centre a martello tower with three guns. About the same time, also, a large encampment was formed on the heights above the village, and some time after, extensive barracks were erected on the same site. Along the ridge of the cliffs six martello towers were placed at convenient distances, and at a short distance inland the Royal Military Canal from Sandgate to the river Rother, a few miles above Rye, was constructed. A fair is held annually on July 23rd. There are bathing-rooms, a public dispensary, numerous lodging-houses, National schools, and an Infant school. *Southborough*, 15 miles S.W. from Maidstone, about midway between Tonbridge and Tonbridge Wells, population of the ecclesiastical district 1327, has a convenient modern church, finely situated, and a National school. Many handsome private dwellings are in the village, it being much used as a place of residence by visitors to Tonbridge Wells. There are some corn-mills in the vicinity. *Southfleet*, 3 miles S.W. from Gravesend, and 18 miles N.W. from Maidstone, population 657, occupies the site of the Roman station Vagninaca. The parish church is ancient and contains numerous objects of interest to the antiquary. In the village is a Free school. Extensive orchards are in the neighbourhood. A great proportion of the water-cresses sold in London is supplied from gardens near Southfleet. The village is much visited in summer. *Staplehurst*, 9 miles S. by E. from Maidstone, population 1660, on the high road from Hastings to Maidstone, has a station of the South-Eastern railway. Several flour-mills are in the neighbourhood. *Stone*, near the Thames, 2 miles E. from Dartford, population 829. The parish church is a very fine example of the early English style and date; at the west end is an embattled square tower. Stone Castle, now a private residence, was erected in the reign of Edward III. Of the original structure a small square tower still stands. *Strood*, 1 mile N. by W. from Rochester, population 3067, of which number 2937 are within the parliamentary city of Rochester, is on the left bank of the Medway; it consists of one long narrow street, and is united to Rochester by a bridge. The church, which was rebuilt a few years ago, contains some ancient monuments. There are in Strood an Independent chapel and National schools. The terminus of the North Kent railway is at Strood; also the North Aylesford Union workhouse. The inhabitants of Strood are mostly dependent on the fisheries and shipping. *Sutton Valence*, 6 miles S.E. from Maidstone, population 1090. Lamb's Free Grammar school, founded in 1576,

free to 24 boys, increased by statutes of 1817 to 30 boys, has two exhibitions of 10*l.* each, which are not claimed. It is under the patronage of the Clothworkers' Company. Near the village are the remains of Sutton Castle, an ancient fortress. *Swanscombe*, 19 miles N.W. by N. from Maidstone, and about 3 miles W. from Gravesend, population 1763, is said to have derived its name, originally Sweynscamp, from Sweyn, the Danish king, having landed and encamped at the place. The church, an ancient edifice, has some portions of Anglo-Saxon date. It is said that at Swanscombe the men of Kent met William the Conqueror and disputed his progress till he had promised to confirm to them their former rights and privileges. *Sydenham*, about 7 miles S. by E. from London, population 4501 in 1851, is pleasantly situated, and contains many genteel residences of London merchants and wealthy families, and many new villa and cottage residences. The Croydon branch of the Brighton and South Coast railway has a station at Sydenham. There are here a handsome modern church, and an Episcopal chapel, two chapels for Independents, and one for Wesleyan Methodists; and there are National, British, and Infant schools. At Sydenham are some springs which in the 17th and 18th centuries were in some repute for their medicinal qualities. From Sydenham Hill and Oak of Honour Hill (on which Queen Elizabeth is said to have breakfasted on one of her Maying excursions) are very extensive and beautiful prospects, including some fine views of the metropolis. On Penge Hill, near Sydenham, is the site of the Crystal Palace, which was opened by Queen Victoria on Saturday, June 10th, 1854. *Teynham*, 16 miles E.N.E. from Maidstone, population 842; the church is a commodious and handsome cruciform structure, with an embattled tower at the west end. In the interior are some ancient brasses, and there are some specimens of stained glass. Much attention is paid to the cultivation of fruit-trees, and there are several hop-gardens. At Conyer's Quay, in Conyer's Creek, an arm of the river Swale, vessels of considerable size can discharge their cargoes. *Wateringbury*, 5 miles S.W. from Maidstone, population 1443, has a parish church and well-attended National schools. There is here a station of the Maidstone branch of the South-Eastern railway. Near the village is Wateringbury Cross. *Wilmington*, 21 miles N.W. from Maidstone, population 915, has extensive orchards and market-gardens. The church is placed on the summit of a hill. There are National schools. In the neighbourhood are some good family mansions. A fair is held on April 23rd. *Wingham*, 6½ miles E. from Canterbury, population 1082, had once a market. The church, an ancient structure, is spacious and has a lofty steeple. The Independents have a chapel, and there are National and Infant schools. Some ancient half-timber houses are in the village. In the parish are several market-gardens. Fairs are held on May 12th and November 12th. *Wittersham*, 23 miles S.S.E. from Maidstone, population 937, is situated on the Isle of Oxney, which is surrounded by the river Rother and its branches. The parish church is an ancient edifice, with a tower; there are a chapel for Wesleyan Methodists and an Endowed Free school. A fair is held on May 12th. *Woodnesborough*, 12 miles E. by S. from Canterbury, population 813, has a parish church, and a chapel for Independents. The village was anciently called Wodnesbeorh, and was one of the many places in England dedicated to the Saxon god Woden. On Woodnesborough Hill numerous Saxon antiquities have been found. *Yalding*, 6 miles S.S.W. from Maidstone, population 2672, has a parish church, a chapel for Baptists, a Free school for boys, and a Charity school for girls and young children. By the river Medway barges can come up to Yalding. The South-Eastern railway has a station here.

Divisions for Ecclesiastical and Legal Purposes.—Kent constitutes the larger part of the diocese of Canterbury, within which the whole of the county is included, except the city and deanery of Rochester, which are in the archdeaconry and diocese of Rochester, and some parishes, chiefly near London, which are in the diocese of London. By the Poor-Law Commissioners the county, exclusive of the city of Canterbury, which is managed under a Local Act, is divided into 27 Unions:—East Ashford, West Ashford, Blean, Bridge, Bromley, Cranbrook, Dartford, Dover, Eastry, Elham, Faversham, Gravesend and Milton, Greenwich, Hollingbourn, Hoo, Lewisham, Maidstone, Malling, Medway, Milton, North Aylesford, Romney Marsh, Sevenoaks, Sheppey, Tenterden, Isle of Thanet, and Tonbridge. Canterbury city is under a local act in respect to the management of the poor. The whole include 424 parishes and townships, with an area of 950,549 acres, and a population in 1851 of 612,355.

Kent is in the Home circuit, except that part of it which is within 10 miles of St. Paul's, London, which is in the jurisdiction (in criminal matters) of the Central Criminal Court. The assizes are held at Maidstone, where are the county jail and the house of correction. County courts are held at Ashford, Bromley, Canterbury, Dartford, Deal, Faversham, Folkestone, Gravesend, Greenwich, Margate, Ramsgate, Rochester, Romney, Sevenoaks, Sheerness, Sittingbourne, Tenterden, Tonbridge, and Tonbridge Wells.

By the Reform Act the county was divided for parliamentary purposes into the divisions of East Kent and West Kent; each returning two members. Two members each are returned for the cities on Canterbury and Rochester, for the cinque ports of Dover and Sandwich, and for the boroughs of Greenwich and Maidstone, and one member

each for the cinque port of Hythe and the borough of Chatham. The total number returned from the whole county is eighteen.

History and Antiquities.—This county comprehends that part of England which from its proximity to the Continent first obtained distinct historical notice. Cæsar mentions the district by its name, which he gives in the Latinised form Cantium; he ascribes to the inhabitants civilisation much superior to that of the other islanders. It was the part on which his attack was made in his first invasion, and he did not then pass beyond its limits; in his second invasion he passed through it to the assault of other tribes; some sharp encounters took place during his march in this county, and in his absence five of the reguli, or petty princes of Cantium, made an unsuccessful attempt to storm the fortified intrenchment which protected his fleet, B.C. 54. Ptolemæus places Londinium (London) among the towns of the Cantii, or the people of Cantium; a statement which, if accurate, supposes the district to have exceeded the limits of the present county. In the division of the Roman empire which prevailed in its later period, Cantium was comprehended in the province of Britannia Prima. Several important stations were within the limits of the modern county. There were the four harbours of Regulbium (Reculver), Ritupæ, or Ad Portum Ritupis (Richborough near Sandwich), Dubræ, or Ad Portum Dubris (Dover), and Lemansæ, or Ad Portum Lemaniæ (Lympe or Linne, near Hythe). Roads from these places met at Durovernum (Canterbury), whence the military way called Watling-street ran in a direct line to Londinium (London), passing by the way through Durolevum (Newington, or more probably Judde Hill near Ospringe), Durobrivæ or Durobrivis (Rochester), and Vagniacæ (Southfleet near Gravesend). The above places, with the exception of Regulbium, are mentioned in the Itinerary of Antoninus, which also notices several other stations. Besides Watling-street, and Stone-street, which runs from Canterbury to Lympe, there are probably other Roman roads in Kent.

Of these stations and roads there are many remains. Regulbium, now Reculver, defended the northern entrance of the channel between Thanet and the rest of the county. The incroachments of the sea have washed away part of the station. The inclosure was a square with the angles rounded off. The town is supposed to have been to the north of the station, on a site now undermined and washed away. Ritupæ, or Ad Portum Ritupis, now Richborough, is called Rhotupis by Richard of Cirencester, who terms it a colony; it is Ratupis in the Peutinger table. Richborough is one of the noblest Roman remains in the island. It was the usual place of communication with the Continent, and guarded one mouth of the channel which then insulated Thanet. The walls form a parallelogram, but the east wall has disappeared and probably fallen into the Stour, on the side of which the station is placed. The area within the walls is five acres. The walls are flanked by projecting round towers at the angles, and by intermediate round towers. The walls to the height of 6 feet are 11 feet 3 inches thick, above that height they are 10 feet 8 inches. The top of the wall is everywhere imperfect; its greatest height is 23 feet. A quarter of a mile from the south-west angle of the castle are the remains of a Roman circular amphitheatre of about 70 yards diameter. Coins and other antiquities have been dug up here. In the circuit of Dover Castle are the ruins of a pharos, or watch-tower, an indubitable relic of the Roman Dubræ. This watch-tower has an octangular base externally, but within it is a square. The structure is composed of long, thin, irregular bricks, with intermediate courses formed by blocks of hard stalactitical incrustations: it is now in a very dilapidated state. The ruin of an old church adjoining the pharos is not Roman, but Roman bricks have been worked up in it. The remains of the Roman fortress Lemansæ, or Ad Portum Lemaniæ, at Lympe, or Lympe, near Hythe, have been mentioned above in the notice of Lympe village, as well as in the article HYTHE. At Durovernum (Canterbury) numerous antiquities have been discovered. Many Roman bricks have been worked up into the city walls. At Durobrivæ (Rochester) various antiquities have been found, and Roman bricks have been worked up in the ruined walls of the cathedral precinct. To Durolevum two positions have been assigned: one at Newington, the other on Judde Hill, in the parish of Ospringe, south of the Canterbury road. At Southfleet, the Roman Vagniacæ, a large earthen vessel and a stone tomb containing several funeral antiquities were discovered early in the present century. On Holwood Hill near Farnborough, on the Hastings road, the ancient Noviomagus, there are the remains of an immense elliptical encampment.

Of the Roman roads, the Watling-street, which nearly coincided with the present road from London to Canterbury, may be traced in several places. It is visible on Bexley Heath, and again just beyond Dartford, where the modern road bends to the left towards Gravesend, while the Street pursues a direct course through Southfleet to Rochester. From hence to Canterbury the ancient and modern roads coincide, and the traces of the ancient one appear to have been, except in a few places, obliterated. The branch of Watling-street which led from Durovernum (Canterbury) to Lemansæ (Lympe), is still conspicuous for some miles. It pursues a straight course between the two places, and is known by the name of Stone-street.

The North Foreland is mentioned by Ptolemæus under the name of the promontory Cantium or Acanthium. The Medway, the Stour, the small stream which enters the sea at Dover, and the Rother, appear

to be mentioned by Richard under the respective names of Madus, Sturius, Dubris, and Lemanus. Thanet appears in the pages of Richard, under the name of Thanatos, and the channel which insulates it, under that of Wantsum.

In the Saxon invasion Cantium was the scene of many interesting events. The fabulous or semi-fabulous brothers Hengist and Horsa are said to have landed in Pegwell Bay, near Ipswich Fleet, now Ebb Fleet, in Thanet. Of the early battles of Hengist and his Jutes with the Britons, the principal were fought in the year 455; the first on the Dereunt (Darent); the second at Epsford or Eglesford (Ayleford) on the Medway, and the third at Stonar, near Sandwich. The ancient chronicles assign the victory in the second and third engagements to the Britons, who were led by Vortimer, son of Vortigern; the Jutes fled, and did not return to England till Vortimer's death, two years after. In 457, and 473, the Jutes obtained victories over the Britons. Hengist's dominions did not extend beyond Kent; his son Eric, or Æsc, was honoured as the real founder of the Kentish dynasty of the Æschingas, or sons of the ash-tree. Kent was called by the Saxons Cantwaraland: Durovernum became Cantwarabyrig or Cantwaraburh, whence Canterbury. In 589, or thereabout, Ethelbert, king of Kent, obtained the power or dignity of Bretwalda, which he retained till his death in 616. After the conversion of Ethelbert to Christianity, a church was built by Augustine, adjacent to the royal palace, which was the precursor of the present cathedral of Canterbury, which from the political supremacy of Ethelbert, and his earlier conversion, became the ecclesiastical metropolis of England. Under Eadbald, son and successor of Ethelbert, the crown of Kent lost the supremacy which the talent or power of Ethelbert had acquired. A succession of obscure princes followed. For a time Kent was in subjection to the king of Wessex. In 726 the reigning authority was in the hands of three brothers, Ethelbert, Eadbert, and Alric, who acknowledged the supremacy of Mercia. Alric was the survivor of the three, and in him ended the line of the Æschingas.

In 752 Kentish men formed part of the army of Ethelbald, the Mercian king, in his war against Cuthred of Wessex. In the following half century Kent appears to have been in subjection to Mercia, having been conquered by Offa, who defeated the Kentish men in 776 at Otford. About 796 or 797 Eadbert, or Ethelbert Pren, king of Kent, was attacked by Cenwulf of Mercia; and the country was again brought under subordination to Mercia. About this time Wessex was establishing its supremacy over the other Anglo-Saxon kingdoms. Egbert, king of the West Saxons, having defeated the Mercians at Ellandun, or Wilton, in 823, dispatched a force into Kent, at whose approach Baldred, the reigning prince, fled, and Kent passed from under the Mercian supremacy to that of the West Saxons, under which it long remained.

From this time Kent, with which Surrey and Sussex, and probably Essex, were incorporated, became a subordinate part of the West Saxon empire. It commonly formed the appanage of the eldest son, or heir apparent, of the king of Wessex, and when the heir succeeded to the paramount sovereignty he usually resigned the Kentish crown to his heir. Thus Ethelwulf, son of Egbert, was, during his father's reign over Wessex, king of Kent; and when he succeeded to the throne of Wessex he bestowed Kent successively on his sons Athelstan and Ethelbert; the latter of whom retained the crown when his brother Ethelbald ruled over Wessex, and on the death of Ethelbald united Kent and Wessex under one sceptre. During the reign of Ethelwulf in Wessex, and of his sons in Kent, the latter kingdom was repeatedly attacked by the Danes: Canterbury and Rochester were sacked by them. Athelstan, king of Kent, and the alderman Elchere, or Ealhere, however defeated the Danes at Sandwich, and took many of their ships. At a subsequent period the Danes landed in the Isle of Thanet, and vanquished the men of Kent and Surrey. In the warfare of Alfred the Great with Hasting the Northman, Kent was for a short period in the year 803 the scene of conflict. From this time the crown of Kent was never separated from that of Wessex. The 'Juti Cantiani,' Jutes of Kent, are mentioned by an ancient chronicler as subdued by Edward the Elder in the very commencement of his reign. In the next reign, that of Athelstan, Kent possessed its separate legislature, which regulated the terms on which the laws of Wessex should be accepted. Traces of the distinct laws and franchises of Kent continued however till long afterwards.

In the reign of Ethelred (980-991), when the Northmen renewed their ravages, Kent was subject to their fury until they were bought off by Ethelred. In 999 they entered the Medway, took Rochester, and plundered the western part of the county. In 1006 Sandwich was plundered by Sweyn, king of Denmark, who re-embarked on receiving a large sum as the price of his retreat. In 1009 a large Saxon fleet had its rendezvous at Sandwich, but performed nothing; and in 1010 the Danes landed on the Isle of Thanet and besieged Canterbury, extorting as usual a large sum as the condition of their withdrawal. In a later invasion they took Canterbury by treachery, plundered it, and reduced it to ashes. In the short but fierce struggle between Canute and Edmund Ironside, Edmund defeated his rival at Otford in 1016, and drove him to the Isle of Sheppey.

In the reign of Edward the Confessor, Kent was included in the earldom of the famous Godwin, but it does not appear that he took his title from it, but from his more important earldom of Wessex.

The earldoms of that day were not mere titles, but conveyed viceregal power over the districts confided to the earl.

At the great battle of Hastings the men of Kent formed the vanguard of the Anglo-Saxon army: it was their privilege to occupy that post. A detachment of the Norman force having landed at Romney just before the battle, were defeated by the townsmen, in revenge for which William subsequently burned that town and massacred the inhabitants. Having secured Dover Castle after a slight resistance, hung the governor, and burnt the town, he marched towards London by Watling-street; and in his way conciliated the favour, or at least disarmed the resistance, of the men of Kent, by granting them the continuance of their privileges. An unsuccessful attempt was subsequently made (1067) by the Kentish men, aided by the earl of Boulogne, to surprise Dover Castle. In the reign of William Rufus, Odo, bishop of Bayeux and earl of Kent, raised the county in favour of Robert duke of Normandy. Rochester town and castle, which were held on behalf of Odo, did not capitulate till after a siege of many weeks. King John, when threatened with an invasion by Philip II. of France, encamped with an army of 60,000 men on Barham Downs; but his courage failed him, and he made his memorable submission and surrender of his crown to Pandulphus, the Pope's Legate, at Dover. In the subsequent troubles (1215) John collected an army of mercenaries at Dover and marched inland; but William de Albini bravely defended Rochester Castle for three months against him. In 1216 Louis, dauphin of France, landed in the Isle of Thanet, near Sandwich, in aid of the barons, and took the castle of Rochester; but after his retreat and the death of John, it again submitted to the crown. The rest of Kent submitted for a time to Louis, except Dover Castle, which was defended for the king against the dauphin and the barons by Hubert de Burgh. In the troubles of the succeeding reign Rochester Castle was defended for the king against Simon de Montfort, who besieged it in vain.

It was in Kent that the rebellion of Wat Tyler broke out. The commons in this county and in Essex rose in a body in 1381. They attacked the archbishop of Canterbury's house at Maidstone and released John Balle, a priest, who had been imprisoned for teaching doctrines like those of Wickliffe. The issue of the rebellion is well known. In the reign of Henry VI. the insurrection of Jack Cade broke out in Kent A.D. 1450. At the outbreak of the war of the Roses, 1451, Richard duke of York encamped near Dartford, where he fortified himself. The king, Henry VI., encamped on Blackheath. There was another encampment on Blackheath in 1471. Sandwich was the scene of several naval operations in 1460 and 1471. In the reign of Mary (1554) Sir Thomas Wyatt's rebellion broke out in Kent. In the civil war of Charles I. and the Parliament a severe battle was fought at Maidstone (1648), in which the Parliamentarians, under Fairfax, obtained a complete victory.

In the reign of Elizabeth the river Medway appears to have formed the only harbour for the royal navy, then in its infancy. The dock at Chatham was built by that queen; and she erected Upnor Castle, on the opposite side of the Medway, to defend the passage of the river. In the reign of Charles II. (1667), a detachment from the Dutch fleet under De Ruyter sailed up the Medway as far as Upnor Castle. [CHATHAM.]

Of ancient castellated edifices we may here specify Leeds, Hever, Chilham, Allington, Saltwood, and Westerhanger castles, with the castellated mansions of Penshurst and Knole. Leeds Castle is to the right of the road from Maidstone to Ashford, 4 or 5 miles from Maidstone. It is surrounded by a broad moat: the entrance is by a stone bridge of two pointed arches, and through a deep gateway in good preservation. Leeds Castle was the residence occasionally of Richard II. and Henry IV. Hever Castle, on the Eden, one of the upper waters of the Medway, was erected partly in the time of Edward III., and possesses some historical interest as the residence of the Boleyn family. The castle is now used as a farm-house. Chilham Castle is about midway between Canterbury and Ashford. After the Conquest a Norman castle was built here, of which the keep is in good preservation. It is an irregular octagon of three stories, with walls 10 or 12 feet thick, built of flint, chalk, and stone intermingled, faced with squared stone, and now mantled with ivy. The remains of Allington Castle, on the left bank of the Medway just below Maidstone, are occupied as two tenements. Allington was the seat of Sir Thomas Wyatt, an accomplished scholar of the time of Henry VIII., and of his son Sir Thomas, who suffered for treason against Queen Mary. Saltwood Castle is seated at the head of a narrow valley about a mile from Hythe. It belonged to the archbishops of Canterbury till the reign of Henry VIII., when Cranmer surrendered it to the king. The outer gate-house, erected by Archbishop Courtney in 1381, is in tolerable preservation. Of Westerhanger, or Westonhanger, 2½ miles from Hythe, the principal remains are the outer walls, with the towers of the north and east sides, and a small chapel. Penshurst Castle is a very extensive pile. It is one of those castellated dwellings that immediately succeeded the baronial castles of a more troubled period, and derives its chief interest from having been the residence of the Sidney family. Knole, or Knowle, near Sevenoaks, the former residence of the Sackvilles, dukes of Dorset, but now of Earl Amherst, is another extensive and magnificent mansion: the principal buildings, like those of Penshurst, form a spacious quadrangle, and are in the

castellated style. The greater part is of the 15th century, but some portions of it are yet older. There are slight remains of castles at Cowling, near the mouth of the Thames; at Thurnham, on the brow of the chalk hills near Maidstone; and one or two other places. Sandown, Sandgate, and Walmer castles, all on the coast, hold a middle place between ancient and modern fortifications. They are coeval with Deal Castle, and are of the time of Henry VIII. Of ancient mansions there are several in the county. The Mote House at Ightham, of the 14th century, is the oldest. Charlton House, erected in 1607, is a characteristic example of the architecture of its period.

Of monastic remains the principal are St. Augustine's Abbey [CANTERBURY], Aylesford Priory [AYLESFORD], and St. Radigund's Abbey, near Dover, which was founded about 1191, for Premonstratensian canons. The walls of the entrance gateway of St. Radigund's Abbey are nearly entire; the north and west sides of the chapel, and part of the dwelling, now patched up as a farm-house, are also standing. There are considerable remains of the Benedictine priory at Dover, including the gateway and refectory, both nearly entire. The church of the Maison Dieu, founded at Dover by Hubert de Burgh, has been purchased by the corporation and turned into a jail, sessions-house, and town-hall. The abbeys of Faversham and Malling, and the priories of Tunbridge and Folkestone, are noticed elsewhere. Of Boxley Abbey, near Maidstone, there are few remains; and the abbey buildings at West Langdon, not far from Dover, have been new fronted with brick and much altered. There are some remains of the priories of Bilsington, on the edge of Romney Marsh, and of Monks Horton, near Stone-street causeway, of which last the western entrance to the church is a small but beautiful ruin of late Norman architecture, with insertions of windows and doors of perpendicular character. The chapel of St. Nicholas's Hospital, at Harbledown, near Canterbury, is partly of Norman and partly of later architecture.

Of the churches of the county the most worthy of note are its two cathedrals, Canterbury and Rochester. For antiquity Barfreston church, between Canterbury and Dover, but not on the high road, is most deserving of notice. It is of Norman date, and consists of a nave and chancel, which communicate by an arch rising from wreathed columns and richly sculptured. It was carefully restored a few years back. The church of Darent, near Dartford, has a rude chancel of Anglo-Saxon date. Several other churches, including St. Mary's at Dover, and St. Margaret-at-Cliffe, are chiefly valuable for their Norman features; but the predominant character in the churches of the county is the early English, of which Stone church is a good specimen. Chatham church is of the decorated style. Maidstone church is a fine example of the perpendicular style; it was completely restored two or three years back at a very great expense. Aylesford is also a good perpendicular church.

Religious Worship and Education.—According to the returns published as the result of the Census of 1851 it appears that in March of that year there were in the county 997 places of worship, of which 479 belonged to the Church of England, 250 to six sections of Methodists, 107 to four sections of Baptists, 86 to Independents, 13 to Roman Catholics, 10 to Quakers, 7 to Mormons, 5 to the Countess of Huntingdon's Connexion, 5 to Jews, 3 to the Presbyterian Church in England, and 32 to various other bodies. The total amount of sittings provided was 802,948. The number of Sunday schools was 638, of which 301 belonged to the Established Church, 172 to six sections of Methodists, 77 to Independents, 60 to Baptists, and 5 to the Countess of Huntingdon's Connexion. The total number of scholars was 57,987, of whom 24,613 belonged to the Church of England schools. The number of day schools was 1930, with 85,458 scholars, namely, 500 public schools with 53,631 scholars, and 1430 private schools with 31,827 scholars. There were 37 literary and scientific institutions, with an aggregate membership of 5771, and libraries containing in all 40,513 volumes.

Savings Banks.—In 1852 there were 22 savings banks in the county, at Ashford, Bromley, Canterbury, Chatham, Dartford, Deal, Deptford, Dover, Faversham, Gravesend, Greenwich, Hawkhurst, Hythe, Maidstone, West Malling, Margate, Ramsgate, Sevenoaks, Sheerness, Tonbridge, Tonbridge Wells, and Woolwich. The total amount owing to depositors on November 20th 1852 was 1,008,386*l.* 9*s.*

KENT ISLANDS. [VAN DIEMEN'S LAND.]

KENTBURY. [BERKSHIRE.]

KENTON. [DEVONSHIRE.]

KENTUCKY, one of the United States of North America, extends between 36° 30' and 39° 12' N. lat., and between 82° and 89° 40' W. long. It is bounded E. by the state of Virginia; S. by that of Tennessee; W. by the Mississippi River, which divides it from the state of Missouri; and N.W. and N. by the Ohio River, which divides it from the states of Illinois, Indiana, and Ohio. Its greatest length from east to west is 368 miles; its greatest width from north to south is 168 miles; but the outline of the state being extremely irregular both length and width vary very much. The area is 37,680 square miles, or about 6300 square miles larger than that of Scotland. The federal representative population in 1850 was 898,012, in which number three-fifths of the slaves are included. This, according to the present ratio of representation, entitles the state to send 10 representatives to Congress. To the Senate, like each of the other United States, Kentucky sends two members.

The following table shows the population of Kentucky at the decennial censuses of the present century, with the relative proportions of whites, free coloured persons, and slaves:—

Date of Census.	Whites.	Free Coloured Persons.	Slaves.	Total.
1800 . . .	179,871	741	40,343	220,955
1810 . . .	324,237	1,713	80,561	406,511
1820 . . .	434,644	2,759	126,732	564,317
1830 . . .	517,787	4,917	165,213	687,917
1840 . . .	590,253	7,317	182,258	779,828
1850 . . .	761,413	10,011	210,981	982,405

Surface, Hydrography, Communications, &c.—The greater part of the surface of Kentucky is nearly level; the broad plains being however broken by gentle undulations. But the south-eastern portion, which is however less than one-tenth of the whole state, is covered with ridges of mountains and high hills, the slopes of which are rather steep, and which contain between them narrow, deep, and gloomy valleys. The whole of this region is well wooded, especially the lower parts of the hills and the vales. None of the summits of these mountains appear to attain the height of 3000 feet above the sea, and their mean elevation probably does not exceed 2000 feet. The highest ranges are the Cumberland Mountains along the boundary-line of Virginia, and the Laurel Mountains, which run parallel to the Cumberland Mountains, and join them between the upper branches of the Kentucky and Cumberland Rivers. To the north and west of the hilly region lies what may be called the upland region, which extends from the Big Sandy River, on the boundary of Virginia, to about 86° W. long., and comprehends more than half of the whole area of the state. Its surface is undulating, with gentle ascents and descents, but it is intersected by numerous narrow but deep valleys in which the rivers run. Though this upland region is sparingly provided with spring-water, its soil is of the first quality, and as fertile as any part of the United States. The western portion of the state is divided between the Barrens and a country which is partially hilly. The Barrens, which occupy chiefly the tract between the Green River and Cumberland River, in their natural state are generally destitute of trees, resembling the prairies north of the Ohio River; but the level surface is diversified by a considerable number of low round-topped hills, called 'oak-knobs,' on account of the trees which cover them. This tract is the least fertile part of the state. The alluvial bottoms between these hills and the Ohio and its affluents are exceedingly rich. On the north and west the Barrens are surrounded by a more broken and hilly country, which gradually passes to the low flats which skirt the Ohio and Mississippi rivers. This tract is superior to the Barrens in fertility, but cannot be compared with the upland region.

Kentucky is amply provided with noble streams. The *Mississippi* forms its western boundary for above 80 miles. Along the north-western and northern boundary runs the *Ohio*, in a winding course of 580 miles, navigable throughout, and affording with its chief affluents ready water-communication to all parts of the state. The *Mississippi* receives from Kentucky only a few inconsiderable tributaries. The *Ohio* receives all the larger rivers that drain Kentucky. Of these the most eastern is the *Big Sandy River*, which rises in Virginia, on the Great Flat-top Mountains, a portion of the Alleghany range; where it approaches the boundary of Kentucky it turns nearly due north, and continues in that direction to its very mouth, forming the boundary between the two states. It is not navigable to a great distance from its mouth, owing to some falls which occur where it issues from the mountain region. The *Licking River* rises in Floyd county, Kentucky, and flows with many windings in a north-western direction for considerably over 100 miles: it falls into the *Ohio* at Newport, opposite Cincinnati. Though it swells in winter and spring to a considerable height, it has but little water in the other seasons; it is navigable by boats for 70 miles. The different branches of the *Kentucky River* rise in the Laurel Mountains, and form by their union a considerable stream, which first flows north-west, then west, and at last nearly due north. Its course is about 280 miles, and though it is very rapid it may be navigated by steamboats to Frankfort, 60 miles from its mouth, and by small boats for 100 miles higher. *Green River* rises in the western districts of the upland region, and flows for the greater part of its course westward, to its junction with its chief affluent, the Big Barren, when it declines to the north-west, and finally to the north, joining the *Ohio* about 50 miles above the mouth of the Cumberland River. Its course is above 250 miles, and it is navigable by steamboats to Bowling Green, 180 miles, and by small flat boats nearly to the heads of the stream; but the navigation is interrupted by falls about 50 miles from its mouth. *Cumberland River* rises in the valley between the Cumberland Mountains and the Laurel Mountains, where it is called *Clove River*. It traverses both the mountain and upland region generally in a western direction; but on approaching the Barrens it turns southward, and enters Tennessee, where it makes a large bend to the southward, and then re-enters Kentucky with a north-western course, continuing in

that direction to its mouth, which is 10 miles above that of Tennessee River. It is nearly 600 miles in length, and as its current is comparatively gentle it offers an easy navigation for sloops and steamboats as far up as Nashville in Tennessee, 200 miles from its mouth, and in full water to Burkesville in Kentucky; for boats of 15 tons it is navigable for 300 miles from its mouth: river-boats ascend much higher. The Tennessee River flows only about 70 miles through Kentucky, and properly belongs to TENNESSEE. It admits steamers to Florence in Alabama, 300 miles from its mouth. The navigation of several of these rivers has been improved by locks and artificial cuts or canals.

The principal canal is the Portland and Louisville, which was formed in order to overcome the obstruction to navigation caused by the rapids of the Ohio at Louisville. The Portland and Louisville Canal is less than three miles long, but is a work of vast labour, having been for almost its whole length excavated out of the solid limestone rocks. It is 50 feet wide at top, has four locks, and was constructed at a cost of 1,200,000 dollars. The other more important canals and works are those for improving the navigation of the Kentucky, Green, Big Sandy, and Licking rivers, which were completed at a cost considerably exceeding 2,000,000 dollars.

Kentucky has a well-arranged system of ordinary carriage roads. It has also a great many miles of plank roads. Of railways it has about 200 miles in operation, and nearly 600 miles in course of construction. The lines at work are the Louisville and Frankfort, 65 miles; the Lexington and Frankfort, 29 miles; and the Covington and Lexington, 96 miles. The chief lines in course of construction are the Kentucky portion of the Mobile and Ohio, the Nashville and Louisville, and the Maysville and Lexington.

Geology, Mineralogy, &c.—Palaeozoic rocks occupy by far the larger part of Kentucky. The centre of the northern portion of the state belongs to the Silurian system: a compact mass of Lower Silurian rocks being bounded by a comparatively narrow belt of Upper Silurian. A few detached patches of both Lower and Upper Silurian rocks occur in the middle and southern counties. The Lower Silurian rocks are mostly blue limestone, but there are also the hard sandstones, which form the lowest rocks of the system in North America. The Upper Silurians consist chiefly of gray limestones, locally known as the Tennessee River group. Bounding the Silurian rocks is a broad band of strata of the Devonian formation, which however does not reach a greater depth than from 100 to 200 feet. A second bed of this formation occurs in the south-western part of the state. The Devonian formation here consists of what have been called by local geologists an upper and lower coralline beds; a middle or shell bed; and an upper or limestone bed. The most prevalent rocks of Kentucky are however those of the Carboniferous group, which occupy nearly all the eastern, western, and southern districts. The whole interior of the state is occupied by Lower Carboniferous rocks, consisting of the characteristic black schist; fine-grained waverly sandstones; and conglomerates, or pudding-stones, consisting of quartz, pebbles, &c., united by a fine sand. The Upper Carboniferous, or Coal-Measures, lie outside these on the east and west. In the extreme south-western corner of the state, along the Mississippi, are rich alluvial deposits, bounded by a narrow band of cretaceous rocks.

Iron is the metal which occurs most abundantly in Kentucky, but it is of inferior quality, and has as yet been very little worked. Lead has been found in small quantities, and silver near Cumberland Falls. The western coal-bed of Kentucky forms a part of that of Illinois and Indiana; the eastern belongs to that of Virginia and Ohio. These beds occupy in Kentucky a large area, but hitherto they have been comparatively little worked: not more than 300,000 tons are raised annually. The blue limestones form an excellent building material. Some good marbles are quarried in the cliffs of the Kentucky River. The sandstones serve for building materials, the making of grindstones, &c. In the limestone rocks occur numerous caverns, 'sinks,' or depressions of the surface of the ground, and subterranean water-courses. Of the caverns the best known is the celebrated Mammoth Cave, situated near the Green River, about midway between Nashville and Louisville. It consists of a series of immense chambers, connected by very long and narrow passages, somewhat like the Peak Cavern in Derbyshire, but on a vastly grander scale. It is said that the cavern has been explored to a distance of upwards of 10 miles without reaching its termination; while the aggregate width of all the branches is above 40 miles. One of the principal chambers is 200 feet long by 150 feet wide, and 50 feet high, and has two passages, each above 100 feet wide, opening into it. Large quantities of bones have been found within it. Mammoth Cave is greatly resorted to by visitors, being by far the most remarkable place of the kind in America. In one of the chambers is a row of cabins, constructed for consumptive patients, who are attracted by the temperateness and purity of the atmosphere. Nitrate of lime (saltpetre) and gypsum abound in this and most of the other limestone caverns. Very productive salt-springs, locally known as 'licks,' occur in many places among the sandstone rocks. Sulphur, saline, and chalybeate springs are numerous.

Climate, Soil, Productions.—The mean annual temperature seems to be about 55° and consequently 5 degrees higher than that of London, but the differences in the extremes of heat and cold are much greater.

The winters are long and severe: they begin about Christmas and last three months. The thermometer annually descends as low as 25°, and has been known to sink as low as 14° of Fahr. Snow falls every winter, but not in great quantities. In summer the heat is sometimes very great, and the thermometer rises to 94° and 95°. In spring and autumn south-west winds prevail, and the weather is delightful. The north-west wind produces great cold in winter, but it seldom continues many days. Rain falls abundantly in winter and spring, but in the other seasons the weather is rather dry and constant.

The soil varies greatly in different parts of the state, but on the whole Kentucky is blest with a large proportion of fertile land; though not more than half the surface of the state is under cultivation. The best soil is that of the blue-limestone districts, in the neighbourhood of Lexington and towards the Ohio. An area of above 100 square miles occupied by this soil is said to be one of the finest and most fertile tracts in North America. The southern districts are somewhat less fertile; and much of the Barrens is chiefly adapted for grazing. Great flocks of sheep pasture on the Barrens; the breed of sheep has been improved by crossing them with merinoes.

The cereals which are most extensively cultivated are maize, of which a larger quantity is grown than in any other state except Ohio, wheat, rye, and oats. Rye and oats are said to thrive better than in the states on the shores of the Atlantic: only two states grow a larger quantity of oats; rye is commonly used for the distilling of whisky. The staple products are however hemp and flax, which are generally cultivated. Five-eighths of the entire hemp crop of the Union, and four-sevenths of that of flax, are grown in Kentucky. In the south-western districts, along the Tennessee, Cumberland, and Mississippi rivers, cotton is raised in abundance. The tobacco which is grown in these districts and the rich lands farther east supplies a considerable article of exportation. Kentucky yields more than one-fourth of the aggregate quantity of tobacco raised in the United States. The principal fruit-trees are apples and peaches; from the former cider is made, and from the latter peach-brandy, of which there is a great consumption.

There are still very extensive forests in the state, and trees of very large size abound. In the mountain and upland region are chiefly tulip-trees, elm, oak, hickory, black-walnut, cherry, &c.; those of the Barrens are commonly oaks, chestnuts, and elms. Among the more generally diffused and most useful trees are the sugar-maple, the honey-locust, and coffee-trees, with the pawpaw, which bears an excellent fruit, in shape and size resembling a cucumber, but of a very sweet flavour. The extensive cane-brakes afford most nutritious feeding for cattle.

The following are the principal results of the inquiries made respecting the agricultural statistics of the state at the last Census. The number of farms under cultivation in the state on the 1st of June 1850 was 74,777; the extent of improved land in farms was 5,968,270 acres; of unimproved, 10,981,478 acres. The cash value of farms was returned at 155,021,262 dollars; of farming implements and machinery 5,169,037 dollars. The total produce of the principal crops in 1850 was as follows:—Wheat, 2,142,822 bushels; rye, 415,078 bushels; maize, 58,672,591 bushels; buckwheat, 16,097 bushels; oats, 8,201,311 bushels; barley, 95,843 bushels; rice, 5688 lbs.; potatoes, 1,492,487 bushels; sweet potatoes, 998,179 bushels; peas and beans, 202,574 bushels; tobacco, 55,501,196 lbs.; ginned cotton, 308,200 lbs.; wool, 2,297,433 lbs.; hay, 113,747 tons; cane-sugar, 284,000 lbs.; molasses, 30,079 gallons; maple-sugar, 437,405 lbs.; hemp, dew-rotted, 18,432 tons, water-rotted, 1355 tons; flax, 2,100,116 lbs.; flax-seed, 75,801 bushels; grass-seeds, 24,741 bushels; wine, 8093 gallons; hops, 4309 lbs. The value of orchard products was 106,280 dollars; and of market-garden products, 303,120 dollars.

The number of horses in the state in 1850 was 315,682; asses and mules, 65,609; milch cows, 247,475; working oxen, 62,274; other cattle, 442,768; sheep, 1,102,091; swine, 2,891,163. The value of live stock was 29,661,436 dollars; of animals slaughtered, 6,462,598 dollars. The products of animals were:—Butter, 9,947,523 lbs.; cheese, 213,954 lbs.; bees'-wax and honey, 1,158,019 lbs.; silk-cocoons, 1281 lbs.

Manufactures, Commerce, &c.—Kentucky is mainly an agricultural state. The number of free males above 15 years of age employed in agriculture in 1850 was 115,017; in commerce, trade, manufactures, mechanic arts, and mining, 36,598. The whole number of manufacturing establishments producing to the value of 500 dollars and upwards, in 1850, was 3471. Of these, there were 8 cotton-factories, employing a capital of 289,000 dollars, and an average of 181 males and 221 females; 25 woollen-factories employing a capital of 249,820 dollars, and an average of 256 males and 62 females; 275 tanneries, employing a capital of 763,455 dollars, and 879 persons; and 45 iron-works, including 20 for castings, which employed a capital of 502,200 dollars, and 578 hands; 21 for pig-iron, employing a capital of 924,700 dollars, and 1855 hands; and 4 for wrought-iron, employing a capital of 176,000 dollars, and 183 hands. The other manufactures are chiefly tobacco-factories, rope-walks, bagging-factories, distilleries, agricultural implement works, and the various works connected with an agricultural district, and the production of the ordinary articles

of domestic consumption. The home-made manufactures of the year were valued at 2,459,128 dollars.

The state has little direct foreign commerce; most of the foreign exports being through New Orleans, but some go by way of the Atlantic ports. The imports in 1852 were valued at 185,559 dollars, all in American vessels; no exports are returned. The shipping owned in the state (collection district of Louisville) in 1850 amounted to 14,820 tons, the whole navigated by steam, and employed in river navigation. In 1852 there were 27 steam-vessels built in the state of an aggregate burden of 7312 tons.

Divisions, Towns, &c.—Kentucky is divided into 101 counties. Frankfort is the political capital, but Louisville is the commercial metropolis, and by far the largest town of the state. There are few other towns with any large amount of population: all the towns which require notice are mentioned below; the population is that of 1850:—

Frankfort, the capital, is built on high ground on the right bank of the Kentucky River; South Frankfort, its suburb, on the left bank, being connected with it by a suspension-bridge; in 38° 14' N. lat., 84° 40' W. long., 551 miles W. by S. from Washington: population 3308, or with the suburbs, 4372. The river is here 80 yards wide, flows in a deep limestone bed, and after very heavy rains rises 50 or 60 feet. Steamboats of considerable burden ascend the river to Frankfort, which is the centre of a considerable commerce, being the mart of a very rich district; the city has great railway facilities. Frankfort is regularly laid out and well built. Many of the public buildings are constructed of white marble, which is found abundantly in this neighbourhood. Of these buildings the chief is the state-house, 86 feet by 54 feet, with a handsome Ionic portico; the other public buildings are the state penitentiary, court-house, and jail; market-house, churches, &c. Streets of considerable size are built here, and there are several manufacturing establishments. One daily and four weekly newspapers, with a semi-monthly and a monthly periodical, are published here.

Louisville, a city, port of entry, and the capital of Jefferson county, is the chief commercial and manufacturing city in Kentucky, and the third in commercial importance on the Ohio. It occupies a sloping plain on the left bank of the Ohio, 70 feet above low-water mark; and is 65 miles by railway W. by N. from Frankfort, and 394 miles above the mouth of the Ohio: the population in 1850 was 43,194; in 1840 it was 21,200; in 1800 it was only 600. The town was founded in 1780; it is regularly laid out and well built, consisting of 10 broad streets running parallel to the river, and 30 others intersecting them at right angles. Along the river are spacious wharfs. The town is lighted with gas, and well supplied with water. Some of the public buildings have considerable architectural pretensions. There are 17 Methodist, 5 Baptist, 5 Presbyterian, 3 Episcopal, 6 German Protestant, 4 Roman Catholic, and 4 other churches, and 2 Jewish synagogues; Louisville University, and numerous public schools; an orphan asylum, a school for the blind, a general and a marine hospital, and several other benevolent institutions; literary, scientific, and agricultural societies; the usual county buildings; a city hall; market-house, and numerous hotels. As a commercial town Louisville is a place of great and constantly increasing traffic: the value of its commerce is stated to be 70,000,000 dollars annually. Its imports are all the ordinary foreign-goods required, for home consumption, in return for which it receives the various products of the state for export by the river. Among its chief exports are tobacco, hemp, flax, bagging, rope, cordage, live stock, pork, spirits, cotton, flour, machinery, &c. Its trade in pork and bacon is very large; in 1850 it received 197,150 hogs for slaughter, and 75,500 barrels of pork; in addition to which many thousand tons of bacon are annually sent in by waggons, &c., and packed in the establishments in the city for exportation by the river steamers. Louisville has also extensive manufactures, consisting of iron-foundries, steam-engine, locomotive-mill, and machine shops; steam-bagging factories and rope-walks; cotton and woollen factories; flour- and saw-mills; distilleries, breweries, tobacco factories, agricultural implement-works, boot and shoe manufactures, and various other large establishments. A considerable trade is carried on in building steamers and other river craft. Constant communication with other leading towns on the Ohio is maintained by steamers, about ten of which leave the port daily. Louisville stands at the head of the natural steam-navigation of the Ohio, but the Louisville and Portland Canal, which is carried round the rapids, enables steamers to ascend much higher. With the interior Louisville has communication by a very complete system of roads, which radiate from it in all directions. It is now being also made a centre of divergence for the state railways. The Jeffersonville railway, which has its terminus at Jeffersonville on the Ohio, immediately opposite Louisville, affords ready communication by way of Indianapolis with all parts of Indiana and the adjoining states. Six newspapers are published here daily, each issuing also editions once, twice, or thrice a week: there are besides three weekly newspapers, and four monthly magazines.

Covington city, on the left bank of the Licking River, at its confluence with the Ohio, opposite Cincinnati, 60 miles N.N.E. from Frankfort, population 9408, or with the suburbs about 12,000, is one of the most rising places in Kentucky. The city is regularly laid out and well built. It contains 8 churches, a Baptist theological

college, several schools, a city-hall, and market-house. There are in the town several tobacco factories, rope-walks, rolling-mills, &c. Covington is connected with Cincinnati by a steam-ferry; and with most parts of the state by railways. Two weekly newspapers are published here. Newport lies on the right bank of the Licking directly opposite to Covington; and about 4 miles inland are the Latonian Springs, a watering-place much resorted to during the summer. *Danville*, the capital of Boyle county, stands on a little tributary of Dick's River, and on the Nashville and Lexington railway, 40 miles S. by E. from Frankfort: population about 1600. It is a place of growing trade, and contains the Centre college, the Kentucky deaf and dumb asylum (which contains about 60 inmates), churches, schools, and the usual county buildings. *Georgetown*, the capital of Scott county, on the north fork of the Elkhorn River, 18 miles E. by N. from Frankfort, population about 1800, contains besides the usual county buildings, churches and schools, Georgetown Baptist college; and supports a weekly newspaper and a monthly magazine. *Harrodsburg*, the capital of Mercer county, on the right bank of the Salt River, 29 miles S. from Frankfort, population 1481, contains the usual county buildings, four churches, and several schools. Bacon college, having 5 tutors, and 75 students, is situated here. In the vicinity is a mineral spring much resorted to by invalids. *Henderson*, the capital of the county of the same name, stands on the left bank of the Ohio, 150 miles W. by S. from Frankfort: population, 1775. It is a place of a good deal of trade, being the shipping port of a considerable tract of country, and having a large supply of coal and iron in its vicinity. It contains also six large tobacco-factories. Besides the court-house and other county buildings, it has 7 churches and 5 schools; and supports two weekly newspapers. *Hopkinsville*, the capital of Christian county, stands on Little River, 170 miles S.W. from Frankfort, population about 1800; contains a court-house and other county buildings, 7 churches, 3 or 4 schools; and is a place of a good deal of trade. Two weekly newspapers are published here. *Lexington*, the capital of Fayette county, and formerly the capital of the state, stands on a branch of the Elkhorn, 25 miles E.S.E. from Frankfort: its population in 1840 was 6997; in the Census Report of 1850 the population of Lexington is not given, but it was probably about 8000. The city is the oldest in the state; it is regularly laid out, forming a square, the sides of which are two miles long, with wide streets intersecting each other at right angles, and many of them bordered by rows of fine trees. It contains several good public buildings, churches, schools, and benevolent institutions. Transylvania University, the oldest college in the state, is situated here, and also the state lunatic asylum. There are considerable manufactories, extensive tobacco warehouses, and stores; and the town carries on a large trade with the interior. Several railways, some as yet however only in course of construction, meet in Lexington, and good turnpike roads diverge in all directions. Ashland, the residence of the late eminent American statesman Henry Clay, is about a mile and a half from Lexington, and numerous other mansions are in its vicinity. Two newspapers are published twice a week, and one daily. *Maysville*, stands on a high bank at the junction of the Limestone Creek with the Ohio, 73 miles N.E. from Frankfort: the population in 1850 was 4256, but is said to have since increased very largely, in consequence of the construction of the railways which have opened to it a ready communication with the interior. Maysville has a good harbour, is the port of a busy district, and has extensive iron-foundries, cotton-factories, rope-walks, bagging-factories, several saw- and flour-mills, pork-packing establishments, lumber-yards, extensive wholesale grocery and other stores, &c. The town is regularly laid out, and well built. The principal buildings are the city-hall, several churches and schools, a hospital, bank, &c. Two newspapers with weekly, and two with tri-weekly issues are published here. *Newport*, the capital of Campbell county, on the right bank of the Licking River at its confluence with the Ohio, immediately opposite to Covington: population, 5895. The town is built on very elevated ground, and commands a fine view of Cincinnati on the opposite side of the Ohio, with which city there is communication by a steam ferry. Besides the usual county buildings, churches, and schools, there are no buildings of any consequence. In the town are several factories. A garrison of the United States army is maintained here. A newspaper is published daily. *Paducah*, the capital of McCracken county, on the left bank of the Ohio near the confluence of the Tennessee, 214 miles W.S.W. from Frankfort, population, 2428, is the port of the valley of the Tennessee, and has a considerable shipping trade. The only public buildings are those of the county, with several churches and schools. A weekly newspaper is published here.

Government, Judicature, &c.—The first state constitution was framed in 1790 and amended in 1799. The present constitution of Kentucky was adopted in 1850. By it the right of voting in all state elections is vested in every white male citizen 21 years of age, who has resided two years in the state, and one year in the place for which he proposes to vote. All votes are given openly. The legislative body, styled the general assembly, consists of a Senate of 38 members elected for 4 years, one half being elected biennially, and a House of Representatives of 100 members elected for two years. For establishing the representative districts a census is taken every eighth year.

Teachers of religion, and persons holding any office of profit under the state or the United States are ineligible as members of the general assembly. The governor is elected for four years, but is incapable of re-election for a consecutive term; he has a salary of 2500 dollars.

Among the special provisions of the constitution are the following:—The legislature cannot grant divorces; or change of names; or sales of estates of persons under legal disabilities; or change the venue in any criminal or penal prosecution by special legislation, but shall by general laws confer such powers upon the courts. With respect to slavery, it is enacted that no laws shall be passed for the emancipation of slaves without the consent of their owners, or without paying their owners a full equivalent, and providing for their removal from the state. Owners may emancipate their slaves, saving the rights of creditors. Immigrants may bring their slaves with them into the state; but slaves are not allowed to be introduced as merchandise, nor under any circumstances slaves imported into the Union since January 1st, 1789. Where slaves are treated inhumanly by their masters, they are to be taken from them and sold. Slaves are not to have the right of an inquest by the grand jury; but are not to be deprived of an impartial trial by petit jury. Free negroes or mulattoes coming into or refusing to leave the state, are to be deemed guilty of felony. The constitution cannot be altered or amended except after such amendments having been twice carried in successive sessions by majorities of the legislature, and each time thereupon submitted to the people and approved by them, and then in the third session passed by a majority of a convention of representatives specially elected for the purpose.

The public debt of the state on the 1st of January 1852 amounted to 5,726,307 dollars. The entire revenue for the year ending October 10th 1852 was 783,885 dollars, the expenditure for the same time was 724,694 dollars. The total value of taxable property in the state was returned at 333,131,512 dollars. The rate of taxation is 17 cents for every 100 dollars worth of property; of this 10 cents is appropriated to ordinary purposes, 5 cents to the sinking fund for the payment of the principal and interest of the state debt, and 2 cents to the school fund. Besides the ordinary items taxed as property, land, houses, stores, slaves, horses and cattle, there are certain rather unusual articles placed under the head of specific taxation, namely, 3705 carriages and barouches at 1 dollar each; 1413 buggies at 50 cents; 1982 pianos at 1 dollar; 394 gold spectacles at 50 cents; 7808 gold watches at 1 dollar; and 853 silver lever watches at 50 cents. The total number of white male citizens over 21 years of age who pay a poll tax of one dollar each for county purposes is 163,005. The state militia in 1852 was composed of 88,979 men, of whom 4370 were commissioned officers.

The judicature consists of a court of appeal, circuit, and county courts. The court of appeal is presided over by a chief justice and three judges, who are elected by the people for a term of eight years, one being chosen every second year, and the senior being chief justice; each of the judges has a salary of 1500 dollars. There is a separate court of chancery at Louisville, the chancellor presiding over which has a salary of 1500 dollars. There are 12 circuit courts, each presided over by a judge who has a salary of 1400 dollars, and is elected by the people for six years. The judges of the county courts and justices of the peace are elected for four years.

The provision made by the state for educational purposes consists of a school fund, which in December 1852 amounted to 1,400,270 dollars, and an annual tax on property producing about 55,000 dollars. A superintendent of public instruction, elected by the people for four years, has the supervision of the common schools. According to his Report for 1852 there were in that year 194,963 children on the books of the state schools, and the average number attending school was 69,825. The number of children in the state between the ages of 5 and 16 was 215,195. The principal colleges in the state are the following:—The Transylvania University at Lexington, founded in 1798, which has 7 instructors, 50 students, and a library of 14,000 volumes; connected with it are law and medical schools, the latter of which has 7 professors and 214 students. The Louisville University at Louisville, founded in 1837, is chiefly celebrated for its law and medical schools, the latter of which has 7 professors and 376 students. St. Joseph's Roman Catholic college at Bardotown has 17 instructors, 80 students, and a library of 6000 volumes. The Centre college at Danville, founded in 1820, has 7 instructors, 189 students, and a library of 5000 volumes. Augusta Methodist college, founded in 1825, has 4 instructors, 54 students, and a library of 2500 volumes. Bacon college at Harrodsburg, founded in 1836, has 5 instructors, 75 students, and a library of 1200 volumes. Georgetown Baptist college, founded in 1840, has 7 instructors, 83 students, and a library of 6600 volumes. The Western Baptist theological institution at Covington, founded in 1840, has 4 professors, 18 students, and a library of 2000 volumes. The Western military institute at Drennon Springs, founded in 1847, has 10 instructors, 186 students, and a library of 1500 volumes. Shelby college at Shelbyville, founded in 1841, has 6 instructors, and 44 students.

Of the various religious denominations, the Baptists, and next to them the Methodists, are the most numerous. In 1850 the Baptists had 803 churches, affording accommodation for 291,855 persons; the Methodists 580 churches, affording accommodation for 167,455

persons; the Presbyterians 224 churches, affording accommodation for 99,106 persons; 'Christians' 111 churches, with accommodation for 46,340 persons; Roman Catholics 48 churches, affording accommodation for 24,240 persons; Unionists 30 churches, affording accommodation for 10,900 persons; 'Free' 34 churches, with accommodation for 9377 persons; Episcopalians 19 churches, affording accommodation for 7050 persons. In all there are in the state 1845 churches, affording accommodation for 671,053 persons. The state institutions for the relief of the unfortunate are—a lunatic asylum at Lexington, containing 249 inmates in 1852, and another at Hopkinsville; an asylum for the deaf and dumb at Dunsville, containing 67 pupils; and one for the blind at Louisville. The number of newspapers and periodicals published in the state in 1850 was 62, with an aggregate annual circulation of 6,582,838 copies. Of these 9 were published daily, 7 three times a week, 38 weekly, and 8 monthly.

From the extensive fortifications which occur in several places, but especially on the banks of the Ohio opposite Scioto River, and are now overgrown with high forest-trees, it appears probable that this part of America was once the seat of a nation which had made some progress in civilisation. The first Europeans arrived in Kentucky in 1767, and the first settlement was formed in 1775, though Daniel Boone is said to have settled in Kentucky some years earlier. It was then a part of Virginia, but the population having increased rapidly Virginia consented to a separation; and in 1792, only seventeen years after the first settlement, Kentucky became one of the United States.

KENVIG. [GLAMORGANSHIRE.]

KERDISTAN, RIVER. [BAGHDAD, Pashalic of.]

KERKHAH, RIVER. [BAGHDAD, Pashalic of.]

KERMAN, KERMANSHAH. [PERSLA.]

KERRY, a maritime county of the province of Munster, in Ireland, is bounded E. by the counties of Limerick and Cork, S. by the county of Cork and the estuary of the Kenmare River, W. by the Atlantic Ocean, and N. by the estuary of the Shannon, which separates it from the county of Clara. It is situated between 51° 41' and 52° 38' N. lat., 9° 7' and 10° 30' W. long. Its greatest length from north to south is 60 miles; from east to west 58 miles. The coast-line with its various indentations measures above 220 miles. The area is 1353 square miles, or 1,186,126 acres, of which 414,614 acres are arable, 726,775 acres uncultivated, 11,169 acres in plantations, 807 acres in towns and villages, and 32,761 acres under water. In 1831 the gross population was 263,126; in 1841 it was 293,880; in 1851 it had fallen to 238,239.

Coast, Surface, Hydrography.—The county of Kerry forms the south-western extremity of Ireland. The coast, which is washed by the Atlantic Ocean, is deeply indented by the estuary of the Kenmare River, the Bay of Dingle, and the Bay of Tralee, the two former of which penetrate into the mainland about 30 miles in an easterly direction. The peninsulas intercepted between these arms of the sea are occupied by the western extremities of the mountain system, which, commencing in Waterford, extends with little interruption across the entire south of Ireland. The Muskerry Mountains, spreading from the western boundary of Cork across the south of Kerry, occupy the district between the bays of Kenmare and Dingle. The peninsula of Corkaguiney, between the bays of Dingle and Tralee, consists of a prolongation of the mountain groups which occupy the north-western extremity of Cork and the south-west of Limerick. The northern part of the county consists of a rich and generally level country, which rises into rough land in only one direction, towards Kerry Head on the Shannon.

At the head of Kenmare Bay, the most beautiful of Irish bays, is a long glen, at the lower extremity of which the town of Kenmare is situated. The peninsula between the bays of Dingle and Kenmare is divided into three principal valleys by ridges running nearly north-east by south-west. Of these valleys the most northern is separated from the Bay of Dingle by the Drung Mountains, which are 2104 feet high, and terminate in Dowlas Head. At the foot of this valley is situated the town of Cahiriveen, near which the river Fartin expands into a small lake before falling into Valentia Harbour. Separated from the valley of the Fartin by the Iveragh Mountains is another valley terminating towards the sea in the open Bay of Ballinaskelligs, so called from the Skelligs, two remarkable rocks in the offing. Between the Iveragh ridge and the Dunkerrin Mountains is a considerable extent of comparatively open country, subdivided into two valleys by a secondary ridge. In the eastern of these two valleys lie the lakes Derresana, Lanan, and Currane, of which Lough Currane receives the surplus waters of the other two, and communicates with the Bay of Ballinaskelligs by the Currane River—a stream only a few hundred yards in length, and a favourite resort for salmon. In a sheltered creek between Ballinaskelligs Bay and the Kenmare estuary is Derrymane Abbey, the seat of the late Daniel O'Connell, Esq. Between the Dunkerrin range and the shore of Kenmare estuary are numerous narrow lateral valleys drained by mountain streams running

GEOL. DIV. VOL. III.

nearly north and south, of which the principal are the glens of Suceem and the Little Blackwater. The surface here is chiefly bog.

The Iveragh Mountains are bounded on the north-east by the valley of Glencar, in the lower portion of which is Lough Carragh, a considerable expanse of water. In the interior and opposite the extremity of the Iveragh Mountains is situated the great group of Mac-Gillicuddy's Reeks, extending about 10 miles from north-west to south-east, among which Carran Tual rises to the height of 3410 feet, being the highest ground in Ireland. The Reeks have steep, almost precipitous sides, and peaked summits on several of which are small lakes; the summits are covered with a loose shingle resting on sandstone, and the sides with heath and coarse grass. On the north-east Mac-Gillicuddy's Reeks are separated from the Toomies and Glens Purple Mountains by a deep chasm called the Gap of Dunloe.

In a deep hollow between the south-eastern flank of this range and the group of Mangerton lies the Upper Lake of Killarney, a beautiful sheet of water, which is three miles in length by three-quarters of a mile in breadth, inclosed on all sides by mountains from 2000 to 3000 feet in height, except at one point towards its eastern extremity, where it discharges its waters by a tortuous course of three miles between the southern declivities of the Glens Purple Mountains and the precipitous side of Turk Mountain. There are several wooded islands in the Upper Lake, the luxuriant foliage of which forms an agreeable contrast to the general sterility of the surrounding mountains. There is also a considerable tract of natural oak-forest towards its southern extremity, and the channel leading to the Lower Lake passes through a thickly-wooded defile. About midway between the extremities of the channel a remarkable detached rock, called the Eagle's Nest, rises over the left bank to a height of 1100 feet: the echoes here are of unusual continuance and distinctness. Emerging from this defile the river expands into the Lower Lake of Killarney, 7 miles long by 3 miles broad, skirting the eastern declivities of the Toomies and Glens Purple Mountains. These mountains, descending abruptly to the western verge of the lake, are clothed with the richest natural woods of oak, ash, pine, alder, and beech, intermixed with hazel, whitethorn, yew, holly, and arbutus, from a height of several hundred feet down to the water's edge through a continuous distance of six miles. O'Sullivan's River, descending by a thickly wooded ravine on this side, forms a cascade 70 feet high close to the shore of the lake. On the opposite side the low alluvial banks are everywhere broken into promontories and islands, on which the arbutus grows with uncommon luxuriance. The town of Killarney is situated on the plain about a mile from the eastern shore; half a mile south of Killarney runs the Fleak, the chief feeder of the lake. About a mile south from the embouchure of the Fleak the richly-wooded promontory of Muckruss runs into the lake about a mile and three-quarters, separating a portion of the lake. This detached portion is called the Middle Lake, and sometimes Turk Lake, on account of its skirting the base of the Turk Mountain. Two cascades descend into Turk Lake: of these the more considerable is fed by a stream that flows from the Devil's Punchbowl, a lake situated near the summit of Mangerton Mountain. Mangerton is easy of ascent, and commands splendid views of the Lakes of Killarney, Macgillicuddy's Reeks, the Sugarloaf Mountains, and in clear weather of several of the bays that indent the coast. The castles of Dunloe and Ross, and the ruined churoches of Aghadoe and Muckruss, which are all situated on the eastern shore of the Lower Lake, add considerably to the interest of the surrounding scenery. The waters of the Lakes of Killarney discharge themselves at the northern extremity of the Lower Lake through the river Laune, which runs by a course of 12 miles into the head of Dingle Bay.

The remainder of the plain between Killarney and the mountains south of Tralee is drained by the Main, which rises near the Cork boundary, and after passing the towns of Castle Island and Castlemain discharges itself into the head of Dingle Bay, where it forms Castlemain Harbour. Near the neck of the peninsula of Corkaguiney the conical mountain of Cahirconree rises to a height of 2784 feet, and has its summit crowned with a circle of massive undressed stones, a circumstance in which the name originated, Cahir Con-rioh meaning the stone fortress of king Con, whose name is famous in Irish legendary story. Westward from this a chain of hills extends to Dingle on the southern side of the peninsula; beyond and north of Dingle the mountains rise towards the Atlantic in great masses, of which the chief is Mount Brandon, 3126 feet in height, being the second highest ground in Ireland. The extremity of the peninsula has an abrupt coast of about six miles from north to south, formed by Sybil Head, Mount Eagle, and Dunmore Head, the most western point of Ireland, off which lie the Blasquet Islands. A new road from Tralee to Dingle skirts the base of Mount Brandon, and affords magnificent views of mountain, lough, and sea.

North of Tralee the country improves in facility of access and cultivation. The plain of Ardfer, between Tralee and the high ground towards Kerry Head, is rich and well improved. The remaining district, extending to Tarbert on the Limerick boundary, is drained by the rivers Feale, Gale, and Brick, which, uniting within five miles of the sea, receive the common name of the Cashen River. A rough district extends from the mouth of the Cashen to Beal Point on the estuary of the Shannon. The coast is here precipitous, and near the bathing village of Ballybunlion abounds in magnificent caves. In

Sneem Harbour, on the north side of Kenmare River, vessels may lie landlocked in four fathoms of water, or in the entrance may ride in 10 fathoms. Ballinaakelligs Bay is generally unsafe in southerly or westerly winds. St. Finian's Bay, between Bolus Head and Puffin Island, is much exposed to the prevalent run of the sea.

The harbour of Valentia possesses the advantage of a double entrance, so that ships may sail in or out with any wind. It is quite landlocked, but the entrances are narrow. Valentia Island, which has an area of 6371 acres and is extremely fertile and tolerably well cultivated, belongs almost entirely to the Knight of Kerry, whose residence Glanleem or Zelva is on the eastern side of the island. The Spaniards occupied Valentia Island up to the time of the Commonwealth, when they were expelled, and two forts still called Cromwell's Forts erected, one to command the north, the other the south entrance to the harbour.

Dingle Bay is full of shoals at its upper extremity. Ventry Bay and Smerwick Harbour have good anchorage and deep water but are somewhat exposed. At the head of Smerwick Harbour is the hamlet of Gallerus, which contains a cluster of Irish antiquities, consisting of a hermitage beautifully constructed, a tower built in the style of the Anglo-Saxons, a cemetery containing several very ancient tomb-stones, and a castle which belonged to the Fitzgeralds, knights of Kerry.

Under the neck of the peninsula of Corkaguiney, on the northern side, is the Bay of Tralee, much of which is dry at low-water, but by means of a canal recently constructed, vessels of 300 tons come up to the town. From Tralee northward there are numerous shoals and sand-banks. Beyond Kerry Head opens the estuary of the Shannon, in which the first sheltered anchorage is off the point of Tarbert, where ships may lie nearly landlocked in 12 fathoms water.

Communications.—The roads in the south-western part of Kerry up to the year 1830 were scarcely passable for wheel-carriages. Several good roads at comparatively low levels have since then been constructed, and have greatly facilitated the development of the resources of these remote districts. A branch railway runs from the Mallow station of the Great Southern and Western line to Killarney, a distance of 40 miles.

Geology and Mineralogy.—The chief mountain chains consist of a red or gray conglomerate and sandstone supporting flanks of siliceous flags, and overlaid in the low districts by stratified limestone. The chief limestone fields occupy the basins of the Feale, Main, and Roughty. Northward from Ardferit the country towards Kerry Head consists of thick beds of argillaceous sandstone, beyond which the limestone re-appears in contact with beds of alum slate in the cliffs of Ballybunian. From Tralee eastward the country rising towards the boundaries of Cork and Limerick is occupied with an extension of the great Munster coal district.

The mountains of Glanbeagh, in the neighbourhood of Lough Carragh, abound with iron-ores. Killarney was celebrated for its iron mines in the 9th century, but they are not now worked. At Muckross and Ross Island in the Lower Lake, copper-mines were formerly worked. Lead-ore has been found in the vicinity of the lake. Copper-ore has been found at Ardferit and in Glanbought. A valuable copper-pine has been recently discovered in the vicinity of Kenmare. The slate quarry in Valentia produces flags and slates of a superior description, which are largely exported to London.

Climate, Soil, and Produce.—The climate is very moist owing to the vicinity of the Atlantic, and the south-western district is much exposed to storms. But in the inland parts, especially in the neighbourhood of Killarney, the air is mild and genial, and vegetation extremely luxuriant.

The soil of the south-western district, where not incumbered with bogs, is an adhesive loam, fit for the reception of corn crops, and formed by the decomposition of the clay-slate rock, which, from the nearly vertical position of its strata, is readily disintegrated by the weather. The soil of the middle district is a rich loam, which produces excellent crops of grain, and fine dairy pasture. The northern district has a stiffer soil, more retentive of wet, and inclined to run to rushes. It also is grazed to a considerable extent by dairy farmers, who find a market for their butter in Tralee. Cider, of a quality which is considered superior, is made here in large quantities. The system of farming is improving. The chief occupations are dairy farming, tillage, and fishing. The total number of acres under crops in 1853 was 151,275, namely:—Wheat, 1931 acres; oats, 35,920; barley, bere, rye, beans, and peas, 12,873; potatoes, 27,715; turnips, 12,661; other green crops, 2966; and flax, 1033; with 56,176 acres in meadow and clover. In 1841 the plantations covered 13,036 acres, growing oak, ash, elm, beech, fir, fruit-trees, &c. In 1852 there were on 16,604 holdings, 11,921 horses, 5045 mules and asses, 170,398 head of cattle, 64,438 sheep, 44,549 pigs, 18,835 goats, and 211,331 head of poultry. The live stock thus enumerated was valued at 1,354,443. The native breed of cattle is very small, but well formed. They are good milkers, and easily fattened. A breed of small ponies is peculiar to Kerry; they are too light for farming purposes, but suit very well for the saddle.

The chief trade of the county consists in exports of agricultural produce, chiefly oats and butter. Coarse woollens are manufactured by families for their own consumption; linen is made in the district about Dingle.

The fishery districts are those of Westcove, Knightstown, Dingle, and Ballyheige, comprising together 242 miles of coast, which had 581 registered fishing-vessels in 1853, employing 2603 men and boys. The fish caught are turbot, cod, ling, hake, haddock, gurnet, pollock, plaice, soles, dorces, brill, mullet, mackerel, herrings, pilchards, &c. with a plentiful supply of oysters, crabs, lobsters, and scallops. Great numbers of seals formerly frequented the river of Kenmare and the caves of Ballybunian; but they are now rarely caught. Large quantities of ling, hake, and haddock are cured and smoked for the Dublin and Cork markets. The fish are conveyed to Cork, Limerick, and Dublin, and other towns in the interior, by Mr. Bianconi's cars and by railway. A government curing station is at Valentia.

Divisions and Towns.—The county of Kerry is in the diocese of Ardferit and Aghadoe. It is divided into 8 baronies—Clanmaurice, Glan-west; Corkaguiney, west; Dunkerrin, south-south-west; Glanerought, south; Iraghticonnor, north; Iveragh, south-west; Magonihy, east; and Trughenacmy, central. The principal towns are TRALEE, KILLARNEY, DINGLE, LISTOWEL, CAHIRIVEEN, and KENMARE. All these are noticed under their respective titles. The following are the smaller towns and most important villages, with the population of each in 1851.

Ardferit, about 4 miles N.N.W. from Tralee, population 509, the seat of one of the most ancient bishoprics in Ireland, was before the Union a parliamentary borough, but is now a poor decayed village, with a nominal cathedral for its sole attraction. The diocese has been united from time immemorial to the see of Aghadoe, and both, under the Church Temporalities Act, are now united to the see of Limerick. The chapter of the united sees of Ardferit and Aghadoe consists of a dean, an archdeacon for each see, a chancellor and a precentor; the number of benefices is 58. The cathedral, which was the church of a monastery founded here by St. Brendan, bears marks of high antiquity, and combines specimens of various styles. There is here a new Roman Catholic chapel. The ruins of the decayed episcopal town of *Aghadoe* are situated on a green hill, 2 miles N.W. from Killarney, and consist of the remains of a cathedral, of a round tower, and of a circular structure called the Bishop's Chair, said to have been erected in the 9th century.

Ballylongford, population 1113, is 21 miles N. by E. from Tralee, at the head of an inlet of the Shannon. Agricultural produce is shipped from the quays for Limerick. The town contains a Roman Catholic chapel; in the vicinity are the interesting ruins of Lislaghtin Abbey. Opposite the entrance of the inlet is the island of Carriga-Foile, on which are the remains of a castle, formerly one of the strongholds of the O'Connor of Kerry.

Castle-Island, population 1718, formerly one of the most important places in the county, is situated on the Many River, a feeder of the Main, 9 miles E. from Tralee. It takes its name from a castle built here in 1226 by Geoffrey de Mariscis, lord-justice of Ireland, and called the Castle of the Island of Kerry. The town contains a church, a Roman Catholic chapel, a sessions house, bridewell, and dispensary.

Killorglin, 11 miles S. from Tralee, population 590, is situated in a fertile country on the Laune, which enters Castlemain Bay about 2 miles below the town. It is an ill-built place, though well situated for trade, the river being navigable up to the town for vessels of 180 tons. The town contains a church, and chapels for Roman Catholics and Wesleyan Methodists. Killorglin is much frequented by anglers and tourists on their way to the Lough of Carragh and the bold wild scenery of Iveragh. The Laune affords excellent salmon fishing, and Killorglin is celebrated for its artificial flies.

Millicom, population 439, a small market- and post-town, 8 miles S. from Tralee, contains a court-house, a bridewell, and a Roman Catholic chapel. Killoleman Abbey, the residence of Sir William Godfrey, is near the town.

Tarbert, population 1005, a post-, market-, and seaport-town, is situated 27 miles N.N.E. from Tralee, on the little bay of Tarbert, which is formed by an inlet of the Shannon. The town is neatly built and clean, and contains a church, chapels for Roman Catholics and Wesleyan Methodists, a bridewell, and a dispensary. Pigs, butter, and corn are shipped in considerable quantities for Limerick. About a mile north from the town is Tarbert Rock, which is alternately an island and a peninsula, according to the state of the tide; on it are a lighthouse, a battery, and a coast-guard station.

The following villages may be mentioned. The populations are those of 1851.

Abbey O'Dorney, population 229, is situated on the Brick, a feeder of the Feale, 6 miles N. from Tralee, and takes its name from the parish of O'Dorney, in which it stands, and from the Cistercian Abbey of Kyrie Eleison, founded here in 1154. The abbot was a lord of parliament. Some ruins of the abbey still remain. *Ballybunian*, population 284, before noticed for its cliffs and extensive caverns, is a village on the coast of the estuary of the Shannon, 17 miles N.W. from Tralee, and is a favourite watering-place. Several neat lodges have sprung up in its vicinity. *Castle-Gregory*, population 816, a fishing village on the south shore of Tralee Bay, 14 miles W. from Tralee town, takes its name from a castle of the Husseys, which was demolished in the invasion of Cromwell, in 1641. *Castle-Maine*, 7 miles S. from Tralee, on the right bank of the Main, is a small place of only 146 inhabitants. A castle was built here jointly by the

M'Carthy More and one of the earls of Desmond, but was forcibly retained by Desmond, and continued in the possession of his family till the reign of Elizabeth. In the wars with Cromwell in 1641 it was nearly demolished. Since the Restoration, the castle, ruined as it is, with 7 acres of land adjoining, has remained in possession of the crown. *Lixnaw*, an ancient village, said to derive its name from one of the old Milesian tribes, stands on the right bank of the river Brick, and has 208 inhabitants. The castle of Lixnaw, one of the fortified residences of the earls of Kerry, is now a ruin. *Port-Magee*, population 161, a fishing village with a small harbour, on the south side of the southern entrance of Valentia Harbour, 8 miles from Cahirciveen. It contains a Roman Catholic chapel, and a coast-guard station. *Water-ville*, population of the township 141, situated on the short stream formed by the outlet of Lough Currane into Ballinaskelligs Bay. The village is clustered round the spot where the river makes a fall into the bay; it is much frequented by anglers and sportsmen.

Kerry is represented in the Imperial Parliament by two members for the county, and one for Tralee borough. The assizes are held at Tralee, where also are the county prison and county infirmary. Quarter-sessions are held at Tralee, Killarney, Cahirciveen, Dingle, Kenmare, and Listowel; each of these towns is also the seat of a Union workhouse. Petty sessions are held at 24 places. There are bridewells at Killarney, Dingle, Kenmare, Cahirciveen, Castle Island, Milltown, Listowel, and Tarbert. The lunatic asylum for the county is at Limerick, and contains about 200 patients. There are fever hospitals at Tralee, Killarney, Ballylongford, Listowel, and Cahirciveen; and 25 dispensaries in various parts of the county. That portion of the county which lies on the right bank of the Feale is included in the military district of Limerick; the remainder belongs to the Cork district. There are barracks at Tralee, Tarbert, and Carigue Islands. The constabulary force, consisting of 241 men and officers, has its head-quarters at Tralee. The county is divided into 6 police districts, comprising 39 stations; the districts are Tralee, Cahirciveen, Dingle, Killarney, Kenmare, and Listowel. The coast-guard, which numbers 118 men and 12 officers, is distributed among 26 stations. In September 1852 there were 168 National schools in operation, attended by 12,647 male, and 13,879 female children. Classical schools are common, and there is a very general turn for classical learning among the peasantry, many of whom have some knowledge of the Latin language. In November 1852 there was no savings bank in the county.

Kerry has its name from Ciar, the son of Fergus, king of Ulster, and signified Ciar's kingdom; and originally formed part of the kingdom of Desmond, or South Munster, of which the Mac Carthies were sovereigns. Dermot Mac Carthy, chief of this country, having invited the assistance of Raymond le Gros, one of the early Anglo-Norman adventurers, to suppress the rebellion of his son Cormac, granted him as a recompense for his services a large tract in the north of the county round Lixnaw, where Raymond, about A.D. 1177, settled his son Maurice, from whom the Fitzmaurices, lords of Kerry, draw their pedigree, and the barony of Clannaurice takes its name. Soon after, the Fitzgeralds established themselves in the south of the county, where they rose to such power on the downfall of the Mac Carthys, that in 1295 Thomas Fitzmaurice Fitzgerald was captain of all Desmond, comprising the counties of Cork, Waterford, and Kerry, and lord-justice of Ireland. He left two sons, John, afterwards created earl of Kildare, and Maurice, created earl of Desmond, with a royal jurisdiction over the palatinate of Kerry. The rebellion of Gerald, the sixteenth earl, in the reign of Elizabeth, caused the final suppression of their authority and the confiscation of their estates.

On the breaking out of the rebellion of 1641, the Irish again took arms, and after compelling the English who held Tralee to surrender, kept possession of the county till 1652, when Ludlow reduced them to subjection. Extensive confiscations of the estates of the native Irish again followed.

Kerry contains several monuments of a very remote antiquity, of which the most remarkable are the Cyclopean stone fortresses of Cahircorree, Staig, near the road from Kenmare to Waterville, and Cahir Donnell, not far from Derrynane Abbey; and the sepulchral stones with ogham inscriptions in the neighbourhood of Dingle. Stone cells, probably of the 6th and 7th centuries, are still standing on the greater Skellig Island, at Ventry, and at Smerwick. There are a round tower at Ratoo, near the river Brick, one on an island in Lough Currane, part of another at Aghadoc, and a fourth formerly stood near the cathedral of Ardferd. There are also the remains of thirteen religious houses and thirty feudal castles.

KERTSH. [CRIMEA.]

KESH. [FERMANAGH.]

KESTEVEN. [LINCOLNSHIRE.]

KESWICK, Cumberland, England, a market-town in the parish of Crosthwaite, is situated in 54° 36' N. lat., 3° 7' W. long., distant 30 miles S. by W. from Carlisle, and 291 miles N.W. by N. from London by road. The population of the town of Keswick in 1851 was 2618. The living is a perpetual curacy in the archdeaconry and diocese of Carlisle.

Keswick is pleasantly situated on the left bank of the river Greta, near the foot of Derwent Water. The town consists chiefly of one street, in which are some good stone houses; it is lighted with gas.

Keswick is generally regarded as the head-quarters of visitors to the lakes and mountains of Cumberland; and upon the visitors the prosperity of the town is to a great extent dependent. The parish church of Crosthwaite is about half a mile N. from the town. It is a spacious edifice of the perpendicular style. In it is a recumbent statue in memory of Southey the poet, whose residence, Greta Hall, was close by. Keswick church is a neat early English structure, erected in 1848. The Independents, Wesleyan Methodists, and Plymouth Brethren have places of worship. Crosthwaite Free Grammar school, a very old foundation, has an income from endowment of 116*l.* a year, and had 180 scholars in 1852. There are besides a school for boys and girls, with a piece of ground for the boys to work in, an infant school, a public library and reading-room, two museums for preserving specimens of the mineral wealth of the district, and a savings bank. A county court is held in the town. The market-day is Saturday; fairs are held at Whitsuntide and Candlemas. Mines from which black-lead is obtained are at Borrowdale, near Keswick. The black-lead is made into pencils and carried to London for sale. Some of the inhabitants are employed in the manufacture of woollen-cloth and fancy waistcoatings, and the making of edge tools. Char, taken in Buttermere Lake, about 7 miles from Keswick, are potted in the town, and sent to various parts of the country. In the town-hall, a neat structure with a tower, there is an excellent model of the lake district, constructed by Mr. Joseph Flintoft.

KETTERING, Northamptonshire, a market-town and the seat of a Poor-Law Union, in the parish of Kettering, is situated in 52° 25' N. lat., 0° 44' W. long., distant 18 miles N.N.E. from Northampton, and 74 miles N.N.W. from London by road. The population of the town of Kettering in 1851 was 5125. The living is a rectory in the archdeaconry of Northampton and diocese of Peterborough. Kettering Poor-Law Union contains 28 parishes and townships, with an area of 50,111 acres, and a population in 1851 of 18,002.

The town of Kettering contains many well-built houses and respectable shops, and a spacious market-place. A sessions-house and lock-up has been recently erected. The town is lighted with gas. The church is a large and handsome building in the perpendicular style, with a fine tower and hexagonal crocketed spire at the west end. The date of the tower is about 1450; portions of the church are of much earlier date. The Independents, Baptists, Wesleyan Methodists, and Quakers have places of worship. There are in the town a Free school, which has an income from endowment of 155*l.* a year, and had 22 scholars in 1852, National and British schools, a reading-room and library, a savings bank, and a dispensary. Wool-stapling and wool-combing are carried on; there is a considerable manufacture of shoes; and silk-weaving employs some of the inhabitants. The market is on Friday; fairs are held four times in the year. A county court is held in the town.

KETZKEMET. [HUNGARY.]

KEW. [SURREY.]

KEY or KI ISLANDS are a group of considerable extent in the Indian Archipelago, situated between 5° 20' and 6° 30' S. lat., and between 132° 30' and 133° 40' E. long. Three islands are rather large, and are called Great Key, Little Key, and Key Watela. The number of the smaller ones is not known, as they are rarely visited by Europeans.

They rise to a moderate elevation above the sea, and all the heights are overgrown with forest-trees. The inhabitants are engaged in ship-building to a considerable extent; a great number of the small vessels that ply in the eastern seas are built in the harbour of Doola, which lies on the western coast of Little Key. There is no town at Doola; but the harbour is large and surrounded by numerous villages. Banda obtains from this place provisions and cattle, for which European and Indian goods are received; these are partly re-exported from the harbour of Elie, which lies on the eastern shores of Great Key, and is famous for its manufacture of earthenware. Many of the inhabitants are occupied with fishing trepang, which is largely exported. The inhabitants of the group have generally embraced Mohammedanism. Many families from Banda and Ceram have settled among them. The islanders have attained a considerable degree of civilization. They are stated to be friendly to foreigners and honest in their dealings. Besides provisions, which are abundant, timber, tortoise-shell, cocoa-nut oil, &c., are the chief products.

KEY, WEST. [FLORIDA.]

KEYNSHAM, Somersetshire, a town and the seat of a Poor-Law Union, in the parish of Keynsham, is situated on the left bank of the river Avon, in 51° 24' N. lat., 2° 29' W. long., distant 6 miles N.W. by W. from Bath, 110 miles W. by S. from London by road, and 118½ miles by the Great Western railway. The population of the parish of Keynsham in 1851 was 2318. The living is a vicarage in the archdeaconry of Bath, and diocese of Bath and Wells. Keynsham Poor-Law Union contains 19 parishes and chapelries, with an area of 32,129 acres, and a population in 1851 of 21,613.

Keynsham was formerly a market-town. It consists chiefly of one long street. The parish church is a spacious building, partly decorated and partly perpendicular in style, with a lofty tower. In the town are a chapel for Baptists, an Endowed school, and an almshouse. Flax-manufactories and copper-mills near the town give employment to some of the inhabitants. At Keynsham the Avon is crossed by a

good stone bridge of 15 arches, which connects the counties of Somerset and Gloucester.

KHYVA, or KHYVA, a country in Asia, forming a part of that natural division which goes by the name of Turan, or Lower Turkistan, is situated on the east of the Caspian Sea, between 39° and 45° N. lat., 54° and 62° E. long. On the east the boundary between Khyva and Bokhara traverses the river Oxus a few miles north-west of the Bokharian fortress of Charchui, and runs northward near the town of Karakol. On the north of Khyva is the desert of Kizil Koum, the Sea of Aral, and the table-land of Usturt. The Caspian constitutes its western boundary. On the south of Khyva is the desert called Desht Cowas, and through it lies the boundary-line separating Khyva from Persia and Merve. The authority of the khan of Khyva may extend over a country containing about 150,000 square miles.

Surface and Soil.—The country between the Caspian Sea and the Sea of Aral is called the Turkman Isthmus. Between 44° and 45° N. lat., an extensive promontory projects into the Caspian. It is called Manghislak, and consists of a mountain-mass divided into three chains, which, according to an estimate, rise to 1500 or 2000 feet above the level of the Caspian. From this place a mountainous country extends in a north-eastern direction towards the northern shores of the Sea of Aral, and in a south-eastern direction to the table-land of Usturt. The whole of the Turkman Isthmus, as well as the country east of the Aral Sea, is described in the articles CASPIAN SEA and ARAL, SEA OF.

Above 30 miles south of Kooli Deria, on the east coast of the Caspian, is an isolated mountain range running east and west. It extends along the northern shores of the Gulf of Balkhan, and is also called Balkhan. Near the Caspian Sea the hills are of moderate elevation, but north-east of the innermost recess of the bay are some summits called Great Balkhan, which appear to attain an elevation of at least 2000 feet above the level of the sea. This chain does not advance much farther east, but turns southward, and incloses the bay also on the east, where it is known by the name of Little Balkhan. At its southern extremity, south of 40° N. lat., a depression is said to exist, by which it is supposed that the Oxus may have discharged its waters into the Caspian. The depression by which an arm of the Oxus is said in former times to have connected the Caspian with the Aral is generally placed farther north, namely, between the head of Kooli Deria Bay and the Oxus, near Kana-Ourghej, where a low broad flat extends, covered with sand, as if it had once been covered by the sea. From the southern base of the Balkhan to the river Atreck, on the boundary of Persia, an uninterrupted ridge of sand-hills skirts the Caspian, about 10 miles from its shores.

The Turkman Isthmus, with the exception of the mountains and hills already noticed, is generally speaking, a plateau or plain, whose surface is only here and there interrupted by flat depressions, in which lakes are generally found; of these however the greater part is dried up during the summer. The northern part of it cannot properly be called a desert. There certainly are many sandy tracts, but they are not extensive, and the remainder consists of a loamy hard soil, impregnated with salt, which in spring and the beginning of summer is partly covered with grass; but later in the season is without vegetation. In the hot season the Truchmenes, or Turkomans, feed their herds of camels and horses on the leaves of the bushes and trees that grow in the depressions, or bring them to the boundary of Persia, or of the cultivated part of Khyva. The southern part however is almost entirely covered with sand.

Khyva proper, or the cultivated portion of the Khanat, consists of a comparatively narrow tract contiguous to the course of the river Oxus, and extending north and south, a distance of about 150 miles. The area of this tract falls short of 4000 square miles. It is thickly inhabited, and produces almost every kind of grain in abundance. But its fertility is properly not derived from the soil, which, where it is beyond the reach of irrigation, consists of a hard loam, impregnated with salt, and nearly without vegetation. But the whole region is traversed by so many canals that it resembles a net. The water is drawn from the Oxus, and runs with a perceptible current to the west and north-west, where the canals terminate in a series of lakes at the foot of sandhills which divide Khyva proper from the desert.

This description however applies only to the southern part of the region; the delta of the Oxus, or that portion of the country which is inclosed by its arms, contains very little land fit for agricultural purposes. It is annually inundated by the river, and mostly overgrown with reeds and rushes, but there are considerable tracts which serve as pasture-ground for cattle, which is of great importance, as the southern country has no meadow-land or pastures. Where the delta borders on Lake Aral it is a complete swamp all the year round. This country is so low that probably the whole delta would be laid under water if the level of the Sea of Aral were raised a few feet.

On the east of the river Oxus the cultivable ground is of small

extent. About 42° 20' N. lat. begins a tract of higher ground about 2 miles from the river, which runs parallel to it for about 40 miles to the south-east. This ridge is about 4 miles wide, and is called Shikhodahelli; it rises about 600 feet above its base, and descends gradually eastward into the desert of Kizil Koum. Where this ridge terminates (40° 35'), the cultivated land probably extends to 5 or 6 miles from the banks of the Oxus, and here also there are several smaller canals.

Rivers and Canals.—The river Oxus, whose modern name is Amoo Deria, or Jyhus, originates in the elevated mountain region called the Table-land of Pamir. [BADAKEBBHAN.] There it issues from a lake called Sir-i-kol, which is about 14 miles long from east to west, with an average breadth of 1 mile, and near 37° 27' N. lat., 73° 40' E. long. Pliny mentions the fact of its rising in a lake, which was supposed to be a blunder, until this lake was discovered a few years ago by Lieutenant Wood. After leaving Badakhshan the Oxus flows west through the south of Bokhara, and having passed the meridian of Balkh (67° E. long.), its course declines more to the north-west, and in that direction it continues to the boundary-line of Khyva, watering the adjacent country for more than 250 miles. The country which it traverses is unfit for cultivation, except in the immediate vicinity of the river, where the fields are irrigated from it. It is here a rapid stream and navigable, but not far from the boundary-line between Bokhara and Khyva rapids are said to exist, which are full of rocks, and during low-water dangerous to be passed by boats. In this middle part of its course the Oxus is not joined by any permanent stream.

The lower course of the Oxus, from the above-mentioned rapids, above the Bokharian fortress of Charchui, or Chaorjee, to its mouth in the Sea of Aral, probably exceeds 500 miles in length, and its whole course amounts to nearly 1300 miles. Nearly 200 miles of its lower course lie through a desert country, similar to that traversed by it in its middle course, but there does not occur any obstruction to navigation, and it is navigated. The river reaches Khyva proper near 41° N. lat., and traverses it in one bed as far north as 42° 20' N. lat., or upwards of 100 miles. Its course is turned by the northern extremity of Mount Shikhodahilli to the west, and a few miles lower down the river divides into two arms, of which the smaller, called Lowdahn, continues to run in a western direction about 50 miles, when it falls into Lake Ak-Cheganak. This lake is situated near the base of the table-land of Usturt, and at a distance of more than 100 miles from the Sea of Aral. It extends about 30 miles from east to west. On its northern side begins a deep depression, which extends along the base of the table-land to the Sea of Aral, and has a mean breadth of 15 miles. It is entirely filled with water even in winter, when the level of the Oxus is lowest, but only to a moderate depth. It is overgrown with reeds, rushes, and other aquatic plants, with the exception of a comparatively narrow strip in the middle, which is unincumbered, and where a perceptible current runs to the Sea of Aral. The water of this swampy tract is sweet. Nearly halfway between the place where the Lowdahn branches off from the Oxus and its influx into Lake Ak-Cheganak, it sends off a branch to the south-west, which is called Szarkrauk, and passes near the town of Kana (Old Ourghej), but its farther course is not known.

From the place where the Lowdahn branches off the main stream of the Oxus runs due north about 10 or 12 miles, and then sends off an arm to the north-east, called Kook-Usak, which, after a course of more than 30 miles, falls into a lake called Dankara. From this lake a swampy depression similar to that of Lake Ak-Cheganak is stated to extend to the Aral; but this fact rests only on the information of the natives. From the efflux of the Kook-Usak the Oxus runs again north-west, and sends a branch, called Kara-Baili, to Lake Dankara, and two smaller ones, Kiatt Chargin and Kok-Daria, to the depression north of Lake Ak-Cheganak. Farther on, at a distance of about 30 miles, the Oxus divides into two arms, of which the smaller and western, called Taldyk-Daria, reaches the Sea of Aral without dividing any further, but the eastern, Ulu-Daria, enters the sea by two arms, of which the eastern is known as Kasak-Daria.

Ancient authors who mention the Oxus state that it flowed into the Caspian; Arrian distinctly affirms this (iii. 29), and the Arab geographers of the middle ages held the same opinion. Alexander Von Humboldt is of opinion that historical facts prove that, as late as A.D. 1500, the Oxus still carried its waters to the Kara-Bogaz. The most decisive proof he finds in the 'Theatrum Orbis Terrarum' of Ortelius (1570), where an account and map of Russia and Tartary are found, which both had previously (1562) been published in London, by Anthony Jenkinson, the agent of the Russia Company, who was sent to establish a commercial intercourse with central Asia by the way of the White Sea and Moscow. The title of Jenkinson's work is, 'Russiæ, Muscoviæ, et Tartariæ Descriptio, Auctore Antonio Jenkinsonio, Anglo, edita Londini, 1562, et dedicata Ill. D. Henrico Sydneo, Walliæ Præsid.' In this map the Oxus is laid down as falling into a large arm of the Caspian at 41° N. lat. This is evidently the lagoon of Kara-Bogaz, but it appears that at the time of his travels (1559) the lagoon advanced much farther eastward, which change may have been produced by a change in the level of the Caspian. In his account Jenkinson states that the water of the Oxus no longer reached the bay as it formerly did, and he attributes this

change to the great volume of water which was drawn from the river to irrigate the adjacent countries. But Oorgentah was at his time a large commercial town, built near the river, which was navigable at that place. In fact, he embarked here, and ascended it to the vicinity of Bokhara. In the history of Abul Ghasi it is stated that in 1575 the Oxus turned to the northward, and began to run into the Sea of Aral, and that the fertile country surrounding Oorgentah or Ourghenj was then converted into a desert. Since that time this place has presented only ruins to the travellers who visited it; no river has been found in its vicinity in the last three centuries. But it would appear that in recent times the river has made some efforts to re-occupy its old bed. Several statements tend to prove this; and Basiner found, in Sept. 1842, that the Szarkrauk, near Kana-Ourghenj was from 60 to 70 feet wide, and 2 feet deep, and that the place, which was formerly uninhabited, had again been settled.

The Oxus brings down during the freshets a great quantity of detritus; but the earthy deposit left diminishes the fertility of the soil. To prevent inundations the banks of the river and of the larger canals have been raised considerably above the level of the country. The detritus is thus confined to their beds, and it leaves there a thick layer of mud mixed with sand. The canals must annually be cleaned, and this is a laborious work. In spite of the embankments partial inundations are rather frequent, and destructive of life and property. The level of the river is highest from May to July, and then its waters are very turbid; but in the remainder of the year they are clear and well-tasted. It runs with a considerable current, at least two miles an hour. Its depth varies between 6 and 10 feet. It must be much navigated, as it is stated that there are more than 1000 river-barges in the country.

The *Jazartes*, now *Syr-Daria* (on some maps *Sikoua*), which waters the barren steppes of the Khirgis Cossacks, and falls into Kamechlou Bay, the most easterly inlet of the Sea of Aral, rises in the Kashkar-Davan Mountains to the north of Kashgar, on the boundary of Chinese Tartary, and flows westward through Kokand; thence north-west between the desert steppes of Kizil-Koum and Kara-Koum to its mouth. After entering the steppes the river becomes gradually narrower, so much so that from about 120 miles above its mouth the breadth decreases from 300 to 120 yards. The country between the Oxus and the Syr was in ancient times called *Transoxiana*. To the north of it lay *Soythia*. Cyrus the Great lost his life in a battle fought upon its banks, according to Herodotus (l. 201—216), who calls the river *Araxes*; and Alexander founded a city (Alexandria) on its banks, which some suppose to be Khojend.

No country in the world has so many canals as Khyva. The number of the larger canals is stated to exceed 20. In the southern districts they run westward, but farther north to the north-west, and terminate in that series of small lakes which, with the sand-hills contiguous to them on the west, separate the cultivated region from the desert. Their width varies between 70 and 100 feet, and their length is considerable; that of Shawat, which is the largest, is at least 70 miles long. From these larger canals others of minor dimensions branch off and water the country to the distance of 20 miles. The canal of Falwan has 12 such lateral canals, three of which exceed 20 miles in length and about six are more than 15 miles long. The water of these canals is brought to the fields by ditches. During the freshets a considerable current runs through the canals, and even at other seasons it is perceptible. The canals are still more navigated than the Oxus itself.

Climate.—On the 8th of October, 1842, the thermometer stood at 90° at 2 o'clock in the afternoon in the shade, and on the 22nd of December in the same year it fell as low as 11° below zero of Fahr. The summers are very dry; rains fall rarely, but gales are frequent. Frost is commonly experienced towards the end of October, and the lakes and canals are soon covered with ice. The Oxus however does not freeze before the end of the year. Snow does not fall in large quantities, hardly more than 4 inches deep at once, and lies rarely more than four days on the ground, which is remarkable, if the frost is continuous. The climate is generally healthy; but in autumn fevers and agues are endemic.

Productions.—Agriculture is attended to with great care and industry; sometimes the fields are ploughed seven times. Great attention is paid to the preparation of manure. On the fields are cultivated rice, wheat, barley, millet, sesamum, cotton (which is exported by the Cossacks by way of Orenburg and Samara to Nijni-Novgorod), jugari, peas, lentils, hemp, poppy, and clover; in the gardens melons and water-melons, pumpkins, carrots, turnips, peas, onions, potatoes, and cucumbers; in the orchards, mulberries for rearing the silk-worm, apricots, apples, pears, plums, cherries, and vine, also currants. But the fruits are not distinguished by flavour, except the melons and water-melons. On the banks of the canals and ditches are alleys of aspen, ash, willow, and poplar. Forest-trees are only found on the eastern banks of the Oxus.

The horses of the Truchmenes are very beautiful, and held in great estimation, especially those which are called 'argamaka.' Common horses are brought to Khyva by the Kirghis, who dwell between Russia and the Aral. Many camels are kept, even by the poorer people, and also asses. Few cattle are reared, on account of the want of meadows. The Kara-Kalpaks, however, who roam between the

Sihoon and the eastern shore of the Aral, import cows and oxen into the cultivated region. Sheep are reared by the Truchmenes, or imported from Bokhara, on account of the fleece: the Kirghis import a considerable number for slaughtering. Fowls are numerous; but turkeys, geese, and ducks are only kept by the khan. Water-fowl are numerous in the delta, but other wild birds are rare. Of wild animals there are bears, wolves, foxes, wild cats, jackals, hares, wild goats, deer, and wild hogs, mostly in the delta, where also the tiger is sometimes met with. Fish abound in the lakes, river, and Sea of Aral; but are not much eaten, except by the Kara-Kalpaks. Turtles and crayfish abound. Silk-worms are reared to a considerable extent.

Gold and copper are said to exist in the Shikhodshilli Mountains, but are not worked. The other useful minerals are stone for building, limestone, pipe-clay, salt, and sulphur.

Population.—The whole population is estimated at 2,000,000, of which one-fourth are stated to be settled in Khyva proper. This region is inhabited by two nations—the Usbecks and the Sartes. The former are a branch of the Turks, whose language they speak, and are the ruling nation. The Sartes are Persians, and the same race of men which, in other parts of Central Asia, are called Tajiks. It appears that they are the most ancient settlers of the country.

The uncultivated portion of the Khanat is in possession of three nomadic tribes—the Truchmenes, Kara-Kalpaks, and Kirghis. All three are Turkish nations, and speak dialects of the Turkish language. The Turkomenes (Truchmenes), or Turcomans, wander about in the wide region lying between Khyva proper and the Caspian. They live on the produce of their large herds of horses, camels, and sheep. Their women are very industrious, and make carpets, tents, felts, cloth, and girdles. Though they do not pay strict obedience to the orders of the khan, they admit a certain degree of dependence, and acknowledge it by sending presents to him. The Kara-Kalpaks (Black-Caps) are numerous in the delta, especially to the east of Kungrad, and some families are found on the south of the Oxus and Lowdahn, north of 42° N. lat. They are besides dispersed over all the shores of the Sea of Aral, where they are especially occupied in fishing. At other places they cultivate a piece of ground, but rely for subsistence especially on their herds of cattle, sheep, and goats. They are peaceful, and entirely dependent on the khan. The Kirghis, who call themselves *Kasauks*, wander about in that immense plain which extends from the banks of the Volga to Lake Balkash. They have numerous herds of horses and sheep, of which they annually import a great number into Khyva.

Towns and Villages.—It is observed as a very remarkable circumstance that in no part of Central and Western Asia, except in Khyva, is the country lying between two towns interspersed with a great number of single farming establishments, which are situated in the centre of the lands belonging to them. This proves that the inhabitants of Khyva must enjoy a considerable degree of security.

Khyva, the capital and residence of the khan, consists of about 700 mud-houses, but the suburbs contain 1500, and the population exceeds 12,000 individuals. The streets are crooked, and so narrow that a loaded camel cannot pass through them. The palace of the khan is only a large mud building. There are two colleges and three mosques, all built of brick. The karavanseraï is also of brick, and arched over. The plain round it is irrigated and cultivated like a garden. Khyva is situated near the point 41° 40' N. lat., 59° 20' E. long.

The other towns are—New Ourghenj, Gurian, Mangyt, and Kiptahak, in the vicinity of the Oxus, and Shawat and Tashathaus in the interior of Khyva proper, with populations varying from 3000 to 5000. The town of Kungrad may be considered the capital of the nomadic population of the delta. In summer it has very few inhabitants, but in winter it is the common residence of several nomadic tribes that inhabit the adjacent country. Its walls are stated to be more than twelve miles in circuit. Kana-Ourghenj is the former Kharism, or Chorasnia, of which there are extensive ruins, and from which the whole country, from the Oxus to the Caspian and the frontiers of Persia, was formerly called *Kharism*. The Chorasmiï are mentioned by Strabo as a tribe of Sogdians (xi. 518), and by Herodotus (iii. 98) they are named with the Parthi, Sogdi, and Arii as forming the 16th Satrapy of Darius.

Manufactures.—The manufactures are cotton-stuffs, some silks, articles of wool made by the nomadic nations, earthenware, and copper utensils. All articles of iron are imported from Russia: only a few Kirghis settled in the khanat exercise the trade of blacksmiths.

Commerce.—The commerce of Khyva is carried on chiefly with Bokhara and Russia. Caravans go from Khyva to Orenburg, exporting a few manufactured articles, sheep-skins, hides, and horses, and bring back utensils of cast-iron, some woollen-cloth, and copper and other metals. They pass through Kana-Ourghenj, traverse the table-land of Ust-urt near the shores of the Sea of Aral, and after descending to the low plain their route lies through the steppe of the Little Horde of the Kirghis; but a part of the traffic with Russia is now carried on by the Cossaks, as stated above. The commerce between Khyva and Persia is less important. Khyva sends there chiefly horses, and receives in return dried fruits and some silk goods. On the whole, about 2000 camels (which are the ordinary beasts of burden) go annually to Orenburg, Astrakhan, and Cabul, with agricultural produce, silk and cotton-stuffs, and yarn. Russian produce is also now imported by steamers and boats across the Caspian.

History.—Khyva probably was a part of ancient Bactria. In the second century before Christ the nomadic nations of Upper Turkistan began to descend into Turan, and took possession of the countries north of the Oxus and south of the Sea of Aral. They seem to have laid waste the country and kept possession of it during more than two centuries. In the second century after Christ however they were subjected to the sway of the Chinese emperors, who at that period extended their dominions to the shores of the Caspian. In the third century of our era it was connected with Persia, and remained so up to the 10th century, when one of its governors acquired independence, and erected the kingdom of Kharism, or Khowarism, which appears to have remained an independent state until conquered by Genghis Khan (1218). The descendants of Genghis Khan remained in possession of the country, which continued to form an independent kingdom under the name of Khowarism up to 1379, when the town was taken by Timur, and the country annexed to his possessions. Khyva remained a part of the kingdom of Samarkand to the beginning of the 16th century, when a Turkish nation, the Usbecks, under the auspices of Shibani Khan, descended from Upper Turkistan, and by degrees took possession of the whole of Turan. Khyva, as it appears, soon became an independent state under an Usbeck prince, and has remained so up to this time. Russia has been frequently accused of attempting to extend her frontier in the direction of Khiva. However this may be, it has been lately stated that, with the consent of the khan, she has erected and manned some forts for the protection of her caravan trade with Khiva against the attacks of the Khirghiz and Turkoman hordes.

KIACHTA is a town in Siberia, in the government of Irkutsk, 50° 20' N. lat., 121° 40' E. long., south of the lake of Baikal, and in a sterile country 2480 feet above the level of the sea, on a small stream also called the Kiachta. A considerable trade is carried on here, as it is the only place in which the subjects of the empires of China and of Russia are permitted to exchange their merchandise. Kiachta consists of two separate parts: the fortress, called Troitako Sawak, where the custom-house, the imperial offices, and the military government are established; and the lower town, or Kiachta, which is nearly two miles farther south, and where the merchants live. Kiachta has one bridge, a square, one wooden church, two chapels, and thirty-seven houses, mostly belonging to merchants, elegantly built, and kept in good order: the total number of inhabitants is about 5000. Merchants from several parts of Russia have settled in Kiachta.

The commerce of this place is carried on with *Maimaitchin*, a Chinese village and emporium, which is less than a mile from the lower town. Until 1727 it was conducted by the Russian government, and was insignificant; but in the last-mentioned year the trade was opened to private merchants, and has since become of great importance. A large fair is held between the two places in December. The Russians bring to Kiachta furs, tanned hides, broadcloth and other coarse woollen fabrics, coarse linen, bullion, glass, looking-glasses, and cattle. They receive in return from the Chinese manufactured silks and cottons, tobacco, china, rhubarb, furniture, and several kinds of toys; but the principal commodity taken in exchange is tea. Cochrane estimated the quantity of tea imported in 1821 at three millions of pounds weight; and at the great fair of Nijni Novgorod the value of the tea which was sold in 1823 amounted to twelve millions of paper roubles. The tea brought to the fair of Nijni Novgorod in 1838 was 37,356 chests, valued at 17,899,500 roubles; to which must be added 560,000 roubles for the value of 5000 chests of tea pressed into cakes. In 1843 the Russians imported through Kiachta 102,700 chests of superfine tea. The value of woollen and cotton goods, leather, and furs, taken by the Chinese merchants in that year amounted to above 677,000 sterling.

(Pallas; Klaproth; Cochrane, *Pedestrian Journey, &c.*; Erman, *Annalen der Erdvölker*; *Official Statements.*)

KIDDERMINSTER, Worcestershire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Kidderminster, is situated on the river Stour, near its confluence with the Severn, in 52° 23' N. lat., 2° 14' W. long., distant 16 miles N. by W. from Worcester, and 126 miles N.W. from London by road. It is 132 miles from London by railway via Birmingham, and 135½ miles via Oxford and Worcester. The population of the borough of Kidderminster in 1851 was 18,462; that of the entire parish was 23,845. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor, and returns one member to the Imperial Parliament. The livings are in the archdeaconry and diocese of Worcester. Kidderminster Poor-Law Union contains 13 parishes and townships, with an area of 38,041 acres, and a population in 1851 of 32,984.

Kidderminster returned members to Parliament as early as the 28th of Edward I., but owing to disuse the privilege was afterwards lost. By the Reform Act it was again erected into a parliamentary borough. The earliest charter of incorporation is that of 12 Charles I.

The town is well lighted, watched, and paved under the superintendence of commissioners appointed by a local act. The prosperity of the town is chiefly dependent on the carpet manufacture, for which Kidderminster is famed. A new factory for patent beaver carpets has been established; and some of the looms used for making Brussels carpets have been applied to the manufacture of the patent tapestry carpets. The church is a handsome perpendicular structure surmounted by a fine tower: the interior contains various ancient monuments. Besides the parish church there were in March 1851 in the borough 14 places of worship, of which 4 belonged to the Establishment, 3 to Wesleyan Methodists, 2 to Primitive Methodists, and one each to Independents, Baptists, Lady Huntingdon's Connexion, Roman Catholics, and Unitarians. The number of Sunday schools in the parish was 14, with 2475 scholars. The Free Grammar school was founded prior to the charter of Charles I. The school is divided into an upper and lower school, boys who wish to learn Latin being received into the upper school. The annual income from endowment is about 580*l.*, and there are residences for the head and second masters. The number of scholars in 1852 was 50. Blakebrook Grammar school had 10 scholars in 1851. The number of day-schools in the parish in 1851 was 39, namely, 16 public schools with 2088 scholars, and 23 private schools with 640 scholars. The Kidderminster Athenæum had 31 members in 1851, and 400 volumes in its library. The dispensary has been converted into an infirmary. There is a savings bank. The market-day is Thursday; six fairs are held in the course of the year.

KIDWELLY. [CAERMARTHENSHIRE.]

KIEL, the capital of the duchy of Holstein, is situated on the Kiekerford, a bay of the Baltic, which forms an excellent harbour, and admits large ships of war to anchor near the town, in 54° 10' N. lat., 10° 8' E. long., 65 miles by railway N. by E. from Altona, and has 15,000 inhabitants including the suburbs. It is surrounded with walls, in which there are five gates; and is pretty regularly built, with straight well-paved streets. The principal structures are the palace of the Duke of Glücksborg; the church of St. Nicholas, which dates from the 13th century; the convent church; and the university buildings. The university of Kiel was founded in 1665; it has a library of 80,000 volumes, and in connection with it are an observatory and a botanic garden, a museum of natural history, and a collection of northern antiquities. The palace garden, and the environs of the city and the wooded shores of the beautiful bay, afford a good promenade. Kiel has manufactures of linen, hats, tobacco, sugar, ironmongery, machinery, &c., and some business in ship-building. The trade in corn, dried herrings, and sprats (which are celebrated) is considerable. The commerce of the town has much increased since the completion of the Kiel Canal [HOLSTEIN], and still more since the opening of the railway. The most busy time of the year is at the annual fair on the three days after Twelfth-day, which is attended not only by the farmers and merchants, but by the nobility and gentry of Sleawick and Holstein. There is an establishment for sea-bathing. Steamboats ply regularly between Kiel, Copenhagen, and other Baltic ports.

KIERTEMINDE. [FUNEN.]

KIEW (written also *Kieff*, *Kiev*, and *Kiow*), a government of Russia in Europe, lies between 48° 30' and 51° 50' N. lat., 28° 40' and 33° 25' E. long. It has an area of 19,340 square miles. The population in 1846 was estimated at 1,605,800. It is bounded N. by the government of Minsk, E. by the governments of Tchernigow and Poltava, S. by Kherson, and W. by Podolia and Volhynia. The surface of the country is undulating; the hills and high lands, which follow the course of the rivers, do not in any part attain a considerable elevation. There are many pleasing rural views, but no grand or striking natural scenery; and in general there is the sameness that is usual in flat countries. The Dnieper range of hills can only be considered as the last ramification of the Carpathians, which it joins in Podolia: in the circle of Tschigri a branch of it quits the river, and traverses the whole southern part of the province in a north-western direction. The land to the north of this branch has an extremely rich and fertile soil. On the south the soil is poorer, more sandy, and like a steppe; but still there are tracts of luxuriant corn-fields and good pastures. The chief, and in fact the only navigable, river is the Dnieper, which however is a frontier river, forming the entire north-eastern boundary between this province and Tchernigow and Poltava for nearly 250 miles. It is from 600 to 1200 feet wide, flows with rapidity, has hard muddy water, and here and there blocks of stone and eddies, which however do not obstruct the navigation. The chief rivers that flow into it are the Pripetz, which comes from Minsk, and is here joined by the Ush or Uza from Volhynia; the Tertserow, from Volhynia, which receives several streams before it falls into the Dnieper; the Irpen; the Stugena; the Ross, which rises in the west of the province, divides into two arms, and forms a large island; and the Tiamin, which comes from Kherson. There are no lakes of any consequence in the whole province: small lakes are numerous in the southern part. The climate is extremely mild and dry, and adapted to all the productions of the temperate zone, though no vines are cultivated. The rivers freeze in December and thaw in February; but in some winters there is very little snow and ice: the north wind however is always severely felt. The heat in summer is often so great that the

river are dried up. Rain seldom falls in summer. Locusts are common, and the migratory locust often does great injury.

Agriculture is the chief employment of the inhabitants. The fruitful soil produces all kinds of corn, pulse, hemp, flax, and tobacco. The millet is of a peculiar kind, bearing several ears on one stem; the grain is large, round, and of excellent quality. The gardens produce all kinds of vegetables, and likewise melons, water-melons, and various kinds of fruit. Fruit of all kinds prospers, except the vine. The country-people however do not grow much fruit, but are content with their wild wood-berries.

Kiew has more and better timber than any other province of Little Russia. Next to agriculture the breeding of cattle is the chief occupation of the inhabitants. The oxen are large and of a good breed, generally of a gray colour. Great numbers are fattened and sent to Austria, Germany, and the interior of Russia. The horses are small. Few sheep are kept, but great numbers of swine. In the forests there are foxes, a few wolves, fewer bears, but many deer; there are hares, partridges, quails, and ortolans. In the Dnieper there are beavers and otters, but they are rare, and in that and the other streams there are many kinds of river fish, though not sufficient for the consumption of the people. The only minerals made use of are clay, lime, chalk, stone for millstones, and bog-iron. With the exception of beet-root sugar factories, of which 72 were in operation in 1850, the manufactories are unimportant; they are confined to the towns, and furnish very little for exportation. The trade consists in the exportation of the produce of the province, and the importation of salt, metal, wine, manufactured goods, and colonial produce. The villages are much closer together than in Great Russia, and have a very cheerful and pleasing appearance; all the houses have gardens, in which there are at least cherry- and plum-trees. The houses in the country are made of brushwood and branches of trees, covered with clay within and without, all whitewashed and thatched, and kept very clean. The Poles are the chief landholders and nobles. Jews are everywhere numerous; they have all the public-houses, inns, and shops, and are likewise the butchers, cattle-dealers, &c. Most of the inhabitants are of the Greek Church, under the archbishop of Kiew and Galiz. Of the Poles many are Roman Catholics. Of the Germans many are Lutherans. The Jews have their synagogues and rabbis. The peasantry are almost all serfs. The only town of importance is Kiew.

KIEW, a city of Russia, capital of the government of Kiew, the residence of an archbishop and of the civil and military administrators of the government, is situated on the right bank of the Dnieper about 660 miles S. from St. Petersburg, in 50° 27' N. lat., 30° 27' 53" E. long., and has about 50,000 inhabitants. It consists of three distinct parts: Old Kiew, built on an eminence towards the north; the fortress of Petscherak on another hill towards the south; and the Podole, or new town, which covers the low ground, between the two hills and the river. Each part of the town has its own fortifications, and the whole is inclosed within vast entrenchments. The houses, in number about 8000, are built partly of wood and partly of stone; the streets, in the old part of the city, as in most old towns, are narrow and irregular.

The Old Town and the Petscherak are separated by a deep ravine. The former was the residence of the grand dukes of Kiew, and in remote ages was a great centre of the idolatrous worship of the Slavonian race. On the site of the temple of Perane, the Russian Jupiter, Vladimir the Great erected the church of St. Basil, which still remains. This part of the town is inclosed with massive earthen walls, and contains ten churches in all, the most interesting of which is the cathedral of St. Sophia, which was founded by the grand-duke Jaroslav Vladimirovitch in 1037. This splendid church is magnificently decorated and contains a marble monument of its founder. Among the other buildings in this part of Kiew may be named the archbishop's palace, which stands close to the cathedral, shaded by venerable trees; the convent of St. Michael; and the churches of St. Andrew, and the Nativity of the Blessed Virgin. This last was also built by Vladimir the Great, who had his grandmother Olga buried in it.

The Petscherak is the highest and best fortified part of Kiew. It is considered one of the strongest fortresses in the interior of Russia. Connected with the massive defences which girdle this part of the city there are a large arsenal, magazines, and military stores. In the Petscherak the civil and military governors of the province and other persons of distinction reside; it is partly inhabited also by Jews. Near the arsenal is a bazaar. The most imposing structure in this part of the town is the Petscherakoi monastery, founded by St. Anthony in the 9th century, and famous for its fine buildings and its catacombs, in which are buried several saints of the Greek Church. The monastery is entered by a splendid gate ornamented with full length figures of St. Anthony and St. Theodosius. The great attraction is the church of the Assumption, which is reached by a fine alley on each side of which are the cells of the monks. The interior of this church is richly decorated with gold and silver, and on the walls are beautiful representations of Scripture scenes. The building is surmounted by a superb belfry, above 300 feet high, and by seven turrets with gilt cupolas connected by golden chains. The Russian annalist, Nestor, was a monk of this convent. The catacombs are excavations in the precipitous limestone rock which overhangs the

river: in them are above 100 bodies of Russian saints in an admirable state of preservation. It is said that as many as 50,000 pilgrims from all parts of Russia visit the monastery and the catacombs yearly. On one side of the road leading from the Petscherak to the Podole is a crucifix backed by a stone obelisk 150 feet high, which marks the fountain in which the children of Vladimir the Great were baptised.

The Podole, the best built and largest quarter of Kiew, stands on a level with the Dnieper and is surrounded with a wall. It is built in the modern Russian style with regular wide streets interspersed with trees and gardens. In it the principal merchants and the trading part of the population reside. It contains 20 churches, an imperial palace, a town-hall, and a Greek academy, a vast and solid structure with a library of 10,000 volumes, and an attendance of above 2000 students; some authorities say there are 6000 students. The Podole enjoys the privilege of being governed by its own magistrates, a right which it obtained from the kings of Poland. It is exposed to the overflowings of the Dnieper, which is here crossed by a bridge of boats, and we believe by a suspension-bridge also of recent erection.

Besides its cathedral, 52 churches, 9 convents, and a Greek ecclesiastical academy, Kiew has a university, founded in 1834, called St. Vladimir's University, which has obtained the library and collections of the Volhynian Lyceum at Krzemniec, and is the authorised place of education for the youth of the governments of Kiew, Podolia, and Volhynia. It is endowed with about a million rubles, and has a library of 35,000 volumes and an observatory. The number of professors and teachers is about 80, and the number of students is between 500 and 600. There are considerable manufactories of earthenware, many tanneries, and a very celebrated fair, attended by 30,000 Turks, Armenians, Germans, Swiss, English, &c. There is considerable commerce with Odessa and the interior of Russia.

The date of the foundation of Kiew is unknown. According to the Polish annals it existed in A.D. 480, soon after which date it was taken from the Khozares by two chiefs named Oakold and Dir. Under the followers of Rurik it became the capital of a grand-duchy and the chief town of Southern Russia, about A.D. 882. From 1037 to 1167 it was the capital of all the Russias; during this period it is said to have been a very large and flourishing city with no less than 400 churches. In aftertimes it suffered terribly from conflagrations and wars, and was successively in the hands of Poles, the Tartars, and a khan of the Crimea. The Russians finally recovered it in 1667.

KILBEGGAN. [WESTMEATH.]

KILBIRNIE. [ATYSHIRE.]

KILBRIDE, EAST. [LANARKSHIRE.]

KILBRIDE, WEST. [ATYSHIRE.]

KILCOCK. [KILDARE.]

KILCULLEN, KILCULLENBRIDGE. [KILDARE.]

KILDA, ST., the most western of the Hebrides, is situated in 57° 50' N. lat., 8° 35' W. long., and consists of an uneven mountain ridge, whose most elevated point, called Conochan, rises 1880 feet above the sea-level. The island is reckoned as belonging to the parish of Harris, in Inverness-shire. To the sea it presents lofty precipices, except at one point on the north side, where there is a rocky bay, and another on the south-east side, where there is a landing-place. The island is 2 miles in length, and 3 miles in breadth. The mildness of the air is favourable to agriculture; but the crops of bere and oats are frequently exposed to destruction from heavy storms, particularly from the west. Cultivation is therefore chiefly confined to the south-east declivity, where there is most shelter. On this side, about a quarter of a mile from the landing-place, is the village of St. Kilda, consisting of 32 houses, placed on the sloping base of a steep hill. This is the only inhabited place on St. Kilda, or the three other islands in the group. The number of the population in 1851 was 110, of whom 48 were males, and 62 females. The men are all described in the schedules as 'farmers and birdcatchers'; each 'farmer' occupies about three acres of land. Eight females are designated 'weaveresses' in 'wool.' The islands are the resort of sea-fowl, the flesh and eggs of which, with fish and the produce of the small plots of land, furnish food to the inhabitants, who would however often be in a state of starvation if the proprietor did not send every year a supply of oatmeal to the island. The dwellings of the poor people are kept in a very dirty state. There is a church and a manse, or minister's house, but no clergyman or medical man resides on the island. The great majority of the infants die of what the inhabitants call the 'eight days' illness.' In the first visitation of cholera, it proved very fatal in St. Kilda. The following curious particulars are given in the Registrar-General's Report on the Census of 1851:—Of the 110 inhabitants, all were born on the island except one woman, aged 35, the wife of a M'Donald, who was imported from Sutherlandshire. There were only 8 family names in the island, in the following proportions:—Gillies 33, M'Donald 23, M'Queen 20, Ferguson 13, M'Crimmon 9, M'Kinnon 9, Morrison 2, and M'Cleod 1. Of those under 20 years of age there were 22 males and 30 females; between the ages of 20 and 60 there were 25 males and 26 females; one man was above 70 years of age; above 60 years of age there were 6 women, of whom one was 79 years. Of married couples there were 19; of widowers 2, widows 3, with five unmarried men and five unmarried women of the age of 20 and under 46.

KILDARE, an inland county in the province of Leinster, in Ireland, is bounded N. by Meath, E. by the counties of Dublin and Wicklow, S. by the county of Carlow, and W. by the Queen's and King's counties, and Westmeath. It is situated between 52° 50' and 53° 25' N. lat., 6° 27' and 7° 10' W. long. Its greatest length from north to south is 40 miles, from east to west 27 miles. The area is 653 square miles, or 418,436 acres, of which 356,787 are arable, 51,854 uncultivated, 3288 in plantations, 490 in towns, and 1017 under water. The population in 1841 was 114,488; in 1851 it was 95,688.

Surface.—The surface of Kildare county is almost level. The only considerable elevations are the hills of Rathcoole, which form the western extremity of the range of the Dublin Mountains, and a detached group which occupies part of the southern margin of the Bog of Allen. Of this group the Hill, or Island of Allen, which is detached from the others, and terminates the range on the north-east, is surrounded by tracts of bog, and rises in a conical hill in the centre to about 300 feet above the level of the surrounding country, which is here 260 feet above the level of the sea. An open table-land extends from the southern base of this group to the acclivities of the Wicklow Mountains on the south-east, and divides the middle and southern parts of Kildare into two districts, one of which slopes gradually towards the Liffey on the east, and the other towards the Barrow on the west. North from the Dunmurry range the upland district spreads east and west, forming the southern boundary of the basin of the Boyne on the west, and the western and northern boundary of the valley of the Liffey on the east. It is here overlaid to an extent of 36,000 acres by a portion of the Bog of Allen.

The district which slopes towards the Barrow, comprising the western part of the county from the Bog of Allen to the county of Carlow, is divided into three open vales by low ranges of undulating ground extending in parallel directions from the central table-land towards the south-west. The most northern of these vales is drained by the Feagile and Little Barrow, which uniting at the lower extremity of the valley, join the Barrow near Monasterivan. At Monasterivan the Barrow is crossed by a branch of the Grand Canal, which, from Monasterivan to Athy, is carried along the right bank of the river. The country about Monasterivan, on both sides of the river, is well improved. Moore Abbey, on the left bank of the Barrow, occupies the site of a Franciscan abbey founded here by St. Abban in the 7th century, and rebuilt in the 12th century. A series of low detached hills, extending from Athy in a north-easterly direction to Old Kilcullen, bounds the basin of the Finnerly on the south and south-east. The lower part of this district is chiefly occupied by bogs. The ancient town of Kildare is situated on the elevated tract at the upper end of the vale. The surrounding country is open, and generally under tillage, with the exception of the Curragh of Kildare, a common containing about 4000 acres, which extends six miles along the table-land between the towns of Kildare and Kilcullen. This is a celebrated race-ground; the turf throughout is close and elastic, and the surface generally undulating. Southward and eastward from the above range of hills lies a fertile tract watered by the rivers Griese and Leir, which fall into the Barrow at the southern extremity of the county.

That part of the basin of the Liffey which is included within this county is formed by the western slope of the Dublin Mountains on the one side, and by the subsidence of the table-land of Kildare on the other. Much of the land in this district is in a high state of cultivation. The left bank of the river, from the point where it enters Kildare to Leixlip on the Dublin boundary, is almost wholly occupied by a succession of demesne lands surrounding numerous residences of the best class. Among these the most remarkable are Killadon, the seat of the earl of Leitrim; Castletown, the mansion of Colonel Conolly; and on the opposite side of the river, near the line of the Grand Canal, Lyons Castle, the residence of Lord Cloncurry. The banks of the Liffey in the neighbourhood of Celbridge and Leixlip are steep and well wooded, and the river for a considerable distance runs in a series of rapids. A ledge of rock, about 10 feet in height, stretching across the channel, forms a waterfall, called the Salmon Leap, which is an object of great attraction. Close to Maynooth is the fine demesne and beautiful mansion of Carton, the residence of the Duke of Leinster. The Royal Canal, crossing the Rye-water by an aqueduct a little above Leixlip, passes Maynooth and Kilcock. Westward from Kilcock, which stands in the centre of one of the most fertile and best cultivated tracts in Ireland, the Royal Canal crosses the Blackwater and Boyne rivers by aqueducts within this county. The district traversed by this canal is for the most part open and arable.

Hydrography and Communications.—The northern border of the county is traversed by the Royal Canal, which unites the Bay of Dublin to the Shannon at Tarmenbarry; by the western mail-coach road, which passes through Kilcock; and by the Dublin and Galway railway. These lines of communication run at very short distances and nearly parallel to each other, from Dublin to Mullingar. The eastern districts are drained by the Liffey, which rises in the Wicklow Mountains only about 12 miles from its mouth, entering this county a little above Ballymore Eustace; its course is nearly due west to Kilcullen Bridge; then north-west to Newbridge; afterwards north-east to Leixlip, whence it flows eastward across the county through

the city and into the Bay of Dublin, after a total course of about 50 miles. The Grand Canal runs along the valley of the Liffey as far as Sallins, where it turns to the west and crosses the Bog of Allen on its way to join the Shannon at Shannon Harbour. The Great Southern and Western railway, from Dublin to Cork, also runs up the valley of the Liffey, and at Kildare sends off a branch southward through Athy to Carlow and Waterford. The southern mail-coach road from Dublin divides at Naas into two branches, one through Kildare, leading to Cashel and Cork; another to Kilcullen Bridge, whence also two branches run, one to Athy and the other through Castle-Dermot to Carlow and Waterford.

Geology.—The clay-slate, which flanks the granite of the Dublin and Wicklow mountains, occupies about one-fourth of the surface of Kildare. It extends from the extremity of the Rathcoole group in the county of Dublin across the valley of the Liffey, whence it runs in a south-west direction towards Athy, forming the Kilcullen group, and occupies the entire valley of the Griese, with the exception of its lower extremity, where the verge of the limestone plain is interposed between it and the line of the Barrow. The granite tract of Carlow extends into the south-eastern extremity of Kildare as far as Castle-Dermot where the clay-slate passes into mica-slate along the eastern portion of their line of junction. The remainder of the county is occupied by the limestone of the great central plain, broken only by the group of Dunmurry and the Hill of Allen, which is composed of a mass of granular compact greenstone and porphyry protruded through the limestone. At the northern extremity of the Hill of Allen is a low hill called the Leap of Allen, composed of red-sandstone conglomerate, which is quarried for millstones. Indications of copper have been observed on Dunmurry Hill.

Climate, Soil, and Products.—The climate is very moist and foggy in the north-west. In the central district the air is pure and keen; and milder and more salubrious in the valleys of the Liffey and Griese. The soil is generally a rich loam, resting on limestone or clay-slate. Manure of the best description is obtained from Dublin, by means of which the lands of the central and western districts are kept in excellent condition. The chief tract of pasture-land is the Curragh, which is used as a sheep-walk. There are rich fattening lands in the north-western and north-eastern portions of the county. An improved system of agriculture has been introduced. The total extent of land under crops in 1853 was 140,837 acres, of which 13,655 acres grew wheat, 46,715 acres oats, 8853 acres barley, bere, rye, beans, and peas, 10,716 potatoes, 11,990 turnips, 2991 other green crops, and 27 acres flax: the area under meadow and clover was 45,890 acres. Of plantations there were 11,891 acres in 1841 growing chiefly oak, ash, elm, and beech. In 1852, on 8557 holdings, there were 12,533 horses, 4127 mules and asses, 62,581 cattle, 110,182 sheep, 17,966 pigs, 2757 goats, and 169,148 head of poultry; the value of the entire live stock being estimated at 662,528*l.* The wheat grown in Kildare is generally of prime quality; it is exported to Dublin and to Waterford. The milling trade is extensively carried on. There are also some woollen, cotton, and paper factories. Great quantities of turf are cut in the Bog of Allen and conveyed to Dublin by the Grand Canal.

Divisions and Towns.—Kildare is divided into 14 baronies; Carberry on the north-west; Ikeathy and Oughteran on the north; North Salt on the north-east; South Salt, which lies south of North Salt; North Naas on the east; South Naas; Kilcullen, also on the east; Narragh and Rheban East; Narragh and Rheban West; Kilkea and Moone on the south; Ophaly East; Ophaly West; Clane, immediately west of South Salt; and Connell, to the west of North and South Naas.

The following towns and villages, with their population in 1851 may be noticed:—

ATHY has been already described. *Ballymore-Eustace*, a small town of 673 inhabitants, is on the Liffey, near the eastern border of the county. It grew up about Eustace castle, built by the Eustace family shortly after the Anglo-Norman invasion, but now ruinous. Fairs are held six times a year. *Ballytore*, a neat clean little town, chiefly inhabited by Quakers, 6 miles E. from Athy on the right bank of the Griese, has 417 inhabitants. Edmund Burke received his early education here. Near Ballytore are the old forts of Mullaghmast and the demesne of Narraghmore, part of the estates of R. Latouche, Esq. Fairs are held in March, May, August, and November. *Castle-Carberry*, a small village in a fine grazing district in the north-west of the county, and near the source of the Boyne, is interesting for a ruined castle, erected in the 14th century, by the family of the Berminghams, and inhabited during the 17th and part of the 18th centuries by the ancestors of the Duke of Wellington. *Castle-Dermot*, population 1416 in 1841 and 666 in 1851, in the south of the county, on the Carlow road, claims to be a very ancient place, and contains many antiquities. The town was formerly surrounded by a wall pierced by four gates. It is now merely an agricultural village. There are some remains of a Norman castle built here in 1180. The parish church is of great antiquity; the eastern part of the building is now used as a place of worship, the rest is in ruins. An ancient ivy-clad round tower on the north side of the church is used as a belfry. In the burying-ground is a sculptured stone cross. The remains of a Franciscan abbey and its church present good specimens of architecture; the church is built in the pointed style. Near the abbey is a strong square tower, locally

called St. John's castle. A parliament was held in Castle-Dermot in 1499. There is a Roman Catholic chapel in the town. Six fairs are held in the course of the year. **CALBRIDGE.** *Clane*, population 833, a village 6 miles S.W. from Celbridge, on the left bank of the Liffey, which is here crossed by a bridge of six arches. Here are considerable remains of a Franciscan friary, erected in the 13th century. Near the village are the ruins of an old castle and some ancient earthworks. Fairs are held in April, July, and October. **KILCOCK**, population 1164, a post- and market-town, situated 19 miles W. from Dublin, on the Dublin and Galway railway and on the banks of the Royal Canal. The town has a dispensary, a church, and a Roman Catholic chapel. The environs are fertile. Near the town are Donadea Castle, and several other large mansions. Nine fairs are held in the year. **KILCULLEN**, or as it is commonly called *Old Kilcullen*, formerly a walled town, and a place of importance, but now a mere hamlet, stands 2 miles S. from Kilcullen Bridge. Fairs are held here in June and October. On the summit of a hill, inclosed by a circular wall, are the ruins of a monastery, part of a round tower, 35 feet high, and many sculptured stone crosses. The rebels were severely defeated at Old Kilcullen in 1798. **Kilcullen Bridge**, a small market-town prettily situated on the Liffey, 5 miles S. by W. from Naas, has a fever hospital, a dispensary, and 985 inhabitants. Fairs are held in February, March, June, September, and December. About 8 miles N.E. from this place is **Harristown**, before the union a parliamentary borough, now a mere hamlet. **Leixlip**, a small town finely situated at the junction of the Rye with the Liffey, 11 miles W. from Dublin, by the mail-coach road and the railway from Dublin to Galway; population, 832. It consists of a single street. The parish church is in the pointed gothic style. The Roman Catholics have a chapel. The Liffey is here crossed by a bridge. Above the town is Leixlip Castle, built by Adam de Hereford, one of Strongbow's followers. A little way beyond the castle, the Liffey forms a fine cascade, called the Salmon Leap. The town is a place of resort on account of the beautiful scenery near it. Fairs are held in May, July, and October. **MAYNOOTH.** *Monasterevan*, population 996, a post- and market-town, situated on the Barrow at the junction of the Mountmellick and Athy branches of the Grand Canal, 36 miles by railway S.W. from Dublin. The main street is built on only one side and fronts the river, which is here crossed by two bridges. The market-place is a large open area. The parish church and Roman Catholic chapel are the chief buildings. Small docks and storehouses have been built in the town, in which are a large distillery and brewery, and a dispensary. The trade is chiefly in corn and other agricultural produce. The site of the abbey of Monasterevan is now occupied by the fine mansion of Moore Abbey, the seat of the Marquis of Drogheda on the south side of the town. Fairs are held ten times in the year. **NAAS.** *Newbridge*, a small market-town of 934 inhabitants, on the Liffey, and on the railway and mail-coach road from Dublin to Cork, 25 miles S.W. from Dublin, has a large cavalry barrack, a Roman Catholic chapel, a police station, and a dispensary. The town takes its name from a bridge which here spans the Liffey. Near it are the ruins of Great Connell Abbey. Five fairs are held in the course of the year. **PROSPEROUS**, population 526 in 1841; 262 in 1851, a miserable decaying village, in which a cotton factory was established in 1780, and long ago abandoned, is situated 4 miles N.W. from the Salinas station on the Dublin and Cork railway, in a dreary, boggy, flat district. **RATHANGAN**, population 1004, a market-town on the Little Barrow and the southern branch of the Grand Canal, 5 miles N. by W. from Kildare, contains a church, a Roman Catholic chapel, a Quakers meeting-house, and a dispensary. There are several large flour-mills here. Three annual fairs are held. **ROBERTSTOWN**, 3 miles W. from Prosperous, a small village, population 314 in 1841, and 600 in 1851, is situated in the dreary region of the Bog of Allen, and is mentioned chiefly on account of its standing at the summit level of the Grand Canal. There are seven yearly fairs. **SALLINS**, a village of 308 inhabitants, is a station on the Dublin and Cork railway, 18 miles S.W. from Dublin. It stands on the Grand Canal, and near the right bank of the Liffey. A large inn and extensive stores have been erected here by the Grand Canal Company.

Prior to the Union Kildare was represented in the Irish Parliament by ten members; two for the county, and two for each of the towns Athy, Kildare, Naas, and Harristown. It is represented in the Imperial Parliament by two county members only. The assizes are held alternately at Naas and Athy, in each of which there are a county court-house and jail. The general quarter-sessions are held at Athy, Maynooth, Kildare, and Naas. Petty sessions are held at 13 places. The head-quarters of the constabulary force, consisting of 263 men and officers, are at Athy; the force is distributed among 5 districts, Naas, Athy, Rathangan, Robertstown, and Leixlip; these again are sub-divided into 45 stations. A resident magistrate is stationed at Naas. The district lunatic asylum, to which the county is entitled to send 52 patients, is at Carlow. The Union workhouses are at Athy, Celbridge, and Naas. A county infirmary is at Kildare, and fever hospitals are at Celbridge, Naas, and Athy; 18 dispensaries are established in the towns and chief villages. At Newbridge are extensive cavalry barracks, and infantry barracks are at Naas and Athy. The staff of the county militia is stationed at Johnstown. A savings bank is at Celbridge; the total amount owing to depositors on November 20th, 1852 was 15,241*l.* 4*s.* 7*d.* In September 1852

GEOG. DIV. VOL. III.

there were 87 National schools in operation, attended by 4575 male and 4648 female children. Adjoining the town of Maynooth is the Roman Catholic College of St. Patrick, for the education of young men destined for the priesthood; and at Clongowes, near the village of Clane, is the Jesuit College for the education of the sons of the Roman Catholic gentry, which had 151 students in 1853.

Numerous earthen works, partly military and partly sepulchral, remain in this county. Of the first class, the most remarkable are the rath of Knockawley, about a mile west from Old Kilcullen; the moat of Mullaghmast, the ancient Carmon, near Ballytore; and Rath-Ardscull near Athy. There are numerous sepulchral mounds on the Curragh; and here in the time of Giraldus Cambrensis was a stone monument similar to Stonehenge. Pillar stones of large dimensions are still standing at Mullaghmast, Furnaughts, and Harristown. There are round towers at Kildare, Taghadoo, Kilcullen, Castle-Dermot, and Oughterard. Among other ancient remains are the ruins of numerous religious houses, stone crosses ornamented with curious sculptures, and a great number of feudal castles, many of which are still standing. The castles of Kilkea, Donadea, and Leixlip are still inhabited.

KILDARE, county of Kildare, Ireland, a small market and episcopal town, and previous to the Union a parliamentary borough, is situated in 53° 10' N. lat., 6° 54' W. long., on high ground half a mile W. from the Curragh of Kildare, and 30 miles S.W. from Dublin by the Dublin and Cork railway. The population in 1841 was 1629; in 1851 it was 1298. The town, which is distinguished at a considerable distance by its round tower 130 feet high, is interesting for its antiquities: these include the ruined cathedral, a small part of the chapel of St. Bridget, locally called the 'Fire-House,' in which the 'ceaseless fire,' a relic probably of the Baal worship of the ancient Irish, was maintained till 1220; the ruins of a Franciscan abbey, on the south side of the town; and the round tower before mentioned. The choir of the old cathedral is now used as the parish church and nominal cathedral. In the cathedral is the family vault of the earls of Kildare; in it the dukes of Leinster are buried. Kildare was famous as a seat of learning in the middle ages. The present town consists of one tolerably good street, on which abut several miserable lanes. The chief buildings are the Roman Catholic chapel, a nunnery or friary, the county infirmary, and the market-house, in which petty sessions are held weekly. During the Curragh races the town is well frequented. The market is held on Thursday. Quarter sessions are held twice a year. The old castle of Kildare, built soon after the Anglo-Norman invasion, and subsequently often repaired, still remains.

The see of Kildare is in the ecclesiastical province of Dublin. The diocese comprises parts of the county of Kildare and of King's and Queen's counties. The chapter consists of a dean, precentor, chancellor, archdeacon, 8 prebendaries, and 4 canons. The number of benefices is 44. The foundation of this see is ascribed to St. Conlaeth in the 6th century. The first Protestant bishop of the see was consecrated in 1550. By the Church Temporalities Act the see of Kildare is now united to that of Dublin.

KILFENORA, a bishop's see in the archiepiscopal province of Dublin in Ireland, comprises the baronies of Burrin and Corcomroe, in the county of Clare. The chapter consists of a dean, precentor, and archdeacon. The number of benefices is seven. The see was anciently called Fenabore and Cellumabrach. There is no authentic mention of it till 1265, when one Christian was bishop. Kilfenora was united to Clonfert in 1741, to Killaloe in 1752, and under the Church Temporalities Act it is now united with Killaloe, Clonfert, and Kilmacduagh. The cathedral serves as a parish church; it is a respectable building, with a massive square tower.

The episcopal city of Kilfenora, now a poor hamlet, is situated 13½ miles N.W. from Ennis, in 52° 57' N. lat., 9° 12' W. long. The population in 1841 was 621; in 1851 it was 387. Kilfenora is unquestionably of high antiquity. It is stated in the 'Ulster Annals' that the abbey and town were burned by Murtough O'Brien in 1055. A fragment of the old abbey still remains, and near it are several ancient crosses. Many ruined castles and old forts are in the vicinity of the village. The land about Kilfenora is fertile and well cultivated.

KILGERRAN. [PEMBROKESHIRE.]

KILHAM. [YORKSHIRE.]

KILIA. [BESSARABIA.]

KILKEE. [CLARE.]

KILKEEL, county of Down, Ireland, a post-town and the seat of a Poor-Law Union, in the barony of Mourne, is situated near the mouth of the river Kilkeel, in a mountainous district, in 54° 3' N. lat., 6° 1' W. long., 65 miles N. by E. from Dublin, and had in 1851 a population of 1163, besides 185 in the workhouse. Kilkeel Poor-Law Union comprises 10 electoral divisions, with an area of 81,829 acres, and a population in 1851 of 24,728. The town contains a small church, some Dissenting meeting-houses, and a few shops. Four fairs are held in the year. Near the town the Rosstrevor road skirts the extensive demesne of Mourne Park, the seat of the Earl of Kilmorey.

KILKENNY, an inland county of the province of Leinster, in Ireland, is bounded N. by Queen's County, E. by the counties of Carlow and Wexford, S. by the county of Waterford, and W. by Tipperary. It lies between 52° 13' and 52° 53' N. lat., 6° 55' and

7° 38' W. long. Its greatest length from north to south is 46 miles; its width is greatest in the north, where it measures 24 miles from east to west; across the southern districts the breadth is only 15 miles. The area is 796 square miles, or 509,732 acres, of which 470,102 are arable, 21,126 uncultivated, 13,899 in plantations, 1549 in towns, and 3056 under water. The population in 1831 was 169,945, exclusive of the city of Kilkenny; in 1841 it was 183,349; in 1851 it was 138,778.

Surface, Hydrography, and Communications.—The navigable rivers Barrow and Suir form the greater part of the eastern and the whole of the southern boundary of Kilkenny, and the Nore traverses its entire length from north to south-east. The northern part of the county between the Nore and the Barrow is hilly. The drainage of this district is carried into the Nore by the Dinan River, which rises in the north-eastern extremity of the county, passes through the town of Castlecomer, and falls into the Nore five miles north of Kilkenny city. The valley of the Nore, from the northern extremity of the county to this point, is confined between the declivities of the Castlecomer hills on the east and two groups of similar formation on the west. Between the two latter groups the low ground spreads out into a rich plain near the town of Freshford. Five miles south-east of Ballyragget, near the road from Castlecomer to Kilkenny, is the remarkable cave of Dunmore. The entrance is by a picturesque hollow clothed with brushwood, at the extremity of which the cavern opens by a natural arch fifty feet high. There are several chambers within encrusted with stalactites and traversed by a subterranean stream.

Southward from these hilly districts the valley of the Nore, which to this extent is confined to a narrow strip on each side of the river, expands across the entire central part of the county, spreading into Tipperary on one side and Carlow on the other, with an open undulating surface, characteristic of the great limestone field of which it forms a part. The banks of the Nore in the neighbourhood of Thomastown are steep and wooded, and the open country on each side to a great extent is under demesne. The open district to the west is traversed by the Owenree, or King's River, running eastward from the Tipperary boundary to the Nore, which it joins 3½ miles above Thomastown. The Munster River, which joins the Owenree from the north, forms the boundary between Tipperary and Kilkenny counties for several miles. Beyond this central district the southern part of the county is occupied with hilly and mountainous tracts. On entering this district the Nore changes its course from south to south-east, and runs along a deep valley to the Barrow, which it joins about 15 miles above the junction of their united streams with the Suir. The hilly district included between the Nore and Barrow, and the open country extending from Gowran to Thomastown, is bounded westward by the Coppinagh hills, and towards the Barrow by a range of hills rising as they go southward, and reaching their culminating point in Mount Brandon, which attains a height of 1696 feet near the town of Graigue-na-managh on the Barrow. The scenery on both sides of the Nore from Thomastown to the Barrow, a distance of 13 miles, is in the highest degree picturesque. Between the ranges of Coppinagh and Brandon are several extensive valleys opening towards the Nore, which receives the Clodagh River from this side. A tongue of alluvial land called the Roer, or Rower, extending above two miles in length, spreads out near the junction of the Nore and Barrow; with the exception of this spot, the right bank of the Barrow from Graigue-na-managh to the Nore is precipitous, and in some places clothed with natural wood. Southward from the Nore the banks of the Barrow slope more gradually, and are highly cultivated.

The hilly district west of the Nore and the Barrow rises into mountains of considerable height and extent, of which the principal group, called the Walsh Mountains, lies between the Argula River, running northward into the Nore above Innistioge, and the Kilmaoow River, which runs southward into the Suir above Waterford. This district is chiefly occupied by dairy-farmers. The space between the southern declivities of the Walsh Mountains and the other groups ranging towards Tipperary and the Suir, is occupied to a breadth of from two to five miles by a level tract of rich land. Several fine modern mansions, and ruins of ancient castles and seats, are in this district.

The Suir is navigable for vessels of 120 tons up to the bridge of Carrick, which is situated in Tipperary close to the western limits of this county. At the bridge of Waterford it is in some places eight fathoms deep at low water. Ships of 800 tons ascend the Barrow to New Ross, and small vessels can ply as high as St. Mullins, where the tide ends, and the Barrow navigation for lighters commences. The Nore throughout the upper part of its course from Durrow to Thomastown runs rapidly, and is subject to violent floods, having a fall of about 13 feet in a mile. From Thomastown to the Barrow it is navigable for boats carrying 15 tons. Vessels of 80 tons and upwards have been built at and below Innistioge, at which town the influence of the tide ends.

The county is traversed by a great number of roads, the principal of which are—the Dublin and Cashel mail-coach road, which passes through Urlingford in the north-west of this county; and the mail-coach roads which connect the city of Kilkenny with Dublin, Waterford, Carrick-on-Suir, and Clonmel. A branch railway to Carlow from the Great Southern and Western line has been continued to Kilkenny, a

distance of 25 miles; the Waterford and Kilkenny railway, 28½ miles, has been in operation for some time past.

Geology.—With the exception of the mountain groups of the south, the entire surface of Kilkenny is occupied by the stratified limestone of the central plain of Ireland, overlaid in the hilly districts north of Kilkenny city by the shale and sandstone of the Castlecomer and Killenaule coal-tracts. The coal-formations are nearly co-extensive with the hilly districts. The strata composing the coal-districts consist of alternations of shale with argillaceous ironstone, compact quartzose sandstone, and sandstone slate. Each district constitutes a separate basin, the strata in that of Castlecomer dipping from the edge towards the centre, so that the undermost strata appear on the outer edge and the uppermost in the interior of the district. The coal raised from these beds is anthracite. It is accompanied with culm, which is used extensively for burning lime; the coal itself is used for domestic purposes and malting. The principal works are at Castlecomer, Clough, and Newtown. The limestone border generally follows the foot of these hills, but in some places it rises half way up the acclivity, and in one or two instances forms considerable hills on the exterior. The general colour of the limestone is a bluish-gray: the best for burning is of a blackish colour, and is found near Kilkenny and Thomastown. Iron, manganese, and siliceous are generally diffused through the limestone rock towards the borders of the coal tract, and prevent it from burning. Near Kilkenny it passes into a fine black marble, containing a great variety of impressions of madrepores and of bivalve and turbate shells. These beds are extensively quarried, and the blocks dressed on the spot by a saw-mill driven by the water of the Nore. The marble is manufactured into chimney-pieces, tombstones, &c.; it bears a very high polish, and can be raised in large blocks. Black primitive limestone also occurs at Ballyragget. The tract of limestone skirting the northern bank of the Suir is decomposed along its northern boundary for a distance of several miles into a friable marly rubble, which is extensively used for manure. Marl is found in large deposits in various other parts of the county. The mountain tract occupying the south of Kilkenny consists, with the exception of the primitive group of Brandon, of clay-slate surrounded by sandstone. There are chalybeate springs at Ballyspellin, Kilkenny city, Castlecomer, and several other places in the county. The Ballyspellin spa was celebrated in the last century, and is still used with benefit in cutaneous diseases.

Climate, Soil, and Produce.—The general slope of the surface is to the south-east. Surface waters run off rapidly, and there is very little bog; the air is consequently dry and healthy. Myrtles and the arbutus grow luxuriantly in the southern parts of the county. Only a small portion of Kilkenny is unfit for tillage. In the northern part of the Castlecomer coal-tract the soil is a moory turf lying over a stiff whitish clay. From Castlecomer southward the soil is light and friable as far as Kilkenny, and becomes deep, rich, and capable of any tillage towards Gowran and thence to Thomastown. The neighbourhoods of Durrow and Johnstown contain good tillage lands, and the valley of Freshford has some of the best ground in the county. The soil of the hilly tract south of Freshford is fitter for pasture, and this is also the character of the right bank of the Nore from Kilkenny to Bennett's Bridge. The district watered by the Owenree has an excellent soil, and yields great crops of wheat. The soil of the hilly country on the south is dry and easily cultivated, but it is badly inclosed, and destitute of shelter. Some of the best wheat and meadow lands in the south of Ireland are situated in the level tract along the Suir.

In 1853 there were 24,988 acres producing wheat; 64,002 oats; 11,622 barley, bere, rye, peas, and beans; 22,045 potatoes; 13,135 turnips; 3561 mangels, carrots, parsnips, and other green crops; 81 flax; and 44,479 meadow and clover; making a total of 183,918 acres under crops. The plantations, including an equivalent for detached trees, cover about 18,000 acres, yielding oak, ash, elm, beech, fir, &c. In 1852 on 14,510 holdings there were 15,871 horses, 4758 mules and asses, 78,278 head of cattle, 61,922 sheep, 48,077 pigs, 8876 goats, and 241,176 head of poultry; the total value of the live stock was estimated at 783,015*l.*

The occupations of the people are chiefly agricultural. Flour and leather are the only industrial products of importance. There are breweries and distilleries in the county. The woollen manufactures which formerly flourished in the city of Kilkenny are now extinct. A coarse frieze for home consumption is made among the peasantry.

Divisions and Towns.—Kilkenny is divided into 10 baronies:—Callan south-west, Crannagh west, Fassadinin north-east, Galmoy north-west, Gowran east, Ida south-east, Iverk south, Kells south-west, Knocktopher south and central, and Shillelogher west. The principal towns are CALLAN, Graigue-na-managh, THOMASTOWN, Freshford, CASTLECOMER, URLINGFORD, and Ballyragget. Callan, Castlecomer, Thomastown, and Urlingford are elsewhere described; the others we notice here. The county of the city of Kilkenny forms a separate division.

Ballyragget, population 1170 in 1851, a small town on the left bank of the Nore, 11 miles N. from Kilkenny, has a barrack and a dispensary. The town owes its origin to Ballyragget Castle, the ancient fortified residence of the Viscounts Mountgarret, the ruins of which are of considerable extent. Near the town are Ballyragget

Hall; and Ballyconra, the seat of the Earl of Kilkenny. Ten fairs are held in the year.

Freshford, a small town, situated within a mile of the right bank of the Nore in a fertile country, 9 miles N.W. from Kilkenny, had 2075 inhabitants in 1841, but only 1076 in 1851. The principal part of the town is built in the form of a square around the fair green. Freshford has a fever hospital, a dispensary, a large Roman Catholic chapel, and a very ancient church, which belonged to an abbey founded here by St. Lactan in the 7th century. Fairs are held in August and December.

Gowran, before the Union a parliamentary borough, now a small but improving town of 1000 inhabitants, is situated 7 miles E. from Kilkenny. It was a place of importance for several centuries in consequence of the strong castle of Gowran, built here by the Butlers, dukes of Ormonde. The ruins of the old church, which belonged to an ancient monastery, are interesting from their architecture and the monuments they contain. Five yearly fairs are held.

Graigie-na-managh, or *Graigie*, a town of 1710 inhabitants, is beautifully situated on the right bank of the Barrow, and nearly environed by offshoots from the Brandon Mountains, 13 miles S.E. from Kilkenny. The Earl of Pembroke founded a Cistercian abbey here in 1212, very interesting ruins of which still remain. The transept of the abbey church has been fitted up as a Roman Catholic chapel. A small church crowns a neighbouring hill. The ruined castle of Tinnahinch, once a seat of the Butlers, is situated opposite the town on the Carlow side of the river. Graigue has good weekly markets and a considerable retail trade; it is also much benefited by being a station on the Barrow navigation. In the town is a dispensary. Several fine seats are in the vicinity. Fairs are held seven times in the year.

Innistogue, before the Union a parliamentary borough, now a small but neat town of 725 inhabitants, stands on the left bank of the Nore, 13 miles S. by E. from Kilkenny. It is built in the form of a square, in the centre of which is part of an ancient stone cross. The houses are slated and have lime-trees planted before them. Here are the ruins of a large Augustinian priory. A handsome bridge of 10 arches spans the Nore. Near the town is the demesne and mansion of Woodstock. Ten fairs are held yearly.

Johnstown, a neat little town, 16 miles N.W. from Kilkenny, population 876, contains a church and a Roman Catholic chapel. East of the town is the range of the Culla hills, which near the chalybeate spa of Ballyspellan attain a height of 1156 feet. West of Johnstown the country is flat, dreary, and in many parts boggy.

Piltown, population 606, a pretty little town half a mile long, situated in the centre of the richest part of the valley of the Suir, and about a mile from the left bank of that river, 20 miles S. from Kilkenny. It is watered by a little stream, up which the tide-water of the Suir ascends: all such little estuaries are locally called 'pilla,' hence the name of the town. The houses are neatly built, and each has in front a small flower-garden inclosed with evergreens and other shrubs. The village contains a church, a Roman Catholic chapel, school-house, market-house, dispensary, and police station. Vessels of 70 tons come up to the quay. In the upper part of the market-house is a small museum.

The following villages may be mentioned: the populations are those of the Census of 1851. *Bennett's Bridge*, population 274, is situated on the river Nore, 5 miles S.W. by S. from Gowran, and has its name from a bridge over the Nore at this place. Several ruined castles and modern mansions are in the vicinity. Four fairs are held yearly. *Clogh*, population 486, is situated about 4 miles N.N.E. from Castlecomer, of which parish it forms a part. The Roman Catholics have a chapel. Brewing is carried on. *Glanmora*, 6 miles from New Ross on the road to Waterford, is a small place, containing a large Roman Catholic chapel and a dispensary. *Goresbridge*, population 921 in 1841, reduced to 419 in 1851, is 10 miles E. from Kilkenny; it stands on the right bank of the Barrow. Fairs are held here four times in the course of the year. In the town is a Roman Catholic chapel. *Kells*, a poor place of 419 inhabitants, was formerly a town of importance, and still attracts notice for the ruins of its abbey. It is situated 7 miles S. from Kilkenny, on the banks of the King's River, which flows through a fertile and beautiful valley between Callan and the Nore. The abbey was founded in 1193, and flourished till the reign of Henry VIII. The ruins comprise two large squares, with portions of several towers, and the cloisters, which are in a state of good preservation; the area is still inclosed. The abbot of Kells was a lord of parliament. A fair is held at Kells on July 13th. *Kilmacow*, population 157, is a small hamlet on the Blackwater, a feeder of the Suir. Near the Waterford and Carrick-on-Suir road, are the extensive ruins of Grandison, or as they are now called Graney Castle, which was built by the 8th earl of Ormonde, and taken by the parliamentary forces in the great civil war. *Kilmaganny*, population 462, is 12 miles S.S.W. from Kilkenny, on the road to Carrick-on-Suir; it is situated at the foot of a range of hills which attain a height of 968 feet. It is a neat village, and contains a church, a Roman Catholic chapel, and a dispensary. In its vicinity are the ruins of Clone Castle, Castlehill, and Kerehill, which were originally fortified residences of the Walshes. *Knocktopher*, a poor village of 347 inhabitants, situated 10 miles S. from Kilkenny on the road to Limerick, was formerly a parliamentary borough. The town and

neighbourhood anciently belonged to the Ormonde family, who built here one of their strongholds called Knocktopher Castle. This castle was besieged, taken, and demolished in 1649 in Cromwell's invasion, and is now a heap of ruins. There are some remains of a Carmelite convent, founded by the second earl of Ormonde in 1356; and one of those ancient mounds locally called moats, or duns. The village contains a neat parish church, a Roman Catholic chapel, and a school. *Mooncoin*, population 664, situated near the river Suir, about 4 miles S.E. from Piltown, has a Roman Catholic chapel, a cemetery, and a National school. *Mullinavat*, population 552, on the road to Waterford, 18 miles S. from Kilkenny, contains a Roman Catholic chapel. A little south-east of it is a remarkable conical elevation, called Tory Hill, which is a conspicuous object in this part of the county, and serves for a landmark to sailors. Six fairs are held yearly. *Rosbercon*, a village of 276 inhabitants, is situated on the left bank of the Barrow, opposite New Ross. It has extensive stores and quays along the river, and occupies a favourable situation for trade. Adjacent to it are the picturesque remains of Rosbercon Abbey, the restored chancel of which serves for the parish church. The abbey was a united foundation of the Walshes and Graces in 1267. The tower of the abbey church and part of the wall of the south aisle still remain. The village contains a Roman Catholic chapel, a police barrack, a large distillery, and several schools. Rosbercon is connected with New Ross by a wooden bridge 358 feet long, and a causeway of 150 feet; in the centre of the bridge is a small draw-bridge for the convenience of vessels navigating the river. Six fairs are held in the course of the year. *Stoneyford*, population 500, 8 miles S. from Kilkenny on the King's River, contains a dispensary, a Roman Catholic chapel, and a police barrack. Near Stoneyford is Mount Juliet, the fine seat and demesne of the Earl of Carrick; in the grounds are the ruins of Ballylinch Castle, the old residence of the earls of Carrick.

Kilkenny returns three members to the House of Commons—two for the county and one for the city of Kilkenny. The assizes are held in Kilkenny, and quarter sessions in Kilkenny, Callan, Castlecomer, Piltown, Thomastown, and Urlingford. The county court-house and jail are in Kilkenny, and there are bridewells in Callan, Graigue Thomastown, and Urlingford. Petty sessions are held in 19 places. The police force, consisting of 500 men and officers, is distributed over 8 districts, comprising 61 stations, of which Kilkenny is headquarters. The district lunatic asylum, to which the county is entitled to send 31 patients, is at Carlow. The county infirmary is at Kilkenny, and there are fever hospitals at Kilkenny, Castlecomer, Callan, Ida, Freshford, Kilmaganny, Rosbercon, and Stoneyford, with 20 dispensaries in the towns and chief villages. A savings bank is established in Kilkenny; the total amount owing to depositors on November 20th 1852 was 17,850*l.* 1*s.* The Union workhouses are at Kilkenny, Callan, Castlecomer, Thomastown, and Urlingford. Kilkenny is headquarters of a military district which comprises parts of Tipperary, Wicklow, Waterford, Wexford, Queen's County, and Carlow. There are barrack stations at Callan and Castlecomer. In September 1852, there were 138 National schools in operation, attended by 8125 male and 7579 female children.

History and Antiquities.—On the partition of Leinster among the daughters of William earl of Pembroke, 1247, Kilkenny was allotted to Isabella, the third daughter, who married Gilbert de Clare, earl of Gloucester and Hertford; by him she had issue, among other children, Eleanor, who married Hugh le Despenser the younger, whose grandson Thomas le Spenser sold his castle and manor of Kilkenny to James Butler, third earl of Ormonde, in 1391. The other great proprietors were the families of Grace and Walsh, who lost their estates in the war of the Revolution of 1688. The early history of the county is chiefly occupied with the feuds of the Ormondes, the house of Desmond, and the Graces. On the breaking out of the rebellion of 1641 the county of Kilkenny fell into the hands of the Irish with little opposition, Lord Mountgarret, an influential member of the Butler family, taking the lead among the insurgents. The defection in this county on the accession of king William III. was very general.

Circular stone inclosures of the Pagan era remain on the summits of the hills near Freshford and Kilmacow, and there are various cromlechs and cairns in the county. The remains of raths and earthen tumuli are also of frequent occurrence. There are five round towers, one adjoining the cathedral church of St. Canice in Kilkenny, the others at Kilree, Tullocherin, Fertagh, and Aghavillar. Of the monastic ruins, the most extensive and interesting are those of Jaspont Abbey on the Nore, two miles from Thomastown. This abbey was founded by Donogh, king of Ossory, in 1180, for Cistercian monks, and was liberally endowed. The ruins occupy three acres, and are a fine specimen of Anglo-Norman architecture. The more modern portions of the building are in the pointed style of the 13th century, and are distinguished by their elegance and lightness. The tombs of the founder and of several ecclesiastics still remain. The remains of a Cistercian abbey at Graigue have been already noticed. There are considerable remains of a Dominican convent at Thomastown, of an Augustinian monastery at Innistogie, and of Augustinian priories at Kells and Callan. Of the numerous castles founded by the Anglo-Norman lords, the most considerable is Grandison Castle in Iverk, an ancient seat of the Butlers. It has three round towers towards the

Suir and two courtyards. The castles of Balleen, Ballyragget, Knocktopher, Gowran, Callan, Urlingford, and several others belong to the same family. Courtstown Castle, the chief seat of the Graces, was a building of great extent and splendour; but the ruins have now nearly disappeared. In the barony of Gowran are numerous castles founded by the Puroella. In Knocktopher barony 15 castles of the Walshes are enumerated; and throughout the county are the remains of various other fortalices belonging to the families of Brennan, Cantwell, Morris, Curry, Shortall, and Fitzgerald.

KILKENNY, Ireland, the capital of the county of Kilkenny, a city and county of a city, a market-town, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the river Nore, in 52° 37' N. lat., 7° 13' W. long., 81 miles S.S.W. from Dublin by the Great Southern and Western railway. The population of the city in 1841 was 19,071; in 1851 it was 19,973. The county of the city comprises an area of 17,012 acres, of which 921 acres are in the city, and 16,091 in the rural districts or liberties. The parliamentary borough, which is co-extensive with the county of the city, returns one member to the Imperial Parliament. The borough is governed by 6 aldermen and 18 councillors, of whom one is mayor. Kilkenny Poor-Law Union comprises 21 electoral divisions, with an area of 110,943 acres, and a population in 1841 of 53,384; in 1851 of 46,710.

Kilkenny, signifying the church of Kenny or Canice, takes its name from the cathedral church of the diocese of Ossory, founded here about the end of the 12th century. The place was selected by the early Anglo-Norman invaders for the site of a castle, which when partially built was destroyed by Donald O'Brien, king of Thomond, in 1193. William Marshal, earl of Pembroke, founded the present castle in 1195. The castle occupies a commanding site on the right bank of the Nore, which is about 40 feet high, and faced with masonry. The cathedral is seated on a gentle eminence on the same side of the river, at the northern extremity of the city. The small river Bregah running into the Nore about midway between these points divides the city of Kilkenny proper from Iriestown, or St. Canice; Kilkenny having originally been dependant on the castle, Iriestown on the cathedral. A large suburb occupies the opposite side of the river, and is connected with Kilkenny proper and Iriestown by two handsome bridges. Several religious houses were founded here in the 13th and 14th centuries. Kilkenny was then a place of great importance as a frontier town of the Pale, and a place of assembly for councils and parliaments. At the parliament held here in 1367, before Lionel duke of Clarence, was passed the celebrated statute of Kilkenny, by which the ancient Irish code called the Brehon Law was abolished, although it continued practically in operation until the time of James I. The title of earl of Ormonde and the Kilkenny estate have been in the family of the Butlers since 1391. The town was walled in by Robert Talbot, a nephew of the Earl of Ormonde, in 1400. Parliaments and vice-royal courts continued to be held in Kilkenny until the breaking out of the rebellion of 1641, when it became the head-quarters of the Roman Catholic party. On the 23rd of March 1650 the Parliamentary army, commanded by Oliver Cromwell, appeared before the town, which was garrisoned for the Roman Catholic party by Colonel Walter Butler. Cromwell, having been thrice repulsed in his assaults on the town, was about to abandon the siege when the mayor and townsmen admitted his forces into Iriestown. On the 28th of March Ireton came up with 1500 men, on which the garrison surrendered on honourable terms, Cromwell himself complimenting them on their gallantry.

The cathedral church of St. Canice is a cruciform building surmounted by a low tower. It extends from east to west 226 feet, and from north to south 123 feet. The chapel of St. Mary, in the north transept, serves as the parish church. The oldest portions of the building date from the early part of the 13th century. The nave is divided from the aisles by pointed arches springing from black marble columns, between which are numerous altar-tombs. The choir, with the chancel, is 77 feet in length; it has oak fittings and a noble east window. Of the original castle there remain three massive towers worked into large additions, in the French taste of the 17th century, made by James duke of Ormonde in 1682. The building occupies three sides of a quadrangle, having a garden and fountain in front, and a lofty terrace towards the Nore. The principal apartment is the picture gallery, 180 feet in length, which contains numerous portraits of historical interest. This apartment commands magnificent views of Kilkenny and the valley of the Nore. The abbey church of St. John's has been converted into a parish church, and retains a good deal of the character of the original building. Black Abbey has been partly restored and converted into a Roman Catholic church.

Kilkenny was first incorporated by William Marshal the elder, and Iriestown by King Edward IV. Their governing charters are respectively of the 3rd and the 7th James I. By the provisions of the Municipal Reform Act they were formed into one borough. Prior to the Union of Great Britain and Ireland, Kilkenny and Iriestown returned two members each to the Irish Parliament. Assizes for the county and quarter and petty sessions are held in the town. The city jail is a small building; but that for the county, situated on the west of the town, is spacious and well constructed.

The town is well built, and has a busy and cheerful appearance, particularly that portion of it which constitutes Kilkenny proper. The building material is usually stone whitened or dashed with rough-cast. The principal buildings besides those already noticed are the two parish churches, seven Roman Catholic chapels, two monasteries, a presentation convent, a Presbyterian and a Methodist meeting-house, the infirmary, the Fever hospital, the Union workhouse (which has accommodation for 1500 inmates), and the barracks. Along the bank of the river there is a fine promenade called the Mall, which is above a mile in length, and has been much improved within the last few years. The city is head-quarters of a military district, the station of a resident magistrate, and the head-quarters of the district police. There is a savings bank. Fairs, all toll free, are held on March 28th for cattle, Thursday after Whitsuntide for frieze, Thursday after Trinity Sunday for cattle, November 10th, and on the first Thursday of every month; markets are held on Wednesday and Saturday.

The manufacture of blankets, coarse woollens and linens, and whisky has declined; the chief industrial establishments are flour-mills, breweries, and tan-yards. The provision trade is carried on extensively. Coal and black marble are raised in the neighbourhood. The coal is sulphurous, and burns without smoke or flame. The marble is much used for chimney-pieces and ornamental purposes; the streets of Kilkenny are paved with it.

The establishments for superior education are the Roman Catholic college of St. Kyran in the Cork Road, which had 60 scholars in 1852, and the Endowed Grammar school, which is also called the College. The Grammar school was founded by Pierce Butler, earl of Ormonde and Ossory, and his wife, the lady Margaret Fitzgerald, in the 16th century; it was further endowed by the duke of Ormonde in 1684. The number of scholars in 1853 was 76. Large schools are attached to the convent; there are also several other schools and a subscription library in the town.

KILKHAMPTON. [CORNWALL.]

KILLADYSERT, or **KILDYSERT**, Clare county, Ireland, a village and the seat of a Poor-Law Union, is situated on the right shore of the estuary of the Fergus, opposite the island of Innisherk, 12 miles S. by W. from Ennis. The population in 1841 was 604; in 1851 it was 440, besides 522 inmates of the Union workhouse. Killadysert Poor-Law Union comprises 11 electoral divisions, with an area of 62,817 acres, and a population of 24,018 in 1841, and 16,807 in 1851. A landing-pier and quay have been erected here by the commissioners for the improvement of the Shannon.

KILLALA, county of Mayo, Ireland, a small market and episcopal town, and the seat of a Poor-Law Union, is situated at the mouth of the river Moy, on the left shore of Killala Bay, 7 miles S. by E. from Ballina, in 54° 12' N. lat., 9° 11' W. long. The population in 1851 was 970, besides 1079 in the workhouse. Killala Poor-Law Union contains 8 electoral divisions, with an area of 104,882 acres, and a population in 1841 of 25,249; in 1851 of 14,120.

The town consists chiefly of three streets diverging from the summit of a flat-topped hill, on which stands the old cathedral dedicated to St. Patrick, a small plain structure, near which is an ancient round tower. The other places of worship are a large Roman Catholic chapel and a small Methodist chapel. The fisheries employ many of the inhabitants. In the French invasion of Ireland in 1798 the town of Killala was held for a month by the French and the insurgents who joined them. The market is held on Saturday, and fairs are held on May 6th, August 17th, and November 8th.

The bishopric of Killala was founded by St. Patrick; it has been united to the see of Achonry since 1607, and to that of Tuam since 1833. It lies chiefly in the county of Mayo, and partly in that of Sligo, and contains 14 benefices. The chapter consists of a dean, archdeacon, precentor, and five prebendaries. The old episcopal palace is now occupied as a private residence.

KILLALOE, county of Clare, Ireland, a market and episcopal town, is situated on the right bank of the Shannon, which is here crossed by a bridge of 19 arches, connecting the town with Ballina on the Tipperary side of the river, in 52° 48' N. lat., 8° 27' W. long., at a distance of 23 miles E. from Ennis, and 12 miles N. by E. from Limerick. The population in 1851 (including the suburb of Ballina, in the county of Tipperary) was 2230.

Killaloe is a place of great antiquity, and was for a long time the capital of the royal O'Briens of Thomond, one of whom in 1054 erected a timber bridge here over the Shannon. Brian Boroihme and many of his ancestors and successors resided at Kincoora, a mile north of Killaloe, on the south shore of Lough Derg. The town consists mainly of long lines of poor houses scattered along the slopes of hills and towards the new pier. It is a principal station of the Inland Steam Navigation Company. The works for the improvement of the Shannon have facilitated the navigation, which is now open between Limerick and the northern extremity of Lough Allen, a distance of 158 miles. Of this distance, 129 miles, from Killaloe to Leitrim, are navigable by large steamers. The communication with Limerick is by packet and passenger boats. Quays, docks, and warehouses have been erected at Killaloe. There is a considerable traffic along this line of navigation in the conveyance of passengers and of agricultural and mineral produce. The public buildings are—the Roman Catholic chapel, the barracks, the hotel, and the cathedral. There are marble-mills, a

slate-yard, a station and docks for the Limerick packets, and a steam-boat pier and docks. Killaloe was formerly of some importance as commanding an important pass: here in 1691 Sarsfield intercepted the artillery of William III. on its way to the siege of Limerick. Markets are held in Killaloe every Tuesday between Christmas and Easter, and fairs on Easter Tuesday, Whit-Tuesday, September 3rd, and October 20th.

The diocese of Killaloe comprises portions of the counties of Clare, Tipperary, King's County, Galway, and Limerick; and includes 70 benefices. The chapter consists of a dean, precentor, chancellor, treasurer, archdeacon, and six prebendaries. The income of the bishop is 3870*l.* St. Flannan, a disciple of St. Lua, or St. Molua (who founded a cell or chapel here in the beginning of the 7th century, and from whom the name of the town is said to be derived), was consecrated at Rome first bishop of this see about the year 639. In 1762 the see of Kilfenora was united to that of Killaloe. Under the Church Temporalities Act the united sees of Clonfert and Kilmacduagh have been also annexed to Killaloe. Of the united sees Killaloe and Kilfenora belong to the archiepiscopal province of Dublin; Clonfert and Kilmacduagh to the province of Armagh. The cathedral, which was rebuilt by Donald O'Brien, king of Thomond, in 1160, is a cruciform structure with a square tower, situated in an open space close to the river. The episcopal palace is a handsome residence in a well-planted demesne. The stone-roofed cell of St. Lua stands near the cathedral. It is remarkable as a specimen of the building of the 7th century. On an island below the bridge, and in front of the bishop's grounds, is another stone-roofed church of still higher antiquity.

KILLAMARSH. [DERBYSHIRE.]

KILLARNEY, county of Kerry, Ireland, a market-town and the seat of a Poor-Law Union, is situated on a level tract a mile and a half distant from the eastern shore of the Lower Lake of Killarney, in 52° 4' N. lat., 9° 30' W. long., at a distance of 17 miles S. by E. from Tralee, and 186 miles S.W. from Dublin by the Great Southern and Western railway. The population of the town in 1841 was 7127; in 1851 it was 5962, besides 4425 inmates of the workhouses. Killarney Poor-Law Union contains 31 electoral divisions, with an area of 251,287 acres, and a population in 1851 of 49,720.

The town consists of two principal streets at right angles, with several smaller streets. The best part of the town is called Kenmare-place, near which is the entrance to Lord Kenmare's demesne, a finely-timbered park. Besides the church there are a large Roman Catholic chapel, a nunnery, and two reading-rooms. The general appearance of the town is neat, and, during the summer and autumn, it becomes very animated in consequence of the influx of tourists who flock from all parts to enjoy the beautiful scenery of the famous lakes of Killarney. Quarter-sessions and weekly petty-sessions are held here. The court-house is a handsome stone edifice, having a bridewell attached. The market-house is an old building, now chiefly appropriated to the sale of linens. There are a fever hospital, a dispensary, an almshouse for aged women, a Roman Catholic Free school, a Free school connected with the Established Church, and a National school.

KILLARNEY, LAKES OF. [KERRY.]

KILLASHANDRA. [CAVAN.]

KILLASHEE. [LONGFORD.]

KILLENAULE. [TIPPERARY.]

KILLIECRANKIE. [PERTSHIRE.]

KILLILEAGH. [DOWN.]

KILLINEY. [DUBLIN, County of.]

KILLLOUGH. [DOWN.]

KILLYBEGS. [DORSET.]

KILMACDUAGH, a bishop's see in the archiepiscopal province of Armagh, in Ireland, lies wholly within the county of Galway, and contains four benefices. The chapter consists of a dean, provost, archdeacon, and prebendary.

The see was founded by St. Colman, surnamed Mac Duagh, about the end of the 6th century. It was united to the see of Clonfert in 1582; and under the Church Temporalities Act these united dioceses are now annexed to the sees of Killaloe and Kilfenora. The ruined cathedral, some remains of the abbey founded by St. Colman, a round tower which leans remarkably from the perpendicular, and some other old ecclesiastical buildings are situated about 2½ miles S.W. from Gort, near the boundary of the county Clare.

KILMACTHOMAS, county of Waterford, Ireland, a post-town and the seat of a Poor-Law Union, is situated on the slope of a steep hill above the river Mahon, 12 miles W. by S. from the city of Waterford, in 52° 12' N. lat., 7° 24' W. long. The population in 1851 was 1057. Kilmacthomas Poor-Law Union contains 16 electoral divisions, with an area of 64,478 acres, and a population in 1851 of 18,722. The mail-coach road from Waterford to Cork and Youghal formerly passed through Kilmacthomas, but in order to avoid the steep hill on which it stands, a new line of road has been opened, which leaves the town considerably to the northward. Kilmacthomas has a dispensary; petty sessions are held in the town; fairs are held on May 12th, August 12th, and December 6th.

KILMAINHAM. [DUBLIN, County of.]

KILMALLOCK, county of Limerick, Ireland, a market-town and the seat of a Poor-Law Union, is situated at the junction of the high roads from Limerick and Cashel to Charleville, 19 miles S. by E. from

Limerick by road, and 39 miles by the Limerick and Waterford, and Great Southern and Western railways; in 52° 23' N. lat., 8° 33' W. long.: the population in 1851 was 1074. Kilmallock Poor-Law Union is partly in the county of Cork and partly in the county of Limerick, and comprises 27 electoral divisions, with an area of 140,357 acres, and a population in 1851 of 48,779.

Kilmallock is one of the oldest towns in Ireland; it is said to have sprung up around a monastery founded here by St. Malachi in the 6th century, and of which a portion still remains. It is particularly associated with the history of the Desmond branch of the Geraldines, who made it their chief town and rendered it a place of great strength and splendour. Of its now ruined mansions none were erected later than the reign of James I.; the castles, gates, and walls date from the time of the Geraldines; the ecclesiastical remains claim a much earlier origin. The walls were strengthened with towers and pierced with four lofty castellated gate-entrances opening upon the extremities of the two principal streets, which were uniformly built and crossed each other at right angles. Two of these gates, several of the towers, and a considerable portion of the walls are still standing. Before the Union Kilmallock returned two members to the Irish House of Commons. The present town consists of a single street, which contains many houses of ancient date externally unaltered. These houses are built of hewn limestone, and are three stories high; they are ornamented with battlements, mullioned windows set in tasteful mouldings, and arched doorways. Of the larger mansions or castles two only remain. Of the ecclesiastical remains the most ancient is the abbey church of St. Peter and St. Paul, which stands on the bank of a little river within the town walls; the choir is now used for the parish church, and is the only portion of the structure that has a roof. Of the Dominican abbey, which was founded in 1291, and stood outside the walls, only the roofless church and part of the cloisters remain. This church is a large cruciform structure of massive but graceful architecture. A tall steeple rises over the intersection of the nave and transept: in the choir is the tomb of the branch of the Fitzgeralds who called themselves White Knights. In modern times the remains of this fine old town have served as a quarry, and many of the houses have been disfigured or reduced in their proportions. The town, though advantageously situated, has little trade. Fairs are held on March 25th, Whit-Tuesday, July 6th, November 8th, and December 4th.

KILMARNOCK, Ayrshire, Scotland, a municipal and parliamentary burgh and market-town, in the district of Cunningham, is situated in 55° 38' N. lat., 4° 30' W. long., 22 miles S.W. from Glasgow by road, and 3½ miles by the Glasgow and South-Western railway. The population of the municipal burgh in 1851 was 19,201: that of the parliamentary burgh was 21,443. The burgh is governed by a provost and 15 councillors; and conjointly with Dumbarton, Port-Glasgow, Renfrew, and Rutherglen, it returns one member to the Imperial Parliament.

Kilmarnock is situated in a fertile and populous district, and is well supplied with coal from the numerous mines in the vicinity. During this century several Acts of Parliament have been passed for cleansing, lighting, and paving the streets, and the town now contains many handsome streets and public buildings. The inhabitants were formerly engaged in the manufacture of 'broad bonnets.' The town is now the principal manufacturing town of Ayrshire for woollen and cotton goods, and is noted for the weaving of shawls and carpets, of which it exports a very large quantity.

In the centre of the town is a handsome cross, with a marble statue of Sir James Shaw, Bart. In March 1851 there were 18 places of worship in the town, of which 4 belonged to the United Presbyterian Church, 3 to the Established Church, 3 to the Free Church, and 1 each to Original Seceders, Independents, Baptists, the Evangelical Union, and Roman Catholics. Besides other schools Kilmarnock has a flourishing academy, founded in 1727, and of which the present building was erected in 1807. Its revenue from endowment is 59*l.* a year: the number of scholars in 1851 was 360. The town library is rich in the various branches of history. There are a mechanics institute, philosophical institution, and an Athenæum, which together in 1851 had 497 members, and 2100 volumes in the libraries attached to them. The public have access to a gallery of paintings containing the works of the native artists, John and William Tannock, and many fine paintings by the old masters. Near the town are the ruins of Dean Castle and Craufurdland Castle.

KILMAURS. [AYRSHIRE.]

KILMORE, a bishop's see in the archiepiscopal province of Armagh, in Ireland, comprises portions of the counties of Fermanagh, Leitrim, and Cavan, and a small part of the county of Meath, and contains 50 benefices. It has a dean and archdeacon but no chapter.

The see was founded in the 13th century, the bishops taking their title from a small village named Triburna. In 1454 the parish church of Kilmore was made a cathedral, and gave title to the bishop. The see is now united to those of Ardagh and Elphin. Kilmore House, the residence of the bishop, is a large mansion situated in a fine demesne three miles south-west from Cavan. Adjoining the palace is the very small village of Kilmore, from which the see is named.

KILPATRICK. [DUMBARTONSHIRE.]

KILREA. [LONDONDERRY.]

KILRENNY. [FIFESHIRE.]

KILRUSH, county of Clare, Ireland, a sea-port town and the seat of a Poor-Law Union, is situated at the head of a small bay on the north shore of the estuary of the Shannon, 26 miles S.W. from Ennis, 145 miles W.S.W. from Dublin, in 52° 33' N. lat., 9° 29' W. long. The population in 1851 was 4471, besides 4796 inmates of the workhouses. Kilrush Poor-Law Union contains 27 electoral divisions, with an area of 136,788 acres, and a population in 1851 of 51,247.

Kilrush Harbour is the first above the mouth of the Shannon, and the roadstead opposite it, sheltered by Scatterry Island, is the first secure anchorage from westerly gales. The pier, which projects in the direction of Hog Island from the entrance of the creek, has been recently extended, and affords shelter and accommodation to sailing-craft and steamers. Kilrush is a market for the sale of the in-shore and deep-sea fisheries of the Milltown Malbay fishing district. Large quantities of fish are shipped to Limerick. A considerable trade is also carried on with Limerick in turf, cut in the extensive bog which extends northward from Kilrush to Dunbeg Bay. The town is much resorted to for the benefit of sea-bathing. It has a good weekly market on Saturday, and annual fairs on May 10th and October 12th. The town consists mainly of two wide streets running along two sides of a large square, the centre of which is occupied by a handsome market-house. There are a new church, a spacious Roman Catholic chapel, a custom-house, a bridewell, police barracks, fever hospital, workhouse, and several large corn-stores. The Methodists have a chapel, and there are several schools. Quarter and petty sessions are held in the town. The island of Scatterry abounds in ancient ecclesiastical remains, among which is a round tower 120 feet high. The mansion and extensive demesne of C. M. Vandaleur, Esq., the proprietor of Kilrush, are close to the town. Steamers ply regularly between Kilrush and Limerick. Kilrush is one of the stations of the Royal Western Yacht Club.

KILSYTH. [STIRLINGSHIRE.]

KILWINNING. [AYRESHIRE.]

KILWORTH. [CORK.]

KIMBOLTON. [HUNTINGDONSHIRE.]

KINCARDINE. [KINCARDINESHIRE; PERTHSHIRE.]

KINCARDINESHIRE, sometimes called the Mearns, a maritime county in the east of Scotland, lying between 56° 46' and 57° 9' N. lat., 2° 3' and 2° 47' W. long., and bounded N. and N.W. by Aberdeenshire, S. and S.W. by Forfarshire, and E. by the ocean. Its greatest length along the sea-shore, from the Bay of Aberdeen on the north to the mouth of the Esk on the south, is about 30 miles; and it stretches inland 22 miles. Its area is 262,250 acres, or 394 square miles. The population in 1841 was 33,075; in 1851 it was 34,598. The county returns one member to the Imperial Parliament.

Coast-line.—The coast from the mouth of the North Esk to Bervie is generally low; all along it are rocks, mostly covered at high water. *Johnshaven*, on this part of the coast, is a small fishing village in Benholm parish, with a small harbour, to which belong a few sloops engaged chiefly in importing coal and exporting grain. A mile south of Bervie is the village of *Gourdon*, where is an excellent harbour, at which large quantities of grain are annually shipped. There are 17 feet of water here at high tide, and a good quay, to which vessels drawing 12 feet of water may come at low tide. Several fishing-boats belong to Gourdon. From Bervie to Stonehaven the coast is formed of a chain of cliffs, which rise from 150 to 300 feet out of the sea. There is no beach except where there are occasional breaks in the cliffs, forming little bays with a coarse gravelly shore. In *Dunnottar* parish are some remarkable caves, and the cliffs here are much frequented by sea-fowl. In this part of the coast are two small fishing villages, *Catterline* and *Crawston*, at each of which are small harbours. From Stonehaven northward the coast continues bold and rocky, but the indentations in the rocks and occasional level shores are more frequent and extensive, and there are in this part of the county many natural harbours. *Skateraw*, *Portlethen*, and the *Cove* may be mentioned as small harbours, chiefly for fishing boats.

Surface, Hydrography, and Communications.—The Grampian range, the extremity of which forms the promontory of Girdleness in this county, occupies the western, central, and more northern parts of Kincardineshire. To the south of the Grampians the county descends into what is locally termed the 'How or Hollow of the Mearns,' which is the eastern extremity of Strathmore. Strathmore commences at Stonehaven in this county, and extends in a south-westerly direction a distance of 80 miles. [GREAT BRITAIN.] There are high grounds all along the southern part of the coast, a little way inland, the more important of which are the Hills of Garvock, Bruxy Hill, and Langmuir Law.

The principal rivers are the Dee on the north [ABERDEENSHIRE] and the North Esk on the south [FORFARSHIRE]. The Bervie River rises in the Grampians, and after a winding course in a south-eastern direction falls into the sea at Bervie. The rivers Cowie and Carron both traverse that part of Strathmore immediately north of the district watered by the Bervie. The northern part of the county is abundantly watered by the tributaries of the North Esk. The river Aven is part of the north-western boundary of the county. The Dye, formed by the numerous mountain streams of the Grampians in the north-west, joins the Aven a few miles before it falls into the Dee.

In all these streams there are salmon fisheries. The roads of the county are numerous and kept in fair order. The Aberdeen railway crosses the Esk near Marykirk, and traverses the county by Laurencekirk and Fordoun to Stonehaven, after which it follows the line of the northern part of the coast. By the southern lines in connection with this railway the county has direct communication with all parts of the kingdom.

Geology, Mineralogy.—On the coast the prevailing rock is gneiss. Porphyry is occasionally found, and quarries of it are worked in *Dunnottar* and *Arbuthnot*. Granite is found on the coast, and south of Stonehaven there is a great deal of conglomerate. Sandstone is found occasionally. In the northern part of the county granite prevails. In the south specimens of red-freestone, quartz, felspar, granite, mica, porphyry, whinstone, and limestone are to be found in every kind of position and variety. Percelein clay of fine quality is found on the banks of some of the smaller streams in this part of the county. Iron-ore has been found near the village of Dalboy. In the parish of Laurencekirk and many other places there are quarries of limestone.

Climate, Soil, Agriculture.—The prevailing winds are the north and north-east in winter, the south and south-east in spring, and south-south-west and north-west in summer and autumn. The climate is generally salubrious.

Strathmore contains about 50,000 acres of comparatively low, fertile, and generally well-cultivated land, comprising about 8000 acres of thriving plantations. Along the coast, from the North Esk River to Stonehaven, the soil consists chiefly of a deep strong loam on a clay bottom, and a large portion of this district is in a high state of cultivation, the remainder being occupied with pasture, moor, and woodland. A third arable district is comprised within the narrow valley of the Dee. Cattle and sheep are extensively raised in Strathmore and on the high lands in the north-west of the county. Of late years the agriculture has been much improved, and there has in consequence been a very considerable rise in the value of land. The ordinary term of agricultural leases is 19 years. Farm buildings are but indifferent, and there is a deficiency of inclosures throughout the county.

Divisions, Towns, &c.—The county is divided into 19 parishes. The principal towns are Bervie and Stonehaven.

Stonehaven or *Stonehove Marischall* is the county-town and is reputed a burgh of barony. It is conveniently situated near the mouth and on both sides of the river Carron, about 16 miles S. from Aberdeen, in 56° 56' N. lat., 2° 12' W. long. The population in 1851 was 3240. Stonehaven has a small but convenient harbour. There is little trade except that of importing coal. About 70 or 80 fishing boats belong to the place. The town is well supplied with water and is lighted with gas. The episcopal chapel, which is in the form of a Greek cross, is one of the oldest in Scotland. The Episcopalians have recently erected handsome schools. There are two chapels of the Free Church, and one chapel for United Presbyterians, which have schools attached, besides which there is Donaldson's Free school. The public buildings are the county court-house, and the jail. At Stonehaven is a station of the Aberdeen railway. The place is frequented as a summer resort by sea-bathers. Jews-harps and tobacco-pipes are made here, and there are a fish-curing establishment, a brewery, and a power-loom linen weaving factory. Hand-loom weaving is carried on. The old market-cross bears the armorials of the Earls Marischall. Near the town, in Feteresso parish, is the tomb of Malcolm I.

The following are the only villages which require to be noticed besides those already mentioned on the coast; the populations are those of 1851:—

Kincardine, in the parish of Fordoun, was at one time the county-town, and had its chapel, its cross and its ports or gates, but is now a poor place having only a few houses. In the neighbourhood are traces of the Castle of Kincardine, where Kenneth III. is said to have been murdered, and where Baliol resigned the crown to Edward I. *Laurencekirk*, population of the village, which is a burgh of barony, 1611, is 30 miles S.W. from Aberdeen. Several fairs are held here in the course of the year. In addition to linen fabrics it produces the well-known snuff-boxes which bear its name. There are the parochial school and two Free schools, an episcopal chapel, three public libraries, and several friendly societies. At Laurencekirk is a station of the Aberdeen railway.

History, Antiquities, &c.—Kincardineshire has been the scene of few events of national interest. The Romans were defeated in Strathmore by Galgacus. David II. landed at Bervie. The duke of Cumberland traversed and occupied this part of the country in 1745. In nearly every part of the county are to be found cairns, memorial stones, stone circles, and other vestiges of the aboriginal inhabitants of our island. There are several traces also of Roman camps; and Roman coins and arms have been found. Of the antiquities of more modern times there remain towers and castles of the barons and landowners of the feudal age. *Dunnottar Castle*, in the parish of *Dunnottar*, once a strong fortress, is almost surrounded by the German Ocean. In the reign of James II. it was used for some time by the Scottish Privy Council as a place of confinement for nonconformists, 160 of whom were imprisoned at one time in a large dungeon, having a window opening to the sea over a high precipice. In this dungeon many of them died and a tomb-stone in the neighbouring

churchyard still preserves their names. It was in this churchyard, and while repairing the above tombstone, that Paterson the prototype of 'Old Mortality' was first met by Sir Walter Scott.

Industry, &c.—The cod and ling fishery along the coast commences in October and closes in July; and the haddock, skates, and turbot fishery, which is carried on with great activity, usually begins on the first of May, and closes about the middle of July. The haddock fishery is also carried on successfully in the winter months; the greater portion of the fish are smoke-dried and exported. The herring-fishery has declined. The weaving of dowlas, household linen, &c., is the chief manufacture of the county, the goods being made mostly for the merchants in Aberdeen and Dundee.

Religious Worship and Education.—According to the 'Returns of the Census' taken in March 1851 there were then in Kincardineshire 48 places of worship, of which 18 belonged to the Established Church, 16 to the Free Church, 7 to Episcopalians, 3 to United Presbyterians, 2 to Independents, and 2 to Baptists. The total number of sittings provided was 23,775. The number of Sabbath schools was 90, of which 36 were connected with the Free Church, 32 with the Established Church, 6 were supported by Episcopalians, 3 by United Presbyterians, 3 by Independents, and 2 by Baptists. The number of Sabbath scholars was 4732. Of day schools there were in the county 124, namely, 77 public schools with 3825 scholars, and 47 private schools with 1331 scholars. There were 3 evening schools for adults attended by 42 pupils, a useful knowledge society with 40 members, and a literary society which had 1400 volumes in its library.

Savings Banks.—In 1852 there were two savings banks in the county at Fordoun and Stonehaven. The amount due to depositors on 20th November 1852 was 29,397*l.* 12*s.* 11*d.*

KINETON. [WARWICKSHIRE.]

KING GEORGE'S SOUND. [AUSTRALIA.]

KING-TCHEOU. [CHINA.]

KING-TE-CHING. [CHINA.]

KINGHORN. [FFRSHIRE.]

KINGSBRIDGE, Devonshire, a market-town and the seat of a Poor-Law Union, in the parish of Kingsbridge, is situated at the head of an estuary of the English Channel, in 51° 17' N. lat., 3° 46' W. long., distant 32 miles S. by W. from Exeter, and 208 miles S.W. from London. The population of the parish of Kingsbridge in 1851 was 1679. The living is a vicarage annexed to the vicarage of Churchstow, in the archdeaconry of Totnes and diocese of Exeter. Kingsbridge Poor-Law Union contains 26 parishes and townships, with an area of 71,323 acres, and a population in 1851 of 21,377.

Kingsbridge is united with the small town of Dodbrooke by a bridge, the two places forming in effect one town. Kingsbridge consists chiefly of one street, built on a hill on the Modbury and Plymouth road; Dodbrooke, also of one street, on the Exeter road. The harbour gives accommodation to small vessels. In Kingsbridge are places of worship for Independents, Baptists, Wesleyan Methodists, and Quakers; a Free school, a National school, Crispin's Free Grammar school for 20 boys, which has four exhibitions of 50*l.* each, and in 1853 had 40 scholars; and other educational institutions. The exports consist chiefly of cider, corn, malt, and slate; coal is the principal article of import. The market is held weekly on Saturday, for corn, butchers' meat, and provisions; the corn-market is one of the largest in the county. An annual fair is held in July.

KINGSCLERE, Hampshire, a market-town and the seat of a Poor-Law Union, in the parish of Kingsclere, is situated in 51° 19' N. lat., 1° 14' W. long., distant 32 miles N.N.E. from Southampton, and 54 miles W.S.W. from London by road. The population of the parish of Kingsclere in 1851 was 2885. The living is a vicarage in the archdeaconry and diocese of Winchester. Kingsclere Poor-Law Union contains 15 parishes, with an area of 43,306 acres, and a population in 1851 of 8903. Kingsclere is a small town of mean appearance. The parish church, a cruciform edifice of Norman character, with a central tower, was restored in 1848-49. The Free school for boys was endowed by Sir James Lancaster in 1618, with 20*l.* per annum. There is a National school for girls. Some trade in malt is carried on: a small corn market is held on Tuesday, and there are two fairs in the year. At Kingsclere was anciently a residence of the West Saxon kings; and a royal residence was in the neighbourhood in the time of King John.

KINGSCLIFFE. [NORTHAMPTONSHIRE.]

KING'S COUNTY, Ireland, an inland county of the province of Leinster, is bounded N. by Westmeath, E. by the county of Kildare, S. by Queen's County and Tipperary, and W. by the river Shannon, which separates it from the counties of Galway and Roscommon. Its greatest length from east to west is 40 miles; from south to north, 39 miles. It lies between 52° 51' and 53° 26' N. lat., 6° 59' and 8° 3' W. long. The area contains 493,985 acres, of which 337,256 are arable, 145,836 uncultivated, 8258 under plantations, 902 in towns, and 1733 under water. The population in 1831 was 144,225; in 1841 it was 146,857; and in 1851, 112,080.

Surface and Hydrography.—The county is very irregular in its outline; it extends east and west from Kildare to the Shannon, and thence southward to the Slieve-Bloom and the northern offshoots of the Devil's Bit Mountains. A series of low limestone hills, running in a north-easterly direction from the northern extremity of the Slieve Bloom by Geashill, divides the northern portion of the county into

two districts of unequal area, of which one slopes eastward to the Barrow, and the other westward to the Shannon. In the north-eastern part of the county the conical hill of Croghan rises 500 feet above the surrounding country. From the northern and eastern declivities of Croghan Hill the ground slopes towards the basin of the Boyne.

From Croghan and the Yellow River to the Boyne, which forms the north-eastern boundary of the county, is a tract of well-cultivated country, containing the market-town of Edenderry. A branch from the Grand Canal is carried to this town, which is situated above half a mile north from the main line. The district south of the Grand Canal, between Geashill and the county of Kildare, is occupied by a portion of the Bog of Allen. This tract, extending about twelve miles every way, is divided into two basins by the Philipstown and Cushina rivers, which discharge themselves through the Feagile and Little Barrow rivers into the Great Barrow, which forms the southern boundary of the district. Each of the rivers just mentioned has margin of arable land varying from half a mile to three miles in breadth. The valley of the Barrow is highly cultivated, and to a considerable extent occupied by the demesnes of the resident gentry. At Port-arlington the Barrow is shallow and rapid, having a fall of 16 feet between this place and its junction with the Little Barrow.

West from the range of Geashill the country slopes to the valley of the Brosna, which, flowing from Lough Ennil in West Meath, traverses the north-western portion of the county, and after receiving the Clodagh and the Broughill, or Silver River, from the district between Geashill and the Shannon, flows into that river at Shannon Harbour. The line of the Grand Canal, which joins the Shannon at the same point, is nearly parallel to the course of the Brosna after its junction with the Clodagh. The bogs which stretch along the southern side of the Grand Canal occupy an area of 11,588 acres. They are disposed in three principal tracts, separated from one another by low hills of limestone-gravel, and bounded on the south by the hill of Clodagh. South of the hill of Clodagh five principal fields of bog extend over an area of about 24,000 acres. This tract is drained by the Broughill River, which is formed by two streams, one issuing from Lough Annagh on the borders of Queen's County, and the other from the western end of a depression in the Slieve-Bloom called the Black Gap, near the small town of Kinnitty. The Broughill River, passing under the Grand Canal, runs into the Brosna about three miles below the junction of the Brosna with the Clodagh, which also passes under the canal. The valley of the Brosna is well cultivated. The river winds between undulating banks which form a margin of considerable breadth on each side free from bog, and towards West Meath spread into a well-cultivated open country about the town of Clara, which is situated on the river near the border of the county. The district between the Brosna and West Meath, with the exception of the arable margin of the river, is almost wholly occupied by bogs, the most eastern of which, the bog of Kilmaleady, now generally known as the 'moving bog,' in the year 1821 flowed nearly a mile and a half down an adjoining valley. A margin of arable land borders the Shannon also, and several elevated tracts of limestone-gravel separate the several districts of bog from each other.

The remaining portion of the county, included between the western declivities of the Slieve-Bloom Mountains, Tipperary, and the Shannon, has a general slope towards the Little Brosna, which forms the boundary between King's County and Tipperary. There are fortifications at both ends of the bridge across the Shannon at this place commanding the approaches, and about a quarter of a mile farther down, on the King's County side, is a circular redoubt mounting six pieces of cannon. The banks of the Shannon are here richly clothed with meadow, but liable to frequent floods. The valley of the Little Brosna from the Shannon to Birr, and thence to the Slieve-Bloom and the borders of the county of Tipperary, is an undulating well-inhabited district containing extensive tracts of pasture, and towards the mountains abounding with varied and pleasing scenery. The highest elevation of the Slieve-Bloom Mountains is 1639 feet. They extend in a line from north-east to south-west for a distance of 15 miles along the Queen's and King's counties. A narrow pass called the Gap of Glandine, near the northern extremity of the range, is the only point of communication throughout this line available for purposes of general traffic. A continuation of the Devil's Bit range forms the more southerly part of the boundary-line bordering on Tipperary. These mountains, although of no great altitude, present a varied and picturesque outline, and abound with scenes of much natural beauty.

That part of the river Shannon which borders on this county is included within the division of the Middle Shannon. The navigation is partly by the river and partly by short lateral canals. The Little Brosna is navigable for small boats.

Communications.—The completion of the works under the commissioners for the improvement of the Shannon, has rendered that fine river navigable for large steamers from Lough Allen to Killaloe; and steamers of 300 tons burden ply daily up and down the river from Shannon Harbour, at the terminus of the Grand Canal. The Grand Canal crosses the county from east to west with branches to Edenderry and Kilbeggan, and a continuation on the Connaught side of the Shannon to Ballinasloe. As yet no railways traverse any part of this county; the Midland Great Western between Dublin and Galway runs at a little distance from the northern boundary, and the

Great Southern and Western from Dublin to Cork passes near the southern border. The most important highways are the mail road from Dublin to Birr, and the mail-coach roads from Dublin to Galway and Limerick, which respectively cross the north-western and south-western districts of the county. There are also numerous good cross-roads.

Geology.—The stratified limestone of the central plain of Ireland spreads over the entire area of the county, except the portions occupied by the Slieve-Bloom chain and the hill of Croghan. The Slieve-Bloom range consists of clay-slate, supporting flanks of very compact sandstone in which the clay-slate is enveloped on all the declivities. The strata of the clay-slate vary from one foot to three feet in thickness, and in some places afford excellent flags. Croghan Hill consists of trap conglomerate. The limestone of the surrounding plain appears tilted up and supported on the north-western and south-western sides of the greenstone tabular masses. Calcareous matter is generally diffused through this rock, which varies from a pale lavender colour to a grayish-black. The rock is very easily decomposed, and forms an uncommonly rich and friable soil. The hill is almost all under cultivation, and yields the most abundant white and green crops. Massy strata of greenstone appear also between Croghan Hill and Philipstown.

Climate, Soil, and Agriculture.—Notwithstanding the extent of wet ground on the surface of King's County, the climate is neither damp nor unwholesome. This is partly accounted for by the antiseptic quality of the peat-bog, and partly by the county lying comparatively high and open. The bogs, which occupy so large a portion of the county, generally repose on limestone gravel. The soil in general is not naturally fertile, but can be made to yield very good crops in the arable districts, by manuring with the lime and bog-mud. Near the middle of the Slieve-Bloom range are some fertile and extensive pastures. In the district lying between these mountains and Tipperary the soil is generally a light gravel, easily tilled, and tolerably fertile. The banks of the Shannon where they are occasionally overflowed afford considerable tracts of fine meadow, and the eskers and derries, as the open spots of dry ground in and between the bogs are termed, have generally a rich friable soil. The chief grazing districts in the county lie on the borders of West Meath, where the pastures are considered very favourable to wool-growing. Throughout the central division the soil, where unincumbered with bog, is almost wholly in tillage. The best ground in the county is in the northern division, from Croghan Hill to the boundary of Meath.

The number of acres under crops in 1853 was 132,098, of which 13,939 produced wheat; 37,370 oats; 8340 barley, bere, rye, peas, and beans; 17,891 potatoes; 10,678 turnips; 3302 mangolds, carrots, cabbage, and green crops; 195 flax; and 39,883 acres were in meadow and clover. Including an estimate for detached trees, in 1841 there were 11,185 acres growing timber, chiefly oak, ash, elm, and beech. On 12,960 holdings there were 12,466 horses; 5555 mules and asses; 48,553 horned-cattle; 379 deer; 78,230 sheep; 19,477 pigs; 4667 goats; and 162,296 head of poultry.

The occupations are entirely agricultural; the fabrics, such as household linen, frieze, and serge, made by the peasantry, being merely for family use.

Divisions and Towns.—King's County is divided into 12 baronies—Ballyboy, south and centre; Ballybrit, south-west; Ballycowan, central; Clonlisk, south-south-west; Coolestown, east; Egliah, Garrycastle, west; Geashill, south and east of centre; Kilcoursey, north-west; Philipstown Lower, north, and Upper, south-east; and Warrentown, north-east. The chief towns are Tullamore; Birr, or Parsonstown; Banagher; Portarlington; and Edenderry; all of which are noticed under their proper heads.

The other more important places are the following, with the population of each in 1851:—

Clara, 7 miles N.W. from Tullamore, population 996, is a neat little town on the Brosna, which here drives several large corn-mills. The town has a church, a Roman Catholic chapel, a Methodist meeting-house, and a dispensary. A corn-market is held weekly on Wednesday, and ten fairs are held in the course of the year.

Frankford, population 956, on the Broughill River, 15 miles S.W. from Tullamore, has a large Roman Catholic chapel and a dispensary. A corn-market is held here weekly on Saturday. Near the town are several handsome country seats, among which are Broughill Castle, the residence of N. Fitzsimon, Esq., and Temora, the ancient seat of the counts Magawley.

Kinnitty, population 452, a neat village, containing a church, a Roman Catholic chapel, a dispensary, and a National school, is situated at the foot of the Slieve Bloom Mountains, 18 miles S. by W. from Tullamore. Close to the town is Bernard Castle, the seat of Captain Bernard. At a short distance east of the village are Knocknahan and Carroll's Hill, summits of the Slieve-Bloom, which rise respectively to 1113 feet and 1584 feet above the sea, and afford extensive views over the great central plain of Ireland. A few miles W. of Kinnitty are the ecclesiastical ruins and ancient burying-ground of Seir-Kieran, or St-Kieran. Among the ruins is a small round tower 20 feet high, with a conical stone roof.

Moneygall, population 631, situated in the most southern part of the county, at the foot of the Devil's Bit Mountains, and 36 miles S.S.W.

from Tullamore, has a dispensary. In this part of the county there are extensive plantations and numerous country seats. Fairs are held in May, August, and November.

Philipstown, population 748, a market-town, formerly a parliamentary borough, and till 1833 the assize town of the county, situated on the Grand Canal, 8 miles E. by N. from Tullamore, consists chiefly of one street, and is altogether an ill-built place. The old name of the town was *Dangan*, which was changed to Philipstown in honour of Philip II. of Spain, husband of Queen Mary; it returned two members to the Irish House of Commons. The public buildings are a sessions-house, a jail, a cavalry barrack, a Roman Catholic chapel, a church, and the remains of Fort Castle, in which King Philip resided during his visit. The town has a dispensary and two schools. A weekly market is held on Thursday.

Shinrone, population 873, about 6 miles W. by N. from Roscrea, has a neat church, a large Roman Catholic chapel, a small chapel for Methodists, a fever hospital, a dispensary, and a National school. Petty sessions are held weekly. Fairs are held in Shinrone on July 9th and November 21st.

Besides the places already noticed the following may be mentioned. The populations are those of 1851.

Ballyboy, population 219, situated on the Broughill River, 13 miles S.W. from Tullamore, has a neat church. About a mile south of it is the hill of Knock, which attains a height of 499 feet above the adjacent flat country. *Ballycumber*, population 156, a village 8 miles W. from Tullamore, stands on the Brosna, which is here crossed by a good stone bridge. In the vicinity are several handsome seats, forming with the village an agreeable contrast to the dreary expanse of bog. *Cloghan*, population 563, 16 miles W.S.W. from Tullamore, on the road to Banagher, is a village situated in a level country, about a mile W. from the beautiful green hill of Cloghan. In the village are a church and a Roman Catholic chapel, and a few miles south of it is Cloghan Castle, the residence of G. O. Moore, Esq., which is one of the oldest inhabited castles in Ireland. *Crinkill*, population 556, forms a suburb of the town of Birr, and has a police station. *Ferbane*, population 641, on the right bank of the Brosna, 14 miles W. from Tullamore, is situated in a flat country, with large tracts of bog near the town. It contains a church, a Roman Catholic chapel, several schools, a dispensary, and a small inn. *Geashill*, 7 miles E.S.E. from Tullamore, population 326, is situated on the road from Philipstown to Portarlington. The village stands on the summit of a ridge of hills, which is crowned with the parish church, the parsonage, and the ruins of the old castle of Geashill. *Killeigh*, population 182, a small village containing a chapel of ease and a large Roman Catholic chapel, is situated 5 miles S. from Tullamore, on the road to Mountmellick. This place is of considerable antiquity, and once had three monasteries, remains of one of which still exist. *Shannon-Bridge*, population 395, is situated on the left bank of the Shannon, 24 miles W. from Tullamore, on the road to Ballinasloe. It is one of the three fortified passes still maintained upon the Shannon, the other two being Banagher and Athlone. The bridge which here crosses the Shannon consists of 16 arches, with two additional arches across a short lateral canal cut to avoid a fall of about a foot in the current of the river. At the Roscommon or Connaught end of the bridge is a tête-de-pont, capable of accommodating a small garrison. The public road runs between the barracks and fort, passing through a strong gate. The fortifications resemble those at Banagher, but the barracks are larger and the battery is more conspicuous. *Shannon-Harbour*, population 152, stands on the Grand Canal, 7 miles S.E. from Shannon-Bridge, half a mile E. from the Shannon. It contains a large inn and stores originally constructed by the Canal company, but now partially occupied as a police barrack. A steamer runs between Shannon-Harbour and Killaloe. A fine quarry of dove-marble is worked near the village.

King's County is in the dioceses of Kildare, Meath, Killaloe, Ossory, and Clonfert. There were 84 National schools in operation in September 1852, attended by 4434 male and 5147 female children. The county returns two members to the Imperial Parliament. Assizes are held at Tullamore. Quarter sessions are held at Tullamore, Birr, and Philipstown, in each of which is a court-house and jail; that at Tullamore being the county jail, and the others bridewells. Petty sessions are held in 16 places. The district lunatic asylum, to which King's County is entitled to send 48 patients, is at Maryborough, in Queen's County. A county infirmary is at Tullamore; fever-hospitals are at Shinrone and Birr, and dispensaries in all the chief towns and villages. Savings banks are established at Tullamore and Birr. There are Union workhouses at Tullamore, Edenderry, and Birr. The county is partly in the military district of Dublin and partly in that of Limerick: there are barracks at Banagher, Birr, Shannon Bridge, Tullamore, and Philipstown. The staff of the county militia is stationed at Birr. The police force of the county, consisting of 412 men and officers, has its head-quarters at Tullamore, and is distributed among 6 districts, comprising 56 stations. The districts are Tullamore, Edenderry, Ferbane, Birr, Shinrone, and Frankford. Resident magistrates are stationed at Tullamore and Birr.

History and Antiquities.—This district was not made a distinct county until 1557. Before that period it was generally designated Western Glenmalery, to distinguish it from Eastern Glenmalery, the

present Queen's County. The fort of Dangan, an old seat of the O'Connors, princes of Offaly, was at the same time made the shire town, and called Philipstown, in compliment to the king consort.

The ruins of the seven churches of Clonmacnoise, situated on the left bank of the Shannon, in the north-western part of this county, form one of the most interesting groups of ecclesiastical remains in Ireland. St. Kieran of Clonard founded the abbey of Clonmacnoise A.D. 548. It was subsequently raised to the rank of a cathedral church, and so continued till 1568, when the see of Clonmacnoise was united to that of Meath. The ruins are inclosed by a wall, at two of the angles of which are ancient round towers. The buildings within the precincts are chiefly chapels, erected over family burying-places by various Irish kings and chieftains. The place exhibits more numerous remains of ancient monuments than any other cemetery in Ireland. Two monumental crosses, richly carved, stand near the western door of the chapel called Temple MacDermot. One of these, 15 feet in height, is formed of a single stone. The remains of several other religious houses are in the immediate vicinity. The entire group occupies a gently swelling bank, rising from the Shannon. Twenty-eight other religious houses are enumerated in this county, of which the chief were—Birr; Durrow, founded in 550; Gallen on the Brosna, founded in the 5th century; Monastercoras, near Edenderry, founded by John Bermingham, earl of Louth, in the year 1325; and Seirkieran, near Birr, founded in 402, by St. Kieran the Elder, and for some time a cathedral church. There are numerous remains of feudal castles, chiefly of the Elizabethan era. Leap Castle, situated on a declivity of Slieve Bloom, in a strong and commanding position, is still inhabited; as are also Cloghan Castle and the castle of Birr.

KINGSCOURT, county of Cavan, Ireland, a small town consisting of one long straggling street, is situated 24 miles E. by S. from Cavan; the population in 1851 was 1143. The town stands on a neck of land where the counties of Meath, Cavan, Louth, and Monaghan meet. It contains several good houses, a neat church, and a large Roman Catholic chapel. There is a good weekly market on Tuesday for agricultural produce; thirteen fairs are held in the year. A resident magistrate is stationed in the town, which has a dispensary and a loan fund. Petty sessions are held here.

KING'S LYNN. [LYNN.]

KING'S NORTON, Worcestershire, a village and the seat of a Poor-Law Union, in the parish of King's Norton, is situated in 52° 24' N. lat., 1° 56' W. long., distant 24 miles N.E. by N. from Worcester, 114 miles N.W. from London by road, and 119 miles by the London and North-Western railway. The population of the parish of King's Norton was 7759 in 1851. The living is a perpetual curacy in the archdeaconry and diocese of Worcester. King's Norton Poor-Law Union contains five parishes, with an area of 27,666 acres, and a population in 1851 of 30,871.

The parish of King's Norton is of considerable extent, covering an area of 11,970 acres, but there is little to notice in the village. The parish church, an ancient structure, perpendicular in style, with a handsome spire, is commodious, and contains some interesting monuments. There are two chapels for Methodists, and one each for Baptists and Unitarians. King Edward VI.'s Free school had 15 scholars on the foundation and 25 other scholars in 1852. Gunmaking is carried on in the village and neighbourhood. An annual fair is held on May 6th. Some very old overhanging half-timber houses are in the village. The Birmingham and Worcester Canal passes through a tunnel about two miles long a short distance southward from King's Norton.

KINGSTHORPE. [NORTHAMPTONSHIRE.]

KINGSTON. [ELGINSHIRE.]

KINGSTON. [CANADA; JAMAICA.]

KINGSTON-UPON-HULL. [HULL.]

KINGSTON-UPON-THAMES, Surrey, a market-town, municipal borough, and the seat of a Poor-Law Union, in the parish of Kingston, is situated on the right bank of the Thames, in 51° 24' N. lat., 0° 18' W. long., distant 17 miles N.E. from Guildford, 13 miles S.W. from London by road, and 12 miles by the London and South-Western railway. The population of the town of Kingston-upon-Thames in 1851 was 6279. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor. The living is a vicarage with the vicarage of Richmond annexed, in the archdeaconry of Surrey and diocese of Winchester. Kingston Poor-Law Union contains 13 parishes and townships, with an area of 25,080 acres, and a population in 1851 of 26,788.

Kingston is a place of great antiquity. Many Roman antiquities have been found near the town, and some antiquaries have contended for this being the spot where Cæsar crossed the Thames. It was a place of note in the Anglo-Saxon times: seven of the Anglo-Saxon princes were crowned here. A stone, believed to be that on which the Saxon monarchs sat at their coronation, formerly stood by the church; in 1850 it was removed to an open space near the assize-courts, and mounted on an ornamental granite pedestal, on the base of which is inscribed the names and dates of the kings crowned at Kingston. A railing with pillars at the seven angles surrounds the stone. The first charter granted to the town was by John, in 1199. Kingston sent members to Parliament in the reigns of Edward II. and Edward III., but not since.

GEOG. DIV. VOL. III.

Kingston extends about half a mile along the Thames, and about a quarter of a mile inland, at the junction of the Hog's Mill River with the Thames. It is irregularly laid out; the streets are lighted with gas. The parish church is an ancient building, but has undergone numerous alterations and repairs: it is cruciform, with a central tower. In the interior are several interesting monuments. At Surbiton, or New Kingston, is a district church, erected in 1845 at the expense of Miss Coutts. There is a chapel for Independents, a county court-house, and a county house of correction. The town-hall, which was erected in 1838 in the centre of the market-place, is a handsome building. Queen Elizabeth's Free Grammar school, founded in 1561, is held in an ancient edifice formerly a chapel dedicated to St. Mary Magdalen: the income from endowment is 65*l.* a year; the number of scholars in 1853 was 50; the school is free to none. There are large National schools, a Blue-Coat school, and an Infant school, almshouses for six aged men and six aged women, some parochial charities, and a savings bank. The bridge over the Thames is of stone, with five arches; it was erected in 1827, at an expense of 40,000*l.*, in place of the ancient wooden bridge which previously stood here. The chief business of the town is malting; there is also a considerable coal trade. There are brick- and tile-works and market-gardens round the town, and breweries and oil-mills in it. A market is held on Saturday for corn, cattle, pigs, and provisions. There are three yearly fairs; the chief fair is one for cattle, sheep, and horses, held on November 13th and seven following days. General and petty sessions are held in the town; the Michaelmas quarter sessions and the Lent assizes for the county are held here, also a county court.

KINGSTOWN, county of Dublin, Ireland, a sea-port town and the mail-packet station of the city of Dublin, is situated in the parish of Monkstown, barony of Rathdown, distant 6 miles E.S.E. by railway from Dublin. The population in 1851 was 10,458. This place was called Dunleary till September 3rd, 1821, when the name was changed to Kingstown to commemorate the embarkation of George IV. for England, which circumstance is recorded on a granite obelisk near the wharf. Although an ancient place, it was a mere fishing village and collier haven till the new harbour-works were commenced in 1817. Since then the town has been greatly extended, so that Kingstown may now be said to include not only Dunleary, but also Monkstown, Bullock, and Dalkey. The harbour, the formation of which has already cost above 700,000*l.*, is described in the article DUBLIN County. The harbour has not proved so useful as was expected, owing to the anchorage being very much exposed. The number of vessels that entered Kingstown harbour in 1851 was 2126, of the aggregate burden of 257,367 tons, exclusive of men-of-war, cruisers, and mail packets; of this number 1117 were vessels trading to or from the port of Dublin. The city of Dublin royal mail steam-packets sail twice a day with the mail and government despatches to Holyhead; there is besides daily communication by steamers with Cork, Liverpool, Holyhead, and Chester, and packets sail regularly to London and other important towns. The chief exports are cattle, corn, lead-ore, and granite; the imports consist chiefly of coal, iron, and timber. The beauty of the situation, the salubrity of the air, the picturesque country around the town, the arrival and departure of the steam-vessels, and the bustle connected with the shipping, have contributed to make Kingstown a place of great resort: it is also much frequented as a watering-place. The principal street is George's-street, extending above half a mile in length. There are numerous avenues, terraces, and parades, some of which are uniformly built, and present a handsome appearance. Besides the parish church, which is at Monkstown, there are a large and handsome Roman Catholic chapel, St. Mary's convent, a Free church, the Mariners church, and places of worship for Presbyterians, Methodists, and Quakers. The Kingstown terminus of the railway to Dublin, and the tunnel of the atmospheric railway to Dalkey, are in front of the harbour. There are a petty sessions court-house, police and coast-guard stations, a savings bank, lying-in hospital, dispensary, National and other schools, and commodious baths. The town is lighted with gas. The paving and lighting of the town is managed by a board of 18 commissioners. There are remains of old castles at Monkstown and Bullock, and of three in the village of Dalkey. Kingstown is the station of the Royal St. George's Yacht Club.

KINGSTOWN. [VINCENT, ST.]

KINGTON, Herefordshire, a market-town and the seat of a Poor-Law Union, in the parish of Kington, is situated in 52° 12' N. lat., 3° 1' W. long., distant 19 miles N.W. by W. from Hereford, and 154 miles W.N.W. from London. The population of the joint township of Old and New Kington in 1851 was 1939. The town is governed by a bailiff. The living is a vicarage in the archdeaconry and diocese of Hereford. Kington Poor-Law Union contains 26 parishes and townships, with an area of 70,957 acres, and a population in 1851 of 11,653.

Kington is pleasantly situated on the river Arrow; the greater part of the town is on the left bank. The town is lighted with gas. The church is a fine but irregular structure, chiefly of the decorated style; it was dedicated by Bishop Orleton to the Virgin Mary on the 18th of April, 1325. The Independents, Baptists, and Wesleyan and Primitive Methodists have places of worship. Lady Hawkins's Free school, which has an income of 210*l.* a year, had 30 scholars in 1850. There are National schools and a savings bank. A county court is

held in the town. The market-day is Wednesday: eight fairs are held in the course of the year.

KINNOUL. [PERTHSHIRE.]

KINROSS, Kinross-shire, Scotland, a market-town and the capital of the county, is situated on the western bank of Loch Leven, in 56° 13' N. lat., 3° 24' W. long.; distant 28 miles N.W. from Edinburgh. The population of the town in 1851 was 2590. The town contains many handsome houses, and is well lighted with gas. Besides the parish school there are a Free Church school, two Foundation schools, and others of minor importance; also a savings bank. The manufacture of tartan shawls is the chief occupation, and in connection with it spinning, scouring, dyeing, &c., are carried on. In the town are a flour-mill and a tan-work. The fishery in the loch employs several persons. The parish church, built in 1832, is a handsome gothic structure. There are two chapels for United Presbyterians and one Free church. The county-hall is an elegant building, built in 1826, and contains a court-room with offices for county business, and a jail. In the vicinity is Kinross House, originally built as a residence for the Duke of York, afterwards James II., in the event of the Exclusion Bill becoming law.

KINROSS-SHIRE, Scotland, a small inland county, bounded E. and S. by Fifeshire, and W. and N. by Perthshire, between 56° 8' and 56° 18' N. lat., 3° 14' and 3° 35' W. long. Its length from east to west is about 12 miles, and its width from north to south barely 10 miles. Its area is 49,531 statute acres. The population was 8763 in 1841 and 8924 in 1851. Conjointly with Clackmannanshire this county returns one member to the Imperial Parliament.

Surface, Hydrography, and Communications.—On the southern boundary of the county are the Cleish Hills; on the northern boundary are the Ochils; the south-eastern boundary runs partly along the summit of the hill of Binnarty and partly along the flat ground to a point on Kelty Burn, which stream, having its source in the Cleish Hills, forms the southern boundary. The western Lomonds are in the eastern part of the shire. The boundaries are chiefly hilly, but a level opens from the south at Blair Adam; a similar level opens to the west towards Stirling, at the Crook of Devon; and a third level to the north-east, between the Ochil and Lomond hills, leading towards Cupar in Fife. There is, in addition, a narrow passage on the east, through which flows the river Leven.

This county contains several fresh-water lakes, which are well stocked with fish. By far the most important is Loch Leven, a noble piece of water, covering a surface of near 3300 acres. Its height above the level of the sea is about 300 feet. Its greatest depth is from 80 to 90 feet. It contains four islands, the largest of which is called the Inch. The lake abounds in fish, and the trout, which are considered a great delicacy, are sent to the Edinburgh market. The level of the lake has been considerably reduced for the purpose of reclaiming a part of its basin. Upon a small island at the north-west end of Loch Leven are the ruins of the castle of Loch Leven, a fortress of great antiquity, long used as a royal residence, and noted as the prison in which Queen Mary was retained a prisoner. The ancient monastery of Portmoak, on the left bank of the Leven, near the lake, is said to have been built by a Pictish king, and to have been the first place in Scotland given to the Culdees after the conversion of the Picts to Christianity. On the Inch in Loch Leven, called St. Serf's, or St. Servanus Isle, once stood a priory, but no traces of it remain.

The chief streams are the Gairney, and the South and the North Queich. The Gairney rises among the Cleish Hills; the North and the South Queich have their sources among the Ochils, and all three fall into Loch Leven, the overflow of which forms the river Leven. The county is well provided with roads, which are kept in good repair; it is traversed from south to north by the great north road.

Geology.—Coal is found on the south, where the county joins the borders of Fifeshire. There are quarries of good sandstone in that quarter. To the north of Kinross red-sandstone is the geological formation of the district. The formation of the Ochil and Lomond hills will be found respectively under CLACKMANNANSHIRE and FIFESHIRE; the general geological character of the whole district is described under GREAT BRITAIN.

Soil, Climate, Agriculture.—The interior of the county, comprising about one-half of the whole, may be regarded as a plain slightly varied by gentle undulations. The soil is various, chiefly inclining to gravel. To the north and west of Loch Leven it is clayey, tolerably fertile, and produces early crops; in the more elevated parts it consists of moor, forming however excellent pasture. The climate, though cold and wet, owing to the general elevation of the land, has been much improved by extensive drainage. Upon the whole the county is healthy, and the people are vigorous, and subject to few distempers. Frost sets in sooner and continues longer than in the adjacent country to the south, yet agriculture has been so much improved that the seed-time and harvest are seldom behind those of the neighbouring districts. The farms are mostly occupied by resident owners. Of the grains which are cultivated the chief attention is given to oats. The district is well suited for turnip husbandry and the rearing of sheep stock.

Divisions, Towns, &c.—Kinross-shire includes four parishes and small portions of three adjoining parishes, the principal parts of which are in Perthshire. KINROSS is described elsewhere; the only other

place worthy of mention is *Milnathort*, population 1606, a thriving village, in the parish of Orwell, about 2 miles N. from Kinross. It is lighted with gas, possesses a chapel of ease, a United Presbyterian and a Free Church, a savings bank, and a public library, said to be the oldest in Scotland. The inhabitants are chiefly engaged in the manufacture of tartan shawls. A weekly corn-market is held in the village.

History, Antiquities, &c.—The only historical events connected with this county are the defence of Loch Leven Castle by Alan de Vipont against an adherent of Baliol, and the subsequent imprisonment of Queen Mary and her escape from the castle. There are so-called druidical remains in the parish of Orwell, and several vestiges of the feudal and ecclesiastical periods of national history throughout the county, but none of importance.

Religious Worship and Education.—According to the returns of the Census taken in March 1851, it appears that there were then in the county 14 places of worship, of which 6 belonged to the Free Church, 4 to the Established Church, and 4 to the United Presbyterian Church. The total number of sittings provided was 6125. The number of Sabbath schools in the county was 14, of which 4 belonged to the Established Church, 4 to the Free Church, and 4 to the United Presbyterian Church. The total number of scholars was 956. The number of day-schools in the county was 23, namely, 14 public schools, with 1033 scholars, and 9 private schools, with 889 scholars. There was 1 evening school for adults, with 31 scholars.

KINSALE, county of Cork, Ireland, a sea-port town, parliamentary borough, and the seat of a Poor-Law Union, is situated on the south coast of Ireland in 51° 41' N. lat., 8° 31' W. long., on the left bank of the estuary of the Bandon River, which forms Kinsale harbour, at a distance of about 4 miles from the sea, 14 miles S. from Cork, and 177 miles S.W. from Dublin. The population in 1851 was 5506, besides 984 inmates of the workhouse. The borough is governed by 13 town commissioners, and returns one member to the Imperial Parliament. Kinsale Poor-Law Union contains 19 electoral divisions, with an area of 79,651 acres, and a population in 1851 of 28,948.

The town is built partly on the slope of Compass Hill, and partly on level ground between it and the harbour. In the level part of the town are a few good spacious streets. Many of the houses in Kinsale are of considerable antiquity, and built with bay windows connected in the upper stories by balconies after the Spanish fashion. The chief public buildings are the church of St. Multosia, a spacious cruciform structure of the 14th century; a large Roman Catholic chapel; a Carmelite convent with a chapel attached to it; the infantry barracks; the assembly-rooms; the court-house and town-hall; the prison; and the Union workhouse, which is built on Compass Hill. The town also contains two chapels for Methodists, a fever hospital, a brewery, and several flour-mills. The harbour, which is completely landlocked, has a depth of 6 to 8 fathoms, within a cable's length of the shore, and is capable of accommodating 300 ships. The entrance to the harbour has a depth of 14 feet at spring ebbs. Fort Charles, a mile east of the town, was erected for the protection of the harbour, but is now used as a barrack. Within the borough limits are the villages of Cove and Scilly, both of which are thronged during the summer with sea-bathing visitors. The fisheries average 600L a week; the fish are mostly conveyed direct from the fisheries to the Cork market. Besides the usual round and flat fish, lobsters, oysters, and crabs are abundant. The exports of Kinsale are agricultural produce; the imports are coal, timber, iron, &c.; but the trade of the port is small. Petty sessions are held in the town, which is also the headquarters of a police district. Fairs are held on May 4th, September 4th, and November 21st; markets on Wednesdays, Fridays, and Saturdays. On the south shore of the estuary of the Bandon, which is reached by a ferry, and nearly opposite the town are the extensive remains of the old fortress of Castle-na Park, and also the ruins of Ringrone Castle, an old seat of the De Courceys.

Kinsale is the centre of a fishing district which comprises 60 miles of coast extending from Flat Head to the east side of Inchy Bridge. The fishermen of the district are deemed the most skilful in Ireland, both in their own calling and as pilots: in 1850 they had 798 vessels, employing altogether 4132 men and boys. The boats of the Kinsale fishermen average from 12 to 20 tons, and are called hookers. There is a lighthouse on the Old Head of Kinsale.

Kinsale is an old town. It gives title to the premier baron in the Irish peerage, Miles de Courcey, John de Courcey's son having been created Baron of Kinsale in 1181. The title has existed in the family ever since. Kinsale has witnessed several important engagements both by sea and land. Here the McCarthy More was defeated by John de Courcey in the 12th century; and in the harbour an English fleet defeated a squadron of French and Spanish galleys in 1380. In 1601 it was for some time occupied by a Spanish force, who were obliged by Sir G. Carew to surrender. In 1688 Kinsale was held for James II., and here that king, in 1689, landed from Brest on his foolish attempt to regain his crown.

KINTORE, Aberdeenshire, Scotland, a very ancient royal and parliamentary burgh in the parish of Kintore, in the district of Garioch, 12 miles N.W. from Aberdeen, in 57° 15' N. lat., 2° 22' W. long. The population of the burgh in 1851 was 476. The town is governed by a provost and 12 councillors, and conjointly with

Benff, Cullen, Elgin, Inverury, and Peterhead, returns one member to the Imperial Parliament. The town consists chiefly of one street, on the bank of the Tuach-Burn, which here falls into the river Don. Besides the parish church there is a Free church. The town-house is a respectable building. Lime is brought up to Port Elphinstone near Kintore by the Aberdeen Canal, and granite is carried down in return. There are a library and a savings bank.

KIOOSIOO. [JAPAN.]

KIPPEN. [STIRLINGSHIRE.]

KIRATZA. [ABYSSINIA.]

KIRBY-LE-SOKEN. [ESSEX.]

KIRK BURTON. [YORKSHIRE.]

KIRKALDY, Fifeshire, Scotland, a royal and parliamentary burgh, sea-port and market-town in the parish of Kirkaldy, is situated in 56° 7' N. lat., 3° 9' W. long., on the shore of the Frith of Forth, about 12 miles E. from Dunfermline. The population of the municipal burgh in 1851 was 5093, that of the parliamentary burgh 10,475. It is governed by a provost and 20 councillors, and unites with Burntisland, Dysart, and Kinghorn in returning one member to the Imperial Parliament. Kirkaldy consists of one rather handsome street, nearly two miles long (from which it gets the designation of the 'Lang Toun,' or Long Town), with several smaller streets branching from it. Near the northern extremity of the High-street is the large village of Pathhead. Kirkaldy has an elegant modern church, and town-house; with assembly-rooms, mason lodge, library, reading-rooms, and public Grammar school. The town is lighted with gas. The market, which is well supplied, is held weekly on Saturday. Many visitors resort to the town as a bathing-place. The harbour has been rendered very commodious. Coal, corn, potatoes, sheep, and pigs are largely exported. The number of vessels registered as belonging to the port on December 31st, 1853, were:—Under 50 tons, 63, tonnage 2020; above 50 tons, 36, tonnage 7096; and one steam-vessel of 62 tons. During the year 1853 there entered the port 643 vessels of 42,604 tons aggregate burden, and there cleared 1213 vessels of 71,117 tons aggregate burden, with 4 steam-vessels of 262 tons. Vessels from the north of Europe trade to the town. Coarse linen fabrics are extensively manufactured, and there are several flax-mills, a foundry, tanneries, a distillery, breweries, &c. Besides the parish church, there are two chapels for United Presbyterians, one for the Free Church, and one each for Independents and Episcopalians. The subscription library in 1851 had 178 members and upwards of 7000 volumes; the Kirkaldy Institution had 60 members and 1420 volumes; and the Scientific Association had 100 members.

Kirkaldy was anciently a seat of the Keldees, or Culdees, whence the name is said to be formed by the prefix of the word kirk. It belonged to the abbots of Dunfermline as a burgh of regality in 1334. At what time it became a royal burgh is not known, but Charles I. in 1644 confirmed it as such, and made it a free port with additional privileges and jurisdiction. At this period it possessed 100 ships, and the population is said to have been larger than at present.

KIRKBY LONSDALE. [WESTMORLAND.]

KIRKBY MOORSIDE, North Riding of Yorkshire, a market-town and the seat of a Poor-Law Union, in the parish of Kirkby Moorside, is situated in 54° 16' N. lat., 0° 55' W. long., distant 25 miles N. by E. from York, and 228 miles N. by W. from London. The population of the township of Kirkby Moorside in 1851 was 1836. The living is a vicarage in the archdeaconry of Cleveland and diocese of York. Kirkby Moorside Poor-Law Union contains 23 townships, with an area of 47,490 acres, and a population in 1851 of 5624.

Kirkby Moorside is a small irregularly-built town, picturesquely situated in a deep valley on the right bank of the river Dove. The parish church, dedicated to All Saints, an ancient structure, has sittings for 514 persons; the chancel contains some curious monuments. In the town are chapels for Wesleyan and Primitive Methodists, Independents and Quakers. There is a Free school. Near the town are quarries, coal-mines, and some corn-mills; and malting is carried on. The prosperity of the town has been seriously affected by the introduction of railways into the district. A small market is held on Wednesday; fairs are held on Whit-Wednesday and September 18th. In former times Kirkby Moorside derived some importance from its two baronial castles, vestiges of which yet remain.

KIRKBY-STEPHEN. [WESTMORLAND.]

KIRKCUDBRIGHT, in the shire or stewartry of Kirkcudbright, Scotland, a royal and parliamentary burgh and market-town, and the chief town of the stewartry, is situated on the left bank of the estuary of the Dee, about 5 miles from the mouth of the Bay of Kirkcudbright, 100 miles S.W. from Edinburgh, in 54° 48' N. lat., 4° 49' W. long. The population of the parliamentary burgh in 1851 was 2687; that of the municipal burgh 2778. The town is governed by a provost and 16 councillors, and unites with Annan, Dumfries, Lochmaben, and Sanquhar in returning one member to the Imperial Parliament.

Kirkcudbright was anciently a burgh of barony under the Douglasses when they were lords of Galloway. Upon the fall of that family it was erected by James II. into a burgh of regality. Charles II. made it a royal burgh. The town consists chiefly of two streets at right angles to each other. The public buildings are the court-house, the parish church, a handsome cruciform gothic building, the academy, and the jail; a Free church and a chapel for United Presbyterians.

There are an academy or burgh-school, two subscription schools, a well-endowed charity school, and a public library. The town has been greatly improved of late years.

In the vicinity of the town are vestiges of the ancient castle of Kirkcudbright. The harbour affords good anchorage and shelter. At the head of it is a beautiful and nearly insulated spot called St. Mary's Isle, the seat of the Earl of Selkirk. The river opposite the harbour is 500 feet broad and the depth of water at spring tides is 30 feet. There is constant communication with Liverpool by steamers; and several vessels belong to the port. Coal, lime, freestone, and slates are imported; grain, potatoes, sheep, and black cattle are exported.

KIRKCUDBRIGHT, THE STEWARTRY OF, is a maritime county in the south-west of Scotland, bounded N. and N.W. by Ayrshire; E. and N.E. by Dumfriesshire, from which it is in part separated by the river Nith; S.W. by Wigtownshire and Wigtown Bay; and S. and S.E. by the Solway Frith. It lies between 54° 48' and 55° 20' N. lat., 3° 38' and 4° 38' W. long. Its length varies from 40 to 48 miles, and its width from 17 to 30 miles. The area is about 610,734 acres, and it comprises the greater portion of the ancient district of Galloway. The population of the county in 1851 was 43,121. It returns one member to the Imperial Parliament.

Coast-line.—The coast, except in the upper part of Wigtown Bay, is generally bold and precipitous. It is flat on the eastern boundary. All along the coast, where the streams of the county fall into the Frith, there are natural harbours. The most important of these, on the eastern shore, are Urr Water Mouth, and Auchencairn Bay, at the bottom of which is the thriving village of *Auchencairn*, which is clean and well built, and near which, on the bay, is *Balcomry*, a free port. In the same parish, a little way westward, are two other free ports, both capable of great improvement, Port Mary and Mullock Bay. Kirkcudbright Bay affords good accommodation to vessels. The most important bay in the western part of the coast is Fleet Bay, so called from the river which discharges itself into it, and which is navigable to the town of Gatehouse for vessels of 160 tons.

Surface, Hydrography, and Communications.—The surface of Kirkcudbrightshire is rugged and barren, more particularly towards the sea-coast; but of late years great improvements have taken place in the arable husbandry of the shire, and considerable tracts of land which were formerly unproductive have been brought into cultivation. The arable lands now form about one-fourth of the entire surface. The whole northern part of the county is extremely mountainous. The chief elevations are Blacklurg in the north, which rises to the height of 1970 feet, and Cairnmuir in the west 2600 feet. [GREAT BRITAIN.]

The absence of plantations, which are essential to the proper protection of grazing districts, was formerly a subject of regret; of late years however planting has been considerably extended, and drainage has been carried on to a considerable extent. The Earl of Galloway's plantations, which stretch around Galloway House for miles, are rich in most varieties of useful and ornamental timber.

Numerous small lakes are distributed over the county. The eastern boundary of the county is formed by the river Nith [DUMFRIESHIRE], the western boundary by the Cree Water, which is formed from several small lakes on the borders of Ayrshire and Wigtownshire; in its course southward the Cree receives the Minnoch Water, and the waters of several other small lakes in the north-west of Kirkcudbright, after which it forms Loch Cree, and issuing from the loch, runs for about 6 miles, when it falls into Wigtown Bay. The two principal streams in the county are the Dee and the Urr. The Dee has its source near the north-western boundary of the county. It pursues a south-east direction, receiving numerous mountain streams, contributes its waters to those of Loch Ken, from which it issues at the southern extremity of the loch, and finally falls into the bay of Kirkcudbright. The salmon-fisheries on this river are valuable. The river Ken collects the waters of all the mountain streams in the north of the county, and forms the loch of the same name. The Urr rises in a lake of the same name on the borders of Dumfriesshire; it also receives numerous tributaries, the most important of which is Kirkgunzeon Burn, which drains the extreme east of the county and soon after falls into the Solway Frith, where it forms a small bay. The Fleet Water is a short stream 6 or 7 miles in length, which discharges itself into Fleet Bay, a small estuary on the east side of Wigtown Bay.

The county is in most parts intersected with well-made and tolerably level roads, which are kept in excellent repair.

There is communication by steam-vessels between Kirkcudbright and Liverpool, and numerous coasting vessels carry on the small home trade of the county.

Geology, Mineralogy, &c.—The county contains a variety of minerals, but they have been only in few instances turned to any profitable account, owing to the absence of coal and the general scarcity of other fuel. Lime, coal, and freestone are imported from the opposite coast of Cumberland. Lead is the mineral mainly wrought. The lead mines at Blackcraigs and Cairnmuir are at present in full operation. Some copper has been found.

Climate, Soil, and Agriculture.—The climate is salubrious. In the mountainous district it is cold and bleak the greater part of the year, though the ground is not long covered with snow. The climate of the low grounds near the Solway is warmer. It is from the number of streams rather moist, and spring is generally late. The west and

south winds prevail, except in late winter and spring, when cold east or northerly winds are most frequent.

The prevailing soil is a thin brown earth resting either upon a gravel bottom, or upon a rock of a rotten slaty substance, which is readily pulverised. It is but slightly retentive of moisture, and its average depth does not exceed four inches. The chief object of cultivation is oats. The potato crops are considerable, and constitute a principal article of export to England. Till within the last thirty-five years green-crop husbandry was little known in Kirkcudbright and Wigtownshire. Now however the cultivation of turnips is universal. Leases are generally from 14 to 19 years, with breaks in many of them alike available to landlord and tenant. The peculiar breed of horses which this and the adjoining county of Wigtown formerly possessed, and which was known by the name of the Galloway breed, has nearly disappeared, its place having been supplied by horses of a larger size and better adapted to draught. The sheep upon the moors and high grounds are mostly of the black-faced breed, but those in the lower districts are mostly Cheviots and Leicesters. The attention of the farmer is chiefly directed to the rearing of cattle for the Norfolk fairs, where they are sold to graziers by whom they are fattened for the London market. The lands of this county, together with those of the adjoining county of Wigtown, were inclosed in the early part of the last century by stone walls, generally known as Galloway dykes. Of late years the farms in Kirkcudbrightshire have been gradually increased in size, so as to afford proper scope for rotation of crops, now that summer fallowing is rarely if ever practised.

Divisions, Towns, &c.—The county is divided into 23 parishes. There are two royal burghs—KIRKCUDBRIGHT and New Galloway. Kirkcudbright has been already described; New Galloway with the market-town of Castle Douglas we notice here.

New Galloway, in the parish of Kells, is a royal and parliamentary burgh, 20 miles N. from Kirkcudbright, and near Loch Ken: the population of the burgh in 1851 was 447. The town is governed by a provost and 17 councillors, though its burgh revenues, it is said, amount to only 16s. annually. It was made a royal burgh by Charles I., and now unites with Stranraer, Whithorn, and Wigtown in the return of one member to the Imperial Parliament. In the neighbourhood is a fine granite bridge over the river Ken. Kenmore Castle stands near the town.

Castle Douglas is a market-town and a burgh of barony in the parish of Kelton, about 9 miles from Kirkcudbright, on the road to Dumfries: population, 1992. It is governed by a provost, 2 bailies, and a town-council of 7, elected by householders in the burgh. The town is regularly built, clean, neat, and thriving. A weekly market is held, and there are several annual fairs. In the town are a savings bank, a library, and several schools. The town-house, parish church, and chapels for the Free Church and the United Presbyterians, are the public buildings. Castle Douglas has risen into importance within the present century. A handsome granite bridge crosses the Dee near the town.

The following villages may be mentioned, with the population of each in 1851:—

Creetown, a village and a burgh of barony, 6 miles S.E. from Newton Stewart, on the bay of Wigtown: population, 1803. There is here a small carpet manufactory. The harbour at Creetown is frequented by a few coasters. The burgh has a town-hall and lock-up house. *Gatehouse, or Gatehouse of Fleet*, in the parish of Girthon, a populous village and burgh of barony situated on the Water of Fleet: population, 1750. There is a small harbour. There are an Endowed school and a savings bank. Cotton works were erected here in 1790. Tanning and brewing are carried on; oysters are obtained in the river Fleet, and the bay affords good fishing. *Kirkpatrick, or Kirkpatrick-Durham*, about 16 miles N. by E. from Kirkcudbright: population of the parish, 1508. Besides the parish church, which was erected in 1748, there is a Free Church. Three public schools are in the parish. A small fair is held annually in March. In Kirkpatrick the last remaining members of the sect of Buchanites took up their abode, enjoying a community of goods, and refraining from marriage. The last members of the sect were chiefly distinguished from their neighbours by the simplicity of their demeanour.

History, Antiquities, &c.—Before its subjugation by Agricola, A.D. 85, this county was possessed by the Selgova, of whom and of the races which preceded them numerous remains have been found here; and cairns, tumuli, circles of stones, &c., still exist in every part of the county. Nor are the marks of the Roman occupation less rare. Arms, coins, and utensils of that people have been found in various parts of the county. To the Romans are attributed the original formation of many of the roads. This county was part of the Bialii property, and part also of the extensive estates of the Douglas. Of Threave Castle, the chief seat of the Douglas family, considerable ruins still remain on the island in the river Dee, on which it stands. It was for the siege of this fortress in 1455 that 'Mons Meg,' the great cannon in Edinburgh Castle was manufactured. Edward I. held Kirkcudbright for some time, and was followed here by his court. Wallace embarked for France from the port. Henry VI. took refuge and resided at Kirkcudbright with his queen, and the Duke of Albany landed here in 1523. Queen Mary resided at Kirkcudbright for some days before applying for refuge to Elizabeth. A

visit from James VI., a riot on the attempt to thrust on the town an episcopalian curate in 1663, the pursuit and death of several of the Scottish martyrs, a visit from the fleet of William III. on its way to Ireland, and one from Paul Jones in 1768, when this American admiral robbed the house of Lord Selkirk, complete the list of events of any interest in which Kirkcudbright has participated. Besides Threave Castle, before referred to, should be mentioned the abbey of Dundrennan, in Berwick parish, and the college of Lincluden, in Terregles parish, both of which are fine specimens of ancient ecclesiastical grandeur. There are also numerous remains of fortalices, of small ecclesiastical buildings, and other relics of the middle ages.

Religious Worship and Education.—According to the Returns of the Census of March 1851 it appears that there were then in the stewartry 54 places of worship, of which 23 belonged to the Established Church, 17 to the Free Church, 7 to the United Presbyterian Church, 3 to Roman Catholics, and 2 to Reformed Presbyterians. The total number of sittings provided was 23,980. The number of Sabbath schools was 57, of which 30 belonged to the Established Church, 21 to the Free Church, and 4 to the United Presbyterian Church. The number of scholars was 3705. There were 107 day-schools, namely, 83 public schools with 5987 scholars, and 24 private schools with 582 scholars. Of evening schools for adults there were 3, with 74 scholars.

In 1852 there was one savings bank in the stewartry, at Castle Douglas. The amount owing to depositors on November 20th 1852 was 3762l. 0s. 2d.

KIRKHAM, Lancashire, a market-town in the parish of Kirkham, is situated in 53° 47' N. lat., 2° 52' W. long., distant 29 miles S. by W. from Lancaster, 225 miles N.W. by N. from London by road, and 219½ miles by the London and North-Western railway. The population of the town of Kirkham in 1851 was 2777. The living is a vicarage in the archdeaconry of Lancaster and diocese of Manchester.

Kirkham is situated on the left bank of a streamlet which flows into the estuary of the Ribble. The cotton manufacture, flax-spinning, and the manufacture of sail-cloth and soaking are the chief sources of employment. The parish church was rebuilt in 1822, except the Norman tower, which still remains. The Independents, Wesleyan Methodists, and Roman Catholics have places of worship. The Free Grammar school, founded in 1658, has an endowment of 340l. a year, and had 85 scholars in 1851. There are also a Blue-Coat school for girls, National and Infant schools, a Roman Catholic Charity school, and a savings bank. A county court is held. Many Roman remains have been found in the neighbourhood. The market was granted to the town by Henry II. Kirkham had a charter of incorporation from Queen Elizabeth, but the borough does not appear ever to have sent members to Parliament.

KISCHENEFF, or KICHENEV, a town in European Russia, capital of the government of Bessarabia, is situated on the Byk, or Bouk, a feeder of the Dniester, 40 miles N.W. from Bender and Tiraspol, on the latter river, 70 miles E. from Jassy. It was a small place with narrow dirty streets darkened by the projecting roofs of the houses, and a population of about 4000 when it came into the possession of Russia in 1812. Since then the town has been enlarged so as to cover three adjacent hills, and it now contains 15 churches, a synagogue, a Greek theological seminary, a gymnasium, several schools, and a public library. In 1838 the population had reached 13,000. The town is adorned with handsome marble fountains, and has a fine public garden. The inhabitants, who consist of Russians, Cossaks, Poles, Jews, Germans, Armenians, Bulgarians, Greeks, and gipsies, carry on a considerable trade in corn, cattle, sheep, flax, hemp, tobacco, fruit, wine, &c. The principal industrial products are brandy, leather, soap, candles, some woollen stuffs, &c.

KLAGENFURT (Zelany), the capital of the crownland of Carinthia, in Austria, is situated on the river Glan, a small feeder of the Drave, in an extensive plain between the Noric and the Carnic Alps, at an elevation of 1554 feet above the sea, in 46° 12' 0" N. lat., 14° 1' 25" E. long., 145 miles in a straight line S.W. from Vienna, and has about 15,000 inhabitants including the suburbs. It is the residence of the bishop of Gurk, and the seat of a court of appeal. The town was the property of the crown till 1518, when the emperor Maximilian I. gave it to the states of Carinthia for the purpose of erecting a fortress for the defence of the country. Soon afterwards the canal from the lake Wörth, 3 miles west from the town, was opened at the expense of the citizens, and the fortifications extended as the town was enlarged—especially after the great conflagrations in 1535, 1723, and 1796, to which the town is indebted for its present fine and regular appearance. The ramparts, gates, and ditches were levelled

in 1809, and on their site there is now an agreeable promenade. The town is in the form of a square, and is adorned with many handsome public buildings, the palaces of Princes Rosenberg and Porcia, and of the bishop of Gurk; which last contains fine collections of paintings, minerals, &c. The streets are wide and regularly built. There are five public squares, three of which are embellished with monuments—a marble equestrian statue of Leopold I., a statue in lead of Maria Theresa, and an obelisk erected by the bishop of Gurk in honour of the emperor Francis I. The other buildings of note are the Burg, or old castle of Klagenfurt, the landhaus, or house of assembly for the states of Carinthia, the law courts, the lyceum and library, the gymnasium, and the theatre. There is also an Ursuline convent, a normal school, an agricultural society, two hospitals, a lunatic asylum, a house of industry, a workhouse, and house of correction. Of the seven churches in the town, the civic church is remarkable for its fine bold tower, the gallery of which commands an extensive prospect over the town and its picturesque environs. The manufactures of Klagenfurt comprise muslin, fine woollens, silks, and white lead. There is also a considerable transit trade. The high road up the valley of the Drave passes through Klagenfurt and Villach. There is a road south from Klagenfurt to Laybach by the Leobel Pass in the Carnic Alps; the distance is above 40 miles.

KNARESBOROUGH, West Riding of Yorkshire, a market-town and parliamentary borough in the parish of Knareborough, is situated on the left bank of the river Nidd, in 54° 1' N. lat., 1° 28' W. long., distant 18 miles W. by N. from York, 202 miles N.N.W. from London, and 209 miles by the Great Northern and East and West Yorkshire railways. The population of the parliamentary borough of Knareborough in 1851 was 5536. Knareborough is under the government of local magistrates and town commissioners, and returns 2 members to the Imperial Parliament. The living is a vicarage in the archdeaconry of Richmond and diocese of Ripon.

The town is situated on the side of a rocky hill, which rises from the bank of the river Nidd. The river is here crossed by two bridges, one at each end of the town. The houses are in general well built of stone, and the town is lighted with gas. The market-place is commodious. The parish church, an ancient gothic edifice, will accommodate 1200 persons. The Wesleyan and Primitive Methodist, Baptist, Independents, and Roman Catholics have places of worship in the town. The Grammar school, founded about 1617, had 35 scholars in 1852. There are also National and Infant schools; a Charity school; Independent and Roman Catholic schools; a literary institute, which had 240 members in 1851, and 907 volumes in its library; a savings bank; and a dispensary. The cotton and linen manufactures are carried on; and woollen rugs are made. Several flour-mills are in the vicinity. The market on Wednesday is well supplied with provisions, and the corn-market is well attended. A cattle fair is held fortnightly. A county court and sessions for the West Riding are held here.

Knareborough has returned two members to parliament since the 1st of Queen Mary, 1558. The ruins of Knareborough Castle stand on a rocky height about midway between the two bridges. This fortress, originally built by Serlo de Burgh, one of the Conqueror's Norman adherents, was a place of great strength, but was dismantled by order of the parliament in 1648. About half a mile down the river are the ruins of a priory for friars of the order of the Holy Trinity, which was founded by Richard Plantagenet, brother of Henry III. There are some curious dwellings excavated in the rock; also St. Robert's chapel, which is said to have been formed in the 13th century by a hermit, son of the mayor of York, and St. Robert's Cave, which is supposed to have been his residence. This cave has been made notorious by the peculiar circumstances of the murder committed there in 1744 by Eugene Aram. On the north-west bank of the river, opposite the ruins of the castle, is a curious petrifying spring, called the Dropping Well.

KNIGHTON, Radnorshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Knighton, is situated on the left bank of the river Teme, in 52° 20' N. lat., 3° 1' W. long., distant 6 miles N. by W. from Presteign, and 165 miles W.N.W. from London. The population of the municipal borough in 1851 was 1388. A Local Board of Health manages the sanitary arrangements of the town. The borough, in conjunction with Radnor and four other boroughs, returns one member to the Imperial Parliament. The living is a perpetual curacy in the archdeaconry of Salop and diocese of Hereford. Knighton Poor-Law Union contains 20 parishes and townships, with a population in 1851 of 9480.

Knighton is rather picturesquely situated on the side of a steep hill on the border of the county, commanding fine views of the valley of the Teme. According to the 'Report on the Borough of Knighton,' presented to the General Board of Health by Mr. Lee, the superintending Inspector, the "rate of health is very low in Knighton;" and "goitre is very common, about one-third of the females being afflicted with it." The market on Thursday is well attended. Fairs are held on the Thursday before Easter, May 17th, October 2nd, the last Thursday in October, and the Thursday before November 12th. The parish church is a small edifice, situated close to the river Teme. In the town are a National school and 6 almshouses.

KNOWSLEY. [LANCASHIRE.]

KNUTSFORD, Cheshire, a market-town in the parish of Knutsford, is situated on the great road from London to Liverpool, in 53° 18' N. lat., 2° 21' W. long., distant 24 miles E.N.E. from Chester, and 172 miles N.W. from London. The population of the town of Knutsford in 1851 was 3127. The living is a vicarage in the archdeaconry and diocese of Chester.

The name of the town is said to be derived from Canute, or Knute, the Dane, who forded with his army the small branch of the Bollin, which runs through the town. In Lower or Nether Knutsford there are a spacious county prison, a handsome town-hall, and the market-place. A county court, and Midsummer and Michaelmas quarter-sessions for the county, are held in Knutsford. The parish church, erected in 1744, is constructed of brick and stone, and has a square tower. The Baptists, Independents, Wesleyan and Primitive Methodists, Roman Catholics, and Unitarians have places of worship. The Free school, founded in 1548, is free to 9 boys: the number of scholars in 1851 was 20. There are 2 Infant schools, and a school for boys and girls; a working-man's library, and a savings bank. The market, which is chiefly for butter and eggs, with some poultry and fruit, is held on Saturday. Fairs are held on April 23rd, Whit-Tuesday, and November 8th. Thread, worsted, and leather are the principal manufactures. Races are held near the town in the month of July.

KOKAND. [TURKISTAN.]

KOLLIN. [COLLIN.]

KÖLN. [COLOGNE.]

KOMMOTAU. [EGER.]

KONG MOUNTAINS are situated in the western part of Northern Africa. Between 9° and 10° N. lat., 9° and 10° W. long. there seems to exist a high table-land, or perhaps mountain-knot, in which the Joliba, Quorra, or Niger, the Gambia, the Rokelle, and the upper feeders of the Senegal take their rise. From this same plateau one mountain range runs north-east, forming the watershed between the basins of the Niger and the Senegal; another takes a north-western direction, dividing the feeders of the Senegal from those of the Gambia; while a third range runs nearly east along the parallel of 9° N. lat. to the northward of the territories of the Mandingoes, the Foola, and the Ashantees. To this last range the name of the Kong Mountains has been given, from the word 'kong,' which, in the dialect of the Mandingoes, is said by Park to mean a mountain. In the kingdom of Yarriba the range is said to turn south-east, and to terminate on the banks of the Niger, near the confluence of the Tohadda with that river. But of this range, if it forms one continuous mass, very little is known. Nothing definite has been ascertained regarding its length, width, or height. [SENEGAMBIA.] The highest known parts of it are said not to exceed 2500 feet above the sea. The Kong Mountains seen by Mungo Park however must attain a much higher elevation, as they are seen from a great distance. According to the information obtained by Mollien from the natives, mountains occur between 7° and 10° W. long., 8° and 9° N. lat., which are covered with snow all the year round. But Caillié, who traversed them from west to east, near 10° N. lat., did not observe snow on the mountains; he found that the moderate ridges which lay in his way were separated from one another by fertile, well-watered, and extensive plains, and that the valleys were not numerous, and comparatively short.

(Mungo Park; Mollien; Clapperton and Lander; and Caillié, *Travels through Central Africa*.)

KONGSBERG. [AGGERHUUS.]

KÖNIGSBERG, one of the two governments into which the province of East Prussia is divided, is bounded N. by the Baltic, N.E. by Russia, E. by the government of Gumbinnen, S. by Posen, and W. by the governments of Marienwerder and Danzig. Its area is 8636 square miles, including the large bay called the Frisches Haff, and the population at the end of 1849 was 847,538, of whom 525 were Jews; 385 Mennonites, and the rest Evangelicals and Catholics, in the ratio of 4 to 1. The government borders on the Baltic from the Gulf of Danzig to the Russian frontier. The coast is low and indented by two extensive shallow fresh-water bays, which communicate with the Baltic each by a narrow strait towards its eastern extremity. These are the Curisches-Haff and the Frisches-Haff, which are described in separate articles. Several arms of the Vistula, the Passarge, which is navigable, and many other rivers, fall into the Frisches-Haff. [DANZIG; VISTULA.] The surface of the interior of the government is a flat agricultural country, with some extensive forests. Wheat, rye, flax, hemp, &c., are the chief products. Cattle and sheep are numerous.

The chief town of the government of Königsberg is **KÖNIGSBERG**. *Memel*, the most northern town in Prussia, is situated at the mouth of the Dange, and on the eastern side of the strait that joins the Curisches-Haff to the Baltic. It is fortified and well built, and has a safe harbour defended by a citadel. The entrance to the harbour is crossed by a bar, on which there is from 13 to 18 feet water. The town is well situated for commerce. The exports consist of timber, hemp, flax, corn, tow, staves, linseed, oil, oil-cake, rags, hides, tallow, bristles, &c., most of which are brought from Poland and Russia. The imports are chiefly salt, coals, herrings, colonial produce, and manufactured goods. The number of ships that arrived in 1849 was 1074, about half of which were in ballast; the departures numbered 1072. In

the town there are several breweries, distilleries, soap factories, oil and saw-mills, ship-building yards, woollen factories, &c. The population is about 10,000. On the north-east side of the entrance of the harbour is a lighthouse, 128 feet high, in 55° 43' 7" N. lat., 21° 6' 2" E. long. A great part of the town was destroyed by fire October 4, 1854.

Rastenburg, on the Guber, a feeder of the Alle, about 60 miles S.E. from Königsberg, has about 6000 inhabitants, and a gymnasium, with 11 professors and about 190 pupils.

Braunsberg, a busy commercial town on the Passarge, and near the entrance of that river into the Frisches-Haff, has a population of 8500, who manufacture cloth, leather, and yarn, and export corn and timber. Braunsberg is occasionally the residence of the Catholic bishop of Ermeland, and has a Catholic theological college, and a Catholic gymnasium, with 13 professors and 322 pupils (in 1850). A railway passing through Braunsberg connects Königsberg with Danzig.

KÖNIGSBERG, the capital of the province of East Prussia, is situated in 54° 42' 12" N. lat., 20° 29' 15" E. long., on the navigable river Pregel, which falls into the Frisches-Haff about four miles below the city, 340 miles in a straight line N.E. from Berlin, but 420 miles by railway through Stettin, Woldenberg, and Bromberg; and has a population of 75,284. The river, running from east to west, approaches the city in two arms, which unite and form an island. Königsberg is built on both sides of the river, and on this island. It consists of three parts, called the Old Town, Löbenicht, and the Kneiphof, besides the royal palace and the citadel Friedericksberg, and four large suburbs and ten smaller ones called Liberties. The Old Town and Löbenicht, both of which are on the north side of the river, are built on seven hills, and the Kneiphof on the island, the soil of which is swampy, and the houses are erected on piles.

Königsberg originated in a wooden fort erected by the Teutonic Knights in 1256 on the eminence, near the Pregel, where the palace now stands. In 1257 another fort was built of stone, surrounded with double walls, nine towers, and a moat. The infant town was plundered and burned in 1264, and the inhabitants who escaped death or slavery settled in the valley between the palace and the river. This was the origin of the present Old Town. In 1300 the Löbenicht, till then a village, obtained the privilege of a town, and in 1327 the Kneiphof was founded. Thus Königsberg consisted originally of three towns, each of which had its own magistrates and jurisdiction. The suburbs were gradually added, and the city became one of the most important commercial places of the north. In 1365 it joined the Hanseatic League, and in 1457, when Marienberg was betrayed to the Poles, Königsberg was chosen for the residence of the grand master of the Teutonic order, and so remained till Prussia was transformed into a duchy in 1528, some time previous to which the Reformation had made great progress in that province. In 1657 Prussia was ceded by the peace of Wehlau to the elector of Brandenburg, who built the citadel to overawe the citizens. In 1701 Frederick III. was crowned here as the first king of Prussia. In the Seven Years' War Königsberg was occupied from 1758 to 1764 by the Russians, who governed the country in the name of the empress Elizabeth; and it again suffered severely from the exactions of the French, who occupied it in 1807, after the disastrous battle of Friedland.

The want of regularity in plan, and the mean appearance of the streets, which are generally narrow and often crooked, make an unfavourable impression on a stranger: the few handsome public and private edifices are scattered over the whole city. There are seven wooden bridges over the Pregel. The castle, or royal palace, has been gradually enlarged and beautified till it has obtained its present form. The most interesting parts of it are the church, the Muscovite hall (274 feet long and 59 feet wide without pillars), and the tower (240 feet high, 278 feet above the Pregel), from the top of which there is a fine prospect of the city and environs. The most remarkable building is the cathedral of St. Nicholas, founded in 1332, and containing a fine organ with 6000 pipes, many excellent paintings, and monuments of the grand masters of the Teutonic Knights and of the dukes of Prussia. The Albrecht University, founded by Albrecht first duke of Prussia in 1544, has 49 professors and lecturers, and 384 students. It has four faculties—Protestant theology, law, medicine, and philosophy. Connected with the university are a library of 45,000 volumes, a botanic garden, and an astronomical observatory. There are likewise three gymnasia—one in the Friedericksberg, with 16 professors and 218 pupils in 1850; one in the Altstadt, with 18 professors and 367 pupils; and one in the Kneiphof, with 14 professors and 272 pupils. There are also very numerous schools, many charitable institutions, an exchange, a town-hall, and a theatre. Königsberg has many manufactories of woollens, linen, silk, leather, tobacco, soap, and sugar; it has celebrated breweries and spirit distilleries, ship-building yards, and an extensive trade in corn, &c. Its geographical position has long made it an important place of trade. Only vessels of light draft can come up to the town; large vessels discharge and load by lighters at Pillau, at the mouth of the Frisches-Haff, in the Gulf of Danzig. During 1849 622 vessels entered Königsberg and Pillau, 219 of which were in ballast; the rest brought wine, fruits, coal, salt, sugar, herrings, fish, train-oil, iron, &c. The departures were 566 vessels laden with grain, oil-cake, rape, and flax-seed, flax, timber, &c. Beer, hemp, tallow and wax, bristles and quills, are likewise exported.

KÖNIGSBERG. [BRANDENBURG; EGWA.]

KONIOOSHL [ALBUTIAN ISLANDS.]

KONIYEH (Koniah, Koniah), a city in Asia Minor, capital of the pashalic of Karassan, which includes the greater part of Phrygia and Pamphylia, is situated in a wide plain in 37° 54' N. lat., 32° 40' E. long., 305 miles E. by S. from Smyrna, and the same distance S.E. from Constantinople: population, 80,000. The town is surrounded by walls built with well-cut blocks of stone, and strengthened by square towers, some of them richly ornamented with cornices, arabesques, lions' heads, and Arabic inscriptions. The walls rise from the brink of a wide fosse, and are pierced by handsome gateways, some of which are constructed with fragments of ancient structures. Within the city, when seen by Hamilton, presented little except ruin and decay; large spaces lay covered with heaps of dilapidated mosques and deserted houses. The modern town and the bazars occupy the more eastern part of the site, where also is the konak, or palace of the pasha. The houses are low, and mostly built of sun-dried bricks and wood. The old castle, which stands in the centre of the town, is crumbling to pieces, its stone-facings having been removed to build the pasha's konak. Koniyeh contains many beautiful remains of Saracenic architecture, among which may be mentioned the mosque of Sultan Alettin on the castle hill, and the Injemi Minareh Djami (Mosque with the Minaret reaching to the Stars), which is exquisitely adorned with delicate tracery, fretwork, and mouldings. The minarets are chiefly of glazed tiles and bricks of various colours, red and blue prevailing. The old Turkish prison, which forms part of the western wall, is an interesting half-ruined structure, bearing some resemblance to a gothic castle with its ruined towers, battlements, and keep. The pasha's konak is a large straggling building approached by a raised esplanade between extensive burial-grounds, part of the site being now used as a cemetery. The other objects of note in the town are its large bazars, several medresseh, or colleges, several sepulchral chapels, a few Armenian churches, the public baths and khans, and the tomb of a Moalem saint venerated all over Turkey. The manufactures are confined to carpets and blue and yellow marocco leather. Cotton, wool, and skins are sent to Smyrna. The immediate neighbourhood of the town is belted by a small breadth of garden-ground, which is kept in a state of verdure by irrigation. The rest of the plain in summer is a dusty desert; in winter flooded and impassable. The city is supplied with fruit and vegetables chiefly from the Greek village of *Zilick*, which is two hours distant, and situated in a gorge among the trachytic hills westward of Koniyeh. This village is inhabited by about 5000 Greeks, descendants of the ancient inhabitants of Koniyeh, who were driven out and obliged to settle here by the Turks when they captured the city.

Koniyeh is the ancient *Iconium*, which Xenophon says ('Anab.' i. 2) was in Phrygia; in later times it was considered the capital of Lycaonia. Under the Romans it seems to have risen in importance. Cicero spent ten days in Iconium on his way to Cilicia ('Epist. ad Atticum,' v. 20). In the first age of Christianity it is described as a populous city inhabited by Greeks and Jews. St. Paul and St. Barnabas preached in the synagogue of Iconium. Under the Greek emperors the city continued to be the metropolis of Lycaonia; but it was wrested from them first by the Saracens, and afterwards by the Seljukian Turks about A.D. 1075, who made it the capital of their dominions. Under the Seljukian sultans, and during the period of the Crusades, Iconium acquired its greatest celebrity. The Seljukian dynasty and power terminated in 1294. After a period of anarchy the city was seized by Othman, the founder of the Ottoman empire in Asia, which had Brusa for its capital. From this time Koniyeh declined rapidly. Ibrahim Pasha, commander of the Egyptian army, completely defeated the Turks near Koniyeh, December 20, 1832.

A Christian synod held at Iconium about A.D. 280 pronounced against the validity of heretical baptism. Koniyeh is looked upon by the Moslems as a sacred city; many dervishes reside in it, and it is visited by many pilgrims.

KOBA. [GEORGIA.]

KOOM. [PERSIA.]

KOORAM RIVER. [AFGHANISTAN.]

KOOTAIS. [GEORGIA.]

KOPREINITZA. [CROATIA.]

KORDOFAN, a country in Africa to the south of Nubia, extends from about 15° 20' to 10° N. lat., 28° to 32° E. long. It is divided from Dar-Fur, which lies to the west, and from Nubia, by deserts. On the east it extends to the Bahr-el-Abiad, or White Nile, which divides it from Sennar. Its southern boundary-line is stated to be formed by extensive forests covering the northern declivity of the Deir or Tuggala Mountains, and inhabited by negroes.

The southern districts as far north as 12° N. lat., have a broken surface, and the hills rise in some parts to a considerable height. This part of the country contains many springs and wells. The country north of 12° N. lat. may be considered as an elevated and mostly level plain, on which several isolated groups of hills rise at considerable distances from one another. These hills are the only places which are inhabited, because it is only in their neighbourhood that wells are found that yield water all the year round. Certain wandering

tribes visit some depressions in the plain, where, in the rainy season, temporary lakes are formed, which preserve the water during the greater part of the year. The plain itself is partly covered with grass and partly with low thorny bushes; in a few places forest-trees occur, among which is the baobab, or *Adansonia*. The rainy season lasts from April to September. In the dry season the plain is changed into a desert. No river traverses this country, with the exception of the Bahr-el-Abiad.

Agriculture does not extend beyond the neighbourhood of the inhabited places. The principal objects of cultivation are two kinds of millet, called durrha and doghen, and samsim or sesamum. In a few places wheat and barley are grown. The wandering Beduin tribes have herds of cattle, horses, and camels. The horses are of an excellent breed, and the cattle have a hunch of fat. The tribes of negroes inhabiting the southern hilly country keep a great number of cattle, sheep, and goats, but few camels and horses. Among the wild animals Rüppell mentions elephants, giraffes, and several kinds of antelopes. The principal exports to Egypt are gold and silver, cattle-hides, sheep-skins, gum-arabic, and cattle. Of gum-arabic as much as 5000 camel-loads have been sent to Cairo in the course of a year. Iron is abundant and worked.

Kordofan was subject to the sovereign of Sennaar up to the beginning of the present century. It was then taken from him by the king of Dar-Fur, in whose possession it remained to the year 1820, when it was conquered by Mehemet Ali, pasha of Egypt. At the time when the country was under the king of Dar-Fur, Obeid, its capital, was a considerable town, and regular caravans resorted to it for slaves, ivory, gold-dust, gum-arabic, ostrich feathers, tamarinds, and honey; but on the occupation of the Egyptian Turks the town was destroyed, and Rüppell estimates its population at about 5000. He mentions a place, Shabun, which is a kind of entrepôt for the caravans that traverse eastern Sudan from east to west, and connect it with Sennaar and Habesh. Two roads lead from Sennaar to Obeid, two others from the last-mentioned place to Dabbe in Dongola, and three to Cobbe in Dar-Fur.

(Rüppell, *Reisen in Nubien, Kordofan, und dem Petraischen Arabien*.)

KORONI. [COBON.]

KÖSLIN. [CÖSLIN.]

KOSTENDJE, or KUSTENDJI, a sea-port town or rather village of Turkey in Europe, is situated in the Dobrudscha at the eastern termination of the fortification called Trajan's Wall, 225 miles in a straight line nearly due north from Constantinople, and about 40 miles E. from Rassova. The town, which consists of about 500 houses, is built on the west shore of the Black Sea on a peninsular projection of limestone rock, which rises precipitously from the sea to the height of about 100 feet, and shelters the harbour on the northern side. The harbour is exposed, except on the north side, and ill adapted for large ships, having in places only 7 feet water. Kostendje occupies the site of an ancient town, *Constantiana*, which is said to have been founded and named from Constantine the Great. It retains in its ruined mole traces of Roman masonry. The town has some trade in corn. The project of opening a channel for the Danube across the Dobrudscha by the chain of lakes called Kara-Su into the harbour of Kostendje has been often mooted. [DOBRUDSCHA.]

KOSTROMA. [COSTROMA.]

KÖTHEN, the capital of the duchy of Anhalt-Köthen, is situated on a fertile spot near the Zittau, in 51° 46' N. lat., 12° 3' E. long., at the junction of railways from Berlin, Magdeburg, Bernburg, and Leipzig, from which it is respectively distant 93, 32, 12, and 40 miles. It was founded by the Slavonians, and was devastated in A.D. 927 by Henry I. The streets are broad and well paved, and the town presents a neat and pleasing appearance; it is about half a league in circumference, and surrounded with high walls. It is divided into the old and new town; the chief buildings are the ducal palace and castle, town-hall, one Reformed, one Lutheran, and one Roman Catholic church. It also possesses various charitable institutions; a normal school, a public library and museum of natural history, picture gallery, a theatre, and some linen and woollen manufactures. Köthen carries on some trade in corn and wool.

KOTTBUS. [BRANDENBURG.]

KOZLOFF, GEUSLEV, or EUPATORIA, a sea-port town in the Russian government of Taurida, on the west coast of the Crimea, is situated on the north shores of the Bay of Kalamita, in about 45° 14' N. lat., 33° 25' E. long., 40 miles N.W. from Simferopol the capital of the Crimea, and 45 miles N. by W. in a straight line from Sevastopol. The population according to the census of 1851 was 8200, chiefly Tartars and Karaitic Jews, with a few Greek and Armenians. The port is shallow admitting only vessels of about 8 feet draught, but tolerably safe and never frozen up. The bay forms an excellent roadstead, and ships may approach within cable's length of the shore, but it is exposed to the west and south winds which cause a heavy surf all along the coast. The town which is surrounded by an old crumbling wall is ill-built; the streets are narrow, crooked, and dirty; the houses, low and built of bricks and clay, open upon courts or gardens in the Turkish fashion, but present to the street only low dead walls. The principal buildings are a Russo-Greek church, several mosques, an Armenian church, two pretty synagogues belonging to the Karaitic

Jews, a bazaar, several khans, and the house in which the governor of the district resides. The principal industrial products are leather, felt stuffs, and wood-work. The town is famous for the preparation of the black lambkins, known in England as 'Astrakhans.' There are several shore-lakes to the south-east of the town on which a good deal of salt is gathered in summer. The water in the town and neighbourhood is bad. Before the Russian occupation of the Crimea, Kozloff, it is said, had a population of 30,000, and was the centre of all the export trade of the country. In order to restore the prosperity of the place it was made a free-port for a limited period from the year 1798, and its trade partially recovered, but subsequently dwindled away on the rise of Odessa. It still carries on some trade in salt, corn, flour, bar-iron, wool, hides, butter, wax, hairskins, &c. There is a quarantine station at Kozloff.

Kozloff is said to occupy the site of the ancient *Eupatoria*, or *Eupatorium*, founded by Mithridates Eupator and named after him. The Russians call it Eupatoria, but this is no proof that the two places are identical. Some authors say that the site of the ancient Eupatoria is marked by the village of Inkerman on the north shore of the Bay of Sevastopol, where there are ancient ruins. Be this as it may, Kozloff under the Tartars was one of the most important and populous towns in the Crimea. The Russians took it in 1736, 1771, and in 1783, when with the whole of the Crimea it came into the power of the Czars. In the Anglo-French invasion of the Crimea the town was occupied by the Allies Sept. 13, 1854.

KRAIN, or CARNIOLA, a crownland of the Austrian empire, is bounded N. by Carinthia, E. by Styria and Croatia, S. by Croatia and the Küstenland, and W. by Friuli and the circle of Görz. The area is 3838 square miles, and the population, according to the census of 1850-51, was 463,956.

The surface is extremely rugged and mountainous. The principal chain of the Carnic Alps penetrates into the north-west of the crownland, where it terminates in the mass of Mount Terglou, the highest point of which rises to 10,800 feet above the level of the sea. The northern boundary is formed by an offset or continuation of the Carnic Alps, which springs from the main chain near the village of Weissenfels in the north-western angle of the crownland, forming the watershed between the Drave and the Save, and running in a general south-east direction between Carinthia and Carniola, through Croatia and Slavonia, where it terminates in the valley of the Danube. This range, which is distinguished by different names, covers with its ramifications all that part of the crownland which lies north of the Save, its highest points being the Loibalberg (5477 feet), the Sattelberg, farther east, and the Steiner Alps to the north of the village of Stein, which rise 10,000 feet above the level of the sea. These mountains are distinguished by their singular forms, and consist of steep, rugged, and for the most part naked masses of limestone, with but scanty vegetation and little timber. They are crossed by three roads, one from Villach to Laybach by the Wurzen Pass and the Upper Sathal; a second from Klagenfurt to Laybach by the Leobel or Loibel Pass (4032 feet); and a third from Marburg and Cilli to Laybach by the Trojana Pass, which is also traversed by the Vienna-Trieste railway, now open as far as Laybach. In the angle between the main chain of the Carnic Alps and the chain that forms their continuation south-eastward, the Save has its rise in the glaciers that cover the northern flanks of Mount Terglou.

The central and southern parts of the crownland are covered by the Julian, or Krainer Alps, and their ramifications. The Julian Alps run south-east from Mount Terglou between the Upper Save, and the Isonzo to Mount Kleck in Croatia, reaching the height of 7458 feet above the sea in the Snianik, or Schneeberg, close to the Croatian frontier. A branch runs southward from the main chain near Idria along the northern and eastern edge of the peninsula of Istria; and along the western side of this ridge to the south of the Wippach extends a stony wilderness called the Karst, which is a plateau of limestone rocks abounding with strange chasms and fissures and funnel-shaped cavities, infested by furious winds, and almost entirely destitute of vegetation. In all this region there is not a single tree; in a few sheltered spots a little corn is grown, and the vine is seen to creep along the crevices of the rocks. The Karst is connected by the Nanas Mountains (4000 feet) near Wippach with the main chain of the Julian Alps, here called Birnbaumerwald. From the Schneeberg a branch of the Julian Alps runs between the Kulpa and the Gurlk, reaching in the summit of Jauernig an elevation of above 6000 feet, and stretching up to the Save in the most eastern part of the crownland. The Julian Alps consist of granulous limestone which is shattered into rugged fragments, rent by chasms, and full of grottoes, caverns, and underground passages, abounding with the most beautiful stalactites. The rain that falls and the snow that melts upon them, form streams, which for the most part flow in subterranean channels, and the want of moisture at the surface gives these mountains an aspect of the most repulsive barrenness. It is said that there are above 1000 grottoes and caverns in the Julian Alps, the most celebrated of which are those in the neighbourhood of ADELSBERG. Innumerable rivulets disappear in the calcareous soil, and periodical fountains spring forth; even large streams plunge more than once into the chasms, which intersect the surface of the region, and pursue for a time an underground course. Nevertheless, some of the valleys present picturesque scenery,

especially those of the Save and its feeders, and the Wippach. The principal roads that cross the Julian Alps in Carniola lead from Laybach to Idria, and from Laybach by the Adelsberg Pass (2159 feet) across the Karst to Trieste. This last is intersected by a road from Görz through St. Veit and Senoetach to Fiume.

Except in the river-valleys which form a comparatively small portion of the surface, the soil is very unfruitful, naked mountains, rocky levels, marahas, or sandy flats being the prevailing characters of the country. The climate on the mountains and uplands is sharp; the winters severe and long; snow disappears from the mountain tops only in the height of summer. The Bora, or north-east winds, at times sweep the Karst and the more exposed parts of the country with furious violence. In the glens and valleys the soil is better, in many parts fertile, the climate much milder, and the vine, the chestnut, and maize flourish. Rye, barley, oats, some wheat, potatoes, pulse, flax, hops, and fruit are grown. In some parts the mountain slopes are clothed with pine, oak, and beech forests, but they have been considerably thinned for the use of the smelting-furnaces. On the mountains many rare Alpine plants, medicinal herbs and roots are found. Horned cattle and horses are small; swine and poultry abound. Among the wild animals are deer, wild boars, the chamois goat, foxes, &c. Bears and wolves are rare. Birds of prey are numerous. Of game fowl the principal kinds are pheasants, bustards, partridges, snipes, and water-fowl. Among the minerals the most important are iron, quicksilver, copper, lead, cinnabar, alum, coal, marble, gypsum, rock-crystal, &c. The great quicksilver mines of Idria in the west of the crown land, have been long famous; the entrance to them is in the middle of the town of Idria; they formerly yielded 16,000 cwt. yearly. The industrial products comprise chiefly bar-iron, iron and steel articles, such as scythes, sickles, nails, files, &c.; copper articles, woollen-cloth, leather, linen, lace, pottery, paper, straw-hats, canvases, horse-hair sieves, tiles, German tinder, &c. A good number of the population is employed in mining and metallurgy. There is a considerable trade in timber and firewood.

The principal rivers are the Save and the Isonzo. The *Save*, or *Sava*, rises on the northern flank of Mount Terglou, and runs first eastward along that mountain mass, and then southward for a short distance to its junction with the Savenitza; its course is then south-south-east to the neighbourhood of Laybach, in which the river Laybach joins it on its right bank. The river then runs eastward till it reaches the boundary, along which it runs in a south-east direction till it enters Croatia a few miles below its junction with the Gurk, which passes Neustädtl. The *Isonzo* (the ancient *Sontius*) rises on the southern slope of Mount Terglou, from which it runs southward through the western part of Carniola and the circle of Görz in the Kustenland. At a short distance above Aquileia the Isonzo divides into two branches, the Isonzato and the Scobbo, which inclose the isle of Morosina, and after their re-union enter the Gulf of Trieste. The principal feeders of the Isonzo are, on the right, the Torre, which drains a part of the province of Friuli, and on the left the Idria and the Wippach, both of which flow in a north-west direction, the former passing the town of Idria and entering the Isonzo above Canal, the latter falling into it between Görz and Gradiaca. Both the Save and the Isonzo are subject to inundations on the melting of the snow in spring and after the autumnal rains. The Save is navigable in Carniola, and a river-port has been formed at Steinbruck, a station on the Vienna-Trieste railway to the south of Cilli. The Isonzo is navigable for small vessels for about 10 miles above its mouth. Both streams are available for floating timber down from the mountain forests. The Isonzo formed part of the eastern boundary of Italy under the French empire. The *Laybach*, above mentioned, rises near Adelsberg under the name of *Poik*; this stream loses itself in the grotto of Adelsberg and re-appears in the *Unz*, which again sinks below the surface, but re-appears at the village of Ober-Laybach, where it becomes navigable for boats. The remarkable Lake of Czirknitz, or Zirknitz, is noticed in a separate article. [CZIRKNITZ.]

The crownland is divided into 10 circles. With the exception of Laybach and Idria the towns are small. *Laybach*, or *Laiabach*, the capital of the crownland, is situated in 46° 1' 48" N. lat., 14° 30' E. long., 258 miles S. by E. from Vienna by the Vienna-Trieste railway; in an extensive valley near the mouth of the navigable river Laybach, which divides the city into two parts, connected by five bridges; and has with its eight suburbs about 18,000 inhabitants. It is a bishop's see, and has a fine cathedral, twelve other churches, a lycœum, a gymnasium, and many other public institutions. The chief industrial products of Laybach are porcelain, linen, and refined sugar; there is an active transit-trade from the interior to Trieste, in which direction a railway is in course of construction. The citadel, situated on a commanding eminence, is now used as a prison. At a short distance to the north of the town there is a stone bridge of 11 arches, 540 paces in length, over the Save. Laybach is celebrated for the congress held there in 1821. The other towns are Stein, which gives its name to the Steiner Alps, from the summits of which, 10,274 feet above the level of the sea, there is a magnificent prospect over Carniola; Krainburg, with the castle of Kieselstein; Neumarkt, famous for the manufacture of scythes, sickles, &c.; none of these towns have so many as 2000 inhabitants.

Neustädtl, the capital of a circle, is beautifully situated on the river

Gurk, 38 miles E.S.E. from Laybach. It is a very pretty regularly-built town, with three churches, a gymnasium, a Franciscan convent, and about 2000 inhabitants.

The only other place of importance is *Idria*, a mining town, famous for its quicksilver mines, which were accidentally discovered by a peasant in the year 1497. It is situated partly at the bottom of a narrow valley, surrounded by high mountains, 22 miles W. from Laybach, on the banks of the little river Idria, and partly on several low hills, of which that called Mount Calvary is distinguished by its height and picturesque form. The town consists of between 400 and 500 houses, and has about 5000 inhabitants, who subsist partly by lace-making and straw-plaiting; but the greater part are employed in the mines and works. A large building called *Schloss*, in the middle of the town, contains the offices of the managers of the mines; close to it is the entrance to the mine by a large iron gate, which opens to a horizontal passage hewn in the solid rock, leading to a flight of 757 steps cut in the limestone rock, which are kept in perfect order and provided with a hand-rail. At the foot of this staircase there is a small aisle serving as a chapel, where the miners perform their devotions before they proceed into the mine, and where a couple of tapers burning on the altar help to cheer the gloom that reigns in these subterranean caverns. The visitor proceeding from this chapel soon reaches various adits running in all directions, and would soon be bewildered in the labyrinth without a guide. This mine is one of the greatest curiosities in the Austrian empire, and unequalled for the order, beauty, and safety which are remarked in every part. The noxious exhalations of the quicksilver, which sensibly affect respiration, and the suffocating heat, soon make the visitor anxious to return to the light of day, to which he ascends by a perpendicular shaft in a kind of box or case, which lands him on the surface of the earth at a great distance from the spot at which he entered. The greatest depth of the mine is 750 feet. About 150 tons of mercury are produced annually. The stamping-mills, washing-houses, furnaces, and roasting-houses for the refinement of the mercurial ore are at a short distance below the town. Besides the quicksilver-works there is a manufactory of cinnabar, which produces 1800 cwt. annually. In the vicinity there are marble, jasper, and freestone. All the establishments for smelting, refining, &c., are admirably arranged, and there are various benevolent institutions for the poor miners, whose health is most dreadfully impaired by the deleterious atmosphere in which they ply their sickly trade. These mines, the grottoes of Adelsberg, and the Lake of Czirknitz, are celebrated as 'the three sights of Carniola.'

Carniola was, until the recent political arrangement of the Austrian empire in 1849, divided into the three circles of Laybach, Neustädtl, and Adelsberg, which corresponded with the older divisions of Upper, Lower, and Inner Krain respectively, and formed the government of Laybach. Krain was early inhabited by a people of Slavonic stock, and formed in the 10th century an independent margraviate, which at a later period the dukes of Austria and Carinthia divided between them, and which was raised in the 12th century to a dukedom. The duchy on the death of the Earl of Tyrol in 1335 fell to the Earl of Görz, from whom it came, through failure of male issue, to the house of Austria in 1364. By the treaty of Vienna in 1809 Krain was ceded to France, and constituted part of the Illyrian provinces. In 1813 it again came into the possession of Austria, and formed part of the kingdom of Illyria. [ILLYRIA.]

Turkish Croatia is sometimes (we know not whether correctly)

called Krain, or Kraina. [BOSNIA.]
KRASNOI-YAR. [ASTRAKHAN.]
KREMNITZ. [HUNGARY.]
KREMS, KREMSMÜNSTER. [ENS.]

KUBA. [DAGHESTAN.]

KUBAN (called *Kubin* by the Abassians, *Priash* by the Circassians), is a river in Russia, which originates in Mount Caucasus, between the principal range and Mount Elbrook. Having skirted the southern and western declivities of that snow-capped peak, it turns to the north, and afterwards to the west, and again to the north before it leaves the mountain range near Grigoriopol. It then turns again to the west and flows along the northern offsets of the Caucasus, which it divides from the steppes of the Tchernomorion Cossaks. Towards its mouth it enters a low flat country, and along its banks salt reed-marshes extend to a considerable distance. In this plain the river divides into two branches, and forms an island called the Island of Taman. One shallow branch, called by the Russians Tchernaya Protoka, runs nearly due north, and falls into the Sea of Azof. The other branch, which preserves the name of Kuban, continues its western course and falls into the shore-lake called Kubanskoi Liman, which is united to the Black Sea by a shallow passage scarcely 100 fathoms wide. The Kuban runs nearly 400 miles, and with a rapid current between steep rocky banks in the mountains; in the plain too the bed of the river is considerably (12 to 18 feet) below the surrounding surface, so that the river never overflows its banks. The Kuban carries down all the drainage of the northern slope of the western Caucasus, from which a large number of streams flow into it on the left bank. Among them are the Zelenchuk, the Ourop, the Laba,

which receives the Tchalmik, the Einansau, and other streams,) the Chagouta, or Chahadgaha, the Spaga, the Soup, and the Kara-Kuban, or Aâpa. On the right bank it receives no stream worth naming. The river abounds with fish. It is navigable for river-barges up to the town of Yekaterinodar, and on its thinly inhabited banks a number of small fortresses have been erected to protect the level country from the incursions of the mountaineers of the Caucasus.

KUMANIA. [CUMANIA.]

KUNAWUR. [BUSSAHER.]

KUNDUZ. [TURKISTAN.]

KUOPIO. [FINLAND.]

KUR, the ancient Cyrus, a river of Armenia, rises near 41° N. lat., 42° 35' E. long., in the mountains north-west of Kara, at a distance of about 12 miles S.S.W. from Ardahan in the Turkish pashalic of Kara. After flowing through the plain of Ardahan in the direction of north by east it runs in a general northern course to the latitude of Akhalzikh, which town it leaves a little to the west, and then turning to north-east it enters Russian Georgia, where it gradually declines to the east-south-east, and receives from the southern declivity of Mount Caucasus the *Arakui*, or *Aragbor*, a rapid river, which brings down a great mass of water. Below this junction the Kur is a very considerable river, and runs nearly south, passing the large town of Tiflis. So far its course is bordered by high, steep, and rocky banks, and it traverses a hilly country. Below Tiflis it enters the Plain of Kara, where its banks are alternately low and high, the plain being considerably elevated above its bed, so that the water of the river cannot be used for irrigating any part of it. In this plain several springs of petroleum occur. The Kur runs through the plain mostly in an east-south-eastern direction, and at its termination its waters are increased by those of the *Alazan*, another powerful river, descending from the southern declivity of Mount Caucasus. The *Alazan* is the ancient *Alazonius*; the country between it and the Kur is drained by the *Yori*, or *Gori*, the ancient *Cambyses*, up which Pompey marched in pursuit of Mithridates, B.C. 65, and which joins the *Alazan* a few miles above its junction with the Kur. From its junction with the *Alazan* the Kur traverses a hilly country of some extent, and then enters that extensive plain which extends along the Caspian Sea from Baku to the Bay of Kizil Agatch. This extensive plain is broken by isolated hills and numerous salt-marshes. Some of the hills along its northern border are mud-volcanoes, and in many places springs of petroleum occur. Near the banks of the Kur the country is subject to inundations, and overgrown with reeds to a considerable distance. The districts nearest the sea-coast have a soil impregnated either with salt or petroleum, and are completely sterile; but towards the hills and mountains which surround the plain the soil is tolerably fertile. About 70 miles from its mouth the Kur receives the *Aras* on the right bank [ARAS] and becomes navigable for moderate-sized vessels, and is about 140 yards wide. About 20 miles from the sea the river divides into several branches, of which the outermost are the largest. On the left main branch is *Salian*, a collection of villages rather than a town, but a wealthy place, on account of the productive fishery which is carried on by the inhabitants in the river, and at its mouth. The fish taken here are the same species which are caught at Astrakhan—sturgeon, pike, salmon, shad, &c. The delta of the Kur projects several miles into the Caspian Sea. The whole course of the river is about 560 miles. The district between the Kur and the *Aras* formerly belonged to Persia; the watershed between the two rivers is formed by the *Karabagh* and *Alighez* Mountains. (Reinegg and Biberstein; *London Geographical Journal*, vols. iii. and iv.; *Dictionary of Greek and Roman Geography*.)

KURDISTAN comprehends the larger portion of that mountain region which divides the elevated table-land of Iran (Persia) from the low plains of Mesopotamia, or Al-Jezireh. The name signifies 'Land of the Kurds,' and as this lawless people have spread themselves over a large part of Armenia and even into the eastern parts of Asia Minor, the term is frequently used in a loose sense so as to include a much wider range of country than that to which it properly applies. The mountain range of the *Erdesh-Dagh*, or *Arjerash-Dagh* (38° 20' N. lat.), constitutes the boundary line between Armenia and Kurdistan. From this range Kurdistan extends in a south-eastern direction to the Persian province of Luristan, or to about 34° N. lat. The greatest width of this mountain-region is about 130 miles, and the area of the whole may be about 28,000 square miles. About three-fourths of it are under the dominion of the sultan, and form portions of the *eyalets* of Baghdad, Mosul, and Van; the remainder belongs to Persia, and constitutes the province of Kurdistan, of which *Kermanahah* is the capital.

The higher mountain region occupies the northern portion, and extends from the *Erdosh-Tagh* to a range which on the west approaches the left bank of the *Tigris* south of *Jezireh-ibn-Omar*, and extends thence in an east-by-south direction across the whole region, being overtopped near the boundary-line of Persia by the elevated peak of *Rowandiz* (10,120 feet above the sea-level). This range is called at its western extremity, where it hardly rises 1000 feet above the sea-level, the *Soli Range*; but in the middle, where it attains 3000 feet and more, the *El-Khair Mountains*: it is still higher where it approaches the table-land of Iran. The whole country between this range and the *Erdosh-Tagh* is mountainous. In the vicinity of its northern limits the rocky masses are rarely and not deeply furrowed by depre-

sions in the shape of valleys. They form a table-land from 6000 to 7000 feet elevated above the sea-level, whose surface presents a succession of low hills with gentle declivities and small plains between them. This is the table-land of *Ali-Bagh*, on which very few lofty summits rise. The climate is very dry, and the vegetation scanty. It is mostly used as pasture-ground in summer. In proceeding southward the country gradually changes its features. The valleys sink deeper and the masses between them rise higher, and thus the table-land is changed into a mountainous country consisting of high ridges with steep acclivities and comparatively narrow valleys between them. Some of the ridges attain a great elevation, as the *Marannan Mountains*, the *Jawar-Tagh*, and the *Jelooch Mountains*; the *Jawar-Tagh* appears to be the highest, and to rise between 12,000 and 13,000 feet above the sea. The declivities of the ridges and the valleys present a vigorous vegetation in the numerous forests and in the growth of the different kinds of grain and vegetables which are cultivated. The forests chiefly consist of different kinds of oak, from which immense quantities of gall-nuts are collected. In the valleys the European *Cerealia* are raised; and the orchards produce apples, pears, plums, and cherries. Many of the valleys open towards the plain of Mesopotamia, and these are wider; but the larger number extend from north to south, and are seldom more than two miles wide, and generally not half so much.

This portion of Kurdistan is in possession of some tribes of Kurds, which were till lately almost independent. Probably more than half the population are Mohammedans, and the other half Christians, among whom the Nestorians are the most numerous. Their patriarch resides in *Julamerik*, a small town situated in the vale of the river *Zab-Ala*, or *Great Zab*. Near the southern extremity of this region are the towns of *AMADIYAH* and *Rowandiz*. The town of *Rowandiz* is some miles west of the peak of *Rowandiz*. It is built on a tongue of land formed by the confluence of two rivers, and contains more than 1000 houses, and perhaps 10,000 inhabitants. Numerous caravans pass between this place and *Mosul*. They export gall-nuts, madder, hides, and tobacco, and bring back several European and Indian articles. In ancient times the district just noticed was called *Cordyene*, or *Gordyene*, which was occupied by the *Karduchi*, the ancestors of the Kurds, and evidently named from them also. [ARMENIA.]

The southern portion of Kurdistan, or that which lies between 36° and 34° N. lat., can hardly be called mountainous, except in its eastern districts. The surface however is greatly diversified by several ranges of hills. Three such ranges may be traced between the banks of the *Tigris* and the *Zagros Mountains*. These three ranges go by the names of the *Hamrin Hills*, the most south-western, *Ali-Tagh*, the central ridge; and *Kara-Tagh*, the north-eastern. They run parallel to one another from north-west to south-east. The *Hamrin Hills* terminate on the banks of the *Tigris* between the town of *Tekrit* and the mouth of the *Zab-Asfal*, or *Lesser Zab* (near 35° N. lat.); the *Ali-Tagh*, south of the confluence of the *Zab-Ala*, or *Great Zab* (near 36° N. lat.); and the *Kara-Tagh* joins the *El-Khair Mountains* south-west of the peak of *Rowandiz*. These ridges are connected with each other at several places by hilly tracts. The Turkish part of this region is described in the article on the Pashalic of *BAGHDAD*; the rest is described under *PERSIA*.

The largest river of Kurdistan is the *Zab-Ala*, or *Great Zab*. It rises in the north-western corner of the table-land of *Ali-Bagh*, or *Elbagh* [ARMENIA], at an elevation of about 7000 feet above the sea-level; receives by its numerous affluents the drainage of a great part of Northern Kurdistan, enters Southern Kurdistan by a narrow glen where the *Kara-Tagh Mountains* are connected with the *Khair* range, and joins the *Tigris* about 30 miles below *Mosul*. At the place of their confluence the rivers are nearly equal in size. The waters of the *Tigris* are highest in April and May, but in the *Zab* in June and July, for about that season the greater part of the snow with which the mountain region is covered during the long winter dissolves, and thus the water brought down by this affluent serves during the summer to keep up the level in the lower part of the *Tigris*. The water of the *Zab-Ala* is much colder than that of the *Tigris*. The other large rivers of Kurdistan are the *Zab-Asfal*, or *Lesser Zab*, and the *Diyâlah*. They rise in the elevated region dividing Southern Kurdistan from the table-land of Iran, and after draining the first-mentioned country they fall into the *Tigris*; they break through all the lower ridges of Southern Kurdistan. The chief towns of this part of Kurdistan are noticed under *BAGHDAD*, Pashalic of.

The climate of Kurdistan is excessively cold in winter, when the mountainous region is covered with snow for six months in the year. The heat in summer in the plains and valleys to the south is very oppressive, especially during the north-eastern winds, which suddenly raise the temperature 10 degrees and more. When the *sharki*, or north-east wind, does not blow, the changes of the atmosphere are very regular in summer.

The fields of Kurdistan produce wheat, barley, and Indian corn; millet and rice are grown only in the lower districts towards the banks of the *Tigris*. Tobacco and cotton are largely cultivated, and supply articles of commerce. Legumes, especially lentils, are much grown. Melons, water-melons, and cucumbers are very abundant. The orchards yield figs, pomegranates, olives, oranges, walnuts, apricots, peaches, plums, apples, pears, cherries, and abundance of grapes of

good quality; in some places there are plantations of dates. Poplar and chinarr trees are planted, and among the forest-trees are several kinds of oak; the pear-tree and rose-bush grow wild.

Sheep, cattle, and horses abound. There are bears, wild hogs, wild goats, antelopes, and jackals. Land-turtles are frequent, but of small size. Bees are very abundant, and honey is a considerable article of commerce; locusts sometimes lay waste a part of the country; birds are not numerous, except partridges and quails.

Minerals appear to be scarce, except building-stone. In the mountain-region iron and sulphur are met with; and in some places these mines are worked on a small scale. There are several salt-springs in the hills between the Lesser Zab and the Diyâlah, from which large quantities of salt are obtained. Naphtha and petroleum abound, especially in the vicinity of Kerkuk.

Commerce is carried on by caravans. At least one caravan departs every month from Suleimaniyeh for the Persian towns of Tabriz and Hamadan. They take to Tabriz chiefly goods obtained from Baghdad, as coffee, dates, and European and Indian manufactures; and bring back large quantities of silk for the manufactures of Baghdad, and some silk stuffs. The exports to Hamadan consist partly of goods obtained from Baghdad, and partly of the produce of the country, as tobacco, fruits, honey, gall-nuts, &c.; the imports consist of butter, but especially of the manufactures of Kasbin, as velvets, brocades, cotton-goods, &c. The commerce with Kerkuk, which is the chief market for the produce of Kurdistan, is very active; from that place are brought to Suleimaniyeh gall-nuts, honey, sheep-skins, and cattle; and exchanged for fruits, rice, leather, coffee, cotton-stuffs, &c. From Northern Kurdistan the chief articles are gall-nuts and manna, which are disposed of chiefly at Bitlis and Van. There is also much commerce with Mosul and Baghdad, where coffee, dates, and European and Indian goods are obtained in exchange for the silk brought from Tabriz, and for the produce of the country, consisting of sheep, gall-nuts, sumach, cheese, butter, gummi, tallow, soap, and tobacco.

The population of Turkish Kurdistan is estimated at one million, of which four-fifths are Kurds, and the remainder Armenians, Persians, Jews, and Turks. The Kurdish population of Persian Kurdistan may amount to 20,000 individuals. But as a numerous colony of Kurds is found in Khorassan, and several tribes are dispersed over the hilly region in Mesopotamia, over Armenia, and as far west as Aleppo and the Taurus range, the whole population of the nation may perhaps not fall short of two millions. The Kurds are a stout race of men, of dark complexion, with black hair, a large mouth, small eyes, and a savage look. They are very regularly built, and attain a great age. Their language is derived from the same stock as that of the modern Persian, but not having been fixed by writing, it has degenerated much more. The name of Kurd signifies a valiant warrior, and is therefore adopted as an honourable denomination. A great portion of the population is still addicted to a migratory life. Even when settled in villages, they leave them in summer, and retire with their herds to the adjacent mountain ranges, from which they return when the harvest time approaches. Though the Kurds are Mohammedans like their neighbours, their women enjoy a much greater degree of liberty, and are frequently met with in the streets. Ladies of rank wear a veil, but the women of the middling and lower classes go without. The Kurds are noted robbers. Further particulars of this people are given under ARMENIA.

The Kurds were known to the ancients. Xenophon ('Anabasis,' iii.) called them Karduchi, and later historians Kordisi and Gordiani. When subject to the kings of ancient Persia, they belonged partly to the province of Assyria, and partly to Media, as at present their country is divided between Turkey and Persia. The battle Gaugamela (Arbela) was fought in Kurdistan, near the modern town of Arbil. [BAGHDAD, vol. i. 822.] After the time of Alexander their country was united to the kingdom of Syria, but was dismembered from it in the third century before Christ by the Parthians. It afterwards became a part of the new Persian empire, and fell with it under the dominion of the khalifs of Baghdad. After the destruction of the khalifat, Kurdistan partook of the numerous revolutions in Persia and Mesopotamia. The famous sultan Saladin was a Kurd, of the tribe of Rewandooz, and appears to have got possession at least of a part of the country. But it soon passed under the dominion of the Moguls (1258), and finally (1888) was conquered by Timur. After the establishment of the Soofee dynasty (1502), Kurdistan constituted a part of Persia, and remained so till the 17th century, when the Kurds, oppressed by the Persians, revolted, and subjected themselves to the dominion of the Turkish sultan.

(Rich, *Narrative of a Residence in Kurdistan*; Heude, *Voyage up the Persian Gulf, and a Journey overland from India to England*; Ainsworth, Shiel, Rawlinson, in *London Geographical Journal*, vols. viii., x., and xi.; Ritter, *Erdrkunde von Asien*; Dr. Layard, *Nineveh and its Remains*; *Discoveries*.)

KURILE ISLANDS, a group of islands in the Pacific Ocean, extend from Cape Lopatka, the southern extremity of the peninsula of Kamtchatka, in a somewhat curved line to Cape Broughton, the north-eastern extremity of the island of Yeso. They are twenty-five in number, and are all of volcanic origin, consisting of high masses of lava. Ten active volcanoes, some of them 6000 feet high, are known to exist on the nineteen northern islands. The vegetation is scanty,

and on those near Kamtchatka trees do not grow; but the southern islands are more fertile, especially Kunashir and Iturup, on which the Japanese have settled. The remainder are claimed by the Russians as an appendage to Kamtchatka, and they even established a settlement on Urup in 1828 for the purpose of hunting the numerous wild animals, especially beavers, which are found there. The natives are partly Kamtchatdales and partly Ainos, a tribe which seems to belong to the same race as the Japanese. Both tribes live on the produce of the chase and the fisheries, which they barter with American, Russian, Japanese, and Dutch traders. The Japanese have introduced agriculture into the islands which have been settled by them.

KURLAND. [COURLAND.]

KURNAU. [BHUTPOOL.]

KURSK, a large government of European Russia, lies between 50° 20' and 52° 26' N. lat., 33° 40' and 38° 20' E. long. It is bounded N. by Orel, E. by Voronetz, S. by Slobodak-Ukraine, and N. by Tschernigov. Its area is 17,818 square miles, and the population in 1846 was estimated at 1,680,000. The surface of the province is undulating. It contains no mountains, but is traversed by many small eminences. There are no large rivers or large lakes, nor are the forests extensive. The country is populous, and covered with villages. The soil generally consists of a rich mould, of sufficient depth, over a thick clayey or loamy bottom; sand or stiff clay occurs but rarely, and heath and moor still more rarely. The hills consist of clay, marl, lime, freestone, and chalk. The principal river is the Donetz, which, after being joined by the Oskol, Uloscha, and other rivers, flows into the Ukraine, where it joins the Don. Neither the Donetz nor any of the other rivers, of which there are 13 large and 495 smaller rivers, is navigable throughout. The Sem, or Seim, runs into the Desna, a feeder of the Dnieper. Among the rivers that join it is the Swava, which comes from Orel, and has many ruins and tumuli on its banks. The streams are not frozen over till the beginning of December, and are free from ice at the beginning of March. In some parts the tapeworm is endemic among the people, and the liver-fluke in the cattle. The corn occasionally suffers from blight.

Kursk is one of the most fertile provinces of the empire. The soil is so rich that it needs no manure. When it is exhausted, it is suffered to lie fallow for three or four years. The system of agriculture is very rude: new ground is broken up with a large plough, drawn by three or four yoke of oxen; old lands are turned or scratched up with a light plough. The corn is dried and threshed in the field; there are no barns, but the grain is deposited in pits in the ground, where it may be preserved for six or ten years, only covered with sods or boards. The chief products are—rye, wheat, barley, oats, peas, buckwheat, millet, poppy, hemp, hops, tobacco, and some flax. Horticulture is very general and successful; all kinds of garden vegetables are cultivated and thrive well. Apples, cherries, various sorts of plums, and pears are grown. There is an abundance of hazel-nuts and wild berries; melons and water-melons are grown in the open fields. There is some wood in small coppices in most of the circles, but timber and fuel are scarce. Straw and dried cow-dung are used for fuel. The crown forests cover an area of only 330 square miles. Wolves, foxes, hares, bustards, partridges, and quails abound. The breeding of cattle and sheep is carried on very extensively. The horses are of the Russian breed, but nearly equal to those of the Ukraine. Oxen alone are employed in agriculture. The inhabitants keep numbers of swine and domestic poultry; and so many bees, that honey and wax are articles of exportation. There is scarcely any fish. The minerals are iron, limestone, flints, and saltpetre.

Agriculture and the breeding of cattle are the chief employments: very few hands are engaged in manufactures. Such clothing as the countryman wants—shirts, stockings, gloves, and caps, are of his own manufacture. The manufactures are chiefly in the towns of Kursk and Belgorod. The exports consist of the natural productions of the country. The mode of transport in the absence of navigable rivers and canals is expensive. Products are mostly sent by land to the Volga and thence to St. Petersburg. Sometimes they are sent by the Sem and the Desna to Odessa.

The population consists partly of great, partly of little Russians. There are few strangers, but a good many gipsies. The head of the Greek Church is the archbishop of Kursk and Belgorod.

Kursk, the capital of the government, in 51° 43' 30" N. lat., 36° 27' 45" E. long., is the residence of the military governor of Kursk and Orel, of the civil governor and authorities, and of the archbishop. It stands on the Tuskara, a feeder of the Seim, at the foot of a hill on which there is an old decayed fortress. The town is surrounded with palisades, the old rampart having been converted into walks and gardens. The streets are narrow and crooked, but they are paved. There are twelve stone and four wooden churches, two convents, an ecclesiastical seminary, a gymnasium, hospital, and several manufactories. The population is stated at 26,000. A great annual fair is held on a heath at Koreaja Pustinja, a village about 12 miles from the town.

Among the other more important towns are BELGOROD; *Karalcha*, on the left bank of a river of the same name, in the south of the province, which has 6 churches, saltpetre factories, and 11,000 inhabitants; *Putivul*, on the Seim, in the west of the province; population, 10,000; *Sudecha*, 50 miles S.W. from Kursk; population, 7000:

Rylak, west of Kursk, on the Sein: *Starov-Oskol*, in the east of the province, on the Oskol, a feeder of the Donets: *Mikhailofska*, in the south-east: and *Obojan*, in the interior, south of Kursk, each with over 6000 inhabitants.

KURUMAN. [BETHOUANA.]

KÜSTENLAND (*Coast Country*), the name of a new province or crownland of the Austrian empire, which comprises the circles of Görz and Istria and the territory of Trieste. It is bounded N. by Carniola, E. by Croatia and the Bay of Quarnero, S. by the Adriatic, and W. by the Adriatic and the province of Udine or Friuli. Its

area is 3060 square miles. Its population, according to official estimate, in 1851 amounted to 508,016. The geographical and statistical details respecting the crownland are given in the articles AUSTRIA, GÖRZ, ISTRIA, and TRIESTE.

LAACHER SEE. [EIFEL.]

LAALAND, an island belonging to Denmark, is situated in the Baltic, between 54° 39' and 54° 57' N. lat., 10° 56' and 11° 50' E. long.; its length from west to east is about 60 miles, its breadth 20 miles, and its area is 460 square miles. The population is about 50,500. The island is low, flat, and has much marsh ground. The water is bad, and the climate rather unhealthy. The soil is extremely fertile, producing all kinds of corn, pulse, flax, hops, potatoes, fruit, timber, &c., for exportation. The inhabitants have great numbers of horned cattle, and fish are very abundant. There are four towns in the island. *Marieboe*, situated on a lake nearly in the centre of the island, has about 1000 inhabitants. *Nastov*, or *Nakator*, with 2300 inhabitants, has a good harbour and considerable trade. *Nystedt*, with 800 inhabitants. *Rödbye*, with 900 inhabitants. Charles X. of Sweden, in his bold march across the frozen Baltic in 1657-8, traversed Laaland in his way.

LA BALME. [ISÈRE.]

LABRADOR. [HUDSON'S BAY TERRITORIES.]

LABREDE. [GIRONDE.]

LABUAN, an island in the Malay Archipelago, and the seat of a British colonial government, is situated near the north-west coast of the island of Borneo, and 30 miles N. from the town of Borneo, in 5° 22' N. lat., 115° 10' E. long. The island is about 10 miles in length, 5 miles in breadth, and 25 miles in circumference. The population in 1851 was 780, exclusive of aliens and resident strangers (chiefly native labourers), amounting to 800. The island is well supplied with good water, and contains coal. It was ceded to the British in 1846, and the colonial government was established on it at the beginning of October 1848.

The locality on which the government establishment was formed consists of a narrow and slightly-raised ridge on the sea-shore, forming the outer edge of a low flat, called the Plain, which is in many parts below the level of the sea, and was converted into a marsh during the rains. The area of the Plain probably does not exceed 100 acres. It is bounded on the inland side by swampy tracts of jungle. The harbour is tolerably good. The unhealthiness of the marshy ground in the Plain has been considerably abated in consequence of the construction of a canal, by which the water is carried off.

The coal is wrought on the north-east point of the island. The mines have been taken by the Eastern Archipelago Company, who in 1851 exported 5032 tons of coal, of which 938 tons were supplied to vessels belonging to the British navy. During 1852 there entered inwards 1198 ships and prahus, of an aggregate burden of 6223 tons; and there cleared outwards 27, of an aggregate burden of 5052 tons. The imports in 1852 were valued at 30,970*l.*; the exports at 16,564*l.* The principal exports were:—Coal, 5448*l.*; sago, 2379*l.*; birds'-nests, 1937*l.*; pearls, 1680*l.*; and camphor, 1559*l.* The principal item of revenue is the royalty on coal. Farm licences are increasing in value, improved rentals being obtained at each succeeding sale.

LACCADIVE ISLANDS, discovered by Vasco de Gama in 1499, are situated in the Indian Ocean, off the west coast of Malabar, between 10° and 13° N. lat., 72° and 75° E. long. They are 17 in number, but only 8 are inhabited, and two sand-banks are yet uncovered with vegetation. The other 7 are uninhabited and overgrown with cocoa-nut trees. They are visited for the coir and nuts by boats from the other islands. The largest of these islands are Cabarettoe, Anderot, or Underoo, and Akhatoe, but they are all small, Anderot, one of the largest, being only 3 miles in length, from east to west, and 1 mile broad.

These islands are based on coral reefs. The south-west monsoon is the only wind that prevails with any degree of regularity, the opposite or fine-weather monsoon being interrupted in a great measure by the proximity of the archipelago to the mainland of Hindustan. The coral-reef of Anderot projects to the north-east. The islands are low, and rise towards the centre with a slightly undulating surface. The chief products are a little rice, a plant not unlike rhubarb, of a most acrid pungent taste, sweet potatoes, cocoa-nuts, plantains, papaus, and betel-nuts. Cows are the only quadrupeds on the islands; they are of small size and not numerous. There is poultry in small quantities, and the sea contains fish and turtle.

The total population of the inhabited islands amounts to about 10,000. They resemble the inhabitants of the coast of Malabar, and

are Mohammedans. The four most considerable islands are subject to the Behee, or petty sovereign of Cananore in Malabar, and the other four are ostensibly British. They export to Mangalore cocoa-nuts, coir for making cables, a few cowries, and a kind of coarse sugar or jaggery, made from the cocoa-nut tree. The imports consist of rice and coarse cotton-cloth. The islands have no safe anchorage. During the south-west monsoon all intercourse between them is interrupted, and their large boats are sent to the Malabar coast for shelter.

LA-CHÂTRE. [INDRE.]

LACHLAN RIVER. [AUSTRALIA.]

LA-CIOTAT. [BOUCHES-DU-RHÔNE.]

LACOCK. [WILTSHIRE.]

LACONICA, called by the Romans *Laconia*, a country of ancient Greece, was bounded W. by Messenia, N. by Arcadia and Argolis, and E. and S. by the sea. Laconica is a long narrow valley, running from north to south, and lying between two mountain masses which stretch from Arcadia to the southern extremities of the Peloponnesus. The western range, which terminated in the promontory of Tænarum, now Matápan, the most southerly point of Greece, was called Taygetus, the highest point of which, called Taleton (now St. Elias), is 7902 feet high. The eastern range, terminating in Cape Malea, was known by the names of Parnon, Thornax, and Zarax. The highest point of Mount Parnon, the most northern part of the eastern range, is 6355 feet. The whole drainage of the valley is collected in the river Eurotas, which flows from the high lands of Arcadia, and is joined by the river Cenus, a little above Sparta. From its source to its junction with the Cenus the Eurotas flows through a very deep and narrow valley, which near Sparta is so much contracted as to leave room for little more than the channel of the river. After it leaves Sparta the hills recede farther from the river; but near Cenoë they again approach it for a short distance, and afterwards retire to the west and east towards the capes Tænarum and Malea respectively, leaving between them a plain of considerable breadth and fertility, through which the Eurotas flows to the sea. Between the mountains which form the eastern boundary of the valley of the Eurotas and the sea there was a narrow strip of land, which contained the towns of Delium, Minoa, and Epidaurus Limerá, belonging to Laconica: Prasia, which was farther north on the same coast, belonged to Argolis. The area of Laconica is probably about 1896 square miles. It forms a nome or province of the modern kingdom of Greece, and had in 1852 a population of 87,801.

The district of *Thyreatis*, on the borders of Argolis, was an object of early contention between Argos and Lacedæmon. (Herod. i. 82.) It originally belonged to Argolis, but was conquered by the Spartans about B.C. 547, in whose possession it remained till the decline of Sparta, when it was recovered by Argos. In the time of Pausanias it was included in Argolis. (Pausan., ii. 38, sec. 5.)

The southern projection of the Taygetus between the Laconian and Messenian gulfs is now called *Mani*, the country of the Maniotes, who always maintained their independence against the Turks. The slopes of Taygetus are clothed with forests of dark green pine. The range is rich in iron, marble, and green porphyry.

The snow remains on the highest points of Taygetus, in the neighbourhood of Amyclæ, to the month of June: the streams on the eastern slope of this mountain range are abundant. The orange-tree flourishes at Mistra, near the ancient Sparta, and fills the air with its perfume at a time when the summits of Taygetus are still wrapped in snow.

Colonel Leake describes the soil of Laconica as "in general a poor mixture of white clay and stones, difficult to plough, and better suited to olives than corn" ('*Morea*, i. 148). This description is in conformity to that of Euripides, who says that "it possesses much arable land, but difficult to work" (quoted by Strabo, viii. 366). Strabo informs us that there were some valuable stone-quarries near Tænarum and in the mountains of Taygetus (viii. p. 367). Laconica was subject, in common with the southern countries of Greece, to earthquakes, the most remarkable of which occurred B.C. 462, and destroyed the whole of the city of Sparta with the exception of five houses.

Laconica is well described by Euripides as difficult of access to an enemy. (Strabo, viii. 366.) On the west the range of Taygetus formed an almost insuperable barrier to an invading force; and on the north there were only two natural passes by which the country could be entered; one by the valley of the Upper Eurotas, as the course of that river above Sparta may be termed, and the other by the valley of the Cœnus. Both of these natural openings led to Sparta, which shows how admirably the capital was situated for purposes of defence. The want of good harbours on the coast also protected it from invasion by sea; and the possession of the island of Cythera, at the entrance of the Laconian Bay, which contained several good harbours, was therefore always considered by the Lacedæmonians as a point of great importance. Gythium, on the coast of the mainland, was the naval station of the Spartans.

There were no towns of any importance in Laconica, with the exception of Sparta. [SPARTA.] One of the most ancient towns was *Amyclæ*, the residence of the Achæan kings, situated a little south of Sparta, in a fertile plain. In the time of Pausanias it had become a small place, but contained many temples and works of art (Pausan., iii. 18.); and its temple of Apollo is described by Polybius as superior to almost all the other temples of Laconica. (Polyb. v. p. 367, Casaub.) The inhabitants of the rugged district of *Sciritis*, which lay to the south of Arcadia, between Tegea and the valley of the Upper Eurotas, enjoyed peculiar honours and privileges. They formed a separate body in the Spartan army, and were always stationed on the left wing. (Thucyd., v. 67; Xenoph., 'Rep. Laced.', xii. 3; 'Cyrop.', iv. 2, sec. 1.) After the invasion of Laconica, B.C. 369, they revolted from the Spartans. (Xenoph., 'Hell.', vii. 4, sec. 21.) They appear to have been of Arcadian race.

The Leleges, according to the most ancient traditions of Laconica, were the earliest inhabitants. (Pausan., iii. 1, sec. 42.) Lelex, the first king, was succeeded by his son Mules, who left the kingdom to his son Eurotas. According to the same traditions Eurotas, dying without children, bequeathed the kingdom to Lacedæmon, the son of Jupiter and Taygeta, who married Sparta, the daughter of Eurotas. The sovereignty is said to have remained in his family till shortly before the Trojan war, when the descendants of Pelops, Menelaus, and Agamemnon obtained possession of the country by marrying Clytemnestra and Helen, the daughters of Tyndareus, the last monarch of the ancient dynasty. At the time of the Trojan war we find the country in the possession of the Achæans, who undoubtedly settled in Laconica at a very early period, and probably conquered the Leleges. Menelaus was succeeded by Orestes, and Orestes by Tisamenus, during whose reign Peloponnesus was invaded by the Dorians.

After the conquest of the country Laconica was assigned to Aristodemus, or his sons Eurysthenes and Procles, for, according to the general tradition, Aristodemus did not live to enter Laconica. Strabo relates, on the authority of Ephorus (viii. p. 364), that Eurysthenes and Procles divided Laconica into six districts, over which they set governors with the title of kings. During the reign of Eurysthenes the conquered people were admitted to an equality of political rights with the Dorians; but his successor Agis deprived them of these privileges. The condition of the original inhabitants of the land, and their relation to their Dorian rulers, as well as the remaining history of the country, belong to the history of SPARTA.

(Strabo, lib. viii.; Pausanias, *Laconica*; Leake, *Morea*; Gall, *Itinerary of Greece*; Müller, *Dorians*; Thiersch, *De l'Etat Actuel de la Grèce*; Thirlwall, *History of Greece*.)

LA-CÔTE-ST-ANDRÉ. [ISÈRE.]

LADAKH is a kingdom in Asia, situated to the east of Cashmere, from which it is separated by that branch of the Himalaya Mountains which is called the Tibet Panjahl range. According to Moorcroft its area is equal to half that of England. It has the figure of a triangle, whose longest side runs from Bissahir [HIMALAYA] along the mountain range to Cashmere. North of it lie Baltistan, or Little Tibet, and Khotan in the Chinese province of Thian-shan-Nanlu. From the last-mentioned country it is divided by the nearly unknown mountain chains of Kuenluen and Kara-korum. East of it is Chang-tang, a province belonging to Tibet.

Ladakh is a part of the elevated table-land which is supported by the Himalaya system, and divided by it from the low plains of the Ganges and Indus. Its elevation above the valley of the Indus can hardly be less than 10,000 feet. The mountain ranges which traverse the country in a direction nearly parallel to the course of the Indus, rise in their highest parts to between 22,000 and 23,000 feet above the sea. Through the middle of the country runs the valley of the river Indus, here called Sing-ke-tee. This river, after passing Gertope, enters Ladakh at its southern extremity, where its valley is upwards of two miles wide. It continues to be wide as far as 33° 12' N. lat., 78° 50' E. long., where it breaks through a central range and rushes with great impetuosity into the plain on which Leh, the capital of the country, is built. The plain is extensive and well peopled, but the country bordering it on the north is unknown.

The Indus, which traverses the country in a north-north-western direction, receives here several considerable tributaries, of which the Shayuk, the most important, joins the Indus below Leh. There are several lakes in this country, most of which are salt, and furnish great quantities of that article. The largest of these lakes is that

of Chimorerel, which is from 20 to 25 miles long, with a width of 8 or 10 miles.

As the surface of the country is so elevated above the sea, its climate and productions do not correspond to its latitude (30° to 35°). The whole country is covered with snow in winter, and most of the mountains are so even in the month of June. The winters are long and severe, and all the rivers are covered with ice, which facilitates travelling in this season, just as in the northern countries of Europe. The people are mostly clad in sheep-skins and fur, as in Russia. The summers are hot and dry. Rain does not appear to be frequent.

The plain about Leh, though of moderate fertility, is well cultivated, which is the case with other districts of less extent. Wheat, barley, and lucerne are grown to a great amount. In some districts a kind of barley is raised which resembles wheat; in others cotton is cultivated in small quantities. Turnips are grown very extensively. Wood is scarce: poplars and some other trees are planted in the lower tracts.

The pastures occupy a large part of the country. The cattle are small and of three different kinds, common cattle, chowry-tailed cattle (Yaks), and a third kind called 'tho,' a mixed breed between the two former. Ases are rather numerous, as well as goats, which also live in a wild state. But the shawl goat is not found in the country. Sheep are numerous, and among them there is a small race called the 'purick-sheep,' which produces excellent wool. Horses are pretty common. On the uncultivated plains a species of wild horse is found, called by Moorcroft 'Equus Kiang.' Among the domestic animals is the dog, which is large and strong. The animal from which musk is obtained is abundant in the mountains.

The sands of most of the rivers which fall into the Indus contain small particles of gold; these are collected in several places. Other metals are not mentioned. Saltpetre and sulphur also are found, and supply materials for gunpowder, which is made in considerable quantities.

Leh, or *Lei*, the capital of the country, contains according to Moorcroft, 1000 houses, each several stories high and substantially built. There are several bazaars, each containing from twelve to fourteen shops. Leh is a place of great trade, being the principal entrepot for shawl-wool, and three great fairs are annually held here, of which that in February is the most frequented. These fairs are attended by merchants from Yerkand, in the Chinese province of Thian Shan Nanlu, from L'Hassa and other parts of Tibet, from Amritair and other towns of the Panjab, and particularly from Cashmere. Roodok, on a small feeder of the upper Pungong Lake, is another place of considerable traffic. It is said to contain 300 families, and is chiefly connected with Hindustan by the way of Kunawar in Bissahir. [HIMALAYA.]

The inhabitants of Ladakh belong to the same race as the inhabitants of Tibet. They are a very industrious and frugal people, and well acquainted with the arts of civilised life. Their country being surrounded by mountains they have preserved their independence, though on all sides bordering on neighbours much more powerful than themselves. Their sovereign, who resides at Leh, is called Gealbo, that is, rajah of Leh. He sends however from time to time presents to his neighbours, because his subjects are connected with their countries by commerce. Ladakh, being situated between Hindustan, Cashmere, Khotan, and Tibet, is the thoroughfare of a very extensive commerce. The commercial routes are few: that to Tibet runs from Leh to Roodok, and thence to Gertope along the Indus; from Gertope it seems to cross mountain ranges to L'Hassa. From Roodok the road to Kunawar traverses a table-land, and then descends to the Paruti River, a tributary of the Spiti, which falls into the Sutlej. Kunawar is that country which occupies the tract where these three rivers join. The road from Leh to Cashmere and the Panjab leads westward over the Tibet Panjahl Mountains by the elevated mountain-pass of Naubuck Nai Mallik. Ladakh is called Tibet by the Cashmerians. The road from Leh to Yerkand is by far the most difficult and dangerous: it crosses the high mountain range of Kara-korum and the whole mountain system of the Kuenluen, and traverses wide mountain tracts which are nearly uninhabited.

The principal object of this extensive commerce is the wool of the goats, which is used in the manufacture of shawls. It is brought from Gertope to Leh, and thence conveyed to Cashmere and the Panjab; 800 horse-loads are said to be carried annually by this route. The merchants of Kunawar bring to Roodok sugar, tobacco, cotton and woollen cloths, indigo, swords, copper, tin, iron, paper, rice, and spices. They take in return salt, borax, gold-dust, tea, and shawl-wool. [See HIMALAYA MOUNTAINS, in SUPPLEMENT.]

LADOGA, LAKE. [RUSSIA.]

LADRONE ISLANDS, so called from the thievish disposition of the natives at the time of their discovery by Magalhaens (1521), are also called *Mariane Islands*, in honour of the queen of Philip IV. of Spain, who caused them to be settled. They extend in a northern and southern direction between 13° and 20° 30' N. lat., 144° and 145° 30' E. long., and are about twenty in number. They are mostly of a volcanic character, and even in modern times some of the volcanoes have been in activity. Like other islands of this description

their surface is broken, and rises to high hills and even to mountains; but the soil, wherever it can be cultivated, is of great fertility. Being exposed to the trade-winds the climate is not so hot as might be expected from their geographical position. Nearly every kind of intertropical product thrives on these islands, which produce cotton, rice, indigo, Indian corn, sugar, cacao, cocoa-nuts, tobacco, plantains, &c., in abundance. The Spaniards have introduced most of these products, as well as the llama, from Peru, which is said to thrive on the mountains. Cattle, horses, mules, and asses are numerous. The sea abounds in fish, and also produces trepang for the Chinese market. The principal island is Guajan, which is about 80 miles in circumference. Its capital, and the seat of the Spanish governor, is San Ygnacio de Agaña, which has an open roadstead defended by two small fortresses; but about 10 miles farther south there is a good harbour called Calderona de Apura, which is also fortified. Of the other islands Tinian has obtained some notoriety from the stay there of our distinguished seaman Anson, and from the extensive ruins, which indicate that these islands were once inhabited by a people well acquainted with the arts of civilisation. The aboriginal inhabitants, who at the time of the foundation of the Spanish settlement in the middle of the 17th century are stated to have amounted to 150,000, have disappeared on Guajan, but probably they are more numerous on some of the other islands, which are only nominally dependent on the Spanish governor. The present population of Guajan consists of settlers from Mexico and the Philippine Islands, who are called by the Spaniards Los Indios; they speak Spanish, and are Catholic Christians. The number of Spaniards is very small. (Anson; Kotzebue, *Voyage round the World*.)

LAEKEN. [BRABANT, SOUTH.]

LAFAYETTE. [INDIANA.]

LAGAN, RIVER. [BELFAST.]

LAGHOUAT. [ALGERIE.]

LAGNEU. [AIX.]

LA'GO MAGGIORE, the ancient *Lacus Verbanus*, the largest lake in Italy, extends about 40 miles in length from north to south; its greatest breadth, which is 8 miles, is about the middle of its length; but it is only between 2 and 3 miles broad in most other places, and still less at the north and south extremities. The elevation of its surface above the sea is 878 feet, and its greatest depth is 1100 feet. Its northern half extends between the lower offsets of the Pennine Alps on one side and the Rhaetian Alps on the other, receiving all the streams that flow from the southern slope of those mountains, from Mount Ross on the west to Mount Bernardin on the east. The southern extremity of the lake touches the level plain of Lombardy. The principal affluents of the Lago Maggiore are the Toccia or Toesa, the Maggia, the Ticino, and the Tresa. It also receives an outlet from the small lake of Orta, which lies west of the Lago Maggiore. The outlet of the Lago Maggiore is formed by the Ticino, which issues from its southern extremity at the town of Sesto. The northern extremity of the Lago Maggiore, which is called at that end the Lake of Locarno, extends into the Swiss canton of Ticino. Through the remainder of its length the Lago Maggiore divides Austrian Italy from the Sardinian territory, which lies along its western shore. The Ticino continues to mark the boundary between the two states to its junction with the Po. The lake abounds with fish. Steamers ply on it. [ARONA; COMO; NOVARA; TICINO.]

About the middle of the length of the lake, and in its broadest part, where it forms a gulf indenting the western shore, near Pallanza, are the Borromean Islands (*Isole Borromée*), which belong to the noble Milanese family of the same name. They are four in number—Isola Madre, Isola Bella, Isola dei Pescatori, and the Isolino, the smallest of all. The Isola Madre, which is the largest, is covered with laurel, pine, and cypress trees, forming a grove rising in the midst of the water, and contrasting by its perpetual verdure with the snows of the neighbouring Alps. The Isola Bella is richer, but its beauty is more artificial. Numerous terraces rising in a pyramidal form are planted with orange- and lemon-trees, and adorned with marble statues and vases. The splendid palace of the owners is rich in marbles, gilding, and mirrors, and the lower apartments are shaped like grottoes and embellished with statues and fountains. The myrtle, the rose, the vine, and the fig-tree thrive luxuriantly around. The whole has an air of enchantment, but art is too apparent, and the lovers of nature prefer the more simple beauty of the Isola Madre. The Isola dei Pescatori is inhabited chiefly by fishermen, and has nothing remarkable; neither has the Isolino.

LAMBETH. [LONDON.]

LAMBOURN, or CHIPPING LAMBOURN, Berkshire, a market-town in the parish of Lambourn, is situated in 51° 30' N. lat., 1° 33' W. long., distant 20 miles S.W. by S. from Abingdon, and 65 miles W. from London. The population of the parish of Lambourn in 1851 was 2577. The living is a vicarage in the archdeaconry of Berks and diocese of Oxford. The town of Lambourn is situated upon the little river Lambourn, which falls into the Kennet at Newbury. In the market-place is a tall plain pillar, with an ornamented capital. The church is a very handsome cruciform structure of transition Norman and early English styles, with some windows of the decorated and perpendicular styles. The market held on Friday is of ancient date, but has much declined. There are four annual fairs.

LAMEGO. [BEIRA.]

LAMLASH. [ARRAN.]

LAMPETER, Cardiganshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Lampeter-Port-Stephen, is situated in 52° 7' N. lat., 4° 3' W. long., distant 29 miles E. by N. from Cardigan, and 209 miles W. by N. from London. The population of the borough of Lampeter in 1851 was 907. The living is a vicarage in the archdeaconry of Cardigan and diocese of St. David's. The borough is a contributory to the Cardigan district of boroughs in returning one member to the Imperial Parliament. Lampeter Poor-Law Union contains 14 parishes and townships, with an area of 74,200 acres, and a population in 1851 of 9883.

The town is pleasantly situated on the left bank of the river Teify at the foot of the Tregaron Downs. Besides the parish church, which was rebuilt in 1836, there are places of worship for Wesleyan and Calvinistic Methodists and Independents; a National school, and a Free Grammar school. An agricultural society has been established here. A county court is held. The market is on Saturday; and there are 11 fairs in the course of the year. St. David's College, Lampeter, founded in 1822 by Bishop Burgess, was incorporated in 1828, and received by a supplementary charter in August 1852, authority to grant the degree in Bachelor of Divinity. The course of instruction is adapted especially for Welsh students, but others are admitted. The college grants at the end of the term a certificate to students who have satisfactorily completed their theological course; which is accepted by most of the bishops as a qualification to become candidates for orders. About 30 scholarships and exhibitions are attached to the college, and it possesses a library of 30,000 volumes. The college buildings, erected in 1827 from a design by C. R. Cockerell, R.A., stand on an elevated site near the town, and form a quadrangle of a picturesque appearance: they accommodate about 70 students: the number of students in 1851 was 50. The annual income of the college is about 3000*l*.

LA-MURE. [ISÈRE.]

LANARK, Lanarkshire, Scotland, a royal and parliamentary burgh and market-town, in the parish of Lanark, is situated on a hill rising from the river Clyde, where it is joined by the Mouse Water. It is distant about 29 miles S.W. from Edinburgh, and 29 miles S.E. from Glasgow by railway, and occupies nearly the centre of Lanark county. The population of the burgh in 1851 was 5008. The town is governed by a provost and 16 councillors, and unites with Airdrie, Falkirk, Hamilton, and Linlithgow in returning one member to the Imperial Parliament.

The town is of great antiquity. Kennett II. assembled the states of the realm here in 978, and it had been constituted a royal burgh before the time of Malcolm IV. Its latest charter was given by Charles I. In the town are many handsome houses built of freestone, which is extensively quarried for this purpose in the adjoining parish of Carluke. The chief public buildings are the commercial bank, county-hall, prison, parish church, and grammar school. In March 1851 there were 8 places of worship in Lanark, of which 2 were of the Established Church, 2 of the United Presbyterian Church, 2 of the Independent Connexion, one of the Free Church, and one of the Roman Catholic communion. There is an Endowed Free school for poor children. In the town are subscription libraries, a mechanics institution, which had 40 members in 1851, and 150 volumes in its library, a savings bank, and several friendly societies. Fairs are held seven times in the year.

New Lanark is a well-built village to the south-west of Lanark town. It lies low upon the right bank of the Clyde, and is completely surrounded by beautifully wooded hills. It contains a cotton manufactory.

LANARKSHIRE, sometimes called CLYDESDALE, an inland county in the west of Scotland, bounded N. and N.W. by the counties of Stirling and Dumbarton, W. and S.W. by those of Renfrew and Ayr, S. S.W., and S.E. by Dumfriesshire and Peeblesshire, E. and N.E. by Peeblesshire, Linlithgowshire, and Edinburghshire, is comprised between 55° 14' and 55° 57' N. lat 3° 20' and 4° 20' W. long.

The greatest length of the county is 52 miles; its greatest width is 34 miles; and its superficial extent is 631,719 statute acres, or 987 square miles. The population in 1841 was 426,972; in 1851 it was 530,169. The county returns one member to the Imperial Parliament.

Surface, Soil, Geology, &c.—Lanarkshire is divided into three principal districts or wards, to each of which is appointed a sheriff-substitute. Its surface is so various that it will be convenient to notice the local peculiarities of each ward under separate heads.

The *Upper or Southern Ward*, of which the ancient burgh of Lanark is the chief town, includes that extensive portion of the county which lies between the counties of Peebles, Dumfries, and Ayr. It constitutes more than one-half of the county, and consists principally of mountains, hills, and moorish lands, which do not appear susceptible of much improvement. About two-thirds of this district may be called moor-pasture, the remaining part being occupied by arable and meadow lands, orchards, &c.

The geology and mineralogy of this part of the county are important. Rich seams of excellent coal, from two to seven feet in thickness, are advantageously wrought in the northern part of this district, at Wilsontown. The Wilsontown coal-field lies in an oval basin bearing north-east and south-west. It is of considerable extent, but full of what are called 'troubles;' that is, throwings up or down of the seams of coal, sometimes to the extent of 50 feet. In the immediate vicinity of this coal-field are the Wilsontown iron-works, the supply of ironstone being reputed to be here inexhaustible. Sandstone (of a beautiful white colour, well adapted for building), whinstone, and limestone, are all abundant, and are extensively used. The lead-mines in the parish of Crawford are very productive, and have been continuously worked from a remote period. Gold and silver are disseminated in minute particles through the superincumbent clay, but the quantity is too small to repay the expense of its extraction. Records exist which state that at one time specimens of native gold were sometimes met with here from one ounce to several ounces in weight. In the vicinity of the lead-mines copper and antimony have been found, and attempts have been made to work them, but without success. Among the more elevated mountains of this part of the county are abundant quarries of slate, but their distance from towns, causing great expense of carriage, precludes their being profitably worked.

The arable portion of this ward is confined to the banks of the Clyde and of the streams which are contributory to it. The highest ground is in the parish of Crawford where the Clyde has its source, and where the mountains appear crowded together. The principal elevations are Tintoe, in the united parishes of Wiston and Robertson (2310 feet); and the range of the Lowthers in the parish of Crawford, and near the borders of Dumfriesshire, of which the greatest height is 3100 feet.

The *Middle Ward*, of which Hamilton is the chief town, is about half the extent of the Upper Ward. In this ward the elevation of the land is considerably diminished, and it declines towards the north-west. The moor and coarse pasture-land does not here form one-half of the soil. The prevailing soil is of a clayey nature intermixed with sand, and varies considerably in colour, composition, and degree of fertility. The usual term of leases is 19 years. Oats and barley form the principal crops, but there is also much wheat raised. The farm-buildings are generally good and substantial. Farming operations are much better understood than formerly, and draining is generally attended to.

This ward is also rich in minerals, containing an abundance of whinstone, sandstone, ironstone, and coal. The coal-seams vary from two to nine feet in thickness, and abound chiefly in the northern part of the district. The ironstone occurs both in masses and in seams. In the western part of the district limestone abounds.

The *Lower or Northern Ward* is of limited extent. It contains the city of Glasgow and the parishes surrounding that city, and is in the centre of the great coal district of Scotland. In Calder parish, besides numerous iron-furnaces and ironstone- and coal-mines, there are immense fields of fire-clay varying from 4 to 19 feet in thickness, and the quality is considered equal to the Stourbridge clay. In their vicinity are extensive works for the manufacture of crucibles, &c. Many of the moorlands in this district have been reclaimed, and they are being lessened by peat-cutting, so that upon many of them oats, ryegrass, and wheat are now grown. The greater part of the tilled land is sown with oats, which also constitute the chief spring corn.

Climate, Agriculture, &c.—The climate of the county is almost as various as its soil. The Lower Ward, being more open to the sea-breezes which prevail from the west and south-west, is comparatively temperate; intense frost is seldom of long continuance, and deep snows are rare: at the same time the elevated lands in the counties of Renfrew and Dumfries, intercepting the vapours with which the westerly winds are usually saturated, occasion the frequent fall of heavy showers. The barometric and thermometric variations in the Middle Ward are more uniform, but in the Upper Ward they are sudden, and there also the climate is unusually severe. The snow sometimes lies for weeks in the mountain roads of the southern part of the county.

Nearly three-fourths of the land of Lanarkshire belong to large proprietors. A considerable extent of inclosed land is kept constantly in grass, and let out from year to year for pasture, especially in the

neighbourhood of the towns and important villages. Throughout the county the dairy system has been prosecuted with great success. The cows are generally of the Ayrshire breed. The sheep are mostly black-faced. The draught horses of Clydesdale are held in great estimation in the north of England and the south of Scotland. Pasturage is chiefly attended to in the Upper Ward; dairy farming is the chief employment of agriculturists in the Middle and Lower Wards.

Clydesdale is famous for its fruit—apples, plums, pears, gooseberries, &c. The rent of the orchards on both sides of the river forms a material part of the income of the landlords, all of whom, from the largest proprietors to the small farmer, sell their fruit annually, the purchasers being generally the Glasgow fruiterers.

Hydrography, Communications, &c.—The principal river of the county is the Clyde (the Glotta of Tacitus, 'Agric.' c. 23), which in a commercial point of view is of more importance than any other river of Scotland. [CLYDE.] The contributory streams are—the Medwin Waters, which rise in the hills on the extreme eastern boundary of Lanarkshire; the Douglas, from the extensive parish of that name; the Mouse Water, which falls into the Clyde near Lanark, also coming from the east of the county; the Nethan, which comes from the high grounds in the west; the Avon, which waters Strathaven parish and the district of that name, and joins the Clyde near Hamilton; and the Calder Water, in the south of the county, with several others of minor importance.

The Monkland Canal from Glasgow intersects the parish of New Monkland, and terminates at the southern extremity of the parish of Old Monkland: its length is about 12 miles. The Ardrossan Canal proceeds from Port Eglinton, on the south side of Glasgow, through Govan, and thence to the counties of Renfrew and Ayr. The Forth and Clyde Canal traverses a portion of the north-western corner of the county.

The roads are all well constructed, and kept in excellent repair. Glasgow is the centre of a series of railways, the most important of which are—the Caledonian, which traverses the whole county; the Edinburgh and Glasgow railway; and the Glasgow and South-Western railway.

Divisions, Towns, &c.—For judicial and administrative purposes the county is divided, as already mentioned, into three wards. A sheriff-substitute also resides at Airdrie, a portion of the Middle Ward having been created for this purpose a separate jurisdiction. Ecclesiastically the county proper is divided into 37 parishes. The most important town is GLASGOW, the commercial capital of Scotland. LANARK and HAMILTON, the chief towns of the Upper and Middle Wards, are described under their respective titles. Besides these, the county contains the towns of AIRDRIE, Calderbank, Carluke, Coatbridge, Govan, Rutherglen, Stonehouse, Strathaven, and Wishawton.

Calderbank, population 2872 in 1851, in Old Monkland parish, is a town of recent origin, and dependent on the coal- and iron-mines in the neighbourhood.

Carluke, population 2845, is a small town and burgh of barony in the parish of Carluke. Many of the inhabitants are weavers. In the neighbourhood coal, ironstone, and limestone are extensively wrought. In the parish are Mauldsdale Castle, formerly the seat of the Hyndford family, and Lee, the seat of the Lockharts, where is preserved the famous 'Lee penny,' noticed by Sir Walter Scott in 'The Talisman.' The parish church, Free Church, and chapels for United and Original Seceders, are the public buildings situated in the burgh, which has also several schools and a savings bank.

Coatbridge, population 8564, like the other towns and villages in the extensive parish of Old Monkland, is chiefly dependent on the coal- and iron-mines. The Monkland Canal is here crossed by a wooden viaduct. The Coatbridge station of the Monkland railway is 9½ miles from Glasgow. There are a Free and a United Presbyterian church, and a mechanics institution, which in 1851 had 140 members, with 700 volumes in the library belonging to it.

Govan, population 3131, about 2 miles W. by N. from Glasgow on the left bank of the Clyde, possesses several large ship-building yards. The church is rather a pretentious building, but a bad imitation of the gothic style. The Free and the United Presbyterian Churches have places of worship. In the parish are situated the Observatory and the Royal Botanic Garden connected with Glasgow University. The town is connected with Glasgow by a line of elegant villas.

Rutherglen, one of the most ancient royal burghs in Scotland, and now a parliamentary burgh, in the parish of Rutherglen, is situated on the left bank of the Clyde, 2 miles E. from Glasgow. The population of the parliamentary burgh in 1851 was 6514; that of the municipal burgh was 6947. The burgh is governed by a provost and 17 councillors. It unites with Dumfries, Kilmarnock, Port Glasgow, and Renfrew in returning one member to the Imperial Parliament. In Rutherglen church, in February 1297, a treaty of peace was concluded between the Scotch and the English. The town consists of one main street; it is lighted with gas. The only public buildings are the town-hall, the parish church, and chapels for the Free and the United Presbyterians. The inhabitants are chiefly employed in handloom weaving. Two important fairs are held here. The town is connected with the suburbs of Glasgow by an old narrow bridge. There is here a station of the Caledonian railway.

Stonehouse, population 2086, is in the parish of Stonehouse, in the

Middle Ward of the county, near Hamilton. Besides the parish church there are chapels for the Free and the United Presbyterian Churches.

Strathaven is a burgh of barony and market-town in the parish of Avondale: the population in 1851 was 4274. It is chiefly inhabited by weavers, who are however in many cases the owners of the houses in which they reside. Cattle and cheese are the staple objects of traffic. The town is old, and the streets are narrow, but lighted with gas. In the town are several schools, a Free church, three chapels for United Presbyterians, and a public library. In the neighbourhood is the old castle of Strathaven, near which are many neat villas.

Wishawton, population 3373, is in the parish of Cambusnethan. In the vicinity are numerous coal- and iron-works.

The following villages, with their populations in 1851, may be mentioned:—

Biggar, population 1530, is a picturesque village in the parish of Biggar, lying on both banks of the Biggar Water, a tributary of the Tweed. The village dates as a burgh of barony and market-town from the middle of the 15th century. The inhabitants are principally weavers. The church is a cruciform edifice of the 16th century. There are two chapels for United Presbyterians, and a scientific institution, which has 40 members and a library of 200 volumes. The remains of several encampments are in the parish. Roman utensils and coins have been occasionally found. *Blantyre*, population of the parish 2848, about 7 miles S.E. from Glasgow, possesses extensive cotton-spinning works. The ruins of Blantyre Priory have been referred to under *BOTHWELL*. There is here a station of the Glasgow and Hamilton branch of the Caledonian railway. *Busby*, a village partly in East Kilbride parish, but chiefly in the parish of Mearns, Renfrewshire, has extensive print-fields and cotton-spinning works. There is here a chapel for United Presbyterians. *Cambuslang*, parish population 3306, is a village 4 miles E. from Glasgow. Here is a station of the Caledonian railway. *Cambusnethan*, population of the parish 8621, in the middle ward of the county, is pleasantly situated in the midst of the orchard district. On the borders of the parish are the extensive Shotts Iron-Works. *Cambusnethan House*, a fine castellated mansion, stands on the right bank of the Clyde, about 2 miles S.W. from the village. *Douglas*, population 1525, is an agricultural village and ancient burgh of barony in the parish of Douglas. Besides the parish church there are chapels for Free, United, and Reformed Presbyterians. In the neighbourhood are the new and splendid seat of the Douglas family and the remains of the ancient Douglas Castle, the 'Castle Dangerous' of Sir Walter Scott. Part of the old church is still preserved, and contains several interesting monuments of the ancient Douglasses, among which is that of the 'good Sir James,' who carried Bruce's heart to the Holy Land. *Gartsherrie*, a village in Old Monkland parish, has an elegant church. In the village are extensive iron-works; and in the parish are the Dundyan, Clyde, Calder, and other iron-works, all extensive, and all contributing to the great iron-trade of Glasgow. There is here a station of the Caledonian railway. *Kilbride, East*, population 1113, an agricultural village and burgh of barony, about 8 miles S.E. from Glasgow. Limestone is extensively wrought in this parish. The milk, butter, and cheese, the chief products of the farms of the district, are sent to Glasgow. There are here a Free and a United Presbyterian church, and a subscription library with 1220 volumes. *Leadhills* is a mining village in Crawford parish, on the borders of Dumfriesshire. The mining operations have been somewhat diminished of late years. *Partick* is a populous old village on the river Kelvin, just beyond the western boundary of the city of Glasgow, now surrounded by the handsome villas of the citizens. It is partly in the Barony parish; the greater part is in the parish of Govan. There are a Free church, two chapels for United Presbyterians, and a society called the Partick Popular Institution, which had 65 members in 1851. The archbishop of Glasgow in former times had a country-house here.

History, Antiquities, &c.—Many interesting events have occurred within the limits of this county; but they have generally been referred to in treating of the different spots where they occurred. The battle of Drumclog, which preceded the slaughter of Bothwell Bridge, took place on Drumclog Moor, in the parish of Strathaven. The church of Rutherglen was the spot chosen by Menteith to arrange for the betrayal of Wallace. The remains of the successive occupants of this district have been found in various parts of the county, throughout the whole of which are scattered remnants of the baronial towers and of the ecclesiastical buildings of the feudal period.

Industry, &c.—Before the commencement of the last century Lanarkshire was not remarkable either for commerce or manufactures. At the time of the Union a considerable trade was carried on in the towns and villages, in collecting yarn for English markets, and many branches of the linen manufacture had been brought to considerable perfection. The rapid rise of the city of Glasgow has led to the discontinuance of most of the small establishments in the county. Those which now exist are subordinate branches of the extensive establishments of GLASGOW, which city, with its suburbs, comprehends the greater part of the population, manufactures, and commerce of the district. In 1852 there was only one savings bank in the county, at Glasgow. The amount owing to depositors on November 20th 1852 was 565,469*l.* 4*s.*

Religious Worship and Education.—According to the returns of the Census of 1851, it appears that there were then in the county 279 places of worship, of which 59 belonged to the Free Church, 57 to the Established Church, 52 to the United Presbyterian Church, 27 to Independents, 13 to Roman Catholics, 10 to Episcopalians, 9 to Baptists, 7 to Wesleyan Methodists, 6 to Mormons, 5 to Reformed Presbyterians, 4 to Primitive Methodists, 3 to Original Seceders, 3 to the Evangelical Union, and 2 to Quakers. The total number of sittings provided was 175,319. The number of Sabbath schools in the county was 622, of which 235 belonged to the Free Church, 113 to the Established Church, 107 to the United Presbyterian Church, 33 to Independents, 12 to Wesleyan Methodists, 8 to Episcopalians, and 6 to Baptists. The total number of Sabbath scholars was 60,119. The number of day-schools was 531; namely, 281 public schools with 36,382 scholars, and 250 private schools with 16,886 scholars. There were 172 evening schools for adults with 6811 scholars, of whom 2594 were females. There were 29 literary and scientific societies in the county with 8740 members, and 53,351 volumes in the libraries belonging to them.

LANARK, NEW. [LANARK.]

LANCASHIRE, a northern county of England, is bounded N. by Cumberland and Westmorland, N.E. and E. by Yorkshire, S. by Cheshire, and W. by the Irish Sea. Its form is irregular: the district of Furness on the north-western side of the county is separated from the rest by the Bay of Morecambe, and by a narrow strip of the county of Westmorland. Its greatest length, not including Furness, is from the 'Counties Stone,' at the junction of the three counties of York, Westmorland, and Lancaster, to the bank of the Mersey, south of Prescott, about 64 miles; the greatest breadth is from Redmer's Head, east of Rochdale, to Formby Point on the Irish Channel, nearly 45 miles. The greatest length of Furness is from the neighbourhood of Ambleside at the head of Windermere to Rampside, at the western extremity of Morecambe Bay, 23 or 24 miles; the greatest breadth from the Duddon to the Winster about 13 miles. The long narrow island of Walney and some smaller ones are at the southern extremity of this detached portion. The whole county is comprehended between 53° 20' and 54° 25' N. lat., 2° 0' and 3° 16' W. long. The area is estimated at 1905 square miles, or 1,219,221 statute acres; the population in 1841 was 1,667,054; in 1851 it was 2,031,236. In size Lancashire is the sixth county in England, being somewhat smaller than Northumberland, and rather larger than Hampshire; in population it was exceeded in 1831 by Yorkshire and Middlesex; in 1841 and 1851 it was the most populous county in England.

Surface and Coast-line.—The inland part of Furness is an integral part of the Cumbrian Mountains, and is marked by the features which characterise Cumberland. Mountains rising to the elevation of between 2000 and 3000 feet are separated by narrow valleys watered by mountain-streams, or occupied by lakes. Towards the coast the mountains and hills subside. Furness is divided into Upper Furness, or Furness Fells, which is mountainous; and Lower, or Low Furness, which includes the low flat towards the shore. In the main portion of the county the northern and eastern parts are occupied by branches from the central high lands which run southward through Yorkshire into Derbyshire. These elevations are not equal to those of the Cumbrian group; but they expand into greater breadth, forming high waste moorlands. In the southern and western parts the high lands gradually subside, leaving between their base and the sea a broad flat belt of land, and on the south sinking into the valley of the Mersey and the wide expanse of the plain of Cheshire. These high lands reach the margin of the sea at Liverpool; but from the mouth of the Mersey northward to the mouth of the Ribble, a uniform level, containing extensive peat-mosses, stretches inland from the flat and sandy coast for several miles. Between the mouth of the Ribble and the Wire is an extensive level tract called the Fylde country. [FYLDE, THE.] The level country still borders the sea from the mouth of the Wire to that of the Lune, and continues along the coast of Morecambe Bay. With the exception of these low lands, and the tract of Lower Furness, Lancashire has a hilly and in some parts a mountainous character. The principal elevations are as follows:—Old Man in Coniston Fells, 2577 feet; another peak, near Old Man, of about the same height; Pendle Hill, near Clitheroe, 1803 feet; Bleasdale Forest, on the east border near Garstang, 1709 feet; Boulworth Hill, on the east border, near Burnley, 1689 feet; Rivington Moor, near Bolton, 1545 feet.

Except near Blackpool, where there are clay-cliffs extending for about 3 miles, and having in some places a height of above 100 feet, the coast is low throughout, with a sweeping rounded outline, skirted by broad sands dry at low water. Towards the north, where the high land approaches nearer to the sea, the coast loses its convexity of outline, and forms a deep bay, of which Rosall Point and the southern point of Furness form the extremities. A tongue of low land projecting near the mouth of the Lune divides this large bay into the two smaller ones of Lancaster and Morecambe, the Morecambe of the ancients. Lancaster Bay receives the Lune and the Wire: the estuaries of the Leven and the Ken, or Kent, open into Morecambe Bay. The depth of water in both bays is little except in the channels formed by the rivers, and a considerable part becomes at low water an expanse of sand, across which there is a road, passable, though not

without danger, when the tide is out, from the neighbourhood of Lancaster into Furness.

Walney Island, off the southern extremity of Furness, extends from north-west to south-east about eight miles, in width nowhere more than one mile. It bends in at each extremity towards the mainland, from which it is separated by a narrow channel. It is so low as to have been at times nearly inundated by the tide. At the southern extremity of the island is a lighthouse. The other islands of the group—Foulney, Fife of Fouldrey (on which are the mouldering remains of an old castle, once extensive and strong), Sheep Island, Roe Island, Dova How, and Old Barrow Ramsey, are all small: they are in the channel between Walney and the mainland.

Geology, Mineralogy, &c.—The new red-sandstone, or red marl, in which occurs the great deposit of rock-salt, occupies the valley of the Mersey, extending inland several miles, especially in the neighbourhood of Manchester. It occupies also a considerable portion of the western side of the county as far north as the valley of the Lune at Lancaster. It is covered near the coast by the moss or peat which extends to the westward of a line drawn from Liverpool by Ormskirk to Preston; and from Preston by Garstang to Lancaster it is covered by the clays, marls, and peat-mosses of the Fylde district. The peat-mosses contain great quantities of large timber-trees, the remains of ancient forests. A great portion of the tract in which the peat occurs is in a state of cultivation. The coal-measures crop out from under the red marl. The coal-field of South Lancashire, to which the county owes its manufacturing pre-eminence, occupies a large irregular tract between the Ribble and the Mersey. The line which bounds it extends from Colne south-west by Burnley, Blackburn, and Chorley, to Upholland, near Wigan; thence north-west to near Ormskirk; and thence south and east by Prescott to between Newton and Warrington. From this point the boundary runs in an irregular line by Newton and Leigh to Worsley; and thence makes a sweep round Manchester at an average distance of five miles from that town till it meets the river Thame on the border of the county. The eastern limit of the coal-field is, generally speaking, just within that of the county; for the high land which divides Lancashire from Yorkshire is formed of the millstone-grit, which here crops out from beneath the coal-measures. The coal-measures probably extend westward under the sea. The coal re-appears in the peninsula of the Wirral in Cheshire, and yet farther west in the coal-field of Flintshire and Denbighshire. A small coal-field, east of Lancaster, occupies a portion of this county, and extends into Yorkshire.

The millstone-grit forms, as already noticed, the heights which skirt the eastern side of the county, as well as those which separate the basins of the Mersey and the Ribble, the valleys of the Irwell and the Roch, and the valleys of the Ribble and the Lune. In the intervening space between the two coal-fields the red marl rests upon the millstone-grit.

That part of the county which is north of the Lune is chiefly occupied by the carboniferous or mountain limestone. Between Hornby and Lancaster this formation extends over a small district south of the Lune. The old red-sandstone, which underlies the mountain limestone, appears just on the border of the county near Kirkby Lonsdale. Furness is occupied partly by the Lower Silurian slate rocks which form the mass of the Cumbrian Mountains. In the central part of Furness occurs carboniferous limestone. Lower Furness is occupied partly by the new red-sandstone, which forms its southern extremity.

The principal mineral production of Lancashire is coal. The coal is of various kinds, including cannel coal. Lead is obtained from the millstone-grit and mountain-limestone districts. The lead-mine of Anglesark, between Chorley and Bolton, yields also carbonate of barytes. Some copper is obtained in the high mountains of Furness; and ironstone is found in the lower part of the same district, between Ulverstone and Dalton. The mountains of Furness yield blue slate; coarse slate of lighter colour, and flag-stones, are obtained near Wigan. Excellent freestone is quarried near Lancaster, and scythe-stones and brick and pipeclay are found in various parts.

Hydrography and Communications.—The rivers that water this county have their general course from north-east to south-west; those of Furness excepted, which flow from north to south. The principal rivers are the Lune in the north, the Wire and the Ribble in the centre, and the Mersey in the south.

The *Lune*, or *Loyne*, rises in Westmorland, on the northern slope of the Langdale Fells. It enters Lancashire near Kirkby Lonsdale, and flows first south and then south-west past Lancaster, where it opens into a wide estuary in Lancaster Bay. The Lune receives in the lower part of its course the Greta, which rises on the southern slope of Wharfedale, and the Wenning, which also rises in the mountains of Yorkshire and flows past the town of Hornby; both these tributaries join the Lune on the left bank. The length of the Lune may be about 48 miles, of which 20 miles are in Lancashire. Lonsdale, or the Valley of the Lune, is surpassed by few vales in England in picturesque beauty. The navigation of the river commences at Lancaster, up to which town it is navigable for ships of small burden.

The *Wire* rises in the moorlands on the Yorkshire border east of Lancaster, and flows first west and then south by Garstang, below which it turns west and then north-west until it enters the Bay of

Lancaster near Rosall Point, by a deep and wide estuary. Its whole course is about 28 miles. At the mouth of the Wire a harbour has been formed, and the town of Fleetwood built.

The *Ribble* rises in the Yorkshire Mountains, a little east of Wharfedale. It touches the border of Lancashire about 3 miles above Clitheroe. After dividing the counties of York and Lancaster for some miles it enters Lancashire, through which it flows in a somewhat sinuous course to the town of Preston, below which it opens into a wide shallow estuary and enters the Irish Sea. It is joined on the right bank by the Hodder, which rises very near the source of the Wire, and has the upper part of its course in Yorkshire, and the lower part on the border of Yorkshire and Lancashire. On its left bank it receives the Calder, which rises just within the boundary of Yorkshire, but has the greater part of its course in Lancashire. In the neighbourhood of Preston it receives on the left bank the Darwen, or Derwent, which rises in the moors near Over Darwen, between Blackburn and Bolton. The Ribble's Dale, or Valley of the Ribble, is very beautiful. The estuary is forded at low water at Heaketh Bank below Preston, where it is 4 miles wide; but with the tide small vessels can get up to near Preston.

The *Mersey* rises in Yorkshire from different sources in Clough Moss and Holme Moss, south-west of Huddersfield. The streams from these sources form the Thame, or Tame, which flows south-west first through Yorkshire and then along the border of Lancashire and Cheshire, by Staleybridge and Ashton-under-Line to Stockport, where it is joined by the Goyt [DERBYSHIRE] and assumes the name of Mersey. The lower part of its course is described elsewhere. [CHESHIRE.] The navigation of the Mersey begins at Stockport. Its principal Lancashire tributary is the Irwell, which has its source in Durley Hill, in the moors between Rochdale and Burnley, and flows in a very winding course by Heywoodbridge near Haslingden, Bury, and Manchester. At Manchester it receives the Irk from between Oldham and Rochdale, and the Medlock from the Yorkshire border near Oldham. The Irwell is navigable as far as Manchester. The whole length of the Irwell may be about 40 miles; that of the Tame, or Mersey, including its estuary, nearly 70 miles.

There are several small streams in the county. The Winster and the Duddon form respectively the eastern and western boundaries of Furness: and the Leven from the Lake of Windermere, and a stream from Coniston Water, flow through the middle of Furness and unite their waters in the wide estuary of the Leven. The Duddon is a beautiful stream; its valley is called Donnerdale. It rises north of Coniston Fells, and sweeps round and under them. The Douglas rises near Wigan, and flows north-west into the estuary of the Ribble. The Alt, or All, rises near Prescott and flows north-west into the Irish Sea near Formby Point. The Douglas is 20 miles long; the Alt 14 miles; the Douglas was made navigable nearly throughout as far back as the year 1727; but many years since an artificial cut was substituted for the natural channel, except for a short distance near the mouth.

Two considerable lakes are in Furness, Winandermere or Windermere and Coniston Water. Windermere is on the border of Westmorland and Lancashire, but by its position rather belongs to Lancashire, within which its southern part is included. It is about 11 miles long from north to south, and varies from half a mile to a mile in breadth; but in one part (where there is a ferry) it is not above 500 yards over. It is the largest lake in England, and its greatest depth is rather more than 200 feet. At its northern extremity it receives two mountain streams from Langdale Pikes, which unite just before they enter the lake: several other mountain streams flow into it on the east and west. Its waters are discharged by the Leven, which flows from its southern extremity into Morecambe Bay. A small lake (Eathwaite Water) in Lancashire discharges its waters into Windermere, to the west of which it lies. The waters of some of the smaller Westmorland lakes also flow into this great receptacle. The waters of Windermere are very clear, and the scenery along its banks remarkably beautiful. In it are several small islands.

Coniston or Thurston Water is nearly 6 miles long from north to south, with a variable breadth, never perhaps exceeding three-quarters of a mile. Its greatest depth is about 240 feet. It is fed by a number of mountain streams, and discharges its waters into the estuary of the Leven. Coniston Fells are near the northern extremity of the lake. Some shallow lakes or morasses lie along the western coast of Lancashire, as Marton Mere, between the Ribble and the Wire, which is now considerably reduced by the channel called the Main Dyke; and White Otter and Barton Mere, not far from Ormskirk. Marton Mere, near the mouth of the Douglas, has been drained and brought into cultivation.

The Sankey Canal, for the construction of which an Act of Parliament was obtained in 1755, was the first canal executed in England. It extends by a very circuitous course of about 12 miles from St. Helen's, near Prescott, along the valley of the Sankey Brook, into the Mersey at Fidler's Ferry, near Warrington, and has three branches. The Duke of Bridgewater's Canal was commenced soon after the Sankey Canal. The execution of this great work was effected by Francis duke of Bridgewater, assisted by Brindley the engineer. The greater part of this canal however belongs to CHESHIRE. It commences at Manchester, and enters Cheshire about 6 miles south

from that city. About 3 miles from Manchester a branch runs west to Worsley, where there are extensive tunnels and underground works connected with the Earl of Ellesmere's collieries, and thence to the town of Leigh. The Leeds and Liverpool Canal, the most extensive in the kingdom, enters this county from Yorkshire at Foulridge, near Colne, and passes by or near Burnley, Blackburn, Chorley, Wigan, and Ormskirk to Liverpool. Cuts connect this canal with the Ribble and with the Duke of Bridgewater's Canal at Leigh. The length of this canal, without reckoning the branches, is about 127 miles, including the 11 miles of the Lancaster Canal incorporated with it. The Lancaster Canal begins near Kendal in Westmorland and runs southward in a tolerably direct line to Lancaster, where it crosses the Lune by an aqueduct of five arches, each of 70 feet span, and rising nearly 49 feet above the surface of the river: from Lancaster it proceeds by Garstang, where it crosses the Wire by an aqueduct, to Preston. Here the canal is for a few miles replaced by a railroad, which crosses the Ribble on a viaduct bridge. The canal recommences on the south side of the Ribble valley, and joins soon after the Leeds and Liverpool Canal. The whole length of the Lancaster Canal is above 70 miles. The Ashton-under-Line Canal, or, as it is sometimes called, the Manchester, Ashton-under-Line, and Oldham Canal, commences on the eastern side of the town of Manchester, and runs in a tolerably direct line to Fairfield, about four miles from Manchester on the road to Ashton. It has branches to Stockport; to the Huddersfield Canal, at Dukinfield, near Ashton; and to the collieries at Hollinwood, near Oldham. Several cuts have been made in Manchester from this canal to wharfs and quays in the town. It communicates with the Rochdale Canal. The length of the canal and its branches (exclusive of the branch to Stockport) is nearly 12 miles. Of the Huddersfield Canal and the Peak Forest Canal only a very small portion is in Lancashire. They both cross the Thame near Dukinfield to unite with the Ashton-under-Line Canal. The Rochdale Canal commences in the Calder Navigation in Yorkshire, and proceeds by Todmorden into Lancashire. It follows the valley of the Rooh to Rochdale, and thence proceeds to Manchester, where it locks into the Duke of Bridgewater's Canal, receiving a branch from the Ashton-under-Line Canal by the way. The Manchester, Bolton, and Bury Canal commences in the Mersey and Irwell Navigation at Manchester, and runs to Bolton, with a branch to Bury. The canals of Lancashire form part of that immense system of inland navigation which connects the Irish Sea with the German Ocean. The Leeds and Liverpool Canal, with the Aire and Calder Navigation, forms one line of communication; and the Duke of Bridgewater's Canal, with the Rochdale Canal, the Calder and Hebble Navigation, and the Aire and Calder Navigation, forms a second. The Ashton-under-Line, Huddersfield, and Sir John Ramsden's Canals may be substituted for the Rochdale Canal in this last line.

The railway system is more completely carried out perhaps in Lancashire than in any other county. The entire southern division of the county is covered with a network of lines, and every part of it has easy communication by railway with all the important towns. The main northern line to Scotland, in connection with the London and North-Western railway company, by way of Carlisle, enters Lancashire at Warrington, passes through it in a northern direction about 53 miles, passing by or through Wigan, Preston, and Lancaster, and quitting the county near Burton. From Manchester lines run in all directions. The Manchester and Liverpool line runs westward to Liverpool, 31 miles: from it are short branches south to the Mersey opposite Runcorn, and north-west to St. Helen's. A direct north-west line unites Manchester with Preston. From it lines diverge right and left, connecting it with other lines. The Manchester and Huddersfield and the Manchester and Yorkshire lines connect Manchester with the various towns in Yorkshire. The North-Western railway gives it direct communication with London, though only a few miles of this line are in Lancashire. A short line of 8 miles runs south-west from Manchester to Altringham. Other short lines run east to Oldham and to Staleybridge. From the Clifton station on the Liverpool line, near Manchester, a line runs nearly north by Bury, Haslingden, Burnley, and Colne, where it quits the county. A line quits the Liverpool line at Kenyon, and proceeds nearly north by Leigh, Bolton, and Blackburn to Accrington, where it quits the county. From Liverpool a line runs at a short distance from the coast to Southport. A line runs nearly north-east from Liverpool to Preston; and another line runs more east past Wigan, and joins the Manchester and Preston line a few miles west of Bolton. From Preston a line runs north-west at some little distance from the coast past Kirkham to Fleetwood, having short branches to Lytham and to Blackpool. A cross-line connects Preston with Blackburn and Accrington, and another connects it with Clitheroe. The Whitehaven and Furness Junction railway runs along the southern extremity of Furness, from Peel northward past Dalton to Broughton, where it crosses the Duddon into Cumberland. The Furness line connects Dalton with Ulverstone.

Of coach-roads the following are the principal:—The Port Patrick, Carlisle, and Manchester road enters the county at Stockport, and runs by Manchester, Chorley, Preston, Garstang, and Lancaster into Westmorland. The Liverpool road enters the county at Warrington, and runs by Prescott to Liverpool, from which place a road runs to Preston, where it joins the high road to Carlisle. The coach-road

from Manchester to Liverpool joins the London and Liverpool road at Warrington. A road from Manchester runs by Middleton and Rochdale to Halifax and Leeds in Yorkshire; another by Oldham to Huddersfield, and so to Leeds; and another northward by Bury and Clitheroe into the mountain district of Yorkshire. The other roads are too numerous to be particularised.

Climate, Soil, Agriculture.—The climate of Lancashire is mild and moist. The high hills which run along its eastern boundary shelter it from the cold easterly winds, but at the same time arrest the clouds which come from the Atlantic, and produce more abundant rains than in those parts of England which lie to the eastward.

The surface of the county is very uneven in the northern and eastern parts. Near the coasts the land is level, and the soil consists of a good sand over a rocky subsoil, or a clay marl, which when mixed with the upper soil renders it extremely productive, especially in garden vegetables. There are extensive tracts of peat-moss.

From the moist nature of the climate Lancashire is more productive in grass than in corn. The arable land is generally well cultivated. Many of the farms are of considerable size, and were formerly occupied as domains by the larger proprietors. Several still retain the name of Hall or Manor Farm, but the subdivision of property has given rise to very small occupations, which are cultivated like large gardens, and are very productive, especially the sandy loams, where excellent crops of potatoes are raised. Oats have always been a favourite crop, partly from their suiting a moist climate, and partly from their forming a considerable part of the food of the inhabitants in the central and northern parts of the county. Wheat is sown where the land is favourable to it, as along the shore north of Lancaster, in the Fylde, and in the south-west part of the county. Potatoes were early cultivated in the fields in Lancashire, and they retain their celebrity when raised in the lighter soils, and when not over-matured. A considerable extent of land in the vicinity of manufacturing towns is kept in grass for the purpose of bleaching linen.

Sheep are not abundant in proportion to cows; the breeds commonly met with are the black-faced, the Cheviot, and the improved Leicester. The original breed of oxen in Lancashire was one of the best in England until it was surpassed by the Leicestershire, which is only the same blood improved by careful selection. Milk is a very important article of food in a populous district; butter and cheese are however made in great quantities and of a very good quality. Many useful horses are bred in Lancashire, for which there is a great demand in the manufacturing towns. They are chiefly cart-horses of a hardy active sort. The breed of swine does not present any peculiar feature. A great deal of pork and bacon is imported from Ireland.

Divisions, Towns, &c.—The county of Lancashire is divided into six hundreds, as follows:—Amounderness, west; Blackburn, east; Leyland, central; Lonsdale (including the borough of Lancaster), north; Salford (including the city of Manchester), south-east; and West Derby (including the boroughs of Liverpool and Wigan), south-west. The county contains the borough, market, and sea-port towns of LANCASTER and LIVERPOOL; the ancient borough and market-towns of CLITHEROE, PRESTON, and WIGAN; the recently-constituted city of MANCHESTER; the decayed and now-disfranchised borough of Newton; the market-towns of ASHTON-UNDER-LINE, BLACKBURN, BOLTON-LE-MOORS, BURNLEY, BURY, CARTMEL, CHORLEY, COLNE, Dalton, GARSTANG, Hawkshead, HASLINGDEN, Hornby, KIRKHAM, LEIGH, MIDDLETON, OLDHAM, ORMSKIRK, Poulton, PRESCOT, ROCHDALE, TODMORDEN, ULVERSTONE, and WARRINGTON; with the small towns of ACCRINGTON, Atherton, Barton-upon-Irwell, Over Darwen, Eccles, Fleetwood, Heywood, Hindley, Horwich, Lytham, Radcliffe, Saint Helen's, Southport, and Tyldesley. Ashton-under-Line, Blackburn, Bury, Manchester, Oldham, Rochdale, Salford (a suburb of Manchester), and Warrington, were by the Reform Act erected into parliamentary boroughs. The places printed in small capitals are described under their respective headings. Of the others an account is subjoined. The populations given are those of 1851.

Atherton, population 4655, about 12 miles W. by N. from Manchester, has numerous cotton-works in its vicinity. A fine old mansion called Atherton Hall stood here, but was pulled down a few years since.

Barton-upon-Irwell, 6 miles W. from Manchester, population of the township 12,687, is on the right bank of the Irwell. It has greatly improved of late years in consequence of the increase of the cotton manufacture. The town possesses a district church, chapels for Wesleyan and Primitive Methodists and Roman Catholics, and a National school. There is here a stone aqueduct of three arches over which the Duke of Bridgewater's Canal is carried across the river Irwell.

Dalton-in-Furness, 25 miles W.N.W. from Lancaster across the Sands: population of the parish, 4683. This town flourished at an early period in consequence of the favour of the neighbouring abbey of Furness. Dalton consists of a principal street of poor houses, terminating on the west in a spacious market-place. The church is a small neat building of considerable antiquity. On a rocky eminence west of the town there is a square tower, the remains of a castle. The market is on Saturday. Malting and brewing are carried on, and there are some iron-works and tanyards near the town. A station of the Whitehaven and Furness railway is at Dalton. In the market-place is a stone cross,

Near the town are the picturesque ruins of Furness Abbey, noticed near the end of this article.

Over Darwen, 4 miles S. from Blackburn, population 7020, possesses a district church and a chapel of ease, places of worship for Wesleyan Methodists, and National, British, Infant, and Operative Free schools. The mechanics institution in 1851 had 194 members, with a library containing 1700 volumes. Cotton-mills, paper-mills, iron-works, and collieries in the neighbourhood give considerable employment. A market established some years back is held on Saturday. A market-house, with a magistrate's room and an assembly room over it, stands in the centre of the town. Fairs for horses and cattle are held in May, July, and October. *Lower Darwen*, population 3521, is about 3 miles S.E. from Over Darwen, but the two places are almost connected by intervening hamlets. The occupations of the inhabitants are nearly similar. At Lower Darwen are a district church, Dissenting chapels, and National and British schools.

Eccles, 4 miles W. from Manchester: population of the town, 4108. The church, an ancient structure, was repaired in 1847; in the interior are some monuments of interest. There are a chapel for Wesleyan Methodists, a Free Grammar school, and an Infant school. The inhabitants are engaged in the cotton and silk manufactures. Eccles cake enjoys a reputation somewhat analogous to Banbury cake.

Fleetwood, or *Fleetwood-on-Wire*, 20 miles S.W. from Lancaster, situated at the north-east corner of the peninsula formed by the estuary of the river Wire and the shore of the Irish Sea, is a modern town, which owes its origin and importance to the extension of railway and steam-vessel communication: the population of the town and port in 1851 was 3121. Sir P. Hesketh Fleetwood, Bart., from whom the place has its name, laid out the town with much taste, and erected various public buildings. In connection with the Preston and Wire railway, which has an extensive station here, steamers ply between Fleetwood and Belfast, Londonderry and the Isle of Man, and during the summer months to Glasgow. Two wharfs, respectively 1180 feet and 1440 feet long, accommodate the steamers and other shipping. There are also docks and a lighthouse. A raised stone causeway, and a bridge of piles extending about two miles, carry the railway along the western side of the Wire water or estuary. There are a neat church; chapels for Independents, Wesleyan Methodists, and Roman Catholics; the 'Fleetwood Testimonial Schools,' an Infant school; a school supported by Roman Catholics; and a commodious market-house. A custom-house and extensive bonded warehouses are on the wharfs. The number and tonnage of vessels registered as belonging to the port of Fleetwood on December 31st 1853 were—16 sailing-vessels with an aggregate tonnage of 480 tons, 14 of 3424 tons, and 5 steamers of 904 tons in all. The number and tonnage of sailing-vessels entered at the port during 1853 were—inwards, 443 vessels, tonnage 83,874; outwards 268, tonnage 19,255: the steam-vessels entered were—inwards 672, tonnage 117,880; outwards 671, tonnage 118,726. The mechanics institution had 142 members in 1851, and 570 volumes in its library. A subscription news-room is maintained. Rosall College, about 3 miles S.W. from the town, furnishes a liberal education to sons of clergymen and other gentlemen: the pupils reside in the college. The market is held on Friday. Fleetwood is a favourite resort in summer for sea-bathing.

Hawkhead, in Furness, 34 miles N.N.W. from Lancaster by Ambleside, population of the township 825, is situated in a pleasant vale near the head of Kethwhite Water, on a brook flowing into the lake. The parish church is finely situated on an elevation; it is of Norman date, but was repaired and altered in the reign of Elizabeth by Sandys, archbishop of York, a native of the town. In the town is a place of worship for Quakers, a National school, and Archbishop Sandys's Grammar school, which has an income of about 220*l.* a year, and had 25 scholars in 1852. The town-house is a neat building. In the neighbouring mountainous district are extensive iron-works and slate-quarries. Large flocks of sheep are fed on the hills and plains in the district. The market is on Monday. Fairs are held on Easter Monday, the Monday before Ascension Day, Whit-Monday, and October 2nd.

Heywood is chiefly on the left bank of the river Roch, about 3 miles from Bury and Rochdale respectively, population 12,194; it owes its importance chiefly to the cotton manufacture. Besides numerous cotton-mills, there are iron-foundries, coal-mines, rope-works, and a manufactory of power-looms. There are two chapels of the Establishment, chapels for Baptists, Independents, Wesleyan, Primitive, New Connexion, and Association Methodists, and Swedenborgians; National and Infant schools, a Swedenborgian school, a mechanics institute, and a savings bank. At Heywood is a station of the Lancashire and Yorkshire railway, and a cut from the Rochdale Canal communicates with the village.

Hindley, 15 miles W. by N. from Manchester, population of the town 5235, has several cotton factories and collieries in the vicinity. Hindley possesses an old Episcopal chapel, chapels for Wesleyan Methodists and Roman Catholics, and an Infant school.

Horwich, 16 miles N.W. from Manchester, population of the town 2104, has a chapel of the Establishment, chapels for Independents and Wesleyan Methodists, and National and Infant schools. Cotton-spinning, coal-mining, and the making of fire-bricks are the chief occupations.

Hornby, 10 miles N.E. from Lancaster, population of the township 374, once a market-town of some importance, stands in the midst of a rich grazing district, on the banks of the river Wenning, near its junction with the Lune. Hornby Castle, near the town, the ancient seat of the Stanleys, Barons Monteagle, has been rebuilt, and is now fitted up as a modern mansion. There are a neat Episcopal chapel with an octagonal tower, a Roman Catholic chapel, and a Free school in Hornby. A handsome stone bridge crosses the Wenning. The market, held on alternate Tuesdays chiefly for cattle, is well attended: there is a yearly fair.

Lytham, on the right bank of the estuary of the Ribble, 26 miles S. by W. from Lancaster, population of the parish 2698, is much resorted to in summer for sea-bathing. There is a fine promenade along the beach. Besides the parish church, which was erected in 1771, there are in Lytham St. John's church, erected in 1834; chapels for Wesleyan Methodists and Roman Catholics; and a Charity school. There is a small shipping business at Lytham Pool, affording some employment for ship-carpenters, block-makers, and sail-makers. A branch of the Preston and Wire railway runs to Lytham. There are baths, assembly- and billiard-rooms, and other accommodations used at bathing towns.

Newton-in-Makerfield, or *Newton-in-the-Willows*, is situated about 15 miles W. from Manchester, by the Manchester and Liverpool railway: the population of Newton in 1851 was 3719. The market, which had been long discontinued, has been restored. An obelisk marks the site of an ancient market cross. Fairs for cattle and horses are held on May 17th and August 11th and 12th. In the town is an ancient court-house. Newton was a borough by prescription, and returned two members to Parliament from the 1st of Elizabeth, but was disfranchised by the Reform Act. Besides the parish church there are a chapel for Independents, a Grammar school, and an Infant school. Cotton-mills, flour-mills, iron-foundries, and an extensive glass-manufactory, afford employment. Brick-making is carried on.

Poulton, or *Poulton-le-Fylde*, a market-town in the Fylde district, situated on an elevation, about 2 miles from the left bank of the estuary of the Wire, 21 miles S.S.W. from Lancaster: population of the township, 1120. The church was rebuilt about 1757, except the tower, which is of the time of Charles I. The Wesleyan Methodists and Roman Catholics have places of worship. A Free school was founded in 1717 for boys and girls; an apprentice fund for poor boys was also provided by the founder of the Free school. The market-day is Monday: three yearly fairs are held. Poulton possesses a savings bank.

Radcliffe, 6 miles N.N.W. from Manchester: population of the town, 5002. Gingham, checks, ticks, and fustians are largely manufactured; and there are calico printing-works and collieries. The parish church is an ancient structure: there are a chapel of ease, two chapels for Wesleyan Methodists, and National and Infant schools. Near Radcliffe are the ruins of a tower erected in the reign of Henry IV.

Saint Helen's, in Prescott parish, 22 miles W. by S. from Manchester, population of the town 14,866, is a straggling ill-built place: it is lighted with gas. There are two established churches and a chapel of ease; chapels for Independents, Wesleyan and Primitive Methodists, Quakers, and Roman Catholics; several National and British schools, Infant schools, a Free school, and a school for Roman Catholics. The town-hall in the market-place contains assembly-rooms and a news-room. The British Plate-Glass Company's establishment at Ravenhead, the works for smelting copper-ore belonging to the proprietors of the Parys Mine in Anglesey, chemical works, potteries, iron and brass foundries, and a brewery, afford employment. Rope-making and tanning are carried on. A customary market is held on Saturday: there are two yearly fairs. A county court is held in the town. The Liverpool and Manchester railway and the Sankey Canal pass near the town, and a railway goes to Runcorn Gap on the Mersey.

Southport, 22 miles N. from Liverpool, or 18½ miles by railway, population 4765, situated in a flat district on the coast at the mouth of the Ribble, is a favourite bathing place. The main street of the village is well lighted with gas and paved, and there is a spacious promenade. In the village are three churches, two Independent chapels, and one each for Wesleyan and Primitive Methodists, Quakers, and Roman Catholics; Church, Wesleyan, National, and British schools. The usual accommodations for visitors are amply provided, and there are medical and other charities.

Tyldesley, about 10 miles W. by N. from Manchester, population of the town 3608, has a large and handsome church, with a tower and spire, together 150 feet high; chapels for Wesleyan Methodists and the Countess of Huntingdon's Connexion; a National school, and a mechanics institution with a library. Coal-mines, cotton-factories, and flour-mills give considerable employment.

The following are among the more important villages; the populations, when not otherwise designated, are those of the parishes in 1851:—

ASHTON-IN-MAKERFIELD. *Bacup*, 16 miles N. from Manchester, population of the village 6981 in 1851, has extensive cotton factories, several dyeing establishments, brass and iron foundries, woollen, woollen-printing, and fulling-mills, and an extensive corn-mill. In the vicinity are numerous coal-mines. There are in Bacup a chapel belonging to the Establishment; two chapels for Baptists; chapels

for Wesleyan and Association Methodists; National and British schools; a school in connection with the Wesleyan chapel; and a mechanics institution, which had 105 members in 1851, with 881 volumes in its library. The village is lighted with gas. *Blackrod*, 17 miles N.W. from Manchester, population of the township 2509, occupies the site of a Roman station; traces are distinctly visible of a Roman road. Extensive collieries and bleach-fields are in the neighbourhood. Blackrod possesses a district church, a chapel for Wesleyan Methodists, a Free Grammar school, founded in 1627, and a National school. *Bolton-to-Sands*, is situated on the east side of Morecambe Bay, 4 miles N. from Lancaster, population of the township 686. The church was erected in 1818. The Free Grammar school had 51 scholars in 1851. *Broughton-in-Furness*, 31 miles N.W. from Lancaster, population of the township 1297, is situated about half a mile from the river Duddon, on the left bank of a stream flowing into the estuary of that river, which here forms the boundary between Lancashire and Cumberland. The houses, which are generally of stone, form a square, and have a neat appearance. Hoops and brush-stocks are extensively made. Oak-bark, grain, malt, and large quantities of blue slate are exported. There is a small market on Wednesday. Fairs are held on April 27th, August 1st, and October 6th, chiefly for horned cattle and mountain-sheep. The Duddon is navigable to about half a mile from the bridge. The Whitehaven and Furness railway passes Broughton; the Furness line runs to Ulverstone. In the town is an Endowed school. Broughton Tower, a portion of an old fortress, is now incorporated with a large modern mansion. *Chowbent*, 12 miles W.N.W. from Manchester, population returned with the chapelry of Atherton, is a populous and busy village, although some of its former celebrity in the manufacture of machinery and iron-work has departed. In the village are a chapel of ease, and chapels for Baptists and Unitarians. *Crosby*, on the coast, 6 miles N. by W. from Liverpool, population of the chapelry 2408, is a pleasant bathing village, much resorted to in summer. A chapel of ease is in the village. A Free Grammar school was founded here in 1618. *Denton*, 6 miles E. by S. from Manchester: population of the township 3146. The felt-hat trade, which was formerly carried on here, has considerably declined, and some coal-mines in the vicinity have been closed, in consequence of which the population has been reduced in number. The parochial chapel is an ancient building, constructed of wood and plaster. There are a district church, and a British school. *Didsbury*, 5½ miles S. from Manchester, population of the township 1449, is selected by many of the Manchester merchants as a place of residence. It is pleasantly situated near the right bank of the Mersey, which here separates Lancashire and Cheshire. Besides the parochial chapel there are a Wesleyan Methodist chapel, a theological institution belonging to the Wesleyan Methodist body, in which young men are trained for the ministry, and an Endowed National school. *Eccleston*, 16 miles S. by W. from Lancaster, population of the township 681, is a place of little trade, situated near the left bank of the Wire. It possesses a parochial chapel, chapels for Wesleyan Methodists and Roman Catholics, and a Free school. The gathering and preparing of rushes for tallow chandlers is a considerable source of employment. *Evertton*, a suburb, and included in the parliamentary borough of Liverpool, population of the chapelry 9221 in 1841; in 1851 it had risen to 25,513; at the Census in 1851 there were 370 of the military in the barracks. There are two district churches, an Independent chapel, a Free school, and National and Infant schools. *Farnworth*, 12 miles E. by S. from Liverpool, has a chapel, which is a picturesque embattled edifice of the 15th century; a Free Grammar school founded in 1480, which has an income from endowment of about 60*l.* a year, and had 21 scholars in 1853; and National schools. Canvas for sails is largely manufactured; watchmaking, and the making of files and other iron tools are carried on. *Gorton*, about 3 miles S. by E. from Manchester, population of the chapelry 4476, contains extensive chemical works, a cotton factory, and establishments for starch making, dyeing, and hat-making. There are a chapel belonging to the Establishment, chapels for Baptists, Wesleyan Methodists, and Unitarians, and an Endowed school for boys. A reservoir of the Manchester water-works, about 70 acres in extent, is in Gorton Vale. The Manchester and Stockport Canal passes Gorton on the east. *Greenacre's Moor* is in the township of Oldham, with which the population is returned. The village is a suburb of Oldham, and a place of residence for many genteel families; it has two Established churches, two chapels for Independents, a chapel for Wesleyan Methodists, National schools, two schools conducted by Methodists, and a mechanics institution, which in March 1851 had 68 members. Numerous cotton-mills, warp making establishments, iron-works, coal-mines, and rope-works furnish employment. Candle-wicks, and clogs and pattens are also made. *Haigh*, 22 miles N.E. from Liverpool, population of the chapelry, which is part of the parish of Wigan, 1220, has extensive coal mines, from which are obtained large quantities of cannel coal, and of a coal which from its superior qualities has received the name of King Coal. Numerous toys and ornaments are made from the cannel coal, which is susceptible of a high polish. There is a large iron-foundry. Besides the parochial chapel there are a public school for boys, and a school of industry for girls. Haigh Hall the seat of the Earl of Balcarres, is between Haigh and Wigan

Haigh, part of the borough of Wigan, 17 miles W. by N. from Manchester, population of the township 3670, has extensive coal-mines, from which cannel and king coal are raised; the cotton manufacture, and the making of garden and edge tools employ many of the population. Ince Hall is a fine old many-gabled mansion. *Kearsley*, about 8 miles N.W. from Manchester, population of the township 4236, has extensive bleaching-works, branches of the cotton manufacture, chemical works, and some less important occupations. A chapel for Swedenborgians is in the village. *Knossley*, about 6 miles N.E. from Liverpool, population of the township 1486. In the neighbourhood is Knowsley Park and Hall, the seat of the Earl of Derby. The mansion is a large brick edifice of various dates and incongruous styles; in it are some fine paintings. The park is very extensive. *Leyland*, 6 miles S. by W. from Preston, population of the township 3617, was once a place of some importance. The church, which is very large, was rebuilt in 1816 except the tower, which is ancient. There are places of worship for Independents and Roman Catholics; a Free school founded in the reign of Elizabeth, which had 18 scholars in 1853; a National and an infant school, and a savings bank. The inhabitants are employed in the cotton manufacture. Warden Hall, a fine old family mansion, is in Leyland. *Morecambe*, a bathing place on the shores of Morecambe Bay, about 4 miles N.W. from Lancaster, and close to Poulton, which is a station of the North-Western railway. The Local Board of Health for Poulton and two neighbouring townships has an interest in the management of the sanitary affairs of the place. *Newchurch*, 8 miles N.W. from Rochdale, population of the chapelry 16,915, has a church, rebuilt in 1825; chapels for Wesleyan and Association Methodists, Baptists, and Unitarians; a Free Grammar school, several National schools, and a school connected with the Baptist chapel. The cotton manufacture, the coarse woollens and baize manufacture, coal-mining, and the quarrying of stone, furnish employment to the population. *Oswaldtwistle*, about 8 miles E. by S. from Blackburn, population of the township 7654, has a parochial chapel, chapels for Baptists and Wesleyan and 1 Primitive Methodists, and National and Infant schools. Several extensive cotton-spinning, manufacturing, and printing-works are in the village. *Padiham*, about 3¼ miles W. by N. from Burnley, population of the township 4509, is situated on an elevation on the right bank of the river Calder: the streets are lighted with gas. The cotton manufacture, and the printing of cotton goods give extensive employment. Several coal-mines are in the vicinity. Besides the parochial chapel, there are chapels for Wesleyan Methodists, Baptists, and Unitarians; National, British, and Wesleyan schools. Three fairs are held in the course of the year. *Pendlebury*, 5 miles N.W. from Manchester, population of the township 2750, is chiefly engaged in the various branches of the cotton manufacture. Several collieries are in the neighbourhood. There are here a neat district church, and National schools. Agecroft Hall, a very ancient mansion, is in the vicinity. *Pillington*, about 6 miles N. by W. from Manchester, population of the township 12,863, is chiefly occupied in the cotton manufacture. *Poulton-le-Sands*, on the shore of Morecambe Bay, about 4 miles N.W. from Lancaster, population of the hamlet 995; is resorted to in summer for sea-bathing, for which it is advantageously situated. The village has railway communication by Lancaster with Yorkshire, and with the northern and southern parts of the county. There are here a chapel of the Establishment, recently rebuilt, and a Free school. *Ramsbottom*, 4 miles N. from Bury, population of the ecclesiastical district 3431, is dependent on the cotton manufacture: at this place the first Sir Robert Peel established the calico-printing trade. The extensive works of Messrs. Grant Brothers, and Messrs. Ashton afford extensive employment. There are here a Scotch church, erected in 1832 by William Grant, Esq., and a chapel of the Establishment, erected by public subscription, to which Messrs. Ashton liberally contributed. There are National and Wesleyan schools. *Rawtonstall*, about 8 miles N. from Bury, population of the ecclesiastical district 5643; has extensive cotton-mills, the proprietors of which have liberally provided means of instruction for their work-people by the erection of a church and a school. There are also a Wesleyan chapel, National schools, a mechanics institution, and a savings bank. *Ribchester*, 9 miles N.E. from Preston, population of the township 1650, occupies the site of the Roman station Coccium, or Rigodunum, on the right bank of the Ribble. A bath and other Roman remains have been discovered. The church is of the perpendicular style. There is a Roman Catholic chapel. The inhabitants of Ribchester are mainly occupied in hand-loom weaving. Salesbury Hall is an antique mansion of noteworthy character. About 4 miles from Ribchester is *Stoneyhurst*, noticeable on account of the Jesuit college, founded in 1840, a large and commodious structure, fitted up with every needful adjunct. It stands in beautiful grounds in the midst of very picturesque scenery. The church is elaborately decorated. The hall is capable of dining 150 pupils. *Seaford*, is a modern village on the coast 3 miles N. from Liverpool, in which are some neat residences of Liverpool merchants, and a new church. It is resorted to for sea-bathing. *Standish*, 3 miles N.W. from Wigan: population, 2655. The church is a semi-classic structure, erected in 1584. There are chapels for Wesleyan Methodists, Independents, and Roman Catholics; a Free Grammar school, founded in 1610, a School of Industry, and an Infant school. The inhabitants are mainly dependent on the coal-mines in the vicinity.

Fairs are held June 29th and November 22nd. It was in Standish Hall that the "Lancashire Plot" for the restoration of the Stuarts was concocted. *Stratford*, on the right bank of the Mersey, 4 miles S.W. from Manchester, population of the chapelry 4998, has a parochial chapel, chapels for Wesleyan Methodists and Independents, National, British, and Infant schools; and a temperance hall. Large numbers of pigs are brought from Wales and from Ireland, and killed at Stratford, chiefly for sale in Manchester. The Duke of Bridgewater's Canal, and the railway from Manchester to Altrincham pass close to the village. *Turton*, 4 miles N. from Bolton, population of the chapelry 4158, has cotton-mills, and bleach works on a large scale. The church is a handsome structure, picturesquely situated. Traces of a Roman road are visible in the neighbourhood. On Chetham's Close are the remains of a stone circle. Turton Tower is an embattled square tower of the Tudor period, to which a large modern mansion is attached. *Upholland*, about 4 miles W. from Wigan, population of the township 3359, has a Free Grammar school, founded in 1668, which had 125 scholars in 1853. The village is ancient; many of the houses are old and of curious construction, built in streets which run down the side of a rather steep hill. A priory formerly stood here; part of the building is used as a parochial chapel. In the neighbourhood are flour-mills, stone-quarries, and coal-mines. *Walmersley*, about 2½ miles N. from Bury, population of the township 4802. There are here cotton-mills, fulling-mills, chemical works, a brewery, and other establishments. A fine new church, picturesquely situated, and chapels for Wesleyan Methodists and Independents are in the township. There are remains of a beacon tower of the time of Elizabeth. A tower has been erected by the Messrs. Grant. *Walton-on-the-Hill*, 3 miles N. from Liverpool: population of the township, 2469. The parish church, which was, till 1698, the mother church of Liverpool, was rebuilt in 1742; it is partly of the decorated style; the tower is a modern erection. Its pleasant position, and its proximity to Liverpool make Walton a favourite residence of Liverpool merchants. In the village are Endowed, National, and Infant schools. *Walton-le-Dale*, 2 miles S.E. from Preston, population of the township 6855, occupies a beautiful situation on both banks of the Darwent, near its junction with the Ribble; the cotton manufacture is the chief source of employment. The church stands on an elevation, and commands fine prospects. There are a Free Grammar school, and National and Infant schools. *Waterloo*, on the coast about 5 miles S.S.W. from Liverpool, is a pleasant resort in summer. Numerous good residences have been erected in the village and neighbourhood. *Worle*, 6 miles W. by N. from Manchester, population of the township 10,189: in the township are three chapels of the Establishment, one of them built in 1847 by the Earl of Ellesmere; a chapel for Wesleyan Methodists; the Countess of Ellesmere's Normal school, and an Infant school. Extensive coal-mines are worked in the township, and there are several flour-mills.

Divisions for Ecclesiastical and Legal Purposes.—Lancashire was included in the diocese of Chester from 1541, when Henry VIII. constituted that bishopric till 1847, when pursuant to an Act passed some years previously, the whole of the county (except the deanery of Furness and Cartmel, which were added to the diocese of Carlisle), was formed into the diocese of Manchester, in the province of York. The parishes are very extensive. Whalley parish is 104,689 acres, Lancaster 73,732 acres, Rochdale 58,620 acres, Blackburn 45,269 acres, Kirkham 48,530 acres, and Prescott 36,554 acres; and others are little inferior in extent. There are however numerous dependent chapelries; and many chapels-of-ease and district churches have been built.

By the Poor-Law Commissioners Lancashire is divided into 29 Poor-Law Unions:—Ashton-under-Line, Barton-upon-Irwell, Blackburn, Bolton, Burnley, Bury, Caton, Chorley, Chorlton, Clitheroe, The Fylde, Garstang, Haslingden, Lancaster, Leigh, Liverpool, Manchester, Oldham, Ormakirk, Prescott, Preston, Prestwich, Rochdale, Salford, Todmorden, Ulverstone, Warrington, West Derby, and Wigan. These Unions contain 475 parishes and townships, with an area of 1,193,085 acres, and a population in 1851 of 2,091,203.

Lancashire is in the northern circuit. The assizes were till of late years held at Lancaster alone, but they are now held at Lancaster for the northern division of the county, and at Liverpool for the southern division. The quarter-sessions are held at Lancaster, and by successive adjournments at Preston, Salford, and Kirkdale. County courts are held at Ashton-under-Line, Blackburn, Bolton, Burnley, Bury, Chorley, Clitheroe, Colne, Garstang, Haslingden, Kirkham, Lancaster, Leigh, Liverpool, Manchester, Oldham, Ormakirk, Poulton, Preston, Rochdale, Salford, St. Helen's, Ulverstone, Warrington, and Wigan.

By the Reform Act the county was divided for parliamentary purposes into two parts, the northern and the southern divisions. Fourteen members were formerly returned to Parliament for this county; namely, two for the county itself and two each for the boroughs of Lancaster, Clitheroe, Liverpool, Newton, Preston, and Wigan. By the Reform Act Newton was disfranchised and Clitheroe reduced to one member: but the division of the county, with the creation of four new boroughs, Manchester, Bolton, Blackburn, and Oldham, each returning two members; and of five, Ashton-under-Line, Bury, Rochdale, Salford, and Warrington, each returning one member, has raised the whole number to 26.

Lancaster, as a county palatine, possesses a chancery court. In the time of Henry III. the earldom of Lancaster was instituted in favour of Edmund, surnamed Crouchback, second son of that king. In the time of Edward II. the earldom was erected into a duchy in favour of Henry Plantagenet, the then earl, and afterwards of John of Gaunt, who had married the heiress of Henry, and for whom the county was made a palatine county. In the time of Edward IV. the duchy was declared forfeited to the crown, to which, by Act of Parliament, both it and the county palatine were inseparably united. The chancery court has a chancellor, attorney-general, and other functionaries, and has an equity jurisdiction within the limits of the duchy.

History and Antiquities.—In the earliest period of English history this county was inhabited chiefly by the Brigantes, the most numerous and powerful of the tribes which then possessed the island. The Brigantes were subdued by Agricola, and in the subsequent division of Britain Lancashire was included in the province of Maxima Caesariensis.

Several places mentioned by ancient geographers are commonly identified with positions in this county. Among those mentioned in the Itinerary of Antoninus are the estuary or bay of Moricambe, Manchester (Mancunium), and Bremetonacæ or Bremetonacia, which is fixed by some at Lancaster, and by Camden and others, with more reason, at Overborough near Tunstall, some miles higher up the Lune, in the neighbourhood of Kirkby Lonsdale.

In Richard of Cirencester's map Moricambe is marked as a river, and the Alauna, Belisama, and Seteia are evidently identified by him with the Lune, the Ribble, and the Mersey. Coccium, in his map, is evidently fixed at or near Ribchester, and Rerigonium agrees in position with Lancaster: possibly Ad Alaunam, which he mentions in his Itinerary, is another name for the same place. The termination 'caster' leads us to fix a station at this town, and the first syllable 'Lan,' or, as it is provincially pronounced 'Lon,' accords well with the name Ad Alaunam, as well as with the first syllable of Longevicus, a station mentioned in the Notitia, which Camden is decided in placing here.

Several Roman roads have been traced in this county. Six of them diverge from Manchester (Mancunium) as a common centre. One runs north-west to Blackrod, and another north to Ribchester, the position most reasonably assigned to Coccium; two others run into Cheshire, one south-east by Stockport, another south-west by Stretford, supposed to be the Fines Flaviae et Maxima mentioned by Richard. Two others run into Yorkshire: one north-east towards Halifax; one, which branches from the foregoing, more easterly towards Oldham, Saddleworth, and Almondbury. The road to Ribchester is continued northward in the direction of Overborough, the Bremetonacæ of Camden. One branch road led from Ribchester to Freckleton, on the north side of the estuary of the Ribble, and another from Overborough to Lancaster, the Ad Alaunam and Rerigonium of Richard.

All traces of the station Mancunium have disappeared: of Coccium and Bremetonacæ some traces are visible at Ribchester and Overborough. Various antiquities of importance have been dug up or found at each of these places. Coins and other antiquities have been found at Colne (perhaps the Colonia of Ravennas), and at Cliviger near Burnley.

Long after the invasion of the Saxons Lancashire, at least in its northern part, retained its independence as a part of the British state of Cumbria or Cumberland, though this was frequently obliged to own the supremacy of the Northumbrian Angles. Egfrid, the son of Oswio, who reigned over the Northumbrians A.D. 670-685, conquered a part of the county, and bestowed Cartmel in Furness, with the Britons therein (et omnes Britanni cum ea), on St. Cuthbert, bishop of Lindisfarne, or rather annexed it to the temporalities of that see. Lancashire would be brought into subjection to the Saxons on the submission of the Cumbrian Britons to Edward the Elder in 921.

In 1323 the northern part of the county was ravaged by the Scots under Robert Bruce, who advanced as far as Preston, part of which he burned. In the reign of Henry VII. the Earl of Lincoln and Lord Lovel, with 2000 German soldiers under Martin Swart, and a number of Irish under Lord Geraldine, landed in Furness to support the cause of the impostor Lambert Simnel. In the civil war of Charles I. Lord Strange, afterwards earl of Derby, at the head of the Royalists, made an unsuccessful attempt in 1642 on Manchester, which was occupied for the Parliament by the county militia. Preston and Lancaster were subsequently taken by the Parliamentarians, and re-taken by the Royalists. In 1644 the siege of Lathom House took place; it was raised on the approach of Prince Rupert, who had previously taken Bolton, and afterwards obliged Liverpool to surrender; but in the following year the house was besieged again, and was given up by order of the king. In 1648 the Duke of Hamilton and General Langdale marched southward to Preston, in the neighbourhood of which, on Ribblesdale Moor, they were routed by the less numerous but veteran forces of Cromwell and Lambert. The vanquished fled southward, were overtaken and again defeated at Winwick and Warrington. Lancaster Castle was meantime besieged by the Royalists, but in vain. In the year 1651 the Earl of Derby again raised the royal standard, but being defeated by Lilburne at Wigan Lane, and subsequently taken, was executed at Bolton. In the

rebellion of 1715 Generals Wills and Carpenter compelled the supporters of the Pretender to surrender at Preston, to which place they had advanced in their march southward.

Of the early periods of our history there are few castellated remains. The keeps of Lancaster and Dalton castles, the ruins of the castle on the island of Pile of Fouldrey, and Hornby Castle, are noticed elsewhere. Gleaston Castle is in Furness, about two miles east of Furness Abbey: the ruins consist of portions of three square towers with some connecting walls, formed of mud and pebbles, and faced with limestone, inclosing an area or court-yard. Thurland Castle, near Hornby, is an old mansion which, having been fortified, stood a siege in the civil wars of Charles I. The ruins of Greenhaugh Castle, a mile from Grunstang, consist of one shattered tower. The monastic ruins in the county are of greater interest. Cockerham Abbey is about 6 miles S.W. from Lancaster, on a point of land at the mouth of the Lune. The only portion remaining is the chapter-house, an octangular room, the roof of which is supported by a single pillar rising in the centre. Furness Abbey is near Dalton, in Furness, on the banks of a rivulet in a narrow and fertile vale. It was founded in 1127 by Stephen, then earl of Morton, afterwards king of England, for Cistercian monks removed here from Tulket in Amounderness, but originally from Savigny in France. The ruins of this abbey are still magnificent, and from the picturesque beauty of the surrounding scenery are among the most striking of our monastic remains. They are of Norman and early English character. The whole length of the church is said to be 287 feet; the nave is 70 feet broad, and the walls are in some places 54 feet high and 5 feet thick. The windows and arches are upon a scale of unusual loftiness. There are ruins of the chapter-house and cloisters, and of the school-house, a large building detached from all the rest. The immediate precincts of the abbey, said to comprehend 65 acres, are inclosed by a stone-wall, on which appear the remains of small buildings, the offices of the abbey, and, entered by a gateway, a beautiful pointed arch. The ruins are built of a pale red stone, dug in the neighbourhood, and changed by time and weather to a dusky-brown tint. They are everywhere embossed by climbing or parasitic plants. Whalley Abbey and the priory church of Cartmel need only be mentioned here.

Religious Worship and Education.—According to the 'Returns of the Census,' taken in March 1851, it appears that there were then in Lancashire 1627 places of worship, of which 529 belonged to the Church of England, 300 to Wesleyan Methodists, 170 to Independents, 114 to Roman Catholics, 107 to Primitive Methodists, 100 to Baptists, 81 to the Wesleyan Methodist Association, 35 to Unitarians, 27 to Quakers, 27 to New Connexion Methodists, 23 to Presbyterians, 21 to Swedenborgians, 15 to Mormons, 11 to the Countess of Huntingdon's Connexion, 8 to Welsh Calvinistic Methodists, and 7 to Jews. The total number of sittings provided was estimated at 790,874. The number of Sunday schools in the county was 1524, of which 548 belonged to the Church of England, 489 to 7 sections of Methodists, 155 to Independents, 83 to Baptists, 78 to Roman Catholics, 26 to Unitarians, 21 to Presbyterians, 19 to Swedenborgians, 8 to Quakers, and 7 to Mormons. The total number of Sunday scholars was 823,173. The number of Day schools in the county was 3014, namely, 1036 public schools with 150,338 scholars, and 1978 private schools with 65,509 scholars. Of Evening schools for adults there were 314, with 9637 scholars. There were 99 literary and scientific institutions, with 20,053 members, and possessing libraries containing about 210,000 volumes.

Savings Banks.—In 1852 the county possessed 29 savings banks, at Accrington, Ashton-under-Line, Blackburn, Bolton, Burnley, Bury, Chorley, Clitheroe, Colne, Croston, Ecclestone, Fleetwood, Kirkham, Lancaster, Leigh, Leyland, Liverpool, Manchester, Oldham, Ormskirk, Poulton, Prescott, Preston, Rawtonstall, Southport, Staleybridge, Ulverstone, Warrington, and Wigan. The total amount owing to depositors on November 20th 1852 was 2,692,747*l.* 18*s.* 10*d.*

LANCASTER, the chief town of Lancashire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Lancaster, is situated on an eminence on the left bank of the river Lune, in 54° 4' N. lat., 2° 46' W. long., distant 240 miles N.W. by N. from London by road, and 230 miles by the North-Western railway. The population of the municipal borough of Lancaster in 1851 was 14,604; of the parliamentary borough 16,168. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. A Local Board of Health has charge of the sanitary arrangements of the borough. The living is a vicarage in the archdeaconry of Lancaster and diocese of Manchester. Lancaster Poor-Law Union contains 19 townships, with an area of 54,252 acres, and a population in 1851 of 23,454.

Lancaster was a Roman station, probably the Ad Alaunam of Richard of Cirencester. The castle was enlarged, and the town, which had previously received a charter from King John, obtained additional privileges in the reign of Edward III., who conferred the duchy of Lancaster on his son John of Gaunt. The town suffered severely in the War of the Roses, and was the scene of contest in the civil war of Charles I.

Lancaster is situated at the north-western angle of Lancashire, about 7 miles from the mouth of the river Lune. The appearance of the town is picturesque. The summit of the eminence on which the

town stands is crowned by the towers of the castle, a spacious edifice, comprehending a large court-yard, some smaller yards, and several differently-shaped towers: it has been almost wholly rebuilt in a palatial style, and fitted up at a vast expense as a county jail and court-house. The large square keep is very ancient and extremely strong: the gateway, defended by two semi-octangular projecting towers, is referred to the time of Edward III. The shire hall and county-courts are modern. The streets of the town are for the most part narrow: they are paved with the ordinary cobble-stones of the district, and are lighted with gas. The houses are built of freestone, which is quarried in the neighbourhood, and are covered with slate. The church is on the same eminence as the castle: it is spacious, and contains some specimens of screen-work; the tower is modern. In the churchyard is the shaft of a Danish cross with Runic characters. There are several chapels of ease and chapels for Independents, Wesleyan Methodists, Presbyterians, and other dissenters. The Royal Grammar school is supposed to have been founded by John Gardiner in 1485. The number of scholars in 1853 was 114, of whom 20 were admitted by the corporation. A new school-house, with residences for the masters, has been recently erected. Lancaster Grammar school has possessed some celebrity: among its more eminent living scholars are Dr. Whewell and Professor Owen. There are also in the town a Blue-Coat school, National, British, Roman Catholic, Quaker, and Infant schools. There are assembly-rooms, a theatre, and public baths. A handsome stone-bridge of five arches over the Lune connects the town with the suburb of Skerton. There are several almshouses; and on Lancaster Moor, in the neighbourhood of the town, is the county lunatic asylum, a neat building, capable of accommodating 700 patients. There are also a lying-in charity, a dispensary, and other benevolent institutions. The Lancaster Athenaeum had 640 members in 1851; the Church of England Instruction Society had 202 members, with 650 volumes in its library; the mechanics institute had 220 members, with 2900 volumes in its library. The town-hall is a neat building, standing in a square: in it are several portraits of distinguished persons. The custom-house is a small Ionic edifice. The assizes for the county, quarter-sessions, and a county-court are held at Lancaster. There is a savings bank. Markets are held on Wednesday and Saturday. Fairs are held May 1st, July 5th, and October 10th, the last being a great cheese fair. In the town and vicinity are cotton- and silk-mills, iron-foundries, corn-mills, very extensive steam-power marble-works, and considerable establishments for the manufacture of furniture. The river admits vessels of 300 tons burden up to the town. The number of sailing vessels registered as belonging to the port of Lancaster on the 31st of December 1853 was—Under 50 tons 36, tonnage 1389; above 50 tons 53, tonnage 5479; and 7 steam-vessels of 1035 tons. During 1853 there entered the port 1256 vessels of 67,153 tons, and cleared 555 vessels of 32,596 tons. Of steam-vessels there entered 369 of 61,467 tons, and cleared 363 of 60,261 tons. The total amount of customs duties received at the port in 1850 was 27,001*l.*; in 1851 it was 20,036*l.* Races are held annually on the Moor, about a mile and a half from the town.

LANCHESTER, Durham, a small town and the seat of a Poor-Law Union in the parish of Lanchester, is situated in 54° 50' N. lat., 1° 44' W. long., distant 8 miles N.W. from Durham, and 266 miles N.N.W. from London. The population of Lanchester township and hamlets was 752 in 1851. The living is a perpetual curacy in the archdeaconry and diocese of Durham. Lanchester Poor-Law Union contains 18 parishes and townships, with an area of 48,984 acres, and a population in 1851 of 20,075. Lanchester is a small place in a remote district near the border of the county. The parish church, which was formerly collegiate, is early English, and has an embattled square tower. In the vicinity are flour-mills and coal-mines. Lanchester is on the site of the Roman station *Episcum*; distinct traces of the works and of the great Roman road to Scotland are observable in the neighbourhood.

LANCIANO. [ABBUEZÒ.]

LANDAU, a small fortified town of Rhenish Bavaria, is situated in a beautiful valley on the Queich, 18 miles S.W. from Speyer, and has about 6000 inhabitants, exclusive of the garrison. The ground plan of the ramparts is a regular octagon, with 8 curtains, covered by 7 bulwarks, 3 redoubts, 7 lunettes, 1 fort, 3 whole and 2 half bastions, and surrounded by broad moats. The barracks and casemates are bomb-proof. It is very regularly built within, has two gates, a large parade, a church, which Protestants and Roman Catholics have in common, a gymnasium, various public offices, and manufactures of calico, woollens, linen, hats, fire-arms, copper and iron-foundries, large vinegar factories, &c. Landau, which was formerly an imperial city, was ceded to France in 1680, and fortified by Louis XIV. In 1702 it was taken by the Austrians, but recovered by the French in 1703. After the battle of Blenheim in 1704 it again fell into the hands of the Austrians, who retained it till 1713, when it was again ceded to France. In 1793 it was unsuccessfully besieged by the Austrians and Prussians. The first treaty of Paris in 1814 left it to the French; but at the second treaty in 1815 it was declared a fortress of the German Confederation, under the protection of Bavaria, a part of whose contingent to the army of the Confederation forms the garrison.

LANDERNEAU. [FINISTÈRE.]

LANDES, a department in the south-west of France, bounded N.

by that of Gironde, E. by Lot-et-Garonne and Gers, S. by Basses-Pyrénées, and W. by the Bay of Biscay. Its greatest length from west to east is 72 miles, from north to south 66 miles. Its area is 3599 square miles. The population in 1841 was 288,077; in 1851 it amounted to 302,196, which gives 84.02 to the square mile, being 90.56 below the average per square mile for the whole of France.

The department takes its name from the French word 'landes,' by which the vast sandy and marshy plains that extend between the Garonne and the Adour from the meridian of Greenwich to the Bay of Biscay are designated. In point of size the department of Landes is inferior only to that of Gironde.

The lower slopes of the Pyrenees enter the south and south-east of the department, furrowed by many brawling rivers, and subsiding into rich plains that extend along the left bank of the Midouze and the Adour, which rivers form the general southern boundary of the Landes. To the northward of these rivers the surface of the ground is covered with a loose ashen-gray sand, overgrown here and there with heath and furze, or with pine woods. Numerous flocks of wretched half-starved sheep wander over this desert waste, tended by shepherds who walk on high stilts to enable them to pass dry-footed over the marshes that occur in all directions. Clothed in sheep-skins, perched on his lofty stilts, and seated on a high staff with a flat broad end, the shepherd of the Landes, watching his sheep and knitting woollen stockings, his constant occupation, presents to the stranger unprepared for the sight an extraordinary appearance. Not only the shepherds, but the charcoal-burners, and almost all the scanty population of the Landes, are accustomed to the use of stilts, on which they walk with astonishing rapidity. Maize and barley are grown in favourable situations in this district; but the most important produce of the Landes are the pine forests, which cover nearly one-fourth of the surface, and which, besides the value of the timber, and the great quantity of rosin they are made to yield by tapping, are found to present a most effectual barrier to the sand hills along the west coast that formerly rolled into the interior under the influence of the western winds, and overwhelmed the villages and crops exposed to their course. The surface of the Landes is in parts rather elevated, as is proved by the rapidity of the river-streams which flow from them towards the south, west, and north-west: the largest of these is the Leyre, which flows north-west into the Bay of Arcachon. The chief rivers of the department are the ADOUR, which receives numerous feeders from the Pyrenees on the left bank; and its principal tributary from the right bank, the Midouze. [GERS.]

Along the sea-coast of the department, which extends north and south about 70 miles, a marked feature of the country are the sand-hills, which have a width from east to west of 5 miles; their height ranges from 120 to 170 feet; they slope towards the sea at an angle of 25 degrees, towards the land at an angle of 50 degrees. The form of these masses of sand is continually varying; sometimes they are arranged in regular chains, at others they present a level surface; and not unfrequently they assume the form of isolated heaps, the openings between them being called 'lettas.' The rate of advance of these moving sands was formerly about 65 feet yearly. To landward of them there are in some places rich pasture grounds. There are several shallow inlets and some isolated lagoons along the coast; and all through the Landes there are numerous marshes, the exhalations from which render the climate foggy in winter, and always more or less unhealthy. The marshes which formerly lined the banks of the Adour have been almost entirely converted into most productive land. The climate of the department, owing to the proximity of the Pyrenees and the prevailing westerly winds, is not so hot as might be expected from its latitude.

The department contains 2,303,429 acres, of which area 968,967 acres consist of barren sands and moors; 415,261 acres are arable land; 654,190 acres are covered with woods and forests; 51,101 acres are under vine culture; 65,728 consist of grass land. The agricultural products, most of which are raised in the territory of Chalosse, as the country south of the Adour is called, are—wheat, maize, millet, hemp, flax, madder, saffron, &c. About 10,000,000 gallons of wine are produced annually, of which about a third goes to supply the home consumption; the rest is exported, or distilled and sold as Armagnac brandy. Almonds, plums, and fruits of all kinds, are abundant and excellent. Cattle are of inferior breed, ill-fed, and give milk of the poorest quality; the horses are small; sheep are numerous, but their wool is the worst possible; goats, pigs, poultry, and bees are numerous; game and fish are plentiful. Besides the pine (*pinus maritima*), which grows most luxuriantly in the Landes, the forest-timber consists of oak, cork, chestnut, and beech.

Mines of iron and bitumen are worked; mica, coal, marble, granite, lithographic stone, chalk, ochre, potters'-clay of superior quality, crucible earth, &c., are found. Peat fuel is dug. Mineral springs are numerous.

The industrial produce is composed of coarse woollens, pottery, liqueurs, bar-iron and iron-ware, rosin, pitch, tar, glass, paper, leather, brandy, beer, oil, &c. There is also a considerable trade in timber, deals, linseed-oil, fruits, wool, pork, &c. The number of wind- and water-mills amounts to 762; of iron-foundries and smelting-furnaces to 81; of factories and workshops of different kinds to 351. About 135 fairs are held annually. The department is crossed by 7 state and 11 departmental roads, and by the railway from Bordeaux to Bayonne, which is now (October, 1854) completed as far as Dax.

The department is divided into 3 arrondissemens, which, with their subdivisions and population, are as follows:—

Arrondissemens.	Cantons.	Communes.	Population in 1851.
1. Mont-de-Marsan . .	12	116	102,761
2. St.-Sever	8	109	88,655
3. Dax	8	108	110,780
Total	28	333	302,196

1. Of the first arrondissement and of the whole department the capital is *Mont-de-Marsan*, which stands in 45° 53' N. lat., 0° 30' W. long., 65 miles south from Bordeaux, and nearly the same distance N.E. from Bayonne. The town, though small, and with a population of only 4465, presents a thriving appearance, and its situation at the junction of the Midou and the Douze, which form the Midouze, a navigable feeder of the Adour, give it considerable advantages in the way of commerce. The streets are wide and well-built, and there are several fine avenues of ancient oaks leading into the town. The principal structures are the prefect's residence, the court-house, prison, the hospital, and barracks. The town is the seat of a tribunal of first instance, and has a college, public library of 12,000 volumes, a theatre, and several public baths. Cloth, blankets, sailcloth, and leather are the principal manufactures. *Mont-de-Marsan* has communication with the Garonne by the Canal des Landes, which at Lavardac joins the Baise, a navigable feeder of the Garonne. The most important commerce of the town consists in the transport of the wines and brandies of Armagnac by the Midouze and the Adour for shipment at Bayonne. In time of war with England *Mont-de-Marsan* becomes an important entrepôt between Bayonne and Bordeaux. With the other towns the population given is that of the commune. *Sabres*, a town of 2524 inhabitants, stands on the Leyre in the midst of barren wastes and marshes, and has a very handsome church said to have been built by the Templars.

2. In the second arrondissement the chief town, *St.-Sever*, is situated in an extremely fertile district on the left bank of the Adour, 10 miles S. from *Mont-de-Marsan*, and has a tribunal of first instance, a college, and 5238 inhabitants, who manufacture fine pottery, linseed-oil, and leather, and trade in corn, wine, brandy, mineral waters, marble, cut-stone, plaster of Paris, &c. The town is well built, and contains some handsome buildings; among which are the court-house, the hospital, barracks, prison, and a magnificent church, which formerly made part of the Benedictine Abbey of *St.-Sever*, founded here in A.D. 993. The town was formerly fortified. The English took it in 1296 after a long siege. Charles VII. recovered it in 1426. In the religious wars of the 16th century the town was twice taken and suffered terribly on both occasions. *Aire*, an episcopal and ancient city, stands on the slope of a hill on the left bank of the Adour, which is here crossed by a handsome stone bridge, 17 miles E. from *St.-Sever*, and contains an ecclesiastical college, a very ancient church, and 4432 inhabitants. The town, which is neat and well built, has manufactures of hats and leather. The see of *Aire* was founded about A.D. 500, soon after which date Alaric II., king of the Visigoths, made it his residence. The Northmen sacked *Aire* in the 9th century. The Gascons, Saracens, and English successively seized it: the religious wars almost completed its ruin. *Amos*, a pretty little town of 2176 inhabitants, is situated in a very fertile corn and wine country near the junction of the *Luy-de-France* with the *Luy-de-Béarn*, and has potteries, brandy distilleries, tile-works, and numerous flour, oil, and bark-mills. *Hagetmas*, a town of 3081 inhabitants, stands in a district abounding with game, on the *Loute*, a few miles south by west from *St.-Sever*, and has manufactures of household linen, pottery, leather, and several oil-mills. It has also a good trade in wine, corn, maize, flax, chestnuts, hides, and cattle. Great quantities of oak-staves and hoops are dispatched to Bordeaux. *Mugron*, situated at the foot of a hill on the left bank of the Adour, has 2190 inhabitants, who trade in brandy, wine, rosin, and silk. *Tartas*, W. by N. from *St.-Sever*, is a well-built ancient town prettily situated on the Midouze, and has 2759 inhabitants, who manufacture linseed-oil, vinegar, and leather, and trade largely in corn, wine, brandy, saffron (of which a great deal is grown in the neighbourhood), fruits, game, hams, timber, planks, resin, &c.

3. In the third arrondissement the chief town, *Dax*, situated in a fertile plain on the left bank of the Adour, over which there is a bridge to the suburb of *Sablar*, is a well-built town, surrounded by ramparts and fosses of Roman construction, 30 miles S.W. from *Mont-de-Marsan*, and has 5842 inhabitants. The town, which is entered by three gates, is defended by a strong castle. The chief buildings are—the former episcopal palace, now occupied by the sub-prefect and the mayor, the court-house, the cathedral, and the gaol. *Dax* has a tribunal of first instance, a college, and a considerable commerce in liqueurs, wine, corn, hams, onions, timber, deals, rosin, &c. It has been famous from the most ancient times for its hot mineral springs, whence its ancient name of *Aquæ*, of which *Dax* (*d'Acqs*) is a corruption. *Aquæ*, or *Aquæ Tarbellicæ* was the capital of the *Tarbelli*, a people of Aquitania. On the downfall of the Roman empire the town was seized successively by the Goths, the Franks, and the Gascons. In A.D. 910 it was stormed by the Saracens. The

English held it from the 12th to the 16th century, when they were finally driven from Gascogne by Charles VII. *St-Esprit*, in the south-western extremity of the department, and on the right bank of the Adour, here crossed by a long wooden bridge which joins the town to Bayonne, is a large busy town, with a population of 7324, by far the greater part of whom are descendants of Jewish refugees from Spain. The citadel of *St-Esprit*, constructed by Vauban, commands the town of Bayonne, and the approaches to it by land and sea. [BAYONNE.] The Jews have 3 synagogues here, in one of which a Rabbi preaches every day in Spanish. *Peyrehorade*, on the right bank of the Gave-de-Pau, which here becomes navigable and a few miles lower down enters the Adour, has 2742 inhabitants. It has a fine old castle flanked with towers. Large stores of ship-timber from the forests of the Pyrenees are kept here; there are also important quarries in the neighbourhood. *Soustons*, on the eastern shore of the lagune of Soustons, 17 miles W. from Dax, has a population of 2733.

The department forms the see of the bishop of Aire, is comprised in the jurisdiction of the High Court of Pau, within the limits of the University Academy of Bordeaux, and belongs to the 13th Military Division, of which Bayonne is head-quarters. It returns 2 members to the Legislative Body of the French Empire.

(*Dictionnaire de la France; Annuaire pour l'An 1849; Statistique de la France; Official Papers.*)

LANDEWEDNACK. [CORNWALL.]

LANDRÉCIES. [NORD.]

LANDSKONA, a small fortified seaport town in Sweden, on the shore of the Sound, is situated at nearly an equal distance between Cape Kuller and the town of Malmö, and opposite the small island of Hven, in 55° 51' N. lat., 12° 8' E. long., and has about 4000 inhabitants. Its harbour is spacious and safe. Being situated nearly opposite the capital of Denmark, the harbour as well as the town are well fortified. It carries on a considerable trade in corn, and has some manufactures of tobacco and starch, and also some sugar-houses, tanneries, and soap-houses.

LANDSHUT, one of the prettiest towns in the kingdom of Bavaria, is situated in 48° 30' N. lat., 12° 7' E. long., in a delightful country on the right bank of the Isar, which is here crossed by two bridges. The principal portion of the town consists of two long, broad, and straight streets, connected by a number of narrower ones. The houses are well built of brick, lofty, many of them with pointed gables. The town has a very picturesque character, owing to its antique architecture and the number of its towers. The open parts are two market-places and the parade-square. The most remarkable buildings are the palace, the house of the provincial assembly, an hospital, and two parish churches, of which *St. Martin's* is celebrated for its beautiful steeple, 456 feet high, and one of the loftiest in Germany. On a hill overlooking the town is the ancient castle of Traunitz, which was formerly a strong fortress, and the residence of the dukes of Bavaria: in this castle Frederick of Austria was confined for three years by Lewis the Bavarian. On the declivity of this hill is the botanic garden. A suburb is built on an island formed by the Isar. In the year 1800 the university of Ingolstadt was transferred to Landshut, but in 1826 it was removed to Munich. There are however still a Catholic theological school, a gymnasium, a lyceum, and a chirurgical clinical school. There are manufactories of woollen cloth, leather, hosiery, starch, playing-cards, snuff, and tobacco, but all on a small scale; the breweries and distilleries are however extensive. Landshut was formerly an important fortress. It has accordingly suffered severely in times of war. The population is about 9500.

LANGÉAIS. [INDRE-ET-LOIRE.]

LANGELAND. [FÛNEN.]

LANGENSALZA. [KEFURT.]

LANGHOLM. [DUMFRIESHIRE.]

LANGLEY, ABBOT'S and KING'S. [HERTFORDSHIRE.]

LANGON. [GIBONDE.]

LANGPORT, Somersetshire, a borough and market-town and the seat of a Poor-Law Union, in the parish of Langport Eastover, is situated in 51° 2' N. lat., 2° 49' W. long., distant 36 miles S.W. by S. from Bath, and 128 miles W. by S. from London. The population of the parish in 1851 was 1117. The borough is governed by a portreeve and capital burghesses. The living is a perpetual curacy annexed to the vicarage of Huish Episcopi, in the archdeaconry of Wells and diocese of Bath and Wells. Langport Poor-Law Union contains 29 parishes and townships, with an area of 53,485 acres, and a population in 1851 of 18,468.

The town of Langport is built at the junction of the Ivel and Parret, on the slope and at the foot of a hill: the lower part of the town near the Parret is liable to be flooded. The principal street leads down the hill to the Parret, over which is a handsome bridge of three arches. The town is well lighted with gas and paved throughout. The village of Huish Episcopi, or Bishop's Huish, forms a part of Langport. The ancient guildhall and market-place is a neat building. Langport church consists of nave, chancel, north and south aisles, two chapels, and a vestry-room, with a good western tower.

The road to Yeovil passes under an ancient building with an arched gateway; this building is popularly called 'Hanging Chapel;' it is now used as a museum. There are chapels for Independents, Bible Christians, and the Plymouth Brethren. The Grammar school, founded in 1675, has been further endowed, and a new school-room built: the school is free to children of the inhabitants: the number of scholars in 1852 was 60. There is also a National school. On a bridge near the middle of the town is the register-office, an elegant little building. There is also a public reading-room and library. On the banks of the Parret Navigation Company's canal are extensive wharfs. The market is on Saturday; there are four yearly fairs. Langport sent members to Parliament in the reign of Edward I. A county court is held here.

LANGRES, a town in France, capital of the second arrondissement in the department of Haute-Marne. This town takes its name from the Lingones, a Celtic people, whose capital it was. They were among the tribes who, in the time of Cæsar, embraced the Roman alliance, and they retained a considerable degree of liberty even under the emperors. Their chief town was called Andomatunum; in the later period of the Roman empire it was called, after the name of the people, Lingones; in old French the name is written Langone and Langoine, and thence by corruption came Langrea. It was a place of great importance under the Romans: many antiquities have been found; and there yet remain the ruins of triumphal arches, and vestiges of several Roman roads. The Alemanni were defeated with terrible slaughter under the walls of Langres in A.D. 298 by the Romans under Constantius, the father of Constantine the Great. The town was taken and burnt by Attila, and afterwards by the Vandals in A.D. 407. Rebuilt, it was next seized by the Burgundians. It was afterwards the head of a county in the possession of the dukes of Bar, from whom Hugues III., duke of Bourgogne, purchased it in A.D. 1179, and gave it to his uncle Ganthier, bishop of Langres. Louis VII. erected the county into a duchy, and the bishops of Langres were peers of France down to 1830. In 1814 Langres capitulated to the Austrians.

Langres is situated in 47° 51' 53" N. lat., 5° 19' 55" E. long., at a distance of 158 miles S.E. from Paris, and has 8646 inhabitants. The town, built on the watershed between the Mediterranean and the Atlantic, near the sources of the Marne, the Meuse, the Amana, and the Vingeanne, occupies a higher site than any other town in France, except Briançon. It is surrounded by old walls, and is pretty well built, with wide streets, and is ornamented with fountains and promenades. The most remarkable structures are the cathedral, part of which dates from A.D. 380; the town-hall; and a Roman triumphal arch, which makes part of the town-wall. The greatest ornament of the town is the promenade called *Blanche-Fontaine*, which is formed of an avenue of magnificent limes, nearly a mile in length, and terminates in a majestic vaulted arcade, from the top of which a colossal frog in bronze continually spouts a mass of limpid water that feeds several basins and jets. The public library of 7000 volumes is in the town-hall: there is a museum in the old church of *St. Didier*. The chief manufacture of Langres is cutlery; there is also a considerable trade in corn, flour, wine, flax, hemp, wool, &c. The town has given title to a bishop since the 3rd century; its diocese is coextensive with the department of Haute-Marne. It is the seat of tribunals of first instance and of commerce, and has two ecclesiastical schools, a college, and three hospitals.

LANGUEDOC, one of the most extensive and important of the provinces into which, before the revolution, France was divided. It was bounded N. by Lyonnais and Auvergne, and by Rouergue and Quercy, subdivisions of Guyenne; E. by the Rhône, which separated it from Dauphiné and Provence; S. by the Mediterranean, the province of Roussillon, and the Pyrenees; and W. by Guienne and Gascogne. Its extent, as described above, includes the county of Foix, which is a subdivision of it, though it constituted a separate military government previous to the revolution. Its subdivisions and area, exclusive of Foix, were as follows:—

District.	Capital.	Square Miles.
Vivarais . . .	Viviers . . .	2201
Rasés . . .	Limoux . . .	796
Carcassès . . .	Carcassonne . . .	561
Lauragais . . .	Castelnaudary and Lavaur . . .	683
Velay . . .	Le Puy . . .	912
Gevaudan . . .	Mende . . .	2027

And the following dioceses:—

Nîmes . . .	1246
Uzès . . .	1159
Toulouse . . .	1090
Montpellier . . .	707
Lodève . . .	372
Béziers . . .	897
Narbonne . . .	1433
Alby . . .	1923
Montauban (part of) . . .	208
Total . . .	10,119

The province now forms the departments of AUDE, TARN, HÉRAULT, LOZÈRE, ARDÈCHE, and GARD, together with the arrondissements of

Toulouse and Villefranche in HAUTE-GARONNE, Castel-Sarrasin in TARN-ET-GARONNE, and Puy and Ysengaux in HAUTE-LOIRE. Under the Romans it formed part of Gallia Narbonensis, and on the decline of their power it got the name of Septimania, from its seven bishoprics, namely, Toulouse, Béziers, Nîmes, Agde, Maguelonne, Lodève, and Uzès. The emperor Honorius ceded the territory of Languedoc to the Goths, who held it for nearly 200 years, when they were driven out by the Saracens, who in their turn were expelled by Charles Martel. The country thus subjected to the kings of France was governed by feudatory dukes and counts till 1270, when, on the death of the last count of Toulouse, it was united to the crown of France.

The name Languedoc has been transferred to the country from the name given to the language of the inhabitants, who used the word 'oc' as an affirmative, and were hence said to speak the 'langue d'oc,' as distinguished from the dialect spoken north of the Loire, which expressed the affirmative by 'oui,' and was called the 'langue d'oui.' The name Occitania, sometimes applied to the country, is said to be derived also from 'oc.'

The province extended from the Rhône to the Garonne, the most western point reaching the junction of the Tarn with the last-mentioned river. It was formerly divided into Haut-Languedoc, Bas-Languedoc, and Cévennes, which had Toulouse, Montpellier, and Alais for their capitals respectively.

Under the old Bourbon monarchy Languedoc had a kind of parliament called States, consisting of the clergy, three archbishops and twenty bishops; the nobility, among whom the count of Alais held the first place; and the commons, consisting of the consuls and deputies of the episcopal and other towns. The archbishop of Narbonne was perpetual president of the States. Their chief business was to apportion among the different parts of the province the taxes levied by the king.

LANNION. [CÔTES-DU-NORD.]

LANVOLLON. [CÔTES-DU-NORD.]

LANZAROTE. [CANARIES.]

LANZET, LE. [ALPES, BASSES.]

LAON, a town in France, capital of the department of Aisne, the seat of an assize court, of a tribunal of first instance, of a communal college, and of an ecclesiastical seminary, is situated in 49° 33' 54" N. lat., 3° 37' 42" E. long., 75 miles N.E. from Paris, and has 8043 inhabitants in the commune. It is situated on a steep isolated hill 592 feet above the level of the sea, and commanding on every side an extensive view over the surrounding plain. It is said to have taken its origin, in the reign of Clovis, from a castle which stood on this eminence. In the later period of the Carolingian dynasty it was frequently the residence of the kings of France, and it continued throughout a part of the domain of the crown. From the latter end of the 5th century to the time of the first French revolution it gave title to a bishop, who was a suffragan of the archbishop of Reims. The town consists of one principal street, rather narrow, and several smaller streets very narrow: it is surrounded by an ancient wall, flanked with towers and by a boulevard, or public walk, on the brow of the hill, whence splendid views of a vast plain brilliant with verdure and teeming with fertility are obtained. At the foot of the hill are the suburbs. Great improvements have been made in Laon in recent times by modernising the houses and widening the streets as opportunities offered. The cathedral of Notre-Dame, erected in two years (A.D. 1112-1114), crowns the hill on which the city stands: it is built in a simple gothic style. The interior is remarkable for its imposing vastness and for its square choir. The principal façade presents the usual triple-arched portal, remarkable for cavernous depth and for great simplicity of ornamentation; the second story presents a beautiful rose of noble dimensions, filled with splendid stained glass, and flanked by two deeply-recessed gothic windows; over these is a niched gallery, surmounted by a graceful parapet of stone tracery, behind which spring into view two gothic towers with large lofty unglazed windows, through which the light plays with grand effect. There are two similar towers behind these, besides a smaller one over the choir. The cloisters of the cathedral were demolished by the corporation of the town not very long ago. There are four other churches in Laon, of which St. Martin's also dates from the 12th century, and is remarkable for its two lofty towers. The abbey of St. Jean is now the residence of the prefect, and the Hôtel-Dieu is established in the monastery of St. Martin. The public library, which contains about 20,000 printed volumes and some valuable manuscripts, is lodged in a part of the convent of St. Jean; in the library is a beautiful marble statue of Gabrielle d'Estrées. Among the other public structures may be noticed the general hospital, the town-hall, the college, the theatre, and the barracks. The massive tower of Louis-d'Outremer, one of the oldest historical monuments in France, was pulled down some years ago to make room for a citadel. Near the Porte St. Martin is a tower considerably out of the perpendicular. Extensive cellars are cut in the chalk rocks beneath the town. The industrial products of Laon comprise nails, hats, woollen-stuffs, hosiery, &c.; the trade in corn, wine, and garden-stuffs is important. In the suburbs are potteries and tan-yards, lime-kilns, a rope-walk, and a manufactory of copperas. The neighbourhood produces grain

and wine, and many artichokes and other vegetables are grown for the supply of Paris.

Laon was besieged in the civil contests of the Armagnacs and Bourguignons, and was taken from the League by Henri IV. in 1594. In March 1814 it was the scene of a severe action between the French and the Prussians and other allies, at the termination of which Napoleon I. was compelled to retreat upon Soissons.

LAOS, the country of the Laos, Chau, or Lowas, comprehends the central portions of the peninsula beyond the Ganges, lying between 15° and 24° N. lat., 96° and 103° E. long. It is bounded S. by Siam and Cochin China, E. by the last-mentioned country, N. by China, and N.W. and W. by the Birman empire. Its area covers about 180,000 square miles. Little is known of the country.

The western portion of it, extending along the banks of the Saluen River, which divides Laos from Birma, is covered with mountain ranges, which do not attain the snow-line, but rise in some parts to a considerable height, as the thermometer was observed to stand at 46° at 8 o'clock in the morning. This mountain region seems to extend over the whole country north of 20° N. lat.; it is intersected by wide level tracts and plains along the courses of the rivers, which are of great fertility, but low, and subject to frequent and extensive inundations. The south-eastern part is traversed by the river Maekhaun, or Camboja. Along the eastern border of Laos there runs a mountain range about 100 miles wide, which separates it from Cochin China and Tonkin. The greatest part of the country is covered with forests and swamps, or stagnant waters, which are produced by the inundations of the numerous rivers which descend from the high ranges surrounding the elevated table-land of Yunnan in China.

The largest of its numerous rivers are the Saluen [BIRMA], the Maekhaun [COCHIN CHINA], and the Menam, or river of Siam, which flows through the centre of the country between the two first-named rivers. The Menam rises on the western declivity of the table-land of Yunnan, in two branches: the Mae-ghue, the western; and the Mae-praen, the eastern. They unite south of 22° N. lat., and the rivers after their junction preserve the name of Mae-praen, and also their southern direction. Where the Mae-praen approaches the boundary of Siam (near 18° N. lat.), its name is changed into that of Menam, under which it is known up to its mouth in the Gulf of Siam. At about 20° N. lat. the Maekhaun divides into two branches, of which the western, called Anan, runs south-south-west until it joins the Mae-praen, south of 19° N. lat. This natural canal is said to be navigable for barges. The whole course of the river Menam probably exceeds 800 miles, and it is navigable for the greatest part of its course, though several rapids occur in it.

Rice is the principal grain cultivated, no wheat is grown. Most fruits which grow in Southern Asia succeed; cotton is cultivated, and much silk is collected, as well as gum-lac. Among the wild animals the elephant and rhinoceros are abundant. Cattle and buffaloes abound. In some of the northern districts tea plantations are very extensive: the leaves of the plant are not dried, but salted for chewing. The mountainous parts, and especially those districts which are contiguous to Yun-Nan, are very rich in metals. Gold abounds in many of the rivers, and silver-mines are worked to a great extent by Chinese miners. Copper occurs in many places, and tin in a few. Iron-ore is found farther south in the country, on the banks of the Saluen River, and the natives make good fire-arms. Rock-salt also occurs in these parts.

The inhabitants of Laos resemble the inhabitants of Siam and Camboja in the form of their bodies. Their language differs little from the Siamese. All the nations belonging to this stock are called Shan, which by Europeans has been changed into Siam. They are inferior in civilisation to the Siamese, except those who inhabit the southern districts of Yun-nan, and who have adopted the arts of the Chinese. Yet even the rest seem to have made considerable progress in agriculture, horticulture, and the various arts of civilised life. They are Buddhists, and their sacred books are written in the Pali language. They have a national literature. Their best books treat of the common occurrences of life, in prose.

Laos is divided into three great portions. The most northern, between the Saluen and Mae-praen, is called Upper Laos, or the country of the Löwa-Shan; its capital is Kemalatain. South of it lies Laotio, or the country of the Yun-Shan, with the capital Zaen-mae, or Changmai. The south-eastern part is called Lanchang, or the country of the Shan. It is nearly unknown to Europeans, and its capital is said to be Lanchang, or Zandapuri. To these three great divisions is to be added Tarout, which lies north of Lanchang, and seems to be incorporated partly with Yun-nan and partly with Tonkin. It is also inhabited by the Shans.

Towards the end of the 18th century, the dominion of the Birman extended over nearly the whole of Laos; since that time the greatest part had recovered its independence. But as it is governed by a great number of petty hereditary sovereigns, it has been unable to preserve its independence, and in modern times the southern districts seem to have fallen under the dominion of the Siamese government.

Laos exports to Siam musk, gold, lac, slaves, ivory, rhinoceros horns, benzoin, hides and tiger skins, silk and silk-stuffs, precious stones, and salt. Its commerce with Ava, the capital of Birma, is almost exclusively limited to that town, and Kemalatain, the capital of the Löwa-Shan. The merchandise is transported over high

mountains on carts drawn by buffaloes. Laos exports to Birma cattle, gold, silver, precious stones, and fruits, and receives in return iron-ware, yellow and red sandal-wood, cotton-cloth, chintzes, and terrajaponica, opium, and other articles procured from Hindustan. The road which leads to Yun-nan passes the town of Kemalatain, and thence ascends the table-land of south-western China. Laos exports to China gold, precious stones, silver, tin, lead, common and red sulphur, cotton wool and yarn, salted tea, lac, sapan-wood, brasiletto, and an official root, called cothua-boua. The Chinese bring to Laos musk, chowry-tails, and various other articles, raw and manufactured.

LA PAZ. [CALIFORNIA; PAZ, LA.]

LAPLAND, the country of the Laplanders, comprehends the northern and north-eastern part of the Scandinavian peninsula. In the 12th and 13th centuries all the country north of 64° N. lat., as far as Cape North Kyn and North Cape (71° 11' and 71° 8'), between the White Sea on the east and the North Sea on the west, was in possession of the people called Laplanders, but in the 13th century they became subject to the king of Norway. As however this submission was rather nominal than real, the neighbouring nations, the Swedes and Russians, also settled in those districts which were nearest to their dominions. In consequence of these settlements and the changes introduced by more recent political events, Lapland became ultimately divided between Norway, Sweden, and Russia, and the settlers from these countries are now much more numerous than the original Laplanders. Only a portion of the country is now known as Lapland, the boundaries of which are not very strictly defined. Lapland probably comprises an area of about 130,000 square miles, above half of which is subject to Russia.

Russian Lapland is divided from Swedish Lapland by the Tornea Elf, and its affluent the Muonio, and from Norwegian Lapland by the Tana Elf, but a small tract of coast extending east of the mouth of the Tana Elf to the Bugge Fjord, also belongs to Norway. Russian Lapland constitutes the district of Kola in the government of Archangel, and Tornea in that of Uleaborg. Swedish Lapland is divided between the two districts (læna) of Pitea and Umea, and had a population in 1845 of 11,244; Norwegian Lapland is called Finmarken, and contained 48,938 inhabitants in 1845. [NORWAY; SWEDEN.]

Along the Norwegian coast lies the mountain range of the Kiölen, which rises from the sea with a very steep ascent, attaining at a distance of a few miles the height of 2000 feet, where it begins to be always covered with snow; some of its summits, as the Sutitjelma (67° 10' N. lat.), rise to an elevation of 6000 feet. The eastern declivity of this range is less rapid, and the country, which is 20 miles distant from the highest part, exhibits only high hills. The highest portion of the range is only in a few places covered with grass and low bushes; but stunted birch and some kinds of pines grow on the hills. These hills, between which are narrow valleys, partly occupied by large lakes and partly by forests, advance to a considerable distance from the principal range, and leave a more level tract only along the Bay of Bothnia, between 20 and 30 miles across. The most hilly part is south of the Lulea Elf, north of which river the country extends in rocky plains with a scanty vegetation, and during the greatest part of the year covered with swamps. The surface of these plains is gently inclined towards the Gulf of Bothnia, and the soil is of a better description where they approach the river Tornea and the boundary of Russia. In these parts they are covered with good forests intersected by extensive grassy tracts, which are used as meadows or pasture-ground. Between the Lulea and Calix Elf, and nearly at an equal distance from the Kiölen Mountains and the Gulf of Bothnia, are several isolated high hills, consisting entirely of iron-ore.

Russian Lapland is an extensive plain, generally covered with sand, but some isolated hills rise on the plain to an elevation of several hundred feet. A large part of this plain is covered with low trees. Other districts of great extent are sandy deserts, and in a few districts, especially along the rivers and the numerous lakes, tracts occur which are used as pasture-grounds, and sometimes cultivated.

The climate is very cold. Three-fourths of the year the country is covered with snow, and the frost between November and March is very intense. The spring lasts only a couple of weeks. In July and August the heat is very great, while the days in the most southern districts last 19 or 20 hours, and in the northern several weeks; near the most northern extremity there is day for three months.

Four nations inhabit Lapland—the Laplanders, Swedes and Norwegians, Finlanders, and Russians. The Laplanders now occupy only the more sterile inland parts beyond the polar circle; but in the summer they visit with their herds of reindeer all the highest portions of the Kiölen range as far south as 68° N. lat., where reindeer moss is found. Their number does not exceed 7000, and they are divided into reindeer Laplanders, who live almost entirely on the produce of their herds, and fishing Laplanders, who are mostly dispersed among the lakes and along the banks of the rivers in Russian Lapland, where they live on the produce of their fisheries. The number of the

GEOG. DIV. VOL. III.

Swedes and Norwegians is very considerable; they occupy those tracts which are adapted to agriculture, where they cultivate rye, barley, oats, and potatoes. Rye grows as far as 66° N. lat., barley, oats, and potatoes to 68°.

The countries along both sides of the Gulf of Bothnia are occupied by the Swedes, whose settlements also extend many miles inland; they keep a number of cattle proportionate to the extent of their fields. But the best pasture grounds and meadows are in possession of the Finlanders, who probably settled at an earlier date among the Laplanders than the other foreigners. They occupy large tracts in the level country, where they apply themselves to the rearing of cattle; they are distinguished by their skill in the management of the dairy. The Russians live only in the district of Kola, where they are chiefly occupied as fishermen or as merchants. Only a few of them apply to agriculture or the rearing of cattle. There are no towns, and but few villages, in Lapland. The chief are in Russian Lapland; they are Kola, at the mouth of the river Kola, which had nearly 1000 inhabitants, but which was destroyed by a British war-steamer in August 1854; Enoutekies on the Tornea, and Enare on Lake Enare, the population of each of which is about 400.

Besides cattle, horses, sheep, and goats are numerous, but hogs are rare. Wild animals are numerous, as immense tracts are deserts, and probably uninhabitable. Bears and beavers are scarce: but reindeer, wolves, lynxes, wolverines, foxes, lemmings, hares, squirrels, martens, and others are very numerous. Among the birds are eagles, capercallies, woodcocks, and a variety of sea-birds, which are particularly numerous along the coast of Norway. The forests, which cover a considerable part of the surface of the country, consist mostly of birch, fir, pine, alder, and aspen. The soil, which is overgrown by these forests, is chiefly covered with reindeer moss (*Lichen Islandicus*), which also covers the lower declivities of the higher part of the Kiölen range, and on which the numerous herds of reindeer feed.

LAPORTE. [INDIANA.]

LAR, or LARISTAN. [PERSIA.]

LARAGNE. [ALPES, HAUTES.]

LARASE. [MAROCCO.]

LAREDO. [CASTILLA LA VIEJA.]

LARGO. [FIFESHIRE.]

LARGS, Ayrshire, Scotland, a watering-place in the parish of Larga, on the Frith of Clyde, opposite the island of Cumbrae. The population of the town in 1851 was 2824.

In the vicinity of Larga the soil is dry, and the air salubrious; and on each side of the town are several fine streams of water. The new houses are well built, and the general appearance of the place is, especially from the water, very pleasing. The principal access is by steamers from Glasgow. A neat stone pier has recently been erected. The only historical incident connected with Larga is the celebrated battle fought here in 1263 between the Scots and Norwegians, in which the Norwegians were defeated. In the burial-ground, the site of the ancient church, stands a fine sepulchral chapel belonging to the family of Montgomery. In the neighbourhood of Larga are a few remains of the castellated residences of its ancient lords. The houses of Skelmorly and Kelburne are still habitable; they afford excellent specimens of the dwellings of the Scottish gentry in the 16th and 17th centuries.

LARISSA. [THESSALY.]

LARKHANA. [HINDUSTAN.]

LARNE, county of Antrim, Ireland, a sea-port town and the seat of a Poor-Law Union, is situated in a sheltered bay near the mouth and on the north shore of Lough Larne, 18 miles N.N.E. from Belfast, in 54° 50' N. lat., 5° 50' W. long. The population in 1851 was 2728, besides 346 in public institutions. The town is governed by nine commissioners. Larne Poor-Law Union comprises 13 electoral divisions, with an area of 117,763 acres, and a population in 1851 of 34,710. The town originally sprung up under the protection of Olderfleet Castle, which was erected in the reign of Henry III. upon a little headland close to the town, where its ruins are still seen. In the older parts of the town the streets are narrow and ill-paved, and the houses very inferior; the modern part consists chiefly of one long wide street of well-built houses. The places of worship are the parish church, three Presbyterian meeting-houses, a Roman Catholic and a Methodist chapel. Cotton-cloth, sail-cloth, ropes, and leather are manufactured; and there are several bleach-mills and flour-mills. The bay forms a good natural harbour for small vessels. Lime is exported in large quantities from the extensive works of Magheramorne adjoining the town. The other exports consist chiefly of provisions. Larne is now a mere out-port of Belfast. Fairs are held on July 31st and December 1st. The town has a dispensary and a petty sessions court.

LATIUM, the country of the ancient Latins, now forms the CAMPANIA DI ROMA, and a part of the Neapolitan provinces of Terra di Lavoro [LAVORO, TERRA DI], under which heads the physical geography of the country is noticed.

The Latini, or Latins, one of the oldest known nations of Italy, are said to have come down at some remote time, long before the building of Rome, from the Central Apennines in the neighbourhood of Reate (the modern Rieti) into the lower country between the Anio, the Tiber, the Alban Mountains, and the sea, which was afterwards called Latium. Varro says that they were a branch of the oldest inhabitants of the peninsula, whilst Dionysius and others thought that they were descendants of an Arcadian colony settled in Italy long before the Trojan war, and identical with the CEnotrians. These aborigines met in the lowlands the Siculi, who are represented by some as a colony from the west, perhaps from Spain, and by others as indigenous in Italy, and identical with the Tyrrheni. These Siculi, or Siceli, were partly driven by the aborigines to the southward, and the rest amalgamated with the new-comers; and thus the nation was formed called afterwards Latini Prisci, and by Ennius called Casci, which in the Sabine or Oscan language, according to Varro, meant old, or the earliest. These Latins appear to have formed their settlements in the lowlands by small communities, perhaps small tribes or even families; a circumstance which would account for the great number of villages or towns spread over a limited surface. Several of these became in course of time considerable places long before the existence of Rome. Such were Laurentum, Lanuvium, Lavinium, Aricia, Gabii, Tusculum, Tibur, Præneste, Labicum, Collatia, Cora, &c. The story of Æneas landing at the mouth of the Tiber, assisting the Latins against the Rutuli, and marrying Lavinia, the daughter of king Latinus, is probably an embellishment invented in aftertimes. The Latin communities were united by religious rites, which were celebrated in the temple of Diana in a grove near Aricia; in a temple dedicated to Venus between Lavinium and Ardea, which was under the care of the Ardeates; and at the Lucus Ferentina, where the wood of Marino now is. (Cato, 'Origines;' Livy, i. 50, 57; vii. 25.) The indigenous deities of the Latins were—Saturnus, who first taught agriculture to their ancestors the aborigines; Janus; and Faunus, who delivered his oracular answers from the depth of the forest of Albunea. Venus and others appear to have been of later introduction into the Latin mythology.

The Latini are described as a race robust, hardy, frugal, and warlike, and their early union with Rome, great part of whose population was recruited amongst them, contributed mainly to the growth and success of that republic. Their morals were simple. Their towns were strong, both by their position and their massive walls. The foundation of Alba is involved in great obscurity, but the fact of its being an important town several centuries before the existence of Rome is indubitable. [ALBA LONGA.] Whether Alba was at the head of the Latin Confederation, or was the centre of another confederation distinct from that of the Latins though connected with it, has been a matter of doubt.

Under Tullus Hostilius war broke out between Rome and Alba, which ended in the destruction of Alba and the removal of the inhabitants to Rome. (Livy, i. 29.) In the following reign of Ancus Marcius the first war of the Latins against Rome is mentioned, the result of which was that Politorium, Tellene, and Ficana were taken by the Romans, and the inhabitants transferred to Rome, where they were settled on Mount Aventine. Tarquinius the Elder took several more of the Latin towns. Servius Tullius obtained, by agreement with the leaders of the Latin cities, that the Latins should unite with the Romans in building a temple to Diana on the Aventine, to be common to both people. This was considered as an acknowledgment that Rome was the head of the Latin nation. The unscrupulous Tarquinius Superbus convoked the Latins to an assembly in the wood of Ferentina (Livy, i. 50, 51), where he persuaded them not only to renew the treaty with Rome, but to acknowledge him as their chief, and to send their youth to serve no longer as auxiliaries, but mixed with the Romans in the same legion. He united a century of Latins and a century of Romans in every maniple commanded by a Roman centurion. Tarquin also assumed the presidency of the Feris Latins, or festivals of the Latin state, which by an ancient usage were held once a year on the summit of the Alban Mount, and were dedicated to Jupiter Latiaris, or Latialis. These feris continued to be held down to the latest period of the Roman republic, and one of the two consuls always attended them. (Cicero, 'De Nat. Deor.' i. 6; 'Ep. ad Fam.' viii. 6; 'Divinat.' i. 11.)

After the expulsion of the Tarquins, the Latin cities, partly to free themselves from Roman supremacy, and partly instigated by Mamilius, Tarquin's son-in-law, and the other connections of the Tarquins, rose in arms, and a war ensued between them and Rome, which ended in the total defeat of the Latin forces by the Roman dictator Posthumius, near the lake Regillus, between Labicum and Gabii, B.C. 499. Peace was made three years after, on condition that the Latins should expel the refugee partisans of the Tarquins. A few years later, under the consulship of Spurius Cassius and Postumus Cominius, a solemn 'foedus,' or treaty of alliance (the Cassian League), was made between Rome and the Latins, by which was renewed the isopolitan franchise formerly existing in the time of Servius in each of the two nations

with respect to the other. The conditions of the treaty were engraved on a brass column mentioned by Livy, and the substance of them is given by Dionysius. (Niebuhr, vol. ii.) Seven years after this league Spurius Cassius concluded a treaty with the Hernici on similar terms; and it is remarkable that in some cases, as at Antium, colonies were sent consisting of equal portions of the three nations.

The league of the Latins with Rome lasted for about a century, till the irruption of the Gauls, during which period there were but a few partial interruptions of the harmony between the two states. (Livy, iii. 71, 72; iv. 9, 10, 11.) The Latin state consisted of thirty towns, which appear to have been independent municipalities; they had their patricians and plebeians; each had its senate and its own magistrates, the chief of whom was styled dictator. Deputies from each town constituted the senate or assembly of the whole state, which met at the grove of Ferentina. A dictator, probably taken by turn from the dictators of the respective cities, was the temporary head of the whole state, presided at the Latin festivals on the Alban Mount, and signed treaties, such as that of alliance with the consul Spurius Cassius. (Sigonius, 'De Jure antiquo Italiae;' Niebuhr, 'History of Rome,' vol. ii.)

After the invasion of the Gauls and their retreat from Rome, we find both the Latins and the Hernici, at least in part, joining the Volsci, Æqui, and the Etruscans, the old enemies of the Romans, and endeavouring to annihilate the city, which was just rising from its ruins. Camillus defeated the Latin towns one after the other. Tusculum humbled itself, was forgiven, and shortly after obtained the Roman citizenship, which enabled its inhabitants to have a domicile at Rome, to vote in the Roman comitia, and to aspire to the public offices of the Roman republic. The Prænestini were defeated, and their town surrendered by capitulation to the dictator Titus Quintius. Soon after, B.C. 376, the Latins joining the Volsci, encamped with them near Satricum, a Volscian town on the borders of the Latini. Being defeated after an obstinate engagement by the Roman military tribunes Æmilius and Valerius, the Volsci forsook their allies, upon which the Latins in a fit of rage burnt Satricum, and then turned their arms against Tusculum, which they entered by force; but the inhabitants took refuge in the citadel, and the Romans under L. Quintius and Servius Sulpicius coming to their assistance, the Latins were surrounded and slaughtered. After a war with Tibur, which led to no definite result, peace was granted, B.C. 357, to the Latins on their demand, and they consequently furnished again a large auxiliary force to Rome. (Livy, vii. 12.) When however, some years after, the Gauls, though repeatedly defeated, appeared again in force and overran the plains of Latium, the coats of which were at the same time infested by Greek pirates, the Latin towns, in a meeting held at the wood of Ferentina, sharply replied to the Romans, who insisted upon their speedily furnishing their contingents, "that the Romans ought not to talk so imperiously to those whose assistance was to them of vital importance; that the Latins would fight rather for their own liberties than for the purpose of extending the dominion of others" (vii. 25.) Soon after that time, the Carthaginians are mentioned by Livy as having entered into a treaty with Rome; but Polybius gives us the text of a former treaty, said to have been concluded between the two republics in the first year after the expulsion of the Tarquins. This treaty, if really of the time of the Tarquins, would confirm the notion that the Roman power under the last kings was much greater than is commonly supposed. (Niebuhr; Heyne, in the 'Götting. Anzeigen.')

After the termination of the first Samnite war (B.C. 340) the Latins, joined by the Campanians, entered the Samnite territory and ravaged it. The Samnites complained to the Roman senate, which promised to restrain the Campanians; but as for the Latins, "there was nothing in their stipulations with Rome that forbade them making war with whomsoever they pleased." This answer increased the audacity of the Latins, and in their councils they began to plan together with the Volsci and Campanians a new war against Rome. The senate demanded explanations, to afford which ten of the chief men of the Latins were sent to Rome: among these was L. Annius of Setia, one of the two prætors, or chief magistrates, of the whole Latin confederation, who, in the presence of the Roman senate, after boasting of the power of the Latins and their allies, and of their ability to assert their own independence, proposed, with a view to a lasting peace, "that the Latins should have the appointment of one of the two consuls, and of one half of the senate, so that Rome and Latium should form in future but one country and one republic, of which Rome would be the capital, and all the people be called Romans." This proposal offended Roman pride. The senate declared war against the Latins, and the two consuls, Manlius Torquatus and Decius Mus, marched each with an army through the territory of the Marai and Peligni (the modern Abruzzo Ultra), and being joined on their march by the Samnites, encamped near Capua, in front of the Latin and Campanian united forces. Here Manlius gave a dreadful instance of Roman severity, in causing his own son to be beheaded for having engaged in a skirmish with the enemy contrary to his orders.

The decisive battle took place in the plain near the base of Vesuvius, and it was one of the hardest fights in which the Romans had ever engaged. (Livy, viii. 8.) By the bravery of Decius however, who devoted his life for the safety of his country, and the skilful general-

ship of Manlius, they were successful, hardly one-fourth of the Latins escaping to Minturnæ. After sustaining a subsequent defeat at Trifanum the Latins made their submission, when part of their land was taken from them and appropriated to the Roman people. In the following year however several of the Latin cities rose again; but instead of uniting their armies in the field they kept their men within their respective walls ready to sally out, and whenever the Romans attempted the siege of one all the rest lent assistance to the besieged. By this means the consul Æmilius was obliged to raise the siege of Pedum. In the next year (B.C. 337) the consul L. Furius Camillus, grandson of the deliverer of Rome, took the field: he entered Pedum by storm, and, together with his colleague, reduced successively the other Latin towns and placed garrisons in them. On his return to Rome he told the senate that it was in their power to destroy the Latin towns; but he advised them to attach the people to themselves for ever by giving them the Roman citizenship, and thus to strengthen the sinews of the republic. The senators, adopting mercy as the wisest course, acted mainly in accordance with this advice, but made a distinction according to the conduct and merits of the various Latin cities. Lanuvium and Nomentum received the Roman citizenship; Tusculum was confirmed in the possession of it; Aricia was kept for a time as a subject town, but was afterwards admitted to the franchise; Tibur and Præneste had their lands confiscated; Velitra, as being an old Roman colony, had its walls razed and its senators banished beyond the Tiber. A fresh colony was sent to Antium; their ships were taken from the old inhabitants, and they were forbidden to go any more to sea. The general assemblies of the Latin cities at the wood of Ferentina were at an end. Thus terminated the existence of the Latins as an independent people; they became subjects of Rome, excepting the few towns above mentioned, which had the Roman citizenship. The Latins, after that epoch, are no longer mentioned as Socii, but distinguished from the genuine Romans as being 'Latini nominia.' (Sigonius, 'De Jure antiquo Italiae,' b. i., 'De Jure Latii')

During the second Punic war the Latins remained faithful to Rome, whose armies were repeatedly recruited among them during that long and fearful contest. For two centuries and a half they remained in the same dependent condition, without the rights of citizenship ('sine civitatis jure'), until the consul L. J. Cæsar (B.C. 91), after the defeat of several Roman armies in the Social war, obtained the passing of a law which gave the Roman franchise to all the people of Italy who were allies of Rome and had remained faithful in that emergency. This franchise, or civitas, is stated accordingly to have been granted to the socii, or allies, who had furnished their contingents, and to the Latins, who are mentioned distinctly from the rest. By this grant the freemen of the Latin towns were placed so far on a level with the Roman citizens as to enjoy the full Roman franchise, to be admitted into the Roman rustic tribes, have votes, and be eligible to public offices.

LA-TOUR-DU-PIN. [LEER.]

LATRONICO. [BASILIGATA.]

LAUDER, Berwickshire, Scotland, a royal and parliamentary burgh in the parish of Lauder, is situated in 55° 42' N. lat., 2° 45' W. long., 25½ miles S.E. from Edinburgh. The population of the burgh in 1851 was 1105. The town is governed by a chief magistrate and 17 councillors; and unites with North Berwick, Dunbar, Haddington, and Jedburgh in returning one member to the Imperial Parliament.

There is only one street in the town. The parish church, the town-house and lock-up house, the Free church, and the United Presbyterian church are the public buildings. The burgh possesses an extensive common, which is exclusively used by a small body of privileged burgesses. Close by the town is the residence of the Earl of Lauderdale, Thirlstane Castle, which stands in a spacious park.

LAUBURG, a duchy in Germany subject to the king of Denmark, is situated on the right bank of the Elbe, between 53° 22' and 53° 47' N. lat., 10° 3' and 11° 5' E. long. It is bounded by the territories of Hanover, Mecklenburg, Holstein, Lübeck, and Hamburg, and has an area of 392 square miles, with a population of 46,486 in 1850. The face of the country is level, with only a few hills; the soil is in some parts very fertile, while in others there are tracts of sand or extensive heaths; there are also large turf-moors and considerable forests. The rivers are the Elbe, Bille, Stecknitz, and Trave, which afford ample means for inland trade; and the Stecknitz Canal, between the Elbe and the Trave, opens a communication with the Baltic at Lübeck. The duchy is traversed by the Hamburg-Berlin railway, and by a branch from it northward to Lübeck. The most considerable lakes are those of Schaal and Ratzeburg. The products are corn, flax, timber, turf, horned cattle, sheep, poultry, fish, &c. The inhabitants are chiefly engaged in agriculture and the carrying trade both by land and water; and their exports are pretty considerable, especially of timber and fuel. They have no manufactures.

Lauburg had formerly its own dukes, whose family became extinct in 1689. It then fell to the duke of Brunswick-Lüneburg, and subsequently formed part of the electorate of Hanover. In 1805 it was taken possession of by the emperor Napoleon I., and in 1810 incorpo-

rated with the new French department of the Mouths of the Elbe. In 1814 Lauburg was restored to George III. as king of Hanover; but by the peace of 1815, Sweden, which had deprived Denmark of the kingdom of Norway, ceded Swedish Pomerania to Denmark, and Prussia ceded East Friesland to Hanover, in exchange for the duchy of Lauburg, Hanover however retaining the small tract on the left bank of the Elbe and the detached bailiwick of Neuhaus on the right bank. Prussia then exchanged Lauburg with Denmark for Swedish Pomerania; but as the latter province was more valuable, Prussia paid to Denmark two millions of Prussian dollars. It also paid a debt of 600,000 Swedish bank dollars, which Sweden owed to Denmark, and paid besides 8,500,000 dollars to Sweden.

Towns.—*Lauburg* (3800 inhabitants), stands on the Elbe, at the mouth of the Delvenau or Stecknitz Canal, and has a custom-house, some transit trade, and the remains of the old castle of the dukes of Saxe-Lauburg. *Ratzeburg*, the capital, a well-built town on an island in the Ratzeburg Lake, 12 miles by railway S. from Lübeck, has extremely fine views over the lake; it is connected with the left shore by a causeway, and with the right by a bridge 1100 feet in length; population 3000. Part of Ratzeburg is in Mecklenburg Strelitz. The lake is 6 miles long and between a mile and two miles wide; its surplus waters are carried by the Wakenitz into the Trave. *Möllen*, 18 miles by railway from Lübeck, on the Stecknitz, is the burying-place of the famous Till Eulenspiegel, of whom various relics are still shown there: population, 2700. *Buchen* is 29 miles by railway from Lübeck, at the junction with the Hamburg-Berlin line.

LAUGHARNE. [CARRMARTHENSHIRE.]

LAUN. [EGER.]

LAUNCESTON, Cornwall, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated in 50° 38' N. lat., 4° 19' W. long.; distant 21 miles N.E. from Bodmin, 213 miles W.S.W. from London. The population of the municipal borough of Launceston in 1851 was 3397, that of the parliamentary borough was 6005. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and conjointly with the neighbouring borough of Newport, returns one member to the Imperial Parliament. The sanitary affairs of the borough are under the management of a Local Board of Health. The living is a perpetual curacy in the archdeaconry of Cornwall and diocese of Exeter. Launceston Poor-Law Union contains 25 parishes and townships, with an area of 101,450 acres, and a population in 1851 of 18,305.

Launceston, anciently *Dunheved*, and commonly called Lanson, is usually regarded as the capital of Cornwall. It is pleasantly situated on a steep hill rising from the banks of the Attery, a few miles above the confluence of that stream with the Tamar. Some improvements have taken place in the town of late years. Launceston is a very ancient town. Previous to the passing of the Reform Act, the boroughs of Launceston and Newport each returned two members to Parliament. The county assizes were both held at Launceston till 1716, and the Lent assizes till 1838. Both summer and Lent assizes are now held at Bodmin. The most important building in Launceston is the church, which was erected about 1535. It is built of carved granite blocks, is 104 feet long and 52 feet broad internally, and is of singular beauty. The Wesleyan Methodists and Independents have places of worship. The Grammar school, founded by Edward VI., had 19 scholars in 1853. There are National and British schools; a young men's institute; and a savings bank. A county court is held here. The market is held on Saturday. There are two large market-places; one for meat, &c., the other for corn and light goods. Fairs are held six times a year.

The remains of the ancient castle of Launceston are very remarkable. The most remote antiquity has been assigned to it, but none of the existing remains appear of earlier than Norman date, while parts are much later. The castle grounds were beautifully laid out as pleasure grounds at the expense of the late Duke of Northumberland, the constable of Launceston Castle. Some slight remains exist of a priory founded in the reign of Henry I.; also a few fragments of the old town wall.

LAURENCEKIRK. [KINGARDINESHIRE.]

LAURENT-DE-MÉDOC, ST. [GIRONDE.]

Lauria. [BASILIGATA.]

LAURVIG. [AGGERHUS.]

LAUSANNE, the head town of the Swiss canton of Vaud, is situated near the northern shore of the Lake of Geneva, on three steep hills, which project from Mont Jorat, and are separated by deep ravines. The highest of these ridges, upon which the old cathedral is built, is 500 feet above the lake, and about 1700 feet above the sea. The situation of Lausanne is picturesque, but the interior of the town is far from pleasing; the streets are mostly narrow, very steep, and ill paved. The cathedral, a vast gothic structure of the 11th century, the handsomest in Switzerland, is adorned with a lofty tower, and also a spire 200 feet high. It contains the tomb of Victor Amadeus VIII., duke of Savoy, and a monument to Mrs. Stratford Canning; the remains of St. Bernard, the founder of the celebrated hospice on the Alps, were buried in this cathedral. The church of St. François is also a very old building, and is memorable for the council assembled there in 1449, in which Felix V. solemnly resigned his claims to the

Popedom. The castle, formerly the residence of the bishops of Lausanne, is now the government-house, and the legislative council of the canton assembles in one of its halls. The other remarkable buildings of Lausanne are—the college, which contains the cantonal library, with 33,000 volumes, and a museum containing collections of mineralogy, botany, zoology, &c.; the penitentiary, the charity-schools, and the casino, or club-house. There are a Catholic church and a Lutheran chapel; the latter is used also by the English. The town, according to the census of 1850, had a population of about 18,000. The manufactures, which are important, comprise woollen-cloth, paper, leather, and jewellery. Some trade is carried on in wine, which is the staple produce of the canton. Steamboats ply on the lake between Geneva, Lausanne, and other towns. The environs of Lausanne are delightful. The house and garden in which Gibbon wrote the greatest part of the 'Decline and Fall' are still shown at Lausanne. In the cemetery of St.-Pierre, near the town, is the grave of John Kemble.

LAUSITZ, or LUSATIA, formerly a margraviate in Germany, extended from 50° 50' to 52° 16' N. lat., 13° 20' to 15° 15' E. long. It was bounded N. by Brandenburg, E. by Silesia, S. by Bohemia, and W. by Saxony. The area was 4386 square miles, and the population about half a million of inhabitants. It was divided into Upper Lausitz (the southern part) and Lower Lausitz.

Lausitz was early inhabited by tribes of the Slavonian Sorbi, the ancestors of the present Wends, who were subdued A.D. 928 by Henry I., and converted to Christianity in 968 by Otho I. From that time its history presents a continual change of masters. In 1620 Lausitz and Silesia having revolted in consequence of the religious oppression of the emperor Ferdinand II., John George I., elector of Saxony, reduced those provinces to obedience; and by the treaty of Prague (A.D. 1635) the whole of Lausitz was ceded to Saxony. By the decision of the Congress of Vienna in 1815 Saxony was obliged to cede the whole of Lower Lausitz and the half of Upper Lausitz to Prussia; so that the Prussian portion of the ancient margraviate has an area of about 3300 square miles, which is divided between Brandenburg, Prussian Saxony, and Silesia. The part left to Saxony forms the circle of Lausitz, or Bautzen, or Budisain, as it is otherwise called, from names of its chief town. The circle is bounded N. by Prussian Saxony, E. by Silesia, S. by Bohemia, and W. by the Saxon circle of Dresden. Its area is 967 square miles, and its population in 1852 was 297,744, of whom about 43,000 are Wends, who still retain their own language (which differs very little from the other Slavonian dialects), and many national habits, to which they are passionately attached. They are a well-made, robust, brave, and industrious race of men. The inhabitants of the circle are nearly all Lutherans or Catholics, the ratio of the former to the latter being nearly as 12 to 1.

The circle is covered in the south-east with mountains, which form the continuation of the Riesengebirge westward and send out numerous offsets into the other parts of the circle. The principal rivers are the Neisse, a feeder of the Oder in the south-east; the Spree in the centre, and the Elster in the north-west, which belong to the basin of the Elbe. The soil is sandy, and in general unproductive. The corn produced does not suffice for the home consumption. Flax, hemp, tobacco, &c., are grown. Horses, horned cattle, sheep, bees, and geese are very numerous. Bog-iron is found, and iron-mines are worked. Great quantities of turf are cut for fuel. A great number of the inhabitants are engaged in manufacturing woollen-cloth, hosiery, linen, cotton, leather, tobacco, &c. There are several iron-forges and foundries.

The province is crossed by the Saxo-Silesian railway, which runs east from Dresden to Görlitz in Silesia, passing through Bautzen and Lobau, whence a branch runs southward through Herznhut to Zittau. The Saxo-Silesian line connects the province with the railway system of central and western Germany on the one hand, and on the other it abuts in the great line which connects Berlin with Vienna through Breslau.

The principal towns of the circle are:—*Bautzen* [BAUTZEN]: *Ebersbach*, N.W. of Zittau, on the Spree, a place of 6000 inhabitants, and one of the principal centres of the linen manufacture in Saxony; *Kamenz*, on the Schwarze-Elster, which has manufactures of woollen-cloth, linen, and leather, and a population of 3844; the poet Lessing was born here in 1729; *Gross-Schönau*, which stands on the Altwasser, and has 4600 inhabitants, who manufacture large quantities of damask; *Reichenau*, on the Bohemian frontier, which has 3700 inhabitants employed in the manufacture of linen and ribands; *Herznhut*, a few miles N. of Zittau, a small place of 1400 inhabitants, from which the sect of the evangelical brethren took the name of Herznhutters; and *Zittau*, on the Altwasser, or Mandau, a feeder of the Neisse, 21 miles by railway S. by E. from Lobau. It is a large well-built walled town, with considerable linen and woollen manufactures, cotton factories, distilleries, breweries, paper-mills, dye-houses, and potteries; it has also a good commerce in flax, linen thread, and colonial products; a theatre, 8 churches, a gymnasium, a training-school for teachers, a public library of 12,000 volumes, and about 10,000 inhabitants.

LAVAGNA. [GENOVA.]

LAVAL. [MAYENNE.]

LAVAUR. [TARN.]

LAVELLO. [BASILICATA.]

LAVENHAM, Suffolk, a market-town in the parish of Lavenham, is situated on the right bank of the little river Bret, in 52° 6' N. lat., 0° 48' E. long., distant 12 miles S. by E. from Bury St. Edmunds, and 60 miles N.E. by N. from London. The population of the parish in 1851 was 1811. The living is a rectory in the archdeaconry of Sudbury and diocese of Ely.

Lavenham occupies a healthy situation on the declivity of a hill. The market-place is a spacious area. The parish church is a handsome edifice of the perpendicular style, 156 feet long by 68 feet wide; it has an embattled tower surmounted with a spire 141 feet high. There are chapels for Wesleyan Methodists and Independents; an Endowed Grammar school, which had 19 scholars in 1851; National schools; and several almshouses. A little wool-combing and spinning and some silk-weaving are carried on. The market on Tuesday is thinly attended. Fairs are held on Shrove Tuesday and October 11th.

LAVER, HIGH. [ESSEX.]

LAVINGTON. [WILTSHIRE.]

LAVORO, TERRA DI ('arable land'), is the name of a province of the kingdom of the Two Sicilies, corresponding to the greater part of the ancient Campania. It is bounded N. by Abruzzo, E. by Sannio, or Molise, S. by the province of Naples and the Mediterranean, and W. by the States of the Church. The boundary-line between the two states runs along the crest of a ridge that forms the western edge of the basin of the Liri for a few miles below Sora, then the Liri itself, and from the mouth of the Sacco the crest of an offset of the Monti Lepini, or Volscian Mountains, which runs down to the sea between Terracina and Fondi. Two roads lead from the Papal State into the province of Terra di Lavoro; one by Terracina between the mountains and the sea-shore, and the other by the valley of the Sacco, which opens into the valley of the Liri below Ceprano. This last road, which follows the track of the ancient Via Latina, has been restored by the present king of the Two Sicilies.

The province extends between the lower ridges of the Apennines, the shores of the Mediterranean Sea, and the volcanic group of mountains which encircle the Bay of Naples. The surface is a vast plain broken only by a few ridges thrown up by ancient volcanic agency. The soil itself, which is of the greatest fertility and most easily tilled, is for the most part of volcanic origin, and has been celebrated in all ages for yielding corn, wine, and oil of the best quality. The principal rivers that cross the plain are the *Liri* (ancient *Liris*), which after its junction with the Sacco is called *Garigliano*; the *Savone* (ancient *Savo*), which traverses the Falernian district at the eastern base of the Massic Hills; the *Volturno*, which flows south-south-east to its junction with the Calore, and then west past Capua to the sea; and the *Lagni* (ancient *Clanivus*), which enters the Mediterranean on the frontier of the province of Napoli.

It is divided into five districts, namely:—1. *The plain of Nola*, to the south-east, which embraces the fertile region between Mount Vesuvius and the Apennines. This plain looks like an immense grove of tall elms and poplars planted in rows to support the vines which grow at their feet, and which twist around them, and hang in festoons from tree to tree. Between the lines corn and pulse are sown without fallows; but in order to prevent the ground from becoming exhausted, early crops of lupines and beans are raised, which are hoed up before they bear fruit, and are buried for manure. The soil is a rich sandy loam. 2. West of Nola is *The district of Caserta*, which includes the central part of Campania, and is watered by the Volturno. The plains of Caserta and Capua near the mountains are tolerably healthy, well cultivated, and extremely productive; but the lower plain of the Volturno, from Capua to the sea, is very unhealthy: it is chiefly occupied by herds of horned cattle. The *Savone*, which rises in the hills above Teano and spreads into the plain north-west of the Volturno, forming pools of stagnant water, contributes to poison the atmosphere of this region. A range of hills, the *Massicus* of the ancients, here divides the basin of the Volturno from that of the Garigliano. The district of the great plain of Campania between the Massic Hills and the right bank of the Volturno was anciently called *Falerus Ager*, so celebrated in Roman times for its generous wines. 3. West of the above range begins *The district of Gaeta*, which includes the lower valley of the Garigliano and the plain of Fondi, which is separated from the Garigliano by the mountains of Itri, or the *Formian Hills*. The low lands of the Garigliano are as unhealthy and desolate as those of the Volturno; but where the *Formian Hills* stretch near the coast the country is healthy, fruitful, and well cultivated. The plain of Fondi is very unhealthy, owing to a stagnant lake near that town. The district between the Garigliano and the offset of the Volscian Mountains which forms part of the western boundary was included in ancient Latium, and inhabited by the Aurunci an Ausonian tribe. 4. North of Capua and beyond the defiles of Mount Tifate, *The district of Piedimonte* occupies the valley of the Upper Volturno to beyond Venafro, and as far as the great chain of the Apennines of Abruzzo. This part of the country is healthier, the low lands are cultivated with wheat and maize, and the lower slopes of the mountains are planted with olive trees, while the higher grounds afford pasture or are covered with chestnut-trees. 5. North-west of the district of Piedimonte, and divided by it from an offset of the Apennines, lies *The district of Sora*, which embraces the valley of the Upper Liri. This is partly a mountainous district, cold in winter, different

in character from the rest of the province, and partaking of the nature and climate of Abruzzo. Fairer complexions, especially among the women, are to be found in this district than in the maritime parts of the country.

Ancient Campania extended southward to the Mons Lactarius (Monte San Angelo), a long offset of the Apennines, which terminates in the Sorrentine Promontory, now Cape Campanella, between the gulfs of Naples and Salerno. The territory of the Picentini, who occupied the district between the Mons Lactarius and the Silarus (now Sele), was included in Campania for administrative purposes. The maritime district of Campania, from the Linterna Palus (Lago di Patria) to the Mons Lactarius, now forms the metropolitan province of Napoli. In this district, which is altogether volcanic, are Vesuvius, and the Mons Gaurus, now Monte Barbaro, celebrated for its wines. This territory is now included in Principato Citra.

The area of the province is 4952 square miles, and the population in 1851 was 752,012. The province is governed by an Intendente, or viceroy, assisted by a secretary and five councillors. It is divided into 5 districts, each governed by a subintendant, or lieutenant-governor, who as well as the Intendente is appointed by the king; and into 230 communes, each governed by a Sindaco, or mayor, two Eletti, or aldermen, and Decurionato, or council. The population is essentially agricultural. A good number are employed as herdsmen. From the fertile soil of the plains, which is almost everywhere of volcanic origin, large quantities of wheat, olives, raisins, fruits, wine, oil, hemp, &c., are raised. The vine, the olive, and the mulberry, for the production of silk, are leading objects of cultivation. The marshy regions near the coast are covered with herds of buffaloes. Wine, oil, and silk are the chief articles of export. Timber is abundant. Good silks are made in the royal manufactory of Santo Leucio, near Caserta; cottons and woollens at Piedimonte; common woollen-cloth at Arpino; and there are extensive tanneries at Santa Maria di Capua. There is a railway from Naples to Capua through Caserta, with a branch to Nola.

Towns.—*Caserta*, the residence of the Intendente, and the seat of the civil and criminal courts, has, including the hamlets near it, a population of 20,000, and is remarkable for the adjoining palace and gardens, which form one of the most magnificent royal residences in Europe. The two principal fronts of the palace are 787 feet in length, 125 feet high, and contain 4 stories of 37 windows each; the two other sides are 616 feet long, and consist also of 4 stories of 27 windows each. In the interior are 4 courts, and in the centre of the palace is a superb staircase, crowned by a circular hall, affording communication with the various suites of apartments. The richest marbles are displayed in profusion, most of them being from the quarries of the kingdom. The chapel is cased with panels of yellow marble, and adorned with paintings. The theatre is a masterpiece of art: antique columns of alabaster support the roof, and divide the house into 46 boxes, richly decorated. The gardens are adorned with numerous cascades, the water of which is brought by an aqueduct 21 miles in length from the neighbouring mountains. The aqueduct and palace were designed by Vanvitelli for Charles III., in whose reign they were commenced, in 1752. Near Caserta is the town of *Caserta-Vecchia*, built and fortified by the Lombards in the 8th century.

Nola, an episcopal town of great antiquity, famous for the resistance it made to Hannibal, and as the death-place of Augustus, stands in the plain to the north-east of Vesuvius. It has 9600 inhabitants, several churches and convents, and extensive barracks. A quantity of ancient pottery, and a great number of the ancient coins of Nola have been dug up in the neighbourhood. Church-bells were invented by Paulinus, bishop of Nola, in the 5th century. The railway from Nola joins the line to Caserta and Naples at the Cancellio junction, north of Aversa.

Maddaloni, a pretty town at the foot of the mountains, has a royal college, many handsome palaces and churches, and 12,500 inhabitants.

Capua and *Santa Maria di Capua* are noticed under CAPUA.

Piedimonte, 18 miles N. by E. from Capua, near the site of the ancient *Allifia*, is a modern well-built town with about 7000 inhabitants. It rose after the destruction of Allifia by the Saracens, A.D. 856, and many of the public buildings are said to be constructed with the materials of the old Samnite city. The town was raised to the rank of a city by the emperor Charles VI. in 1731, and is the seat of a bishop. Several paper, flour, and fulling-mills, and copper-works are driven by the water-power of a small feeder of the Volturno, which originates in a torrent that issues from the ravine of Val d'Inferno, near the town. This torrent and a few others in the valley are supposed to be fed by subterranean emissaries from Lake Matese, which lies a few miles north of Piedimonte. Cotton is manufactured and wine and oil of high repute are raised abundantly in the vicinity. The ruins of an amphitheatre and other buildings at *Allife*, a small village of 1600 inhabitants, mark with precision the site of Allifia.

Cerreto, 18 miles S.E. from Piedimonte, in the valley of the Titerno, a tributary of the Volturno, has 6000 inhabitants. A few miles south of Cerreto, in the plain between the Titerno and the Calore, is the village of Telesse, with a small lake of the same name, which constantly exhales sulphuretted hydrogen, rendering the neighbourhood extremely unhealthy.

At a short distance westward from the junction of the Calore with

the Volturno is *Ojasso*, which stands on the site of the ancient *Calatia*, the walls of the modern town standing on the foundation of the ancient ones, and constructed with the massive blocks of the ancient walls: population, 4000.

Seven miles N.W. from Capua, on the road to Teano, and in the plain between the Savone and the Volturno, is *Calvi*, a hamlet of about a dozen houses, built round a small ruined feudal castle. This place marks the site of the ancient *Cales*, the ruins of which cumber the ground for miles. The situation is extremely beautiful, but very unwholesome. Cales was celebrated for its wines.

Five miles farther N.W. is *Teano*, the ancient *Teanum*, capital of the Sidicini, which has a population of 8000, including the neighbouring hamlets. The town is beautifully situated on the southern slope of the Rocca Monfina, a quiescent volcanic region nine miles in circumference, and is approached by a terrace which commands fine views of the country. It is the residence of the bishop of Teano and Calvi. The streets are narrow. The most remarkable objects are the ruins of a theatre and an amphitheatre, the Roman inscriptions in the walls of the churches, and the massive remains of a baronial castle built by the Duke of Sessa in the 15th century. In front of the cathedral are two sphinxes of red granite, and within the building are a sarcophagus and many ancient columns. On the edge of the principal crater of Rocca Monfina district are remains of the walls of the ancient city of the Aurunci, which they were compelled to abandon in their war with the Sidicini in the 4th century before Christ.

Suessa Aurunca, the later capital of the Aurunci, was on the western side of the Massic Hills, on a small feeder of the Liris. Its site is marked by *Sessa*, a considerable town, which with the neighbouring hamlets has a population of 16,300. The town is built on a mass of volcanic tufa which covers a more ancient city, and lava-streams may be traced up to the extinct crater of Rocca Monfina. There is an ancient bridge at Sessa, besides an amphitheatre, inscriptions, and other antiquities in the town. The town is ill built, but contains a fine cathedral, five other parish churches, and several monasteries. The Massic Hills terminate on the coast near *Mondragone*, a village of 2350 inhabitants, which marks the site of the ancient *Sinuessæ*.

Northward from the remarkable peak called Rocca di Mondragone the coast is flat, and in many parts marshy and unhealthy. Beyond the Garigliano, which is crossed by a fine suspension-bridge on the coast-road to Gaëta, some ancient ruins mark the site of *Misurana*, celebrated in the history of Marius; and nearer Gaëta was *Formia* (not far from Mola di Gaëta), the birthplace of Vitruvius, near which was Cicero's Formian villa. [GAËTA.]

Six miles N.W. from Gaëta is *Itri*, a small town of 4500 inhabitants, picturesquely situated on a hill, which is crowned by a ruined castle. Some Italian writers suppose Itri to occupy the site of *Urbs Marmur-rorum*, mentioned in Horace ('Sat.' i. 5). Itri is the birthplace of the atrocious Michele Pessa ('Fra Diavolo'), a leader of banditti in the pay of England and Naples during the revolutionary war with France. There are some ancient polygonal walls on the outskirts of the town. South of Itri, near the coast, and at the foot of Monte Migliorano, is *Sperlunga*, a small place built on the site of *Spelunca*, a villa of Tiberius.

Six miles N.W. from Itri, on the road to Terracina, and near the frontier of the States of the Church, is *Fondi*, a poor miserable town of about 5500 inhabitants. It occupies the site of the ancient *Fundî*, a city of Latium, of which there are still some remains: these include an ancient gateway, the lower part of which is of polygonal masonry, the upper part is built in the Roman style; numerous fragments of ancient buildings scattered over the site, or built into the walls of the castle, cathedral, &c., of the modern town; and some remains of cyclopean walls. The Appian Way traverses the principal street of the town, the ancient pavement remaining almost entire. The cell of St. Thomas Aquinas is shown in the Dominican convent. In the marshy plain between Fondi and the sea is the *Lacus Fondanus*, a considerable lake, now called *Lago di Fondi*. The hills about Fondi have been celebrated in all ages for their vineyards, which produced the Cæcuban wine so famous among the Romans. In the 16th century Fondi was in possession of the family of Colonna, to whom it was given by Ferdinand of Aragon. The town was sacked and pillaged by Khair Eddin Barbarossa in 1534, and again by the Turks in 1594. Both Itri and Fondi have obtained a bad eminence as nests of bandits.

In the north of the department, on the right bank of the Liri, and near the frontier of the Abruzzo, is *Sora*, built at the foot of an isolated hill, which is crowned by the ruins of ancient walls and of an old gothic castle. The Liri, emerging from a narrow gulf, bends sharply round the city, changing its direction from south-east to south-west. The town is well built, the houses are large, the streets wide and well paved, and the population, apparently well-to-do, numbers about 7000. Sora retains its ancient name; it was one of the refractory colonies during the second Punic war. It was re-colonised by Augustus. On the hill above it stood the ancient citadel, of which there remain some cyclopean walls; the gothic castle was the stronghold of the Piccolomini and some other powerful families. Sora gives title to a bishop, and has several churches. It is the birthplace of Cardinal Baronius.

At a little distance south of Sora the *Fibreno*, the ancient *Fibresus*,

famous for the purity and coldness of its waters and for its trout, joins the Liri on the left bank, after forming some beautiful cascades and driving the machinery of a large paper factory. Cicero's Arpine villa stood near the Fibrenus; the church of the monastery of San Domenico Abate is built out of its ruins. Three miles down the river from Sora is *Isola*, a thriving town of 4000 inhabitants, built on an island formed by two branches of the Liri, at the base of a high platform crowned by an old feudal castle of the dukes of Sora. The arms of the river leaping down 100 feet perpendicularly on each side of the castle, form two of the finest cascades in Italy; and at the lower end of the town the principal branch of the river "rushes down an inclined plane many hundred feet in length, forming a majestic combination of cascade and cataract." (Blewitt, 'Southern Italy.') *Isola* is famous for the statuesque beauty of its women. It has important cloth-, linen-, and paper-mills, which are worked by water-power derived from the river at the foot of the fall. A little farther south is *Arce*, a custom-house station, at the foot of a steep hill crowned with the fortress of *Rocca d'Arce*, which occupies the site of the ancient *Arx*. There are many remains of polygonal walls on the hill. The country between *Arce* and *Sora* is in many parts very beautiful, abounding in vines, elms, and poplar-trees of exceedingly fine growth, and presenting almost at every turn some remains of antiquity.

Arpino, the ancient *Arpinum*, the birthplace of Cicero and Marius; and *Aquino*, the birthplace of Juvenal and St. Thomas Aquinas, are described in separate articles. [ARPIANO; AQUINUM.]

Between Arpino and Aquino flows the Melfa, the ancient Melfis, a feeder of the Garigliano, as the Liri is called after its junction with the Sacco. The roads in all this part of the province are excellent, and the plain is covered with rich corn and maize fields, and large vineyards interspersed with magnificent elms and oaks. On a hill high up among the bleak Apennines, and far above the plain of the Melfa, stands the city of *Atina*, which retains its ancient site and name. *Atina* was a very ancient Volscian (subsequently Sannite) town. Virgil speaks of it as powerful long before the foundation of Rome ('Æn.' vii. 630). It was a flourishing and populous place in the time of Cicero and during the empire. The extent and magnitude of the cyclopean walls which inclosed the whole platform of the hill attest the ancient importance of the place. Of later works there are remains of a grand Roman aqueduct, ruins of temples, and numerous sepulchral monuments and inscriptions. Several of the streets retain their ancient pavement, and there is a gateway of Roman architecture called *Porta Aurea*. *Atina*, surrounded by bleak Apennines, has a desolate aspect; it is one of the coldest places in the kingdom. The modern city, which occupies but a small part of the ancient inclosure, has a cathedral, a convent, an hospital, and about 6000 inhabitants.

Near the source of the Rapido a small feeder of the Garigliano, 6 miles E. from Aquino, stands *San-Germano* on part of the site of the ancient *Casinum*, and has about 5600 inhabitants. On a height above the town is the old turreted castle of San-Germano, famous in the wars of Manfred and Charles of Anjou. San-Germano is interesting for its healthy and charming situation, but more so for its ancient remains, among which are a small amphitheatre in unusually perfect preservation; ruins of a temple, a theatre, and a sepulchral monument, with considerable portions of ancient pavements, still showing the rut of chariot wheels, and some parts of the ancient walls. *Casinum* was originally a Volscian, next a Sannite, and then a Roman town. It received a Roman colony, probably a 'colonia civium,' B.C. 312. Hannibal encamped in its territory, which he ravaged for two days, but he made no attempt to take the town. The district between the city and the Liris was extremely fertile, and particularly famous for its olives; it was portioned out among military colonists in the second Triumvirate. The town continued to flourish during the empire; it was taken and in great part destroyed by the Lombards in the 6th century. On its ruins rose the modern town.

On the summit of the lofty hill above San-Germano, at the distance of about two miles, stands the celebrated monastery of *Monte Casino*, founded by St. Benedict A.D. 529, on the site of a temple of Apollo. This monastery, the most ancient in Europe, is a massive pile, without much pretension to architectural beauty, but imposing for its great magnitude and general simplicity. It consists of several quadrangles connected by arcades. In the central quadrangle, round which a cloister runs, supported by ancient granite columns, stands the abbey church, which for the tasteful elegance and costliness of its decorations is unequalled in Italy. The interior is adorned with rich marbles, paintings, and mosaics. The choir is lined with walnut-wood exquisitely carved; fifty corinthian columns separate the stalls, the backs of which are carved in every variety of pattern with flowers, birds, and foliage; under the high altar, which is richly decorated with precious stones, lie the remains of St. Benedict and his sister St. Scholastica: the organ is the finest in Italy. The library numbers above 10,000 select volumes, and is famous for classical and other manuscripts; it contains also the archives of the monastery, not the least interesting portion of the collection. The monastery was formerly rich in paintings, but the best of these have been taken away to adorn the gallery of Naples. The inmates of the monastery must be of noble family and independent fortune: the revenue of the establishment, formerly about 100,000 ducats, now hardly exceeds 20,000, but the courteous hospitality of the brethren to strangers

continues unabated. The view from the monastery over the rich and well cultivated plain of the Garigliano and the neighbouring mountains is extensive and beautiful.

Venafro, 11 miles E. from San-Germano, stands near the western edge of the basin of the Volturno on the lower slopes of the Santa Croce Mountains, which are still covered with olives as they were in the time of Horace. It gives title to a bishop, and has about 4000 inhabitants. The city retains the name though it stands a little below the site of ancient *Venafrum*, of which there remain only some vestiges of an amphitheatre, a portion of the polygonal walls; and some inscriptions. Above the town are a feudal castle belonging to the Caraccioli, dukes of Miranda, and an old ruined tower. The wild boar is hunted in the hills about Venafro.

In the valley of the Garigliano on both sides of that river, between the mouths of the Melfa and the Rapido, is an isolated district, belonging to the States of the Church, and called *Pontecorvo* from the chief town in it. This district is included in the delegation of *Frosinone*. It is fertile in corn and olives; somewhat hilly towards the north-west, and has a population of 7500. The town of *Pontecorvo*, founded in the 9th century, fell under the power of the Normans, and was sold in the 12th century by Robert count of Cajazzo to the monastery of Monte-Casino. In 1469 it passed under the direct protection of the Pope. It was seized by Carlo Borbone in 1768; Napoleon I. presented it to Bernadotte with the title of duke. At the Congress of Vienna it was united to the States of the Church. In the town are an old feudal castle, a cathedral, a fine bridge over the Garigliano, and an hospital. The sees of *Pontecorvo*, *Aquino*, and *Sora* are united under the same bishop. Nearly opposite *Pontecorvo*, on the left bank of the Liri, are the ruins of *Interamna-Lerinas*, an old Volscian city, colonised by the Romans B.C. 312. Hannibal in his march from Capua against Rome (B.C. 212) laid waste its territory; and soon after *Interamna* refused to furnish Rome with any further supplies. It subsequently passed into the state of a municipal town having lost its colonial rank. The spot on which it stood, though entirely deserted, is still called *Teramo*. It presents many remains of ancient buildings, with portions of walls, streets, and aqueducts.

LAYER-DE-LA-HAY, and LAYER MARNEY. [ESSEX.]

LEADHILLS. [LANARKSHIRE.]

LEAMINGTON PRIORS, Warwickshire, a market-town and inland watering-place, in the parish of Leamington Priors, is situated in 52° 18' N. lat., 1° 30' W. long., distant about 2 miles E. from Warwick, 92 miles N.W. from London by road, and 97½ miles by the London and North-Western railway. The population of the town in 1851 was 15,692. The living is a vicarage in the archdeaconry of Coventry and diocese of Worcester. For sanitary purposes the town is under the management of a Local Board of Health.

Leamington as a town is quite of modern date. Its mineral waters were noticed by Camden and Dugdale, though their valuable medicinal qualities were first publicly recognised by Dr. Kerr of Northampton in 1784, whose recommendation attracted a few patients, and more prominently by Dr. Lamb, about 1797. In 1811 Leamington contained but 60 houses, and 543 inhabitants. Its growth has since been very rapid. The town is situated in the valley of the Leam, in a situation sheltered by gentle and well-wooded declivities, and consists of two parts, the new and the old town, separated from each other by the lawn, gardens, and shrubberies of the Royal Spa, and by the river Leam, which joins the Avon about a mile below the town. The soil is dry and absorbent; the strata through which the waters percolate are of the new red-sandstone formation. The springs are saline, sulphureous, and chalybeate, containing, in varying proportions, oxygen, azote, and carbonic acid gases, the sulphureous springs containing also sulphuretted hydrogen, with sulphate of soda; the chlorides of sodium, calcium, and magnesia; and in some instances silica, peroxide of iron, and traces of iodine and bromine. The ordinary season for using the waters is from May to October.

Leamington contains many new streets regularly laid out, terraces, squares, crescents, and parades, chiefly in the new town, which is on the north side of the Leam. The river is crossed by a handsome stone bridge. The town is well paved and lighted with gas. The old well or spring noticed by Camden has a neat pump-room over it. Since 1784 new springs have been discovered, and in connection with these other establishments for drinking the waters or bathing, of which the Royal Spa is the principal, have been formed in different parts of the town. These establishments have hot, cold, vapour, and shower baths, and pump-rooms. The parish church, recently rebuilt in the decorated and perpendicular styles, is a very elegant structure. Trinity church is another handsome new church. The churches of St. Mary and Milverton, and the Episcopal chapel, are of little architectural merit. The Wesleyan Methodists, Independents, Baptists, Countess of Huntingdon's Connexion, and Roman Catholics have places of worship. There are National, British, and Infant schools, and a school

for the indigent blind. The proprietary college, founded in 1844, is a spacious and substantial edifice in the Tudor collegiate style, erected in 1847. The education is of the first order; the pupils are chiefly of the higher classes. The college had about 70 scholars in 1852. A superior school for the middle classes has also been established, called the Vicar's Grammar school. There is a literary and scientific institution. The benevolent institutions are very numerous: the chief is the Warnford Hospital, erected in 1832, mainly through the munificence of Dr. Warnford, who subscribed 2625*l.* for the purpose. There are also a savings bank, visiting societies, clothing societies, penitentiaries, &c. There are bath-houses and pump-rooms, two assembly-rooms, a theatre, a music-hall, a tennis-court, several libraries and reading-rooms, a town-hall, and a museum. The Jephson Gardens are an extensive area, well laid out and planted for public use; in them is a marble statue of Dr. Jephson. In the immediate vicinity of the town are numerous excellent rides, drives, and walks. Markets are held on Tuesday and Friday.

LE-BUGUE. [DORDOGNE.]

LE-BUIS. [DROME.]

LECCE, a town in the kingdom of the Two Sicilies, in the province of Terra di Otranto, is situated in about 40° 21' N. lat., 17° 50' E. long., on the road from Brindisi to Otranto, and has a population of 16,000. Lecce is a bishop's see, and one of the best built towns in the kingdom, with wide streets, a handsome market-place, several fine churches, and a royal college. The town is surrounded by walls entered by handsome gateways. The principal public buildings are the palace of the Intendente, or governor of the province; the cathedral of Sant' Orosio, which is of Lombard architecture, and has a wooden roof richly carved and gilt; several other large churches and convents; a theatre, a foundling hospital, and a new town-hall. Considerable trade is carried on here in the agricultural products of the country, the principal of which are oil, tobacco, wool, cotton, flax, and gum. There are also manufactories of woollen, cotton, and silk goods; lace, linen thread, and snuff.

Lecce is situated about 200 miles E. from Naples, and 9 miles from the Adriatic coast, in a plain on the north-east side of the range of hills which traverse the Messapian peninsula in its entire length. It is connected by good roads with Gallipoli, Taranto, Brindisi, and Otranto. These are partly ancient Roman roads repaired. Lecce occupies the site of the ancient *Lupia*, a town on the Via Trajana, which ran south down from Brundisium to Hydruntum, and thence along the coast to Tarentum.

LEDBURY, Herefordshire, a market-town and the seat of a Poor-Law Union in the parish of Ledbury, is situated in 52° 2' N. lat., 2° 24' W. long., distant 14 miles E. by S. from Hereford, and 120 miles W.N.W. from London. The population of the town of Ledbury in 1851 was 3027. The living is a vicarage in the archdeaconry and diocese of Hereford. Ledbury Poor-Law Union contains 22 parishes and townships, with an area of 47,627 acres, and a population in 1851 of 13,141.

Ledbury sent representatives to Parliament in the time of Edward I., but this privilege was only exercised on two occasions. The town consists chiefly of two streets, which are lighted with gas, and partially paved. Some of the more ancient houses have projecting stories; those which are of recent erection are constructed of red brick, and are of neat appearance. The market-house is an ancient structure. In the town are—a commodious church of Norman date, which has a detached tower surmounted with a fine spire 60 feet high; chapels for Wesleyan Methodists, Independents, and Baptists; National and British schools; a Grammar school, founded in 1612, with a small endowment, which had 41 scholars in 1853; a literary institution; the hospital of St. Catherine, founded by Bishop Foliot in 1282, for 11 old men and women and a nurse; a dispensary; a savings bank; and some parochial charities. Tuesday is the market-day. About 12 fairs are held in the course of the year. A county court is held in the town. Rope- and line-making and the sacking manufacture give employment to some of the population. In the neighbourhood are limestones and marble quarries. Hops are cultivated in the vicinity, and there are numerous orchards.

LEDESMA. [LEON.]

LEEDS, West Riding of Yorkshire, a market-town, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on both sides, but chiefly on the left of the river Aire, in 53° 49' N. lat., 1° 31' W. long., distant 24 miles S.W. from York, 189 miles N.N.W. from London by road, and 206 miles by the Great Northern railway. The population of the borough in 1851 was 172,270. The parish of Leeds is a vicarage; it is now divided into nine ecclesiastical districts. The livings are in the archdeaconry of Craven and diocese of Ripon. The borough, which is divided into 12 wards, is governed

by 16 aldermen and 48 councillors, one of whom is mayor. Leeds Poor-Law Union is co-extensive with the township of Leeds, and contains an area of 2672 acres, with a population in 1851 of 101,331.

History.—It appears probable that Leeds was a Roman station, for Roman remains have been found in various parts of the town. The great road from Tadcaster (Calcaria) to Manchester (Mancunium) passed through this place. The Northmen effected the subjugation of this district about the year 850, and it was again conquered by the Saxons previous to the Norman Conquest. The appellation Loidis (Leeds) is Saxon, derived probably from the name of the first Saxon possessor. No definite time can be named as the commencement of manufactures at Leeds, but we may judge from the efforts made early in the 16th century to provide the various accommodations required by an increasing population, that such efforts were immediately subsequent to the commencement of its manufacturing activity. In 1638 Leeds had to furnish its proportion of ship-money; the town also participated in the conflict between Charles and the Parliament. It suffered under several severe visitations of the plague, and in 1644-45 more than one-fifth of its population perished. The first charter was granted by Charles I. Of late years the town has continued to improve rapidly, and it possesses the local establishments requisite for a large commercial community, as well as the institutions and societies necessary for supplying the wants and advancing the interests of its population.

Situation and Inland Communication.—Leeds is situated on the slope and partly on the summit of a hill which rises from the left bank of the river Aire, and from the top declines to the east, west, and north. The northern and southern parts are connected by the old bridge, leading from the Briggate, or main street; it is a freestone bridge, over which the traffic is very great. Two suspension-bridges over the river, on the bow-and-string principle (which was first introduced here), were erected, the first in 1827 and the second in 1832. The Victoria and the Wellington bridges of stone, and the Crown Point bridge of iron, are modern bridges. Leeds is admirably situated for trade, being placed in the heart of the inland navigation of the country. It communicates with the eastern seas by means of the Aire and Calder Navigation to the Humber, and westward by the Leeds and Liverpool Canal with the Mersey. The warehouses of the Aire and Calder Company are of great dimensions, and suited to the immense traffic to which they are auxiliary. There are also convenient docks. Leeds is the centre of a network of railways converging to it from all points of the compass, and placing it in connection with every important town in Yorkshire and in England.

The streets of the older parts of the town are, with the exception of the Briggate, generally narrow and crooked. The more recently-formed streets are wider and straighter. There are a great many public buildings, and some of them are handsome; but on the whole the aspect of the town is inelegant and unpicturesque. Improvements are however in steady progress. Some years back an Improvement Act was obtained, which conferred great powers on the town council. Since then many valuable changes have been made, and others are in progress.

Manufactures.—The principal manufacture of Leeds is woollen-cloth; and the town is the centre and mart of a large number of clothing villages and hamlets. The woollen manufacture, flax spinning, and the manufacture of machinery, may now be considered as its staple occupations. The woollen factories are very numerous, and many of them are immense buildings; the entire process, from the breaking of the wool to the finishing of the cloth for the consumer, is carried on in them. In and around Leeds are also many small manufacturers who carry on separate stages of the operations. The dye-houses and dressing-shops at Leeds are very extensive. In these establishments both woollen and worsted goods are finished after being purchased in the rough at the cloth-halls and piece-halls. Great quantities of worsted goods are still brought to Leeds to be dyed and dressed. The mills for the spinning of flax for canvass, linen, sacking, thread, &c., are very extensive: that of Messrs. Marshall is indeed of enormous size, the great room covering an area of nearly two acres, and it is remarkably complete in all its arrangements. In the flax-spinning manufacture there was an increase in the county of York between 1835 and 1850 from 1560 to 2425 horse-power, by far the greater part of which is in and around Leeds. The manufacture of steam-engines is carried on very largely; as is also that of flax, worsted, and woollen machinery. The manufacture of locomotive engines, which was established in Leeds about 15 years ago, is now a very important feature of the industry of the town. Perhaps the most extensive tobacco manufactories out of London are at Leeds. The leather is an important and growing trade of the town. The manufactures of silk-thread and of felted-cloth and carpets are very considerable. Paper-staining is conducted on an extensive scale; and there are large manufactories of glass and earthenware. These and the other operations of the town and district are facilitated by the abundant supply of coals, produced from the mines in the vicinity.

Places of Worship, Schools, &c.—There are within the borough of Leeds in all 17 places of worship of the Establishment. Within the last 18 years there have been 3 old churches rebuilt, including the parish church, which cost upwards of 30,000*l.*; and 12 new churches erected, each having a parsonage. It is in contemplation to erect

several more churches. The increased church accommodation provided in Leeds has been obtained mainly by the efforts of the vicar, Dr. Hook. The architecture of some of the new churches is worthy of notice. St. Peter's, the parish church, is a spacious cruciform edifice in the decorated style, erected in 1840 from a design by Mr. Chantrell. St. John's, Holbeck, is an elaborately executed example of the early English style, with a good groined roof. St. Andrew's is in the same style: both are by Mr. Scott. St. Lawrence's is a striking and very lofty cruciform church in the decorated style, fitted up with rich stained glass and carved wood-work. Holy Trinity, Meanwood, is a very highly finished structure in the early English style, built, without regard to expense, at the cost of a single family. A new church, in St. Matthew's district, was consecrated in August 1851; it is in the decorated style. There are also in the borough 60 places of worship for 6 sections of Methodists, 13 for Baptists, 11 for Independents, 3 for Unitarians, 2 for Plymouth Brethren, and 2 for Jews. A chapel for English Presbyterians has been opened within the last three years. The total number of sittings provided at the date of the Census was 76,488. Two of the Wesleyan chapels are large and handsome buildings, each containing 3000 sittings. The Independent chapel in East Parade is an elegant building, and one or two of the other chapels belonging to the same body are large in size and costly in their accommodations. The Unitarian chapel on Mill Hill is a chaeste example of the perpendicular style. The Roman Catholic church of St. Ann is a fine building of the decorated style, with a spire 150 feet high. In 1835 the Leeds Cemetery, with a neat chapel, was opened on Woodhouse Moor; and more recently two public burial grounds have been provided by rates; a portion of each being left unconsecrated and set apart for Dissenters.

The Leeds Free Grammar school, founded in 1552 by the Rev. W. Sheffield, but enriched by subsequent benefactors, has a large school-house erected in 1823, and an income of about 2000*l.* It is free to all boys natives of Leeds, or sons of residents in the town. In 1851 there were 169 scholars. There are in the borough of Leeds 371 day-schools, of which 76 are public day-schools with 13,176 scholars, and 295 are private schools with 8658 scholars; the total number of scholars being 21,834. Of Sunday schools the number is 147, with 28,761 scholars, of which 60 schools belong to Methodists, 46 to the Established Church, 14 to Independents, and 11 to Baptists. The Industrial school opened in 1848 is a large and very complete establishment situated at Burmantofta. The buildings form a capacious and ornamental Elizabethan pile. The grounds cover 6 acres. Leeds possesses an excellent library founded by Dr. Priestley in 1768. The Literary and Philosophical Society is a superior institution, chiefly supported by the manufacturers and professional men of the town. It has a good museum. The number of members in 1851 was 219, and of volumes in the library 800. The mechanics institution is one of the most flourishing in the kingdom. It numbers about 1900 members, of whom 550 are artisans. It has a library of 8000 volumes, and well-attended news-rooms, lecture-rooms, &c. Leeds is the headquarters of the Yorkshire Union of 120 institutes existing in the county. A school of design has been in operation for several years. There is a medical school in the town. Leeds possesses a savings bank.

Charitable Institutions, Trusts, &c.—The Leeds Infirmary, established in 1767, now possesses accommodation for more than 150 in-patients. The House of Recovery, for the reception of persons attacked by infectious fevers, may be considered as an appendage to the infirmary. The other medical charities in Leeds are—the Dispensary, the Eye and Ear Infirmary, and the Lying-in Hospital.

In the hands of 'the Committee of Pious Uses' there are trusts for the repair of highways in and near Leeds, a trust for the poor, which is laid out in clothing, and distributed at Christmas, the estates of the Free Grammar school, and the property of several other charities. Harrison's Hospital was endowed in 1653. Jenkinson's almshouses, founded with money bequeathed in 1643, provide a residence for eight poor and aged persons. There are several other important charities.

Public Buildings.—The largest buildings in Leeds are the cloth-halls. The Coloured-Cloth Hall was built in 1758; the White-Cloth Hall in 1775. Previous to 1711 the cloth-market was held in an open street. In the cloth-halls woollen-cloths in their rough state are sold by the country manufacturers to the merchants. The Coloured-Cloth Hall is a quadrangular building 127½ yards long and 66 yards broad; divided into six departments which are called streets. An additional story erected on the north side of the Coloured-Cloth Hall is used chiefly for the sale of ladies' cloths in their undyed state. The White-Cloth Hall is nearly as large as the Coloured-Cloth Hall, and is built on the same plan. The markets for mixed and white cloths are held on Tuesday and Saturday. The Commercial Buildings are used as a commercial news-room, for the Leeds bankruptcy court, and for offices of companies, &c. It is a Grecian building of some architectural beauty. The entire edifice is of stone. The various markets of Leeds are exceedingly commodious. The Free Market occupies an area of 9758 square yards; the Central Market is a spacious covered building, and is one of the principal ornaments of the town. It has a handsome Grecian elevation, and cost 35,000*l.* The area is divided into three walks, with stalls. The South Market is used chiefly for the leather fairs. The Corn Exchange is a very handsome structure. The elevation is Ionic; between the columns is a niche with

a statue of Queen Anna. The corn-market is held every Tuesday, between the hours of eleven and one. The Court-house, under which are the prison and police-office, was completed in 1813. In it the quarter sessions and the petty sessions for the borough and the Michaelmas sessions for the West Riding are held. A new Town-hall, which promises to be a very fine building, is in course of erection in Park-place, and in front of it is to be placed the noble bronze statue by Behnes of the late Sir Robert Peel (now standing near the court-house), and also the statue of the late Edward Baines, Esq., M.P. for the borough. The Stock Exchange, completed in 1847, is an architectural ornament to the town. A new county court occupies a site nearly adjoining the Stock Exchange. The Leeds Club, established in 1850, ranks in the style and character of its arrangements with the clubs of the metropolis. A chamber of commerce was established in June 1851. The borough jail was erected in 1847 at an expense of 43,000*l.* Cavalry barracks, which with the parade-ground occupy above 11 acres of land, are just within the northern boundary of the township. The building in which are the public baths, has a neat Ionic elevation. The places of public amusement are the theatre (a plain building), the assembly-rooms, and the music-hall, the latter of which is used for various public purposes.

The general market is held on Tuesday and Saturday. Fairs are held fortnightly for cattle; and in July and November for general purposes. Leather fairs are held eight times a year.

About two miles from Leeds are the noble ruins of Kirkstall Abbey. In the villages and open spots around the town are many neat villas. At Bramley Fell, on the line of the Leeds and Liverpool Canal, about 3 miles from Leeds, are extensive quarries. Quarries of sandstone are at Woodhouse, about a mile from Leeds.

(Communication from Leeds.)

LEEK, Staffordshire, a market-town and the seat of a Poor-Law Union, in the parish of Leek, is pleasantly situated on an eminence above the river Churnet, in 53° 6' N. lat., 2° 1' W. long., distant 24 miles N. by E. from Stafford, 154 miles N.W. by N. from London by road, and 151½ miles by the North-Western and North-Staffordshire railways. The population of the town of Leek in 1851 was 8877. The living is a vicarage in the archdeaconry of Stafford and diocese of Lichfield. Leek Poor-Law Union contains 19 parishes and townships, with an area of 68,247 acres, and a population in 1851 of 21,827.

Leek contains several well-built and spacious streets, which are well paved and lighted with gas. The town has a good water supply. The town-hall is a neat building. The parish church was erected in 1180, but has been considerably altered by repairs. It occupies an elevated site, and has a square tower with eight pinnacles. In the churchyard is a dilapidated ancient cross. In the town are also St. Luke's church, erected in 1846, and places of worship for Wesleyan, Primitive, and Reform Methodists, Independents, Quakers, and Roman Catholics. The Free Grammar school, founded in 1723, has a small endowment; in 1853 it had 31 scholars. There are two National schools, two Infant schools, and a Roman Catholic school. Leek possesses a mechanics institute, a subscription library, a savings bank, a penny bank connected with the mechanics institute, a dispensary, and numerous parochial charities. A county court and petty sessions are held in the town. The market-days are Wednesday and Saturday; twelve fairs are held in the course of the year, three of which are cheese fairs; the others are chiefly for cattle. The principal source of employment in the town is the silk manufacture in its several branches—sewing silk, buttons, ribands, broad silk, &c. The Caldon Canal passes about 2 miles S. from Leek; a cut from it comes near to the town. Remains of Roman and British antiquities have been found in the vicinity. A short distance from the town are some remains of a Cistercian abbey.

LEER. [AURICH.]

LEEUWARDEN, the chief town of the Dutch province of Friesland, is situated in 53° 12' N. lat., 5° 47½' E. long., and has about 21,000 inhabitants. It is surrounded with an earthen rampart and a wide moat; the broad straight streets are intersected by canals, the banks of which, as well as the ramparts, are planted with trees, and afford very pleasant promenades. The town, which is well built, has manufactures of linen and paper, and has a considerable trade, which is much facilitated by canals communicating with the sea, and with Dokkum, Franeker, Haarlingen, and Groningen. The principal buildings are the town-hall, the palace of the princes of Orange, a synagogue, and twelve churches, the largest and handsomest of which contains several monuments of the princes of the house of Orange.

LEEWARD ISLANDS. The British Leeward Islands, in the West Indies, form a distinct government, which includes the islands of Antigua, St. Christopher's, Anguilla, Montserrat, the Virgin Islands, Nevis, and Dominica.

LEH, or LEI. [LUDAKH.]

LEICESTER, the chief town of Leicestershire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the right bank of the river Soar, in 52° 38'

N. lat., 1° 8' W. long., distant 96 miles N.N.W. from London by road, and 102½ miles by the North-Western and South Midland railways. The population of the municipal and parliamentary borough of Leicester in 1851 was 60,584. The borough is governed by 14 aldermen and 42 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. For sanitary purposes it is under the management of a Local Board of Health. The livings are in the archdeaconry of Leicester and diocese of Peterborough. Leicester Poor-Law Union contains 8 parishes and townships, with an area of 3960 acres, and a population in 1851 of 60,642.

Leicester was known to the Romans by the name *Ratae*, and was then, as well as subsequently under the Saxons, a place of importance. Some handsome tessellated pavements and other Roman remains were found here during 1851, and numerous vestiges of the Roman occupation have been found at various times. The name Leicester is derived from the river Leire, now Soar. It appears to have been the seat of a bishop's see transferred hither from Sidnacester. It was taken, and many of the inhabitants were massacred, by Ethilfrith, king of Northumbria. It was also taken by the Danes, and was one of the five Danish burghs. Being recovered it was repaired and fortified anew and enlarged by Ethelfleda, daughter of Alfred the Great, in the time of Edward I. (the elder). After the Conquest it was added to the royal demesne, and a castle erected, or an older fortress was enlarged and strengthened. In the civil wars of Henry II. both town and castle were nearly destroyed. During the reigns of the Lancastrian princes Leicester Castle was frequently a royal residence, and parliaments were held in it. On the overthrow of that dynasty it went to decay, and few remains now exist. During the civil wars of Charles I., Leicester, which was occupied by the Parliamentarians, was taken by storm by the king on May 31st 1645, but was recovered on the 18th of June in the same year by the Parliamentarians under Fairfax.

Leicester had a mint, in which were produced a succession of coins from the time of the Saxon Athelstan to Henry II. There were several religious houses or hospitals, among which the most important was the abbey of St. Mary Pré or De Pratis, founded for Black or Augustinian canons by Robert Boesu, earl of Leicester, in 1143. Of this great and wealthy establishment, to which, from its being the scene of Cardinal Wolsey's death, considerable interest attaches, little more than a mass of shapeless ruins remains.

The town is irregularly laid out; the principal line of street extends from north to south nearly a mile in length. It is well supplied with water and lighted with gas. The houses are for the most part of red brick. St. Nicholas church is partly built of the bricks from an adjacent Roman building, believed to have been a temple, of which a fragment called the Jewry wall, containing several arches, remains. The church, which consists of a nave, chancel, and south aisle, has a square western tower between the nave and chancel, and is chiefly of Norman architecture. St. Mary's church is a large building, partly Norman, partly early English, and partly perpendicular; it has a square western tower surmounted with a lofty spire rebuilt in the last century. The church of St. Martin is a large cruciform church, partly of early English and partly of perpendicular architecture: a tower, the lower part of which is Norman, rises from the centre, surmounted with a crocketed spire, which, as well as the upper part of the tower, is of later date. All Saints is a small church chiefly in the early English style, with a modern chancel. St. Margaret's is a handsome church, partly early English, with a chancel and a lofty tower of perpendicular character. A district church in St. Margaret's parish, dedicated to St. George, was erected in 1826 in the perpendicular style. Trinity district church is a neat brick building of recent erection. In 1851 there were 35 places of worship in the borough, of which 9 belonged to the Established Church, 10 to Baptists, 8 to Methodists, and 3 to Independents. The total number of sittings provided was 25,008. A Free Grammar school of ancient foundation has a school-house and an endowment of 47*l.* a year; to this the old corporation added a yearly sum of 75*l.*, but since 1836 this has been discontinued, and there is now consequently neither master nor scholar. A Proprietary school or college was established in 1835; in 1851 it had 110 scholars. There are several National, British, and Infant schools, and schools in connection with the Wesleyan Methodists and Roman Catholics. In the Female Asylum, in Newark liberty, from 10 to 16 girls between the ages of 13 and 16 are received for three years, clothed, maintained, and instructed. A School of Design was established some years back by the town council. There are several hospitals or almshouses, especially Trinity Hospital containing 90 inmates, and Wigston's Hospital containing 26 inmates; an infirmary or county hospital; a lunatic asylum; and other benevolent institutions. There are a mechanics institute, a philosophical society, and a good museum and library.

The guildhall is a commodious edifice; the borough jail and house of correction are modern buildings. A new county jail and house of correction have been built on the south side of the town. Wigston's hospital is an ancient building, with some good perpendicular work both in stone and wood. There are a convenient theatre, and a range of assembly-rooms, which were originally built for an hotel: the county assizes are held in them. The news-rooms form a handsome and convenient building. The Collegiate school is in the Tudor

GEOL. DIV. VOL. III.

collegiate style. There are excellent public baths. The New Walk is a promenade on the south-east side of the town, planted with trees and commanding some pleasant prospects. There are four bridges over the Soar. South of the town is an extensive area laid down as a racecourse.

Worsted and cotton hosiery is the staple manufacture of the town, which is very largely carried on. There are very large spinning-mills in Leicester. Lace-making, wool-combing, and dyeing are carried on. Numerous hands are employed in the manufacture of the frames or other machinery required by the stocking weavers. The town is also the centre of a great agricultural and wool-raising district. The general market is held on Saturday, a market for vegetables is held on Tuesday and Thursday, and one for cattle on Wednesday. Fairs are held about 12 times in the year. The market-place is a large open area, in which stands the Exchange, wherein the magistrates hold their weekly meetings.

The assizes and quarter-sessions for the county are held in Leicester. Leicester has returned two members to Parliament since the time of Edward I. The magistrates of the borough hold quarter-sessions; and a county court is held here. There is a savings bank.

LEICESTERSHIRE, an English county, bounded N. by Nottinghamshire, N.E. by Lincolnshire, E. by Rutlandshire, S.E. by Northamptonshire, S.W. by Warwickshire, and N.W. by Derbyshire, is included between 52° 24' and 52° 59' N. lat., 0° 39' and 1° 37' W. long. The greatest length of the county is 44 miles; its greatest breadth 40 miles. The area is 803 square miles, or 514,164 statute acres. The population in 1841 was 215,867; in 1851 it was 230,303. A detached portion of Derbyshire near Ashby-de-la-Zouch is surrounded on three sides by Leicestershire, and on the fourth side by Warwickshire and Staffordshire.

Surface, Hydrography, Communications.—The surface of Leicestershire consists almost entirely of gently rising hills. The north-eastern part is occupied by the southern extremity of the Keateven Cliffe Row. These hills overlook the Vale of Belvoir, which is partly in this county and partly in Nottinghamshire. The south-eastern portion of the county from Ouston, south of Melton Mowbray, to Lutterworth, is occupied by the hills which separate the basin of the Soar from that of the Welland. The north-western portion, between Mount Sorrel, Loughborough, Ashby-de-la-Zouch, Market Bosworth, and Leicester, constitutes the district which, though now bare of wood, retains its ancient designation of Charnwood Forest. This district is occupied by a group of hills of inconsiderable elevation, but of a rugged character, with distinct sharp prominences. Bardon Hill, 853 feet high, between Leicester and Ashby, the most elevated point of the group, commands a very wide extent of landscape, extending in one direction to Lincoln cathedral, distant 60 miles, and in another direction, with a good telescope, to the Dunstable Hills, distant nearly 80 miles.

Leicestershire is chiefly included in the basin of the Trent, which just touches the county, and for a few miles divides it from Derbyshire. The principal tributary of the Trent belonging to this county is the Soar, which is formed by the junction of several small streams that rise near the south-western border between Hinckley and Lutterworth. In the lower part of its course the Soar forms the boundary between Nottinghamshire and Leicestershire; the upper part belongs wholly to Leicestershire. It was anciently called Leire, from which the town and county of Leicester derive their name. This river has a gentle current; it is navigable for about 7 miles from its junction with the Trent below Kegworth to the neighbourhood of Loughborough; a canal continues the navigation up to that town. The length of the Soar is nearly 40 miles.

The Wreak is a tributary of the Soar. Its true head is near Oakham in Rutlandshire, whence it flows in a winding channel to Melton, below which it receives the short stream from Ab Kettleby, which is the reputed head stream: before this junction it is called Eye, or Eie. It then flows into the Soar near Mount Sorrel, after a course of about 25 miles. Its channel, so far as it is navigable, forms part of the Leicester and Melton Mowbray Navigation. The Anker skirts the border of the county for 2 or 3 miles near Atherstone in Warwickshire; it joins the Tame, a feeder of the Trent, at Tamworth. The Sence rises in Charnwood Forest, and flows south-west 14 miles into the Anker near Atherstone. The Mease, a feeder of the Trent, which rises just within the border of Derbyshire, has a small part of its course in this county; it flows by Ashby, and in two places separates Leicestershire from the detached part of Derbyshire. The Devon, which joins the Trent at Newark, has its source in Croxton Park in this county; the Smyte, or Smite, which waters the Vale of Belvoir, rises just within the county, near Nether Broughton. These are all the streams belonging to the system of the Trent which claim notice.

The Avon, a tributary of the Severn, forms the boundary of the county for nearly 8 miles on the southern side, separating it from Northamptonshire. The Swift, a small stream which flows by Lutterworth, falls into it. The Welland, which rises just within Northamptonshire, forms, for 17 miles, the boundary between that county and Leicestershire. A small feeder of the Welland divides, for about 7 miles, the counties of Leicester and Rutland.

Leicestershire has several canals. The Leicester Navigation, which

consists partly of a canal, and partly of the river Soar made navigable, extends from Loughborough to Leicester, about 11 miles. The Leicester and Melton Mowbray Navigation, also 11 miles, commences at the junction of the river Wreak with the Leicester Navigation, and is carried along the channels of the Wreak and Eye, which are thus made navigable to Melton. The Leicestershire and Northamptonshire Union Canal extends from the Leicester Navigation at Leicester, to Foxton near Market Harborough, with a cut from Foxton to Harborough. Its length is about 17 miles; or, including the branch to Harborough, 21 miles. The Grand Union Canal forms a communication between the Grand Junction Canal, at Long Buckby in Northamptonshire, and the Leicestershire and Northamptonshire Union Canal at Foxton. Its course is about 8 miles in Leicestershire. The Oakham Canal runs from Oakham in Rutlandshire to Melton Mowbray, where it unites with the Leicester and Melton Mowbray Navigation. Its whole length is about 15 miles, of which more than half is in Leicestershire. The Ashby-de-la-Zouch Canal commences in the Coventry Canal, about 3 miles from Nuneaton in Warwickshire, and runs to the coal-field south-west of Ashby. Its whole length is about 26 miles, of which the greater part is in Leicestershire. There are three railways connected with this canal at the Ashby end; one from the Ticknall lime-works, 8½ miles long; a second branching off from this to the Cloudbill lime-works, 4½ miles long, with two short branches; and a third from a colliery near Moira, half a mile long. Ashby is connected with the canal by a tram road about 2 miles long.

The south branch of the Midland railway enters Leicestershire about 2 miles W. from Lutterworth, and runs north by east past Leicester, 5 miles beyond which the main line turns north-west, and quits the county near Loughborough, while the Syston and Peterborough branch turns north-east to Melton Mowbray, where it turns round east, and near Wymondham south-east; soon after which it enters Rutlandshire. The old-goods railway from Leicester to Swanington has been converted into a passenger line. It runs in a somewhat serpentine, but generally west-north-west direction past Ashby-de-la-Zouch to Burton; but quits the county soon after it passes Ashby. The Rugby and Stafford railway enters the county near Lutterworth, which town it passes, but soon after enters Northamptonshire, though it runs for some distance along the borders of Leicestershire.

The principal coach roads through the county are as follows:—The Chester and Liverpool road enters the county from Northamptonshire, near the village of North Kilworth, and runs through Lutterworth and Hinckley to the neighbourhood of Atherstone, where it enters Warwickshire. The Leeds road enters the county from Rutlandshire, and runs through Melton Mowbray into Nottinghamshire. The Halifax road enters the county from Northamptonshire, and passes by Market Harborough, Leicester, and Loughborough into Nottinghamshire. The Carlisle and Manchester road coincides with the Halifax road as far as Loughborough, from which town it runs by Kegworth to Derby. Roads lead from Leicester by Melton Mowbray to Grantham; by Bingham in Nottinghamshire to Newark; by Ashby-de-la-Zouch to Burton-on-Trent; to Hinckley; to Lutterworth; and to Uppingham in the adjoining county of Rutland.

Geology, Mineralogy, &c.—Some portions of the east side of Leicestershire are occupied by the formations which constitute the third or lowest system of oolites. The Great Oolite extends over the summit of the sandy hills which overhang the Vale of Belvoir. From beneath the Great Oolite the beds which intervene between it and the lias crop out; they skirt the Vale of Belvoir and occupy the border of the county towards Rutlandshire. The lias occupies the rest of the eastern side of the county, skirting the valley of the Soar at the distance of 2 to 3 miles eastward from that river. The rest of the county, with the exception of Charnwood Forest, the coal-fields near Ashby-de-la-Zouch, and some isolated hills of mountain limestone to the north-west of Charnwood Forest, is occupied by the new red or saliferous sandstone. The Ashby coal-fields lie to the north-east and the south-west of Ashby, and extend into Derbyshire. The south-western field is of an oblong figure, extending north-west and south-east about 11 miles. The strata dip in different directions. More than 20 coal-works have been opened in this field. One of the coal-beds has a thickness of 17 to 21 feet. The other coal-field is also oblong, and extends in the same direction as that just mentioned: its length is about 6 or 7 miles. The isolated beds of mountain limestone are quarried at the village of Osgathorpe, near Ashby, at a spot near the road from Ashby to Loughborough, and in other places. Charnwood Forest district is occupied by rocks of the transition series, sienite, greenstone, and slate. Some of these rocks are quarried under the name of granite. This district yields coarse slate for roofing and other common purposes. Gypsum is quarried near Leicester; and limestone, which makes excellent cement for works under water, at Barrow-upon-Soar. Freestone for building and clay for bricks are procured in several parts of the county.

Climate, Soil, Agriculture.—The climate of Leicestershire is mild and genial, without being so moist as in those counties which lie nearer the Atlantic. There are few high hills to intercept the clouds. The soil is loamy, without the extremes of stiff clay, loose sand, or chalk. It varies in fertility. The most fertile soils are generally kept in pasture, for which this county is pre-eminent; the poorer and

thinner soils only being kept in arable cultivation. Out of above 500,000 acres of surface, fully one-half is in permanent grass. The quantity of woods or wastes is very small. There are many large landed proprietors who have family seats in this county, and they have in general some portion of their domains in hand. By employing intelligent bailiffs they greatly contribute to the improvement of husbandry. Grazing and the breeding of cattle and sheep are the chief objects of the Leicestershire farmers, and they have succeeded admirably both with oxen and sheep. The arable land has however not been neglected; and the quantity of stock kept, for which artificial food must be provided in winter, has not only supplied abundant manure to recruit the land, but also made the cultivation of green crops more general and extensive than in many other counties. The natural meadows along the banks of the rivers are considerable, and most of them of excellent quality. The upland meadows are also good. There are considerable dairies, especially on the borders of Derbyshire, and very good cheese is made there. The cheese known by the name of Stilton is chiefly made in Leicestershire.

The principal breed of cattle in Leicestershire is the improved long horn, which bears a very high character. The sheep, for which this county is also renowned, are large, with very long wool, and fatten very readily at an early age. As fox-hunting is followed with great eagerness in this county many good horses are bred, and the rich pasture favours the rearing of this useful and noble animal.

Divisions, Towns, &c.—Leicestershire is divided into six hundreds, as follows:—West Goscote, north-west and central; East Goscote, central; Framland, north-east; Gartree, south-east; Guthlaxton, south; Sparkenhoe, west. It contains the borough, market, and county town of LEICESTER; the market towns of ASHBY-DE-LA-ZOUCH, BOSWORTH, MARKET HARBOURGH, LUTTERWORTH, MELTON MOWBRAY, Mount Sorrel, and Whitwick, and the town of Castle Donington. The last three we notice here; the other towns are described under their respective titles.

Castle Donington, 21 miles N.W. from Leicester, population 2729 in 1851, is on the border of the county, on the road from Ashby-de-la-Zouch to Nottingham. There are remains of an old castle, from which the place has its name; also a noble park and mansion, the residence of the Marquis of Hastings, which contains a valuable collection of paintings and an extensive library. The church is a venerable edifice with a lofty spire. The Wesleyan Methodists, Independents, Baptists, and Quakers have places of worship, and there is a Wesleyan school. Basket-making, frame-work knitting, and the making of silk stockings, lace, and gloves, give employment to the inhabitants. Tanning and brick-making are carried on. A customary market is held on Saturday; fairs are held on March 18th, Thursday in Whitsun-week, and Michaelmas Day.

Mount Sorrel, 7½ miles N. by W. from Leicester, on the road to Loughborough, population 1597 in 1851, stands in a romantic situation on the left bank of the Soar. The extremity of a range of hills extending from Charnwood Forest overhangs the town, presenting a steep slope; it is called Castle Hill, from a fortress which anciently crowned it. The principal street is paved with red granite, as it is termed, from the adjacent rocks of the Charnwood Forest group. Many houses are built of the same stone. The Wesleyan and Association Methodists and Baptists have places of worship; and there are National, Infant, and Free schools. A small market-house stands on the site of an ancient cross. The principal manufacture is of stockings; bobbin-net lace is also made. The market is on Monday, but is very small. A fair is held on July 29th.

Whitwick, on the border of Charnwood Forest, 13 miles N.W. from Leicester, population 2336 in 1851, is a place of considerable antiquity. Of Whitwick Castle there are now few remains. The church is an ancient gothic building, which has been recently restored. There are places of worship for Wesleyan and Primitive Methodists, Baptists, and Roman Catholics. There are a Free and an Infant school. In Charnwood Forest is a Trappean monastery called St. Bernard's Abbey. In the neighbourhood of Whitwick are extensive collieries. The market, which was for many years disused, has been revived, and is held on Wednesday.

The following are some of the more important villages; the populations are those of the parishes in 1851:—

Arnesby, 8 miles S. from Leicester, population 567, was once a market-town. The village is pleasantly situated at the foot of the Saddington Hills. It has a fine old church and a Baptist chapel. A Mutual Improvement Society here had 50 members in 1851. Frame-work knitting employs some of the inhabitants. *BARROW-UPON-SOAR*, *BILLESDON*, and *BLABY* being the seats of Poor-Law Unions are noticed under their respective titles. *Barwell*, 11 miles S.W. from Leicester, population 1613. Besides the parish church, which is ancient, there are places of worship for Wesleyan and Primitive Methodists, and a Free school. The inhabitants are chiefly engaged in frame-work knitting, or dependent upon agriculture. *Belgrave*, a mile and a half from Leicester: population, 1398. There are here an ancient church, chapels for Wesleyan and Primitive Methodists and Baptists, and a National school. Frame-work knitting and brick-making give some employment. *Belton*, 17 miles N.W. from Leicester, population 751, has a handsome old church, a Wesleyan Methodist and a Baptist chapel, and a National school. A great fair for horses is held here on

Trinity Monday. *Belvoir*, at the north-eastern angle of the county, is noticeable on account of Belvoir Castle, the magnificent seat of the Duke of Rutland. The castle and a large part of the park are in Leicestershire. Belvoir village is in Lincolnshire. Belvoir Castle occupies nearly the summit of a hill, on the southern slope of which are terraces and shrubberies. It surrounds a quadrangular court, and has undergone many alterations during the present century; in its situation and general appearance it bears some resemblance to Windsor Castle. It contains a very fine collection of paintings. *Bottesford* is on the river Devon, in the picturesque Vale of Belvoir: population, 1874. The village is on the road from Grantham to Nottingham. The church is cruciform, of the perpendicular style, with a tower and a lofty ornamental spire; it has been recently restored at a great expense. In the interior are several handsome monuments of the earls of Rutland of the Manners family. Four dukes of Rutland are buried here, but have no monuments. There are chapels for Wesleyan and Primitive Methodists, Independents, and Baptists, an Endowed Free school, and almshouses for 17 poor men and 6 women. *Burbage*, 18 miles S.W. from Leicester: population of the chapelry 1894, mostly frame-work knitters. The church, a fine old building, was repaired at a great expense in 1843. There are chapels for Wesleyan and Primitive Methodists and Independents, and a Free school for boys and girls. *Coleorton*, 17 miles N.W. from Leicester, 2 miles E. from Ashby-de-la-Zouch: population, 549. The chief object of interest here is Coleorton Hall, which was the seat of Sir George Beaumont. Sir George's choice collection of paintings, which he munificently presented to the nation, formed the nucleus of our National Gallery. Coleorton Hall is a neat Grecian building. In the beautiful grounds are inscriptions by Wordsworth, whose taste contributed to the laying out of the grounds. In the church are a rich painted glass window, and a painting by Alston, both presented by Sir George Beaumont. *Countesthorpe*, 7 miles S. from Leicester, population of the chapelry 949, is a large straggling village; the inhabitants are mostly frame-work knitters. It has a church, rebuilt, except the tower, in 1842; chapels for Primitive Methodists, Independents, and Baptists; and a station of the Midland railway. *Croxton Keyriol*, on the Lincolnshire border, 3 miles S. by E. from Belvoir Castle, population 621, is chiefly celebrated for its races, held in Croxton Park, a seat of the Duke of Rutland, which annually attract large numbers of visitors. Besides the church there are a Wesleyan Methodist chapel and a National school. *Deaford*, 8 miles W. from Leicester, population 1025, is a station on the Leicester and Swannington railway. The church, which is ancient, is large and has a very lofty spire. There are meeting-houses for Baptists and Primitive Methodists, and a National school. *Earl Skilloe*, 9 miles S.W. from Leicester: population, 2364. Besides the parish church there are chapels for Wesleyan and Primitive Methodists, Independents, and Baptists, and a Free school. Petty sessions are held here. Frame-work knitting employs many of the inhabitants. *Enderby*, 5 miles S.S.W. from Leicester: population 1835, mostly employed in frame-work knitting. The church contains some interesting monuments. There are an Independent chapel and a Free school. Enderby Hall is a handsome mansion. *Hallaton*, 16 miles E.S.E. from Leicester: population, 691. The church, which is ancient, has a lofty spire. Some curious Norman carving is built up in the walls; in the interior of the church are sedilia and some interesting old monuments. The Independents have a chapel, and there are a Free school and some almshouses. Hallaton was formerly a market-town; the market-cross is still standing. Two cattle fairs and a statute fair are held in the course of the year. *Ibstock*, 13 miles W.N.W. from Leicester: population of the township, 1188. Besides the church there are chapels for Wesleyan Methodists and Baptists, and National and British schools. Many of the inhabitants are employed in the Ibstock collieries, to which there is carried a branch from the Leicester and Swannington railway. *Keyworth*, 19 miles N.N.W. from Leicester, on the road from Loughborough to Derby, and on the Midland railway: population of the township, 1782. There was formerly a market here. The church is a handsome cruciform structure: there are chapels for Wesleyan Methodists, Independents, and Baptists; a National and a Free school. Four fairs are held during the year. Framework-knitting and lace-working afford the chief occupations. Malting is carried on, and there are flour-mills. *Kibworth*, 8 miles S.S.E. from Leicester, population 1752, was formerly a market-town. The church is a spacious and handsome building. The Independents, Baptists, and Primitive Methodists have places of worship. The Free Grammar school has an income from endowment of about 300*l.* a year, and had 39 scholars in 1852; there are also a National and an Infant school. The inhabitants are chiefly frame-work knitters. *Oadby*, 3 miles S.E. from Leicester, population 1196, consists of a long street on the road to Market Harborough. Besides the church, which is ancient and contains some interesting monuments, there are a Baptist chapel, a National and an Infant school. The inhabitants are mostly frame-work knitters. *Packington*, 15 miles S.W. from Leicester, is partly in an outlying part of Derbyshire: population of the township, 644. Besides the parish church there are a Wesleyan Methodist and a Baptist chapel, and a Free, a National, and an Infant school. A market was formerly held here. *Quorn*, 8 miles N. by W. from Leicester, population of the township 1876, is a busy village on the navigable

branch of the Soar, with a station on the Midland railway. The inhabitants are employed in frame-work knitting, lace- and glove-making, and tanning. Besides the church, which is ancient, there are chapels for Wesleyan and Primitive Methodists and Baptists, and National and Infant schools. Quorn has some celebrity as the head-quarters of the Quorndon or Quorn hunt. Some good mansions are in the neighbourhood. *Ratby*, 5 miles W. by N. from Leicester, population of the township 719, is a large irregularly-built village, near the Leicester and Swannington railway. Besides the church, which is a large old building, there are a Primitive Methodist meeting-house and an Infant school. Frame-work knitting is carried on. *Rothley*, 5½ miles N. from Leicester, population of the township 985, many of whom are frame-work knitters. On the green is an ancient manorial court-house. Besides the church there are chapels for Wesleyan and Primitive Methodists and Baptists, a Free school for 15 poor boys, a National and an Infant school. The mechanics institute had 80 members in 1851, with a library of 190 volumes. *Sheepshed*, 4 miles W. from Loughborough, on the edge of Charnwood Forest: population, 3759. The stocking manufacture is the chief employment; glove-making and needle-making are also carried on. In the middle of the village is a stone cross, consisting of a single shaft, standing on steps. Besides the church there are chapels for Baptists and Roman Catholics. *Sileby* is 7¼ miles N. from Leicester on the Midland railway, which has a station here: population 1680, chiefly frame-work knitters. The church is a fine example of the perpendicular style. There are chapels for Wesleyan and Primitive Methodists and Baptists, and a National school. *Syston*, 5 miles N. by E. from Leicester, near the junction of the Midland and Peterborough railways, and of the Soar and Wreak navigations: population, 1669. The village is large and increasing; it consists of several streets of shops, and there are large coal-dépôts by the railway. The church is a spacious building, partly of Norman date. There are chapels for Wesleyan and Primitive Methodists and Baptists; and Free, National, and Infant schools. Frame-work knitting is the chief source of employment. Malting, brewing, tanning, needle-making, rope-making, and currying are carried on. *Waltham-on-the-Wolds* is situated, as its name implies, in the Wold district in the north-eastern angle of the county, 5½ miles N.N.E. from Melton Mowbray: population, 732. The church, a handsome cruciform structure chiefly of the decorated style, was restored within the last few years. There are a Wesleyan chapel and a National school. An agricultural association is established here, for whose meetings a neat Grecian building has been erected. Yearly meetings are held for the exhibition of stock, awarding of prizes, &c. A large cattle and horse fair is held on September 18th and 19th. *Wigston-Magna* is a large village, 4 miles S. by E. from Leicester: population, 2189. Wigston has grown into a small town within the last few years. There are some extensive hosiery manufacturers in the place, who employ many hands. There are two churches, chapels for Wesleyan and Primitive Methodists and Independents, National and British schools, and almshouses for six poor persons. *Wymenold*, 13 miles N. from Leicester, on the Nottinghamshire border of the county, population 1235, is a large and well-built village, formerly a market-town. The inhabitants are employed in frame-work knitting and lace-making. The handsome gothic church was lately restored at a considerable expense. There are chapels for Wesleyan and Primitive Methodists, and National schools. *Wymondham*, 7 miles E. from Melton Mowbray, near the junction of the county with Lincolnshire and Rutlandshire, is a place of considerable antiquity: population, 800. The church is a handsome cruciform structure, with a lofty spire. There are chapels for Wesleyan Methodists and Independents, and a British school. A Free Grammar school was founded here in 1637 by Sir John Sedley; its income from endowment is about 153*l.* a year: in 1851 it had 40 scholars.

Divisions for Ecclesiastical and Legal Purposes.—This county is in the diocese of Peterborough and in the ecclesiastical province of Canterbury. It constitutes the archdeaconry of Leicester. Leicestershire is in the Midland Circuit; the assizes and quarter sessions are held at Leicester. By the Poor-Law Commissioners Leicestershire is divided into 11 Unions:—Ashby-de-la-Zouch, Barrow-on-Soar, Billesdon, Blaby, Hinckley, Leicester, Loughborough, Lutterworth, Market Bosworth, Market Harborough, and Melton Mowbray. These Unions include 325 parishes and townships, with an area of 508,684 acres, and a population in 1851 of 235,494. County courts are held at Ashby-de-la-Zouch, Hinckley, Leicester, Loughborough, Lutterworth, Market Bosworth, Market Harborough, and Melton Mowbray. Leicestershire formerly returned four members to Parliament, namely, two for the county, and two for the borough of Leicester. By the Reform Act the county was divided into a northern and a southern division, each division returning two members. The borough of Leicester still returns two members.

History, Antiquities, &c.—Leicestershire was anciently comprehended in the territory of the Coritani: and when the Romans had subjugated Britain and divided it into provinces, it was included in the province of Flavia Caesariensis. The Romans established several stations within or near upon the limits of the county: *Ratae* (Leicester); *Vernometum*, near Willoughby (on the road from Leicester to Newark); *Manduessedum* (Manchester, near Atherstone); *Benone*, or *Venone* (High Cross, between Lutterworth and Hinckley); and

Tripointium, on the Avon, near Catthorpe, a village south of Lutterworth. Of these stations however only Ratae strictly belongs to this county. Venonæ and Tripointium are just on the border; the others are beyond it. Ratae, as it is termed in the Itineraries of Antoninus, and Bagæ and Ratisorion, according to Richard of Cirencester, was on the site of the modern Leicester. Many tessellated pavements, coins, urns, and domestic and military utensils have been discovered at different times. A Roman mile-stone was discovered in 1771, about two miles north from the town, on the side of the Fosse road: it is cylindrical like the shaft of a column with a roughly carved inscription, showing it to have been set up in the time of the emperor Hadrian. It is now in the Museum at Leicester. South of Leicester town are two remarkable parallel embankments, called the 'Raw Dykes,' extending about three furlongs in length, and about 16 yards apart. There do not appear to be any remains of Venonæ, which probably stood at the intersection of Watling-street and the Fosse Way; but Camden reports that great foundations of square stones had been discovered under ground, and, since his time, coins have been found here. There are traces of Tripointium near Catthorpe. There are remains or traces of encampments, probably Roman, at four or five places in the county. Tessellated pavements have been found at Rothley and Wanlip. At Wanlip were found also coins and broken urns.

The Roman road Watling-street forms the boundary between this county and Warwickshire from Tripointium, or Catthorpe, to the neighbourhood of Manduessedum (Manchester, near Atherstone). The Fosse Way, another ancient road, which intersects Watling-street at Venonæ (High Cross), runs in a direct line north-east to Ratae (Leicester); and thence north-north-east to Vernomestum, near Willoughby, just within the border of Nottinghamshire. The Via Devana enters the county on the south-east, crossing the Welland near Medbourne, and runs north-west by Ratae (Leicester) and Ashby into Derbyshire. Some remains of the Fosse Way and Via Devana may be traced.

During the Heptarchy, Leicestershire was included in the kingdom of Mercia. In the year 680, or according to others 737, Leicester was made the seat of a bishopric transferred thither from Sidnacester. The diocese was afterwards united to the previously existing see of Dorchester (in Oxfordshire).

By the treaty between Alfred and Guthrun the Dane (878 or 880), Leicestershire was included in the Danelagh, or Danish territory; and Leicester became one of the great Danish burghs. It was recovered by Ethelfleda, governess of Mercia, during the reign of Edward the Elder.

Upon the Norman conquest, Leicestershire was divided between the followers and relatives of the Conqueror. Several of these or their descendants, to secure the territory thus acquired, erected castles or repaired older ones at Ashby-de-la-Zouch, Leicester, Mount Sorrel, Shilton, Whitwick, Groby, Hinckley, Donington, Melton Mowbray, Ravenston, Thorpe, Saucy, and Belvoir. Of these castles, except that at Ashby, there are few remains. The present Belvoir Castle is a more modern edifice, erected or restored by the first Earl of Rutland, in the end of the 15th or beginning of the 16th century. Most of the other castles are mentioned elsewhere. Of Groby (near Leicester) the earth-works and a few fragments of the masonry remain.

Upon the accession of William Rufus, Leicestershire was ravaged by Hugh Grentemaisnell, who supported the cause of Robert, duke of Normandy. It was on this occasion that Leicester Castle was taken by William Rufus. The county was again the scene of contest in the civil troubles of the reigns of John and Henry III. The civil war of the Roses was closed by the defeat and death of Richard III. at Bosworth Field in this county, 1485.

In the civil war of Charles I. the men of Leicestershire seem generally to have taken the side of the Parliament. Several severe skirmishes took place in the county in 1643-45. On the 31st of May 1645 the king took Leicester by storm; the garrison consisted of about 450 soldiers and 500 to 600 townsmen; the resistance was obstinate but unavailing. The besieging army was estimated at 4000. The triumph of the king was short: the decisive battle of Naseby in Northamptonshire, was won by the Parliament a fortnight after the capture of Leicester; and Leicester was retaken four days after. In his subsequent marches the king came once or twice to Belvoir and Ashby. Belvoir was taken by storm in November the same year, and the garrison at Ashby surrendered in the February following.

Religious Worship and Education.—According to the Returns of the Census of 1851, it appears that there were then in the county 655 places of worship, of which 289 belonged to the Church of England, 201 to six sections of Methodists, 85 to Baptists, 41 to Independents, 12 to Roman Catholics, 7 to Mormons, 3 to Quakers, and 3 to Unitarians. The total number of sittings provided was 159,215. The number of Sunday schools in the county was 432, of which 227 belonged to the Church of England, 103 to Methodists, 61 to Baptists, 26 to Independents, 6 to Roman Catholics, and 3 to Unitarians. The total number of scholars was 36,282. The number of day-schools in the county in 1851 was 709, namely, 278 public day-schools, with 19,392 scholars, and 431 private day-schools, with 8862 scholars. The number of evening-schools for adults was 20, with 784 scholars. There were 14 literary and scientific institutions, with 1849 members, and possessing in their libraries about 10,000 volumes.

Savings Banks.—In 1852 the county possessed 7 savings banks, at Ashby-de-la-Zouch, Hinckley, Leicester, Loughborough, Lutterworth, Market Harborough, and Melton Mowbray. The total amount owing to depositors on the 20th of November 1852 was 226,256*l.* 10*s.* 1*d.*

LEIGH. [Essex.]

LEIGH, Lancashire, a market-town and the seat of a Poor-Law Union, in the parish of Leigh, is situated in 53° 30' N. lat., 2° 31' W. long., distant 13 miles W. by N. from Manchester, 197 miles N.W. from London by road, and 192½ miles by the London and North-Western railway. The population of the town of Leigh in 1851 was 5206. The living is a vicarage with the curacy of West Leigh annexed in the archdeaconry and diocese of Manchester. Leigh Poor-Law Union contains 10 townships and chapelrys, with an area of 24,352 acres, and a population in 1851 of 32,733.

The town of Leigh is chiefly dependent on the silk and cotton manufactures. Glue-works, coal-pits, stone-quarries, and flour-mills in the neighbourhood also afford employment. The town is lighted with gas. In the town-hall, erected in 1840, the petty sessions and the county court are held: the great room is also used for concerts and meetings. Leigh parish church is an ancient edifice of stone, consisting of nave, chancel, and aisles, with a tower. The Wesleyan, Primitive, and Association Methodists, Baptists, and Swedenborgians have places of worship in Leigh. The Free Grammar school, founded in 1656, has an income from endowment of 24*l.* 16*s.* a year, and had 70 scholars in 1853. There are also National and British schools, a Charity school for girls, a Quakers school, and a Roman Catholic school; a mechanics institute, which in 1851 had 183 members, and 1125 volumes in its library; and a savings bank. The district around Leigh is famous for the production of cheese. Leigh communicates with Manchester by the Duke of Bridgewater's Canal, and with the Leeds and Liverpool Canal by a branch canal to Wigan. The market-day is Saturday; fairs are held on April 24th and 25th, and on December 7th and 8th.

LEIGHLIN, a bishop's see in the archiepiscopal province of Dublin, in Ireland, comprehends the county of Carlow, and extends into the counties of Wicklow, Wexford, Queen's County, and Kilkenny. The chapter consists of a dean, precentor, chancellor, treasurer, archdeacon, and four prebendaries. The number of benefices is 62. The founder of this diocese was St. Lasserian, who supported the Roman mode of celebrating Easter at the Synod of Leighlin, A.D. 630. Prior to that time the church of Leighlin had been ruled by an abbot. The bishoprics of Leighlin and Ferns were united in 1600, and have been lately incorporated with the see of Ossory under the Church Temporalities Act. The income of the united bishopric is 3850*l.* The cathedral is the parish church of Old Leighlin. [CARLOW, County of.]

LEIGHLIN BRIDGE. [CARLOW, County of.]

LEIGHTON, or LEES. [Essex.]

LEIGHTON BUZZARD, Bedfordshire, a market-town and the seat of a Poor-Law Union in the parish of Leighton Buzzard, is situated in 51° 55' N. lat., 0° 39' W. long., distant 20 miles S.S.W. from Bedford, 41 miles N.W. from London by road, and 40½ miles by the London and North-Western railway. The population of the town of Leighton Buzzard in 1851 was 4465. The living is a vicarage in the archdeaconry of Bedford and diocese of Ely. Leighton Buzzard Poor-Law Union contains 16 parishes and townships, with an area of 37,980 acres, and a population in 1851 of 17,141.

Leighton Buzzard is a place of considerable antiquity. An ancient market-cross, an elegant erection of the perpendicular style, pentagonal in form, is in the market-place. The streets are lighted with gas. A town-hall was built in 1851 by Lord Leigh. The parish church, erected about 1220, was originally early English in style, but it has been much modernised. There are chapels for Wesleyan Methodists, Baptists, and Mormons; a British school, a new school in connection with the church, a savings bank, and several benevolent institutions and charitable foundations. The Leighton Institute, chiefly for the delivery of lectures, formed about 5 years ago, has a library connected with it. Straw-plat is made in almost every cottage in the town. Cattle are extensively raised in the vicinity for sale in the London market. A large cattle market is held weekly on Tuesday: 5 fairs are held in the course of the year: the wool fair, in July, is frequented by buyers from the west and north of England. A county court is held in the town.

LEININGEN, or LINANGE, formerly a county situated between the Lower Palatinate and the bishoprics of Spire and Worms, gives its name to one of the wealthiest of the mediatised German houses. The principal line obtained in 1779 the dignity of princes of the empire: in 1803 it lost its possessions on the left bank of the Rhine, which had an area of 250 square miles, with a revenue of 168,000 florins, and obtained instead Amorbach, Miltenberg, and several other bailiwicks, the area of which is 520 square miles, with 86,000 inhabitants, in 15 towns, 9 market villages, and 171 other villages, producing a revenue of 568,000 florins, which form together the present principality of Leiningen. The principality was mediatised in 1806; 410 square miles of it are under Baden, 100 under Bavaria, and 10 under Hesse-Darmstadt. The population of the principality is now about 107,000. The present Prince Charles is half-brother to the queen of Great Britain. He resides at Amorbach, in the Odenwald, 28 miles west from Würzburg and south from Aschaffenburg, on the Müdt,

a small feeder of the Mayn: population about 3000. It has some manufactures, a new palace, with fine gardens, and a very handsome church. The religion of this branch is Lutheran. There are four other branches of the house of Leiningen, two Lutheran and two Roman Catholic.

LEINSTER, one of the four provinces of Ireland, extends from 52° 6' to 54° 7' N. lat., 6° to 8° 3' W. long., including the eastern half of the central and south-eastern parts of Ireland.

Leinster possesses greater advantages than the other provinces in point of soil and surface, being little incumbered with mountains, and having consequently superior facilities for internal communication. The navigable Shannon forms part of its western boundary, and the navigable Barrow intersects its central and southern counties. The Boyne also, the basin of which lies within its north-eastern limits, is partly navigable, and the Grand and Royal canals traverse it from east to west. The coast is inferior in point of natural harbours to that of the remainder of the island, but it is more sheltered from the prevalent winds.

Upon the conquest of Ireland by the English in 1170 the present province was divided into the two petty kingdoms of Meath and Leinster, and embraced also a part of the then kingdom of Ulster, in the present county of Louth. The first counties erected were those of Dublin, including the present county of Wicklow; Meath, including the present counties of West Meath and Longford; Louth; Kildare, including the present King's and Queen's counties; Carlow, Kilkenny, and Wexford. Meath was divided into Meath and West Meath in the reign of Henry VIII.; King's and Queen's counties were separated from Kildare and erected into separate counties in the reign of Mary; Longford was made shire-ground in the time of Elizabeth; and Wicklow was made a county in the reign of James I.

The area of the respective counties, and of the three chief towns in the province, with the population of each at the four decennial periods of 1821, 1831, 1841, and 1851, are given in the article IRELAND, col. 298.

LEINTWARDINE. [HEREFORDSHIRE.]

LEIPZIG, a circle or province in the north-west of the kingdom of Saxony, is bounded W. and N. by Prussia, E. by the circle of Dresden, and S. by the circle of Zwickau and the principality of Saxe-Altenburg. Its area is 1826 square miles, and the population in 1852 amounted to 446,826. The circle belongs to the basin of the Elbe. The western part of it is drained by the White Elster, which receives the Pleisse and the Partha; the eastern districts are watered by the Mulda, which is here formed by two head-streams, both called Mulda, which rise in the Erzgebirge and flow past Zwickau and Freiberg respectively. There are a few small lakes. The soil is fertile in corn and pasture; tobacco is grown extensively. The country is level, except in the south and south-east, where there are some offsets of the Erzgebirge. The land is generally well cultivated; the country is deficient in wood, which is procured from the Erzgebirge and the circle of Voigtland. There are no metals, but there are fullers' earth and potters' clay, limestone, marble, porphyry, jasper, and great quantities of peat. There is a very good breed of sheep, of which the circle possesses a large number.

This is not one of the manufacturing circles of Saxony: there are however flourishing manufactures of woollens, cotton, linen, and pottery in all the towns; but in the villages, which are above 1000 in number, all hands, generally speaking, are required for agriculture. The climate is temperate and healthy.

Leipzig, the capital of the province, forms the subject of the next article. [LEIPZIG.] The other towns are small. Among them we name the following, with the population in round numbers:—*Grimma*, a walled town on the Mulda, here crossed by a stone bridge, 5100; *Döbeln*, on an island in the Mulda, 6000; *Leisnig*, a walled town defended by a castle, on the Freiberg Mulda, 4800; *Rochlitz*, on the Zwickau Mulda, 4100; *Geithayn*, west of Rochlitz, 4800; *Mitweyda*, on the Zschopau, a feeder of the Freiberg Mulda, 6800; *Colditz*, on the Zwickau Mulda, 3000; *Borna*, on the Wyhra, a feeder of the Pleisse, 3800; *Pegau*, on the White Elster, 3500; *Würzen* on the Mulda, here crossed by three bridges, 4100; and *Mügelin* on the Döllnitz, a small feeder of the Elbe, about 2200.

Most of these towns have manufactures of broadcloth, cotton, linen, beer, &c. The province is traversed by several railroads which connect Leipzig with all parts of Germany. One line proceeds from Leipzig southward through Borna to Augsburg and Munich; another south-east to Dresden, Prag, and Vienna, with a branch from the Riess junction through Döbeln to Chemnitz; and a third line northward to Magdeburg and Berlin.

LEIPZIG, the capital of the province of Leipzig, and the second city in the kingdom of Saxony, is situated in 51° 20' 16" N. lat., 12° 21' 45" E. long., 72 miles W.N.W. from Dresden, in an extensive plain watered by the Pleisse, into which the White Elster, the Parde, and the Luppe flow. The swamps that formerly existed in this plain have been filled and drained, and it is now extremely fertile and healthy, and covered with flourishing villages. The town, including its four suburbs, is nearly a mile in length from north to south, parallel to the course of the Pleisse, and three-quarters of a mile in breadth. It contained in 1852 a population of 66,682. It was formerly well fortified, but the ramparts have been converted into public walks, and

partly laid out as gardens. The only remaining part of the fortifications is the castle, called the Pleissenburg, upon which the observatory now stands.

Leipzig is irregularly built; the streets are generally narrow, though well paved and lighted, but it contains many very handsome parts, numerous elegant public buildings, private houses resembling palaces, and many seats, with fine gardens, in the suburbs. The most remarkable edifices are St. Thomas's church; St. Nicholas's, a venerable and magnificent building, adorned with paintings; St. Paul's, or the University church; St. John's, in which is the marble monument of Gellert; the theatre; the town-hall, built in 1599; the cloth-hall; the Pleissenburg, with the observatory, which is furnished with excellent instruments, and stands in 51° 20' 19" N. lat., 30° 1' 52" E. long. of Ferro, 10° 1' 45" E. of Paris; and the Königshaus, or King's House, near the town-hall on the great market square. In this house Napoleon I. lodged during the battle of Leipzig, and Field-Marshal Schwarzenberg, who then commanded the allies, died in it in 1820. The great building called Auerbach's House is in the time of the fairs a kind of bazaar, where the finest and most costly articles are exposed for sale. There are numerous excellent schools and academies, and many literary and learned societies, a deaf and dumb institution, an academy of painting and architecture, many museums, several picture galleries, a public library containing 120,000 volumes and 2000 manuscripts; and several charitable institutions. Besides its great publishing and printing establishments, noticed in a subsequent part of this article, Leipzig possesses large type-foundries, oil-mills, paper-mills, and manufactories of musical, optical, and mathematical instruments, bronzed ware, hats, leather, and hardware. Leipzig though comparatively small, has become one of the most important cities in Europe, owing to its university, its fairs, and its book-trade.

The University was founded in 1409 by the Elector Frederick on the model of the universities of Prague and Paris. The 4th of December, 1409, is considered as the date of the foundation, and the Bull of Alexander VI. confirming it is of the same year. The establishment is richly endowed. There are four faculties—Protestant theology, law, medicine, and philosophy;—94 professors and teachers; the number of students in 1850 was 846. Connected with the university are a philological seminary, a clinical institution, a school of midwifery, a botanic garden, a chemical laboratory, an ophthalmic institution, &c. The library of the university contains 80,000 printed volumes, and 2000 manuscripts; it is particularly rich in works on philology, medicine, and divinity. A great ornament of the university is the Augusteum, erected in memory of King Frederick Augustus, and opened in 1835. It is a very fine building, 300 feet in length and three stories in height, and contains a great hall, lecture-rooms, and apartments for the library and the collections of natural history. Besides the university Leipzig possesses two gymnasia for superior instruction, the Thomasschule with 213 pupils in 1850, and the Nicholaschule with 150 pupils.

The origin of Leipzig was the Slavonian village in the angle between the Parde and the Pleisse, which is said to have received its name from the lime-trees growing about it, which are called in Slavonian Lip, Lipa, or Lipsk. It is not spoken of as a fortified town till the 12th century, when Margrave Otho the Rich granted it a license to hold two fairs at Easter and Michaelmas. At that time the number of the inhabitants was between 5000 and 6000. Otho's son Dietrich designed to curb the mutinous spirit of the citizens by erecting in 1213 three castles, of which only the Pleissenburg still exists, but in a very different form. The first fair at New Year was proclaimed in 1458, and the three fairs were confirmed by the emperor in 1507. These fairs laid the foundation of the prosperity and wealth of Leipzig. The concourse of merchants from various countries is very great. The value of the goods sold at the Easter Fair is estimated by Mr. Macgregor, in his 'Commercial Statistics,' at upwards of 3,000,000 sterling. The goods sold at these fairs comprise the products and manufactures of Saxony and the States of the Zollverein—broad-cloths, merinoes, calicoes, printed cottons, damasks, hosiery, hard- and glass-ware, wool, books, paper, leather, &c.; the cotton manufactures, thread and yarns, woollens, and hardwares of England; the shawls, silks, lace, jewellery, and watches of France; the toys of Nürnberg; the glue, furs, bristles, and cantharides of Russia; the plated goods, glass, fine broadcloths, shawls, and embroidered goods of Austria; and the clockwork, embroidery, and printed cottons of Switzerland. Merchants from nearly every country in Europe, Americans, Armenians, Persians, Turks, and occasionally Australians, attend these Leipzig fairs.

The singular concentration of the German book-trade in Leipzig has been a main cause of the celebrity and wealth of that city. The first catalogue appeared in the 16th century. The number of new works announced has gradually increased. It was not till 1816 that above 3000 new works appeared in Germany; since then the number annually published has more than doubled. The peculiar feature in the German book-trade is, that every publisher has his commissioner at Leipzig to whom he sends prospectuses and specimens of his new publications, which the commissioner distributes and makes known. At the Easter Fair booksellers from all Germany, Sweden, Denmark, the Russian Baltic provinces (where the German language is spoken), from the Netherlands, and even France and England, to the number

of above 300, meet at Leipzig to settle their accounts, &c.; and this meeting has acquired additional importance by the establishment of a Booksellers' Exchange, a handsome building, opened in May, 1836. There are in the city about 120 publishing establishments, and 23 great printing-houses, with 260 presses, 14 of which are worked by steam.

In September 1631 the great victory obtained by Gustavus Adolphus over Tilly was fought on the plain of Leipzig. In 1642 the city was besieged by the Swedish general Torstenson, after defeating the imperial army under the Archduke Leopold William and Piccolomini, who came to its relief. In the fearful battle of Leipzig, fought on the 16th, 17th, and 18th of October, 1813, Napoleon I. was totally defeated by the allied armies under Prince Schwarzenberg. Gesner, Ernesti, Fischer, and Reiske have been rectors of the schools of Leipzig; and Leibnitz, Thomasius, Fabricius, and Teller were natives of this city.

(Leonhardi, *Geschichte und Beschreibung der Kreisstadt Leipzig*, Leipzig, 1799; Dolz, *Versuch einer Geschichte von Leipzig*, Leipzig, 1818; Gretschel, *Leipzig und seine Umgebungen*, Leipzig, 1828.)

LEIRIA. [ESTREMADURA; PORTUGAL.]

LEITH, Edinburghshire, Scotland, a sea-port town and a municipal and parliamentary burgh, is situated on the banks of the Water of Leith, at its confluence with the Frith of Forth, in 55° 58' N. lat., 3° 9' W. long., about 2 miles N.E. from Edinburgh. The population of the municipal burgh or town of Leith in 1851 was 30,919. The burgh is governed by 4 bailies and 12 councillors, of whom one is provost; and, conjointly with Portobello and Musselburgh, returns one member to the Imperial Parliament.

Leith is mentioned as early as the reign of David I., and has for several centuries maintained a respectable rank among the maritime towns of Scotland. In 1313, and again in 1410, the English burned the vessels in the harbour. In 1541 the town was fired, and almost destroyed, by the English fleet. In 1549 the French, in the interest of Mary of Guise, took possession of the town. In 1560 the forces of Queen Elizabeth besieged it, in conjunction with the Scottish Protestant forces under the Lords of the Congregation. Leith fort was repaired, and a citadel, with 5 bastions, erected by Cromwell. In 1715 the citadel was held for a short time by the adherents of the Pretender. In 1822 George IV. landed on the pier.

The town is irregularly built, and in some parts not well paved; in the older portions of the town the streets are narrow and inconvenient, and the houses closely built; of late years some good streets and numerous dwelling-houses of a superior character have been erected, particularly in the neighbourhood of the Links, on the south-east side of the town. The town is lighted with gas, and has a good supply of water. Two draw-bridges and a stone bridge over the Water of Leith connect North Leith and South Leith. Among the public buildings are the town-hall, or court-house, erected in 1828, in which are held the burgh and sheriff courts; the exchange buildings, a Grecian structure, containing commodious assembly-rooms, reading-rooms, and the post-office; the Trinity-house, or mariner's hospital, erected in 1817; the custom-house, on the west side of the harbour, erected in 1812, at a cost of 12,000*l.*; the female asylum for incurables, erected by the late Sir John Gladstone, Bart., of Fasque, a native of Leith; and a new poor-house for the parish of South Leith. The parish church of South Leith, erected probably about 1490, has been recently repaired at an expense of about 3000*l.* North Leith Church is a neat and spacious modern structure in the Grecian style, erected in 1814 at a cost of 12,000*l.* St. Thomas's church was built and endowed by Sir John Gladstone, in connection with the asylum erected by him. The Free Church has four chapels, besides the Mariners' church; the United Presbyterians have four chapels, and there are one each for Original Seceders, Wesleyan Methodists, Episcopalians, Independents, the Evangelical Union, and Roman Catholics. There are several public schools including the High school, which is conducted by six teachers, and is under the management of the town-council and the ministers of South Leith; Dr. Bell's school, in which about 700 children receive instruction on the Madras system; and a Charity school for boys. There are also a savings bank, a public library comprising 8000 volumes, belonging to 185 annual subscribers, and a mechanics subscription library. The incorporated trades are the ship-masters, usually termed the Trinity House, combining the features of a benefit society with those of a board for licensing pilots; the traffickers, or merchant company; and the conveyers of trades, representing eight trades. The position of the town near the mouth of the estuary of the Forth causes considerable difficulty in keeping the harbour clear from accumulations of sand brought down by the river. Great expense has been at various periods incurred to deepen the harbour, and render it commodious for shipping. For this purpose two wet-docks were constructed and opened, one in 1806, the other in 1817, each 250 yards long, and 100 yards broad; three dry, or graving docks, 136 feet by 45 feet, were also made, and the eastern pier was carried out on a level with the Martello Tower. The eastern pier, which is constructed in part of timber, extends about 3000 feet into the Frith, and forms a fine promenade. A new pier, nearly parallel to the old one, was erected in 1852, and another wet-dock to the north of the previous existing eastern dock, was constructed. The new dock is of nearly similar size to the other docks, but the depth of water is greater. These operations have caused a considerable expenditure, to which govern-

ment has largely contributed, but greatly increased accommodation has been afforded to the shipping. A large proportion of the Leith vessels is engaged in the Baltic trade. Steamers sail from Leith to various ports in the Frith of Forth, to the east and north of Scotland, to Hull, to London, Hamburg, and Rotterdam. The number and tonnage of vessels registered at the port of Leith on December 31st, 1853, were:—Under 50 tons 79, tonnage 2350; above 50 tons 102, tonnage 22,007; steam-vessels, 13, of 274 tons, and 15 of 3672 tons. In the coasting-trade, during 1853, there entered the port 1069 sailing-vessels of 66,931 tons, and 614 steam-vessels of 182,496 tons. During 1853 there cleared out 734 sailing-vessels of 55,387 tons, and 615 steam-vessels of 184,059 tons. In the colonial trade 24 vessels of 7993 tons entered, and 32 vessels of 11,307 tons cleared from the port. In the foreign trade there entered 236 British vessels of 34,322 tons, and 891 foreign vessels of 86,912 tons; and there cleared out 86 British vessels of 14,696 tons, and 265 foreign vessels of 28,769 tons; with 78 British steam-vessels of 18,005 tons, and 2 foreign steam-vessels of 320 tons inwards, and 73 British steam-vessels of 16,965 tons, and 1 foreign steam-vessel of 160 tons outwards. The chief imports are flax, tallow, hides, hemp, wines, &c. In Leith are several rope, cordage, and sail-cloth manufactories, and sail-making establishments; ship-building yards and slips; oil and colour works; chemical works; glass-works; soap and candle factories; an extensive meat preserving establishment; corn-mills; iron-foundries; engineering works; and other establishments. Leith has communication by the North British and the Edinburgh and Northern railways with all parts of the kingdom.

LEITMERITZ, an episcopal town in Bohemia, is situated on the slope of a hill above the left bank of the Elbe, in 50° 30' N. lat., 14° 5' E. long., and has about 5000 inhabitants. The Elbe is here navigable, and spanned by a bridge 843 feet in length. The town is surrounded with walls and a moat. It has a very fine cathedral, dedicated to St. Stephen, and eleven churches, the principal of which is All Saints; an episcopal palace, a handsome town-hall, a gymnasium, a theological seminary, &c. The surrounding district is extremely fertile; it is laid out in corn-fields, vineyards, hop-gardens, and orchards; the best Bohemian wines are produced in the neighbourhood, and vast quantities of fruit. The town has an active trade in corn, fish, and wine. The Elbe contains sturgeon, shad, and salmon. The bridge across the Elbe connects the town with Lobositz, a station on the Dresden-Prag railway, distant 65 miles S. by E. from Dresden, and 53 miles N. by W. from Prag.

LEITHRIM, a maritime county of the province of Connaught in Ireland, is bounded N. by the Bay of Donegal and by the counties of Donegal and Fermanagh, E. by Fermanagh, Cavan, and Longford, S. by Longford, and W. by Roscommon and Sligo. It lies between 53° 47' and 54° 27' N. lat., 7° 35' and 8° 25' W. long., and extends from north-west to south-east 51 miles, with a breadth varying from 5½ to 21 miles. The area is 613 square miles, or 392,363 acres, of which 249,850 acres are arable, 3396 acres in plantations, and 23,784 acres under water. In 1831 the population was 141,524; in 1841 it was 155,297; in 1851 it was 111,841.

The outline of Leitrim is very irregular. Lough Allen stretches across the narrowest part of the county, dividing it into two nearly equal parts. The district lying south and east of Lough Allen is an irregular parallelogram of about 18 by 20 miles, the western and south-western sides of which are formed by the lake and the line of the Shannon, and the north-eastern and south-eastern sides by the boundaries of the counties of Cavan and Longford respectively. The southern portion of this district, abutting on the counties of Longford and Roscommon, is to a considerable extent occupied by low, narrow, and steep ridges, shutting in numerous small lakes, and flanking the streams and roads by which the intermediate valleys are traversed. Of the lakes the principal is Lough Rinn, which is about two miles in length by half a mile in breadth; it is formed by an expansion of the river Rinn, which runs southward out of Leitrim through the north-western extremity of Longford to the Shannon. The Ealin, which brings down the waters of several small lakes situated between the Rinn and the Shannon, joins the latter river at the southern extremity of Lough Boffin. Northward from this hilly tract extends an open undulating plain, interspersed with numerous lakes and streams as far as the southern extremity of Lough Allen. This district forms part of the great limestone plain of Ireland, and contains some excellent arable land, but is in general better adapted for grazing. The surface is irregularly traversed by a great number of clay and gravel ridges. The principal heights on this plain are Sheemore and Sheebeg, two hills of moderate elevation rising from the left bank of the Shannon. The main drainage of the limestone district is southward and westward to the Shannon, but several streams in the north-eastern division of it run eastward to the lakes on the border of Cavan. Of the streams the principal is the Yellow River, which runs past Ballinamore into Lough Garadice, and thence, under the name of the Woodford River, to Lough Erne. A cluster of lakes, of which the largest are Lough Sour and St. John's Lough, occupies a tract of about 6 miles in length on the north of the limestone district near Ceshcarrigan; and there are upwards of fifty other lakes, varying from a quarter of a mile to a mile in length, scattered throughout the same portion of the county.

That part of the basin of Lough Allen which is in this county is bounded by the Slieve-an-Ierin Mountains on the east, by the Lackagh range on the north, and by a part of the Munterkenny and Braulieve ranges on the west. The group of Slieve-an-Ierin extends from above Drumshambo into the west part of Cavan, a distance of about 12 miles. Its highest point, called Slieve-an-Ierin, is at its southern extremity, and has an altitude of 1922 feet. The summits of Bencroy and Larganacailagh, which are farther north, rise to 1707 and 1494 feet respectively. East of the two latter mountains the Yellow River descends by a broad and precipitous channel to Lough Garadice; and the Shannon, which has its source in Cavan, enters the northern extremity of Lough Allen through the valley intervening between Larganacailagh and the Lackagh group. The highest summit of the Lackagh range is 1448 feet, and between it and the Munterkenny group a wide valley intervenes watered by the Diffagher, the outlet of Lough Belhavel, which lies on the watershed between Lough Allen and the bays of Sligo and Donegal. The Munterkenny Mountains, on the west shore of Lough Allen, attain the height of 1377 feet, and bound on the north the valley of the Arigna, which river for some distance constitutes the boundary between Leitrim and Roscommon, and runs into the southern extremity of Lough Allen through a portion of the latter county. Lough Allen is 8 miles in length, and from 1 to 3 miles in breadth, and lies nearly north and south. The Shannon issues in a noble stream from its southern extremity, at which point the scenery is highly picturesque, as well as at the opposite end of the lake, where several islands and peninsulas diversify the outline. The general aspect of the lake however is gloomy; the high grounds that bound it are bleak and deficient in grandeur, rising gradually and with gentle slope from its shores. Its summer level is 159 feet, and its winter level 163 feet above the level of the sea at low water. The Shannon, in its passage from Lough Allen to the extremity of the county has a fall of 30 feet, which is principally distributed over the first 7 miles of its course, where the difficulty of navigation has been obviated by the construction of lateral canals. By the improvements lately effected by the commissioners for the improvement of the Shannon, steamers of considerable size now ply between Killaloe and the northern extremity of Lough Allen.

Beyond the range of Lackagh and the table-land occupied by the Lake of Belhavel rise four detached mountain groups, including, with the heights of Lackagh, five distinct valleys, which unite in a pleasantly-situated plain occupying nearly the centre of the northern division of the county. The town of Manorhamilton and the village of Lurganboy are situated in the common terminus of these valleys, and through these towns the entire inland communication between Leitrim and Sligo and the northern counties is carried on. Of the valleys the best defined is that of the Bonnet. The Bonnet, rising in Lough Glenade, near the north-western extremity of the county, runs south-east, between the heights of Dartree on the north and a prolongation of the Benbulbin range in Sligo on the south, to within a mile of Manorhamilton, where it is joined by the Owenmore on the left bank. The river then sweeps round nearly in a semicircular course past Dromahair into Lough Gill, the waters of which are discharged by the Garogue River into the Bay of Sligo. The valley of the Bonnet between Dromahair and Manorhamilton is inclosed by the brow of Lackagh on the east, and on the west by the mountain of Benbo (1400 feet) and its subordinate range. The slopes on each side of the valley are well wooded, and the whole scene is one of considerable beauty. North of the group of Benbo lies the valley of Glencar, watered by the Differen, which runs westward through Lough Car into Sligo Bay. Glensfarn, another valley terminating in the open country round Manorhamilton, lies nearly due east and west, and is watered by a considerable river running eastward into Lough Macnean, which is included in the basin of Lough Erne. This valley is bounded by the northern brow of Lackagh on the south, and by the heights of Docey on the north, the mountains rising on each side to a height of 1400 to 1500 feet. Steep sides and flat extended summits are the characteristics of all the mountains in this district of Leitrim.

Loughs Macnean and Melvin stretch along the north-eastern boundary of the county, separating it from Fermanagh, in which they partly lie. Lough Macnean is 4 miles long by 2 miles broad; it is 172 feet above the sea-level, and is connected by a short stream about half a mile in length with Lough Nitty (sometimes called Lower Lough Macnean), whence the superfluous waters of both lakes are carried to upper Lough Erne by the Arney River. [FERMANAGH.] Lough Melvin is a dreary sheet of water 8 miles long by 2 miles broad, diversified by four small wooded islands. It lies between the north-eastern base of the Dartree Mountains in Leitrim, and the bleak moorlands of the barony of Magheraboy in Fermanagh on the east. The Leitrim shore of the lake is skirted by the road from Garrison to Kinlough, over which Aghabohad, one of the Dartree summits, frowns from a height of 1346 feet. The sides of these mountains present numerous ravines formed by the action of the streams that rush into the lake. At the western extremity of Lough Melvin is the village of Kinlough, in an open tract expanding towards the sea, and drained by the Drowes River, which carries the surplus waters of Lough Melvin into the Bay of Donegal at the hamlet of Bundrowes. The river Duff, which separates Leitrim from Sligo, runs into the Bay of Donegal at the eastern extremity of the coast-line. The coast

extends for about six miles along the south shore of Donegal Bay. It is for the most part a rocky bluff, rising above a rough stony beach, and is exposed to the whole swell of the Atlantic. There is no shelter on any part of the coast. There are salmon fisheries at the mouths of the Drowes and Duff rivers.

Communications.—A road runs from Bundrowes, through Glenade to Manorhamilton, and thence by the west side of Lough Allen to Carrick-on-Shannon and Drumsna, whence the Dublin and Sligo road runs along the left bank of the Shannon. The other principal roads in the northern district pursue the lines of the several valleys radiating from Manorhamilton. The chief roads in the southern district run east and west, connecting the towns and villages which occupy the northern and southern margins of the open limestone country.

Geology, Mineralogy, &c.—The varieties of surface in Leitrim indicate the internal structure with peculiar precision. The flat-topped mountain groups showing steep escarpments and natural terraces belong to the millstone-grit or Lough Allen coal-formation. The undulating open country has the stratified limestone for its substratum, and the rough coarse land, when not belonging to the Lough Allen basin, generally consists of sandstone, conglomerate, and grauwacke. Where the millstone-grit formation terminates, the stratified limestone reappears, and occupies the greater portion of the district watered by the Bonnet and its tributaries. The grit and sandstone occur however in the detached formation of Dartree, and a stripe of yellow sandstone and conglomerate intervenes between the external limit of the limestone and the sea. The only primary rock within the county occurs along the western boundary of the valley of the Lower Bonnet, where the granitic and trap formation of the Ox Mountains of Sligo is prolonged to within a few miles of Manorhamilton. Benbo, which rises about the middle of this range, is a mass of gneiss passing into mica-slate.

The smelting of iron was carried on in several places round Lough Allen while the wood of the native forests lasted. The iron-ore of the Lough Allen basin, and especially that raised in the Arigna mines, is very rich, yielding when roasted 58.2 per cent. of metallic iron. The chief workable beds of coal are in the Slieve-an-Ierin Mountains and in the valley of Arigna, where they are worked to some extent for smelting purposes. Lead-ore is abundant, but no mines are now worked. Copper-ore and manganese are found on the north side of Benbo. Fullers'-earth, potters'-clay, steatite, and marls are also obtained in the district between Dromahair and Lurganboy. Chalybeate springs are numerous on the borders of the Lough Allen district.

Climate, Soil, Agriculture.—The climate is raw and damp in the northern division of the county. In the sheltered vicinities of Dromahair and Manorhamilton, there is a kindly soil resting on a limestone bottom, and the vegetation is luxuriant. The southern division is more genial, if not less damp, than the northern. The soil is for the most part stiff, cold, and very retentive of wet; but fertile in the valleys where the subsoil is limestone. The best tracts are along the Shannon, Rinn, and Bonnet rivers, and in the vicinity of Drumsna, Mohill, Dromahair, and Manorhamilton. The principal crops are potatoes, oats, and hay. In 1853 there were 84,695 acres under crops, namely:—wheat, 258 acres; oats, 29,516; barley, bere, rye, peas, and beans, 516; potatoes, 22,601; turnips, 1635; mangels, carrots, parsnips, cabbage, and green crops, 1746; flax, 1316; meadow and clover, 27,127. Including an equivalent for detached trees, in 1841 there were 4528 acres growing timber. The system of agriculture is rude and backward in the extreme. Leitrim is more a grazing than an agricultural county. Large quantities of young stock, chiefly horned cattle, are raised on the pasturable plains of the southern district. On 14,206 holdings in 1852 there were 3188 horses, 5100 mules and asses, 77,898 head of cattle, 10,450 sheep, 15,729 pigs, 4789 goats, and 167,571 head of poultry. The total value of the live stock thus enumerated was estimated at 575,622*l.* Turf fuel is everywhere abundant.

The occupations of the people are almost entirely agricultural; linens and coarse woollens for domestic use are the only manufactures of any importance. Some coarse pottery is made at Dromahair. The trade of the county is chiefly in corn, butter, and live stock.

Divisions and Towns.—The county is divided into five baronies:—Rossclogher, north; Dromahair, between Rossclogher and Lough Allen; Carrigallen, south-east; Leitrim, south-west; and Mohill, south. CARRICK-ON-SHANNON, MANORHAMILTON, and MOHILL, the only towns of any importance in the county, are noticed under their respective titles.

The following places may be noticed: the populations are those of 1851:—*Balinsmore*, a neat and thriving market-town with 704 inhabitants, is situated on the Yellow River, nearly mid-way between Lough Garadice and St. John's Lough, 14 miles N.E. from Carrick-on-Shannon. It contains a court-house in which quarter and petty sessions are held, a bridewell, a church, and chapels for Roman Catholics and Methodists. There is a dispensary. The market is held weekly on Tuesday, and fairs are held on May 12th and November 12th. *Carrigallen*, is situated 16 miles E. from Carrick-on-Shannon, and consists chiefly of one long miserable street: population, 337. A market is held weekly on Monday, and five yearly fairs are held. In the neighbourhood are Drumsillagh, the residence of A. O'Brien, Esq., and Cloncarrick Castle, the seat of H. Simpson, Esq. *Cashcarrigan*,

a poor village 8 miles N.E. from Carrick-on-Shannon, is situated in the barony of Leitrim, and is noticed only as being famous for its stock fairs, of which 10 are held in the year. *Dromod*, a village 10 miles S. by E. from Carrick-on-Shannon, is prettily situated on the eastern shore of Lough Boffin, an expansion of the Shannon, and has a population of 213. The neighbourhood of this town presents, perhaps, the finest scenery in the county. Six annual fairs are held in Dromod. *Dromahair*, a small neat village of 346 inhabitants, is prettily situated in the valley of the Bonnet, 22 miles N. by W. from Carrick-on-Shannon. Here are the ruins of an old castle of the O'Rourks, and a fortified mansion, erected by Sir E. Villiers in 1626, which has been of late partially repaired. Near the village are the ruins of Creevelea Abbey, and some other conventual remains. *Drumkeeran*, population 400, a village in the barony of Dromahair, about 2 miles from the northern extremity of Lough Allen, has a church, a Roman Catholic chapel, a dispensary, and a petty sessions court. A market is held weekly on Wednesday, and fairs are held eleven times in the year. *Drumshambo* is situated half a mile east of the southern extremity of Lough Allen: population, 522. There are a dispensary and a petty sessions court in the town. The completion of the navigation of the Shannon, and the formation of a harbour at the junction of the short lateral canal of the Shannon with the southern extremity of Lough Allen, have rendered this an improving place. A market is held weekly on Friday, and nine yearly fairs are held. *Drumsna*, 4 miles S.E. from Carrick-on-Shannon, population 384, is beautifully situated on the mail-coach road to Dublin, and on the left bank of the Shannon, which is here crossed by a bridge of 8 arches. The village, which is nearly surrounded by the plantations of Mount Campbell, the demesne and residence of J. Rowley, Esq., is neatly built, and has a comfortable, thriving appearance. The river bank is formed into quays, where agricultural produce is shipped. *Jamestown*, a small village of 212 inhabitants, is situated about 1 mile W. from Drumsna, and on the left bank of the Shannon. Jamestown was formerly a walled town and a parliamentary borough, and returned two members to the Irish House of Commons. Of the fortifications there remain some old walls and a gateway; there are also some vestiges of the castle built here by Sir C. Coote in 1623 to command the passage of the Shannon. The river is here crossed by a bridge of seven arches. The town was named in honour of James I., who granted it a charter of incorporation in the 19th year of his reign. The Shannon between Drumsna and Jamestown forms a beautiful curve, the concave side of which is entirely occupied with the extensive well-wooded park of Charlestown, the seat of Sir Gilbert King, Bart. A market is held on Saturday, and four fairs are held in the year. *Killyclogher*, population 321, a village possessing a market, which is held weekly on Friday, is situated near the northern border of the county, about 7 miles N.E. from Manorhamilton. *Leitrim*, population 256, besides 182 in an auxiliary workhouse, a miserable village which gives name to the county and barony of Leitrim, is situated on the left bank of the Shannon, 3 miles N.N.E. from Carrick-on-Shannon, and is joined by a bridge to the hamlet of Battlebridge on the Roscommon side of the river. A canal joins the Shannon at Leitrim with the southern extremity of Lough Allen. *Lurganboy*, a small village, is situated about 2 miles W. from Manorhamilton, at the base of Benbo Mountain, and in the beautiful vale of the Bonnet. Five fairs are held here in the year. Lead and copper ores have been found in the mountain above Lurganboy. *Newtowngore*, population 193, about 4 miles N. by W. from Carrigallen, has a market, which is held weekly on Friday from September to March. *Tullaghan*, a small village on the sea-coast about a mile W. from Bundrowes, is frequented by seabathers in summer, and has on the land side several marine villas.

Leitrim lies partly in the diocese of Ardagh, but chiefly in that of Kilmore. Prior to the Union it returned six members to the Irish parliament; it now returns two members to the House of Commons. Leitrim county is in the Connaught circuit. The assizes for the county are held at Carrick-on-Shannon, where the county jail and court-house are situated. Quarter-sessions are held at Carrick-on-Shannon, Ballinamore, and Manorhamilton; the two last have court-houses and bridewells; petty-sessions are held in 13 places. The district lunatic asylum, to which the county is entitled to send 34 patients, is at Ballinasloe, in the county of Galway. The medical charities of the county comprise the county infirmary at Carrick-on-Shannon, a fever hospital at Mohill, and 10 dispensaries. The Union workhouses are at Carrick-on-Shannon, Manorhamilton, and Mohill. Loan funds are in operation in Annaduff and Cloone. The constabulary force, numbering 327 men and officers, has its head-quarters at Carrick-on-Shannon, where also are military barracks. The staff of the county militia is stationed at Mohill. Stipendiary magistrates are stationed at Manorhamilton and Ballinamore; revenue police at Drumshambo, Manorhamilton, Drumkeeran, and Mohill. The county is in the Military District of Belfast. In September 1852 there were 116 National schools in operation, attended by 6056 male and 5259 female children.

Leitrim anciently formed a portion of the territory called Breifne, or Brenny O'Rourk, to distinguish it from Brenny O'Reily, the present county of Cavan. The O'Rourks maintained their independence until the reign of Elizabeth, when Leitrim was first reduced to shire-ground. During the earlier period of Anglo-Irish history it is said to have formed

part of the county of Roscommon. Brian O'Rourk broke out into open rebellion in 1588, and assisted by MacSweeney and a body of Munster troops held the castle of Dromahair until compelled to retreat towards Donegal by Sir Richard Bingham and the Earl of Clanricarde. From thence he fled to Scotland, where he was delivered up to the English authorities by James VI., carried to London, and executed for treason. On the breaking out of O'Donnell's rebellion in 1596, Teague O'Rourk, the son of Brian, joined the insurgents, and in conjunction with Maguire, prince of Fermanagh, defeated Sir Conyers Clifford in a pass of the Curlew Mountains, with considerable loss to the English, in the month of June 1597. He finally submitted in 1603, and took out a patent of the residue of his estate, which was allotted to him on an English tenure. On the breaking out of the rebellion of 1641, the Irish, headed by Sir Owen O'Rourk, seized all the places of strength in the county, with the exception of the castles at Carrick-on-Shannon and Manorhamilton. The confiscations which followed on the termination of these wars included almost all the lands that had been allowed to remain to the native proprietors under former attainders, and may be said to have extinguished the family of O'Rourk.

The remains of antiquity in Leitrim are not very interesting. There are some ruins of the abbey of Fenagh, founded by St. Cailin in the 5th century, and celebrated during the early period of Irish church history as a school of divinity. The abbey of Creevelea, near Dromahair, founded by the wife of Owen O'Rourk in 1508, was an extensive pile, of which the principal walls are still standing: it contains some curious tombs and monuments. O'Rourk's Hall at Dromahair, Castle Longfield, Cloncarrick Castle, Castle Car, and several others now in ruins, belonged to the O'Rourks. Amongst the more modern fortified structures the most perfect is the castle of Manorhamilton, erected in the reign of Elizabeth.

LEIXLIP. [KILDARE.]

LEMAN LAKE (Genfersee, Lake of Geneva), one of the largest lakes in Europe, extends in the form of a crescent from east to west between Switzerland and Savoy. Its northern or convex bank, which forms an arc of about 53 miles in length, not reckoning the sinuosities, belongs to the Swiss canton of Vaud, and the southern or concave side, forming an arc of 46 miles, belongs for the greater part to Savoy, the canton of Geneva possessing about 8 miles of it at the south-western, and the canton of Valais 4 miles of it at the south-eastern extremity. Its breadth varies greatly, being between 8 and 9 miles in the middle, 4 miles towards the eastern extremity between Vevay and St. Gingouph, 3 miles in its western part opposite Nyon, after which it becomes narrower, being reduced to 1 mile just before reaching Geneva. This narrow part, which is about 14 miles in length from Nyon to Geneva, is called the Little Lake, and more especially the Lake of Geneva. The greatest depth of the Leman below the cliffs of Meillerie, on the Savoy shore, is nearly 1000 feet; it is 500 feet deep near the castle of Chillon, on the opposite shore, and from 600 to 300 feet in other places. The lake seldom if ever freezes; the temperature of its water below 150 feet depth is 41° of Fahrenheit. Its surface is 1150 feet above the level of the sea, but in summer it rises sometimes from 6 to 8 feet higher, owing to the melting of the snows in the Alps. The water reflects a bright azure tinge like that of the Mediterranean Sea. The Rhône, coming from the Valais, enters the lake at its south-east extremity, where the waters of the river are muddy coloured; and they issue out of the lake again at Geneva, clear and of a deep blue tinge. The other rivers that enter the lake are—1, the Dranse on the Savoy side, coming from the Alps of Faucigny; 2, the Venoge, on the northern or Swiss side, which rises in the Jura and enters the lake between Morges and Lausanne; 3, the Vevayse, a mountain torrent, which rises in the canton of Freyburg, and enters the lake near Vevay. Though the Leman Lake does not abound so much with fish as most of the other Swiss lakes, still it affords some very fine and large sorts, especially trout, pike, carp, perch, and a species of salmon called 'omble chevalier,' which is much esteemed. The east and north-east winds are the most violent on this lake, and when they blow fresh for some time the waves rise to a considerable height, and the surface of the lake resembles an agitated sea. The most dangerous wind is the Bornand, or south wind, which blows in sudden gusts from the mountains of Savoy. A regular communication is kept up between the towns along the shores of the lake by means of steam-boats. The scenery around this lake has been always a subject of admiration to travellers. The mountains of the Chablais, being a lower offset of the Alps, rise dark and abrupt along the southern shore, some of their summits being 5000 feet above the lake, and beyond them, through their openings, the spectator from several points of the Swiss coast sees the higher Alps of Faucigny and Mont Blanc itself covered with perpetual snow. The eastern extremity of the lake presents the wild and imposing scenery of the narrow deep entrance into the Valais between the lofty groups of the Dent de Morcle and Dent du Midi, between 8000 and 9000 feet high above the lake, while the northern or Swiss coast displays a milder and more cheering landscape of hills rising, in the form of an amphitheatre, covered with vineyards and gardens, and studded with numerous towns and villages having all the appearance of comfort and industry.

LEMBERG, LEOPOL, LWOW, the capital of the circle and of the crownland or kingdom of Galicia, is situated in 49° 52' N. lat., 24°

E. long, in a narrow valley which winds round the southern base of the Sandberg, a hill crowned with the ruins of the old castle of Lowenburg. The situation is pleasant, but not suited to a great city, there being no large river, but only a small stream, the Peltew, which is dry in summer. The city is 868 feet above the level of the sea. The population, exclusive of the military and foreign students, exceeds 56,000, nearly 20,000 of whom are Jews. When Lemberg belonged to Poland it was a very ill-built place, consisting chiefly of wooden houses, but it has been extremely improved since it came into the possession of Austria. There are now many handsome buildings, broad straight streets, and lofty houses built of freestone, which, with the cupolas and steeples of the cathedrals and churches, give the city, especially when viewed at a distance, an air of grandeur. The city was formerly strongly fortified, and made a successful defence in 1666 against the Russians, and in 1672 against the Turks. In 1704 Charles XII. of Sweden took it by storm, and had Stanislas Leczinski, who was a native of the town, crowned king of Poland in the cathedral. Under Joseph II. the fortifications were pulled down, and low ramparts erected instead, which are planted with trees and laid out in public walks. The city is small, and surpassed in size by any one of its four suburbs—Halicz, Krakow, Zolkiew, and Brody—which contain also the largest houses. There are in Lemberg a handsome cathedral and 13 other Roman Catholic churches, an Armenian and a Greek cathedral, a Lutheran chapel, 3 synagogues, and 9 convents. Besides being the residence of the Roman Catholic, Armenian, and Greek archbishops, of the Lutheran superintendent, and a chief rabbi, and all the chief military and civil authorities of the crownland, Lemberg has a university, two gymnasia, a Roman Catholic and a Greek Catholic theological seminary, numerous schools, and several large hotels, with many hospitals, infirmaries, and other charitable institutions. In the central market-place stands the rath-haus, or town-hall, completed in 1835. In the Dominican church is a monument by Thorwaldsen to the Countess of Dunin-Borowska. The Armenian cathedral and archiepiscopal palace form a handsome pile of buildings in the Krakow suburb. The Jews occupy one of the suburbs exclusively, where they have the finest synagogue in the Austrian empire. The University of Lemberg is one of the most numerous attended in Europe; it has 4 faculties—Catholic theology, law, medicine, and philosophy, taught by 35 professors: the number of students in 1850 was 4203. The university library contains 50,000 volumes. The academical gymnasium in the same year had 22 professors and 822 pupils, and the Dominican gymnasium 21 professors and 559 pupils. There is a museum of the productions of the crownland in the town; a public library of 60,000 volumes rich in Polish literature; and a theatre. The manufactures of broadcloth, cotton-goods, and leather have become much more extensive and important within these few years than they formerly were. Lemberg is the most important trading town in Galicia. The commission trade is very extensive, and an immense amount of business is done at the annual fair called Dreikönigs Messe commencing on the 6th of January, and in the six weeks beginning on the 14th of January, which is called *Contractzeit* ('contract time'), when the nobility of Galicia and a vast concourse of strangers, Christians and Jews, resort to this place. The transit-trade and the corn and cattle markets of Lemberg are very important. Lemberg is connected with Vienna by electro-telegraphic wires.

LEMGO. [LIPPE DETMOLD.]

LEMNOS, now STALIMENE, one of the northern islands of the Ægean Sea, situated nearly half-way between Mount Athos and the entrance of the Dardanelles, and about 22 miles south-west of Imbros. Its area is about 147 square miles, and its population 8000, all Greeks, with the exception of the Turkish garrison and governor. The harbours of Sant' Antonio and Paradiso, on the south and north sides of the island respectively, divide it into two peninsular portions. The surface is hilly. The western and more fertile part of the island produces wine and corn, hemp, flax, and fruits; but it is deficient in timber-trees and in wood for fuel. The principal harbour, called Sant' Antonio, in the south-west part of the island, is large and safe. The principal town, called Lemnos, or Stalimene, is a small place on the west coast with about 1000 inhabitants, ship-building docks, and a castle in which the Turkish governor and garrison reside.

Lemnos is known in ancient mythology as the spot on which Vulcan fell after being hurled down from heaven, and where he established his forges. A volcano which once was burning on the island may have afforded ground for the fable. The Pelasgi, being driven out of Attica, are said to have taken possession of Lemnos; and it is also said that, having stolen some Athenian women and carried them to the island, the children of these women despised their half-brethren born of Pelasgian women: in consequence of which the Pelasgians took the resolution of murdering both the Athenian women and their children. On account of these atrocities Lemnos had a bad name among the ancient Greeks. The Athenians, led by Miltiades, took Lemnos after their conquest of the Chersonesus. (Herod., vi. 140.) A labyrinth is mentioned by Pliny ('Hist. Nat., xxxvi. 19) as having existed on the island, like those of Egypt and Crete, adorned with 150 columns, and with gates so well poised that a child could throw them open. Pliny says that remains of it existed in his time. Lemnos had two towns, Hephæstia and Myrina: the present castle is supposed to be on the site of the latter.

GEOL. DIV. VOL. III.

The 'terra sigillata' of Lemnos is a kind of earthy substance which was once and is still supposed by Greeks and Turks to have wonderful medicinal properties. It is dug out of a hill in the island with great ceremony and at particular times, in presence of the Turkish governor and the Greek clergy, and is shaped into little balls stamped with the governor's seal. It is also used for tanning leather.

LENA, RIVER. [SIBERIA.]

LENHAM. [KENT.]

LENKORAN. [GEORGIA.]

LENNEP. [DÜSSELDORF.]

LENNOXTOWN. [STIRLINGSHIRE.]

LEOMINSTER, Herefordshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Leominster, is situated on the left bank of the river Lugg, in 52° 13' N. lat., 2° 43' W. long, distant 13 miles N. by W. from Hereford, and 137 miles N.W. by W. from London. The population of the borough in 1851 was 5214. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The living is a vicarage in the archdeaconry and diocese of Hereford. Leominster Poor-Law Union contains 25 parishes and townships, with an area of 60,271 acres, and a population in 1851 of 14,910.

Leominster, locally called Lemster, has a considerable trade in wheat. There are some neat modern houses. The market-place is old and inconveniently situated. The Butter Cross is a quaint structure of wood and plaster, erected about two centuries ago. The House of Industry was originally part of the buildings of a priory. The church, a handsome edifice, was rebuilt about the beginning of the last century: there are chapels for Baptists and some other Dissenters. The Free Grammar school, founded by charter of Queen Mary in 1554, is under the patronage of the corporation, who pay 20*l.* a year to the master; but the school has been for a number of years a private school. In the town are National schools and a savings bank. The market-day is Friday: eight fairs are held in the course of the year. A county court is held in the town. Races are annually run at Leominster in the month of August.

LEON, one of the old provinces of Spain, previously a kingdom, is bounded N. by Asturias, S. by Estremadura, E. by Castilla la Vieja, and W. by Galicia and Portugal. It is situated between 40° 4' and 43° 4' N. lat., 3° 44' and 7° 13' W. long. The greatest length north to south is about 175 miles; the greatest width east to west is about 155 miles, but the average width is less than 100 miles. The area is 20,059 square miles. The population in 1849 was 1,098,833. It is now divided into five modern provinces, as follows:—

Provinces.	Area in Square Miles.	Population in 1849.
Leon	5,894	238,833
Salamanca	5,680	240,000
Valladolid	3,239	210,000
Zamora	3,563	180,000
Palencia	1,733	180,000
Total	20,059	1,098,833

Surface.—The modern provinces of Leon and Palencia occupy the northern part of the old province. The provinces of Zamora and Valladolid fill up the central part (that of Zamora including the district of Toro). The province of Salamanca occupies the southern part.

The province of Leon is divided from Asturias by that part of the Pyrenean chain which is called the Asturian Mountains, whence several offsets extend southward into Leon, especially one great mountain range called the Sierra de los Cilleros, which, commencing at the Peña de Peñaranda, a summit 11,000 feet high, unites with the range of Monte Teleno, and extends into Portugal, separating the basin of the Miño (Minho) from that of the Duero (Douro). At the point, near Braganza, where this mountain range reaches the boundary of Portugal it divides into two branches, one of which takes a westerly direction through Portugal, and the other, called the Sierra de Culebra, an easterly direction, forming for some miles the boundary between the provinces of Leon and Zamora. Also, at the point where the Asturian Mountains enter Galicia, another mountain-range runs southward from the Peña de Peñamarela (9450 feet high), at first bearing to the west, but afterwards to the east till it joins the Monte Teleno north of Braganza. Thus, at the north-western angle of Leon there is a district hemmed in by mountains forming a sort of circumvallation round a central concavity, which was probably once a large lake, the waters of which burst a way through the narrow gorge where the Sil is joined by the Cabrera. The district inclosed by this amphitheatre of mountains is called the Vierzo, and is about 40 miles in length by 30 miles in width. Besides this mountainous district several other offsets from the Asturian Mountains enter the provinces of Leon and Palencia, but they soon sink down and terminate in a lofty and extensive plain, which is a portion of the great table-land of Castilla la Vieja. This plain is not level, but undulating, intersected by ravines, and cut by numerous river-channels. The south part of the province of Salamanca is mountainous, being separated from Estremadura by

the Sierra de Gredos and Sierra de Gata, the former of which occupies the south-eastern angle. The great central plains of the province consist for the most part of the fresh-water limestone of Castilla la Vieja, which furnishes the building material for Valladolid and other towns.

Rivers.—The province belongs entirely to the basin of the Duero, with the exception of the small portion at the north-western angle, which is cut off by the Sierra de Cilleros: this portion belongs to the basin of the Miño, and is watered by the Sil and its tributaries.

The Duero crosses the central part of the province in a direction from east to west, and here it receives many of its largest affluents. On the right or northern bank it receives in the province of Valladolid the Pisuerga with its tributaries the Carrion and the Esquivia; in the province of Zamora it receives the Rio Seco with its affluent the Sequillo, and the Esla, which has many tributaries, the largest of which are the Tera, the Orvigo, the Bernesga, and the Cea. All these rivers have a southern course from the Asturian Mountains and the ridges connected with them. When the Duero reaches the boundary of Portugal it takes a southern direction, and then receives on its left or eastern bank the Tormes, the Agueda, and other smaller rivers, all of which rise in the Sierra de Gredos and Sierra de Gata, and have a north-western course. [DUERO.]

Climate and Productions.—The climate is mild in the spring and hot in the summer, but the cold in winter is severe. The Bierzo and the other mountainous parts of the province are well wooded with chestnut, walnut, and other trees. The extensive plains in the central part of the province produce abundance of corn, though the agriculture is very imperfect. These wide plains are without trees, and almost without houses, dreary and wearisome to the traveller, dusty in summer and muddy in winter. The villages are built with mud mixed with straw; most of the houses are without windows, and where there are windows they are seldom glazed. A large door answers all purposes. Wine and flax also form part of the produce, and fruit and vegetables are grown in abundance. Large herds of cattle and flocks of sheep are reared, and the asses and mules of this province are celebrated throughout Spain for their size and usefulness as beasts of burden. There are few manufactures: coarse woollen and linen cloths are made, and much flax is spun by the distaff, and bleached, and forms an article of export.

Towns.—The city of Leon, now a decayed town, with a population of only 5750, was formerly the capital of the kingdom of Leon and of the ancient province. It is now the capital of the modern province of Leon. It is situated in 42° 30' N. lat., 5° 35' W. long., about 180 miles N.W. from Madrid. It stands in the angle formed by the junction of the Torio with the Bernesga, in a pleasant district abounding in fruit-trees. It is the see of a bishop not subject to any primate, and the residence of the provincial authorities. The walls are much decayed, but are best preserved on the north side, where they are flanked by numerous semi-circular towers not higher than the walls themselves. A wall runs also through the centre. The city still looks well at a distance, and the approach over the bridge passes along a pleasant alameda; but the interior is gloomy, dull, and ruinous. The cathedral is the boast of Leon. It is an early specimen of pointed gothic architecture, built of a beautiful cream-coloured stone, and is an exceedingly light and elegant structure. The west entrance has an open plaza in front, with a fountain. It has a tower on each side, three doorways of pointed arches, and a noble rose-window surmounted by a pinnacle. The south front has also a plaza, and three pointed doorways. The north entrance has been modernised with balustrades. The east end is semicircular, with flying buttresses and pinnacles. All the fronts are enriched with elaborate sculpture. The interior is light and simple, but is now without pictures. In its pristine state it must have been one of the most beautiful cathedrals then existing in the world. Opposite the cathedral is the bishop's palace. The church of San Isidoro was begun in 1063; the burial place of the kings of Leon is at the west end of the church; it is low and dark, and contains many tombs of wood and stone. Outside the town, near the bridge over the Bernesga, is the convent of San Marcos de Leon, which formerly belonged to the order of Santiago. It is of the renaissance style, and is of very great extent, though one wing was never commenced. There are still some of the palaces of the old nobles of Leon, the Gusmans, the Condes, the Ponces; and there is a Casa de Ayuntamiento, or town-hall, built in 1585. The Casa de Espositos (hospital for orphans) is a very large building outside the town, north of the rose-perfumed alameda.

Astorga, in the province of Leon, 32 miles W. by S. from the city of Leon, is all that remains of the *Asturica Augusta* of the Romans, which in the time of Pliny ('Hist. Nat.,' iii. 3) was "urbs magnifica," a magnificent city, capital of the Astures. Even now it presents evidences of high antiquity, in its walls and in two Roman tombs near the Puerto de Hierro (Iron-Gate). The walls are similar to those of Leon, but are in a more perfect state, flanked by many semi-circular towers, none of which rise higher than the walls. It is the see of a bishop, and contains a population of about 3000. The cathedral, built in 1471, has been disfigured by repairs and alterations. It has two towers, one of gray-stone, the other of red-stone. The retablo, a carved altar-piece representing subjects from the life of the Saviour, was executed in 1569 by Gaspar Becerra, and is perhaps the

most remarkable work of the kind in the Peninsula, but has been injured by re-painting. Astorga has long been the chief town of the Maragateria, or country of the Maragatos, a peculiar race of people, who are almost all carriers (arrieros), celebrated for their fine beasts of burden (asses and mules), and distinguished for the extent and honesty of their transactions. The Maragateria comprises a district of about 200 square miles, with 36 villages. For an account of this singular people, see Ford's 'Handbook,' vol. ii. p. 593.

Benavente, in the province of Zamora, 38 miles S. from Leon, contains a population of 2600. It is situated in the angle formed by the junction of the Orvigo with the Esla, but not close to either river. It is surrounded by mud-walls, and has a fine old ruin of a castle, but the town is now a poor place. The church of Santa Maria has a remarkable tower, and round Saxon arches.

Ciudad Rodrigo, a fortified town in the province of Salamanca, 60 miles S.W. from the city of Salamanca, and 16 miles E. from the frontier of Portugal, is situated on a slight eminence, on the right or eastern bank of the Agueda. A bridge of seven arches crosses the river. The town contains a population of 4700, and is rather a poor place. It is the see of a bishop, and has a cathedral, begun in 1190, and enlarged in 1538; it was much injured during the sieges of the fortress. The fortifications consist of a wall, ditch, and citadel. Though not in itself very strong, it was considered, during the Peninsular War, as a military position of the highest importance. It was taken by Massena from the Spaniards July 10th, 1810, and retaken from the French by Wellington, January 19th, 1812.

Ledesma, in the province of Salamanca, 22 miles N.W. from the city of Salamanca, stands on the left or south-west bank of the Tormes, over which there is a fine bridge built on Roman foundations. The walls of the town are of singular construction, and are thought to be older than the times of the Romans. The town is very ancient, and many inscriptions have been found in and around it. Population, 2000. The warm baths of Ledesma are about 7 miles to the south-east.

Medina del Campo, in the province of Valladolid, 30 miles S.S.W. from the city of Valladolid, is the chief town of the Campo, or level district, which produces corn in abundance. This town was formerly one of the principal cities of Spain, and the residence of the court, but is now an inconsiderable place with a population of 2800. The great square is remarkable, surrounded by a massive piazza, over which rise dark-looking buildings of great antiquity. Ruins are scattered round the town on every side, attesting the former greatness of this city of the plain.

Medina de Rio Seco, in the province of Valladolid, and 27 miles N.W. from the city of Valladolid, stands on the right or north-west bank of the Sequilla, the largest affluent of the Rio Seco. It is a very ancient town, with narrow ill-paved streets. The population is 4700.

Palencia, capital of the province of Palencia, 30 miles N.N.E. from the city of Valladolid, is an ancient city, which had a university founded in the 10th century, but transferred to Salamanca in 1239. It stands on the east bank of the Carrion, over which there is a good stone bridge. It is inclosed by old walls, which are surrounded with alamedas. The town stands in the midst of wide treeless plains, but is well situated for commerce, and is famous for its trade in wool. It contains a cathedral of light and elegant architecture, built after the model of that of Leon, 1321-1504, and containing some beautiful paintings by Murillo. The hospital of San Lazaro was once the palace of Rodrigo Diaz, the Cid Campeador, who was here married to Ximena.

Ponferrada, in the Bierzo of the province of Leon, 65 miles W. from the city of Leon, stands in the angle formed by the junction of the Baeza with the Sil. The bridge here was built for the passage of the pilgrims to Santiago in Galicia, and the town afterwards belonged to the Knights Templars. Population, 2500.

Sahagun, in the province of Leon, 37 miles S.E. from the city of Leon, stands on the east bank of the Cea. There are remains of walls and a castle. The celebrated Benedictine abbey of San Facundo was founded in 905, and refounded by Alonso VI. The gothic church was finished in 1188. Alonso and his five wives were buried here. The marble sepulchre with a statue of the king is superb. There are other tombs. The abbey was plundered by the French in 1810. The population of this town is about 2500.

Salamanca is the capital of the province of Salamanca. [SALAMANCA.]

Toro, in the province of Zamora, 20 miles E. from the town of Zamora, and 40 miles N. by E. from Salamanca, is situated on the north bank of the Duero. It was formerly a city of importance, and capital of the province of Toro. It is inclosed by old walls, has a fine bridge over the Duero, and contains a ruined palace of the Infante Don Garcia, a palace of the dukes of Berwick, a town-hall, and a plaza-de-toros (bull-arena). The streets are tolerably wide, but dirty, and the iron-barred windows (rejas) give it a prison-like look. Population, 6900.

Valladolid is the capital of the province of Valladolid. [VALLADOLID.]

Villafranca del Bierzo, in the province of Leon, and 72 miles W. from the city of Leon, is a Swiss-like town, built in a mountain-gorge. It is surrounded by vine-plantations. At the entrance is a large

square fortress-mansion, and a large Franciscan convent on an eminence which over-looks the town. Population, 8000.

Zamora, capital of the province of Zamora, 66 miles S. by W. from the city of Leon, stands on the north bank of the Duero, which is here crossed by an old stone bridge. It is a city, and the see of a bishop, suffragan of Santiago. It stands on an elevation, and in Moorish times is said to have been inclosed by seven lines of walls, with a moat between each. It is now a decayed place, but contains a good deal of curious but dilapidated mediæval architecture. The cathedral is very ancient. It has a massive square tower, and has round Norman arches, with the capitals of the pillars of the same style. The present cloisters, of simple Doric, were completed in 1621. Near the cathedral is the bishop's palace. The palace of Doña Urraca, which occupies the extreme point of the city, is a ruin. The church of La Magdalena, which belonged to the Templars, and afterwards to the order of San Juan of Jerusalem, is a simple solid edifice of the 12th century. Outside the walls is a pleasant alameda, with fountains and stone benches. The population in 1845 was 9926.

History.—Leon was one of the earliest of those kingdoms which were formed by the Christians out of the territories conquered from the Moors. The kingdom of Asturias, or Oviedo, as it was afterwards called, having been established by Pelayo and his successors, Alfonso the Catholic (A.D. 789-757) extended it by the conquest of the towns of Leon, Astorga, Zamora, and others. These places however were held on the precarious tenure of either paying tribute to the neighbouring Moors, or having to defend them against their incursions. It was Garcia, son and successor of Alfonso III., who about A.D. 910 transferred the seat of sovereignty from Oviedo to Leon. Henceforth the Christian kingdom in northern Spain was called the kingdom of Leon and Oviedo, and was independent of the kingdom of Navarra, which was on the other side of the Ebro. The counts of Castilla, who had formed another Christian state between the two, were for a time dependent, nominally at least, on the kings of Leon, until A.D. 1025, when Castilla became an independent kingdom under a branch of the royal house of Navarra. The boundaries of all these kingdoms were of course not clearly or fixedly determined. Almost always at war, either with the Moors or among themselves, the extent of their respective territories varied with every reign, or rather with every fresh campaign. The male line of the kings of Leon in 1037 became extinct with Bermudo III., whose sister had married Fernando, king of Castilla, thus uniting the two crowns; but at his death, Sancho, one of his sons, had Castilla, and Alfonso had Leon and Oviedo. The two kingdoms remained distinct, although their crowns were sometimes worn by the same person, for nearly two centuries, until Fernando III., in 1230, permanently united them, assuming the title of King of Leon and Castilla, which his successors retained.

(Ford, *Handbook of Spain*; Mudoz, *Diccionario de España*; Hoskins, *Spain as it is*, 1851.)

LEONARD'S, ST. [HASTINGS.]

LEONESSA. [ABRUZZO.]

LEPANTO, GULF OF, a narrow sea 75 miles in length from west to east, extending between the northern coast of the Peloponnesus and the mainland of Greece. It is entered from the west from an outer bay called the Gulf of Patras, by a strait about a mile and a half wide (called the Strait of Lepanto, and sometimes the Little Dardanelles), which is defended by two castles—the castle of Morea, on the promontory anciently called *Rhium*; and the castle of Roumili, on the promontory of *Antirrhium*. This strait seems to have been not quite a mile wide in ancient times, according to the testimony of Thucydides, Strabo, and Pliny. A few miles inside of the straits, on the northern coast, is the town of *Lepanto*, the ancient *Nepactos*, and still called by the Greeks *Nepactos*, built on a hill, and commanded by a castle, with a good harbour, and between 2000 and 3000 inhabitants. The town was for a long time in possession of the Venetians, who fortified it and sustained several sieges against the Turks, to whom it was finally given up by Venice at the peace of Carlowitz in 1697, as well as the castle of Roumili and the fortress of Prevesa, while the republic retained the Morea. The country around Lepanto, which is part of ancient *Locris*, produces wine, oil, corn, rice, and tobacco. Leather is also an article of export.

The sea of Lepanto widens towards the middle to the breadth of 12 or 13 miles, exclusive of several deep bays which indent its northern coast, especially the Bay of Salona, the ancient Crissæan Gulf, which stretches about 8 miles to the north. The eastern extremity of the Sea of Lepanto terminates in two bays: that of Corinth to the south-east, where the Lechæum, or western harbour of Corinth once was; and the other, called the Alcyonian Sea, which is deeper and extends to the north-east, bordering on the territory of Megaris and stretching to the foot of Mount Cithæron. This last bay is now called Livadostro. The ancient Corinthian Gulf comprised the Gulf of Patras as well as the Gulf of Lepanto; its western boundary extending from the mouth of the Evenus, according to Strabo (or according to others, from the mouth of the Achelôus), to the promontory of Araxus now Kalogria, the most north-western point of Achaia. The whole of the inner bay east of Rhium and Antirrhium to the Isthmus of Corinth was originally called the Crissæan Gulf; it was also sometimes called the Delphian Gulf. In later times, when the name Corinthian Gulf (which most probably was originally

applied to the bay on which Lechæum, the harbour of Corinth, stood) was extended to the whole of the inner sea, the term Crissæan Gulf was generally confined to the inlet now called the Gulf of Salona. The inner gulf resembles a large inland lake; it is surrounded by mountains, and in scenery surpasses the most picturesque of the lakes of Switzerland and north Italy.

Lepanto has given its name to a celebrated naval battle between Turks and Christians, fought on October 7th 1571, in which the Ottomans were utterly defeated. The Christian allied fleet, consisting of Spanish, Venetian, Genoese, and Papal ships, about 210 in all, was commanded by John of Austria. The Turks, with about 800 sail, were commanded by Ali Pasha. The Christian fleet was stationed off the mouth of the Achelôus, at the entrance of the Gulf of Patras, when the Turkish fleet came out of the Gulf of Lepanto, to meet it. The Christians broke through the centre of the Turkish line, took the admiral's ship, and killed the admiral Ali. At the same time the Turkish right being repulsed in an attack on the Venetian ships the defeat of the Ottomans became complete. More than 8000 of the Christians were killed, and a still greater number were wounded. The Venetian commander, Barbarigo, who contributed greatly to the victory, was mortally wounded, and expired after seeing the Turks utterly defeated. The loss of the Ottomans was much greater, as the Christians gave no quarter during the heat of the battle. Several thousand Christian slaves, who were employed to row the Turkish galleys were liberated: 107 Turkish ships were taken, and most of the others were sunk; about 30 or 40 escaped. This defeat completely destroyed the ascendancy of the Turkish navy in the Mediterranean. Herrera, the Spanish poet, wrote some of his finest odes in commemoration of the battle. Cervantes, who served on board one of the ships, was severely wounded, and lost for life the use of his left hand. The battle of Lepanto is often called by Italian writers the battle of the *Curzolari*, from the modern name of the islands at the mouth of the Achelôus, where the Christian fleet was stationed before the engagement.

LERMA. [CASTILLA LA VIEJA.]

LERWICK. [SHETLAND.]

LESBOS, a large island of the Ægean Sea, near the coast of Asia Minor, being separated from the coast of Troas by the Adramyttian Gulf. Its length is 60 miles, from Cape Sigrium, which is its north-western extremity, to Cape Malia, at its south-east end, which last looks directly into the entrance of the Gulf of Smyrna. The breadth of the island is very unequal, owing to some deep gulfs which indent its coast, and varies from 7 to 15 miles. *Mitylene*, the chief town of the island, lies on the south-eastern shore, opposite the coast of the ancient Æolia. It had formerly two harbours, was a place of great importance, and sent out numerous colonies. *Mitylene* still exists as a village, and gives its name to the island. *Methymna*, another ancient town of Lesbos, stood on its north-east coast, opposite Cape Lectum on the coast of Troas. The deep Bay of Pyrrha, which indents the middle of the island, was called *Euripus Pyrrhaeus*, now Porto Kaloni; the other bay, farther south, west of Cape Malia, is now named Porto di Jero. The island has many villages, but no town of any importance, and contains about 40,000 inhabitants, Greeks and Turks. It is considered one of the most fertile and beautiful of the Greek islands. The island is intersected by a long range of mountains clothed with pine-woods, skirted on the lower slopes by olive-groves and vineyards. The plains are partially cultivated; but for the most part they are planted with fruit-trees. Grapes, figs, oil, and pine-timber for ship-building are the chief exports. The wine now made on the island is inferior. Sufficient corn is not grown for the inhabitants. In ancient times Lesbos was known as a place of refinement, luxury, and licentiousness.

The earliest inhabitants of Lesbos are said to have been Pelasgians; it was afterwards colonised by the Æolians in their great migration. The children of Orestes are said, after fifteen years of vicissitudes and strife, to have conquered the island of Lesbos.

Pittacus, who flourished about B.C. 600, became tyrant of Mitylene, and he sustained a war against the Athenians, whom he ultimately defeated. This was in the time of the Lydian monarchy, after the fall of which Lesbos was obliged to submit to the power of Persia. After the battle of Mycale (B.C. 479) Lesbos freed itself from Persian dependence, and became the ally of Athens. During the Peloponnesian war, the people of Mitylene being accused of a secret negotiation with the Lacedæmonians, Athens sent a fleet against them; the walls of Mitylene were razed, and many of its wealthier inhabitants put to death. The whole island, except the territory of Methymna, which was spared, was distributed among the Athenians, by whom they were rented to the former proprietors. (Thucydides, iii. 36-49; Strabo, xiii.)

Lesbos passed successively under the dominion of the Macedonians, the Romans, and the Byzantines; it was afterwards captured by the Venetians, A.D. 1185, recaptured by the Greeks, and at last seized by the Turks, who retain it to this day. In the war of Greek independence Lesbos lost nearly half of its population.

LETTERKENNY, county of Donegal, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated on the side of a steep hill above the left bank of the Swilly, at about a mile above its entrance into Lough Swilly, in 54° 57' N. lat., 7° 44' W. long., 15 miles N.W. from Lifford, 140 miles N.N.W. from Dublin. In 1851 the population was 1947, besides 233 inmates of the workhouse. The Poor-Law Union contains 14 electoral divisions, with an area of 101,207 acres and a population of 20,665 in 1851. The town of Letterkenny consists principally of one long straggling street, which however contains some good retail shops. The chief buildings are the parish church, a Roman Catholic chapel, three chapels for Presbyterians, a court-house, fever-hospital, and the Union workhouse. There are also a dispensary, a bridewell, and a loan-fund. Quarter and petty sessions are held in the town, which is the head-quarters of the county police. The creek of Ballyraine, called the Port of Letterkenny, is a mile distant from the town, and admits vessels of 160 tons. The exports are chiefly corn, butter, eggs, and hides; the imports consist of colonial produce, manufactured goods, iron, coal, oak-bark, fish, &c. The scenery of Glen-Swilly above Letterkenny, and of Lough Swilly below, presents much picturesque beauty.

LEUCADIA. [IONIAN ISLANDS, *Santa Maura*.]

LEUCATE. [AUDE.]

LEUCHTENBERG is a lordship in the kingdom of Bavaria, which has an area of 84 square miles, and a population of about 6800. It is situated on the western slope of the Böhmerwald, and is traversed by the Luhe, a feeder of the Naab, which river joins the Danube just above Ratisbon. Till 1806 it was a landgraviate, the prince of which had a seat and vote in the Diet of the Empire. It is called after the ancient mountain castle of Leuchtenberg, in the village of that name situated on the Luhe, the original seat of the landgraves. The male line becoming extinct in 1646, the country fell to Bavaria. In 1817 the late king of Bavaria, Maximilian Joseph, gave it, with the principality of Eichstätt, to his son-in-law Eugene Beauharnois, who assumed the title of Duke of Leuchtenberg. The title of royal highness was conferred on the duke and his successors according to the order of primogeniture, and the rank of princes and princesses of Leuchtenberg, with the title of serene highness, on the other members of the family. The dukes of Leuchtenberg were also declared capable of succeeding to the throne in case the royal line of Bavaria should become extinct; and on the other hand, on the extinction of the male line of the house of Leuchtenberg, its possessions return to the crown of Bavaria, on the payment of an indemnity of 2,320,312 Rhenish florins to the female line. [EICHSTADT.]

LEUZE. [HAINAULT.]

LEVANT, LEVA'NTE, an Italian word, which means the East, and which is also commonly used, especially among seafaring and commercial people of the countries bordering on the Mediterranean, to designate the eastern or Asiatic shores of that sea, namely, those of Syria and Asia Minor, the harbours of which are styled 'Scale di Levante,' in French 'Echelles du Levant' ('Stairs of the East'). Smyrna, Alexandretta, Beyrout, Acre, the harbours of Cyprus and other islands near the coast of Asia, are included within this denomination. The inhabitants of those countries, and more particularly that mixed population which is found in the sea-port towns, the descendants of Europeans settled there, and of Greek, Armenian, or Syrian mothers, are called Levantines. They speak Greek among themselves, but their medium of intercourse with European seamen and traders is a very corrupt Italian mixed up with modern Greek words, which is known by the name of 'Lingua Franca.'

Levant is also the name of one of the Hyères Isles. [HYÈRES.]

LEVANTO. [GENOA.]

LEVEN. [FIFESHIRE.]

LEVEN, LOCH. [KINROSS-SHIRE.]

LEVROUX. [INDRE.]

LEWES, Sussex, a market-town, parliamentary borough, and the seat of a Poor-Law Union, is situated chiefly on the right bank of the river Ouse, in 50° 52' N. lat., 0° 1' E. long., distant 35 miles E. by N. from Chichester, 50 miles S. from London by road, and 50 miles by the London, Brighton, and South Coast railway. The population of the parliamentary borough of Lewes in 1851 was 9533. The borough returns two members to the Imperial Parliament. The livings are in the archdeaconry of Lewes and diocese of Chichester. Lewes Poor-Law Union contains 7 parishes, with a population in 1851 of 9821.

Many Roman remains have been found in Lewes and its immediate vicinity. The town had acquired its present name some centuries prior to the Norman conquest. Lewes, with a wide tract of country besides, was given by William I. to William earl of Warrenne, who had married his daughter Gundreda. The earl made Lewes his chief residence; and in the priory of Lewes, which they had founded, he

and his wife were buried. The bodies of both the earl and Gundreda were discovered in their original leaden coffins when the priory ground was excavated in 1845. On May 14th, 1264, a battle was fought at Lewes by Henry III. with his brother Richard, king of the Romans, and his son, Prince Edward, against the Confederated Barons under Simon de Montfort, which ended in the defeat of the royal army, and the capture of the king of the Romans.

The town of Lewes is built on the uneven slope of a chalk hill, one of the South Downs, while other and loftier hills of the same range surround and shelter it on almost every side. The streets are well built, paved, and lighted with gas. The principal public buildings are the churches, the assize-hall, and the house of correction. St. Anne's, though one of the smallest of the churches in the town, is the most interesting; it is a very neat example of the early English style. The church of St. Thomas à Becket at Cliffe is of the perpendicular style. St. Michael's and St. John the Baptist, at Southover, have been modernised and denuded of all architectural character. All Saints and St. John's are modern brick buildings. Malling church was erected in 1628. The Wesleyan Methodists, Independents, Baptists, Countess of Huntingdon's Connexion, Huntingdonians, Calvinists, Quakers, and Unitarians have places of worship in the town; and there are National, British, and Infant schools. The Free Grammar school of Lewes and Southover, originally founded and endowed by Agnes Morley in 1512, is free to 12 children of the burgesses of Lewes, and had 42 scholars in 1852. In the town are a mechanics institute, subscription library, assembly-room, record-room, &c. The county-hall was erected in 1812 at an expense of 15,000*l.* It is a handsome building, 90 feet long and about the same width, and comprises a council-chamber, the civil and criminal courts, record-rooms, and other convenient apartments. The house of correction was erected in 1793, and enlarged in 1817. A county jail has been recently erected outside the town. The summer and winter assizes are held at Lewes; likewise the general quarter-sessions for the eastern division of the shire, and a county court. The borough has returned two members to Parliament continuously from the reign of Edward I. Grain and malt, sheep and cattle, are now the principal articles of traffic. Brewing, tanning, rope- and twine-making, and lime-burning are extensively carried on. Newhaven, at the mouth of the Ouse, about eight miles below the town, is the port of Lewes. The fairs for cattle are held on May 8th and the beginning of June; those for sheep on September 21st and October 2nd. The average number of sheep sold annually at these fairs is estimated to exceed 100,000. There is a savings bank.

Lewes Castle is of Norman date; the chief portions remaining are the gatehouse and the keep, both of massive proportions, but much altered. The interior is now fitted up as a local museum. Of the priory the remains are few, and in a very dilapidated condition. The building is situated just outside the town, in the suburb of Southover. The railway is carried through the priory precincts, and in constructing it a place of interment, besides the priory burial-ground, was cut through. Thirteen waggon-loads of bones are said to have been removed. It was supposed, with much probability, that they were the bones of those who fell in the great battle.

LEWIS, ISLAND OF. [ROSS-SHIRE.]

LEWISHAM, Kent, a village, and the seat of a Poor-Law Union, in the parish of Lewisham, is situated in 51° 27' N. lat., 0° 1' W. long., distant about 6 miles S.E. from London. The population of the village in 1851 was 6097. The living is a vicarage in the archdeaconry of Middlesex and diocese of London. Lewisham Poor-Law Union contains 7 parishes and townships, with an area of 15,767 acres, and a population in 1851 of 34,738.

The village of Lewisham stretches along the road to Bromley for above a mile. Many of the houses are large and well built, and the road for a good part of the way is bordered by lofty elms. Lewisham is a favourite place of residence for London merchants. There are three or four corn-mills on the Ravensbourne river. Brewing, brick-making, &c., are carried on. There are extensive nursery grounds. The church, a plain brick structure, was rebuilt, except the tower which is ancient, in 1744; but was largely altered after a fire in 1831. In the interior are monuments by Flaxman and Banks. There are chapels for Wesleyan and Primitive Methodists, Independents, Bible Christians, and Unitarians. The Free Grammar school was founded in 1656 by the Rev. Abraham Colfe, vicar of Lewisham, who also founded an English Free school and almshouses for six poor females. The Grammar school had 44 scholars in 1851. The present master, the Rev. J. Prendergast, D.D., has filed a bill in Chancery against the trustees for the recovery of considerable property for the benefit of the foundation. There are several National and Infant schools; a British school; a Congregational school for educating the children of Congregational ministers, which had 35 scholars in 1851; and a mechanics institute. A handsome range of almshouses for persons who have become reduced in their circumstances was built and endowed a few years back by J. Thackeray, Esq. A station of the North Kent railway is at Lewisham.

LEXDEN, a hundred in the county of Essex, which conjointly with the hundred of Winstree in the same county constitutes a Poor-Law Union. The hundreds of Lexden and Winstree are bounded E. by Tendring hundred; Lexden hundred is bounded N. by the river Stour, which here separates Essex from Suffolk; Winstree hun-

dred is bounded S. by the estuaries of the Colne and the Blackwater; the adjoining hundreds on the west are Thurstable, Witham, and Hinokford: the two hundreds comprise 48 parishes with an area of 89,345 acres, and a population in 1851 of 28,768. Lexden and Winstree Poor-Law Union contains 35 parishes with an area of 73,492 acres, and a population in 1851 of 21,485. The village of Lexden, which gives name to the hundred, is pleasantly situated on the main road about 2 miles W. from Colchester. From remains which have been found in the neighbourhood, it has been supposed that Lexden occupies the site of an outpost of the Roman station Camelodunum. Some extensive earth-works are traceable on Lexden Heath, and to the west of the village is an excavation, supposed to have been an amphitheatre.

LEXINGTON. [MASSACHUSETTS.]

LEYBURN, North Riding of Yorkshire, a small market-town and the seat of a Poor-Law Union in the parish of Wensley, is situated in 54° 18' N. lat., 1° 50' W. long., distant 46 miles N.W. from York, and 235 miles N.N.W. from London. The population of the township of Leyburn in 1851 was 800. The living of Wensley is a rectory in the archdeaconry of Richmond and diocese of Ripon. Leyburn Poor-Law Union contains 41 townships and chapelries, with an area of 91,570 acres and a population in 1851 of 9942. Leyburn is pleasantly situated in the midst of picturesque scenery. The houses are chiefly arranged in the form of an oblong square, in the centre of which the market is held. There are a small episcopal chapel, places of worship for Wesleyan Methodists and Independents, an elegant chapel for Roman Catholics, a school supported by the Roman Catholics, and a savings bank. A county court is held. The market-day is Friday. Fairs are held on the second Friday in February, May, October, and December. In the neighbourhood are lead and coal-mines and limestone quarries. Remains of Bolton and Middleham castles, and of the abbeys of Jervaux and Coverham are in the vicinity. Leyburn Shawl, a romantic road along the edge of a ridge of rocks commanding extensive views of picturesque scenery, is the scene of a popular annual tea festival.

LEYDEN, a city of the kingdom of the Dutch province of South Holland, is situated in 52° 9' 30" N. lat., 4° 29' 13" E. long.; 10 miles by railway N.N.E. from the Hague, on a branch of the Rhine, and has about 40,000 inhabitants. The town stands in a level part of the country, and is traversed by many broad canals, bordered with trees, which, intersecting each other, divide the town into fifty small islands, connected together by 145 bridges, some of which are of wood. It is surrounded with a rampart, partly covered with turf and partly faced with brick, on which are fine shady walks; and outside there is a deep and broad moat, with eight bridges leading to as many gates. The city is well built, and the principal streets are broad and well paved. That in which the town-hall is situated extends nearly across the city from east to west; it is almost two miles in length, and is reckoned one of the handsomest streets in Europe. The houses are mostly of brick, with the gable-ends to the streets. Among the public buildings the most worthy of notice are the town-hall, a magnificent edifice, containing a valuable collection of paintings; St. Peter's church, the finest of the seventeenth in the city, a large and handsome gothic building, which contains the sarcophagus of Boerhaave and other monuments. An ancient castle or fort, ascribed by tradition to the Romans, is in the middle of the city, and, rising above the highest houses, commands an extensive prospect of the town and the surrounding country. The handsome new Roman Catholic church, the custom-house, and hospitals likewise deserve notice. The manufactures of linen and woollens were formerly celebrated, and the chief source of wealth to the inhabitants, but they have greatly declined. It is however still the chief seat of the woollen manufactures and of the wool trade of Holland, and has an annual wool fair, which is much frequented. There are likewise extensive manufactures of soap and indigo, tanneries famous for their shamoy leather and parchment, salt-works, &c. Printing, especially of classical works, was formerly a great branch of trade. The most remarkable event in the history of Leyden is its successful resistance to the Spaniards in 1573. The University, which was founded in 1575, has a library of 60,000 volumes and 14,000 manuscripts, a valuable botanical garden, an observatory, a museum rich in Egyptian and Etruscan antiquities, a cabinet of natural history, &c., &c. Grotius, Descartes, Fielding, and Goldsmith studied at Leyden. There are likewise many fine private libraries and museums, and various learned societies. In 1655, 4000 of the inhabitants were carried off by the plague; and in 1807 a boat, with 40,000 lbs. of gunpowder on board, blew up, and destroyed a large portion of the finest part of the city: several hundred persons lost their lives on that occasion.

LIBANUS. [SYRIA.]

LIBAU. [COURLAND.]

LIBERIA, Republic of, occupies a considerable extent of the West Coast of Africa. Liberia was originally confined to the tract of country lying west of the Grain Coast, of which the town of Monrovia on Cape

Mesurado is the centre; but the republic, though its limits are not accurately defined, now, we believe, claims the entire coast (including the whole of the Grain Coast) from the Cavally River east of Cape Palmas, 4° 20' N. lat., 7° 30' W. long., to the Sherboro River, opposite Sherboro Island, 7° 23' N. lat., 12° 31' W. long., bordering on the colony of Sierra Leone; a length of about 450 miles, with a breadth at present ranging from 20 to 50 miles, but the settlers are gradually extending farther into the interior. The area may be about 17,000 square miles. We find some difficulty in stating the population. In a semi-official statement published in 1848 by the American Colonisation Society, in which the extent of the territory is made nearly as wide as that given above, the population is said to consist of 4200 colonists (including 700 in Maryland-in-Liberia) and "from 10,000 to 15,000 natives;" while in some popular works recently published in this country we find the colonists variously estimated at from 6000 to 10,000, and the natives at 250,000 to above 300,000. This no doubt is a great exaggeration; and we think the population, including the additions by immigration and extension of territory, cannot exceed 7000 colonists and 50,000 natives: perhaps the native tribes in the interior with whom the Liberians have entered into treaty may number 150,000 to 200,000, but they are not inhabitants of Liberia.

Liberia owes its origin to the efforts of the American Colonisation Society, founded in 1816, for the colonisation of the free coloured people of the United States. The first settlement was made on Sherboro Island, off the coast of West Africa, opposite the present western boundary of Liberia; but several of the settlers having died, and the others experienced much suffering, the settlement was abandoned, and the settlers removed to Sierra Leone. A second party was however sent out, who established themselves, early in 1822, on the site of the present town of Monrovia, on Cape Mesurado, 6° 19' N. lat., 10° 48' W. long. At first the settlers encountered many difficulties, owing to the unfriendly disposition of the native tribes; but after a time, as they increased in numbers and were more abundantly provided with fire-arms and some pieces of artillery, they were able not only to keep the natives in check, but to act on the offensive, and to drive them into the interior, or subject them to their authority. In about a dozen years the colony had become sufficiently numerous and energetic to seek the privileges of self-government. In 1839 a constitution was framed and a governor appointed by the Colonisation Society to carry out its provisions. The new constitution appears to have worked very well in home matters, but difficulties occurred in enforcing the laws on foreign traders; and the English government, which had displayed the friendliest feeling and rendered important assistance to the infant community, announced that it could not recognise the right of the Liberian authorities—the colony being neither an independent state nor an acknowledged dependency of the United States—to impose duties on goods imported into the country by British subjects. The Liberian council forwarded a resolution to the Colonisation Society, importing that the existence of the colony was dependent on its possession of complete political jurisdiction; and the Society replied by a resolution admitting that the time had come for the "commonwealth of Liberia to take into their own hands the whole work of self-government, including the management of all their foreign relations." Accordingly, the question was put to the vote of the people whether the settlement should declare itself an independent state, and carried in the affirmative. A convention was then appointed to draw up a constitution, and on the 24th of August, 1847, the flag of the 'Independent Republic of Liberia' was hoisted with much ceremony. The chief events in the history of the settlement have been the numerous encounters with the natives, and since its independence the visits of the president to England and America with a view to the arranging of certain treaties. The republic was recognised by England as an independent state soon after its declaration of independence, and has since been recognised by France, Prussia, Brazil, and some other powers, but not by the United States.

The coast of Liberia has a general direction north-west and south-east, and is broken by several inlets and coves, of which those formed by Cape Mount, Cape Mesurado, and Bassa Cove are of much value as harbours. The greater part of the coast is low and sandy, or marshy; but about Cape Mesurado and Cape Mount (which is 1060 feet above the sea) the shore is considerably elevated. Between those points however there is a low continuous beach of light brown sand, backed by an unbroken tract of forest. Towards the south-eastern extremity the coast is in many parts bold and rocky, the cliffs in many places being from 40 to 60 feet above the sea, with large irregular blocks of granite on the beach, over which the sea breaks heavily, and many rocks lie a short distance off the shore; but between the higher parts everywhere occur long stretches of low sandy beach, in many places bordered by sand-banks: so that nearly all along the coast it is necessary for the mariner to keep a sharp look-out.

From the coast the land rises for the most part gradually towards the interior. About 20 or 30 miles from the shore is a succession of hills covered, like a large part of the lower country, with forests, rising farther inland into mountain ridges, and divided by wide and fertile valleys. The rivers are numerous, and some of them are good-sized streams; but all have their mouths obstructed, and some entirely closed, by sand-bars; and, owing to the prevalence of rapids,

none appear to be navigable far inland. The chief river is the St. Paul, which falls into the sea by Cape Mesurado. The sand-banks at its mouth leave only a narrow channel for boats, with 7 feet of water in it at low-tide. It is half a mile wide 40 miles from its mouth, has a considerable body of water, flows through an extremely fertile valley, and has along its banks numerous native villages as well as settlements of the Liberians; but its course is greatly obstructed by rapids; boats of light draught can only ascend it for about 25 miles. The other most important streams are the St. John, which falls into the sea at Bassa Cove; the Junk, which lies between the St. Paul and St. John, and has a very narrow channel through the bar at its mouth; the Cape Mount River, which falls into the sea at Cape Mount, and has its entrance almost closed by a narrow spit of sand; the Grand Cestos, some distance eastward; and the Droo, still farther east, which has about 6 feet of water over its bar, deepening inside to 4 fathoms.

The climate is hot and oppressive. During the dry season, which lasts from May to November, the temperature averages 86°; but in the wet season it falls to 75° or 74°. The extreme heat is alleviated by gentle breezes, which blow daily from the sea. To whites, whether natives of Europe or America, the climate is very prejudicial; but the negro colonists, though the descendants of families long settled in America, experience no inconveniences from it after they have passed through the 'seasoning,' or 'acclimatising fever,' which visits all the newly-arrived alike, but is now comparatively seldom fatal in its attacks. Nothing like an epidemic has ever appeared in Liberia.

The following brief extract from an 'Address of the Citizens of Liberia to the Free Coloured People of the United States,' 1847, may serve, with allowance for a little heightening in the colouring, to convey a tolerably clear idea of the character and capabilities of the country:—

"A more fertile soil, and a more productive country, so far as it is cultivated, there is not, we believe, on the face of the earth. Its hills and its plains are covered with a verdure which never fades; the productions of nature keep on in their growth through all seasons of the year. Even the natives of the country, almost without farming tools, without skill, and with very little labour, make more grain and vegetables than they can consume, and often more than they can sell. Cattle, swine, fowl, ducks, goats, and sheep thrive without feeding, requiring no care but to keep them from straying. Cotton, coffee, indigo, and the sugar-cane are all the spontaneous growth of our forests, and may be cultivated at pleasure, to any extent, by such as are disposed. The same may be said of rice, Indian corn, Guinea corn, millet, and too many species of fruit to enumerate. Add to all, we have no dreary winter here. . . . Nature is constantly renewing herself, and is also constantly pouring her treasures all the year round into the laps of the industrious."

It is thought that when labour becomes more abundant, sugar, cotton (which yields two crops in the year), coffee, and indigo will come to be staple products of Liberia. The coffee-tree has already been somewhat extensively planted; at one place there is a plantation of 30,000 trees. At present the chief articles of export, besides fruits, vegetables, and salted meats supplied to ships calling at the ports, are palm oil, which has become an article of great importance, dye-woods, ivory, and rice, with some gold, tortoise-shell, gums, hides, wax, ground-nuts, ginger, and pepper; a good proportion of which is brought by natives from the interior. The exports in the two years ending September, 1843, amounted to 25,767*l.*, the imports to 32,830*l.*; the exports are said now to average upwards of 100,000*l.* annually. The supply of dye-woods, especially cam-wood, appears to be inexhaustible. It is said that from about 30 miles east of Bassa Cove there "extends a forest-region of unknown extent, where scarcely any tree is seen except cam-wood." Liberia has a considerable coasting-trade, carried on by schooners belonging to the country; and a large trade with the interior. For home consumption as well as export there is a great variety of timber-trees suitable for building purposes; good building-stone abounds; as do also shells for lime, and clay of excellent quality for bricks.

Liberia is divided into the counties of Mesurado, or Montserrado, Bassa, and Sinoe. The chief town is *Monrovia*, the capital, on Cape Mesurado, a busy sea-port town and the principal place of trade. It contains a court-house, a public library, two or three churches and schools; several stores, warehouses, and good wharfs; a fort and a lighthouse; and has about 1600 inhabitants. The other larger towns and settlements along the coast are Marshall at the mouth, and on the right bank of the Junk River; Edina and Grand Bassa at the mouth, but on the opposite banks of the St. John, in Bassa Cove; Bexley, and the new town of Cresson in the same neighbourhood; Greenville on the Sinoe; Trade Town, a populous place 4 miles W. from Young Cestos; and Cestos, or St. George's Point in Cestos Bay. The chief inland towns and settlements are Caldwell on the St. Paul; New Georgia; and Millsburg. Along the coast are several factories, chiefly for the trade in cam-wood, belonging to Liberians, and some to English and American merchants: and both along the coast and inland are numerous native towns and villages, some of them, as Grand Cestos and Great Neefoo, of considerable size.

On Cape Palmas, the south-eastern extremity of Liberia, is esta-

blished the colony of *Maryland-in-Liberia*, consisting of free coloured emigrants sent thither from the state of Maryland by the 'State Colonisation Society.' The colony was founded in 1834, and a considerable number of free coloured persons have since been sent to it by the Society, which is assisted in its operations by an annual grant from the state legislature of 20,000 dollars. The colony, which is independent of Liberia, is governed by an agent, or governor, appointed by the Colonisation Society, and a council and other officers elected by the colonists; and appears to be in a tolerably flourishing condition. *Harper*, the chief town, contains about 700 inhabitants, and carries on a good deal of trade. The Palmas River is about a hundred yards wide towards its mouth, but several rocks lie in the channel; it has a depth of 3 feet over the bar at low water. The colonists have erected a lighthouse on Cape Palmas, which shows a fixed light 100 feet above the sea. There are two or three villages and smaller settlements.

The constitution, adopted at the declaration of the independence of Liberia, and said to have been drawn up by Professor Greenleaf, of Harvard College, Massachusetts, is founded on that of the United States, which it greatly resembles in its leading principles. It proclaims the equality of all men; establishes perfect religious freedom, and the liberty of the press; prohibits slavery; gives the right of every one to be tried by a jury of his peers, of bail, and of habeas corpus; makes nearly all offices elective, and gives the suffrage to every male citizen 21 years of age possessing real estate—citizenship belonging however exclusively to persons of colour; and of such, at present at least, only to the free coloured emigrants from the United States, who immediately on arriving are admitted to full citizenship, and receive a grant of five acres of land, with liberty to purchase more. The executive government is vested in a senate elected from the counties, and a house of representatives elected after the American system, according to a ratio of representative population; and a president who is elected for two years, is to exercise supreme executive power, is the commander-in-chief of the army and navy, and has a qualified veto on the acts of the legislature. The judicature consists of a supreme court, and districts courts: the judges are only removable by the president on a vote of two-thirds of the houses of legislature. The annual revenue and expenditure average about 7000*l.* a year each. The republic appears to be making steady progress.

There were in 1847 in Liberia (without including the Maryland colony) 23 churches with 1474 communicants, of whom 469 were natives; there are now above 30 churches. Schools are provided for all the children of citizens. In 1847 there were 16 schools with 562 scholars, of whom 192 were the children of native Africans: in 1851 the scholars were said to exceed 2000. Three high-schools are in operation in Monrovia; and an Act has passed the legislature for the establishment of a college. The 'Liberia Herald,' a very respectably conducted newspaper, has now continued to be published for above 20 years: one or two others have been issued within the last few years.

LIBOURNE. [GIRONDE.]

LIBYA. [AFRICA.]

LICHFIELD, Staffordshire, an episcopal city, a county in itself, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on a small stream, a feeder of the Trent, in 52° 41' N. lat., 1° 49' W. long., distant 18 miles S.E. from Stafford, 119 miles N.W. from London by road, and 115½ miles by the London and North-Western railway. The population of the city and borough of Lichfield in 1851 was 7012. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The livings are in the archdeaconry of Stafford and diocese of Lichfield. Lichfield Poor-Law Union contains 30 parishes and townships, with an area of 58,701 acres, and a population in 1851 of 25,278.

The name Lichfield is Saxon. Edward II. granted a charter of incorporation to the city; and Queen Mary in the first year of her reign constituted the city and suburbs a distinct county. Charters were also granted by James I. and James II. The houses in the principal streets are handsome and well built; the city is well supplied with water, and is paved and lighted. Among the public buildings are the guildhall, the market-house, theatre, jail, and house of correction. A county court is held in the town.

The cathedral is partly of the early English, but much of it is of a later period. It sustained considerable injury during the civil wars, but was restored by Dr. Hacket in 1661; and very extensive repairs and alterations have since been effected. Its total length is 410 feet; the width along the transepts is 153 feet. It has three spires, of which the central rises to the height of 230 feet, the whole being ornamented with a profusion of very elaborate workmanship. As the building occupies an elevated site it forms a prominent object in the approach to the city. In the interior of the cathedral are numerous monuments, and among them is one of Dr. Samuel Johnson, who was born in this city, and to whose memory a statue has been erected. There are chapels for Independents and other Dissenters: a Free Grammar school (not now free to any), said to have been founded by

Edward VI., which has an income of nearly 100*l.* a year, with nine exhibitions, tenable for three years, and had 28 scholars in 1858; several National schools; an hospital for the aged widows or unmarried daughters of aldermen; a savings bank, and other benevolent institutions. In the town are extensive carpet manufactories and breweries. The market days are Tuesday and Friday. Fairs are held on January 10th, Shrove-Tuesday, Ash-Wednesday, and the first Tuesday in November. There are seven incorporated trade companies. The Grand Junction Canal passes Lichfield on the south.

The diocese of Lichfield comprises the three archdeaconries of Stafford, Derby, and Salop, including parts of Staffordshire, Derbyshire, Warwickshire, and Shropshire. Besides the archdeacons the chapter includes a dean, 4 canons, 19 prebendaries, a chancellor, and 5 minor canons. The income of the bishop is fixed at 4500*l.* a year. The livings are 491. The episcopal palace adjoins the cathedral in the precinct of the Cathedral Close.

LICHTENBERG, a principality situated between the Bavarian circle of the Rhine, the Prussian province of the Lower Rhine, and two isolated districts belonging to Oldenburg and Hesse-Homburg, has an area of 286 square miles. The old lordship of Baumholder was ceded in 1816 by Prussia to the Duke of Saxe-Coburg, who gave it the rank of a principality, calling it Lichtenberg after an ancient castle. The duke ceded the principality, with all the rights of sovereignty, to Prussia in 1834. The territory of the principality is mountainous, being covered by the western offsets of the Wasgau, which are furrowed by the narrow valleys of the Nahe and the Blies. It now forms part of the government of Trèves. Its chief town, *Wendel*, situated on the Blies, a feeder of the Saar, has about 2600 inhabitants. *Baumholder*, a village of about 1000 inhabitants, lies N.E. of *Wendel*. Iron, copper, and some valuable stones are found in the principality.

LIDFORD. [DEVONSHIRE.]

LIECHTENSTEIN, a sovereign principality, the smallest of all the states composing the German Confederation, consists of the counties of Schellenberg and Vaduz, and is situated between Switzerland and the Tyrol, on the northern slope of the Rhaetian Alps. It is bounded N. and E. by the Tyrol, S. by the canton of Grisons, and W. by the Rhine, which separates it from the canton of St. Gall. Its area is only 52 square miles, with a population of 6351, all Roman Catholics. The country is very mountainous; but it produces corn, flax, wine, fruit, and timber, sufficient for the consumption of the inhabitants, who have also a good breed of horned cattle. Liechtenstein, together with several other small German states, forms the fifteenth member of the diet, but in the full council each of them has a vote of its own. Its contingent to the army of the Confederation is 55 men.

The principal place in the principality is *Vaduz*, a village of 1700 inhabitants, situated on the right bank of the Rhine. Above it is the castle of Liechtenstein, built on a lofty rock.

Though the prince of Liechtenstein, as a sovereign, has a smaller territory than any other of the German princes, he possesses in the Austrian empire mediated principalities and lordships of great extent, which comprise the principalities of Troppau and Jagerndorf in Upper Silesia, and vast estates in Moravia, making together an area of 2200 square miles, with a population of 360,000, and yielding to the prince an annual revenue of 1,500,000 florins. The house of Liechtenstein is one of the most ancient and illustrious in Europe; it is believed to have a common origin with the house of Este.

LIÈGE, a province of Belgium, is bounded N. by Limburg, E. by Rhenish-Prussia, S. by Luxembourg, and W. by Namur and South Brabant. Its area is 1115 square miles, and the population on January 1, 1849, numbered 460,663, the great majority of whom are Walloons. The smaller and northern portion is hilly and undulating; the southern is mountainous. The Ardennes cover a great part of the south of the province. The soil differs much in quality. On the west side of the Maas, and on the east side towards Limburg, the plains, valleys, and low hills are fertile and well cultivated; on the east side of the Maas, where it is joined by the Ourthe, especially towards Luxembourg, the soil is rocky and stony. In this part of the province there are extensive forests. The principal river is the Maas, which comes from Namur, and forms at first the boundary between the two provinces. After receiving the Ourthe it flows between high, steep, and often perpendicular rocks to Liège, where it becomes broader, and enters the province of Limburg. The Ourthe is joined on the right bank by the Amblève, which rises in the Eifel, and passes Malmedy; and near its mouth by the Vesdre, which also rises in the Eifel, and runs west through a pretty valley past Eupen, Limburg, and Verviers. The climate is healthy and temperate, though somewhat damp; in the southern parts the air is keener and the winter longer than in the north. The country produces hops, corn, and a little wine; the pastures are good, and maintain great numbers of horned cattle and sheep. The mineral wealth of the country is considerable; there are mines of calamine, alum, lead, and iron ore; but more important than all these together are the numerous coal-mines of the province. Of the mineral waters those of Spa are the most celebrated. The manufactures, which are very important, consist of all kinds of steam-machinery for railroads and factories, mill-castings, fine woollens, merinoes, linen, cotton-stuffs, cutlery, surgical instruments, fire-arms, glass, hardware, &c. There are zinc and calamine works of con-

siderable magnitude near Huy, and at other places in the valley of the Maas. The province is crossed by the Liège-Namur railroad, and by the line from Ostend to Cologne. The number of steam-engines of different kinds in the province for manufacturing, mining, and locomotive purposes exceeds 500.

The province of Liège was formerly a bishopric belonging to the circle of Westphalia; the bishop, who was suffragan of the archbishop of Cologne, was a prince of the empire, and had also the title of Duke of Bouillon. The French however took possession of the province in 1789, and retained the country till the overthrow of Napoleon I., after which it was united with the kingdom of the Netherlands: from this it was severed by the revolution of 1830. [BELGIUM.]

Towns.—The capital is LiÈGE. *Glons*, a small place of 2000 inhabitants, N. of Liège, is the centre of a great straw-hat manufacture, which gives occupation to upwards of 6000 people. *Herstal*, or *Heristal*, on the left bank of the Maas, has important coal-mines, iron- and steel-works, iron-foundries, and 6000 inhabitants. The village extends nearly 3 miles along the river towards Liège. Pepin le Gros took the name of D'Heristal from having resided here. *Herve*, a few miles E. of Liège, has 3500 inhabitants, who manufacture woollen-cloth, stockings, and shoes, and trade in cheese and butter. *Huy*, situated in a narrow valley, hemmed in by lofty rocks, on the Maas, here crossed by an ancient stone bridge, is strongly fortified and further defended by a formidable citadel, which commands the valley of the Maas. This town is admired for its romantic situation. It has an interesting cathedral and town-hall. The collegiate church of Notre Dame, situated below the citadel, is a graceful gothic structure, which dates from A.D. 1811, and is approached by a gateway adorned with sculptures in relief, representing incidents in the life of the Blessed Virgin. The grave of Peter the Hermit, who died A.D. 1115, is still shown on the site of the old church of the monastery of Neufmoustier, in one of the suburbs of the town. The population is 8000. Beer, spirits, paper, leather, linen, and cast-iron are manufactured. *Limburg*, formerly a strongly fortified town and capital of the old duchy of Limburg. It is now little better than a heap of ruins: the French demolished its outworks in 1675, and various calamities of war and fire have since completed its destruction. The population of the town hardly exceeds 1500. Its suburb, *Dalshais*, or *Dalhem*, is now a much more important place; it has about 3000 inhabitants, is a station on the railway from Liège to Aix-la-Chapelle, 6 miles E. from Verviers, 16 miles N.E. from Liège, and has manufactures of fine linen and woollen-cloth. *Seraing*, S. of Liège, on the Maas, has coal-mines, important iron-foundries, and glass-works: population 3460. A suspension-bridge over the Maas connects the town with Jemeppe. The iron-works established here by the late Mr. John Cockerill form a vast mass of buildings, comprising 4 blast- and 15 puddling-furnaces, rolling-mills, and forges, where iron is worked into articles of all sorts, from penknives to steam-engines. Iron and coal are got from mines within the walls. The buildings are surmounted by about 50 tall chimneys. The establishment is now worked by a Belgian company, and employs between 3000 and 4000 men in addition to several steam-engines. *Spa*, a well-built little town, famous for its mineral-springs and baths, is situated in a pretty valley among the Ardennes Mountains, in the south-east of the province. The heights around it are covered with plantations, and laid out in delightful walks, which present at several points prospects of great beauty. The principal spring, called *Pouhon*, is situated in the town; six others are in the environs. The ordinary population of the town is about 4000, who live chiefly by the profits derived from visitors to the waters. The bath-buildings, the several pump-rooms, and the *Redoute* (a handsome building, which includes a café, theatre, gambling-rooms, &c.) are the most interesting structures in Spa. The Spa springs are chalybeate; they are chiefly recommended in cases of relaxation of the bowels and obstruction of the liver. About 150,000 bottles are annually exported from the *Pouhon* spring, which is the strongest. Spa is famous also for the manufacture of elegant wooden toys, work-boxes, writing-desks, &c. The mountains near the town contain many beautiful and extensive grottoes. *Theux*, S.E. of Liège, on the left bank of the Hoëgne, a feeder of the Vesdre, which rises to the south of Spa in the Ardennes, has black marble-quarries, woollen-yarn factories, iron-works, and 4370 inhabitants. Near *Theux* is the old castle of Franchimont, celebrated by Sir Walter Scott. *Verviers*, a flourishing manufacturing town of 27,000 inhabitants, is situated on the Vesdre, about 20 miles by railway E. from Liège. It is irregularly built, but some of the suburbs are pretty. The town-house, theatre, the new church, the railway station, and the college are the most remarkable public structures of the town. Verviers is famous for the manufacture of fine and ordinary woollen-cloths and cassimirs, giving employment to 40,000 hands in the town and neighbourhood; the Belgian army is clothed principally from the looms of Verviers, the total produce of which is estimated at 1,000,000*l.* sterling annually. Flannels, serges, tickings, coverlets, mouselines-de-laine, merino, &c. are also manufactured. The dyes of Verviers are said not to be surpassed in Europe. There are also establishments for the manufacture of steam-machinery, ironmongery, soap, beer, &c.

LIÈGE (*Lutich*, *Luit*), the capital of the Belgian province of Liège, is situated in a valley below the junction of the Ourthe with the Maas, in 50° 39' N. lat., 5° 31' E. long., at a distance by railway of 58½ miles S.E. from Malines, 35 miles N.E. from Namur, and has

76,500 inhabitants. The city is the seat of a bishop, and of the supreme court of justice for the provinces of Liège, Limburg, Namur, and Luxembourg. The Maas, on entering the city, divides into several branches which form islands, bordered by handsome quays and connected by 17 bridges. Liège is divided into the old and the new town, and has besides 10 suburbs. Most of the streets are very narrow, dark, in consequence of the height of the houses, and not clean. There are however a few broad streets, some good squares, and promenades. The city was formerly fortified, but at present it is defended only by a citadel, erected on St. Walburg's Mount on the north side of the town, and by a great outwork on the west side. The most remarkable buildings are—the cathedral, built in the 8th century, the court-house, the town-hall, the theatre, the university, which was founded in 1817, and the church of St. Jacques, the finest ecclesiastical edifice in the city, lately repaired and magnificently decorated at the public expense. There are a gymnasium, a bank, and numerous learned, charitable, and useful institutions. The extensive coal-mines near the town; its numerous iron-works, royal cannon-foundry, and establishments for the manufacture of fire-arms, hardware, broadcloth, glass, and leather; its engine-factories, zinc rolling-mills, and naileries; its linen and cotton factories, steel-works, and breweries; together with a flourishing commerce in colonial produce and manufactured goods, render it one of the most important towns in Belgium, and one of the most industrial centres in Europe. The staple manufacture is that of fire-arms. The town owes its prosperity to the valuable coal-mines near and under the town.

LIEGNITZ, one of the three governments into which Silesia is divided, comprises the most north-westerly part of that province, and that part of Upper Lausitz which is now part of Prussia. It is bounded N. by the governments of Frankfurt and Posen, E. by those of Posen and Breslau, S. by Bohemia, from which it is separated by the crest of the Riesen-gebirge, and W. by the kingdom of Saxony. Its area is 5800 square miles, and the population at the end of 1849 was 921,002. The surface, high, rugged, and mountainous, in the south, slopes down northward into the great plain of the Oder, which river traverses the government from south-east to north-west, and forms part of the northern boundary. The principal feeders of the Oder in the government are the Katsbach, the Bober (which receives the Zack, the Queiss, and many other streams), the Neisse, which drains the west of the province, consisting of part of Upper Lausitz, and the Bartsch, which rises in Posen and joins the Oder on the right bank above Glogau. A small portion of the province to the west of Görlitz belongs to the basin of the Spree, which river forms part of the western boundary. There are many small lakes in the south and west of the province.

The climate is tolerably mild. The soil is generally sandy and in the valleys very fertile, but there are few districts which produce corn enough for the consumption. The vine is cultivated in the valleys. Forests everywhere abound and timber forms an important article of export. The pastures are extensive, and large numbers of horned cattle and sheep are reared. Linen and woollen stuffs are the chief industrial products. [SILESIA.]

Liegnitz, the capital of the government, situated in 51° 12' 30" N. lat., 16° 12' 15" E. long., at the conflux of the Schwarzwasser and the Katsbach, 180 miles by railway S.E. from Berlin, has a population of about 12,000. The inner town is surrounded with a moat and earthen rampart, which is laid out in public gardens with fine avenues of trees; it is entered by four gates. The old palace of the princes of Liegnitz is in the town, and is surrounded by a separate moat and high wall. There are 4 churches, of which that of St. Peter and St. Paul has a large library, and that of St. John contains the magnificent chapel where the old princes of Liegnitz and Brieg were interred. Among the public institutions are a gymnasium, with 13 professors, and 270 pupils in 1850, the Ritter Academy, a magnificent building, founded in 1708 by the emperor Joseph I. for the sons of Silesian gentlemen, and remodelled in 1810 for the education of children of the upper classes of society. It has a good library, mathematical and other instruments, collections of natural history, &c., and considerable revenues. Liegnitz has manufactures of woollen cloth, linen, cotton, silk-stockings, tobacco, starch, beer, &c. In the suburbs and environs great quantities of fruit and vegetables are grown. Liegnitz has a theatre, an orphan asylum, and two hospitals. Frederick II. defeated the Austrians under Marshal Laudon between this town and Parohwitz (a few miles to the north-east) in 1760. In the vicinity is Wahlstatt, where the celebrated battle with the Mongol Tartars was fought in 1241, in which Frederick, duke of Liegnitz, lost his life; and between this place and Eichholz on the Katsbach, Blücher, together with the Russians, defeated the French under Macdonald and Ney in 1813, whence he obtained the title of Prince Blücher of Wahlstatt.

Görlitz, a well-built fortified town, is situated on the left bank of the Neisse, 60 miles by railway E. from Dresden, and has a population of 13,670, who are engaged in the manufacture of woollen-cloth, linen, hosiery, leather, sheeting, linen-yarn, hardware, and musical instruments. The town has also a considerable transit-trade. It contains 8 churches, a citadel, a town-hall, a gymnasium, 3 libraries, an orphan asylum, 4 hospitals, and a house of correction.

Glogau, a strong fortress, on the left bank of the Oder, is situated

in 51° 38' N. lat., 16° 7' E. long., 50 miles by railway E. from the Hansdorf station on the Berlin-Breslau line, and has 12,000 inhabitants. An island in the Oder is strongly fortified and connected with the town by a wooden bridge. The town has 11 churches, a synagogue, 2 hospitals, a Catholic gymnasium with 13 professors and 268 pupils (in 1850); a Protestant gymnasium with 11 professors and 117 pupils; and manufactures of woollens, printed calicoes, hosiery, tobacco, &c.

Bunzlau is the subject of a separate article. [BUNZLAU.]

Among the other towns we can only briefly notice the following:—

Goldberg, situated on an eminence on the banks of the Katsbach, has double walls and four gates; a population of 7500; manufactures of broadcloth, hosiery, and gloves; and a high school, in which the celebrated Wallenstein was educated. Grünberg, a walled town with three gates, about 10,000 inhabitants, flourishing manufactures of woollen cloths, printed cottons, and leather, is situated near the northern boundary of the government. Hirschberg, S.W. of Goldberg, is the centre of a great linen manufacture, and has about 8000 inhabitants. The town stands on the left bank of the Bober; it is walled, and has five churches, a gymnasium, cotton-printing factories, paper-mills, sugar-refineries, and potteries. Jauer, or Jauerbach, stands S. of Liegnitz, on the mountain river Neisse, a feeder of the Katsbach. It is a well-built town, surrounded by a double wall and a ditch, and has about 7000 inhabitants, who manufacture broadcloth, linen, hosiery, and leather. Laudan, on the Queiss, a walled town, with four gates, has a Protestant gymnasium with 9 professors and 94 pupils (in 1850), and 6000 inhabitants, who manufacture calico and linen. Sagan, on the Bober, is a strongly-fortified town, with three gates, a very fine ducal palace with a beautiful park, one Lutheran and five Roman Catholic churches, and manufactures of woollen-cloth, linen, stockings, lace, and looking-glasses. There is a Catholic gymnasium, with 11 professors and 223 pupils (in 1850). The population is nearly 7000.

The government of Liegnitz is traversed by the Saxo-Silesian railway from Dresden, through Görlitz, to the Kohlfurt junction on the Berlin-Breslau line, which passes through Liegnitz and Bunzlau, and sends out a branch eastward through Sagan to Glogau. [SILESIA.]

LIEOU-KIEOU or LOO-CHOO ISLANDS, a group of islands situated at considerable distances from one another, between the Japanese island of Kioosio and the Chinese island of Formosa. They lie between 24° 10' and 28° 40' N. lat., 127° and 129° E. long., and are said to consist of 36 islands, of different but rather small dimensions. The largest of them, called Great Loo-Choo, and sometimes Doo-Choo by the natives, is very nearly 60 miles long in a north-east direction, and preserves a tolerably uniform breadth of about 10 or 12 miles. The surface of these islands is mostly uneven and rugged. The highest of the hills, Onnodake Mount, measured by Captain Beechy, does not attain 1100 feet above the sea. They seem to be of volcanic origin, but no active volcano has been observed in them. The lower tracts are of great fertility, but the most elevated are generally bare and rarely covered with wood. The fertile tracts are in high cultivation, yielding sweet potatoes, millet, wheat, Indian corn, rice, potatoes, cabbages, barley, the sugar-cane, cotton, peas, tea-shrubs, tobacco, capsicums, cucumbers, coconuts, carrots, lettuces, onions, plantains, pomegranates, and oranges. Their agriculture resembles that of the Chinese, particularly as to manuring and irrigating the ground. Along the sides of the hills and around the villages the bamboo, rattan, pine, and banyan trees flourish. Cattle are employed only for agricultural purposes. Milk is never used; hogs, goats, and poultry, with rice and other vegetables, form the food of the inhabitants. They have no sheep nor asses; their horses are of a small slight make, and used for riding and carrying loads. The climate is very mild, these islands being situated within the range of the trade-winds. The inhabitants are rather low in stature, but well formed, of a deep copper colour, with uniformly black hair, and dark gray eyes. Gentleness and simplicity characterise them all. Their language is similar to the Japanese. Sugar, salt, and sulphur are exported to China and Japan. The principal commercial town of Great Loo-Choo is Napakiang, or Nepa Ching, which has a good and safe harbour, and is generally considered the capital of the islands; but Captain Beechy thinks that the town of Shui or Shoodi is the capital and residence of the king. It is situated farther inland, on a hill, and surrounded by a wall, but has never been visited by Europeans. The islands are said to be nominally subject to Japan.

LIERRE, or LIER. [ANTWERP, Province of.]

LIFFORD. [DONEGAL.]

LIFFRÉ. [ILLE-ET-VILAINE.]

LIFY, RIVER. [DUBLIN; IRELAND.]

LIGUEIL. [INDRE-ET-LOIRE.]

LIGURIA (called by the Greeks Ligystica, and the inhabitants Ligyes and Ligustini), a division of ancient Italy, was separated in the time of Augustus from Etruria by the river Macra (*Magra*), and was bounded N.E. by Gallia Cisalpina, and W. by the province of Gallia. The most important places in Liguria were Albium Intemelium (*Vintimiglia*), a place of some importance and a municipium, the capital of the Intemelii; Albium Ingaunum (*Abruzzi*), the capital of the Ingauni; Genua or Genoa; Dertona (*Tortona*), in the interior,

a Roman colony, surnamed Julia; Alba Pompeia (*Alba*); Asta (*Asti*); and Pollentia (*Polenza*).

The Ligures in more ancient times extended as far as the Rhone in France; and they also appear to have inhabited part of Spain and Corsica. The Ligurians of Italy were finally subdued by the Romans B.C. 166.

LIGURIAN APENNINES. [APENNINES.]

LILLE, the capital formerly of French Flanders, now of the department of Nord, is situated in 50° 38' 44" N. lat., 3° 3' 37" E. long., at a distance by railway of 170 miles E.N.E. from Paris, 51 miles S.E. from Dunkirk, and in 1851 had 68,463 inhabitants in the commune, which does not include all the suburbs. It stands in a fertile and level country, at the junction of the Haute-Deule and the Basse-Deule, as the two cuts of the canal that unites the Scarpe and the Lys are called. These two cuts are united by a third, called Moyenne-Deule, which passing west of the town conveys barges too heavily laden or too large to pass through any of the numerous channels that traverse the city for purposes of commerce or to drive the machinery of the numerous factories. The town is well built; the streets are regular, wide, and provided with foot-pavements; the houses are in general three or four stories high, and built of brick or limestone. It contains 34 squares and market-places, 30 bridges of all sizes, about 200 streets, a great number of lanes and courts, and about 10,000 houses, besides many factories and mills, which, together with a far greater number in the environs, announce to the traveller by their lofty chimneys that he is approaching one of the great hives of industrial activity. Lille, which is entered by 7 gates, is surrounded by very strong fortifications and wet ditches, and defended by a citadel said to be the masterpiece of Vauban. Its shape is nearly oval, its length within the walls being 2560 yards, and its breadth 1278 yards. The citadel is a regular pentagon of 426 yards diameter; it is situated south-west of the town, and separated from it by a wide esplanade, which crossed by the Moyenne-Deule, and planted next the town with several avenues of trees, forms a fine promenade.

The public structures of Lille are few. The most remarkable are—the churches of La-Madeleine, St-Maurice, and St-Paul; the town-hall, which, built by Jean-sans-Feur in 1430, was for a long time the palace of the dukes of Bourgogne; the Mont-de-Piété, founded in 1610; the Paris gate, which is a triumphal arch in honour of Louis XIV.; the general hospital; the large corn-stores at the end of the Rue Royale; the theatre; the concert-room, one of the finest in France; the museum, established in a fine old abbey, and containing the public library of above 20,000 volumes, a gallery of paintings, and the archives of the town; and the Napoléon bridge across the Moyenne-Deule, which unites the part of the esplanade that serves for a walking-place to the part next the citadel where the troops are drilled.

The manufactures of Lille are very important; they consist of all kinds of cotton goods; linen and linen thread, lace, blankets, and other woollen-stuffs; paper, leather, beet-root sugar; steam machinery and iron-mongery; gin, beer, and great quantities of oil, which is expressed in 300 wind-mills near the town; glass, soap, tape, hats, carpets, chemical products, &c. There are also iron- and copper-foundries, dye-houses, bleaching establishments, and sugar-refineries. The trade in these various products, and in colonial produce, wool, hides, hops, coal, tobacco, chicory, &c., is extensive. The town is lighted with gas, and has communications by railway and by canal with all parts of France and Belgium.

Lille is the seat of tribunals of first instance and of commerce, and the head-quarters of the 3rd Military Division; it has a bank, a council of prud'hommes, a college, a medical school, an academy of music, a school of painting, various establishments for the gratuitous instruction of working manufacturers, and a great number of charitable institutions.

Lille (*l'Isle*) owes its origin and its name to a castle built on a spot surrounded by marshes at an early period. It is first mentioned in the time of Baudouin I., count of Flanders, who had several of his enemies hanged from the walls of the castle in 863. Baudouin IV. however may be said to be the founder of the city; he enlarged the place and surrounded it with walls in 1030. The emperor Henry III. in his invasion of Flanders in 1054 took Lille; but it was soon recovered and restored by Baudouin V., who founded the collegiate church of St-Pierre in 1066. In 1213 the city was taken after a siege of three days by Philippe Auguste of France; in the same year it revolted, whereupon Philippe retook it, and burnt it to the ground. Rebuilt upon a larger scale it was besieged by Philip the Fair in 1297, to whom it capitulated after 11 weeks siege. After the defeat of the French at the battle of Courtrai in 1302 the city opened its gates to Jean de Namur, count of Flanders; but Philip the Fair after another long siege recovered it in the following year, and the city remained in the hands of the French till the time of Philippe-le-Hardi, who restored it to Flanders. In 1476 it passed to the house of Austria, and twenty years afterwards it was united, together with the whole of the Low Countries, to the crown of Spain. The Spaniards held Lille till 1676 when it was wrested from them by Louis XIV., by whose directions Vauban constructed the fortifications and one of the finest citadels in Europe. In the wars of the Spanish succession the city was taken by the allies in 1708. It was finally ceded to France in 1713. Lille was considerably enlarged in 1780, when the handsome

GEORG. DIV. VOL. III.

quarter extending between the gates of La-Barre and La-Madeleine was laid out and built. The most memorable siege that Lille has ever sustained was that of 1792, when an Austrian army rained shell, shot, and red-hot balls upon it for six days, but owing to the resistance of the garrison and the townsfolk, and still more to the successes of the republicans in Champagne, they were obliged to withdraw before making themselves masters of the city.

LILLEBONNE. [SEINE-INFÉRIEURE.]

LILLO. [ANTWERP.]

LILYBŒUM. [SICILY.]

LIMA, the capital of the republic of Peru in South America, is situated in 12° 2' S. lat., 77° 4' W. long., about six miles from its port CALLAO, which is on the shores of the Pacific. It contains with its suburbs about 60,000 inhabitants, of whom more than a third are mulattos, and nearly 10,000 Indians and mestizos. Lima stands on high ground; the road rises gradually from Callao, and the great square of the capital is 560 feet above the level of the sea. Lima is built in a spacious and fertile valley traversed by a small river called the Rimac, which washes the northern walls of the city. Over it there is a handsome stone bridge leading to the suburbs of St. Lazaro and to the alameda, or public walk. The city is surrounded with low walls. It is about two miles in length, and from its numerous domes and spires has an imposing and picturesque appearance at a little distance. The city is regularly laid out in square blocks of houses (quadras), about 400 feet each way. The houses are low, and have rarely more than one floor: they are lightly built on account of the frequent earthquakes, which have repeatedly reduced the city to ruins. The roofs are made of coarse linen-cloth, or cane, the total want of rain rendering more substantial roofs unnecessary. The streets are regular and tolerably wide, but the pavement is extremely bad, consisting of large round stones, laid without the least regularity. There are no flags for foot-passengers; and the chief or only scavengers are the lurking buzzards which swarm about them: a broad channel of running water passes through the middle of almost every street. The city occupies a nearly triangular space, the base or longest side extending along the banks of the river. A fine street leads from the bridge to the Plaza Mayor, or great square, in the midst of which is a large fountain with a bronze statue of Fame in its centre, and at its angles four small basins. On the north side of the square is the government palace, a large but gloomy-looking edifice, formerly occupied by the viceroys, but now the court-house. On the east side of the square are the cathedral, a handsome building of considerable extent, and the archiepiscopal palace, now in part used as a senate-house. On the west side, which faces the cathedral, is the town-hall and the city prison; the south side is occupied by private houses generally built in a good style.

Lima has 56 churches, and before the revolutionary war there were 46 convents of monks and nuns; but most of them have since been abolished. It has a university, three colleges, a medical college, a botanic garden, a national museum, and a public library with a considerable collection of valuable books. Primary schools are pretty numerous. There are several charitable institutions, including sixteen hospitals for sick persons and two foundling hospitals. The places of amusement are—a theatre, a large bull-ring, a cock-pit, &c. There are also public baths and an extensive cemetery, called the Patheon, outside the city.

The manufactures are not numerous nor extensive. The principal manufactured articles are—utensils and vessels of silver, gold-lace, gilded leather, glass, and cotton-cloth. There is a mint in the city. Gold and silver, copper-ore, chinchilla and viougnas skins and wool, bark, nitre, sugar, &c., constitute the principal articles of export.

LIMBURG, a former province of the kingdom of the Netherlands as constituted after the overthrow of Napoleon I., was situated between 50° 44' and 51° 45' N. lat., 4° 57' and 6° 15' E. long., and was bounded N. by North Brabant and Gelderland, E. by Rhenish Prussia, S. by the province of Liège, and W. by those of South Brabant and Antwerp. The surface of the country is generally level, being diversified only in the south-east by some slight elevations. In the adjoining province of Liège the banks of the Maas are lofty and precipitous; but in the province of Limburg there are elevations only at a distance from the stream as far as Maestricht, from which place the banks are low.

In consequence of the revolution of 1830 the province of Limburg was divided between Holland and Belgium, the Maas forming the line of separation between the two portions, with the exception of a small circuit about the city of Maestricht on the left bank of the river, which is included in the Dutch portion. We here notice the portions separately.

Belgian Limburg lies between 50° 44' and 51° 18' N. lat., 4° 57' and 5° 40' E. long., and is bounded N. by North Brabant, E. by the duchy of Limburg, from which it is separated by the Maas, S. by Liège, and W. by Antwerp and South Brabant. The area is 928 square miles, and the population in 1849 was 185,621. The surface is flat, except in the south, where there are a few hills. The east of the province along the left bank of the Maas is fertile in corn, hemp, flax, tobacco, madder, fruits, &c. The district also between the Jaar and the Demer possesses a fertile soil. The rest of the province consists of a sandy soil, presenting towards the north extensive barren heaths and many marshes. The pasture-lands are extensive, and cattle-feeding is more

attended to than tillage; there is a good breed of horses, and bees are carefully tended. The principal rivers are—the Maas, which receives the Jaar on its left bank at Maastricht; the Demer, which rising west of Maastricht runs westward past Hasselt, and having received several small feeders from both banks enters South Brabant on its way to join the Dyle, a feeder of the Schelde; and the Dommel, which rises in the north of this province and flows through North Brabant, where it enters the Maas at Crèvecoeur.

Hasselt, the capital of the province, is a well-built town of 7600 inhabitants, on the Demer. It has some manufactures of linen, leather, tobacco, beer, spirits, point-lace, &c. A branch railroad leads from Hasselt through St.-Trond to the Liège-Malines line, which it joins at Landen.

St.-Trond, 10 miles from Hasselt, stands on the Meselbeck, a feeder of the Demer, and has 9500 inhabitants. It is joined by a branch railroad to the Liège-Malines line. The chief manufactures are fire-arms and lace; there are iron-forges in the neighbourhood.

Bilsen, a small place of 2900 inhabitants on the left bank of the Demer, has iron mineral springs and potteries. *Tongres*, or *Tongern*, on the Jaar, is a well-built town with 6000 inhabitants, who manufacture chicory, leather, and hats. In a valley near this town there is an iron mineral spring which has been described by Pliny. The town is named from the *Tungri*, the first German tribe which settled on the left bank of the Rhine. *Maaseyk*, or *Mazeik*, a town of 4000 inhabitants, stands in the north-east of the province on the left bank of the Maas, and has manufactures of leather, paper, hats, tobacco, pottery, beer, spirits, and ropes.

The Dutch province of *Limburg* has the title of duchy, extends between 50° 45' and 51° 47' N. lat., 5° 35' and 6° 13' E. long., and is bounded N. by Gelderland, E. by Rhenish Prussia, S. by the Belgian province of Liège, and W. by those of North Brabant and Limburg. The area is 848 square miles, and the population in 1852 was 210,275. It extends 71 miles from north to south, with an average breadth of 14 miles, but at some points the width does not exceed 3 miles. In the southern part extending along the right bank of the Maas the soil is fertile, but in the north bogs, moors, and marshes cover a great part of the surface. Cattle-breeding and agriculture are the chief occupations of the inhabitants; the products are similar to those of the Belgian province of Limburg. The principal rivers besides the Maas are its feeders from the right, the Roer and the Neisse.

Maastricht, or *Maestricht*, the capital of the province, stands on the left bank of the Maas, here crossed by a handsome stone bridge, in 50° 48' N. lat., 5° 43' E. long., and has 22,000 inhabitants. The part of the town that stands on the right bank of the Maas is properly a suburb, and called *Wyck*. The town is regularly and well built, and contains several spacious squares, one of which, the Parade, is inclosed by an avenue of trees. The town-hall in the great market-place, and the church of St.-Gervais, are the most remarkable buildings. There are 6 Roman Catholic and 3 Calvinist churches, 2 hospitals, 2 orphan asylums, and a lyceum. The manufactures consist of woollen-cloth, flannel, leather, fire-arms, soap, beer, and spirits. The town is very strongly fortified, and has an arsenal and military magazine: the citadel is erected on a hill called *Petersberg*, on the west bank of the Maas. Underneath this hill is a stone quarry of great extent, abounding in many curious and interesting fossils; it is said to be intersected by above 20,000 passages, forming a most intricate labyrinth. Steamers ply on the Maas to Liège and Rotterdam. Maastricht has suffered often from siege. It was taken after a four-months' siege by the Spaniards in 1579, when the garrison and many of the townspeople were massacred by the victors; it was taken also by Louis XIV.; but William III., king of England, attacked it in vain. Its brave garrison defended it successfully against the Belgians in 1830, and thus preserved it to the Dutch. A branch railway connects the town with Aix-la-Chapelle, whence it has communication with the Belgian and Rhine railways.

The other towns are:—*Sittard*, N. by E. from Maastricht, population 3325; *Rodmond*, or *Ruremonde*, a strongly-fortified place at the entrance of the Roer into the Maas, with 6000 inhabitants, who manufacture woollen-cloth, leather, and beer; *Vaels*, a frontier town, a little W. of Aix-la-Chapelle, with 3000 inhabitants; *Venloo*, a fortified town on the right bank of the Maas, and near the Prussian frontier, has 7500 inhabitants, several breweries, distilleries, tobacco-factories, vinegar-works, tin- and lead-foundries, tan-yards, and spinning-mills; the fort St.-Michael, which forms part of the defences, stands on the left bank of the Maas, and is joined to the rest of the town by a bridge of boats; and *Veerd*, which is situated in a marshy district, near the borders of North Brabant, on the Bree, and has 6500 inhabitants, who manufacture hats, cloth, tobacco, chocolate, candles, leather, and stockings.

LIMBURG, referred to from Galicia, is a misprint for LEMBERG.

LIMBURG. [LIEGE.]

LIMBURG, a town in the duchy of Nassau, situated near the point 50° 20' N. lat., 8° 0' E. long., 20 miles N.N.W. from Wiesbaden, gives title to a Roman Catholic bishop, and has about 3300 inhabitants. It is built on the left bank of the river Lahn, a feeder of the Rhine, over which there is a stone bridge. It has a mint and four churches, of which St. George's church is deserving of notice. The inhabitants manufacture earthenware, and carry on a considerable trade in the

productions of the country. There is a Roman Catholic clerical college and an hospital in the town. The Bishop of Limburg is suffragan of the Archbishop of Freiburg.

LIMERICK, an inland county of the province of Munster, in Ireland, is bounded N. by the Shannon, which separates it from Clare, E. by Tipperary, S. by Cork, and W. by Kerry. It lies between 52° 17' and 52° 47' N. lat., 8° 8' and 9° 25' W. long., and is 35 miles long from north to south, 54 miles from east to west. The area comprises 1064 square miles, or 680,842 acres, of which 526,876 are arable, 121,101 uncultivated, 11,575 in plantations, 2759 in towns, and 18,531 under water. In 1841 the population, exclusive of the city of Limerick, was 281,638; in 1851 it was 208,688.

Surface, Hydrography, Communications.—The surface is an undulating plain, sloping with a gentle declivity towards the Shannon on the north, and surrounded on its southern and western borders by a well-defined margin of mountain groups and hilly uplands. A mountainous tract, called *Slieve-Phelim*, covers the north-east of the county, being a continuation of the *Keuper Mountains* in Tipperary. The general direction of the *Slieve-Phelim* range is from north-east to south-west, and this is also the course pursued by the streams that descend from them into the *Bilboa*, a feeder of the *Mulkern River*. The *Mulkern* carries a considerable body of water to the Shannon, which it enters a little above the city of Limerick. The district between the *Slieve-Phelim* range and the Shannon is, towards the extremity of the county, flat and boggy, but has a pleasingly diversified surface along the banks of the *Mulkern*. The Shannon which, flowing between well-timbered banks, bounds this district on the west, forms a series of rapids of uncommon grandeur, the principal of which, near *Castle Connell*, is known as the 'Leap of Doonass.' The valley of the Shannon is here contracted by the *Slieve-Barnagh Mountains* on one side, and the *Keuper range* on the other, and presents features of a grand and striking character throughout a distance of several miles.

The principal features of the great plain of Limerick, extending from the *Mulkern* westward and southward to the mountains on the borders of Kerry and Cork, are the rivers *Maigue* and *Deel*, which traverse it from south to north in nearly parallel courses. The basin of the *Maigue* embraces the east and south-east of the county. This river has its source in the high land stretching south of *Charleville*, in the county of Cork, from whence it runs north by west to the Shannon, and nearly bisects the central plain of Limerick. Its chief feeders, the *Looba*, the *Mornin*, and the *Camogue*, fall in on the right bank, and have their sources among the continuation of the *Galtees* and a detached group called the *Castle Oliver Mountains*, which occupy the south-east of the county. The *Maigue* is navigable from *Adare* to the Shannon, a distance of 12 miles. *Lough Gur*, a picturesque sheet of water, about 5 miles in circumference and embosomed among romantic knolls, some of which have a considerable elevation, is about midway between the *Camogue* and the *Mornin*. A cave and the ruins of a strong fortress on an island in the lake, and a vast number of Druidical structures on its shores, add to the interest of the scenery. From the summit of *Knockfennel*, one of the hills forming the basin of the lake, a magnificent view is obtained of the surrounding plain, comprising the greatest extent of arable land unincumbered with bog in Ireland, bounded by an imposing amphitheatre of distant mountains. The country between the *Camogue*, the *Mulkern*, and the Shannon has a more varied surface than that above described: several conical hills rise within a short distance on the Tipperary border about midway between the more marked mountain boundaries which limit the plain on the north and south.

The country west of the *Maigue* for about two-thirds of its extent has much the same character of surface as the district last described, the remainder being included in the mountainous region stretching westward into Kerry. It is drained by the *Deel*, which is navigable for three miles from its junction with the Shannon below *Askeaton*. The lower portions of the courses of the *Deel* and *Maigue* are through so flat a country that their respective valleys are scarcely observable, but in the district intervening between their sources there is a good deal of high ground, particularly about the small town of *Ballingarry*, in the neighbourhood of which are the steep hills of *Knockfeernha* and *Kilmeedy*. *Knockfeernha* has an elevation of 907 feet. The valley of the Upper *Deel* lies between these heights on the east, and the high country towards Kerry on the west. The high lands rise round the Kerry margin of the level district in a continuous sweep of above 20 miles from *Drumcollogher*, at the head of the river, to *Shanagolden* and the Shannon. At the northern extremity of the mountain range the detached hill of *Knockpatrick* rises boldly between the town of *Shanagolden* and the Shannon. From *Shanagolden* westward the surface is rough and hilly, rising at the distance of 2 or 3 miles from the Shannon into sterile tracts of bog and mountain, which spread southward and westward into the counties of Cork and Kerry. The county extends considerably beyond the watershed of this mountainous region, the principal rivers of which, the *Faale* and the *Gale*, flow westward and south-westward into Kerry, where they unite with the *Brick* to form the *Cashen* river or estuary.

The Lower Shannon runs along the northern boundary for a distance of about 35 miles. It is navigable at high water for vessels of heavy burden up to Limerick. Some improvements have been lately effected in the navigation of the Lower Shannon, and several

landing piers erected on each shore of the estuary; one of these piers has been built at Kiltewy on the Limerick shore, between Glin and the island of Foynes. Between Foynes Island and the mainland is a safe natural harbour, completely sheltered from all winds; and with ample depth of water at all times of the tide.

The leading lines of road diverging from Limerick to Clonmel, Cork, and Tralee are carried nearly in straight lines over the open country. A new road by Croom to Charleville has been completed, and several good roads traverse the mountainous district surrounding Abbeyfeale. The Great Southern and Western railway from Dublin to Cork approaches close to the most eastern angle of the county, whence a branch line, 22 miles in length, runs to the city of Limerick, and another 55 miles long runs in a south-south-east direction to Waterford, near the south-eastern corner of the island.

Geology.—The level part of the county consists of the carboniferous limestone of the central plain of Ireland. The mountain groups and detached eminences of its eastern and southern margins are formed by the protrusion of older rocks, and the high lands on the west consist of more recent series superimposed. The Slieve-Phelim group consists of clay-slate supporting flanks of yellow sandstone and conglomerate. Old red-sandstone forms the nucleus of the Slieve-na-muck chain, an offset of the Galtees, the western declivities of which spread into Limerick above Galbally. The clay-slate reappears in the central summits of the Galtees and Castle Oliver Mountains, flanked by old conglomerate with red, purple, and green clay-slate, sustaining a margin of yellow sandstone. Old red- and green-sandstone compose the various protrusions which rise between and in the valleys of the Upper Maigue and Deel rivers, except in Knockfeerna Hill, which consists chiefly of a mass of crystalline greenstone trap. Trap protrusions, interstratified with limestone, occur in 12 distinct localities in the eastern part of the county, between the embouchure of the Maigue and the border of Tipperary. Pallas Hill, one of these protrusions, is remarkable for the great fertility of its soil, and for the presence of columnar basalt, which overlies the amorphous trap of its northern brow. Felspar porphyry occurs in various forms throughout the hilly district. The mountainous district on the west of the county belongs to the great Munster coal-tract, which is one of the most extensive in the British Islands. The coal is usually of a slaty structure, and much softer than that of Tipperary or Kilkenny: it is chiefly used for burning lime. The only workings within Limerick have been at Newcastle and Loughill. About 7 miles from the city of Limerick, near the Askeaton road, is a quarry producing a fine maroon-coloured marble; and in the more immediate vicinity of the city, an inferior black marble is got in abundance, and generally used as building-stone. Iron-, copper-, and lead-ores are found in the trap districts, but no veins are at present worked.

Climate, Soil, and Produce.—The climate of Limerick is remarkably equable, and favourable to health. The soil is generally fertile. A tract of extraordinary fertility, called the Golden Vale, stretching westward out of the county of Tipperary, extends from the sources of the Maigue to the Mulhern, and has an area of about 160,000 acres. The soil is a rich, mellow, crumbling loam, and is equally suited to grazing or tillage. A still richer soil is that of the 'Corcasses,' or rich bottoms, which extend for 15 miles along the left bank of the Shannon, from a little below Limerick to the embouchure of the Deel. They are similar in character to those on the opposite side of the river [CLARE], having a subsoil of yellow or blue clay, covered with a deep rich black mould. They yield the heaviest wheat crops in Ireland; and their produce of potatoes sometimes amounts to 100 barrels of 22 stones each to the acre. The soil of the remainder of the limestone plain is light and sweet, very good for tillage, and yielding excellent pasture for cattle and sheep.

The number of acres under crops in Limerick county in 1858 was 197,572, of which 10,324 acres grew wheat; 53,138 oats; 17,792 barley, bere, rye, beans, and peas; 27,830 potatoes; 15,015 turnips; 3969 mangels, carrots, parsnips, cabbage, vetches, and other green crops; 349 flax; and 69,160 meadow and clover. On 15,291 holdings in 1852 there were 15,917 horses, 5929 mules and asses, 145,286 cattle, 61,761 sheep, 53,614 pigs, 14,088 goats, and 274,355 head of poultry. The total value of the live stock here enumerated was estimated at 1,231,460*l.* The chief occupations are agricultural; pasturage and dairy farming are most attended to. Large quantities of butter and other farm produce are exported. The only manufactures of importance are coarse woollens, paper, flour, and meal. Limerick is the chief point of exportation. Cider is made in the districts about Rathkeale, Adare, and Croom.

Limerick county is divided into 14 baronies:—Owneybeg, north-east; Clanwilliam, west of Owneybeg; Coonagh, east; Small County, south of the preceding; Coshma, central; Coshlea, south-east; Pubblebrien, north; Kenry, west of Pubblebrien; Lower Connello, west of Kenry; Upper Connello, south; Kilmallock Liberties, between Coshlea and Upper Connello; Shanid, west; Glenquin, south of Shanid; and North Liberty, north.

The principal towns besides the city of LIMERICK are NEWCASTLE and RATHKEALE. These are noticed under their titles. Of the other towns and villages the following are the most important; the populations are those of 1851:—

Abbeyfeale, a village of 717 inhabitants, in the centre of a moun-

tainous district, is situated on the river Feale, which here separates Limerick from Kerry. The village takes its name from the Cistercian abbey founded in 1188 on the right bank of the Feale. The ruins of the abbey still exist, and near it are the ruins of Purt Castle, a seat of the Geraldines. Abbeyfeale contains a church, a Roman Catholic chapel, and a dispensary. Fairs are held on June 29th and October 18th. *Adare*, or *Adair*, a market-town 12 miles S.S.W. from Limerick, population 967, is situated on the Maigue, which is navigable at high water for small vessels up to the town. Adare stands in a fertile, richly-wooded, and very beautiful country: it is an ancient place, and was distinguished for its castle and its church even before the Norman invasion. It afterwards became the property of the Fitzgeralds, earls of Kildare. The splendid ecclesiastical structures whose remains form the great attraction of the place were erected by members of the Fitzgerald family. Among these structures are the Black Abbey, the Augustinian Monastery, and the Franciscan Abbey. The Black Abbey, founded in 1279, is situated in the town; the tower, nave, and part of the choir of the church remain, and are fitted up as a Roman Catholic chapel. The nave, choir, and south transept of the Augustinian Monastery are tolerably entire, and stand close to the bank of the river, in the demesne of Adare Manor, the seat of the Earl of Dunraven, which adjoins the town. The Franciscan Abbey stood close to the bridge over the Maigue; the tower, nave, and choir of the church, the cloisters, and the refectory remain. The nave and choir are fitted up as a parish church; the refectory is formed into a school-room, and the cloisters have been restored. The Earl of Dunraven has erected a family mausoleum near the cloisters. A large ruined castle of the Desmond branch of the Fitzgeralds rises from the bank of the river near the town. The town has a petty-sessions court, a fever hospital, and a dispensary. *Askeaton*, 17 miles W. by S. from Limerick, on the road to Tarbert, population 1957, besides 808 in an auxiliary work-house, was a parliamentary borough till the Union. It is situated on the Deel, about 3 miles above its confluence with the Shannon, and contains a church, a Roman Catholic chapel, several schools, a dispensary, and a petty-sessions court. A market is held weekly on Tuesday. The river is navigable for vessels of 60 tons up to the bridge. The town was in former times much larger than at present, and was surrounded by walls, and defended by a strong castle, built by the seventh earl of Desmond. The massive ruin of this castle, which had a high rock encompassed by the Deel for its site, is still an object of great interest; the keep and banqueting-room remain. Close to the river are the remains of a Franciscan abbey founded in 1420, the cloisters of which are in good preservation. The parish church was formerly part of the church of a commandery of Knights Templars, founded in 1298. *Ballingarry*, 14 miles S. by W. from Limerick, has remains of several religious houses founded at an early period, a parish church, a Roman Catholic chapel, a dispensary, several schools, and 1502 inhabitants, besides 957 in the auxiliary workhouse and the fever hospital. Markets are held twice a week, on Tuesday and Friday. *Bruff* is a poor town of 1224 inhabitants, 14 miles S. by E. from Limerick, and a little south of the beautiful Lough Gur, on the Dawn, a feeder of the Maigue. It contains a neat church, a Roman Catholic chapel, a court-house in which quarter and petty sessions are held, a dispensary, a bridewell, and the ruins of an old castle. The market is held weekly, on Friday. *Bruree*, 4 miles W. by N. from Kilmallock, population 780, stands in a fertile country watered by the Maigue, and has a petty-sessions court and a dispensary. The Irish bards used to meet half-yearly in this place: the last meeting took place in 1746. *Cahirconlish*, 11 miles E. by S. from Limerick, and a little south of the Limerick Junction railway: population, 485. It contains a church and a Roman Catholic chapel. Cahirconlish was formerly a walled town, and was defended by four castles, every vestige of which has disappeared. *Cappamore*, a town of 579 inhabitants, is situated at the foot of the Slieve-Phelim Mountains, 14 miles E. from Limerick, at a short distance north of the Limerick Junction railway. *Castle-Connell*, 7 miles N. from Limerick, population 555, is situated on the left bank of the Shannon, close to the fall called the Leap of Doonas. The town takes its name from its castle, which was built by Conal, a local chieftain, and long inhabited by the O'Briens of Munster; it was finally blown up by General Ginkel during the siege of Limerick. The ruins cover the summit of an isolated rock in the town, and form a very picturesque object. The town of Castle-Connell is very irregularly built, and consists of an assemblage of cottages, villas, lodging-houses, cabins, and inns, to suit the circumstances of the parties who frequent it for its scenery and its chalybeate spring, both of which are celebrated. Castle-Connell has a petty-sessions court and a dispensary. In the angle between the Shannon and the Mulhern are the elegant mansion and extensive demesne of Mount Shannon, the residence of the Earl of Clara. *Croom*. *Drumcollogher*, a village of 757 inhabitants, is situated at the base of the Mullaghaneirk Mountains, close upon the boundary of Cork; it contains a large Roman Catholic chapel. Two miles from the village is Springfield Castle, the seat of Lord Muskerry. *Galbally*, population 301, is situated at the head of the beautiful glen or vale of Aherlow, which is screened by the Galtees on the south, and the Slieve-na-muck Hills on the north. The village contains remains of several ancient ecclesiastical structures. Petty sessions are held in this place. *Glin*. *Hospital*, population 684, a small town 5 miles E. from Bruff, is famous for its horse- and cattle-

fairs. Petty sessions are held in the town. *Kilfinane*, situated 5 miles S. by E. from Kilmallock, population 1413, contains a church and a Roman Catholic chapel. In the vicinity are the dilapidated round tower and ruined abbey of Ardpatrick, and the remains of Castle Oliver, an old seat of the Oliver family, which gave name to the high hills among which it stands. Kilfinane has a petty-sessions court, a bridewell, and a fever hospital; the town is head-quarters of the district police. *Montpellier*, a village of 441 inhabitants, stands 3 miles N. from Castle-Connell, on the left bank of the Shannon, opposite the village of O'Brien's Bridge. *Pallas-Kerry*, a small market-town of 613 inhabitants, is situated about 7 miles W. from Limerick. Petty sessions are held here. At a short distance on the road to Limerick are Elm Park, the seat of Lord Clarina, and Tervoe, the fine mansion of W. T. Monsell, Esq., M.P., in the demesne surrounding which are the extensive ruins of Carrickagonnell Castle, an old seat of the O'Briens, kings of Munster. *Shanagolden*, 23 miles W. from Limerick, population 770, has a small church, a Roman Catholic chapel, and a petty-sessions court. About a mile east of Shanagolden are the fine ruins of Manistir-na-Gillagh Abbey; and a little south of it are the remains of Shanid Castle, one of the ancient strongholds of the Desmond branch of the Fitzgeralds, whose motto, 'Shanid-a-boo' (Shanid for ever), originated with this old warlike residence. This castle dates from the 12th century.

The county of Limerick lies chiefly in the sees of Limerick and Emly; but small portions of it belong to the dioceses of Cashel and Killaloe. It returns four members to the Imperial Parliament, two for the county and two for the city of Limerick. Assizes are held in the city of Limerick, where are the county prison, the county infirmary, and the district lunatic asylum for the counties of Clare, Limerick, and Kerry. Quarter sessions are held in Limerick, Bruff, Newcastle, and Rathkeale, in which towns, and in Croom, Glin, and Kilfinane, there are bridewells. Petty sessions are held in 22 places. The medical charities of the county include, besides those already mentioned, fever hospitals in Limerick, Adare, Kilfinane, Newcastle, and Rathkeale; and 32 dispensaries.

There was one savings bank in the county in 1852, at Limerick: the total amount due to depositors on November 20th 1852 was 93,037*l.* 8*s.* 5*d.* The Union workhouses are at Limerick, Kilmallock, Newcastle, Rathkeale, Croom, and Glin. The county is the head-quarters of the Limerick Military Division, which includes also Clare and Galway counties, and parts of Kerry, King's County, and Tipperary. A barrack station is at Newcastle, and the staff of the county militia is stationed in Limerick city. The county constabulary numbers 667 men and officers, and is distributed into 10 districts, comprising 95 stations, of which Limerick is the head-quarters. In September 1852 there were 124 National schools in operation, attended by 9382 male and 11,565 female scholars.

History and Antiquities.—Prior to the arrival of the English in Ireland Limerick constituted part of Thomond. Donald O'Brien was prince of this territory at the time of the English invasion, and, notwithstanding grants of his lands made by Henry II, first to the family of the Earl of Cornwall, and next to Philip de Braosa, neither of whom could get possession, Donald held his principedom till his death in 1194. In 1199 King John renewed his father's grants to the De Braosa family, and bestowed the city of Limerick and the cantred adjoining on William de Burgho, to whom he committed the custody of the city. William de Braosa was afterwards attainted, and his lands reverted to the crown. A portion of the forfeited lands, comprising the barony of Owneybeg, was then conferred on Theobald Fitz-Walter, the ancestor of the Ormonde family, and other portions on Hamo de Valois, William Fitz-Adelm de Burgho, and Thomas, son of Maurice Fitzgerald, the ancestor of the great family of Desmond, which subsequently became possessed of the greater part of the counties of Limerick, Kerry, Cork, and Waterford. The estates of Gerald, the 16th earl, who finally forfeited the family property, in the county of Limerick alone consisted of 96,165 acres, which were granted among twelve individuals, most of whose names are now extinct in the county. The forfeitures which ensued after the rebellion of 1641, in which this county took a very prominent part, embraced almost the entire county, and introduced a numerous new proprietary. The war of the Revolution terminated in further forfeitures comprising 14,188 acres. The families of Fitzgerald, Rice, Trant, and Brown were the principal sufferers. A spirit of insubordination among the peasantry, arising, it is said, from the severe exaction of rack-rents, broke out into insurrectionary acts in 1762, 1786, and 1793. These at the time were suppressed, and many of the ringleaders executed. In 1815, 1817, and finally in 1821-22, the peasantry, from a similar cause, rose in arms, and after several severe conflicts with the king's troops they were put down. Great numbers of the peasantry who were taken were executed or transported, and the famine of 1823, added to the rigour of summary justice, completely broke the spirit of the insurgents.

Limerick is among the richest of the Irish counties in antiquities, several of which have been already mentioned. The cyclopean remains, stone circles, pillar stones, and altars, on the banks of the beautiful Lough Gur, are so numerous and gigantic as to form one of the most magnificent collections of primeval remains in existence. Military earthen works are numerous in all parts of the county. The argest raths are those at Bruree, Kilpeacon, Pallasgreen, Shanid, and

Kilfinane. At Carrigeen, near Croom, are the remains of a round tower still 50 feet in height. The ruins of religious houses are very numerous. The river Cmaigue alone has the ruins of seven religious houses on its banks. Manister-Nenagh, the most considerable of these, is the most extensive pile of monastic ruins in Munster. It was founded by O'Brien, king of Limerick, in 1148. The entire number of such foundations in the county was about 36, chiefly erected by members of the house of Desmond. Of the castles of the early proprietors nearly 100 still remain. Of these the most remarkable are—Croom Castle and Shanid Castle, which have been already mentioned. Cappagh Castle, near the hamlet of Croagh, 4 miles from Adare, on the high road from Limerick to Rathkeale, was another seat of the Fitzgeralds. Part of the keep, 100 feet high, is still standing. It is remarkable for the superior style in which it is built, the quoins-stones being polished. At Castle-Connell are the ruins of a noble castle, a seat of the O'Briens. Carrickagonnell Castle, another stronghold of the O'Briens, is boldly situated on a basaltic rock rising suddenly from the plain to a height of several hundred feet above the left bank of the Shannon. It was blown up in the war of the Revolution; but, although 84 barrels of gunpowder were exploded under it, two of the towers are still tolerably perfect.

LIMERICK, Ireland, the capital of the county of Limerick, a city, a municipal and parliamentary borough, a sea-port, and the seat of a Poor-Law Union, is situated on the Shannon, in 52° 40' N. lat., 8° 35' W. long., distant 119½ miles W.S.W. from Dublin by road; 129 miles by the Great Southern and Western, and the Limerick and Waterford railways. In 1851 the population of the city was 53,448. The borough is governed by 10 aldermen and 30 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. Limerick Poor-Law Union comprises 34 electoral divisions, with an area of 177,951 acres, and a population in 1851 of 110,628.

The town is built on both sides of the Shannon, and on King's Island, a tract about a mile long and from a quarter to half a mile broad, lying nearly north and south, with the main stream on its west side. Englishtown, the oldest part of the city, occupies the southern end of the island. On the west it is connected by Thomond-bridge with Thomond-gate, a suburb of considerable extent on the county Clare side of the Shannon. Irishtown, which is next in antiquity to Englishtown, lies to the south of it on the left bank of the smaller branch of the Shannon, which is called the Abbey, or Salmon Weir River. Newtown Pery, which has sprung up within the last sixty years, extends to the south-west of Irishtown, on a gentle elevation along the left bank of the reunited river.

The ancient city of Limerick is by some supposed to be the Regia of Ptolemaeus. It was a place of some note in the 5th century when visited by Patrick. The Danes made their first attempt on Limerick in 812; and, although repeatedly baffled, succeeded about the middle of the century in getting possession of the place. Towards the close of the 10th century they were reduced by the celebrated Brian Boroinmhe, and rendered tributary to the kings of Munster. The effectual introduction of English government did not take place till the time of Henry II. [LIMERICK, County of.] King John in 1210 visited Limerick, and caused Thomond-bridge to be erected over the Shannon, the castle of Limerick to be built, and established a mint in the city. Great numbers of English settlers now arrived, and the city continued to prosper until the invasion of Ireland by Edward Bruce, who burned the suburbs in 1314, and during the winter of 1316 made Limerick the rendezvous for his Irish allies. On the termination of this war the fortifications of the town were increased. In the wars succeeding the rebellion of 1641 the city was seized by the Roman Catholics, became the head-quarters of their supreme council, and was for several years the scene of great commotion and outrage. In 1651 it surrendered to the army of the Parliament under General Ireton. At the Revolution Limerick declared for King James. After the battle of the Boyne and the flight of James it was unsuccessfully besieged by King William. In the following year the town was invested by the army of William, under General Ginkel. The besieged having been closely pressed for some weeks proposed an armistice, when negotiations were opened, which terminated, on the 3rd of October, in the signature of the celebrated treaty of Limerick.

The city now began slowly to recover from the effects of these repeated disasters. In 1697 the castle in the Irishtown was thrown down, and a market-house erected on its site; and in 1717 the Abbey River was partly quayed in. About 1760, besides several new roads, a canal was commenced, by which the Shannon was rendered navigable to Killaloe. In 1761 a commodious bridge was erected between Englishtown and the southern bank of the main river. In 1796 the buildings of the Irishtown began to extend along the southern bank of the main river, on an open elevated plot of ground called South Prior's Land, or Newtown Pery. This division now constitutes the best part of Limerick, and is justly considered one of the most elegant towns in Ireland. Englishtown is closely built, with confused lines of narrow and irregular streets. It has been deserted by the wealthier classes, and although it still contains several important buildings, it presents a general appearance of wretchedness and decay. The older part of Irishtown is similar in character, but on the whole it is better built and inhabited, and contains several straight and well-formed streets, especially in the line of the Dublin road, and at the south-east side of

the town, where it has been much improved by a considerable extension. The streets of Newtown Pery, which intersect each other at right angles, are spacious and airy, well lighted and paved, and contain many handsome shops and dwelling-houses. The principal street, running from the New-bridge, which connects it with Englishtown, and terminating in a double crescent, presents a fine line of buildings, upwards of a mile in length. Towards the south-west end of Newtown is a handsome square with a lofty column in the centre, surmounted by a statue of Lord Monteaigle. The city is lighted with gas; the streets are generally well paved; the supply of water is from elevated tanks, to which the water is raised by steam power.

Of the public buildings in Limerick, the most remarkable are the following: St. Mary's cathedral, founded in 1180, and rebuilt in 1490, occupies an open space in the centre of Englishtown. It is a venerable cruciform structure, measuring 156 feet by 114 feet, and has a square embattled tower 120 feet high. St. Munchin's church, supposed to have been the former cathedral, is situated on an elevated open plot in the north of Englishtown, overlooking the Shannon. There are besides 4 Episcopal chapels, one of which is attached to the Blind Asylum; 4 parochial and 3 conventual Roman Catholic chapels; also chapels for Wesleyan and Primitive Methodists, Presbyterians, Independents, and Quakers. The Limerick Institution, founded in 1829, has an extensive library attached to it. There are several National and Free schools; a district Diocesan school, and schools supported by the Nuns of the Presentation Convent, and by the Monastic Society of Christian Brothers.

The exchange was built in 1778, and has a commodious hall and handsome portico. The city court-house stands near the Abbey River; the county court-house, which stands towards the main stream of the Shannon on the west, is a very handsome building, erected in 1808 at a cost of 12,000*l.* It is quadrangular, built of hewn stone, and has a fine portico of four Roman Doric columns. The chief public buildings of Irishtown are the corn- and butter-markets, the linen-hall and the fever-hospital. At the southern extremity of the new bridge which leads from Englishtown into Newtown-Pery, facing the main river, is the new custom-house, a handsome structure, built in 1769. The Chamber of Commerce was erected in 1805. On Charlotte quay, is the assembly-house, built in 1770, now converted into a theatre. In the southern suburbs is the new county jail, erected in 1821 at a cost of 25,000*l.* It consists of a central polygonal tower, 60 feet high, surrounded by 5 diverging ranges of prison buildings, and having a fine Doric entrance in front. Near it is the County Lunatic Asylum, erected at a cost of nearly 30,000*l.*, and opened in 1821 for 150 patients.

The charitable institutions are the County Limerick infirmary; Barrington's hospital and City of Limerick infirmary, erected by Sir Joseph Brrington in 1829, and chiefly supported by the Limerick Monte de Pietà, opened in March, 1837; the City of Limerick dispensary; the Limerick asylum for blind females; the house of industry, founded in 1774; the fever and lock hospital, founded by Lady Hartstonge in 1781; the lying-in hospital, opened in 1812; Hall's almshouses, founded by Dr. Jeremy Hall in the early part of the last century; the corporation almshouse, for reduced widows; the St. George's Widows' asylum; Mrs. Villiers's almshouses, also for widows, erected in 1826; and several minor charities. A savings bank has been in operation since 1820.

About a mile above the city, the river is crossed by Athlunkard-bridge, a fine structure of five large elliptic arches. Wellesley-bridge, with the same form and number of arches, each 70 feet in span, connects the east end of Newtown Pery with the county Clare side of the river. It was completed in 1827 at a cost of 60,000*l.* Thomond-bridge has been lately rebuilt by the corporation at an expense of 12,000*l.* At the end of this bridge is Treaty Stone, noted as the spot on which the Treaty of Limerick was signed. On the Abbey River, New-bridge, and Ball's-bridge, the latter a beautiful single arch, erected in 1831, connect Englishtown with Newtown Pery and Irishtown. Higher up on the same stream is Park-bridge, an old and lofty structure of five irregular arches.

Limerick possesses various important branches of productive industry. The manufacture of lace, introduced in 1829, has gradually increased, and gives employment to a considerable number of females. Fish-hooks of a superior quality are made in great number, and largely exported to America. There are several iron-foundries, tanneries, flour-mills, breweries, and distilleries; three ship-building slips, and a patent slip for vessels of 500 tons. The interests of manufactures and trade are attended to by the Chamber of Commerce, the Agricultural Association, and the Trustees for the promotion of Industry.

The trade of Limerick has increased with the growth of the city. Being the natural outlet for the produce of a great part of the counties of Limerick, Clare, Tipperary, Cork, and Kerry, it has since the termination of the civil wars been, next to Cork, the chief seaport of Munster. It has also an extensive export trade through the Shannon and Grand Canal by way of Dublin. The mayor is admiral of the port, with jurisdiction from 3 miles above the city to the open sea. The port is under the control of 72 commissioners, 42 for life, and 15 elected each year to serve for two years, by whom are appointed a resident engineer, harbour master, &c., and 50 pilots.

The harbour extends about 1600 yards in length, by 150 yards in breadth. It has from 2 feet to 9 feet at low-water, and 19 feet at spring tide, when vessels of 600 tons can moor at the quays. There are about 1600 yards of quays and wharfrage running irregularly along the Abbey River and the main stream of the Shannon, to a weir thrown across the river towards the lower end of Newtown Pery. Between Wellesley-bridge and the custom-house is a large floating dock, and near the lower end of the island is one 300 yards in length, called the Long Dock. A lateral cut with a swing bridge, at the south end of Wellesley-bridge, admits vessels to the upper quays, and to the works in Abbey River, which connect the harbour with the canals of the Limerick navigation.

On 31st December, 1853, the number of vessels registered as belonging to the port of Limerick was 59 under 50 tons, amounting to 1761 tons, and 40 above 50 tons, amounting to 10,315 tons; and one steam-vessel of 300 tons. The number and tonnage of vessels entered and cleared at the port during 1853 were as follows, namely:—Inwards 564 sailing-vessels of 89,530 tons, and 81 steam-vessels of 21,228 tons; outwards, 529 sailing-vessels of 76,763 tons, and 80 steam-vessels of 21,168 tons. The amount of customs duties received at the port in 1851 was 159,781*l.* 8*s.* 2*d.*

Limerick is the head-quarters of the South-western Military District, and contains several barracks. One, consisting of three sides of a square, and affording accommodation for 400 men, stands within the remains of King John's Castle. There are a fine new barrack near Newtown Pery, one for artillery in Irishtown, and another for infantry in St. John's Square.

The assizes for the county are held in Limerick, also quarter and petty sessions. The mayor holds a court of conscience for pleas under 40*s.*, and the assistant barrister holds a civil bill court for the county. Fairs are held on Easter Tuesday, July 4th, August 4th, and December 4th. The market-days are Wednesday and Saturday.

The see of Limerick is in the archiepiscopal province of Dublin; it comprises a large part of Limerick, and a small portion of Clare. It contains 56 benefices. The chapter consists of a dean, precentor, chancellor, treasurer, archdeacon, and 11 prebendaries. The diocese in 1663 was united to that of Ardferd and Aghadoe. The annual revenue of the united diocese is 4973*l.* The bishop's palace is situated in the New Town of Limerick, overlooking the Shannon.

LIMISSO. [CYPRUS.]

LIMOGES, a city in France, capital of the department of Haute-Vienne, is situated on the summit and slope of a hill on the right bank of the Vienne, which is here crossed by three bridges, 236 miles S. by W. from Paris, in 45° 49' 52" N. lat., 1° 15' 35" E. long., and had 37,010 inhabitants in the commune according to the census of 1851. It was the chief town of the Celtic tribe *Lemovices*, to whom both the town and the province of Limousin owe their names. It was called Augustoritum by the Romans, under whom it was a place of considerable importance, and became in the 3rd century the seat of a bishop. It was at the convergence of several Roman roads. There was an amphitheatre, said to have been built by the emperor Trajan, of which there were sufficient remains in 1713 to admit of a plan being drawn; it was about 1500 feet in circumference. It was entirely destroyed in 1714, in order to form the Place d'Orsay. There are now no Roman remains at Limoges in good preservation, except a subterranean aqueduct, which conveys the water of a fountain in the upper part of the town. In the 5th century Limoges came into the power of the Visigoths; and was successively pillaged or destroyed by the Franks and by the Northmen. It was ceded to the English by the treaty of Bretigny, and formed part of the great principality of Aquitaine under Edward the Black Prince. The people of Limoges were persuaded by their bishop to revolt from Edward, one of whose last exploits (A.D. 1370) was the capture of the town. Irritated by treachery, the prince put three thousand of the inhabitants, men, women, and children, to the sword.

Limoges is built on a hill which commands a prospect of the delightful valley of the Vienne. The older part of the town consists of narrow and steep streets, with timber-framed houses: the more modern part contains broad and straight streets, two handsome squares, several excellent houses, new boulevards, and a number of public fountains. Of the public edifices the principal are the town-hall, the cathedral of St. Etienne, a fine gothic edifice of the 13th century; the churches of St. Michel-des-Lions, and St. Pierre-du-Queyroix; the episcopal palace, and the beautiful fountain of Aigoulène. The public library of 12,000 volumes, the cavalry barracks, the prefect's residence, the theatre, and the hospitals also deserve notice. There is a great monthly cattle market, and nine yearly fairs are held.

Limoges is the seat of a bishop, whose diocese includes the departments of Creuse and Haute-Vienne; and of a High Court, the jurisdiction of which comprehends the departments of Haute-Vienne, Corrèze, and Creuse. It has tribunals of first instance and of commerce, a college, a mint, an ecclesiastical college, and several charitable institutions. A great number of books are printed at Limoges; and the manufacture of fine and coarse woollen-cloth, paper, porcelain, and crucibles is important. Flannel, cotton handkerchiefs, glue, nails, woollen-yarn, room-paper, articles in papier-mâché, &c., are also made. There is besides a considerable commerce in corn, chestnuts, wine, brandy, liqueurs, iron, copper, tin, kaolin, &c.

LIMONE. [CONC.]

LIMOUSIN, or LIMOSIN, an old province of France, now forms the departments of Corrèze and Haute-Vienne. It was watered by the Vienne, one of the great tributaries of the Loire, and by the Dordogne, and its tributaries the Isle and the Vézère, all belonging to the system of the Garonne. The province was divided into two parts by the Vézère—Upper Limousin, which was to the north-west of that river, and had Limoges for its capital; and Lower Limousin, of which the chief towns were Brives and Tulle. Limoges was also the capital of the whole province.

This district was anciently inhabited by the Lemovices, a Celtic people. In the division of Gaul into provinces, Limousin was included in Aquitania. It formed part of the dominions of the Visigoths till the overthrow of Alaric II. by Clovis at the battle of Vouillé. It was subsequently under the government of the dukes of Aquitaine, from whom it was taken by Pepin-le-Bref. It was afterwards included in the great duchy of Guienne, under which Limoges, its capital, became the head of a vice-county. It was in a quarrel with Ademar V., viscount of Limoges, that Richard I. (Cœur-de-Lion), king of England and duke of Guienne, lost his life, being shot with an arrow as he was besieging the castle of Chalus in Limousin. The possession of Limousin was subsequently disputed by the kings of England, as dukes of Guienne, and the kings of France. It afterwards came by marriage into the hands of the dukes of Bretagne, and later still into those of the counts of Albret. It was inherited by Henri IV. from his mother Jeanne d'Albret, and was by him united to the French crown.

LIMOUX. [AUDE.]

LINARES. [JAEN.]

LINCOLN, the county town of Lincolnshire, a city, a county of itself, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the left bank of the river Witham, in 53° 14' N. lat., 0° 32' W. long., distant 132 miles N. by W. from London by road, and 140 miles by the Great Northern railway via Boston. The population of the borough in 1851 was 17,536. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor, and returns 2 members to the Imperial Parliament. There are 13 parishes; the livings are in the archdeaconry and diocese of Lincoln. Lincoln Poor-Law Union contains 86 parishes and townships, with an area of 149,218 acres, and a population in 1851 of 42,003.

Lincoln was a place of considerable importance under the Romans; the existing vestiges of their residence here are noticed under the county. In the time of the Saxons and of the Danes it was also a place of consequence. At the time of the Conquest it was one of the most important places in the kingdom, and the emporium of a considerable trade. William the Conqueror ordered the erection of a strong castle here in 1066. The prosperity of the place appears to have been further promoted in the time of Henry I. by clearing out the Fosse Dyke, and making it again available for navigation. This inland communication, with the navigation of the river Witham, rendered the situation of Lincoln peculiarly favourable for commerce. The town was incorporated by charter of Henry II. In the reign of Stephen the empress Maud was besieged here by the king, who took the city, but the empress escaped. In 1141 Stephen besieged Lincoln, but was defeated in an action near the town, and was taken prisoner by the Earl of Gloucester, natural brother of the empress. In the civil wars of the reign of John the town was taken by Gilbert de Gaunt, one of the barons in the interest of Louis, dauphin of France, who had created him Earl of Lincoln. The castle however held out for the king. After the death of John, a battle was fought here between the royalists and the adherents of the dauphin, in which the latter were entirely defeated. The battle was fought June 4, 1218. Lincoln sent members to Parliament in the reign of Henry III. John of Gaunt, son of Edward III., in whose hands the castle was for some time, effected on it considerable improvements. In the civil war of Charles I. the city, the cathedral, and the castle having been occupied by the Royalists, were stormed by the Parliamentarians under the Earl of Manchester in May 1644. Of the castle little more than the gateway is now standing.

The city is built on the southern slope and at the foot of a hill, on the summit of which is the cathedral. The town is irregularly laid out. The streets are well paved, lighted with gas, and supplied with water from public conduits. The lighting, watching, sewerage, &c., are provided for by a local act of a somewhat stringent character.

The most important of the public buildings is the Cathedral, which is one of the finest of the English cathedrals, and is advantageously situated on the summit of the hill; it may be seen for many miles across the flat country to the south-east or south-west; the three towers have at a distance a very fine effect. It has been erected at different periods, and combines various styles, the predominant is early English, of a remarkably rich and beautiful character. The nave is very fine, and the piers in this part are peculiarly rich; and though the side aisles are unusually narrow, the effect of the whole is excellent. The western front, which embraces the width of the nave and aisles with the side chapels or western transepts, is partly Norman, partly early English: it has two towers whose height from the ground is 180 feet. There were formerly spires upon these, of the height of 101 feet, but these were taken down more than 40 years ago; there are still pinnacles at the corners of the towers. At each angle of the

west front are octagonal staircase turrets crowned with pinnacles. Over the central doorway of the west front are several statues of the kings of England, from the Conquest to Edward III., under decorated canopies. The central or great transepts are chiefly in the early English style. At the ends of the transepts are circular windows; that at the end of the south transept is one of the finest circles in the early English style remaining. The Galilee court, or porch attached to the west side of the south transept, and the chapels on the east aisle of the same, have intricate and beautiful mouldings, and their general composition is excellent. At the intersection of these transepts with the nave and choir is the central tower, 53 feet square, and 300 feet high, with pinnacles at the corners. The choir is of rich and elaborate composition; it is separated from the nave by a rich stone screen. The eastern end of the choir, with the Lady Chapel, is of a transition style between the early English and decorated, of peculiar beauty and interest. It has a fine east window, of eight lights. There are two transepts to the east of the principal transepts, and there are several chapels in different parts. The dimensions of the cathedral are as follows:—Exterior length within the buttresses 524 feet; interior length 482 feet; width of the cathedral 80 feet; height of the vaulting of the nave 80 feet; width of the western front 174 feet. Exterior length of the principal transept 250 feet, interior 222 feet; width 66 feet. Smaller or eastern transept—length 170 feet; width, including the side chapels, 44 feet. The old bell, called Tom of Lincoln, which was cast in 1610, and hung in the northernmost of the west towers, became cracked in 1827, and being broken up in 1831, with six other bells, was recast into the present large bell and two quarter bells by Mr. Mears of London, and placed in the Rood (or central) tower in 1835. The new bell is 6 feet 10½ inches in diameter at the mouth, and weighs 5 tons 8 cwt.

On the north side of the cathedral are the cloisters with the chapter-house. The cloisters inclose a quadrangle of 118 feet by 91 feet; three sides remain in their original state, and are of good decorated work; over the fourth (the north) side is a library built by Dean Honeywood in the latter part of the 17th century. The library contains a collection of books, and some curious specimens of Roman antiquities. In the inclosure of the cloisters, some feet below the surface, is a handsome tessellated pavement. From the eastern side of the cloisters is the entrance to the chapter-house, a lofty and elegant decagon, with a groined roof supported by a central pillar. Its interior diameter is 60 feet 6 inches. The cathedral contains numerous monuments; many others which formerly existed have been removed or totally destroyed at and since the time of the Reformation. The dean, precentor, chancellor, and sub-dean have residences. The bishop's palace was demolished during the civil wars; the ruins are on the south side of the cathedral. A modern house has been built on part of the site, in which the bishop resides when at Lincoln. The deanery is an ancient building; and near it is another ancient building, called the Works Chantry, formerly the residence of the chancellor of the diocese. The vicars' college once formed a quadrangle, of which at present there remain only four houses inhabited by the vicars. There is an ancient gateway yet standing.

The see of Lincoln was removed from Dorchester on the bank of the Thames, and the seat of the bishopric was placed at Lincoln. The diocese of Lincoln includes the counties of Lincoln and Nottingham, and is divided into the archdeaconries of Lincoln, Nottingham and Stow. The chapter consists of three archdeacons, a dean, precentor, chancellor, sub-dean, 4 minor canons, and 41 canons non-resident. The number of benefices is 793. The income of the bishop is 4000*l*.

Besides the cathedral there are in the city 13 churches of the Establishment, about one fourth of the number said to have been standing at the time of the Reformation. The old churches are mostly small and much mutilated, being generally the remains of larger edifices. Three of the churches have Norman towers. Six of the churches were rebuilt in a very mean manner during the last century. St. Peter's church, a large structure, erected in 1723, is a spacious classic pile. A church, dedicated to St. Nicholas, has been recently erected at the northern end of the town: it is in the early English style, with a tower and spire at the south-west angle of the nave. The Wesleyan Methodists and Independents have each two chapels; and the Primitive Methodists, General and Particular Baptists, Countess of Huntingdon's Connexion, Roman Catholics, Unitarians, and Quakers have each a place of worship. The Free Grammar school was remodelled in 1851; it is under the care of a head master and three under masters, and had 86 scholars in 1853. The Diocesan Public school is held in a handsome Tudor building, erected in 1835. There are National, British, Wesleyan, Roman Catholic, and Infant schools, and a girls school. The Permanent Stock library, established about 40 years back, has a valuable collection of books, numbering about 11,000 volumes, and had 278 members in 1851. There are in the city a young mens mutual improvement society, a mechanics institute, which had 349 members in 1851, a museum, in which are many Roman remains, and a savings bank. The principal benevolent institutions are the county hospital, open to the whole county; the dispensary limited to the town; the county lunatic asylum, an extensive structure; and the lying-in institution. The principal public buildings besides those mentioned above, are the county jail, erected on part of the site of the castle; the city prison; the county courts,

an imposing pile erected from a design by Sir R. Smirke; the assembly rooms; and the theatre, a plain edifice. The Midland railway station has a good portico; the Great Northern station is a handsome Tudor structure. There are a large meat market, a spacious covered market for butter, poultry, and eggs, another for vegetables, &c. The corn exchange, erected within the last eight years, has a Grecian portico on a rusticated basement. The principal trade of the town is in flour: there are several large steam flour-mills. A considerable trade is carried on in corn and wool, chiefly with Yorkshire. An extensive manufactory of steam-engines employs a large number of hands. There are several breweries. The railways and the canal uniting the Witham with the Trent, afford considerable facilities for trade. Friday is the market-day. A fair is held on four days of the last whole week in April, for horses, sheep, and cattle—this is one of the great horse fairs of the kingdom, and is attended by dealers from all parts of England and many foreigners; mixed fairs are held on Midsummer-day, October 6th, and November 28th. Cattle markets are held fortnightly during a part of the year. The county assizes, quarter sessions, and a county court are held in the city.

Lincoln abounds in monastic and other remains of ancient architecture. The most ancient and in many respects most remarkable antiquity is the Roman gate, of which the principal arch and a postern remain. There are several gateways of English architecture, as the Chequer or Exchequer Gate in the Cathedral Close, and the Stonebow in the High-street: the remains of a fort called Lucy Tower; a tower of three stories, incorporated in a modern house called the Priory, and several other buildings. The Gray Friars is a large oblong building, the lower story of which lies some feet below the surface of the ground; part of the upper story, formerly the chapel, is now used for a Free school, and the remaining part as a library. The remains of John of Gaunt's Palace and of a building called John of Gaunt's Stables present some interesting Norman and early English features. In the gable of the palace is a beautiful oriel window. A small chapel in the richest decorated style is now used as the reservoir of a public conduit. The town-hall is an ancient chamber over a castellated gateway of the time of Henry VIII., which crosses High-street.

LINCOLN, PORT. [AUSTRALIA.]

LINCOLNSHIRE, an English county, bounded N. by the estuary of the Humber, which separates it from Yorkshire; N.W. by Yorkshire; W. by Nottinghamshire, from which it is partly separated by the Trent; S.W. by the counties of Leicester and Rutland; S. by Northamptonshire; S.E. by the counties of Cambridge and Norfolk, from the last of which it is separated by the Cross Keys Wash; and E. by the North Sea, or German Ocean. Its form is irregular, having its greatest length from north to south, 75 miles, from the Humber near the town of Barton to the Welland, near Market Deeping; and its greatest breadth, 50 miles, from the junction of the three counties of York, Nottingham, and Lincoln, to the sea at Saltfleet. The area is estimated at 2776 square miles, or 1,776,738 acres. The population in 1841 was 362,602; in 1851 it was 407,222. In size Lincolnshire is the second English county, Yorkshire only exceeding it. It is comprehended between 52° 39' and 53° 43' N. lat., 0° 22' E. and 0° 56' W. long.

Coast-line.—The coast from the Welland to the Humber forms a tolerably regular curve convex to the sea, and is low and marshy, except about Clea Ness, near Grimsby, where the coast rises into cliffs. A belt of sand of varying breadth skirts the land, and the forest, which once occupied the fen country, where the trunks of trees are found under the soil, extended over a considerable space now covered by the sea. From the mouth of the Welland to that of the Nene the coast is so low as to require the protection of a sea-wall or bank. The present bank is more advanced towards the ocean than what is termed the old or Roman bank, and a considerable extent of land is thus gained. The estuary of the Wash is occupied for the most part by sand-banks, dry at low water. Between these banks the streams which flow into the estuary have their channels. Two wide spaces, or pools of deeper water, between the banks afford anchorage to vessels. The opening near the Norfolk coast is termed Lynn Well or Lynn Deep, though in some maps the name of Lynn Deep is given to the eastern channel of the Ouse. The opening near the Lincolnshire coast is called Boston Deep; it forms a long narrow anchorage, sheltered to seaward by Long Sand, Dog's Head, and Outer Knock, a range of sand-banks which run parallel to the coast to Skegness, north of Wainfleet. The water in Boston Deep is from 3 to 8 fathoms deep. The coast between Boston and Wainfleet is occupied by a line of salt-marshes. There are other salt-marshes along the estuary of the Humber.

Surface and Geological Character.—A considerable part of Lincolnshire consists of alluvium, constituting a vast extent of flat or marsh land, from the border of which the subjacent strata rise and form comparatively elevated tracts. The alluvial soil occupies nearly the whole of the coast. It skirts the bank of the Humber, and that of the Trent, as far up as Gainsborough. West of the Trent it spreads over Thorne Waste, or Thorne Level, from the midst of which rises the Isle of Axholme. This level was anciently occupied by a vast forest. [AXHOLME, Isle of.] West of the Wash the alluvium extends inland from Wainfleet to the river Witham. It spreads in

breadth 3 or 4 miles from each bank nearly up to Lincoln, where it

is contracted to a narrow strip. Southward from the Witham the alluvium occupies half the breadth of the county. From Barton-upon-Humber to Burgh, near Wainfleet, extends a line of chalk downs, called the Wolds of Lincolnshire. These downs form part of the great chalk formation which extends through England, from Flamborough Head in Yorkshire to the coast of Dorsetshire. The length of the Lincolnshire Wolds is about 47 miles, their average breadth 6 miles, their greatest breadth 13 miles. The chalk is found extending under the alluvium in the marshes round the Wolds. Along the coast by Saltfleet are natural outlets of water called provincially 'blow wells,' deep circular pits, which furnish a continual flow of water, and are vulgarly reputed to be unfathomable; they are presumed to communicate with the chalk. The Wolds have their steepest escarpment towards the west, on which side the greensand crops out and forms a narrow belt, skirting the chalk from Barton to Burgh. The iron-sand occupies a narrow belt of land west of the greensand. These two formations constitute a range of hills extending from north-west, near Market Rasen, to south-east, near Spilaby, running nearly parallel to the Wolds.

Westward of the iron-sand extends a wide flat, watered towards the north by the Ancholme, and towards the south by the Witham, occupied chiefly by the Oxford or clunch clay. The breadth of this district near the Humber is about 3 miles, east of Lincoln 15 miles, and between Sleaford and Spilaby 25 miles; but in this part it is partially covered by the marshes of the Witham. The elevation of this stratum scarcely exceeds that of the adjacent fens. It has been penetrated to the depth of nearly 500 feet. The low district of the Oxford clay forms a large central valley separating the Wolds, with the adjacent hills, from the higher grounds formed of the oolitic strata, which extend southward through the county from the marshes which line the Humber: they are bounded on the east by a line drawn by Lincoln (where the oolites subside, forming a narrow gap of a mile or two wide, occupied by the Witham and the adjacent marshes), Sleaford, and Bourne to Uffington. This range of high land has its steepest escarpment, called Cliffe Row, on the western side, south of Lincoln. The eastern side of this range of hills consists, from Barton to Lincoln, chiefly of the great oolite; and south of Lincoln of the cornbrash and great oolite, separated by a thick bed of clay. The west side is occupied by the inferior division of the Oolitic formations. Several stone-quarries are opened between Sleaford and Grantham.

The Lias formation occupies nearly all the rest of the county. Commencing at the Humber, it proceeds due south to Lincoln, southward of which it pervades almost all the western side of the county. It is continuous on its eastern side with the oolitic formations, from beneath which it crops out. The north-western corner of the county is occupied by the new red-sandstone or red marl. It is covered all round the Isle of Axholme (which is composed of red marl) by the alluvium of the Thorne Level, Hatfield Chase, and the contiguous marsh-lands. Gypsum occurs plentifully in this formation in the Isle of Axholme and on the border of the Trent; and there are saline mineral springs in the neighbourhood of Gainsborough.

Hydrography and Communications.—The Trent touches the border of the county nearly midway between Newark and Gainsborough, and for about 16 miles separates the counties of Lincoln and Nottingham; from below Gainsborough to its junction with the Yorkshire Ouse its course of 19 miles is almost entirely within the border of Lincolnshire. This river is navigable throughout the part which belongs to this county; and vessels of 150 tons can ascend to Gainsborough, where the river is crossed by a bridge. The Idle, which comes from Nottinghamshire, or rather the Bykerdike or Vicardye, a cut from the Idle, skirts the southern boundary of the Isle of Axholme, and falls into the Trent a little below Gainsborough on the left bank. The Bykerdike and the Idle are navigable from East Retford. The old river Thorne, another affluent of the Trent, skirts the Isle of Axholme on the north-west, and cuts (not navigable), distinguished as the New River Idle, and the New Thorne, pass from the rivers after which they are named through Axholme Isle into the Trent.

The Ancholme rises near the village of Spridlington, between Lincoln and Market Rasen, and flows north-east 6 miles to Bishop Briggs, when it is joined by the little river Rase from near Market Rasen. Here the navigation commences, and the stream is carried in an almost direct line by an artificial cut, about 20 miles long, into the Humber; a short distance west of Barton. This river serves to drain the marshes through which it flows. The Ancholme carries off the drainage of the valley between the Wolds and the oolite or stonebrash hills. The Tetney rises from the south-western escarpment of the Wolds, between Binbrook and Market Rasen, and flows by Binbrook and Tetney into the German Ocean near Grimsby and Saltfleet, about 22 miles. The mouth has been made navigable, the Louth Navigation entering the sea there. The Ludd rises near the south-west escarpment of the chalk range. It is formed by the junction of two or three brooks which unite above Louth and flow north-east into the German Ocean by several arms, one of which enters the sea by Grainthorpe sluice between Tetney and Saltfleet, another near North Somerootes, and a third at Saltfleet. The length of the Ludd is about 18 miles. The Louth Navigation consists partly of this river and partly of an artificial cut from the village of Alvingham to the mouth of the Tetney river: the navigation is about 14 miles long. The Withern, or Withern Eau,

rises near Ashby Puerorum, and flows north-east into the sea at Saltfleet, where its estuary receives one of the arms of the Ludd: its length is about 24 miles. In the upper part of its course it is called the Calceby Beck. The *Steeping* rises near Ashby Puerorum, and flows south-east, not far from Spilsby, 20 miles into the sea.

South of Wainfleet the Fen district commences: and from the extensive system of draining that has been carried on, the hydrography of the county becomes very complicated. We must therefore comprehend the natural and artificial hydrography in one view, from the impossibility of drawing exactly the line of demarcation between them. The *Witham*, the most important river in the county, rises near the village of Thistleton, just within the border of Rutlandshire, but almost immediately enters Lincolnshire, flowing northward to the town of Grantham, and receiving by the way several brooks. Below Grantham the river flows generally northward to Lincoln; two or three miles of its course in this part are on the border of the county, which it separates from Nottinghamshire; the rest is within the county. A few miles above Lincoln it receives on the right bank the little river Brant, nearly 15 miles long, from Brandon, north of Grantham. At Lincoln the river turns eastward, and flows to the neighbourhood of Bardney Abbey, where it receives the united stream of the Langworth River and the South Beck. The principal source of this stream (the Langworth) is in the chalk hills between Market Rasen and Louth, and its whole course is about 18 miles. From the junction of the Langworth the Witham flows south-east to the neighbourhood of Tattershall, where it receives, on the left bank, the river Bain; and on the right bank the Sleaford River, or Kyme Eau. The Bain rises in the chalk hills at Ludford, between Market Rasen and Louth, and flows southward by Horncastle and Tattershall, about 26 miles: it receives the Waring, Scrivelaby, and Enderby Becks. There is a navigation 11 miles long, partly artificial, partly natural, from the Witham up to Horncastle. The Sleaford rises near Ancaster, and flows north-east by Sleaford and South Kyme into the Witham, about 22 miles: there is a navigable channel 13½ miles long, partly natural, partly artificial, from the Witham up to Sleaford. From the junction of these streams the Witham flows by an artificial cut to Boston, below which town it flows in its natural bed into the Wash. The whole length of the Witham is nearly 80 miles, for about half of which it is navigable. At Lincoln it communicates with the Fosse Dyke, and below that with the Horncastle and Sleaford Navigation; there are also numerous cuts connected with it for the purpose of draining the fens.

The *Welland* rises in Northamptonshire, and flows along the border of that county, which it divides successively from Leicestershire, Rutlandshire, and Lincolnshire. It first touches the border of Lincolnshire just above Stamford, whence it flows to Deeping and Crowland, where what is termed the Old Welland runs northward to Spalding, while another arm called the Shire Drain proceeds along the border of the county into the Wash at the mouth of the Nene. From Spalding the Old Welland is conveyed in a direct line by an artificial channel into the Wash. There is a navigation up to Stamford. Between that town and Deeping there is a canal by the side of the natural stream: below Deeping the natural channel is employed for about 2 miles; and then there is a navigable cut to Spalding. The navigation is about 28 miles long from Stamford to the Wash. The Glen rises between Grantham and Folkingham, and flows south by Corby to Barholm, not far from Stamford; in this part of its course it crosses a projecting corner of the county of Rutland. From the junction of a small stream at Wilthorpe the Glen flows north-east into the Wash at the mouth of the Welland. Its whole length is about 36 miles. A small rivulet which joins the Glen has been made navigable for 3½ miles up to the town of Bourne; and below the junction of this rivulet the Glen is navigable for about 12 miles.

A general account of the great Fen district of England, and of the changes which it has undergone, is given under BEDFORD LEVEL. Of the cuts and drains in the Lincolnshire Fens the Car Dyke, which skirts the western border of the fens, commences in the Welland between Stamford and Deeping, and runs northward nearly 35 miles into the fens of the Witham, with the drainage of which it is connected. This canal is supposed to be of Roman origin: it is 60 feet wide, and has on each side a wide flat bank. The South Forty-Foot is cut from the Glen by a circuitous course to the Witham at Boston; its length is about 22 miles: it receives a number of small streams flowing from the hills which form the western boundary of the Fen country. The North Forty-Foot runs 10 miles from the Kyme, or Sleaford River, near its junction with the Witham, parallel to the Witham, into the South Forty-Foot, near Boston. The West Fen Catchwater Drain, 10 miles, and the East Fen Catchwater Drain, 7 miles, bound the Fen district on the north side. The Old and New Hammond Beck runs by a circuitous course of about 20 miles from the Welland near Spalding to the South Forty-Foot near Boston. The other cuts, provincially termed 'Leams,' 'Droves,' 'Drains,' 'Becks,' 'Eaus,' and 'Dykes,' are too numerous to admit of distinct notice. In the fens between the Glen and the Shire Drain they are particularly numerous. The drainage of the northern fens is noticed under AXHOLME, Isle of.

Of navigable canals, beside the Ancholme, Louth, Horncastle, Sleaford, Bourne, and other navigations already noticed, there are only

two. One of them, the Fosse-Dyke, from the Trent at Torksey to the Witham at Lincoln, 11 miles, is probably a Roman work, and appears to have been used for navigation previous to the Conquest. Henry I. had it cleaned out and the navigation improved. It is level throughout, but its waters are 4 feet above those of the Trent. The other canal is the Stainforth and Keadby Canal, which opens a communication between the Don, or Dun, Navigation at Stainforth near Thorne in Yorkshire, and the Trent at Keady in Lincolnshire.

The principal coach-road is the Hull, Barton, and Lincoln road. This enters the county at Market Deeping, 90 miles from London, and runs north by west by Bourne, Folkingham, and Sleaford to Lincoln (134 miles). From Lincoln the road runs due north in a direct line along an old Roman road for many miles; and then turning north by east runs by Glanford Brigg to Barton, on the right bank of the Humber, opposite Hull. The Louth and Boston road branches off from the above just before it enters Lincolnshire, and passing through the opposite extremity of the town of Deeping, runs by Spalding, Boston, and Spilsby to Louth; from whence a road runs onward to Great Grimsby on the Sea. The Great North road enters the county at Stamford, and runs north-north-west by Grantham into Nottinghamshire. There are numerous roads of minor importance.

The Boston branch of the Great Northern railway enters the county at St. James Deeping, east of Market Deeping, and runs north by east past Spalding to Boston, where it turns north-west past Tattershall to Lincoln and Gainsborough, joining at that place the Manchester and Sheffield railway: a short branch diverges at Saxeby west to the Manchester line. From Boston the line is continued in a generally northern direction, mainly by the East Lincolnshire line, at a short distance from the coast, past Alford and Louth to Great Grimsby. The main line of the Great Northern railway enters the county west of Market Deeping, and traverses the south-eastern part of the county in a north-western direction, quitting it at Claypole, south-east of Newark. The Nottingham and Lincoln line enters the county a few miles south-west of Lincoln. From Lincoln it is continued in a north-eastern direction by the Sheffield and Lincolnshire railway to Market Rasen, where it turns north-west, and near Glanford Brigg joins the Manchester, Sheffield, and Lincolnshire railway. This last-named line enters the county at Gainsborough, and proceeds in a generally east-north-east direction past Kirton and Glanford to Grimsby. A short branch runs from it to New Holland opposite Hull, and to Barton-upon-Humber.

Climate, Soil, Agriculture.—The temperature of Lincolnshire is nearly the same as that of the centre of England. The flatness of the surface allows the winds to blow uninterruptedly over it, and of these the western are the most violent. Near the coast the sea tempers the cold easterly winds in winter, and the snow seldom lies long. The climate in the lower parts, where in spite of extensive drainings much marshy ground still remains, is not very healthy, and intermittent fevers are prevalent. The water in the lower parts is bad and brackish, being procured only from wells and ponds; there is no such thing as a spring of pure water in the fens. The soil varies greatly in different districts. The grazing land in this county cannot be surpassed in its capabilities for fattening cattle, and some of the drained fens and warp lands along the rivers possess a high degree of fertility when cultivated. Upon the whole the produce of the county, both in grain and cattle, is very considerable. The lands which have been reclaimed from the sea by banking and draining are mostly laid out in large farms, which require a considerable capital. In other parts of the county there are many small properties cultivated by the owners and kept with great neatness.

The crops usually raised on the arable land are mostly the same as in other counties on similar soils. Some wood is cultivated in the neighbourhood of Boston on rich warp land; sainfoin is grown on the chalky soils, and lucern on the richer. Cabbages and carrots are cultivated to a considerable extent, the former on the heavy clays and the latter on the light and deep sands. Some of the finest pastures are fed off by horses which are fattened for the markets.

One of the most effectual improvements practised on land, by the side of some rivers in which the tide flows rapidly, is that of warping; or, in other words, retaining the water on the land so long as to let it deposit a layer of sand and mud. Thus a new soil is created over an old one, and this deposited soil is always very fertile. By this process extensive tracts of poor land have been covered in a short time with a new soil of the finest quality, as the crops raised upon it clearly show. Besides creating a soil the warping fills up all inequalities, and a perfectly level surface is produced. Warp land possesses a natural power of production, which cultivation and manuring cannot imitate. The basis of the new soil is fine clay and sand, the sand minutely divided and intimately mixed with the clay, with a considerable portion of fine calcareous earth. The richest crops of beans, wheat, oats, and rape are raised without manure on the warp lands. But they are not so well adapted for barley or turnips on account of their slimy nature. It has added much to the produce of Lincolnshire, that the crops raised on the warp lands have enabled the farmer to employ all the manure made by the abundance of straw which these lands produce to improve the lands that lie above the reach of the waters.

In a county which contains such rich pastures it is of great import-

ance that the breed of cattle and sheep be of the most profitable kind; and it is found that no county possesses finer breeds of horses, oxen, and sheep. The Lincolnshire horses are celebrated for their size and power. Horncastle fair is the great resort of all the London dealers, who purchase hunters and carriage-horses at very high prices. The best hunters are bred on the higher and drier lands, but they are generally turned out for a time in the richer pastures to give them flesh before they are sold. The oxen which are preferred for grazing are the short-horns and some crosses of long-horns.

There are not many dairies in Lincolnshire: breeding and fattening are considered more profitable and less troublesome. There is however some excellent cheese made of the Stilton kind. The sheep which are bred in this county are principally of the long-woolled, commonly called Leicesters; but the counties of Lincoln and Leicester differ only in the great proportion of fen lands to be found in Lincolnshire. The rich upland pastures are similar in both counties. The old Lincoln sheep are larger than the improved Leicester, carry a heavier fleece, and are hardier; the Leicesters however are generally preferred, from their greater propensity to fatten. A cross which partakes of the qualities of both breeds has been produced, and is preferred by some for the fens. The breed of pigs has been much improved of late years by judicious crossing.

Divisions, Towns, &c.—Lincolnshire has long been divided into three 'parts,' as they are termed—Lindsey, Kesteven, and Holland. Lindsey is by far the largest, including the north and north-eastern parts of the county. The name Lindsey, like that of the county, is derived from Lindum, the Roman name of Lincoln. From Lindum, with the subjoined epithet Colonia, came Lincoln, and thence Lincolnshire; and from the name without the epithet, Lind-sey. The latter part of this name appears to be the Saxon 'ey,' an island; 'the Isle of Lindum,' a name sufficiently descriptive of the district, which is insulated by the sea, the Humber, and the Trent, the Fosse Dyke and the Witham, with their connected marshes. Kesteven comprehends the south-western part of the county. Holland comprehends the rest of the county, including the greater part of the fens. These divisions are of great antiquity; they are also characterised by distinct natural features. The insular character of Lindsey has been noticed: the Wolds, or chalk hills, form the nucleus of it. Kesteven is distinguished by the steep slope of the Cliffe Row, which overlooks the valley of the Witham; and Holland, like its continental namesake, is distinguished by its fens.

Lincolnshire is further divided into wapentakes, hundreds, and sokes. These, with their situation in the county, are as follows:—

I. Parts of Lindsey.—Aslaoce, wapentake, central; Bolingbroke, soke, central; Bradley Haverstoe, wapentake, north-east; Calceworth, hundred, east; Candleshoe, wapentake, east; Corringham, wapentake, north-west; Gartree, wapentake, central; Hill, hundred, central; Horncastle, soke, central; Lawress, wapentake, east; Louth Eske, hundred, north-east; Ludborough, wapentake, north-east; Manley, wapentake, north; Walshoroff, wapentake, central; Well, wapentake, east; Wraggoc, wapentake, central; Yarborough, wapentake, north; Lincoln, city and liberty, central.

II. Parts of Kesteven.—Aswardhurn, wapentake, central; Aveland, wapentake, south; Beltialoe, wapentake, south; Boothby Graffo, wapentake, west; Flaxwell, wapentake, central; Langoe, wapentake, central; Loveden, wapentake, west; Ness, wapentake, south; Winnibriggs and Threo, wapentake, south-west; Grantham, borough and soke, south-west.

III. Parts of Holland.—Elloe, wapentake, south; Kirton, wapentake, south-east; Skirbeck, wapentake, south-east.

The county contains the city of LINCOLN; the boroughs and market-towns of BOSTON, GRANTHAM, GRIMSBY, and STAMFORD; and the market-towns of ALFORD, BARTON-UPON-HUMBER, BOLINGBROKE, BOURN, CAISTOR, Corby, Crowle, Deeping, Donington, Epworth, Falkingham, GAINSBOROUGH, GLANFORD BRIGG, HOLBEACH, HORNCASTLE, Kirton, LOUTH, Market Rasen, SLEAFORD, SPALDING, SPILSBY, Swinehead, Tattershall, Wainfleet, and Wragby. To these may be added the now disused market-towns of Binbrook, Burton-upon-Stather, Crowland or Croyland, Navenby, and Saltfleet. Of those printed in small capitals an account is given under their respective titles; the others we notice here.

Alford, population 2262, distant 34 miles E. by N. from Lincoln, consists chiefly of two streets, which are paved; the shops are lighted with gas. The church, a stone building of the 13th century, has been repaired with brick. The Wesleyan and Primitive Methodists, Independents, and Baptists have places of worship. The Free Grammar school, founded in 1576, has an income of about 200*l.* a year; the number of scholars is about 30. There are National and British schools. Brewing, tanning, and rope-making are carried on. The market is on Tuesday: fairs for cattle and sheep are held on Whit-Tuesday and on November 8th. Near the town is a medicinal spring called Holy Well.

Bolingbroke, population 980, is 29 miles E. by S. from Lincoln. A castle was built here by William de Romars, earl of Lincoln, which subsequently came into the hands of John of Gaunt, whose son, Henry IV., was born in this castle, and took from it his surname of Bolingbroke. The remains consist of the castle mount and the moat. During the wars of Charles I. and the Parliament the castle was

stormed and demolished. The church was at the same time partly destroyed: it has a tower at the west end. In the town are a Wesleyan chapel and National schools. Rope-making, brewing, and malting are carried on. Tuesday is the market-day.

Binbrook, population 1285, formerly a market-town, 20 miles N.N.E. from Lincoln, is a well-built place. Agricultural implements are made here. Extensive rabbit-warrens are in the neighbourhood, and the dressing of skins for furriers employs some of the inhabitants. The church is a plain building with a tower. There are chapels for Wesleyan and Primitive Methodists, a National school, and a temperance hall. A fair is held on Easter Tuesday.

Burton, distinguished from other places of the same name as *Burton-upon-Stather*, population 899, is situated on a hill near the right bank of the river Trent, 32 miles N. by W. from Lincoln. The town was formerly more extensive, and had a market, which has been given up. The church is a handsome structure, with a tower. There are chapels for Wesleyan and Primitive Methodists, and a National school. Fairs are held twice a year, and a feast at Whitsuntide. Ship-building and malting are carried on.

Corby, population 958, is 33 miles S. by E. from Lincoln; the Roman Ermine-street passed through the parish. A market formerly held here has fallen into disuse. The church is a large ancient building, with a pinnacled square tower. In the town is a Wesleyan chapel. Read's Endowed school had 42 scholars in 1851; its income from endowment is about 49*l.* a year. There are stone-quarries in the vicinity.

Crowland, or *Croyland*, population 2466, is about 48 miles S.S.E. from Lincoln. Roman antiquities have been discovered in the neighbourhood. A monastery was founded here by Ethelbald, king of Mercia, about the beginning of the 8th century. About 870, in the reign of Ethelred I., this monastery, with several others, was destroyed by the Danes. In the latter part of the 11th century, the monastery, which had been restored, was again destroyed by fire, but was rebuilt a few years afterwards. The abbey, thus restored, increased rapidly in wealth and reputation. At the dissolution, its yearly revenues were estimated at 1217*l.* 5*s.* 11*d.* gross, or 1033*l.* 15*s.* 10*d.* clear. The buildings of the abbey were much injured during the siege of Crowland by the parliamentary forces under Cromwell: there are yet standing however considerable remains of the church. The architecture is chiefly of the transition style from Norman to early English, but part is of the perpendicular style. On the west side of the church, at the confluence of two streams, is a triangular bridge, probably erected in the 14th century. It is used for foot-passengers. The Wesleyan and Primitive Methodists have places of worship in Crowland. Brewing, malting, and brick-making are carried on. A market formerly held here has been removed to Thorney.

Crowle, in the Isle of Axholme, population 3008, is 32 miles N.N.W. from Lincoln, on the right bank of the old Don River. A market is held on alternate Mondays during March, April, and May: fairs for cattle, flax, &c., are held on the last Monday of May, and on November 23rd. The church is a fine old Norman structure. The Wesleyan and Primitive Methodists, Independents, and Baptists have places of worship, and there is a Free school. Malting and flax-dressing are carried on.

Deeping, called also *Market Deeping*, population 1294, is 43 miles S.S.E. from Lincoln. The town is close to the Northamptonshire border, the navigable river Welland here forming the boundary. Boat-building, brewing, malting, and rope-making are carried on. The market is on Wednesday, and is chiefly for pigs. The church contains traces of Norman, and portions of early English architecture; the tower and other parts are of perpendicular character. The Wesleyan Methodists, Independents, and Baptists, have places of worship. There is a Free school. A neat town-hall was built in 1839. A priory was formerly established in the town. *Deeping St. James*, population 1849, is a village so near to Market Deeping as almost to constitute one town with it. The church, originally a chapel built by the monks of Croyland, is large and curious, chiefly in the Norman and early English styles: it has a very high tower, with an octangular spire; in the interior is a curious Norman font. An ancient stone cross in the village was rebuilt in 1819, and is now a police station.

Donington, population 1867, about 31 miles S.S.E. from Lincoln. The parish church is of perpendicular date, with a fine tower and spire, which stands outside the south aisle, and forms the principal entrance. The Wesleyan and Primitive Methodists and Baptists have places of worship. Cowley's Endowed schools, founded in 1719, had upwards of 300 scholars in 1853: some of the scholars receive clothing from this charity. The schools are free to all children of inhabitants of the parish. In the upper school there is a head master with 3 assistants, one of whom teaches the classics. The junior boys school and the upper and junior girls schools are conducted by female teachers. The revenue of the charity is about 1300*l.* a year, out of which pensions are given to poor old men and women, apprentice fees paid, the school supported, and other charitable purposes effected. Saturday is the market-day: fairs for horses, cattle, &c., are held on May 26th, September 4th, and October 17th. Rope-making, brick-making, and malting are carried on. Hemp is grown to a great extent; and much hemp-seed is sold.

Epworth, population 1944, about 30 miles N.N.W. from Lincoln,

consists chiefly of one street upwards of 2 miles long. The church is in the perpendicular style. The Wesleyan, New Connexion, and Primitive Methodists and Baptists have places of worship. The Free school was founded by Samuel Wesley, rector of Epworth, the father of John Wesley, the founder of Methodism, who was born here. There is a National school. Tuesday is the market-day: two fairs are held in the year. The dressing of hemp and flax, rope-making, and malting, are the chief employments.

Falkingham, or Folkingham, population 768, is 27 miles S. by E. from Lincoln. Here was anciently a castle, but only the moats and mounds remain. The streets are clean and well paved. The church is large and handsome, chiefly of perpendicular character; the chancel was rebuilt in 1825; the tower has eight pinnacles and a rich battlement. There are a chapel for Wesleyan Methodists, an Endowed school, and a savings bank. There is here a small jail for the southern division of the Parts of Kesteven. The market is on Thursday; there are 5 yearly fairs. Near the town are several springs, one of them chalybeate.

Kirton, or Kirton in Lindsey, population 1948, is situated on the slope of the range of hills which traverses the eastern side of the county, about 18 miles N. by W. from Lincoln. Kirton belongs to the Duchy of Cornwall. The Duchy Court-house on Kirton Green is a neat brick edifice. The church is large, and has a considerable portion of good early English work. The Wesleyan and Primitive Methodists and Baptists have places of worship. The Free school, founded in the 19th year of Elizabeth, has been since 1820 a National school. It has an income from endowment of about 90*l.* a year, and two exhibitions, which however do not appear to have ever been claimed. In 1863 it had about 100 scholars. There is an Infant school. The quarter-sessions for the Parts of Lindsey are held here by adjournment; and there is a house of correction. A market is held on Friday for corn; a cattle market every alternate Saturday for 8 weeks in spring and autumn; and two great cattle fairs are held on July 18th, and December 11th. Brewing and malting are carried on.

Long Sutton, or Sutton St. Mary, population of the hamlet 4416, about 8 miles from the sea coast; occupies a site to which some centuries ago the tide flowed. The market is on Friday: fairs are held twice a year. The church is an ancient structure, with a square tower surmounted by a wooden spire, which is a useful land-mark for sailors. The Wesleyan and Primitive Methodists, General Baptists and Independents, have places of worship. The Free school, founded in 1492, was re-founded by Queen Elizabeth; the school-room has been recently rebuilt. In the parish are National schools and a parish school. Brewing, malting, tanning, and machine-making employ some of the inhabitants. Sutton-bridge, or Washway, affords a passage across the outfall of the river Nene, on the road between Sutton St. Mary and King's Lynn, Norfolk.

Market Rasen, population 2110, is situated on a little brook, the Rase or Rasen, which joins the Ancholme, 16 miles N.N.E. from Lincoln. The town consists chiefly of one long street, which is crossed by the Sheffield and Lincolnshire railway. The parish church is commodious. The Roman Catholics and Wesleyan and Primitive Methodists have chapels; there are a National school, and some almshouses. The market on Tuesday is well frequented; a fair is held on September 25th.

Novenby, population 1057, is situated on the South Cliffe range of hills, 9 miles S. from Lincoln. The market has been long discontinued. An ancient market cross, covered with a spiral roof, is still standing. The church, which is partly early English and partly decorated, has a large and handsome tower. The Wesleyan Methodists have a neat chapel. There is a Free school. A fair is held on October 17th, chiefly for swine.

Saltfleet, or Saltfleet Haven, population 404, is 38 miles E.N.E. from Lincoln. The Wesleyan Methodists have a chapel here. Saltfleet had formerly a market which has long been disused. A fair is held on October 3rd. Some good springs are near the town. Saltfleet is resorted to in summer for sea-bathing. Oysters are found in abundance off the shore.

Swineshead, or Swinhead, population 2044, is 29 miles S.E. from Lincoln. A Cistercian abbey was founded here in 1134, by Robert de Greslei; in this monastery King John appears to have rested after his escape in crossing the Wash, a few days previous to his death at Newark. Swineshead, although now about 6 miles from the sea, was formerly a port, and the sea flowed up to the market-place, where there was a harbour. The market held on Thursday is now nearly obsolete. A fair is held on October 2nd. The church is a handsome building, partly decorated and partly perpendicular in style, with a lofty spire. The Wesleyan Methodists and Baptists have places of worship. There is an Endowed Free school, founded in 1720. Near the abbey is a circular Danish encampment, 200 feet in diameter, surrounded by a double moat.

Tattershall, population 987, on the little river Bain, about 19 miles S.E. from Lincoln, had formerly a strong castle. A massive square brick tower, 100 feet high, built by Cromwell, treasurer of the exchequer to King Henry VI., is in tolerable preservation. The town is much decayed. The church, which was formerly collegiate, is a spacious perpendicular edifice, in the form of a cross. There are chapels for Wesleyan Methodists and Baptists, a National school, and

an Endowed almshouse for 10 poor widows. The Horncastle navigation passes through the town. Boat-building, malting, and brewing are carried on. The market is held on Thursday, and fairs are held in May and September.

Wainfleet, about 38 miles E.S.E. from Lincoln, population of the parishes of Wainfleet All Saints, St. Mary, and St. Thomas or Northolme, 2257 in 1841; in 1851 it was 2255. Wainfleet is supposed to have been a Roman station, the *Vainouas* of the geographer Ravennas. The haven was anciently frequented by ships, but is now only used for small craft. The town is supposed to have stood formerly higher up the creek, where the old church of All Saints stands. Wainfleet consists chiefly of one street, with a market-place in the centre. A new church in the Italian style, the cost of which was partly defrayed by the commissioners for building churches, stands on a site given by Colonel Sibthorp. St. Mary's church is much decayed. The Wesleyan and Primitive Methodists and Quakers have places of worship. The Free Grammar school, founded by William of Waynflete, bishop of Winchester, in the 15th century, has an income from endowment of 70*l.* a year, and is free to 30 boys; the number of scholars in 1853 was 45. There are also an Endowed Free school, supported by the governors of Bethlehem Hospital, a British school, and a savings bank. The market is held on Saturday, but is almost disused; fairs are held in May and October.

Wragby, population 610, is 11 miles E.N.E. from Lincoln. The town is pleasantly situated, and contains some good houses. The church, a handsome edifice, was built in 1837 by Mr. Turner, the proprietor of the town. The Wesleyan Methodists have a chapel. Hansard's Free school for boys, founded in 1636, had 56 scholars in 1852. There is also a Free school for girls. In the town are almshouses for six widows of clergymen and six widows of laymen. Thursday is the market-day; fairs for cattle are held on Holy Thursday and September 29th.

The following are some of the more important villages, with the population of the parishes in 1851:—

Alkborough, or Aukborough, population 468, on the right bank of the river Trent, near its confluence with the Ouse, where the combined river takes the name of the Humber, about 18 miles N.W. by N. from Grantham; has an ancient church with a tower, chapels for Wesleyan and Primitive Methodists, a girls' school, and some almshouses. On a hill near the village a Roman camp and labyrinth have been traced. *Ancaster*, the Roman station *Causanna*, population 589, is situated on the Ermine-street, about 7 miles N.N.E. from Grantham. The church is a handsome building of the early English and decorated styles. Roman coins have been found here in such quantities as to make the sale of them a source of profit to some of the inhabitants. *Bardney*, population 1329, on the left bank of the Witham, 10 miles E. by S. from Lincoln, has a church, a chapel for Wesleyan Methodists, and a Free school. An abbey founded here about the close of the 7th century, was destroyed by the Danes, but was re-founded by Gilbert, earl of Lincoln, in the reign of William I. *Barrow-upon-Humber*, population 2283, about 8 miles S. by E. from Barton, has an ancient church, which has been recently repaired, and a new roof placed on it. The tower is of later date than the body of the church. A convent was founded here by St. Chad. A mound, called the Castle, is about a mile north-west from the village; there are also several tumuli. *Basingham*, population 892, 9 miles S.S.W. from Lincoln, has an ancient church, the tower of which was rebuilt in 1782, and a large chancel added. Some old pictures which were found on the walls have been restored. There are chapels for Wesleyan and Primitive Methodists. Malting and brewing are carried on. *Beckingham*, population 450, distant 14 miles S.S.W. from Lincoln. The church is a handsome building of the early English style, and has a fine tower with eight pinnacles. It has of late years received extensive repairs; a beautiful Norman doorway on the north side is now closed up. There are a chapel for Wesleyan Methodists, and schools supported by the Established Church and by the Wesleyans. *Belton*, population 1738, in the Isle of Axholme, 14 miles N. by W. from Gainsborough, has a handsome and commodious gothic church, and chapels for Wesleyan and Primitive Methodists. A fair is held in October, chiefly for flax. There are some parochial charities. About a mile from the village is Belton Hall, the seat of Earl Brownlow. *Long Bennington*, 8 miles N.W. from Grantham, close to the Nottinghamshire border, population 1100, consists chiefly of one street on the road from Grantham to Newark. The church, a fine gothic structure, has a tower at the west end. There are national schools. Quarries of freestone and lime, lime-kilns, and corn-mills afford employment. A priory of Cistercian monks was formerly at this place. *Billingham*, population 1048, about 3 miles E. from Falkingham, has an elegant stone church in the decorated style, with a tower and spire 150 feet high. There are chapels for Wesleyan Methodists and Baptists, and an Endowed Free school for 25 boys. *Boothby, or Boothby Graffo*, population 208, on the Cliffe range of hills and on the Ermine-street, 8 miles S. from Lincoln. The parish church, a neat gothic structure, erected in 1842, consists of a nave, chancel, and a tower. In 1305 the Bishop of Lincoln erected here a large castellated mansion, which he afterwards presented to Edward I., and which served as a place of confinement for the King of France, when he was a prisoner in 1359. Of the remains, which are extensive, a portion is incorporated with

the modern mansion. The south-east tower is nearly entire, it is surmounted with three pinnacles and a conical roof. The tower at the north-east angle has a groined roof resting upon a central pillar. In the walls of the tower are 12 painted windows. *Bottesford*, population of the township 144, about 6 miles W. from Granford Brigg, has a handsome and commodious cruciform church, which has undergone extensive repairs and alterations. There are National schools for boys and girls. *Burgh-in-the-Marsh*, population 1215, occupying a pleasant situation commanding a view of the sea, 8 miles E. from Spilsby, had formerly a market. The marsh-land around is extensively used for grazing cattle and sheep. The parish church is a handsome edifice in the early English style, with clerestory and a tower; in the interior is a fine gothic screen. The Wesleyan Methodists and Baptists have places of worship; and there are Palmer's Endowed Free school for boys, which had 60 scholars in 1853, and Holden's Charity school for boys and girls. Two annual fairs are held. Brick-making, brewing, and malting are carried on. Some earth-works have been traced, and coins and other antiquities have been found here. *Caythorpe*, population 889, about 10 miles N. from Grantham. The church, which is chiefly in the decorated style, has some peculiar features; the nave is divided longitudinally by arches rising from between two windows at the west end; the tower is quadrangular; on it are four pinnacles attached by flying buttresses to the spire, which reaches the height of 162 feet. There is a chapel for Wesleyan Methodists. Schools for boys and girls are supported partly by subscription. Caythorpe Hall, a modern mansion, is in the Grecian style. *Colsterworth*, population 1174, on the right bank of the Witham, 8 miles S. from Grantham, has a church which is chiefly of early English style. There are a chapel for Wesleyan Methodists, and National and Infant schools. Sir Isaac Newton was born at Woolsthorpe, a hamlet of Colsterworth. His father was lord of the manor of Woolsthorpe. The house in which Sir Isaac was born is now a farm-house. *Denton*, population 650, on the Leicestershire border, 4 miles S.W. from Grantham. The church is a handsome gothic structure. Denton Hall, finely situated in a well-wooded park, was almost entirely rebuilt in 1817. Roman tessellated pavements have been found here. A reservoir for Grantham Canal covers 28 acres. There are stone quarries in the vicinity. *Edenhams*, population 670, about 3 miles W. by N. from Bourne, has a handsome church, partly early English and partly perpendicular. The interior contains some fine monuments of the Willoughby de Eresby family. There is a school for girls. Grimsthorpe Castle, the seat of Lord Willoughby de Eresby, an elegant mansion, stands in a spacious park, which is about 16 miles in circumference. *Fleet*, population 1162, about 2 miles S.E. from Holbeach, has an ancient gothic church, the tower of which stands apart at the west end, and is surmounted with a spire 114 feet high. A chapel for General Baptists, built in 1690, and one for Unitarians, are in the village. Some flour-mills are in the vicinity. *Frieston*, population 1240, in the fen country on the sea-shore, about 3 miles E. from Boston, has a commodious church, partly of Norman date. A chapel for Wesleyan Methodists and a Free school are in the village. Here was a priory of Benedictine monks. Frieston Mere is resorted to for bathing. *Fulbeck*, population 743, about 11 miles N. by E. from Grantham, has a handsome church of decorated character, with a spacious chancel; a new window has been recently placed in the east end. The font is Norman, and there is an ancient carved wooden screen. There are in Fulbeck a chapel for Primitive Methodists and a National school. *Gedney*, 3 miles E. by S. from Holbeach: population 2519. The church is a large perpendicular structure. There are chapels for Wesleyan and Primitive Methodists, General Baptists, and Quakers, and a Free school. The population is dependent on agriculture. *Great Gonerby*, population 1433, about 2 miles N. by W. from Grantham, has a considerable number of well-built houses. The church, a handsome edifice, has a square embattled tower with a crocketed spire. There are chapels for Wesleyan and Primitive Methodists and Independents. The National school, in the Tudor style, was erected in 1841. *Gosberton*, population 2091, on the Risegate Eau, 6 miles N. from Spalding, has a large and handsome church with a central tower, surmounting which is a richly crocketed spire. The Wesleyan Methodists and Baptists have places of worship. The population is agricultural. Brewing is carried on. *Goxhill*, 5 miles E. by S. from Barton-on-Humber, population 1138, has a church with a lofty tower, chapels for Wesleyan and Primitive Methodists, Calvinists, and Baptists, and some parochial charities. At Goxhill Ferry, about 2 miles from the village, there is communication by ferry-boat with Hull, on the opposite side of the Humber. The Manchester, Sheffield, and Lincolnshire railway has a station at Goxhill. *Halton Holgate*, 1 mile S.E. from Spilsby, population 539, has a church partly of early Norman character; the windows are perpendicular. The church has been recently repaired at a cost of about 2000*l.* The Wesleyan Methodists have a chapel, and there is a National school. *Harlaxton*, population 494, near the Leicestershire border, 3 miles S.W. from Grantham. The parish church, which is an ancient structure, has a square embattled tower with a stone spire. In the interior is a finely-carved screen. Near the village is Harlaxton Hall, a fine mansion of the Elizabethan style, recently built. The former hall, situated near the church, is an ancient edifice. Roman coins and other antiquities have been found near the village. *Ingoldby*, population 407, about

8 miles S.E. from Grantham. In the neighbourhood is an ancient encampment of circular form. The parish church, a structure partly Norman and partly perpendicular, with a square tower and spire, occupies an elevated site in the centre of the village. *North Kelsey*, population 918, about 6 miles S.E. from Granford Brigg, has an ancient church with a low square tower, chapels for Wesleyan and Primitive Methodists, and a National school. The Manchester, Sheffield, and Lincolnshire railway has a station here. *South Kelsey*, 8 miles S.S.E. from Granford Brigg, population 623, is situated near the Caistor Canal and the right bank of the river Ancholme, which afford facilities for conveying corn, coal, and general merchandize. There are a neat modern church, Wesleyan and Primitive Methodist chapels, and a National school. *Kirton-in-Holland*, 4 miles S. by W. from Boston, population 2299, has a fine cruciform church of decorated character, with a square embattled tower rising from the intersection. The church was partly rebuilt in 1809. A Free school was founded here in 1624. A market formerly held in Kirton has been disused. *Ladenham*, or *Long Ladenham*, 10 miles E.N.E. from Sleaford: population, 735. The church, a handsome decorated building, with a tower surmounted with a crocketed spire, underwent extensive repairs about the year 1830; it has some good stained-glass windows. The Wesleyan Methodists have a chapel. Fairs are held in May and in July. From the adjacent cliff very excellent prospects are obtained. *Messingham*, 7 miles W. by S. from Granford Brigg: population of the township, 1117. Much of the land here has been reclaimed from the overflowings of the river Trent. The tower of the church was rebuilt about the year 1820 at a cost of nearly 2000*l.* The Wesleyan and Primitive Methodists have places of worship. A pleasure fair is held annually on Trinity Monday. Malting is carried on to a small extent. Some corn-mills are in the vicinity. *Metheringham*, 9 miles S.E. from Lincoln, population 1522, has a commodious church, a Wesleyan Methodist chapel, and a National school. By Metheringham drain there is communication with the river Witham. An ancient cross in the village has been rebuilt, and a market is held beside it on Saturday evenings. Rope-making affords some employment, and there are corn-mills. *Moulton*, 4 miles W. from Holbeach, population 2053, is situated about 5 miles inland from Fossedyke Wash, with which there is a navigable communication from the western side of the parish. The church, a handsome structure of the 13th century, has a square embattled tower surmounted with an elegant spire. There are chapels for Wesleyan and Primitive Methodists, and a Free Grammar school, founded in 1660. Large numbers of bees are kept in the neighbourhood. *New Holland*, 4 miles E. from Barton, on the right bank of the Humber, opposite Hull. The Manchester Sheffield and Lincolnshire railway has its northern terminus here, communicating with Hull by a steam-ferry. The Humber is here about 3 miles broad. *Nocton*, 7 miles S.E. from Lincoln, population 510, is situated on a small stream, by which, and by artificial drains, communication is maintained with the river Witham. The church is a small Grecian building. A Charity school is supported by the Earl of Ripon. Nocton Park, the earl's seat, is a well-wooded inclosure, containing the mansion, erected in the Elizabethan style, to replace the former building, which was burnt down in 1884. A priory for Black canons of the Augustinian order formerly occupied the site of the mansion. *Owston*, on the left bank of the Trent, 8 miles N. from Gainsborough, population of the township 1693, has a gothic church, Wesleyan and Primitive Methodist chapels, and a Diocesan school. Seed-crushing affords some employment, and there are corn-mills near the village. The navigation of the Trent affords facilities for commerce. *Partney*, 7 miles S.S.W. from Alford, population 489, formerly had a market, which was removed to Spilsby. The church is a fine early English structure, apparently of the date of Edward I. The Wesleyan Methodists and Baptists have places of worship, and there is a Free school. Fairs for cattle are held in August and September, and for cheese in October. Brick-making, malting, and brewing are carried on. *Pinchbeck*, 2 miles N. from Spalding, population 3062, near the navigable river Welland, on the line of the Great Northern railway. Beside the church, a commodious building which has received extensive repairs, there are Wesleyan Methodist, Independent, and Baptist chapels, and well-attended National schools. *Great Ponton*, or *Paumton*, about a mile from the ancient Ermine-street, 4 miles S. from Grantham, population 680, has a church of perpendicular character, built about 1519, which consists of nave, chancel, and square tower with pinnacles; also a chapel for Wesleyan Methodists, and a Free school. Roman coins, arms, and other antiquities have been found. *Redbourne*, 6 miles S. by W. from Granford Brigg, population 354, has a handsome church with a lofty tower. There is a National school supported by the Duke of St. Albans, at whose coat a school-house in the gothic style has been erected. Redbourne Hall, the residence of the Duke of St. Albans, stands in a well-wooded park adjoining the public road. *Saxelby*, 6½ miles N.W. from Lincoln, near the Nottinghamshire border, population 1137, has a neat church with a handsome tower, and a chapel for Wesleyan Methodists. There is a station here of the Lincoln and Gainsborough branch of the Great Northern railway. Wharfs for the corn and coal trade are on the Fosse-Dyke navigation. Brick-making, brewing, and malting are carried on. *Scotter*, on the small river Eau, near its confluence with the Trent, about 10 miles N.N.E. from Gainsborough: population, 1158. The parish church is

a commodious structure; there are chapels for Wesleyan and Primitive Methodists and National schools. A fair for horses and cattle is held on July 6th, and a pleasure fair on July 10th. *North Somercotes*, 2 miles N.W. from the small sea-side town of Saltfleet, population 1089, has a spacious gothic church. In the village are chapels for Wesleyan and Primitive Methodists, National schools, and a school supported by Wesleyan Methodists. In the parish are extensive rabbit-warrens. *Surfleet*, 4 miles N. from Spalding, and about 6 miles S.W. from Fosse-Dyke Wash, with which there is navigation by the Welland, population 945, has a good church of ancient date with a spire. There is a Free school endowed by the late Lady Frazer. By the Grand Sluice drainage Surfleet has inland navigable communication with Boston. At Surfleet is a station of the Great Northern railway. *Sutterton*, 6 miles S.S.W. from Boston, and 3 miles from Fosse-Dyke Wash, population 1445, is situated in a district where there is a considerable extent of fen-land. There are a handsome church with a spire, chapels for Wesleyan Methodists and Baptists, and a National school. *Tetford*, 9 miles S. from Louth, population 799, has an ancient gothic church with a tower, a chapel for Wesleyan Methodists, and National and Wesleyan schools. Limestone is extensively quarried and burned for manure. Traces of an extensive encampment exist in the neighbourhood. *Uffington*, on the southern border of the county, 2 miles E. from Stamford; population, 573. The church is a handsome edifice, with a square tower and crocketed spire supported by buttresses. In the village are National schools. A priory of Augustinian canons was formerly at Newstead in the parish; the site is now occupied by an extensive mill. *Whaplode*, about 2½ miles W. from Holbeach, population 2564, has a church of Norman date, with a square tower at the south-east angle of the church. There are chapels for Wesleyan and Primitive Methodists, National schools, and almshouses for six poor widows. *Winterringham*, on the right bank of the Humber, 7 miles W. from Barton, population 824, had once a market. The church is of the early English period. There are chapels for Wesleyan and Primitive Methodists and National schools. On the river-side are convenient wharfs. Near the village is a chalybeate spring. *Winterton*, 8 miles W.S.W. from Barton: population, 1665. The church is early English, except the lower part of the tower, which is Norman. There are chapels for Wesleyan and Primitive Methodists and Independents, and National schools. Cattle fairs are held on the Tuesday before Palm Sunday and on September 23rd, and a general fair on July 6th. A small market for corn is held on Wednesday. Malting, rope-making, and machine-making employ a portion of the population. Tessellated pavements have been found in the neighbourhood.

Divisions for Ecclesiastical and Legal Purposes.—This county, as noticed above, is in the diocese of Lincoln, and province of Canterbury, and constitutes the two archdeaconries of Lincoln and Stow. Lincolnshire is in the midland circuit. The assizes are held at Lincoln, where is the county jail. The quarter-sessions are held as follows: for the county of the city of Lincoln at Lincoln; for the parts of Kesteven and Holland at Bourne, Boston, Sleaford, and Spalding; for the parts of Lindsey, at Kirton, Louth, and Spilsby. County courts are held at Barton-on-Humber, Boston, Brigg, Caistor, Gainsborough, Grantham, Great Grimsby, Holbeach, Horncastle, Lincoln, Louth, Market Rasen, Sleaford, Spalding, Spilsby, and Stamford.

Before the passing of the Reform Act the county returned two members to Parliament; and two members each were returned for the city of Lincoln, and for the boroughs of Boston, Grantham, Grimsby, and Stamford. By the Reform Act the county was divided into two parts, each to return two members. The northern division comprehends the parts of Lindsey; the southern division comprehends the parts of Kesteven and Holland. The only alteration for the borough members was the loss of one for Grimsby. By the Poor-Law Commissioners the county is divided into the Unions of Boston, Bourne, Caistor, Gainsborough, Grantham, Brigg, Grantham, Holbeach, Horncastle, Lincoln, Louth, Sleaford, Spalding, Spilsby, and Stamford. These Unions comprise 723 parishes and townships, with an area of 1,584,020 acres, and a population in 1851 of 397,411.

History and Antiquities.—At the time of the Roman conquest Lincolnshire constituted part of the territory of the Coritani, who occupied several of the midland counties, and whose dominion stretched through Lincolnshire to the German Ocean and the Humber. In the division which the Romans made of Britain Lincolnshire was included in the province of Flavia Caesariensis.

The principal British roads or trackways which passed through Lincolnshire were Ermine-street (which had two branches), the Fosseway, and what has been termed the Upper Saltway. Ermine-street after passing over an angle of the county near Stamford, re-entered it in the neighbourhood of South Witham, between Stamford and Grantham. It immediately divided into two branches, of which the most easterly ran north by Ancaster and Lincoln to Winterringham on the Humber. The other main branch ran north-north-west into Nottinghamshire. The Fosseway commenced on the coast at or near Grimsby, and ran south-west by Lincoln through Nottinghamshire to Leicester. The Upper Saltway appears to have been the communication between the coast of Lincolnshire and the salt-works of Worcester-shire.

Lindum, the modern Lincoln, was a British town before it was

made a Roman station: it is at the intersection of the two great roads, the eastern branch of Ermine-street and the Fosseway. Ptolemaeus mentions it as one of the two chief towns of the Coritani. It was made a Roman station, and according to Richard a Roman colony. The station was on the hill now occupied by the cathedral and the castle: its form was that of a parallelogram, the sides nearly facing the four cardinal points: on each side was a gate. The inclosed area was 1200 feet by 1800 feet. The walls have been almost entirely levelled with the ground, and the gates, with one exception, have been long since demolished. The remaining gate, now called 'Newport Gate,' is one of the most remarkable Roman remains in the kingdom. It consists of a central arch nearly 16 feet wide, and formed with large stones put together apparently without mortar; and two lateral arches or posterns, now nearly closed up by the elevation of the soil. Adjacent to this gate is a mass of the Roman wall; a Roman arch and part of the wall are incorporated with the Norman castle; and another portion of wall parallel to that of the station, and now called the Mint Wall, is supposed to have been part of a granary or of some other Roman building. A fortified wall with towers at the corners appears to have run down to the bank of the Witham, and then along the bank. Coins of the emperors Nero, Vespasian, and Julian have been found here, and especially of Carausius, who as some have supposed, resided for a time at Lincoln. A tessellated pavement and a hypocaust beneath it were discovered in 1739: the pavement was 13 feet below the present surface. Another hypocaust and several antiquities have been also discovered, especially a sarcophagus and some stone coffins, earthen and glass urns, and other funereal utensils. Part of a set of glazed earthen conduit-pipes and other specimens of pottery have been also found.

The only other Roman station in the county mentioned in the Antonine Itinerary was Causennæ. Ad Abum, mentioned by Richard of Cirencester, was on Ermine-street, at Winterringham or Winterton, near the south bank of the Humber. The Bannoallum and the Vainonas of Ravennas have been fixed at Horncastle and Wainfleet. Causennæ was probably Ancaster on Ermine-street, 15 miles south of Lincoln. Roman coins have been found here. The remains of the station at Winterton, supposed to be Ad Abum, were ploughed up not more than six years before Stukeley wrote the account of it, and 'great pavements, chimney stones,' and other antiquities were found but not preserved. Three curious tessellated pavements were found here in 1747. At Roxby, Hibbaldstow, Appleby, Sandton, and Broughton, all in the same part of the county, various Roman antiquities have been discovered. At Horkstow also, near Winterton, several Roman remains, chiefly tessellated pavements and the foundations of buildings, have been found. At Torkesey, at the junction of the Fosse Dyke with the Trent, between Lincoln and Gainsborough, there was probably a Roman settlement. The foundations of the ancient Norman castle appear to have been Roman. At Scampton, about 6 miles north of Lincoln, were discovered in 1795 the foundations of a Roman villa, occupying a site 200 feet square, and having upwards of 40 apartments on the ground plan, with painted and stuccoed walls, and no less than 13 Roman pavements, only one of which was perfect. Some of the walls were of great thickness. Various Roman antiquities were found scattered over the spot. Upon the banks of the Trent, 3 miles west of Stow, in the same part of the county, two Roman altars and other antiquities have been discovered. Stow is supposed to have been the Sidnaceaster of the Saxons, the seat of a bishopric afterwards transferred to Lincoln. Near Gainsborough and at Aukborough, both on the Trent, are Roman camps: the latter was, in Stukeley's time, very perfect, and formed a square of 800 feet; near it was one of those labyrinths, formed of banks, called here and elsewhere Julian's Bower. Camps, probably Roman, have been found at Gedney Hill, near Holbeach, and at Honnington, not far from Grantham; a mosaic pavement at Denton, in the same neighbourhood; and Roman coins and pipes of baked earthenware in other places.

Under the Saxons, Lindsey, a name which perhaps extended nearly or quite over the modern county of Lincoln, appears to have been a subordinate state dependent upon the kingdom of Mercia. It was included among the conquests of Edwin of Northumbria, under whose influence Christianity was introduced by the missionary Paulinus. Bede states that Blesca, the governor of Lincoln, was with his household among the first converts, in the year 628.

When the Danes, or Northmen, were carrying on their ravages in England, in the time of Ethelred I., Lincolnshire, which then had several monastic establishments, suffered greatly. Lincolnshire passed permanently into Danish hands about 877; it constituted part of the territory of the Danish burghs of Lincoln and Stamford; and was included within the boundary of the Danelagh, or Danelag (the 'Danish law,' or 'Danish jurisdiction'), as settled by the treaty between Alfred and Guthrun the Dane. In time the Danish and Anglo-Saxon population became amalgamated, and the whole district came under the supremacy of the Anglo-Saxon crown.

In the civil war between Stephen and the empress Maud, Lincolnshire was the scene of contest. The siege and battle of LINCOLN, 1141, are noticed elsewhere. In the civil war of the barons with John and his son Henry III., Lincoln was signalled by a second battle, which seated Henry III., yet a boy, securely on his throne.

At the latter part of his reign, when troubles had again broken out, Axholme became once more the refuge of the disaffected. In the civil war of the Roses Lincolnshire appears not to have suffered much. Sir Robert Wells, out of revenge for his father's death, whom Edward IV. had beheaded, raised a rebellion against that prince, and gathered an army of 30,000 Lincolnshire men. He was defeated with dreadful loss near Stamford, and put to death by the king's command. At the time of the Reformation the Lincolnshire men broke out into open rebellion upon the suppression of the monasteries, in 1536. The earls of Shrewsbury, Rutland, and Huntingdon, and the Duke of Suffolk, were sent into Lincolnshire with all the force that could be collected; and the rebels dispersed without an engagement, delivering up their leaders to the king's officers.

Of the ecclesiastical and baronial edifices which were erected between the Conquest and the Reformation, Lincolnshire contains many admirable specimens, especially churches. The cathedral of Lincoln and the churches of Boston, Louth, Sleaford, Spalding, and other places are elsewhere noticed. On the hill which runs from Lincoln towards Grantham is a line of churches, presenting a number of interesting features. Beokingham, Normanton, and Ancaster have considerable portions of Norman character. Caythorpe church is chiefly of decorated English character, and presents several singularities in its arrangement. Leadenham has a tower and spire of early perpendicular date, and of good design; the rest of the church is an excellent example of the decorated style. The churches on and near the road from London to Lincoln exhibit as much, if not more variety and excellence of composition than is to be met with in any part of the kingdom in the same distance: among them are Sleaford, Folkingham, Bourne, and Market Deeping churches. Kelby, Threackingham, Kirby Laythorpe, Howel, Horbling, Sempringham, and Morton, have portions of Norman character. Sempringham church appears to be the remains of a much larger building; it has a tower of plain perpendicular character. Silk Willoughby church is of fine decorated English character, with a tower and spire of good composition. Walcot has a tower and fine crocketed spire, which are of decorated English character, as well as the rest of the church: the east window is very fine. Heckington church is one of the most beautiful models of a church in the kingdom, having almost every feature of a fine church. It is a large cruciform structure, having a nave and aisles, spacious transepts, a large chancel with a vestry attached to the north side, and at the west end a tower crowned with four pentagonal pinnacles and a lofty spire. The finest churches in the Fens are for the most part of perpendicular character, with lofty spires. The churches already noticed are chiefly in Kesteven and Holland; those of Lindsey are of inferior architecture, except in the flat marshy tract between the Wolds and the Ocean or the Humber, where there are some fine ones. The churches in this district vary but little in their form and character; they have a nave with north and south aisles, a chancel, south porch, and western tower. The churches amid the Wolds have little claim to architectural excellence. In the western parts of Lindsey are some churches of great antiquity and of considerable beauty. Stow church, in this part, is a large Norman edifice.

Of monastic edifices there are several remains. Barling's Abbey shows part of a wall and some fragments of columns. Thornton Abbey, not far from Barton-upon-Humber, presents some important and interesting fragments. It was founded by William Le Gros, earl of Albemarle, in 1139, as a priory for Black Canons, and was afterwards made an abbey. The buildings were originally extensive, forming a quadrangle surrounded with a moat, and having lofty ramparts for occasional defence. The gate-house which formed the western entrance is yet tolerably entire. A spacious room, probably the refectory, and an adjoining room with recesses in both ends, the abbey church, and a portion of the octagonal chapter-house, are also standing. The abbot's lodge, which stood to the south, is occupied as a farm-house. Of Bardney Abbey there are some remains, also of Kirkstead Abbey; both these are on the left bank of the Witham, between Lincoln and Boston. Of Temple Bruer, a receptory first of Knights Templars, afterwards of Hospitallers, a few vaults and the tower of the church are left; the latter is a massy, quadrangular, stone building, accessible to the top by a winding staircase. The remains of Haverholme Priory, near Sleaford, have been incorporated into a modern mansion.

In the civil war of Charles I. this county was the scene of several important events. In March, 1642, Colonel Cavendish, on the part of the king, took possession of Grantham, and captured 360 prisoners, with a quantity of arms and ammunition, and demolished the works which had been erected. Oliver Cromwell shortly afterwards gained a victory near Grantham with his own regiment of horse over 24 troops of royalist cavalry. In the same year Colonel Cavendish defeated the parliamentary forces at Ancaster; and Gainsborough was taken by the Parliamentarians under Lord Willoughby of Parham. In 1643 Cromwell gained a victory near Gainsborough over the Royalists under General Cavendish, who lost his life in the engagement. In autumn the same year the Royalists were again defeated at Horncastle; and in 1644 Lincoln castle and minster were stormed by the Earl of Manchester.

Religious Worship and Education.—According to the Returns of

the Census of 1851, it appears that there were in Lincolnshire 1501 places of worship, of which 703 belonged to four sections of Methodists, 657 to the Established Church, 62 to Baptists, 38 to Independents, 13 to Roman Catholics, 9 to Quakers, 5 to Unitarians, and 5 to Latter-Day Saints. The total number of sittings provided was 281,266. The number of Sunday schools in the county was 830, with 57,120 scholars. Of these schools 432 belonged to the Church of England, 318 to four sections of Methodists, 36 to Baptists, 27 to Independents, and 5 to Roman Catholics. The number of day schools was 1420, of which 457 were public schools with 32,267 scholars, and 963 were private schools with 19,896 scholars. There were 18 evening schools for adults, with 224 scholars, and 23 literary and scientific institutions with 2818 members, and libraries containing 22,654 volumes.

Savings Banks.—In 1852 there were 14 savings banks in the county, at Alford, Boston, Bourne, Brigg, Caistor, Folkingham, Gainsborough, Grantham, Horncastle, Lincoln, Louth, Sleaford, Spalding, and Stamford. The total amount owing to depositors on 20th November 1852 was 553,566l. 8s.

LINDFIELD. [SUSSEX.]

LINGFIELD. [SURREY.]

LINLITHGOW, Linlithgowshire, Scotland, a royal and parliamentary burgh, market-town, and the chief town of the county, is situated in 55° 55' N. lat., 3° 55' W. long., 18 miles W. by N. from Edinburgh by road, and by the Edinburgh and Glasgow railway. The population of the parliamentary burgh in 1851 was 4213. The town is governed by a provost, 4 bailies, a dean of guild, and treasurer, who are elected from 27 councillors. It unites with Airdrie, Falkirk, Hamilton, and Lanark, in returning one member to the Imperial Parliament.

The town consists of a main street and several cross streets. It is paved, lighted with gas, well supplied with water, and tolerably clean. The parish church, founded by David I., is a fine specimen of gothic architecture. In the town are a Free Church, two chapels for United Presbyterians, one each for Independents and Roman Catholics, a burgh school, and several other schools. The town-hall was built in 1668. In front of it is a curiously sculptured well, called the Cross Well, which sends out a copious supply of water through the mouths of numerous grotesque figures. The jail is a modern building. The principal trade of the town is the currying and tanning of leather. There are a distillery and a brewery. The Union Canal passes close to the town on the south side.

The burgh is said to have been erected by Robert II. in 1389. It was in the main street of Linlithgow that the Regent Murray was assassinated. The chief antiquity is the palace of Linlithgow, which, after being a royal residence for several centuries, was accidentally set on fire in the year 1746. It is a massive quadrangular structure, standing on an eminence on the side of a beautiful sheet of water. The oldest part of the palace is on the west side, in which is the room in which Mary queen of Scots was born. The palace is now a magnificent ruin.

LINLITHGOWSHIRE, or WEST LOTHIAN, a county in the east of Scotland, bounded N. by the Frith of Forth, W. by Stirlingshire, from which it is separated by the river Avon and the Polnessburn, S.W. by Lanarkshire, and S. and S.E. by Edinburghshire, from which it is separated by the rivers Breich and Almond. Its length, from the mouth of the Almond to the borders of Stirlingshire and Lanarkshire, is nearly 21 miles: its breadth, from the north-west extremity of the county to the village of Livingston on the south-east boundary, somewhat exceeds 10 miles. It is comprised between 55° 49' and 56° 1' N. lat., 3° 17' and 3° 5' W. long. The area of the county is 101 square miles, or 64,375 acres. The population in 1841 was 26,872; in 1851 it was 30,135. The county returns one member to the Imperial Parliament.

Coast-line.—At the mouth of the river Almond the land is generally flat and sandy, the shore broad, the water shallow. Inland there are some hills of moderate elevation. West of the Almond the coast rises somewhat higher, attaining on an average an elevation of between 50 and 60 feet, and so it continues as far as Black Ness, where it gets lower, until, west of Borrowstownness, it sinks so low that more than 2000 acres are covered by the tide. There are harbours at New-halls and Port Edgar, which are respectively half a mile east and west of South Queensferry. There is also a harbour at Borrowstownness.

Surface, Hydrography, and Communications.—In the southern part of the county are extensive tracts covered with mosses and heath. This surface extends in plains, though occasionally there are hills of moderate elevation, some of which rise to 900 or 1000 feet. The rivers do not run in narrow glens, as in a hilly country, and the arable ground along their banks is consequently extensive and fertile; but the greater portion of the tract is unfit for agricultural purposes. A line drawn through Livingstone to Bathgate may be considered as the northern boundary of this tract. The country north of this line presents in general an undulating surface with few hills. The greatest portion of this district does not slope towards the sea, but towards the river Almond on the one side, and towards the Avon on the other. The basin of the Almond is bordered by high ground, which in some places rises into hills. These hills begin east of Bathgate and run northward under the names of Dumcross Hills, Knock Hills, and Kipp Hills; east of Torpichen is their highest summit, the Cairnnaple, which is said to be 1493 feet high. They terminate south of Linlithgow

county of Lippe, which are surrounded by Hanover, the Hessian part of Schaumburg, Lippe-Detmold, and Westphalia. It is 210 square miles in extent. The population at the end of 1852 was 30,226. The country, which is in general mountainous, has no rivers except small affluents of the Weser: the Stein-hude Lake is about 5 miles long, 2½ miles broad, and at most 6 feet deep. The country produces corn, pulse, potatoes, turnips, rape-seed, flax, fruit, timber, horned cattle, sheep, swine, goats, horses, poultry, game, and fish. Its mineral products are coals and lime. The revenue amounts to 180,000 thalers. The country has an assembly of estates, which consists of 13 members, and meets annually. The chief town and residence of the prince is *Bückeburg*, on the Aa, which has a population of 2500. It is a walled town entered by five gates, and has a castle, a gymnasium, a normal school, a public library, an orphan-house, &c., but no remarkable buildings. Schaumburg-Lippe, as a member of the German Confederation, has one vote in the general council and part of the sixteenth vote with Lippe-Detmold, &c., as above stated. Its contingent to the federal army is 210 men.

LIRI, OR LIRIS RIVER. [LAVORO, TERRA DL.]

LISBELLAW. [FERMANAGH.]

LISBON (*Lisboa* in Portuguese), a city, capital of the kingdom of Portugal and of the province of Estremadura, is situated on the northern bank of the Tagus (Tejo) about 12 miles from the mouth of the river, in 38° 42' N. lat., 9° 8' W. long. The population is about 280,000.

The broad estuary of the Tagus gives to Lisbon an extensive and safe harbour, in which the largest ships of war can anchor close to the city. From the suburb of Belem up to the western end of Lisbon the Tagus is little more than a mile in width, but opposite the centre of Lisbon it widens considerably, the left or southern bank turning suddenly to the south near the town of Almada, and forming a wide bay or reach about 5 or 6 miles in breadth, and extending far to the north-east. In this deep lake-like expansion of the river all the fleets of Europe might be anchored beyond the range of cannon from either shore. The southern bank of the river, which is hilly about Almada, becomes low higher up, and is swampy at low water; it is however studded with small towns and villages, which keep up a constant traffic with Lisbon, supplying it with fruits, vegetables, wine, &c., besides being the medium of intercourse between the capital and the southern provinces of the kingdom, and also with Spain by the post-road of Badajos. The entrance of the river is defended by Fort St. Julian (Forte São Julião) on the north bank, and by Fort Bugio on a low point of rock near the south bank; higher up it is protected by the Tower of Belem (Torre de Belem) and by several batteries on both banks. To the north the city is protected by mountains, which, rising in successive ranges, end abruptly near Torres Vedras, in a line extending from the sea-coast to Alhandra on the Tagus. On three of these ridges were constructed the series of entrenchments and fortified positions called the Lines of Torres Vedras.

The city rises from the bank of the river in the form of an amphitheatre, being built on a succession of hills, the highest of which are the hill of Bons Ares, or Estrella, to the west, and the Castle-Hill to the east. Most of the streets are steep, irregular, and tortuous, besides being ill paved and dirty. One part of the city however, which has been entirely rebuilt since the great earthquake of 1755, is regular and handsome; it lies on even ground in a valley which runs in a direction at right angles to the river, between the Castle Hill to the east, and the hills of San Francisco and Do Carmo on the west. This space contains about eight or nine well-built parallel streets, some of them, such as the Rua Augusta, tolerably wide, and nearly half a mile in length, containing the best shops in Lisbon, especially those of the goldsmiths, silversmiths, and jewellers. These streets are crossed at right angles by other streets, and they terminate on the river side in a handsome square called Praça de Commercio, one side of which is formed by the Tagus, and the other sides by the Arsenal, the Custom-House, the Exchange, Royal Library, and other public buildings. This square is adorned with a bronze statue of king Joseph I. At the opposite or north end of the above-mentioned streets are two squares, the Praça da Figueira, or market-place, and the Praça do Rocio, the latter of which is bounded on one side by the convent of San Domingo and the massive buildings formerly occupied by the Inquisition. Farther north, going towards the country, is the Passeio Publico, or promenade, which however is small, and very inferior to the public gardens of other large capitals.

The eastern part of Lisbon, which lies at the foot of and beyond the castle, consists of narrow irregular ill-paved streets, with a neat house here and there. This is the oldest part of Lisbon, and the houses are high and old-fashioned. It is remarkable, that while the earthquake destroyed all the buildings in the valley, it spared the houses built on the steep declivity of the hill.

To the westward of the new streets the town rises on the steep declivity of a succession of hills, with a few good streets and open places here and there, especially along the river side, the rest of the streets being narrow, crooked, and filthy. Here and there are massive buildings, chiefly convents and churches, which crown the summits of the hills and tower above all the rest.

Lisbon being an open town, and its suburbs very long and straggling in various directions, it is not easy to define its limits. Its

western boundary however is generally fixed at the stream of Alcantara, which falls into the Tagus; and thence to the eastern extremity of the town the length in a straight line is between 3 and 4 miles, not reckoning the sinuosities of the ground: the width of the town from the Tagus inland varies from a mile to a mile and a half, not including the long straggling lines of houses which extend along the approaches to the town.

The whole of the area thus described is however far from being thickly covered with buildings; many parts are occupied by gardens, plantations, the naked steep declivities of the hills, and by ruins and rubbish. In fact almost every house of any pretension has its little garden, or rather grape-terrace; and many portions of the city are occupied by ruins, which have been allowed to remain in the same state of desolation as that to which they were reduced by the earthquake. The district of Bons Ares, along the slope of the western hill, is the least densely built, and contains many pleasant and healthy residences with gardens, which are mostly occupied by foreigners. West of the bridge of Alcantara a line of streets parallel to the Tagus connects Lisbon with Belem, or Bethlehem, which is resorted to as a bathing-place. In its square stands a fine old church, with extensive conventual buildings adjoining, and here there is a royal residence. A new palace called the Ajuda has recently been constructed on an elevation north of Belem.

The most striking buildings of Lisbon are its vast and massive convents, which crown the hills, and look like palaces and fortresses. Before the suppression of the monasteries in 1835 they gave to Lisbon a monkish appearance. Most of the churches belonging to them have since been converted into parish churches, and the conventual buildings applied to other purposes.

The principal public buildings are:—The castle and citadel of St. George, occupying the highest summit in the city; the old cathedral, near the castle; several churches; the Custom-House; the Exchange; the Royal Library; several prisons; five theatres; an English church, with a handsome cemetery adjoining; schools of various kinds; a museum of natural history; and a botanic garden. The Arsenal was formerly one of the finest establishments of the kind in Europe: it contained all kinds of naval and military stores in abundance. It is now on a reduced scale, but has a foundry for casting cannon and a manufactory of fire-arms; there is also a large dock-yard.

The Aqueduct (Os Arcos das Agoas Livres) which supplies Lisbon with water is not surpassed in boldness of design and grandeur of effect by any similar work of art. The water is brought from several springs situated near the village of Bellas, 9 miles N.W. from Lisbon. The aqueduct is in part conducted under ground; but on approaching Lisbon it passes across a deep valley, and the water is carried over a number of lofty arches for a length of about 2400 feet. The water enters the town on the north-west, at a place called Amoreira, where is the reservoir (Depositorio das Agoas Livres) from which the water is distributed to the several fountains of the city. The Gallegos draw water in small barrels from the fountains and sell it from house to house or cry it about the streets.

The population of Lisbon is much mixed, consisting of people from every province of Portugal, who come there in quest of employment, of a number of blacks and men of colour from the colonies, and of numerous Gallegos, or porters and water-carriers from Galicia, and other foreigners. The lower classes live poorly, and are dirty in their appearance. There are crowds of beggars and vagrants. The women of Lisbon wear on their heads a plain muslin kerchief folded in a three-cornered shape. Many of the ladies have adopted the Spanish mantilla.

The police is still very imperfect, and the streets are but partially and imperfectly lighted at night. Lisbon is not provided with conduits or sewers, and all the filth is thrown into the streets, from which it is washed off by the rain into the river.

The climate of Lisbon is healthy and genial; it is very hot and dry in the summer months, when the heat is often 96° of Fahrenheit, but is relieved by north-west winds; heavy rains fall in November and December; cold clear weather prevails in January, but in February the weather becomes mild again, and the spring begins. Snow is a very rare occurrence.

The commerce and trade of Lisbon, though much diminished since the loss of Brazil, are still considerable. It exports wine, fruits, and oil; and it imports corn, salt fish, salt butter, cheese, timber, iron, lead, tin, copper, coals, tar, and all sorts of foreign manufactures, with which it supplies the whole southern part of the kingdom. Lisbon has some manufactories of silks, paper, soap, and leather; its goldsmiths and jewellers are very expert; and there are also sugar-refineries and potteries. The laziness and want of industry of the Portuguese have been much exaggerated by travellers.

A great portion of Lisbon was destroyed by an earthquake in 1755. The number of persons killed amounted to 60,000.

(Kinsey, *Portugal Illustrated*; Miñano, *Diccionario Geographico*; Link, *Travels in Portugal*, a good work of the end of the last century; Alexander, *Sketches of Portugal*, 1834; *Portugal and Galicia*, 1836; Baxter, *The Tagus and the Tiber*, 1852. See also *Map of Lisbon*, by the Society for the Diffusion of Useful Knowledge.)

LISBURN, Ireland, a market- and post-town, a parliamentary borough, and the seat of a Poor-Law Union, is situated in the midst

of a beautiful and highly improved district, on the river Lagan, partly in the barony of Upper Massereene, county of Antrim, and partly in the barony of Upper Castlereagh, county of Down, in 54° 31' N. lat., 6° 4' W. long., distant 8½ miles S.S.W. from Belfast by the Ulster railway, and 97¼ miles N. by E. from Dublin by the Dublin and Belfast Junction railway. The town is governed by 13 commissioners. The population of the town in 1851 was 6569, besides 363 inmates of the workhouse. The borough returns one member to the Imperial Parliament. Lisburn Poor-Law Union comprises 28 electoral divisions, with an area of 119,790 acres, and a population in 1851 of 68,783.

The town took its rise from the erection of Lisburn Castle in 1610 by Sir Fulk Conway, to whom James I. had granted part of the manor. In 1641 it was attacked by the Irish insurgents, who were repulsed, but the town was set fire to and reduced to ashes. After the revocation of the edict of Nantes, a number of Huguenot families settled in the town, and introduced the linen and damask manufactures with the improved machinery of Holland. In 1707 the castle and chief part of the town were destroyed by fire. The castle remained a ruin, the gardens were given to the public as a place of recreation. The town was rebuilt in a substantial and handsome manner. Lisburn enjoyed great prosperity during the period between the time of the Irish volunteers and the rebellion of 1798. The linen manufacture subsequently fell off here, but it has revived, and the town is again in a flourishing condition.

Lisburn lies on the left bank of the Lagan, with a small suburb beyond the river. It consists mainly of a long irregular street, with several streets branching from it. Another leading street diverges from the main street on the line of the Belfast high road, having the castle terrace and gardens between it and the river. At the point of divergence is a large open area, in which is the market-house. Between the two streets, near their intersection, stands the parish church, fronting the castle gardens. The houses are well built and roofed with slate, and the town has generally a neat, clean, and handsome appearance. It is well paved, lighted with gas, and supplied with water. The parish church, which is the cathedral for the united diocese of Down and Connor, is a spacious and handsome building with a tower, to which an octagonal spire was added in 1807. It contains a monument to Jeremy Taylor, who died at Lisburn in 1667. Besides the parish church, there are a chapel of ease, places of worship for Roman Catholics, Presbyterians, Quakers, and Methodists, National, Free, and Infant schools, and a school endowed by John Hancock for the support and education of 40 Quaker children. The charitable institutions are the County of Antrim Infirmary, the Lisburn Fever Hospital, and six free houses for destitute widows. In the town is a savings bank. Lisburn possesses great facilities for trade, and large quantities of agricultural produce, provisions, and manufactured goods are disposed of in the weekly markets. On a river-island within the borough there is an extensive chemical work for the supply of the neighbouring bleaching-yards. Damasks, and the finer kinds of linen, linen-thread, muslins, and diapers are manufactured. There are factories for flax-spinning and bleaching, and for printing and dyeing muslins and other fabrics. Courts for Kilultagh Manor, courts leet, and petty sessions are held in the town. Fairs are held on July 21st, and October 5th. The market day is Tuesday.

LISCARD. [CHESHIRE.]

LISCARROL. [CORK.]

LISIEUX. [CALVADOS.]

LISKEARD, LESKEARD, or LESKERET, Cornwall, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Liskeard, is situated in 50° 27' N. lat., 4° 28' W. long., distant 14 miles W. by N. from Bodmin, and 221 miles W.S.W. from London. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns one member to the Imperial Parliament. The population of the municipal borough in 1851 was 4386, that of the parliamentary borough 6204. The living is a vicarage in the archdeaconry of Cornwall and diocese of Exeter. Liskeard Poor-Law Union contains 26 parishes and townships, with an area of 92,157 acres, and a population in 1851 of 33,792.

The town, which is meanly built, stands partly in a hollow and partly upon rocky heights, so that the streets have an appearance of great irregularity. The chief public building is the town-hall, a handsome structure, supported on granite columns. The parish church, a fine edifice of the 15th century, consists of a nave, aisles, and chancel, with a tower at the west end. The Wesleyan and Association Methodists, Independents, and Quakers have places of worship, and the Bible Christians meet for worship in the Teetotal Hall. The Grammar school, founded in 1658, of which the corporation is patron, had lost its endowment, and had been discontinued, but has been lately re-opened. There are British and Infant schools, a mechanics institute, a mutual improvement society, and a savings bank. Liskeard is a place of considerable trade, and has an excellent market, which is held on Saturday; fairs are held six times in the year. Only a few persons are now engaged in wool-combing. Tanning was formerly carried on to a considerable extent, but there is only one tan-yard left. A considerable number of the inhabitants are

GEOG. DIV. VOL. III.

employed at mines in the neighbouring parishes of St. Cleer, Menheniot, and St. Ive.

LISLE, or L'ISLE. [VAUCLUSE.]

LISMORE, county of Waterford, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated on the right bank of the Blackwater, in 52° 8' N. lat., 7° 50' W. long., distant 39 miles W.S.W. from Waterford by road, and 136 miles S.W. by S. from Dublin. The population in 1851 was 2340, besides 898 inmates of the workhouse. Lismore Poor-Law Union comprises 18 electoral divisions, with an area of 97,140 acres, and a population in 1851 of 27,077.

Lismore, at first called Dunsginne, from a fortification east of the town, now known as the Round Hill, is said to have had its rise in the beginning of the 7th century. It was named Lismore, or the Great House, from a monastery founded by St. Carthagh, who was interred in his own church. As a sacred city, and a seat of learning, it grew into importance and fame, and is said to have had no fewer than 20 churches erected in its vicinity. In the 9th century the place was five times plundered by the Danes. Henry II. held a council in it. Its castle was founded by King John. Several times attacked in the rebellion of 1641, and at length burned in 1645, it remained a comparative ruin, and the town sank into a poor and wretched village. It was visited by James II. in 1689. In 1753 it became the property of the fourth Duke of Devonshire. Since that time it has revived, and has been greatly enlarged.

Lismore occupies the summit of a steep bank of the Blackwater River. The church standing on the crest of the hill at its eastern extremity, and the castle, on the verge of a rocky precipice nearly 100 feet high, at the opposite end of the town, give it a very striking appearance. The church, which is the cathedral of the see of Lismore, is a handsome building, having a tower, surmounted by a light and elegant spire. It was in great part built by the Earl of Cork in 1663, and was about the year 1820 renewed under the direction of the dean. There are a spacious Roman Catholic chapel and a small Presbyterian meeting-house; a classical school, well-built and endowed; free schools, and a school erected and supported by the Duke of Devonshire. The castle, which is a massive pile, is a magnificent specimen of the ancient baronial residence. Three sides of the quadrangle are in complete repair. The bridge, which crosses the Blackwater a little above the point where it receives the Owenahad, a rapid stream from the mountains lying to the north, is a handsome structure, having a centre arch with a span of 100 feet. In the town are a fever hospital, a dispensary, and six almshouses, founded by the first earl of Cork for decayed Protestant soldiers. The navigable part of the Blackwater has been connected with the town by a canal, which allows a free traffic by lighters between Lismore and Youghal. There is a limited export of corn and flour, and the imports are timber, iron, coal, &c. Immediately below the castle is an extensive salmon fishery. Good roofing slate is quarried near the town. Fairs are held on February 14th, May 25th, and November 12th. The scenery of the neighbourhood is remarkable for its grandeur and beauty. In the vicinity are many villas and gentlemen's seats.

The diocese of Lismore is in the archdiocese of Dublin; it includes portions of the counties of Waterford and Tipperary, and comprises 42 benefices. The chapter consists of a dean, precentor, chancellor, treasurer, archdeacon, and 7 prebendaries. The income of the united dioceses of Cashel, Emly, Waterford, and Lismore is 5000*l.*

LISNASKKA, Fermanagh, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated at the junction of the roads from Dublin and Belfast to Enniskillen, in 54° 16' N. lat., 7° 27' W. long.; distant 11 miles S.E. from Enniskillen by road, and 89 miles N.N.W. from Dublin. The population in 1851 was 882. The Lisnaska Poor-Law Union comprises 14 electoral divisions, with an area of 98,738 acres, and a population in 1851 of 29,155. The town has been much improved by its proprietor the Earl of Erne, and contains some superior houses built in the old English style. Besides the parish church, a plain edifice, rebuilt in 1814, there are chapels for Roman Catholics and Primitive Methodists; and National, Infant, and Endowed schools. A handsome market-house, a fever hospital, a dispensary, and the Union workhouse are in the town. By the steamers on Lough Erne large quantities of corn, butter, linen, and yarn are brought from the islands and sold in Lisnaska market. The market is held on Saturday, and fairs are held on the Monday before Easter, October 10th, and the 1st Saturday of every month. Petty sessions are held in the town.

LISSA. [POSEN.]

LISTOWEL, Kerry, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated in the barony of Iraghtic Connor, on the right bank of the river Feale, in 52° 26' N. lat., 9° 28' W. long.; distant 18½ miles N.N.E. from Tralee, and 165 miles S.W. by W. from Dublin. The population in 1851 was 2126. Listowel Poor-Law Union comprises 32 electoral divisions, with an area of 151,208 acres, and a population in 1851 of 43,251.

Listowel Castle, which was a seat of the earls of Desmond, was the last castle which held out for Lord Kerry against Queen Elizabeth. It was taken in 1600 by Sir Charles Wilmot, who put all the garrison to the sword. The town has of late been much improved. It consists of an extensive square, in the centre of which is the church, and of

one principal street with several short branches. On the western side of the square is a part of the ancient castle. At the southern approach to the town is a fine bridge with five arches, each of 50 feet span. The parish church is a handsome structure, having a tower surmounted with a neat spire. The Roman Catholic chapel is a spacious cruciform structure. There are a Classical school and two National schools; a fever hospital, a dispensary, and a bridewell. A line of navigation by the river Cashen enables boats of 15 tons to come within 2½ miles of Listowel. Salmon are plentiful in the river. Behind the castle are extensive flour-mills. Quarter sessions are held in the town and petty sessions every Saturday. The market is held on Wednesday and Saturday, and a corn-market on Friday. Fairs are held on May 13th, July 25th, October 28th, and on the first Wednesday of alternate months. The soil around is remarkably fertile.

LITCHFIELD. [CONNECTICUT.]

LITHUANIA, a large tract of country which now forms part of the Russian empire, but which once constituted an independent and powerful state, until it was united to Poland by the accession of its reigning dynasty to the throne of that country. The early history of Lithuania is unknown. Some conjecture that the Heruli, who destroyed the western empire under Odoacer, were inhabitants of Lithuania, and that after their expulsion from Italy they returned to this country, and brought with them those words resembling the Latin which abound in the Lithuanian language. The first mention of Lithuania occurs in the chronicle of Quedlinburg, A.D. 1009. From that time the name of Lithuania begins to appear more frequently in Russian chronicles, which speak of the Lithuanians as a poor and savage nation, some tribes of which were compelled by the bordering Russian princes to pay a tribute, consisting of the bark of birch-trees for making oil, or ropes made of the bark of lime-trees, and of brooms.

Towards the year 1200, Albert, bishop of Riga, founded the order of the Knights Sword-Bearers (Knsiferi), in order to conquer the pagans who inhabited the shores of the Baltic from the Curische-Haff to the Gulf of Finland. The half-savage barbarians were soon subdued by the valour and military skill of those warrior-monks, and reduced to a state of the most oppressive bondage. Not long after, about 1220, Conrad, duke of Masovia, being unable to resist the predatory attacks of the Prussians, a branch of the Lithuanians, called to his assistance the Knights of St. John of Jerusalem, and granted them a large tract of land, with many castles. These knights did the same in Prussia that the Sword-Bearers had done elsewhere. The Lithuanians were almost destitute of defensive armour, and had for the most part no other weapons than spears, clubs, and arrows. In spite of these disadvantages they not only resisted the German invaders, but gained possession of some of those Russian principalities to which they had been obliged to pay tribute. The decline of the powerful Russian principality of Halicz by the death of Prince Roman, who was defeated and killed by the Poles in the battle of Zarichost, 1206, delivered the Lithuanians from a formidable enemy, and their predatory incursions began to be more dangerous to the Polish and Russian principalities.

Ryngold was the first Lithuanian ruler who, after having united under his dominion all the principalities of that nation, assumed the title of Grand Duke of Lithuania about 1235. His son Mindog embraced Christianity, and was crowned at Novogrodek in 1252, but soon relapsed into paganism. At the end of the 13th century Witenes established a new dynasty on the throne of Lithuania; but the most brilliant era of the history of the country began after the accession of the Grand Duke Ghedymin in 1315. He made most extensive conquests in the south-western principalities of Russia, and consolidated his power by insuring the most perfect protection to the religion, language, customs, and property of the inhabitants of the conquered lands, which were intrusted to the administration of such princes only of the Lithuanian dynasty as had embraced the Christian religion, whilst the sovereign still remained an idolater.

Two nations of a different origin and creed thus became soon blended together, and the Russian Christians were always the most loyal subjects of the pagan grand dukes of Lithuania. The Russian became the official language of Lithuania, and continued so till the middle of the 17th century, when it was superseded by the Polish language.

The government of Lithuania was in some degree feudal: each province was given in fief, generally to a prince of the reigning family. After its union with Poland, Lithuania was governed by the same forms as that country.

Ghedymin was killed in 1328 at the siege of the fortrees of the German knights. He divided his empire among his several sons; but after some contention one of them, called Olghard, assumed the sovereign power. He proved a worthy successor to his glorious father: he defeated the Tartars, and compelled those of the Crimea to become his vassals, having extended the limits of Lithuania to the banks of the Don and to the shores of the Black Sea. The republics of Novogorod and Pakow acknowledged his supremacy, and he presented himself in triumph before the gates of Moscow in the years 1368, 1370, and 1373. He died in 1381 in the faith of the Greek Church, which he embraced on his death-bed at the solicitations of his wife, who was a Russian princess of Twar. Olghard's son and successor, Yaguellon, married in 1385 Hedvige of Anjou, queen of Poland, and, having been baptised, ascended the throne of that country. From that time Lithuania was united with Poland.

Yaguellon, having become a Christian, exerted himself successfully for the conversion of his pagan subjects, who however long retained many rites and customs derived from their idolatrous forefathers.

By the accession of Yaguellon to the throne of Poland the two countries became united, but it often happened that the kings of Poland of the Yaguellonian family, who were hereditary sovereigns in Lithuania and elective in Poland, after their accession to the throne of the latter country, gave up the government of Lithuania to a prince of their family, but still retained the sovereignty. The most celebrated of those princes was Vitold (1430). A kind of union of the two countries was effected at the diet of Lublin in 1569. The throne of Lithuania became elective like that of Poland. The diets of the two countries were held in common, but the laws, finances, and armies remained separate.

Lithuania lost a great part of its dominions under the reign of Casimir III., king of Poland and grand-duke of Lithuania, and on several subsequent occasions. At the time of the first dismemberment of Poland in 1772, Lithuania was divided into the following palatinates or counties:—Vilna, Troki, Novogrodek, Bzesc, Vitepak, Polosk, Mohilew, and the duchy of Samogitia. Of this territory Russia got Mohilew and Polosk in 1792, and all the remainder in 1793, with the exception of the territory which forms the Prussian government of Gumbinnen. The territory of Lithuania was formed into the Russian governments of—1, Vilna; 2, Grodno; 3, Bialystock; 4, Minsk; 5, Mohilew; 6, Vitepak; and, 7, the palatinate of Augustovo. With the exception of Bialystock, incorporated with Grodno we believe in 1842, and Augustovo, now comprehended in the kingdom of Poland, these divisions still subsist. The area of the duchy exceeded 110,000 square miles, and its population in 1846 was above 5,000,000.

Lithuania is generally a flat and low country, although there are some hills in the environs of Vilna. The north-western part, comprehending the duchy of Samogitia, is very fertile, and celebrated particularly on account of its flax. The banks of the Niemen are also generally fertile, and in many parts very picturesque. But the greater part of this country is covered with sand, marshes, and fens. Ferruginous ochre is found in all the peat-mosses, but the quantity of iron is very limited; and many iron-works which formerly existed are now abandoned in consequence of the cheaper rate at which iron can be got from the mines in the north of Russia and Siberia. Blocks of granite and pudding-stone are scattered over many districts. The large forests abound in fine timber, and contain a great quantity of wild animals, such as elks, wild hogs, bears, wolves, foxes, &c. An animal peculiar to Lithuania is the urochs, or bison, which was formerly found in many forests of Poland and Germany, but is now confined to a single spot in Lithuania, called the forest of Biala Vieja. The climate is extremely cold in winter and very hot in summer. There are scarcely any manufactures in the country, and its exports consist chiefly of flax, hemp, corn, timber, honey, and wax.

The principal rivers which water Lithuania are the Niemen, the Dnieper, Beresina, Villia, &c. The chief towns are Vilna, its ancient capital; Grodno, Minsk, Mohilew, Vitepak, &c.

The Lithuanians remained idolaters till the end of the 14th century. Their chief deity was Perkunas, the god of thunder, besides some other divinities presiding over seasons, elements, and particular occupations. They possessed also sacred groves and fountains, and worshipped fire and consecrated snakes. The population is composed of Lithuanians, Lithuano-Russians, Poles, Jews, and Tartars. Adelung and Vater define the Lithuanians to be a Germano-Slavic nation, and say that two-thirds of their language are Slavonian; and Balbi adds that the remaining third may be traced to the Finnish, Gothic, and German. The recent researches of some distinguished German philologists, and particularly those of Bopp and Bohlen, have proved that the Lithuanian language is closely allied to the Sanscrit, that it has a common origin with the Latin, German, and Slavonic languages, but that it is not derived from them. Professor Bohlen of Königsberg thinks that it bears a stronger resemblance to the Sanscrit than to any other known language.

The Lithuanian language may be divided into two principal dialects, the Lithuanian proper and the Lettonian, or Livonian, both of which may be subdivided into smaller ones. The Lithuanian proper contains the following dialects:—1. The old Prussian, which had been spoken in Prussia previously to the arrival of the Knights of St. John of Jerusalem, who tried by all means to extirpate it. It was still in general use at the time of the Reformation, but is now entirely extinct as a living language. It differs from other Lithuanian dialects in having a greater admixture of German than Slavonian words. A catechism compiled about 1545, and an Enchiridion, or church service (Königsberg, 1561), are the only extant monuments of that old language. 2. The Prusso-Lithuanian dialect, which is now spoken about Insterburg and Memel, is the nearest to the old Prussian, but it has received a great admixture of Polish words. A Bible, translated into that language by Quandt, was published at Königsberg, 1755. The Polish-Lithuanian, or Samogitian language, which is spoken in the north-western part of Lithuania, and particularly in the province of Samogitia, differs from the Prussian dialect in being more free from the admixture of German words; and it is certainly the purest of all

the dialects, as the population by which it is spoken resisted the German invaders. There is in that dialect a Protestant Bible translated by Chilinaki, published at London in 1660, and many other religious works.

The second principal dialect of the Lithuanian is the Lettonian, or the Livonian, which is sometimes called the Curonian. It is spoken in the greatest part of Livonia, in Courland, and a part of the government of Vitepsk, which was formerly called Polish Livonia. It differs from the other Lithuanian dialects in having an admixture of Finnish words, which is peculiar to this dialect. It is subdivided into several minor dialects, of which that which is spoken about Mittau and Riga is considered the best; and it has been used for the translation of the Bible, and for the composition of several religious works. There is at the University of Dorpat a chair of this language.

LITRY. [CALVADOS.]

LITTLE BELT. [BELT.]

LITTLEHAMPTON. [SUSSEX.]

LITTLEPORT. [CAMBRIDGESHIRE.]

LIVADIA, or LEBADEA. [BOEOTIA.]

LIVERPOOL, Lancashire, a sea-port, market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the right bank of the river Mersey, in 53° 23' N. lat., 2° 54' W. long., distant 53 miles S. by W. from Lancaster, 81 miles W. by S. from Manchester, 206 miles N.W. from London by road, and 201 miles by the London and North-Western railway. The population of the parliamentary and municipal borough of Liverpool in 1851 was 375,955. The borough is governed by 16 aldermen and 48 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The livings are in the archdeaconry of Liverpool and diocese of Chester. Liverpool Poor-Law Union consists of the parishes of Liverpool, which has an area of 1830 acres, with a population in 1841 of 223,054, in 1851 of 255,055.

The etymology of the name Liverpool is popularly derived from a bird called the liver, or lever, which is said to have frequented the marshy pool that existed on what is now the site of the lower portion of the town. In conformity with this tradition, the corporate seal bears the figure of a bird, which, as there represented, resembles the glossy ibis, a species now almost if not altogether extinct. The name has also been ascribed, with considerable probability, to the Welsh words *Llŷr pwll*, signifying 'place on the pool,' and it is certain that anciently the whole estuary of the Mersey was called *Lyrpul*, *Lyr-pool*, or *Litherpool*. It is believed that the first castle of Liverpool was built by Roger of Poitiers, and this was probably the origin of an English town and port, which have become next to London the greatest, in commercial importance, of any in the world. The castle, which had been enlarged and strengthened by king John, was destroyed in compliance with an Act passed in 1659; it occupied the site upon which now stands St. George's church. Liverpool received its first charter, in 1173, from Henry II.; a second charter was conferred by king John in 1207; and a third, constituting the town a free borough for ever, was granted by Henry III. in 1227. During the contest between Charles I. and his Parliament, Liverpool held out for 24 days against the army under Prince Rupert; but the town being then taken, many of the garrison and inhabitants were put to death; and the ravages of pestilence and famine closely followed those of the sword. In the year 1699, Liverpool was constituted a separate parish; up to that period, it had been a chapelry attached to the parish of Walton, and its population at the time was about 5000. Ten years afterwards, an act was passed for constructing the first dock ever formed in Liverpool: this old dock was filled up in 1826, and the present magnificent structure called Revenue Buildings, comprising the custom-house, stamp, dock, and post-offices, which cost 284,000*l.*, stands upon the site. For nearly half a century two wet docks and a graving dock sufficed for the trade of Liverpool; a third was formed soon after the accession of George III., for the convenience of the shipping employed in the African and West India trades. The chief exports then consisted of hardwares, cutlery, and woollen goods. These were shipped in slave ships to the coast of Africa, where they were bartered for negroes, who were conveyed to the West India plantations; the ships returning thence loaded with sugar and rum. In 1764, more than half the African slave trade was carried on by the merchants of Liverpool; but that traffic has happily been suppressed, while ample compensation has been obtained by the town in the importation of cotton, palm-oil, tobacco, and breadstuffs. Cotton forms the chief staple of the commerce of Liverpool. Of palm-oil the imports have increased since 1807, the year following the suppression of the slave trade, from less than 200 tons to about 30,000 tons a year. In 1650, there were only 15 ships, mostly sloops and schooners, belonging to the port; about a century later, the number had risen to above 400, although at the latter period there were but three inns in the town, and not a single stage coach came nearer than Warrington.

The progress of Liverpool as a commercial port may be traced from the following tables, compiled from the 'Entry Office' documents at the custom-house.

Statement, showing the amount of Customs Receipts at various periods for the last 100 years:—

Year.	Customs Receipt.	Year.	Customs Receipt.
1750	£215,961	1820	£1,488,072
1760	248,312	1830	2,862,114
1770	231,994	1835	4,272,847
1780	188,830	1840	4,607,326
1795	469,438	1845*	3,434,521
1800	1,058,578	1850	3,366,384
1810	2,675,766	1851	3,510,038

In the year 1853, the declared value of British and Irish produce and manufactures exported from Liverpool, amounted to 47,152,194*l.*; the exports from London during 1853 being under 23 millions, of Hull under 11 millions, and of Glasgow less than 5 millions.

Imports of American cotton into Liverpool:—

In the year 1785 there were imported	5 bales.
" 1786	6 "
" 1787	108 "

From this period the cotton trade increased with almost inconceivable rapidity, as will be seen from the statement of annual imports, taken at decennial periods, commencing with the present century:—

In 1801 there were imported	98,752 bales of cotton.
" 1811	174,132 "
" 1821	413,183 "
" 1831	791,582 "
" 1841	1,164,269 "

The relative importance of Liverpool with all other ports in Great Britain, as regards the cotton trade, is indicated by the fact that 1,573,005 bales of cotton were received at Liverpool in the year 1850, while only 176,200 were received at all other ports of Great Britain; in 1851 the respective quantities were 1,748,946 bales at Liverpool, and 154,609 at all other British ports.

Of tobacco the total quantity imported into Liverpool in 1851 was 10,041 hhd.; the weight of unmanufactured tobacco on which duty was paid in that year was 26,611,165 lbs.

The number of vessels registered as belonging to the port of Liverpool on December 31st, 1853, was:—Sailing-vessels, under 50 tons 232, tonnage 8019; above 50 tons 1786, tonnage 704,342; steam-vessels, under 50 tons 24, tonnage 873; above 50 tons 102, tonnage 24,325. The number of vessels which entered and cleared at the port during 1853, with the amount of their tonnage, was:—In the coasting trade, sailing-vessels inwards 7046, tonnage 522,499; outwards 7090, tonnage 467,949; steam-vessels, inwards 2728, tonnage 898,851; outwards 2841, tonnage 884,678. In the colonial and foreign trade there entered and cleared, of sailing- and steam-vessels:—Inwards 2635 British, tonnage 1,102,955, and 1822 foreign, tonnage 902,976; outwards 2965 British, tonnage 1,171,840, and 2012 foreign, tonnage 977,442.

Numerous railways and canals diverge from Liverpool to all parts of England, Scotland, and the richest parts of Wales, by which the imported produce of foreign nations as well as the vast products of the manufacturing districts, and the mineral treasures of the surrounding counties are conveyed to and from Liverpool as the grand commercial centre of the three kingdoms. The Leeds and Liverpool Canal is 128 miles long; the Mersey and Irwell navigation, notwithstanding the competition of the railways, still conveys both goods and passengers to and from Manchester; the Duke of Bridgewater's Canal connects the Mersey with Birmingham and Staffordshire; the Ellesmere Canal, through the western part of Cheshire, communicates with North Wales; and the river Weaver navigation communicates with the salt district and the heart of Cheshire. These were indeed all important auxiliaries to the progress of Liverpool before the construction of railways. Now, an uninterrupted line of railway communication is open from Liverpool to Hull, thus practically joining the Irish Sea to the German Ocean. By one or other of the lines having their termini within the town, not only the metropolis, but any place of importance in England, Scotland, or Wales, may be reached by railway direct from Liverpool; whence electric telegraph messages may be exchanged with most railway towns in Great Britain and Ireland. In 1845, the Liverpool and Manchester and the Grand Junction railway united with the London and Birmingham line, the united companies assuming the title of the London and North-Western railway company. This line has a very handsome and commodious terminus in Lime-street. The East Lancashire and the Lancashire and Yorkshire lines have a joint terminus in Tithebarn-street, which is also an elegant and substantial structure. This is likewise used as the office of the Liverpool and Southport line. The Birkenhead, Lancashire, and Cheshire junction railway, on the opposite shore of the Mersey, connects Liverpool with Holyhead and the intervening towns of Chester and Bangor; as well as with Shrewsbury and the mineral districts of South Wales: and the vast and important coal-fields of Lancashire and Cheshire are connected by a goods railway from Liverpool to Runcorn.

Liverpool has benefited more than any port in the kingdom from the application of steam-power to navigation. Two magnificent lines of transatlantic mail steam-ships called the British and North American line, belonging to Cunard and Co., and the United States line, belong-

* At this period the duties were taken off cotton-wool and many other raw materials.

ing to Collins and Co., respectively make regular weekly voyages between Liverpool and New York, and fortnightly to Halifax and Boston. The average time of each voyage across the Atlantic is 10½ days from port to port. There is also a line monthly to Philadelphia. In addition to these gigantic floating palaces, which are propelled by paddle-wheels, innumerable steam-boats both on the paddle and screw principles leave Liverpool daily for Dublin and all parts of Ireland, from Cork to Londonderry, and for all parts of the British coast, from Southampton to Inverness. Of late there has been an extensive introduction of screw-steamers into the Liverpool shipping.

A continual and rapid intercourse is kept up between Liverpool and the Cheshire shore by means of a large number of steam-boats, which ply every quarter of an hour from the various ferries of Tranmere, Woodside, Birkenhead, Seacombe, Egremont, New Brighton, and the Liverpool Landing-Stage. This landing-stage is a triumph of mechanical skill adapted to public convenience: the stage is 500 feet long and 70 feet broad. It rests on a series of galvanised iron pontoons, and is connected with St. George's Pier by a spacious platform at either end for the passage both of pedestrians and carriages. These platforms are furnished with self-acting or universal hinges, which permit the stage to rise and fall according to the state of the tide. The average number of persons daily embarking and disembarking at the landing-stage is computed at upwards of 20,000. At Woodside Ferry alone 200,000 paid the penny toll during the year 1851. A considerable amount is derived from the transit of horses, cattle, vehicles, and merchandise by ferry steam-boats between Liverpool and Birkenhead. Since the formation of a railway and docks at Birkenhead the progress of that place has been surprising, and in a few years it must prove both a commercial rival and an auxiliary to Liverpool. Upwards of twenty-four millions sterling have been expended upon the improvements of the Mersey and the formation of 24 docks, whereby a stormy estuary and an unsafe anchorage have been converted into the most perfect harbour ever constructed by the skill of man. From the Cheshire shore at Seacombe the panoramic view is unrivalled. The port of Liverpool, with its 6 miles of river-wall and docks, crowded with forests of shipping of every size and from every clime, and the town with its tower, spires, domes, and gigantic warehouses, present to the spectator at a glance more of the grandeur of commerce than any other port in the world.

There are 34 consuls of various nations resident at Liverpool. The number of emigrants who left the port in 1851 exceeded 200,000, of whom the greater portion were destined for North America; but during the month of January 1852 several emigrant ships left the port with passengers for the British possessions in Australia. During the first four months of 1853 the total number of emigrants who left the port was 39,156, of whom 35,767 were for the United States, 81 for British North America, and 3224 for the Australian colonies. The number of registered lodging-houses within the borough in 1851 was 3250, of which 215, averaging 8 rooms in each, were exclusively devoted to sailors, and 239, averaging 12 rooms each, to emigrants. There are also very extensive establishments called Emigrants' Homes.

Liverpool is divided by the Municipal Corporation Act into 16 wards; each ward elects an alderman and three councillors, who with the mayor constitute the Town Council. By a private Act of Parliament the council is empowered to nominate persons to fill corporate offices, to make laws for the regulation of the police, the docks, and the town and port generally. The mayor is ex officio a justice of the peace during his year of office and the year succeeding. A recorder, appointed by the crown, presides as judge at the general quarter-sessions for the borough; a stipendiary magistrate presides daily in the police court, and the assizes for the southern division of the county are held twice a year in St. George's Hall, which building was opened for that purpose on December 8th 1851. There is also a county court at Liverpool, the judge of which is appointed by the Chancellor of the Duchy of Lancaster; and a court of passage, or poyage, presided over by an assessor, possessing coördinate power with the superior courts, has existed for upwards of 600 years.

There are many elegant public buildings in Liverpool, the most important of which are the Custom-House (already alluded to), the Town-Hall, the Exchange Buildings, the Collegiate Institution, the Sailors' Home, and St. George's Hall. There are besides numerous fine specimens of architecture in churches, banks, and public offices, but our limits preclude the mention of even the names of many of them.

The Custom-House, or Revenue Buildings, is in the Ionic style, and much admired for its chasteness and beauty; the 'long room' in the centre of the building is 146 feet long, 70 feet wide, and 45 feet high. The dome may be seen for many miles around Liverpool. The Town-Hall is a Grecian building, and contains on the ground-floor the council-rooms, several committee-rooms, the mayor's, treasurer's, and various other offices, in which the business of the corporation is transacted. A handsome staircase, on which is a colossal statue of George Canning, by Chantrey, leads to a spacious saloon, two extensive drawing-rooms, two magnificent ball-rooms, and a large banquet-room, all communicating with each other. The staircase is lighted by lateral windows, in a dome which is 106 feet high from the floor of the building, and on the summit of which is a fine statue of Britannia. The Exchange Buildings form three sides of a square, of which the Town-

Hall on the south forms the fourth, the architecture well harmonising. The quadrangular area is 197 feet by 178 feet, and is used by the merchants of the town as an exchange; in the centre is a bronze monument, erected in honour of Nelson, and emblematical of his principal victories. On the east side is a news-room, 94 feet by 53 feet, above which are the underwriters' and cotton sales rooms. The west and north sides are chiefly occupied as offices by merchants, and by the American and the Liverpool Chambers of Commerce.

St. George's Hall is of great magnitude, and has a very commanding appearance. The order adopted is the Corinthian; the eastern façade, 420 feet long, is polystyle, with an advanced colonnade in the centre 200 feet in length: the columns are 45 feet high. The south front has a grand portico 24 feet deep; the apex of the pediment is 95 feet from the ground. The interior contains numerous apartments, some of which are of noble proportions. The great hall is 161 feet long, 75 feet wide, and 75 feet high. Two large rooms are appropriated for the holding of assizes; the hall is used for public meetings, concerts, &c., and there is a second concert-room of considerable size, besides numerous offices and private apartments. The architect was Mr. H. Lonsdale Elmes, who died before its completion.

The Collegiate Institution, fronting Shaw-street, is one of the most elegant scholastic edifices in the kingdom: it is in the Tudor style, and built from a design by the late H. Lonsdale Elmes, the architect of St. George's Hall. The principal front is 280 feet long, and comprises a centre and two slightly-projecting wings. A magnificent arch rises above the central porch, and lofty oriel windows are carried up through two stories, the main building being four stories in height, the highest lighted from the roof. There are 48 apartments, varying in length from 20 to 50 feet, and all 25 feet wide; a well-lighted sculpture gallery, 218 feet long; a laboratory; a handsome lecture-hall, 50 feet high, with two galleries, which will hold 2300 persons; and a spacious music-room opening from the lecturer's platform, with rising seats for 300 performers, and a rich and powerful organ. This institution comprises three distinct day-schools for the youth of the three great classes of society, and evening-schools for adults. The foundation-stone was laid by Lord Stanley (now Earl of Derby) in October 1840; the Bishop of Chester is the visitor, and the instruction is strictly in accordance with the doctrines of the Church of England.

The Sailors' Home is a noble gothic building adjacent to the east end of the custom-house. The foundation-stone was laid in July 1846 by Prince Albert. The building contains a spacious hall with four tiers of galleries, a reading-room, library, chapel, and numerous commodious offices. The architect was Mr. John Cunningham. The institution provides board and lodging at a moderate charge for seamen frequenting the port, promotes their moral and intellectual improvement, and protects them from imposition and extortion. At the annual meeting January 31st 1852, the registry contained the number of 16,254 seamen of established character, many of whom had certificates from their captains for seven or eight voyages. The cost of the building was about 30,000*l.*, the corporation having gratuitously presented the site.

Liverpool contains 51 churches belonging to the Establishment, of which two, St. Nicholas and St. Peter's are parish churches. St. Nicholas is the oldest place of worship in Liverpool, having existed as a chapel of ease under Walton, before the town became a separate parish: both St. Nicholas and St. Peter's stand near the river, at a short distance from the town-hall. Many of the other churches were built and endowed with the funds of the corporation, and the remainder at the expense of private individuals. There are also 11 Roman Catholic, and 8 Scotch churches; 7 chapels belonging to the Independents (for one of which, in Great George-street, the sum of 12,000*l.* was subscribed in a few days). The Baptists have 10 chapels, the Wesleyan Methodists 15, of which 2 are Welsh; and the Calvinistic Methodists 7, including 1 Welsh; in addition to which there are numerous chapels and meeting-houses belonging to the Quakers, Unitarians, Jews, and various other denominations. The schools are very numerous. They consist, besides those already mentioned, of 2 Corporation Free schools; the Blue-Coat school founded in 1709, for 250 boys and 100 girls; National and British schools; 3 schools attached to the Mechanics Institution; 2 schools attached to the Royal Institution; schools for the blind, the deaf and dumb, &c. The Royal Institution possesses a museum of natural history, and collections of paintings and sculpture, minerals, and philosophical apparatus. To the town belongs a valuable collection of zoological specimens, the gift of the late Earl of Derby. A medical, a philharmonic, and a literary and scientific institution, severally flourish in handsome buildings, that of the philharmonic having been erected at a cost of upwards of 20,000*l.*

The town contains many buildings devoted to charitable purposes; a large and well managed infirmary, and two smaller hospitals; three public dispensaries, and an ophthalmic infirmary; a lunatic asylum, a fever hospital, and other public establishments for the alleviation or cure of disease. The workhouse is a spacious and convenient building. There are two bridewells within the limits of the town, besides the borough jail, and a house of correction; the latter belongs to the county, and is situated at Kirkdale, at the northern extremity of Liverpool.

The corporation have erected baths and wash-houses in various

parts of the town, which have been well attended by the labouring classes.

The principal places of amusement are:—the theatre in Williamson-square; an amphitheatre in Great Charlotte-street; the Adelphi theatre in Christian-street; the concert-hall, Lord Nelson-street; the music-hall, Bold-street; the botanic gardens at Edge-hill, and a zoological garden in West Derby road. Near the last named is the necropolis, which, with the cemetery of St. James, form the 2 principal places of sepulture. A statue of the late Mr. Huskisson stands in St. James's cemetery, in which place the remains of the deceased statesman are deposited.

The market-places in Liverpool are upon an extensive scale: St. John's market, which stands in the centre of the town, covers an area of 1½ acres, being 550 feet long and 135 feet wide, the whole under one roof, supported by 116 pillars. Meat, poultry, fruit, and garden vegetables, are daily sold in this market, but the principal market-days are Wednesday and Saturday. The fish-market is on the opposite side of the street in which St. John's market stands. There are several smaller market-places in different parts of the town.

The town is supplied with water by companies under the management of the corporation; a long and severe struggle having been successfully made to obtain powers for bringing water from Rivington Pike, a distance of several miles.

LIVERPOOL. [NOVA SCOTIA.]

LIVNO. [BOSNIA.]

LIVONIA, one of the Baltic provinces of European Russia, is situated between 56° 34' and 59° 3' N. lat., 23° 20' and 27° 38' E. long. It is bounded N. by Esthonia, E. by Lake Peipus, and the government of Pakow, S. by Vitsepak and Courland, and W. by the Gulf of Livonia, or Bay of Riga, which contains the great island of Oesel, and some smaller ones belonging to this province. The area is 18,058 square miles; the population in 1846 was 814,100. The province derives its name from its first inhabitants, the Liven, a Finnish tribe, whose race is now extinct or confounded with the Esthonians and the Lettonians.

The surface is level or gently undulating, with here and there some hills, which rarely exceed 100 feet in height. The highest ground of the whole province is the Meesenberg, near Wenden, which rises to the height of 1200 feet. Livonia is covered with vast forests, lakes, rivers, meres, marshes, and heaths. The woods contain fir, pine, beech, and alder; they supply abundant fuel, and even manure for the land, the timber being cut down and allowed to rot on the surface. The soil on the sea-coast (which is bounded by a cliff several fathoms high) is very sandy: in the interior, sand, clay, loam, and moorland alternate; but there are many very fertile tracts. In the south, especially on the banks of the Düna, there is some very picturesque scenery. Most of the forests and marshes are in the west. The Baltic forms the great bay of Riga, between the continent and the island of Oesel.

Of the lakes, 1120 in number, the most considerable are—the great lake of Peipus, united by a narrow channel with that of Pakow on the south-east; and the lake Werzierwe, or Wirzjerw, above 100 square miles in extent, in the centre of the province, which is connected by the Great Embach with lake Peipus. The lake *Peipus*, or *Tchoudakoe*, is about 50 miles long and 30 miles broad, and 1086 square miles in extent; of which 448 square miles belong to Livonia, 495 to St. Petersburg, and 142 miles to Esthonia; it contains several small islands, of which *Porka* is the largest. Besides the waters of lake Pakow it receives several rivers—the Embach, the Kosa, the Jellcha, the Tcherma, &c. Its waters flow in a north-east direction, and are carried by the Narova to the Gulf of Finland. The lake is deep enough for small frigates. It abounds in fish; its shores are low, wooded, and marshy. The channel which connects lake Peipus with the lake *Pskow* is rather more than 3 miles wide at its narrowest part. This last-mentioned lake is about 20 miles long, 10 miles broad, and covers an area of 92 square miles, only 24 of which belong to Livonia. It receives a large supply of water from the Velkaia River at its southern extremity. The principal river is the Düna, which is the boundary between Livonia and Courland till it reaches Kirchholme, where it changes its direction, and empties itself at Dünamunde, below Riga, into the bay of Riga. It receives on the right side the Ewest and the Oger, and on the left the Treider-aa, which runs from Courland along the Bay of Riga and falls into the Düna near its mouth. Other smaller rivers are—the Boulder-aa, which rises in the circle of Wenden; the Salis, which forms the outlet of lake Burtnek; the Pernau, which empties itself at Pernau into the Bay of Riga; the Little Embach, which flows into lake Werzierwe, which it leaves as a navigable stream under the name of the Great Embach, and runs into lake Peipus. The smaller rivers and streams are nearly 300 in number. [DÜNA; AA.]

The climate is disagreeable, being cold and raw till the end of May, but very hot in the three summer months, with frequent thunderstorms. September has often some fine days, though occasionally with night frosts.

The chief occupations of the inhabitants are agriculture and the distillation of spirits. Improved methods of agriculture have been introduced, slowly and partially it is true; but in the tillage of the soil Livonia is much in advance of Courland and Esthonia. The country produces rye, barley, flax, hops, hemp, and linseed. The fruit, such as apples, plums, and cherries is very indifferent. There

are some good horses on the estates of the nobles, but those of the peasantry are small and of little value. The horned cattle also are small; sheep of the German breed are kept by the nobles; the peasants have an inferior breed, the coarse black wool of which is manufactured into cloth. Goats, swine, and domestic poultry are kept chiefly by the nobles, citizens, and clergy. There is abundance of game; of beasts of prey there are bears, wolves, lynxes, and foxes; and of fur-bearing animals beavers, otters, martins, badgers, and squirrels. On the islands and sea-coast seals are taken, and fish of various kinds are abundant. Potters' clay and limestone are obtained in some parts. There are no manufactures of importance except in Riga. Coarse woollen and linen cloths are made for domestic use. Spirit distilleries are numerous. The exports are corn, hemp, flax, wool, and linseed; the imports salt, iron, lead, coal, colonial produce, wine, manufactured goods, and articles of luxury.

On the melting of the snow in spring and after the autumnal rains, barks loaded with the produce of the interior of Livonia and the adjacent provinces descend the Düna to Riga, and thither also masts and other timber are brought in large quantities in rafts. Flax and grain are brought in winter to Riga on sledges. In Riga, which is the chief trading port for a large portion of the north-west of Russia, large fairs are held. Between 1800 and 1400 foreign vessels enter and clear out of the harbour annually in ordinary times. The exports in 1841 amounted in value to above 2,327,000*l.*; the imports in the same year were under 850,000*l.* [RIGA.]

The population consists of Lettes, Liven, or Livonians, Esthonians, Germans, Swedes (who form the nobility, clergy, and burghers), and a few Russians and Jews. The great majority of the population are Lutherans. The Russians, who number only a few thousands, are of the Greek church. There are also a few Roman Catholics and Calvinists. The peasants were formerly serfs, but vassalage was abolished in 1818, and they are now nearly in the same condition as the German peasantry. The Jews are generally innkeepers and shopkeepers; the Russians, who are the most striving section of the inhabitants, are mostly gardeners, travelling mechanics, and tradesmen. The Lettes and Esthonians, each numbering between 300,000 and 400,000, form the bulk of the peasantry. The Esthonians of Livonia resemble their countrymen noticed in a preceding article. [ESTHONIA.] The Lettes, who occupy the south-west of the province, are of great natural intelligence, but timid, attached to the soil, without energy, and entirely devoid of the spirit of trade, which is so conspicuous in the Russian. Such is the manual dexterity of the Lette that he makes everything for himself—his house, his beer, his clothes. From his beech-wood he makes his furniture, his medicine, his dye-stuffs, his charcoal, his plough, his bottles, and his birkenwasser, if he is too poor to drink beer or mead. Both women and men ride on horseback or in sledges. Their dwelling-houses, to which are attached (the whole forming a circle or a square) stables, cow-houses, bath-houses, and the rige (for thrashing and drying the grain), are superior to those of the Esthonians; they have different apartments, an oven, and chimneys. The Esthonian has one room and no chimney. There are seldom more than two of these establishments built together; so that villages are rare.

The provinces of Livonia, Esthonia, Courland, and Semgallen belonged in the earliest times to Russia, to which however they only paid tribute, and had their own government. During the distracted state of Russia they made themselves wholly independent of it, and were not reduced to subjection till the time of Peter the Great. Livonia was almost unknown to the rest of Europe till 1158, when some traders from Bremen visited it, and formed settlements in it. In 1186 Meinhard, an Augustine monk, with other Germans, settled in Livonia, and having converted the natives to Christianity, became the first bishop. Albrecht, the third bishop, built in the year 1200 the town of Riga, and fixed his see there.

Towards the end of this century Canute VI., king of Denmark, made himself master of these provinces, which Waldemar III., one of his successors, ceded for a sum of money to the Teutonic Knights. The weakness of this Order, which was unable to resist the czar Ivan II., Wasiljewitsch, who sought to recover those provinces that had been detached from the Russian empire, caused the entire dissolution of the state. Esthonia placed itself under the protection of Sweden; Livonia was united with Poland; Courland and Semgallen became a duchy under Poland, which Gotthard Kettler, the last grand-master of the Teutonic order, obtained as a fief under that crown. From that time Sweden, Russia, and Poland disputed for Livonia from 1561 to 1660, when Poland ceded the provinces to Sweden, and they were united with Esthonia. By the treaty of Nystadt, in 1721, both were annexed to the Russian empire. The island of Oesel, which bounds the Gulf of Livonia on the north, is included in the province, and forms the circle of Arensburg. [OESSEL.] The small islands of Rouno, Kin, and a few others in the gulf are also comprised in the province of Livonia.

The province of Livonia is divided into five circles named from the chief town in each. These are—RIGA; Arensburg; DORPAT; Pernau; and Wenden. *Arensburg*, or *Arensberg*, is the capital of the island of Oesel. It lies on the Pedda, a small river on the south-east side of the island, and has a harbour for small vessels; vessels of large draught anchor about 5 miles below the town. The town

contains a Russian and a Lutheran church, a town-hall, public school, an hospital, and about 1500 inhabitants. *Pernau* is a well-built fortified town and port, with 10,000 inhabitants, at the mouth of the *Pernau*, which flows from the *Wirjærw* Lake, and falls into the north-eastern part of the Gulf of Livonia. Only vessels of 6 feet draught can come up to the town; those of larger size anchor in the roads about a mile from the harbour, where they are unloaded by lighters. The exports are chiefly corn, flax, and hemp; the imports consist of wine, brandy, salt, drugs, and various kinds of manufactured goods. The total value of the exports in 1842 was 108,015*l.* 16*s.* 2*d.*, which represents the freight of 75 ships of 4451 tons burden. *Wenden*, N.E. of Riga, situated on the *Aa*, which drains the centre of the province, has a population of 2500. The fortress of *Düsamünde*, built on an island, in the estuary formed by the embouchures of the *Diina* and the *Aa*, deserves mention for its lighthouse, and as defending the entrance to the harbour of Riga.

LIVORNO (Leghorn in English, Livourne in French) is a sea-port town on the west coast of Italy, in the grand-duchy of Tuscany. It stands at the southern extremity of a low and partly marshy plain, 14 miles S. by W. from Pisa, and 45 miles W. by S. from Florence, (in 43° 33' N. lat., 10° 19' E. long.), with which cities it is connected by railway, and has about 65,000 inhabitants.

The town is regularly built, clean, and lighted with gas; the streets are wide and mostly straight, and there is a fine square in the middle of the town. The western district, called *La Nova Venezia*, is intersected with canals, by which goods are carried in boats from the shipping in the harbour and landed before the warehouses of the merchants. Many of the private houses are handsome, uniting external elegance with interior comfort. The shops are well supplied with goods, and fitted up in good taste. The religious edifices are numerous, comprising a gothic cathedral and six parish churches, besides several chapels for different sects of Protestants, a mosque, and a synagogue. There are also three hospitals, two *monti-di-pietà*, a public library, an observatory, and a citadel. The natural insalubrity of the site has been in a great measure remedied by effectual drainage; and good water is brought to the town by means of an aqueduct 12 miles long. Of all the towns in the Mediterranean perhaps Livorno most resembles an English town; the English and Lutherans have chapels and burying-grounds, the Greeks and Armenians have each a church, and the Jews (who number about 8000 of the inhabitants) a very handsome synagogue. The English burying-ground, situated on the ramparts, is adorned with numerous marble monuments—among others is one to Smollett, who died here. The town itself is little more than 2 miles in circumference; but two large suburbs, one beyond the north or Pisa gate, and the other to the south, called *Borgo Cappuccini*, have gradually increased to the size of towns, and have been lately included within the boundaries of the *Porto Franco*, wherein goods can be landed and warehoused, and exported again without paying duty. The outer mole, which is more than a mile in length, and joins the lighthouse, affords a pleasant walk. The harbour is tolerably large, but not sufficiently deep for large vessels, which lie in the roadstead, where the anchorage is safe and good. The roadstead is between the harbour and the *Meloria* sand-bank, so named from the rocky islet of *Meloria*, the *Mænaria* of Pliny, on which a tower now stands. The *Darsena*, or interior harbour or dock, is only fit for smaller vessels. Near the *Darsena* is a fine colossal statue of Ferdinand I, the benefactor of Livorno. The *lazarettos*, of which there are three, outside of the town and on the sea-shore, are remarkable for their excellent distribution and perfect security, being surrounded by wet ditches, and furnished with extensive warehouses and convenient lodgings.

Livorno is entirely a commercial place; being a free port it is better stocked with English and French manufactures than any other town on the continent. It has a casino, or assembly-house, a theatre, very good inns and coffee-houses, and numerous elementary and infant schools. Among the population are individuals of every nation in Europe, besides Turks, Moors, Armenians, and Jews from Africa and Asia. Thirty-three foreign consuls reside at Leghorn.

Livorno is first mentioned as a village, parish, and fort adjacent to *Porto Pisano*, or the harbour of Pisa, in the 11th century. It was ravaged in the wars between Genoa and Pisa, was taken possession of by the Visconti of Milan, and afterwards by the French General *Boucicault*, who sold it in 1407 to the Genoese for 26,000 golden ducats. The Florentines, who purchased it from Genoa in 1421 for 100,000 golden florins, established ship-building docks and surrounded the place with walls. As the neighbouring *Porto Pisano* became gradually filled up [ARNO] the importance of Livorno as a port increased in proportion. But the great increase of Livorno took place under the dynasty of the Medici. The grand-duke *Cosmo I.* granted to all new settlers numerous and important privileges and immunities, built a mole and lighthouse, and made the harbour the station of the galleys of the military order of *St. Stefano*, whose avocation was to cruise against the Mussulmans. His successor *Ferdinand I.* greatly extended the improvements begun by *Cosmo*; he raised regular fortifications round the town, built warehouses, a fortress, a lazaretto, and numerous other buildings, and excavated a navigable canal communicating with the *Arno*. He confirmed the privileges and immunities to new settlers granted by *Cosmo*, and published an indulto, dated the

10th of June 1593, by which merchants of all nations and of every religion were invited to come and settle at Livorno, without fear of being molested on account of their religion.

During the first years of the war of the French Revolution, the neutrality adopted by the grand-duke Ferdinand, whilst all the rest of Europe was at war, favoured greatly the commerce of Leghorn. When Bonaparte however invaded Italy in 1796, he did not respect the neutrality of Tuscany, but seized upon all English, Portuguese, Neapolitan, and Austrian property at Leghorn. In 1808 Napoleon occupied Tuscany and annexed it to the French empire. Upon this, the trade of Livorno was annihilated, but with the peace of 1814 its prosperity returned. Population and buildings have rapidly increased. The immunities of the *Porto Franco* have been extended to the suburbs, an aqueduct and railways have been constructed, and other improvements have been effected. The town was taken by the Austrians under General *Aspré*, May 13, 1849; and it was for a long time subsequently occupied by an Austrian garrison.

The imports into Livorno are either for consumption or for deposit. In the first place, Livorno supplies with foreign goods Tuscany, *Lucca*, part of the Roman States, and partly also *Modena* and *Parma*. In the last century it used to supply Lombardy also, but Trieste has supplanted Livorno in this branch of trade. The deposit trade of Livorno was also in the last century more extensive than it is now. The English, Dutch, American, and other ships from the Atlantic carried thither manufactures and colonial goods, and exchanged them for cotton, silk, and other produce of the Levant, which were brought to Livorno by Italian and Greek vessels. This relation of things is now materially altered. Commerce is become more direct: the English, American, and other vessels from the west proceed straight to the Levant and the Black Sea to exchange their cargoes. Still the transit trade of Livorno is considerable; its warehouses are always well supplied, and it is a convenient place especially for the smaller vessels from the coasts of Italy and its islands to take in their cargoes.

The total number of vessels that entered the harbour, including the ships of foreign countries and 1280 coasters in 1840, amounted to 4131 (368,320 tons), and the departures in the same year numbered 4017 (354,050 tons). The total value of the trade of Leghorn in 1840 amounted to 4,784,400*l.* (imports, 2,928,000*l.*; exports, 1,856,400*l.*). In 1839 the imports were valued at 3,039,200*l.*; the exports at 2,022,400*l.* The principal articles of import are corn, tissues of cotton hemp, and wool; sugar, raw and manufactured silks, bronze work, and jewellery; salt fish, skins, and hides; hemp, flax, and cotton; coffee and cocoa; iron and other metals; wool, dyestuffs, drugs, gums, spices, wine, brandy, rum, &c. Many of these articles also appear among the exports, which comprise also oil, salt of tartar, paper and rags, straw hats, marble and alabaster, works of art, timber, cork, coral, tallow, anchovies, potashes, wool, &c.

Sixty coral boats are sent out annually to gather coral on the coasts of Barbary and Sardinia; half the produce is exported raw, the remainder is worked up into various articles at Leghorn in 16 coral factories. There are also numerous establishments in the city for the manufacture of leather, woollen caps, ropes, soap, glass bottles, crystals, wax, tallow candles, cream of tartar, borax, and sulphur. Ship-building gives employment to many hands; both steamers and sailing-vessels are turned out of the yards of Leghorn. There is a joint stock bank which issues notes and discounts bills. In the year 1853 there belonged to the port of Leghorn and its dependencies 504 vessels of all sizes, with a tonnage of 20,761.

To the south of Leghorn are the rugged hills of *Montenero*, the slopes of which are dotted with the country houses of the Livornese merchants. Livorno gives name to a department of Tuscany, which includes the isle of *Gorgona*, and has a total area of 88 square miles; the population of the department including that of the city was 85,884 in 1842. *Gorgona* is a small rocky and wooded island, situated between Leghorn and Corsica, about 8 miles in circuit, and inhabited by a few families who are engaged in the anchovy fisheries, for which its coasts are famous. A signal tower on the highest point of the island stands in 43° 26' 50" N. lat., 9° 54' 43" E. long. *Gorgona* is the ancient *Gorgon* or *Urgo*; it is about 20 miles from the mainland.

LIXNAW. [KERRY.]

LIZARD POINT. [CORNWALL.]

LJUNGAN-ELF. [ÄNGERMANNLAND.]

LJUSNAN-ELF, or LIUSNE. [SWEDEN.]

LLANARTH. [CARDIGANSHIRE.]

LLANBADARN-VAWR. [CARDIGANSHIRE.]

LLANBERRIS. [CAERNARVONSHIRE.]

LLANDAFF, Glamorgan-shire, the seat of a bishopric, in the parish of Llandaff, is situated on the right bank of the river *Taf*, or *Taff*, in 51° 30' N. lat., 3° 12' W. long., distant about 2 miles W.N.W. from Cardiff, and 168 miles W. from London. The population of the parish of Llandaff in 1851 was 1821. The living is a vicarage attached to the cathedral church of the diocese of Llandaff.

Llandaff (*Llan Taf*, the church of the *Taf*), though of episcopal rank, is scarcely more than a village; it contains two mansions, and one or two respectable but small dwelling-houses, with a number of cottages. The cathedral stands in a hollow by the river, at a little distance from the village. The limits of the edifice were contracted

in repairs executed in 1751, by building a new western front across the nave, the western portion of which, a fine specimen of early English architecture, was abandoned to decay. The original west front has a series of delicately executed lancet windows, of various sizes, and has at its northern angle a fine tower in the perpendicular style. The entire external length of the body of the church is 300 feet, the breadth 80 feet. At the eastern end of the choir is the lady chapel, which, with part of the choir, is of decorated English architecture. The presbytery, comprising the two eastern bays of the choir, has been restored, and the process of restoration is being applied to other portions of the edifice. The lady chapel having been restored, is now used as a parish church. The chapter-house, on the south side of the church, is a square building with a central pillar, from which spring the arches that support the roof; it is in the decorated English style, with plain but elegant groining. Near the cathedral are the ruins of the episcopal palace, consisting of a large gateway and part of the external wall. There are National schools for boys and girls. Two considerable cattle fairs are held yearly at Llandaff.

The diocese of Llandaff includes Monmouthshire with that part of Glamorganshire which lies east of the river Neath, and comprises 215 benefices. It contains only the archdeaconry of Llandaff. The chapter consists of the archdeacon, dean, chancellor, seven canons, and two minor canons. The income of the bishop is 4200*l*.

LLANDILO-VAWR, Caermarthenshire, a market-town and the seat of a Poor-Law Union in the parish of Llandilo-vawr, is situated on the right bank of the river Towy, in 51° 53' N. lat., 3° 59' W. long., distant 15 miles E. by N. from Caermarthen, and 202 miles W. by N. from London. The population of the parish of Llandilo-vawr in 1851 was 4565. The living is a vicarage in the archdeaconry of Caermarthen and diocese of St. David's. Llandilo-vawr Poor-Law Union contains 12 parishes and townships, with an area of 99,437 acres, and a population in 1851 of 17,967.

The town of Llandilo-vawr, or, as it is usually called, Llandilo, is beautifully situated, the parks of Dynevor and Golden Grove, which are to the westward of the town, adding much to the interest of the scenery. Considerable improvements have been made in the town of late years. A handsome stone bridge over the river Towy, with an elliptical arch of 145 feet span and 36 feet high, was erected in 1843. The parish church, dedicated to St. Teilo, from whom the name of the town is derived (Llan-dello-fawr, the church of Teilo the Great), was rebuilt in 1850 in the early decorated style. There are chapels for Wesleyan and Calvinistic Methodists, Baptists, and Independents; parochial schools; a mechanics institute; and a savings bank. A county court is held in the town: Saturday is the market-day. Fairs are held on February 20th, Monday before Easter, May 5th and 14th, June 21st, August 23rd, September 28th, November 12th, and the Monday before Christmas.

The town is seated in a locality very interesting to the geologist. It stands on the Llandilo-flag formation, to which it imparts its name. South of the town are developed the Caradoc sandstone, the Ludlow and Wenlock rocks, and on the north the claylate and grauwacke extend to the coast. On an eminence overlooking the Towy stands the ancient castle of Dynevor, or Dinas-fawr, celebrated as the residence of the ancient princes of South Wales: the remains consist chiefly of a square and a round tower, and the walls, which inclose an irregular area. Newton House, the present mansion of Lord Dynevor, is in a distant part of the grounds.

LLANDOVERY, Caermarthenshire, a market-town, municipal borough, and the seat of a Poor-Law Union, in the parish of Llandingat, is situated on the banks of the river Braen, in 52° N. lat., 3° 47' W. long., distant 25 miles E.N.E. from Caermarthen, and 191 miles W. by N. from London. The population of the borough in 1851 was 1927. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor. The living of Llandingat is a vicarage in the archdeaconry of Caermarthen and diocese of St. David's. Llandoverly Poor-Law Union contains 11 parishes and townships, with an area of 118,055 acres, and a population in 1851 of 15,055.

Llandoverly is pleasantly situated near the junction of the Braen with the Towy. A stone bridge of one arch and a suspension-bridge cross the Towy near the town. The parish church stands in the middle of the town. There are in the town some chapels for Dissenters, and National and Infant schools. In 1847 a 'Welsh Educational Institution' was founded at Llandoverly by Thomas Phillips, Esq. The pupils receive a classical and mathematical education, but the Welsh language is an essential portion of the course of study. The income from endowment is 440*l*. a year. The number of scholars in 1851 was 80, of whom 20 were on the foundation. The market-days are Wednesday and Saturday. Seven fairs are held in the course of the year. Llandoverly is a favourite resort of anglers. Roman antiquities have been discovered at Llan Fair y Brynn, in the immediate neighbourhood of Llandoverly. The castle, which was probably built by some of the Norman barons who invaded the country soon after the Conquest, was ruined during the civil wars of the 17th century. Some vestiges of it remain on a hill by the Braen.

LLANDRINDOD. [RADNORSHIRE.]

LLANDUDNO. [CAERNARVONSHIRE.]

LLANELLY, Caermarthenshire, a market-town, municipal and

parliamentary borough, and the seat of a Poor-Law Union, in the parish of Llanelly, is situated on the small river Lliedi, near its confluence with the estuary of the river Burry, in 51° 41' N. lat., 4° 9' W. long., distant 13 miles S.S.E. from Caermarthen, and 217 miles W. by N. from London. The population of the borough of Llanelly in 1851 was 8710. The living is a vicarage in the archdeaconry of Caermarthen and diocese of St. David's. Llanelly Poor-Law Union contains 9 parishes and townships, with an area of 52,065 acres, and a population in 1851 of 23,324.

Llanelly is chiefly built on rising ground, and contains some tolerably good houses; the suburbs southward lie low, and are occasionally flooded by the river. The streets are lighted with gas. The church, dedicated to St. Elliw, has two towers, one surmounted with a spire, the other with an embattled turret. There are chapels for Independents, Baptists, and other Dissenters, National schools, and a savings bank. The market days are Thursday and Saturday; fairs are held on Holy Thursday and September 30th. Collieries, copper-works, lead- and silver-works, iron-foundries, and an extensive pottery-work employ numerous workmen. Coal is largely exported. Copper-ore is imported, and copper-cakes and sheathing exported. Commodious docks have been constructed for the convenience of shipping, by which vessels of considerable tonnage can frequent the port. The number of vessels registered as belonging to the port on December 31st 1853 were:—Under 50 tons, 40 vessels of 1098 tons; above 50 tons, 36 of 3329 tons; and 3 steam-vessels, tonnage 62. During 1853 there entered the port 1949 sailing-vessels of 97,928 tons, and 82 steam-vessels of 9783 tons; and there cleared 3107 sailing-vessels of 190,527 tons, and 77 steam-vessels of 9878 tons. The amount of customs duties received at the port in 1851 was 1174*l*. 6*s*. 6*d*. The South Wales railway has a station at Llanelly. Besides the railway there is communication by canal between Llanelly and Kidwelly. The Caermarthenshire railway runs between Llanelly and the limestone-quarries at Castell-y-Garreg, a distance of 16 miles. The Llanelly railway is a mineral line from Machynis Pool, near Llanelly, to the shore of the estuary, about 2 miles farther up. Near the town is an ancient camp supposed to be British.

LLANELLY. [BRECKNOCKSHIRE.]

LLANERCH-Y-MEDD. [ANGLESEY.]

LLANFAIR. [MONTGOMERYSHIRE.]

LLANFIHANGEL. [BRECKNOCKSHIRE.]

LLANFYLLIN, Montgomeryshire, a small market-town, parliamentary borough, and the seat of a Poor-Law Union, in the parish of Llanfyllin, is situated chiefly on the right bank of the river Cain, an affluent of the Vyrnwy, in 52° 46' N. lat., 3° 16' W. long., distant 23 miles N.N.W. from Montgomery, and 179 miles N.W. by N. from London. The population of the borough, which is contributory to the Montgomery district of boroughs, was 1116 in 1851. The borough is governed by 2 bailiffs and 12 aldermen. The living is a rectory in the archdeaconry of Montgomery and diocese of St. Asaph. Llanfyllin Poor-Law Union contains 23 parishes and townships, with an area of 117,958 acres, and a population in 1851 of 19,484. The principal street of Llanfyllin is crossed by the Abel brook, which flows into the Cain; over this brook is a neat bridge. The town-hall is a neat brick building with a covered area for a market underneath. The church is a brick building in the Venetian style, erected in 1710; it has a fine peal of six bells and chimes. The Wesleyan Methodists, Independents, Baptists, and Welsh Calvinists have places of worship, and there are a combined National and Endowed school, and a reading society with a news-room. The market day is Thursday: eight fairs are held in the course of the year.

LLANGADOCK. [CAERMARTHENSHIRE.]

LLANGAMMARCH. [BRECKNOCKSHIRE.]

LLANGATTOCK. [BRECKNOCKSHIRE.]

LLANGEFNI. [ANGLESEY.]

LLANGOLLEN. [DENBIGHSHIRE.]

LLANGORSE. [BRECKNOCKSHIRE.]

LLANGYNIWR. [BRECKNOCKSHIRE.]

LLANIDLOES, Montgomeryshire, a market-town and municipal and parliamentary borough, in the parish of Llanidloes, is situated chiefly on the right bank of the river Severn, in 52° 27' N. lat., 3° 31' W. long., distant 20 miles S.W. by W. from Montgomery, and 188 miles W.N.W. from London. The population of the borough, which is one of the Montgomery district of boroughs, in 1851 was 3045. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor. The living is a vicarage in the archdeaconry of Merioneth and diocese of Bangor.

The parish of Llanidloes is extensive, including large tracts of waste land on the slope of Plinlimmon. The hills which bound the vale of the Severn are mostly laid out in sheep-walks. The town consists chiefly of two streets crossing each other at right angles. Of late years many good modern dwellings have been substituted for the ancient timber-framed houses. Two bridges cross the Severn here, one of them a handsome stone structure of three arches. The town is well lighted. The market or town-house is a massive old timber-framed building, the property of Lord Mostyn. There are large and commodious public rooms. The church, a fine old edifice, dedicated to St. Idloes, consists of a nave and aisle separated from each other by curious clustered pillars, the capitals of which are decorated with

palm-leaves. There are chapels for Independents, Old Welsh Baptists, and other Dissenters; National schools, and three other public schools. The staple manufacture of the town is flannel. Several factories for carding and spinning wool, fulling-mills, tan-yards, copper and lead-mines, and a large brass and iron foundry, give some employment to the inhabitants. Coarse slate and building stone are quarried in the surrounding hills. The market on Saturday is for wool, corn, and provisions; and nine fairs are held in the year, some of which are great sheep-fairs.

LLANRWST, Denbighshire, a market-town and the seat of a Poor-Law Union, in the parish of Llanrwst, is pleasantly situated on the right bank of the river Conway, which here separates Denbighshire from Caernarvonshire, in 53° 8' N. lat., 3° 47' W. long., distant 17 miles W. by S. from Denbigh, and 217 miles N.W. by W. from London. The population of the parish of Llanrwst in 1851 was 3984. The living is a rectory in the archdeaconry and diocese of St. Asaph. Llanrwst Poor-Law Union contains 17 parishes and townships, with a population in 1851 of 12,478.

The town of Llanrwst is encompassed with well-wooded hills. The houses are irregularly built; the streets, with the exception of that in which the town-hall stands, are narrow. The bridge over the Conway, erected about 200 years ago, from designs by Inigo Jones, consists of three arches; the span of the middle arch is 59 feet. The parish church is an elegant structure of recent erection; the Gwydir chapel, constructed in 1633, from a design by Inigo Jones, was for a considerable time the burial-place of the Gwydir family, and contains numerous interesting monuments and incised brasses. There are chapels for Baptists, Independents, and Methodists; National schools, and some almshouses. Tuesday is the market-day; nine fairs are held in the course of the year. Coracles are used for fishing in the Conway: the tide flows to within a mile and a half from the bridge, and in spring-tides boats of 12 tons can ascend the river. A county court is held in the town. Llanrwst is a favourite station for anglers.

LLYWELL. [BRECKNOCKSHIRE.]

LÓ, ST. [MANCHE.]

LOANDA. [ANGOLA.]

LOANGO, on the West Coast of Africa, is the most northern of the four countries or districts which are said to have anciently constituted the kingdom of Congo, as explained in the articles ANGOLA and CONGO. It extends along the coast from Cape Lopez Gonsalvo in 0° 44' S. lat. to the river Congo or Zaire, which separates it from Congo in about 6° S. lat. To the north it is said to be bounded by Gabon, or Pongo, and to the east by the country called Mokoko, or Anziko. It is said to extend about 200 miles from the coast towards the interior of Africa. The country is described by Dapper and other early writers to be divided into several districts, among which the following names occur:—Mayomba, or Majumba, Kilongo, Piri, Wansi, Loangiri, Loangomongo, Sette, and Gobbi.

Loango, the capital town, called by the natives Banza Loangiri, is in the province of Loangiri, which occupies the south-western angle of the country. It stands in a large plain, at the distance of three miles from the sea, in about 4° 39' S. lat., 12° 17' E. long. The houses are shaded by palm-trees. The town is said to be 10 miles round.

The government, like that generally prevalent among the barbarous tribes of this part of Africa, is the most absolute species of despotism. The kings of Loango are believed by their subjects to be divinities. In particular, they are held to have the power of bringing down rain from the sky; and this useful prerogative they exercise every year, on the petition of their subjects, with great ceremony. The king has an unlimited number of wives, and his children are counted by hundreds; his principal revenue is or was derived from the sale of slaves. The successor to the throne is the king's next eldest brother, or, if he have no brother, the eldest son of his eldest sister. Although the king however is independent of the nobles, the latter in their own sphere appear to exercise unlimited tyranny over the common people. The religion of the inhabitants, who resemble the negroes of Congo, is an idolatry of the most superstitious character.

A great part of the country is covered with thick woods, and it is mountainous only in the interior towards the south. In the north it possesses some lakes of considerable extent, from which, and from the mountains, many rivers descend to the sea. Among these however there are none of magnitude, with the exception of the Banna, at the mouth of which stands the town of *Mayomba*, about 6 miles S. from Cape Negro, or nearly in 3° 30' S. lat. A good deal of copper, ivory, and gum is got in the district of *Mayomba*.

Fish forms a great part of the sustenance of the people; the produce of the soil, which is said to yield three harvests in the year with very little cultivation, consists of various kinds of grain, such as are raised in the adjacent regions. Among the trees are some dye-woods. The only minerals found in the country seem to be iron and copper. The principal animals are elephants and apes.

LOANO, or LOVANO. [ALENGA.]

LOBOSITZ. [EGER.]

LOCANA. [IVREA.]

LOCARNO. [TICINO.]

LOCHES. [INDRE-ET-LOIRE.]

LOCHMABEN, Dumfriesshire, Scotland, an ancient royal burgh, a parliamentary burgh, and market-town, is situated about 9 miles N.E. from Dumfries, and 65 miles S.W. from Edinburgh. It is governed by a provost, three bailies, a dean of guild, and nine councillors; and unites with Annan, Dumfries, Kirkcudbright, and Sanquhar in the return of one member to the Imperial Parliament. The population in 1851 was 1092. The town consists principally of one main street, with the church, a neat and substantial building, at one end, the cross and town-house at the other, and several small cross streets. The town-hall, under which is the jail and lock-up house, was built in 1745. There are a Free church, a chapel for United Presbyterians, a subscription library, an Endowed and a Parish school. During the winter there is a weekly market for pork, in which much business is done. The castle, now in ruins, was formerly a place of great strength; the works covered nearly 16 acres.

LOCHWINNOCH. [RENFREWSHIRE.]

LOCKERBIE. [DUMFRIESHIRE.]

LOCRI was employed to designate the country of three distinct Grecian tribes, the Locri Epicnemidii, the Locri Opuntii and the Locri Ozola.

The Locri Epicnemidii and Locri Opuntii, who appear to have been more ancient than the Locri Ozolæ, since the latter are not mentioned by Homer, inhabited the eastern coast of Phocia, and were separated from the latter country by a mountain range which stretches from Mount Ceta to the borders of Boeotia. The northern part of this range, which is much higher than the southern, was called Cnemis, whence the Epicnemidii Locri derived their name. The Opuntii Locri derived their name from Opus, their chief town, on the borders of Boeotia. They pretended to be the most ancient Hellenic people in Greece.

Coin of Locri.

British Museum. Actual size. Silver.

The Locri Ozolæ were bounded on the west by Ætolia, on the north by Doris, on the east by Phocia, and on the south by the Corinthian Gulf. According to Strabo (ix. p. 427) they were a colony from the eastern Locri. The origin of their name is uncertain. The western Locrians are said by Thucydides (i. 5) to have been a wild and barbarous people even in the time of the Peloponnesian war. Their principal towns were Amphissa and Naupaetus. *Amphissa*, the capital of the Locri Ozolæ (now *Salona*), an inland town at the head of the Crissæan Gulf, was destroyed by Philip of Macedonia, who acted under the orders of the Amphictyons, B.C. 338, for cultivating the sacred plain of Crissa. It was afterwards rebuilt, and in the war with the Romans, B.C. 190, it is mentioned by Livy (xxxvii. 5) as a place of considerable importance. *Amphissa* was 60 stadia, or about 7 miles, from Delphi. The walls of the ancient acropolis still remain. *Salona* is now the capital of Phocia, and has a population of about 4000. *Naupaetus* (Nepakto, or Lepanto), on the sea-coast on the borders of Ætolia, was for a long time in the possession of the Athenians, who established there, in B.C. 455, at the close of the third Messenian war, those Messenians who quitted Ithome. On the termination of the Peloponnesian war it fell into the power of Sparta, and in later times was subject to the Ætolians. *Nepakto* is reckoned a town of the modern Greek province of Ætolia. It has about 2000 inhabitants.

The Locri Epizephyrii, who inhabited the south-eastern extremity of Italy, were a colony, according to Ephorus, of the Locri Opuntii, but according to Strabo of the Locri Ozolæ. The town built by this colony was called *Locri Epizephyrii*; according to some accounts it was founded B.C. 710, and according to others B.C. 683. It is supposed to have stood on or near the site of the present town of Gerace [CALABRIA, vol. ii. 236.] The Locri Epizephyrii are said to have been the first Greek people who had a written code of laws (Strabo, vi. 397), which was drawn up by Zaleucus about B.C. 664.

(Pausanias; Strabo; Müller; Dorians; Leake, *Northern Greece*.)

LODDON, a hundred in the county of Norfolk, which with the adjoining hundred of Clavering gives name to a Poor-Law Union. Loddon and Clavering hundreds are bounded S. by the river Waveney, which here separates Norfolk and Suffolk, and which also bounds Clavering hundred on the E.; on the W. the boundary is formed by the hundreds of Depwade and Humbleyard; and on the N. by the hundreds of Henstead Blowfield and Walsham. The hundreds of Loddon and Clavering comprise 40 parishes, with an area of 59,401 acres, and a population in 1851 of 15,029. Loddon and Clavering

Poor-Law Union contains 42 parishes, with an area of 56,393 acres, and a population in 1851 of 14,891. The village of Loddon is situated on the Chet, a small stream which flows into the Yare. It so closely adjoins the village of Chedgrave that the two form one street. The population of Loddon parish in 1851 was 1211. The parish church is a fine stone building, with an elegant tower; it was built by Sir Henry Hobart in 1478. The Wesleyan and Primitive Methodists have places of worship. The market-day is Thursday, and four fairs are held in the course of the year.

LODÈVE. [HÉRAULT.]

LODI-E-CREMA, a province of Austrian Italy, is bounded N. by the provinces of Milan and Bergamo; W. by that of Pavia; S. by the Po, which divides it from the duchies of Parma and Piacenza; and E. by Cremona and Brescia. The province is part of the great plain of the Po, and is watered by the Adda, Serio, Lambro, and other affluents of that river. Until the end of the last century this province was divided into two small ones, which were separated by the Adda, namely, Crema to the east of that river, which belonged to the republic of Venice; and Lodi, or Il Lodigiano, west of the Adda, which was part of the duchy of Milan.

The greatest length of the province is 30 miles from east to west, and about 27 miles from north to south. The area is 459 square miles. The population was 218,844 in 1850. The surface is a plain with slight undulations. The soil is partly sown with corn, flax, and pulse, and partly planted with the vine and mulberry trees; but the best part consists of artificial meadows rendered productive by irrigation. On these are fed a great number of cows, from the milk of which the rich cheese is made known in Lombardy by the name of Lodigiano, but called in the rest of Europe by the name of Parmesan. Great attention is paid to the rearing of silk-worms, and a good deal of coarse raw silk is brought to market. A considerable number of horses and pigs are bred. In every commune there is an elementary school.

Lodi, the capital of the province, is a well-built, walled, episcopal town, on the right bank of the Adda, with about 18,000 inhabitants (including the suburbs), who manufacture pottery, delft, and silks. It has a royal lyceum and a gymnasium, a theological seminary, an orphan asylum, two hospitals, a savings bank, a public library of 15,000 volumes, and a monte-di-pietà. The most interesting structures in Lodi are—the cathedral, a fine building in the pure Lombardian style; the great square, surrounded by arcades; the church of L'Incoronata, built by Bramante; and the stone bridge over the Adda, famous for the defeat of the Austrians by Bonaparte, May 10, 1796. The cathedral contains some antiquities brought from Lodi-Vecchio, including a very ancient bas-relief of the Last Supper. The Incorporata is decorated with the surpassingly beautiful paintings of Calisto da Lodi, a pupil of Titian. Lodi was founded in 1158 by the remainder of the inhabitants of an older city now called Lodi-Vecchio, a small place of 3000 inhabitants, 6 miles from Lodi. Lodi-Vecchio is said to have been founded by Cneius Pompeius Strabo, and to have been called Laus Pompeia. It was entirely destroyed by the Milanese, A.D. 1111.

Crema, an episcopal town on the right bank of the Serio, is a well-built place, with a gymnasium and 9000 inhabitants, who manufacture linen, lace, hats, silk, and linen-thread. Codogno, S.E. of Lodi, on the road from Milan to Cremona, is a flourishing town with 8000 inhabitants, a theatre, and a considerable trade in cheese, silk, &c. San-Colombano, at the foot of a hill near the right bank of the Lambro, has a population of 5000.

LOFODEN ISLANDS. [TRONDHEJEM.]

LOGANSFORT. [INDIANA.]

LOGRONO. [CASTILLA-LA-VIEJA.]

LOHEIA. [ARABIA.]

LOIR, RIVER. [LOIR-ET-CHER.]

LOIR-ET-CHER, a department in France, bounded N. by Eure-et-Loir, E. by Loiret and Cher, S. by Indre, and W. by Indre-et-Loire and Sarthe. It lies between 47° 13' and 48° 6' N. lat., 0° 38' and 2° 14' E. long. Its greatest length from north-west to south-east is 80 miles; its average breadth is about 38 miles. The area of the department is 2202.2 square miles. The population amounted to 249,462 in 1841, and to 261,892 in 1851. This last gives 118.92 to the square mile, being 55.66 below the average per square mile for the whole of France. The department is formed out of the south-west part of the former province of Orléanais, and is named from two of its rivers, the Loir and the Cher, tributaries of the Loire.

The surface presents a number of elevated and extensive plains, unbroken by any considerable hills, and sloping with very gentle inclination towards the south-west. The department is divided into two pretty equal parts by the Loire, which for about 80 miles of its course runs between two chains of low hills, that have their slopes covered with vineyards and orchards. The district north of the Loire is traversed by the Loir, which rising in the south-west of Eure-et-Loir flows south-east as far as Bonneval, and thence nearly south past Châteaudun to Vendôme, in this department. From Vendôme it runs nearly west, crossing the south of the department of Sarthe, and reaching the boundary below La-Flèche it enters the department of Maine-et-Loire, taking a south-western direction to its junction with the Sarthe on the left bank, nearly opposite to the point where that river is joined by the Mayenne, about 5 miles N. from Angers. The principal feeders of the Loir are the Ozane, the Yère, and the Braye

on the right bank, and the Conie on the left. The whole length of the river is about 160 miles, 65 miles of which are navigable. The navigation commences at Coëmont, near Château-du-Loir, in the department of Sarthe; but it is available for floatage from the mouth of the Braye on the western border of Loir-et-Cher. The Loir has abundance of water in all seasons, and it is seldom frozen. The principal articles conveyed along the stream are—timber, fuel-wood, hay and straw, charcoal, paving-tiles, lime, cut-stone, &c.

The district south of the Loire is drained by the CHER, its feeder the Sauldre, and by the Beuvron and Cosson, which throw their waters into the Loire, near the village of Candé, below Blois. The Cosson flows through the park that surrounds the fine old royal château of Chambord, which after being the residence of several kings of France, of Stanislas, king of Poland, of Marshal de Saxe, and of Charles IV., king of Spain, was given by Napoleon I. to Marshal Berthier. The Princesses of Wagram sold it in 1820, when it was purchased by subscriptions raised for the purpose, and presented to the Duke of Bordeaux, who takes from it the title of Count of Chambord. There are numerous ponds along the left bank of the Loire; and the south-east of the department, formed out of that part of the old district of Sologne which was included in the Blaisois, a dependency of Orléanais, and is now included in the arrondissement of Romorantin, presents a vast marshy plain, which contains many hundreds of ponds.

Roadway accommodation is afforded by 6 imperial, 16 departmental, and 11 parish roads. The department is crossed by the railroad from Paris to Nantes and Bordeaux, which runs through Blois; and by the Orléans-Bourges line, which has 32 miles of its length in the south-east of this department.

The soil in the north-east of the department, which includes a portion of the Beauce district, consists of a dark rich loam; in the south-east the arable lands are composed of strong clay and sand; along the Cher the soil is calcareous. In the Sologne district the arable soil consists of a light fine sand mixed with pebbly gravel and a small portion of vegetable earth, and yields only poor light crops. The north-west of the department, forming part of the arrondissement of Vendôme, has an arid hungry soil, very generally covered with heath, gorse, and broom. The supracretaceous strata which occupy the chalk-basin of Paris extend into the department from the north-east, and occupy the banks of the Loire as far as the junction of the Beuvron. In all other parts the department is occupied by the chalk itself. Agriculture is in rather a forward state; bread-stuffs are raised in quantity more than sufficient for the home consumption. Of wine the annual produce is about 13,200,000 gallons, a large portion of which is distilled into brandy. The department yields, besides excellent fruits and vegetables, beet-root, hemp, &c. The Sologne sheep are extolled for the fineness of their wool; but the horses of that district, though hardy, are small and ill-formed. Black cattle are of inferior breed. The arrondissement of Vendôme is famous for its breed of draught horses. The rivers and ponds abound in fish; the Sologne marshes supply a considerable quantity of good leeches. Poultry and game are plentiful. The department contains a good deal of natural and artificial grass-land, and in the arrondissement of Romorantin there are large pine-woods. The climate is in general mild and healthy, except in the marshy district of Sologne.

Iron-mines are worked; alabaster and building-stone are quarried; marl and potters' clay are found. Great quantities of gun-flints were formerly procured from the layers of flint in the chalk deposits of this department.

The manufactures consist of coarse woollens, blankets, swanskins, cotton cloth, hosiery, leather gloves, beet-root sugar, woollen yarn, leather, glass, and earthenware. About 160 fairs are held annually. The department contains 465 wind- and water-mills, 61 iron-foundries and smelting-furnaces, and 194 factories.

The area of the department is 1,569,408 acres, of which 913,500 acres are arable land; 77,500 acres are grass and meadow land; 65,710 acres are under vineyards; 201,813 acres are covered with woods and forests; 200,153 acres consist of heaths and barren moors; 84,161 acres of ponds, rivers, canals, &c.; and 19,030 acres are under orchards, nurseries, gardens, and plantations of different kinds.

The department is divided into three arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Blois . . .	10	138	181,817
2. Romorantin . . .	6	48	50,523
3. Vendôme . . .	8	110	79,553
Total . . .	24	296	261,892

1. Of the first arrondissement, and of the whole department, the capital is BLOIS. Of the following places the population given is that of the canton:—*Mer*, N.E. of Blois, on the right bank of the Loire, has 3686 inhabitants, who manufacture leather, and trade in wine, brandy, and vinegar. Close to *Mer* is *Menars*, where there is a very fine château, in which some years ago the Prince de Chimay, its owner, established a college. *Montrichard*, formerly an important fortress, defended by a strong castle, now in ruins, is situated on a hill on the

right bank of the Cher, 18 miles S. from Blois, and has 2526 inhabitants. The ancient walls of the town, which are pierced by four gates and flanked with towers, are still in a good state of preservation. The castle of Montrichard was founded A.D. 1010 by Foulques Nerra, count of Anjou, on his return from the Holy Land. The ground on which the castle was built belonged to Gelduin, lord of Saumur and Pont-le-Voy, who appealed to Eudes II., count of Blois, for redress. The latter assembling his forces at Pont-le-Voy attacked the Angevine troops, which marched out of Montrichard to meet him (July 16, 1016); the result of the engagement was the defeat and capture of Foulques Nerra. But Herbert, count of Maine, who had prudently effected a retreat from the previous battle, watching his opportunity, defeated Eudes a few days after, and delivered the Count of Anjou and all the other prisoners. The castle came into the hands of the lords of Amboise, the heirs of Gelduin. The kings of England, as counts of Touraine, strengthened the castle and maintained a garrison in it. In 1188 Philippe Auguste took it by assault, but by the treaty of Colombiers (July 5, 1190) it was restored to the king of England, and Richard Cœur-de-Lion then rebuilt the castle and surrounded the town with walls, which still remain. Near *St.-Aignan*, a small town close to the southern boundary, on the left bank of the Cher, are the great gun-flint quarries from which the French armies were supplied.

2. In the second arrondissement the chief town, *Romorantin*, stands at the junction of the Morantin with the Sauldre, 24 miles S.E. from Blois, and has tribunals of first instance and of commerce, a college, and 7962 inhabitants in the commune. The town, formerly ill built, has been considerably improved of late years, the streets having been widened and laid out more regularly, houses erected in a modern style, and the roadways well paved. It has important manufactures of cloth and woollen stuffs, several spinning-factories, tan-yards, and parchment-milla. At the siege of this town by the Black Prince, in 1366, Froissart says that artillery was used. The prince, compelled by King John to raise the siege, retreated towards Poitiers, where, overtaken by the French army, he gained his celebrated victory. *Selles-sur-Cher*, situated in a fertile country, 10 miles S.W. from Romorantin, on the Cher, which is here spanned by a fine bridge, has 4252 inhabitants, who manufacture cloth, and trade in corn, wine, &c. At one end of the town stands a fine château, erected by Philippe de Bethune.

3. In the third arrondissement the chief town, *Vendôme*, prettily situated on the slope of a vine-clad hill, above the Loir, which here divides into two branches, stands 19 miles N.W. from Blois, and has a tribunal of first instance, a college, and 8100 inhabitants, who manufacture woollen stuffs, gloves, cotton-yarn, calico, leather, and paper. The town is well built. On the height above it are the ruins of the old castle of the dukes of Vendôme, from which there is a fine view of the scenery of the Loir. Among the more remarkable structures are the church of La-Sainte-Trinité; the Benedictine monastery, now used as a barrack; the desecrated church of St.-Martin, now converted into a corn-market; the college buildings; and the theatre. Vendôme from a very early period gave name to a county, which in 1514 was raised to a duchy. In the wars of the League the town was taken by each of the opposing parties. Henri IV. took it by assault and dismantled the castle, which has since fallen to ruins. The Parliament of Paris met in the castle of Vendôme in 1227, during the minority of St.-Louis; and again in 1458, to try the Duke of Alençon for treason. Charles VII. and Francis I. resided in it occasionally. *Mondoubleau*, a small place of 1671 inhabitants, is prettily situated on a hill above the Graians, a small feeder of the Braye, 15 miles N.W. from Vendôme. A fine old castle, with walls, towers, and ditches, still nearly entire, stands above the town, and formed one of the chain of fortresses that defended the frontier of the old province of Maine. *Montoir*, a pretty town on the right bank of the Loir, and at the foot of a hill crowned by the château of St.-Otrille, has 3306 inhabitants, who manufacture linen, woollen hosiery, and leather. The church of St.-Gilles, the interior of which is richly ornamented with frescoes, and the handsome square in the centre of the town, are the most remarkable objects. *Savigny*, near the left bank of the Braye, in the north-west of the department, has a population of 3065.

The department forms the see of the bishop of Blois, is included in the jurisdiction of the High Court of Orléans, and belongs to the 18th Military Division, of which Tours is head-quarters. Loir-et-Cher is one of the departments comprised within the limits of the University Academy of Paris. It returns two members to the Legislative Body of the French empire.

LOIRE, LA (the *Liger* or *Ligeris* of the Romans, a river in France, the basin of which is bounded E. by the Cévennes and the Côte-d'Or, which divide it from the basin of the Rhône; N. by the Morvan Hills, the plateau of Orléans, the heights of Beauce, and their continuation westward round the source of the Mayenne, whence a ridge of hills runs in a south-south-west direction to the neighbourhood of Châteaubriant forming the watershed between the Loire and the Vilaine; and S. and S.W. by the Margeride Mountains, and the volcanic group of Auvergne, with its ramifications westward to the Atlantic, including the Limousin Mountains and the plateau of Gâtine. The limits thus described include a fourth part of France. The greatest length of the basin from north-west to south-east is 370 miles; its greatest breadth, 224 miles. Its area is estimated at above 50,700 square miles.

The Loire rises in Mont Gerbier-des-Joncs, one of the Cévennes in the neighbourhood of Mount Mezen, in the department of Ardèche. The general direction of its course is at first north, then north-west to Orléans, where it turns westward, and continues in this direction to its entrance into the Atlantic, 36 miles below Nantes. The number of streams received by the Loire is very great; its navigable feeders from the right bank are the Arroux, the Maine (formed by the junction of the Mayenne and the Sarthe); from the left—the Allier, the Loiret, the Cher, the Indre, the Vienne, the Thouét, the Sèvre-Nantaise, and the Achenau, all of which, with their feeders, give a total amount of internal navigation of about 1300 miles. In the upper part of its course, above the junction of the Allier, the valley of the Loire is narrow. At its source the Loire is about 4000 feet above the sea-level; below Nevers, at its junction with the Allier, 550 feet; at Orléans, 294 feet; a little below Tours, 160 feet; at the junction of the Mayenne, 115 feet; and at Nantes, 83 feet above the sea-level.

The whole course of the Loire is 546 miles, of which 505 miles are navigable; but of these 44 miles, from La-Noirie to Roanne, are navigable down the stream only. The navigation is interrupted by frost, deficiency of water, or by floods, during three or four months in the year. River steamers ply between Nantes and Moulins on the Allier. For two-thirds of the distance above Roanne the Loire is available for floating timber.

This river, with its larger affluents, constitutes the great outlet for the produce of central and western France. The banks are celebrated for their beauty, particularly in the neighbourhood of Tours. From the melting of the snows in the Cévennes, in which it has its source, the Loire is subject to great inundations, to prevent which it has been embanked in the level tracts below Orléans. [INDRE-ET-LOIRE.] The sand and soil which its waters bring down from islands or shifting banks in its course, which materially impede the navigation, especially above Orléans: to avoid this inconvenience a canal has been formed along the left bank of the river, from the Canal-du-Centre, at the junction of the Arroux, to the Canal de Briare, at Briare near Gien. The tide flows about 40 miles up the river to a short distance above Nantes. [LOIRE-INFÉRIEURE; NANTES.] The Loire is connected with the Saône by the Canal-du-Centre; with the Seine by the canals de Briare, d'Orléans, and du-Loing; and with Brest Harbour by the canal from Nantes to Brest.

At its mouth the Loire is about 7 miles wide, between Paimboeuf and St.-Nazaire, where formerly large vessels of all nations were seen afloat, prevented from going up to Nantes by the shallowness of the stream; only vessels of about 300 tons could get up to Nantes, larger vessels unloaded by means of lighters; but since the introduction of steam-tugs all vessels, except those of the largest size, are hauled up to Nantes with the flow tide. The entrance of the river is dangerous in consequence of the shoals and banks that traverse it, and of its want of shelter. In hard weather vessels make for Quiberon. The mouth of the river is indicated by two lighthouses—d'Aiguillon and du Commerce—which stand on the north shore about a mile apart. The d'Aiguillon light, 101 feet high, stands in 47° 15' N. lat., 2° 15' W. long. The du Commerce tower is 128 feet high, has a remittant light at three-minute intervals, and stands in 47° 16' N. lat., 2° 14' W. long. The distance between the two lights is 2132 yards. The general fall of the river is 2-132 feet in every 2132 yards of its course; its course therefore is rapid. In ordinary floods its waters rise 13 to 15 feet; in extraordinary floods 20 to 23 feet above low-water mark. The general width between the summits of the embankments is 639 yards, and the breadth of the stream in the embanked portion is ordinarily 419 yards.

LOIRE, a department in France, named from the river Loire, is bounded N. by the department of Saône-et-Loire, E. by those of Rhône and Isère, S. by those of Ardèche and Haute-Loire, and W. by those of Puy-de-Dôme and Allier. It extends from 45° 13' to 46° 17' N. lat., 3° 41' to 4° 45' E. long. Its greatest length is 77 miles; its average width is about 29 miles; the area is 1841-8 square miles. The population in 1841 amounted to 484,085; in 1851 to 472,588. This last number gives 256-5 to the square mile, being 82-01 above the average per square mile for the whole of France.

The department, which comprises the old province of Forez and portions of Lyonnais and Beaujolais, was included in the department of Rhône till 1793. It belongs almost entirely to the basin of the Loire, which is separated from that of the Rhône by the Cévennes Mountains on the east, and from that of the Allier by a secondary chain of the Cévennes Mountains on the west. The highest point of the eastern mountains is Mont Pilat, which rises 1509 feet above its base and 3985 feet above the sea. The highest summit of the western chain, which is connected also with the mountains of Auvergne, is Pierre-sur-Haute, 3884 feet above the level of the sea. The interior of the department may be described as two large inclined plains descending from these two mountain ranges, and intersecting in the water-line of the Loire; but as the mountains, in their course northward, trend off respectively in directions nearly north-north-east and north-north-west, the northern portion of the department has more the appearance of a single wide plain, which includes part of the former provinces of Beaujolais and Bourbonnais, and is called the plain of Roanne. The rest of the department is called the plain of Forez; and between it and the plain of Roanne the division is marked by a

chain of hills running east and west, and uniting the two mountain ranges before named, except at the point where it is broken through by the Loire. A small portion of the south-east of the department extends eastward of the Cévennes into the basin of the Rhône, which river runs along the boundary for about 6 miles. In the western part of the plain, at the foot of the mountains, several isolated volcanic swells, consisting of black basalt, lie in a general direction of north and south, and have in some instances their summits crowned with the ruins of ancient castles or monasteries. There are several of these basaltic excrescences on the slope of the mountains also.

The principal rivers are the LOIRE and the RHÔNE, by means of which the various industrial products of the department are conveyed to the Atlantic, or to the Mediterranean. The Loire runs through the centre of the department in a direction of north by west, and is navigable, in its whole length, in this department; but owing to the rapidity of the current it is only the down navigation that is available as far as Roanne, where the general navigation of the river commences. Its principal feeders in this department are the Ondène, the Furens, the Coise, the Lignon, and the Sornin. The *Gier*, the only feeder which the Rhône receives from this department, rises in Mont Pilat, in descending which it forms several cascades, passes St.-Chamond and Rive-de-Gier and enters the Rhône at Givors. The lateral canal of the Loire from Roanne to Digoin runs through the north of the department; another, the Givors Canal, which is fed by the Gier, runs from Rive-de-Gier to the Rhône. The department contains many ponds and tarns, about 450 of which are in the plain of Forez. A railroad runs along the right bank of the Loire, from Roanne to St.-Étienne, with a branch westward to Montbrison. From St.-Étienne the line is carried through the Cévennes, and continues up the right bank of the Rhône to Lyon; its length in this department is 79 miles. The department is also traversed by 6 state, 11 departmental, and 21 parish roads.

The heights of Forez and La-Madeleine, separating the valley of the Loire from that of the Allier, are chiefly composed of granitic rocks or of the older limestones and sandstones, disturbed in places by those curious protuberances of compact basalt thrown up by ancient volcanic agency already alluded to. Part of the high ground between the Loire and Rhône is occupied by the coal-measures; and the valley of the Loire is occupied by strata belonging to the supracretaceous group.

The mountains of the department abound with excellent pasture and medicinal plants; their lower slopes are cultivated or covered with vineyards and chestnut woods. In the upland districts of the department great numbers of cattle are reared and much cheese is made. In the plains the common breadstuffs—wheat, rye, barley, oats, &c.—are grown, but in quantity insufficient for the consumption; hemp, excellent fruits, oleaginous seeds, and dyestuffs are also raised. About 6,000,000 gallons of good ordinary red and white wines are produced annually. Horses and black cattle are small; the sheep are noted for their sweet flesh; poultry and game are abundant. In the valley of the Rhône, mulberry-trees are extensively grown for the production of silk. There are also extensive forests of pine, fir, beech, and oak; on Mont Pilat, near St.-Étienne, an immense number of deals are cut, saw-mills being established on every available stream of water. But much of the finest pine-timber is made into charcoal, in consequence of the great difficulty of transport from the mountain-heights on which it grows; the finest trees vary from 98 to 115 feet in height. Great quantities of chestnuts are grown; these enter largely into the food of the people; the finest are sent to Paris, where they are sold (like those of Ardèche) under the name of Marrons de Lyon.

The department contains one of the richest coal-fields in France, which, besides supplying the numerous factories and furnaces of St.-Étienne, and other places in the department, also furnishes large quantities for exportation to Lyon and the towns on the Rhône. The quantity of coal annually furnished by the mines of Loire amounts to one-third of all the coal raised in France. Lead- and iron-mines are also worked; building stone, granite, potters' clay, &c., are found; mineral springs are numerous.

The manufactures of the department are of great variety and importance, and give rise to a very extensive commerce. The chief products are fire-arms, ironmongery, and machinery of all kinds, silks, ribands, crape, velvet, plush, laces, linen, cotton, glass, bricks, steel, iron, scythes, hardware, canvas, mill-castings, files and tools of all descriptions, cotton and linen yarn, lace, cutlery, earthenware, tiles, lime, &c., &c. Great numbers of coal-barges and canal-boats are built at Roanne and St.-Rambert. The great centre of manufacturing industry is St.-Étienne. The number of wind- and water-mills amounts to 936; of iron- and steel-works to 94; of factories of different kinds to 714. About 300 fairs are held yearly for the sale of cattle and agricultural produce.

The department contains 1,173,780 acres, of which area 613,100 acres are arable land; 211,609 acres natural pasture land; 34,342 acres are laid out in vineyards; 156,824 acres are covered with woods; 31,821 acres with rivers, ponds, canals, &c.; 92,329 acres consist of barren heath and moorland; and 85,322 acres are occupied with roads, streets, buildings, &c.

The department is divided into three arrondissements, which, with their sub-divisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Montbrison . . .	9	138	132,116
2. Roanne . . .	10	108	135,324
3. St.-Étienne . . .	8	73	205,148
Total . . .	27	319	472,588

1. Of the first arrondissement, and of the whole department, the capital is *Montbrison*, which stands on the *Vizézy*, a small feeder of the Loire, in 45° 36' N. lat., 4° 8' 45" E. long., at a distance of 45 miles W. from Lyon (60 miles by railway), and has 6435 inhabitants in the commune. It is built round a basaltic hill (from the summit of which there is a fine view over the plain of Forez), and at the extremity of a branch railroad that joins the St.-Étienne-Roanne line at Montbrison. The town, which is ill built, with narrow winding streets and low houses, has a tribunal of first instance, communal and ecclesiastical colleges, a primary normal school, and a public library of 15,000 volumes. The principal building is the cathedral of Notre-Dame, which dates from 1225. The old ramparts and ditches are now replaced by handsome promenades. Montbrison is the capital of the department of Loire, which distinction it owes solely to its central situation; for with respect to population, for commercial and industrial activity, it is greatly surpassed by St.-Étienne and Roanne. The town originated in a castle and church built on the summit of a volcanic hill by the counts of Forez in the 13th century. It became the chief town of Forez and was taken and burnt by the English in the 14th century. In the religious wars of the 16th century it was taken by the ferocious baron Adrets, who committed unparalleled cruelties against the townfolk and the garrison. In 1590 the Leaguers, under the Duke de Nemours, took the castle of Montbrison, which was soon afterwards demolished by Henri IV. Of the other towns that are noticed the population is that of the commune in each case. *St.-Bonnet-le-Château*, on a high hill in the south of the department, and on the Roman road made here by Agrippa, has 2066 inhabitants. *Chazelles-sur-Lyon*, a small but well-built walled town E. of Montbrison, has a population of 3011. *Feurs*, the ancient *Forum Segusianorum*, and the midway station on the railroad from St.-Étienne to Roanne, from each of which towns it is 25 miles distant, stands in a fertile, well-watered plain near the right bank of the Loire, and has 2646 inhabitants. Roman antiquities, comprising four milestones, remains of an aqueduct, some mosaics, corinthian columns, and baths, still exist in the town; the high stone dykes which confine the Loire in the neighbourhood are said to be of Roman construction. The territory of Forum was called *Pagus Forensis*, whence the Forez is said to derive its name. The church of Feurs is built with materials from Roman buildings. *St.-Galmier*, 12 miles E. of Montbrison, on the St.-Étienne-Roanne railroad, 37 miles from Roanne, stands on a high hill near the right bank of the Coise, and has a population of 2758. It is said to occupy the site of the ancient *Aqua-Segeto*: and is still famous for its cold mineral spring. *St.-Rambert*, 11 miles S.E. from Montbrison, is prettily situated on the left bank of the Loire, and has 3078 inhabitants. The church of St.-Rambert is remarkable for its great antiquity. Nearly 3000 barges are built here annually, and sent down the Loire laden with coal to Roanne. In the neighbourhood are several iron-forges and smelting furnaces. *Sury-le-Comtal*, 7 miles S. from St.-Rambert, for a long time the residence of the counts of Forez, whose castle is still in good preservation, has 2454 inhabitants.

2. In the second arrondissement the chief town, *Roanne*, is situated on the left bank of the Loire, which is here navigable, at a distance of 50 miles by railroad from St.-Étienne, and has a tribunal of first instance, a consultative chamber of manufactures, a college, and 13,221 inhabitants in the commune. The town is well-built, with straight wide streets, formed by handsome houses; the bridge over the Loire, the public library, and the college buildings are the most remarkable structures. The manufactures, which are important, consist of mualin, calico, broadcloth, handkerchiefs, glue, oil, porcelain, linen thread, cotton-yarn, and leather; there are several dye-houses, and numerous boat-building yards. By means of the lateral canal of the Loire, which enters that river at Digoin, and by the numerous canals and rivers that join the Loire, Roanne has water communication with all the principal towns in France. The trade in corn, wine, flour, spun cotton, calico, planks, coal, charcoal, the manufactures of Lyon, and of the southern and eastern departments of France, is very considerable. *Belmont*, 3 miles N.E. from Roanne, has 3440 inhabitants. *Charlieu*, 12 miles N by E. from Roanne, on the Sornin, a feeder of the Loire, is famous for the remains of a Benedictine abbey, and has 3689 inhabitants, who manufacture linen, cotton, silk and cotton-yarn, and shoe- and glove-leather. The hospital of Charlieu, one of the oldest in France, was founded by St.-Louis. *Perreux*, on the Rodon, 4 miles from Roanne, has 2517 inhabitants. *St.-Symphorien-de-Lay*, 10 miles by railway S.E. from Roanne, has cotton factories, coal-mines, and 8989 inhabitants.

3. Of the third arrondissement, the chief town is *St.-Étienne* [*ÉTIENNE, St.*] *Bourg-Argental*, on the *Décome*, in a fertile valley abounding with mulberry plantations, from which silk of the best

quality is produced, stands 18 miles S. from St.-Étienne, and has 2629 inhabitants. *Le-Chambon*, 3 miles from St.-Étienne, is situated on the *Dondaine-Vachery*, and has 4028 inhabitants, who manufacture ribands, iron- and steel-ware, table cutlery, pocket-knives, &c. *St. Chamond*, beautifully situated at the confluence of the Gier and the Janon, 7½ miles N.E. from St.-Étienne, and near the Lyon-St.-Étienne railway, is a busy manufacturing town, containing a consultative chamber of manufactures, a council of prud'hommes, and 8204 inhabitants. The town is well built, and presents a great number of elegant houses inclosed in gardens. The church of St.-Chamond, the public baths, and promenades are the most remarkable objects in the town. There are extensive coal-mines, iron-forges, and smelting-furnaces in the environs. The town contains a great number of silk-mills, and has important manufactures of ribands, stay-laces, nails for the navy, hardware, &c. *Pelussin*, situated at the foot of Mont Pilat, at a short distance from the Rhône, and in a fertile wine district, has 3511 inhabitants. The preparation of raw silk for manufactures, and the working of the porphyry quarries of the neighbourhood, afford employment to a considerable part of the population. *Rive-de-Gier*, 13 miles N.E. from St.-Étienne, on the Lyon-St.-Étienne railroad, previous to 1815 had under 4000 inhabitants; it now has a population of above 12,000. It is built on the Gier, here crossed by several bridges, and rendered navigable by the Canal-de-Givors, which runs from this town to Givors on the Rhône. The town owes its prosperity to the coal-mines, exceeding 40 in number, which are worked in the neighbourhood. The basin of the canal is lined with quays, backed by vast coal stores. The reservoir of the Canal-de-Givors, a little south of the town, is formed by massive mason-work, and is a fine work of its kind. Besides its great trade in coal, with which Lyon and several other towns are supplied, Rive-de-Gier has above 40 glass-works, steam-engine-factories, iron-foundries and forges, steel-works, silk-mills, riband-factories, &c. At *Terre-Noire*, a station on the railway from St.-Étienne to Lyon, there are important iron-furnaces and foundries.

The department forms with that of Rhône the see of the archbishop of Lyon and Vienne; it is comprised in the jurisdiction of the High Court and University Academy of Lyon, and is included in the 8th Military Division, of which Lyon is head-quarters. It returns three members to the Legislative Body of the French empire.

(*Dictionnaire de la France; Annuaire pour l'An 1849; Statistique de la France; Official Papers.*)

LOIRE, HAUTE, a department in France, takes its name from its situation in the upper part of the basin of the Loire, and is bounded N. by the departments of Puy-de-Dôme and Loire, E. by Ardèche, S. by Lozère, and W. by Cantal. Its greatest length from east to west is 69 miles, from north to south 46 miles; it extends from 44° 44' to 45° 25' N. lat., and from 3° 4' to 4° 26' E. long. The area is 1916 square miles, and the population in 1841 was 298,137, in 1851 it was 304,615; which last gives 158.98 to the square mile, being 15.6 below the average per square mile for all France.

The department comprises the old district of Velay with portions of the Gévaudan, Forez, and Auvergne. The surface is mountainous. The Cantal Mountains, and the Margeride Chain, which unites them to the Cévennes, cover with their offshoots so much of the south-west and south of the department as lies on the left bank of the Allier: the south-eastern and eastern districts are occupied with the mass of the Cévennes, from which a secondary chain, running through the interior nearly north and south, forms the watershed between the Allier and the Loire, and is joined, near Chaise-Dieu, by another range that runs north-west from Mont Mezen, the culminating point of the Cévennes [CÉVENNES; ARDÈCHE]. The country, thus surrounded and traversed by mountains, is furrowed by numerous rivers, brooks, and torrents, which flow with rapid descent, either between steep banks that expose to view the volcanic formation of the country, or through picturesque and fertile valleys whereof the soil consists of decomposed lava and other volcanic deposits. On the mountains, which present numerous conical peaks and craters, and have their summits covered with snow, during five or six months in the year, there are large forests and extensive pastures, where great numbers of cattle and mules, the chief wealth of the country, are reared. The lower slopes are covered with chestnut woods and vineyards. In the north-west and north-east of the department there are some extensive plains of considerable fertility, all covered with a soil of decomposed volcanic matter.

The principal rivers are the ALLIER, which drains the west of the department; and the LOIRE, which, swelled by the Gazeille, the Lignon, and the Somme, from the right bank, by the Borne, the Arzon, and the Ance, from the left, drains the central and eastern districts. The department is traversed by 6 state and 12 departmental roads.

The agricultural produce of the department suffices the consumption. The usual crops are wheat, rye, barley, oats, mixed grain, beans, &c.; fruits are abundant. Of wine only 1,264,000 gallons are produced, and this is of inferior quality. Mules are reared in great numbers; horned cattle and pigs are fattened. Among the wild animals are boars, wolves, foxes, wild cats, badgers, &c.

The geological structure and mineral wealth of the department are of great variety, though the latter is not turned to much advantage.

The mountain range which runs north-west from Mont Mezen consists of trachytic rocks, and is reckoned among the most ancient of the volcanic structures of central France. Mont Mezen itself the culminating part of the Cévennes is a vast mass of volcanic accumulation, above 5000 feet high. [CÉVENNES.] The district of the *Velay*, which lies south and south-west of this range, and comprises nearly all the south of the department, is occupied with basaltic rocks and lava beds, the great antiquity of which is proved by their being covered with a soil formed by the decomposition of their surface. Along the banks of the rivers in this district, the basaltic columns laid bare to view assume a variety of beautiful forms; and the charred fragments of ancient eruptions, which were long subsequently rolled and worn in watercourses that have disappeared for ever, are seen in other places deposited in beds of clay and marl, piled up alternately one upon the other. Among the primitive rocks are found granite, gneiss, quartz, mica-schist, &c. Coal, lead-, and antimony-mines are worked; iron- and copper-ores are found at various points. Chalcedony, diamond-spar, sapphires, amethysts, tourmalines, &c., are found, and also marble, millstone-grit, gypsum, &c., &c. Mineral springs are numerous; they are all saline or acidulous.

The manufactures consist of common articles of necessity and use, and are unimportant, with the exception of silk and thread lace and ribands. The people are in general poor, and many of them emigrate during the winter months as sawyers, hawkers, porters, sweeps, &c. About 300 fairs are held.

In a country the highest point of which, Mont Mezen, is 5820 feet above the sea-level, whilst its lowest point, namely, where the Allier crosses the northern border, is only 1279 feet above the same level, there is room for great variety of climate and season. Seed-time and harvest differ in different cantons according to the elevation, the maximum variation amounting to as much as two months; and such is the difference of climate, that, while in some districts the vine flourishes, in others rye will hardly ripen. The south-west wind blows at times for weeks continually, and with great violence; the west and north-west winds bring rain.

The department contains 1,226,246 acres, of which area 560,258 acres are arable; 196,288 acres are grass land; 14,569 acres are occupied with vines; 177,896 acres with woods and forests; 222,994 acres consist of barren heaths and moors; 9371 acres of orchards, gardens, and plantations; and 12,680 acres are covered with rivers, tarns, and brooks.

The department is divided into three arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Le-Puy	13	111	134,430
2. Ysengeaux	6	37	87,161
3. Brioude	8	107	83,024
Total	27	255	304,615

1. In the first arrondissement the chief town, *Le-Puy*, which is now the capital of the whole department, as it formerly was of the district of Velay, is situated at the foot and around the southern slope of a steep hill, at the junction of three pretty valleys, watered respectively by the Loire, the Borne, and the Dolaison, in 45° 2' 46" N. lat., 3° 52' 55" E. long., 66 miles S.W. from Lyon, and has 14,004 inhabitants in the commune. Except the broad street at the foot of the hill, through which the roads from Clermont and Lyon run, the rest of the town is built in form of an amphitheatre round the steep sides of Mont Anis, which is surmounted by a lofty basaltic rock called *Corneille*. From a distance *Le-Puy* presents a most picturesque appearance: but the interior view disappoints the expectations thus raised. The streets are irregular, narrow, and in the upper part of the town inaccessible to carriages; they are paved with volcanic breccia, which in all weathers is slippery and dangerous to walk upon. The most important structures are—the cathedral, situated in the highest part of the town (the pavement of the nave is 2250 feet above the level of the sea); the church of St.-Laurent, situated at the foot of the hill, and containing the monument and part of the remains of Du-Guesclin; the prefect's residence in the spacious square of Du-Breuil; the college church; the museum, near the cathedral, in which are numerous paintings, Roman antiquities, and one of the best collections of geological and mineralogical specimens in France; the theatre, an ancient structure, supposed to have been a heathen temple; the ecclesiastical college; and the *Parneassac* gate, a fine specimen of military architecture over one of the promenades of the town. *Le-Puy* is the seat of a bishop, and contains tribunals of first instance and of commerce, a consultative chamber of manufactures, a college, a public library, and various literary and scientific societies. In the suburb de l'*Aiguille* is an isolated basaltic rock of pyramidal form, and 285 feet high, which is ascended by a staircase of 218 steps cut in the rock, and is surmounted by the highly ornamented chapel of St.-Michel, erected in the 10th century. Between this rock and that of *Corneille* stands a heptagonal building, said to have been a chapel dedicated to St. Clair, and now used as a corn-store. The chief industrial products of *Le-Puy* are lace, coarse woollens, wine-skins, nails, and leather; the commerce is in these articles, and in corn, iron, pottery, cattle, &c.

St.-Paulien, built on the ruins of an ancient city, said to be *Ruessium*, or *Revesia Vellavorum*, has a population of 3016; several Roman coins, vases, and monuments with inscriptions have been found and are preserved here. *Saugues*, a town of 3805 inhabitants, stands in a rich corn and pasture country, 16 miles W.S.W. from Le-Puy, and has some woollen manufactures. Just outside the walls is a monument of rudely cut stone without inscription, which is traditionally called the Tomb of the English General.

2. In the second arrondissement the chief town is *Ysengeaux*, or *Issengeaux*, an ill-built gloomy place, is situated on a rocky hill 14 miles N.E. of Le-Puy, and has a tribunal of first instance, a college, and 7518 inhabitants, who manufacture silk, lace, and ribands, and trade in timber, cattle, sheep, &c. It is supposed to occupy the site of *Icidmagus*. The town has a handsome pariah church, the pavement of which is 2822 feet above the level of the sea. It contains also several large and well-built houses. *Bas-en-Basset*, on the left bank of the Loire, 12 miles from Ysengeaux, has 5783 inhabitants, who manufacture lace and pottery. The town, which is commanded by the old castle of Rochebaron, has a mineral spring. *St.-Didier*, 14 miles N.E. from Ysengeaux, has silk factories and 3972 inhabitants, who manufacture ribands and articles in papier-mâché. *Monistrol*, 12 miles N.E. from Ysengeaux, near the right bank of the Loire, is an ugly ill-built town, with an important corn-market, and 3975 inhabitants, who manufacture lace, ribands, hardware, satin, silk handkerchiefs, leather, and papier-mâché articles. A few miles east of Ysengeaux is *Montfaucon*, the old capital of the Velay. It was destroyed in the religious wars of the 16th century, and is now a small place of only 1200 inhabitants. It was formerly defended by a very strong castle, and gave title to a barony. *Tence*, a manufacturing town of 5468 inhabitants, is prettily situated on the right bank of the Lignon, 9 miles E. by S. from Ysengeaux.

3. In the third arrondissement the chief town, *Brioude*, is situated 29 miles N.W. from Le-Puy, near the left bank of the Allier, and has tribunals of first instance and of commerce, a college, and 4635 inhabitants. It is an ill-built town, and stands on a site 1466 feet above the sea. The most remarkable structures are the church of St.-Julien and the college buildings. Brioude occupies the site of the ancient *Brivas*, a town of the Arverni. There is said to have been a Roman bridge over the river here, and that this circumstance gave origin to the name Briva, or Brivas, meaning a bridge. Constantine is said to have built a church in Brivas. The church of St.-Julien dates from the reign of Louis le Débonnaire, and occupies the site of a still more ancient church, which was built over the spot where the saint suffered martyrdom. *La-Chaise-Dieu*, 15 miles E. from Brioude, a town of 2000 inhabitants, takes its name from the monastery of Chaise-Dieu (*Casa Dei*), which, with the exception of the church, was destroyed during the revolution of 1793. The abbey church, a gothic structure, erected about the middle of the 14th century, at the expense of Pope Clement VI., a native of Chaise-Dieu, is considered one of the finest abbey churches remaining in France; it contains tombs of Clement VI. and Gregory XI., some very ancient tapestries, and is greatly admired for the carved wood-work of the 156 stalls in the choir. The walls of the choir are ornamented with ancient paintings in fresco, representing the Danse Macabre, or Dance of the Dead. The total length of the church is 302 feet, and the width within the walls 95 feet. The choir is 131 feet long, and its bold groined roof is supported by 22 pillars, each 26 feet in circumference. In the middle of the choir is the black marble monument of Clement VI., who was educated in the abbey of Chaise-Dieu and buried in the church. The organ is a splendid instrument. The portal entrance of the church is decorated with numerous bas-reliefs executed in black basalt. *Langeac*, built in a pretty situation, on the left bank of the Allier, has 3231 inhabitants. There are coal-mines and stone-quarries near this town.

The department forms the see of the Bishop of Le-Puy, is included in the jurisdiction of the High Court of Riom, and of the University Academy of Clermont, and belongs to the 20th Military Division, of which Clermont is head-quarters. It returns two members to the Legislative Body of the French empire.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Official Papers.*)

LOIRE-INFÉRIEURE, a department in the west of France, is bounded N. by the departments of Morbihan and Ille-et-Vilaine, E. by those of Mayenne and Maine-et-Loire, S. by that of Vendée, and W. by the Bay of Biscay. It extends from 46° 52' to 47° 52' N. lat., 0° 55' to 2° 32' W. long.; its greatest length from east to west is 74 miles, from north to south 69 miles. The area is 2654.3 square miles: the population in 1841 was 486,806; in 1851 it amounted to 535,664; which last gives 201.89 to the square mile, being 27.31 above the average per square mile for all France. The department is formed out of part of Bretagne, and derives its name from its position along the lower course of the river Loire. The south-west portion of the department constituted the old duchy of *Retz*, of which Pornic, Paimboeuf, and Macheouel were the chief towns. It was originally included in Aquitaine, in the extended application of that term [AQUITAINE]; subsequently it belonged to Poitou; and finally it was annexed to the diocese of Nantes, and thus came to be considered part of Bretagne. The castles of Macheouel and Champtoce (the latter near Ingrande, in the department of Maine-et-Loire) were the

scenes of the atrocious crimes of Gilles de Laval, lord of Retz, the original of Blue Beard.

The coast line is about 55 miles in length. It presents an irregular outline, broken towards the north by the bays of Pennebe and Pembron, which are separated by the promontory of Piriac and by the bay of Croisic, sheltered on the south and west by the long tongue of land on which the town of Croisic is built; in the centre by the embouchure of the Loire, to the north of which are some islets called the *Leven Isles*; and in the southern part by the large Bay of Bourgneuf, which extends southward from Point-St.-Gildas between the mainland and the island of Noirmoutier. Of the promontory of Croisic there is a dangerous ledge called *Le-Four*, on which a lighthouse is built. There are considerable salt-marshes along this coast.

The surface of the interior of the department is level, with the exception of a line of low hills, which crosses it in the north, forming the watershed between the Loire and the Vilaine. The principal river is the Loire, which enters the department below Ingrande in Maine-et-Loire, and divides it into two unequal parts. It is 5 miles wide at its mouth, and is navigable for large vessels up to Nantes, to a few miles above which the tide ascends. [LOIRE, LA.] The principal feeders of the Loire in this department are, from the left, the Sèvre-Nantaise [SÈVRES, DEUX] and the Achenau, which last is the outlet of the Lake of Grand-Lieu; from the right, the Erdre, which below Nort swells out into the proportions of a lake, and enters the Loire at Nantes. The Vilaine touches the department on the north-west, receiving the Don and the Isaac. The other most considerable rivers are the Maine and the Moine, feeders of the Sèvre-Nantaise; the Ognon and the Boulogne, which flow from Vendée into the Lake of Grand-Lieu; the Falleron, a small stream which falls into the Bay of Bourgneuf, after forming for about 10 miles the boundary between Loire-Inférieure and La Vendée; the Brivé, which enters the Loire above St.-Nazaire; and the Tenu, a feeder of the Achenau. The department is crossed by the canal from Nantes to Brest; also by 6 royal, 17 departmental, and a great number of pariah roads. A railway through Angers, Tours, and Orléans connects Nantes, the capital of the department, with Paris. The climate is healthy, although somewhat damp; the heat in summer is often very great.

Grand-Lieu, the largest lake in France, and the reservoir for the waters of the Boulogne, the Ognon, and some smaller streams, is situated near the left bank of the Loire, with which it has communication by its navigable outlet the Achenau. It has an area of 29 square miles, and abounds in fish; its shores are marshy. North of the Loire there are many small lakes, and extensive marshes and bogs. It has been recently proposed to drain the lake of Grand-Lieu.

The quantity of cereal grain produced suffices the consumption. The chief crops of this kind are wheat, rye, buckwheat, and mixed grain. Barley is grown in small quantity. The meadows and pastures along the Loire, in the islands formed by the deposits of the river, and in the neighbourhood of the marshes are excellent. Cattle of good breed are very numerous; horses, of which also great numbers are reared, are small. The apple-tree is extensively cultivated north of the Loire for making cider; and in the same district there are forests of vast extent. The *Bocage* district, which stretches south-east of the Lake of Grand-Lieu, is hilly and well wooded, as the name implies, every field being inclosed with hedgerows and lines of timber-trees. The vineyards of the department yield 32,200,000 gallons of wine annually, rather less than a third of which is used for the home consumption; of the surplus part goes to the supply of Paris, some is distilled into brandy, and the rest is sent to Orléans to be converted into vinegar. The wines are considered of middling quality; the sweet wines are prized for their agreeable flavour and for their keeping qualities. Fishing affords occupation to a great number of the inhabitants. The principal kinds of fish taken along the coast are mackerel, herring, salmon, turbot, sardines, soles, skait, oysters and other shell-fish, &c.

The department is occupied chiefly by the coal-measures, and the underlying strata is covered in some places by alluvial deposits. Granite, quartz, mica, kaolin, and feldspar are found in the arrondissement of Nantes; in that of Châteaubriant extensive slate-quarries are worked, and iron-ore is abundant, supplying 20 forges, blast-furnaces, and foundries. In the arrondissements of Châteaubriant and Ancenis there are important mines of coal of excellent quality. The most important mines are those of Nort and Montrelais. Magnetic iron is found in isolated particles on the surface of the ground on the right shore of the embouchure of the Loire. Peat is dug on the north shore of the embouchure of the Loire. Near Crossac there is a mine of lead not worked. A tin-mine is worked near Piriac. There are mineral springs and sea-bathing establishments at Plaine and Pornic.

The principal manufactures are linen, calico, printed cotton, serge, and coarse woollen stuffs, which are manufactured chiefly at Nantes, Clisson, Châteaubriant, and Guérande; ship-building is extensively carried on at Nantes, Paimboeuf, and Pellerin; and at Indret, one of the islands in the Loire, near Nantes, there are establishments for the manufacture of steam-machinery, and slips for building steam-frigates. Other articles of industrial produce are—paper, leather, porcelain, glass, ship-cordage, chain-cables, cotton-yarn, refined sugar, &c. [NANTES.] There are in the department 1698 wind- and water-mills, 52 iron-forges and blast-furnaces, and 76 factories of various kinds.

The department has an important commerce with foreign countries coastwise, and with the interior. The principal articles of trade are—wine, brandy, fruits, salt (of which a vast quantity is made along the coast), hardware, oil, provisions, soap, wool, and other French and colonial produce. Ships are fitted out for the whale, herring, and cod fisheries; and the mackerel and pilchard fisheries along the coast are actively plied. About 340 fairs are held annually. At these fairs not cattle only, but broadcloth and small wares of all descriptions are sold.

The department contains 1,698,768 acres. Of this area 794,722 acres are cultivated; 259,490 acres are grass-land; 72,518 acres are under vine-culture; 92,796 acres are covered with woods and forests; 27,143 acres with orchards and plantations; 319,647 acres are heaths and moor-land; 43,749 acres are occupied with rivers, lakes, canals, &c.; and 71,285 acres with roads, streets, &c.

The department is divided into five arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Nantes . . .	17	66	240,440
2. Ancenis . . .	5	27	48,102
3. Châteaubriant . . .	7	37	71,462
4. Paimboeuf . . .	5	25	46,767
5. Savenay . . .	11	51	128,893
Total . . .	45	206	535,664

1. In the first arrondissement the chief town is NANTES, which is also the capital of the whole department: population of the commune, 91,303. With the other places noticed the population given is that of the commune. *Charrenat*, situated on a hill above the right shore of the Loire, has a population of 8935. *Clisson*, beautifully situated on the slopes of two hills at the junction of the Moine and the Sèvre-Nantaise, has a population of 2759, who manufacture woollen-cloth, cotton-yarn, leather, and paper. On a rock above the town stand the majestic ruins of the ancient castle of Clisson, which for extent, construction, and beauty of site, has scarcely an equal among the castellated structures of France. Some repairs were made a few years ago by M. Lemot, its possessor, in order to arrest the progress of decay among these magnificent ruins. In the castle Olivier de Clisson was born in 1386; the Duke of Orléans, afterwards Louis XII., took refuge in it from the intrigues of Madame de Beaujeu; Charles VIII., after his marriage with Anne of Brittany, entertained the Breton nobles within its walls. *Légé* is situated in the south of the department, near the right bank of the Logne, a feeder of the Boulogne, on a hill which commands a fine view of a rich well-cultivated country. The town, which suffered greatly in the civil war between the Vendéans and the Republicans, has 3401 inhabitants. On the Nantes road, at a short distance from *Légé*, a monument was erected in 1827 to the Vendean general Charette, which was demolished during the short frenzy of 1830. *Loroux-Bottereau*, a few miles E. of Nantes, has 5000 inhabitants: within the town, in a spacious circular place surrounded by trees, a statue of Louis XVI. is erected. *Machecoul*, an ill-built town on the little river Falleron, and formerly the capital of the duchy of Retz, is 20 miles S.W. from Nantes, and has 3745 inhabitants. This town was the scene of great cruelties and of some severe actions during the Vendean war. *St.-Philbert*, 14 miles S.W. from Nantes, is situated on the navigable river Boulogne, near its entrance into the Lake of Grand-Lieu, and has 3285 inhabitants. It stands in a fertile wine and corn country, and is a place of some trade in agricultural produce, timber, &c. *Vallet*, 5 miles N. from Clisson, is situated on a height among rich vineyards that yield the best wine of the department, and has 5583 inhabitants. *Vertou*, 5 miles S. by E. from Nantes, stands near the right bank of the Sèvre-Nantaise, and has 5635 inhabitants.

2. Of the second arrondissement the chief town, *Ancenis*, is prettily situated among vine-clad slopes on the right bank of the Loire, 21 miles by railway N.E. from Nantes, and has a tribunal of first instance, a college, and 3661 inhabitants in the commune. The old castle of the dukes of Bethune, from the gardens of which there is a splendid view of the valley and islands of the Loire; the Ursuline convent, now a cavalry barrack; and the hospital, are deserving of notice. The steamboats that navigate the Loire make Ancenis one of their stations. *Montrelais*, N.E. of Ancenis, on a hill near the eastern boundary of the department, stands upon a valuable coal-field, and has about 2500 inhabitants. Coal-mines are worked also at *Monzeil*, a small place near Montrelais. *Varades*, 8 miles by railway E. from Ancenis, stands on a hill near the right bank of the Loire, and has 3483 inhabitants. It was before Varades that the Vendean army, after their defeat at Chollet by the Republicans, crossed the Loire in 1793. At *Meillerie*, near Varades, is the celebrated monastery of the order of La Trappe. Driven from their retreat by the revolution of 1792, the Trappists of Meillerie emigrated and founded several monasteries in foreign countries; among others, one near Lulworth Castle, Dorsetshire, where they devoted themselves, as elsewhere, to agriculture and reclaiming waste lands. After the general peace they returned from Dorsetshire to their original monastery of Meillerie in 1816, with increased skill in agriculture, and furnished with superior agricultural

instruments; repurchased the abbey and some farms adjacent, and established a model-farm. On the accession of Louis Philippe, however, they were again expatriated in 1831, and we believe again took refuge in England.

3. In the third arrondissement, the chief town, *Châteaubriant*, stands 37 miles N. by E. from Nantes, and has a tribunal of first instance and 4010 inhabitants, who manufacture common woollen stuffs, cordials, earthenware, tiles, and leather. The town in its architecture is a model of the unsymmetrical irregularity and bad taste which prevails in old Breton towns generally. It seems to have been originally called *Cadette*. The present name was assumed in 1015, from Briant, count of Penthievre, who built the castle. The castle was taken and demolished, with the exception of the keep and two other high towers which still remain, by La Tremouille in the reign of Charles VIII. There is a new château, which contains a fine gallery and other handsome apartments. *Moisson*, on a hill near the right bank of the Don, has iron-mines, iron-forges, and 2305 inhabitants. *Nort*, 15 miles N. from Nantes, is situated on the right bank of the Erdre, across which a stone bridge of six arches leads to the suburb of St.-Georges. The Erdre here becomes navigable for steamers which ply daily to and from Nantes. *Nort* is a busy town, with a population of 5561, who trade largely in wood, charcoal, coal, iron, leather, cattle, &c. *Nozay*, 11 miles N. from Nort, on the road from Nantes to Rennes, has 3002 inhabitants. *Rougé*, 5 miles N.W. from Châteaubriant, gives name to important iron-mines, and has 2272 inhabitants.

4. The fourth arrondissement is named from its chief town, *Paimboeuf*, which stands 24 miles W. from Nantes, on the left bank and near the embouchure of the Loire, and has a tribunal of first instance, a naval school, and 4080 inhabitants, who are chiefly engaged in the construction and repairing of ships, in the manufacture of cordage, tiles, and bricks, and in the fisheries and coasting trade. The town consists chiefly of one long street, which is built along the quays that line the river. It has a harbour formed by a well-constructed mole, and capable of admitting the largest ships. Steamers ply several times a day to Nantes. The population of Paimboeuf was nearly 10,000 before the French lost the West Indian Islands. *Bourgneuf-en-Retz*, 15 miles S. from Paimboeuf, is situated on the Bay of Bourgneuf, opposite the isle of Noirmoutier, in a low marshy place, and has 2625 inhabitants, who are engaged in the fishery along the coast, and in the manufacture of salt. *St.-Père-en-Retz*, 4 miles S. from Paimboeuf, has 2679 inhabitants. *Pornic*, a small fishing village, situated on an inlet of the Bay of Bourgneuf, is much frequented in summer for its fine sea-bathing: population about 1500.

5. The fifth arrondissement is named from its chief town, *Savenay*, a small place of 2331 inhabitants, situated 22 miles N.W. from Nantes, near the right bank of the Loire. The town, which has a tribunal of first instance, was the scene of a most bloody engagement (November 25, 1793) between the Republican army under Westermann, Kléber, Marceau, and Tilly, and the gallant Vendéans, who were entirely defeated. A monument in honour of the slain has been erected in the cemetery of Savenay. *Batz*, situated among the salt-marshes on the sea-shore, where it has a good fishing harbour, is a well-built town with 3597 inhabitants. It has a handsome church with a tower, terminating in an elegant cupola 180 feet high, which serves as a land-mark for sailors. *Blain*, near the right bank of the Isac, has 5441 inhabitants. The town was formerly defended by a strong feudal castle, erected by Alan, duke of Bretagne, in 1105. This fortress, which, with the exception of its towers, is still in tolerable preservation, subsequently belonged to the family of Clisson, from whom, by the marriage of Beatrix, daughter of the Constable Olivier de Clisson, it passed to the dukes of Rohan. *Coueron*, prettily situated a few miles below Nantes, on the right bank of the Loire, which here forms a commodious harbour for the repairing of vessels, has glass-works and 4214 inhabitants. *Croisic*, situated on the extremity of a small tongue of land that juts out into the Bay of Biscay, is an ill-built place with 2539 inhabitants, who are chiefly engaged in the fisheries, in the manufacture of salt and soda, and in the coasting trade. *Guéméné*, situated on a hill near the right bank of the Don (which here begins to be navigable), at a distance of 22 miles N.N.E. from Savenay, has 4013 inhabitants. *Guérande*, an ancient town, situated about 3 miles from the sea and 25 miles W. from Savenay; has an ecclesiastical college, two hospitals, and 8503 inhabitants, who manufacture great quantities of salt, linen, serge, cotton, and woollen-yarn, &c. The town, built on the slope of a hill, is commanded by an old castle flanked with towers; it is surrounded by walls built of granite, and pierced by four gates situated at the cardinal points. The ditches which formerly surrounded this ancient fortress are now filled up and converted into shady walks. *Herbignac*, 18 miles N.W. from Savenay, has extensive potteries and 3176 inhabitants. *St.-Nazaire*, a town of 3771 inhabitants, composed chiefly of sailors, pilots, fishermen, and custom-house officers, is situated on the northern shore of the embouchure of the Loire. It has a lighthouse at the head of the mole which forms the harbour; its chief trade is in fish, corn, and salt. Steam-tugs for hauling large vessels up the river to Nantes lie off St.-Nazaire. *Pont-Château*, on the left bank of the Brive, which is navigable by means of the tide from this town to its entrance into the Loire a little above St.-Nazaire, has a corn-market, tan-yards, and 3516 inhabitants.

The department forms the see of the Bishop of Nantes, is included in the jurisdiction of the High Court and University Academy of Rennes, and belongs to the 15th Military Division, of which Nantes is head-quarters. It returns four members to the Legislative Body of the French empire.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Statistique de la France; Official Papers.*)

LOIRET, a department of France, lies between 47° 29' and 48° 20' N. lat., 1° 32' and 3° 5' E. long., and is bounded N. by Seine-et-Oise and Seine-et-Marne, E. by the department of Yonne, S. by those of Nièvre, Loir-et-Cher, and Cher, and W. by Eure-et-Loire. Its greatest length from east to west is 72 miles, and its average breadth from north to south is 42 miles. The area is 2612.1 square miles, and the population in 1841 was 318,452, in 1851 it amounted to 341,029; which last gives 130.55 to the square mile, being 44.03 under the average per square mile for the whole of France. The department is formed out of the eastern part of Orléanais, and a small portion of Berri. The greater part of Gâtinais proper, a sub-division of Orléanais, is comprised in Loiret.

The department is divided into two unequal parts by the Loire. The district situated south of this river is part of the old district of Sologne [CHER], and presents a barren sandy soil, covered with heath, but here and there swelling into hills, which are planted with vines, yielding red and white wines of moderately good quality. The district north of the Loire is composed of fertile and well-cultivated plains, separated by wooded hills, and diversified by extensive forests, rich meadows, and pasture lands. A chain of hills that forms part of the watershed between the Seine and the Loire traverses the department from south-east to north-west, at no great distance from the right bank of the LOIRE, which river crosses the department in the same direction as far as Orléans, where it sweeps round to the south-west.

The department takes its name from the *Loiret*, a little river that rises all at once in full flood from a spring in the park of Château-de-la-Source, a few miles S.S.E. from Orléans, and flowing westward enters the Loire on the left bank after a course of 7 miles. The waters of the Loiret never freeze, owing to the high temperature which they have on issuing from the earth, and to the shortness of their course. The *Duis*, a sluggish muddy stream, is the principal feeder of the Loiret; before its junction with the latter it enters a whirlpool by which part of its waters are generally absorbed, the remainder being conducted to the Loiret by a short canal. But at certain seasons of the year, when the waters of the Loiret are highest, a portion of them ascends the canal and enters with the Duis into the whirlpool, which is said to have an underground communication with the Loire. When the waters of the Loire however rise above the usual level, the whirlpool then, instead of absorbing the waters of either of the small rivers, overflows and adds considerably to their quantity. The Loiret is navigable almost from its source; it drives the machinery of several mills and factories. The *Loing*, which receives the Ounne and several other feeders, flows north through this department from that of Yonne in its way to join the Seine. The north-western districts are drained by the *Essonne*, which flows north and enters the Seine in the department of Seine-et-Oise. The department possesses great advantages from internal navigation by the Loire, and by the Canal-d'Orléans and the Canal-de-Briare, which unite near Montargis, whence the Canal-du-Loing runs northward into the department of Seine-et-Marne, and, passing Nemours, enters the Seine near Moret. The department is also traversed by the Paris-Orléans, the Orléans-Nantes, and the Orléans-Bourges railways; and by 9 state, 14 departmental, and a great number of parish roads.

The climate is mild and extremely healthy; the prevailing winds are the west and south-west.

The greater part of the department is occupied by the supracretaceous rocks belonging to the chalk-basin of Paris. These occupy the valley of the Loire for a short distance on each side of the river; and extend over all the country northward of the Loire and westward of the Loing. The districts east of the Loing and south of the Loire are occupied by the chalk which surrounds the Paris basin, except for a short distance from the banks of the Loire on each side of the river where the chalk is covered by supracretaceous rocks.

The district north of the Loire is very productive of rye and other bread-stuffs; but, owing to the infertility of the Sologne district, the produce of the department is barely enough for the consumption. Yet it has a most important trade in corn, which however is supplied from the great wheat districts of Beauce, Poitou, Anjou, and Lower Auvergne, and finds easy distribution from the great granaries of Orléans, by the means of transit before mentioned, to different parts of France. The quantity of oats grown is enormous; the annual exports amount to 1,375,000 quarters. Saffron is extensively and profitably cultivated. Asparagus and many pot-herbs are raised in large quantities. About 22,000,000 gallons of wine are made annually, of which about one-fourth goes to the home consumption; most of the remainder is exported under the name of Vins d'Orléans, generally of ordinary quality; some is retained for making vinegar. Apple, pear, and all fruit-trees common to the north and centre of France are successfully cultivated, and a great quantity of preserves is made. The forests contain chiefly oak, beech, birch, elm, and chestnut. Cattle are of good breed, and also sheep, except in the Sologne, where they

are small but well fleeced. Bees are carefully tended; game, poultry, and fish are abundant. Building- and lime-stone, marl, chalk, and potters'-clay are the only minerals found.

The manufactures, except those of Orléans, are unimportant; but the commerce of the department is very extensive. The chief articles of trade are corn, flour, wine, brandy, vinegar, groceries, drugs, fruits and fruit-trees, peas and beans, chestnuts, cider, fish, honey, saffron, salt, wool, firewood, oak-staves, charcoal, cattle, &c. About 220 fairs are held in the year.

The department contains 1,671,760 acres. Of this area 975,088 acres are under tillage, 60,454 acres are grass-land, 98,554 acres are under vineyards, 280,966 acres are covered with woods and forests, 15,855 acres are occupied as orchards and plantations of different kinds, 27,640 acres are covered with rivers, canals, &c., 140,509 acres consist of barren heath and moor-land, and 50,626 acres are occupied as roads, streets, and buildings.

The department is divided into 4 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Orléans . . .	14	106	154,600
2. Pithiviers . . .	5	98	60,833
3. Gien . . .	5	49	49,162
4. Montargis . . .	7	93	76,434
Total . . .	31	348	341,029

1. Of the first arrondissement, and of the whole department, the capital is ORLÉANS: population, 43,405 in the commune. The population given with the other places noticed is in each case the population of the commune. *Beaugency*, 17 miles from Orléans, 19 miles from Blois by railroad, is built at the foot and on the slope of a hill, on the right bank of the Loire, and has about 5000 inhabitants. The Loire is crossed at Beaugency by a stone bridge of 39 arches. The town was formerly defended by a castle, walls, towers, and bastions, some of which works still remain. There is a massive octagonal tower 130 feet high, and of unknown antiquity, in the town. The town-hall is a small but elegant building of the time of François I. In the religious wars of the 16th century Beaugency was taken several times. Brandy, broadcloth, and leather are the chief industrial products, which, together with the excellent wine of the neighbourhood, corn, flour, and wool, are the chief articles of trade. The kings of France had a palace at Beaugency in the 14th century. *Château-neuf-sur-Loire* stands on the right bank of the Loire, E. of Orléans, and has woollen-cloth and beet-root sugar factories and 2994 inhabitants. *Cléry*, prettily situated near the left bank of the Loire, 9 miles S.W. from Orléans, has 2578 inhabitants. This town is famous for its beautiful church of Notre-Dame, in the nave of which is a marble monument to Louis XI., who was buried here. The monument which was erected to the memory of Louis and his wife, Charlotte of Savoy, was completed in 1622. It figured after the first French revolution in the Museum of French Monuments in Paris, but was replaced in the church of Cléry in 1816. *Jargeau*, 11 miles E. from Orléans, on the left bank of the Loire, here crossed by a fine bridge, has a population of 2247. *Meunay*, a well-built town, situated on the right bank of the Loire, 12 miles by railroad W. by S. from Orléans, has 4515 inhabitants, who manufacture leather, room-paper, and felt hats, and trade largely in flour. *Patay* is a small town of 1200 inhabitants, 15 miles N.W. from Orléans, near which Jeanne d'Arc defeated the English in 1429 and took Talbot prisoner.

2. The second arrondissement is named from its chief town, *Pithiviers*, which is situated on the slope and at the foot of a hill above the *Genf* (a feeder of the Seine, which lower down takes the name of *Essonne*), 25 miles N.E. from Orléans, and has a tribunal of first instance and 3772 inhabitants. The town, which is pretty well built, is famous for its almond-cakes and lark-pies. Pithiviers, which is also called Piviers, existed in the 10th century, when the square castle was built, of which there are still some remains. In 1058 Henri I. took both town and castle. The English unsuccessfully besieged it in 1350; but they took it after an obstinate resistance in 1428. The Prince of Condé took it in 1562, and again in 1567. Henri IV. caused the fortifications to be dismantled in 1589. *Beaune-la-Rollande*, 8 miles N.E. from Pithiviers, near the *Essonne*, has a population of 2212.

3. The third arrondissement takes its name from *Gien*, a well-built town, situated on the right bank of the Loire, which is here crossed by a handsome stone bridge of 12 arches, at a distance of 36 miles E.S.E. from Orléans. From the left bank of the river the view, comprising the bridge and the town, built along the slope of a hill, which is surmounted by the church of St.-Louis and a fine old castle in good preservation, is very pretty. Gien has a tribunal of first instance and 5349 inhabitants, who manufacture porcelain and leather, and trade in salt, corn, wine, saffron, and wool. The castle of Gien was founded by Charlemagne, and became the property of Étienne de Vermandois, a descendant of his second son. In 1410 the marriage of the Count of Guise to the daughter of John the Fearless, duke of Burgogne, took place in the castle of Gien. In 1420 the treaty

called the League of Gien was signed in it. Here Jeanne d'Arc prevailed upon Charles VII. to march upon Reims. In 1494, Anne of France, regent during the minority of Charles VIII., repaired and enlarged the castle. François I. inhabited it in 1523; and Louis XIV. with all his court made a long stay in it in 1652. Briare, 6 miles E. by S. from Gien, stands on the right bank of the Loire, at the point where the Briare Canal enters that river. It has a population of 3229, and a good trade in wine, wood, and charcoal. *Châtillon*, farther up the Loire and on its left bank, has 2785 inhabitants. *Sully*, 13 miles W. from Gien, on the left bank of the Loire, has a population of 2153, and is remarkable for the castle of the lords of La Tremoille, which was restored by Henri IV.'s minister, Sully, who resided here after the death of his master.

4. In the fourth arrondissement of Montargis, the chief town, *Montargis*, situated near a forest of the same name, in a plain, 40 miles E. by N. from Orléans, and at the junction of the canals of Briare, Orléans, and the Loing, which complete the navigation between the Loire and the Seine, has a college, tribunals of first instance and of commerce, and 7300 inhabitants. The town, which is pretty well built, has cloth-factories, tan-yards, paper-mills, and a considerable trade in corn, saffron, hides, wool, cattle, &c. The most remarkable objects at Montargis are the church of La-Madeleine, the old walls of the town, and a few remains of the extensive castle of Montargis, which was erected by Charles V. on a hill that commands the town. The castle was of elliptic plan, surrounded by deep ditches and strong walls, flanked with battlemented towers. Three vast courts capable of lodging a garrison of 6000 men surrounded the royal apartments which were attached to the keep, and contained a hall 184 feet long, 55 feet wide, and lighted through 17 noble painted windows. The interior of the hall was decorated with paintings; over one of the six fire-places, by which the interior was heated, was a painted representation of the celebrated story of the Dog of Montargis. Montargis was unsuccessfully besieged in 1427 by the English, under the earls of Suffolk and Warwick; they took it however in 1431, but were forced to evacuate it the following year. It surrendered to the Great Condé in 1652. *Château-Renard*, situated 11 miles E. from Montargis, near the right bank of the Ouanne, has 2378 inhabitants. *Châtillon-sur-Loing*, 14 miles S.S.E. from Montargis, on the canal and river Loing, has a population of 2067. *Courtenay*, with a castle, which is the cradle of the ancient house of Courtenay, who are descended from one of the sons of Louis le Gros, is situated 15 miles E. by N. from Montargis, on the little river Clare, a feeder of the Loing, and has 2567 inhabitants. *Lorris*, formerly a favourite residence of the kings of France, and famous for its ancient charter of privileges, renewed and confirmed by Philippe Auguste in 1187, is situated 12 miles S.W. from Montargis, and has a population of 1847. The old castle or palace of *Lorris*, of which there are still remains of two old towers, was rebuilt in the 11th century by Philippe I. Louis le Gros, Louis le Jeune, and Philippe Auguste resided frequently in *Lorris* castle, and conferred upon it numerous privileges. A treaty called the peace of *Lorris* was concluded in the town between St. Louis, and Raymond, count of Toulouse. The castle was forsaken by the royal family of France in the 14th century; it then fell to ruin, and the town lost its importance.

The department forms the see of the Bishop of Orléans, is included in the jurisdiction of the High Court of Orléans, within the limits of the University Academy of Paris, and belongs to the 1st Military Division, of which Paris is head-quarters. It returns two members to the Legislative Body of the French empire.

(*Dictionnaire de la France; Statistique de la France; Annuaire pour l'An 1853; Official Papers.*)

LOJA. [ECUADOR; GRANADA.]

LOKERËN. [FLANDERS, EAST.]

LOMBARDO-VENETIAN KINGDOM, or Austrian Italy, is composed of the former duchies of Milan and Mantua and of the territory of the republic of Venice. Its boundaries proceeding from east to west are the Alps of Friuli, and the Carnic Alps, which separate it from Carinthia and Carniola, and several offsets of the Rhetian Alps, which divide it from the Tyrol: farther to the north-west it is bounded by the main chain of the Rhetian Alps, from the Ortler Spitz to Monte Jorio, which divide it from the Grisons. From Monte Jorio, an irregular boundary-line, not very definitely marked by nature, divides the Lombard territory from that of the Swiss canton of Ticino. This boundary-line between the two states terminates on the eastern coast of the Lago Maggiore, a few miles north of the influx of the river Tresa. Thence southward, the Lago Maggiore, and the river Ticino, which issues from it, mark the western boundary of the Lombardo-Venetian Kingdom, and divide from the Sardinian territories. The course of the Po marks its southern boundary, and separates it from Parma, Modena, and the Papal States, except in one part of the Modena frontier, where a slip of ground along the southern bank of the Po, which belonged to the old duchy of Mantua, continues to form part of the present Austrian Lombardy. In the delta formed by the Po, the branch of that river called Po d'Ariano, the mouth of which is named Porto di Goro, marks the limits between the Austrian and Papal territories. The eastern boundary of the kingdom is formed by the Adriatic. Its limits to the north-east are fixed at the mouth of the river Ausa, west of the Isonzo.

Until the rebellion of 1848-9 Austrian Italy was governed by a Viceroy, who was generally an arch-duke of the Imperial Austrian family, and resided at Milan: it consisted of two great administrative divisions: 1, Province Lombarde, or government of Milan; and 2, Province Venete, or government of Venice. These divisions acknowledged for their respective political heads the governors of Milan and Venice. Each division was subdivided into provinces called Delegazioni, at the head of which was a delegate; each province was divided into districts, and at the head of each district was a commissary. The districts were subdivided into communes, and each commune had a podesta for its local magistrate. Since 1848 until very recently Austrian Italy has been governed by martial law. Field-Marshal Count Radetzky, the governor-general, resides at Verona, two military commanders under him have their head-quarters respectively at Milan and Venice, in which cities are the supreme courts of appeal and finance. After the marriage of the emperor of Austria in the spring of 1854 the civil government of the country was partially re-established.

By the division of the Austrian empire, established in 1849, Lombardy and Venice form two of the crownlands of the empire. Lombardy is divided into nine provinces, the area and population of which according to the official returns of 1850 and 1851 are as follows:—

Provinces.	Area in Square Miles.	Population.
Bergamo	1616·3	378,123
Brescia	1306·3	356,325
Como	1090·2	433,206
Cremona	523·1	204,558
Lodi-e-Crema	459·3	218,844
Mantova	903·1	270,100
Milano	745·7	604,512
Pavia	401·3	171,622
Sondrio	1253·0	98,550
Total	8,298·0	2,725,740

The crownland of Venice contains eight provinces as follows:—

Provinces.	Area in Square Miles.	Population.
Belluno	1239·8	157,120
Padova	831·0	312,765
Rovigo	428·0	153,783
Treviso	929·1	286,199
Udine, or Friuli	2519·3	429,844
Venice	1056·1	298,425
Verona	1094·2	302,902
Vicenza	1083·4	340,694
Total	9,180·9	2,281,732

The total area of Austrian Italy then is 17,479 square miles; and the total population in 1850 was 5,007,472.

Before the regular administration was superseded by the military government, which was established in consequence of insurrectionary movements and the invasion of the Austrian territory by the Sardinians in 1849, the governor of each of the two great divisions of Milan and Venice was advised and assisted by a central congregation or provincial assembly, consisting of landholders and deputies from the royal towns, of which there were several in each province. Every province returned two landholders, one noble and the other not noble, as deputies, and every royal town returned one deputy. The respective communal or municipal councils selected three persons, out of whom the emperor, as king of Lombardy, chose one as a deputy. The deputies were elected for six years. These congregations were not legislative assemblies, but boards of administration; they settled the proportion of the taxes, both general and local; they inspected the accounts of repairs of roads, bridges, &c., and had also the superintendence of the charitable establishments of the country and their revenues. They could petition the sovereign concerning the wants and wishes of the people. Their resolutions were carried by a majority of votes. In every head town of a province there was a provincial congregation consisting of eight, six, or four landowners, one-half nobles, and the other half not noble, who concerned themselves especially with the administration of the municipal and communal finances of their respective districts. The communes had their own councils, and a complete system of communal administration was established.

The administration of Austrian Italy paid peculiar attention to the material improvements of roads, bridges, canals, dykes, and other public works, for which immense sums were dispersed by the state independent of the expenditure of the communes for the communal or parish roads. At the beginning of the 19th century there were few communal roads in Lombardy deserving the name. St. Valery in his 'Voyages en Italie,' observes that "nowhere perhaps on the continent is the administration of the roads and bridges more actively and usefully employed than in Lombardy. The roads are like the walks of a garden, and they are kept in repair with the greatest care. This government, economical and parsimonious in other respects, is great

and magnificent in this." Among other public works of great utility must be mentioned the repairing of the dykes in the province of Mantua; the completion of the great canal, called Naviglio; the construction of roads in the mountainous districts of Bergamo: the great commercial road of the Splügen; the road over the Stilsfer Joch, and its continuation along the eastern bank of the lake of Como down to Lecco; completing the cathedral of Milan; the splendid bridge at Buffalora on the Ticino; the construction of railways from Venice to Treviso; from Venice through Padua, Vicenza, and Verona to Milan, which is all but completed from Verona to Mantua, and from Milan to Como; and finally the measures taken for the free navigation of the Po from the mouth of the Ticino by means of steam-tugs.

In the department of popular education the Austrian government has extended to the Lombardo-Venetian kingdom the same general and uniform system established in its German states. The elementary schools were first opened in Lombardy in 1822, and ten years after there was hardly a commune without its school, whilst several of the more extensive and populous communes had two. The number of communes in the Lombard provinces is 2284, and the elementary schools for boys are 2038 and those for girls 1852. There were besides 328 adult schools, 25 infant schools, 75 training or upper schools, and 874 high schools, making a total of 5192 schools of all kinds in the crownland of Lombardy in 1847. The total number of schools in the crownland of Venice in the same year amounted to 2218.

In the upper elementary schools of the chief towns of provinces there are courses of methodical teaching for those who are intended for schoolmasters. There are also in the towns and villages of Lombardy Sunday and holiday schools for children above twelve years of age, or for those below that age who cannot on account of their occupations attend the daily elementary schools.

From the upper elementary schools boys who intend to pursue their studies pass into the gymnasias, of which there are 64 in Lombardy and 24 in the crownland of Venice. The gymnasial course lasts six years, four of which are employed in the study of Latin and Greek, the geography and history of the Austrian empire, and Roman history. The other two years are engrossed by rhetoric and poetry, study of the classics, algebra, general geography, and history, ancient and modern, and religious instruction. Besides the gymnasias there are numerous private institutions for youth approved of by the government, which exercises an inspection over them. There are two general direzioni, or boards, at Milan and Venice, for the superintendence of all the establishments for secondary or grammar education throughout the kingdom. For the instruction of young ladies there are several female colleges, mostly under the direction of the nuns of Santa Teresa, of Saint Francis of Sales, of Santa Chiara, and other orders, which devote themselves to the education of youth.

The Lombardo-Venetian kingdom is not only better supplied with elementary instruction than any other Italian state, but it is the only one in which a universal system of popular education has been established. With regard to 'secondary' or gymnasial education this kingdom is also better provided than any other Italian state, the continental dominions of the king of Sardinia alone excepted. Above the gymnasias are the Lycea, or schools of philosophy, of which there are 20 in the crownland of Lombardy and 16 in that of Venice. The Lycea are devoted to philosophical studies, and the course lasts two years. Lastly, the two universities of the kingdom, Padua and Pavia, supply instruction in all professional branches of learning.

The object of the Austrian government in this extensive system of education was clear and definite; it proposed to form a population of docile but not indolent or ignorant subjects; to make individuals in general contented with their respective stations in life, without precluding any one from using his honest exertions to make the best of that station; and also, if talents and opportunity should favour, to rise to a higher one without injury to others or disturbance to society. The emperor Francis being urged, says St. Valéry, once by some Milanese noblemen to proclaim a distinct criminal statute for his Italian territories, as the Austrian statute was considered too mild for the temper of the Italians, he refused, saying that the spread of education and civilisation would render his code as fit for Lombardy as it was for the hereditary states. "When all the people shall be able to read," said he, "they will stab no longer." Events since 1848 have blunted the point of this hopeful observation.

The Austrian civil and criminal codes are in force in the Lombardo-Venetian kingdom. According to this system trials are not public. Every species of torture has been abolished since the reign of Joseph II. The Austrian penal code also abolished the penalty of confiscation, which the Code Napoleon retained in certain cases—among others, against emigrants; but since 1849 the Austrian government has violated its own code by confiscating the property of the emigrants settled in Sardinia. By the Austrian law, the property of a state prisoner or political emigrant who will not surrender himself for trial is placed in the hands of trustees, who administer it for the benefit of his family, creditors, and heirs; and it is restored to him on his return, or to his next of kin after his death if he dies an emigrant.

Religious toleration is guaranteed by the Austrian laws. The Jews have synagogues at Venice, Mantua, Padua, and other towns.

CHOC. DIV. VOL. III.

The Italian regiments are—eight of infantry of three battalions each, one battalion of light infantry, and one regiment of cavalry. These are numbered among the other regiments of the Austrian army, and, like them, are called to do duty in any part of the empire. There are besides two garrison battalions at Mantua and Venice; and a corps of gendarmerie for the police service. There is a military college and a school of artillery at Milan. The principal station of the Austrian navy is at Venice, where there is a college for cadets, also a corps of marines, and a battalion of naval artillery. [AUSTRIA, vol. I., col. 734.] In all, the number of the military furnished by the kingdom in time of peace amounts to about 36,000 men. There are eight fortresses in the kingdom, namely, Mantua, which is the strongest of all, Peschiera, Legnago, Osopo, Pizzighetton, Rocca d'Anfo, Palma Nova, and Venice. Since the late rebellion Verona has been greatly strengthened, the walls being built in the Cyclopean style. The Austrian troops garrison also, conformably to treaties, three frontier places belonging to neighbouring states, namely, Piacenza in the duchy of Parma, and Ferrara and Comacchio in the Papal States. The military head-quarters is stationed at Verona.

The hierarchy consists of two archbishops, of Milan and Venice, the latter of whom has the rank of patriarch, and 18 bishops. The parishes number 4483, and the clerical seminaries 20.

The judiciary in ordinary times consists of a tribunal of first instance, both for civil and criminal matters, in every head town of a province; of two courts of appeal, one at Milan and the other at Venice; and lastly, of a supreme court for the whole kingdom, called the Senate, which sits at Verona. Two commercial courts are established, one at Milan and the other at Venice. In each of the smaller towns is a Pretore, or inferior judge.

The Lombardo-Venetian kingdom is generally one of the most fertile countries of Europe; and the industry of the inhabitants and the extensive system of irrigation increase the natural fertility of the soil.

The numerous rivers which come from the Alps are perennial, and the fields of Lombardy never appear in that parched condition which those of southern Italy, and of many parts of Spain and Portugal, exhibit in summer. The most fertile provinces of the kingdom are those of Lombardy proper, and those of Padua, Treviso, Vicenza, Verona, and Friuli, in the Venetian territory. The poorest provinces are Sondrio or Valtellina, and Belluno.

Lombardy proper produces in abundance everything that is necessary for the sustenance of its population, corn, wine, rice, fruits, cheese, and excellent meat. The two principal articles of exportation are silk and rice. The districts in which the rice is cultivated are the low flats of the provinces of Mantua, Lodi-e-Crema, Cremona, and part of that of Milan, as well as the provinces of Padua and Rovigo. The cultivation of rice, which requires the fields to be laid permanently under water for a certain period, is considered by many as productive of diseases among the peasantry. The other articles of exportation are cheese, especially from Lodi, and hemp, which is cultivated in the provinces of Padua, Venice, and Rovigo. Salt is imported from Istria, Parma, and Sicily.

The principal manufactures, besides those of silk, are glass, especially at Venice, paper, ornamental works in bronze, and straw hats. There are also establishments for spinning cotton, and other minor works. Lombardy is essentially an agricultural country, and receives most of the manufactured goods which it uses from other parts of the Austrian empire. The bookselling and publishing trade, although subject to the censorship, was until lately more flourishing at Milan than in all the rest of Italy put together. About 1000 new works of every description were published annually throughout the kingdom. The journals published in the Lombardo-Venetian kingdom amounted to nearly 40; but it is needless to say that under the military government which has lately prevailed the greater number of these have been suppressed. Milan and Venice have each an academy of the fine arts, and Milan has also a 'conservatorio,' or college for musical pupils.

The public charitable establishments, hospitals, orphan and foundling asylums, houses of industry, 'monti di pietà,' &c., in the whole kingdom, are to the number of 88.

The taxes paid by the kingdom amount in ordinary times to about three millions and a half sterling, and the sources of taxation have remained for the most part the same as they were under the French administration, but the respective burdens have been somewhat alleviated. The tax which the French government had put on those who exercised the liberal professions has been abolished, and a cheap postage has been established. Since the late rebellion the provinces have had to pay more than one forced loan.

Lombardy takes its name from the *Longobardi*, a nation of ancient Germany, mentioned by Tacitus ('German,' 40) as a tribe of the Suevi: he describes them as few in number, but secured by their bravery against their more powerful neighbours. It appears that they lived east of the Elbe, towards the shores of the Baltic Sea. Warnefridus says that they came originally from Scandinavia, and that their name was Viniles, which was afterwards changed into that of Langobards, from two Teutonic words, 'lang' and 'bart,' 'long-beards.' The Longobards joined Arminius against Maroboduus, king of the Suevi. (Tacit., 'Annal,' ii. 46.)

During the 3d and 4th centuries of our era the Longobards followed the general movement of the northern nations towards the south, and came to the banks of the Danube, where we find them acting as allies of Odoacer, king of Italy, whose dominion extended also over Noricum, and bordered on the region then occupied by the Longobarda. The Longobards afterwards totally defeated and almost exterminated the Heruli; and about the middle of the 6th century they occupied part of Pannonia, under their king Audoin. Here they came in contact with the Gepids, a nation settled in Dacia, on the borders of the Eastern empire, and which the Longobards, with the assistance of the Avari, a tribe of the Hunni, totally defeated.

In the year 568 Alboin crossed the Julian Alps, near Forum Julii, and led the Longobards to the conquest of the plains of North Italy, which have ever since been called by the name of the conquerors. Pavia became the capital of the Longobards. After Alboin's death the Longobards elected Clefo as his successor, A.D. 573; but on his being murdered by a servant, eighteen months after, the nation became divided among a number of dukes, a duke of Ticino, or Pavia, a duke of Friuli, a duke of Trento, a duke of Bergamo, a duke of Brescia, besides thirty dukes in as many other cities. Under these dukes the Longobards penetrated south of the Apennines, and conquered Tuscany, Liguria, Umbria, and part of Campania. The Byzantine emperors retained Ravenna, Rome and its duchy, Padua, Genoa, Apulia, Calabria, Naples, and the southern extremity of Italy with Sicily. After ten years of this disorderly dominion of the dukes, the Longobards chose for their king Autaris, son of Clefo, 586—592. His reign was prosperous: he repulsed the attacks of the Franks on one side, and of the Byzantines on the other; and he carried his arms into southern Italy, where he founded the dukedom of Benevento. After the death of Autaris, his widow Theodolinda, who was a daughter of the king of Boiaria, or Bavaria, married Agilulfus, duke of Turin, who was acknowledged by the Longobards as their king. Agilulfus, through the persuasion of his wife, became a Catholic, most of his countrymen being Arians, and made peace with Gregory the Great, bishop of Rome. Theodolinda built the church and palace of Monza, where was deposited the iron-crown (so called from a nail, said to be from the cross of our Saviour, which is riveted inside of the crown), which has served ever since for the coronation of the kings of Lombardy. Agilulfus took Cremona, Padua, and other towns which still sided with the Eastern Emperor. Agilulfus died in 615, and was succeeded by his son Adaloaldus, under the regency of Theodolinda. Adaloaldus, ten years after, was deposed, and Ariovaldus was elected in his stead. Ariovaldus reigned twelve years, and died A.D. 636. It was under his reign that Columbanus, the Irish monk and missionary, after passing through Helvetia and Rhaetia, came into Italy and founded the monastery of Bobbio, near the Ligurian Apennines, which afterwards became celebrated for its wealth and its collection of manuscripts.

After the death of Ariovaldus, Rothar, son-in-law of Agilulfus, was elected in his place. Rothar was the first who made a compilation of the unwritten laws and usages of the Longobards, and published them in a kind of barbarous Latin, under the name of 'Edict,' with his own preface and observations. This edict drew a marked distinction between the Longobards and the Roman or subject population, which continued to live under the Roman law. By a subsequent law of King Liutprand, who made considerable additions to the edict of Rothar, it was enacted that if a Roman married a Longobard woman, the children born from such a marriage were Roman, and followed the condition of the father. Pecuniary compensation was awarded for most personal injuries. Adultery and theft were punished with death. The judges were enjoined to decide causes within a limited number of days. Duelling was tolerated, though its practice was characterised by Liutprand as absurd.

With regard to the political system of the Longobards, it may be considered as a federation under an elective king, who was the chief of the nation. When Autaris was elected king, the dukes in a general assembly agreed to give one half of their revenues for the support of the royal office and state, but in other respects they acted as sovereigns in their respective duchies, each making wars and conquests on his own account, as appears by the chronicles and also by the letters of Pope Gregory the Great. The orders and enactments of the king required the sanction of the people, or army (for the two words are used as synonymous) of the Longobards. The king was supreme judge and commander, but not absolute legislator. These relations were maintained with tolerable fairness among the Longobards themselves, but the 'Roman' or Italian subjects of the Longobards were looked upon as a conquered and subject race. They had neither the same political nor civil rights as the conquerors; they had no voice in their assemblies; they had no appeal against the caprice of their Longobard rulers; they lived among themselves according to the Roman law, but in any affairs between them and the Longobards they were judged by Longobard judges and according to the Longobard law.

Rothar, having conquered the towns of the Thuscia Lunensis, or the Riviera of Genoa, and defeated the troops of the exarch of Ravenna, died A.D. 653, and was succeeded by his son Rodoaldus, who after five years' reign was killed by a Longobard for having seduced his wife. Aripertus, a nephew of queen Theodolinda, being elected in his place, reigned till the year 661, when he died, and his two sons Pertharitus and Godebertus divided the supreme authority between them.

Godebertus however conspired against his brother, who was obliged to run away; but Godebertus himself was killed by Grimoaldus, a chief from Benevento, who took possession of the crown, A.D. 662. Grimoaldus was an able and warlike usurper. He defeated the Franks, who had entered Italy, and had advanced to near Asti. Shortly after, Constans II, emperor of Constantinople, and grandson of Heraclius, having landed with an army at Tarentum with the intention of recovering Italy from the Longobards, took Luceria, and laid siege to Benevento, of which Romualdus, son of Grimoaldus, was duke. Grimoaldus marched with an army to the assistance of his son, and obliged Constans to raise the siege and retire to Naples. Under the reign of Grimoaldus, Aseck, a chief of Bulgarians, emigrated to Italy with all his tribe, and put himself under the protection of the Longobard king. The king sent him to his son the duke of Benevento, who assigned to him the towns and territories of Boianum, Sæpinum, Aesernia, and other places in the country of Samnium, which had remained desolate in consequence of the wars. Warnefridus (b. v. ch. 29) adds that the descendants of those Bulgarians continued there in his days, "and although they spoke Latin, had not lost the use of the language of their ancestors;" a remarkable passage, which shows that the general language of Italy in the time of Charlemagne was still the Latin, and was adopted by the northern tribes which settled in the country.

Grimoaldus died at Pavia, A.D. 671. After his death the exile Pertharitus, who had wandered as far as England, returned, and by universal consent resumed the crown. Pertharitus reigned seventeen years, and died in 688, leaving his son Cunipertus, who had married Ermelinda, an Anglo-Saxon lady. Cunipertus was driven away by Alachis, duke of Tarentum, but he returned, defeated and killed Alachis, and resumed the crown. In the meantime Romualdus, duke of Benevento, took Tarentum and all the neighbouring country from the Byzantines, and annexed it to his dominions. Cunipertus died in the year 700. His infant son Limpertus was put to death by Aripertus, duke of Turin, who assumed the crown. Asprandus, whom Cunipertus had appointed guardian to his son, fled into Boiaria with Liutprand, the son of Asprandus. Nine years afterwards they returned at the head of an army of Bavarians, and after a battle, in which Aripertus was drowned in attempting to cross the Ticinus, Asprandus was acknowledged king of the Longobards; he died soon after, and his son Liutprandus succeeded him by common consent, A.D. 713.

Liutprandus reigned thirty-two years. He was the most illustrious of the Longobard kings. He took Ravenna and the Pentapolis, but afterwards made peace with the Byzantines and restored Ravenna, was friendly with the Pope Zacharias and the people of Rome, who at that time were alienated from the Eastern emperors in consequence of the schism of the Iconoclasts; and he was also friendly with Charles Martel, to whom he sent assistance against the Saracens, who had entered Provence in the year 739. Liutprand raised many churches and other buildings. His laws are joined to those of his predecessors Rothar and Grimoald, in the collection of the laws of the Longobards. Liutprand died in 744, and was succeeded by his nephew Hildebrand, who was deposed a few months after for his misconduct, when Ratchis, duke of Friuli, was elected king. Ratchis, after five years' reign, voluntarily renounced the crown, and went to Rome, and afterwards to Monte Casino, where he became a monk. Ratchis was succeeded by his brother Astolphus. Astolphus took Ravenna in 751, and put an end to the dominion of the Exarchs, attacked the duchy of Rome, and aimed at subjecting that city also to his authority. Pepin, king of the Franks, came twice to the assistance of the pope, and each time defeated Astolphus near Pavia, and obliged him to give up Ravenna, the Pentapolis, and other towns, which Pepin bestowed upon the Roman see. Astolphus died in 756, and Desiderius, a Longobard duke, was elected his successor. Desiderius renewed the quarrel of Astolphus with the pope, and not only seized the towns given up by Astolphus, but likewise devastated the duchy of Rome. The Pope Adrian I. applied to Charlemagne for assistance. Charlemagne came into Italy A.D. 774, defeated Desiderius, and carried him prisoner into France, where he became a monk. Adelchis, son of Desiderius, fled to Constantinople, from whence he returned to Italy with some troops, and fell in battle. The kingdom of the Longobards ended with Desiderius, and the Longobard nation and its territories became subject to Charlemagne.

The overthrow of the kingdom of the Longobards by Charlemagne did not destroy the political existence of that people. They retained their laws and institutions, their property, and their numerous and powerful nobility; they continued a nation and a kingdom, subject however to the monarchy of the Franks. At Pavia, which was then the capital of the country, the successors of Charlemagne were crowned with the iron crown of Lombardy as kings of Italy, previous to their coronation at Rome as emperors of the West and kings of the Romans. The Longobard code continued in force for the Longobard population, while the descendants of the ancient inhabitants, or Romans, as they were called, lived under the Roman law. The name of Lombardy was retained, but only for a part of the former dominions of the Longobards: the duchies of Spoleto, Friuli, Tuscany, and Benevento, although some of them continued to be ruled by Longobard dynasties, were not included in the general name.

The feudal system, according to which the possession of land was

the pay of the soldier, and constituted his liability to military service and feudal duties, was more fully developed under the successors of Charlemagne, when every duke, count, or marquis divided and subdivided the land belonging to him among numerous subfeudatories called vassors, who swore fealty and homage to him, and were bound to follow him to the war.

About the 9th century, the towns began to rebuild their walls, which had been razed by the barbarians, in order to defend themselves against the incursions of the Hungarians, Saracens, and other predatory bands. The towns had retained the ancient system of curias, or municipalities, and the citizens elected their own magistrates. The distinction between Longobard and Roman became gradually obliterated among the people; they became all Italians or Lombards together.

After the deposition of Charles the Fat in 888, the crown of Italy was disputed for about 70 years among a succession of pretenders, Italians and Burgundians, until Otho I. of Saxony seized it with a firm hand, and was crowned at Rome by the pope, A.D. 961. Otho and his successors resided chiefly in Germany; they came now and then to Italy at the head of armies, when they generally pitched their tents and held their sovereign court in the plain of Roncaglia near Piacenza, whither all the great feudatories of Lombardy and other parts of Italy, and the magistrates of the towns, were summoned to pay their homage, and to listen to the sovereign's decisions and 'placita.' But with the emperor's return to Germany the great vassals retired to their castles, and the magistrates and bishops returned to their cities. Each town and district was in a manner independent of every other, all acknowledging allegiance to a distant sovereign. A veil covers the first period of the history of the municipal emancipation of the towns of Lombardy; it seems to have grown silently under the reign of Otho and his successors, the citizens slowly and gradually appropriating to themselves the prerogatives of the sovereign, and not wishing to attract attention to their encroachments.

Towards the middle of the 11th century we find discord first breaking out in Milan and other cities between the various classes of the population. The vassors, or inferior nobles, of whom there were several gradations, rose in arms against the great nobles, at the head of whom was the archbishop Heribert. The archbishop defeated them and drove them out of Milan, but being joined by the malcontents from the neighbouring towns, they appealed to the emperor Conrad, who came to Italy in 1036, and deposed and imprisoned the archbishop. Heribert soon made his escape, and returned to Milan, where he was joyfully received by the clergy, the nobles, and the people, and in order to defend himself against the imperial forces he called to arms the people of every district of the town, without distinction of condition. Till this time the use of arms had been a privilege of the nobles. On this occasion Heribert introduced the caroccio, or cart drawn by oxen, in imitation of the ark of the Israelites, with the great banner of the city fixed upon it, which was drawn in the midst of the militia, and upon which stood the leaders, who from a raised platform gave their directions during the fight. By degrees every city adopted the caroccio, which became a kind of palladium, and the emblem of popular independence. Thus it was that the episcopal government of Milan and other cities prepared the way for their municipal liberty. In 1041 the plebeians, or burghers, headed by Lanzo, himself a noble, rose against the class of nobles, who were obliged to leave with their families. The archbishop Heribert, who this time had taken no part in the quarrel, emigrated with the rest. The nobles, being joined by others, blockaded Milan, and reduced the citizens to famine, when after three years Lanzo managed to bring about a reconciliation, and the nobles returned.

In 1059 began the long struggle at Milan and in the rest of Lombardy on account of the married clergy. The church of Milan had its peculiar liturgy and system of discipline (called Ambrosian from its great bishop St. Ambrose), according to which married men could be ordained priests, and could continue to live with their wives, though an unmarried priest could not marry after his ordination. This quarrel agitated the city till the time of Pope Gregory VII., when the archbishops of Milan became gradually dependent on Rome, received the pallium from the Pope, and swore obedience to him. As a consequence of this the clergy became subjected to the Roman discipline, and the regulation was enforced of not admitting any persons to orders except unmarried men.

In the great contest of the investitures, Milan, Lodi, Cremona, and other Lombard cities were at first swayed by the nobility, who were mostly favourable to the emperor, but at last in the decline of the imperial authority they joined the Countess Matilda and her second husband Guelf, with whom they formed an alliance. It was during this long struggle that the cities really established their independence, acknowledging no longer the imperial *missi*, or vicars. The citizens then began to elect a certain number of magistrates, whom they styled consuls, who administered justice and commanded the militia; they were chosen from three orders, namely, captains, or nobles of the first rank, vassors, and burghers. Laws and written constitutions were few in those times, and the consuls enforced the customs and precedents, which were collected in 1216 in a kind of code, and published at Milan and other cities. The war of the investitures

being over, the cities continued to acknowledge, at least nominally, the emperor's sovereignty over Italy.

The Lombard cities having now secured their municipal liberties began to fight among themselves. Milan and Pavia were rivals of old; and Cremona, which was the third great city of Lombardy, was also jealous of Milan; but before they turned their arms against one another they began by attacking their weaker neighbours: Cremona attacked Crema, Pavia attacked Tortona, and Milan attacked Lodi and Novara. At last Lombardy became divided between two parties: that of which Milan was the head included Brescia, Crema, and Tortona; and the other consisted of Pavia and Cremona, Lodi and Como.

In 1107 the Milanese commenced war upon the people of Lodi, destroyed their harvests for four consecutive years, and at last, in June 1111, took the town, killed many of the inhabitants, plundered the rest, razed their houses, and drove the survivors to the neighbouring villages. The spot is still known by the name of Lodi-Vecchio. The people of Pavia on their side took Tortona and burnt it. In 1118 the Milanese began a furious war against Como, which in 1127 was obliged to submit to pay tribute to Milan, and the walls of their town were razed; but in the year 1154 Frederick of Hohenstaufen crossed the Alps, assumed the iron crown of Italy at Pavia, and afterwards the imperial crown at Rome. He ordered the Milanese to let their neighbours of Lodi live in peace, and allow them to rebuild their town. The Milanese with scorn refused to obey, and the war began between the emperor, joined by the militia of Pavia and Cremona, on one side, and the Milanese and their allies on the other. The war lasted several years, and horrid cruelties were committed by both parties. At last Milan was obliged to surrender, in March 1162; the inhabitants were ordered to leave the town with all they could carry, after which Milan was sentenced to be treated as it had treated Lodi—to be razed to the ground; and the people of Cremona, Pavia, Lodi, and Como readily executed the sentence.

Frederick having returned to Germany, his officers and podestas treated the Milanese and other Lombards with the most unsparring rigour, and oppressed them in every way. The emperor was applied to for redress, but in vain. At last a general spirit pervaded the cities of Lombardy, and extended to those of the marches of Verona and Treviso beyond the Adige. In April 1167 a secret conference was held by deputies of the various cities in the convent of Pontida, in the territory of Bergamo; and it was resolved to form a league for the common protection, and to assist the Milanese in rebuilding their city. Pope Alexander III. declared himself protector of the Lombard league, which consisted of fifteen cities—Cremona, Bergamo, Brescia, Ferrara, Bologna, Modena, Milan, Parma, Piacenza, Verona, Vicenza, Padua, Venice, Treviso, and Lodi, which was obliged to follow the rest. The league was afterwards joined by Ravenna, Rimini, Reggio, Bobbio, Tortona, Vercelli, Mantua, and Novara. Pavia only remained attached to the emperor's party, and as the Marquis of Montferrat took the same side, the allies, after rebuilding Milan founded a new town on the borders of Montferrat, which they called *Alessandria*, from the name of their protector. The towns reestablished their consular governments, and a kind of federal diet was assembled at Modena, composed of consuls of the various cities, who were styled *rectors* of the league. But this appearance of a federal union lasted only as long as the contest with Frederick, after which it dissolved itself. The league however carried its purpose bravely for the time. After several campaigns the Lombard militia completely defeated the Imperial army at Legnano in May 1176, took the emperor's camp, and Frederick was obliged to escape alone to Pavia. This led to a truce, and afterwards to the peace of Constance in 1183. By this celebrated treaty, which served for ages after as an authority for regulating questions which arose between the German empire and the North Italian states, the cities were confirmed in their independent administration; they had the right of declaring war, of coining, in short all the attributes of sovereignty, under an acknowledgment however of the emperor as king of Italy and their suzerain.

The glorious struggle of the Lombards for their independence being terminated they soon fell again to quarrelling among themselves. Several of the towns, in order to check their internal factions, adopted the institution of the Podesta, which Frederick had first introduced. This officer was a kind of dictator; he was supreme judge, assisted however by lawyers or assessors, and had the right of inflicting capital punishment. He was always chosen from the territory of another town, and from among the nobility, and changed generally every year. It was imagined that by choosing a stranger impartiality might be better secured. Milan chose in 1186 for its podesta Uberto Visconti, of Piacenza. The consuls still remained as magistrates of various kinds. In 1198 a fresh rupture broke out at Milan between the nobles and the 'popolani,' or burghers. The latter insisted on having their separate councils; the wealthier merchants, and the vassors, or inferior nobles, also had each their own council. Each of these councils ('*credenze*') had its consuls, who made edicts for those under their respective jurisdiction; but the four *credenze*, and those they represented generally, resolved themselves into two parties, the nobles and the popolani. The nobles were haughty and overbearing towards others and quarrelsome among themselves; and the burghers on their part as they became wealthier would no longer brook their assumed superiority. The consequence was that the

nobles were driven out of Milan and Brescia; but they returned, being supported by their friends from Cremona and other places. Reggio, Bologna, and other cities were likewise distracted. Besides these internal feuds there was the old rivalry among the towns, which revived after their united contests with the emperor had terminated. The interminable list of these petty wars, which is given by Bossi and other historians, without any intelligible account of the origin of most of them, excites a feeling of indignation mixed with contempt; people were killed, property was destroyed, and families were made unhappy by these absurd feuds.

It has been said that notwithstanding all these feuds the Italian free cities prospered; the real truth is that some of them flourished at the expense of the others. It is observed that a number of towns which are mentioned as being of importance in the 11th century, had disappeared in the 13th. We read of the glory and wealth of Milan and Florence, but we take no account of the depopulation and calamities of Lodi and of Pisa. Several causes contributed to keep up the wealth of the great Lombard cities during the middle ages; the extraordinary fertility of their territory, their manufactures in which they were unrivalled in Europe, and the practice of their citizens of lending money at high interest throughout Europe, whence the name of Lombard became synonymous with that of banker as well as usurer. But however flourishing the cities might be, the subject country had little participation in their splendour, and the greatest sufferers in the continual wars between them were the unfortunate country people, who in all these republics had no political rights, had no voice in these quarrels, but were doomed to suffer from both parties, who treated them like dogs.

In the contests between the popes and Frederic II. the Lombard cities were divided: Milan, Brescia, Piacenza, and Modena were against the emperor; Cremona, Parma, Modena, Reggio, were for him. But his most effective ally was Ecelino da Romano, whom the Veronese had made their podesta. In 1237 Frederick attacked the Milanese and their allies at Cortenova, near the river Oglio, and completely defeated them. Still the emperor was prevented from pursuing his advantage, and Milan was saved. A desultory war continued till his death.

Meantime renewed affrays between the nobles and the burghers of Milan induced the latter, who were dissatisfied with the podesta for favouring the nobles, to have a distinct podesta, or magistrate for themselves, as they had already a separate credenza and separate consuls. They chose for this office Pagano della Torre, lord of Valsesina, on whose death the people chose his nephew Martino for their chief magistrate, with the title of 'Elder,' 'Anziano della-Credenza,' for an indefinite time. Martino expelled Paolo di Soresina, the podesta of the nobles; the latter then had recourse to Ecelino da Romano. Ecelino advanced towards Milan with a splendid army, crossed the Adda, but found himself hemmed in by enemies on all sides, and in attempting a retreat was wounded and taken prisoner, and died of his wounds, in October, 1259.

The exiled nobles of Milan still kept the field, and Martino della Torre, unable to reduce them for want of cavalry, engaged Pelavicino (a former friend of Ecelino) and his troops in the service of Milan, with the title of captain-general for five years and a pension. This was the beginning of the practice so prevalent afterwards of hiring mercenary troops, or condottieri. The Milanese emigrants were besieged in the castle of Tabiago, near Brianza, where having exhausted their provisions and the water of the wells, and their horses having died, they surrendered at discretion. They were taken to Milan in chains, and confined in iron cages exposed to public view, and kept there for years.

In 1260 Martino della Torre was chosen by the towns of Lodi and Novara as their 'signore,' or lord, which in those small communities implied a more absolute authority than that which he had at Milan. The fashion spread; Cremona chose for its lord the marquis Pelavicino; Verona chose Martino della Scala; Mantua, the Count San Bonifazio; Ferrara, the Marquis of Este, &c. The desire of tranquillity and repose from factions induced the citizens to submit to a chief who could make himself feared, and they chiefly required of him to punish quickly and severely those who troubled the public peace. They preferred summary and often brutal justice to anarchy.

After the death of Archbishop Perego, Pope Alexander IV., named to the see the canon Otho Visconti, of a noble and powerful family, who had been exiled with the other nobles some years before. But as the Della Torre family opposed his coming to Milan, considering him as an emigrant, the archbishop elect continued for several years to remain on the estates of his family near the Lake of Como, where he collected many of the disaffected, with whom he carried on a sort of predatory warfare against Milan. Martino della Torre having died in 1263, his brother Philip succeeded him as lord of Milan, Lodi, and Novara, to which he added Como, Vercelli, and Bergamo, which towns elected him as their lord. Thus the foundation was laid of that consolidation of Lombardy into one state which in after times was known by the name of the duchy of Milan. Philip della Torre died in 1265, and was succeeded by his nephew Napoleone della Torre.

After the death of Pope Gregory X. in 1276, Archbishop Visconti took possession of Como and Lecco, and at last marched against Milan. Napoleone della Torre came out to meet him, but was surprised and taken prisoner, and he and his relations were confined

in cages, after the example set by his uncle Martino. The people of Milan, hearing of the defeat, rose against the adherents of the Torriani, pelted them with stones, and drove them out of the city. A deputation of citizens was sent to the archbishop Visconti, whom they saluted as 'Perpetual Lord of Milan.' This occurred in January, 1277.

The power of the Visconti, though in fact hereditary, was at first, at least in form, dependent on the sanction of the people, who, at the death of the actual lord, elected his successor. The council of the elders continued to discuss the laws which the lord proposed, to levy the taxes, superintend the expenditure, and to exercise the other functions of a legislature. But gradually, and especially from the time of Bernabò Visconti, the lord took upon himself to issue his own laws or statutes, to impose taxes, let to farm the revenue, make war, and, in short, exercise all the acts of sovereignty. In the 14th century the Visconti ranked among the most powerful Italian princes. They extended their dominions not only over Lombardy proper, north of the Po, but over part of Montferrat, including Asti, Alessandria, Bobbio, Tortona, and also to Parma, Piacenza, Bologna, and other towns south of the Po. Gian Galeazzo Visconti received in 1395, from the Emperor Wenceslas, the title of 'Duke of Milan and Count of Pavia.' The charter of investiture included 26 towns and their territories, extending from the hills of Montferrat to the lagoons of Venice. Besides these he obtained also possession by force or fraud of Genoa, Lucca, Pisa, Siena, Perugia, Bologna, and other parts of the Romagna. Florence alone stood in his way, and he was preparing to attack it with all his forces, when he died of the plague, in September, 1402. In the following century the duchy of Milan became circumscribed within narrower limits. The Venetians took the three provinces of Brescia, Bergamo, and Crema, between the Mincio and the Adda, which last river became the boundary of the two states. The Swiss took possession of Bellinzona, and other valleys north of the Lago Maggiore. The duchy of Milan likewise lost its conquests south of the Po. On the side of Piedmont its boundary was the Sesia, including within its limits the extensive province of Novara, which now forms part of the Sardinian territories. The duchy of Milan therefore, as possessed by the later Visconti and their successors the Sforza, from whom it came into possession of Charles V., extended about 70 miles north to south from the Alps to the Po, and 60 miles east to west. Its principal cities were Milan, Pavia, and Cremona. Mantua formed a separate duchy until the war of the Spanish succession, when it was taken possession of by the house of Austria, and annexed to the duchy of Milan. These two duchies constituted Lombardy proper.

The duchy of Milan, during a century and a half that it remained under the Spanish branch of the house of Austria, declined greatly from its former prosperity. With its transfer to the German branch of the house of Austria, Lombardy began to recover. But it was under the reign of Maria Theresa that improvements of every sort proceeded with rapid strides, and the duchy of Milan assumed a new aspect. The population also increased rapidly. In 1749 it was 900,000, and in 1770 it was 1,130,000. Joseph II. pursued the career of improvement in Lombardy. The consequence of all this was, that the people of Lombardy grew attached to the Austrian way. Austria continued to govern these united states till Bonaparte's invasion of 1796. By the peace of Campoformio of the following year Austria gave up Milan and Mantua, and received as a compensation for them and Belgium, which was also taken from her by the French, the territory of the republic of Venice, which Bonaparte had overthrown. Milan and Mantua, or Lombardy Proper, were constituted first as a republic dependent on France, and afterwards into a kingdom, of which Napoleon I. made himself king in 1805. At the close of that year, in consequence of the campaign of Austerlitz, Napoleon I. retook from Austria the Venetian territories, which he annexed to Lombardy, styling the whole by the name of the kingdom of Italy, though this new kingdom did not comprise above one-third of Italy. He added to it the state of Modena, the Legations, and lastly in 1808 the Papal Marches. The whole population of this kingdom was about 6,000,000. In 1814 the Austrian and allied forces occupied the kingdom of Italy, and the emperor Francis again took possession of his former territories of Milan and Mantua, and also of Venice, the latter as a compensation for his loss of Belgium; and this measure was confirmed by the Congress of Vienna. The districts south of the Po were restored to their former sovereigns; Modena to its duke, and the Legations and Marches to the Pope. The emperor Francis then constituted the territory of Milan, Mantua, and Venice into a kingdom, styled Lombardo-Veneto, which was annexed to the imperial crown of Austria.

Making every allowance for the political aspirations and disappointed national feelings of the Italians, who regret being dependent on a foreign power, it may be affirmed with safety that the Lombardo-Venetian kingdom was previous to the outbreak of 1848 in a thriving and progressive condition, and that it was the best administered country in Italy, excepting perhaps Tuscany. An outline of the history of the late insurrection, and of the war with Sardinia, is given in the article AUSTRIA. The provinces and chief towns of the two crownlands are noticed in separated articles. [See ITALY in SUPPLEMENT.]

LOMBEZ. [GERA.]

LOMBOK, an island of the Indian Archipelago, lying between 8°

and 9° S. lat., 116° and 117° E. long., has the island of Bali on the west and that of Sumbhawa on the east. Its mean length and breadth are respectively 53 miles and 45 miles. The surface of the island is mountainous. Two ranges run along the north and south coasts, inclosing a well-watered plain laid out in rice-fields. In the northern range is a volcanic peak above 12,000 feet high. On the slopes of the mountains maize and coffee are grown. The island is well cultivated, and the whole surface is covered with verdure. It is abundantly supplied with springs of water which feed several small streams, some of which fall into the sea on the west side, where there is a commodious harbour named Ampanam. Trading ships and whalers resort to Ampanam for provisions, procuring from the natives abundant supplies of oxen, swine, goats, poultry, and vegetables. The chief town of the island is named Mataram. There is a town named Lalm-Hadje on the east coast, and a good roadstead at Pejow. The inhabitants, who numbered about 305,000 in 1852, carry on a brisk trade with Java and Borneo: their chief food is rice, of which they export large quantities. Lombok was, and perhaps is still, subject to the sultan of Bali, who may now be considered to be a dependent of the Dutch. [BALL.] The Dutch claim Lombok as one of their colonial possessions in the east. The ponies of Lombok are in high repute in the east.

LOMOND, LOCH, the most celebrated of the Scottish lakes, extends between 56° and 56° 20' N. lat., 4° 30' and 4° 42' W. long., in a direction from N. by W. to S. by E. about 24 miles, and is bounded E. by the counties of Stirling and Perth, and W. by Dumbartonshire. The southern portion, which is nearly one-third of its length, is from 4 to 7 miles wide, and contains several well-wooded islands. The whole number of islands is about thirty. North of Luss in Dumbartonshire the lake becomes gradually narrower. It covers a surface of 45 square miles. Its general depth is about 20 fathoms, but in some places its depth is 120 fathoms. The surface is 22 feet above the level of the sea. Its waters are supplied by a great number of small rivers, which descend from the adjacent mountains; the Endrick is the only considerable stream which falls into it. [STIRLINGSHIRE.] Loch Lomond is famous for the grand and beautiful scenery which its banks exhibit. The country around the southern portion of the lake is hilly, but fertile, rich, and well cultivated: it is dotted with gentlemen's seats, surrounded with fine natural woods and plantations, while the lake gives a peculiar charm to the scenery. Where the lake begins to narrow, Ben Lomond on the eastern bank raises its head 3197 feet above the sea. The Arrochar hills rise on the other side with a steep acclivity and with bare and rocky summits to nearly the same elevation as Ben Lomond. The northern extremity of the lake is completely inclosed by high, steep, rocky, and dark mountain masses.

LONATO. [BRESCIA.]

LONDON, the metropolis of the British Empire, mostly in the counties of Middlesex and Surrey, stands on both sides of the Thames, about 60 miles W. from the sea, by the course of the river to the Nore Light, or about 40 miles direct distance. The centre of the dome of St. Paul's Cathedral is in 51° 30' 47.59" N. lat., 5' 48.2" W. long. The tides influence the Thames as high as Teddington, and steam-boats ascend it to Hampton Court, but ship-navigation terminates below London Bridge. At London Bridge the tide flows 5 hours and ebbs 7 hours. The velocity upwards on an average is about 3 miles an hour; downwards about 3½ miles an hour. The rise of the tide at the London Docks, on an average of spring-tides, is 18 feet; neap-tides is 14 feet. The width of the Thames, between London Bridge and Westminster Bridge, varies from about 300 to 400 yards; and in this part of its course the river makes a great bend, the direction of Blackfriars Bridge being north and south, while Westminster Bridge is nearly west and east, and Waterloo Bridge, which is intermediate, north-west and south-east. The volume of the Thames, immediately above the tidal influence, has been calculated to be equal to about 1337 cubic feet per second, or 115,516,800 cubic feet per day.

London stands on alluvial deposits, consisting of beds of clay and gravel, beneath which is the geological formation denominated the London Clay. The gravel-beds are thickest and most numerous on the north side of the river, and convey water in considerable abundance, especially in the city, where there are many springs which would rise to the surface, but they are now nearly all covered in, and supply water to pumps. For manufacturing purposes wells are sunk to the depth of from 200 to 300 feet, and in some places deeper, and a large supply of water is thus obtained. The Fleet River, Walbrook, and other smaller streams, which formerly flowed through London, now pass under it in the sewers.

The mean temperature in London is 50.5° Fahr., that of the surrounding country being about 48°. The mean temperature in each month is as follows:—January 36.34° Fahr., February 39.6°, March 42°, April 47.61°, May 55.4°, June 59.36°, July 62.97°, August 62.9°, September 57.7°, October 50.79°, November 42.4°, December 38.71°. The temperature in the summer seldom rises to 80° in the shade, but has been known to reach 96°; it seldom falls in winter to 20° during the day, but has sunk as low as 5° below zero at night. In 1813-14 the Thames was frozen over, so as entirely to stop the navigation above London Bridge, and it has been partially frozen over three or four times since. The mean height of the barometer in London is 29.74 inches; the mean elevation is 30.356 inches; the mean depression is 29.075 inches. The average quantity of rain which

falls in the year is 25 inches. Fogs occasionally occur in the winter, and are sometimes exceedingly dense.

London is the largest city at present existing in the world, and is probably the largest that ever has existed. The left bank of the river slopes gently upwards. The right bank is a uniform flat. As a compact mass of houses the metropolis may be taken as a parallelogram about 6 miles in length and 3¼ miles in width—thus covering an area of 21 square miles. There are besides some continuous lines of houses extending to suburban towns, which are included in the Returns of the Census as a part of the metropolis. The returns for 1851 include in the London district an area of 78,029 acres, or 121.92 square miles, which are equal to a circle of more than 12 miles diameter, and in fact extend in some directions to a distance of 8 miles from St. Paul's Cathedral. Within these limits are included—on the east, Bow and Woolwich; west, Hammersmith; north, Highgate; and south, Herne Hill.

According to the Census of 1851 the population of the metropolis is 2,362,236, of whom 1,106,558 are males, and 1,255,678 are females. The number of houses inhabited is 305,933, which gives 7.721 persons to a house. There are besides 16,643 houses uninhabited, and 4815 building. If all these houses were arranged as closely as they are in the city and liberties of London and the borough of Southwark conjointly, they would cover an area of about 30 square miles. The limits adopted by the late Mr. Rickman, who superintended the population returns from 1801 to 1831 inclusive, comprised 29,350 acres, or 46.64 square miles.

The following is a list of the Registration Districts and Poor-Law Unions of the Metropolis, with the area of each, and population for 1851:—

Registration Districts and Poor-Law Unions of the Metropolis.	Area in Acres.	Population in 1851.
Bermondsey (St. Mary)	688	48,128
Bethnal Green	760	90,193
Camberwell (St. Giles)	4,342	54,667
Chelsea	865	58,538
Clerkenwell (St. James)	380	64,778
George, St., Hanover Square	1,161	73,230
George, St., in-the-East	243	48,376
George, St., Southwark	282	51,824
Giles, St., in-the-Fields, and St. George, Bloomsbury	245	54,214
Greenwich	5,367	99,365
Hackney	3,929	58,429
Hampstead	2,252	11,986
Holborn	196	46,621
Islington (St. Mary)	3,127	95,329
James, St., Westminster	164	36,406
Kensington	7,374	120,004
Lambeth (St. Mary)	4,015	139,325
Lewisham	17,224	34,835
London, City of	434	55,932
London, East	153	44,408
London, West	136	28,790
Luke, St., Old Street	220	54,055
Margaret, St., and St. John, Westminster	917	65,609
Martin, St., in-the-Fields	305	24,640
Marylebone, St.	1,509	157,696
Newington (St. Mary)	624	64,816
Olave, St.	189	19,375
Panorama, St.	2,716	166,956
Poplar	2,918	47,162
Rotherhithe (St. Mary)	886	17,805
Savion's, St.	250	35,731

Total	78,029	2,362,236

The houses of the metropolis, with the exception of public buildings and a few others belonging to clubs, bankers, insurance-offices, and private persons, are built of brick, but many of them are faced with stucco. Nearly all the streets are paved with granite, but a few are macadamised, and some small portions are paved with wood. The streets have a foot-path on each side laid with flags, and divided from the carriage-way by being raised two or three inches above it. The greater part of the houses are covered with tiles, the rest with slates.

The central and oldest portions of the metropolis are the City and Liberties of London, the City of Westminster, and the Borough of Southwark. To these must be added the Metropolitan Boroughs, comprising a number of parishes and districts. We shall first describe the metropolis as consisting of the separate portions of the City and Liberties of London, and the metropolitan boroughs of Westminster, Marylebone, Finsbury, the Tower Hamlets, Southwark, and Lambeth, and then add such statements as relate to the metropolis generally.

City and Liberties of London.—London was one of the chief stations of the Romans, at least in the later times of their occupation of Britain. By Tacitus and other Roman writers it is called Londinium, Londinun.

and Augusta; by the Britons it was called *Lundayne*, and by the older Saxons *Lundenceaster*, 'ceaster' signifying a fortified place. The wall appears, from careful examinations of certain portions, to have been originally built by the Romans, and to have extended from the Tower to Cripplegate, whence it was carried direct south to the Thames. Fitzstephen, writing of the wall in the reign of Henry II., says:—"The wall of the city is high and massive; it has seven gates with double doors, and on the north side towers set at proper distances apart. In like manner London has also walls and towers on the south side; but that great river, the Thames, which abounds in fish, and in which the tide ebbs and flows, running on that side, has in course of time loosened, overthrown, and washed away the walls on that part." Stow, in his 'Survey of London,' describes the circuit of the wall as it existed in his time, specifying the distances from place to place in perches, which are here converted into yards. "From the Tower of London to Aldgate, 451 yards; from Aldgate to Bishopsgate, 470 yards; from Bishopsgate to Cripplegate, 891 yards; from Cripplegate to Aldersgate, 412½ yards; from Aldersgate to Newgate, 363 yards; from Newgate to Ludgate, 231 yards; from Ludgate to the Fleet Dyke, 330 yards; from the Fleet Bridge to the Thames, 385 yards: total, 3536½ yards, or 2 miles 16¼ yards." Excavations which have been made at various times show that the general level of the streets of Roman London was from 15 to 20 feet below the present level; and that Spitalfields and other districts eastward outside the walls were used as a cemetery. Many sepulchral remains have been discovered in these portions. Within the walls have been discovered tessellated pavements, foundations of buildings and other architectural remains, coins, urns, pottery, utensils, tools, and ornaments of a great variety of kinds. A collection of the remains of Roman London has recently been formed under the auspices of the corporation. London does not seem to have extended much beyond the limits of the present city and liberties up to the time of Stow, who, in his 'Survey,' which bears the date of 1603, states that there were then 110 churches in the City and Liberties of London, and only 13 churches in the suburbs, including Westminster and Southwark.

The great fire, which occurred in the year 1666, destroyed almost the whole of London within the walls, including 84 churches. It is stated that the number within the walls was previously 97, so that only 13 escaped. Some of these afterwards became ruinous, and were taken down and rebuilt. Sir Christopher Wren, besides St. Paul's cathedral, rebuilt 53 of the pariah churches, and 34 were never rebuilt, the parishes being respectively united to adjoining parishes which had churches. Other churches have since been taken down, and the parishes united to others in like manner. Thus one was taken down when the present Bank of England was built, one for making the approaches to London Bridge, and two to make room for the present Royal Exchange. The number of parishes is now 109, but the number of the pariah churches is reduced to 70. The area of the whole and the respective areas of the parishes are probably nearly the same as they were in Stow's time. The entire area (including the Inns of Court, most of which are extra-parochial) is 600 acres, or 40 acres less than a square mile.

After the great fire Sir Christopher Wren proposed a plan for rebuilding the city which would have secured a convenient width for the streets, a sufficient degree of regularity, and open places for ventilation and as sites for public structures. Wren's plan was not adopted; and the actual process of rebuilding left only the great lines of thoroughfare of a proper width, while all the rest of the city consisted of narrow streets, lanes, and alleys. Most of Wren's churches are built in the sides or at the angles of these narrow streets and lanes, and in order to fit them for their respective situations they are built in a great variety of ways, of smaller or larger size according to the extent of the respective parishes, and with more or less of solidity and architectural decoration according to the funds allowed him by the pariah authorities. Some are domed, some have towers, some have towers and spires, some have the interior divided by columns into a nave and aisles, and some are simple rectangular buildings of four walls with a small belfry. Several of the towers and spires are eminently beautiful.

The City and Liberties of London comprehend the City of London within the Walls and the City of London without the Walls. London within the Walls is limited to the area formerly inclosed by the walls. London without the Walls extends westward to Holborn Bars and Temple Bar, northward some distance beyond Aldgate and Bishopsgate, eastward to the Minories, and southward over London Bridge so far as to include a portion of ground on the Surrey side of the river. London within the Walls comprises an area of 370 acres, and in 1851 had 7174 houses inhabited, 1127 uninhabited, 17 building, and a population of 54,702. London without the Walls comprises an area of 230 acres, and had 7406 houses inhabited, 332 uninhabited, 12 building, and a population of 73,167: total population, 127,869.

The City and Liberties of London contain a large number of public buildings. We can only notice briefly the most important of them.

The Tower of London lies just outside the city and liberties, but may be noticed here, as it has in reality formed the nucleus of modern London. It consists of a number of structures inclosed within a wall and ditch. The oldest part is the White Tower, which stands nearly in the centre of the quadrangle, and is known to have been built by

Gundulph, bishop of Rochester, for the Conqueror, about the year 1078. The area within the walls of the Tower exceeds 12 acres. The ditch is now dry. Round the quadrangle are several towers which have distinctive names, and at the north-western corner is the church of St. Peter-ad-Vincula. Several of the kings of England occasionally resided in the Tower, and courts, coronation-fêtes and tournaments were held in it. For five or six centuries however it was chiefly used as a state-prison; and in it were retained as captives kings, queens, statesmen, philosophers, and patriots. Many of the prisoners were publicly executed, and not a few were privately tortured and murdered. The horse armoury, Queen Elizabeth's armoury, and the regalia are now exhibited in the Tower. Large portions of the Tower buildings have been rebuilt within the last few years.

St. Paul's cathedral was built by Sir Christopher Wren on the site of a former St. Paul's cathedral, of gothic architecture, which was burnt by the great fire in 1666. Sir Christopher laid the first stone June 21st 1675, and he completed it in 1710, being then in his 78th year. It is the only English cathedral built in the classic style. It is built in the usual form of a cross. The length from east to west is 500 feet; the length of the transept is 285 feet. Over the intersection of the nave and transept rises a dome surmounted by a lantern, globe, and cross. The height to the summit of the cross is generally stated to be 404 feet, but some authorities reduce it to 365 feet from the ground. Two campanile towers, 220 feet high, flank the great western portico. In the interior are many monuments and statues erected in honour of naval and military commanders, and a few in honour of philanthropists, literary men, and artists. In the crypt the remains of Nelson and Wellington are deposited—those of Nelson in the sarcophagus originally prepared by Cardinal Wolsey, and intended by him for his own interment in the chapel at Windsor; those of Wellington lie about 20 feet east of Nelson's.

The Mansion House, the official residence of the Lord Mayor during his year of office, was erected by Dance between 1739 and 1753. The principal room is the Egyptian Hall, in which the civic banquets are held. The justice room, in which the Lord Mayor sits as a police magistrate, is on the left of the principal entrance. The Mansion House is richly furnished, and contains a large supply of valuable plate. The Guildhall was originally built in 1411, but continued to receive additions and decorations till about the commencement of the 16th century. The great fire destroyed all within and near it, but left the walls so far uninjured that they still stand. The Guildhall as it now stands was almost entirely rebuilt in 1789 by Dance. The entrance-porch is a part of the original structure, and the crypt is still in its original state. The Hall is 152 feet in length, 50 feet in breadth, and 55 feet in height. Various courts are held in other apartments of the Guildhall.

The Royal Exchange stands on the site of the old Royal Exchange, with some additional area. It was erected by Mr. Tite. The first stone was laid by Prince Albert, January 17, 1842, and the structure was opened by Queen Victoria, October 28th, 1844. The length from the portico at the west end to the columns of the east entrance is 308 feet; the width of the west end is 119 feet, of the east end 174 feet. The interior quadrangular area is 170 feet by 112 feet, of which 111 feet by 58 feet is uncovered, leaving 21 feet for the width of the ambulatory clear of the plinths. The height of the bell-tower to the top of the vane is 177 feet. In front of the grand or western entrance is a bronze equestrian statue by Chantry of the Duke of Wellington.

The Bank of England was originally erected from a design by Mr. George Sampson, 1732 to 1734, and then comprised only the centre of the south front, the hall, bullion court, and court-yard. The east and west wings were added by Sir Robert Taylor between 1766 and 1786; and the remainder of the structure was completed by Sir John Soane, who was appointed the architect to the Bank in 1788. He rebuilt many of the parts constructed by Sampson and Taylor, and the whole of the edifice, as it now stands, may be said to be from his designs. The exterior appearance has since been improved by Mr. Cockerell. It now covers an irregular space of four acres. Near the Bank, on the east side, is the Stock Exchange, in Capel Court.

The Central Criminal Court, in the Old Bailey, consists of two courts, the Old Court and the New Court, which meet monthly, and both sit at the same time for the greater despatch of business. The Recorder and Common Serjeant are the presiding judges in most cases, but one of the judges of the superior courts assists occasionally; and a third court is sometimes presided over by one of the chief law officers of the corporation.

In the angle between the Old Bailey and Newgate-street stands the prison of Newgate, built by Dance, and completed in 1733. It is a massive and prison-like structure. In Giltspur-street, on the opposite side of Newgate-street, stood the Giltspur-street Compter, also by Dance; it was also a prison for criminals, but having been superseded by the new city prison at Holloway, it is now (November, 1854) being taken down. Whitecross-street Prison is for debtors; and Bridewell is a place of confinement for persons summarily convicted before the Lord Mayor and Aldermen.

The General Post Office, St. Martin's-le-Grand, was built between 1824 and 1829 from the designs of Sir Robert Smirke. The building is of the Ionic order, 389 feet long, 130 feet wide, and 64 feet high. The Hall, in which letters and newspapers are delivered, is 80 feet

long and 60 feet wide. The Custom House in Lower Thames-street, was erected 1814-17, from the designs of David Laing, but in consequence of the foundation having given way, the original centre was taken down and the present front towards the Thames erected by Sir Robert Smirke. The East India House, the house of business of the East India Company, was built by Mr. R. Jupp, in 1799, and subsequently enlarged from designs by C. R. Cockerell and W. Wilkins. The façade is 200 feet in length. The pediment is of the Ionic order. The Mint, on Tower Hill, was by Mr. Johnson, but the entrances, &c., were by Sir Robert Smirke, who finished the works in 1811.

The Corn Exchange, Mark-lane, opened in 1747, was enlarged and partly rebuilt and reopened June 24th, 1823. The Coal Exchange, Lower Thames-street, was built by Mr. J. B. Bunning, between December 1847, and October 30th, 1849, on which day it was opened by Prince Albert. The new building for Billingsgate Market is a handsome and commodious structure, affording great facilities for the landing and sale of fish of all kinds.

The principal educational establishments of the city are Christ's Hospital, St. Paul's school, the Merchant Taylors' school, the Mercers' school, the Charter-House school, and the City of London school. Christ's Hospital, in Newgate-street, commonly called the Blue Coat school, was founded by Edward VI., June 26th, 1553, and occupies the site of the Gray Friars Monastery. The first stone of the new hall was laid April 28th, 1825, and the hall publicly opened May 28th, 1829. The architect was James Shaw. In 1853 there were 950 boys on the foundation in London, who are instructed in the classics and mathematics, and 450 boys and 70 girls in a branch school at Hertford, which was founded in 1683. St. Paul's school is opposite the east end of St. Paul's cathedral. The number of scholars is limited to 153, the number of fish taken in the miraculous draught (John, xxi. 11). The Merchant Taylors' school, founded in 1561 by the Merchant Taylors' Company, in 1853 had 260 scholars, to which number it is limited. The City of London school, Milk-street, Cheapside, is partly an old foundation of 1442. The present structure was erected in 1835. The school is open to the sons of any respectable persons recommended by a member of the corporation. Each pupil has to pay 8*s.* a year school fees. The number of scholars in July 1852 was 579.

Doctors' Commons, on the south side of St. Paul's Churchyard, are so called because the doctors of the civil law here dine in common. The original buildings were destroyed by the great fire in 1666, and rebuilt at the expense of the professors. It is here that the Ecclesiastical and Admiralty Courts are held.

There are five principal markets within the limits of the city and liberties of London—Smithfield Market, for the sale of live cattle and sheep; Newgate Market, chiefly for the sale of meat in the carcase; Leadenhall Market, chiefly for poultry and game; Billingsgate Market, for fish; and Farringdon Market for general purposes. A new market for the sale of live cattle and sheep is being constructed at Copenhagen Fields, near Holloway, on the completion of which Smithfield Market will be discontinued.

Three bridges cross the Thames within the limits of the city. London Bridge was built after the designs of John Rennie, under the superintendence of his son Sir John Rennie. It was commenced March 15, 1824, and opened by King William IV., August 1, 1831. The bridge and its approaches cost little less than two millions sterling. It stands about 180 feet higher up the river than old London Bridge, which was not pulled down till after the new one was completed. London Bridge is built of granite, and has five semi-elliptic arches, of which the central arch has a span of 150 feet. The total length of the bridge, including piers and abutments, is 920 feet. It combines massive strength with elegance of structure, and is a truly magnificent work. Southwark Bridge was erected by John Rennie, between 1815 and 1819, at the expense of a company of proprietors. It consists of three arches, the central arch being 240 feet in span, and the other arches 210 feet each. The two piers and abutments are of stone; all the rest of the bridge is of iron, 5780 tons of cast iron and 50 tons of wrought iron being used in the work. Tolls are levied on this bridge, foot-passengers being charged one penny each. Blackfriars Bridge was erected by Mr. Mylne, a Scotch engineer, between 1760 and 1769. The funds for the work were raised by a city loan, to be repaid by tolls. The government purchased the tolls, and made the bridge free in June, 1785. The bridge consists of nine elliptic arches, of which the central arch is 100 feet in span. The length, between the abutments, is 996 feet. This bridge is in a somewhat insecure condition.

The Monument on Fish-street Hill, is a fluted column of the Doric order, erected by Sir Christopher Wren, 1671-1677, to commemorate the great fire of London. The bas-relief on the pediment is the work of Caius Gabriel Cibber.

Temple Bar, the gateway which separates the liberties of the city of London from the city of Westminster, was erected by Sir Christopher Wren in 1670. The statues in niches (Queen Elizabeth and James I. on the east side, Charles I. and Charles II. on the west side), are all by John Bushnell, who died in 1701.

The Inn of Court called the Temple, is nearly all within the limits of the City Liberties, but is extra-parochial. The buildings belong to

the two law societies of the Inner Temple and the Middle Temple. The Temple is so called from the Knights Templars, to whom it originally belonged. The buildings, which for the most part consist of chambers, are arranged in various courts. Each Temple has a hall, and the beautiful Temple Church, the restoration of which was completed in 1842, is common to both societies. The Hall of the Middle Temple is one of the most magnificent in the metropolis. The Inner Temple Garden is an extensive lawn, bordered on three sides with shrubs and flowers, and open in front to the Thames. The public are admitted to it on summer evenings.

Some of the insurance societies possess handsome structures of stone. Several of the banks have massive fronts of granite, and present an appearance of great solidity, and even grandeur.

The Halls, as they are called, of the various London Companies are for the most part extensive quadrangular buildings with a courtyard in the centre; some of these consist of two quadrangles which are separated by the banqueting-hall. With the exception of the Goldsmiths' Hall in Foster-lane, Fishmongers' Hall at the foot of London-bridge, and Ironmongers' Hall in Fenchurch-street, few of these structures have any pretensions to architectural elegance of exterior; the interiors however are in some instances of considerable extent. The Goldsmiths' Hall is a magnificent structure of stone, of classic architecture, designed by P. Hardwick, and opened July 15th, 1835.

For municipal purposes the City and Liberties of London are divided into 26 wards, and are governed by a Lord Mayor, 26 aldermen, including the Lord Mayor, and 240 common-councilmen. There are two sheriffs, who are jointly sheriffs of London and Middlesex, a recorder, common serjeant, chamberlain, town-clerk, and a variety of other officers. The Lord Mayor is elected annually from among those aldermen who have served the office of sheriff. He enters upon the duties of his office on the 9th of November, when there is a procession called the Lord Mayor's Show. The aldermen are chosen for life by such householders of the wards as are freemen. They constitute the court of aldermen, and every alderman is a justice of peace for the city of London, and presides in the court of wardmote in his ward. The common-councilmen are elected annually on St. Thomas's Day, at a wardmote in each ward, the electors being the same as in the elections of aldermen. They do not meet in any court exclusively their own, their sittings being presided over by the Lord Mayor, and the aldermen having the right to attend. The sheriffs are chosen annually by such of the freemen as are liverymen of some of the City Companies. The recorder is elected for life by the court of aldermen. The livery of London is the aggregate of the members of the several City Companies, of which 81 still exist.

London is the seat of a bishopric. The diocese comprises the county of Middlesex and several parishes in the counties of Essex, Kent, and Surrey: the number of benefices is 813. The chapter comprises a dean, 2 archdeacons, 4 canons, a precentor, chancellor, 28 prebendaries, and 12 minor canons. The income of the present bishop is returned at 11,700*l.*; that of his successors is fixed by Act 6 and 7 Wm. IV. c. 77, at 10,000*l.* The Bishop of London takes precedence of the other bishops, ranking next after the archbishops.

Besides the Central Criminal Court, there are the Lord Mayor's Court, a court held by each of the sheriffs, and two police-courts, one held at the Mansion House, before the Lord Mayor, and the other at Guildhall, before one of the aldermen. The London sessions are held eight times a year, before the Lord Mayor, aldermen, and recorder, for minor misdemeanors and poor-law appeals.

The police of the City and Liberties of London are under the control of a commissioner, who is appointed by the common council, but subject to the approval of the crown. The number of policemen, usually about 500, is fixed by the mayor, aldermen, and common-council.

The sewers are under the management of commissioners of sewers appointed by the corporation. They have authority to compel the proper drainage of houses, and they also attend to the repairs of the streets. A medical officer has been recently appointed by the corporation to take cognisance of matters affecting the public health within the city. Gas is supplied chiefly by two companies, and the total consumption is about 750,000,000 cubic feet per annum.

The City and Liberties of London are under three Poor-Law Unions, which are denominated respectively the City of London Union, East London Union, and West London Union. The London workhouse admits about 1000 inmates, the East London 600, and the West London about 650.

The revenue of the corporation amounts to about 190,000*l.* The expenditure in 1850 was about 170,000*l.* Besides this revenue, which strictly belongs to the corporation, a considerable income is collected from duties on coals and other sources, which is appropriated to public improvements, including the construction of new streets, the repair of the bridges, and some other specific purposes. The total amount of dues collected in the port of London on the importation of coal or coke in the year 1851 was about 110,000*l.* By the same duties charged on coals brought by railway to London, the Corporation collected in 1851 about 7500*l.*; and on coals brought by the Grand Junction Canal and by road, about 765*l.* was collected. The duty on wine produced 6620*l.* The City and Liberties of London return four members to the House of Commons. The right of election is in

the freemen, being liverymen, and the inhabitant householders occupying dwellings of 10*l.* yearly value.

The Corporation of the City of London is conservator of the Thames, and the Lord Mayor is chief magistrate of the river as well as of the city. The port of London extends, for general purposes, from London Bridge to a little below Blackwall; but, in connection with the coal-trade, it reaches to a little below Gravesend. The control of the maritime affairs within the port of London rests chiefly with the harbour-masters, of whom there are four, one principal and three subordinate. The Corporation receive dues varying from one half-penny to three farthings a ton from every vessel that enters or leaves the port, whether engaged in the foreign, colonial, or coasting trade. These dues amounted in the year ending July 25th 1851 to 16,038*l.* 12*s.* 6*d.* About a fourth of the whole British shipping trade is conducted through the port of London. The number and tonnage of vessels belonging to the port of London on December 31st 1853 were—under 50 tons 749, tonnage 24,621; above 50 tons 2209, tonnage 654,694. Of steam-vessels under 50 tons, there were 116 of 3759 tons, and above 50 tons, 291 of 109,598 tons. In the coasting trade during 1853 there entered the port 19,240 sailing-vessels, of 2,744,524 tons burden; and 7721 steam-vessels of 553,452 tons; and there cleared 1592 sailing-vessels of 446,925 tons, and 1565 steam-vessels of 431,082 tons. In the colonial and foreign trade there entered (including steamers) 6261 British vessels of 1,524,219 tons; and 5502 foreign vessels of 1,069,894 tons; and cleared 3807 British vessels, tonnage 1,060,408; and 4954 foreign vessels, tonnage 946,634. The amount of exports in the year 1852 was 18,802,122*l.*, in 1853 it was 22,991,082*l.*

Connected with the port of London are the Docks. Nearest to the Tower, on the north side of the river, are the St. Katharine's Docks, which include an area of 23 acres, 11 acres of which are water. The London Docks are three;—London Dock, with an area of 20 acres, East London Dock, with an area of 7 acres, and Shadwell Basin, with an area of 3 acres. The West India Docks are about one mile and a half east from the London Docks. The entire area occupied by these docks, including the canal cut to avoid the bend of the Thames at the Isle of Dogs, is 295 acres. The East India Docks are below Blackwall. The import dock has an area of 19 acres; the area of the export dock is 10 acres. These docks, since the opening of the trade to India, have been purchased by the proprietors of the West India Docks, and are now open to vessels from all parts. On the south side of the river are the Commercial Docks, the Grand Surrey Canal Docks, the Greenland Dock, the East Country Dock, and some smaller docks.

The City and Liberty of Westminster extends from Temple Bar on the east, to Kensington and Chelsea on the west, and from the Thames on the south to Marylebone on the north. It embraces the parishes of St. Clement-Danes, St. Mary-le-Strand, St. Paul, Covent Garden, St. Martin-in-the-Fields, St. Anne, Soho, St. Margaret, Westminster, St. James, Westminster, St. George, Hanover-square, and St. John the Evangelist. It includes an area of 2355 acres. The population in 1851 was 199,799. The Metropolitan Borough of Westminster includes, in addition to the City and Liberty, the district of the Savoy and the lordship of the duchy of Lancaster, which are situated between the Strand and the bank of the Thames. The Metropolitan Borough has an area of 2500 acres, and had in 1851 a population of 241,611. It returns two members to the Imperial Parliament.

Westminster, next to the City of London, contains the largest number of public buildings of the metropolis. The most ancient of these, and in many respects the most interesting, is Westminster Abbey. A church was built on the site by Sebert, king of the East Saxons, and dedicated to St. Peter; but the first Westminster Abbey was erected by Edward the Confessor, 1049 to 1066. Henry III., in 1220, commenced the building of a chapel dedicated to the Virgin at the east end of the church. In 1245 he began to take down and rebuild the church. He died in 1272. The parts of the present structure erected during his reign are not exactly known; but he is supposed to have completed the choir and transepts, besides erecting the chapel to the Virgin and the chapel of Edward the Confessor. The building was afterwards carried on by successive abbots. Henry VII. took down Henry III.'s chapel to the Virgin, in order to make room for his own Lady Chapel, which is now called Henry VII.'s Chapel. The upper parts of the two western towers were added by Sir Christopher Wren. The interior length of the Abbey, including Henry VII.'s Chapel, is 511 feet; entire breadth, across the transepts, 203 feet; length of the nave, 166 feet; length of the choir, 155 feet; breadth of the nave and aisles, 79 feet; breadth of the choir, 38 feet; height of the roof, 102 feet; height of the western towers, 224 feet. Henry VII.'s chapel is 103 feet long, 70 feet wide, and 60 feet high.

Westminster contains, in addition to the Abbey, 42 churches belonging to the Established Church, among which the most conspicuous are St. Martin's-in-the-Fields and St. Mary-le-Strand, both built by Gibbs; Whitehall Chapel, erected by Inigo Jones as the banqueting-hall for the intended palace of Whitehall; and St. Margaret's church, near Westminster Abbey, which possesses one of the finest windows of painted glass in the metropolis. The church erected

at the expense of Miss Burdett Coutts is a very fine example of the modern gothic.

The Palace of Westminster, as it is called, which contains the new Houses of Parliament and other apartments appropriated to parliamentary business, is not yet completed. Sir Charles Barry is the architect. The first stone was laid April 27th 1840. The east or river front, which is finished, has a length of 900 feet, and is separated from the Thames by a terrace formed of Aberdeen granite. The walls of the whole structure are constructed externally of magnesian limestone from Anston, in Yorkshire, and lined internally with brick. The main beams and joists all through the building are made of iron: the oak wainscoting, which covers a large portion of the interior surface of the walls, is the only material used that can cause any danger from fire. The style of the building is highly-decorated palatial Tudor. The west or land front is the most picturesque of the fronts, because the most varied in surface. The Central Tower, which contains the Grand Central Octagon Hall, is nearly finished, and will, when completed, present one great lantern, three lights in height, with flying buttresses pinnacled; above this a second story two lights high, and over all a richly-crocketed gothic spire, the summit rising to the height of 300 feet. The Victoria Tower, which stands in the south-western angle of the building, and forms its grandest single feature, is 75 feet square, and rises over four magnificent pointed arches 60 feet in height, two of them opening on two sides direct into the street; the other two opening respectively on the Guard Room and the Royal Staircase. This stupendous tower is raised at the rate of only 30 feet a year; it has not yet reached much more than a half of its intended height, 340 feet. The Clock Tower, which stands at the north-western angle of the building, is 40 feet square. It is to bear an eight-day clock with four faces, each nearly 30 feet in diameter, striking the hours on a bell weighing 9 tons, and chiming the quarters on eight bells. It is to be surmounted by a richly-decorated belfry spire, the summit of which will be 320 feet above the ground. A large window in the western face of the Clock Tower is to open into a wing which will displace all the houses on the south side of Bridge-street, extend up to Margaret-street, thence cross to the corner now occupied by the Law Courts, and thence return to Westminster Hall, thus inclosing the whole area of New Palace Yard. An additional tower of metal-work, of rather large dimensions, is being erected near to the principal front. To afford light to the interior parts of the structure there is a long series of courts connected together by groined archways under the chief buildings. Westminster Hall, which is 270 feet long, 74 feet wide, and 90 feet high, will, when the Westminster Palace is completed, be incorporated, and form a part of this magnificent whole.

St. James's Palace, a dingy brick structure opposite the bottom of St. James's-street, was originally built in 1532 by Henry VIII., after a design by Holbein. Many of the kings and queens of England up to the time of George III. resided in it, and the court is still held there. Buckingham Palace, at the west end of St. James's Park, is the town residence of Queen Victoria. It was commenced by Nash for George IV.: a new front towards St. James's Park has been recently added. Considerable improvements are in progress in the vicinity of the palace. Behind the palace is a large garden.

On the south side of Whitehall are some of the most important government offices—the Treasury, extending from Downing-street to the Horse Guards, and including the Board of Trade; the Horse Guards, which contains the offices of the Secretary-at-War, the Commander-in-Chief, and the Quarter-Master-General; and the Admiralty, which contains the offices of the First Lord of the Admiralty and the four Junior Lords. The office of the Master-General of the Ordnance is in Pall Mall. Other government offices are held in Somerset House, Strand—the Stamp and Tax offices, the offices of the Poor-Law Commissioners, the Inland Revenue office, the Audit office, and the office of the Duchy of Cornwall. In the buildings of Somerset House the Royal Society, Astronomical Society, Geographical Society, and Geological Society have apartments. The University of London has apartments in Somerset House: it is an examining body, not educational, and confers degrees in arts, laws, and medicine. King's College occupies the east wing of Somerset House. It was founded in 1828 for imparting a university education in accordance with the principles of the Church of England. A hospital is attached to the college, and it has museums and libraries. The matriculated students, unlike those of University College, are distinguished by an academical dress. In 1853 there were 79 theological students, 102 in general literature and science, 46 in engineering, manufactures, and architecture, and 239 in medicine. This college has several exhibitions at Oxford and Cambridge, and some valuable prizes.

In this borough are the Westminster, the St. George's, and Charing-cross hospitals. Westminster contains most of the theatres of the metropolis. The old Covent Garden theatre was burnt down September 20th 1803, was rebuilt by Smirke, and was opened September 18th 1809. The old Drury-lane theatre was also burnt down February 24th 1809, was rebuilt by B. Wyatt, and opened October 10th 1812. The Opera House and Haymarket theatre are both in the Haymarket; the St. James's theatre is in King-street, St. James's; the Adelphi, Lyceum, and New Strand are in the Strand; and the Olympic is in Wyob-street.

The Pantheon, in Oxford-street, originally a theatre, is now a bazaar. There are several other bazaars in Westminster.

There are several buildings and rooms for lectures, exhibitions, concerts, and balls. The chief of these are the Royal Institution, Albemarle-street; the Society of Arts, John-street, Adelphi; the National Gallery, Trafalgar-square, and Marlborough House, Pall-Mall, for the National collection of pictures; the British Institution, Pall-Mall; Gallery of British Artists, Suffolk-street, Pall-Mall; the Old and New Water-Colour Societies' Galleries, Pall-Mall; the Egyptian Hall, Piccadilly; Wyld's Great Globe, Leicester-square; the Panopticon Institution, Leicester-square; the Leicester-square Rooms; the Hungerford Market Rooms; the Hanover-square Rooms; the Argyle Rooms; Exeter Hall; and the Whittington Club Rooms. The Penitentiary and the Bridewell prisons are in Westminster.

The London and Westminster Bank has erected a handsome new building for its Bloomsbury branch. The design is by Mr. Henry Baker, and presents a four-storied front in the Italian style, with rusticated projections at the sides.

The two principal markets in Westminster are Covent Garden for vegetables, fruit, and flowers, and Hungerford Market for fish, fruit, &c.

In Westminster are included Hyde Park and Kensington Gardens, as far as the Serpentine River, the Green Park, and St. James's Park. A new line of street, called Victoria-street, has been recently opened from Westminster Abbey to Vauxhall Bridge Road, Pimlico, and some extensive ranges of dwelling-houses have been built along part of the line.

Westminster Bridge was erected by Charles Labelye, a native of Switzerland. The first stone was laid January 29th 1738, and the bridge was opened November 18th 1750. It consists of 15 arches, the centre arch being 76 feet span. The entire length is 1223 feet. This bridge has fallen into a very dilapidated condition; and a new bridge is now being constructed under powers granted by Act of Parliament. Mr. Thomas Page is the architect. The bridge is to be in the gothic style, to harmonise with the houses of parliament, and is to consist of 7 principal arches, and 2 of smaller dimensions on the Surrey side. The length of the roadway is 914 feet, and the extreme width of the bridge will be 85 feet. The span of the centre arch is 121 feet. Waterloo Bridge was erected by John Rennie for a company of proprietors. The first stone was laid October 11th 1811, and the bridge was opened June 18th 1817. It consists of 9 elliptical arches of 120 feet span. The entire length of the bridge and abutments is 1380 feet. The approaches have been raised, and the bridge is level. A toll of $\frac{1}{4}$ d. is charged to foot-passengers, and there are other tolls for vehicles. Hungerford Suspension-Bridge was erected by I. K. Brunel. The first stone was laid in 1841, and the bridge was opened April 18th 1845. It consists of three arches, the span of the centre arch being 676 feet, and that of each of the side arches 333 feet. It is only for foot passengers, who are charged a toll of $\frac{1}{4}$ d. each.

The Borough of Marylebone adjoins Westminster on the south, Oxford-street and the Uxbridge-road forming the boundary. The area is 5310 acres. The population in 1841 was 287,465; in 1851 it was 370,957. It returns two members to the House of Commons. This borough contains the Regent's Park, with the Gardens of the Zoological Society, and the Botanical Society; the termini of the Great Western, North-Western, and Great Northern railways; the two exhibitions of the Colosseum and Diorama; University College; the Foundling Hospital; the Middlesex Hospital; and St. Mary's Hospital, Paddington. University College was designed by W. Wilkins, to consist of a centre, and two wings advancing at right angles from its extremities. The centre only has been completed. The first stone was laid April 30th 1827, and the building was opened October 1st 1828. The grand entrance under the portico opens into an octagonal vestibule, which is surmounted by a dome. The interior contains several lecture-rooms, a large general library, a Chinese library, a law library, a museum, &c. The Flaxman Gallery, which is open to the public on Wednesdays and Saturdays, contains the original models of the statues, bas-reliefs, and other works of Flaxman. The number of students in arts and law in 1853 was 236; in medicine 186. The college has been already endowed to a considerable extent by various benefactors. In connection with it is a Junior school, of very high character, which is held in the south end of the building. The number of scholars in 1853 was 290. University College Hospital stands opposite the college, and besides the usual benefits conferred by an hospital affords improved means of instruction in medicine and surgery to the medical students of the college, under the superintendence of its professors.

The Foundling Hospital was founded by Captain Thomas Coram, in 1739. The funds were afterwards increased by a parliamentary grant of 10,000*l.*, and the system of admission was altered. The children are now admitted on application of the mother, who must depose to the abandonment of the father, and non-recognition of the parish authorities. The number of children in the institution is usually about 400. After receiving a moderate education the boys are apprenticed to trades, and the girls either apprenticed or put to service.

The Borough of Finsbury adjoins Westminster and Marylebone on the west, and the western part of the city of London on the south.

GEOG. DIV. VOL. III.

The area is 4670 acres. The population in 1841 was 265,043; in 1851 it was 323,772. It returns two members to the House of Commons. This borough contains the British Museum, Lincoln's Inn, Gray's Inn, the College of Surgeons, the Mechanics Institute; the Free and the Lying-in Hospitals, and St. Luke's Asylum for Lunatics; the Charter House, and Sadlers Wells Theatre. The British Museum owes its origin to the purchase by government for 20,000*l.* of Sir Hans Sloane's collection of books and specimens of natural history. The purchase was made in 1753, the Harleian collection of manuscripts was added to it, and Montague House was bought as the place of deposit. Large additions have since been made by gifts and parliamentary grants. A new museum was commenced in 1823 by Sir Robert Smirke, and has been recently completed. The library of printed books is said to consist of about 500,000 volumes; there is also a very large collection of manuscripts. The Print Room contains prints, drawings, &c. of the first masters. The zoological department is supplied with a vast collection of stuffed beasts, birds, reptiles, fishes, insects, and shells. The collections of mineralogy and geology are very large. The specimens of fine art consist of Egyptian antiquities, sculptures from Nineveh, the Elgin marbles, Phigaleian marbles, Lycian marbles, and Townley marbles.

Lincoln's Inn is so called after Henry de Lacy, earl of Lincoln, who died in 1312, and whose town-residence occupied a considerable part of the present site of Lincoln's Inn. He assigned the grounds to certain professors of the law, who built on them an inn of court for the study of the laws of England. Lincoln's Inn Old Hall, in which the Court of Chancery sits during vacation, has been repeatedly altered and modernised. It is a fine room, but not very large. Lincoln's Inn New Hall and Library were built by Philip Hardwick, R.A. They form a very handsome structure of Tudor architecture on the west side of Lincoln's Inn New Square. The building, which is of brick, with stone quoins and dressings, was commenced April 20th 1843, and was opened by the Queen, October 30th 1845. The hall is 120 feet long, 45 feet wide, and 62 feet high, and has a roof of carved oak. The library is 80 feet long, 40 feet wide, and 44 feet high. The hall forms the south end of the structure, the library the north end, and they are connected by a vestibule.

Gray's Inn derives its name from Edmund lord Gray of Wilton, who, in 1605, sold the manor of Portpoole, four messuages, four gardens, and other premises and grounds, to Hugh Dunny, Esq., from whom they passed into the possession of the prior and convent of East Sheen, in Surrey, by whom they were leased to certain students of the law. The hall was completed in 1560. It is a handsome apartment, little inferior to the Middle Temple Hall.

Eight Inns of Chancery are nominally attached to the four Inns of Court. To the Inner Temple are attached Clifford's Inn, near St. Dunstan's church, Fleet-street, Clement's Inn, near St. Clement-Danes, Strand, and Lyon's Inn, at the bottom of Newcastle-street, Strand. To the Middle Temple is attached New Inn, Wych-street, Drury-lane. To Lincoln's Inn are attached Furnival's Inn, on the north side of Holborn, and Thavies Inn, nearly opposite, on the south side. To Gray's Inn are attached Staple Inn, near Holborn Bars, and Barnard's Inn, in Holborn, adjoining Fetter-lane.

The College of Surgeons is in Lincoln's Inn Fields, and contains an excellent collection of anatomical specimens, and a museum of comparative anatomy. The Mechanics Institute was founded in 1823.

The Charterhouse, which name is a corruption of Chartreuse, is an asylum for about 80 decayed householders upwards of 50 years of age, and has also a Free school in which about 40 boys are educated, some of whom are sent to the university, and others are apprenticed. The total number of scholars in 1851-52 was about 180.

The Borough of the Tower Hamlets adjoins the City of London and the Borough of Finsbury on the west. The area is 8988 acres. The population in 1841 was 419,730; in 1851 it was 539,111. It returns two members to the House of Commons. The public buildings in this borough are not of sufficient importance to require special notice; but it includes the Victoria Park; the East and West India, the London, and the St. Katherine's docks; the terminus of the Eastern Counties railway; the London Hospital, the Jew's Hospital, Bancroft's almshouses, and numerous others; the Tower Hamlets' cemetery; and the extensive Union workhouse for the City of London.

The Borough of Southwark is bounded by the river on the north, by the borough of Lambeth on the south and west, and by the borough of Greenwich on the south-east. The area is 590 acres. The population in 1841 was 142,620; in 1851 it was 172,863. It returns two members to the House of Commons. It contains St. Thomas's Hospital, Guy's Hospital, Bethlehem Hospital, the School for the Indigent Blind, the Magdalen Asylum, St. Patrick's Hospital; the Surrey Theatre; the fine old church of St. Saviour; the modern gothic Roman Catholic Cathedral; the terminus of the South-Eastern and Brighton railways; and the Queen's Prison. St. Saviour's church, formerly St. Mary-Overy, though it has been much injured, is still, next to Westminster Abbey, the largest and handsomest of the old gothic churches of the metropolis. The Lady chapel was restored in 1832, in accordance with the original architecture.

The Borough of Lambeth adjoins that of Southwark on the east and north. The area is 8840 acres. The population in 1841 was 197,412; in 1851 it was 251,845. It returns two members to the House of

Commons. It contains Lambeth Palace, the Orphan Asylum, Licensed Victuallers' school; the Surrey county jail; the terminus of the South-Western railway; the Victoria Theatre, Astley's Amphitheatre, the Vauxhall Gardens, and the Surrey Zoological Gardens. Lambeth Palace, situated near Westminster Bridge, has for several centuries been the chief residence of the archbishops of Canterbury. The various buildings of which it consists are erected round two courts. The outer court is on the western side near the Thames, and the inner court on the eastern side of the Hall. The outer court is entered by a lofty arched gatehouse flanked by two embattled towers. The Lollard's Tower, which was erected in 1484, and was used as a prison for heretics till the Reformation, is in the outer court: it is of stone. The prison was at the top of the tower. The palace was much injured by the Puritans, but has since been repaired, and some parts have recently been rebuilt.

The Metropolis.—The City and Liberties of London have a municipal government already described, and a limited jurisdiction in Southwark. The City of Westminster has a limited jurisdiction under a high steward and deputy, a high constable, and 16 burgesses, and the Tower is a fortress under a constable, an office which was held by the Duke of Wellington at the period of his death, and is now held by General Viscount Combermere. With these exceptions the whole of the local government of the metropolis is under the management of the parishes, by vestries and other public meetings, and by parish officers. The parishes of Westminster have been already enumerated. Chelsea is noticed separately. [CHLSEA.] Then follow, on the north side of the river, proceeding from west to east, the parishes of Kensington, Paddington, Marylebone, St. Giles-in-the-Fields, and St. George, Bloomsbury (St. Giles's and St. George's, Bloomsbury, are for many purposes united), St. George the Martyr, St. James, Clerkenwell, St. Luke, Old-street, St. Mary, Islington, Hackney, Shoreditch, Bethnal Green, Spitalfields, Whitechapel, Wapping, St. George's-in-the-East, Shadwell, Stepney, Limehouse, and Poplar. On the south side of the river, proceeding from west to east, are the parishes of Lambeth, Newington, Camberwell, Christ Church, Surrey, the five parishes in the ward of Southwark, of St. Saviour, St. Olave, St. John (Horsley-down), St. George, and St. Thomas, and then follow the parishes of Bermondsey, Rotherhithe, Deptford, Greenwich, and Lewisham.

Greatly as the metropolis had increased in extent in the reign of Elizabeth, the map of London at that period shows it to have been a mere dwarf in comparison with its present gigantic dimensions. All to the north and west of the Strand was open fields and country, as well as nearly all the south bank of the river. London Bridge was then the only structure of its kind which the metropolis possessed. Insignificant as the increase of buildings in Elizabeth's reign may now appear, it was regarded with so much apprehension as well as wonder at the time, that the queen issued a proclamation, in 1580, forbidding the erection of any but houses of the highest class within 8 miles of the city. The same was done by her successor, but in neither case had the prohibition much effect; so that by 1686 many new districts and parishes had been added to the suburbs. Terrible as was the calamity which during that year befel the city itself, when upwards of 18,000 houses and other buildings, including St. Paul's cathedral, were destroyed, it has been attended with much improvement in the construction of the streets and houses in the city.

Within the course of the next hundred years from this date the metropolis extended itself considerably to the west and north-west, where it became more fashionable to reside; and no doubt the fire of London had a great share in this change, for their mansions in the city having been destroyed by it, the nobility removed from that seat of bustle and traffic much earlier than they otherwise might have done. In 1700 Old Bond-street was partly built, but its situation was then almost rural, all to the north being fields, lanes, and uncovered ground; and many mansions which are now surrounded by buildings and streets for a considerable distance, then stood, if not quite solitary, with only a few straggling houses in their neighbourhood; such were Montague House, which occupied the site of the British Museum, and Burlington House, Piccadilly.

It was not till the beginning of the reign of George III., when the present system of paving and lighting the streets was introduced, that the metropolis began to put on a civilised appearance, by the safety and convenience of the public being attended to. Signs, posts, water-spouts, and all similar nuisances and obstructions were removed; foot-paths were laid down, and lamps were lit at night. Covent Garden Theatre, the first production of Sir R. Smirke, and almost the first specimen of the Grecian Doric style in the metropolis, may also be considered as the beginning of a new era in its architecture; or rather it has so happened that it has been followed by numerous other structures and improvements, which have given (at least as far as they extend) quite a different aspect to the town. The first of these improvements was the formation of Regent-street and the Regent's Park. These were followed by other improvements, not only in the street-architecture of the west end of the town, but in the reconstruction of several parts of the city. The alterations occasioned by the building of New London Bridge, and forming approaches to it, have already greatly changed that part of the city; and a spacious and handsome line of street just opened, called Cannon-street West, connects the east end of King William-street with the south side of St. Paul's

Churchyard. The range of buildings in Princes-street, which was previously a narrow lane, has an imposing air of noble simplicity. Moorgate-street, which extends from Princes-street to Finsbury-circus, displays a considerable regularity of design, and yet does not offend by too great sameness and monotony, the elevations being broken into sufficiently distinct masses. The Excise Office, in Broad-street, once the Gresham College, has been replaced by a handsome range of buildings for mercantile purposes. Warehouses of very large extent and of massive appearance have been recently constructed in Gresham-street, in Cannon-street, and on the south side of St. Paul's Churchyard.

The squares of the metropolis are chiefly at the west end of the town. The largest is Lincoln's Inn Fields, which comprises an area of 12 acres. Russell-square and Belgrave-square occupy 10 acres each. The rest occupy from about 7 to 8 acres each.

The metropolis is now liberally supplied with parks, and the number is increasing. At the west end are—St. James's Park, the Green Park, and Hyde Park, with Kensington Gardens. On the north-west side are the Regent's Park and Primrose Hill; on the north-east the Victoria Park; on the south Kennington Park has recently been opened to the public, and Battersea Park is in preparation. Cemeteries also have been formed at Kensall Green, at Highgate, in Fulham-road, Brompton, at Stoke Newington, at Mile End, at Stepney, at Bow, and at Nunhead and Norwood in Surrey.

That London is not commonly considered as a manufacturing town is owing to the more important aspects under which it presents itself, and not because of the absence of manufacturing industry. Manufactures of almost every kind are in fact carried on in the metropolis, and upon a scale of great magnitude. The largest breweries, distilleries, and sugar-refineries in the kingdom are in the metropolis. The manufacture of metals in almost every branch is carried on to a vast extent. Almost every kind of machinery, from the smallest wheels required by the watchmaker to the most powerful steam-engines, are made in London. The making of gold and silver articles, of optical and surgical and other instruments, tools of the best quality, and musical instruments, gives employment to numerous hands. Ship-building and its accessory occupations, rope-making, mast-making, block-making, anchor-making, &c., have always been actively prosecuted. There are also numerous chemical works on a large scale, tanneries, soap-manufactories, potteries, and dye-houses. Clothing of all descriptions is made, not merely for the use of the inhabitants of the metropolis, but for the supply of wealthy persons in various parts of the kingdom, and for exportation to the British colonies. The metropolis is also the great workshop of literature, science, and the arts. The number of books printed and published in all other parts of the united kingdom is trifling in comparison with what is produced in London. The periodical literature is of corresponding rank and magnitude.

It is not possible to state with any pretensions to accuracy the amount of consumption in London. A considerable part of the foreign and colonial merchandise that passes every year through the custom-house of the port is forwarded into the interior of the country; and the same remark applies, though in a less degree, to the produce of London breweries, distilleries, tanneries, &c. A tolerably good test of the consumption of butchers' meat was formerly supplied by the returns of sheep and cattle sold in Smithfield market, though this would at all times be somewhat below the actual amount, on account of the number of animals sold to butchers by the drovers on their road to the market; but since the improvement of turnpike roads, and the consequent acceleration of travelling, and more especially since the adoption of steam-navigation and railways, a great and continually-increasing quantity of cattle and slaughtered meat is brought for sale, of which no account is taken. The quantity of wheat brought into the port affords no evidence of the quantity consumed in the metropolis, much of it being sent into the country. The quantity of coals brought into London during 1851 was above 8,500,000 tons.

Until comparatively a recent period the police of the metropolis was very defective; but in 1829 the metropolitan police was formed, and subsequently the police of the city of London. The city police has jurisdiction only within the city and liberties. The metropolitan police extends 10 or 12 miles from St. Paul's to the surrounding villages. It is under the management of two commissioners, and is formed into 18 divisions, each of which is distinguished by a letter, A, B, &c.

For the ordinary administration of justice, there are 11 metropolitan police-courts, besides the two magisterial courts of the city. At Bow-street police-court there are three magistrates, at each of the others two, except at Greenwich and Woolwich, where there are two magistrates for the two courts, and so at Hammersmith and Wandsworth.

Besides the prisons of the city, namely, Newgate, Whitecross-street Prison, and Bridewell House of Correction, there are belonging to the metropolis—the Queen's Prison, which includes the offenders formerly confined in the Fleet Prison and the Marshalsea; the Pentonville Prison; the Coldbath-Fields House of Correction; the Tothill-Fields Prison; the Horsemonger-lane or Surrey County Jail; the Millbank Penitentiary; the Clerkenwell House of Detention; the new City Prison, Holloway; the Brixton House of Correction; and the Hulks, or ship prisons, some of which are moored adjoining the dockyards of Woolwich, and others at Portsmouth.

According to the Returns of the Census of 1851 it appears that

there were then in the metropolis 1097 places of worship, affording sittings for 691,723 persons. Of these places of worship 458 belonged to the Established Church, 161 to Independents, 154 to six sections of Methodists, 130 to five sections of Baptists, 85 to Roman Catholics, 23 to Presbyterians, 20 to Mormons, 11 to Jews, 9 to Quakers, 9 to Unitarians, 8 to the Countess of Huntingdon's Connexion, 6 to Lutherans, 6 to Irvingites, 3 to Welsh Calvinistic Methodists, 3 to Swedenborgians, 3 to Plymouth Brethren, 2 to Moravians, 2 to the Greek Church, and 1 each to Sandemanians, French Protestants, German Catholics, Italian Reformers, German Protestant Reformers, and the Reformed Church of the Netherlands. The returns include 48 'isolated congregations.' The number of Sunday schools was 701, with 188,600 scholars on the books, of whom 96,671 attended Sunday schools on March 30th 1851; the respective numbers of the sexes being 45,488 males and 51,188 females. Of day schools there were 863 public, with 167,298 scholars, and 8698 private, with 86,941 scholars. Of evening schools for adults there were 100, attended by 2878 scholars on March 29th 1851.

The hospitals and other charitable institutions are very numerous. Baths and wash-houses, chiefly for the use of the poorer classes, have recently been established in several parts of the metropolis. In 1853 there were about 80 savings banks in London, which will be found enumerated in the articles *KENT*, *MIDDLESEX*, and *SURREY*.

The metropolis is now well lighted with gas, which is supplied by 18 companies. They have about 20 gas-making establishments in different parts of the town and suburbs, and supply daily about 15,000,000 cubic feet.

The sewers of the metropolis, except those of the city and liberties, which are under a distinct commission appointed by the corporation, were, by an Act of 1848, all placed under a general board, styled the 'Metropolitan Commissioners of Sewers,' whose jurisdiction extends "to all such places or parts in the counties of Middlesex, Surrey, Essex, and Kent, or any of them, not more than 12 miles distant in a straight line from St. Paul's Cathedral, in the city of London, but not being within the city of London or the liberties thereof." By an Act of Parliament passed in August 1854, the powers of this commission were continued till August 31st 1855, in order to afford time for the re-construction of the board.

As the parish fire-engines of the metropolis were found insufficient for the repression of the fires which occurred, the fire-insurance companies maintained each their own firemen and engines. In 1833, however, the fire-offices of the metropolis united, and formed a fire-brigade for the purpose of extinguishing fires, which is supported at the expense of the various companies in proportions agreed upon. The London Fire Engine Establishment has 17 stations, where engines are kept and firemen are on duty at all hours of the day and night, besides two floating engines on the Thames. The whole establishment is under one superintendent, and is divided into a certain number of foremen, engineers, sub-engineers, senior firemen, junior firemen, and extramens.

The yearly value of the house property of the metropolis has been estimated at about 8,000,000*l.*, and the amount of poor-rates at about 650,000*l.*

The metropolitan post-office consists of two districts, one of a circle of three miles round the general post-office, the other of districts beyond that circle, but within a circle of 12 miles from the post-office, which have fewer and later deliveries of letters than the inner circle. Besides the General Post-Office in St. Martin's le Grand, there are branch-offices at Lombard-street, Charing-cross, Old Cavendish-street, and Blackman-street in Southwark. In each of the principal streets, and in every district, at convenient distances, receiving-houses are kept by shop-keepers. The amount of postage paid by the metropolis is about 900,000*l.* per annum.

The metropolis is supplied with water by nine companies; the total supply per day during 1853 averaged 60,614,323 gallons, of which the New River Company supplied upwards of 17,500,000 gallons, and the East London Company about 12,000,000 gallons.

Eight lines of railway connect the metropolis with all parts of the United Kingdom—the Great Western; the North-Western; the Great Northern; the Eastern Counties; the Blackwall; the Greenwich and North Kent; the Croydon, Epping, and Brighton; and the South-Western. There are besides, the Grand Junction Canal and Paddington branch, which joins the Regent's Canal, and then passing quite round the northern and eastern sides of the metropolis is connected with the Thames between the London Docks and West India Docks. On all the main lines of railway the electric telegraph is placed, while wires are carried under the pavement of the streets in pipes from the respective termini to the central and western offices of the Electric Telegraph Company in Lothbury and at Charing Cross, to the General Post-Office, to the Admiralty, and to other public departments. There are seven or eight small canals, which are of comparatively little importance.

LONDON. [CANADA.]

LONDON, NEW. [CONNECTICUT.]

LONDONDERRY, a maritime county of the province of Ulster, in Ireland, is bounded N. by the Atlantic Ocean, E. by the county of Antrim and a portion of Lough Neagh, S. by the county of Tyrone, and W. by the county of Donegal. It lies between 54° 38' and 55° 22'

N. lat., 6° 28' and 7° 24' W. long. In form it is an irregular triangle. Its greatest length from north to south is 40½ miles; from east to west, 34 miles. The area is 810 square miles, or 518,595 acres, of which 318,282 acres are arable, 180,709 acres uncultivated, 7718 acres in plantations, 1559 acres in towns, and 10,327 acres under water. The population in 1831 was 222,012; in 1841 it was 227,174; in 1851 it was 191,868.

Coast-line and Surface.—On a low rocky peninsula, at the extreme north-east of the county, is the thriving town of Portrush; and nearer the Bann, on an exposed strand running down between low headlands of basalt is Port Stewart, a well-built and fashionable watering-place, but quite unprovided with shelter for any craft above the size of a fishing-boat. West of the sand-banks which occur at the embouchure of the Bann the coast has a bolder outline, rising in precipitous cliffs from the sandy beach.

The most remarkable feature of the coast-line is the tract which extends from the western extremity of the cliffs to the low point of Magilligan, and southward to the mouth of the Roe, which has been noticed in the article *FOYLE, LOUGH*. The north-eastern liberties of Coleraine occupy an irregular semicircle of about 4 miles in radius, surrounding Coleraine town, on the eastern side of the Bann. In this district the elevations are inconsiderable, and the general aspect of the country is tame and bleak. From the Lower Bann, nearly the whole length of its course, the surface gradually rises westward for about 10 miles, forming a chain of elevations which bound the valley of that river. Of these heights, which slope with a gentle declivity eastward and northward, but present steep and often precipitous escarpments towards the west, the most prominent are Benyevanagh, at the northern extremity of the range, which rises abruptly over the sandy flat of Magilligan to a height of 1260 feet; Donald's Hill, 9 miles farther south, 1318 feet; Benbradagh, 3 miles S. from Donald's Hill, 1581 feet; and, separated from Benbradagh by the bold amphitheatrical valley of Glenshane, the upper or eastern boundary of which is formed by Carntogher Mountain, 1521 feet high, is Craignashock, 1773 feet, with its subordinate heights of Altglish, 1261 feet, and Tammarin, 1272 feet. West of the valley of Ballynascreen commences a mountain chain which, with little interruption, extends to the valley of the river Foyle, forming the boundary between the counties of Tyrone and Londonderry. The highest of the group is Sawell, which rises to a height of 2236 feet, about midway between Slieve Gallion and the western extremity of the chain. The district included between these mountains and Lough Foyle, constituting the western division of the county, is divided by a central tract of high land into the valleys of the rivers Roe and Faughan. The valley of the Roe, especially towards the mouth of the river, forms a rich and open country, which under the name of Moyroe, or the plain of the Roe, extends westward along the southern shore of Lough Foyle by Muff, and at the lower extremity of the lough opens into the valley of the Faughan. To the south of this comparatively level tract the district between these two valleys is considerably encumbered with moor and mountain. Legavannon, the principal eminence, which occupies nearly the centre of the district, has an elevation of 1269 feet.

Between the Lower Faughan and the Foyle is a range of undulating ground crossed by a valley through which the high road from Dungiven is carried. The city of Londonderry occupies a boldly rising ground on the bank of the Foyle, along which the county embraces an irregular tract, extending from about 4 miles above the city to a mile below Culmore, where the river expands into Lough Foyle. The length of this outlying portion of the county is 10 miles, and its breadth from 1 to 3¼ miles. It is all arable, and in a good state of improvement.

Hydrography and Communications.—The principal rivers are the Foyle, the Faughan, the Roe, and the Lower Bann. The *Foyle*, a spacious river when it enters the county, flows nearly north-east about 4 miles to the city of Londonderry, and 5 miles below it expands into the Lough. It is a tidal river, and is navigable for ships of 800 tons to the bridge of Londonderry, and for vessels of considerable burden about 8 miles higher, where by a canal the traffic is continued to Strabane. The *Faughan* River, which springs from the northern declivities of Sawell, receives numerous rills and streams from the surrounding heights, and after skirting the bases of the several mountains which extend westward and northward to within two miles of the Foyle, makes a sharp turn to the north-north-east, and runs through a highly-improved open valley to Lough Foyle. The *Roe*, rising in the upper part of Glenshane, is joined by the Owenreagh and Owenbeg rivers at the entrance of that valley, from which it pursues a northern course to Lough Foyle, which it enters by a sharp turn to the west, immediately under the base of Benyevanagh. The *Lower Bann*, from Lough Neagh to the sea, a distance of upwards of 30 miles, has a fall of only 48 feet. The sea flows up to the Cutts above Coleraine, a distance of 6 miles, between low banks which are incumbered towards the mouth of the river with extensive tracts of sand. The river is navigable to Coleraine for vessels of 200 tons.

Of the rivers which drain the valley of the Bann the most considerable are the Macosquin, which has its sources in the 'slack' (as mountain passes are here provincially termed) between the mountains of Benyevanagh and Keady; and the Agivey, which unites the waters of several streams descending from the range of Donald's Hill and

Benbradagh. The Clady joins the Bann at Portglenone. South of this the drainage of the county is towards Lough Neagh, through the rivers Mayola and Ballinderry, the latter of which forms part of the county boundary on this side.

The roads throughout the county are in general excellent. The immediate valley of the Bann, and the district of Lough Neagh in particular, are closely intersected with lines of communication. The western district is not so well opened. The chief lines here are those connecting Newtownlimavady, by the southern shore of Lough Foyle and the valley of the Lower Faughan, with Londonderry, and that which runs by the Upper Faughan from Dungiven to the same place. The valley of the Roe is well provided with roads, which extend southward by Banagher to Clady, giving ample means of communication to the country between the heads of the rivers Roe and Faughan. The communication southward is chiefly by the valley of the Foyle on one side, and by the head of the valley of Ballynascreen on the other. Besides these there are several passes from Tyrone into Londonderry among the mountain groups which lie between these points. A line of railway connects Londonderry city with Coleraine. The railway from the city of Londonderry to Enniskillen runs along the left bank of the Foyle till it crosses the river a little beyond the boundary of the county.

Geology.—The basaltic tract corresponds in all respects to the remainder of the field on the opposite side of the Bann [ANTRIM], except that the dip of the strata is reversed; the surface, and the masses which compose it, on the Londonderry side of the Bann dipping towards the north-east, whereas their direction on the Antrim side is nearly to the south-west. The basalt, as in Antrim, attains its greatest thickness at the northern extremity of the field, the cap of Benyevagh measuring upwards of 900 feet. Chalk, lias, limestone, and red-sandstone, succeed in descending order (one or more of the members being frequently absent), and constitute the remainder of the system, which throughout reposes immediately on the primitive rock. The geological structure of the district may thus be described as a floor of primitive rock overlaid in part by a field of secondary formations, capped by basalt. The boundary-line is marked by the abrupt declivities forming the eastern limit of the valley of the Roe; from the southern extremity of this range it passes across the Mayola River to the east of Slieve Gallion, and so to Lough Neagh, on the opposite side of which it re-appears at the mouth of the Glenavy River. The main constituent of the rest of the county is mica-slate. This rock covers about 450 square statute miles of the surface of Londonderry. In general the line of demarcation between it and the red-sandstone, which is the most prominent member of the secondary field, is well defined. One mass however, that of Coolcoocrahan Mountain, which rises nearly 1300 feet above the level of the sea, is wholly composed of this rock, although almost surrounded by the advanced basaltic heights of Craignashock and Benbradagh. Upwards of two-thirds of the mica-slate of this district belong to the talcose variety. Primitive limestone is of frequent occurrence throughout this field. At a height of 800 feet above the sea, on the north-west side of Carntogether Mountain, it is found with veins of coloured spar, quartz, and green chlorite. It also occurs near Dungiven and Claudy. On the east side of Slieve Gallion there is a granular limestone, which contains quantities of crystallised hornblende. Hornblende slate is found at several places in the valley of the Roe; a bed, 400 yards in extent, occurs near the old church of Dungiven, where it runs parallel to the bed of primitive limestone above mentioned. The structure of the south-eastern extremity of the county is more complex. Slieve Gallion, besides having a cap of basalt, with the usual underlying formations, exhibits towards its base beds of sienite in connection with porphyry. On the north-west side the sienite verges into greenstone. Several masses of greenstone, unconnected with the tabular basalt of the summit, also crop out on the east side of the mountain. All along the western verge of the basaltic region the red-sandstone, which forms the lowest member of the field, projects beyond the superior strata in a belt varying from one to two miles in breadth. This is the surface rock of the eastern valley of the Roe, from the head of which it sweeps across the opening of the valley of Ballinderry, and so between Slieve Gallion and the line of basalt into Tyrone. A detached patch of stratified limestone occurs near the outer edge of the sandstone field at Desartmartin. There are no mines worked in this county.

Climate, Soil, and Produce.—The climate is comparatively moist and cold. The soil of that part of the valley of the Bann where the subsoil is hard basalt, consists for the most part of a rusty loose grit, without sufficient strength or cohesion for wheat crops. Numerous tracts of bog, interspersed with shallow pools, and frequently separated by craggy knolls of basalt, are scattered over this part of the county. There are however tracts of good land along the banks of the several rivers which traverse the district, and especially at their junctions. A tract of rich open country, which extends southward into Tyrone, is the most extensive tract of good ground in the county. Beyond the eastern terrace which bounds the valley above Newtownlimavady commences a tract of red-clay, arising from the decomposition of the sandstone, which at this side forms the surface-rock up to the immediate acclivities of the mountains. This clay contains extensive beds of marl, and with good treatment bears excellent grain crops. The schistose district, lying between the valleys of the Roe and Faughan,

is to a great extent moory and mountainous. The valleys of Faughan Vale and Muff Glen, running southward from the open tract along the margin of Lough Foyle into the schistose region, have good tracts of fertile land. In the main valley of the Faughan River are gravel terraces reaching back to the schistose region at each side. These are well cultivated. The best improved portions of the county are the district of Lough Neagh, the valley of the Roe, the valley of the Faughan, including the coast of Lough Foyle, between the embouchures of these rivers, and the immediate vicinity of Londonderry on both sides of the Foyle.

The progress of agriculture in this county has been materially forwarded by the establishment of an agricultural school near Muff by the Company of Grocers of London, who here hold large estates under the crown. There are 172 acres of land attached to the school for experimental farming; a classical school is likewise connected with the establishment. In 1853 there were under crops in the county 174,887 acres, of which 2163 acres grew wheat; 88,176 oats; 2290 barley, bere, rye, peas and beans; 29,749 potatoes; 12,231 turnips; 1735 mangel-wurzel, carrots, vetches, and other green crops; 19,219 flax; and 19,324 acres meadow and clover. The plantations in 1841 covered 11,291 acres, yielding oak, ash, elm, birch, pine, &c. In 1852 on 17,487 holdings, there were 19,640 horses; 400 mules and asses; 92,132 cattle; 23,343 sheep; 22,421 pigs; 2518 goats; and 229,801 poultry. The total value of the live stock here enumerated was estimated at 817,108*l*.

The manufacture and bleaching of linen is the staple trade of the county. The most extensive bleach-works lie along the rivers Roe and Faughan: on the Faughan there is abundant water-power, and numerous sites are admirably calculated for this branch of the manufacture. The export and import trade of the county is carried on at the ports of Londonderry city and Portrush, the latter being the sea-port of Coleraine. The county is chiefly in the diocese of Derry, with portions in the dioceses of Armagh and Connor. It is divided into four baronies—Coleraine, Kennaght, Loughinsholin, and Tirkeeran—and two liberties, Londonderry and Coleraine, which include the city and town of these names. The principal towns are—LONDONDERRY CITY, COLERAINE, NEWTOWNLIMAVADY, and MAGHERAFELT, which are noticed under their respective titles. The other more important places are the following, with the population of each in 1851:—

Castle-Dawson, population 663, situated on the Mayola River, contains some good dwelling-houses, a chapel of ease, and a Presbyterian meeting-house. The inhabitants are employed in the linen manufacture. A monthly market is held on Saturday; fairs are held four times in the year. The mansion and demesne of Castle-Dawson, the property of the Right Hon. G. R. Dawson, are on the opposite side of the river.

Dungiven, population 917, a market- and post-town, situated on the river Roe, 15 miles E.S.E. from Londonderry, consists principally of a long straggling street built on a ridge of red-sandstone, and contains a church, a Roman Catholic chapel, a Presbyterian meeting-house, and a dispensary. At the head of the town are the remains of a castle and bawn built in 1618 by the Skinners' Company, to whom the place belongs. On the right bank of the river, on a rock rising 200 feet from the stream, are the picturesque ruins of the abbey-church, supposed to have been founded in 1100, and containing a richly-sculptured altar-tomb of a chief of the O'Kanes. The village is chiefly remarkable for its romantic site, being surrounded by some of the principal heights of the county, with Benbradagh as chief. Fairs are held on May 25th and October 25th. A market is held on Saturday.

Garvagh, population 785, a market- and post-town, distant 11 miles S. from Coleraine, is a neat little town, containing a parish church, a Roman Catholic chapel, a Presbyterian meeting-house, several schools, and a district dispensary. A market is held on Friday, and fairs are held on May 23rd, July 26th, and November 6th.

Kilrea, population 993, a market- and post-town, is situated near the river Bann on its left bank, distant 11½ miles from Coleraine. The place has been much improved by its proprietors, the Mercers' Company, who have built a market-house, a public school, a police barrack, and a hotel, and have also constructed new roads. Linen-weaving employs some of the inhabitants. A fair is held on October 10th.

Maghera, population 1162, a market- and post-town, distant 2½ miles S.E. by E. from Londonderry, contains a parish church, two Presbyterian meeting-houses, a district dispensary, and a petty sessions house, in which a court is held every alternate Saturday. The market is held on Tuesday, and fairs are held on the last Tuesday of every month. In the town are some interesting ruins of the old parish church.

Moneymore, population 781, a market- and post-town, about 39 miles S.E. from Londonderry, is distinguished by an appearance of neatness and comfort, and contains various places of worship, a court house, market-house, linen-hall, a district dispensary, and numerous handsome dwelling-houses. The Drapers' Company of London, to whom it belongs, have liberally aided in the improvement of the town and neighbourhood. There is a considerable trade in linen. A corn-market is held weekly on Monday, and a fair on the 21st of every month.

Port Stewart, a small town on the coast, about 25 miles N.E. from

Londonderry, contains a church, a Presbyterian meeting-house, a district dispensary, and several handsome dwelling-houses. There is a harbour with accommodation for small craft. Pleasantly situated on the coast, the town is a favourite resort in summer, and is steadily improving.

History and Antiquities.—At the most remote period the county appears to have been possessed by the sept of O'Loughlin and O'Neill, to whom the tribe of O'Cahan, who held the eastern and central districts, was tributary. After the arrival of the English in 1197, John de Courcy invaded the country of O'Cahan, and seized Derry, but was compelled by Hugh O'Neill to abandon his conquest. An English garrison was established at Coleraine, and grants appear to have been made and inquiries to have been taken in Derry in the regular manner; and in the patent roll of the 20th Edward II. is an entry of the appointment of Robert Savage to be sheriff of the county of Coulrath, or Coleraine, as O'Cahan's country was then called. After the great revolt of the O'Neills in 1333, the native Irish held possession of the county until the middle of the 16th century. In 1600 Sir Henry Dockwra, with a force of 4000 foot and 200 horse, arrived in the river Foyle, and made the commencement of a permanent settlement by the construction of three forts. The rebellion of Sir Cahir O'Dogherty in 1603, and the flight of Tyrone and O'Donnell in the preceding year, left the entire of this and five other counties at the disposal of the crown. In 1609 the king granted on certain conditions the forfeited lauds in this county to the corporation of London, who still retain possession of them. For the management of these estates the common council elect a body of twenty-six, consisting of a governor, deputy-governor, and assistants, of whom one-half retire every year.

In 1619 this body was incorporated by royal charter, and their estates erected into one county, to be called the county of Londonderry. The corporation, which is generally known as the Irish Society, still exists as constituted under the charter granted by Charles II. after the restoration. The division of the county took place immediately after the granting of the first charter. The several city companies had portions of the county assigned to their management, and the lands not assigned to the companies still belong to the society. The introduction of the new colony changed the entire face of the country, which up to this period had been one of the most desolate tracts in Ireland. Artisans in the chief branches of trade and manufacture were brought over by the companies, and habits of industry and independence became fixed among the population. The native Irish, returning by degrees, have again increased so far as nearly to equal in number the descendants of the settlers.

There are some remains of a Cyclopean fortress at the Giant's Sconce, on the road from Newtownlimavady to Coleraine. Dungorkin, a circular mount surrounded by a wet ditch, near Claudy, is a remarkable earthen fortress. There are several cromlechs, and other so-called druidical remains, of which the largest is at Slaughter-Manus. Artificial caves and tumuli are frequent. The only military edifices remaining are the castles of Kiloloo, Dungiven, Salterstown, and Muff, erected by the Londoners. The old abbey of Dungiven, which occupies a romantic site on a rock rising 200 feet above the bed of the river Roe, was built in 1100 by O'Cahan, and contains several well-sculptured monuments of that family.

Londonderry is represented in the Imperial Parliament by two members for the county, and one each for Londonderry city and the borough of Coleraine. The assizes are held at Londonderry: quarter sessions there and at Coleraine, Magherafelt, and Newtownlimavady: in all which towns there are bridewells. Petty sessions are held in 12 places. The county prison and the county infirmary are in Londonderry, as also the district lunatic asylum for Donegal, Londonderry, and Tyrone counties, to which the county of Londonderry is entitled to send 69 patients. There are fever hospitals at Coleraine and Londonderry, and 23 dispensaries in various parts of the county. Savings banks are established in Londonderry, Coleraine, and Newtownlimavady; the amount owing to depositors on November 20th 1853 was 70,110*l.* 6*s.* The county is within the military district of Belfast; and there are barracks in Londonderry, where also the staff of the county militia is stationed. The head-quarters of the constabulary force, consisting of 106 men, officers included, are at Coleraine; those of the 4 districts, comprising 18 stations, are at Coleraine, Londonderry, Magherafelt, and Newtownlimavady. There are 2 stations of the coast guard, at Down Hill and Port Stewart, and 2 stations of the revenue police, at Draperstown and Learmont. In September, 1852, there were 177 National schools, attended by 6899 male and 6063 female children.

LONDONDERRY, Ireland, the capital of the county of Londonderry, a city and sea-port, a municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the river Foyle, partly in the barony of Tirkeeran, but chiefly in that of Londonderry, in 54° 59' N. lat., 7° 19' W. long., distant 144 miles N.N.W. from Dublin by road. The borough is governed by 6 aldermen and 18 councillors, of whom one is mayor, and returns one member to the Imperial Parliament. The population of the city in 1851 was 19,888, besides 591 inmates of the workhouse. Londonderry Poor-Law Union comprises 22 electoral divisions, with an area of 139,178 acres, and a population in 1851 of 62,241.

The town, anciently called Derry Calgach from an oak grown in

the vicinity, grew up around a monastery founded by St. Columb, in 546. During the first few centuries, its progress was repeatedly checked by fire, and by the ravages of the Danes and the neighbouring Irish chiefs. In 1198 it was taken by the English under De Courcy. After a series of disasters, the place was occupied by a garrison in 1566, during the rebellion of the Earl of Tyrone. Two years later, the greater part of the town and fort was destroyed by the explosion of a powder magazine, when the garrison was withdrawn. Sir Henry Docwra arriving with a large force in 1600, rebuilt the fort. In 1608 Sir Cahir O'Dogherty surprised the fort, put the garrison to the sword, and burned a great part of the town. A few years after the modern city was founded by the London companies, who obtained a grant of the place in 1613. The walls were then built in their present extent, the cathedral and some other public buildings were completed, and the town rapidly advanced till 1637, when their charter was cancelled. The gates of the city were closed against the troops of James II. in December 1688. The famous siege of Derry followed. On the 18th of April 1690, James advanced against the city, and conducted the operations in person during 11 days. On the 1st of August the siege was hastily raised, on the arrival of a victualling ship, which having escaped the fire of the batteries, and broken through the boom drawn across the river, introduced supplies to the famished inhabitants. After this siege the city gradually recovered from all its disasters, and steadily advanced towards its present extent and prosperity.

The town is built on the summit and sides, and around the base of an oval hill, rising 119 feet above high water, on the left bank of the Foyle. The city within the walls (which are still entire and form an agreeable promenade) is traversed by four leading streets which extend at right angles from a square in the centre, called the Diamond, to the four gates. The street between the eastern and western gates stretches above half a mile further to the west with branches on either side. The city is lighted with gas, well paved, and supplied with water from reservoirs on the eastern side of the river.

The cathedral, which is also the parish church of Templemore, stands on the summit of the hill. It is a handsome building with a tower; from which an elegant spire rises to the height of 179 feet. It was completed in 1633, but has been considerably altered by frequent repairs. The bishop's palace, a plain substantial building, occupies the site of an old Augustinian convent. Besides the parish church there are a chapel of ease and a Free church, two Roman Catholic chapels, six Presbyterian, one Independent, and two Methodist meeting-houses. The Endowed schools are—Gwyn's charitable institution, established in 1833, for the support and education of male orphan children of the city and liberties; it has an income of 1870*l.* per annum, and about 120 boys under training; the Diocesan and Free Grammar school, or Foyle college, a spacious and handsome building near the river to the north of the city, with a yearly income of 280*l.* from the Irish Society of London, and 60 scholars in 1852, of whom 6 were free; the Parish or Poor school, founded in 1812 by Bishop Knox, and endowed by Erasmus Smith; an Infant school, and a National school, besides some others aided by the Irish Society. There is a mechanics institute with a library attached. In the centre of the square is the Corporation Hall or Town House, a large building with a circular front and a cupola, occupying the site of that which was destroyed during the siege. Between the cathedral and bishop's palace is the court-house, a very handsome edifice with a façade of 126 feet, consisting of an Ionic portico of four columns, and of wings adorned with Doric pilasters, and surmounted by statues of Peace and Justice. The building was commenced in 1813, and cost above 30,000*l.* Bishop's gate is a triumphal arch, erected in 1789, the centenary of the opening of the gates, at the raising of the siege. Near it on the central western bastion is a monument 90 feet high, consisting of a fluted Doric column, with a statue of the Rev. George Walker, governor of the city during the siege in 1689. To the west of this wall is the county jail, a very spacious and strong building. The crown prison stands a few yards apart. Outside the walls, to the east of the city, and facing the river, is the custom-house, a hollow square of buildings, 170 feet by 130 feet. Among other public buildings are the district lunatic asylum, the county infirmary and fever hospital, and a district dispensary. Among the charitable institutions are:—the mendicity house; the poor shop, established in 1821 to provide the indigent with clothing and bedding at prime cost; and the ladies' penny society for the relief of sick and indigent room-keepers; a charitable loan-fund, and a penitentiary for females. A savings bank has been in operation since 1815.

The river is here crossed by a wooden bridge 1068 feet long by 40 feet broad, connecting the city with the opposite suburb of Waterside. For the upper navigation of the Foyle it is divided by a swing-bridge, the machinery of which, in turning the platform, acts upon the pipes by which water and gas are conveyed across the river. The port formed by the river, which here expands into a spacious estuary, is under the jurisdiction of the Irish Society, who appoint a vice-admiral over it, and the Lough and adjacent coast. It is also in charge of a board of ballast commissioners, under whose control are harbour, pilot, and ballast masters, with 29 pilots. The quays extend northward from the bridge above half a mile. A ship-yard, with a patent slip attached, admits vessels of 800 tons. There is a ship-

building yard on the strand. The greatest depth of water in the port at low water is 31 feet, and 12 to 14 feet at the quays. Vessels of 500 tons can discharge at the quays. The number and tonnage of vessels registered as belonging to the port on December 31st 1853 were:—Sailing vessels, under 50 tons 10, tonnage 256; above 50 tons 14, tonnage 4171; and 7 steam-vessels of 1464 tons. The returns of vessels entered and cleared at the port during 1853 were as follows:—Coasting trade, inwards, sailing-vessels 588, tonnage 39,000; steam-vessels 468, tonnage 148,815: outwards, sailing-vessels 256, tonnage 15,320; steam-vessels 464, tonnage 146,693. In the colonial and foreign trade there entered 173 vessels of 35,791 tons, and cleared 81 vessels of 22,220 tons. The customs duties of the port in 1852 amounted to 116,799*l*.

In the city are two flax spinning-mills and several flour-mills, three distilleries, three breweries, several rope-walks, one foundry, and five tan-yards: near it is an extensive salmon fishery. Assizes for the county, and quarter and petty sessions are held in the city. Fairs are held June 17th, September 4th, and October 17th, and markets daily for provisions; on Wednesday and Saturday for grain, and on Thursday for flax.

LONGFORD, an inland county of the province of Leinster, in Ireland, lies between 53° 29' and 53° 56' N. lat., 7° 19' and 7° 56' W. long., and is bounded N. by the counties of Leitrim and Cavan, E. and S. by the county of Westmeath, and W. by the county of Roscommon. Its greatest length from north to south is 29 miles, from east to west 22 miles. The area comprises 269,409 acres, of which 191,823 are arable, 58,937 acres uncultivated, 4610 acres in plantations, 864 acres in towns, and 13,675 acres under water. The population in 1841 was 115,491, in 1851 it was 83,250.

Surface, Hydrography, and Communications.—The southern half of the county consists of a low table-land, inclining gently on the east and south towards the valley of the Inney, and bordered on the west by the flat and boggy shores of Lough Ree. In this division the only considerable eminence is Slieve Gauldry, which rises about 6 miles south-east of the town of Longford to a height of 650 feet. North of the table-land the county is traversed from east to west by the valley of the Camlin, a well-improved tract, the southern slope of which is diversified by numerous seats and well-planted demesnes. The opposite bank rises on the east into a slightly elevated district, which slopes northward along the shore of Lough Gownagh to the basin of the Erne; on the west it is overlooked by the pastoral hills of the Clonhugh range, which extends about 10 miles in a south-westerly direction, varying from 686 feet, the height of Crott Hill on the north-east to 912 feet, the height of Cairn Clonhugh near the opposite extremity. North of this range the moorish district of Drumlish spreads between Lough Gownagh and the limits of the county. From the western termination of the range to the Shannon there is an open fertile tract bounded towards the river by the plantations of Castle Forbes, the seat of the Earl of Granard.

Except a few streams that fall into Lough Gownagh, the whole drainage of the county is towards the Shannon. That river with its windings forms a boundary-line of about 50 miles. Near its first contact with the county it spreads into Lough Forbes, a small lake three miles long by a mile and a half in its widest part, and is there joined by the Rinn, a considerable stream that flows south out of Leitrim. Two miles below the lough is the confluence of the Camlin, which rises near the eastern boundary, and flows in a westerly direction with a winding course of above 20 miles, passing through Longford town. About half-way in its course along the county the Shannon expands into Lough Ree, an extensive lake, strikingly diversified by deep bays, rugged headlands, and numerous islands. The shores of Lough Ree are subject to extensive inundations in consequence of the rising of its waters in winter to an average height of 7 feet above the summer level. An inlet running 4 miles eastward along the southern limit of the county receives the waters of the Inney, which rises in Cavan, and next to the river Suck is the largest tributary of the Shannon. Many small lakes diversify the surface of the county; but Longford derives its chief advantage from the river Shannon, which connects the county with the important line of navigation extending from Lough Allen to the city of Limerick. This line again has a connection through Longford with the city of Dublin. The Royal Canal enters the county near its southern extremity, and after continuing its course in a westerly direction to the vicinity of Ballymahon passes north by west to the Shannon at Richmond harbour, where on the Cloondara island, which is formed by the two branches of the Camlin, are the canal docks, basins, and warehouses. The county is generally provided with good lines of road.

Geology and Mineralogy.—The southern half of the county consists of the stratified limestone of the central plain of Ireland. The other division is a continuation of the clay-slate of the grauwacke formation of Cavan. These two fields are separated at their western extremity by a belt of yellow-sandstone and conglomerate, which projects from a small tract in the south of Leitrim. A patch of sandstone crosses the bed of the Inney and spreads round Ballymahon. Another forms the mass of Slieve Gauldry, and stretches to the vicinity of the town of Longford. Along the south and south-east border of the county are large quantities of fine calcareous sand and marl. Marly clay in beds from 1 foot to 10 feet thick underlies many of the boggy

tracts, which have an average depth of 30 feet. Marble of a deep gray colour and susceptible of a fine polish is raised in the vicinity of Ballymahon. Excellent ironstone associated with coal-shale and lead-ore has been found in small quantities.

Climate, Soil, and Produce.—The extent of wet and marshy surface renders the climate less genial than that of the midland counties in general. The soil of the boggy district of Lough Ree is inferior, but over the rest of the limestone plain there is a rich vegetable mould, which produces heavy grain crops and the finest pasture. The northern division of the county is chiefly devoted to grazing. The occupations of the county are tillage and grazing, principally the latter. Great quantities of butter are made by the farmers and cottiers. Linens and coarse woollens are manufactured. In 1853 there were under crop 82,644 acres, of which 1166 acres grew wheat, 40,952 acres oats, 967 barley, bere, rye, peas, and beans, 15,576 potatoes, 2510 turnips, 1175 mangel-wurzel, carrots, parsnips, vetches, and other green crops, 781 acres flax, and 19,167 acres meadow and clover. In 1841 the plantations covered 5987 acres, growing oak, ash, elm, beech, fir, fruit-trees, &c. In 1852 on 8269 holdings there were 6523 horses, 3006 mules and asses, 40,495 head of cattle, 19,102 sheep, 12,465 pigs, 8014 goats, and 138,294 head of poultry. The total value of the live stock here enumerated was estimated at 368,802*l*.

Divisions and Towns.—The county of Longford is in the Ardagh diocese, with a small portion in Meath. It is divided into 6 baronies, Ardagh, Granard, Longford, Moydow, Ratholine, and Shrule. The principal towns are LONGFORD, GRANARD, and BALLYMAHON, which are noticed under their respective titles. The following towns and villages, with the population of each in 1851, may be mentioned.

Ardagh, 5½ miles S.E. by E. from Longford, containing a parish church and a Roman Catholic chapel, is remarkable only as giving name to an Episcopalian and a Roman Catholic diocese. An abbey is said to have been founded and the see to have been established by St. Patrick about the year 454. Fairs are held April 5th, and August 26th. The population of Ardagh was returned in 1841 as 165; but in the Returns of the Census of 1851 the place is returned as without inhabitants. *Drumlish*, population 400, situated in a bleak and barren district, about 4½ miles N.E. from Newtown-Forbes, contains an Episcopal and a Roman Catholic chapel. A market is held weekly on Tuesdays from October to March inclusive. *Edgeworthstown*, population 817, a village 6½ miles E. by S. from Longford, the residence of the Edgeworth family, and beautified by the family mansion and its highly improved demesne. It contains a parish church, a Roman Catholic chapel, and a school for the education of the sons of the Established Clergy. There are a National and some other schools, a loan-fund, and a district dispensary. Fairs are held six times a year. *Keenagh*, population 244, a village 9 miles S. from Longford, containing a church and a Methodist chapel, a district dispensary and a loan-fund. A fair is held on October 10th. In the neighbourhood are the mansion-house and well-kept demesne of Mosstown, with the ruins of Mosstown Castle. *Killahee*, population 193, a village 5 miles S.W. from Longford, containing an Episcopal church, and chapels for Roman Catholics and Methodists. It is a station on the Royal Canal, which here sends off a branch of 6 miles to the town of Longford. Large quantities of dairy and agricultural produce from the surrounding country are shipped at the village. There is a loan-fund. Fairs are held four times in the year. *Lanesborough*, population 201, a market- and post-town situated on the left bank of the Shannon, at the head of Lough Ree, 10 miles S.W. from Longford, contains a church, a Roman Catholic chapel, a district dispensary, and a police station. The Dublin road here crosses the Shannon by a bridge of 9 arches, under one of which a lateral cut with a small basin continues the river navigation. There is a considerable corn-market. A fair is held on February 12th. *Newtown-Forbes*, population 331, a small post-town 2½ miles N.N.W. from Longford, contains a church, a Roman Catholic chapel, and a Methodist meeting-house. A court of petty sessions is held every alternate Tuesday. Fairs are held on Easter Tuesday, September 4th, and October 31st.

The county returns two members to the Imperial Parliament. The assizes are held at Longford, where are the county prison and the county infirmary. Quarter sessions are held at Longford, Ballymahon, and Granard; each of these towns is also the seat of a Poor-Law Union. Petty sessions are held in 11 places. The county is within the military district of Dublin. The staff of the county militia is stationed at Newtown-Forbes. The constabulary force, consisting of 202 men and officers, has its head-quarters at Longford. The county is divided into five police districts, comprising 29 stations; the districts are Longford, Killahee, Ballymahon, Drumlish, and Granard. In September 1852 there were 57 National schools in operation, attended by 3983 male and 3111 female children.

History and Antiquities.—The territory at present constituting the county of Longford was originally a portion of the kingdom of Meath, and as such was included in the grant of Meath by king Henry II. to Hugh de Lacy. The district was erected into a separate county in the 11th of Elizabeth. In 1615, a commission was appointed and an inquisition taken, by which it was found that, under a proviso in the grant of Elizabeth, the crown was entitled to take possession of this territory by virtue of the act of absentees. A commission was in consequence issued empowering the Lord Deputy and others to

dispose of the estates, so found to be in the king, to patentees. The plantation did not take effect to any great extent, as in 1641 the entire county appears to have been seized back by the O'Farrells, except Longford Castle and Castle-Forbes. The confiscations which ensued extended over nearly the entire county, and introduced a newly new proprietary.

The remains of the old town of Granard possess considerable interest when taken in connection with the neighbouring rampart of Duncla, which runs from Lough Kinale to Lough Gownagh, a distance of nearly 8 miles. This work is similar to the Dane's Cast. [Down.] On the island of Inch-Clorin, in Lough Ree, are the ruins of seven churches, and the foundation of a round tower. An abbey was founded here, about 540, by St. Dermid. The Lord Richard Tuise, in 1205, built an abbey at Grauard in honour of the Virgin, which was rifled by the Scots, under Edward Bruce, in 1315. The abbey at Longford was one of Patrick's foundations. O'Farrel, prince of Annaly, founded a very fine monastery on the site of this abbey in 1400. The church of the friars is now the parish church. Abbeyshrule was another rich foundation of the same family. In Lough Ree, besides the seven churches of Inch-Clorin, were the monasteries of All Saints, founded by St. Kieran in 544, and Innisbofin, founded by a nephew of Patrick about 530, on islands bearing these names respectively. There are remains of all the preceding, as also of the religious houses of Moydow, Clonebrone, Clone, Derg, and Innismore, a foundation of St. Columba's on an island in Lough Gownagh. A few castles are still partially standing; the principal ones are at Castle-Forbes, Granard, Tenallick, Castlecor, Rathcline, and Ballymahon.

LONGFORD, the capital of the county of Longford, Ireland, a market- and post-town and the seat of a Poor-Law Union, is situated on the river Camlin, in 53° 44' N. lat., 7° 45' W. long., 75 miles W.N.W. from Dublin by road. The population in 1851 was 4144, besides 2096 in the workhouse, 30 in the infirmary, and 117 in the jail. Longford Poor-Law Union comprises 19 electoral divisions, with an area of 109,961 acres, and a population in 1851 of 87,055.

The town, which stands on the left bank of the river, with a small portion on the opposite bank, consists of several regular and well-built streets. The parish church is a spacious and handsome building. The Roman Catholic cathedral, recently erected, is a magnificent structure, with a portico of six Ionic columns, and a tower nearly 200 feet high. There are in the town chapels for Presbyterians and Methodists, the county court-house, the county jail, and the cavalry and artillery barracks. A branch of the Royal Canal comes to Longford from Killashoe. At the Canal basin there is a fine market-house, erected by the late Lord Longford. An extensive corn-trade is carried on, and there are corn-mills and storehouses, tanyards, and a brewery. The assizes for the county and quarter-sessions are held in Longford. Markets are held on Wednesday and Saturday, and fairs on June 10th and October 22nd.

LONG ISLAND. [BAHAMAS; NEW YORK.]

LONGNOR. [STAFFORDSHIRE.]

LONGOBUCO. [CALABRIA.]

LONGTON. [STAFFORDSHIRE.]

LONGTOWN, Cumberland, a market-town and the seat of a Poor-Law Union, in the parish of Arthuret, is situated near the border of Scotland, in 55° 1' N. lat., 2° 56' W. long., distant 9 miles N. by W. from Carlisle, and 309 miles N.N.W. from London. The population of the town in 1851 was 9142. The living is a rectory in the archdeaconry and diocese of Carlisle. Longtown Poor-Law Union contains 14 parishes and townships, with an area of 94,520 acres, and a population in 1851 of 9696. The streets of Longtown are regular and spacious. There are a chapel in connection with the Established Church of Scotland, a chapel of the United Presbyterian Church, an old Endowed school, and a public room for the Independent United Order of Mechanics. A bobbin-mill gives some employment, and a little handloom weaving is carried on. The corn-market is on Thursday; on Monday a market is held for bacon and butter. Fairs are held at Whiteutide and at Martinmas. Netherby Hall, the seat of Sir James Graham, Bart., is pleasantly situated on the banks of the Esk, about two miles from Longtown.

LORGUES. [VAR.]

LO'RIENT, a sea-port town of France, situated at the confluence of the Scorff and the Blavet in the department of Morbihan, stands in 47° 44' 45" N. lat., 3° 21' 37" W. long., 266 miles W. by S. from Paris, and has 22,561 inhabitants in the commune.

The town is of modern origin. In 1666 Louis XIV. granted permission to the French India Company to establish magazines and docks for building vessels on a part of the Bay of St. Louis, the name given to the mouth of the Blavet. The establishment thus formed, which continued in the possession of the company till 1770, is now in the hands of government. From the company's establishment the place

took the title of Port de L'Orient (Port of the East). In 1720 the building of the town was commenced; in 1738 the inhabitants amounted to 14,000, and in that year the town was incorporated. The India Company had previously established here their annual sale of Chinese and Indian commodities. In 1744 the town was fortified. The English landed and made a sudden attack upon the town in 1746; but it was bravely defended by the Count de Tinténac, a Breton nobleman, who came to the assistance of the bewildered townsfolk with a few hundred men, and the English finally withdrew to their ships. During the long wars of the revolution the commerce and population of the town declined, but since the peace of 1815 commerce has been gradually resuming its former activity.

The town is well laid out, with wide, straight, well-paved, and clean streets; the houses are well built, and there are several pleasant promenades. The bridge over the Scorff, the quays, the theatre, the abattoir, and the covered meat and fish markets, are the public buildings most entitled to notice. The port is on the east side of the town, from which it is walled off: its length is nearly 4000 feet; its breadth nearly 2000 feet. The imperial dockyard is one of the finest in the empire; there are slips for laying down 30 vessels of war at a time. Both steamers and sailing-vessels of the largest size are turned out of the dockyard of Lorient. Among the most remarkable objects connected with the dockyard are—the machinery for fixing the masts; the basin for ships under repair; the block-manufactory, worked by steam; the arsenal; the bagne, in which soldiers are confined for insubordination; the handsome artillery barracks, capable of accommodating 1800 men; the school of naval artillery, with its library, museums, and drawing-hall; the apartments and gardens of the maritime prefect; and the offices of the various departments of the public service. There is an observatory, or signal-tower, built on an eminence south of the harbour, from which vessels can be discerned 30 miles out at sea. The height of the observatory is 194 feet above the sea-level, and 181 feet above its base. The Place-Royale is well built and planted with lime-trees. In the market-place is a granite column surmounted by a statue of a brave French naval officer named Bignon, who was appointed to command a prize taken from Greeks in the Archipelago, and blew it up rather than surrender it to the pirates, who subsequently attacked him in superior force.

Besides the national establishments connected with the imperial dockyard, Lorient has manufactures of hats, linens, braid, and pottery; the trade in wine, brandy, flour, wax, honey, salt, butter, corn, provisions, lead, iron, hardware, and manufactured goods, is still important. The sardine fishery is actively carried on. Vessels sail from Lorient to the principal ports of Europe, America, and the West Indies.

About a mile from the arsenal, on the bank of the Scorff, is a powder-magazine; and a mile west, an exercise-ground for the artillery. An hospital is erected on the island of St. Michel, in the roadstead.

Lorient is the chief town of an arrondissement, the head-quarters of a maritime prefecture, and a fortress of the third class. It has tribunals of first instance and of commerce, an exchange, a naval school, a communal college, a custom-house, and several other government offices. The fortifications of this town are in good condition. The environs are exceedingly well cultivated.

LORIOU. [DRÔME.]

LORRAINE, a province or military government of France before the revolution, situated on the north-eastern frontier, was bounded N. by the duchy of Luxembourg and the electorate of Trèves; N.E. by the duchy of Deux-Ponts, in the Palatinate; E. by Alsace, from which it was separated by the Vosges; S. by Franche-Comté; S.W. by the county of Langres in Champagne; and W. by other districts of Champagne. The length of the province was about 99 miles; its breadth 87 miles. Its area was about 6780 square miles. It was watered in the west by feeders of the Aisne and Marne, belonging to the system of the Seine, and by the Meuse; on the east by the Moselle and its tributaries.

Lorraine, in the extended application of the name, corresponding with the bounds and dimensions given above, comprehended:—1. The Duchy of Lorraine, which contained Lorraine proper, German Lorraine, and the Pays des Vosges, of which the respective chief towns were—Nancy, Sarreguemines, and Épinal; 2. the Duchy of Bar, of which the capital was Bar-le-Duc; and, 3. the Pays-des-Trois-Évêchés, which had Metz, Toul, and Verdun for chief towns.

A small portion of German Lorraine was ceded by France to Prussia by the treaty of Vienna, 1815. The remainder constitutes the departments of MEURTHE, MEUSE, MOSELLE, and VOSGES.

At the time of the Roman conquest of Gaul, Lorraine was inhabited by the Treviri, the Mediomatrici, the Verodunenses, and the Leuci. It formed part of the province of Belgica Prima, and was included in the earlier conquests of Clovis. In the division of the Frankish empire under the sons of Clovis, Lorraine formed part of the kingdom of Austrasia. In the division of the empire among the descendants of Charlemagne the country between the Rhine and the Meuse was assigned to Lothaire, son of the emperor Lothaire, from whom it took the Latin name of Lotharingia, in German Lothringen, and in French Lothierregne and Lorraine. This kingdom existed for a long period, and was united with the imperial crown, so that eastern France became a portion of the empire.

The duchy of Lorraine, which consisted of a large part of the kingdom of Lorraine, was established in the 10th century, and was afterwards divided into two parts, Lower Lorraine, or Brabant, and Upper Lorraine, which has retained its designation to modern times. The duchy of Upper Lorraine was in the 11th century conferred by the emperor on Gérard, a noble of Alsace. From this Gérard descended the long line of the dukes of Lorraine who governed the country till towards the middle of the 18th century. The county, afterwards duchy of Bar, was separated from the duchy of Lorraine in the 11th century. The connection of the dukes of Lorraine with France involved them in the disputes of that kingdom. Raoul, duke of Lorraine, was one of those who fell in the battle of Créci, 1346, fighting against the English; and Jean, his son and successor, a mere boy, was taken prisoner after distinguishing himself by his valour at the battle of Poitiers, 1346. He was again taken prisoner, 1364, at the battle of Auray in Bretagne, in which Charles de Blois was defeated and slain by Jean de Montfort, his rival claimant for that duchy. The duke Jean of Lorraine was also present at the battle of Rosbecque, in which Charles VI. of France defeated the Flemings (1382): he died in 1390.

On the death of Charles le Hardi, the successor of Jean in the duchy of Lorraine, the succession was disputed by René I., duke of Bar and of Anjou, and Antoine de Vaudemont, nephew of Charles. In the war that ensued René was defeated and taken prisoner (1431) by his rival; but he obtained his liberty in 1436, and set out for Naples, the crown of which had fallen to him during his captivity. Lorraine had been confirmed to him by the decision both of the Emperor Sigismund and of the council of Bâle. He resigned the duchy of Lorraine to his eldest son Jean, duke of Calabria, in 1453. Jean was succeeded by his son Nicholas, on whose death (1473) Lorraine came to René II., grandson, on his mother's side, of René I., and on his father's side, of Antoine, duke of Bar, who had been René's competitor. René II. was seized by Charles le Téméraire, duke of Bourgogne, together with his mother Yolande, almost immediately on his (René's) accession to the duchy, and though released by the interference of Louis XI., was obliged to make an alliance, offensive and defensive, with Charles. Charles soon afterwards again attacked Lorraine, took the capital (Nancy) and other towns, and obtained possession of the whole duchy. After the defeat of Charles by the Swiss at Granson and at Morat in 1476, René returned to Lorraine, and rapidly reconquered it. Charles led an army in the ensuing winter to recapture Nancy, but he was defeated and slain by René (January, 1477). René subsequently obtained of Charles VIII. of France the restoration of the duchy of Bar, which had been seized by Louis XI. He died in 1508.

Antoine, the successor of René II. (1508), seems to have merited, by his care to promote the happiness of his subjects, the title which he received of 'the Good.' His reign is chiefly remarkable for the declaration of Lorraine as a free and independent sovereignty by the Germanic body. He died in 1544, and was succeeded by his son François I. François I. reigned only a year. He was succeeded by his son Charles, who during the long period in which he held the duchy (1545-1608) acquired regal rights over that part of the duchy of Bar which he held as vassal of the king of France. Henri II., François II., and Charles III. (or IV.) successively occupied the ducal throne. Charles III. (or IV.) was involved in hostilities with Louis XIII. of France, by whom the duchy was in great part conquered, but it was restored to Charles by the treaty of the Pyrenees; and subsequent negotiations (in 1661) with Cardinal Mazarin secured also the restitution of the duchy of Bar. Charles agreed that on his death the whole of his states should fall to the crown of France; but soon after renouncing his independent sovereignty, he renewed his allegiance to the emperor. Louis XIV. seized his dominions in 1670. Duke Charles distinguished himself in the imperial service on several occasions, till his death in 1675. He was succeeded by his nephew Charles IV. (or V.), also a distinguished military commander. Finding himself (1677) at the head of an army of 60,000 imperialists, he attempted to regain possession of Lorraine, but was baffled by the skill of the French *Maréchal* Crecqui, who had only 30,000 men. At the treaty of Nimègue, 1678, the restitution of Lorraine was offered to him, but on conditions which he refused to accept. He distinguished himself afterwards at the head of the imperialists in Hungary against the Turks, and aided Sobieski in the deliverance of Vienna (1683). He died in 1690.

Leopold, the successor of Charles, obtained restitution of his states by the treaty of Ryswick, 1697. He observed neutrality in the war of the Spanish succession, and devoted himself to the improvement of his dominions. He died in 1729, and was succeeded by his eldest son François Etienne, who in 1735 acquiesced in a treaty between France and the empire, by which his duchy was ceded to Stanislas Leckzinski, ex-king of Poland, whose daughter had been married to Louis XV. of France. It was further agreed that on the death of Stanislas the duchy should be united to France. François Etienne, who married, the following year, the archduchess Maria Theresa, and was afterwards (1745) elected to the imperial crown, received the reversion of Tuscany in exchange for Lorraine. Stanislas was recognised as Duke of Lorraine and Bar in 1737. After

governing the country with wisdom and beneficence, he died in 1766. On his death Lorraine was incorporated with France.

LOSS ISLANDS. [SIERRA LEONE.]

LOSTWITHIEL, Cornwall, a market-town in the parish of Lostwithiel, is situated on the right bank of the river Fowey, in 50° 25' N. lat., 4° 40' W. long., distant 6 miles S.S.E. from Bodmin, and 234 miles W.S.W. from London. The population of the parish of Lostwithiel in 1851 was 1053. The living is a vicarage in the archdeaconry of Cornwall and diocese of Exeter. The town is governed by 7 capital burgesses, of whom one is mayor, and 17 assistants.

Lostwithiel sent members to parliament from the reign of Edward I. till it was disfranchised by the Reform Act. In the civil war of the time of Charles I., Restormel Castle, about a mile from the town, was taken by Sir Richard Grenville, and the Earl of Essex, who was at Lostwithiel in command of the parliamentary army, had to retire with his forces. The houses in the town are chiefly of stone, and are covered with slate, of which large slabs are quarried in the neighbourhood. The streets are narrow, and roughly paved: they are lighted with gas. The church is of the early English style, and has an octagonal lantern and spire of decorated character. There are in the town one chapel for Independents, two chapels for Methodists, a National school for girls, and a mechanics institute. A grammar school formerly existed here. Near the parish church is an ancient building said to have been a palace of the dukes of Cornwall. The market is on Friday. Four fairs are held in the course of the year. Lime burning, tanning, and wool-stapling employ a few of the population. Some trade is carried on in timber, iron, and coals.

LOT, RIVER. [Lot, Department of.]

LOT, a department of France traversed by the Lot, is bounded N. by the department of Corrèze, E. by those of Cantal and Aveyron, S. by Tarn-et-Garonne, and W. by Lot-et-Garonne and Dordogne. It lies between 44° 13' and 45° 3' N. lat., 1° 1' and 2° 14' E. long. Its greatest length from south-west to north-east is 65 miles; its average breadth is about 35 miles. The area is 2168 square miles. The population in 1841 was 287,739; in 1851 it amounted to 296,224, giving 136.63 inhabitants to a square mile, or 37.95 below the average per square mile for the whole of France.

The department takes its name from the Lot, a river which, rising in the Margeride Mountains, in the department of Lozère, flows in a general western direction across the departments of Lozère, Aveyron, Lot, and Lot-et-Garonne, where it enters the Garonne on the right bank a little above Aiguillon, after a course of 270 miles, 187 miles of which, from Entraigues, where it is joined by the Truyère, in the department of Aveyron, are navigable. The north of the department is drained by the DORDOGNE. The watershed between these two rivers is formed by a prolongation of the Auvergne Mountains, which traverse the department from north-east to west, dividing it into two slopes, the northern one belonging to the basin of the Dordogne, the southern one to the basin of the Garonne. The Selle, which flows along the south-eastern side of this mountain range, and enters the Lot on the right bank near St.-Cirq, is the only other river of importance. Some small feeders of the Garonne rise in the south of the department, the largest of which is the Barguelonne. The eastern districts of the department are covered with low hills which are ramifications of the Cévennes.

The deep soils of the valleys and plains yield fine crops of wheat, maize, barley, and oats; on the lighter soils rye, rape, and buckwheat are grown; and on the strongest soils considerable quantities of hemp and tobacco are raised. The hill-slopes along the rivers are generally laid out in vineyards, which yield annually 13,200,000 gallons of wine, the best kinds being those of Cahors and Grand-Constant. About two-thirds of the whole produce are exported or distilled into brandy. The white mulberry is extensively cultivated for the production of silk. Excellent truffles are found. Plums are grown in large quantities, and when dried form an important article of export. Turkeys, geese, game, and poultry generally are very plentiful. Horses, cows, and sheep are of inferior breeds; goats are numerous; and large numbers of pigs are fattened for the supply of the neighbouring departments. Wild boars are now rarely met with. Hares and rabbits are very numerous, and of large size. Fish is abundant in all the rivers, among which the Cère, a feeder of the Dordogne, is famous for eels, and the Lot for carp of enormous size.

The south-west of the department is occupied by the chalk formation; the southern and central parts by the strata which intervene between the chalk and the new red-sandstone; the eastern side by the formations from the new red-sandstone (inclusive) to those which repose on the primitive rocks; and the north-east of the department, along the bank of the Cère, by the primitive rocks. Among the mineral productions are coal and iron. The hills afford granite, marble of various colours, limestone, calamine, alabaster, calcareous spar, and stone for mill-stones and lithography. Crucible-clay and fullers'-earth are found in the valleys. There are several mineral-springs, and one or two remarkable caverns in the department: one of these near the bank of the Selle contains the fossil bones of animals not now found in Europe.

Of industrial activity there is little: a little bar- and cast-iron, coarse cotton- and woollen-stuffs, brandy, and paper are manufactured. The corn-mills, which are 922 in number, are the only important

manufacturing establishments in the department. The commerce is composed of the articles already indicated, and of hides, salt, oak-staves, groceries, small wares, broadcloth, &c. About 680 fairs and markets are held in the year. Roadway accommodation is afforded by 4 state, 11 departmental, and 37 parish roads.

The department presents great differences of temperature and climate. Among the granitic highlands of the east the winters are long and rude, generally lasting from November to April, during which time snow and rain, each accompanied by cold winds, alternately succeed each other. The calcareous slopes of the Auvergne range have a drier and less rigorous climate, and a much shorter winter. In the plains and the valleys of the Dordogne and the Lot the climate is genial, except during the spring, when the night-frosts are often very harsh and biting.

The department contains 1,388,187 acres. Of this area 574,622 acres are under tillage, 62,483 acres consist of grass-land, 144,876 acres are under vines, 215,620 acres are covered with woods and forests, 176,153 acres with heaths and moors, and 89,520 acres are occupied with orchards, plantations, and nurseries.

The department is divided into 3 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Cahors . . .	11	125	118,515
2. Figeac . . .	7	112	94,345
3. Gourdon . . .	9	73	83,364
Total . . .	27	310	296,224

1. Of the first arrondissement, and of the whole department, CAHORS is the capital. *Castelnau-de-Montratier* occupies the summit of a steep hill, 14 miles S. from Cahors, and has 4133 inhabitants. Its position, its ramparts and strong castle, of which there are still some vestiges, rendered it formerly a town of considerable importance. *Montcuq*, situated on a conical hill between two valleys, 14 miles S.W. from Cahors, has 2314 inhabitants. It was formerly one of the most important fortresses of Quercy; in accordance with the treaty of Meaux, its formidable defences were demolished, with the exception of a single square tower 109 feet high, which still stands in the highest part of the town. *Puy-l'Évêque* is situated on a peninsula formed by the Lot, on its right bank, 15 miles W. by N. from Cahors, and has 2505 inhabitants.

2. In the second arrondissement the chief town, *Figeac*, is situated in a pretty valley surrounded by hills, which are covered with woods, vineyards, and orchards, on the right bank of the Selle, 32 miles N.E. from Cahors, and has a tribunal of first instance, a college, and 6171 inhabitants. This town was formerly surrounded by ramparts and ditches, part of which still remains. The streets are narrow and ill laid out; the houses ill built, many of them remarkable for antiquity of style. The most important buildings are the *Château-de-Baleine*, a part of the old fortifications of which now serves for a court-house; the abbey-church of *St-Sauveur*; and the church of *Notre-Dame-du-Puy*. Two obelisks, called *Aiguilles*, one south the other west of the town, are remarkable for their structure and antiquity; they were used in former times as fire-beacons to guide travellers by night through the surrounding countries, which were then covered with dense forests. *Figeac* originated in a monastery founded A.D. 755. It was governed by consuls, had the right of coining money, and enjoyed several other immunities. All these it lost for voluntarily submitting to the English in the reign of King Jean; by the efforts and sacrifices they made to shake off the yoke of the foreigners their privileges were afterwards restored. The English seized the town again in the reign of Charles V., and levied heavy contributions as a condition of evacuating it. *Cajarc*, a town of 2055 inhabitants, is situated in a very fertile district, on the right bank of the Lot, 12 miles S.W. from Figeac. *St-Céré*, 18 miles N. by W. from Figeac, is built on an island formed by the Bave, a feeder of the Dordogne, and has 3902 inhabitants, who manufacture great quantities of hats. To the north of the town are the remains of a fortified camp, said to be Roman, in which however several ecclesiastical structures seem to have been erected; of these two lofty isolated towers are still standing.

3. The third arrondissement takes its name from its chief town, *Gourdon*, which is situated on a hill in the west of the department, 22 miles N. from Figeac, and has a tribunal of first instance, a college, and 5325 inhabitants, who manufacture woollen stuffs, linen, and hats. The town, which is tolerably well built, and has a handsome church, was formerly surrounded by strong ramparts. *Gramat*, situated in a romantic valley, 16 miles N.E. from Gourdon, on the right bank of the Alzon, a feeder of the Dordogne, has mineral springs and 3560 inhabitants, who trade in corn and wool. *Martel*, 11 miles N. by W. from Gramat, has a college and 3070 inhabitants. It owes its origin and name to Charles Martel, who erected here the church of *St-Maur*, which was rebuilt on a large scale in the year 1300, and is lighted through stained-glass windows remarkable for beauty of colouring and correctness of design; the subjects represented are the principal incidents of our Saviour's passion. *Souillac*, a well-built town, with a tribunal of commerce and 3087 inhabitants, is situated in a fertile

GEOL. DIV. VOL. III.

valley, 12 miles N. by E. from Gourdon, on the right bank of the Dordogne, which is here spanned by a stone bridge of seven arches. The town was taken by the English in 1362, and by the Calvinists in 1562. Coarse woollens, agricultural implements, bar-iron, leather, and iron-ware are manufactured; there is also some trade in wine, tobacco, hides, salt, groceries, oak-staves, cattle, &c.

The department forms the see of the Bishop of Cahors; it is included in the jurisdiction of the High Court of Agen, within the limits of the University-Academy of Toulouse, and belongs to the 12th Military Division, of which Toulouse is head-quarters. It returns two members to the Legislative Body of the French empire. There are a diocesan seminary, an endowed college, and a normal school at Cahors; and communal colleges at Figeac and Martel, besides the ordinary communal schools.

(*Dictionnaire de la France; Statistique de la France; Annuaire pour l'An 1853; Official Papers.*)

LOT-ET-GARONNE, a department in France, is bounded N. by the department of Dordogne, E. by those of Lot and Tarn-et-Garonne, S. by that of Gers, and W. by those of Landes and Gironde. It lies between 43° 58' and 44° 45' N. lat., 1° 5' E. and 0° 8' W. long. Its greatest length from north-east to south-west is 63 miles; from south-east to north-west, 55 miles. The area is 2067 square miles, and the population in 1841 was 347,073; in 1851 it amounted only to 341,345, which gives 165.14 to the square mile, or 9.44 below the average per square mile for all France. The department takes its name from the two principal rivers which traverse it—the Lot, from north-east to west, and the Garonne from south-east to north-west; and is formed out of the old district of Agénois, part of the diocese of Condom, and small portions of those of Bazas, Lectoure, and Cahors.

The surface of the department presents a high plain, furrowed to different depths by river-valleys, but diversified in the south by some low swells, the last declivities of the Pyrenees northward; the whole inclining towards the north-west and belonging to the basin of the Garonne. Nothing can exceed the beauty and fertility of the valleys of the Lot and the Garonne; the slopes that inclose them are covered with vines and other fruit-trees, especially the fig and the plum, and the low-lands yield abundantly wheat, maize, rye, hemp, tobacco, &c. The valley of the Baise, in the south, and that of the Dropt, in the north of the department, are also very fertile. With these exceptions, the department presents an arid, treeless surface, with a barren stony soil, especially in the eastern districts at a little distance from the Lot and the Garonne. In the upper part of Agénois, the soil is a stiff iron-coloured clay that ill repays the labour of the husbandman; and in the Landes, which extend over the south-west of the department along the Avenche, the ground is covered with arid sands, unhealthy marshes, and in some places with a scanty soil, which can with difficulty be made to produce a few ears of corn. In this last district there are also some hungry pastures and forests of pine and cork; the cork-woods along the left bank of the Gelise, a feeder of the Losse, in the south of the department, are the largest in France. On the northern borders there are fine chestnut woods. The quantity of wine annually produced is 14,014,000 gallons, half of which goes for the home consumption; part of the surplus is distilled into brandy, and the remainder is exported to Bordeaux. A considerable number of cattle, horses, mules, and sheep are reared. Immense numbers of geese also are reared, and form an important article of export. Game and fresh-water fish are plentiful. The climate of the department is in general very healthy; but long alternations of drought and rain are not uncommon.

The principal rivers are the LOT, the GARONNE, and the GERS. The *Baise*, which enters the Garonne on the left bank nearly opposite the mouth of the Lot, rises near the village of Lannemezan, in the department of Hautes-Pyrénées, whence it flows northward through the department of Gers, passing Mirande (below which it is joined on the right bank by the Baise-Devant) and Condom, to which town we believe it has recently been made navigable. At a short distance below Condom it enters the department of Lot-et-Garonne, and passing Nérac (where the navigation formerly began) it joins the Garonne opposite Aiguillon after a course of nearly 100 miles. The *Dropt* rises in the department of Dordogne to the east of Montpazier. It flows westward along the southern base of a western offset from the mountains of Cantal, and in its course crosses the boundary between Lot-et-Garonne and Dordogne more than once. Below Eymet in the south of the latter department it finally leaves Dordogne, and crossing the north-western angle of Lot-et-Garonne it runs north-west to Monseigneur in the department of Gironde, and thence west by south to its mouth in the Garonne below La-Réole. Its whole length is about 85 miles. The *Dropt* runs through a pretty valley; it is crossed by many mill-dams, but has been rendered navigable by canalisation and by lifting apparatus up as far we believe as Eymet. Steamers ply up the Garonne between Bordeaux and Agen. [AGEN; GARONNE.]

The projected railway from Bordeaux to Cette enters the department on the north-west between La-Réole and Marmande, where it crosses from the left to the right bank of the Garonne. From Marmande it is to run up the right bank of the Garonne through Tonneins to Agen, thence through Moissac to Montauban, and then to the Garonne at Toulouse. Roadway communication is afforded by 6 state and 16 departmental roads.

The department is occupied wholly by the supracretaceous strata. Iron-mines are worked; good building stone, calcareous spar, gypsum, and marl are found. The chief manufactures are cork, sailcloth, linen, swanikins, pottery, linen- and cotton-yarn, iron, glass, paper, lime, ropes, leather, tobacco. The commerce is composed of the various industrial and agricultural articles enumerated, and of pitch and tar made from the pines of the Landes. About 675 fairs and markets are held annually. The department possesses 1138 wind- and water-mills, 9 iron forges and furnaces, and 239 factories of different kinds.

The department contains 1,323,062 acres. Of this area 706,996 acres are arable land; 104,584 acres are grass land; 171,371 acres are under vineyards; 169,617 acres are covered with woods; 97,936 acres consist of barren heaths and moors; 28,752 acres are occupied with roads, buildings, &c.; 12,689 acres with rivers; and 19,020 acres are laid out in orchards and fruit plantations of various kinds.

The department is divided into 4 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Agen	9	72	84,092
2. Marmande	9	96	101,044
3. Villeneuve	10	82	95,391
4. Nérac	7	62	60,818
Total	35	312	341,345

1. In the first arrondissement the chief town, *Agen*, which is also the capital of the department, and of the former district of Agénois, is the subject of a separate article [AGEN]. Of the following places the population is that of the commune. *Astaffort*, on the right bank of the Gers, 10 miles S. from Agen, is surrounded by old turreted half-ruined walls, and has 2414 inhabitants. A large cross, erected at a short distance from the rear of the parish church, marks the spot, still called *Champ des Huguenots*, on which the Prince of Condé was defeated in the religious wars. *Port-Sainte-Marie*, 12 miles W. from Agen, is built at the foot of a high hill, on the right bank of the Garonne, which is here crossed by a fine suspension-bridge and forms a commodious harbour for river craft. The high road to Bordeaux passes under an arcade surmounted by a lofty tower, the whole built with small square stones, and supposed to be of Roman erection. The population of the town is 3025.

2. In the second arrondissement the chief town, *Marmande*, is situated in the west of the department, on a hill above the Garonne, which is here crossed by a bridge of a single arch. *Marmande* is an ancient place, but its origin is unknown. The Goths are said to have occupied it. The Saracens destroyed it in the 8th century. It was rebuilt however, and the fortifications it is said were raised by the English *Cœur-de-Lion*. In 1212 it was taken from the English by Simon de Montfort, and again in 1219 by Amaury de Montfort, whose troops massacred all the townsfolk they could lay hands upon. In 1424 the English attacked it without success; but took it in 1427, and held it for a short time. Henri IV. besieged it without success in 1577. In 1814 the town, garrisoned by a small force, held out for a month against an English division. It has an old-fashioned look; many of the houses are timber-framed. The most important buildings are the town-hall, the court-house, the college, and the hospital. *Marmande* is the seat of a tribunal of first instance, and has 8257 inhabitants, who manufacture hats, woollen stuffs, brandy, ropes, and leather. It has also a considerable trade in corn, flour, wine, brandy, plums, hemp, tobacco, &c. Steam-boats ply several times a day to Bordeaux. *Clairac*, a clean well-built town, stands in a pretty situation on the right bank of the Lot, has 4842 inhabitants, who trade in white wine, plums, flour, tobacco, &c. *Castel-Moron*, formerly a fortified town, which was taken in 1315 by the English, stands on the Lot, and has 2379 inhabitants. *Le-Mas-d'Agénois*, a small but ancient town, is situated 8 miles from *Marmande*, on the left bank of the Garonne, and has 2414 inhabitants. *Tonneins*, a few miles E. of *Le-Mas-d'Agénois*, on the right bank of the Garonne, which is here crossed by a suspension-bridge, is a cheerful, well-built town, situated on the sides of a hill, from whence there is a delightful view. The town-hall, the theatre, and the public baths are the most conspicuous buildings. *Tonneins* has a population of 6973, who manufacture great quantities of ropes, leather, and tobacco, and trade in these articles, as also in hemp, plums, wine, corn, brandy, &c.

3. The third arrondissement takes its name from *Villeneuve d'Agén*, a town of 12,337 inhabitants, 14 miles N. from Agen, situated on the Lot, which divides it into two unequal parts, united by an ancient bridge of remarkable structure. *Villeneuve* occupies the site of *Gajac*, a town which was destroyed in the early part of the 13th century; it was rebuilt by the brother of St. Louis in 1264, and has been since called *Villeneuve*, or the new town. *Gajac* it is supposed occupied the site of the ancient *Excisum* mentioned in the 'Antonine Itinerary.' By much the greater part of the town is on the right bank of the river, and consists of several wide, straight, well-built streets, that abut in a circus surrounded by arcades. Of the old fortifications, two towers and the castle still remain; the ramparts have been turned into handsome promenades. The buildings of the ancient abbey of

Eysses, situated about three-quarters of a mile north of the town, now form a convict prison for eleven departments. *Villeneuve* has tribunals of first instance and of commerce, and a college. Linen, leather, tiles, hammers for metal foundries, &c., are manufactured; the commerce is composed of flour, plums, wine, cattle, paper, iron, copper, &c. *Fumel*, E. by N. from Villeneuve, on the right bank of the Lot, has paper-mills, and 2577 inhabitants. *Sainte-Livrade*, W. of Villeneuve, and near the left bank of the Lot, has a population of 3209, who manufacture leather, and trade largely in plums. *Monflanquin*, situated on a hill, near the left bank of the Lède, 9 miles N. from Villeneuve, has 5075 inhabitants. The streets are narrow, steep, and ill paved. The neighbourhood is fertile in wine and fruit. *Tournon*, a market-town, 16 miles E. from Villeneuve, situated on a hill on the right bank of the Baudusson, a feeder of the Lot, has 4956 inhabitants.

4. The fourth arrondissement comprises the south-west of the department, and takes its name from the chief town, *Nérac*, which is prettily situated on the Baïse, 15 miles S.W. from Agen, and has tribunals of first instance and of commerce, a college, and 7090 inhabitants, who manufacture coarse woollens, sea-biscuits, corks, leather, and great quantities of flour. The old town, situated on a steep slope, on the right bank of the Baïse, is ill built, with narrow streets of old wooden houses; it is joined by two stone bridges to the new town, which stands on the left bank of the river, and is larger and better built. This town has several pretty and shady walks, one of which is adorned with a statue of Henri IV. The mosaics, the remains of a palace, a temple, an aqueduct, and of baths, found here, mark the place as the site probably of a Roman city, the name of which is lost. The lords of Albret had a castle here which was built on the site of a Benedictine monastery, erected in 1250. The castle consisted of four ranges of buildings surrounding a square, and was built by the different members of the house of Albret after that family had ascended the throne of Navarre. The last addition to the building was made by Jeanne d'Albret who built the fourth range with the materials of demolished churches and monasteries after her conversion to Calvinism. In this part of the building Henri IV. lodged in his youth. In the reign of Louis XIII. *Nérac* aided with the Calvinists, but was forced to capitulate to Mayenne in 1621. In the following year its defences were dismantled. The town trades in linen, hemp, flax, wine, brandy, &c., and is famous for its partridge patties. *Nérac* has an important corn-market. *Castel-Jaloux*, 18 miles N.W. from *Nérac*, on the left bank of the *Avance*, is a pretty well-built town, not far from the commencement of the 'landes,' and has 2585 inhabitants, who manufacture coarse cloth, paper, glass, leather, &c. It has also iron-forges, copper-foundries, smelting-furnaces, hydraulic saw-mills, and a considerable trade in corn, wine, pitch, and tar, oak-bark, chestnuts, and leeches. *Mézin*, 7 miles S. from *Nérac*, on the right bank of the *Gelise*, a feeder of the *Baïse*, is an ill-built town, with 3042 inhabitants, who manufacture corks, pottery, flour, paper, and leather.

The department forms the see of the Bishop of Agen, is included in the jurisdiction of the High Court of Agen, within the limits of the University-Academy of Bordeaux, and belongs to the 14th Military Division, of which Bordeaux is head-quarters. It returns 3 members to the Legislative Body of the French empire. There are a diocesan seminary, a secondary ecclesiastical school, and a communal college at Agen. Aiguillon, Marmande, Mézin, and Villeneuve also have communal colleges. The Calvinists have churches at Tonneins, Clairac, Nérac, Lafitte (a village near Clairac), and Castelmonron; and 19 meeting-houses in different towns of the department.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Official Papers.*)

LOTHARINGIA. [LORRAINE.]

LOTHIANS, THE, a term by which is understood that part of Scotland which stretches along the southern shores of the Firth of Forth, and includes the counties of Haddington, Edinburgh, and Linlithgow, called respectively East Lothian, Mid Lothian, and West Lothian.

LOUDEAC. [CÔTES-DU-NORD.]

LOUDUN. [VIENNE.]

LOUGHBOROUGH, Leicestershire, a market-town and the seat of a Poor-Law Union, in the parish of Loughborough, is situated in 52° 47' N. lat., 1° 13' W. long., distant 13 miles N. by W. from Leicester, 109 miles N.W. by N. from London by road, and 115½ miles by the North-Western and Midland railways. The population of the town of Loughborough in 1851 was 10,900. The sanitary arrangements of the town are under a Local Board of Health. The living is a rectory in the archdeaconry of Leicester and diocese of Peterborough. Loughborough Poor-Law Union contains 24 parishes and townships, with an area of 42,513 acres, and a population in 1851 of 25,268.

Loughborough consists of five principal streets, which radiate from the centre of the town, and several smaller streets. The town is lighted with gas. The old church is a handsome edifice in the perpendicular style with a fine tower. Emmanuel church is of recent erection. The Wesleyan Methodists, Baptists, Independents, Quakers, and Roman Catholics have places of worship. Burton's school, founded in 1493, has an income from endowment of 1742*l.* 16*s.*; with the

foundation there are now connected five distinct schools, in which all the scholars pay a small sum fixed by the trustees. The number of scholars in 1853 was—in the Grammar and Commercial school 87; in the High school 70; in the Low school 120; in two Girls' schools 116. There are also National and Infant schools, a literary and philosophical society, a working men's improvement society, a public library, a savings bank, a dispensary, and barracks for cavalry. A Roman Catholic convent of the Sisters of the Institute of Mercy is in the town. The chief manufacture is that of patent angola hosiery, or fleecy hosiery. Other kinds of hosiery, cotton goods, net lace, and shoes are also made. The Leicester Navigation and the Loughborough Canal communicate with the Soar and unite a little to the north of the town. The Midland Counties railway passes the town on the north-east side. The market-day is Thursday: eight fairs are held in the course of the year. A county-court is held in the town. Public walks have been laid out by the trustees of Burton's charity.

LOUGHOR. [GLAMORGANSHIRE.]

LOUGHREA, county of Galway, Ireland, a market- and post-town, and the seat of a Poor-Law Union, is situated on the north side of Loughrea Lake, in 53° 12' N. lat., 8° 35' W. long., 23 miles E.S.E. from Galway, and 110 miles W. from Dublin. The population in 1851 was 3651, besides 2661 in the workhouses, and 30 in the bridewell. Loughrea Poor-Law Union comprises 34 electoral divisions, with an area of 198,832 acres, and a population in 1851 of 38,735. The principal street on the Dublin and Galway road contains some good houses. Besides the parish church, a neat building erected in 1821, there is a Roman Catholic chapel with a Carmelite friary and nunnery, to which chapels are attached. The other public buildings are the court-house, a linen- and yarn-hall, a barrack for cavalry and infantry, a bridewell, and the Union workhouses. Brewing and tanning, and the manufacture of narrow linen and coarse diapers are carried on. Quarter and petty sessions are held. The market is on Thursday, and there are four yearly fairs. On the north side of the town, attached to the friary, is part of a Carmelite abbey, with a square tower, founded in 1300.

LOUGHTON. [ESSEX.]

LOUIS, ST. [MISSOURI.]

LOUISBOURG. [CAPE BRETON.]

LOUISIADÉ ISLANDS, an extensive group of islands in the Pacific, lie south-east of Papua, or New Guinea, between 8° and 12° S. lat., 150° and 155° E. long. The group was discovered by Bougainville in 1768. The islands occupy a space of more than 300 miles from north-west to south-east, but none of them appear to be large. The principal among them are named D'Entrecasteaux, Jurien, St. Aignan, and Rossel. So far as a rough conjecture may be formed, there is not one that exceeds 40 miles in length. Some of them rise to a considerable elevation; they generally appear to be very fertile. The inhabitants belong to the Papua race, and are very averse to any intercourse with foreign vessels which visit the dangerous sea that washes the southern coast of these islands. It is supposed that they are cannibals. The inhabitants make large pirogues, or canoes, and use shields as a defensive armour.

(Bougainville; D'Entrecasteaux.)

LOUISIANA, one of the most south-western of the United States of North America, extends between 28° 55' and 33° N. lat., 88° 40' and 94° 25' W. long. It is bounded E. by the state of Mississippi, from which it is divided down to 31° by the river Mississippi; N. by Arkansas; W. by Texas, from which it is separated for 200 miles, or above two-thirds of the distance by the Sabine River; and S. by the Gulf of Mexico, along which its coast-line extends for 400 miles. The area is 41,346 square miles; the total population in 1850 was 517,762, or 1252 to the square mile. The federal representative population in 1850 was 419,838, in which number three-fifths of the slaves are included. This, according to the ratio of representation established by the Census of 1850 (one representative to 93,423), entitles the state to send four representatives to Congress. To the Senate, like each of the other United States, Louisiana sends two members.

The following table shows the population of Louisiana at the decennial censuses from 1810, the first taken after the admission of Louisiana into the Union as a state, with the relative proportions of whites, free-coloured persons, and slaves:—

Date of Census.	Whites.	Free Coloured Persons.	Slaves.	Total.
1810 . . .	34,311	7,585	34,660	76,556
1820 . . .	73,383	10,476	69,064	153,407
1830 . . .	89,441	16,710	109,538	215,739
1840 . . .	138,457	25,502	168,452	352,411
1850 . . .	255,491	17,462	244,809	517,762

Of the white population 126,917 were born in the state, 60,641 in other states of the Union, 67,308 in foreign countries, and of 625 the birthplace was unknown. Of the foreigners 3598 were born in England and Wales, 1196 in Scotland, and 24,266 in Ireland; 17,507 in Germany, and 11,552 in France.

Surface, Hydrography, and Communications.—Along the coast are

several spacious bays and inlets, or, as they are called, lakes, but there are few good harbours. Vessels drawing 8 feet of water can ascend Lake Pontchartrain to Madisonville, but the other inlets are mostly shallow. The roadstead on the west of the Chandeleur Islands, known as Naso Roads, affords secure riding for large vessels. The smaller bays and inlets, many of which penetrate a considerable distance into the country, afford shelter for small craft. Off the eastern coast are several islands, the largest of which are known as the Chandeleur Islands: they are not very fertile, but are regarded as very healthy, and the larger of them are inhabited. On the south coast, and west of the mouths of the Mississippi, are several other islands which lie close to the shore, and are said to possess a soil of remarkable fertility.

Louisiana presents a considerable variety of surface, though it is for the most part a plain country, only in a few places rising into hills of moderate elevation. The southern part of the state for 100 miles from the shore is a low unbroken level. The delta of the Mississippi extends along the shores of the Gulf of Mexico from Atchafalaya Bay on the west (91° 40' W. long.) to the Pass de Marianne (89° 15' W. long.) and Lake Borgne on the east, and includes a coast-line of above 250 miles; and thence up the Mississippi to the great bend above the mouth of the Homochitto River, about 31° 15' N. lat.; comprehending about one-fourth of the state, or more than 10,000 square miles. This vast tract of country, which is in few places elevated more than 10 feet above the level of the sea, is annually inundated by the spring floods, and for six months in the year is either covered with water or a swamp. The swamps extend along the sea, and are called the marshes; the inundated region lies north and west of the marshes. The marshes are nearly on a level with the sea at high tide. They are destitute of trees and shrubs, but covered with grass, which however is quite useless, as the swamps can only be traversed in boats by following the numerous watercourses which intersect them. The cultivated part of this marshy region is confined to the very narrow banks of the watercourses, and even there settlements are only formed on the northern borders of the marshes, on account of the great unhealthiness of this region.

The inundated region comprehends more than two-thirds of the delta. All that part of the delta which is west of the Mississippi and of the Bayou la Fourche, with the exception of a tract west of Baton Rouge, is deeply inundated from February to August, during which period it forms an immense lake. The common depth of the water is 6 feet, but in many parts, especially where the Red River joins the Mississippi, it is much more. During the remainder of the year it is dry and the soil firm. The whole region is covered with high and valuable forest-trees. The country east of the Mississippi and of the Bayou la Fourche, as well as the tract of higher ground west of Baton Rouge, is only inundated to the depth of 3 or 4 feet, and the inundation ceases a month or six weeks sooner. The banks of the rivers also are several feet higher than in the country farther back, so that they are at most only slightly inundated, and numerous settlements have been formed along them. The greatest part of this country is covered with trees. To protect the cultivated ground from the annual inundation a bank of earth, called 'levée,' has been formed on each side of the Mississippi, it begins at Fort St. Philip (29° 25' N. lat.), and extends to the higher grounds of Baton Rouge (30° 30'), a distance of 180 miles. In some places above New Orleans this embankment is 15 feet high and 30 feet wide at the base, but generally it does not exceed 12 feet at the base and 5 feet in height.

The country west of the delta to the Sabine River is likewise bordered by a broad belt of sea marshes, extending from 10 to 30 miles inland, and having in many places clumps of live oak. North of the marshes the country rises considerably, and extends in open prairies, which are generally destitute of trees, but covered with grass. The prairies are traversed by numerous rivers, whose narrow valleys or 'bottoms' are overgrown with trees, and contain fertile tracts. The banks of the river Teche form the western boundary of the inundated country, but they are above the line of the inundation, and contain many rich cultivated tracts. To the west and north-west of the prairies of Opelousas lies an extensive wooded region, which on the Sabine extends to 30° 10', and terminates not far from the marshes. It occupies the country about the northern half of the course of the Calcasieu River, and approaches the inundated country of the delta on the Bayou Boeuf, a branch of the Courtableau. The whole of this extensive tract is covered with pine-forests, and the soil is of very indifferent quality. It is an undulating plain, except at the most north-western angle of Louisiana, between the upper course of the Sabine River and the Red River, where it rises into high hills.

Red River may be considered as the boundary of this wooded region. Where it enters Louisiana, high-grounds covered with pine-trees approach to the margin of the river on both sides, but about 60 miles lower down a remarkable swampy depression of the surface, known as the Rafts, extends from north-north-west to south-south-east, about 60 miles long with a mean width of 8 miles. The whole of this low region is inundated from 1 to 20 feet during the spring, but in summer the lakes and low grounds are nearly dry, and in October and November they become meadows covered with a carpet of green and succulent herbage.

The country extending from Red River on the west to the Mississippi River on the east consists mostly of elevated woodland, especially that portion which lies west of the Washita or Ouachita River. In this region, east of Lake Bistineau, is the highest land of Louisiana. It consists of numerous hills rising from 100 to 200 feet above their base: they are covered with trees, chiefly pine and oak, thinly interspersed with ash, hickory, and dog-wood, and produce a luxuriant herbage in summer and spring. Farther east these hills sink into a sandy plain, which extends to the Washita and river Boeuf, a confluent of the former; it is mostly covered with pine-forest; but the river bottoms are wide, and have a fertile soil. The country on both sides of the Black river, which is formed by the junction of the river Boeuf with the Washita, resembles in every respect the less inundated part of the delta. But between the river Boeuf and the Mississippi, and especially along the banks of the latter, is a low tract traversed by the river Tensas, a confluent of Black river, which is likewise inundated by the water which issues from the Mississippi in the first half of the year. Narrow strips along the river become quite dry in the second half of the year, but the greater part of this tract is a swamp, which produces fine timber-trees, especially cypress. From these forests New Orleans is supplied with lumber and fuel.

Along the east bank of the Mississippi extends an elevated country, broken by numerous streams. Its projections, worn away by the action of the river, are known by the name of Bluffs. They rise more than 100 feet above the alluvial plains near the Mississippi. These hills continue eastward for 15 or 20 miles from the banks, and lie scattered about in wild confusion. They are overgrown by mingled forests of oak, sweet-gum, poplar, tulip-tree, hickory, and some pine, and have an almost uniformly productive soil. By degrees the hills disappear, and are followed by a plain which is considerably elevated above the delta. This plain has a sandy sterile soil, and is entirely overgrown with pitch-pine. On the south it does not extend to the lakes of Maurepas and Pontchartrain, but begins imperceptibly to lower, at a distance of about 10 miles, until it advances to the river Amite and the lakes, where it terminates in narrow swamps, which line the banks of the river and lakes. The soil, though light, is well adapted to the cultivation of cotton, of which there are numerous plantations, and the extensive pine-forests produce abundance of pitch and tar.

The Mississippi becomes the boundary of Louisiana at its most north-eastern corner, 33° N. lat., but receives no accession of water from the right until it has attained 31° N. lat., where it is joined by the united waters of Red and Black rivers, which together probably drain a tract of 100,000 square miles, and bring down an immense body of water during the spring months. From 31° N. lat., the Mississippi, which has formed the boundary of the state for 450 miles, runs wholly in the state of Louisiana; the remainder of its course being about 350 miles. Where it enters the state the Mississippi sends off its first great branch, the Atchafalaya, here called the Chafalio, which, flowing in a southern and south-eastern direction, traverses the lowest part of the delta, enters the south-eastern part of lake Chetimaches, and issuing from it, passes through the marshes into Atchafalaya Bay. Lake Chetimaches, or Grand Lake, is about 40 miles long and from 2 to 5 miles wide; at its southern extremity it is 40 feet deep. It is connected with the Atchafalaya by several natural channels, which traverse the intervening country, and divide it into many islands, making a kind of net-work. From the Atchafalaya the Mississippi flows in a general south-eastern direction, but with many great bends. About 30° 20' N. lat., the river sends off the second great branch, the Iberville, which runs eastward, and joins the Amite river. The united stream falls into Lake Maurepas, a circular sheet of water about 8 miles in diameter. This lake is united to the lake of Pontchartrain by the Pass of Manchac. Lake Pontchartrain is in the form of an ellipse 20 miles by 32 miles, and from 18 to 20 feet deep; it is connected with Lake Borgne by two channels, of which the southern is called Chef Menteur, and the northern the Rigolets. By means of the St. John's Bayou, a small river which falls into its southern shore, and a short canal, cut from the St. John to New Orleans, Lake Pontchartrain has become the medium of communication between a considerable district of the interior and the commercial capital of the state. Lake Borgne, though denominated a lake is really a bay of the Gulf of Mexico, and connected with it by the Pass de Marianne. A few miles below the efflux of the Iberville, the Mississippi sends off another branch to the west, the Plaquemines, which is only 6 miles long, and joins the Atchafalaya. Though it has only water during the high flood, it is important for the internal navigation. Farther down occurs the last great efflux of the Mississippi, the La Fourche (the Fork). It leaves the principal river at Donaldsonville, and flows in a south-eastern direction for 90 miles; it has 9 feet water on its bar, and admits vessels drawing 4 or 5 feet to within 30 miles of its efflux; but the upper part of its course is very shallow from September to March. From the efflux of the La Fourche the Mississippi flows east to the town of New Orleans, and thence to the sea in a south-eastern direction. Shortly before it reaches the Gulf of Mexico it divides into six branches, called the West, South-west, South, East, North-east, and L'Outre Pass. The most frequented is the East Pass, with 12 feet water at ordinary tides; the South-west

Pass is nearly as deep as the East Pass. The other passes have from 5 to 8 feet water, but they are rarely frequented. The depth of the water increases rapidly in the channels, so that it is upwards of 30 feet within a mile from the bars, and still greater farther upwards. [MISSISSIPPI.] In the inundated tract there is a great number of lakes of different sizes. The largest is lake Quacha, or Barataria, south-south-west of New Orleans, which is 22 miles long and 6 miles wide. As these lakes are united, either with one another or with the chief branches of the Mississippi, some of them facilitate the internal navigation, especially Lake Palourde and Lake Verret, which are united with one another and with the Atchafalaya and La Fourche, branches of the Mississippi.

Red River, which rises in the Rocky Mountains, traverses Louisiana with a general south-east course of 200 miles, but by the windings of the river of above 300 miles. Shortly after it enters the state commences the depression mentioned above, and known as the Raft, which consists of a swampy extension of the river, 20 to 30 miles wide, and extending for a length of 70 miles. The water having become obstructed by fallen timber has forced for itself a number of new channels, most of them shallow, which have likewise in their turn become blocked by the trees brought down by floods, so that during certain seasons the whole width of the tract might occasionally be traversed on horseback. The United States government has however recently, at a great expense, caused so much of the raft to be removed as to admit the passage of steam-vessels. The navigation is again interrupted by the rapids in 31° 20' N. lat., where two ledges of rocks extend across the channel about three-quarters of a mile from each other; but when the water is high the rocks form no obstruction to the passing of boats. Its principal affluents are Black river and the Bayou de Bon Dieu.

The other rivers of Louisiana are unimportant as channels of navigation. The Sabine, which divides the country from Texas, rises in the last-mentioned state, and has a generally southern course of 300 miles. Before it enters the sea it flows into a shallow lake 30 miles long, and from 3 to 5 miles wide. In ordinary tides there is not above 3 feet water on its bar. It is navigable throughout Louisiana by steamers of light draught. East of the Sabine is the Calcasieu, which rises in the angle between the Red river and Sabine, flows parallel to the Sabine at a distance of about 35 miles, expands near its mouth likewise into a large but shallow lake, and has also only 3 feet water on its bar. Its course is upwards of 200 miles. The Mermentou, which flows to the east of the Calcasieu, is properly only the channel by which Lake Mermentou discharges its waters into the Gulf of Mexico. This lake is of considerable extent, and receives most of the waters which originate on the prairies of Opelousas, but the different streams unite before they enter the marshes in one river, which receives the name of Mermentou, and soon afterwards falls into the lake. It is not better adapted for navigation than the Sabine and Calcasieu. Sixty miles east of the mouth of the Mermentou are two large bays, Vermilion Bay and Cote Blanche Bay, which are united by several passes with the Gulf of Mexico. The bays have 12 feet of water, but the passes only 5 or 6 feet. Vermilion Bay receives the river of the same name, which rises on the prairies of Opelousas 30° 30' N. lat., and runs in a general southern course about 80 miles. It is navigable for vessels of 5 feet draught to a considerable distance.

The canals in the state are the Orleans Bank Canal, extending from New Orleans to Lake Pontchartrain; the Barataria Canal from New Orleans to Berwick Bay; Lake Veret Canal from Lake Veret to La Fourche River; and a short line from New Orleans to the Bay of St. John's.

Louisiana has been slower than most of the states in adopting railway communication. The only lines in operation in June 1854 were the Clinton and Port Hudson railway, uniting those places, 24 miles long; the Mexican Gulf railway, from New Orleans to Proctorsville, 27 miles; the Milneburg and Lake Pontchartrain, from New Orleans to Milneburg, 6 miles; the New Orleans and Carrollton, uniting the towns so named, 6 miles; and the West Feliciana, 26 miles. A convention was however held some time back at New Orleans, of representatives of the South-Western States, with a view to the adoption of a very extensive system of railways for facilitating intercommunication between those states, and a more ready access to the ports of the Mexican Gulf. In consequence of the resolutions then passed several extensive lines of railway have been projected, some of which are now in course of construction. Of these lines commenced or projected the principal are the New Orleans, Opelousas, and Great Western, 213 miles long; the Vicksburg and Shreve-port, 207 miles; and the New Orleans, Jackson, and Great Northern, 51 miles. It has also been proposed to the general government to improve the navigation of the Mississippi below New Orleans.

Geology, Mineralogy, &c.—The rocks of Louisiana consist almost entirely of Eocene and later deposits. The oldest are the Upper Cretaceous strata, green-sandstone, and marl, outlyers apparently of the great cretaceous formations of Texas, which are said to occur in the north-western and northern parts of the state. Almost the whole of the remainder of the state west of the valley of the Mississippi, with the exception of the lower course of the Red river, appears to consist of Eocene strata, consisting of a white limestone, sandstone, marls, and red and white clays. The middle and upper strata (Miocene and

Pliocene) of the tertiary rocks do not appear to have been identified in Louisiana, but it is believed that these rocks exist. The shores of the Mexican Gulf, the banks of the Mississippi throughout the state, and along Red river up to Natchitoches, or about 31° 45' N. lat., belong to the post-tertiary, post-pliocene, or quaternary rocks, and consist of sandy and clayey deposits, containing vast quantities of various fresh-water shells, of species now living in the beds or on the borders of these rivers; but many of the cliffs or bluffs which contain these shells are raised more than 100 feet above the rivers. The delta of the Mississippi is formed of recent rocks. The river brings down immense quantities of organic and inorganic bodies, which are deposited on the shore of the Gulf of Mexico, and form a vast and constantly increasing delta; and the bar at the mouth of the Mississippi in consequence is continually shifting its position. The bluffs along the Mississippi, Sir Charles Lyell says, have been evidently formed in the same manner and slowly upraised to their present position, the river carving out valleys through the horizontal and unconsolidated strata as they rose, sweeping away the greater portion of them, and leaving mere fragments in the shape of terraces. "The deposits forming the delta and alluvial plain of the Mississippi," he says, "consist of sedimentary matter extending over an area of 30,000 square miles, and known in some parts to be several hundred feet deep." The advance of the delta of the Mississippi into the Mexican Gulf has been estimated at about 50 feet a year, or a mile in a century: the average quantity of sedimentary matter brought down annually by the river is about 1-1700th of the whole weight of the water, or 3,000,000 cubic feet, being about ten times that of the Rhine.

The mineralogical riches of Louisiana are not very considerable. An inferior aluminous brown coal, serviceable for fuel where the true coal is not obtainable, is said to be abundant in the tertiary beds of the northern parts of the state. Iron is found throughout the tertiary beds; the Red river derives its name from the colour of its waters, which is owing to the ferruginous matter contained in the strata through which it flows. Salt-springs occur in several places in the parishes of Natchitoches and Rapides, but are not now worked. Gypsum of good quality abounds, as do also very rich marls and ochre.

Climate, Soil, Productions.—A considerable difference is observed between the climate of the low and high lands of Louisiana. In the low lands it seldom snows, and frost is a rare occurrence, the thermometer commonly not sinking to the freezing-point. In summer the heat is great, and lasts from the beginning of July to the close of September; the thermometer then ranges between 75° and 85°, and sometimes rises to 90° and even 96°. At this time the inundation ceases, and the decomposition of animal and vegetable matter infects the air and produces dangerous diseases, especially fevers. The mean temperature of the year at New Orleans, according to Darby, does not exceed 63°, or about 13 degrees above that of London, which is 21 degrees nearer the pole. On the higher grounds, especially on the open prairies of Opelousas, the climate is much more severe. In 30° 30' N. lat. the snow has fallen to a depth of 11 inches, and remained for several days on the ground. Frost occurs there every winter, and even sometimes in April and September, so that at Natchitoches it does great injury to the cotton and tender plants. In July there are heavy rains and thunder, and in August sometimes hurricanes blow from the south, which cause great damage by forcing the water of the Mississippi into the adjacent level country. In winter the north-western gales, which are very cold, produce great and sudden changes in the temperature.

The alluvial soil along the banks (or as they are here called coasts, from the French 'côtés') of the Mississippi is of extraordinary fertility. This tract, the whole of which is under cultivation, and produces excellent sugar crops, extends for about a mile on each side of the river from about 150 miles above New Orleans to 140 miles below that city. It lies below the flood-tides, from which it is defended by a dyke or levée. Although not so rich as this, all the river bottoms have a very fertile soil. Of the 'inundated lands' about two-thirds are covered with heavy timber and a dense undergrowth of canes and other plants. The cypress swamps have a fertile soil, but the surface is generally depressed, and there is no natural outlet: if drained however they are capable of being converted into excellent rice grounds. The sea marshes are only partially covered with timber; their soil is for the most part a deep clay. The pine lands are always poor and often sterile. The dispersed tracts of elevated prairie are free from timber and generally very fertile.

The staple products are cotton and sugar. The cereals chiefly cultivated are rice and maize. Wheat, rye, barley, and oats are most cultivated towards the north, but nowhere to any great extent. Sugar succeeds well as far north as the head of the delta. Cotton succeeds everywhere, and is of excellent quality. Good tobacco is raised in different places, but its cultivation has decreased. The cultivation of indigo was formerly carried on to some extent, but has been abandoned. The mulberry-tree is indigenous. The vine, peach, and fig flourish; and the orange up to about 30° 30'. The apple cannot be cultivated successfully, and the cherry is wholly unproductive. Vegetables are not extensively cultivated, with the exception of the sweet potato.

By far the greatest part of the surface of Louisiana is covered with forests. The pine-tree, which is most abundant, covers the northern

and western sandy districts, and is extensively used in the manufacture of tar and pitch. On the declivities by which the prairies or wooded regions descend to the inundated grounds the forests mostly consist of oak, sweet-gum, poplar, tulip-tree, and hickory of various species; the same trees occur on the broken country east of the Mississippi: the chincapin grows on the borders of the inundated lands.

Immense herds of cattle are raised on the natural meadows of Opelousas and Attakapas, as likewise horses and mules. The bison, or buffalo, is only met with towards the northern and western border, where also wild horses are found. Deer are only plentiful in the prairies of Opelousas and in the pine-forests. Bears, lynxes, the American panther, and beavers are rare, but wolves are somewhat numerous. Locusts infest the prairies, and numerous serpents the woods and lowlands. The alligator occurs in all the rivers, but is most numerous in the bays and lakes of stagnant water: it is not dangerous, except when attacked or wounded. The Mississippi and its branches abound in fish. The forests swarm with birds, among which are the wild turkey, the paroquet, the pelican, the flamingo, and the humming-bird. Swans, geese, and ducks are very numerous on the lakes and stagnant waters along Red river.

The following are the principal results of the inquiries made at the last Census respecting the agricultural resources of the state:—The number of farms under cultivation in Louisiana on June 1st 1850 was 13,422: the extent of improved land in farms was 1,590,025 acres; of unimproved land, 3,399,018 acres. The cash value of farms was returned at 75,814,398 dollars; of farming implements and machinery at 11,576,938 dollars. Of the chief products of Louisiana the total produce was:—Maize, 10,266,373 bushels (5,952,912 bushels in 1840); rice, 4,425,349 lbs. (3,604,534 lbs. in 1840); ginned cotton, 71,494,800 lbs. (152,255,368 lbs. in 1840, being a decrease of 81,060,568 lbs.); cane-sugar, 226,001,000 lbs. (119,947,720 lbs. in 1840); molasses, 10,931,177 gallons; tobacco, 26,878 lbs. (119,824 lbs. in 1840, being a decrease of 92,946 lbs.). The decrease in the quantity of cotton was mainly due to the destructive floods which swept over the cotton districts in the autumn of 1849; but much of the labour and capital formerly devoted to the production of cotton and tobacco have been diverted to the culture of other crops, and especially sugar, of which Louisiana alone in 1850 produced 91-28 per cent. of the entire quantity produced in the United States. The other more important crops were as follows:—Wheat, 417 bushels; rye, 475 bushels; oats, 89,637 bushels; potatoes, 95,632 bushels; sweet potatoes, 1,428,453 bushels; peas and beans, 161,732 bushels; hay, 25,752 tons; hops, 125 lbs.; of wine, only 15 gallons were made. The value of orchard products was 22,359 dollars; of market-garden produce, 148,329 dollars.

The number of horses in the state in 1850 was 89,514; asses and mules, 44,849; milch cows, 105,576; working oxen, 54,968; other cattle, 414,798; sheep, 110,333; swine, 597,301. The value of live stock was 11,152,275 dollars; of animals slaughtered, 1,458,990 dollars. The products of animals were:—Butter, 683,089 lbs.; cheese, 1957 lbs.; wool, 109,897 lbs.; bees-wax and honey, 96,701 lbs.

Manufactures, Commerce, &c.—Louisiana is mainly an agricultural state, the manufactures being chiefly of articles required for domestic consumption and the supply of a southern planting state. The Census of 1850 does not show the number of free persons employed in agriculture and manufactures very precisely, and the slaves are omitted in the tables of occupations. According to it, in 1850 there were in Louisiana 18,639 free males above 15 years of age employed in agriculture, and 32,879 in commerce, trade, manufactures, and mechanical arts. At the Census of 1840 there were, including slaves, 79,289 persons employed in agriculture, 7565 in manufactures, and 8549 in commerce. The whole number of manufacturing establishments producing to the value of 500 dollars and upwards in 1850 was 1021. Of these 8 were manufactories of iron-castings, employing a capital of 255,000 dollars and 383 persons; 15 were tanneries, employing 66 persons; the remainder were chiefly sugar-refineries, which employed 252 hands; saw- and planing-mills, 898 hands; grist-mills; and other works usual in a southern agricultural state. The home-made manufactures of the year were valued at 189,232 dollars.

Besides the valuable produce of its own soil a large proportion of the production of the other states within the extensive basin of the Mississippi which are destined for a foreign market passes through this state; it has also a very large coasting-trade, and an extremely important internal trade. The whole of this commerce is concentrated at NEW ORLEANS. Louisiana has the largest export trade of any state except New York; its imports are exceeded by those of New York, Massachusetts, and Pennsylvania. The total exports for the year ending June 30th 1852 amounted to 49,058,885 dollars, of which 48,808,169 dollars were American produce, and 250,716 dollars foreign. The imports for the same period amounted to 12,057,724 dollars, of which 9,732,977 dollars were conveyed in American vessels, and 2,324,747 dollars in foreign vessels. The exports for the preceding year amounted to 54,413,963 dollars; the imports to 12,528,460 dollars. Up to 1851, when the largest amount was registered, the exports had been on the whole steadily progressive; but the imports attained their highest amount, 17,519,814 dollars, in 1835. The number and tonnage of the vessels which entered and cleared at the

ports of Louisiana in 1850 were:—Entered, 893 vessels of 350,853 tons, of which 524 vessels of 175,969 tons were American, and 374 vessels of 174,884 tons were foreign; cleared, American 493, of 211,800 tons, and foreign 350, of 158,137 tons. In the coasting-trade, during the year ending June 30th 1851, there entered 1178 vessels of 466,415 tons, and cleared 1227 vessels of 853,173 tons. The total value of the exports coastwise during the year was 27,288,912 dollars. The total quantities of the principal articles exported to foreign and domestic ports during the year ending June 30th 1851 were as follows:—Cotton, 997,458 bales; sugar, 44,147 hogsheads and 8644 barrels; molasses, 686 hogsheads and 67,024 barrels; tobacco, 54,501 hogsheads; corn, 535,382 sacks; flour, 583,418 barrels; pork, 192,737 barrels; bacon, 46,241 hogsheads; lard, 738,956 kegs; beef, 42,415 barrels; whiskey, 67,392 barrels. The receipts, chiefly of these staple exports, from the interior by the Mississippi during the same year were valued at 106,924,088 dollars, in addition to which there is a considerable traffic by Lake Pontchartrain and the new canal. The aggregate of the shipping owned in the state in 1850 amounted to 250,090 tons, the whole of which, except 1881 tons owned in the sub-district of Teche, belonged to the district of New Orleans. Of the above, 83,668 tons were registered; 160,630 tons enrolled and licensed; 5789 tons were of vessels under 20 tons burden; three-fifths of the tonnage, 151,613 tons were propelled by steam. During the year ending June 30th 1852, 1 brig, 11 schooners, and 4 steamers, in the aggregate 1284 tons, were built in the state.

Divisions, Towns, &c.—Louisiana is divided into two districts; the eastern district having 21 parishes, and the western district 26 parishes. Baton Rouge is the political capital; but NEW ORLEANS is the commercial metropolis, and one of the chief commercial cities in the United States. All the other towns are of small size; but several of them are places of considerable business as shipping stations, or otherwise. New Orleans is noticed in a separate article; the other more important towns are noticed below; the population is that of 1850:—

Baton Rouge, the capital, stands partly on elevated ground on the left bank, and 245 miles above the mouth of the Mississippi, 1120 miles S.W. from Washington: population, 3905, of whom 2562 are whites. The public buildings are the state house, penitentiary, county house, United States barracks, churches, a college, schools, &c. Some trade is carried on, the business part of the town lying at the foot of the bluff. Two newspapers are published here weekly.

Carrollton, on the right bank of the Mississippi, 6 miles from New Orleans, population 1470, is a place of a good deal of trade, but contains no buildings of any note. *Donaldsonville*, the capital of Ascension parish, and formerly the capital of the state, is pleasantly situated on the right bank of the Mississippi, 27 miles S.E. by S. from Baton Rouge: population, 1498. It contains a court-house, arsenal, United States land-office, churches, a college, schools, &c.; and carries on a considerable trade. *Lafayette* [NEW ORLEANS]. *Natchitoches*, the capital of Natchitoches parish, stands on the right bank of the Red River, 145 miles N.W. from Baton Rouge, population 1261, of whom 474 are slaves. This is one of the oldest towns in the state, having been founded by the French in 1717, and a large proportion of the population is of French and Spanish descent. It contains a court-house, United States land-office, jail, churches, and schools; possesses considerable trade, and supports a weekly newspaper. *Opelousas*, the capital of Landry parish, is situated near the source of Vermilion River, 55 miles W. by N. from Baton Rouge: the population is not given in the Census Return. It is the centre of a fertile district, and a place of considerable trade; contains a court-house, United States land-office, four churches, schools, Franklin college, two banks, several extensive stores, and supports a daily and a semi-weekly newspaper. *Point Coupée*, on the right bank of the Mississippi, 86 miles N.N.W. from Baton Rouge: the population, which is chiefly of French descent, is not given. It contains a court-house, jail, churches, schools, &c.; is the depôt for a very important planting district; and supports a daily newspaper. The levee extends along the Mississippi from this place downwards. *Shreveport*, the capital of Caddo parish, on the right bank of the Red River, 1 mile from Soda Lake, and about 200 miles N.W. from Baton Rouge, population 1728, of whom 595 were slaves. It contains a court-house, jail, churches, &c., and is a place of much business. There are several other business towns, as Alexandria on the Red River, Jackson on Thompson's Creek, Iberville and St. Francisville on the Mississippi, Thibodeauxville on the La Fourche, &c.; but they all have a very small white population.

Government, Judicature, &c.—The first state constitution was adopted in 1812, and superseded by a new one in 1845. The present constitution of Louisiana was adopted in 1852. By it the right of voting in all state elections is vested in every white male citizen 21 years of age, who shall have resided in the state 12 months, and in the parish in which he offers to vote 6 months next preceding the election; but persons in the army or navy, paupers, and persons interdicted or convicted of any crime punishable with hard labour, are not entitled to vote. The legislative body consists of a Senate of 32 members elected for 4 years, one-half being elected biennially; and a House of Representatives of not less than 70 nor more than 100 members (at present 97), elected biennially. The Senate confirms or rejects the appointments of officers made by the governor. The election of United States

senators is made by a joint ballot of both houses. Members may address either house in the English or French language. The governor is elected for 4 years, but is incapable of re-election for a consecutive term. He has a veto on acts of the legislature; but a bill becomes law, notwithstanding his veto, if it be again passed by a vote of two-thirds of both houses. His salary is 6000 dollars.

The legislature may grant aid to companies for internal improvements in proportion to one-fifth of their paid-up capital; but the total amount of debt incurred in this way must not exceed 8,000,000 dollars; and the state shall not subscribe for the stock of any banking corporation, nor make any loan to, nor pledge its faith for, any such corporation. No law can be passed sanctioning the suspension of specie payments. Lotteries, and the buying and selling of lottery-tickets, are prohibited. No divorce can be granted by the legislature. No principal or second in a duel, and no one who sends or accepts a challenge, shall hold any office or enjoy the rights of suffrage. Propositions to alter or amend the constitution must be carried by a vote of two-thirds of all the members of each house; the vote must then be published throughout the state three months before the next general election; and then, if it be ratified by a majority of voters at such election, it shall become a part of the constitution.

The total public debt of the state on January 1st, 1853, was 11,766,407 dollars; but of this the sum of 9,612,088 dollars was for liabilities incurred on account of property banks, the proper state debt being only 2,154,319 dollars. The entire revenue for the year ending December 31, 1852 (including a balance left in 1851 of 308,886 dollars), was 1,455,456 dollars; the expenditure for the same year was 1,100,934 dollars. The state-militia consists of 42,823 men, of whom 1392 are commissioned officers. The judicature consists of a supreme court, having appellate jurisdiction, and district courts. The supreme court is presided over by a chief justice having a salary of 6000 dollars, and four associate justices with salaries of 5500 dollars each: these judges are all elected by the people for a term of ten years. There are 6 district courts of New Orleans each presided over by a judge with a salary of 3500 dollars, and 18 other district courts: all the judges of these and the inferior courts are also elected by the people.

A superintendent of education is directed by the constitution to be elected every two years. It also directs that free public schools shall be established throughout the state; and that the proceeds of the lands granted for the purpose, or escheated to the state, shall be held as a permanent fund, on which 6 per cent. interest shall be paid by the state for the support of those schools. In 1850 the number of public schools was 664, having 822 teachers and 25,016 pupils; colleges and academies 143, having 354 teachers and 5323 pupils. The total number of children attending school in 1850 was returned at 32,838 whites and 1219 free coloured children; total, 34,057. The number of white children in the state between the ages of 5 and 15 was 61,165; of free coloured children, 4463. The number of adults in the state in 1850 who cannot read and write was 21,221 whites and 8889 free coloured; total, 24,610, of whom 18,339 were natives of the United States and 6271 foreigners. The principal colleges in the state are the following:—Centenary (Methodist) College, at Jackson, founded in 1839, which on January 1st 1853 had 7 instructors, 102 students, and a library of 5000 volumes; St. Charles (Roman Catholic) College, at Grand Coteau, founded in 1838, which had 21 instructors, 103 students, and a library of 4000 volumes; Baton Rouge College, founded in 1838, which had four instructors, 45 students, and a library of 300 volumes; Franklin College, at Opelousas, founded in 1839, which had 4 instructors and 70 students; and the University of Louisiana, founded in 1849, which had 7 professors in the department of Arts, and connected with it law and medical schools.

Of the various religious denominations the Roman Catholics, and next to them the Methodists, are the most numerous. In 1850 the Roman Catholics had 55 churches, affording accommodation for 37,780 persons; the Methodists 125 churches, affording accommodation for 33,180 persons; the Baptists 77 churches, with accommodation for 16,660 persons; the Presbyterians 18 churches, with accommodation for 9510 persons; the Episcopalians 14 churches, with accommodation for 5210 persons. Including all sects there were 306 churches in the state with accommodation for 109,615 persons. The state institutions for the relief of the unfortunate are—a deaf and dumb asylum at Baton Rouge; and the charity hospital at New Orleans, in which, during 1852, there were admitted 18,035 patients, discharged 15,057; died 2098. Of the patients admitted 1709 were natives of the United States, 16,144 natives of foreign countries, and 181 of unknown birth. The number of newspapers and periodicals published in the state in 1850 was 54, with an aggregate annual circulation of 12,269,824 copies. Of these 11 were published daily, 6 tri-weekly, and 37 weekly: 13 were literary and miscellaneous; 6 neutral and independent, 33 political, 1 religious, and 1 scientific.

The Mississippi river was discovered by land. The Spaniards navigated the Gulf of Mexico for two centuries without being aware that one of the largest rivers of the globe falls into it. This fact may be explained from the circumstance that a low, flat, and dangerous coast extends on both sides of its mouth to a great distance. The French, after their establishment in Canada, got some information as to the river about 1660, but did not discover its mouth before 1699, when M. de Iberville founded the first colony. The city of New Orleans

was built in 1717, about which time the colony began to be of some importance, and it soon after acquired universal notoriety from having been granted to the company formed by John Law at Paris in 1716, and incorporated as the Mississippi Company. When the Mississippi bubble burst the land was resumed by the crown, and the commerce of the Mississippi declared free. The French remained in possession of Louisiana up to 1762, when they ceded it to Spain. The colony was much neglected by the Spaniards, and improved very slowly, notwithstanding its numerous natural advantages. In 1800 Bonaparte succeeded in inducing the Spanish government to re-cede Louisiana to France. It was held for a time nominally as a French colony, but only long enough to enable Napoleon I. to complete a sale of it to the government of the United States, which he succeeded in doing in 1803 for the sum of 60,000,000 francs (2,400,000*l.*). At the time of the sale the inhabitants were chiefly French and descendants of French; the whole population did not exceed 90,000 inhabitants, of whom about 40,000 were slaves. Louisiana comprehended all the country included in the present state of Louisiana, except the tract which extends north of the river Amite, and the lakes of Maurepas and Pontchartrain; and in addition, the immense tract of country included between the Mississippi River and the Rocky Mountains. The country was then divided into several territories, of which Louisiana first rose to a state. Louisiana was formed into a state in 1812.

LOUISVILLE. [KENTUCKY.]

LOUTH, Lincolnshire, a market-town, municipal borough, and the seat of a Poor-Law Union, in the parish of Louth, is pleasantly situated at the eastern foot of the Wolds, on the bank of the little river Ludd, in 53° 22' N. lat., 0° 1' W. long., distant 25 miles N.E. by E. from Lincoln, 143 miles N. from London by road, and 140½ miles by the Great Northern and East Lincolnshire railways. The population of the borough in 1851 was 10,467. The borough is governed by 6 aldermen and 18 councillors, one of whom is mayor. The lighting, paving, and sewerage of the town are under the management of commissioners appointed in terms of an Act of Parliament passed in 1826. The living is a vicarage in the archdeaconry and diocese of Lincoln. Louth Poor-Law Union contains 88 parishes and townships, with an area of 145,512 acres, and a population in 1851 of 83,388.

Louth was incorporated by Edward VI. The town is well built, and the streets are paved and lighted. In the town are a modern guildhall, an assembly room, a public subscription library and news room, a small theatre, a sessions house, and a house of correction for the division. A county court is held. The parish church is a beautiful edifice of the latter part of the 14th century, and consists of a nave and chancel, and a tower surmounted with a rich octangular crocketed spire, 300 feet high. The church of the Holy Trinity is a mean brick structure, erected in 1834. There are chapels for Wesleyan Methodists, Baptists, Independents, Primitive Methodists, and Roman Catholics. King Edward VI.'s Free Grammar school has an income from endowment of 620*l.* a year; it has 6 teachers; the number of scholars in 1851 was 71. Dr. Mapletoft's Endowed Commercial school, with which has been recently conjoined Hardies' foundation, contains about 50 boys. There are National, British, and Infant schools; a mechanics institute, with a library of upwards of 2000 volumes; a savings bank; a dispensary, supported by public subscription; and 12 beds-houses, on the same foundation as the grammar-school, in which 12 poor women reside and have an annual allowance. There are several iron foundries and tanneries, a large carpet manufactory, and other establishments. On the canal from Tetney Haven to Louth, an extensive traffic in corn and coals is carried on. Wednesday is the principal market-day; another market is held on Saturday. Fairs are held in April, September, and November. In the neighbourhood of the town are some remains of Louth Abbey, founded by Alexander bishop of Lincoln, in 1139, for Cistercian monks.

LOUTH, a maritime county in the province of Leinster, Ireland, is bounded N. by the county of Armagh and the Bay of Carlingford, which separates it from the county of Down; E. by the Irish Channel; S. by the county of Meath; and W. by the counties of Meath and Monaghan. It lies between 53° 43' and 54° 7' N. lat., 6° 6' and 6° 41' W. long. Its greatest length from north to south is 25 miles, from east to west 15 miles. Louth is the smallest county in Ireland, having an area of 315 square miles, or 201,434 acres, of which 178,972 acres are arable, 15,603 acres uncultivated, 5318 acres in plantations, 723 acres in towns, and 813 acres under water. The population in 1841 was 111,979; in 1851 it was 90,812.

Coast-line and Surface.—From the Boyne to the harbour of Dundalk, about 17 miles, the coast is low and comparatively level. The flat and sandy beach extends in some places to a breadth of 3 miles at low water. In a small bay south of Dunany Head are some reefs which are covered at high water, but left at a considerable distance by the ebb-tide. The only striking elevation is Clogher Head, a promontory 181 feet high, about 3 miles north from the Boyne. This headland is the termination of a range of hills stretching across the

county from the north-east border of Meath. The highest summit is Belpatrick in the west, 788 feet. With the exception of this range the county consists of extensive flats and tracts gently undulating. From the head of Dundalk Bay a margin of level land sweeps round the peninsula, which projects to the south-east between that bay and Carlingford Lough. This open tract is several miles wide at the extremity of the peninsula, but is contracted to a narrow strip along the shore of Carlingford Bay and the valley of the Newry River. Within this low coast-line the land rises into a group of mountains ranging from 904 feet, the height of Durlargy on the west, to 1935 feet, the height of Carlingford Mountain, which overhangs the lough. This group is opened by a considerable valley towards the south-east, and on the west it is separated from the Slieve Gullion and Forkhill groups of Armagh by a ravine traversing it from north to south, and forming a direct line of communication between Dundalk and Newry. Through this defile the great northern road is carried at a considerable height above the bed of a mountain stream.

Hydrography and Communications.—By the river Boyne the county is connected with the inland navigation to Navan, while the harbour of Drogheda affords a convenient outlet for the produce of the southern districts. At its first contact with the county the Boyne is joined by the river Mattock, which forms the boundary-line for some miles after flowing southward by Mellifont Abbey, from its rise on the west of Tullysker Hill. The Dee rises in the north-east of Meath, and passing through the town of Ardee proceeds in an easterly direction until within 4 miles of the sea, where it receives the White River. The Glyde, formed by the junction of the Lagan, which rises in Meath, with a stream descending from the Monaghan border, crosses the county through a succession of rich demesnes and low marshy lands to Castle-Bellingham, and then winding southward along the coast, unites with the Dee before reaching the sea at the small port of Anagassan. The Fane, which rises in Monaghan, runs in a direction nearly parallel to the course of the Glyde, and falls into Dundalk Bay at the village of Lurganreen. The Castletown or Dundalk River, formed by the junction of several streams which come in from Monaghan, flows eastward, and receiving the Kilcurry River from the north-west, a short distance above the bridge of Dundalk, enters the bay at the harbour of Dundalk. The Big and Little rivers fall into the bay from the valley on the south-east of the peninsula. Carlingford Lough connects the county by the Newry River and Canal with the inland navigation of Ulster. Besides Drogheda, Dundalk, and Carlingford harbours, there are some small fishing ports on the coast. The county is intersected in all directions by excellent roads. The two leading lines are the Great Northern road from Dublin to Belfast, and the road from Drogheda to Castle-Blaney by Ardee. The Dublin and Belfast junction railway traverses the county nearly its whole length. The Dundalk and Enniskillen railway connects Dundalk and Castle-Blaney, and on the south Drogheda is connected with Navan by a branch of the Dublin and Drogheda railway.

Geology.—The level portion of the county south of Dundalk belongs to the northern clay-slate formation of Ireland. A considerable patch of carboniferous limestone, skirted with a narrow belt of yellow sandstone and conglomerate, occurs to the west of Ardee, and minor deposits of the same rock are found along the western border of the clay-slate division. This formation also occupies the level space between the mountains and the shore, from the town of Carlingford round to the valley of the Castletown River, as far as its junction with the Kilcurry. The structure of the mountainous region is similar to that of the group of Mourne, consisting of a nucleus of granite supporting the clay-slate and limestone on its flanks.

Climate, Soil, and Produce.—The prevalent direction of the wind, which for nine months in the year is off shore, and the excellent drainage of the county by its numerous streams, render the climate comparatively mild and dry. The soil of the southern division of the county is well calculated for every kind of grain-crop. The tract north of the Bay of Dundalk, between the mountains and the sea, also produces heavy wheat crops. Farming in general is carried on in a superior manner. In the mountain district the condition of the people is much inferior. Spade cultivation is here very general, and the old slide car without wheels is still in use.

The chief occupations are agricultural. The linen manufacture and bleaching are carried on to some extent at Ravensdale, Collon, and Drogheda. There is a large export of produce from Drogheda, Dundalk, and Carlingford, and along the coast the fishery gives employment to many families. In 1853 there were 109,889 acres under crop, of which 4201 acres grew wheat; 40,801 acres oats; 23,904 acres barley, bere, rye, peas, and beans; 9123 acres potatoes; 9741 acres turnips, mangel-wurzel, carrots, parsnips, and cabbage; 3134 acres vetches and other green crops; 2091 acres flax; and 17,094 acres meadow and clover. Of plantations, in 1841 there were 6885 acres growing oak, ash, elm, beech, fir, fruit, &c. In 1851, on 7693 holdings, there were 11,314 horses, 1786 mules and asses, 27,733 cattle, 24,805 sheep, 15,823 pigs, 5231 goats, 143,751 head of poultry. The estimated value of the live stock here enumerated was 326,990*l.* The fishery district of Dundalk extends the whole line of coast from Ballagan Point to Maiden Tower, comprising 40 miles of maritime boundary, which in 1853 had 115 registered fishing-vessels, employing 558 men and boys.

Divisions and Towns.—The county of Louth is chiefly in the diocese of Armagh, with a small portion in that of Meath. It is divided into six baronies:—Ardee, Drogheda, Lower and Upper Dundalk, Ferrard, and Louth. The principal towns are DUNDALK, ARDEE, and part of DROGHEDA, which are noticed under their respective titles. The following are some of the other towns and more important villages, with the population of each in 1851:—

Carlingford, population 887, a market-town and sea-port on the southern shore of Carlingford Lough, 11½ miles E.N.E. from Dundalk, is a poor and decayed place, chiefly inhabited by fishermen. It contains a church, a Roman Catholic chapel, a Presbyterian meeting-house, National schools, and a district dispensary. There is a quay for coasting vessels, with convenient shelter for fishing-boats. The chief employment is the oyster-fishery in the bay. A fair is held on October 10th and on the first Saturday in each month. Near the town are the ruins of a castle, said to have been built by King John, and those of a monastery, founded in 1305 by Richard de Burgh, earl of Ulster. *Castle-Bellingham*, population 538, a neat village on the Dublin and Belfast road, 7½ miles S. from Dundalk, contains a handsome church, a Presbyterian meeting-house, the district dispensary, and a loan fund. Linen-weaving is carried on, and there is an extensive brewery. Fairs are held five times a year. *Clogher*, population 895, an increasing town on the coast, visited in summer for sea-bathing. It is situated near Clogher Head, about 7½ miles N.N.E. from Drogheda. *Collon*, population 761, a market- and post-town, on the road from Drogheda to Ardee, about 18 miles S. by W. from Dundalk, a well-built place, much improved by the late Lord Oriel. The market-house forms three sides of a square. The church was erected in 1813, at a cost of more than 6000*l.* There are a handsome glebe-house, and chapels for Roman Catholics and Methodists. The district dispensary is in the town. A cotton-factory and a bleaching-green, stocking-making, and linen-weaving are the chief sources of employment. Fairs are held five times a year. Petty sessions are held in the village. *Dunleer*, population 505, about 9 miles N. by W. from Drogheda, is situated in a sheltered valley, through which the White River flows, is a principal coach-station on the road between Drogheda and Dundalk. In the town are an Episcopal church and a chapel for Roman Catholics. *Louth*, population 585, an ancient town, now a poor decayed place, is situated on the road from Ardee to Castle Blayney, 5½ miles S.W. from Dundalk. It contains a church, a Roman Catholic chapel, two National schools, and a district dispensary. In the outskirts of the town are the ruins of a priory, erected in 1148. The town was plundered in the 9th century by the Danes. *Termonfeckan*, population 329, a pleasant village and sea-bathing place, situated at the mouth of the Termonfeckan rivulet, about 17 miles S. by W. from Dundalk, was formerly one of the residences of the archbishops of Armagh, of whom the celebrated Usher last dwelt in the village. The church, a neat building with a spire, stands on a rising ground overlooking the stream. Its chancel is the burial-place of several archbishops. The village contains a Roman Catholic chapel, a National school, and a district dispensary. Petty sessions are held here.

Louth returns three members to the Imperial Parliament, two for the county and one for Dundalk borough. The assizes are held in Dundalk, and quarter sessions there and at Ardee. Petty sessions are held in ten places. The county court house and county jail are at Dundalk. The District Lunatic Asylum, to which the county is entitled to send 23 patients, is at Dublin. The county infirmary is at Dundalk. At Drogheda is a fever hospital, and there are nine dispensaries in various parts of the county. Savings banks are established at Dundalk, Drogheda, and Ardee; the amount owing to depositors on November 20th 1853 was 70,396*l.* 0*s.* 9*d.* The county is partly within the Military District of Dublin and partly in that of Belfast. There are cavalry barracks in Dundalk, and the staff of the county militia is stationed at Dunleer. The police force, consisting of 192 men and officers, is distributed over 5 districts, comprising 27 stations, of which the head-quarters are at Dundalk. The coast-guard, which numbers 50 men and 4 officers, is distributed over 9 stations. In September 1852 there were 78 National schools in operation, attended by 5607 male and 5985 female children.

History and Antiquities.—Louth, at the coming of the English, formed a portion of the territory of Orgial or Oriel, by which name it was afterwards distinguished from the more western parts of the territory. Having been conquered by De Courcy between 1179 and 1180, Louth was erected into a county by King John in 1210. Being at the time accounted a portion of Ulster, it formed part of the grant to De Courcy, and after his time to De Lacey, by whom it was divided among inferior barons. Louth was not considered a portion of Leinster until the reign of Elizabeth. The forfeitures consequent on the rebellion of 1641, and the ensuing civil wars, extended over nearly the entire county.

The numerous antiquities which occur throughout Louth have been made the subject of a volume entitled 'Louthiana,' published at Dublin in 1758. Earthen mounds and entrenchments are of very frequent occurrence. The most remarkable in the county is that of Castle Guard at Ardee. The mound and building called Fahs na ain Eigha, or 'the one night's work,' near Dundalk, is a curious combination of the earthen rath with the stone cashiel. Stone circles and

other primeval remains are numerous. The most remarkable are at Ballirekan and Ballinahatry near Dundalk. At Ballymascanlan is a cromlech, the covering stone of which measures 12 feet by 6 feet, and weighs upwards of 30 tons. Round towers formerly stood at Louth and Drogheda, and two are still remaining at Dromiakin and Monasterboyce. In the churchyard near the tower at Monasterboyce, stand two beautifully sculptured stone crosses. The larger, called St. Boyne's Cross, is 18 feet high. The arms of these crosses are inclosed in circles, and the entire surface of each is covered with rich tracery and allegorical sculpture. The ruins of the abbey of Mellifont, founded in the 17th century, occupy a beautiful site on the bank of the Mattock River, near the Boyne. They consist of a gate-tower, part of a chapel, and the lower story of an octagonal chapter-house. The ornamental part of the doorways and arches of the two latter buildings are formed of blue marble, and have been highly gilt. Of the various feudal buildings throughout the county the chief are the castle of Carlingford, erected by King John, Rohe's Castle, north-west of Dundalk, and Torfeckan or Termonfeckan Castle.

LOUVAIN (Löven, Löwen, Leuven), an ancient town in Belgium, in the province of South Brabant, is situated on the Dyle, in 50° 54' N. lat., 4° 39' E. long., 15 miles S.E. from Malines, 49 miles N.W. from Liège, and has about 24,000 inhabitants. It is a first-class station on the Brussels-Liège-Cologne railway. The origin of the town is unknown. Some attribute its foundation to Cæsar, and the old castle, a portion of which still remains outside the Malines Gate, is still called Château de Cæsar; it is known however that this was built in 890 as a barrier against the Northmen. An earthen rampart, 80 to 100 feet high, within a deep dry fosse, incloses the town on the west and north-west, except where it is cut through by the roads to Malines and Brussels. The bastions and casemates now in ruins were probably erected by the Spaniards. The ground-plan of the city within the walls is nearly a circle. Louvain was surrounded with walls in 1156, and was for a long time the residence of the dukes of Brabant. In those times it was the largest, the richest, and the most commercial city in the country. Its principal trade consisted in woollen manufactures, which are said to have been prosecuted to such an extent at the beginning of the 14th century as to give employment to 150,000 workmen; but this number appears to be exaggerated. The weavers in 1382 revolted against the Duke of Brabant, and for a time desolated the province, but were speedily reduced to obedience; and the ring-leaders being exiled, the greater part of them came to England, where they introduced the manufacture of broadcloth. The English Edward III. resided for nearly a year in the castle of Louvain, and the emperor Charles V. was brought up in it. The walls of Louvain were nearly seven miles in circumference; they are now partly turned into boulevards. A great part of the space inclosed is no longer occupied by houses, which have been succeeded by gardens and vineyards. It is said that the town was never taken till 1792, when General Kleber, at the head of a French revolutionary force, made himself master of it.

The manufacture of woollens and lace is now carried on in Louvain to a small extent. There are several breweries in the town, and the beer of Louvain enjoys a high reputation, and has a great sale in other parts of Belgium. There is also a considerable trade in corn, hops, and other agricultural produce.

The town is in general not well built, but it contains several fine buildings and numerous masterpieces of art. The University of Louvain was established in 1426 by John, the fourth duke of Brabant, and long enjoyed a high celebrity. In the 16th century it was frequented by 6000 students, and was then as now a distinguished school of Catholic theology. There were formerly 43 colleges, of which 20 still remain; many of them are fine buildings. The university was suppressed by the French in 1793, but was restored in 1817, and is again a flourishing institution with 60 professors and 600 students: it has a botanic garden and zoological and mineralogical museums.

The town-hall, which is one of the most beautiful gothic buildings in the world, was erected in 1448-1469; it has been recently restored at the joint expense of the town and the government. Every part of the exterior is decorated with delicately-chiselled masonry and sculpture; the interior contains some good paintings. The cathedral church of St. Pierre, situated near the town-hall, is one of the finest religious edifices in Belgium. It was founded in 1040, but the present structure dates from 1358. The interior consists of nave, choir, and aisles running all round the building. The rood-screen, separating the nave from the choir, is richly ornamented in the flamboyant gothic style. The tabernacle of sculptured stone; the admirably-carved pulpit (representing St. Peter standing on a rock, and the conversion of St. Paul); the font at the west end of the nave; and the paintings which adorn the side-chapels (including masterpieces of Memling and Quintin Matsys), are among the attractive decorations of this church. The tower, which fell down in 1604, is said to have been 533 feet high. St. Gertrude's church, which was originally the chapel of the dukes of Brabant, is celebrated for its carved oaken stalls recently restored.

LOUVIERS. [EURE.]

LOUVIGNÉ-DU-DESERT. [ILLE-ET-VILAINE.]

LOW COUNTRIES, or NETHERLANDS, a name given to that portion of Northern Europe which is surrounded by Hanover, Prussia,

France, and the North Sea, and which now comprises the kingdoms of Holland and Belgium, and grand-duchy of Luxemburg. All this territory was united to form the kingdom of the Netherlands from 1815 to 1830, when Belgium shook off the yoke of the Dutch. The king of Holland, whose territories comprise only the northern part of the Low Countries, is still sometimes styled King of the Netherlands. [NETHERLANDS; HOLLAND; BELGIUM.]

LOWELL. [MASSACHUSETTS.]

LOWESTOFT, colloquially LAYSTOFF, Suffolk, a market-town in the parish of Lowestoft, is situated on the east coast in 52° 29' N. lat., 1° 44' E. long., distant 45 miles N.E. from Ipswich, 114 miles N.E. from London by road, and 149½ miles by the Eastern Counties railway. The population in 1851 was 6580. The living is a vicarage in the archdeaconry of Suffolk and diocese of Norwich.

The town stands on the top of a cliff facing the sea, from which it is separated by a beach in some parts nearly half a mile wide. It consists of a principal street nearly a mile long, well paved, and of some smaller streets. The parish church, a handsome edifice of perpendicular architecture, nearly half a mile west of the town, is 182 feet long, 57 feet broad, and 43 feet high; it has a tower and spire 120 feet high. In the town are a chapel of ease; chapels for Wesleyan Methodists, Independents, and Baptists; Wyld's Free school, which educates about 60 boys; Annot's Endowed school, which has been made a National school, and has 90 scholars; a Girls' school, and an Infant school. There are a town-hall, a theatre, and a bathing-house. On the cliff is the upper lighthouse, and on the beach are the lower lighthouse and a battery at the south end of the town. Off the shore are the North and South roads, sheltered to sea-ward by the Corton and Newcome sands. South of the town is the cut communicating between lake Lothing and the sea, forming part of the line of the Norwich and Lowestoft navigation. The tide-lock will admit vessels 84 feet long and 21 feet in beam. A principal branch of industry at Lowestoft is the fishery. Great quantities of mackerel and soles are caught, and sent to the London and Norwich markets; and large numbers of herrings are taken and cured. There are rope and twine manufactories. The market is on Wednesday, and there are two yearly fairs. Lowestoft is also frequented as a bathing-place. Communication by steam-vessel is maintained during the season between Lowestoft and Tönningen, on the Eyder, being the nearest point of communication with Denmark.

LOWTHER. [WESTMORELAND.]

LOWTHERSTOWN, or IRVINESTOWN, Fermanagh, Ireland, a post-town and the seat of a Poor-Law Union in the barony of Lurg, is situated in 54° 28' N. lat., 7° 39' W. long., 10½ miles N. from Enniskillen, and 111½ miles N.W. by N. from Dublin. The population in 1851 was 1008. Lowtherstown Poor-Law Union comprises 11 electoral divisions, with an area of 75,916 acres, and a population in 1851 of 25,673. The town consists principally of one street, forming part of the post-road from Enniskillen to Pettigo, and contains a chapel of ease, a chapel for Methodists, a National school, the district dispensary, and the union workhouse. Fairs are held on the 8th of each month.

LOXA, or LOJA. [GRANADA.]

LOZÈRE, a department in the south of France, is bounded N. by the departments of Cantal and Haute-Loire, E. by Ardèche, S. by Gard, and W. by Aveyron. The department lies between 44° 7' and 44° 58' N. lat., 3° and 4° E. long. Its greatest length from north-west to south-east is about 65 miles, its greatest breadth is about 44 miles. The area of the department is 1995 square miles. The population in 1841 was 140,788; in 1851 it was 144,705, giving 72.53 inhabitants to a square mile, or 102.05 below the average population per square mile for the whole of France. The department is named from one of its principal mountains, and is formed out of a subdivision of Languedoc called Gévaudan.

The department is altogether of a mountainous character. The Cévennes cross it in the south-eastern part; Mont Lozère, one of the loftiest mountains of this range, is 4887 feet high, and gives name to the department. The Margeride Chain which branches off from the Cévennes at Mont Lozère, and unites that mountain range with the volcanic group of Auvergne, extends through the department in the direction of its length, covering all the east of the department; and the mountains of Aubrac overspread the western part, and extend into the adjacent department of Aveyron. The mountain ranges of the Cévennes and La-Margeride determine the watershed of the department, which they divide between three of the great river-basins of France. A small portion on the south-east, separated by the crest of the Cévennes, belongs to the basin of the Rhône; the rest of the department is divided by the mountains of La-Margeride, between the basin of the Loire in the north and that of the Garonne in the west. The part comprehended in the basin of the Garonne is considerably larger than either of the others, it comprises many high plains (called Caussées), some of which are of great fertility; but others of them, as the Caussée de Sauveterre, which is traversed by the road from Mende to Florac, is a calcareous table-land, bare, arid, and totally uninhabited. This Caussée is about 8000 feet above the level of the sea, and about 7 miles broad: the cold felt upon it in winter is intense; it is then deeply covered with snow, and exposed to violent hurricanes.

The department is chiefly occupied by the primitive rocks which constitute the mass of the Cévennes and the connected mountains.

2200. DIV. VOL. III.

On the south-eastern slope of the Cévennes, towards the basin of the Rhône, the granites and other primitive rocks are covered with the strata of later formation which intervene between the chalk and the saliferous sandstone. The same strata overspread a considerable portion of the western side of the department on the banks of the Tarn and the Lot, and in the country between them. One or two extinct volcanoes have been observed within the limits of this department; but they are not so numerous as in the adjacent departments of Haute-Loire and Cantal.

The mineral wealth of the department is not great: lead, silver, antimony, copper, and iron-ore are procured. Marble, freestone, porphyry, granite, basalt, and gypsum are quarried. There are some mineral springs, of which the most frequented are those of Bagnols les Bains near Mende.

The melting of the snow that lies on the mountains of the department for several months in the year, gives rise to a great number of rivers which drain the three slopes formed by the mountain masses above named. The rivers are all small in that part of their course which lies within the department. To the basin of the Rhône belong the Cèze, which rises in Mont Lozère, and brings down particles of gold; the Gardon d'Alais, the Gardon de Mialet, and the Gardon d'Anduze, which unite their streams to form the river Gard [GARD], in the adjacent department of Gard, on the eastern border of which all these rivers join the Rhône. The Chassezac rises on the east side of the department, and flows by the Ardèche into the Rhône [ARDECHE.] The Borne, a small feeder of the Chassezac, forms part of the eastern boundary. To the basin of the Loire belong the Allier, which rises in the north-eastern slopes of La-Margeride, and for some distance separates this department from those of Ardèche and Haute-Loire; the Chapeauroux and the Ance, which also rise on the same slope and flow northward into the Allier [ALLIER.] To the basin of the Garonne belong the Lot and the Tarn. The Lot rises in the south-western slope of La-Margeride, not far from Mont Lozère, and flows west by Mende and Chanac into the department of Aveyron: nearly 40 miles of its course belong to this department. It receives the Coulanges and some other small streams. [LOT.] The Truyère, a more important tributary, rises in the slope of La-Margeride, and flows north-west; it does not join the Lot till far beyond the boundary of this department. The Bèze, a tributary of the Truyère, forms the boundary between the departments of Lozère and Cantal; it rises in that of Lozère. [CANTAL.] The Tarn rises on the western side of Mont Lozère and flows westward to Sainte-Enimie, and then south-west into the department of Aveyron. It receives the Tarnon, which has a northerly course below Florac, the Jonte (which separates the department of Lozère from that of Aveyron), and several smaller streams. None of the rivers named is navigable in this department. Many of them flow through gloomy ravines and dark glens, screened by lofty cavernous rocks. There are a few small tarns in the mountains of Aubrac.

The department is entirely destitute of inland navigation, and very indifferently provided with roads. There are 5 state and 21 departmental roads, but in general they are in a bad state of repair. The principal road is that from Paris by Moulins and Clermont to Narbonne and Perpignan. Goods are conveyed for the most part on mule-back.

The climate is variable and cold: winter lasts about four months in the southern part of the Cévennes, and is prolonged to six months in the north of the department; the spring is very rainy, and violent storms are frequent in summer, during which season the heat is great in the lower grounds of the department.

The nature of the soil presents great obstacles to the labours of the farmer; yet in most instances the land everywhere that it is capable of cultivation is well tilled. The chief crops raised in the north of the department are rye, some barley, oats, and hay; in the Caussées wheat, barley, oats, fruits, &c. are grown; and in the Cévennes, the chestnut and the potato are the chief support of the population. The vine is cultivated in some favourable situations; but the quantity of wine produced does not suffice for the consumption, and the same may be said for the cereal productions of the department. In the basin of the Tarn the mulberry is extensively grown for the production of silk: here also bees are kept by every householder. The mountain pastures are extensive, and of excellent quality; great numbers of well-woolled sheep are reared. Horses are not numerous; but mules and horned cattle are. Amongst the wild animals are wolves, badgers, great numbers of hares and rabbits. Medicinal plants, and plants used in tanning and dyeing, are abundant. The forest timber is composed of oak, beech, fir, chestnut, &c. The base of Mont Lozère is surrounded with large forests, the upper part of the mountain is covered with pastures, on which vast flocks of sheep, numbering together above 200,000, feed during the summer months. The Cévennes also about the sources of the Tarn and its feeders abound with forests, and are scored by numerous wild glens and defiles, in the sides of which are many extensive caverns, the retreats of the persecuted Calvinists in the beginning of the 18th century.

The manufactures are unimportant; some woollen yarn, serge, blankets, druggot, and cotton-cloth, nearly all for home use, are the chief products. In the arrondissement of Florac there are some cotton-spinning and silk-throwing establishments. Paper, leather, felt hats, parchment, tiles, and earthenware are also made. About 40

fairs are held in the year. The commerce of the department, owing to the want of water communication and good roadways, is confined to articles of mere necessity, and is altogether insignificant.

The department contains 1,276,756 acres. Of this area, 515,629 acres are arable; 110,185 acres are covered with woods and forests; 448,278 acres consist of natural pastures, heaths, and moors; and 72,806 acres are under different kinds of culture.

The department is divided into 3 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Mende	7	68	49,361
2. Florac	7	52	41,426
3. Marvejols . . .	10	79	53,918
Total	24	194	144,705

1. The first arrondissement is named from its chief town, *Mende*, which is situated in a valley surrounded by high hills, on the right bank of the Lot, in 44° 31' 4" N. lat., 3° 30' 4" E. long., 2426 feet above the level of the sea, and has a tribunal of first instance, ecclesiastical and communal colleges, a public library, and 6345 inhabitants in the commune. The town is surrounded by ramparts, which form a pretty walk; the streets, many of which are supplied with fountains, are narrow and crooked. Mende is the seat of a bishop; the cathedral, a gothic structure surmounted by two towers, one of which is greatly admired for its graceful elegance; and the former episcopal palace, which is now the residence of the prefect of Lozère, are the most remarkable buildings. The manufactures consist of coarse woollen cloths and paper. On Mont Mimat, one of the hills above the town, is the hermitage of St. Privat, who suffered martyrdom here at the hands of the Vandals. The town was first surrounded with walls by Adalbert bishop of Gévaudan, in 1151. In the religious wars of the 16th century the town was taken no less than seven times. The citadel was demolished in 1597 after the reduction of the town by the forces of Henri IV. About 10 miles from Mende in the valley of the Lot is *Bagnols-les-Bains*, a small village famous for its medicinal springs and baths. *Ispagnac*, a pretty town situated in a valley on the right bank of the Tarn and on the south side of the *Causée-de-Sauveterre*, has a mineral spring and 1800 inhabitants. *Langogne*, a small town, with an ecclesiastical school, and 2803 inhabitants, is situated on a high plateau on the left bank of the Allier, on the eastern border of the department. It has an ancient church which belonged to a monastery founded in the 10th century. A few miles west of Langogne between the source of the Allier and the right bank of the *Chapeauroux* is *Château-neuf-le-Randon*, whilst besieging the castle of which the chivalrous constable Duguesclin died. The commander of the fortress had agreed to surrender the place in a fortnight in case no succour arrived; the time having expired without bringing the expected aid he brought the keys of the fortress and laid them on the dead warrior's coffin. The road from Langogne to Mende crosses the *Margeride* mountains near the ruins of the old castle just named by a high pass, often blocked up with snow. *Villefort*, a small place of under 2000 inhabitants, situated at the foot of Mont Lozère, is important for its lead- and copper-mines.

2. In the second arrondissement the chief town, *Florac*, is situated in 44° 19' 29" N. lat., 3° 35' 44" E. long., 1960 feet above the sea, on the left bank of the Tarnon, a feeder of the Tarn, and has a tribunal of first instance, and 2286 inhabitants in the commune. Near Florac is *Oriaac*, a mountain village, the birth-place of Pope Urban V. *Sainte-Etienne*, an ancient town which originated in a monastery founded in the 7th century by a daughter of Clothaire II., is situated amongst savage mountains with lofty precipitous sides, on the right bank of the Tarn, and has 1200 inhabitants. The Tarn, which runs in a deep rocky bed in all this part of its course, is famous for its excellent trout. *Barre*, a small market-town of about 700 inhabitants, is situated in the Cévennes mountains about 9 miles S.S.E. from Florac. *St. Germain-de-Calberte*, S.E. of Florac, is situated in a district almost entirely covered with mulberry plantations, and has 2025 inhabitants, who raise a considerable quantity of raw silk. *Meyruis*, near the southern border of the department, on the right bank of the Jonte, a feeder of the Tarn, has hydraulic saw-mills, manufactures of hats, cheese, lace, wire for cards, and knitting needles. The population is 2005. *Vialas*, 15 miles E. from Florac, on the southern slope of Mont Lozère, has lead-mines and 2126 inhabitants.

3. In the third arrondissement the chief town is *Marvejols*, which is situated in a valley planted with fruit-trees, on the right bank of the Cologne (a feeder of the Lot), 12 miles W. from Mende, and has a tribunal of first instance, a college, an ecclesiastical school, and 4142 inhabitants, who manufacture woollen cloth and yarn, leather, bricks, &c. It stands about 2900 feet above the level of the sea, in 44° 38' 17" N. lat., 3° 17' 28" E. long. The town is regularly built, wall paved, and ornamented with fountains. A canal from the Cologne supplies the dye-houses of the town with water, and drives the machinery of several factories. *St. Alban*, 16 miles N.N.E. from Marvejols, on the right bank of the Truyère, has 2138 inhabitants, and an old baronial castle now converted into a female lunatic asylum. *La-Canourgue*,

7 miles S. from Marvejols, is situated in the fertile valley of the Urugue and near the junction of the small stream with the Lot. Some antiquities supposed to be Celtic exist in the town. The population of the commune numbers about 2000. The town has been always famous for the manufacture of serge and druggat. *St. Chély*, on the great road from Clermont to Narbonne, is situated in a mountainous country north from Marvejols, and has about 1600 inhabitants. *Chirac*, 3 miles S. from Marvejols, on the right bank of the Cologne, and near its mouth in the Lot, has 1644 inhabitants in the commune. *Malsieu*, 5 miles N. from St-Alban, and on the right bank of the Truyère, has 1200 inhabitants, who manufacture coarse woollen stuffs, leather, and blankets.

The department forms the see of the Bishop of Mende, is included in the jurisdiction of the High Court of Nimes, within the limits of the University Academy of Montpellier, and belongs to the 10th Military Division, of which Montpellier is head-quarters. It returns one member to the Legislative Body of the French empire. There are in Mende a diocesan seminary, a preparatory ecclesiastical school, a communal college, and a normal school. The Calvinists have churches in Meyruis, Florac, Vialas, Barre, and St-Germain-de-Calberte, besides 8 meeting-houses in other districts of the department. (*Dictionnaire de la France; Annuaire pour l'An 1853*).

LÜBECK, a free city in the north of Germany, is situated in 53° 51' N. lat., 10° 50' E. long., on a long eminence between the rivers Trave and Wakenitz. It is the capital of a republic whose territory, consisting of a continuous tract along the Trave, is bounded E. by Mecklenburg Strelitz, W. by Oldenburg and Holstein, S. by Lauenburg, and N. by the Baltic. The city also possesses, in common with Hamburg, the *Vierlande* district, a rich fertile tract inclosed by arms of the Elbe, from the floods of which it is protected by dykes. This district, which is inhabited by the descendants of a Dutch colony settled here in the 13th century, forms the bailiwick of Bergedorf, so named from its chief town at the entrance of the Bille into the northern arm of the Elbe. The total area of the possessions of the republic is 110 square miles (of which 16 square miles are in the Vierlande), and the total population, according to the census of 1851, amounted to 54,166. The population is thus distributed:—City of Lübeck, 26,098; county parts, 16,587; bailiwick of Bergedorf, 11,481.

Adolphus II., count of Holstein, founded the present city of Lübeck on the banks of the Trave in 1140. In 1158 Adolphus ceded it and its territory to Henry the Lion, who rebuilt the town, surrounded it with walls, gave it magistrates of its own, granted it several privileges, allowed the northern nations a free trade to it, and gave it the celebrated code of laws called 'Das Lübsche Recht'. In 1163 the see of the bishopric of Oldenburg was transferred to Lübeck. The churches of St. Mary and St. Peter were already built, and the cathedral was founded by Bishop Gerold in 1170. Henry the Lion being put under the ban of the empire, Lübeck was forced to submit to the emperor Frederick I., during whose absence in the Holy Land Henry returned from England and recovered it, but had held it only three years when it was taken by Adolphus III., count of Holstein (1192). Ten years later it was taken by Woldemar, brother of Canute, king of Denmark. The citizens expelled the Danish garrison in 1226, and placed themselves under the protection of the emperor Frederick II., who confirmed all their privileges, and made Lübeck a free imperial city.

The wealth and power of Lübeck increased, and it joined the Hanseatic League, of which it became the head, about 1260. The city was the seat of government of the League, the repository of its archives, and the station of its fleet, to the command of which Lübeck was entitled to appoint one of her own citizens. For four centuries the city maintained her flourishing condition, and possessed it is said at one time a population of 200,000 souls. From the dissolution of the League in 1630 Lübeck has considerably diminished in importance, her commerce has greatly decayed, and her streets that were once crowded with the bustle of busy commerce are now partially overgrown with grass. The occupation of the city by Blücher after his retreat from the battle of Jena led to the plunder of the town during three days by about 75,000 French troops, who after expelling the Prussians took up their quarters in the town. Lübeck, like Hamburg, was incorporated with the French empire in 1810, and so remained till it recovered its freedom after the battle of Leipzig in 1813. The most important recent event in the history of the town is its connection by a branch railway with the Hamburg-Berlin line at Buchen.

Lübeck, in its present state, is no longer a fortified town; the old ramparts are converted into public walks, and the city, being on a moderate eminence between the Trave and the Wakenitz, is very pleasantly situated, very clean and cheerful. The interior is more regular than in most of the old German towns, it being intersected by several broad and straight streets. The houses are built of stone. A great number of the houses are in the old-fashioned style, with the gable-ends towards the street, and many of them are richly decorated. The dom, or cathedral, erected between 1170 and 1341, is a large red-brick structure surmounted by two spires. In the choir and side-chapels are many tombs of the bishops and leading families of Lübeck. The screen which separates the choir from the nave is a masterpiece of wood-carving of the early German school. But the great treasure of this church is a painting by Memling, in one of the side-chapels, representing the chief incidents in the Passion of our

Lord; it is inclosed in double shutters, on which are pictures of the Annunciation and of various saints. The baptismal font is a rich specimen of admirably-sculptured gothic work, which dates from 1455. The Marien-Kirche, also a red-brick structure, is celebrated as one of the finest pointed gothic churches in northern Germany. It is 340 feet long; the nave is 152 feet high and 45 feet wide. The interior is lighted through painted glass windows, and is very imposing for its elegant architecture; a brass screen surrounds the choir. This church contains valuable paintings by Holbein, Vandyck, Perugino, Overbeck, and other masters; a curious astronomical clock; a 'Dance of Death'; a fine organ; and a remarkable altar by Guilius of Antwerp. The other churches, four in number, are much inferior to the Marien-Kirche; but the Katherine-Kirche, though now used as a gallery, retains its altars, pictures, and rood. The Raath-haus, in which deputies from the 85 cities of the Hanseatic League held their sittings, stands near the Marien-Kirche, fronting the market-place. It is an imposing gothic structure, erected between 1442 and 1517. The beautiful Hall of the Hansa, in which the council used to meet, is now divided into small apartments. The Senate of Lübeck still assembles in the lower story of the building. Other remarkable architectural objects in Lübeck are—the Burg and Holstein gates, and the Hospital of the Holy Ghost. The city has an exchange and several insurance companies. A splendid avenue of lime-trees extends for a considerable distance along the road to Travemünde. Lübeck is celebrated for its charitable institutions, which are numerous and admirably conducted. The other public establishments and buildings are—the gymnasium, the commercial institution, the Roman Catholic chapel, the Calvinistic church, and many others.

The commerce of Lübeck is still important. Its geographical position gives it a considerable share in the transit trade with Russia, Finland, Sweden, and Denmark. The corn of Mecklenburg and part of Holstein is shipped at Lübeck. Northern produce is forwarded by the Trave and the Stecknitz Canal to the Elbe and Hamburg. Besides the railway before-mentioned Lübeck is connected with Hamburg by means of two good turnpike-roads. Regular communication is kept up with Copenhagen, Stockholm, and St. Petersburg by large steamers. Vessels drawing about 9 feet water can go up the Trave to Lübeck, where they lie in a spacious dock lined with quays, and supplied with every convenience for loading and unloading. Vessels of greater draught stop at Travemünde (where there is secure anchorage for ships of any burthen), and load and discharge by means of large lighters. The chief exports of Lübeck are corn, cattle, wool, fish, quills, iron, timber, &c.: the imports consist of zinc, silk and cotton goods, hardware, and other manufactures, colonial products, dye-stuffs, &c. Pit-coal and salt are important articles of transport by the Stecknitz Canal. The forests belonging to the city supply excellent timber for ship-building, which is in a flourishing state at Lübeck. Large fairs are held for the sale of wool (in June), cattle, and horses. Tobacco, soap, paper, playing-cards, linen and cotton goods, iron, copper and brass wares, &c., are manufactured. The arrivals at the port of Lübeck in 1849 numbered 918; the departures 922, exclusive of steamers and coasters: in 1852 the arrivals were 1022, carrying 63,569 lasts (of 4120 Lübeck pounds each), the departures 1064, with 68,293 lasts. The official return states the weight of imports in 1851 to have been—by land (including the river and canal traffic) 50,463,308 Lübeck pounds; by sea 214,192,119 Lübeck pounds.

Lübeck is governed, according to the constitution of April 8, 1848, by a senate of 20 (which every two years elects two of its members as burgomasters for the two following years), and by a body of delegates named for six years, and numbering 120. The senators are named for life, and all citizens above 30 years of age are eligible. Vacancies are filled up by the senate, and a commission named by the people. For electoral purposes the city is divided into 11 districts, one-third of the delegates returned by each of which resign their seats every two years. A delegate may be re-elected.

The revenue of the republic, raised chiefly on state property and direct and indirect taxes, amounted to 899,157 marcs (16 to the pound sterling) in 1853; the expenditure to 1,014,690 marcs. The state debt at the end of 1852 amounted to 12,200,000 marcs, of which 8,000,000 marcs were borrowed in 1850 for making railways.

Lübeck is the seat of the supreme court of appeal for the four free towns (Hamburg, Lübeck, Bremen, and Frankfurt-am-Mayn). The court consists of six members, one of whom is chosen by each of the free towns; Frankfurt and Bremen name the fifth: the sixth is named alternately by Lübeck and Hamburg, but with this difference, that Hamburg has the appointment twice for Lübeck's once. The president of the court is named by the senates of the four towns from year to year.

Twenty foreign consuls reside at Lübeck.

The Trave, before it enters the Baltic, forms a large shore-lake called the *Binnen-wasser*, or *Binnen-see*, the eastern part of which belongs to Mecklenburg. On the western shore of the embouchure is *Travemünde*, the port of Lübeck, 10 miles N.N.E. from that city, with a lighthouse, and a population of about 1500. It is slightly fortified, and is much frequented in summer as a watering-place. Large steamers and all vessels in the Lübeck trade drawing above 10 feet water anchor at Travemünde. Small steamers ply up the river to Lübeck, with which Travemünde is also connected by an excellent turnpike road and a ferry.

LÜBLIN, the capital of the government of Lublin in Poland, is situated in about 51° 16' N. lat., 22° 30' E. long., 94 miles S.E. from Warsaw, and has about 16,000 inhabitants, including the garrison. It is situated on an eminence above the left bank of Bystricza, a feeder of the Wieprz, and is surrounded with walls, ditches, and lakes; it is divided into the upper and lower town, of which the latter is chiefly inhabited by Jews. It has a dilapidated castle on a hill, and is the seat of a bishop and court of appeal. The most considerable buildings are the town-hall, the Sobieski palace, 18 churches, of which the cathedral, dedicated to St. Michael, and the churches formerly belonging to the Jesuits, those of the Visitandines, the Dominicans, and the Carmelites, are worthy of notice; there are several monasteries, a Piarist college, a synagogue, a gymnasium, an academy of sciences, and several hospitals and charitable institutions. The town has three annual fairs, each lasting a month, which are frequented by great numbers of foreign merchants: the chief articles sold are cotton manufactures, woollen-cloths, corn, and Hungarian wines. Lublin is one of the principal centres of the cotton manufactures in Poland; large spinning-mills have been recently established in the town. It has been long famous for the manufacture of coarse woollens.

LUBLIN, GOVERNMENT OF. [POLAND.]

LUCANIA. [DUBLIN, County of.]

LUCANIA, a province of ancient Italy, bounded N. by the Silarus, the Apennines, and the Bradanus, which separate it from Campania, Samnium and Apulia respectively; E. by the Gulf of Tarentum, along which it extended to the mouth of the Crathis; S. by Brutium; and W. by the Tyrrhene Sea, between the mouths of the Laus and Silarus. The territory of Lucania is now comprised chiefly in the modern province of Basilicata; portions of it are included in Calabria and Principato Citra. Under these heads the physical geography of the country is given, and many particulars respecting its ancient towns. The rivers that fall into the Gulf of Tarentum between the Bradanus and the Crathis were—proceeding from the north, the Casuentus, the Acalandrus, the Aciris, the Siris, and the Sybaris. These rivers rise in the mountains that cover all the interior of the province, and run generally in the direction of east by south across a very fertile plain, which skirts the shore of the Tarentine Bay. Along this shore were several celebrated cities founded by early Greek colonies: Metapontum, between the mouths of the Bradanus and the Casuentus; Heracleia, near the mouth of the Aciris and on its right bank; a little higher up the right bank was Pandosia; Siris, near the mouth of the Siris and on its left bank; Sybaris, near the mouth of the Sybaris; and Thurii, a few miles higher up, in the plain between the Crathis and the Sybaris. On the coast of the Tyrrhene Sea were Paestum, a few miles south of the Silarus, and Elea, or Velia, further south, on the Bay of Elea, and a few miles north of the promontory of Palinurus.

Heracleia, founded about B.C. 432 by the inhabitants of Thurii and Siris, was the place of meeting of the Italian Greeks till its capture by Alexander, king of Epirus, who transferred the meetings to Thurii. The city early rose to prosperity, and was in close alliance with Tarentum against the Lucanians and Messapians. The first engagement between Pyrrhus and the Romans took place in the plain between Heracleia and Siris B.C. 280, and ended in the total defeat of the latter. Two years afterwards the Heracleiots entered into alliance with Rome, and it continued to be a flourishing city under Roman sway till the time of the empire. The date of its final extinction is unknown. Its site is marked by mounds of rubbish and the foundations of ancient buildings near the farm of Policoro, which is marked on some maps near the mouth and on the right bank of the Agri. Many coins, bronzes, and other antiquities have been found on the site, and at a short distance were discovered the two very interesting bronze tables called *Tabulæ Heracleenses*, which contain a Latin inscription relating to the municipal regulations of the city. On the back is a long Greek inscription of earlier date and of much less interest. The coins of Heracleia are beautiful masterpieces of ancient art. Zeuxis the painter, it is said, was a native of Heracleia. [BASILICATA; CALABRIA; PRINCIPATO CITRA; PASTUM, &c.]

LUCAYOS. [BAHAMAS.]

LUCCA, a small duchy in Italy, which now forms a province of Tuscany, between the Apennines and the sea, is bounded N. by the territories of Modena, E. and S. by the grand-duchy of Tuscany, and west by the Mediterranean. It is watered by the river Serchio, which rises in the Apennines of Garfagnana and enters the Mediterranean a few miles north of the Arno. Its area is 512 square miles. Its population in 1852 amounted to 260,745. Lucca is one of the most densely inhabited parts of Italy.

The territory of Lucca is naturally divided into three regions: 1st, the mountainous districts among the Apennines, including the valley of the Lima, an affluent of the Serchio; 2nd, the valley of the Serchio, including the fine plain of Lucca, which is cultivated like a garden; 3rd, the flats near the sea, which are in part marshy, but produce good pasture for cattle. The people are very industrious; many of them emigrate to foreign countries, where they work as plasterers and image-makers, and others from the mountainous districts repair every winter to the maremme of Tuscany and other neighbouring states to work in the fields, whence they return home

in the summer. There is a lyceum in the city of Lucca and numerous grammar and elementary schools. In spiritual matters the Lucchesi are subject to the archbishop of Lucca.

The country is divided for administrative purposes into 21 communes. At the head of each commune is a political officer called *Gonfaloniere*, and likewise a judge called *Commissario Giudicente*. In the town of Lucca are the civil, criminal, and commercial tribunals for the whole duchy.

The climate of Lucca is sharp and cold in the Apennines, hot in the plain, and moist and unhealthy near the coast, along which it extends about 7 miles. The soil in the centre and south is rich and fertile; in the north stony, and in the west marshy. Agriculture is carried to high perfection, but such is the density of the population that born has to be imported. The fields are bordered with elms, plane-trees, and mulberry-trees, linked together by vines. Olive, orange, citron, mulberry, and sweet chestnut trees flourish in the plain; they are cultivated in plantations, and serve as supports to vines, which are grown in the intervals between the trees. The Apennines of Lucca are covered in part with chestnut, larch, and pine-trees up to their summits. The chief products of Lucca are corn, pulse, almonds, figs, citrons, oranges, chestnuts, wine, oil, and silk. Horned cattle are numerous; bees are generally kept. Marble, alabaster, building-stone, and potter's-clay are the only minerals. Agriculture is almost exclusively the occupation of the people; the only important factories are those for the preparation of oil and the reeling of silk. Oil and raw silk are the chief exports. The coast fisheries are actively worked.

The chief town is *Lucca*, which forms the subject of the next article.

Viareggio, with 6000 inhabitants, is, next to Lucca, the principal town of the duchy; it has a roadstead which is frequented by coasting-vessels, both native and foreign, which take away cargoes of oil, timber, silks, beans, statuary marble, and other minor articles. The manufactures of the country consist of some silks, woollens, paper, glass, iron and copper vessels, linen and cotton cloths, and hats. In the valley of the *Serchio*, about 10 miles N. from the city of Lucca, are the celebrated baths of Lucca, a much frequented watering-place. Near the city are the so-called baths of *Nero*.

The province comprises the territory of the old republic of Lucca, which (as stated in the next article) existed from the middle of the 14th century to 1805, when it was erected into a principality in favour of one of Napoleon I.'s sisters. By act of the Congress of Vienna it was given to the Infanta Maria Luisa, duchess of Parma, in lieu of the duchy of Parma, which was then conferred upon Maria Louisa, ex-empress of France. Upon the death of the latter in 1847 Lucca was, in accordance with the same treaty, united to Tuscany, and the duke of Lucca entered into possession of Parma.

LUCCA, the capital, formerly of the duchy, now of the province, of Lucca, is situated in a rich plain watered by the *Serchio*, and surrounded by mountains; it is 12 miles from the sea, and about 10 miles N.E. from Pisa, and contains 24,000 inhabitants. Lucca is surrounded by ramparts, which are planted with trees, and form a very pleasant promenade. The town is well built, and well supplied with water, brought by means of an aqueduct (which is supported on 459 arches), from Monte Pisano. The streets are well paved and clean. Lucca, like most other Italian cities, is rich in churches: the cathedral, which belongs to the 11th century, is adorned with good paintings, and with statues and monuments by the native sculptor *Civitali*. The archiepiscopal archives and those of the chapter contain a vast mass of historical documents, parchments, and manuscripts, some as old as the 7th century. The other remarkable churches of Lucca are those of *San Frediano*, *San Francesco*, and *San Michele*. The former ducal palace is a vast building; it contained previous to 1847 a gallery of valuable paintings by the great masters, and a library of 25,000 volumes. The other remarkable structures are the town-house, the aqueduct, the public library, and several of the mansions of the nobles. The Academy of Letters and Sciences in Lucca, instituted in 1817, which consists of 36 members, holds its meetings once a month, and has published several volumes of *Memoirs*. Lucca (Luca) is mentioned in ancient history as a town belonging to the Etruscans after they had conquered the country between the *Arno* and the *Macra* and taken it from the *Ligurians*. It afterwards became a Roman colony. There are still remains of a Roman theatre and an amphitheatre. Lucca is connected by railways with Pisa, Leghorn, and Florence.

Lucca in the middle ages was a republic, often at war with Pisa and Florence. It was at one time with Pisa at the head of the *Ghibeline* party; it afterwards fell under the yoke of the *Visconti* of Milan, was restored to liberty by the emperor *Charles IV.* in 1370, was subject successively to several tyrants, and at last settled gradually into a narrow aristocracy. One of its citizens, *Burlamacchi*, about 1546, being made *gonfaloniere*, attempted a revolution for the purpose of restoring the popular government, not only at Lucca, but in all the other Tuscan cities. Being discovered, he was arrested and given up to the imperial governor of Milan, who put him to death. In 1556 a law was passed at Lucca, on the proposal of the *gonfaloniere* *Martino Bernardini*, by which only a certain number of families were eligible to office: this law, called '*Martinian*,' from its author, established a close aristocracy like that of *Venice*. In 1600 the privileged families were 160; in 1797 they were reduced to 88, the others having become extinct. From among these families was elected a '*signoria*,' or executive of 9

'*anziani*,' or elders, and a *gonfaloniere*, a senate of 36 members, and a great council of 90. In this manner Lucca was administered for more than two centuries in peaceable obscurity. In 1799 the French, under *General Serrurier*, entered Lucca, placed a garrison in it, emptied the arsenal, carried away all the brass cannon from the ramparts, and exacted two millions of francs, besides supplies of provisions, professing all the time to have the greatest regard for the ancient republic of Lucca. Meantime the democratic party, supported by the French, demanded a change in the form of government; the *Martinian* law was abolished, and a constitution after the then prevalent fashion, with two consuls and a directory, was proclaimed. In 1805 Napoleon, having reestablished monarchy both in France and Italy, gave Lucca to his sister *Eliza* as a principality, with new constitutional laws.

LUCENA. [CORDOVA.]

LUCENTUM. [ALICANTE.]

LUCERA. [CAPITANATA.]

LUCERN. [LUZERN.]

LUCIA, SAINT, Island of, one of the Lesser Antilles, is situated in 13° 50' N. lat., 60° 58' W. long., about 40 miles N. from *St. Vincent*. Its extreme length from north to south is 32 miles, and its extreme breadth about 12 miles. The island is of volcanic origin, and several of the mountains terminate at their summits in craters of extinct volcanoes. One of these called *La Souffrière*, at the south-west side of the island, has the appearance of a vast lime-pit, and some severe earthquakes, which are still remembered, are attributed to the convulsions within this mountain. *Saint Lucia* comprises two districts: of one of these, *Basseterre*, the lowest part is well cultivated, but abounds in swamps and marshes; the other district, called *Capisterre*, consists of a succession of abrupt fantastically-shaped mountains, covered to their summits with forest-trees and underwood, and intersected by numerous ravines containing stagnant water and masses of vegetable matter in every stage of decomposition; the island is consequently unhealthy, but, according to the governor's reports, its character in this respect has been much improved of late years.

The chief productions of the island are sugar, molasses, and rum. In 1852 the quantity of sugar exported was 63,517 cwt., valued at 44,462*l.* The total imports amounted to 5753*l.* The inward tonnage of the shipping was 11,856; the outward, 11,832. On December 31st 1853 the number of vessels registered as belonging to *Saint Lucia* was 14, of which number 12 had an aggregate tonnage of 332; the two other vessels were together 335 tons burden. The total population of the island on June 25th 1851 was 24,318, of whom only 512 were Protestants. There are 3 Protestant churches and 10 Roman Catholic chapels in the island. A Board of Education has been recently appointed, which appropriated upwards of 1000*l.* in aid of schools during the year 1852. There are eight public schools, a Free school, and two Infant schools; seven of these schools are supported in part from an endowment founded by *Lady Mico*.

Castries, the chief town on the island, lies at the bottom of a long winding bay, in a low marshy spot, surrounded by an amphitheatre of hills. It has a church, and convenient wharfs; and is supplied with water by water-works constructed within the last few years, and defrayed by a parochial rate. *Souffrière* and *Vieuxport* are the names of two other towns, but they are both small and of little importance.

St. Lucia is so called from having been first discovered on *St. Lucia's* day: this was about the year 1635, when a settlement was attempted by a party of English, who were soon after driven off by the *Caribs*. About 1650 the French effected a settlement; from that time till 1804 it was taken, retaken and transferred between the English and French no less than eleven times: since 1804 it has remained subject to the British crown. The colonial revenue was 13,746*l.* in 1852, and the colonial expenditure 12,520*l.*; the military expenditure defrayed by Great Britain was 12,706*l.* The government is administered by a lieutenant-governor and an executive council. The French code of law in relation to the rights of property has continued in use.

LUCRINE LAKE. [AVERNO.]

LUDGERSHALL. [WILTSHIRE.]

LUDLOW, Shropshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the left bank of the river *Teme*, in 52° 22' N. lat., 2° 44' W. long., distant 25 miles S. by E. from *Shrewsbury*, and 143 miles W.N.W. from *London*. The *Shrewsbury* and *Hereford* railway connects Ludlow with the North-Western and the Great Western lines. The population of the municipal borough was 4691 in 1851; that of the parliamentary borough was 5376. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The living is a rectory in the archdeaconry of *Salop* and diocese of *Hereford*. Ludlow Poor-Law Union contains 32 parishes and townships, with an area of 82,736 acres, and a population in 1851 of 17,051.

Ludlow has returned two members to parliament continuously from the reign of *Edward IV.* The streets are broad, well paved, and lighted with gas; the houses are generally well built; and there is a

good supply of water. Over the Teme is a handsome stone bridge of three arches. The parish church is of the reign of Edward III. There are chapels for Wesleyan and Primitive Methodists, Independents, and Plymouth Brethren; a Free school, founded by Edward VI., which has an income from endowment of 350*l.* a year, besides 150*l.* for exhibitions, and had 42 scholars in 1852; two National schools, an Infant school, a mechanics institute, a Natural History society, with a museum particularly rich in geological specimens; a savings bank, a dispensary, a society for the relief of lying-in-women, a winter clothing charity, and a district visiting society. The Ludlow public buildings, including accommodation for museum, library, news-room, ball-room, and savings bank, with magistrates' and other offices, were erected in 1839. The borough jail was erected in 1764. The principal market-day is Monday; markets are held also on Wednesday and Saturday. Nine fairs are held in the year for cattle, wool, and hops.

The castle of Ludlow was one of the most extensive fortresses on the Welsh border, and its ruins are perhaps the most perfect of any of them yet remaining. In the reign of Henry VI. it was possessed by Richard, duke of York, who on the advance of the king's army in 1459, abandoned the castle and town, which were given up to plunder. Edward IV. repaired the castle, and made it the court of his son the Prince of Wales. In the reign of Henry VII. the castle again became a royal residence; and Arthur, the king's eldest son, held a court here to celebrate his marriage with Katharine of Aragon. The prince died here the following year. During the reigns of Henry VIII. and Elizabeth, the lord-presidents of the marches held their courts here. Sir Henry Sidney, who held the office of president, made this castle his favourite residence, and put it into repair. In 1616 it was visited by Prince Charles, afterwards Charles I. Milton's masque of 'Comus' was first performed here in 1634, during the presidency of the Earl of Bridgewater. In the reign of Charles I. this castle was kept as a garrison for the king; but in June, 1646, it was delivered up to the parliamentary forces. After the dissolution of the court of the lords-marchers, in the reign of William III., the castle was suffered to fall into decay, and it is now a magnificent ruin.

LUGANO. [TICINO.]

LUGO. [FERRARA; GALICIA, Spanish.]

LULEA-ELF. [BOTHNIA.]

LUMLEY, GREAT. [DURHAM.]

LUND, a town in Sweden, is situated in 55° 40' N. lat., 13° 10' E. long., about 7 miles from the eastern shore of the Sound, and has about 5000 inhabitants. It is situated in the extensive and fertile plain of Scania, 30 miles S.S.E. from Helsingfors. The streets are straight and wide, and the houses commonly of two stories, and many of them surrounded by orchards and gardens. In the centre of the town is the cathedral, a large irregular structure of hewn stone, and dating from the 12th century. Lund is the seat of a bishop, and has a celebrated university. Between the cathedral and the university buildings is a space planted with lime-trees, and kept in good order. The university buildings, erected in 1668, consist at present of two extensive edifices, the old and new one. The former, which is the larger, is three stories high, and has a tower, which is used as an observatory. Besides museums and lecture-rooms, it contains a library of nearly 40,000 volumes, and a few valuable manuscripts. The new university building contains the meeting-rooms of the senate and of the four faculties, and likewise the archives; in the second floor are the collections of natural history. The chemical laboratory is in a separate building. There is a botanical garden belonging to the university. The university was founded with the permission of the Pope by Christian I. of Denmark, in 1479, after his return from Rome. It has the usual four faculties of theology, law, medicine, and philosophy. The number of students is between 400 and 500. An active commerce in the produce of the adjacent country is carried on between Lund and Malmö, a port which lies 11 miles S.W. from Lund.

Before the introduction of Christianity, Lund was a large and wealthy city, with a considerable commerce, and 80,000 inhabitants who lived chiefly by trade and piracy. In after times it gave title to an archbishop, who was considered primate of the North. On a hill about half a mile from the town, the Scandinavian monarchs were installed as sovereigns of Scania. Before the Reformation there were no less than 21 churches (including 6 churches of as many religious houses); there are now only two besides the cathedral. There are several woollen-manufactories in the town.

LUNDY ISLAND. [DEVONSHIRE.]

LÜNEBURG is an ancient allodium of the house of Brunswick, which, in the year 1235, was raised, together with Brunswick, to the rank of a duchy, but was subsequently separated, and formed a distinct principality. In recent times it lost the bailiwick of Klötze, which was ceded to Prussia, but was indemnified by the addition of that part of Lauenburg which was retained by Hanover. It is now a land-drostei, or province, of the kingdom of Hanover, situated between 52° 15' and 53° 30' N. lat., 9° 16' and 11° 40' E. long. It is bounded N. by the Elbe, which separates it from Holstein, Hamburg, and Lauenburg; N.E. by Mecklenburg-Schwerin and Prussia; E. by Saxony; S.E. and S. by Brunswick and Hildesheim; and W. by Calen-

berg. The area is 4326 square miles, and the population in 1852 was 338,764. The country is an immense sandy plain, broken by chains of low hills. The surface is chiefly covered with heath, extensive turf moors, and forests mostly of fir. Fertile arable land is rare; but on the banks of most of the rivers, especially the Elbe and the Aller, there is some very rich marsh land. The principal river is the Elbe, which runs along the frontier, and receives several small feeders in this province. The Aller, in the south of the province, belongs to the valley of the Weser. The country has a very gradual fall towards the Elbe and the Weser, especially towards the former, against the inundation of which the land is secured by dykes. The highest land between the two rivers is the Lüneburg Heath. This tract has some villages and seats of rich landowners on the small streams that run through it. A breed of small coarse-woolled sheep is kept on this heath. The villagers derive their chief subsistence from tending bees and gathering bilberries, juniper-berries, and cranberries, of which vast quantities are sent to Hamburg and Bremen. The quantity of corn raised is not sufficient for the population. Flax is extensively cultivated. The land produces also hops, potatoes, garden vegetables, and turnips in abundance, but only a little fruit. The breeding of cattle is more profitable than tillage; sheep are very numerous, but their wool is in general indifferent. The breed of horses has been lately improved. The heath is so favourable to the breeding of bees, that many thousand beehives are sent thither from other parts of the kingdom. The forests afford timber for building as well as fuel, for which there is a good sale. Gypsum abounds in many places; and in the vicinity of the gypsum are saline springs. The main common road for commerce between Hamburg and the interior of Germany passes through this principality; it is traversed also by the railroad from Hanover to Hamburg (opposite Hamburg) which passes through Celle, Ulzen, and Lüneburg. The transit trade along this railroad since the improvement of the harbour of Hamburg is very important. The manufactures of the province are chiefly confined to the towns. The country people manufacture most articles required for their domestic use.

Towns.—Lüneburg, the capital of the province, is situated in about 53° 15' N. lat., 10° 17' E. long., 82 miles by railway N.N.E. from Hanover, on the Ilmenau (which is here navigable about 15 miles above its junction with the Elbe), and has about 13,000 inhabitants. It was formerly surrounded with walls, but the fortifications are now dismantled. The principal buildings and public institutions are the royal palace, the gymnasium, St. Michael's church, in the vaults of which are the monuments of the ancient princes of Lüneburg, the convent of St. Michael, the town-hall, the arsenal, &c. The inhabitants carry on a considerable trade in the products of the country, such as linen, salt, wax, honey, woollens, linen thread, flax, horses, of which 70,000 are annually brought hither to market, &c. There are very productive salt-works in a part of the city which is separated from the rest by a wall, and is called the Sulze. Great quantities of lime are burned in the Kalkberg, a hill to the west of the town (350 feet high), and sent to Hamburg and Holland. There are manufactories of soap, breweries, distilleries, a paper-mill, &c. The gymnasium of Lüneburg, called Johanneum, is attended by about 250 pupils.

Of the other towns in the province the most important is *Celle*, or *Zell*, a tolerably well-built town, at the junction of the Fuse and the Aller. Celle is the seat of the supreme court of appeal; it has a gymnasium, a national stud, a large house of correction, six churches (belonging to Lutherans, Calvinists, and Roman Catholics), and 12,000 inhabitants. In the suburbs, which are very extensive, there is a palace with a large garden, in which Matilda, sister of George III., is buried. The industrial products of Celle comprise chicory, linen, hosiery, tobacco, spirits, soap, &c. There is also a considerable transit trade by the Aller and by the railway, by which the town is 27 miles distant from Hanover to the north-east. *Harburg*, the chief port of Hanover, on the left bank of the Elbe opposite to Hamburg is the subject of a separate article. [HARBURG.] *Ulzen*, a first-class station on the railway from Hanover to Harburg, from which towns it is respectively distant 60 and 106 miles, is situated on the Lüneburg Heath and on the Ilmenau, has 3000 inhabitants, who grow flax, and manufacture woollen-cloth, camlets, and starch.

LUNEL-LA-VILLE, [HÉRAULT.]

LUNENBURGH, [NOVA SCOTIA.]

LUNEVILLE, a town in France, capital of the third arrondissement in the department of Meurthe, stands in 48° 35' 35" N. lat., 6° 29' 45" E. long., 180 miles E. from Paris in a straight line, on the Vezouze, a feeder of the Meurthe, and has a tribunal of first instance, a college, and 12,476 inhabitants. The town is a first-class station on the Paris-Strasbourg railway, by which line of communication it is 240 miles distant from Paris. Luneville appears to have been a mere village before the 11th century. It afterwards became a fortified town and the capital of a county. In the war between Charles the Rash, duke of Bourgogne, and René II, duke of Lorraine, it was frequently taken. In the year 1638 it was taken by the French, who demolished the fortifications. Leopold, duke of Lorraine, resided here, and built a palace, which was subsequently much improved by Stanislas, ex-king of Poland. Both of these princes made great improvements in the town, which presents wide, straight, and well-built streets, and some handsome squares. Behind the palace is the parade ground, or Champ de Mars, which covers a space of 500 acres. The other remarkable objects

in Luneville are—the parish church; the immense cavalry barracks, with stabling for 6000 horses; the riding-school, which is considered the finest in France, being large enough for 200 horse soldiers to exercise in; the hospitals; and the Place-Neuve, which is ornamented with handsome buildings. Great bodies of cavalry are frequently collected at Luneville in the autumn for the purpose of manœuvring on a large scale. The town has manufactures of woollen-cloth, calico, hosiery, lace, gloves, earthenware, sheet-iron, and beer; it has also a good trade in wine, corn, brandy, hemp, flax, wood, &c. By the treaty of peace signed at Luneville, February 9, 1801, the Rhine was made the limit between France and Germany.

LURCY-LEVY. [ALIER.]

LURE. [SAÔNE-HAUTE.]

LURGAN, county of Armagh, Ireland, a market and post-town, and the seat of a Poor-Law Union, is situated in 54° 28' N. lat., 6° 21' W. long., 16 miles N.E. from Armagh by the Ulster railway, and 9½ miles N. from Dublin by the Dublin and Belfast junction railway. The population in 1851 was 4211, besides 440 inmates of the workhouse. Lurgan Poor-Law Union comprises 20 electoral divisions, with an area of 79,236 acres, and a population in 1851 of 67,317.

Lurgan was built in the reign of James I. by William Brownlow, Esq., one of the English settlers: it was burned by the insurgents in 1641, and again destroyed by the army of James II. in the war of the revolution. The town consists principally of a wide street extending along the Armagh and Belfast road, and has a clean and neat appearance. Besides the parish church, which is a handsome building with a tower and octagonal spire, there are places of worship for Roman Catholics, Presbyterians, Quakers, and Methodists. The public buildings are—the market-house, a linen-hall, a court-house, a district dispensary, a bridewell, and the Union workhouse. The manufacture of linens, especially of damasks and diapers, for which Lurgan is famed, is extensively carried on. There are a brewery and a distillery. Quarter-sessions and petty sessions are held here. Fairs are held on August 5th, November 22nd, and the second Tuesday of every month. The market-day is Friday. Lurgan Castle, the seat of Lord Lurgan, is a mansion of modern erection in the Elizabethan style.

LURI. [CORRICA.]

LUS. [BELOCHISTAN.]

LUSATIA. [LAUSITZ.]

LUSIGNY. [AUBE.]

LUSITANIA. [PORTUGAL.]

LUSK. [DUBLIN, County of.]

LUSS. [DUMBARTONSHIRE.]

LUTON, Bedfordshire, a market-town, and the seat of a Poor-Law Union, in the parish of Luton, is situated in a depression of the chalk hills, on the right bank of the Lea, in 51° 52' N. lat., 0° 25' W. long., distant 12 miles S. by E. from Bedford, and 31 miles N.N.W. from London. The population in 1851 was 10,648. For sanitary purposes the town is under a Local Board of Health. The living is a vicarage in the archdeaconry of Bedford and diocese of Ely. Luton Poor-Law Union contains 14 parishes and townships, with an area of 39,998 acres, and a population in 1851 of 25,083.

The town has a neat and clean appearance. The streets are lighted with gas and paved. The principal building is the church, a remarkably fine edifice, 174 feet long by 51 feet wide, of the early English, decorated, and perpendicular styles; but it has suffered much from injudicious alterations. In the interior is an almost unique baptistery over the font of decorated character. There are several dissenting places of worship, a National and a British school, and almshouses. A town-hall has been recently erected. In the town are a literary institution and library, a mechanics institute, and a savings bank. Straw-plaiting is extensively carried on, and there are several straw-bonnet manufactories, the Luton plait having a high reputation. Malting and brewing are also carried on. The market is on Monday. Fairs are held on the third Monday in April and October, and a statute fair in September. Petty sessions and a county court are held in the town. Luton Hoo, the seat of the Marquis of Bute, was almost wholly destroyed by fire in 1843.

LUTTERWORTH, Leicestershire, a market-town, and the seat of a Poor-Law Union, in the parish of Lutterworth, is situated on the right bank of the little river Swift, in 52° 27' N. lat., 1° 12' E. long., distant 13 miles S. by W. from Leicester, and 89 miles N.W. from London by road. The population in 1851 was 2446. The living is a rectory in the archdeaconry of Leicester and diocese of Peterborough. Lutterworth Poor-Law Union contains 37 parishes and townships, with an area of 61,090 acres, and a population in 1851 of 16,194.

The town consists of one main street and several smaller ones, and is lighted with gas. A new town-hall was erected in 1836. The parish church, erected about the year 1100, and thoroughly repaired about 1740, is a large handsome building. The chancel is separated from the nave by a beautiful screen. From the pulpit, which is of finely carved oak, Wickliffe, who held the living of Lutterworth, is said to have addressed his flock. Wesleyan and Primitive Methodists, Independents, and Baptists have places of worship. There are two endowed schools—Ryder's school for girls, and Sherrier's and Poole's for boys; a mechanics institute; and a savings bank. A county court is held. The chief manufactures are those of coarse hosiery and silk ribbon. The market is on Thursday. Fairs are held on

April 2nd, Holy Thursday, September 16th, and on the Friday after September 16th.

LUXEMBOURG, or LUXEMBURG, a grand-duchy, the sovereignty of which until lately vested, according to the arrangements of the Congress of Vienna, in the King of the Netherlands, who thus became a member of the Germanic Confederation. After the severance of Belgium from Holland in 1830 the grand-duchy was divided after considerable delay and discussion between these two states, the King of Holland retaining the title of Grand-Duke of Luxembourg. The boundary line between the two states runs a little east of the watershed between the Meuse and the Moselle, Belgian Luxembourg, which lies to the west of the line just indicated, being drained by the Semois or Semoy, the Lesse, and the Ourthe; and Dutch Luxembourg by the Moselle and the Our, which meet a few miles west of Trèves and form the eastern boundary of the grand-duchy. The interior of Dutch Luxembourg is drained also by the Alzette, the Sûre, and many other streams, all feeders of the Our. All these rivers rise in the Ardennes or the Eifel.

Luxembourg is crossed from south-west to north-east by a range of high ground, part of the Ardennes, which separates the valley of the Maas from that of the Moselle. The soil of this elevated region is calcareous, and is principally occupied as pasturage. The lower lands are very productive, and yield abundant harvests of wheat, rye, flax, hemp, mangel-wurzel, &c. Such of the high lands as are tilled rarely yield anything but rye, oats, and potatoes. Luxembourg contains many large forests. Agriculture is in rather a backward state all through Luxembourg. The vine is cultivated on the banks of the Moselle and the Sûre. The quality of the wine is inferior. In Dutch Luxembourg there are a great number of distilleries, and some iron-works. Horses, horned cattle, swine, and sheep are numerous. In Belgian Luxembourg there are iron-works, slate-quarries, potteries, tanneries, cloth, and paper-mills. Iron- and lead-mines are worked; copper is found in Dutch Luxembourg.

Luxembourg is bounded E. by the Prussian Rhenish provinces, N. by Liège, W. by Namur, and S. by the French departments of the Moselle and Ardennes. Its greatest length from east to west is 75 miles, and its greatest breadth is 50 miles.

Dutch Luxembourg, the possession of which gives the King of Holland the title of Grand Duke, and a voice in the German Confederation, lies east of Belgian Luxembourg, and has an area of 848 square miles, with a population in 1852 of 210,275.

Belgian Luxembourg is the larger and more western part of the grand-duchy; it contains also the old duchy of Bouillon, a small territory in the south-west of the province, and has an area of 1703 square miles, with a population (in 1849) of 187,978.

The city of Luxembourg, the capital of Dutch Luxembourg, is a fortress of great strength, situated in 49° 37' N. lat., 6° 9' E. long., on the Alzette, or Elze, 76 miles S.S.E. from Liège, and has about 12,000 inhabitants. The city is surrounded by strong walls and deep ditches, and has a double line of outworks in the form of a heptagon. The upper town is built on a platform of a rock which is joined to the neighbouring country on the west side, and on the other three sides descends precipitously about 200 feet. Similar lofty precipices rise opposite them screening a deep valley watered by the Alzette, along which the lower town is built. The communication between the upper and lower towns is by flights of steps and by zigzag streets which are passable for carriages. The fortifications have been greatly strengthened by the German Confederation since 1830. The Vale of the Alzette is crossed in various directions by the fortifications. A projecting rock, called Le Bouc, which divides the lower town into two quarters, contains casemates for 4000 men hollowed out of the rock, which is perforated with loopholes and embrasures so as to sweep the valley up and down. A new fort has been built outside the Trèves gate. The garrison numbers about 6000 men. In the lower town are several mills and dye-works. The town is small but well-built; it has four churches, a military hospital, and a newly built market-place. Echternach, a walled town on the right bank of the Sûre, 17 miles N.E. from Luxembourg, has a population of about 4000, who are occupied with the manufacture of pottery, damasks, and woollen-cloths.

Of Belgian Luxembourg the chief town is ARLON. The only other towns worth notice are Bastogne, 19 miles N. by W. from Arlon, population 2500; and Bouillon, the capital of the ancient duchy of Bouillon, which stands near the French frontier, on the left bank of the Semois in a gorge of the Ardennes, and has 2600 inhabitants. The old castle of Bouillon, built on a rock high above the town, has been restored and is now used as a prison. A few miles west of Bastogne is the forest of St.-Hubert, which is said to be the original of Shakespeare's 'Forest of Arden.' The scenery still answers to the description of the poet. At St.-Hubert, a poor village, in a clearing in the middle of the forest, is a fine gothic church, which formerly belonged to the abbey of St.-Hubert who was buried here in 825. A railroad is in course of construction from Namur to Arlon.

LUXOR. [THEBES.]

LUXEUIL. [SAÔNE, HAUTE.]

LUZERN (Lucerne), a canton of Switzerland, is bounded N. by Aargau, E. by Schwytz and Zug, S. by Unterwalden, and W. by Bern. Its greatest length from north to south is 33 miles, and its greatest

breadth 27 miles. Its area is 586 square miles; and the population is 132,789, who are all Swiss but 537, and all Catholics but 1563. The declivity of the valleys is towards the north-east and north-west. The southern part of the canton belongs to the basin of the Reuss, which issues out of the Waldstätter Lake at the town of Luzern, and flows north-east into Aargau. Below Luzern the Reuss is joined by the Wald-Emme, which rises at the south-west extremity of the canton. A succession of high grounds, running across the middle of the canton, divides the basin of the Reuss from that of the Aar, to which latter river the northern part of Luzern belongs. North-east of the Sempach Lake, which is in the centre of the canton, is another lake called the Baldeg Lake. The only mountains in the canton are at its southern extremity, on the borders of the Unterwalden and the Bernese Oberland. None of them attain the limits of perpetual snow. The highest is Mount Pilatus, south-west of the town of Luzern, and a conspicuous feature in its landscape. It is a mountain group nearly 30 miles in length, extending along the borders of Luzern and Unterwalden, and having 7 peaks, of which the Tomlishorn (8358 feet) and the Esel (8678 feet) are the highest. The view from these summits is very extensive. The soil of Luzern is fertile; it is one of the very few cantons of Switzerland which produces more corn than it consumes. Fruit-trees are also abundant: the vine is cultivated in some favourable situations. The rearing of cattle is the principal branch of industry in a great part of the canton. In some districts there are manufactories of linen and cotton goods. The trade between Switzerland and Italy by the St. Gothard employs a number of people, and all the goods pass through Luzern and across the Waldstätter Lake.

German is the language spoken. Luzern is in the diocese of the Bishop of Basel, who resides at Soleure. It returns 7 members to the National Council of Switzerland. [SWITZERLAND.]

LUZERN, the capital of the canton, is situated at the western extremity of the Waldstätter Lake, and is divided into two unequal parts by the Reuss, which issues out of the lake. The larger part, which is on the right bank, is built on the slope of a hill; the whole is surrounded by old walls flanked by towers. The interior of the town presents streets narrow, uneven, and ill paved. The remarkable buildings are—the town-house, the college of the Jesuits, the arsenal, and the three covered wooden bridges, which are built on the lake, ornamented with paintings, and form the chief curiosities of Luzern. The parochial church and cemetery are outside of the town, and are well worth visiting. Luzern contained 10,088 inhabitants in 1852. It has two hospitals, a savings bank, a friendly society, and other benevolent institutions. It has also a collection of minerals, and very good elementary and secondary schools. The forces of the Sonderbund were defeated near Luzern by the federal army of the Swiss Diet, under General Dufour, on November 24th, 1847. [SWITZERLAND.]

In a secluded spot in the neighbourhood of Luzern is the monument erected in 1821 to the memory of the Swiss guards who died in the defence of the Tuileries against the mob of Paris on August 10th, 1792. It consists of a wounded and dying lion of colossal size, in alto-rilievo, sculptured on the side of a rock in a kind of niche. The model for it was sent by Thorwaldsen from Rome. The names of the officers, 26 in number, who with 760 soldiers fell on that memorable occasion, as well as those officers, 16 in number, who with about 350 soldiers survived it, are engraved underneath. The lion is represented grasping a shield with a fleur-de-lys on it, and a bundle of broken arms with the Swiss cross are lying on one side.

LUZON. [PHILIPPINE ISLANDS.]

LYCAONIA, a district of Asia Minor, is first mentioned by Xenophon, who describes it as extending eastward from Iconium in Phrygia to the beginning of Cappadocia, a distance of 30 parasangs, about 110 English miles ('Anab.', i. 2. s. 19.) It was united during the Persian monarchy to the satrapy of Cappadocia. (Xen., 'Anab.' vii. 8, s. 25.) But in the time of Strabo the name of Lycaonia was applied to the south-eastern part of Phrygia; and it was bounded S. by Mount Taurus, E. by Cappadocia, and W. by Pisidia.

Lycaonia is described by Strabo as a high table-land, deficient in water (which the inhabitants could procure only by digging deep wells), but well adapted for sheep. Iconium was the principal town of Lycaonia [ΚΟΝΙΥΗΝ]. *Isauria* is mentioned by Strabo as part of Lycaonia; it contained the cities of Laranda, Lystra, and Derbe; the two last of which were visited by Saint Paul, and appear, from the narrative of the 'Acts,' to have been places of considerable importance. (Acts, xiv. 6.)

The northern part of Lycaonia was united, but at what time is uncertain, to Galatia; but the southern part was governed in the time of Cicero ('Fam.' xiii, 78) by an independent prince of the name of Antipater, who resided at Derbe. Antipater however being afterwards conquered by Amyntas, king of Galatia, the whole of Lycaonia fell under the power of the Galatians. At the death of Amyntas B.C. 25, Lycaonia, together with Galatia, became a Roman province. (Dion. Cass., liv., p. 589, 'Stephan.'). In the time of Pliny Lycaonia formed a separate tetrarchy, which contained 14 towns. ('Nat. Hist.', v. 25.)

LYCIA, a province of Asia Minor, was bounded N. by Phrygia, E. by Pamphylia, W. by Caria, and S. by the Mediterranean Sea. The coast is skirted by lofty mountains, which rise in many places to a great height. Mount Solyma (now Takhatlu), to the north of Phaselis, on the borders of Pamphylia, rises to the height of 7800 feet. Accord-

ing to Strabo (xiv. c. iii, vol. iii, p. 213, 'Tauchnitz'), there was a great number of good harbours, notwithstanding the rocky nature of the coast. The length of the coast, from Telmessus on the west to Phaselis on the east, is said by Strabo to be 1720 stadia. The northern part of Lycia is occupied by the mountains which support the high table-land of Phrygia on the south, and which appear to have been known to the ancients under the name of Masicytus. Mount Masicytus is erroneously placed in most maps in the centre of the country, where there are no mountains, according to Mr. Fellowes. The Xanthus, which is also represented as an inconsiderable stream, is in reality a river of considerable length, flowing from the mountains in the north of Lycia; and the whole of the interior, instead of being occupied by mountains, as was commonly thought, is, on the contrary, a fertile plain, surrounded by mountains on every side, and drained through its whole extent by the river Xanthus.

According to Herodotus the Lycians were originally called Milyana, and afterwards Solymi; but again changed their name to that of Termila; after Sarpedon settled in the country, who had been compelled to leave Crete in consequence of dissensions with his brother Minoas. They were, according to the same authority, eventually called Lycians from Lycus, the son of Pandion, who came to Lycia after he had been expelled from Athens by his brother Ægeus. (Herodot. i. 173; Strabo, vol. iii. p. 217, 218.) In the Homeric poems the country is always called Lycia, and the Solymi are mentioned as a warlike people against whom Bellerophon was sent to fight by the king of Lycia ('Il.', vi. 184). In later times the southern part of Phrygia, on the north of Lycia, was always called Milyas; but the people are never called Solymi, though the name still remained in Mount Solyma on the north-eastern coast. That Lycia was early colonised by the Greeks is evident, not only from the account of Herodotus, but also from many other Lycian traditions, as well as from the worship of Apollo, which was spread over the whole country. Xanthus was a Cretan settlement (Steph. Byz.), and 60 stadia below the town was a grove sacred to Læona, near an ancient temple of the Lycian Apollo (Strabo, vol. iii. p. 215; Diod., v. 56). But the chief temple was at Patara, the winter habitation of the god, where he gave oracles through the mouth of a priestess. (Müller, 'Dorians'.)

The Lycians appear to have obtained considerable power in early times. They were almost the only people west of the Helys who were not subdued by Croesus (Herodot., i. 23); and they made an obstinate resistance to Harpagus, the general of Cyrus, but were eventually conquered. (Herodot., i. 176.) They supplied Xerxes with fifty ships in his expedition against Greece. (Herodot., vii. 92.) After the downfall of the Persian empire they continued subject to the Seleucids, till the conquest of Antiochus by the Romans, when their country, as well as Caria, was granted by the conquerors to the Rhodians (Polyb., p. 848, 'Casaubon'); but their freedom was afterwards again secured to them by the Romans (Polyb., p. 925), who allowed them to preserve their own laws and their political constitution, which is greatly praised by Strabo. According to this account (vol. iii., p. 214) the government was a kind of federation consisting of 23 cities, which sent deputies to an assembly, in which a governor was chosen for the whole of Lycia, as well as judges and inferior magistrates. All matters relating to the government of the country were discussed in this assembly. The six principal cities, Xanthus, Patara, Pinara, Olympus, Myra, and Tlos, had three votes each; other cities two votes each; and the remainder only one each. In consequence of dissensions between the different cities, this constitution was abolished by the emperor Claudius (Suet., 'Claud.', c. 25; 'Vespas.', c. 8); and the country united to the province of Pamphylia. (Dion. Cass., lx. p. 777, 'Steph'.)

Lycia contained many cities of considerable importance. Pliny ('Nat. Hist.', v. 28) mentions 36, but says that there were formerly as many as 70. Telmessus, on the borders of Caria, a sea-port with a good harbour, must have been a place of some importance in the time of Croesus (Herodot., i. 78), but afterwards declined in power; it is mentioned by Strabo as a small place. South of Telmessus, on the coast, were the towns of Pynda, Cragus, and Patara; the last of which is described by Strabo as a large city with many temples in it, and is said by Livy (xxvii. 16) to have been the capital of Lycia. According to Pliny, the ancient name of this town was Sataros ('Hist. Nat.', v. 28); but the name was afterwards changed by Ptolemy Philadelphus into Arsinöe. (Strabo, vol. ii., p. 216-16.) To the north of Patara, on the river Xanthus (now Etchen-Chai), was the town of Xanthus, which was taken and destroyed by Harpagus, the general of Cyrus the Great. Five centuries later it was burnt by its own inhabitants, when they could no longer resist Brutus. It was however again restored, as is evident from the Greek inscriptions and the state of the ruins when discovered by Fellowes, whose collection of Lycian sepulchral marbles of various ages, now in the British Museum, was obtained in and near this ancient city. A portion of the very ancient Cyclopean walls of Xanthus still remain. The ruins are in parts covered with inscriptions, many of them in a perfect state but in an unknown language. They consist of walls, temples, tombs, triumphal arches, and a theatre. The tombs and other ruins are covered with sculptures of elegant design and execution, and with poetical bas-reliefs. The walls of the city are extensive and massive, the Cyclopean being mixed with Greek masonry.

Several gateways with their paved roads still exist. In the walls of the acropolis many beautifully sculptured marbles are used as materials. Fellowes thinks that the oldest of the sculptures of Xanthus belong to the 6th or 7th century B.C. The tombs, many of which he examined, extend over several miles of country. In the Xanthian room in the British Museum are fragments also, and casts of some of the marbles of Xanthus, and also those of Tlos, Telmessus, Pinara, Myra, and Cadyanda.

Farther up the Xanthus in the interior was Tlos, where Pinara is marked on most maps, and where Fellowes discovered a highly-finished theatre, and other interesting ruins and rock-tombs. To the east, along the coast, were Myra (mentioned in the Acts, xxvii. 5, as a sea-port, but placed in most maps in the interior), Limyra, and Olympus. Between Myra and Olympus was the sacred promontory, stretching out a considerable distance into the sea, off which were the Chelidonian Islands. On the borders of Pamphylia was the important town of Phaselis, founded by the Dorians. (Herodot. ii. 178.) It had three harbours (Strabo, vol. iii., p. 217), and was one of the most flourishing commercial cities on the southern coast of Asia Minor. It was one of the principal resorts of the Cilician pirates in the later times of the Roman republic, and was destroyed for this reason by Paulus Servilius. (Cic., 'Verr.', vi. 10.) It was afterwards rebuilt, and is mentioned by Lucan (viii. 251); but it never recovered its former importance.

According to Fellowes, Lycia is now well inhabited, chiefly by Turks, many of whom lead a life half settled and half nomadic. Trade is carried on by Armenians and Greeks who live in the coast-towns, and form the greater portion of the population of the inland town of Almali, which is the largest in Lycia, the population being about 25,000. Many of the Turks wander with their herds on the high plateaus, like the Turkomans. Along the coast of Lycia, as well as the adjoining provinces of Caria and Pamphylia, there live a number of Arabs (Syrians?), who are generally seamen, and seem to have settled there many centuries ago. Among the wild animals the 'káplán' (which term is here applied to the leopard), and the 'arslán,' or lion (perhaps the panther), commit great depredations among the herds; great numbers of them are annually killed, and a reward of from 100 to 200 piasters is given by the government for each arslán. They are very frequent in the district of Sidyma, on the coast. The ox is precisely the same as represented on the ancient coins and monuments of Lycia; but there is also a species of dwarf ox, of the size of a large dog, though more stoutly built. There are great numbers of buffaloes and camels. The breeding of horses is carried on to a great extent, and herds of many hundreds are often seen grazing together in the valleys. The only kind is that of which such spirited representations are seen in the ancient marbles; the head is of Arabic cast, the chest is very large, the feet are remarkably fine and thin, and the ears are small, as in the antique. They are not shod. The rivers and lakes abound with large tortoises, and on their banks the trees swarm with the green climbing frog. No part of Asia Minor contains such splendid valleys as those of the Xanthus and the Dolomon Chái. Myrtle, oleander, and pomegranates cover the banks of the rivers; the plains along the rivers are well cultivated, and in many places the fields are inclosed by fences of myrtle and the small prickly oak, mixed with the orange, the wild olive, the pomegranate, the oleander, the elegant green storax, which are most beautifully matted together by vine, clematis, and many other climbers. Fruit-trees are planted in inclosures. The hills are covered with large oaks and planes, which supply excellent timber, of which however only small quantities are shipped from the coast-towns. The oak (*Quercus agrilops*) is a source of wealth from its acorns, the 'valonea' of the Smyrna merchants, which is used in tanning leather, and gives it that agreeable smell which places the Turkish leather even above the Russian 'jucht.' A sort of horse-radish is used as food, and as a substitute for soap. In proportion as the traveller approaches the high upland plains the tender fruit-trees, as well as the olive, the aloes, and other southern plants, disappear, and are replaced by the walnut, apple, and pear trees. The high plain round Almali, which is 4000 feet above the sea, is one of the largest and best cultivated corn tracts in Asia Minor; its chief produce is barley, which is the common food for horses. Maize is chiefly raised in the valleys and on the coast.

(Fellowes, *An Account of Discoveries in Lycia—a Journal written during an Excursion in Asia Minor.*)

LYDD. [KENT.]

LYDFORD, or LIDFORD. DEVONSHIRE.]

LYDIA (*Audia*), a country of Asia Minor. It is difficult to determine its exact boundaries, as they differed at various times; but under the Roman empire it was bounded S. by Caria, from which it was separated by the river Mæander; N. by a range of mountains known under the name of Sardene, which divided it from Mysia; E. by Phrygia; and W. by the Ægean, though the tract of country along the coast was more commonly known by the name of Ionia. Lydia was intersected by mountain ranges running from east to west, of which the principal, called Mésogis by Strabo, is a branch of Taurus, and forms the northern boundary of the valley of the Mæander. Another chain of mountains, known to the ancients under the name of Tmolus, which appears to detach itself from the Mésogis near the borders of Phrygia, runs parallel to the Mésogis through the

centre of Lydia, and terminates on the western coast opposite the island of Chios. A branch of Tmolus, called Sipylus, stretches more to the north-west towards the towns of Cuma and Phocæa. The chain of mountains which separates Mysia from Lydia appears to be a continuation of the northern range known in Bithynia by the name of Olympus, and in Mysia by that of Ida and Temnon. Lydia is thus divided into two principal valleys: the southern, between Mésogis and Tmolus, through which the Caystrus flows, is of moderate extent; but the northern, between Tmolus and Sardene, watered by the Hermus, and its tributaries the Hyllus, Pactolus, and Coganus, forms a considerable plain. The fertility of Lydia, and the salubrity of the climate, are frequently mentioned by ancient writers; and this account is confirmed by the reports of modern travellers. Chishull speaks of the country between Tmolus and Mésogis as a "region inexpressibly delicious."

The origin of the Lydian people is uncertain. Some writers, and among others Josephus ('Antiquit.', i. 6, 4), have imagined that they are mentioned in the book of Genesis (x. 22) under the name of Lud, in which passage they are described as descendants of Shem. Homer does not appear to have known the name of Lydia, but always calls the people Mæones. According to most ancient writers, the people were originally called Mæones, and obtained the name of Lydians from Lydus, the son of Atys, who is mentioned by tradition as the first king of the country. (Herod., i. 7; Diod. Sic., iv.; Pliny 'N. H.', v. 30.) Later writers make a distinction between Mæonians and Lydians, and represent the former as dwelling on the north-east of Tmolus, near the river Hyllus, and the Lydians as inhabiting the southern part of the country. According to Herodotus, the Lydians were of a common origin with the Carians and Mysians (i. 171).

The early history of Lydia is related by Herodotus, who informs us that three dynasties ruled in Lydia: the Atyadæ from the earliest times to B.C. 1221; the Heraclidæ from B.C. 1221 to 716; and the Mermnadæ from B.C. 716 to 556. The proper history of Lydia can be said to begin only with the last of these dynasties; since the two first are almost entirely fabulous. The following is a list of the Mermnadæ princes;—1. Gyges, who obtained the throne by the murder of Candaules, the last of the Heraclidæ monarchs, reigned from B.C. 716 to 678. 2. Ardys, from B.C. 678 to 629. 3. Sadyattes, from B.C. 629 to 617. 4. Alyattes, from B.C. 617 to 560. 5. Croesus, from B.C. 560 to 556, though he was probably associated in the sovereignty during the lifetime of his father. These monarchs were engaged in almost uninterrupted wars with the Greek cities on the coast; but the empire steadily increased in wealth and power. It obtained its greatest prosperity during the reign of Croesus, who subdued all the people of Asia Minor west of the river Halya, with the exception of the Cilicians and Lycians. (Herodot., i. 28.) But this empire, the most powerful at that time in Western Asia, was overthrown by Cyrus (B.C. 556); and the country became a Persian province. Herodotus informs us that no nation in Asia was more warlike than the Lydians (i. 79); till, through the advice of Croesus, they were deprived of their arms by Cyrus, and obliged to learn music and dancing (i. 154). After Alexander's conquests, Lydia, with the rest of Western Asia, formed part of the empire of the Seleucidæ; and on the conquest of Antiochus by the Romans (B.C. 189) it was given to Eumenes, king of Pergamus, as a reward for the assistance he had afforded them in their war against the Syrian monarch. (Livy, xxxvii. 56; Appian, 'Syr.', 38; 1 Macc., viii. 8.) On the death of Attalus III. (B.C. 133) it came, with the other dominions of the kings of Pergamus, into the power of the Romans.

The ancient Lydians appear to have enjoyed great commercial prosperity and to have possessed abundance of the precious metals, as is evident from other circumstances, and particularly from the rich presents which Croesus sent to the different oracles in Greece. (Herodot., i. 50.) They are said to have obtained a large quantity of gold which was washed down from the mountains by the river Pactolus; but there is no proof that they ever carried on the operation of mining. (Herodot., i. 93, v. 101.) But in the time of Strabo no gold was found in this river (xiii. 928); and if Herodotus had been misinformed, which is improbable since he visited Sardis, the tale might have arisen from the appearance of Mount Tmolus, which, according to a modern traveller, Chishull, as quoted by Chandler, "is adorned with bright and shining particles, resembling gold-dust." The Lydians are said by the Greeks to have been the first people who put a stamp upon gold and silver; and they claimed to be the inventors of the games which were prevalent in Greece in the time of Herodotus (i. 94).

The most extraordinary work of art in ancient Lydia was the enormous sepulchral mound of Alyattes, the father of Croesus, erected a little to the north of the river Hermus, about three or four miles from the city of Sardis. Herodotus classes it next to the great works of the Egyptians and Babylonians, and describes it as six stadia (about three-quarters of a mile) and two plethra (200 feet) in circumference; and 13 plethra (1300 Greek feet) in width. The basement was built of great stones, and the upper part of earth. (Herodot., i. 93.) Chandler visited the spot in which this mound is supposed to have been raised; he describes the ground as covered with earthen barrows or mounds of various sizes, and mentions one in particular, near the middle, larger than the rest, which he supposes to have been

the sepulchral mound of Alyattes, and conjectures that the basement of stone is now concealed by the mould, which has been washed down from the top. In the neighbourhood of this mound is the lake known to the ancients by the name of Gygma. (Homer, 'Il,' ii. 864; Herodot., i. 93.) It is described by Chandler as large and abounding in fish; its colour and taste like common pond-water, with beds of sedge growing in it. ('Travels,' p. 262.)

The most important Lydian towns were Sardis, Philadelphia, and Thyatira.

Sardis, now *Sart*, was situated on the river Pactolus, a tributary of the Hermus, in the middle of an extensive plain, now in great part a swamp. The citadel was remarkable for its strength, being built on a lofty hill, which was a perpendicular precipice on the back part towards Mount Tmolus. It is not mentioned by Homer, but some have conjectured that he speaks of it under the name of Hyde (Hm, 'Il,' xx. 385.) Sardis was taken by the Cimmerians during their invasion of Lydia, in the reign of Ardyas. (Herodot., i. 15.) It was the capital of the Lydian monarchy, and the residence of the Persian satraps of the country. It was burnt by the Athenians, B.C. 503 (Herodot., v. 100-101); at which time the houses were principally made of reeds or straw, and those built of brick had thatched roofs. Under the Romans, Sardis formed the seat of a separate provincial government. (Pliny, 'Nat. Hist.,' v. 30.) It was nearly destroyed by an earthquake in the time of Tiberius (Tac., 'Ann.,' ii. 47); but it was again rebuilt, and is frequently mentioned in the wars between the Greeks and Turks. Sart is now a 'miserable village;' there are large ruins of Sardis in the neighbourhood. Fellows mentions the remains of a colossal temple (said by Hamilton to have been dedicated to Cybele), the proportions of which resemble those of Agrigentum; they are near the Pactolus, about a mile from Sart. Among other remains he enumerates a theatre (which Hamilton says is of Roman erection), stadium, temples, which he says "may be readily traced, but the masses of wall composing the rest of the city speak with certainty only of its extent." One of the largest piles of buildings consists of distinct long rooms with circular ends and seems to have been a palace. The earth, which has fallen from the hills above it, has buried great part of the buildings of the city.

Philadelphia, now *Allah Shehr*, 28 miles S.E. from Sardis (Anton., 'Itin.,' p. 336), stands on a part of Mount Tmolus, by the river Coganus. This town was built by Attalus Philadelphus, king of Pergamus; and is still a place of some importance. "Its walls," says Fellows, "are still standing, inclosing several hills, upon the sides of which the town stood. They are built of unhewn stone, massed and cemented together with fragments of old buildings. Some immense remains of buildings, huge square stone pillars, supporting brick arches are also standing and are called the ruins of a Christian church," but Fellows supposes them to be the remains of a heathen temple.

Thyatira, now *Akhissar*, was built by Seleucus Nicator; though there appears to have been a small town on the same spot before his time, called Pelopia. (Steph. 'Byz.:' Pliny, 'Nat. Hist.,' v. 29.) Strabo mentions it as a colony of the Macedonians (xiii. p. 929). It was situated on the borders of Lydia and Mysia near the river Hyllus, on the road between Pergamus and Sardis. It was famous for the art of dyeing purple. (Acts, xvi. 14.) "Akhissar," says Fellows, who writes the name *Acsá* as he heard it pronounced, "teems with relics of a former city, although there is not a trace of the site of any ruin or early building." In a portion not exceeding one-third of the cemetery he counted 130 parts of columns, which from their measurement and different orders must have belonged to seven or eight distinct buildings. The streets of Akhissar are in places paved with fragments of carved stone. There are several columns of granite and of veined marble; and also some small columns, which were two-thirds engaged, and which Fellows pronounces to be an unerring indication of the Christian age, being probably for the interior adornment of the church. In the town, and for two miles out of it, the mouths of the wells are formed of the capitals of Corinthian pillars, the bucket being drawn up through holes cut in the centre. Thyatira, Philadelphia, and Sardis are three of the Seven Churches which are addressed in the Book of Revelations. There are Christian communities to this day in Philadelphia and Thyatira.

(Chandler, *Travels in Asia Minor*; Arundell, *Visit to the Seven Churches of Asia*; Heeren, *Researches*, &c.; Fellows, *Travels in Asia Minor*; Hamilton, *Researches in Asia Minor*; Lond. *Geograph. Journal*.)

LYDNEY. [GLOUCESTERSHIRE.]

LYME REGIS, Dorsetshire, a market-town, sea-port, and municipal and parliamentary borough, in the parish of Lyme, is situated in 50° 43' N. lat., 2° 55' W. long., distant 25 miles W. from Dorchester, 143 miles S.W. by W. from London. The population of the municipal borough of Lyme Regis in 1851 was 2661; that of the parliamentary borough was 3516. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns one member to the Imperial Parliament. The living is a vicarage in the archdeaconry of Dorset and diocese of Salisbury.

The town of Lyme Regis had a charter as early as the 12th Edward I., from which time till the passing of the Reform Act it returned two members to Parliament. The streets are lighted, but the houses are irregularly built. The parish church is of the 14th perpendicular style, with a Norman entrance. It has been much

ENGL. DIV. VOL. III.

improved by the vicar, Dr. Hodges, and adorned with painted glass. The Wesleyan Methodists, Baptists, Independents, and Roman Catholics have chapels, and there are British and National schools, an Infant school, and a savings bank. A pier called the Cobb, built of stone, runs out in a serpentine form into the sea. The harbour is useful as a place of refuge for small vessels during rough weather, there being no safe shelter eastward between this and the Start Point of Portland, about 30 miles distant. The number and tonnage of vessels registered as belonging to the port on 31st December 1853 were—under 50 tons, 7 vessels, 217 tons; above 50 tons, 13 vessels, 1754 tons. During 1853 there entered 195 vessels of 10,069 tons, and cleared 110 of 4703 tons. The market days are Tuesday and Friday. Fairs are held on February 13th and October 2nd.

LYMFIORD, or LÜMFIORD. [JUTLAND.]

LYMINGTON, Hampshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is agreeably situated on the right bank of the river Lymington, at a short distance from its mouth, in 50° 45' N. lat., 1° 32' W. long., distant 18 miles S.W. by S. from Southampton, and 93 miles S.W. from London. The population of the municipal borough was 2651 in 1851; that of the parliamentary borough was 5282. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. The living is a curacy annexed to the vicarage of Boldre in the archdeaconry and diocese of Winchester. Lymington Poor-Law Union contains six parishes, with an area of 30,122 acres, and a population in 1851 of 12,153.

Lymington is a borough by prescription. It has returned two members to Parliament since the reign of Elizabeth. The town has a good supply of water, and is well lighted with gas and paved. As a port Lymington is subordinate to Southampton. In 1834 excellent baths were erected in the town; and other improvements have since been made. The parish church was erected in the reign of Henry VI., but it has undergone many alterations. The Wesleyan Methodists, Independents, Baptists, and Irvingites have places of worship, and there are National and British schools, a literary institute, a savings bank, and a dispensary. The chief manufactory is that of salt. The salt-works are situated on the bank of the Solent Channel, to the south-west of the town. Saturday is the market-day. The fairs, which are chiefly for cheese, are held on May 12th and October 2nd.

LYMM. [CHESHIRE.]

LYMPNE. [KENT.]

LYNCHBURG. [VIRGINIA.]

LYNDHURST. [HAMPSHIRE.]

LYNMOUTH. [DEVONSHIRE.]

LYNN, LYNN REGIS, or KING'S LYNN, Norfolk, a market-town, sea-port, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated chiefly on the right bank of the estuary of the Ouse, in 52° 45' N. lat., 0° 25' E. long.; distant 41 miles W.N.W. from Norwich, 96 miles N. by E. from London by road, and 98½ miles by the Eastern Counties and East Anglian railways. The population of the borough in 1851 was 19,355. The borough is governed by 6 aldermen and 24 councillors, one of whom is mayor, and returns two members to the Imperial Parliament. The lighting, watching, and general sanitary arrangements of the town are managed by a Local Board of Health. The livings are in the archdeaconry of Norfolk and diocese of Norwich. King's Lynn Poor-Law Union contains four parishes, with an area of 5410 acres, and a population in 1851 of 20,323.

It has been supposed that there was in the time of the Romans a town on the spot where the village of West or Old Lynn now stands, on the left side of the river. The harbour of Lynn was much enlarged by an alteration of the course of the river Ouse, the left bank of the river being to a considerable extent swept away, with one of the churches of Old Lynn. Lynn had been, previously to this, a place of considerable trade, and was especially favoured by King John, who granted it a charter of incorporation. From the 23rd of Edward I. the borough has returned two members to parliament. Henry VIII. changed the name of the town from Lynn Episcopi, Bishop's Lynn, to Lynn Regis, or King's Lynn. In the civil wars of Charles I. the town stood out for the king, but capitulated in 1643, after a siege of three weeks.

The town extends in length about a mile on the right bank of the river, and about half a mile in breadth. It is traversed or bounded by several narrow streams or 'fleets,' over which are many bridges. There is no bridge in the town over the Ouse, which is about as wide as the Thames at London Bridge; but there are bridges about a mile above the town over the Eau Brink, the old channel of the Ouse, communicating with West Lynn, Wisbeach, and the Lincolnshire Fens. The town was formerly defended on the land side by walls, of which a few fragments with one of the gates remain: the moat, which encompassed the walls, still encircles the town. On the north side of the town is St. Ann's Fort, a battery of heavy guns, intended to guard the passage of the river. The town is well paved and lighted, and supplied with water. The principal market-place comprises an area of about three acres, surrounded by many good houses. The market-cross, an octagonal building, erected in 1710, has an Ionic peristyle rising to the first story, surmounted by an open gallery. The guildhall is an ancient building of stone and flint, with court-

rooms, assembly-rooms, &c. There are a borough jail, an exchange and custom-house in one building, an excise-office, and a neat theatre. A county court is held in the town.

The church of St. Margaret is a spacious cruciform structure, containing portions of early English, decorated, and perpendicular architecture. The chancel has a fine east window, and two octagonal turrets crowning the buttresses at the angles. The nave was rebuilt in 1747, the old nave having been destroyed by the fall of the spire, 268 feet high, which was blown down in a storm. There are two western towers. The chapel of St. Nicholas, 194 feet long by 74 feet wide, consists of a lofty nave with side aisles, but without any transept or distinct choir: it is chiefly of decorated and perpendicular architecture, with large east and west windows. It has a very rich south porch, and a fine wooden roof. It had a spire 107 feet high, which was blown down on the same day as that of St. Margaret's. All Saints church is also cruciform, but smaller than St. Margaret's; the tower fell down in 1768, and demolished part of the church. St. John's church was built in 1846. The Wesleyan Methodists, Baptists, Independents, Quakers, Roman Catholics, and Mormons have places of worship. The Grammar school, founded in 1510, has an endowment of 75*l.* a year, and six exhibitions for Cambridge University. The number of scholars in 1858 was 53. There are several National and British schools; a society of arts, with 120 members, and a literary institute with 323 members in 1851; several public libraries, a savings bank, an hospital for about 60 patients, almshouses, and numerous charitable institutions.

The corn-market is held on Tuesday, and a general market on Saturday. Fairs are held in February and October. Rope-making and ship-building are carried on to some extent. Operations for deepening the channel have been carried on for some years by the Norfolk Estuary Improvement Company. The exports are chiefly corn and agricultural produce sent coastwise, and a fine white sand which is found near the town, and used in making glass. A vast quantity of shrimps, caught on the shores of the Wash, are sent to London. The imports are—corn and coal; timber from America; timber, deals, hemp, and tallow from the Baltic; wine from France, Spain, Portugal, &c. The number and tonnage of vessels registered as belonging to the port of Lynn on the 31st December 1853 were as follows:—Sailing-vessels, under 50 tons, 55, tonnage 1769; above 50 tons 122, tonnage 18,569; steam-vessels 2, tonnage 26. During the year 1853, in the coasting trade, there entered the port 1529 sailing-vessels, of 133,725 tons, and 49 steam-vessels of 5439 tons; and there cleared 365 sailing-vessels of 18,057 tons, and 51 steamers of 5661 tons. In the colonial and foreign trade the returns were—inwards, 166 vessels, tonnage 17,291; outwards, 36 vessels, tonnage 4619.

Some remains of ancient ecclesiastical edifices are in the town. A hexagonal tower 90 feet high, formerly the Gray (or Franciscan) Friars monastery, serves as a landmark to vessels entering the harbour. The Chapel of our Lady on the Mount, or Red Mount Chapel, on the east side of the town, is remarkable for the beauty of its architecture: it is a small chapel of stone, cruciform inside, but octagonal externally, erected on the walls of a more ancient building of coarse red brick, an irregular octagon, about 26 feet in diameter, with buttresses at the angles. There are beautiful walks, called the Mall, along the old fortifications on the east side of the town.

LYNTON. [DEVONSHIRE.]

LYON (the Celtic and Roman *Lugdunum*), an ancient and large city in France, capital of the department of Rhône, is situated at the junction of the Saône with the Rhône, and at an elevation of 969 feet above the level of the sea, in 45° 45' 45" N. lat., 4° 49' 33" E. long., at a distance of 240 miles in a straight line, 316 miles by railway through Dijon, S.S.E. from Paris; and had 156,169 inhabitants in the commune, according to the census of 1851. The population, including the suburbs of Croix-Rousse and La Guillotière, which at the time of taking the census formed distinct communes, is probably over 200,000. The commune of La Guillotière has been recently annexed to the city.

It is said that Lugdunum was founded by L. Munatius Plancus, commander of the Roman legions in Gaul at the time of Julius Cæsar's death, who settled here the people of Vienna (Vienne), driven from their homes by the Allobroges about B.C. 42. It seems improbable however that a situation so advantageous should have been overlooked by the Gauls; and the Celtic name Lugudunum, or Lugdunum, would lead one to think that there was a town here before the time of Plancus. Cæsar does not mention Lugdunum. About thirty years after the settlement of the Viennese Plancus established at Lugdunum a Roman colony, or rather a municipium. Augustus was in Gaul about the time, and appears to have made Lugdunum his place of residence for some time, an indication of the rising importance of the place. Agrippa, son-in-law of Augustus, made it the centre of four great Roman roads which traversed Gaul. Strabo describes Lugdunum as the most populous city of Gaul, except Narbonne (iv. 192, Casaub.). It was the great mart of the Romans, had even at that early time a mint for coining gold and silver money, and it gave name to one of the four great divisions of Gaul. An altar was erected here by sixty of the nations of Gaul, by common consent, in honour of Augustus.

Both Tiberius and Caligula appear to have favoured the town. The latter visited it, and instituted games professedly in honour of

Augustus, about A.D. 40. The emperor Claudius, himself a native of Lyon, raised it from the rank of a municipium to that of a colony, and regulated its local government. It was utterly destroyed in a single night by fire about 59. The rebuilding of the city was promoted by a grant from the emperor Nero, to whom the citizens manifested their affection and fidelity in his downfall. Upon Vitellius assuming the imperial purple they embraced his cause, and he stayed some time at Lugdunum on his way from the Rhenish provinces to Rome. Domitian, afterwards emperor, came to this city on the overthrow of Vitellius, to establish the authority of his father Vespasian in Gaul.

Coin of Lyon.

British Museum. Actual size. Silver.

In the contest of Clodius Albinus with Septimius Severus, Lugdunum became the scene of contest. In an engagement near this town Albinus was totally defeated and slain (197). Lugdunum, which had afforded a retreat to the vanquished, was pillaged by the victor, who put most of the inhabitants to the sword, and burned the town, which Herodian describes as being then large and wealthy. In the reign of Probus, Proculus was elected emperor by the people of Lugdunum, who had been ill-treated by Aurelian, and were fearful of the severity of Probus. The latter however defeated Proculus, and caused him to be put to death (280).

The usurper Magnentius, having been defeated by Constantius, sole survivor of the sons of Constantine, took refuge in Lugdunum, but was seized by the townsmen, who thus made their peace with Constantius (353). Magnentius slew himself to avoid being delivered up. While Julian held the government of Gaul under Constantius, the environs of Lugdunum were ravaged and the town nearly captured by the Allemanni. The emperor Gratian, pursued by the usurper Maximus, was overtaken and slain at Lugdunum (383). In the beginning of the 5th century, in the reigns of Honorius and his successors, the Burgundians seem to have possessed themselves of this town and of the south-eastern part of Gaul, under the sanction of the emperors, who employed them to oppose other barbarians of a fiercer character. On the overthrow of the Burgundian kingdom, Lugdunum came into the power of the Franks.

Lugdunum, during the Roman period, occupies a considerable place in ecclesiastical as well as in civil history. The Gospel had been early introduced into this part of Gaul, and here a severe persecution raged in the reign of Marcus Aurelius Antoninus (172 or 177). The churches at Vienna (Vienne) and Lugdunum sent a relation of their sufferings to those of Asia and Phrygia. Pothinus, bishop of Lyon, and perhaps the person who introduced the Gospel into these regions, was one of the martyrs in this persecution. His successor was St. Irenæus, one of the most eminent of the early Fathers.

In the division of the Frankish kingdom under the Merovingian princes, Lyon, as we may now call it, was included in the kingdom of Bourgogne (561-613). In the division of the Frankish empire among the grandchildren of Charlemagne (843), Lyon, with the district of Lyonnais, fell to the lot of the emperor Lothaire, and in the subsequent division of his states (855) it fell to Charles, king of Provence, who made it his usual residence. On his death (863) it was seized by Charles le Chauve, king of France. On the re-establishment of the kingdom of Bourgogne by Boson (879), Lyon was included in his dominions. In the troubled period of the later Carlovingian kings of France, Lyon was subject alternately to that kingdom and to the kingdom of Bourgogne Transjurane. It was in these troubled times that the counts, or governors, of Lyon succeeded in establishing a hereditary sway over the districts of Lyonnais, Forez, and Beaujolais, but not over the city of Lyon, the lordship of which was obtained by Bouchard, archbishop of Lyon, and after his time remained annexed to the see. The archbishops, whose temporal power over the city was confirmed by the emperor in 1157, received the title of Exarch: they were allowed free and independent jurisdiction, except so far as they were subject to the supreme authority of the emperor and the general laws of the empire.

At Lyon was held, in 1245, the 13th general council, in which the Pope Innocent IV. pronounced sentence of excommunication and deposition against the emperor Frederick II., on the ground of sacrilege and heresy; a new crusade for the recovery of the Holy Land was agreed upon; and it was determined to render aid to the emperor Baudouin, or Baldwin II., of Constantinople. In 1274 the fourteenth general council was held also in Lyon, attended by 500 bishops, 70 abbots, and about 1000 other dignitaries. Pope Gregory X. presided in person. At this council the emperor Paleologus and the Eastern bishops renounced by their representatives the Greek schism, accepted the faith of the Roman Church, and acknowledged the primacy of the Pope. The other proceedings of the council had for their chief object the reform of abuses among the clergy. Many other councils were held in Lyon.

About the middle of the 13th century the citizens of Lyon became

dissatisfied with the government of their ecclesiastical rulers; they elected a municipal body, between whom and the archbishop dissensions broke out, which led to the annexation of the city to the dominion of the French crown, the judicial administration remaining partly in the hands of the archbishop, partly in the municipality or consulate, as the civic council of Lyon was called. The citizens had the right to elect their own magistrates, and to control the receipts and outlay of the municipal officers; they were also exempt from the jurisdiction of any courts but those established in the city. Under this government the town increased in population, wealth, and commerce till the 16th century, when it suffered much at the hands of the Huguenots, but recovered its prosperity in the 17th and 18th centuries. In the year 1793, during the government of the Convention, the people of Lyon rose against the tyranny of the Revolutionary Club which had been established in the city, and seizing the town-hall put Challier, the president of the club, to death. To avenge this affront the Convention sent an army of 60,000 men, with a hundred pieces of cannon. The town was bombarded, and obliged, after a siege of sixty-six days, to yield to famine and force; and during the cruelties that followed in the next five months nearly 6000 victims perished, including those who fell in the defence; the principal buildings were demolished; and a new name, Commune Affranchie, was given in mockery to the city. This dreadful blow, together with the long war which followed the French revolution, caused the commerce and manufactures of Lyon to languish; but under the empire it rose again to prosperity. The city capitulated to the Austrians in 1814. On the return of Napoleon I. from Elba in 1815, his cause was espoused by the Lyonnese. In 1831 and 1834 Lyon was the scene of great disturbances, which originated in the disputes of the trades-unions with the master-manufacturers respecting wages, but had also connection with the republican party who headed the insurrection, and were ready to make it subserve their own purposes. In the last-mentioned year the insurgents by barricading the suburbs contested the possession of the town for two days with the military, but at the end of that time they laid down their arms.

The city of Lyon is very advantageously situated on the line of railway from Paris to Marseille, and on two navigable rivers, the Rhône and the Saône, in the fork between which the greater part of the town is built. This part of Lyon consists mostly of narrow crooked dirty streets, formed by solidly built houses of 7 or 8 stories high. To afford room for the extension of the town southward the two rivers have been made to meet about a mile below their original junction, thus forming the peninsula of Perrache, on which the streets are built with more regularity and elegance, and some beautiful promenades are laid out. The old fortifications between the city and the hill and suburb of Croix-Rousse prevented the extension of the town northward, but by a decree of the French Republic, dated March 1848, these fortifications were ordered to be demolished, and a wider enceinte to be constructed, so as to include this suburb. A considerable part of the town lies on the right bank of the Saône, both shores of which are lined with quays. Here also is the steep hill and suburb of Fourvières on the south-west; and the suburbs of Serin and Vaise on the west. On the left bank of the Rhône are the suburbs of Brotteaux and Guillotière; its right bank is lined with quays throughout the whole length of the city, some of them being planted with trees and forming delightful promenades.

The suburbs of Fourvières and Croix-Rousse are chiefly inhabited by silk-weavers. The hill of Fourvières is said to derive its name from *Forum-Vetus*, an ancient Roman structure which stood on its summit, and on the site of which the church of Notre-Dame is now built. The remains of an aqueduct and amphitheatre have been found on this hill. From the terrace close by this church, or from a tower erected near it, the view over the city of Lyon, its two noble rivers, its squares, chief structures, quays, avenues, and bridges, the hills and plains in the vicinity, of the snowy peak of Mont Blanc and the Alps of Dauphiné in the far distance, presents one of the most varied and most beautiful panoramas in Europe.

The Rhône, which runs along the eastern side of the town, flows with a rapid current 656 feet wide, and is spanned by four bridges, that unite the city to the populous suburbs of Guillotière and Brotteaux, which are protected from the inundations of the river by high embankments. The Saône flows in a gentle current with a breadth of 492 feet along the base of the hill Fourvières, a projecting crag of which formerly blocked up the passage along the right bank, but was cut through by the Romans, and hence it got the name of *Petra Excisa*, still remaining in the modern name *Pierre-Scise*. The Saône is crossed by nine bridges.

Of the 50 squares or open spaces in the city, the finest are—the *Place-Bellecour*, which is planted with lime-trees and is one of the largest squares in Europe; and the *Place-des-Terreaux*, of which the town-hall and the *Palais-des-Arts* form two sides. In the latter a

colossal equestrian statue of the Emperor Napoleon I. was erected in 1852.

The public structures of Lyon are numerous, and, with some exceptions, more remarkable for solidity than elegance. Among the chief religious edifices are—the splendid cathedral of St.-Jean, on the right bank of the Saône, the churches of St.-Pierre, d'Ainai, de l'Observance, Notre-Dame-de-Fourvières before mentioned, St.-Nizier, St.-Bonaventure, St.-Polycarpe, des-Chartreux, St.-Georges, St.-Irénee, and St.-Just. These, together with the palace of the archbishop, form a series of buildings interesting for their architecture, extent, decorations, and antiquity. Among the civic structures are the prefect's residence, once a convent; the town-hall, the finest building of the kind in France; the court-house, on the Quai-de-la-Saône; the public library the *Palais-des-Arts*, in which are an exchange, galleries of paintings and sculptures, cabinets of medals, collections of minerals, and of natural history, specimens of silk manufactures, &c.; the *Loge-du-Change*, formerly an exchange, now a Calvinist church; the college, situated on the Quai-du-Rhône; the mint; the general hospital, or *Hotel-Dieu*; the *Maison-de-la-Charité*, or asylum for the poor; the hospital de l'Antiquaille, built on the site of the Roman palace in which Claudius, Caligula, and Germanicus were born; the *Mont-de-piété*; the prisons; the two theatres; and the numerous barracks.

The fortifications of Lyon are formed by a series of detached forts, seven of which are built on the left bank of the Rhône, and the rest on the heights of Croix-Rousse, and the hills on the right bank of the Saône. The environs of Lyon are dotted with numerous country seats, gardens, and vineyards.

Lyon is an important manufacturing town. The staple articles of industrial produce are silk-stuffs of all descriptions, which for solidity of texture, richness and permanence of dye, and beauty of design are not equalled in the world. In this manufacture about 100,000 of the population are directly or indirectly concerned. Cashmere and silk shawls, ribands, cotton-cloth, hosiery, hats, printed calico, jewellery, liqueurs, chemical products, gold and silver lace, crapes, tulle, glue, sheet lead, musical strings, ornamental paper, &c., are also manufactured. There are besides, numerous printing-establishments, dye-houses, metal-foundries, glass-works, potteries, tan-yards, breweries, boat-building yards, &c.

Lyon is also, from its advantageous position, a place of great commerce. The products, imported into the town for its own consumption, or for re-exportation, are wine, brandy, oil, hemp, flax, soap, rice, chestnuts, salt, raw cotton, coffee, indigo, sulphur, lead, teazles, madder and other dye-stuffs, &c. Timber, firewood, building-stone, and asphalt are the chief articles brought down the Rhône to this city. Down the Saône are brought timber of all kinds, oak-staves, fire-wood, charcoal, tanning-bark, iron and iron-ore, gypsum, hay, straw, corn, building-stone, bricks, tiles, &c. Steamers ply on the Saône to Chalon-sur-Saône; on the Rhône down to Avignon and Arles, and up as far as Seyssel. The town has communication with the Rhine by the Canal-du-Rhône-au-Rhin; and with Paris by the Saône and the canals that join it to the Seine. Railroads unite Lyon with Paris and with the great manufacturing town of St.-Etienne, and the extensive coal-fields of the department of Loire. A railway is in course of construction southward to Avignon, whence it is completed to Marseille.

Lyon gives title to an archbishop, whose see includes the departments of Rhône and Loire. It is the seat of a High Court of Justice, which has jurisdiction over the departments of Ain, Loire, and Rhône; and of a University-Academy, the limits of which comprise the departments just named and also Saône-et-Loire. It is also the head-quarters of the 8th Military Division, which includes the departments of Rhône, Loire, Saône-et-Loire, Ain, Isère, Hautes-Alpes, Drôme, and Ardèche. There are also in Lyon faculties of theology and the sciences, a secondary school of medicine, and a college. The city has also a tribunal of first instance, a tribunal and chamber of commerce, a council of Prud' Hommes, an academy of sciences and arts, a diocesan seminary, a preparatory theological college, a school of the fine arts, a mint, an establishment for deaf mutes, a school of arts and trades, besides various other literary, scientific, and benevolent institutions.

(*Dictionnaire de la France; Almanac pour l'An 1853; Official Papers; L'Art de Vérifier les Dates*, vol. iii.) [See SUPPLEMENT.]

LYONNAIS, a former province of France, which now forms the departments of Rhône and Loire. It was divided into Lyonnais proper, of which Lyon was the capital; Franc-Lyonnais, chief town Neufville; the Beaujolais, capital Villefranche; and the Forez, which had Fourvières for its chief town.

MACAO, an island at the south-western mouth of the Choo-Kiang or Canton River in China. It terminates to the southward in a peninsula running in the direction of north-east to south-west for a length of more than two miles, with a breadth of half a mile where widest, and is connected with the rest of the island by a long narrow isthmus about 100 yards across. On this peninsular projection stands the Portuguese town and settlement of Macao; the rest of the island is held by the Chinese who have built a wall, with a gate and guard-house in the centre, across the isthmus. The town is built on declivities round the harbour, the shore beneath being embanked so as to form a marine parade, backed by a terrace of white houses, above which Chinese and European houses are intermingled. The principal buildings are the church and college of St. Joseph, 11 other churches, the senate-house, and several Chinese temples. The house in which Camoens wrote part of the 'Lusiad' still exists. The harbour which lies north and west of the town, and between it and the island of Patara, is not deep enough for large ships; these anchor in the Macao roads on the east side of the peninsula from 5 to 10 miles E.S.E. from the town. The Chinese regulations permit none but Portuguese or Spanish vessels to trade at Macao; but through the connivance of the Chinese officials, and the readiness of the Portuguese inhabitants to lend their names to foreigners who wish to be associated with them for the purpose of trading to the port, vessels of other nations have little difficulty, generally speaking, in lading or discharging in the roads by means of Portuguese boats. The Portuguese obtained possession of the peninsula of Macao in 1586, and made it for a long time the centre of an extensive commerce with China, Japan, the Philippines, and other eastern countries. For many years the trade has been of little importance. Indeed Macao may be said to be a place without any manufactures or commerce of its own. It is merely a place for landing goods, which are afterwards sent for sale to Canton. Goods imported (comprising cotton, broadcloth, camlets, betel-nut, tin, edible birds'-nests, rattans, saltpetre, pepper, opium, gold and silver, &c.) pay a moderate duty at the Portuguese custom-house. No cognisance is taken of goods exported, nor do they pay any duty.

The population of the peninsula is about 13,000, more than half of whom are Chinese; the whole island has a population perhaps exceeding 20,000. The Chinese part of the island, to which the Portuguese are rarely admitted, has a light sandy soil, and is extremely well cultivated, being made to yield all kinds of potherbs and vegetables. The town receives its supplies from the Chinese part of the island or from the mainland. When the Portuguese give offence to the Chinese the gate of the isthmus is shut, and all supplies and intercourse are cut off till satisfaction is made. The Portuguese govern themselves. The administration is vested in a governor and senate composed of the Catholic bishop, the judge, and a few of the principal inhabitants; but all real authority is in the hands of the Chinese mandarin resident in the town. The harbour of Macao is defended by six forts. Besides the college of St. Joseph the Portuguese have an endowed grammar school, and an orphan asylum. Macao is about 80 miles from Canton. The flagstaff is in 22° 12' 45" N. lat., 113° 35' E. long.

MAC CARTHY'S ISLAND. [GAMBIA, Colony of.]

MACASSAR. [CELEBES.]

MACCLESFIELD, Cheshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Prestbury, is situated on the river Bollin, in 53° 15' N. lat., 2° 6' W. long., distant 34 miles E. by N. from Chester, 167 miles N.W. by N. from London by road, and 165½ miles by the North-Western and North Staffordshire railways. The population of the borough in 1851 was 39,048. The borough is governed by 12 aldermen and 36 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The living is a perpetual curacy in the archdeaconry and diocese of Chester. Macclesfield Poor-Law Union contains 41 parishes and townships, with an area of 65,078 acres, and a population in 1851 of 63,322.

In 1260 the son of Henry III., as Earl of Chester, made Macclesfield a free borough. Various advantages were granted to the burgesses in later times. Macclesfield is a chief seat of the silk-throwing trade, which progressively advanced from 1808 to 1825, when it attained its greatest prosperity. The manufacture is still very considerable. Almost every variety of silk, including the finest kind, is manufactured here. The mills are mostly situated on the Bollin. Macclesfield possesses also several cotton-factories, dye-works, foundries, and breweries. Small wares are extensively made. Coal, slate, and stone are found in the neighbourhood.

Macclesfield is situated on the west side and at the base of a range of high land on the border of Cheshire which forms part of the mountain region of Derbyshire. A canal which unites the Grand Trunk and Peak Forest canals passes close to Macclesfield, and thus opens a water communication with most parts of England. The town contains four principal streets, diverging from the market-place in various directions; the streets are partially paved, the town is lighted with gas, and the sewerage is good. Baths and wash-houses were established in 1850. The town-hall is a good building. A subscription library, founded in 1770, has above 20,000 volumes, and contains likewise the public records. The court-house and jail are situated in the market-place. A county court is held in the town.

There are in all seven churches. The oldest and finest, St. Michael's church, was founded by Eleanor, queen of Edward I., in 1278: the chancel, which has been rebuilt, contains a painted window. The Independents, Wesleyan, Primitive, New Connexion, and Association Methodists, Baptists, Roman Catholics and Mormons have places of worship. The Free Grammar school was endowed with lands in 1502 by Sir John Percyval, Lord Mayor of London, a native of Macclesfield. It was refounded by Edward VI. The annual revenue is 1500*l.* The number of scholars in 1853 was 39. A Commercial school is also supported on the foundation, and the Grammar school has two exhibitions. In the town are National and Infant schools, and schools supported by the Wesleyan Methodists and the Roman Catholics. There are a school of design, established in 1851; a useful knowledge society, which had 518 members in 1851, and 2000 volumes in its library; a museum; a dispensary; and a savings bank. The corn and butchers' markets are held on Tuesday and Saturday. Fairs are held on May 6th, June 21st, July 11th, October 4th, and November 1st.

MACEDO'NIA, in the time of Strabo, included a considerable part of Illyria and Thrace; but Macedonia proper may be considered as separated from Thessaly on the south by the Cambunian Mountains; from Illyria on the west by the great mountain chain called Scardus and Bernus, and which under the name of Pindus also separates Thessaly from Epirus; from Mœsia on the north by the mountains called Orbelus and Scomius, which run at right angles to Scardus; and from Thrace on the east by the river Strymon. The Macedonia of Herodotus was however still more limited, as is afterwards mentioned. Macedonia proper, as defined above, is watered by three rivers of considerable size, the Axius, the Lydias, and the Haliacmon, all of which flow into the Thermaic Gulf (Gulf of Saloniki). The most easterly as well as the largest of the three, the Axius (Vardar), flows from the ranges between Scardus and Orbelus, in the north-west of Macedonia, and is increased by several tributaries, and particularly the Erigon (Kuchuk Kara-su), which rises in the mountains between Macedonia and Illyria. The next river to the west of the Axius is the Lydias (called at the present day Kara Azmac, on the coast, and Potova in the interior), which flowed, according to Strabo (vii. 'Extracts,' sec. 9, vol. ii. p. 130, Tauchn.), through the lake on which Pella is situated into the sea. It now joins the Axius about a league above the entrance of the latter into the sea. To the west of the Lydias is the Haliacmon, which flows from the Cambunian Mountains; in the time of Herodotus it joined the Lydias (vii. 127), but at present it flows directly into the sea to the south-west of the mouth of the Axius. The Haliacmon was called Astræus, probably from the gorges of Beræa; the modern corresponding names are Injëkara and Vistriza. The whole of the district on the sea-coast, and to a considerable distance in the interior, between the Axius and the Haliacmon, is very low and marshy. [AXIUS.]

From the mountains which divide Illyria and Macedonia two mountain ranges run towards the south-east, separating the valleys of the Haliacmon, the Lydias, and the Axius: the most southerly of these ranges, which is between the Haliacmon and Lydias, was called Bermius; and the most northerly, between the Lydias and the Axius, Dysorum, in one part of its course at least. The only other rivers of any importance were the Strymon and the Angites, whose valleys were separated from that of the Axius by a range of mountains which runs from Orbelus on the north towards the peninsula of Chalcidice. The Strymon (Struma) rises in Mount Scomius and flows into the Strymonic Gulf (Gulf of Orphano). Not far from the sea it forms a lake, called Cercinitis (Kerkine), into which the Angites flows from the eastward. [AMPHIPOLIS.]

The origin and early history of the Macedonians are involved in much obscurity. Some moderns have attempted to derive the name from the Kittim mentioned in Gen. x. 4; Numb. xxiv. 24; Jer. ii. 10; Ezek. xxvii. 6; Dan. xi. 30. In the book of Maccabees, Alexander the Great is said to come from the land of Chaitteim (1 Macc. i. 1), and Perseus is called king of the Kittians (1 Macc. viii. 5). Whatever the origin of the name, there is abundant reason for believing that the Macedonian princes were of Hellenic race, and that the Macedonians themselves were an Illyrian people, though the

country must also have been inhabited in very early times by many Hellenic tribes. The Greeks always regarded the Macedonians as a people not of Hellenic origin; and the similarity of the manners and customs, as well as the languages, as far as they are known, of the early Macedonians and Illyrians, appear to establish the identity of these two nations. In the time of Herodotus, the name of Macedonia comprehended only the country to the south and west of the Lydias, for he observes that Macedonia was separated from Bottissis by the united mouth of the Lydias and Haliacmon. (Herodot., vii. 127.) How far inland Herodotus conceived that Macedonia extended does not appear from his narrative. According to many ancient writers, Macedonia was originally called Emathia (Plin., 'Nat. Hist.', iv. 17; Justin, vii. 1; Gell., xiv. 6); but we also find traces of the name of Macedonians from the earliest times, under the ancient forms of Maketa and Makedni. They appear to have dwelt originally in the south-western part of Macedonia near Mount Pindus (Herod., i. 56; viii. 43), whence they emigrated in a north-easterly direction.

There are various accounts of the origin of the Macedonian monarchy, but all agree in asserting that the royal family was descended from the race of Temenus of Argos. (Herodot., viii. 137-139; Thucyd., ii. 99.) Perdiccas is usually regarded as the founder of this empire, the dominions of which were first confined to the country in the neighbourhood of Edessa between the Lydias and the Haliacmon, but afterwards extended as far as the Axios, and subsequently along the coast as far as the Strymon. Very little however is known of the history of the country till the reign of Amyntas I., who was king of Macedon at the time of the expulsion of the Pisistratides from Athens, B.C. 560. This monarch submitted to Megabyzus, who had been left in Europe by Darius after the failure of his Scythian expedition; and Macedonia was considered a province of the Persian empire till the battle of Platæa delivered it from subjection to the king of Persia.

Amyntas was succeeded by his son Alexander I., who was obliged to accompany the Persian army into Greece, but was able on several occasions to render important services to the Grecian cause. Alexander was not allowed to contend at the Olympian games until he had proved his Argive descent. (Herodot., v. 22; Justin, vii. 2.) The time of Alexander's death is uncertain, but he lived at least to B.C. 463 (Plutarch, 'Cimon', c. 14.) He was succeeded by Perdiccas II., a fickle and dishonourable prince, who took an active part in the Peloponnesian war, and alternately assisted Athens and Sparta as his interests or policy dictated. His successor Archelaus (B.C. 413) was the wisest monarch that had yet sat upon the throne of Macedon. He effected greater improvements in his kingdom, according to Thucydides, than all the other monarchs together who had preceded him (ii. 100). He greatly improved the condition of his army; he erected forts to repress his barbarous neighbours; constructed roads; and endeavoured to diffuse among his subjects a love of Grecian literature and refinement. He is said to have invited Socrates to settle at his court, and Euripides resided there during the latter part of his life.

On the assassination of Archelaus, B.C. 399, the greatest confusion prevailed; and it was not till the accession of Amyntas II. (B.C. 393), that anything like order was restored to the country. But even during the greater part of his reign Macedonia was distracted by intestine commotions and foreign enemies; and on his death, B.C. 369, the same state of confusion prevailed that had followed the death of Archelaus. Amyntas was succeeded by his eldest son, Alexander II., who was assassinated at the end of the first year of his reign by Ptolemy Alorites, who held the supreme power for three years as regent during the minority of Perdiccas; but, in consequence of abusing his trust, he was cut off by Perdiccas, B.C. 364. Perdiccas, after a reign of five years, fell in battle against the Illyrians, B.C. 359, and was succeeded by his younger brother, the celebrated Philip, who succeeded to a kingdom assailed by numerous enemies and weakened by intestine commotions, and left it to his son, Alexander the Great, the most powerful monarchy in Europe. The career of Alexander, which put an end to the Persian empire, and established the short-lived Macedonian empire, cannot be traced in a sketch like this. It may be sufficient to state here, that in the commotions consequent upon Alexander's death the royal family was finally destroyed, and Cassander obtained at first the power and eventually the title of king of Macedon. Cassander was succeeded by his son Philip, B.C. 296, who reigned only two years; and on his death, in B.C. 294, his two younger brothers, Antipater and Alexander, having quarrelled respecting the succession, the throne was seized by Demetrius, the son of Antigonus, who reigned for seven years. He was driven from his kingdom, B.C. 287, by Pyrrhus, king of Epirus, who was however deposed in his turn, after a short reign of seven months, by Lysimachus, king of Thrace.

On the death of Lysimachus, who fell in battle, B.C. 281, the country remained in almost a state of anarchy for many years. The invasion of the Gauls from B.C. 280 to B.C. 278, and the contests between the numerous pretenders to the throne, brought the country to the brink of ruin. Eventually Antigonus (surnamed Gonnatas), the son of Demetrius, was proclaimed king; but he was dethroned by Pyrrhus, who again obtained the kingdom on his return from Italy. After the death of Pyrrhus, Antigonus regained possession of the throne, which he retained till his death, B.C. 239. The two following monarchs,

Demetrius II. (B.C. 239-229) and Antigonus II. (B.C. 229-220), were principally occupied in the Grecian wars which followed the formation of the Achaean league.

Philip V., who succeeded Amyntas, alarmed at the increasing power of the Romans, entered into an alliance with Hannibal; but was never able to afford him any effectual assistance, in consequence of continual wars with the Ætolians and Illyrians. On the conclusion of the war with Carthage, Philip found that he was unable to cope with the Roman power; and after continuing the contest for a few years, was obliged to sue for peace on such terms as the victors chose to grant. Philip was succeeded by Perseus, B.C. 178, who carried on war against the Romans, and was finally conquered, B.C. 168. Macedonia was not immediately converted into a Roman province, but was divided into four districts, which were considered independent, and governed by their own laws, and of which the capitals were respectively—Amphipolis, Thessalonica, Pella, and Pelagonia. Macedonia was reduced to the form of a Roman province, B.C. 142.

It is very difficult to determine the boundaries of the Roman province of Macedonia. According to the 'Epitomizer' of Strabo (vii.), it was bounded by the Adriatic on the west; on the north by the mountains of Scardus, Orbelus, Rhodope, and Hæmus; on the south by the Via Egnatia; and on the east it extended as far as Cypæla and the mouth of the Hebrus. But this statement with respect to the southern boundary of Macedonia cannot be correct, since we know that the province of Macedonia was bounded on the south by that of Achaëa; and although it is extremely difficult, if not impossible, to fix the precise boundaries of these provinces, yet it does not appear that Achaëa extended farther north than the south of Theasaly.

Macedonia was inhabited from the earliest times by numerous tribes, whose names continued to be given till a late period to various districts of the country. The most important of these divisions were—Mygdonia, Bottissis or Bottisæa, Pieria, Elimeæ, Stymphalia, Orestis, Lynceus, Kordia or Eordæa, Emathia, Pæonia, and Chalcidica.

Mygdonia, on the Thermaic Bay, was separated from the district of Bottissis, or Bottisæa, by the Axios (Herodot., vii. 123); but its boundaries on the east are doubtful. Thucydides makes it extend as far as the Strymon (ii. 99); but this is at variance with the statement of Herodotus, who speaks of the land to the west of the Strymon under the name of Bisaltia. (Herodot., vii. 116.) Mygdonia was originally occupied by the Edones, a Thracian people, who were expelled thence by the Temenidæ. (Thucyd., ii. 99.) The principal town in this district was *Therme*, afterwards called *Theasalonica* by Cassander in honour of his wife, who was daughter of Philip. (Strabo, vii. 'Excerpta,' sec. 10, vol. ii. p. 131.) It was a large and prosperous town, and exists at the present day under the name of Saloniki. The apostle Paul addressed two epistles to the Christian converts in this town. The lake *Bolbe*, called at the present day *Betchik*, was either in or near Mygdonia (Thucyd., i. 58); it is said by Dr. Clarke to be about 12 miles in length, and 6 or 8 miles in breadth. To the west of *Bolbe* was another and smaller lake, which is now called *St. Basilii*.

The *Bottissis*, or *Bottisæa*, of Herodotus, was bounded on the east by the Axios, on the west by the united mouth of the Haliacmon and Lydias (vii. 127), and on the north by Emathia. The principal town of Bottissis was *Pella*, situated on the lake through which the Lydias flows, which afterwards became the residence of the kings of Macedon. Pella was a small place till the time of Philip, by whom it was greatly enlarged and beautified. (Strabo, vii. sec. 9, vol. ii. pp. 130, 131.) The ruins of Pella may still be seen at *Alakilisseh*. Near the mouth of the Lydias was the town of *Ichnæ*, celebrated for an ancient temple. (Herodotus, vii. 123; Pliny, 'Nat. Hist.', iv. 17; Mela, ii. 3; Hesych., under *Ἰχναίων*.) Thirty miles to the south-west of Pella, at the foot of Mount *Bermius* (Pliny, 'Nat. Hist.', iv. 17), was the ancient city of *Berrhæa*, or *Bereæ*, which is mentioned in the Acts of the Apostles (xvii. 10).

Proceeding along the coast, we come to *Pieria*. The ancient district of Macedonia originally intervened between Bottisæa and Pieria. According to Strabo (vii. sec. 8, vol. ii. p. 130), and Livy (xlv. 9), Pieria was bounded on the south by Dium; but in more ancient times the name was probably applied to all the country between Macedonia and the Peneus. Ptolemy calls the country between the mouth of the Lydias and that of the Peneus by the name of Pieria. Pieria was celebrated in Grecian mythology as the first seat of the muses. *Pydna*, the chief place in this district, also called *Cydna* (Steph. Byz.), and *Citron*, according to Strabo (vii. sec. 8, vol. ii. p. 130), known at the present day under the name of *Kidros*, is said to have been a Greek city, and was for some time in possession of the Athenians; but was afterwards taken by Philip, and given to Olynthus. The battle between Perseus and Æmilius, which decided the fate of the Macedonian monarchy, was fought near *Pydna*. South of *Pydna* was the town of *Dium*, at the foot of Mount Olympus, of which Livy has given a short description (xlv. 6, 7). It afterwards became a Roman colony. (Pliny, 'Nat. Hist.', iv. 17.) Forty stadia to the north of *Pydna* was *Methone* (Strabo, vii. sec. 8, vol. ii. p. 130), at the siege of which Philip, the father of Alexander the Great, lost an eye.

In the interior, to the west of Pieria, in the valley of the Haliacmon, was the district of *Elimeæ*, the inhabitants of which were called *Elimiotæ*. In the time of Thucydides, Elimeæ was subject to the Macedonian monarchs, but was governed by its own princes (ii. 99)

There was a road from Elimea to Thessaly over the Cambunian Mountains (Livy, xlii. 58), and another to Ætolia (Livy, xliii. 21).

South-west of Elimea was the district of *Stymphalia*, which was annexed to Macedon on the conquest of Perseus by the Romans (Livy, xlv. 30), together with the country of the Atintani and Paravæi, which extended to the west of Elimea, in Illyria and Epirus.

North-west of Elimea was the district of *Orestis* (Polyb., xviii. 30; Liv., xxxiii. 34), which probably derived its name, as Müller has remarked, from the mountainous nature of the country (*σπος*, mountain), and not from Orestes, the son of Agamemnon. The Orestæ appear to have been independent of the Macedonian kings for a considerable time; they were however obliged at length to submit to their authority, but were declared independent again on the conquest of Macedonia by the Romans (Livy, xxxiii. 34). The principal town in this district was Celetrum, situated on a peninsula, which ran into a lake of the same name (the modern Kastoria, or Kessie).

Lyncus, or *Lyncæstis*, the country of the Lyncestæ (Thucyd., iv. 83, 124; Liv., xxvi. 25; xxxi. 33; xxxii. 9), north of Orestis, was surrounded by mountains on all sides. It contained no towns of any importance except Heraclea, which was situated on the great Egnatian road. The Lyncestæ were governed by an independent prince of the name of Arrhibæus during the early part of the Peloponnesian war. (Thucyd., iv. 124.)

To the east of Lyncus, and north of Elimea and the Bermius, was the district of *Eordia*, or *Eordæa*, in the valley of the Lydias. The Eordians are said to have been driven out of their country, which however still continued to bear the name of Eordia, by the Temenidæ, and to have settled afterwards about Physca, which was probably a town in Mygdonia. (Thucyd., ii. 99.)

Emathia, which was afterwards limited to the country north of Bottiæ, in the valley of the Lydias, was the name, as has been already remarked, by which the country was originally called, according to many ancient writers. The chief town in this district, *Æga*, afterwards called *Edessa* (*Vodina*), was the capital of the Macedonian kingdom in the earliest times; and even when it had ceased to be the royal residence, it still continued the burial-place of the kings. It was a large city in the time of Livy (xiv. 30). It stood on the Via Egnatia, 80 miles west of Pella.

The northern part of Macedonia was inhabited by various tribes of Pæonians: of which the principal were the Pelagonians, who dwelt north of Lyncestis. The chief town of this district was also called Pelagonia. The Agrians, north-east of the Pelagonians, were a powerful Pæonian tribe, living near the sources of the Strymon. (Strabo, vii. a. 18, vol. ii., p. 133.)

The peninsula south of Mygdonia, between the Thermaic and Strymonic gulfs, was called *Chalcidice* from the Chalcidians of Eubœa, who formed settlements in this country in very early times. The peninsula of Chalcidice comprised in the south three smaller peninsulas: Pallene, formerly called Phlegra (Strabo, vii. a. 12; vol. ii. p. 131), between the Thermaic and Toronaic gulfs; Sithonia, between the Toronaic and Singitic gulfs; and Acté, as Thucydides calls it (iv. 109), or Athos, according to Herodotus (vii. 22), between the Singitic and Strymonic gulfs. [Ἄθος.] The peninsula of Chalcidice, together with the three smaller peninsulas, contained several important towns, which are frequently mentioned in Grecian history.

Potidæa, afterwards called *Cassandria* from Cassander, king of Macedon, founded by the Corinthians (Thucyd., i. 56), stood on the narrow isthmus which connects the peninsula of Pallene with the mainland. It sent 300 men to Plataea (Herodot., ix. 28), and after the Persian war was subject to the Athenians. Potidæa revolted from Athens, B.C. 432; and was not taken till after a siege of two years, when the Potidæans surrendered and were allowed to quit the place. A mutilated inscription in elegiac verse, now in the British Museum, commemorates the courage of those Athenians who fell in a battle before this town, B.C. 432. An Athenian colony was afterwards sent to occupy the town. (Thucyd., ii. 70.) It subsequently fell under the power of Philip of Macedon, and continued from that time subject to the Macedonian kings. The other towns of Pallene were Aphytis, with a celebrated temple of Bacchus; Mende, a colony of Eretria in Eubœa (Thucyd., iv. 123), which revolted from the Athenians, B.C. 423, and was retaken by Nicias and Nicostratus; and Solone, said to have been founded by the Pellenians from Achaia in Peloponnesus, which also revolted from the Athenians, B.C. 423, but was retaken, and the inhabitants treated with great cruelty; the town and lands were afterwards given to the Plataeans. (Thucyd., v. 82.)

At the head of the Toronaic Gulf was the important town of Olynthus, founded by the Chalcidians and Erethrians of Eubœa. [ΟΛΥΝΘΙΟΥΣ.] The chief town in Sithonia was Torone, on the south-western coast, which was also probably founded by the Eubœans. Torone was for a long time subject to the Athenians, but afterwards belonged to the Olynthian confederacy, and was eventually united to the Macedonian monarchy by Philip.

The peninsula of Acté, or Athos, was inhabited in the time of Thucydides by a few people of Chalcidic origin, but principally by Pelasgians, Bisaltæ, Crestonians, and Edoneæ, who dwelt in small fortified villages. (Thucyd., iv. 109.) At the extremity of this peninsula was Mount Ἄθος. The canal which Xerxes cut across the isthmus

can still be distinctly traced. Acanthus, situated on the isthmus which connects the peninsula with the mainland, was once an important town. [Ἄθος.] The chief towns in the interior of the peninsula of Chalcidice were Chalcis and Apollonia, mentioned in the Acts of the Apostles (xvii. 1).

The Via Egnatia, which formed one great line of communication between the Ionian Sea and Byzantium, commenced at Apollonia in Illyria, and was joined at Clodiana on the Genusus by the Via Candavia, from Dyrrachium, which however is also called the Via Egnatia. (Strabo, vii. sec. 3.) The Via Egnatia entered Macedonia in the district of Lyncus, and passed by the towns of Edessa, Pella, Thessalonica, Apollonia, and Amphipolis, where it entered Thrace.

MACERATA-E-CAMERINO, a province of the Papal States, forming part of the old division called the Marches, is bounded N. by the provinces of Ancona and Urbino-e-Pesaro, E. by the Adriatic, W. by the province of Perugia, and S. by those of Spoleto and Fermo-ed-Ascoli. Its area is 1173 square miles, and its population in 1843 was 264,030. The country slopes towards the north-east from the foot of the central Apennine chain to the coast of the Adriatic. The principal rivers are the Potenza, Chienti, and Musone, which rise in the Apennines and flow into the Adriatic.

The province of Macerata is in part very mountainous and barren; but the valleys and plains towards the sea-coast produce abundance of corn, wine, most kinds of fruit, and very good silk. The coast along the Adriatic has no harbour which deserves the name. Recanati has an anchoring-place for small vessels at the mouth of the river Potenza, where some trade is carried on.

The chief towns are the following:—*Macerata*, on a hill in a fine country watered by the Chienti, is a well-built town, with 16,000 inhabitants. It has several churches and convents with good paintings, a college, and a university with a library containing 20,000 volumes, a court of appeal, a handsome town-house, and several fine private palaces, amongst which the Palace Compagnoni is the most remarkable. Macerata is a bishop's see and the residence of the delegate. It carries on a considerable trade in born, silk, and cattle.

Loreto is famous for its sanctuary of the Madonna, called the Santa Casa, or Holy House, which is said to be the house in which the Virgin Mary lived at Nazareth, and to have been miraculously carried, first to the hill of Tersatto, above the town of Fiume in Dalmatia, and finally in 1294 to its present site, on a hill about 15 miles S.E. from Ancona, and 3 miles from the Adriatic coast. The ground on which the house was deposited belonged to a woman named Lauretta, whence the name of Loreto. The city which has grown up around the sanctuary is well built, and contains 8000 inhabitants. The square in which the church called Chiesa della Santa Casa is situated is occupied on one side by a house belonging to the Jesuits; on the other side by the palace of the governor, a noble building, erected after designs by Bramante; in the centre is a fine bronze statue of Pope Sixtus V., seated, and giving the benediction. Over the central door of the façade of the church, which forms the third side of the square, is a full-length bronze statue of the Virgin and Child, by Girolamo Lombardo. The great ornaments of the interior are three superb bronze doors, which are divided into compartments, filled with bas-reliefs representing various events recorded in the Old and New Testaments and the triumphs of the Church. The Campanile, which is of great height, was designed by Vauvitelli; it exhibits a combination of the four orders, and is surmounted by an octagonal pyramid containing a bell 22,000 lbs. weight. The vault of the nave is painted in chiaroscuro, the subjects being taken from the prophetic books of the Holy Scriptures. But the great wonder of this celebrated church is the Santa Casa itself, which is said to be the birthplace of the Blessed Virgin, the scene of the Annunciation and Incarnation, and the residence of the Holy Family after the return from Egypt. It is a small brick house, with one door facing the north and one window facing the west, and it is built in the rudest manner. Above the fireplace is a celebrated statue of the Blessed Virgin and the Infant Jesus, reputed to have been sculptured by St. Luke: it is of the cedar of Lebanon, and quite black with age. The Santa Casa is cased with white marble, and this casing is one of the most remarkable works of modern art. It was designed by Bramante, and executed by Sansovino, Girolamo Lombardo, Bandinelli, John of Bologna, and other illustrious artists. The casing forms four fronts, each of which is covered with sculptures in relief. The western front presents the Annunciation by Sansovino, characterised by Vasari as a 'divine work,' with smaller tablets on which are sculptured representations of the Visitation and of St. Joseph and the Blessed Virgin in Bethlehem by Sangallo; and in the angles are the prophets Jeremiah and Ezekiel by Sansovino and Girolamo Lombardo respectively. On the southern front is the Nativity, another grand work by Sansovino. The eastern front presents the fine bas-reliefs of the Arrival of the Holy House at Loreto, the Death and Burial of the Blessed Virgin, &c., by Nicolò Tribolo. On the northern front are bas-reliefs of the Nativity of the Blessed Virgin, the Sposalizio, and several prophets, by Sansovino, Bandinelli, and Raffaele da Montelupo. The baptistry, or font, is a noble work in bronze, covered with bas-reliefs of great merit, representing the Baptism of Our Saviour, and several other scriptural subjects. The side chapels are ornamented with fine mosaics, from pictures by great masters, with bas-reliefs, frescoes, and paintings.

The chapel of the Treasury is remarkable for the frescoes of its roof, which represent the leading events in the life of the Blessed Virgin. The treasury contains a rich collection of costly offerings.

Recanati, 4 miles S.W. from Loreto, on the Musone, near the Adriatic, has 4050 inhabitants, a cathedral and several other churches, convents, and some fine palaces. There is an aqueduct from Recanati to Loreto for the water supply of the latter city. *Tolentino*, farther inland, on the left bank of the Chienti, near the foot of the Apennines, has 9437 inhabitants and an interesting cathedral. By the treaty of Tolentino (1797) the Pope ceded the Romagna to the French. *Camerino*, the ancient *Camerinum*, is an old town among the Apennines, and a bishop's see, with 5500 inhabitants, a cathedral, a university, several churches and convents, and some silk-factories. Camerino has been recently made the capital of a separate delegation, which comprises 311 square miles of the area, and 38,415 of the population given above. *Fabriano*, farther north, is a bishop's see, with 7000 inhabitants, manufactories of paper and parchment, and a considerable trade in wool. *San Severino* has 3000 inhabitants. *Matelica*, is an old walled town, with 3000 inhabitants.

MACHECOUL. [LOIRE-INFÉRIEURE.]

MACHYNLETH, Montgomeryshire, a market-town, parliamentary borough, and the seat of a Poor-Law Union, in the parish of Machynlleth, is situated in 52° 35' N. lat., 3° 51' W. long., distant 35 miles W. from Montgomery, and 205 miles W.N.W. from London. The population of the borough in 1851 was 1673; it forms one of the Montgomery district of boroughs in returning a member to the Imperial Parliament. The living is a rectory in the archdeaconry of Montgomery and diocese of St. Asaph. Machynlleth Poor-Law Union contains 11 parishes and townships, with an area of 116,647 acres, and a population in 1851 of 12,116.

The town is near the confluence of the Dulais with the Dovey. It is neatly and regularly built, and consists chiefly of two principal streets, which are wide, and contain some good houses. There is a plain town-hall and market-house. The ancient building in which Owen Glyndwr held the parliament or assembly of the chief men of Wales in 1402, by which his title to the principality was formally acknowledged, is still standing, but is converted to private use. The church, dedicated to St. Peter, was rebuilt, with the exception of the tower, in 1827. The Wesleyan and Calvinistic Methodists, Independents, and Baptists have places of worship; and there is a large National school. The chief manufacture of the town and neighbourhood is that of 'webs,' or coarse woollen cloths and coarse flannels. Tanning is carried on. Lead-ore is found in the neighbourhood, and slate is quarried. Salmon-trout and sewin are taken in the river Dovey, and during the season Machynlleth is much resorted to by anglers. The market is held on Wednesday, and there are six fairs in the year.

MACKENZIE RIVER. [HUDSON'S BAY TERRITORIES.]

MÂCON, an ancient town in France, occupies the site of *Matisco*, one of the towns of the *Ædui*, mentioned by Cæsar ('De Bell. Gall., vii. 90). It is mentioned in the 'Itinerary' of Antoninus, and in the 'Notitia Imperii' (in which latter it is designated *Castrum*), and is noticed for the manufacture of arrows. It suffered much from Attila. It passed into the hands of the Burgundians and the Franks; was included in the kingdom of Bourgogne under Boso, and in the duchy of Bourgogne under the later dukes. It was much injured in the religious wars of the 16th century. Before the first French Revolution it was a bishop's see.

Mâcon, now the capital of the French department of Saône-et-Loire, is situated on the right bank of the Saône, in 46° 18' 24" N. lat., 4° 50' 18" E. long., at an elevation of 605 feet above the sea; 275 miles S.S.E. by railway from Paris, 41 miles N. from Lyon, and has 12,658 inhabitants in the commune. The town stands on the slope and at the foot of a hill above the Saône, along the bank of which there is a noble quay, commanding a distant view of the Alps. A green island occupies the centre of the stream opposite to the quay; and an ancient bridge of twelve arches connects the town with the suburb of St-Laurent on the other side of the river, in the department of Ain. The streets of Mâcon are crooked, narrow, and ill-paved; the houses are of stone, and substantially built. The ramparts of the town have been demolished and their site laid out in promenades. The former cathedral was ruined in the first Revolution, but the episcopal palace escaped, and is now used for the prefect's residence. The chief public buildings are—the town-hall, which contains a theatre and public library; the general hospital, on the parade; the church of St-Vincent; and the prison. Among the Roman antiquities are a triumphal arch and the ruins of a temple of Janus. The inhabitants carry on a considerable trade in the excellent wines of the district, corn, hoops, staves, cattle, &c. There are manufactories of blankets, leather, earthenware, clocks, and watches. Mâcon is the seat of tribunals of first instance and of commerce; it has also a college, and a primary normal school.

Mâcon had in the middle ages counts of its own. Their county constituted the district of the *Mâconnais*, which nearly coincided with the present *arrondissement* of Mâcon. St. Louis purchased the county and united it to the domains of the crown. [BOURGOGNE.]

(*Dictionnaire de la France, Annuaire pour l'An 1853.*)

MACON. [GEORGIA, U.S.]

MACQUARIE RIVER. [NEW SOUTH WALES.]

MACROOM, county of Cork, Ireland, a post and market-town, and the seat of a Poor-Law Union, is situated on the river Sullane, and on the road from Cork to Killarney, in 51° 55' N. lat., 8° 55' W. long., distant by road 24½ miles W. from Cork, and 182½ miles S.W. by S. from Dublin. The population in 1851 was 3727, besides 2124 in the workhouse. Macroom Poor-Law Union comprises 25 electoral divisions, with an area of 179,108 acres, and a population in 1851 of 37,394. The town consists principally of one street nearly a mile in length, occupied in great part by cabins and other mean dwellings. Near the centre are some good houses and shops. The parish church, the Roman Catholic chapel, the sessions-house and bridewell, and a market-house, the dispensary, and the Union workhouse are the public edifices. Petty-sessions are held monthly. Fairs are held on the 12th day of May, July, September, and November. There is a large weekly market. Macroom Castle is a fine old structure overhanging the river.

MADAGASCAR (called by the natives *Madecasse*), a large island in the Indian Sea, about 240 miles from the coast of Mozambique on the eastern shores of Africa, extends from 12° to 25° 45' S. lat., and between 48° and 51° E. long. From north to south, between Cape Ambré and Cape St. Mary, it is 960 miles long, with a width varying from 200 to 500 miles; it is estimated to cover a surface of 225,000 square miles, or somewhat more than the extent of France. The most eastern and western points of the island are Cape East and Cape St-Felix respectively. It is separated from the continent of Africa by the Channel of Mozambique.

The eastern coast runs in the direction of north by east, and nearly in a straight line, being indented only by the bay of Antongil, which runs up into the island to the west of Cape Baldrick, and Cape East. The western side of the island has a much more sinuous outline; the part of the coast that faces the north-west, between Cape Ambré and Cape St. Andrew, presents several small inlets—Chimpaiki, Narinda, Majambo, and Bembatooka; on the southern part, between the Crab Islands and the Barraconta Islands, are Murderers Bay and the Bay of St. Augustine. Cape St. Andrew is nearly in 16° S. lat.; between it and Mozambique Island the Channel of Mozambique is narrowest, being about 240 miles across. The Comoro Isles, and near the African coast the Querimba Islands, lie at the northern entrance of the channel, in which are numerous small islets; of these we can only name the Juan-de-Nova Islands in its narrowest part, and Europa Island opposite Murderers Bay, and near 40° E. long. The most important island on the eastern coast is that of St. Mary, which lies south of Antongil Bay, and is occupied by the French.

A mountain range traverses Madagascar in its whole length; some of the summits rise to an elevation of 10,000 or 12,000 feet. The eastern and western slopes of this range are furrowed by numerous rivers, many of which traverse lakes and form cascades in the upper part of their course. Its offsets cover the greater part of the interior, and in some places approach to the very shores of the sea, especially in the north between Cape Passadava and Cape Ambré, where the stupendous peak of *Matowla* raises its head not far from the shore, and also near Cape St. Andrew on the west coast. But between Cape St. Andrew and Cape Passadava a low marshy plain, crossed by several rivers, extends along the shore and runs 60 or 80 miles inland. The bays, harbours, and rivers which indent this part of the coast, and which are mentioned above, are admirably adapted for commerce, but they are all neglected, with the exception of Bembatooka. The eastern coast is high and rocky from Cape Ambré to the bay of Antongil, one of the most spacious harbours of the Indian Sea. South of this bay the shores are low and swampy to a distance inland varying from 10 to 40 miles, and extremely unhealthy. In the interior the country in many places contains extensive plains, which are excellent pasture-ground, and frequently possess a soil adapted to all kinds of tropical plants.

At the entrance of St. Augustine Bay is Sandy Island (23° 39' S. lat., 44° E. long.). Onglahy River falls into the head of the bay. Ships anchor here for provisions, refreshments, and barter. Large fat bullocks (with a hump), sheep, and goats are obtained for European articles, such as gunpowder, brass-nails, looking-glasses, muskets, kettles, scissors, glass and coral beads, &c. Pumpkins, yams, sweet-potatoes, limes, oranges, and other fruit may be had here. Fish are abundant. Good Water is got 4 or 5 miles up the river, which is infested with alligators.

Bembatooka Bay, on the western coast, is the estuary of several rivers. It is 17 miles long and 3½ miles wide at the entrance (15° 43' S. lat., 46° 28' E. long.), but inside it is nearly 8 miles wide. Under Bembatooka Point, to the north of Bembatooka town, ships may lie land-locked and sheltered from all winds. This bay is considered to be very eligible as a commercial station, its shores being healthy and easy of access. Prime bullocks are very numerous and cheap, and salt-beef might be prepared in any quantity; wild pigs abound, and rice is grown extensively. The French buy bullocks here, and have them driven to Fort Dauphin, on Antongil Bay, where salt provisions for their navy and for colonial consumption are cured. The Arabs of Mascat frequent this port. Slaves are an article of trade. Bembatooka itself is a village, but *Majunga*, on the north side of the bay, is a large town, and the harbour of Thansan-arive, the capital of the *Ovaha*, the most powerful, industrious, and civilized nation of the

island. Vessels drawing 15 feet water can proceed to Majunga and 15 miles up the bay. From this point to the mouth of the river Betsibooka, a distance of 10 miles, there is an extensive lagoon, deep enough to be navigated by vessels of considerable burden; in spring-tides the water rises 20 feet at the mouth of the river. From its mouth to Thanaan-arive is a distance of 245 miles by the road. Boats sail 160 miles up the Betsibooka; from the point where the navigation terminates merchandise is carried overland to Thanaan-arive, a distance of about 85 miles. Following the road from Majunga along the river to the capital, the country is low and swampy for 60 miles, but well adapted to the culture of rice: 40 miles farther, the land is more elevated and the raffia-tree (*Sagrus raffia*) abounds. Then for 70 miles a barren country intervenes, and the remaining distance of 75 miles to the capital is rather a level country, in which rice, sugar-cane, and cotton are cultivated.

Thanaan-arive, which is described as a close assemblage of numerous villages, is situated in 18° 56' S. lat., about 47° E. long., at an elevation of about 4000 feet above the sea-level, and has about 20,000 inhabitants. It contains some well-built houses, and a few in the European fashion were erected in modern times, under the reign of Radama. *Tamatave*, a sea-port on the eastern coast (18° 10' S. lat. 49° 31' E. long.), has a good anchorage with a hard and sandy bottom. The entrance to Tamatave however is between reefs, and ships are exposed to easterly winds. It carries on some commerce, though it was destroyed by the French in 1819. To the north of Tamatave is Foul Point, where ships may anchor and procure provisions and water.

South of Tamatave is the mouth of the river Manooroo, or Mangarow. It traverses an extensive country, which is generally level and of great fertility, and contains extensive pastures. The Mangarow seems to be the most important river which descends from the eastern declivity of the interior mountain range.

Antongil Bay, called Manghalees by the natives, is named from its discoverer Antonio Gil, a Portuguese captain. At the bottom of the bay are several small islands; the largest of which is Marotto, in 15° 25' S. lat., about a mile long and the same distance from the shore. Ships anchor to the north of the island, on which wood and water may be obtained: provisions are got from the mainland. A river, navigable for boats, enters the head of the bay north-north-west from the island. The anchorage of the river is called Port Choiseul by the French; near it is Fort Dauphin, named above.

St. Mary's Island, called Nossi Ibrahim by the natives, lies between Foul Point and Antongil Bay, and extends north-east by north from 17° 5' to 16° 33' S. lat. On the west side of it there is a bay, at the entrance of which is Quails Island. The French occupied St. Mary's in 1740 and again in 1743. They abandoned it in 1761 but we believe they have recently re-occupied it and several points along the coast.

At another Fort Dauphin (25° 5' S. lat., 46° 35' E. long.) the French carry on a considerable trade, bartering European articles for rice, poultry, cattle, turtle, oranges, and other fruit, all of which are abundant, and exported to the Mauritius and the Isle of Bourbon. The country about Fort Dauphin is very populous, the natives living in fortified villages built on eminences. Cattle and poultry are very abundant, large quantities of rice are grown; beautiful mats, cloth from native cotton, and various stuffs from vegetable fibre are manufactured by the natives.

The climate of Madagascar is not so hot as might be expected from its geographical position. The elevated range in the interior, and the wind constantly blowing from the sea, render the heat supportable. The interior is very healthy, but the low swampy coast, which contains numerous marshes and lakes, and in certain seasons large sheets of stagnant water, is destructive to the health of Europeans. The year is divided between the dry and the wet seasons. The first occurs when the sun is in the northern hemisphere, and then the south-east monsoons prevail. During the north-west monsoons, which blow when the sun is in the southern hemisphere, rains are abundant, and sometimes incessant for several days.

Madagascar contains a very large proportion of fertile soil, and produces nearly every kind of grain. Rice is the principal object of agriculture; it is cultivated either on high or low ground, but with little care. Other products are manioc, or cassava root, maize, sweet potatoes, cotton, indigo, allspice, black-pepper, ginger, cinnamon, saffron, tobacco, sugar-cane (which is indigenous), grapes, and all tropical fruits. Indigenous plants used as food are the prickly yam, bread-fruit, many varieties of plantain, and arrow-root. The *Sagrus raffia* is much cultivated on account of its leaves, the fibres of which are ingeniously woven into cloth, which is worn by the greater part of the natives. The dresses of the higher classes are manufactured of silk or cotton. The silk-worms of this island are of a large size, and suspend their cocoons from the branches of trees. They feed on the leaves of *Cytisus Cajan*, or Pigeon-Pea, which is indigenous in Madagascar. By an incision into the bark of the *Urania speciosa*, a glutinous juice is obtained which is very nourishing; and the leaves of this tree are used in building and thatching houses. There are eleven varieties of tobacco indigenous in this island. Coffee has been introduced by the French, and succeeds very well. The cocoa-nut tree and the mangrove abound along the shores. Forests cover a

large part of the island; the timber trees are of great size and excellent quality.

Cattle, sheep, goats, fowls, ducks, and geese are kept. Wild swine, and in parts wild cattle, are numerous. The wild ass, wild large-tailed sheep, and zebras abound. The large wild animals of the African continent are not met with, but macaoucs, caimans, and serpents abound. Birds of beautiful plumage exist in great variety; the pheasant and the wild-duck, as elsewhere, are highly prized as food. Fish in great numbers frequent the coasts and the rivers; whales also visit the shores during the rainy season; sharks and crocodiles, or rather perhaps alligators, infest the bays and rivers. Beautiful shells are common on the beach.

In the absence of scientific examination little is known of the mineral wealth of the island, except that lead, tin, iron, copper, mercury, talc, rock-salt, saltpetre, rock-crystal, and precious stones are stated to be found abundantly in the mountains.

The population is estimated to amount to between four and five millions. The inhabitants seem to belong to different races, which have mixed together, and speak only one language, which contains a great number of Malay words. The inhabitants of the shores are short, rather darker than mulattoes, with low foreheads, broad and flat faces, and large eyes and mouths. Their hair is long but crisp. The Ovahs, who inhabit the elevated plains in the interior (which are remarkably fertile and populous), are in height rather above the European standard, portly in their person, and of all shades of colour from deep black to copper, and their hair is long and lank. The Madagasses have made considerable progress in the arts of civilisation, which is evinced by the houses they build in a climate which does not require such substantial dwellings. In agriculture and the arts connected with it they are perhaps not inferior to the inhabitants of Java. The Ovahs are distinguished by their superior skill in manufacturing silk and cotton dresses, in forging iron, which they apply to various purposes, from the blade of a lance down to a needle, and in the making of silver and gold chains, balances, and other articles, in which great ingenuity is displayed. Their language is written in the Arabic character. Their religion is idolatry. Under the reign of Radama Christianity was much favoured; schools were established by English missionaries, who were protected by the king; but after his murder in 1823, Ranavala Manjoka, who succeeded him on the throne, restored the old system of Fetichism; and by a royal edict of 1835 the public profession of Christianity was forbidden in the island. The French missionaries nevertheless have still continued their endeavours to introduce Christianity among the natives in the neighbourhood of their establishments on or near the coast.

Madagascar is said to be divided into 22 states, governed by kings; but in the present century most of them were subjected to the sway of the Ovahs by King Radama, who died in 1828. This extraordinary man, who in energy of character resembled Peter the Great, introduced into his country the arts and civilisation of Europe. He established a communication with the English in the Island of Mauritius. He received and protected missionaries, and promoted the establishment of schools, the number of which at the time of his death had increased to more than 100, in which nearly 6000 children were instructed. Several young people were sent to the Mauritius and even to England to receive instruction. European mechanics were well received and employed by Radama. He introduced into his army the discipline and arms of the English. Besides the Ovahs, the Seclavas have distinguished themselves, but only as pirates. They inhabit the north-western shores, whence they send fleets consisting of several small vessels to the Comoro Islands and even to the coast of Mozambique for the purpose of making slaves; but since the abolition of the slave trade, which Radama, their conqueror, effected at the request of the English, their excursions have been less numerous and destructive. Still however slavery exists in Madagascar.

The French alone have tried to establish colonies on this island. The first attempt was made in 1665, and several others were made afterwards. These settlements never prospered, partly on account of the unhealthiness of the low western coast, where they were formed, and partly on account of the warlike character of the inhabitants. Since the return of peace in Europe the French have again made some attempts in two or three places. In 1821 they settled on Isle St. Mary, which is 31 miles long, and from 2 to 3 miles in breadth. This settlement is improving, though the French at first suffered much from the climate. There is another settlement at Foul Point Bay, but it is inconsiderable. There are also small settlements at S. Luce (24° 44' S. lat.), and on the tongue of land called Tholagar (25° 5' S. lat.), where the French have built a small fortress, called Fort Dauphin. In these establishments the French cultivate sugar, coffee, and other tropical productions, which are sent to the Island of Bourbon. The English of the Mauritius fetch from the harbour of Tamatave rice, cattle, tortoise-shells, amber, and some minor articles. Some parts of Madagascar keep up a commercial intercourse with the southern coasts of Arabia.

(Owen, *Voyages to the Shores of Africa*; London *Geographical Journal*, vol. v.; Ellis, *History of Madagascar*; Macgregor, *Commercial Statistics*. [See SUPPLEMENT.]

MADDALONI. [LAVORO, TERRA DL]

MADEIRA, an island belonging to Portugal, is situated in the Atlantic Ocean, between 32° 30' and 32° 50' N. lat., 16° 40' and 17° 20' W. long., and about 400 miles from the north-western coast of Africa. It is 45 miles long, with a breadth of 10 to 16 miles, but towards the east the island terminates in a narrow projection about 9 miles long and 3 miles wide, opposite the isle of Fora. The area is about 360 square miles. The population is about 100,000.

This island is one mass of basalt, rising with a rather steep ascent from the south and from the north towards the interior, where the highest part of the mass runs from south of east to the north of west, between Cape de St. Laurengo on the east to Cape de Pargo on the west. Pico Ruivo, the highest summit, attains 6165 feet above the sea-level. Both declivities of the mountain-mass are furrowed by deep and generally narrow valleys and depressions, traversed by streams of clear water. These valleys contain gardens and vineyards. The vineyards are formed on the declivities of the rocks and on artificial terraces on the mountain sides, to the height of 2300 feet above the sea. The rocks in most places come down to the very shore, along which however soundings are found at a depth of 35 to 50 fathoms on a rocky and unequal ground.

The climate of Madeira is very equable and mild. The mean temperature of the year does not exceed 68°. In the months of December and January the thermometer rarely sinks below 60°; the mean temperature of that season being 63°. The mean temperature of the hottest months (August and September) is between 73° and 74°; but when the winds blow from the African desert, the thermometer sometimes rises as high as 90°. Madeira suffers occasionally from hurricanes. The climate is considered very healthy, and many consumptive persons withdraw to it from England for the purpose of prolonging their lives.

In the lowest region of the island to about 750 feet above the sea-level many tropical plants are cultivated, as the date palm-tree, the plantain, two kinds of cactus, the sweet potato, Indian corn, arrow-root, coffee, and the American agave, as well as the sugar-cane, the olive-tree, the pomegranate, and the fig. Above this region, to a height of from 750 to 2500 or 2800 feet above the sea-level, the fruits and grains of Europe, especially wheat and maize, are raised; and in this region are also the extensive vineyards, which furnish the most important article of exportation. Then follows a tract covered with high trees, which rises to 3200 feet and higher, where many plants and trees are found which do not occur in Europe. This region contains also extensive chestnut forests, the fruit of which is the common food of the inhabitants. Its surface is extremely broken, and bare rocks appear in many places. The highest portion of the rocks is covered with heath, fern, and in some places with fine grass, which preserves its verdure through the greater part of the year, this region being frequently enveloped by dense fogs, and subject to heavy dews.

Few horses are kept, and most of them are imported. Cattle are more numerous, and of a large size. Asses are the most common domestic animals, and best adapted to the roads of the country as beasts of burden. Hogs are rather numerous, as well as fowls. In the interior there are many wild swine and rabbits. Birds are not numerous, and fish is rare, on account of the great depth of the sea which surrounds the island. Salt cod and herring are important articles of import.

Funchal, the capital, and the only town of the island, is on the southern coast in 32° 51' 7" N. lat., 16° 54' 7" W. long. It has only an open roadstead, with a rocky and very uneven anchorage, in which vessels are exposed to great danger from November to February, when gales from the south-east and south-west prevail. It is frequently visited by ships bound to South America, the Cape of Good Hope, or the East Indies, as a place of refreshment, and from it all the produce of the island is exported. The town consists of a pretty wide street along the sea-shore, where there are several good buildings, and numerous narrow lanes, which extend to a considerable distance up the slope of the hill. The number of houses amounts to about 2000, and that of the inhabitants to 20,000. The town is defended by four forts, and has a cathedral, eight churches, several convents, a theatre, and an hospital. In the midst of the town is an open square, planted with exotic trees. The environs are studded with numerous villas. Foreign consuls reside in Funchal.

The commerce of Madeira with England is considerable. The principal export is wine, which is of two kinds, Madeira wine and Malvasia de Madeira. The former is cultivated on the southern slopes of the island, the latter on the north-eastern coast, near the village of Machico. Minor articles of export are, fruits, dragon's-blood, honey, wax, orchil, and tobacco, besides provisions for the vessels bound to more remote places. The imports consist of manufactured goods, corn, fish (herring and cod), oil, salt-beef, salt, and some tropical productions.

Madiera was discovered about 1420 by Goncalves Zarco. It was then covered with forests, whence its name is derived, Madiera in Spanish signifying wood. The forest was set on fire, and it is said that the conflagration lasted seven years. Soon afterwards it was settled by the Portuguese, and the culture of sugar and wine was introduced. Sugar was grown to a considerable extent before the islands in the West Indies were settled; but upon that event the culture decreased, and was replaced by that of wine, which now seems to be giving way to coffee.

GEOG. DIV. VOL. III.

About 40 miles N.E. from Madeira lies the small island of *Porto Santo*. It is a basaltic rock, which does not exceed 500 feet in height. Indian corn and vegetables are cultivated for consumption, and a little wine for exportation. The population amounts to about 1400, of whom 600 live in the small town of Porto Santo, the roadstead of which is much exposed to southerly winds. The island is destitute of trees and has only one spring. It has a bleak and barren look. There are several small rocky islets near Porto Santo.

To the south-south-east of Cape St. Laurengo are three small basaltic rocks, lying in a row from north to south. They are called *Ilhas Desertas*, and are only inhabited by sea-fowl, but they are visited from Madeira for the purpose of collecting the orchil, with which the greatest part of their surface is covered.

MADEIRA, RIO. [BRAZIL.]

MADELEY, Shropshire, a market-town and the seat of a Poor-Law Union, in the parish of Madeley, is situated in 52° 38' N. lat., 2° 26' W. long, distant 14 miles E.S.E. from Shrewsbury, and 140 miles N.W. from London. The population of the parish in 1851 was 8525. The living is a vicarage in the archdeaconry of Salop and diocese of Hereford. Madeley Poor-Law Union contains 12 parishes and townships, with an area of 27,951 acres, and a population in 1851 of 27,627.

Madley is situated about a mile from the left bank of the Severn. The streets are lighted with gas. The parish church is a Grecian structure, erected in 1796. A second church has just been erected. In Madeley are National and British schools; and at Ironbridge are a dispensary and savings bank. The extensive coal- and iron-works of Coalbrookdale are in Madeley parish. The products of this vast manufacturing district are exported and distributed by the Severn and by several canals. An iron bridge, the first erected in the country, here crosses the Severn, and consists of one arch with a span of 100 feet. In the neighbourhood of Madeley is a manufacture of coal-tar. China-ware is manufactured at Coalport. The market-day is Friday. Two fairs are held annually at Ironbridge.

MADISON. [INDIANA.]

MADLEY. [HEREFORDSHIRE.]

MADRAS, Presidency of. The presidency of Madras comprises the southern part of the peninsula of Hindustan, including part of the Circars and the whole of the Carnatic on the eastern side, and extending across so as to include Canara, Malabar, &c., on the western side. The distribution of the presidency into Regulation Districts and Non-Regulation Districts, and also the total area and population, are stated in the article HINDUSTAN. The government of the presidency is conducted by a Governor, who is subordinate to the Governor-General of India, a council of three members, and secretaries of the political, civil, and military departments. The total net revenue of the presidency for the year 1851-52 was 3,704,048*l.*; the total expenditure for the same year amounted to 3,204,273*l.*

MADRAS, the capital city of the presidency of Madras, is situated on the eastern coast of Hindustan, in 13° 4' N. lat., 80° 16' E. long. In 1639 a factory was established here, and a fortress was built to protect it, which was named Fort St. George. This name was formerly given to the presidency and the city, and is still occasionally used, as Fort William is for Calcutta. The entire population of Madras probably amounts to 300,000, and there are several populous suburban villages.

The largest portion of Madras is called the Black Town, from its being inhabited by the native population. The Black Town is north of Fort St. George, and both are situated close to the shore, on level ground, with a large open space called the Esplanade between them. The Black Town contains many good streets, especially one very handsome street in which Europeans reside; but the houses of most of the Europeans occupy a space of several miles in the rear of Black Town and the fortress. These houses are placed without any arrangement into streets; they are generally one story in height, and are shaded with trees, and inclosed by hedges of bamboo and prickly pear. St. George's church is a large and handsome structure; and at Vepery is one of the finest modern gothic churches in Hindustan. The Government House, which adjoins the Esplanade, is a handsome structure; detached from it is a large banqueting-house. Madras gives title to a bishop of the English Church, and is the principal station in South India of the Church Missionary Society. In the city are several endowed public schools and charitable institutions.

The coast has no indentation, nor has Madras any harbour or pier. A heavy swell rolls in shore throughout the year, and vessels anchor in the open roads at the distance of a mile or two. Considerable difficulty is frequently experienced in landing passengers and goods.

MADRID, the capital of the kingdom of Spain, of the ancient province of Castilla la Nueva, and of the modern province of Madrid [CASTILLA LA NUEVA], is situated near the centre of the extensive table-land of Castilla la Nueva, in the middle of Spain, in 40° 25' N. lat., 3° 42' W. long. Though it is the residence of the court and of the chief civil and military authorities, it is only designated a villa (town), not a ciudad (city); it is not the see of a bishop, and has no cathedral. The circumference is about five miles, and it has no suburbs. The population in 1845 was 216,745.

Madrid is about 2000 feet above the level of the sea, and has the range of the Guadarrama Mountains at a distance of about 30 miles to

the north. The summer heat is excessive, especially when the wind is from the south-east, the average summer temperature being $76^{\circ} 4'$ Fahr.; but it sometimes rises to 90° , and even 100° . The winters are very cold, especially when the wind is from the north, the mean winter temperature being 43.1° Fahr.; but it sometimes sinks to 18° . Standing in a wide and arid plain, without the shelter of trees, and overlooked by the snowy ridges of the Sierra de Guadarrama, it is subject to sudden and extreme changes of temperature, producing pulmonary and other diseases, which are often fatal. The average of deaths is 1 in 28.

Madrid is built on and around several low hills, near the east bank of the Manzanares, a small river which rises in the Guadarrama Mountains, and falls into the Jarama, an affluent of the Tagua. The Manzanares is sometimes dried up in the summer; but in the winter, and more especially during the rains of spring, it is occasionally swollen to a wide and rapid torrent, which however soon passes away. It is crossed by five bridges, of which the Puente de Segovia is the largest; it is a solid and handsome structure of stone, built by Herrera, 695 feet long, and 31 feet wide. The Puente de Toledo and the Puente de Casa del Campo are also of stone. The Puente de San Isidro is an old bridge of wood, and the Puente Verde is a modern bridge of wood, painted green—whence the name.

Madrid is surrounded by a brick wall 20 feet high, and is entered by 15 gates, 5 of which are principal. Some of the approaches have a gentle ascent between rows of trees, and terminate in handsome arched gateways, mostly of granite. The Puerta de Alcalá is particularly handsome.

The general aspect of Madrid from all the approaches is anything but inviting. The numerous fantastic spires of churches and conventual buildings, the tiled roofs of the houses, the sterility of the neighbourhood, and the total absence of villas, pleasure-gardens, or other ornamental buildings, such as usually indicate the approach to a great city, give to the capital of Spain a very gloomy and forbidding appearance. The interior however is not devoid of beauty. The form is somewhat circular, or rather that of a square with the corners rounded off. The principal streets are wide and well paved, and in these streets the houses are well built, four, five, and six stories high, with basements of granite, the rest of brick, stuccoed, and generally painted. Each house contains, as in Paris, several families, who occupy the different floors. The streets are lighted with gas, obtained mostly from oil. There are several large and handsome public buildings, and more than 30 public fountains, several of which are handsome structures. The water is obtained from springs which have their origin in the Guadarrama Mountains, filtering naturally through coarse sand and gravel, and is pure. Much of the washing of clothes is performed in the bed of the Manzanares, and the articles are spread out to dry in the sun on the gravelly banks. The whole of the interior, as to paving, lighting, and cleansing, has been greatly improved since the time of Ferdinand VII.

Nearly in the centre of Madrid is an open space of no great extent called the Puerta del Sol, from the east gate having formerly stood there. From this spot some of the principal streets diverge—the Calle de Alcalá eastward, the Calle Mayor westward, the Calle de Montera northward, and the Calle de las Carretas southward. The Puerta del Sol is a place of resort for all classes; for the men of business and for the idle. It is continually thronged with company. The Calle de Alcalá runs east-north-east from the Puerta del Sol; it has a gentle rise, is planted with acacia-trees, and widens gradually as it approaches the Prado (meadow), which is an extensive district, including a park (the Campo Grande), a botanic garden, a Campo Santo or cemetery, the Palacio del Buen Retiro, and the artillery-barracks. The principal square (Plaza Mayor) is a short distance west-south-west from the Puerta del Sol, and from it extends the Calle de Atocha in an east-south-east direction, and the Calle de Toledo southward. There are altogether upwards of 40 squares, but, with the exception of the Plaza Mayor, the Plaza de Cebada, and one or two others, they are mostly of small size. The Plaza Mayor is quadrilateral, 434 feet by 334 feet, and it is surrounded with stone buildings six stories high, ornamented with pillars of gray granite, which form a fine piazza all round.

Madrid, as already observed, has no cathedral, and not one of the seventy churches which it contains is worthy of special description. The royal palace (Palacio Real) is a magnificent structure. It stands at the west end of Madrid, and occupies the site of the Alcazar of the Moors, which was inhabited by Philip II. and his successors till it was destroyed by fire in 1734. The present structure was commenced by Philip V., and was continued by his successors. It is a square of 470 feet each side, and is 100 feet high. The basement is of granite rusticated, the upper part of a white stone which glitters in the sun like pure white marble. The interior was fitted up in the most costly style, but was greatly injured by the French during their occupation of Madrid. The Patio, or interior court, is 240 feet each side. The Palacio del Buen Retiro is in the Prado at the east end of Madrid. It was built by Philip IV. as a summer residence. It occupies an eminence. A wide esplanade separates it from the artillery-barracks (Cuartel de Artillería), and near it is a new theatre. Extensive gardens, well laid out and well kept, are attached to the palace, and a large portion of them have recently been opened to the public. Near the

Palacio del Buen Retiro is the Museo de Pinturas (Picture Gallery), the largest and finest collection in the world. It contains about 2000 pictures, among which are—62 by Velasquez, 46 by Murillo, 53 by Ribera, 62 by Rubens, 22 by Vandyke, 43 by Titian, 10 by Raffaele, and other masters in a like proportion. Just outside the Puerta de Alcalá is the Plaza de Toros (Bull-Arena), a large circular structure capable of containing 14,000 spectators. It belongs to the government, and the profits are given to the public charities. In the summer there is a bull-fight every Monday afternoon. The Armoury, a fine building of the time of Philip II., is near the Palacio Real. It contains some of the most beautiful specimens of armour in Europe, especially of the Middle Ages. It contains several complete suits of armour which formerly belonged to Ferdinand V., Charles V., the Great Captain, John of Austria, Garcia de Paredes, and other illustrious Spaniards. The centre of a gallery 227 feet in length is filled with steel-clad warriors on foot and horseback. Swords, shields, helmets, and fire-arms, are contained in glass-cases. The new parliament house (Palacio del Congreso) is in the Plaza de las Cortes. It is built in imitation of the Chamber of Deputies at Paris. On the north side of the Calle de Alcalá, near the Puerta del Sol, is the Aduana (Custom House), a large and handsome quadrilateral structure, built in 1769. The Real Academia de San Fernando is near the Aduana. It contains about 300 pictures of no great merit, and has a cabinet of natural history (Gabinete de Ciencias Naturales), in which is the largest and most perfect semi-fossil known, the huge Megatherium, which was found in 1789 about thirteen leagues from the city of Buenos Ayres. The collection of minerals is chiefly from Spain and the Spanish dominions in America. The post-office (Casa de Correos) is a large square building on the south side of the Puerta del Sol. It was originally built as a palace for Carlo III. Adjoining, to the west, are the mail and post-horse establishments (Casa de Postas). The town-hall (Casa de Ayuntamiento) is a structure of the 16th century. The stock-exchange (Bolsa de Comercio) was established in 1831; it is near the Puerta del Sol. The Biblioteca Nacional contains about 200,000 volumes. It is rich in Spanish books and manuscripts. It is open daily from 10 to 3. The Biblioteca de San Isidro has a good collection of books which formerly belonged to the Jesuits. The theatres are—Teatro del Principe, Teatro de la Cruz, Teatro del Circo (gymnastics), Teatro del Museo (built in 1838), Teatro del Instituto (built in 1845), Teatro de Variedades (built in 1843), Teatro de Buena-Vista, and Teatro de Oriente. Besides the buildings already mentioned there are—a college, 9 academies, an observatory, a founding hospital, 18 other hospitals, 2 other public libraries, and a Conservatorio de Artes. On the west bank of the Manzanares is the Real Casa del Campo, a summer palace, with extensive walks and gardens.

Before the year 1834 there were 66 convents, 34 for men and 32 for women. Some of them have been since pulled down either to widen the streets or to form squares; others have been converted into barracks (especially the large convent of San Francisco el Grande), hospitals, magazines, and government offices.

Among the public monuments are—an equestrian statue of Felipe IV., in the Plaza de Oriente; a statue of Cervantes, in the Plaza de las Cortes, erected in 1835; and the Monumento del Dos de Mayo, a column erected to the memory of the Spaniards who were slain on that day by the French in 1808.

The chief industrial establishments are—the royal manufactories of porcelain and carpets, and manufactures of jewellery, silks, hats, and paper, none of which are important.

Madrid is supposed to occupy the site of the Mantua Carpetanorum of the Romans, which was called Majoritum by the Goths. During the occupation of the peninsula by the Arabs the place served as a frontier town, and its castle was often taken from the Moors and retaken by them until 1086, when it was finally taken by Alfonso VI., the conqueror of Toledo, who annexed it to the bishopric of Toledo, to which it now belongs. It continued to be a mere village until the reign of Henry III. of Castile, who, being very fond of hunting the wild boar and the bear, both which animals were then abundant in the mountains near Madrid, made the place his residence during the hunting season. Charles V. occasionally lived in it, and it was at last made the capital of the Spanish dominions by his son, Philip II. On the 23rd of March 1808 Madrid was entered by the French troops under Murat, and the royal family was decoyed into France. The heroic rising of the inhabitants of Madrid on the 2nd of May of the same year obliged the French to evacuate the town, and aroused the whole Spanish nation. Madrid was again occupied by Napoleon I. in person in December following, and by his brother Joseph in 1809. It was held by the French till 1812, when the Duke of Wellington entered it, and restored it to the Spaniards.

MADRIDEJOS. [CASTILLA LA NUEVA.]

MADURA, an island in the eastern sea, separated by a narrow strait from the north-east coast of Java. Madura lies between $6^{\circ} 58'$ and $7^{\circ} 30'$ S. lat., $110^{\circ} 20'$ and $111^{\circ} 50'$ E. long. Its extreme length from east to west is 90 miles, and its mean breadth 17 miles.

The island is politically divided into three districts, each of which is nominally under the government of a native chief; but the whole are subject to the authority of the Dutch governor of Java. These divisions are:—Bangkalan occupying the western, Pamakassan the centre, and Sumanap the eastern portions of the island. Each division contains a town or capital bearing the name of the district.

The population of Madura in 1815, according to a census made by the English government, which was then in the possession of the island, was 218,659, of whom 6844 were natives of China. In 1840 the population numbered about 300,000. The inhabitants reside in villages. The religion of the Madurese is Brahminical, and the practice of widows burning themselves with the bodies of their husbands is prevalent.

The soil of Madura is fertile, and produces abundance of fine rice. Buffaloes and sheep are also bred for exportation. Cocoa-nut oil is prepared. The principal export trade is salt. [JAVA.]

MÆNTWROG. [MERIONETHSHIRE.]

MÆOTIS, PALUS. [AZOF, Sea of.]

MAFRA. [ESTREMADURA, Portuguese.]

MAGADOXO, or MUKDEESHA, a town on the eastern shore of Africa, is situated in about 2° 2' N. lat., 45° 25' E. long., and is the only important place on the coast between Cape Gardafui and the mouth of the Juba. The harbour is formed by a long coral-reef, and the town is divided into two parts, Umarween and Chamgany; the latter consists entirely of tombs. Umarween contains nearly 150 stone and many wooden houses, built in the Spanish style. It carries on some commerce with Arabia. Its exports are ivory, gum, and a particular kind of cloth; it imports sugar, dates, salt-fish, arms, and slaves. Its sovereign (whose territory extends along the Haines and Juba rivers, and has a population of about 150,000) is dependent on the Iman of Muscat in Arabia.

MAGALHAENS. STRAIT OF, commonly called the *Strait of Magellan*, is the most extensive known strait on the surface of the globe. Its length in a straight line is above 200 miles; but if the three great bends are taken into account it is rather more than 300 miles. It divides the continent of South America from Tierra del Fuego. The eastern entrance is formed by Cape de las Virgines on the continent, and by Cape del Espiritu Santo, or Queen Catherine's Foreland, which is on King Charles's Southland, the largest of the islands composing Tierra del Fuego. At its western entrance are Cape Pillar on the south, on the island of South Desolation, and Cape Victory on the north, on a small island belonging to Queen Adelaide's Archipelago. The most northern bend of the strait approaches 53° 10' S. lat., and the most southern inlet, called Admiralty Sound, 55° S. lat. The eastern extremity of the strait is situated in about 68° 20' W. long., and the western extremity in about 74° 40'.

This strait may be considered as divided into three parts. The eastern part extends from Cape de las Virgines to Cape Negro, and its direction as far as the first Narrows is nearly west, but afterwards south-west. In two places the strait contracts to a width of 5 or 6 miles, forming the two Narrows, of which the eastern is called De la Esperanza, and the second that of San Simon. It is extremely difficult and dangerous to pass through these Narrows from east to west, as western winds prevail in them nearly all the year round, and the western currents set through them sometimes at the rate of 7 miles an hour. The country on both sides of this part of the strait is rather level; at some distance from the shore a range of hills rises on each side to a moderate height. No trees grow in this country; the bushes are few in number and stunted, and the grass though abundant is coarse.

The central portion of the strait, from Cape Negro to Cape Froward, lies north and south, and is the widest part, extending in two large inlets, called the Useless Bay and Admiralty Sound, deep into King Charles's Southland. This part of the strait is the easiest to navigate, being free from islands and cliffs, except the large island of Dawson. The country on both sides rises into high snow-covered mountains. Between the mountains there are valleys of some extent, which, as well as the lower part of the mountains themselves, are covered with a heavy growth of timber-trees.

The western part of the strait extends from Cape Froward to Cape Pillar, in a direction nearly south-east and north-west. This part is very difficult to navigate on account of its narrowness, the width varying between 5 and 25 miles, and also by reason of the numberless cliffs and islets, with which the shores, especially on the north side, are lined. To these disadvantages must be added the north-western gales, which sweep with incredible force along the channel of the strait. The mountains on each side rarely attain the snow-line; but their huge masses approach so close to the shores that in many places it is difficult to find as much level ground as is required to place a boat upon. Land-locked basins of moderate extent however occur in several places, and afford safe harbours. On each side of Clarence Island an island-studded strait leads out of Magellan Strait, entering the Pacific by Cockburn Channel. Nearly opposite the south-eastern extremity of the large island of South Desolation a channel opens eastward into the continent. This strait, called Jerome Channel, leads to Otway Water, a large inland sea 50 miles long, trending to the

north-east, and separated from the eastern portion of the strait only by a narrow isthmus. From this lake another channel, called Fitaroy Channel, 12 miles long, leads in a north-west direction to another inland lake, called Skyring Water, which is about 34 miles long and 12 miles wide. The country bordering these lakes on the south and west is high, rocky, and mostly covered with trees; whilst that which incloses them on the east and north is a low undulating grassy plain without trees. [AUCON-SUN-SALIDA.]

The Strait of Magalhaens was discovered by Fernando Magalhaens in 1520. Its navigation has been for a long time rarely attempted by trading vessels, the passage by Cape Horn being in general safer and more expeditious. Upon the discovery of gold in California however many emigrant and trading vessels found their way through the Strait of Magalhaens at the commencement of the excitement caused by that event.

(Cordova, *Voyage of Discovery to the Strait of Magellan*; London *Geographical Journal*, vol. i.)

MAGDALENA, RIVER. [NEW GRANADA.]

MAGDEBURG, one of the three governments of the Prussian province of Saxony, is composed of the ancient duchy of Magdeburg, the county of Barby, the bailiwick of Gommern (without the circle of the Saal), the Altmark, on the left bank of the Elbe, the bailiwick of Klötze, the principality of Halberstadt, with Derenburg, Quedlinburg, Wernigerode, and Schauen. Its area is 4466 square miles, and the population in 1847 was 674,149. The government is divided into 15 circles. The country is one of the finest parts of the Prussian monarchy, consisting chiefly of a fertile and level tract; the hills in the south-west, which are offsets of the Harz, are low, and in other parts the surface is merely varied by gentle elevations. Railways cross the government in several directions, from Magdeburg as a centre. One line proceeds eastward through Potsdam to Berlin; a second south through Cöthen and Halle to Leipsig; a third west through Brunswick to Hanover, near which it meets the lines to Harburg, Bremen, and Cologne; and a fourth northward through Stendal to the Berlin-Hamburg line, which it joins near the Wittenberg station on the right bank of the Elbe.

Magdeburg, the capital of the government and of the province of Prussian Saxony, and one of the strongest fortresses in Prussia, stands on the left bank of the Elbe and an island formed by its arms, in 52° 8' N. lat., 11° 39' E. long., 90 miles by railway S.W. from Berlin, and has a population of 55,000. The town consists of three parts, called Altstadt, Neumarkt, and Friedrichsstadt; and of two suburbs, Sudenburg and Neustadt. It is ill built, with narrow crooked streets. The most remarkable buildings are—the noble cathedral, which was completed in 1363, the town-hall, the government-house, the artillery barracks, and the theatre. Of the squares the largest are—the old market-place, in which is a statue of Otho the Great; and the cathedral square, which is surrounded by handsome buildings and avenues of trees. The town has numerous charitable, literary, and scientific institutions, schools, libraries, and picture-galleries. It has also manufactures of silk, broadcloth, leather, gloves, tobacco, jewellery, pottery, beer, spirits, &c. A canal runs from the Elbe at Magdeburg to the Havel; steamers ply daily to Hamburg. Magdeburg is rich in historical associations; the most celebrated events in its annals are its capture by storm (May 10th, 1631) by the Austrian general Tilly, and again in 1806 by the French, who annexed it to the kingdom of Westphalia.

Aschersleben. [ASCHERSLEBEN.]

Burg. [BURG.]

Halberstadt. [HALBERSTADT.]

Quedlinburg, a walled-town, the birthplace of Klopstock, stands on the Bode, a feeder of the Saale, 30 miles S.W. from Magdeburg, and has 14,000 inhabitants, who manufacture beet-root sugar, spirits, and woollen-cloth. This place was long famous for its convent, the superiress of which was in spiritual matters subject to the Pope only, was a princess of the empire, and had a vote in the Diet. At the Reformation the abbess embraced the Lutheran religion, and the institution continued, but with greatly diminished means, till 1802, when the convent was sequestered. The abbey church is a fine building, and interesting on account of the tombs it contains; among these are the tombs of the emperor Henry I. and his wife Matilda.

Salzwedel, a walled-town, 54 miles N.W. from Magdeburg, stands on the Jetzel, which divides it into the Old and the New Town. It has six churches, two hospitals, a gymnasium, and 8000 inhabitants, who manufacture woollen-stuffs, gloves, needles, beer, spirits, &c.

Schönebeck, 7 miles (10 miles by railway) S.S.E. from Magdeburg, stands on the left bank of the Elbe, and has important salt-works and 7400 inhabitants, who manufacture tobacco, leather, chemical products, gloves, &c.

Stendal, a walled-town, entered by five gates, stands on the Uchte, 32 miles N.N.E. from Magdeburg, and has 6800 inhabitants, engaged in the manufacture of cloth, calico, and leather.

MAGELLAN. [MAGALHAENS.]

MAGGIORE, LAGO. [LAGO MAGGIORE.]

MAGHERA. [LONDONDERRY.]

MAGHERAFELT, Londonderry, Ireland, a post and market-town, and the seat of a Poor-Law Union, is situated on the Armagh and Coleraine road, in 54° 46' N. lat., 6° 37' W. long., distant by road

41½ miles S.E. by E. from Londonderry, and 117½ miles N. by W. from Dublin. The population in 1851 was 1390. Magherafelt Poor-Law Union comprises 25 electoral divisions, with an area of 155,904 acres, and a population in 1851 of 64,822. The town, which has been much improved by its proprietors, the London Salters' Company, contains a parish church, chapels for Roman Catholics, Presbyterians, and Methodists, National, Free, and other schools partially endowed. The other public buildings are the court-house and market-house, the bridewell, district dispensary, and Union workhouse. The chief occupation is the manufacture of linen, of which large sales are made at the weekly market. Quarter and petty sessions are held in the town. Fairs are held May 25th, August 25th, and October 29th.

MAGINDANAO. [PHILIPPINE ISLANDS.]

MAGNA GRÆCIA, was used to designate the south of Italy, in consequence of the numerous and flourishing colonies which were founded by the Greeks in that part of the country. The name it seems was not applied to the country north of Cuma and Neapolis. Pliny apparently considers Magna Græcia to begin at the Locri Epizephyrii ('Nat. Hist.,' iii. 15); but Strabo even includes the Grecian towns of Sicily under this name. The name does not occur, as far as we are aware, in the early Greek writers, but it is used by Polybius and succeeding Greek and Roman writers. It contained many cities far superior in size and population to any in Greece itself. The most important of these places were—TARENTUM, founded by the Lacedæmonians; SYBARIS, Croton, and Metapontum, by the Achæans; Locri Epizephyrii, by the Locrians; and RHEGIUM, by the Chalcidians—all in Italy; and in Sicily—SYRACUSE, founded by the Corinthians; GELA, by the Cretans and Rhodians; and AGRIGENTUM, by the inhabitants of Gela. [BASILICATA; CALABRIA; PAESTUM, &c.]

MAGNESIA. [KARIA.]

MAGUIRE'S BRIDGE. [FERMANAGH.]

MAHÉ. [HINDUSTAN.]

MAHON, PORT. [MENORCA.]

MAIDENHEAD, Berkshire, a market-town and municipal borough, partly in the parish of Bray, and partly in that of Cookham, is situated on the right bank of the Thames, in 51° 31' N. lat., 0° 42' W. long., distant 14 miles N.E. by E. from Reading, and 22½ miles W. from London by the Great Western railway. The population of the borough in 1851 was 3607. The borough is governed by 4 aldermen, or bridge-masters, and 12 burgesses, one of whom is mayor. The living is a perpetual curacy in the archdeaconry of Berks and diocese of Oxford.

Maidenhead, anciently called South Ealington, is a small but neat town, a little way from the Thames, on the Bath road. It consists of one long street, which is lighted with gas and paved. In the town are a market-place, a town-hall, and a jail, a plain modern chapel, places of worship for Wesleyan Methodists and the Countess of Huntingdon's Connexion, a National school, and almshouses for eight poor men and their wives. The bridge consists of seven semicircular arches of stone, and three smaller arches of brick at each end. The Great Western railway is here carried across the Thames by a remarkably fine brick bridge. The chief trade of the place is in meal, malt, and timber; there is an extensive brewery. The market is on Wednesday, and is a considerable mart for corn. There are three fairs. In the neighbourhood are Cliefden, the seat of the Marquis of Stafford, Taplow Court, the seat of Earl Orkney, and several other mansions. The scenery of the Thames just above Maidenhead is very beautiful.

MAIDSTONE, Kent, the county and assize-town, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on a declivity, on the right bank of the Medway, in 51° 16' N. lat., 0° 30' E. long., distant 27 miles W. by S. from Canterbury, 34 miles S.E. from London by road, and 56 miles by the South-Eastern railway. The population of the borough in 1851 was 20,801. The borough is governed by 6 aldermen and 13 councillors, and returns two members to the Imperial Parliament. The living is a perpetual curacy in the archdeaconry of Maidstone and diocese of Canterbury. Maidstone Poor-Law Union contains 15 parishes and townships, with an area of 35,806 acres, and a population in 1851 of 38,097.

According to Nennius this place was called *Cæsar Magusaid*, or *Medwig* (the town or city of the Medway). At a very early period Maidstone formed part of the possessions of the see of Canterbury; in the Domesday survey it is placed among the lands of the archbishop. Charters were granted to the town by Edward VI., Elizabeth, James I., Charles II., and George II. The town consists chiefly of four principal streets, which are well-paved and lighted, and contain many well-built houses. Water is supplied from reservoirs on the opposite bank of the Medway. The chief public building is the parish church of All Saints, which is one of the largest in the kingdom, and an excellent example of the perpendicular style: it has been recently restored in a very costly manner. There are also the churches of Holy Trinity, St. Peter's, and Tovil, and two other churches; with places of worship for Wesleyan Methodists, Independents, Baptists, Quakers, and Unitarians. All Saints College, founded in 1846, is held in a remaining portion of the old college of All Saints, suppressed by Edward VI. There was also a fraternity of Corpus Christi, on the suppression of which the buildings belonging to it, then called 'The Brotherhood

Hall,' were purchased by the corporation, who established the Free Grammar school, which has an endowment of about 60*l.* a year, and had 40 scholars in 1851. There are a Blue-Coat school for 60 boys and 40 girls; a Brown-Coat school for educating 200 boys and 100 girls, and for clothing and educating 24 boys and 24 girls; National schools; almshouses for 19 poor persons; a dispensary; a philosophical society; a mechanics institute; a library; a savings bank; county assembly-rooms; and a theatre. The county jail was erected in 1818, at a cost of 200,000*l.* A county court is held. There is a neat town-hall; and nearly opposite to it is a spacious corn-exchange. The archbishop's palace was originally erected in the 14th century, but has undergone many alterations. On the left bank of the river are cavalry barracks. There are at Maidstone numerous paper-mills, an extensive oil-mill, manufactories of felt and blankets, and several breweries. The navigation of the Medway has been greatly improved and the traffic increased by the construction of a lock two miles below the town. The imports consist chiefly of coal, timber, groceries, iron, and rags; the exports are mostly fruit, hops, Kentish ragstone from the quarries in the neighbourhood, and paper. The market days are Thursday and Saturday; fairs are held on February 13th, May 12th, June 20th, and a large hop fair on October 17th.

MAIMAITCHIN. [KIACHTA.]

MAINA. [LAONICIA.]

MAINE, LE, one of the old provinces of France, was bounded N. by Normandie, E. by Orléanais, S. by Anjou, or Touraine, and W. by Bretagne. It now forms the department of SARTHE (with the exception of the arrondissement of La-Flèche), the arrondissements of Laval and Mayenne in the department of MAYENNE, the arrondissement of Mortagne in the department of ORNE, and part of the arrondissements of Dreux and Nogent-le-Rotrou in the department of EUBRE-ET-LOIR. It was formerly divided into Haut-Maine, capital Le-Mans; Bas-Maine, capital Mayenne; Haut-Perche, capital Mortagne; Perche-Gouet, chief town Montmirail; Terres-Françaises, chief place Tour-Grise-de-Verneuil; and Thymerais, chief town Châteauneuf. Its length was about 113 miles from east to west; its breadth 59 miles, and its area about 3886 square miles. It was watered in the western part by the Mayenne; and in the central and western parts by the Sarthe and its branches.

Le-Maine, as well as its capital Le-Mans, derives its name from the Aulerici Cenomani, one of the Celtic tribes which inhabited it. The Aulerici Cenomani were among the nations who filled the north of Italy with a population of Gauls. Le-Maine was among the earlier conquests of the Franks, who established here a kingdom, which lost its separate existence when Clovis amalgamated the Frankish tribes under his sway.

Le-Maine was early formed into a county. It was conquered by William the Bastard, duke of Normandie (1068), a little before the conquest of England. Henry I., his youngest son, ceded the province (1100) to Hélie de la Flèche, on whose death (1110) it came to the counts of Anjou. On the accession of Henry Plantagenet, count of Anjou and Maine, to the duchy of Normandie (1151), and subsequently to the crown of England as Henry II. (1154), Maine again became part of the English possessions in France. On the confiscation of these by Philippe Auguste, the county of Maine was granted by that prince (1204) to Berengaria, widow of Richard I. of England, on whose death it probably reverted to the crown, and was granted by St. Louis, together with the county of Anjou (1246), to his brother Charles, count of Provence. Under Philippe VI. de Valois, who had inherited it before he came to the throne of France, it was reunited to the crown; but Philippe shortly after his accession invested his son Jean with the two counties, and when Jean became king he bestowed them on his second son Louis, who subsequently became count of Provence and king of Naples, in whose line it continued for some time. In 1440 René, who possessed the counties of Lorraine, Provence, Anjou, and Maine, bestowed the last on his brother Charles, who transmitted it to his son: but on the death of the latter (1481) the county of Maine was once more reunited to the crown, from which it has never since been permanently alienated.

MAINE-ET-LOIRE, a department in the west of France, bounded N. by the departments of Mayenne and Sarthe, E. by Indre-et-Loire, S. by the departments of Vienne, Deux-Sèvres, and Vendée, and W. by Loire-Inférieure. It lies between 46° 58' and 47° 46' N. lat., 0° 15' E. and 1° 18' W. long. Its greatest length from east by north to west by south is 77 miles; its greatest breadth, at right angles to the length, is 60 miles. The area is 2756.3 square miles. The population in 1841 was 488,472; in 1851 it was 515,452, which gives 187.34 inhabitants to a square mile, being 12.76 above the average per square mile for the whole of France. The department is formed out of the former province of Anjou, and it is named from the two principal rivers which traverse it.

The department has no mountains, nor are there any very high hills. The high lands which separate the basins of the Vilaine and the Loire occupy a small part of the north-western border, and the southern part is overspread by the prolongation of the heights of Gâtine, which bound the basin of the Loire on the south-west. The surface of the department consists for the most part of low hills covered with vineyards, or of gently undulating plains, divided by ditches and quickset hedges, and adorned with clumps of trees, whose foliage gives

variety and beauty to the landscape. The eastern side of the department is occupied by the chalk which encircles the Paris basin: a belt of land in the centre, extending across the department, first south-west along the eastern bank of the Sarthe to its junction with the Mayenne, and from thence south-east by Angers, Brissac, and Doué, is occupied by the formations between the chalk and the saliferous sandstone: the western side is occupied by the primitive rocks.

The department belongs entirely to the basin of the Loire, which river crosses it from east to west, and forms in its course several beautiful islands. The northern districts are drained by the Mayenne and its feeder the Oudon, by the Sarthe and its feeder the Loire, and by the Authion. [MAYENNE; SARTHE; LOIRE-ET-CHEV; INDRE-ET-LOIRE.] The Mayenne and the Sarthe unite above Angers and form the *Maine*, which after a course of about 5 miles falls into the Loire south by west of Angers. These last-named rivers are navigable; the Loire steamers between Nantes and Tours ply up the Maine as far as Angers. The chief feeders of the Loire from the left bank in this department are the Thouet and the Layon. The Sèvre-Nantaise and its tributary the Moine drain a small portion of the south-west of the department. The department is traversed by the Orléans-Nantes railroad, which passes through Saumur and Angers; it is also crossed by 9 state, 24 departmental, 17 military, and 33 parish roads. The climate is healthy, and the temperature mild; winter is rainy; west and south-west winds prevail.

The soil is generally fertile, yielding corn more than enough for the consumption. The chief crops are wheat, rye, barley, and pulse of all kinds. Other valuable products are hemp, flax, nuts, excellent fruits, &c. About 11,000,000 gallons of white and red wine are made annually, some of which is of good quality. Since 1838 a good deal of effervescing wine, resembling the true champagne and rivaling it in quality, has been manufactured. The department is famous for its melons. A considerable quantity of cider is also made. The forests of the department, which are extensive, consist chiefly of oak and beech. The pasturage is good, and great numbers of horses, mules, horned cattle, and sheep are reared. Deer and wild boars are met with in the forests; wolves and badgers are sometimes seen; foxes, weasels, and wild cats are more common. Feathered game is very abundant. Fish is plentiful; the rivers are infested by otters. Among the reptiles are vipers, adders, the common snake, and land-lizards.

Iron and coal mines are worked. Marble, granite, building stone, limestone, slate, and potters'-clay are quarried. The slate-quarries of the department, especially those of Angers, are vast excavations, worked right from the surface of the ground. They give employment to above 3000 men, who raise about 80,000,000 slates annually. The number of wind- and water-mills amounts to 622; of iron forges and foundries to 90; and there are 160 factories and workshops of different kinds, in which sailcloth, linen, cotton-handkerchiefs, flannels, paper, oil, cotton- and woollen-yarn, &c., are manufactured. There are also numerous tan-yards, sugar-refineries, distilleries, bleach-works, and dye-houses.

The department is divided into five arrondissements, which with their subdivisions and population are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Angers	9	88	154,945
2. Baugé	6	66	79,713
3. Segré	5	61	62,080
4. Beaupréau	7	75	121,375
5. Saumur	7	83	97,339
Total	34	373	515,452

1. Of the first arrondissement, and of the whole department, the capital is *Angers*, which is noticed in a separate article. [ANGERS.] Of the other towns named in this article the population given in each case is that of the commune. *Chalennes*, prettily situated at the foot of a hill between the Layon and the Loire, 12 miles by railway S. by W. from Angers, has 4927 inhabitants, who manufacture serge, handkerchiefs, and brandy. *Ponts-de-Cé*, a town of 4000 inhabitants, stands about 4 miles S. from Angers, at the entrance of the Authion into the Loire. It takes its name from the series of bridges that here connects the banks of the Loire with the intervening islands. These bridges form one of the most important passes of the Loire; they are partly of wood and partly of stone, and contain 109 arches in all, the entire length, including the causeway, being 3280 yards. The town consists merely of rows of houses built along the causeways connecting the bridges. About half a mile below *Ponts-de-Cé*, and on the right bank of the Loire, is an ancient Roman encampment, which is traditionally said to have been occupied by Cæsar. Some derive the name *Ponts-de-Cé* from *Pontes Cæsaris* (Cæsar's Bridges).

2. The second arrondissement of Baugé, has for its chief town *Baugé*, which stands east of Angers, in 47° 32' 32" N. lat., 0° 6' 11" W. long., 192 feet above the level of the sea, near the Couesnon, a feeder of the Authion, and has a tribunal of first instance, a college, and 3147 inhabitants, who manufacture coarse woollens, linen, and articles of horn. The old castle built here by Foulques Nerra is well

preserved, and forms now one of the finest hospitals in Maine. *Beaufort*, situated in an extremely fertile country on the right bank of the Loire, was formerly one of the most important towns of Anjou; but since the construction of the dyke along the Loire, on the summit of which the road from Tours to Angers runs and not as formerly through Beaufort, the town is much fallen from its former prosperity. It is however a well-built and still important town, with 5474 inhabitants, who manufacture sailcloth, zinc, leather, &c. There is also a considerable trade in corn, wine, oil, fruit, hemp, &c. *Durtal*, a town of 3452 inhabitants, is built at the foot and on the slope of a hill on the right bank of the Loire, which is here passed by a bridge of cut stone. There is a pretty château, with two battlemented and machicolated towers, on a hill near the town. Earthenware, tiles, bricks, and linen are manufactured here. *Longué*, on the Lathan, a feeder of the Authion, a few miles S. of Baugé, has 4287 inhabitants, who manufacture oil and leather, and trade in cattle, leeches, and agricultural produce. The leeches are found in a marsh lake traversed by the Lathan.

3. The third arrondissement is named from its chief town *Segré*, which is situated in the north of the department, on the Oudon, a feeder of the Mayenne, and has a tribunal of first instance, and 2631 inhabitants. *Lion-d'Angers*, a well-built little town, near the junction of the Oudon with the Mayenne, has a population of 2732. *Pouancé*, in the north-western angle of the department, has iron-smelting forges and blast furnaces, and 2821 inhabitants.

4. In the fourth arrondissement the chief town, *Beaupréau*, stands on the Erve, a feeder of the Loire, 34 miles S.W. from Angers, and has a tribunal of first instance, a college, and 3448 inhabitants. There is a fine turreted chateau near the town. Leather, flannel and other woollen stuffs, and linen are manufactured. *Chemillé*, E. of Beaupréau, on a river called Ionne, is an old town with 4049 inhabitants, who manufacture linen of all kinds, calico, cotton-yarn, and paper. *Chollet*, or *Chollet*, a busy manufacturing town in the south of the department, stands on the Moine, and has a tribunal of commerce, a council of Prud'Hommes, a college, and 8413 inhabitants. The town was burnt in the Vendean war by the Vendéans and the Republicans; but it has been since rebuilt. It is famous for the manufacture of linen and pocket-handkerchiefs; flannel, calico, cotton-yarn, and leather are also made; there is a brisk trade in these articles, and in cattle and agricultural produce. *St.-Florent-le-Vieil*, a town of 2025 inhabitants, stands on a steep hill above the left bank of the Loire.

5. In the fifth arrondissement of Saumur the chief town, *Saumur*, stands in a charming situation on the left bank of the Loire, in 47° 15' 34" N. lat., 0° 4' 17" W. long., 252 feet above the level of the sea, at a distance of 28 miles by railroad W. from Tours, and has tribunals of first instance and of commerce, a college, and 12,608 inhabitants. A magnificent stone bridge, of 12 arches, 310½ yards long, joins the town to an extensive suburb built on several islets in the river and along the dyke on its right bank. Saumur is built at the foot and on the slope of a hill, the summit of which is crowned by an old castle, now used as an arsenal. The lower part of the town is well built, and extends along the river, which is lined with quays. The higher part of the town is irregularly built; the streets are ill laid out, and some of them very steep. The principal buildings, besides the castle, are the churches of St.-Pierre, Nantilly, and Notre-Dame-des-Ardilliers (the convent formerly attached to this church is now an hospital); and the town-hall. The splendid barracks of Saumur, which were built between the Loire and the Thouet, were destroyed by fire, May 8th, 1848. Other objects of notice at Saumur are the public library, the theatre, and the baths. There are several fine promenades; the view from the castle over the valley of the Loire is very splendid. The environs of Saumur, along the left bank of the Loire, abound in druidical monuments. The chief industrial products are linen, cotton handkerchiefs, enamelled articles, beads, saltpetre, and leather. The line of steamers that ply between Nantes and Tours put in at Saumur. *Doué*, S.W. of Saumur, is a well-built little town, with 2590 inhabitants, who trade in corn, linen, iron, and cattle. It possesses one of the finest fountains in France, both in an architectural point of view and on account of the abundance of its waters. *Fontevrault*, in the south-eastern angle of the department, 9 miles from Saumur, has a population of 3639. The town owes its existence to the famous abbey of Fontevrault, founded in 1099, of which the great church, a magnificent monument of the 12th century, and all the other buildings now remaining, have been converted into a central prison for eleven departments. The abbey possesses great interest for an Englishman; it contains the cemetery of the Norman kings of England and the Counts of Anjou. The tombs of Henry II. and his queen, Eleanor of Guienne, of Cœur-de-Lion, and Elizabeth the Queen of John, alone have been saved from utter destruction.

The department forms the see of the Bishop of Angers. It is included in the jurisdiction of the High Court of Angers, and belongs to the 15th Military Division, of which Nantes is head-quarters. It returns four members to the Legislative Body of the French empire. There are at Angers a diocesan seminary, a preparatory theological college, a secondary school of medicine, an endowed college, and a primary normal school; and communal colleges at Baugé, Beaufort, Doué, and Saumur. The former University-Academy of Angers (like some others) is now suppressed and by recent legislation and a decree

of the emperor the department is now placed within the limit of the University Academy of Rennes.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Official Papers.*)

MAINE, the most northern of the United States of North America, extends between 43° and 47° 30' N. lat., and between 66° 52' and 71° 6' W. long. It is bounded E. by the British colony of New Brunswick; N. and N.W. by that of Lower Canada; W. by the state of New Hampshire; and S. by the Atlantic Ocean. The state, which is of very irregular form, has an area of about 35,000 square miles, or about 3600 square miles larger than that of Scotland. The population in 1850 was 538,169, or 16.66 to the square mile. The inhabitants being all free, the federal representative population is the same as the entire population in 1850; this according to the present ratio of representation entitles the state to send 6 representatives to Congress. To the Senate, like each of the other states, Maine sends two members.

Coast-line, Surface.—The coast-line extends in a straight line 230 miles, but following its windings it is above 900 miles long. It is greatly broken, and in the north-eastern part is skirted by numerous islands, generally small, but some of considerable size, inhabited and cultivated. The southern portion, as far north as Casco Bay, is rather high, but comparatively free from rocks and islands. Casco Bay extends from south-west to north-east 20 miles, with a mean width of five miles, and is landlocked by a chain of islands, the largest of which are the Great Gebrag and Sebascodegan. Along the bay are several good harbours. So far the coast trends from south-south-west to north-north-east. Between Casco Bay and Penobscot Bay the coast of the mainland runs nearly east and west; but numerous long peninsulas stretch out from it southward into the sea, and are divided from each other by narrow and deep indentations, which form excellent harbours. These bays contain numerous small islands. Penobscot Bay extends from St. George's Point (44° N. lat.) and the Fox Islands, thirty miles northward, to the mouth of the Penobscot River, nearly in a northern direction. It contains numerous wooded islands, some of which are considerable, as Long Island, which is fifteen miles long, and from two to three miles wide, Fox, Deer, and Haut islands. The remainder of the coast-line, from Penobscot Bay to Passamaquoddy Bay, resembles the coast west of Penobscot Bay, consisting of an alternation of promontories and indentations; but the promontories are commonly wider, and the inlets do not run so far into the mainland. The most extensive bays are Frenchman's Bay and Machias Bay. Frenchman's Bay is formed on the west side by the extensive island called Mount Desert Island. The approach to this coast, which runs from the south of west to the north of east, is also rendered difficult by numerous rocks and small islands. Though the frost along this shore is very intense in winter, and the numerous islands favour the formation of ice, the harbours are commonly open all the year round, the strength of the tide, which rises from 24 to 40 feet, preventing their being closed up.

The surface of the state is mostly hilly, except along the shore, which is flat and sandy; but it is only in the north-western and northern districts that the hills rise to any great altitude. This northern and north-western region is full of high hills and mountains, of which the highest, Mount Kathadin, between the east and west branches of the Penobscot River, rises to 5380 feet. The other lofty heights are the Bald mountains west of Moosehead Lake, Mounts Saddleback, Abraham, and Bigelow, and the Sugar Loaf mountains on the west of the Walloostook. These hills and mountains, though mostly isolated, occupy perhaps one-fourth of the region, and about as much is occupied by the lakes. The lowest part of this region is probably from 600 to 700 feet above the surface of the sea; and few settlements have been formed in it, except in the valley of the Androscoggin, at the southern extremity, where the hills are of moderate elevation. This region occupies more than one-fifth of the area of the state.

Between this region and the coast is the hilly region, which is well drained by numerous rivers with a rapid course. Swamps are here of rare occurrence and of moderate extent, except along the banks of the Matawamkeag, where they occupy a space fifty miles in length.

Hydrography, Communications.—Maine is in every part abundantly provided with streams, rivulets, or lakes. It is estimated that above a tenth of the surface is covered with water. The rivers in the southern district have a short course. The principal are the Piscataqua [NEW HAMPSHIRE], the Saco, and the Presumpscot, or Casco. The two latter rise on the southern and western declivity of the White Mountains in New Hampshire, the Saco running about 90 miles and the Presumpscot about 60 miles. The Presumpscot traverses a large lake called Sebago Pond, and falls into Casco Bay, a short distance north of Portland. In the northern part of the state is the Walloostook, or Main St. John, the chief branch of the St. John's River. It rises in Somerset county, and flows at first north and then north-east to its confluence with the St. Francis at the northern boundary of the state. The united river, under the name of the St. John, flowing at first east and then south-east, forms the boundary of the state to 67° 49' W. long., when it enters the province of New Brunswick, to which the remainder of its course belongs.

East of Casco Bay is a deep indentation which receives two considerable rivers, the Androscoggin and the Kennebec. The Androscoggin is formed by the confluence of two small streams in the north-eastern

part of New Hampshire, and enters Maine about 44° 15' N. lat. It then flows for some distance in a generally eastern direction, but near the town of Jay turns south and afterwards south-east, when it passes over the Pejepakeag Falls, and joins the Kennebec at Merry Meeting Bay, 16 miles from the sea. The Kennebec rises in several branches on the eastern declivity of the mountain-range which separates Maine from Canada: these branches, some of which have a course of 40 miles, unite in Moose-head Lake, a sheet of water about 30 miles long from north to south, with a breadth varying from 5 to 20 miles. From the south-western side of this lake the Kennebec issues in a large stream, and the general direction of the remainder of its course is to the south, but with considerable deviations to the west and east, until it reaches the mouth of the Androscoggin, after a course of about 180 miles. Though their courses are much obstructed by falls and shoals, both of these rivers are of great importance in the transportation of lumber. The tide ascends to Augusta, 50 miles from the sea; steamers of light draught and small vessels ascend to Augusta. Kennebec Bay, in which the Androscoggin and the Kennebec unite, stretches more than 20 miles farther south, being formed by the long peninsula of Phippsbury on the west, and by numerous islands on the east.

The upper branches of Penobscot River are numerous. All the waters which descend from the southern declivity of the high land which forms the southern border of the St. John's River, between 68° and 70° W. long., flow down to the Penobscot. The western or principal branch is formed by several mountain-streams uniting in Chesuncook Lake, from the southern extremity of which it issues, flowing eastward to Pemadumcook Lake, after leaving which it unites with the north branch and the Matawamkeag, two large rivers which come from the north. The united stream flows in a south-western course to its junction with the Piscataquis River, a large stream which falls into it from the west. The remainder of its course is a little to the west of south, and it falls into Penobscot Bay after a course of about 300 miles. The tides reach up to Bangor, 60 miles from the sea. Penobscot River is more navigable than the other rivers of Maine, as no obstruction occurs for 20 miles above Bangor, except its rapid current, and it is much used for the transport of lumber.

From Penobscot Bay to that of Passamaquoddy, a distance of 100 miles along the margin of the ocean, no large river empties itself into the sea. The last remarkable river is the St. Croix, or Scodoc, which forms the boundary-line in this part between the United States of North America and the British colony of New Brunswick. Its farthest sources are a number of lakes, curving from north to east, and extending in length about 40 miles; they are known as the Grand or Chiputnatook Lake. The river issuing from the last of this series of lakes runs southward until it unites with the outlet of another series called the Scodoc lakes. Hence its course is to the south-east, but with some considerable bends. It enters Passamaquoddy Bay after a course of about 100 miles. Passamaquoddy Bay is of a very irregular form, extending upwards of 20 miles from the mouth of the St. Croix River to Quoddy Point; on the side of Maine it forms a bay of considerable extent, called Kopscook Bay.

The estuaries of the above rivers, with the deep inlets and harbours, form the natural lines of communication belonging to the state. The only canal of any magnitude is the Cumberland and Oxford Canal, which connects Portland with Sebago Pond; it has 25 locks, and is 20½ miles long; but by an additional lock is connected with Saco River, and with Brandy and Long Ponds, giving a navigable length of over 50 miles.

The carriage-roads are generally well laid out and well maintained. The railways are extensive and important: above 450 miles are completed, and a great additional length is in progress or projected. The most important completed line is the Grand Trunk, originally called the Atlantic and St. Lawrence, which was finished in 1853, and forms a continuous line from Montreal in Canada to Portland in Casco Bay, Maine, a distance of 292 miles: of this railway the Maine portion, 149 miles long, is known as the Portland District railway, and has a branch from Mechanic Falls to Buckfield, 13 miles. Three other lines of railway meet or terminate at Portland: the Portland, Saco, and Portsmouth, 52 miles long, which runs to Portsmouth, New Hampshire, and unites Portland with Boston; a connected line called the Portland and Kennebec, which is completed to Augusta, 60 miles, with a branch 9 miles long to Bath; and the York and Cumberland railway, which is open to Saco River, 18 miles. The other lines in this state are—the Androscoggin Junction, 20 miles, connecting Androscoggin and Livermore; the Androscoggin and Kennebec, a broad-gauge line, from Danville to Waterville, 55 miles; the Bangor and Piscataqua, from Bangor to Old Town, 12 miles; the Calais and Baring, uniting the places so named, 6 miles; and the Franklin, from Machias Port to Whitneyville, 9 miles.

Geology, Mineralogy, &c.—The larger part of the rocks of the state is of the Igneous and Paleozoic formations. Igneous rocks, eruptive and metamorphic, occupy the greater part of the western and southern sides, and they appear in the Silurian districts about the middle of the state. Much of the north-western mountain region is granitic; Mount Kathadin and other of the loftier summits in the neighbourhood of Moosehead Lake, and the St. John River, are of granite; and it occurs largely about Augusta and elsewhere towards the south. Trap-dykes are very widely distributed; porphyries, mica, and talcose

schists, greenstones, soapstone, &c., abound. Lower Silurian strata occupy the whole centre of the state, except where broken through or transformed by intrusive rocks. The Lower Silurian series is here represented chiefly by strata of blue fossiliferous limestone and argillaceous schists. The Upper Silurian rocks occupy the north-west districts, including the valley of the Walloostock, and they also appear in detached portions quite across to Eastport, at the south-eastern corner of the state: these rocks are chiefly a light-gray limestone. In the most northern part of Maine the characteristic rocks are of the Devonian formation, consisting of strata of deep red-sandstone, which correspond to the old red-sandstone of Great Britain, crowning beds of schistose clay. Miocene and Pliocene strata, or the middle and upper series of the Tertiary formation, occur at Portland, Augusta, and elsewhere. Recent rocks are found in various places at the estuaries of rivers and along the coast. Raised beaches are met with in several localities.

Gold is said to be found in the tributaries of the Penobscot and Moose rivers. Iron-ore of excellent quality is found in considerable quantities. Traces of bituminous coal, outcrops of the carboniferous measures of New Brunswick probably, are said to have been discovered in the south-eastern districts between the Kennebec and St. Croix. Granite-limestone and marble of superior quality are largely quarried, as well for export to other states as for use in Maine. Lime is burnt to a great extent at Camden and Thomaston. There is a salt-spring at Lubec.

Soil, Climate, and Productions.—Along the sea-coast, and from ten to twenty miles inland, the soil is of moderate fertility, and frequently intersected with sandy and sterile tracts; but beyond this region the soil improves, and produces plentiful crops of grain, flax, and hemp. Between the Penobscot and Kennebec rivers is a very fertile tract of country. The tract between the Penobscot and Passamaquoddy has a strong moist soil, and is known as the White-Pine Land, from the tree which most largely covers it. The mountain districts are chiefly available for grazing.

The winter is very severe. From the 1st of November to the 1st of April the ground is covered with snow, and the rivers and lakes with ice. The summer on the sea-shore is very hot. The thermometer frequently rises to 90°, and sometimes to 100°; and the weather is subject to sudden and great changes. Vegetation commences late; the season of growth lasts from the middle of April to the middle of October, but growth is vigorous for little over three months, during which it makes rapid progress. Drought is frequent. The mean temperature is about 42°. In the year the thermometer ordinarily ranges 116°; between 96° above and 20° below zero. In the interior of the hilly region the weather, though not so warm, is much more regular. The climate is generally healthy.

A very dense forest covered Maine in its natural state, and still spreads over the greater part of it. The forest-trees consist principally of white pine, spruce, maple, beech, birch, white and gray oak, and constitute the principal wealth of the state, timber being its staple. The cultivated fields do not occupy one-twentieth part of the surface. Maize, which constitutes the principal food of the inhabitants, thrives well as far north as the valley of the Lower Penobscot River. Most other cereals are cultivated in this state. The fruit-trees of northern Europe thrive very well, especially pears and apples, as well as most of our vegetables.

Cattle and hogs are numerous, and afford articles of exportation. Deer were formerly abundant; wolves, bears, beavers, foxes, and squirrels are still common. The sea abounds in fish, especially cod; and the rivers and lakes are full of fish, especially salmon; large trout are common in the lakes in the interior.

Manufactures, Commerce, &c.—Maine is not to any great extent a manufacturing state; the chief branches of manufacture are cotton and woollen goods and iron. Very nearly half of the male population over 15 years of age (77,082 out of 162,711) are returned as employed in agriculture, while a very large number are occupied in the forests cutting timber, in the numerous saw-mills on the rivers preparing the timber for market, and in various employments more or less connected with agriculture and the timber trade.

The exports consist chiefly of the produce of the forests, as timber, lumber, boards, and potash, and of dried fish, beef, pork, and grain. For the year ending June 30th 1852 the value of the articles of domestic produce exported was 1,668,274 dollars; of foreign produce exported, 49,544 dollars; total, 1,717,818 dollars. The imports amounted in the same year to 1,094,977 dollars, of which 947,926 dollars were in American vessels and 147,051 dollars in foreign vessels. The imports consist mostly of manufactured articles from Europe, and salt, iron, and colonial produce from the West Indies, especially Cuba. This state possesses a larger amount of shipping than any other state in the Union except Massachusetts and New York; and a larger number of ships are now built in Maine than in any other state. In 1852 there were 354 vessels built in the state of the aggregate burden of 110,047 tons: of these 138 were ships, 63 brigs, 148 schooners, and 5 sloops and canal-boats.

Divisions, Towns, &c.—Maine is divided into 13 counties. Augusta is the political capital; but Portland is the commercial metropolis and most populous town in the state. These, with the other more important towns, we notice below: the population is that of 1850, but it

is proper to intimate that the term 'town' as used in Maine is equivalent to the English 'township,' and the Census Report does not discriminate the urban and rural population.

Augusta, the capital, is built chiefly on the right bank of the Kennebec River, at the head of steam navigation, 43 miles from the sea, and 595 miles N.E. from Washington, in 44° 18' N. lat., 69° 50' W. long.: population, 8225. The town is regularly laid out, and a fine bridge 520 feet long connects the main part with that which lies on the left bank of the river. The principal buildings are the state-house, which stands a little south of the town, the county buildings, state lunatic asylum, United States arsenal, several churches, schools, &c. Steamers ply regularly to the principal North Atlantic ports, and the Portland and Kennebec railway terminates here. Four newspapers are published here weekly.

Portland, the capital of Cumberland county, is the chief commercial city in Maine, and the third in importance in the New England states. It is finely situated on an elevated promontory on the south-west side of Casco Bay, 55 miles S.S.W. from Augusta: population, 20,815. The city is regularly laid out, and well built, especially in the more recent parts. The chief public buildings are the Exchange, which includes the post-office, custom-house, and United States court-rooms; the city-hall; the old custom-house; 18 churches; numerous high and public schools; an athensium; natural history society's museum, &c. Portland is a place of considerable trade. The foreign commerce of the city is principally with Europe and the West Indies. The coasting-trade is chiefly with Boston, with which port there is regular, and during summer daily, steam-boat communication. The exports are lumber, ice, fish, provisions, &c. Portland Harbour is capacious, safe and well sheltered, has a good entrance, and is seldom obstructed by ice. Four lines of railway terminate at Portland, and afford very complete facilities for communication with the neighbouring states and Canada. There is a very extensive manufactory of locomotives and railway-cars in the town. Two daily and seven weekly newspapers are published here.

Bangor, the capital of Penobscot county, occupies both banks of the Kenduskeag River, at its confluence with the Penobscot, at the head of steam navigation, 60 miles N.E. from Augusta: population, 14,432. The harbour is spacious and deep. The chief trade is in timber. The town has good railway and steam-boat communication with the other leading towns of the state. A bridge 1820 feet long, across the Penobscot just above the city, connects Bangor with the manufacturing village of Orrington. *Bath*, on the right bank of the Kennebec, 12 miles from the sea, and 28 miles S. from Augusta, population 8020, is a busy sea-port and commercial town. The shipping belonging to the town in 1850 amounted to 103,626 tons, of which 76,606 tons were engaged in the foreign trade. A branch of the Kennebec and Portland railway is carried to the town. *Belfast* is situated at the head of Belfast Bay, 30 miles from the sea, and 87 miles E. by N. from Augusta: population, 5051. The harbour is capacious, deep enough for the largest vessels, and is rarely obstructed by ice. The town possesses a considerable trade in the export of lumber and fish. Ship-building is carried on to some extent. There is regular steam-boat communication with the neighbouring ports. *Brunswick*, on the right bank and near the mouth of the Androscoggin, 29 miles S. by W. from Augusta: population, 4977. A large quantity of lumber is brought here for export, and there are extensive saw-mills both at Brunswick and at the village of *Topsham*, on the opposite side of the river. The two places are connected by a bridge, on which also passes the Portland and Kennebec railway. Bowdoin College and Medical School is situated at Brunswick. *Camden*, on the west side of Penobscot Bay, 36 miles E. by S. from Augusta, population 4005, possesses a good harbour, is somewhat largely engaged in the coasting-trade, especially in the export of lime, fisheries, and ship-building. *Calais*, on the right bank of the St.-Croix River, at the head of steam navigation, 133 miles E.N.E. from Augusta: population, 4749. Calais consists of an upper and a lower village; to the lower vessels of considerable burden ascend, and there is an extensive trade in the preparation and sale of lumber. The upper and lower villages are connected with each other and with other parts of the state by a railway, and with the British territory by a bridge, which is carried across the St.-Croix below the lower falls of that river. *Eastport*, on Moose Island, Passamaquoddy Bay, close to the British islands Campo Bello and Indian, 145 miles E.N.E. from Augusta: the population of the island, which is 4 miles long, and several smaller islands, is 4125. Eastport has a large lumber trade; and a considerable business in the foreign and coasting trade, the cod and mackerel fisheries, and ship-building. A United States garrison is maintained on the island, which is the most eastward portion of the territory of the United States. *Gardiner*, on the right bank of the Kennebec, at the confluence of the Cobbessacotee, 12 miles S. by E. from Augusta: population, 6486. A great amount of water power is afforded by the rivers, and immense quantities of timber are sawn here. The Portland and Kennebec railway passes through Gardiner. *Hallowell*, on the right bank of the Kennebec, 2 miles S. from Augusta: population, 4769. The town is regularly laid-out, and contains some neat buildings. The town has an extensive coasting trade; the chief exports are lumber and granite. Vessels drawing 9 feet of water can lie alongside the wharfs. The Portland and Kennebec railway passes through

Hallowell. *Saco*, on the left bank of the river Saco, 67 miles S.S.W. from Augusta, population of the township 5798, carries on a considerable trade in the preparation of lumber for export, and has nine large cotton-factories, a woollen-mill, and other establishments. The town is united by a bridge with *Biddeford* on the opposite side of the river, and the two places are closely associated in business interests. The Portland, Saco, and Portsmouth railway places these towns in connection with the railway system of the state. *Waldoboro*, on the left bank of the Muscongus River, where it opens into Muscongus Bay, 30 miles S.E. from Augusta: population, 4199. The inhabitants are engaged principally in ship-building, the coasting-trade, and the cod and mackerel fisheries. There are several mills and tanneries. *Wells*, on the coast, 80 miles S.W. by S. from Augusta: population, 2945. The town carries on a rather considerable coasting-trade; and has numerous mills, tanneries, &c. The Portland, Saco, and Portsmouth railway has a station here. *Wiscasset*, on the right bank of the Sheepscot River where it opens into Sheepscot Bay, 22 miles S.S.E. from Augusta: population, 2332. The town is well built, and contains the usual county buildings, churches, schools, &c. Although the foreign trade has somewhat declined, Wiscasset is still one of the most important sea-port towns in the state. *York*, on the coast, 92 miles S.W. from Augusta: population, 2930. The town is regularly laid out. Vessels of 250 tons can lie in the harbour. The coasting-trade and fisheries are the chief sources of employment.

Government, Judicature, &c.—The constitution was framed and adopted in 1820 when Maine was admitted into the Union as an independent state. By the constitution the right of voting in all state elections is vested in every white male citizen 21 years of age, not being a pauper or under guardianship, who has resided for three months in the town for which he proposes to vote. The legislative body, elected annually, consists of a Senate of not less than 20 nor more than 31 (at present 30) members, and a House of Representatives of not less than 100 nor more than 200 (at present 151) members.

Maine was discovered by one of the Cabots in 1497. It was afterwards visited by the French, who called the southern part, west of the Kennebec River, Maine, and the eastern part Acadie. About 1635 the English succeeded in making some settlements in the southern district. The first charter was proprietary, and granted in 1639 to Sir Ferdinand Gorges; but in 1652 Maine was united to Massachusetts under the title of the county of Yorkshire. In 1676 Massachusetts bought the country from the family of the Gorges, and from that time it remained annexed to that state, but advanced slowly, on account of the constant disputes between the English and French, and the incursions of the native Indians. Its progress became more decided from 1712, when England obtained full possession of it by the peace of Utrecht. After the declaration of independence Massachusetts opposed the attempts of the inhabitants to separate Maine from Massachusetts; but in 1819 it gave permission to the freemen of Maine to decide this question; and the majority of votes being in favour of a separation, Maine became in 1820 an independent member of the Union.

MAINTENON. [EURE-ET-LOIRE.]

MAINZ, *Mentz*, or *Mayence*, the Roman *Moguntiacum*, the capital of the province of Rheinhessen, in the grand-duchy of Hesse-Darmstadt, is situated in one of the most beautiful and fertile parts of Germany, on the left bank of the Rhine, a little below the junction of the Maine with that river, on the slope of a hill, in 50° N. lat., 8° 11' E. long., and has about 31,000 inhabitants. It is connected, by a bridge of boats over the Rhine, with the village of Kastel, or Kassel, included in the system of fortifications, which render Mainz one of the strongest fortresses in Europe, and a chief bulwark of Germany against France. The town is connected by railways with Frankfort, Manheim, and Paris. The distance to Paris by railway through Ludwigshafen, Forbach, and Nancy is 415 miles W. Besides the hill-side the town occupies a long alip of land on the river bank. The extent of the fortifications, which were much enlarged by the French while the city was in their possession, including the citadel and other strong works, exclusive of Kastel, is two leagues and a half. Kastel, which is united with Mainz as an outwork, has very extensive fortifications, which consist of four strong forts besides the strongly fortified island of Petersau, including which latter the works are of greater extent than even those of Mainz itself. The inner works consist of 14 principal and 13 smaller bastions. On the land side there are four great gates with double drawbridges, and toward the river several gates. The Rhine runs from south to north, and the Maine from east to west. About a mile above the junction of the two rivers is the village of Kostheim on the Maine, and a little farther up a bridge of boats, defended by a strong tête-de-pont. On the last settlement of the affairs of Germany by the Congress of Vienna, Mainz was assigned to the grand-duke of Hesse-Darmstadt, but it was decided that, as a fortress, it should belong to the German Confederation, with a garrison of Austrian, Prussian, and Hessian troops. This garrison in time of peace consists of 6000 men. The military governor, who retains his post five years, is alternately an Austrian and a

Prussian general. This great fortress requires for its defence a garrison of 30,000 men.

Mainz is on the whole an old-fashioned and ill-built town. The streets, with three or four exceptions, are narrow, crooked, and gloomy, though there are many handsome private houses and some fine public edifices. Of the 27 squares and market places the principal is the Parade, which is surrounded with avenues of trees. Of the 11 churches, of which only one is for Protestants, the most remarkable are the cathedral, the church of St. Ignatius, which is considered a model of beautiful ecclesiastical architecture, St. Peter's church, and St. Stephen's. The cathedral, founded in the 12th century, is 350 feet long, 140 feet wide, and has 14 altars and 20 chapels. It was much injured in the siege by the French in 1793, and under the government of Napoleon I. it was intended to pull it down, but it has since been repaired. Nothing however remains of the great treasures which it formerly possessed, or of its library, and even many of the fine monuments have been destroyed. The other public edifices comprise the grand-ducal palace (formerly the house of the Teutonic order), the arsenal, the palaces of the commandant and of the vice-governor, the episcopal palace, the theatre, &c. A bronze statue of Gutenberg, the inventor of printing, and a native of Mainz, modelled by Thorwaldsen, and cast in Paris, was erected in an open space opposite the theatre in 1837. The expenses were paid by subscriptions from all parts of Europe. A gymnasium has taken the place of the former university, and there are several schools. The city library consists of above 90,000 volumes, and in the same building there are cabinets of medals and of natural history, a collection of philosophical and mechanical instruments, a gallery of pictures, and a collection of Roman antiquities found in the vicinity of the town. The Eichelstein in the citadel is supposed to be a monument in honour of Drusus Germanicus, brother of the emperor Tiberius. Near the village of Zahlbach are the remains of an aqueduct said to have been built by the same Drusus. There are pleasant walks on the Rhine; the environs are very beautiful and the prospects over the surrounding country magnificent. Mainz is a free-port; it has manufactures of tobacco, soap, leather, glue, false pearls, musical instruments, porcelain, &c. The commerce in corn, wine, timber, and Rhenish products generally, is considerable. Steamers ply regularly to the chief towns on the Rhine. Two railroads run from Kassel, one east to Frankfurt-am-Main, the other north to Wiesbaden.

Mainz is supposed to have been originally a town of the Mediomatrici, who inhabited the left bank of the Rhine, and whose dominion ended in the year 72 B.C. In 13 B.C. Drusus founded the fortress of Maguntiacum, or Maguntiacum, on the site on which Kastel now stands. The town which sprung up near it did not extend under the Romans to the Rhine. It was destroyed by the Vandals in 406, and lay in ruins for some centuries, till it was rebuilt by the kings of the Franks. A new and brilliant epoch in its history commenced with St. Bonifacius, the apostle of the Germans, who was bishop of Mainz. Some affirm that the bishopric of Mainz was founded by Crescens, a disciple of St. Paul, who suffered martyrdom in A.D. 103. Others say that Bonifacius was its first bishop. In 1798 Mainz became the capital of the French department of Mont Tonnère; in 1816 it was ceded to the grand-duke of Hesse.

MAIO. [CAPE VERD ISLANDS.]

MAIRE, LE, the name of a strait that lies in the Southern Atlantic Ocean, on the eastern shore of Tierra del Fuego, between Staten Island and King Charles's Southland, along which it extends from Cape San Diego to Cape Good Success. This strait, which is situated in the route of vessels making for Cape Horn, is about 20 miles in length and width. It is free from rocks and shoals, but still some difficulties are encountered in traversing it from the north, on account of the prevalence of western and south-western winds, and a strong current which always sets through it from the south. Strait Le Maire was first traversed by the Dutchmen Le Maire and Schooten in 1616, from the former of whom it received its name.

MAJORCA, the English name of the largest of the Balearic Islands, which the Spaniards call *Mallorca*. [MALLORCA.]

MAKARIEW. [COSTROMA.]

MALABAR. [HINDUSTAN.]

MALACCA, a British settlement on the south-western coast of the Malay peninsula, between 2° and 3° N. lat., 102° and 103° E. long. It comprises the town of Malacca and a territory of about 1000 square miles, including the district of Nanning, which is of some value for its tin-mines. The population is estimated at about 60,000. The surface is undulating, the hills are covered with trees, and the valleys are swampy. The soil is generally adapted to tropical produce, but little of it is cultivated. Around the town of Malacca are extensive fields of rice, cultivated mostly by Malays. The other products are tin, sugar, sago, pepper, nutmegs, rattans, and timber. Malacca, with Prince of Wales's Island and Singapore, since September, 1851, have formed a separate province of the East India Company's possessions. The revenue of Malacca for the year 1851-52 was 9,275*l.*; the expenditure for the same year was 7,820*l.*

MALACCA, the capital of the British settlement of Malacca, is situated at the head of a small bay by the mouth of an inconsiderable river, in 2° 12' N. lat., 102° 16' E. long. The town presents a handsome appearance from the sea. The houses are mostly of stone, and

well built, and several of the streets are spacious and handsome. The principal public buildings are the town-house, court-house, jail, barracks, civil and military hospitals, and an Anglo-Chinese college. The population is about 16,000, mostly Malays and Chinese. There is a fort on the south side of the river, and nearly opposite is a small island, between which and the mainland is secure anchorage for vessels drawing not more than 18 feet water. Owing to a bar at the mouth of the river, the small harbour close to the town is only accessible to boats.

Malacca was built about 1250 by Sri Iscander Shah, king of the Malays. It was first visited by the Portuguese in 1507, and taken by Alfonso Albuquerque in 1511. It was taken from the Portuguese by the Dutch in 1640. It was taken possession of by the British in 1795, was restored at the peace of Amiens, but was soon afterwards taken again. In 1814 the Dutch recovered possession of the place. The town and fort with their dependencies were finally ceded to the British by treaty with the government of the Netherlands, in March 1824.

MALAGA. [GRANADA.]

MALAHIDE. [DUBLIN, County of.]

MALAR, LAKE. [SWEDEN.]

MALASIA. [MALAY PENINSULA.]

MALATIA (Malatiah), a town in Asia Minor, about 38° 27' N. lat., 38° 20' E. long., is built in a limestone plain on a small tributary of the Tokma-su, a feeder of the Euphrates, and contains only about 200 houses. The Tokma-su flows about 6 miles to the north of Malatiah, and joins the Euphrates at a considerable distance to the eastward. There is little or no wood near Malatiah, so that in summer it is exposed to all the violence of the sun's rays. Formerly the inhabitants used to reside here during the winter, and in summer and autumn to retire to Aspuzi; but the Turkish pasha having for a long time previous to 1840 occupied Malatiah as winter quarters, the inhabitants have been obliged to reside permanently at Aspuzi, and Malatiah itself has sunk into a state of ruin and decay, although it is still we believe the seat of a Kaimakan. The town occupies the site of the ancient *Melitene*, of which parts of the walls and old gateways still remain. *Melitene* was originally a Roman camp; from this a city sprung up, which became the capital of the Cappadocian province of *Melitene*. The province which gave name to the town was so designated from the *Melas*, the ancient name of the Tokma-su. According to Mr. Brandt, who visited Malatiah in 1835 at a time when it was deserted, the population then at Aspuzi numbered 2800 Turkish and 1123 Armenian families. About six miles south of Malatiah is the town or village of *Aspuzi*, the neighbourhood of which is subjected to a refined system of irrigation (an heirloom of remote antiquity), and is covered with verdant and shady gardens. Since the inhabitants of Malatiah have taken up their abode permanently at Aspuzi a bazaar has sprung up at the latter place, and all the comforts and conveniences of a town are to be found. Malatiah is about 2780 feet and Aspuzi about 2980 feet above the level of the sea; both places are very hot in summer and have a low temperature in winter. Malatiah derives its importance only from its being situated on the great caravan-road which leads from Sivas to Diar-bekr and Mosul, and from being one of the places to which the Kurds resort for the purpose of trade. (*London Geographical Journal*, vols. vi. and x.)

MALAY PENINSULA constitutes the most southern extremity of the continent of Asia, extending between the Gulf of Bengal and the Straits of Malacca on the west, and the Gulf of Siam and the Chinese Sea on the east. It is united to the continent at its northern extremity. Its most southern points form the northern shore of the Strait of Singapore. Kwi Point, in the Gulf of Siam, and the mouth of the Tenasserim River, which enters the Gulf of Bengal, may be considered as constituting its northern boundary; they are situated near 12° N. lat. Cape Burus, the most southern promontory of Asia, in 1° 15' N. lat., and Cape Romania, in 1° 17' N. lat. constitute the two extremities of the Strait of Singapore. The peninsula lies between 98° and 104° E. long. It is 750 miles long, with a width varying between 60 and 180 miles. Its surface may cover an area of about 80,000 square miles.

The peninsula is traversed by a mountain range, which is a continuation of the Samroiyet (that is, three hundred peaks) Mountains, which between 12° and 14° N. lat. separate the valley of the Tenasserim River from the streams which fall into the Gulf of Siam. This chain, which in this part rises in numerous peaks to the elevation of 3000 feet, sinks lower south of Kwi Point, where it traverses the isthmus of Krah, or Kraw, the narrowest part of the peninsula, between 8° and 12° N. lat. The mountain range on this long isthmus, though of moderate elevation, occupies together with its offsets the whole country from one sea to the other, except at its southern extremity, where an extensive tract of alluvial land, inclosing the Bay of Chai-ya, occurs on the shore of the Gulf of Siam.

The isthmus of Krah lies due north and south. At its southern extremity, between 8° and 9° N. lat., the Malay Peninsula turns to the south-east, and preserves this direction to its most southern point. Between 6° 30' and 8° N. lat. the mountains seem to be higher than on the isthmus, but this fact is not established, as no European has ever traversed this country. The tract between 5° and 6° 30' N. lat., appears to be the highest part of the mountain range, the peak of Titch Bangsa, opposite the town of Queda, rising, according to Crawford, to 6000 feet. The mountains in this part occupy the greatest part of the country, leaving only a low level tract, about seven or eight miles

COCOS. DIV. VOL. III.

in width, along the Gulf of Bengal, which is swampy and mostly covered with jungle, but when cultivated yields rich crops of rice and paddy. On the eastern coast the level tracts are probably more extensive, but the offsets of the mountains in some parts approach near the sea-shore, as Cape Patani and Rocky Point.

South of 5° N. lat. is the widest part of the peninsula. The interior or mountain region of this part is little known, but it is certain that it is less elevated than the country farther north, and the summits of the hills are more rounded. The level tract along the Strait of Malacca widens considerably, being about 18 miles in breadth north of 4° N. lat., and more than 20 miles in breadth south of that parallel; but along the sea-shore a few isolated hills rise to a moderate height, as Rachado Point and others. The range forming the water-shed between the rivers which fall into the Strait of Malacca and the Chinese Sea does not occupy the centre of the peninsula, but is nearer the western than the eastern shores. The level country along the Chinese Sea is also, so far as is known, much more extensive near the town of Pahang, and contains a lake called Braugh, 50 miles in circumference. On the eastern boundary of the district of Malacca is an elevated summit, the Gunong Leadang of the natives, and Mount Ophir of the Portuguese, whose summit is estimated to be 4000 feet high. Proceeding farther south, the mountains subside into hills; but even along the Old Strait, which divides the island of Singapore from the continent, the country presents a rocky and elevated shore, and its surface is strongly undulating, though it can hardly be called hilly. Towards this extremity the level country along the Strait of Malacca and the Chinese Sea is of inconsiderable width.

The comparatively small width of this peninsula and the disposition of the mountain range prevent the formation of considerable rivers. The largest which are known are the Muar River, which forms the southern boundary of the district of Malacca and falls into the strait of that name, and the Pahang River on the eastern side of the peninsula. Both rivers are navigable before they issue from the mountains, and are separated by a portage of not more than 300 yards. The Pahang River flows 200 miles under the name of Suruting, and falls into the Lake of Braugh, from which it issues under the name of the Braugh River, but soon takes that of Pahang River. At its mouth, near Pahang, are four large islands, planted with cocoa-nut and palm-trees. It is probable that there are other rivers, navigable at least for a considerable extent, but they are not known. The number of small rivers is very great, and there probably is no country better watered than this peninsula.

The climate differs on the eastern and western sides of the peninsula. The eastern resembles the coast of Coromandel and of Cochin China proper, as the mountain range interrupts the clouds brought by the south-west monsoon, during which period the dry season prevails. But the country is exposed to the full effects of the north-east monsoon, and the wet season commences in the beginning of November and continues till March. The northern part of the western coast is exposed to the south-west monsoon, and in climate resembles Aracan, having its rainy season in our summer, and its dry season in our winter. The southern portion of the western coast differs in climate from all other countries in Southern Asia. It constitutes the eastern side of a large valley, running from north-west to south-east, in the centre of which the Strait of Malacca extends like a large river. On the north-east this valley is sheltered by the mountain range which traverses the peninsula in its whole length, and on the south-west by the mountain chain which traverses the island of Sumatra. Thus this country, as well as the low eastern coast of Sumatra, is perfectly sheltered against both monsoons, the north-eastern and the south-western. Accordingly the regular succession of dry and wet seasons is unknown. Showers of rain fall in every month of the year, but more abundantly in our summer. They moderate the heat of the atmosphere, and maintain a vigorous vegetation. No gales are known to occur, and no winds except the sea and land breezes. The heat is not so insupportable as in other countries near the equator; and though during the day the sandy shores are heated to a great degree, the air is cooled sufficiently during the night. The range of the thermometer amounts hardly to 10° or 12° in the whole year.

The soil is composed of a tough red clay, or of a black earth similar to peat; in many places it yields rich crops of rice. Besides rice the inhabitants live on plantains and some other vegetables; also on fruits, in which this country, especially towards the south, surpasses all other countries. The cultivated fruits are chiefly pine-apples, mangosteens, durion, shaddock, and oranges. The country is generally covered with high trees, even on part of the mountains, but the teak-tree does not occur. The variety of trees and plants is very great. Rattans are exported in great numbers. Among the miscellaneous products of the peninsula are comprised bamboo, areca-palm, sago, caoutchouc and many other valuable gums and resins, drugs, nutmegs, cloves, cinnamon, tobacco, coffee, sugar, cotton, indigo, &c. Ivory and horns are exported; grain is imported from Sumatra and Bengal.

Cattle are few in number, but buffaloes abound. No sheep are kept; hogs and fowls are plentiful. In the uncultivated tracts and woods tigers, leopards, and rhinoceroses are frequently met with, and sometimes elephants. Among birds the swallow, which makes the

edible nest, is the most remarkable. Fish is extremely plentiful, and constitutes one of the most common articles of food.

The most important articles of commerce are from the mineral kingdom. Gold is found in all the rivers, and also got from mines. A sufficient quantity of this metal is collected to justify the name of *Chersonesus Aurea*, or the Golden Chersonese, which the ancients gave to this country. Tin is still more abundant, and seems to occur in the whole range from the isthmus of Kra to the southern extremity, but not in the Samroyet range, north of the isthmus. Part goes to Pulo Penang, Malacca, and Singapore: part is exported from the harbours on the Gulf of Siam to China. Other metals are not noticed.

The bulk of the population consists of Siamese and of Malays. The former occupy the isthmus of Kra and the districts north of 6° 40' N. lat., and the latter the remainder of the peninsula. The Malays of this country have not attained that degree of civilisation which is found among the inhabitants of Sumatra and Java. They show little industry in cultivating the ground, and still less in the mechanical arts. Their principal occupation is fishing. The language of these nations is different. The Malay race and language seem to have spread over all the islands of the eastern seas from Madagascar to Easter Island; but the great body of the race inhabits the larger islands of the Indian Archipelago, which is from this circumstance sometimes called *Malasia*—a name which comprises Borneo, Celebes, the Moluccas, the Philippines, the Sunda Isles, &c. In person the Malays are short and robust, height about 5 feet 2 inches, face round, complexion generally brown, mouth wide, teeth remarkably fine, eyes small and black, hair long, coarse, and black. The Malays of Java are the most advanced in civilisation. They are acquainted with agriculture and some mechanical arts, have made some progress in medicine and music, and are devotedly fond of commerce and navigation, and not a little addicted to piracy. Most of the Malay tribes are Mohammedans.

In the interior there are two other nations: the Jakong, or Benua, inhabit some wooded plains towards the southern extremity of the peninsula; they are of a copper-colour, their hair is straight, and their features resemble those of the Malays. They have no fixed habitations, and live by the produce of the chase. In the interior, between 6° and 8°, live the Samanga, who seem to belong to the native Australian race. They resemble the African negroes in their features, and have woolly hair. In stature however they are much shorter, their average height not exceeding 4 feet 8 inches. They have no fixed habitations, they live in the forests and mountains on the produce of the chase, and eat every kind of animal food, even reptiles. They are extremely timid, and have little intercourse with their neighbours. The whole of the Malay peninsula is thinly inhabited, and many extensive districts in the interior are unpeopled. The whole population perhaps does not exceed 1,000,000.

The northern part of the peninsula, as far south as the Bay of Chai-ya, is immediately subject to the King of Siam. On that bay are two harbours, called Chai-ya and Bandon, and on the opposite western coast is the harbour of Phunga, or Pongo, from which a commercial road traverses the peninsula to Chai-ya and Bandon. The produce of the island of Junk Seylon, or Salanga, and also European goods, are transported from Phunga across the isthmus to Bandon and Chai-ya, and thence shipped to Bangkok. From the island of Kos Sammi, or Pulo Carnam, the Chinese fetch cotton and edible nests; 10 or 15 junks arrive annually for that purpose.

That portion of the peninsula which lies between the bay of Chai-ya and Cape Patani is partly governed by Malay sovereigns, dependent on the King of Siam, and partly belongs immediately to Siam. The town of Ligar is said to have 5000 inhabitants, Malays, Chinese, and Siamese. A few Chinese junks arrive annually here for cotton, tin, pepper, and rattans. The same articles, and in addition to them sapan-wood, are exported from the towns of Talung and Sungora, which lie opposite the mountainous but fertile island of Tantalum. A road begins at Talung which crosses the peninsula to the small town of Trang, and is passable for elephants. Patani is the most southern of the small kingdoms subject to Siam. It is more fertile and productive than the other Malay states. Its capital was once much visited by vessels from Hindustan in their voyages to Siam, Cochinchina, and China, but at present it is rarely resorted to. It has intercourse with Singapore; it exports much rice, salt, and a little tin.

The kingdoms of Calantan and Tringano on the eastern, and that of Queda on the western side of the peninsula are only nominally dependent on Siam, and their commercial produce, consisting of gold, tin, and pepper is brought to Singapore. Tringano, situated at the mouth of the little river Tringano, seems to be a considerable place. From Queda a commercial road, passable for elephants, leads across the peninsula to Sungora; this road is much frequented. Another communication connects the mouth of the river Muda in Queda with the town of Patani. For a considerable distance the goods are conveyed in boats on the river, but still this road is not much frequented. The British colony of Pulo Penang, or Prince of Wales Island, is partly situated within the kingdom of Queda. [PENANG.] The town of Queda is a small place. Its commerce was formerly considerable, but has been nearly destroyed by the establishment on Prince of Wales Island. A few miles farther up is Alustar, a more populous place, and the favourite residence of the princes.

The southern extremity of the peninsula is divided between the kingdoms of Pahang and Johore on the eastern side, that of Rumbowé in the interior, and those of Salangore and Perak on the western coast, together with the British colony of Malacca. [MALACCA.] These kingdoms are independent, and under the protection of the British. None of the commercial places in these states are of importance; they send their produce, consisting of gold, tin, and pepper to Malacca and Singapore. Perak contains the most productive tin-mines in the peninsula, and in Salangore also some rich tin-mines have been opened, not far from Cape Rachado. The islands lying in the Chinese Sea, as far as the Nantnas, are subject to Johore. Between the towns of Malacca and Pahang there is a communication, which is much favoured by the water-carriage on the river Suruting, a branch of the Pahang River, and also on the Pahang.

(Marsden, *History of Sumatra*; Crawford, *Embassy to Siam and Cochinchina*; Finlayson, *Journal of a Mission to Siam and Huh*; and *Notices of the Indian Archipelago*, &c., collected by J. H. Moor, Singapore, 1837.)

MALDON, Essex, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the right bank of the Chelmer, about a mile above its junction with the Blackwater River, in 51° 44' N. lat., 0° 40' E. long., distant 9 miles E. from Chelmsford, 37 miles N.E. by E. from London by road, and 44 miles by the Eastern Counties railway. The population of the municipal borough in 1851 was 4568; that of the parliamentary borough was 5888. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The livings are in the archdeaconry of Essex and diocese of Rochester. Maldon Poor-Law Union contains 32 parishes and townships, with an area of 81,260 acres, and a population in 1851 of 22,138.

The town of Maldon consists chiefly of two principal streets, at right angles to each other; it is lighted with gas. The town-hall is an old building. All Saints church is a very ancient edifice. St. Mary's parish church, and chapels for Wesleyan Methodists and Independents, are the other places of worship in the town. Of St. Peter's church only the tower remains. The Grammar school, founded by Alderman Breeder in 1608, had 12 scholars in 1850. There are National and British schools, and a savings bank. A county court is held. The market-day is Thursday. Fairs are held on the first Thursday in May and on September 13th. There are malt-houses, breweries, boat-building yards, sail-lofts, cooperages, soap-works, and iron-foundries; and on the Blackwater extensive salt-pans, and fisheries. The haven is convenient, and vessels of 200 tons burden can come up to the town at spring tides. The number and tonnage of vessels registered as belonging to the port on December 31st 1853 were as follows:—Under 50 tons 111, tonnage 3196; above 50 tons 48, tonnage 4741. During 1853 there entered the port 1220 vessels, tonnage 76,273; and cleared 1141 vessels, tonnage 47,104. Coal, iron, corn, &c. are brought into the port in considerable quantities.

MALEDIVA ISLANDS (the *Maldives*) lie in the Indian Ocean, and extend between 72° 48' to 73° 48' E. long., and from 7° 6' N. lat., to 0° 40' S. lat., or nearly 550 miles. They consist of several groups, or Atolls, surrounded by coral reefs, all of which however are not continuous. The most northern Atoll is about 350 miles from Cape Comorin, the nearest point of Hindustan. The name is derived from the language of Malabar, in which the Sanscrit *Dwipa*, 'an island,' is corrupted into *Diva*, and from the name of the largest of these islands, which is called *Mali*.

The sovereign of these islands styles himself Sultan of the Thirteen Atolls and Twelve Thousand Islands, but the actual number of these islands is probably more than treble or fourfold this number. They are inclosed and protected from the sea, which during the south-west monsoon is violently agitated, by narrow strips of coral-reefs, which surround them like a wall. This protecting wall is either circular or oblong, and contains breaks, which constitute convenient passages for vessels or boats to enter. The number of these coral-reefs is fourteen, thirteen of which are situated to the north of the equator. They lie on a long sand-bank, to the edge of which their outer sides extend, and beyond them there are no soundings. The channels which divide these Atolls, or Atollons (for so they are called), are in some places deep and safe. They are passed by the vessels which are bound to Ceylon or the Bay of Bengal, the Malediva Islands lying across the direct route to these places. Two of these navigable channels are south of the equator: the Addon, or south channel, and the Equatorial Channel, which are south and north of the island of Addon respectively. North of the equator are first, the One and a Half Degree Channel, the widest and safest of all these channels, and frequently used by ships proceeding eastward in the westerly monsoon: the Colloman-dous Channel, and the Cardiva Channel, all of which seem to offer a safe passage, but the last is not used at present, though it appears to have been much frequented two centuries ago.

Within the Atolls the sea is not agitated by storms, and there are always soundings in 20 or 30 fathoms of water. The islands are generally situated along the inclosing coral-wall, the central part of the Atolls containing only few of them. The islands are all small; not many of them exceed a mile in length and breadth, and a few are less than half a mile. They are generally circular or lozenge-shaped.

Many are mere narrow strips, 50 or 100 yards broad, forming a circle, which incloses a lower tract, filled up with broken coral-rocks, and dry at spring-tides. Within this ring there is sometimes a considerable depth of water, from one to ten fathoms, so that a perfect lagoon is formed. The highest part of the islands is from 6 to 14 feet above water. Their surface consists of sand, about 3 feet thick, the top part of which is mixed with vegetable matter, forming a black light sandy soil. Beneath the sand is a soft sandstone, resembling particles of beech-sand indurated. This sandstone is about two feet thick, below which depth it softens again to sand, and here fresh water is found. All the inhabited islands have fresh water, and also some which are not inhabited.

All the islands are covered with a thick impenetrable jungle, among which there are many fine large trees, as the Indian banyan fig-tree, the candoo-tree, the breadfruit-tree, and others. The bamboo grows on some islands, but is scarce. On some of the islands are small plantations of Indian corn and sugar-cane. A little cotton is grown, from which a small quantity of cloth is made. Two kinds of millet are cultivated. The inhabitants live mostly on fish and the cocoa-nut palmas, which are cultivated with care. A few cattle are found only on the Mali or Maldiva Atoll, but there are no sheep or goats. The common fowl is very abundant. A few cats are kept to keep the houses clear of rats and mice, which are very numerous. The 'flying fox,' as it is called in India, a large species of bat, is very common. Fish is very abundant, and sharks are common and dangerous. Turtle are common. Cowries are collected and exported to a great amount.

The inhabitants are Mohammedans. Two languages are in use among them—the common, which seems to be peculiar to the people, and the Arabic, as a learned language. They have also a peculiar alphabet, which is written from right to left, and the vowels are indicated by points, as in Arabic. The whole population may amount to between 150,000 and 200,000. They are governed by a chief called sultan, who sends annual presents to the British governor of Ceylon, receiving others in return. He resides on the Mali or Maldiva Atoll, which contains the largest of the islands, called Mali; its circumference is about 7 miles. Spoken of collectively as a kingdom the Maldives are called by the natives 'Male-Rague.'

The inhabitants bring cowries, coir, cocoa-nut oil, turtle-shell, salt-fish, rope-mats, and some smaller articles to Bengal, Sumatra, and elsewhere, whence they import rice, sugar, silk-stuffs, broadcloth, hardware, and tobacco. They arrive at Calcutta in June or July with the south-western monsoon, and depart from that place in the middle of December with the north-east monsoon.

(London Geographical Journal.)

MALINES. [MECHELEN.]

MALLING, TOWN, or WEST MALLING, Kent, a small town, formerly a market-town, and the seat of a Poor-Law Union, in the parish of West Malling, is situated in 51° 17' N. lat., 1° 23' E. long., distant 9 miles W. from Maidstone, and about 29 miles S.E. from London. The population of the parish in 1851 was 2021. The living is a vicarage in the archdeaconry of Maidstone and diocese of Canterbury. Malling Poor-Law Union contains 22 parishes and townships, with an area of 43,305 acres, and a population in 1851 of 19,555.

A Benedictine monastery was founded at Malling at a very early date. Many parts of the conventual buildings still remain, especially a portion of the west end of the church, which is a fine specimen of Norman architecture. The parish church is a spacious and handsome building, with a Norman tower at the west end. A parochial school is partly supported by endowment. There is a savings bank. Fairs are held in August, September, and October: the principal fair, that in September, is chiefly for horses. Numerous remains of moats and encampments, probably Roman, exist in the neighbourhood.

MALLORCA, or MAJORCA, the largest of the Balearic Islands, is situated in the Mediterranean, off the eastern coast of Spain, to which kingdom it belongs. It lies between 39° 20' and 39° 57' N. lat., 2° 20' and 3° 30' E. long., about 110 miles from the coast of Cataluña, and 120 miles from that of Valencia. It is nearly 60 miles long from east to west, and in some parts 40 miles broad from north to south. The circumference is 143 miles. The area is about 1410 square miles. The population is about 182,000.

The general surface of the country is hilly. On the north-west side a mountain range crosses the island, the highest summit of which, the Puig de Torellas, is above 4500 feet high. Another range of lofty hills runs parallel to this, through the heart of the island, and high grounds in many parts border on the coast. The eastern and southern districts are the most level. Some of the plains are liable to be inundated by the periodical rains, on which account they are generally used as pasture-land. Near Campos on the south, and near Alcudia on the north of the island, are marshy tracts which generate malaria to a very pernicious extent. The general aspect of the country is extremely beautiful and picturesque. The roads in the interior are very rugged and stony, and are traversed only by mules, which form the ordinary mode of conveyance, and by carts of clumsy and primitive construction.

The climate of Mallorca is delightful; the winters being mild, though occasionally stormy, and the heats of summer being tempered

by the sea-breezes and the vicinity of the mountains. The extreme fertility of the soil is mentioned by Strabo. Firs, holm-oaks, and wild olives, adorn the slopes, and often cover the summits of the higher mountains; lavender, rosemary, thyme, marjoram, saffron, and roses, perfume the air; and the valleys and level tracts produce some corn and wine, oil, and fruit in abundance. The date-palm and the plantain attain their full size, though seldom yielding fruit. The valley most famed for beauty and fertility is that of Soler, 11 or 12 miles in circumference, abounding in orchards of orange and lemon trees, and hemmed in by mountains luxuriantly clothed with wood.

Three rivers of no great size fall into the sea on the southern coast. One of these enters the sea beneath the ramparts of Palma. It is almost dry in summer, but in the rainy season it is very full and impetuous. Two other small rivers reach the sea between Cabo Blanco and Cabo Salinas. Small streams are very numerous.

Mallorca produces wheat, barley, and oats; wines of excellent quality; olive-oil in large quantities; hops, vegetables, fruits, particularly melons, oranges, and citrons, all of superior flavour; honey, hemp, wool, and a little silk. Mules and asses, sheep, goats, horned cattle, and pigs are bred in considerable numbers; poultry and game are abundant. Olive-oil, wine, brandy, fruits, saffron, flax, and hemp are exported. The imports are corn, salt-beef, iron, hardware, sugar, coffee, spices, tobacco, rice, cutlery, and other made goods, and articles of clothing. With the exception of a few foxes and hawks the island is free from beasts and birds of prey.

The geology of Mallorca is but imperfectly known. Granite and porphyry are said to be found, but the generality of the rocks are of secondary or tertiary formation. There is slate, fine marble of various colours, with abundance of sandstone, freestone, and chalk. Salt is procured by the evaporation of sea-water in the low grounds about Campos.

The manufactures of Mallorca are linen-cloths (coarse and fine), silk-stuffs, and woollen goods, as tapestry, blankets, sashes, and corded stuffs. Brooms and baskets are made of the leaves of the palm.

Palma, a city, is the capital of the island. It was one of the two principal towns in the time of Strabo, and is on the south-east of the island, picturesquely situated on a slope in the bight of a deep bay, 10 or 12 miles wide, formed by the capes Blanco and Cala Figuera. The population in 1845 was 40,514. The city, though walled and fortified, could not sustain a regular siege. The streets are in some parts narrow and mean, in others wide and regular; the houses are large and without external ornament, mostly in the Moorish style of architecture, and some are built of marble. Palma is the see of a bishop, who is a suffragan of Valencia. The cathedral, a large gothic edifice of much simple beauty, was built in the beginning of the 13th century by James of Aragon, surnamed the Conqueror, who is interred within its walls. Attached to the cathedral is a spire of such remarkable delicacy and airiness that it has received the name of the Angel's Tower. There are many other religious edifices in Palma, five parish churches, and numerous buildings which belonged to the conventual establishments, together with several hospitals and two colleges. Ferdinand V. founded a university here in 1483. The other public buildings are—the episcopal palace; the royal palace, a very ancient edifice, the residence of the captain-general or governor of the island, comprehending also an arsenal, a magazine, and a prison; the town-hall; and the house of contraction, or of mercantile assembly and judicature, a gothic edifice of remarkable beauty. Palma, though in the 13th century one of the chief markets of Europe, has now comparatively but little commerce. Its port is small, and will only admit vessels of little draught. Within and without the city are to be seen numerous evidences of the superior size, population, and commercial importance of Palma in past ages.

The other principal towns of Mallorca are the following:—*Alcudia*, on the north-east coast, on a neck of land between the two bays of Alcudia and Pollenza, stands on a rising ground, and is fortified with ancient walls of great height. Some centuries ago it was a large and flourishing city, but is now in a state of decay, with a population of only 1000. *Arta*, in the northern part of the island, on a range of hills which extend eastward to Cape Para: population 4000, who manufacture coarse linens and woollens, and are employed in fishing. *Llunyador*, 17 miles E.S.E. from Palma, is well built, and has manufactures of woollens and linens: population, 7112. *Manacor*, 30 miles E. from Palma, stands in a fertile plain. It is the see of a bishop. The population in 1845 was 9642. *Pollenza* (the Pollentia of Strabo), 28 miles N.E. from Palma, stands 2 miles W. from the Bay of Pollenza. The bay is large and well sheltered. The town contains a handsome church, and has manufactures of black woollen cloth: the population in 1845 was 6402. There are several other towns of smaller size, and numerous villages.

Castilian is spoken by the upper and middle classes, but the language of the lower orders is a mixed dialect of Castilian, Catalanian, and Arabic.

A sketch of the history of these islands is given in the article BALEARIC ISLANDS.

(Strabo, 167, *Casaub.*; Mariana, *Historia General de España*; Laborde, *Itinéraire Descriptif de l'Espagne*; Dalmeto and Mut, *History of the Balearic Kingdom*; St. Sauveur, *Travels through the Balearic and Pithiustan Islands*; Macgregor, *Commercial Statistics*.)

MALLOW, county of Cork, Ireland, a market-town, parliamentary

borough, and the seat of a Poor-Law Union, is situated on the river Blackwater, in 52° 8' N. lat., 8° 38' W. long.; distant 19½ miles N.N.W. from Cork by railway, and 20½ miles by road; 145 miles S.W. from Dublin by railway, and 150½ miles by road. The borough returns one member to the Imperial Parliament. The population in 1851 was 5436, besides 2034 inmates of the workhouse. Mallow Poor-Law Union comprises 21 electoral divisions, with an area of 154,358 acres, and a population in 1851 of 42,145. The suburb of Ballydaheen, on the right bank of the river, is connected with the town by a bridge of 15 arches. The principal part of the town lies on the left bank of the Blackwater, and consists of one leading street, with a number of smaller streets on either side. Many of the houses in the main street are well built, and some of a superior description stand at the west end. The town is lighted with gas and paved. Besides the parish church, a handsome edifice built in 1820, there are chapels for Roman Catholics, Independents, and Methodists; two National schools; a reading room, a public library; a neat spa-house, court-house, barrack, bridewell, infirmary, fever hospital, and Union workhouse. Saltworks, tanneries, and a brewery are in the town. There is a considerable resort of visitors to the mineral spring. Quarter- and petty-sessions are held in the town. Fairs are held five times a year. The market days are Tuesday and Friday. The Circular Drive, a road 5 miles in length, affords an agreeable view of the highly-improved environs on both sides of the river. The beautiful demesne of Mallow Castle, extending a mile below the town on the left bank of the river, contains besides the modern mansion, the ruins of the old castle of Mallow, which was erected by the Earl of Desmond.

MALMAISON. [SEINE-ET-OISE.]

MALMESBURY, Wiltshire, a market-town, parliamentary borough, and the seat of a Poor-Law Union, in the parish of Malmesbury, is situated in 51° 35' N. lat., 2° 4' W. long., distant 20 miles N. by W. from Devizes, and 96 miles W. by N. from London by road. The population of the parliamentary borough in 1851 was 6998. The borough is governed by an alderman chosen annually by the 12 capital burgesses, and returns one member to the Imperial Parliament. The living is a vicarage in the archdeaconry of Bristol and diocese of Gloucester and Bristol. Malmesbury Poor-Law Union contains 25 parishes and townships, with an area of 59,343 acres, and a population in 1851 of 14,907.

Malmesbury is a very ancient town. According to the 'Chronicles of the Kings of England,' by William, a monk of Malmesbury in the 11th century, a monastery was founded here before 670. The abbey suffered from the Danish invasions in the 9th and 10th centuries, when the town was twice burnt; but it recovered, and became one of the most important monasteries in the west of England. The abbot was mitred in the reign of Edward III. The borough appears to have had a charter as early as the reign of Athelstan. In the reign of Stephen a castle was built here, and the town was walled by Roger, bishop of Sarum, who was however obliged to surrender the castle to the king. In 1152, the town and castle were taken by Prince Henry, afterwards Henry II. In the civil war of Charles I. the Royalists had a garrison here, which was driven out by Sir William Waller, at the head of a parliamentary army, March, 1643. The Royalists recovered the place, but it was again taken by the Parliamentarians, who stormed it in 1645. The cloth-trade flourished in the middle ages, according to the testimony of Leland, who says that 3000 'clothes' (pieces of cloth) were made yearly. The abbey buildings were, at the dissolution, converted into a cloth factory.

The town stands on an eminence near the junction of the Avon with a stream from Tetbury, and consists of some streets irregularly laid out, but paved and lighted. Besides the Abbey church and St. Mary's, there are the tower and some ruins of a third, old St. Paul's. The abbey church was, at the dissolution, purchased by the inhabitants of St. Paul's parish, and made parochial. Part of the nave and aisles, the grand southern porch, and a wall belonging to the south transept, are the only perfect remains of this once magnificent structure. The architecture is partly Norman, and partly of decorated English character. In the interior, near the altar, is a screen inclosing a space in which stands an altar tomb, with an effigy in royal robes. The church of St. Mary Westport is a mean-looking building, erected nearly two centuries ago on the site of the old church, which was destroyed by Sir William Waller. An ancient cross stands in the market-place; and west of the abbey is a building called Chapel-house, supposed to have been originally the chapel of a nunnery. Some fragments of the town-walls remain. The Independents, Baptists, and Moravians have places of worship. There are a Free and an Endowed school for boys, and a savings bank. A new market-house has been erected. There are at Malmesbury four bridges—two over the Avon, and two over the Newtonwater.

Malmesbury has now little trade or manufactures. A mill lately employed in the clothing manufacture is now a silk mill. Tanning, brewing, and lace-making are carried on. The market is on Saturday, and on the last Tuesday of each month there are great cattle markets for horses, cattle, and sheep. Fairs are held on March 28th, April 28th, June 5th, and December 15th.

The borough has returned members to Parliament with little interruption since the time of Edward I. Previous to the passing of the Reform Act, it returned two members.

Three writers of eminence in their respective ages were connected with Malmesbury: St. Aldhelm, a Saxon writer of note in the 7th and 8th centuries, was for a time abbot of Malmesbury, where he was interred; William of Malmesbury, one of the best English historians of the middle ages, was, during the greater part of his life, a monk of the abbey; and Thomas Hobbes, sometimes designated the Philosopher of Malmesbury, was a native of the parish of St. Mary Westport.

MALMÖ, a sea-port town in Sweden, in the province of Skania, gives name to the Malmö-län. It is situated in about 55° 40' N. lat., near 13° E. long., on the widest part of the Sound, nearly opposite the town of Copenhagen, on level ground, and has a good and safe harbour for small vessels, protected by the fortress of Malmöhus. The town is well built, and has regular streets. In the middle is a handsome and spacious square. It was formerly surrounded by strong fortifications, but these have been demolished and the castle alone remains, which is now used as barracks and a prison. The inhabitants, about 9000 in number, carry on an active commerce in corn, as Malmö is the principal commercial town of the fertile and rich province in which it is situated. It may also be counted among the manufacturing towns of Sweden, as there are several manufactories in which cloth, stockings, hats, gloves, carpets, soap, leather, starch, and looking-glasses are made. Some of these manufactories are rather extensive. Steamers ply daily to Copenhagen, which is only two hours distant to the north-west and is visible from Malmö in clear weather. Malmö Län, one of the most level and most fertile provinces of Sweden, has an area of 1774 square miles, with (in 1845) a population of 234,207. Corn, potatoes, hemp, hops, tobacco, and some fruits are grown. Corn and cattle are the chief exports. In 1849 there arrived at the harbour of Malmö 621 vessels, and 596 departed.

MALO, ST. [ILLE-ET-VILAINE.]

MALPAS. [CHESHIRE.]

MALTA (anciently *Melitis* and *Melita*) is an island in the Mediterranean Sea, and a British settlement. The neighbouring island of Gozo is included under the same government, as well as the small island of Comino; there are besides the uninhabited islets of Cominotto and Filifa. The entire group lies between 35° 43' and 36° 5' N. lat., 14° 10' and 14° 35' E. long. Malta is 60 miles S.W. by S. from Cape Passaro, the most southern point of Sicily. The greatest length of Malta is 18 miles, the greatest breadth is 10 miles, and the circuit, as a boat would sail round it, is 50 miles. The area is 98 square miles. The population in 1849 was 115,864.

The Maltese Islands are masses of limestone rock. Monte Benjemma, the highest part of Malta, has an elevation of 590 feet. The island slopes from the southern side towards the northern. The rocks on the southern side rise perpendicularly from the sea to the height of 300 or 400 feet. A ridge crosses the island and divides it into two portions, of which the eastern contains all the towns and villages. The western portion however, though it has very few inhabitants, has much land under cultivation, and the wild thyme and other odoriferous plants which abound in that part, are frequented by the bees which produce the honey for which Malta has been long celebrated. About two-thirds of the surface of Malta is cultivated; the remainder is bare rock. There is much good soil in the valleys which has been converted into fertile fields; but a large portion of the surface has been rendered productive by the industry of the natives. The earth has been carefully collected from interstices and crevices of the limestone, and has been placed in layers on level spaces of loose broken-up rock. Innumerable low stone walls prevent these precious layers of soil from being washed away by the rains; and so favourable has this process been found to vegetation under the climate of the island, that the cultivator who is not sparing of manure raises two crops a year, without ever being obliged to let his land lie fallow. In summer the want of rain is supplied by a heavy dew which falls at night.

The climate of Malta ranges from a maximum of 90° Fahr. to a minimum of 46°, medium 63°. In the middle of summer the heat is sometimes very oppressive, especially at night. The sun remains so long above the horizon, and the stone-walls and rock absorb so much heat as to render the short nights as hot as the day. No regular sea-breezes or land-breezes are felt at Malta. The only winds which are deleterious are those between the south and east, which are called the scirocco of the Mediterranean. They are most prevalent at the end of August and during the whole of September. The winter, that is, from the beginning of October to the end of May, is very delightful, and is eminently suited for English invalids. For the greater part of the year the atmosphere is so clear as to give brilliancy to every object. The summit of Mount Etna, 128 miles distant, may be distinctly seen at sunrise or sunset.

There are no forest-trees in Malta, and the whole group of islands has a bare and naked appearance. There are no hedges, and the verdure being partial in extent and duration, the glare of the hard naked roads and rock, under a bright tropical sun, is very oppressive and injurious to the eyes. The carob-tree however is always green, as well as the Indian fig, and these afford an occasional relief to the sight.

There are no streams in Malta, and the springs are not numerous. In general the rain-water is collected in tanks which are excavated in the rock, and are lined with a cement of pozzuolana. In ordinary

seasons these tanks afford a sufficient supply for agricultural and household purposes. Valletta and the shipping in its harbours are supplied with water by an aqueduct, which brings it from springs on the southern side of the island. This great work was constructed by Vignacourt, grand-master of the Knights of Malta, in 1635. It is 8½ miles long, in some parts supported on arches, in others it runs under ground. The Fanara springs are also conducted by an aqueduct to Vittoriosa, Cospicua, and Genglea.

The produce of Malta consists of cotton (which is the staple), wheat, barley, pulse, potatoes, barilla, cummin-seed, honey, and sulla. Sulla, which in England is a garden-flower, known as the French honeysuckle, grows to the height of 4 or 5 feet, and furnishes a nutritious fodder. As there is no meadow-land much barley is cut green for draught animals, and the straw, which is very fine, is a good substitute for hay. The produce of corn is only sufficient for the subsistence of the inhabitants for about four months of the year. The fruits are generally good and in great variety, and the vegetables are excellent. No wine is made. The carob grows in abundance. There are no wild animals, and from the scarcity of pasture few cattle are kept. Meat is imported chiefly from Barbary. Horses are also imported; but some mules are reared, and the asses of Malta and Gozo have always been celebrated for strength and beauty. Goats are likewise bred, and are valued for the quantity of milk which they supply.

The roads in Malta and Gozo are generally good, and communicate with all parts of each island.

The natives of Malta are a dark-skinned athletic race, hardy and robust. The men are of middle stature, well-formed, erect, and active. The women are rather small, with delicate limbs and regular features, and many are handsome. The great bulk of the people who are not employed in field labour are stone-cutters. The Maltese are also excellent seamen, and are in request in all the ports of the Mediterranean. Workmen and artisans are numerous, and are expert in their respective trades.

The Maltese native language seems to be a dialect of the Arabic. Italian is spoken by the upper classes generally, and by many of the middle classes in addition to their native tongue. The English language is spoken and read by the educated classes, but is still unknown to most of the natives. The people are mostly Roman Catholics, and the clergy are very numerous. The Protestant places of worship are few and unassuming.

Malta is a crown colony, and is under the rule of a governor, assisted by a council of six persons nominated by the crown. The revenue in 1852 was 127,728*l.* 15*s.* 1*d.*; the expenditure for the same year was 123,086*l.* 8*s.* 8*d.* An expenditure of about 100,000*l.* a year is incurred by Great Britain for the military protection of Malta, and for its maintenance as a military depôt.

Valletta, the capital of Malta, stands on the eastern side of the island, in 35° 54' N. lat., 14° 31' E. long. Its fortifications are considered impregnable. Its port, which is one of the finest in the world, consists of two large harbours, separated by a rocky tongue of land a mile and a half long, and in the central parts 200 feet high. This rocky projection extends from south-west to north-east, having a harbour on each side, that on the south-east being the Valletta Harbour, or Great Harbour, and that on the north-west being the Quarantine Harbour, or Marsamuscato. The entrances are defended by forts on all sides. On the point of the projecting ridge is Fort St. Elmo, with one of the most brilliant lighthouses in the Mediterranean. Opposite to it on the left, at the entrance of Valletta Harbour, is Fort Ricassoli, and on a projecting promontory within is the Castle of St. Angelo. Again, opposite to Fort St. Elmo, on the right at the entrance of the Quarantine Harbour, is Fort Tigne, and within is Fort Manuel. On the front part of the projecting tongue of rock, immediately behind Fort St. Elmo, is built the city of Valletta, the streets in many parts rising by successive terraces from the sea on each side towards the central part of the ridge. The inner side of Valletta is defended by strong lines of fortification which extend across the ridge from harbour to harbour, and having a dry ditch cut in the rock to a depth varying from 90 to 140 feet. Outside this ditch is the suburb called *Floriana*, and beyond this suburb on the land side, is another series of fortifications. Valletta Harbour is divided by promontories projecting from the main land into four or five bays, within which are the naval hospital, the dockyard, arsenal, and victualling yard, and the suburban cities of *Vittoriosa*, *Cospicua*, and *Genglea*. Valletta is a clean, well-built, and handsome town. The principal street, called the *Strada Reale*, extends along the crest of the hill from Fort St. Elmo to the gate called *Porta Reale*; the other streets run parallel to this, and the communication from street to street is by flights of steps. The principal public buildings are the palace of the grand master, now the residence of the British governor, the cathedral of St. John of Jerusalem, the armoury, the post-office, the library, the university, the exchange, and the theatre. The military hospital was founded by the Knights of Malta, as an asylum for the sick and distressed of all nations. There are also two civil hospitals, one for males and the other for females. The English collegiate church of St. Paul was founded by the late Queen Adelaide at an expense of about 15,000*l.* The population of Valletta and its suburbs is about 60,000.

Città Vecchia, properly *Città Notabile*, formerly the capital of the

island, is situated on high ground in the interior of the island, about 6 miles W. from Valletta. It is still the seat of a bishop, and contains a handsome modern cathedral, built on the site of the ancient church, two large convents, and many good dwelling-houses. The city is walled, but is now of no importance as a fortification.

Besides Valletta, with its suburbs, and *Città Vecchia*, Malta contains between 20 and 30 casals, or villages; and besides the two harbours of Valletta, there are some bays on the coast of Malta which ships sometimes enter in stress of weather, such as *Marsa Scirocco*, *St. Thomas's Bay*, and *Marsa Scala*, south-east of Valletta, and *St. Julian's Bay*, *St. Paul's Bay*, and *Melleha*, north-west of Valletta.

The island of *Gozo* is 4 miles N.W. from Malta. It is of an oval form, about 10 miles in its greatest length, and 5 miles in its greatest width. The population is about 8000. The area is about 16 square miles. *Gozo* has a better soil than Malta, and is more highly cultivated. It contains a great quantity of game, and is consequently much frequented by sportsmen. The products are similar to those of Malta. On a lofty site near the centre of the island is the citadel. The chief town is *Rabat*, near the citadel. It is a large and populous place, with good houses, and several churches. The *Giant's Tower*, a massive ruin near the eastern coast, is a fine specimen of Cyclopean masonry. It is supposed to be the remains of two Phœnician temples. *Gozo* has been selected by some kind of tradition for the fabled island of *Calypso*, and a cave called *Calypso's Grotto* is shown, but is not worth a visit. The small island of *Comino*, with about 1000 inhabitants, lies between Malta and *Gozo*, as does also the islet of *Cominotto*.

Malta and *Gozo* are stated by *Diodorus* (v. xii.) to have been occupied by a colony of Phœnicians. The Greeks are said to have subsequently occupied Malta. It was afterwards in the possession successively of the Carthaginians, the Romans, and the Arabs. In 1120 Count Roger, the Norman conqueror of Sicily, expelled the Arabs, and Malta was then united to the government of Sicily. In 1516 Sicily and the Maltese islands passed to the emperor Charles V. as heir to the crown of Aragon. In 1530 Charles granted to the grand master and religious fraternity of St. John of Jerusalem, who had recently been expelled from Rhodes by the Turks, the ownership of Malta and *Gozo*, with complete jurisdiction. The Knights of St. John of Jerusalem thus became sovereigns of Malta, and were independent, with the exception of a trifling annual feudal acknowledgment of tenure to the King of Sicily. To protect the islands against the Turks and the pirates of the Mediterranean, the knights commenced those fortifications which remain to the present day. In 1798 a French expedition, under Admiral Brueys, obtained possession of the island, mainly through the treachery of some of the knights, and the order became from that time extinct. The French government was however found to be so oppressive that the inhabitants revolted, and the French were compelled to shut themselves up in the fortifications of Valletta. They were kept in a state of close blockade both by land and sea for two years. The natives were assisted by a British fleet, and in 1799 by troops under General Graham (afterwards Lord Lynedoch), and in 1800 by additional troops under General Pigot. On the 5th of September, 1800, the garrison being reduced to the last extremity of famine, surrendered to the British. The French were allowed to march out with the honours of war, the forts and city of Valletta were taken possession of by the British, and the French were conveyed home in English transports. The Maltese islands have remained in the possession of the British government. [See SUP.]

MALTON, NEW, North-Riding of Yorkshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on an eminence on the right bank of the river Derwent, in 54° 8' N. lat., 0° 48' W. long., distant 18 miles N.E. by N. from York, 217 miles N. by W. from London by road, and 24¼ miles by the Great Northern and York and North Midland railways. The population of the parliamentary borough of New Malton in 1851 was 7661. The borough returns two members to the Imperial Parliament. The living of New Malton is a perpetual curacy with the perpetual curacy of Malton, in the archdeaconry of Cleveland and diocese of York. New Malton Poor-Law Union contains 65 parishes and townships, with an area of 110,010 acres, and a population in 1851 of 23,129.

A stone bridge over the Derwent, which here forms the boundary between the North and East Ridings, connects New Malton with the suburb of Norton. St. Leonard's church has a tall truncated spire. St. Michael's is a fine specimen of late Norman architecture. The Wesleyan and Primitive Methodists, Wesleyan Reformers, Independents, Baptists, Quakers, Roman Catholics, and Unitarians have places of worship. There are National, British, and Infant schools. Old Malton Grammar school, held in the suburb of Norton, was founded in 1547, and has an income from endowment of about 100*l.* a year. In the town are a large market-place, including a town-hall; a corn-exchange; a neat theatre; a handsome suite of public rooms; a literary institute; a dispensary; and a savings bank. The town is well built, and is lighted with gas. A considerable trade is carried on. The market-day is Saturday, and there are fairs during the whole week before Palm Sunday, on the Saturday before Whit-Sunday, and on October 11th. Quarter sessions and a county court are held here. The borough has returned two members to Parliament since 1640.

Old Malton stands about a mile N.E. from New Malton, on the same side of the river. It has a very ancient church, dedicated to St. Mary, near which are the remains of a priory, founded in 1150, for Gilbertine canons. The town contains a Wesleyan chapel and several schools. Old Malton is noted for its lime-quarries.

Malton is supposed to have been one of the oldest Brigantian fortified towns in this part of Britain; and its importance as a Roman military station is indicated by six ancient roads pointing to it. The Romans called it *Camulodunum*, which the Saxons abbreviated to *Meldun*. Numerous Roman coins, urns, and other remains have been found here, and entrenchments are yet visible on the opposite side of the river. After the Norman conquest the baronial family of Vesey, or De Vesci, built a castle here, as well as the priory mentioned above. This castle was demolished by Henry II. The town, which was burnt down in a siege, was rebuilt in the reign of Stephen, and then received the name of New Malton. A noble castellated mansion was erected on the site of the ancient castle, about the close of the 16th century, by Ralph, Lord Eure; but in 1674 the greater part of the mansion was pulled down.

(Communication from New Malton.)

MALVERN, GREAT, Worcestershire, a watering-place in the parish of Great Malvern, is situated in 52° 6' N. lat., 2° 19' W. long., distant 8 miles S.W. from Worcester, and 119 miles N.W. by W. from London. The population of the parish in 1841 was 2911; in 1851 it was 3911. The living is a vicarage in the archdeaconry and diocese of Worcester. Great Malvern occupies a picturesque site on the eastern side of the Malvern Hills. It is much resorted to by invalids. The wells are between Great Malvern and Little Malvern, a small village about three miles to the south. The Malvern Hills afford extensive and beautiful views into Wales as well as the adjoining English counties. Edward the Confessor endowed a monastery at Great Malvern, the church of which, at the dissolution, was purchased by the inhabitants, and made parochial. The church is a fine gothic cruciform building, 170 feet long by 60 feet wide; the tower, 124 feet high, in the centre of the building, is surmounted with battlements and pinnacles. In Great Malvern are a chapel of the Countess of Huntingdon's Connexion, National and Endowed schools, and a dispensary.

MALWA. [HINDUSTAN.]

MALZIEU. [LOZÈRE.]

MAMERS. [SARTHE.]

MAN, ISLE OF, is situated in the Irish Sea, between 54° 4' and 54° 27' N. lat., 4° 17' and 4° 47' W. long., 28 miles W. by S. from St. Bees' Head in Cumberland, 16 miles S. from Burrow Head in Scotland, and 32 miles E. from the entrance of Lough Strangford in Ireland. Its length from north-east to south-west is about 34 miles; its breadth varies from about 8 to 13 miles, but is much narrower at its extremities; and its circumference is about 75 miles. The area of the island is about 220 square miles. The population in 1841 was 47,975; in 1851 it was 52,387. The Calf of Man is a small island situated nearly a mile S.W. from the island, and from 3 to 5 miles in circumference. The Kitterlins, another small rocky island, is situated between the Isle and Calf of Man. The Isle of Man is the *Monia* of Cæsar, the *Monapia* of Pliny, *Monada* of Ptolemæus, *Menavia* of Orosius and Bede, and *Eubonia* of Nennius.

The island is intersected by a ridge of mountains, which runs from north-east to south-west nearly through its whole length, and chiefly occupies the central parts. The heights that form this elevated mass compose three chains, separated from each other by high table-lands, and crossed by three very narrow openings. Snafield, the highest point, is 2004 feet above the level of the sea, and North Berrule rises to the height of 1804 feet. England, Scotland, Ireland, and Wales are visible from the summits of the mountains on a clear day. The Neb, Sulby, and other small streams which flow from the mountains, enter the sea at Peel, Laxey, Douglas, and Ramsey. The coast in many places is very precipitous.

Rocks of mica-slate and clay-slate compose all the mountains. These slates form also the coast at Spanish Head, where some precipices exceed 300 feet in height. The summit of one of the cliffs is crowned by a so-called Druidical monument. Mica-slate is found at Snafield, the rounded summit of which is covered with grass. The base of this mountain is rich in metals. The galena which is found here contains from 90 to 130 ounces of silver per ton. Copper pyrites has five ounces of silver per ton, and black-jack (sulphate of zinc) sells for 5*l.* per ton. Clay-slate forms the largest portion of the island, and nearly all the Calf. A stratified gray stone, which is used in building, is the second variety of clay-slate. The third variety, at Spanish Head, is used for lintels, &c. The roofing slate, drawing slate, and one of a vermilion colour near Braddah, make up the other varieties of clay-slate found in the island. The secondary slate formation, resting on the primary, consists of grauwacke, grauwacke-slate, and old red-sandstone, and forms the greater part of the rocky sea-coast of the island, but does not extend much inland. There is a belt along the west coast, about two miles in width, consisting of old red-sandstone, of which Peel Castle is built. Boulders of sienite, porphyry, and quartz are scattered from north to south, and the blocks of clay-slate and mica-slate, mixed with the quartz, prove it to belong to the island. Granite *in situ*, containing mica, felspar, and quartz, is found in blocks on the north side of South Berrule. The decom-

position of the felspar forms a fine powder, which is sold for polishing iron.

The soil in the south part of the island is a light clay formed by decomposition of the clay slate. The mountainous district is adapted only for pasture, and judicious culture alone can render the hilly parts productive. The soil however in the level country, extending from Kirk Michael to the north-eastern extremity of the island, consists of sand, clay, and peat, and contains excellent marl. The soil in the neighbourhood of Castletown is well adapted for wheat, and the abundance of lime supplies the farmer with a cheap manure. The climate is variable, damp, and windy, but temperate. The highest and lowest temperatures observed are about 77° and 26° Fahr. respectively; the mean annual temperature is about 49°. The annual fall of rain is about 37 inches. The harvests are frequently late. Wheat and in some years potatoes are exported. The largest part of the island is in the hands of yeomen, who farm their own estates, which are from 10 to 200 acres. The Houghton sheep, peculiar to the island, are long in coming to maturity; their wool is much used for making stockings. The cattle and horses of the island are very small.

The principal towns in the island are Castletown, DOUGLAS, Peel, and Ramsey. *Castletown*, population 2479 in 1851, situated on the south coast, is a neat town, with spacious regular streets, and an open well-built square. The houses are situated on the opposite sides of a small creek, opening into a bay in the shape of a crescent. *Castle Rushen*, in Castletown, was built, according to tradition, in the year 960, by Guttred, a Danish prince, who is said to have been buried here. The town possesses a neat chapel commenced by Bishop Wilson in 1698, and a college founded in 1668 by Bishop Barrow, which had 119 scholars in 1851. Courts of chancery and common law are held in Castletown, which is the residence of the governor. The House of Keys meets here.

Peel, formerly called *Holm Peel*, population 2342 in 1851, is on the west coast of the island. The castle, which is built on a small rocky island, incloses an irregular space of more than two acres, and is separated from the town by a narrow channel, scarcely a foot deep at low water. A strong wall, built as a security for the harbour, connects the island and castle with the mainland. St. Patrick's church, within the castle area, was probably built before the Norman conquest; St. Germain's, erected about 1245, is the cathedral church of the island, but is now only used for a burying-place. Peel has besides a parish church, a chapel for Methodists, and an Endowed school, founded in 1746, which had 20 scholars in 1852.

Ramsey, population 2701 in 1851, is situated on a spacious bay, where there is safe anchorage, on the north-eastern coast of the island. It is built in a straggling and irregular manner. In this town the courts of law for the north part of the island are held.

The only village of any considerable size is *Ballaasalla*, situated a short distance north of Castletown, on the road to Douglas. The names of the other villages on the island are Andreas, Ballaugh, Calf-of-Man Isle, Colby, Derbyhaven, Kiendroughad, Laxey, Michael, Port Erin, Port St. Mary, and Sulby.

The established religion is that of the Church of England. The island gives title to a bishop, whose seat is supposed to have been fixed at Sodor in the 9th century, but the site of this place is not now known. The bishop of Sodor and Man, whose authority is wholly confined to this island, is a suffragan of the archbishop of York. He has no seat in the House of Lords. The income of the see is 2000*l.* a year; the number of benefices is 25. The bishop has an archdeacon, vicar-general, registrar and secretary to assist him in managing the affairs of his diocese. In 1851 there were 132 places of worship in the island, of which 59 belonged to Wesleyan Methodists, 39 to the Church of England, 27 to Primitive Methodists, 4 to Roman Catholics, 2 to Presbyterians, and 1 to Independents. The total number of sittings provided was 32,985. The island possesses several local institutions. The House of Keys has both a legislative and judicial character; it consists of 24 of the principal commoners of the island. The two deans have equal jurisdiction, and are judges in civil and criminal cases. The Court of Chancery is held eight times in the year, where the governor acts as chancellor, with the assistance of the deans and other chief officers. The Court of Exchequer is generally held immediately after the Court of Chancery, and the governor, assisted by the dean, is sole judge. The common-law courts are held at different places for the different 'sheedings' into which the island is divided, called Glenfaba, Michael, Ayre, Garff, Middle, and Rushen. There is a general jail-delivery twice in the year. The high bailiffs, who act as magistrates in the five towns of the island, were established in 1777, and can hear and determine all causes under 40*s.*; it is their duty also to maintain the peace and apprehend offenders. There are no barristers, and the services of attorneys are in many cases rendered unnecessary by the party pleading his own cause.

The Manx language, a dialect of the Celtic, is spoken by the inhabitants; but English is generally understood. The elements of education are taught in parochial schools, which were established by Bishop Barrow in 1666. The number of day schools in 1851 was 126, with 6333 scholars, and of Sunday schools 87, with 6894 scholars.

Between 200 and 300 vessels, averaging about 10 hands each, and

of from 15 to 80 tons burden, are engaged in the herring fishery. The number of vessels registered as belonging to the island at the close of 1858 included 318 sailing vessels under 50 tons, with a total tonnage of 7422; 89 above 50 tons, with a tonnage of 2947; and 5 steamers above 50 tons, with a total tonnage of 1197. During 1853 the entries inwards included 1532 sailing-vessels (70,298 tons), and 219 steamers (25,360 tons); outwards, 731 sailing-vessels (23,044 tons), and 130 steamers (30,067 tons). Duties levied on imported goods, charges on vessels and boats trading to the island, the harbour dues, taxes on dogs, carriages, and public-houses, are the taxes of the island. The two last are expended in repairing harbours, roads, and bridges. Steam-vessels ply between the island and Liverpool, Dublin, Whitehaven, and Scotland.

The early history of the Isle of Man is obscure. It was governed by a succession of Norwegian kings until 1264, when Magnus, finding himself unable to preserve the Western Isles, sold them to Alexander III, king of Scotland. Soon after this Alexander reduced the Isle of Man, and appointed Regulus king. William de Montacute, with an English force, afterwards drove out the Scots, and it became the property of the kings of England. In 1307 Edward II. bestowed this island first upon the Earl of Cornwall, and then on Henry Beaumont. The Scots, under Robert Bruce, recovered and possessed it until 1340, when the Earl of Shaftesbury wrested it from Scotland in the reign of Edward III., and sold it to the Earl of Wiltshire, who was afterwards executed for high treason, and his estates confiscated. Henry IV. granted the island to Henry Percy, earl of Northumberland, after whose attainder in 1403 it was granted, with the patronage of the bishopric and other ecclesiastical benefices, to William Stanley and his heirs, afterwards earls of Derby. Thomas, earl of Derby, relinquished the title of King of Man, and took that of Lord. James I. made a new grant of the island to William, sixth earl of Derby, which the Parliament confirmed. James, earl of Derby, in consequence of his adherence to Charles I., was taken prisoner and executed at Bolton in 1651. The Parliament granted the island to Lord Fairfax. Charles II., on his accession to the throne, gave it to the Earl of Derby, the son of the earl who had been beheaded, from whom it passed to James, second duke of Athol, who was descended from the youngest daughter of the seventh earl of Derby. In 1764 the Duke of Athol sold his sovereign rights to the British government for 70,000*l.*, with his civil patronage, and the castles of Peel and Rushen. By a subsequent arrangement with the duke on the part of the English government (6 Geo. IV. c. 34), Great Britain now enjoys all the sovereign rights and privileges of the island.

No part of the kingdom abounds so much in Danish and other ancient remains. The various tumuli, barrows, weapons, coins, and Runic inscriptions afford clear evidence of the connection which the Northmen had with this island. Some stone circles have been discovered. The venerable remains of Rushen Abbey, which belonged to the Cistercian order, and of a nunnery near Douglas, show the influence of the Church during the middle ages. The tumulus at Tinwald, which is approached by turf steps on the east, presents the appearance of a truncated cone divided into three stages, which are raised about three feet above each other, and proportionally diminished both in circuit and width until they approach the summit, where the king of Man formerly sat on solemn occasions. The local laws of the island still continue to be read and promulgated here annually before the governor, two deans, keys, council, and various officers of state, and divine service concludes the solemnities of the day. The Tinwald Mount (which means either 'a fence for an assembly,' or 'a juridical hill') is situated near the intersection of the high road from Castletown to Ramsey with that from Douglas to Peel.

MANAAR PASSAGE. [CEYLON.]

MANACOR. [MALLORCA.]

MANAMA. [BAHREIN ISLANDS.]

MANCHA, LA. [CASTILLA LA NUEVA.]

MANCHE, a department of France, deriving its name from La-Manche, the French name for the English Channel, on the coast of which it lies, is bounded W., N., and N.E. by the Channel, E. by the departments of Calvados and Orne, and S. by those of Mayenne and Ille-et-Vilaine. Its form is that of an irregular rectangle, having its greatest length from north to south about 90 miles: its greatest breadth is about 39 miles, but the average width does not exceed 27 miles. Its area is 2291 square miles. The population of the department in 1841 was 597,334; in 1851 it was 600,882, giving 262,279 inhabitants to a square mile, being 87,695 above the average population to the square mile for the whole of France. The department comprises the peninsula of Cotentin and the district of Avranchin, parts of the old province and duchy of Normandy.

The department is traversed from south to north by hills of no great elevation, which branch off from the Armorican chain, and terminate northward in Cape La-Hague. These hills slope down gradually towards the coast on the eastern and western sides of Cotentin, in some places presenting bold cliffs towards the sea, in others subsiding into sands and benches of vast extent, which are always covered at full tide. Along the coast there are several harbours and roadsteads, the most important of which are—Cherbourg, La-Hougue, Granville, Regneville, Carteret, &c. Among the numerous islands that stand in near the coast, besides the Channel Islands, are—Mont-St.-Michel, the

Chaussey group, Pelée, north-east of Cherbourg; and Tatihou and St.-Marcouf, on the east coast of Cotentin. Most of these islands are fortified and garrisoned; many of them, traditions say, were once joined to the mainland.

The Chaussey group consists of one island about a mile long and half a mile wide, surrounded by several much smaller islets. The principal island stands in 48° 51' N. lat., 1° 47' W. long. It is uninhabited, except by persons who work in its granite quarries, which have supplied materials for constructing the harbours of Granville and St.-Malo. The granite is also sent to Paris. There is a grazing farm on the island. Rabbits are numerous.

From the nature of the surface the rivers must be all of short course. The largest is the Vire [CALVADOS], which rises in the department of Orne, and enters this department on the east side, whence it flows northward, just within and in one part on the boundary of the department, past St.-Lô into the English Channel. The whole length of the Vire is about 50 miles, for about 8 miles of which it is navigable. The Taute and the Douve, empty their united waters into the great sandy bay between Isigny and Carentan. The Ay, the Tienne, the Célune, and the See terminate on the western coast. The Couësson [ILLE-ET-VILAINE] in the lower part of its course separates La-Manche from Ille-et-Vilaine, and falls into the bay of St.-Michel. The department is crossed by 9 state, 25 departmental, and a great number of parish roads. The railway connecting Paris with Cherbourg, now in course of construction, crosses the department, but as yet (December 1854) no railroad is open in the department. The climate is mild but moist.

The department yields more of bread-stuffs than suffices for the consumption. Wheat, barley, rye, buck-wheat, black oats (cakes made of which form the chief food of the labouring class), and potatoes are the chief crops. Apple- and pear-trees are extensively cultivated for making cider and perry, the favourite beverages of the country. Of cider above 22,000,000 gallons are made annually; some of it, especially that made near Avranches, is of excellent quality. Hemp and flax are grown in considerable quantity on the eastern slopes of Cotentin. Fruits of various kinds are sedulously cultivated in the arrondissement of Avranches. Horses of the true Norman breed are numerous, and fetch the breeder good prices; they are much sought after as cavalry horses. The pastures are good and extensive, affording food for a great number of horned-cattle of large size and excellent fattening qualities. Excellent butter is made, and large quantities of it are exported from Isigny. A considerable number of sheep are fed on the sandy plains (locally called 'mielles') which extend between the sea and the cultivated land; they are small, and have sweet flesh. Game, water-fowl, and fish of all kinds are abundant.

Primitive rocks overspread the greater portion of the department, but a part of the eastern coast and of the country about Valognes, Carentan, and St.-Lô is occupied by later formations. Between Carentan and Valognes the elevated tract behind the low marshes that skirt the shore is composed of blue lias, which extends to a considerable distance inland. The new red-sandstone is abundant between Carentan and St.-Lô; between Carentan and Isigny it is yellowish mixed with red and gray, and is tolerably compact. Red-marl and red-sandstone belonging to this formation are found near Valognes and along the coast intermingled with gravel beds composed of the rocks of this formation, intermixed with quartz rock, on which in several places the new red-sandstone is found to rest. Nude quartz rock is found between Valognes and Cherbourg alternating with argillaceous slate. Argillaceous slate and grauwacke occupy the east of the department about St.-Lô. Granite, resembling that of Dartmoor, is found at St.-Vaast near Pointe-Barfleur. A bed of limestone, probably belonging to the supracretaceous rocks, is quarried between Carentan and Valognes, and another limestone of uncertain date is found in the immediate vicinity of the latter place. The department is rich in minerals. Iron, lead, and coal-mines are worked; granite and building stone are quarried; marble, slate, potters'-clay, and limestone are found. Mineral springs are numerous; there are a few salt-marshes along the coast.

Manufacturing industry is actively exerted in the making of iron, the working of zinc and copper, the fabrication of plate-glass, serge, calico, drugget, cutlery, woollen-stuffs, lace, tape, haircloth, porcelain, oil, hardware, cotton-yarn, paper, leather, soda made from kelp, basket-work, &c. Ship-building is actively carried on at Cherbourg and other towns on the coast. Cherbourg is the chief naval arsenal and naval station of France in the north; vessels of war and steamers of all sizes are turned out of its yards. The articles enumerated and the products of the soil support an active commerce and coasting-trade. The chief exports are fresh and salt fish, corn, cattle, horses, poultry, wax, honey, salt butter, feathers, salt, salt provisions, soda, &c. About 380 fairs and markets are held in the year.

The department contains 1,466,275 acres. Of the whole area 949,290 acres are under tillage; 227,483 acres are meadow and pasture land; 59,201 acres are covered with woods and forests chiefly of oak, beech, and birch; 50,063 acres are laid out in gardens, orchards, and plantations; 114,394 acres consist of heaths and moors; 46,299 acres are occupied as roads, streets, squares, &c.; 6657 acres are covered with waters; and 13,663 acres with houses and buildings.

The department is divided into six arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. St.-Lô	9	115	99,089
2. Coutances	10	138	130,475
3. Valognes	7	118	92,238
4. Cherbourg	5	73	85,397
5. Avranches	9	123	117,032
6. Mortain	8	73	76,641
Total	48	640	600,882

1. In the first arrondissement, the chief town is *St. Lô*, which is also the capital of the department. It is situated in 49° 6' 59" N. lat., 1° 5' 32" W. long., at a distance of 157 miles W. from Paris, and has tribunals of first instance and of commerce, a college, and 9156 inhabitants in the commune. The central part of the town stands on a rocky eminence above the Vire, from which the other streets, all irregularly and badly built, extend down the slopes in all directions. The square called *Champ-de-Mars* is prettily laid out with avenues of trees. The most remarkable structures are the church of *Notre-Dame*, in which are fine painted windows, the gift of Louis XI.; the church of *Sainte-Croix*, the best preserved edifice in the oldest Norman style in France; the church of *St. Thomas*, which is now a corn-market; and the tower in the garden of the prefecture, which is all that remains of the former defences of the town. The chief manufactures of *St. Lô* are druggot, woollen-yarn, tape, lace, linen, and leather. There is a considerable trade in horses for the French cavalry, in cattle, corn, small-wares, cloth, &c. The town has a museum, dye-houses, and bleaching establishments. Of the other towns named in this article, the population given in each case is that of the commune. *Carentan*, a town of 2990 inhabitants, is situated near the coast among unhealthy marshes on the left bank of the *Taute*. It was formerly defended by a strong castle, a great part of which remains; this castle was taken by Edward III. in 1346. *Percy*, S. W. of *St. Lô*, has a population of 3215. *Torigny*, S. of *St. Lô*, a small well-built town of 2186 inhabitants, is famous for its ancient castle.

2. In the second arrondissement the chief town *Coutances*, the capital of the old district of Cotentin, is built on a hill extending north and south about 4 miles from the sea, to which it is joined by the *Saule Canal*. It is generally ill-built, with narrow crooked streets, but the situation is very picturesque. The town is said to have existed in Roman times, and to have taken its name from *Constantius Chlorus*, who fortified it and built the aqueduct, now called *les-Piliers* from the Roman arches of it still remaining. The principal buildings are the cathedral, which is universally admired, the churches of *St. Nicholas* and *St. Pierre*, the prison, and the theatre. The tower of the cathedral of *Coutances* is over the point 49° 2' 54" N. lat., 1° 28' 32" W. long. *Coutances* is the seat of an assize court, of tribunals of first instance and of commerce; it gives title to a bishop, and has communal and theological colleges, and 7295 inhabitants. The industrial products are cutlery, parchment, druggot, mualin, &c.; the chief trade is in corn, butter, poultry, eggs, cattle, horses, hempen and flaxen thread, wool, feathers, &c. *Cerisy-la-Salle*, 7 miles from *Coutances*, has a population of 2327; there are several druidical monuments near it. *Gavray*, famous for its long resistance to *Du-Guesclin*, stands a few miles S. by E. from *Coutances*, and has 2014 inhabitants. *Périers*, N. of *Coutances*, has a population of 2356.

3. The third arrondissement is named from its chief town *Valognes*, which stands in a pretty valley a few miles S. by E. from *Cherbourg*, in 49° 30' 32" N. lat., 1° 28' 1" W. long., and has a tribunal of first instance, a college, and 5707 inhabitants, who manufacture lace and porcelain. The principal building is that in which the college and public library are established, and which was formerly a theological seminary. *Barfleur*, an important sea-port in the time of the Norman kings of England, stands on the eastern shore of the peninsula of Cotentin; it is now a mere fishing village with 1185 inhabitants, and has a harbour capable of admitting only small craft. Edward the Confessor and the early Norman kings of England used *Barfleur* as the port of communication with Normandy. *Briquebec*, situated in a forest of the same name W. of *Valognes*, has a handsome church, an ancient ruined castle, and 4484 inhabitants. There are several iron-mines and mineral springs near this town. North-east of *Valognes*, on the eastern coast of Cotentin, is the fortress of *La-Hougue*, which is built on the isthmus of a peninsula terminating in *Cape La-Hougue*, and defends the roadstead of *La-Hougue*. The roadstead is marked out by three lights, one of which is on the fort of *La-Hougue*. Off the cape on the 29th of May 1692 the French fleet, under Admiral *Tourville*, was completely defeated by the combined fleets of England and Holland. *Montebourg*, S.E. of *Valognes*, has 2502 inhabitants, who manufacture lace, cutlery, and leather. *Sainte-Merc-Eglise*, S. of *Montebourg*, on the road to *Carentan*, has a population of 2894. *St. Sauveur-le-Vicomte*, a well-built town prettily situated on an eminence above the *Douve*, has 2774 inhabitants.

4. In the fourth arrondissement the chief town is *Cherbourg*, which is the subject of a separate article. [CHERBOURG.] *St.-Pierre-Eglise*,

a small town E. of *Cherbourg*, has 2208 inhabitants, who manufacture linen and leather. *Les-Picqs*, a small place built on a hill near the west coast of Cotentin, is remarkable for the extensive view from it, in which are included the islands of Guernsey and Jersey, and 20 churches on the peninsula.

5. Of the fifth arrondissement the chief town is *Avranches*, which has been already noticed. [AVRANCHES.] *Brécey*, E. of *Avranches*, near the right bank of the *See*, has 2452 inhabitants. *Granville*, a sea-port and walled town N.W. of *Avranches*, has a tribunal of commerce, a naval school, and 8347 inhabitants. The town stands on a rocky promontory, and has a well-sheltered harbour, which however is always dry at low water. Works are now in progress for the improvement of the harbour generally, and for the construction of wet docks and quays. The streets of the town are narrow and steep; the only remarkable building is the parish church. The inhabitants of *Granville* are enterprising seamen, and are largely engaged in the coasting trade, and in the cod, herring, whale, and oyster fisheries. They export corn, flour, butter, cider, poultry, cattle, granite-blocks, &c.; and import wine, brandy, colonial produce, drugs, salt, hemp, soap, oak and deal planks, iron, &c. Ship-building is carried on. *Pontorson*, a town of 2000 inhabitants, stands near the mouth of the *Couésnon*, which separates Normandy from Bretagne. Near it is the isolated and fortified rock of *Mont-St. Michel*, on which stands the famous abbey dedicated to *St. Michael the Archangel*. The abbey-buildings, after the first French revolution, were made a prison for nobles and priests; it afterwards became and still is a central prison for several departments. The abbey-church, which springs from the centre of the other buildings, and crowns the summit of the rock, is greatly admired for the beauty of its gothic architecture. *St. James*, S. of *Avranches*, on the *Beuvron*, has a population of 3236, who trade in corn, cattle, flax, and hemp. *Villabek*, N.E. of *Avranches*, has 3763 inhabitants, who manufacture hardware and plated goods, lace, and leather.

6. The sixth arrondissement is named from its chief town *Mortain*, which is situated in the south-east of the department, and has a tribunal of first instance, a college, and 2221 inhabitants. The church of *Mortain*, founded in 1082, is a remarkable structure; the castle that formerly stood on the hill above the town is now a heap of ruins. *Barenton*, S.E. of *Mortain*, has a population of 3086. *St.-Hilaire-du-Harcouet*, near the confines of Normandy, Bretagne, and Maine, has large markets for the sale of the cattle, corn, and other produce of these provinces: population, 2994. *Sourdeval-la-Barre*, N. of *Mortain* on the *See*, has several paper-mills, manufactures of cutlery and hardware, and a population of 4389. *Le-Teilleul*, on the borders of *Mayenne*, 9 miles S. from *Mortain*, has 2539 inhabitants.

The department forms the see of the Bishop of *Coutances*, is included in the jurisdiction of the High Court and within the limits of the University-Academy of *Caen*, and belongs to the 16th Military Division, of which *Rennes* is head-quarters. It returns 4 members to the Legislative Body of the French empire.

Besides the communal colleges in the chief towns of arrondissements there are a diocesan seminary and a secondary ecclesiastical school in *Coutances*, a primary school at *St.-Lô*, and a naval school and academical society in *Cherbourg*. The Calvinists have two meeting-houses, one at *Cherbourg* and one at *Chéfrème*, near *Percy*.

(*Dictionnaire de la France; Annuaire pour l'An 1853.*)

MANCHESTER, Lancashire, a manufacturing and market-town, a city, the seat of a bishopric, a municipal and parliamentary borough, and the seat of a Poor-Law Union, in the parish of Manchester and hundred of Salford, is situated on the river *Irwell*, distant 51½ miles S.S.E. from *Lancaster*, 31½ miles E. by N. from *Liverpool*, 183 miles N.W. by N. from *London* by road, and 188 miles by the North-Western railway via *Trent Valley*. The cathedral church of Manchester is situated in 53° 29' 5" N. lat., 2° 14' 35" W. long. The population of the city of Manchester in 1841 was 240,867; in 1851 it was 316,213. The population of the entire parish, which contains an area of 34,260 acres, and includes the city of Manchester and its suburb *Salford*, in 1841 was 353,390; and 452,158 in 1851. The city is governed by 16 aldermen and 48 councillors, of whom one is mayor; and returns two members to the Imperial Parliament. The living of Manchester is a rectory in the archdeaconry and diocese of Manchester. The parish of Manchester is divided into three Poor-Law Unions—Manchester, Chorlton, and Salford. Manchester Poor-Law Union contains an area of 1577 acres, with a population in 1851 of 186,987; Chorlton Poor-Law Union contains 12 townships and chapelrys, with an area of 11,560 acres, and a population in 1851 of 123,806; Salford Poor-Law Union contains 4 townships, with an area of 5308 acres, and a population in 1851 of 87,514.

Manchester is chiefly built upon low ground on the left bank of the river *Irwell*, by which it has a communication with the *Mersey*, *Liverpool*, and the ocean. Separated from the borough of Manchester by the *Irwell*, but really forming part of the town, is the municipal and parliamentary borough of *Salford*. Throughout this article the two boroughs are spoken of as one town. It is situated in a district which contains some of the best coal strata of England, a circumstance to which the place is in no small degree indebted for its prosperity. According to *Dr. Dalton* ('*Memoirs of the Manchester Philosophical Society*, 2nd series, v. iii. p. 483, et seq.), the mean height of the

barometer at Manchester is 29.85. The mercury is higher in the summer months than in the winter. The general annual mean of temperature is 49°. The mean annual fall of rain is 36.140 inches; while at Lancaster it is 39.714. The first six months of the year must be considered as dry months, and the last six months as wet months. April is the driest month in the year, and October is the wettest, or that in which the most rain falls, in a long-continued series of years, in the immediate neighbourhood of Manchester.

The drainage and sewerage of the town have been greatly improved under local acts. A few years back the corporation obtained an Act of Parliament by which it was empowered to purchase the old water-works, and to construct new works on the river Etherow, near Woodhead, at a distance of from 14 to 18 miles from Manchester, and thus insure a sufficient supply of good water. The streets are well paved, and there is an ample supply of gas of a superior quality. The gas as well as water supply is under the direction of the corporation.

Manchester has reaped an ample reward from that system of canal navigation to which it gave such impulse in its earlier stages. The achievements of Brindley were prompted by the desire which the Duke of Bridgewater had of sending his coal from Worsley to Manchester at a small expense; and the city now possesses the means of water-communication with almost every part of the country. In railway enterprise Manchester has held a prominent station. It furnished its full share of the capital employed in the formation of the Manchester and Liverpool railway; and is now the centre of a system of railways which radiate from it by numerous lines, connecting it with all the commercial towns of the kingdom. Along most of these lines the electric telegraph is in full operation.

Manchester was a Roman station, the Mancunium of the Itinerary of Antoninus. Under the Saxons Mancestre became the abode of a Thane. In the Domesday Book it is mentioned as possessing a church, that of St. Michael's. In the year 1301 Thomas de Grelley granted the Great Charter of Manchester. From the Grelleys the barony descended to the family of De la Warre, and John, the first of the line, was called to Parliament in the 9th year of Edward II. The manorial rights have been recently purchased by the corporation of Manchester.

In the civil wars Manchester ranged itself on the side of the Parliament, and sustained a siege conducted by Lord Strange. On the cessation of the contest, Presbyterianism replaced Episcopacy; Heyrick, the warden of the collegiate church, being himself instrumental in bringing about the change. The Rebellion of 1745 had many friends and supporters in Manchester. The desire for political reform arose at a very early period in Manchester, and immediately after the peace in 1815, it began to manifest itself in a very decided manner. By the Reform Act Manchester obtained the elective franchise. The great 'free-trade' movement received its mightiest impetus in Manchester by the formation of the 'Anti-Corn-Law League'; and the party which gives special attention to the interests of manufacture, as it had its origin in the town, has been generally recognised as the 'Manchester school.' In 1848 Manchester was made the seat of a bishopric. In 1852 it was constituted a city.

In the time of Henry VIII. and Edward VI. the town was distinguished for its manufactures. The more rapid expansion of trade began in the 17th century; and one who is known as a benefactor to the town, Humphrey Chetham, was among its most eminent tradesmen. The enormities of the Duke of Alva in the Netherlands, and subsequently the revocation of the edict of Nantes, brought many enterprising and skilful foreigners into the district. At first the woollen was the only branch of trade, but since the middle of the last century the cotton has nearly superseded the woollen manufacture. The series of brilliant inventions and discoveries applied, improved, or originated in the district of Manchester, comprising the steam-engine, the spinning-jenny, the mule-jenny, the fly-frame, the tube-frame, the mule, &c., have proved most effective instruments in developing the industrial power of the inhabitants. The early inventions which gave energy to the cotton manufacture were completed about 1788. The importation of raw cotton into this country in 1701 amounted to 1,985,868 lbs.; in 1751 to 2,976,610 lbs. In 1780 it had increased to upwards of 6,700,000 lbs.; in 1800 it reached 56,000,000 lbs. Since then it has gone on increasing with marvellous rapidity.

There are above 200 cotton factories within the limits of Manchester parish. Some of them are only spinning factories; others are both spinning and weaving; and many of them are on a scale of extraordinary magnitude. Bleach-works, dye-works, and print-works, all connected with the cotton manufacture, exist on a very large scale in and near Manchester: also chemical works, engine factories, and numerous other extensive establishments, as well as a very great number of small factories and workshops, which depend more or less on the staple manufacture of the town.

The processes of throwing and weaving silk were extensively carried on at Macclesfield several years before they reached Manchester. The silk-mill of Mr. Vernon Royle, erected in 1819-20, was the first brought into operation in Manchester. Since then the trade has rapidly increased; and there are now several very large mills, employing a great number of hands. Printing is another branch of the silk

GEOG. DIV. VOL. III.

business, chiefly, if not exclusively, carried on at Manchester. Dyeing of silk is also extensively pursued.

Locomotive engines for railways, as well as the engines and machinery for cotton factories, are extensively made. There are besides manufacturing of woollens, small wares, hats, umbrellas, &c. There are numerous banking and other mercantile establishments. A chamber of commerce has been established. Property in the town has enormously increased in value; the application of capital has been on the grandest scale, and the habits of the manufacturers have undergone an entire change.

As to the intellectual and moral condition of the working classes, there is doubtless much to deplore. The prevalence of the factory system has broken up the old domestic manufacture, and thereby destroyed former domestic habits; it has also called from every district of the kingdom, and especially from Ireland, masses of people heterogeneous in their character, yet all more or less ignorant and uncultivated. Most of them have been much bettered in their circumstances without having found an equal increase of morally improving influences. Children by the amount of their wages have become independent of their parents: girls have been sent into the mill before they have learnt the rudiments of domestic duty, and mothers, whose presence in their own houses is indispensable, continue at work for ten hours in the day amid a mass of people, young and old, from whom they can derive little improvement. It is a painful consequence of so many married women working at the mills that a fearfully large number of infants are left barely cared for during the day: to meet, and in some degree to remedy, this evil, 'day nurseries' have been established, and have been found exceedingly useful. The Saturday holiday is a considerable boon to the industrial population of Manchester. Every Saturday at one o'clock factories and warehouses, as well as banks and other large commercial establishments and many shops, are closed, and the remainder of the day is given as a holiday to those employed in them.

Manchester has not been hitherto distinguished for architectural beauty; its chief streets are occupied with warehouses and shops. Recently however a great improvement has taken place in the building of warehouses and places of business; so much so indeed that the warehouses of Manchester promise to become a marked architectural feature of the town. They are spacious, constructed mostly of brick, with stone quoins and dressings, but many are wholly stone, and they are almost invariably in the Italian style. Under the sanction of Acts of Parliament much has been done for the improvement of the town, both in convenience and appearance. Market-street, the chief street, is wide and handsome. The Manchester Improvement Committee have applied the profits of the gas-works, which are very large, to the improvement of the town. Several new streets have been opened by them through dense masses of buildings. Great attention has also been given to the level of the roads in the approaches to the town.

The ecclesiastical edifices in Manchester are numerous. The cathedral is a spacious (collegiate) church of the perpendicular style, of very good proportions; it consists of a nave with two aisles, transepts, several mortuary chapels, and an elaborate western tower. This building serves as the cathedral of the see of Manchester. Among the recent churches one of the finest is that of the Holy Trinity in Stretford-road. St. Luke's church, Cheetham-hill, St. James's at Birch, Trinity church, Rusholme, and St. Matthew's church, are deserving of notice. Among dissenting places of worship, may be mentioned the handsome cruciform Congregational church in Stretford-road, the Scotch church, corner of Devonshire-street, the elegant Unitarian chapel in Brook-street, built by Sir C. Barry, and the handsome Roman Catholic church of St. Chads. Next to the cathedral the finest building in Manchester or Salford is the Roman Catholic cathedral in Salford. There are 42 places of worship belonging to the Establishment, and 110 in connection with the Dissenters in Manchester and Salford; of these the Wesleyan Methodists have 27, the Association Methodists 14, the Primitive and New Connexion Methodists 9, the Independents 17, the Baptists 9, Presbyterians 7, the Unitarians 4, the Roman Catholics 7, and the Quakers, Swedenborgians, and Greek Church one each. The Jews have two synagogues. There are three cemeteries in Manchester; one in Rusholme-road, one at Ardwick, and the third at Harpurhey.

The Manchester Free Grammar school was founded by Hugh Oldham, bishop of Exeter, in 1515. It is free to boys of whatever county or shire, from 5 years old to 20. The income is variable, but averages 5000*l.* It has several exhibitions to Oxford and Cambridge. The school is under the care of nine masters, and in 1853 had 400 scholars. Chetham's Hospital, or the College, was founded by charter in 1665, for 31 boys of Manchester and Salford, and other places in the vicinity; Humphrey Chetham, the benefactor, leaving the interest of 7000*l.* for their maintenance and instruction from 6 to 14 years of age, at which period they were to be put out to some trade. The number of scholars is now about 80. The school is conducted in a convenient old building, which also contains the college library, a fine collection of not less than 25,000 volumes, which have been accumulated out of the benefactions of the same H. Chetham: among the books are many rare and most valuable works. The library is open to the use of the public; books are not allowed to be taken out, but

a convenient reading-room is provided. There is also a museum connected with this institution. The Lancashire Independent college is for the education of students of the Independent denomination intending to enter the ministry, and the course of instruction pursued in it extends over a period of five years. It is in connection with the University of London. The number of students in 1852 was 29. Manchester New College, an institution belonging to the Unitarian body, was founded in 1786, and is in connection with the University of London. It has an income from endowment of about 800*l.* a year. The number of students in 1851 was 20. Owens College is so called from a Manchester merchant, Mr. Owens, who bequeathed the bulk of his property, amounting to nearly 100,000*l.*, for the endowment of a college in Manchester, wherein the usual course of collegiate instruction should be given, with the exception of theology. Owens college was opened in March, 1851, and is in connection with the University of London. In 1853 the number of students was 99. The Royal Manchester School of Medicine is the oldest and one of the most flourishing in the provinces; it also is in connection with the University of London. The Commercial schools under the management of the Manchester Church Education Society, are under the care of a head, second, and third master, and a teacher for each of the departments of French, German, drawing, and music. The school for the deaf and dumb, and the asylum for the blind, occupy a very handsome building near the botanical gardens, on the Stretford-road. The number of day schools in the city of Manchester in March 1851 was 368, of which 80 were public schools with 16,202 scholars, and 288 were private schools with 10,034 scholars. The number of day schools in Salford was 63, namely, 13 public schools with 3352 scholars, and 50 private schools with 1891 scholars. Of Sunday schools there were in Manchester 111, with 42,389 scholars, and in Salford 25, with 10,086 scholars.

The Blind Asylum is maintained from a bequest of Mr. Henshaw of Oldham, who left 20,000*l.* to be applied to the maintenance of an asylum for the blind, so soon as the inhabitants should furnish a suitable building. The Jubilee, or Ladies' Female Charity school, founded in 1806, is conducted in the house in Ducie-road, and educates 40 girls for the duties of domestic service. Among other benevolent and religious institutions are the Royal Infirmary, several dispensaries and lying-in-hospitals, the District Provident society, and the city missions.

Among the scientific institutions of the town, the Literary and Philosophical Society (founded in 1781) stands first in point of time. Its utility has been fully proved by the publication of its Transactions. The Royal Manchester Institution for the promotion of literature, science, and the arts, formed mainly under the auspices of G. W. Wood, Esq., M.P. for Kendal, has been of service in promoting the objects for which it was founded: above 30,000*l.* were laid out in the erection of the building. The Manchester museum, or natural history society, has a handsome hall in Peter-street. The council is empowered to open the museum to ladies, strangers, resident non-subscribers, schools, and the working-classes. Manchester also possesses an architectural society, a statistical society, a flourishing school of design, a choral society, &c.

Among the institutions in Manchester having an influence on the working-classes may be mentioned the athenæum, the mechanics institution in Cooper-street, the mechanics institution in Miles-Platting, the Ancoats lyceum, the Chorlton mechanics institution, the Salford free library and museum in Peel-Park, and the Manchester free library and museum, Camp-Field. The total number of literary societies in Manchester and Salford in 1851 was 24, with 6298 members, and 79,285 volumes in the libraries belonging to them. There are a botanical garden, two theatres, and a concert-hall. There are also several refreshment-rooms of very large size, some capable of holding above 2000 persons, in which music and singing and alight dramatic interludes are performed, and which are attended by great numbers of the youths employed in the factories. Three public parks were opened in 1846:—Queen's-Park, Harpurhey; Peel's-Park, Salford; and Philip's-Park, Bradford. Baths and wash-houses have been erected in different parts of the city.

Among the public buildings worthy of notice are the Royal Institution in Mosley-street, a handsome Grecian pile, designed by Barry; the Infirmary in Piccadilly; the Blind Asylum and Deaf and Dumb school already mentioned; the Town-Hall in King-street; the Royal Exchange, said to be the largest room used as an exchange in Europe; the Theatre Royal, Peter-street; the Branch Bank of England; and the Athenæum in Bond-street, erected by Barry, and one of the most elegant buildings in Manchester. From its size and its political associations the Free-Trade Hall may be specially noticed. It is frequently used for public meetings. There are several railway stations. A new borough jail, on the plan of the model prison at Pentonville, London, has recently been built at a great expense in the Gorton Road; it will contain 500 persons. The union-houses are spacious structures.

There are 10 market-places in Manchester. The provision-markets are open for the sale of goods every day except Sunday, but the regular market-days are Tuesday, Thursday, and Saturday for provisions and manufactures, the Tuesday market being the principal for manufactures, and the Saturday market for vegetables, &c.; Wednesday for pigs and cattle, and Tuesday and Saturday for corn. Fairs

are held in Manchester on Easter Monday and October 1st; and in Salford on Whit Monday and November 17th. A custom-house is maintained in Manchester, in order that the town and neighbourhood may have the privilege of possessing bonding warehouses; the cost of the establishment is borne in the first instance by the corporation, but ultimately by the Bonded Warehouse company. Courts of bankruptcy and county courts are held in the city.

MANCHURIA. [CHINA; MANDSHOORIA.]

MANDAL. [CHRISTIANSAND.]

MANDAVEE. [CUTCH.]

MANDSHOORIA constitutes a government of the Chinese empire under the name of Kirin-oola, or Ghirin-oola. It is the most eastern projection of the high lands of Central Asia, and lies between 42° and 58° N. lat., 120° and 142° E. long. Its surface is estimated at 650,000 or 750,000 square miles. On the north it borders on Siberia, from which it is separated by a mountain range, the Yablouoi Khrebet of the Russians, or the Khing-khan Tugwick of the Chinese. On the west it is divided from the Russian province of Da-uria by the river Kerlou, an affluent of the Amur, and from Mongolia by the river Khailar and the mountain range called Khing-khan-oola. On the south it joins the Chinese provinces of Pe-cheli and Leao-tong, the latter of which formerly belonged to Mandshooria, and has only been detached from it since the present imperial dynasty ascended the throne of Peking. On the east is Corea, from which it is divided by the Tai-yung-shan and Shan Alin, a high range; and farther north the Sea of Japan and the Gulf of Tartary, which separate the large island of Tarakai from Mandshooria.

Mandshooria may be considered as an immense valley inclosed by high and steep mountains, except at its south-western corner, where a broken and rather hilly tract divides it from the province of Leao-tong. The mountain chain of the Khing-khan-oola, which forms the western boundary, seems to be the highest. Towards its southern extremity, between 42° and 43° N. lat., is the peak of Pecha, which is thought to rise to more than 15,000 feet. There are other elevated and snow-capped summits farther north. The Yalo Pass, the only one traversed by Europeans, is near 49° N. lat., and even in April is covered with deep snow. The mountain region of the Yablouoi Khrebet does not attain the snow-line; and its mean elevation probably does not exceed 2500 or 3000 feet above the sea-level. Along the Gulf of Tartary the coast is formed by an exceedingly steep mountain range, rising to 4000 or 5000 feet, and coming close up to the sea, so that only a few level spots of inconsiderable extent intervene between the range and the water. On the eastern declivity of this range there is a tribe which seems to belong to the same race as the inhabitants of Japan: they are called Ainos or Kechen, and live on the produce of their fishing. This mountain range seems to allow no passage, as the Ainos have no intercourse with the Mandshoo, who inhabit the country west of the range. At its southern extremity (43° N. lat.) this maritime range is probably connected with the Shan Alin and its continuation the Tai-yung-shan, which appears to run in a south-south-west direction, until it terminates on the Hoang-hai, or Yellow Sea, in a long promontory, the most southern extremity of which is called the Regent's Sword. The huge mountain mass of the Shan Alin rises above the snow-line.

The interior of Mandshooria contains, towards its southern extremity, an extensive and nearly level plain, called Cortchin. It lies on both sides of the Siren-muren, or Leao-ho, and seems to stretch northward to the banks of the rivers Nonni-oola and Songari. It greatly resembles the desert of the Gobi, which is separated from it only by the Khing-khan range, being mostly covered with sand, and having no water, or only salt-lakes; but the grassy spots are more common and more extensive here than in the Gobi, and afford better pasturage to the numerous cattle of the Mongols, who occupy this part of Mandshooria, which is also called the Eastern Gobi. In some parts the surface is covered with salt incrustations. The remainder of Mandshooria is supposed to consist of a succession of valleys and mountain ranges of various elevation. The mountains however are not bare, but covered with forests nearly to the top. The valleys are said to be fertile, and wide along the principal rivers south of the Amur, and so far it appears that agriculture extends. But that large part of the country which extends from the last-named river to the Yablouoi Khrebet is too cold for agriculture, and its inhabitants live on the produce of their herds and of the chase. Though the climate of Mandshooria is not equal in severity to that of the Gobi, it must be very cold, as we may infer from its geographical position and its elevation.

The principal river is the Amur, which has numerous tributaries. [AMUR.] Through the southern districts runs the Sira-muren, or Leao-ho, which flows about 500 miles; it rises in the Khing-khan range north of the Peak of Pecha, and runs for nearly 400 miles east, and the remainder of its course south-west, until it falls into the Gulf of Leao-tong. It seems to be navigated nearly up to the place where it turns to the south-west.

Agriculture is common south of the river Amur. Wheat, rye, barley, and buckwheat are cultivated extensively, as well as hemp and cotton. The forests, which cover the greatest part of the surface, are partly composed of oak and lime trees, and partly of different kinds of pines, fir, and birch. On the mountains towards Corea rhubarb and ginseng grow in abundance; both are collected by the natives, and

constitute, with corn, the principal articles of export. All domestic animals common to the countries of central Asia are kept in considerable numbers; there are also reindeer in the districts north of the Amur, and camels in many places south of it. Wild animals are numerous, especially those that yield furs, in the forests which clothe the eastern declivity of the Khing-khan, where sables, ermines, bears, wolves, and foxes are found. Among the wild animals peculiar to this and the neighbouring countries are the 'argali,' or wild sheep, and the 'dashigetai,' or wild ass. Fish abound in the rivers, especially the sturgeon and salmon. Pearls are said to be found in some of the streams. The mineral riches of Mandshooria are not known.

The population is very vaguely estimated at two millions, but it is probably much underrated. All the people, with the exception of the Mongols, who inhabit Cortchin, belong to the wide-spread race of the Tungooses, of which the Mandshoo form a subdivision. The most widely-spread tribe is the proper Tungooses, who seem to occupy the whole or nearly the whole country north of the Amur, and also the greatest part of that between the Nonni-oola and Songari rivers. The Tungooses are numerous also in Siberia. This race differs considerably from the Mongols, who inhabit the country farther west, in the form of their body, being tall and of a slender make. The languages of all the tribes of this race have a great similarity in words and construction; and it appears that there is a relationship between them and the language of the Mongols and Turks, as well as some languages of eastern Europe, especially that of the Finlanders. They lead in general a nomadic life, subsisting on their herds of cattle or reindeer. The Taguri, or Da-ures, live on the river Nonni, and are agriculturists. Among them are settled the Yakutes, about 6000 families, which emigrated in 1787 from Siberia. The Mandshoo occupy the south-eastern part of the country: though not the most numerous of the tribes they are the most important, their sovereign family having ascended the throne of China. They began their incursions into the northern provinces of the Celestial Empire about 1610. Their progress at first was slow, but it afterwards became so rapid that in 1662 they proclaimed the son of their valiant chief Taytsong emperor of China, under the name of Kaughi, and he completed the conquest of the empire with singular success. His family still occupies the throne of China. The Mandshoo are agriculturists, but pass a great part of their life in hunting: many Chinese families have settled among them, and have improved their modes of cultivation. Members of the Tungoose tribes have been well received by the Mandshoo dynasty in China, where they serve as soldiers and attain military honours, the civil employments being reserved for native Chinese.

The governor of the province resides at Ghirin-oola, a place of some importance. Ninguta, on the Hurka-pira, an affluent of the Songari River, is the ancient residence of the chiefs of the Mandshoo, and is held in great veneration by the court of Peking and the whole nation. Other towns of some importance are Naun-koten, on the Nonni, and Sakhalien, on the Amur.

MANFREDONIA. [CAPITANATA.]

MANGALORE. [CANARA.]

MANI. [LACONICA.]

MANILLA. [PHILIPPINE ISLANDS.]

MANITOULIN ISLANDS. [CANADA.]

MANNHEIM, the capital of the circle of Unter-Rhein, in the grand-duchy of Baden, is situated in 49° 29' N. lat., 8° 28' E. long., in a very fertile plain, at the junction of the Neckar with the Rhine, and has 25,000 inhabitants. Over both rivers there are bridges of boats. Mannheim is built with great regularity; it consists of several squares and of broad straight streets that cross each other at right angles. The houses are all of two stories, except those at the corners, which have three stories. The principal street leads from the Neckar Gate to the palace of the grand-duke, which is a very magnificent building, and one of the finest of the kind in Germany. The right wing contains a gallery of pictures, a cabinet of natural history, a collection of plaster casts of the most celebrated antiques, and a library of 60,000 volumes. Among the other public buildings the most worthy of notice are the observatory, the merchant's hall, and the splendid church formerly belonging to the Jesuits, the theatre, three hospitals, &c. Mannheim has a gymnasium, a botanic garden, a mercantile school, an academy of painting and sculpture, and other establishments for education. The fortifications having been entirely demolished by the French, and the site subsequently converted into gardens, the inhabitants enjoy the benefit of beautiful promenades, besides the fine park of the palace, which is nearly 200 acres in extent. The town has a considerable transit trade. There are manufactories of tobacco, shawls, linen, and playing cards, besides bleaching-grounds and tanneries. In the environs there are numerous gardens, and hops are extensively cultivated. Mannheim has communication by railway with all the principal towns of Germany; it is joined to the railroad along the right bank of the Rhine, by a branch line 12 miles in length, which joins the former at Heidelberg, and by the railway from Mayence to Forbach and Metz, which runs up the left bank of the Rhine opposite Mannheim, it is connected with the Paris-Strasbourg and the French lines.

Mannheim was only a village till 1606, when the elector palatine, Frederick IV., laid the foundation of a fortress and a town. In the Thirty Years' War it was taken by Tilly, duke Bernhard of Weimar, the French, and the Bavarians. In 1688 it was taken by the French general Melac. In 1699 the elector Frederick William had the city fortified on Coehorn's system. His successor Charles Philip removed hither from Heidelberg in 1720, with his court and all the public offices, on account of the religious disputes with the Protestants. The first stone of the splendid palace was laid in 1720, and the building was completed in 1731. The next elector, Charles Theodore, having succeeded to the electorate of Bavaria on the death of Maximilian Joseph, without issue, in 1788, removed his court to Munich. Mannheim was taken by the French in 1795, by the arch-duke Charles in 1799, afterwards re-occupied by the French, and assigned to Baden by the treaty of Luneville in 1801.

MANNINGTREE. [ESSEX.]

MANORHAMILTON, county of Leitrim, Ireland, a small post and market-town and the seat of a Poor-Law Union, is situated on the Owenmore, an affluent of the Bonnet River, in 54° 19' N. lat., 8° 7' W. long., distant by road 24½ miles W. by S. from Enniskillen, and 125½ miles N.W. from Dublin. The population in 1851 was 1227. Manor-hamilton Poor-Law Union comprises 22 electoral divisions, with an area of 144,847 acres, and a population in 1851 of 34,804. The town, unattractive in itself, but lying in a well-cultivated valley, forms part of a landscape singularly varied, and is closed up by lofty mountains. In the town are the parish church, a Roman Catholic chapel, a bride-well, district dispensary, and Union workhouse. A large castle, built in the reign of Elizabeth, stands on an eminence near the town. Quarter and petty sessions are held. There are eight fairs yearly.

MANOSQUE. [ALPES, BASSES.]

MANRESA. [CATALUÑA.]

MANS, LE, the capital formerly of the province of Maine, now of the department of Sarthe in France, stands on the right bank of the Sarthe, here crossed by three bridges, in 48° 0' 35" N. lat., 0° 12' 4" E. long., at a distance of 115 miles in a straight line, and 132 by railway through Versailles and Chartres, S.W. from Paris, and has 24,568 inhabitants in the commune. The old part of the town, which is situated near the river, is ill-built, with narrow, crooked, dirty streets, running parallel to each other, and connected by still narrower and dirtier lanes. The new quarter stands on a hill, and although not regularly laid out, it is on the whole agreeable and well-built, with cut-stone houses roofed with slates. The principal streets of this quarter abut on a fine square called Place-des-Halles. There are two fine promenades, one called Des-Jacobins, the other Du-Greffier; this last runs along the Sarthe, the banks of which are lined with quays. The cathedral of St-Julien, famous for its choir and painted windows, and dating from the 13th century, contains the tomb of Berengaria, Cœur-de-Lion's queen. The church De-la-Couture, which dates from the 12th century, and that of Notre-Dame-du-Pré, from the 11th century, are very remarkable buildings. The church De-l'ancienne-Visitation, opened in 1737, is also a beautiful structure. The other objects of notice in the town are the prefect's hotel, which contains a public library of 40,000 volumes, a museum, &c.; the theatre; the theological and communal colleges; the corn-market buildings; and several ancient houses, among which are shown those of Queen Berengaria and Scarron.

Le-Mans gives title to a bishop; it has tribunals of first instance and of commerce, and several learned and benevolent societies. The manufactures consist of coarse woollens, lace, linen, soap, hosiery, blankets, woollen yarn, paper, and leather. There are also marble works and bleach-mills. The articles enumerated, together with iron, salt, rags, wine, brandy, chestnuts, corn, oil, cattle, sheep, pigs, poultry, and clover-seed, support a considerable commerce.

Le-Mans was the birth-place of Henry II., the first of the Plantagenet kings of England.

A town called *Suindinum*, existed here in the time of the Romans. It was the capital of that division of the Auleri called *Cenomani*, or *Cenomanni*, from whom it took in the 4th century the name of *Cenomanni*, a fragment of which remains in its modern designation. In the age of Charlemagne it was considered one of the principal cities of France, and became afterwards the chief town of the province of Maine. It is said to have been besieged twenty-four times between the reign of Clovis and that of Henri IV., inclusive. It was occupied by the royalists of Vendée in A.D. 1793, to the number of 60,000. They were driven out by General Marceau after a desperate resistance. It was surprised by a party of Chouans in 1795.

(*Dictionnaire de la France*.)

MANSFIELD, Nottinghamshire, a market-town and the seat of a Poor-Law Union, in the parish of Mansfield, is situated in 53° 8' N. lat., 1° 11' W. long., distant 14 miles N. by W. from Nottingham, 138 miles N.N.W. from London by road, and 147½ miles by the North-Western and Midland railways. The population of the town in 1851 was 10,012. The living is a vicarage in the archdeaconry of Nottingham and diocese of Lincoln. Mansfield Poor-Law Union contains 18 parishes and townships, with an area of 54,665 acres, and a population in 1851 of 30,156.

Mansfield is seated in a valley near the little river Mann, or Maun, from which it probably takes its name; and is surrounded by the

ancient forest of Sherwood, the scene of Robin Hood's chief exploits. The principal streets are lighted with gas, and paved. The parish church, dedicated to St. Peter, is a commodious structure; parts of it are Norman, but it has been repaired at different times in various styles. Wesleyan and Primitive Methodists, Independents, Baptists, Quakers, and Unitarians, have places of worship. The Royal Free Grammar school of Queen Anne has an income of 250*l.* a year, and had 56 scholars in 1852. In the town are—Brunt's Charity school, Clarkson's Charity school, a subscription library and news-room, a mechanics library, and a savings bank. A railway, 7 miles in length, connects Mansfield with the Cromford Canal. The more prominent buildings are the market-house, the moot-hall, the town-hall, the railway station, and the saw-mills of Mr. Lindley. A handsome monument to the memory of the late Lord George Bentinck stands in the market-place. There are extensive cotton-mills, besides manufactories of cotton and silk hosiery. Lace is extensively made. The market-day is Thursday; cattle-fairs are held on the 5th of April, 10th of July, and the second Thursday in October.

MANSURAH. [EGYPT.]

MANTES. [SEINE-ET-OISE.]

MANTINEIA, a city of the Peloponnesus, was situated on the little river Ophis, in the east part of Arcadia, in an elevated plain of considerable extent, which was bounded on the north by the plain of Orchomenus, and on the south by that of Tegea. [ARCADIA.] The inhabitants of Mantinea originally dwelt in four or five separate districts (Xen., 'Hell.,' v. 2, § 7; Strabo, p. 337); but were afterwards collected into one city. The Mantineans had a democratical form of government, and were closely connected with Argos. Their political constitution has received great praise from Polybius and Ælian. Their form of government and their connection with Argos led them to oppose the Lacedæmonian interests. In B.C. 418 they formed an alliance with Elis and Argos against Sparta, but were entirely defeated, and obliged to sue for peace. (Thucyd., v. 64-74, 81.)

In B.C. 385 the Spartans again took Mantinea (Xen., 'Hell.,' v. 2, § 1-7; Paus., viii. 8, § 5; Diod., xv. 5), and destroyed it; compelling the inhabitants to live apart in four hamlets, as in ancient times. After the battle of Leuctra the Mantineans again rebuilt their city; and it was in the vicinity of their town that the battle was fought, B.C. 362, between the Spartans and Thebans, in which Epaminondas fell. Mantinea, in later times, joined the Achæan league; but in consequence of the massacre of a garrison of Achæans the city was taken by the Achæans in connection with Antigonus Doseon, who sold all the male population as slaves. In honour of Antigonus the name of the city was changed to Antigoneia, which it retained till the time of Hadrian, who restored its original name. (Paus., viii. 8, § 6.) Pausanias has devoted a considerable part of his eighth book to a description of Mantinea and its works of art. The ruins of Mantinea, called *Paleopoli*, are still considerable. The circuit of the walls is entire, with the exception of four or five towers on the eastern side. The form of the city was slightly elliptical, and about two miles and a quarter in circumference. There were ten gates. The entire circuit of the walls is protected by a wet ditch. One of the eparchies, or sub-prefectures, of Arcadia is now called Mantinea.

(Leake, *Travels in the Morea*, i. pp. 103-105.)

MA'NTOVA, a province of Austrian Italy, is bounded E. by Verona and Rovigo, N. by Brescia and the lake of Garda, W. by Brescia and Cremona, and S. by the duchies of Modena and Parma. The province of Mantova extends along both banks of the Po. The other rivers are the Mincio and the Oglio, both affluents of the Po. The Mincio issues out of the lake of Garda at Peschiera, and for about ten miles marks the limits between Verona and Mantova, after which it flows across the territory of the latter, forms the lagune in the midst of which stands the city of Mantua, and then enters the Po below Governolo. The length of the province from north to south is about 36 miles, and its breadth about 32 miles. The area is 903 square miles, and the population in 1850 was 270,100. The territory of Mantova is noted for its fertility. It contains many fine pastures well adapted for the grazing of cattle, and irrigated by numerous streams and canals; vines and mulberry-trees also abound. Landed property is very valuable in this district, which labours however under two disadvantages, namely, the danger of the inundations of the Po, to prevent which the dykes and sluices are kept in constant repair at a great expense, and the unwholesomeness of the air in summer. The chief products are wheat, rice, maize, silk, flax, hemp, fruits, and wines. The country is bare of timber. Cattle and horses are reared in considerable numbers. There is no town of any importance except the capital, which is noticed in the next article.

MA'NTOVA (or MANTUA), the capital of the province and of the old duchy of Mantua, stands on an island about five miles in circumference, in the middle of a lagune formed by the Mincio, and is joined to the mainland by causeways, the shortest of which is about 1000 feet in length. The town is strongly and regularly fortified. It is well-built, with wide streets and squares, and contains many handsome structures. The principal buildings are—the cathedral, one of the finest in Italy; the church of Sant-Andrea; the churches of San-Maurizio and San-Sebastiano; the house of Giulio Romano, whose works as a painter and an architect form the greatest glory of the

city; the church of Santa-Barbara, rich in paintings; the public library of 80,000 volumes, and the museum, in which is a valuable sculpture gallery; the ducal palace, an old vast irregular structure, partly rebuilt by Giulio Romano, which contains some good paintings; and the gates and bridges of Mantua, especially the gate dei Mulini, by Giulio Romano. A palace outside of the town, called Palazzo del Tè, was originally intended for stables for the dukes Gonzaga, but under the direction of Giulio Romano it grew into a vast palace. The town of Mantua contains about 25,000 inhabitants, 3000 of whom are Jews. It is a bishop's see, and has a lyceum and a gymnasium. There is a branch railroad from Mantua which joins the Milan-Venice line at Verona. The town and province are infested in summer and autumn with gnats and mosquitoes.

Two miles below Mantua on the banks of the Mincio is the village of La Pietola, which a vague tradition reports to be the same as Andes, Virgil's birthplace. The dukes of Mantua had a palace here, called La Virgiliana, which still exists, though much dilapidated.

The origin of Mantua is lost in the obscurity of ante-Roman times. Virgil ('Æn.,' x. 201) boasts of its Etruscan origin, its former power, and says it was inhabited by three different races; and Pliny the elder (iii. 19) observes that it was the only relic of the Transpadane Etruscans, from whom it passed into the power of the Cenomani Gauls, and afterwards became subject to Rome with the rest of Cisalpine Gaul. After the fall of the Western empire it was successively subject to the Goths, the Longobards, the Franks, and the German emperors. In the 12th century it asserted its freedom as an independent municipality, like the other Lombard cities, but afterwards became subject to marquises of the house of Gonzaga, who were feudatories of the empire. Frederick II., the last marquis of Gonzaga, was created duke of Mantua by Charles V., in 1530. His states comprised the duchy or province of Mantua, and a large portion of Montferrat. Charles IV., the last duke, having joined the party of Philip V. in the war of the Spanish succession, was put under the ban of the empire, and his duchy annexed to the states of the house of Austria, with the exception of Montferrat, which was annexed to the duchy of Savoy. The duchy and town were taken by the French in 1797, and incorporated in the Cisalpine Republic. It afterwards formed the department of Mincio in the so-called kingdom of Italy till 1814, when it again came into the hands of Austria. The city of Mantua was taken and sacked by the imperialists in 1630, when its population (it is stated) was reduced from 55,000 to 13,000. The French attacked it unsuccessfully in 1735; but Bonaparte took it in 1797. The Austrians recovered it in 1799, but were obliged to surrender it to the French in 1801.

MARAGHA. [PERSIA.]

MARAKAH. [DONGOLA.]

MARANHAO, Province of. [BRAZIL.]

MARANHAO, or SAN LUIZ DO MARANHÃO, a town on the northern coast of Brazil, is situated in 2° 3' S. lat., 43° 50' W. long., on the western shore of the island of Maranhão. This island, which is nearly twenty miles long, extends along the shore of the continent, from which it is separated by a shallow channel, called Rio do Mosquito. The channel is, on an average, only 100 yards wide, and terminates in two large bays, the Bahia de San José on the east, and the Bahia de San Marcos on the west. The island is generally low and swampy, and almost entirely covered with wood.

The town is built on the north shore of a small peninsula, formed by two small inlets, the Rio de San Francisco on the north, and the Rio da Bacanya on the south. It is divided into two sections. The Bairro da Praia Grande extends along the shores on a broken surface. The streets are crooked, uneven, and badly paved. The houses have two or three floors, and are mostly built of sandstone. In this part of the town is a large square, surrounded by the palace of the governor, the college of the Jesuits, the town-hall, and the prisons, which are substantial buildings. Besides the public buildings already mentioned the most remarkable are the episcopal palace, and the theatre. At the back of this section lies the other, called Bairro de N. Senhora da Conceição, which consists of small houses, many of which are surrounded by gardens and plantations. Each division has its own parochial church, besides which there are three other churches, two chapels, and four churches belonging to four convents. The town is defended by three small fortresses. Maranhão is the residence of the governor of the province, and has a lyceum, and schools of navigation. The harbour is good and safe, but the entrance is difficult, on account of a bank to the north of the town, on the east and west of which however are deep channels leading into the harbour. The tide rises 18 feet in the harbour, and 12 feet outside of it. The mean annual temperature is 80° of Fahrenheit. The climate of the town is considered healthy. The population amounts to about 30,000. The imports consist of wine, brandy, oil, flour, fruits, silk, cotton and linen goods, hardware and metals, all from Europe or North America, and articles brought from the East Indies, as spices, &c., and drugs. The exports

are cotton, rice, tanned and raw hides, &c. Sugar and coffee are imported from Pernambuco, Bahia, and other parts of Brazil. The province of Maranhao is noticed under BRAZIL (vol. ii. cols. 108, 109). The name is sometimes written *Maranhã*.

MARANON. [AMAZONAS.]

MARANS. [CHARENTE-INFÉRIEURE.]

MARATEA. [BASILICATA.]

MA'RATHON, a small plain in the north-east part of Attica [ATTICA], about 5 miles in length and 2 miles in breadth, which is chiefly memorable for the victory which the Athenians under Miltiades gained over the Persians here B.C. 490. Marathon was the first place in Attica that was occupied by Pisistratus and his partisans, after he had been compelled to retire to Eretria in Euboea. (Herod., i. 62.) The town of Marathon originally belonged to one of the four towns which formed the Tetrapolis, which consisted of Ceneo, Marathon, Probalinthus, and Tricorythus; but the name was afterwards applied to the whole district. Marathon is about three miles from the sea, and is said by Plutarch to have derived its name from the hero Marathos. It is mentioned in the 'Odyssey' as a place of considerable importance (viii. 80); and it was near this place that the Athenians are said to have defeated Eurystheus when they took up arms in defence of the Heraclidae. It is 18 miles in a direct line from Athens to the village of Marathon.

The plain of Marathon was watered by a small stream, called Asopus by Ptolemy, which forms marshes near the sea, in which, according to Pausanias (i. 32, § 6), a great many of the Persians perished. The Athenians who fell in the battle were buried in the plain; and also, but apart from the Athenians, the Plataeans, Boeotians, and slaves. A large mound of earth still rises from the centre of the plain; and near the sea there are two others, much lower than the former.

MARAZION, Cornwall, a market-town in the parish of St. Hilary, is situated on the coast of Mounts Bay, in 50° 7' N. lat., 5° 28' W. long.; distant 29 miles S.W. from Truro, and 230 miles W. by S. from London. The population of the chapelry of Marazion in 1851 was 1379. The town is governed by a mayor and corporation. The living is a perpetual curacy in the archdeaconry of Cornwall and diocese of Exeter.

The town of Marazion is built on the slope of a hill, which rises towards the north and shelters it from cold winds. The mildness of temperature thus induced renders the place inviting to invalids, although this advantage is to some extent counterbalanced by the falling of a large quantity of rain. In the town are the parochial chapel, a very ancient edifice, chapels for Wesleyan Methodists and Baptists, and a school built in 1851 by Lady Mary Cole. A market is held on Saturday. A fair is held on Michaelmas-day. The chief trade of the town consists in the importation of timber, coals, and iron for the use of the neighbouring mines. A station of the Penzance and Truro railway is at Marazion.

Opposite the town of Marazion is St. Michael's Mount, which is connected with the main land by the sands and a narrow causeway of pebbles when the tide is out, but is insulated when it is high water. It is supposed that St. Michael's Mount was the *Insula* of Diodorus Siculus, the depot for the tin refined and cast into ingots by the Britons. Specimens of tin ore are said to be plentiful all over the Mount, which is principally composed of granite. Previous to 1044 a priory of Benedictine monks had been established on the island. The Mount is said to have been regarded with religious reverence as early as the 5th century. In the middle ages it was much resorted to as a place of pilgrimage, and Marazion became in consequence a place of considerable trade. The Mount was regarded also as a stronghold, and a castle was built on it. In the War of the Roses the castle was seized by the Earl of Oxford; the Yorkists besieged the place for several months, and at last took it by capitulation. It was several times the subject of contest during the civil wars. In 1726-27 Sir John St. Aubyn rebuilt the pier. On September 6th, 1846, Queen Victoria visited the Mount.

The island, containing the Mount and a level piece of ground at its foot, is about a mile in circumference, and comprehends 70 acres of surface. In 1851 the population was 147. The Mount is about 200 feet in height from the level of the sea to the platform of the chapel tower. The ascent is steep, and is defended by two small batteries; the summit is occupied by the remains of the monastic buildings, which have been repaired and converted into a dwelling-house.

MARBELLA. [GRANADA.]

MARBLEHEAD. [MASSACHUSETTS.]

MARBURG, the capital of the province of Upper Hesse, in the electorate of Hesse-Cassel, is situated in 50° 50' N. lat., 8° 47' E. long., 60 miles N. by E. from Frankfurt-am-Mayn by the Frankfurt-Cassel railway, and has about 8000 inhabitants. It is built on the banks of the Lahn, which divides it from the suburb of Weidenhausen. The town is situated on the side of a hill, and the streets are very steep. On the top of an eminence overlooking the town there is a large castle, which was formerly well fortified and was the residence of the landgraves of Hesse. The town is partly surrounded by a wall, in which there are five gates. Marburg has a university, which was founded in 1527 by the landgrave Philip the Generous. This university has very considerable revenues, and all the usual appendages of

the German universities, with a library of 100,000 volumes. The university has faculties of Protestant theology, law, medicine, and philosophy, and 62 professors and teachers. The number of students in 1850 was 263. Marburg has also a gymnasium, with about 200 pupils; one Calvinist, one Roman Catholic, and two Lutheran churches; one hospital, two infirmaries, an orphan asylum, a school of industry, &c. The church of St. Elizabeth contains the fine monument of St. Elizabeth, which was however much damaged under the Westphalian government. Marburg has some manufactures of woollen, linen, cotton, hats, tobacco, and pipes.

MARCA D'ANCO'NA, an old denomination of a geographical division of the Papal States, whose limits correspond partly with those of ancient Picenum, and which is now subdivided into the three administrative delegazioni, or provinces, of Ancona, Fermo ed Ascoli, and Macerata e Camerino. This fine region extends from the frontiers of Abruzzo to the boundaries of the former duchy of Urbino, now the province of Pesaro e Urbino, and from the Apennines to the Adriatic, along which sea it occupies a line of coast more than 60 miles in length. It has been called *La Marca*, 'the March,' since the time of the Carolingian emperors and kings of Italy, from being governed by marchiones, or marquises. *March* ('Mark,' in German) meant originally a frontier district, but the term was afterwards applied rather capriciously, and the number of marquisates was multiplied in various parts of the revived Western empire. In the time of the Longobards the country, afterwards called *Marca*, was called *Pentapolis*, from its five principal towns, Ancona, Faano, Pisaurum, Auximum (now Osimo), and Numana. The name of *Marchia Anconae* is found in a diploma of the emperor Frederick I., of 1162. His son Henry VI. united it to the duchy of Ravenna. Innocent III. conquered the March, and placed it under the allegiance of the Roman see. During the troubles of the middle ages it was divided among several petty princes. Cesare Borgia subdued the country, which was annexed to the papal territories. It was then generally called *Marca d'Ancona*, from its principal town; but the south-east part of it was also sometimes called *Marca di Fermo*, and the two together were often designated, in the plural number, '*Le Marche*,' or *The Marches*. [ANCONA; FERMO-ED-ASCOLI; MACERATA.]

MARCELLIN, ST. [ISÈRE.]

MARCHE, Isle of Ely, Cambridgeshire, a market- and post-town in the parish of Doddington, is situated on the old river Nene, in 52° 33' N. lat., 0° 5' E. long., distant 32 miles N. by W. from Cambridge, 79 miles N. by E. from London by road, and 87½ miles by the Eastern Counties railway. The population of the town of March in 1851 was 4171. The living is a chapelry in the archdeaconry and diocese of Ely.

The town consists principally of two streets. The river Nene is crossed by a bridge at the junction of the two streets. The church stands at the southern extremity of the town; it is a handsome structure, erected in the middle of the 14th century. The Baptists and Independents have places of worship, and there are National schools. A county court is held in the town. There is a commodious town-hall. The market is held on Friday; and there are several fairs. Some trade in agricultural produce is carried on by means of the river Nene.

MARCHE, LA, one of the provinces or military governments into which France was divided in pre-revolutionary times. It was bounded N. by Berri, E. by Auvergne, S. by Limousin, and W. by Poitou and Angoumois. Its name, which denotes a frontier district, was derived from its situation on the border of Limousin (of which province it was formerly accounted a subdivision, being sometimes called *La Marche du Limousin*) towards Poitou and Berri. It was subdivided into *La Haute Marche* on the east side, of which Gueret was the capital, and *La Basse Marche* on the west side, of which Bellac was the chief town. *La Haute Marche* now constitutes the department of CREUSE; *La Basse Marche* is comprised in the arrondissements of Limoges and Bellac, in the department of Haute-Vienne. [VIENNE-HAUTE.]

MARCHIENNES. [NORD.]

MARCILLAT. [ALLIER.]

MARDIN, a town of Northern Mesopotamia, built on a steep hill on the southern slope of the Mardin Hills, the ancient Mount Masius, which divides the basin of the Upper Tigris from that of the Euphrates. Mardin is a considerable though poor town, and is said to contain 20,000 inhabitants, two-thirds of whom are Moslems, and the rest Christians, with some Jews. The Christians are divided between Syrians of the Greek Church, Nestorians, and Armenians. The Syrians, who are the most numerous, have two churches in the town and two convents in the neighbourhood. They read their church service in the Syriac language, the vulgar tongue being the Arabic.

The circuit of the town including the castle, which is built on the summit of a limestone rock, which rises perpendicularly from the platform of the hill, is about 2 miles. The houses rise one above another on the eastern and southern sides of the hill; the streets run along the slopes forming successive terraces, the cross streets that connect them being literally flights of steps. The houses are built of stone, generally small, with flat roofs, on which in summer the inhabitants commonly sup and sleep. Mardin has eight mosques, several bazaars, and some public baths. The castle, which is strong by its

situation, is now in ruins. The town of Mardin is nearly half-way between Diarbekr and Mosul, and on the road from Constantinople to Baghdad. The platform of the rock on which the town is built is about 2300 feet above the level of the sea. The prospect from it over the vast and beautiful plain to the southward is very striking.

Mardin is said to be an ancient town and to have been originally called Marde or Meride. It was taken and plundered by Tamerlane. Hulakou, grandson of Genghis Khan, attacked it without success. Osman Beg made himself master of the place in the beginning of the 14th century.

(Niebuhr; Buckingham; Ainsworth, in the *London Geographical Journal*.)

MAREMME, the name given in Italy to the unwholesome lowlands which extend along the coast of the Mediterranean. The name is especially applied to the lowlands of Tuscany and the Papal States, which last are the most extensive. The Maremma may be divided into basins. The first basin begins north of Lucca, and extends along the sea-coast as far as Leghorn, south of which town the ridge of Montenero projects as far as the sea-coast. This basin extends inland from 10 to 12 miles to the hills east of Pisa; it also includes the lowest part of the course both of the Serchio and the Arno, and is called Maremma Pisana. The next basin is that of the Cecina, a river which enters the sea about 18 miles south from Leghorn. This basin, which is called the Maremma of Volterra, is of small extent, for the hills again approach close to the sea a few miles south of the mouth of the Cecina. The third basin begins at Piombino, and extends as far as Monte-Argentaro, a distance of about 60 miles in a direct line. It stretches from 10 to 20 miles inland, and includes the lower course of the rivers Cornia, Bruna, Ombrone, and Albegna, and the lakes or marshes of Castiglione and Orbetello. This large tract is called Maremma Senese, because it forms part of the province of Siena. It is also called the Maremma of Grosseto, from the town of that name which is situated in the midst of it.

The Roman Maremma, which is a continuation of that of Siena (for there is no interruption of hills near the coast between the one state and the other), begins at the river Pescaia, which marks the boundary of the two countries, and extends as far as Terracina on the frontiers of Naples. The whole of this tract, of more than 120 miles in length, is low and unhealthy; but its depth inland is very unequal, owing to various offsets of the lower Apennines, and also to detached ridges which approach the sea without coming close to it, and which partly inclose the lowlands. The Roman Maremma may therefore be divided into three basins:—First, that of the Lake of Bolsena, including the banks of that lake and the course of its outlet, the river Marta, as well as the rivers Fiora, Arone, and Mignone. The mountains of Santa-Fiara, on the borders of Tuscany, bound this basin on the north-west; and Mount Cimino, which is of volcanic formation, on the south-east, divides it from the basin of the Tiber. The lower steps of the ridge of Cimino approach the sea at La-Tolla, near Civitavecchia. This basin, which is generally called the Maremma of Corneto, includes the districts of Corneto, Montalto, Canino, Castro, and Civitavecchia.

The second basin, that of the lower Tiber, extends from Civitavecchia to Anzo. The volcanic ridge of the Alban Mount divides it on the south-east from the basin of the Pomptine Marshes. A description of both, with some account of the various phenomena of the soil and atmosphere, is given under CAMPAGNA DI ROMA. The Maremma are of two kinds; some are marshy, and others dry, but both are unwholesome in summer and autumn.

The name of Maremma is not commonly used in the kingdom of Naples to designate the unhealthy lowlands of that country, which are also extensive, but the synonymous word Paduli, a corruption of paludi (marshes), is used instead.

The Tuscan government has effected great improvements in the Maremma; parts of the Tuscan marshes have been drained, lakes embanked, the ground has been brought into tillage, and colonies established. It is remarkable that, although to spend a single night in the Maremma during summer and autumn is commonly dangerous, and in some instances and places fatal, persons may sleep in open boats close in shore with perfect impunity.

MARENCO. [ALESSANDRIA.]

MARENNES. [CHARENTE-INFÉRIEURE.]

MAREOTIS. [BIRKET-EL-MARIOUT.]

MARGARETTING. [ESSEX.]

MARGATE, Kent, a sea-port and market-town, and a watering-place, in the parish of St. John, Isle of Thanet, is situated in 51° 24' N. lat., 1° 22' E. long., distant 15 miles N.E. by E. from Canterbury, 72 miles E. by S. from London by road, and 101 miles by the South-Eastern railway. The population of the parish of St. John in 1861 was 9107. The living is a vicarage in the archdeaconry and diocese of Canterbury.

Margate is a member of the cinque-port of Dover. The town is situated on the north coast of Kent. The principal streets are regularly constructed and well paved; the town is lighted with gas, and is well supplied with spring-water. The public buildings, parades, esplanade, squares, &c., are of a superior description. The shore is well adapted to sea-bathing. Since the formation of railways to the watering-places on the south coast, the popularity of Margate has

somewhat declined, but it is still resorted to by large numbers of visitors. The old church of St. John's has suffered greatly from alterations. Trinity church, erected in 1825, is a handsome edifice, with a tower 135 feet high, which serves as a sea-mark; the Trinity Company having contributed largely towards its erection for that purpose. The Wesleyan Methodists, Independents, Baptists, Countess of Huntingdon's Connexion, and Roman Catholics, have places of worship; and there are National and British schools, and a literary institution. The Royal Sea-Bathing infirmary at West-Brook, near Margate, was established for the benefit of poor people, chiefly from London and its vicinity. In the town are Draper's hospital for decayed housekeepers, and a dispensary. There is a considerable fishery, and the fishermen add to their income by assisting vessels in distress.

The assembly-room has externally a wide colonnade of coupled Doric columns. The principal room, which is 87 feet long and 43 feet wide, is handsomely fitted up. There are a theatre, baths, libraries, bazaars, &c. The town-hall contains several portraits. The pier was erected under the superintendence of Messrs. Reunie and Jessop, at an expense exceeding 100,000*l.* It is of stone, 900 feet long, and at its extremity is a lighthouse. There is a wooden jetty longer than the pier. The Droit-office, at the foot of the pier, is rather an ornamental structure. The custom-house is a plain building. The market-house is commodious. Wednesday and Friday are the market-days. The Marine-terrace is an excellent sea-side promenade, 1500 feet long.

MARGUERITES. [GARD.]

MARIA ISLAND. [VAN DIEMEN'S LAND.]

MARIANE ISLANDS. [LADRONES.]

MARIANO. [COMO.]

MARIE-AUX-MINES, SAINTE. [RHIN, HAUT.]

MARIE-GALANTE, an island in the Caribbean Sea, belonging to France, lies about 15 miles S. from Guadaloupe. It is of a circular form, and about 14 miles in diameter. This island was discovered by Columbus in 1493, and was first settled by the French in 1647. It is a dependency of Guadaloupe. The surface of Marie-Galante is of moderate elevation, and rises gradually towards the north; the western side is flat. The shores are rocky, and without good harbours. The soil is productive, and yields abundantly coffee, sugar, cotton, and cocoa. The population is about 14,000. The only town, Basseterre, or Grand Bourg, stands on the south-west point of the island, in 15° 52' N. lat., 61° 22' W. long.

MARIENBERG, a small town in the circle of Zwickau in Saxony.

MARIENBURG. [DANZIG, Government of.]

MARIENWERDER, one of the two governments into which West Prussia is divided, is bounded N. by the government of Danzig, E. by that of Königsberg, S. by Poland and Posen, and W. by Brandenburg. Its area is 6759 square miles, and the population in 1847 was 613,300. The government is divided into 13 circles. The surface is level, in parts marshy. The principal rivers are the Vistula and its feeder the Brahe. At a little distance from the left bank of the Vistula the Berlin-Königsberg railway runs down from Bromberg to Danzig. Steamers ply on the Vistula.

Marienwerder, the capital, situated on the Liebe and the Little Nogat, 2 miles E. from the Vistula (over which there is a pontoon-bridge 2700 feet in length), has 5000 inhabitants. It is a very neat town, with four suburbs. It is the seat of the provincial courts and the government offices. There are manufactories of woollens, hats, soap, and leather. The breweries and distilleries are very considerable. The gymnasium of *Marienwerder* had 14 masters and 248 pupils in 1850. The other towns are Thorn, Culm, and Graudenz. *Thorn*, the birthplace of Kopernik (Copernicus), is a fortified town, 52 miles S. by W. from *Marienwerder*, on the right bank of the Vistula, here crossed by a long bridge, and has 10,000 inhabitants. It consists of an old and a new town, and has several convents, and manufactories of linen and woollen goods, hosiery, and leather. The gymnasium had 13 teachers and 248 pupils in 1850. *Thorn* was taken from the Poles in 1703 by Charles XII., of Sweden, after a four months' siege. *Culm*, or *Kulm*, on the right bank of the Vistula, with a population of 7000, and some cloth-factories, stands 24 miles N. by W. from *Thorn*. It has a Catholic gymnasium, with 13 masters and 277 pupils (in 1850); Catholic and Lutheran churches; and a military school. *Graudenz* also stands on the right bank of the Vistula, here crossed by a bridge of boats, and has about 7000 inhabitants, who manufacture woollen cloths and tobacco, and trade in corn. The town is surrounded by a wall, and defended by a strong fortress which commands the course of the Vistula. At *Konitz*, a small town of about 3000 inhabitants, on the Brahe, 55 miles W. from *Marienwerder*, there is a Catholic gymnasium with 15 teachers and 439 pupils (in 1850). [PRUSSIA, Province of.]

MARIESTAD. [SWEDEN.]

MARINO, SAN. [SAN MARINO.]

MARITZA, the modern name of the Hebrus, the principal river of Thrace. The basin of the Hebrus is inclosed between the chain of Hæmus, or the Balkan, on the north, and Mount Rhodope, the modern Despot, on the south; the first divides it from the basin of the Danube, and the other from that of the Strymon. The Hebrus rises at the foot of Mount Rhodope, in about 42° N. lat., 24° E. long., and

flows in an easterly direction for more than 100 miles, receiving numerous affluents from both chains of mountains: it passes by Tatar Bazardjik, Philippopolis, and Chirmenli (the ancient Assus), where it diverges to the south-east until it reaches Adrianople, where it is joined by two large streams—the Toonja, or Tonzus, from the north, and the Arda, or Harpessus. After passing Adrianople the Hebrus turns to the south, receives the Erkeneh (the ancient Agrianes), coming from Kirkliseh and the Balkan, flows by Demotica, and after numerous windings enters the Gulf of *Ænos* by two mouths, opposite the island of Samothrace. The whole course of the Hebrus is above 300 miles. It is navigable for small craft as far as Adrianople, about one-third of its course. [BALKAN MOUNTAINS; THRACE.]

MARKET BOSWORTH. [BOSWORTH.]

MARKET DRAYTON. [DRAYTON.]

MARKET HARBOROUGH, Leicestershire, a market-town and the seat of a Poor-Law Union in the parish of Bowden Magna, is situated on the left bank of the river Welland, which divides the county from Northamptonshire, in 52° 29' N. lat., 0° 56' W. long., distant 15 miles S.S.E. from Leicester, 88 miles N.W. from London by road, and 100½ miles by the North-Western and Rugby and Stamford railways. The population of the town in 1851 was 2325. The living is a perpetual curacy in the archdeaconry of Leicester and diocese of Peterborough. Market Harborough Poor-Law Union contains 41 parishes and townships, with an area of 62,978 acres, and a population in 1851 of 15,764.

Market Harborough consists of a principal street and several smaller ones, which are lighted with gas and paved. In the main street is the town-hall, a building of which the under part is occupied as shops. The chapel, a commodious edifice of the 14th century, consists of a nave, two aisles, and chancel, with a fine tower and a lofty octangular spire, crocketed. Wesleyan Methodists, Independents, and Baptists have places of worship. There are National and British schools, a Free school, a dispensary, and a savings bank. The preparation of wool for carpets is carried on. The market for cattle and corn is held on Tuesday. Fairs are held in April and October. A branch from the Leicestershire and Northamptonshire Union Canal extends from Foxton to Harborough.

MARKET HILL. [ARMAGH.]

MARKET RASEN. [LINCOLNSHIRE.]

MARKINCH. [FIFESHIRE.]

MARLBOROUGH, Wiltshire, a market-town, municipal and parliamentary borough, and the seat of a Poor-Law Union, is situated on the left bank of the river Kennet, in 51° 25' N. lat., 1° 43' W. long., distant 18 miles N.W. from Devizes, and 75 miles W. by S. from London. The population of the municipal borough of Marlborough in 1851 was 3908; that of the parliamentary borough was 5135. The borough is governed by 4 aldermen and 12 councillors, one of whom is mayor; and returns two members to the Imperial Parliament. The livings are in the archdeaconry of Wilts and diocese of Salisbury. Marlborough Poor-Law Union contains 14 parishes and townships, with an area of 39,220 acres, and a population in 1851 of 9374.

There was a castle at Marlborough in the time of Richard I. A parliament or assembly was held here in the time of Henry III., the laws enacted in which were called the 'Statutes of Malbridge,' one of the older forms of the name, which in Domesday is written *Marlberge*. The site of the castle is covered by a large house, which was a seat of the dukes of Somerset, was afterwards used as the Castle Inn, and is now a part of the college.

The town of Marlborough consists chiefly of one wide street lined with brick houses irregularly built. The market-house for cheese, butter, and corn, is an ancient building, having in its upper story a council-chamber, assembly-rooms, and court-house. St. Mary's church is an old edifice, having a freestone tower at the west end, with a Norman doorway: the church of St. Peter and St. Paul has a lofty square tower. There are some remains of an Augustinian priory. Wesleyan Methodists and Independents have chapels. Marlborough College was incorporated in 1845. The number of pupils is not to exceed 500, of whom two-thirds must be sons of clergymen, who are charged a much smaller sum yearly than other pupils. In August 1852 the number of pupils was 398. The establishment is under the care of a head master and numerous assistant-masters. An excellent library was presented to the college by F. A. M'Geachy, Esq., one of the council. The Royal Free Grammar school, founded by Edward VI. for the sons of tradesmen and other inhabitants, had 12 free scholars and 23 boarders in 1853. There are also National, British, and Infant schools. There is a savings bank. The trade of Marlborough is chiefly in coal, corn, and malt. Before the opening of the Great Western railway it was one of the chief posting towns between London and Bath and Bristol. There is a small market on Wednesday, and a more important one on Saturday. Fairs are held on July 11th, August 22nd, and November 23rd. A county court is held.

MARLE. [AISNE.]

MARLOW, GREAT, Buckinghamshire, a municipal and parliamentary borough, in the parish of Great Marlow, is situated on the left bank of the Thames, which forms the southern border of the county, in 51° 34' N. lat., 0° 46' W. long., distant about 23 miles S. by E. from Aylesbury, and 31 miles W. by N. from London. The population of the parliamentary borough in 1851 was 6523. The

living is a vicarage in the archdeaconry of Buckingham and diocese of Oxford.

The situation of the town is pleasant and picturesque, and the scenery of the Thames here is very agreeable. There are two principal streets and three smaller ones. The parish church is a handsome structure of modern erection, with a lofty spire. Wesleyan Methodists, Independents, Baptists, and Roman Catholics have places of worship. The Free School, founded in 1624 for the education of 24 poor boys of Marlow and two neighbouring parishes, had 24 scholars in 1852. There are a National school, and almshouses for six poor widows. The suspension-bridge erected over the Thames in 1835, has a span from pier to pier of 75 yards. There are two large paper-mills and two breweries at Marlow; a good trade is carried on in corn, coals, and timber, and lace caps are made. A large horse and cattle fair is held on October 29th. Races are held in August, and the town is much resorted to in the season by anglers.

MARLY. [SEINE-ET-OISE.]

MARMANDE. [LOT-ET-GARONNE.]

MARMORA, or MARMARA, SEA OF, the *Propontis* of the ancients, is situated between the Grecian Archipelago and the Black Sea, communicating with the former by the Dardanelles, the ancient Hellespont, and with the latter by the Strait of Constantinople, the ancient Bosphorus. Towards the east it terminates in the long and narrow Gulf of Ismid, and towards the south-east in the Gulf of Mudanieh. These were respectively the *Astacenus* or *Olbianus Sinus* (afterwards the Gulf of *Nicomedia*) and the *Cianus Sinus* of the ancients. The Greek geographers, before the time of Ptolemy, represent its greatest length in a direction nearly north and south, instead of east and west, placing the Thracian Bosphorus and the Hellespont on the same meridian.

Herodotus gives the length of the *Propontis* at 1400 stadia, and its breadth at 500 stadia (iv., 85); he allows 400 stadia as the length of the Hellespont. Strabo (p. 125, Casaub.) gives 1500 stadia as the length of the *Propontis* from Byzantium to the Troad, and reckons its breadth nearly the same. He also places the Hellespont and the Bosphorus under the same meridian, and it is not until the time of Ptolemy that we find the *Propontis* beginning to assume an inclination from west to east, and even then the error in its position received but a slight correction.

The Sea of Marmora is comprehended between 40° 18' and 41° 5' N. lat., 26° 40' and 30° 5' E. long. Its extreme length, from west to east, including the Gulf of Ismid, is about 160 geographical miles; from strait to strait, in a west-south-west and east-north-east direction, 110 miles; and its greatest breadth is 43 miles. Its shores are described by modern travellers as highly cultivated and picturesque, with a greater boldness of character on the Asiatic than on the European side. The depth of this sea is in many parts very considerable, 133 fathoms about 5 miles north-east of Marmora Island, and about the same distance due north of it no bottom at 355 fathoms; from which we may infer that the depth is very much greater midway between the two shores. There is no tide in the Sea of Marmora; but a current sets through it from the Bosphorus, varying its velocity according to the season and the prevailing winds, and continuing its course through the Dardanelles to the Archipelago. Its navigation is by no means difficult; it is generally free from dangers, and good anchorage may be found all along its northern shore, under its various islands, and inside the peninsula of Artaki, or Erdek.

The most remarkable islands in this sea are, Marmora (from which the sea takes its name), Rabi, and Liman-Pasha, occupying its western division; Paps, or Kalolimno, off the Gulf of Mudanieh; and the group called *Demonesi*, or the Princes Islands, near the Asiatic shore, about 10 miles south-east of Constantinople. The Princes Islands are nine in number, two of which, *Oxea* and *Rata*, are uninhabited. Of the others, *Prinkipos* (the ancient *Pityusa*) and *Kalki* (the ancient *Chalcitis*) were once distinguished for their copper-mines. Their scenery is described as being very beautiful, and the Frank merchants of Pera and others have their summer residences on them.

The remarkable peninsula of Artaki was formerly an island, on which stood the once flourishing city of *Cyzicus*, the ruins of which are still to be seen, and which confirm the historical testimony of its opulence. The modern town of Artaki, or Erdek, which gives its name to the peninsula, and which is thought to occupy the site of the ancient Artace, is said to contain about 4000 inhabitants, and has some trade in wine, oil, and silk.

In addition to Constantinople, at the entrance of the Bosphorus, and Gallipoli, at the entrance of the Dardanelles, the principal towns of the Sea of Marmora are, Rodosto, Erekli, and Silivri, on the northern, and Kemer, Karabughaz, Panormo, and Mudanieh, on the southern shore. There is also Ismid, at the head of the gulf of that name, and *Gumehlek*, or *Kemlik*, at the head of the Gulf of Mudanieh. The chief rivers which enter this sea are the *Tchorlu* and the *Iatidji*, in Europe, and the *Kojah-chai* (the ancient *Granicus*), the *Ghonen-chai* (the ancient *Æsepus*), and the *Edrenos* (the ancient *Rhyndacus*), in Asia. There are two other rivers on the European side, the *Karasu* and *Taali*. [ANATOLIA.]

MARMORA, or MARMARA (the ancient *Proconnesus*), is an island in the Sea of Marmora. It was early celebrated for its marble quarries, from which *Cyzicus* and other neighbouring cities were

supplied with materials for their edifices. (Strabo, p. 588.) More recently Constantinople has been partly indebted to these quarries for the embellishment of its mosques, fountains, and other public buildings; but the marble is now principally used for the sepulchral monuments of the Turks and Armenians. It is said to have abounded with deer, from which circumstance the Greek names Proconnesus and its earlier appellation Elaphonnesus are said to be derived.

It has a mountainous range of moderate height and sterile aspect, and is poorly inhabited. The chief town, which is also called *Marmora*, is situated on its south-west side, and is built of wood. The island has several villages, and its inhabitants are chiefly Greek Christians. Some wine is produced in the island.

MARNE, a department in the north of France, is bounded N. by the departments of Aisne and Ardennes, E. by those of Meuse and Haute-Marne, S. by that of Aube, and W. by Seine-et-Marne and Aisne. It lies between 48° 28' and 49° 23' N. lat., 3° 25' and 5° E. long. Its form is irregular. The greatest length from north-west to south-east is 74 miles; from north-east to south-west 81 miles. The area is 3158.6 square miles. The population in 1841 was 356,632; in 1851 it amounted to 373,302, which gives 118-185 inhabitants to a square mile, being 56-399 below the average per square mile for the whole of France. The department is formed out of the central part of the old province of Champagne, and is named from one of its principal rivers.

The department presents a bare plain, sloping generally towards the west, and broken here and there by steep isolated hills, which nowhere exceed 1200 feet in height or 2 miles in length. From the centre of the department almost to its extremities the arid and almost barren soil consists of a thin layer of sandy earth not two inches in depth, and resting on a chalk bottom; bushes are rare; the villages far apart. Between Reims and Fismes the land is good, and along the western border, and in the valley of the Marne, there is some strong deep land. Again in the Perthois district in the south-east of the department, along a considerable margin from Vitry to Sainte-Ménéhould, and in the valley of the Aisne, the soil is in general rich and productive.

The department takes its name from the river *Marne* (the *Matrona* of Julius Cæsar), which rises in the department of Haute-Marne, about 3 miles south from Langres, and flowing nearly north past St.-Dizier, then sweeps round to the west and enters the department of Marne: here its course is north-west past Vitry and as far as Châlons, whence it flows west, and continues in this general direction across the south of the department of Aisne, the north of Seine-et-Marne, and to its junction with the Seine at Charenton, in the department of Seine-et-Oise. Its whole length is 217 miles, of which 147, from St.-Dizier to its mouth, are navigable. Its principal feeders on the right bank are the Rognon, the Saulx (which receives the Ornain), and the Ourcq; on the left bank the Blaise, the Collé, the Some-Soude, the Grand-Morin, and the Petit-Morin. The north-east of the department is drained by the AISNE; the north and north-west by the Suippe and the Veale, feeders of the Aisne; the south is skirted by the Seine, and crossed by the AUBE, both of which rivers are navigable in this department. By the Saulx, the Ornain, the Planche-Coulon Canal from the Ornain to the Chée, the Chée, and the Revigny Canal, barges ply between the Marne and Bar-le-Duc, in the department of Meuse, and by other works finished in 1853 the water communication between the Marne and the Rhine was completed, uniting the valleys of the Marne, the Meuse, the Moselle, the Meurthe, and the Rhine. The line of the navigation is 250 miles long, including rivers and canals, and in the distance are many tunnels, cuttings, aqueducts, and 150 locks. The department is crossed by 8 state, 15 departmental, and a great number of parish roads; it is also traversed by the Paris-Strasbourg railway, which passes through Epernay, Châlons, and Vitry-le-Français. A branch line joins Reims with the main line at Epernay, and another branch runs from Blesme, a small village on the Saulx east of Vitry-le-Français, to St.-Dizier, in the department of Haute-Marne.

The climate is temperate and the air pure, except along the eastern and western borders of the department, where in the low, rich, and sometimes marshy bottoms fogs are not unfrequent at certain seasons of the year. The common bread-stuffs are grown; rye and oats are produced in quantity more than enough for the consumption. Fruit-trees are extensively cultivated in the arrondissement of Sainte-Ménéhould; that of Châlons is famous for its melons; other crops are cow-cabbage, onions, which are grown in great quantities, artichokes, &c. The department contains several large forests; and within the last twenty years a considerable portion of the shallow chalky soil above-mentioned has been planted with pines. Along the Marne, the Aisne, the Aube, and the Seine, there is some fine grass land, and a good deal of hay is made.

But the vine for the production of the famous Champagne wines is the chief object of the landholder's care all through the department, more especially in the arrondissements of Reims and Epernay, wherein the white wines of Sillery, Ai, Mareuil, Pierry, Epernay, and Dizy; and the pink wines of Verzenay, Verzy, Bouzy, Taisy, Cumières, Ai, Hautvilliers, Mareuil, Dizy, and Pierry, all of the first class, differing and distinguishable from one another by certain inexpressible elements of excellence, are produced from the hungry chalky soil, on which little else than the vine-bush will grow. The excellent qualities of the

Champagne wines are owing however not wholly to the peculiarity of the soil, but in a great degree also to the unremitting care of the growers in the selection and management of their vines, and in the manipulation of the wines, which experience teaches them to make so as to suit the different palates of the lovers of Champagne in the various countries of the world. The best white Champagne wines are made from black grapes. These are suffered to remain on the vine till they attain perfect maturity; when gathered they are put in the wine-press, and the first pressings are set apart for wine of the first quality. The juice thus obtained is put into a tun, where it remains from 20 to 30 hours, after which time it is put into sulphured casks, and these are deposited in cool cellars. During the frosty weather the wine is transferred into other casks, and clarified by means of isinglass; this process is repeated once or twice (if necessary) after an interval of a fortnight each time. From the 20th to the 30th of March the bottling process for the effervescing wines begins, but this is sometimes delayed even to the end of May, as the greatest attention must be paid to the temperature of the air, otherwise the delicacy of the wine and its effervescence would be materially injured. The bottles are placed in deep cellars, so as to have the most equable temperature possible, in order to diminish the chance of loss by breakage, which however, when the wines become brisk in the autumn, often amounts to 20 per cent. The quantity of wine of all kinds made in the department annually amounts to about 15,400,000 gallons. The wines are roughly distinguished as 'vin de rivière,' or the wine grown along the Marne, which is chiefly white, and 'vin de montagne,' or wine grown on the hills, most of which is red. The proprietors of the vineyards in this the true Champagne country are greatly injured by the competition of a fictitious Champagne (or champagnised) wine, manufactured in several other departments of France, and sold at a much lower price than the true and great Champagne wine.

The domestic animals of the department are small and of bad breed; sheep are numerous; game is abundant; deer and wild boars are met with in the forests; the rivers and ponds yield abundance of fish; poultry is plentiful; bees are carefully tended.

The western side of the department is occupied by the supracretaceous formations of the Paris basin, and the rest of the department by the chalk itself, except just along the eastern border, where the formations that underlie the chalk crop out. Chalk, flint, millstone of the best quality, building-stone, potters' and brick-clay, and turf are the chief mineral productions.

The chief manufactures are woollen stuffs of all kinds, and cotton hosiery, which centre chiefly at Reims. There are also several tanneries, dye-houses, paper-mills, glass-works, potteries, rope-walks, oil-mills, soaperies, and establishments for the making of Spanish white.

The most important article of commerce is Champagne wine, the great marts for which are Reims and Epernay. Other articles of trade are corn, flour, brandy, the articles previously named, together with timber, hides, and firewood, of which great quantities are sent for the supply of Paris. About 670 fairs and markets are held in the year.

The department contains 2,021,496 acres. Of this area 1,519,320 acres are more or less capable of cultivation; 95,025 acres are grass-land; 45,701 acres are under vine culture; 231,106 acres are covered with woods and forests; 22,927 acres are laid out in nurseries, orchards, gardens, &c.; 41,913 acres consist of heath- and moor-land; 15,749 acres are covered with rivers, marshes, ponds, canals, &c.; and 46,766 acres are occupied by roads, streets, and buildings.

Divisions and Towns.—The department is divided into 5 arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Châlons-sur-Marne	5	108	52,562
2. Epernay	9	180	93,090
3. Reims	10	181	138,031
4. Sainte-Ménéhould	3	80	36,246
5. Vitry-le-François	5	123	53,373
Total	32	677	373,302

1. In the first arrondissement the chief town is CHÂLONS-SUR-MARNE, which is also the capital of the department. The population given with the following places is that of the commune. *Swippes*, an improving and well-built little town, of 2353 inhabitants, stands E.N.E. of Châlons, on the Suippe, a feeder of the Aisne, and has important manufactures of coarse woollens, woollen-yarn, and leather, besides dye-houses, and a considerable trade in corn, cattle, hemp, and wool. *Vertus*, an ill-built town at the foot of a high vine-clad hill, W. by S. of Châlons, has 2200 inhabitants. About 5 miles E.N.E. from Châlons, near the left bank of the Veale, is the village of *Epine*, celebrated for its magnificent gothic church of Notre-Dame-de-l'Epine, which for the vast number of its sculptured ornaments has few equals in Europe.

2. Of the second arrondissement the chief town, *Epernay*, stands in a rich vine district, near the left bank of the river Marne, which is here crossed by a bridge of seven arches, 15 miles by railway west from Châlons, in 49° 2' 52" N. lat., 3° 57' 10" E. long. The town is well-built, clean, and well-paved. It has tribunals of first instance and of commerce, a college, and 7386 inhabitants, who manufacture

hosiery, pottery, refined sugar, and leather; and trade largely in bottles, corks, wire, champagne wines, &c. *Dormans*, a small town west of Épernay, on the left bank of the Marne, has 2148 inhabitants, who send large quantities of wood and charcoal to Paris by the Marne. *Père-Champenoise*, south of Épernay, the scene of the defeat of Marshals Marmont and Mortier by the Austro-Russian army under Schwartzberg (March 25, 1814), stands on the Pleurs, and has 2118 inhabitants. *Montmirail*, situated on a hill near the right bank of the Petit-Morin, a feeder of the Marne, has a population of 2545. Napoleon I. defeated a large force of Russians and Prussians here February 11, 1814. *Sézanne*, an ancient and well-built town, is situated on the slopes of a hill, partly in Brie, partly in Champagne, and has 4440 inhabitants, who manufacture coarse woollens, tiles, bricks, lime, pottery, flour, oil, and leather. Sézanne was formerly fortified, and stood several sieges; the site of its defences is now laid out in gardens and public walks.

3. In the third arrondissement the chief town is REIMS. *Ay*, or *Aÿ*, near the right bank of the Marne, and nearly opposite to Épernay, from which it is only 2 miles distant on the railway to Reims, has 3130 inhabitants, who are chiefly engaged in the culture of the vine, and in the distillation of brandy. *Fismes*, in the north-west of the department, on the left bank of the Vesle, is a well-built walled town with 2368 inhabitants, who manufacture woollen-cloth, and trade in flour, wine, hemp, wool, &c.

4. Of the fourth arrondissement the chief town, *Sainte-Ménéhould*, situated in a pretty well-wooded country on the Aisne, in the east of the department, in 49° 5' 27" N. lat., 4° 53' 57" E. long., 450 feet above the level of the sea, has a tribunal of first instance, a college, and 4137 inhabitants, who manufacture hosiery, leather, and small wares. In the environs there are several iron-forges, glass-works, and potteries.

5. The fifth arrondissement is named after its chief town, *Vitry-le-François*, or *Vitry-sur-Marne*, a well-built fortified town on the right bank of the Marne, 21 miles by railway S.E. from Châlons, and has a tribunal of first instance, a college, and 7796 inhabitants. *Vitry-le-François* stands in 48° 43' 34" N. lat., 4° 35' 23" E. long., 331 feet above the level of the sea. The town is modern; it was founded in 1545 by François I., after the destruction of *Vitry-en-Perthois*, or *Vitry-le-Brulé*, by Charles V. The streets are wide, straight, clean, and provided with foot-pavements; the houses are mostly of wood; the supply of water is from 27 fountains, from which also streams run through all the streets. The central square, on one side of which is an unfinished church of large dimensions, is adorned with a handsome fountain, and planted with a double row of lime-trees. The manufactures are hosiery, cotton-yarn, oil; the chief trade is in corn, wool, wood, and charcoal.

The department, with the exception of the arrondissement of Reims (which with the department of Ardennes is included in the see of the Archbishop of Reims), forms the see of the Bishop of Châlons. It is comprised in the jurisdiction of the High Court and within the limits of the University-Academy of Paris; and belongs to the 4th Military Division, of which Châlons is head-quarters. It returns 3 members to the Legislative Body of the French empire. There are at Reims an archiepiscopal seminary, a secondary ecclesiastical school, and an endowed college; at Châlons a diocesan seminary, a preparatory ecclesiastical school, and a communal college; and communal colleges also in Épernay, Sainte-Ménéhould, and Vitry-le-François.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Statistique de la France; Official Papers.*)

MARNE, HAUTE, a department in the north-east of France, is bounded N. by the departments of Marne and Meuse, E. by that of Vosges, S. by Haute-Saône and Côte-d'Or, and W. by the department of Aube. It lies between 47° 35' and 48° 40' N. lat., 4° 38' and 5° 52' E. long. Its form approximates to an oval. Its greatest length from north-north-west to south-south-east is 78 miles; and its greatest breadth, at right angles to the length on the Meuse is 48 miles; but the average width is only about 37 miles. The area is 2401.5 square miles. The population in 1841 was 257,567; in 1851 it amounted to 268,398, which gives 111.76 inhabitants to a square mile, being 62.82 below the average number per square mile for the whole of France. The department is formed out of the southern part of Champagne and small portions of Bourgogne, the duchy of Bar, and Franche-Comté; and it is named from the circumstance that it comprises the basin of the Upper Marne (Haute-Marne).

The department is hilly, in parts mountainous. The plateau of Langres and the Faucilles Mountains (which with the hills of Côte-d'Or form a continuous chain that unites the Cévennes to the Vosges Mountains) cover the southern part of the department. The Faucilles Mountains surround the sources of the Meuse and the Saône, and form part of the watershed between the Atlantic and the Mediterranean, thence two branches run northward screening the narrow valley of the Upper Meuse and ultimately uniting with the Ardennes Hills. The more westerly of these branch ranges is called the Faucilles Mountains, which cover the east of the department, and form part of the watershed between the basins of the Seine and the Meuse. From the plateau of Langres also numerous ramifications run north-eastward between the Marne, the Aube, and their earliest tributaries. The mountains rise near Langres to about 2500 feet above the sea; they diminish in height as they advance northward. The valleys extend

GEOL. DIV. VOL. III.

mostly north and south. In the arrondissement of Vassy, in the north of the department, there are some fine valleys and extensive plains. Here and there all through the department, outlying hills, either singly or in groups, give variety to the surface. More than one-third of the department is covered with forests, in which oak, beech, ash, maple, birch, and poplar are the principal trees.

The principal rivers are—the MARNE and its feeders, and the MEUSE, which rises in the department, and flows northward across the eastern boundary into the department of Vosges. The Marne is navigable from St-Dizier, so that the department has the advantage of a share in the extensive system of inland water communication mentioned in the preceding article. The south-west of the department is drained by the AUBE and its feeder the Aujon; the Amance and the Vingeanne rise on the south-eastern side of the plateau of Langres, and flow to the Saône. The Rognon, the Suize, and the Triere, all feeders of the Marne, have their whole length in this department; the Blaise, another considerable feeder of the Marne, rises and has most of its length in Haute-Marne. Except three or four miles along the Marne, below St-Dizier, the department has no internal navigation. It is crossed by 6 state and 8 departmental roads. The only railroad is the short branch which unites St-Dizier to the Paris-Strasbourg line at the Blesmes station mentioned in the preceding article. It is proposed to continue the line from St-Dizier up the valley of the Marne, through the plateau of Langres to Gray, on the upper Saône.

The climate is very healthy; the air is pure and keen in the mountains, where the winters are very cold. In many of the valleys, especially in those that open into the basin of the Saône, the temperature is warm and equable.

The common breadstuffs are produced in quantity sufficient for the consumption. Kitchen vegetables, pulse of all kinds, mustard, hemp, cherries, filberts, &c., are grown. The vine is extensively cultivated in favourable situations, and about 13,000,000 gallons of wine are made, two-thirds of which are consumed on the spot, and the rest is exported to Switzerland and to the departments of Vosges and Haut-Rhin. The milch cattle of the department are of good breed; horses and sheep are small; goats are numerous; poultry and game of all kinds are plentiful.

The department is entirely occupied by the strata that occur between the chalk and the saliferous sandstone. It is rich in iron-ore; several mines are worked; the metal is smelted and manufactured into bars, utensils, and tools in 114 furnaces and foundries, in which wood charcoal is the fuel chiefly used. Building-stone, marble, alabaster, gypsum, &c., are quarried. Marl, brick-earth, fuller's-clay, and turf are dug. Besides ironmongery and cutlery, the industrial products include brandy, vinegar, cotton- and woollen-yarn, druggut, woollen stockings, leather gloves, cast-iron tubes, paper, leather, beer, &c. The commerce in the products before named, and in timber, planks, fire-wood, oak-staves, oil, honey, &c., is considerable. About 225 fairs and markets are held annually.

The department contains 1,537,012 acres. Of the whole area 829,343 acres are capable of cultivation; 88,413 acres are grass land; 32,461 acres are under vines; 524,327 acres are covered with woods and forests; and 69,115 acres consist of heaths and moors.

Divisions and Towns.—The department is divided into three arrondissements, which, with their subdivisions and population, are as follows:—

Arrondissements.	Cantons.	Communes.	Population in 1851.
1. Chaumont . . .	10	195	88,571
2. Langres . . .	10	211	106,424
3. Vassy . . .	8	145	73,403
Total . . .	28	551	268,398

1. Of the first arrondissement and of the whole department the chief town is *Chaumont-en-Bassigny*, which stands on a hill at the junction of the Marne and Suize, in 48° 6' 47" N. lat., 5° 8' 42" E. long., 150 miles S.E. from Paris, and has tribunals of first instance and of commerce, a college, and 6088 inhabitants in the commune. The site of the town is 1063 feet above the level of the sea. The town is pretty well built, with wide clean streets; some of them however are very steep. It still retains some portion of its old fortifications. The supply of water is from twelve wells and four fountains, to which last the waters of the Suize are raised by an hydraulic engine. The principal buildings are—the church of St-Jean, the college buildings, the hospital, the remains of the castle of the counts of Champagne, and the town-hall, an elegant modern structure. The manufactures are woollen stockings, gloves, serge, druggut, common woollen cloth, cotton- and woollen-yarn, leather, beet-root, sugar, &c. *Château-Villain*, 12 miles W. by S. from Chaumont, stands on the left bank of the Anjou, and has iron-forges and smelting furnaces, and 2068 inhabitants. *Nogent-le-Roi*, 12 miles S. by E. from Chaumont, near the right bank of the Triere, is the centre of a considerable cutlery manufacture, and has 2979 inhabitants.

2. In the second arrondissement the chief town is LANGRES, the site of which is 1551 feet above the level of the sea. *Bourbonne-les-Bains*, celebrated for its warm springs, is situated on the southern

slope of the Faucilles Mountains, and on the Apance, a feeder of the Saône. It is frequented chiefly by persons troubled with paralysis and with gun-shot wounds, and has a military hospital with 545 beds, 40 of which are for officers. The regular season is from May to October; but the baths are frequented more or less during the whole year. *Fayl-Billot*, S.E. of Langres, has 2505 inhabitants. *Montigny-le-Roi*, a small town of 1300 inhabitants, deserves notice on account of its situation near the source of the Meuse.

3. Of the third arrondissement the chief town, *Vassy*, is prettily situated on the right bank of the Blaise, in 48° 30' 2" N. lat., 4° 57' 11" E. long., 591 feet above the level of the sea, 28 miles N. from Chaumont, and has a tribunal of first instance, a college, and 2826 inhabitants, who manufacture calico, druggot, ironmongery, pottery, and leather. There are several iron-forges and smelting works near *Vassy*. *Joinville*, situated on the Marne, at the foot of a hill, on the summit of which formerly stood the castle of the Sires de Joinville, has several iron-works, and 3196 inhabitants. The Duke of Orléans, father of Louis Philippe, king of France, had the castle demolished in 1790; the church remained till 1792, when it was destroyed, with the tombs of the lords of Joinville and all the curious relics it contained. In 1841 such of the remains as had been preserved or recovered were solemnly deposited in the cemetery of the town, and a tomb, with a suitable inscription, was erected over them at the expense of Louis Philippe. Woollen hosiery, druggot, tartan, linen, woollen-yarn, and serge are manufactured in this town. *St-Dizier*, a well-built town, with wide regular streets, stands on the right bank of the Marne, which here begins to be navigable at a distance of 9 miles north from *Vassy*, and has a tribunal of commerce, a college, and 5705 inhabitants. The town-hall and the remains of an ancient castle are the most interesting structures in the town. Its chief industrial establishments are iron-forges and foundries, boat-building yards (which turn out a great number of river and canal boats, commonly of about 100 tons burden), and cotton factories. There is also a considerable trade in planks, ship timber, and in wine casks. A branch railway, 11 miles long, connects *St-Dizier* with the Paris-Strasbourg railway, which it joins at the Blesmes station.

The department forms the see of the Bishop of Langres; is included in the jurisdiction of the High Court and within the limits of the University-Academy of Dijon, and belongs to the 7th Military Division, of which Besançon is head-quarters. It returns 2 members to the Legislative Body of the French empire.

There are at Langres a diocesan seminary and a preparatory ecclesiastical school; and communal colleges in Chaumont, Langres, *St-Dizier*, and *Vassy*.

(*Dictionnaire de la France; Annuaire pour l'An 1853; Statistique de la France; Official Papers.*)

MARNHULL. [DORSETSHIRE.]

MAROCCO, called by the natives *Mogh'rib-el-accâ* ('the farthest west'), or briefly *Mogh'rib*, whence the inhabitants are called *Mogh'ribins*, is an empire in Northern Africa, which extends from south to north between 27° and 36° N. lat., the most northern districts forming the southern coast of the Strait of Gibraltar, and from east to west between 1° 20' and 11° 30' W. long. It is bounded N. by the Mediterranean, W. by the Atlantic Ocean, S. by the Sahara, and E. by Algérie. Its surface is estimated at 274,000 square miles, and its population at 8,500,000.

Surface and Soil; Coast.—The surface of this extensive country is extremely diversified by mountains, hills, plains, and valleys. The Atlas traverses it in its greatest length, running, at some distance from its southern and eastern boundary, from Cape Nun on the Atlantic Ocean to Cape dell' Acqua, west of the mouth of the river Mulwia, on the Mediterranean. The general direction of the Atlas is from south-west to north-east; south of 32° N. lat. it is called the Greater Atlas, and north of it the Lesser Atlas. [ATLAS.] The Greater Atlas, towards its southern extremity, consists of two ranges, both beginning near the Atlantic; the southern, commencing at Cape Nun (south of 29° N. lat.), is called Mount Adrar, and the northern, commencing at Cape Gher (south of 31° N. lat.), or Ras Aferai, bears the name of Mount Bebauan. The two ranges unite about 31° N. lat., and about 100 miles from the shore, forming the *Jebel Telge*, commonly called the Great Atlas. Between these two ranges is the plain of *Tarudant*, or *Sus-el-accâ*. Both the ranges, as well as the remainder of the Greater Atlas, are covered with snow for several months in the year, but probably none of the summits attains the limit of perpetual congelation. The Greater Atlas is not very wide, being generally traversed in two or three days. Two mountain passes lead over Mount Bebauan, one called *Bebauan*, not far from Cape Gher, and another called *Belavin*, about 60 miles farther east, which connects the town of *Tarudant* with *Fruge*, in the plains of Morocco. A third pass leads from the town of *Tatta* in *Drah*, or *Daraa*, to the city of Morocco. The interior of the range consists of ridges and valleys, and sometimes also mountain plains: it is well cultivated in some parts, and in others it serves as pasture-ground; towards the southern declivity it is nearly a bare rock.

Between 31° and 32° N. lat., and near 5° W. long., where the range turns more to the north, and takes the name of the Lesser Atlas, the width of the range increases considerably, and as most of the large rivers rise in this part of the Atlas, it is probable that the highest

summits occur here. *M. Caillié* however, who traversed this part of the Atlas a little west of 4° W. long., does not mention any elevation of the summits, nor does he speak of snow on the mountains. The Lesser Atlas, though, according to appearances, much less elevated than the Greater Atlas, probably occupies a greater width, sending lateral branches to the east and west, between which there are fertile valleys. Near 34° N. lat., 4° W. long., the Lesser Atlas divides into two branches, of which the eastern runs north-east and terminates at Cape dell' Acqua; the other, called *Er-Riff* (the *Riff*, the coast population of which region are addicted to piracy), turns first north-west, then west, and again north-west, until it terminates in the high and mountainous coast which forms the southern shore of the Strait of Gibraltar, between *Punti di Africa*, near *Ceuta*, on the east, and *Cape Spartel* on the west. The country which is included between these two lateral ranges of the Lesser Atlas and the Mediterranean Sea is the most extensive mountain region in Morocco. Though the mountains do not rise to a great elevation, the whole tract is covered with masses of bare rock, with narrow valleys between them. The whole coast line along the Mediterranean, which from *T'wunt*, or *Tawunt*, to *Cape Spartel* is about 320 miles, is high and rocky. Level tracts of inconsiderable extent occur at the mouths of the small rivers only. *Mount Abyla*, opposite the rock of Gibraltar, rises to a considerable height. [CEUTA.]

The elevated and rocky coast continues along the Atlantic nearly as far south as the mouth of the river *El Khos*, or *Luccos*. The country adjacent to the coast is rather hilly than mountainous, though a few rocky masses rise to 2500 feet; the soil is mostly gravelly, and sustains only a scanty vegetation, with a few trees. The river (*wadi*) *El Khos* traverses an immense plain called *M'shiara-er-Rumla*, which extends eastward to the ranges of the Lesser Atlas, and southward to the banks of the river *Seboo*. Its surface is partly level, and partly traversed by low ranges of hills. Its slope towards the Atlantic appears to be gradual, as the rivers make numerous bends in the plain and have a gentle course. On its western border the sea has formed a range of sandhills, by which several small rivers are prevented from reaching the ocean, and form along the shores two lakes, the smaller of which, *Muley Buselham*, is 5 miles long, and the larger, *Murja Kas-el-Dowla*, 20 miles long by a mile and a half broad. The range of sandhills which separates these lakes from the sea is about 250 feet high. The harbours along this low coast are nearly filled up with sand, and can only be entered by small vessels. The plain of *M'shiara-er-Rumla*, though the soil is light, is very productive in corn, and contains excellent pasture-grounds. It is also connected on the east with the fertile valley that extends east of the town of *Fez*, between the offsets of the Lesser Atlas.

The plains continue south of the *Seboo* River to the banks of the *Oom-er-Begh*, or *Morbeya*, and still farther south; but they gradually change their character, and their fertility greatly diminishes. The country also rises from the sea-shore, which in many places is rocky and inaccessible, and extends in wide plains ascending like terraces one above the other, the eastern being always some hundred feet higher than that immediately west of it, until at the base of the Lesser Atlas they probably attain an elevation of 4000 feet. The inferior fertility of these plains seems to depend more on the climate than the soil, which chiefly consists of a light loam. Water is found only at the depth of from 100 to 200 feet. The rivers run in channels several feet below the surface of the plains. Only isolated spots are cultivated, and there are no trees except stunted palms.

A range of hills, rising between 500 and 1200 feet above the plains, divides them from the southern plain, which extends along the base of the Greater Atlas. Where the town of Morocco is situated, from which it obtains the name of the Plain of Morocco, it is about 25 miles wide, but it grows still wider as it advances westward. This plain, which is drained by the river *Tensift*, is about 1500 feet high near the town; but it grows lower towards the sea, and terminates, between *Cape Cantin* and *Mogadore*, in a low shore, generally sandy, and sometimes rocky. In fertility it is much superior to the central plains. An isolated mass called *Hadid*, or *Iron Hills*, rises 2200 feet in height near the coast between the mouth of *Tensift* and *Mogador*.

The plain of *Tarudant*, which is the most southern, lies between the ranges of the *Bebauan*, or *Western Atlas*, and *Adrar*, or *Southern Atlas Mountains*. It appears to be traversed nearly in the middle by a range of hills which divide it into two wide valleys. The northern is level, and of great fertility, as the extensive woods and plantations of olive-trees show, but the greater part of it is uncultivated. It is drained by the river *Sous* which rises on the south side of the *Western Atlas*, and is joined near *Tarudant* by a tributary which flows from the *Southern Atlas*: from *Tarudant* the river flows west to its mouth in the Atlantic, a few miles south of *Agadir*. The southern valley is drained by the *Messa* and the *Nourvar Wad-al-Aksa*. To the south of the mouth of the *Messa* the shore is formed by a hilly ridge surmounted by many lofty peaks, terminating to southward in a plateau about 800 feet high, to the north of which is the projection of *Cape Nun*, and an extensive sandy waste which here intervenes between the hills and the sea northward as far as 29° N. lat. The river *Nun* flows into the Atlantic along the southern base of the table-land, and forms part of the southern boundary of Morocco.

The countries east of *Mount Adrar* and south of the Greater Atlas,

are known under the names of Draha or Daraa, Taflet, and Segelmeza, and are parts of the Bilud-ul-Gerid, or the 'country of the palms.' They consist of valleys and small plains, inclosed by low and sterile hills. The valleys and plains are also frequently rocky, and exhibit a scanty vegetation; but some parts are cultivated or covered with extensive groves of date-trees.

That portion of the empire of Morocco which lies east of the Lesser Atlas and west of the main range called Jebel Tedla, which runs north-eastward into Algérie, comprehends the basin of the river Mulwia; the southern part of it, near the sources of the river, contains some fertile plains or valleys, which are good pasture-grounds; but the northern districts are said to be occupied by two sterile regions, the deserts of Aduhra and Angad. The Jebel Tedla is supposed to be the ancient Mount Durdus, a name probably derived from the same source as Dyrin, the native name for the Atlas.

Rivers.—The Mulwia, or Muluya (the ancient Mulucha, or Malva), which rises at or near the southern extremity of the Lesser Atlas, and runs northward into the Mediterranean Sea, has a course of about 400 miles; but as it traverses a country which has not been visited by Europeans, its peculiarities are not known. It is the most considerable river in Morocco which falls into the Mediterranean. Seven rivers fall into the Atlantic Ocean. The most northern, the El-Khos, rises in the range of Er-Riff, and in its course of nearly 100 miles is used to fertilise the adjacent country by irrigation. Farther south is the Seboo River, which rises in numerous branches on the western declivity of the Lesser Atlas, and is joined by several affluents which descend from the southern declivity of the range of Er-Riff. After a course of about 230 miles it enters the Atlantic, near the town of Mehedia. Though a considerable river, with rather a large volume of water when compared with other rivers of this country, its mouth does not afford a harbour; a bar of sand a quarter of a mile from its outlet extends almost across, and is nearly dry at low water of spring-tides. Inside the bar there are from 3 to 4 fathoms of water, and the tide rises 7 or 8 feet. The waters are used for irrigating the adjacent country.

Bu-Regreb is an inconsiderable river running hardly more than 100 miles; but its waters are used for irrigation, and its mouth forms the harbour of the towns of Salé or Sla, and Rabatt or Arbat. A bar about one-eighth of a mile from the entrance runs almost across in a west-south-western direction, with three or four feet of water on it at low water, leaving a channel at each end. The north-eastern channel is that which is used. The tide rises from 9 to 10 feet; inside the harbour is sheltered, and has sufficient water for a frigate.

The Oom-er-Begh, or Morbeys, the largest of the rivers that fall into the Atlantic, likewise rises in several branches in the western declivity of the Lesser Atlas, and probably runs more than 800 miles. In the upper part of its course it fertilises several valleys; but in its course through the plains it runs between high banks of sandy clay, and cannot be used for the purpose of irrigation. At its mouth is the small town of Azamor, which has no commerce. A bar of sand which lies across the mouth of the river is almost dry at low-water, and boats alone can enter it.

The Tenaift, which waters the plain of Morocco, rises in a subordinate range of high hills about 40 miles E. from the town, and runs nearly 150 miles with a winding course. It is very probable that the mouth of this river also is closed by a bar.

Through the plain of Tarudant, or Sus-el-Acââ, flows the river Sus, noticed above. It may be considered as the southern boundary of the empire, the Arabian chiefs who govern the country south of it being only nominally subject to the emperor of Morocco.

The most southern river which falls into the Atlantic is the Draha, or Daraa, which was formerly supposed to lose itself in the Sahara; but according to a statement in the 'London Geographical Journal' (vol. vii.) it reaches the sea 82 miles S.W. from Cape Nun, where it is called on most maps Akassa. If this statement is true the Draha, which rises on the southern declivity of the Greater Atlas, south-east of the town of Morocco, must have a course of more than 500 miles; but nearly the whole of it is unknown. It is however said that it flows through the productive districts of Draha and El-Harib; and that two considerable towns, Tatta and Akka, stand on its banks.

From the southern declivity of the Jebel Tedla, or Mount Atlas, descend three other rivers, the Fileli, Ziz, and Ghir, which run southward, and are lost in the sands of the Sahara.

Climate.—The climate is not so hot as might be expected from the position of this country. A great part of the empire is subject to the alternation of the sea and land breezes, and those districts which lie beyond their reach are cooled to some extent by the winds which blow from the mountains. Frost and snow only occur on the mountains. Along the sea the thermometer never falls below 39° or 40°; and even in the hottest places, at Agadir, or Santa Cruz, and Tarudant, it generally does not rise above 84°, and rarely to 90°. The seasons are divided into the dry and wet: the wet season happens in our winter. Abundant rains fall towards the end of October, and last for about three weeks: these rains are followed by some dry weather, but they set in again about the middle of November, and showers are frequent till the month of March, when the dry season begins, which is rarely interrupted by showers. The rains are less general and frequent south of the river Seboo, and also less certain, which is probably the

cause of the inferior fertility of these districts, as they are subject to frequent drought. Little is known of the climate south of Mount Bebauan, except that the heat is very great, and that the southern declivity of Mount Atlas has no rain, being exposed to the dry and hot winds that blow from the Sahara and disperse the few vapours which occasionally rise.

Productions.—The soil is in many parts very fertile, but it is rudely cultivated. Besides wheat and barley, which are extensively raised in most of the districts of the plains, rice, maize, and dhurra are cultivated; the last-mentioned grain constitutes the principal food of the lower classes. Other objects of cultivation are cotton, tobacco, sesamum, hemp, saffron, and different kinds of beans and peas. The plantations of olive-trees and almond-trees are very extensive. The fruit-trees of southern Europe are also common, especially the fig and the pomegranate. The date-tree is cultivated on the southern declivity of Mount Atlas, and the best come from Draha and Taflet. Lemons, grapes, oranges, almonds, &c., are among the fruits. The sugar-cane thrives where cultivated. In the districts south of the Oom-er-Begh there are large plantations of henna. The southern declivities of Mount Atlas are bare, but on the northern there are extensive forests, consisting of the olive, carob, walnut, acacia, cedar, stunted palms, and rose-trees, and also cork-trees. The timber is fine, but not large. Oak and white cedar also grow on the mountains.

The wandering life of the shepherd is preferred to the occupation of farming very generally throughout Morocco. Domestic animals of every kind are numerous. The horses are distinguished by their beauty, those of the native breed as well as those of Arab origin; the sheep, which are considered as indigenous, and are supposed to have spread from the declivities of the Atlas over all the world, produce a wool not inferior to any for softness, fineness, and whiteness; sheep and goats are more numerous than any other domestic animals. Goat-skins constitute one of the most important articles of export. Cows, asses, mules, and camels are also reared in considerable numbers. In the large uncultivated tracts wild animals abound, as lions, panthers, hyenas, wolves, and several species of antelopes and deer, as well as monkeys and wild boars. Wild boars are abundant in all parts, but most of the other ferocious animals are limited to the southern regions. Ostriches are found in the desert bordering on the southern and eastern districts, and their feathers constitute an article of export. Cranes and storks abound. Locusts sometimes lay waste the provinces bordering on the deserts. Bees are common, and wax is exported.

The mineral wealth of Morocco, as far as known, comprises iron, lead, tin, copper, antimony, and salt. Metals seem to occur in the greatest abundance on the southern declivity of Mount Atlas, especially in those parts which surround the plain of Sus-el-Acââ, where gold and silver occur, but not in abundance; the latter occurs in the river Draha. Copper, which in Strabo's time was worked in these countries, is still abundant; the richest mine is near Teseleht, in Sus-el-Acââ, but there are others in the neighbourhood of Tarudant. Lead is found in Mount Adrar and in the Lesser Atlas. Iron is worked in several places; and there is also antimony. Rock-salt is also said to be abundant. The several small lakes which lie along the sea-shore are natural salt-pans, which produce this useful article in abundance. Fuller's-earth occurs in several places.

Inhabitants.—The population of this empire is composed of Amazirghis, Arabs, Jews, and blacks. The Amazirghis comprise 2,300,000 Berbers, and 1,450,000 Shelluhs. The Arabs comprise 3,550,000 Moors, Ludayas, and other mixed tribes, and 740,000 Beduins and others of pure blood. The Jews number about 339,500; and the negroes about 120,000, consisting of slaves and freemen from Soudan, Foulahs, Mandingoes, &c.

The Amazirghis, or Mazirghis, are the most ancient inhabitants of northern Africa, and one of the most widely-spread nations of that continent. Dialects of their language are spoken by the tribes which extend from the Nile to the Atlantic, as the Tibboos and Tuzicks of the desert, the Filelis in Segelmeza and Taflet, and the different Shelluh tribes on the Atlas and Mount Bebauan. Most of the tribes occupying the southern districts of Tunis and Algiers also speak the same language. The Amazirghis in Morocco are divided into Berbers and Shelluhs. The Berbers occupy exclusively the mountain region which extends along the Mediterranean, where they are called Riffins, from inhabiting the mountains of Er-Riff, and are divided into several tribes. Such of them as live along the coast have been always addicted to piracy. The Shelluhs occupy the Greater Atlas and its great branches Mount Bebauan and Mount Adrar. The Berbers and Shelluhs differ somewhat in their physical character and customs. The Berbers are nearly white, of middle size, well formed, and rather robust and athletic; their hair is frequently fair, resembling that of the northern people of Europe rather than any nation of Africa, and they have very little hair on their chins. They live generally under tents, or in caves situated on steep and nearly inaccessible mountains. They pay little regard to the orders of the sultan, and obey only their hereditary princes or chosen magistrates. In the plains they build houses of stone or wood, but always inclose them with walls. Their chief occupation is that of huntsmen and herdsmen, yet they cultivate some patches of ground, and rear bees.

The Shelluhs are chiefly agriculturists, and exercise several trades;

their houses are always built of stones and covered with tiles or slates. They are less robust than the Berbers; their colour is sallow, and they resemble in some respects the Portuguese, from whom some authors think they are descended. They are much more advanced in civilization than the Berbers.

The Moors are the most numerous of the nations that inhabit Morocco. Their language, which is called Moghreb, is a dialect of the Arabic; but it is intermixed with many words from the language of the Amazirghis, and still more with Spanish words. The latter circumstance may be ascribed to the emigration of their ancestors from Spain after the conquest of Granada. These emigrants settled in the towns and plains along the Atlantic.

The Moors of Morocco are of middling size, and rather slender when young, but they grow stout as they advance in years. Their colour varies between yellow and black, which is principally to be ascribed to their frequently marrying black women from Sudan. They are the only nation of Morocco with which the Europeans have an immediate intercourse, and they are the principal inhabitants of the towns; they fill the high offices of government, and form the military class.

The Arabs are the descendants of those who emigrated at the time when the Mohammedan religion was diffused from Arabia. A few families live in the towns, but the Beduins are dispersed over the plains, where they adhere to their wandering life, living in tents, and following the pastoral occupation. They are a hardy race, slightly made, and under the middle size. Their language is the Koreish, or Arabic of the Koran, which they pretend to speak in its purity.

The Jews are intermixed among all these nations: their condition is best among the Berbers, where they follow different trades; but among the Shelluhs and Moors they are much oppressed, and exposed to the most ignominious treatment. They are very numerous in the sea-ports and commercial towns.

The negroes, who are imported as slaves, frequently obtain their liberty; and as they are distinguished by fidelity they form the emperor's body-guard, which is the only standing army of the empire.

Manufactures.—As the inhabitants dress chiefly in wool, the manufacture of woollen-cloth is general; in some of the towns there are manufactories on a large scale. In the town of Fez the red caps are made which are used in all the countries that border on the Mediterranean, besides several kinds of silk goods, linen, and leather. The inhabitants of Fez are also distinguished as goldsmiths, jewellers, and cutters of precious stones. Tanning is well understood. Very good leather is made in the neighbourhood of the towns of El Kasar and Mekinez. The tanyards in the city of Morocco are very extensive, and the leather which they produce is superior to any made in Europe. The tanners possess the art of tanning the skins of lions and panthers, and giving them a snow-white colour, with the softness of silk. The Morocco leather of the capital is yellow, that made in Tafilet green, and in Fez it is dyed red. Their bright colours are considered inimitable in Europe. Very good sole-leather is made in Rabatt and Tetuan. Silks, embroidered goods, and leather are the staple manufactures of the capital. Carpets are chiefly made in the province of Ducalla, south of the river Oom-er-begh, and are known in Europe by the name of Turkey carpets.

Political Division and Towns.—The empire of Morocco is composed of the two kingdoms of Fez and Morocco, of which the former occupies the basin of the Mulwia and the countries north of the river Oom-er-begh; the kingdom of Morocco comprehends the remainder, with the exception of the countries south of the Greater Atlas and Mount Beban, which are considered as a separate kingdom, called that of Taflet. At present the whole country is divided into 30 governments, of which 15 belong to Fez and 15 to Morocco. In the latter the country between Mount Beban and Mount Adrar is included. The countries of Draha, Taflet, and Segelmesa are divided into two other governments.

Along the coast of the Mediterranean the Spaniards possess Melilla, near Ras-ul-dir, or Cape Tres Forcas, and farther westward Alhucemas and Peñon de Velez, three small fortresses, which have no communication with the interior.

Not far from the Strait of Gibraltar is *Tetuan*, built on the declivity of a hill, about half a mile from a small river (Martil) which falls into the Mediterranean about five miles from the town: the mouth of the river forms a harbour for vessels of middling size. It carries on a considerable commerce with Spain, France, and Italy, exporting wool, barley, wax, leather, hides, cattle, mules, and fruits, of which the valley of Tetuan produces abundance of the finest quality. The streets are narrow and unpaved: the population is 20,000.

Near the eastern entrance of the Strait of Gibraltar is the Spanish town of *Ceuta* [CEUTA], and near the western entrance the town of *Tangier*, where European consuls reside. Tangier is built on a hill, near a spacious bay, 14 miles W. from Cape Spartel, and its harbour is defended by three small fortresses. The streets are wider and straighter than in other towns of the empire; but except the houses of the European consuls, and a few belonging to rich persons, they are all small and inconvenient. The Jews have here several synagogues, and the Roman Catholics have a church, the only Christian establishment of this kind in the empire. The commerce of this place is limited

to some trade with Gibraltar and the opposite coast of Spain: the population is about 10,000.

Along the Atlantic, from north to south, are the following towns:—*El-Araish*, or *Larash*, at the mouth of the river El Kos, containing 4000 inhabitants, has a good harbour; the bar at the mouth of the river has 16 feet of water at spring-tides, and spacious anchoring-ground within, with water enough for frigates. *Sla*, *Salé*, or *Sallee*, and *Rabatt*, are separated from each other by the river Bu Regreb, which forms their common harbour: they contain together 30,000 inhabitants. Salé, formerly noted for the boldness of its pirates, is badly built and partly in ruins; but Rabatt is a thriving town, and has some good streets. Salé is still the principal commercial port of Morocco, though a portion of its trade has been transferred to Mogadora. The principal articles of exportation are—wool, corn, and wax, and the manufactured goods of Fez and Mekinez. The European and East India goods, destined for Fez and the northern provinces, are imported through this town. *Saffi*, or *Asif*, farther south, not far from Cape Cantin, is between two hills in a valley, and is subject to inundations. It formerly exported many products of the country, as its roadstead affords excellent anchorage; but since the rise of Mogadora it has been on the decline: the population is 12,000, including 3000 Jews.

Mogador, or *Suera*, as the Moghrebins call it, the port of the town of Morocco, lies on the sea-shore between Cape Cantin and Cape Gher. It was founded in 1760. The town is built on a low shore, consisting of moving sand, which extends from 5 to 15 miles inland, where a fertile country begins. It is regularly built, the streets being straight but somewhat narrow. The Europeans settled here have erected several large buildings in the African style. The town is divided into two parts, one of which is called the Fortress, and contains the custom-house, the palace of the pasha, the other public buildings, and the houses of Europeans; the other part is only inhabited by Jews. The harbour is formed by a small island lying south-west of the town, and about two miles in circumference. At low tides there are only 10 or 12 feet of water in the harbour, and large vessels are obliged to anchor without, at a distance of about two miles. The commerce of this place is considerable: the population is stated to amount to 30,000. The towns of Mogador, Tangiera, Sallee, and Rabatt, suffered severely in 1844, when they were bombarded by the French fleet under Prince de Joinville. [ALGÉRIE, vol. i. col. 212.]

Agadir, or *Santa Cruz*, farther south, has a good harbour, and formerly carried on a considerable trade, which however was transferred to Mogador by order of the government.

In the interior there are several populous towns, of which the following are the principal:—*Taza*, or *Taza*, on one of the upper branches of the Sebou River, in a very fertile country, has 10,000 or 12,000 inhabitants, some manufactures, and a considerable trade with Tlemcen in Algiers (being situated near one of the most frequented passes of the Lesser Atlas), and with Fez. *At Kasar* or *Ksar*, on the El Kos River, is well built, and has some manufactures, with about 8000 inhabitants.

Fez, or *Fas*, the most industrious and commercial town of the empire, is situated in a valley which is drained by one of the upper branches of the Sebou River. It contains upwards of 100 mosques and 7 public schools. The mosque called El Karubin is a magnificent building, and that of Mula Driss, the founder of the town (807), is the object of many pilgrimages, and is an asylum for thieves and murderers. The imperial palace, with the buildings and gardens annexed to it, occupies a great space. The number of persons employed in manufactures is considerable. Every trade is carried on in a separate street; generally only one kind of goods is sold in each shop. The commerce of this town with the sea-ports, especially Rabatt, and by means of the caravans with Tunis, Kahira, and Sudan, is very great. The streets are narrow, and, owing to the great height of the houses, also dark; there are numerous extensive caravansaries: the population is variously estimated at from 20,000 to 88,000.

Mekinez, or *Miknas*, west of Fez, a large town built on a hill in a wide and fertile plain, has also narrow crooked streets. It has many manufactures, especially of leather. The imperial palace is more than two miles in circuit, and has large orchards and gardens annexed to it: the population is 56,000. A large portion of the imports into Sallee is sent to Mekinez, where there are large magazines of the principal products of Morocco and the neighbouring states.

Tefza is situated in one of those fine valleys which are watered by the numerous branches of the Oom-er-begh, not far from the base of the Atlas. It has large manufactures of woollen-cloths, some of which are exported to Italy and elsewhere: the population is 10,500.

Demnet, or *Dimnit*, a considerable place east of the town of Morocco, near the base of a branch of Mount Atlas, carries on a considerable trade. The caravans which go from Morocco to Draha and Sudan here begin to ascend the mountain-pass which leads to Tatta.

Morocco, the capital of the empire and the residence of the sultan, is situated on level ground 4 miles S. from the river Tensift, and is surrounded by a strong wall 30 feet high, with square turrets at every 50 paces. The walls, which are pierced by 11 gate-entrances, are near 6 miles in circuit; but the area inclosed is far from being covered with buildings, there being several large gardens and many spaces unoccupied or covered with ruins. The streets are narrow, irregular, filthy, and in many cases crossed by walls with arches and gates, separating the

different quarters and subdivisions of the city in the same manner as described in the article *KAHIRA*. Several open places, which cannot be called squares, are used as market-places. The houses, which are only of one story, have flat roofs and terraces, and the rooms open upon a court, which is sometimes surrounded by arcades and embellished by a fountain. The houses, which are mostly constructed with clay and lime, have no windows, no fire-place, and no furniture, except a cushion or two. Large aqueducts, which convey the water of the river Tensift to the city, surround it; some of them are 10 or 12 feet deep, and partly ruined. These aqueducts supply the fountains, which are numerous, and some of them have traces of delicate sculpture. On the south of the town, but without the walls, is the imperial palace: a wall of a quadrangular form, inclosing a space about 1500 yards long by 600 yards wide, is equal in strength and height to the walls of the town. The inclosed space is divided into squares, laid out in gardens, round which are detached pavilions, forming the imperial residences. The floors of the rooms are tessellated with various coloured tiles, but otherwise they are plain, the furniture consisting of a mat, a small carpet at one end, and some cushions. There are 19 mosques, 2 colleges or medrasses, and 1 hospital in the town. The principal mosque, El Kontubia, is distinguished by a lofty tower 220 feet high, a masterpiece of Arabic architecture. The bazaar, or kaisseria, is a long range of shops, covered in and divided into compartments, in which the agricultural and manufactured productions of the country, as well as goods from China, India, and England, are exposed for sale. There are manufactures of silk, leather, and embroideries: the population is about 100,000, of which number about 5000 are Jews, who inhabit a separate quarter of the town. Outside the city (as in all Mohammedan towns) are the cemeteries, which are extensive.

In the province of Sus-el-Acsâ is *Tarudant*, once the capital of a separate kingdom, about 60 miles from the sea-port of Agadir or Santa Cruz. It is built in the middle of an extensive plain, and its walls, which are now in a ruinous state, are very extensive. The houses are low and built of earth, and each of them is surrounded by a garden and wall, so that the place rather resembles a well-peopled country, than a town. The inhabitants are industrious, and the woollen dresses and marocco leather made here are much esteemed; copper and saltpetre are abundant in the neighbourhood, and a considerable quantity of the copper is made into domestic utensils in this town. The population is 22,000.

In this province are also the towns of *Tedai*, with 15,000 industrious inhabitants, and *Tagavost*, which is said to be more populous. Farther to the south-west, near the banks of the river Draha, is the village of *Nun*, 50 miles from the sea, with 2000 inhabitants. It is one of the points from which the caravans depart for Sudan.

On the southern declivity of Mount Atlas are Taflet and Tatta, two other places from which the caravans start on their route to Sudan. The former, a considerable place with 10,000 inhabitants, seems to be the collective name of an assemblage of villages, in one of which the governor of the province of Taflet resides. Caillié in traversing this country neither saw nor heard of any town of the name of Taflet.

Education.—The Moors send their children to school at the age of six years. The elementary schools, which are very numerous, both in the towns and in the country, are either private or public establishments. In these schools reading, writing, and correct pronunciation are taught; the children also learn by heart some passages of the Koran. Boys sometimes remain in these schools until they know the whole of the Koran by heart, when they pass for their further education into the higher schools (*mudaris*) where they are prepared for the university of Fez, called *Dar-el-ilm* (or the House of Science), and other colleges. In the colleges they are instructed in grammar, theology, logic, rhetoric, poetry, arithmetic, geometry, astrology, and medicine. The commentaries and traditions relating to the Koran, the laws, legal procedure, and all the formalities to be observed in the courts, are also explained. As there are no printing establishments, calligraphy is enumerated among the sciences.

Commerce.—The Moghrebins carry on a very active commerce with Sudan, Egypt, and Arabia by caravans, and with several parts of Europe by sea. Caravans set out from Tetuan, Fez, Marocco, and Taflet, each consisting of about 150 persons and 1000 or 1500 camels; when they unite at Tatta or Akka, on the Draha River, the point where they enter the desert, they consist of about 500 or 600 persons, with 16,000 and even 20,000 camels. Towards the southern border of the desert they come to the oases of Touadenni and El-A'rauan, where there are immense deposits of rock-salt, of which they buy large quantities for the market of Sudan. From Timbuctoo, as a central point, the merchants traverse the adjacent countries, exchanging their goods for those of Sudan. They import into these countries rock-salt, woollen-cloth and dresses, scarfs, tobacco, Turkish daggers, and blue cloth, and take in return ivory, rhinoceros' horns, incense, gold in bars and powder, ostrich feathers, gum-arabic, cotton, assafetida, indigo, and slaves; two-thirds of the imports, which are valued at 10 millions of Spanish dollars, are again exported.

The caravans which go to Mecca are chiefly composed of pilgrims, and are much more numerous. They depart only once in the year, and follow two routes. The northern route leads from Fez through Teza over the Lesser Atlas, traversing the northern districts of Algiers

and Tripoli, in which latter country it may be said to terminate at Kairoan. Hence it passes southward through Gadamis and Fezzan to Alexandria and Cairo, and ultimately to Mecca. The southern road passes from Marocco to Tefza, and thence through the southern districts of Algiers and Tunis to Gadamis and Fezzan, whence it leads to Alexandria and Mecca. Indigo, cochineal, ostrich-feathers, skins, and leather, with the woollen articles manufactured in Fez, Tefza, and Taflet are exported by these caravans, and they import the cotton and silk goods of India, some Persian silk-stuffs, rose-oil, amber, musk, balsam, and spices, but particularly cotton, wool, and raw silk.

European vessels visit the harbours of Tetuan, Rabatt, Saffi, and Mogador, and export the produce of the empire to Italy, France, Spain, England, and Holland. The principal imports are tissues of cotton, wool, and silk; hemp, flax, and raw silk; sugar, metals, spices, drugs, dyes, hardware, tea, specie, &c. The exports by sea comprise fruits, wool, and woollen tissues, olive oil, wax, hives, grain, oxen, gums, bark, leeches, ostrich-feathers, ivory, specie, &c. The principal part of the trade is in the hands of the English and French. Among the less important articles exported are scarfs of wool and silk, marocco leather slippers and shoes, the black cloaks of Tarudant, and the shawls of Fez and Tefza.

In 1839 the number of foreign ships that entered the ports of Marocco was 372; the departures numbered 456. The former brought cargoes valued at 581,680*l.*; the latter took away goods to the value of 484,000*l.* The trade of Marocco is greatly clogged by monopolies. The cultivation of the soil is free, but none of the products can be exported till a duty has been paid to the emperor by those who have the monopoly of the export trade. The monopoly is renewed every year, and accorded to those who agree to pay the highest export duty. The duties therefore are constantly varying, and are all arbitrarily imposed. The import duties amount to about 10 per cent. on the value; they are sometimes arbitrarily raised, and often corruptly levied.

Government.—The government is absolutely despotic, even more so than in the Turkish empire; the people are much oppressed, and the Christian merchants exposed to great losses by capricious ordinances.

(Graberg, *Specchio Geografico e Statistico dell' Impero di Marocco*; Jackson, *History of Marocco*; London *Geographical Journal*; Caillié, *Travels through Central Africa*, &c.) [See SUPPLEMENT.]

MARPLE. [CHESHIRE.]

MARPURG. [MARBURG.]

MARQUESAS ISLANDS were so called in honour of the Marquis Mendoca de Canete, by Mendoca de Neyra, who discovered them in 1595. They are situated in the Pacific, and extend about 200 miles in a north-west and south-east direction, between 10° 30' and 7° 50' S. lat., 138° and 140° 20' W. long.

The largest islands of the southern group are Santa Dominica, or Hiwaoa, Santa Christina, or Tahuata, and Hood's Island, or Tiboa. They are about 10 miles long from south-south-west to north-north-east. The principal islands of the northern group are Noukahivah, Uahuga (sometimes called Washington Island), Uapoa, and Ohivaoa. Noukahivah, the largest, is nearly 20 miles long from south-east to north-west, and 70 miles in circumference.

An elevated ridge of rocky mountains traverses each island lengthways, and in the larger one rises to an elevation of 2000 or 3000 feet. The mountains have on both sides high offsets, which extend to the shores, and thus divide the lowland along the shores into valleys. The mountains in the interior are mostly bare, rugged, and inaccessible. The coast is rocky, abrupt, and beaten by a surf. Noukahivah is of volcanic origin, which may be the case with the rest also. The soil is rich; in the valleys it is clay, mixed with vegetable mould, but on the lower declivities of the hills it is thin, and covered by coarse grass in tufts. There are numerous harbours, and many of them very safe, as Resolution Bay, on Tahuata; and the three harbours, Anna Maria, or Tayo-Hoae, Cho-Ome, or Comptroller's Bay, and Hapoa, or Tshitahagoff, on Noukahivah.
